Source: This medium is available as a premixed powder from BD Diagnostic Systems.**Preparation of Medium:** Add components, except rabbit blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–60°C. Aseptically add 50.0mL of sterile, defibrinated rabbit blood. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.**Use:** For the cultivation and maintenance of *Francisella tularensis* and *Francisella philomiragia*. Without the hemoglobin enrichment, it supports excellent growth of Gram-negative cocci and other pathogenic microorganisms.**Cystine HiVeg Agar Base with Hemoglobin****Composition** per liter:

Agar	15.0g
Plant infusion	10.0g
Plant peptone No. 3	10.0g

Glucose	10.0g
NaCl	5.0g
L-Cystine	1.0g
Hemoglobin solution.....	100.0mL

pH 6.8 ± 0.2 at 25°C

Source: This medium, without hemoglobin, is available as a premixed powder from HiMedia.

Hemoglobin Solution:

Composition per 100.0mL:

Bovine hemoglobin.....	2.0g
------------------------	------

Preparation of Hemoglobin Solution: Add bovine hemoglobin to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Preparation of Medium: Add components, except hemoglobin solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Add 100.0mL sterile hemoglobin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of Gram-negative cocci and other fastidious pathogens. For the cultivation of *Francisella tularensis*.

Cystine Lactose Electrolyte Deficient Agar

Cystine Tellurite Blood Agar

Composition per liter:

Heart infusion agar.....	900.0mL
K ₂ TeO ₃ solution.....	75.0mL
Rabbit blood.....	25.0mL
L-Cystine	22.0mg

pH 7.4 ± 0.2 at 25°C

Heart Infusion Agar:

Composition per 900.0mL:

Beef heart, solids from infusion.....	500.0g
Agar	20.0g
Tryptose	10.0g
Yeast extract.....	5.0g
NaCl	5.0g

Preparation of Heart Infusion Agar: Add components to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

K₂TeO₃ Solution:

Composition per 100.0mL:

K ₂ TeO ₃	0.3g
---------------------------------------	------

Preparation of K₂TeO₃ Solution: Add K₂TeO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Caution: Potassium tellurite is toxic.

Preparation of Medium: Add sterile K₂TeO₃ solution, sterile rabbit blood, and sterile, solid L-cystine to sterile, cooled heart infusion agar. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation, differentiation, and cultivation of *Corynebacterium diphtheriae*. *Corynebacterium diphtheriae* appears as dark gray to black colonies.

Cystine Tryptone Agar

Composition per liter:

Casein enzymatic hydrolysate	20.0g
NaCl.....	5.0g
Agar	2.5g
L-Cystine.....	0.5g
Na ₂ SO ₃	0.5g
Phenol Red.....	17.0mg

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the maintenance, subculturing, and detection of motility of various bacteria.

Cystine Tryptone Agar, HiVeg

Composition per liter:

Plant hydrolysate	20.0g
NaCl.....	5.0g
Agar	2.5g
L-Cystine.....	0.5g
Na ₂ SO ₃	0.5g
Phenol Red.....	17.0mg

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the maintenance, subculturing, and detection of motility of various bacteria.

Cystine Tryptone Agar, HiVeg with Carbohydrate

Composition per liter:

Plant hydrolysate	20.0g
NaCl.....	5.0g

Agar	2.5g
L-Cystine	0.5g
Na ₂ SO ₃	0.5g
Phenol Red	17.0mg
Carbohydrate solution	50.0mL

pH 7.3 ± 0.2 at 25°C

Source: This medium, without carbohydrate solution, is available as a premixed powder from HiMedia.

Carbohydrate Solution:

Composition per 100.0mL:

Carbohydrate	10.0g
--------------------	-------

Preparation of Carbohydrate Solution: Add carbohydrate to distilled/deionized water and bring volume to 100.0mL. Adonitol, arabinose, cellobiose, glucose, dulcitol, fructose, galactose, inositol, lactose, maltose, mannitol, raffinose, rhamnose, salicin, sorbitol, sucrose, trehalose, xylose, or other carbohydrates may be used. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except carbohydrate solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 50.0mL of sterile carbohydrate solution. Mix thoroughly. Pour into sterile Petri dishes or leave in tubes.

Use: For fermentation studies of various bacteria.

CYT Agar

Composition per liter:

Agar	15.0g
Pancreatic digest of casein	1.0g
CaCl ₂ ·2H ₂ O	0.5g
MgSO ₄ ·7H ₂ O	0.5g
Yeast extract	0.5g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of *Cytophaga* species, *Herpetosiphon* species, *Saprospira* species, and *Flexithrix* species.

**Cytophaga Agarase Agar
(ATCC Medium 793)**

Composition per liter:

Agar	15.0g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.5g
NH ₄ Cl	0.5g
CaCl ₂ ·H ₂ O	0.02g
Vishniac and Santer trace element mixture	0.2mL

pH 7.2 ± 0.2 at 25°C

Vishniac and Santer Trace Element Mixture:

Composition per liter:

Ethylenediamine tetraacetic acid (EDTA)	50.0g
ZnSO ₄ ·7H ₂ O	22.0g
CaCl ₂	5.54g
MnCl ₂ ·4H ₂ O	5.06g
FeSO ₄ ·7H ₂ O	4.99g

CoCl ₂ ·6H ₂ O	1.61g
CuSO ₄ ·5H ₂ O	1.57g
(NH ₄) ₆ Mo ₇ O ₂₄ ·4H ₂ O	1.1g

Preparation of Vishniac and Santer Trace Element Mixture: Add components to distilled/deionized water and bring volume to 1.0L. Adjust pH to 6.0 with KOH. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Adjust pH to 7.2. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Cytophaga flevensis*.

Cytophaga Agarase Broth

Composition per liter:

Agar	1.0g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.5g
NH ₄ Cl	0.5g
CaCl ₂ ·H ₂ O	0.02g
Vishniac and Santer trace element mixture	0.2mL

pH 7.2 ± 0.2 at 25°C

Vishniac and Santer Trace Element Mixture:

Composition per liter:

Ethylenediamine tetraacetic acid (EDTA)	50.0g
ZnSO ₄ ·7H ₂ O	22.0g
CaCl ₂	5.54g
MnCl ₂ ·4H ₂ O	5.06g
FeSO ₄ ·7H ₂ O	4.99g
CoCl ₂ ·6H ₂ O	1.61g
CuSO ₄ ·5H ₂ O	1.57g
(NH ₄) ₆ Mo ₇ O ₂₄ ·4H ₂ O	1.1g

Preparation of Vishniac and Santer Trace Element Mixture: Add components to distilled/deionized water and bring volume to 1.0L. Adjust pH to 6.0 with KOH. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Adjust pH to 7.2. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Cytophaga flevensis*.

**Cytophaga agarovorans Agar
(LMG Medium 99)**

Composition per 1001.0mL:

NaCl	30.0g
Agar	15.0g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O	1.0g
NH ₄ Cl	1.0g
Yeast extract	1.0g
CaCl ₂ ·2H ₂ O	50.0mg
FeCl ₃ ·H ₂ O	1.25mg
Glucose solution	10.0mL
NaHCO ₃ solution	10.0mL
Na ₂ S·9H ₂ O solution	1.0mL

Glucose Solution:

Composition per 10.0mL:

D-Glucose	1.0g
-----------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

NaHCO₃ Solution:

Composition per 100.0mL:

NaHCO₃ 5.0g

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na₂S·9H₂O 1.0g

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Filter sterilize.

Preparation of Medium: Add components, except glucose solution, NaHCO₃ solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 10.0mL of sterile glucose solution, 10.0mL of sterile NaHCO₃ solution, and 1.0mL of sterile Na₂S·9H₂O solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Cytophaga agarovorans*.

Cytophaga agarovorans Broth (LMG Medium 99)

Composition per 1001.0mL:

NaCl 30.0g
KH₂PO₄ 1.0g
MgSO₄·7H₂O 1.0g
NH₄Cl 1.0g
Yeast extract 1.0g
Agar 1.0g
CaCl₂·2H₂O 50.0mg
FeCl₃·H₂O 1.25mg
Glucose solution 10.0mL
NaHCO₃ solution 10.0mL
Na₂S·9H₂O solution 1.0mL

Glucose Solution:

Composition per 10.0mL:

D-Glucose 1.0g

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

NaHCO₃ Solution:

Composition per 100.0mL:

NaHCO₃ 5.0g

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na₂S·9H₂O 1.0g

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Filter sterilize.

Preparation of Medium: Add components, except glucose solution, NaHCO₃ solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 980.0mL. Add 1.0g of agar as a detoxifying agent. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL of sterile glucose solution, 10.0mL of sterile NaHCO₃ solution, and 1.0mL of sterile Na₂S·9H₂O solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Cytophaga agarovorans*.

Cytophaga fermentans Medium

Composition per liter:

NaCl 30.0g
Agar 5.0g
NaHCO₃ 5.0g
KH₂PO₄ 1.0g
NH₄Cl 1.0g
MgCl₂·6H₂O 0.5g
Yeast extract 0.3g
Na₂S·9H₂O 0.1g
CaCl₂ 0.04g
Ferric citrate (4mM solution) 5.0mL
Trace elements solution 2.0mL

pH 7.0 ± 0.2 at 25°C

Trace Elements Solution:

Composition per 100.0mL:

H₃BO₃ 0.28g
MnSO₄·6H₂O 0.21g
Na₂MoO₄·2H₂O 0.075g
Zn(NO₃)₂·6H₂O 0.025g
CoCl₂·6H₂O 0.02g
Cu(NO₃)₂·3H₂O 0.02g

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of agar-digesting *Cytophaga fermentans*.

Cytophaga hutchinsonii Agar

Composition per liter:

Agar 15.0g
Pancreatic digest of casein 3.0g
CaCl₂·2H₂O 1.36g
Yeast extract 1.0g
Cellobiose solution 50.0mL

pH 7.2 ± 0.2 at 25°C

Cellobiose Solution:

Composition per 50.0mL:

D-Cellobiose 6.0g

Preparation of Cellobiose Solution: Add cellobiose to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except cellobiose solution, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 50.0mL of

sterile cellobiose solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Cytophaga aurantiaca* and *Cytophaga hutchinsonii*.

Cytophaga hutchinsonii Broth

Composition per liter:

Pancreatic digest of casein	3.0g
CaCl ₂ ·2H ₂ O	1.36g
Yeast extract	1.0g
Filter paper strips	variable

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components, except filter paper strips, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute in 5.0mL volumes into tubes. Add a strip of filter paper about 7.0cm in length to each tube. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Cytophaga aurantiaca* and *Cytophaga hutchinsonii*.

Cytophaga Marine Medium (DSMZ Medium 172)

Composition per liter:

NaCl	24.7g
Agar	15.0g
MgSO ₄ ·7H ₂ O	6.3g
MgCl ₂ ·6H ₂ O	4.6g
CaCl ₂ ·2H ₂ O	1.2g
Yeast extract	1.0g
Tryptone	1.0g
KCl	0.7g
Sodium bicarbonate solution	10.0mL
Calcium chloride solution	10.0mL

pH 7.0 ± 0.2 at 25°C

Sodium Bicarbonate Solution:

Composition per 10.0mL:

NaHCO ₃	0.2g
--------------------------	------

Preparation of Sodium Bicarbonate Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Calcium Chloride Solution:

Composition per 10.0mL:

CaCl ₂ ·2H ₂ O	1.2g
--	------

Preparation of Calcium Chloride Solution: Add CaCl₂·2H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except sodium bicarbonate and calcium chloride solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45–50°C. Aseptically add 10.0mL of sterile bicarbonate solution and 10.0mL sterile calcium chloride solution. Adjust pH to 7.2. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Cellulophaga lytica*, *Cytophaga latercula*, *Marinilabilia salmonicolor*, *Saprospira grandis*, *Cytophaga marinoflava*, *Persicobacter diffluens*, *Flammeovirga apri-*

ca, *Flexibacter tractuosus*, *Microscilla* spp., *Marinilabilia salmonicolor*, *Flexibacter litoralis*, *Flexithrix dorotheae*, and *Cellulophaga lytica*.

Cytophaga Medium

Composition per liter:

NaCl	30.0g
Agar	15.0g
KH ₂ PO ₄	1.0g
NH ₄ Cl	1.0g
Yeast extract	1.0g
MgSO ₄	0.5g
CaCl ₂	0.04g
FeCl ₃ ·6H ₂ O	1.25mg
NaHCO ₃ solution	100.0mL
Glucose solution	10.0mL
Na ₂ S·9H ₂ O solution	1.0mL

Glucose Solution:

Composition per 100.0mL:

Glucose	10.0g
---------------	-------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

NaHCO₃ Solution:

Composition per 100.0mL:

NaHCO ₃	5.0g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Na₂S·9H₂O Solution:

Composition per 100.0mL:

Na ₂ S·9H ₂ O	10.0g
---	-------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except NaHCO₃ solution, glucose solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 889.0mL. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add sterile NaHCO₃ solution, sterile glucose solution, and sterile Na₂S·9H₂O solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Cytophaga agarovorans*.

Cytophaga Medium (ATCC Medium 420)

Composition per liter:

NaCl	20.0g
Yeast extract	10.0g
Agar	3.0g
MgSO ₄ ·7H ₂ O	1.0g
NH ₄ Cl	1.0g
K ₂ HPO ₄	0.2g
FeCl ₃	1.0μg

pH 7.5 ± 0.2 at 25°C

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Adjust pH to 7.5. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Cytophaga fermentans*.

***Cytophaga* Medium (ATCC Medium 1299)**

Composition per liter:

Agar	11.0g
Pancreatic digest of casein	0.5g
Yeast extract	0.5g
Beef extract	0.2g
Sodium acetate	0.2g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Cytophaga* species and *Flavobacterium branchiophilum*.

***Cytophaga* Medium, Modified**

Composition per liter:

NaCl	20.0g
Agar	15.0g
Yeast extract	10.0g
MgSO ₄ ·7H ₂ O	1.0g
NH ₄ Cl	1.0g
K ₂ HPO ₄	0.2g
FeCl ₃	1.0μg

pH 7.5 ± 0.2 at 25°C

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Adjust pH to 7.5. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Cytophaga fermentans*.

***Cytophaga* Spirochete Medium**

See: **Spirochete Medium**

Cytosine Nutrient Agar

Composition per liter:

Agar	15.0g
Pancreatic digest of gelatin	5.0g
Beef extract	3.0g
Cytosine	20.0mg

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Escherichia coli*.

Cystine Tellurite Blood Agar

Composition per 120.0mL:

Heart infusion agar	100.0mL
K ₂ TeO ₃ solution	15.0mL
Sheep blood	5.0mL
L-Cystine	5.0mg

pH 7.4 ± 0.2 at 25°C

Heart Infusion Agar:

Composition per liter:

Beef heart, infusion from	500.0g
Agar	20.0g
Tryptose	10.0g
Yeast extract	5.0g
NaCl	5.0g

Preparation of Heart Infusion Agar: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

K₂TeO₃ Solution:

Composition per 100.0mL:

K ₂ TeO ₃	0.3g
---------------------------------------	------

Preparation of K₂TeO₃ Solution: Add K₂TeO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Caution: Potassium tellurite is toxic.

Preparation of Medium: Add sterile K₂TeO₃ solution, sterile, defibrinated sheep blood, and sterile, solid L-cystine to sterile, cooled heart infusion agar. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation, differentiation, and cultivation of *Corynebacterium diphtheriae*. *Corynebacterium diphtheriae* appears as dark gray to black colonies.

CYU 2%

Composition per liter:

Basal solution	960.0mL
Yeast extract solution	30.0mL
Trace metal solution	10.0mL

Basal Solution:

Composition per 960.0mL:

Glucose	20.0g
K ₂ HPO ₄	9.2g
Urea	5.0g
(NH ₄) ₂ SO ₄	2.2g
KH ₂ PO ₄	1.3g
Trisodium citrate·2H ₂ O	1.0g
MgSO ₄ ·7H ₂ O solution	1.66mL

MgSO₄·7H₂O Solution:

Composition per 10.0mL:

MgSO ₄ ·7H ₂ O	2.5g
--	------

Preparation of MgSO₄·7H₂O Solution: Add MgSO₄·7H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly.

Preparation of Basal Solution: Add components to distilled/deionized water and bring volume to 960.0mL. Mix thoroughly. Filter sterilize.

Yeast Extract Solution:

Composition per 100.0mL:

Yeast extract	10.0g
---------------------	-------

Preparation of Yeast Extract Solution: Add yeast extract to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Trace Metal Solution:**Composition per liter:**

CaCl ₂ ·2H ₂ O.....	3972.0mg
FeSO ₄ ·7H ₂ O.....	1250.0mg
H ₃ BO ₃	1140.0mg
ZnSO ₄ ·7H ₂ O.....	882.0mg
CuCl ₂ ·5H ₂ O.....	157.0mg
MnCl ₂ ·4H ₂ O.....	140.0mg
NaMoO ₄ ·2H ₂ O.....	119.0mg
Vanadyl sulfate·2H ₂ O.....	100.0mg
CsCl ₂ ·6H ₂ O.....	49.0mg
FeCl ₃ ·6H ₂ O.....	29.0mg
CdSO ₄ ·8H ₂ O.....	10.0mg
Ni(NO ₃) ₂ ·6H ₂ O.....	10.0mg
HCl, concentrated.....	10.0mL

Preparation of Trace Metal Solution: Add 10.0mL of concentrated HCl to 900.0mL of distilled/deionized water. Mix thoroughly. Add remaining components in the order shown. Mix thoroughly after adding each component. Bring volume to 990.0mL with distilled/deionized water. Mix thoroughly. Filter sterilize.

Preparation of Medium: Aseptically combine 960.0mL of sterile basal solution, 30.0mL of sterile yeast extract solution, and 30.0mL of sterile trace metal solution. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Neosporangium excentricum*.

CZA

See: **Czapek Agar**

CZA200

See: **Czapek Agar with 20% Sucrose**

**Czapek Agar
(ATCC Medium 312)****Composition per liter:**

Sucrose.....	30.0g
Agar.....	15.0g

MgSO ₄ ·7H ₂ O.....	0.5g
FeSO ₄ ·7H ₂ O.....	0.01g

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components, except sucrose, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Distribute into tubes or flasks. In a separate flask, add sucrose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave both solutions separately for 15 min at 15 psi pressure–121°C. Cool to 50°C. Combine the sterile solutions. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Streptomyces* species. For the cultivation of Actinoplanaceae.

Czapek Agar

See: **Czapek Yeast Autolysate Agar**

**Czapek Agar with Peptone
(ATCC Medium 522)****Composition per liter:**

Sucrose.....	30.0g
Agar.....	15.0g
Peptone.....	5.0g
NaNO ₃	3.0g
K ₂ HPO ₄	1.0g
KCl.....	0.5g
MgSO ₄ ·7H ₂ O.....	0.5g
FeSO ₄ ·7H ₂ O.....	0.01g

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components, except sucrose, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Distribute into tubes or flasks. In a separate flask, add sucrose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave both solutions separately for 15 min at 15 psi pressure–121°C. Cool to 50°C. Combine the sterile solutions. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Streptomyces* species. For the cultivation of Actinoplanaceae.

Czapek Agar with Sucrose**Composition per liter:**

Sucrose.....	170.0g
Agar.....	15.0g
NaNO ₃	3.0g
K ₂ HPO ₄	1.0g
KCl.....	0.5g
MgSO ₄ ·7H ₂ O.....	0.5g
FeSO ₄ ·7H ₂ O.....	0.01g

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components, except sucrose, to distilled/deionized water and bring volume to 700.0mL. Mix thoroughly. In a separate flask, add sucrose to distilled/deionized water and bring volume to 300.0mL. Mix thoroughly. Autoclave both solutions separately for 15 min at 15 psi pressure–121°C. Cool to 45–50°C. Combine the sterile solutions. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Aspergillus echinulatus*, *Aspergillus flavipes*, *Aspergillus penicilloides*, numerous *Eurotium* species, *Penicillium citreonigrum*, and *Penicillium thomii*.

**Czapek Agar with 20% Sucrose
(CZA200)****Composition per liter:**

Sucrose.....	200.0g
Agar.....	15.0g
NaNO ₃	3.0g
K ₂ HPO ₄	1.0g
KCl.....	0.5g
MgSO ₄ ·7H ₂ O.....	0.5g
FeSO ₄ ·7H ₂ O.....	0.01g

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components, except sucrose, to distilled/deionized water and bring volume to 700.0mL. Mix thoroughly. In a separate flask, add sucrose to distilled/deionized water and bring volume to 300.0mL. Mix thoroughly. Autoclave both solutions separately for 15 min at 15 psi pressure–121°C. Cool to 45–50°C. Combine

the sterile solutions. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Aspergillus repens* (*Eurotium repens*).

Czapek Dox Agar

Composition per liter:

Sucrose.....	30.0g
Agar	15.0g
NaNO ₃	3.0g
K ₂ HPO ₄	1.0g
MgSO ₄ ·7H ₂ O.....	0.5g
KCl.....	0.5g
FeSO ₄ ·7H ₂ O.....	0.01g

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Actinoplanes* species, *Amorphosporangium auranticolor*, *Ampullariella* species, *Spirillospora albida*, and *Streptomyces armeniacus*.

Czapek Dox Agar

Composition per liter:

Sucrose.....	30.0g
Agar	15.0g
NaNO ₃	2.0g
K ₂ HPO ₄	1.0g
MgSO ₄ ·7H ₂ O.....	0.5g
KCl.....	0.5g
FeSO ₄ ·7H ₂ O.....	0.01g

pH 7.3 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Actinoplanes* species, *Amorphosporangium auranticolor*, *Ampullariella* species, *Spirillospora albida*, and *Streptomyces armeniacus*.

Czapek Dox Agar with 3% Glucose

Composition per liter:

Glucose	30.0g
Agar	15.0g
NaNO ₃	3.0g
K ₂ HPO ₄	1.0g
KCl.....	0.5g
MgSO ₄ ·7H ₂ O.....	0.5g
FeSO ₄ ·7H ₂ O.....	0.01g

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Microbispora rosea* and *Streptomyces* species.

Czapek Dox Agar with 20% Sucrose

Composition per liter:

Sucrose.....	200.0g
Agar	20.0g
NaNO ₃	2.0g
K ₂ HPO ₄	1.0g
KCl.....	0.5g
MgSO ₄ ·7H ₂ O.....	0.5g
FeSO ₄	0.01g
ZnSO ₄	0.01g
CuSO ₄	0.005g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 20 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Aspergillus brunneus*, *Aspergillus equitis*, *Aspergillus hollandicus*, *Aspergillus nidulellus*, *Aspergillus reptans*, and *Aspergillus rubrobrunneus*.

Czapek Dox Agar, Modified

Composition per liter:

Sucrose.....	30.0g
Agar	12.0g
NaNO ₃	2.0g
Magnesium glycerophosphate	0.5g
KCl.....	0.5g
K ₂ SO ₄	0.35g
FeSO ₄	0.01g

pH 6.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath and HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of numerous fungal species. For chlamydospore production by *Candida albicans*.

Czapek Dox Broth

Composition per liter:

Sucrose.....	30.0g
NaNO ₃	3.0g
K ₂ HPO ₄	1.0g
MgSO ₄ ·7H ₂ O.....	0.5g
KCl.....	0.5g
FeSO ₄ ·7H ₂ O.....	0.01g

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of a variety of fungal and bacterial species that can use nitrate as sole nitrogen source.

Czapek Dox Liquid Medium, Modified**Composition per liter:**

Sucrose.....	30.0g
NaNO ₃	2.0g
Magnesium glycerophosphate	0.5g
KCl.....	0.5g
K ₂ SO ₄	0.35g
FeSO ₄	0.01g

pH 6.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of fungi and bacteria capable of utilizing sodium nitrate as the sole source of nitrogen.

Czapek Malt Agar**Composition per liter:**

Malt extract.....	40.0g
Sucrose.....	30.0g
Agar	15.0g
KNO ₃	2.0g
K ₂ HPO ₄	1.0g
KCl.....	0.5g
MgSO ₄ ·7H ₂ O.....	0.5g
FeSO ₄ ·7H ₂ O.....	0.1g

pH 6.8 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of saprophytic fungi.

Czapek Peptone Agar**Composition per liter:**

Sucrose.....	30.0g
Agar	15.0g
Peptone.....	5.0g
KNO ₃	2.0g
Yeast extract.....	2.0g
K ₂ HPO ₄	1.0g
KCl.....	0.5g
MgSO ₄ ·7H ₂ O.....	0.5g
FeSO ₄ ·7H ₂ O.....	0.01g

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Actinoplanes campanulatus*, *Actinoplanes digitatis*, *Actinoplanes italicus*, *Actinoplanes lobatus*, *Actinoplanes regularis*, *Actinoplanes utahensis*, *Ampullariella campanulata*, *Micromonospora brunnea*, *Micromonospora purpurea*, *Micromonospora purpureochromogenes*, *Micromonospora species*, *Microtetraspora glauca*, *Micromonospora chalcea*, *Nocardia brevicatena*, *Pilimelia anulata*, *Pilimelia terevasa*, *Planomonospora parontospora*, *Promicromonospora citrea*,

Saccharomonospora caesia, *Saccharomonospora viridis*, *Spirillospora albida*, *Sporichthya polymorpha*, *Streptomyces yerevanensis*, *Thermoactinomyces thalophilus*, *Thermoactinomyces vulgaris*, and *Thermomonospora chromogena*.

Czapek Peptone Yeast Agar**Composition per liter:**

Sucrose.....	30.0g
Agar	15.0g
Peptone	5.0g
NaNO ₃	3.0g
Yeast extract.....	2.0g
K ₂ HPO ₄	1.0g
KCl.....	0.5g
MgSO ₄ ·7H ₂ O.....	0.5g
FeSO ₄ ·7H ₂ O.....	0.01g

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components, except sucrose, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Distribute into tubes or flasks. In a separate flask, add sucrose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave both solutions separately for 15 min at 15 psi pressure–121°C. Cool to 50°C. Combine the sterile solutions. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of various actinomycetes.

Czapek Solution Agar**Composition per liter:**

Sucrose.....	30.0g
Agar	15.0g
NaNO ₃	2.0g
K ₂ HPO ₄	1.0g
KCl.....	0.5g
MgSO ₄ ·7H ₂ O.....	0.5g
FeSO ₄ ·7H ₂ O.....	0.01g

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Aspergillus*, *Penicillium*, and other fungi. For the cultivation and maintenance of microorganisms that can utilize nitrate as sole nitrogen source.

Czapek Solution Agar with Sucrose**Composition per liter:**

Sucrose.....	200.0g
Agar	20.0g
NaNO ₃	3.0g
K ₂ HPO ₄	1.0g
KCl.....	0.5g
MgSO ₄ ·7H ₂ O.....	0.5g
FeSO ₄ ·7H ₂ O.....	10.0mg

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of osmophilic fungi.

Czapek Yeast Autolysate Agar
(CYA Agar)
(Czapek Agar)

Composition per liter:

Agar	15.0g
Yeast extract.....	5.0g
NaNO ₃	3.0g
K ₂ HPO ₄	1.0g
KCl.....	0.5g
MgSO ₄ ·7H ₂ O.....	0.5g
FeSO ₄ ·7H ₂ O.....	0.01g
Sucrose solution.....	100.0mL

pH 7.3 ± 0.2 at 25°C

Sucrose Solution:

Composition per 100.0mL:

Sucrose.....	30.0g
--------------	-------

Preparation of Sucrose Solution: Add sucrose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C.

Preparation of Medium: Add components, except sucrose solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add sterile sucrose solution. Mix thoroughly. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of heat-resistant filamentous fungi (molds) from foods.

Czapek Yeast Extract Agar

Composition per liter:

Sucrose.....	30.0g
Agar	15.0g
Yeast extract.....	5.0g
K ₂ HPO ₄	1.0g
Czapek concentrate.....	10.0mL

Czapek Concentrate:

Composition per liter:

NaNO ₃	30.0 g
KCl.....	5.0 g
MgSO ₄ ·7H ₂ O.....	5.0 g
FeSO ₄ ·7H ₂ O.....	0.1 g
ZnSO ₄ ·7H ₂ O.....	0.1 g
CuSO ₄ ·5H ₂ O.....	0.05 g

Preparation of Czapek Concentrate: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Aspergillus niger*.

Czapek Yeast Extract Agar

Composition per liter:

Sucrose.....	30.0g
Agar	15.0g
Yeast extract.....	5.0g

NaNO ₃	3.0g
K ₂ HPO ₄	1.0g
MgSO ₄ ·7H ₂ O.....	0.5g
KCl.....	0.5g
FeSO ₄ ·7H ₂ O.....	0.01g
Trace metal solution.....	1.0mL

pH 7.3 ± 0.2 at 25°C

Trace Metal Solution:

Composition per 100.0mL:

ZnSO ₄ ·7H ₂ O.....	1.0g
CuSO ₄ ·5H ₂ O.....	0.5g

Preparation of Trace Metal Solution: Add components to 100.0mL distilled/deionized water. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.2. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of a variety of fungal and bacterial species that can use nitrate as sole nitrogen source.

Czapek Yeast Extract Agar

Composition per liter:

Sucrose.....	30.0g
Agar	15.0g
Yeast extract.....	5.0g
K ₂ HPO ₄	1.0g
KNO ₃	0.3g
KCl.....	0.05g
MgSO ₄ ·7H ₂ O.....	0.05g
FeSO ₄ ·7H ₂ O.....	1.0mg
ZnSO ₄ ·7H ₂ O.....	1.0mg
CuSO ₄ ·5H ₂ O.....	0.5mg

pH 6.8 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of *Aspergillus niger*.

CZYA

See: [Czapek Yeast Autolysate Agar](#)

DA Medium

Composition per liter:

NaCl.....	116.9g
Agar	15.0g
Tris-HCl.....	6.024g
NaHCO ₃	1.68g
MgSO ₄ ·7H ₂ O.....	1.232g
KNO ₃	0.505g
CaCl ₂	0.033g
KH ₂ PO ₄	0.014g
H ₃ BO ₃	6.0mg
MnCl ₂ ·4H ₂ O.....	99.0μg
ZnCl ₂	14.0μg
CoCl ₂ ·6H ₂ O.....	4.76μg

CuCl ₂ ·2H ₂ O	34.0ng
FeCl ₃ solution	50.0mL
pH 7.5 ± 0.2 at 25°C	

FeCl₃ Solution:**Composition per 50.0mL:**

EDTA	5.84mg
FeCl ₃	0.32mg

Preparation of FeCl₃ Solution: Add components to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into screw-capped tubes. Autoclave for 15 min at 15 psi pressure–121°C. Allow to cool in a slanted position.

Use: For the cultivation of *Dunaliella bardawil*.

Dap Nutrient Agar**Composition per liter:**

Urea	20.0g
Agar	15.0g
Peptone.....	5.0g
Meat extract	3.0g
DL-α,ε-Diaminopimelic acid.....	0.1g
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.0. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Bacillus megaterium*.

Dap Nutrient Agar**Composition per liter:**

Urea.....	20.0g
Agar	15.0g
Peptone.....	5.0g
Meat extract	3.0g
DL-α,ε-Diaminopimelic acid.....	0.1g
MnSO ₄ ·H ₂ O	10.0mg
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.0. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the sporulation of *Bacillus megaterium*.

Davis and Mingioli Glucose Minimal Medium**Composition per liter:**

Agar	15.0g
K ₂ HPO ₄	7.0g
KH ₂ PO ₄	3.0g
(NH ₄) ₂ SO ₄	1.0g
Sodium citrate·3H ₂ O.....	0.5g
MgSO ₄ ·7H ₂ O	0.1g
L-Arginine	0.02g
L-Tryptophan	0.02g
Glucose solution	10.0mL
pH 7.0 ± 0.2 at 25°C	

Glucose Solution:**Composition per 10.0mL:**

Glucose	2.0g
---------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except glucose solution, to distilled/deionized water and bring volume to 990.0mL. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile glucose solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Escherichia coli*.

Davis and Mingioli Medium A**Composition per liter:**

K ₂ HPO ₄	7.0g
KH ₂ PO ₄	3.0g
(NH ₄) ₂ SO ₄	1.0g
Sodium citrate·3H ₂ O.....	0.5g
MgSO ₄ ·7H ₂ O	0.1g
Glucose solution	10.0mL
Amino acid solution.....	10.0mL
pH 7.0 ± 0.2 at 25°C	

Glucose Solution:**Composition per 10.0mL:**

Glucose	2.5g
---------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Amino Acid Solution:**Composition per 10.0mL:**

L-Leucine	40.0mg
L-Histidine	20.0mg
L-Methionine.....	20.0mg

Preparation of Amino Acid Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except glucose solution and amino acid solution, to distilled/deionized water and bring volume to 980.0mL. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL of sterile glucose solution and 10.0mL of sterile amino acid solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Escherichia coli*.

Davis and Mingioli Medium, Modified**Composition per liter:**

K ₂ HPO ₄	7.0g
KH ₂ PO ₄	2.0g
(NH ₄) ₂ SO ₄	1.0g
Na citrate·2H ₂ O	0.5g
MgSO ₄ ·7H ₂ O	0.1g
Glucose solution	10.0mL

Streptomycin solution	10.0mL
Additives solution	10.0mL
pH 7.2 ± 0.2 at 25°C	

Glucose Solution:**Composition per 10.0mL:**

Glucose	4.0g
---------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Streptomycin Solution:**Composition per 10.0mL:**

Streptomycin	4.0g
--------------------	------

Preparation of Streptomycin Solution: Add streptomycin to distilled/deionized water and bring volume to 10.0mL. Mix well. Filter sterilize.

Additives Solution:**Composition per 10.0mL:**

DL-Threonine	0.1g
DL- or L-Leucine	0.1g
Thiamine-HCl	0.5mg

Preparation of Additives Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components—except glucose solution, streptomycin solution, and additives solution—to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Adjust pH to 7.2. Gently heat and bring to boiling. Autoclave for 25 min at 15 psi pressure—121°C. Cool to 45°–50°C. Aseptically add sterile glucose solution, streptomycin solution, and additives solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Escherichia coli*.

Davis and Mingioli Medium, Modified**Composition per liter:**

Agar	15.0g
K ₂ HPO ₄	7.0g
Lactose	2.0g
(NH ₄) ₂ SO ₄	1.0g
KH ₂ PO ₄	0.91g
MgSO ₄ ·7H ₂ O	0.1g
Tap water	10.0mL
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Distribute into tubes or flasks. Autoclave for 20 min at 15 psi pressure—121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Escherichia coli*.

Davis and Mingioli Medium with Proline**Composition per liter:**

K ₂ HPO ₄	7.0g
KH ₂ PO ₄	3.0g
Glucose	2.0g
(NH ₄) ₂ SO ₄	1.0g
L-Proline	0.5g

Sodium citrate·3H ₂ O	0.5g
MgSO ₄ ·7H ₂ O	0.1g
Glucose solution	1.0mL
pH 7.0 ± 0.2 at 25°C	

Glucose Solution:**Composition per 100.0mL:**

Glucose	20.0g
---------------	-------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except glucose solution, to distilled/deionized water and bring volume to 999.0mL. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure—121°C. Cool to 25°C. Aseptically add 1.0mL of sterile glucose solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Escherichia coli*.

Davis and Mingioli Medium with Vitamin B₁ and Asparagine**Composition per liter:**

K ₂ HPO ₄	7.0g
KH ₂ PO ₄	3.0g
(NH ₄) ₂ SO ₄	1.0g
Sodium citrate·3H ₂ O	0.5g
L-Asparagine	0.4g
MgSO ₄ ·7H ₂ O	0.1g
Vitamin B ₁	0.1mg
Glucose solution	1.0mL
pH 7.0 ± 0.2 at 25°C	

Glucose Solution:**Composition per 100.0mL:**

Glucose	20.0g
---------------	-------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except glucose solution, to distilled/deionized water and bring volume to 999.0mL. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure—121°C. Cool to 25°C. Aseptically add 1.0mL of sterile glucose solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Escherichia coli*.

Davis Supplemented Minimal Medium**Composition per liter:**

Agar	15.0g
K ₂ HPO ₄	7.0g
KH ₂ PO ₄	3.0g
Casein hydrolysate	2.0g
Yeast extract	2.0g
(NH ₄) ₂ SO ₄	1.0g
Sodium citrate·3H ₂ O	0.5g
MgSO ₄ ·7H ₂ O	0.1g
Glucose solution	20.0mL
pH 7.0 ± 0.2 at 25°C	

Glucose Solution**Composition per 100.0mL:**

Glucose	10.0g
---------------	-------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except glucose solution, to distilled/deionized water and bring volume to 980.0mL. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 20.0mL of sterile glucose solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Escherichia coli*.

DCLS Agar

(Deoxycholate Citrate Lactose Sucrose Agar)

Composition per liter:

Agar	12.0g
Sodium citrate·3H ₂ O	10.5g
Lactose	5.0g
Na ₂ S ₂ O ₃	5.0g
Sucrose	5.0g
Pancreatic digest of casein	3.5g
Peptic digest of animal tissue	3.5g
Beef extract	3.0g
Sodium deoxycholate	2.5g
Neutral Red	0.03g

pH 7.2 ± 0.1 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems and Oxoid.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Do not overheat. Do not autoclave. Pour into sterile Petri dishes in 20.0mL volumes.

Use: For the selective isolation of *Salmonella* species, *Shigella* species, and *Vibrio* species from fecal specimens.

DCLS Agar

Composition per liter:

Agar	12.0g
Sodium citrate	10.0g
Proteose peptone	7.0g
Lactose	5.0g
Na ₂ S ₂ O ₃	5.0g
Sucrose	5.0g
Beef extract	3.0g
Sodium deoxycholate	2.5g
Neutral Red	0.03g

pH 7.2 ± 0.1 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Do not overheat. Do not autoclave. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation of *Salmonella* species, *Shigella* species, and *Vibrio* species from fecal specimens.

DCLS Agar, Hajna

Composition per liter:

Agar	20.0g
Sodium citrate	10.0g
Lactose	7.5g
Sucrose	7.5g
Peptic digest of animal tissue	5.0g
Casein enzymatic hydrolysate	5.0g
NaCl	5.0g
Na ₂ S ₂ O ₃	5.0g
Plant extract	3.0g
Beef extract	3.0g
Sodium deoxycholate	2.5g
Bromcresol Purple	0.02g

pH 7.2 ± 0.1 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Do not overheat. Do not autoclave. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation of *Salmonella* species, *Shigella* species, and *Vibrio* species from fecal specimens.

DCLS HiVeg Agar

Composition per liter:

Agar	12.0g
Sodium citrate	10.0g
Plant peptone No. 3	8.0g
Lactose	5.0g
Na ₂ S ₂ O ₃	5.0g
Sucrose	5.0g
Plant extract	3.0g
Synthetic detergent No. III	1.5g
Neutral Red	0.03g

pH 7.2 ± 0.1 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Do not overheat. Do not autoclave. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation of *Salmonella* species, *Shigella* species, and *Vibrio* species from fecal specimens.

DCLS HiVeg Agar, Hajna

Composition per liter:

Agar	20.0g
Sodium citrate	10.0g
Lactose	7.5g
Sucrose	7.5g
Plant peptone	6.0g
Plant hydrolysate	5.0g
NaCl	5.0g
Na ₂ S ₂ O ₃	5.0g
Plant extract	3.0g
Yeast extract	3.0g

Synthetic detergent No. III.....	1.5g
Bromresol Purple	0.02g
pH 7.2 ± 0.1 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Do not overheat. Do not autoclave. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation of *Salmonella* species, *Shigella* species, and *Vibrio* species from fecal specimens.

DCMYBA

Composition per liter:

Agar	20.0g
Cornmeal.....	15.0g
Supplement solution	100.0mL

Supplement Solution:

Composition per 100.0mL:

Glucose	20.0g
Yeast extract.....	1.0g
Biotin	100.0µg

Preparation of Supplement Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add cornmeal to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Maintain at 100°C for 30 min. Filter through Whatman filter paper. Add agar to filtrate and bring volume to 1.0L with distilled/deionized water. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50–55°C. Aseptically add 100.0mL of sterile supplement solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Sordaria brevicollis*.

D/E-Neutralizing Agar

Composition per liter:

Agar	15.0g
Glucose	10.0g
Soybean lecithin.....	7.0g
Na ₂ S ₂ O ₃ ·5H ₂ O	6.0g
Polysorbate 80.....	5.0g
Pancreatic digest of casein.....	5.0g
NaHSO ₃	2.5g
Yeast extract.....	2.5g
Sodium thioglycolate.....	1.0g
Bromcresol Purple	0.02g
pH 7.6 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into flasks in 9.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the neutralization and testing of antiseptics and disinfectants.

D/E-Neutralizing Broth (Dey/Engley-Neutralizing Broth)

Composition per liter:

Glucose	10.0g
Soybean lecithin.....	7.0g
Na ₂ S ₂ O ₃ ·5H ₂ O	6.0g
Tween™ 80.....	5.0g
Pancreatic digest of casein.....	5.0g
NaHSO ₃	2.5g
Yeast extract.....	2.5g
Sodium thioglycolate.....	1.0g
Bromcresol Purple	0.02g
pH 7.6± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes in 9.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the neutralization and testing of antiseptics and disinfectants.

D/E-Neutralizing Broth Base (Dey/Engley-Neutralizing Broth Base)

Composition per liter:

Glucose	10.0g
Pancreatic digest of casein.....	5.0g
Yeast extract.....	2.5g
Bromcresol Purple	0.02g
pH 7.6± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes in 9.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the neutralization and testing of antiseptics and disinfectants.

Decarboxylase Basal Medium (BAM M44)

Composition per liter:

Peptone or gelysate.....	5.0g
Yeast extract.....	3.0g
Glucose	1.0g
Bromcresol Purple	0.02g
pH 6.5 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH so that it will be 6.5 ± 0.2 after sterilization. Distribute into 16 × 150mm screw-capped tubes in 5.0mL volumes. Autoclave medium with loosely capped tubes for 10 min at 15 psi pressure–121°C. Screw the caps on tightly for storage and after inoculation.

Use: For the cultivation and differentiation of bacteria based on their ability to decarboxylate the amino acid. As the basal medium for arginine broth, lysine broth, and ornithine broth. Bacteria that decarboxylate arginine, lysine, or ornithine turn the medium turbid purple. The unsupplemented decarboxylase basal medium is used as a control.

Decarboxylase Basal Medium with Sodium Chloride (BAM M44)

Composition per liter:

Peptone or gelysate.....	5.0g
Yeast extract.....	3.0g

Glucose	1.0g
Bromcresol Purple	0.02g
pH 6.5 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH so that it will be 6.5 ± 0.2 after sterilization. Distribute into 16 × 150mm screw-capped tubes in 5.0mL volumes. Autoclave medium with loosely capped tubes for 10 min at 15 psi pressure–121°C. Screw the caps on tightly for storage and after inoculation.

Use: For the cultivation and differentiation of *Vibrio* spp. based on their ability to decarboxylate the amino acid. As the basal medium for arginine broth, lysine broth, and ornithine broth. Bacteria that decarboxylate arginine, lysine, or ornithine turn the medium turbid purple. The unsupplemented decarboxylase basal medium is used as a control.

Decarboxylase Base, Møller

Composition per liter:

Amino acid	10.0g
Beef extract	5.0g
Peptone	5.0g
Glucose	0.5g
Bromcresol Purple	0.01g
Cresol Red	5.0mg
Pyridoxal	5.0mg
Mineral oil	200.0mL
pH 6.0 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components, except mineral oil, to distilled/deionized water and bring volume to 1.0L. For amino acid, use L-arginine, L-lysine, or L-ornithine. Mix thoroughly. Distribute into screw-capped tubes in 5.0mL volumes. Autoclave medium and mineral oil separately for 15 min at 15 psi pressure–121°C. After inoculation, overlay medium with 1.0mL of sterile mineral oil per tube.

Use: For the cultivation and differentiation of bacteria based on their ability to decarboxylate the amino acid. Bacteria that decarboxylate arginine, lysine, or ornithine turn the medium turbid purple.

Decarboxylase HiVeg Agar Base

Composition per liter:

Agar	15.0g
Plant peptone	5.0g
Yeast extract	3.0g
Glucose	1.0g
Bromcresol Purple	0.02
Amino acid solution	100.0mL
pH 6.5 ± 0.2 at 25°C	

Source: This medium without amino acid is available as a premixed powder from HiMedia.

Amino Acid Solution:

Composition per 100.0mL:

L-arginine, L-lysine, or L-ornithine	10.0g
--	-------

Preparation of Amino Acid Solution: Add amino acid to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components and bring volume to 900.0L. For amino acid, use L-arginine, L-lysine, or L-ornithine and add 100.0mL of a 10% solution. Mix thoroughly. Distribute into screw-

capped tubes in 5.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: As a basal medium for the cultivation and differentiation of bacteria based on their ability to decarboxylate amino acids. The medium is supplemented with specific L-amino acids for testing decarboxylase activity on that amino acid. Amino acids are added to a final concentration of 0.5 percent.

Decarboxylase HiVeg Broth Base, Moeller

Composition per liter:

Plant extract	5.0g
Plant peptone	5.0g
Glucose	0.5g
Bromcresol Purple	0.01g
Cresol Red	5.0mg
Pyridoxal	5.0mg
Amino acid solution	100.0mL
pH 6.0 ± 0.2 at 25°C	

Source: This medium without amino acid is available as a premixed powder from HiMedia.

Amino Acid Solution:

Composition per 100.0mL:

L-arginine, L-lysine, or L-ornithine	10.0g
--	-------

Preparation of Amino Acid Solution: Add amino acid to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components and bring volume to 900.0L. For amino acid, use L-arginine, L-lysine, or L-ornithine and add 100.0mL of a 10% solution. Mix thoroughly. Distribute into screw-capped tubes in 5.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: As a basal medium for the cultivation and differentiation of bacteria based on their ability to decarboxylate amino acids. The medium is supplemented with specific L-amino acids for testing decarboxylase activity on that amino acid. Bacteria that decarboxylate arginine, lysine, or ornithine turn the medium turbid purple.

Decarboxylase Medium Base, Falkow

Composition per liter:

Amino acid (arginine, lysine, or ornithine)	5.0g
Peptone	5.0g
Yeast extract	3.0g
Glucose	1.0g
Bromcresol Purple	0.02g
Mineral oil	200.0mL
pH 6.8 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components, except mineral oil, to distilled/deionized water and bring volume to 1.0L. For amino acid, use L-arginine, L-lysine, or L-ornithine. Mix thoroughly. Distribute into screw-capped tubes in 5.0mL volumes. Autoclave medium and mineral oil separately for 15 min at 15 psi pressure–121°C. After inoculation, overlay medium with 1.0mL of sterile mineral oil per tube.

Use: For the cultivation and differentiation of bacteria based on their ability to decarboxylate a specific amino acid. Bacteria that decarboxylate arginine, lysine, or ornithine turn the medium turbid purple.

Decarboxylase Medium, Ornithine Modified**Composition per liter:**

L-Ornithine	10.0g
Meat peptone.....	5.0g
Yeast extract.....	3.0g
Bromcresol Purple solution	5.0mL
pH 5.5 ± 0.2 at 25°C	

Bromcresol Purple Solution:**Composition per 100.0mL:**

Bromcresol Purple	0.2g
Ethanol.....	50.0mL

Preparation of Bromcresol Purple Solution: Add Bromcresol Purple to ethanol. Mix thoroughly. Bring volume to 100.0mL with distilled/deionized water. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until dissolved. Adjust pH to 5.5 with HCl or NaOH. Distribute into screw-capped tubes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and differentiation of bacteria based on their ability to decarboxylate ornithine. Bacteria that decarboxylate ornithine turn the medium turbid purple.

Decarboxylase Test HiVeg Medium Base (Falkow)**Composition per liter:**

Plant peptone.....	5.0g
Yeast extract.....	3.0g
Glucose	1.0g
Bromcresol Purple	0.02
Amino acid solution.....	100.0mL
pH 6.8 ± 0.2 at 25°C	

Source: This medium without amino acid is available as a premixed powder from HiMedia.

Amino Acid Solution:**Composition per 100.0mL:**

L-arginine, L-lysine, or L-ornithine	10.0g
--	-------

Preparation of Amino Acid Solution: Add amino acid to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components and bring volume to 900.0L. For amino acid, use L-arginine, L-lysine, or L-ornithine and add 100.0ml of a 10% solution. Mix thoroughly. Distribute into screw-capped tubes in 5.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: As a basal medium for the cultivation and differentiation of bacteria based on their ability to decarboxylate amino acids. The medium is supplemented with specific L-amino acids for testing decarboxylase activity on that amino acid. Amino acids are added to a final concentration of 0.5 percent. Bacteria that decarboxylate arginine, lysine, or ornithine turn the medium turbid purple.

Deep Liver Broth**Composition per liter:**

Pancreatic digest of casein.....	10.0g
Glucose	5.0g
Yeast extract.....	5.0g
K ₂ HPO ₄	2.0g
Liver infusion.....	1.0g
pH 7.4 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Bacillus polymyxa* and *Leuconostoc mesenteroides*.

Deferribacter Medium (DSMZ Medium 935)**Composition per liter:**

NaCl.....	25.0g
Sulfur, powdered.....	10.0g
Na-acetate	2.0g
KNO ₃	0.5g
NH ₄ Cl	0.33g
KCl.....	0.33g
CaCl ₂ ·2H ₂ O	0.33g
MgCl ₂ ·6H ₂ O	0.33g
KH ₂ PO ₄	0.33g
Yeast extract.....	0.15g
NaHCO ₃ solution.....	10.0mL
Trace elements solution	10.0mL
Vitamin solution.....	10.0mL
pH 7.0 ± 0.2 at 25°C	

NaHCO₃ Solution:**Composition per 10.0mL:**

NaHCO ₃	0.3g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Must be prepared freshly.

Trace Elements Solution:**Composition per liter:**

MgSO ₄ ·7H ₂ O	3.0g
Nitritotriacetic acid	1.5g
NaCl.....	1.0g
MnSO ₄ ·2H ₂ O	0.5g
CoSO ₄ ·7H ₂ O.....	0.18g
ZnSO ₄ ·7H ₂ O.....	0.18g
CaCl ₂ ·2H ₂ O	0.1g
FeSO ₄ ·7H ₂ O.....	0.1g
NiCl ₂ ·6H ₂ O.....	0.025g
KAl(SO ₄) ₂ ·12H ₂ O.....	0.02g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·4H ₂ O	0.01g
CuSO ₄ ·5H ₂ O.....	0.01g
Na ₂ SeO ₃ ·5H ₂ O.....	0.3mg

Preparation of Trace Elements Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Vitamin Solution:**Composition per liter:**

Pyridoxine-HCl.....	10.0mg
Thiamine-HCl·2H ₂ O.....	5.0mg
Riboflavin	5.0mg
Nicotinic acid.....	5.0mg
D-Ca-pantothenate	5.0mg
p-Aminobenzoic acid.....	5.0mg
Lipoic acid	5.0mg

Biotin	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Preparation of Medium: Add components, except vitamin solution, NaHCO₃ solution, and sulfur, to 980.0mL distilled/deionized water. Gently heat and bring to boiling. Boil for 3 min. Cool to room temperature while sparging with 100% N₂. Adjust pH to 7.0. Anaerobically under 100% N₂ distribute into tubes of bottles containing the sulfur (0.1g sulfur per 10mL medium). Autoclave for 20 min at 110°C. Aseptically and anaerobically add 10.0mL sterile vitamin solution and 10.0mL sterile NaHCO₃ solution. Mix thoroughly. The final pH should be 7.0.

Use: For the cultivation of *Deferribacter desulfuricans* and *Deferribacter thermophilus*.

Defined Glucose Medium EMSY-1

Composition per liter:

Na ₂ HPO ₄	1.79g
KH ₂ PO ₄	1.7g
Citric acid.....	0.5g
NH ₄ Cl	0.43g
MgSO ₄ ·7H ₂ O	0.41g
CaCl ₂ ·2H ₂ O.....	0.04g
NaCl	0.03g
FeCl ₃ ·6H ₂ O	4.84mg
Glucose solution	100.0mL
Yeast extract solution	10.0mL
TK6-3 solution.....	1.0mL

pH 7.2 ± 0.2 at 25°C

Glucose Solution:

Composition per 100.0mL:

Glucose	10.0g
---------------	-------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Yeast Extract Solution:

Composition per 10.0mL:

Yeast extract.....	0.4g
--------------------	------

Preparation of Yeast Extract Solution: Add yeast extract to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

TK6-3 Solution:

Composition per liter:

ZnSO ₄ ·7H ₂ O	1.45g
CuSO ₄ ·5H ₂ O	0.76g
MnSO ₄ ·H ₂ O	0.31g
H ₃ BO ₃	0.19g
Na ₂ MoO ₄ ·2H ₂ O	0.17g
KI	0.04g
H ₂ SO ₄ (1N solution)	1.0mL

Preparation of TK6-3 Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components, except glucose solution and yeast extract solution, to distilled/deionized water and bring volume to 890.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool rapidly to 25°C.

Aseptically add 100.0mL of sterile glucose solution and 10.0mL of sterile yeast extract solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Xanthomonas campestris*.

Defined Medium with Povidone Iodine

Composition per 1025.0mL:

Basal solution.....	1.0L
Solution B	10.0mL
Solution C	10.0mL
Solution A	5.0mL

Basal Solution:

Composition per liter:

Agar	20.0g
Na ₂ HPO ₄	4.8g
KH ₂ PO ₄	4.4g
NH ₄ Cl	1.0g
MgSO ₄ ·7H ₂ O	0.5g

Preparation of Basal Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Solution A:

Composition per 100.0mL:

Ferric ammonium citrate.....	1.0g
CaCl ₂ ·2H ₂ O	0.1g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Solution B:

Composition per 100.0mL:

D-Glucose	10.0g
-----------------	-------

Preparation of Solution B: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Solution C:

Composition per 100.0mL:

Povidone-iodine.....	0.1g
----------------------	------

Preparation of Solution C: Add povidone-iodine to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: To 1.0L of cooled, sterile basal solution, aseptically add 5.0mL of sterile solution A, 10.0mL of sterile solution B, and 10.0mL of sterile solution C. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Pseudomonas aeruginosa* and *Pseudomonas cepacia*.

Defined Medium for *Rhodopseudomonas*

Composition per liter:

Malic acid	4.0g
(NH ₄) ₂ SO ₄	1.0g
K ₂ HPO ₄	0.9g
KH ₂ PO ₄	0.6g
MgSO ₄ ·7H ₂ O	0.2g
CaCl ₂ ·2H ₂ O	0.075g
EDTA	0.02g
FeSO ₄ ·7H ₂ O.....	0.012g
Thiamine.....	1.0mg

Biotin	0.015mg
Trace elements	1.0mL
pH 6.8 ± 0.2 at 25°C	

Trace Elements:**Composition per 250.0mL:**

H ₃ BO ₃	0.7g
MnSO ₄ ·H ₂ O	0.4g
Na ₂ MoO ₄ ·2H ₂ O	0.19g
ZnSO ₄ ·7H ₂ O	0.06g
CoCl ₂ ·6H ₂ O	0.05g
Cu(NO ₃) ₂ ·3H ₂ O	0.01g

Preparation of Trace Elements: Add components to distilled/deionized water and bring volume to 250.0mL. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.8. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Rhodobacter capsulatus*.

Dehalobacter restrictus Medium (DSMZ Medium 732)

Composition per 1046mL:

Solution A	900.0mL
Solution B	100.0mL
Solution G	15.0mL
Solution C	10.0mL
Solution E	10.0mL
Solution F	10.0mL
Solution D	1.0mL
pH 7.2 ± 0.2 at 25°C	

Solution A:**Composition per liter:**

K ₂ HPO ₄	0.653g
Na-acetate	0.460g
NaH ₂ PO ₄ ·H ₂ O	0.173g
Peptone	0.1g
Resazurin	0.5mg

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 1.0 L. Mix thoroughly. Gently heat and bring to boiling. Cool to room temperature under 80% H₂ + 20% CO₂ gas. Distribute 9ml volumes into 50mL serum bottles under 80% H₂ + 20% CO₂ gas. Pressurize closed bottles with H₂ + CO₂ gas to 0.5 bar overpressure. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B:**Composition per 100.0mL:**

NaHCO ₃	3.730g
NH ₄ HCO ₃	0.443g

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 100.0mL in bottles. Mix thoroughly. Flush solution with 80% N₂ + 20% CO₂ gas. Close bottles. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C:**Composition per 10.0mL:**

MgCl ₂ ·6H ₂ O	0.12g
CaCl ₂ ·2H ₂ O	0.11g

Preparation of Solution C: Add components to distilled/deionized water and bring volume to 10.0mL in bottles. Mix thoroughly. Flush

solution with 100% N₂ for 20 min. Close bottles. Autoclave for 15 min at 15 psi pressure–121°C.

Solution D:**Composition per 10.0mL:**

Na ₂ -EDTA	5.0mg
FeCl ₂ ·4H ₂ O	5.0mg
AlCl ₃	0.1mg
Trace elements solution SL-10	10.0mL

Trace Elements Solution SL-10:**Composition per liter:**

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Solution D: Add Na₂-EDTA, FeCl₂·4H₂O, and AlCl₃ to 10.0mL trace solution SL-10 in a Hungate bottle. Mix thoroughly. Flush solution with 100% N₂ for 20 min. Close bottles. Autoclave for 15 min at 15 psi pressure–121°C.

Solution E:**Composition per liter:**

Vitamin solution	900.0mL
Seven vitamin solution	100.0mL

Vitamin Solution:**Composition per liter:**

Pyridoxine-HCl	10.0mg
Thiamine-HCl·2H ₂ O	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
D-Ca-pantothenate	5.0mg
p-Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Seven Vitamin Solution:**Composition per liter:**

Pyridoxine hydrochloride	300.0mg
Thiamine-HCl·2H ₂ O	200.0mg
Nicotinic acid	200.0mg
Vitamin B ₁₂	100.0mg
Calcium pantothenate	100.0mg
p-Aminobenzoic acid	80.0mg
D(+)-Biotin	20.0mg

Preparation of Seven Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Sparge with 100% N₂. Mix thoroughly.

Preparation of Solution E: Combine 900.0mL vitamin solution and 100.0mL seven vitamin solution. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Solution F:

Composition per 10.0mL:

Na₂S·9H₂O 0.3g

Preparation of Solution F: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution G:

Hexadecane 45.0mL
Tetrachloroethene 5.0mL

Preparation of Solution G: Using a syringe, aseptically inject 5.0mL sterile tetrachloroethene to the 45.0mL sterile hexadecane in the 100mL serum bottle. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Hexadecane:

Hexadecane 45.0mL

Preparation of Hexadecane: Add hexadecane to a 100mL serum bottle. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Tetrachloroethene:

Tetrachloroethene 10.0mL

Preparation of Tetrachloroethene: Add tetrachloroethene to a 10mL serum bottle. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add 9mL sterile solution A to a 50 mL sterile bottle. Then add by injection 1.0mL sterile solution B, 0.1mL sterile solution C, 0.01mL sterile solution D, 0.1mL sterile solution E, and 0.1mL sterile solution F. Inoculate the culture into the medium. Then add by injection 0.15mL sterile solution G.

Use: For the cultivation of *Dehalobacter restrictus* and *Sulfurospirillum halorespiran*.

***Dehalobacter restrictus* Medium
(DSMZ Medium 732)**

Composition per 1056mL:

Solution A 900.0mL
Solution B 100.0mL
Solution G 15.0mL
Solution C 10.0mL
Solution E 10.0mL
Solution F 10.0mL
Solution H 10.0mL
Solution D 1.0mL

pH 7.2 ± 0.2 at 25°C

Solution A:

Composition per liter:

K₂HPO₄ 0.653g
Na-acetate 0.460g
NaH₂PO₄·H₂O 0.173g
Peptone 0.1g
Resazurin 0.5mg

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 1.0 L. Mix thoroughly. Gently heat and bring to boiling. Cool to room temperature under 80% N₂ + 20% CO₂

gas. Distribute 9ml volumes into 50mL serum bottles under 80% N₂ + 20% CO₂ gas. Pressurize closed bottles with N₂ + CO₂ gas to 0.5 bar overpressure. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B:

Composition per 100.0mL:

NaHCO₃ 3.730g
NH₄HCO₃ 0.443g

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 100.0mL in bottles. Mix thoroughly. Flush solution with 80% N₂ + 20% CO₂ gas. Close bottles. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C:

Composition per 10.0mL:

MgCl₂·6H₂O 0.12g
CaCl₂·2H₂O 0.11g

Preparation of Solution C: Add components to distilled/deionized water and bring volume to 10.0mL in bottles. Mix thoroughly. Flush solution with 100% N₂ for 20 min. Close bottles. Autoclave for 15 min at 15 psi pressure–121°C.

Solution D:

Composition per 10.0mL:

Na₂-EDTA 5.0mg
FeCl₂·4H₂O 5.0mg
AlCl₃ 0.1mg
Trace elements solution SL-10 10.0mL

Trace Elements Solution SL-10:

Composition per liter:

FeCl₂·4H₂O 1.5g
CoCl₂·6H₂O 190.0mg
MnCl₂·4H₂O 100.0mg
ZnCl₂ 70.0mg
Na₂MoO₄·2H₂O 36.0mg
NiCl₂·6H₂O 24.0mg
H₃BO₃ 6.0mg
CuCl₂·2H₂O 2.0mg
HCl (25% solution) 10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Solution D: Add Na₂-EDTA, FeCl₂·4H₂O, and AlCl₃ to 10.0mL trace solution SL-10 in a Hungate bottle. Mix thoroughly. Flush solution with 100% N₂ for 20 min. Close bottles. Autoclave for 15 min at 15 psi pressure–121°C.

Solution E:

Composition per liter:

Vitamin solution 900.0mL
Seven vitamin solution 100.0mL

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl 10.0mg
Thiamine-HCl·2H₂O 5.0mg
Riboflavin 5.0mg
Nicotinic acid 5.0mg
D-Ca-pantothenate 5.0mg
p-Aminobenzoic acid 5.0mg
Lipoic acid 5.0mg

Biotin	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Seven Vitamin Solution:

Composition per liter:

Pyridoxine hydrochloride	300.0mg
Thiamine-HCl·2H ₂ O	200.0mg
Nicotinic acid.....	200.0mg
Vitamin B ₁₂	100.0mg
Calcium pantothenate	100.0mg
<i>p</i> -Aminobenzoic acid.....	80.0mg
D(+)-Biotin.....	20.0mg

Preparation of Seven Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Sparge with 100% N₂. Mix thoroughly.

Preparation of Solution E: Combine 900.0mL vitamin solution and 100.0mL seven vitamin solution. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Solution F:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.3g
---	------

Preparation of Solution F: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution G:

Hexadecane	45.0mL
Tetrachloroethene.....	5.0mL

Hexadecane:

Hexadecane	45.0mL
------------------	--------

Preparation of Hexadecane: Add hexadecane to a 100mL serum bottle. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Tetrachloroethene:

Tetrachloroethene.....	10.0mL
------------------------	--------

Preparation of Tetrachloroethene: Add tetrachloroethene to a 10mL serum bottle. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Solution G: Using a syringe, aseptically inject 5.0mL sterile tetrachloroethene to the 45.0mL sterile hexadecane in the 100mL serum bottle. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution H:

Composition per 10.0mL:

Na-lactate	2.5g
------------------	------

Preparation of Solution H: Add Na-lactate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add 9mL sterile solution A to a 50mL sterile bottle. Then add by injection 1.0mL sterile solution B, 0.1mL sterile solution C, 0.01mL sterile solution D, 0.1mL sterile solution E, 0.1mL sterile solution F, and 0.1mL solution H. Inoculate the culture into the medium. Then add by injection 0.15mL sterile solution G.

Use: For the cultivation of *Sulfurospirillum halorespirans* DSM 13726.

Deleya halophila Medium

Composition per liter:

NaCl.....	81.0g
MgSO ₄	19.6g
Yeast extract.....	10.0g
Proteose peptone No.3	5.0g
MnCl ₂	4.0g
KCl.....	2.0g
Glucose	1.0g
CaCl ₂	0.47g
NaBr.....	0.026g
NaHCO ₃ solution	10.0mL

pH 7.5 ± 0.2 at 25°C

NaHCO₃ Solution

Composition per 10.0mL:

NaHCO ₃	0.06g
--------------------------	-------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except NaHCO₃ solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Adjust pH to 7.5. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 10.0mL of sterile NaHCO₃ solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Deleya halophila*.

DeMan, Rogosa, Sharpe Agar

See: MRS Agar

DeMan, Rogosa, Sharpe Broth

See: MRS Broth

Demi-Fraser Broth

Composition per liter:

NaCl.....	20.0g
Tryptose	10.0g
Na ₂ HPO ₄	9.6g
Beef extract.....	5.0g
Yeast extract.....	5.0g
LiCl	3.0g
KH ₂ PO ₄	1.35g
Esculin	1.0g
Acridine-HCl	12.5mg
Nalidixic acid.....	10.0mg
Ferric ammonium citrate supplement	10.0mL

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder and supplement from BD Diagnostic Systems.

Ferric Ammonium Citrate Supplement:

Composition per 10.0mL:

Ferric ammonium citrate.....	0.5g
------------------------------	------

Preparation of Ferric Ammonium Citrate Supplement: Add ferric ammonium citrate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except ferric ammonium citrate supplement, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL of sterile ferric ammonium citrate sup-

plement. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Listeria* species from food and environmental samples.

***Denitrovibrio* Medium (DSMZ Medium 881)**

Composition per 1032.0mL:

NaCl	20.0g
MgCl ₂ ·6H ₂ O	3.0g
KH ₂ PO ₄	1.0g
NaNO ₃	0.7g
KCl	0.5g
NH ₄ Cl	0.25g
CaCl ₂ ·2H ₂ O	0.15g
Na ₂ SO ₄	0.02g
Resazurin	0.5mg
Na-acetate solution	10.0mL
NaHCO ₃ solution	10.0mL
Na ₂ S·9H ₂ O solution	10.0mL
Seven vitamin solution	1.0mL
Trace elements solution SL-10	1.0mL

pH 6.8–7.2 at 25°C

Na-Acetate Solution:

Composition per 10.0mL:

Na-acetate	1.64g
------------	-------

Preparation of Na-Acetate Solution: Add Na-acetate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.5g
-------------------------------------	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

NaHCO₃ Solution:

Composition per 10.0mL:

NaHCO ₃	2.5g
--------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

Seven Vitamin Solution:

Composition per liter:

Pyridoxine hydrochloride	300.0mg
Thiamine-HCl·2H ₂ O	200.0mg
Nicotinic acid	200.0mg
Vitamin B ₁₂	100.0mg
Calcium pantothenate	100.0mg
<i>p</i> -Aminobenzoic acid	80.0mg
D(+)-Biotin	20.0mg

Preparation of Seven Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Sparge with 100% N₂. Mix thoroughly. Filter sterilize.

Trace Elements Solution SL-10:

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
--------------------------------------	------

CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare and dispense medium under 100% N₂ gas atmosphere. Add components, except NaHCO₃ solution, Na-acetate solution, Na₂S·9H₂O solution, seven vitamin solution, and trace elements solution SL-10, to distilled/deionized water and bring volume to 949.0mL. Mix thoroughly. Adjust pH to 6.8–7.2. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 10.0mL NaHCO₃ solution, 10.0mL Na-acetate solution, 10.0mL Na₂S·9H₂O solution, 1.0mL seven vitamin solution, and 1.0mL trace elements solution SL-10. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or bottles.

Use: For the cultivation of *Denitrovibrio acetiphilus*.

Deoxycholate Agar

Composition per liter:

Agar	16.0g
Lactose	10.0g
NaCl	5.0g
Pancreatic digest of casein	5.0g
Peptic digest of animal tissue	5.0g
K ₂ HPO ₄	2.0g
Ferric citrate	1.0g
Sodium citrate	1.0g
Sodium deoxycholate	1.0g
Neutral Red	0.033g

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Do not autoclave. Cool to 45°–50°C. Pour into sterile Petri dishes.

Use: For the selective isolation, cultivation, enumeration, and differentiation of Gram-negative enteric microorganisms from a variety of clinical and nonclinical specimens. *Escherichia coli* appears as large, flat, rose-red colonies. *Enterobacter* and *Klebsiella* species appear as large, mucoid, pale colonies with a pink center. *Proteus* and *Salmonella* species appear as large, colorless to tan colonies. *Shigella* species appear as colorless to pink colonies. *Pseudomonas* species appear as irregular colorless to brown colonies.

Deoxycholate Agar (Desoxycholate Agar)

Composition per liter:

Agar	15.0g
Lactose	10.0g
Peptone	10.0g

NaCl	5.0g
K ₂ HPO ₄	2.0g
Ferric citrate	1.0g
Sodium citrate	1.0g
Sodium deoxycholate	1.0g
Neutral Red	0.03g
pH 7.3 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Oxoid Unipath and BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Do not autoclave. Cool to 50°C. Pour into sterile Petri dishes.

Use: For the selective isolation, cultivation, enumeration, and differentiation of Gram-negative enteric microorganisms from a variety of clinical and nonclinical specimens. *Escherichia coli* appears as large, flat, rose-red colonies. *Enterobacter* and *Klebsiella* species appear as large, mucoid, pale colonies with a pink center. *Proteus* and *Salmonella* species appear as large, colorless to tan colonies. *Shigella* species appear as colorless to pink colonies. *Pseudomonas* species appear as irregular colorless to brown colonies.

Deoxycholate Agar

Composition per liter:

Agar	15.0g
Peptic digest of animal tissue	10.0g
Lactose	10.0g
NaCl	5.0g
K ₂ HPO ₄	2.0g
Ferric citrate	1.0g
Sodium citrate	1.0g
Sodium deoxycholate	1.0g
Neutral Red	0.03g
pH 7.5 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Do not autoclave. Cool to 45°–50°C. Pour into sterile Petri dishes.

Use: For the selective isolation, cultivation, enumeration, and differentiation of Gram-negative enteric microorganisms from a variety of clinical and nonclinical specimens. *Escherichia coli* appears as large, flat, rose-red colonies. *Enterobacter* and *Klebsiella* species appear as large, mucoid, pale colonies with a pink center. *Proteus* and *Salmonella* species appear as large, colorless to tan colonies. *Shigella* species appear as colorless to pink colonies. *Pseudomonas* species appear as irregular colorless to brown colonies.

Deoxycholate Agar, HiVeg

Composition per liter:

Agar	15.0g
Plant peptone	10.0g
Lactose	10.0g
NaCl	5.0g
K ₂ HPO ₄	2.0g
Ferric citrate	1.0g
Sodium citrate	1.0g

Synthetic detergent No. III	1.0g
Neutral Red	0.03g
pH 7.5 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Do not autoclave. Cool to 45°–50°C. Pour into sterile Petri dishes.

Use: For the selective isolation, cultivation, enumeration, and differentiation of Gram-negative enteric microorganisms from a variety of clinical and nonclinical specimens. *Escherichia coli* appears as large, flat, rose-red colonies. *Enterobacter* and *Klebsiella* species appear as large, mucoid, pale colonies with a pink center. *Proteus* and *Salmonella* species appear as large, colorless to tan colonies. *Shigella* species appear as colorless to pink colonies. *Pseudomonas* species appear as irregular colorless to brown colonies.

Deoxycholate Citrate Agar

Composition per liter:

Sodium citrate	50.0g
Agar	15.0g
Lactose	10.0g
Beef extract	5.0g
Peptone	5.0g
Na ₂ S ₂ O ₃ ·5H ₂ O	5.0g
Sodium deoxycholate	2.5g
Ferric citrate	1.0g
Neutral Red	0.025g
pH 7.3 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Do not autoclave. Cool to 45°–50°C. Pour into sterile Petri dishes. Dry the agar surface before use.

Use: For the selective isolation and cultivation of enteric pathogens, especially *Salmonella* and *Shigella* species.

Deoxycholate Citrate Agar

Composition per liter:

Sodium citrate	20.0g
Agar	17.0g
Lactose	10.0g
Meat, solids from infusion	10.0g
Peptic digest of animal tissue	10.0g
Sodium deoxycholate	5.0g
Ferric citrate	1.0g
Neutral Red	0.02g
pH 7.3 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Do not autoclave. Cool to 45°–50°C. Pour into sterile Petri dishes. Dry the agar surface before use.

Use: For the selective isolation and cultivation of enteric pathogens, especially *Salmonella* and *Shigella* species.

Deoxycholate Citrate Agar (Desoxycholate Citrate Agar)

Composition per liter:

Pork infusion	330.0g
Sodium citrate	20.0g
Agar	13.5g
Lactose	10.0g
Proteose peptone No. 3	10.0g
Sodium deoxycholate	5.0g
Ferric ammonium citrate	2.0g
Neutral Red	0.02g

pH 7.5 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Do not autoclave. Cool to 45°–50°C. Pour into sterile Petri dishes. Dry the agar surface before use.

Use: For the selective isolation and cultivation of enteric pathogens, especially *Salmonella* and *Shigella* species.

Deoxycholate Citrate Agar

Composition per liter:

Sodium citrate	20.0g
Agar	13.0g
Proteose peptone	10.0g
Heart infusion solids	10.0g
Lactose	10.0g
Sodium deoxycholate	5.0g
Ferric ammonium citrate	2.0g
Neutral Red	0.02g

pH 7.5 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Do not autoclave. Cool to 45°–50°C. Pour into sterile Petri dishes. Dry the agar surface before use. Avoid excessive heating as it is detrimental to the medium.

Use: For the selective isolation and cultivation of enteric pathogens, especially *Salmonella* and *Shigella* species.

Deoxycholate Citrate Agar, HiVeg

Composition per liter:

Sodium citrate	20.0g
Agar	13.5g
Plant peptone No. 3	13.0g
Plant infusion	10.0g
Lactose	10.0g
Synthetic detergent No. III	2.0g
Ferric ammonium citrate	2.0g
Neutral Red	0.02g

pH 7.5 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Do not autoclave. Cool to 45°–50°C. Pour into sterile Petri

dishes. Dry the agar surface before use. Avoid excessive heating as it is detrimental to the medium.

Use: For the selective isolation and cultivation of enteric pathogens, especially *Salmonella* and *Shigella* species.

Deoxycholate Citrate Agar, Hynes

Composition per liter:

Agar	12.0g
Lactose	10.0g
Sodium citrate	8.5g
Na ₂ S ₂ O ₃ ·5H ₂ O	5.4g
Beef extract powder	5.0g
Peptone	5.0g
Sodium deoxycholate	5.0g
Ferric citrate	1.0g
Neutral Red	0.02g

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Do not autoclave. Cool to 45°–50°C. Pour into sterile Petri dishes. Dry the agar surface before use.

Use: For the selective isolation, cultivation, and differentiation of enteric pathogens, especially *Salmonella* and *Shigella* species. Lactose-fermenting bacteria appear as pink colonies that may or may not be surrounded by a zone of precipitated deoxycholate. Nonlactose-fermenting bacteria appear as colorless colonies that are surrounded by a clear orange-yellow zone.

Deoxycholate Citrate Lactose Sucrose Agar

See: [DCLS Agar](#)

Deoxycholate Lactose Agar

pH 7.1 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Do not autoclave. Cool to 45°–50°C. Pour into sterile Petri dishes. Dry the agar surface before use.

Use: For the selective isolation, cultivation, and differentiation of enteric pathogens, especially *Salmonella* and *Shigella* species. Lactose-fermenting bacteria appear as pink colonies that may or may not be surrounded by a zone of precipitated deoxycholate. Nonlactose-fermenting bacteria appear as colorless colonies that are surrounded by a clear orange-yellow zone. Also used for the enumeration of coliform bacteria from water, milk, and dairy products.

Deoxycholate Lactose HiVeg Agar**Composition per liter:**

Agar	15.0g
Plant special peptone	10.0g
Lactose	10.0g
NaCl	5.0g
Sodium citrate	2.0g
Synthetic detergent No. III	0.5g
Neutral Red	0.03g

pH 7.1 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Do not autoclave. Cool to 45°–50°C. Pour into sterile Petri dishes. Dry the agar surface before use.

Use: For the selective isolation, cultivation, and differentiation of enteric pathogens, especially *Salmonella* and *Shigella* species. Lactose-fermenting bacteria appear as pink colonies that may or may not be surrounded by a zone of precipitated deoxycholate. Nonlactose-fermenting bacteria appear as colorless colonies that are surrounded by a clear orange-yellow zone. Also used for the enumeration of coliform bacteria from water, milk, and dairy products.

Deoxycholate Lactose Sucrose Sorbitol Agar**Composition per liter:**

Sodium citrate	20.0g
Agar	15.0g
D-Sorbitol	10.0g
Lactose	10.0g
Sucrose	5.0g
Pancreatic digest of casein	5.0g
Yeast extract	5.0g
Sodium deoxycholate	2.5g
Ferric citrate	1.0g
Neutral Red	0.02g

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Do not overheat. Adjust pH to 7.4. Do not autoclave. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of *Hafnia* species.

Dermabacter Medium**Composition per liter:**

Pancreatic digest of casein	10.0g
Glucose	5.0g
NaCl	5.0g
Yeast extract	5.0g

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Dermabacter hominus*.

Dermasel Agar Base**Composition per liter:**

Glucose	20.0g
Agar	14.5g

Papaic digest of soybean meal	10.0g
Antibiotic inhibitor	10.0mL
pH 6.8–7.0 at 25°C	

Source: This medium is available as a premixed powder from Oxoid Unipath.

Antibiotic Inhibitor:**Composition per 10.0mL:**

Cycloheximide	0.4g
Chloramphenicol	0.05g
Acetone	10.0mL

Preparation of Antibiotic Inhibitor: Add cycloheximide and chloramphenicol to 10.0mL of acetone. Mix thoroughly.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Do not overheat. Add antibiotic inhibitor. Mix thoroughly. Autoclave for 10 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the isolation and cultivation of dermatophytic fungi isolated from hair, nails, or skin scrapings.

Dermatophyte Test Medium AgarSee: **DTM Agar****Dermatophyte Test Medium****Composition per liter:**

Agar	20.0g
Enzymatic digest of soybean meal	10.0g
Glucose	10.0g
Cycloheximide	0.5g
Phenol Red	0.2g
Selective supplement solution	10.0mL

pH 5.5 ± 0.2 at 25°C

Source: This medium is available from Acumedia, Neogen Corp.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Selective Supplement Solution:**Composition per 10.0mL:**

Gentamicin	0.1g
Chlortetracycline	0.1g

Preparation of Selective Supplement Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except selective supplement solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Distribute into tubes or flasks. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 10.0mL selective supplement solution. Mix thoroughly. Pour into sterile Petri dishes or leave in tubes.

Use: For the selective isolation of dermatophytic fungi.

Dermatophyte Test Medium Base**Composition per liter:**

Agar	20.0g
Glucose	10.0g

Papaic digest of soybean meal	10.0g
Cycloheximide	0.5g
Phenol Red	0.2g
Gentamycin sulfate	0.1g
Chlortetracycline	0.1g

pH 5.5 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: Add components, except gentamycin sulfate and chlortetracycline, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add gentamycin sulfate and chlortetracycline. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the selective isolation and cultivation of pathogenic fungi from cutaneous sources.

Dermocystidium Medium

Composition per liter:

NaCl	48.0g
Agar	36.0g
MgSO ₄ ·7H ₂ O	16.0g
Glucose	8.0 g
Casein hydrolysate or sodium glutamate	4.0g
Tris(hydroxymethyl)aminomethane buffer	4.0g
KCl	1.4g
CaCl ₂	0.94g
K ₂ HPO ₄	0.86g
Thiamine-HCl	400.0µg
Cyanocobalamine	6.0µg
Trace metal mix stock	20.0mL

Trace Metal Mix Stock:

Composition per 100.0mL:

H ₃ BO ₃	114.0mg
EDTA	100.0mg
FeCl ₃ ·6H ₂ O	96.8mg
MnCl ₂ ·4H ₂ O	36.0mg
Na ₂ MoO ₄ ·2H ₂ O	23.0mg
ZnCl ₂	13.4mg
CuCl ₂ ·2H ₂ O	536.0µg
CoCl ₂ ·6H ₂ O	400.0µg

pH 7.4 ± 0.3 at 25°C

Preparation of Trace Metal Mix Stock: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.4 with concentrated HCl. Bring volume to 2.0L with distilled/deionized water. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Dermocystidium* species.

Derxia gummosa Medium

Composition per liter:

Agar	20.0g
Starch	20.0g

MgSO ₄ ·7H ₂ O	0.2g
KH ₂ PO ₄	0.15g
NaHCO ₃	0.1g
K ₂ HPO ₄	0.05g
CaCl ₂	0.02g
Na ₂ MoO ₄ ·2H ₂ O	2.0mg
Bromthymol Blue solution	5.0mL
FeCl ₃ ·6H ₂ O (10% solution)	0.1mL

pH 6.9 ± 0.2 at 25°C

Bromthymol Blue Solution:

Composition per 10.0mL:

Bromthymol Blue	0.5g
Ethanol	10.0mL

Preparation of Bromthymol Blue Solution: Add Bromthymol Blue to 10.0mL of ethanol. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Derxia gummosa*.

Derxia Medium

Composition per liter:

Agar	20.0g
Glucose	20.0g
NH ₄ Cl	2.0g
K ₂ HPO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.2g
CaSO ₄	5.0mg
FeSO ₄ ·7H ₂ O	5.0mg
Na ₂ MoO ₄ ·2H ₂ O	0.5mg

pH 6.7 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 6.7. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Derxia gummosa*.

Desoxycholate Agar

See: **Desoxycholate Agar**

Desoxycholate Citrate Agar

See: **Desoxycholate Citrate Agar**

Desulfacinum hydrothermale Medium (DSMZ Medium 875)

Composition per 1004mL:

Solution A	920.0mL
Solution C (NaHCO ₃ solution)	50.0mL
Solution F	13.0mL
Solution D (Seven vitamin solution)	10.0mL
Solution E	10.0mL
Solution B (Trace elements solution SL-10)	1.0mL

pH 7.0–7.3 at 25°C

Solution A:

Composition per 920mL:

NaCl	10.4g
MgSO ₄ ·7H ₂ O	2.72g

MgCl ₂ ·6H ₂ O.....	2.24g
CaCl ₂ ·2H ₂ O.....	0.56g
KCl.....	0.29g
NH ₄ Cl.....	0.1g
KH ₂ PO ₄	0.08g
Resazurin.....	0.5mg

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 920.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B (Trace Elements Solution SL-10):

Composition per liter:

FeCl ₂ ·4H ₂ O.....	1.5g
CoCl ₂ ·6H ₂ O.....	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	36.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O.....	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Solution B (Trace Elements Solution SL-10):

Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C (NaHCO₃ Solution):

Composition per 100.0mL:

NaHCO ₃	5.0g
--------------------------	------

Preparation of Solution C (NaHCO₃ Solution): Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution D (Seven Vitamin Solution):

Composition per liter:

Pyridoxine hydrochloride.....	300.0mg
Thiamine-HCl·2H ₂ O.....	200.0mg
Nicotinic acid.....	200.0mg
Vitamin B ₁₂	100.0mg
Calcium pantothenate.....	100.0mg
<i>p</i> -Aminobenzoic acid.....	80.0mg
D(+)-Biotin.....	20.0mg

Preparation of Solution D (Seven Vitamin Solution): Add components to distilled/deionized water and bring volume to 1.0L. Sparge with 100% N₂. Mix thoroughly. Filter sterilize.

Solution E:

Composition per 10.0mL:

Na-lactate.....	2.5g
-----------------	------

Preparation of Solution E: Add Na-lactate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution F:

Composition per 100.0mL:

Na ₂ S·9H ₂ O.....	3.0g
--	------

Preparation of Solution F: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas atmosphere. Add 50.0mL sterile solution C, 13.0mL sterile solution F, 10.0mL sterile solution D, 10.0mL sterile solution E, and 1.0mL sterile solution B to 920.0mL sterile solution A. Mix thoroughly. The pH of the completed medium should be 7.0–7.3. Aseptically and anaerobically distribute into sterile tubes or bottles.

Use: For the cultivation of *Desulfacinum hydrothermale*.

Desulfacinum Medium (DSMZ Medium 1100)

Composition per liter:

NaCl.....	7.0g
MgCl ₂ ·6H ₂ O.....	3.1g
Na ₂ SO ₃	3.0g
KCl.....	0.5g
Yeast extract.....	0.5g
NH ₄ Cl.....	0.3g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O.....	0.1g
Resazurin.....	0.5mg
Na-lactate solution.....	10.0mL
NaHCO ₃ solution.....	10.0mL
Na ₂ S·9H ₂ O solution.....	10.0mL
Trace elements solution SL-10 with EDTA.....	1.0mL
Selenite/tungstate solution.....	1.0mL
pH 7.2 ± 0.2 at 25°C	

Na-lactate Solution:

Composition per 10.0mL:

Na-lactate.....	2.0g
-----------------	------

Preparation of Na-lactate Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

NaHCO₃ Solution:

Composition per 10.0mL:

NaHCO ₃	1.5g
--------------------------	------

Preparation of NaHCO₃ Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 20% CO₂ + 80% H₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	0.5g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Adjust to pH 7.0. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Selenite/Tungstate Solution:

Composition per liter:

NaOH.....	0.5g
Na ₂ WO ₄ ·2H ₂ O.....	4.0mg
Na ₂ SeO ₃ ·5H ₂ O.....	3.0mg

Preparation of Selenite/Tungstate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution SL-10 with EDTA:**Composition per liter:**

FeCl ₂ ·4H ₂ O	1.5g
Na ₂ -EDTA	0.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution SL-10 with EDTA:

Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Adjust pH to 7.0.

Preparation of Medium: Add components, except bicarbonate, lactate, and sulfite solution, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Gently heat and bring to boiling. Boil for 1 min. Cool while sparging with 100% N₂. Add the solid bicarbonate. Dispense under 100% N₂ into culture vessels. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anoxically add bicarbonate, lactate, and sulfide solutions. Adjust final pH of the medium to pH 7.2.

Use: For the cultivation of *Desulfacinum* spp.

***Desulfatirhabdium* Medium
(DSMZ Medium 1086)**

Composition per liter:

Na ₂ SO ₄	2.8g
Na ₂ HPO ₄	0.53g

Trace elements solution SL-10	1.0mL
Selenite/tungstate solution	1.0mL

pH 7.1 ± 0.2 at 25°C

NaHCO₃ Solution:**Composition per 10.0mL:**

NaHCO ₃	4.0g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 20% CO₂ + 80% H₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Vitamin Solution:**Composition per liter:**

Pyridoxine-HCl	10.0mg
Thiamine-HCl·2H ₂ O	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg

D-Ca-pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Crotonate Solution:**Composition per 10.0mL:**

Na-crotonate	1.7g
--------------------	------

Preparation of Crotonate Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Benzoate Solution:**Composition per 10.0mL:**

Na-benzoate	0.43g
-------------------	-------

Preparation of Benzoate Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O	0.5g
---	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Selenite/Tungstate Solution:**Composition per liter:**

NaOH	0.5g
Na ₂ WO ₄ ·2H ₂ O	4.0mg
Na ₂ SeO ₃ ·5H ₂ O	3.0mg

Preparation of Selenite/Tungstate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution SL-10:**Composition per liter:**

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except bicarbonate, vitamins, crotonate, benzoate, and sulfide solutions, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Boil for 1 min. Cool while sparging with 80% N₂ + 20% CO₂. Dispense under 80% N₂ + 20% CO₂ into culture vessels.

Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add vitamins, crotonate, benzoate, and sulfide. Adjust the final pH of the medium to 7.0–7.2. After inoculation pressurize the vessels with 80% N₂ + 20% CO₂ to 0.7 bar overpressure.

Use: For the cultivation of *Desulfatirhabdium* spp.

Desulfitobacterium dehalogenans Medium

Composition per liter:

Solution A	955.0mL
Solution B	25.0mL
Solution C	20.0mL

Solution A:

Composition per 955.0mL:

Na ₂ HPO ₄	2.2g
Yeast extract.....	2.0g
3-Chloro-4-hydroxyphenylacetic acid.....	1.5g
L-Cysteine·HCl·H ₂ O.....	0.7g
NH ₄ Cl.....	0.5g
KH ₂ PO ₄	0.44g
MgCl ₂ ·6H ₂ O.....	0.2g
CaCl ₂	25.0mg
Wolfe's mineral solution.....	10.0mL

Wolfe's Mineral Solution:

MgSO ₄ ·7H ₂ O.....	3.0g
Nitrilotriacetic acid.....	1.5g
NaCl.....	1.0g
MnSO ₄ ·H ₂ O.....	0.5g
FeSO ₄ ·7H ₂ O.....	0.1g
CoCl ₂ ·6H ₂ O.....	0.1g
CaCl ₂	0.1g
ZnSO ₄ ·7H ₂ O.....	0.1g
CuSO ₄ ·5H ₂ O.....	0.01g
AlK(SO ₄) ₂ ·12H ₂ O.....	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O.....	0.01g

Preparation of Wolfe's Mineral Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components one at a time. Add distilled/deionized water to 1.0L.

Preparation of Solution A: Add components, except L-cysteine·HCl·H₂O, to distilled/deionized water and bring volume to 955.0mL. Mix thoroughly. Gently heat and bring to boiling. Cool to room temperature while sparging with 90% N₂ + 10% CO₂. Adjust pH to 7.3. Add L-cysteine·HCl·H₂O. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B:

Composition per 25.0mL:

Sodium pyruvate.....	2.2g
----------------------	------

Preparation of Solution B: Add sodium pyruvate to distilled/deionized water and bring volume to 25.0mL. Mix thoroughly. Filter sterilize. Sparge with 100% N₂.

Solution C:

Composition per 20.0mL:

NaHCO ₃	1.0g
--------------------------	------

Preparation of Solution C: Add NaHCO₃ to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize. Sparge with 100% CO₂.

Preparation of Medium: Aseptically and anaerobically combine 955.0mL of sterile solution A with 25.0mL of sterile solution B and 20.0mL of sterile solution C. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or flasks.

Use: For the cultivation of *Desulfitobacterium dehalogenans*.

Desulfitobacterium dehalogenans Medium

Composition per liter:

KH ₂ PO ₄	5.4g
Sodium pyruvate.....	2.2g
3-Chloro-4-hydroxyphenylacetic acid.....	1.9g
Yeast extract.....	1.0g
NH ₄ Cl.....	0.5g

NaWO ₄ ·2H ₂ O.....	0.01g
NiCl ₂ ·6H ₂ O.....	0.01g

Preparation of Modified Wolfe's Mineral Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components one at a time. Add distilled/deionized water to 1.0L. Adjust pH to 6.8.

Preparation of Medium: Prepare and dispense medium under 100% N₂. Add components, except reducing solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 3 min. Cool to room temperature while sparging with 100% N₂. Add reducing solution. Mix thoroughly. Adjust pH to 7.5. Anaerobically distribute into anaerobic tubes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Desulfitobacterium dehalogenans*.

Desulfitobacterium hafniense Medium

Composition per 1005.0mL:

NaHCO ₃	2.6g
NH ₄ Cl	1.0g
Yeast extract.....	1.0g
K ₂ HPO ₄ ·3H ₂ O.....	0.4g
MgCl ₂ ·6H ₂ O.....	0.1g
NaCl.....	0.1g
CaCl ₂ ·2H ₂ O.....	0.05g
Resazurin	0.5mg
Na ₂ S·9H ₂ O solution	10.0mL
Sodium pyruvate solution.....	10.0mL
Wolfe's vitamin solution.....	10.0mL
Na ₂ S ₂ O ₃ solution.....	5.0mL
Selenite-tungstate solution.....	1.0mL
Trace elements solution SL-10 with EDTA.....	1.0mL
pH 7.5 ± 0.2 at 25°C	

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	0.3g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Sodium Pyruvate Solution:

Composition per 10.0mL:

Sodium pyruvate.....	2.5g
----------------------	------

Preparation of Sodium Pyruvate Solution: Add sodium pyruvate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Wolfe's Vitamin Solution:

Composition per liter:

Pyridoxine-HCl.....	10.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Lipoic acid.....	5.0mg
Nicotinic acid.....	5.0mg
Riboflavin	5.0mg
Thiamine-HCl	5.0mg
Calcium DL-pantothenate.....	5.0mg
Biotin	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Sparge with 100% N₂.

Na₂S₂O₃ Solution:

Composition per 10.0mL:

Na ₂ S ₂ O ₃ ·5H ₂ O.....	2.5g
---	------

Preparation of Na₂S₂O₃ Solution: Add Na₂S₂O₃·5H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Selenite-Tungstate Solution:

Composition per liter:

NaOH.....	0.5g
Na ₂ WO ₄ ·2H ₂ O.....	4.0mg
Na ₂ SeO ₃ ·5H ₂ O.....	3.0mg

Preparation of Selenite-Tungstate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Trace Elements Solution SL-10 with EDTA:

Composition per liter:

FeCl ₂ ·4H ₂ O.....	1.5g
Disodium EDTA.....	0.5g
CoCl ₂ ·6H ₂ O.....	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	36.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O.....	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-10 with EDTA:

Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂. Add components, except NaHCO₃, Na₂S·9H₂O solution, sodium pyruvate solution, vitamin solution, and Na₂S₂O₃·5H₂O solution, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 3 min. Cool to room temperature while sparging with 80% N₂ + 20% CO₂. Add NaHCO₃. Mix thoroughly. Adjust pH to 7.0. Anaerobically distribute 9.7mL volumes into anaerobic tubes. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 0.1mL of sterile Na₂S·9H₂O solution, 0.1mL of sterile sodium pyruvate solution, 0.1mL of sterile vitamin solution, and 0.05mL of sterile Na₂S₂O₃·5H₂O solution to each tube. Mix thoroughly.

Use: For the cultivation of *Desulfitobacterium hafniense*.

Desulfitobacterium Medium (DSMZ Medium 663)

Composition per liter:

KH ₂ PO ₄	5.44g
Yeast extract.....	1.0g
NH ₄ Cl	0.5g
MgCl ₂ ·2H ₂ O.....	0.18g
CaCl ₂ ·2H ₂ O.....	0.032g
Resazurin	0.5mg
Vitamin solution.....	20.0mL
Na-pyruvate solution	10.0mL
Na-thiosulfate solution.....	10.0mL
Cysteine solution	10.0mL

Na ₂ S·9H ₂ O solution	10.0mL
Trace elements solution	5.0mL
pH 7.5 ± 0.2 at 25°C	

Na-pyruvate Solution:**Composition** per 10.0mL:

Na-pyruvate	2.5g
-------------------	------

Preparation of Na-pyruvate Solution: Add Na-pyruvate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Na-thiosulfate Solution:**Composition** per 10.0mL:

Na ₂ S ₂ O ₃ ·5H ₂ O	2.5g
--	------

Preparation of Na-thiosulfate Solution: Add Na₂S₂O₃·5H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Na₂S·9H₂O Solution:**Composition** per 10.0mL:

Na ₂ S·9H ₂ O	0.4g
---	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Cysteine Solution:**Composition** per 10.0mL:

L-Cysteine·HCl·H ₂ O	0.4g
---------------------------------------	------

Preparation of Cysteine Solution: Add L-cysteine·HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution:**Composition** per liter:

Nitritotriacetic acid	12.8g
FeCl ₃ ·6H ₂ O	1.35g
NaCl	1.0g
CoCl ₂ ·4H ₂ O	0.24g
NiCl ₂ ·6H ₂ O	0.12g
MnCl ₂ ·4H ₂ O	0.1g
CaCl ₂ ·2H ₂ O	0.1g
ZnCl ₂	0.1g
Na ₂ SeO ₃ ·5H ₂ O	0.026g
CuCl ₂ ·2H ₂ O	0.025g
Na ₂ MoO ₄ ·4H ₂ O	0.024g
H ₃ BO ₃	0.01g

Preparation of Trace Elements Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly. Adjust pH to 6.8.

Vitamin Solution:**Composition** per liter:

Pyridoxine-HCl	10.0mg
Thiamine-HCl·2H ₂ O	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
D-Ca-pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Biotin	2.0mg

Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Preparation of Medium: Prepare and dispense medium under an oxygen-free atmosphere of 100% N₂. Add components, except vitamin solution, cysteine solution, Na-pyruvate solution, Na-thiosulfate solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically and anaerobically add 20.0mL sterile vitamin solution, 10.0mL of sterile cysteine solution, 10.0mL sterile Na-pyruvate solution, 10.0mL sterile Na-thiosulfate solution, and 10.0mL of sterile Na₂S·9H₂O solution. Mix thoroughly. Adjust pH to 7.5. Aseptically and anaerobically distribute into sterile tubes or flasks.

Use: For the cultivation of *Desulfitobacterium dehalogenans*.

Desulfitobacterium PCE Medium (DSMZ Medium 717)

Composition per liter:

(NH ₄)H ₂ PO ₄	2.88g
MgSO ₄ ·7H ₂ O	0.1g
Yeast extract	0.1g
Ca(NO ₃) ₂ ·4H ₂ O	0.05g

pH 7.1 ± 0.2 at 25°C	

Selenite-Tungstate Solution:**Composition** per liter:

NaOH	0.5g
Na ₂ WO ₄ ·2H ₂ O	4.0mg
Na ₂ SeO ₃ ·5H ₂ O	3.0mg

Preparation of Selenite-Tungstate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Na₂S·9H₂O Solution:**Composition** per 10.0mL:

Na ₂ S·9H ₂ O	0.5g
---	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

NaHCO₃ Solution:**Composition** per 100.0mL:

NaHCO ₃	5.0g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

KOH Solution:**Composition** per 100.0mL:

KOH 10.0g

Preparation of KOH Solution: Add KOH to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Trace Elements Solution SL-10:**Composition** per liter:FeCl₂·4H₂O 1.5gCoCl₂·6H₂O 190.0mgMnCl₂·4H₂O 100.0mgZnCl₂ 70.0mgNa₂MoO₄·2H₂O 36.0mgNiCl₂·6H₂O 24.0mgH₃BO₃ 6.0mgCuCl₂·2H₂O 2.0mg

HCl (25% solution) 10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Vitamin Solution:**Composition** per liter:

Pyridoxine-HCl 10.0mg

Thiamine-HCl·2H₂O 5.0mg

Riboflavin 5.0mg

Nicotinic acid 5.0mg

D-Ca-pantothenate 5.0mg

p-Aminobenzoic acid 5.0mg

Lipoic acid 5.0mg

Biotin 2.0mg

Folic acid 2.0mg

Vitamin B₁₂ 0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Seven Vitamin Solution:**Composition** per liter:

Pyridoxine hydrochloride 300.0mg

Thiamine-HCl·2H₂O 200.0mg

Nicotinic acid 200.0mg

Vitamin B₁₂ 100.0mg

Calcium pantothenate 100.0mg

p-Aminobenzoic acid 80.0mg

D(+)-Biotin 20.0mg

Preparation of Seven Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Sparge with 100% N₂. Mix thoroughly. Filter sterilize.

Na-lactate Solution:**Composition** per 100.0mL:

Na-lactate 25.0g

Preparation of Na-lactate Solution: Add Na-lactate to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Na-fumarate Solution:**Composition** per 100.0mL:

Na-fumarate 16.0g

Preparation of Na-fumarate Solution: Add Na-fumarate to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas atmosphere. Add components, except NaHCO₃ solution, Na₂S·9H₂O solution, KOH solution, Na-lactate solution, Na-fumarate solution, vitamin solution, seven vitamin solution, selenite-tungstate solution, and trace elements solution SL-10, to distilled/deionized water and bring volume to 873.7mL. Mix thoroughly. Adjust pH to 7.0–7.2. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 50.0mL NaHCO₃ solution, 3.3mL Na₂S·9H₂O solution, 20.0mL KOH solution, 20.0mL Na-lactate solution, 20.0mL Na-fumarate solution, 10.0mL vitamin solution, 1.0mL seven vitamin solution, 1.0mL selenite-tungstate solution, and 1.0mL trace elements solution SL-10. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or bottles.

Use: For the cultivation of *Desulfitobacterium* spp. and *Desulfitobacterium hafniense*.

Desulfitobacterium PCE Medium**Composition** per 1001.0mL:(NH₄)₂HPO₄ 2.88gMgSO₄·7H₂O 0.1g

Wolfe's mineral solution 1.0mL

pH 7.0–7.2 at 25°C

NaHCO₃ Solution:**Composition** per 50.0mL:NaHCO₃ 2.5g

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

KOH Solution:**Composition** per 20.0mL:

KOH 2.0g

Preparation of KOH Solution: Add KOH to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Sodium Fumarate Solution:**Composition** per 20.0mL:

Sodium fumarate 3.2g

Preparation of Sodium Fumarate Solution: Add sodium fumarate to distilled/deionized water and bring volume to 20.0mL. Mix

thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Sodium L-Lactate Solution:

Composition per 20.0mL:

Sodium L-lactate 3.2g

Preparation of Sodium L-Lactate Solution: Add sodium L-lactate to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Wolfe's Vitamin Solution:

Composition per liter:

Pyridoxine-HCl 10.0mg
p-Aminobenzoic acid 5.0mg
 Lipoic acid 5.0mg
 Nicotinic acid 5.0mg
 Riboflavin 5.0mg
 Thiamine-HCl 5.0mg
 Calcium DL-pantothenate 5.0mg
 Biotin 2.0mg
 Folic acid 2.0mg
 Vitamin B₁₂ 0.1mg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Seven Vitamin Solution:

Composition per liter:

Pyridoxine-HCl 0.3g
 Thiamine-HCl 0.2g
 Nicotinic acid 0.2g
 Calcium DL-pantothenate 0.1g
 Vitamin B₁₂ 0.1g
p-Aminobenzoic acid 80.0mg
 Biotin 20.0mg

Preparation of Seven Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Selenite-Tungstate Solution:

Composition per liter:

NaOH 0.5g
 Na₂WO₄·2H₂O 4.0mg
 Na₂SeO₃·5H₂O 3.0mg

Preparation of Selenite-Tungstate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Wolfe's Mineral Solution:

Composition per liter:

MgSO₄·7H₂O 3.0g
 Nitritotriacetic acid 1.5g
 NaCl 1.0g
 MnSO₄·2H₂O 0.5g
 CoCl₂·6H₂O 0.1g
 ZnSO₄·7H₂O 0.1g
 CaCl₂·2H₂O 0.1g
 FeSO₄·7H₂O 0.1g
 NiCl₂·6H₂O 0.025g
 KAl(SO₄)₂·12H₂O 0.02g
 CuSO₄·5H₂O 0.01g
 H₃BO₃ 0.01g

Na₂MoO₄·2H₂O 0.01g
 Na₂SeO₃·5H₂O 0.3mg

Preparation of Wolfe's Mineral Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Adjust pH to 6.8.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas mixture. Add components, except NaHCO₃ solution, KOH solution, sodium fumarate solution, sodium-L-lactate solution, Wolfe's vitamin solution, and seven vitamins solution, to distilled/deionized water and bring volume to 880.0mL. Mix thoroughly. Adjust pH to 7.0–7.2. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 50.0mL of sterile NaHCO₃ solution, 20.0mL of sterile KOH solution, 20.0mL of sterile sodium fumarate solution, 20.0mL of sterile sodium-L-lactate solution, 10.0mL of sterile Wolfe's vitamin solution, and 1.0mL of sterile seven vitamins solution. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or bottles.

Use: For the cultivation of *Desulfitobacterium* species.

Desulfitobacterium PCE II Medium (DSMZ Medium 1062)

Composition per liter:

NaCl 1.0g
 KCl 0.5g
 MgCl₂·6H₂O 0.4g
 NH₄Cl 0.25g
 KH₂PO₄ 0.2g
 CaCl₂·2H₂O 0.15g
 Resazurin 0.5mg
 Trace elements solution 10.0mL
 Pyruvate solution 10.0mL
 Fumarate solution 10.0mL
 Yeast extract solution 10.0mL
 Ferrous sulfate solution 10.0mL
 NaHCO₃ solution 10.0mL
 Selenite/tungstate solution 1.0mL
 Vitamin solution 1.0mL

pH 7.5 ± 0.2 at 25°C

Ferrous Sulfate Solution:

Composition per 10.0mL:

FeSO₄·7H₂O 22.0mg

Preparation of Ferrous Sulfate Solution: Add FeSO₄·7H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Pyruvate Solution:

Composition per 10.0mL:

Na-pyruvate 4.5g

Preparation of Pyruvate Solution: Add Na-pyruvate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Fumarate Solution:

Composition per 10.0mL:

Na₂-fumarate 6.5g

Preparation of Fumarate Solution: Add Na₂-fumarate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Yeast Extract Solution:**Composition** per 10.0mL:

Yeast extract 2.0g

Preparation of Yeast Extract Solution: Add yeast extract to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

NaHCO₃ Solution:**Composition** per 10.0mL:NaHCO₃ 3.0g

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 20% CO₂ + 80% H₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Vitamin Solution:

Nicotinamide 9.0mg

Calcium DL-pantothenate 5.0mg

Riboflavin 5.0mg

Thiamine-HCl 5.0mg

Biotin 2.0mg

Folic acid 2.0mg

Cyanocobalamin 0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Trace Elements Solution:**Composition** per liter:MgSO₄·7H₂O 3.0g

Nitrilotriacetic acid 1.5g

NaCl 1.0g

MnSO₄·2H₂O 0.5gCoSO₄·7H₂O 0.18gZnSO₄·7H₂O 0.18gCaCl₂·2H₂O 0.1gFeSO₄·7H₂O 0.1gNiCl₂·6H₂O 0.025gKAl(SO₄)₂·12H₂O 0.02gH₃BO₃ 0.01gNa₂MoO₄·4H₂O 0.01gCuSO₄·5H₂O 0.01gNa₂SeO₃·5H₂O 0.3mg

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Selenite/Tungstate Solution:**Composition** per liter:

NaOH 0.5g

Na₂WO₄·2H₂O 4.0mgNa₂SeO₃·5H₂O 3.0mg

Preparation of Selenite/Tungstate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except bicarbonate, iron sulfate, vitamins, and organic substrates, to distilled/deionized water and bring volume to 940.0mL. Gently heat and bring to boiling. Boil for 1 min. Mix thoroughly. Cool to room temperature while sparging with 80% N₂ + 20% CO₂. Dispense into culture vessels under an

atmosphere of 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Add ferrous iron sulfate, vitamins, pyruvate, fumarate, and yeast extract from sterile anoxic solutions. Adjust the final pH of the medium to 7.5. Addition of 10–20 mg sodium dithionite per liter (e.g., from 5% (w/v) solution, freshly prepared under N₂ and filter sterilized) may stimulate growth at the beginning.

Use: For the cultivation of *Desulfobacterium* spp.

HCl (25% solution) 10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:**Composition** per 10.0mL:Na₂S·9H₂O 0.5g

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Selenite-Tungstate Solution:

Composition per liter:

NaOH	0.5g
Na ₂ WO ₄ ·2H ₂ O	4.0mg
Na ₂ SeO ₃ ·5H ₂ O	3.0mg

Preparation of Selenite-Tungstate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

CaCl₂ Solution:

Composition per 10.0mL:

CaCl ₂ ·2H ₂ O	0.11g
--------------------------------------	-------

Preparation of CaCl₂ Solution: Add CaCl₂·2H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas atmosphere. Add components, except Na₂S·9H₂O solution, CaCl₂ solution, seven vitamin solution, selenite-tungstate solution, and trace elements solution SL-10, to distilled/deionized water and bring volume to 977.8mL. Mix thoroughly. Adjust pH to 7.0–7.2. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 10.0mL Na₂S·9H₂O solution, 10.0mL CaCl₂ solution, 0.2mL seven vitamin solution, 1.0mL selenite-tungstate solution, and 1.0mL trace elements solution SL-10. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or bottles.

Use: For the cultivation of *Desulfobacca acetoxidans*.

Desulfobacter Medium

Composition per 1001.0mL:

Solution A	870.0mL
Solution C	100.0mL
Solution D	10.0mL
Solution E (Vitamin solution)	10.0mL
Solution F	10.0mL
Solution B (Trace elements solution SL-10)	1.0mL

pH 7.1–7.4 at 25°C

Solution A:

Composition per 870.0mL:

NaCl	21.0g
MgCl ₂ ·6H ₂ O	3.1g
Na ₂ SO ₄	3.0g
KCl	0.5g
NH ₄ Cl	0.3g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O	0.15g
Resazurin	1.0mg

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 870.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 3–4 min. Allow to cool to room temperature while gassing under 80% N₂ + 20% CO₂. Continue gassing until pH reaches below 6.0. Seal the flask under 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B (Trace Elements Solution SL-10):

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Solution B (Trace Elements Solution SL-10):

Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C:

Composition per 100.0mL:

NaHCO ₃	5.0g
--------------------	------

Preparation of Solution C: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Gas under 80% N₂ + 20% CO₂.

Solution D:

Composition per 10.0mL:

Sodium acetate·3H ₂ O	2.5g
----------------------------------	------

Preparation of Solution D: Add sodium acetate·3H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution E (Vitamin Solution):

Composition per liter:

Pyridoxine-HCl	10.0mg
Calcium DL-pantothenate	5.0mg
Lipoic acid	5.0mg
Nicotinic acid	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Riboflavin	5.0mg
Thiamine-HCl	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Solution E (Vitamin Solution): Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution F:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.4g
-------------------------------------	------

Preparation of Solution F: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Aseptically and anaerobically combine solution A with solution B, solution C, solution D, solution E, and solution F, in that order. Mix thoroughly. Anaerobically distribute into sterile tubes or flasks under 80% N₂ + 20% CO₂.

Use: For the cultivation and maintenance of *Desulfobacter* species and *Malonomonas rubra*.

***Desulfobacter postgatei* Medium
(DSMZ Medium 193)**

Composition per 1001.0mL:

Solution A	870.0mL
Solution C	100.0mL
Solution D	10.0mL
Solution E (Vitamin solution)	10.0mL
Solution F	10.0mL
Solution B (Trace elements solution SL-10)	1.0mL
pH 7.1–7.4 at 25°C	

Solution A:**Composition** per 870.0mL:

NaCl	7.0g
Na ₂ SO ₄	3.0g
MgCl ₂ ·6H ₂ O	1.3g
KCl	0.5g
NH ₄ Cl	0.3g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O	0.15g
Resazurin	1.0mg

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 870.0mL. Mix thoroughly.

Solution B (Trace Elements Solution SL-10):**Composition** per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Solution B (Trace Elements Solution SL-10):

Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C:**Composition** per 100.0mL:

NaHCO ₃	5.0g
--------------------	------

Preparation of Solution C: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Flush with 80% N₂ + 20% CO₂ to remove dissolved oxygen.

Solution D:**Composition** per 10.0mL:

Na-acetate·3H ₂ O	2.5g
------------------------------	------

Preparation of Solution D: Add Na-acetate·3H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution E (Vitamin Solution):**Composition** per liter:

Pyridoxine-HCl	10.0mg
Thiamine-HCl·2H ₂ O	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
D-Ca-pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg

Lipoic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.10mg

Solution E (Vitamin Solution): Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution F:**Composition** per 10.0mL:

Na ₂ S·9H ₂ O	0.4g
-------------------------------------	------

Preparation of Solution F: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Gently heat solution A and bring to boiling. Boil solution A for a few minutes. Cool to room temperature. Gas with 80% N₂ + 20% CO₂ gas mixture to reach a pH below 6. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Sequentially add 1.0mL solution B, 100.0mL solution C, 10.0mL solution D, 10.0mL solution E, and 10.0mL solution F. Distribute anaerobically under 80% N₂ + 20% CO₂ into appropriate vessels. Addition of 10–20mg sodium dithionite per liter from a 5% (w/v) solution, freshly prepared under N₂ and filter-sterilized, may stimulate growth.

Use: For the cultivation of *Desulfobacter postgatei*, *Paracoccus solventivorans*, and *Desulfotomaculum* spp.

Solution F:**Composition** per 10.0mL:

Na ₂ S·9H ₂ O	0.4g
-------------------------------------	------

Preparation of Solution F: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution G (Selenite-Tungstate Solution):**Composition** per liter:

NaOH	0.5g
Na ₂ WO ₄ ·2H ₂ O	4.0mg
Na ₂ SeO ₃ ·5H ₂ O	3.0mg

Preparation of Solution G (Selenite-Tungstate Solution):

Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Preparation of Medium: Gently heat solution A and bring to boiling. Boil solution A for a few minutes. Cool to room temperature. Gas with 80% N₂ + 20% CO₂ gas mixture to reach a pH below 6. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Sequentially add 1.0mL solution B, 100.0mL solution C, 10.0mL solution D, 10.0mL solution E, 10.0mL solution F, and 1.0mL solution G. Distribute anaerobically under 80% N₂ + 20% CO₂ into appropriate vessels.

Use: For the cultivation of *Desulfobacterium anilini*.

Desulfobacterium anilini* Medium*Composition** per 1011.0mL:

Solution A	870.0mL
Solution C	100.0mL
Solution D	10.0mL
Solution E (Vitamin solution)	10.0mL
Solution F	10.0mL
Solution G	10.0mL
Solution B (Trace elements solution SL-10)	1.0mL
pH 7.1–7.4 at 25°C	

Solution A:**Composition** per 870.0mL:

NaCl	7.0g
Na ₂ SO ₄	3.0g
MgCl ₂ ·6H ₂ O	1.3g
KCl	0.5g
NH ₄ Cl	0.3g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O	0.15g
Resazurin	1.0mg

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 870.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 3–4 min. Allow to cool to room temperature while gassing under 80% N₂ + 20% CO₂. Continue gassing until pH reaches below 6.0. Seal the flask under 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B (Trace Elements Solution SL-10):**Composition** per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Solution B (Trace Elements Solution SL-10):

Add $\text{FeCl}_2 \cdot 4\text{H}_2\text{O}$ to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Gas under 100% N_2 . Autoclave for 15 min at 15 psi pressure–121°C.

Solution C:**Composition per 100.0mL:**

NaHCO_3 5.0g

Preparation of Solution C: Add NaHCO_3 to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Gas under 80% N_2 + 20% CO_2 .

Solution D:**Composition per 10.0mL:**

Sodium acetate $\cdot 3\text{H}_2\text{O}$ 2.5g

Preparation of Solution D: Add sodium acetate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gas under 100% N_2 . Autoclave for 15 min at 15 psi pressure–121°C.

Solution E (Vitamin Solution):**Composition per liter:**

Pyridoxine-HCl 10.0mg
 Calcium DL-pantothenate 5.0mg
 Lipoic acid 5.0mg
 Nicotinic acid 5.0mg
p-Aminobenzoic acid 5.0mg
 Riboflavin 5.0mg
 Thiamine-HCl 5.0mg
 Biotin 2.0mg
 Folic acid 2.0mg
 Vitamin B₁₂ 0.1mg

Preparation of Solution E (Vitamin Solution): Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gas under 100% N_2 . Autoclave for 15 min at 15 psi pressure–121°C.

Solution F:**Composition per 10.0mL:**

$\text{Na}_2\text{S} \cdot 9\text{H}_2\text{O}$ 0.4g

Preparation of Solution F: Add $\text{Na}_2\text{S} \cdot 9\text{H}_2\text{O}$ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gas under 100% N_2 . Autoclave for 15 min at 15 psi pressure–121°C.

Solution G:**Composition per 10.0mL:**

Phenol 94.0mg

Preparation of Solution G: Add phenol to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize. Gas under 80% N_2 + 20% CO_2 . Prepare solution freshly.

Preparation of Medium: Aseptically and anaerobically combine solution A with solution B, solution C, solution D, solution E, solution F, and solution G, in that order. Mix thoroughly. Anaerobically distribute into sterile tubes or flasks under 80% N_2 + 20% CO_2 .

Use: For the cultivation of *Desulfobacterium anilini*.

Desulfobacterium anilini* Medium*Composition per 1002.0mL:**

Solution A 870.0mL
 Solution C 100.0mL
 Solution D 10.0mL
 Solution E (Vitamin solution) 10.0mL
 Solution F 10.0mL

Solution B (Trace elements solution SL-10) 1.0mL
 Solution G 1.0mL
 pH 7.1–7.4 at 25°C

Solution A:**Composition per 870.0mL:**

NaCl 7.0g
 Na_2SO_4 3.0g
 $\text{MgCl}_2 \cdot 6\text{H}_2\text{O}$ 1.3g
 KCl 0.5g
 NH_4Cl 0.3g
 KH_2PO_4 0.2g
 $\text{CaCl}_2 \cdot 2\text{H}_2\text{O}$ 0.15g
 Resazurin 1.0mg

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 870.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 3–4 min. Allow to cool to room temperature while gassing under 80% N_2 + 20% CO_2 . Continue gassing until pH reaches below 6.0. Seal the flask under 80% N_2 + 20% CO_2 . Autoclave for 15 min at 15 psi pressure–121°C.

Solution B (Trace Elements Solution SL-10):**Composition per liter:**

$\text{FeCl}_2 \cdot 4\text{H}_2\text{O}$ 1.5g
 $\text{CoCl}_2 \cdot 6\text{H}_2\text{O}$ 190.0mg
 $\text{MnCl}_2 \cdot 4\text{H}_2\text{O}$ 100.0mg
 ZnCl_2 70.0mg
 $\text{Na}_2\text{MoO}_4 \cdot 2\text{H}_2\text{O}$ 36.0mg
 $\text{NiCl}_2 \cdot 6\text{H}_2\text{O}$ 24.0mg
 H_3BO_3 6.0mg
 $\text{CuCl}_2 \cdot 2\text{H}_2\text{O}$ 2.0mg
 HCl (25% solution) 10.0mL

Preparation of Solution B (Trace Elements Solution SL-10):

Add $\text{FeCl}_2 \cdot 4\text{H}_2\text{O}$ to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Gas under 100% N_2 . Autoclave for 15 min at 15 psi pressure–121°C.

Solution C:**Composition per 100.0mL:**

NaHCO_3 5.0g

Preparation of Solution C: Add NaHCO_3 to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Gas under 80% N_2 + 20% CO_2 .

Solution D:**Composition per 10.0mL:**

Phenol 0.094g

Preparation of Solution D: Add phenol to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gas under 100% N_2 . Filter sterilize.

Solution E (Vitamin Solution):**Composition per 100.0mL**

Nicotinic acid amide 35.0mg
 Thiamine dichloride 30.0mg
p-Aminobenzoic acid 20.0mg
 Biotin 10.0mg
 Calcium pantothenate 10.0mg
 Pyridoxal-HCl 10.0mg
 Vitamin B₁₂ 5.0mg

Preparation of Solution E (Vitamin Solution): Add components to distilled/deionized water and bring volume to 100.0mL. Mix thor-

oughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution F:**Composition** per 10.0mL:

Na₂S·9H₂O 0.4g

Preparation of Solution F: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution G:**Composition** per liter:

NaOH 0.5g

Na₂WO₄·2H₂O 4.0mg

Na₂SeO₃·5H₂O 3.0mg

Preparation of Solution G: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Aseptically and anaerobically combine solution A with solution B, solution C, solution D, solution E, solution F, and solution G, in that order. Mix thoroughly. Anaerobically distribute into sterile tubes or flasks under 80% N₂ + 20% CO₂.

Use: For the cultivation and maintenance of *Desulfobacterium anilini*.

Desulfobacterium catecholicum* Medium*Composition** per 1001.0mL:

Solution A 870.0mL

Solution C 100.0mL

Solution D 10.0mL

Solution E (Vitamin solution) 10.0mL

Solution F 10.0mL

Solution B (Trace elements solution SL-10) 1.0mL

pH 7.1–7.4 at 25°C

Solution A:**Composition** per 870.0mL:

Na₂SO₄ 3.0g

NaCl 1.0g

KCl 0.5g

MgCl₂·6H₂O 0.4g

NH₄Cl 0.3g

KH₂PO₄ 0.2g

CaCl₂·2H₂O 0.15g

Resazurin 1.0mg

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 870.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 3–4 min. Allow to cool to room temperature while gassing under 80% N₂ + 20% CO₂. Continue gassing until pH reaches below 6.0. Seal the flask under 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B (Trace Elements Solution SL-10):**Composition** per liter:

FeCl₂·4H₂O 1.5g

CoCl₂·6H₂O 190.0mg

MnCl₂·4H₂O 100.0mg

ZnCl₂ 70.0mg

Na₂MoO₄·2H₂O 36.0mg

NiCl₂·6H₂O 24.0mg

H₃BO₃ 6.0mg

CuCl₂·2H₂O 2.0mg

HCl (25% solution) 10.0mL

Preparation of Solution B (Trace Elements Solution SL-10):

Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C:**Composition** per 100.0mL:

NaHCO₃ 2.5g

Preparation of Solution C: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Gas under 80% N₂ + 20% CO₂.

Solution D:**Composition** per 10.0mL:

Sodium benzoate 0.37g

Catechol 0.055g

Preparation of Solution D: Add sodium benzoate and catechol to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gas under 100% N₂. Filter sterilize.

Solution E (Vitamin Solution):**Composition** per liter:

Pyridoxine-HCl 10.0mg

Calcium DL-pantothenate 5.0mg

Lipoic acid 5.0mg

Nicotinic acid 5.0mg

p-Aminobenzoic acid 5.0mg

Riboflavin 5.0mg

Thiamine-HCl 5.0mg

Biotin 2.0mg

Folic acid 2.0mg

Vitamin B₁₂ 0.1mg

Preparation of Solution E (Vitamin Solution): Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution F:**Composition** per 10.0mL:

Na₂S·9H₂O 0.4g

Preparation of Solution F: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gas under 100%

N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Aseptically and anaerobically combine solution A with solution B, solution C, solution D, solution E, and solution F, in that order. Mix thoroughly. Anaerobically distribute into sterile tubes or flasks under 80% N₂ + 20% CO₂.

Use: For the cultivation and maintenance of *Desulfobacterium catecholicum*.

Desulfobacterium cetonicum* Medium*Composition** per 1011.0mL:

Solution A 950.0mL

Solution C 10.0mL

Solution D 40.0mL

Solution E 10.0mL

Solution B (Trace elements solution SL-10) 1.0mL

pH 7.2–7.4 at 25°C

Solution A:**Composition** per 950.0mL:

NaCl 10.0g

Na₂SO₄ 2.8g

KH ₂ PO ₄	0.7g
MgCl ₂ ·6H ₂ O.....	0.3g
NH ₄ Cl	0.3g
CaCl ₂ ·2H ₂ O.....	0.05g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B (Trace Elements Solution SL-10):

Composition per liter:

FeCl ₂ ·4H ₂ O.....	1.5g
CoCl ₂ ·6H ₂ O.....	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	36.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O.....	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Solution B (Trace Elements Solution SL-10):

Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C:

Composition per 10.0mL:

Sodium butyrate.....	1.2g
----------------------	------

Preparation of Solution C: Add sodium butyrate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution D:

Composition per 40.0mL:

NaHCO ₃	2.0g
--------------------------	------

Preparation of Solution D: Add NaHCO₃ to distilled/deionized water and bring volume to 40.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution E:

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	0.3g
--	------

Preparation of Solution E: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂. Aseptically and anaerobically combine 950.0mL of sterile solution A with 1.0mL of sterile solution B, 10.0mL of sterile solution C, 40.0mL of sterile solution D, and 10.0mL of sterile solution E. Mix thoroughly. Check that final pH is 7.2–7.4.

Use: For the cultivation of *Desulfobacterium cetonicum*.

Desulfobacterium indolicum Medium

Composition per 1002.4mL:

Solution A.....	900.0mL
Solution C.....	50.0mL
Solution D.....	30.0mL
Solution E (Wolfe's vitamin solution).....	10.0mL
Solution G.....	10.0mL
Solution B (Trace elements solution SL-10).....	1.0mL

Solution F.....	1.0mL
Solution H.....	0.4mL
pH 7.6 ± 0.2 at 25°C	

Solution A:

Composition per 900.0mL:

NaCl.....	21.0g
MgCl ₂ ·6H ₂ O.....	3.0g
Na ₂ SO ₄	3.0g
KCl.....	0.5g
NH ₄ Cl.....	0.3g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O.....	0.15g
Resazurin.....	1.0mg

Preparation of Solution A: Prepare and dispense solution anaerobically under 80% N₂ + 20% CO₂. Add components to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling until resazurin turns colorless, indicating reduction. Cap with rubber stoppers. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Solution B (Trace Elements Solution SL-10):

Composition per liter:

FeCl ₂ ·4H ₂ O.....	1.5g
CoCl ₂ ·6H ₂ O.....	0.19g
MnCl ₂ ·4H ₂ O.....	0.1g
ZnCl ₂	0.07g
Na ₂ MoO ₄ ·2H ₂ O.....	0.036g
NiCl ₂ ·6H ₂ O.....	0.024g
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O.....	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Solution B (Trace Elements Solution SL-10):

Add the FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Bring volume to approximately 900.0mL with distilled/deionized water. Mix thoroughly. Adjust pH to 6.0 with NaOH. Bring volume to 1.0L with distilled/deionized water. Filter sterilize. Aseptically gas under 100% N₂ for 20 min.

Solution C:

Composition per 50.0mL:

NaHCO ₃	2.5g
--------------------------	------

Preparation of Solution C: Add NaHCO₃ to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize. Aseptically gas under 80% N₂ + 20% CO₂ for 20 min.

Solution D:

Composition per 107.7mL:

Indole.....	0.3g
NaCl (30% solution).....	7.0mL
MgCl ₂ ·6H ₂ O (40% solution).....	0.7mL

Preparation of Solution D: Prepare and dispense all solutions anaerobically under 100% N₂. Add indole to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Gently heat while stirring until dissolved. Prepare the NaCl solution and the MgCl₂·6H₂O solution separately. Autoclave the three solutions separately for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. To 100.0mL of sterile indole solution, aseptically and anaerobically add 7.0mL of sterile NaCl solution and 0.7mL of sterile MgCl₂·6H₂O solution. Mix thoroughly.

Solution E (Wolfe's Vitamin Solution):

Composition per liter:

Pyridoxine·HCl.....	0.01g
---------------------	-------

Thiamine-HCl	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
Calcium pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Thioctic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Cyanocobalamin	0.1mg

Preparation of Solution E (Wolfe's Vitamin Solution): Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Aseptically gas under 100% N₂ for 20 min.

Solution F:

Composition per liter:

Na ₂ SeO ₃ ·5H ₂ O	3.0mg
NaOH (0.01M solution)	1.0L

Preparation of Solution F: Add Na₂SeO₃·5H₂O to 1.0L of NaOH solution. Mix thoroughly. Filter sterilize. Aseptically gas under 100% N₂ for 20 min.

Solution G:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.4g
---	------

Preparation of Solution G: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Gas under 100% N₂ for 20 min. Cap with a rubber stopper. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution H:

Composition per 10.0mL:

Na ₂ S ₂ O ₄	0.5g
---	------

Preparation of Solution H: Add Na₂S₂O₄ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize. Aseptically gas under 100% N₂ for 20 min. Prepare solution freshly.

Preparation of Medium: To 900.0mL of cooled, sterile solution A, aseptically and anaerobically add in the following order: 1.0mL of sterile solution B, 50.0mL of sterile solution C, 10.0mL of sterile solution E, 1.0mL of sterile solution F, and 10.0mL of sterile solution G. Mix thoroughly. Immediately prior to inoculation, aseptically and anaerobically add 30.0mL of sterile solution D and 0.4mL of sterile solution H. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Desulfobacterium indolicum*.

Desulfobacterium Medium

Composition per 1002.4mL:

Solution A	930.0mL
Solution C	50.0mL
Solution D (Wolfe's vitamin solution)	10.0mL
Solution F	10.0mL
Solution B (Trace elements solution SL-10)	1.0mL
Solution E	1.0mL
Solution G	0.4mL

pH 7.0 ± 0.2 at 25°C

Solution A:

Composition per 930.0mL:

NaCl	21.0g
MgCl ₂ ·6H ₂ O	3.0g

Na ₂ SO ₄	3.0g
KCl	0.5g
NH ₄ Cl	0.3g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O	0.15g
Resazurin	1.0mg

Preparation of Solution A: Prepare and dispense solution anaerobically under 80% N₂ + 20% CO₂. Add components to distilled/deionized water and bring volume to 930.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling until resazurin turns colorless, indicating reduction. Cap with rubber stoppers. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Solution B (Trace Elements Solution SL-10):

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	0.19g
MnCl ₂ ·4H ₂ O	0.1g
ZnCl ₂	0.07g
Na ₂ MoO ₄ ·2H ₂ O	0.036g
NiCl ₂ ·6H ₂ O	0.024g
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Solution B (Trace Elements Solution SL-10):

Add the FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Bring volume to approximately 900.0mL with distilled/deionized water. Mix thoroughly. Adjust pH to 6.0 with NaOH. Bring volume to 1.0L with distilled/deionized water. Filter sterilize. Aseptically gas under 100% N₂ for 20 min.

Solution C:

Composition per 50.0mL:

NaHCO ₃	2.5g
--------------------------	------

Preparation of Solution C: Add NaHCO₃ to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize. Aseptically gas under 80% N₂ + 20% CO₂ for 20 min.

Solution D (Wolfe's Vitamin Solution):

Composition per liter:

Pyridoxine-HCl	0.01g
Thiamine-HCl	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
Calcium pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Thioctic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Cyanocobalamin	0.1mg

Preparation of Solution D (Wolfe's Vitamin Solution):

Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Aseptically gas under 100% N₂ for 20 min.

Solution E:

Composition per liter:

Na ₂ SeO ₃ ·5H ₂ O	3.0mg
NaOH (0.01M solution)	1.0L

Preparation of Solution E: Add Na₂SeO₃·5H₂O to 1.0L of NaOH solution. Mix thoroughly. Filter sterilize. Aseptically gas under 100% N₂ for 20 min.

Solution F:**Composition per 10.0mL:**

Na₂S·9H₂O 0.4g

Preparation of Solution F: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Gas under 100% N₂ for 20 min. Cap with a rubber stopper. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution G:**Composition per 10.0mL:**

Na₂S₂O₄ 0.5g

Preparation of Solution G: Add Na₂S₂O₄ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize. Aseptically gas under 100% N₂ for 20 min. Prepare solution freshly.

Preparation of Medium: To 900.0mL of cooled, sterile solution A, aseptically and anaerobically add in the following order: 1.0mL of sterile solution B, 50.0mL of sterile solution C, 10.0mL of sterile solution D, 1.0mL of sterile solution E, and 10.0mL of sterile solution F. Mix thoroughly. Immediately prior to inoculation, aseptically and anaerobically add 0.4mL of sterile solution G. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Desulfobacterium autotrophicum*.

Desulfobacterium Medium with Lactate**Composition per 1002.4mL:**

Solution A 930.0mL
 Solution C 50.0mL
 Solution D (Wolfe's vitamin solution) 10.0mL
 Solution F 10.0mL
 Solution B (Trace elements solution SL-10) 1.0mL
 Solution E 1.0mL
 Solution G 0.4mL

pH 7.0 ± 0.2 at 25°C

Solution A:**Composition per 930.0mL:**

NaCl 21.0g
 MgCl₂·6H₂O 3.0g
 Na₂SO₄ 3.0g
 Lactic acid, sodium salt 1.1g
 KCl 0.5g
 NH₄Cl 0.3g
 KH₂PO₄ 0.2g
 CaCl₂·2H₂O 0.15g
 Resazurin 1.0mg

Preparation of Solution A: Prepare and dispense solution anaerobically under 80% N₂ + 20% CO₂. Add components to distilled/deionized water and bring volume to 930.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling until resazurin turns colorless, indicating reduction. Cap with rubber stoppers. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Solution B (Trace Elements Solution SL-10):**Composition per liter:**

FeCl₂·4H₂O 1.5g
 CoCl₂·6H₂O 0.19g
 MnCl₂·4H₂O 0.10g
 ZnCl₂ 0.070g
 Na₂MoO₄·2H₂O 0.036g
 NiCl₂·6H₂O 0.024g

H₃BO₃ 6.0mg
 CuCl₂·2H₂O 2.0mg
 HCl (25% solution) 10.0mL

Preparation of Solution B (Trace Elements Solution SL-10):

Add the FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Bring volume to approximately 900.0mL with distilled/deionized water. Mix thoroughly. Adjust pH to 6.0 with NaOH. Bring volume to 1.0L with distilled/deionized water. Filter sterilize. Aseptically gas under 100% N₂ for 20 min.

Solution C:**Composition per 50.0mL:**

NaHCO₃ 2.5g

Preparation of Solution C: Add NaHCO₃ to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize. Aseptically gas under 80% N₂ + 20% CO₂ for 20 min.

Solution D (Wolfe's Vitamin Solution):**Composition per liter:**

Pyridoxine-HCl 0.01g
 Thiamine-HCl 5.0mg
 Riboflavin 5.0mg
 Nicotinic acid 5.0mg
 Calcium pantothenate 5.0mg
p-Aminobenzoic acid 5.0mg
 Thioctic acid 5.0mg
 Biotin 2.0mg
 Folic acid 2.0mg
 Cyanocobalamin 0.1mg

Preparation of Solution D (Wolfe's Vitamin Solution): Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Aseptically gas under 100% N₂ for 20 min.

Solution E:**Composition per liter:**

Na₂SeO₃·5H₂O 3.0mg
 NaOH (0.01M solution) 1.0L

Preparation of Solution E: Add Na₂SeO₃·5H₂O to 1.0L of NaOH solution. Mix thoroughly. Filter sterilize. Aseptically gas under 100% N₂ for 20 min.

Solution F:**Composition per 10.0mL:**

Na₂S·9H₂O 0.4g

Preparation of Solution F: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Gas under 100% N₂ for 20 min. Cap with a rubber stopper. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution G:**Composition per 10.0mL:**

Na₂S₂O₄ 0.5g

Preparation of Solution G: Add Na₂S₂O₄ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize. Aseptically gas under 100% N₂ for 20 min. Prepare solution freshly.

Preparation of Medium: To 900.0mL of cooled, sterile solution A, aseptically and anaerobically add, in the following order, 1.0mL of sterile solution B, 50.0mL of sterile solution C, 10.0mL of sterile solution D, 1.0mL of sterile solution E, and 10.0mL of sterile solution F. Mix thoroughly. Immediately prior to inoculation, aseptically and anaerobically add 0.4mL of sterile solution G. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or flasks.

Use: For the cultivation of *Desulfobacterium autotrophicum*.

Desulfobacterium Medium, Modified

Composition per 1002.4mL:

Solution A	920.0mL
Solution C	50.0mL
Solution D	10.0mL
Solution E (Wolfe's vitamin solution)	10.0mL
Solution G	10.0mL
Solution B (Trace elements solution SL-10).....	1.0mL
Solution F	1.0mL
Solution H	0.4mL

pH 7.0 ± 0.2 at 25°C

Solution A:

Composition per 920.0mL:

NaCl	21.0g
MgCl ₂ ·6H ₂ O.....	3.0g
Na ₂ SO ₄	3.0g
KCl.....	0.5g
NH ₄ Cl	0.3g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O.....	0.15g
Resazurin	1.0mg

Preparation of Solution A: Prepare and dispense solution anaerobically under 80% N₂ + 20% CO₂. Add components to distilled/deionized water and bring volume to 920.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling until resazurin turns colorless, indicating reduction. Cap with rubber stoppers. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Solution B (Trace Elements Solution SL-10):

Composition per liter:

FeCl ₂ ·4H ₂ O.....	1.5g
CoCl ₂ ·6H ₂ O	0.19g
MnCl ₂ ·4H ₂ O.....	0.1g
ZnCl ₂	0.07g
Na ₂ MoO ₄ ·2H ₂ O	0.036g
NiCl ₂ ·6H ₂ O	0.024g
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Solution B (Trace Elements Solution SL-10):

Add the FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Bring volume to approximately 900.0mL with distilled/deionized water. Mix thoroughly. Adjust pH to 6.0 with NaOH. Bring volume to 1.0L with distilled/deionized water. Filter sterilize. Aseptically gas under 100% N₂ for 20 min.

Solution C:

Composition per 50.0mL:

NaHCO ₃	2.5g
--------------------------	------

Preparation of Solution C: Add NaHCO₃ to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize. Aseptically gas under 80% N₂ + 20% CO₂ for 20 min.

Solution D:

Composition per 10.0mL:

Sodium acetate·3H ₂ O.....	2.5g
---------------------------------------	------

Preparation of Solution D: Prepare and dispense solution anaerobically under 80% N₂ + 20% CO₂. Add sodium acetate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Cap with

rubber stopper. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Solution E (Wolfe's Vitamin Solution):

Composition per liter:

Pyridoxine-HCl.....	0.01g
Thiamine-HCl	5.0mg
Riboflavin	5.0mg
Nicotinic acid.....	5.0mg
Calcium pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Thioctic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Cyanocobalamin	0.1mg

Preparation of Solution E (Wolfe's Vitamin Solution):

Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Aseptically gas under 100% N₂ for 20 min.

Solution F:

Composition per liter:

Na ₂ SeO ₃ ·5H ₂ O.....	3.0mg
NaOH (0.01M solution).....	1.0L

Preparation of Solution F: Add Na₂SeO₃·5H₂O to 1.0L of NaOH solution. Mix thoroughly. Filter sterilize. Aseptically gas under 100% N₂ for 20 min.

Solution G:

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	0.4g
--	------

Preparation of Solution G: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Gas under 100% N₂ for 20 min. Cap with a rubber stopper. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution H:

Composition per 10.0mL:

Na ₂ S ₂ O ₄	0.5g
---	------

Preparation of Solution H: Add Na₂S₂O₄ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize. Aseptically gas under 100% N₂ for 20 min. Prepare solution freshly.

Preparation of Medium: To 920.0mL of cooled, sterile solution A, aseptically and anaerobically add in the following order: 1.0mL of sterile solution B, 50.0mL of sterile solution C, 10.0mL of sterile solution D, 10.0mL of sterile solution E, 1.0mL of sterile solution F, and 10.0mL of sterile solution G. Mix thoroughly. Immediately prior to inoculation, aseptically and anaerobically add 0.4mL of sterile solution H. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Desulfobacter curvatus* and *Desulfobacter latus*.

Desulfobacterium oleovorans Medium

Composition per 1154.0mL:

Solution A	1.0L
Solution H.....	67.0mL
Solution D.....	50.0mL
Solution I	13.0mL
Solution E	10.0mL
Solution G.....	10.0mL
Solution C (Selenite-tungstate solution).....	2.0mL

Solution B (Trace elements solution SL-10)	1.0mL
Solution F	1.0mL
pH 7.2 ± 0.2 at 25°C	

Solution A:**Composition per liter:**

Na ₂ SO ₄	4.0g
NaCl	1.0g
MgCl ₂ ·6H ₂ O	0.4g
NH ₄ Cl	0.25g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O	0.1g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 3–4 min. Allow to cool to room temperature while gassing under 80% N₂ + 20% CO₂. Continue gassing until pH reaches below 6.0. Seal the flask under 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B (Trace Elements Solution SL-10):**Composition per liter:**

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Solution B (Trace Elements Solution SL-10):

Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C (Selenite-Tungstate Solution):**Composition per liter:**

NaOH	0.5g
Na ₂ WO ₄ ·2H ₂ O	4.0mg
Na ₂ SeO ₃ ·5H ₂ O	3.0mg

Preparation of Solution C (Selenite-Tungstate Solution):

Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution D:**Composition per 50.0mL:**

NaHCO ₃	2.5g
--------------------------	------

Preparation of Solution D: Add NaHCO₃ to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Gas under 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution E:**Composition per liter:**

Pyridoxine-HCl	10.0mg
Calcium DL-pantothenate	5.0mg
Lipoic acid	5.0mg
Nicotinic acid	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Riboflavin	5.0mg
Thiamine-HCl	5.0mg

Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Solution E: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gas under 100% N₂. Filter sterilize.

Solution F:**Composition per 10.0mL:**

Vitamin B ₁₂	0.5mg
-------------------------------	-------

Preparation of Solution F: Add vitamin B₁₂ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gas under 100% N₂. Filter sterilize.

Solution G:**Composition per 80.0mL:**

Stearic acid	2.85g
NaOH (4.0M solution)	2.5mL

Preparation of Solution G: Add components to distilled/deionized water and bring volume to 80.0mL. Mix thoroughly. Gas under 100% N₂. In a closed bottle, heat in a boiling water bath. Shake until stearic acid dissolves. Autoclave for 15 min at 15 psi pressure–121°C. On storage, solution will solidify and should be remelted before use.

Solution H:**Composition per liter:**

NaCl	286.4g
MgCl ₂ ·6H ₂ O	44.7g
CaCl ₂ ·2H ₂ O	2.2g

Preparation of Solution H: Add components to distilled/deionized water and bring volume to 80.0mL. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution I:**Composition per 20.0mL:**

Na ₂ S·9H ₂ O	0.6g
---	------

Preparation of Solution I: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: To 1.0L of sterile solution A, add in order: 1.0mL of sterile solution B, 2.0mL of sterile solution C, 50.0mL of sterile solution D, 10.0mL of sterile solution E, 1.0mL of sterile solution F, 10.0mL of sterile solution G, 67.0mL of sterile solution H, and 13.0mL of sterile solution I. Mix thoroughly. Final pH of the medium should be 7.2. Prior to inoculation, add 10.0–20.0mg of sodium dithionate to 1.0L of medium.

Use: For the cultivation and maintenance of *Desulfobacterium oleovorans*.

Desulfobacterium phenolicum Medium**Composition per 1002.4mL:**

Solution A	930.0mL
Solution C	50.0mL
Solution E (Wolfe's vitamin solution)	10.0mL
Solution G	10.0mL
Solution D	4.0mL
Solution B (Trace elements solution SL-10)	1.0mL
Solution F	1.0mL
Solution H	0.4mL

pH 7.0 ± 0.2 at 25°C

Solution A:**Composition per 920.0mL:**

NaCl	21.0g
MgCl ₂ ·6H ₂ O	3.0g
Na ₂ SO ₄	3.0g
KCl	0.5g
NH ₄ Cl	0.3g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O	0.15g
Resazurin	1.0mg

Preparation of Solution A: Prepare and dispense solution anaerobically under 80% N₂ + 20% CO₂. Add components to distilled/deionized water and bring volume to 920.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling until resazurin turns colorless, indicating reduction. Cap with rubber stoppers. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Solution B (Trace Elements Solution SL-10):**Composition per liter:**

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	0.19g
MnCl ₂ ·4H ₂ O	0.1g
ZnCl ₂	0.07g
Na ₂ MoO ₄ ·2H ₂ O	0.036g
NiCl ₂ ·6H ₂ O	0.024g
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Solution B (Trace Elements Solution SL-10):

Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Bring volume to 900.0mL with distilled/deionized water. Mix thoroughly. Adjust pH to 6.0 with NaOH. Bring volume to 1.0L with distilled/deionized water. Filter sterilize. Aseptically gas under 100% N₂ for 20 min.

Solution C:**Composition per 50.0mL:**

NaHCO ₃	2.5g
--------------------------	------

Preparation of Solution C: Add NaHCO₃ to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize. Aseptically gas under 80% N₂ + 20% CO₂ for 20 min.

Solution D:**Composition per 10.0mL:**

Sodium benzoate	1.0g
Phenol	0.1g

Preparation of Solution D: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize. Aseptically gas under 100% N₂ for 20 min.

Solution E (Wolfe's Vitamin Solution):**Composition per liter:**

Pyridoxine-HCl	0.01g
Thiamine-HCl	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
Calcium pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Thioctic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Cyanocobalamin	0.1mg

Preparation of Solution E (Wolfe's Vitamin Solution): Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Aseptically gas under 100% N₂ for 20 min.

Solution F:**Composition per liter:**

Na ₂ SeO ₃ ·5H ₂ O	3.0mg
NaOH (0.01M solution)	1.0L

Preparation of Solution F: Add Na₂SeO₃·5H₂O to 1.0L of NaOH solution. Mix thoroughly. Filter sterilize. Aseptically gas under 100% N₂ for 20 min.

Solution G:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O	0.4g
---	------

Preparation of Solution G: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Gas under 100% N₂ for 20 min. Cap with a rubber stopper. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution H:**Composition per 10.0mL:**

Na ₂ S ₂ O ₄	0.5g
---	------

Preparation of Solution H: Add Na₂S₂O₄ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize. Aseptically gas under 100% N₂ for 20 min. Prepare solution freshly.

Preparation of Medium: To 920.0mL of cooled, sterile solution A, aseptically and anaerobically add in the following order: 1.0mL of sterile solution B, 50.0mL of sterile solution C, 10.0mL of sterile solution D, 10.0mL of sterile solution E, 1.0mL of sterile solution F, and 10.0mL of sterile solution G. Mix thoroughly. Immediately prior to inoculation aseptically and anaerobically add 0.4mL of sterile solution H. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Desulfobacterium phenolicum*.

***Desulfobacula toluolica* Medium (DSMZ Medium 383b)**

Composition per 1013.5mL:

Solution A	930.0mL
Solution C	50.0mL
Solution D	10.0mL
Solution E	10.0mL
Solution G	10.0mL
Solution B	1.0mL
Solution F	1.0mL
Sodium-tungstate solution	1.0mL
Vitamin B ₁₂ solution	0.5mL

pH 7.0 at 25°C

Solution A:**Composition per 930.0mL:**

NaCl	21.0g
Na ₂ SO ₄	3.0g
MgCl ₂ ·6H ₂ O	3.0g
KCl	0.5g
NH ₄ Cl	0.3g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O	0.15g
Resazurin	1.0mg

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 930.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂ gas until saturated. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution B:

Composition per liter:

Na-EDTA	5.2g
FeCl ₂ ·4H ₂ O	1.5g
H ₃ BO ₃	300.0mg
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	7.7mL

Preparation of Solution B: Add FeCl₂·4H₂O to 7.7mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Adjust pH to 6.0. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C:

Composition per 100.0mL:

NaHCO ₃	5.0g
--------------------------	------

Preparation of Solution C: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% CO₂ until saturated, approximately 20 minutes. Filter sterilize under 100% CO₂ into a sterile, gas-tight 100.0mL screw-capped bottle.

Solution D:

Composition per 10.0mL:

Na-benzoate	0.4g
-------------------	------

Preparation of Solution D: Add Na-benzoate to distilled/deionized water and bring volume to 10.0mL. Sparge with N₂. Filter sterilize. Store anaerobically.

Solution E:

Composition per liter:

Pyridoxine-HCl	10.0mg
Thiamine-HCl·2H ₂ O	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
D-Ca-pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Solution E: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Solution F:

Composition per liter:

NaOH	0.5g
Na ₂ SeO ₃ ·5H ₂ O	3.0mg

Preparation of Solution F: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Solution G:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.4g
---	------

Preparation of Solution G: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Sparge with N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Store anaerobically.

Vitamin B₁₂ Solution:

Composition per 100.0mL:

Vitamin B ₁₂	10.0mg
-------------------------------	--------

Vitamin B₁₂ Solution: Add vitamin B₁₂ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge under 100% N₂ gas for 3 min. Filter sterilize.

Selenite-Tungstate Solution:

Composition per liter:

NaOH	0.5g
Na ₂ WO ₄ ·2H ₂ O	4.0mg
Na ₂ SeO ₃ ·5H ₂ O	3.0mg

Preparation of Selenite-Tungstate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Preparation of Medium: Add solution B, solution C, solution D, solution E, Vitamin B₁₂ solution, solution F, selenite-tungstate solution, and solution G to solution A in that order under N₂ gas. Adjust the pH to 7.0.

Use: For the cultivation of *Desulfobacula toluolica*.

Desulfobulbus Medium

Composition per liter:

Sodium propionate	1.85g
Na ₂ SO ₄	1.5g
(NH ₄) ₂ SO ₄	1.24g
NaCl	0.6g
L-Cysteine·HCl·H ₂ O	0.5g
KH ₂ PO ₄	0.3g
MgSO ₄ ·7H ₂ O	0.12g
CaCl ₂ ·2H ₂ O	0.08g
Trace minerals	10.0mL
Vitamin solution	10.0mL

pH 7.0 ± 0.2 at 25°C

Trace Minerals:

Composition per liter:

Nitritotriacetic acid	12.8g
FeSO ₄ ·7H ₂ O	0.3g
CoCl ₂ ·2H ₂ O	0.1g
MnCl ₂ ·4H ₂ O	0.1g
ZnCl ₂	0.1g
CuCl ₂	0.02g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄	0.01g
NiSO ₄ ·6H ₂ O	2.6mg
Na ₂ SeO ₃	1.7mg

Preparation of Trace Minerals: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L.

Vitamin Solution:**Composition per liter:**

Pyridoxine-HCl	0.01g
Thiamine-HCl	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
Calcium pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Thioctic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Cyanocobalamin	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components, except L-cysteine-HCl-H₂O, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Cool to 25°C under 85% N₂ + 15% CO₂. Add L-cysteine-HCl-H₂O. Mix thoroughly. Adjust pH to 7.2 with KHCO₃. Anaerobically distribute into tubes or flasks under 85% N₂ + 15% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Adjust pH to 7.0, if necessary.

Use: For the cultivation and maintenance of *Desulfobulbus elongatus*.

Desulfobulbus Medium**Composition per 1001.0mL:**

Solution A	870.0mL
Solution C	100.0mL
Solution D	10.0mL
Solution E (Vitamin solution)	10.0mL
Solution F	10.0mL
Solution B (Trace elements solution SL-10)	1.0mL
pH 7.1–7.4 at 25°C	

Solution A:**Composition per 870.0mL:**

Na ₂ SO ₄	3.0g
NaCl	1.0g
KCl	0.5g
MgCl ₂ ·6H ₂ O	0.4g
NH ₄ Cl	0.3g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O	0.15g
Resazurin	1.0mg

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 870.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 3–4 min. Allow to cool to room temperature while gassing under 80% N₂ + 20% CO₂. Continue gassing until pH reaches below 6.0. Seal the flask under 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B (Trace Elements Solution SL-10):**Composition per liter:**

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg

HCl (25% solution)	10.0mL
--------------------------	--------

Preparation of Solution B (Trace Elements Solution SL-10):

Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C:**Composition per 100.0mL:**

NaHCO ₃	5.0g
--------------------------	------

Preparation of Solution C: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Gas under 80% N₂ + 20% CO₂.

Solution D:**Composition per 10.0mL:**

Sodium propionate	2.5g
-------------------------	------

Preparation of Solution D: Add sodium propionate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution E (Vitamin Solution):**Composition per liter:**

Pyridoxine-HCl	10.0mg
Calcium DL-pantothenate	5.0mg
Lipoic acid	5.0mg
Nicotinic acid	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Riboflavin	5.0mg
Thiamine-HCl	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Solution E (Vitamin Solution): Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution F:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O	0.4g
---	------

Preparation of Solution F: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Aseptically and anaerobically combine 870.0mL of sterile solution A with 1.0mL of sterile solution B, 100.0mL of sterile solution C, 10.0mL of sterile solution D, 10.0mL of sterile solution E, and 10.0mL of sterile solution F, in that order. Mix thoroughly. Anaerobically distribute into sterile tubes or flasks under 100% N₂.

Use: For the cultivation and maintenance of *Desulfobulbus* species.

Desulfobulbus Medium**Composition per 1001.0mL:**

Solution A	870.0mL
Solution C	100.0mL
Solution D	10.0mL
Solution E (Vitamin solution)	10.0mL
Solution F	10.0mL
Solution B (Trace elements solution SL-10)	1.0mL
pH 7.1–7.4 at 25°C	

Solution A:**Composition** per 870.0mL:

NaCl	7.0g
Na ₂ SO ₄	3.0g
MgCl ₂ ·6H ₂ O	1.3g
KCl	0.5g
NH ₄ Cl	0.3g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O	0.15g
Resazurin	1.0mg

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 870.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 3–4 min. Allow to cool to room temperature while gassing under 80% N₂ + 20% CO₂. Continue gassing until pH reaches below 6.0. Seal the flask under 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B (Trace Elements Solution SL-10):**Composition** per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Solution B (Trace Elements Solution SL-10):

Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C:**Composition** per 100.0mL:

NaHCO ₃	5.0g
--------------------	------

Preparation of Solution C: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Gas under 80% N₂ + 20% CO₂.

Solution D:**Composition** per 10.0mL:

Sodium propionate	1.5g
-------------------	------

Preparation of Solution D: Add sodium propionate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution E (Vitamin Solution):**Composition** per liter:

Pyridoxine-HCl	10.0mg
Calcium DL-pantothenate	5.0mg
Lipoic acid	5.0mg
Nicotinic acid	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Riboflavin	5.0mg
Thiamine-HCl	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Solution E (Vitamin Solution): Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution F:**Composition** per 10.0mL:

Na ₂ S·9H ₂ O	0.4g
-------------------------------------	------

Preparation of Solution F: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Aseptically and anaerobically combine solution A with solution B, solution C, solution D, solution E, and solution F, in that order. Mix thoroughly. Anaerobically distribute into sterile tubes or flasks under 80% N₂ + 20% CO₂.

Use: For the cultivation and maintenance of *Desulfobulbus* species and *Streptomyces* species.

***Desulfobulbus* spp. Medium
(DSMZ Medium 196)**

Composition per 1001.0mL:

Solution A	870.0mL
Solution C	100.0mL
Solution D	10.0mL
Solution E (Vitamin solution)	10.0mL
Solution F	10.0mL
Solution B (Trace elements solution SL-10)	1.0mL
pH 7.1–7.4 at 25°C	

Solution A:**Composition** per 870.0mL:

NaCl	21.0g
MgCl ₂ ·6H ₂ O	3.1g
Na ₂ SO ₄	3.0g
KH ₂ PO ₄	0.2g
NH ₄ Cl	0.3g
KCl	0.5g
CaCl ₂ ·2H ₂ O	0.15g
Resazurin	1.0mg

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 870.0mL. Mix thoroughly.

Solution B (Trace Elements Solution SL-10):**Composition** per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Solution B (Trace Elements Solution SL-10):

Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C:**Composition** per 100.0mL:

NaHCO ₃	5.0g
--------------------	------

Preparation of Solution C: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Flush with 80% N₂ + 20% CO₂ to remove dissolved oxygen.

Solution D:

Composition per 10.0mL:

Na-propionate 1.5g

Preparation of Solution D: Add Na-propionate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution E (Vitamin Solution):

Composition per liter:

Pyridoxine-HCl 10.0mg
 Thiamine-HCl·2H₂O 5.0mg
 Riboflavin 5.0mg
 Nicotinic acid 5.0mg
 D-Ca-pantothenate 5.0mg
p-Aminobenzoic acid 5.0mg
 Lipoic acid 5.0mg
 Biotin 2.0mg
 Folic acid 2.0mg
 Vitamin B₁₂ 0.10mg

Preparation of Solution E (Vitamin Solution): Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution F:

Composition per 10.0mL:

Na₂S·9H₂O 0.4g

Preparation of Solution F: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Gently heat solution A and bring to boiling. Boil solution A for a few minutes. Cool to room temperature. Gas with 80% N₂ + 20% CO₂ gas mixture to reach a pH below 6. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Sequentially add 1.0mL solution B, 100.0mL solution C, 10.0mL solution D, 10.0mL solution E, and 10.0mL solution F. Distribute anaerobically under 80% N₂ + 20% CO₂ into appropriate vessels. Addition of 10–20mg sodium dithionite per liter from a 5% (w/v) solution, freshly prepared under N₂ and filter sterilized, may stimulate growth.

Use: For the cultivation of *Desulfosarcina variabilis*.

***Desulfocapsa sulfoexigens* Medium
(DSMZ Medium 195b)**

Composition per 1001.0mL:

Solution A 890.0mL
 Solution C 100.0mL
 Solution D 10.0mL
 Solution B (Trace elements solution SL-10) 1.0mL
 pH 7.2 ± 0.2 at 25°C

Solution A:

NaCl 21.0g
 MgCl₂·6H₂O 3.1g
 Na₂SO₄ 3.0g
 FeCl₃·6H₂O 2.7g
 KCl 0.5g
 NH₄Cl 0.3g
 KH₂PO₄ 0.2g

CaCl₂·2H₂O 0.15g
 Resazurin 1.0mg

Preparation of Solution A: Dissolve 2.7g FeCl₃·6H₂O in 890.0mL distilled/deionized water. Adjust pH to 7 with 1N NaOH. Add remaining components. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂ gas mixture.

Solution B (Trace Elements Solution SL-10):

Composition per liter:

FeCl₂·4H₂O 1.5g
 CoCl₂·6H₂O 190.0mg
 MnCl₂·4H₂O 100.0mg
 ZnCl₂ 70.0mg
 Na₂MoO₄·2H₂O 36.0mg
 NiCl₂·6H₂O 24.0mg
 H₃BO₃ 6.0mg
 CuCl₂·2H₂O 2.0mg
 HCl (25% solution) 10.0mL

Preparation of Solution B (Trace Elements Solution SL-10):

Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C:

Composition per 100.0mL:

NaHCO₃ 5.0g

Preparation of Solution C: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Flush with 80% N₂ + 20% CO₂ to remove dissolved oxygen.

Solution D:

Composition per 10.0mL:

Na-thiosulfate 5.0g

Preparation of Solution D: Add Na-thiosulfate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize. Flush with 80% N₂ + 20% CO₂ to remove dissolved oxygen.

Preparation of Medium: Gently heat solution A and bring to boiling. Boil solution A for a few minutes. Cool to room temperature. Gas with 80% N₂ + 20% CO₂ gas mixture to reach a pH below 6. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Sequentially add 1.0mL solution B, 100.0mL solution C, and 10.0mL solution D. Adjust pH to 7.2 with sodium bicarbonate or sodium carbonate. Distribute anaerobically under 80% N₂ + 20% CO₂ into appropriate vessels. Alternately distribute solution A to tubes prior to autoclaving. Dispense 8.9 mL amounts under 80% N₂ + 20% CO₂ into Hungate tubes. Seal and autoclave for 15 min at 15 psi pressure–121°C. Before use aseptically add appropriate amounts of remaining solutions to each tube from sterile anaerobic solutions.

Use: For the cultivation of *Desulfocapsa sulfoexigens*.

Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution F:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O.....	0.4g
--	------

Preparation of Solution F: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Aseptically and anaerobically combine solution A with solution B, solution C, solution D, solution E, and solution F, in that order. Mix thoroughly. Anaerobically distribute into sterile tubes or flasks under 80% N₂ + 20% CO₂.

Use: For the cultivation and maintenance of *Desulfococcus multivorans*.

Desulfococcus multivorans Medium

Composition per liter:

NaCl	10.0g
MgSO ₄ ·7H ₂ O	2.0g
CaSO ₄	1.0g
NH ₄ Cl	1.0g
Yeast extract	1.0g
K ₂ HPO ₄	0.5g
Sodium lactate (70% solution)	3.5mL

Preparation of Medium: Add components, except FeSO₄·7H₂O, ascorbic acid, and thioglycolic acid, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂ for 10–15 min. Add FeSO₄·7H₂O, ascorbic acid, and thioglycolic acid. Mix thoroughly. Continue to sparge with 80% N₂ + 20% CO₂ and adjust pH to 7.4. Anaerobically distribute into tubes or flasks. Autoclave for 10 min at 10 psi pressure–115°C.

Use: For the cultivation of *Desulfococcus multivorans*.

Desulfococcus niacini Medium

Composition per 1001.0mL:

Solution A	870.0mL
Solution C	100.0mL
Solution D	10.0mL
Solution E (Vitamin solution)	10.0mL
Solution F	10.0mL
Solution B (Trace elements solution SL-10)	1.0mL
pH 7.4 ± 0.2 at 25°C	

Solution A:

Composition per 870.0mL:

NaCl	7.0g
Na ₂ SO ₄	3.0g
MgCl ₂ ·6H ₂ O	1.3g
KCl	0.5g
NH ₄ Cl	0.3g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O	0.15g
Resazurin	1.0mg
Na ₂ SeO ₃ ·5H ₂ O	3.0μg

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 870.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 3–4 min. Allow to cool to room temperature while gassing under 80% N₂ + 20% CO₂. Continue gassing until pH reaches below 6.0. Seal the flask under 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B (Trace Elements Solution SL-10):

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg

MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Solution B (Trace Elements Solution SL-10):

Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C:

Composition per 100.0mL:

NaHCO ₃	5.0g
--------------------------	------

Preparation of Solution C: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Gas under 80% N₂ + 20% CO₂.

Solution D:

Composition per 10.0mL:

Sodium nicotinate	0.82g
-------------------------	-------

Preparation of Solution D: Add sodium nicotinate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution E (Vitamin Solution):

Composition per liter:

Pyridoxine-HCl	10.0mg
Calcium DL-pantothenate	5.0mg
Lipoic acid	5.0mg
Nicotinic acid	5.0mg

Na ₂ S·9H ₂ O.....	0.1g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure-121°C. Cool to room temperature.

NaHCO₃ Solution:**Composition** per 10.0mL:

NaHCO ₃	3.0g
--------------------------	------

Preparation of NaHCO₃ Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 20% CO₂ + 80% H₂. Autoclave for 15 min at 15 psi pressure-121°C. Cool to room temperature.

Wolfe's Mineral Elixir:**Composition** per liter:

MgSO ₄ ·7H ₂ O	30.0g
NaCl	10.0g
MnSO ₄ ·2H ₂ O	5.0g
(NH ₄) ₂ NiSO ₄ ·6H ₂ O	2.8g
CoCl ₂ ·6H ₂ O	1.8g
ZnSO ₄ ·7H ₂ O	1.8g
FeSO ₄ ·7H ₂ O.....	1.0g
CaCl ₂ ·2H ₂ O.....	1.0g
KAl(SO ₄) ₂ ·12H ₂ O.....	0.18g
CuSO ₄ ·5H ₂ O	0.1g
H ₃ BO ₃	0.1g
Na ₂ MoO ₄ ·2H ₂ O	0.1g
Na ₂ SeO ₄	0.1g
Na ₂ WO ₄ ·2H ₂ O	0.1g

Preparation of Wolfe's Mineral Elixir: Adjust pH of 1.0L of distilled/deionized water to 1.0 with dilute H₂SO₄. Add remaining components one at a time. Mix thoroughly to dissolve.

Wolfe's Vitamin Solution:**Composition** per liter:

Pyridoxine-HCl	10.0mg
Thiamine-HCl	5.0mg
Riboflavin	5.0mg

Nicotinic acid.....	5.0mg
Calcium pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Thioctic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Cyanocobalamin	100.0µg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except bicarbonate, vitamins, and reducing agents, to distilled/deionized water and bring volume to 960.0mL. Adjust pH to 7.2. Gently heat and bring to boiling. Boil for 1 min. Mix thoroughly. Cool to room temperature while sparging with 80% N₂ + 20% CO₂. Dispense into culture vessels under an atmosphere of 80% N₂ + 20% CO₂ (e.g., Balch tubes or serum vials). Add n-decane to each vessel. Close the vessels using butyl rubber stoppers fixed with aluminum crimps. Autoclave for 15 min at 15 psi pressure-121°C. Add vitamins and reducing agents from sterile, anoxic stock solutions. Adjust pH to 7.1. Use 20% as inoculum and incubate vials in an inverted position.

Use: For the cultivation of *Desulfoglaeba* spp.

Desulfohalobium Medium**Composition** per 1010.0mL:

NaCl.....	100.0g
MgCl ₂ ·6H ₂ O	20.0g
KCl.....	4.0g
Na ₂ SO ₄	3.0g
CaCl ₂ ·2H ₂ O	2.7g
NH ₄ Cl	1.0g
Sodium acetate.....	1.0g
Trypticase™.....	1.0g
Yeast extract.....	1.0g
K ₂ HPO ₄	0.3g
KH ₂ PO ₄	0.3g
Sodium (L)-lactate	2.5g
Resazurin	1.0mg
Na ₂ SeO ₃ ·5H ₂ O.....	3.0µg
Na ₂ S·9H ₂ O solution	10.0mL
Trace elements solution SL-10	1.0mL

pH 7.0 ± 0.2 at 25°C

Trace Elements Solution SL-10:**Composition** per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	36.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure-121°C.

Na₂S·9H₂O Solution:**Composition per 10.0mL:**Na₂S·9H₂O 1.0mg

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 10.0mL of sterile Na₂S·9H₂O solution. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Methanohalophilus oregonense*.

**Desulfohalobium utahense Medium
(DSMZ Medium 1055)**

Composition per liter:

NaCl 10.0g
MgSO₄·7H₂O 10.0g
KCl 6.0g
NH₄Cl 1.0g
KH₂PO₄ 0.1g
CaCl₂·2H₂O 0.4g
Yeast extract 0.5g
Resazurin 0.5mg
NaHCO₃ solution 10.0mL
Lactate solution 10.0mL
Na₂S·9H₂O solution 10.0mL
Trace elements solution SL-10 1.0mL
Selenite-tungstate solution 1.0mL

pH 7.1 ± 0.2 at 25°C

Lactate Solution:**Composition per 10.0mL:**

Na-(L)-lactate 2.5g

Preparation of Lactate Solution: Add Na-(L)-lactate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Na₂S·9H₂O Solution:**Composition per 10.0mL:**Na₂S·9H₂O 0.1g

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

NaHCO₃ Solution:**Composition per 10.0mL:**NaHCO₃ 4.0g

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 20% CO₂ + 80% H₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Selenite/Tungstate Solution:**Composition per liter:**

NaOH 0.5g
Na₂WO₄·2H₂O 4.0mg
Na₂SeO₃·5H₂O 3.0mg

Preparation of Selenite/Tungstate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution SL-10:**Composition per liter:**

FeCl₂·4H₂O 1.5g
CoCl₂·6H₂O 190.0mg
MnCl₂·4H₂O 100.0mg
ZnCl₂ 70.0mg
Na₂MoO₄·2H₂O 36.0mg
NiCl₂·6H₂O 24.0mg
H₃BO₃ 6.0mg
CuCl₂·2H₂O 2.0mg
HCl (25% solution) 10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except bicarbonate, vitamins, and reducing agents, to distilled/deionized water and bring volume to 960.0mL. Adjust pH to 7.2. Gently heat and bring to boiling. Boil for 1 min. Mix thoroughly. Cool to room temperature while sparging with 80% N₂ + 20% CO₂. Dispense into culture vessels under an atmosphere of 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add bicarbonate, sodium lactate, and sulfide. Adjust the final pH of the medium to 7.0–7.2.

Use: For the cultivation of *Desulfohalobium utahense*.

**Desulfohalobium utahense Medium with Malate
(DSMZ Medium 1055)**

Composition per liter:

NaCl 10.0g
MgSO₄·7H₂O 10.0g
KCl 6.0g
NH₄Cl 1.0g
KH₂PO₄ 0.1g
CaCl₂·2H₂O 0.4g
Yeast extract 0.5g
Resazurin 0.5mg
NaHCO₃ solution 10.0mL
Malate solution 10.0mL
Na₂S·9H₂O solution 10.0mL
Trace elements solution SL-10 1.0mL
Selenite/tungstate solution 1.0mL

pH 7.1 ± 0.2 at 25°C

Malate Solution:**Composition per 10.0mL:**Na₂(DL)-malate 1.0g

Preparation of Malate Solution: Add Na₂(DL)-malate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Na₂S·9H₂O Solution:**Composition per 10.0mL:**Na₂S·9H₂O 0.1g

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly.

Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

NaHCO₃ Solution:

Composition per 10.0mL:

NaHCO₃ 4.0g

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 20% CO₂ + 80% H₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Selenite/Tungstate Solution:

Composition per liter:

NaOH 0.5g

Na₂WO₄·2H₂O 4.0mg

Na₂SeO₃·5H₂O 3.0mg

Preparation of Selenite/Tungstate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution SL-10:

Composition per liter:

FeCl₂·4H₂O 1.5g

CoCl₂·6H₂O 190.0mg

MnCl₂·4H₂O 100.0mg

ZnCl₂ 70.0mg

Na₂MoO₄·2H₂O 36.0mg

NiCl₂·6H₂O 24.0mg

H₃BO₃ 6.0mg

CuCl₂·2H₂O 2.0mg

HCl (25% solution) 10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except bicarbonate, vitamins, and reducing agents, to distilled/deionized water and bring volume to 960.0mL. Adjust pH to 7.2. Gently heat and bring to boiling. Boil for 1 min. Mix thoroughly. Cool to room temperature while sparging with 80% N₂ + 20% CO₂. Dispense into culture vessels under an atmosphere of 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add bicarbonate, sodium lactate, and sulfide. Adjust the final pH of the medium to 7.0–7.2.

Use: For the cultivation of *Desulfovermiculus halophilus*.

Desulfoluna Medium (DSMZ Medium 1099)

Composition per liter:

NaCl 20.0g

MgSO₄·7H₂O 2.0g

NH₄Cl 1.0g

Na₂SO₄ 1.0g

KH₂PO₄ 0.5g

Yeast extract 0.5g

CaCl₂·2H₂O 0.1g

Resazurin 1.0mg

L-Cysteine-HCl solution 10.0mL

Na-lactate, 60% solution 2.9mL

Trace elements solution SL-10 1.0mL

pH 6.5 ± 0.2 at 25°C

Trace Elements Solution SL-10:

Composition per liter:

FeCl₂·4H₂O 1.5g

CoCl₂·6H₂O 190.0mg

MnCl₂·4H₂O 100.0mg

ZnCl₂ 70.0mg

Na₂MoO₄·2H₂O 36.0mg

NiCl₂·6H₂O 24.0mg

H₃BO₃ 6.0mg

CuCl₂·2H₂O 2.0mg

HCl (25% solution) 10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

L-Cysteine-HCl Solution:

Composition per 10.0mL:

L-Cysteine-HCl 0.5g

Preparation of L-Cysteine Solution: Add L-cysteine-HCl to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except cyseine solution, to distilled/deionized water and bring volume to 990.0mL. Gently heat and bring to boiling. Boil for 1 min. Mix thoroughly. Cool to room temperature while sparging with 100% N₂. Dispense into culture vessels under an atmosphere of 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL cysteine solution. Adjust the final pH of the medium to 6.5.

Use: For the cultivation of *Desulfoluna* spp.

Desulfomicrobium WHB Medium

Composition per 1003.0mL:

Solution A 870.0mL

Solution C 100.0mL

Solution D 10.0mL

Solution E (Vitamin solution) 10.0mL

Solution F 10.0mL

Solution B (Trace elements solution SL-10) 1.0mL

Solution G 1.0mL

Solution H 1.0mL

pH 7.1–7.4 at 25°C

Solution A:

Composition per 870.0mL:

NaCl 21.0g

MgCl₂·6H₂O 3.1g

Na₂SO₄ 3.0g

KCl 0.5g

NH₄Cl 0.3g

KH₂PO₄ 0.2g

CaCl₂·2H₂O 0.15g

Resazurin 1.0mg

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 870.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 3–4 min. Allow to cool to room temperature while gassing under 80% N₂ + 20% CO₂. Continue gassing until pH reaches below 6.0. Seal the flask under 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B (Trace Elements Solution SL-10):**Composition per liter:**

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Solution B (Trace Elements Solution SL-10):

Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C:**Composition per 100.0mL:**

NaHCO ₃	5.0g
--------------------------	------

Preparation of Solution C: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Sparge with 80% N₂ + 20% CO₂.

Solution D:**Composition per 10.0mL:**

Sodium lactate	4.0g
----------------------	------

Preparation of Solution D: Add sodium lactate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution E (Vitamin Solution):**Composition per liter:**

Pyridoxine-HCl	10.0mg
Calcium DL-pantothenate	5.0mg
Lipoic acid	5.0mg
Nicotinic acid	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Riboflavin	5.0mg
Thiamine-HCl	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Solution E (Vitamin Solution): Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Sparge with 100% N₂.

Solution F:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O	0.4g
---	------

Preparation of Solution F: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution G (Selenite-Tungstate Solution):**Composition per liter:**

NaOH	0.5g
Na ₂ WO ₄ ·2H ₂ O	4.0mg
Na ₂ SeO ₃ ·5H ₂ O	3.0mg

Preparation of Solution G (Selenite-Tungstate Solution): Add components to distilled/deionized water and bring volume to

1.0L. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution H (Seven Vitamins):**Composition per liter:**

Pyridoxine-HCl	0.3g
Thiamine-HCl	0.2g
Nicotinic acid	0.2g
Calcium DL-pantothenate	0.1g
Vitamin B ₁₂	0.1g
<i>p</i> -Aminobenzoic acid	80.0mg
Biotin	20.0mg

Preparation of Solution H (Seven Vitamins): Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Sparge with 100% N₂.

Preparation of Medium: Aseptically and anaerobically combine solution A with solution B, solution C, solution D, solution E, solution F, solution G, and solution H, in that order. Mix thoroughly. Anaerobically distribute into sterile tubes or flasks under 80% N₂ + 20% CO₂.

Use: For the cultivation of *Desulfomicrobium* species.

Desulfomonile Medium**Composition per 1002.0mL:**

Solution A	870.0mL
Solution C	100.0mL
Solution D	10.0mL
Solution E (Vitamin solution)	10.0mL
Solution F	10.0mL
Solution B (Trace elements solution SL-10)	1.0mL
Solution G	1.0mL
pH 6.8–7.0 at 25°C	

Solution A:**Composition per 870.0mL:**

Na ₂ SO ₄	3.0g
NaCl	1.0g
KCl	0.5g
MgCl ₂ ·6H ₂ O	0.4g
NH ₄ Cl	0.3g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O	0.15g
Resazurin	1.0mg

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 870.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 3–4 min. Allow to cool to room temperature while gassing under 80% N₂ + 20% CO₂. Continue gassing until pH reaches below 6.0. Seal the flask under 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B (Trace Elements Solution SL-10):**Composition per liter:**

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Solution B (Trace Elements Solution SL-10):

Add $\text{FeCl}_2 \cdot 4\text{H}_2\text{O}$ to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Gas under 100% N_2 . Autoclave for 15 min at 15 psi pressure–121°C.

Solution C:**Composition per 100.0mL:**

NaHCO_3 2.5g

Preparation of Solution C: Add NaHCO_3 to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Gas under 80% N_2 + 20% CO_2 .

Solution D:**Composition per 10.0mL:**

Sodium pyruvate 4.0g

Preparation of Solution D: Add sodium pyruvate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gas under 100% N_2 . Autoclave for 15 min at 15 psi pressure–121°C.

Solution E (Vitamin Solution):**Composition per liter:**

Nicotinamide 50.0mg
 1,4-Naphthoquinone 20.0mg
 Pyridoxine-HCl 5.0mg
 Calcium DL-pantothenate 5.0mg
 Thiocetic acid 5.0mg
p-Aminobenzoic acid 5.0mg
 Riboflavin 5.0mg
 Thiamine-HCl 5.0mg
 Biotin 5.0mg
 Folic acid 5.0mg
 Vitamin B_{12} 5.0mg
 Hemin 5.0mg

Preparation of Solution E (Vitamin Solution): Add 1,4-naphthoquinone and hemin to 10.0mL of 0.1N NaOH. Mix thoroughly. Add remaining components and bring volume to 1.0L with distilled/deionized water. Mix thoroughly. Gas under 100% N_2 . Autoclave for 15 min at 15 psi pressure–121°C.

Solution F:**Composition per 10.0mL:**

$\text{Na}_2\text{S} \cdot 9\text{H}_2\text{O}$ 0.4g

Preparation of Solution F: Add $\text{Na}_2\text{S} \cdot 9\text{H}_2\text{O}$ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gas under 100% N_2 . Autoclave for 15 min at 15 psi pressure–121°C.

Solution G:**Composition per 10.0mL:**

NaOH 0.5g
 $\text{Na}_2\text{WO}_4 \cdot 2\text{H}_2\text{O}$ 4.0mg
 $\text{Na}_2\text{SeO}_3 \cdot 5\text{H}_2\text{O}$ 3.0mg

Preparation of Solution G: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gas under 100% N_2 . Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Aseptically and anaerobically combine 870.0mL of sterile solution A with 1.0mL of sterile solution B, 100.0mL of sterile solution C, 10.0mL of sterile solution D, 10.0mL of sterile solution E, and 10.0mL of sterile solution F, in that order. Mix thoroughly. Anaerobically distribute into sterile tubes or flasks under 100% N_2 . Add 50.0mg/L of sodium dithionite prior to inoculation.

Use: For the cultivation and maintenance of *Desulfomonile tiedjei*.

Desulfomonile tiedjei Medium**Composition per liter:**

NaHCO_3 3.0g
 PIPES (piperazine-*N,N'*-bis-2-ethanesulfonic acid) buffer 1.5g
 Na_2SO_4 1.42g
 Yeast extract 1.0g
 Mineral solution 20.0mL
 Trace metal solution 10.0mL
 $\text{Na}_2\text{S}_2\text{O}_4$ solution 10.0mL
 Vitamin solution 10.0mL
 Sodium pyruvate solution 10.0mL
 Resazurin (0.1% solution) 1.0mL

pH 7.3 ± 0.2 at 25°C

Mineral Solution:**Composition per liter:**

NH_4Cl 50.0g
 NaCl 40.0g
 $\text{MgCl}_2 \cdot 6\text{H}_2\text{O}$ 8.3g
 KCl 5.0g
 KH_2PO_4 5.0g
 $\text{CaCl}_2 \cdot 2\text{H}_2\text{O}$ 1.0g

Preparation of Mineral Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Trace Metal Solution:**Composition per liter:**

Nitrilotriacetic acid 2.0g
 $\text{MnSO}_4 \cdot \text{H}_2\text{O}$ 1.0g
 $\text{Fe}(\text{NH}_4)_2(\text{SO}_4)_2 \cdot 6\text{H}_2\text{O}$ 0.8g
 $\text{CoCl}_2 \cdot 6\text{H}_2\text{O}$ 0.2g
 $\text{ZnSO}_4 \cdot 7\text{H}_2\text{O}$ 0.2g
 $\text{CuCl}_2 \cdot 2\text{H}_2\text{O}$ 0.02g
 $\text{Na}_2\text{MoO}_4 \cdot \text{H}_2\text{O}$ 0.02g
 Na_2SeO_4 0.02g
 Na_2WO_4 0.02g
 $\text{NiCl}_2 \cdot 6\text{H}_2\text{O}$ 0.02g

Preparation of Trace Metal Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L.

Vitamin Solution:**Composition per liter:**

Nicotinamide 0.05g
 1,4-Naphthoquinone 0.02g
p-Aminobenzoic acid 5.0mg
 Biotin 5.0mg
 Calcium pantothenate 5.0mg
 Cyanocobalamin 5.0mg
 Folic acid 5.0mg
 Hemin 5.0mg
 Pyridoxine-HCl 5.0mg
 Riboflavin 5.0mg
 Thiocetic acid 5.0mg
 NaOH (0.1N solution) 5.0mL

Preparation of Vitamin Solution: Add thiocetic acid, 1,4-naphthoquinone, and hemin to 5.0mL of 0.1N NaOH solution. Mix thoroughly. Bring volume to 1.0L with distilled/deionized water. Add remaining components. Mix thoroughly.

Na₂S₂O₄ Solution:**Composition** per 10.0mL:Na₂S₂O₄ 0.087g

Preparation of Na₂S₂O₄ Solution: Add Na₂S₂O₄ to distilled/deionized water and bring volume to 10.0mL. Filter sterilize. Prepare freshly.

Sodium Pyruvate Solution:**Composition** per 10.0mL:

Sodium pyruvate 4.4g

Preparation of Sodium Pyruvate Solution: Add sodium pyruvate to distilled/deionized water and bring volume to 10.0mL. Filter sterilize.

Preparation of Medium: Add PIPES buffer, Na₂SO₄, yeast extract, mineral solution, and trace metal solution to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Adjust pH to 7.3 with HCl. Add NaHCO₃ and resazurin. Gently heat and bring to boiling under 80% N₂ + 20% CO₂. Replace headspace with 2 atm pressure of the same gas phase. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Anaerobically and aseptically add sterile vitamin solution, sodium pyruvate solution, and Na₂S₂O₄ solution. Mix thoroughly.

Use: For the cultivation and maintenance of *Desulfomonile tiedjei*.

***Desulfomusa hansenii* Medium
(DSMZ Medium 916)**

Solution A	870.0mL
Solution D	50.0mL
Solution F	50.0mL
Solution E (Vitamin solution)	10.0mL
Solution G	10.0mL
Solution H	10.0mL
Solution B (Trace elements solution SL-10)	1.0mL
Solution C (Selenite-tungstate solution)	1.0mL
pH 7.2 ± 0.2 at 25°C	

Solution A:**Composition** per 870.0mL:

NaCl	20.0g
Na ₂ SO ₄	1.42g
KCl	0.67g
NH ₄ Cl	0.1g
KH ₂ PO ₄	0.01g
MgSO ₄ ·7H ₂ O	0.02g
Resazurin	0.5mg

Preparation of Solution A: Add components to 870.0mL of distilled/deionized water. Mix thoroughly. Gently heat and bring to boiling. Boil for 3 min. Cool to room temperature while sparging with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Solution B (Trace Elements Solution SL-10):**Composition** per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Solution B (Trace Elements Solution SL-10):

Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C (Selenite-Tungstate Solution):**Composition** per liter:

NaOH	0.5g
Na ₂ WO ₄ ·2H ₂ O	4.0mg
Na ₂ SeO ₃ ·5H ₂ O	3.0mg

Preparation of Solution C (Selenite-Tungstate Solution):

Add components to distilled/deionized water and bring volume to 1.0L. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution D:**Composition** per 50.0mL:NaHCO₃ 5.0g

Preparation of Solution D: Add NaHCO₃ to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution E (Vitamin Solution):**Composition** per liter:

Pyridoxine-HCl	10.0mg
Thiamine-HCl·2H ₂ O	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
D-Ca-pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Solution E (Vitamin Solution): Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Solution F:**Composition** per 50.0mL:

MgCl ₂ ·6H ₂ O	10.6g
CaCl ₂ ·2H ₂ O	1.52g

Preparation of Solution F: Add components to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution G:**Composition** per 10.0mL:FeCl₂·4H₂O 0.52g

Preparation of Solution G: Add FeCl₂·4H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Adjust pH to 2.0. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution H:**Composition** per 10.0mL:

Na-propionate 0.96g

Preparation of Solution H: Add Na-propionate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Aseptically and anaerobically under 80% N₂ + 20% CO₂ sequentially add to 860.0mL sterile solution A, 1.0mL solution B, 1.0mL solution C, 50.0mL solution D, 10.0mL solution E,

50.0mL solution F, 10.0mL solution G, and 10.0mL solution H. Aseptically and anaerobically distribute under 80% N₂ + 20% CO₂ into appropriate vessels. The final pH should be 7.2. Addition of 10–20mg sodium dithionite per liter from a 5% (w/v) solution, freshly prepared under N₂ and filter sterilized, may stimulate growth.

Use: For the cultivation of *Desulfomusa hansenii*.

Desulfonatrosospira Medium (DSMZ Medium 1101)

Composition per liter:

Na ₂ CO ₃	95.0g
NaHCO ₃	15.0g
NaCl	15.0g
K ₂ HPO ₄	0.5g
Ammonium chloride solution	10.0mL
Magnesium chloride solution	10.0mL
Yeast extract solution	10.0mL
Pyruvate solution	10.0mL
Thiosulfate solution	10.0mL
Na ₂ S·9H ₂ O solution	10.0mL
Vitamin solution	10.0mL
Trace elements solution SL-10 with -EDTA	1.0mL
Selenite/tungstate solution	1.0mL
pH 10.0 ± 0.2 at 25°C	

Trace Elements Solution SL-10 with EDTA:

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
Na ₂ -EDTA	0.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution SL-10 with EDTA:

Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Adjust pH to 7.0.

Selenite/Tungstate Solution:

Composition per liter:

NaOH	0.5g
Na ₂ WO ₄ ·2H ₂ O	4.0mg
Na ₂ SeO ₃ ·5H ₂ O	3.0mg

Preparation of Selenite/Tungstate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl	10.0mg
Thiamine-HCl·2H ₂ O	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
D-Ca-pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Biotin	2.0mg

Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.24g
---	-------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Ammonium Chloride Solution:

Composition per 10.0mL:

NH ₄ Cl	0.2g
--------------------------	------

Preparation of Ammonium Chloride Solution: Add NH₄Cl to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Magnesium Chloride Solution:

Composition per 10.0mL:

MgCl ₂ ·6H ₂ O	0.2g
--	------

Preparation of Magnesium Chloride Solution: Add MgCl₂·6H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Yeast Extract Solution:

Composition per 10.0mL:

Yeast extract	0.5g
---------------------	------

Preparation of Yeast Extract Solution: Add yeast extract to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Lactate Solution:

Composition per 10.0mL:

Na-lactate	2.2g
------------------	------

Preparation of Lactate Solution: Add Na-lactate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Sulfite Solution:

Composition per 10.0mL:

Na ₂ SO ₃	1.3g
---------------------------------------	------

Preparation of Sulfite: Add Na₂SO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Preparation of Medium: Add components, except ammonium chloride, magnesium chloride, yeast extract, trace elements, lactate, sulfite, and sulfide solutions, to distilled/deionized water and bring volume to 930.0mL. Gently heat and bring to boiling. Boil for 1 min. Mix thoroughly. Cool to room temperature while sparging with 100% N₂. Dispense into culture vessels under an atmosphere of 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add the ammonium chloride, magnesium chloride, yeast extract, trace elements, vitamins, lactate, sulfite, and sulfide solutions. Adjust the pH to 10.

Use: For the cultivation of *Desulfonatrosospira* spp.

Desulfonatronospira Medium (DSMZ Medium 1101)

Composition per liter:

Na ₂ CO ₃	95.0g
NaHCO ₃	15.0g
NaCl	15.0g
K ₂ HPO ₄	0.5g

HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution SL-10 with EDTA:

Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Adjust pH to 7.0.

Selenite/Tungstate Solution:

Composition per liter:

NaOH	0.5g
Na ₂ WO ₄ ·2H ₂ O	4.0mg
Na ₂ SeO ₃ ·5H ₂ O	3.0mg

Preparation of Selenite/Tungstate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl	10.0mg
Thiamine-HCl·2H ₂ O	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
D-Ca-pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Lactate Solution:

Composition per 10.0mL:

Na-lactate	2.2g
------------------	------

Preparation of Lactate Solution: Add Na-lactate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Sulfite Solution:

Composition per 10.0mL:

Na ₂ SO ₃	1.3g
---------------------------------------	------

Preparation of Sulfite: Add Na₂SO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.24g
---	-------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Ammonium Chloride Solution:

Composition per 10.0mL:

NH ₄ Cl	0.2g
--------------------------	------

Preparation of Ammonium Chloride Solution: Add NH₄Cl to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Magnesium Chloride Solution:

Composition per 10.0mL:

MgCl ₂ ·6H ₂ O	0.2g
--	------

Preparation of Magnesium Chloride Solution: Add MgCl₂·6H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Yeast Extract Solution:

Composition per 10.0mL:

Yeast extract	0.5g
---------------------	------

Preparation of Yeast Extract Solution: Add yeast extract to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Pyruvate Solution:

Composition per 10.0mL:

Na-pyruvate	2.2g
-------------------	------

Preparation of Pyruvate Solution: Add Na-pyruvate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Thiosulfate Solution:

Composition per 10.0mL:

Na ₂ S ₂ O ₃	5.0g
---	------

Preparation of Thiosulfate Solution: Add Na₂S₂O₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Preparation of Medium: Add components, except ammonium chloride, magnesium chloride, yeast extract, trace elements, vitamin, pyruvate, thiosulfate, and sulfide solutions, to distilled/deionized water and bring volume to 930.0mL. Gently heat and bring to boiling. Boil

for 1 min. Mix thoroughly. Cool to room temperature while sparging with 100% N₂. Dispense into culture vessels under an atmosphere of 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add the ammonium chloride, magnesium chloride, yeast extract, trace elements, vitamin, pyruvate, thiosulfate, and sulfide solutions. Adjust the pH to 10.

Use: For the cultivation of *Desulfonatronospira delicata*.

CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Solution B (Trace Elements Solution SL-10):

Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C:**Composition per 100.0mL:**

NaHCO ₃	5.0g
--------------------	------

Preparation of Solution C: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Flush with 80% N₂ + 20% CO₂ to remove dissolved oxygen.

Solution D:**Composition per 10.0mL:**

Na-acetate·3H ₂ O	2.5g
Isobutyric acid	0.18g
Na ₂ -succinate	0.1g

Preparation of Solution D: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Solution E:**Composition per 10.0mL:**

Na ₂ -succinate	1.0g
----------------------------	------

Preparation of Solution E: Add Na₂-succinate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution F (Vitamin Solution):**Composition per liter:**

Pyridoxine-HCl	10.0mg
Vitamin B ₁₂	5.1mg
Thiamine-HCl·2H ₂ O	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
D-Ca-pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg

Preparation of Solution F (Vitamin Solution): Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Sparge with 100% N₂.

Solution G (Artificial Sediment):

Composition per 6.6mL:

AlCl ₃ ·6H ₂ O, 4.9% (w/v)	5.0mL
Na ₂ CO ₃ , 10.6% (w/v)	1.6mL

Preparation of Solution G (Artificial Sediment): Combine components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution H:

Composition per 20.0mL:

Rumen fluid, clarified	20.0mL
------------------------	--------

Preparation of Solution H: Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution I:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.4g
-------------------------------------	------

Preparation of Solution I: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Gently heat solution A and bring to boiling. Boil solution A for a few minutes. Cool to room temperature. Gas with 80% N₂ + 20% CO₂ gas mixture to reach a pH below 6. Autoclave for 15 min at 15 psi pressure–121°C. Add 50.0mL hot agar solution. Mix thoroughly. Cool to 50°C. Sequentially add 1.0mL solution B, 100.0mL solution C, 10.0mL solution D, 1.0mL solution E, 10.0mL solution F, 6.6mL solution G, 20.0mL solution H, and 10.0mL solution I. Distribute anaerobically under 80% N₂ + 20% CO₂ into appropriate vessels. The pH should be 6.9. Addition of 10–20mg sodium dithionite per liter from a 5% (w/v) solution, freshly prepared under N₂ and filter sterilized, may stimulate growth.

Use: For the cultivation of *Desulfonema ishimotoi*.

***Desulfonema limicola* Medium
(DSMZ Medium 201)**

Composition per 1007.6mL:

Solution A	850.0mL
Solution C	100.0mL
Solution H	20.0mL
Solution D	10.0mL
Solution F (Vitamin solution)	10.0mL
Solution I	10.0mL
Solution G (Artificial sediment)	6.6mL
Solution E	1.0mL
Solution B (Trace elements solution SL-10)	1.0mL
pH 7.6 ± 0.2 at 25°C	

Solution A:

NaCl	13.0g
Na ₂ SO ₄	3.0g
MgCl ₂ ·6H ₂ O	2.2g
KCl	0.5g
KH ₂ PO ₄	0.2g
NH ₄ Cl	0.3g
CaCl ₂ ·2H ₂ O	0.15g
Resazurin	0.5mg

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 870.0mL. Mix thoroughly.

Solution B (Trace Elements Solution SL-10):

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Solution B (Trace Elements Solution SL-10):

Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C:

Composition per 100.0mL:

NaHCO ₃	5.0g
--------------------	------

Preparation of Solution C: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Flush with 80% N₂ + 20% CO₂ to remove dissolved oxygen.

Solution D:

Composition per 10.0mL:

Na-acetate·3H ₂ O	2.5g
------------------------------	------

Preparation of Solution D: Add Na-acetate·3H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution E:

Composition per 10.0mL:

Na ₂ -succinate	1.0g
----------------------------	------

Preparation of Solution E: Add Na₂-succinate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution F (Vitamin Solution):

Composition per liter:

Pyridoxine-HCl	10.0mg
Thiamine-HCl·2H ₂ O	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
D-Ca-pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.10mg

Preparation of Solution F (Vitamin Solution): Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Sparge with 100% N₂.

Solution G (Artificial Sediment):

Composition per 6.6mL:

AlCl ₃ ·6H ₂ O, 4.9% (w/v)	5.0mL
Na ₂ CO ₃ , 10.6% (w/v)	1.6mL

Preparation of Solution G (Artificial Sediment): Combine components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution H:

Composition per 20.0mL:

Rumen fluid, clarified20.0mL

Preparation of Solution H: Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution I:

Composition per 10.0mL:

Na₂S·9H₂O 0.4g

Preparation of Solution I: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Gently heat solution A and bring to boiling. Boil solution A for a few minutes. Cool to room temperature. Gas with 80% N₂ + 20% CO₂ gas mixture to reach a pH below 6. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Sequentially add 1.0mL solution B, 100.0mL solution C, 10.0mL solution D, 1.0mL solution E, 10.0mL solution F, 6.6mL solution G, 20.0mL solution H, and 10.0mL solution I. Distribute anaerobically under 80% N₂ + 20% CO₂ into appropriate vessels. The pH should be 7.6. Addition of 10–20mg sodium dithionite per liter from a 5% (w/v) solution, freshly prepared under N₂ and filter-sterilized, may stimulate growth.

Use: For the cultivation of *Desulfonema limicola*.

 Vitamin B₁₂ 0.10mg

Preparation of Solution F (Vitamin Solution): Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Sparge with 100% N₂.

Solution G (Artificial Sediment):

Composition per 6.6mL:

AlCl₃·6H₂O, 4.9% (w/v) 5.0mL
 Na₂CO₃, 10.6% (w/v) 1.6mL

Preparation of Solution G (Artificial Sediment): Combine components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution H:

Composition per 20.0mL:

Rumen fluid, clarified20.0mL

Preparation of Solution H: Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution I:**Composition per 10.0mL:**

Na₂S·9H₂O 0.4g

Preparation of Solution I: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Agar Solution:**Composition per liter:**

Agar 20.0g

Preparation of Agar Solution: Wash agar three times for 1 hr with distilled water at room temperature. Add 20.0g washed agar to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C.

Preparation of Medium: Gently heat solution A and bring to boiling. Boil solution A for a few minutes. Add 50.0mL agar solution. Cool to room temperature. Gas with 80% N₂ + 20% CO₂ gas mixture to reach a pH below 6. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Sequentially add 1.0mL solution B, 100.0mL solution C, 10.0mL solution D, 1.0mL solution E, 10.0mL solution F, 6.6mL solution G, 20.0mL solution H, and 10.0mL solution I. Distribute anaerobically under 80% N₂ + 20% CO₂ into appropriate vessels. The pH should be 7.6. Addition of 10–20mg sodium dithionite per liter from a 5% (w/v) solution, freshly prepared under N₂ and filter-sterilized, may stimulate growth.

Use: For the cultivation of *Desulfonema limicola*.

Desulfonema limicola Medium**Composition per 1009.0mL:**

Solution A 850.0mL
 Solution C 100.0mL
 Solution H 20.0mL
 Solution D 10.0mL
 Solution F (Wolfe's vitamin solution) 10.0mL
 Solution I 10.0mL
 Solution G 6.6mL
 Solution B (Trace elements solution SL-10) 1.0mL
 Solution E 1.0mL
 Solution J 0.4mL

pH 7.6 ± 0.2 at 25°C

Solution A:**Composition per 920.0mL:**

NaCl 13.0g
 MgCl₂·6H₂O 2.2g
 Na₂SO₄ 3.0g
 KCl 0.5g
 NH₄Cl 0.3g
 KH₂PO₄ 0.2g
 CaCl₂·2H₂O 0.15g
 Resazurin 0.5mg

Preparation of Solution A: Prepare and dispense solution anaerobically under 80% N₂ + 20% CO₂. Add components to distilled/deionized water and bring volume to 920.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling until resazurin turns colorless, indicating reduction, and a pH of 6.0 is reached. Cap with rubber stoppers. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution B (Trace Elements Solution SL-10):**Composition per liter:**

FeCl₂·4H₂O 1.5g

CoCl₂·6H₂O 0.19g
 MnCl₂·4H₂O 0.1g
 ZnCl₂ 0.07g
 Na₂MoO₄·2H₂O 0.036g
 NiCl₂·6H₂O 0.024g
 H₃BO₃ 6.0mg
 CuCl₂·2H₂O 2.0mg
 HCl (25% solution) 10.0mL

Preparation of Solution B (Trace Elements Solution SL-10):

Add the FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Bring volume to approximately 900.0mL with distilled/deionized water. Mix thoroughly. Adjust pH to 6.0 with NaOH. Bring volume to 1.0L with distilled/deionized water. Filter sterilize. Aseptically gas under 100% N₂ for 20 min.

Solution C:**Composition per 100.0mL:**

NaHCO₃ 5.0g

Preparation of Solution C: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Aseptically gas under 80% N₂ + 20% CO₂ for 20 min.

Solution D:**Composition per 10.0mL:**

Sodium acetate·3H₂O 2.5g

Preparation of Solution D: Prepare and dispense solution anaerobically under 80% N₂ + 20% CO₂. Add sodium acetate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Cap with a rubber stopper. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution E:**Composition per 1.0mL:**

Disodium succinate 0.1g

Preparation of Solution E: Add disodium succinate to distilled/deionized water and bring volume to 1.0mL. Mix thoroughly. Gas with 80% N₂ + 20% CO₂. Cap with rubber stopper. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution F (Wolfe's Vitamin Solution):**Composition per liter:**

Pyridoxine·HCl 0.01g
 Thiamine·HCl 5.0mg
 Riboflavin 5.0mg
 Nicotinic acid 5.0mg
 Calcium pantothenate 5.0mg
p-Aminobenzoic acid 5.0mg
 Thioctic acid 5.0mg
 Biotin 2.0mg
 Folic acid 2.0mg
 Cyanocobalamin 0.1mg

Preparation of Solution F (Wolfe's Vitamin Solution): Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Aseptically gas under 100% N₂ for 20 min.

Solution G:**Composition per 6.6mL:**

AlCl₃·6H₂O (4.9% solution) 5.0mL
 Na₂CO₃ (10.6% solution) 1.6mL

Preparation of Solution G: Combine both solutions. Mix thoroughly. Gas with 100% N₂. Cap with a rubber stopper. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution H:**Composition per 10.0mL:**

Rumen fluid, clarified20.0mL

Preparation of Solution H: Gas rumen fluid under 100% N₂ for 20 min. Cap with a rubber stopper. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution I:**Composition per 10.0mL:**Na₂S·9H₂O 0.4g

Preparation of Solution I: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Gas under 100% N₂ for 20 min. Cap with a rubber stopper. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution J:**Composition per 10.0mL:**Na₂S₂O₄ 0.5g

Preparation of Solution J: Add Na₂S₂O₄ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize. Aseptically gas under 100% N₂ for 20 min. Prepare solution freshly.

Preparation of Medium: To 850.0mL of cooled, sterile solution A, aseptically and anaerobically add in the following order: 1.0mL of sterile solution B, 100.0mL of sterile solution C, 10.0mL of sterile solution D, 1.0mL of sterile solution E, 10.0mL of sterile solution F, 6.6mL of sterile solution G, 20.0mL of sterile solution H, and 10.0mL of sterile solution I. Mix thoroughly. Immediately prior to inoculation, aseptically and anaerobically add 0.4mL of sterile solution J. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Desulfonema limicola*.

 H₃BO₃ 6.0mg
 CuCl₂·2H₂O 2.0mg
 HCl (25% solution) 10.0mL

Preparation of Solution B (Trace Elements Solution SL-10):

Add the FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Bring volume to approximately 900.0mL with distilled/deionized water. Mix thoroughly. Adjust pH to 6.0 with NaOH. Bring volume to 1.0L with distilled/deionized water. Filter sterilize. Aseptically gas under 100% N₂ for 20 min.

Solution C:

Composition per 50.0mL:

NaHCO₃ 2.5g

Preparation of Solution C: Add NaHCO₃ to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize. Aseptically gas under 80% N₂ + 20% CO₂ for 20 min.

Solution D:

Composition per 10.0mL:

Sodium benzoate 0.6g

Preparation of Solution D: Add sodium benzoate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gas with 100% N₂ for 10 min. Cap with a rubber stopper. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution E:

Composition per 1.0mL:

Na₂SeO₃·5H₂O 3.5µg

Preparation of Solution E: Add Na₂SeO₃·5H₂O to distilled/deionized water and bring volume to 1.0mL. Mix thoroughly. Gas with 100% N₂ for 10 min. Cap with a rubber stopper. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution F:

Composition per 1.0mL:

Disodium succinate 0.1g

Preparation of Solution F: Add disodium succinate to distilled/deionized water and bring volume to 1.0mL. Mix thoroughly. Gas with 100% N₂. Cap with a rubber stopper. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution G (Wolfe's Vitamin Solution):

Composition per liter:

Pyridoxine-HCl 0.01g
 Thiamine-HCl 5.0mg
 Riboflavin 5.0mg
 Nicotinic acid 5.0mg
 Calcium pantothenate 5.0mg
p-Aminobenzoic acid 5.0mg
 Thiocetic acid 5.0mg
 Biotin 2.0mg
 Folic acid 2.0mg
 Cyanocobalamin 0.1mg

Preparation of Solution G (Wolfe's Vitamin Solution): Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Aseptically gas under 100% N₂ for 20 min.

Solution H:

Composition per 1.0mL:

Vitamin B₁₂ 0.05mg

Preparation of Solution H: Add Vitamin B₁₂ to distilled/deionized water and bring volume to 1.0mL. Mix thoroughly. Gas with 100% N₂. Cap with a rubber stopper. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution I:

Composition per 6.6mL:

AlCl ₃ ·6H ₂ O (4.9% solution)	5.0mL
Na ₂ CO ₃ (10.6% solution)	1.6mL

Preparation of Solution I: Combine both solutions. Mix thoroughly. Gas with 100% N₂. Cap with a rubber stopper. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution J:

Composition per 10.0mL:

Rumen fluid, clarified	20.0mL
------------------------	--------

Preparation of Solution J: Gas rumen fluid under 100% N₂ for 20 min. Cap with a rubber stopper. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution K:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.4g
-------------------------------------	------

Preparation of Solution K: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Gas under 100% N₂ for 20 min. Cap with a rubber stopper. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution L:

Composition per 10.0mL:

Na ₂ S ₂ O ₄	0.5g
---	------

Preparation of Solution L: Add Na₂S₂O₄ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize. Aseptically gas under 100% N₂ for 20 min. Use freshly prepared solution.

Preparation of Medium: To 890.0mL of cooled, sterile solution A, aseptically and anaerobically add in the following order: 1.0mL of sterile solution B, 50.0mL of sterile solution C, 10.0mL of sterile solution D, 1.0mL of sterile solution E, 1.0mL of sterile solution F, 10.0mL of sterile solution G, 1.0mL of sterile solution H, 6.6mL of sterile solution I, 20.0mL of sterile solution J, and 10.0mL of sterile solution K. Mix thoroughly. Immediately prior to inoculation, aseptically and anaerobically add 0.4mL of sterile solution L. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Desulfohalobium magnum*.

Desulforhabdus amnigenus Medium (DSMZ Medium 708)

Composition per liter:

Na ₂ SO ₄	2.8g
Na ₂ HPO ₄ ·2H ₂ O	0.53g
KH ₂ PO ₄	0.41g
NH ₄ Cl	0.3g
NaCl	0.3g
CaCl ₂ ·2H ₂ O	0.11g
MgCl ₂ ·6H ₂ O	0.1g
Resazurin	0.5mg
Na ₂ S·9H ₂ O solution	10.0mL
Vitamin solution	10.0mL
NaHCO ₃ solution	10.0mL
Na-propionate solution	10.0mL

Selenite-tungstate solution	1.0mL
Seven vitamin solution	1.0mL
Trace elements solution SL-10	1.0mL
pH 7.2–7.6 at 25°C	

Na-propionate Solution:

Composition per 10.0mL:

Na-propionate	2.0g
---------------	------

Preparation of Na-propionate Solution: Add Na-propionate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Selenite-Tungstate Solution:

Composition per liter:

NaOH	0.5g
Na ₂ WO ₄ ·2H ₂ O	4.0mg
Na ₂ SeO ₃ ·5H ₂ O	3.0mg

Preparation of Selenite-Tungstate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.5g
-------------------------------------	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

NaHCO₃ Solution:

Composition per 10.0mL:

NaHCO ₃	4.0g
--------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

Trace Elements Solution SL-10:

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl	10.0mg
Thiamine-HCl·2H ₂ O	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
D-Ca-pantothenate	5.0mg
p-Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg

Biotin	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Seven Vitamin Solution:

Composition per liter:

Pyridoxine hydrochloride	300.0mg
Thiamine-HCl·2H ₂ O.....	200.0mg
Nicotinic acid.....	200.0mg
Vitamin B ₁₂	100.0mg
Calcium pantothenate	100.0mg
<i>p</i> -Aminobenzoic acid.....	80.0mg
D(+)-Biotin.....	20.0mg

Preparation of Seven Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Sparge with 100% N₂. Mix thoroughly. Filter sterilize.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas atmosphere. Add components, except NaHCO₃ solution, Na₂S·9H₂O solution, Na-propionate solution, vitamin solution, seven vitamin solution, selenite-tungstate solution, and trace elements solution SL-10, to distilled/deionized water and bring volume to 947.0mL. Mix thoroughly. Adjust pH to 7.2–7.6. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 10.0mL NaHCO₃ solution, 10.0mL Na₂S·9H₂O solution, 10.0mL Na-propionate solution, 10.0mL vitamin solution, 1.0mL seven vitamin solution, 1.0mL selenite-tungstate solution, and 1.0mL trace elements solution SL-10. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or bottles.

Use: For the cultivation of *Desulforhabdus amnigena* (*Desulforhabdus amnigenus*).

Desulforhabdus amnigenus Medium

Composition per 1001.0mL:

Na ₂ SO ₄	2.8g
Na ₂ HPO ₄ ·2H ₂ O.....	0.53g
KH ₂ PO ₄	0.41g
NaCl.....	0.3g
NH ₄ Cl.....	0.3g
CaCl ₂ ·2H ₂ O.....	0.11g
MgCl ₂ ·6H ₂ O.....	0.1g
Resazurin.....	0.5mg
Sodium propionate solution.....	20.0mL
NaHCO ₃ solution.....	10.0mL
Wolfe's vitamin solution.....	10.0mL
Na ₂ S·9H ₂ O solution.....	10.0mL
Selenite-tungstate solution.....	1.0mL
Trace elements solution SL-10.....	1.0mL
Seven vitamin solution.....	1.0mL

pH 7.2–7.6 at 25°C

Sodium Propionate Solution:

Composition per 20.0mL:

Sodium propionate.....	2.0g
------------------------	------

Preparation of Sodium Propionate Solution: Add sodium propionate to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

NaHCO₃ Solution:

Composition per 10.0mL:

NaHCO ₃	4.0g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	0.5g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Before use, neutralize to pH 7.0 with sterile HCl.

Wolfe's Vitamin Solution:

Composition per liter:

Pyridoxine-HCl.....	10.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Lipoic acid.....	5.0mg
Nicotinic acid.....	5.0mg
Riboflavin.....	5.0mg
Thiamine-HCl.....	5.0mg
Calcium DL-pantothenate.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Selenite-Tungstate Solution:

Composition per liter:

NaOH.....	0.5g
Na ₂ WO ₄ ·2H ₂ O.....	4.0mg
Na ₂ SeO ₃ ·5H ₂ O.....	3.0mg

Preparation of Selenite-Tungstate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution SL-10:

Composition per liter:

FeCl ₂ ·4H ₂ O.....	1.5g
CoCl ₂ ·6H ₂ O.....	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	36.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O.....	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly.

Seven Vitamin Solution:

Composition per liter:

Pyridoxine-HCl.....	0.3g
Thiamine-HCl.....	0.2g
Nicotinic acid.....	0.2g
Calcium DL-pantothenate.....	0.1g
Vitamin B ₁₂	0.1g

<i>p</i> -Aminobenzoic acid.....	80.0mg
Biotin	20.0mg

Preparation of Seven Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas mixture. Add components, except sodium propionate solution, NaHCO₃ solution, selenite-tungstate solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 960.0mL. Mix thoroughly. Adjust pH to 7.2–7.6. Sparge with 80% N₂ + 20% CO₂ gas mixture. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 20.0mL of sterile sodium propionate solution, 10.0mL of sterile NaHCO₃ solution, 1.0mL of sterile selenite-tungstate solution, and 10.0mL of sterile Na₂S·9H₂O solution. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or bottles.

Use: For the cultivation of *Desulforhabdus amnigenus*.

Desulfosarcina Medium

Composition per 1001.0mL:

Solution A	870.0mL
Solution C	100.0mL
Solution D	10.0mL
Solution E (Vitamin solution)	10.0mL
Solution F	10.0mL
Solution B (Trace elements solution SL-10).....	1.0mL

pH 7.1–7.4 at 25°C

Solution A:

Composition per 870.0mL:

NaCl	7.0g
Na ₂ SO ₄	3.0g
MgCl ₂ ·6H ₂ O.....	1.3g
KCl.....	0.5g
NH ₄ Cl	0.3g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O.....	0.15g
Resazurin	1.0mg
Na ₂ SeO ₃ ·5H ₂ O.....	3.0μg

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 870.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 3–4 min. Allow to cool to room temperature while gassing under 80% N₂ + 20% CO₂. Continue gassing until pH reaches below 6.0. Seal the flask under 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B (Trace Elements Solution SL-10):

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Solution B (Trace Elements Solution SL-10): Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C:

Composition per 100.0mL:

NaHCO ₃	5.0g
--------------------------	------

Preparation of Solution C: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Gas under 80% N₂ + 20% CO₂.

Solution D:

Composition per 10.0mL:

Sodium benzoate.....	0.6g
----------------------	------

Preparation of Solution D: Add sodium benzoate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution E (Vitamin Solution):

Composition per liter:

Pyridoxine-HCl	10.0mg
Calcium DL-pantothenate.....	5.0mg
Lipoic acid	5.0mg
Nicotinic acid.....	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Riboflavin	5.0mg
Thiamine-HCl	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Solution E (Vitamin Solution): Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution F:

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	0.4g
--	------

Preparation of Solution F: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Aseptically and anaerobically combine solution A with solution B, solution C, solution D, solution E, and solution F, in that order. Mix thoroughly. Anaerobically distribute into sterile tubes or flasks under 80% N₂ + 20% CO₂.

Use: For the cultivation and maintenance of *Desulfosarcina variabilis*.

Desulfosarcina variabilis Medium

Composition per 1009.0mL:

Solution A	850.0mL
Solution C	100.0mL
Solution G	20.0mL
Solution D.....	10.0mL
Solution E (Wolfe's vitamin solution)	10.0mL
Solution H.....	10.0mL
Solution F.....	6.6mL
Solution B (Trace elements solution SL-10)	1.0mL
Solution I	0.4mL

pH 7.6 ± 0.2 at 25°C

Solution A:

Composition per 920.0mL:

NaCl	13.5g
Na ₂ SO ₄	3.0g
MgCl ₂ ·6H ₂ O	2.2g
KCl.....	0.5g

NH ₄ Cl	0.3g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O.....	0.15g
Na ₂ SeO ₃ ·5H ₂ O.....	3.0μg
Resazurin	0.5mg

Preparation of Solution A: Prepare and dispense solution anaerobically under 80% N₂ + 20% CO₂. Add components to distilled/deionized water and bring volume to 920.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling until resazurin turns colorless, indicating reduction, and a pH of 6.0 is reached. Cap with rubber stoppers. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution B (Trace Elements Solution SL-10):

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	0.19g
MnCl ₂ ·4H ₂ O.....	0.10g
ZnCl ₂	0.070g
Na ₂ MoO ₄ ·2H ₂ O	0.036g
NiCl ₂ ·6H ₂ O	0.024g
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Solution B (Trace Elements Solution SL-10):

Add the FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Bring volume to approximately 900.0mL with distilled/deionized water. Mix thoroughly. Adjust pH to 6.0 with NaOH. Bring volume to 1.0L with distilled/deionized water. Filter sterilize. Aseptically gas under 100% N₂ for 20 min.

Solution C:

Composition per 100.0mL:

NaHCO ₃	5.0g
--------------------------	------

Preparation of Solution C: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Aseptically gas under 80% N₂ + 20% CO₂ for 20 min.

Solution D:

Composition per 10.0mL:

Sodium benzoate.....	0.6g
----------------------	------

Preparation of Solution D: Prepare and dispense solution anaerobically under 80% N₂ + 20% CO₂. Add sodium benzoate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Cap with a rubber stopper. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution E (Wolfe's Vitamin Solution):

Composition per liter:

Pyridoxine-HCl	0.01g
Thiamine-HCl	5.0mg
Riboflavin	5.0mg
Nicotinic acid.....	5.0mg
Calcium pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Thioctic acid	5.0mg
Biotin	2.0mg
Folic acid.....	2.0mg
Cyanocobalamin	0.1mg

Preparation of Solution E (Wolfe's Vitamin Solution): Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Aseptically gas under 100% N₂ for 20 min.

Solution F:

Composition per 6.6mL:

AlCl ₃ ·6H ₂ O (4.9% solution).....	5.0mL
Na ₂ CO ₃ (10.6% solution)	1.6mL

Preparation of Solution F: Combine both solutions. Mix thoroughly. Gas with 100% N₂. Cap with a rubber stopper. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution G:

Composition per 10.0mL:

Rumen fluid, clarified.....	20.0mL
-----------------------------	--------

Preparation of Solution G: Gas rumen fluid under 100% N₂ for 20 min. Cap with a rubber stopper. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution H:

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	0.4g
--	------

Preparation of Solution H: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Gas under 100% N₂ for 20 min. Cap with a rubber stopper. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution I:

Composition per 10.0mL:

Na ₂ S ₂ O ₄	0.5g
---	------

Preparation of Solution I: Add Na₂S₂O₄ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize. Aseptically gas under 100% N₂ for 20 min. Prepare solution freshly.

Preparation of Medium: To 850.0mL of cooled, sterile solution A, aseptically and anaerobically add in the following order: 1.0mL of sterile solution B, 100.0mL of sterile solution C, 10.0mL of sterile solution D, 10.0mL of sterile solution E, 6.6mL of sterile solution F, 20.0mL of sterile solution G, and 10.0mL of sterile solution H. Mix thoroughly. Immediately prior to inoculation, aseptically and anaerobically add 0.4mL of sterile solution I. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Desulfosarcina variabilis*.

Desulfotomaculum acetoxidans Medium

Composition per 1011.0mL:

Solution A.....	1.0L
Solution B.....	10.0mL
Vitamin solution.....	1.0mL

pH 7.0 ± 0.2 at 25°C

Solution A:

Composition per liter:

NaHCO ₃	4.5g
Na ₂ SO ₄	2.84g
Sodium acetate.....	1.4g
Sodium butyrate.....	1.4g
NaCl.....	1.17g
Yeast extract.....	1.0g
MgCl ₂ ·6H ₂ O	0.4g
KCl.....	0.3g
NH ₄ Cl	0.27g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O	0.15g

Resazurin	0.5mg
Trace elements solution	1.0mL

Preparation of Solution A: Add components, except NaHCO₃ and vitamin solution, and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 3–4 min. Allow to cool to room temperature while gassing under O₂-free 80% N₂ + 20% CO₂. Add NaHCO₃ and continue gassing with O₂-free 80% N₂ + 20% CO₂ until pH reaches 6.9–7.1. Seal the flask under 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution:

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	120.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	68.0mg
H ₃ BO ₃	62.0mg
Na ₂ MoO ₄ ·2H ₂ O	24.0mg
NiCl ₂ ·6H ₂ O	24.0mg
CuCl ₂ ·2H ₂ O	17.0mg
HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Gas under 100% N₂.

Vitamin Solution:

Composition per 100.0mL:

Thiamine-HCl	10.0mg
<i>p</i> -Aminobenzoic acid	4.0mg
D(+)-Biotin	1.0mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Gas under 100% N₂.

Solution B:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.36g
---	-------

Preparation of Solution B: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: To 1.0L of sterile solution A, add 10.0mL of sterile solution B and 1.0mL of sterile vitamin solution. Mix thoroughly.

Use: For the cultivation and maintenance of *Desulfotomaculum acetoxidans*.

Desulfotomaculum acetoxidans Medium

Composition per 1020.0mL:

Solution A	1.0L
Na ₂ S·9H ₂ O solution	10.0mL
Wolfe's vitamin solution	10.0mL

Solution A:

Composition per liter:

NaHCO ₃	4.5g
Na ₂ SO ₄	2.84g
Sodium acetate	1.4g
Sodium butyrate	1.4g
NaCl	1.17g
Yeast extract	1.0g

MgCl ₂ ·6H ₂ O	0.4g
KCl	0.3g
NH ₄ Cl	0.27g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O	0.15g
Resazurin	0.5mg
Trace elements solution SL-7	1.0mL

Trace Elements Solution SL-7:

Composition per 1010.0mL:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
H ₃ BO ₃	62.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
CuCl ₂ ·2H ₂ O	17.0mg
Hydrochloric acid, 25%	10.0mL

Preparation of Trace Elements Solution SL-7: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly.

Preparation of Solution A: Prepare and dispense medium under 80% N₂ + 20% CO₂. Add components, except NaHCO₃ and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Cool to room temperature while sparging with 80% N₂ + 20% CO₂. Add NaHCO₃. Mix thoroughly. Continue sparging with 80% N₂ + 20% CO₂ until pH stabilizes at 6.9–7.1. Anaerobically distribute into tubes in 10.0mL amounts under an atmosphere of 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.36g
---	-------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Before use, neutralize to pH 7.0 with sterile HCl.

Wolfe's Vitamin Solution:

Composition per liter:

Pyridoxine-HCl	10.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Nicotinic acid	5.0mg
Riboflavin	5.0mg
Thiamine-HCl	5.0mg
Calcium DL-pantothenate	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Sparge with 100% N₂.

Preparation of Medium: Aseptically and anaerobically add 0.1mL of sterile Na₂S·9H₂O solution and 0.1mL of sterile Wolfe's vitamin solution to each tube containing 10.0mL of solution A. Prepare immediately prior to use.

Use: For the cultivation of *Desulfotomaculum acetoxidans*.

***Desulfotomaculum alkaliphilum* Medium
(DSMZ Medium 866)**

Composition per liter:

Trace elements solution SL-10.....	1.0mL
pH 8.7–9.0 at 25°C	

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl.....	10.0mg
Thiamine-HCl·2H ₂ O.....	5.0mg
Riboflavin.....	5.0mg
Nicotinic acid.....	5.0mg
D-Ca-pantothenate.....	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Lipoic acid.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Trace Elements Solution SL-10:

Composition per liter:

FeCl ₂ ·4H ₂ O.....	1.5g
CoCl ₂ ·6H ₂ O.....	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	36.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O.....	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare and dispense medium anaerobically under N₂. Add components, except NaHCO₃ and Na₂S·9H₂O, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Boil for 5 min. Cool to room temperature while sparging with 100% N₂. Add NaHCO₃ and Na₂S·9H₂O. Mix thoroughly. Distribute into anaerobe tubes or bottles. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Desulfotomaculum alkaliphilum*.

***Desulfotomaculum geothermicum* Medium**

Composition per 1001.0mL:

Solution A.....	870.0mL
Solution C.....	100.0mL
Solution D.....	10.0mL
Solution E (Vitamin solution).....	10.0mL
Solution F.....	10.0mL
Solution B (Trace elements solution SL-10).....	1.0mL
pH 7.1–7.4 at 25°C	

Solution A:

Composition per 870.0mL:

NaCl.....	21.0g
MgCl ₂ ·6H ₂ O.....	3.1g
Na ₂ SO ₄	3.0g
KCl.....	0.5g
NH ₄ Cl.....	0.3g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O.....	0.15g
Resazurin.....	1.0mg

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 870.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 3–4 min. Allow to cool to room temperature while gassing under 80% N₂ + 20% CO₂. Continue gassing until pH reaches below 6.0. Seal the flask under 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B (Trace Elements Solution SL-10):

Composition per liter:

FeCl ₂ ·4H ₂ O.....	1.5g
CoCl ₂ ·6H ₂ O.....	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	36.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O.....	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Solution B (Trace Elements Solution SL-10):

Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C:

Composition per 100.0mL:

NaHCO ₃	5.0g
--------------------------	------

Preparation of Solution C: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Gas under 80% N₂ + 20% CO₂.

Solution D:

Composition per 10.0mL:

Sodium lactate.....	2.5g
---------------------	------

Preparation of Solution D: Add sodium lactate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution E (Vitamin Solution):

Composition per liter:

Pyridoxine-HCl.....	10.0mg
Calcium DL-pantothenate.....	5.0mg
Lipoic acid.....	5.0mg

Nicotinic acid.....	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Riboflavin.....	5.0mg
Thiamine-HCl.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Solution E (Vitamin Solution): Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution F:

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	0.05g
--	-------

Preparation of Solution F: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Aseptically and anaerobically combine solution A with solution B, solution C, solution D, solution E, and solution F, in that order. Mix thoroughly. Anaerobically distribute into sterile tubes or flasks under 80% N₂ + 20% CO₂.

Use: For the cultivation and maintenance of *Desulfotomaculum geothermicum*.

Desulfotomaculum Groll Medium (DSMZ Medium 124a)

Composition per liter:

NaHCO ₃	4.5g
Na ₂ SO ₄	2.84g
Na-acetate.....	1.4g
Na-butyrate.....	1.4g
NaCl.....	1.17g
Yeast extract.....	1.0g
MgCl ₂ ·6H ₂ O.....	0.4g
KCl.....	0.3g
NH ₄ Cl.....	0.27g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O.....	0.15g
Resazurin.....	0.5mg
Na ₂ S·9H ₂ O solution.....	10.0mL
Substrate solution.....	10.0mL
Selenite solution.....	10.0mL
Vitamin solution.....	1.0mL
Trace elements solution.....	1.0mL

pH 7.0 ± 0.2 at 25°C

Na₂S·9H₂O Solution:

Composition per 100.0mL:

Na ₂ S·9H ₂ O.....	3.6g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 100.0mL. Sparge with N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Store anaerobically.

Trace Elements Solution:

Composition per liter:

FeCl ₂ ·4H ₂ O.....	1.5g
CoCl ₂ ·6H ₂ O.....	120.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	68.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	24.0mg

NiCl ₂ ·6H ₂ O.....	24.0mg
H ₃ BO ₃	62.0mg
CuCl ₂ ·2H ₂ O.....	17.0mg
HCl (0.5M).....	1.0L

Preparation of Trace Elements Solution: Add FeCl₂·4H₂O to 1.0L of 0.5M HCl. Mix thoroughly. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Vitamin Solution:

Thiamine-HCl·2H ₂ O.....	10.0mg
<i>p</i> -Aminobenzoic acid.....	4.0mg
D(+)-Biotin.....	1.0mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

Selenite Solution:

Composition 10.0mL:

Sodium selenite.....	3.0μg
----------------------	-------

Preparation of Selenite Solution: Add sodium selenite to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Substrate Solution:

Composition per 10.0mL:

Sodium benzoate.....	0.6g
----------------------	------

Preparation of Substrate Solution: Add sodium benzoate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare and dispense medium under an oxygen-free 80% N₂ + 20% CO₂ gas mixture. Add components, except NaHCO₃, substrate solution, selenite solution, vitamin solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Heat gently and bring to boiling. Cool to room temperature. Add NaHCO₃. Continue sparging with 80% N₂ + 20% CO₂ until an equilibrium pH of 6.9–7.1 is reached. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C while sparging with 80% N₂ + 20% CO₂. Aseptically and anaerobically add 10.0mL of sterile substrate solution, 10.0mL of sterile selenite solution, 1.0mL of sterile vitamin solution, and 10.0mL of sterile Na₂S·9H₂O solution. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or flasks. Alternately the medium can be distributed to tubes under anaerobic conditions and autoclaved in tubes prior to addition of substrate solution, selenite solution, vitamin solution, and Na₂S·9H₂O solution. Appropriate amounts of these solutions can then be added to each tube to yield the desired concentrations. Additions are performed aseptically and anaerobically under an oxygen-free 80% N₂ + 20% CO₂ gas mixture.

Use: For the cultivation of *Desulfotomaculum gibsoniae*.

Desulfotomaculum halophilum Medium (DSMZ Medium 815)

Composition per liter:

Iron, powder.....	150.0g
NaCl.....	40.0g
MgCl ₂ ·6H ₂ O.....	8.0g
CaCl ₂ ·2H ₂ O.....	6.0g
Na-lactate.....	3.6g

Na ₂ SO ₄	3.0g
MOPS.....	3.0g
KCl.....	2.0g
Yeast extract.....	1.0g
NH ₄ Cl.....	0.3g
KH ₂ PO ₄	0.2g
SrCl ₂ ·6H ₂ O.....	0.1g
Resazurin.....	0.5mg
NaHCO ₃ solution.....	50.0mL
Trace elements solution SL-12.....	1.0mL
pH 7.2 ± 0.2 at 25°C	

Trace Elements Solution SL-12:**Composition per liter:**

Na ₂ -EDTA.....	5.2g
FeCl ₂ ·4H ₂ O.....	1.5g
CoCl ₂ ·6H ₂ O.....	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	36.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O.....	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-12: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Adjust pH to 6.0. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

NaHCO₃ Solution:**Composition per 100.0mL:**

NaHCO ₃	10.0g
--------------------------	-------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

Preparation of Medium: Prepare and dispense medium under 100% N₂. Add components, except iron and NaHCO₃ solution, to distilled/deionized water and bring volume to 950.0L. Mix thoroughly. Sparge with 100% N₂. Adjust pH to 6.0. Dispense under 100% N₂ into tubes or bottles containing 1.5g iron per 10.0mL medium. Autoclave for 30 min at 105°C. Cool to 25°C. Aseptically and anaerobically add sterile NaHCO₃ solution, 0.5mL per 10.0mL medium. Final pH is 7.2.

Use: For the cultivation of *Desulfotomaculum halophilum* and *Desulfocella halophila*.

Desulfotomaculum halophilum Medium (DSMZ Medium 815)

Composition per liter:

NaCl.....	40.0g
MgCl ₂ ·6H ₂ O.....	8.0g
CaCl ₂ ·2H ₂ O.....	6.0g

CuCl ₂ ·2H ₂ O.....	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-12: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Adjust pH to 6.0. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

NaHCO₃ Solution:**Composition per 100.0mL:**

NaHCO ₃	10.0g
--------------------------	-------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

Preparation of Medium: Prepare and dispense medium under 100% N₂. Add components, except NaHCO₃ solution, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Sparge with 100% N₂. Adjust pH to 6.0. Dispense under 100% N₂ into tubes or bottles. Autoclave for 30 min at 105°C. Cool to 25°C. Aseptically and anaerobically add sterile NaHCO₃ solution, 0.5mL per 10.0mL medium. Final pH is 7.2.

Use: For the cultivation of *Desulfocella halophila* DSM 11763.

Desulfotomaculum sapomandens Medium

Composition per 1019.7mL:

Solution A.....	966.0mL
Solution B.....	20.0mL
Solution C.....	10.0mL
Solution D.....	10.0mL
Solution F.....	10.0mL
Solution H.....	1.7mL
Solution G.....	1.0mL
Solution E.....	1.0mL

pH 7.2–7.5 at 25°C

Solution A:**Composition per 966.0mL:**

Na ₂ SO ₄	3.0g
NaCl.....	1.0g
MgCl ₂ ·6H ₂ O.....	0.4g
NH ₄ Cl.....	0.3g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O.....	0.15g
Resazurin.....	1.0mg
Trace elements solution SL-10.....	1.0mL

Trace Elements Solution SL-10:**Composition per liter:**

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B:**Composition per 20.0mL:**

NaHCO ₃	1.0g
--------------------------	------

Preparation of Solution B: Add NaHCO₃ to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C:**Composition per 10.0mL:**

Ethanol	1.0mL
---------------	-------

Preparation of Solution C: Add ethanol to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Solution D:**Composition per 10.0mL:**

Sodium benzoate	0.7g
-----------------------	------

Preparation of Solution D: Add sodium benzoate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Solution E:**Composition per 1.0mL:**

Rumen fluid, clarified	1.0mL
------------------------------	-------

Preparation of Solution E: Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution F:**Composition per liter:**

Pyridoxine-HCl	10.0mg
Calcium DL-pantothenate	5.0mg
Lipoic acid	5.0mg
Nicotinic acid	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Riboflavin	5.0mg
Thiamine-HCl	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Solution F: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gas under 100% N₂. Filter sterilize.

Solution G:**Composition per 1.0mL:**

Sodium dithionite	0.025g
-------------------------	--------

Preparation of Solution G: Add sodium dithionite to distilled/deionized water and bring volume to 1.0mL. Mix thoroughly. Gas under 100% N₂. Filter sterilize.

Solution H:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O	0.3g
---	------

Preparation of Solution H: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Aseptically and anaerobically combine in the following order: 966.0mL of sterile solution A with 20.0mL of sterile solution B, 10.0mL of sterile solution C, 10.0mL of sterile solution D, 1.0mL of sterile solution E, 10.0mL of sterile solution F, 1.0mL of sterile solution G, and 1.7mL of sterile solution H. Mix thoroughly.

Use: For the cultivation and maintenance of *Desulfotomaculum sapo-mandens*.

Desulfotomaculum spp. Medium I (DSMZ Medium 63a)

Composition per liter:

Solution A	980.0mL
Solution B	10.0mL
Solution C	10.0mL

pH 6.5–7.0 at 25°C

Solution A:**Composition per 980.0mL:**

Na-pyruvate	5.0g
Na-acetate	2.0g
MgSO ₄ ·7H ₂ O	2.0g
Yeast extract	1.0g
NH ₄ Cl	1.0g
Na ₂ SO ₄	1.0g
K ₂ HPO ₄	0.5g
CaCl ₂ ·2H ₂ O	0.1g
Resazurin	1.0mg

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly.

Solution B:**Composition per 10.0mL:**

FeSO ₄ ·7H ₂ O	0.5g
--	------

Preparation of Solution B: Add FeSO₄·7H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly.

Solution C:**Composition per 10.0mL:**

Na-thioglycolate	0.1g
Ascorbic acid	0.1g

Preparation of Solution C: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly.

Preparation of Medium: Bring solution A to a boil for a few minutes. Cool to room temperature while gassing with oxygen-free N₂ gas. Add solutions B and C. Adjust pH to 6.5–7.0. Immediately distribute under N₂ into anaerobic tubes. During distribution continuously swirl the medium to keep the grey precipitate suspended. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Desulfotomaculum spp.*

Desulfotomaculum species Medium II**Composition per 1001.0mL:**

Solution A	870.0mL
Solution C	100.0mL
Solution D	10.0mL
Solution E (Seven vitamin solution)	10.0mL
Solution F	10.0mL
Solution B (Trace elements solution SL-10)	1.0mL
	pH 7.1–7.4 at 25°C

Solution A:**Composition per 870.0mL:**

NaCl	7.0g
MgCl ₂ ·6H ₂ O	1.3g
Na ₂ SO ₄	0.7g
KCl	0.5g
NH ₄ Cl	0.3g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O	0.15g
Resazurin	1.0mg

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 870.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 3–4 min. Allow to cool to room temperature while gassing under 80% N₂ + 20% CO₂. Continue gassing until pH reaches below 6.0. Seal the flask under 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B (Trace Elements Solution SL-10):**Composition per liter:**

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Solution B (Trace Elements Solution SL-10):

Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C:**Composition per 100.0mL:**

NaHCO ₃	5.0g
--------------------	------

Preparation of Solution C: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Sparge with 80% N₂ + 20% CO₂.

Solution D:**Composition per 10.0mL:**

3,4,5-Trimethoxybenzoate	0.42g
--------------------------	-------

Preparation of Solution D: Add 3,4,5-trimethoxybenzoic acid to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution E (Seven Vitamin Solution):**Composition per liter:**

Pyridoxine-HCl	0.3g
Thiamine-HCl	0.2g

Nicotinic acid	0.2g
Calcium DL-pantothenate	0.1g
Vitamin B ₁₂	0.1g
<i>p</i> -Aminobenzoic acid	80.0mg
Biotin	20.0mg

Preparation of Solution E (Seven Vitamin Solution): Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution F:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O	0.4g
-------------------------------------	------

Preparation of Solution F: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Aseptically and anaerobically combine solution A with solution B, solution C, solution D, solution E, and solution F, in that order. Mix thoroughly. Anaerobically distribute into sterile tubes or flasks under 80% N₂ + 20% CO₂.

Use: For the cultivation of *Desulfotomaculum* species.

Desulfotomaculum thermosapovorans Medium**Composition per 1015.0mL:**

Solution A	900.0mL
Solution B	100.0mL
Solution C	10.0mL
Solution D	5.0mL
Solution E	0.5mL

pH 7.0–7.2 at 25°C

Solution A:**Composition per 900.0mL:**

NaCl	8.0g
Na ₂ SO ₄	3.0g
Sodium butyrate	2.2g
NH ₄ Cl	1.0g
KCl	0.5g
Sodium acetate	0.5g
MgCl ₂ ·6H ₂ O	0.4g
Yeast extract	0.4g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O	0.15g
Na ₂ SeO ₃ ·5H ₂ O	0.003mg
Trace elements solution SL-10	1.5mL

Trace Elements Solution SL-10:**Composition per liter:**

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining compo-

nents. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂.

Solution B:

Composition per 100.0mL:

NaHCO₃..... 5.0g

Preparation of Solution B: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C:

Composition per liter:

Pyridoxine-HCl..... 10.0mg

p-Aminobenzoic acid..... 5.0mg

Lipoic acid..... 5.0mg

Nicotinic acid..... 5.0mg

Riboflavin..... 5.0mg

Thiamine-HCl..... 5.0mg

Calcium DL-pantothenate..... 5.0mg

Biotin..... 2.0mg

Folic acid..... 2.0mg

Vitamin B₁₂..... 0.1mg

Preparation of Solution C: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Solution D:

Composition per 5.0mL:

Na₂S·9H₂O..... 0.2g

Preparation of Solution D: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 5.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Before use, neutralize to pH 7.0 with sterile HCl.

Solution E:

Composition per 1.0mL:

Na₂S₂O₄ (sodium dithionite)..... 20.0mg

Preparation of Solution E: Add Na₂S₂O₄ to distilled/deionized water and bring volume to 1.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare medium anaerobically under 80% N₂ + 20% CO₂. Aseptically and anaerobically combine 900.0mL of sterile solution A, 100.0mL of sterile solution B, 10.0mL of sterile solution C, 5.0mL of sterile solution D, and 0.5 mL of sterile solution E. Mix thoroughly. Adjust pH to 7.0–7.2.

Use: For the cultivation of *Desulfotomaculum thermosapovorans*.

Desulfovibrio aespoensis Medium (DSMZ Medium 721)

Composition per 1004.0mL:

Solution A..... 870.0mL

Solution C..... 100.0mL

Solution D..... 10.0mL

Solution E (Vitamin solution)..... 10.0mL

Solution F..... 10.0mL

Selenite-tungstate solution..... 2.0mL

Solution B (Trace elements solution SL-10)..... 1.0mL

Seven vitamin solution..... 1.0mL

pH 7.3–7.5 at 25°C

Solution A:

Composition per 870.0mL:

NaCl..... 7.0g

Na₂SO₄..... 3.0g

MgCl₂·6H₂O..... 1.3g

KCl..... 0.5g

NH₄Cl..... 0.3g

KH₂PO₄..... 0.2g

CaCl₂·2H₂O..... 0.15g

Resazurin..... 1.0mg

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 870.0mL. Mix thoroughly.

Solution B (Trace Elements Solution SL-10):

Composition per liter:

FeCl₂·4H₂O..... 1.5g

CoCl₂·6H₂O..... 190.0mg

MnCl₂·4H₂O..... 100.0mg

ZnCl₂..... 70.0mg

Na₂MoO₄·2H₂O..... 36.0mg

NiCl₂·6H₂O..... 24.0mg

H₃BO₃..... 6.0mg

CuCl₂·2H₂O..... 2.0mg

HCl (25% solution)..... 10.0mL

Preparation of Solution B (Trace Elements Solution SL-10):

Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C:

Composition per 100.0mL:

NaHCO₃..... 5.0g

Preparation of Solution C: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Flush with 80% N₂ + 20% CO₂ to remove dissolved oxygen.

Solution D:

Composition per 10.0mL:

Na-lactate..... 2.5g

Preparation of Solution D: Add Na-lactate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution E (Vitamin Solution):

Composition per liter:

Pyridoxine-HCl..... 10.0mg

Thiamine-HCl·2H₂O..... 5.0mg

Riboflavin..... 5.0mg

Nicotinic acid..... 5.0mg

D-Ca-pantothenate..... 5.0mg

p-Aminobenzoic acid..... 5.0mg

Lipoic acid..... 5.0mg

Biotin..... 2.0mg

Folic acid..... 2.0mg

Vitamin B₁₂..... 0.10mg

Preparation of Solution E (Vitamin Solution): Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution F:**Composition** per 10.0mL:

Na₂S·9H₂O 0.4g

Preparation of Solution F: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Seven Vitamin Solution:**Composition** per liter:

Pyridoxine hydrochloride 300.0mg
 Thiamine-HCl·2H₂O 200.0mg
 Nicotinic acid 200.0mg
 Vitamin B₁₂ 100.0mg
 Calcium pantothenate 100.0mg
p-Aminobenzoic acid 80.0mg
 D(+)-Biotin 20.0mg

Preparation of Seven Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Sparge with 100% N₂. Mix thoroughly. Filter sterilize.

Selenite Tungstate Solution**Composition** per liter:

NaOH 0.5g
 Na₂WO₄·2H₂O 4.0mg
 Na₂SeO₃·5H₂O 3.0mg

Preparation of Selenite Tungstate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Preparation of Medium: Gently heat solution A and bring to boiling. Boil solution A for a few minutes. Cool to room temperature. Gas with 80% N₂ + 20% CO₂ gas mixture to reach a pH below 6. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Sequentially add 1.0mL solution B, 100.0mL solution C, 10.0mL solution D, 10.0mL solution E, 10.0mL solution F, 2.0mL selenite tungstate solution, and 1.0mL seven vitamin solution. Distribute anaerobically under 80% N₂ + 20% CO₂ into appropriate vessels.

Use: For the cultivation of *Desulfovibrio aespoeensis*.

Desulfovibrio alcoholovorans* Medium*Composition** per liter:

Solution A 980.0mL
 Solution B 10.0mL
 Solution C 10.0mL

pH 7.8 ± 0.2 at 25°C

Solution A:**Composition** per 980.0mL:

MgSO₄·7H₂O 2.0g
 1,2-Propanediol 1.5g
 Na₂SO₄ 1.0g
 NH₄Cl 1.0g
 Yeast extract 1.0g
 K₂HPO₄ 0.5g
 CaCl₂·2H₂O 0.1g
 Na₂SeO₃·5H₂O 3.0mg
 Resazurin 1.0mg

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 3–4 min. Allow to cool to room temperature while gassing under 100% N₂.

Solution B:**Composition** per 10.0mL:

FeSO₄·7H₂O 0.5g

Preparation of Solution B: Add FeSO₄·7H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C:**Composition** per 10.0mL:

Ascorbic acid 0.1g
 Sodium thioglycolate 0.1g

Preparation of Solution C: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: To 980.0mL of cooled solution A, anaerobically add 10.0mL of solution B and 10.0mL of solution C. Mix thoroughly. Adjust pH to 7.8 with NaOH. Distribute into tubes or flasks. During distribution, swirl the medium to keep the precipitate in suspension. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Desulfovibrio alcoholovorans*.

Desulfovibrio asponium* Medium*Composition** per 1004.0mL:

Solution A 870.0mL
 Solution C 100.0mL
 Solution D 10.0mL
 Solution E (Vitamin solution) 10.0mL
 Solution F 10.0mL
 Solution G (Selenite-tungstate solution) 2.0mL
 Solution B (Trace elements solution SL-10) 1.0mL
 Solution H (Seven vitamin solution) 1.0mL
 pH 7.3–7.5 at 25°C

Solution A:**Composition** per 870.0mL:

NaCl 7.0g
 Na₂SO₄ 3.0g
 MgCl₂·6H₂O 1.3g
 KCl 0.5g
 NH₄Cl 0.3g
 KH₂PO₄ 0.2g
 CaCl₂·2H₂O 0.15g
 Resazurin 1.0mg

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 870.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 3–4 min. Allow to cool to room temperature while gassing under 80% N₂ + 20% CO₂. Continue gassing until pH reaches below 6.0. Seal the flask under 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B (Trace Elements Solution SL-10):**Composition** per liter:

FeCl₂·4H₂O 1.5g
 CoCl₂·6H₂O 190.0mg
 MnCl₂·4H₂O 100.0mg
 ZnCl₂ 70.0mg
 Na₂MoO₄·2H₂O 36.0mg
 NiCl₂·6H₂O 24.0mg
 H₃BO₃ 6.0mg

CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Solution B (Trace Elements Solution SL-10):

Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C:**Composition per 100.0mL:**

NaHCO ₃	5.0g
--------------------------	------

Preparation of Solution C: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Sparge with 80% N₂ + 20% CO₂.

Solution D:**Composition per 10.0mL:**

Sodium lactate.....	2.5g
---------------------	------

Preparation of Solution D: Add sodium lactate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution E (Vitamin Solution):**Composition per liter:**

Pyridoxine·HCl	10.0mg
Calcium DL-pantothenate	5.0mg
Lipoic acid	5.0mg
Nicotinic acid.....	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Riboflavin	5.0mg
Thiamine·HCl	5.0mg
Biotin	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Solution E (Vitamin Solution): Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution F:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O.....	0.4g
--	------

Preparation of Solution F: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution G (Selenite-Tungstate Solution):**Composition per liter:**

NaOH.....	0.5g
Na ₂ WO ₄ ·2H ₂ O	4.0mg
Na ₂ SeO ₃ ·5H ₂ O.....	3.0mg

Preparation of Solution G (Selenite-Tungstate Solution):

Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution H (Seven Vitamin Solution):**Composition per liter:**

Pyridoxine·HCl	0.3g
Thiamine·HCl	0.2g
Nicotinic acid.....	0.2g
Calcium DL-pantothenate	0.1g

Vitamin B ₁₂	0.1g
<i>p</i> -Aminobenzoic acid.....	80.0mg
Biotin	20.0mg

Preparation of Solution H (Seven Vitamin Solution): Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Sparge with 100% N₂.

Preparation of Medium: Aseptically and anaerobically combine solution A with solution B, solution C, solution D, solution E, and solution F, in that order. Mix thoroughly. Anaerobically distribute into sterile tubes or flasks under 80% N₂ + 20% CO₂.

Use: For the cultivation of *Desulfovibrio asponium*.

Desulfovibrio baarsii* Medium*Composition per 1009.0mL:**

Solution A.....	850.0mL
Solution C.....	100.0mL
Solution G.....	20.0mL
Solution D.....	10.0mL
Solution E (Wolfe's vitamin solution)	10.0mL
Solution H.....	10.0mL
Solution F.....	6.6mL
Solution B (Trace elements solution SL-10)	1.0mL
Solution I	0.4mL

pH 7.6 ± 0.2 at 25°C

Solution A:**Composition per 920.0mL:**

Na ₂ SO ₄	3.0g
NaCl.....	1.0g
KCl.....	0.5g
MgCl ₂ ·6H ₂ O	0.4g
NH ₄ Cl	0.3g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O	0.15g
Resazurin	0.5mg

Preparation of Solution A: Prepare and dispense solution anaerobically under 80% N₂ + 20% CO₂. Add components to distilled/deionized water and bring volume to 920.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling until resazurin turns colorless, indicating reduction, and a pH of 6.0 is reached. Cap with rubber stoppers. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution B (Trace Elements Solution SL-10):**Composition per liter:**

FeCl ₂ ·4H ₂ O.....	1.5g
CoCl ₂ ·6H ₂ O	0.19g
MnCl ₂ ·4H ₂ O	0.10g
ZnCl ₂	0.070g
Na ₂ MoO ₄ ·2H ₂ O	0.036g
NiCl ₂ ·6H ₂ O.....	0.024g
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Solution B (Trace Elements Solution SL-10):

Add the FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Bring volume to approximately 900.0mL with distilled/deionized water. Mix thoroughly. Adjust pH to 6.0 with NaOH. Bring volume to 1.0L with distilled/deionized water. Filter sterilize. Aseptically gas under 100% N₂ for 20 min.

Solution C:**Composition** per 100.0mL:

NaHCO₃..... 5.0g

Preparation of Solution C: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Aseptically gas under 80% N₂ + 20% CO₂ for 20 min.

Solution D:**Composition** per 10.0mL:

Sodium butyrate..... 0.7g

Sodium caproate..... 0.3g

Sodium octanoate..... 0.15g

Preparation of Solution D: Prepare and dispense solution anaerobically under 80% N₂ + 20% CO₂. Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Cap with a rubber stopper. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution E (Wolfe's Vitamin Solution):**Composition** per liter:

Pyridoxine-HCl..... 0.01g

Thiamine-HCl..... 5.0mg

Riboflavin..... 5.0mg

Nicotinic acid..... 5.0mg

Calcium pantothenate..... 5.0mg

p-Aminobenzoic acid..... 5.0mg

Thioctic acid..... 5.0mg

Biotin..... 2.0mg

Folic acid..... 2.0mg

Cyanocobalamin..... 0.1mg

Preparation of Solution E (Wolfe's Vitamin Solution): Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Aseptically gas under 100% N₂ for 20 min.

Solution F:**Composition** per 6.6mL:

AlCl₃·6H₂O (4.9% solution)..... 5.0mL

Na₂CO₃ (10.6% solution)..... 1.6mL

Preparation of Solution F: Combine both solutions. Mix thoroughly. Gas with 100% N₂. Cap with a rubber stopper. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution G:**Composition** per 10.0mL:

Rumen fluid, clarified..... 20.0mL

Preparation of Solution G: Gas rumen fluid under 100% N₂ for 20 min. Cap with a rubber stopper. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution H:**Composition** per 10.0mL:

Na₂S·9H₂O..... 0.4g

Preparation of Solution H: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Gas under 100% N₂ for 20 min. Cap with a rubber stopper. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution I:**Composition** per 10.0mL:

Na₂S₂O₄..... 0.5g

Preparation of Solution I: Add Na₂S₂O₄ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize. Aseptically gas under 100% N₂ for 20 min. Prepare solution freshly.

Preparation of Medium: To 850.0mL of cooled, sterile solution A, aseptically and anaerobically add in the following order: 1.0mL of sterile solution B, 100.0mL of sterile solution C, 10.0mL of sterile solution D, 10.0mL of sterile solution E, 6.6mL of sterile solution F, 20.0mL of sterile solution G, and 10.0mL of sterile solution H. Mix thoroughly. Immediately prior to inoculation, aseptically and anaerobically add 0.4mL of sterile solution I. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Desulfovibrio baarsii*.

Desulfovibrio Brackish Medium (DSMZ Medium 410)

Composition per liter:

Solution A..... 980.0mL

Solution B..... 10.0mL

Solution C..... 10.0mL

Solution A:**Composition** per 980.0mL:

NaCl..... 10.0g

MgSO₄·7H₂O..... 2.0g

DL-Na-lactate..... 2.0g

Yeast extract..... 1.0g

NH₄Cl..... 1.0g

Na₂SO₄..... 1.0g

K₂HPO₄..... 0.5g

CaCl₂·2H₂O..... 0.1g

Resazurin..... 1.0mg

pH 7.8 ± 0.2 at 25°C

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly.

Solution B:**Composition** per 10.0mL:

FeSO₄·7H₂O..... 0.5g

Preparation of Solution B: Add FeSO₄·7H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly.

Solution C:**Composition** per 10.0mL:

Na-thioglycolate..... 0.1g

Ascorbic acid..... 0.1g

Preparation of Solution C: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly.

Preparation of Medium: Bring solution A to a boil for a few minutes. Cool to room temperature while gassing with oxygen-free N₂ gas. Add solutions B and C. Adjust pH to 7.8 with NaOH. Immediately distribute under N₂ into anaerobic tubes. During distribution continuously swirl the medium to keep the grey precipitate suspended. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Desulfovibrio giganteus* (*Desulfobacter giganteus*).

Desulfovibrio carbinolicus Medium

Composition per 1001.0mL:

Solution A..... 870.0mL

Solution C..... 100.0mL

Solution D	10.0mL
Solution E (Vitamin solution)	10.0mL
Solution F	10.0mL
Solution B (Trace elements solution SL-10)	1.0mL
pH 7.1–7.4 at 25°C	

Solution A:**Composition per 870.0mL:**

Na ₂ SO ₄	3.0g
NaCl	1.0g
KCl	0.5g
MgCl ₂ ·6H ₂ O	0.4g
NH ₄ Cl	0.3g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O	0.15g
Yeast extract	0.1g
Casamino acids	0.1g
Resazurin	1.0mg

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 870.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 3–4 min. Allow to cool to room temperature while gassing under 80% N₂ + 20% CO₂. Continue gassing until pH reaches below 6.0. Seal the flask under 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B (Trace Elements Solution SL-10):**Composition per liter:**

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Solution B (Trace Elements Solution SL-10):

Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C:**Composition per 100.0mL:**

NaHCO ₃	5.0g
--------------------	------

Preparation of Solution C: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Gas under 80% N₂ + 20% CO₂.

Solution D:**Composition per 10.0mL:**

Sodium propionate	0.7g
-------------------	------

Preparation of Solution D: Add sodium propionate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution E (Vitamin Solution):**Composition per liter:**

Pyridoxine-HCl	10.0mg
Calcium DL-pantothenate	5.0mg
Lipoic acid	5.0mg
Nicotinic acid	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg

Riboflavin	5.0mg
Thiamine-HCl	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Solution E (Vitamin Solution): Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution F:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O	0.4g
-------------------------------------	------

Preparation of Solution F: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Aseptically and anaerobically combine 870.0mL of sterile solution A with 1.0mL of sterile solution B, 100.0mL of sterile solution C, 10.0mL of sterile solution D, 10.0mL of sterile solution E, and 10.0mL of sterile solution F, in that order. Mix thoroughly. Anaerobically distribute into sterile tubes or flasks under 100% N₂.

Use: For the cultivation and maintenance of *Desulfovibrio carbinolicus*.

Desulfovibrio Choline Medium (DSMZ Medium 272)

Composition per liter:

Solution A	980.0mL
Solution B	10.0mL
Solution C	10.0mL

Solution A:**Composition per 980.0mL:**

Choline hydrochloride	5.0g
MgSO ₄ ·7H ₂ O	2.0g
Yeast extract	1.0g
NH ₄ Cl	1.0g
Na ₂ SO ₄	1.0g
K ₂ HPO ₄	0.5g
CaCl ₂ ·2H ₂ O	0.1g
Resazurin	1.0mg
pH 7.8 ± 0.2 at 25°C	

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly.

Solution B:**Composition per 10.0mL:**

FeSO ₄ ·7H ₂ O	0.5g
--------------------------------------	------

Preparation of Solution B: Add FeSO₄·7H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly.

Solution C:**Composition per 10.0mL:**

Na-thioglycolate	0.1g
Ascorbic acid	0.1g

Preparation of Solution C: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly.

Preparation of Medium: Bring solution A to a boil for a few minutes. Cool to room temperature while gassing with oxygen-free N₂ gas. Add solutions B and C. Adjust pH to 7.8 with NaOH. Immediately distribute under N₂ into anaerobic tubes. During distribution continuously

swirl the medium to keep the grey precipitate suspended. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Desulfovibrio* spp.

Desulfovibrio gabonensis Medium

Composition per 1002.0mL:

NaCl	50.0g
MgCl ₂ ·6H ₂ O	3.3g
Na ₂ SO ₄	3.0g
MgSO ₄ ·7H ₂ O	1.6g
KCl	0.3g
NH ₄ Cl	0.3g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O	0.1g
Yeast extract	0.1g
Resazurin	0.5mg
Sodium lactate solution	10.0mL
NaHCO ₃ solution	10.0mL
Na ₂ S·9H ₂ O solution	10.0mL
Trace elements solution SL-10 with EDTA	1.0mL
Seven vitamin solution	1.0mL

pH 7.0–7.2 at 25°C

Sodium Lactate Solution:

Composition per 10.0mL:

Sodium lactate	2.5g
----------------	------

Preparation of Sodium Lactate Solution: Add sodium lactate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

NaHCO₃ Solution:

Composition per 10.0mL:

NaHCO ₃	2.5g
--------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.2g
-------------------------------------	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution SL-10 with EDTA:

Composition per liter:

Disodium EDTA	3.0g
FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg

Preparation of Trace Elements Solution SL-10 with EDTA:

Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.0.

Seven Vitamin Solution:

Composition per liter:

Pyridoxine-HCl	0.3g
Thiamine-HCl	0.2g
Nicotinic acid	0.2g
Calcium DL-pantothenate	0.1g
Vitamin B ₁₂	0.1g
<i>p</i> -Aminobenzoic acid	80.0mg
Biotin	20.0mg

Preparation of Seven Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Sparge with 100% N₂.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂. Add components, except sodium lactate solution, NaHCO₃ solution, Na₂S·9H₂O solution, trace elements solution SL-10 with EDTA, and seven vitamin solution, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 3 min. Cool to room temperature while sparging with 80% N₂ + 20% CO₂. Anaerobically distribute 9.7mL volumes into anaerobic tubes. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 0.1mL of sterile sodium lactate solution, 0.1mL of sterile NaHCO₃ solution, 0.1mL of sterile Na₂S·9H₂O solution, 0.01mL of sterile trace elements solution SL-10 with EDTA, and 0.01mL of sterile seven vitamin solution to each tube. Mix thoroughly.

Use: For the cultivation of *Desulfovibrio gabonensis*.

Desulfovibrio giganteus Medium

Composition per 1001.0mL:

Solution A	870.0mL
Solution C	100.0mL
Solution D	10.0mL
Solution E (Vitamin solution)	10.0mL
Solution F	10.0mL
Solution B (Trace elements solution SL-10)	1.0mL

pH 7.5 ± 0.2 at 25°C

Solution A:

Composition per 870.0mL:

NaCl	20.0g
Na ₂ SO ₄	3.0g
KCl	0.5g
MgCl ₂ ·6H ₂ O	0.4g
NH ₄ Cl	0.3g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O	0.15g
Resazurin	1.0mg

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 870.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 3–4 min. Allow to cool to room temperature while gassing under 80% N₂ + 20% CO₂. Continue gassing until pH reaches below 6.0. Seal the flask under 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B (Trace Elements Solution SL-10):

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg

H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Solution B (Trace Elements Solution SL-10):

Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C:**Composition per 100.0mL:**

NaHCO ₃	5.0g
--------------------------	------

Preparation of Solution C: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Gas under 80% N₂ + 20% CO₂.

Solution D:**Composition per 10.0mL:**

Sodium lactate.....	1.5g
---------------------	------

Preparation of Solution D: Add sodium acetate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution E (Vitamin Solution):**Composition per liter:**

Pyridoxine-HCl	10.0mg
Calcium DL-pantothenate	5.0mg
Lipoic acid	5.0mg
Nicotinic acid.....	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Riboflavin	5.0mg
Thiamine-HCl	5.0mg
Biotin	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Solution E (Vitamin Solution): Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution F:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O	0.4g
---	------

Preparation of Solution F: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Aseptically and anaerobically combine solution A with solution B, solution C, solution D, solution E, and solution F, in that order. Mix thoroughly. Anaerobically distribute into sterile tubes or flasks under 80% N₂ + 20% CO₂.

Use: For the cultivation and maintenance of *Desulfovibrio giganteus*.

Desulfovibrio gigas* Medium*Composition per 1001.0mL:**

Solution A	950.0mL
Solution B	40.0mL
Solution C	6.0mL
Solution D (Vitamin solution).....	5.0mL

pH 7.2 ± 0.2 at 25°C

Solution A:**Composition per 950.0mL:**

Na ₂ SO ₄	2.0g
Sodium (L)-lactate	2.0g
KH ₂ PO ₄	1.0g
NH ₄ Cl	0.5g
MgSO ₄ ·7H ₂ O	0.4g
CaCl ₂ ·2H ₂ O	0.1g
H ₂ SO ₄ (1M solution).....	1.0mL
Trace elements solution SL-6	1.0mL

Trace Elements Solution SL-6:**Composition per liter:**

MnCl ₂ ·4H ₂ O	0.5g
H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
Na ₂ MoO ₄ ·2H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 3–4 min. Allow to cool to room temperature while gassing under 80% N₂ + 20% CO₂. Seal the flask under 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B:**Composition per 40.0mL:**

NaHCO ₃	2.0g
--------------------------	------

Preparation of Solution B: Add NaHCO₃ to distilled/deionized water and bring volume to 40.0mL. Mix thoroughly. Filter sterilize. Gas under 80% N₂ + 20% CO₂.

Solution C:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O.....	0.5g
--	------

Preparation of Solution C: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution D (Vitamin Solution):**Composition per liter:**

Pyridoxine-HCl.....	62.5g
Nicotinic acid.....	25.0mg
<i>p</i> -Aminobenzoic acid.....	12.5mg
Thiamine-HCl	12.5mg
Calcium DL-pantothenate.....	6.5mg
Biotin	2.5mg

Preparation of Solution D (Vitamin Solution): Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Aseptically and anaerobically combine 950.0mL of sterile solution A with 40.0mL of sterile solution B, 6.0mL of sterile solution C, and 5.0mL of sterile solution D. Adjust pH to 7.2. Mix thoroughly. Anaerobically distribute into sterile tubes or flasks under 80% N₂ + 20% CO₂.

Use: For the cultivation and maintenance of *Desulfovibrio gigas*.

***Desulfovibrio halophilus* Medium**

Composition per 1154.0mL:

Solution A	1.0L
Solution H	67.0mL
Solution D	50.0mL
Solution I	13.0mL
Solution E	10.0mL
Solution G	10.0mL
Solution C (Selenite-tungstate solution)	2.0mL
Solution B (Trace elements solution SL-10)	1.0mL
Solution F	1.0mL

pH 6.8 ± 0.2 at 25°C

Solution A:

Composition per liter:

Na ₂ SO ₄	4.0g
NH ₄ Cl	0.25g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O	0.1g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 3–4 min. Allow to cool to room temperature while gassing under 80% N₂ + 20% CO₂. Continue gassing until pH reaches below 6.0. Seal the flask under 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B (Trace Elements Solution SL-10):

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Solution B (Trace Elements Solution SL-10):

Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C (Selenite-Tungstate Solution):

Composition per liter:

NaOH	0.5g
Na ₂ WO ₄ ·2H ₂ O	4.0mg
Na ₂ SeO ₃ ·5H ₂ O	3.0mg

Preparation of Solution C (Selenite-Tungstate Solution):

Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution D:

Composition per 50.0mL:

NaHCO ₃	2.5g
--------------------	------

Preparation of Solution D: Add NaHCO₃ to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Gas under 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution E:

Composition per liter:

Pyridoxine-HCl	10.0mg
Calcium DL-pantothenate	5.0mg
Lipoic acid	5.0mg
Nicotinic acid	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Riboflavin	5.0mg
Thiamine-HCl	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Solution E: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gas under 100% N₂. Filter sterilize.

Solution F:

Composition per 10.0mL:

Vitamin B ₁₂	0.5mg
-------------------------	-------

Preparation of Solution F: Add vitamin B₁₂ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gas under 100% N₂. Filter sterilize.

Solution G:

Composition per 80.0mL:

Sodium-(L)-lactate	2.25g
--------------------	-------

Preparation of Solution G: Add sodium-(L)-lactate to distilled/deionized water and bring volume to 80.0mL. Mix thoroughly. Gas under 100% N₂. In a closed bottle, heat in a boiling water bath. Shake until stearic acid dissolves. Autoclave for 15 min at 15 psi pressure–121°C. On storage, solution will solidify and should be remelted before use.

Solution H:

Composition per liter:

NaCl	70.4g
MgCl ₂ ·6H ₂ O	3.0g
CaCl ₂ ·2H ₂ O	2.2g

Preparation of Solution H: Add components to distilled/deionized water and bring volume to 80.0mL. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution I:

Composition per 20.0mL:

Na ₂ S·9H ₂ O	0.15g
-------------------------------------	-------

Preparation of Solution I: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: To 1.0L of sterile solution A, add in the following order: 1.0mL of sterile solution B, 2.0mL of sterile solution C, 50.0mL of sterile solution D, 10.0mL of sterile solution E, 1.0mL of sterile solution F, 10.0mL of sterile solution G, 67.0mL of sterile solution H, and 13.0mL of sterile solution I. Mix thoroughly. Final pH of medium should be 7.2. Prior to inoculation, add 10.0–20.0mg of sodium dithionite to 1.0L of medium.

Use: For the cultivation and maintenance of *Desulfovibrio halophilus*.

***Desulfovibrio halophilus* Medium**

NaOH 0.5g

Na₂WO₄·2H₂O 4.0mg

Na₂SeO₃·5H₂O 3.0mg

Preparation of Selenite-Tungstate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Yeast Extract Solution:

Composition per 10.0mL:

Yeast extract 1.0g

Preparation of Yeast Extract Solution: Add yeast extract to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Preparation of Medium: Gently heat solution A and bring to boiling. Boil solution A for a few minutes. Cool to room temperature. Gas with 80% N₂ + 20% CO₂ gas mixture to reach a pH below 6. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Sequentially add 1.0mL solution B, 100.0mL solution C, 10.0mL solution D, 10.0mL solution E, 10.0mL solution F, 5.0mL yeast extract solution, 1.0mL selenite-tungstate solution, and 1.0mL seven vitamin solution. Distribute aseptically and anaerobically under 80% N₂ + 20% CO₂ into sterile tubes or bottles.

Use: For the cultivation of *Desulfovibrio inopinatus*.

Desulfovibrio magneticus Medium (DSMZ Medium 896)

Composition per liter:

Na-fumarate 0.58g

Na-pyruvate 0.44g

KH₂PO₄ 0.2g

NH₄Cl 0.06g

Cysteine-HCl·H₂O 0.05g

Vitamin solution 8.0mL

Trace elements solution 4.0mL

Fe(III)quinate solution 2.0mL

pH 7.0 ± 0.2 at 25°C

Trace Elements Solution:

Composition per liter:

MgSO₄·7H₂O 3.0g

Nitritotriacetic acid 1.5g

NaCl 1.0g

MnSO₄·2H₂O 0.5g

CoSO₄·7H₂O 0.18g

ZnSO₄·7H₂O 0.18g

CaCl₂·2H₂O 0.1g

FeSO₄·7H₂O 0.1g

NiCl₂·6H₂O 0.025g

KAl(SO₄)₂·12H₂O 0.02g

H₃BO₃ 0.01g

Na₂MoO₄·4H₂O 0.01g

CuSO₄·5H₂O 0.01g

Na₂SeO₃·5H₂O 0.3mg

Preparation of Trace Elements Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl 10.0mg

Thiamine-HCl·2H₂O 5.0mg

Riboflavin 5.0mg

Nicotinic acid 5.0mg

D-Ca-pantothenate 5.0mg

p-Aminobenzoic acid 5.0mg

Lipoic acid 5.0mg

Biotin 2.0mg

Folic acid 2.0mg

Vitamin B₁₂ 0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Ferric Quinate Solution:

Composition per 100.0mL:

FeCl₃·6H₂O 0.45g

Quinic acid 0.19g

Preparation of Ferric Quinate Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Sparge with N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Preparation of Medium: Add components, except vitamin solution and ferric quinate solution, to distilled/deionized water and bring volume to 990.0mL. Purge medium with N₂ gas for 10 min. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically and anaerobically add 8.0mL vitamin solution and 2.0mL ferric quinate solution. Mix thoroughly. Adjust pH to 7.0. Purge medium with N₂ gas for 10 min. Under the same atmosphere, aseptically distribute medium to sterile tubes or bottles.

Use: For the cultivation of *Desulfovibrio magneticus*.

Use: For the cultivation of *Desulfovibrio desulfuricans* subsp. *Desulfuricans* and *Desulfovibrio vulgaris* subsp. *Vulgaris*.

***Desulfovibrio* Medium**

Composition per 1056.5mL:

(NH ₄) ₂ SO ₄	5.3g
Sodium acetate	2.0g
NaCl	1.0g
KH ₂ PO ₄	0.5g
MgSO ₄ ·7H ₂ O	0.2g
CaCl ₂ ·2H ₂ O	0.1g
Na ₂ CO ₃ solution	50.0mL
Solution 1	10.0mL
Solution 2	1.0mL

pH 7.2 ± 0.2 at 25°C

Solution 1:

Composition per liter:

Nitritotriacetic acid	12.8g
FeCl ₂ ·4H ₂ O	0.3g
CoCl ₂ ·6H ₂ O	0.17g
MnCl ₂ ·4H ₂ O	0.1g
ZnCl ₂	0.1g
CuCl ₂	0.02g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g

Preparation of Solution 1: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with NaOH. Add remaining components. Readjust pH to 7.2 with H₂SO₄ or NaOH. Add distilled/deionized water to 1.0L.

Solution 2:

Composition per 100.0mL:

Resazurin	0.2g
-----------------	------

Preparation of Solution 2: Add resazurin to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Na₂CO₃ Solution:

Composition per 100.0mL:

Na ₂ CO ₃	8.0g
---------------------------------------	------

Preparation of Na₂CO₃ Solution: Add Na₂CO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Gas with 100% N₂ for 20 min.

Preparation of Medium: Add components—except Na₂CO₃ solution, HCl solution, and Na₂S₂O₄ solution—to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Anaerobically and aseptically add 50.0mL of sterile Na₂CO₃ solution, 5.5mL of sterile HCl solution, and 1.0mL of sterile Na₂S₂O₄ solution. Mix thoroughly. Anaerobically and aseptically distribute into sterile tubes or flasks.

Use: For the isolation, cultivation, and enrichment of *Desulfovibrio* species.

Desulfovibrio Medium

Composition per liter of tap water:

Agar	15.0g
Glucose	5.0g
Peptone.....	5.0g
Beef extract	3.0g
MgSO ₄	1.5g
Na ₂ SO ₄	1.5g
Yeast extract.....	0.2g
Fe(NH ₄) ₂ (SO ₄) ₂	0.1g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Sterilize by autoclaving for 15 min at 15 psi–121°C.

Use: For the cultivation and maintenance of *Desulfomaculum nigrificans*, *Desulfovibrio desulfuricans*, and *Desulfovibrio gigas*.

Desulfovibrio Medium

Composition per liter:

Solution A	980.0mL
Solution B	10.0mL
Solution C	10.0mL

pH 7.8 ± 0.2 at 25°C

Solution A:

Composition per 980.0mL:

DL-Sodium lactate	2.0g
MgSO ₄ ·7H ₂ O	2.0g
Na ₂ SO ₄	1.0g
NH ₄ Cl	1.0g
Yeast extract.....	1.0g
K ₂ HPO ₄	0.5g
CaCl ₂ ·2H ₂ O.....	0.1g
Resazurin	1.0mg

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Adjust pH to 7.4.

Solution B:

Composition per 10.0mL:

FeSO ₄ ·7H ₂ O.....	0.5g
---	------

Preparation of Solution B: Add FeSO₄·7H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly.

Solution C:

Composition per 10.0mL:

Ascorbic acid	0.1g
Sodium thioglycolate	0.1g

Preparation of Solution C: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly.

Preparation of Medium: Combine 980.0mL of solution A, 10.0mL of solution B, and 10.0mL of solution C. Mix thoroughly. Adjust pH to 7.8. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Desulfovibrio desulfuricans*, *Desulfovibrio giganteus*, and *Desulfovibrio vulgaris*.

Desulfovibrio Medium

Composition per liter:

Solution A	980.0mL
Solution B	10.0mL
Solution C	10.0mL

pH 7.8 ± 0.2 at 25°C

Solution A:

Composition per 980.0mL:

Choline-HCl.....	5.0g
K ₂ HPO ₄	4.0g
MgSO ₄ ·7H ₂ O.....	2.0g
Na ₂ SO ₄	1.0g
NH ₄ Cl	1.0g
Yeast extract.....	1.0g
CaCl ₂ ·2H ₂ O.....	0.1g
Resazurin	1.0mg

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 3–4 min. Allow to cool to room temperature while gassing under 100% N₂.

Solution B:

Composition per 10.0mL:

FeSO ₄ ·7H ₂ O.....	0.5g
---	------

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C:

Composition per 10.0mL:

Ascorbic acid	0.1g
Sodium thioglycolate	0.1g

Preparation of Solution C: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Dissolve the ingredients of each solution in the appropriate quantities of water. Bring solution A to a boil for a few minutes, then cool to room temperature while gassing with oxygen-free N₂ gas. Add solutions B and C, adjust pH to 7.8 with NaOH, and distribute under N₂ in anaerobic tubes. During distribution, continuously swirl the medium to keep the grey precipitate suspended. Autoclave for 15 min at 121°C.

Use: For the cultivation and maintenance of *Desulfobacterium macesitii*, *Desulfomicrobium apsheronum*, *Desulfomonas pigra*, *Desulfotomaculum species*, *Desulfovibrio species*, and *Thermodesulfobacterium mobile*.

Desulfovibrio Medium with Lactate

Composition per liter:

Agar	15.0g
Lactate.....	10.0g

Glucose	5.0g
Peptone	5.0g
Beef extract	3.0g
MgSO ₄	1.5g
Na ₂ SO ₄	1.5g
Yeast extract	0.2g
Fe(NH ₄) ₂ (SO ₄) ₂	0.1g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Desulfovibrio desulfuricans*.

***Desulfovibrio* Medium with Sodium Chloride**

Composition per liter:

NaCl	30.0g
Agar	15.0g
Glucose	5.0g
Peptone	5.0g
Beef extract	3.0g
MgSO ₄	1.5g
Na ₂ SO ₄	1.5g
Yeast extract	0.2g
Fe(NH ₄) ₂ (SO ₄) ₂	0.1g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Desulfovibrio desulfuricans* and *Desulfovibrio salexigens*.

***Desulfovibrio* MG-1 Medium (DSMZ Medium 615)**

Composition per liter:

Na ₂ SO ₄	4.5g
Glycerol	2.0g
NH ₄ Cl	1.0g
Yeast extract	1.0g
Na ₃ -citrate·2H ₂ O	0.6g
KH ₂ PO ₄	0.5g
Na-thioglycolate	0.1g
MgSO ₄ ·7H ₂ O	0.06g
CaCl ₂ ·2H ₂ O	0.04g
FeSO ₄ ·7H ₂ O	4.0mg
Resazurin	0.5mg

pH 6.9 ± 0.2 at 25°C

Preparation of Medium: Prepare and dispense medium under 100% N₂ gas atmosphere. Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.5. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Desulfovibrio* sp.

***Desulfovibrio* MG-1 Medium**

Composition per liter:

Na ₂ SO ₄	4.5g
Glycerol	2.0g

NH ₄ Cl	1.0g
Yeast extract	1.0g
Trisodium citrate·2H ₂ O	0.6g
KH ₂ PO ₄	0.5g
Sodium thioglycolate	0.1g
MgSO ₄ ·7H ₂ O	0.06g
CaCl ₂ ·2H ₂ O	0.04g
FeSO ₄ ·7H ₂ O	4.0mg
Resazurin	0.5mg

pH 7.5 ± 0.2 at 25°C

Preparation of Medium: Prepare and dispense medium under 100% N₂. Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 5 min. Cool to room temperature while sparging with 100% N₂. Anaerobically distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Desulfovibrio* species.

***Desulfovibrio sapovorans* Medium**

Composition per 1009.0mL:

Solution A	850.0mL
Solution C	100.0mL
Solution G	20.0mL
Solution D	10.0mL
Solution E (Wolfe's vitamin solution)	10.0mL
Solution H	10.0mL
Solution F	6.6mL
Solution B (Trace elements solution SL-10)	1.0mL
Solution I	0.4mL

pH 7.7 ± 0.2 at 25°C

Solution A:

Composition per 920.0mL:

Na ₂ SO ₄	3.0g
NaCl	1.0g
KCl	0.5g
MgCl ₂ ·6H ₂ O	0.4g
NH ₄ Cl	0.3g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O	0.15g
Resazurin	0.5mg

Preparation of Solution A: Prepare and dispense solution anaerobically under 90% N₂ + 10% CO₂. Add components to distilled/deionized water and bring volume to 920.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling until resazurin turns colorless, indicating reduction, and a pH of 6.0 is reached. Cap with rubber stoppers. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution B (Trace Elements Solution SL-10):

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	0.19g
MnCl ₂ ·4H ₂ O	0.10g
ZnCl ₂	0.070g
Na ₂ MoO ₄ ·2H ₂ O	0.036g
NiCl ₂ ·6H ₂ O	0.024g
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Solution B (Trace Elements Solution SL-10): Add the FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly.

Bring volume to approximately 900.0mL with distilled/deionized water. Mix thoroughly. Adjust pH to 6.0 with NaOH. Bring volume to 1.0L with distilled/deionized water. Filter sterilize. Aseptically gas under 100% N₂ for 20 min.

Solution C:

Composition per 100.0mL:

NaHCO₃ 5.0g

Preparation of Solution C: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Aseptically gas under 90% N₂ + 10% CO₂ for 20 min.

Solution D:

Composition per 10.0mL:

Sodium butyrate 0.7g

Sodium caproate 0.3g

Sodium octanoate 0.15g

Preparation of Solution D: Prepare and dispense solution anaerobically under 90% N₂ + 10% CO₂. Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Cap with a rubber stopper. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution E (Wolfe's Vitamin Solution):

Composition per liter:

Pyridoxine-HCl 0.01g

Thiamine-HCl 5.0mg

Riboflavin 5.0mg

Nicotinic acid 5.0mg

Calcium pantothenate 5.0mg

p-Aminobenzoic acid 5.0mg

Thioctic acid 5.0mg

Biotin 2.0mg

Folic acid 2.0mg

Cyanocobalamin 0.1mg

Preparation of Solution E (Wolfe's Vitamin Solution): Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Aseptically gas under 100% N₂ for 20 min.

Solution F:

Composition per 6.6mL:

AlCl₃·6H₂O (4.9% solution) 5.0mL

Na₂CO₃ (10.6% solution) 1.6mL

Preparation of Solution F: Combine both solutions. Mix thoroughly. Gas with 100% N₂. Cap with a rubber stopper. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution G:

Composition per 10.0mL:

Rumen fluid, clarified 20.0mL

Preparation of Solution G: Gas rumen fluid under 100% N₂ for 20 min. Cap with a rubber stopper. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution H:

Composition per 10.0mL:

Na₂S·9H₂O 0.4g

Preparation of Solution H: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Gas under 100% N₂ for 20 min. Cap with a rubber stopper. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution I:

Composition per 10.0mL:

Na₂S₂O₄ 0.5g

Preparation of Solution I: Add Na₂S₂O₄ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize. Aseptically gas under 100% N₂ for 20 min. Prepare solution freshly.

Preparation of Medium: Prepare and dispense medium under 90% N₂ + 10% CO₂. To 850.0mL of cooled, sterile solution A, aseptically and anaerobically add in the following order: 1.0mL of sterile solution B, 100.0mL of sterile solution C, 10.0mL of sterile solution D, 10.0mL of sterile solution E, 6.6mL of sterile solution F, 20.0mL of sterile solution G, and 10.0mL of sterile solution H. Mix thoroughly. Immediately prior to inoculation, aseptically and anaerobically add 0.4mL of sterile solution I. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Desulfovibrio sapovorans*.

***Desulfovibrio sax* Medium (DSMZ Medium 383a)**

Composition per 1022.6mL:

Solution A 930.0mL

Solution C 50.0mL

Solution E 20.0mL

Solution D 10.0mL

Solution G 10.0mL

Solution B 1.0mL

Solution F 1.0mL

Vitamin B₁₂ solution 0.5mL

Yeast extract solution 0.1mL

pH 7.3 at 25°C

Solution A:

Composition per 930.0mL:

NaCl 21.0g

Na₂SO₄ 3.0g

MgCl₂·6H₂O 3.0g

KCl 0.5g

NH₄Cl 0.3g

KH₂PO₄ 0.2g

CaCl₂·2H₂O 0.15g

Resazurin 1.0mg

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 930.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂ gas until saturated. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution B:

Composition per liter:

FeCl₂·4H₂O 1.5g

H₃BO₃ 300.0mg

CoCl₂·6H₂O 190.0mg

MnCl₂·4H₂O 100.0mg

ZnCl₂ 70.0mg

Na₂MoO₄·2H₂O 36.0mg

NiCl₂·6H₂O 24.0mg

CuCl₂·2H₂O 2.0mg

HCl (25% solution) 7.7mL

Preparation of Solution B: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring vol-

ume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C:

Composition per 100.0mL:

NaHCO₃..... 5.0g

Preparation of Solution C: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% CO₂ until saturated, approximately 20 min. Filter sterilize under 100% CO₂ into a sterile, gas-tight 100.0mL screw-capped bottle.

Solution D:

Composition per 10.0mL:

Na-benzoate 0.5g

Preparation of Solution D: Add Na-benzoate to distilled/deionized water and bring volume to 10.0mL. Sparge with N₂. Filter sterilize. Store anaerobically.

Solution E:

Composition per liter:

Pyridoxine-HCl..... 10.0mg
Thiamine-HCl·2H₂O..... 5.0mg
Riboflavin 5.0mg
Nicotinic acid..... 5.0mg
D-Ca-pantothenate..... 5.0mg
p-Aminobenzoic acid..... 5.0mg
Lipoic acid 5.0mg
Biotin 2.0mg
Folic acid..... 2.0mg
Vitamin B₁₂..... 0.1mg

Preparation of Solution E: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Solution F:

Composition per liter:

NaOH..... 0.5g
Na₂SeO₃·5H₂O..... 3.0mg

Preparation of Solution F: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Solution G:

Composition per 10.0mL:

Na₂S·9H₂O..... 0.4g

Preparation of Solution G: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Sparge with N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Store anaerobically.

Vitamin B₁₂ Solution:

Composition per 100.0mL:

Vitamin B₁₂..... 10.0mg

Vitamin B₁₂ Solution: Add vitamin B₁₂ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge under 100% N₂ gas for 3 min. Filter sterilize.

Yeast Extract Solution:

Composition per 10.0mL:

Yeast extract..... 1.0g

Preparation of Yeast Extract Solution: Add yeast extract to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Preparation of Medium: Add solution B, solution C, solution D, solution E, Vitamin B₁₂ solution, yeast extract solution, solution F, and solution G to solution A in that order under N₂ gas. Adjust the pH to 7.3.

Use: For the cultivation of *Desulfotignum balticum* (*Desulfoarculus* sp.).

Desulfovibrio SHV Medium

Composition per 1003.0mL:

Solution A..... 870.0mL
Solution C 100.0mL
Solution D..... 10.0mL
Solution E (Vitamin solution)..... 10.0mL
Solution F..... 10.0mL
Solution B (Trace elements solution SL-10) 1.0mL
Solution G (Selenite-tungstate solution)..... 1.0mL
Solution H (Seven vitamin solution) 1.0mL
pH 7.1–7.4 at 25°C

Solution A:

Composition per 870.0mL:

NaCl..... 7.0g
Na₂SO₄..... 3.0g
MgCl₂·6H₂O..... 1.3g
KCl..... 0.5g
NH₄Cl 0.3g
KH₂PO₄..... 0.2g
CaCl₂·2H₂O 0.15g
Resazurin 1.0mg

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 870.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 3–4 min. Allow to cool to room temperature while gassing under 80% N₂ + 20% CO₂. Continue gassing until pH reaches below 6.0. Seal the flask under 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B (Trace Elements Solution SL-10):

Composition per liter:

FeCl₂·4H₂O..... 1.5g
CoCl₂·6H₂O 190.0mg
MnCl₂·4H₂O 100.0mg
ZnCl₂..... 70.0mg
Na₂MoO₄·2H₂O 36.0mg
NiCl₂·6H₂O 24.0mg
H₃BO₃..... 6.0mg
CuCl₂·2H₂O 2.0mg
HCl (25% solution)..... 10.0mL

Preparation of Solution B (Trace Elements Solution SL-10):

Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C:

Composition per 100.0mL:

NaHCO₃..... 5.0g

Preparation of Solution C: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Sparge with 80% N₂ + 20% CO₂.

Solution D:

Composition per 10.0mL:

Sodium lactate 4.0g

Preparation of Solution D: Add sodium lactate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution E (Vitamin Solution):

Composition per liter:

Pyridoxine-HCl	10.0mg
Calcium DL-pantothenate	5.0mg
Lipoic acid	5.0mg
Nicotinic acid	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Riboflavin	5.0mg
Thiamine-HCl	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Solution E (Vitamin Solution): Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution F:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.4g
-------------------------------------	------

Preparation of Solution F: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution G (Selenite-Tungstate Solution):

Composition per liter:

NaOH	0.5g
Na ₂ WO ₄ ·2H ₂ O	4.0mg
Na ₂ SeO ₃ ·5H ₂ O	3.0mg

Preparation of Solution G (Selenite-Tungstate Solution): Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution H (Seven Vitamin Solution) :

Composition per liter:

Pyridoxine-HCl	0.3g
Thiamine-HCl	0.2g
Nicotinic acid	0.2g
Calcium DL-pantothenate	0.1g
Vitamin B ₁₂	0.1g
<i>p</i> -Aminobenzoic acid	80.0mg
Biotin	20.0mg

Preparation of Solution H (Seven Vitamin Solution): Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Aseptically and anaerobically combine solution A with solution B, solution C, solution D, solution E, solution F, solution G, and solution H, in that order. Mix thoroughly. Anaerobically distribute into sterile tubes or flasks under 80% N₂ + 20% CO₂.

Use: For the cultivation of *Desulfovibrio* species.

Desulfovibrio sp. Medium
(DSMZ Medium 200)

Composition per 1001.0mL:

Solution A	870.0mL
Solution C	100.0mL
Solution D	10.0mL

Solution E (Vitamin solution)	10.0mL
Solution F	10.0mL
Solution B (Trace elements solution SL-10)	1.0mL
pH 6.8–7.0 at 25°C	

Solution A:

Composition per 870.0mL:

NaCl	20.0g
MgCl ₂ ·6H ₂ O	3.1g
Na ₂ SO ₄	3.0g
KH ₂ PO ₄	0.2g
NH ₄ Cl	0.3g
KCl	0.5g
CaCl ₂ ·2H ₂ O	0.15g
Resazurin	1.0mg

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 870.0mL. Mix thoroughly.

Solution B (Trace Elements Solution SL-10):

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Solution B (Trace Elements Solution SL-10):

Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C:

Composition per 100.0mL:

NaHCO ₃	5.0g
--------------------	------

Preparation of Solution C: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Flush with 80% N₂ + 20% CO₂ to remove dissolved oxygen.

Solution D:

Composition per 10.0mL:

Na-butyrate	0.7g
Na-caproate	0.3g
Na-octanoate	0.15g

Preparation of Solution D: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution E (Vitamin Solution):

Composition per liter:

Pyridoxine-HCl	10.0mg
Thiamine-HCl·2H ₂ O	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
D-Ca-pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.10mg

Preparation of Solution E (Vitamin Solution): Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution F:

Composition per 10.0mL:

Na₂S·9H₂O 0.4g

Preparation of Solution F: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Gently heat solution A and bring to boiling. Boil solution A for a few minutes. Cool to room temperature. Gas with 80% N₂ + 20% CO₂ gas mixture to reach a pH below 6. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Sequentially add 1.0mL solution B, 100.0mL solution C, 10.0mL solution D, 10.0mL solution E, and 10.0mL solution F. Distribute anaerobically under 80% N₂ + 20% CO₂ into appropriate vessels.

Use: For the cultivation of *Desulfovibrio* sp.

***Desulfovibrio sulfodismutans* Medium
(DSMZ Medium 386)**

Composition per 1002.0mL:

Solution A 920.0mL
Solution C 50.0mL
Solution D 10.0mL
Solution F 10.0mL
Solution G 10.0mL
Solution B 1.0mL
Solution E 1.0mL

pH 7.1–7.4 at 25°C

Solution A:

Composition per 920.0mL:

NaCl 1.0g
KCl 0.5g
MgCl₂·6H₂O 0.4g
KH₂PO₄ 0.2g
NH₄Cl 0.3g
CaCl₂·2H₂O 0.15g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 920.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂ gas until saturated. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution B:

Composition per liter:

FeCl₂·4H₂O 1.5g
H₃BO₃ 300.0mg
CoCl₂·6H₂O 190.0mg
MnCl₂·4H₂O 100.0mg
ZnCl₂ 70.0mg
Na₂MoO₄·2H₂O 36.0mg
NiCl₂·6H₂O 24.0mg
CuCl₂·2H₂O 2.0mg
HCl (25% solution) 7.7mL

Preparation of Solution B: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C:

Composition per 100.0mL:

NaHCO₃ 5.0g

Preparation of Solution C: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂ gas until saturated, approximately 20 min. Filter sterilize under 100% CO₂ into a sterile, gas-tight 100.0mL screw-capped bottle.

Solution D:

Composition per 10.0mL:

Na-acetate·3H₂O 0.3g

Preparation of Solution D: Add Na-acetate·3H₂O to distilled/deionized water and bring volume to 10.0mL. Sparge with N₂. Filter sterilize. Store anaerobically.

Solution E:

Composition per 1.0mL:

Ca-D-pantothenate 50.0µg
D(+)-Biotin 10.0µg

Preparation of Solution E: Add components to distilled/deionized water and bring volume to 1.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Solution F:

Composition per 10.0mL:

Na₂S·9H₂O 0.4g

Preparation of Solution F: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Sparge with N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Store anaerobically.

Solution G:

Composition per liter:

NaOH 0.5g
Na₂SeO₃·5H₂O 3.0mg

Preparation of Solution G: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Preparation of Medium: Add solution B, solution C, solution D, solution E, solution F, and solution G to solution A in that order under 80% N₂ + 20% CO₂ gas. Adjust the pH to 7.1–7.4. When growth has started feed culture again with same amount of solution G. After a further 2 days repeat feeding once more.

Use: For the cultivation of *Desulfovibrio sulfodismutans*.

***Desulfovibrio sulfodismutans* Medium**

Composition per 1002.0mL:

Solution A 920.0mL
Solution C 50.0mL
Solution D 10.0mL
Solution F 10.0mL
Solution G 10.0mL
Solution B (Trace elements solution SL-10) 1.0mL
Solution E 1.0mL

pH 7.1–7.4 at 25°C

Solution A:

Composition per 920.0mL:

NaCl 1.0g
KCl 0.5g
MgCl₂·6H₂O 0.4g

NH ₄ Cl	0.3g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O.....	0.15g

Preparation of Solution A: Prepare and dispense solution anaerobically under 80% N₂ + 20% CO₂. Add components to distilled/deionized water and bring volume to 920.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling until resazurin turns colorless, indicating reduction. Cap with rubber stoppers. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Solution B (Trace Elements Solution SL-10):

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	0.19g
MnCl ₂ ·4H ₂ O.....	0.1g
ZnCl ₂	0.07g
Na ₂ MoO ₄ ·2H ₂ O	0.036g
NiCl ₂ ·6H ₂ O	0.024g
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Solution B (Trace Elements Solution SL-10):

Add the FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Bring volume to approximately 900.0mL with distilled/deionized water. Mix thoroughly. Adjust pH to 6.0 with NaOH. Bring volume to 1.0L with distilled/deionized water. Filter sterilize. Aseptically gas under 100% N₂ for 20 min.

Solution C:

Composition per 50.0mL:

NaHCO ₃	2.5g
--------------------------	------

Preparation of Solution C: Add NaHCO₃ to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize. Aseptically gas under 80% N₂ + 20% CO₂ for 20 min.

Solution D:

Composition per 10.0mL:

Na-acetate·3H ₂ O	0.3g
------------------------------------	------

Preparation of Solution D: Prepare and dispense solution anaerobically under 80% N₂ + 20% CO₂. Add Na-acetate·3H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Cap with rubber stopper. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Solution E:

Composition per liter:

Calcium pantothenate	0.05mg
Biotin	0.01mg

Preparation of Solution E: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Aseptically gas under 100% N₂ for 20 min.

Solution F:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.4g
---	------

Preparation of Solution F: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Gas under 100% N₂ for 20 min. Cap with a rubber stopper. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution G:

Composition per 10.0mL:

Na ₂ S ₂ O ₅	1.05g
---	-------

Preparation of Solution G: Add Na₂S₂O₅ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize. Aseptically gas under 100% N₂ for 20 min. Prepare solution freshly.

Preparation of Medium: To 920.0mL of cooled, sterile solution A, aseptically and anaerobically add in the following order: 1.0mL of sterile solution B, 50.0mL of sterile solution C, 10.0mL of sterile solution D, 1.0mL of sterile solution E, 10.0mL of sterile solution F, and 10.0mL of sterile solution G. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Desulfovibrio sulfodismutans*.

Desulfovibrio zosteræ Medium (DSMZ Medium 383c)

Composition per 1023.5mL:

Solution A.....	930.0mL
Solution C.....	50.0mL
Solution E.....	20.0mL
Solution D.....	10.0mL
Solution G.....	10.0mL
Solution B.....	1.0mL
Solution F.....	1.0mL
Selenite-tungstate solution.....	1.0mL
Vitamin B ₁₂ solution.....	0.5mL

pH 7.3 at 25°C

Solution A:

Composition per 930.0mL:

NaCl.....	21.0g
Na ₂ SO ₄	3.0g
MgCl ₂ ·6H ₂ O	3.0g
KCl.....	0.5g
NH ₄ Cl	0.3g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O	0.15g
Resazurin	1.0mg

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 930.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂ gas until saturated. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution B:

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
H ₃ BO ₃	300.0mg
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution).....	7.7mL

Preparation of Solution B: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C:

Composition per 100.0mL:

NaHCO ₃	5.0g
--------------------------	------

Preparation of Solution C: Add NaHCO_3 to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% CO_2 until saturated, approximately 20 min. Filter sterilize under 100% CO_2 into a sterile, gas-tight 100.0mL screw-capped bottle.

Solution D:

Composition per 10.0mL:

Na-lactate 1.25g

Preparation of Solution D: Add Na-lactate to distilled/deionized water and bring volume to 10.0mL. Sparge with N_2 . Filter sterilize. Store anaerobically.

Solution E:

Composition per liter:

Pyridoxine hydrochloride 300.0mg
Thiamine-HCl- $2\text{H}_2\text{O}$ 200.0mg
Nicotinic acid 200.0mg
Vitamin B_{12} 100.0mg
Calcium pantothenate 100.0mg
p-Aminobenzoic acid 80.0mg
D(+)-Biotin 20.0mg

Preparation of Solution E: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N_2 . Filter sterilize.

Solution F:

Composition per liter:

NaOH 0.5g
 $\text{Na}_2\text{SeO}_3 \cdot 5\text{H}_2\text{O}$ 3.0mg

Preparation of Solution F: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N_2 . Filter sterilize.

Solution G:

Composition per 10.0mL:

$\text{Na}_2\text{S} \cdot 9\text{H}_2\text{O}$ 0.4g

Preparation of Solution G: Add $\text{Na}_2\text{S} \cdot 9\text{H}_2\text{O}$ to distilled/deionized water and bring volume to 10.0mL. Sparge with N_2 . Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Store anaerobically.

Vitamin B_{12} Solution:

Composition per 100.0mL:

Vitamin B_{12} 10.0mg

Vitamin B_{12} Solution: Add vitamin B_{12} to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge under 100% N_2 gas for 3 min. Filter sterilize.

Selenite-Tungstate Solution

Composition per liter:

NaOH 0.5g
 $\text{Na}_2\text{WO}_4 \cdot 2\text{H}_2\text{O}$ 4.0mg
 $\text{Na}_2\text{SeO}_3 \cdot 5\text{H}_2\text{O}$ 3.0mg

Preparation of Selenite-Tungstate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N_2 . Filter sterilize.

Preparation of Medium: Add solution B, solution C, solution D, solution E, Vitamin B_{12} solution, selenite-tungstate solution, solution F, and solution G to solution A in that order under N_2 gas. Adjust the pH to 7.3.

Use: For the cultivation of *Desulfovibrio zosteriae* (*Desulfovibrio* sp.).

***Desulfovibrio adipica* Medium
(DSMZ Medium 868)**

Composition per 2.0L:

Solution A 940.0mL
Solution E 50.0mL
Solution K 50.0mL
Solution G 20.0mL
Solution F 10.0mL
Solution M (Vitamin solution) 10.0mL
Solution H 7.0mL
Solution B 1.0mL
Solution C 1.0mL
Solution D 1.0mL
Solution I 1.0mL
Solution J (Trace elements solution SL-10) 1.0mL
Solution L (Selenite-tungstate solution) 1.0mL
Solution N variable

pH 7.1 ± 0.2 at 25°C

Solution A:

Composition per 940.0mL:

NaCl 1.0g
KCl 0.5g
 $\text{MgCl}_2 \cdot 6\text{H}_2\text{O}$ 0.4g
 NH_4Cl 0.25g
 KH_2PO_4 0.2g
 $\text{CaCl}_2 \cdot 2\text{H}_2\text{O}$ 0.15g
Resazurin 0.5mg

Preparation of Solution A: Prepare under 80% N_2 + 20% CO_2 gas atmosphere. Add components to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Adjust pH to 7.2. Sparge with 80% N_2 + 20% CO_2 . Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution B:

Composition per liter:

$\text{FeCl}_2 \cdot 4\text{H}_2\text{O}$ 1.5g
 $\text{CoCl}_2 \cdot 6\text{H}_2\text{O}$ 190.0mg
 $\text{MnCl}_2 \cdot 4\text{H}_2\text{O}$ 100.0mg
 ZnCl_2 70.0mg
 $\text{Na}_2\text{MoO}_4 \cdot 2\text{H}_2\text{O}$ 36.0mg
 $\text{NiCl}_2 \cdot 6\text{H}_2\text{O}$ 24.0mg
 H_3BO_3 6.0mg
 $\text{CuCl}_2 \cdot 2\text{H}_2\text{O}$ 2.0mg
HCl (25% solution) 10.0mL

Preparation of Solution B: Add $\text{FeCl}_2 \cdot 4\text{H}_2\text{O}$ to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 80% N_2 + 20% CO_2 . Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution C:

Composition per liter:

Pyridoxine hydrochloride 300.0mg
Thiamine-HCl- $2\text{H}_2\text{O}$ 200.0mg
Nicotinic acid 200.0mg
Vitamin B_{12} 100.0mg
Calcium pantothenate 100.0mg
p-Aminobenzoic acid 80.0mg
D(+)-Biotin 20.0mg

Preparation of Solution C: Add components to distilled/deionized water and bring volume to 1.0L. Sparge with 100% N₂. Mix thoroughly. Filter sterilize.

Solution D:

Composition per liter:

NaOH.....	0.5g
Na ₂ WO ₄ ·2H ₂ O.....	4.0mg
Na ₂ SeO ₃ ·5H ₂ O.....	3.0mg

Preparation of Solution D: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Solution E:

Composition per 100.0mL:

NaHCO ₃	5.0g
--------------------------	------

Preparation of Solution E: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂ gas mixture. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution F:

Composition per 10.0mL:

Yeast extract.....	1.0g
--------------------	------

Preparation of Solution F: Add yeast extract to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂ gas mixture. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution G:

Composition per 20.0mL:

Na ₂ S·9H ₂ O.....	0.625g
--	--------

Preparation of Solution G: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution H:

Composition per 10.0mL:

Na ₂ SO ₄	1.0g
---------------------------------------	------

Preparation of Solution H: Add Na₂SO₄ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂ gas mixture. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution I:

Composition per 10.0mL:

Propanol.....	1.0g
---------------	------

Preparation of Solution I: Add propanol to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂ gas mixture. Filter sterilize.

Solution J (Trace Elements Solution SL-10):

Composition per liter:

FeCl ₂ ·4H ₂ O.....	1.5g
CoCl ₂ ·6H ₂ O.....	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	36.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O.....	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Solution J (Trace Elements Solution SL-10):

Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution K:

Composition per 100.0mL:

NaHCO ₃	5.0g
--------------------------	------

Preparation of Solution K: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂ gas mixture. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution L (Selenite–Tungstate Solution):

Composition per liter:

NaOH.....	0.5g
Na ₂ WO ₄ ·2H ₂ O.....	4.0mg
Na ₂ SeO ₃ ·5H ₂ O.....	3.0mg

Preparation of Solution L (Selenite–Tungstate Solution):

Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Solution M (Vitamin Solution):

Composition per liter:

Pyridoxine-HCl.....	10.0mg
Thiamine-HCl·2H ₂ O.....	5.0mg
Riboflavin.....	5.0mg
Nicotinic acid.....	5.0mg
D-Ca-pantothenate.....	5.0mg
p-Aminobenzoic acid.....	5.0mg
Lipoic acid.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Solution M (Vitamin Solution):

Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Solution N:

Composition per 100.0mL:

Na ₂ CO ₃	5.0g
---------------------------------------	------

Preparation of Solution N: Add Na₂CO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂ gas mixture. Filter sterilize.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas atmosphere. Sequentially add 1.0mL solution B, 1.0mL solution C, 1.0mL solution D, 50.0mL solution E, 10.0mL solution F, 20.0mL solution G, 7.0mL solution H, 1.0mL solution I, 1.0mL solution J, 50.0mL solution K, 1.0mL solution L, and 10.0mL solution M, to 940.0mL solution A. Mix thoroughly. Adjust pH to 7.1 with solution N. Distribute anaerobically under 80% N₂ + 20% CO₂ into appropriate vessels.

Use: For the cultivation of *Desulfovira adipica* (*Desulfobacterium* sp.).

Desulfurella Medium

Composition per liter:

Sulfur, powdered.....	10.0g
Sodium acetate.....	5.0g
CaCl ₂ ·2H ₂ O.....	0.33g

KCl.....	0.33g
KH ₂ PO ₄	0.33g
MgCl ₂ ·6H ₂ O.....	0.33g
NH ₄ Cl.....	0.33g
Yeast extract.....	0.1g
Resazurin.....	1.0 mg
NaHCO ₃ solution.....	40.0mL
Na ₂ S·9H ₂ O solution.....	10.0mL
Wolfe's vitamin solution.....	10.0mL
Trace elements solution SL-10.....	1.0 mL

pH 6.8–7.0 at 25°C

NaHCO₃ Solution:**Composition** per 40.0mL:

NaHCO ₃	2.0g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 40.0mL. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:**Composition** per 10.0mL:

Na ₂ S·9H ₂ O.....	0.5g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Wolfe's Vitamin Solution:**Composition** per liter:

Pyridoxine-HCl.....	10.0mg
Calcium D-(+)-pantothenate.....	5.0mg
Nicotinic acid.....	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Riboflavin.....	5.0mg
Thiamine-HCl.....	5.0mg
Thioctic acid.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Cyanocobalamin.....	100.0μg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Trace Elements Solution SL-10:**Composition** per liter:

FeCl ₂ ·4H ₂ O.....	1.5g
CoCl ₂ ·6H ₂ O.....	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	36.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O.....	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂. Add components, except NaHCO₃ solution, Wolfe's vitamin solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Adjust pH to 5.9. Do

not autoclave. Sterilize medium by heating to 100°C for 1 hr on 3 consecutive days. Prior to inoculation, aseptically and anaerobically add 40.0mL of sterile NaHCO₃ solution, 10.0mL of sterile Wolfe's vitamin solution, and 10.0mL of sterile Na₂S·9H₂O solution. Mix thoroughly. Final pH should be 6.8–7.0.

Use: For the cultivation of *Desulfurella* species, especially *Desulfurella acetivorans*.

Desulfurella II Medium (DSMZ Medium 480c)

Composition per liter:

MOPS [3-(<i>N</i> -morpholino) propane sulfonic acid].....	3.0g
Sulfur, powder.....	1.0g
NH ₄ Cl.....	0.33g
CaCl ₂ ·2H ₂ O.....	0.33g
MgCl ₂ ·6H ₂ O.....	0.33g
KCl.....	0.33g
KH ₂ PO ₄	0.33g
Yeast extract.....	0.1g
Resazurin.....	1.0mg
NaHCO ₃ solution.....	40.0mL
Na ₂ S·9H ₂ O solution.....	10.0mL
Vitamin solution.....	10.0mL
Substrate solution.....	10.0mL
Trace elements solution SL-10.....	1.0mL

pH 6.9 ± 0.2 at 25°C

NaHCO₃ Solution:**Composition** per 10.0mL:

NaHCO ₃	2.0g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Must be prepared freshly.

Trace Elements Solution SL-10:**Composition** per liter:

FeCl ₂ ·4H ₂ O.....	1.5g
CoCl ₂ ·6H ₂ O.....	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	36.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O.....	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Vitamin Solution:**Composition** per liter:

Pyridoxine-HCl.....	10.0mg
Thiamine-HCl·2H ₂ O.....	5.0mg
Riboflavin.....	5.0mg
Nicotinic acid.....	5.0mg
D-Ca-pantothenate.....	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Lipoic acid.....	5.0mg

Biotin	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.5g
---	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Sparge with N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Substrate Solution:

Composition per 10.0mL:

Na-lactate	2.5g
------------------	------

Preparation of Substrate Solution: Add Na-lactate to distilled/deionized water and bring volume to 10.0mL. Sparge with N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Store anaerobically.

Preparation of Medium: Prepare and dispense medium under an oxygen-free 80% N₂ + 20% CO₂ gas mixture. Add components, except sulfur, substrate solution, vitamin solution, NaHCO₃ solution, and Na₂S·9H₂O solution, to 930.0mL distilled/deionized water. Mix thoroughly. Sparge for 30 min with 80% N₂ + 20% CO₂. Adjust pH to 5.9 with concentrated NaOH. Distribute under 80% N₂ + 20% CO₂ into anaerobic tubes or bottles containing sulfur powder (100mg S per 10.0mL medium). Autoclave 20 min at 110°C. Sparge with 80% N₂ + 20% CO₂. Aseptically and anaerobically add 10.0mL sterile Na₂S·9H₂O solution, 10.0mL sterile vitamin solution, 10.0mL substrate solution, and 40.0mL sterile NaHCO₃ solution per liter of medium.

Use: For the cultivation of *Thermoproteus uzoniensis* and *Desulfurella kamchatkensis* DSM 10409.

Desulfurella II Medium **(DSMZ Medium 480c)**

Composition per liter:

MOPS [3-(<i>N</i> -morpholino) propane sulfonic acid].....	3.0g
Sulfur, powder.....	1.0g
NH ₄ Cl	0.33g
CaCl ₂ ·2H ₂ O.....	0.33g
MgCl ₂ ·6H ₂ O.....	0.33g
KCl.....	0.33g
KH ₂ PO ₄	0.33g
Yeast extract.....	0.1g
Resazurin	1.0mg
NaHCO ₃ solution	40.0mL
Na ₂ S·9H ₂ O solution	10.0mL
Vitamin solution.....	10.0mL
Substrate solution.....	10.0mL
Trace elements solution SL-10	1.0mL

pH 6.9 ± 0.2 at 25°C

NaHCO₃ Solution:

Composition per 10.0mL:

NaHCO ₃	2.0g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave

for 15 min at 15 psi pressure–121°C. Cool to 25°C. Must be prepared freshly.

Trace Elements Solution SL-10:

Composition per liter:

FeCl ₂ ·4H ₂ O.....	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-10:

Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl.....	10.0mg
Thiamine-HCl·2H ₂ O.....	5.0mg
Riboflavin	5.0mg
Nicotinic acid.....	5.0mg
D-Ca-pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Lipoic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	0.5g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Sparge with N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Store anaerobically.

Substrate Solution:

Composition per 10.0mL:

Na-pyruvate	2.5g
-------------------	------

Preparation of Substrate Solution: Add Na-pyruvate to distilled/deionized water and bring volume to 10.0mL. Sparge with N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Store anaerobically.

Preparation of Medium: Prepare and dispense medium under an oxygen-free 80% N₂ + 20% CO₂ gas mixture. Add components, except sulfur, substrate solution, vitamin solution, NaHCO₃ solution, and Na₂S·9H₂O solution, to 930.0mL distilled/deionized water. Mix thoroughly. Sparge for 30 min with 80% N₂ + 20% CO₂. Adjust pH to 5.9 with concentrated NaOH. Distribute under 80% N₂ + 20% CO₂ into anaerobic tubes or bottles containing sulfur powder (100mg S per 10.0mL medium). Autoclave for 20 min at 110°C. Sparge with 80% N₂ + 20% CO₂. Aseptically and anaerobically add the appropriate amounts to achieve concentrations of 10.0mL sterile vitamin solution,

10.0mL substrate solution, 10.0mL Na₂S·9H₂O solution, and 40.0mL sterile NaHCO₃ solution per liter of medium.

Use: For the cultivation of *Desulfurella propionica* DSM 10410.

Desulfurella multipotens Medium (DSMZ Medium 480a)

Composition per liter:

Sulfur, powder.....	10.0g
Na-butyrate	5.0g
NH ₄ Cl	0.33g
CaCl ₂ ·2H ₂ O.....	0.33g
MgCl ₂ ·6H ₂ O.....	0.33g
KCl.....	0.33g
KH ₂ PO ₄	0.33g
Yeast extract.....	0.1g
Resazurin	1.0mg
NaHCO ₃ solution.....	40.0mL
Na ₂ S·9H ₂ O solution.....	10.0mL
Vitamin solution.....	10.0mL
Trace elements solution SL-10	1.0mL

pH 6.9 ± 0.2 at 25°C

NaHCO₃ Solution:

Composition per 10.0mL:

NaHCO ₃	2.0g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Must be prepared freshly.

Trace Elements Solution SL-10:

Composition per liter:

FeCl ₂ ·4H ₂ O.....	1.5g
CoCl ₂ ·6H ₂ O.....	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	36.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O.....	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl.....	10.0mg
Thiamine-HCl·2H ₂ O.....	5.0mg
Riboflavin	5.0mg
Nicotinic acid.....	5.0mg
D-Ca-pantothenate.....	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Lipoic acid.....	5.0mg
Biotin	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	0.5g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Sparge with N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Store anaerobically.

Preparation of Medium: Prepare and dispense medium under an oxygen-free 80% N₂ + 20% CO₂ gas mixture. Add components, except vitamin solution, NaHCO₃ solution, and Na₂S·9H₂O solution, to 940.0mL distilled/deionized water. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Adjust pH to 5.9 with concentrated NaOH. Sterilize medium by heating for 1 hr at 90ff100°C on 3 subsequent days. Sparge with 80% N₂ + 20% CO₂. Before use, aseptically and anaerobically add 10.0mL sterile vitamin solution, 10.0mL sterile Na₂S·9H₂O solution, and 40.0mL sterile NaHCO₃ solution. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or flasks.

Use: For the cultivation of *Desulfurella multipotens*.

Desulfurococcus Medium

Composition per 1300.0mL:

Solution C.....	500.0mL
Solution B.....	450.0mL
Solution A.....	300.0mL
Solution D.....	50.0mL

Solution A:

Composition per 300.0mL:

(NH ₄) ₂ SO ₄	1.3g
KH ₂ PO ₄	0.28g
MgSO ₄ ·7H ₂ O.....	0.25g
CaCl ₂ ·2H ₂ O.....	0.07g
FeSO ₄ ·7H ₂ O.....	0.028g
Na ₂ B ₄ O ₇ ·10H ₂ O.....	4.5mg
MnCl ₂ ·4H ₂ O.....	1.8mg
ZnSO ₄ ·7H ₂ O.....	0.22mg
CuCl ₂ ·2H ₂ O.....	0.05mg
Na ₂ MoO ₄ ·2H ₂ O.....	0.03mg
VOSO ₄ ·2H ₂ O.....	0.03mg
CoSO ₄ ·7H ₂ O.....	0.01mg

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 300.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Gas under 100% N₂ for 20 min.

Solution B:

Composition per 450.0mL:

Sulfur.....	5.0g
-------------	------

Preparation of Solution B: Add sulfur to distilled/deionized water and bring volume to 450.0mL. Autoclave for 30 min at 0 psi pressure–100°C on 3 consecutive days. Gas under 100% N₂ for 20 min.

Solution C:

Composition per 500.0mL:

Pancreatic digest of casein.....	2.0g
Yeast extract.....	2.0g
Resazurin.....	1.0mg

Preparation of Solution C: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Gas under 100% N₂ for 20 min.

Solution D:

Composition per 50.0mL:

Na₂S·9H₂O 0.5g

Preparation of Solution D: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Gas under 100% N₂ for 20 min.

Preparation of Medium: Aseptically combine solutions A–D under nitrogen gas. Seal containers with butyl rubber stoppers.

Use: For the cultivation and maintenance of *Desulfurococcus mobilis* and *Desulfurococcus mucosus*.

***Desulfurococcus Medium*
(DSMZ Medium 184)**

Composition per liter:

Sulfur, powdered 5.0g
 (NH₄)₂SO₄ 1.3g
 Yeast extract 1.0g
 KH₂PO₄ 0.28g
 MgSO₄·7H₂O 0.25g
 CaCl₂·2H₂O 0.07g
 FeCl₃·6H₂O 0.02g
 Na₂B₄O₇·10H₂O 4.5mg
 MnCl₂·4H₂O 1.8mg
 Resazurin 1.0mg
 ZnSO₄·7H₂O 0.22mg
 CuCl₂·2H₂O 0.05mg
 Na₂MoO₄·4H₂O 0.03mg
 VOSO₄·2H₂O 0.03mg
 CoSO₄ 0.01mg
 Na₂S·9H₂O solution 10.0mL

pH 5.8 ± 0.2 at 25°C

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na₂S·9H₂O 0.5g

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Sulfur: Add 10.0g of powdered sulfur to a flask and sterilize by steaming for 3 hr on 3 consecutive days.

Preparation of Medium: Prepare and dispense medium under 100% N₂. Add components, except sulfur, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 5.0g of sterile sulfur and 10.0mL of sterile Na₂S·9H₂O solution. Adjust pH to 5.5 with 10*N* sterile H₂SO₄. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or flasks.

Use: For the cultivation of *Desulfurococcus mobilis* and *Desulfurococcus mucosus*.

Mix thoroughly. Adjust pH to 7.2. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 5.0g sterile sulfur, 50.0mL NaHCO₃ solution, 10.0mL Na-pyruvate solution, 10.0mL Na₂S·9H₂O solution, 1.0mL seven vitamin solution, and 1.0mL trace elements solution SL-10. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or bottles.

Use: For the cultivation of *Desulfuromonas acetexigenes* DSM8988.

Desulfuromonas acetoxidans Medium

Composition per 1001.0mL:

Fumaric acid	1.5g
KH ₂ PO ₄	1.0g
NH ₄ Cl	0.5g
Sodium acetate	0.5g
MgSO ₄ ·7H ₂ O	0.4g
CaCl ₂ ·2H ₂ O.....	0.1g
Resazurin	0.5mg
NaHCO ₃ solution	40.0mL
Trace elements solution SL-4	10.0mL
Na ₂ S·9H ₂ O solution	6.0mL
Vitamin solution.....	5.0mL

pH 7.5 ± 0.2 at 25°C

NaHCO₃ Solution:

Composition per 40.0mL:

NaHCO ₃	2.0g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 40.0mL. Mix thoroughly. Gas under 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution SL-4:

Composition per liter:

EDTA	0.5g
FeSO ₄ ·7H ₂ O.....	0.2g
Trace elements solution SL-6	100.0mL

Trace Elements Solution SL-6:

Composition per liter:

MnCl ₂ ·4H ₂ O.....	0.5g
H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
Na ₂ MoO ₄ ·2H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Trace Elements Solution SL-4: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Na₂S·9H₂O Solution:

Composition per 6.0mL:

Na ₂ S·9H ₂ O.....	0.3g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl	62.5g
Nicotinic acid.....	25.0mg
<i>p</i> -Aminobenzoic acid.....	12.5mg
Thiamine-HCl	12.5mg
Calcium DL-pantothenate.....	6.5mg
Biotin	2.5mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.5. Gas under 100% N₂. Filter sterilize.

Preparation of Medium: Add components, except NaHCO₃ solution, Na₂S·9H₂O solution, and vitamin solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 5.0. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 40.0mL of sterile NaHCO₃ solution, 6.0mL of sterile Na₂S·9H₂O solution, and 5.0mL of sterile vitamin solution. Mix thoroughly. Aseptically and anaerobically distribute into sterile screw-capped bottles or tubes. Fill completely, leaving only a small gas bubble.

Use: For the cultivation and maintenance of *Desulfuromonas acetoxidans*.

Desulfuromonas Medium

Composition per 1051.0mL:

Elemental sulfur slurry	10.0g
Solution 1	1.0L
Solution 3	40.0mL
Solution 4	6.0mL
Solution 5	5.0mL
Solution 2	1.0mL

pH 7.2 ± 0.2 at 25°C

Solution 1:

Composition per liter:

NaCl.....	20.0g
MgCl ₂ ·6H ₂ O	3.0g
KH ₂ PO ₄	1.0g
NH ₄ Cl	0.3g
CaCl ₂ ·2H ₂ O	0.1g
HCl (2 <i>N</i> solution)	4.0mL

Preparation of Solution 1: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution 2:

Composition per liter:

Disodium EDTA	5.2g
CoCl ₂ ·6H ₂ O	1.9g
FeCl ₂ ·4H ₂ O.....	1.5g
MnCl ₂ ·4H ₂ O	1.0g
ZnCl ₂	0.7g
H ₃ BO ₃	0.62g
Na ₂ MoO ₄ ·2H ₂ O	0.36g
NiCl ₂ ·6H ₂ O	0.24g
CuCl ₂ ·2H ₂ O	0.17g

pH 6.5 ± 0.2 at 25°C

Preparation of Solution 2: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.5. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution 3:

Composition per 100.0mL:

NaHCO₃ 10.0g

Preparation of Solution 3: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution 4:

Composition per 100.0mL:

Na₂S·9H₂O 5.0g

Preparation of Solution 4: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution 5:

Composition per 200.0mL:

Pyridoxamine-HCl 0.01g

Nicotinic acid 4.0mg

p-Aminobenzoic acid 2.0mg

Thiamine 2.0mg

Cyanocobalamin 1.0mg

Pantothenic acid 1.0mg

Biotin 0.5mg

Preparation of Solution 5: Add components to distilled/deionized water and bring volume to 200.0mL. Mix thoroughly. Filter sterilize.

Elemental Sulfur Slurry:

Composition per 10.0g:

Sulfur flowers 10.0g

Preparation of Elemental Sulfur Slurry: Add highly purified sulfur flowers to a mortar and grind to a fine powder. Add sufficient distilled/deionized water to produce a slurry. Distribute into 100.0mL screw-capped bottles in 20.0mL volumes. Autoclave for 30 min at 10 psi pressure–115°C. Decant supernatant solution. Reserve sulfur slurry.

Preparation of Medium: To 1.0L of cooled, sterile solution 1, aseptically add 1.0mL of sterile solution 2, 40.0mL of sterile solution 3, 6.0mL of sterile solution 4, and 5.0mL of sterile solution 5. Mix thoroughly. Adjust pH to 7.2. Aseptically distribute into sterile 50.0mL screw-capped bottles. Fill bottles completely with medium except for a pea-sized air bubble. Aseptically add a pea-sized piece of sulfur slurry to each 50.0mL of medium.

Use: For the isolation and cultivation of marine *Desulfuromonas* species.

NiCl₂·6H₂O 0.24g

CuCl₂·2H₂O 0.17g

Preparation of Solution 2: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.5. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution 3:

Composition per 100.0mL:

NaHCO₃ 10.0g

Preparation of Solution 3: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution 4:

Composition per 100.0mL:

Na₂S·9H₂O 5.0g

Preparation of Solution 4: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution 5:

Composition per 200.0mL:

Pyridoxamine-HCl 0.01g

Nicotinic acid 4.0mg

p-Aminobenzoic acid 2.0mg

Thiamine 2.0mg

Cyanocobalamin 1.0mg

Pantothenic acid 1.0mg

Biotin 0.5mg

Preparation of Solution 5: Add components to distilled/deionized water and bring volume to 200.0mL. Mix thoroughly. Filter sterilize.

Elemental Sulfur Slurry:

Composition per 10.0g:

Sulfur flowers 10.0g

Preparation of Elemental Sulfur Slurry: Add highly purified sulfur flowers to a mortar and grind to a fine powder. Add sufficient distilled/deionized water to produce a slurry. Distribute into 100.0mL screw-capped bottles in 20.0mL volumes. Autoclave for 30 min at 10 psi pressure–115°C. Decant supernatant solution. Reserve sulfur slurry.

Preparation of Medium: To 1.0L of cooled, sterile solution 1, aseptically add 1.0mL of sterile solution 2, 40.0mL of sterile solution 3, 6.0mL of sterile solution 4, and 5.0mL of sterile solution 5. Mix thoroughly. Adjust pH to 7.2. Aseptically distribute into sterile 50.0mL screw-capped bottles. Fill bottles completely with medium except for

a pea-sized air bubble. Aseptically add a pea-sized piece of sulfur slurry to each 50.0mL of medium.

Use: For the isolation and cultivation of freshwater *Desulfuromonas* species.

Desulfuromonas Medium

Composition per 1003.0mL:

Solution A	950.0mL
Solution C	40.0mL
Solution D	10.0mL
Solution B	3.0mL

pH 7.2 ± 0.2 at 25°C

Solution A:

Composition per 950.0mL:

NaCl	20.0g
Disodium DL-malate	2.66g
MgCl ₂ ·6H ₂ O	2.0g
Na ₂ SO ₄	1.77g
MgSO ₄ ·7H ₂ O	1.0g
KH ₂ PO ₄	0.5g
Yeast extract	0.5g
NH ₄ Cl	0.3g
CaCl ₂ ·2H ₂ O	0.1g
Resazurin	1.0mg
Trace elements solution SL-4	10.0mL

Trace Elements Solution SL-4:

Composition per liter:

EDTA	0.5g
FeSO ₄ ·7H ₂ O	0.2g
Trace elements solution SL-6	100.0mL

Trace Elements Solution SL-6:

Composition per liter:

MnCl ₂ ·4H ₂ O	0.5g
H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
Na ₂ MoO ₄ ·2H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Trace Elements Solution SL-4: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Adjust pH to 6.0 with 2*N* NaOH. Gently heat and bring to boiling. Continue boiling for 3–4 min. Allow to cool to room temperature while gassing under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B:

Composition per 3.0mL:

Ethanol	0.3mL
---------------	-------

Preparation of Solution B: Add ethanol to distilled/deionized water and bring volume to 3.0mL. Sparge under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C:

Composition per 40.0mL:

NaHCO ₃	1.85g
--------------------------	-------

Preparation of Solution C: Add NaHCO₃ to distilled/deionized water and bring volume to 40.0mL. Mix thoroughly. Gas under 80% N₂ + 20% CO₂. Filter sterilize.

Solution D:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.3g
---	------

Preparation of Solution D: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: To 950.0mL of sterile solution A, aseptically and anaerobically add 3.0mL of sterile solution B, 40.0mL of sterile solution C, and 10.0mL of sterile solution D. Mix thoroughly. Aseptically and anaerobically distribute into tubes or flasks.

Use: For the cultivation and maintenance of *Desulfuromonas* species.

H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
MnCl ₂ ·4H ₂ O	0.03g
Na ₂ MoO ₄ ·H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 3.4.

Preparation of Trace Elements Solution SL-4: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl.....	62.5mg
Nicotinic acid.....	25.0mg
Thiamine-HCl·2H ₂ O.....	12.5mg
<i>p</i> -Aminobenzoic acid.....	12.5mg
Ca-pantothenate.....	6.5mg
Biotin.....	2.5mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Na₂S·9H₂O Solution:

Composition per 100.0mL:

Na ₂ S·9H ₂ O.....	5.0g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Before use, neutralize to pH 7.0 with sterile HCl.

Preparation of Medium: Add components, except vitamin solution, NaHCO₃ solution, and Na₂S·9H₂O solution, to 950.0mL distilled/deionized water. Adjust pH to 5.0. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 5.0mL vitamin solution, 40.0mL NaHCO₃ solution, and 6.0mL Na₂S·9H₂O solution. Mix thoroughly. Adjust pH to 7.5 with sterile 2M Na₂CO₃ and 2M H₂SO₄, respectively. Aseptically distribute into sterile screw-capped bottles or tubes. Fill completely, leaving only a small gas bubble.

Use: For the cultivation of *Desulfuromonas acetexigenes*.

Desulfuromonas succinoxidans Medium

Composition per liter:

NaCl.....	20.0g
MgCl ₂ ·6H ₂ O.....	2.0g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O.....	1.0g
NH ₄ Cl.....	0.3g
CaCl ₂ ·2H ₂ O.....	0.1g
Resazurin.....	0.5mg
NaHCO ₃ solution.....	50.0mL
Disodium fumarate solution.....	10.0mL
Sodium acetate solution.....	10.0mL
Na ₂ S·9H ₂ O solution.....	10.0mL
Trace elements solution SL-10.....	1.0mL
Seven vitamin solution.....	1.0mL

pH 7.2 ± 0.2 at 25°C

NaHCO₃ Solution:

Composition per 50.0mL:

NaHCO ₃	2.5g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Disodium Fumarate Solution:

Composition per 10.0mL:

Disodium fumarate.....	1.6g
------------------------	------

Preparation of Disodium Fumarate Solution: Add disodium fumarate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Sodium Acetate Solution:

Composition per 10.0mL:

Sodium acetate.....	0.8g
---------------------	------

Preparation of Sodium Acetate Solution: Add sodium acetate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	0.5g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution SL-10:

Composition per liter:

FeCl ₂ ·4H ₂ O.....	1.5g
CoCl ₂ ·6H ₂ O.....	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	36.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O.....	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly.

Seven Vitamin Solution:

Composition per liter:

Pyridoxine-HCl.....	0.3g
Thiamine-HCl.....	0.2g
Nicotinic acid.....	0.2g
Calcium DL-pantothenate.....	0.1g
Vitamin B ₁₂	0.1g
<i>p</i> -Aminobenzoic acid.....	80.0mg
Biotin.....	20.0mg

Preparation of Seven Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Sparge with 100% N₂.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂. Add components, except NaHCO₃ solution, disodium fumarate solution, sodium acetate solution, Na₂S·9H₂O solution, and seven vitamin solution, to distilled/deionized water and bring volume to 920.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 50.0mL of sterile NaHCO₃ solution, 10.0mL of sterile disodium fumarate solution, 10.0mL of sterile sodium acetate solution, 10.0mL of sterile Na₂S·9H₂O solution, and 1.0mL of sterile seven vitamin solution. Mix thoroughly.

Use: For the cultivation of *Desulfuromonas succinoxidans*.

***Desultobacterium* Medium
(DSMZ Medium 383)**

Composition per 1012.0mL:

Solution A	930.0mL
Solution C	50.0mL
Solution D	10.0mL
Solution E	10.0mL
Solution G	10.0mL
Solution B	1.0mL
Solution F	1.0mL

pH 7.0 at 25°C

Solution A:**Composition** per 930.0mL:

NaCl	21.0g
Na ₂ SO ₄	3.0g
MgCl ₂ ·6H ₂ O	3.0g
KCl	0.5g
NH ₄ Cl	0.3g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O	0.15g
Resazurin	1.0mg

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 930.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂ gas until saturated. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution B:**Composition** per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	300.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	7.7mL

Preparation of Solution B: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C:**Composition** per 100.0mL:

NaHCO ₃	5.0g
--------------------	------

Preparation of Solution C: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% CO₂ until saturated, approximately 20 min. Filter sterilize under 100% CO₂ into a sterile, gas-tight 100.0mL screw-capped bottle.

Solution D:**Composition** per 10.0mL:

Na ₂ -benzoate	0.5g
---------------------------	------

Preparation of Solution D: Add Na₂-benzoate to distilled/deionized water and bring volume to 10.0mL. Sparge with N₂. Filter sterilize. Store anaerobically.

Solution E:**Composition** per liter:

Pyridoxine-HCl	10.0mg
Thiamine-HCl·2H ₂ O	5.0mg
Riboflavin	5.0mg

Nicotinic acid	5.0mg
D-Ca-pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Solution E: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Solution F:**Composition** per liter:

NaOH	0.5g
Na ₂ SeO ₃ ·5H ₂ O	3.0mg

Preparation of Solution F: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Solution G:**Composition** per 10.0mL:

Na ₂ S·9H ₂ O	0.4g
-------------------------------------	------

Preparation of Solution G: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Sparge with N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Store anaerobically.

Preparation of Medium: Add solutions B, C, D, E, F, and G to solution A in that order under N₂ gas. Adjust the pH to 7.0.

Use: For the cultivation of *Desulfotobacterium* spp.

***Dethiobacter* Medium
(DSMZ Medium 1104)**

Composition per liter:

Na ₂ CO ₃	22.0g
NaHCO ₃	8.0g
NaCl	6.0g
Sulfur, powdered	1.5g
K ₂ HPO ₄	0.5g
Thiosulfate solution	10.0mL
Vitamin solution	10.0mL
Ammonium chloride solution	10.0mL
Magnesium chloride solution	10.0mL
Na ₂ S·9H ₂ O solution	10.0mL
Yeast extract solution	10.0mL
Acetate solution	10.0mL
Trace elements solution SL-10 with EDTA	1.0mL
Selenite/tungstate solution	1.0mL
Ethanol	0.6mL

pH 9.5 ± 0.2 at 25°C

Ammonium Chloride Solution:**Composition** per 10.0mL:

NH ₄ Cl	0.2g
--------------------	------

Preparation of Ammonium Chloride Solution: Add NH₄Cl to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Magnesium Chloride Solution:**Composition** per 10.0mL:

MgCl ₂ ·6H ₂ O	0.2g
--------------------------------------	------

Preparation of Magnesium Chloride Solution: Add $\text{MgCl}_2 \cdot 6\text{H}_2\text{O}$ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N_2 . Autoclave for 15 min at 15 psi pressure–121°C.

$\text{Na}_2\text{S} \cdot 9\text{H}_2\text{O}$ Solution:

Composition per 10.0mL:

$\text{Na}_2\text{S} \cdot 9\text{H}_2\text{O}$ 0.24g

Preparation of $\text{Na}_2\text{S} \cdot 9\text{H}_2\text{O}$ Solution: Add $\text{Na}_2\text{S} \cdot 9\text{H}_2\text{O}$ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N_2 for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Thiosulfate Solution:

Composition per 10.0mL:

$\text{Na}_2\text{S}_2\text{O}_3$ 2.5g

Preparation of Thiosulfate Solution: Add $\text{Na}_2\text{S}_2\text{O}_3$ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N_2 . Filter sterilize.

Trace Elements Solution SL-10 with EDTA:

Composition per liter:

$\text{FeCl}_2 \cdot 4\text{H}_2\text{O}$ 1.5g
 Na_2 -EDTA 0.5g
 $\text{CoCl}_2 \cdot 6\text{H}_2\text{O}$ 190.0mg
 $\text{MnCl}_2 \cdot 4\text{H}_2\text{O}$ 100.0mg
 ZnCl_2 70.0mg
 $\text{Na}_2\text{MoO}_4 \cdot 2\text{H}_2\text{O}$ 36.0mg
 $\text{NiCl}_2 \cdot 6\text{H}_2\text{O}$ 24.0mg
 H_3BO_3 6.0mg
 $\text{CuCl}_2 \cdot 2\text{H}_2\text{O}$ 2.0mg
HCl (25% solution) 10.0mL

Preparation of Trace Elements Solution SL-10 with EDTA:

Add $\text{FeCl}_2 \cdot 4\text{H}_2\text{O}$ to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N_2 . Autoclave for 15 min at 15 psi pressure–121°C. Adjust pH to 7.0.

Selenite/Tungstate Solution:

Composition per liter:

NaOH 0.5g
 $\text{Na}_2\text{WO}_4 \cdot 2\text{H}_2\text{O}$ 4.0mg
 $\text{Na}_2\text{SeO}_3 \cdot 5\text{H}_2\text{O}$ 3.0mg

Preparation of Selenite/Tungstate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N_2 . Autoclave for 15 min at 15 psi pressure–121°C.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl 10.0mg
Thiamine-HCl- $2\text{H}_2\text{O}$ 5.0mg
Riboflavin 5.0mg
Nicotinic acid 5.0mg
D-Ca-pantothenate 5.0mg

-Aminobenzoic acid 5.0mg
Lipoic acid 5.0mg
Biotin 2.0mg
Folic acid 2.0mg
Vitamin B_{12} 0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H_2 + 20% CO_2 . Filter sterilize.

Yeast Extract Solution:

Composition per 10.0mL:

Yeast extract 0.05g

Preparation of Yeast Extract Solution: Add yeast extract to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N_2 . Autoclave for 15 min at 15 psi pressure–121°C.

Acetate Solution:

Composition per 10.0mL:

Sodium acetate 0.4g

Preparation of Acetate Solution: Add sodium acetate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N_2 . Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except ammonium chloride, magnesium chloride, yeast extract, trace elements, vitamin, ethanol, acetate, sulfur, thiosulfate, and sulfide solutions, to distilled/deionized water and bring volume to 930.0mL. Gently heat and bring to boiling. Boil for 1 min. Mix thoroughly. Cool to room temperature while sparging with 100% N_2 . Dispense into culture vessels under an atmosphere of 100% N_2 . Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add the ammonium chloride, magnesium chloride, yeast extract, trace elements, vitamin, ethanol, acetate, sulfur, thiosulfate, and sulfide solutions. Sulfur is sterilized by steaming for 3 h on each of 3 successive days and added as powder. Adjust pH of final medium to 9.5. After inoculation add sterile H_2 gas to 0.5 bar overpressure.

Use: For the cultivation of *Dethiobacter* spp.

***Dethiobacter* Medium
(DSMZ Medium 1104)**

Composition per liter:

Na_2CO_3 22.0g
 NaHCO_3 8.0g
NaCl 6.0g
Sulfur, powdered 1.5g
 K_2HPO_4 0.5g
Thiosulfate solution 10.0mL

Selenite/tungstate solution 1.0mL
pH 9.5 ± 0.2 at 25°C

Ammonium Chloride Solution:

Composition per 10.0mL:

NH_4Cl 0.2g

Preparation of Ammonium Chloride Solution: Add NH_4Cl to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N_2 . Autoclave for 15 min at 15 psi pressure–121°C.

Magnesium Chloride Solution:

Composition per 10.0mL:

$\text{MgCl}_2 \cdot 6\text{H}_2\text{O}$ 0.2g

Preparation of Magnesium Chloride Solution: Add $\text{MgCl}_2 \cdot 6\text{H}_2\text{O}$ to distilled/deionized water and bring volume to 10.0mL. Mix thor-

oughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na₂S·9H₂O 0.24g

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Thiosulfate Solution:

Composition per 10.0mL:

Na₂S₂O₃ 2.5g

Preparation of Thiosulfate Solution: Add Na₂S₂O₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Trace Elements Solution SL-10 with EDTA:

Composition per liter:

FeCl₂·4H₂O 1.5g
 Na₂-EDTA 0.5g
 CoCl₂·6H₂O 190.0mg
 MnCl₂·4H₂O 100.0mg
 ZnCl₂ 70.0mg
 Na₂MoO₄·2H₂O 36.0mg
 NiCl₂·6H₂O 24.0mg
 H₃BO₃ 6.0mg
 CuCl₂·2H₂O 2.0mg
 HCl (25% solution) 10.0mL

Preparation of Trace Elements Solution SL-10 with EDTA:

Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Adjust pH to 7.0.

Selenite/Tungstate Solution:

Composition per liter:

NaOH 0.5g
 Na₂WO₄·2H₂O 4.0mg
 Na₂SeO₃·5H₂O 3.0mg

Preparation of Selenite/Tungstate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl 10.0mg
 Thiamine-HCl·2H₂O 5.0mg
 Riboflavin 5.0mg
 Nicotinic acid 5.0mg
 D-Ca-pantothenate 5.0mg
 p-Aminobenzoic acid 5.0mg
 Lipoic acid 5.0mg
 Biotin 2.0mg
 Folic acid 2.0mg
 Vitamin B₁₂ 0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Yeast Extract Solution:

Composition per 10.0mL:

Yeast extract 0.05g

Preparation of Yeast Extract Solution: Add yeast extract to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Acetate Solution:

Composition per 10.0mL:

Sodium acetate 0.4g

Preparation of Acetate Solution: Add sodium acetate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Butyrate Solution:

Composition per 10.0mL:

Sodium butyrate 1.1g

Preparation of Butyrate Solution: Add sodium butyrate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except ammonium chloride, magnesium chloride, yeast extract, trace elements, vitamin, ethanol, acetate, sulfur, thiosulfate, and sulfide solutions, to distilled/deionized water and bring volume to 920.0mL. Gently heat and bring to boiling. Boil for 1 min. Mix thoroughly. Cool to room temperature while sparging with 100% N₂. Dispense into culture vessels under an atmosphere of 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add the ammonium chloride, magnesium chloride, yeast extract, trace elements, vitamin, ethanol, acetate, sulfur, thiosulfate, and sulfide solutions. Sulfur is sterilized by steaming for 3 h on each of 3 successive days and added as powder. Adjust pH of final medium to 9.5. After inoculation add sterile H₂ gas to 0.5 bar overpressure.

Use: For the cultivation of *Desulfurivibrio alkaliphilus*.

Dethiosulfovibrio II Medium (DSMZ Medium 906)

Composition per liter:

NaCl 20.0g
 Yeast extract 5.0g
 MgCl₂·6H₂O 3.0g
 Na₃-citrate·5H₂O 3.0g
 Peptone 2.0g
 KH₂PO₄ 1.0g
 Resazurin 0.5mg
 Calcium chloride solution 10.0mL
 Na₂S·9H₂O solution 10.0mL
 Na₂S₂O₃ solution 10.0mL
 Trace elements solution SL-10 1.0mL
 pH 6.7–6.8 at 25°C

Na₂S₂O₃ Solution:

Composition per 10.0mL:

Na₂S₂O₃·5H₂O 2.5g

Preparation of Na₂S₂O₃ Solution: Add Na₂S₂O₃·5H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na₂S·9H₂O 0.5g

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution SL-10:

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Calcium Chloride Solution:

Composition per 10.0mL:

CaCl ₂ ·2H ₂ O	0.2g
--	------

Preparation of Calcium Chloride Solution: Add CaCl₂·2H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except calcium chloride solution, trace elements solution SL-10, Na₂S·9H₂O solution, and Na₂S₂O₃ solution, to distilled/deionized water and bring volume to 969.0mL. Mix thoroughly. Sparge with 100% N₂ for 30 min. Distribute under 100% N₂ into anaerobe tubes or bottles. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically per 1.0L of medium add 10.0mL calcium chloride solution, 1.0mL trace elements solution SL-10, 10.0mL Na₂S·9H₂O solution, and 10.0mL Na₂S₂O₃ solution. Mix thoroughly. The final pH should be 6.7–6.8.

Use: For the cultivation of *Dethiosulfovibrio* spp.

CuSO ₄ ·5H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O	0.3mg

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Na₂S·9H₂O Solution:

Composition per 20.0mL:

Na ₂ S·9H ₂ O	0.6g
---	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

NaHCO₃ Solution:

Composition per 100.0mL:

NaHCO ₃	10.0g
--------------------------	-------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

Na-thiosulfate Solution:

Composition per 20.0mL:

Na ₂ S ₂ O ₃ ·5H ₂ O	5.0g
--	------

Preparation of Na-thiosulfate Solution: Add Na₂S₂O₃·5H₂O to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂. Add components, except Na-thiosulfate solution, NaHCO₃ solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically and anaerobically add 20.0mL Na-thiosulfate solution, 50.0mL NaHCO₃ solution, and 15.0mL Na₂S·9H₂O solution. Mix thoroughly. Adjust pH to 7.3. Aseptically and anaerobically distribute into sterile tubes or flasks.

Use: For the cultivation of *Dethiosulfovibrio peptidovorans*.

DEV Lactose Peptone MUG Broth

Composition per liter:

Lactose	10.0g
Meat peptone	10.0g
NaCl	5.0g
Tryptophan	1.0g

4-Methylumbelliferyl- β -D-glucuronide	0.1g
Bromocresol Purple	0.01g
pH 7.2 \pm 0.2 at 37°C	

Source: This medium is available from Fluka, Sigma-Aldrich.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into test tubes that contain an inverted Durham tube in 10.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the enrichment and titer determination of coliform bacteria in connection with the bacteriological examination of water. The presence of *E. coli* can be demonstrated by fluorescence in the UV and a positive indole test.

Dextran Agar

Composition per liter:

Minimal mineral base solution	700.0mL
Agar solution.....	200.0mL
Dextran-deoxyglucose solution	100.0mL
pH 4.0 \pm 0.2 at 25°C	

Minimal Mineral Base Solution:

Composition per 700.0mL:

(NH ₄) ₂ SO ₄	5.0g
KH ₂ PO ₄	1.5g
CaCl ₂	0.1g
MnSO ₄	0.1g
NaCl.....	0.1g
Yeast extract.....	0.1g

Preparation of Minimal Mineral Base Solution: Add components to distilled/deionized water and bring volume to 700.0mL. Mix thoroughly. Gently heat and bring to boiling. pH is 4.0 before autoclaving. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Agar Solution:

Composition per 200.0mL:

Agar	10.0g
------------	-------

Preparation of Agar Solution: Add agar to distilled/deionized water and bring volume to 200.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Dextran-Deoxyglucose Solution:

Composition per 100.0mL:

Dextran.....	10.0g
2-Deoxy-D-glucose	0.5g

Preparation of Dextran-Deoxyglucose Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Aseptically combine 700.0mL of sterile minimal mineral base solution, 200.0mL of sterile agar solution, and 100.0mL of sterile dextran-deoxyglucose solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Lipomyces starkeyi*.

Dextran Broth

Composition per liter:

Minimal mineral base solution	900.0mL
Dextran-deoxyglucose solution	100.0mL
pH 4.0 \pm 0.2 at 25°C	

Minimal Mineral Base Solution:

Composition per 900.0mL:

(NH ₄) ₂ SO ₄	5.0g
KH ₂ PO ₄	1.5g
CaCl ₂	0.1g
MnSO ₄	0.1g
NaCl.....	0.1g
Yeast extract.....	0.1g

Preparation of Minimal Mineral Base Solution: Add components to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. pH is 4.0 before autoclaving. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Dextran-Deoxyglucose Solution:

Composition per 100.0mL:

Dextran	10.0g
2-Deoxy-D-glucose	0.5g

Preparation of Dextran-Deoxyglucose Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Combine 900.0mL of sterile minimal mineral base solution with 100.0mL of sterile dextran-deoxyglucose solution. Mix thoroughly. Distribute into sterile flasks or tubes.

Use: For the cultivation and maintenance of *Lipomyces starkeyi*.

Dextran Medium (DSMZ Medium 1050)

Composition per liter:

Agar	15.0g
Dextran	10.0g
Polypepton	5.0g
NH ₄ NO ₃	1.0g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O.....	0.5g
CaCl ₂ ·2H ₂ O.....	0.25g

pH 6.8 \pm 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.8. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Arthrobacter dextranilyticum*.

Dextrin Fuchsin Sulfite Agar *See: Aeromonas Differential Agar*

Dextrose Agar

Composition per liter:

Agar	15.0g
Glucose	10.0g
NaCl.....	5.0g
Pancreatic digest of casein.....	5.0g
Peptic digest of animal tissue	5.0g
Beef extract.....	3.0g

pH 6.9 \pm 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and enumeration of microorganisms from foods. For use as a base for the preparation of blood agar.

Dextrose Agar

Composition per liter:

Agar	15.0g
Glucose	10.0g
Tryptose	10.0g
NaCl	5.0g
Beef extract	3.0g

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of a wide variety of microorganisms. For use as a base for the preparation of blood agar and for general laboratory procedures.

Dextrose Agar

Composition per liter:

Agar	15.0g
Glucose	10.0g
Tryptose	10.0g
NaCl	5.0g
Beef extract	3.0g

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 20 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of a wide variety of microorganisms.

Dextrose Ascitic Fluid Semisolid Agar

Composition per liter:

Pancreatic digest of casein	2.66g
NaCl	1.33g
Agar	0.5g
Phenol Red	4.8mg
Ascitic fluid	50.0mL
Glucose solution	15.0mL

pH 7.4 ± 0.2 at 25°C

Glucose Solution:

Composition per 15.0mL:

Glucose	3.0g
---------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 15.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except ascitic fluid and glucose solution, to distilled/deionized water and bring volume to 935.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile ascitic fluid and glucose solution. Mix thoroughly. Aseptically distribute into sterile tubes.

Use: For the isolation and cultivation of microorganisms from spinal fluid.

Dextrose Broth

Composition per liter:

Tryptose	10.0g
Glucose	5.0g
NaCl	5.0g
Beef extract	3.0g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems and Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation and enrichment of fastidious or damaged microorganisms.

Dextrose Broth

Composition per liter:

Pancreatic digest of casein	10.0g
Glucose	5.0g
NaCl	5.0g

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and differentiation of microorganisms based on their ability to ferment glucose. If desired, a Durham tube may be added to the test tubes to determine gas production.

Dextrose HiVeg Agar

Composition per liter:

Agar	15.0g
Glucose	10.0g
Plant hydrolysate No. 1	10.0g
NaCl	5.0g
Plant extract	3.0g

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 20 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of a wide variety of microorganisms.

Dextrose HiVeg Agar with Blood**Composition per liter:**

Agar	15.0g
Glucose	10.0g
Plant hydrolysate No. 1	10.0g
NaCl	5.0g
Plant extract	3.0g
Sheep blood, defibrinated	50.0mL
pH 7.3 ± 0.2 at 25°C	

Source: This medium without sheep blood is available as a premixed powder from HiMedia.

Preparation of Medium: Add components, except sheep blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 50.0mL sterile blood. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of a wide variety of microorganisms.

Dextrose HiVeg Agar Base, Emmons**(Sabouraud Glucose HiVeg Agar Base, Modified)****Composition per liter:**

Glucose	20.0g
Agar	17.0g
Plant special peptone	10.0g
pH 6.9 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of yeasts and molds. For the cultivation of dermatophytes and other pathogenic and nonpathogenic fungi from clinical and nonclinical specimens. For the cultivation of yeast and filamentous fungi.

Dextrose HiVeg Broth**Composition per liter:**

Plant hydrolysate No. 1	10.0g
Glucose	5.0g
NaCl	5.0g
Plant extract	3.0g
pH 7.0 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For antibiotic sensitivity testing using tube dilution method. For the cultivation and maintenance of a wide variety of microorganisms.

Dextrose HiVeg Broth with Blood**Composition per liter:**

Plant hydrolysate No. 1	10.0g
NaCl	5.0g
Glucose	5.0g

Plant extract	3.0g
Sheep blood, defibrinated	50.0mL
pH 7.3 ± 0.2 at 25°C	

Source: This medium without sheep blood is available as a premixed powder from HiMedia.

Preparation of Medium: Add components, except sheep blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 50.0mL sterile blood. Aseptically distribute into tubes or flasks.

Use: For the cultivation and maintenance of a wide variety of microorganisms.

Dextrose HiVeg Peptone Agar**Composition per liter:**

Plant peptone	20.0g
Agar	15.0g
Glucose	10.0g
NaCl	5.0g
pH 7.2 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of a wide variety of microorganisms.

Dextrose HiVeg Peptone Broth**Composition per liter:**

Plant peptone	20.0g
Glucose	10.0g
NaCl	5.0g
pH 7.2 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of a wide variety of microorganisms.

Dextrose Peptone Agar**Composition per liter:**

Peptic digest of animal tissue	20.0g
Agar	15.0g
Glucose	10.0g
NaCl	5.0g
pH 7.2 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of a wide variety of microorganisms.

Dextrose Proteose No. 3 Agar

Composition per liter:

Proteose peptone No. 3	20.0g
Agar	13.0g
NaCl	5.0g
Glucose	2.0g
Tellurite blood solution	50.0mL
pH 7.4 ± 0.2 at 25°C	

Tellurite Blood Solution:

Composition per 60.0mL:

Sheep blood, defibrinated	50.0mL
Chapman tellurite solution	10.0mL

Preparation of Tellurite Blood Solution: Aseptically combine 10.0mL of Chapman tellurite solution with 50.0mL of sterile, defibrinated sheep blood. Mix thoroughly.

Chapman Tellurite Solution:

Composition per 100.0mL:

K ₂ TeO ₃	1.0g
---------------------------------------	------

Preparation of Chapman Tellurite Solution: Add K₂TeO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Caution: Potassium tellurite is toxic.

Preparation of Medium: Add components, except tellurite blood solution, to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 75°–80°C. Aseptically add 50.0mL of sterile tellurite blood solution. Mix thoroughly. Maintain at 75°–80°C for 10–15 min or until the agar becomes chocolate. Cool slowly to 50°C. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For propagating pure cultures of *Neisseria gonorrhoeae* and other fastidious microorganisms.

Dextrose Proteose Peptone HiVeg Agar Base with Tellurite and Blood

Composition per liter:

Plant peptone No. 3	20.0g
Agar	15.0g
NaCl	5.0g
Glucose	2.0g
Sheep blood, defibrinated	50.0mL
Tellurite solution	2.0mL
pH 7.4 ± 0.2 at 25°C	

Source: This medium, without tellurite or blood, is available as a pre-mixed powder from HiMedia.

Tellurite Solution:

Composition per 10.0mL:

K ₂ TeO ₃	0.1g
---------------------------------------	------

Preparation of Tellurite Solution: Add K₂TeO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Caution: Potassium tellurite is toxic.

Preparation of Medium: Add components, except tellurite solution and blood, to distilled/deionized water and bring volume to

950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 2.0mL of sterile tellurite solution and 50.0mL of sterile defibrinated blood. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of a wide variety of microorganisms. For use as a base for the preparation of blood agar and for general laboratory procedures. For the isolation of *Corynebacterium diphtheriae*.

Dextrose Proteose Peptone Agar Base with Tellurite and Blood

Composition per liter:

Proteose peptone	20.0g
Agar	15.0g
NaCl	5.0g
Glucose	2.0g
Sheep blood, defibrinated	50.0mL
Tellurite solution	2.0mL
pH 7.4 ± 0.2 at 25°C	

Source: This medium, without tellurite or blood, is available as a pre-mixed powder from HiMedia.

Tellurite Solution:

Composition per 10.0mL:

K ₂ TeO ₃	0.1g
---------------------------------------	------

Preparation of Tellurite Solution: Add K₂TeO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Caution: Potassium tellurite is toxic.

Preparation of Medium: Add components, except tellurite solution and blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 2.0mL of sterile tellurite solution and 50.0mL of sterile defibrinated blood. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of a wide variety of microorganisms. For use as a base for the preparation of blood agar and for general laboratory procedures. For the isolation of *Corynebacterium diphtheriae*.

Dextrose Soil Agar (DSA)

Composition per liter:

Soil	150.0g
Agar	20.0g
Glucose	5.0g

Preparation of Medium: Add soil to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 60 min at 15 psi pressure–121°C. Filter through Whatman #1 filter paper. Bring volume of filtrate to 1.0L with distilled/deionized water. Mix thoroughly. Add agar and glucose. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes

Use: For the cultivation and maintenance of *Chaetomium globosum*.

Dextrose Starch Agar

Composition per liter:

Gelatin	20.0g
Proteose peptone	15.0g

Agar	10.0g
Starch	10.0g
Glucose	5.0g
NaCl	5.0g
Na ₂ HPO ₄	3.0g
pH 7.3 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Neisseria gonorrhoeae*, *Neisseria animalis*, and other fastidious microorganisms.

Dextrose Sucrose Cellulose Agar (DSA Cellulose)

Composition per liter:

Agar	20.0g
Cellulose, powdered.....	10.0g
KH ₂ PO ₄	1.0g
KNO ₃	1.0g
MgSO ₄ ·7H ₂ O.....	0.5g
KCL	0.5g
Amidon	0.2g
Glucose	0.2g
Sucrose.....	0.2g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 30 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Bipolaris sorghicola* and *Codinaea simplex*.

Dextrose Tryptone Agar

Composition per liter:

Agar	15.0g
Pancreatic digest of casein.....	10.0g
Glucose	5.0g
Bromcresol Purple	0.04g
pH 6.9 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of mesophilic and thermophilic aerobic microorganisms in food.

Dextrose Tryptone Agar

Composition per liter:

Agar	12.0g
Pancreatic digest of casein.....	10.0g

Glucose	5.0g
Bromcresol Purple	0.04g
pH 6.9 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation, cultivation, and enumeration of “flat-sour” thermophiles and mesophiles in food. Acid-producing microorganisms such as “flat-sour” thermophiles appear as yellow colonies surrounded by a yellow zone.

Dextrose Tryptone Broth

Composition per liter:

Pancreatic digest of casein.....	10.0g
Glucose	5.0g
Bromcresol Purple	0.04g
pH 6.9 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation and cultivation of “flat-sour” thermophiles and mesophiles in food. Acid-producing microorganisms such as “flat-sour” thermophiles turn the medium yellow.

Dextrose Tryptone Broth (m-Dextrose Tryptone Broth)

Composition per liter:

Pancreatic digest of casein.....	20.0g
Glucose	10.0g
Bromcresol Purple	0.04g
pH 6.7 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation, cultivation, and enumeration of “flat-sour” thermophiles and mesophiles in food by the membrane filter technique. Acid-producing microorganisms such as “flat-sour” thermophiles turn the medium yellow.

Dextrose Tryptone HiVeg Agar

Composition per liter:

Agar	15.0g
Plant hydrolysate	10.0g
Glucose	5.0g
pH 6.7 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation, cultivation, and enumeration of “flat-sour” thermophiles and mesophiles in food.

Dextrose Tryptone HiVeg Agar, Modified

Composition per liter:

Agar	15.0g
Plant hydrolysate.....	10.0g
Glucose	5.0g
K ₂ HPO ₄	1.25
Yeast extract.....	1.0g
Bromcresol Purple	0.04g
pH 6.7 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation, cultivation, and enumeration of “flat-sour” thermophiles and mesophiles in food. Acid-producing microorganisms such as “flat-sour” thermophiles appear as yellow colonies surrounded by a yellow zone.

Dextrose Tryptone HiVeg Broth

Composition per liter:

Plant hydrolysate.....	10.0g
Glucose	5.0g
Bromcresol Purple	0.04g
pH 6.7 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation and cultivation of “flat-sour” thermophiles and mesophiles in food. Acid-producing microorganisms such as “flat-sour” thermophiles turn the medium yellow.

Dextrose Tryptone HiVeg Broth, Modified

Composition per liter:

Plant hydrolysate.....	10.0g
Glucose	5.0g
K ₂ HPO ₄	1.25
Yeast extract.....	1.0g
Bromcresol Purple	0.04g
pH 6.7 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation, cultivation, and enumeration of “flat-sour” thermophiles and mesophiles in food. Acid-producing microorganisms such as “flat-sour” thermophiles turn the medium yellow.

Dextrose Yeast Asparagine Agar (DYAA)

Composition per liter:

Agar	20.0g
Glucose	10.0g
Yeast extract.....	1.0g
Asparagine.....	0.5g
K ₂ HPO ₄ ·3H ₂ O	0.5g
MgSO ₄ ·7H ₂ O	0.25g
FeCl ₃ solution	0.5mL

FeCl₃ Solution:

Composition per 10.0mL:

FeCl ₃	1.0g
-------------------------	------

Preparation of FeCl₃ Solution: Add FeCl₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Aciculoconidium aculeatum*, many *Acremonium* species, *Acrodontium simplex*, *Plectosphaerella cucumerina*, and many other filamentous fungi.

Dextrose Yeast Extract Peptone (DYPA)

Composition per liter:

Agar	20.0g
Glucose	20.0g
Peptone	10.0g
Yeast extract.....	5.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Candida maltosa*, *Candida ethanolica*, *Candida boidinii*, *Candida tropicalis*, *Pichia membranaefaciens*, *Debaryomyces hansenii*, *Dekkera intermedia*, *Dekkera bruxellensis*, *Dekkera abstinentis*, *Dekkera anomala*, *Dekkera custersiana*, *Dekkera lambica*, *Dekkera naardenensis*, *Saccharomyces servazzii*, *Williopsis californica*, *Zygosaccharomyces rouxii*, and other fungi.

Dey-Engley Neutralizing Agar

See: **D-E Neutralizing Agar**

Dey-Engley Neutralizing Agar (D-E HiVeg Agar Disinfectant Testing)

Composition per liter:

Agar	15.0g
Glucose	10.0g
Lecithin	7.0g
Na ₂ S ₂ O ₃	6.0g
Casein enzymatic hydrolysate	5.0g
Polysorbate 80	5.0g
NaHSO ₃	2.5g
Yeast extract.....	2.5g
Na-thioglycollate	1.0g
Bromcresol Purple	0.02g

pH 7.6 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into flasks in 9.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the neutralization and testing of antiseptics and disinfectants.

Dey-Engley Neutralizing Broth
See: [D-E Neutralizing Broth](#)

Dey-Engley Neutralizing Broth Base

Composition per liter:

Glucose	10.0g
Casein enzymatic hydrolysate	5.0g
Yeast extract	2.5g
pH 7.6± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes in 9.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the neutralization and testing of antiseptics and disinfectants.

**Dey-Engley Neutralizing HiVeg Agar
(D-E HiVeg Agar Disinfectant Testing)**

Composition per liter:

Agar	15.0g
Glucose	10.0g
Lecithin	7.0g
Na ₂ S ₂ O ₃	6.0g
Plant hydrolysate	5.0g
Polysorbate 80	5.0g
NaHSO ₃	2.5g
Yeast extract	2.5g
Na-thioglycollate	1.0g
Bromcresol Purple	0.02g
pH 7.6 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into flasks in 9.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the neutralization and testing of antiseptics and disinfectants.

Dey-Engley Neutralizing HiVeg Broth

Composition per liter:

Glucose	10.0g
Lecithin	7.0g
Na ₂ S ₂ O ₃	6.0g
Plant hydrolysate	5.0g
Polysorbate 80	5.0g
NaHSO ₃	2.5g
Yeast extract	2.5g

Na-thioglycollate	1.0g
Bromcresol Purple	0.02g
pH 7.6± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes in 9.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the neutralization and testing of antiseptics and disinfectants.

Dey-Engley Neutralizing HiVeg Broth Base

Composition per liter:

Glucose	10.0g
Plant hydrolysate	5.0g
Yeast extract	2.5g
pH 7.6± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes in 9.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the neutralization and testing of antiseptics and disinfectants.

DG18 Agar

See: [Dichloran Glycerol Agar](#)

**Diagnostic Sensitivity Test Agar
(DST Agar)**

Composition per liter:

Agar	12.0g
Proteose peptone	10.0g
Veal infusion solids	10.0g
NaCl	3.0g
Na ₂ HPO ₄	2.0g
Glucose	2.0g
Sodium acetate	1.0g
Adenine sulfate	0.01g
Guanine-HCl	0.01g
Uracil	0.01g
Xanthine	0.01g
Thiamine	0.02mg
Horse blood, defibrinated	70.0mL
pH 7.4 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add components, except horse blood, to distilled/deionized water and bring volume to 930.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile horse blood. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For antimicrobial testing of various pathogenic microorganisms. DSTA is primarily used for susceptibility tests rather than the primary isolation of organisms from clinical samples. An essential requirement for satisfactory antimicrobial susceptibility media is that the reactive levels of thymidine and thymine must be sufficiently reduced to avoid antagonism of trimethoprim and sulphonamides. DSTA meets this

requirement and in the presence of lysed horse blood (or defibrinated horse blood if the plates are stored long enough to allow some lysis of the erythrocytes) the level of thymidine will be further reduced. This is caused by the action of the enzyme thymidine phosphorylase which is released from lysed horse erythrocytes. Thymidine is an essential growth factor for thymidine-dependent organisms and they will not grow in its absence or they will grow poorly in media containing reduced levels.

Dialister Medium (DSMZ Medium 1107)

Composition per liter:

Trypticase.....	17.0g
Yeast extract.....	3.0g
NaCl.....	3.0g
KNO ₃	3.0g
Lactate solution.....	10.0mL
Hemin solution.....	10.0mL
Glucose solution.....	10.0mL
L-Cysteine solution.....	5.0mL
DTT solution.....	5.0mL
Vitamin K ₁ solution.....	5.0mL
Formiate solution.....	50.0mL
Fumarate solution.....	50.0mL
Horse blood, sterile.....	50.0mL

pH 7.0 ± 0.2 at 25°C

L-Cystine Solution:

Composition per 5.0mL:

L-Cystine.....	0.25g
NaOH (1N solution).....	5.0mL

Preparation of L-Cystine Solution: Add L-cystine to 5.0mL of NaOH solution. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Vitamin K₁ Solution:

Composition per 100.0mL:

Vitamin K ₁	0.5g
Ethanol.....	99.0mL

Preparation of Vitamin K₁ Solution: Add vitamin K₁ to 99.0mL of absolute ethanol. Mix thoroughly. Sparge with 100% N₂. Filter sterilize. Store refrigerated.

Hemin Solution:

Composition per 100.0mL:

Hemin.....	50.0mg
NaOH (1N solution).....	20.0mL

Preparation of Hemin Solution: Add hemin to 20.0mL of 1N NaOH solution. Mix thoroughly. Bring volume to 100.0mL with distilled/deionized water. Sparge with 100% N₂. Filter sterilize.

Lactate Solution:

Composition per 10.0mL:

Sodium lactate.....	5.0g
---------------------	------

Preparation of Lactate Solution: Add sodium lactate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Glucose Solution:

Composition per 10.0mL:

Glucose.....	4.0g
--------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Formiate Solution:

Composition per 10.0mL:

Na-formiate.....	0.6g
------------------	------

Preparation of Formiate Solution: Add Na-formiate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Fumarate Solution:

Composition per 10.0mL:

Na-fumarate.....	0.6g
------------------	------

Preparation of Fumarate Solution: Add Na-fumarate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

DTT Solution:

Composition per 10.0mL:

DTT.....	0.15g
----------	-------

Preparation of DTT Solution: Add DTT to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

NaHCO₃ Solution:

Composition per 10.0mL:

NaHCO ₃	1.0g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 20% CO₂ + 80% H₂. Filter sterilize.

Preparation of Medium: Add components, except horse blood, lactate, hemin, glucose, cysteine, DTT, Vitamin K₁, formiate, and fumarate solutions, to distilled/deionized water and bring volume to 810.0mL. Mix thoroughly. Adjust pH to 7.8. Gently heat while stirring and bring to boiling. Distribute into tubes or bottles. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add horse blood, lactate, hemin, glucose, cysteine, DTT, vitamin K₁, formiate, and fumarate solutions. Incubate in oxygen-free, 5–10% CO₂ containing atmosphere.

Use: For the cultivation of *Dialister fulvus*, *Dialister vulgaris*, and other *Dialister* spp.

Diamalt Agar

Composition per liter:

Diamalt.....	150.0g
Agar.....	20.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of yeasts.

Diaminopimelic Acid Medium

Composition per liter:

Pancreatic digest of gelatin.....	5.0g
Beef extract.....	3.0g
Diaminopimelic acid.....	0.05g

pH 6.9 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Bacillus megaterium*.

Diamonds Medium, Modified

Composition per liter:

Pancreatic digest of casein	20.0g
Yeast extract	1.0g
L-Cysteine·HCl·H ₂ O	0.5g
Maltose	0.5g
L-Ascorbic acid	0.02g
Horse serum, inactivated	100.0mL
Antibiotic inhibitor	10.0mL

pH 6.5 ± 0.2 at 25°C

Antibiotic Inhibitor:

Composition per 10.0mL:

Streptomycin sulfate	0.15g
Amphotericin B	0.2mg
Penicillin G	100,000U

Preparation of Antibiotic Inhibitor: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except antibiotic inhibitor and horse serum, to distilled/deionized water and bring volume to 890.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add sterile antibiotic inhibitor and horse serum. Mix thoroughly. Aseptically distribute into sterile tubes in 5.0mL volumes.

Use: For the cultivation of *Trichomonas* species.

Diazotrophic Medium (RBA)

Composition per 1008.0mL:

Solution A	903.0mL
Solution B	50.0mL
Solution C	50.0mL
Solution D	5.0mL

pH 7.3 ± 0.2 at 25°C

Solution A:

Composition per 903.0mL:

Agar	15.0g
K ₂ HPO ₄	0.9g
CaCl ₂ ·2H ₂ O	0.1g
KH ₂ PO ₄	0.1g
MgSO ₄ ·7H ₂ O	0.1g
NaCl	0.1g
FeSO ₄ ·7H ₂ O	0.01g
MnSO ₄ ·H ₂ O	5.0mg
NaVO ₃ ·2H ₂ O	5.0mg
Na ₂ MoO ₄ ·2H ₂ O	0.5mg
Trace elements solution SL-6	3.0mL

Trace Elements Solution SL-6:

Composition per liter:

MnCl ₂ ·4H ₂ O	0.5g
H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g

Na ₂ MoO ₄ ·2H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.3. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 903.0mL. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.3. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Pour into sterile Petri dishes or distribute into sterile tubes.

Solution B:

Composition per 50.0mL:

DL-Malate	2.0g
Disodium succinate	1.0g
Yeast extract	0.05g

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Adjust pH to 7.3. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C:

Composition per 50.0mL:

D-Mannitol	2.0g
D-Glucose	2.0g
Sodium pyruvate	1.0g

Preparation of Solution C: Add components to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Adjust pH to 7.3. Filter sterilize.

Solution D:

Composition per liter:

Pyridoxine-HCl	62.5g
Nicotinic acid	25.0mg
<i>p</i> -Aminobenzoic acid	12.5mg
Thiamine-HCl	12.5mg
Calcium DL-pantothenate	6.5mg
Biotin	2.5mg

Preparation of Solution D: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.5. Gas under 100% N₂. Filter sterilize.

Preparation of Medium: To 903.0mL of sterile solution A, aseptically add 50.0mL of sterile solution B, 50.0mL of sterile solution C, and 5.0mL of sterile solution D. Mix thoroughly. Final pH should be 7.3. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Arthrobacter* species, *Azomonas* species, *Azorhizophilus paspali*, and *Azotobacter* species.

Dibenzothiophene Mineral Medium

Composition per liter:

Beef extract	10.0g
Na ₂ HPO ₄	3.0g
KH ₂ PO ₄	2.0g
NH ₄ Cl	2.0g
Dibenzothiophene	0.5g
MgCl ₂ ·6H ₂ O	0.2g
FeCl ₃ ·6H ₂ O	0.028g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of bacteria that can metabolize dibenzothio-
phene.

Dichloran Glycerol Agar (DG18 Agar)

Composition per liter:

Agar	15.0g
Glucose	10.0g
Peptone.....	5.0g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.5g
Dichloran	2.0mg
Chloramphenicol solution.....	10.0mL

pH 5.6 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid
Unipath.

Chloramphenicol Solution:

Composition per 10.0mL:

Chloramphenicol.....	0.1g
----------------------	------

Preparation of Chloramphenicol Solution: Add chloramphenicol
to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly.
Filter sterilize.

Preparation of Medium: Add components, except chlorampheni-
col solution, to distilled/deionized water and bring volume to 990.0mL.
Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min
at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile
chloramphenicol solution. Mix thoroughly. Pour into sterile Petri dish-
es or distribute into sterile tubes.

Use: For the enumeration and isolation of xerophilic molds from dried
and semidried foods.

Dichloran 18% Glycerol Agar (DG18 Agar) (BAM M184)

Composition per liter:

Glycerol	220.0g
Agar	15.0g
Glucose	10.0g
Peptone.....	5.0g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.5g
Dichloran	2.0mg
Chloramphenicol	0.1g

pH 5.6 ± 0.2 at 25°C

Preparation of Medium: Add components, except glycerol, to dis-
tilled/deionized water and bring volume to 950.0mL. Mix thoroughly.
Gently heat and bring to boiling. Cool to 50°C. Add 220.0g of glycerol.
Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. The
final pH should be 5.6 and the final a_w should be 0.955. Pour into sterile
Petri dishes or distribute into sterile tubes.

Use: Used as a general purpose medium for the enumeration of molds
from foods. For the enumeration and isolation of xerophilic molds
from dried and semidried foods. This medium is preferred when the a_w
of the analyzed food is 0.95 or lower. The low water activity of this
medium reduces interference by bacteria and fast-growing fungi.

Dichloran HiVeg Medium Base with Rose Bengal and Selective Supplement

Composition per liter:

Agar	15.0g
Glucose	10.0g
Plant peptone	5.0g
KH ₂ PO ₄	1.0g
MgSO ₄	0.5g
Rose Bengal.....	0.025g
Bromcresol Purple	0.02g
Dichloran	0.002
Selective supplement	10.0mL

pH 5.6 ± 0.2 at 25°C

Source: This medium, without selective supplement, is available as a
premixed powder from HiMedia.

Selective Supplement:

Composition per 10.0mL:

Chloramphenicol.....	0.1mg
----------------------	-------

Preparation of Selective Supplement: Add chloramphenicol to
distilled/deionized water and bring volume to 10.0mL. Mix thorough-
ly. Filter sterilize.

Preparation of Medium: Add components, except selective sup-
plement, to distilled/deionized water and bring volume to 1.0L. Mix
thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at
15 psi pressure–121°C. The final pH should be 5.6. Temper in a water
bath at 45°C. Aseptically add 10.0mL sterile selective supplement.
Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile
tubes. This medium is light sensitive and should be stored in a dark,
cool place until used. It is intended for spread plates only.

Use: For the analysis of food samples containing spreader molds, e.g.,
Mucor and Rhizopus. The dichloran and Rose Bengal slow down the
growth of fast-growing fungi, thus allowing the detection of other
fungi with slower growth rates.

Dichloran Medium Base with Rose Bengal and Selective Supplement

Composition per liter:

Agar	15.0g
Glucose	10.0g
Peptic digest of animal tissue	5.0g
KH ₂ PO ₄	1.0g
MgSO ₄	0.5g
Rose Bengal.....	0.025g
Bromcresol Purple	0.02g
Dichloran	0.002
Selective supplement	10.0mL

pH 5.6 ± 0.2 at 25°C

Source: This medium, without selective supplement, is available as a
premixed powder from HiMedia.

Selective Supplement:

Composition per 10.0mL:

Chloramphenicol.....	0.1mg
----------------------	-------

Preparation of Selective Supplement: Add chloramphenicol to
distilled/deionized water and bring volume to 10.0mL. Mix thorough-
ly. Filter sterilize.

Preparation of Medium: Add components, except selective sup-
plement, to distilled/deionized water and bring volume to 1.0L. Mix

thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. The final pH should be 5.6. Temper in a water bath at 45°C. Aseptically add 10.0mL sterile selective supplement. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes. This medium is light sensitive and should be stored in a dark, cool place until used. It is intended for spread plates only.

Use: For the analysis of food samples containing spreader molds, e.g., *Mucor* and *Rhizopus*. The dichloran and Rose Bengal slow down the growth of fast-growing fungi, thus allowing the detection of other fungi with slower growth rates.

Dichloran Rose Bengal Chloramphenicol Agar (DRBC Agar) (BAM M183)

Composition per liter:

Agar	15.0g
Glucose	10.0g
Peptone.....	5.0g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O.....	0.5g
Chloramphenicol.....	0.1g
Dichloran solution.....	1.0mL
Rose Bengal solution	0.5mL
pH 5.6 ± 0.2 at 25°C	

Dichloran Solution:

Composition per 10.0mL:

Dichloran (2,6-dichloro-4-nitroaniline)	0.2g
---	------

Preparation of Dichloran Solution: Add dichloran to 10.0mL of distilled/deionized water. Mix thoroughly.

Rose Bengal Solution:

Composition per 100.0mL:

Rose Bengal	2.0g
-------------------	------

Preparation of Rose Bengal Solution: Add Rose Bengal to 100.0mL of distilled/deionized water. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. The final pH should be 5.6. Temper in a water bath at 45°C. Pour into sterile Petri dishes or distribute into sterile tubes. This medium is light sensitive and should be stored in a dark, cool place until used. It is intended for spread plates only.

Use: For the analysis of food samples containing spreader molds, e.g., *Mucor* and *Rhizopus*. The dichloran and Rose Bengal slow down the growth of fast-growing fungi, thus allowing the detection of other fungi with slower growth rates.

Dichloran Rose Bengal Chloramphenicol Agar See: DRBC Agar

Dichloroacetic Acid Medium No. 1

Composition per liter:

Yeast extract.....	10.0g
Glucose	5.0g
(NH ₄) ₂ PO ₄	1.5g
K ₂ HPO ₄	1.0g
2,4-Dichloroacetic acid.....	0.75g
MgSO ₄ ·7H ₂ O.....	0.2g

Fe ₂ (SO ₄) ₃ ·5H ₂ O.....	0.01g
ZnSO ₄ ·7H ₂ O	2.0mg
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Rhodococcus* species.

Dichloroacetic Acid Medium No. 2

Composition per liter:

Yeast extract.....	10.0g
Glucose	5.0g
(NH ₄) ₂ PO ₄	1.5g
K ₂ HPO ₄	1.0g
MgSO ₄ ·7H ₂ O.....	0.2g
Fe ₂ (SO ₄) ₃ ·5H ₂ O.....	0.01g
ZnSO ₄ ·7H ₂ O	0.002g
2,4-Dichloroacetic acid.....	10.0mg
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Pseudomonas* species.

Dichloromethane Medium for *Hyphomicrobium*

Composition per liter:

K ₂ HPO ₄ ·3H ₂ O	4.1g
KH ₂ PO ₄	1.4g
MgSO ₄ ·7H ₂ O	0.2g
(NH ₄) ₂ SO ₄	0.2g
Dichloromethane (methylene chloride)	1.0mL
Trace elements solution	1.0mL
pH 7.2 ± 0.2 at 25°C	

Trace Elements Solution:

Composition per liter:

Ca(NO ₃) ₂	25.0g
FeSO ₄ ·7H ₂ O.....	1.0g
H ₃ BO ₃	1.0g
MnSO ₄ ·H ₂ O.....	1.0g
Co(NO ₃) ₂ ·6H ₂ O	0.25g
CuCl ₂ ·2H ₂ O	0.25g
(NH ₄) ₆ Mo ₇ O ₂₄ ·4H ₂ O	0.25g
ZnCl ₂	0.25g
NH ₄ VO ₃	0.1g

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Filter sterilize dichloromethane. Add components, except dichloromethane, to distilled/deionized water and bring volume to 999.0mL. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.2. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile dichloromethane. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Hyphomicrobium* species.

Dichotomicrobium thermohalophilum Agar

Composition per liter:

Agar	18.0g
Disodium DL-malate	1.0g

Yeast extract.....	1.0g
Artificial seawater, 3×.....	960.0mL
Hutner's basal salts solution	20.0mL
NaHCO ₃ solution	20.0mL
pH 7.0–7.2 at 25°C	

Artificial Seawater, 3×:**Composition per liter:**

NaCl.....	70.43g
MgCl ₂ ·6H ₂ O.....	31.86g
Na ₂ SO ₄	11.75g
CaCl ₂ ·2H ₂ O.....	4.35g
NaHCO ₃	2.88g
KCl.....	1.99g
KBr.....	0.29g
H ₃ BO ₃	0.08g

Preparation of Artificial Seawater, 3×: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Hutner's Basal Salts Solution:**Composition per liter:**

MgSO ₄ ·7H ₂ O.....	29.7g
Nitrilotriacetic acid.....	10.0g
CaCl ₂ ·2H ₂ O.....	3.335g
FeSO ₄ ·7H ₂ O.....	99.0mg
(NH ₄) ₆ MoO ₇ O ₂₄ ·4H ₂ O.....	9.25mg
"Metals 44".....	50.0mL

"Metals 44":**Composition per 100.0mL:**

ZnSO ₄ ·7H ₂ O.....	1.095g
FeSO ₄ ·7H ₂ O.....	0.5g
Sodium EDTA.....	0.25g
MnSO ₄ ·H ₂ O.....	0.154g
CuSO ₄ ·5H ₂ O.....	39.2mg
Co(NO ₃) ₂ ·6H ₂ O.....	24.8mg
Na ₂ B ₄ O ₇ ·10H ₂ O.....	17.7mg

Preparation of "Metals 44": Add sodium EDTA to distilled/deionized water and bring volume to 90.0mL. Mix thoroughly. Add a few drops of concentrated H₂SO₄ to retard precipitation of heavy metal ions. Add remaining components. Mix thoroughly. Bring volume to 100.0mL with distilled/deionized water.

Preparation of Hutner's Basal Salts Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Adjust pH to 6.8.

NaHCO₃ Solution:**Composition per 20.0mL:**

NaHCO ₃	3.0g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except NaHCO₃ solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 20.0mL of sterile NaHCO₃ solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Dichotomicrobium thermohalophilum*.

Dichotomicrobium thermohalophilum Broth**Composition per liter:**

Disodium DL-malate.....	1.0g
Yeast extract.....	1.0g
Artificial seawater, 3×.....	960.0mL
Hutner's basal salts solution	20.0mL
NaHCO ₃ solution.....	20.0mL

pH 7.0–7.2 at 25°C

Artificial Seawater, 3×:**Composition per liter:**

NaCl.....	70.43g
MgCl ₂ ·6H ₂ O.....	31.86g
Na ₂ SO ₄	11.75g
CaCl ₂ ·2H ₂ O.....	4.35g
NaHCO ₃	2.88g
KCl.....	1.99g
KBr.....	0.29g
H ₃ BO ₃	0.08g

Preparation of Artificial Seawater, 3×: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Hutner's Basal Salts Solution:**Composition per liter:**

MgSO ₄ ·7H ₂ O.....	29.7g
Nitrilotriacetic acid.....	10.0g
CaCl ₂ ·2H ₂ O.....	3.335g
FeSO ₄ ·7H ₂ O.....	99.0mg
(NH ₄) ₆ MoO ₇ O ₂₄ ·4H ₂ O.....	9.25mg
"Metals 44".....	50.0mL

"Metals 44":**Composition per 100.0mL:**

ZnSO ₄ ·7H ₂ O.....	1.095g
FeSO ₄ ·7H ₂ O.....	0.5g
Sodium EDTA.....	0.25g
MnSO ₄ ·H ₂ O.....	0.154g
CuSO ₄ ·5H ₂ O.....	39.2mg
Co(NO ₃) ₂ ·6H ₂ O.....	24.8mg
Na ₂ B ₄ O ₇ ·10H ₂ O.....	17.7mg

Preparation of "Metals 44": Add sodium EDTA to distilled/deionized water and bring volume to 90.0mL. Mix thoroughly. Add a few drops of concentrated H₂SO₄ to retard precipitation of heavy metal ions. Add remaining components. Mix thoroughly. Bring volume to 100.0mL with distilled/deionized water.

Preparation of Hutner's Basal Salts Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Adjust pH to 6.8.

NaHCO₃ Solution:**Composition per 20.0mL:**

NaHCO ₃	3.0g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except NaHCO₃ solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 20.0mL of sterile NaHCO₃ solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Dichotomicrobium thermohalophilum*.

Dictyoglossus Medium**Composition per liter:**

Soluble starch.....	5.0g
Na ₂ HPO ₄ ·12H ₂ O.....	4.2g
Polypeptone™.....	2.0g
Yeast extract.....	2.0g
KH ₂ PO ₄	1.5g
L-Cysteine-HCl·H ₂ O.....	1.0g
Na ₂ CO ₃	1.0g
NH ₄ Cl.....	0.5g
MgCl ₂ ·6H ₂ O.....	0.38g
CaCl ₂	0.05g
Fe(NH ₄) ₂ (SO ₄) ₂ ·6H ₂ O.....	0.039g
Resazurin.....	2.0mg
Trace metals.....	10.0mL
Wolfe's vitamin solution.....	10.0mL

pH 7.2 ± 0.2 at 25°C

Trace Metals:**Composition per liter:**

CoCl ₂ ·6H ₂ O.....	0.29g
ZnSO ₄ ·7H ₂ O.....	0.28g
Na ₂ MoO ₄ ·2H ₂ O.....	0.24g
MnCl ₂ ·4H ₂ O.....	0.2g
Na ₂ SeO ₃	0.017g

Preparation of Trace Metals: Add components to distilled/deionized water and bring volume to 1.0L. Adjust pH to 6.0 with KOH. Mix thoroughly.

Wolfe's Vitamin Solution:**Composition per liter:**

Pyridoxine-HCl.....	0.01g
Thiamine-HCl.....	5.0mg
Riboflavin.....	5.0mg
Nicotinic acid.....	5.0mg
Calcium pantothenate.....	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Thioctic acid.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Cyanocobalamin.....	0.1mg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Prepare and dispense medium under 100% N₂. Add components, except Wolfe's vitamin solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling until resazurin turns colorless. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C under 100% N₂. Aseptically add sterile Wolfe's vitamin solution. Mix thoroughly. Adjust pH to 7.2 if necessary. Aseptically and anaerobically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Dictyoglossus thermophilum*.

Dictyostelium Medium**Composition per liter:**

Glucose.....	15.4g
Agar.....	15.0g
Peptone.....	14.3g
Yeast extract.....	7.15g

Na ₂ HPO ₄ ·12H ₂ O.....	1.28g
KH ₂ PO ₄	0.49g

pH 6.7 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 6.7. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Dictyostelium discoideum* and *Fusarium acuminatum*.

Diethyl Phosphonate Agar**Composition per liter:**

Agar.....	12.0g
Tris(hydroxymethyl)methylamine.....	6.0g
<i>p</i> -Hydroxybenzoate, Na salt.....	0.75g
KCl.....	0.2g
MgSO ₄ ·7H ₂ O.....	0.2g
NH ₄ Cl.....	0.2g
Diethyl phosphonate solution.....	100.0mL

pH 7.4 ± 0.2 at 25°C

Diethyl Phosphonate Solution:**Composition per 100.0mL:**

Diethyl phosphonate.....	0.015g
--------------------------	--------

Source: Diethyl phosphonate is available from Eastman Organic Chemical Division, Rochester, NY.

Preparation of Diethyl Phosphonate Solution: Add diethyl phosphonate to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except diethyl phosphonate solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 100.0mL diethyl phosphonate solution. Mix. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Comamonas acidovorans*.

DIFF/BCYE

See: **Buffered Charcoal Yeast Extract Differential Agar**

Differential Agar for Group D Streptococci**Composition per liter:**

NaCl.....	65.0g
Agar.....	13.5g
Casein enzymic hydrolysate.....	16.0g
Glucose.....	10.0g
Brain heart infusion.....	8.0g
Peptic digest of animal tissue.....	5.0g
Na ₂ HPO ₄	2.5g
Bromcresol Purple.....	0.02g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes. For tubes, allow to solidify in slanted position.

Use: For the differentiation and identification of Group D streptococci.

Differential Agar Medium A8 for *Ureaplasma urealyticum*

Composition per 103.1mL:

Basal agar.....	80.0mL
Horse serum, unheated.....	20.0mL
Fresh yeast extract solution.....	1.0mL
Urea solution.....	1.0mL
CVA enrichment.....	0.5mL
L-Cysteine-HCl-H ₂ O solution.....	0.5mL
GHL tripeptide solution.....	0.1mL

pH 5.5 ± 0.2 at 25°C

Basal Agar:

Composition per 80.0mL:

Tryptic soy broth.....	2.4g
Noble agar.....	1.05g
Putrescine·2HCl.....	0.17g
CaCl ₂ ·2H ₂ O.....	0.015g

Preparation of Basal Agar: Add components to distilled/deionized water and bring volume to 80.0mL. Mix thoroughly. Adjust pH to 5.5 with 2N HCl. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C.

Fresh Yeast Extract Solution:

Composition per 100.0mL:

Baker's yeast, live, pressed, starch-free.....	25.0g
--	-------

Preparation of Fresh Yeast Extract Solution: Add the live Baker's yeast to 100.0mL of distilled/deionized water. Autoclave for 90 min at 15 psi pressure–121°C. Allow to stand. Remove supernatant solution. Adjust pH to 6.6–6.8. Filter sterilize.

Urea Solution:

Composition per 30.0mL:

Urea.....	3.0g
-----------	------

Preparation of Urea Solution: Add urea to distilled/deionized water and bring volume to 30.0mL. Mix thoroughly. Filter sterilize.

CVA Enrichment:

Composition per liter:

Glucose.....	100.0g
L-Cysteine-HCl-H ₂ O.....	25.9g
L-Glutamine.....	10.0g
Adenine.....	1.0g
L-Cystine·2HCl.....	1.0g
Nicotinamide adenine dinucleotide.....	0.25g
Cocarcboxylase.....	0.1g
Guanine-HCl.....	0.03g
Fe(NO ₃) ₃	0.02g
Vitamin B ₁₂	0.01g
<i>p</i> -Aminobenzoic acid.....	0.013g
Thiamine-HCl.....	3.0mg

Preparation of CVA Enrichment: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

L-Cysteine-HCl-H₂O Solution:

Composition per 50.0mL:

L-Cysteine-HCl-H ₂ O.....	1.0g
--------------------------------------	------

Preparation of L-Cysteine-HCl-H₂O Solution: Add L-cysteine-HCl-H₂O to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize.

GHL Tripeptide Solution:

Composition per 10.0mL:

GHL tripeptide.....	0.2mg
---------------------	-------

Preparation of GHL Tripeptide Solution: Add GHL tripeptide (glycyl-L-histidyl-L-lysine acetate) to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: To 80.0mL of cooled, sterile basal agar, aseptically add 20.0mL of sterile horse serum, 1.0mL of sterile fresh yeast extract solution, 1.0mL of sterile urea solution, 0.5mL of sterile CVA enrichment, 0.5mL of sterile L-cysteine-HCl-H₂O solution, and 0.1mL of sterile GHL tripeptide solution. Mix thoroughly. Pour into sterile Petri dishes in 20.0mL volumes.

Use: For the cultivation and maintenance of *Ureaplasma urealyticum*.

Differential Broth for Lactic Streptococci

Composition per liter:

Sodium citrate.....	20.0g
Arginine.....	5.0g
Pancreatic digest of casein.....	5.0g
Yeast extract.....	5.0g
K ₂ HPO ₄	1.0g
Bromcresol Purple.....	0.02g
Skim milk (11% solution).....	35.0mL

pH 6.2 ± 0.2 at 25°C

Preparation of Medium: Add components, except skim milk solution, to distilled/deionized water and bring volume to 800.0mL. Mix thoroughly. Add 35.0mL of skim milk solution. Bring volume to 1.0L with distilled/deionized water. Place medium in a steam bath for 15 min. Cool to 25°C. Adjust pH to 6.2. Distribute 7.0mL volumes into screw-capped tubes that contain an inverted Durham tube. Autoclave for 15 min at 15 psi pressure–121°C. Allow autoclave to cool below 70°C before opening door.

Use: For the cultivation and differentiation of *Lactobacillus lactis*, *Lactobacillus lactis* subspecies *cremoris*, and *Lactobacillus lactis* subspecies *diacetylactis*. Lactose-fermenting bacteria such as *Lactobacillus lactis* subspecies *cremoris* turn the medium yellow. Arginine-utilizing bacteria such as *Lactobacillus lactis* initially turn the medium yellow but then turn it back to violet. Citrate-utilizing bacteria such as *Lactobacillus lactis* subspecies *diacetylactis* turn the medium violet and produce CO₂ that is trapped as a bubble in the Durham tube.

Differential Buffered Charcoal Yeast Extract Agar Base with Selective Supplement

Composition per liter:

Agar.....	15.0g
ACES buffer.....	10.0g
Yeast extract.....	10.0g
Charcoal, activated.....	1.5g
L-Cysteine-HCl.....	0.4g
Ferric pyrophosphate, soluble.....	0.25g
α-Ketoglutarate.....	0.2g
Bromcresol Purple.....	0.01g
Bromthymol Blue.....	0.01g
Selective supplement.....	10.0mL

pH 6.9 ± 0.2 at 25°C

Source: This medium, without selective supplement, is available as a premixed powder from HiMedia.

Selective Supplement:

Composition per 10.0mL:

Vancomycin	0.1g
Polymyxin B	50,000 units

Preparation of Selective Supplement: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except selective supplement, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 10.0mL sterile selective supplement. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation and differentiation of *Legionella* species.

Differential Reinforced Clostridial HiVeg Broth Base with Ferric Citrate and Sodium Sulfite

Composition per liter:

Plant extract	10.0g
Plant peptone	10.0g
Sodium acetate, hydrated	5.0g
Yeast extract	1.5g
Glucose	1.0g
Starch	1.0g
L-Cysteine-HCl	0.5g
Ferric citrate sodium sulfite solution	20.0mL
pH 7.2 ± 0.2 at 25°C	

Source: This medium, without sodium sulfite and ferric citrate, is available as a premixed powder from HiMedia.

Ferric Citrate Sodium Sulfite Solution:

Composition per 100.0mL:

Ferric citrate solution	50.0mL
Sodium sulfite solution	50.0mL

Preparation of Ferric Citrate Sodium Sulfite Solution: Aseptically combine 50.0mL of sterile ferric citrate solution and 50.0mL of sterile sodium sulfite solution. Mix thoroughly. Filter sterilize.

Ferric Citrate Solution:

Composition per 100.0mL:

Ferric citrate	7.0g
----------------------	------

Preparation of Ferric Citrate Solution: Add ferric citrate to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Sodium Sulfite Solution:

Composition per 100.0mL:

Na ₂ SO ₃	7.0g
---------------------------------------	------

Preparation of Sodium Sulfite Solution: Add Na₂SO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except ferric citrate-sodium sulfite solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Just before using, aseptically add 20.0mL sterile ferric citrate sodium sulfite solution. Mix thoroughly. Aseptically distribute into tubes or flasks.

Use: For the cultivation and enumeration of *Clostridium* species from water.

Dihydrolase Broth Base with Arginine

Composition per liter:

NaCl	30.0g
Yeast extract	6.0g
Peptic digest of animal tissue	5.0g
Glucose	2.0g
Bromcresol Purple	0.032g
L-Arginine solution	50.0mL
pH 6.5 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Arginine Solution:

Composition per 100.0mL:

L-Arginine	10.0g
------------------	-------

Preparation of Arginine Solution: Add L-arginine to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except arginine solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until dissolved. Distribute into screw-capped tubes in 5.0mL volumes. Autoclave for 15 min at 10 psi pressure–115°C. Aseptically add 50.0mL sterile arginine solution.

Use: For the differentiation of Gram-negative enteric bacteria based on the production of arginine dihydrolase.

Dihydrolase HiVeg Broth Base with Arginine

Composition per liter:

NaCl	30.0g
Yeast extract	6.0g
Plant peptone	5.0g
Glucose	2.0g
Bromcresol Purple	0.032g
L-Arginine solution	50.0mL
pH 6.5 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Arginine Solution:

Composition per 100.0mL:

L-Arginine	10.0g
------------------	-------

Preparation of Arginine Solution: Add L-arginine to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except arginine solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until dissolved. Distribute into screw-capped tubes in 5.0mL volumes. Autoclave for 15 min at 10 psi pressure–115°C. Aseptically add 50.0mL sterile arginine solution.

Use: For the differentiation of Gram-negative enteric bacteria based on the production of arginine dihydrolase.

Dilute Peptone Water

Composition per liter:

NaCl	1.0g
Peptone	1.0g
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of various heterotrophic bacteria.

Dilute Potato Medium (DSMZ Medium 789)

Composition per liter:

Glucose	1.0g
Na ₂ HPO ₄	0.12g
Ca(NO ₃) ₂ ·4H ₂ O	0.05g
Peptone	0.05g
Potato decoction	100.0mL

pH 7.3 ± 0.2 at 25°C

Potato Decoction:

Diced potato	20.0g
--------------------	-------

Preparation of Potato Decoction: Add diced potatoes to distilled/deionized water and bring volume to 1.0L. Boil for 30 min. Filter to remove solid potatoes. Bring volume to 1.0L with distilled/deionized water.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of various fungi.

Dilute Potato Medium

Composition per 1090.0mL:

Glucose	1.0g
Na ₂ HPO ₄	0.12g
Ca(NO ₃) ₂ ·4H ₂ O	0.05g
Peptone	0.05g
Potato decoction	100.0mL

pH 6.8 ± 0.2 at 25°C

Potato Decoction:

Composition per liter:

Potato	20.0g
--------------	-------

Preparation of Potato Decoction: Peel and dice potato. Add to 1.0L of distilled/deionized water. Gently heat and bring to boiling. Continue boiling for 30 min. Filter through Whatman #1 filter paper. Bring volume of filtrate to 1.0L with distilled/deionized water.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1090.0mL. Mix thoroughly. Adjust pH to 6.8. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Rhizobacter daucus*.

Dinoflagellate Medium

Composition per 1020.0mL:

Seawater solution	1.0L
Basal solution	20.0mL

pH 7.8 ± 0.2 at 25°C

Seawater Solution:

Composition per 1100.0mL:

Seawater	1010.0mL
----------------	----------

Preparation of Seawater Solution: Add seawater to distilled/deionized water and bring volume to 1100.0mL. Mix thoroughly. Adjust pH to 7.8. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Basal Solution:

Composition per 100.0mL:

Buffer salts solution	25.0mL
Fe solution	25.0mL
Vitamin solution	25.0mL
Metal solution	25.0mL

Preparation of Basal Solution: Adjust final pH to 7.8.

Buffer Salts Solution:

Composition per 25.0mL:

Tris-HCl	500.0mg
NaNO ₃	350.0mg
Sodium glycerophosphate·6H ₂ O	50.0mg

Preparation of Buffer Salts Solution: Add components to distilled/deionized water and bring volume to 25.0mL. Adjust pH to 7.8. Mix thoroughly.

Fe Solution:

Composition per 500.0mL:

Fe(NH ₄) ₂ (SO ₄) ₂ ·6H ₂ O	351.0mg
EDTA	330.0mg

Preparation of Fe Solution: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly.

Vitamin Solution:

Composition per 25.0mL:

Vitamin B ₁₂	10.0µg
Biotin	5.0µg
Thiamine	0.5mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 25.0mL. Mix thoroughly.

Metal Solution:

Composition per 25.0mL:

H ₃ BO ₃	114.0mg
EDTA	100.0mg
MnSO ₄ ·4H ₂ O	16.4mg
FeCl ₃ ·6H ₂ O	4.9mg
ZnSO ₄ ·7H ₂ O	2.2mg
CoSO ₄ ·7H ₂ O	0.48mg

Preparation of Metal Solution: Add components, in the order listed, to distilled/deionized water and bring volume to 25.0mL. Mix thoroughly. Adjust pH to 7.5.

Preparation of Basal Solution: Combine 25.0mL buffer salts solution, 25.0mL Fe solution, 25.0mL vitamin solution, and 25.0mL metal solution. Adjust pH to 7.8. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Preparation of Medium: Aseptically combine 20.0mL of sterile basal solution with 1.0L of sterile seawater solution. Mix thoroughly. Aseptically distribute into sterile, screw-capped tubes or flasks.

Use: For the cultivation of *Amphidinium carteri*.

Diphasic Blood Agar Base Medium (ATCC Medium 449)

Composition per 500.0mL:

Beef	25.0g
Agar	10.0g

Neopeptone	10.0g
NaCl	2.5g

Preparation of Medium: Trim beef to remove fat. Add 25.0g of lean beef to 250.0mL of distilled/deionized water. Gently heat and bring to boiling. Boil for 2–3 min. Filter through Whatman #2 filter paper. Add agar, neopeptone, and NaCl to filtrate. Bring volume to 500.0mL with distilled/deionized water. Mix thoroughly. Adjust pH to 7.2–7.4. Gently heat and bring to boiling. Autoclave for 20 min at 15 psi pressure–121°C. Cool to 50°–55°C. Add as required to other diphasic blood agars.

Use: As the base medium for diphasic blood agars.

Diphasic Blood Agar Medium with 10% Blood

Composition per 1120.0mL:

Blood agar, diphasic base medium	630.0mL
Locke's solution	420.0mL
Rabbit blood, defibrinated	70.0mL
pH 7.2–7.4 at 25°C	

Blood Agar, Diphasic Base Medium:

Composition per 750.0mL:

Beef	25.0g
Agar	10.0g
Neopeptone	10.0g
NaCl	2.5g

Preparation of Blood Agar, Diphasic Base Medium: Trim beef to remove fat. Add 25.0g of lean beef to 250.0mL of distilled/deionized water. Gently heat and bring to boiling. Boil for 2–3 min. Filter through Whatman #2 filter paper. Add agar, neopeptone, and NaCl to filtrate. Bring volume to 750.0mL with distilled/deionized water. Mix thoroughly. Adjust pH to 7.2–7.4. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C.

Locke's Solution:

Composition per liter:

NaCl	8.0g
Glucose	2.5g
KH ₂ PO ₄	0.3g
CaCl ₂	0.2g
KCl	0.2g

Preparation of Locke's Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C.

Preparation of Medium: Aseptically combine 630.0mL of sterile blood agar, diphasic base medium, with 70.0mL of sterile defibrinated rabbit blood warmed to 50°–55°C. Mix thoroughly. Aseptically distribute 5.0mL volumes into 16 × 125mm screw-capped test tubes. Allow to cool in a slanted position. Overlay the agar in each tube with 3.0mL of sterile Locke's solution.

Use: For the cultivation of *Leishmania braziliensis*, *Leishmania enriettii*, *Leishmania tropica*, *Trypanosoma conorrhini*, *Trypanosoma cruzi*, and *Trypanosoma rangeli*.

Diphasic Blood Agar Medium with 30% Blood

Composition per 1450.0mL:

Blood agar, diphasic base medium	700.0mL
Locke's solution	450.0mL
Rabbit blood, defibrinated	300.0mL
pH 7.2–7.4 at 25°C	

Blood Agar, Diphasic Base Medium:

Composition per 750.0mL:

Beef	25.0g
Agar	10.0g
Neopeptone	10.0g
NaCl	2.5g

Preparation of Blood Agar, Diphasic Base Medium: Trim beef to remove fat. Add 25.0g of lean beef to 250.0mL of distilled/deionized water. Gently heat and bring to boiling. Boil for 2–3 min. Filter through Whatman #2 filter paper. Add agar, neopeptone, and NaCl to filtrate. Bring volume to 750.0mL with distilled/deionized water. Mix thoroughly. Adjust pH to 7.2–7.4. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C.

Locke's Solution:

Composition per liter:

NaCl	8.0g
Glucose	2.5g
KH ₂ PO ₄	0.3g
CaCl ₂	0.2g
KCl	0.2g

Preparation of Locke's Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C.

Preparation of Medium: Aseptically combine 700.0mL of sterile blood agar, diphasic base medium, with 300.0mL of sterile defibrinated rabbit blood warmed to 50°–55°C. Mix thoroughly. Aseptically distribute 5.0mL volumes into 16 × 125mm screw-capped test tubes. Allow to cool in a slanted position. Overlay the agar in each tube with 3.0mL of sterile Locke's solution.

Use: For the cultivation and maintenance of *Blastocrithidia culicis*, *Crithidia deanei*, *Crithidia flexonema*, *Crithidia luciliae*, *Crithidia mellificae*, *Endotrypanum* species, *Herpetomonas anglusteri*, *Herpetomonas mariadeanei*, *Herpetomonas megaseliae*, *Herpetomonas muscarum*, *Herpetomonas roitmani*, *Leishmania braziliensis*, *Leishmania donovani*, *Leishmania peruviana*, *Leishmania tarentolae*, *Leptomonas collosoma*, *Leptomonas costoris*, *Leptomonas lactosovorans*, *Leptomonas mirabilis*, *Leptomonas pulexsimulantis*, *Leptomonas samueli*, *Leptomonas seymouri*, *Trypanosoma avium*, *Trypanosoma bennetti*, *Trypanosoma cervi*, *Trypanosoma chattoni*, *Trypanosoma conorrhini*, *Trypanosoma cruzi*, *Trypanosoma cyclops*, *Trypanosoma fallisi*, *Trypanosoma lewisi*, *Trypanosoma lucknowi*, *Trypanosoma mega*, *Trypanosoma musculi*, *Trypanosoma neveulementairei*, *Trypanosoma ranarum*, *Trypanosoma rotatorium*, and *Trypanosoma tamiassi*.

Diphasic Blood Culture Buffered

Charcoal Yeast Extract Medium

See: Legionella pneumophila Medium

Charcoal Yeast Extract Diphasic Blood Culture Medium

Diphasic Medium for Amoeba

(Charcoal Agar Slants)

Composition per liter:

Agar slants	1.0L
Buffered saline overlay	1.0L
pH 7.4 ± 0.2 at 25°C	

Agar Slants:

Composition per liter:

Agar	10.0g
Charcoal, activated	10.0g

Pancreatic digest of casein.....	5.0g
KH ₂ PO ₄	4.0g
Na ₂ HPO ₄	3.0g
Asparagine.....	2.0g
Sodium citrate.....	1.0g
Ferric ammonium citrate.....	0.1g
MgSO ₄ ·7H ₂ O.....	0.1g
Cholesterol solution.....	25.0mL
Glycerol.....	10.0mL

Cholesterol Solution:**Composition per 25.0mL:**

Cholesterol.....	0.25g
Acetone.....	25.0mL

Preparation of Cholesterol Solution: Add cholesterol to 25.0mL of acetone. Mix thoroughly.

Preparation of Agar Slants: Add components, except agar, charcoal, and cholesterol solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat to dissolve. Do not boil. Add agar, charcoal, and cholesterol solution. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes in 3.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Resuspend charcoal. Allow tubes to cool in a slanted position with short butts or no butts.

Buffered Saline Overlay:**Composition per liter:**

NaCl.....	5.0g
Solution B.....	810.0mL
Solution A.....	190.0mL

Solution A:**Composition per liter:**

KH ₂ PO ₄ , anhydrous.....	9.07g
--	-------

Preparation of Solution A: Add KH₂PO₄ to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Solution B:**Composition per liter:**

Na ₂ HPO ₄ , anhydrous.....	9.46g
---	-------

Preparation of Solution B: Add Na₂HPO₄ to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Buffered Saline Overlay: Combine 810.0mL of solution A and 190.0mL of solution B. Add the NaCl. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Store at 4°C.

Preparation of Medium: To each agar slant, aseptically add 3.0mL of sterile, buffered saline overlay.

Use: For the cultivation and maintenance of *Amoebae* species.

Diphosphothiamine Medium**Composition per liter:**

Protease peptone.....	20.0g
Glucose.....	10.0g
NaCl.....	5.0g
Tween™ 40.....	0.05g
Diphosphothiamine.....	1.0mg

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components, except diphosphothiamine, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until dissolved. Autoclave for 15 min at 15 psi

pressure–121°C. Cool to 45°–50°C. Aseptically add 1.0mg of diphosphothiamine. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Haemophilus piscium*.

**Diphtheria Virulence HiVeg Agar Base
with Tellurite and Diphtheria Virulence Supplement**

Composition per liter:

Plant peptone No. 3.....	20.0g
Agar.....	15.0g
NaCl.....	2.5g
Diphtheria virulence supplement.....	200.0mL
Tellurite solution.....	50.0mL

pH 7.8± 0.2 at 25°C

Source: This medium, without tellurite or diphtheria virulence supplement, is available as a premixed powder from HiMedia.

Tellurite Solution:**Composition per 100.0mL:**

K ₂ TeO ₃	1.0g
---------------------------------------	------

Preparation of Tellurite Solution: Add K₂TeO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Caution: Potassium tellurite is toxic.

Diphtheria Virulence Supplement:**Composition per 260.0mL:**

Horse serum.....	200.0mL
Potassium tellurite solution.....	60.0mL

Preparation of Diphtheria Virulence Supplement: Aseptically combine sterile horse serum and sterile tellurite solution. Mix thoroughly.

Preparation of Medium: Add components, except tellurite solution and diphtheria virulence supplement, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 55–60°C. Aseptically add 2.0mL of sterile diphtheria virulence supplement and 0.5mL sterile tellurite solution to each Petri dish. Quickly add 10.0mL sterile Diphtheria Virulence HiVeg Base Agar to each Petri dish. Before the medium solidifies, place a filter paper strip saturated with potent diphtheria antitoxin across the diameter of the plate. Allow the strip to sink to the bottom of the Petri plate. Inoculate the plate with a heavy inoculum across the strip.

Use: For the detection of diphtheria toxin producing strains of *Corynebacterium diphtheriae*. For testing the toxigenicity of *Corynebacterium diphtheriae*. The reaction of antitoxin forms the actual basis for the detection of the diphtheria toxin.

Disinfectant Test Broth**(Staphylococcus aureus Enrichment Broth)****Composition per liter:**

Peptic digest of animal tissue.....	10.0g
Beef infusion.....	5.0g
NaCl.....	5.0g

pH 6.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the determination of phenol coefficients of disinfectants.

Disinfectant Test Broth AOAC

Composition per liter:

Peptic digest of animal tissue.....	10.0g
Beef extract.....	5.0g
NaCl.....	5.0g

pH 6.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 13 psi pressure–118°C.

Use: For the determination of phenol coefficients of disinfectants.

Disinfectant Test HiVeg Broth

Composition per liter:

Plant peptone.....	10.0g
Plant extract.....	5.0g
NaCl.....	5.0g

pH 6.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the determination of phenol coefficients of disinfectants.

Disinfectant Test Medium

Composition per liter:

Peptic digest of animal tissue.....	5.0g
Proteose peptone.....	5.0g
NaCl.....	5.0g
Beef extract.....	5.0g
Yeast extract.....	5.0g

pH 6.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the determination of phenol coefficients of disinfectants.

Dithionite Thioglycolate, HS T, Broth

See: Clausen Medium

Dixon Agar

Composition per liter:

Malt extract.....	30.0g
Oxbile.....	20.0g
Agar.....	15.0g
Mycological peptone.....	5.0g

Glycerol mono-oleate.....	2.50g
Tween™ 40.....	10.0mL

pH 5.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring until boiling. Distribute into tubes or flasks. Autoclave for 10 min at 15 psi pressure–115°C. Do not overheat or agar will not harden. If a lower pH (3.5) is desired, cool medium to 55°C and aseptically add 100.0mL of sterile lactic acid. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Malassezia* species.

DM Medium

Composition per liter:

Starch, soluble.....	5.0g
MgSO ₄ ·7H ₂ O.....	0.5g
K ₂ HPO ₄	0.25g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of myxobacteria.

DMA Medium

Composition per liter:

NaHCO ₃	3.0g
KH ₂ PO ₄	0.85g
K ₂ HPO ₄	0.8g
NH ₄ Cl.....	0.5g
FeSO ₄ ·7H ₂ O.....	1.0mg
Resazurin.....	0.5mg
Glucose solution.....	100.0mL
Wolfe's mineral solution.....	10.0mL
Wolfe's vitamin solution.....	10.0mL
Na ₂ S·9H ₂ O solution.....	10.0mL
MgSO ₄ ·7H ₂ O solution.....	10.0mL

Glucose Solution:

Composition per 100.0mL:

D-Glucose.....	2.0g
----------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Wolfe's Mineral Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O.....	3.0g
Nitritotriacetic acid.....	1.5g
NaCl.....	1.0g
MnSO ₄ ·2H ₂ O.....	0.5g
CoCl ₂ ·6H ₂ O.....	0.1g
ZnSO ₄ ·7H ₂ O.....	0.1g
CaCl ₂ ·2H ₂ O.....	0.1g
FeSO ₄ ·7H ₂ O.....	0.1g
NiCl ₂ ·6H ₂ O.....	0.025g
KAl(SO ₄) ₂ ·12H ₂ O.....	0.02g
CuSO ₄ ·5H ₂ O.....	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O.....	0.01g
Na ₂ SeO ₃ ·5H ₂ O.....	0.3mg

Preparation of Wolfe’s Mineral Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Sparge with 100% N₂. Adjust pH to 6.8. Filter sterilize.

Wolfe’s Vitamin Solution:

Composition per liter:

Pyridoxine-HCl	10.0mg
p-Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Nicotinic acid	5.0mg
Riboflavin	5.0mg
Thiamine-HCl	5.0mg
Calcium DL-pantothenate	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Wolfe’s Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

MgSO₄·7H₂O Solution:

Composition per 10.0mL:

MgSO ₄ ·7H ₂ O	0.25g
--	-------

Preparation of MgSO₄·7H₂O Solution: Add MgSO₄·7H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.3g
---	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Before use, neutralize to pH 7.0 with sterile HCl.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas mixture. Add components, except glucose solution, Wolfe’s mineral solution, Wolfe’s vitamin solution, Na₂S·9H₂O solution, and MgSO₄·7H₂O solution, to distilled/deionized water and bring volume to 860.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂ gas mixture for 30 min. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 100.0mL of sterile glucose solution, 10.0mL of sterile Wolfe’s mineral solution, 10.0mL of sterile Wolfe’s vitamin solution, 10.0mL of sterile Na₂S·9H₂O solution, and 10.0mL of sterile MgSO₄·7H₂O solution. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or bottles.

Use: For the cultivation of unclassified bacterium DSMZ 8827.

DNase Agar

Composition per liter:

Tryptose	20.0g
Agar	12.0g
NaCl	5.0g
Deoxyribonucleic acid	2.0g

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring

to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the differentiation of microorganisms, especially *Staphylococcus* species and *Serratia marcescens*, based on their production of deoxyribo-nuclease.

DNase Medium

Composition per liter:

Agar	15.0g
Pancreatic digest of casein	10.0g
Peptic digest of animal tissue	10.0g
L-Arabinose	10.0g
NaCl	5.0g
Deoxyribonucleic acid	2.0g
Methyl Green	0.09g
Phenol Red	0.05g
Antibiotic solution	10.0mL

pH 7.3 ± 0.2 at 25°C

Antibiotic Solution:

Composition per 10.0mL:

Cephalothin	0.01g
Ampicillin	5.0mg
Colistimethate	5.0mg
Amphotericin B	2.5mg

Preparation of Antibiotic Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except antibiotic solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile components. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of *Serratia marcescens*.

DNase Test Agar

Composition per liter:

Agar	15.0g
Pancreatic digest of casein	15.0g
NaCl	5.0g
Papaic digest of soybean meal	5.0g
Deoxyribonucleic acid	2.0g

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 13 psi pressure–118°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the differentiation of microorganisms, especially *Staphylococcus* species and *Serratia marcescens*, based on their production of deoxyribonuclease.

DNase Test Agar with Methyl Green

Composition per liter:

Agar	15.0g
Pancreatic digest of casein	10.0g

Peptic digest of animal tissue.....	10.0g
NaCl.....	5.0g
Deoxyribonucleic acid.....	2.0g
Methyl Green.....	0.05g
pH 7.3 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 13 psi pressure–118°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the differentiation of microorganisms, especially *Staphylococcus* species and *Serratia marcescens*, based on their production of deoxyribonuclease.

DNase Test Agar with Toluidine Blue

Composition per liter:

Agar.....	15.0g
Pancreatic digest of casein.....	10.0g
Peptic digest of animal tissue.....	10.0g
NaCl.....	5.0g
Deoxyribonucleic acid.....	2.0g
Toluidine Blue.....	0.1g
pH 7.3 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 13 psi pressure–118°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the differentiation of microorganisms, especially *Staphylococcus* species and *Serratia marcescens*, based on their production of deoxyribonuclease.

DNase Test HiVeg Agar Base

Composition per liter:

Agar.....	15.0g
Plant hydrolysate.....	15.0g
Papaic digest of soybean meal.....	5.0g
NaCl.....	5.0g
Deoxyribonucleic acid (DNA).....	2.0g
pH 7.3 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 13 psi pressure–118°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the differentiation of microorganisms, especially *Staphylococcus* species and *Serratia marcescens*, based on their production of deoxyribonuclease.

DNase Test HiVeg Agar Base without DNA

Composition per liter:

Agar.....	15.0g
Plant hydrolysate.....	15.0g

Papaic digest of soybean meal.....	5.0g
NaCl.....	5.0g
pH 6.8 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: As a base medium for the differentiation of microorganisms, especially *Staphylococcus* species and *Serratia marcescens*, based on their production of deoxyribonuclease.

DNase Test HiVeg Agar with Toluidine Blue

Composition per liter:

Plant hydrolysate No. 1.....	20.0g
Agar.....	15.0g
NaCl.....	5.0g
Deoxyribonucleic acid (DNA).....	2.0g
Toluidine Blue.....	0.1g
pH 7.3 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 13 psi pressure–118°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the differentiation of microorganisms, especially *Staphylococcus* species and *Serratia marcescens*, based on their production of deoxyribonuclease.

DNB Medium

Composition per liter:

Nutrient broth.....	2.4g
Yeast extract.....	1.5g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Bdellovibrio bacteriovorus* and ATCC strain 43826.

Doepel Medium

Composition per liter:

Pancreatic digest of casein.....	8.0g
Yeast extract.....	8.0g
Glucose.....	5.0g
K ₂ HPO ₄	2.0g
MgSO ₄	0.3g
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Clavibacter toxicus*.

Dorset Egg Medium**Composition per liter:**

Homogenized whole egg	950.0mL
Glycerol	50.0mL
pH 6.8–7.4 at 25°C	

Source: This medium is available as a prepared medium from BD Diagnostic Systems.

Homogenized Whole Egg:**Composition per liter:**

Whole eggs	18–24
------------------	-------

Preparation of Homogenized Whole Egg: Use fresh eggs, less than 1 week old. Scrub the shells with soap. Let stand in a soap solution for 30 min. Rinse in running water. Soak eggs in 70% ethanol for 15 min. Break the eggs into a sterile container. Homogenize by shaking. Filter through four layers of sterile cheesecloth into a sterile graduated cylinder. Measure out 1.0L.

Preparation of Medium: Filter sterilize glycerol. Combine glycerol and homogenized whole egg. Mix thoroughly. Distribute into sterile screw-capped tubes. Place tubes in a slanted position. Inspissate at 85°C (moist heat) for 45 min.

Use: For the maintenance of *Mycobacterium* species.

Double-Strength Crude *Lactobacillus* Medium**Composition per 1025.0mL:**

Yeast extract (Basamine)	20.0g
Sucrose.....	20.0g
Casein hydrolysate.....	15.0g
Potassium acetate.....	3.0g
Histidine·HCl·H ₂ O.....	2.0g
Ascorbic acid	1.0g
Pyridoxamine·HCl	33.0μg
Salts solution A	20.0mL
Salts solution B	5.0mL
pH 5.4 ± 0.2 at 25°C	

Salts Solution A:**Composition per liter:**

K ₂ HPO ₄ ·3H ₂ O.....	16.5g
KH ₂ PO ₄ ·H ₂ O.....	16.5g

Preparation of Salts Solution A: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Salts Solution B:**Composition per liter:**

MgSO ₄ ·7H ₂ O	8.0g
FeSO ₄ ·7H ₂ O.....	0.4g
NaCl	0.4g
HCl, concentrated	0.1mL
MnSO ₄ ·H ₂ O	0.1mL

Preparation of Salts Solution B: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except salts solution A and salts solution B, to distilled/deionized water and bring volume to 975.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 20.0mL of sterile salts solution A and 5.0mL of sterile salts solution B. Mix thoroughly. Adjust pH to 5.4. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Lactobacillus* species.

Double-Strength Crude Medium for *Lactobacillus***Composition per liter:**

Sucrose.....	20.0g
Yeast extract.....	20.0g
Casein hydrolysate.....	15.0g
Potassium acetate.....	3.0g
Histidine·HCl.....	2.0g
Ascorbic acid	1.0g
Pyridoxamine·HCl	33.0μg
Salts solution A.....	20.0mL
Salts solution B.....	5.0mL
pH 5.4 ± 0.2 at 25°C	

Salts Solution A:**Composition per 100.0mL:**

KH ₂ PO ₄ ·H ₂ O	16.5g
K ₂ HPO ₄ ·3H ₂ O	16.5g

Preparation of Salts Solution A: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Salts Solution B:**Composition per 100.0mL:**

MgSO ₄ ·7H ₂ O	8.0g
FeSO ₄ ·7H ₂ O.....	0.4g
MnSO ₄ ·H ₂ O	0.4g
NaCl	0.4g
HCl, concentrated	0.1mL

Preparation of Salts Solution B: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 5.4 with acetic acid. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Lactobacillus* species.

**Double Sugar Agar, Russell
(Russell Double Sugar Agar)****Composition per liter:**

Agar	15.0g
Lactose.....	10.0g
Casein enzymic hydrolysate	7.5g
NaCl.....	5.0g
Beef extract	3.0g
Peptic digest of animal tissue	2.5g
Glucose	1.0g
Phenol Red.....	0.025g
pH 7.3 ± 0.2 at 25°C	

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Allow the tubes to solidify in slanting position to form a generous butt.

Use: For the differentiation of Gram-negative enteric bacilli on the basis of their ability to ferment glucose and lactose with or without gas formation.

Double Sugar HiVeg Agar**Composition per liter:**

Agar	15.0g
Lactose	10.0g
Plant hydrolysate.....	7.5g
NaCl.....	5.0g
Plant extract	3.0g
Plant peptone.....	2.5g
Glucose	1.0g
Phenol Red.....	0.025g

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes. Autoclave for 15 min at 15 psi pressure–121°C. Allow tubes to cool in a slanted position.

Use: For the identification of Gram-negative enteric bacilli based on their fermentation of glucose and lactose. Bacteria that ferment both glucose and lactose produce a yellow slant and yellow butt. Bacteria that ferment glucose but do not ferment lactose produce a red slant and a yellow butt. Bacteria that ferment neither glucose nor lactose produce an unchanged pink-orange color.

Doyle and Roman Enrichment Medium**Composition per liter:**

Pancreatic digest of casein.....	10.0g
Peptic digest of animal tissue.....	10.0g
NaCl.....	5.0g
Sodium succinate	3.0g
Yeast extract.....	2.0g
Glucose	1.0g
NaHSO ₃	0.1g
L-Cysteine·HCl·H ₂ O	0.1g
Horse blood, lysed	70.0mL
Antibiotic solution	10.0mL

pH 7.0 ± 0.2 at 25°C

Antibiotic Solution:**Composition per 10.0mL:**

Cycloheximide	0.05g
Vancomycin	0.015g
Trimethoprim lactate.....	5.0mg
Polymyxin B	200,000U

Preparation of Antibiotic Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: Add components, except antibiotic solution and horse blood, to distilled/deionized water and bring volume to 920.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile antibiotic solution and horse blood. Mix thoroughly. Aseptically distribute into sterile flasks in 90.0–100.0mL volumes.

Use: For the cultivation and enrichment of *Campylobacter* species from foods.

Doyle's Enrichment Broth Base with Antibiotic Solution**Composition per liter:**

Casein enzymatic hydrolysate	10.0g
Peptic digest of animal tissue	10.0g
NaCl.....	5.0g
Sodium succinate	3.0g
Yeast extract.....	2.0g
Glucose	1.0g
L-Cysteine·HCl	0.1g
NaHSO ₃	0.1g
Antibiotic solution	10.0mL

pH 7.0 ± 0.2 at 25°C

Source: This medium, without antibiotic solution, is available as a premixed powder from HiMedia.

Antibiotic Solution:**Composition per 10.0mL:**

Cycloheximide.....	0.05g
Vancomycin	0.015g
Trimethoprim lactate.....	5.0mg
Polymyxin B	200,000U

Preparation of Antibiotic Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: Add components, except antibiotic solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add a selective sterile antibiotic solution. Generally 50.0mL of defibrinated horse blood is also added as an enrichment. Mix thoroughly.

Use: For the cultivation and enrichment of *Campylobacter* species from foods.

Doyle's Enrichment HiVeg Broth Base with Antibiotic Solution**Composition per liter:**

Plant hydrolysate	10.0g
Plant peptone	10.0g
NaCl.....	5.0g
Sodium succinate	3.0g
Yeast extract.....	2.0g
Glucose	1.0g
L-Cysteine·HCl	0.1g
NaHSO ₃	0.1g
Antibiotic solution	10.0mL

pH 7.0 ± 0.2 at 25°C

Source: This medium, without antibiotic solution, is available as a premixed powder from HiMedia.

Antibiotic Solution:**Composition per 10.0mL:**

Cycloheximide.....	0.05g
Vancomycin	0.015g
Trimethoprim lactate.....	5.0mg
Polymyxin B	200,000U

Preparation of Antibiotic Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: Add components, except antibiotic solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add a selective sterile antibiotic solution. Generally 50.0mL of defibrinated horse blood is also added as an enrichment. Mix thoroughly.

Use: For the cultivation and enrichment of *Campylobacter* species from foods.

DP Agar

Composition per liter:

Agar	20.0g
Pancreatic digest of casein	10.0g
Yeast extract	10.0g
K ₂ HPO ₄	7.0g
Glucose	5.0g
KH ₂ PO ₄	3.0g
Trisodium citrate·3H ₂ O	0.5g
MgSO ₄ ·7H ₂ O	0.1g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Escherichia coli*.

DPA with Calcium Carbonate

Composition per liter:

Agar	20.0g
Glucose	20.0g
Peptone	10.0g
CaCO ₃	5.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 30 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Dekkera* species.

DPM Medium (DSMZ Medium 737)

Composition per liter:

Na-propionate	1.20g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.1g
CaCl ₂ ·2H ₂ O	0.01g
Chelated iron solution	1.8mL
Trace elements solution	1.0mL

pH 6.8 ± 0.2 at 25°C

Chelated Iron Solution:

Composition per liter:

Na ₂ -EDTA	7.56g
FeSO ₄ ·5H ₂ O	5.54g

Preparation of Chelated Iron Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Trace Elements Solution:

Composition per liter:

H ₃ BO ₃	2.860
MnCl ₂ ·4H ₂ O	1.81g
ZnSO ₄ ·7H ₂ O	0.22g
CuSO ₄ ·5H ₂ O	0.08g
Na ₂ MoO ₄ ·4H ₂ O	0.025g
CoCl ₂	0.025g

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Frankia* sp.

DRBC Agar

(Dichloran Rose Bengal Chloramphenicol Agar)

Composition per liter:

Agar	15.0g
Glucose	10.0g
Peptone	5.0g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.5g
Rose Bengal	0.025g
Dichloran	0.002g
Chloramphenicol solution	10.0mL

pH 5.6 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Chloramphenicol Solution:

Composition per 10.0mL:

Chloramphenicol	0.1g
-----------------------	------

Preparation of Chloramphenicol Solution: Add chloramphenicol to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except chloramphenicol solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile chloramphenicol solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation, cultivation, and enumeration of yeasts and molds associated with food spoilage.

Drigalski Litmus Lactose Agar

Composition per liter:

Agar	10.0g
Lactose	10.0g
Meat peptone	5.0g
Beef extract	3.0g
Litmus	1.0g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Sigma Aldrich.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the maintenance of lactic acid bacteria and differentiation of bacteria on the basis of lactose fermentation. Bacteria that ferment lactose appear as red colonies and others as dark blue-purple colonies.

Drigalski Litmus Lactose Agar

Composition per liter:

Lactose	15.0g
Agar	13.0g
Peptic digest of animal tissue.....	7.0g
NaCl	5.0g
Litmus	1.2g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the maintenance of lactic acid bacteria and differentiation of bacteria on the basis of lactose fermentation. Bacteria that ferment lactose appear as red colonies and others as dark blue-purple colonies.

Drigalski Litmus Lactose Agar, Modified

Composition per liter:

Agar	16.0g
Lactose	10.0g
Peptic digest of animal tissue.....	10.0g
Beef extract	4.0g
Bromthymol Blue	0.04g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the maintenance of lactic acid bacteria and differentiation of bacteria on the basis of lactose fermentation. Bacteria that ferment lactose appear as red colonies and others as dark blue-purple colonies.

Drigalski Litmus Lactose HiVeg Agar

Composition per liter:

Lactose	15.0g
Agar	13.0g
Plant peptone.....	7.0g
NaCl	5.0g
Litmus	1.2g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring

to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the maintenance of lactic acid bacteria and differentiation of bacteria on the basis of lactose fermentation. Bacteria that ferment lactose appear as red colonies and others as dark blue-purple colonies.

DS Sporulation Medium, Modified

See: [Duncan-Strong Sporulation Medium, Modified](#)

DSA

See: [Dextrose Soil Agar](#)

DSA Cellulose

See: [Dextrose Sucrose Cellulose Agar](#)

DSIC Medium, Modified (DSMZ Medium 747)

Composition per 994.0mL:

Solution A	910.0mL
Solution B	70.0mL
Solution C	14.0mL

pH 7.0–7.1 at 25°C

Solution A:

Composition per 960.0mL:

NaCl	125.0g
K ₂ SO ₄	2.5g
Na-acetate	2.0g
Yeast extract.....	0.75g
KH ₂ PO ₄	0.6g
NH ₄ Cl	0.5g
Na ₂ S ₂ O ₃ ·5H ₂ O	0.1g
MOPS buffer.....	10.0mL
Vitamin B ₁₂ solution	1.0mL
Trace elements solution SL-10	1.0mL

Vitamin B₁₂ Solution:

Composition per 100.0mL:

Vitamin B ₁₂	10.0mg
-------------------------------	--------

Vitamin B₁₂ Solution: Add vitamin B₁₂ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge under 100% N₂ gas for 3 min.

Trace Elements Solution SL-10:

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

MOPS Buffer:**Composition per 10.0mL:**

MOPS [3-(<i>N</i> -morpholino) propane sulfonic acid]	2.1g
Na-acetate	0.3g
EDTA	0.1g

Preparation of MOPS Buffer: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Adjust to pH 7.2. Filter sterilize.

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 960.0mL. Mix thoroughly. Sparge with 100% N₂. Gently heat and bring to boiling while continuing to sparge with 100% N₂. Distribute about 13mL aliquots in 15mL Hungate tubes. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution B:**Composition per 70.0mL:**

MgCl ₂ ·6H ₂ O	10.0g
CaCl ₂ ·2H ₂ O	0.2g

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 70.0mL. Mix thoroughly. Adjust pH to 7.0. Sparge with 100% N₂. Gently heat and bring to boiling while continuing to sparge with 100% N₂. Distribute into a screw-capped bottle. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution C:**Composition per 14.0mL:**

NaHCO ₃	1.0g
--------------------------	------

Preparation of Solution C: Add NaHCO₃ to distilled/deionized water and bring volume to 14.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

Preparation of Medium: Inject 1.0 ml of solution B and 0.2 ml of solution C in each tube of solution A.

Use: For the cultivation of *Rhodovibrio sodomensis*=*Rhodospirillum sodomense*.

DSM 134

See: *Halicomenobacter* Medium

DST Agar

See: **Diagnostic Sensitivity Test Agar**

DTC Agar**Composition per liter:**

Agar	20.0g
Pancreatic digest of casein	15.0g
NaCl	5.0g
Papaic digest of soybean meal	5.0g
Deoxyribonucleic acid	2.0g
Toluidine Blue O	0.1g
Cephalothin solution	10.0mL

Cephalothin Solution:**Composition per 10.0mL:**

Cephalothin	1.0g
-------------------	------

Preparation of Cephalothin Solution: Add cephalothin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except cephalothin solution, to distilled/deionized water and bring volume to 990.0mL. Mix

thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile cephalothin solution. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the isolation and cultivation of *Serratia* species. *Serratia* appear as colonies with red halos.

DTM Agar**(Dermatophyte Test Medium Agar)****Composition per liter:**

Agar	20.0g
Enzymatic digest of soybean meal	10.0g
Glucose	10.0g
Cycloheximide	0.5g
Phenol Red	0.2g
Chlortetracycline	0.1g
Gentamicin	0.1g

pH 7.3 ± 0.2 at 25°C

Source: Available as a prepared medium from BD Diagnostic Systems.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of dermatophytic fungi.

Dubos Agar with Filter Paper**Composition per liter:**

Agar	15.0g
K ₂ HPO ₄	1.0g
KCl	0.5g
MgSO ₄ ·7H ₂ O	0.5g
NaNO ₃	0.5g
FeSO ₄ ·7H ₂ O	0.01g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.2. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes. Lay sterile strips of Whatman #1 filter paper on the surface of the agar.

Use: For the cultivation and maintenance of *Cytophaga hutchinsonii*.

Dubos Broth**Composition per liter:**

Na ₂ HPO ₄	2.5g
L-Asparagine	2.0g
KH ₂ PO ₄	1.0g
Pancreatic digest of casein	0.5g
Tween™ 80	0.2g
CaCl ₂ ·2H ₂ O	0.5mg
CuSO ₄	0.1mg
ZnSO ₄ ·7H ₂ O	0.1mg
Ferric ammonium citrate	0.05g
MgSO ₄ ·7H ₂ O	0.01g
Bovine serum albumin or bovine serum	20.0mL

pH 6.5 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components, except bovine serum or bovine serum albumin, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile bovine serum or bovine serum albumin. Mix thoroughly. Aseptically distribute into sterile tubes.

Use: For the cultivation of *Mycobacterium tuberculosis* and other *Mycobacterium* species.

Dubos Broth Base with Serum and Glycerol

Composition per liter:

Na ₂ HPO ₄	2.5g
L-Asparagine.....	2.0g
KH ₂ PO ₄	1.0g
Casein enzymatic hydrolysate.....	0.5g
Polysorbate 80.....	0.2g
Ferric ammonium citrate.....	0.05g
MgSO ₄	0.01g
CaCl ₂	0.5mg
CuSO ₄	0.1mg
ZnSO ₄	0.1mg
Glycerol.....	50.0mL
Bovine serum or bovine albumin V.....	20.0mL
pH 6.5 ± 0.2 at 25°C	

Source: This medium, without bovine serum or glycerol, is available as a premixed powder from HiMedia.

Preparation of Medium: Add components, except bovine serum, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 20.0mL sterile bovine serum or bovine serum albumin. Mix thoroughly. Aseptically distribute into sterile tubes.

Use: For the cultivation of *Mycobacterium tuberculosis* and other *Mycobacterium* species.

Dubos Broth with Horse Serum

Composition per liter:

Na ₂ HPO ₄	2.5g
L-Asparagine.....	2.0g
KH ₂ PO ₄	1.0g
Pancreatic digest of casein.....	0.5g
Tween™ 80.....	0.2g
CaCl ₂ ·2H ₂ O.....	0.5mg
CuSO ₄	0.1mg
ZnSO ₄ ·7H ₂ O.....	0.1mg
Ferric ammonium citrate.....	0.05g
MgSO ₄ ·7H ₂ O.....	0.01g
Horse serum.....	50.0mL
pH 6.5 ± 0.2 at 25°C	

Preparation of Medium: Add components, except horse serum, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile horse serum. Mix thoroughly. Aseptically distribute into sterile tubes.

Use: For the cultivation and maintenance of *Corynebacterium* species.

Dubos HiVeg Broth Base with Serum and Glycerol

Composition per liter:

Na ₂ HPO ₄	2.5g
L-Asparagine.....	2.0g
KH ₂ PO ₄	1.0g
Plant hydrolysate.....	0.5g
Polysorbate 80.....	0.2g
Ferric ammonium citrate.....	0.05g
MgSO ₄	0.01g
CaCl ₂	0.5mg
CuSO ₄	0.1mg
ZnSO ₄	0.1mg
Glycerol.....	50.0mL
Bovine serum or bovine albumin V.....	20.0mL
pH 6.5 ± 0.2 at 25°C	

Source: This medium, without bovine serum or glycerol, is available as a premixed powder from HiMedia.

Preparation of Medium: Add components, except bovine serum, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 20.0mL sterile bovine serum or bovine serum albumin. Mix thoroughly. Aseptically distribute into sterile tubes.

Use: For the cultivation of *Mycobacterium tuberculosis* and other *Mycobacterium* species.

Dubos Mineral Medium

Composition per liter:

K ₂ HPO ₄	1.0g
KCl.....	0.5g
MgSO ₄ ·7H ₂ O.....	0.5g
NaNO ₃	0.5g
FeSO ₄ ·7H ₂ O.....	0.01g
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation and cultivation of *Cytophaga* species, *Herpetosiphon* species, *Saprospira* species, and *Flexithrix* species.

Dubos Oleic Agar

Composition per liter:

Agar.....	15.0g
Na ₂ HPO ₄	2.5g
KH ₂ PO ₄	1.0g
L-Asparagine.....	1.0g
Pancreatic digest of casein.....	0.5g
Ferric ammonium citrate.....	0.05g
MgSO ₄ ·7H ₂ O.....	0.01g
CaCl ₂ ·2H ₂ O.....	0.5mg
CuSO ₄	0.1mg
ZnSO ₄ ·7H ₂ O.....	0.1mg
Dubos oleic albumin complex.....	20.0mL
Penicillin solution.....	10.0mL
pH 6.6 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Dubos Oleic Albumin Complex:**Composition per 100.0mL:**

Bovine serum albumin, fraction V.....	5.0g
Oleic acid, sodium salt.....	0.05g
NaCl (0.85% solution).....	100.0mL

Preparation of Dubos Oleic Albumin Complex: Add bovine serum albumin and oleic acid to 100.0mL of NaCl solution. Mix thoroughly. Filter sterilize.

Penicillin Solution:**Composition per 10.0mL:**

Penicillin.....	10,000U
-----------------	---------

Preparation of Penicillin Solution: Add penicillin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except Dubos oleic albumin complex and penicillin solution, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile Dubos oleic albumin complex and penicillin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes. Allow tubes to cool in a slanted position.

Use: For the isolation of *Mycobacterium tuberculosis* and determining its sensitivity to chemotherapeutic agents.

Dubos Oleic HiVeg Agar Base with Serum and Glycerol

Composition per liter:

Agar.....	15.0g
Na ₂ HPO ₄	2.5g
L-Asparagine.....	1.0g
KH ₂ PO ₄	1.0g
Plant hydrolysate.....	0.5g
Ferric ammonium citrate.....	0.05g
MgSO ₄	0.01g
CaCl ₂	0.5mg
CuSO ₄	0.1mg
ZnSO ₄	0.1mg
Glycerol.....	50.0mL
Bovine serum or bovine albumin V.....	20.0mL

pH 6.5 ± 0.2 at 25°C

Source: This medium, without bovine serum or glycerol, is available as a premixed powder from HiMedia.

Preparation of Medium: Add components, except bovine serum, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 20.0mL sterile bovine serum or bovine serum albumin. Mix thoroughly. Aseptically distribute into sterile tubes.

Use: For the cultivation of *Mycobacterium tuberculosis* and other *Mycobacterium* species.

Dubos Oleic HiVeg Broth Base with Antibiotic and Oleic Albumin Supplement

Composition per liter:

Na ₂ HPO ₄	2.5g
Asparagine.....	1.0g
KH ₂ PO ₄	1.0g
Plant hydrolysate.....	0.5g

Ferric ammonium citrate.....	0.05g
MgSO ₄	0.01g
CaCl ₂	0.5mg
CuSO ₄	0.1mg
ZnSO ₄	0.1mg
Penicillin solution.....	10.0mL

pH 6.5 ± 0.2 at 25°C

Source: This medium, without penicillin and oleic albumin supplement, is available as a premixed powder from HiMedia.

Penicillin Solution:**Composition per 10.0mL:**

Penicillin.....	10,000U
-----------------	---------

Preparation of Penicillin Solution: Add penicillin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Oleic Albumin Supplement:**Composition per 100.0mL:**

Oleic acid.....	10.0g
Albumin fraction IV.....	4.0g
NaCl.....	0.68g
NaOH.....	8.0mg

Preparation of Oleic Albumin Supplement: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except penicillin solution and oleic albumin supplement, to distilled/deionized water and bring volume to 880.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL sterile penicillin solution and 100.0mL sterile oleic albumin solution. Mix thoroughly. Aseptically distribute into sterile tubes.

Use: For the cultivation of *Mycobacterium tuberculosis* and other *Mycobacterium* species.

Dubos Salts Agar

Composition per liter:

Agar.....	15.0g
K ₂ HPO ₄	1.0g
KCl.....	0.5g
MgSO ₄ ·7H ₂ O.....	0.5g
NaNO ₃	0.5g
FeSO ₄ ·7H ₂ O.....	0.01g
Filter paper strips, sterile.....	variable

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components, except filter paper strips, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes. Aseptically place sterile filter paper strips onto the surface of the solidified medium.

Use: For the cultivation and maintenance of *Alteromonas* species, *Cellvibrio mixtus*, *Cellvibrio* species, *Cytophaga aurantiaca*, *Cytophaga hutchinsonii*, *Pseudomonas* species, and *Sporocytophaga myxococcoides*.

Dubos Salts Agar with 1% Sodium Chloride

Composition per liter:

Agar.....	15.0g
NaCl.....	10.0g

K ₂ HPO ₄	1.0g
KCl.....	0.5g
MgSO ₄ ·7H ₂ O.....	0.5g
NaNO ₃	0.5g
FeSO ₄ ·7H ₂ O.....	10.0mg
Filter paper strips.....	1 strip per tube
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes. Autoclave for 15 min at 15 psi pressure–121°C. Allow tubes to cool in a slanted position. Aseptically add a strip of sterile filter paper to the surface of each slant.

Use: For the cultivation of *Cytophaga* species.

Dubos Salts Agar with Yeast Extract

Composition per liter:

Agar.....	15.0g
K ₂ HPO ₄	1.0g
Yeast extract.....	0.5g
KCl.....	0.5g
MgSO ₄ ·7H ₂ O.....	0.5g
NaNO ₃	0.5g
FeSO ₄ ·7H ₂ O.....	0.01g
Filter paper strips, sterile.....	variable
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components, except filter paper strips, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes. Aseptically place sterile filter paper strips onto the surface of the solidified medium.

Use: For the cultivation and maintenance of *Cellulomonas* species and *Cellvibrio* species.

Dubos Salts Broth

Composition per liter:

K ₂ HPO ₄	1.0g
KCl.....	0.5g
MgSO ₄ ·7H ₂ O.....	0.5g
NaNO ₃	0.5g
FeSO ₄ ·7H ₂ O.....	0.01g
Filter paper strips, sterile.....	variable
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components, except filter paper strips, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes containing a filter paper strip (filter paper strip should protrude above the surface of the broth). Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Cytophaga aurantiaca* and *Pseudomonas* species.

Dubos Salts Broth with Yeast Extract

Composition per liter:

K ₂ HPO ₄	1.0g
Yeast extract.....	0.5g
KCl.....	0.5g
MgSO ₄ ·7H ₂ O.....	0.5g

NaNO ₃	0.5g
FeSO ₄ ·7H ₂ O.....	0.01g
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Cytophaga aurantiaca*.

Dubos Salts Broth with Yeast Extract

Composition per liter:

K ₂ HPO ₄	1.0g
Yeast extract.....	0.5g
KCl.....	0.5g
MgSO ₄ ·7H ₂ O.....	0.5g
NaNO ₃	0.5g
FeSO ₄ ·7H ₂ O.....	0.01g
Filter paper strips, sterile.....	variable
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components, except filter paper strips, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes containing a filter paper strip (filter paper strip should protrude above the surface of the broth). Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Cellulomonas* species and *Cellvibrio* species.

Dubos Salts Medium (DSMZ Medium 1161)

Composition per liter:

Agar.....	15.0g
K ₂ HPO ₄	1.0g
MgSO ₄ ·7H ₂ O.....	0.5g
KCl.....	0.5g
NaNO ₃	0.5g
FeSO ₄ ·7H ₂ O.....	10.0mg
Filter paper.....	Variable
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components, except filter paper, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes. For tubes allow to solidify on a slant. When the agar has solidified, place a strip of sterile filter paper on to the surface of each slope. Inoculate on to the filter paper.

Use: For the cultivation of *Cellvibrio* spp.

Ducreyi Medium, Revised

See: Haemophilus ducreyi Medium, Revised

Dulaney Slants

Composition per liter:

Egg yolks.....	50.0mL
Locke solution.....	50.0mL

Locke Solution:

Composition per 100.0mL:

NaCl.....	0.9g
Glucose.....	0.25g
KCl.....	0.042g

CaCl ₂ ·2H ₂ O.....	0.024g
Na ₂ CO ₃	0.02g

Preparation of Locke Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Aseptically remove the yolks from 5–8 day old hen egg embryos. Add an equal volume of sterile Locke solution containing sterile glass beads. Mix thoroughly to homogenize. Aseptically distribute into sterile tubes. Inspissate tubes in a slanted position at 80°C (moist heat) for 15 min.

Use: For the cultivation of *Calymmatobacter granulomatis* from clinical specimens.

Dulcitol Selenite Broth (Selenite-F Broth with Dulcitol)

Composition per liter:

NaH ₂ PO ₄	10.0g
Peptic digest of animal tissue.....	5.0g
Dulcitol	4.0g
HNaO ₃ Se.....	4.0g

pH 7.0 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Caution: Sodium hydrogen selenite is a very toxic, corrosive agent and causes teratogenicity. Upon contact with skin, wash immediately with a lot of water.

Preparation of Medium: Add sodium hydrogen selenite to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Add remaining components. Mix thoroughly. Gently heat if needed to get all components to dissolve. Distribute into tubes or flasks. Sterilize in a boiling water bath or free flowing steam for 10 min. Excessive heating is detrimental. Do not autoclave.

Use: For the selective enrichment of *Salmonella* species.

Duncan-Strong Sporulation Medium, Modified (DS Sporulation Medium, Modified) (Sporulation Medium, Modified)

Composition per liter:

Proteose peptone	15.0g
Na ₂ HPO ₄ ·7H ₂ O.....	10.0g
Raffinose	4.0g
Yeast extract	4.0g
Sodium thioglycolate	1.0g

pH 7.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Adjust pH to 7.8 with filter-sterilized 0.66M Na₂CO₃. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and induction of sporulation of *Clostridium perfringens*.

Dung Extract Agar (DSMZ Medium 781)

Composition per liter:

Agar	15.0g
Malt extract	5.0g

(NO ₃) ₂ ·4H ₂ O.....	0.72g
MgSO ₄ ·7H ₂ O.....	0.5g
K ₂ HPO ₄	0.25g
Peptone	0.1g
Dung extract.....	100.0mL

pH 6.9 ± 0.2 at 25°C

Dung Extract:

Composition per 150.0mL:

Horse dung.....	variable
-----------------	----------

Preparation of Dung Extract: Add an average sized piece of horse dung to 150.0mL water. Gently heat and bring to boiling. Boil for 2 hr in a water bath. Filter. Use immediately.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Panaeolus cyanescens*.

Dunkelberg Agar

See: Peptone Starch Dextrose Agar

Dunkelberg Carbohydrate Medium, Modified

Composition per 100.0mL:

Proteose peptone No. 3	1.5g
Carbohydrate.....	1.0g
Na ₂ HPO ₄ ·2H ₂ O.....	0.207g
Phenol Red.....	0.055g
NaH ₂ PO ₄ ·H ₂ O.....	0.038g
Horse serum.....	5.0mL

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components, except horse serum, to distilled/deionized water and bring volume to 95.0mL. For carbohydrate, use glucose, maltose, or starch. Mix thoroughly. Filter sterilize. Aseptically add sterile horse serum. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and differentiation of *Gardnerella vaginalis* based on its ability to ferment glucose, maltose, or starch.

Dunkelberg Maintenance Medium

Composition per liter:

Proteose peptone No. 3	20.0g
Soluble starch.....	10.0g
Agar	8.0g
Glucose	2.0g
Na ₂ HPO ₄	1.0g
NaH ₂ PO ₄	1.0g

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Add starch to approximately 100.0mL of cold distilled/deionized water. Mix thoroughly. Add starch solution to 400.0mL of boiling distilled/deionized water. Add remaining components. Mix thoroughly. Bring volume to 1.0L with distilled/deionized water. Distribute into screw-capped tubes. Autoclave for 12 min at 8 psi pressure–112°C.

Use: For the cultivation and maintenance of *Gardnerella vaginalis*.

Dunkelberg Semisolid Carbohydrate Fermentation Medium

Composition per liter:

Proteose peptone No. 3	20.0g
Carbohydrate	10.0g
Agar	5.0g
Bromcresol Purple solution	1.0mL
pH 7.4 ± 0.2 at 25°C	

Bromcresol Purple Solution:

Composition per 10.0mL:

Bromcresol Purple	0.16g
Ethanol (95% solution)	10.0mL

Preparation of Bromcresol Purple Solution: Add Bromcresol Purple to 10.0mL of ethanol. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. For carbohydrate, use glucose, maltose, or starch. Mix thoroughly. Gently heat and bring to boiling. Filter sterilize. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and differentiation of *Gardnerella vaginalis* based on its ability to ferment glucose, maltose, or starch.

DV Medium

Composition per 100.1mL:

NaCl	1.8g
MgSO ₄ ·7H ₂ O	0.5g
Tris-HCl	100.0mg
KCl	60.0mg
NaNO ₃	50.0mg
Na ₂ SiO ₃ ·9H ₂ O	20.0mg
CaCl ₂	10.0mg
Nitrilotriacetic acid (NTA)	10.0mg
K ₂ HPO ₄	3.0mg
FeCl ₂	0.01mg
Vitamin B ₁₂	0.3 µg
Metal solution	3.0mL
Vitamin solution	0.1mL
Seawater, charcoal filtered	100.0mL

Metal Solution:

Composition per 25.0mL:

EDTA	25.0mg
MnCl ₂	1.0mg
H ₃ BO ₃	0.5mg
FeCl ₂	0.25mg
ZnCl ₂	125.0µg
CoCl ₂	25.0µg

Preparation of Metal Solution: Add components to distilled/deionized water and bring volume to 25.0mL. Mix thoroughly.

Vitamin Solution:

Composition per 100.0mL:

Inositol	100.0mg
Thymine	50.0mg
Orotic acid	26.0mg
Thiamine-HCl	20.0mg
Calcium D-(+)-pantothenate	10.0mg
Nicotinic acid	10.0mg
Putrescine·2HCl	4.0mg
Pyridoxine·2HCl	4.0mg
Pyridoxamine·2HCl	2.0mg

<i>p</i> -Aminobenzoic acid	1.0mg
Riboflavin	0.5mg
Folic acid	0.025mg
Biotin	50.0µg
Folinic acid	20.0µg
Vitamin B ₁₂	5.0µg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 25.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except vitamin solution, to charcoal-filtered seawater and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 0.1mL of sterile vitamin solution. Mix thoroughly. Aseptically distribute into sterile, screw-capped tubes or flasks.

Use: For the cultivation of *Dunaliella tertiolecta* and *Trichosphaerium* species.

DYA with Calcium Carbonate

Composition per liter:

Glucose	50.0g
Agar	20.0g
CaCO ₃	5.0g
Yeast extract	5.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Dekkera intermedia*, *Dekkera bruxellensis*, *Dekkera abstinens*, *Dekkera anomala*, *Dekkera custersiana*, *Dekkera lambica*, and *Dekkera naardenensis*.

DYAA

See: [Dextrose Yeast Asparagine Agar](#)

DYAA Cellulose

Composition per liter:

Agar	20.0g
Cellulose	5.0g
Glucose	5.0g
K ₂ HPO ₄	1.0g
L-Asparagine	0.5g
MgSO ₄ ·7H ₂ O	0.5g
(NH ₄) ₂ SO ₄	0.5g
Yeast extract	0.5g
CaCl ₂	0.1g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Bipolaris sacchari* and *Drechslera biseptata*.

DYAA Cellulose Malt

Composition per liter:

Agar	20.0g
Malt extract	10.0g
Cellulose	5.0g
Glucose	5.0g

K ₂ HPO ₄	1.0g
L-Asparagine.....	0.5g
MgSO ₄ ·7H ₂ O.....	0.5g
(NH ₄) ₂ SO ₄	0.5g
Yeast extract.....	0.5g
CaCl ₂	0.1g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Bipolaris sorghicola* and *Codinæa simplex*.

DYAA LUP

Composition per liter:

Agar.....	20.0g
Glucose.....	10.0g
Yeast extract.....	1.0g
Asparagine.....	0.5g
K ₂ HPO ₄ ·3H ₂ O.....	0.5g
MgSO ₄ ·7H ₂ O.....	0.25g
FeCl ₃ solution.....	0.5mL
Lupine stems.....	variable

FeCl₃ Solution:

Composition per 10.0mL:

FeCl ₃	1.0g
-------------------------	------

Preparation of FeCl₃ Solution: Add FeCl₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly.

Preparation of Medium: Add components, except lupine stems, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute 6.0mL volumes into tubes. Cut lupine stems into 8.0cm-long pieces. Add 2–3 lupine stems per tube. Autoclave for 15 min at 15 psi pressure–121°C. Allow tubes to cool in a slanted position.

Use: For the cultivation of *Ceratocystis coerulea*, *Ceratocystis microspora*, *Coniella pulchella*, *Phoma lini*, and *Phoma glomerata*.

DYPA

See: **Dextrose Yeast Extract Peptone**

E Agar (m-E Agar)

Composition per liter:

Yeast extract.....	30.0g
Agar.....	15.0g
NaCl.....	15.0g
Pancreatic digest of gelatin.....	10.0g
Esculin.....	1.0g
Nalidixic acid.....	0.25g
NaN ₃	0.15g
Cycloheximide.....	0.05g
TTC solution.....	15.0mL

pH 7.1 ± 0.2 at 25°C

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

TTC Solution:

Composition per 15.0mL:

2,3,5-Triphenyltetrazolium chloride.....	0.15g
--	-------

Preparation of TTC Solution: Add triphenyltetrazolium chloride to distilled/deionized water and bring volume to 15.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except TTC solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile TTC solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Caution: Sodium azide is toxic. Azides also react with metals and disposal must be highly diluted.

Use: For the isolation, cultivation, and enumeration of enterococci in water by the membrane filter method. It is used in conjunction with esculin iron agar.

E. coli O157:H7 MUG Agar

Composition per liter:

Casein peptone.....	20.0g
Agar.....	13.0g
Sorbitol.....	10.0g
NaCl.....	5.0g
Meat extract.....	2.0g
Na ₂ S ₂ O ₃	2.0g
Na-deoxycholate.....	1.12g
Yeast extract.....	1.0g
Ammonium ferric citrate.....	0.5g
4-Methylumbelliferyl-β-D-glucuronide.....	0.1g
Bromthymol Blue.....	0.025g

pH 7.4 ± 0.2 at 37°C

Source: This medium is available from Fluka, Sigma-Aldrich.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Pour into sterile Petri dishes.

Use: For the isolation and differentiation of enterohemorrhagic (EHEC) *E. coli* O157:H7 strains from food and clinical specimens.

E Medium for Anaerobes

Composition per 100.0mL:

Glucose.....	0.05g
L-Cysteine·HCl·H ₂ O.....	0.05g
Maltose.....	0.05g
(NH ₄) ₂ SO ₄	0.05g
Peptone.....	0.05g
Soluble starch.....	0.05g
Yeast extract.....	0.05g
Salts solution.....	50.0mL
Rumen fluid.....	30.0mL
Resazurin solution.....	0.4mL

pH 7.0 ± 0.2 at 25°C

Salts Solution:

Composition per liter:

NaHCO ₃	10.0g
NaCl.....	2.0g
K ₂ HPO ₄	1.0g
KH ₂ PO ₄	1.0g
CaCl ₂ , anhydrous.....	0.2g
MgSO ₄	0.2g

Preparation of Salts Solution: Add CaCl₂ and MgSO₄ to approximately 300.0mL of distilled/deionized water. Mix thoroughly. Bring

volume to 800.0mL with distilled/deionized water. Add remaining components. Mix thoroughly. Bring volume to 1.0L with distilled/deionized water. Mix thoroughly. Store at 4°C.

Rumen Fluid:**Composition per 100.0mL:**

Rumen fluid100.0mL

Preparation of Rumen Fluid: Obtain the rumen contents from a cow that has been fed an alfalfa-hay ration. Filter rumen contents through two layers of cheesecloth. Store under 100% CO₂ in the refrigerator. The particulate material will settle out. Use only the supernatant liquid.

Resazurin Solution:**Composition per 44.0mL:**

Resazurin 0.011g

Preparation of Resazurin Solution: Add resazurin to distilled/deionized water and bring volume to 44.0mL. Mix thoroughly.

Preparation of Medium: Add components, except L-cysteine-HCl-H₂O, to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling until resazurin turns colorless, indicating reduction. Cool in an ice-water bath under 100% CO₂. Add the L-cysteine-HCl-H₂O. Adjust pH to 7.0 with 8N NaOH or 5N HCl. Anaerobically distribute into tubes under O₂-free 100% N₂. Cap tubes with butyl rubber stoppers. Place tubes in a press. Autoclave for 12 min at 15 psi pressure–121°C with fast exhaust.

Use: For the cultivation and maintenance of *Bacteroides ruminicola*, *Bacteroides succinogenes*, *Butyrivibrio fibrisolvens*, *Clostridium methylpentosum*, *Eubacterium ruminantium*, *Lachnospira multipara*, *Micromonospora ruminantium*, *Prevotella ruminicola*, *Propionibacterium acidipropionici*, *Selenomonas ruminantium*, *Selenomonas suis*, *Succinivibrio dextrinosolvens*, *Treponema bryantii*, and *Treponema succinifaciens*.

E Medium for Anaerobes with 0.1% Cellobiose**Composition per 100.0mL:**

Cellobiose 0.1g
 Glucose 0.05g
 L-Cysteine-HCl-H₂O 0.05g
 Maltose 0.05g
 (NH₄)₂SO₄ 0.05g
 Peptone 0.05g
 Soluble starch 0.05g
 Yeast extract 0.05g
 Salts solution 50.0mL
 Rumen fluid 30.0mL
 Resazurin solution 0.4mL

pH 7.0 ± 0.2 at 25°C

Salts Solution:**Composition per liter:**

NaHCO₃ 10.0g
 NaCl 2.0g
 K₂HPO₄ 1.0g
 KH₂PO₄ 1.0g
 CaCl₂, anhydrous 0.2g
 MgSO₄ 0.2g

Preparation of Salts Solution: Add CaCl₂ and MgSO₄ to approximately 300.0mL of distilled/deionized water. Mix thoroughly. Bring volume to 800.0mL with distilled/deionized water. Add remaining

components. Mix thoroughly. Bring volume to 1.0L with distilled/deionized water. Mix thoroughly. Store at 4°C.

Rumen Fluid:**Composition per 100.0mL:**

Rumen fluid100.0mL

Preparation of Rumen Fluid: Obtain the rumen contents from a cow that has been fed an alfalfa-hay ration. Filter rumen contents through two layers of cheesecloth. Store under 100% CO₂ in the refrigerator. The particulate material will settle out. Use only the supernatant liquid.

Resazurin Solution:**Composition per 44.0mL:**

Resazurin 0.011g

Preparation of Resazurin Solution: Add resazurin to distilled/deionized water and bring volume to 44.0mL. Mix thoroughly.

Preparation of Medium: Add components, except L-cysteine-HCl-H₂O, to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling until resazurin turns colorless, indicating reduction. Cool in an ice-water bath under 100% CO₂. Add the L-cysteine-HCl-H₂O. Adjust pH to 7.0 with 8N NaOH or 5N HCl. Anaerobically distribute into tubes under O₂-free 100% N₂. Cap tubes with butyl rubber stoppers. Place tubes in a press. Autoclave for 12 min at 15 psi pressure–121°C with fast exhaust.

Use: For the cultivation and maintenance of *Eubacterium cellulosolvens* and *Fibrobacter inrydyinslid*.

E Medium for Anaerobes with Filtered Rumen Fluid and 0.1% Cellobiose**Composition per 100.0mL:**

Cellobiose 0.1g
 Glucose 0.05g
 L-Cysteine-HCl-H₂O 0.05g
 Maltose 0.05g
 (NH₄)₂SO₄ 0.05g
 Peptone 0.05g
 Soluble starch 0.05g
 Yeast extract 0.05g
 Salts solution 50.0mL
 Rumen fluid, filtered 30.0mL
 Resazurin solution 0.4mL

pH 7.0 ± 0.2 at 25°C

Salts Solution:**Composition per liter:**

NaHCO₃ 10.0g
 NaCl 2.0g
 K₂HPO₄ 1.0g
 KH₂PO₄ 1.0g
 CaCl₂ (anhydrous) 0.2g
 MgSO₄ 0.2g

Preparation of Salts Solution: Add CaCl₂ and MgSO₄ to approximately 300.0mL of distilled/deionized water. Mix thoroughly. Bring volume to 800.0mL with distilled/deionized water. Add remaining components. Mix thoroughly. Bring volume to 1.0L with distilled/deionized water. Mix thoroughly. Store at 4°C.

Rumen Fluid:**Composition per 100.0mL:**

Rumen fluid100.0mL

Preparation of Rumen Fluid: Obtain the rumen contents from a cow that has been fed an alfalfa-hay ration. Filter rumen contents through two layers of cheesecloth. Store under 100% CO₂ in the refrigerator. The particulate material will settle out. Use only the supernatant liquid. Filter through a 0.20µm filter.

Resazurin Solution:

Composition per 44.0mL:

Resazurin 0.011g

Preparation of Resazurin Solution: Add resazurin to distilled/deionized water and bring volume to 44.0mL. Mix thoroughly.

Preparation of Medium: Add components, except L-cysteine·HCl·H₂O, to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling until resazurin turns colorless, indicating reduction. Cool in an ice-water bath under 100% CO₂. Add the L-cysteine·HCl·H₂O. Adjust pH to 7.0 with 8N NaOH or 5N HCl. Anaerobically distribute into tubes under O₂-free 100% N₂. Cap tubes with butyl rubber stoppers. Place tubes in a press. Autoclave for 12 min at 15 psi pressure–121°C with fast exhaust.

Use: For the cultivation and maintenance of the *Fibrobacter* species.

E Medium for Anaerobes, Modified

Composition per 103.6mL:

L-Cysteine·HCl·H₂O 0.05g
 (NH₄)₂SO₄ 0.05g
 Peptone 0.05g
 Yeast extract 0.05g
 Salts solution 50.0mL
 Rumen fluid 30.0mL
 Potassium phosphate buffer (1M, pH 6.5) 2.8mL
 Hemin solution 1.0mL
 Glucose-maltose solution 1.4mL
 Starch solution 1.4mL
 Resazurin (0.025% solution) 0.4mL
 Vitamin K₃ solution 0.2mL

pH 6.5 ± 0.2 at 25°C

Salts Solution:

Composition per liter:

NaHCO₃ 10.0g
 NaCl 2.0g
 K₂HPO₄ 1.0g
 KH₂PO₄ 1.0g
 CaCl₂, anhydrous 0.2g
 MgSO₄ 0.2g

Preparation of Salts Solution: Add CaCl₂ and MgSO₄ to approximately 300.0mL of distilled/deionized water. Mix thoroughly. Bring volume to 800.0mL with distilled/deionized water. Add remaining components. Mix thoroughly. Bring volume to 1.0L with distilled/deionized water. Mix thoroughly. Store at 4°C.

Rumen Fluid:

Composition per 100.0mL:

Rumen fluid 100.0mL

Preparation of Rumen Fluid: Obtain the rumen contents from a cow that has been fed an alfalfa-hay ration. Filter rumen contents through two layers of cheesecloth. Store under 100% CO₂ in the refrigerator. The particulate material will settle out. Use only the supernatant liquid.

Hemin Solution:

Composition per 100.0mL:

Hemin 0.05g
 NaOH (1N solution) 1.0mL

Preparation of Hemin Solution: Add hemin to 1.0mL of 1N NaOH solution. Mix thoroughly. Bring volume to 100.0mL with distilled/deionized water. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Glucose-Maltose Solution:

Composition per 10.0mL:

Glucose 0.5g
 Maltose 0.5g

Preparation of Glucose-Maltose Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Starch Solution:

Composition per 10.0mL:

Starch, soluble 0.5g

Preparation of Starch Solution: Add starch to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Resazurin Solution:

Composition per 44.0mL:

Resazurin 0.011g

Preparation of Resazurin Solution: Add resazurin to distilled/deionized water and bring volume to 44.0mL. Mix thoroughly.

Vitamin K₃ Solution:

Composition per 25.0mL:

Vitamin K₃ (menadione) 0.0125g
 Ethanol, absolute 25.0mL

Preparation of Vitamin K₃ Solution: Add vitamin K₃ to 99.0mL of ethanol. Mix thoroughly.

Preparation of Medium: Filter sterilize potassium phosphate buffer. Add components—except L-cysteine·HCl·H₂O, vitamin K₃ solution, potassium phosphate buffer, glucose-maltose solution, and starch solution—to distilled/deionized water and bring volume to 98.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling until resazurin turns colorless, indicating reduction. Cool in an ice-water bath under O₂-free 97% N₂ + 3% H₂. Add the L-cysteine·HCl·H₂O and vitamin K₃ solution. Mix thoroughly. Adjust pH to 6.5 with 8N NaOH or 5N HCl. Anaerobically distribute into tubes under O₂-free 97% N₂ + 3% H₂ in 7.0mL volumes. Cap tubes with butyl rubber stoppers. Place tubes in a press. Autoclave for 12 min at 15 psi pressure–121°C with fast exhaust. Immediately prior to inoculation, aseptically add 0.2mL of filter-sterilized potassium phosphate buffer, 0.1mL of sterile glucose-maltose solution, and 0.1mL of sterile starch solution to each tube. Mix thoroughly.

Use: For the cultivation and maintenance of *Bacteroides* species, *Butyrivibrio fibrisolvens*, *Clostridium methylpentosum*, *Eubacterium ruminantium*, *Lachnospira multipara*, *Micromonospora ruminantium*, *Prevotella ruminicola*, *Propionibacterium acidipropionici*, *Selenomonas* species, *Succinivibrio dextrinosolvens*, and *Treponema* species.

E Medium for Anaerobes with 0.3% Phloroglucinol

Composition per 110.4mL:

(NH₄)₂SO₄ 0.5g
 L-Cysteine·HCl·H₂O 0.05g

Soluble starch.....	0.05g
Salts solution.....	50.0mL
Rumen fluid.....	30.0mL
Phloroglucinol solution.....	30.0mL
Resazurin solution.....	0.4mL
pH 6.6 ± 0.2 at 25°C	

Salts Solution:**Composition per liter:**

NaHCO ₃	10.0g
NaCl.....	2.0g
K ₂ HPO ₄	1.0g
KH ₂ PO ₄	1.0g
CaCl ₂ , anhydrous.....	0.2g
MgSO ₄	0.2g

Preparation of Salts Solution: Add CaCl₂ and MgSO₄ to approximately 300.0mL of distilled/deionized water. Mix thoroughly. Bring volume to 800.0mL with distilled/deionized water. Add remaining components. Mix thoroughly. Bring volume to 1.0L with distilled/deionized water. Mix thoroughly. Store at 4°C.

Rumen Fluid:**Composition per 100.0mL:**

Rumen fluid.....	100.0mL
------------------	---------

Preparation of Rumen Fluid: Obtain the rumen contents from a cow that has been fed an alfalfa-hay ration. Filter rumen contents through two layers of cheesecloth. Store under 100% CO₂ in the refrigerator. The particulate material will settle out. Use only the supernatant liquid.

Phloroglucinol Solution:**Composition per 100.0mL:**

Phloroglucinol.....	1.0g
---------------------	------

Preparation of Phloroglucinol Solution: Add phloroglucinol to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Keep away from light.

Resazurin Solution:**Composition per 44.0mL:**

Resazurin.....	0.011g
----------------	--------

Preparation of Resazurin Solution: Add resazurin to distilled/deionized water and bring volume to 44.0mL. Mix thoroughly.

Preparation of Medium: Add components, except L-cysteine-HCl-H₂O, to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling until resazurin turns colorless, indicating reduction. Cool in an ice-water bath under 100% CO₂. Add the L-cysteine-HCl-H₂O. Adjust pH to 6.6 with 8N NaOH or 5N HCl. Anaerobically distribute into tubes under O₂-free 100% N₂. Cap tubes with butyl rubber stoppers. Place tubes in a press. Autoclave for 12 min at 15 psi pressure–121°C with fast exhaust.

Use: For the cultivation and maintenance of *Coprococcus* species.

E Medium for Anaerobes with 0.2% Rutin**Composition per 110.4mL:**

(NH ₄) ₂ SO ₄	0.5g
L-Cysteine-HCl-H ₂ O.....	0.05g
Soluble starch.....	0.05g
Salts solution.....	50.0mL
Rumen fluid.....	30.0mL

Rutin solution.....	30.0mL
Resazurin solution.....	0.4mL
pH 6.6 ± 0.2 at 25°C	

Salts Solution:**Composition per liter:**

NaHCO ₃	10.0g
NaCl.....	2.0g
K ₂ HPO ₄	1.0g
KH ₂ PO ₄	1.0g
CaCl ₂ , anhydrous.....	0.2g
MgSO ₄	0.2g

Preparation of Salts Solution: Add CaCl₂ and MgSO₄ to approximately 300.0mL of distilled/deionized water. Mix thoroughly. Bring volume to 800.0mL with distilled/deionized water. Add remaining components. Mix thoroughly. Bring volume to 1.0L with distilled/deionized water. Mix thoroughly. Store at 4°C.

Rumen Fluid:**Composition per 100.0mL:**

Rumen fluid.....	100.0mL
------------------	---------

Preparation of Rumen Fluid: Obtain the rumen contents from a cow that has been fed an alfalfa-hay ration. Filter rumen contents through two layers of cheesecloth. Store under 100% CO₂ at 4°C. The particulate material will settle out. Use the liquid.

Rutin Solution:**Composition per 100.0mL:**

Rutin.....	0.2g
------------	------

Preparation of Rutin Solution: Add rutin to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Resazurin Solution:**Composition per 44.0mL:**

Resazurin.....	0.011g
----------------	--------

Preparation of Resazurin Solution: Add resazurin to distilled/deionized water and bring volume to 44.0mL. Mix thoroughly.

Preparation of Medium: Add components, except L-cysteine-HCl-H₂O, to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling until resazurin turns colorless, indicating reduction. Cool in an ice-water bath under 100% CO₂. Add the L-cysteine-HCl-H₂O. Adjust pH to 6.6 with 8N NaOH or 5N HCl. Anaerobically distribute into tubes under O₂-free 100% N₂. Cap tubes with butyl rubber stoppers. Place tubes in a press. Autoclave for 12 min at 15 psi pressure–121°C with fast exhaust.

Use: For the cultivation of *Butyrivibrio* species.

Eagle Medium**Composition per 99.1mL:**

Eagle MEM in Hanks BSS.....	87.0mL
Fetal bovine serum.....	10.0mL
NaHCO ₃ (7.5% solution).....	1.0mL
Penicillin-streptomycin solution.....	1.0mL
Amphotericin B solution.....	0.1mL
pH 7.2–7.4 at 25°C	

Eagle MEM in Hanks BSS:**Composition per liter:**

NaCl.....	8.0g
Glucose.....	1.0g
KCl.....	0.4g
CaCl ₂ ·2H ₂ O.....	0.14g

MgSO ₄ ·7H ₂ O	0.1g
KH ₂ PO ₄	0.06g
Na ₂ HPO ₄	0.05g
L-Isoleucine	0.026g
L-Leucine	0.026g
L-Lysine	0.026g
L-Threonine	0.024g
L-Valine	0.0235g
L-Tyrosine	0.018g
L-Arginine	0.0174g
L-Phenylalanine	0.0165g
L-Cystine	0.012g
L-Histidine	8.0mg
L-Methionine	7.5mg
Phenol Red	5.0mg
L-Tryptophan	4.0mg
Inositol	1.8mg
Biotin	1.0mg
Folic acid	1.0mg
Calcium pantothenate	1.0mg
Choline chloride	1.0mg
Nicotinamide	1.0mg
Pyridoxal-HCl	1.0mg
Thiamine-HCl	1.0mg
Riboflavin	0.1mg

Preparation of Eagle MEM in Hanks BSS: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Penicillin-Streptomycin Solution:

Composition per 1.0mL:

Streptomycin	0.01g
Penicillin	10,000U

Preparation of Penicillin-Streptomycin Solution: Add components to distilled/deionized water and bring volume to 1.0mL. Mix thoroughly.

Amphotericin B Solution:

Composition per 1.0mL:

Amphotericin B	1.0mg
----------------	-------

Preparation of Amphotericin B Solution: Add amphotericin B to distilled/deionized water and bring volume to 1.0mL. Mix thoroughly.

Preparation of Medium: Combine components. Mix thoroughly. Filter sterilize.

Use: For the cultivation of animal tissue culture cell lines.

Eagle Medium

Composition per liter:

Hanks balanced salt solution (10X)	100.0mL
Calf serum	50.0mL
NaHCO ₃ (7.5% solution)	29.6mL
Tissue culture amino acids (50X)	20.0mL
Tissue culture vitamins (100X)	10.0mL
Glutamine solution	10.0mL
Phenol Red (0.5% solution)	4.0mL
Penicillin solution	1.0mL
Streptomycin solution	0.4mL

pH 7.0 ± 0.2 at 25°C

Hanks Balanced Salt Solution (10X):

Composition per 100.0mL:

NaCl	8.0g
Glucose	1.0g
KCl	0.4g
NaHCO ₃	0.35g
CaCl ₂ ·2H ₂ O	0.14g
MgCl ₂ ·6H ₂ O	0.1g
MgSO ₄ ·7H ₂ O	0.1g
Na ₂ HPO ₄	0.06g
KH ₂ PO ₄	0.06g
Phenol Red	0.02g

Preparation of Hanks Balanced Salt Solution (10X): Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Tissue Culture Amino Acids (50X):

Composition per liter:

L-Arginine	0.1g
L-Lysine	0.058g
L-Isoleucine	0.052g
L-Leucine	0.052g
L-Threonine	0.048g
L-Valine	0.046g
L-Tyrosine	0.036g
L-Phenylalanine	0.032g
L-Histidine	0.031g
L-Cystine	0.024g
L-Methionine	0.015g
L-Tryptophan	0.01g

Preparation of Tissue Culture Amino Acids (50X): Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Tissue Culture Vitamins (100X):

Composition per liter:

Inositol	2.0mg
Calcium pantothenate	1.0mg
Choline chloride	1.0mg
Folic acid	1.0mg
Nicotinamide	1.0mg
Pyridoxal	1.0mg
Thiamine-HCl	1.0mg
Riboflavin	0.1mg

Preparation of Tissue Culture Vitamins (100X): Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Glutamine Solution:

Composition per 100.0mL:

L-Glutamine	2.9g
-------------	------

Preparation of Glutamine Solution: Add glutamine to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Penicillin Solution:

Composition per 1.0mL:

Penicillin	200,000U
------------	----------

Preparation of Penicillin Solution: Add penicillin to distilled/deionized water and bring volume to 1.0mL. Mix thoroughly.

Streptomycin Solution:

Composition per 1.0mL:

Streptomycin	0.5g
--------------	------

Preparation of Streptomycin Solution: Add streptomycin to distilled/deionized water and bring volume to 1.0mL. Mix thoroughly.

Preparation of Medium: Combine components. Mix thoroughly. Adjust pH to 7.0 with 1*N* NaOH. Filter sterilize.

Use: For the cultivation of animal tissue culture cell lines, especially for use with rhinoviruses.

Eagle Medium

Composition per 100.1mL:

Eagle MEM in Earle BSS	94.0mL
NaHCO ₃ (7.5% solution)	3.0mL
Fetal bovine serum, inactivated	2.0mL
Penicillin-streptomycin solution	1.0mL
Amphotericin B solution	0.1mL
pH 7.2–7.4 at 25°C	

Eagle MEM in Earle BSS:

Composition per liter:

NaCl	6.8g
Glucose	1.0g
KCl	0.4g
CaCl ₂ ·2H ₂ O	0.2g
MgCl ₂ ·6H ₂ O	0.2g
NaH ₂ PO ₄	0.15g
L-Arginine	0.1g
L-Lysine	0.06g
L-Isoleucine	0.05g
L-Leucine	0.05g
L-Threonine	0.05g
L-Valine	0.05g
L-Tyrosine	0.04g
L-Phenylalanine	0.03g
L-Histidine	0.03g
L-Cystine	0.02g
L-Methionine	0.02g
L-Tryptophan	0.01g
<i>i</i> -Inositol	2.0mg
Calcium pantothenate	1.0mg
Choline chloride	1.0mg
Folic acid	1.0mg
Nicotinamide	1.0mg
Pyridoxal	1.0mg
Thiamine-HCl	1.0mg
Riboflavin	0.1mg

Preparation of Eagle MEM in Earle BSS: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Penicillin-Streptomycin Solution:

Composition per 1.0mL:

Streptomycin	0.01g
Penicillin	10,000U

Preparation of Penicillin-Streptomycin Solution: Add components to distilled/deionized water and bring volume to 1.0mL. Mix thoroughly.

Amphotericin B Solution:

Composition per 1.0mL:

Amphotericin B	1.0mg
----------------------	-------

Preparation of Amphotericin B Solution: Add amphotericin B to distilled/deionized water and bring volume to 1.0mL. Mix thoroughly.

Preparation of Medium: Combine components. Mix thoroughly. Filter sterilize.

Use: For the cultivation of animal tissue culture cell lines.

Eagle Medium, Modified

Composition per liter:

Eagle MEM (10X)	100.0mL
Fetal bovine serum	100.0mL
Glucose solution	20.0mL
HEPES (<i>N</i> -2-hydroxyethyl piperazine- <i>N'</i> -2-ethanesulfonic acid) buffer, 1 <i>M</i> , pH 7.2	20.0mL
Glutamine solution	10.0mL
NaHCO ₃ (7.5% solution)	7.5mL
Gentamicin sulfate solution	0.2mL
pH 7.2 ± 0.2 at 25°C	

Eagle MEM (10X):

Composition per 100.0mL:

Sterile salt solution	97.0mL
TC amino acids, minimal Eagle 50X	2.0mL
TC vitamins, minimal Eagle 100X	1.0mL

Preparation of Eagle MEM (10X): Combine components. Mix thoroughly. Filter sterilize.

Sterile Salt Solution:

Composition per 100.0mL:

NaCl	6.8g
Glucose	1.0g
KCl	0.4g
CaCl ₂	0.2g
MgCl ₂	0.2g
NaH ₂ PO ₄	0.15g

Preparation of Sterile Salt Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

TC Amino Acids (50X):

Composition per liter:

L-Arginine	0.1g
L-Lysine	0.06g
L-Isoleucine	0.05g
L-Leucine	0.05g
L-Threonine	0.05g
L-Valine	0.05g
L-Tyrosine	0.04g
L-Phenylalanine	0.03g
L-Histidine	0.03g
L-Cystine	0.02g
L-Methionine	0.02g
L-Tryptophan	0.01g

Preparation of TC Amino Acids (50X): Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2–7.4. Filter sterilize.

TC Vitamins, Minimal Eagle 100X:

Composition per liter:

Inositol	2.0mg
Calcium pantothenate	1.0mg
Choline chloride	1.0mg
Folic acid	1.0mg
Nicotinamide	1.0mg

Pyridoxal	1.0mg
Thiamine-HCl	1.0mg
Riboflavin	0.1mg

Preparation of TC Vitamins, Minimal Eagle 100X: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Glucose Solution:

Composition per 100.0mL:

Glucose	27.0g
---------------	-------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Glutamine Solution:

Composition per 10.0mL:

L-Glutamine.....	5.0g
------------------	------

Preparation of Glutamine Solution: Add glutamine to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Gentamicin Solution:

Composition per 1.0mL:

Gentamicin sulfate	0.05g
--------------------------	-------

Preparation of Gentamicin Solution: Add gentamicin sulfate to distilled/deionized water and bring volume to 1.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Combine components. Mix thoroughly. Filter sterilize.

Use: For the cultivation of animal tissue culture cell lines, especially for McCoy cells.

Eagle's Minimal Essential Medium with Earle's Salts and Nonessential Amino Acids (MEM with Earle's Salts and Nonessential Amino Acids) (BAM M46)

Composition per liter:

NaCl	6.8g
NaHCO ₃	2.2g
Glucose	1.0g
KCl	0.4g
CaCl ₂ ·2H ₂ O	0.265g
MgSO ₄ ·7H ₂ O	0.2g
L-Arginine·H ₂ O	0.15g
NaH ₂ PO ₄ ·H ₂ O	0.14g
L-Arginine·HCl	0.126g
L-Lysine·HCl	72.5mg
L-Tyrosine, disodium salt	52.1mg
L-Leucine	52.0mg
L-Threonine	48.0mg
L-Valine	46.0mg
L-Histidine·HCl·H ₂ O	42.0mg
D-Phenylalanine	32.0mg
L-Cysteine·2HCl	31.29mg
L-Methionine	15.0mg
L-Glutamic acid	14.7mg
L-Aspartic acid	13.3mg
L-Proline	11.5mg
L-Serine	10.5mg

L-Tryptophan	10.0mg
L-Alanine	8.9mg
Phenol Red	10.0mg
L-Glycine	7.5mg
<i>i</i> -Inositol	2.0mg
D-Calcium pantothenate	1.0mg
Choline chloride	1.0mg
Folic acid	1.0mg
Nicotinamide	1.0mg
Pyridoxal-HCl	1.0mg
Thiamine-HCl	1.0mg
Riboflavin	0.1mg

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to 1.0L of distilled/deionized water. Mix thoroughly. Filter sterilize.

Use: For the cultivation of animal cells in tissue culture, for example, cells for viral detection and identification by characteristic cytopathic effects.

Earle's Balanced Salts, Phenol Red-Free

Composition per liter:

NaCl	6.8g
NaHCO ₃	2.2g
Glucose	1.0g
KCl	0.4g
CaCl ₂ ·2H ₂ O	0.265g
MgSO ₄ ·7H ₂ O	0.2g
NaH ₂ PO ₄ ·H ₂ O	0.14g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Use: For the preparation of tissue culture media where Phenol Red is not desired.

EB Motility Medium

Composition per liter:

Peptone or gelysate	10.0g
NaCl	5.0g
Agar	4.0g
Beef extract	3.0g

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes in 8.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and differentiation of bacteria based on motility.

EBA Medium

Composition per 994.0mL:

Glycine	2.0g
NaCl	1.0g
KCl	0.5g
MgSO ₄ ·7H ₂ O	0.5g
NH ₄ Cl	0.25g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O	0.15g
Resazurin	1.0mg

NaHCO ₃ solution.....	30.0mL
Na ₂ S·9H ₂ O solution.....	10.0mL
Biotin solution.....	2.0mL
Na ₂ SeO ₃ ·5H ₂ O solution.....	1.0mL
Trace elements solution SL-10.....	1.0mL
pH 7.2–7.4 at 25°C	

NaHCO₃ Solution:**Composition per 100.0mL:**

NaHCO ₃	8.4g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Gas under 80% N₂ + 20% CO₂.

Na₂S·9H₂O Solution:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O.....	0.6g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Biotin Solution:**Composition per 10.0mL:**

Biotin.....	0.1mg
-------------	-------

Preparation of Biotin Solution: Add biotin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gas under 100% N₂. Autoclave for 10 min at 15 psi pressure–121°C.

Na₂SeO₃·5H₂O Solution:**Composition per liter:**

Na ₂ SeO ₃ ·5H ₂ O.....	0.26g
NaOH (10mM solution).....	1.0L

Preparation of Na₂SeO₃·5H₂O Solution: Add Na₂SeO₃·5H₂O to 1.0L of 10mM NaOH solution. Mix thoroughly.

Trace Elements Solution SL-10:**Composition per liter:**

FeCl ₂ ·4H ₂ O.....	1.5g
CoCl ₂ ·6H ₂ O.....	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	36.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O.....	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except NaHCO₃ solution, Na₂S·9H₂O solution, and biotin solution, to distilled/deionized water and bring volume to 952.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 30.0mL of sterile NaHCO₃ solution, 10.0mL of sterile Na₂S·9H₂O solution, and 2.0mL of sterile biotin solution. Aseptically and anaerobically distribute into sterile flasks or tubes.

Use: For the cultivation and maintenance of *Eubacterium acidaminophilum*.

EC Broth
(*Escherichia coli* Broth)
(EC Medium)

Composition per liter:

Pancreatic digest of casein.....	20.0g
Lactose.....	5.0g
NaCl.....	5.0g
K ₂ HPO ₄	4.0g
Bile salts mixture.....	1.5g
KH ₂ PO ₄	1.5g

pH 6.9 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into test tubes that contain an inverted Durham tube. Autoclave for 12 min at 15 psi pressure–121°C. Cool broth as quickly as possible.

Use: For the cultivation and differentiation of coliform bacteria at 37°C and of *Escherichia coli* at 45.5°C.

EC Broth
(*Escherichia coli* Broth)
(EC Medium)
(BAM M49)

Composition per liter:

Pancreatic digest of casein.....	20.0g
Lactose.....	5.0g
NaCl.....	5.0g
K ₂ HPO ₄	4.0g
KH ₂ PO ₄	1.5g
Bile salts No.3.....	1.12g
Novobiocin solution.....	10.0mL

pH 6.9 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid.

Novobiocin Solution:**Composition per 50.0mL:**

Novobiocin.....	0.1g
-----------------	------

Preparation of Novobiocin Solution: Add novobiocin to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except novobiocin solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 10.0mL novobiocin solution. Mix thoroughly. Aseptically distribute to sterile tubes or flasks.

Use: A selective enrichment broth for the growth of *E. coli* O157 from food and environmental samples.

EC Broth with MUG

Composition per liter:

Pancreatic digest of casein.....	20.0g
Lactose.....	5.0g
NaCl.....	5.0g
K ₂ HPO ₄	4.0g
Bile salts mixture.....	1.5g

KH ₂ PO ₄	1.5g
4-Methylumbelliferyl-β-D-glucuronide (MUG).....	0.05g
pH 6.9 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into test tubes that contain an inverted Durham tube in 10.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the detection of *Escherichia coli* in water and food samples by a fluorogenic procedure.

EC HiVeg Broth

Composition per liter:

Plant hydrolysate no. 1.....	20.0g
Lactose.....	5.0g
NaCl.....	5.0g
K ₂ HPO ₄	4.0g
KH ₂ PO ₄	1.5g
Synthetic detergent.....	1.5g
pH 6.9 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into test tubes that contain an inverted Durham tube. Autoclave for 15 min at 15 psi pressure–121°C. Cool broth as quickly as possible.

Use: For the cultivation and differentiation of coliform bacteria at 37°C and of *Escherichia coli* at 45.5°C. Recommended for selective enumeration of presumptive *Escherichia coli* by MPN technique. For the selective enumeration of faecal and nonfaecal coliforms in water, wastewater, and shell fish.

EC Medium, Modified with Novobiocin

Composition per liter:

Tryptone.....	20.0g
NaCl.....	5.0g
Lactose.....	5.0g
K ₂ HPO ₄	4.0g
KH ₂ PO ₄	1.5g
Bile salts.....	1.12g
Novobiocin supplement.....	10.0mL
pH 6.9 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder and supplement from BD Diagnostic Systems.

Novobiocin Supplement:

Composition per 10.0mL:

Sodium novobiocin.....	20.0mg
------------------------	--------

Preparation of Novobiocin Supplement: Add sodium novobiocin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except novobiocin supplement, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL of sterile novobiocin supplement. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Escherichia coli* O157:H7.

ECD Agar

Composition per liter:

Casein enzymic hydrolysate.....	20.0g
Agar.....	15.0g
Yeast extract.....	5.0g
NaCl.....	5.0g
Na ₂ HPO ₄	5.0g
KH ₂ PO ₄	1.5g
Bile salts.....	1.5g
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the selective detection of coliforms, especially *Escherichia coli* in water and food.

ECD Agar, Fluorocult® (Fluorocult ECD Agar)

Composition per liter:

Peptone from casein.....	20.0g
Agar.....	15.0g
NaCl.....	5.0g
Lactose.....	5.0g
K ₂ HPO ₄	4.0g
Bile salt mixture.....	1.5g
KH ₂ PO ₄	1.5g
Tryptophan.....	1.0g
4-Methylumbelliferyl-β-D-glucuronide.....	0.07g
pH 7.0 ± 0.2 at 25°C	

Source: This medium is available from Merck.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Pour into sterile Petri dishes. The prepared broth is clear and yellowish brown.

Use: For the detection of *E. coli* in meats. The medium complies with the German-DIN-Norm 10110 for the examination of meat, with the regulations according to § 35 LMBG (06.00/36) for the examination of food, and with ISO Standard 6391 (1996) for the enumeration of *E. coli* in meat and meat products. The bile salt mixture of this medium largely inhibits the accompanying flora not usually found in the intestines. Using fluorescence under UV light and a positive indole reaction, *E. coli* colonies can be identified among the grown colonies.

ECD MUG Agar

Composition per liter:

Casein peptone.....	20.0g
Agar.....	15.0g
NaCl.....	5.0g
Lactose.....	5.0g
K ₂ HPO ₄	4.0g
Bile salt mixture.....	1.5g
KH ₂ PO ₄	1.5g
Tryptophan.....	1.0g
4-Methylumbelliferyl-β-D-glucuronide.....	0.07g
pH 7.0 ± 0.2 at 37°C	

Source: This medium is available from Fluka, Sigma-Aldrich.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Pour into sterile Petri dishes.

Use: For detection of *Escherichia coli* in a variety of specimens. The bile-salt mixture in this *E. coli* Direct Agar extensively inhibits the non-obligatory intestinal accompanying flora. Fluorescence in the UV and a positive indole test demonstrate the presence of *E. coli* in the colonies.

Echinamoeba Agar (ATCC Medium 2339)

Composition per liter:

Agar	18.0g
FeCl ₂ ·6H ₂ O	0.552g
MgSO ₄ ·7H ₂ O	0.5g
CaSO ₄ ·2H ₂ O	0.49g
NaHCO ₃	0.37g
CaCl ₂ ·2H ₂ O	0.24g
Yeast extract	0.2g
KCl	8.6mg
KNO ₃	0.16mg
Mineral solution	10.0mL
Glycerol	1.0mL

pH 7.0 ± 0.2 at 25°C

Mineral Solution:

Composition per liter:

ZnSO ₄ ·7H ₂ O	3.5g
Na ₂ MoO ₄ ·2H ₂ O	0.4g
MnCl ₂ ·4H ₂ O	0.25g
(NH ₄) ₂ Ni(SO ₄) ₂ ·6H ₂ O	0.2g
LiCl	0.3g
SnCl ₂ ·2H ₂ O	0.1g

Preparation of Mineral Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0 with NaOH. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Echinamoeba* spp.

Echinamoeba Agar

Composition per liter:

Agar	18.0g
FeCl ₂ ·6H ₂ O	0.552g
MgSO ₄ ·7H ₂ O	0.5g
CaSO ₄ ·2H ₂ O	0.49g
NaHCO ₃	0.37g
CaCl ₂ ·2H ₂ O	0.24g
Yeast extract	0.2g
KCl	8.6mg
KNO ₃	0.16mg
Mineral solution	10.0mL
Glycerol	1.0mL

pH 7.0 ± 0.2 at 25°C

Mineral Solution:

Composition per liter:

ZnSO ₄ ·7H ₂ O	3.5g
Na ₂ MoO ₄ ·2H ₂ O	0.4g

MnCl ₂ ·4H ₂ O	0.25g
(NH ₄) ₂ Ni(SO ₄) ₂ ·6H ₂ O	0.2g
LiCl	0.3g
SnCl ₂ ·2H ₂ O	0.1g

Preparation of Mineral Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0 with NaOH. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Echinamoeba* spp.

Echinamoeba Broth

Composition per liter:

FeCl ₂ ·6H ₂ O	0.552g
MgSO ₄ ·7H ₂ O	0.5g
CaSO ₄ ·2H ₂ O	0.49g
NaHCO ₃	0.37g
CaCl ₂ ·2H ₂ O	0.24g
Yeast extract	0.2g
KCl	8.6mg
KNO ₃	0.16mg
Mineral solution	10.0mL
Glycerol	1.0mL

pH 7.0 ± 0.2 at 25°C

Mineral Solution:

Composition per liter:

ZnSO ₄ ·7H ₂ O	3.5g
Na ₂ MoO ₄ ·2H ₂ O	0.4g
MnCl ₂ ·4H ₂ O	0.25g
(NH ₄) ₂ Ni(SO ₄) ₂ ·6H ₂ O	0.2g
LiCl	0.3g
SnCl ₂ ·2H ₂ O	0.1g

Preparation of Mineral Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0 with NaOH. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Echinamoeba* spp.

ECM Agar

Composition per liter:

Agar	15.0g
NaCl	6.0g
<i>Escherichia coli</i> cells, washed	1.0g
MgSO ₄ ·7H ₂ O	0.5g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of myxobacteria.

Ectothiorhodospira abdelmalekii Medium

Composition per 1010.0mL:

NaCl	120.0g
Na ₂ SO ₄	15.0g

NaHCO ₃	10.0g
Na ₂ CO ₃	5.0g
Sodium acetate.....	1.0g
KH ₂ PO ₄	0.8g
NH ₄ Cl.....	0.8g
MgCl ₂ ·6H ₂ O.....	0.1g
Na ₂ S·9H ₂ O solution.....	10.0mL
Trace elements solution SLA.....	1.0mL
Vitamin solution.....	1.0mL

pH 8.5 ± 0.2 at 25°C

Na₂S·9H₂O Solution:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O.....	0.5g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution SLA:**Composition per liter:**

CuCl ₂ ·2H ₂ O.....	10.0g
FeCl ₂ ·4H ₂ O.....	1.8g
H ₃ BO ₃	0.5g
CoCl ₂ ·6H ₂ O.....	0.25g
ZnCl ₂	0.1g
MnCl ₂ ·4H ₂ O.....	70.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	30.0mg
Na ₂ SeO ₃ ·5H ₂ O.....	10.0mg
NiCl ₂ ·6H ₂ O.....	10.0mg

Preparation of Trace Elements Solution SLA: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 2.0–3.0.

Vitamin Solution VA:**Composition per 100.0mL:**

Nicotinic acid amide.....	35.0mg
Thiamine dichloride.....	30.0mg
<i>p</i> -Aminobenzoic acid.....	20.0mg
Biotin.....	10.0mg
Calcium DL-pantothenate.....	10.0mg
Pyridoxal·HCl.....	10.0mg
Vitamin B ₁₂	5.0mg

Preparation of Vitamin Solution VA: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 8.5. Filter sterilize. Aseptically add 10.0mL of sterile Na₂S·9H₂O solution. Mix thoroughly. Distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Ectothiorhodospira abdelmalekii*.

Ectothiorhodospira halochloris* Medium*Composition per liter:**

NaCl.....	180.0g
Na ₂ SO ₄	20.0g
NaHCO ₃	14.0g
Na ₂ CO ₃	6.0g
Na ₂ S·9H ₂ O.....	1.0g

Sodium succinate.....	1.0g
NH ₄ Cl.....	0.8g
KH ₂ PO ₄	0.5g
Yeast extract.....	0.5g
MgCl ₂ ·6H ₂ O.....	0.1g
CaCl ₂ ·2H ₂ O.....	0.05g
Vitamin solution VA.....	1.0mL
Trace elements solution SLA.....	1.0mL

pH 8.5–8.7 at 25°C

Vitamin Solution VA:**Composition per liter:**

Nicotinamide.....	0.04g
Thiamine dichloride.....	0.03g
<i>p</i> -Aminobenzoic acid.....	0.02g
Biotin.....	0.01g
Calcium pantothenate.....	0.01g
Pyridoxal chloride.....	0.01g
Vitamin B ₁₂	5.0mg

Preparation of Vitamin Solution VA: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Trace Elements Solution SLA:**Composition per liter:**

FeCl ₂ ·4H ₂ O.....	1.8g
H ₃ BO ₃	0.5g
CoCl ₂ ·6H ₂ O.....	0.25g
ZnCl ₂	0.1g
MnCl ₂ ·4H ₂ O.....	0.07g
NaMoO ₄ ·2H ₂ O.....	0.03g
CuCl ₂ ·2H ₂ O.....	0.01g
Na ₂ SeO ₃	0.01g
NiCl ₂ ·6H ₂ O.....	0.01g

Preparation of Trace Elements Solution SLA: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 3.0 with 2N HCl.

Preparation of Medium: Add components, except trace elements solution SLA, to distilled/deionized water and bring volume to 999.0mL. Mix thoroughly. Filter sterilize. Aseptically add 1.0mL of sterile trace elements solution SLA. Mix thoroughly. Aseptically distribute into flasks or bottles. Completely fill bottles with medium except for a pea-sized air bubble.

Use: For the enrichment and isolation of *Ectothiorhodospira halochloris*.

Ectothiorhodospira halophila* Medium*Composition per liter:**

NaCl.....	200.0g
NH ₄ Cl.....	0.4g
(NH ₄) ₂ SO ₄	0.1g
Na ₂ CO ₃ solution.....	100.0mL
Tris buffer (1M solution, pH 7.5).....	30.0mL
Solution C.....	5.0mL
Potassium phosphate buffer (1M solution, pH 7.5).....	3.0mL
Additional solution.....	2.5mL

pH 7.4–8.0 at 25°C

Na₂CO₃ Solution:**Composition per 100.0mL:**

Na ₂ CO ₃	10.0g
---------------------------------------	-------

Preparation of Na₂CO₃ Solution: Add Na₂CO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution C:

Composition per liter:

MgCl ₂ ·6H ₂ O.....	24.0g
CaCl ₂ ·2H ₂ O.....	3.3g
FeCl ₃ ·4H ₂ O.....	1.1g
(NH ₄) ₆ Mo ₇ O ₂₄ ·4H ₂ O.....	0.1g
Nitrilotriacetic acid.....	10.0mg
Trace elements solution.....	50.0mL

Preparation of Solution C: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Readjust pH to 7.2 with H₂SO₄ or KOH. Add distilled/deionized water to 1.0L.

Trace Elements Solution:

Composition per 100.0mL:

ZnCl ₂	0.52g
EDTA.....	0.25g
MnCl ₂ ·4H ₂ O.....	0.08g
FeCl ₃ ·4H ₂ O.....	0.03g
Co(NO ₃) ₂ ·6H ₂ O.....	0.02g
CuCl ₂ ·2H ₂ O.....	0.02g
H ₃ BO ₃	0.01g

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 3.0 with 2N HCl.

Additional Solution:

Composition per 50.0mL:

NaS ₂ O ₃ ·6H ₂ O.....	6.0g
Sodium succinate.....	5.0g
Sodium ascorbate.....	1.0g

Preparation of Additional Solution: Add components to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except Na₂CO₃ solution and additional solution, to distilled/deionized water and bring volume to 900.0mL. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically adjust pH to 7.4–7.8 with filter-sterilized HCl. Aseptically distribute into 50.0mL screw-capped bottles. Fill each bottle almost to the top, leaving a space of 2.8mL in the neck. Aseptically add 2.5mL of sterile additional solution to each bottle. Mix thoroughly.

Use: For the isolation and cultivation of *Ectothiorhodospira halophila*.

Ectothiorhodospira halophila Medium

Composition per liter:

NaCl.....	220.0g
Potassium succinate.....	1.0g
Na ₂ S·9H ₂ O.....	0.1g
K ₂ HPO ₄ solution.....	20.0mL
NaHCO ₃ solution.....	20.0mL
Solution C.....	20.0mL

(NH ₄) ₂ SO ₄ solution.....	5.0mL
Vitamin solution.....	0.5mL
pH 7.4–8.0 at 25°C	

K₂HPO₄ Solution:

Composition per liter:

K ₂ HPO ₄	125.0g
---------------------------------------	--------

Preparation of K₂HPO₄ Solution: Add K₂HPO₄ to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

NaHCO₃ Solution:

Composition per liter:

NaHCO ₃	100.0g
--------------------------	--------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Solution C:

Composition per liter:

MgCl ₂ ·6H ₂ O.....	24.0g
CaCl ₂ ·2H ₂ O.....	3.3g
FeCl ₃ ·4H ₂ O.....	1.1g
(NH ₄) ₆ Mo ₇ O ₂₄ ·4H ₂ O.....	0.1g
Nitrilotriacetic acid.....	10.0mg
Trace elements solution.....	50.0mL

Preparation of Solution C: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Trace Elements Solution:

Composition per 100.0mL:

ZnCl ₂	0.52g
EDTA.....	0.25g
MnCl ₂ ·4H ₂ O.....	0.08g
FeCl ₃ ·4H ₂ O.....	0.03g
Co(NO ₃) ₂ ·6H ₂ O.....	0.02g
CuCl ₂ ·2H ₂ O.....	0.02g
H ₃ BO ₃	0.01g

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 3.0 with 2N HCl.

(NH₄)₂SO₄ Solution:

Composition per liter:

(NH ₄) ₂ SO ₄	100.0g
---	--------

Preparation of (NH₄)₂SO₄ Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Vitamin Solution:

Composition per liter:

Nicotinic acid.....	2.0mg
Thiamine.....	1.0mg
<i>p</i> -Aminobenzoic acid.....	0.2mg
Biotin.....	0.02mg
Vitamin B ₁₂	1.0μg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.4–8.0. Filter sterilize. Aseptically distribute into flasks or bottles. Completely fill bottles with medium except for a pea-sized air bubble.

Use: For the isolation and cultivation of *Ectothiorhodospira halophila*.

Ectothiorhodospira Medium**Composition per liter:**

NaCl	180.0g

Egg Yolk Emulsion:

Composition:

Chicken egg yolks.....	11
Whole chicken egg.....	1

Preparation of Egg Yolk Emulsion: Soak eggs with 1:100 dilution of saturated mercuric chloride solution for 1 min. Crack eggs and separate yolks from whites. Mix egg yolks with 1 chicken egg.

Preparation of Medium: Add components, except egg yolk emulsion, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile egg yolk emulsion. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the isolation, cultivation, and differentiation of *Clostridium* species and some other anaerobic bacteria.

Egg Yolk Agar with Neomycin

See: Lombard-Dowell Neomycin Agar

Egg Yolk Emulsion

Composition per 100.0mL:

Sterile saline.....	70.0mL
Egg yolk.....	30.0mL

Source: Sterile egg yolk emulsion is available from Fluka, Sigma-Aldrich.

Preparation of Medium: Use fresh eggs, less than 1 week old. Scrub the shells with soap. Let stand in a soap solution for 30 min. Rinse in running water. Soak eggs in 70% ethanol for 15 min. or soak eggs with 1:100 dilution of saturated mercuric chloride solution for 1 min. Crack eggs and separate yolks from whites, placing egg yolks into a sterile container. Use enough eggs to produce at least 30.0mL egg yolk. Homogenize by shaking. Add 0.9g NaCl to distilled/deionized water and bring volume to 100.0mL. Sterilize the saline solution by filtration or by autoclaving for 15 min at 15 psi pressure–121°C. If autoclaving is used, cool to 25°C. Aseptically add 30.0mL homogenized egg yolks to 70.0mL of sterile saline solution. Mix thoroughly.

Use: Sterile stabilized emulsion of egg yolk is recommended for use in various culture media.

NaCl.....	0.45g
Egg yolk.....	50.0mL

Preparation of Medium: Use fresh eggs, less than 1 week old. Scrub the shells with soap. Let stand in a soap solution for 30 min. Rinse in running water. Soak eggs in 70% ethanol for 15 min. or soak eggs with 1:100 dilution of saturated mercuric chloride solution for 1 min. Crack eggs and separate yolks from whites, placing egg yolks into a sterile container. Use enough eggs to produce at least 50.0mL egg yolk. Homogenize by shaking. Add 0.45g NaCl to distilled/deionized water and bring volume to 50.0mL. Sterilize the saline solution by filtration or by autoclaving for 15 min at 15 psi pressure–121°C. If autoclaving is used, cool to 25°C. Aseptically add 50.0mL homogenized egg yolks to 50.0mL of the sterile NaCl solution. Mix thoroughly.

Use: Sterile stabilized emulsion of egg yolk is recommended for use in various culture media.

Egg Yolk Emulsion, 50% (BAM M51)

Composition per 100.0mL:

Chicken egg yolks.....	variable
NaCl (0.85% solution).....	40.0mL

Preparation of Egg Yolk Emulsion: Wash fresh eggs with a stiff brush and drain. Soak eggs in 70% ethanol for 1 h. Crack eggs aseptically and separate yolks from whites. Remove egg yolks with a sterile syringe or a wide-mouth pipet. Place 50.0mL of egg yolks into a sterile container. Add 50.0mL sterile 0.85% saline.

Use: For use in media requiring egg yolk emulsion.

Egg Yolk Tellurite Emulsion 20%

Composition per 100.0mL:

NaCl.....	0.425g
K ₂ TeO ₃	0.21g
Egg yolk.....	20.0mL

Preparation of Medium: Use fresh eggs, less than 1 week old. Scrub the shells with soap. Let stand in a soap solution for 30 min. Rinse in running water. Soak eggs in 70% ethanol for 15 min or soak eggs with 1:100 dilution of saturated mercuric chloride solution for 1 min. Crack eggs and separate yolks from whites, placing egg yolks into a sterile container. Use enough eggs to produce at least 20.0mL egg yolk. Homogenize by shaking. Add 0.45g NaCl and 0.21g K₂TeO₃ to distilled/deionized water and bring volume to 80.0mL. Sterilize the saline-tellurite solution by filtration or by autoclaving for 15 min at 15 psi pressure–121°C. If autoclaving is used, cool to 25°C. Aseptically add 20.0mL homogenized egg yolks to 80.0mL of the sterile saline-tellurite solution. Mix thoroughly.

Use: For use in various culture media. It may be added directly to nutrient media for the identification of *Clostridium*, *Bacillus*, and *Staphylococcus* species by their lipase activity.

EGGC (DSMZ Medium 1191)

Composition per liter:

Agar	15.0g
Glucose	0.6g
Na-acetate	0.3g
Casamino acids	0.3g
Salt solution	10.0mL
Vitamin solution.....	5.0mL
Phosphate solution.....	2.0mL

pH 7.2 ± 0.2 at 25°C

Salt Solution:

Composition per liter:

(NH ₄) ₂ SO ₄	1.0g
KCl.....	0.5g
MgSO ₄ ·7H ₂ O.....	0.5g
CaCl ₂ ·2H ₂ O.....	0.2g
CaCO ₃	0.2g
FeCl ₃ ·6H ₂ O.....	0.005g

Preparation of Salt Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Vitamin Solution:**Composition** per 100.0mL:

Thiamine-HCl·2H ₂ O	50.0mg
Nicotinic acid	50.0mg
Pyridoxine-HCl	50.0mg
D-Ca-pantothenate	50.0mg
Riboflavin	10.0mg
Vitamin B ₁₂	1.0mg
Folic acid	0.2mg
Biotin	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Phosphate Solution:**Composition** per 20.0mL:

Na ₂ HPO ₄	2.48g
NaH ₂ PO ₄	0.308g

Preparation of Phosphate Solution: Add components to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except phosphate and vitamin solutions, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Adjust pH to 7.2. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add the vitamin and phosphate solutions. Mix thoroughly. Pour into Petri dishes or aseptically distribute into sterile tubes.

Use: For the cultivation of *Thiothrix* spp.

EIA Substrate**Composition** per liter:

Agar	15.0g
Esculin	1.0g
Ferric citrate	0.5g

pH 7.1 ± 0.1 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.1. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the cultivation and enumeration of marine enterococci by the membrane filter method.

Eijkman Lactose HiVeg Broth**Composition** per liter:

Plant hydrolysate No. 1	15.0g
NaCl	5.0g
K ₂ HPO ₄	4.0g
Lactose	3.0g
KH ₂ PO ₄	1.5g

pH 6.8 ± 0.1 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into test

tubes that contain an inverted Durham tube. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and differentiation of *Escherichia coli* from other coliform organisms based on their ability to ferment lactose and produce gas.

Eijkman Lactose Medium**Composition** per liter:

Pancreatic digest of casein	15.0g
K ₂ HPO ₄	10.0g
KH ₂ PO ₄	4.0g
Lactose	3.0g
NaCl	2.5g

pH 6.8 ± 0.1 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into test tubes that contain an inverted Durham tube. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and differentiation of *Escherichia coli* from other coliform organisms based on their ability to ferment lactose and produce gas.

Eijkman Lactose Medium**Composition** per liter:

Tryptose	15.0g
NaCl	5.0g
K ₂ HPO ₄	4.0g
Lactose	3.0g
KH ₂ PO ₄	1.5g

pH 6.8 ± 0.1 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into test tubes that contain an inverted Durham tube. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and differentiation of *Escherichia coli* from other coliform organisms based on their ability to ferment lactose and produce gas.

**Ekho Lake Strains Medium
(DSMZ Medium 621a)****Composition** per liter:

Agar	15.0g
Peptone	0.25g
Yeast extract	0.25g
Artificial sea water	250.0mL
Hutner's basal salts solution	20.0mL
Glucose solution	10.0mL
Vitamin solution	5.0mL

pH 7.3 ± 0.2 at 25°C

Hutner's Basal Salts Solution:**Composition** per liter:

MgSO ₄ ·7H ₂ O	29.7g
Nitilotriacetic acid	10.0g
CaCl ₂ ·2H ₂ O	3.335g
FeSO ₄ ·7H ₂ O	99.0mg
(NH ₄) ₆ MoO ₇ O ₂₄ ·4H ₂ O	9.25mg
"Metals 44"	50.0mL

“Metals 44”:**Composition per 100.0mL:**

ZnSO ₄ ·7H ₂ O	1.095g
FeSO ₄ ·7H ₂ O	0.5g
Sodium EDTA	0.25g
MnSO ₄ ·H ₂ O	0.154g
CuSO ₄ ·5H ₂ O	39.2mg
Co(NO ₃) ₂ ·6H ₂ O	24.8mg
Na ₂ B ₄ O ₇ ·10H ₂ O	17.7mg

Preparation of “Metals 44”: Add sodium EDTA to distilled/deionized water and bring volume to 90.0mL. Mix thoroughly. Add a few drops of concentrated H₂SO₄ to retard precipitation of heavy metal ions. Add remaining components. Mix thoroughly. Bring volume to 100.0mL with distilled/deionized water.

Preparation of Hutner’s Basal Salts Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Adjust pH to 6.8.

Artificial Sea Water:**Composition per liter:**

NaCl	23.477g
MgCl ₂ ·6H ₂ O	4.981g
Na ₂ SO ₄	3.917g
CaCl ₂	1.12g
KCl	664.0mg
NaHCO ₃	192.0mg
H ₃ BO ₃	26.0mg
SrCl ₂	24.0mg
KBr	6.0mg
NaF	3.0mg

Preparation of Artificial Sea Water: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Vitamin Solution:**Composition per liter:**

Pyridoxine-HCl	20.0mg
Riboflavin	10.0mg
Nicotinamide	10.0mg
Thiamine-HCl·2H ₂ O	10.0mg
Ca-pantothenate	10.0mg
<i>p</i> -Aminobenzoic acid	10.0mg
Biotin	4.0mg
Folic acid	4.0mg
Vitamin B ₁₂	0.2mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Store in the dark at 5°C.

Glucose Solution:**Composition per 10.0mL:**

Glucose	0.25g
---------------	-------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except artificial sea water, glucose solution, and vitamin solution, to distilled/deionized water and bring volume to 735.0mL. Mix thoroughly. Adjust pH to 7.5. Autoclave for 20 min at 15 psi pressure–121°C. Cool to 60°C. Warm artificial sea water to 55°C. Aseptically add 250.0mL warm artificial sea water.

Mix thoroughly. Adjust pH to 7.3. Aseptically add 10.0mL glucose solution and 5.0 mL vitamin solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Nocardioides aquaticus*, *Antarctobacter heliothermus*, *Sulfitobacter brevis*, *Roseovarius tolerans*, *Staleyia guttiformis*, *Roseovarius tolerans*, *Friedmanniella lacustris*, and *Nesterenkonia lacusekhoensis*.

Elek Agar

See: K-L Virulence Agar

Elliker Agar**Composition per liter:**

Pancreatic digest of casein	20.0g
Agar	15.0g
Glucose	5.0g
Lactose	5.0g
Sucrose	5.0g
Yeast extract	5.0g
NaCl	4.0g
Gelatin	2.5g
Sodium acetate	1.5g
Ascorbic acid	0.5g

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of lactic streptococci.

Elliker Agar**Composition per liter:**

Pancreatic digest of casein	20.0g
Agar	15.0g
Yeast extract	10.0g
Gelatin	4.0g
Glucose	3.0g
Ascorbic acid	2.5g
Lactose	2.5g
NaCl	2.5g
Sodium acetate	2.5g
Sucrose	2.5g

pH 6.8 ± 0.1 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of streptococci and lactobacilli of importance in the dairy industry.

Elliker Broth**Composition per liter:**

Pancreatic digest of casein	20.0g
Yeast extract	10.0g
Gelatin	4.0g
Glucose	3.0g

NaCl	4.0g
Gelatin	2.5g
Sodium acetate	1.5g
Ascorbic acid	0.5g

pH 6.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into test tubes that contain an inverted Durham tube. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of streptococci and lactobacilli of importance in the dairy industry.

Elliker Broth

(Lactobacilli Broth)

Composition per liter:

Casein enzymatic hydrolysate	22.5g
Glucose	5.0g
Lactose	5.0g
Saccharose	5.0g
Yeast extract	5.0g
NaCl	4.0g
Sodium acetate	1.5g
Ascorbic acid	0.5g

pH 6.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into test tubes that contain an inverted Durham tube. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of streptococci and lactobacilli of importance in the dairy industry.

Elliker HiVeg Broth

(Lactobacilli HiVeg Broth)

Composition per liter:

Plant hydrolysate	22.5g
Glucose	5.0g

Lactose	5.0g
Saccharose	5.0g
Yeast extract	5.0g
NaCl	4.0g
Sodium acetate	1.5g
Ascorbic acid	0.5g

pH 6.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into test tubes that contain an inverted Durham tube. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of streptococci and lactobacilli of importance in the dairy industry.

Elliker Lactose Broth

(ATCC Medium 2333)

Composition per liter:

Pancreatic digest of casein	20.0g
Lactose	10.0g
Yeast extract	5.0g
NaCl	4.0g
Gelatin	2.5g
Ascorbic acid	2.5g
Sodium acetate	1.5g

pH 7.0 ± 0.1 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into test tubes that contain an inverted Durham tube. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of streptococci and lactobacilli of importance in the dairy industry.

EMB Agar

(Eosin Methylene Blue Agar)

Composition per liter:

Agar	13.5g
Pancreatic digest of casein	10.0g
Lactose	5.0g
Sucrose	5.0g
K ₂ HPO ₄	2.0g
Eosin Y	0.4g
Methylene Blue	0.065g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the isolation, cultivation, and differentiation of Gram-negative enteric bacteria based on lactose fermentation. Bacteria that ferment lactose, especially the coliform bacterium *Escherichia coli*, appear as colonies with a green metallic sheen or blue-black to brown color. Bacteria that do not ferment lactose appear as colorless or transparent, light purple colonies.

EMB Agar Base**Composition per liter:**

Agar	15.0g
Peptone.....	10.0g
K ₂ HPO ₄	2.0g
Eosin Y	0.4g
Methylene Blue.....	0.065g

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the isolation, cultivation, and differentiation of Gram-negative enteric bacteria based on lactose fermentation. Bacteria that ferment lactose, especially the coliform bacterium *Escherichia coli*, appear as colonies with a green metallic sheen or blue-black to brown color. Bacteria that do not ferment lactose appear as colorless or transparent, light purple colonies.

EMB Agar, Modified**(Eosin Methylene Blue Agar, Modified)****Composition per liter:**

Agar	15.0g
Lactose	10.0g
Pancreatic digest of gelatin	10.0g
K ₂ HPO ₄	2.0g
Eosin Y	0.4g
Methylene Blue.....	0.065g

pH 6.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 60°C. Shake medium to oxidize methylene blue. Pour into sterile Petri dishes. Swirl flask while pouring plates to distribute precipitate.

Use: For the isolation, cultivation, and differentiation of Gram-negative enteric bacteria based on lactose fermentation. Bacteria that ferment lactose, especially the coliform bacterium *Escherichia coli*, appear as colonies with a green metallic sheen or blue-black to brown color. Bacteria that do not ferment lactose appear as colorless or transparent, light purple colonies.

EMB HiVeg Agar**Composition per liter:**

**Emerson Agar
(ATCC Medium 199)****Composition per liter:**

Agar	20.0g
Glucose	10.0g
Beef extract.....	4.0g
Pancreatic digest of gelatin.....	4.0g

NaCl.....	2.5g
Yeast extract.....	1.0g
pH 7.0 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 13 psi pressure–118°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation, cultivation, and maintenance of members of the Actinomycetaceae, Streptomycetaceae, and molds. For the cultivation and maintenance of *Arthrobacter* species, *Microbispora rosea*, *Micromonospora coerulea*, *Mycobacterium* species, *Nocardia asteroides*, *Nocardioopsis dassonvillei*, *Pseudonocardia thermophila*, *Staphylococcus epidermidis*, *Streptomyces flaveus*, *Streptomyces olivaceus*, *Streptomyces thermoviolaceus*, *Streptomyces thermovulgaris*, and *Streptomyces vendargensis*.

Emerson Agar, Half Strength

Composition per liter:

Agar	20.0g
Soluble starch.....	7.5g
Yeast extract.....	2.0g
K ₂ HPO ₄	0.5g
MgSO ₄ ·7H ₂ O	0.25g
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Streptosporangium longisporum*.

Emerson HiVeg Agar

Composition per liter:

Agar	20.0g
Glucose	10.0g
Plant extract	4.0g
Plant peptone.....	4.0g
NaCl	2.5g
Yeast extract.....	1.0g
Cycloheximide	0.05g
pH 7.0 ± 0.2 at 25°C	

Source: This medium, without cyclohexamide, is available as a premixed powder from HiMedia.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: Add components, except cycloheximide, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Add cycloheximide. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation, cultivation, and maintenance of members of the Actinomycetaceae, Streptomycetaceae, and molds.

Emerson YpSs Agar with 0.25% Seawater

Composition per liter:

Agar	20.0g
Soluble starch.....	15.0g
Yeast extract.....	4.0g
K ₂ HPO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.5g
Seawater.....	2.5mL
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 13 psi pressure–118°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Halosphaeria quadricornuta*.

Emerson YpSs Agar

Composition per liter:

Agar	20.0g
Soluble starch.....	15.0g
Yeast extract.....	4.0g
K ₂ HPO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.5g
pH 7.0 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 13 psi pressure–118°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Allomyces* and other fungi.

Emerson YpSs Agar with 25% Seawater and a Birch Stick

Composition per liter:

Agar	20.0g
Soluble starch.....	15.0g
Yeast extract.....	4.0g
K ₂ HPO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.5g
Seawater.....	250.0mL
Birch stick.....	1 per test tube
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components, except birch stick, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes. Add one birch stick to each tube. Autoclave for 15 min at 13 psi pressure–118°C.

Use: For the cultivation and maintenance of *Helicascus kanaloanus*, *Lulworthia* species, *Pseudohalonestria adversaria*, *Pseudohalonestria falcata*, *Pseudohalonestria phialidica*, and *Ophiobolus* species.

Emerson YpSs Broth, 1/2 strength (ATCC Medium 2370)

Composition per liter:

Soluble starch.....	7.5g
Yeast extract.....	2.0g

K ₂ HPO ₄	0.5g
MgSO ₄ ·7H ₂ O.....	0.25g
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Lulworthia medusa*.

Emerson YpSs Broth, 1/4 strength (ATCC Medium 2371)

Composition per liter:

Soluble starch.....	3.75g
Yeast extract.....	1.0g
K ₂ HPO ₄	0.25g
MgSO ₄ ·7H ₂ O.....	0.125g
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Lulworthia medusa*.

Emerson's Yeast Starch Agar (EYS Agar)

Composition per liter:

Starch, soluble.....	15.0g
Agar.....	12.0g
Yeast extract.....	4.0g
Na ₂ HPO ₄	1.0g
MgSO ₄	0.5g
pH 6.8 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 6.8. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Microtetraspora recticatena* and *Saccharothrix coeruleoviolacea*.

Emmon's Modification of Sabouraud's Agar

Composition per liter:

Agar.....	20.0g
Glucose.....	20.0g
Neopeptone.....	10.0g
pH 6.8–7.0 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.8–7.0. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Prototheca moriformis*, *Prototheca stagnora*, *Prototheca wickerhamii*, and *Prototheca zopfii*.

Emmon's Modification of Sabouraud's Agar (Sabouraud's Agar, Modified)

Composition per liter:

Agar.....	20.0g
Glucose.....	20.0g

Pancreatic digest of casein.....	5.0g
Peptic digest of animal tissue.....	5.0g
pH 6.8–7.0 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Bacillus subtilis*, *Nocardia* species, and *Streptomyces albus*.

Emmon's Modification of Sabouraud's Agar with 0.5% Yeast Extract in Olive Oil

Composition per liter:

Agar.....	20.0g
Glucose.....	20.0g
Yeast extract.....	5.0g
Pancreatic digest of casein.....	5.0g
Peptic digest of animal tissue.....	5.0g
Olive oil.....	10.0mL
pH 6.8–7.0 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Pityrosporum ovale*.

ENB Agar

Composition per liter:

Agar.....	15.0g
Pancreatic digest of gelatin.....	5.0g
NaCl.....	5.0g
Peptone.....	5.0g
K ₂ HPO ₄	3.5g
Beef extract.....	3.0g
KH ₂ PO ₄	1.5g
Glucose solution.....	10.0mL
pH 6.8 ± 0.2 at 25°C	

Glucose Solution:

Composition per liter:

Glucose.....	1.0g
--------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except glucose solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 6.8. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL of sterile glucose solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Escherichia coli*.

Endamoeba Medium

See: *Entamoeba* Medium

Endo Agar**Composition per liter:**

Agar	15.0g
Lactose	10.0g
Peptic digest of animal tissue.....	10.0g
K ₂ HPO ₄	3.5g
Na ₂ SO ₃	2.5g
Basic Fuchsin.....	0.5g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Caution: Basic Fuchsin is a potential carcinogen and care must be taken to avoid inhalation of the powdered dye and contact with the skin.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Pour into sterile Petri dishes. Swirl flask while pouring plates to keep precipitate in suspension. Protect from the light.

Use: For the selective isolation, cultivation, and differentiation of coliform and other enteric microorganisms based on their ability to ferment lactose. Lactose-fermenting bacteria appear as dark red colonies with a gold metallic sheen. Lactose-nonfermenting bacteria appear as colorless or translucent colonies.

Endo Agar**Composition per liter:**

Agar	10.0g
Lactose	10.0g
Peptic digest of animal tissue.....	10.0g
K ₂ HPO ₄	3.5g
Na ₂ SO ₃	2.5g
Basic Fuchsin solution.....	4.0mL

pH 7.5 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid.

Basic Fuchsin Solution:**Composition per 10.0mL:**

Basic Fuchsin.....	1.0g
Ethanol (95% solution).....	10.0mL

Preparation of Basic Fuchsin Solution: Add Basic Fuchsin to 10.0mL of ethanol. Mix thoroughly.

Caution: Basic Fuchsin is a potential carcinogen and care must be taken to avoid inhalation of the powdered dye and contact with the skin.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Pour into sterile Petri dishes. Swirl flask while pouring plates to keep precipitate in suspension. Protect from the light.

Use: For the selective isolation, cultivation, and differentiation of coliform and other enteric microorganisms based on their ability to ferment lactose. Lactose-fermenting bacteria appear as dark red colonies with a gold metallic sheen. Lactose-nonfermenting bacteria appear as colorless or translucent colonies.

Endo Agar**Composition per liter:**

Agar	15.0g
Peptic digest of animal tissue	10.0g
Lactose.....	10.0g
K ₂ HPO ₄	3.5g
Na ₂ SO ₃	2.5g
Basic Fuchsin.....	0.5g

pH 7.5 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Caution: Basic Fuchsin is a potential carcinogen and care must be taken to avoid inhalation of the powdered dye and contact with the skin.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Pour into sterile Petri dishes. Swirl flask while pouring plates to keep precipitate in suspension. Protect from the light.

Use: For the selective isolation, cultivation, and differentiation of coliform and other enteric microorganisms based on their ability to ferment lactose. Lactose-fermenting bacteria appear as dark red colonies with a gold metallic sheen. Lactose-nonfermenting bacteria appear as colorless or translucent colonies.

Endo Agar Base**Composition per liter:**

Agar	12.0g
Peptic digest of animal tissue	10.0g
Lactose.....	10.0g
K ₂ HPO ₄	3.5g
Na ₂ SO ₃	2.5g
Basic Fuchsin solution.....	4.0mL

pH 7.5 ± 0.2 at 25°C

Source: This medium, without Basic Fuchsin solution, is available as a premixed powder from HiMedia.

Basic Fuchsin Solution:**Composition per 10.0mL:**

Basic Fuchsin.....	1.0g
Ethanol (95% solution).....	10.0mL

Preparation of Basic Fuchsin Solution: Add Basic Fuchsin to 10.0mL of ethanol. Mix thoroughly.

Caution: Basic Fuchsin is a potential carcinogen and care must be taken to avoid inhalation of the powdered dye and contact with the skin.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Pour into sterile Petri dishes. Swirl flask while pouring plates to keep precipitate in suspension. Protect from the light.

Use: For the selective isolation, cultivation, and differentiation of coliform and other enteric microorganisms based on their ability to ferment lactose. Lactose-fermenting bacteria appear as dark red colonies with a gold metallic sheen. Lactose-nonfermenting bacteria appear as colorless or translucent colonies.

Endo Agar, Modified**Composition per liter:**

Agar	12.5g
Peptic digest of animal tissue.....	10.0g
Lactose	10.0g
Na ₂ SO ₃	3.3g
K ₂ HPO ₄	2.5g
Basic Fuchsin.....	0.3g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Caution: Basic Fuchsin is a potential carcinogen and care must be taken to avoid inhalation of the powdered dye and contact with the skin.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Pour into sterile Petri dishes. Swirl flask while pouring plates to keep precipitate in suspension. Protect from the light.

Use: For the selective isolation, cultivation, and differentiation of coliform and other enteric microorganisms based on their ability to ferment lactose. Lactose-fermenting bacteria appear as dark red colonies with a gold metallic sheen. Lactose-nonfermenting bacteria appear as colorless or translucent colonies.

Endo Agar, LES**(Endo Agar, Laurance Experimental Station)****(m-Endo Agar, LES)****(m-LES, Endo Agar)****Composition per liter:**

Agar	14.0g
Lactose	9.4g
Peptones (pancreatic digest of casein 65% and yeast extract 35%).....	7.5g
NaCl	3.7g
Pancreatic digest of casein.....	3.7g
Peptic digest of animal tissue.....	3.7g
K ₂ HPO ₄	3.3g
Na ₂ SO ₃	1.6g
Yeast extract.....	1.2g
KH ₂ PO ₄	1.0g
Basic Fuchsin.....	0.8g
Sodium lauryl sulfate.....	0.05g
Ethanol.....	20.0mL

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Caution: Basic Fuchsin is a potential carcinogen and care must be taken to avoid inhalation of the powdered dye and contact with the skin.

Preparation of Medium: Add ethanol to approximately 900.0mL of distilled/deionized water. Add remaining components. Bring volume to 1.0L with distilled/deionized water. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile 60mm Petri dishes in 4.0mL volumes. Protect from the light.

Use: For the cultivation and enumeration of coliform bacteria by the membrane filter method.

**Endo Agar, LES

Use: For the selective isolation, cultivation, and differentiation of coliform and other enteric microorganisms based on their ability to ferment lactose.

Endo Broth (m-Endo Broth)

Composition per liter:

Lactose	12.5g
Peptone	10.0g
NaCl	5.0g
Pancreatic digest of casein	5.0g
Peptic digest of animal tissue	5.0g
K ₂ HPO ₄	4.375g
Na ₂ SO ₃	2.1g
Yeast extract	1.5g
KH ₂ PO ₄	1.375g
Basic Fuchsin	1.05g
Sodium deoxycholate	0.1g
Ethanol (95% solution)	20.0mL

pH 7.2 ± 0.1 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Caution: Basic Fuchsin is a potential carcinogen and care must be taken to avoid inhalation of the powdered dye and contact with the skin.

Preparation of Medium: Add ethanol to approximately 900.0mL of distilled/deionized water. Add remaining components. Bring volume to 1.0L with distilled/deionized water. Mix thoroughly. Gently heat and bring to boiling. Rapidly cool broth below 45°C. Do not autoclave. Use 1.8–2.0mL for each filter pad. Protect from the light. Prepare broth freshly.

Use: For the cultivation and enumeration of coliform bacteria from water by the membrane filter method.

Endo HiVeg Agar

Composition per liter:

Agar	15.0g
Plant peptone	10.0g
Lactose	10.0g
K ₂ HPO ₄	3.5g
Na ₂ SO ₃	2.5g
Basic Fuchsin	0.5g

pH 7.5 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Caution: Basic Fuchsin is a potential carcinogen and care must be taken to avoid inhalation of the powdered dye and contact with the skin.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Pour into sterile Petri dishes. Swirl flask while pouring plates to keep precipitate in suspension. Protect from the light.

Use: For the selective isolation, cultivation, and differentiation of coliform and other enteric microorganisms based on their ability to ferment lactose. Lactose-fermenting bacteria appear as dark red colonies with a gold metallic sheen. Lactose-nonfermenting bacteria appear as colorless or translucent colonies.

Endo HiVeg Agar Base

Composition per liter:

Agar	12.0g
Plant peptone	10.0g

Lactose	10.0g
K ₂ HPO ₄	3.5g
Na ₂ SO ₃	2.5g
Basic Fuchsin solution	4.0mL

pH 7.5 ± 0.2 at 25°C

Source: This medium, without Basic Fuchsin solution, is available as a premixed powder from HiMedia.

Basic Fuchsin Solution:

Composition per 10.0mL:

Basic Fuchsin	1.0g
Ethanol (95% solution)	10.0mL

Preparation of Basic Fuchsin Solution: Add Basic Fuchsin to 10.0mL of ethanol. Mix thoroughly.

Caution: Basic Fuchsin is a potential carcinogen and care must be taken to avoid inhalation of the powdered dye and contact with the skin.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Pour into sterile Petri dishes. Swirl flask while pouring plates to keep precipitate in suspension. Protect from the light.

Use: For the selective isolation, cultivation, and differentiation of coliform and other enteric microorganisms based on their ability to ferment lactose. Lactose-fermenting bacteria appear as dark red colonies with a gold metallic sheen. Lactose-nonfermenting bacteria appear as colorless or translucent colonies.

Endo HiVeg Agar, Modified

Composition per liter:

Agar	12.5g
Plant peptone	10.0g
Lactose	10.0g
Na ₂ SO ₃	3.3g
K ₂ HPO ₄	2.5g
Basic Fuchsin	0.3g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Caution: Basic Fuchsin is a potential carcinogen and care must be taken to avoid inhalation of the powdered dye and contact with the skin.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Pour into sterile Petri dishes. Swirl flask while pouring plates to keep precipitate in suspension. Protect from the light.

Use: For the selective isolation, cultivation, and differentiation of coliform and other enteric microorganisms based on their ability to ferment lactose. Lactose-fermenting bacteria appear as dark red colonies with a gold metallic sheen. Lactose-nonfermenting bacteria appear as colorless or translucent colonies.

Endo HiVeg Agar with NaCl

Composition per liter:

Agar	12.0g
Lactose	10.0g
Plant special peptone	8.0g

NaCl	3.0g
Na ₂ SO ₄	2.5g
K ₂ HPO ₄	2.0g
Basic Fuchsin	0.2g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Caution: Basic Fuchsin is a potential carcinogen and care must be taken to avoid inhalation of the powdered dye and contact with the skin.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Pour into sterile Petri dishes. Swirl flask while pouring plates to keep precipitate in suspension. Protect from the light.

Use: For the selective isolation, cultivation, and differentiation of coliform and other enteric microorganisms based on their ability to ferment lactose.

Endothia Complete Agar

Composition per liter:

Agar	20.0g
Glucose	10.0g
Malt extract	7.5g
Yeast extract	2.5g
NH ₄ NO ₃	1.5g
KH ₂ PO ₄	1.0g
KCl	0.5g
Na ₂ SO ₄	0.25g
MgSO ₄	0.125g
CaCl ₂	0.063g
Thiamine	2.0mg
Trace elements solution	1.0mL

pH 4.0–5.0 at 25°C

Trace Elements Solution:

Composition per liter:

CuSO ₄	0.2g
ZnCl ₂	0.2g
MnCl ₂	0.07g
FeCl ₃	0.05g
H ₃ BO ₃	0.03g
Na ₂ MoO ₄	0.02g

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Cryphonectria parasitica*.

Endothia Complete Broth

Composition per liter:

Glucose	10.0g
Malt extract	7.5g
Yeast extract	2.5g
NH ₄ NO ₃	1.5g
KH ₂ PO ₄	1.0g
KCl	0.5g

Na ₂ SO ₄	0.25g
MgSO ₄	0.125g
CaCl ₂	0.063g
Thiamine	2.0mg
Trace elements solution	1.0mL

pH 4.0–5.0 at 25°C

Trace Elements Solution:

Composition per liter:

CuSO ₄	0.2g
ZnCl ₂	0.2g
MnCl ₂	0.07g
FeCl ₃	0.05g
H ₃ BO ₃	0.03g
Na ₂ MoO ₄	0.02g

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Cryphonectria parasitica*.

Enriched *Cytophaga* Agar

Composition per liter:

Agar	15.0g
Pancreatic digest of casein	2.0g
Beef extract	0.5g
Yeast extract	0.5g
Sodium acetate	0.2g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Cytophaga arvensicola*, *Cytophaga johnsonae*, *Cytophaga psychrophila*, *Cytophaga* species, *Cytophaga succinicans*, *Flavobacterium aquatile*, *Flavobacterium branchiophila*, *Flexibacter aurantiacus*, *Flexibacter canadensis*, *Flexibacter* species, *Pseudomonas echinoides*, *Psychrobacter immobilis*, *Xanthobacter autotrophicus*, and *Zoogloea ramigera*.

Enriched *Cytophaga* Agar Medium (DSMZ Medium 1133)

Composition per liter:

Agar	15.0g
Tryptone	2.0g
Beef extract	0.5g
Yeast extract	0.5g
Sodium acetate	0.2g

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.3. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into Petri dishes or aseptically distribute into sterile tubes. For soft agar for the maintenance of active cultures reduce agar content to 4.0g/L. Dispense in 3–4mL amounts in 7mL screw-capped bottles (bijou bottles).

Use: For the cultivation of *Cytophaga* spp.

Enriched *Cytophaga* Medium**Composition per liter:**

Pancreatic digest of casein.....	2.0g
Beef extract.....	0.5g
Yeast extract.....	0.5g
Sodium acetate.....	0.2g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Cytophaga columnaris*.

Enriched *Isonema* Medium**Composition per 1111.0mL:**

Natural seawater.....	1.0L
Horse serum, inactivated.....	100.0mL
Enrichment solution.....	10.0mL
Vitamin solution.....	1.0mL

Enrichment Solution:**Composition per liter:**

NaNO ₃	4.667g
Na ₂ SiO ₃ ·9H ₂ O.....	3.0g
Sodium glycerophosphate.....	0.667g
EDTA·2H ₂ O.....	0.553g
H ₃ BO ₃	0.38g
Fe(NH ₄) ₂ (SO ₄) ₂ ·6H ₂ O.....	0.234g
MnSO ₄ ·4H ₂ O.....	0.054g
FeCl ₃ ·6H ₂ O.....	0.016g
ZnSO ₄ ·7H ₂ O.....	7.3mg
CoSO ₄ ·7H ₂ O.....	1.6mg

Preparation of Enrichment Solution: Add Na₂SiO₃·9H₂O to distilled/deionized water. Mix thoroughly. Neutralize with 1N HCl. Add 500.0mL of distilled/deionized water. Mix thoroughly. Add remaining components and bring volume to 1.0L with distilled/deionized water. Mix thoroughly. Filter sterilize.

Vitamin Solution:**Composition per liter:**

Thiamine.....	0.1g
Vitamin B ₁₂	2.0mg
Biotin.....	1.0mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Allow natural seawater to age for 2 months. Filter sterilize. Aseptically add 10.0mL of sterile enrichment solution and 1.0mL of sterile vitamin solution. Mix thoroughly. Prior to inoculation, aseptically add 100.0mL of heat-inactivated horse serum. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Diplonema* species, *Gymnophrydium marinum*, *Isonema* species, and *Rhynchopus* species.

Enriched Nutrient Agar**Composition per liter:**

Agar.....	15.0g
Heart, solids from infusion.....	12.5g
Yeast extract.....	3.3g
Peptone.....	2.1g

NaCl.....	2.1g
Beef extract.....	0.42g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Micrococcus luteus*.

Enriched Nutrient Broth**Composition per liter:**

Beef heart, infusion from.....	250.0g
Tryptose.....	5.0g
Pancreatic digest of gelatin.....	3.38g
NaCl.....	2.5g
Yeast extract.....	2.5g
Beef extract.....	2.02g

pH 7.2 ± 0.1 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Bacillus licheniformis*, *Bacillus polymyxa*, *Bacillus subtilis*, *Escherichia coli*, *Listonella anguillarum*, *Micrococcus luteus*, *Pseudomonas aeruginosa*, *Salmonella choleraesuis*, *Staphylococcus aureus*, *Staphylococcus epidermidis*, *Streptococcus* species, and *Vibrio cholerae*.

Enriched Nutrient Broth**Composition per liter:**

Beef heart, infusion from.....	300.0g
Tryptose.....	7.5g
NaCl.....	3.0g
Yeast extract.....	3.0g
Peptone.....	2.5g
NaCl.....	2.5g
Beef extract.....	0.5g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of fastidious bacteria.

Enriched Thioglycollate HiVeg Broth**Composition per liter:**

Plant hydrolysate.....	17.0g
Glucose.....	6.0g
Papaic digest of soybean meal.....	3.0g
NaCl.....	2.5g
Agar.....	0.7g
Na-thioglycollate.....	0.5g
L-Cystine.....	0.25g
Na ₂ SO ₃	0.1g
Fe ₄ (P ₂ O ₇) ₃ ·H ₂ O.....	0.005g
Vitamin K ₁	0.001g

pH 7.1 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Prepare freshly or boil and cool the medium just before use.

Use: For the cultivation of both aerobic and anaerobic organisms. For the performance of sterility tests of turbid or viscous specimens.

Enrichment Broth for *Aeromonas hydrophila*

Composition per liter:

NaCl	5.0g
Maltose.....	3.5g
Yeast extract.....	3.0g
Bile salts No. 3.....	1.0g
L-Cysteine-HCl·H ₂ O	0.3g
Bromthymol Blue	0.03g
Novobiocin.....	5.0mg

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and enrichment of *Aeromonas hydrophila*.

Enrichment Broth, pH 7.3

Composition per liter:

Pancreatic digest of casein.....	17.0g
Yeast extract.....	6.0g
NaCl.....	5.0g
Papaic digest of soybean meal	3.0g
Glucose	2.5g
K ₂ HPO ₄	2.5g
Nalidixic acid solution	8.0mL
Cycloheximide solution	5.1mL
Acriflavin-HCl solution	3.0mL

pH 7.3 ± 0.2 at 25°C

Cycloheximide Solution:

Composition per 10.0mL:

Cycloheximide	0.1g
Ethanol, absolute.....	4.0mL

Preparation of Cycloheximide Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Nalidixic Acid Solution:

Composition per 10.0mL:

Nalidixic acid.....	0.05g
---------------------	-------

Preparation of Nalidixic Acid Solution: Add nalidixic acid to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Acriflavin-HCl Solution:

Composition per 10.0mL:

Acriflavin-HCl	0.05g
----------------------	-------

Preparation of Acriflavin-HCl Solution: Add acriflavin-HCl to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components—except cycloheximide solution, nalidixic acid solution, and acriflavin-HCl solution—to

distilled/deionized water and bring volume to 983.9mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 5.1mL of sterile cycloheximide solution, 8.0mL of sterile nalidixic acid solution, and 3.0mL of sterile acriflavin-HCl solution. Mix thoroughly. Aseptically distribute into sterile tubes.

Use: For the isolation, cultivation, and enrichment of a variety of microorganisms from nondairy foods.

Enrichment Broth, pH 7.3

Composition per liter:

Pancreatic digest of casein.....	17.0g
Yeast extract.....	6.0g
NaCl.....	5.0g
Papaic digest of soybean meal	3.0g
Glucose	2.5g
K ₂ HPO ₄	2.5g
Nalidixic acid solution.....	8.0mL
Cycloheximide solution	5.1mL
Acriflavin-HCl solution	2.0mL

pH 7.3 ± 0.2 at 25°C

Cycloheximide Solution:

Composition per 10.0mL:

Cycloheximide.....	0.1g
Ethanol, absolute.....	4.0mL

Preparation of Cycloheximide Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Nalidixic Acid Solution:

Composition per 10.0mL:

Nalidixic acid.....	0.05g
---------------------	-------

Preparation of Nalidixic Acid Solution: Add nalidixic acid to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Acriflavin-HCl Solution:

Composition per 10.0mL:

Acriflavin-HCl	0.05g
----------------------	-------

Preparation of Acriflavin-HCl Solution: Add acriflavin-HCl to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components—except cycloheximide solution, nalidixic acid solution, and acriflavin-HCl solution—to distilled/deionized water and bring volume to 984.9mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 5.1mL of cycloheximide solution, 8.0mL of nalidixic acid solution, and 2.0mL of acriflavin-HCl solution. Mix thoroughly. Aseptically distribute into sterile tubes.

Use: For the isolation, cultivation, and enrichment of a variety of microorganisms from milk and dairy products.

Enrichment Broth, pH 7.3 with Pyruvate

Composition per liter:

Pancreatic digest of casein.....	17.0g
Yeast extract.....	6.0g

NaCl	5.0g
Papaic digest of soybean meal	3.0g
Glucose	2.5g
K ₂ HPO ₄	2.5g
Pyruvate solution	11.1mL
Nalidixic acid solution	8.0mL
Cycloheximide solution	5.1mL
Acriflavin-HCl solution	3.0mL
pH 7.3 ± 0.2 at 25°C	

Pyruvate Solution:**Composition per 20.0mL:**

Sodium pyruvate	2.0g
-----------------------	------

Preparation of Pyruvate Solution: Add sodium pyruvate to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize.

Cycloheximide Solution:**Composition per 10.0mL:**

Cycloheximide	0.1g
Ethanol, absolute	4.0mL

Preparation of Cycloheximide Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Nalidixic Acid Solution:**Composition per 10.0mL:**

Nalidixic acid	0.05g
----------------------	-------

Preparation of Nalidixic Acid Solution: Add nalidixic acid to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Acriflavin-HCl Solution:**Composition per 10.0mL:**

Acriflavin-HCl	0.05g
----------------------	-------

Preparation of Acriflavin-HCl Solution: Add acriflavin-HCl to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components—except pyruvate solution, cycloheximide solution, nalidixic acid solution, and acriflavin-HCl solution—to distilled/deionized water and bring volume to 972.8mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 11.1mL of sterile pyruvate solution. Mix thoroughly. Inoculate medium and incubate at 30°C for 6 hr. Aseptically add 5.1mL of sterile cycloheximide solution, 8.0mL of sterile nalidixic acid solution, and 3.0mL of sterile acriflavin-HCl solution. Mix thoroughly.

Use: For the isolation, cultivation, and enrichment of *Listeria* species from nondairy foods.

Enrichment Broth, pH 7.3 with Pyruvate**Composition per liter:**

Pancreatic digest of casein	17.0g
NaCl	5.0g
Papaic digest of soybean meal	3.0g
Glucose	2.5g
K ₂ HPO ₄	2.5g
Yeast extract	6.0g

Pyruvate solution	11.1mL
Nalidixic acid solution	8.0mL
Cycloheximide solution	5.1mL
Acriflavin-HCl solution	2.0mL

pH 7.3 ± 0.2 at 25°C

Pyruvate Solution:**Composition per 20.0mL:**

Sodium pyruvate	2.0g
-----------------------	------

Preparation of Pyruvate Solution: Add sodium pyruvate to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize.

Cycloheximide Solution:**Composition per 10.0mL:**

Cycloheximide	0.1g
Ethanol, absolute	4.0mL

Preparation of Cycloheximide Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Nalidixic Acid Solution:**Composition per 10.0mL:**

Nalidixic acid	0.05g
----------------------	-------

Preparation of Nalidixic Acid Solution: Add nalidixic acid to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Acriflavin-HCl Solution:**Composition per 10.0mL:**

Acriflavin-HCl	0.05g
----------------------	-------

Preparation of Acriflavin-HCl Solution: Add acriflavin-HCl to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components—except pyruvate solution, cycloheximide solution, nalidixic acid solution, and acriflavin-HCl solution—to distilled/deionized water and bring volume to 973.8mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 11.1mL of sterile pyruvate solution. Mix thoroughly. Inoculate medium and incubate at 30°C for 6 hr. Aseptically add 5.1mL of sterile cycloheximide solution, 8.0mL of sterile nalidixic acid solution, and 2.0mL of sterile acriflavin-HCl solution. Mix thoroughly.

Use: For the isolation, cultivation, and enrichment of *Listeria* species from milk and dairy products.

Entamoeba dispar* Axenic Culture Medium*Composition per liter:**

YI-S solution	990.0mL
Gastric mucin stock suspension	10.0mL

YI-S Solution:**Composition per liter:**

YI broth	880.0mL
Bovine serum, heat inactivated	100.0mL
Vitamin mixture 18	20.0mL

Source: Vitamin mixture 18 is available from Biofluids, Rockville, MD.

YI Broth:**Composition per liter:**

YI base stock.....	780.0mL
10× Glucose buffer stock.....	100.0mL

YI Base Stock:**Composition per 780.0mL:**

Yeast extract.....	30.0g
L-Cysteine·HCl.....	1.0g
NaCl.....	1.0g
Ascorbic acid.....	0.2g
Ferric ammonium citrate.....	228.0mg

10× Glucose Buffer Stock:**Composition per 100.0.0mL:**

Glucose.....	10.0g
K ₂ HPO ₄	1.0g
KH ₂ PO ₄	0.6g

Preparation of 10× Glucose Buffer Stock: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of YI Base Stock: Add components to 600.0mL of distilled/deionized water. Mix thoroughly. Bring volume to 780.0mL with distilled/deionized water. Adjust pH to 6.8 with 1N NaOH. Distribute in 78.0mL aliquots to 100.0mL screw-capped bottles. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Preparation of YI Broth: Aseptically add 10.0mL of 10× glucose buffer stock to 78.0mL of cooled YI base stock. Adjust osmolarity with NaCl to 380.0milliosmols/kg.

Preparation of YI-S Solution: Aseptically add 2.0mL of vitamin mixture 18 and 10.0mL of heat-inactivated bovine serum to 88.0mL of YI broth. Distribute in 12.0mL aliquots to 16 x 125mm screw-capped test tubes. Store at 4°C in the dark with the caps screwed on tightly. Use within 96 hr.

Gastric Mucin Stock Suspension:**Composition per 100.0mL:**

Gastric mucin.....	1.0g
--------------------	------

Preparation of Gastric Mucin Stock Suspension: Add gastric mucin to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Aseptically add 0.12mL of gastric mucin stock suspension (thoroughly mix by swirling before use) to 12.0mL of the complete YI-S solution in a 16 x 125mm screw-capped test tube. Store at 4°C in the dark with the caps screwed on tightly. Use within 96 hrs.

Use: For the cultivation of *Entamoeba dispar*.

Entamoeba HiVeg Medium**Composition per liter:**

Agar.....	11.0g
Plant infusion No. 1.....	10.8g
Plant peptone No. 3.....	5.5g
Sodium glycerophosphate.....	3.0g
NaCl.....	2.7g

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring

to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Allow the tubes to solidify in a slanted position. Cover about half of the slant with fresh sterile horse seum saline mixture (1:6) and add a 5mm loopful of rice powder that has been sterilized in an oven at 160°C. Scorching should be prevented.

Use: For the cultivation of *Entamoeba histolytica*.

**Entamoeba Medium
(Endamoeba Medium)****Composition per liter:**

Liver infusion.....	272.0g
Rice powder.....	14.2g
Agar.....	11.0g
Proteose peptone.....	5.5g
Sodium glycerophosphate.....	3.0g
NaCl.....	2.7g
Horse serum.....	50.0mL

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Rice Powder:**Composition per 15.0g:**

Rice powder.....	15.0g
------------------	-------

Preparation of Rice Powder: Sterilize rice powder at 160°C for 60 min. Do not overheat or rice powder will scorch.

Preparation of Medium: Add components, except horse serum and rice powder, to distilled/deionized water and bring volume to 994.0mL. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes in 7.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Allow tubes to cool in a slanted position. Aseptically add enough sterile horse serum to each tube to cover about half the slant. Aseptically add 0.1g of sterile rice powder to each tube.

Use: For the cultivation of *Entamoeba histolytica*.

**Enteric Fermentation Base
(Fermentation Base for Campylobacter)****Composition per liter:**

Peptic digest of animal tissue.....	10.0g
NaCl.....	5.0g
Beef extract.....	3.0g
Carbohydrate solution.....	100.0mL
Andrade's indicator.....	10.0mL

pH 7.2 ± 0.1 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Carbohydrate Solution:**Composition per 100.0mL:**

Carbohydrate.....	10.0g
-------------------	-------

Preparation of Carbohydrate Solution: Add carbohydrate to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Glucose, lactose, mannitol, sucrose, adonitol, arabinose, cellobiose, dulcitol, glycerol, inositol, salicin, xylose, or other carbohydrates may be used. For the preparation of expensive carbohydrate solutions (adonitol, arabinose, cellobiose, dulcitol, glycerol, inositol, salicin, or xylose), 5.0g of carbohydrate per 100.0mL of distilled/deionized water may be used.

Andrade's Indicator:**Composition** per 100.0mL:

NaOH (1N solution).....	16.0mL
Acid Fuchsin.....	0.1g

Caution: Acid Fuchsin is a potential carcinogen and care must be taken to avoid inhalation of the powdered dye and contact with the skin.

Preparation of Andrade's Indicator: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components, except carbohydrate solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes that contain an inverted Durham tube in 9.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 1.0mL of sterile carbohydrate solution per tube. Mix thoroughly.

Use: For the cultivation and differentiation of a variety of bacteria based on their ability to ferment different carbohydrates. Bacteria that produce acid from carbohydrate fermentation turn the medium dark pink to red. Bacteria that produce gas have a bubble trapped in the Durham tube.

Enterobacter Medium**Composition** per 800.0mL:

Casein hydrolysate.....	2.0g
K ₂ HPO ₄	1.4g
K ₂ SO ₄	1.0g
Yeast extract.....	1.0g
KH ₂ PO ₄	0.6g
MgSO ₄	0.5g
Glycerol.....	20.0mL

Preparation of Medium: Add components to distilled/deionized water and bring volume to 800.0mL. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Enterobacter* species and *Klebsiella pneumoniae*.

Enterobacteria Enrichment Broth, Mossel**Composition** per liter:

Pancreatic digest of gelatin.....	10.0g
Na ₂ HPO ₄ , anhydrous.....	6.4g
Glucose, anhydrous.....	4.5g
Bile salts (sodium desoxycholate, sodium lauryl sulphate, sodium citrate).....	3.055g
KH ₂ PO ₄	2.0g
Brilliant Green.....	0.015g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Maintain at 100°C for 30 min, typically using flowing steam. Do not autoclave. Cool rapidly in cold running water. Mix Aseptically distribute into tubes or flasks.

Use: For the enrichment of bile-tolerant Gram-negative bacteria in the microbiological examination of pharmaceutical products.

Enterobacteriaceae Enrichment Broth

See: **EE Broth**

Enterobacteriaceae Enrichment Broth, Mossel

See: **EE Broth, Mossel**

**Enterococci Broth, Chromocult
(Chromocult Enterococci Broth)****Composition** per liter:

Peptone.....	8.6g
NaCl.....	6.4g
Tween 80.....	2.2g
NaN ₃	0.6g
5-Bromo-4-chloro-3-indolyl-β-D-glucopyranoside (X-GLU).....	0.04

pH 7.5 ± 0.2 at 25°C

Source: This medium is available from Merck.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix well. Distribute into tubes. Autoclave for 15 min at 15 psi pressure–121°C. The prepared broth is clear and yellowish.

Use: For the detection of enterococci in food and water. The sodium azide present in this medium largely inhibits the growth of the accompanying, and especially the Gram-negative microbial flora while sparing the enterococci. The substrate X-GLU (5-bromo-4-chloro-3-indolyl-β-D-glucopyranoside) is cleaved, stimulated by selected peptones, by the enzyme β-D-glucosidase which is characteristic for enterococci. This results in an intensive blue-green color of the broth. Azide, at the same time, prevents a false positive result by most other β-D-glucosidase positive bacteria. Therefore, the color change of the broth largely confirms the presence of enterococci and group D streptococci.

Enterococci Confirmatory Agar**Composition** per liter:

Agar.....	15.0g
Glucose.....	5.0g
Pancreatic digest of casein.....	5.0g
Yeast extract.....	5.0g
NaN ₃	0.4g
Methylene Blue.....	10.0mg
Enterococci confirmatory broth.....	variable

pH 8.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Caution: Sodium azide is toxic. Azides also react with metals and disposal must be highly diluted.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes. Autoclave for 15 min at 15 psi pressure–121°C. Allow tubes to cool in a slanted position. Add sufficient amount of Enterococci confirmatory broth (see below) to cover half the slant.

Use: For the identification of enterococci from water by the confirmatory test.

Enterococci Confirmatory Broth**Composition** per liter:

NaCl.....	65.0g
Glucose.....	5.0g
Pancreatic digest of casein.....	5.0g
Yeast extract.....	5.0g
NaN ₃	0.4g

Methylene Blue.....	10.0mg
Penicillin	650U
pH 8.0 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Caution: Sodium azide is toxic. Azides also react with metals and disposal must be highly diluted.

Preparation of Medium: Add components, except penicillin, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add penicillin. Mix thoroughly.

Use: For the identification of enterococci from water by the confirmatory test.

Enterococci Presumptive Broth

Composition per liter:

Glucose	5.0g
Pancreatic digest of casein.....	5.0g
Yeast extract.....	5.0g
NaN ₃	0.4g
Bromthymol Blue	32.0mg
pH 8.4 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Caution: Sodium azide is toxic. Azides also react with metals and disposal must be highly diluted.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation and identification of enterococci from water by the presumptive test. Bacteria that produce acid and turn the medium yellow and turbid after incubation at 45°C are presumptive enterococci.

Enterococcosel™ Agar

Composition per liter:

Pancreatic digest of casein.....	17.0g
Agar	13.5g
Oxgall.....	10.0g
NaCl.....	5.0g
Yeast extract.....	5.0g
Peptic digest of animal tissue.....	3.0g
Esculin	1.0g
Sodium citrate	1.0g
Ferric ammonium citrate.....	0.5g
NaN ₃	0.25g
pH 7.1 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Caution: Sodium azide is toxic. Azides also react with metals and disposal must be highly diluted.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the rapid, selective isolation, cultivation, and enumeration of fecal group D streptococci (enterococci). For the cultivation of staphylococci and *Listeria monocytogenes*.

Enterococcosel™ Broth

Composition per liter:

Pancreatic digest of casein.....	17.0g
Oxgall	10.0g
NaCl.....	5.0g
Yeast extract.....	5.0g
Peptic digest of animal tissue	3.0g
Esculin	1.0g
Sodium citrate	1.0g
Ferric ammonium citrate.....	0.5g
NaN ₃	0.25g
pH 7.1 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Caution: Sodium azide is toxic. Azides also react with metals and disposal must be highly diluted.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring until dissolved. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and differentiation of group D streptococci (enterococci).

Enterococcus Agar (m-Enterococcus Agar) (Azide Agar)

Composition per liter:

Pancreatic digest of casein.....	15.0g
Agar	10.0g
Papaic digest of soybean meal.....	5.0g
Yeast extract.....	5.0g
KH ₂ PO ₄	4.0g
Glucose	2.0g
NaN ₃	0.4g
Triphenyltetrazolium chloride	0.1g
pH 7.2 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Caution: Sodium azide is toxic. Azides also react with metals and disposal must be highly diluted.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Cool to 45°–50°C. Do not autoclave. Pour into sterile Petri dishes.

Use: For the isolation, cultivation, and enumeration of enterococci in water, sewage, and feces by the membrane filter method. For the direct plating of specimens for the detection and enumeration of fecal streptococci.

Enterococcus Confirmatory HiVeg Agar with Penicillin

Composition per liter:

Agar	15.0g
Glucose	5.0g
Plant hydrolysate	5.0g

Yeast extract.....	5.0g
NaN ₃	0.4g
Methylene Blue.....	0.01g
Penicillin solution	10.0mL

pH 8.0 ± 0.2 at 25°C

Source: This medium, without penicillin, is available as a premixed powder from HiMedia.

Caution: Sodium azide is toxic. Azides also react with metals and disposal must be highly diluted.

Penicillin Solution:

Composition per 10.0mL:

Penicillin	650U
------------------	------

Preparation of Penicillin Solution: Add penicillin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except penicillin solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL sterile penicillin solution. Mix thoroughly. Pour into sterile Petri dishes or dispense into sterile tubes.

Use: For the isolation, cultivation, and enumeration of enterococci in water, sewage, and feces by the membrane filter method. For the direct plating of specimens for the detection and enumeration of fecal streptococci.

Enterococcus Confirmatory HiVeg Broth with Penicillin

Composition per liter:

NaCl	65.0g
Glucose	5.0g
Plant hydrolysate.....	5.0g
Yeast extract.....	5.0g
NaN ₃	0.4g
Methylene Blue.....	0.01g
Penicillin solution	10.0mL

pH 8.0 ± 0.2 at 25°C

Source: This medium, without penicillin, is available as a premixed powder from HiMedia.

Caution: Sodium azide is toxic. Azides also react with metals and disposal must be highly diluted.

Penicillin Solution:

Composition per 10.0mL:

Penicillin	650U
------------------	------

Preparation of Penicillin Solution: Add penicillin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except penicillin solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL sterile penicillin solution. Mix thoroughly.

Use: For the cultivation of enterococci in water, sewage, and feces.

Enterococcus faecium Medium

Composition per liter:

Sucrose.....	97.3g
Brain heart, solids from infusion	37.0g
Agar	13.3g
NaCl.....	9.3g
Yeast extract.....	5.0g
MgSO ₄	0.25g

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Enterococcus faecium*.

Enterococcus Presumptive HiVeg Broth with Penicillin

Composition per liter:

Glucose	5.0g
Plant hydrolysate	5.0g
Yeast extract.....	5.0g
NaN ₃	0.4g
Bromthymol Blue.....	0.032g
Penicillin solution	10.0mL

pH 8.4 ± 0.2 at 25°C

Source: This medium, without penicillin, is available as a premixed powder from HiMedia.

Caution: Sodium azide is toxic. Azides also react with metals and disposal must be highly diluted.

Penicillin Solution:

Composition per 10.0mL:

Penicillin	650U
------------------	------

Preparation of Penicillin Solution: Add penicillin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except penicillin solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL sterile penicillin solution. Mix thoroughly.

Use: For the cultivation and presumptive identification of enterococci.

Eosin Methylene Blue Agar

Erwinia amylovora Selective Medium

Composition per liter:

Agar	20.0g
Mannitol.....	10.0g
L-Asparagine	3.0g
Sodium taurocholate.....	2.5g

K ₂ HPO ₄	2.0g
Nicotinic acid.....	0.5g
MgSO ₄ ·7H ₂ O.....	0.2g
Nitrilotriacetic acid.....	10.0mL
Actidione (cycloheximide) solution.....	10.0mL
Bromthymol Blue.....	9.0mL
Neutral Red.....	2.5mL
TiNO ₃ solution.....	1.75mL
Tergitol™ 7.....	0.1mL

pH 7.2–7.3 at 25°C

Cycloheximide Solution:**Composition per 10.0mL:**

Cycloheximide.....	0.05g
--------------------	-------

Preparation of Cycloheximide Solution: Add cycloheximide to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

TiNO₃ Solution:**Composition per 10.0mL:**

TiNO ₃	0.1g
-------------------------	------

Preparation of TiNO₃ Solution: Add TiNO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except TiNO₃ solution and cycloheximide solution, to distilled/deionized water and bring volume to 988.25mL. Mix thoroughly. Adjust pH to 7.2–7.3. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 1.75mL of sterile TiNO₃ solution and 10.0mL of sterile cycloheximide solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of *Erwinia amylovora*.

Erwinia* Fermentation Medium*Composition per liter:**

Lactose.....	45.0g
K ₂ HPO ₄	3.6g
KH ₂ PO ₄	1.8g
Yeast extract.....	1.8g
(NH ₄) ₂ SO ₄	1.46g
MgSO ₄ ·7H ₂ O.....	0.6g
CaCl ₂ ·2H ₂ O.....	0.04g
FeSO ₄ ·7H ₂ O.....	1.9mg
CoCl ₂	1.0mg
CuSO ₄ ·5H ₂ O.....	1.0mg
MnSO ₄ ·H ₂ O.....	1.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	1.0mg
ZnSO ₄ ·7H ₂ O.....	1.0mg

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0 with NaOH (approximately 0.18g). Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Rahnella aquatilis*.

Erwinia* Medium D3*Composition per liter:**

Agar.....	15.0g
Arabinose.....	10.0g

Sucrose.....	10.0g
LiCl.....	7.0g
Casein hydrolysate.....	5.0g
NaCl.....	5.0g
MgSO ₄ ·7H ₂ O.....	0.3g
Acid Fuchsin.....	0.1g
Bromthymol Blue.....	0.06g
Sodium dodecyl sulfate.....	0.05g

pH 7.0 ± 0.2 at 25°C

Caution: Acid Fuchsin is a potential carcinogen and care must be taken to avoid inhalation of the powdered dye and contact with the skin.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 8.2. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. The pH after autoclaving should be 7.0. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of *Erwinia* species.

Erwinia* Selective Medium*Composition per liter:**

Agar.....	15.0g
(NH ₄) ₂ SO ₄	5.0g
K ₂ HPO ₄	2.0g
Eosin Y.....	0.4g
Methylene Blue.....	0.065g
Glycerol.....	10.0mL
Antibiotic solution.....	10.0mL

Antibiotic Solution:**Composition per 10.0mL:**

Cycloheximide.....	0.25g
Novobiocin.....	0.04g
Neomycin sulfate.....	0.04g

Preparation of Antibiotic Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: Add components, except antibiotic solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile antibiotic solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation and cultivation of *Erwinia* species.

Erwinia tracheiphila* Agar*Composition per liter:**

Agar.....	15.0g
Glucose.....	10.0g
Peptone.....	10.0g
Beef extract.....	5.0g
Yeast extract.....	1.0g

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Erwinia tracheiphila*.

***Erysipelothrix* Medium**

Composition per liter:

Na ₂ HPO ₄ ·12H ₂ O	18.0g
Glucose	6.0g
Peptone S	5.0g
Yeast extract	5.0g
L-Arginine·HCl	0.5g
Tween™ 80	0.5mL

pH 7.8–8.0 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Erysipelothrix* species.

Erythritol Agar

Composition per liter:

Agar	15.0g
Erythritol	2.0g
K ₂ HPO ₄	1.15g
NH ₄ NO ₃	1.0g
KH ₂ PO ₄	0.625g
MgSO ₄ ·7H ₂ O	0.02g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Klebsiella pneumoniae*.

Erythritol Broth

Composition per liter:

Erythritol	2.0g
K ₂ HPO ₄	1.15g
NH ₄ NO ₃	1.0g
Yeast extract	1.0g
KH ₂ PO ₄	0.625g
MgSO ₄ ·7H ₂ O	0.02g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Klebsiella pneumoniae*.

***Erythrobacter longus* Medium**

Composition per liter:

Peptone	2.0g
Proteose peptone No. 3	1.0g
Papaic digest of soybean meal	1.0g
Yeast extract	1.0g
Artificial seawater	700.0mL
Ferric citrate solution	2.0mL

pH 7.5 ± 0.2 at 25°C

Ferric Citrate Solution:

Composition per 10.0mL:

Ferric citrate	0.5g
----------------------	------

Preparation of Ferric Citrate Solution: Add ferric citrate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Erythrobacter longus*.

***Erythromicrobium roseococcus* Medium (DSMZ Medium 767)**

Composition per 1001.0mL:

Na-acetate	1.0g
Yeast extract	1.0g
Peptone	1.0g
MgSO ₄ ·7H ₂ O	0.5g
NH ₄ Cl	0.3g
K ₂ HPO ₄	0.3g
KCl	0.3g
CaCl ₂ ·2H ₂ O	0.05g
Trace elements solution SL-6	1.0mL
Vitamin B ₁₂ solution	1.0mL

pH 7.5–7.8 at 25°C

Vitamin B₁₂ Solution:

Composition per 100.0mL:

Vitamin B ₁₂	2.0mg
-------------------------------	-------

Preparation of Vitamin B₁₂ Solution: Add vitamin B₁₂ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Trace Elements Solution SL-6:

Composition per liter:

MnCl ₂ ·4H ₂ O	0.5g
H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
Na ₂ MoO ₄ ·2H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except vitamin solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.5–7.8. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add 10mL vitamin solution. Mix thoroughly. Aseptically distribute into sterile tubes or bottles.

Use: For the cultivation of *Erythrobacter litoralis*, *Erythromicrobium ramosum*, and *Roseococcus thiosulfatophilus*.

Erythromycin L Broth Medium

Composition per liter:

Pancreatic digest of casein	10.0g
NaCl	5.0g
Yeast extract	5.0g
Glucose	1.0g
Erythromycin solution	10.0mL

pH 7.0 ± 0.2 at 25°C

Erythromycin Solution:

Composition per 10.0mL:

Erythromycin	10.0mg
--------------------	--------

Preparation of Erythromycin Solution: Add erythromycin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except erythromycin solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Bring pH to 7.0. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL of sterile erythromycin solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Escherichia coli*.

Erythromycin LB Medium

Composition per liter:

Pancreatic digest of casein	10.0g
NaCl	10.0g
Yeast extract	5.0g
Erythromycin solution	10.0mL
pH 7.0 ± 0.2 at 25°C	

Erythromycin Solution:

Composition per 10.0mL:

Erythromycin	50.0mg
--------------	--------

Preparation of Erythromycin Solution: Add erythromycin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except erythromycin solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Bring pH to 7.0. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL of sterile erythromycin solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Escherichia coli*.

ESA Medium (Epoxy succinic Acid Medium)

Composition per liter:

Agar	20.0g
(NH ₄) ₂ SO ₄	3.0g
KH ₂ PO ₄	1.5g
Na ₂ HPO ₄	1.5g
MgSO ₄ ·7H ₂ O	0.5g
Yeast extract	0.5g
CaCl ₂ ·2H ₂ O	0.01g
FeSO ₄ ·7H ₂ O	0.01g
MnSO ₄ ·4H ₂ O	0.001g
Epoxy succinate solution	100.0mL
pH 7.0 ± 0.2 at 25°C	

Epoxy succinate Solution:

Composition per 100.0mL:

Sodium <i>cis</i> -epoxy succinate	10.0g
------------------------------------	-------

Preparation of Epoxy succinate Solution: Add sodium *cis*-epoxy succinate to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except epoxy succinate solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–60°C. Aseptically add sterile epoxy succinate solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Nocardia tartaricans*.

Escherichia coli Broth

See: **EC Broth**

Escherichia Medium (ATCC Medium 52)

Composition per liter:

Glucose	40.0g
Agar	30.0g
Peptone	10.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Escherichia coli*.

Escherichia Medium (ATCC Medium 53)

Composition per liter:

Agar	15.0g
Casein hydrolysate	6.0g
K ₂ HPO ₄	0.2g
MgSO ₄ ·7H ₂ O	0.2g
Asparagine	0.15g
FeSO ₄ ·7H ₂ O	1.0μg
Vitamin B ₁₂ solution	10.0mL
Glycerol	2.0mL
pH 7.0 ± 0.2 at 25°C	

Vitamin B₁₂ Solution:

Composition per 10.0mL:

Vitamin B ₁₂	0.04g
-------------------------	-------

Preparation of Vitamin B₁₂ Solution: Add vitamin B₁₂ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly.

Preparation of Medium: Add components—except glycerol, agar, and vitamin B₁₂ solution—to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.0. Filter through Whatman #1 filter paper. Add glycerol and agar. Mix thoroughly. Gently heat and bring to boiling. Add vitamin B₁₂ solution. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Escherichia coli*.

Escherichia Medium (ATCC Medium 57)

Composition per liter:

Agar	15.0g
K ₂ HPO ₄	7.0g
Glycerol	5.0g
KH ₂ PO ₄	3.0g
(NH ₄) ₂ SO ₄	1.5g
L-Lysine	0.1g
MgSO ₄	0.1g
CaCl ₂	0.01g
FeSO ₄ ·7H ₂ O	0.5mg
pH 7.1 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring

to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Escherichia coli*.

Escherichia Medium **(ATCC Medium 60)**

Composition per liter:

Agar	15.0g
K ₂ HPO ₄	7.0g
KH ₂ PO ₄	3.0g
Casein hydrolysate.....	2.0g
Sodium citrate, anhydrous	0.4g
MgSO ₄ ·7H ₂ O	0.1g
(NH ₄) ₂ SO ₄	0.1g
Glycerol	2.0mL

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Escherichia coli*.

Escherichia Medium **(ATCC Medium 62)**

Composition per 700.0mL:

Agar	12.5g
Casein hydrolysate.....	6.0g
Glycerol	2.0g
K ₂ HPO ₄	0.2g
MgSO ₄ ·7H ₂ O	0.2g
L-Asparagine	0.15g
FeSO ₄ ·7H ₂ O.....	5.0mg
Vitamin B ₁₂	0.4mg

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components, except glycerol, agar, and vitamin B₁₂, to distilled/deionized water and bring volume to 500.0mL. Adjust pH to 7.2. Mix thoroughly. Gently heat and bring to boiling. Filter through Whatman #1 filter paper. Cool to 25°C. Add agar and glycerol. Bring volume to 1.0L with distilled/deionized water. Mix thoroughly. Gently heat and bring to boiling. Readjust pH to 7.2. Add vitamin B₁₂. Mix thoroughly. Distribute into tubes in 10.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Allow tubes to cool in a slanted position.

Use: For the cultivation and maintenance of *Escherichia coli*.

Escherichia Medium **(ATCC Medium 271)**

Composition per liter:

Pancreatic digest of casein.....	10.0g
NaCl	8.0g
Yeast extract.....	1.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Escherichia coli*.

Escherichia Medium **(ATCC Medium 765)**

Composition per liter:

K ₂ HPO ₄	11.67g
Casamino acids	11.0g
KH ₂ PO ₄	4.49g
(NH ₄) ₂ SO ₄	1.98g
MgSO ₄ ·7H ₂ O	0.25g
FeSO ₄ ·7H ₂ O.....	0.5mg
Glycerol	20.25mL

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Escherichia coli*.

Esculin Agar

Composition per liter:

Agar	15.0g
Pancreatic digest of casein.....	13.0g
NaCl.....	5.0g
Yeast extract.....	5.0g
Heart muscle, solids from infusion.....	2.0g
Esculin	1.0g
Ferric citrate.....	0.5g

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into screw-capped tubes in 3.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Allow tubes to cool in a slanted position.

Use: For the cultivation and differentiation of bacteria based on their ability to hydrolyze esculin and produce H₂S. Bacteria that hydrolyze esculin appear as colonies surrounded by a reddish-brown to dark brown zone. Bacteria that produce H₂S appear as black colonies.

Esculin Agar, Lombard-Dowell *See: Lombard-Dowell Esculin Agar*

Esculin Agar, Modified CDC **(BAM M53)**

Composition per liter:

Heart muscle, infusion from	375.0g
Agar	15.0g
Thiotone.....	10.0g
NaCl.....	5.0g
Esculin	1.0g
Ferric citrate.....	0.5g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Cool to 55°C. Adjust pH to 7.0. Distribute into tubes or leave in flask. Autoclave for 20 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes. Allow tubes to cool in inclined position to produce slants.

Use: For the differentiation of *Enterobacter* spp.

Esculin Azide Broth**Composition per liter:**

Peptic digest of animal tissue.....	20.0g
Bile salts.....	10.0g
Yeast extract.....	5.0g
Esculin.....	1.0g
Sodium citrate.....	1.0g
Ferric ammonium citrate.....	0.5g
NaN ₃	0.25g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Caution: Sodium azide is toxic. Azides also react with metals and disposal must be highly diluted.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Cool to 45°–50°C. Do not autoclave.

Use: For the cultivation of enterococci in water, sewage, and feces.

Esculin Azide HiVeg Broth**Composition per liter:**

Plant peptone.....	25.0g
Synthetic detergent.....	5.0g
Yeast extract.....	5.0g
Esculin.....	1.0g
Sodium citrate.....	1.0g
Ferric ammonium citrate.....	0.5g
NaN ₃	0.25g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Caution: Sodium azide is toxic. Azides also react with metals and disposal must be highly diluted.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Cool to 45°–50°C. Do not autoclave.

Use: For the cultivation of enterococci in water, sewage, and feces.

Esculin Broth**Composition per liter:**

Beef heart, solids from infusion.....	500.0g
Tryptose.....	10.0g
NaCl.....	5.0g
Agar.....	1.0g
Esculin.....	1.0g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into screw-capped tubes in 7.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and differentiation of bacteria based on their ability to hydrolyze esculin. Bacteria that hydrolyze esculin turn the medium brown-black to black.

Esculin Iron Agar**Composition per liter:**

Agar.....	15.0g
-----------	-------

Esculin.....	1.0g
Ferric ammonium citrate.....	0.5g

pH 7.1 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the cultivation and identification of enterococci based on their ability to hydrolyze esculin. Used in conjunction with E agar and the membrane filter method.

Esculin Mannitol Agar**Composition per liter:**

Agar.....	13.5g
Polypeptone™.....	10.0g
D-Mannitol.....	10.0g
Pancreatic digest of casein.....	5.0g
Yeast extract.....	5.0g
NaCl.....	5.0g
Heart peptone.....	3.0g
Cornstarch.....	1.0g
Esculin.....	1.0g
Ferric ammonium citrate.....	0.5g
Phenol Red.....	0.025g
Nalidixic acid solution.....	10.0mL
Colistin solution.....	10.0mL

pH 7.3 ± 0.2 at 25°C

Nalidixic Acid Solution:**Composition per 10.0mL:**

Nalidixic acid.....	0.015g
---------------------	--------

Preparation of Nalidixic Acid Solution: Add nalidixic acid to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Colistin Solution:**Composition per 10.0mL:**

Colistin.....	0.01g
---------------	-------

Preparation of Colistin Solution: Add colistin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except nalidixic acid solution and colistin solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile nalidixic acid solution and colistin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation, cultivation, and differentiation of *Staphylococcus aureus* and group D streptococci based on mannitol fermentation and hydrolysis of esculin. Bacteria that ferment mannitol appear as yellow colonies surrounded by a yellow zone. Bacteria that hydrolyze esculin appear as dark brown to black colonies surrounded by a dark brown to black zone.

Esculin Thallium Medium**Composition per liter:**

Agar.....	15.0g
Beef extract.....	10.0g

Peptone.....	10.0g
NaCl.....	5.0g
Esculin.....	1.0g
Thallosulfate.....	0.33g
Crystal Violet.....	1.3mg
Blood, bovine or sheep.....	50.0mL

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components, except blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile blood. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Caution: Thallium salts are toxic.

Use: For the cultivation of *Streptococcus* species that cause bovine mastitis.

E.T. Medium

Composition per liter:

Beef heart, infusion from.....	250.0g
Liver, infusion from.....	250.0g
Peptone, special.....	20.0g
NaCl.....	5.0g
K ₂ HPO ₄	4.0g

pH 7.1 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the mass cultivation of clostridia for enterotoxin production.

Ethanoligenes Medium (DSMZ Medium 1057)

Composition per liter:

Tryptone.....	4.0g
NaCl.....	4.0g
Beef extract.....	2.0g
K ₂ HPO ₄	1.5g
Yeast extract.....	1.0g
L-cysteine-HCl.....	0.5g
MgCl ₂ ·6H ₂ O.....	0.2g
FeSO ₄ ·7H ₂ O.....	0.1g
Vitamin solution.....	10.0mL
Trace elements solution.....	1.0mL

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl.....	10.0mg
Thiamine-HCl·2H ₂ O.....	5.0mg
Riboflavin.....	5.0mg
Nicotinic acid.....	5.0mg
D-Ca-pantothenate.....	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Lipoic acid.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Glucose Solution:

Composition per 10.0mL:

Glucose.....	10.0g
--------------	-------

Preparation of Glucose Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Trace Elements Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O.....	3.0g
Nitilotriacetic acid.....	1.5g
NaCl.....	1.0g
MnSO ₄ ·2H ₂ O.....	0.5g
CoSO ₄ ·7H ₂ O.....	0.18g
ZnSO ₄ ·7H ₂ O.....	0.18g
CaCl ₂ ·2H ₂ O.....	0.1g
FeSO ₄ ·7H ₂ O.....	0.1g
NiCl ₂ ·6H ₂ O.....	0.025g
KAl(SO ₄) ₂ ·12H ₂ O.....	0.02g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·4H ₂ O.....	0.01g
CuSO ₄ ·5H ₂ O.....	0.01g
Na ₂ SeO ₃ ·5H ₂ O.....	0.3mg

Preparation of Trace Elements Solution: Add nitilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Preparation of Medium: Add components, except glucose and vitamin solutions, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Adjust pH to 6.0. Gently heat while stirring and bring to boiling. Boil for 1 min. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature while sparging with N₂. Dispense into tubes or bottles under an atmosphere of 100% N₂. Prior to inoculation, aseptically and anoxically add the vitamin and glucose solutions.

Use: For the cultivation of *Ethanoligenes* spp.

ETGPA

(Egg Tellurite Glycine Pyruvate Agar)

Composition per liter:

Agar.....	17.0g
Glycine.....	12.0g
Sodium pyruvate.....	10.0g
Pancreatic digest of casein.....	10.0g
Beef extract.....	5.0g
LiCl.....	5.0g
Yeast extract.....	1.0g
Egg yolk emulsion.....	50.0mL
K ₂ TeO ₃ solution.....	10.0mL

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Egg Yolk Emulsion:

Composition:

Chicken egg yolks.....	11
Whole chicken egg.....	1

Preparation of Egg Yolk Emulsion: Soak egg with 1:100 dilution of saturated mercuric chloride solution for 1 min. Crack eggs and separate yolks from whites. Mix egg yolks with 1 chicken egg.

K₂TeO₃ Solution:

Composition per 100.0mL:

K₂TeO₃ 1.0g

Preparation of K₂TeO₃ Solution: Add K₂TeO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Caution: Potassium tellurite is toxic.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Add 10.0mL of sterile 1% tellurite solution and 50.0mL of sterile egg yolk emulsion. If desired, add sulfamethazine to a final concentration of 50.0mg/mL. Mix thoroughly but gently and pour into sterile Petri dishes.

Use: For the selective isolation and enumeration of coagulase-positive staphylococci from food, skin, soil, air, and other materials. For the differentiation and identification of staphylococci on the basis of their ability to clear egg yolk. Addition of sulfamethazine inhibits the growth of *Proteus*. Gray-black colonies surrounded by a clear zone are diagnostic for *Staphylococcus aureus*.

Ethyl Violet Azide Broth (EVA Broth)

Composition per liter:

Pancreatic digest of casein 13.5g
Yeast extract 6.5g
Glucose 5.0g
NaCl 5.0g
K₂HPO₄ 2.7g
KH₂PO₄ 2.7g
NaN₃ 0.4g
Ethyl Violet 0.83mg

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Caution: Sodium azide is toxic. Azides also react with metals and disposal must be highly diluted.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes in 10.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation, cultivation, and enumeration of enterococci from water and other specimens. Fecal enterococci turn the medium turbid with a purple sediment on the bottom of the tube.

Ethyl Violet Azide Broth (EVA Broth)

Composition per liter:

Tryptose 20.0g
Glucose 5.0g
NaCl 5.0g
K₂HPO₄ 2.7g
KH₂PO₄ 2.7g

NaN₃ 0.4g
Ethyl Violet 0.83mg

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Caution: Sodium azide is toxic. Azides also react with metals and disposal must be highly diluted.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes in 10.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation, cultivation, and enumeration of enterococci from water and other specimens. Fecal enterococci turn the medium turbid with a purple sediment on the bottom of the tube.

Ethyl Violet Azide Broth (EVA Broth)

Composition per liter:

Tryptose 20.0g
Glucose 5.0g
NaCl 5.0g
K₂HPO₄ 2.7g
KH₂PO₄ 2.7g
NaN₃ 0.3g
Ethyl Violet 0.5mg

pH 6.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes in 10.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Caution: Sodium azide is toxic. Azides also react with metals and disposal must be highly diluted.

Use: For the isolation, cultivation, and enumeration of enterococci from water and other specimens. Fecal enterococci turn the medium turbid with a purple sediment on the bottom of the tube.

Ethyl Violet Azide HiVeg Broth (E.V.A. HiVeg Broth)

Composition per liter:

Plant hydrolysate 20.0g
Glucose 5.0g
NaCl 5.0g
K₂HPO₄ 2.7g
KH₂PO₄ 2.7g
NaN₃ 0.4g
Ethyl Violet 8.3mg

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Caution: Sodium azide is toxic. Azides also react with metals and disposal must be highly diluted.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes in 10.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation, cultivation, and enumeration of enterococci from water and other specimens. Fecal enterococci turn the medium turbid with a purple sediment on the bottom of the tube.

Ethylene Glycol NaCl Medium No. 7

See: [EG NaCl Medium No. 7](#)

Ethylene Production Agar for *Mucor*

Composition per liter:

Solution 3	700.0mL
Solution 1	100.0mL
Solution 2	100.0mL
Solution 4	100.0mL

Solution 1:

Composition per 100.0mL:

Agar, noble	10.0g
D-Glucose	5.0g
DL-Methionine	5.0g

Preparation of Solution 1: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Solution 2:

Composition per 100.0mL:

NaNO ₃	3.5g
-------------------------	------

Preparation of Solution 2: Add NaNO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Solution 3:

Composition per 700.0mL:

Citric acid	0.756g
MgSO ₄ ·7H ₂ O	0.5g
NaOH	0.432g
CaCl ₂	0.1g
Ferric citrate·5H ₂ O	0.1g
MnCl ₂ ·4H ₂ O	0.05g
ZnSO ₄ ·7H ₂ O	0.05g
CuCl ₂ ·2H ₂ O	5.0mg
Na ₂ MoO ₄ ·2H ₂ O	5.0mg
Na ₂ B ₄ O ₇ ·10H ₂ O	2.0mg
CoCl ₂ ·6H ₂ O	0.2mg

Preparation of Solution 3: Add components to distilled/deionized water and bring volume to 700.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Solution 4:

Composition per 100.0mL:

KH ₂ PO ₄	5.0g
---------------------------------------	------

Preparation of Solution 4: Add KH₂PO₄ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Preparation of Medium: Aseptically combine 100.0mL of sterile solution 1, 100.0mL of sterile solution 2, 700.0mL of sterile solution 3, and 100.0mL of sterile solution 4. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of ethylene-producing *Mucor* species.

Ethylene Production Broth for *Mucor*

Composition per liter:

Solution 1	100.0mL
Solution 2	100.0mL
Solution 3	700.0mL
Solution 4	100.0mL

Solution 1:

Composition per 100.0mL:

D-Glucose	5.0g
DL-Methionine	5.0g

Preparation of Solution 1: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Solution 2:

Composition per 100.0mL:

NaNO ₃	3.5g
-------------------------	------

Preparation of Solution 2: Add NaNO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Solution 3:

Composition per 700.0mL:

Citric acid	0.756g
MgSO ₄ ·7H ₂ O	0.5g
NaOH	0.432g
CaCl ₂	0.1g
Ferric citrate·5H ₂ O	0.1g
MnCl ₂ ·4H ₂ O	0.05g
ZnSO ₄ ·7H ₂ O	0.05g
CuCl ₂ ·2H ₂ O	5.0mg
Na ₂ MoO ₄ ·2H ₂ O	5.0mg
Na ₂ B ₄ O ₇ ·10H ₂ O	2.0mg
CoCl ₂ ·6H ₂ O	0.2mg

Preparation of Solution 3: Add components to distilled/deionized water and bring volume to 700.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Solution 4:

Composition per 100.0mL:

KH ₂ PO ₄	5.0g
---------------------------------------	------

Preparation of Solution 4: Add KH₂PO₄ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Aseptically combine 100.0mL of sterile solution 1, 100.0mL of sterile solution 2, 700.0mL of sterile solution 3, and 100.0mL of sterile solution 4. Mix thoroughly. Aseptically distribute into sterile flasks or tubes.

Use: For the cultivation of ethylene-producing *Mucor* species.

ETSA Medium

Composition per 998.0mL:

Agar	19.0g
Pancreatic digest of casein	15.0g
Papaic digest of soybean meal	5.0g
NaCl	5.0g
Yeast extract	1.0g
KNO ₃	0.5g
Sodium formate	0.5g
Sodium succinate	0.5g

Sheep blood, defibrinated	30.0mL
L-Cysteine·HCl·H ₂ O solution	10.0mL
Dithiothreitol solution	10.0mL
Glucose solution	10.0mL
Na ₂ CO ₃ solution	10.0mL
Menadione solution	2.0mL
Sodium fumarate solution	2.0mL
Sodium lactate (60% syrup)	1.3mL
Hemin solution	1.0mL
pH 7.3 ± 0.2 at 25°C	

Hemin Solution:**Composition per 200.0mL:**

KOH	1.12g
Hemin	0.2g
Ethanol (95% solution)	100.0mL

Preparation of Hemin Solution: Add KOH to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Add ethanol. Mix thoroughly. Add hemin. Mix thoroughly.

Menadione Solution:**Composition per 100.0mL:**

Menadione (vitamin K ₃)	1.0g
Ethanol (95% solution)	50.0mL

Preparation of Menadione Solution: Add menadione to 50.0mL of ethanol. Mix thoroughly. Bring volume to 100.0mL with distilled/deionized water. Filter sterilize.

L-Cysteine·HCl·H₂O Solution:**Composition per 10.0mL:**

L-Cysteine·HCl·H ₂ O	0.4g
---------------------------------------	------

Preparation of L-Cysteine·HCl·H₂O Solution: Add L-cysteine·HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Dithiothreitol Solution:**Composition per 10.0mL:**

Dithiothreitol	0.05g
----------------------	-------

Preparation of Dithiothreitol Solution: Add dithiothreitol to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Glucose Solution:**Composition per 10.0mL:**

D-Glucose	1.0g
-----------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Sodium Fumarate Solution:**Composition per 10.0mL:**

Sodium fumarate	0.1g
-----------------------	------

Preparation of Sodium Fumarate Solution: Add sodium fumarate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Na₂CO₃ Solution:**Composition per 10.0mL:**

Na ₂ CO ₃	0.4g
---------------------------------------	------

Preparation of Na₂CO₃ Solution: Add Na₂CO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components—except menadione solution, L-cysteine·HCl·H₂O solution, dithiothreitol solution, glucose solution, sodium fumarate solution, Na₂CO₃ solution, and sheep blood—to distilled/deionized water and bring volume to 926.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–60°C. Aseptically add in the following order: 2.0mL of sterile menadione solution, 10.0mL of sterile L-cysteine·HCl·H₂O solution, 10.0mL of sterile dithiothreitol solution, 10.0mL of sterile glucose solution, 2.0mL of sterile sodium fumarate solution, 10.0mL of sterile Na₂CO₃ solution, and 30.0mL of sterile sheep blood. Mix thoroughly. Aseptically and anaerobically distribute into tubes under 80% N₂ + 10% CO₂ + 10% H₂. Cap tubes with butyl rubber stoppers. Place tubes in a press. Autoclave for 15 min at 15 psi pressure–121°C with fast exhaust.

Use: For the cultivation and maintenance of *Bacteroides pneumosintes*, *Falcivibrio grandis*, *Falcivibrio vaginalis*, *Mobiluncus curtisii*, *Mobiluncus mulieris*, *Serpula hyodysenteriae*, and *Treponema* species.

Eubacterium acidaminophilum Medium**Composition per liter:**

KH ₂ PO ₄	1.0g
NH ₄ Cl	0.5g
MgCl ₂ ·6H ₂ O	0.4g
CaCl ₂ ·2H ₂ O	0.1g
NaHCO ₃ solution	20.0mL
Sodium selenite solution	10.0mL
Na ₂ S·9H ₂ O solution	3.0mL
Vitamin solution	1.0mL
Trace elements solution SL-7	1.0mL
pH 7.2–7.3 at 25°C	

Sodium Selenite Solution:**Composition per liter:**

NaOH	0.5g
Na ₂ SeO ₃ ·5H ₂ O	0.03g

Preparation of Sodium Selenite Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Gas with 100% N₂ for 20 min.

Na₂S·9H₂O Solution:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O	1.0g
---	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gas with 100% N₂ for 20 min. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

NaHCO₃ Solution:**Composition per 100.0mL:**

NaHCO ₃	10.0g
--------------------------	-------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

Vitamin Solution:**Composition per 100.0mL:**

p-Aminobenzoic acid	4.0mg
Biotin	1.0mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Trace Elements Solution SL-7:**Composition** per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	0.19g
MnCl ₂ ·4H ₂ O	0.1g
ZnCl ₂	0.07g
Na ₂ MoO ₄ ·2H ₂ O	0.036g
NiCl ₂ ·6H ₂ O	0.024g
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution SL-7: Add the FeCl₂·4H₂O to the HCl. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C under 100% N₂. Cool to 25°C.

Preparation of Medium: Add components—except NaHCO₃ solution, Na₂S·9H₂O solution, vitamin solution, and sodium selenite solution—to distilled/deionized water and bring volume to 966.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C under 80% N₂ and 20% CO₂. Aseptically add 20.0mL of sterile NaHCO₃ solution, 3.0mL of sterile Na₂S·9H₂O solution, 1.0mL of sterile vitamin solution, and 10.0mL of sterile sodium selenite solution. Mix thoroughly. Adjust pH to 7.2–7.3 with dilute sterile HCl or Na₂CO₃, if necessary. Aseptically and anaerobically distribute into sterile tubes under 80% N₂ and 20% CO₂. Cap tubes with rubber stoppers.

Use: For the cultivation and maintenance of *Eubacterium acidaminophilum*.

***Eubacterium aggregans* Medium (DSMZ Medium 711a)**

Composition per liter:

Yeast extract	1.0g
NH ₄ Cl	1.0g
NaCl	0.6g
Cysteine-HCl·H ₂ O	0.5g
K ₂ HPO ₄	0.3g
KH ₂ PO ₄	0.3g
Yeast extract	0.2g
MgCl ₂ ·6H ₂ O	0.2g
CaCl ₂ ·2H ₂ O	0.1g
KCl	0.1g
Resazurin	0.5mg
NaHCO ₃ solution	40.0mL
Fructose solution	10.0mL
Na ₂ S·9H ₂ O solution	10.0mL
Trace elements solution SL-10	1.5mL

pH 7.1 ± 0.2 at 25°C

Trace Elements Solution SL-10:**Composition** per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:**Composition** per 10.0mL:

Na ₂ S·9H ₂ O	0.3g
---	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

NaHCO₃ Solution:**Composition** per 100.0mL:

NaHCO ₃	10.0g
--------------------------	-------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

Fructose Solution:**Composition** per 10.0mL:

Fructose	5.0g
----------------	------

Preparation of Fructose Solution: Add fructose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas atmosphere. Add components, except NaHCO₃ solution, Na₂S·9H₂O solution, fructose solution, and trace elements solution SL-10, to distilled/deionized water and bring volume to 938.5mL. Mix thoroughly. Adjust pH to 7.1. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 40.0mL NaHCO₃ solution, 10.0mL Na₂S·9H₂O solution, 10.0mL fructose solution, and 1.5mL trace elements solution SL-10. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or bottles.

Use: For the cultivation of *Clostridium methoxybenzovorans* and *Eubacterium aggregans*.

***Eubacterium angustum* Medium**

Composition per liter:

NaHCO ₃	5.0g
Tris(hydroxymethyl)aminomethane buffer	3.0g
Uric acid	3.0g
Yeast extract	1.0g
L-Cysteine-HCl·H ₂ O	0.5g
NH ₄ Cl	0.5g
K ₂ HPO ₄	0.1g
MgSO ₄ ·7H ₂ O	0.05g
Na ₂ S·9H ₂ O	0.05g
Resazurin	1.0mg
Wolfe's mineral solution	10.0mL
Selenium solution	1.0mL

pH 7.9 ± 0.2 at 25°C

Selenium Solution:**Composition** per liter:

Na ₂ SeO ₃ ·5H ₂ O	3.0mg
NaOH (0.01M solution)	1.0L

Preparation of Selenium Solution: Add $\text{Na}_2\text{SeO}_3 \cdot 5\text{H}_2\text{O}$ to 1.0L of NaOH solution. Mix thoroughly. Filter sterilize. Aseptically gas under 100% N_2 for 20 min.

Wolfe's Mineral Solution:

Composition per liter

$\text{MgSO}_4 \cdot 7\text{H}_2\text{O}$	3.0g
Nitilotriacetic acid	1.5g
NaCl	1.0g
$\text{MnSO}_4 \cdot \text{H}_2\text{O}$	0.5g
$\text{FeSO}_4 \cdot 7\text{H}_2\text{O}$	0.1g
$\text{CoCl}_2 \cdot 6\text{H}_2\text{O}$	0.1g
CaCl_2	0.1g
$\text{ZnSO}_4 \cdot 7\text{H}_2\text{O}$	0.1g
$\text{CuSO}_4 \cdot 5\text{H}_2\text{O}$	0.01g
$\text{AlK}(\text{SO}_4)_2 \cdot 12\text{H}_2\text{O}$	0.01g
H_3BO_3	0.01g
$\text{Na}_2\text{MoO}_4 \cdot 2\text{H}_2\text{O}$	0.01g

Preparation of Wolfe's Mineral Solution: Add nitilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L.

Preparation of Medium: Add the uric acid and the tris(hydroxymethyl)aminomethane buffer to 900.0mL of distilled/deionized water. Mix thoroughly. Gently heat while stirring until dissolved. Add remaining components, except L-cysteine-HCl-H₂O, NaHCO_3 , and $\text{Na}_2\text{S} \cdot 9\text{H}_2\text{O}$. Gently heat and bring to boiling. Cool to 25°C under 80% N_2 + 10% CO_2 + 10% H_2 . Add L-cysteine-HCl-H₂O, NaHCO_3 , and $\text{Na}_2\text{S} \cdot 9\text{H}_2\text{O}$. Mix thoroughly. Anaerobically distribute into tubes under 80% N_2 + 10% CO_2 + 10% H_2 . Cap tubes with rubber stoppers. Place tubes in a press. Autoclave for 15 min at 15 psi pressure-121°C with fast exhaust.

Use: For the cultivation and maintenance of *Eubacterium angustum*.

Eubacterium callanderi Medium

Composition per liter:

NaHCO_3	3.5g
Glucose	1.8g
Resazurin	1.0mg
Clarified rumen fluid	50.0mL
Pfennig's mineral solution	50.0mL
L-Cysteine-sulfide reducing agent	20.0mL
Wolfe's vitamin solution	10.0mL
Trace elements solution SL-7	1.0mL

Pfennig's Mineral Solution:

Composition per 100.0mL:

KH_2PO_4	1.0g
NaCl	0.8g
NH_4Cl	0.8g
$\text{MgCl}_2 \cdot 6\text{H}_2\text{O}$	0.66g
$\text{CaCl}_2 \cdot 2\text{H}_2\text{O}$	0.1g

Preparation of Pfennig's Mineral Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

L-Cysteine-Sulfide Reducing Agent:

Composition per 200.0mL:

L-Cysteine-HCl-H ₂ O	2.5g
$\text{Na}_2\text{S} \cdot 9\text{H}_2\text{O}$	2.5g
NaOH (3N solution)	13.4mL

Preparation of L-Cysteine-Sulfide Reducing Agent: Add L-cysteine-HCl-H₂O to distilled/deionized water and bring volume to 50.0mL. Rapidly adjust pH to 10 with 3N NaOH solution. Add $\text{Na}_2\text{S} \cdot 9\text{H}_2\text{O}$. Mix thoroughly. Bring volume to 200.0mL with distilled/deionized water. Gently heat and bring to boiling. Cool to room temperature. Distribute into tubes under 100% N_2 . Autoclave for 15 min at 15 psi pressure-121°C.

Wolfe's Vitamin Solution:

Composition per liter:

Pyridoxine-HCl	10.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Nicotinic acid	5.0mg
Riboflavin	5.0mg
Thiamine-HCl	5.0mg
Calcium DL-pantothenate	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Trace Elements Solution SL-7:

Composition per 1010.0mL:

$\text{FeCl}_2 \cdot 4\text{H}_2\text{O}$	1.5g
$\text{CoCl}_2 \cdot 6\text{H}_2\text{O}$	190.0mg
$\text{MnCl}_2 \cdot 4\text{H}_2\text{O}$	100.0mg
ZnCl_2	70.0mg
H_3BO_3	62.0mg
$\text{Na}_2\text{MoO}_4 \cdot 2\text{H}_2\text{O}$	36.0mg
$\text{NiCl}_2 \cdot 6\text{H}_2\text{O}$	24.0mg
$\text{CuCl}_2 \cdot 2\text{H}_2\text{O}$	17.0mg
Hydrochloric acid, 25%	10.0mL

Preparation of Trace Elements Solution SL-7: Add $\text{FeCl}_2 \cdot 4\text{H}_2\text{O}$ to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly.

Preparation of Medium: Prepare and dispense medium under 80% N_2 + 20% CO_2 . Add components, except NaHCO_3 and cysteine-sulfide reducing agent, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 3 min. Cool to room temperature while sparging with 80% N_2 + 20% CO_2 . Add NaHCO_3 . Mix thoroughly. Anaerobically distribute 10.0mL volumes into anaerobic tubes. Autoclave for 15 min at 15 psi pressure-121°C. Aseptically and anaerobically add 0.2mL of sterile cysteine-sulfide reducing agent to each tube. Mix thoroughly.

Use: For the cultivation of *Eubacterium callanderi*.

Eubacterium lentum Medium

Composition per 1205.0mL:

Peptone	30.0g
Arginine	5.0g
K_2HPO_4	5.0g
Yeast extract	5.0g
L-Cysteine-HCl-H ₂ O	0.5g
Chopped meat extract filtrate	1.0L
Chopped meat extract solids	200.0mL
Resazurin (0.025% solution)	4.0mL

pH 7.0 ± 0.2 at 25°C

Chopped Meat Extract:**Composition** per liter:

Beef or horse meat	500.0g
NaOH (1 <i>N</i> solution)	25.0mL

Preparation of Chopped Meat Extract: Use lean beef or horse meat. Remove fat and connective tissue. Grind. Add meat and NaOH to distilled/deionized water and bring volume to 1.0L. Gently heat and bring to boiling while stirring. Cool to 25°C. Remove fat from surface. Filter. Reserve ground meat particles and filtrate. Add distilled/deionized water to filtrate and bring volume to 1.0L.

Preparation of Medium: To 1.0L of chopped meat extract filtrate, add the remaining components, except L-cysteine·HCl·H₂O and chopped meat solids. Mix thoroughly. Gently heat to boiling. Cool to room temperature. Add the L-cysteine·HCl·H₂O. Adjust pH to 7.0. Distribute 1 part chopped meat solids (by volume) and 5 parts of liquid (by volume) into tubes under O₂-free 97% N₂ + 3% H₂. Cap with rubber stoppers and place tubes in a press. Autoclave for 15 min at 15 psi pressure–121°C with fast exhaust.

Use: For the cultivation and maintenance of *Eubacterium lentum*.

Eubacterium Medium**Composition** per liter:

Pancreatic digest of casein	20.0g
Agar	15.0g
Meat extract	15.0g
Glucose	5.0g
Na ₂ HPO ₄ ·12H ₂ O	4.0g
L-Cysteine·HCl	0.5g

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes. Use freshly prepared medium.

Use: For the cultivation of *Eubacterium* species.

Eubacterium Medium**Composition** per liter:

Beef brain powder	33.33g
Pancreatic digest of casein	15.0g
Yeast extract	10.0g
Glucose	5.5g
Yeast extract	5.0g
NaCl	2.5g
Sodium thioglycolate	1.8g
L-Cystine	0.5g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components, except beef brain powder, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling under 97% N₂ + 3% H₂. Continue boiling for 15–20 min. Adjust pH to 7.0. Cool to 25°C under 97% N₂ + 3% H₂. Anaerobically distribute into tubes in 9.0mL volumes. Add 0.3g of beef brain powder to each tube. Cap tubes with rubber stoppers. Place tubes in a press. Autoclave for 15 min at 15 psi pressure–121°C with fast exhaust.

Use: For the cultivation of *Eubacterium* species.

Eubacterium oxidoreducens Medium**Composition** per 1001.0mL:

Solution A	890.0mL
Solution B	100.0mL
Solution C	10.0mL
Solution D	1.0mL

pH 7.0–7.2 at 25°C

Solution A:**Composition** per 890.0mL:

Crotonic acid	5.0g
Yeast extract	2.0g
Resazurin	1.0mg
Mineral solution	50.0mL
Vitamin solution	5.0mL
Trace elements solution SL-10	1.0mL

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 890.0mL. Mix thoroughly. Adjust pH to 6.9. Sparge with 80% N₂ + 20% CO₂ for 20 min. Distribute 8.9mL into anaerobic tubes under 80% N₂ + 20% CO₂. Autoclave under 80% N₂ + 20% CO₂ for 15 min at 15 psi pressure–121°C.

Mineral Solution:**Composition** per liter:

KH ₂ PO ₄	10.0g
MgCl ₂ ·6H ₂ O	6.6g
NaCl	8.0g
NH ₄ Cl	8.0g
CaCl ₂ ·2H ₂ O	1.0g

Preparation of Mineral Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Vitamin Solution:**Composition** per liter:

Pyridoxine·HCl	6.2mg
Nicotinic acid	2.5mg
<i>p</i> -Aminobenzoic acid	1.25mg
Thiamine·HCl	1.25mg
Pantothenic acid	0.62mg
Biotin	0.25mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Adjust pH to 7.0. Mix thoroughly.

Trace Elements Solution SL-10:**Composition** per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly.

Solution B:**Composition** per 100.0mL:

NaHCO ₃	5.0g
--------------------------	------

Preparation of Solution B: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Sparge with 80% N₂ + 20% CO₂ for 20 min.

Solution C:

Composition per 10.0mL:

L-Cysteine 0.24g

Preparation of Solution C: Add L-cysteine to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 80% N₂ + 20% CO₂ for 15 min at 15 psi pressure–121°C.

Solution D:

Composition per 1.0mL:

Na₂S·9H₂O 78.0mg

Preparation of Solution D: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 1.0mL. Mix thoroughly. Autoclave under 80% N₂ + 20% CO₂ for 15 min at 15 psi pressure–121°C.

Preparation of Medium: To each tube containing 8.9mL of sterile solution A, add (using a syringe) 1.0mL of sterile solution B, 0.1mL of sterile solution C, and 0.01mL of sterile solution D.

Use: For the cultivation and maintenance of *Eubacterium oxidoreducens*.

Euglena B₁₂ Medium

Composition per liter:

Sucrose 30.0g
 L-Glutamic acid 6.0g
 Glycine 5.0g
 DL-Aspartic acid 4.0g
 DL-Malic acid 2.0g
 Succinic acid 1.04g
 MgSO₄·7H₂O 0.8g
 (NH₄)₂CO₃ 0.72g
 KH₂PO₄ 0.6g
 CaCO₃ 0.16g
 FeCl₃ 0.06g
 ZnSO₄·7H₂O 0.04g
 Thiamine·HCl 0.012g
 MnSO₄·H₂O 6.0mg
 CoSO₄ 5.0mg
 (NH₄)₂MoO₃ 1.34mg
 H₃BO₃ 1.14mg
 CuSO₄·5H₂O 0.62mg

pH 3.5 ± 0.1 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until dissolved. Distribute into tubes in 2.0mL volumes. Add standard solution or test solution to each tube. Bring volume of each tube to 4.0mL with distilled/deionized water. Autoclave for 15 min at 0 psi pressure–100°C.

Use: For the assay of vitamin B₁₂ using *Euglena gracilis* as the test organism.

Eugon Agar

Composition per liter:

Agar 15.0g
 Pancreatic digest of casein 15.0g
 Glucose 5.5g
 Papaic digest of soybean meal 5.0g
 NaCl 4.0g

L-Cystine 0.3g
 Na₂SO₃ 0.2g
 pH 7.0 ± 2.0 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 13 psi pressure–118°C. Pour into sterile Petri dishes.

Use: For the cultivation and maintenance of a variety of fastidious microorganisms. For the cultivation and maintenance of *Bifidobacterium* species.

Eugon Agar with Fildes Enrichment (LMG Medium 75)

Composition per liter:

Agar 15.0g
 Pancreatic digest of casein 15.0g
 Glucose 5.5g
 Papaic digest of soybean meal 5.0g
 NaCl 4.0g
 L-Cystine 0.7g
 Na₂SO₃ 0.2g
 Fildes digested sheep blood 50.0mL

pH 7.0 ± 0.2 at 25°C

Fildes Enrichment Solution:

Composition per 206.0mL:

Pepsin 1.0g
 NaCl (0.85% solution) 150.0mL
 Sheep blood, defibrinated 50.0mL
 HCl 6.0mL

pH 7.0–7.2 at 25°C

Source: Fildes enrichment solution is available from BD Diagnostic Systems.

Preparation of Fildes Enrichment Solution: Combine components. Mix thoroughly. Incubate at 56°C for 4 hr. Bring pH to 7.0 with 20% NaOH. Adjust pH to 7.2 with HCl. Do not autoclave. Add 0.25 mL of chloroform and store at 4°C. Before use, heat to 56°C to remove chloroform.

Preparation of Medium: Add components, except Fildes digested sheep blood, to 950.0mL distilled/deionized water. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°f/55°C. Aseptically add 50.0mL sterile Fildes digested sheep blood. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Taylorella equigenitalis*.

Eugon Agar with Fildes Enrichment

Composition per liter:

Agar 15.0g
 Pancreatic digest of casein 15.0g
 Glucose 5.5g
 Papaic digest of soybean meal 5.0g
 NaCl 4.0g
 L-Cystine 0.3g
 Na₂SO₃ 0.2g
 Fildes enrichment solution 50.0mL

pH 7.0 ± 2.0 at 25°C

Fildes Enrichment Solution:**Composition per 206.0mL:**

Pepsin.....	1.0g
NaCl (0.85% solution).....	150.0mL
Sheep blood, defibrinated.....	50.0mL
HCl.....	6.0mL

pH 7.0–7.2 at 25°C

Source: Fildes enrichment solution is available from BD Diagnostic Systems.

Preparation of Fildes Enrichment Solution: Combine components. Mix thoroughly. Incubate at 56°C for 4 hr. Bring pH to 7.0 with 20% NaOH. Adjust pH to 7.2 with HCl. Do not autoclave. Add 0.25 mL of chloroform and store at 4°C. Before use, heat to 56°C to remove chloroform.

Preparation of Medium: Add components, except Fildes enrichment solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 13 psi pressure–118°C. Cool to 50°–55°C. Aseptically add 50.0mL of Fildes enrichment solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Taylorella equigenitalis*.

Eugon Blood Agar (Eugonagar™)

Composition per liter:

Agar.....	15.0g
Pancreatic digest of casein.....	15.0g
Glucose.....	5.5g
Papaic digest of soybean meal.....	5.0g
NaCl.....	4.0g
L-Cystine.....	0.3g
Na ₂ SO ₃	0.2g
Sheep blood, defibrinated.....	100.0mL

pH 7.0 ± 2.0 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components, except sheep blood, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 13 psi pressure–118°C. Cool to 45°–50°C. Aseptically add sterile sheep blood. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes. If desired, medium may be chocolatized by maintaining at 80°–85°C for 20 min after the addition of sheep blood.

Use: For the cultivation and maintenance of fastidious microorganisms. For the cultivation and maintenance of *Bifidobacterium* species.

Eugon Broth (Eugonbroth™)

Composition per liter:

Pancreatic digest of casein.....	15.0g
Glucose.....	5.5g
Papaic digest of soybean meal.....	5.0g
NaCl.....	4.0g
L-Cystine.....	0.3g
Na ₂ SO ₃	0.2g

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 13 psi pressure–118°C.

Use: For the cultivation and maintenance of a variety of fastidious microorganisms.

Eugonic Agar

Composition per liter:

Agar.....	15.0g
Casein enzymatic hydrolysate.....	15.0g
Glucose.....	5.0g
Papaic digest of soybean meal.....	5.0g
NaCl.....	4.0g
L-Cystine.....	0.2g
Na ₂ SO ₃	0.2g
Sheep blood, defibrinated.....	50.0mL

pH 7.0 ± 2.0 at 25°C

Source: This medium, without blood, is available as a premixed powder from HiMedia.

Preparation of Medium: Add components, except blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 50.0mL of sterile defibrinated blood. Pour into sterile Petri dishes or leave in tubes.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the cultivation and maintenance of a variety of fastidious microorganisms, e.g., *Brucella*, *Haemophilus*, *Neisseria*, *Pasteurella*, and *Lactobacillus* species.

Eugonic HiVeg Agar

Composition per liter:

Agar.....	15.0g
Plant hydrolysate.....	15.0g
Glucose.....	5.0g
Papaic digest of soybean meal.....	5.0g
NaCl.....	4.0g
L-Cystine.....	0.2g
Na ₂ SO ₃	0.2g
Sheep blood, defibrinated.....	50.0mL

pH 7.0 ± 2.0 at 25°C

Source: This medium, without blood, is available as a premixed powder from HiMedia.

Preparation of Medium: Add components, except blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 50.0mL of sterile defibrinated blood. Pour into sterile Petri dishes or leave in tubes.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the cultivation and maintenance of a variety of fastidious microorganisms, e.g., *Brucella*, *Haemophilus*, *Neisseria*, *Pasteurella*, and *Lactobacillus* species.

Eugonic HiVeg Broth**Composition per liter:**

Plant hydrolysate.....	15.0g
Glucose	5.0g
Papaic digest of soybean meal	5.0g
NaCl	4.0g
L-Cystine	0.2g
Na ₂ SO ₃	0.2g
Sheep blood, defibrinated	50.0mL

pH 7.0 ± 2.0 at 25°C

Source: This medium, without blood, is available as a premixed powder from HiMedia.

Preparation of Medium: Add components, except blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 50.0mL of sterile defibrinated blood. Mix thoroughly. Dispense into sterile tubes or flasks.

Use: For the cultivation and maintenance of a variety of fastidious microorganisms, e.g., *Brucella*, *Haemophilus*, *Neisseria*, *Pasteurella*, and *Lactobacillus* species.

EVA BrothSee: **Ethyl Violet Azide Broth****Exiguobacterium Medium****Composition per liter:**

Beef extract	10.0g
Peptone.....	10.0g
NaCl	5.0g
Glucose	5.0g
Yeast extract.....	3.0g

pH 8.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 8.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Exiguobacterium aurantiacum*.

Extracted Hay Medium

Composition: Hay or grass..... 50.0g

Preparation of Medium: Add hay or grass to 1.0L of distilled/deionized water. Gently heat and bring to boiling. Continue boiling for 30 min. Rinse with cold water twice. Add 1.0L of distilled/deionized water, boil 30 min, and rinse. Repeat this process at least five times. Dry the extracted hay or grass. Add 10–30 blades of extracted hay or grass to a large test tube. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation and cultivation of *Beggiatoa* species and myxotrophic *Thiothrix* species.

EYGA Agar**Composition per liter:**

Agar	12.0g
K ₂ HPO ₄	1.1g
Glucose	1.0g
Yeast extract.....	1.0g
KH ₂ PO ₄	0.86g
(NH ₄) ₂ SO ₄	0.5g
MgSO ₄ ·7H ₂ O	0.2g

NaCl.....	0.1g
CaCl ₂	0.025g
Vitamin B ₁₂	2.0μg
EDTA/trace elements mix.....	3.0mL

pH 6.8 ± 0.2 at 25°C

EDTA/Trace Elements Mix:**Composition per 600.0mL:**

EDTA.....	5.0g
ZnSO ₄ ·7H ₂ O	2.2g
MnSO ₄ ·4H ₂ O	0.57g
FeSO ₄ ·7H ₂ O.....	0.50g
CoCl ₂ ·6H ₂ O	0.161g
CuSO ₄ ·5H ₂ O.....	0.157g
Na ₂ MoO ₄ ·2H ₂ O	0.151g

Preparation of EDTA/Trace Elements Mix: Add components to distilled/deionized water and bring volume to 600.0mL. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.8. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Arthrobacter* species.

EYS AgarSee: **Emerson's Yeast Starch Agar****FAA Alternative Selective**See: **Fastidious Anaerobe Agar, Alternative Selective****FAA Alternative Selective with Neomycin, Vancomycin, and Josamycin**See: **Fastidious Anaerobe Agar, Alternative Selective with Neomycin, Vancomycin, and Josamycin****FAA Selective with Neomycin and Vancomycin**See: **Fastidious Anaerobe Agar, Selective with Neomycin and Vancomycin****Falcivibrio Medium****Composition per liter:**

Pancreatic digest of casein.....	10.0g
Gelatin peptone.....	10.0g
NaCl	5.0g
Yeast extract.....	5.0g
Glucose	1.0g
L-Arginine	1.0g
Sodium pyruvate	1.0g
Cysteine	0.3g
Hemin	5.0mg
Resazurin	1.0mg
Menadione	0.5mg
Serum, equine, bovine, or ovine	50.0mL

pH 7.1 ± 0.2 at 25°C

Preparation of Medium: Prepare medium under 100% N₂. Add components, except serum, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 50.0mL of sterile serum. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Falcivibrio grandis* and *Falcivibrio vaginalis*.

Fastidious Anaerobe Agar (FAA)

Composition per liter:

Peptone.....	23.0g
Agar	12.0g
NaCl	5.0g
Glucose	1.0g
L-Arginine	1.0g
Sodium pyruvate.....	1.0g
Soluble starch.....	1.0g
L-Cysteine·HCl·H ₂ O	0.5g
Sodium succinate	0.5g
NaHCO ₃	0.4g
Na ₄ P ₂ O ₇ ·10H ₂ O	0.25g
Sheep blood, defibrinated	50.0mL
Hemin solution.....	1.0mL
Vitamin K ₁ solution.....	0.1mL

pH 7.2 ± 0.2 at 25°C

Vitamin K₁ Solution:

Composition per 100.0mL:

Vitamin K ₁	1.0g
Ethanol	99.0mL

Preparation of Vitamin K₁ Solution: Add vitamin K₁ to 99.0mL of absolute ethanol. Mix thoroughly.

Hemin Solution:

Composition per 100.0mL:

Hemin.....	1.0g
NaOH (1N solution).....	20.0mL

Preparation of Hemin Solution: Add hemin to 20.0mL of 1N NaOH solution. Mix thoroughly. Bring volume to 100.0mL with distilled/deionized water.

Preparation of Medium: Add components, except defibrinated sheep blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50.0mL of sterile defibrinated sheep blood. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of a variety of fastidious anaerobes from clinical and nonclinical specimens.

Fastidious Anaerobe Agar, Alternative Selective (FAA Alternative Selective)

Composition per liter:

Peptone.....	23.0g
Agar	12.0g
NaCl	5.0g
Glucose	1.0g
L-Arginine	1.0g
Sodium pyruvate.....	1.0g
Soluble starch.....	1.0g
L-Cysteine·HCl·H ₂ O	0.5g
Sodium succinate	0.5g
NaHCO ₃	0.4g
Na ₄ P ₂ O ₇ ·10H ₂ O	0.25g
Sheep blood, defibrinated	50.0mL

Hemin solution.....	1.0mL
Vitamin K ₁ solution.....	0.1mL

pH 7.2 ± 0.2 at 25°C

Vitamin K₁ Solution:

Composition per 100.0mL:

Vitamin K ₁	1.0g
Ethanol.....	99.0mL

Preparation of Vitamin K₁ Solution: Add vitamin K₁ to 99.0mL of absolute ethanol. Mix thoroughly.

Hemin Solution:

Composition per 100.0mL:

Hemin	1.0g
NaOH (1N solution).....	20.0mL

Preparation of Hemin Solution: Add hemin to 20.0mL of 1N NaOH solution. Mix thoroughly. Bring volume to 100.0mL with distilled/deionized water.

Preparation of Medium: Add components, except defibrinated sheep blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50.0mL of sterile defibrinated sheep blood. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of a variety of fastidious anaerobes from clinical and nonclinical specimens.

Fastidious Anaerobe Agar, Alternative Selective with Neomycin, Vancomycin, and Josamycin (FAA Alternative Selective Medium with Neomycin, Vancomycin, and Josamycin)

Composition per liter:

Peptone	23.0g
Agar	12.0g
NaCl	5.0g
Glucose	1.0g
L-Arginine	1.0g
Sodium pyruvate.....	1.0g
Soluble starch.....	1.0g
L-Cysteine·HCl·H ₂ O	0.5g
Sodium succinate	0.5g
NaHCO ₃	0.4g
Na ₄ P ₂ O ₇ ·10H ₂ O	0.25g
Neomycin.....	0.1g
Sheep blood, defibrinated	50.0mL
Vancomycin solution	10.0mL
Josamycin solution.....	10.0mL
Hemin solution.....	1.0mL
Vitamin K ₁ solution.....	0.1mL

pH 7.2 ± 0.2 at 25°C

Vitamin K₁ Solution:

Composition per 100.0mL:

Vitamin K ₁	1.0g
Ethanol.....	99.0mL

Preparation of Vitamin K₁ Solution: Add vitamin K₁ to 99.0mL of absolute ethanol. Mix thoroughly.

Hemin Solution:

Composition per 100.0mL:

Hemin	1.0g
NaOH (1N solution).....	20.0mL

Preparation of Hemin Solution: Add hemin to 20.0mL of 1N NaOH solution. Mix thoroughly. Bring volume to 100.0mL with distilled/deionized water.

Vancomycin Solution:

Composition per 10.0mL:

Vancomycin 5.0mg

Preparation of Vancomycin Solution: Add vancomycin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Josamycin Solution:

Composition per 10.0mL:

Josamycin 3.0mg

Preparation of Josamycin Solution: Add josamycin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except defibrinated sheep blood, vancomycin solution, and josamycin solution, to distilled/deionized water and bring volume to 930.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50.0mL of sterile defibrinated sheep blood, 10.0mL vancomycin solution, and 10.0mL of josamycin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective cultivation of *Fusobacterium* species from clinical and nonclinical specimens.

**Fastidious Anaerobe Agar, Selective
(FAA Selective)**

Composition per liter:

Peptone 23.0g
Agar 12.0g
NaCl 5.0g
Glucose 1.0g
L-Arginine 1.0g
Sodium pyruvate 1.0g
Soluble starch 1.0g
L-Cysteine·HCl·H₂O 0.5g
Sodium succinate 0.5g
NaHCO₃ 0.4g
Na₄P₂O₇·10H₂O 0.25g
Sheep blood, defibrinated 50.0mL
Hemin solution 1.0mL
Vitamin K₁ solution 0.1mL

pH 7.2 ± 0.2 at 25°C

Vitamin K₁ Solution:

Composition per 100.0mL:

Vitamin K₁ 1.0g
Ethanol 99.0mL

Preparation of Vitamin K₁ Solution: Add vitamin K₁ to 99.0mL of absolute ethanol. Mix thoroughly.

Hemin Solution:

Composition per 100.0mL:

Hemin 1.0g
NaOH (1N solution) 20.0mL

Preparation of Hemin Solution: Add hemin to 20.0mL of 1N NaOH solution. Mix thoroughly. Bring volume to 100.0mL with distilled/deionized water.

Preparation of Medium: Add components, except defibrinated sheep blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50.0mL of sterile defibrinated sheep blood. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of a variety of fastidious anaerobes from clinical and nonclinical specimens.

**Fastidious Anaerobe Agar, Selective
with Neomycin and Vancomycin**

(FAA Selective with Neomycin and Vancomycin)

Composition per liter:

Peptone 23.0g
Agar 12.0g
NaCl 5.0g
Glucose 1.0g
L-Arginine 1.0g
Sodium pyruvate 1.0g
Soluble starch 1.0g
L-Cysteine·HCl·H₂O 0.5g
Sodium succinate 0.5g
NaHCO₃ 0.4g
Na₄P₂O₇·10H₂O 0.25g
Neomycin 0.1g
Sheep blood, defibrinated 50.0mL
Vancomycin solution 10.0mL
Hemin solution 1.0mL
Vitamin K₁ solution 0.1mL

pH 7.2 ± 0.2 at 25°C

Vitamin K₁ Solution:

Composition per 100.0mL:

Vitamin K₁ 1.0g
Ethanol 99.0mL

Preparation of Vitamin K₁ Solution: Add vitamin K₁ to 99.0mL of absolute ethanol. Mix thoroughly.

Hemin Solution:

Composition per 100.0mL:

Hemin 1.0g
NaOH (1N solution) 20.0mL

Preparation of Hemin Solution: Add hemin to 20.0mL of 1N NaOH solution. Mix thoroughly. Bring volume to 100.0mL with distilled/deionized water.

Vancomycin Solution:

Composition per 10.0mL:

Vancomycin 7.5mg

Preparation of Vancomycin Solution: Add vancomycin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except defibrinated sheep blood and vancomycin solution, to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50.0mL of sterile defibrinated sheep blood and 10.0mL of vancomycin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective cultivation of *Fusobacterium* species from clinical and nonclinical specimens.

Fay and Barry Medium**Composition** per liter:

Amino acid.....	10.0g
Peptone.....	5.0g
Yeast extract.....	3.0g
Bromcresol Purple solution	5.0mL
pH 5.5 ± 0.2 at 25°C	

Bromcresol Purple Solution:**Composition** per 100.0mL:

Bromcresol Purple	0.2g
Ethanol.....	50.0mL

Preparation of Bromcresol Purple Solution: Add Bromcresol Purple to 50.0mL of absolute ethanol. Add distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. The amino acid may be L-arginine, L-ornithine, or L-lysine, depending on which amino acid decarboxylase activity is being measured. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the determination of decarboxylase activities of *Aeromonas* species.

Faybitch's Sucrose Gelatin Agar**Composition** per liter:

Sucrose.....	100.0g
Gelatin.....	15.0g
Agar	10.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the growth of microbial cultures that are to be lyophilized.

**FB Medium
(DSMZ Medium 980)****Composition** per liter:

NH ₄ Cl	0.54g
MgCl ₂ ·6H ₂ O.....	0.2g
CaCl ₂ ·2H ₂ O.....	0.15g
KH ₂ PO ₄	0.14g
Resazurin	0.5mg
NaHCO ₃ solution.....	10.0mL
Yeast extract solution.....	10.0mL
Na-crotonate solution.....	10.0mL
Cysteine solution.....	10.0mL
Na ₂ S·9H ₂ O solution	10.0mL
Vitamin solution.....	10.0mL
Trace elements solution SL-9	1.0mL
Selenite tungstate solution	1.0mL

pH 7.0 ± 0.2 at 25°C

Na-Crotonate Solution:**Composition** per 10.0mL:

Na-crotonate.....	0.86g
-------------------	-------

Preparation of Na-Crotonate Solution: Add Na-crotonate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Cysteine Solution:**Composition** per 10.0mL:

L-Cysteine·HCl·H ₂ O.....	0.25g
--------------------------------------	-------

Preparation of Cysteine Solution: Add L-cysteine·HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution SL-9:**Composition** per liter:

MgSO ₄ ·7H ₂ O	3.0g
Nitritotriacetic acid	1.5g
NaCl.....	1.0g
MnSO ₄ ·2H ₂ O.....	0.5g
CoSO ₄ ·7H ₂ O.....	0.18g
ZnSO ₄ ·7H ₂ O	0.18g
CaCl ₂ ·2H ₂ O.....	0.1g
FeSO ₄ ·7H ₂ O.....	0.1g
NiCl ₂ ·6H ₂ O.....	0.025g
KAl(SO ₄) ₂ ·12H ₂ O.....	0.02g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·4H ₂ O.....	0.01g
CuSO ₄ ·5H ₂ O.....	0.01g
Na ₂ SeO ₃ ·5H ₂ O.....	0.3mg

Preparation of Trace Elements Solution SL-9: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Vitamin Solution:**Composition** per liter:

Pyridoxine-HCl.....	10.0mg
Thiamine-HCl·2H ₂ O.....	5.0mg
Riboflavin	5.0mg
Nicotinic acid.....	5.0mg
D-Ca-pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Lipoic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Na₂S·9H₂O Solution:**Composition** per 10.0mL:

Na ₂ S·9H ₂ O.....	0.25g
--	-------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Sparge with N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Store anaerobically.

NaHCO₃ Solution:**Composition** per 10.0mL:

NaHCO ₃	2.5g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

Yeast Extract Solution:**Composition** per 10.0mL:

Yeast extract.....	0.2g
--------------------	------

Preparation of Yeast Extract Solution: Add yeast extract to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Preparation of Medium: Add components, except Na-crotonate solution, yeast extract solution, cysteine solution, vitamin solution, NaHCO₃ solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Gently heat and bring to boiling. Boil for 3 min. Cool to 25°C while sparging with 80% N₂ + 20% CO₂. Distribute to anaerobe tubes or bottles under 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add per liter of medium, 10.0mL sterile cysteine solution, 10.0mL sterile Na-crotonate solution, 10.0mL sterile vitamin solution, 10.0mL sterile yeast extract solution, 10.0mL sterile NaHCO₃ solution, and 10.0mL sterile Na₂S·9H₂O solution. Mix thoroughly. The final pH should be 7.0.

Use: For the cultivation of *Sporotomaculum syntrophicum*.

FC Agar
(Fecal Coliform Agar)
(m-FC Agar)
(m-Fecal Coliform Agar)

Composition per liter:

Agar	15.0g
Lactose	12.5g
NaCl	5.0g
Proteose peptone No. 3	5.0g
Yeast extract	3.0g
Bile salts	1.5g
Aniline Blue	0.1g
Rosolic acid solution	10.0mL
pH 7.4 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Rosolic Acid Solution:

Composition per 100.0mL:

Rosolic acid	1.0g
--------------------	------

Preparation of Rosolic Acid Solution: Add rosolic acid to 0.2N NaOH and bring volume to 100.0L. Mix thoroughly.

Preparation of Medium: Add 10.0mL rosolic acid solution to 950.0mL distilled/deionized water. Mix thoroughly. Add other components and bring volume to 1.0L with distilled/deionized water. Mix thoroughly. Gently heat and bring to boiling with frequent mixing. Do not autoclave. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of fecal coliform bacteria from waters and the enumeration of coliform bacteria using the membrane filtration method.

FC Agar
(Fecal Coliform Agar)
(m-FC Agar)
(m-Fecal Coliform Agar)

Composition per liter:

Agar	15.0g
Lactose	12.5g
Tryptose	10.0g
NaCl	5.0g
Proteose peptone No. 3	5.0g

Yeast extract	3.0g
Bile salts	1.5g
Aniline Blue	0.1g
Rosolic acid solution	10.0mL
pH 7.4 ± 0.2 at 25°C	

Rosolic Acid Solution:

Composition per 100.0mL:

Rosolic acid	1.0g
--------------------	------

Preparation of Rosolic Acid Solution: Add rosolic acid to 0.2N NaOH and bring volume to 100.0L. Mix thoroughly.

Preparation of Medium: Add 10.0mL rosolic acid solution to 950.0mL of distilled/deionized water. Mix thoroughly. Add other components and bring volume to 1.0L with distilled/deionized water. Mix thoroughly. Gently heat and bring to boiling with frequent mixing. Do not autoclave. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of fecal coliform bacteria from waters and the enumeration of coliform bacteria using the membrane filtration method.

FC Broth
(Fecal Coliform Broth)
(m-FC Broth)
(m-Fecal Coliform Broth)

Composition per liter:

Lactose	12.5g
Tryptose	10.0g
NaCl	5.0g
Proteose peptone No. 3	5.0g
Yeast extract	3.0g
Bile salts	1.5g
Aniline Blue	0.1g
Rosolic acid solution	10.0mL
pH 7.4 ± 0.2 at 25°C	

Rosolic Acid Solution:

Composition per 100.0mL:

Rosolic acid	1.0g
--------------------	------

Preparation of Rosolic Acid Solution: Add rosolic acid to 0.2N NaOH and bring volume to 100.0L. Mix thoroughly.

Preparation of Medium: Add 10.0mL of rosolic acid solution to 950.0mL of distilled/deionized water. Mix thoroughly. Add other components and bring volume to 1.0L with distilled/deionized water. Mix thoroughly. Gently heat and bring to boiling with frequent mixing. Do not autoclave. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of fecal coliform bacteria from waters and the enumeration of coliform bacteria using the membrane filtration method.

FC Broth
(Fecal Coliform Broth)
(m-FC Broth)
(m-Fecal Coliform Broth)

Composition per liter:

Lactose	12.5g
NaCl	5.0g
Proteose peptone No. 3	5.0g
Yeast extract	3.0g
Bile salts	1.5g

Aniline Blue.....	0.1g
Rosolic acid solution.....	10.0mL
pH 7.4 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Rosolic Acid Solution:

Composition per 100.0mL:

Rosolic acid.....	1.0g
-------------------	------

Preparation of Rosolic Acid Solution: Add rosolic acid to 0.2N NaOH and bring volume to 100.0L. Mix thoroughly.

Preparation of Medium: Add 10.0mL of rosolic acid solution to 950.0mL of distilled/deionized water. Mix thoroughly. Add other components and bring volume to 1.0L with distilled/deionized water. Mix thoroughly. Gently heat and bring to boiling with frequent mixing. Do not autoclave. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of fecal coliform bacteria from waters and the enumeration of coliform bacteria using the membrane filtration method.

FCIC

See: **Fecal Coliform Agar, Modified**

FDA Agar

(ATCC Medium 182)

(AATCC Bacteriostasis Agar)

(American Association of Textile Chemists and Colorists Bacteriostasis Agar)

Composition per liter:

Agar	15.0g
Peptic digest of animal tissue.....	10.0g
Beef extract.....	5.0g
NaCl.....	5.0g

pH 6.8 ± 0.1 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For testing the antibacterial activities of antiseptics and disinfectants.

FDA Broth

(AATCC Bacteriostasis Broth)

(American Association of Textile Chemists and Colorists Bacteriostasis Broth)

Composition per liter:

Peptic digest of animal tissue.....	10.0g
Beef extract.....	5.0g
NaCl.....	5.0g

pH 6.8 ± 0.1 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For testing the antibacterial activities of antiseptics and disinfectants.

Fe(III) Lactate Nutrient Agar

Composition per liter:

Agar	15.0g
Peptone	5.0g
NaCl.....	5.0g
Yeast extract.....	2.0g
Beef extract.....	1.0g
Fe(III)-lactate solution.....	25.0mL

pH 7.2 ± 0.2 at 25°C

Fe(III)-Lactate Solution:

Composition per 30.0mL:

FeCl ₃ ·6H ₂ O solution.....	20.0mL
Sodium lactate solution.....	10.0mL

Preparation of Fe(III)-Lactate Solution: Aseptically combine the component solutions. Mix thoroughly.

FeCl₃·6H₂O Solution:

Composition per 100.0mL:

FeCl ₃ ·6H ₂ O.....	5.0g
---	------

Preparation of FeCl₃·6H₂O Solution: Add FeCl₃·6H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Sodium Lactate Solution

Composition per 100.0mL:

Sodium lactate	5.0g
----------------------	------

Preparation of Sodium Lactate Solution: Add sodium lactate to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except Fe(III)-lactate solution, to distilled/deionized water and bring volume to 975.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 25.0mL of filter-sterilized Fe(III)-lactate solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Shewanella putrefaciens*.

Fecal Coliform Agar

See: **FC Agar**

Fecal Coliform Agar, Modified (m-Fecal Coliform Agar, Modified) (FCIC)

Composition per liter:

Agar	15.0g
Inositol.....	10.0g
Tryptose.....	10.0g
Proteose peptone No. 3.....	5.0g
NaCl.....	5.0g
Yeast extract.....	3.0g
Bile salts No. 3.....	1.5g
Aniline Blue.....	0.1g

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Do not autoclave. Cool to 50°C. Adjust pH to 7.4. Pour into sterile Petri dishes in 20.0mL volumes. Allow surface of plates to dry before using.

Use: For the isolation, cultivation, and enumeration of *Klebsiella* species using the membrane filter method.

Fecal Coliform Agar, Modified

Composition per liter:

Agar	15.0g
Lactose	12.5g
Tryptose	10.0g
Proteose peptone No. 3	5.0g
NaCl	5.0g
Yeast extract	3.0g
Bile salts No. 3	1.5g
Aniline Blue	0.1g

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Do not autoclave. Cool to 50°C. Adjust pH to 7.4. Pour into sterile Petri dishes in 20.0mL volumes. Allow surface of plates to dry before using.

Use: For the isolation, cultivation, and identification of stressed fecal coliform microorganisms based on their ability to ferment lactose. Lactose-fermenting bacteria turn the medium blue.

Feeley Gorman HiVeg Agar

(F.G. HiVeg Agar)

Composition per liter:

Plant acid hydrolysate	17.5g
Agar	17.0g
Plant extract	3.0g
Starch	1.5g
L-Cysteine·HCl	0.4g
Fe ₄ (P ₂ O ₇) ₃ ·H ₂ O, soluble	0.25g

pH 6.9 ± 0.05 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Mix thoroughly. Adjust pH to 6.9. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of *Legionella pneumophila*.

Feeley Gorman HiVeg Broth

(F.G. HiVeg Broth)

Composition per liter:

Plant acid hydrolysate	17.5g
Plant extract	3.0g
Starch	1.5g
L-Cysteine·HCl	0.4g
Fe ₄ (P ₂ O ₇) ₃ ·H ₂ O, soluble	0.25g

pH 6.9 ± 0.05 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Mix thoroughly. Adjust pH to 6.9.

Use: For the cultivation of *Legionella pneumophila*.

Feodorov Medium

Composition per liter:

Mannitol or glucose	20.0g
Marine salts mixture	18.0g
CaCO ₃	0.5g
K ₂ HPO ₄	0.3g
MgSO ₄	0.3g
CaHPO ₄	0.2g
K ₂ SO ₄	0.2g
FeCl ₃	0.1g
Trace elements solution	1.0mL

Trace Elements Solution:

Composition per 100.0mL:

H ₃ BO ₃	0.5g
(NH ₄) ₆ Mo ₇ O ₂₄ ·4H ₂ O	0.5g
KI	0.05g
NaBr	0.05g
Al ₂ (SO ₄) ₃ ·18H ₂ O	0.03g
ZnSO ₄	0.02g

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Azotobacter vinelandii*.

Fermentation Basal Medium

Composition per liter:

Agar	15.0g
(NH ₄) ₂ HPO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.2g
KCl	0.02g
Carbohydrate solution	100.0mL
Bromocresol Purple solution	20.0mL

pH 7.0 ± 0.2 at 25°C

Carbohydrate Solution:

Composition per 100.0mL:

Carbohydrate	10.0g
--------------------	-------

Preparation of Carbohydrate Solution: Add carbohydrate to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Bromcresol Purple Solution:

Composition per 100.0mL:

Bromcresol Purple	0.04g
Ethanol	50.0mL

Preparation of Bromcresol Purple Solution: Add Bromcresol Purple to 50.0mL of absolute ethanol. Add distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components, except carbohydrate solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 100.0mL of sterile carbohydrate solution. Various carbohydrates are used for different fermentation tests. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the differentiation of aerobic actinomycetes based upon carbohydrate fermentation. Actinomycetes that produce acid from carbohydrates turn the medium yellow.

Fermentation Base for *Campylobacter*

See: Enteric Fermentation Base

**Fermentation Broth
(CHO Medium)**

Composition per liter:

Pancreatic digest of casein	15.0g
Yeast extract	7.0g
NaCl	2.5g
Agar	0.75g
Sodium thioglycolate	0.5g
L-Cystine	0.25g
Ascorbic acid	0.1g
Bromthymol Blue	0.01g
Carbohydrate or starch solution	100.0mL

pH 7.0 ± 0.1 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Carbohydrate Solution:

Composition per 100.0mL:

Carbohydrate	6.0g
--------------------	------

Preparation of Carbohydrate Solution: Add carbohydrate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Starch Solution:

Composition per 100.0mL:

Starch	2.5g
--------------	------

Preparation of Starch Solution: Add starch to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except carbohydrate solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 100.0mL of sterile carbohydrate solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks. Loosen caps on tubes. Place in an anaerobic

chamber under an atmosphere of 85% N₂, 10% H₂, and 5% CO₂. Fasten the caps securely or maintain in an anaerobic chamber.

Use: For the differentiation of anaerobic bacteria based upon carbohydrate fermentation. Bacteria that ferment carbohydrates turn the medium yellow.

**Fermentation HiVeg Medium Base for *C. perfringens*
with Salicin and Raffinose**

Composition per liter:

Plant hydrolysate	10.0g
Plant special peptone	10.0g
Agar	2.0g
Na-thioglycollate	0.25g
Salicin solution	10.0mL
Raffinose solution	10.0mL

pH 7.0 ± 2.0 at 25°C

Source: This medium, without salicin and raffinose, is available as a premixed powder from HiMedia.

Salicin Solution:

Composition per 10.0mL:

Salicin	0.1g
---------------	------

Preparation of Salicin Solution: Add salicin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Raffinose Solution:

Composition per 10.0mL:

Raffinose	0.1g
-----------------	------

Preparation of Raffinose Solution: Add raffinose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except salicin and raffinose solutions, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL sterile salicin solution and 10.0mL sterile raffinose solution. Mix thoroughly. Aseptically distribute into tubes or flasks.

Use: For the cultivation of *Clostridium perfringens*.

**Fermentation HiVeg Medium for Neisseriae
with Carbohydrate**

Composition per liter:

Plant hydrolysate	20.0g
NaCl	5.0g
Agar	3.5g
Cystine	0.5g
Na ₂ SO ₃	0.5g
Phenol Red	0.017g
Carbohydrate solution	100.0mL

pH 6.9 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Carbohydrate Solution:

Composition per 100.0mL:

Carbohydrate	10.0g
--------------------	-------

Preparation of Carbohydrate Solution: Add carbohydrate to distilled/deionized water and bring volume to 100.0mL. Adonitol, ara-

binose, cellobiose, glucose, dulcitol, fructose, galactose, inositol, lactose, maltose, mannitol, raffinose, rhamnose, salicin, sorbitol, sucrose, trehalose, xylose, or other carbohydrates may be used. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except carbohydrate solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 12 psi pressure–118°C. Cool to 50°C. Aseptically add 100.0mL of sterile carbohydrate solution. Mix thoroughly.

Use: For the cultivation and identification of *Neisseria* spp. For studying fermentation reactions of fastidious organisms such as *Neisseria* species.

Fermentation HiVeg Medium for *Staphylococcus* and *Micrococcus*

Composition per liter:

Glucose	10.0g
Plant hydrolysate.....	10.0g
Agar	2.2g
Yeast extract.....	1.0g
Bromcresol Purple	0.04g
pH 7.0 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and identification of *Staphylococcus* and *Micrococcus* spp.

Fermentation Medium

Composition per liter:

Glucose or mannitol.....	10.0g
Pancreatic digest of casein.....	10.0g
Agar	2.2g
Yeast extract.....	1.0g
Bromcresol Purple	0.04g
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 10 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For differentiating *Staphylococcus* and *Micrococcus* species based upon the fermentation of glucose and mannitol.

Fermentation Medium Base for *C. perfringens* with Salicin and Raffinose

Composition per liter:

Casein enzymatic hydrolysate	10.0g
Peptone, special	10.0g
Agar	2.0g
Na-thioglycollate	0.25g

Salicin solution	10.0mL
Raffinose solution.....	10.0mL
pH 7.0 ± 0.2 at 25°C	

Source: This medium, without salicin and raffinose, is available as a premixed powder from HiMedia.

Salicin Solution:

Composition per 10.0mL:

Salicin	0.1g
---------------	------

Preparation of Salicin Solution: Add salicin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Raffinose Solution:

Composition per 10.0mL:

Raffinose.....	0.1g
----------------	------

Preparation of Raffinose Solution: Add raffinose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except salicin and raffinose solutions, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL sterile salicin solution and 10.0mL sterile raffinose solution. Mix thoroughly. Aseptically distribute into tubes or flasks.

Use: For the cultivation of *Clostridium perfringens*.

Fermentation Medium for *Neisseriae* with Carbohydrate

Composition per liter:

Casein enzymatic hydrolysate	20.0g
NaCl.....	5.0g
Agar	3.5g
Cystine	0.5g
Na ₂ SO ₃	0.5g
Phenol Red.....	0.017g
Carbohydrate solution.....	100.0mL
pH 6.9 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Carbohydrate Solution:

Composition per 100.0mL:

Carbohydrate.....	10.0g
-------------------	-------

Preparation of Carbohydrate Solution: Add carbohydrate to distilled/deionized water and bring volume to 100.0mL. Adonitol, arabinose, cellobiose, glucose, dulcitol, fructose, galactose, inositol, lactose, maltose, mannitol, raffinose, rhamnose, salicin, sorbitol, sucrose, trehalose, xylose, or other carbohydrates may be used. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except carbohydrate solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 12 psi pressure–118°C. Cool to 50°C. Aseptically add 100.0mL of sterile carbohydrate solution. Mix thoroughly.

Use: For the cultivation and identification of *Neisseria* spp. For studying fermentation reactions of fastidious organisms such as *Neisseria* species.

Fermentation Medium for *Staphylococcus* and *Micrococcus*

Composition per liter:

Glucose	10.0g
Casein enzymatic hydrolysate	10.0g
Agar	2.2g
Yeast extract	1.0g
Bromocresol Purple	0.04g

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and identification of *Staphylococcus* and *Micrococcus* spp.

Ferric Citrate Medium

Composition per liter:

Ferric citrate	13.7g
Sodium lactate (60% solution)	5.6g
NaHCO ₃	2.5g
NH ₄ Cl	1.5g
NaH ₂ PO ₄	0.6g
KCl	0.1g
Wolfe's mineral solution	10.0mL
Wolfe's vitamin solution	10.0mL

pH 7.0 ± 0.2 at 25°C

Wolfe's Vitamin Solution:

Composition per liter:

Pyridoxine-HCl	10.0mg
Calcium D-(+)-pantothenate	5.0mg
Nicotinic acid	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Riboflavin	5.0mg
Thiamine-HCl	5.0mg
Thioctic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Cyanocobalamin	0.1mg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Wolfe's Mineral Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O	3.0g
Nitritotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·H ₂ O	0.5g
CaCl ₂	0.1g
CoCl ₂ ·6H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g
ZnSO ₄ ·7H ₂ O	0.1g
KAl(SO ₄) ₂ ·12H ₂ O	0.01g
CuSO ₄ ·5H ₂ O	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g

Preparation of Wolfe's Mineral Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components sequentially. Add distilled/deionized water to 1.0L. Mix thoroughly.

Preparation of Medium: Add ferric citrate to distilled/deionized water and bring volume to 1.0L. Gently heat and bring to boiling. Continue boiling until ferric citrate is dissolved. Cool to room temperature. Adjust to pH 6.6 with 10N NaOH. Add remaining components. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Anaerobically distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Final pH should be 7.0.

Use: For the cultivation of *Aeromonas encheleia* and *Shewanella alga*.

Ferroglobus placidus Medium (DSMZ Medium 730)

Composition per 1020.0mL:

NaCl	18.0g
NaHCO ₃	10.0g
MgCl ₂ ·6H ₂ O	4.3g
KNO ₃	1.0g
KCl	0.34g
NH ₄ Cl	0.24g
CaCl ₂ ·2H ₂ O	0.14g
K ₂ HPO ₄ ·3H ₂ O	0.14g
Resazurin	0.5mg
Trace elements solution	10.0mL
Vitamin solution	10.0mL
Na ₂ S·9H ₂ O solution	10.0mL
Na-pyruvate solution	10.0mL

pH 7.0 ± 0.2 at 25°C

Na-pyruvate Solution:

Composition per 10.0mL:

Na-pyruvate	1.0g
-------------------	------

Preparation of Na-pyruvate Solution: Add Na-pyruvate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Trace Elements Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O	3.0g
Nitritotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·2H ₂ O	0.5g
CoSO ₄ ·7H ₂ O	0.18g
ZnSO ₄ ·7H ₂ O	0.18g
CaCl ₂ ·2H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g
NiCl ₂ ·6H ₂ O	0.025g
KAl(SO ₄) ₂ ·12H ₂ O	0.02g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·4H ₂ O	0.01g
CuSO ₄ ·5H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O	0.3mg

Preparation of Trace Elements Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl.....	10.0mg
Thiamine-HCl·2H ₂ O.....	5.0mg
Riboflavin.....	5.0mg
Nicotinic acid.....	5.0mg
D-Ca-pantothenate.....	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Lipoic acid.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	0.5g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Sparge with N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Store anaerobically.

Preparation of Medium: Add components, except Na₂S·9H₂O solution, vitamin solution, and Na-pyruvate solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Flush medium with N₂ for 20 min. Adjust medium pH to 7.0 with 4*N* H₂SO₄. Add 10.0mL of Na₂S·9H₂O solution. Mix thoroughly. Readjust the medium pH to 7.0 with H₂SO₄, while flushing the gas phase only with N₂. Dispense 10mL volumes into 100mL serum bottles with rubber stoppers under N₂. Replace gas phase by 80% H₂ + 20% CO₂ gas mixture and finally pressurize the bottles to 2 bar gas overpressure. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically inject via syringe 0.1mL vitamin solution and 0.1mL Na-pyruvate solution into each tube containing 10.0mL of the autoclaved medium.

Use: For the cultivation of *Ferroglobus placidus*.

***Ferroplasma acidiphilum* Medium
(DSMZ Medium 874)**

Composition per 1001.6mL:

Solution A.....	950.0mL
Solution B.....	10.0mL
Solution C.....	1.6mL

pH 1.7 ± 0.2 at 25°C

Solution A:

Composition per 950.0mL:

MgSO ₄ ·7H ₂ O.....	0.4g
(NH ₄) ₂ SO ₄	0.2g
KCl.....	0.1g
K ₂ HPO ₄	0.1g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly.

Solution B:

Composition per 50.0mL:

FeSO ₄ ·7H ₂ O.....	25.0g
H ₂ SO ₄ , 1 <i>N</i>	40.0mL

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly.

Solution C:

Composition per 10.0mL:

Yeast extract.....	1.0g
--------------------	------

Preparation of Solution C: Add yeast extract to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Preparation of Medium: Add 50.0mL solution B to 950.0mL solution A. Mix thoroughly. Adjust pH to 1.6–1.8 with H₂SO₄. Filter sterilize. Aseptically add 1.6 mL of sterile solution C. Pour into sterile Petri dishes or leave in tubes. Mix thoroughly. Aseptically distribute to sterile tubes or flasks.

Use: For the cultivation of *Ferroplasma acidiphilum* (*Ferriplasma acidiphilum*).

**Ferrous Sulfate/Yeast Extract Medium
(DSMZ Medium 1190)**

Composition per liter:

Yeast extract.....	0.2g
Basal salts solution.....	20.0mL
Ferrous sulfate solution.....	20.0mL
Trace elements solution.....	1.0mL

Basal Salts Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O.....	25.0g
(NH ₄) ₂ SO ₄	22.5g
Na ₂ SO ₄ ·10H ₂ O.....	7.5g
KCl.....	2.5g
KH ₂ PO ₄	2.5g
Ca(NO ₃) ₂ ·4H ₂ O.....	0.7g

Preparation of Basal Salts Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution:

Composition per liter:

ZnSO ₄ ·7H ₂ O.....	10.0g
CuSO ₄ ·5H ₂ O.....	1.0g
CoO ₄ ·7H ₂ O.....	1.0g
MnSO ₄ ·2H ₂ O.....	1.0g
NiSO ₄ ·6H ₂ O.....	1.0g
Na ₂ SeO ₄	1.0g
Na ₂ WO ₄ ·2H ₂ O.....	1.0g
Cr ₂ (SO ₄) ₃ ·15H ₂ O.....	0.5g
H ₃ BO ₃	0.6g
Na ₂ MoO ₄ ·2H ₂ O.....	0.5g
NaVO ₃	0.1g

Preparation of Trace Elements Solution: Adjust pH of 800.0mL of distilled/deionized water to 2.0 with dilute H₂SO₄. Add the above salts in order one at a time, allowing each to dissolve before adding the next. Maintain the pH at 2.0 by adding H₂SO₄ as necessary. After addition of vanadate, bring volume to 1.0L with water. Adjust final pH to 2.0. Autoclave for 15 min at 15 psi pressure–121°C. The vanadate will require several days to dissolve.

Ferrous Sulfate Solution:

Composition per 20.0mL:

FeSO ₄ ·7H ₂ O.....	2.78g
---	-------

Preparation of Ferrous Sulfate Solution: Adjust pH of 20.0mL of distilled/deionized water to 1.8 with H₂SO₄. Add FeSO₄·7H₂O. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except ferrous sulfate solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Adjust pH to 2.0 with H₂SO₄. Gently heat while stirring and bring to boiling. Boil for 1 min. Autoclave for 20 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add the ferrous sulfate solution.

Use: For the cultivation of *Sulfobacillus* spp.

Ferrous Sulfide Agar

Composition per 1200.0mL:

Agar layer	1.0L
Liquid overlay	200.0mL

Agar Layer:

Composition per liter:

Agar	30.0g
FeS washed precipitate suspension	500.0mL

Preparation of Agar Layer: Add agar to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Heat FeS washed precipitate suspension to 45°–50°C. Mix thoroughly. Aseptically add 500.0mL of sterile FeS washed precipitate suspension to 500.0mL of sterile agar at 45°–50°C. Mix thoroughly.

FeS Washed Precipitate Suspension:

Composition per 500.0mL:

Fe(NH ₄) ₂ (SO ₄) ₂ ·6H ₂ O	78.4g
Na ₂ S·9H ₂ O	15.6g

Preparation of FeS Washed Precipitate Suspension: Add Na₂S·9H₂O and Fe(NH₄)₂(SO₄)₂·6H₂O to 500.0mL boiling distilled/deionized water. Let precipitate settle from the hot solution in a completely filled and stoppered bottle. Wash precipitate four times by decanting supernatant and replacing each time with 500.0mL of boiling distilled/deionized water. Store FeS washed precipitate suspension in a completely filled 500.0mL glass-stoppered bottle.

Liquid Overlay:

Composition per liter:

(NH ₄) ₂ Cl	1.0g
K ₂ HPO ₄	0.5g
MgSO ₄ ·7H ₂ O	0.2g
CaCl ₂	0.1g

Preparation of Liquid Overlay: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically bubble 100% CO₂ for 15 sec.

Preparation of Medium: Aseptically distribute agar layer into sterile tubes in 10.0mL volumes. Allow tubes to cool in a slanted position. Aseptically add 2.0mL of sterile liquid overlay to each tube.

Use: For the enumeration, enrichment, and isolation of iron and sulfur bacteria, including *Gallionella ferruginea*.

Ferulate Medium

Composition per 1016.0mL:

Solution A	916.0mL
Solution B	70.0mL
Solution C	10.0mL
Solution D	10.0mL
Solution E	10.0mL

pH 7.2 ± 0.2 at 25°C

Solution A:

Composition per 916.0mL:

Pancreatic digest of casein	1.0g
Resazurin	1.0mg
Mineral solution	50.0mL
Rumen fluid, clarified	50.0mL
Vitamin solution	5.0mL
Trace elements solution SL-10	1.0mL

Mineral Solution:

Composition per liter:

Nitritotriacetic acid	12.5g
NaCl	1.0g
FeCl ₃ ·4H ₂ O	0.2g
MnCl ₂ ·4H ₂ O	0.1g
CaCl ₂ ·2H ₂ O	0.1g
ZnCl ₂	0.1g
CuCl ₂	0.02g
Na ₂ SeO ₃	0.02g
CoCl ₂ ·6H ₂ O	0.017g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g

Preparation of Mineral Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Vitamin Solution:

Composition per liter:

Nicotinic acid	2.5mg
Thiamine-HCl	1.25mg
<i>p</i> -Aminobenzoic acid	1.25mg
Pantothenic acid	0.62mg
Pyridoxine-HCl	6.2mg
Biotin	0.25mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Trace Elements Solution SL-10:

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly.

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 916.0mL. Adjust pH to 7.2. Gently heat and bring to boiling. Continue boiling for a few minutes. Allow to cool to room temperature under 80% N₂ + 20% CO₂. Distribute into bottles under 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B:

Composition per 70.0mL:

NaHCO ₃	3.5g
--------------------------	------

Preparation of Solution B: Add NaHCO₃ to distilled/deionized water and bring volume to 70.0mL. Mix thoroughly. Filter sterilize. Sparge with 80% N₂ + 20% CO₂ for 15 min.

Solution C:

Composition per 10.0mL:

L-Cysteine-HCl..... 0.3g

Preparation of Solution C: Add L-cysteine-HCl to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂ for 3–4 min. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C.

Solution D:

Composition per 10.0mL:

Na₂S·9H₂O..... 0.3g

Preparation of Solution D: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂ for 3–4 min. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C.

Solution E:

Composition per 10.0mL:

Sodium ferulate..... 1.5g

Preparation of Solution E: Add sodium ferulate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize. Sparge with 100% N₂ for 3–4 min.

Preparation of Medium: To 916.0mL of sterile solution A, add 70.0mL of sterile solution B, 10.0mL of sterile solution C, 10.0mL of sterile solution D, and 10.0mL of sterile solution E. Mix thoroughly. Anaerobically and aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Eubacterium callanderi*.

Fervidobacterium islandicum Medium

Composition per liter:

(NH₄)₂SO₄..... 1.3g
 Yeast extract..... 1.0g
 KH₂PO₄..... 0.28g
 MgSO₄·7H₂O..... 0.25g
 CaCl₂·2H₂O..... 0.07g
 FeCl₃·6H₂O..... 0.02g
 Na₂B₄·10H₂O..... 4.5mg
 MnCl₂·4H₂O..... 1.8mg
 Resazurin..... 1.0mg
 ZnSO₄·7H₂O..... 0.22mg
 CuCl₂·2H₂O..... 0.05mg
 Na₂MoO₄·2H₂O..... 0.03mg
 VO₂·2H₂O..... 0.03mg
 CoSO₄..... 0.01mg
 Glucose solution..... 20.0mL
 Na₂S·9H₂O solution..... 10.0mL

pH 7.0 ± 0.2 at 25°C

Glucose Solution:

Composition per 20.0mL:

Glucose..... 2.0g

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Sparge with 100% N₂ for 3–4 min. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na₂S·9H₂O..... 0.5g

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except glucose solution and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Adjust pH to 7.0. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 20.0mL of sterile glucose solution and 10.0mL of sterile Na₂S·9H₂O solution. Mix thoroughly.

Use: For the cultivation of *Fervidobacterium islandicum*.

Fervidobacterium Medium

Composition per liter:

Pancreatic digest of casein..... 10.0g
 Glucose..... 5.0g
 Yeast extract..... 3.0g
 K₂HPO₄..... 1.5g
 NH₄Cl..... 0.9g
 KH₂PO₄..... 0.75g
 MgCl₂·6H₂O..... 0.2g
 Na₂S·9H₂O solution..... 10.0mL
 Trace elements solution..... 9.0mL
 Wolfe's vitamin solution..... 5.0mL
 Resazurin (0.2% solution)..... 1.0mL
 FeSO₄·7H₂O (10% solution)..... 0.03mL

pH 7.0 ± 0.1 at 25°C

Trace Elements Solution:

Composition per liter:

Nitritotriacetic acid..... 12.5g
 NaCl..... 1.0g
 FeCl₃·4H₂O..... 0.2g
 CaCl₂·2H₂O..... 0.1g
 MnCl₂·4H₂O..... 0.1g
 ZnCl₂..... 0.1g
 CuCl₂..... 0.02g
 Na₂SeO₃..... 0.02g
 CoCl₂·6H₂O..... 0.017g
 H₃BO₃..... 0.01g
 Na₂MoO₄·2H₂O..... 0.01g

Preparation of Trace Elements Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Filter sterilize. Maintain under an atmosphere of 100% N₂.

Wolfe's Vitamin Solution:

Composition per liter:

Pyridoxine-HCl..... 0.01g
 Thiamine-HCl..... 5.0mg
 Riboflavin..... 5.0mg
 Nicotinic acid..... 5.0mg
 Calcium pantothenate..... 5.0mg
p-Aminobenzoic acid..... 5.0mg
 Thiocetic acid..... 5.0mg
 Biotin..... 2.0mg
 Folic acid..... 2.0mg
 Cyanocobalamin..... 0.1mg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Maintain under an atmosphere of 100% N₂.

Na₂S·9H₂O Solution:**Composition per 10.0mL:**Na₂S·9H₂O 0.5g

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize. Maintain under an atmosphere of 100% N₂.

Preparation of Medium: Add components, except sodium sulfide solution, trace elements solution, and Wolfe's vitamin solution, to distilled/deionized water and bring volume to 976.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool under an atmosphere of 100% N₂. Aseptically add 9.0mL of trace elements solution and 5.0mL of Wolfe's vitamin solution under an atmosphere of 100% N₂. Mix thoroughly. Aseptically distribute into sterile tubes or flasks under an atmosphere of 100% N₂. Add Na₂S·9H₂O solution just prior to use to a concentration of 0.1%.

Use: For the cultivation and maintenance of *Clostridium* species, *Ferribacterium nodosum*, *Ferribacterium islandicum*, and *Thermoanaerobium brockii*.

F-G Agar (Feeley-Gorman Agar)

Composition per liter:

Casein, acid hydrolyzed 17.5g

Agar 17.0g

Beef extract 3.0g

Starch 1.5g

L-Cysteine solution 10.0mL

Fe₄(P₂O₇)₃ solution 10.0mL

pH 6.9 ± 0.05 at 25°C

L-Cysteine Solution:**Composition per 10.0mL:**L-Cysteine·HCl·H₂O 0.4g

Preparation of L-Cysteine Solution: Add L-cysteine·HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Fe₄(P₂O₇)₃ Solution:**Composition per 10.0mL:**Fe₄(P₂O₇)₃ 0.25g

Preparation of Fe₄(P₂O₇)₃ Solution: Add Fe₄(P₂O₇)₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except L-cysteine solution and Fe₄(P₂O₇)₃ solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL of L-cysteine solution. Mix thoroughly. Aseptically add 10.0mL of Fe₄(P₂O₇)₃ solution. Mix thoroughly. Adjust pH to 6.9. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of *Legionella pneumophila*.

F-G Agar with Selenium (Feeley-Gorman Agar with Selenium)

Composition per liter:

Casein, acid hydrolyzed 17.5g

Agar 17.0g

Beef extract 3.0g

Starch 1.5g

L-Cysteine solution 10.0mL

Fe₄(P₂O₇)₃ solution 10.0mLNa₂SeO₃·5H₂O solution 10.0mL

pH 6.9 ± 0.05 at 25°C

L-Cysteine Solution:**Composition per 10.0mL:**L-Cysteine·HCl·H₂O 0.4g

Preparation of L-Cysteine Solution: Add L-cysteine·HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Fe₄(P₂O₇)₃ Solution:**Composition per 10.0mL:**Fe₄(P₂O₇)₃ 0.25g

Preparation of Fe₄(P₂O₇)₃ Solution: Add Fe₄(P₂O₇)₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Na₂SeO₃·5H₂O Solution:**Composition per 10.0mL:**Na₂SeO₃·5H₂O 0.01g

Preparation of Na₂SeO₃·5H₂O Solution: Add Na₂SeO₃·5H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components—except L-cysteine solution, Fe₄(P₂O₇)₃ solution, and Na₂SeO₃·5H₂O solution—to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL of sterile L-cysteine solution. Mix thoroughly. Aseptically add 10.0mL of sterile Fe₄(P₂O₇)₃ solution and 10.0mL of sterile Na₂SeO₃·5H₂O solution. Mix thoroughly. Adjust pH to 6.9. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of *Legionella pneumophila*.

F-G Broth (Feeley-Gorman Broth)

Composition per liter:

Casein, acid hydrolyzed 17.5g

Beef extract 3.0g

Starch 1.5g

L-Cysteine solution 10.0mL

Fe₄(P₂O₇)₃ solution 10.0mL

pH 6.9 ± 0.05 at 25°C

L-Cysteine Solution:**Composition per 10.0mL:**L-Cysteine·HCl·H₂O 0.4g

Preparation of L-Cysteine Solution: Add L-cysteine·HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Fe₄(P₂O₇)₃ Solution:**Composition per 10.0mL:**Fe₄(P₂O₇)₃ 0.25g

Preparation of Fe₄(P₂O₇)₃ Solution: Add Fe₄(P₂O₇)₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except L-cysteine solution and Fe₄(P₂O₇)₃ solution, to distilled/deionized water and bring vol-

ume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL of L-cysteine solution. Mix thoroughly. Aseptically add 10.0mL of Fe₄(P₂O₇)₃ solution. Mix thoroughly. Adjust pH to 6.9. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Legionella pneumophila*.

FGTC Agar

Composition per liter:

Pancreatic digest of casein	15.0g
Agar	15.0g
Papaic digest of soybean meal	5.0g
NaCl	5.0g
KH ₂ PO ₄	5.0g
Amylose Azure	3.0g
Galactose	1.0g
Thallos acetate	0.5g
MUG (4-Methylumbelliferyl- α -D-galactoside)	0.1g
NaHCO ₃ solution	20.0mL
Gentamicin solution	2.5mL
Tween™ 80	0.75mL

pH 7.3 ± 0.2 at 25°C

Gentamicin Solution:

Composition per 10.0mL:

Gentamicin	0.01g
------------------	-------

Preparation of Gentamicin Solution: Add gentamicin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly.

NaHCO₃ Solution:

Composition per 20.0mL:

NaHCO ₃	2.0g
--------------------------	------

Preparation of NaHCO₃ Solution: Add the NaHCO₃ to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize. Use freshly prepared solution.

Preparation of Medium: Add components, except NaHCO₃ solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add sterile NaHCO₃ solution. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the cultivation, differentiation, and enumeration of *Enterococcus* species based on starch hydrolysis and production of fluorescence. Bacteria that hydrolyze starch, such as *Streptococcus bovis*, appear as colonies surrounded by a clear zone. Bacteria that produce fluorescence, such as *Streptococcus bovis* and *Enterococcus faecium*, appear as colonies surrounded by a zone of bright bluish fluorescence when viewed under a long-wave UV lamp. Other bacteria, such as *Enterococcus faecalis*, *Enterococcus avium*, or *Streptococcus equinus*, do not hydrolyze starch or produce fluorescence.

FGTC Agar Base

with Bicarbonate, Gentamicin and Amylose Azure

Composition per liter:

Agar	15.0g
Casein enzymatic hydrolysate	15.0g
KH ₂ PO ₄	5.0g
Papaic digest of soybean meal	5.0g
NaCl	5.0g
Galactose	1.0g
Polysorbate 80	0.75g

Thallos acetate	0.5g
4-Methylumbellifery β -D-glucuronide (MUG)	0.1g
NaHCO ₃ solution	20.0mL
Amylose azure solution	10.0mL
Gentamicin solution	2.5mL

pH 7.3 ± 0.2 at 25°C

Source: This medium, without gentamicin, amylose azure, or NaHCO₃ solutions, is available as a premixed powder from HiMedia.

Gentamicin Solution:

Composition per 10.0mL:

Gentamicin	0.01g
------------------	-------

Preparation of Gentamicin Solution: Add gentamicin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Amylose Azure Solution:

Composition per 10.0mL:

Amylose azure	3.0g
---------------------	------

Preparation of Amylose Azure Solution: Add amylose azure to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

NaHCO₃ Solution:

Composition per 20.0mL:

NaHCO ₃	2.0g
--------------------------	------

Preparation of NaHCO₃ Solution: Add the NaHCO₃ to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize. Use freshly prepared solution.

Preparation of Medium: Add components, except NaHCO₃ solution, amylose azure solution, and gentamicin solution, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 20.0mL sterile NaHCO₃ solution, 10.0mL sterile amylose azure solution, and 2.5mL sterile gentamicin solution. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the cultivation, differentiation, and enumeration of *Enterococcus* species based on starch hydrolysis and production of fluorescence. Bacteria that hydrolyze starch, such as *Streptococcus bovis*, appear as colonies surrounded by a clear zone. Bacteria that produce fluorescence, such as *Streptococcus bovis* and *Enterococcus faecium*, appear as colonies surrounded by a zone of bright bluish fluorescence when viewed under a long-wave UV lamp. Other bacteria, such as *Enterococcus faecalis*, *Enterococcus avium*, or *Streptococcus equinus*, do not hydrolyze starch or produce fluorescence.

FGTC HiVeg Agar Base

with Bicarbonate, Gentamicin, and Amylose Azure

Composition per liter:

Agar	15.0g
Plant hydrolysate	15.0g
KH ₂ PO ₄	5.0g
Papaic digest of soybean meal	5.0g
NaCl	5.0g
Galactose	1.0g
Polysorbate 80	0.75g
Thallos acetate	0.5g
4-Methylumbellifery β -D-glucuronide (MUG)	0.1g
NaHCO ₃ solution	20.0mL

Amylose azure solution	10.0mL
Gentamicin solution	2.5mL
pH 7.3 ± 0.2 at 25°C	

Source: This medium, without gentamicin, amylose azure, or NaHCO₃ solutions, is available as a premixed powder from HiMedia.

Gentamicin Solution:

Composition per 10.0mL:

Gentamicin	0.01g
------------------	-------

Preparation of Gentamicin Solution: Add gentamicin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Amylose Azure Solution:

Composition per 10.0mL:

Amylose azure	3.0g
---------------------	------

Preparation of Amylose Azure Solution: Add amylose azure to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

NaHCO₃ Solution:

Composition per 20.0mL:

NaHCO ₃	2.0g
--------------------------	------

Preparation of NaHCO₃ Solution: Add the NaHCO₃ to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize. Use freshly prepared solution.

Preparation of Medium: Add components, except NaHCO₃ solution, amylose azure solution, and gentamicin solution, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 20.0mL sterile NaHCO₃ solution, 10.0mL sterile amylose azure solution, and 2.5mL sterile gentamicin solution. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the cultivation, differentiation, and enumeration of *Enterococcus* species based on starch hydrolysis and production of fluorescence. Bacteria that hydrolyze starch, such as *Streptococcus bovis*, appear as colonies surrounded by a clear zone. Bacteria that produce fluorescence, such as *Streptococcus bovis* and *Enterococcus faecium*, appear as colonies surrounded by a zone of bright bluish fluorescence when viewed under a long-wave UV lamp. Other bacteria, such as *Enterococcus faecalis*, *Enterococcus avium*, or *Streptococcus equinus*, do not hydrolyze starch or produce fluorescence.

Fibrobacter Medium

Composition per 1020.0mL:

Cellobiose	4.0g
Na ₂ CO ₃	4.0g
Pancreatic digest of casein	1.0g
NaCl	0.6g
Yeast extract	0.5g
K ₂ HPO ₄	0.3g
KH ₂ PO ₄	0.3g
(NH ₄) ₂ SO ₄	0.3g
MgSO ₄ ·7H ₂ O	0.12g
CaCl ₂ ·2H ₂ O	0.08g
Resazurin	1.0mg
Vitamin solution	20.0mL
Na ₂ S·9H ₂ O solution	10.0mL
L-Cysteine·HCl·H ₂ O solution	10.0mL

VFA solution	4.65mL
Trace elements solution	1.0mL
pH 6.6 ± 0.2 at 25°C	

Vitamin Solution:

Composition per 100.0mL:

Calcium D-(+)-pantothenate	20.0mg
Lipoic acid	20.0mg
Nicotinamide	20.0mg
Pyridoxal-HCl	20.0mg
Pyridoxamine·2HCl	20.0mg
Riboflavin	20.0mg
Thiamine-HCl	20.0mg
<i>p</i> -Aminobenzoic acid	1.0mg
Biotin	1.0mg
Cyanocobalamin	1.0mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.25g
---	-------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

L-Cysteine·HCl·H₂O Solution:

Composition per 10.0mL:

L-Cysteine·HCl·H ₂ O	0.25g
---------------------------------------	-------

Preparation of L-Cysteine·HCl·H₂O Solution: Add L-cysteine·HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution:

Composition per liter:

FeSO ₄ ·7H ₂ O	2.0g
CoCl ₂ ·6H ₂ O	0.2g
H ₃ BO ₃	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
MnCl ₂ ·4H ₂ O	0.03g
Na ₂ MoO ₄ ·2H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

VFA Solution:

Composition per 310.0mL:

Acetic acid	17.0mL
Propionic acid	6.0mL
<i>n</i> -Butyric acid	4.0mL
Isobutyric acid	1.0mL
Isovaleric acid	1.0mL
DL- α -Methylbutyric acid	1.0mL
<i>n</i> -Valeric acid	1.0mL

Preparation of VFA Solution: Add volatile fatty acids to approximately 200.0mL of distilled/deionized water. Mix thoroughly. Adjust pH to 7.0 with NaOH pellets. Bring volume to 310.0mL with distilled/deionized water.

Preparation of Medium: Prepare and dispense medium under 100% CO₂. Add components, except Na₂CO₃, to distilled/deionized water and

bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 3 min. Cool to room temperature while sparging with 100% CO₂. Add Na₂CO₃. Mix thoroughly. Continue sparging with 100% CO₂ for 10 min. Anaerobically distribute into anaerobic tubes. Autoclave for 15 min at 15 psi pressure–121°C. Prior to inoculation, aseptically and anaerobically add 10.0mL of sterile Na₂S·9H₂O solution and 10.0mL of sterile L-cysteine-HCl·H₂O solution per liter of medium. Mix thoroughly. Adjust pH to 6.6.

Use: For the cultivation of *Fibrobacter intestinalis* and *Fibrobacter succinogenes*.

Fildes Enrichment Agar

Composition per liter:

Agar	15.0g
Peptone.....	5.0g
Beef extract	3.0g
Fildes enrichment solution	50.0mL

Fildes Enrichment Solution:

Composition per 206.0mL:

Pepsin.....	1.0g
NaCl (0.85% solution).....	150.0mL
Sheep blood, defibrinated	50.0mL
HCl.....	6.0mL

pH 7.0–7.2 at 25°C

Source: Fildes enrichment solution is available from BD Diagnostic Systems.

Preparation of Fildes Enrichment Solution: Combine components. Mix thoroughly. Incubate at 56°C for 4 hr. Bring pH to 7.0 with 20% NaOH. Adjust pH to 7.2 with HCl. Do not autoclave. Add 0.25 mL of chloroform and store at 4°C. Before use, heat to 56°C to remove chloroform.

Preparation of Medium: Add components, except Fildes enrichment solution, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 56°C. Aseptically add 50.0mL of sterile Fildes enrichment solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of *Haemophilus influenzae*.

Filobacillus milosensis Medium (DSMZ Medium 607a)

Composition per liter:

NaCl.....	100.0g
Peptone.....	0.75g
Yeast extract.....	0.75g
Glucose.....	0.75g
Artificial sea water.....	250.0mL
Tris/HCl (0.1M, pH 7.5).....	50.0mL
Hutner's basal salts solution.....	20.0mL
Vitamin solution.....	10.0mL

pH 7.2 ± 0.2 at 25°C

Hutner's Basal Salts Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O.....	29.7g
Nitritotriacetic acid.....	10.0g
CaCl ₂ ·2H ₂ O.....	3.335g
FeSO ₄ ·7H ₂ O.....	99.0mg
(NH ₄) ₆ MoO ₇ O ₂₄ ·4H ₂ O.....	9.25mg
"Metals 44".....	50.0mL

"Metals 44":

Composition per 100.0mL:

ZnSO ₄ ·7H ₂ O.....	1.095g
FeSO ₄ ·7H ₂ O.....	0.5g
Sodium EDTA.....	0.25g
MnSO ₄ ·H ₂ O.....	0.154g
CuSO ₄ ·5H ₂ O.....	39.2mg
Co(NO ₃) ₂ ·6H ₂ O.....	24.8mg
Na ₂ B ₄ O ₇ ·10H ₂ O.....	17.7mg

Preparation of "Metals 44": Add sodium EDTA to distilled/deionized water and bring volume to 90.0mL. Mix thoroughly. Add a few drops of concentrated H₂SO₄ to retard precipitation of heavy metal ions. Add remaining components. Mix thoroughly. Bring volume to 100.0mL with distilled/deionized water.

Preparation of Hutner's Basal Salts Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Adjust pH to 6.8.

Artificial Sea Water:

Composition per liter:

NaCl.....	23.477g
MgCl ₂ ·6H ₂ O.....	4.981g
Na ₂ SO ₄	3.917g
CaCl ₂	1.12g
KCl.....	664.0mg
NaHCO ₃	192.0mg
H ₃ BO ₃	26.0mg
SrCl ₂	24.0mg
KBr.....	6.0mg
NaF.....	3.0mg

Preparation of Artificial Sea Water: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Vitamin Solution:

Composition per liter:

Riboflavin.....	5.0mg
Nicotinamide.....	5.0mg
Thiamine-HCl·2H ₂ O.....	5.0mg
Ca-pantothenate.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except artificial sea water and vitamin solution, to distilled/deionized water and bring volume to 740.0mL. Mix thoroughly. Adjust pH to 7.2. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add 250.0mL artificial sea water and 10.0mL vitamin solution. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or bottles.

Use: For the cultivation of *Filobacillus milosensis*.

Fish Peptone Agar

Composition per liter:

Agar.....	5.0g
Maltose.....	5.0g
NaCl.....	5.0g

Peptone.....	5.0g
Pancreatic digest of casein.....	5.0g
Yeast extract.....	5.0g
Trout tissue extract solution.....	50.0mL
pH 7.0 ± 0.2 at 25°C	

Trout Tissue Extract Solution:**Composition per liter:**

Fish (brook trout).....	500.0g
Pepsin.....	1.0g
HCl, concentrated.....	15.0mL

Preparation of Trout Tissue Extract Solution: Add 1.0L of distilled/deionized water to brook trout and blend for 20–30 min. Add 1.0g of pepsin and 15.0mL of concentrated HCl to digest the trout proteins. Incubate for 12 hr at 45°C. Adjust pH to 7.0. Allow solids to settle. Filter sterilize. Do not autoclave. Store at 5°C.

Preparation of Medium: Add components, except trout tissue extract solution, to distilled/deionized water and bring volume to 950.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 13 psi pressure–118°C. Cool to 45°–50°C. Aseptically add 50.0mL of sterile trout tissue extract solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Aeromonas salmonicida*.

Fish Peptone Broth**Composition per liter:**

Maltose.....	5.0g
NaCl.....	5.0g
Peptone.....	5.0g
Pancreatic digest of casein.....	5.0g
Yeast extract.....	5.0g
Trout tissue extract solution.....	50.0mL
pH 7.0 ± 0.2 at 25°C	

Trout Tissue Extract Solution:**Composition per liter:**

Fish (brook trout).....	500.0g
Pepsin.....	1.0g
HCl, concentrated.....	15.0mL

Preparation of Trout Tissue Extract Solution: Add 1.0L of distilled/deionized water to brook trout and blend for 20–30 min. Add 1.0g of pepsin and 15.0mL of concentrated HCl to digest the trout proteins. Incubate for 12 hr at 45°C. Adjust pH to 7.0. Allow solids to settle. Filter sterilize. Do not autoclave. Store at 5°C.

Preparation of Medium: Add components, except trout tissue extract solution, to distilled/deionized water and bring volume to 950.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 10 psi pressure–118°C. Cool to 45°–50°C. Aseptically add 50.0mL of sterile trout tissue extract solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Aeromonas salmonicida*.

**Five g Agar
(5g Agar)****Composition per liter:**

Glycerol.....	50.0g
Agar.....	15.0g
Yeast extract.....	5.0g
CaCO ₃	1.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Dermatophilus congolensis* and *Geodermatophilus obscurus*.

Flagella Broth**Composition per liter:**

Tryptose or biosate.....	10.0g
NaCl.....	2.5g
K ₂ HPO ₄	1.0g
pH 7.0 ± 0.1 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of flagella-producing bacteria.

**Flavobacterium aquatile Medium
(DSMZ Medium 102)****Composition per liter:**

Agar.....	15.0g
Na-caseinate.....	2.0g
Proteose peptone.....	1.0g
Yeast extract.....	0.5g
K ₂ HPO ₄	0.5g
pH 7.4 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.4. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Flavobacterium aquatile*.

Flavobacterium M1 Agar**Composition per liter:**

Agar.....	15.0g
Proteose peptone.....	5.0g
NaCl.....	3.0g
Beef extract.....	2.0g
Yeast extract.....	1.0g
pH 7.0–7.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Flavobacterium indoltheticum*.

Flavobacterium Medium**Composition per liter:**

Na ₂ SO ₄	1.0g
Pancreatic digest of casein.....	1.0g
Yeast extract.....	1.0g
pH 6.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.0 with

H₂SO₄. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Flavobacterium acidurans*.

**Flavobacterium Medium
(ATCC Medium 65)**

Composition per liter:

Agar	12.0g
Sodium caseinate	2.0g
Peptone.....	1.0g
K ₂ HPO ₄	0.5g
Yeast extract.....	0.5g

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Flavobacterium aquatile*.

**Flavobacterium Medium
(ATCC Medium 647)**

Composition per liter:

Agar	12.0g
Beef extract	10.0g
Peptone.....	10.0g
NaCl.....	5.0g

pH 7.2–7.3 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of *Flavobacterium* species from food and food-processing equipment.

**Flavobacterium Medium
(ATCC Medium 1687)**

Composition per liter:

Sodium glutamate	4.0g
K ₂ HPO ₄	0.65g
NaNO ₃	0.5g
KH ₂ PO ₄	0.19g
MgSO ₄ ·7H ₂ O	0.1g
FeSO ₄ solution	2.0mL

pH 7.4 ± 0.2 at 25°C

FeSO₄ Solution:

Composition per 10.0mL:

FeSO ₄ ·7H ₂ O.....	0.03g
---	-------

Preparation of FeSO₄ Solution: Add FeSO₄ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except FeSO₄ solution, to distilled/deionized water and bring volume to 998.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 2.0mL of sterile FeSO₄ solution. Mix thoroughly. Adjust pH to 7.4. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Flavobacterium* species.

Flavobacterium Medium M1

Composition per liter:

Agar	12.0g
Proteose peptone.....	5.0g
NaCl.....	3.0g
Beef extract.....	2.0g
Yeast extract.....	0.2g

pH 7.2–7.4 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of *Flavobacterium* species.

Flavobacterium Medium with Thiamine

Composition per liter:

Agar	12.0g
Sodium caseinate	2.0g
Peptone	1.0g
K ₂ HPO ₄	0.5g
Yeast extract.....	0.5g
Thiamine-HCl	10.0mg

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Flavobacterium aquatile* and *Flavobacterium lutescens*.

**Flavobacterium resinovorum Agar
(LMG Medium 216)**

Composition per liter:

Agar	15.0g
Lab-Lemco beef extract.....	10.0g
Peptone	10.0g
NaCl.....	5.0g

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Flavobacterium resinovorum*.

Flavobacterium tirrenicum Medium

Composition per liter:

Agar	15.0g
NaCl.....	10.0g
Peptone	5.0g
Meat extract.....	3.0g
Ethanolamine.....	2.0g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Flavobacterium* species.

Flegler's Mutinus Medium

Composition per liter:

Agar	20.0g
Glucose	5.0g
Malt extract	5.0g
KH ₂ PO ₄	0.5g
MgSO ₄	0.5g
NH ₄ NO ₃	0.5g
Ferric citrate	5.0mg
Thiamine-HCl	0.1mg

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Dictyophora indusiata* and *Dictyophora phalloidea*.

Fletcher *Leptospira* HiVeg Medium Base (*Leptospira* HiVeg Medium Base, Fletcher)

Composition per liter:

Agar	1.5g
NaCl	0.5g
Plant peptone	0.3g
Plant extract	0.2g
Rabbit serum	50.0mL

pH 7.9 ± 0.1 at 25°C

Source: This medium, without rabbit serum, is available as a pre-mixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components, except rabbit serum, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 50.0mL of sterile rabbit serum. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the isolation, cultivation, and maintenance of cultures of *Leptospira* species.

Fletcher Medium

Composition per liter:

Agar	1.5g
NaCl	0.5g
Peptone	0.3g
Beef extract	0.2g
Rabbit serum	50.0mL

pH 7.9 ± 0.1 at 25°C

Source: This medium is available as a pre-mixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components, except rabbit serum, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 50.0mL of sterile rabbit serum. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the isolation, cultivation, and maintenance of cultures of *Leptospira* species.

Fletcher Medium with Fluorouracil (Fluorouracil *Leptospira* Medium)

Composition per liter:

Agar	1.5g
NaCl	0.5g
Peptone	0.3g
Beef extract	0.2g
Rabbit serum	50.0mL
Fluorouracil solution	20.0mL

pH 7.9 ± 0.1 at 25°C

Fluorouracil Solution:

Composition per 100.0mL:

Fluorouracil	10.0g
--------------------	-------

Preparation of Fluorouracil Solution: Add fluorouracil to 50.0mL of distilled/deionized water. Add 1.0mL of 2*N* NaOH and bring volume to 100.0mL. Gently heat to 56°C for 2 hr. Adjust pH to 7.4–7.6 with NaOH. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except rabbit serum and fluorouracil solution, to distilled/deionized water and bring volume to 930.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 80.0mL of sterile rabbit serum. Mix thoroughly. Aseptically distribute into sterile tubes or flasks. Immediately prior to use, add 0.1mL of fluorouracil solution per 5.0mL of medium.

Use: For the isolation, cultivation, and maintenance of cultures of *Leptospira* species.

Fletcher's Semisolid Medium

Composition per 2120.0mL:

Agar	1.5g
NaCl	0.5g
Peptone	0.3g
Beef extract	0.2g
Rabbit serum	240.0mL

pH 7.9 ± 0.1 at 25°C

Preparation of Medium: Add components, except rabbit serum, to distilled/deionized water and bring volume to 1880.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 240.0mL of sterile rabbit serum. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the isolation, cultivation, and maintenance of cultures of *Leptospira* species.

Flexibacter Agar

Composition per liter:

Agar	15.0g
Monosodium glutamate	5.0g
Pancreatic digest of casein	1.0g
Vitamin-free casamino acids	1.0g
Sodium glycerophosphate	0.1g
Vitamin B ₁₂	1.0μg
Seawater	1.0L
Trace elements solution HO-LE	1.0mL

Trace Elements Solution HO-LE:

Composition per liter:

H ₃ BO ₃	2.85g
MnCl ₂ ·4H ₂ O	1.8g

Sodium tartrate.....	1.77g
FeSO ₄ ·7H ₂ O.....	1.36g
CoCl ₂ ·6H ₂ O.....	0.04g
CuCl ₂ ·2H ₂ O.....	0.027g
Na ₂ MoO ₄ ·2H ₂ O.....	0.025g
ZnCl ₂	0.02g

Preparation of Trace Elements Solution HO-LE: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except trace elements solution HO-LE, to filtered seawater and bring volume to 999.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 1.0mL of sterile trace elements solution HO-LE. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Flexibacter polymorphus*.

***Flexibacter* Agar (LMG Medium 60)**

Composition per liter:

Agar.....	15.0g
Casamino acids.....	1.0g
Tris buffer.....	1.0g
MgSO ₄ ·7H ₂ O.....	0.1g
KNO ₃	0.1g
CaCl ₂ ·2H ₂ O.....	0.1g
Sodium-β-glycerophosphate.....	0.1g
Thiamine.....	1.0mg
Vitamin B ₁₂	1.0μg
Glucose solution.....	10.0mL
Vitamin solution.....	10.0mL
Trace elements solution.....	1.0mL

pH 7.5 ± 0.2 at 25°C

Glucose Solution:

Composition per 100.0mL:

Glucose.....	10.0g
--------------	-------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Trace Elements Solution:

Composition per liter:

H ₃ BO ₃	2.85g
FeSO ₄ ·7H ₂ O.....	2.49g
MnCl ₂ ·4H ₂ O.....	1.8g
Sodium tartrate.....	1.77g
CaCl ₂ ·2H ₂ O.....	40.4mg
CuCl ₂ ·2H ₂ O.....	26.9mg
ZnCl ₂	20.8mg
Na ₂ MoO ₄ ·2H ₂ O.....	25.2mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Vitamin Solution:

Composition per 10.0mL:

Thiamine.....	10.0mg
Vitamin B ₁₂	10.0μg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except vitamin solution, glucose solution, and trace elements solution, to 979.0mL distilled/deionized water. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL of sterile vitamin solution, 10.0mL of sterile glucose solution, and 1.0mL of sterile trace elements solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Flexibacter* spp.

***Flexibacter* Agar**

Composition per liter:

Agar.....	15.0g
Sodium glutamate.....	5.0g
MgSO ₄ ·7H ₂ O.....	1.0g
Yeast extract.....	1.0g
Glucose solution.....	20.0mL

pH 7.2 ± 0.2 at 25°C

Glucose Solution:

Composition per 20.0mL:

Glucose.....	2.0g
--------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Sparge with 100% N₂ for 3–4 min. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except glucose solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 20.0mL of sterile glucose solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Flexibacter elegans*.

***Flexibacter* Broth**

Composition per liter:

Monosodium glutamate.....	5.0g
Pancreatic digest of casein.....	1.0g
Vitamin-free casamino acids.....	1.0g
Sodium glycerophosphate.....	0.1g
Vitamin B ₁₂	1.0μg
Trace elements solution HO-LE.....	1.0mL

Trace Elements Solution HO-LE:

Composition per liter:

H ₃ BO ₃	2.85g
MnCl ₂ ·4H ₂ O.....	1.8g
Sodium tartrate.....	1.77g
FeSO ₄ ·7H ₂ O.....	1.36g
CoCl ₂ ·6H ₂ O.....	0.04g
CuCl ₂ ·2H ₂ O.....	0.027g
Na ₂ MoO ₄ ·2H ₂ O.....	0.025g
ZnCl ₂	0.02g
Seawater.....	999.0mL

Preparation of Trace Elements Solution HO-LE: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except trace elements solution HO-LE, to filtered seawater and bring volume to 999.0mL.

Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 1.0mL of sterile trace elements solution HO-LE. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Flexibacter polymorphus*.

Flexibacter canadensis Agar

Composition per 1001.0mL:

Agar	10.0g
Casamino acids	1.0g
Tris	1.0g
CaCl ₂ ·2H ₂ O	0.1g
KNO ₃	0.1g
MgSO ₄ ·7H ₂ O	0.1g
Sodium glycerophosphate	0.1g
Thiamine HCl	1.0mg
Vitamin B ₁₂	1.0μg
Glucose solution	10.0mL
Trace elements solution SL-10	1.0mL
pH 7.5 ± 0.2 at 25°C	

Glucose Solution:

Composition per 10.0mL:

Glucose	1.0g
---------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂ for 3–4 min. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution SL-10:

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly.

Preparation of Medium: Add components, except glucose solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL of sterile glucose solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Flexibacter canadensis*.

Flexibacter canadensis Medium

Composition per liter:

Agar	15.0g
Tryptone	2.0g
Beef extract	0.5g
Yeast extract	0.5g
Sodium acetate	0.2g
pH 7.2–7.4 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring

to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Flexibacter canadensis*.

Flexibacter Medium

Composition per liter:

Agar	15.0g
Tris(hydroxymethyl)aminomethane buffer	1.0g
Casamino acids	1.0g
MgSO ₄ ·7H ₂ O	0.1g
KNO ₃	0.1g
CaCl ₂ ·2H ₂ O	0.1g
Sodium β-glycerophosphate	0.1g
Thiamine	1.0mg
Cobalamin	1.0μg
Glucose solution	10.0mL
Trace elements solution HO-LE	1.0mL
pH 7.5 ± 0.2 at 25°C	

Glucose Solution:

Composition per 10.0mL:

D-Glucose	1.0g
-----------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Trace Elements Solution HO-LE:

Composition per liter:

H ₃ BO ₃	2.85g
MnCl ₂ ·4H ₂ O	1.8g
Sodium tartrate	1.77g
FeSO ₄ ·7H ₂ O	1.36g
CoCl ₂ ·6H ₂ O	0.04g
CuCl ₂ ·2H ₂ O	0.027g
Na ₂ MoO ₄ ·2H ₂ O	0.025g
ZnCl ₂	0.020g

Preparation of Trace Elements Solution HO-LE: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except glucose solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL of sterile glucose solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Flexibacter* species.

Flexibacter Medium

Composition per liter:

Agar	15.0g
Tryptone	5.0g
Yeast extract	5.0g
Tris(hydroxymethyl)aminomethane buffer	1.0g
KNO ₃	0.5g
Sodium β-glycerophosphate	0.1g
Seawater	1.0L
Trace elements solution HO-LE	1.0mL
pH 7.0 ± 0.2 at 25°C	

Trace Elements Solution HO-LE:

Composition per liter:

H ₃ BO ₃	2.85g
MnCl ₂ ·4H ₂ O	1.8g

Sodium tartrate.....	1.77g
FeSO ₄ ·7H ₂ O.....	1.36g
CoCl ₂ ·6H ₂ O.....	0.04g
CuCl ₂ ·2H ₂ O.....	0.027g
Na ₂ MoO ₄ ·2H ₂ O.....	0.025g
ZnCl ₂	0.020g

Preparation of Trace Elements Solution HO-LE: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components to filtered, aged seawater and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Cytophaga latercula*, *Flexibacter aurantiacus*, *Flexibacter flexilis*, *Flexibacter roseolus*, *Flexibacter ruber*, *Flexithrix dorotheae*, and *Saprospira grandis*.

Flexibacter Medium (ATCC Medium 1559)

Composition per liter:

Solution B.....	700.0mL
Solution A.....	300.0mL

Solution A:

Composition per 300.0mL:

Pancreatic digest of casein.....	0.5g
Yeast extract.....	0.5g
Beef extract.....	0.2g
Sodium acetate.....	0.2g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Solution B:

Aged seawater.....	700.0 mL
--------------------	----------

Preparation of Solution B: Allow seawater to sit for 7 days. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Preparation of Medium: Aseptically add 300.0mL of sterile solution A to 700.0mL of sterile solution B at 45°–50°C. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Flexibacter maritimus*.

Flexibacter polymorphus Medium (LMG 108)

Composition per liter:

Agar.....	15.0g
Monosodium glutamate.....	5.0g
Tryptone.....	1.0g
Casamino acids, vitamin-free.....	1.0g
Sodium glycerophosphate.....	0.1g
Vitamin B ₁₂	1.0μg
Trace elements solution HO-LE.....	1.0mL
Seawater, filtered, aged.....	1.0L

Trace Elements Solution HO-LE:

Composition per liter:

H ₃ BO ₃	2.85g
MnCl ₂ ·4H ₂ O.....	1.8g
Sodium tartrate.....	1.77g
FeSO ₄ ·7H ₂ O.....	1.36g

CoCl ₂ ·6H ₂ O.....	0.04g
CuCl ₂ ·2H ₂ O.....	0.027g
Na ₂ MoO ₄ ·2H ₂ O.....	0.025g
ZnCl ₂	0.02g

Preparation of Trace Elements Solution HO-LE: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Combine components. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Flexibacter polymorphus*.

Flexibacterium Medium

Composition per 1060.0mL:

Yeast extract.....	1.0g
Ca(NO ₃) ₂ ·4H ₂ O.....	0.1g
K ₂ HPO ₄	0.02g
Seawater, filtered.....	1.0L
Glucose solution.....	50.0mL
Trace elements.....	10.0mL

pH 7.0 ± 0.2 at 25°C

Glucose Solution:

Composition per 50.0mL:

Glucose.....	1.0g
--------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Trace Elements:

Composition per liter:

FeSO ₄ ·7H ₂ O.....	0.5mg
ZnSO ₄ ·7H ₂ O.....	0.3mg
H ₃ BO ₃	0.1mg
CoCl ₂ ·6H ₂ O.....	0.1mg
CuSO ₄ ·5H ₂ O.....	0.1mg
MnSO ₄ ·4H ₂ O.....	0.1mg
Na ₂ MoO ₄ ·2H ₂ O.....	0.1mg

Preparation of Trace Elements: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Combine components, except glucose solution. Mix thoroughly. Adjust pH to 7.2. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile glucose solution. Mix thoroughly. Aseptically distribute into sterile tubes or bottles.

Use: For the cultivation of *Flexibacter litoralis* and *Flexibacter marinus*.

Flexibacterium Medium

Composition per 1050.0mL:

Tris(hydroxymethyl)aminomethane buffer.....	1.0g
Yeast extract.....	1.0g
CaCl ₂ ·2H ₂ O.....	0.1g
KCl.....	0.1g
MgSO ₄ ·7H ₂ O.....	0.1g
Sodium glycerophosphate.....	0.1g
NaNO ₃	0.1g
Cobalamin.....	1.0μg
Glucose solution.....	50.0mL
Trace elements.....	10.0mL

pH 7.5 ± 0.2 at 25°C

Glucose Solution:**Composition per 50.0mL:**

Glucose 1.0g

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Trace Elements:**Composition per liter:**FeSO₄·7H₂O 0.5mgZnSO₄·7H₂O 0.3mgH₃BO₃ 0.1mgCoCl₂·6H₂O 0.1mgCuSO₄·5H₂O 0.1mgMnSO₄·4H₂O 0.1mgNa₂MoO₄·2H₂O 0.1mg

Preparation of Trace Elements: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components, except glucose solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.5. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile glucose solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Saprosira thermalis*, *Flexibacter elegans*, and *Flexibacter rubrum*.

Flexibacterium Medium**Composition per 1050.0mL:**

Tris(hydroxymethyl)aminomethane buffer 1.0g

Yeast extract 1.0g

Trace elements 10.0mL

pH 7.5 ± 0.2 at 25°C

Trace Elements:**Composition per liter:**FeSO₄·7H₂O 0.5mgZnSO₄·7H₂O 0.3mgH₃BO₃ 0.1mgCoCl₂·6H₂O 0.1mgCuSO₄·5H₂O 0.1mgMnSO₄·4H₂O 0.1mgNa₂MoO₄·2H₂O 0.1mg

Preparation of Trace Elements: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.5. Distribute into sterile tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Saprosira albida*.

Flexiligidius Medium**Composition per liter:**

Beef heart, solids from infusion 50.0g

Agar 15.0g

Tryptose 1.0g

NaCl 0.5g

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Ensifer adhaerens*.

Flexistipes Medium**Composition per liter:**

NaCl 58.35g

MgCl₂·6H₂O 37.80gNa₂SO₄ 9.72gCaCl₂·2H₂O 7.14g

KCl 1.65g

Yeast extract 1.0g

H₃BO₃ 0.66gNa₂S·9H₂O 0.5g

KBr 0.24g

SrCl₂·6H₂O 0.17gNa₂HPO₄·2H₂O 0.03g

Sodium meta silicate 0.012g

NaF 0.007g

KNO₃ 0.005g

Resazurin 0.5mg

pH 6.5 ± 0.2 at 25°C

Preparation of Medium: Prepare and dispense medium under 100% N₂. Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.5 with H₂SO₄. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Flexistipes sinuarabici*.

**Flexithrix Marine Agar
(LMG Medium 61)****Composition per liter:**

Agar 15.0g

Tryptone 5.0g

Yeast extract 5.0g

Tris buffer 1.0g

KNO₃ 0.5g

Sodium-β-glycerophosphate 0.1g

Seawater 1.0L

Trace elements solution 1.0mL

pH 7.4 ± 0.2 at 25°C

Trace Elements Solution:**Composition per liter:**H₃BO₃ 2.85gFeSO₄·7H₂O 2.49gMnCl₂·4H₂O 1.8g

Sodium tartrate 1.77g

CaCl₂·2H₂O 40.4mgCuCl₂·2H₂O 26.9mgZnCl₂ 20.8mgNa₂MoO₄·2H₂O 25.2mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to filtered aged seawater and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Flexithrix dorotheae*.

FIGlyM Medium (DSMZ Medium 298b)

Composition per liter:

NaCl	1.0g
KCl	0.5g
MgCl ₂ ·6H ₂ O	0.4g
NH ₄ Cl	0.25g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O	0.15g
Resazurin	1.0mg
NaHCO ₃ solution	50.0mL
Na ₂ S·9H ₂ O solution	10.0mL
Na-glycolate solution	10.0mL
L-Cysteine solution	10.0mL
Na-acetate solution	7.0mL
Trace elements solution SL-10	1.0mL
Vitamin solution	0.5mL

pH 7.2 ± 0.2 at 25°C

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.36g
-------------------------------------	-------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

NaHCO₃ Solution:

Composition per 100.0mL:

NaHCO ₃	10.0g
--------------------	-------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

Na-Acetate Solution:

Composition per 10.0mL:

Na-acetate	0.25g
------------	-------

Preparation of Na-Acetate Solution: Add Na-acetate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Na-Glycolate Solution:

Composition per 10.0mL:

Na-glycolate	1.0g
--------------	------

Preparation of Na-Glycolate Solution: Add Na-glycolate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

L-Cysteine Solution:

Composition per 10.0mL:

L-Cysteine-HCl·H ₂ O	0.3g
---------------------------------	------

Preparation of L-Cysteine Solution: Add L-cysteine-HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thorough-

ly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution SL-10:

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
H ₃ BO ₃	300.0mg
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Vitamin Solution:

Composition per liter:

Pyridoxine hydrochloride	300.0mg
Thiamine-HCl·2H ₂ O	200.0mg
Nicotinic acid	200.0mg
Vitamin B ₁₂	100.0mg
Calcium pantothenate	100.0mg
<i>p</i> -Aminobenzoic acid	80.0mg
Folic Acid	30.0mg
D(+)-Biotin	20.0mg
α-Lipoic acid	10.0mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas atmosphere. Add components, except NaHCO₃ solution, Na₂S·9H₂O solution, L-cysteine solution, Na-acetate solution, Na-glycolate solution, vitamin solution, and trace elements solution SL-10, to distilled/deionized water and bring volume to 979.0mL. Mix thoroughly. Adjust pH to 7.2. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 10.0mL NaHCO₃ solution, 10.0mL Na₂S·9H₂O solution, 10.0mL L-cysteine solution, 7.0mL Na-acetate solution, 10.0mL Na-glycolate solution, 1.0mL trace elements solution SL-10, and 0.5mL vitamin solution. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or bottles. After inoculation, flush and repressurize the gas head space of culture bottles with sterile 80% N₂ + 20% CO₂ to 1 bar overpressure.

Use: For the cultivation of *Syntrophobotulus* spp.

FIGlyM Medium (DSMZ Medium 298b)

Composition per liter:

NaCl	1.0g
KCl	0.5g
MgCl ₂ ·6H ₂ O	0.4g
NH ₄ Cl	0.25g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O	0.15g

L-Cysteine solution	10.0mL
Na-acetate solution	7.0mL
Trace elements solution SL-10	1.0mL
Vitamin solution	0.5mL

pH 7.2 ± 0.2 at 25°C

Na₂S·9H₂O Solution:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O	0.36g
---	-------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

NaHCO₃ Solution:**Composition per 100.0mL:**

NaHCO ₃	10.0g
--------------------------	-------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

Na-Acetate Solution:**Composition per 10.0mL:**

Na-acetate	0.25g
------------------	-------

Preparation of Na-Acetate Solution: Add Na-acetate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Na-Glyoxalate Solution:**Composition per 10.0mL:**

Na-glyoxalate	0.6g
---------------------	------

Preparation of Na-Glyoxalate Solution: Add Na-glyoxalate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

L-Cysteine Solution:**Composition per 10.0mL:**

L-Cysteine·HCl·H ₂ O	0.3g
---------------------------------------	------

Preparation of L-Cysteine Solution: Add L-cysteine·HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution SL-10:**Composition per liter:**

FeCl ₂ ·4H ₂ O	1.5g
H ₃ BO ₃	300.0mg
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Vitamin Solution:**Composition per liter:**

Pyridoxine hydrochloride	300.0mg
Thiamine·HCl·2H ₂ O	200.0mg
Nicotinic acid	200.0mg
Vitamin B ₁₂	100.0mg
Calcium pantothenate	100.0mg
<i>p</i> -Aminobenzoic acid	80.0mg
Folic Acid	30.0mg
D(+)-Biotin	20.0mg
α-Lipoic acid	10.0mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas atmosphere. Add components, except NaHCO₃ solution, Na₂S·9H₂O solution, L-cysteine solution, Na-acetate solution, Na-glyoxalate solution, vitamin solution, and trace elements solution SL-10, to distilled/deionized water and bring volume to 979.0mL. Mix thoroughly. Adjust pH to 7.2. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 10.0mL NaHCO₃ solution, 10.0mL Na₂S·9H₂O solution, 10.0mL L-cysteine solution, 7.0mL Na-acetate solution, 10.0mL Na-glyoxalate solution, 1.0mL trace elements solution SL-10, and 0.5mL vitamin solution. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or bottles. After inoculation, flush and repressurize the gas head space of culture bottles with sterile 80% N₂ + 20% CO₂ to 1 bar overpressure.

Use: For the cultivation of *Syntrophobotulus glycolicus*.

FLN Medium**(Fluorescence Lactose Nitrate Medium)****Composition per liter:**

Lactose	20.0g
Agar	15.0g
Proteose peptone No. 3	10.0g
KNO ₃	2.0g
K ₂ HPO ₄	1.5g
MgSO ₄ ·7H ₂ O	1.5g
NaNO ₂	0.5g
Phenol Red	0.02g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the differentiation of pseudomonads from other nonfermentative bacilli. Lactose fermentation is indicated by the medium turning yellow. *Pseudomonas cepacia* often produces acid from lactose. Denitrification from nitrate or nitrite is indicated by the formation of gas bubbles in the solid medium. *Pseudomonas aeruginosa*, *Pseudomonas mendocina*, and *Pseudomonas denitrificans* are positive for denitrification. Fluorescein production is indicated by fluorescence under UV light. *Pseudomonas aeruginosa* is positive for fluorescein production; *Pseudomonas denitrificans* does not produce fluorescein.

Flo Agar**Composition per liter:**

Agar	14.0g
Pancreatic digest of casein	10.0g

Peptic digest of animal tissue.....	10.0g
K ₂ HPO ₄	1.5g
MgSO ₄ ·7H ₂ O.....	1.5g
pH 7.2 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For cultivation of fluorescent *Pseudomonas* species.

Fluconazole Testing Medium

Composition per liter:

Glucose.....	19.98g
(NH ₄) ₂ SO ₄	4.99g
KH ₂ PO ₄	1.99g

Agar solution.....	100.0mL

Source: This medium is available from HiMedia.

Agar Solution:

Composition per 100.0mL:

Agar.....	10.0g
-----------	-------

Preparation of Agar Solution: Add agar to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Adjust pH to 7.5 with phosphate buffer. Autoclave for 10 min at 10 psi pressure–115 °C. Cool to 50°C.

Preparation of Medium: Add components, except agar solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Filter sterilize. Aseptically add agar solution. Mix thoroughly. Pour into Petri dishes or aseptically distribute into sterile tubes.

Use: For fluconazole susceptibility testing using *Candida* species.

Fluid Casein Digest Soya Lecithin HiVeg Medium

Composition per liter:

Plant hydrolysate.....	20.0g
Soya lecithin.....	5.0g
Polysorbate 20.....	40.0 ml
pH 7.3 ± 0.2 at 25°C	

Source: This medium, without polysorbate 20, is available as a premixed powder from HiMedia.

Preparation of Medium: Add plant hydrolysate and soya lecithin to distilled/deionized water and bring volume to 960.0mL. Mix thoroughly. Heat as necessary until components are completely dissolved. Add 40.0mL polysorbate 20. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: This is a highly nutritional medium containing neutralizing agents for neutralizing quaternary ammonium compounds used for the sanitary examination of surfaces.

Fluid Casein Digest Soya Lecithin Medium

Composition per liter:

Casein enzymatic hydrolysate.....	20.0g
Soya lecithin.....	5.0g
Polysorbate 20.....	40.0 ml
pH 7.3 ± 0.2 at 25°C	

Source: This medium, without polysorbate 20, is available as a premixed powder from HiMedia.

Preparation of Medium: Add plant hydrolysate and soya lecithin to distilled/deionized water and bring volume to 960.0mL. Mix thoroughly. Heat is necessary until components are completely dissolved. Add 40.0mL polysorbate 20. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: This is a highly nutritional medium containing neutralizing agents for neutralizing quaternary ammonium compounds used for the sanitary examination of surfaces.

Fluid Lactose HiVeg Medium

Composition per liter:

Plant peptone No. 2.....	5.0g
Lactose.....	5.0g
Plant extract.....	3.0g
pH 6.9 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: As a pre-enrichment medium for the detection of coliform bacteria in water, dairy products, and foods.

Fluid Lactose HiVeg Medium with Soya Lecithin and Polysorbate 20

Composition per liter:

Plant peptone No. 2.....	5.0g
Lactose.....	5.0g
Soya lecithin.....	5.0g

Plant extract	3.0g
Polysorbate 20.....	40 mL
pH 6.9 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components, except polysorbate 20, to distilled/deionized water and bring volume to 960.0mL. Mix thoroughly. Heat as necessary until components are completely dissolved. Add 40.0mL polysorbate 20. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of coliform bacteria in water, dairy products, and foods.

Fluid Lactose Medium

Composition per liter:

Pancreatic digest of gelatin	5.0g
Lactose	5.0g
Plant extract	3.0g
pH 6.9 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: As a pre-enrichment medium for the detection of coliform bacteria in water, dairy products, and foods.

Fluid Sabouraud HiVeg Medium

Composition per liter:

Glucose	20.0g
Plant hydrolysate.....	5.0g
Plant peptone.....	5.0g
pH5.7 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For cultivation of yeasts, molds, and aciduric microorganisms. For sterility test medium for molds and lower bacteria in pharmaceutical preparations.

Fluid Sabouraud Medium

See also: Antibiotic Medium 13

Fluid Sabouraud Medium

Composition per liter:

Glucose	20.0g
Pancreatic digest of casein.....	5.0g
Peptic digest of animal tissue.....	5.0g
pH5.7 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For cultivation of yeasts, molds, and aciduric microorganisms.

Fluid Selenite Cystine HiVeg Medium (Selenite Cystine HiVeg Broth)

Composition per liter:

Na ₂ HPO ₄	10.0g
Plant hydrolysate	5.0g
Lactose.....	4.0g
L-Cystine.....	0.01g
HNaO ₃ Se	4.0g
pH 7.0 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Caution: Sodium selenite is toxic and a potential teratogen and care must be taken to avoid inhalation of the powdered dye, contact with the skin, or ingestion, especially in pregnant laboratory workers.

Preparation of Medium: Add sodium hydrogen selenite to distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Gently heat. Do not autoclave. Distribute into sterile tubes in 10.0mL volumes. Sterilize for 15 min at 0 psi pressure–100°C. Do not autoclave.

Use: For the isolation and cultivation of *Salmonella* species from feces, dairy products, and other specimens.

Fluid Selenite Cystine Medium (Selenite Cystine Broth)

Composition per liter:

Na ₂ HPO ₄	10.0g
Casein enzymatic hydrolysate	5.0g
Lactose.....	4.0g
L-Cystine.....	0.01g
HNaO ₃ Se	4.0g
pH 7.0 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Caution: Sodium selenite is toxic and a potential teratogen and care must be taken to avoid inhalation of the powdered dye, contact with the skin, or ingestion, especially in pregnant laboratory workers.

Preparation of Medium: Add sodium hydrogen selenite to distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Gently heat. Do not autoclave. Distribute into sterile tubes in 10.0mL volumes. Sterilize for 15 min at 0 psi pressure–100°C. Do not autoclave.

Use: For the isolation and cultivation of *Salmonella* species from feces, dairy products, and other specimens.

Fluid Tetrathionate HiVeg Medium without Iodine and BG (Tetrathionate HiVeg Broth Base without Iodine & BG)

Composition per liter:

Na ₂ S ₂ O ₃	30.0g
CaCO ₃	10.0g
Plant hydrolysate	2.5g
Plant peptone	2.5g
Synthetic detergent	1.0g

Iodine-potassium iodide solution.....	20.0mL
Brilliant Green solution	10.0mL
pH 8.4 ± 0.2 at 25°C	

Source: This medium, without iodine-potassium iodine solution and Brilliant Green solution, is available as a premixed powder from Hi-Media.

Preparation of Tetrathionate Broth Base: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. A slight precipitate will remain. Do not autoclave. Cool to 25°C. Store at 4°C.

Iodine-Potassium Iodide Solution:

Composition per 20.0mL:

Iodine, resublimed	6.0g
KI	5.0g

Preparation of Iodine-Potassium Iodide Solution: Add KI to 5.0mL of sterile distilled/deionized water. Mix thoroughly. Add iodine. Mix thoroughly. Bring volume to 20.0mL with sterile distilled/deionized water.

Brilliant Green Solution:

Composition per 100.0mL:

Brilliant Green	0.1g
-----------------------	------

Preparation of Brilliant Green Solution: Add Brilliant Green to sterile distilled/deionized water. Mix thoroughly.

Preparation of Medium: Add components, except iodine-potassium iodine solution and Brilliant Green solution to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. A slight precipitate will remain. Do not autoclave. Cool to 25°C. Add 20.0mL of iodine-potassium iodide solution, and 10.0mL of Brilliant Green solution. Mix thoroughly. Aseptically distribute into tubes in 10.0mL volumes. Do not heat medium after it has been mixed.

Use: For the selective isolation and cultivation of *Salmonella* species from foods.

Fluid Tetrathionate Medium without Iodine and BG (Tetrathionate Broth Base without Iodine & BG)

Composition per liter:

Na ₂ S ₂ O ₃	30.0g
CaCO ₃	10.0g
Casein enzymatic hydrolysate	2.5g
Peptic digest of animal tissue.....	2.5g
Bile salts.....	1.0g
Iodine-potassium iodide solution.....	20.0mL
Brilliant Green solution	10.0mL
pH 8.4 ± 0.2 at 25°C	

Source: This medium, without iodine-potassium iodine solution and Brilliant Green solution, is available as a premixed powder from Hi-Media.

Preparation of Tetrathionate Broth Base: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. A slight precipitate will remain. Do not autoclave. Cool to 25°C. Store at 4°C.

Iodine-Potassium Iodide Solution:

Composition per 20.0mL:

Iodine, resublimed	6.0g
KI	5.0g

Preparation of Iodine-Potassium Iodide Solution: Add KI to 5.0mL of sterile distilled/deionized water. Mix thoroughly. Add iodine. Mix thoroughly. Bring volume to 20.0mL with sterile distilled/deionized water.

Brilliant Green Solution:

Composition per 100.0mL:

Brilliant Green	0.1g
-----------------------	------

Preparation of Brilliant Green Solution: Add Brilliant Green to sterile distilled/deionized water. Mix thoroughly.

Preparation of Medium: Add components, except iodine-potassium iodine solution and Brilliant Green solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. A slight precipitate will remain. Do not autoclave. Cool to 25°C. Add 20.0mL of iodine-potassium iodide solution, and 10.0mL of Brilliant Green solution. Mix thoroughly. Aseptically distribute into tubes in 10.0mL volumes. Do not heat medium after it has been mixed.

Use: For the selective isolation and cultivation of *Salmonella* species from foods.

Fluid Thioglycollate Agar

Composition per liter:

Pancreatic digest of casein.....	15.0g
Glucose	5.0g
Yeast extract.....	5.0g
NaCl.....	2.5g
Agar	0.75g
L-Cystine	0.5g
Sodium thioglycolate.....	0.5g
Resazurin	1.0mg

pH 7.1 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of anaerobic bacteria. For the cultivation of *Campylobacter fetus*, *Campylobacter jejuni*, *Leptotrichia buccalis*, and *Streptococcus* species.

Fluid Thioglycolate Agar with Calcium Carbonate

Composition per liter:

Agar	75.0g
Pancreatic digest of casein.....	15.0g
CaCO ₃	10.0g
Glucose	5.0g
Yeast extract.....	5.0g
NaCl.....	2.5g
L-Cystine	0.5g
Sodium thioglycolate.....	0.5g
Resazurin	0.001g

pH 7.1 ± 0.2 at 25°C

Preparation of Medium: Add components, except CaCO₃, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Sterilize CaCO₃ by autoclaving for 15 min at 15 psi pressure–121°C. Aseptically add sterile CaCO₃ to sterile tubes or plates—0.1g of sterile CaCO₃ per 10.0mL of medium to be added. Pour medium into sterile Petri dishes or distribute into sterile tubes.

Use: For the rapid cultivation of anaerobic bacteria. For the cultivation and maintenance of *Campylobacter fetus*, *Campylobacter jejuni*, *Lep-totrichia buccalis*, and *Streptococcus* species.

Fluid Thioglycollate HiVeg Medium

Composition per liter:

Plant hydrolysate.....	15.0g
Glucose	5.5g
Yeast extract.....	5.0g
NaCl	2.5g
Agar	0.75g
L-Cystine.....	0.5g
Na-thioglycollate	0.5g
Resazurin	0.001g

pH 7.1 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Prepare freshly or boil and cool the medium just before use.

Use: For the cultivation of facultative anaerobes. For the cultivation of both aerobic and anaerobic organisms in the performance of sterility tests.

Fluid Thioglycollate HiVeg Medium with HiVeg Extract

Composition per liter:

Plant hydrolysate.....	15.0g
Glucose	5.5g
Plant extract	5.0g
Yeast extract.....	5.0g
NaCl	2.5g
Agar	0.75g
L-Cystine.....	0.5g
Na-thioglycollate	0.5g
Resazurin	0.001g

pH 7.1 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Prepare freshly or boil and cool the medium just before use.

Use: For the cultivation of facultative anaerobes. For the cultivation of both aerobic and anaerobic organisms in the performance of sterility tests.

Fluid Thioglycollate Medium

Composition per liter:

Pancreatic digest of casein.....	15.0g
Glucose	5.5g
Yeast extract.....	5.0g
NaCl	2.5g
Agar	0.75g
L-Cystine.....	0.5g

Sodium thioglycollate.....	0.5g
Resazurin	1.0mg

pH 7.1 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. If medium becomes oxidized before use (resazurin turns red), heat in a boiling water bath to expel absorbed O₂. Cool to 25°C.

Use: For the cultivation of anaerobic, microaerophilic, and aerobic microorganisms. For use in sterility testing of a variety of specimens.

Fluid Thioglycollate Medium with Beef Extract

Composition per liter:

Pancreatic digest of casein.....	15.0g
Glucose	5.5g
Yeast extract.....	5.0g
Beef extract.....	5.0g
NaCl.....	2.5g
Agar	0.75g
L-Cystine.....	0.5g
Sodium thioglycollate.....	0.5g
Resazurin	1.0mg

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. If medium becomes oxidized before use (resazurin turns red), heat in a boiling water bath to expel absorbed O₂. Cool to 25°C.

Use: For the cultivation of anaerobic, microaerophilic, and aerobic microorganisms. For use in sterility testing of a variety of specimens.

Fluid Thioglycollate Medium with K Agar

Composition per liter:

Pancreatic digest of casein.....	15.0g
Glucose	5.0g
Yeast extract.....	5.0g
KCl.....	2.5g
L-Cystine.....	0.5g
K agar.....	0.45g
Resazurin	1.0mg
Thioglycolic acid.....	0.3mL

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. If medium becomes oxidized before use (resazurin turns red), heat in a boiling water bath to expel absorbed O₂. Cool to 25°C.

Use: For the cultivation of anaerobic, microaerophilic, and aerobic microorganisms. For use in sterility testing of a variety of specimens.

Fluid Thioglycolate Medium with Rabbit Serum**Composition per liter:**

Pancreatic digest of casein.....	15.0g
Glucose.....	5.5g
Yeast extract.....	5.0g
NaCl.....	2.5g
Agar.....	0.75g
L-Cystine.....	0.5g
Sodium thioglycolate.....	0.5g
Resazurin.....	1.0mg
Rabbit serum.....	100.0mL

pH 7.1 ± 0.2 at 25°C

Preparation of Medium: Add components, except rabbit serum, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes in 9.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. If medium becomes oxidized before use (resazurin turns red), heat in a boiling water bath to expel absorbed O₂. Cool to 25°C. Immediately prior to inoculation, aseptically and anaerobically add 1.0mL of sterile rabbit serum to each tube. Mix thoroughly.

Use: For the cultivation of anaerobic, microaerophilic, and aerobic microorganisms. For use in the sterility testing of a variety of specimens.

Fluid Thioglycolate Medium without Glucose or E_h Indicator**Composition per liter:**

Pancreatic digest of casein.....	20.0g
NaCl.....	2.5g
Agar.....	0.75g
L-Cystine.....	0.5g
Sodium thioglycolate.....	0.5g

pH 7.1 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically distribute into sterile screw-capped tubes or flasks.

Use: For cultivation of anaerobic bacteria. For use as a basal medium in carbohydrate fermentation tests for differentiating anaerobic bacteria. For carbohydrate fermentation tests, 1.0 mL of a 10% filter-sterilized carbohydrate solution is aseptically added to 9.0mL of fluid thioglycolate medium.

Fluorescence Denitrification MediumSee: **FN Medium****Fluorescence Lactose Nitrate Medium**See: **FLN Medium****Fluorescent Pectolytic Agar (FPA Medium)****Composition per liter:**

Proteose peptone No. 3.....	20.0g
Agar.....	15.0g
Pectin.....	5.0g

K ₂ HPO ₄	1.5g
MgSO ₄ ·7H ₂ O.....	0.73g
Antibiotic solution.....	10.0mL

Antibiotic Solution:**Composition per 10.0mL:**

Cycloheximide.....	0.075g
Novobiocin.....	0.045g
Penicillin G.....	75,000U
Ethanol.....	1.0mL

Preparation of Antibiotic Solution: Add components to 1.0mL of ethanol. Mix thoroughly. Let stand for 30 min. Bring volume to 10.0mL with distilled/deionized water. Mix thoroughly. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: Add components, except antibiotic solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile antibiotic solution. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the cultivation of fluorescent *Pseudomonas* species that are pectinolytic.

Fluorocult® *E. coli* O157:H7 Agar (*E. coli* O157:H7 Agar, Fluorocult)**Composition per liter:**

Peptone from casein.....	20.0g
Agar.....	13.0g
Sorbitol.....	10.0g
NaCl.....	5.0g
Meat extract.....	2.0g
Na ₂ S ₂ O ₃	2.0g
Sodium deoxycholate.....	1.12g
Yeast extract.....	1.0g
Ammonium ferric citrate.....	0.5g
4-Methylumbelliferyl-β-D-glucuronide.....	0.1g
Bromthymol Blue.....	0.025g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available from Merck.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Pour into sterile Petri dishes.

Use: For the isolation and differentiation of enterohemorrhagic (EHEC) *Escherichia coli* O157:H7 strains from foods. In contrast to most other *E. coli* strains, *E. coli* O157:H7 shows the following characteristics: no sorbitol-cleavage capacity within 48 hr and no formation of glucuronidase (MUG-negative/no fluorescence). Sodium deoxycholate inhibits the growth of the Gram-positive accompanying flora for the greater part. Sorbitol serves, together with the pH indicator Bromthymol Blue, to determine the degradation of sorbitol which, in the case of sorbitol-positive microorganisms, results in the colonies turning yellow in color. Sorbitol-negative strains, on the other hand, do not lead to any change in the color of the culture medium and thus proliferate as greenish colonies. Sodium thiosulfate and ammonium iron(III) citrate result in black-brown discoloration of the agar for colonies, in the presence of hydrogen-sulfide-forming pathogens, precipitating iron sulfide. *Proteus mirabilis* in particular, which displays biochemical properties similar to those of *E. coli* O157:H7, can thus be very easily

differentiated from *E. coli* O157:H7 on account of the brownish discoloration. 4-Methylumbelliferyl- β -D-glucuronide (MUG) is converted into 4-methylumbelliferone by β -D-glucuronidase-forming pathogens; 4-methylumbelliferone fluoresces under UV light. The activity of β -D-glucuronidase is a highly specific characteristic of *E. coli*. In contrast to most *E. coli* strains, *E. coli* O157:H7 is not capable of forming β -D-glucuronidase. When irradiated with long-wave UV light, no fluorescence is formed.

Fluorouracil *Leptospira* Medium

See: **Fletcher Medium with Fluorouracil**

FM Medium

Composition per liter:

Agar	15.0g
Pancreatic digest of casein	15.0g
Glucose	5.0g
NaCl	5.0g
Yeast extract	5.0g
L-Cysteine-HCl-H ₂ O	0.75g
Crystal Violet	0.01g
Horse serum	50.0mL
Streptomycin solution	10.0mL

pH 7.2 \pm 0.2 at 25°C

Streptomycin Solution:

Composition per 10.0mL:

Streptomycin	0.01g
--------------------	-------

Preparation of Streptomycin Solution: Add streptomycin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except horse serum and streptomycin solution, to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile horse serum and streptomycin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation and cultivation of *Fusobacterium* species.

FN Medium

(Fluorescence Denitrification Medium)

Composition per liter:

Agar	15.0g
Proteose peptone No. 3	10.0g
KNO ₃	2.0g
K ₂ HPO ₄	1.5g
MgSO ₄ ·7H ₂ O	1.5g
NaNO ₂	0.5g

pH 7.2 \pm 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the differentiation of pseudomonads from other nonfermentative bacilli. Denitrification from nitrate or nitrite is indicated by the formation of gas bubbles in the solid medium. *Pseudomonas aeruginosa*, *Pseudomonas mendocina*, and *Pseudomonas denitrificans* are positive for denitrification. Fluorescein production is indicated by flu-

orescence under UV light. *Pseudomonas aeruginosa* is positive for fluorescein production; *Pseudomonas denitrificans* does not produce fluorescein.

FNA Medium

(Fluorescein Denitrification Agar)

Composition per liter:

Agar	15.0g
Peptic digest of animal tissue	5.0g
Casein enzymatic hydrolysate	5.0g
KNO ₃	2.0g
MgSO ₄ ·7H ₂ O	1.5g
K ₂ HPO ₄	1.5g

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the differentiation of *Pseudomonas* spp. based upon their ability to reduce nitrates or nitrites to nitrogen gas and the detection of fluorescein pigment production.

Folic Acid Agar

Composition per liter:

Noble agar	15.0g
K ₂ HPO ₄ ·3H ₂ O	1.2g
Folic acid	1.0g
KH ₂ PO ₄	0.5g
Salts A	5.0mL
Salts B	1.5mL

Salts A:

Composition per 100.0mL:

MgSO ₄ ·7H ₂ O	1.0g
CaCl ₂ ·2H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g

Preparation of Salts A Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Maintain for 3 days at 25°C to dissolve. Filter sterilize the supernatant.

Salts B:

Composition per 100.0mL:

MnSO ₄	0.1g
Na ₂ MoO ₄	0.1g

Preparation of Salts B Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except salts A solution and salts B solution, to distilled/deionized water and bring volume to 994.5mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 5.0mL of sterile salts A solution and 1.5mL of sterile salts B solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Pseudomonas* species.

Folic Acid Assay HiVeg Medium

Composition per liter:

Glucose	40.0g
Sodium citrate	20.0g

Plant acid hydrolysate, vitamin free	12.0g
K ₂ HPO ₄	1.0g
KH ₂ PO ₄	1.0g
MgSO ₄	0.4g

Chloramphenicol Solution:**Composition per 10.0mL:**

Chloramphenicol.....	0.02g
----------------------	-------

Preparation of Chloramphenicol Solution: Add chloramphenicol to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Folic Acid Solution:**Composition per 10.0mL:**

Folic acid.....	0.1µg
-----------------	-------

Preparation of Folic Acid Solution: Add folic acid to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except chloramphenicol solution and folic acid solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL of sterile chloramphenicol solution and 10.0mL of sterile folic acid solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Lactobacillus casei*.

Folic Acid Culture Agar**Composition per liter:**

Peptonized milk.....	15.0g
Agar	10.0g
Glucose	10.0g
Yeast extract.....	5.0g
KH ₂ PO ₄	2.0g
Tomato juice.....	100.0mL
Polysorbate 80.....	1.0mL

pH 6.8 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Enterococcus hirae* for use in the folic acid assay.

Folic Acid Culture HiVeg Agar**Composition per liter:**

Plant hydrolysate No. 4.....	15.0g
Agar	10.0g
Glucose	10.0g
Tomato juice.....	5.0g
Yeast extract.....	5.0g
KH ₂ PO ₄	2.0g
Polysorbate 80.....	1.0g

pH 6.7 ± 0.1 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling with frequent mixing. Cool to 45°–50°C. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 5 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the microbiological assaying of folic acid using *Enterococcus hirae* as the test organism.

Folic Acid HiVeg Medium**Composition per liter:**

Sodium citrate.....	52.0g
Glucose	40.0g
Plant acid hydrolysate, vitamin free	10.0g
K ₂ HPO ₄	6.4g

Calcium pantothenate	0.8mg
Nicotinic acid	0.8mg
Thiamine·HCl	0.4mg
Biotin	0.02mg

pH 6.7 ± 0.1 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling with frequent mixing. Cool to 45°–50°C. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 5 min at 15 psi pressure–121°C.

Use: For the microbiological assaying of folic acid using *Enterococcus hirae* as the test organism.

Fomes annosus Isolation Medium No. 1

Composition per liter:

Agar	20.0g
Peptone	5.0g
KH ₂ PO ₄	0.5g
MgSO ₄	0.25g
Pentachloronitrobenzene (PCNB)	0.19mg
Streptomycin	0.1mg
Ethanol (95% solution)	20.0mL
Lactic acid (50% solution)	2.0mL

Preparation of Medium: Filter sterilize ethanol and lactic acid. Add components, except ethanol and lactic acid, to distilled/deionized water and bring volume to 978.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile ethanol and lactic acid. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Fomes annosus*.

Fomes annosus Isolation Medium No. 2

Composition per liter:

Malt extract	20.0g
Agar	17.0g
Streptomycin sulfate solution	10.0mL
Phenylphenol solution	2.5mL
Lactic acid (50% solution)	1.0mL

Streptomycin Sulfate Solution:

Composition per 10.0mL:

Streptomycin sulfate	0.1g
----------------------	------

Preparation of Streptomycin Sulfate Solution: Add streptomycin sulfate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Phenylphenol Solution:

Composition per 20.0mL:

<i>o</i> -Phenylphenol	0.48g
Ethanol (95% solution)	20.0mL

Preparation of Phenylphenol Solution: Add *o*-phenylphenol to 20.0mL of ethanol. Mix thoroughly. Filter sterilize.

Preparation of Medium: Filter sterilize lactic acid. Add components—except lactic acid, phenylphenol solution, and streptomycin sulfate solution—to distilled/deionized water and bring volume to 986.5mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile lactic acid, phenylphenol solution, and streptomycin sulfate solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Fomes annosus*.

Forget Fredette Agar

Composition per liter:

Casein enzymatic hydrolysate	17.0g
Agar	10.0g
NaCl	5.0g
Papaic digest of soybean meal	3.0g
Glucose	2.5g
K ₂ HPO ₄	2.5g
NaN ₃	0.5g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Caution: Sodium azide is toxic. Azides also react with metals and disposal must be highly diluted.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the selective isolation of anaerobic microorganisms.

Formate Fumarate Medium

Composition per 900.0mL:

Agar	20.0g
Sodium fumarate	16.6g
Sodium formate	6.8g
Yeast extract	4.0g
Sodium thioglycolate solution	100.0mL

pH 7.3 ± 0.2 at 25°C

Sodium Thioglycolate Solution:**Composition** per 100.0mL:

Sodium thioglycolate 0.5g

Preparation of Sodium Thioglycolate Solution: Add sodium thioglycolate to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Sparge with 100% N₂ gas. Warm to 50°–55°C.

Preparation of Medium: Add components, except sodium thioglycolate solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 5 min. Cool to 50°–55°C while sparging with 80% N₂ + 20% CO₂. Anaerobically distribute 4.5mL volumes into anaerobic tubes. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Prior to inoculation, add 0.5mL of sterile sodium thioglycolate solution to each tube.

Use: For the cultivation and identification of *Bacteroides gracilis*, *Bacteroides ureolyticus*, *Campylobacter* species, and *Wolinella* species.

Formate Ricinoleate Broth**Composition** per liter:

Pancreatic digest of gelatin 5.0g

Lactose 5.0g

Sodium formate 5.0g

Sodium ricinoleate 1.0g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes with inverted Durham tubes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the detection of coliform bacteria in milk, water, and other material of sanitary importance.

Formivibrio citricus* Medium*Composition** per liter:

Trisodium citrate 2.94g

NaHCO₃ 2.5gMgCl₂·6H₂O 2.03gKH₂PO₄ 1.36gNH₄Cl 0.53gNa₂S·9H₂O 0.24gCaCl₂·2H₂O 0.15g

Modified Wolfe's metals solution 10.0mL

Wolfe's vitamin solution 10.0mL

pH 7.5–7.7 at 25°C

Modified Wolfe's Metals Solution:**Composition** per literNaWO₄·2H₂O 10.01gNa₂SeO₃ 0.01gNiCl₂·6H₂O 0.01g

Wolfe's mineral solution 1.0L

Preparation of Modified Wolfe's Metals Solution: Add components to Wolfe's mineral solution and bring volume to 10.0mL. Mix thoroughly.

Wolfe's Mineral Solution:**Composition** per literMgSO₄·7H₂O 3.0g

Nitroacetic acid 1.5g

NaCl 1.0g

MnSO₄·H₂O 0.5gFeSO₄·7H₂O 0.1gCoCl₂·6H₂O 0.1gCaCl₂ 0.1gZnSO₄·7H₂O 0.1gCuSO₄·5H₂O 0.01gAlK(SO₄)₂·12H₂O 0.01gH₃BO₃ 0.01gNa₂MoO₄·2H₂O 0.01g

Preparation of Wolfe's Mineral Solution: Add nitrotriactic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L.

Wolfe's Vitamin Solution:**Composition** per liter:

Pyridoxine-HCl 0.01g

Thiamine-HCl 5.0mg

Riboflavin 5.0mg

Nicotinic acid 5.0mg

Calcium pantothenate 5.0mg

p-Aminobenzoic acid 5.0mg

Thioctic acid 5.0mg

Biotin 2.0mg

Folic acid 2.0mg

Cyanocobalamin 0.1mg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components, except NaHCO₃ and sodium sulfide, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Cool under an atmosphere of 90% N₂ + 10% CO₂. Add bicarbonate and sodium sulfide. Mix thoroughly. Adjust pH to 7.5–7.7. Anaerobically distribute into tubes under 90% N₂ + 10% CO₂. Cap tubes with rubber stoppers. Place tubes in a press. Autoclave at 121°C for 15 min with fast exhaust.

Use: For the cultivation and maintenance of *Formivibrio citricus*.

Fowells Acetate Agar**Composition** per liter:

Agar 20.0g

Sodium acetate trihydrate 5.0g

pH 6.5–7.0 at 25°C

Preparation of Medium: Add sodium acetate trihydrate to distilled/deionized water and bring volume to 1.0L. Adjust pH to 6.5–7.0. Add agar. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of fungi with the production of ascospores.

FPA Medium

See: **Fluorescent Pectolytic Agar**

FPA Medium**Composition** per liter:

Proteose peptone No. 3 20.0g

Agar 15.0g

Pectin, citrus 5.0g

K₂HPO₄ 1.5g

MgSO ₄ ·7H ₂ O	1.5g
Antibiotic solution	10.0mL
pH 7.0 ± 0.2 at 25°C	

Antibiotic Solution:**Composition per 10.0mL:**

Cycloheximide	0.075g
Novobiocin.....	0.045g
Penicillin G	75,000U

Preparation of Antibiotic Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: Add components, except agar and antibiotic solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Adjust pH to 7.0. Add agar. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile antibiotic solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of *Pseudomonas* species that cause soft rot.

FRAG Agar (*Fragilis* Agar)

Composition per 1025.0mL:

L-Cysteine-HCl·H ₂ O.....	0.5g
Basal solution.....	995.0mL
Glucuronic acid solution.....	25.0mL
Gentamicin solution.....	1.0mL
Hemin-vitamin K ₁ solution.....	1.0mL
Ferric sulfate solution.....	1.0mL
Mineral solution.....	1.0mL
Phenol Red (1% solution).....	1.0mL
Vitamin B ₁₂ solution.....	0.05mL
pH 7.0 ± 0.1 at 25°C	

Basal Solution:**Composition per 995.0mL:**

Oxgall.....	20.0g
Agar	15.4g
K ₂ HPO ₄	2.26g
Yeast extract.....	2.0g
Pancreatic digest of casein.....	1.4g
(NH ₄) ₂ HPO ₄	1.0g
K ₂ HPO ₄	0.9g
Papaic digest of soybean meal.....	0.12g
NaCl.....	0.12g

Preparation of Basal Solution: Add components to distilled/deionized water and bring volume to 995.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Glucuronic Acid Solution:**Composition per 100.0mL:**

D-Glucuronic acid.....	40.0g
------------------------	-------

Preparation of Glucuronic Acid Solution: Add glucuronic acid to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Gentamicin Solution:**Composition per 10.0mL:**

Gentamicin.....	0.1mg
-----------------	-------

Preparation of Gentamicin Solution: Add gentamicin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Vitamin K₁-Hemin Solution:**Composition per liter:**

Vitamin K ₁ solution.....	10.0mL
Hemin solution.....	10.0mL

Preparation of Vitamin K₁-Hemin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Vitamin K₁ Solution:**Composition per 100.0mL:**

Vitamin K ₁	1.0g
Ethanol.....	99.0mL

Preparation of Vitamin K₁ Solution: Add vitamin K₁ to 99.0mL of absolute ethanol. Mix thoroughly.

Hemin Solution:**Composition per 10.0mL:**

Hemin.....	0.5g
NaOH.....	0.4g

Preparation of Hemin Solution: Add hemin and NaOH to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly.

Ferric Sulfate Solution:**Composition per 100.0mL:**

FeSO ₄ ·9H ₂ O.....	0.04g
---	-------

Preparation of Ferric Sulfate Solution: Add FeSO₄·9H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Mineral Solution:**Composition per 100.0mL:**

NaCl.....	9.0g
CaCl ₂ ·2H ₂ O.....	0.27g
MgCl ₂ ·6H ₂ O.....	0.2g
CoCl ₂ ·6H ₂ O.....	0.1g
MnCl ₂ ·4H ₂ O.....	0.1g

Preparation of Mineral Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Vitamin B₁₂ Solution:**Composition per 10.0mL:**

Vitamin B ₁₂	0.1mg
-------------------------------	-------

Preparation of Vitamin B₁₂ Solution: Add vitamin B₁₂ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: To 995.0mL of cooled, sterile basal solution, aseptically add 0.5g of L-cysteine-HCl·H₂O, 25.0mL of sterile glucuronic acid solution, 1.0mL of sterile gentamicin solution, 1.0mL of sterile hemin-vitamin K₁ solution, 1.0mL of sterile ferric sulfate solution, 1.0mL of sterile mineral solution, 1.0mL of Phenol Red solution, and 0.05mL of sterile vitamin B₁₂ solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation, cultivation, and differentiation of the *Bacteroides fragilis* group (*Bacteroides fragilis*, *Bacteroides thetaiotamicron*,

Bacteroides vulgatus, *Bacteroides distasonis*, *Bacteriodes ovatus*, and *Bacteroides uniformis*) from clinical specimens.

Fragilis Agar

See: **FRAG Agar**

Francisella tularensis Isolation Medium

Composition per liter:

Agar	10.0g
Glucose	10.0g
Pancreatic digest of casein	10.0g
Peptic digest of animal tissue	10.0g
L-Cysteine-HCl-H ₂ O	5.0g
NaCl	5.0g
Sodium thioglycolate	2.0g
Glucose	1.0g
Thiamine-HCl	5.0mg

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components, except agar, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Add agar. Gently heat and bring to boiling. Autoclave for 20 min at 15 psi pressure–121°C. Cool to 45°–50°C. Pour into sterile Petri dishes.

Use: For the isolation and cultivation of *Francisella tularensis*.

Frankia Agar

Composition per liter:

Starch, soluble	20.0g
Agar	15.0g
Glucose	10.0g
N-Z-Amine™	5.0g
Yeast extract	5.0g
CaCO ₃	1.0g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.0 with NaOH. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Frankia alni*.

Frankia Isolation Medium

Composition per liter:

Sucrose	40.0g
Ca(NO ₃) ₂ ·4H ₂ O	0.242g
KNO ₃	0.085g
KCl	0.061g
MgSO ₄ ·7H ₂ O	0.042g
KH ₂ PO ₄	0.02g
MnSO ₄ ·H ₂ O	4.5mg
FeCl ₃ ·6H ₂ O	2.5mg
H ₃ BO ₃	1.5mg
ZnSO ₄ ·7H ₂ O	1.5mg
Nicotinic acid	0.5mg
Pyridoxine-HCl	0.5mg
Na ₂ MoO ₄ ·2H ₂ O	0.25mg
Thiamine-HCl	0.1mg
CuSO ₄ ·5H ₂ O	0.04mg

Mannitol solution	10.0mL
Supplement solution	10.0mL
pH 5.5 ± 0.2 at 25°C	

Mannitol Solution:

Composition per 100.0mL:

Mannitol	11.84g
----------------	--------

Preparation of Mannitol Solution: Add mannitol to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Supplement Solution:

Composition per 10.0mL:

L-Glutamic acid	0.185g
L-Arginine	0.174g
L-Glutamine	0.146g
L-Aspartic acid	0.133g
L-Asparagine	0.132g
Glycine	0.075g
Urea	0.06g
Naphthaloneacetic acid	2.0mg
Zeatin	1.0μg

Preparation of Supplement Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except mannitol solution and supplement solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Adjust pH to 5.5. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL of sterile mannitol solution and 10.0mL of sterile supplement solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the isolation and cultivation of *Frankia* species from root nodules.

Frankia Medium

Composition per liter:

Sucrose	20.0g
Agar	10.0g
Edamin	1.0g
Mannitol	1.0g
CaCO ₃	0.5g
K ₂ HPO ₄	0.5g
Yeast extract	0.5g
MgCl ₂ ·7H ₂ O	0.2g
NaCl	0.1g
H ₃ BO ₃	0.1g
MnSO ₄ ·H ₂ O	0.025g
ZnSO ₄ ·7H ₂ O	0.01g
Nicotinic acid	0.5mg
Na ₂ MoO ₄ ·2H ₂ O	0.25mg
Pyridoxine-HCl	0.1mg
Thiamine-HCl	0.1mg
CuSO ₄ ·5H ₂ O	0.025mg

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Frankia* species from root nodules.

Frankia Medium

Composition per 1200.0mL:

Na ₂ HPO ₄	1.0g
NaCl.....	1.0g
KH ₂ PO ₄	0.3g
Glycerol.....	1.0mL
NH ₄ Cl.....	1.0mL
Thiamine.....	1.0mL
Albumin fatty acid supplement.....	200.0mL

pH 7.4 ± 0.2 at 25°C

Albumin Fatty Acid Supplement:

Composition per 200.0mL:

Bovine albumin fraction V.....	20.0g
Tween™ 80.....	25.0mL
FeSO ₄ ·7H ₂ O.....	20.0mL
CaCl ₂ ·2H ₂ O.....	2.0mL
MgCl ₂ ·6H ₂ O.....	2.0mL
Vitamin B ₁₂	2.0mL
ZnSO ₄ ·7H ₂ O.....	2.0mL
CuSO ₄ ·5H ₂ O.....	0.2mL

Preparation of Albumin Fatty Acid Supplement: Add components to distilled/deionized water and bring volume to 200.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except albumin fatty acid supplement, to distilled/deionized water and bring volume to 800.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 200.0mL of sterile albumin fatty acid supplement. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Frankia* species.

Frankia Medium

Composition per liter:

Basal medium.....	900.0mL
Albumin fatty acid supplement.....	100.0mL

pH 7.4 ± 0.2 at 25°C

Basal Medium:

Composition per liter:

Na ₂ HPO ₄	1.0g
NaCl.....	1.0g
KH ₂ PO ₄	0.3g
Glycerol (10% solution).....	1.0mL
NH ₄ Cl (25% solution).....	1.0mL
Thiamine (0.5% solution).....	1.0mL

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.4. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Albumin Fatty Acid Supplement:

Composition per 200.0mL:

Bovine albumin fraction V.....	20.0g
Tween™ 80 (10% solution).....	25.0mL
FeSO ₄ ·7H ₂ O (0.5% solution).....	20.0mL
CaCl ₂ ·2H ₂ O (1% solution).....	2.0mL
MgCl ₂ ·6H ₂ O (1% solution).....	2.0mL
Vitamin B ₁₂ (0.2% solution).....	2.0mL

ZnSO ₄ ·7H ₂ O (0.4% solution).....	2.0mL
CuSO ₄ ·5H ₂ O (0.3% solution).....	0.2mL

Preparation of Albumin Fatty Acid Supplement: Add albumin to 100.0mL of distilled/deionized water. Mix thoroughly. Slowly add Tween™ 80 and then other components. Adjust pH to 7.4. Add distilled/deionized water and bring volume to 200.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Aseptically combine 900.0mL of sterile basal medium and 100.0mL of sterile albumin fatty acid supplement. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Frankia* species.

Fraser Broth

Composition per 10.0mL:

Ferric ammonium citrate.....	0.5g
Acriflavine-HCl.....	0.25g
Nalidixic acid.....	0.1g
Ethanol.....	5.0mL

Preparation of Fraser Supplement Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except Fraser supplement solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile Fraser supplement solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the isolation of *Listeria* species from food and environmental species.

Fraser Broth

Composition per liter:

NaCl.....	20.0g
Na ₂ HPO ₄	12.0g
Proteose peptone.....	5.0g
Tryptone.....	5.0g
Lab Lemco powder.....	5.0g
LiCl.....	3.0g
KH ₂ PO ₄	1.35g
Esculin.....	1.0g
Fraser supplement solution.....	10.0mL

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Fraser Supplement Solution:

Composition per 10.0mL:

Ferric ammonium citrate.....	0.5g
Acriflavine-HCl.....	0.25g
Nalidixic acid.....	0.1g
Ethanol.....	5.0mL

Preparation of Fraser Supplement Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except Fraser supplement solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile Fraser supplement solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the isolation of *Listeria* species from food and environmental species.

Fraser Broth, Half
See: Half Fraser Broth

Fraser HiVeg Broth Base

Composition per liter:

NaCl.....	20.0g
Na ₂ HPO ₄ ·2H ₂ O.....	12.0g
Plant extract No. 1.....	5.0g
Plant hydrolysate.....	5.0g
Plant peptone.....	5.0g
Yeast extract.....	5.0g
LiCl.....	3.0g
KH ₂ PO ₄	1.35g
Esculin.....	1.0g
Fraser supplement solution.....	10.0mL

pH 7.2 ± 0.2 at 25°C

Source: This medium, without Fraser supplement solution, is available as a premixed powder from HiMedia.

Caution: Lithium chloride is harmful. Avoid bodily contact and inhalation of vapors. On contact with skin wash with plenty of water immediately.

Fraser Supplement Solution:

Composition per 10.0mL:

Ferric ammonium citrate.....	0.5g
Acriflavine-HCl.....	0.25g
Nalidixic acid.....	0.1g
Ethanol.....	5.0mL

Preparation of Fraser Supplement Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except Fraser supplement solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile Fraser supplement solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the isolation of *Listeria* species from food and environmental species.

Fraser Secondary Enrichment Broth

Composition per liter:

NaCl.....	20.0g
Na ₂ HPO ₄	12.0g
Beef extract.....	5.0g
Proteose peptone.....	5.0g
Pancreatic digest of casein.....	5.0g
Yeast extract.....	5.0g
LiCl.....	3.0g
KH ₂ PO ₄	1.35g
Esculin.....	1.0g
Acriflavin solution.....	10.0mL
Ferric ammonium citrate solution.....	10.0mL
Nalidixic acid solution.....	1.0mL

Ferric Ammonium Citrate Solution:

Composition per 10.0mL:

Ferric ammonium citrate.....	0.5g
------------------------------	------

Preparation of Ferric Ammonium Citrate Solution: Add ferric ammonium citrate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Acriflavin Solution:

Composition per 10.0mL:

Acriflavin.....	0.025g
-----------------	--------

Preparation of Acriflavin Solution: Add acriflavin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Nalidixic Acid Solution:

Composition per 10.0mL:

Nalidixic acid.....	0.04g
NaOH (0.1N solution).....	10.0mL

Preparation of Nalidixic Acid Solution: Add nalidixic acid to 10.0mL of NaOH solution. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except acriflavin solution and ferric ammonium citrate solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes in 10.0mL volumes. Autoclave for 12 min at 15 psi pressure–121°C. Cool rapidly to 25°C. Immediately prior to inoculation, aseptically add 0.1mL of sterile acriflavin solution and 0.1mL of ferric ammonium citrate solution to each tube. Mix thoroughly.

Use: For the isolation, cultivation, and enrichment of *Listeria monocytogenes* from foods and environmental specimens based on esculin hydrolysis. Bacteria that hydrolyze esculin appear as black colonies.

Fraser Secondary Enrichment HiVeg Broth Base

Composition per liter:

NaCl.....	20.0g
Na ₂ HPO ₄	12.0g
Plant extract.....	5.0g
Plant hydrolysate.....	5.0g
Plant peptone No. 3.....	5.0g
Yeast extract.....	5.0g
LiCl.....	3.0g
KH ₂ PO ₄	1.35g
Esculin.....	1.0g

Ferric ammonium citrate.....	0.5g
Acriflavin solution.....	10.0mL
Ferric ammonium citrate solution.....	10.0mL
Nalidixic acid solution.....	1.0mL

pH 7.2 ± 0.2 at 25°C

Source: This medium, without acriflavin, ferric ammonium citrate, and nalidixic acid solutions, is available as a premixed powder from Hi-Media.

Caution: Lithium chloride is harmful. Avoid bodily contact and inhalation of vapors. On contact with skin wash with plenty of water immediately.

Ferric Ammonium Citrate Solution:

Composition per 10.0mL:

Ferric ammonium citrate.....	0.5g
------------------------------	------

Preparation of Ferric Ammonium Citrate Solution: Add ferric ammonium citrate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Acriflavin Solution:

Composition per 10.0mL:

Acriflavin.....	0.025g
-----------------	--------

Preparation of Acriflavin Solution: Add acriflavin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Nalidixic Acid Solution:

Composition per 10.0mL:

Nalidixic acid.....	0.04g
NaOH (0.1N solution).....	10.0mL

Preparation of Nalidixic Acid Solution: Add nalidixic acid to 10.0mL of NaOH solution. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except acriflavin solution and ferric ammonium citrate solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes in 10.0mL volumes. Autoclave for 12 min at 15 psi pressure–121°C. Cool rapidly to 25°C. Immediately prior to inoculation, aseptically add 0.1mL of sterile acriflavin solution and 0.1mL of ferric ammonium citrate solution to each tube. Mix thoroughly.

Use: For the isolation, cultivation, and enrichment of *Listeria monocytogenes* from foods and environmental specimens based on esculin hydrolysis. Bacteria that hydrolyze esculin appear as black colonies.

Freezing Agar

Composition per liter:

Potatoes, unpeeled.....	200.0g
Agar.....	20.0g
Glucose.....	8.0g
Yeast extract.....	1.0g
Activated carbon.....	0.5g

Preparation of Medium: Thinly slice potatoes. Add to 500.0mL of tap water. Autoclave for 15 min at 15 psi pressure–121°C. Mash the potatoes in their liquid. Filter solids through cheesecloth. Add agar, glucose, yeast extract, and activated carbon to filtrate. Mix thoroughly. Bring volume to 1.0L with distilled/deionized water. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Amauroascus species*, *Aphanascus cinnabarinus*, *Arachniotus flavoluteus*, *Arachniotus hebridensis*, *Arachnotheca albicans*, *Auxarthron thaxteri*, *Auxarthron zuffianum*, *Dichotomyces cejpii*, *Disarticulatus devroeyi*, *Disarticulatus indicus*, *Eleutherascus lectardii*, *Epidermophyton floccosum*, *Geomyces pannorus*, *Gymnascella citrina*, *Gymnoascoideus petalosporus*, *Gymnoascus intermedius*, *Kuehniella racovitzae*, *Lasiobolium orbiculoides*, *Macronodus bifurcatus*, *Microascus trigonosporus*, *Onygena corvina*, *Onygena equina*, *Pectinotrichum llanense*, *Phunkettomyces littoralis*, *Preussia typharum*, *Pseudeurotium desertorum*, *Pseudeurotium ovalis*, *Pseudoarachniotus roseus*, *Pseudoarachniotus ruber*, *Pseudoarachniotus trochleosporus*, *Rollandina capitata*, *Rollandina hyalinosporea*, and *Shanorella spirotricha*.

Freezing Medium

Composition per 11.5mL:

Bolton broth base.....	9.5mL
Fetal bovine serum.....	1.0mL
Glycerol solution.....	1.0mL

Bolton Broth Base:

Composition per liter:

Peptone.....	10.0g
Lactalbumin hydrolysate.....	5.0g
Yeast extract.....	5.0g
NaCl.....	5.0g
α-Ketoglutarate.....	1.0g
Na-pyruvate.....	0.5g
Na-metabisulfite.....	0.5g
Na ₂ CO ₃	0.6g
Hemin.....	0.01g

Preparation of Bolton Broth Base: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Glycerol Solution:

Composition per 100.0mL:

Glycerol.....	10.0g
---------------	-------

Preparation of Glycerol Solution: Add glycerol to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Preparation of Medium: Aseptically combine 9.5mL Bolton broth base, 1.0mL sterile glycerol solution, and 1.0mL filter sterilized fetal bovine serum. Mix thoroughly.

Use: For the preservation of *Campylobacter* spp.

Freshwater Amoeba Medium

Composition per liter:

Agar.....	10.0g
Malt extract.....	0.1g
Yeast extract.....	0.1g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Acanthamoeba astronyxis*, *Acanthamoeba castellanii*, *Acanthamoeba griffini*, *Acanthamoeba pearcei*, *Acanthamoeba polyphaga*, *Acanthamoeba rhyodes*, *Acanthamoeba stevensoni*, *Acanthamoeba tubiashi*, *Capsellina* species, *Cochliopodium actinophora*, *Cochliopodium bilimbosum*, *Hartmannella limax*, *Hartmannella vermiformis*, *Naegleria fowleri*, *Naegleria gruberi*, *Naegleria lovaniensis*,

Naegleria minor, *Naegleria thorntoni*, *Paraflorella reniformis*, *Protacanthamoeba caledonica*, *Rosculus* species, *Saccamoeba limax*, *Tetramitus rostratus*, *Vahlkampfia inornata*, and *Vannella miroides*.

Frey *Mycoplasma* Broth Base

Composition per liter:

Casein enzymic hydrolysate	7.5g
Yeast extract	5.0g
NaCl	5.0g
Papaic digest of soybean meal	2.5g
Na ₂ HPO ₄	1.6g
KCl	0.4g
MgSO ₄ ·7H ₂ O	0.2g
KH ₂ PO ₄	0.1g
Horse serum, sterile inactivated	100.0mL
pH 7.7 ± 0.2 at 25°C	

Source: This medium is available from HiMedia.

Preparation of Medium: Add components, except horse serum, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add horse serum. Mix thoroughly. Aseptically distribute into sterile tubes.

Use: For the cultivation of avian *Mycoplasma* spp.

Friis Medium (DSMZ Medium 1078)

Composition per 162.0mL:

Beef heart, infusion from	0.7g
Pancreatic digest of gelatin	0.32g
Peptone	0.27g
Brain heart, solids from infusion	0.13g
NaCl	0.1g
Na ₂ HPO ₄	0.08g
Glucose	0.07g
NaCl	0.07g
Hank's balance salt solution (BSS)	50.0mL
Porcine serum, heat inactivated	30.0mL
Yeast extract solution	3.32mL
Phenol Red solution	0.133mL
pH 7.4 ± 0.2 at 25°C	

Hanks' Balanced Salt Solution:

Composition per liter:

Solution A	25.0mL
Solution B	25.0mL

Solution A:

Composition per 25.0mL:

Na ₂ Cl	0.8g
KCl	0.4g
CaCl ₂	1.4g
MgCl ₂ ·6H ₂ O	0.185g
MgSO ₄ ·7H ₂ O	0.1g

Preparation of Solution A: Add components to 25.0mL distilled/deionized water. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B:

Composition per 25.0mL:

Na ₂ HPO ₄ ·7H ₂ O	0.15g
KH ₂ PO ₄	0.06g

Preparation of Solution B: Add components to 25.0mL distilled/deionized water. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Hanks' Balanced Salt Solution: Add solutions A and B to sterile distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Phenol Red Solution:

Composition per 15.0mL:

Phenol Red	0.1g
------------------	------

Preparation of Phenol Red Solution: Add components to 15.0mL distilled/deionized water. Filter sterilize.

Yeast Extract Solution:

Composition per 15.0mL:

Yeast extract	2.5g
---------------------	------

Preparation of Yeast Extract Solution: Add components to 15.0mL distilled/deionized water. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except porcine serum, yeast extract solution, and Phenol Red solution, to distilled/deionized water and bring volume to 78.0mL. Mix thoroughly. Adjust pH to 7.4. Gently heat while stirring and bring to boiling. Boil for 1 min. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add porcine serum, yeast extract solution, and Phenol Red solution. Bring volume to 162.0mL with distilled/deionized water.

Use: For the cultivation of *Mycoplasma* spp., e.g., *Mycoplasma hyorhinis*.

Fructose Mineral Medium

Composition per liter:

Solution A	500.0mL
Solution B	300.0mL
Solution C	200.0mL

Solution A:

Composition per 500.0mL:

Na ₂ HPO ₄ ·12H ₂ O	9.0g
K ₂ PO ₄	1.5g
NH ₄ Cl	1.0g
MgSO ₄ ·7H ₂ O	0.2g
Trace elements solution SL-6	1.0mL

Trace Elements Solution SL-6:

Composition per liter:

MnCl ₂ ·4H ₂ O	0.5g
H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
Na ₂ MoO ₄ ·2H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B:

Composition per 300.0mL:

CaCl ₂ ·2H ₂ O	0.01g
Ferric ammonium citrate	0.005g

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C:

Composition per 200.0mL:

Fructose..... 5.0g

Preparation of Solution C: Add fructose to distilled/deionized water and bring volume to 200.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: To 500.0mL of sterile solution A, aseptically add 300.0mL of sterile solution B and 200.0mL of sterile solution C. Mix thoroughly. Aseptically dispense into sterile tubes or flasks.

Use: For the general cultivation of a wide variety of bacteria.

FSM Selective Medium

Composition per liter:

Agar	18.0g
Peptone.....	10.0g
Glucose	4.0g
(NH ₄) ₂ SO ₄	1.32g
K ₂ HPO ₄	1.18g
Casamino acids	1.0g
Yeast extract.....	1.0g
KH ₂ PO ₄	0.44g
MgSO ₄ ·7H ₂ O	0.2g
FeC ₆ H ₅ O ₇ ·5H ₂ O.....	3.0mg
Citric acid.....	1.9mg
ZnSO ₄ ·7H ₂ O	1.6mg
MnSO ₄ ·H ₂ O	1.5mg
2,3,5-Triphenyltetrazolium·HCl solution.....	10.0mL
Benomyl solution.....	10.0mL
Polymyxin B solution	10.0mL
Chloroneb solution.....	10.0mL
Dichloran solution.....	10.0mL
Bacitracin solution	10.0mL
Cycloheximide solution	10.0mL
Pentachloronitrobenzene solution.....	10.0mL
Pimaricin solution	10.0mL
Tyrosine solution.....	10.0mL
Vancomycin solution.....	10.0mL
Chloromycetin solution.....	10.0mL
Penicillin G solution	10.0mL

2,3,5-Triphenyltetrazolium·HCl Solution:

Composition per 10.0mL:

2,3,5-Triphenyltetrazolium·HCl..... 0.5mg

Preparation of 2,3,5-Triphenyltetrazolium·HCl Solution: Add 2,3,5-triphenyltetrazolium·HCl to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 7 min at 15 psi pressure–121°C.

Benomyl Solution:

Composition per 10.0mL:

Benomyl..... 0.5mg

Preparation of Benomyl Solution: Add benomyl to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Polymyxin B Solution:

Composition per 10.0mL:

Polymyxin B
 0.1mg |

Preparation of Polymyxin B Solution: Add polymyxin B to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Chloroneb Solution:

Composition per 10.0mL:

Chloroneb
 0.1mg |

Preparation of Chloroneb Solution: Add chloroneb to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Dichloran Solution:

Composition per 10.0mL:

Dichloran
 0.1mg |

Preparation of Dichloran Solution: Add dichloran to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Bacitracin Solution:

Composition per 10.0mL:

Bacitracin
 0.05mg |

Preparation of Bacitracin Solution: Add bacitracin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Cycloheximide Solution:

Composition per 10.0mL:

Cycloheximide..... 0.05mg

Preparation of Cycloheximide Solution: Add cycloheximide to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Pentachloronitrobenzene Solution:

Composition per 10.0mL:

Pentachloronitrobenzene..... 0.03mg

Preparation of Pentachloronitrobenzene Solution: Add pentachloronitrobenzene to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Pimaricin Solution:

Composition per 10.0mL:

Pimaricin..... 0.02mg

Preparation of Pimaricin Solution: Add pimaricin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Tyrosine Solution:

Composition per 10.0mL:

Tyrosine
 0.02mg |

Preparation of Tyrosine Solution: Add tyrosine to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Vancomycin Solution:

Composition per 10.0mL:

Vancomycin
 0.01mg |

Preparation of Vancomycin Solution: Add vancomycin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Chloromycetin Solution:**Composition per 10.0mL:**

Chloromycetin 5.0µg

Preparation of Chloromycetin Solution: Add chloromycetin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Penicillin G Solution:**Composition per 10.0mL:**

Penicillin G 1.0µg

Preparation of Penicillin G Solution: Add penicillin G to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components—except 2,3,5-triphenyltetrazolium chloride solution, benomyl solution, polymyxin B solution, chloroneb solution, dichloran solution, bacitracin solution, cycloheximide solution, pentachloronitrobenzene solution, pimaricin solution, tyrothricin solution, vancomycin solution, chloromycetin solution, and penicillin G solution—to distilled/deionized water and bring volume to 870.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL each of sterile 2,3,5-triphenyltetrazolium chloride solution, benomyl solution, polymyxin B solution, chloroneb solution, dichloran solution, bacitracin solution, cycloheximide solution, pentachloronitrobenzene solution, pimaricin solution, tyrothricin solution, vancomycin solution, chloromycetin solution, and penicillin G solution. Mix thoroughly. Pour into sterile Petri dishes. Dry plates for 24 hr at 30°C.

Use: For the isolation and cultivation of *Pseudomonas solanacearum* from soil.

FTX Broth**Composition per 1001.0mL:**

Sodium glutamate 10.0g
 Glucose 2.0g
 Tris 2.0g
 Sodium glycerophosphate 0.1g
 Artificial seawater 1.0L
 Trace elements solution 1.0mL

pH 8.0 ± 0.2 at 25°C

Artificial Seawater:**Composition per liter:**

NaCl 24.7g
 MgSO₄·7H₂O 6.3g
 MgCl₂·6H₂O 4.6g
 CaCl₂ 1.0g
 KCl 0.7g
 NaHCO₃ 0.2g

Preparation of Artificial Seawater: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Trace Elements Solution:**Composition per liter:**

Disodium EDTA 8.0g
 MnCl₂·4H₂O 0.1g
 CoCl₂·6H₂O 0.02g
 KBr 0.02g
 KI 0.02g
 ZnCl₂ 0.02g
 CuSO₄ 0.01g

H₃BO₃ 0.01g
 Na₂MoO₄·2H₂O 0.01g
 LiCl 5.0mg
 SnCl₂·2H₂O 5.0mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to 1.0L of artificial seawater. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation and cultivation of *Cytophaga* species, *Herpetosiphon* species, *Saprospira* species, and *Flexithrix* species.

Fuchsin Lactose Broth**Composition per liter:**

Peptone, special 5.0g
 Lactose 5.0g
 Meat extract 3.0g
 Basic Fuchsin 0.013g

pH 6.8 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Caution: Basic Fuchsin is a potential carcinogen and care should be taken to avoid inhalation of the powdered dye and contamination of the skin.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes with inverted Durham tubes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the determination of coliform levels in the bacteriological examination of water and other materials.

FUF Medium**(DSMZ Medium 318a)****Composition per liter:**

KHCO₃ 2.0g
 NH₄Cl 1.0g
 NaCl 0.6g
 KH₂PO₄ 0.3g
 MgCl₂·6H₂O 0.1g
 CaCl₂·2H₂O 0.08g
 Resazurin 1.0mg
 HEPES solution 50.0mL
 Furoic acid solution 50.0mL
 Trace elements solution 10.0mL
 Vitamin solution 10.0mL
 Cysteine solution 10.0mL
 Na₂S·9H₂O solution 10.0mL

pH 6.8 ± 0.2 at 25°C

Vitamin Solution:**Composition per liter:**

Pyridoxine-HCl 10.0mg
 Thiamine-HCl·2H₂O 5.0mg
 Riboflavin 5.0mg
 Nicotinic acid 5.0mg
 D-Ca-pantothenate 5.0mg
p-Aminobenzoic acid 5.0mg
 Lipoic acid 5.0mg
 Biotin 2.0mg

Folic acid..... 2.0mg
 Vitamin B₁₂..... 0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Cysteine Solution:

Composition per 10.0mL:

L-Cysteine·HCl·H₂O 0.3g

Preparation of Cysteine Solution: Add L-cysteine·HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na₂S·9H₂O 0.3g

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Trace Elements Solution:

Composition per liter:

Nitrilotriacetic acid 12.8g
 FeCl₃·6H₂O 1.35g
 NaCl 1.0g
 NiCl₂·6H₂O 0.12g
 MgCl₂·4H₂O 0.1g
 CaCl₂·2H₂O 0.1g
 ZnCl₂ 0.1g
 Na₂SeO₃·5H₂O 0.026g
 CuCl₂·2H₂O 0.025g
 CoCl₂·6H₂O 0.024g
 Na₂MoO₄·4H₂O 0.024g
 H₃BO₃ 0.01g

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to 200.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Furoic Acid Solution:

Composition per 100.0mL:

2-Furoic acid 4.4g

Preparation of Furoic Acid Solution: Add furoic acid to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Adjust pH to 7.0 with NaOH. Sparge with 100% N₂. Filter sterilize.

HEPES Solution:

Composition per 100.0mL:

HEPES 6.2g

Preparation of HEPES Solution: Add HEPES to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Adjust pH to 7.0. Sparge with 100% N₂. Filter sterilize.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas atmosphere. Add components, except cysteine solution, furoic acid solution, Na₂S·9H₂O solution, and vitamin solution, to distilled/deionized water and bring volume to 920.0mL. Mix thoroughly. Adjust pH to 7.0. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 10.0mL cysteine solution, 50.0mL furoic acid solution, 10.0mL Na₂S·9H₂O solution, and 10.0mL vitamin solution. Mix thoroughly. Aseptically and

anaerobically distribute into sterile tubes or bottles. After inoculation, flush and repressurize the gas head space of culture bottles with sterile 80% N₂ + 20% CO₂ to 1 bar overpressure.

Use: For the cultivation of *Methanosarcina thermophila* (*Methanosarcina* sp.) and *Methanosarcina mazei*=*Methanococcus mazei* (*Methanosarcina frisia*).

Fumarate Medium (DSMZ Medium 195a)

Composition per 991.0mL:

Solution A 870.0mL
 Solution C 100.0mL
 Solution D 10.0mL
 Solution E (Vitamin solution) 10.0mL
 Solution B (Trace elements solution SL-10) 1.0mL
 pH 7.4 ± 0.2 at 25°C

Solution A:

Composition per 870.0mL:

NaCl 21.0g
 MgCl₂·6H₂O 3.1g
 Na₂SO₄ 3.0g
 Na₂-fumarate 2.5g
 KCl 0.5g
 NH₄Cl 0.3g
 KH₂PO₄ 0.2g
 CaCl₂·2H₂O 0.15g
 Resazurin 1.0mg

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 870.0mL. Mix thoroughly.

Solution B (Trace Elements Solution SL-10):

Composition per liter:

FeCl₂·4H₂O 1.5g
 CoCl₂·6H₂O 190.0mg
 MnCl₂·4H₂O 100.0mg
 ZnCl₂ 70.0mg
 Na₂MoO₄·2H₂O 36.0mg
 NiCl₂·6H₂O 24.0mg
 H₃BO₃ 6.0mg
 CuCl₂·2H₂O 2.0mg
 HCl (25% solution) 10.0mL

Preparation of Solution B (Trace Elements Solution SL-10):

Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C:

Composition per 100.0mL:

NaHCO₃ 5.0g

Preparation of Solution C: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Flush with 80% N₂ + 20% CO₂ to remove dissolved oxygen.

Solution D:

Composition per 100.0mL:

Resorcinol 1.1g

Preparation of Solution D: Add resorcinol to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize. Use freshly prepared solution.

Solution E (Vitamin Solution):**Composition per liter:**

Pyridoxine-HCl.....	10.0mg
Thiamine-HCl·2H ₂ O.....	5.0mg
Riboflavin.....	5.0mg
Nicotinic acid.....	5.0mg
D-Ca-pantothenate.....	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Lipoic acid.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.10mg

Preparation of Solution E (Vitamin Solution): Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution F:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O.....	0.4g
--	------

Preparation of Solution F: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Gently heat solution A and bring to boiling. Boil solution A for a few minutes. Cool to room temperature. Gas with 80% N₂ + 20% CO₂ gas mixture to reach a pH below 6. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Sequentially add 1.0mL solution B, 100.0mL solution C, 10.0mL solution D, 10.0mL solution E, and 10.0mL solution F. Adjust pH to 7.4 with sodium bicarbonate or sodium carbonate. Distribute anaerobically under 80% N₂ + 20% CO₂ into appropriate vessels. Addition of 10–20mg sodium dithionite per liter from a 5% (w/v) solution, freshly prepared under N₂ and filter-sterilized, may stimulate growth. During growth the culture can be fed with the resorcinol solution.

Use: For the cultivation of *Desulfuromusa kysingii*, *Desulfuromusa bakii*, and *Desulfuromusa succinoxidans*.

***Fundibacter jadensis* Medium
(DSMZ Medium 821)**

Composition per liter:

Peptone.....	2.5g
Meat extract.....	1.5g
Na-acetate.....	1.0g
Artificial sea water, concentrated.....	190.0mL
pH 7.2 ± 0.2 at 25°C	

Artificial Sea Water, Concentrated:**Composition per 1.0L:**

NaCl.....	99.4g
MgSO ₄ ·7H ₂ O.....	23.76g
MgCl ₂ ·6H ₂ O.....	18.12g
CaCl ₂ ·2H ₂ O.....	5.2g
KCl.....	2.56g

Preparation of Artificial Sea Water, Concentrated: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.1–7.3. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Preparation of Medium: Add components, except concentrated artificial sea water, to distilled/deionized water and bring volume to 810.0mL. Mix thoroughly. Adjust pH to 7.1–7.3. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 60°C. Add 190.0mL concentrated ar-

tificial sea water. Mix thoroughly. Aseptically distribute into tubes or flasks.

Use: For the cultivation of *Alcanivorax jadensis*.

***Fundibacter jadensis* Medium
(DSMZ Medium 821)**

Composition per liter:

Peptone.....	2.5g
Meat extract.....	1.5g
Artificial sea water, concentrated.....	190.0mL
Hexadecane.....	2.0mL
pH 7.2 ± 0.2 at 25°C	

Artificial Sea Water, Concentrated:**Composition per 1.0L:**

NaCl.....	99.4g
MgSO ₄ ·7H ₂ O.....	23.76g
MgCl ₂ ·6H ₂ O.....	18.12g
CaCl ₂ ·2H ₂ O.....	5.2g
KCl.....	2.56g

Preparation of Artificial Sea Water, Concentrated: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.1–7.3. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Preparation of Medium: Add components, except concentrated artificial sea water, to distilled/deionized water and bring volume to 810.0mL. Mix thoroughly. Adjust pH to 7.1–7.3. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 60°C. Add 190.0mL concentrated artificial sea water. Mix thoroughly. Aseptically distribute into tubes or flasks.

Use: For the cultivation of *Alcanivorax jadensis*.

**Fungal Agar
(Mycological agar)**

Composition per liter:

Agar.....	15.0g
Papaic digest of soybean meal.....	10.0g
Glucose.....	10.0g
pH 7.0 ± 0.2 at 25°C	

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of fungi and for production of chlamydo-spores.

**Fungal Agar with Low pH
(Mycological Agar with Low pH)**

Composition per liter:

Agar.....	15.0g
Papaic digest of soybean meal.....	10.0g
Glucose.....	10.0g
pH 4.8 ± 0.2 at 25°C	

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring

to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the selective enumeration and cultivation of saprophytic fungi and aciduric bacteria.

Fungal Broth (Mycological Broth)

Composition per liter:

Glucose	40.0g
Papaic digest of soybean meal	10.0g
pH 7.0 ± 0.2 at 25°C	

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of fungi.

Fungi Kimmig Agar

Composition per liter:

Glucose	19.0g
Agar	15.0g
Peptone.....	15.0g
NaCl.....	1.0g
Glycerol	5.0mL
pH 6.5 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the cultivation, isolation, identification, and strain preservation of fungi.

Fungi Kimmig Agar Base

Composition per liter:

Agar	15.0g
NaCl.....	11.4g
Glucose	10.0g
Peptic digest of animal tissue.....	9.3g
Casein enzymatic hydrolysate	4.3g
Glycerol	5.0mL
pH 6.5 ± 0.2 at 25°C	

Source: This medium, without glycerol, is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the cultivation, isolation, identification, and strain preservation of fungi.

Fungi Kimmig HiVeg Agar Base

Composition per liter:

Agar	15.0g
NaCl.....	11.4g
Glucose	10.0g
Plant peptone.....	9.3g

Plant hydrolysate	4.3g
Glycerol	5.0mL
pH 6.5 ± 0.2 at 25°C	

Source: This medium without glycerol, is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the cultivation, isolation, identification, and strain preservation of fungi.

Fungi Kimmig Selective Agar

Composition per liter:

Glucose	19.0g
Agar	15.0g
Peptone	15.0g
NaCl.....	1.0g
Glycerol	5.0mL
Selective solution.....	10.0mL
pH 6.5 ± 0.2 at 25°C	

Selective Solution:

Composition per 10.0mL:

Cycloheximide.....	0.4g
Streptomycin.....	0.04mg
Penicillin.....	40,000U

Preparation of Selective Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: Add components, except selective solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL selective solution. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 5 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the cultivation, isolation, identification, and strain preservation of pathogenic fungi.

Fungi Kimmig Selective Agar

Composition per liter:

Glucose	19.0g
Agar	15.0g
Peptone	15.0g
NaCl.....	1.0g
Glycerol	5.0mL
Selective solution.....	10.0mL
pH 6.5 ± 0.2 at 25°C	

Selective Solution:

Composition per 10.0mL:

Novobiocin	0.1g
Colistin.....	0.08g

Preparation of Selective Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except selective solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL selective solution. Mix thoroughly. Distribute into tubes or flasks.

Use: For the cultivation, isolation, identification, and strain preservation of pathogenic fungi.

Fungobiotic Agar (Mycobio Agar)

Composition per liter:

Agar	15.0g
Papaic digest of soybean meal	10.0g
Glucose	10.0g
Cycloheximide	0.5g
Chloramphenicol	0.5g

pH 6.5 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation of dermatophytic fungi.

Furoate Agar

Composition per liter:

Agar	20.0g
2-Furoic acid	2.0g
K ₂ HPO ₄	1.0g
NH ₄ Cl	1.0g
MgSO ₄ ·7H ₂ O	0.1g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Bacillus megaterium* and *Pseudomonas* species.

Furunculosis Agar

Agar	15.0g
Tryptone	10.0g
Yeast extract	5.0g
NaCl	2.5g
Tyrosine	1.0g

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the cultivation and identification based upon pigment production of *Aeromonas salmonicida*.

Furunculosis Agar

Composition per liter:

Agar	15.0g
Casein enzymatic hydrolysate	10.0g
Yeast extract	5.0g
NaCl	2.5g
Tyrosine	1.0g

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes. Allow tubes to cool in a slanted position.

Use: For the cultivation and identification based upon pigment production of *Aeromonas salmonicida*.

Furunculosis HiVeg Agar

Composition per liter:

Agar	15.0g
Plant hydrolysate	10.0g
Yeast extract	5.0g
NaCl	2.5g
Tyrosine	1.0g

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes. Allow tubes to cool in a slanted position.

Use: For the cultivation and identification based upon pigment production of *Aeromonas salmonicida*.

Fusibacter paucivorans Medium (DSMZ Medium 853)

Composition per 1068.0mL:

NaCl	30.0g
Na-thiosulfate·5H ₂ O	3.16g
MgCl ₂ ·6H ₂ O	3.0g
Yeast extract	1.0g
Trypticase™	1.0g
NH ₄ Cl	1.0g
KCl	1.0g
Na-acetate·3H ₂ O	0.5g
Cysteine-HCl·H ₂ O	0.5g
K ₂ HPO ₄	0.3g
KH ₂ PO ₄	0.3g
CaCl ₂ ·2H ₂ O	0.1g
Resazurin	0.5mg
NaHCO ₃ solution	40.0mL
Glucose solution	18.0mL
Na ₂ S·9H ₂ O solution	10.0mL
Trace elements solution	10.0mL

pH 7.3 ± 0.2 at 25°C

Trace Elements Solution:**Composition per liter:**

MgSO ₄ ·7H ₂ O	3.0g
Nitrilotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·2H ₂ O	0.5g
CoSO ₄ ·7H ₂ O	0.18g
ZnSO ₄ ·7H ₂ O	0.18g
CaCl ₂ ·2H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g
NiCl ₂ ·6H ₂ O	0.025g
KAl(SO ₄) ₂ ·12H ₂ O	0.02g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·4H ₂ O	0.01g
CuSO ₄ ·5H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O	0.3mg

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 7.0 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

NaHCO₃ Solution:**Composition per 100.0mL:**

NaHCO ₃	10.0g
--------------------	-------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Must be prepared freshly.

Na₂S·9H₂O Solution:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O	0.3g
-------------------------------------	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Glucose Solution:**Composition per 50.0mL:**

Glucose	10.0g
---------	-------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas mixture. Add components, except glucose solution, NaHCO₃ solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically and anaerobically add 18.0mL sterile glucose solution, 10.0mL sterile Na₂S·9H₂O solution, and 40.0mL sterile NaHCO₃ solution. Mix thoroughly. Adjust pH to 7.3. Aseptically and anaerobically distribute into tubes or bottles.

Use: For the cultivation of *Fusibacter paucivorans*.

Fusobacterium Medium**Composition per liter:**

Agar	15.0g
Pancreatic digest of casein	15.0g
Glucose	5.0g
NaCl	5.0g
Yeast extract	5.0g

L-Cysteine	0.75g
Crystal Violet	0.01g
Bovine serum	50.0mL
Streptomycin solution	10.0mL

pH 7.2 ± 0.2 at 25°C

Streptomycin Solution:**Composition per 10.0mL:**

Streptomycin	0.01g
--------------	-------

Preparation of Streptomycin Solution: Add streptomycin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except bovine serum and streptomycin solution, to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50.0mL of sterile bovine serum and 10.0mL of sterile streptomycin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Fusobacterium* species.

Fusobacterium necrophorum Medium**Composition per 500.0mL:**

Pancreatic digest of casein	16.0g
Agar	8.3g
Biosate	4.0g
MgSO ₄	2.5g
Na ₂ HPO ₄	2.5g
Thiotone	2.0g
Glucose	0.5g
Egg yolk emulsion, 50%	45.0mL
Crystal Violet solution	25.0mL
Phenylethyl alcohol solution	1.35mL

pH 7.3 ± 0.2 at 25°C

Egg Yolk Emulsion, 50%:**Composition per 100.0mL:**

Chicken egg yolks	11
Whole chicken egg	1
NaCl (0.9% solution)	50.0mL

Preparation of Egg Yolk Emulsion, 50%: Soak eggs with 1:100 dilution of saturated mercuric chloride solution for 1 min. Crack 11 eggs, separating yolks from whites. Mix egg yolks with 1 chicken egg. Beat to form emulsion. Combine 50.0mL of egg yolk emulsion and 50.0mL of 0.9% NaCl solution. Mix thoroughly.

Crystal Violet Solution:**Composition per 25.0mL:**

Crystal Violet	0.0115g
----------------	---------

Preparation of Crystal Violet Solution: Aseptically add Crystal Violet to sterile distilled/deionized water and bring volume to 25.0mL. Mix thoroughly.

Phenylethyl Alcohol Solution:**Composition per 100.0mL:**

Phenylethyl alcohol	0.27g
---------------------	-------

Preparation of Phenylethyl Alcohol Solution: Aseptically add phenylethyl alcohol to sterile distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components—except egg yolk emulsion, 50%, Crystal Violet solution, and phenylethyl alcohol solu-

tion—to distilled/deionized water and bring volume to 428.65mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 45.0mL of sterile egg yolk emulsion, 50%, 25.0mL of Crystal Violet solution, and 1.35mL of sterile phenylethyl alcohol solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of *Fusobacterium necrophorum*.

FWM Medium

Composition per 1013.0mL:

Solution A	940.0mL
Solution E (NaHCO ₃ solution)	50.0mL
Solution F (Substrate solution)	10.0mL
Solution G (Na ₂ S·9H ₂ O solution)	10.0mL
Solution B (Trace elements solution SL-10)	1.0mL
Solution C (Seven vitamin solution)	1.0mL
Solution D (Selenite-tungstate solution)	1.0mL
pH 7.2–7.4 at 25°C	

Solution A:

Composition per 940.0mL:

NaCl	1.0g
KCl	0.5g
MgCl ₂ ·6H ₂ O	0.4g
NH ₄ Cl	0.25g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O	0.15g
Resazurin	0.5mg

Preparation of Solution A: Prepare and dispense under 80% N₂ + 20% CO₂. Add components to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B (Trace Elements Solution SL-10):

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Solution B (Trace Elements Solution SL-10):

Prepare and dispense under 100% N₂. Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C (Seven Vitamin Solution):

Composition per liter:

Pyridoxine-HCl	300.0mg
Nicotinic acid	200.0mg
Thiamine-HCl	200.0mg
Calcium DL-pantothenate	100.0mg
Cyanocobalamin	100.0mg
<i>p</i> -Aminobenzoic acid	80.0mg
D(+) Biotin	20.0mg

Preparation of Solution C (Seven Vitamin Solution): Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Sparge with 100% N₂.

Solution D (Selenite-Tungstate Solution):

Composition per liter:

NaOH	0.5g
Na ₂ WO ₄ ·2H ₂ O	4.0mg
Na ₂ SeO ₃ ·5H ₂ O	3.0mg

Preparation of Solution D (Selenite-Tungstate Solution):

Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Sparge with 100% N₂.

Solution E (NaHCO₃ Solution):

Composition per 50.0mL:

NaHCO ₃	2.5g
--------------------	------

Preparation of Solution E (NaHCO₃ Solution):

Add NaHCO₃ to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution F (Substrate Solution):

Composition per 10.0mL:

Sodium-DL-3-hydroxybutyrate	1.5g
-----------------------------	------

Preparation of Solution F (Substrate Solution):

Add sodium-DL-3-hydroxybutyrate to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution G (Na₂S·9H₂O Solution):

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.3g
-------------------------------------	------

Preparation of Solution G (Na₂S·9H₂O Solution):

Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium:

To 940.0mL of sterile solution A, aseptically and anaerobically add 1.0mL of sterile solution B, 1.0mL of sterile solution C, 1.0mL of sterile solution D, 50.0mL of sterile solution E, 10.0mL of sterile solution F, and 10.0mL of sterile solution G. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Clostridium homopropionicum* and *Desulfococcus biacutus*.

FWM Medium

Composition per 1013.0mL:

Solution A	940.0mL
Solution E (NaHCO ₃ solution)	50.0mL
Solution F (Substrate solution)	10.0mL
Solution G (Na ₂ S·9H ₂ O solution)	10.0mL
Solution B (Trace elements solution SL-10)	1.0mL
Solution C (Seven vitamin solution)	1.0mL
Solution D (Selenite-tungstate solution)	1.0mL
pH 7.2–7.4 at 25°C	

Solution A:

Composition per 940.0mL:

NaCl	1.0g
KCl	0.5g
MgCl ₂ ·6H ₂ O	0.4g
NH ₄ Cl	0.25g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O	0.15g
Resazurin	0.5mg

Preparation of Solution A: Prepare and dispense under 80% N₂ + 20% CO₂. Add components to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B (Trace Elements Solution SL-10):

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Solution B (Trace Elements Solution SL-10):

Prepare and dispense under 100% N₂. Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C (Seven Vitamin Solution):

Composition per liter:

Pyridoxine-HCl	300.0mg
Nicotinic acid	200.0mg
Thiamine-HCl	200.0mg
Calcium DL-pantothenate	100.0mg
Cyanocobalamine	100.0mg
<i>p</i> -Aminobenzoic acid	80.0mg
D(+)-Biotin	20.0mg

Preparation of Solution C (Seven Vitamin Solution): Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Sparge with 100% N₂.

Solution D (Selenite-Tungstate Solution):

Composition per liter:

NaOH	0.5g
Na ₂ WO ₄ ·2H ₂ O	4.0mg
Na ₂ SeO ₃ ·5H ₂ O	3.0mg

Preparation of Solution D (Selenite-Tungstate Solution):

Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Sparge with 100% N₂.

Solution E (NaHCO₃ Solution):

Composition per 50.0mL:

NaHCO ₃	2.5g
--------------------------	------

Preparation of Solution E (NaHCO₃ Solution): Add NaHCO₃ to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution F (Substrate Solution):

Composition per 10.0mL:

Xylan or xylose	2.0g
-----------------------	------

Preparation of Solution F (Substrate Solution): Add 2.0g of xylan or 2.0g of xylose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution G (Na₂S·9H₂O Solution):

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.3g
---	------

Preparation of Solution G (Na₂S·9H₂O Solution): Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: To 940.0mL of sterile solution A, aseptically and anaerobically add 1.0mL of sterile solution B, 1.0mL of sterile solution C, 1.0mL of sterile solution D, 50.0mL of sterile solution E, 10.0mL of sterile solution F, and 10.0mL of sterile solution G. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Desulfococcus biacutus*.

FWN Medium, Modified with Fructose

Composition per 1020.0mL:

Solution A	950.0mL
Solution C (NaHCO ₃ solution)	50.0mL
Solution B (Wolfe's vitamin solution)	10.0mL
Solution D (Na ₂ S·9H ₂ O solution)	10.0mL

Solution A:

Composition per 950.0mL:

Fructose	2.0g
NaCl	1.0g
KCl	0.5g
MgCl ₂ ·6H ₂ O	0.4g
NH ₄ Cl	0.25g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O	0.15g
Resazurin	0.5mg
Modified Wolfe's mineral solution	10.0mL

Modified Wolfe's Mineral Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O	3.0g
Nitrilotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·H ₂ O	0.5g
CaCl ₂	0.1g
CoCl ₂ ·6H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g
ZnSO ₄ ·7H ₂ O	0.1g
AlK(SO ₄) ₂ ·12H ₂ O	0.01g
CuSO ₄ ·5H ₂ O	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g
Na ₂ SeO ₃	0.01g
NaWO ₄ ·2H ₂ O	0.01g
NiCl ₂ ·6H ₂ O	0.01g

Preparation of Modified Wolfe's Mineral Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components one at a time. Add distilled/deionized water to 1.0L. Adjust pH to 6.8.

Preparation of Solution A: Prepare and dispense under 80% N₂ + 20% CO₂. Add components to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B (Wolfe's Vitamin Solution):

Composition per liter:

Pyridoxine-HCl	10.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg

Nicotinic acid.....	5.0mg
Riboflavin.....	5.0mg
Thiamine-HCl.....	5.0mg
Calcium DL-pantothenate.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Solution B (Wolfe's Vitamin Solution): Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Solution C (NaHCO₃ Solution):

Composition per 50.0mL:

NaHCO ₃	2.5g
--------------------------	------

Preparation of Solution C (NaHCO₃ Solution): Add NaHCO₃ to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution D (Na₂S·9H₂O Solution):

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	0.3g
--	------

Preparation of Solution D (Na₂S·9H₂O Solution): Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Before use, neutralize to pH 7.0 with sterile HCl.

Preparation of Medium: To 950.0mL of sterile solution A, aseptically and anaerobically add 10.0mL of sterile solution B, 50.0mL of sterile solution C, and 10.0mL of sterile solution D. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or flasks under 100% N₂.

Use: For the cultivation of *Clostridium homopropionicum*.

FWN Medium, Modified with Xylan

Composition per 1020.0mL:

Solution A.....	950.0mL
Solution C (NaHCO ₃ solution).....	50.0mL
Solution D (Na ₂ S·9H ₂ O solution).....	10.0mL
Solution B (Wolfe's vitamin solution).....	10.0mL

Solution A:

Composition per 950.0mL:

Xylan.....	2.0g
NaCl.....	1.0g
KCl.....	0.5g
MgCl ₂ ·6H ₂ O.....	0.4g
NH ₄ Cl.....	0.25g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O.....	0.15g
Resazurin.....	0.5mg
Modified Wolfe's mineral solution.....	10.0mL

Modified Wolfe's Mineral Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O.....	3.0g
Nitritotriacetic acid.....	1.5g
NaCl.....	1.0g
MnSO ₄ ·H ₂ O.....	0.5g
CaCl ₂	0.1g
CoCl ₂ ·6H ₂ O.....	0.1g
FeSO ₄ ·7H ₂ O.....	0.1g
ZnSO ₄ ·7H ₂ O.....	0.1g

AlK(SO ₄) ₂ ·12H ₂ O.....	0.01g
CuSO ₄ ·5H ₂ O.....	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O.....	0.01g
Na ₂ SeO ₃	0.01g
NaWO ₄ ·2H ₂ O.....	0.01g
NiCl ₂ ·6H ₂ O.....	0.01g

Preparation of Modified Wolfe's Mineral Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components one at a time. Add distilled/deionized water to 1.0L. Adjust pH to 6.8.

Preparation of Solution A: Prepare and dispense under 80% N₂ + 20% CO₂. Add components to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B (Wolfe's Vitamin Solution):

Composition per liter:

Pyridoxine-HCl.....	10.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Lipoic acid.....	5.0mg
Nicotinic acid.....	5.0mg
Riboflavin.....	5.0mg
Thiamine-HCl.....	5.0mg
Calcium DL-pantothenate.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Solution B (Wolfe's Vitamin Solution): Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Solution C (NaHCO₃ Solution):

Composition per 50.0mL:

NaHCO ₃	2.5g
--------------------------	------

Preparation of Solution C (NaHCO₃ Solution): Add NaHCO₃ to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution D (Na₂S·9H₂O Solution):

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	0.3g
--	------

Preparation of Solution D (Na₂S·9H₂O Solution): Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Before use, neutralize to pH 7.0 with sterile HCl.

Preparation of Medium: To 950.0mL of sterile solution A, aseptically and anaerobically add 10.0mL of sterile solution B, 50.0mL of sterile solution C, and 10.0mL of sterile solution D. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or flasks under 100% N₂.

Use: For the cultivation of *Cytophaga xylanolytica*.

FX A Broth

Composition per liter:

Pancreatic digest of casein.....	10.0g
Yeast extract.....	2.0g
MgSO ₄ ·7H ₂ O.....	1.0g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation and cultivation of *Cytophaga* species, *Herpetosiphon* species, *Saprospira* species, and *Flexithrix* species.

FX AG Broth

Composition per liter:

Pancreatic digest of casein.....	10.0g
Yeast extract.....	2.0g
MgSO ₄ ·7H ₂ O.....	1.0g
Glucose solution.....	100.0mL

pH 7.0 ± 0.2 at 25°C

Glucose Solution:

Composition per 100.0mL:

D-Glucose.....	2.0g
----------------	------

Preparation of Glucose Solution: Add D-glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Preparation of Medium: Add components, except glucose solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile glucose solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of *Cytophaga* species, *Herpetosiphon* species, *Saprospira* species, and *Flexithrix* species.

G Medium

Composition per liter:

(NH ₄) ₂ SO ₄	2.0g
Yeast extract.....	2.0g
Glucose.....	1.0g
K ₂ HPO ₄	0.6g
KH ₂ PO ₄	0.4g
MgSO ₄ ·7H ₂ O.....	0.2g
CaCl ₂	0.08g
MnSO ₄ ·H ₂ O.....	0.05g
CuSO ₄ ·5H ₂ O.....	5.0mg
ZnSO ₄ ·7H ₂ O.....	5.0mg
FeSO ₄ ·7H ₂ O.....	0.5mg

pH 7.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Bacillus cereus*.

GA Medium

See: [Gelatin Agar](#)

Gaizotia abyssinica Creatinine Agar

See: [Birdseed Agar](#)

GAM Agar

Composition per liter:

GAM agar.....	74.0g
---------------	-------

Source: GAM agar is available from Nissui.

Preparation of Medium: Add GAM agar to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Fusobacterium necrophorum*, *Fusobacterium pseudonecrophorum*, *Pediococcus* species, *Peptostreptococcus hydrogenalis*, and *Peptostreptococcus tetradius*.

GAM Semisolid

Composition per liter:

GAM broth.....	74.0g
Agar.....	2.0g

Source: GAM broth is available from Nissui.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Actinomyces naeslundii*, *Actinomyces viscosus*, *Atopobium minutum*, *Bacteroides* species, *Bifidobacterium* species, *Campylobacter divergens*, *Clostridium* species, *Eubacterium alactolyticum*, *Fusobacterium necrophorum*, *Fusobacterium nucleatum*, *Fusobacterium pseudonecrophorum*, *Lactobacillus* species, *Lactococcus lactis*, *Leuconostoc lactis*, *Leuconostoc mesenteroides*, *Leuconostoc oenos*, *Mitsuokella multiacida*, *Pediococcus* species, *Peptostreptococcus hydrogenalis*, *Peptostreptococcus prevotii*, *Peptostreptococcus productus*, *Peptostreptococcus tetradius*, *Prevotella intermedia*, *Prevotella melaninogenica*, *Propionibacterium acidipropionici*, *Propionibacterium* species, *Rikenella microfusus*, *Selenomonas ruminantium*, and *Selenomonas sputigena*.

Gardnerella vaginalis Selective Medium

Composition per liter:

Columbia blood agar base.....	940.0mL
Rabbit or horse serum.....	50.0mL
Antibiotic inhibitor solution.....	10.0mL

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Columbia Blood Agar Base:

Composition per liter:

Special peptone.....	23.0g
Agar.....	10.0g
NaCl.....	5.0g
Starch.....	1.0g

Source: Columbia blood agar base is available as a premixed powder from Oxoid Unipath.

Preparation of Columbia Blood Agar Base: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Antibiotic Inhibitor Solution:

Composition per 10.0mL:

Nalidixic acid.....	0.035g
Gentamicin sulfate.....	4.0mg
Amphotericin B.....	2.0mg
Ethanol.....	4.0mL

Preparation of Antibiotic Inhibitor Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: To 940.0mL of cooled, sterile Columbia blood agar base, aseptically add 50.0mL of rabbit or horse blood serum and 10.0mL of sterile antibiotic inhibitor solution. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation, cultivation, and differentiation of *Gardnerella vaginalis* from clinical specimens, such as the vaginal discharge of patients with vaginitis. *Gardnerella vaginalis* exhibits β -hemolysis on this medium.

Gassner Agar

(Water-Blue Metachrome-Yellow Lactose Agar)

Composition per liter:

Lactose	43.0g
Peptone.....	14.0g
Agar	13.0g
NaCl	5.0g
Metachrome Yellow	1.25g
Water Blue	0.62g
	pH 7.2 \pm 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the detection and isolation of pathogenic Enterobacteriaceae. For use in the execution of the German Meat Inspection Law (Deutsches Fleischbeschaugesetz). This culture medium contains Metachrome Yellow, which primarily inhibits the accompanying Gram-positive microbial flora. It also contains lactose, which, when degraded to acid, is shown by the indicator Water Blue, which is deep blue in the acidic range and colorless in the alkaline range. The prepared culture medium is green; in the acidic pH range it becomes blue-green to blue. At alkaline pHs, however, the yellow color of the Metachrome Yellow becomes increasingly apparent.

Gassner Lactose Agar

Composition per liter:

Lactose	50.0g
Agar	13.0g
Meat peptone.....	7.0g
NaCl	5.0g
Metachrome Yellow	1.25g
Water Blue	0.625g
	pH 7.2 \pm 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the detection and isolation of pathogenic Enterobacteriaceae.

Gassner Lactose HiVeg Agar

Composition per liter:

Lactose	50.0g
Agar	13.0g

Plant peptone No. 1.....	7.0g
NaCl	5.0g
Metachrome Yellow.....	1.25g
Water Blue	0.625g
	pH 7.2 \pm 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the detection and isolation of pathogenic Enterobacteriaceae.

Gauze's Medium No. 1

Composition per liter:

Agar	30.0g
Soluble starch.....	20.0g
KNO ₃	1.0g
K ₂ HPO ₄	0.5g
MgSO ₄	0.5g
NaCl	0.5g
FeSO ₄	0.01g

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Streptomyces phaeopureus*.

Gauze's Synthetic Medium No.1 (DSMZ Medium 1048)

Composition per liter:

Agar	15.0g
KNO ₃	1.0g
NaCl	0.5g
MgSO ₄ ·7H ₂ O	0.5g
K ₂ HPO ₄	0.5g
FeSO ₄ ·7H ₂ O.....	0.01g
	pH 7.4 \pm 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.4. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into Petri dishes or aseptically distribute into sterile tubes.

Use: For the cultivation of *Nocariopsis* spp.

GBNA Medium

(Gum Base Nalidixic Acid Medium)

Composition per liter:

Gellan gum.....	8.0g
Pancreatic digest of casein.....	5.7g
NaCl	1.7g
Papaic digest of soybean meal.....	1.0g
Glucose	0.83g
K ₂ HPO ₄	0.83g
MgCl ₂ ·6H ₂ O	0.33g
Nalidixic acid.....	0.05g
	pH 7.2 \pm 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of *Listeria monocytogenes* from clinical and nonclinical specimens.

GBS Agar Base, Islam
(Group B Streptococci Agar)
(Islam GBS Agar)

Composition per liter:

Proteose peptone	23.0g
Agar	10.0g
Na ₂ HPO ₄	5.75g
Soluble starch.....	5.0g
NaH ₂ PO ₄	1.5g
Horse serum, heat inactivated.....	50.0mL
pH 7.5 ± 0.1 at 25°C	

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add components, except horse serum, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50.0mL of sterile inactivated horse serum. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and detection of group B streptococci (GBS) in clinical specimens. The medium is designed to exploit the ability of most group B streptococci (GBS) to produce orange/red pigmented colonies when incubated under anaerobic conditions. There is a pigment-enhancing effect around a sulphonamide disc, which does not grow; the enhanced pigment effect can be seen over a radius of 10–20mm. Non-group B organisms able to grow on this medium do not produce the orange/red pigment.

GBS Medium, Rapid
(Group B Streptococci Medium)
(GBS Medium Base)

Starch	80.0g
Proteose peptone	23.0g
Na ₂ HPO ₄	5.75g
NaH ₂ PO ₄	1.5g
Horse serum, inactivated.....	50.0mL
Antibiotic inhibitor solution.....	10.0 mL
pH 7.5 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Oxoid Unipath and HiMedia.

Antibiotic Inhibitor Solution:

Composition per 10.0mL:

Metronidazole	10.0mg
Gentamicin.....	2.0mg

Preparation of Antibiotic Inhibitor Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except horse serum and antibiotic inhibitor solution, to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50.0mL of sterile heat-inactivated horse serum and 10.0mL of sterile antibiotic inhibitor solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks. Cool to 5°C and hold at that temperature for 12 hr prior to use.

Use: For the rapid isolation and cultivation of group B streptococci from clinical specimens.

GC Agar
(LMG Medium 236)

Composition 1010.0mL:

Solution A	500.0mL
Solution B	500.0mL
Supplement solution	10.0mL
pH 7.2 ± 0.2 at 25°C	

Solution A:

Agar	5.0g
GC agar base, 2X.....	500.0mL

GC Agar Base, 2X:

Composition per 500.0mL:

Agar	10.0g
Pancreatic digest of casein.....	7.5g
Peptic digest of animal tissue	7.5g
NaCl.....	5.0g
K ₂ HPO ₄	4.0g
Cornstarch.....	1.0g
KH ₂ PO ₄	1.0g

Source: GC agar base is available as a premixed powder from BD Diagnostic Systems. This base may be replaced by GC medium base available from BD Diagnostic Systems.

Preparation of GC Agar Base, 2X: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly.

Preparation of Solution A: Add 5.0g agar to 500.0mL GC agar base, 2X. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Solution B:

Composition per 500.0mL:

Bovine hemoglobin.....	10.0g
------------------------	-------

Preparation of Solution B: Add bovine hemoglobin to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Supplement Solution:

Composition per liter:

Glucose	100.0g
L-Cysteine·HCl.....	25.9g
L-Glutamine	10.0g
L-Cystine	1.1g
Adenine.....	1.0g
Nicotinamide adenine dinucleotide	0.25g
Vitamin B ₁₂	0.1g
Thiamine pyrophosphate	0.1g
Guanine·HCl	0.03g
Fe(NO ₃) ₃ ·6H ₂ O.....	0.02g
<i>p</i> -Aminobenzoic acid.....	0.013g
Thiamine·HCl	3.0mg

Source: The supplement solution (IsoVitaleX[®] enrichment) is available from BD Diagnostic Systems. This enrichment may be replaced by supplement VX from BD Diagnostic Systems.

Preparation of Supplement Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: To 500.0mL of sterile GC agar base, aseptically add 500.0mL of sterile hemoglobin solution at 45°–50°C. Mix thoroughly. Aseptically add 10.0mL of sterile supplement solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Haemophilus parainfluenzae* and *Neisseria* spp.

GC Agar (ATCC Medium 814)

Composition per 1010.0mL:

GC agar base, 2X.....	500.0mL
Hemoglobin solution.....	500.0mL
Supplement solution.....	10.0mL

pH 7.2 ± 0.2 at 25°C

GC Agar Base, 2X:

Composition per 500.0mL:

Agar.....	10.0g
Pancreatic digest of casein.....	7.5g
Peptic digest of animal tissue.....	7.5g
NaCl.....	5.0g
K ₂ HPO ₄	4.0g
Cornstarch.....	1.0g
KH ₂ PO ₄	1.0g

Source: GC agar base is available as a premixed powder from BD Diagnostic Systems. This base may be replaced by GC medium base available from BD Diagnostic Systems.

Preparation of GC Agar Base, 2X: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Hemoglobin Solution:

Composition 500.0mL:

Bovine hemoglobin.....	10.0g
------------------------	-------

Preparation of Hemoglobin Solution: Add bovine hemoglobin to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Supplement Solution:

Composition per liter:

Glucose.....	100.0g
L-Cysteine-HCl.....	25.9g
L-Glutamine.....	10.0g
L-Cystine.....	1.1g
Adenine.....	1.0g
Nicotinamide adenine dinucleotide.....	0.25g
Vitamin B ₁₂	0.1g
Thiamine pyrophosphate.....	0.1g
Guanine-HCl.....	0.03g
Fe(NO ₃) ₃ ·6H ₂ O.....	0.02g
<i>p</i> -Aminobenzoic acid.....	0.013g
Thiamine-HCl.....	3.0mg

Source: The supplement solution (IsoVitaleX[®] enrichment) is available from BD Diagnostic Systems. This enrichment may be replaced by supplement VX from BD Diagnostic Systems.

Preparation of Supplement Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: To 500.0mL of sterile GC agar base, aseptically add 500.0mL of sterile hemoglobin solution at 45°–50°C. Mix thoroughly. Aseptically add 10.0mL of sterile supplement solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of fastidious bacteria, especially *Neisseria* and *Haemophilus* species. For the cultivation and maintenance of *Branhamella catarrhalis*, *Campylobacter pylori*, *Eikenella corrodens*, *Helicobacter pylori*, *Moraxella nonliquefaciens*, *Morococcus cerebrosus*, *Oligella ureolytica*, *Oligella urethralis*, *Pasteurella volantium*, *Proteus mirabilis*, and *Taylorella equigenitalis*.

GC Agar (GC Medium) (ATCC Medium 1351)

Composition per liter:

GC agar base.....	950.0mL
Blood, defibrinated.....	50.0mL

pH 7.2 ± 0.2 at 25°C

GC Agar Base:

Composition per liter:

Agar.....	10.0g
Pancreatic digest of casein.....	7.5g
Peptic digest of animal tissue.....	7.5g
NaCl.....	5.0g
K ₂ HPO ₄	4.0g
Cornstarch.....	1.0g
KH ₂ PO ₄	1.0g

Source: GC agar base is available as a premixed powder from BD Diagnostic Systems. This base may be replaced by GC medium base available from BD Diagnostic Systems.

Preparation of GC Agar Base: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 75°–80°C.

Preparation of Medium: To 950.0mL of sterile GC agar base aseptically add 50.0mL sterile defibrinated blood with thorough mixing and maintain at 75°–80°C for 15–20 min until the medium is chocolate. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of fastidious bacteria, especially *Neisseria* and *Haemophilus* species. For the cultivation and maintenance of *Branhamella catarrhalis*, *Campylobacter pylori*, *Eikenella corrodens*, *Helicobacter pylori*, *Moraxella nonliquefaciens*, *Morococcus cerebrosus*, *Oligella ureolytica*, *Oligella urethralis*, *Pasteurella volantium*, *Proteus mirabilis*, and *Taylorella equigenitalis*.

GC Agar with Ampicillin

Composition per 1020.0mL:

GC agar base, 2X.....	500.0mL
Hemoglobin solution.....	500.0mL

Supplement solution	10.0mL
Ampicillin solution	10.0mL
pH 7.2 ± 0.2 at 25°C	

GC Agar Base, 2X:**Composition per 500.0mL:**

Agar	10.0g
Pancreatic digest of casein	7.5g
Peptic digest of animal tissue.....	7.5g
NaCl	5.0g
K ₂ HPO ₄	4.0g
Cornstarch.....	1.0g
KH ₂ PO ₄	1.0g

Source: GC agar base is available as a premixed powder from BD Diagnostic Systems. This base may be replaced by GC medium base available from BD Diagnostic Systems.

Preparation of GC Agar Base, 2X: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Hemoglobin Solution:**Composition per 500.0mL:**

Bovine hemoglobin.....	10.0g
------------------------	-------

Preparation of Hemoglobin Solution: Add bovine hemoglobin to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Supplement Solution:**Composition per liter:**

Glucose	100.0g
L-Cysteine-HCl.....	25.9g
L-Glutamine.....	10.0g
L-Cystine	1.1g
Adenine.....	1.0g
Nicotinamide adenine dinucleotide	0.25g
Vitamin B ₁₂	0.1g
Thiamine pyrophosphate.....	0.1g
Guanine-HCl	0.03g
Fe(NO ₃) ₃ ·6H ₂ O.....	0.02g
<i>p</i> -Aminobenzoic acid.....	0.013g
Thiamine-HCl	3.0mg

Source: The supplement solution (IsoVitaleX[®] enrichment) is available from BD Diagnostic Systems. This enrichment may be replaced by supplement VX from BD Diagnostic Systems.

Preparation of Supplement Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Ampicillin Solution:**Composition per 10.0mL:**

Ampicillin	0.02g
------------------	-------

Preparation of Ampicillin Solution: Add ampicillin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: To 500.0mL of sterile GC agar base, aseptically add 500.0mL of sterile hemoglobin solution at 45°–50°C. Mix thoroughly. Aseptically add 10.0mL of sterile supplement solution and 10.0mL of sterile ampicillin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Branhamella catarrhalis*, *Haemophilus influenzae*, and *Haemophilus parainfluenzae*.

GC Agar with Ampicillin and Gentamicin**Composition per 1030.0mL:**

GC agar base, 2X.....	500.0mL
Hemoglobin solution	500.0mL
Supplement solution	10.0mL
Ampicillin solution	10.0mL
Gentamicin solution.....	10.0mL
pH 7.2 ± 0.2 at 25°C	

GC Agar Base, 2X:**Composition per 500.0mL:**

Agar	10.0g
Pancreatic digest of casein.....	7.5g
Peptic digest of animal tissue	7.5g
NaCl.....	5.0g
K ₂ HPO ₄	4.0g
Cornstarch.....	1.0g
KH ₂ PO ₄	1.0g

Source: GC agar base is available as a premixed powder from BD Diagnostic Systems. This base may be replaced by GC medium base available from BD Diagnostic Systems.

Preparation of GC Agar Base, 2X: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Hemoglobin Solution:**Composition per 500.0mL:**

Bovine hemoglobin.....	10.0g
------------------------	-------

Preparation of Hemoglobin Solution: Add bovine hemoglobin to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Supplement Solution:**Composition per liter:**

Glucose	100.0g
L-Cysteine-HCl.....	25.9g
L-Glutamine	10.0g
L-Cystine	1.1g
Adenine.....	1.0g
Nicotinamide adenine dinucleotide	0.25g
Vitamin B ₁₂	0.1g
Thiamine pyrophosphate	0.1g
Guanine-HCl	0.03g
Fe(NO ₃) ₃ ·6H ₂ O.....	0.02g
<i>p</i> -Aminobenzoic acid.....	0.013g
Thiamine-HCl	3.0mg

Source: The supplement solution (IsoVitaleX[®] enrichment) is available from BD Diagnostic Systems. This enrichment may be replaced by supplement VX from BD Diagnostic Systems.

Preparation of Supplement Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Ampicillin Solution:**Composition per 10.0mL:**

Ampicillin.....	0.01g
-----------------	-------

Preparation of Ampicillin Solution: Add ampicillin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Gentamicin Solution:

Composition per 10.0mL:

Gentamicin 2.0mg

Preparation of Gentamicin Solution: Add gentamicin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: To 500.0mL of sterile GC agar base, aseptically add 500.0mL of sterile hemoglobin solution at 45°–50°C. Mix thoroughly. Aseptically add 10.0mL of sterile supplement solution, 10.0mL of sterile ampicillin solution, and 10.0mL of sterile gentamicin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Haemophilus parainfluenzae*.

GC Agar with Ampicillin and Tetracycline

Composition per 1030.0mL:

GC agar base, 2X 500.0mL
Hemoglobin solution 500.0mL
Supplement solution 10.0mL
Ampicillin solution 10.0mL
Tetracycline solution 10.0mL

pH 7.2 ± 0.2 at 25°C

GC Agar Base, 2X:

Composition per 500.0mL:

Agar 10.0g
Pancreatic digest of casein 7.5g
Peptic digest of animal tissue 7.5g
NaCl 5.0g
K₂HPO₄ 4.0g
Cornstarch 1.0g
KH₂PO₄ 1.0g

Source: GC agar base is available as a premixed powder from BD Diagnostic Systems. This base may be replaced by GC medium base available from BD Diagnostic Systems.

Preparation of GC Agar Base, 2X: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Hemoglobin Solution:

Composition per 500.0mL:

Bovine hemoglobin 10.0g

Preparation of Hemoglobin Solution: Add bovine hemoglobin to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Supplement Solution:

Composition per liter:

Glucose 100.0g
L-Cysteine-HCl 25.9g
L-Glutamine 10.0g
L-Cystine 1.1g
Adenine 1.0g

Nicotinamide adenine dinucleotide 0.25g
Vitamin B₁₂ 0.1g
Thiamine pyrophosphate 0.1g
Guanine-HCl 0.03g
Fe(NO₃)₃·6H₂O 0.02g
p-Aminobenzoic acid 0.013g
Thiamine-HCl 3.0mg

Source: The supplement solution (IsoVitalX[®] enrichment) is available from BD Diagnostic Systems. This enrichment may be replaced by supplement VX from BD Diagnostic Systems.

Preparation of Supplement Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Ampicillin Solution:

Composition per 10.0mL:

Ampicillin 0.01g

Preparation of Ampicillin Solution: Add ampicillin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Tetracycline Solution:

Composition per 10.0mL:

Tetracycline 5.0mg

Preparation of Tetracycline Solution: Add tetracycline to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: To 500.0mL of sterile GC agar base, aseptically add 500.0mL of sterile hemoglobin solution at 45°–50°C. Mix thoroughly. Aseptically add 10.0mL of sterile supplement solution, 10.0mL of sterile ampicillin solution, and 10.0mL of sterile tetracycline solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Haemophilus parainfluenzae*.

GC Agar Base with Blood

Composition per liter:

Peptone, special 15.0g
Agar 10.0g
NaCl 5.0g
K₂HPO₄ 4.0g
KH₂PO₄ 1.0g
Cornstarch 1.0g
Blood, defibrinated 50.0mL

pH 7.2 ± 0.2 at 25°C

Source: This medium, without blood, is available as a premixed powder from HiMedia.

Preparation of Medium: Add components, except blood, to distilled/deionized water and bring volume to 950.0L. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 75°–80°C. Add 50.0mL sterile defibrinated blood with thorough mixing and maintain at 75°–80°C for 15–20 min until the medium is chocolatized. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of fastidious bacteria, especially *Neisseria* and *Haemophilus* species.

GC Agar Base with Kellogg's Supplement (ATCC Medium 1674)

Composition per liter:

GC agar base.....	990.0mL
Kellogg's supplement solution.....	10.0mL
	pH 7.2 ± 0.2 at 25°C

GC Agar Base:

Composition per 990.0mL:

Agar	10.0g
Pancreatic digest of casein.....	7.5g
Peptic digest of animal tissue.....	7.5g
NaCl	5.0g
K ₂ HPO ₄	4.0g
Cornstarch.....	1.0g
KH ₂ PO ₄	1.0g

Source: GC agar base is available as a premixed powder from BD Diagnostic Systems. This base may be replaced by GC medium base available from BD Diagnostic Systems.

Preparation of GC Agar Base: Add components to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Kellogg's Supplement Solution:

Composition per 100.0mL:

Glucose	40.0g
L-Glutamine.....	0.5g
Fe(NO ₃) ₃ ·6H ₂ O.....	0.05g
Coccarboxylase.....	2.0mg

Preparation of Kellogg's Supplement Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: To 990.0mL of sterile GC agar base, aseptically add 10.0mL of sterile Kellogg's supplement solution warmed to 45°–50°C. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Arsenophonus nasoniae*.

GC Agar with Chloramphenicol, Tetracycline, and Ampicillin

Composition per 1040.0mL:

GC agar base, 2X.....	500.0mL
Hemoglobin solution.....	500.0mL
Supplement solution	10.0mL
Ampicillin solution	10.0mL
Tetracycline solution.....	10.0mL
Chloramphenicol solution.....	10.0mL
	pH 7.2 ± 0.2 at 25°C

GC Agar Base, 2X:

Composition per 500.0mL:

Agar	10.0g
Pancreatic digest of casein.....	7.5g
Peptic digest of animal tissue.....	7.5g
NaCl	5.0g
K ₂ HPO ₄	4.0g
Cornstarch.....	1.0g
KH ₂ PO ₄	1.0g

Source: GC agar base is available as a premixed powder from BD Diagnostic Systems. This base may be replaced by GC medium base available from BD Diagnostic Systems.

Preparation of GC Agar Base, 2X: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Hemoglobin Solution:

Composition per 500.0mL:

Bovine hemoglobin.....	10.0g
------------------------	-------

Preparation of Hemoglobin Solution: Add bovine hemoglobin to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Supplement Solution:

Composition per liter:

Glucose	100.0g
L-Cysteine-HCl.....	25.9g
L-Glutamine	10.0g
L-Cystine	1.1g
Adenine.....	1.0g
Nicotinamide adenine dinucleotide	0.25g
Vitamin B ₁₂	0.1g
Thiamine pyrophosphate	0.1g
Guanine-HCl.....	0.03g
Fe(NO ₃) ₃ ·6H ₂ O.....	0.02g
<i>p</i> -Aminobenzoic acid.....	0.013g
Thiamine-HCl	3.0mg

Source: The supplement solution (IsoVitaleX[®] enrichment) is available from BD Diagnostic Systems. This enrichment may be replaced by supplement VX from BD Diagnostic Systems.

Preparation of Supplement Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Ampicillin Solution:

Composition per 10.0mL:

Ampicillin.....	0.01g
-----------------	-------

Preparation of Ampicillin Solution: Add ampicillin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Tetracycline Solution:

Composition per 10.0mL:

Tetracycline.....	5.0mg
-------------------	-------

Preparation of Tetracycline Solution: Add tetracycline to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Chloramphenicol Solution:

Composition per 10.0mL:

Chloramphenicol.....	5.0mg
----------------------	-------

Preparation of Chloramphenicol Solution: Add chloramphenicol to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: To 500.0mL of sterile GC agar base, aseptically add 500.0mL of sterile hemoglobin solution at 45°–50°C. Mix thoroughly. Aseptically add 10.0mL of sterile supplement solution, 10.0mL of sterile ampicillin solution, 10.0mL of sterile chloram-

phenicol solution, and 10.0mL of sterile tetracycline solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Haemophilus parainfluenzae*.

GC Agar with Defined Supplements

GC agar base	990.0mL
Defined supplements solution	10.0mL
pH 7.2 ± 0.2 at 25°C	

GC Agar Base:

Composition per liter:

Agar	10.0g
Pancreatic digest of casein	7.5g
Peptic digest of animal tissue	7.5g
NaCl	5.0g
K ₂ HPO ₄	4.0g
Cornstarch	1.0g
KH ₂ PO ₄	1.0g

Source: GC agar base is available as a premixed powder from BD Diagnostic Systems. This base may be replaced by GC medium base available from BD Diagnostic Systems.

Preparation of GC Agar Base: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Defined Supplements Solution:

Composition per 100.0mL:

Glucose	40.0g
Glutamine	1.0g
Fe(NO ₃) ₃ ·6H ₂ O	0.05g
Coccarboxylase	2.0mg

Preparation of Defined Supplements Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: To 990.0mL of sterile GC agar base, aseptically add 10.0mL of sterile defined supplements solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Neisseria gonorrhoeae*.

GC Agar with Penicillin G

Composition per 1020.0mL:

GC medium base, 2×	500.0mL
Hemoglobin solution	500.0mL
Supplement solution	10.0mL
Penicillin G solution	10.0mL

pH 7.2 ± 0.2 at 25°C

GC Medium Base, 2X:

Composition per 500.0mL:

Proteose peptone No. 3	15.0g
Agar	10.0g
NaCl	5.0g
K ₂ HPO ₄	4.0g
Cornstarch	1.0g
KH ₂ PO ₄	1.0g

Source: GC medium base is available as a premixed powder from BD Diagnostic Systems.

Preparation of GC Medium Base, 2X: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Hemoglobin Solution:

Composition per 500.0mL:

Bovine hemoglobin	10.0g
-------------------------	-------

Preparation of Hemoglobin Solution: Add bovine hemoglobin to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Supplement Solution:

Composition per liter:

Glucose	100.0g
L-Cysteine·HCl	25.9g
L-Glutamine	10.0g
L-Cystine	1.1g
Adenine	1.0g
Nicotinamide adenine dinucleotide	0.25g
Vitamin B ₁₂	0.1g
Thiamine pyrophosphate	0.1g
Guanine·HCl	0.03g
Fe(NO ₃) ₃ ·6H ₂ O	0.02g
p-Aminobenzoic acid	0.013g
Thiamine·HCl	3.0mg

Source: The supplement solution (IsoVitalX[®] enrichment) is available from BD Diagnostic Systems. This enrichment may be replaced by supplement VX from BD Diagnostic Systems.

Preparation of Supplement Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Penicillin G Solution:

Composition per 10.0mL:

Penicillin G	0.05g
--------------------	-------

Preparation of Penicillin G Solution: Add penicillin G to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: To 500.0mL of sterile GC medium base, aseptically add 500.0mL of sterile hemoglobin solution at 45°–50°C. Mix thoroughly. Aseptically add 10.0mL of sterile supplement solution and 10.0mL of sterile penicillin G solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Neisseria gonorrhoeae*.

GC Agar with Streptomycin and Chloramphenicol

Composition per 1030.0mL:

GC agar base, 2X	500.0mL
Hemoglobin solution	500.0mL
Supplement solution	10.0mL
Streptomycin solution	10.0mL
Chloramphenicol solution	10.0mL

pH 7.2 ± 0.2 at 25°C

GC Agar Base, 2X:

Composition per 500.0mL:

Agar	10.0g
Pancreatic digest of casein	7.5g
Peptic digest of animal tissue	7.5g

NaCl	5.0g
K ₂ HPO ₄	4.0g
Cornstarch	1.0g
KH ₂ PO ₄	1.0g

Source: GC agar base is available as a premixed powder from BD Diagnostic Systems. This base may be replaced by GC medium base available from BD Diagnostic Systems.

Preparation of GC Agar Base, 2X: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Hemoglobin Solution:

Composition per 500.0mL:

Bovine hemoglobin	10.0g
-------------------------	-------

Preparation of Hemoglobin Solution: Add bovine hemoglobin to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Supplement Solution:

Composition per liter:

Glucose	100.0g
L-Cysteine·HCl	25.9g
L-Glutamine	10.0g
L-Cystine	1.1g
Adenine	1.0g
Nicotinamide adenine dinucleotide	0.25g
Vitamin B ₁₂	0.1g
Thiamine pyrophosphate	0.1g
Guanine·HCl	0.03g
Fe(NO ₃) ₃ ·6H ₂ O	0.02g
<i>p</i> -Aminobenzoic acid	0.013g
Thiamine·HCl	3.0mg

Source: The supplement solution (IsoVitaleX[®] enrichment) is available from BD Diagnostic Systems. This enrichment may be replaced by supplement VX from BD Diagnostic Systems.

Preparation of Supplement Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Streptomycin Solution:

Composition per 10.0mL:

Streptomycin	0.25g
--------------------	-------

Preparation of Streptomycin Solution: Add streptomycin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Chloramphenicol Solution:

Composition per 10.0mL:

Chloramphenicol	25.0mg
-----------------------	--------

Preparation of Chloramphenicol Solution: Add chloramphenicol to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: To 500.0mL of sterile GC agar base, aseptically add 500.0mL of sterile hemoglobin solution at 45°–50°C. Mix thoroughly. Aseptically add 10.0mL of sterile supplement solution, 10.0mL of sterile streptomycin solution, and 10.0mL of sterile chloramphenicol solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Azorhizophilus paspali*.

GC Agar with Supplement A

Composition per 1020.0mL:

GC medium base, 2X	500.0mL
Hemoglobin solution	500.0mL
Supplement solution	10.0mL
Supplement A	10.0mL

pH 7.2 ± 0.2 at 25°C

GC Medium Base, 2X:

Composition per 500.0mL:

Proteose peptone No. 3	15.0g
Agar	10.0g
NaCl	5.0g
K ₂ HPO ₄	4.0g
Cornstarch	1.0g
KH ₂ PO ₄	1.0g

Source: GC medium base and Supplement A are available as a premixed powder from BD Diagnostic Systems.

Preparation of GC Medium Base, 2X: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Hemoglobin Solution:

Composition per 500.0mL:

Bovine hemoglobin	10.0g
-------------------------	-------

Preparation of Hemoglobin Solution: Add bovine hemoglobin to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Supplement Solution:

Composition per liter:

Glucose	100.0g
L-Cysteine·HCl	25.9g
L-Glutamine	10.0g
L-Cystine	1.1g
Adenine	1.0g
Nicotinamide adenine dinucleotide	0.25g
Vitamin B ₁₂	0.1g
Thiamine pyrophosphate	0.1g
Guanine·HCl	0.03g
Fe(NO ₃) ₃ ·6H ₂ O	0.02g
<i>p</i> -Aminobenzoic acid	0.013g
Thiamine·HCl	3.0mg

Source: The supplement solution (IsoVitaleX[®] enrichment) is available from BD Diagnostic Systems. This enrichment may be replaced by supplement VX from BD Diagnostic Systems.

Preparation of Supplement Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Supplement A:

Composition per 10.0mL:

Supplement A contains yeast concentrate with Crystal Violet.

Preparation of Supplement A: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: To 500.0mL of sterile GC medium base, aseptically add 500.0mL of sterile hemoglobin solution at 45°–50°C. Mix thoroughly. Aseptically add 10.0mL of sterile supplement solution

and 10.0mL of sterile supplement A solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Neisseria gonorrhoeae*, other *Neisseria* species, and *Haemophilus* species.

GC Agar with Supplement A and with VCN Inhibitor

Composition per 1030.0mL:

GC medium base, 2X.....	500.0mL
Hemoglobin solution.....	500.0mL
Supplement solution	10.0mL
Supplement A	10.0mL
VCN inhibitor	10.0mL

pH 7.2 ± 0.2 at 25°C

GC Medium Base, 2X:

Composition per 500.0mL:

Proteose peptone No. 3	15.0g
Agar	10.0g
NaCl.....	5.0g
K ₂ HPO ₄	4.0g
Cornstarch.....	1.0g
KH ₂ PO ₄	1.0g

Source: GC medium base and Supplement A are available as a pre-mixed powder from BD Diagnostic Systems.

Preparation of GC Medium Base, 2X: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Hemoglobin Solution:

Composition per 500.0mL:

Bovine hemoglobin.....	10.0g
------------------------	-------

Preparation of Hemoglobin Solution: Add bovine hemoglobin to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Supplement Solution:

Composition per liter:

Glucose	100.0g
L-Cysteine-HCl.....	25.9g
L-Glutamine.....	10.0g
L-Cystine	1.1g
Adenine.....	1.0g
Nicotinamide adenine dinucleotide	0.25g
Vitamin B ₁₂	0.1g
Thiamine pyrophosphate.....	0.1g
Guanine-HCl	0.03g
Fe(NO ₃) ₃ ·6H ₂ O.....	0.02g
<i>p</i> -Aminobenzoic acid.....	0.013g
Thiamine-HCl	3.0mg

Source: The supplement solution (IsoVitaleX[®] enrichment) is available from BD Diagnostic Systems. This enrichment may be replaced by supplement VX from BD Diagnostic Systems.

Preparation of Supplement Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Supplement A:

Composition per 10.0mL:

Supplement A contains yeast concentrate with Crystal Violet.

Preparation of Supplement A: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

VCN Inhibitor:

Composition per 10.0mL:

Colistin.....	7.5mg
Vancomycin	3.0mg
Nystatin.....	12,500U

Preparation of VCN Inhibitor: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: To 500.0mL of sterile GC medium base, aseptically add 500.0mL of sterile hemoglobin solution at 45°–50°C. Mix thoroughly. Aseptically add 10.0mL of sterile supplement solution, 10.0mL of sterile supplement A solution, and 10.0mL of sterile VCN inhibitor. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Neisseria gonorrhoeae*, other *Neisseria* species, and *Haemophilus* species.

GC Agar with Supplement A and VCTN Inhibitor

Composition per 1030.0mL:

GC medium base, 2X.....	500.0mL
Hemoglobin solution	500.0mL
Supplement solution	10.0mL
Supplement A	10.0mL
VCTN inhibitor.....	10.0mL

pH 7.2 ± 0.2 at 25°C

GC Medium Base, 2X:

Composition per 500.0mL:

Proteose peptone No. 3	15.0g
Agar	10.0g
NaCl.....	5.0g
K ₂ HPO ₄	4.0g
Cornstarch.....	1.0g
KH ₂ PO ₄	1.0g

Source: GC medium base and Supplement A are available as a pre-mixed powder from BD Diagnostic Systems.

Preparation of GC Medium Base, 2X: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Hemoglobin Solution:

Composition per 500.0mL:

Bovine hemoglobin.....	10.0g
------------------------	-------

Preparation of Hemoglobin Solution: Add bovine hemoglobin to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Supplement Solution:

Composition per liter:

Glucose	100.0g
L-Cysteine-HCl.....	25.9g
L-Glutamine	10.0g
L-Cystine	1.1g
Adenine.....	1.0g
Nicotinamide adenine dinucleotide	0.25g

Vitamin B ₁₂	0.1g
Thiamine pyrophosphate	0.1g
Guanine-HCl	0.03g
Fe(NO ₃) ₃ ·6H ₂ O	0.02g
<i>p</i> -Aminobenzoic acid	0.013g
Thiamine-HCl	3.0mg

Source: The supplement solution (IsoVitaleX[®] enrichment) is available from BD Diagnostic Systems. This enrichment may be replaced by supplement VX from BD Diagnostic Systems.

Preparation of Supplement Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Supplement A:

Composition per 10.0mL:

Supplement A contains yeast concentrate with Crystal Violet.

Preparation of Supplement A: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

VCTN Inhibitor:

Composition per liter:

Colistin	7.5mg
Trimethoprim lactate	5.0mg
Vancomycin	4.0mg
Nystatin	12,500U

Preparation of VCTN Inhibitor: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: To 500.0mL of sterile GC medium base, aseptically add 500.0mL of sterile hemoglobin solution at 45°–50°C. Mix thoroughly. Aseptically add 10.0mL of sterile supplement solution, 10.0mL of sterile supplement A, and 10.0mL of sterile VCTN inhibitor. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Neisseria gonorrhoeae*, other *Neisseria* species, and *Haemophilus* species.

GC Agar with Supplement B

GC agar base	990.0mL
Supplement B	10.0mL
pH 7.2 ± 0.2 at 25°C	

GC Agar Base:

Composition per liter:

Agar	10.0g
Pancreatic digest of casein	7.5g
Peptic digest of animal tissue	7.5g
NaCl	5.0g
K ₂ HPO ₄	4.0g
Cornstarch	1.0g
KH ₂ PO ₄	1.0g

Source: GC agar base is available as a premixed powder from BD Diagnostic Systems. This base may be replaced by GC medium base available from BD Diagnostic Systems.

Preparation of GC Agar Base: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Supplement B:

Composition per 10.0mL:

Supplement B contains yeast concentrate, glutamine, coenzyme, co-carboxylase, hematin, and growth factors.

Preparation of Supplement B: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: To 990.0mL of sterile GC agar base, aseptically add 10.0mL of sterile defined supplement B. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Neisseria gonorrhoeae*.

GC HiVeg Agar Base with Blood

Composition per liter:

Plant special peptone	15.0g
Agar	10.0g
NaCl	5.0g
K ₂ HPO ₄	4.0g
KH ₂ PO ₄	1.0g
Cornstarch	1.0g
Blood, defibrinated	50.0mL
pH 7.2 ± 0.2 at 25°C	

Source: This medium, without blood, is available as a premixed powder from HiMedia.

Preparation of Medium: Add components, except blood, to distilled/deionized water and bring volume to 950.0L. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 75°–80°C. Add 50.0mL sterile defibrinated blood with thorough mixing and maintain at 75°–80°C for 15–20 min until the medium is chocolate. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of fastidious bacteria, especially *Neisseria* and *Haemophilus* species.

GC HiVeg Agar Base with Hemoglobin

Composition per liter:

Plant special peptone	15.0g
Agar	10.0g
NaCl	5.0g
K ₂ HPO ₄	4.0g
KH ₂ PO ₄	1.0g
Cornstarch	1.0g
Hemoglobin solution	100.0mL
pH 7.2 ± 0.2 at 25°C	

Source: This medium, without hemoglobin solution, is available as a premixed powder from HiMedia.

Hemoglobin Solution:

Composition 100.0mL:

Bovine hemoglobin	2.0g
-------------------------	------

Preparation of Hemoglobin Solution: Add bovine hemoglobin to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Preparation of Medium: Add components, except hemoglobin, to distilled/deionized water and bring volume to 500.0L. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Add 100.0mL sterile hemoglobin solution.

Mix thoroughly. Note: Antibiotics may be added to increase selectivity. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of fastidious bacteria, especially *Neisseria* and *Haemophilus* species.

GC Medium, New York City Formulation

Composition per liter:

GC agar base	850.0mL
Horse blood, lysed	100.0mL
Yeast autolysate supplement	30.0mL
LCAT antibiotic solution	20.0mL
pH 7.3 ± 0.2 at 25°C	

GC Agar Base:

Composition per 850.0mL:

Special peptone	15.0g
Agar	10.0g
NaCl	5.0g
K ₂ HPO ₄	4.0g
Cornstarch	1.0g
KH ₂ PO ₄	1.0g
pH 7.2 ± 0.2 at 25°C	

Preparation of GC Agar Base: Add components of GC medium base and the hemoglobin to distilled/deionized water and bring volume to 850.0mL. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Horse Blood, Lysed:

Composition per 100.0mL:

Saponin	0.5g
Horse blood, defibrinated	100.0mL

Preparation of Horse Blood, Lysed: Add saponin to defibrinated horse blood. Mix thoroughly. Allow blood to lyse.

Yeast Autolysate Supplement:

Composition per 30.0mL:

Yeast autolysate	10.0g
Glucose	1.0g
NaHCO ₃	0.15g

Preparation of Yeast Autolysate Supplement: Add components to distilled/deionized water and bring volume to 30.0mL. Mix thoroughly. Filter sterilize.

LCAT Antibiotic Solution:

Composition per 20.0mL:

Colistin	6.0mg
Trimethoprim lactate	5.0mg
Lincomycin	1.0mg
Amphotericin B	1.0mg

Preparation of LCAT Antibiotic Solution: Add components to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: To 850.0mL of cooled sterile GC agar base, aseptically add 100.0mL of sterile lysed horse blood, 30.0mL of sterile yeast autolysate supplement, and 20.0mL of LCAT antibiotic solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation and cultivation of fastidious microorganisms, especially *Neisseria* species.

GC Medium
See: **GC Agar**

GCII Agar

Composition per liter:

GCII agar base, 2X	490.0mL
Hemoglobin solution	490.0mL
Supplement solution	10.0mL
pH 7.2 ± 0.2 at 25°C	

GCII Agar Base, 2X:

Composition per liter:

Agar	10.0g
Pancreatic digest of casein	7.5g
Selected meat peptone	7.5g
NaCl	5.0g
K ₂ HPO ₄	4.0g
Cornstarch	1.0g
KH ₂ PO ₄	1.0g

Source: GCII agar base is available as a premixed powder from BD Diagnostic Systems.

Preparation of GCII Agar Base, 2X: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Hemoglobin Solution:

Composition per 500.0mL:

Hemoglobin	10.0g
------------------	-------

Preparation of Hemoglobin Solution: Add hemoglobin to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Supplement Solution:

Composition per liter:

Glucose	100.0g
L-Cysteine-HCl	25.9g
L-Glutamine	10.0g
L-Cystine	1.1g
Adenine	1.0g
Nicotinamide adenine dinucleotide	0.25g
Vitamin B ₁₂	0.1g
Thiamine pyrophosphate	0.1g
Guanine-HCl	0.03g
Fe(NO ₃) ₃ ·6H ₂ O	0.02g
p-Aminobenzoic acid	0.013g
Thiamine-HCl	3.0mg

Preparation of Supplement Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: To 490.0mL of sterile GCII agar base, aseptically add 490.0mL of sterile hemoglobin solution at 45°–50°C. Mix thoroughly. Aseptically add 10.0mL of sterile supplement solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of fastidious microorganisms, especially *Neisseria* and *Haemophilus* species, from clinical specimens.

GCII Agar

Composition per liter:

GCII agar base	950.0mL
Blood, defibrinated	50.0mL
pH 7.2 ± 0.2 at 25°C	

GCII Agar Base with Extra Agar:**Composition per liter:**

Agar	12.0g
Pancreatic digest of casein	7.5g
Selected meat peptone	7.5g
NaCl	5.0g
K ₂ HPO ₄	4.0g
Cornstarch	1.0g
KH ₂ PO ₄	1.0g

Source: GCII agar base is available as a premixed powder from BD Diagnostic Systems.

Preparation of GCII Agar Base with Extra Agar: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Preparation of Medium: To 950.0mL of sterile GCII agar base, aseptically add 50.0mL of sterile defibrinated blood with thorough mixing and maintain at 75°–80°C for 15–20 min until the medium is chocolated. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of fastidious microorganisms, especially *Neisseria* and *Haemophilus* species, from clinical specimens.

GCII Agar with Hemoglobin and IsoVitaleX®

See: **Chocolate II Agar with Hemoglobin and IsoVitaleX®**

GC-Lect™ Agar**Composition per liter:**

GCII agar base, 2X	500.0mL
Hemoglobin solution	500.0mL
Supplement solution	10.0mL
Selective agent solution	10.0mL

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a prepared medium from BD Diagnostic Systems.

GCII Agar Base, 2X with Extra Agar:**Composition per liter:**

Agar	12.0g
Pancreatic digest of casein	7.5g
Selected meat peptone	7.5g
NaCl	5.0g
K ₂ HPO ₄	4.0g
Cornstarch	1.0g
KH ₂ PO ₄	1.0g

Source: GCII agar base is available as a premixed powder from BD Diagnostic Systems.

Preparation of GCII Agar Base, 2X with Extra Agar: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Hemoglobin Solution:**Composition per 500.0mL:**

Hemoglobin	10.0g
------------------	-------

Preparation of Hemoglobin Solution: Add hemoglobin to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Supplement Solution:**Composition per liter:**

Glucose	100.0g
L-Cysteine·HCl	25.9g
L-Glutamine	10.0g
L-Cystine	1.1g
Adenine	1.0g
Nicotinamide adenine dinucleotide	0.25g
Vitamin B ₁₂	0.1g
Thiamine pyrophosphate	0.1g
Guanine·HCl	0.03g
Fe(NO ₃) ₃ ·6H ₂ O	0.02g
<i>p</i> -Aminobenzoic acid	0.013g
Thiamine·HCl	3.0mg

Source: The supplement solution (IsoVitaleX® enrichment) is available from BD Diagnostic Systems. This enrichment may be replaced by supplement VX from BD Diagnostic Systems.

Preparation of Supplement Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Selective Agent Solution:**Composition per 10.0mL:**

Selective agents	0.017g
------------------------	--------

Preparation of Selective Agent Solution: Add selective agents to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: To 500.0mL of sterile GCII agar base, aseptically add 500.0mL of sterile hemoglobin solution at 45°–50°C. Mix thoroughly. Aseptically add 10.0mL of sterile supplement solution and 10.0mL of selective agents solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of *Neisseria gonorrhoeae* from clinical specimens.

GC Medium with Chloramphenicol**Composition per 1020.0mL:**

GC agar base, 2X	500.0mL
Hemoglobin solution	500.0mL
Supplement solution	10.0mL
Chloramphenicol solution	10.0mL

pH 7.2 ± 0.2 at 25°C

GC Agar Base, 2X:**Composition per 500.0mL:**

Agar	10.0g
Pancreatic digest of casein	7.5g
Peptic digest of animal tissue	7.5g
NaCl	5.0g
K ₂ HPO ₄	4.0g
Cornstarch	1.0g
KH ₂ PO ₄	1.0g

Source: GC agar base is available as a premixed powder from BD Diagnostic Systems. This base may be replaced by GC medium base available from BD Diagnostic Systems.

Preparation of GC Agar Base, 2X: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Hemoglobin Solution:**Composition per 500.0mL:**

Bovine hemoglobin..... 10.0g

Preparation of Hemoglobin Solution: Add bovine hemoglobin to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Supplement Solution:**Composition per liter:**

Glucose 100.0g
 L-Cysteine-HCl..... 25.9g
 L-Glutamine..... 10.0g
 L-Cystine 1.1g
 Adenine..... 1.0g
 Nicotinamide adenine dinucleotide 0.25g
 Vitamin B₁₂..... 0.1g
 Thiamine pyrophosphate..... 0.1g
 Guanine-HCl 0.03g
 Fe(NO₃)₃·6H₂O..... 0.02g
p-Aminobenzoic acid..... 0.013g
 Thiamine-HCl 3.0mg

Source: The supplement solution (IsoVitaleX[®] enrichment) is available from BD Diagnostic Systems. This enrichment may be replaced by supplement VX from BD Diagnostic Systems.

Preparation of Supplement Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Chloramphenicol Solution:**Composition per 10.0mL:**

Chloramphenicol..... 8.0mg

Preparation of Chloramphenicol Solution: Add chloramphenicol to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: To 500.0mL of sterile GC agar base, aseptically add 500.0mL of sterile hemoglobin solution at 45°–50°C. Mix thoroughly. Aseptically add 10.0mL of sterile supplement solution and 10.0mL of sterile chloramphenicol solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Neisseria gonorrhoeae*.

GCA Agar with Thiamine**Composition per liter:**

Glucose 25.0g
 Agar 14.0g
 Papaic digest of soybean meal 10.0g
 NaCl 5.0g
 Pancreatic digest of heart muscle..... 3.0g
 Cysteine-HCl·H₂O..... 1.0g
 Thiamine 0.05mg
 Rabbit blood, defibrinated 50.0mL

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Add components, except rabbit blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile rabbit blood. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of *Francisella tularensis*.

Gelatin Agar**Composition per liter:**

Gelatin..... 30.0g
 Agar 15.0g
 Pancreatic digest of casein..... 10.0g
 NaCl..... 10.0g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of bacteria isolated from foods and their differentiation based on proteolytic activity.

Gelatin Agar**Composition per liter:**

Agar 15.0g
 Gelatin..... 15.0g
 Peptone 4.0g
 Yeast extract..... 1.0g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of a variety of heterotrophic bacteria based upon their utilization of gelatin.

Gelatin Agar**(GA Medium)****Composition per liter:**

Solution 1..... 950.0mL
 Solution 2..... 50.0mL

pH 7.2 ± 0.2 at 25°C

Solution 1:**Composition per 950.0mL:**

Gelatin..... 30.0g
 Agar 15.0g
 Pancreatic digest of casein..... 10.0g
 NaCl..... 2.0g
 D-Mannitol 1.0g
 Glucose 1.0g
 KNO₃..... 1.0g
 Sodium acetate..... 1.0g
 Sodium formate 1.0g
 Sodium succinate..... 1.0g
 Yeast extract..... 1.0g
 Sodium lactate (60% solution)..... 5.0mL

Preparation of Solution 1: Add components to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C.

Solution 2:**Composition per 50.0mL:**

Na₂HPO₄..... 1.0g
 L-Cysteine-HCl·H₂O 0.5g
 Na₂CO₃·H₂O..... 0.5g
 Sucrose..... 0.5g

Dithiothreitol.....	0.1g
Menadione solution.....	2.0mL

Preparation of Solution 2: Add components to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize.

Menadione Solution:

Composition per 100.0mL:

Menadione (vitamin K ₃).....	0.05g
Ethanol.....	99.0mL

Preparation of Menadione Solution: Add menadione to 99.0mL of absolute ethanol. Mix thoroughly.

Preparation of Medium: Aseptically combine sterile solution 1 with sterile solution 2. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the cultivation and differentiation of microorganisms from dental plaque based on their ability to produce gelatinase. For the differentiation of aerobic, anaerobic, and facultative microorganisms of clinical significance.

Gelatin DEV Agar

Composition per liter:

Agar.....	15.0g
Peptone from meat.....	10.0g
Meat extract.....	10.0g
Gelatin.....	10.0g
NaCl.....	5.0g

pH 7.3 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For determining the total microbial count and detecting gelatin-liquefying microorganisms in water.

Gelatin Infusion Broth

Composition per liter:

Beef heart, solids from infusion.....	500.0g
Gelatin.....	40.0g
Tryptose.....	10.0g
NaCl.....	5.0g

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and differentiation of a variety of heterotrophic bacteria based upon their production of gelatinase. The gelatinase liquefies the medium.

Gelatin Iron Agar

Composition per liter:

Gelatin.....	120.0g
Peptic digest of animal tissue.....	25.0g
Meat extract.....	7.5g
NaCl.....	5.0g
AGar.....	1.0g
FeCl ₂	0.5g

pH 7.0 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the detection of gelatin liquefaction and hydrogen sulfide production.

Gelatin Medium

Composition per liter:

Gelatin.....	4.0g
--------------	------

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add gelatin to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and differentiation of *Nocardia* and *Streptomyces* species based on utilization of gelatin. *Nocardia asteroides* usually exhibits no growth. *Nocardia brasiliensis* shows good growth and round, compact colonies. *Streptomyces* species show varying degrees of growth.

Gelatin Medium

Composition per liter:

Gelatin.....	120.0g
Pancreatic digest of casein.....	13.0g
Sodium chloride.....	5.0g
Yeast extract.....	5.0g
Heart muscle, solids from infusion.....	2.0g
Sodium thioglycolate.....	0.5g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of gelatin-utilizing *Clostridium* species.

Gelatin Metronidazole Cadmium Medium (GMC Medium)

Composition per liter:

Solution 1.....	950.0mL
Solution 2.....	50.0mL

pH 7.2 ± 0.2 at 25°C

Solution 1:

Composition per 950.0mL:

Gelatin.....	30.0g
Agar.....	15.0g
Pancreatic digest of casein.....	10.0g
NaCl.....	2.0g
D-Mannitol.....	1.0g
Glucose.....	1.0g
KNO ₃	1.0g
Sodium acetate.....	1.0g
Sodium formate.....	1.0g
Sodium succinate.....	1.0g
Yeast extract.....	1.0g
CdSO ₄ ·8H ₂ O.....	0.02g

Metronidazole	0.01g
Sodium lactate (60% solution).....	5.0mL

Preparation of Solution 1: Add components to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C.

Solution 2:

Composition per 50.0mL:

Na ₂ HPO ₄	1.0g
L-Cysteine·HCl·H ₂ O.....	0.5g
Na ₂ CO ₃ ·H ₂ O.....	0.5g
Sucrose.....	0.5g
Dithiothreitol.....	0.1g
Menadione solution.....	2.0mL

Preparation of Solution 2: Add components to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize.

Menadione Solution:

Composition per 100.0mL:

Menadione (vitamin K ₃).....	0.05g
Ethanol.....	99.0mL

Preparation of Menadione Solution: Add menadione to 99.0mL of absolute ethanol. Mix thoroughly.

Preparation of Medium: Aseptically combine sterile solution 1 with sterile solution 2. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the cultivation and differentiation of microorganisms from dental plaque based on their ability to produce gelatinase. For the differentiation of aerobic, anaerobic, and facultative microorganisms of clinical significance.

Gelatin Phosphate Salt Agar (GPS Agar)

Composition per liter:

Agar	15.0g
Gelatin.....	10.0g
NaCl.....	10.0g
K ₂ HPO ₄	5.0g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the cultivation and differentiation of *Vibrio* species from foods.

Gelatin Phosphate Salt Broth (GPS Broth)

Composition per liter:

Gelatin.....	10.0g
NaCl.....	10.0g
K ₂ HPO ₄	5.0g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Vibrio* species from foods.

Gelatin Salt Agar

Composition per liter:

NaCl.....	30.0g
Agar	15.0g
Gelatin.....	15.0g
Peptone	4.0g
Yeast extract.....	1.0g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and differentiation of *Vibrio* species from foods.

Gelatin Salt Agar (GS Agar) (BAM M55)

Composition per liter:

NaCl.....	30.0g
Agar	25.0g
Gelatin.....	15.0g
Peptone	4.0g
Yeast extract.....	1.0g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and differentiation of *Vibrio* species from foods. The high concentration of agar inhibits the spreading of *V. alginolyticus* and some other *Vibrio* spp.

Gelatinase Test Medium

Composition per liter:

Gelatin.....	3.0g
ACES buffer.....	1.0g
Yeast extract.....	1.0g
Charcoal, activated	0.15g
α-Ketoglutarate monopotassium salt.....	0.1g
L-Cysteine·HCl·H ₂ O (4% solution).....	1.0mL
KOH (85% solution).....	1.0mL
Fe ₄ (P ₂ O ₇) ₃ solution.....	1.0mL

pH 6.9 ± 0.2 at 25°C

L-Cysteine·HCl·H₂O Solution:

Composition per 10.0mL:

L-Cysteine·HCl·H ₂ O	0.4g
---------------------------------------	------

Preparation of L-Cysteine·HCl·H₂O Solution: Add L-cysteine·HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Fe₄(P₂O₇)₃ Solution:

Composition per 10.0mL:

Fe ₄ (P ₂ O ₇) ₃	0.15g
---	-------

Preparation of Fe₄(P₂O₇)₃ Solution: Add Fe₄(P₂O₇)₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add ACES buffer to distilled/deionized water and bring volume to 899.0mL. Mix thoroughly. Gently heat to 50°C. Add 1.0mL of KOH solution. Mix thoroughly. Add charcoal, yeast extract, and α -ketoglutarate. Add 80.0mL of distilled/deionized water to wash sides of flask. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 10.0mL of sterile cysteine solution and 10.0mL of sterile $\text{Fe}_4(\text{P}_2\text{O}_7)_3$ solution. Mix thoroughly. Adjust pH to 6.9. Aseptically distribute into sterile screw-capped tubes.

Use: For the cultivation and differentiation of gelatinase-producing bacteria.

General Salts Medium for Estuarine Methanogens

Composition per 410.8mL:

Agar	8.0g
NaCl	3.6g
NaHCO_3	2.0g
Complete salts solution	200.0mL
Cysteine-sulfide reducing agent	16.0mL
Wolfe's mineral solution	4.0mL
Vitamin solution	4.0mL
Yeast extract-Trypticase™ solution	4.0mL
Sodium acetate (25% solution)	2.0mL
$\text{Fe}(\text{NH}_4)_2\text{SO}_4$ (0.2% solution)	0.4mL
Resazurin (0.1% solution)	0.4mL
pH 7.0 ± 0.2 at 25°C	

Complete Salts Solution:

Composition per liter:

$\text{MgSO}_4 \cdot 7\text{H}_2\text{O}$	6.9g
$\text{MgCl}_2 \cdot 6\text{H}_2\text{O}$	5.5g
KCl	0.67g
NH_4Cl	0.5g
$\text{CaCl}_2 \cdot 2\text{H}_2\text{O}$	0.28g
K_2HPO_4	0.28g

Preparation of Complete Salts Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Cysteine-Sulfide Reducing Agent:

Composition per 400.0mL:

L-Cysteine-HCl-H ₂ O	5.0g
Na_2S (12.5% solution)	40.0mL
NaOH (1N solution)	30.0mL

Preparation of Cysteine-Sulfide Reducing Agent: Add distilled/deionized water to a 500.0mL round-bottomed flask. Add freshly prepared NaOH solution. Gently heat and bring to boiling under 100% N_2 . Remove gassing probe. Add L-cysteine-HCl-H₂O. Add freshly prepared Na_2S solution. Renew gassing for several minutes. Cap with rubber stoppers. Distribute into 8.0mL/18mm Hungate tubes.

Yeast Extract-Trypticase™ Solution:

Composition per 100.0mL:

Yeast extract	20.0g
Pancreatic digest of casein	20.0g

Preparation of Yeast Extract-Trypticase™ Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Wolfe's Mineral Solution:

Composition per liter:

$\text{MgSO}_4 \cdot 7\text{H}_2\text{O}$	3.0g
Nitilotriacetic acid	1.5g

NaCl	1.0g
$\text{MnSO}_4 \cdot \text{H}_2\text{O}$	0.5g
$\text{FeSO}_4 \cdot 7\text{H}_2\text{O}$	0.1g
$\text{CoCl}_2 \cdot 6\text{H}_2\text{O}$	0.1g
CaCl_2	0.1g
$\text{ZnSO}_4 \cdot 7\text{H}_2\text{O}$	0.1g
$\text{CuSO}_4 \cdot 5\text{H}_2\text{O}$	0.01g
$\text{AlK}(\text{SO}_4)_2 \cdot 12\text{H}_2\text{O}$	0.01g
H_3BO_3	0.01g
$\text{Na}_2\text{MoO}_4 \cdot 2\text{H}_2\text{O}$	0.01g

Preparation of Wolfe's Mineral Solution: Add nitilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl	10.0mg
Thiamine-HCl-2H ₂ O	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
D-Ca-pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H_2 + 20% CO_2 . Filter sterilize.

Preparation of Medium: Add components, except cysteine-sulfide reducing agent, to distilled/deionized water and bring volume to 410.8mL. Mix thoroughly. Adjust pH to 7.0. Gently heat and bring to boiling under 80% N_2 + 20% CO_2 . Add cysteine-sulfide reducing agent. Continue boiling until resazurin turns colorless, indicating reduction. Distribute anaerobically into culture tubes with aluminum crimp seals. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Methanococcus deltae*, *Methanococcus vannielii*, *Methanococcus voltae*, *Methanogenium cariaci*, *Methanogenium marisnigri*, and *Methanogenium olentangyi*.

Gentamicin Sulfate Solution (BAM M57)

Composition per 100.0mL:

Gentamicin sulfate	0.5g
--------------------------	------

Preparation of Gentamicin Sulfate Solution: Add gentamicin sulfate to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Use: As an inhibitor to render media selective.

Geo Medium

Composition per liter:

Agar	15.0g
CaCO_3	1.0g
Glucose	1.0g
Starch, soluble	1.0g
Yeast extract	1.0g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.2. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Geodermatophilus obscurus*.

***Geoalkalibacter* Medium (DSMZ Medium 1059)**

Composition per liter:

Sulfur, powdered	10.0g
NaHCO ₃	10.0g
Na ₂ CO ₃	3.0g
NaCl	1.0g
NH ₄ Cl	0.5g
KCl	0.2g
KH ₂ PO ₄	0.2g
MgCl ₂ ·6H ₂ O	0.1g
Yeast extract	0.1g
Resazurin	0.5mg
Sodium acetate solution	10.0mL
Trace elements solution SL-10	1.0mL
Selenite/tungstate solution	1.0mL
pH 9.1 ± 0.2 at 25°C	

Sodium Acetate Solution:

Composition per 10.0mL:

Sodium acetate	2.5g
----------------	------

Preparation of Sodium Acetate Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution SL-10:

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Selenite/Tungstate Solution:

Composition per liter:

NaOH	0.5g
Na ₂ WO ₄ ·2H ₂ O	4.0mg
Na ₂ SeO ₃ ·5H ₂ O	3.0mg

Preparation of Selenite/Tungstate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except sulfur, carbonate, sodium bicarbonate, and sodium acetate solution, to distilled/deionized water and bring volume to 990.0mL. Gently heat and bring to boiling. Boil for 1 min. Cool to room temperature under N₂ gas atmo-

sphere. Add solid carbonate and bicarbonate. Adjust pH to 9.0–9.2. Dispense under N₂ gas atmosphere into culture vessels. Autoclave for 15 min at 15 psi pressure–121°C. Sterilize sulfur separately in screw-capped tubes by steaming in a water bath for 3 hr on each of 3 successive days. Aseptically add the sterilized sulfur to the medium. Mix thoroughly. Aseptically and anoxically add the sodium acetate solution. Mix thoroughly.

Use: For the cultivation of *Geoalkalibacter* spp.

***Geobacter* Medium (DSMZ Medium 579)**

Composition per liter:

Fe(III) citrate	13.7g
NaHCO ₃	2.5g
Na-acetate	2.5g
NH ₄ Cl	1.5g
NaH ₂ PO ₄	0.6g
KCl	0.1g
Na ₂ WO ₄ ·2H ₂ O	0.25mg
Vitamin solution	10.0mL
Trace elements solution	10.0mL
pH 6.7–7.0 at 25°C	

Trace Elements Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O	3.0g
Nitritotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·2H ₂ O	0.5g
CoSO ₄ ·7H ₂ O	0.18g
ZnSO ₄ ·7H ₂ O	0.18g
CaCl ₂ ·2H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g
NiCl ₂ ·6H ₂ O	0.025g
KAl(SO ₄) ₂ ·12H ₂ O	0.02g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·4H ₂ O	0.01g
CuSO ₄ ·5H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O	0.3mg

Preparation of Trace Elements Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl	10.0mg
Thiamine-HCl·2H ₂ O	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
D-Ca-pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Preparation of Medium: Prepare and dispense medium under an oxygen-free 80% N₂ + 20% CO₂ gas mixture. Dissolve ferric citrate in

900.0mL distilled/deionized water by heating and adjust to pH 6.0. Add other components, except vitamin solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically and anaerobically add 10.0mL vitamin solution. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or flasks.

Use: For the cultivation of *Geobacter metallireducens* and *Geobacter grbiciae*.

Geobacter Medium **(DSMZ Medium 826)**

Composition per 1050.0mL:

NaHCO ₃	2.5g
NH ₄ Cl.....	1.5g
Na-acetate.....	0.82g
Na ₂ HPO ₄	0.6g
KCl.....	0.1g
Resazurin.....	0.5mg
Na-fumarate solution.....	50.0mL
Trace elements solution.....	10.0mL
Vitamin solution.....	10.0mL
Selenite-tungstate solution.....	1.0mL

pH 6.8 ± 0.2 at 25°C

Na-Fumarate Solution:

Composition per 100.0mL:

Na-fumarate.....	16.0g
------------------	-------

Preparation of Na-Fumarate Solution: Add Na-fumarate to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Selenite-Tungstate Solution

Composition per liter:

NaOH.....	0.5g
Na ₂ WO ₄ ·2H ₂ O.....	4.0mg
Na ₂ SeO ₃ ·5H ₂ O.....	3.0mg

Preparation of Selenite-Tungstate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Trace Elements Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O.....	3.0g
Nitrilotriacetic acid.....	1.5g
NaCl.....	1.0g
MnSO ₄ ·2H ₂ O.....	0.5g
CoSO ₄ ·7H ₂ O.....	0.18g
ZnSO ₄ ·7H ₂ O.....	0.18g
CaCl ₂ ·2H ₂ O.....	0.1g
FeSO ₄ ·7H ₂ O.....	0.1g
NiCl ₂ ·6H ₂ O.....	0.025g
KAl(SO ₄) ₂ ·12H ₂ O.....	0.02g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·4H ₂ O.....	0.01g
CuSO ₄ ·5H ₂ O.....	0.01g
Na ₂ SeO ₃ ·5H ₂ O.....	0.3mg

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl.....	10.0mg
Thiamine-HCl·2H ₂ O.....	5.0mg
Riboflavin.....	5.0mg
Nicotinic acid.....	5.0mg
D-Ca-pantothenate.....	5.0mg
p-Aminobenzoic acid.....	5.0mg
Lipoic acid.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas mixture. Add components, except NaHCO₃ and fumarate solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Boil for 5 min. Cool to room temperature while sparging with 80% N₂ + 20% CO₂. Add the NaHCO₃. Equilibrate with the 80% N₂ + 20% CO₂ gas mixture to reach a pH of 6.8. Distribute into anaerobe tubes under 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically and anaerobically add 0.5mL Na-fumarate solution per 10.0mL medium. The pH should be 6.8.

Use: For the cultivation of *Geobacter sulfurreducens*, *Geobacter bre-mensis* (*Geobacter* sp.), *Geobacter chapellei*, *Geobacter hydrogenophilus*, and *Geothrix fermentans*.

Geobacter Medium

Composition per liter:

Ferric citrate.....	13.7g
Sodium acetate.....	2.5g
NaHCO ₃	2.5g
NH ₄ Cl.....	1.5g
NaH ₂ PO ₄	0.6g
KCl.....	0.1g
Na ₂ WO ₄ ·2H ₂ O.....	0.25mg
Trace elements solution.....	10.0mL
Vitamin solution.....	10.0mL

pH 6.7–7.0 at 25°C

Trace Elements Solution:

Composition per liter:

MgSO ₄ ·7 H ₂ O.....	3.0g
Nitrilotriacetic acid.....	1.5g
CaCl ₂ ·2 H ₂ O.....	1.0g
NaCl.....	1.0g
MnSO ₄ ·2 H ₂ O.....	0.5g
CoSO ₄ ·7 H ₂ O.....	0.18g
ZnSO ₄ ·7 H ₂ O.....	0.18g
FeSO ₄ ·7 H ₂ O.....	0.1g
NiCl ₂ ·6 H ₂ O.....	0.025g
KAl(SO ₄) ₂ ·12 H ₂ O.....	0.02g

H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2 H ₂ O.....	0.01g
Na ₂ SeO ₃ ·5 H ₂ O.....	0.3 mg

Preparation of Trace Elements Solution: Dissolve nitrilotriacetic acid and adjust pH to 6.5 with KOH. Add minerals. Adjust final pH to 7.0 with KOH.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl	10.0mg
Calcium DL-pantothenate	5.0mg
Lipoic acid	5.0mg
Nicotinic acid	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Riboflavin	5.0mg
Thiamine-HCl	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂. Add ferric citrate to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Gently heat until ferric citrate dissolves. Adjust pH to 6.0. Add remaining components. Add distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Geobacter metallireducens*.

Geobacter Medium

Composition per liter:

NaHCO ₃	2.5g
NH ₄ Cl	1.5g
Sodium acetate	0.82g
NaH ₂ PO ₄	0.6g
KCl	0.1g
Sodium fumarate solution	50.0mL
Modified Wolfe's mineral solution	10.0mL
Wolfe's vitamin solution	10.0mL

pH 6.8 ± 0.2 at 25°C

Sodium Fumarate Solution:

Composition per 50.0mL:

Sodium fumarate	8.0g
-----------------	------

Preparation of Sodium Fumarate Solution: Add sodium fumarate to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize. Sparge with 100% N₂.

Wolfe's Vitamin Solution:

Composition per liter:

Pyridoxine-HCl	10.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Nicotinic acid	5.0mg
Riboflavin	5.0mg
Thiamine-HCl	5.0mg
Calcium DL-pantothenate	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Modified Wolfe's Mineral Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O	3.0g
Nitrilotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·H ₂ O	0.5g
CaCl ₂	0.1g
CoCl ₂ ·6H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g
ZnSO ₄ ·7H ₂ O	0.1g
AlK(SO ₄) ₂ ·12H ₂ O	0.01g
CuSO ₄ ·5H ₂ O	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g
Na ₂ SeO ₃	0.01g
NaWO ₄ ·2H ₂ O	0.01g
NiCl ₂ ·6H ₂ O	0.01g

Preparation of Modified Wolfe's Mineral Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components one at a time. Add distilled/deionized water to 1.0L. Adjust pH to 6.8.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂. Add components, except sodium fumarate solution, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 3 min. Cool to room temperature while sparging with 80% N₂ + 20% CO₂. Anaerobically distribute 9.5mL volumes into anaerobic tubes. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 0.5mL of sterile sodium fumarate solution to each tube. Mix thoroughly. Adjust pH to 6.8.

Use: For the cultivation of *Geobacter sulfurreducens*.

Geococcus nitratireducens and *Petrobacter succinimandens* Medium (DSMZ Medium 979)

Composition per liter:

Glucose	3.6g
NaCl	1.0g
NH ₄ Cl	1.0g
Yeast extract	1.0g
KH ₂ PO ₄	0.3g
K ₂ HPO ₄	0.3g
MgCl ₂ ·6H ₂ O	0.2g
Sodium acetate	0.16g
CaCl ₂ ·2H ₂ O	0.1g
KCl	0.1g
Trace elements solution SL-10	10.0mL
Vitamin solution	5.0mL

pH 6.8 ± 0.2 at 25°C

Trace Elements Solution SL-10:

Composition per liter:

MgSO ₄ ·7H ₂ O	3.0g
Nitrilotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·2H ₂ O	0.5g
CoSO ₄ ·7H ₂ O	0.18g
ZnSO ₄ ·7H ₂ O	0.18g
CaCl ₂ ·2H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g

NiCl ₂ ·6H ₂ O	0.025g
KAl(SO ₄) ₂ ·12H ₂ O	0.02g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·4H ₂ O	0.01g
CuSO ₄ ·5H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O	0.3mg

Preparation of Trace Elements Solution SL-10: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl	10.0mg
Thiamine-HCl·2H ₂ O	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
D-Ca-pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Preparation of Medium: Add components, except vitamin solution, to distilled/deionized water and bring volume to 1.0L. Gently heat and bring to boiling. Mix thoroughly. Cool to room temperature while sparging with 80% N₂ + 20% CO₂. Dispense into culture vessels under an atmosphere of 80% N₂ + 20% CO₂. Autoclave for 45 min at 6 psi pressure–110°C. Aseptically and anoxically add vitamin solution.

Use: For the cultivation of *Geococcus nitratireducens*.

Geococcus nitratireducens and *Petrobacter succinimandens* Medium (DSMZ Medium 979)

Composition per liter:

Succinic acid	2.36g
NaCl	1.0g
NH ₄ Cl	1.0g
Yeast extract	1.0g
KH ₂ PO ₄	0.3g
K ₂ HPO ₄	0.3g
MgCl ₂ ·6H ₂ O	0.2g
CaCl ₂ ·2H ₂ O	0.1g
KCl	0.1g
Trace elements solution SL-10	10.0mL
Vitamin solution	5.0mL

pH 6.8 ± 0.2 at 25°C

Trace Elements Solution SL-10:

Composition per liter:

MgSO ₄ ·7H ₂ O	3.0g
Nitrilotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·2H ₂ O	0.5g
CoSO ₄ ·7H ₂ O	0.18g
ZnSO ₄ ·7H ₂ O	0.18g
CaCl ₂ ·2H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g

NiCl ₂ ·6H ₂ O	0.025g
KAl(SO ₄) ₂ ·12H ₂ O	0.02g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·4H ₂ O	0.01g
CuSO ₄ ·5H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O	0.3mg

Preparation of Trace Elements Solution SL-10: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl	10.0mg
Thiamine-HCl·2H ₂ O	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
D-Ca-pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Preparation of Medium: Add components, except vitamin solution, to distilled/deionized water and bring volume to 1.0L. Gently heat and bring to boiling. Mix thoroughly. Cool to room temperature while sparging with 80% N₂ + 20% CO₂. Dispense into culture vessels under an atmosphere of 80% N₂ + 20% CO₂. Autoclave for 45 min at 6 psi pressure–110°C. Aseptically and anoxically add vitamin solution.

Use: For the cultivation of *Petrobacter succinimandens*.

Geodermatophilus obscurus Medium

Composition per liter:

Agar	20.0g
Malt extract, purified solids	15.0g
Starch, soluble	10.0g
Sucrose	10.0g
Yeast extract	5.0g
CaCO ₃	2.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of *Geodermatophilus obscurus*.

George's Medium, Modified

Composition per liter:

Agar	15.0g
Peptone	1.0g
KNO ₃	0.2g
K ₂ HPO ₄	0.02g
MgSO ₄ ·7H ₂ O	0.02g
Ferric citrate	0.035mg

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Dis-

tribute into tubes. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of a variety of algae.

***Geothermobacter* Medium (DSMZ Medium 981)**

Composition per liter:

NaCl	19.0g
MgCl ₂ ·6H ₂ O	9.0g
NaHCO ₃	1.7g
KNO ₃	1.01g
KCl	0.5g
KH ₂ PO ₄	0.42g
CaCl ₂ ·2H ₂ O	0.3g
MgSO ₄ ·7H ₂ O	0.15g
Yeast extract	0.1g
(NH ₄) ₂ SO ₄	0.1g
NaBr	0.05g
SrCl ₂ ·6H ₂ O	0.02g
Resazurin	0.5mg
Vitamin solution	10.0mL
NaHCO ₃ solution	10.0mL
DL-Malic acid solution	10.0mL
L-Cysteine solution	5.0mL
Trace elements solution SL-10	1.0mL
Selenite/tungstate solution	1.0mL

pH 6.2 ± 0.2 at 25°C

DL-Malic Acid Solution:

Composition per 10.0mL:

DL-Malic acid	1.34g
---------------	-------

Preparation of DL-Malic Acid Solution: Add DL-malic acid to 10.0mL distilled/deionized water. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

L-Cystine Solution:

Composition per 5.0mL:

L-Cystine-HCl·2H ₂ O	0.05g
NaOH (1N solution)	5.0mL

Preparation of L-Cystine Solution: Add L-cystine to 5.0mL of NaOH solution. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

NaHCO₃ Solution:

Composition per 10.0mL:

NaHCO ₃	1.7g
--------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 20% CO₂ + 80% H₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Trace Elements Solution SL-10:

Composition per liter:

MgSO ₄ ·7H ₂ O	3.0g
Nitritotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·2H ₂ O	0.5g
CoSO ₄ ·7H ₂ O	0.18g
ZnSO ₄ ·7H ₂ O	0.18g
CaCl ₂ ·2H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g
NiCl ₂ ·6H ₂ O	0.025g
KAl(SO ₄) ₂ ·12H ₂ O	0.02g

H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·4H ₂ O	0.01g
CuSO ₄ ·5H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O	0.3mg

Preparation of Trace Elements Solution SL-10: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Selenite/Tungstate Solution:

Composition per liter:

NaOH	0.5g
Na ₂ WO ₄ ·2H ₂ O	4.0mg
Na ₂ SeO ₃ ·5H ₂ O	3.0mg

Preparation of Selenite/Tungstate Solution: Add components to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl	10.0mg
Thiamine-HCl·2H ₂ O	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
D-Ca-pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Preparation of Medium: Add components, except bicarbonate, cysteine, vitamins, and malic acid, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Boil for 3 min. Cool to room temperature while sparging with 80% N₂ + 20% CO₂. Dispense into culture vessels under an atmosphere of 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anoxically add vitamins, yeast extract, malic acid, and cysteine solution. Adjust pH to 6.2.

Use: For the cultivation of *Geothermobacter* spp.

GFY Agar

Composition per liter:

Agar	15.0g
Glucose	5.0g
Fructose	5.0g
Yeast extract	5.0g
CaCO ₃	3.0g
Vitamin B ₁₂	2.0mg

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Flexibacter* species.

Gilardi Motility Test and Maintenance Medium

See: Motility Test and Maintenance Medium, Gilardi

Gillies Agar No. 2 (Sucrose Salicin Agar)

Composition per liter:

Peptic digest of animal tissue.....	10.0g
Casein enzymic hydrolysate	10.0g
NaCl	5.0g
Na ₂ H ₂ PO ₄	0.25g
Sucrose.....	10.0g
Salicin	10.0g
Bromthymol Blue	0.01g
Na ₂ S ₂ O ₃	0.025g
Agar	3.0g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes. Autoclave for 15 min at 15 psi pressure–121°C. Allow the tubes to cool in an upright position. Suspend Kovacs reagent strips and lead acetate papers from the cap or the cotton plug over the medium but not touching the surface of the medium.

Use: For the detection of motility, hydrogen sulphide, indole production, and fermentation of sucrose and salicin for identification of *Salmonella* spp. and *Shigella* spp.

Ginger Beer Plant Medium (DSMZ Medium 267)

Ginger, powdered.....	1.5g
Citric acid.....	1.5g
Soft brown sugar.....	100.0mL

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of ginger beer plant.

Giolitti-Cantoni Broth (Giolitti-Cantoni Broth Base with Tellurite)

Composition per 1030.0mL:

Mannitol.....	20.0g
Pancreatic digest of casein.....	10.0g
Beef extract.....	5.0g
LiCl.....	5.0g
NaCl.....	5.0g
Yeast extract.....	5.0g
Sodium pyruvate.....	3.0g
Glycine.....	1.2g
Chapman tellurite solution.....	0.3mL

pH 6.9 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath and BD Diagnostic Systems.

Chapman Tellurite Solution:

Composition per 100.0mL:

K ₂ TeO ₃	3.5g
---------------------------------------	------

Preparation of Chapman Tellurite Solution: Add K₂TeO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Caution: Potassium tellurite is toxic.

Preparation of Medium: Add components, except Chapman tellurite solution, to distilled/deionized water and bring volume to 1.0L. Gently heat and bring to boiling. Mix thoroughly. Distribute into tubes in 10.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Cool rapidly to 25°C. Immediately prior to use, incubate tubes at 100°C to expel oxygen. Aseptically add 0.3mL of sterile Chapman tellurite solution to each tube. Mix thoroughly. Cool to 25°C.

Use: For the cultivation and enrichment of *Staphylococcus aureus* from foods.

Giolitti-Cantoni Broth Base with Tellurite

See: [Giolitti-Cantoni Broth](#)

Gisa Agar

Composition per liter:

Agar.....	18.0g
(NH ₄) ₂ SO ₄	5.0g
Calcium glucoisosaccharinate	2.0g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O.....	0.5g
NaCl.....	0.1g
CaCl ₂ ·2H ₂ O	0.1g
Inositol.....	2.0mg
KI.....	1.0mg
H ₃ BO ₃	0.5mg
ZnSO ₄ ·7H ₂ O.....	0.4mg
MnSO ₄ ·4H ₂ O.....	0.4mg
Thiamine-HCl.....	0.4mg
Pyroxidine-HCl.....	0.4mg
Niacin.....	0.4mg
Calcium pantothenate	0.4mg
<i>p</i> -Aminobenzoic acid.....	0.2mg
Riboflavin.....	0.2mg
FeCl ₃	0.2mg
Na ₂ MoO ₄ ·4H ₂ O.....	0.2mg
CuSO ₄ ·5H ₂ O.....	0.04mg
Folic acid	2.0μg
Biotin	2.0μg

pH 5.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Ancylobacter aquaticus*, *Pseudomonas* species, *Xanthobacter autotrophicus*, and *Xanthobacter* species.

Gisa Broth

Composition per liter:

(NH ₄) ₂ SO ₄	5.0g
Calcium glucoisosaccharinate	2.0g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O.....	0.5g
NaCl.....	0.1g
CaCl ₂ ·2H ₂ O	0.1g
Inositol.....	2.0mg
KI.....	1.0mg
H ₃ BO ₃	0.5mg
ZnSO ₄ ·7H ₂ O.....	0.4mg
MnSO ₄ ·4H ₂ O.....	0.4mg

Thiamine-HCl	0.4mg
Pyroxidine-HCl	0.4mg
Niacin	0.4mg
Calcium pantothenate	0.4mg
<i>p</i> -Aminobenzoic acid	0.2mg
Riboflavin	0.2mg
FeCl ₃	0.2mg
Na ₂ MoO ₄ ·4H ₂ O	0.2mg
CuSO ₄ ·5H ₂ O	0.04mg
Folic acid	2.0μg
Biotin	2.0μg

pH 5.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Ancylobacter aquaticus*, *Pseudomonas* species, *Xanthobacter autotrophicus*, and *Xanthobacter* species.

Gliding Medium

Composition per liter:

Pancreatic digest of casein	0.5g
Yeast extract	0.5g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of the gliding bacteria *Cytophaga* species and *Flexibacter columnaris*.

Gluconacetobacter johannae and *Gluconacetobacter azotocaptans* Medium (DSMZ Medium 920)

Composition per liter:

K ₂ HPO ₄	4.81g
MES buffer	4.4g
Yeast extract	2.7g
Glucose	2.7g
Mannitol	1.8g
KH ₂ PO ₄	0.65g

pH 6.7 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Gluconacetobacter azotocaptans* and *Gluconacetobacter johannae*.

Gluconacetobacter rhaeticus Medium (DSMZ Medium 1044)

Composition per liter:

Glucose	50.0g
Agar	15.0g
Yeast extract	5.0g

pH 6.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.5. Gently heat while stirring and bring to boiling. Distribute into tubes or

flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into Petri dishes or leave in tubes.

Use: For the cultivation of *Gluconacetobacter rhaeticus*.

Gluconacetobacter xylinus Medium (LMG Medium 129)

Composition per liter:

D-Glucose	50.0g
Yeast extract	5.0g

pH 6.9 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Gluconacetobacter xylinus* subsp. *Xylinus*.

Gluconate Peptone Broth

Composition per liter:

Potassium gluconate	40.0g
Casein peptone	1.5g
K ₂ HPO ₄	1.0g
Yeast extract	1.0g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and differentiation of Gram-negative bacteria based on their ability to oxidize gluconate to 2-ketogluconate. For the differentiation of fluorescent *Pseudomonas* species. After inoculation with bacteria and 48 hr of growth in this medium, Benedict's reagent is added. Bacteria that produce the reducing sugar 2-ketogluconate turn the reagent yellow-orange to orange-red.

Gluconate Test HiVeg Medium

Composition per liter:

Potassium gluconate	40.0g
Plant peptone	1.5g
K ₂ HPO ₄	1.0g
Yeast extract	1.0g

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and differentiation of Gram-negative bacteria based on their ability to oxidize gluconate to 2-ketogluconate. For the differentiation of fluorescent *Pseudomonas* species. After inoculation with bacteria and 48 hr of growth in this medium, Benedict's reagent is added. Bacteria that produce the reducing sugar 2-ketogluconate turn the reagent yellow-orange to orange-red.

Gluconobacter Agar

Composition per liter:

Glucose	100.0g
CaCO ₃	20.0g

Agar	15.0g
Yeast extract.....	10.0g
pH 6.8 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.8. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Acetobacter pasteurianus*, *Acetobacter* species, *Acetobacter xylinum*, and *Gluconobacter oxydans*.

***Gluconobacter* Broth**

Composition per liter:

Glucose	100.0g
CaCO ₃	20.0g
Yeast extract.....	10.0g
pH 6.8 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.8. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Acetobacter pasteurianus*, *Acetobacter* species, *Acetobacter xylinum*, and *Gluconobacter oxydans*.

***Gluconobacter oxydans* Agar**

Composition per liter:

Glucose	100.0g
CaCO ₃	20.0g
Agar	15.0g
Yeast extract.....	10.0g
pH 6.8 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Acetobacter aceti*, *Acetobacter pasteurianus*, *Acetobacter xylinum*, and *Gluconobacter oxydans*.

Glucose Agar

Composition per liter:

Glucose	50.0g
Agar	20.0g
KNO ₃	2.0g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O.....	0.5g
pH 5.4 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 5.4. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 20 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Cladosporium cladosporioides*, *Cladosporium cucumerinum*, *Cladosporium herbarum*, *Cladosporium macrocarpum*, *Cladosporium sphaerospermum*, *Cladosporium ure-dinicola*, and *Hormoconis resinae*.

Glucose Agar

Composition per liter:

Agar	15.0g
Tryptone.....	10.0g
Glucose	10.0g
NaCl.....	5.0g
Yeast extract.....	1.5g
Bromcresol Purple	0.015g
pH 7.0 ± 0.2 at 25°C	

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For determining the fermentation reactions of presumptive Enterobacteriaceae.

Glucose Agar with 25% Glucose

Composition per liter:

Glucose	250.0g
Agar	25.0g
Polypeptone™	5.0g
Malt extract.....	3.0g
Yeast extract.....	3.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of osmophilic yeasts and bacteria.

Glucose Agar, 9K

Composition per liter:

(NH ₄) ₂ SO ₄	3.0g
KH ₂ PO ₄	0.5g
MgSO ₄ ·7H ₂ O.....	0.5g
KCl.....	0.1g
Ca(NO ₃) ₂	0.0125g
FeSO ₄ ·7H ₂ O.....	0.01mg
Agar solution	500.0mL
Glucose solution	100.0mL
pH 4.5 ± 0.2 at 25°C	

Agar Solution:

Composition per 500.0mL:

Agar	15.0g
------------	-------

Preparation of Agar Solution: Add agar to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 55°C.

Glucose Solution:

Composition per 100.0mL:

Glucose	10.0g
---------------	-------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except agar solution and glucose solution, to distilled/deionized water and bring volume to 400.0mL. Mix thoroughly. Adjust pH to 4.5 with H₂SO₄. Autoclave for

15 min at 15 psi pressure–121°C. Cool to 55°C. Aseptically add 500.0mL of sterile agar solution and 100.0mL of sterile glucose solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Thiobacillus acidophilus*.

Glucose Asparagine Agar

Composition per liter:

Agar	15.0g
Glucose	10.0g
Asparagine	0.5g
K ₂ HPO ₄	0.5g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Actinoplanes violaceus*, *Ampullariella kummingensis*, *Streptomyces avermitilis*, *Streptomyces calvus*, *Streptomyces hygroscopicus*, *Streptomyces tosaensis*, and *Streptoverticillium morookaense*.

Glucose Asparagine Agar 2

Composition per liter:

Agar	15.0g
Glucose	10.0g
Yeast extract.....	2.0g
L-Asparagine	1.0g
K ₂ HPO ₄	0.5g

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Actinomadura echinospora*, *Amycolata autotrophica*, *Amycolatopsis methanolica*, *Amycolatopsis rugosa*, *Amycolatopsis sulphurea*, *Gordona bronchialis*, *Gordona rubropertinctus*, *Gordona terrae*, *Microbispora rosea*, *Micromonospora narashino*, *Nocardia amarae*, *Nocardia diaphanozonaria*, *Nocardia farcinica*, *Nocardia otitidiscaviarum*, *Nocardia salmonicida*, *Nocardia violaceofusca*, *Nocardioides fastidiosa*, *Rhocococcus* species, *Streptomyces gri-seus*, and *Streptomyces lactamdurans*.

Glucose Azide Broth

Composition per liter:

Peptic digest of animal tissue.....	10.0g
Glucose	5.0g
K ₂ HPO ₄	5.0g
NaCl.....	5.0g
Yeast extract.....	3.0g
KH ₂ PO ₄	2.0g
NaN ₃	0.25g
Bromcresol Purple	0.03g

pH 6.7 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Caution: Sodium azide is toxic. Azides also react with metals and disposal must be highly diluted.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the enumeration of fecal streptococci by the MPN technique from water and sewage.

Glucose Azide HiVeg Broth

Composition per liter:

Plant peptone	10.0g
Glucose	5.0g
K ₂ HPO ₄	5.0g
NaCl.....	5.0g
Yeast extract.....	3.0g
KH ₂ PO ₄	2.0g
NaN ₃	0.25g
Bromcresol Purple	0.03g

pH 6.7 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Caution: Sodium azide is toxic. Azides also react with metals and disposal must be highly diluted.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the enumeration of fecal streptococci by the MPN technique from water and sewage.

Glucose Blood Liver Agar

See: BL Agar

Glucose Broth

Composition per 800.0mL:

Agar	10.0g
Beef extract.....	10.0g
Peptone	10.0g
NaCl.....	5.0g
Glucose solution	200.0mL

pH 7.0 ± 0.2 at 25°C

Glucose Solution:

Composition per 200.0mL:

Glucose	20.0g
---------------	-------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 200.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except glucose solution, to distilled/deionized water and bring volume to 800.0mL. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.0. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°C. Aseptically add 200.0mL of sterile glucose solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Pseudomonas* species.

Glucose Broth**Composition per liter:**

Casein enzymatic hydrolysate	10.0g
Glucose	5.0g
NaCl	5.0g

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Cool to 25°. Adjust pH to 7.0. Distribute into sterile tubes or flasks. Autoclave for 15 min at 12 psi pressure–118°C.

Use: For the study of glucose fermentation where pH indicator is not desired.

Glucose Broth, Buffered**Composition per liter:**

Peptone.....	5.0g
NaCl.....	5.0g
K ₂ HPO ₄	3.68g
Yeast extract.....	2.0g
KH ₂ PO ₄	1.32g
Lab Lemco beef extract	1.0g
Glucose	1.0g

pH 7.2 ± 0.2 at 25°C

Source: CM1 broth powder, which contains the peptone, NaCl, yeast extract, and Lab Lemco beef extract, is available from Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Aerococcus viridans*, *Carnobacterium alterfunditum*, *Carnobacterium funditum*, *Enterococcus durans*, *Enterococcus faecalis*, *Enterococcus faecium*, *Enterococcus hirae*, *Lactococcus lactis*, *Lactococcus plantarum*, *Streptococcus agalactiae*, *Streptococcus equimilis*, *Streptococcus mutans*, *Streptococcus pyogenes*, *Streptococcus salivarius*, and other *Streptococcus* species.

Glucose Broth, 9K**Composition per liter:**

Glucose	10.0g
(NH ₄) ₂ SO ₄	3.0g
KH ₂ PO ₄	0.5g
MgSO ₄ ·7H ₂ O	0.5g
KCl.....	0.1g
Ca(NO ₃) ₂	0.0125g
FeSO ₄ ·7H ₂ O.....	0.01mg
Glucose solution	100.0mL

pH 3.5 ± 0.2 at 25°C

Glucose Solution:**Composition per 100.0mL:**

Glucose	10.0g
---------------	-------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except glucose solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Adjust pH to 3.5 with H₂SO₄. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 100.0mL of sterile glucose solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Thiobacillus acidophilus*.

Glucose Cysteine Agar Base with Thiamine and Hemoglobin**Composition per liter:**

Glucose	25.0g
Papaic digest of soyabean meal	10.0g
Agar	14.0g
NaCl.....	5.0g
Meat peptone	3.0g
Cysteine-HCl.....	1.0g
Thiamine	5.0mg
Hemoglobin solution	500.0mL

pH 6.9 ± 0.2 at 25°C

Source: This medium, without hemoglobin solution, is available as a premixed powder from HiMedia.

Hemoglobin Solution:**Composition 500.0mL:**

Bovine hemoglobin.....	10.0g
------------------------	-------

Preparation of Hemoglobin Solution: Add bovine hemoglobin to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Preparation of Medium: Add components, except hemoglobin, to distilled/deionized water and bring volume to 500.0L. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Add 500.0mL sterile hemoglobin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and enumeration of *Pasteurella tularensis*.

Glucose Cysteine HiVeg Agar Base with Thiamine and Hemoglobin**Composition per liter:**

Glucose	25.0g
Papaic digest of soybean meal	10.0g
Agar	14.0g
NaCl.....	5.0g
Plant peptone No. 1.....	3.0g
Cysteine-HCl.....	1.0g
Thiamine	5.0mg
Hemoglobin solution	500.0mL

pH 6.9 ± 0.2 at 25°C

Source: This medium, without hemoglobin solution, is available as a premixed powder from HiMedia.

Hemoglobin Solution:**Composition 500.0mL:**

Bovine hemoglobin.....	10.0g
------------------------	-------

Preparation of Hemoglobin Solution: Add bovine hemoglobin solution to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Preparation of Medium: Add components, except hemoglobin solution, to distilled/deionized water and bring volume to 500.0L. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Add 500.0mL sterile hemoglobin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and enumeration of *Pasteurella tularensis*.

Glucose Cysteine HiVeg Agar Base with Thiamine and Blood

Composition per liter:

Glucose	25.0g
Papaic digest of soybean meal	10.0g
Agar	14.0g
NaCl	5.0g
Plant peptone No. 1	3.0g
Cysteine-HCl	1.0g
Thiamine	5.0mg
Blood, defibrinated	50.0mL

pH 7.2 ± 0.2 at 25°C

Source: This medium, without blood, is available as a premixed powder from HiMedia.

Preparation of Medium: Add components, except blood, to distilled/deionized water and bring volume to 950.0L. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 75°–80°C. Add 50.0mL sterile defibrinated blood with thorough mixing and maintain at 75°–80°C for 15–20 min until the medium is chocolate. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and enumeration of *Pasteurella tularensis*.

Glucose HiVeg Broth

Composition per liter:

Plant hydrolysate	10.0g
Glucose	5.0g
NaCl	5.0g

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Cool to 25°. Adjust pH to 7.0. Distribute into sterile tubes or flasks. Autoclave for 15 min at 12 psi pressure–118°C.

Use: For the study of glucose fermentation where pH indicator is not desired.

Glucose HiVeg Peptone Agar

Composition per liter:

Plant peptone	20.0g
Agar	15.0g
Glucose	10.0g
NaCl	5.0g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Agrobacterium* species.

Glucose Medium Nakayama (DSMZ Medium 452)

Composition per liter:

Yeast extract	15.0g
Glucose	10.0g
Peptone	10.0g

Agar	10.0g
Solution A	10.0mL
Solution B	10.0mL
Solution C	1.0mL

pH 6.8 ± 0.2 at 25°C

Solution A:

Composition per 100.0mL:

KH ₂ PO ₄	0.5g
K ₂ HPO ₄	0.5g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C.

Solution B:

Composition per 100.0mL:

MgSO ₄ ·7H ₂ O	3.0g
NaCl	0.1g
MnSO ₄ ·5H ₂ O	0.1g
CuSO ₄ ·5H ₂ O	0.01g

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C.

Solution C:

Composition per 100.0mL:

Na ₃ -citrate	2.0g
FeSO ₄ ·7H ₂ O	0.1g

Preparation of Solution C: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C.

Preparation of Medium: Add components, except solutions A, B, and C, to distilled/deionized water and bring volume to 979.0mL. Mix thoroughly. Adjust pH to 6.8. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 10.0mL sterile solution A, 10.0mL sterile solution B, and 1.0mL sterile solution C. Mix thoroughly. Pour into sterile Petri dishes or aseptically dispense into sterile tubes.

Use: For the growth and maintenance of *Bacillus laevolacticus*.

Glucose Nitrogen-Free Salt Agar

Composition per liter:

Agar	15.0g
CaCO ₃	1.0g
K ₂ HPO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.2g
NaCl	0.2g
FeSO ₄ ·7H ₂ O	0.1g
Na ₂ MoO ₄ ·2H ₂ O	5.0mg
Glucose solution	100.0mL

pH 7.0 ± 0.2 at 25°C

Glucose Solution:

Composition per 100.0mL:

Glucose	10.0g
---------------	-------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except glucose solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at

15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 100.0mL of sterile glucose solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Azotobacter* species.

Glucose Nitrogen-Free Salt Solution

Composition per liter:

CaCO ₃	1.0g
K ₂ HPO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.2g
NaCl	0.2g
FeSO ₄ ·7H ₂ O	0.1g
Na ₂ MoO ₄ ·2H ₂ O	5.0mg
Glucose solution	100.0mL

pH 7.0 ± 0.2 at 25°C

Glucose Solution:

Composition per 100.0mL:

Glucose	10.0g
---------------	-------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except glucose solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 100.0mL of sterile glucose solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Azotobacter* species.

Glucose Nutrient Agar

Composition per liter:

Agar	15.0g
Pancreatic digest of casein	10.0g
Glucose	5.0g
K ₂ HPO ₄	5.0g
NaCl	5.0g
Yeast extract	5.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of *Brochothrix thermosphacta*.

Glucose Peptone Agar

Composition per liter:

Peptone	20.0g
Agar	15.0g
Glucose	10.0g
NaCl	5.0g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Agrobacterium* species.

Glucose Peptone Medium

Composition per liter:

Agar	15.0g
Glucose	0.3g
Peptone	0.17g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Acytostelium ellipticum*, *Phlyctochytrium africanum*, *Rhizophylctis harderi*, and *Rhizophylctis rosea*.

Glucose Peptone Medium

Composition per liter:

Peptone	20.0g
CaCO ₃	10.0g
Glucose	10.0g
Yeast extract	10.0g

Preparation of Medium: Add components to 1.0L of tap water. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Mycobacterium chitae*.

Glucose Peptone Yeast Extract Salts Medium

See: **GPY Salts Medium**

Glucose Phosphate Broth

Composition per liter:

Peptone	10.0g
K ₂ HPO ₄	5.0g
Glucose	5.0g

pH 7.5 ± 0.2 at 25°C

Preparation of Medium: Add components, except glucose, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Filter while hot through Whatman filter paper. Cool to 25°C. Adjust pH to 7.5. Add 5.0g of glucose. Mix thoroughly. Distribute into sterile tubes or flasks. Autoclave for 10 min at 10 psi pressure–115°C.

Use: For the cultivation of a variety of nonfastidious heterotrophic microorganisms.

Glucose Phosphate Broth

Composition per liter:

Peptone	10.0g
K ₂ HPO ₄	5.0g
Glucose	5.0g

pH 7.5 ± 0.2 at 25°C

Preparation of Medium: Add components, except glucose, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Filter while hot through Whatman filter paper. Cool to 25°C. Adjust pH to 7.5. Add 5.0g of glucose. Mix thoroughly. Distribute into sterile tubes or flasks. Autoclave for 10 min at 10 psi pressure–115°C.

Use: For the cultivation of a variety of nonfastidious heterotrophic microorganisms.

Glucose Salt Teepol Broth (GSTB)

Composition per liter:

NaCl	30.0g
Peptone.....	10.0g
Glucose	5.0g
Beef extract.....	3.0g
Methyl Violet.....	2.0mg
Sodium lauryl sulfate (Teepol—0.1% solution)	4.0mL
pH 8.8 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 8.8. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure—121°C.

Use: For the cultivation of *Vibrio* species from foods.

Glucose Salt Teepol HiVeg Broth

Composition per liter:

NaCl	30.0g
Plant peptone.....	10.0g
Glucose	5.0g
Teepol.....	4.0g
Plant extract	3.0g
Methyl Violet.....	2.0mg
pH 8.8 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 8.8. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure—121°C.

Use: For the cultivation of *Vibrio* species from foods.

Glucose Salts Medium

Composition per 1000.5mL:

Glucose	5.0g
(NH ₄) ₂ SO ₄	1.0g
MgSO ₄ ·7H ₂ O.....	0.5g
NaCl.....	0.5g
NaH ₂ PO ₄ ·12H ₂ O.....	0.7mg
NaH ₂ PO ₄ ·2H ₂ O.....	0.3mg
Trace elements solution	0.5mL
pH 6.9 ± 0.2 at 25°C	

Trace Elements Solution:

Composition per liter:

H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
MnCl ₂ ·4H ₂ O.....	0.03g
Na ₂ MoO ₄ ·2H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except trace elements solution, to distilled/deionized water and bring volume to 1.0L. Mix

thoroughly. Autoclave for 15 min at 15 psi pressure—121°C. Aseptically add 0.5mL of sterile trace elements solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of a wide variety of bacteria and fungi.

Glucose Starch Agar

Composition per liter:

Gelatin.....	20.0g
Proteose peptone.....	15.0g
Agar	10.0g
Glucose	10.0g
Starch, soluble.....	5.0g
NaCl.....	5.0g
Na ₂ HPO ₄	3.0g
pH 7.2 ± 0.2 at 25°C	

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure—121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For use as a basal medium with the addition of salicin, raffinose, and Phenol Red for the detection of *Clostridium* spp.

Glucose Tetrazolium Medium

Composition per liter:

Agar	15.0g
Pancreatic digest of gelatin.....	6.0g
Yeast extract.....	3.0g
Beef extract.....	1.5g
1,3,5-Triphenyl tetrazolium chloride.....	0.05g
Glucose solution	100.0mL
pH 6.6 ± 0.1 at 25°C	

Glucose Solution:

Composition per 100.0mL:

Glucose	10.0g
---------------	-------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except glucose solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure—121°C. Cool to 45°–50°C. Aseptically add glucose solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Streptococcus mutans*.

Glucose Tryptone Yeast Extract Medium

See: **GTYE Medium**

Glucose Yeast Broth with Sodium Chloride

Composition per liter:

NaCl.....	50.0g
Agar	15.0g
Yeast extract.....	3.0g
Glucose	1.0g
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Pediococcus halophilus*.

Glucose Yeast Chalk Agar

Composition per liter:

Chalk	40.0g
Agar	15.0g
Glucose	5.0g
Yeast extract	5.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Xanthomonas* species.

Glucose Yeast Extract Agar

Composition per liter:

Agar	15.0g
Glucose	5.0g
Meat extract	5.0g
Peptone	5.0g
Yeast extract	5.0g

pH 6.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of *Leuconostoc* species and *Pediococcus* species.

Glucose Yeast Extract Agar

Composition per liter:

CaCO ₃	20.0g
Glucose	20.0g
Agar	17.0g
Yeast extract	10.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Agrobacterium* species, *Clostridium* species, *Erwinia* species, *Pseudomonas* species, and *Xanthomonas campestris*.

Glucose Yeast Extract Agar

Composition per liter:

Agar	15.0g
Peptic digest of animal tissue	5.0g
Yeast extract	5.0g
Glucose	2.0g
KH ₂ PO ₄	0.5g
K ₂ HPO ₄	0.5g
MgSO ₄ ·7H ₂ O	0.3g
NaCl	0.01g

MnSO ₄ ·H ₂ O	0.01g
ZnSO ₄ ·7H ₂ O	1.6mg
CuSO ₄ ·5H ₂ O	1.6mg
CoSO ₄ ·7H ₂ O	1.6mg

pH 7.2 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the enumeration and cultivation of lactobacilli in pharmaceutical preparations.

Glucose Yeast Extract Iron Agar (LMG Medium 153)

Composition per liter:

Agar	15.0g
Glucose	10.0g
Yeast extract	5.0g
Iron solution	20.0mL

pH 7.1 ± 0.2 at 25°C

Iron Solution:

Composition per 100.0mL:

FeCl ₃	0.03g
-------------------------	-------

Preparation of Iron Solution: Add FeCl₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except iron solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 20.0mL sterile iron solution. Mix thoroughly. Aseptically pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Pseudomonas denitrificans*. Note: Buffered Nutrient Agar is more commonly used for the culture of *P. denitrificans*.

Glucose Yeast Extract Medium (ATCC Medium 846)

Composition per liter:

Agar, noble	13.0g
Yeast extract	5.0g
KH ₂ PO ₄	1.0g
NaCl	1.0g
Peptone	1.0g

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Pseudomonas glathei*.

Glucose Yeast Extract Medium (ATCC Medium 985)

Composition per liter:

Agar	15.0g
Yeast extract	3.0g
Glucose	1.0g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Acinetobacter tartarogenes*, *Agrobacterium viscosum*, and *Pseudomonas* species.

Glucose Yeast Extract Medium (ATCC Medium 1742)

Composition per liter:

Agar	15.0g
Glucose	5.0g
Yeast extract	3.5g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Xanthobacter* species.

Glucose Yeast Extract Peptone Agar

Composition per liter:

Glucose	20.0g
Agar	15.0g
Peptone	10.0g
Yeast extract	3.0g

pH 6.8 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of yeasts from soils.

Glucose Yeast Extract Peptone Agar with 2% Glucose

Composition per liter:

Glucose	20.0g
Agar	15.0g
Peptone	5.0g
Yeast extract	1.0g
K ₂ HPO ₄	0.5g
MgSO ₄ ·7H ₂ O	0.5g
CaCO ₃	1.0g
FeSO ₄ ·7H ₂ O	50.0mg

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.8. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Lactobacillus acidophilus* and *Leclercia adecarboxylata*.

Glucose Yeast Extract Peptone Medium (GYP Medium)

Composition per liter:

Glucose	20.0g
Agar	10.0g

Peptone	5.0g
Yeast extract	5.0g
CaCO ₃	0.1g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of *Sporolactobacillus* species.

Glucose Yeast Extract Peptone Thioglycolate Medium

See: **GYPT Medium**

Glucose Yeast Medium with Calcium Carbonate

Composition per liter:

Agar	15.0g
CaCO ₃	7.5g
Peptone	5.0g
Yeast extract	5.0g
Glucose	3.0g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Adjust pH to 6.3. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Erwinia herbicola* and *Bacillus* species.

Glucose Yeast Plant Peptone Agar

Composition per liter:

Glucose	20.0g
Agar	15.0g
Plant peptone	10.0g
Yeast extract	5.0g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation of yeasts from soil specimens.

Glucose Yeast Peptone Medium

Composition per liter:

Agar	20.0g
Glucose	5.0g
Peptone	5.0g
Yeast extract	3.0g

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 6.8. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of a variety of yeasts, including *Candida* species, *Cryptococcus albidus*, *Cryptococcus albidosimilis*, *Cryptococcus albidus*,

Cryptococcus laurentii, *Cryptococcus vishniacii*, *Eeniella nana*, *Filobasidiella neoformans*, *Histoplasma capsulatum*, *Kluyveromyces lactis*, *Lipomyces kononenkoae*, *Rhodotorula matritensis*, *Saccharomyces bayanus*, *Saccharomyces cerevisiae*, *Saccharomyces douglasii*, *Saccharomyces paradoxus*, *Schizosaccharomyces pombe*, and *Zygosaccharomyces rouxii*.

Glucose Yeast Peptone Medium

Composition per liter:

Glucose	10.0g
Peptone.....	5.0g
Yeast extract.....	5.0g
pH 5.0 ± 1.0 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 5.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Enterobacter cloacae*.

Glutamate Medium

Composition per liter:

Solution A	500.0mL
Solution B	250.0mL
Solution C	250.0mL

Solution A:

Composition per 500.0mL:

Mannitol.....	10.0g
K ₂ HPO ₄	0.22g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution B:

Composition per 250.0mL:

MgSO ₄ ·7H ₂ O.....	0.1g
CaCl ₂ ·6H ₂ O.....	0.08g
FeCl ₃ ·6H ₂ O.....	0.05g

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 250.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution C:

Composition per 250.0mL:

Sodium glutamate	1.1g
Calcium pantothenate	0.5mg
Thiamine-HCl	0.1mg
Biotin	0.5µg

Preparation of Solution C: Add components to distilled/deionized water and bring volume to 250.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Aseptically combine 500.0mL of cooled, sterile solution A, 250.0mL of cooled, sterile solution B, and 250.0mL of sterile solution C. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the isolation of *Rhizobium* species.

Glutamate Medium (ATCC Medium 820)

Composition per liter:

Agar	15.0g
Sodium glutamate	5.0g

KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O.....	0.2g
KCl.....	0.1g
Glucose solution	100.0mL
pH 6.5 ± 0.2 at 25°C	

Glucose Solution:

Composition per 100.0mL:

Glucose	10.0g
---------------	-------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except glucose solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 100.0mL of sterile glucose solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Pseudomonas* species.

Glutamate Medium (ATCC Medium 1372)

Composition per liter:

K ₂ HPO ₄	6.0g
Sodium glutamate	5.0g
Peptone	4.0g
Yeast extract.....	4.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Escherichia coli*.

Glutamate Starch Phenol Red Agar Base

Composition per liter:

Starch, soluble.....	20.0g
L-Glutamate, sodium.....	10.0g
Agar	12.0g
KH ₂ PO ₄	2.0g
MgSO ₄ ·7H ₂ O.....	0.5g
Phenol Red.....	0.36g
Selective supplement solution	10.0mL
pH 7.2 ± 0.2 at 25°C	

Source: This medium is available from HiMedia.

Selective Supplement Solution:

Composition per 10.0mL:

Penicillin G100,00 U
Preparation of Selective Supplement Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except selective supplement solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add selective supplement solution. Mix thoroughly. Pour into Petri dishes or aseptically distribute into sterile tubes.

Use: For the detection of *Pseudomonas* spp. and *Aeromonas* spp. in foodstuffs, wastewater, and equipment, in the food industry.

Glutamine Medium**Composition per liter:**

Agar	15.0g
Pancreatic digest of gelatin	5.0g
Beef extract	3.0g
Glutamine-tryptophan solution	10.0mL
pH 6.8 ± 0.2 at 25°C	

Glutamine-Tryptophan Solution:**Composition per liter:**

L-Glutamine	100.0mg
L-Tryptophan	100.0mg

Preparation of Medium: Add components, except glutamine-tryptophan solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL of sterile glutamine-tryptophan solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Escherichia coli*.

Glutarate Medium**Composition per liter:**

Sodium glutarate	2.6g
NaCl	1.0g
KCl	0.5g
MgCl ₂ ·6H ₂ O	0.4g
NH ₄ Cl	0.25g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O	0.15g
Resazurin	1.0mg
Rumen fluid	20.0mL
NaHCO ₃ solution	20.0mL
Na ₂ S·9H ₂ O solution	10.0mL
Trace elements solution SL-10	1.0mL
pH 7.2 ± 0.2 at 25°C	

Trace Elements Solution SL-10:**Composition per liter:**

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Gas under 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

NaHCO₃ Solution:**Composition per 20.0mL:**

NaHCO ₃	2.5g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize. Gas under 80% N₂ + 20% CO₂.

Na₂S·9H₂O Solution:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O	0.36g
---	-------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂. Add components, except NaHCO₃ solution and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 20.0mL of sterile NaHCO₃ solution and 10.0mL of sterile Na₂S·9H₂O solution. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or flasks.

Use: For the cultivation of a wide variety of bacteria that can utilize glutarate as a carbon source.

Glycerol Agar**Composition per 1070.0mL:**

Agar	15.0g
Peptone	5.0g
Beef extract	3.0g
Soil extract	1.0L
Glycerol	70.0mL
pH 7.0 ± 0.2 at 25°C	

Soil Extract:**Composition per liter:**

Soil, air dried	1.0Kg
-----------------------	-------

Preparation of Soil Extract: Sift soil through a #9 mesh screen. Add to 2.4L of tap water. Mix thoroughly. Autoclave for 60 min at 15 psi pressure–121°C. Cool to 25°C. Filter through Whatman #1 filter paper. Bring volume to 1.0L with tap water.

Preparation of Medium: Combine components. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation and cultivation of *Nocardia* species and *Rhodococcus* species.

Glycerol Agar**Composition per liter:**

Beef heart, solids from infusion	250.0g
Glycerol	60.0g
Agar	15.0g
Pancreatic digest of gelatin	5.0g
Tryptose	5.0g
Beef extract	3.0g
NaCl	2.5g
pH 7.3 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Bacillus subtilis*, *Enterococcus faecalis*, *Erwinia chrysanthemi*, *Gordona rubropertinctus*, *Mycobacterium* species, *Nocardia brevicatena*, *Rhodococcus equi*, and *Rhodococcus rhodochrous*.

Glycerol Agar**Composition per liter:**

Beef heart, infusion from	300.0g
Glycerol	60.0g
Agar	17.5g
Tryptose	7.0g
NaCl	3.0g
Peptone.....	2.5g
NaCl	2.5g
Yeast extract.....	1.0g
Beef extract.....	0.5g

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.3. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of fastidious bacteria.

Glycerol Arginine Agar**Composition per liter:**

Agar	15.0g
Glycerol	12.5g
Arginine	1.0g
K ₂ HPO ₄	1.0g
NaCl	1.0g
MgSO ₄ ·7H ₂ O	0.5g
Fe ₂ (SO ₄) ₃ ·6H ₂ O	0.01g
CuSO ₄ ·5H ₂ O	1.0mg
MnSO ₄ ·H ₂ O	1.0mg
ZnSO ₄ ·7H ₂ O	1.0mg

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the selective isolation and cultivation of streptomycetes.

Glycerol Asparagine Agar

See: ISP 5

Glycerol Asparagine Meat Agar**Composition per liter:**

Agar	20.0g
Glycerol	10.0g
Beef extract	10.0g
L-Asparagine	1.0g
K ₂ HPO ₄	1.0g
Trace salts solution.....	1.0mL

pH 7.4 ± 0.2 at 25°C

Trace Salts Solution:**Composition per 100.0mL:**

FeSO ₄ ·7H ₂ O.....	0.1g
MnCl ₂ ·4H ₂ O.....	0.1g
ZnSO ₄ ·7H ₂ O.....	0.1g

Preparation of Trace Salts Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except trace salts solution, to distilled/deionized water and bring volume to 999.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 1.0mL of sterile trace salts solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Actinomadura* species and *Streptomyces* species.

Glycerol Asparagine Medium**Composition per liter:**

Agar	20.0g
Glycerol	10.0g
K ₂ HPO ₄	1.0g
L-Asparagine.....	1.0g
Trace salts solution	1.0mL

pH 7.2–7.4 at 25°C

Trace Salts Solution:**Composition per 100.0mL:**

FeSO ₄ ·7H ₂ O.....	0.1g
MnCl ₂ ·4H ₂ O	0.1g
ZnSO ₄ ·7H ₂ O	0.1g

Preparation of Trace Salts Solution: Add components to distilled/deionized water and bring the volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.0–7.4. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Streptomyces* species.

Glycerol Beef Extract Medium**Composition per liter:**

Agar	15.0g
Peptone	10.0g
NaCl	5.0g
Beef extract.....	3.0g
Glycerol	40.0mL

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Corynebacterium alkanolyticum*, *Pseudomonas mallei*, *Pseudomonas pseudomallei*, and *Rhodococcus* species.

Glycerol Calcium Malate Agar**Composition per liter:**

Agar	15.0g
Calcium malate.....	10.0g
Glycerol	10.0g
K ₂ HPO ₄	0.5g
NH ₄ Cl	0.5g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Actinoplanes awajinensis*, *Dactylosporangium aurantiacum*, *Dactylosporangium salmoneum*, *Dactylosporangium thailandense*, and *Planobispora rosea*.

Glycerol Chalk Agar

Composition per liter:

NaCl	30.0g
Agar	15.0g
Glycerol	10.0g
CaCO ₃	5.0g
Peptone.....	5.0g
Yeast extract.....	3.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes. Swirl flask while dispensing medium to keep CaCO₃ in suspension.

Use: For the cultivation of *Photobacterium* species and *Lucibacterium* species.

Glycerol Corn Steep Agar

Composition per liter:

Agar	12.0g
Corn steep powder	5.0g
Glycerol	5.0g
NaCl	3.0g
Peptone from casein.....	3.0g
Yeast extract.....	3.0g
Beef extract.....	1.0g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Saccharomonospora glauca*.

Glycerol-Enriched Medium

Composition per liter:

Glycerol	30.0g
Peptone.....	20.0g
Yeast extract.....	10.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Saccharomyces cerevisiae*.

Glycerol-Enriched Medium with 2% Ethanol

Composition per liter:

Glycerol	30.0g
Peptone.....	20.0g
Yeast extract.....	10.0g
Ethanol (absolute).....	20.0mL

Preparation of Medium: Add components, except ethanol, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Filter sterilize the ethanol. Aseptically add 20.0mL of sterile ethanol to the basal medium. Mix thoroughly. Distribute into sterile flasks or tubes.

Use: For the cultivation and maintenance of *Kluyveromyces lactis*.

Glycerol-Free Medium

Composition per liter:

L-Asparagine	4.0g
L-Glutamine	4.0g
Monosodium glutamate	4.0g
Na ₂ HPO ₄	2.5g
Pancreatic digest of casein.....	1.0g
KH ₂ PO ₄	1.0g
Triton® WR 1339.....	0.25g
Ferric ammonium citrate.....	0.05g
CaCl ₂	1.0mg
CuSO ₄	0.5mg
ZnSO ₄	0.5mg

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Mycobacterium tuberculosis* Bacille Calmette-Guérin (BCG) for vaccine production.

Glycerol Glycine Agar

Composition per liter:

Agar	15.0g
Glycine.....	2.5g
K ₂ HPO ₄	1.0g
NaCl	1.0g
CaCO ₃	0.1g
FeSO ₄	0.1g
MgSO ₄	0.1g
Glycerol	20.0mL

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components, except glycerol, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Add glycerol. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Streptomyces* species.

Glycerol Nutrient Agar

Composition per liter:

Agar	15.0g
Peptone	5.0g
NaCl	5.0g
Yeast extract.....	2.0g
Beef extract.....	1.0g
Glycerol	10.0mL

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Mycobacterium smegmatis*.

Soil	400.0g
------------	--------

Preparation of Soil Extract: Air dry garden soil and pass through a sieve. Weigh out 400.0g and add to 960.0mL of tap water. Autoclave for 60 min at 15 psi pressure–121°C. Cool to room temperature and allow soil to settle out. Decant supernatant solution. Filter through paper. Distribute into flasks in 200.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Actinomadura madurae*, *Amycolata autotrophica*, *Amycolata saturnea*, *Gordona bronchialis*, *Gordona terrae*, *Mycobacterium* species, *Nocardia* species, and *Tsukamurella paurometabolum*.

Glycine Cycloheximide Phenol Red Agar**Composition** per liter:

Solution B	800.0mL
Solution A	200.0mL

Solution A:**Composition** per 200.0mL:

Glycine.....	10.0g
(NH ₄) ₂ SO ₄	5.0g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.5g
NaCl	0.1g
CaCl ₂ ·2H ₂ O.....	0.1g
DL-Methionine.....	0.02g
DL-Tryptophan.....	0.02g
L-Histidine·HCl	0.01g
Inositol	2.0mg
H ₃ BO ₃	0.5mg
ZnSO ₄ ·7H ₂ O	0.4mg
MnSO ₄ ·4H ₂ O	0.4mg
Thiamine·HCl	0.4mg
Pyridoxine·HCl	0.4mg
Niacin.....	0.4mg
Calcium pantothenate	0.4mg
<i>p</i> -Aminobenzoic acid.....	0.2mg
Riboflavin	0.2mg
FeCl ₃	0.2mg
Na ₂ MoO ₄ ·4H ₂ O	0.2mg
KI	0.1mg

CuSO ₄ ·5H ₂ O.....	0.04mg
Folic acid	2.0μg
Biotin	2.0μg
Cycloheximide solution.....	1.6mL

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 200.0mL. Mix thoroughly. Filter sterilize.

Cycloheximide Solution:**Composition** per 100.0mL:

Cycloheximide.....	0.1g
--------------------	------

Preparation of Cycloheximide Solution: Add cycloheximide to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Solution B:**Composition** per 800.0mL:

Agar	20.0g
Phenol Red solution.....	30.0mL

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 800.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C.

Phenol Red Solution:**Composition** per 100.0mL:

Phenol Red.....	0.5g
-----------------	------

Preparation of Phenol Red Solution: Add Phenol Red to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: To 800.0mL of sterile solution B, aseptically add 200.0mL of sterile solution A at 55°C. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective cultivation and differentiation of fungi from clinical and nonclinical specimens. *Cryptococcus neoformans* turns the medium bright red.

Glycocholate Mineral Medium**Composition** per liter:

Agar	15.0g
K ₂ HPO ₄	3.5g
(NH ₄) ₂ SO ₄	2.0g
Sodium glycocholate	2.0g
KH ₂ PO ₄	1.5g
MgSO ₄ ·7H ₂ O	0.1g
Yeast extract.....	0.1g
CaCl ₂ ·2H ₂ O	0.01g
FeSO ₄ ·7H ₂ O.....	0.5mg

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Pseudomonas putida* and *Pseudomonas* species.

GMC MediumSee: **Gelatin Metronidazole Cadmium Medium**

G25N**(25% Glycerol Nitrate Agar)****Composition per liter:**

Glycerol, analytical grade	250.0g
Agar	12.0g
Yeast autolysate or extract	3.7g
KH ₂ PO ₄	0.75g
Czapek concentrate	7.5mL

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Penicillium* species.

GN Broth, Hajna**Composition per liter:**

Pancreatic digest of casein	10.0g
Peptic digest of animal tissue	10.0g
NaCl	5.0g
Sodium citrate	5.0g
K ₂ HPO ₄	4.0g
D-Mannitol	2.0g
KH ₂ PO ₄	1.5g
Glucose	1.0g
Sodium deoxycholate	0.5g

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 13 psi pressure–118°C.

Use: For the selective cultivation of *Salmonella* and *Shigella* species.

GN Broth, Hajna**Composition per liter:**

Tryptose	20.0g
NaCl	5.0g
Sodium citrate	5.0g
K ₂ HPO ₄	4.0g
Mannitol	2.0g
KH ₂ PO ₄	1.5g
Glucose	1.0g
Sodium deoxycholate	0.5g

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 10 psi pressure–115°C.

Use: For the selective cultivation of *Salmonella* and *Shigella* species.

GN HiVeg Broth**Composition per liter:**

Plant hydrolysate No. 1	20.0g
NaCl	5.0g

Sodium citrate	5.0g
K ₂ HPO ₄	4.0g
Mannitol	2.0g
KH ₂ PO ₄	1.5g
Glucose	1.0g
Synthetic detergent No. III	0.5g

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 10 psi pressure–115°C.

Use: For the selective cultivation of *Salmonella* and *Shigella* species.

**GNYS Agar
(DSMZ Medium 1119)****Composition per liter:**

Agar	18.0g
Sodium gluconate	3.0g
Yeast extract	1.0g
(NH ₄) ₂ SO ₄	1.0g
KH ₂ PO ₄	1.0g
NaCl	0.2g
MgCl ₂ ·6H ₂ O	0.2g
CaCl ₂ ·2H ₂ O	0.05g
Trace elements solution SL-8	1.0mL

pH 5.0 ± 0.2 at 25°C

Trace Elements Solution SL-8:**Composition per liter:**

Disodium EDTA	5.2g
FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	0.19g
MnCl ₂ ·4H ₂ O	0.1g
ZnCl ₂	0.07g
H ₃ BO ₃	0.06g
NaMoO ₄ ·2H ₂ O	0.04g
CuCl ₂ ·2H ₂ O	0.02g
NiCl ₂ ·6H ₂ O	0.02g

Preparation of Trace Elements Solution SL-8: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 5.0. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into Petri dishes or leave in tubes.

Use: For the cultivation of *Acidisphaera rubrifaciens*.

**GNYS Medium
(DSMZ Medium 1119)****Composition per liter:**

pH 6.5-6.8 at 25°C	

NaHCO₃ Solution:**Composition** per 50.0mL:

NaHCO ₃	5.0g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure-121°C.

Vitamin Solution:**Composition** per liter:

Pyridoxine·HCl.....	10.0mg
DL-Calcium pantothenate.....	5.0mg
Lipoic acid.....	5.0mg
Nicotinic acid.....	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Riboflavin.....	5.0mg

Thiamine·HCl.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Sparge with 80% N₂ + 20% CO₂.

L-Cysteine·HCl·H₂O Solution:**Composition** per 10.0mL:

L-Cysteine·HCl·H ₂ O.....	0.3g
--------------------------------------	------

Preparation of L-Cysteine·HCl·H₂O Solution: Add L-cysteine·HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure-121°C.

Na₂S·9H₂O Solution:**Composition** per 10.0mL:

Na ₂ S·9H ₂ O.....	0.3g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure-121°C.

Trace Elements Solution SL-10:**Composition** per liter:

FeCl ₂ ·4H ₂ O.....	1.5g
CoCl ₂ ·6H ₂ O.....	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	36.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O.....	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂.

Preparation of Medium: Add components, except NaHCO₃ solution, vitamin solution, L-cysteine·HCl·H₂O solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 920.0mL. Mix thoroughly. Sparge under 80% N₂ + 20% CO₂ for 3-4 min. Autoclave for 15 min at 15 psi pressure-121°C. Aseptically and anaerobically add 40.0mL of sterile NaHCO₃ solution, 20.0mL of sterile vitamin solution, 10.0mL of sterile L-cysteine·HCl·H₂O solution, and 10.0mL of sterile Na₂S·9H₂O solution. Mix thoroughly. Aseptically and anaerobically distribute into sterile screw-capped bottles under 80% N₂ + 20% CO₂.

Use: For the cultivation of *Methanosarcina mazei*.

Uracil.....	5.0mg
Biotin.....	4.0mg
Hypoxanthine.....	2.5mg
Sodium thioglycolate.....	0.025mg

Preparation of Part I: Add components to distilled/deionized water and bring volume to 123.0mL. Mix thoroughly. Adjust pH to 7.2 with 6*N* NaOH. Warm to 50°C for 45 min. Filter sterilize.

Part II:

Composition per 500.0mL:

Agar	10.0g
Soluble starch.....	7.5g

Preparation of Part II: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Preparation of Medium: Aseptically combine 123.0mL of sterile part I and 500.0mL of cooled, sterile part II. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the cultivation of *Neisseria gonorrhoeae*.

Gorbenko Medium

Composition per liter:

Agar	16.2g
Peptone.....	0.9g
NaCl.....	0.9g
Yeast extract.....	0.36g
Beef extract.....	0.18g
Lake water.....	1000.0mL

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Combine components. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Gordona rubropertinctus*, *Gordona terrae*, and heterotrophic marine bacteria.

Gorham's Medium for Algae

Composition per liter:

NaNO ₃	0.496g
MgSO ₄ ·7H ₂ O.....	0.075g
Na ₂ SiO ₃ ·9H ₂ O.....	0.058g
K ₂ HPO ₄	0.039g
CaCl ₂ ·2H ₂ O.....	0.036g
Na ₂ CO ₃	0.02g
Citric acid.....	6.0mg
EDTA.....	6.0mg
Ferric citrate.....	6.0mg

pH 7.5 ± 0.5 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Anabaena flosaquae*, *Selenastrum capricornutum*, and *Microcystis aeruginosa*.

GP Agar (Glycerol Peptone Agar)

Composition per liter:

Agar	15.0g
Peptone.....	10.0g
Glycerol	10.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of actinomycetes and *Mycobacterium spp.*

GPHF Agar

Composition per liter:

Agar	12.0g
Glucose.....	10.0g
Beef extract.....	5.0g
Pancreatic digest of casein.....	5.0g
Yeast extract.....	5.0g
CaCl ₂ ·2H ₂ O.....	0.74g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Actinoplanes caeruleus*, *Micromonospora* species, *Microtetraspora fusca*, and *Streptomyces yerevanensis*.

GPS Agar

GPVA Medium

Composition per liter:

Agar	15.0g
Yeast extract.....	10.0g
ACES buffer (2-[(2-amino-2-oxoethyl)- amino]-ethane sulfonic acid).....	10.0g
Glycine.....	3.0g
Charcoal, activated.....	2.0g
α-Ketoglutarate.....	1.0g
Fe ₄ (P ₂ O ₇) ₃ ·9H ₂ O.....	0.25g
Antibiotic inhibitor solution.....	10.0mL

pH 6.9 ± 0.2 at 25°C

Antibiotic Inhibitor Solution:

Composition per 10.0mL:

Anisomycin.....	0.08g
Vancomycin.....	5.0mg
Polymyxin B.....	100,000U

Preparation of Antibiotic Inhibitor Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except antibiotic inhibitor solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Adjust pH to 6.9. Aseptically add 10.0mL of sterile antibiotic inhibitor solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of *Legionella* species from environmental waters.

GPY/10 Medium**Composition per liter:**

KH ₂ PO ₄	1.5g
Glucose.....	1.0g
Peptone.....	1.0g
Na ₂ HPO ₄	0.915g
MgSO ₄ ·7H ₂ O.....	0.1g
Yeast extract.....	0.1g

pH 6.6–6.8 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 6.6–6.8. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Echinostelium minutum*.

GPY Salts Medium**(Glucose Peptone Yeast Extract Salts Medium)****Composition per liter:**

Glucose.....	1.0g
Peptone.....	0.5g
Yeast extract.....	0.1g
Modified Hutner's mineral base.....	20.0mL

Hutner's Mineral Base:**Composition per liter:**

MgSO ₄ ·7H ₂ O.....	29.7g
Nitrilotriacetic acid.....	10.0g

MnSO ₄ ·7H ₂ O.....	0.154g
CuSO ₄ ·5H ₂ O.....	0.04g
Co(NO ₃) ₂ ·6H ₂ O.....	0.025g
Na ₂ B ₄ O ₇ ·10H ₂ O.....	0.018g

Preparation of Metals "44": Add a few drops of H₂SO₄ to distilled/deionized water to inhibit precipitate formation. Add components to acidified distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Prostheco bacter fusiformis*.

Source: Grace's Insect Medium is available from BD Diagnostics.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Blastocrithidia culicis*.

**Gracilibacillus Medium
(DSMZ Medium 802)****Composition per liter:**

NaCl.....	100.0g
MgSO ₄ ·7H ₂ O.....	20.0g
Tris·HCl.....	12.0g
KCl.....	2.0g
Yeast extract.....	2.0g
Trypticase™ peptone.....	2.0g
NaBr.....	0.1g
Trace metals solution.....	2.0mL
Phosphate solution.....	10.0mL

Glucose solution	10.0mL
Calcium chloride solution.....	5.0mL
Iron chloride manganese chloride solution	2.0mL
pH 7.8 ± 0.2 at 25°C	

Trace Metals Solution:**Composition per liter:**

FeCl ₂ ·4H ₂ O	2.0g
CoCl ₂ ·6H ₂ O	250.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
NiCl ₂ ·6H ₂ O	70.0mg
AlCl ₃ ·6H ₂ O	60.0mg
Na ₂ MoO ₄ ·2H ₂ O	40.0mg
H ₃ BO ₃	6.0mg
Na ₂ WO ₄ ·2H ₂ O	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (32% solution).....	10.0mL

Preparation of Trace Metals Solution: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly.

Phosphate Solution:**Composition per liter:**

KH ₂ PO ₄	50.0g
---------------------------------------	-------

Preparation of Phosphate Solution: Add KH₂PO₄ to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Calcium Chloride Solution:**Composition per 10.0mL:**

CaCl ₂ ·2H ₂ O.....	0.1g
---	------

Preparation of Calcium Chloride Solution: Add CaCl₂·2H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Iron Chloride Manganese Chloride Solution:**Composition per 10.0mL:**

FeCl ₂ ·4H ₂ O	0.2g
MnCl ₂ ·4H ₂ O.....	0.2g

Preparation of Iron Chloride Manganese Chloride Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Glucose Solution:**Composition per 10.0mL:**

Glucose	2.0g
---------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Preparation of Medium: Add components, except glucose solution, phosphate solution, calcium chloride solution, and iron chloride manganese chloride solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.8. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add 10.0mL glucose solution, 10.0mL phosphate solution, 5.0mL calcium chloride solution, and 2.0mL iron chloride manganese chloride solution. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or bottles.

Use: For the cultivation of *Gracilibacillus* spp.

Grahamella Medium**Composition per liter:**

Agar	20.0g
Saline (0.9% solution)	800.0mL
Rabbit serum, filter sterilized	90.0mL
Rabbit hemoglobin (2% solution).....	45.0mL
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components, except rabbit serum and rabbit hemoglobin, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Distribute into small tubes in 2.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 60°C. Aseptically add 0.2mL of sterile rabbit serum and 0.1mL of rabbit hemoglobin solution to each tube. Mix thoroughly. Autoclave for 30 min with a mixture of steam and air at 0 psi pressure–56°C.

Use: For the cultivation of *Grahamella* species.

Granada Medium**Composition per liter:**

Starch, soluble.....	150.0g
Proteose peptone No. 3	38.0g
NaCl.....	3.0g
Trimethoprim lactate.....	0.015g
Sodium phosphate	
buffer (0.06M, pH 7.4)	900.0mL
Horse serum, coagulated.....	100.0mL
pH 7.4 ± 0.2 at 25°C	

Preparation of Medium: Add proteose peptone No. 3 and NaCl to 200.0mL of sodium phosphate buffer and bring to boiling. Add 400.0mL of cold sodium phosphate buffer, starch, and trimethoprim lactate. Mix thoroughly. Bring volume to 900.0mL with sodium phosphate buffer. Gently heat while stirring in a boiling water bath for exactly 20 min. Do not autoclave. Cool to 90°–95°C. Add horse serum. Mix thoroughly. Cool to 60°–65°C while stirring. Pour into sterile Petri dishes. Medium will solidify in 2–3 hr.

Use: For the early selective isolation and cultivation of Group B streptococci from clinical specimens.

**Granulibacter Medium
(DSMZ Medium 1186)****Composition per liter:**

Glucose	50.0g
CaCO ₃	12.5g
Yeast extract	5.0g
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Granulibacter* spp.

Gray's Agar**Composition per liter:**

Glucose	30.0g
Agar	15.0g

Yeast extract..... 7.0g
 KH₂PO₄..... 5.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Emericellopsis minima* and *Verticillium lateritium*.

Green Top Agar

Composition per liter:

Agar 15.0g
 Yeast extract..... 2.0g
 Sodium acetate..... 1.0g
 Pancreatic digest of casein..... 1.0g
 Soil extract..... 50.0mL

pH 7.4 ± 0.2 at 25°C

Soil Extract:

Composition per 200.0mL:

African Violet soil..... 0.5g
 Na₂CO₃..... 0.5g

Preparation of Soil Extract: Add components to tap water and bring volume to 200.0mL. Autoclave for 60 min at 15 psi pressure–121°C. Filter through Whatman filter paper.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Bacillus macroides*, *Caryophanon latum*, *Lampropedia hyalina*, and *Vitreoscilla stercoraria*.

Green Yeast and Mold Broth (m-Green Yeast and Mold Broth)

Composition per liter:

Glucose 50.0g
 Yeast extract..... 9.0g
 Pancreatic digest of casein..... 5.0g
 Peptic digest of animal tissue..... 5.0g
 MgSO₄·7H₂O 2.1g
 K₂HPO₄..... 2.0g
 α-Amylase 0.05g
 Thiamine 0.05g
 Bromocresol Green 0.026g

pH 4.6 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems and Acumedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 10 min at 15 psi pressure–121°C.

Use: For the cultivation of fungi from beverages.

Group A Selective Strep Agar with Sheep Blood

Composition per liter:

Pancreatic digest of casein..... 14.5g
 Agar 14.0g
 NaCl..... 5.0g

Papaic digest of soybean meal..... 5.0g
 Sheep blood 50.0mL
 Growth factor solution..... 10.0mL
 Selective agents solution..... 10.0mL

pH 7.4 ± 0.2 at 25°C

Growth Factor Solution:

Composition per 10.0mL:

Growth factors, BBL 1.5g

Preparation of Growth Factor Solution: Add growth factors to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Selective Agents Solution:

Composition per 10.0mL:

Selective agents 0.042g

Preparation of Selective Agents Solution: Add selective agents to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except sheep blood, growth factor solution, and selective agents solution, to distilled/deionized water and bring volume to 930.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50.0mL of sheep blood, 10.0mL of sterile growth factor solution, and 10.0mL of sterile selective agents solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective cultivation and primary isolation of group A streptococci, especially *Streptococcus pyogenes*, from clinical specimens.

Group B Streptococci Agar

See: [GBS Agar Base, Islam](#)

Group B Streptococci Medium

See: [GBS Medium, Rapid](#)

GS Medium

Composition per liter:

Morpholinopropane sulfonic acid..... 10.0g
 Yeast extract..... 6.0g
 Glucose 5.0g
 Urea..... 2.0g
 L-Cysteine·HCl 1.0g
 K₂HPO₄·3H₂O 1.0g
 KH₂PO₄..... 0.5g
 MgCl₂·6H₂O 0.5g
 CaCl₂·2H₂O 0.05g
 FeSO₄·7H₂O..... 1.25mg
 Resazurin 1.0mg

pH 7.2 ± 0.2 at 25°C

Glucose Solution:

Composition per 20.0mL:

Glucose 2.0g

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize. Sparge with 100% N₂.

Preparation of Medium: Add components, except glucose solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 25 min at 15 psi pres-

sure–121°C. Aseptically and anaerobically add 20.0mL of sterile glucose solution. Mix thoroughly.

Use: For the cultivation and maintenance of *Clostridium thermocellum*.

GSP Agar

Composition per liter:

Starch, soluble.....	20.0g
Agar.....	15.0g
Sodium glutamate.....	10.0g
K ₂ HPO ₄	2.0g
MgSO ₄ ·7H ₂ O.....	0.5g
Phenol Red.....	0.36g

pH 7.2–7.4 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the selective isolation and cultivation of *Pseudomonas* species.

GSTB

See: **Glucose Salt Teepol Broth**

GTC Agar Base with Bicarbonate

Composition per liter:

Agar.....	15.0g
Casein enzymatic hydrolysate.....	15.0g
Papaic digst of soybean meal.....	5.0g
NaCl.....	5.0g
KH ₂ PO ₄	5.0g
Glucose.....	1.0g
Esculin.....	1.0g
Thallos acetate.....	0.5g
Ferric citrate.....	0.5g
Polysorbate 80.....	0.75g
Bicarbonate solution.....	10.0mL

pH 7.3 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Bicarbonate Solution:

Composition per 10.0mL:

NaHCO ₃	1.0g
--------------------------	------

Preparation of Bicarbonate Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except bicarbonate solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add bicarbonate solution. Mix thoroughly. Pour into Petri dishes or aseptically distribute into sterile tubes.

Use: For the recovery of enterococci from food.

GTYE Medium

(Glucose Tryptone Yeast Extract Medium)

Composition per liter:

NaCl.....	30.0g
Agar.....	15.0g
Pancreatic digest of casein.....	10.0g

Yeast extract.....	10.0g
Glucose.....	5.0g
MgSO ₄ ·7H ₂ O.....	5.0g

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of ATCC strain 21081.

Guanosine Medium

Composition per liter:

Glucose.....	20.0g
Peptone.....	10.0g
Yeast extract.....	10.0g
Guanosine.....	0.02g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Salmonella choleraesuis*.

Guizotia abyssinica Creatinine Agar

See: **Birdseed Agar**

Gum Base Nalidixic Acid Medium

See: **GBNA Medium**

Gum Listeria Medium (Gum Base Nalidixic Acid Medium)

Composition per liter:

Gellan gum.....	8.0g
Casein enzymic hydrolysate.....	5.7g
NaCl.....	1.7g
Papaic digest of soybean meal.....	1.0g
Dextrose.....	0.83g
K ₂ HPO ₄	0.83g
MgCl ₂ ·6H ₂ O.....	0.33g
Nalidixic acid.....	0.05g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation of *Listeria monocytogenes* from clinical and nonclinical specimens.

Gum Tragacanth Gum Arabic Medium

Composition per 100.0mL:

Gum tragacanth.....	2.0g
Gum arabic.....	1.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the cultivation of aciduric flat sour sporeformers from foods. For the isolation and cultivation of *Desulfotomaculum nigrificans* from foods.

Guttman's IIB Medium**Composition per liter:**

Sucrose.....	10.0g
Triethanolamine.....	5.0g
L-Glutamic acid.....	1.0g
MgSO ₄ ·7H ₂ O.....	0.8g
NaCl.....	0.5g
L-Arginine.....	0.3g
L-Histidine.....	0.2g
K ₃ PO ₄	0.2g
DL-Methionine.....	0.2g
Salts solution.....	1.0mL
Vitamin solution.....	1.0mL

Salts Solution:**Composition per 100.0mL:**

CaCl ₂	0.3g
Fe(NH ₄) ₂ (SO ₄) ₂ ·6H ₂ O.....	0.2g
MnSO ₄ ·H ₂ O.....	0.1g
ZnSO ₄ ·7H ₂ O.....	0.1g
CuSO ₄ ·5H ₂ O.....	0.04g
CoSO ₄ ·7H ₂ O.....	0.01g
H ₃ BO ₃	0.01g
Ammonium molybdate.....	0.005g

Preparation of Salts Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Vitamin Solution:**Composition per 100.0mL:**

Calcium D-(+)-pantothenate.....	0.1g
Nicotinic acid.....	0.1g
Pyridoxamine-HCl.....	0.1g
Thiamine-HCl.....	0.1g
<i>p</i> -Aminobenzoic acid.....	0.001g
Biotin.....	0.001g

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Store at 4°C.

Preparation of Medium: Add components, except vitamin solution, to distilled/deionized water and bring volume to 999.0mL. Mix thoroughly. Autoclave for 18 min at 15 psi pressure–121°C. Aseptically add 1.0mL of sterile vitamin solution. Mix thoroughly. Aseptically distribute into sterile screw-capped tubes.

Use: For the cultivation of *Crithidia oncopelti*.

GV Medium**Composition per 1051.0mL:**

NaHCO ₃	3.0g
NaCl.....	2.25g
Yeast extract.....	1.0g
NH ₄ Cl.....	0.5g
K ₂ HPO ₄	0.348g
KH ₂ PO ₄	0.227g
FeSO ₄ ·7H ₂ O.....	2.0mg
Resazurin.....	0.5mg
Vitamin solution.....	10.0mL
Substrate solution.....	10.0mL
L-Cysteine-HCl solution.....	10.0mL
Na ₂ S·9H ₂ O solution.....	10.0mL
MgSO ₄ ·7H ₂ O solution.....	10.0mL
CaCl ₂ ·2H ₂ O solution.....	10.0mL

Selenite-tungstate solution.....	1.0mL
Trace elements solution SL-10.....	1.0mL
pH 7.0 ± 0.2 at 25°C	

Vitamin Solution:**Composition per liter:**

Pyridoxine-HCl.....	10.0mg
Calcium DL-pantothenate.....	5.0mg
Lipoic acid.....	5.0mg
Nicotinic acid.....	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Riboflavin.....	5.0mg
Thiamine-HCl.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Substrate Solution:**Composition per 10.0mL:**

Sodium crotonate.....	10.0mg
-----------------------	--------

Preparation of Substrate Solution: Add sodium crotonate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

L-Cysteine-HCl Solution:**Composition per 10.0mL:**

L-Cysteine-HCl.....	0.3g
---------------------	------

Preparation of L-Cysteine-HCl Solution: Add L-cysteine-HCl to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O.....	0.3g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gas under 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

MgSO₄·7H₂O Solution:**Composition per 10.0mL:**

MgSO ₄ ·7H ₂ O.....	0.5g
---	------

Preparation of MgSO₄·7H₂O Solution: Add MgSO₄·7H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

CaCl₂·2H₂O Solution:**Composition per 10.0mL:**

CaCl ₂ ·2H ₂ O.....	0.25g
---	-------

Preparation of CaCl₂·2H₂O Solution: Add CaCl₂·2H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Selenite-Tungstate Solution:**Composition per liter:**

NaOH.....	0.5g
-----------	------

Na ₂ WO ₄ ·2H ₂ O	4mg
Na ₂ SeO ₃ ·5H ₂ O	3mg

Preparation of Selenite-Tungstate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution SL-10:

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Gas under 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂. Add components, except substrate solution, MgSO₄·7H₂O solution, CaCl₂·2H₂O solution, selenite-tungstate solution, L-cysteine-HCl solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 10.0mL of sterile MgSO₄·7H₂O solution, 10.0mL of sterile substrate solution, 10.0mL of sterile CaCl₂·2H₂O solution, 1.0mL of sterile selenite-tungstate solution, 10.0mL of sterile L-cysteine-HCl solution, and 10.0mL of sterile Na₂S·9H₂O solution. Mix thoroughly. Adjust pH to 7.0 to 7.2. Aseptically and anaerobically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Ilyobacter delafieldii*.

GV Medium

Composition per 1051.0mL:

NaHCO ₃	3.0g
NaCl	2.25g
Yeast extract	1.0g
NH ₄ Cl	0.5g
K ₂ HPO ₄	0.348g
KH ₂ PO ₄	0.227g
FeSO ₄ ·7H ₂ O	2.0mg
Resazurin	0.5mg
Vitamin solution	10.0mL
Substrate solution	10.0mL
L-Cysteine-HCl solution	10.0mL
Na ₂ S·9H ₂ O solution	10.0mL
MgSO ₄ ·7H ₂ O solution	10.0mL
CaCl ₂ ·2H ₂ O solution	10.0mL
Selenite-tungstate solution	1.0mL
Trace elements solution SL-10	1.0mL

pH 7.0 ± 0.2 at 25°C

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl	10.0mg
Calcium DL-pantothenate	5.0mg

Lipoic acid	5.0mg
Nicotinic acid	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Riboflavin	5.0mg
Thiamine-HCl	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Substrate Solution:

Composition per 10.0mL:

D-Glucose	2.0g
-----------------	------

Preparation of Substrate Solution: Add D-glucose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

L-Cysteine-HCl Solution:

Composition per 10.0mL:

L-Cysteine-HCl	0.3g
----------------------	------

Preparation of L-Cysteine-HCl Solution: Add L-cysteine-HCl to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.3g
---	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gas under 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

MgSO₄·7H₂O Solution:

Composition per 10.0mL:

MgSO ₄ ·7H ₂ O	0.5g
--	------

Preparation of MgSO₄·7H₂O Solution: Add MgSO₄·7H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

CaCl₂·2H₂O Solution:

Composition per 10.0mL:

CaCl ₂ ·2H ₂ O	0.25g
--	-------

Preparation of CaCl₂·2H₂O Solution: Add CaCl₂·2H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Selenite-Tungstate Solution:

Composition per liter:

NaOH	0.5g
Na ₂ WO ₄ ·2H ₂ O	4mg
Na ₂ SeO ₃ ·5H ₂ O	3mg

Preparation of Selenite-Tungstate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution SL-10:**Composition per liter:**

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Gas under 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂. Add components, except substrate solution, MgSO₄·7H₂O solution, CaCl₂·2H₂O solution, selenite-tungstate solution, L-cysteine-HCl solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 10.0mL of sterile substrate solution, 10.0mL of sterile MgSO₄·7H₂O solution, 10.0mL of sterile CaCl₂·2H₂O solution, 1.0mL of sterile selenite-tungstate solution, 10.0mL of sterile L-cysteine-HCl solution, and 10.0mL of sterile Na₂S·9H₂O solution. Mix thoroughly. Adjust pH to 7.0–7.2. Aseptically and anaerobically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Clostridium magnum* and *Clostridium* species.

GV Medium**Composition per 1061.0mL:**

NaHCO ₃	3.0g
NaCl	2.25g
Yeast extract	1.0g
NH ₄ Cl	0.5g
K ₂ HPO ₄	0.348g
KH ₂ PO ₄	0.227g
FeSO ₄ ·7H ₂ O	2.0mg
Resazurin	0.5mg
Substrate solution	20.0mL
Vitamin solution	10.0mL
L-Cysteine-HCl solution	10.0mL
Na ₂ S·9H ₂ O solution	10.0mL
MgSO ₄ ·7H ₂ O solution	10.0mL
CaCl ₂ ·2H ₂ O solution	10.0mL
Selenite-tungstate solution	1.0mL
Trace elements solution SL-10	1.0mL
pH 7.0 ± 0.2 at 25°C	

Substrate Solution:**Composition per 20.0mL:**

Sodium citrate	6.0g
----------------------	------

Preparation of Substrate Solution: Add sodium citrate to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Vitamin Solution:**Composition per liter:**

Pyridoxine-HCl	10.0mg
Calcium DL-pantothenate	5.0mg
Lipoic acid	5.0mg
Nicotinic acid	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Riboflavin	5.0mg
Thiamine-HCl	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

L-Cysteine-HCl Solution:**Composition per 10.0mL:**

L-Cysteine-HCl	0.3g
----------------------	------

Preparation of L-Cysteine-HCl Solution: Add L-cysteine-HCl to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O	0.3g
---	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

MgSO₄·7H₂O Solution:**Composition per 10.0mL:**

MgSO ₄ ·7H ₂ O	0.5g
--	------

Preparation of MgSO₄·7H₂O Solution: Add MgSO₄·7H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

CaCl₂·2H₂O Solution:**Composition per 10.0mL:**

CaCl ₂ ·2H ₂ O	0.25g
--	-------

Preparation of CaCl₂·2H₂O Solution: Add CaCl₂·2H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Selenite-Tungstate Solution:**Composition per liter:**

NaOH	0.5g
Na ₂ WO ₄ ·2H ₂ O	4mg
Na ₂ SeO ₃ ·5H ₂ O	3mg

Preparation of Selenite-Tungstate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution SL-10:**Composition per liter:**

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg

Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Gas under 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂. Add components, except substrate solution, MgSO₄·7H₂O solution, CaCl₂·2H₂O solution, selenite-tungstate solution, L-cysteine·HCl solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 20.0mL of sterile substrate solution, 10.0mL of sterile MgSO₄·7H₂O solution, 10.0mL of sterile CaCl₂·2H₂O solution, 1.0mL of sterile selenite-tungstate solution, 10.0mL of sterile L-cysteine·HCl solution, and 10.0mL of sterile Na₂S·9H₂O solution. Mix thoroughly. Adjust pH to 7.0–7.2. Aseptically and anaerobically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Campylobacter* species.

GV Medium

Composition per 1061.0mL:

NaHCO ₃	3.0g
NaCl	2.25g
Yeast extract	1.0g
NH ₄ Cl	0.5g
K ₂ HPO ₄	0.348g
KH ₂ PO ₄	0.227g
FeSO ₄ ·7H ₂ O	2.0mg
Resazurin	0.5mg
Vitamin solution	10.0mL
Substrate solution	10.0mL
L-Cysteine·HCl solution	10.0mL
Na ₂ S·9H ₂ O solution	10.0mL
MgSO ₄ ·7H ₂ O solution	10.0mL
CaCl ₂ ·2H ₂ O solution	10.0mL
Selenite-tungstate solution	1.0mL
Trace elements solution SL-10	1.0mL
pH 7.0 ± 0.2 at 25°C	

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl	10.0mg
Calcium DL-pantothenate	5.0mg
Lipoic acid	5.0mg
Nicotinic acid	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Riboflavin	5.0mg
Thiamine-HCl	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Substrate Solution:

Composition per 20.0mL:

D-Glucose	10.0g
-----------------	-------

Preparation of Substrate Solution: Add sodium crotonate to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

L-Cysteine·HCl Solution:

Composition per 10.0mL:

L-Cysteine·HCl	0.3g
----------------------	------

Preparation of L-Cysteine·HCl Solution: Add L-cysteine·HCl to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.3g
---	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gas under 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

MgSO₄·7H₂O Solution:

Composition per 10.0mL:

MgSO ₄ ·7H ₂ O	0.5g
--	------

Preparation of MgSO₄·7H₂O Solution: Add MgSO₄·7H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

CaCl₂·2H₂O Solution:

Composition per 10.0mL:

CaCl ₂ ·2H ₂ O	0.25g
--	-------

Preparation of CaCl₂·2H₂O Solution: Add CaCl₂·2H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Selenite-Tungstate Solution:

Composition per liter:

NaOH	0.5g
Na ₂ WO ₄ ·2H ₂ O	4mg
Na ₂ SeO ₃ ·5H ₂ O	3mg

Preparation of Selenite-Tungstate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution SL-10:

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized

water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Gas under 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂. Add components, except substrate solution, MgSO₄·7H₂O solution, CaCl₂·2H₂O solution, selenite-tungstate solution, L-cysteine-HCl solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 20.0mL of sterile substrate solution, 10.0mL of sterile MgSO₄·7H₂O solution, 10.0mL of sterile CaCl₂·2H₂O solution, 1.0mL of sterile selenite-tungstate solution, 10.0mL of sterile L-cysteine-HCl solution, and 10.0mL of sterile Na₂S·9H₂O solution. Mix thoroughly. Adjust pH to 7.0–7.2. Aseptically and anaerobically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Clostridium quinii*.

GY Agar (ATCC Medium 1994)

Composition per liter:

Agar	15.0 g
Glucose	10.0 g
Yeast extract	2.5 g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Aspergillus nidulans*.

GY Double-Strength Agar with Uracil and Uridine

Composition per liter:

Glucose	20.0 g
Agar	15.0 g
Yeast extract	5.0 g
Uracil	1.5g
Uridine	1.5g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Aspergillus nidulans*.

GYE Medium

Composition per liter:

Glucose	15.0g
Yeast extract	5.0g
CaCl ₂ ·2H ₂ O	0.2g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Bacillus thermoruber*.

GYEP Medium

Composition per liter:

Glucose	20.0g
Peptone	10.0g
Yeast extract	5.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Aspergillus nidulans* and *Basidiobolus microsporus*.

GYM+S Agar

Composition per liter:

Starch	20.0g
Agar	12.0g
Malt extract	10.0g
CaCO ₃	4.0g
Glucose	4.0g
Yeast extract	4.0g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components, except agar, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Using pH indicator paper, adjust pH to 7.2 with KOH. Add agar. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Actinomadura* species, *Actinoplanes* species, *Amycolata autotrophica*, *Amycolatopsis orientalis*, *Amycolatopsis sulphurea*, *Cellulomonas cellulans*, *Cellulomonas turbata*, *Gordona rubropertinctus*, *Kineosporia aurantiaca*, *Mycobacterium* species, *Nocardia* species, *Nocardioides albus*, *Nocardioopsis albus*, *Oerskovia* species, *Promicromonospora enterophila*, *Pseudonocardia compacta*, *Saccharomonospora viridis*, *Saccharopolyspora hirsuta*, *Saccharothrix coeruleofusca*, *Saccharothrix longispora*, *Sporichthya polymorpha*, *Streptomyces* species, *Streptosporangium corrugatum*, and *Thermoactinomyces dichotomicus*.

GYM + Seawater (DSMZ Medium 871)

Composition per liter:

Sea salts	32.0g
Agar	15.0g
Malt extract	10.0g
Glucose	4.0g
Yeast extract	4.0g
CaCO ₃	2.0g

pH 7.0–7.4 at 25°C

Preparation of Medium: Add sea salts to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Add remaining components. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Nocardioopsis aegyptia* (*Nocardioopsis* sp.) and *Nocardioopsis halotolerans* (*Nocardioopsis* sp.).

GYM Starch Agar (DSMZ Medium 214)

Composition per liter:

Starch	20.0g
Agar	12.0g
Malt extract	10.0g
Glucose	4.0g

Yeast extract.....	4.0g
CaCO ₃	2.0g
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components, except agar, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Add agar. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Amycolatopsis orientalis* subsp. *orientalis*, *Nocardia* spp., *Mycobacterium* spp., *Pseudonocardia* spp., *Saccharothrix* spp., *Kineosporia aurantiaca*, *Kitasatospora setae*, *Oerskovia turbata* (*Cellulomonas turbata*), *Cellulosimicrobium cellulans*, and *Thermoactinomyces dichotomicus*.

GYM Starch Medium (DSMZ Medium 214)

Composition per liter:

Starch.....	20.0g
Malt extract.....	10.0g
Glucose.....	4.0g
Yeast extract.....	4.0g
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Amycolatopsis orientalis* subsp. *orientalis*, *Nocardia* spp., *Mycobacterium* spp., *Pseudonocardia* spp., *Saccharothrix* spp., *Kineosporia aurantiaca*, *Kitasatospora setae*, *Oerskovia turbata* (*Cellulomonas turbata*), *Cellulosimicrobium cellulans*, and *Thermoactinomyces dichotomicus*.

GYM Streptomyces Agar (DSMZ Medium 65)

Composition per liter:

Agar.....	12.0g
Malt extract.....	10.0g
Glucose.....	4.0g
Yeast extract.....	4.0g
CaCO ₃	2.0g
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components, except agar, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Add agar. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Streptomyces* spp.

GYM Streptomyces Medium (DSMZ Medium 65)

Composition per liter:

Malt extract.....	10.0g
Glucose.....	4.0g
Yeast extract.....	4.0g
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2.

Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Streptomyces* spp.

GYP Agar

Composition per liter:

Glucose.....	40.0g
Agar.....	20.0g
Peptone.....	20.0g
Sodium acetate.....	20.0g
Yeast extract.....	20.0g
Solution A.....	10.0mL
pH 6.8 ± 0.2 at 25°C	

Solution A:

Composition per 100.0mL:

MgSO ₄ ·7H ₂ O.....	4.0g
FeSO ₄ ·7H ₂ O.....	0.2g
MnSO ₄ ·H ₂ O.....	0.2g
NaCl.....	0.2g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Bacillus laevolacticus*, *Bacillus racemilacticus*, and *Sporolactobacillus inulinus*.

GYP Medium

See: [Glucose Yeast Extract Peptone Medium](#)

GYP Sodium Acetate Mineral Salts Broth (Glucose Yeast Peptone Sodium Acetate Mineral Salts Broth)

Composition per liter:

FeSO ₄ ·7H ₂ O.....	10.0g
Glucose.....	10.0g
MnSO ₄ ·H ₂ O.....	10.0g
Peptone.....	10.0g
Sodium acetate.....	10.0g
Yeast extract.....	10.0g
MgSO ₄ ·7H ₂ O.....	0.2g
NaCl.....	10.0mg
pH 6.8 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.8. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Lactobacillus pentosus*, *Lactobacillus plantarum*, *Pediococcus acidilactici*, and *Pediococcus pentosaceus*.

GYP Sodium Acetate Mineral Salts Broth with Sodium Chloride

Composition per liter:

NaCl.....	50.0g
FeSO ₄ ·7H ₂ O.....	10.0g
Glucose.....	10.0g

MnSO ₄ ·H ₂ O	10.0g
Peptone.....	10.0g
Sodium acetate.....	10.0g
Yeast extract.....	10.0g
MgSO ₄ ·7H ₂ O.....	0.2g
NaCl.....	10.0mg

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.8. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Pediococcus halophilus*.

GYP Sodium Acetate Mineral Salts Broth with 5% Sodium Chloride (LMG Medium 244)

Composition per liter:

NaCl.....	50.0g
Glucose.....	10.0g
Yeast extract.....	10.0g
Peptone.....	10.0g
Sodium acetate.....	10.0g
MgSO ₄ ·7H ₂ O.....	0.2g
MnSO ₄ ·4H ₂ O.....	10.0mg
FeSO ₄ ·7H ₂ O.....	10.0mg

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Tetragenococcus halophilus* and *Tetragenococcus muraticus*.

GYPT Medium (Glucose Yeast Extract Peptone Thioglycolate Medium)

Composition per liter:

Agar.....	8.0g
Yeast extract.....	6.0g
Glucose.....	5.0g
Peptone.....	2.0g
Sodium thioglycolate.....	0.5g

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.4. Gently heat and bring to boiling. Anaerobically distribute into tubes under 97% N₂ + 3% H₂. Cap tubes with rubber stoppers. Place tubes in a press. Autoclave for 15 min at 15 psi pressure–121°C with fast exhaust.

Use: For the cultivation of *Spirochaeta stenostrepta*.

H Agar

Composition per liter:

Agar.....	15.0g
Pancreatic digest of casein.....	10.0g
NaCl.....	8.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring

to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Escherichia coli* and a variety of other bacteria.

H Agar (Hominis Agar)

Composition per 98.0mL:

Base agar.....	65.0mL
Horse serum.....	20.0mL
Yeast dialysate.....	10.0mL
Penicillin solution.....	2.0mL
Thallium acetate solution.....	1.0mL

pH 7.3 ± 0.2 at 25°C

Base Agar:

Composition per liter:

Papaic digest of soybean meal.....	20.0g
Agarose.....	10.0g
NaCl.....	5.0g
Phenol Red (2% solution).....	1.0mL

Preparation of Base Agar: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.3. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Yeast Dialysate:

Composition per 10.0mL:

Active, dried yeast.....	450.0g
--------------------------	--------

Preparation of Yeast Dialysate: Add active, dried yeast to distilled/deionized water and bring volume to 1250.0mL. Gently heat and bring to 40°C. Autoclave for 15 min at 15 psi pressure–121°C. Put into dialysis tubing. Dialyze against 1.0L of distilled/deionized water for 2 days at 4°C. Discard tubing and its contents. Autoclave dialysate for 15 min at 15 psi pressure–121°C. Store at –20°C.

Penicillin Solution:

Composition per 10.0mL:

Penicillin.....	100,000U
-----------------	----------

Preparation of Penicillin Solution: Add penicillin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Thallium Acetate Solution:

Composition per 10.0mL:

Thallium acetate.....	0.33g
-----------------------	-------

Preparation of Thallium Acetate Solution: Add thallium acetate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Caution: Thallium salts are toxic.

Preparation of Medium: To 65.0mL of cooled, sterile base agar, aseptically add 10.0mL of sterile yeast dialysate, 20.0mL of horse serum, 2.0mL of sterile penicillin solution, and 1.0mL of sterile thallium acetate solution. Mix thoroughly. Pour into 10mm × 35mm Petri dishes in 5.0mL volumes. Allow plates to stand overnight at 25°C to remove excess surface moisture.

Use: For the isolation of *Mycoplasma pneumoniae* and *Mycoplasma hominis*.

H Broth

Composition per liter:

NaCl	5.0g
Pancreatic digest of casein	5.0g
Peptone	5.0g
Beef extract	3.0g
K ₂ HPO ₄	2.5g
Glucose	1.0g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes in 4.0mL volumes. Autoclave for 15 min at 10 psi pressure–115°C.

Use: For the preparation of the H agglutination antigen used in the differentiation and identification of *Salmonella* species types and subtypes.

H Broth (Hominis Broth)

Composition per 99.0mL:

Base broth	65.0mL
Horse serum	20.0mL
Yeast dialysate	10.0mL
Penicillin solution	2.0mL
Glucose solution	1.0mL
Thallium acetate solution	1.0mL

pH 7.3 ± 0.2 at 25°C

Base Broth:

Composition per liter:

Papaic digest of soybean meal	20.0g
NaCl	5.0g
Phenol Red (2% solution)	1.0mL

Preparation of Base Broth: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.3. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Yeast Dialysate:

Composition per 10.0mL:

Dried yeast, active	450.0g
---------------------------	--------

Preparation of Yeast Dialysate: Add active, dried yeast to distilled/deionized water and bring volume to 1250.0mL. Gently heat and bring to 40°C. Autoclave for 15 min at 15 psi pressure–121°C. Put into dialysis tubing. Dialyze against 1.0L of distilled/deionized water for 2 days at 4°C. Discard tubing and its contents. Autoclave dialysate for 15 min at 15 psi pressure–121°C. Store at –20°C.

Penicillin Solution:

Composition per 10.0mL:

Penicillin	100,000U
------------------	----------

Preparation of Penicillin Solution: Add penicillin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Glucose Solution:

Composition per 10.0mL:

D-Glucose	1.8g
-----------------	------

Preparation of Glucose Solution: Add D-glucose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Thallium Acetate Solution:

Composition per 10.0mL:

Thallium acetate	0.33g
------------------------	-------

Preparation of Thallium Acetate Solution: Add thallium acetate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Caution: Thallium salts are toxic.

Preparation of Medium: To 65.0mL of cooled, sterile base broth, aseptically add 10.0mL of sterile yeast dialysate, 20.0mL of horse serum, 2.0mL of sterile penicillin solution, 1.0mL of sterile glucose solution, and 1.0mL of sterile thallium acetate solution. Mix thoroughly. Aseptically distribute into sterile screw-capped tubes in 5.0mL volumes. Screw caps down tightly.

Use: For the isolation and cultivation of *Mycoplasma pneumoniae*.

H Broth (Hominis Broth)

Composition per 100.0mL:

Base broth	65.0mL
Horse serum	20.0mL
Yeast dialysate	10.0mL
Penicillin solution	2.0mL
Arginine solution	2.0mL
Thallium acetate solution	1.0mL

pH 7.3 ± 0.2 at 25°C

Base Broth:

Composition per liter:

Papaic digest of soybean meal	20.0g
NaCl	5.0g
Phenol Red (2% solution)	1.0mL

Preparation of Base Broth: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.3. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Yeast Dialysate:

Composition per 10.0mL:

Dried yeast, active	450.0g
---------------------------	--------

Preparation of Yeast Dialysate: Add active, dried yeast to distilled/deionized water and bring volume to 1250.0mL. Gently heat and bring to 40°C. Autoclave for 15 min at 15 psi pressure–121°C. Put into dialysis tubing. Dialyze against 1.0L of distilled/deionized water for 2 days at 4°C. Discard tubing and its contents. Autoclave dialysate for 15 min at 15 psi pressure–121°C. Store at –20°C.

Penicillin Solution:

Composition per 10.0mL:

Penicillin	100,000U
------------------	----------

Preparation of Penicillin Solution: Add penicillin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Arginine Solution:

Composition per 10.0mL:

L-Arginine	1.74g
------------------	-------

Preparation of Arginine Solution: Add L-arginine to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Thallium Acetate Solution:

Composition per 10.0mL:

Thallium acetate..... 0.33g

Caution: Thallium salts are toxic.

Preparation of Thallium Acetate Solution: Add thallium acetate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: To 65.0mL of cooled, sterile base broth, aseptically add 10.0mL of sterile yeast dialysate, 20.0mL of horse serum, 2.0mL of sterile penicillin solution, 1.0mL of sterile glucose solution, and 1.0mL of sterile thallium acetate solution. Mix thoroughly. Aseptically distribute into sterile screw-capped tubes in 5.0mL volumes. Screw caps down tightly.

Use: For the isolation and cultivation of *Mycoplasma hominis*.

H Diphasic Medium

Composition per 197.0mL:

Base agar.....65.0mL
Base broth.....65.0mL
Horse serum.....40.0mL
Yeast dialysate.....20.0mL
Penicillin solution.....4.0mL
Glucose solution.....1.0mL
Thallium acetate solution.....2.0mL

pH 7.3 ± 0.2 at 25°C

Base Agar:

Composition per liter:

Papaic digest of soybean meal..... 20.0g
Agarose..... 10.0g
NaCl..... 5.0g
Phenol Red (2% solution).....1.0mL

Preparation of Base Agar: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.3. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Base Broth:

Composition per liter:

Papaic digest of soybean meal..... 20.0g
NaCl..... 5.0g
Phenol Red (2% solution).....1.0mL

Preparation of Base Broth: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.3. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Yeast Dialysate:

Composition per 10.0mL:

Dried yeast, active..... 450.0g

Preparation of Yeast Dialysate: Add active, dried yeast to distilled/deionized water and bring volume to 1250.0mL. Gently heat and bring to 40°C. Autoclave for 15 min at 15 psi pressure–121°C. Put into dialysis tubing. Dialyze against 1.0L of distilled/deionized water for 2 days at 4°C. Discard tubing and its contents. Autoclave dialysate for 15 min at 15 psi pressure–121°C. Store at –20°C.

Penicillin Solution:

Composition per 10.0mL:

Penicillin..... 100,000U

Preparation of Penicillin Solution: Add penicillin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Glucose Solution:

Composition per 10.0mL:

D-Glucose..... 1.8g

Preparation of Glucose Solution: Add D-glucose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Thallium Acetate Solution:

Composition per 10.0mL:

Thallium acetate..... 0.33g

Caution: Thallium salts are toxic.

Preparation of Thallium Acetate Solution: Add thallium acetate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: To 65.0mL of cooled, sterile base agar, aseptically add 10.0mL of sterile yeast dialysate, 20.0mL of horse serum, 2.0mL of sterile penicillin solution, and 1.0mL of sterile thallium acetate solution. Mix thoroughly. Aseptically distribute into screw-capped tubes in 3.0mL volumes. Allow agar to solidify. To 65.0mL of cooled, sterile base broth, aseptically add 10.0mL of sterile yeast dialysate, 20.0mL of horse serum, 2.0mL of sterile penicillin solution, 1.0mL of sterile glucose solution, and 1.0mL of sterile thallium acetate solution. Mix thoroughly. Aseptically distribute 3.0mL of broth solution on top of the 3.0mL of solidified base agar in each tube. Screw caps down tightly.

Use: For the isolation and cultivation of *Mycoplasma pneumoniae*.

H Medium

Composition per liter:

Pancreatic digest of casein..... 10.0g
NaCl..... 8.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Escherichia coli* and a variety of other bacteria.

H Top Agar

Composition per liter:

Pancreatic digest of casein..... 10.0g
NaCl..... 8.0g
Agar..... 7.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes that contain H agar.

Use: For the cultivation of *Escherichia coli* and a variety of other bacteria.

HA

See: **Halophilic Agar**

HAEBSee: **Horie Arabinose Ethyl Violet Broth****Haemophilus Agar****Composition** per 1010.0mL:

Beef heart, infusion from	250.0g
Calf brain, infusion from	200.0g
Agar	13.5g
Proteose peptone	10.0g
NaCl	5.0g
Na ₂ HPO ₄ ·12H ₂ O	2.5g
Glucose	2.0g
β-NADH	1.0g
L-Cysteine·HCl	0.5g
Chicken serum, inactivated	10.0mL

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components, except β-NADH, L-cysteine-HCl, and chicken serum, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.4. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 1.0g of β-NADH, 0.5g of L-cysteine-HCl, and 10.0mL of chicken serum. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Haemophilus paragallinarum*.

Haemophilus ducreyi Medium**Composition** per liter:

Columbia blood agar base	675.0mL
Rabbit blood	300.0mL
Fresh yeast extract solution	25.0mL

pH 6.5–7.0 at 25°C

Columbia Blood Agar Base:**Composition** per 675.0mL:

Agar	15.0g
Pantone	10.0g
Bitone	10.0g
NaCl	5.0g
Tryptic digest of beef heart	3.0g
Cornstarch	1.0g

Preparation of Columbia Blood Agar Base: Add components to distilled/deionized water and bring volume to 675.0mL. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Fresh Yeast Extract Solution:**Composition** per 100.0mL:

Baker's yeast, live, pressed, starch-free	25.0g
---	-------

Preparation of Fresh Yeast Extract Solution: Add the live Baker's yeast to 100.0mL of distilled/deionized water. Autoclave for 90 min at 15 psi pressure–121°C. Allow to stand. Remove supernatant solution. Adjust pH to 6.6–6.8. Filter sterilize.

Preparation of Medium: To 675.0mL of cooled, sterile Columbia blood agar base, aseptically add rabbit blood and sterile fresh yeast extract solution. Aseptically adjust pH to 6.5–7.0.

Use: For the cultivation and maintenance of *Haemophilus ducreyi*.

**Haemophilus ducreyi Medium, Revised
(Ducreyi Medium, Revised)****Composition** per 1010.0mL:

Solution B	500.0mL
Solution A	400.0mL
Solution C	110.0mL

pH 7.4 ± 0.2 at 25°C

Solution A:**Composition** per 400.0mL:

Beef heart, infusion from	500.0g
Agar	15.0g
Tryptose	10.0g
NaCl	5.0g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 400.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Solution B:**Composition** per 500.0mL:

Hemoglobin	10.0g
------------------	-------

Preparation of Solution B: Add hemoglobin to distilled/deionized water and bring volume to 500.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Solution C:**Composition** per 110.0mL:

Fetal bovine serum	100.0mL
Supplement solution	10.0mL

Supplement Solution:**Composition** per liter:

Glucose	100.0g
L-Cysteine·HCl	25.9g
L-Glutamine	10.0g
L-Cystine	1.1g
Adenine	1.0g
Nicotinamide adenine dinucleotide	0.25g
Vitamin B ₁₂	0.1g
Thiamine pyrophosphate	0.1g
Guanine·HCl	0.03g
Fe(NO ₃) ₃ ·6H ₂ O	0.02g
p-Aminobenzoic acid	0.013g
Thiamine·HCl	3.0mg

Source: The supplement solution (IsoVitaleX[®] enrichment) is available from BD Diagnostic Systems. This enrichment may be replaced by supplement VX from BD Diagnostic Systems.

Preparation of Supplement Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Solution C: Combine components. Mix thoroughly. Filter sterilize. Warm to 45°–50°C.

Preparation of Medium: Aseptically combine solution A, solution B, and solution C. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Haemophilus ducreyi*.

Haemophilus influenzae Defined Medium MI**Composition per liter:**

NaCl	5.8g
K ₂ HPO ₄	3.5g
Glycerol	3.0g

Haemophilus Medium**(DSMZ Medium 804)****Composition per liter:**

Acid hydrolysate of casein	31.5g
Beef extract	5.4g
Yeast extract	5.0g
Starch	2.7g
NAD solution	1.0mL
Hemin solution	1.0mL

pH 7.3 ± 0.1 at 25°C

NAD Solution:**Composition per 10.0mL:**

NAD	150.0mg
-----	---------

Preparation of NAD Solution: Add NAD to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Hemin Solution:**Composition per 10.0mL:**

Hemin	150.0mg
NaOH (1N solution)	2.0mL

Preparation of Hemin Solution: Add hemin to 2.0mL of 1N NaOH solution. Mix thoroughly. Bring volume to 10.0mL with distilled/deionized water. Filter sterilize.

Preparation of Medium: Add components, except hemin solution and NAD solution, to distilled/deionized water and bring to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 10 min at 10 psi pressure–115°C. Cool to 25°C. Aseptically add 1.0mL sterile NAD solution and 1.0mL sterile hemin solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Haemophilus influenzae*.

Haemophilus Medium**Composition per 1050.0mL:**

Beef heart, infusion from	25.0g
Agar	14.0g
Peptone	5.0g
NaCl	2.5g
Glucose	1.0g
Yeast extract solution	100.0mL
Horse serum	50.0mL

Yeast Extract Solution:**Composition per liter:**

Baker's yeast	250.0g
---------------	--------

Preparation of Yeast Extract Solution: Add Baker's yeast to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Filter through a paper filter. Adjust pH to

8.0. Filter through a Seitz filter. Store at -20°C . Check sterility before using.

Preparation of Medium: Add components, except yeast extract solution and horse serum, to distilled/deionized water and bring volume to 850.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure– 121°C . Cool to 50° – 55°C . Aseptically add 100.0mL of sterile yeast extract solution and 50.0mL of sterile horse serum. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Actinobacillus pleuropneumoniae*, *Haemophilus actinomycetemcomitans*, *Haemophilus haemoglobinophilus*, *Haemophilus paragallinarum*, *Haemophilus paraphrophilus*, *Haemophilus parasuis*, *Haemophilus segnis*, *Pasteurella avium*, *Pasteurella volantinum*, and *Taylorella equigenitalis*.

Haemophilus somnus Agar

Composition per liter:

Agar	20.0g
Tryptose	10.0g
NaCl	5.0g
Beef extract	3.0g
Sheep blood, defibrinated	100.0mL
IsoVitaleX [®] enrichment solution	10.0mL
L-Cysteine-HCl solution	5.0mL

L-Cysteine-HCl Solution:

Composition per 10.0mL:

L-Cysteine-HCl	1.0g
----------------------	------

Preparation of L-Cysteine-HCl Solution: Dissolve 1.0g of L-cysteine-HCl in distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize. Warm to 50°C .

IsoVitaleX[®] Enrichment Solution:

Composition per liter:

Glucose	100.0g
L-Cysteine-HCl	25.9g
L-Glutamine	10.0g
Adenine	1.0g
Thiamine pyrophosphate	0.1g
Vitamin B ₁₂	0.1g
Guanine-HCl	0.03g
Fe(NO ₃) ₃ ·9H ₂ O	0.02g
<i>p</i> -Aminobenzoic acid	0.013g
Thiamine-HCl	0.003g

Preparation of IsoVitaleX[®] Enrichment: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Warm to 50°C .

Preparation of Medium: Add components, except sheep blood, IsoVitaleX[®] enrichment solution, and L-cysteine-HCl solution, to distilled/deionized water and bring volume to 895.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure– 121°C . Cool to 50° – 55°C . Warm defibrinated sheep blood to 50°C . Aseptically add 100.0mL of sterile defibrinated sheep blood, 10.0mL of sterile IsoVitaleX[®] enrichment solution, and 5.0mL of sterile L-cysteine-HCl solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Haemophilus somnus*.

Haemophilus Test Medium (HTM)

Composition per liter:

Beef infusion	300.0g
Acid hydrolysate of casein	17.5g
Agar	17.0g
Yeast extract	5.0g
Starch	1.5g
HTM supplement	10.0mL
pH 7.4 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Oxoid Unipath.

HTM Supplement:

Composition per 10.0mL:

Nicotinamide adenine dinucleotide	0.03g
Hematin	0.03g

Preparation of HTM Supplement: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except HTM supplement, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure– 121°C . Cool to 45° – 50°C . Aseptically add 10.0mL of sterile HTM supplement. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the susceptibility testing of *Haemophilus influenzae*. The medium forms part of the recommended methods of the United States National Committee for Clinical Laboratory Standards (NCCLS). *Haemophilus influenzae* require complex media for growth. These complex media have aggravated the routine susceptibility testing of *Haemophilus influenzae* because of antagonism between some essential nutrients and certain antimicrobial agents. This medium overcomes those limitations. The transparency of the medium allows zones of inhibition to be read easily through the bottom of the Petri dish. HTM contains low levels of antimicrobial antagonists, which allows testing of trimethoprim/sulphamethoxazole to be carried out.

Hagedorn and Holt Selective Medium

Composition per liter:

NaCl	20.0g
Agar	15.0g
Yeast extract	2.0g
Pancreatic digest of casein	1.7g
Agar	1.5g
NaCl	0.5g
Papaic digest of soybean meal	0.3g
K ₂ HPO ₄	0.25g
Glucose	0.25g
Cycloheximide	0.1g
Methyl Red	0.15mg
pH 7.3 ± 0.2 at 25°C	

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure– 121°C . Pour into sterile Petri dishes or leave in tubes.

Use: For the selective isolation of *Arthrobacter* species in soil.

Hagem's Modess Medium**Composition per liter:**

Agar, noble	15.0g
Glucose	10.0g
DL-Asparagine	1.0g
Yeast extract	1.0g
Peptone	1.0g
MgSO ₄ ·7H ₂ O	0.5g
KH ₂ PO ₄	0.35g
K ₂ HPO ₄	0.15g
Thiamine-HCl	40.0mg
FeCl ₃ ·6H ₂ O or ferric citrate	1.0mg

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Agaricus macrosporus*, *Bolletus rubinellus*, *Flammulina velutipes*, *Inonotus hispidus*, *Lactarius turpis*, *Nodulisporium tuberosum*, *Odontia bicolor*, *Phellinus pomaceus*, *Phellinus tremulus*, *Phellinus weirii*, *Phlebia gigantea*, *Poria medula-panis*, *Pteridiospora spinosipora*, *Schizophyllum commune*, *Thanatephorus cucumeris*, *Thelephora terrestris*, *Trametes versicolor*, *Tuber albidum*, and *Tuber rufum*.

Half Fraser Broth**Composition per liter:**

NaCl	20.0g
Na ₂ HPO ₄	12.0g
Proteose peptone	5.0g
Tryptone	5.0g
Lab Lemco powder	5.0g
LiCl	3.0g
KH ₂ PO ₄	1.35g
Esculin	1.0g
Half Fraser supplement solution	10.0mL
pH 7.2 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Oxoid Unipath.

Half Fraser Supplement Solution:**Composition per 10.0mL:**

Ferric ammonium citrate	0.5g
Acridine-HCl	0.125g
Nalidixic acid	0.05g
Ethanol	5.0mL

Preparation of Half Fraser Supplement Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except half Fraser supplement solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile half Fraser supplement solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the isolation of *Listeria* species from food and environmental species. A primary selective enrichment broth for *Listeria* spp.

Half Fraser Broth without Ferric Ammonium Citrate**Composition per liter:**

NaCl	20.0g
Na ₂ HPO ₄	12.0g
Proteose peptone	5.0g
Tryptone	5.0g
Lab Lemco powder	5.0g
LiCl	3.0g
KH ₂ PO ₄	1.35g
Esculin	1.0g
Half Fraser supplement solution without ferric ammonium citrate	10.0mL
pH 7.2 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Oxoid Unipath.

Half Fraser Supplement Solution without Ferric Ammonium Citrate:**Composition per 10.0mL:**

Acridine-HCl	0.125g
Nalidixic acid	0.05g
Ethanol	5.0mL

Preparation of Half Fraser Supplement Solution without Ferric Ammonium Citrate: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except half Fraser supplement solution without ferric ammonium citrate, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile Half Fraser supplement solution without ferric ammonium citrate. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the isolation of *Listeria* species from food and environmental specimens. A primary selective enrichment broth for *Listeria* spp. A pre-supplemented primary selective enrichment broth for *Listeria* spp.

Haliscomenobacter hydrossis Medium (LMG Medium 154)**Composition per liter:**

Glutamic acid	1.31g
MgSO ₄ ·7H ₂ O	75.0mg
CaCl ₂ ·2H ₂ O	50.0mg
K ₂ HPO ₄	40.0mg
Na ₂ HPO ₄ ·2H ₂ O	40.0mg
KH ₂ PO ₄	27.0mg
FeCl ₃ ·6H ₂ O	5.0mg
MnSO ₄ ·H ₂ O	3.0mg
Pancreatic digest of casein	1.7mg
NaCl	0.5mg
Papaic digest of soybean meal	0.3mg
K ₂ HPO ₄	0.25mg
Glucose	0.25mg
Glucose solution	10.0mL
Vitamin solution	1.0mL
Trace elements solution	1.0mL
pH 7.5 ± 0.2 at 25°C	

Glucose Solution:**Composition per 10.0mL:**

Glucose	2.0g
---------	------

Preparation of Glucose Solution: Add glucose to 10.0mL of distilled/deionized water. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Vitamin Solution:

Composition per 10.0mL:

Thiamine	4.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add Vitamin B₁₂ and thiamine to 10.0mL of distilled/deionized water. Mix thoroughly. Filter sterilize.

Trace Elements Solution:

Composition per liter:

H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
Na ₂ MoO ₄ ·2H ₂ O	30.0mg
MnCl ₂ ·4H ₂ O	30.0mg
NiCl ₂ ·6H ₂ O	20.0mg
CuCl ₂ ·2H ₂ O	10.0mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components, except vitamin solution and glucose solution, to 989.0mL distilled/deionized water. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 10.0mL sterile glucose solution and 1.0mL sterile vitamin solution. Mix thoroughly. Aseptically distribute to sterile tubes or flasks.

Use: For the cultivation of *Haliscomenobacter hydrossis*.

Haliscomenobacter Medium

Composition per liter:

Agar	10.0g
(NH ₄) ₂ SO ₄	0.5g
Glucose	0.15g
CaCO ₃	0.1g
KCl	0.05g
K ₂ HPO ₄	0.05g
MgSO ₄ ·7H ₂ O	0.05g
Ca(NO ₃) ₂	0.01g
Vitamin solution	10.0mL

Vitamin Solution:

Composition per 10.0mL:

Thiamine	0.4mg
Vitamin B ₁₂	0.05mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except vitamin solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile vitamin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation of *Haliscomenobacter* species from activated sludge.

Haliscomenobacter Medium
(DSM 134)

Composition per liter:

Glutamic acid	1.31g
MgSO ₄ ·7H ₂ O	0.075g
CaCl ₂ ·2H ₂ O	0.05g
K ₂ HPO ₄	0.04g
Na ₂ HPO ₄ ·2H ₂ O	0.04g
KH ₂ PO ₄	0.027g
FeCl ₃ ·6H ₂ O	5.0mg
MnSO ₄ ·H ₂ O	3.0mg
Pancreatic digest of casein	1.7mg
NaCl	0.5mg
Papaic digest of soybean meal	0.3mg
K ₂ HPO ₄	0.25mg
Vitamin solution	10.0mL
Glucose solution	5.0mL
Trace elements solution SL-6	1.0mL

pH 7.5 ± 0.2 at 25°C

Vitamin Solution:

Composition per 10.0mL:

Thiamine	0.4mg
Vitamin B ₁₂	0.01mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Glucose Solution:

Composition per 5.0mL:

D-Glucose	2.0g
-----------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 5.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution SL-6:

Composition per liter:

H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
MnCl ₂ ·4H ₂ O	0.03g
Na ₂ MoO ₄ ·H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 3.4.

Preparation of Medium: Add components, except vitamin solution and glucose solution, to distilled/deionized water and bring volume to 985.0mL. Mix thoroughly. Adjust pH to 7.5. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add sterile vitamin solution and glucose solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Haliscomenobacter hydrossis*.

Haloalkaliphilic Agar**Composition per liter:**

Solution A	900.0mL
Solution B	100.0mL
	pH 8.5–9.5 at 25°C

Solution A:**Composition per 900.0mL:**

NaCl	200.0g
Agar	25.0g
Yeast extract	10.0g
Casamino acids	7.5g
Sodium citrate	3.0g
KCl	2.0g
MgSO ₄ ·7H ₂ O	1.0g
FeSO ₄ ·7H ₂ O	0.05g
MnSO ₄ ·4H ₂ O	0.25mg

Preparation of Solution A: Add components, except NaCl, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Add 200.0g of NaCl. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C.

Solution B:**Composition per 100.0mL:**

Na ₂ CO ₃	5.0g
---------------------------------------	------

Preparation of Solution B: Dissolve 5.0g of Na₂CO₃ in distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C.

Preparation of Medium: Aseptically mix 900.0mL of solution A and 100.0mL of solution B. Mix thoroughly. Aseptically adjust pH to 8.5–9.5. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Natronobacterium gregoryi*, *Natronobacterium magadii*, *Natronobacterium pharaonis*, and *Natronococcus occultus*.

**Haloalkaliphilic Growth Medium
(DSMZ Medium 1150)****Composition per liter:**

Glucose	5.0g
Na ₂ B ₄ O ₇ ·10H ₂ O	4.0g
NH ₄ Cl	1.0g
NaNO ₃	0.5g
KH ₂ PO ₄	0.5g
	pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 10.0 with concentrated NaOH. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Halomonas campisalis*.

Haloanaerobacter chitinovorans Medium**Composition per 1001.0mL:**

NaCl	10.0g
MgSO ₄ ·7H ₂ O	9.6g
MgCl ₂ ·6H ₂ O	7.0g
KCl	3.8g
Na ₂ CO ₃	1.0g
NH ₄ Cl	1.0g

Yeast extract	1.0g
CaCl ₂ ·2H ₂ O	0.5g
K ₂ HPO ₄ ·3H ₂ O	0.4g
Resazurin	0.001g
Na ₂ CO ₃ solution	20.0mL
Substrate solution	20.0mL
Na ₂ S·9H ₂ O solution	10.0mL
L-Cysteine·HCl·H ₂ O solution	10.0mL
Trace elements solution SL-6	1.0mL
	pH 7.2 ± 0.2 at 25°C

Na₂CO₃ Solution:**Composition per 20.0mL:**

Na ₂ CO ₃	3.0g
---------------------------------------	------

Preparation of Na₂CO₃ Solution: Add Na₂CO₃ to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize. Sparge with 100% N₂.

Substrate Solution:**Composition per 20.0mL:**

Glucose or <i>N</i> -acetylglucosamine	5.0g
--	------

Preparation of Substrate Solution: Add glucose or *N*-acetylglucosamine to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O	0.5g
---	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Before use, neutralize to pH 7.0 with sterile HCl.

L-Cysteine·HCl·H₂O Solution:**Composition per 10.0mL:**

L-Cysteine·HCl·H ₂ O	0.5g
---------------------------------------	------

Preparation of L-Cysteine·HCl·H₂O Solution: Add L-cysteine·HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution SL-6:**Composition per liter:**

MnCl ₂ ·4H ₂ O	0.5g
H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
Na ₂ MoO ₄ ·2H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Prepare and dispense medium under 100% N₂. Add components, except Na₂CO₃ solution, Na₂S·9H₂O solution, and L-cysteine·HCl·H₂O solution, to distilled/deionized water and bring volume to 960.0mL. Mix thoroughly. Adjust pH to 7.2. Gently heat and bring to boiling. Cool to room temperature while sparging with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 20.0mL of sterile NaHCO₃ solution, 10.0mL of sterile Na₂S·9H₂O solution, and 10.0mL of sterile L-

cysteine-HCl-H₂O solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Haloanaerobacter chitinovorans*.

Haloanaerobacter chitinovorans Medium

Composition per 1001.0mL:

NaCl	10.0g
MgSO ₄ ·7H ₂ O	9.6g
MgCl ₂ ·6H ₂ O	7.0g
Chitin	5.0g
KCl	3.8g
Na ₂ CO ₃	1.0g
NH ₄ Cl	1.0g
Yeast extract	1.0g
CaCl ₂ ·2H ₂ O	0.5g
K ₂ HPO ₄ ·3H ₂ O	0.4g
Resazurin	0.001g
Na ₂ CO ₃ solution	20.0mL
Na ₂ S·9H ₂ O solution	10.0mL
L-Cysteine-HCl-H ₂ O solution	10.0mL
Trace elements solution SL-6	1.0mL

pH 7.2 ± 0.2 at 25°C

Na₂CO₃ Solution:

Composition per 20.0mL:

Na ₂ CO ₃	3.0g
---------------------------------	------

Preparation of Na₂CO₃ Solution: Add Na₂CO₃ to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize. Sparge with 100% N₂.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.5g
-------------------------------------	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Before use, neutralize to pH 7.0 with sterile HCl.

L-Cysteine-HCl-H₂O Solution:

Composition per 10.0mL:

L-Cysteine-HCl-H ₂ O	0.5g
---------------------------------	------

Preparation of L-Cysteine-HCl-H₂O Solution: Add L-cysteine-HCl-H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution SL-6:

Composition per liter:

MnCl ₂ ·4H ₂ O	0.5g
H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
Na ₂ MoO ₄ ·2H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Prepare and dispense medium under 100% N₂. Add components, except Na₂CO₃ solution, Na₂S·9H₂O solution, and L-cysteine-HCl-H₂O solution, to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Adjust pH to 7.2. Gently

heat and bring to boiling. Cool to room temperature while sparging with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 20.0mL of sterile NaHCO₃ solution, 10.0mL of sterile Na₂S·9H₂O solution, and 10.0mL of sterile L-cysteine-HCl-H₂O solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Haloanaerobacter chitinovorans*.

Haloanaerobium alcaliphilum Medium (DSMZ Medium 807)

Composition per liter:

NaCl	100.0g
MgSO ₄ ·7H ₂ O	17.0g
Trypticase™	10.0g
NaHCO ₃	4.1g
Cysteine-HCl-H ₂ O	0.5g
Resazurin	1.0mg
Solution A	50.0mL
Solution B	50.0mL
Yeast extract solution	50.0mL
Glucose solution	20.0mL
Trace elements solution	10.0mL
Na ₂ S·9H ₂ O solution	10.0mL

pH 7.0 ± 0.1 at 25°C

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.25g
-------------------------------------	-------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Glucose Solution:

Composition per 20.0mL:

Glucose	5.0g
---------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize.

Yeast Extract Solution:

Composition per 50.0mL:

Yeast extract	10.0g
---------------	-------

Preparation of Yeast Extract Solution: Add yeast extract to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Solution A

Composition per liter:

K ₂ HPO ₄	6.0g
---------------------------------	------

Preparation of Solution A: Add K₂HPO₄ to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Solution B

Composition per liter:

NaCl	12.0g
KH ₂ PO ₄	6.0g
(NH ₄) ₂ SO ₄	6.0g
MgSO ₄ ·7H ₂ O	2.6g
NH ₄ Cl	2.5g

CaCl ₂ ·2H ₂ O.....	0.28g
K ₂ HPO ₄	0.28g

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Trace Elements Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O.....	3.0g
Nitrilotriacetic acid.....	1.5g
NaCl.....	1.0g
MnSO ₄ ·2H ₂ O.....	0.5g
CoSO ₄ ·7H ₂ O.....	0.18g
ZnSO ₄ ·7H ₂ O.....	0.18g
CaCl ₂ ·2H ₂ O.....	0.1g
FeSO ₄ ·7H ₂ O.....	0.1g
NiCl ₂ ·6H ₂ O.....	0.025g
KAl(SO ₄) ₂ ·12H ₂ O.....	0.02g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·4H ₂ O.....	0.01g
CuSO ₄ ·5H ₂ O.....	0.01g
Na ₂ SeO ₃ ·5H ₂ O.....	0.3mg

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas atmosphere. Add components, except NaHCO₃, Na₂S·9H₂O solution, cysteine-HCl·H₂O, yeast extract solution, and glucose solution, to distilled/deionized water and bring volume to 920.0mL. Mix thoroughly. Gently heat and bring to boiling. Boil for 5 min. Cool to room temperature under 80% N₂ + 20% CO₂ gas atmosphere. Add 4.1g NaHCO₃ and 0.5g cysteine-HCl·H₂O. Adjust pH to 7.0. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 20.0mL sterile glucose solution, 50.0mL sterile yeast extract solution, and 10.0mL sterile Na₂S·9H₂O solution. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or bottles.

Use: For the cultivation of *Haloanaerobium alcaliphilum*.

Haloanaerobium congolense Medium (DSMZ Medium 933)

Composition per 1080.0mL:

NaCl.....	100.0g
MgCl ₂ ·6H ₂ O.....	10.0g
Trypticase™.....	1.0g
NH ₄ Cl.....	1.0g
KCl.....	1.0g
Na-acetate.....	0.5g
Cysteine.....	0.5g
K ₂ HPO ₄	0.3g
KH ₂ PO ₄	0.3g
CaCl ₂ ·2H ₂ O.....	0.1g
Resazurin.....	0.01g
Glucose solution.....	20.0mL
Thiosulfate solution.....	20.0mL
Na ₂ S·9H ₂ O solution.....	20.0mL
NaHCO ₃ solution.....	20.0mL
Trace elements solution.....	1.0mL

pH 7.0 ± 0.2 at 25°C

Trace Elements Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O.....	3.0g
Nitrilotriacetic acid.....	1.5g
NaCl.....	1.0g
MnSO ₄ ·2H ₂ O.....	0.5g
CoSO ₄ ·7H ₂ O.....	0.18g
ZnSO ₄ ·7H ₂ O.....	0.18g
CaCl ₂ ·2H ₂ O.....	0.1g
FeSO ₄ ·7H ₂ O.....	0.1g
NiCl ₂ ·6H ₂ O.....	0.025g
KAl(SO ₄) ₂ ·12H ₂ O.....	0.02g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·4H ₂ O.....	0.01g
CuSO ₄ ·5H ₂ O.....	0.01g
Na ₂ SeO ₃ ·5H ₂ O.....	0.3mg

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	0.2g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

NaHCO₃ Solution:

Composition per 50.0mL:

NaHCO ₃	5.0g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Thiosulfate Solution:

Composition per 20.0mL:

Na ₂ S ₂ O ₃ ·5H ₂ O.....	5.0g
---	------

Preparation of Thiosulfate Solution: Add Na₂S₂O₃·5H₂O to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Glucose Solution:

Composition per 20.0mL:

Glucose.....	3.5g
--------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas atmosphere. Add components, except NaHCO₃ solution, glucose solution, Na₂S·9H₂O solution, and thiosulfate solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Boil for 5 min. Cool to room temperature while sparging with 80% N₂ + 20% CO₂. Adjust pH to 7.0. Distribute into anaerobe tubes or bottles. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically and anaerobically add per 10.0mL medium, 0.2mL NaHCO₃ solution, 0.2mL glucose solution, 0.2mL Na₂S·9H₂O solution, and 0.2mL thiosulfate solution. Mix thoroughly. The final pH should be 7.0.

Use: For the cultivation of *Thermococcus waiotapuensis*.

***Haloanaerobium lacusroseus* Medium (DSMZ Medium 764)**

NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.2g
-------------------------------------	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Neutralize to pH 7.0 with sterile HCl.

NaHCO₃ Solution:

Composition per 100.0mL:

NaHCO ₃	10.0g
--------------------	-------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

Dithionite Solution

Composition per 10.0mL:

Na-dithionite	2.0mg
---------------	-------

Preparation of Dithionite Solution: Add Na-dithionite to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas atmosphere. Add components, except glucose solution, NaHCO₃ solution, dithionite solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 835.0mL. Mix thoroughly. Adjust pH to 7.0. Gently heat and bring to boiling. Cool while sparging with 80% N₂ + 20% CO₂. Distribute into Hungate tubes under 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically and anaerobically inject glucose solution (0.25mL per 10mL medium), dithionite solution (0.05mL per 10mL medium), NaHCO₃ solution (0.5mL per 10mL medium), and Na₂S·9H₂O solution (0.1mL per 10mL medium). Aseptically and anaerobically distribute into sterile tubes or bottles.

Use: For the cultivation of *Haloanaerobium lacusrosei* (*Haloanaerobium lacusroseus*).

***Haloanaerobium* Medium**

Composition per 1066.0mL:

NaCl	130.0g
Pancreatic digest of casein	10.0g
Yeast extract	10.0g
MgSO ₄ ·H ₂ O	5.0g
KCl	1.0g
Thioglycolate-ascorbate reducing agent	30.9mL
Glucose solution	25.75mL
NaOH solution	10.3mL
Wolfe's vitamin solution	10.0mL
Wolfe's mineral solution	10.0mL

pH 7.0 ± 0.2 at 25°C

Glucose Solution:

Composition per 30.0mL:

D-Glucose	3.0g
-----------	------

Preparation of Glucose Solution: Add D-glucose to distilled/deionized water and bring volume to 30.0mL. Mix thoroughly. Filter sterilize.

NaOH Solution:

Composition per 20.0mL:

NaOH	1.6g
------	------

Preparation of NaOH Solution: Add NaOH to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Wolfe's Vitamin Solution:

Composition per liter:

Pyridoxine-HCl	0.01g
Thiamine-HCl	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
Calcium pantothenate	5.0mg
p-Aminobenzoic acid	5.0mg
Thioctic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Cyanocobalamin	0.1mg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Wolfe's Mineral Solution:**Composition per liter**

MgSO ₄ ·7H ₂ O	3.0g
Nitritotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·H ₂ O	0.5g
FeSO ₄ ·7H ₂ O	0.1g
CoCl ₂ ·6H ₂ O	0.1g
CaCl ₂	0.1g
ZnSO ₄ ·7H ₂ O	0.1g
CuSO ₄ ·5H ₂ O	0.01g
AlK(SO ₄) ₂ ·12H ₂ O	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g

Preparation of Wolfe's Mineral Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L.

Thioglycolate-Ascorbate Reducing Agent:**Composition per 100.0mL:**

Ascorbic acid	1.0g
Sodium thioglycolate	1.0g

Preparation of Thioglycolate-Ascorbate Reducing Agent:

Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Adjust pH to 7.0. Filter sterilize.

Preparation of Medium: Add components, except thioglycolate-ascorbate reducing agent, glucose, and NaOH solutions, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Anaerobically distribute into tubes under 97% N₂ + 3% H₂ in 9.7mL volumes. Cap tubes with rubber stoppers. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Immediately prior to inoculation, aseptically add 0.3mL of sterile thioglycolate-ascorbate reducing agent, 0.25mL of sterile glucose solution, and 0.1mL of sterile NaOH solution to each tube.

Use: For the cultivation and maintenance of *Haloanaerobium praevalens*.

Haloanaerobium praevalens* Medium*Composition per liter:**

NaCl	130.0g
Agar	20.0g
Yeast extract	2.0g
Pancreatic digest of casein	2.0g
NH ₄ Cl	0.5g
MgSO ₄ ·7H ₂ O	0.5g
K ₂ HPO ₄	0.35g
CaCl ₂ ·2H ₂ O	0.25g
KH ₂ PO ₄	0.23g
FeSO ₄ ·7H ₂ O	2.0mg
NaHCO ₃ solution	20.0mL
L-Cysteine-sulfide reducing agent	20.0mL
Wolfe's vitamin solution	10.0mL
Methanol	10.0mL
Resazurin (0.025% solution)	4.0mL
Trace elements solution SL-6	3.0mL

pH 6.8 ± 0.2 at 25°C

NaHCO₃ Solution:**Composition per 20.0mL:**

NaHCO ₃	850.0mg
--------------------------	---------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize. Gas with 100% CO₂ for 20 min.

L-Cysteine-Sulfide Reducing Agent:**Composition per 20.0mL:**

L-Cysteine·HCl·H ₂ O	0.3g
Na ₂ S·9H ₂ O	0.3g

Preparation of L-Cysteine-Sulfide Reducing Agent: Add L-cysteine·HCl·H₂O to 10.0mL of distilled/deionized water. Mix thoroughly. In a separate tube, add Na₂S·9H₂O to 10.0mL of distilled/deionized water. Mix thoroughly. Gas both solutions with 100% N₂ and cap tubes. Autoclave both solutions for 15 min at 15 psi pressure–121°C using fast exhaust. Cool to 50°C. Aseptically combine the two solutions under 100% N₂.

Wolfe's Vitamin Solution:**Composition per liter:**

Pyridoxine·HCl	10.0mg
Thiamine·HCl	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
Calcium pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Thioctic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Cyanocobalamin	100.0µg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Trace Elements Solution SL-6:**Composition per liter:**

H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
MnCl ₂ ·4H ₂ O	0.03g
Na ₂ MoO ₄ ·H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 3.4.

Preparation of Medium: Add components, except NaHCO₃ solution, L-cysteine-sulfide reducing agent, Wolfe's vitamin solution, and methanol, to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool under 80% N₂ + 20% CO₂. Aseptically and anaerobically add the sterile NaHCO₃ solution, the sterile L-cysteine-sulfide reducing agent, the sterile Wolfe's vitamin solution, and filter-sterilized methanol. Mix thoroughly. Adjust pH to 6.8. Aseptically and anaerobically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Haloanaerobium praevalens*.

Haloanaerobium salsugo* Medium*Composition per liter:**

NaCl	90.0g
Purified agar (if necessary)	20.0g
Casamino acids	5.0g

Yeast extract.....	5.0g
Dipotassium PIPES (piperazine- <i>N,N'</i> -bis[2-ethanesulfonic acid]) buffer	1.5g
Resazurin	1.0mg

L-Cysteine-sulfide reducing solution	20.0mL
Mineral solution.....	20.0mL
Wolfe's vitamin solution	10.0mL
Modified Wolfe's mineral solution	5.0mL
pH 6.0–7.0 at 25°C	

Glucose Solution:**Composition per 50.0mL:**

D-Glucose.....	10.0g
----------------	-------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Mineral Solution:**Composition per liter:**

NH ₄ Cl	50.0g
NaCl	40.0g
MgSO ₄ ·7H ₂ O	10.0g
KCl.....	5.0g
KH ₂ PO ₄	5.0g
CaCl ₂ ·2H ₂ O.....	2.0g

Preparation of Mineral Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Wolfe's Vitamin Solution:**Composition per liter:**

Pyridoxine-HCl	10.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Nicotinic acid.....	5.0mg
Riboflavin	5.0mg
Thiamine-HCl	5.0mg
Calcium DL-pantothenate	5.0mg
Biotin	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Modified Wolfe's Mineral Solution:**Composition per liter:**

MgSO ₄ ·7H ₂ O	3.0g
Nitritotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·H ₂ O	0.5g
CaCl ₂	0.1g
CoCl ₂ ·6H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g
ZnSO ₄ ·7H ₂ O	0.1g
AlK(SO ₄) ₂ ·12H ₂ O.....	0.01g
CuSO ₄ ·5H ₂ O	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g
Na ₂ SeO ₃	0.01g
NaWO ₄ ·2H ₂ O.....	0.01g
NiCl ₂ ·6H ₂ O	0.01g

Preparation of Modified Wolfe's Mineral Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH

to 6.5 with KOH. Add remaining components one at a time. Add distilled/deionized water to 1.0L. Adjust pH to 6.8.

L-Cysteine-Sulfide Reducing Solution:**Composition per 200.0mL:**

L-Cysteine-HCl·H ₂ O	5.0g
Na ₂ S·9H ₂ O.....	5.0g
NaOH.....	1.25g

Preparation of L-Cysteine-Sulfide Reducing Solution:

Add NaOH to distilled/deionized water and bring volume to 200.0mL. Mix thoroughly. Gently heat and bring to boiling. Cool to room temperature while sparging with 100% N₂. Add L-cysteine-HCl·H₂O and Na₂S·9H₂O. Mix thoroughly. Anaerobically distribute into tubes. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium:

Prepare and dispense medium under 100% N₂. Add components, except glucose solution and L-cysteine-sulfide reducing solution, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 3 min. Cool to room temperature while sparging with 100% N₂. Adjust pH to 6.0–7.0. Add 20.0mL of L-cysteine-sulfide reducing solution. Mix thoroughly. Anaerobically distribute 9.5mL volumes into anaerobic tubes. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 0.5mL of sterile glucose solution to each tube. Mix thoroughly.

Use: For the cultivation of *Haloanaerobium salsugo*.

Haloarcula japonica* Medium*Composition per liter:**

NaCl.....	200.0g
MgSO ₄ ·7H ₂ O	20.0g
Yeast extract.....	10.0g
Casamino acids	7.5g
Trisodium citrate·2H ₂ O.....	3.0g
KCl.....	2.0g
FeSO ₄ ·7H ₂ O.....	50.0mg
MnCl ₂ ·4H ₂ O	0.36mg

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Haloarcula japonica*.

Haloarcula marismortui* Medium*Composition per liter:**

NaCl.....	208.0g
MgSO ₄ ·7H ₂ O	46.6g
Yeast extract.....	10.0g
CaCl ₂	0.5g
MnCl ₂	0.125g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Haloarcula marismortui*.

Haloarcula* Medium*Composition per 1001.0mL:**

NaCl.....	250.0g
MgSO ₄ ·7H ₂ O	20.0g
Agar	15.0g
Sodium citrate.....	3.0g

KCl.....	2.0g
CaCl ₂	0.2g
Peptone solution.....	100.0mL
Trace elements solution.....	1.0mL
pH 7.4 ± 0.1 at 25°C	

Peptone Solution:**Composition per 100.0mL:**

Peptone.....	10.0g
--------------	-------

Preparation of Peptone Solution: Add peptone to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Trace Elements Solution:**Composition per 100.0mL:**

FeCl ₂ ·4H ₂ O.....	0.36g
MnCl ₂ ·4H ₂ O.....	0.022g

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except peptone solution and trace elements solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.4 with NaOH. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 100.0mL of sterile peptone solution and 1.0mL of sterile trace elements solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Haloanaerobium praevalens*.

Haloarcula vallismortis* Synthetic Medium*Composition per 1029.0mL:**

Basal salts solution.....	1.0L
Glucose solution.....	20.0mL
NH ₄ Cl solution.....	5.0mL
FeSO ₄ ·6H ₂ O solution.....	2.0mL
K ₂ HPO ₄ solution.....	2.0mL
pH 7.5 ± 0.2 at 25°C	

Basal Salts Solution:**Composition per liter:**

NaCl.....	200.0g
MgSO ₄ ·7H ₂ O.....	36.0g
Tris[hydroxymethyl]aminomethane.....	6.0g
KCl.....	4.0g
CaCl ₂ ·2H ₂ O.....	1.0g

Preparation of Basal Salts Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.5 with HCl. Autoclave for 15 min at 15 psi pressure–121°C.

FeSO₄·6H₂O Solution:**Composition per 100.0mL:**

FeSO ₄ ·6H ₂ O.....	0.2g
HCl (1.0mM solution).....	100.0mL

Preparation of FeSO₄·6H₂O Solution: Combine components. Mix thoroughly. Filter sterilize.

K₂HPO₄ Solution:**Composition per 100.0mL:**

K ₂ HPO ₄	5.0g
---------------------------------------	------

Preparation of K₂HPO₄ Solution: Combine components. Mix thoroughly. Filter sterilize.

NH₄Cl Solution:**Composition per 100.0mL:**

NH ₄ Cl.....	20.0g
-------------------------	-------

Preparation of NH₄Cl Solution: Combine components. Mix thoroughly. Filter sterilize.

Glucose Solution:**Composition per 100.0mL:**

D-Glucose.....	25.0g
----------------	-------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Aseptically combine 1.0L of sterile basal salts solution with 20.0mL of sterile glucose solution, 5.0mL of sterile NH₄Cl solution, 2.0mL of sterile K₂HPO₄ solution, and 2.0mL of sterile FeSO₄·6H₂O solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Haloarcula vallismortis*.

***Halobacillus* Medium
(DSMZ Medium 755)****Composition per liter:**

NaCl.....	100.0g
MgSO ₄ ·7H ₂ O.....	5.0g
Peptone, casein digest.....	5.0g
Yeast extract.....	3.0g
pH 7.5 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.5. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Halobacillus trueperi* and *Halobacillus litoralis*.

Halobacteria Agar**Composition per liter:**

NaCl.....	200.0g
Agar.....	20.0g
MgSO ₄ ·7H ₂ O.....	20.0g
Casamino acids.....	5.0g
Yeast extract.....	5.0g
Trisodium citrate.....	3.0g
KCl.....	2.0g
Sodium glutamate.....	1.0g
FeCl ₂ ·4H ₂ O.....	36.0mg
MnCl ₂ ·4H ₂ O.....	0.36mg
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Haloarcula* species, *Halobacterium* species, *Halococcus morrhuae*, and *Haloferax* species.

**Halobacteria Medium
(DSMZ Medium 372)****Composition per liter:**

NaCl.....	200.0g
MgSO ₄ ·7H ₂ O.....	20.0g

Agar	20.0g
Yeast extract	5.0g
Casamino acids	5.0g
Na ₃ -citrate	3.0g
KCl	2.0g
Na-glutamate	1.0g
FeCl ₂ ·4H ₂ O	36.0mg
MnCl ₂ ·4H ₂ O	0.36mg
pH 7.1 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of *Halorubrum* spp., *Haloarcula* spp., *Haloferax* spp., *Halococcus* spp., *Haloterrigena* spp., *Halogeometricum borinquense*, *Natrialba* spp., and *Halomicrobium mukohataei*.

Halobacteria Medium

Composition per liter:

NaCl	220.0g
Agar	10.0g
MgSO ₄ ·7H ₂ O	10.0g
Casein hydrolysate	5.0g
KCl	5.0g
Disodium citrate	3.0g
KNO ₃	1.0g
Yeast extract	1.0g
CaCl ₂ ·6H ₂ O	0.2g
pH 7.2–7.4 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until dissolved. Adjust pH to 7.2–7.4. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and enumeration of halobacteria.

Halobacteriaceae Medium 1

Composition per liter:

Salt, crude solar	250.0g
MgSO ₄ ·7H ₂ O	20.0g
KCl	5.0g
Pancreatic digest of casein	5.0g
Yeast extract	5.0g
CaCl ₂ ·6H ₂ O	0.2g
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until dissolved. Adjust pH to 7.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the axenic cultivation of members of the Halobacteriaceae.

Halobacteriaceae Medium 2

Composition per liter:

NaCl	250.0g
MgSO ₄ ·7H ₂ O	20.0g
Yeast extract	10.0g
Casamino acids	7.5g
Trisodium citrate	3.0g

KCl	2.0g
FeCl ₂	2.3mg
pH 7.5–7.8 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until dissolved. Adjust pH to 7.5–7.8. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the axenic cultivation of halobacteria and halococci.

Halobacteriaceae Medium 3

Composition per liter:

NaCl	240.0g
L-Glutamine	15.0g
KCl	5.0g
K ₂ SO ₄	5.0g
MgCl ₂ ·6H ₂ O	5.0g
MgSO ₄ , anhydrous	5.0g
NH ₄ Cl	5.0g
Pancreatic digest of casein	5.0g
Yeast extract	5.0g
K ₂ HPO ₄	0.5g
L-Arginine	0.5g
L-Isoleucine	0.25g
L-Leucine	0.25g
L-Lysine	0.25g
L-Proline	0.25g
L-Valine	0.25g
Cytidylic acid	0.2g
CaCl ₂ ·2H ₂ O	0.1g
L-Methionine	0.1g
L-Tyrosine	0.1g
L-Phenylalanine	0.05g
FeCl ₂ ·6H ₂ O	5.0mg
pH 6.8 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until dissolved. Adjust pH to 6.8. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of some halobacteria and halococci.

Halobacteriaceae Medium 4

Composition per liter:

NaCl	250.0g
MgSO ₄ ·7H ₂ O	20.0g
NH ₄ Cl	5.0g
L-Glutamic acid	1.3g
DL-Valine	1.0g
Glycerol	1.0g
L-Lysine	0.85g
L-Leucine	0.8g
DL-Serine	0.61g
DL-Threonine	0.5g
DL-Isoleucine	0.44g
DL-Alanine	0.43g
L-Arginine	0.4g
DL-Methionine	0.37g
DL-Phenylalanine	0.26g
L-Tyrosine	0.2g
Adenylic acid	0.1g
KNO ₃	0.1g

Uridylic acid	0.1g
Glycine.....	0.06g
KH ₂ PO ₄	0.05g
K ₂ HPO ₄	0.05g
L-Cysteine.....	0.05g
L-Proline.....	0.05g
Sodium citrate.....	0.05g
FeCl ₂	2.3mg
CaCl ₂ ·2H ₂ O.....	0.7mg
ZnSO ₄ ·7H ₂ O.....	0.44mg
MnSO ₄ ·H ₂ O.....	0.3mg
CuSO ₄ ·5H ₂ O.....	0.05mg

pH 6.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until dissolved. Adjust pH to 6.2. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of members of the Halobacteriaceae.

Halobacterium Agar

Composition per liter:

NaCl.....	250.0g
Agar.....	20.0g
MgSO ₄ ·7H ₂ O.....	20.0g
Yeast extract.....	10.0g
Casamino acids.....	7.5g
Trisodium citrate.....	3.0g
KCl.....	2.0g
FeSO ₄ ·7H ₂ O.....	0.05g
MnSO ₄ ·H ₂ O.....	0.2mg

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components, except agar, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Add agar. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Haloarcula* species, *Halobacterium* species, *Halococcus morrhuae*, *Haloferax mediterranei*, and *Haloferax volcanii*.

Halobacterium denitrificans Medium

Composition per liter:

NaCl.....	176.0g

CaCl ₂ ·2H ₂ O.....	0.1g

pH 6.7 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 6.7. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the aerobic cultivation and maintenance of *Haloferax* (*Halobacterium*) *denitrificans*.

Halobacterium denitrificans Medium

Composition per liter:

NaCl.....	176.0g
Agar.....	20.0g
MgCl ₂ ·6H ₂ O.....	20.0g
HEPES (<i>N</i> -2-hydroxyethylpiperazine- <i>N'</i> - 2-ethanesulfonic acid) buffer.....	11.9g
KNO ₃	5.0g
Yeast extract.....	5.0g
Hy-Case SF (Humko-Sheffield).....	2.0g
KCl.....	2.0g
CaCl ₂ ·2H ₂ O.....	0.1g

pH 6.7 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 6.7. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the anerobic cultivation and maintenance of *Haloferax* (*Halobacterium*) *denitrificans*.

Halobacterium halobium Defined Medium

Composition per liter:

NaCl.....	250.0g
MgSO ₄ ·7H ₂ O.....	20.0g
L-Glutamic acid.....	1.3g
KCl.....	1.0g
Glycerol.....	1.0g
KCl.....	1.0g
L-Valine.....	1.0g
L-Lysine.....	0.85g
L-Leucine.....	0.8g
CaCl ₂ ·7H ₂ O.....	0.71g
L-Serine.....	0.6g
Sodium citrate·2H ₂ O.....	0.5g
L-Proline.....	0.5g
L-Threonine.....	0.5g
L-Alanine.....	0.43g
L-Arginine.....	0.4g
L-Methionine.....	0.37g
L-Phenylalanine.....	0.26g
L-Tyrosine.....	0.2g
KH ₂ PO ₄	0.15g
K ₂ HPO ₄	0.15g
KNO ₃	0.1g
KNO ₃	0.1g
Glycine.....	0.06g
L-Cysteine·HCl·H ₂ O.....	0.05g
L-Isoleucine.....	0.044g
FeCl ₂ ·5H ₂ O.....	2.3mg
ZnSO ₄ ·7H ₂ O.....	0.44mg
CuSO ₄ ·5H ₂ O.....	0.005mg

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Halobacterium halobium*.

***Halobacterium halobium*/**
***Halobacterium salinarium* Medium**

Composition per liter:

NaCl	250.0g
MgSO ₄ ·7H ₂ O	20.0g
Pancreatic digest of casein	5.0g
Yeast extract	3.0g
Trisodium citrate·2H ₂ O	3.0g
KCl	2.0g
Trace metals solution	0.1mL

Trace Metals Solution:**Composition per liter:**

ZnSO ₄ ·7H ₂ O	1.32g
MnSO ₄ ·H ₂ O	0.34g
Fe(NH ₄) ₂ SO ₄ ·7H ₂ O	0.78g
CuSO ₄ ·5H ₂ O	0.14g

Preparation of Trace Metals Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Halobacterium halobium* and *Halobacterium salinarium*.

***Halobacterium halobium*/**
***Halobacterium salinarium* Medium**

Composition per liter:

NaCl	250.0g
MgSO ₄ ·7H ₂ O	20.0g
Trisodium citrate·2H ₂ O	3.0g
KCl	2.0g
Peptone	2.0g
Trace metals solution	0.1mL

Trace Metals Solution:**Composition per liter:**

ZnSO ₄ ·7H ₂ O	1.32g
Fe(NH ₄) ₂ SO ₄ ·7H ₂ O	0.78g
MnSO ₄ ·H ₂ O	0.34g
CuSO ₄ ·5H ₂ O	0.14g

Preparation of Trace Metals Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Halobacterium halobium* and *Halobacterium salinarium*.

***Halobacterium*/Halococcus Medium**

Composition per liter:

Solution A	500.0mL
Salt solution	500.0mL

Solution A:**Composition per 500.0mL:**

Skim milk	50.0g
-----------------	-------

Preparation of Solution A: Add 50.0g of skim milk to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly.

Salt Solution:**Composition per 500.0mL:**

MgSO ₄ ·7H ₂ O	10.0g
KNO ₃	2.0g

Preparation of Salt Solution: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Haloarcula vallismortis*, *Halobacterium cutirubrum*, *Halobacterium halobium*, *Halobacterium saccharovorum*, *Halobacterium salinarium*, and *Halococcus morrhuae*.

***Halobacterium lacusprofundii* Medium**
(DSMZ Medium 589)

Composition per liter:

NaCl	181.0g
MgCl ₂ ·6H ₂ O	75.0g
Na-succinate	10.0g
MgSO ₄ ·7H ₂ O	7.4g
KCl	7.4g
CaCl ₂ ·2H ₂ O	1.0g
Yeast extract	1.0g
Vitamin solution	1.0mL

pH 7.4 ± 0.2 at 25°C

Vitamin Solution:**Composition per 100.0mL:**

Biotin	10.0mg
Vitamin B ₁₂	10.0mg
Thiamine-HCl·2H ₂ O	10.0mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except vitamin solution, to distilled/deionized water and bring volume to 999.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 1.0mL vitamin solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Halorubrum lacusprofundii*.

***Halobacterium* Medium**

Composition per liter:

Solution 1	500.0mL
Solution 2	500.0mL

pH 7.0 ± 0.2 at 25°C

Solution 1:**Composition per 500.0mL:**

Yeast extract	10.0g
Pancreatic digest of casein	2.5g

Preparation of Solution 1: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.0. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Solution 2:**Composition per 500.0mL:**

NaCl	250.0g
MgSO ₄ ·7H ₂ O	10.0g

KCl.....	5.0g
CaCl ₂ ·6H ₂ O.....	0.2g

Preparation of Solution 2: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Preparation of Medium: Aseptically combine sterile solution 1 and sterile solution 2. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Halobacterium salinarium*.

Halobacterium Medium (ATCC Medium 213)

Composition per liter:

Solution 1.....	500.0mL
Solution 2.....	500.0mL
pH 7.0 ± 0.2 at 25°C	

Solution 1:

Composition per 500.0mL:

Yeast extract.....	10.0g
Pancreatic digest of casein.....	2.5g

Preparation of Solution 1: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.0. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Solution 2:

Composition per 500.0mL:

NaCl.....	250.0g
Agar.....	20.0g
MgSO ₄ ·7H ₂ O.....	10.0g
KCl.....	5.0g
CaCl ₂ ·6H ₂ O.....	0.2g

Preparation of Solution 2: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Preparation of Medium: Aseptically combine sterile solution 1 and sterile solution 2. Mix thoroughly. Aseptically pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Halobacterium salinarium*.

Halobacterium Medium (ATCC Medium 974)

Composition per 100.0mL:

Solution 1.....	75.0mL
Solution 2.....	25.0mL
pH 6.8 ± 0.2 at 25°C	

Solution 1:

Composition per 75.0mL:

NaCl.....	12.5g
MgCl ₂ ·6H ₂ O.....	5.0g
K ₂ SO ₄	0.5g
CaCl ₂ ·6H ₂ O.....	0.02g

Preparation of Solution 1: Add components to distilled/deionized water and bring volume to 75.0mL. Mix thoroughly. Adjust pH to 6.8. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Solution 2:

Composition per 25.0mL:

Agar.....	2.0g
Pancreatic digest of casein.....	0.5g
Yeast extract.....	0.5g

Preparation of Solution 2: Add components to distilled/deionized water and bring volume to 25.0mL. Mix thoroughly. Adjust pH to 6.8. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Preparation of Medium: Aseptically combine sterile solution 1 and sterile solution 2. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Haloferax volcanii*.

Halobacterium Medium (ATCC Medium 1176)

Composition per liter:

NaCl.....	156.0g
MgSO ₄ ·7H ₂ O.....	20.0g
MgCl ₂ ·6H ₂ O.....	13.0g
Yeast extract.....	5.0g
KCl.....	4.0g
CaCl ₂ ·6H ₂ O.....	1.0g
Glucose.....	1.0g
NaBr.....	0.5g
NaHCO ₃	0.2g
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Haloferax mediterranei*.

Halobacterium Medium (ATCC Medium 1270)

Composition per liter:

NaCl.....	194.0g
MgSO ₄	24.0g
MgCl ₂	16.0g
KCl.....	5.0g
Yeast extract.....	5.0g
CaCl ₂	1.0g
NaBr.....	0.5g
NaHCO ₃	0.2g
pH 7.3 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Haloarcula hispanica* and *Haloferax gibbonsii*.

Halobacterium pharaonis Medium

Composition per liter:

NaCl.....	250.0g
Agar.....	20.0g
Casamino acids.....	15.0g
Trisodium citrate·2H ₂ O.....	3.0g
Glutamic acid.....	2.5g

MgSO ₄ ·7H ₂ O	2.5g
KCl.....	2.0g

pH 8.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 6.0. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Readjust pH to 8.5. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Natronobacterium (Halobacterium) pharaonis*.

Halobacterium saccharovorum Medium

Composition per liter:

NaCl.....	250.0g
MgCl ₂ ·6H ₂ O	20.0g
Glucose	10.0g
Casimino acids.....	5.0g
Yeast extract.....	2.5g
KCl.....	2.0g
CaCl ₂ ·7H ₂ O.....	0.2g

pH 7.35 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Halobacterium saccharovorum*.

Halobacterium soldomense Medium

Composition per liter:

MgCl ₂ ·6H ₂ O.....	160.0g
NaCl.....	125.0g
K ₂ SO ₄	5.0g
Soluble starch.....	2.0g
Peptone.....	1.0g
Yeast extract.....	1.0g
CaCl ₂ ·2H ₂ O.....	0.13g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Halobacterium soldomense*.

Halobacterium Starch Medium

Composition per liter:

MgCl ₂ ·6H ₂ O.....	160.0g
NaCl.....	125.0g
K ₂ SO ₄	5.0g
Soluble starch.....	2.0g
Peptone.....	1.0g
Yeast extract.....	1.0g
CaCl ₂ ·2H ₂ O.....	0.13g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Haloarcula marismortui*.

Halobacterium volcanii Medium

Composition per 100.0mL:

NaCl.....	25.0g
MgSO ₄ ·7H ₂ O.....	1.0g
KCl.....	0.5g
Glycine.....	0.2g
CaCl ₂ ·6H ₂ O	0.02g
Yeast autolysate	1.0mL

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Adjust pH to 7.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the specific enrichment of *Halobacterium volcanii*.

Halobacterium volcanii Medium

Composition per liter:

NaCl.....	125.0g
MgCl ₂ ·6H ₂ O	50.0g
K ₂ SO ₄	5.0g
Pancreatic digest of casein.....	5.0g
Yeast extract.....	5.0g
CaCl ₂ ·6H ₂ O	0.2g

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until dissolved. Adjust pH to 6.8. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Halobacterium volcanii*.

Halobacteroides acetoethylicus Medium

Composition per liter:

NaCl.....	100.0g
Pancreatic digest of casein.....	10.0g
Yeast extract.....	3.0g
K ₂ HPO ₄	1.5g
NH ₄ Cl	0.9g
KH ₂ PO ₄	0.75g
MgCl ₂ ·6H ₂ O	0.2g
Glucose solution	25.0mL
Na ₂ S·9H ₂ O (10% solution).....	10.0mL
Trace elements solution	9.0mL
Wolfe's Vitamin solution	5.0mL
Resazurin (0.025% solution)	4.0mL
FeSO ₄ ·7H ₂ O (10% solution).....	0.03mL

pH 7.3 ± 0.2 at 25°C

Glucose Solution:

Composition per 100.0mL:

Glucose	20.0g
---------------	-------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Sparge with 100% N₂.

Trace Elements Solution:

Composition per liter:

Nitrilotriacetic acid	12.5g
NaCl.....	1.0g
FeCl ₃ ·4H ₂ O.....	0.2g
MnCl ₂ ·4H ₂ O	0.1g

CaCl ₂ ·2H ₂ O	0.1g
ZnCl ₂	0.1g
CuCl ₂	0.02g
Na ₂ SeO ₃	0.02g
CoCl ₂ ·6H ₂ O	0.017g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L.

Wolfe's Vitamin Solution:

Composition per liter:

Pyridoxine-HCl	10.0mg
Thiamine-HCl	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
Calcium DL-pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Thioctic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Cyanocobalamin	100.0μg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components, except glucose solution, to distilled/deionized water and bring volume to 975.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. While still hot, aseptically add 25.0mL of the sterile glucose solution under 97% N₂ + 3% H₂. Adjust pH to 7.3 if necessary. Aseptically and anaerobically distribute into tubes. Cap with rubber stoppers.

Use: For the cultivation and maintenance of *Halobacteroides acetotethylicus*.

Halobacteroides/Haloicola Medium

Composition per liter:

NaCl	100.0g
Peptone	5.0g
CaCl ₂	0.33g
KCl	0.33g
KH ₂ PO ₄	0.33g
MgCl ₂	0.33g
NH ₄ Cl	0.33g
Resazurin	2.0mg
Glucose solution	30.0mL
NaHCO ₃ solution	10.0mL
Na ₂ S·9H ₂ O solution	10.0mL
Wolfe's vitamin solution	10.0mL
Trace elements solution SL-10	1.0mL
pH 7.5 ± 0.2 at 25°C	

Glucose Solution:

Composition per 30.0mL:

D-Glucose	5.0g
-----------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 30.0mL. Mix thoroughly. Filter sterilize. Sparge with 100% N₂.

NaHCO₃ Solution:

Composition per 10.0mL:

NaHCO ₃	1.5g
--------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize. Sparge with 100% N₂.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.5g
-------------------------------------	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Wolfe's Vitamin Solution:

Composition per liter:

Pyridoxine-HCl	10.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Nicotinic acid	5.0mg
Riboflavin	5.0mg
Thiamine-HCl	5.0mg
Calcium DL-pantothenate	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Trace Elements Solution SL-10:

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂. Add components, except glucose solution, NaHCO₃ solution, Na₂S·9H₂O solution, and Wolfe's vitamin solution, to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Gently heat and bring to boiling. Cool to room temperature while sparging with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 30.0mL of sterile glucose solution, 10.0mL of sterile NaHCO₃ solution, 10.0mL of sterile Na₂S·9H₂O solution, and 10.0mL of sterile Wolfe's vitamin solution. Mix thoroughly. Check that final pH is 7.5.

Use: For the cultivation of *Haloanaerobium (Haloicola) saccharolyticum*.

Halobacteroides/Haloicola Medium

Composition per liter:

NaCl	150.0g
Peptone	5.0g
CaCl ₂	0.33g

KCl.....	0.33g
KH ₂ PO ₄	0.33g
MgCl ₂	0.33g

Glucose (10% solution).....	50.0mL
Sodium PIPES (piperazine- <i>N,N'</i> -bis-2-ethane sulfonate buffer, 1M, pH 6.8–7.0).....	40.0mL
pH 6.8–7.0 at 25°C	

Preparation of Medium: Filter sterilize glucose solution and PIPES buffer solution separately. Add remaining components—except glucose solution, PIPES buffer solution, and L-cysteine·HCl·H₂O—to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling under 100% N₂. Add L-cysteine·HCl·H₂O. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50.0mL of sterile glucose solution and 40.0mL of sterile PIPES buffer solution. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Halobacteroides halobius* and *Sporohalobacter marismortui*.

Halobacteroides Medium**Composition per liter:**

Yeast extract.....	0.5g
CaCl ₂ ·2H ₂ O.....	0.33g
KCl.....	0.33g
KH ₂ PO ₄	0.33g
MgCl ₂ ·6H ₂ O.....	0.33g
NH ₄ Cl.....	0.33g
Resazurin.....	2.0mg
Wolfe's mineral solution.....	10.0mL
Wolfe's vitamin solution.....	10.0mL
pH 7.0 ± 0.2 at 25°C	

Wolfe's Mineral Solution:**Composition per liter:**

MgSO ₄ ·7H ₂ O.....	3.0g
Nitritotriacetic acid.....	1.5g

NaCl	1.0g
MnSO ₄ ·2H ₂ O	0.5g
CoCl ₂ ·6H ₂ O	0.1g
ZnSO ₄ ·7H ₂ O	0.1g
CaCl ₂ ·2H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g
NiCl ₂ ·6H ₂ O	0.025g
KAl(SO ₄) ₂ ·12H ₂ O	0.02g
CuSO ₄ ·5H ₂ O	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O	0.3mg

Preparation of Wolfe's Mineral Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components one at a time. Add distilled/deionized water to 1.0L. Adjust pH to 6.8.

Wolfe's Vitamin Solution:

Composition per liter:

Pyridoxine-HCl	10.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Nicotinic acid	5.0mg
Riboflavin	5.0mg
Thiamine-HCl	5.0mg
Calcium DL-pantothenate	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 10% CO₂ + 10% H₂. Add components, except NaHCO₃ and Na₂S·9H₂O, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 3 min. Cool to room temperature while sparging with 80% N₂ + 10% CO₂ + 10% H₂. Add NaHCO₃ and Na₂S·9H₂O. Mix thoroughly. Adjust pH to 7.0. Anaerobically distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Haloanaerobacter lacunaris*.

Halobaculum gomorrense Medium (DSMZ Medium 823)

Composition per liter:

MgCl ₂ ·6H ₂ O	160.0g
NaCl	125.0g
K ₂ SO ₄	5.0g
Starch	2.0g
Yeast extract	1.0g
Casamino acids	1.0g
CaCl ₂ ·2H ₂ O	0.1g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Halobaculum gomorrense* (*Haloferax gomorrae*).

Halobius Medium

Composition per liter:

NaCl	116.0g
Agar	20.0g
MgSO ₄ ·7H ₂ O	20.0g
Yeast extract	10.0g
Vitamin-free casamino acids	7.5g
Sodium citrate	3.0g
KCl	2.0g
FeCl ₂	0.023g

pH 6.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Micrococcus halobius*.

Halocella cellulolytica Medium

Composition per liter:

NaCl	150.0g
Cellobiose or microcrystalline cellulose	5.0g
Yeast extract	2.0g
MgCl ₂ ·6H ₂ O	3.6g
CaCl ₂	0.33g
KCl	0.33g
KH ₂ PO ₄	0.33g
NH ₄ Cl	0.33g
Resazurin	2.0mg
NaHCO ₃ solution	10.0mL
Na ₂ S·9H ₂ O solution	10.0mL
Wolfe's vitamin solution	10.0mL
Trace elements solution SL-10	1.0mL

pH 7.0 ± 0.2 at 25°C

NaHCO₃ Solution:

Composition per 10.0mL:

NaHCO ₃	2.5g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize. Sparge with 100% N₂.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.5g
---	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Wolfe's Vitamin Solution:

Composition per liter:

Pyridoxine-HCl	10.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Nicotinic acid	5.0mg
Riboflavin	5.0mg
Thiamine-HCl	5.0mg
Calcium DL-pantothenate	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Trace Elements Solution SL-10:

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂. Add components, except NaHCO₃ solution, Na₂S·9H₂O solution, and Wolfe's vitamin solution, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Gently heat and bring to boiling. Cool to room temperature while sparging with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 10.0mL of sterile NaHCO₃ solution, 10.0mL of sterile Na₂S·9H₂O solution, and 10.0mL of sterile Wolfe's vitamin solution. Mix thoroughly. Check that final pH is 7.0.

Use: For the cultivation of *Halocella cellulolytica*.

Halococcus Agar

Composition per liter:

Solution A	500.0mL
Solution B	100.0mL
Solution C	400.0mL

pH 8.4 ± 0.2 at 25°C

Solution A:

Composition per 500.0mL:

Skim milk powder.....	50.0g
-----------------------	-------

Preparation of Solution A: Add skim milk powder to distilled/deionized water and bring volume to 500.0mL. Autoclave for 15 min at 8 psi pressure–112°C. Cool to 50°–55°C.

Solution B:

Composition per 100.0mL:

NaCl	200.0g
KNO ₃	2.0g
MgSO ₄ ·7H ₂ O	10.0mg
Ferric citrate.....	1.0µg

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 100.0mL. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C.

Solution C:

Composition per 400.0mL:

Agar	25.0g
Glycerol	10.0g
Neopeptone	5.0g

Preparation of Solution C: Add components to distilled/deionized water and bring volume to 400.0mL. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C.

Preparation of Medium: Aseptically combine 100.0mL of sterile solution B with 400.0mL of sterile solution C. Mix thoroughly. Adjust pH to 8.4. Aseptically add 500.0mL of sterile solution A. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Halococcus morrhuae*.

Halococcus dombrowskii Medium (DSMZ Medium 954)

Composition per liter:

NaCl.....	200.0g
Agar	20.0g
MgCl ₂ ·6H ₂ O	20.0g
TRIS.....	12.1g
Casamino acids	5.0g
Yeast extract.....	5.0g
KCl.....	2.0g
CaCl ₂ ·2H ₂ O	0.2g

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components, except agar, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.4. Add agar. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Halococcus dombrowskii*.

Halodurans Medium

Composition per liter:

NaCl.....	150.0g
Agar	20.0g
MgSO ₄ ·7H ₂ O	20.0g
Yeast extract.....	10.0g
Casamino acids	7.5g
Sodium citrate.....	3.0g
KCl.....	2.0g
FeCl ₂	0.023g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Micrococcus varians*.

Haloferax mediterranei Medium

Composition per liter:

NaCl.....	195.0g
MgSO ₄ ·7H ₂ O	49.4g
MgCl ₂ ·6H ₂ O	34.6g
Yeast extract.....	5.0g
CaCl ₂ ·2H ₂ O	0.92g
NaBr.....	0.58g
KCl.....	0.5g
NaHCO ₃	0.17g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Haloferax mediterranei*.

Haloferax mediterranei Minimal Medium I

Composition per liter:

NaCl	156.0g
MgSO ₄ ·7H ₂ O	20.0g
MgCl ₂ ·6H ₂ O	13.0g
Glucose	10.0g
KCl	4.0g
NaH ₄ Cl	2.0g
CaCl ₂ ·2H ₂ O	1.0g
NaBr	0.58g
KH ₂ PO ₄	0.5g
NaHCO ₃	0.2g
FeCl ₂ ·6H ₂ O	0.005g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Haloferax mediterranei*.

Haloferax mediterranei Minimal Medium II

Composition per liter:

NaCl	160.0g
MgCl ₂ ·7H ₂ O	20.0g
Sodium glutamate·H ₂ O	20.0g
Sucrose	10.0g
KCl	4.0g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Haloferax mediterranei*.

Haloferax sulfurifontis Medium (DSMZ Medium 1018)

Composition per liter:

Casitone	3.0g
MgSO ₄ ·7H ₂ O	2.0g
CaCl ₂ ·2H ₂ O	0.07g
Trace elements solution SL-4	1.0mL
Vitamin solution	1.0mL

pH 7.1 ± 0.2 at 25°C

Vitamin Solution:

Composition per 10.0mL:

Vitamin B ₁₂	5.0mg
-------------------------------	-------

Preparation of Vitamin Solution: Add vitamin B₁₂ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Trace Elements Solution SL-4:

Composition per liter:

EDTA	0.5g
FeSO ₄ ·7H ₂ O	0.2g
Trace elements solution SL-6	100.0mL

Trace Elements Solution SL-6:

Composition per liter:

MnCl ₂ ·4H ₂ O	0.5g
H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
Na ₂ MoO ₄ ·2H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Trace Elements Solution SL-4: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except vitamin solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.1. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add 1.0mL vitamin solution. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Haloferax sulfurifontis*.

Haloferax volcanii Low-Salt Medium

Composition per liter:

NaCl	125.0g
MgCl ₂ ·6H ₂ O	45.0g
MgSO ₄ ·7H ₂ O	10.0g
KCl	10.0g
CaCl ₂ ·2H ₂ O	10.0g
Pancreatic digest of casein	3.0g
Yeast extract	1.34g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Haloferax volcanii*.

Haloferax volcanii Medium

Composition per liter:

NaCl	206.0g
MgSO ₄ ·7H ₂ O	37.0g
KCl	3.7g
Yeast tryptone solution	100.0mL
Tris[hydroxymethyl]aminomethane·HCl (1M solution, pH 7.2)	50.0mL
CaCl ₂ ·2H ₂ O solution	5.0mL
MnCl ₂ ·6H ₂ O solution	1.7mL

pH 7.2 ± 0.2 at 25°C

Yeast Tryptone Solution:

Composition per 100.0mL:

Tryptone	5.0g
Yeast extract	3.0g

Preparation of Yeast Tryptone Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

CaCl₂·2H₂O Solution:**Composition** per 100.0mL:CaCl₂·2H₂O..... 10.0g**Preparation of CaCl₂·2H₂O Solution:** Add CaCl₂·2H₂O to distilled/deionized water and bring volume to 100.0mL. Wolfe's Vitamin Solution:**Composition per liter:**

Pyridoxine-HCl	0.01g
Thiamine-HCl	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
Calcium pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Thioctic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Cyanocobalamin	0.1mg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Store at 4°C.

Wolfe's Mineral Solution:**Composition per liter:**

MgSO ₄ ·7H ₂ O	3.0g
Nitritotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·H ₂ O	0.5g
FeSO ₄ ·7H ₂ O	0.1g
CoCl ₂ ·6H ₂ O	0.1g
CaCl ₂	0.1g
ZnSO ₄ ·7H ₂ O	0.1g
CuSO ₄ ·5H ₂ O	0.01g
AlK(SO ₄) ₂ ·12H ₂ O	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g

Preparation of Wolfe's Mineral Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L.

Volatile Acids Solution:**Composition per liter:**

α -Methylbutyric acid	0.5mL
Isobutyric acid	0.5mL
Isovaleric acid	0.5mL
Valeric acid	0.5mL

Preparation of Volatile Acids Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Combine components, except the L-cysteine-HCl·H₂O, trimethylamine-HCl, and Na₂S·9H₂O solution. Mix thoroughly. Gently heat and bring to boiling. Add L-cysteine-HCl·H₂O. Mix thoroughly. Cool in an ice-water bath under 80% N₂ + 20% CO₂. Add trimethylamine-HCl. Mix thoroughly. Adjust pH to 7.1. Aseptically and anaerobically distribute into tubes in 10.0mL volumes under 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Immediately prior to inoculation, aseptically add 0.25mL of sterile Na₂S·9H₂O solution to each tube. Mix thoroughly.

Use: For the cultivation and maintenance of *Methanohalophilus mahii*.

***Halomicrobium katesii* Medium (DSMZ Medium 1164)**

Composition per liter:

NaCl	195.0g
MgSO ₄ ·7H ₂ O	49.83g

Proteose peptone	5.0g
Yeast extract	5.0g
KCl	5.0g
Glucose	1.0g
CaCl ₂ ·2H ₂ O	0.916g
NaBr	0.35g
NaHCO ₃	0.166g
FeCl ₃ ·6H ₂ O, 0.5% solution	7 drops

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Halomicrobium katesii*.

***Halomonas desiderata* Medium (DSMZ Medium 762)**

Composition per liter:

Glucose	5.0g
KNO ₃	2.0g
KH ₂ PO ₄	1.0g
MgCl ₂ ·6H ₂ O	0.2g
Carbonate solution	100.0mL

pH 9.5–10.0 at 25°C

Carbonate Solution**Composition per 100.0mL:**

Na ₂ CO ₃	5.4g
NaHCO ₃	4.2g

Preparation of Carbonate Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except carbonate solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add 100.0mL sterile carbonate solution. Mix thoroughly. Aseptically distribute into sterile tubes or bottles.

Use: For the cultivation of *Halomonas desiderata*.

***Halomonas desiderata* Medium (LMG Medium 271)**

Composition per liter:

Glucose	5.0g
KNO ₃	2.0g
KH ₂ PO ₄	1.0g
MgCl ₂ ·6H ₂ O	0.2g
Na ₂ CO ₃ /NaHCO ₃ solution	100.0mL

pH 9.5–10.0

Na₂CO₃/NaHCO₃ Solution:**Composition per 100.0mL:**

Na ₂ CO ₃	5.4g
NaHCO ₃	4.2g

Preparation of Na₂CO₃/NaHCO₃ Solution: Add NaHCO₃ and Na₂CO₃ to 100.0mL of distilled/deionized water. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except Na₂CO₃/NaHCO₃ solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 100.0mL sterile Na₂CO₃/

NaHCO₃ solution. Pour into sterile Petri dishes or aseptically distribute into sterile tubes.

Use: For cultivation and maintenance of *Halomonas desiderata*.

Halomonas magadiensis Medium (DSMZ Medium 971)

Composition per liter:

Agar	20.0g
Glucose	10.0g
Peptone.....	5.0g
Yeast extract.....	5.0g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O.....	0.2g
NaCl solution.....	200.0mL
Na ₂ CO ₃ solution.....	100.0mL

pH 10.0 ± 0.2 at 25°C

NaCl Solution:

Composition per 200.0mL:

NaCl.....	40.0g
-----------	-------

Preparation of NaCl Solution: Add NaCl to distilled/deionized water and bring volume to 200.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 60°C.

Na₂CO₃ Solution:

Composition per 100.0mL:

Na ₂ CO ₃	10.0g
---------------------------------------	-------

Preparation of Na₂CO₃ Solution: Add Na₂CO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 60°C.

Preparation of Medium: Add components, except NaCl solution and Na₂CO₃ solution, to distilled/deionized water and bring volume to 700.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 60°C. Aseptically add 200.0mL NaCl solution and 100.0mL Na₂CO₃ solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Halomonas magadiensis*.

Halomonas Medium

Composition per liter:

NaCl.....	80.0g
MgSO ₄ ·7H ₂ O.....	20.0g
Casamino acids with vitamins.....	7.5g
Proteose peptone No. 3.....	5.0g
Sodium citrate.....	3.0g
Yeast extract.....	1.0g
K ₂ HPO ₄	0.5g
Fe(NH ₄) ₂ (SO ₄) ₂ ·6H ₂ O.....	0.05g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0 with KOH. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Halomonas elongata*.

Halomonas pantelleriense Agar (DSMZ Medium 752)

Composition per liter:

NaCl.....	100.0g
Agar.....	20.0g

Yeast extract.....	10.0g
Na ₂ -citrate.....	3.0g
KCl.....	2.0g
MgSO ₄ ·7H ₂ O.....	1.0g
Na ₂ CO ₃ solution.....	25.0mL
MnCl ₂ solution.....	1.0mL
FeSO ₄ solution.....	1.0mL

pH 9.0 ± 0.2 at 25°C

Na₂CO₃ Solution:

Composition per 25.0mL:

Na ₂ CO ₃	2.5g
---------------------------------------	------

Preparation of Na₂CO₃ Solution: Add Na₂CO₃ to distilled/deionized water and bring volume to 25.0mL. Mix thoroughly.

FeSO₄ Solution:

Composition per 100.0mL:

FeSO ₄ ·7H ₂ O.....	5.0g
---	------

Preparation of FeSO₄ Solution: Add FeSO₄·7H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

MnCl₂ Solution:

Composition per 100.0mL:

MnCl ₂ ·4H ₂ O.....	0.036g
---	--------

Preparation of MnCl₂ Solution: Add MnCl₂·4H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components, except Na₂CO₃ solution to distilled/deionized water and bring volume to 990.0L. Mix thoroughly. Adjust pH to 9.0. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL sterile Na₂CO₃ solution. Mix thoroughly. Pour into Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Halomonas pantelleriense* (*Halomonas pantelleriense*).

Halomonas pantelleriense Medium (DSMZ Medium 752)

Composition per liter:

NaCl.....	100.0g
Yeast extract.....	10.0g
Na ₂ -citrate.....	3.0g
KCl.....	2.0g
MgSO ₄ ·7H ₂ O.....	1.0g
Na ₂ CO ₃ solution.....	50.0mL
MnCl ₂ solution.....	1.0mL
FeSO ₄ solution.....	1.0mL

pH 9.0 ± 0.2 at 25°C

Na₂CO₃ Solution:

Composition per 50.0mL:

Na ₂ CO ₃	2.5g
---------------------------------------	------

Preparation of Na₂CO₃ Solution: Add Na₂CO₃ to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize.

FeSO₄ Solution:

Composition per 100.0mL:

FeSO ₄ ·7H ₂ O.....	5.0g
---	------

Preparation of FeSO₄ Solution: Add FeSO₄·7H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

MnCl₂ Solution:

Composition per 100.0mL:

MnCl ₂ ·4H ₂ O.....	0.036g
---	--------

Preparation of MnCl₂ Solution: Add MnCl₂·4H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 9.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Halomonas pantelleriensis* (*Halomonas pantelleriense*).

Halomonas pantelleriensis Medium (LMG Medium 268)

Composition per liter:

NaCl	100.0g
Agar	20.0g
Yeast extract	10.0g
Sodium citrate	3.0g
KCl	2.0g
MgSO ₄ ·7H ₂ O	1.0g
Sodium carbonate solution	20-30mL
Manganese chloride solution	1.0mL
Iron sulfate solution	1.0mL

pH 9.0 ± 0.2 at 25°C

Manganese Chloride Solution:

Composition per 100.0mL:

MnCl ₂ ·4H ₂ O	0.036g
--------------------------------------	--------

Preparation of Manganese Chloride Solution: Add MnCl₂·4H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Iron Sulfate Solution:

Composition per 10.0mL:

FeSO ₄ ·7H ₂ O	0.5g
--------------------------------------	------

Preparation of Iron Sulfate Solution: Add FeSO₄·7H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly.

Sodium Carbonate Solution:

Composition per 100.0mL:

Na ₂ CO ₃	10.0g
---------------------------------	-------

Preparation of Sodium Carbonate Solution: Add Na₂CO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components, except sodium carbonate solution, to 950.0mL distilled/deionized water. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Adjust pH to 9.0 by septicly adding sterile sodium carbonate solution (20–30mL). Bring volume to 1.0L by adding sterile distilled/deionized water. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Halomonas pantelleriensis*.

Halomonas subglaciescola Medium

Composition per liter:

Agar	25.0g
Peptone	10.0g
NaCl	10.0g
Beef extract	8.0g

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Dis-

tribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Halomonas subglaciescola*.

Halomonas subglaciescola Medium (Artificial Organic Lake Medium)

Composition per 1001.0mL:

NaCl	80.0g
MgSO ₄ ·7H ₂ O	9.5g
Yeast extract	1.0g
KCl	0.5g
CaCl ₂ ·2H ₂ O	0.2g
KNO ₃	0.1g
(NH ₄) ₂ SO ₄	0.1g
Hutner's basal salts solution	20.0mL
Phosphate supplement	20.0mL
Vitamin solution	1.0mL

pH 8.0 ± 0.2 at 25°C

Hutner's Basal Salts Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O	29.7g
Nitritotriacetic acid	10.0g
CaCl ₂ ·2H ₂ O	3.335g
FeSO ₄ ·7H ₂ O	99.0mg
(NH ₄) ₆ Mo ₇ O ₂₄ ·4H ₂ O	9.25mg
"Metals 44"	50.0mL

"Metals 44":

Composition per 100.0mL:

ZnSO ₄ ·7H ₂ O	1.095g
FeSO ₄ ·7H ₂ O	0.5g
Sodium EDTA	0.25g
MnSO ₄ ·H ₂ O	0.154g
CuSO ₄ ·5H ₂ O	39.2mg
Co(NO ₃) ₂ ·6H ₂ O	24.8mg
Na ₂ B ₄ O ₇ ·10H ₂ O	17.7mg

Preparation of "Metals 44": Add sodium EDTA to distilled/deionized water and bring volume to 90.0mL. Mix thoroughly. Add a few drops of concentrated H₂SO₄ to retard precipitation of heavy metal ions. Add remaining components. Mix thoroughly. Bring volume to 100.0mL with distilled/deionized water.

Preparation of Hutner's Basal Salts Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Adjust pH to 6.8. Filter sterilize.

Phosphate Supplement:

Composition per 20.0mL:

K ₂ HPO ₄	50.0mg
KH ₂ PO ₄	50.0mg

Preparation of Phosphate Supplement: Add components to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize.

Vitamin Solution:

Composition per liter:

Cyanocobalamin	10.0mg
Pyridoxine-HCl	10.0mg
Thiamine-HCl	10.0mg
Calcium DL-pantothenate	5.0mg
Nicotinamide	5.0mg

Biotin	2.0mg
Folic acid.....	2.0mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except Hutner's basal salts solution, phosphate supplement, and vitamin solution, to distilled/deionized water and bring volume to 960.0mL. Mix thoroughly. Adjust pH to 8.0. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 20.0mL of sterile Hutner's basal salts solution, 20.0mL of sterile phosphate supplement, and 1.0mL of sterile vitamin solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Halonatrum subglaciescola*.

Halonatrum saccharophilum Medium (DSMZ Medium 932)

Composition per liter:

Na ₂ CO ₃	68.0g
NaCl	50.0g
NaHCO ₃	38.0g
NH ₄ Cl	0.5g
KCl	0.2g
KH ₂ PO ₄	0.2g
MgCl ₂	0.1g
Resazurin	0.01g
Sucrose solution	50.0mL
Na ₂ S·9H ₂ O solution	10.0mL
Yeast extract solution	10.0mL
Vitamin solution	10.0mL
Trace elements	1.0mL

pH 9.5–10.0 at 25°C

Sucrose Solution:

Composition per 50.0mL:

Sucrose.....	5.0g
--------------	------

Preparation of Sucrose Solution: Add sucrose to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Yeast Extract Solution:

Composition per 10.0mL:

Yeast extract.....	0.2g
--------------------	------

Preparation of Yeast Extract Solution: Add yeast extract to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	0.7g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Trace Elements Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O	3.0g
Nitilotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·2H ₂ O	0.5g
CoSO ₄ ·7H ₂ O	0.18g

ZnSO ₄ ·7H ₂ O	0.18g
CaCl ₂ ·2H ₂ O	0.1g
FeSO ₄ ·7H ₂ O.....	0.1g
NiCl ₂ ·6H ₂ O.....	0.025g
KAl(SO ₄) ₂ ·12H ₂ O.....	0.02g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·4H ₂ O	0.01g
CuSO ₄ ·5H ₂ O.....	0.01g
Na ₂ SeO ₃ ·5H ₂ O.....	0.3mg

Preparation of Trace Elements Solution: Add nitilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl.....	10.0mg
Thiamine-HCl·2H ₂ O.....	5.0mg
Riboflavin	5.0mg
Nicotinic acid.....	5.0mg
D-Ca-pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Lipoic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Preparation of Medium: Prepare and dispense medium under 100% N₂ gas atmosphere. Add components, except NaHCO₃, NH₄Cl, Na₂CO₃, sucrose solution, Na₂S·9H₂O solution, yeast extract solution, and vitamin solution, to distilled/deionized water and bring volume to 920.0mL. Mix thoroughly. Gently heat and bring to boiling. Boil for 5 min. Cool to room temperature while sparging with 100% N₂. Add solid NaHCO₃, NH₄Cl, and Na₂CO₃. Mix thoroughly. Distribute into anaerobe tubes or bottles. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add per liter of medium 50.0mL sucrose solution, 10.0mL yeast extract solution, 10.0mL Na₂S·9H₂O solution, and 10.0mL vitamin solution. The final pH should be 9.5–10.0.

Use: For the cultivation of *Halonatrum saccharophilum*.

Halophile Agar

Composition per liter:

NaCl.....	156.0g
Agar	20.0g
MgSO ₄ ·7H ₂ O	20.0g
MgCl ₂ ·6H ₂ O	13.0g
Yeast extract.....	10.0g
KCl.....	4.0g
CaCl ₂ ·6H ₂ O	1.0g
NaBr.....	0.5g
NaHCO ₃	0.2g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Haloarcula hispanica*, *Haloferax gibbonsii*, *Marinococcus halophilus*, *Planococcus* species, and *Sporosarcina halophila*.

Halophile Agar I**Composition per liter:**

NaCl.....	250.0g
MgSO ₄ ·7H ₂ O.....	20.0g
Agar.....	15.0g
Yeast extract.....	10.0g
Casamino acids.....	7.5g
Trisodium citrate.....	3.0g
KCl.....	2.0g
FeSO ₄ ·7H ₂ O.....	0.05g
MnSO ₄ ·4H ₂ O.....	0.25mg

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components, except agar, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.4. Add agar. Gently heat and bring to boiling. Do not autoclave. Sterilize by steaming at 100°C for 30 min. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Halobacterium halobium*, *Halobacterium salinarum*, and *Halobacterium trapanicum*.

Halophile Medium**Composition per liter:**

NaCl.....	30.0g
Agar.....	15.0g
Peptone.....	5.0g
Yeast extract.....	2.0g
Beef extract.....	1.0g

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Bacillus tusciae*, *Chromobacterium maris-mortui*, *Flavobacterium tirrenicum*, *Flavobacterium uliginosum*, *Halomonas halmophila*, *Pseudomonas beijerinckii*, *Vibrio alginolyticus*, *Vibrio parahaemolyticus*, and *Vibrio proteolyticus*.

Halophile Medium**Composition per liter:**

NaCl.....	100.0g
KCl.....	5.0g
MgCl ₂ ·6H ₂ O.....	5.0g
MgSO ₄ ·7H ₂ O.....	5.0g
NH ₄ Cl.....	5.0g
Peptone solution (15% solution).....	30.0mL
Yeast extract solution (15% solution).....	30.0mL
Ferric citrate solution (1% solution).....	10.0mL
Trace elements solution.....	5.0mL

Trace Elements Solution:**Composition per liter:**

ZnSO ₄ ·7H ₂ O.....	0.22g
MgCl ₂ ·4H ₂ O.....	0.18g
CoCl ₂ ·6H ₂ O.....	0.01g
Na ₂ MoO ₄ ·H ₂ O.....	6.3mg
CuSO ₄ ·5H ₂ O.....	1.0mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Rhodospirillum salinarum*.

Halophile Medium III**Composition per liter:**

NaCl.....	95.3g
MgSO ₄ ·7H ₂ O.....	81.3g
Glycerol.....	5.0g
NH ₄ Cl.....	1.0g
K ₂ HPO ₄ solution.....	100.0mL
Wolfe's vitamin solution.....	10.0mL
Trace elements solution SL-10.....	1.0mL

pH 7.5 ± 0.2 at 25°C

Wolfe's Vitamin Solution:**Composition per liter:**

Pyridoxine·HCl.....	10.0mg
Calcium D-(+)-pantothenate.....	5.0mg
Nicotinic acid.....	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Riboflavin.....	5.0mg
Thiamine·HCl.....	5.0mg
Thioctic acid.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Cyanocobalamin.....	100.0µg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Trace Elements Solution SL-10:**Composition per liter:**

FeCl ₂ ·4H ₂ O.....	1.5g
CoCl ₂ ·6H ₂ O.....	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	36.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O.....	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

K₂HPO₄ Solution:**Composition per 100.0mL:**

K ₂ HPO ₄	1.0g
---------------------------------------	------

Preparation of K₂HPO₄ Solution: Add K₂HPO₄ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Preparation of Medium: Add components, except K₂HPO₄ solution, Wolfe's vitamin solution, and trace elements solution SL-10, to distilled/deionized water and bring volume to 889.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 100.0mL of sterile K₂HPO₄ solution, 10.0mL of sterile Wolfe's vitamin

solution, and 1.0mL of sterile trace elements solution SL-10. Mix thoroughly. Aseptically adjust pH to 7.5. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Halovibrio variabilis*.

Halophilic Agar (HA)

Composition per liter:

NaCl	250.0g
MgSO ₄ ·7H ₂ O	25.0g
Agar	20.0g
Casamino acids	10.0g
Yeast extract	10.0g
Proteose peptone	5.0g
Trisodium citrate	3.0g
KCl	2.0g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Combine the ingredients with distilled water and heat to boiling to dissolve completely. Autoclave at 121°C for 15 min.

Use: For the isolation and cultivation of halophilic microorganisms from foods, such as *Pseudomonas* species and *Flavobacterium* species from fish and salted foods.

Halophilic Broth (HB)

Composition per liter:

NaCl	250.0g
MgSO ₄ ·7H ₂ O	25.0g
Casamino acids	10.0g
Yeast extract	10.0g
Proteose peptone	5.0g
Trisodium citrate	3.0g
KCl	2.0g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation and cultivation of halophilic microorganisms from foods, such as *Pseudomonas* species and *Flavobacterium* species from fish and salted foods.

Halophilic *Chromatium* Medium

Composition per 1060.0mL:

NaCl	60.0g
KH ₂ PO ₄	1.0g
NH ₄ Cl	1.0g
MgCl ₂ ·6H ₂ O	0.5g
Solution A	20.0mL
Solution B	20.0mL
Solution C	10.0mL
Solution D	10.0mL
Trace elements solution	1.0mL

pH 7.0 ± 0.2 at 25°C

Solution A:

Composition per 100.0mL:

NaHCO ₃	10.0g
--------------------------	-------

Preparation of Solution A: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B:

Composition per 100.0mL:

Na ₂ S·9H ₂ O	10.0g
---	-------

Preparation of Solution B: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C:

Composition per 100.0mL:

Na ₂ S ₂ O ₃ ·9H ₂ O	10.0g
--	-------

Preparation of Solution C: Add Na₂S₂O₃·9H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Solution D:

Composition per 100.0mL:

Sodium malate	10.0g
---------------------	-------

Preparation of Solution D: Add sodium malate to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution:

Composition per liter:

FeCl ₃ ·6H ₂ O	2.7g
H ₃ BO ₃	0.1g
ZnSO ₄ ·7H ₂ O	0.1g
Co(NO ₃) ₂ ·6H ₂ O	50.0mg
CuSO ₄ ·5H ₂ O	5.0mg
MnCl ₂ ·6H ₂ O	5.0mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components, except solution A, solution B, solution C, and solution D, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Bring pH to 7.0–7.2 with H₃PO₄. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 0.2mL of sterile solution A, 0.2mL of sterile solution B, 0.1mL of sterile solution C, and 0.1mL of sterile solution D for each 10.0mL of medium. Mix thoroughly. Use immediately.

Use: For the cultivation of halophilic *Chromatium* species.

Halophilic *Clostridium* Agar

Composition per liter:

L-Cysteine·HCl·H ₂ O	0.5g
Solution 1	1.0L
Solution 2	100.0mL

pH 6.2–7.0 at 25°C

Solution 1:

Composition per liter:

NaCl	105.0g
Agar	20.0g
KCl	7.5g
CaCO ₃	5.0g
L-Glutamic acid	4.0g
Soluble starch	2.0g
Casamino acids	2.0g
Nutrient broth	2.0g
Yeast extract	2.0g
FeSO ₄ ·7H ₂ O	2.0mg

Resazurin	1.0mg
NaOH (2.5 <i>N</i> solution).....	12.5mL
Wolfe's vitamin solution	10.0mL
Wolfe's mineral solution	10.0mL

Preparation of Solution 1: Add components, except CaCO₃, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. When all components have dissolved, add the CaCO₃. Mix thoroughly.

Wolfe's Vitamin Solution:

Composition per liter:

Pyridoxine-HCl	0.01g
Thiamine-HCl	5.0mg
Riboflavin	5.0mg
Nicotinic acid.....	5.0mg
Calcium pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Thioctic acid	5.0mg
Biotin	2.0mg
Folic acid.....	2.0mg
Cyanocobalamin	0.1mg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Wolfe's Mineral Solution:

Composition per liter

MgSO ₄ ·7H ₂ O	3.0g
Nitritotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·H ₂ O	0.5g
FeSO ₄ ·7H ₂ O	0.1g
CoCl ₂ ·6H ₂ O	0.1g
CaCl ₂	0.1g
ZnSO ₄ ·7H ₂ O	0.1g
CuSO ₄ ·5H ₂ O	0.01g
AlK(SO ₄) ₂ ·12H ₂ O.....	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g

Preparation of Wolfe's Mineral Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L.

Solution 2:

Composition per 100.0mL:

MgCl ₂ ·6H ₂ O.....	20.3g
CaCl ₂ ·2H ₂ O.....	7.35g

Preparation of Solution 2: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Gas with 100% N₂ for 20 min. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Preparation of Medium: Gently heat 1.0L of solution 1 and bring to boiling under 100% N₂. Add the L-cysteine-HCl·H₂O. Continue boiling until resazurin turns colorless, indicating reduction. The volume of solution 1 should be about 900.0mL. Anaerobically distribute into tubes in 9.0mL volumes under 100% N₂. Cap tubes with rubber stoppers. Place tubes in a press. Autoclave for 15 min at 15 psi pressure–121°C with fast exhaust. Cool to 50°C. Aseptically add 1.0mL of sterile solution 2 to each tube. In the presence of CaCO₃, the pH may be higher than 7.0. Do not adjust pH.

Use: For the cultivation and maintenance of *Sporohalobacter lortetii*.

Halophilic Clostridium Broth

Composition per liter:

L-Cysteine-HCl·H ₂ O	0.5g
Solution 1	1.0L
Solution 2.....	100.0mL
pH 6.2–7.0 at 25°C	

Solution 1:

Composition per liter:

NaCl.....	105.0g
KCl.....	7.5g
L-Glutamic acid.....	4.0g
Casamino acids	2.0g
Nutrient broth.....	2.0g
Yeast extract.....	2.0g
FeSO ₄ ·7H ₂ O.....	2.0mg
Resazurin	1.0mg
NaOH (2.5 <i>N</i> solution).....	12.5mL
Wolfe's vitamin solution.....	10.0mL
Wolfe's mineral solution.....	10.0mL

Preparation of Solution 1: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Wolfe's Vitamin Solution:

Composition per liter:

Pyridoxine-HCl	0.01g
Thiamine-HCl	5.0mg
Riboflavin	5.0mg
Nicotinic acid.....	5.0mg
Calcium pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Thioctic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Cyanocobalamin	0.1mg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Wolfe's Mineral Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O	3.0g
Nitritotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·H ₂ O	0.5g
FeSO ₄ ·7H ₂ O	0.1g
CoCl ₂ ·6H ₂ O	0.1g
CaCl ₂	0.1g
ZnSO ₄ ·7H ₂ O	0.1g
CuSO ₄ ·5H ₂ O	0.01g
AlK(SO ₄) ₂ ·12H ₂ O.....	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g

Preparation of Wolfe's Mineral Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L.

Solution 2:

Composition per 100.0mL:

MgCl ₂ ·6H ₂ O.....	20.3g
CaCl ₂ ·2H ₂ O	7.35g

Preparation of Solution 2: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Gas with 100% N₂ for 20 min. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Gently heat 1.0L of solution 1 and bring to boiling under 100% N₂. Add the L-cysteine-HCl·H₂O. Continue boiling until resazurin turns colorless, indicating reduction. The volume of solution 1 should be about 900.0mL. Anaerobically distribute into tubes in 9.0mL volumes under 100% N₂. Cap tubes with rubber stoppers. Place tubes in a press. Autoclave for 15 min at 15 psi pressure–121°C with fast exhaust. Cool to 25°C. Aseptically add 1.0mL of sterile solution 2 to each tube. Adjust pH to 6.2–7.0 if necessary with sterile O₂-free NaOH or HCl.

Use: For the cultivation and maintenance of *Sporohalobacter lortetii*.

Halophilic *Halobacterium* Medium

Composition per liter:

NaCl	200.0g
MgSO ₄ ·7H ₂ O	37.0g
CaCl ₂ ·2H ₂ O	0.7g
KCl	0.5g
MnCl ₂ ·4H ₂ O	0.05g
Yeast extract	100.0mL
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until dissolved. Adjust pH to 7.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of extremely halophilic *Halobacterium* species.

Halophilic HiVeg Agar

Composition per liter:

NaCl	250.0g
MgSO ₄	25.0g
Agar	20.0g
Plant acid hydrolysate	10.0g
Yeast extract	10.0g
Plant peptone No. 3	5.0g
Na ₃ -citrate	3.0g
KCl	2.0g
pH 7.2 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Combine the ingredients with distilled water and heat to boiling to dissolve completely. Autoclave at 121°C for 15 min.

Use: For the isolation and cultivation of halophilic microorganisms from foods, such as *Pseudomonas* species and *Flavobacterium* species from fish and salted foods.

Halophilic HiVeg Broth

Composition per liter:

NaCl	250.0g
MgSO ₄	25.0g
Plant acid hydrolysate	10.0g
Yeast extract	10.0g

Plant peptone No. 3	5.0g
KCl	2.0g
Na ₃ -citrate	3.0g
pH 7.2 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation and cultivation of halophilic microorganisms from foods, such as *Pseudomonas* species and *Flavobacterium* species from fish and salted foods.

Halophilic Medium (DSMZ Medium 1125)

Composition per liter:

NaCl	180.0g
MgCl ₂ ·6H ₂ O	20.0g
HEPES (4-(2-hydroxyethyl)-1-piperazineethanesulfonic acid) ..	6.0g
K ₂ HPO ₄	5.0g
NH ₄ Cl	0.5g
Sucrose	0.5g
CaCl ₂ ·2H ₂ O	0.1g
Yeast extract	0.1g
KH ₂ PO ₄	0.05g
pH 6.5 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.5. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Haladaptatus paucihalophilus*.

Halophilic Methanotrophic Bacterium Medium (DSMZ Medium 1156)

Composition per liter:

NaCl	65.0g
Na ₂ HPO ₄ ·2H ₂ O	0.7g
NH ₄ Cl	0.5g
KH ₂ PO ₄	0.3g
MgSO ₄ ·7H ₂ O	0.1g
CaCl ₂ ·2H ₂ O	0.01g
FeSO ₄ ·7H ₂ O	5.0mg
Methanol	5.0mL
Trace elements solution	1.0mL
pH 7.2 ± 0.2 at 25°C	

Trace Elements Solution:

Composition per liter:

ZnSO ₄ ·7H ₂ O	0.44g
CuSO ₄ ·5H ₂ O	0.2g
MnSO ₄ ·2H ₂ O	0.17g
H ₃ BO ₃	0.1g
CoCl ₂ ·6H ₂ O	0.08g
Na ₂ MoO ₄ ·2H ₂ O	0.06g

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.6 with 10% NaOH. Gently heat while stirring and bring to boiling. Distribute 25.0mL aliquots into 120mL serum bottles closed with butyl rubber serum caps and aluminum crimps. Autoclave for 15 min at 15 psi pressure–121°C. The pH is critical and the final pH must be 6.5–7.5. Some insoluble phosphates may precipitate during medium preparation (the turbidity should not be more than OD 0.005). Instead of methanol a headspace with 20% methane, 2% CO₂, and 78% air can be used.

Use: For the cultivation of *Methylohalobius crimeensis*.

Halophilic Nutrient Agar (LMG Medium 220)

Composition per liter:

NaCl	60.0g
Agar	15.0g
Casein peptone, tryptic digest	10.0g
Yeast extract	5.0g
Glucose	5.0g

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of halophilic bacteria.

Halophilic Synthetic Medium

Composition per liter:

Glucose	0.1g
KNO ₃	0.05g
FePO ₄	0.01g
Artificial seawater	100.0mL

Artificial Seawater:

Composition per 100.0mL:

NaCl	2.4g
MgCl ₂ ·6H ₂ O	1.1g
Na ₂ SO ₄	0.4g
CaCl ₂ ·6H ₂ O	0.2g
KCl	0.07g
NaHCO ₃	0.02g
KBr	0.01g
SrCl ₂ ·6H ₂ O	4.0mg
H ₃ BO ₃	3.0mg
Na ₂ SiO ₃ ·9H ₂ O	0.5mg
NaF	0.3mg

Preparation of Artificial Seawater: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of halophilic bacteria.

Halopiger Medium (DSMZ Medium 1138)

Composition per liter:

NaCl	195.0g
MgSO ₄ ·7H ₂ O	50.8g

MgCl ₂ ·6H ₂ O	32.5g
Yeast extract	5.0g
KCl	5.0g
CaCl ₂ ·2H ₂ O	0.8g
NaBr	0.6g
NaHCO ₃	0.16g

pH 8.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 8.0. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Halopiger* spp.

Haloquadratum walsbyi Medium (DSMZ Medium 1091)

Composition per liter:

NaCl	195.0g
MgSO ₄ ·7H ₂ O	50.0g
MgCl ₂ ·6H ₂ O	35.0g
KCl	5.0g
NaNO ₃	1.0g
Sodium pyruvate	1.0g
CaCl ₂ ·2H ₂ O	0.5g
NaHCO ₃	0.25g
KH ₂ PO ₄	0.05g
Yeast extract	0.05g
NH ₄ Cl	0.03g
Tris buffer, 1M	20.0mL

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.4. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Haloquadratum walsbyi*.

Halorhabdus utahensis Medium (DSMZ Medium 927)

Composition per 1003.25mL:

NaCl	270.0g
MgSO ₄ ·7H ₂ O	20.0g
Tris-HCl	12.0g
KCl	5.0g
NH ₄ Cl	2.0g
Glucose	2.0g
Yeast extract	1.0g
NaBr	0.1g
Potassium phosphate solution	2.5mL
Calcium chloride solution	0.5mL
Iron chloride manganese chloride solution	0.25mL

pH 7.6 ± 0.2 at 25°C

Potassium Phosphate Solution:

Composition per 10.0mL:

KH ₂ PO ₄	0.5g
---------------------------------------	------

Preparation of Potassium Phosphate Solution: Add KH₂PO₄ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Calcium Chloride Solution:**Composition per 10.0mL:**CaCl₂·2H₂O..... 1.0g

Preparation of Calcium Chloride Solution: Add CaCl₂·2H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Iron Chloride Manganese Chloride Solution:**Composition per 10.0mL:**FeCl₂·4H₂O..... 0.2gMnCl₂·4H₂O..... 0.2g

Preparation of Iron Chloride Manganese Chloride Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Preparation of Medium: Add components, except potassium phosphate solution, calcium chloride solution, and iron chloride manganese chloride solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.6 with 5M NaOH. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add 2.5mL phosphate solution, 0.5mL calcium chloride solution, and 0.25mL iron chloride manganese chloride solution. Mix thoroughly. Aseptically distribute to sterile tubes or flasks.

Use: For the cultivation of *Halorhabdus utahensis*.

Halorhodospira Medium (DSMZ Medium 999)

Composition per liter:

NaCl..... 100.0g

MgCl₂·6H₂O..... 2.0gMgSO₄·7H₂O..... 1.0gKH₂PO₄..... 1.0gNH₄Cl..... 0.5gCaCl₂·2H₂O..... 0.05gNaHCO₃ solution..... 10.0mLNa₂S·9H₂O solution..... 7.5mL

Vitamin solution V7..... 1.0mL

NaHCO ₃ solution.....	50.0mL
Na ₂ S·9H ₂ O solution.....	10.0mL
Dithionite solution.....	5.0mL
Trace elements solution SL-6.....	1.0mL

pH 7.0 ± 0.2 at 25°C

Trace Elements Solution SL-6:

Composition per liter:

MnCl ₂ ·4H ₂ O.....	0.5g
H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O.....	0.2g
ZnSO ₄ ·7H ₂ O.....	0.1g
Na ₂ MoO ₄ ·2H ₂ O.....	0.03g
NiCl ₂ ·6H ₂ O.....	0.02g
CuCl ₂ ·2H ₂ O.....	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	0.2g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Neutralize to pH 7.0 with sterile HCl.

NaHCO₃ Solution:

Composition per 100.0mL:

NaHCO ₃	10.0g
--------------------------	-------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

Dithionite Solution

Composition per 10.0mL:

Na-dithionite.....	2.0mg
--------------------	-------

Preparation of Dithionite Solution: Add Na-dithionite to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas atmosphere. Add components, except NaHCO₃ solution, dithionite solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 935.0mL. Mix thoroughly. Adjust pH to 7.0. Gently heat and bring to boiling. Cool while sparging with 80% N₂ + 20% CO₂. Distribute into Hungate tubes under 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically and anaerobically inject NaHCO₃ solution (0.5mL per

10mL medium), dithionite solution (0.05mL per 10mL medium), and Na₂S·9H₂O solution (0.1mL per 10mL medium). Aseptically and anaerobically distribute into sterile tubes or bottles.

Use: For the cultivation of *Halothermothrix orenii*.

***Halothiobacillus* Medium (DSMZ Medium 864)**

Composition per 1030.0mL:

H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Adjust pH to 7.0. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na-thiosulfate Solution:

Composition per 20.0mL:

Na ₂ S ₂ O ₃ ·5H ₂ O	5.0g
--	------

Preparation of Na-thiosulfate Solution: Add Na₂S₂O₃·5H₂O to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Phosphate Solution:

Composition per 10.0mL:

K ₂ HPO ₄	0.5g
---------------------------------	------

Preparation of Phosphate Solution: Add K₂HPO₄ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Preparation of Medium: Add components, except phosphate solution and Na-thiosulfate solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.7. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add 20.0mL sterile Na-thiosulfate solution and 10.0mL sterile phosphate solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Halothiobacillus kellyi*.

***Halovibrio* Medium (DSMZ Medium 1176)**

Composition per liter:

NaCl	120.0–240.0g
KH ₂ PO ₄	3.0g
NH ₄ Cl	0.5g
Sodium acetate solution	10.0mL
HEPES solution	10.0mL
Yeast extract solution	2.0mL
Magnesium sulfate solution	2.0mL
Trace elements solution SL-6	1.0mL
pH 7.5 ± 0.2 at 25°C	

Trace Elements Solution SL-6:

Composition per liter:

MnCl ₂ ·4H ₂ O	0.5g
H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
Na ₂ MoO ₄ ·2H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

HEPES Solution:

Composition per 10.0mL:

HEPES	2.4g
-------	------

Preparation of HEPES Solution: Add HEPES to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly.

Sodium Acetate Solution:

Composition per 10.0mL:

Sodium acetate	1.64g
----------------	-------

Preparation of Sodium Acetate Solution: Add sodium acetate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Magnesium Sulfate Solution:

Composition per 10.0mL:

MgSO ₄ ·7H ₂ O	2.5g
--------------------------------------	------

Preparation of Magnesium Sulfate Solution: Add MgSO₄·7H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Yeast Extract Solution:

Composition per 10.0mL:

Yeast extract	1.0g
---------------	------

Preparation of Yeast Extract Solution: Add yeast extract to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except yeast extract, magnesium sulfate, and sodium acetate solutions, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Adjust pH to 7.5. Gently heat while stirring and bring to boiling. Cool to room temperature. Dispense into sealed tubes, vials, or bottles. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add yeast extract, magnesium sulfate, and sodium acetate solutions.

Use: For the cultivation of *Halovibrio* spp.

Halovibrio variabilis* Medium*Composition per liter:**

NaCl	95.0g
MgSO ₄ ·7H ₂ O	81.0g
Yeast extract	7.5g
Proteose peptone	2.5g
KCl	1.0g
Trace elements solution SL-4	10.0mL
Vitamin solution	10.0mL

pH 7.5 ± 0.2 at 25°C

Vitamin Solution:**Composition per liter:**

Pyridoxine HCl	1.0mg
Lipoic acid	0.5mg
Nicotinic acid	0.5mg
<i>p</i> -Aminobenzoic acid	0.5mg
Pantothenic acid	0.5mg
Riboflavin	0.5mg
Thiamine HCl	0.5mg
Biotin	0.2mg
Folic acid	0.2mg
Cyanocobalamin	0.01mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Store at 5°C.

Trace Elements Solution SL-4:**Composition per 900.0mL:**

EDTA	0.5g
FeSO ₄ ·7H ₂ O	0.2g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Use: For the growth of Y-1 cell cultures used in the mouse adrenal assay for heat-labile toxin of enterotoxigenic *Escherichia coli* and *Vibrio* species.

**Hanahan's Broth
(SOB Medium)****Composition per liter:**

Casein enzymatic hydrolysate	20.0g
Yeast extract	5.0g
MgSO ₄	2.4g
NaCl	0.5g
KCl	0.186g

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from SigmaAldrich.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of recombinant strains of *Escherichia coli*.

Hanahan's HiVeg Broth

Composition per liter:

Plant hydrolysate.....	20.0g
Yeast extract.....	5.0g
MgSO ₄	2.4g
NaCl.....	0.5g
KCl.....	0.186g

pH 7.0± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of recombinant strains of *Escherichia coli*.

Harpo's HTYE Trypticase Peptone Medium

Composition per liter:

Pancreatic digest of casein.....	5.0g
HEPES (N-[2-Hydroxyethyl]piperazine-N'-2-ethanesulfonic acid) buffer.....	4.0g
Yeast extract.....	2.0g

pH 6.8–7.0 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0–7.2. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Cytophaga arvensicola* and *Flexibacter columnaris*.

Harpo's HTYEM Marine Medium

Pancreatic digest of casein.....	5.0g
HEPES.....	4.0g
Yeast extract.....	2.0g
Artificial seawater.....	1.0L

pH 7.5 ± 0.2 at 25°C

Artificial Seawater:

Composition per liter:

NaCl.....	27.5g
MgSO ₄ ·7H ₂ O.....	6.78g
MgCl ₂ ·6H ₂ O.....	5.38g
CaCl ₂ ·2H ₂ O.....	1.4g
KCl.....	0.72g
NaHCO ₃	0.2g

Preparation of Artificial Seawater: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to artificial seawater and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.5 with NaOH. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Cytophaga fermentans*, *Cytophaga latercula*, *Cytophaga uliginosa*, and *Microscilla aggregans*.

Harrold's Agar

see: **M 40 Y Agar**

Hartley's Digest Broth

Composition per 10.0L:

Ox heart.....	3000.0g
Pancreatin.....	50.0g
Na ₂ CO ₃ , anhydrous (0.8% solution).....	5.0L
HCl, concentrated.....	80.0mL

pH 7.5 ± 0.2 at 25°C

Preparation of Medium: Finely mince the ox heart. Add the meat to 5.0L of distilled/deionized water. Gently heat and bring to 80°C. Add the 5.0L of Na₂CO₃ solution. Cool to 45°C. Add pancreatin and maintain at 45°C for 4 hr while stirring. Add the HCl and steam at 100°C for 30 min. Cool to room temperature. Adjust pH to 8.0 with 1N NaOH. Gently heat and bring to boiling. Continue boiling for 25 min. Filter while hot through Whatman #1 filter paper. Cool to room temperature. Adjust pH to 7.5. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation and cultivation of *Actinobacillus lignieresii* from cattle.

Hartley's Digest HiVeg Broth

Composition per liter:

Plant hydrolysate.....	29.0g
------------------------	-------

pH 7.6 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation and cultivation of *Actinobacillus lignieresii* from cattle.

Haskins Agar for *Tetrahymena*

Composition per liter:

Agar.....	16.0g
Dextrin.....	8.0g
Pancreatic digest of casein.....	5.0g
Yeast extract.....	5.0g
Liver concentrate.....	0.6g
Sodium acetate.....	0.6g

pH 7.2–7.4 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2–7.4. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes. Overlay agar with a layer of sterile distilled water.

Use: For the cultivation of *Tetrahymena australis* and *Tetrahymena vorax*.

HAY

See: **Hay Extract Agar**

Hay Extract Agar (HAY)

Composition per liter:

Hay.....	50.0g
Agar	20.0g

pH 6.2 ± 0.2 at 25°C

Preparation of Medium: Add finely hashed hay to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 30 min at 15 psi pressure–121°C. Filter through Whatman filter paper. Adjust pH of filtrate to 6.2 with 5% potassium phosphate solution. Add agar. Bring volume to 1.0L with distilled/deionized water. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 20 min at 10 psi pressure–115°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Alternaria porri*, *Botryotinia draytonii*, *Botryotinia fuckeliana*, *Botryotinia porri*, *Botryotinia narcissicola*, *Botryotinia polyblastis*, *Botrytis aclada*, *Botrytis hyacinthi*, *Botrytis cinerea*, *Cercospora beticola*, and *Sclerotinia sphaerosperma*.

Hay Extract Medium See: HE Medium

Hay Infusion Agar

Composition per liter:

Hay, partially decomposed.....	50.0g
Agar	15.0g
K ₂ HPO ₄	2.0g

pH 6.2 ± 0.3 at 25°C

Preparation of Medium: Add hay to distilled/deionized water and bring volume to 1.0L. Autoclave for 30 min at 15 psi pressure–121°C. Filter through paper and reserve filtrate. Add distilled/deionized water to filtrate and bring volume to 1.0L. Mix thoroughly. Add agar and K₂HPO₄. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 6.2. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Alternaria* species, *Caulochytrium protostelioides*, *Choanephora infundibulifera*, *Dipsacomyces acuminosporus*, *Eremascus albus*, *Eremascus fertilis*, *Eurotium chevalieri*, *Eurotium halophilicum*, *Eurotium herbariorum*, *Mortierella bisporalis*, *Protostelium irregularis*, and *Saksenaea vasiformis*.

Hayflick Medium

Composition per 107.5mL:

Mycoplasma broth base	70.0mL
Horse serum	20.0mL
Fresh yeast extract solution.....	10.0mL
Penicillin solution	5.0mL
Thallos acetate solution	2.5mL

pH 7.8 ± 0.2 at 25°C

Mycoplasma Broth Base:

Pancreatic digest of casein.....	7.0g
NaCl	5.0g
Beef extract	3.0g
Yeast extract.....	3.0g
Beef heart, solids from infusion.....	2.0g

pH 7.8 ± 0.2 at 25°C

Preparation of Mycoplasma Broth Base: Add components to distilled/deionized water and bring volume to 1.0L. Gently heat and

bring to boiling. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Fresh Yeast Extract Solution:

Composition per 100.0mL:

Baker's yeast, live, pressed, starch-free.....	25.0g
--	-------

Preparation of Fresh Yeast Extract Solution: Add live Baker's yeast to 100.0mL of distilled/deionized water. Autoclave for 90 min at 15 psi pressure–121°C. Allow to stand. Remove supernatant solution. Adjust pH to 6.6–6.8. Filter sterilize.

Penicillin Solution:

Composition per 5.0mL:

Penicillin	20,000U
------------------	---------

Preparation of Penicillin Solution: Add penicillin to distilled/deionized water and bring volume to 5.0mL. Mix thoroughly. Filter sterilize.

Thallos Acetate Solution:

Composition per 10.0mL:

Thallos acetate	0.1g
-----------------------	------

Preparation of Thallos Acetate Solution: Add thallos acetate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Use: For the cultivation of *Mycoplasma* species.

Hayflick Medium, Modified

Composition per 1212.0mL:

Beef heart, infusion from.....	500.0g
Tryptose	10.0g
Noble agar.....	9.6g
NaCl.....	5.0g
Horse serum, normal.....	200.0mL
Fresh yeast extract solution	100.0mL
Calf thymus DNA solution	12.0mL

pH 7.8 ± 0.2 at 25°C

Fresh Yeast Extract Solution:

Composition per 100.0mL:

Baker's yeast, live, pressed, starch-free.....	25.0g
--	-------

Preparation of Fresh Yeast Extract Solution: Add the live Baker's yeast to 100.0mL of distilled/deionized water. Autoclave for 90 min at 15 psi pressure–121°C. Allow to stand. Remove supernatant solution. Adjust pH to 6.6–6.8. Filter sterilize.

Calf Thymus DNA Solution:

Composition per 20.0mL:

Calf thymus DNA	0.04g
-----------------------	-------

Preparation of Calf Thymus DNA Solution: Add calf thymus DNA to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except horse serum, fresh yeast extract solution, and calf thymus DNA solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 200.0mL of sterile horse serum, 100.0mL of sterile fresh yeast extract solution, and 12.0mL of sterile calf thymus DNA solution. Mix thoroughly. Aseptically distribute into sterile tubes.

Use: For the cultivation and maintenance of *Mycoplasma mustelae*.

HBSee: **Halophilic Broth****3HB**See: **Hydroxybutyrate Medium****HBT Bilayer Medium
(Human Blood Tween™ Bilayer Medium)****Composition per 1062.5mL:**

Agar	13.5g

Casein/meat peptone	10.0g
NaCl	5.0g
Peptic digest of animal tissue	5.0g
Beef extract	3.0g
Yeast extract	3.0g
Cornstarch	1.0g
Human blood, anticoagulated	25.0mL
Colistin solution	10.0mL
Nalidixic acid solution	10.0mL
Amphotericin B solution	10.0mL
Polysorbate 80 (Tween™ 80) solution	7.5mL

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Colistin Solution:**Composition per liter:**

Colistin	0.01g
----------------	-------

Preparation of Colistin: Add colistin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Nalidixic Acid Solution:**Composition per liter:**

Nalidixic acid	0.02g
----------------------	-------

Preparation of Nalidixic Acid Solution: Add nalidixic acid to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Amphotericin B Solution:**Composition per liter:**

Amphotericin B	3.0mg
----------------------	-------

Preparation of Amphotericin B Solution: Add Amphotericin B to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Tween™ 80 Solution:**Composition per 100.0mL:**

Tween™ 80	1.0mL
-----------------	-------

Preparation of Tween™ 80 Solution: Add Tween™ 80 to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Adjust pH to 7.3. Filter sterilize.

Preparation of Medium: Add components, except amphotericin B solution, Tween™ 80, and human blood, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Divide the medium into two 500.0mL fractions. Autoclave both flasks of media for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. To one flask, aseptically add 5.0mL of sterile colistin solution, 5.0mL of sterile nalidixic acid solution, 5.0mL of sterile amphotericin B solution, and 3.75mL of Tween™ 80 solution. Mix thoroughly. Pour into sterile Petri dishes in 7.0mL volumes. Allow agar to harden. To re-

maining flask aseptically add 5.0mL of sterile colistin solution, 5.0mL of sterile nalidixic acid solution, 5.0mL of sterile amphotericin B solution, 3.75mL of sterile Tween™ 80 solution, and 25.0mL of sterile human blood. Mix thoroughly. Pour into the same Petri dishes that each contain 7.0mL of the agar medium without blood. The top layer should be approximately 14.0mL per plate.

Use: For the selective isolation, cultivation, and differentiation of *Gardnerella vaginalis* from clinical specimens.

HC AgarSee: **Hemorrhagic coli Agar****HC Agar Base****Composition per liter:**

Yeast extract.....	1.0g
Hay extract solution	500.0mL
pH 6.5 ± 0.2 at 25°C	

Hay Extract Solution:**Composition** per liter:

Hay, dried.....	50.0g
-----------------	-------

Preparation of Hay Extract Solution: Add dried barn hay to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Filter through Whatman #40 filter paper.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of *Spirochaeta aurantia*.

Heart Infusion Agar

Composition per liter:

Beef heart, infusion from	500.0g
Agar	15.0g

Tryptose	10.0g
NaCl.....	5.0g
pH 7.4 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of a wide variety of fastidious microorganisms. For the cultivation and maintenance of *Bacillus anthracis*, *Bacillus cereus*, *Bacillus mycoides*, *Serratia rubidaea*, *Staphylococcus aureus*, *Tsatumella pytyseos*, and *Vibrio vulnificus*. It can also be used as a base for the preparation of blood agar in determining hemolytic reactions. When using for blood agar, reduce volume to 950.0mL to allow for addition of 50.0mL of defibrinated horse blood.

Heart Infusion Agar (HIA) (BAM M159)

Composition per liter:

Proteose peptone	15.0g
Agar	12.0g
Yeast extract.....	5.0g
NaCl.....	5.0g
Liver digest	2.5g
pH 7.4 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of a wide variety of fastidious microorganisms. For the cultivation and maintenance of *Bacillus cereus*, *Staphylococcus aureus*, *Vibrio vulnificus*, and *Vibrio cholerae*. It can also be used as a base for the preparation of blood agar in determining hemolytic reactions. When using for blood agar, reduce volume to 950.0mL to allow for addition of 50.0mL of defibrinated horse blood. Blood is added aseptically after autoclaving.

Heart Infusion Agar (HIA) (BAM M60)

Composition per liter:

Agar	15.0g
Tryptose	10.0g
NaCl.....	5.0g
Beef heart, infusion from 500.0g.....	1.0L
pH 7.4 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of a wide variety of fastidious microorganisms. For the cultivation and maintenance of *Bacillus cereus*, *Staphylococcus aureus*, *Vibrio vulnificus*, and *Vibrio cholerae*. It can also be used as a base for the preparation of blood agar in determining hemolytic reactions. When using for blood agar, reduce volume to 950.0mL to allow for addition of 50.0mL of defibrinated horse blood. Blood is added aseptically after autoclaving.

Heart Infusion Agar with Glucose

Composition per liter:

Beef heart, infusion from	500.0g
Agar	15.0g
Tryptose	10.0g
NaCl	5.0g
Glucose	1.0g

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Bacillus* species and *Pseudomonas* species.

Heart Infusion Agar with 0.1% Glucose

Composition per liter:

Beef heart, infusion from	500.0g
Agar	15.0g
Tryptose	10.0g
NaCl	5.0g
Glucose	1.0g

pH 7.4 ± 0.2 at 25°C

Source: This medium without glucose is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of *Bacillus circulans* and *Pseudomonas* sp.

Heart Infusion Agar, HiVeg

Composition per liter:

Agar	15.0g
Plant hydrolysate No. 1	10.0g
Plant infusion	10.0g
NaCl	5.0g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of a wide variety of fastidious microorganisms.

Heart Infusion Agar, HiVeg with Blood

Composition per liter:

Agar	15.0g
Plant hydrolysate No. 1	10.0g
Plant infusion	10.0g
NaCl	5.0g
Horse blood, defibrinated	50.0mL

pH 7.4 ± 0.2 at 25°C

Source: This medium, without blood, is available as a premixed powder from HiMedia.

Preparation of Medium: Add components, except blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 50.0mL defibrinated blood. Mix thoroughly. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of a wide variety of fastidious microorganisms. For determining hemolytic reactions.

Heart Infusion Agar with Horse Serum and Fresh Yeast Extract

Composition per 930.0mL:

Heart infusion agar	720.0mL
Horse serum, unheated	200.0mL
Fresh yeast extract solution	10.0mL

pH 7.4 ± 0.2 at 25°C

Heart Infusion Agar:

Composition per liter:

Beef heart, infusion from	500.0g
Agar	15.0g
Tryptose	10.0g
NaCl	5.0g

Preparation of Heart Infusion Agar: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Fresh Yeast Extract Solution:

Composition per 100.0mL:

Baker's yeast, live, pressed, starch-free	25.0g
---	-------

Preparation of Fresh Yeast Extract Solution: Add the live Baker's yeast to 100.0mL of distilled/deionized water. Autoclave for 90 min at 15 psi pressure–121°C. Allow to stand. Remove supernatant solution. Adjust pH to 6.6–6.8.

Preparation of Medium: To 720.0mL of sterile cooled heart infusion broth, aseptically add 200.0mL of horse serum and 10.0mL of fresh yeast extract solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Mycoplasma equigenitalium* and *Mycoplasma subdolum*.

Heart Infusion Agar (pH 7.6) with Inactivated Horse Serum (ATCC Medium 493)

Composition per liter:

Beef heart, infusion from	500.0g
Agar	15.0g
Tryptose	10.0g

NaCl.....	5.0g
Horse serum, inactivated.....	100.0mL
pH 7.6 ± 0.2 at 25°C	

Preparation of Medium: Add components, except horse serum, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile horse serum. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Corynebacterium* species.

Heart Infusion Agar with Inactivated Horse Serum

Composition per liter:

Beef heart, infusion from.....	500.0g
Agar.....	15.0g
Tryptose.....	10.0g
NaCl.....	5.0g
Horse serum, inactivated.....	100.0mL
pH 7.4 ± 0.2 at 25°C	

Preparation of Medium: Add components, except horse serum, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile horse serum. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Corynebacterium* species.

Heart Infusion Agar with Inactivated Horse Serum, Sodium Chloride, and Penicillin

Composition per liter:

Beef heart, infusion from.....	500.0g
NaCl.....	35.0g
Agar.....	15.0g
Tryptose.....	10.0g
Horse serum, inactivated.....	100.0mL
Penicillin solution.....	10.0mL
pH 7.4 ± 0.2 at 25°C	

Penicillin Solution:

Composition per 10.0mL:

Penicillin.....	1,000,000U
-----------------	------------

Preparation of Penicillin Solution: Add penicillin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except penicillin solution and horse serum, to distilled/deionized water and bring volume to 890.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL of sterile penicillin solution and 100.0mL of sterile horse serum. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Corynebacterium* species.

Heart Infusion Agar with Sodium Chloride (HIA with NaCl) (BAM M60)

Composition per liter:

NaCl.....	20.0g
Agar.....	15.0g

Tryptose.....	10.0g
NaCl.....	20.0g
Beef heart, infusion from 500.0g.....	1.0L
pH 7.4 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of halophilic *Vibrio* spp.

Heart Infusion Agar with Rabbit Blood

Composition per liter:

Beef heart, infusion from.....	500.0g
Agar.....	15.0g
Tryptose.....	10.0g
NaCl.....	5.0g
Rabbit blood.....	50.0mL
pH 7.4 ± 0.2 at 25°C	

Preparation of Medium: Add components, except rabbit blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile rabbit blood. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Neisseria lactamica*, *Bartonella quintana*, *Bartonella elizabethae*, and *Bartonella henselae*.

Heart Infusion Agar with Yeast Extract

Composition per liter:

Beef heart, infusion from.....	500.0g
Agar.....	20.0g
Tryptose.....	10.0g
NaCl.....	5.0g
Yeast extract.....	5.0g
pH 7.4 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Moraxella nonliquefaciens*.

Heart Infusion Broth

Composition per liter:

Beef heart, infusion from.....	500.0g
Tryptose.....	10.0g
NaCl.....	5.0g
pH 7.4 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation and cultivation of a wide variety of fastidious microorganisms.

Heart Infusion Broth (HI) (BAM M60)

Composition per liter:

Agar	15.0g
Tryptose	10.0g
NaCl	5.0g
Beef heart, infusion from 500.0g	1.0L
pH 7.4 ± 0.2 at 25°C	

Source: This medium without added NaCl is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation and cultivation of a wide variety of fastidious microorganisms. For the cultivation and maintenance of *Bacillus cereus*, *Staphylococcus aureus* and *Vibrio vulnificus*, and *Vibrio cholerae*. It can also be used as a base for the preparation of blood agar in determining hemolytic reactions. When using for blood broth, reduce volume to 950.0mL to allow for addition of 50.0mL of defibrinated horse blood. Blood is added aseptically after autoclaving.

Heart Infusion Broth with Additives for *Staphylococcus*

Composition per liter:

Beef heart, infusion from	500.0g
NaCl	30.0 g
Tryptose	10.0g
Horse serum, inactivated	100.0mL
Penicillin solution	10.0mL
Fresh yeast extract solution	5.0mL
pH 7.4 ± 0.2 at 25°C	

Penicillin Solution:

Composition per 10.0mL:

Penicillin	1,000,000U
------------------	------------

Preparation of Penicillin Solution: Add penicillin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Fresh Yeast Extract Solution:

Composition per 100.0mL:

Baker's yeast, live, pressed, starch-free	10.0g
---	-------

Preparation of Fresh Yeast Extract Solution: Add the live Baker's yeast to 100.0mL of distilled/deionized water. Autoclave for 90 min at 15 psi pressure–121°C. Allow to stand. Remove supernatant solution. Adjust pH to 6.6–6.8.

Preparation of Medium: Add components—except horse serum, fresh yeast extract solution, and penicillin solution—to distilled/deionized water and bring volume to 800.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile horse serum. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Staphylococcus* species.

Heart Infusion Broth with Additives for *Streptobacillus*

Composition per liter:

Beef heart, infusion from	500.0g
Tryptose	10.0g

Peptone	10.0g
NaCl	5.0g
Glucose	0.5g
Horse serum, inactivated	200.0mL
pH 7.5 ± 0.2 at 25°C	

Preparation of Medium: Add components, except horse serum, to distilled/deionized water and bring volume to 800.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile horse serum. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Streptobacillus moniliformis*.

Heart Infusion Broth with Glucose

Composition per liter:

Beef heart, infusion from	500.0g
Tryptose	10.0g
NaCl	5.0g
Glucose	1.0g
pH 7.4 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Arthrobacter* species, *Bacillus* species, and *Pseudomonas* species.

Heart Infusion Broth with 0.1% Glucose (ATCC Medium 544)

Composition per liter:

Beef heart, infusion from	500.0g
Tryptose	10.0g
NaCl	5.0g
Glucose	1.0g
pH 7.4 ± 0.2 at 25°C	

Source: Heart infusion broth without glucose is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Heart Infusion Broth with Glucose and Antibiotics

Composition per liter:

Beef heart, infusion from	500.0g
Tryptose	10.0g
NaCl	5.0g
Antibiotic inhibitor solution	10.0mL
Glucose solution	10.0mL
pH 7.4 ± 0.2 at 25°C	

Antibiotic Inhibitor Solution:

Composition per 10.0mL:

Streptomycin sulfate	0.1g
Tetracycline-HCl	0.025g

Preparation of Antibiotic Inhibitor Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Glucose Solution:

Composition per 10.0mL:

D-Glucose	1.0g
-----------------	------

Preparation of Glucose Solution: Add D-glucose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except antibiotic inhibitor solution and glucose solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile antibiotic inhibitor solution and glucose solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Escherichia coli*.

Heart Infusion Broth, HiVeg

Composition per liter:

Plant hydrolysate No. 1	10.0g
Plant infusion	10.0g
NaCl	5.0g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation and cultivation of a wide variety of fastidious microorganisms.

Heart Infusion Broth with Horse Serum and Fresh Yeast Extract

Composition per 930.0mL:

Heart infusion broth	720.0mL
Horse serum, unheated	200.0mL
Fresh yeast extract solution	10.0mL

pH 7.4 ± 0.2 at 25°C

Heart Infusion Broth:

Composition per liter:

Beef heart, infusion from	500.0g
Tryptose	10.0g
NaCl	5.0g

Preparation of Heart Infusion Broth: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Fresh Yeast Extract Solution:

Composition per 100.0mL:

Baker's yeast, live, pressed, starch-free	25.0g
---	-------

Preparation of Fresh Yeast Extract Solution: Add the live Baker's yeast to 100.0mL of distilled/deionized water. Autoclave for 90 min at 15 psi pressure–121°C. Allow to stand. Remove supernatant solution. Adjust pH to 6.6–6.8.

Preparation of Medium: To 720.0mL of sterile cooled heart infusion broth, aseptically add 200.0mL of horse serum and 10.0mL of fresh yeast extract solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Mycoplasma equigenitalium* and *Mycoplasma subdolum*.

Heart Infusion Broth with Horse Serum, Fresh Yeast Extract, and Penicillin

Composition per 940.0mL:

Heart infusion broth	720.0mL
Horse serum, unheated	200.0mL
Fresh yeast extract solution	10.0mL
Penicillin solution	10.0mL

pH 7.4 ± 0.2 at 25°C

Heart Infusion Broth:

Composition per liter:

Beef heart, infusion from	500.0g
Tryptose	10.0g
NaCl	5.0g

Preparation of Heart Infusion Broth: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Fresh Yeast Extract Solution:

Composition per 100.0mL:

Baker's yeast, live, pressed, starch-free	25.0g
---	-------

Preparation of Fresh Yeast Extract Solution: Add the live Baker's yeast to 100.0mL of distilled/deionized water. Autoclave for 90 min at 15 psi pressure–121°C. Allow to stand. Remove supernatant solution. Adjust pH to 6.6–6.8.

Penicillin Solution:

Composition per 10.0mL:

Penicillin	100,000U
------------------	----------

Preparation of Penicillin Solution: Add penicillin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: To 720.0mL of sterile cooled heart infusion broth, aseptically add 200.0mL of horse serum, 10.0mL of fresh yeast extract solution, and 10.0mL of sterile penicillin solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Mycoplasma equigenitalium* and *Mycoplasma subdolum*.

Heart Infusion Broth with Human Serum and Fresh Yeast Extract

Composition per 930.0mL:

Heart infusion broth	720.0mL
Human serum, unheated	200.0mL
Fresh yeast extract solution	10.0mL

pH 7.4 ± 0.2 at 25°C

Heart Infusion Broth:

Composition per liter:

Beef heart, infusion from	500.0g
Tryptose	10.0g
NaCl	5.0g

Preparation of Heart Infusion Broth: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Fresh Yeast Extract Solution:

Composition per 100.0mL:

Baker's yeast, live, pressed, starch-free	25.0g
---	-------

Preparation of Fresh Yeast Extract Solution: Add the live Baker's yeast to 100.0mL of distilled/deionized water. Autoclave for 90

min at 15 psi pressure–121°C. Allow to stand. Remove supernatant solution. Adjust pH to 6.6–6.8.

Preparation of Medium: To 720.0mL of sterile, cooled heart infusion broth, aseptically add 200.0mL of human serum and 10.0mL of fresh yeast extract solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Mycoplasma equigenitalium* and *Mycoplasma subdolum*.

Heart Infusion Broth with Inactivated Horse Serum

Composition per liter:

Beef heart, infusion from	500.0g
Tryptose	10.0g
NaCl	5.0g
Horse serum, inactivated.....	100.0mL
pH 7.6 ± 0.2 at 25°C	

Preparation of Medium: Add components, except horse serum, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile horse serum. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Enterococcus faecium*.

Heart Infusion Broth with Inactivated Horse Serum and Fresh Yeast Extract

Composition per liter:

Beef heart, infusion from	500.0g
Tryptose	10.0g
NaCl	5.0g
Horse serum, inactivated.....	200.0mL
Fresh yeast extract solution.....	100.0mL
pH 7.5 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Fresh Yeast Extract Solution:

Composition per 100.0mL:

Baker's yeast, live, pressed, starch-free.....	25.0g
--	-------

Preparation of Fresh Yeast Extract Solution: Add the live Baker's yeast to 100.0mL of distilled/deionized water. Autoclave for 90 min at 15 psi pressure–121°C. Allow to stand. Remove supernatant solution. Adjust pH to 6.6–6.8.

Preparation of Medium: Add components, except horse serum and fresh yeast extract solution, to distilled/deionized water and bring volume to 700.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile horse serum and fresh yeast extract solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Acholeplasma* species, *Mycoplasma* species, and *Streptobacillus* species.

Heart Infusion Broth with Inactivated Horse Serum, Fresh Yeast Extract, and Sucrose

Composition per liter:

Beef heart, infusion from	500.0g
Sucrose.....	40.0g
Tryptose	10.0g

NaCl.....	5.0g
Horse serum, inactivated	200.0mL
Fresh yeast extract solution	100.0mL
pH 7.5 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Fresh Yeast Extract Solution:

Composition per 100.0mL:

Baker's yeast, live, pressed, starch-free.....	25.0g
--	-------

Preparation of Fresh Yeast Extract Solution: Add the live Baker's yeast to 100.0mL of distilled/deionized water. Autoclave for 90 min at 15 psi pressure–121°C. Allow to stand. Remove supernatant solution. Adjust pH to 6.6–6.8.

Preparation of Medium: Add components, except horse serum and fresh yeast extract solution, to distilled/deionized water and bring volume to 700.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile horse serum and fresh yeast extract solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Acholeplasma* species, *Mycoplasma* species, and *Streptobacillus* species.

Heart Infusion Broth (pH 7.5) with Inactivated Human Serum and Yeast Extract (ATCC Medium 245)

Composition per liter:

Heart infusion broth with yeast extract.....	800.0mL
Human serum, inactivated	200.0mL
pH 7.5 ± 0.2 at 25°C	

Heart Infusion Broth with Yeast Extract:

Composition per liter:

Beef heart, infusion from	500.0g
Tryptose	10.0g
Yeast extract (Oxoid).....	6.3g
NaCl.....	5.0g

Preparation of Heart Infusion Broth with Yeast Extract: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.5. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°.

Source: Heart infusion broth without yeast extract is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: To 800.0mL of sterile cooled heart infusion broth with yeast extract, aseptically add 200.0mL of heat inactivated human serum. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Corynebacterium pseudotuberculosis* and *Streptobacillus moniliformis*.

Heart Infusion Broth with Porcine Serum and Fresh Yeast Extract

Composition per liter:

Beef heart, infusion from.....	500.0g
Tryptose	10.0g
NaCl.....	5.0g
Porcine serum, inactivated.....	200.0mL
Fresh yeast extract (25% w/v solution)	100.0mL
pH 7.5 ± 0.2 at 25°C	

Porcine Serum:**Composition** per 200.0mL:

Porcine serum200.0mL

Preparation of Porcine Serum: Adjust the pH of 200.0mL of porcine serum to 4.4 with sterile 1N HCl. Do not overshoot pH below 4.2. Allow serum to stand at 4°C for 18–20 hr. Adjust pH to 7.0 with sterile NaOH. Aseptically centrifuge at 9000 rpm for 20 min. Discard sediment. Filter supernatant solution through a 0.85µm filter. Filter sterilize through a 0.22µm filter. Store at –70°C.

Fresh Yeast Extract Solution:**Composition** per 100.0mL:

Baker's yeast, live, pressed, starch-free..... 25.0g

Preparation of Fresh Yeast Extract Solution: Add the live Baker's yeast to 100.0mL of distilled/deionized water. Autoclave for 90 min at 15 psi pressure–121°C. Allow to stand. Remove supernatant solution. Adjust pH to 6.6–6.8.

Preparation of Medium: Add components, except porcine serum and fresh yeast extract solution, to distilled/deionized water and bring volume to 700.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile porcine serum and fresh yeast extract solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Acholeplasma* species.

Heart Infusion Broth with Sodium Chloride**(HI with NaCl)****(BAM M60)****Composition** per liter:

NaCl20.0g
Tryptose 10.0g
NaCl20.0g
Beef heart, infusion from 500.0g 1.0L

pH 7.4 ± 0.2 at 25°C

Source: This medium without added NaCl is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation and cultivation of halophilic *Vibrio* spp.

Heart Infusion Medium with Fetal Bovine Serum**Composition** per liter:

Beef heart, infusion from 500.0g
Agar 15.0g
Tryptose 10.0g
NaCl 5.0g
Fetal bovine serum.....100.0mL

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components, except fetal bovine serum, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile fetal bovine serum. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Haemophilus ducreyi*.

Heart Infusion Tyrosine Agar**Composition** per liter:

Beef heart, infusion from 500.0g
Agar 15.0g
Tryptose 10.0g
NaCl 5.0g
L-Tyrosine 1.0g

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes. Autoclave for 15 min at 15 psi pressure–121°C. Allow tubes to cool in a slanted position.

Use: For the cultivation and differentiation of *Bordetella parapertussis* based on browning of blood-free medium.

Hektoen Enteric Agar**Composition** per liter:

Agar 13.5g
Lactose..... 12.0g
Peptic digest of animal tissue 12.0g
Sucrose..... 12.0g
Bile salts..... 9.0g
NaCl 5.0g
Na₂S₂O₃ 5.0g
Yeast extract..... 3.0g
Salicin 2.0g
Ferric ammonium citrate..... 1.5g
Acid Fuchsin 0.1g
Bromthymol Blue 0.064g

pH 7.6 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems and Oxoid Unipath.

Caution: Acid Fuchsin is a potential carcinogen and care must be taken to avoid inhalation of the powdered dye and contact with the skin.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring until components are dissolved. Do not autoclave. Pour into sterile Petri dishes. Allow agar to solidify with the Petri dish covers partially off.

Use: For the isolation and cultivation of Gram-negative enteric microorganisms from a variety of clinical and nonclinical specimens based on lactose or sucrose fermentation and H₂S production. For the isolation and differentiation of *Salmonella* and *Shigella*. Bacteria that ferment lactose or sucrose appear as yellow to orange colonies. Bacteria that produce H₂S appear as colonies with black centers.

Hektoen Enteric Agar**Composition** per liter:

Agar 15.0g
Proteose peptone 12.0g
Lactose 12.0g
Sucrose..... 12.0g
Bile salts..... 9.0g
NaCl 5.0g
Na₂S₂O₃ 5.0g
Yeast extract..... 3.0g
Salicin 2.0g
Ferric ammonium citrate..... 1.5g

Acid Fuchsin	0.1g
Bromthymol Blue	0.065g
pH 7.5 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Caution: Acid Fuchsin is a potential carcinogen and care must be taken to avoid inhalation of the powdered dye and contact with the skin.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring until components are dissolved. Do not autoclave. Pour into sterile Petri dishes. Allow agar to solidify with the Petri dish covers partially off.

Use: For the isolation and cultivation of Gram-negative enteric microorganisms from a variety of clinical and nonclinical specimens based on lactose or sucrose fermentation and H₂S production. For the isolation and differentiation of *Salmonella* and *Shigella*. Bacteria that ferment lactose or sucrose appear as yellow to orange colonies. Bacteria that produce H₂S appear as colonies with black centers.

Hektoen Enteric Agar, HiVeg

Composition per liter:

Plant peptone No. 3	19.0g
Agar	15.0g
Lactose	12.0g
Sucrose	12.0g
NaCl	5.0g
Na ₂ S ₂ O ₃	5.0g
Yeast extract	3.0g
Synthetic detergent No. 1	2.0g
Salicin	2.0g
Ferric ammonium citrate	1.5g
Acid Fuchsin	0.1g
Bromthymol Blue	0.065g
pH 7.5 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Caution: Acid Fuchsin is a potential carcinogen and care must be taken to avoid inhalation of the powdered dye and contact with the skin.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring until components are dissolved. Do not autoclave. Pour into sterile Petri dishes. Allow agar to solidify with the Petri dish covers partially off.

Use: For the isolation and cultivation of Gram-negative enteric microorganisms from a variety of clinical and nonclinical specimens based on lactose or sucrose fermentation and H₂S production. For the isolation and differentiation of *Salmonella* and *Shigella*. Bacteria that ferment lactose or sucrose appear as yellow to orange colonies. Bacteria that produce H₂S appear as colonies with black centers.

Helicobacter Medium

Composition per 850.0mL:

Agar	15.0g
Beef extract	10.0g
Peptone	10.0g
NaCl	5.0g
Horse blood, laked	50.0mL

Antibiotic solution A	10.0mL
Antibiotic solution B	10.0mL
pH 7.3 ± 0.2 at 25°C	

Antibiotic Solution A:

Composition per 10.0mL:

Vancomycin	1.0mg
Trimethoprim	5.0mg
Polymyxin B	250 U

Preparation of Antibiotic Solution A: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Antibiotic Solution B:

Composition per 10.0mL:

Amphotericin B	5.0mg
Dimethylformamide	2.0mL

Preparation of Antibiotic Solution B: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except laked horse blood, antibiotic solution A, and antibiotic solution B, to distilled/deionized water and bring volume to 930.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 50.0mL of sterile laked horse blood, 10.0mL of sterile antibiotic solution A, and 10.0mL of sterile antibiotic solution B. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Helicobacter muridarum* and *Helicobacter felis*.

Helicobacter pylori Isolation Agar

Composition per liter:

Agar	15.0g
Bitone	10.0g
Pancreatic digest of casein	5.0g
NaCl	5.0g
Peptic digest of animal tissue	5.0g
Tryptic digest of beef heart	3.0g
Cornstarch	1.0g
Horse blood, laked	35.0mL
Antibiotic inhibitor solution	10.0mL
pH 7.3 ± 0.2 at 25°C	

Antibiotic Inhibitor Solution:

Composition per 10.0mL:

Vancomycin	0.01g
Amphotericin B	5.0mg
Cefsulodin	5.0mg
Trimethoprim lactate	5.0mg

Preparation of Antibiotic Inhibitor Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except horse blood and antibiotic inhibitor solution, to distilled/deionized water and bring volume to 955.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile horse blood and sterile antibiotic inhibitor solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of *Helicobacter pylori* from clinical specimens.

Helicobacter pylori* Selective Medium*Composition** per 1080.0mL:

Special peptone	23.0g
Agar	10.0g
NaCl	5.0g
Starch	1.0g
Horse blood, laked	70.0mL
Selective supplement solution	10.0mL

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Horse Blood, Laked:**Composition** per 100.0mL:

Horse blood, fresh	100.0mL
--------------------------	---------

Preparation of Horse Blood, Laked: Add blood to a sterile polypropylene bottle. Freeze overnight at -20°C. Thaw at 8°C. Refreeze at -20°C. Thaw again at 8°C.

Selective Supplement Solution:**Composition** per 10.0mL:

Vancomycin	10.0mg
Trimethoprim	5.0mg
Cefsulodin	5.0mg
Amphotericin B	5.0mg

Preparation of Selective Supplement Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except selective supplement solution and laked horse blood, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure-121°C. Cool to 50°C. Aseptically add 10.0mL selective supplement solution and 70.0mL sterile laked horse blood. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the isolation of *Helicobacter pylori* from clinical specimens. *H. pylori* forms discrete, translucent, and non-coalescent colonies.

Heliobacillus mobilis* Medium*Composition** per 966.0mL:

Yeast extract	10.0g
MgSO ₄	0.1g
EDTA	2.0mg
Sodium pyruvate solution	100.0mL
Trace elements solution B	10.0mL
K ₂ HPO ₄ solution	5.0mL
Trace elements solution A	1.0mL

pH 7.1 ± 0.2 at 25°C

Sodium Pyruvate Solution:**Composition** per 100.0mL:

Sodium pyruvate	1.1g
-----------------------	------

Preparation of Sodium Pyruvate Solution: Add sodium pyruvate to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Trace Elements Solution B:**Composition** per 100.0mL:

CaCl ₂ ·2H ₂ O	0.3g
Ferric ammonium citrate	0.2g

Preparation of Trace Elements Solution B: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

K₂HPO₄ Solution:**Composition** per 100.0mL:

K ₂ HPO ₄	4.0g
---------------------------------------	------

Preparation of K₂HPO₄ Solution: Add K₂HPO₄ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Trace Elements Solution A:**Composition** per 100.0mL:

H ₃ BO ₃	2.86g
MnCl ₂ ·4H ₂ O	1.81g
Na ₂ MoO ₄ ·2H ₂ O	0.39g
ZnSO ₄ ·7H ₂ O	0.222g
CuSO ₄ ·5H ₂ O	0.079g
Co(NO ₃) ₂ ·6H ₂ O	49.4mg

Preparation of Trace Elements Solution A: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except sodium pyruvate solution, trace elements solution B, K₂HPO₄ solution, and trace elements solution A, to distilled/deionized water and bring volume to 850.0mL. Mix thoroughly. Adjust pH to 7.1. Autoclave for 15 min at 15 psi pressure-121°C. Cool to room temperature. Aseptically add 100.0mL of sterile sodium pyruvate solution, 10.0mL of sterile trace elements solution B, 5.0mL of sterile K₂HPO₄ solution, and 1.0mL of sterile trace elements solution A. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Heliobacillus mobilis*.

Heliobacterium chlorum* Medium*Composition** per liter:

Yeast extract	10.0g
K ₂ HPO ₄	1.0g
MgSO ₄ ·7H ₂ O	1.0g
Sodium ascorbate	0.5g

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Add components, except sodium ascorbate, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Sparge with 100% N₂ and continue boiling for 3-4 min. Add sodium ascorbate and continue to sparge with 100% N₂. Adjust pH to 6.8. Under 100% N₂, immediately dispense 45.0mL of medium into 50.0mL screw-capped tubes fitted with rubber septa. Tighten screw caps. Autoclave for 15 min at 15 psi pressure-121°C.

Use: For the cultivation and maintenance of *Heliobacillus mobilis* and *Heliobacterium chlorum*.

***Heliorestis* Medium
(DSMZ Medium 886)****Composition** per liter:

Na-acetate	1.0g
MgCl ₂ ·6H ₂ O	0.6g
Yeast extract	0.5g
KH ₂ PO ₄	0.5g
NaCl	0.5g
Resazurin	0.2g

CaCl ₂	0.1g
Vitamin B ₁₂	20.0μg
Biotin.....	20.0μg
Solution A.....	50.0mL
Trace elements solution SL-6.....	1.0mL
pH 9.0–9.5 at 25°C	

Solution A :**Composition per 50.0mL:**

Na ₂ CO ₃	2.5g
NaHCO ₃	2.5g
NH ₄ Cl.....	0.5g
Na ₂ S·9H ₂ O.....	0.4g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Trace Elements Solution SL-6:**Composition per liter:**

MnCl ₂ ·4H ₂ O.....	0.5g
H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O.....	0.2g
ZnSO ₄ ·7H ₂ O.....	0.1g
Na ₂ MoO ₄ ·2H ₂ O.....	0.03g
NiCl ₂ ·6H ₂ O.....	0.02g
CuCl ₂ ·2H ₂ O.....	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components, except solution A, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 50.0mL solution A. Mix thoroughly. Adjust pH to 9.0–9.5. Aseptically distribute to sterile tubes or flasks.

Use: For the cultivation of *Heliorestis baculata*.

Hemin Medium for *Mycobacterium*

See: Middlebrook 7H10 Agar

with Middlebrook OADC Enrichment and Hemin**Hemmes Medium Base****Composition per liter:**

Casein enzymatic hydrolysate.....	10.0g
Lactose.....	10.0g
Sucrose.....	10.0g
Agar.....	5.5g
NaCl.....	4.0g
Yeast extract.....	3.0g
Glucose.....	0.3g
Na ₂ S ₂ O ₃ ·5H ₂ O.....	0.1g
FeSO ₄ ·7H ₂ O.....	0.04g
Phenol Red.....	0.015g
Urea solution.....	5.0mL

pH 7.2 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Urea Solution:**Composition per 10.0mL:**

Urea.....	4.0g
-----------	------

Preparation of Urea Solution: Add urea to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except selective supplement solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add selective supplement solution. Mix thoroughly. Pour into Petri dishes or aseptically distribute into sterile tubes.

Use: For the detection of *Salmonella* spp. and *Shigella* spp. based upon 7 different metabolic reactions.

Hemo ID Quad Plate with Growth Factors (*Haemophilus* Identification Quadrant Plate with Growth Factors)

Composition per plate:

Quadrant I.....	5.0mL
Quadrant II.....	5.0mL
Quadrant III.....	5.0mL
Quadrant IV.....	5.0mL

Quadrant I:**Composition per 5.0mL:**

Hemin.....	0.1mg
Brain heart infusion agar.....	5.0mL

Quadrant II:**Composition per 5.0mL:**

Brain heart infusion agar.....	5.0mL
Supplement solution.....	0.05mL

Quadrant III:**Composition per 5.0mL:**

Hemin.....	0.1mg
Brain heart infusion agar.....	5.0mL
Supplement solution.....	0.05mL

Quadrant IV:**Composition per 5.0mL:**

Hemin.....	0.1mg
Brain heart infusion agar.....	5.0mL
Horse blood.....	0.25mL
Supplement solution.....	0.05mL

Source: The supplement solution (IsoVitaleX[®] enrichment) is available from BD Diagnostic Systems. This enrichment may be replaced by supplement VX from BD Diagnostic Systems.

Preparation of Quadrant Media: Sterilize Brain Heart Infusion Agar by autoclaving for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Add additional components as filter sterilized solutions. Mix and distribute as 5.0mL aliquots into quadrants.

Use: For the differentiation and presumptive identification of *Haemophilus* species. The Hemo ID Quad Plate is a four-sectored plate, each with a different medium.

Hemorrhagic Coli Agar (HC Agar)

Composition per liter:

Sorbitol.....	20.0g
Pancreatic digest of casein.....	20.0g
Agar.....	15.0g
NaCl.....	5.0g
Bile salts No. 3.....	1.12g
Bromocresol Purple.....	0.015g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the isolation and cultivation of enterohemorrhagic *Escherichia coli* from food.

Hemorrhagic Coli Agar with MUG (HC Agar with MUG) (BAM M62)

Composition per liter:

Sorbitol.....	20.0g
Pancreatic digest of casein.....	20.0g
Agar.....	15.0g
NaCl.....	5.0g
Bile salts No. 3.....	1.12g
Bromcresol Purple.....	0.015g
MUG reagent.....	0.1g

pH 7.2 ± 0.2 at 25°C

Source: MUG reagent is available from Hach Company, Loveland, Colorado.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the isolation and cultivation of enterohemorrhagic *Escherichia coli* from food. For hemorrhagic colitis *E. coli* strains.

Heparin Medium

Composition per liter:

Agar.....	15.0g
Pancreatic digest of casein.....	3.5g
NaCl.....	1.0g
Pancreatic digest of soybean meal.....	0.6g
Glucose.....	0.5g
K ₂ HPO ₄	0.5g
Heparin solution.....	10.0mL

pH 6.5 ± 0.2 at 25°C

Heparin Solution:

Composition per 10.0mL:

Heparin.....	0.02g
--------------	-------

Preparation of Heparin Solution: Add heparin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except heparin solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile heparin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Flavobacterium leparinum*.

Herbaspirillum Agar

Composition per liter:

Agar.....	15.0g
KH ₂ PO ₄	4.0g
MgSO ₄ ·7H ₂ O.....	0.2g

K ₂ HPO ₄	0.1g
NaCl.....	0.1g
Yeast extract.....	0.05g
CaCl ₂	0.02g
FeCl ₂ ·6H ₂ O.....	0.01g
NaMoO ₄ ·2H ₂ O.....	2.0mg
Solution A.....	50.0mL

pH 7.0 ± 0.2 at 25°C

Solution A:

Composition per 50.0mL

Sodium malate.....	5.0g
--------------------	------

Preparation of Solution A: Add sodium malate to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Adjust pH to 7.0. Filter sterilize.

Preparation of Medium: Add components, except solution A, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 50.0mL of sterile solution A. Mix thoroughly. Aseptically pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Herbaspirillum seropedicae*.

Herellea Agar

Composition per liter:

Agar.....	16.0g
Pancreatic digest of casein.....	15.0g
Lactose.....	10.0g
Maltose.....	10.0g
Enzymatic digest of soybean meal.....	5.0g
NaCl.....	5.0g
Bile salts.....	1.25g
Bromcresol Purple.....	0.02g

pH 6.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation, cultivation, and differentiation of Gram-negative nonfermentative and fermentative bacteria. It is especially recommended for the differentiation of *Acinetobacter* (*Herellea*) species from *Neisseria gonorrhoeae* in urethral or vaginal specimens. Fermentative bacteria appear as yellow colonies surrounded by yellow zones. Nonfermentative bacteria, such as *Acinetobacter* species, appear as pale lavender colonies.

Herpetosiphon giganteus Medium

Composition per liter:

Pancreatic digest of casein.....	3.0g
Yeast extract.....	1.0g
CaCl ₂ ·2H ₂ O.....	0.5g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Herpetosiphon giganteus*.

Hershey's Tris-Buffered Salts Medium

Composition per liter:

Tris(hydroxymethyl)amino- methane buffer (0.1M solution)	12.1g
NaCl	5.4g
KCl	3.0g
NH ₄ Cl	1.1g
MgCl ₂	0.095g
KH ₂ PO ₄	0.087g
Na ₂ SO ₄	0.023g
CaCl ₂	0.011g
FeCl ₃	0.16mg
Glucose solution	100.0mL

pH 7.4 ± 0.2 at 25°C

Glucose Solution:

Composition per 100.0mL:

Glucose	2.0g
---------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Preparation of Medium: Add components, except glucose solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add sterile glucose solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of a variety of heterotrophic microorganisms.

HESNW Medium

Composition per 1011.0mL:

Natural seawater	1.0L
Enrichment solution	10.0mL
Vitamin solution	1.0mL

Enrichment Solution:

Composition per liter:

NaNO ₃	4.667g
Na ₂ SiO ₃ ·9H ₂ O	3.000g
Sodium glycerophosphate	0.667g
EDTA·2H ₂ O	0.553g
H ₃ BO ₃	0.380g
Fe(NH ₄) ₂ (SO ₄) ₂ ·6H ₂ O	0.234g
MnSO ₄ ·4H ₂ O	0.054g
FeCl ₃ ·6H ₂ O	0.016g
ZnSO ₄ ·7H ₂ O	7.3mg
CoSO ₄ ·7H ₂ O	1.6mg

Preparation of Enrichment Solution: Add Na₂SiO₃·9H₂O to distilled/deionized water. Mix thoroughly. Neutralize Na₂SiO₃·9H₂O with 1N HCl. Add 500.0mL of distilled/deionized water. Mix thoroughly. Add remaining components and bring volume to 1.0L with distilled/deionized water. Mix thoroughly. Filter sterilize.

Vitamin Solution:

Composition per liter:

Thiamine	0.1g
Vitamin B ₁₂	2.0mg
Biotin	1.0mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Allow natural seawater to age for 2 months. Filter sterilize. Aseptically add 10.0mL of sterile enrichment solution and 1.0mL of sterile vitamin solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Amphiprora hyalina*, *Chlamydomonas hedleyi*, *Chlamydomonas provasolii*, *Chlorella saccharophila*, *Chroomonas salina*, *Pavlova lutheri*, and *Trichosphaerium* species.

HESPI/SR1/TMC4/LUP Medium (DSMZ Medium 860)

Composition per 1090.0mL:

Yeast extract	1.0g
NH ₄ Cl	1.0g
NaCl	0.6g
Cysteine-HCl·H ₂ O	0.5g
K ₂ HPO ₄	0.3g
KH ₂ PO ₄	0.3g
MgCl ₂ ·6H ₂ O	0.2g
CaCl ₂ ·2H ₂ O	0.1g
KCl	0.1g
Resazurin	0.5mg
NaHCO ₃ solution	60.0mL
Substrate solution	20.0mL
Na ₂ S·9H ₂ O solution	10.0mL
Trace elements solution SL-10	1.5mL

pH 7.0 ± 0.2 at 25°C

Trace Elements Solution SL-10:

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

NaHCO₃ Solution:

Composition per 100.0mL:

NaHCO ₃	10.0g
--------------------	-------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.3g
-------------------------------------	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Sparge with N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Store anaerobically.

Substrate Solution:**Composition** per 10.0mL:

Fructose..... 2.0g

Preparation of Substrate Solution: Add fructose to distilled/deionized water and bring volume to 10.0mL. Sparge with N₂. Filter sterilize.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂. Add components, except NaHCO₃ solution, Na₂S·9H₂O solution, and substrate solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Gently heat and bring to boiling. Boil for 10 min. Cool to room temperature while sparging with 80% N₂ + 20% CO₂. Adjust pH to 6.0. Dispense under 80% N₂ + 20% CO₂ into tubes or bottles. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically and anaerobically add 0.6mL sterile NaHCO₃ solution per 10.0mL medium, 0.1mL Na₂S·9H₂O solution per 10.0mL medium, and 0.2mL substrate solution per 10.0mL medium. Final pH is 7.0.

Use: For the cultivation of *Clostridium xylanovorans* DSM 12503.

HESP1/SR1/TMC4/LUP Medium (DSMZ Medium 860)

Composition per 1090.0mL:

Yeast extract.....	1.0g
NH ₄ Cl.....	1.0g
NaCl.....	0.6g
Cysteine-HCl·H ₂ O.....	0.5g
K ₂ HPO ₄	0.3g
KH ₂ PO ₄	0.3g
MgCl ₂ ·6H ₂ O.....	0.2g
CaCl ₂ ·2H ₂ O.....	0.1g
KCl.....	0.1g
Resazurin.....	0.5mg
NaHCO ₃ solution.....	60.0mL
Substrate solution.....	20.0mL
Na ₂ S·9H ₂ O solution.....	10.0mL
Trace elements solution SL-10.....	1.5mL

pH 7.0 ± 0.2 at 25°C

Trace Elements Solution SL-10:**Composition** per liter:

FeCl ₂ ·4H ₂ O.....	1.5g
CoCl ₂ ·6H ₂ O.....	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	36.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O.....	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

NaHCO₃ Solution:**Composition** per 100.0mL:NaHCO₃..... 10.0g

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

Na₂S·9H₂O Solution:**Composition** per 10.0mL:Na₂S·9H₂O..... 0.3g

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Sparge with N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Store anaerobically.

Substrate Solution:**Composition** per 10.0mL:

Na-syringate..... 0.6g

Preparation of Substrate Solution: Add Na-syringate to distilled/deionized water and bring volume to 10.0mL. Sparge with N₂. Filter sterilize.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂. Add components, except NaHCO₃ solution, Na₂S·9H₂O solution, and substrate solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Gently heat and bring to boiling. Boil for 10 min. Cool to room temperature while sparging with 80% N₂ + 20% CO₂. Adjust pH to 6.0. Dispense under 80% N₂ + 20% CO₂ into tubes or bottles. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically and anaerobically add 0.6mL sterile NaHCO₃ solution per 10.0mL medium, 0.1mL Na₂S·9H₂O solution per 10.0mL medium, and 0.2mL substrate solution per 10.0mL medium. Final pH is 7.0.

Use: For the cultivation of *Sporobacterium olearium* (*Clostridium* sp.) DSM 12504.

HESP1/SR1/TMC4/LUP Medium (DSMZ Medium 860)

Composition per 1090.0mL:

Yeast extract.....	1.0g
NH ₄ Cl.....	1.0g
NaCl.....	0.6g
Cysteine-HCl·H ₂ O.....	0.5g
K ₂ HPO ₄	0.3g
KH ₂ PO ₄	0.3g
MgCl ₂ ·6H ₂ O.....	0.2g
CaCl ₂ ·2H ₂ O.....	0.1g
KCl.....	0.1g
Resazurin.....	0.5mg
NaHCO ₃ solution.....	60.0mL
Substrate solution.....	20.0mL
Na ₂ S·9H ₂ O solution.....	10.0mL
Trace elements solution SL-10.....	1.5mL

pH 7.0 ± 0.2 at 25°C

Trace Elements Solution SL-10:**Composition** per liter:

FeCl ₂ ·4H ₂ O.....	1.5g
CoCl ₂ ·6H ₂ O.....	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	36.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O.....	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized

water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

NaHCO₃ Solution:

Composition per 100.0mL:

NaHCO₃ 10.0g

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na₂S·9H₂O 0.3g

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Sparge with N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Store anaerobically.

Substrate Solution:

Composition per 10.0mL:

Casamino acids 0.5g

Preparation of Substrate Solution: Add casamino acids to distilled/deionized water and bring volume to 10.0mL. Sparge with N₂. Filter sterilize.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂. Add components, except NaHCO₃ solution, Na₂S·9H₂O solution, and substrate solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Gently heat and bring to boiling. Boil for 10 min. Cool to room temperature while sparging with 80% N₂ + 20% CO₂. Adjust pH to 6.0. Dispense under 80% N₂ + 20% CO₂ into tubes or bottles. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically and anaerobically add 0.6mL sterile NaHCO₃ solution per 10.0mL medium, 0.1mL Na₂S·9H₂O solution per 10.0mL medium, and 0.2mL substrate solution per 10.0mL medium. Final pH is 7.0.

Use: For the cultivation of *Clostridium peptidivorans* DSM 12505.

HESPI/SRI/TMC4/LUP Medium (DSMZ Medium 860)

Composition per 1090.0mL:

Yeast extract 1.0g
 NH₄Cl 1.0g
 NaCl 0.6g
 Cysteine-HCl·H₂O 0.5g
 K₂HPO₄ 0.3g
 KH₂PO₄ 0.3g
 MgCl₂·6H₂O 0.2g
 CaCl₂·2H₂O 0.1g
 KCl 0.1g
 Resazurin 0.5mg
 NaHCO₃ solution 60.0mL
 Substrate solution 20.0mL
 Na₂S·9H₂O solution 10.0mL
 Trace elements solution SL-10 1.5mL

pH 7.0 ± 0.2 at 25°C

Trace Elements Solution SL-10:

Composition per liter:

FeCl₂·4H₂O 1.5g
 CoCl₂·6H₂O 190.0mg

MnCl₂·4H₂O 100.0mg
 ZnCl₂ 70.0mg
 Na₂MoO₄·2H₂O 36.0mg
 NiCl₂·6H₂O 24.0mg
 H₃BO₃ 6.0mg
 CuCl₂·2H₂O 2.0mg
 HCl (25% solution) 10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

NaHCO₃ Solution:

Composition per 100.0mL:

NaHCO₃ 10.0g

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na₂S·9H₂O 0.3g

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Sparge with N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Store anaerobically.

Substrate Solution:

Composition per 10.0mL:

Na-lactate 1.25g
 Na₂S₂O₃·5H₂O 0.05g

Preparation of Substrate Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Sparge with N₂. Filter sterilize.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂. Add components, except NaHCO₃ solution, Na₂S·9H₂O solution, and substrate solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Gently heat and bring to boiling. Boil for 10 min. Cool to room temperature while sparging with 80% N₂ + 20% CO₂. Adjust pH to 6.0. Dispense under 80% N₂ + 20% CO₂ into tubes or bottles. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically and anaerobically add 0.6mL sterile NaHCO₃ solution per 10.0mL medium, 0.1mL Na₂S·9H₂O solution per 10.0mL medium, and 0.2mL substrate solution per 10.0mL medium. Final pH is 7.0.

Use: For the cultivation of *Desulfovibrio mexicanus* DSM 13116.

HESPI/SRI/TMC4/LUP Medium (DSMZ Medium 860)

Composition per 1090.0mL:

Yeast extract 1.0g
 NH₄Cl 1.0g
 NaCl 0.6g
 Cysteine-HCl·H₂O 0.5g
 K₂HPO₄ 0.3g
 KH₂PO₄ 0.3g
 MgCl₂·6H₂O 0.2g
 CaCl₂·2H₂O 0.1g

KCl.....	0.1g
Resazurin	0.5mg
NaHCO ₃ solution	60.0mL
Substrate solution.....	20.0mL
Na ₂ S·9H ₂ O solution	10.0mL
Trace elements solution SL-10	1.5mL
pH 7.4 ± 0.2 at 25°C	

Trace Elements Solution SL-10:**Composition per liter:**

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

NaHCO₃ Solution:**Composition per 100.0mL:**

NaHCO ₃	10.0g
--------------------------	-------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

Na₂S·9H₂O Solution:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O	0.3g
---	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Sparge with N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Store anaerobically.

Substrate Solution:**Composition per 10.0mL:**

Na ₂ S ₂ O ₃ ·5H ₂ O	1.25g
--	-------

Preparation of Substrate Solution: Add Na₂S₂O₃·5H₂O to distilled/deionized water and bring volume to 10.0mL. Sparge with N₂. Filter sterilize.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂. Add components, except NaHCO₃ solution, Na₂S·9H₂O solution, and substrate solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Gently heat and bring to boiling. Boil for 10 min. Cool to room temperature while sparging with 80% N₂ + 20% CO₂. Adjust pH to 6.0. Dispense under 80% N₂ + 20% CO₂ into tubes or bottles. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically and anaerobically add 0.6mL sterile NaHCO₃ solution per 10.0mL medium, 0.1mL Na₂S·9H₂O solution per 10.0mL medium, and 0.2mL substrate solution per 10.0mL medium. Final pH is 7.4.

Use: For the cultivation of *Clostridium thiosulfatireducens* DSM 13105.

HESPI/SR1/TMC4/LUP Medium (DSMZ Medium 860)

Composition per 1090.0mL:

Yeast extract.....	1.0g
NH ₄ Cl	1.0g
NaCl.....	0.6g
Cysteine-HCl·H ₂ O	0.5g
K ₂ HPO ₄	0.3g
KH ₂ PO ₄	0.3g
MgCl ₂ ·6H ₂ O	0.2g
CaCl ₂ ·2H ₂ O	0.1g
KCl.....	0.1g
Resazurin	0.5mg
NaHCO ₃ solution	60.0mL
Substrate solution.....	20.0mL
Na ₂ S·9H ₂ O solution.....	10.0mL
Trace elements solution SL-10	1.5mL
pH 7.4 ± 0.2 at 25°C	

Trace Elements Solution SL-10:**Composition per liter:**

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

NaHCO₃ Solution:**Composition per 100.0mL:**

NaHCO ₃	10.0g
--------------------------	-------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

Na₂S·9H₂O Solution:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O	0.3g
---	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Sparge with N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Store anaerobically.

Substrate Solution:**Composition per 10.0mL:**

Glucose	1.0g
---------------	------

Preparation of Substrate Solution: Add glucose to distilled/deionized water and bring volume to 10.0mL. Sparge with N₂. Filter sterilize.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂. Add components, except NaHCO₃ solution, Na₂S·9H₂O solution, and substrate solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Gently heat and bring to boiling. Boil for 10 min. Cool to room temperature

while sparging with 80% N₂ + 20% CO₂. Adjust pH to 6.0. Dispense under 80% N₂ + 20% CO₂ into tubes or bottles. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically and anaerobically add 0.6mL sterile NaHCO₃ solution per 10.0mL medium, 0.1mL Na₂S·9H₂O solution per 10.0mL medium, and 0.2mL substrate solution per 10.0mL medium. Final pH is 7.4.

Use: For the cultivation of *Sporanaerobacter acetigenes* DSM 13106.

Heterotrophic Agar H3P (DSMZ Medium 428)

Composition per 1010.0mL:

Solution B	855.0mL
Solution A	50.0mL
Solution E	50.0mL
Solution D	30.0mL
Solution C	20.0mL
Standard vitamin solution	5.0mL

Solution A:

Composition per 50.0mL:

Na ₂ HPO ₄ ·2H ₂ O	2.9g
KH ₂ PO ₄	2.3g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C.

Solution B:

Composition per 855.0mL:

Agar	15.0g
NH ₄ Cl	1.0g
MgSO ₄ ·7H ₂ O	0.5g
CaCl ₂ ·2H ₂ O	0.010g
MnCl ₂ ·4H ₂ O	0.005g
NaVO ₂ ·H ₂ O	0.005g
Trace elements solution SL-6	5.0mL

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 855.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C.

Trace Elements Solution SL-6:

Composition per liter:

MnCl ₂ ·4H ₂ O	0.5g
H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
Na ₂ MoO ₄ ·2H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Solution C:

Composition per 20.0mL:

Ferric ammonium citrate	0.05g
Distilled water	20.0mL

Preparation of Solution C: Add ferric ammonium citrate to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C.

Solution D:

Composition per 30.0mL:

Yeast extract	1.0g
Na-acetate	1.0g
Na ₂ -succinate	1.0g
DL-Malate	1.0g

Preparation of Solution D: Add components to distilled/deionized water and bring volume to 30.0mL. Mix thoroughly. Adjust to pH 7.0. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C.

Solution E:

Composition per 50.0mL:

Na-lactate	1.0g
Na-pyruvate	1.0g
D-Mannitol	1.0g
D-Glucose	2.0g

Preparation of Solution E: Add components to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Adjust to pH 7.0. Filter sterilize.

Standard Vitamin Solution:

Composition per 100.0mL:

Thiamine-HCl·2H ₂ O	50.0mg
Nicotinic acid	50.0mg
Pyridoxine-HCl	50.0mg
Ca-pantothenate	50.0mg
Riboflavin	10.0mg
Vitamin B ₁₂	1.0mg
Folic acid	0.2mg
Biotin	0.1mg

Preparation of Standard Vitamin Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Aseptically mix solutions A, B, C, D, E, and standard vitamin solution. Pour into sterile Petri dishes or aseptically distribute to flasks or tubes.

Use: For the cultivation and maintenance of *Bacillus* spp., *Pseudomonas* spp., *Xanthomonas campestris* pvar. *campestris*, *Xanthobacter* sp., *Aquaspirillum arcticum*, *Herbaspirillum seropedicae*, *Sphingobium chlorophenolicum*=*Sphingomonas chlorophenolica*, and *Azoarcus* sp. Also H3P is a heterotrophic medium for growth, purity checking, and isolation of a broad spectrum of aerobic bacteria.

Heterotrophic Agar H3P

Composition per 1010.0mL:

Solution B	855.0mL
Solution A	50.0mL
Solution E	50.0mL
Solution C	20.0mL
Solution D	30.0mL
Standard vitamin solution	5.0mL

pH 6.8 ± 0.2 at 25°C

Solution A:

Composition per 50.0mL:

Na ₂ HPO ₄ ·2H ₂ O	2.9g
KH ₂ PO ₄	2.3g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C.

Solution B:**Composition per 855.0mL:**

Agar	15.0g
NH ₄ Cl	1.0g
MgSO ₄ ·7H ₂ O	0.5g
CaCl ₂ ·2H ₂ O	0.01g
MnCl ₂ ·4H ₂ O	5.0mg
NaVO ₃ ·H ₂ O	5.0mg
Trace elements solution SL-6	5.0mL

Trace Elements Solution SL-6:**Composition per liter:**

MnCl ₂ ·4H ₂ O	0.5g
H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
Na ₂ MoO ₄ ·2H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 855.0mL. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C:**Composition per 20.0mL:**

Ferric ammonium citrate	0.05g
-------------------------------	-------

Preparation of Solution C: Add ferric ammonium citrate to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C.

Solution D:**Composition per 30.0mL:**

Disodium succinate	1.0g
DL-Malate	1.0g
Sodium acetate	1.0g
Yeast extract	1.0g

Preparation of Solution D: Add components to distilled/deionized water and bring volume to 30.0mL. Mix thoroughly. Adjust pH to 7.0. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C.

Solution E:**Composition per 50.0mL:**

D-Glucose	2.0g
D-Mannitol	1.0g
Sodium lactate	1.0g
Sodium pyruvate	1.0g

Preparation of Solution E: Add components to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize. Warm to 50°C.

Standard Vitamin Solution:**Composition per 100.0mL:**

Calcium DL-pantothenate	50.0mg
Nicotinic acid	50.0mg
Pyridoxine HCl	50.0mg
Thiamine	50.0mg
Riboflavin	10.0mg
B ₁₂	1.0mg
Folic acid	0.2mg
Biotin	0.1mg

Preparation of Standard Vitamin Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Warm to 50°C.

Preparation of Medium: Aseptically combine 50.0mL of sterile solution A, 855.0mL of sterile solution B, 20.0mL of sterile solution C, 30.0mL of sterile solution D, 50.0mL of sterile solution E, and 5.0mL of sterile standard vitamin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the heterotrophic growth, isolation, and purity checking of a wide variety of aerobic bacteria, including *Ancylobacter* species, *Aquaspirillum* species, *Azospirillum* species, *Beijerinckia* species, *Dexia gummosa*, *Herbaspirillum seropedicae*, *Rhodococcus* species, *Xanthobacter* species, and *Xanthomonas campestris*.

Heterotrophic Broth H3P**Composition per 1010.0mL:**

Solution B	855.0mL
Solution A	50.0mL
Solution E	50.0mL
Solution C	20.0mL
Solution D	30.0mL
Standard vitamin solution	5.0mL

pH 6.8 ± 0.2 at 25°C

Solution A:**Composition per 50.0mL:**

Na ₂ HPO ₄ ·2H ₂ O	2.9g
KH ₂ PO ₄	2.3g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C.

Solution B:**Composition per 855.0mL:**

NH ₄ Cl	1.0g
MgSO ₄ ·7H ₂ O	0.5g
CaCl ₂ ·2H ₂ O	0.01g
MnCl ₂ ·4H ₂ O	5.0mg
NaVO ₃ ·H ₂ O	5.0mg
Trace elements solution SL-6	5.0mL

Trace Elements Solution SL-6:**Composition per liter:**

MnCl ₂ ·4H ₂ O	0.5g
H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
Na ₂ MoO ₄ ·2H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 855.0mL. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C:**Composition per 20.0mL:**

Ferric ammonium citrate	0.05g
-------------------------------	-------

Preparation of Solution C: Add ferric ammonium citrate to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C.

Solution D:

Composition per 30.0mL:

Disodium succinate.....	1.0g
DL-Malate.....	1.0g
Sodium acetate.....	1.0g
Yeast extract.....	1.0g

Preparation of Solution D: Add components to distilled/deionized water and bring volume to 30.0mL. Mix thoroughly. Adjust pH to 7.0. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C.

Solution E:

Composition per 50.0mL:

D-Glucose.....	2.0g
D-Mannitol.....	1.0g
Sodium lactate.....	1.0g
Sodium pyruvate.....	1.0g

Preparation of Solution E: Add components to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize. Warm to 50°C.

Standard Vitamin Solution:

Composition per 100.0mL:

Calcium DL-pantothenate.....	50.0mg
Nicotinic acid.....	50.0mg
Pyridoxine HCl.....	50.0mg
Thiamine.....	50.0mg
Riboflavin.....	10.0mg
B ₁₂	1.0mg
Folic acid.....	0.2mg
Biotin.....	0.1mg

Preparation of Standard Vitamin Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Warm to 50°C.

Preparation of Medium: Aseptically combine 50.0mL of sterile solution A, 855.0mL of sterile solution B, 20.0mL of sterile solution C, 30.0mL of sterile solution D, 50.0mL of sterile solution E, and 5.0mL of sterile standard vitamin solution. Mix thoroughly. Aseptically distribute into sterile tubes.

Use: For the heterotrophic growth, isolation, and purity checking of a wide variety of aerobic bacteria, including *Ancylobacter* species, *Aquaspirillum* species, *Azospirillum* species, *Beijerinckia* species, *Derxia gummosa*, *Herbaspirillum seropedicae*, *Rhodococcus* species, *Xanthobacter* species, and *Xanthomonas campestris*.

Heterotrophic Hyperthermophilic Archaea Medium

Composition per liter:

Pancreatic digest of casein.....	3.0g
Glucose.....	3.0g
Yeast extract.....	3.0g
Artificial seawater.....	990.0mL
Na ₂ S·9H ₂ O solution.....	10.0mL

pH 7.2 ± 0.2 at 25°C

Artificial Seawater:

Composition per liter:

NaCl.....	20.0g
MgSO ₄ ·7H ₂ O.....	6.0g

MgCl ₂ ·6H ₂ O.....	3.0g
(NH ₄) ₂ SO ₄	1.0g
NaHCO ₃	0.2g
CaCl ₂ ·2H ₂ O.....	0.3g
KCl.....	0.5g
KH ₂ PO ₄	0.42g
NaBr.....	0.05g
SrCl ₂ ·6H ₂ O.....	0.02g
Fe(NH ₄) citrate.....	0.01g
Wolfe's mineral solution.....	5.0mL
Vitamin solution.....	5.0mL

Wolfe's Mineral Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O.....	3.0g
Nitritotriacetic acid.....	1.5g
NaCl.....	1.0g
MnSO ₄ ·2H ₂ O.....	0.5g
CoCl ₂ ·6H ₂ O.....	0.1g
ZnSO ₄ ·7H ₂ O.....	0.1g
CaCl ₂ ·2H ₂ O.....	0.1g
FeSO ₄ ·7H ₂ O.....	0.1g
NiCl ₂ ·6H ₂ O.....	0.025g
KAl(SO ₄) ₂ ·12H ₂ O.....	0.02g
CuSO ₄ ·5H ₂ O.....	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O.....	0.01g
Na ₂ SeO ₃ ·5H ₂ O.....	0.3mg

Preparation of Wolfe's Mineral Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components one at a time. Add distilled/deionized water to 1.0L. Adjust pH to 6.8.

Vitamin Solution:

Composition per liter:

Niacin.....	10.0mg
Pantothenate.....	10.0mg
Lipoic acid.....	10.0mg
p-Aminobenzoic acid.....	10.0mg
Thiamine (B ₁).....	10.0mg
Riboflavin (B ₂).....	10.0mg
Pyridoxine (B ₆).....	10.0mg
Cobalamin (B ₁₂).....	10.0mg
Biotin.....	4.0mg
Folic acid.....	4.0mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Artificial Seawater: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	0.8g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Before use, neutralize to pH 7.0 with sterile HCl.

Preparation of Medium: Add components, except Na₂S·9H₂O solution, to artificial seawater and bring volume to 990.0mL. Mix thoroughly. Filter sterilize. Sparge with 100% N₂ for 20 min. Aseptically and anaerobically add 10.0mL of sterile Na₂S·9H₂O solution. Mix

thoroughly. Adjust medium pH to 7.2 by adding sterile anaerobic HCl. Aseptically and anaerobically distribute into sterile tubes or bottles.

Use: For the cultivation of hyperthermophilic archaea.

Heterotrophic Medium H3P (DSMZ Medium 428)

Composition per 1010.0mL:

Solution B	855.0mL
Solution A	50.0mL
Solution E	50.0mL
Solution D	30.0mL
Solution C	20.0mL
Standard vitamin solution	5.0mL

Solution A:

Composition per 50.0mL:

Na ₂ HPO ₄ ·2H ₂ O	2.9g
KH ₂ PO ₄	2.3g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution B:

Composition per 855.0mL:

NH ₄ Cl	1.0g
MgSO ₄ ·7H ₂ O	0.5g
CaCl ₂ ·2H ₂ O	0.010g
MnCl ₂ ·4H ₂ O	0.005g
NaVO ₂ ·H ₂ O	0.005g
Trace elements solution SL-6	5.0mL

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 855.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Trace Elements Solution SL-6:

Composition per liter:

MnCl ₂ ·4H ₂ O	0.5g
H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
Na ₂ MoO ₄ ·2H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Solution C:

Composition per 20.0mL:

Ferric ammonium citrate	0.05g
-------------------------------	-------

Preparation of Solution C: Add ferric ammonium citrate to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution D:

Composition per 30.0mL:

Yeast extract	1.0g
Na-acetate	1.0g
Na ₂ -succinate	1.0g
DL-Malate	1.0g

Preparation of Solution D: Add components to distilled/deionized water and bring volume to 30.0mL. Mix thoroughly. Adjust to pH 7.0. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution E:

Composition per 50.0mL:

D-Glucose	2.0g
Na-lactate	1.0g
Na-pyruvate	1.0g
D-Mannitol	1.0g

Preparation of Solution E: Add components to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Adjust to pH 7.0. Filter sterilize.

Standard Vitamin Solution:

Composition per 100.0mL:

Thiamine-HCl·2H ₂ O	50.0mg
Nicotinic acid	50.0mg
Pyridoxine-HCl	50.0mg
Ca-pantothenate	50.0mg
Riboflavin	10.0mg
Vitamin B ₁₂	1.0mg
Folic acid	0.2mg
Biotin	0.1mg

Preparation of Standard Vitamin Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Aseptically mix solutions A, B, C, D, E, and standard vitamin solution. Aseptically distribute to flasks or tubes.

Use: For the cultivation and maintenance of *Bacillus* spp., *Pseudomonas* spp., *Xanthomonas campestris* pvar. *campestris*, *Xanthobacter* sp., *Aquaspirillum arcticum*, *Herbaspirillum seropedicae*, *Sphingobium chlorophenolicum*=*Sphingomonas chlorophenolica*, and *Azoarcus* sp. Also H3P is a heterotrophic medium for growth, purity checking, and isolation of a broad spectrum of aerobic bacteria.

Heterotrophic Medium for *Hydrogenomonas*

Composition per liter:

Agar	15.0g
Tryptose	5.0g
Cornstarch	2.0g
Sodium succinate·6H ₂ O	2.0g
Sodium glutamate	1.0g
Yeast extract	1.0g
Sodium citrate·2H ₂ O	0.5g
Sodium acetate·3H ₂ O	0.3g
KH ₂ PO ₄	0.2g
MgSO ₄	0.1g

pH 6.8–7.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the heterotrophic cultivation of *Hydrogenomonas* species.

Heterotrophic Medium for Hydrogen-Oxidizing Bacteria

Composition per 1010.0mL:

Solution A	900.0mL
Solution C	100.0mL
Solution B	10.0mL

Solution A:**Composition per 900.0mL:**

Noble agar.....	17.0g
Na ₂ HPO ₄ ·12H ₂ O.....	9.0g
KH ₂ PO ₄	1.5g
NH ₄ Cl.....	1.0g
MgSO ₄ ·7H ₂ O.....	0.2g
Trace elements solution SL-6.....	1.0mL

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Trace Elements Solution SL-6:**Composition per liter:**

H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O.....	0.2g
ZnSO ₄ ·7H ₂ O.....	0.1g
MnCl ₂ ·4H ₂ O.....	0.03g
Na ₂ MoO ₄ ·H ₂ O.....	0.03g
NiCl ₂ ·6H ₂ O.....	0.02g
CuCl ₂ ·2H ₂ O.....	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 3.4.

Solution B:**Composition per 10.0mL:**

CaCl ₂ ·2H ₂ O.....	0.01g
Ferric ammonium citrate.....	5.0mg

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Solution C:**Composition per 100.0mL:**

Sodium 3-hydroxybutyrate.....	2.0g
-------------------------------	------

Preparation of Solution C: Add sodium 3-hydroxybutyrate to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Warm to 45°–50°C.

Preparation of Medium: Aseptically combine 900.0mL of sterile solution A, 10.0mL of sterile solution B, and 100.0mL of sterile solution C. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the heterotrophic cultivation and maintenance of *Xanthobacter agilis*.

Heterotrophic *Nitrobacter* Medium (DSMZ Medium 756)

Composition per liter:

Yeast extract.....	1.5g
Peptone.....	1.5g
Na-pyruvate.....	0.55g
Stock solution.....	100.0mL
Trace elements solution.....	1.0mL

pH 7.4 ± 0.2 at 25°C

Stock Solution:**Composition per liter:**

NaCl.....	5.0g
KH ₂ PO ₄	1.5g

MgSO ₄ ·7H ₂ O.....	0.5g
CaCO ₃	0.07g

Preparation of Stock Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Trace Elements Solution:**Composition per liter:**

FeSO ₄ ·7H ₂ O.....	97.3mg
H ₃ BO ₃	49.4mg
ZnSO ₄ ·7H ₂ O.....	43.1mg
(NH ₄) ₆ Mo ₇ O ₂₄ ·4H ₂ O.....	37.1mg
MnSO ₄ ·2H ₂ O.....	33.8mg
CuSO ₄ ·5H ₂ O.....	25.0mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.4. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Nitrospira moscoviensis*, *Nitrobacter hamburgensis*, *Nitrobacter vulgaris*, and *Nitrobacter winogradskyi*.

Heterotrophic *Nitrobacter* Medium (LMG Medium 245)

Composition per liter:

Yeast extract.....	1.5g
Peptone.....	1.5g
Na-pyruvate.....	0.55g
Stock solution.....	100.0mL
Trace elements solution.....	1.0mL

pH 7.4 ± 0.2 at 25°C

Stock Solution:**Composition per liter:**

NaCl.....	5.0g
KH ₂ PO ₄	1.5g
MgSO ₄ ·7H ₂ O.....	0.5g
CaCO ₃	0.07g

Preparation of Stock Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Trace Elements Solution:**Composition per liter:**

(NH ₄) ₆ Mo ₇ O ₂₄	437.1mg
FeSO ₄ ·7H ₂ O.....	97.3mg
ZnSO ₄ ·7H ₂ O.....	43.1mg
H ₃ BO ₃	39.4mg
MnSO ₄ ·H ₂ O.....	33.8mg
CuSO ₂ ·5H ₂ O.....	25.0mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.4 with NaOH. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of heterotrophic *Nitrobacter* spp.

Heterotrophic Plate CountSee: **HPC Agar**

Hexamita Medium**Composition per liter:**

TYGM-9 medium	250.0mL
Sonneborn's <i>Paramecium</i> medium	750.0mL

TYGM-9 Medium:**Composition per liter:**

NaCl	7.5g
K ₂ HPO ₄	2.8g
Casein digest	2.0g
Gastric mucin	2.0g
Yeast extract	1.0g
KH ₂ PO ₄	0.4g
Bovine serum, heat inactivated	30.0mL
Rice starch solution	30.0mL
Tween™ solution	0.5mL

pH 7.4 ± 0.2 at 25°C

Tween™ Solution:**Composition per 100.0mL:**

Tween™ 80	10.0mL
-----------------	--------

Preparation of Tween™ Solution: Add Tween™ 80 to absolute ethanol and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Rice Starch Solution:**Composition per 100.0mL:**

Rice starch	5.0g
Phosphate-buffered saline solution	100.0mL

Phosphate-Buffered Saline Solution:**Composition per liter:**

NaCl	9.0g
Na ₂ HPO ₄ ·7H ₂ O	0.795g
KH ₂ PO ₄	0.114g

Preparation of Phosphate-Buffered Saline Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.4. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Preparation of Rice Starch Solution: Heat sterilize rice starch at 150°C for 2 hr. Aseptically add 100.0mL of sterile phosphate-buffered saline solution. Mix thoroughly. Use immediately.

Preparation of TYGM-9 Medium: Add components, except rice starch solution, Tween™ solution, and bovine serum, to distilled/deionized water and bring volume to 939.5mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 30.0mL of sterile bovine serum, 30.0mL of sterile rice starch solution, and 0.5mL of sterile Tween™ solution. Mix thoroughly. Aseptically distribute into sterile, screw-capped tubes or flasks.

Sonneborn's *Paramecium* Medium:**Composition per liter:**

Solution 1	1.0L
<i>Klebsiella pneumoniae</i> cultured on solution 2	variable

Solution 1:**Composition per liter:**

Rye grass cerophyll	2.5g
Na ₂ HPO ₄	0.5g

Source: Cerophyll can be obtained from Ward's Natural Science Establishment, Inc. Dairy Goat Nutrition distributes Grass Media Culture, which is equivalent. Cereal Leaf Product from Sigma Chemical is similar to cerophyll.

Preparation of Solution 1: Add cerophyll to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Boil for 5 min. Filter through Whatman #1 filter paper. Add 0.5g of Na₂HPO₄. Bring volume to 1.0L with distilled/deionized water. Mix thoroughly. Distribute 10.0mL volumes into tubes. Autoclave for 15 min at 15 psi pressure–121°C.

Solution 2:**Composition per liter:**

Agar	20.0g
Yeast extract	4.0g
Glucose	0.16g

Preparation of Solution 2: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute 5.0mL into tubes. Autoclave for 15 min at 15 psi pressure–121°C. Allow tubes to cool in a slanted position.

Preparation of Sonneborn's *Paramecium* Medium: Inoculate the surface of agar slants of solution 2 with a culture of *Klebsiella pneumoniae*. Incubate at 37°C for 24–48 hr. Scrape cells from the surface of the agar slants and add to 10.0mL of solution 1. Incubate at 30°C for 24 hr.

Preparation of Medium: Aseptically combine 3.0mL of sterile TYGM-9 medium with 9.0mL of Sonneborn's *Paramecium* medium in 16 × 125mm screw-capped test tubes.

Use: For the cultivation of *Hexamita inflata*, *Hexamita pusilla*, *Mastigamoeba invertens*, and *Trepomonas agilis*.

HHD Medium**Composition per liter:**

Agar	20.0g
Pancreatic digest of casein	10.0g
Casamino acids	3.0g
Fructose	2.5g
KH ₂ PO ₄	2.5g
Papaic digest of soybean meal	1.5g
Tween™ 80	1.0g
Yeast extract	1.0g
Bromcresol Green solution	20.0mL

pH 7.0 ± 0.2 at 25°C

Bromcresol Green Solution:**Composition per 30.0mL:**

Bromcresol Green	0.1g
NaOH (0.01N solution)	30.0mL

Preparation of Bromcresol Green Solution: Add Bromcresol Green to 30.0mL of NaOH solution. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Salmonella* species from foods.

Hickey Tresner Agar**Composition per liter:**

Agar	15.0g
Dextrin	10.0g
Pancreatic digest of casein	2.0g
Meat extract	1.0g

Yeast extract.....	1.0g
CaCl ₂	2.0mg
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Thermomonospora curvata*.

HiCrome™ Aureus Agar Base with Egg Tellurite
(Aureus Agar Base, HiCrome™)
(HiCrome™ *Staphylococcus aureus* Agar)
(*Staphylococcus aureus* Agar, HiCrome)

Composition per liter:

Agar.....	20.0g
Casein enzymic hydrolysate.....	12.0g
Sodium pyruvate.....	10.0g
Beef extract.....	6.0g
LiCl.....	5.0g
Yeast extract.....	5.0g
Pancreatic digest of gelatin.....	3.0g
Chromogenic mixture.....	2.1g
Egg tellurite emulsion.....	50.0mL
pH 7.4 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Caution: Lithium chloride is harmful. Avoid bodily contact and inhalation of vapors. On contact with skin, wash with plenty of water immediately.

Egg Yolk Tellurite Emulsion:

Composition per 100.0mL:

Sterile saline.....	64.0mL
Egg yolk.....	30.0mL
Sterile potassium tellurite solution, 3.5%.....	6.0mL

Source: This medium is available from Fluka, Sigma-Aldrich, and HiMedia.

Preparation of Medium: Add components, except egg yolk tellurite emulsion, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 50.0mL sterile egg yolk tellurite emulsion. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and identification of staphylococci from environmental samples. For the isolation and enumeration of coagulase positive *Staphylococcus aureus*. Coagulase positive *S. aureus* gives brown-black colonies whereas *S. epidermidis* gives yellow, slightly brownish, colonies.

HiCrome™ Bacillus Agar with Polymyxin B
(*Bacillus cereus* HiCrome™ Agar)

Composition per liter:

Agar.....	15.0g
Peptic digest of animal tissue.....	10.0g
D-Mannitol.....	10.0g
NaCl.....	10.0g
Chromogenic mixture.....	3.2g

Meat extract.....	1.0g
Phenol Red.....	0.025g
Polymyxin B solution.....	1.0mL
pH 7.1 ± 0.2 at 25°C	

Source: This medium, without Polymyxin B solution, is available as a premixed powder from HiMedia.

Polymyxin B Solution:

Composition per 1.0mL:

Polymyxin B.....	1.0mg
------------------	-------

Preparation of Polymyxin B Solution: Add Polymyxin B to distilled/deionized water and bring volume to 1.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except Polymyxin B solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly and heat with frequent agitation until boiling. Boil until components are fully dissolved. Do not autoclave. Cool to 45°–50°C. Mix thoroughly. Aseptically add 1.0mL of Polymyxin B solution. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the rapid identification of *Bacillus* species from a mixed culture by chromogenic method. For the enumeration of *Bacillus cereus* and *Bacillus thuringiensis* when present in large numbers in certain foodstuffs.

HiCrome™ Candida Agar

Composition per liter:

Agar.....	15.0g
Peptic digest of animal tissue.....	15.0g
Chromogenic mixture.....	11.22g
K ₂ HPO ₄	1.0g
Chloramphenicol.....	0.5g
pH 6.9 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly and heat with frequent agitation until boiling. Boil until components are fully dissolved. Do not autoclave. Cool to 45°–50°C. Pour into sterile Petri dishes.

Use: For the rapid isolation and identification of *Candida* species from mixed cultures.

HiCrome™ Candida Agar, HiVeg

Composition per liter:

Agar.....	15.0g
Plant peptone.....	15.0g
Chromogenic mixture.....	11.2g
K ₂ HPO ₄	1.0g
Chloramphenicol.....	0.5g
pH 6.9 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly and heat with frequent agitation until boiling. Boil until components are fully dissolved. Do not autoclave. Cool to 45°–50°C. Pour into sterile Petri dishes.

Use: For the rapid isolation and identification of *Candida* species from mixed cultures.

HiCrome™ *Candida* Differential Agar Base with *Candida* Selective Supplement

Composition per liter:

Agar	15.0g
Peptone, special	15.0g
Yeast extract	4.0g
Chromogenic mixture	7.220g
K ₂ HPO ₄	1.0g
Chloramphenicol	0.5g
Gentamicin solution	1.0mL
pH 7.2 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Candida Selective Supplement:

Composition per 10.0mL:

Gentamicin	0.1g
------------------	------

Preparation of *Candida* Selective Supplement: Add gentamicin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except *Candida* selective supplement, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Do not autoclave. Do not overheat. Cool to 50°C. Aseptically add 10.0mL *Candida* selective supplement. Mix thoroughly. Pour into sterile Petri dishes or leave in tubes.

Use: For the rapid isolation and identification of *Candida* species from mixed cultures.

HiCrome™ *Candida* Differential Agar Base, Modified with *Candida* Selective Supplement

Composition per liter:

Agar	18.0g
Glucose	10.0g
Peptic digest of animal tissue	5.0g
Malt extract	3.0g
Yeast extract	3.0g
Chromogenic mixture	3.0g
Chloramphenicol	0.05g
Gentamicin solution	1.0mL
pH 7.2 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Candida Selective Supplement:

Composition per 10.0mL:

Gentamicin	0.1g
------------------	------

Preparation of *Candida* Selective Supplement: Add gentamicin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except *Candida* selective supplement, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Do not autoclave. Do not overheat. Cool to 50°C. Aseptically add 10.0mL *Candida* selective supplement. Mix thoroughly. Pour into sterile Petri dishes or leave in tubes.

Use: For the rapid isolation and identification of *Candida* species from mixed cultures.

HiCrome™ *Candida* HiVeg Agar Base, Modified with *Candida* Selective Supplement

Composition per liter:

Agar	18.0g
Glucose	10.0g
Plant peptone	5.0g
Malt extract	3.0g
Yeast extract	3.0g
Chromogenic mixture	3.0g
Chloramphenicol	0.05g
Gentamicin solution	1.0mL
pH 7.2 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Candida Selective Supplement:

Composition per 10.0mL:

Gentamicin	0.1g
------------------	------

Preparation of *Candida* Selective Supplement: Add gentamicin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except *Candida* selective supplement, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Do not autoclave. Do not overheat. Cool to 50°C. Aseptically add 10.0mL *Candida* selective supplement. Mix thoroughly. Pour into sterile Petri dishes or leave in tubes.

Use: For the rapid isolation and identification of *Candida* species from mixed cultures.

HiCrome™ Coliform Agar (Coliform Agar, HiCrome™)

Composition per liter:

Agar	12.0g
Sodium chloride	5.0g
Peptone, special	3.0g
K ₂ HPO ₄	3.0g
KH ₂ PO ₄	1.7g
Sodium pyruvate	1.0g
Tryptophan	1.0g
Chromogenic mixture	0.2g
Sodium lauryl sulphate	0.1g
pH 6.8 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the simultaneous detection of *Escherichia coli* and total coliforms in water and food samples. Sodium lauryl sulphate inhibits Gram-positive organisms. The chromogenic mixture contains two chromogenic substrates as Salmon-GAL and X-glucuronide. The enzyme β-D-galactosidase produced by coliforms cleaves Salmon-GAL, resulting in the salmon to red coloration of coliform colonies. The enzyme β-D-glucuronidase produced by *E. coli* cleaves X-glucuronide. *Escherichia coli* forms dark blue to violet coloured colonies due to cleavage of both Salmon-GAL and X-glucuronide. The

addition of tryptophan improves the indole reaction, thereby increasing detection reliability in combination with the two chromogens.

HiCrome™ Coliform Agar with Novobiocin (Coliform Agar with Novobiocin, HiCrome™)

Composition per liter:

Agar	12.0g
Sodium chloride	5.0g
Peptone, special	3.0g
K ₂ HPO ₄	3.0g
KH ₂ PO ₄	1.7g
Sodium pyruvate	1.0g
Tryptophan	1.0g
Chromogenic mixture	0.2g
Sodium lauryl sulphate	0.1g
Novobiocin	5.0mg

pH 6.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the simultaneous detection of *Escherichia coli* and total coliforms in water and food samples when high numbers of Gram-positive bacteria may be present. Novobiocin and sodium lauryl sulphate inhibit Gram-positive organisms. The chromogenic mixture contains two chromogenic substrates as Salmon-GAL and X-glucuronide. The enzyme β-D-galactosidase produced by coliforms cleaves Salmon-GAL, resulting in the salmon to red coloration of coliform colonies. The enzyme β-D-glucuronidase produced by *E. coli*, cleaves X-glucuronide. *Escherichia coli* forms dark blue to violet colored colonies due to cleavage of both Salmon-GAL and X-glucuronide. The addition of tryptophan improves the indole reaction, thereby increasing detection reliability in combination with the two chromogens.

HiCrome™ Coliform Agar with SLS

Composition per liter:

Agar	12.0g
NaCl	5.0g
K ₂ HPO ₄	3.0g
Peptone, special	3.0g
KH ₂ PO ₄	1.7g
Sodium pyruvate	1.0g
Tryptophan	1.0g
Chromogenic mixture	0.2g
Sodium lauryl sulfate	0.1g

pH 7.1 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the simultaneous detection of *Escherichia coli* and total coliforms in water and food samples.

HiCrome™ Coliform Agar with SLS and Novobiocin

Composition per liter:

Agar	12.0g
NaCl	5.0g
K ₂ HPO ₄	3.0g
Peptone, special	3.0g
KH ₂ PO ₄	1.7g
Sodium pyruvate	1.0g
Tryptophan	1.0g
Chromogenic mixture	0.2g
Sodium lauryl sulfate	0.1g
Novobiocin	5.0mg

pH 7.1 ± 0.2 at 25°C

Source: This medium, without novobiocin, is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the simultaneous detection of *Escherichia coli* and total coliforms in water and food samples when a high number of Gram-positive accompanying bacteria are expected.

HiCrome™ Coliform HiVeg Agar with SLS

Composition per liter:

Agar	12.0g
NaCl	5.0g
K ₂ HPO ₄	3.0g
Plant special peptone	3.0g
KH ₂ PO ₄	1.7g
Sodium pyruvate	1.0g
Tryptophan	1.0g
Chromogenic mixture	0.2g
Sodium lauryl sulfate	0.1g

pH 7.1 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the simultaneous detection of *Escherichia coli* and total coliforms in water and food samples.

HiCrome™ *E. coli* Agar

Composition per liter:

Casein enzymic hydrolysate	14.0g
Agar	12.0g
Peptone, special	5.0g
NaCl	2.4g
Bile salts mixture	1.5g
Na ₂ HPO ₄	1.0g
NaH ₂ PO ₄	0.6g
X-Glucuronide	0.075g

pH 7.1 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the simultaneous detection of *Escherichia coli* in foods without further confirmation on membrane filter or by indole reagent.

HiCrome™ *E. coli* Agar

Composition per liter:

Casein enzymic hydrolysate	20.0g
Agar	15.0g
Bile salts mixture	1.50g
X-Glucuronide	7.5mg

pH 7.1 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the simultaneous detection of *Escherichia coli* in foods without further confirmation on membrane filter or by indole reagent.

HiCrome™ *E. coli* Agar A (*E. coli* Agar A, HiCrome™)

Composition per liter:

Casein enzymic hydrolysate	14.0g
Agar	12.0g
Peptone, special	5.0g
NaCl	2.4g
Bile salts mixture	1.5g
Na ₂ HPO ₄	1.0g
NaH ₂ PO ₄	0.6g
X-Glucuronide	0.075g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Pour into sterile Petri dishes.

Use: For the detection and enumeration of *Escherichia coli* in foods without further confirmation on membrane filter or by indole reagent. The chromogenic agent X-glucuronide used in this medium helps to detect glucuronidase activity. *E. coli* cells absorb X-glucuronide and the intracellular glucuronidase splits the bond between the chromophore and the glucuronide. The released chromophore gives coloration to the colonies. Bile salts mixture inhibits Gram-positive organisms.

HiCrome™ *E. coli* Agar B (*E. coli* Agar B, HiCrome™)

Composition per liter:

Casein enzymic hydrolysate	20.0g
Agar	15.0g
Bile salts mixture	1.5g
X-Glucuronide	0.075g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the detection and enumeration of *Escherichia coli* in foods without further confirmation on membrane filter or by indole reagent. The chromogenic agent X-glucuronide used in this medium helps to detect glucuronidase activity. *E. coli* cells absorb X-glucuronide and the intracellular glucuronidase splits the bond between the chromophore and the glucuronide. The released chromophore gives coloration to the colonies. Bile salts mixture inhibits Gram-positive organisms.

HiCrome™ *E. coli* Agar, HiVeg

Composition per liter:

Plant hydrolysate	14.0g
Agar	12.0g
Plant special peptone	5.0g
NaCl	2.4g
Synthetic detergent	1.5g
Na ₂ HPO ₄	1.0g
NaH ₂ PO ₄	0.6g
X-Glucuronide	0.075g

pH 7.1 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the simultaneous detection of *Escherichia coli* in foods without further confirmation on membrane filter or by indole reagent.

HiCrome™ EC O157:H7 Agar

Composition per liter:

Agar	15.0g
Casein enzymic hydrolysate	8.0g
Sorbitol	7.0g
Bile salts mixture	1.5g
Chromogenic mixture	0.25g
Sodium lauryl sulfate	0.1g

pH 7.1 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the isolation and differentiation of *Escherichia coli* O157:H7 from food and recommended for selective isolation and easy detection of *Escherichia coli* O157:H7.

HiCrome™ ECC Agar (ECC Agar, HiCrome™)

Composition per liter:

Chromogenic mixture	20.3g
Agar	15.0g

Peptone, special	5.0g
NaCl	5.0g
Na ₂ HPO ₄	3.5g
Yeast extract	3.0g
Lactose	2.5g
KH ₂ PO ₄	1.5g
Neutral Red	0.03g

pH 6.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the presumptive identification of *Escherichia coli* and other coliforms in food and environmental samples. A differential medium for presumptive identification of *E. coli* and other coliforms in food samples. The chromogenic mixture contains two chromogens as X-glucuronide and Salmon-GAL. X-glucuronide is cleaved by the enzyme β-glucuronidase produced by *E. coli*. Salmon-GAL is cleaved by the enzyme galactosidase produced by the majority of coliforms, including *E. coli*.

HiCrome™ ECC HiVeg Agar

Composition per liter:

Chromogenic mixture	20.3g
Agar	15.0g
Plant special peptone	5.0g
NaCl	5.0g
Na ₂ HPO ₄	3.5g
Yeast extract	3.0g
Lactose	2.5g
KH ₂ PO ₄	1.5g
Neutral Red	0.03g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the presumptive identification of *Escherichia coli* and other coliforms in food and environmental samples.

HiCrome™ ECC Selective Agar (ECC Selective Agar, HiCrome™)

Composition per liter:

Agar	10.0g
Peptone, special	6.0g
Casein enzymic hydrolysate	3.3g
NaCl	2.0g
Sodium pyruvate	1.0g
Tryptophan	1.0g
Sorbitol	1.0g
Na ₂ HPO ₄	1.0g
NaH ₂ PO ₄	0.6g
Tergitol 7®	0.15g
Chromogenic mixture	0.43g

pH 6.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly and heat with frequent agitation until components are completely dissolved (approximately 35 min). Do not autoclave. Cool to 45°–50°C. Pour into sterile Petri dishes. Medium may show haziness.

Use: For detection of *Escherichia coli* and coliforms in water and food samples. Tergitol inhibits Gram-positive as well as some Gram-negative bacteria other than coliforms. The chromogenic mixture contains two chromogenic substrates as Salmon-GAL and X-glucuronide. The enzyme β-D-galactosidase produced by coliforms cleaves Salmon-GAL, resulting in the salmon to red coloration of coliform colonies. The enzyme β-D-glucuronidase produced by *E. coli*, cleaves X-glucuronide. *E. coli* forms dark blue to violet colored colonies due to cleavage of both Salmon-GAL and X-glucuronide. The addition of tryptophan improves the indole reaction.

HiCrome™ ECC Selective Agar (ECC Selective Agar, HiCrome™)

Composition per liter:

Agar	10.0g
Peptone, special	6.0g
Casein enzymic hydrolysate	3.3g
NaCl	2.0g
Sodium pyruvate	1.0g
Tryptophan	1.0g
Sorbitol	1.0g
Na ₂ HPO ₄	1.0g
NaH ₂ PO ₄	0.6g
Tergitol 7®	0.15g
Chromogenic mixture	0.43g
Cefsulodin	5.0mg

pH 6.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly and heat with frequent agitation until components are completely dissolved (approximately 35 min). Do not autoclave. Cool to 45°–50°C. Pour into sterile Petri dishes. Medium may show haziness.

Use: For detection of *Escherichia coli* and coliforms in water and food samples using pour plate or streak plate methods. Tergitol inhibits Gram-positive as well as some Gram-negative bacteria other than coliforms. The cefsulodin inhibits *Pseudomonas* and *Aeromonas* species. The chromogenic mixture contains two chromogenic substrates as Salmon-GAL and X-glucuronide. The enzyme β-D-galactosidase produced by coliforms cleaves Salmon-GAL, resulting in the salmon to red coloration of coliform colonies. The enzyme β-D-glucuronidase produced by *E. coli*, cleaves X-glucuronide. *E. coli* forms dark blue to violet colored colonies due to cleavage of both Salmon-GAL and X-glucuronide. The addition of tryptophan improves the indole reaction.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Pour into sterile Petri dishes.

Use: For detection of *Escherichia coli* in a variety of specimens, including foods and water. Fluorescence in the UV and a positive indole test demonstrate the presence of *E. coli* in the colonies.

HiCrome™ Enrichment Broth Base for EC O157:H7

Composition per liter:

Casein enzymic hydrolysate	10.0g
Sorbitol.....	10.0g
Bile salts mixture	1.5g
Chromogenic mixture	1.3g
pH 7.1 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly and heat with frequent agitation until boiling. Boil until components are fully dissolved. Do not autoclave. Cool to 45°–50°C.

Use: For the enrichment culture of *Escherichia coli* O157:H7 in foods and environmental samples

HiCrome™ *Enterobacter sakazakii* Agar

Composition per liter:

Casein enzymic hydrolysate	15.0g
Agar	15.0g
Chromogenic mixture	10.17g
Papaic digest of soybean meal	5.0g
NaCl	5.0g
Na ₂ S ₂ O ₃	1.0g
Sodium deoxycholate.....	0.5g
pH 7.2 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the isolation and identification of *Enterobacter sakazakii* from food and environmental samples.

HiCrome™ *Enterobacter sakazakii* Agar, Modified

Composition per liter:

Agar	15.0g
Casein enzymic hydrolysate	7.0g
NaCl	5.0g
Yeast extract.....	3.0g
Sodium deoxycholate.....	0.6g
Chromogenic substrate	0.15g
Crystal Violet.....	0.02g
pH 7.2 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the isolation and identification of *Enterobacter sakazakii* from food and environmental samples. Meets the formulation recommended by ISO Committee for the isolation and identification of *Enterobacter sakazakii* from milk and milk products.

HiCrome™ Enterococci Broth (Enterococci HiCrome™ Broth)

Composition per liter:

Peptone, special	10.0g
NaCl.....	5.0g
Polysorbate 80	2.0g
NaH ₂ PO ₄	1.25g
NaN ₃	0.3g
Chromogenic mixture	0.04g
pH 7.5 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Caution: Sodium azide is toxic. It also has a tendency to form explosive metal azides with plumbing materials. It is advisable to use enough water to flush off the disposables.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the rapid and easy identification and differentiation of enterococci. It contains a chromogenic substrate which aids in the detection of enterococci, especially in water samples.

HiCrome™ Enterococci HiVeg Broth

Composition per liter:

Plant special peptone	10.0g
NaCl.....	5.0g
Polysorbate 80	2.0g
Na ₂ HPO ₄	1.25g
NaN ₃	0.3g
Chromogenic mixture	0.04g
pH 7.2 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Caution: Sodium azide is toxic. It also has a tendency to form explosive metal azides with plumbing materials. It is advisable to use enough water to flush off the disposables.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the identification and differentiation of Enterococci from water samples.

HiCrome™ *Enterococcus faecium* Agar Base

Composition per liter:

Peptone, special	23.0g
Agar	15.0g
Arabinose.....	10.0g

NaCl	5.0g
Cornstarch	1.0g
Chromogenic substrate	0.1g
Phenol Red	0.1g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the chromogenic identification of *Enterococcus faecium* from water and sewage samples.

HiCrome™ Improved *Salmonella* Agar

Composition per liter:

Agar	12.0g
Peptone, special	8.0g
Chromogenic mixture	3.25g
Yeast extract	2.0g
Sodium deoxycholate	1.0g

pH 7.1 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly and heat with frequent agitation until boiling. Boil until components are fully dissolved. Do not autoclave. Cool to 45°–50°C. Mix well. Pour into sterile Petri dishes.

Use: For the improved selective and differential medium for *Salmonella* species.

HiCrome™ *Klebsiella* Selective Agar Base with Carbenicillin

Composition per liter:

Agar	15.0g
Peptone, special	12.0g
Yeast extract	7.0g
NaCl	5.0g
Bile salts mixture	1.5g
Chromogenic mixture	0.2g
Sodium lauryl sulfate	0.1g
<i>Klebsiella</i> selective supplement	2.0mL

pH 7.1 ± 0.2 at 25°C

Source: This medium, without *Klebsiella* selective supplement, is available as a premixed powder from HiMedia.

Klebsiella Selective Supplement:

Composition per 2.0mL:

Carbenicillin	50.0mg
---------------------	--------

Preparation of *Klebsiella* Selective Supplement: Add components to distilled/deionized water and bring volume to 2.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly and heat with frequent agitation until boiling. Boil until components are fully dissolved. Do not autoclave. Cool to 45°–50°C. Aseptically add *Klebsiella* selective supplement. Mix well. Pour into sterile Petri dishes.

Use: For the selective isolation and easy detection of *Klebsiella* species from water and sewage.

HiCrome™ *Listeria* Agar Base, Modified, with Moxalactam (*Listeria* HiCrome Agar Base, Modified)

Composition per liter:

Peptone, special	23.0g
Agar	13.0g
Rhamnose	10.0g
Chromogenic mixture	5.13g
LiCl	5.0g
Meat extract	5.0g
NaCl	5.0g
Yeast extract	1.0g
Phenol Red	0.12g
Moxolactam solution	10.0mL

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Caution: Lithium chloride is harmful. Avoid bodily contact and inhalation of vapors. On contact with skin, wash with plenty of water immediately.

Moxalactam Solution (*Listeria* Selective Supplement):

Composition per 10.0mL:

Moxolactam	0.2g
------------------	------

Preparation of Moxalactam Solution (*Listeria* Selective Supplement): Add moxalactam to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except moxalactam solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Add 10.0mL moxalactam solution (*Listeria* selective supplement). Mix well. Pour into sterile Petri dishes.

Use: For the rapid and direct identification of *Listeria* species, specifically *Listeria monocytogenes*. A selective and differential agar medium recommended for rapid and direct identification of *Listeria* species, specifically *Listeria monocytogenes*.

HiCrome™ MacConkey-Sorbitol Agar (MacConkey-Sorbitol Agar, HiCrome)

Composition per liter:

Casein enzymic hydrolysate	17.0g
Agar	13.5g
Sorbitol	10.0g
NaCl	5.0g
Proteose peptone	3.0g
Bile salts mixture	1.5g
5-Bromo-4-chloro-3-indolyl-β-D-glucuronide sodium salt	0.1g
Neutral Red	0.03g
Crystal Violet	0.001g

pH 7.1 ± 0.3 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Mix to completely dissolve components. Do not autoclave. Cool to 50°C. Pour into sterile Petri dishes.

Use: For the direct isolation and differentiation of *E. coli* O157:H7 strains from foodstuffs. Recommended for selective isolation of *Escherichia coli* O157:H7 from food and animal feeds. The medium contains sorbitol instead of lactose. Enteropathogenic strains of *Escherichia coli* O157:H7 ferment lactose but do not ferment sorbitol and hence produce colorless colonies. Sorbitol fermenting strains of *Escherichia coli* produce pink-red colonies. The red color is due to production of acid from sorbitol, absorption of Neutral Red and a subsequent color change of the dye when the pH of the medium falls below 6.8. The chromogenic indicator is added to detect the presence of an enzyme β -D-glucuronidase. Strains of *Escherichia coli* possessing β -D-glucuronidase appear as blue colored colonies on the medium. Enteropathogenic strains of *Escherichia coli* O157 do not possess β -D-glucuronidase activity and thus produce colorless colonies. *Escherichia coli* fermenting sorbitol and possessing β -D-glucuronidase activity produce purple colored colonies. Most of the Gram-positive organisms are inhibited by Crystal Violet and bile salts.

HiCrome™ MacConkey-Sorbitol Agar with Tellurite-Cefixime Supplement (MacConkey-Sorbitol Agar with Tellurite-Cefixime Supplement)

Composition per 1004.0mL:

Casein enzymic hydrolysate	17.0g
Agar	13.5g
Sorbitol.....	10.0g
NaCl	5.0g
Proteose peptone	3.0g
Bile salts mixture	1.5g
5-Bromo-4-chloro-3-indolyl- β -D-glucuronide sodium salt	0.1g
Neutral Red	0.03g
Crystal Violet	0.001g
Tellurite-cefixime supplement	4.0mL

pH 7.1 \pm 0.3 at 25°C

Source: This medium, without tellurite-cefixime supplement, is available as a premixed powder from HiMedia.

Tellurite-Cefixime Supplement:

Composition per 4.0mL:

K ₂ TeO ₃	5.0mg
Cefixime.....	0.1mg

Preparation of Tellurite-Cefixime Supplement: Add components to 4.0mL of distilled/deionized water. Mix thoroughly. Filter sterilize.

Caution: Potassium tellurite is toxic.

Source: This medium is available from Fluka, Sigma-Aldrich. Tellurite-cefixime supplement is available from Oxoid Unipath.

Preparation of Medium: Add components, except tellurite-cefixime supplement, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Mix to completely dissolve components. Do not autoclave. Cool to 50°C. Add 4.0mL sterile tellurite-cefixime supplement. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the direct isolation and differentiation of *E. coli* O157:H7 strains from foodstuffs. Recommended for selective isolation of *Escherichia coli* O157:H7 from food and animal feeding stuffs. The medium contains sorbitol instead of lactose. Enteropathogenic strains of *Escherichia coli* O157:H7 ferment lactose but do not ferment sorbitol and hence produce colorless colonies. Sorbitol fermenting strains of *Escherichia coli* produce pink-red colonies. The red color is due to production of acid from sorbitol, absorption of Neutral Red and a subsequent color change of the dye when the pH of the medium falls below 6.8. The chromogenic indicator is added to detect the presence of an enzyme β -D-glucuronidase. Strains of *Escherichia coli* possessing β -D-glucuronidase appear as blue colored colonies on the medium. Enteropathogenic strains of *Escherichia coli* O157 do not possess β -D-glucuronidase activity and thus produce colorless colonies. *Escherichia coli* fermenting sorbitol and possessing β -D-glucuronidase activity produce purple colored colonies. Most of the Gram-positive organisms are inhibited by Crystal Violet and bile salts. Addition of tellurite-cefixime supplement makes the medium selective. Potassium tellurite selects the serogroups O157 from other *E. coli* serogroups and inhibits *Aeromonas* species and *Providencia* species. Cefixime inhibits *Proteus* species.

HiCrome™ M-CP Agar Base (M-CP HiCrome™ Agar Base) (Membrane *Clostridium perfringens* HiCrome™ Agar Base)

Composition per liter:

Tryptose	30.0g
Yeast extract.....	20.0g
Agar	15.0g
Sucrose.....	5.0g
L-Cysteine-HCl·H ₂ O	1.0g
MgSO ₄ ·7H ₂ O	0.1g
FeCl ₃ ·6H ₂ O.....	0.09g
Indoxyl- β -D-glucoside.....	0.06g
Bromocresol Purple	0.04g

pH 7.6 \pm 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the detection of *Clostridium perfringens*. Recommended by the Directive of the Council of the European Union 98/83/EC for isolation and enumeration of *C. perfringens* from water samples using the membrane filtration technique.

HiCrome™ MeReSa Agar with Methicillin

Composition per liter:

NaCl.....	40.0g
Agar	15.0g
Casein enzymic hydrolysate	13.0g
Chromogenic mixture	5.3g
Sodium pyruvate.....	5.0g
Beef extract.....	2.5g
Yeast extract.....	2.5g
MRSA selective supplement.....	10.0mL

pH 7.0 \pm 0.2 at 25°C

Source: This medium, without MRSA supplement, is available as a premixed powder from HiMedia.

MRSA Selective Supplement:

Composition per 10.0mL:

Methicillin..... 4.0mg

Preparation of MRSA Selective Supplement: Add methicillin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except MRSA supplement, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 10.0mL MRSA supplement. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of methicillin-resistant *Staphylococcus aureus* (MRSA).

HiCrome™ MeReSa Agar with Oxacillin

Composition per liter:

NaCl 40.0g
 Agar 15.0g
 Casein enzymic hydrolysate 13.0g
 Chromogenic mixture 5.3g
 Sodium pyruvate 5.0g
 Beef extract 2.5g
 Yeast extract 2.5g
 MRSA selective supplement 10.0mL

pH 7.0 ± 0.2 at 25°C

Source: This medium, without MRSA supplement, is available as a premixed powder from HiMedia.

MRSA Selective Supplement:

Composition per 10.0mL:

Oxacillin..... 2.0mg

Preparation of MRSA Selective Supplement: Add oxacillin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except MRSA supplement, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 10.0mL MRSA supplement. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of methicillin-resistant *Staphylococcus aureus* (MRSA).

HiCrome™ M-Lauryl Sulfate Agar

Composition per liter:

Peptic digest of animal tissue..... 40.0g
 Lactose 30.0g
 Agar 10.0g
 Yeast extract 6.0g
 Sodium lauryl sulfate 1.0g
 Sodium pyruvate 0.5g
 Chromogen 0.2g
 Phenol Red 0.2g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the differentiation and enumeration of *Escherichia coli* and other coliforms by the membrane filtration method.

**HiCrome™ MM Agar
 (HiCrome™ Miller and Mallinson Agar)
 (MM Agar HiCrome™)**

Composition per liter:

Agar 15.0g
 Lactose 10.0g
 Peptic digest of animal tissue 10.0g
 Chromogenic mixture 6.6g
 D-Cellobiose..... 3.0g
 Beef extract 2.0g
 D-Trehalose 1.33g
 D-Mannitol 1.2g

pH 7.6 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Do not autoclave. Cool to 45°–50°C. Mix well. Pour into sterile Petri dishes.

Use: For the identification and differentiation of *Salmonella* and non-*Salmonella* like *Citrobacter* from water samples.

HiCrome™ MM HiVeg Agar

Composition per liter:

Agar 15.0g
 Plant peptone 10.0g
 Lactose 10.0g
 Chromogenic mixture 6.6g
 D-Cellobiose..... 3.0g
 Plant extract 2.0g
 D-Trehalose 1.33g
 D-Mannitol 1.2g

pH 7.6 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Do not autoclave. Cool to 45°–50°C. Mix well. Pour into sterile Petri dishes.

Use: For the identification and differentiation of *Salmonella* and non-*Salmonella* like *Citrobacter* from water samples.

**HiCrome™ MS.O157 Agar
 (MS.O157 Agar HiCrome™)**

Composition per liter:

Agar 12.0g
 Peptone, special 10.0g
 Sorbitol 4.0g

Bile salt mixture.....	1.0g
Chromogenic mixture	0.731g
pH 6.8 ± 0.2 at 25°C	

Source: This medium is available from Fluka, Sigma-Aldrich.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Do not autoclave. Cool to 50°C. Pour into sterile Petri dishes.

Use: For the simultaneous detection of *Escherichia coli*, *Escherichia coli* O157:H7 and coliforms in water and food samples. *Escherichia coli* O157:H7 gives colorless colonies because of non-fermentation of sorbitol and absence of β-glucuronidase activity, whereas other strains of *Escherichia coli* having β-glucuronidase activity and fermenting sorbitol appear as steel blue colored colonies. Some non *Escherichia coli* O157:H7 may have some colony color.

HiCrome™ MS.O157 Agar with Tellurite (MS.O157 Agar with Tellurite, HiCrome™)

Composition 1000.25mL:

Agar	12.0g
Peptone, special	10.0g
Sorbitol.....	4.0g
Bile salt mixture.....	1.0g
Chromogenic mixture	0.731g
Tellurite solution	0.25mL
pH 6.8 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Tellurite Solution:

Composition per 10.0mL:

K ₂ TeO ₃	0.1g
---------------------------------------	------

Preparation of Tellurite Solution: Add K₂TeO₃ to 10.0mL of distilled/deionized water. Mix thoroughly. Filter sterilize.

Caution: Potassium tellurite is toxic.

Preparation of Medium: Add components, except tellurite solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Do not autoclave. Cool to 45°C. Aseptically add 0.25mL sterile tellurite solution. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the simultaneous detection of *Escherichia coli*, *Escherichia coli* O157:H7, and coliforms in water and food samples. *Escherichia coli* O157:H7 gives colorless colonies because of non-fermentation of sorbitol and absence of β-glucuronidase activity, whereas other strains of *Escherichia coli* having β-glucuronidase activity and fermenting sorbitol appear as steel blue colored colonies. Addition of tellurite makes the medium much more specific and selective.

HiCrome™ M-TEC Agar

Composition per liter:

Agar	15.0g
Lactose	10.0g
NaCl.....	7.5g
Protease peptone	5.0g
K ₂ HPO ₄	3.3g
Yeast extract.....	3.0g
KH ₂ PO ₄	1.0g
Chromogen.....	0.5g

Sodium lauryl sulfate.....	0.2g
Sodium deoxycholate.....	0.1g
pH 7.3 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the differentiation and enumeration of thermotolerant *E. coli* from water by the membrane filtration method.

HiCrome Nickels and Leesment Medium

Composition per liter:

Casein enzymatic hydrolysate	18.0g
Agar	15.0g
Calcium lactate pentahydrate.....	8.0g
Tricalcium dicitrate tetrahydrate.....	6.65g
Yeast extract.....	4.5g
Glucose	4.5g
Lactose.....	4.5g
NaCl.....	3.6g
Gelatin.....	2.25g
Trisodium citrate dihydrate.....	1.8g
Carboxymethyl cellulose	0.4g
Chromogenic substrate (X-gal).....	0.2g
Selective supplement solution	10.0mL
pH 6.65 ± 0.05 at 25°C	

Source: This medium is available from HiMedia.

Selective Supplement Solution:

Composition per 10.0mL:

Vancomycin	0.2g
------------------	------

Preparation of Selective Supplement Solution: Add vancomycin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except selective supplement solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add selective supplement solution. Mix thoroughly. Pour into Petri dishes or aseptically distribute into sterile tubes.

Use: For the enumeration of citrate-fermenting lactic acid bacteria from milk.

HiCrome™ OGYE Agar Base (OGYE Agar Base HiCrome) (Oxytetracycline Glucose Yeast Extract Agar HiCrome)

Composition per liter:

Glucose	20.0g
Agar	12.0g
Yeast extract	4.0g
Chromogenic mixture	1.1g
Oxytetracycline selective supplement	10.0mL
pH 7.0 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Oxytetracycline Selective Supplement:**Composition per 10.0mL:**

Oxytetracycline..... 0.1g

Preparation of Oxytetracycline Selective Supplement: Add 0.1g oxytetracycline to 10.0mL of distilled/deionized water. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except oxytetracycline selective supplement, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 10.0mL sterile oxytetracycline selective supplement. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the rapid isolation of yeasts and molds from milk and milk products. Oxytetracycline makes the medium more selective by inhibiting the growth of lactobacilli. *Aspergillus niger* appears as light blue colored colonies with black spores due to the presence of chromogenic mixture; *Candida albicans* shows green colored colonies and *Saccharomyces cerevisiae* gives colorless colonies.

HiCrome™ RajHans Medium (Salmonella Agar)

Composition per liter:

Agar 13.5g
Casein enzymic hydrolysate 8.0g
Chromogenic mixture 7.3g
NaCl 5.0g
Yeast extract 5.0g
Peptone 4.0g
Lactose 3.0g
Sodium deoxycholate 1.0g
Neutral Red 0.02g

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Do not autoclave. Do not overheat. Cool to 50°C. Mix thoroughly. Pour into sterile Petri dishes or leave in tubes.

Use: For the identification and differentiation of *Salmonella* species from the members of Enterobacteriaceae, especially *Proteus* species.

HiCrome™ RajHans Medium, Modified (Salmonella Agar, Modified)

Composition per liter:

Agar 12.0g
Casein enzymic hydrolysate 8.0g
NaCl 5.0g
Yeast extract 5.0g
Chromogenic mixture 4.32g
Peptic digest of animal tissue 4.0g
Lactose 3.0g
Sodium deoxycholate 1.0g
Neutral Red 0.02g

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Do not autoclave. Do not overheat. Cool to 50°C. Mix thoroughly. Pour into sterile Petri dishes or leave in tubes.

Use: For the identification and differentiation of *Salmonella* species from the members of Enterobacteriaceae, especially *Proteus* species.

HiCrome™ Rapid Coliform Broth (Coliform Rapid HiCrome™ Broth) (Rapid Coliform HiCrome™ Broth)

Composition per liter:

Peptone, special 5.0g
NaCl 5.0g
Na₂HPO₄ 2.7g
KH₂PO₄ 2.0g
Sorbitol 1.0g
Sodium lauryl sulfate 0.1g
IPTG 0.1g
Chromogenic substrate 0.08g
Fluorogenic substrate 0.05g

pH 6.8 ± 0.3 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the detection and confirmation of *Escherichia coli* and coliforms on the basis of enzyme substrate reaction from water samples, using a combination of chromogenic and fluorogenic substrate.

HiCrome™ Rapid Enterococci Agar (Enterococci Rapid HiCrome™ Agar) (Rapid Enterococci HiCrome™ Agar)

Composition per liter:

Agar 15.0g
Peptone special 10.0g
NaCl 5.0g
Polysorbate 80 2.0g
Na₂HPO₄ 1.25g
NaN₃ 0.3g
Chromogenic mixture 0.06g

pH 7.5 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Caution: Sodium azide is toxic. It also has a tendency to form explosive metal azides with plumbing materials. It is advisable to use enough water to flush off the disposables.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the rapid and easy identification and differentiation of enterococci. It contains a chromogenic substrate, which aids in the detection of enterococci, especially from water samples.

HiCrome™ Salmonella Agar

Composition per liter:

Agar 13.0g
Peptic digest of animal tissue 6.0g
Chromogenic mixture 5.4g

Yeast extract.....	2.5g
Bile salts mixture	1.0g
pH 7.3 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Do not autoclave. Cool to 45°–50°C. Mix well. Pour into sterile Petri dishes.

Use: For the simultaneous detection of *Escherichia coli* and *Salmonella* from food and water. For the identification, differentiation, and confirmation of enteric bacteria from specimens such as urine, water, or food which may contain large numbers of *Proteus* species as well as potentially pathogenic Gram-positive organisms.

HiCrome™ Salmonella Agar (Salmonella Agar, HiCrome™)

Composition per liter:

Agar	13.0g
Peptic digest of animal tissue.....	6.0g
Chromogenic mixture	5.4g
Yeast extract.....	2.5g
Chromogenic mix	1.5g
Bile salt mixture.....	1.0g
pH 7.7 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Mix to completely dissolve components. Do not autoclave. Cool to 50°C. Pour into sterile Petri dishes.

Use: A selective chromogenic medium used for the isolation and differentiation of *Salmonella* species from coliforms in food and water. *E. coli* and *Salmonella* are easily distinguishable due to the colony characteristics. *Salmonella* give light purple colonies with a halo. *E. coli* have a characteristic blue color. Other organisms give colorless colonies. The characteristic light purple and blue color is due to the chromogenic mixture. Chromogenic medium for detecting and identifying Enterobacteria, *Proteus* species, and other Gram-positive organisms.

HiCrome™ Salmonella Chromogen Agar (Salmonella Chromogen Agar, HiCrome™) (Rambach Equivalent Agar)

Composition per liter:

Agar	15.0g
Peptic digest of animal tissue.....	5.0g
NaCl.....	5.0g
Yeast extract.....	2.0g
Meat extract	1.0g
Na-deoxycholate	1.0g
Chromogenic mixture	1 vial
pH 7.3 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while

stirring and bring to boiling. Mix to completely dissolve components. Do not autoclave. Mix and boil in 5 min sequences for 35–40 min. Cool to 50°C. Shake gently for 30–35 min. Pour into sterile Petri dishes.

Use: A selective medium used for the detection of *Salmonella* species. This medium exploits a novel phenotypic characteristic of *Salmonella* spp.: the formation of acid from propylene glycol. This characteristic may be used in combination with a chromogenic indicator of β-galactosidase to differentiate *Salmonella* spp. from *Proteus* spp. and the other members of the Enterobacteriaceae. Deoxycholate is included in the plate medium as an inhibitor of Gram-positive organisms. Nontyphi *Salmonella* spp. yield distinct, bright red colonies on this medium, allowing facilitated identification and unambiguous differentiation from *Proteus* spp. Coliforms produce blue-green to blue-violet colonies. Other Enterobacteriaceae and Gram-negative bacteria such as *Proteus*, *Shigella*, *Pseudomonas*, *Salmonella typhi*, and *S. paratyphi* A form colorless or yellow colonies.

HiCrome™ UTI Agar, HiVeg

Composition per liter:

Agar	15.0g
Plant peptone	15.0g
Chromogenic mixture	2.45g
pH 7.3 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the differentiation and enumeration of thermotolerant *E. coli* from water by the membrane filtration method. For the identification, differentiation, and confirmation of enteric bacteria from specimens such as urine, water, or food which may contain large numbers of *Proteus* species as well as potentially pathogenic Gram-positive organisms.

HiCrome™ UTI Agar, Modified

Composition per liter:

Peptic digest of animal tissue	18.0g
Agar	15.0g
Chromogenic mixture	12.44g
Beef extract.....	6.0g
Casein enzymic hydrolysate	4.0g
pH 7.2 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the differentiation and enumeration of thermotolerant *E. coli* from water by the membrane filtration method. For the identification, differentiation, and confirmation of enteric bacteria from specimens such as urine, water, or food which may contain large numbers of *Proteus* species as well as potentially pathogenic Gram-positive organisms.

**HiCrome™ UTI Agar, Modified
(UTI Agar, Modified HiCrome™)**

Composition per liter:

Peptic digest of animal tissue.....	18.0g
Agar	15.0g
Chromogenic mixture	12.44g
Beef extract.....	4.0g
Casein enzymatic hydrolysate	4.0g
pH 7.2 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Mix to completely dissolve components. Do not autoclave. Cool to 50°C. Pour into sterile Petri dishes.

Use: A chromogenic medium used for detecting and identifying Enterobacteria, *Proteus* species, and other bacteria involved in urinary tract infections.

HiFluoro™ Pseudomonas Agar Base

Composition per liter:

Pancreatic digest of gelatin.....	18.0g
Agar	15.0g
K ₂ SO ₄	10.0g
Fluorogenic mixture.....	2.05g
MnCl ₂	1.4g
Cetrimide	0.3g
Glycerol	10.ml
pH 7.2 ± 0.2 at 25°C	

Source: This medium, without glycerol, is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the selective isolation of *Pseudomonas aeruginosa* from clinical and nonclinical specimens by the fluorogenic method.

High Plate Count Agar

Composition per liter:

Agar	15.0g
Peptic digest of animal tissue.....	3.0g
Casein, soluble.....	0.5g
K ₂ HPO ₄	0.2g
MgSO ₄ ·7H ₂ O	0.05g
FeCl ₃ ·4H ₂ O	1.0mg
pH 7.2 ± 0.2 at 25°C	

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For obtaining higher colony counts by the spread plate, pour plate or membrane filter technique.

High Salt Nutrient Agar

Composition per liter:

NaCl.....	30.0g
Agar	15.0g
Peptic digest of animal tissue	5.0g
Meat extract	5.0g
pH 8.5 ± 0.2 at 25°C	

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of salt-tolerant *Vibrio* species.

High Salt Peptone Yeast Extract Agar

Composition per liter:

NaCl.....	30.0g
Agar	15.0g
Peptic digest of animal tissue	10.0g
Yeast extract.....	6.0g
Meat extract	2.0g
Glucose	2.0g
L-Cysteine·HCl·H ₂ O	0.3g
pH 7.5 ± 0.2 at 25°C	

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the confirmation of *Vibrio* species.

**Hippea Medium
(DSMZ Medium 854)**

Composition per 1010.0mL:

NaCl.....	25.0g
Sulfur, powdered.....	10.0g
Na-acetate	5.0g
MOPS [3-(<i>N</i> -morpholino) propane sulfonic acid].....	3.0g
Na ₂ S·9H ₂ O.....	0.5g
NH ₄ Cl	0.33g
CaCl ₂ ·2H ₂ O	0.33g
MgCl ₂ ·6H ₂ O	0.33g
KCl.....	0.33g
KH ₂ PO ₄	0.33g
Yeast extract.....	0.1g
Resazurin	0.5mg
Trace elements solution	10.0mL
Vitamin solution.....	10.0mL
pH 6.1 ± 0.2 at 25°C	

Trace Elements Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O.....	3.0g
Nitritotriacetic acid	1.5g
NaCl.....	1.0g
MnSO ₄ ·2H ₂ O.....	0.5g
CoSO ₄ ·7H ₂ O.....	0.18g
ZnSO ₄ ·7H ₂ O.....	0.18g

CaCl ₂ ·2H ₂ O.....	0.1g
FeSO ₄ ·7H ₂ O.....	0.1g
NiCl ₂ ·6H ₂ O.....	0.025g
KAl(SO ₄) ₂ ·12H ₂ O.....	0.02g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·4H ₂ O.....	0.01g
CuSO ₄ ·5H ₂ O.....	0.01g
Na ₂ SeO ₃ ·5H ₂ O.....	0.3mg

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl.....	10.0mg
Thiamine-HCl·2H ₂ O.....	5.0mg
Riboflavin.....	5.0mg
Nicotinic acid.....	5.0mg
D-Ca-pantothenate.....	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Lipoic acid.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Preparation of Medium: Add components, except vitamin solution, sulfur, and Na₂S·9H₂O, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.0. Sparge the medium with 80% N₂ + 20% CO₂ gas mixture for 30 min. Add Na₂S·9H₂O. Mix thoroughly. Readjust the pH to 6.0–6.2. Dispense medium under 80% N₂ + 20% CO₂ gas mixture into anaerobe tubes or bottles containing 100.0mg sulfur powder per 10mL medium. Autoclave 20 min at 110°C. Prior to use inject 0.1mL sterile vitamin solution per 10.0mL medium.

Use: For the cultivation of *Hippaea maritima*.

Hippurate Broth

See: Sodium Hippurate Broth

Hippurate Hydrolysis Broth

Composition per liter:

Heart infusion powder.....	10.0g
Peptic digest of animal tissue.....	10.0g
Sodium hippurate.....	10.0g
NaCl.....	5.0g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the detection of hippurate-hydrolyzing bacteria.

Hirschia Medium

Composition per liter:

Pancreatic digest of casein.....	5.0g
HEPES.....	4.0g

Yeast extract.....	2.0g
Artificial seawater.....	250.0mL
Glucose solution.....	100.0mL

pH 7.4 ± 0.2 at 25°C

Glucose Solution:

Composition per 100.0mL:

Glucose.....	0.25g
--------------	-------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Artificial Seawater:

Composition per liter:

NaCl.....	27.5g
MgCl ₂ ·6H ₂ O.....	5.38g
MgSO ₄ ·7H ₂ O.....	6.78g
KCl.....	0.72g
NaHCO ₃	0.2g
CaCl ₂ ·2H ₂ O.....	1.4g

Preparation of Artificial Seawater: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components, except glucose solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.4. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 100.0mL of sterile glucose solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Hirschia baltica*.

Hi-Sensitivity Test Agar

Composition per liter:

Casein enzymic hydrolysate.....	11.0g
Agar.....	8.0g
NaCl.....	3.0g
Peptic digest of animal tissue.....	3.0g
Glucose.....	2.0g
Na ₂ HPO ₄	2.0g
Sodium acetate.....	1.0g
Starch, soluble.....	1.0g
Magnesium glycerophosphate.....	0.2g
Calcium gluconate.....	0.1g
L-Cystine hydrochloride.....	0.02g
L-Tryptophan.....	0.02g
Adenine.....	0.01g
Guanine.....	0.01g
Uracil.....	0.01g
Xanthine.....	0.01g
Calcium pantothenate.....	3.0mg
Biotin.....	3.0mg
Nicotinamide.....	3.0mg
Pyridoxine hydrochloride.....	3.0mg
Manganese chloride.....	2.0mg
ZnSO ₄	1.0mg
CoSO ₄	1.0mg
CuSO ₄	1.0mg
Cyanocobalamin.....	1.0mg
FeSO ₄	1.0mg
Menadione.....	1.0mg
Thiamine hydrochloride.....	0.04mg

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For antimicrobial susceptibility tests.

Hi-Sensitivity Test Broth

Composition per liter:

Casein enzymic hydrolysate	11.0g
NaCl	3.0g
Peptic digest of animal tissue.....	3.0g
Glucose	2.0g
Na ₂ HPO ₄	2.0g
Sodium acetate.....	1.0g
Starch, soluble.....	1.0g
Magnesium glycerophosphate	0.2g
Calcium gluconate	0.1g
L-Cystine hydrochloride.....	0.02g
L-Tryptophan.....	0.02g
Adenine.....	0.01g
Guanine.....	0.01g
Uracil	0.01g
Xanthine.....	0.01g
Calcium pantothenate	3.0mg
Biotin	3.0mg
Nicotinamide.....	3.0mg
Pyridoxine hydrochloride	3.0mg
Manganese chloride	2.0mg
ZnSO ₄	1.0mg
CoSO ₄	1.0mg
CuSO ₄	1.0mg
Cyanocobalamin	1.0mg
FeSO ₄	1.0mg
Menadione	1.0mg
Thiamine hydrochloride.....	0.04mg

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For antimicrobial susceptibility testing.

Hi-Sensitivity Test HiVeg Agar

Composition per liter:

Plant hydrolysate.....	11.0g
Agar	8.0g
NaCl	3.0g
Plant peptone.....	3.0g
Glucose	2.0g
Na ₂ HPO ₄	2.0g
Sodium acetate.....	1.0g
Starch, soluble.....	1.0g
Magnesium glycerophosphate	0.2g
Calcium gluconate	0.1g
L-Cystine hydrochloride.....	0.02g

L-Tryptophan	0.02g
Adenine.....	0.01g
Guanine.....	0.01g
Uracil	0.01g

Biotin	3.0mg
Nicotinamide.....	3.0mg
Pyridoxine hydrochloride	3.0mg
Manganese chloride	2.0mg
ZnSO ₄	1.0mg
CoSO ₄	1.0mg
CuSO ₄	1.0mg
Cyanocobalamin	1.0mg
FeSO ₄	1.0mg
Menadione	1.0mg
Thiamine hydrochloride.....	0.04mg

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For antimicrobial susceptibility tests.

Hi-Sensitivity Test HiVeg Broth

Composition per liter:

Plant hydrolysate	11.0g
NaCl	3.0g
Plant peptone	3.0g
Glucose	2.0g
Na ₂ HPO ₄	2.0g
Sodium acetate.....	1.0g
Starch, soluble.....	1.0g
Magnesium glycerophosphate	0.2g
Calcium gluconate	0.1g
L-Cystine hydrochloride	0.02g
L-Tryptophan	0.02g
Adenine.....	0.01g
Guanine.....	0.01g
Uracil	0.01g
Xanthine.....	0.01g
Calcium pantothenate	3.0mg
Biotin	3.0mg
Nicotinamide.....	3.0mg
Pyridoxine hydrochloride	3.0mg
Manganese chloride	2.0mg
ZnSO ₄	1.0mg
CoSO ₄	1.0mg
CuSO ₄	1.0mg
Cyanocobalamin	1.0mg
FeSO ₄	1.0mg
Menadione	1.0mg
Thiamine hydrochloride.....	0.04mg

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring

to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For antimicrobial susceptibility testing.

Hisitest Agar

Composition per liter:

Casein enzymic hydrolysate	11.0g
Agar	8.0g
Buffer salt.....	3.3g
Peptic digest of animal tissue.....	3.0g
NaCl.....	3.0g
Glucose	2.0g
Starch	1.0g
Nucleoside basis	0.02g
Thiamine	0.02mg

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For determination of antibiotic susceptibility of fastidious microorganisms.

Histidans Agar

Composition per liter:

Agar	20.0g
Glucose	10.0g
Yeast extract.....	10.0g
Na ₂ HPO ₄	0.95g
KH ₂ PO ₄	0.91g
MgSO ₄ ·7H ₂ O	0.5g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Streptomyces* species.

Histoplasma capsulatum Agar

Composition per liter:

Agar	12.5g
Glucose	10.0g
Citric acid.....	10.0g
Potato starch.....	2.0g
α-Ketoglutaric acid.....	1.0g
L-Cystine-HCl·H ₂ O	1.0g
Glutathione, reduced.....	0.5g
L-Asparagine	0.1g
L-Tryptophan	0.02g
Solution 1	250.0mL
Solution 3	40.0mL
Solution 2	10.0mL
Solution 4	10.0mL
Solution 8	10.0mL
Solution 5	1.0mL

Solution 6.....	0.1mL
Solution 7.....	0.1mL

pH 6.5 ± 0.2 at 25°C

Solution 1:

Composition per liter:

KH ₂ PO ₄	8.0g
(NH ₄) ₂ SO ₄	8.0g
MgSO ₄ ·7H ₂ O	0.86g
CaCl ₂ , anhydrous	0.08g
ZnSO ₄ ·7H ₂ O	0.05g

Preparation of Solution 1: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Bring volume to 1.0L with distilled/deionized water. Store at 5°C.

Solution 2:

Composition per liter:

FeSO ₄ ·7H ₂ O.....	5.7g
MnCl ₂ ·6H ₂ O	0.8g
NaMoO ₄ ·2H ₂ O.....	0.15g
HCl, concentrated	1.0mL

Preparation of Solution 2: Add 1.0mL of concentrated HCl to 100.0mL of distilled water in a 1.0L volumetric flask. Dissolve each component completely in the sequence given. Bring volume to 1.0L with distilled/deionized water. Store at 5°C. Discard if red color or red precipitate appears.

Solution 3:

Composition per 100.0mL:

Casein, acid-hydrolyzed, vitamin-free.....	10.0g
--	-------

Preparation of Solution 3: Add casein to distilled/deionized water and bring volume to 100.0mL.

Solution 4:

Composition per liter:

Calcium pantothenate	0.2g
Inositol	0.2g
Riboflavin	0.2g
Thiamine-HCl	0.2g
Nicotinamide.....	0.1g
Biotin	0.01g

Preparation of Solution 4: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Store at –20°C.

Solution 5:

Composition per 100.0mL:

Hemin	0.2g
NH ₄ OH, concentrated	0.3mL

Preparation of Solution 5: Add hemin to approximately 30.0mL of distilled/deionized water. Add NH₄OH. Mix thoroughly until dissolved. Bring volume to 100.0mL with distilled/deionized water. Store at 5° C.

Solution 6:

Composition per 10.0mL:

DL-Thioctic acid	0.01g
Ethanol (95% solution).....	10.0mL

Preparation of Solution 6: Add DL-thioctic acid to 10.0mL of ethanol. Mix thoroughly. Store at –20°C.

Solution 7:

Composition per 10.0mL:

Coenzyme A	0.01g
Na ₂ S·5H ₂ O (0.05% solution).....	0.2mL

Preparation of Solution 7: Prepare $\text{Na}_2\text{S}\cdot 5\text{H}_2\text{O}$ solution in freshly boiled distilled/deionized water. Add coenzyme A to 9.8mL of distilled/deionized water. Mix thoroughly. Add freshly prepared $\text{Na}_2\text{S}\cdot 5\text{H}_2\text{O}$ solution. Mix thoroughly. Store the solution at -20°C .

Solution 8:

Composition per 100.0mL:

Oleic acid 0.1g

Preparation of Solution 8: Add oleic acid to 50.0mL of distilled/deionized water. Adjust pH to 9.0 with NaOH. Gently heat until dissolved. Bring volume to 100.0mL with distilled/deionized water. Store at 5°C .

Preparation of Medium: Add components—except agar, potato starch, and solution 8—to distilled/deionized water and bring volume to 400.0mL. Mix thoroughly. Adjust pH to 6.5 with 20% KOH solution. Filter sterilize. In a separate flask, add potato starch to 50.0mL of distilled/deionized water. Add the starch solution to 450.0mL of boiling distilled/deionized water. Add 10.0mL of solution 8 and the agar. Mix thoroughly. Autoclave for 15 min at 15 psi pressure— 121°C . Cool to 70°C . Aseptically combine the two sterile solutions. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Histoplasma capsulatum* in the yeast phase. For the cultivation of *Histoplasma duboisii*, *Blastomyces dermatitidis*, and *Sporotrichum schenckii*.

Histoplasma capsulatum Agar

Composition per liter:

Agar	15.0g
Glucose	10.0g
Potato starch.....	2.0g
α -Ketoglutaric acid.....	1.0g
L-Cystine-HCl-H ₂ O	1.0g
Glutathione, reduced.....	0.5g
L-Asparagine	0.1g
L-Tryptophan	0.02g
Solution 1	250.0mL
Solution 3	40.0mL
Solution 2	10.0mL
Solution 4	10.0mL
Solution 8	10.0mL
Solution 5	1.0mL
Solution 6	0.1mL
Solution 7	0.1mL

pH 6.5 ± 0.2 at 25°C

Solution 1:

Composition per liter:

KH_2PO_4	8.0g
$(\text{NH}_4)_2\text{SO}_4$	8.0g
$\text{MgSO}_4\cdot 7\text{H}_2\text{O}$	0.86g
CaCl_2 , anhydrous	0.08g

Preparation of Solution 1: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Bring volume to 1.0L with distilled/deionized water. Store at 5°C .

Solution 2:

Composition per liter:

$\text{FeSO}_4\cdot 7\text{H}_2\text{O}$	5.7g
$\text{MnCl}_2\cdot 6\text{H}_2\text{O}$	0.8g
$\text{NaMoO}_4\cdot 2\text{H}_2\text{O}$	0.15g
HCl, concentrated	1.0mL

Preparation of Solution 2: Add the 1.0mL of concentrated HCl to 100.0mL of distilled water in a 1.0L volumetric flask. Dissolve each component completely in the sequence given. Bring volume to 1.0L with distilled/deionized water. Store at 5°C . Discard if red color or red precipitate appears.

Solution 3:

Composition per 100.0mL:

Casein, acid-hydrolyzed, vitamin-free..... 10.0g

Preparation of Solution 3: Add casein to distilled/deionized water and bring volume to 100.0mL. Do not use enzymatically digested casein.

Solution 4:

Composition per liter:

Calcium pantothenate	0.2g
Inositol	0.2g
Riboflavin	0.2g
Thiamine-HCl	0.2g
Nicotinamide.....	0.1g
Biotin	0.01g

Preparation of Solution 4: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Store at -20°C .

Solution 5:

Composition per 100.0mL:

Hemin	0.2g
NH_4OH , concentrated.....	0.3mL

Preparation of Solution 5: Add hemin to approximately 30.0mL of distilled/deionized water. Add NH_4OH . Mix thoroughly until dissolved. Bring volume to 100.0mL with distilled/deionized water. Store at 5°C .

Solution 6:

Composition per 10.0mL:

DL-Thioctic acid.....	0.01g
Ethanol (95% solution).....	10.0mL

Preparation of Solution 6: Add DL-thioctic acid to 10.0mL of ethanol. Mix thoroughly. Store solution at -20°C .

Solution 7:

Composition per 10.0mL:

Coenzyme A	0.01g
$\text{Na}_2\text{S}\cdot 5\text{H}_2\text{O}$ (0.05% solution).....	0.2mL

Preparation of Solution 7: Prepare $\text{Na}_2\text{S}\cdot 5\text{H}_2\text{O}$ solution in freshly boiled distilled/deionized water. Add coenzyme A to 9.8mL of distilled/deionized water. Mix thoroughly. Add freshly prepared $\text{Na}_2\text{S}\cdot 5\text{H}_2\text{O}$ solution. Mix thoroughly. Store the solution at -20°C .

Solution 8:

Composition per 100.0mL:

Oleic acid..... 0.1g

Preparation of Solution 8: Add oleic acid to 50.0mL of distilled/deionized water. Adjust pH to 9.0 with NaOH. Gently heat until dissolved. Bring volume to 100.0mL with distilled/deionized water. Store at 5°C .

Preparation of Medium: Add components—except agar, potato starch, and solution 8—to distilled/deionized water and bring volume to 400.0mL. Mix thoroughly. Adjust pH to 6.5 with 20% KOH solution. Filter sterilize. In a separate flask, add potato starch to 50.0mL of distilled/deionized water. Add the starch solution to 450.0mL of boiling distilled/deionized water. Add 10.0mL of solution 8 and the agar. Mix thoroughly. Autoclave for 15 min at 15 psi pressure— 121°C . Cool

to 70°C. Aseptically combine the two sterile solutions. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Histoplasma capsulatum* in the mycelial phase.

Histoplasma capsulatum Broth

Composition per liter:

Glucose	10.0g
Citric acid	10.0g
α -Ketoglutaric acid	1.0g
L-Cystine·HCl·H ₂ O	1.0g
Potato starch	0.5g
Glutathione, reduced	0.5g
L-Asparagine	0.1g
L-Tryptophan	0.02g
Solution 1	250.0mL
Solution 3	40.0mL
Solution 2	10.0mL
Solution 4	10.0mL
Solution 5	1.0mL
Solution 8	1.0mL
Solution 6	0.1mL
Solution 7	0.1mL

pH 6.5 ± 0.2 at 25°C

Solution 1:

Composition per liter:

KH ₂ PO ₄	8.0g
(NH ₄) ₂ SO ₄	8.0g
MgSO ₄ ·7H ₂ O	0.86g
CaCl ₂ , anhydrous	0.08g
ZnSO ₄ ·7H ₂ O	0.05g

Preparation of Solution 1: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Bring volume to 1.0L with distilled/deionized water. Store at 5°C.

Solution 2:

Composition per liter:

FeSO ₄ ·7H ₂ O	5.7g
MnCl ₂ ·6H ₂ O	0.8g
NaMoO ₄ ·2H ₂ O	0.15g
HCl, concentrated	1.0mL

Preparation of Solution 2: Add 1.0mL of concentrated HCl to 100.0mL of distilled water in a 1.0L volumetric flask. Dissolve each component completely in the sequence given. Bring volume to 1.0L with distilled/deionized water. Store at 5°C. Discard if red color or red precipitate appears.

Solution 3:

Composition per 100.0mL:

Casein, acid-hydrolyzed, vitamin-free	10.0g
---------------------------------------	-------

Preparation of Solution 3: Add casein to distilled/deionized water and bring volume to 100.0mL. Do not use enzymatically digested casein.

Solution 4:

Composition per liter:

Calcium pantothenate	0.2g
Inositol	0.2g
Riboflavin	0.2g
Thiamine·HCl	0.2g

Nicotinamide	0.1g
Biotin	0.01g

Preparation of Solution 4: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Store at -20°C.

Solution 5:

Composition per 100.0mL:

Hemin	0.2g
NH ₄ OH, concentrated	0.3mL

Preparation of Solution 5: Add hemin to approximately 30.0mL of distilled/deionized water. Add NH₄OH. Mix thoroughly until dissolved. Bring volume to 100.0mL with distilled/deionized water. Store at 5°C.

Solution 6:

Composition per 10.0mL:

DL-Thioctic acid	0.01g
Ethanol (95% solution)	10.0mL

Preparation of Solution 6: Add DL-thioctic acid to 10.0mL of ethanol. Mix thoroughly. Store solution at -20°C.

Solution 7:

Composition per 10.0mL:

Coenzyme A	0.01g
Na ₂ S·5H ₂ O (0.05% solution)	0.2mL

Preparation of Solution 7: Prepare Na₂S·5H₂O solution in freshly boiled distilled/deionized water. Add coenzyme A to 9.8mL of distilled/deionized water. Mix thoroughly. Add freshly prepared Na₂S·5H₂O solution. Mix thoroughly. Store the solution at -20°C.

Solution 8:

Composition per 100.0mL:

Oleic acid	0.1g
------------	------

Preparation of Solution 8: Add oleic acid to 50.0mL of distilled/deionized water. Adjust pH to 9.0 with NaOH. Gently heat until dissolved. Bring volume to 100.0mL with distilled/deionized water. Store at 5°C.

Preparation of Medium: Add components—except potato starch and solution 8—to distilled/deionized water and bring volume to 400.0mL. Mix thoroughly. Adjust pH to 6.5 with 20% KOH solution. Filter sterilize. In a separate flask, add potato starch to 50.0mL of distilled/deionized water. Add the starch solution to 450.0mL of boiling distilled/deionized water. Add 1.0mL of solution 8. Mix thoroughly. Autoclave for 15 min at 15 psi pressure-121°C. Cool to 70°C. Aseptically combine the two sterile solutions. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Histoplasma capsulatum* in the yeast phase. For the cultivation of *Histoplasma duboisii*, *Blastomyces dermatitidis*, and *Sporotrichum schenckii*.

HiVeg Hydrolysate Agar with 2.5% Agar

Composition per liter:

Agar	25.0g
Plant hydrolysate	5.0g
Plant peptone	5.0g
NaCl	5.0g
Na ₂ HPO ₄	2.5g
Plant infusion	1.5g
Yeast autolysate	1.5g
Glycerol	22.0mL

pH 7.8 ± 0.2 at 25°C

Source: This medium, without glycerol, is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Vibrio cholerae*. For the production of cholera vaccine.

HiVeg Magnesium Broth

Composition per liter:

Plant hydrolysate.....	10.0g
NaCl.....	5.0g
MgSO ₄	0.94g

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Mix thoroughly.

Use: For the cultivation of recombinant strains of *Escherichia coli*.

HiVeg Peptone Water

Composition per liter:

Plant peptone.....	10.0g
NaCl.....	5.0g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Mix thoroughly.

Use: For the cultivation of various bacteria.

HL Agar

Composition per plate:

Columbia agar base.....	10.0mL
Columbia blood top agar.....	5.0mL

pH 7.3 ± 0.2 at 25°C

Columbia Agar Base:

Composition per liter:

Agar.....	13.5g
Pancreatic digest of casein.....	12.0g
NaCl.....	5.0g
Peptic digest of animal tissue.....	5.0g
Beef extract.....	3.0g
Yeast extract.....	3.0g
Cornstarch.....	1.0g

Preparation of Columbia Agar Base: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Columbia Blood Top Agar:

Composition per liter:

Agar.....	13.5g
Pancreatic digest of casein.....	12.0g
NaCl.....	5.0g
Peptic digest of animal tissue.....	5.0g
Beef extract.....	3.0g
Yeast extract.....	3.0g
Cornstarch.....	1.0g
Horse blood, defibrinated.....	50.0mL

Preparation of Columbia Blood Top Agar: Add components, except horse blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile horse blood. Mix thoroughly.

Preparation of Medium: Pour cooled, sterile Columbia agar base into sterile Petri dishes in 10.0mL volumes. Allow agar to solidify. Pour 5.0mL of cooled, sterile Columbia blood top agar over Columbia agar base that has solidified but is still warm.

Use: For the cultivation of *Listeria monocytogenes*.

HM Medium

Composition per liter:

NaCl.....	81.0g
Yeast extract.....	10.0g
MgSO ₄	9.6g
MgCl ₂	7.0g
Proteose peptone No. 3.....	5.0g
KCl.....	2.0g
Glucose.....	1.0g
CaCl ₂	0.36g
NaHCO ₃	60.0mg
NaBr.....	26.0mg

pH 7.1 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.1. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Salinicoccus roseus* and *Salinicoccus hispanicus*.

HNS Agar (ATCC Medium 923)

Composition per liter:

Agar.....	15.0g
NaCl.....	9.6g
Heart infusion broth.....	990.0mL
Horse serum.....	10.0mL

pH 7.4 ± 0.2 at 25°C

Heart Infusion Broth:

Composition per 900.0mL:

Beef heart, infusion from.....	500.0g
Tryptose.....	10.0g
NaCl.....	5.0g

Preparation of Heart Infusion Broth: Add agar and NaCl to 990.0mL heart infusion broth. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL sterile horse serum. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Corynebacterium* species.

HNW Medium (DSMZ Medium 997)

Composition per liter:

DMJ synthetic seawater.....	1.0L
Vitamin solution.....	10.0mL
NaHCO ₃ solution.....	10.0mL
NaNO ₃ solution.....	10.0mL
Na ₂ S·9H ₂ O solution.....	10.0mL
Tungstate solution.....	10.0mL

pH 7.2 ± 0.2 at 25°C

Tungstate Solution:

Composition per 10.0mL:

Na ₂ WO ₄ ·2H ₂ O.....	0.1mg
---	-------

Preparation of Tungstate Solution: Add Na₂WO₄·2H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly.

NaHCO₃ Solution:

Composition per 10.0mL:

NaHCO ₃	1.0g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 20% CO₂ + 80% H₂. Filter sterilize.

NaNO₃ Solution:

Composition per 10.0mL:

NaNO ₃	1.0g
-------------------------	------

Preparation of NaNO₃ Solution: Add NaNO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl.....	10.0mg
Thiamine-HCl·2H ₂ O.....	5.0mg
Riboflavin.....	5.0mg
Nicotinic acid.....	5.0mg
D-Ca-pantothenate.....	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Lipoic acid.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	0.5g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature. Adjust pH to 7.5.

DMJ Synthetic Seawater:

Composition per liter:

NaCl.....	30.0g
MgCl ₂ ·6H ₂ O.....	4.18g

MgSO ₄ ·7H ₂ O.....	3.4g
KCl.....	0.33g
NH ₄ Cl.....	0.25g
K ₂ HPO ₄	0.14g
CaCl ₂ ·2H ₂ O.....	0.14g
Fe(NH ₄) ₂ (SO ₄) ₂ ·6H ₂ O.....	0.01g
NiCl ₂ ·6H ₂ O.....	0.5mg
Na ₂ SeO ₃ ·5H ₂ O.....	0.5mg
Trace elements solution SL-10.....	10.0mL

Trace Elements Solution SL-10:

Composition per liter:

MgSO ₄ ·7H ₂ O.....	3.0g
Nitrilotriacetic acid.....	1.5g
NaCl.....	1.0g
MnSO ₄ ·2H ₂ O.....	0.5g
CoSO ₄ ·7H ₂ O.....	0.18g
ZnSO ₄ ·7H ₂ O.....	0.18g
CaCl ₂ ·2H ₂ O.....	0.1g
FeSO ₄ ·7H ₂ O.....	0.1g
NiCl ₂ ·6H ₂ O.....	0.025g
KAl(SO ₄) ₂ ·12H ₂ O.....	0.02g
H ₃ BO ₃	0.01g
Na ₂ MnO ₄ ·4H ₂ O.....	0.01g
CuSO ₄ ·5H ₂ O.....	0.01g
Na ₂ SeO ₃ ·5H ₂ O.....	0.3mg

Preparation of Trace Elements Solution SL-10: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly. Adjust pH to 7.0.

Preparation of DMJ Synthetic Seawater: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Preparation of Medium: Aseptically add 10.0mL each of vitamin solution, NaHCO₃ solution, NaNO₃ solution, Na₂S·9H₂O solution, and tungstate solution to 1.0L sterile DMJ synthetic seawater. Mix thoroughly. Distribute into tubes. Tightly seal the tubes with butyl rubber stoppers under a gas phase of 80% H₂ + 20% CO₂ (300 kPa).

Use: For the cultivation of *Persephonella hydrogeniphila* and *Hydrogenivirga caldilitoris*.

Hofer's Alkaline Medium

Composition per liter:

Agar.....	15.0g
Mannitol.....	10.0g
Yeast extract.....	1.0g
K ₂ HPO ₄	0.5g
MgSO ₄	0.2g
NaCl.....	0.1g
Thymol Blue.....	0.016g

pH 11.0 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the selective isolation of *Agrobacterium* spp. from soil.

Hohn's Medium, Modified
See: **Steenken and Smith Agar**

HO-LE Trace Elements Solution

Composition per liter:

H ₃ BO ₃	2.85g
MnCl ₂ ·4H ₂ O	1.8g
Sodium tartrate	1.77g
FeSO ₄	1.36g
CoCl ₂ ·6H ₂ O	0.04g
CuCl ₂ ·2H ₂ O	0.026g
Na ₂ MoO ₄ ·2H ₂ O	0.025g
ZnCl ₂	0.021g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For use as an enrichment to other media that require trace minerals.

Hominis Agar
See: **H Agar**

Hominis Broth
See: **H Broth**

Horie Arabinose Ethyl Violet Broth
(HAEB)

Composition per liter:

NaCl	30.0g
Peptone	5.0g
Beef extract	3.0g
Bromthymol Blue	0.03g
Ethyl Violet	1.0mg
Arabinose solution	100.0mL

pH 9.0 ± 0.2 at 25°C

Arabinose Solution:

Composition per 100.0mL:

Arabinose	5.0g
-----------------	------

Preparation of Arabinose Solution: Add arabinose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except arabinose solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 9.0. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile arabinose solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Vibrio* species from foods.

Horikoshi Alkaline Medium
(DSMZ Medium 940)

Composition per liter:

Agar	15.0g
D-glucose	10.0g
Peptone	5.0g
Yeast extract	5.0g
Na ₂ CO ₃	5.0g

KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.2g

pH 9.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Pannonibacter phragmiticus*.

Horikoshi-1 Medium
(DSMZ Medium 1081)

Composition per liter:

Agar	15.0g
Glucose	10.0g
Polypeptone	5.0g
Yeast extract	5.0g
KH ₂ PO ₄	1.0g
K ₂ HPO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.2g
NaCO ₃ solution	100.0mL

pH 10.0 ± 0.2 at 25°C

NaCO₃ Solution:

Composition per 100.0mL:

NaCO ₃	10.0g
-------------------------	-------

Preparation of NaCO₃ Solution: Add NaCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except NaCO₃ solution, to double distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Adjust pH to 10.0. Gently heat while stirring and bring to boiling. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 100.0mL NaCO₃ solution. Adjust pH to 10.0. Pour into Petri dishes or aseptically distribute into tubes.

Use: For the cultivation of “*Streptomyces sannurensis*” and *Salinicoccus alkaliphilus*.

Horikoshi-1 Medium with 10% Sodium Chloride
(DSMZ Medium 1081a)

Composition per liter:

NaCl	100.0g
Agar	15.0g
Glucose	10.0g
Polypeptone	5.0g
Yeast extract	5.0g
KH ₂ PO ₄	1.0g
K ₂ HPO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.2g
NaCO ₃ solution	100.0mL

pH 10.0 ± 0.2 at 25°C

NaCO₃ Solution:

Composition per 100.0mL:

NaCO ₃	10.0g
-------------------------	-------

Preparation of NaCO₃ Solution: Add NaCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except NaCO₃ solution, to double distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Adjust pH to 10.0. Gently heat while stirring and bring to boiling. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 100.0mL NaCO₃ solution. Adjust pH to 10.0. Pour into Petri dishes or aseptically distribute into tubes.

Use: For the cultivation of *Salinicoccus alkaliphilus*.

Horse Blood Agar

Composition per liter:

Beef heart, infusion from	500.0g
Agar	15.0g
Tryptose	10.0g
NaCl	5.0g
Horse blood, defibrinated	50.0mL
pH 6.8 ± 0.2 at 25°C	

Preparation of Medium: Add components, except horse blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile horse blood. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Yersinia pseudotuberculosis*.

Horse Serum Agar

Composition per liter:

Agar	15.0g
Pancreatic digest of gelatin	5.0g
Beef extract	3.0g
Horse serum	200.0mL
pH 6.8 ± 0.2 at 25°C	

Preparation of Medium: Add components, except horse serum, to distilled/deionized water and bring volume to 800.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile horse serum. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Pseudomonas aeruginosa* and *Streptobacillus moniliformis*.

Horse Serum Broth

Composition per liter:

Pancreatic digest of gelatin	5.0g
Beef extract	3.0g
Horse serum	200.0mL
pH 6.8 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components, except horse serum, to distilled/deionized water and bring volume to 800.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile horse serum. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Pseudomonas aeruginosa* and *Streptobacillus moniliformis*.

Hottinger Broth

Composition per liter:

Fish peptone	20.0g
Yeast extract	2.0g
Tryptophan	1.0g
pH 7.2 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For cultivation of less fastidious microorganisms and determination of indole as per USSR State Pharmacopoeia.

Howardella Medium (DSMZ Medium 1085)

Composition per liter:

Casitone	20.0g
Yeast extract	5.0g
Na ₂ HPO ₄	5.0g
MgCl ₂ ·6H ₂ O	1.1g
Urea	1.0g
Na-thioglycolate	0.75g
Resazurin	0.5mg
Urea solution	10.0mL
pH 7.4 ± 0.2 at 25°C	

Urea Solution:

Composition per 10.0mL:

Urea	1.0g
------------	------

Preparation of Urea Solution: Add urea to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Preparation of Medium: Add components, except thioglycolate and urea solution, to double distilled/deionized water and bring volume to 990.0mL. Cool to room temperature while sparging with 80% N₂ + 20% CO₂. Add thioglycolate. Mix thoroughly. Distribute into tubes or bottles under an atmosphere of 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add 10.0mL urea solution. Adjust pH to 7.4.

Use: For the cultivation of *Howardella* spp.

Hoyer's Medium

Composition per liter:

(NH ₄) ₂ SO ₄	1.0g
KH ₂ PO ₄	0.9g
MgSO ₄ ·7H ₂ O	0.25g
K ₂ HPO ₄	0.1g
FeCl ₃ ·6H ₂ O	0.02g
Ethanol solution	200.0mL

Ethanol Solution:

Composition per 200.0mL:

Ethanol	30.0mL
---------------	--------

Preparation of Ethanol Solution: Add ethanol to distilled/deionized water and bring volume to 200.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except ethanol solution, to distilled/deionized water and bring volume to 800.0mL. Mix thoroughly. Distribute into tubes in 4.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 1.0mL of sterile ethanol solution to each tube. Mix thoroughly.

Use: For the cultivation of *Acetobacter* species.

Hoyle Medium

Composition per 1060.0mL:

Agar	15.0g
Lab Lemco powder	10.0g
Peptone.....	10.0g
NaCl.....	5.0g
Horse blood, laked	50.0mL
Tellurite solution	10.0mL

pH 7.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Horse Blood, Laked:

Composition per 50.0mL:

Horse blood, fresh.....	50.0mL
-------------------------	--------

Preparation of Horse Blood, Laked: Add blood to a sterile polypropylene bottle. Freeze overnight at –20°C. Thaw at 8°C. Refreeze at –20°C. Thaw again at 8°C.

Tellurite Solution:

Composition per 100.0mL:

K ₂ TeO ₃	3.5g
---------------------------------------	------

Preparation of Tellurite Solution: Add K₂TeO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Caution: Potassium tellurite is toxic.

Preparation of Medium: Add components, except laked horse blood and tellurite solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 50.0mL sterile laked horse blood and 10.0mL sterile tellurite solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and differentiation of *Corynebacterium diphtheriae* strains. This medium permits very rapid growth of all types of *Corynebacterium diphtheriae*, so that diagnosis is possible after 18 hours' incubation.

Hoyle HiVeg Medium Base

Composition per liter:

Agar	15.0g
Plant extract	10.0g
Plant peptone.....	10.0g
NaCl.....	5.0g
Horse blood, laked	50.0mL
Tellurite solution	10.0mL

pH 7.8 ± 0.2 at 25°C

Source: This medium, without tellurite solution and laked blood, is available as a premixed powder from HiMedia.

Horse Blood, Laked:

Composition per 50.0mL:

Horse blood, fresh.....	50.0mL
-------------------------	--------

Preparation of Horse Blood, Laked: Add blood to a sterile polypropylene bottle. Freeze overnight at –20°C. Thaw at 8°C. Refreeze at –20°C. Thaw again at 8°C.

Tellurite Solution:

Composition per 100.0mL:

K ₂ TeO ₃	3.5g
---------------------------------------	------

Preparation of Tellurite Solution: Add K₂TeO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Caution: Potassium tellurite is toxic.

Preparation of Medium: Add components, except laked horse blood and tellurite solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 50.0mL sterile laked horse blood and 10.0mL sterile tellurite solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and differentiation of *Corynebacterium diphtheriae* strains. This medium permits very rapid growth of all types of *Corynebacterium diphtheriae*, so that diagnosis is possible after 18 hours' incubation.

Hoyle Medium Base

Composition per liter:

Agar	15.0g
Beef extract	10.0g
Peptone	10.0g
NaCl.....	5.0g
Blood, laked.....	50.0mL
Tellurite solution	10.0mL

pH 7.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Tellurite Solution:

Composition per 100.0mL:

K ₂ TeO ₃	3.5g
---------------------------------------	------

Caution: Potassium tellurite is toxic.

Preparation of Tellurite Solution: Add K₂TeO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Horse Blood, Laked:

Composition per 50.0mL:

Horse blood, fresh.....	50.0mL
-------------------------	--------

Preparation of Horse Blood, Laked: Add blood to a sterile polypropylene bottle. Freeze overnight at –20°C. Thaw at 8°C. Refreeze at –20°C. Thaw again at 8°C.

Preparation of Medium: Add components, except laked blood, to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile laked blood. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and differentiation of *Corynebacterium diphtheriae*.

HP 6 Agar**Composition per liter:**

Agar	15.0g
Sodium glutamate	10.0g
MgSO ₄ ·7H ₂ O	1.0g
Yeast extract	1.0g
Cyanocobalamin	0.5mg
Glucose solution	100.0mL

pH 7.2 ± 0.2 at 25°C

Glucose Solution:**Composition per 100.0mL:**

D-Glucose	5.0g
-----------------	------

Preparation of Glucose Solution: Add D-glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Preparation of Medium: Add components, except glucose solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile glucose solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of *Cytophaga* species, *Herpetosiphon* species, *Saprospira* species, and *Flexithrix* species.

HP 6 Agar Base**Composition per liter:**

Plant hydrolysate	15.0g
Glucose	5.5g
Yeast extract	5.0g
NaCl	2.5g
Agar	1.0g
Sodium hydrosulphite	0.5g
Resazurin	1.0mg

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of *Cytophaga* species, *Herpetosiphon* species, *Saprospira* species, and *Flexithrix* species.

HP 6 Agar Base**Composition per liter:**

Agar	15.0g
Sodium glutamate	10.0g
MgSO ₄ ·7H ₂ O	1.0g
Yeast extract	1.0g
Cyanocobalamin	0.5mg
Glucose solution	100.0mL

Source: This medium is available from HiMedia.

Glucose Solution:**Composition per 100.0mL:**

Glucose	5.0g
---------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except glucose solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add glucose solution. Mix thoroughly. Pour into Petri dishes or aseptically distribute into sterile tubes.

Use: For the isolation and cultivation of *Cytophaga*, *Herpetosiphon*, *Saprospira*, and *Flexithrix* species.

HP 74 Broth**Composition per liter:**

Sodium glutamate	10.0g
MgSO ₄ ·7H ₂ O	2.0g
Yeast extract	2.0g
Glucose solution	100.0mL
Phosphate buffer solution	20.0mL

pH 6.5 ± 0.2 at 25°C

Glucose Solution:**Composition per 100.0mL:**

D-Glucose	10.0g
-----------------	-------

Preparation of Glucose Solution: Add D-glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Phosphate Buffer Solution:**Composition per 100.0mL:**

K ₂ HPO ₄	6.81g
---------------------------------------	-------

Preparation of Phosphate Buffer Solution: Add K₂HPO₄ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Adjust pH to 6.5. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Preparation of Medium: Add components, except glucose solution and phosphate buffer solution, to distilled/deionized water and bring volume to 880.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 100.0mL of sterile glucose solution and 20.0mL of sterile phosphate buffer solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the isolation and cultivation of *Cytophaga* species, *Herpetosiphon* species, *Saprospira* species, and *Flexithrix* species.

HP 101 Halophile Medium**Composition per liter:**

NaCl	100.0g
Agar	20.0g
Peptone	10.0g
MgSO ₄ ·7H ₂ O	4.3g
NaNO ₃	2.0g
Yeast extract	1.0g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Pseudomonas* species.

HP Medium**Composition per liter:**

Pancreatic digest of soybean meal	20.0g
Beef extract	10.0g

Yeast extract.....	6.0g
Ammonium citrate.....	5.0g
Tween™ 80.....	0.5g
MgSO ₄ ·7H ₂ O.....	0.2g
MnSO ₄ ·4H ₂ O.....	0.05g
FeSO ₄ ·7H ₂ O.....	0.04g
Glucose solution.....	10.0mL
Tetracycline solution.....	10.0mL

Glucose Solution:

Composition per 100.0mL:

Glucose.....	10.0g
--------------	-------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Tetracycline Solution:

Composition per 100.0mL:

Tetracycline.....	10.0g
-------------------	-------

Preparation of Tetracycline Solution: Add tetracycline to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except glucose solution and tetracycline solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile glucose solution and tetracycline solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and enumeration of *Leuconostoc* species.

HPC Agar
See: NWRI Agar

HPC Agar
(Heterotrophic Plate Count Agar)
(m-HPC Agar)

Composition per liter:

Gelatin.....	25.0g
Pancreatic digest of gelatin.....	20.0g
Agar.....	15.0g
Glycerol.....	10.0mL

pH 7.1 ± 0.2 at 25°C

Source: This medium is available from BD Diagnostic Systems.

Preparation of Medium: Add components, except glycerol, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Add glycerol. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Pour into sterile Petri dishes.

Use: For the the cultivation and enumeration of microorganisms from potable water sources, swimming pools, and other water specimens by the membrane filter method and heterotrophic plate count technique.

HQGö1 Medium
(DSMZ Medium 298a)

Composition per liter:

NaCl.....	1.0g
KCl.....	0.5g
MgCl ₂ ·6H ₂ O.....	0.4g
NH ₄ Cl.....	0.25g

KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O.....	0.15g
Resazurin.....	1.0mg
NaHCO ₃ solution.....	10.0mL
Butanediol solution.....	10.0mL
Na ₂ S·9H ₂ O solution.....	10.0mL
Vitamin solution.....	10.0mL
Gentisic acid solution.....	1.0mL
Trace elements solution SL-10.....	1.0mL

pH 7.2 ± 0.2 at 25°C

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	0.36g
--	-------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

NaHCO₃ Solution:

Composition per 10.0mL:

NaHCO ₃	2.5g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl.....	10.0mg
Thiamine-HCl·2H ₂ O.....	5.0mg
Riboflavin.....	5.0mg
Nicotinic acid.....	5.0mg
D-Ca-pantothenate.....	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Lipoic acid.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Butanediol Solution:

Composition per 10.0mL:

2,3 butanediol.....	0.9g
---------------------	------

Preparation of Butanediol Solution: Add butanediol to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Gentisic Acid Solution:

Composition per 100.0mL:

Gentisic acid.....	3.08g
--------------------	-------

Preparation of Gentisic Acid Solution: Add gentisic acid to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Adjust pH to 7.0. Sparge with 100% N₂. Filter sterilize.

Trace Elements Solution SL-10:

Composition per liter:

FeCl ₂ ·4H ₂ O.....	1.5g
CoCl ₂ ·6H ₂ O.....	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	36.0mg

NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas atmosphere. Add components, except NaHCO₃ solution, butanediol solution, Na₂S·9H₂O solution, vitamin solution, gentisic acid solution, and trace elements solution SL-10, to distilled/deionized water and bring volume to 958.0mL. Mix thoroughly. Adjust pH to 7.2. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 10.0mL NaHCO₃ solution, 10.0mL butanediol solution, 10.0mL Na₂S·9H₂O solution, 10.0mL vitamin solution, 1.0mL gentisic acid solution, and 1.0mL trace elements solution SL-10. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or bottles. After inoculation, flush and repressurize the gas head space of culture bottles with sterile 80% N₂ + 20% CO₂ to 1 bar overpressure.

Use: For the cultivation of *Syntrophus gentianae*.

HR Antifungal Assay Medium Buffered with MOPS

Composition per liter:

MOPS (3- <i>N</i> -morpholino- propanesulfonic acid) buffer	34.53g
Glucose	10.0g
(NH ₄) ₂ SO ₄	2.5g
KH ₂ PO ₄	1.0g
NaHCO ₃	1.0g
Glutamine	0.58g
MgSO ₄ ·7H ₂ O	0.5g
CaCl ₂ ·2H ₂ O	0.1g
NaCl	0.1g
L-Lysine	0.07g
L-Isoleucine	0.05g
L-Leucine	0.05g
L-Threonine	0.05g
L-Valine	0.05g
L-Arginine	0.04g
L-Histidine	0.02g
L-Methionine	0.01g
L-Tryptophan	8.2mg
DL-Methionine	2.0mg
DL-Tryptophan	2.0mg
Inositol	2.0mg
L-Histidine·HCl	1.0mg
H ₃ BO ₃	0.5mg
Calcium pantothenate	0.4mg
MnSO ₄ ·H ₂ O	0.4mg
Niacin	0.4mg
Pyridoxine	0.4mg
Thiamine·HCl	0.4mg
ZnSO ₄ ·7H ₂ O	0.4mg
<i>p</i> -Aminobenzoic acid	0.2mg
FeCl ₃	0.2mg
Riboflavin	0.2mg
Na ₂ MoO ₃	0.2mg

KI	0.1mg
CuSO ₄ ·5H ₂ O	0.04mg
Biotin	2.0μg
Folic acid	2.0μg

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components, except NaHCO₃ and MOPS buffer, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Add NaHCO₃ and MOPS buffer. Mix thoroughly. Adjust pH to 7.0. Bring volume to 1.0L with distilled/deionized water. Filter sterilize.

Use: For testing the effectiveness of antifungal agents against clinical fungal isolates using the broth dilution susceptibility testing method.

HS HiVeg Medium

Plant hydrolysate	15.0g
Glucose	5.5g
Yeast extract	5.0g
Agar	1.0g
NaCl	2.5g
Na ₂ S ₂ O ₄	0.5g
Resazurin	0.001g

pH 7.1 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For cultivation of aerobic as well as anaerobic bacteria and sterility testing.

HS Medium

Casein enzymic hydrolysate	15.0g
Glucose	5.5g
Yeast extract	5.0g
Agar	1.0g
NaCl	2.5g
Na ₂ S ₂ O ₄	0.5g
Resazurin	0.001g

pH 7.1 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For cultivation of aerobic as well as anaerobic bacteria and sterility testing.

HTM

See: *Haemophilus Test Medium*

Hugh Leifson Glucose Broth

Composition per liter:

NaCl	30.0g
Glucose	10.0g
Agar	3.0g
Peptone	2.0g

Yeast extract.....	0.5g
Bromcresol Purple	0.015g
pH 7.4 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Adjust pH to 7.4. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and differentiation of bacteria based on their ability to ferment glucose. Bacteria that ferment glucose turn the medium yellow.

Hugh Leifson Glucose HiVeg Medium

Composition per liter:

NaCl.....	30.0g
Glucose	10.0g
Agar	3.0g
Plant peptone.....	2.0g
Yeast extract.....	0.5g
Bromcresol Purple	0.015g
pH 7.4 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Adjust pH to 7.4. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and differentiation of bacteria based on their ability to ferment glucose. Bacteria that ferment glucose turn the medium yellow.

Hugh Leifson HiVeg Medium

Composition per liter:

Glucose	10.0g
NaCl.....	5.0g
Agar	2.0g
Plant peptone.....	2.0g
K ₂ HPO ₄	0.3g
Bromthymol Blue	0.05g
pH 6.8 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Adjust pH to 7.4. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and differentiation of bacteria based on their ability to ferment glucose. Bacteria that ferment glucose turn the medium yellow.

Hugh Leifson Oxidation-Fermentation Medium

See: Oxidation-Fermentation Medium, Hugh-Leifson

Human Blood Tween™ Bilayer Medium

See: HBT Bilayer Medium

Hungate's Habitat-Simulating Medium

Composition per 1140.2mL:

Rumen fluid	333.0mL
Mineral solution A	167.0mL

Mineral solution B	167.0mL
NaHCO ₃ solution.....	53.0mL
L-Cysteine·HCl solution	10.6mL
Substrate solution.....	10.6mL
Resazurin solution	1.0mL

Mineral Solution A:

Composition per liter:

NaCl.....	6.0g
KH ₂ PO ₄	3.0g
(NH ₄) ₂ SO ₄	3.0g
CaCl ₂	0.6g
MgSO ₄	0.6g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Mineral Solution B:

K ₂ HPO ₄	3.0
---------------------------------------	-----

Preparation of Solution B: Add K₂HPO₄ to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Resazurin Solution:

Composition per 100.0mL:

Resazurin	0.1g
-----------------	------

Preparation of Resazurin Solution: Add resazurin to distilled/deionized water and bring volume to 100.0L. Mix thoroughly.

L-Cysteine·HCl Solution:

Composition per 100.0mL:

L-Cysteine·HCl	3.0g
----------------------	------

Preparation of L-Cysteine·HCl Solution: Add L-cysteine·HCl to O₂-free distilled/deionized water and bring volume to 100.0L. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 2 min. Cool to 25°C under 100% N₂. Seal tube with a stopper that is wired in place. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

NaHCO₃ Solution:

Composition per 10.0mL:

NaHCO ₃	1.0g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to O₂-free distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize. Gas with 100% CO₂ for 15 min.

Substrate Solution:

Composition per 100.0mL:

Sugar.....	10.0g
------------	-------

Preparation of Substrate Solution: Add sugar to O₂-free distilled/deionized water. Mix thoroughly. Gas with 100% N₂ for 15 min. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Preparation of Medium: Add 167.0mL of solution A, 167.0mL of solution B, and 1.0mL of resazurin solution to distilled/deionized water and bring volume to 733.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling until resazurin turns colorless, indicating reduction. Bring volume back to 733.0mL (some evaporation will have occurred) with O₂-free distilled/deionized water. Cool to 45°–50°C under O₂-free 100% CO₂. Anaerobically add rumen fluid. Anaerobically distribute into tubes in 10.0mL volumes. Cap with butyl rubber stoppers. Place tubes in a press. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Immediately prior to inoculation, aseptically and anaerobically add 0.1mL of sterile L-cysteine·HCl solution, 0.5mL of sterile NaHCO₃ solution, and 0.1mL of substrate solution per 10.0mL of medium in each tube.

Use: For the cultivation of *Bacteroides* species from rumens.

Hutner's Medium for *Euglena*

Composition per liter:

Agar, noble.....	12.0g
Pancreatic digest of peptone.....	0.6g
Yeast extract.....	0.4g
KH ₂ PO ₄	0.02g
Potassium citrate·H ₂ O.....	0.04g
MgSO ₄ ·3H ₂ O.....	0.02g
Thiamine.....	0.4mg
Vitamin B ₁₂	0.5μg

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Astasia longa*, *Euglena gracilis*, *Polytoma* species, *Polytomella parva*, and *Polytomella caeca*.

Hutner's Medium for *Euglena*

Composition per liter:

Agar, noble.....	12.0g
Pancreatic digest of peptone.....	0.6g
Liver concentrate.....	0.2g
Potassium citrate·H ₂ O.....	0.04g
KH ₂ PO ₄	0.02g
MgSO ₄ ·3H ₂ O.....	0.02g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Astasia longa*, *Euglena gracilis*, *Polytoma* species, *Polytomella parva*, and *Polytomella caeca*.

HY Agar for *Flavobacterium*

Composition per liter:

Agar.....	8.0g
Glutamic acid.....	5.0g
K ₂ HPO ₄	0.1g
MgSO ₄ ·7H ₂ O.....	0.1g
pH 7.3 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Glutamic acid may be replaced by 1.0g of folic acid if desired. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Flavobacterium* species.

HY Medium for *Flavobacterium*

Composition per liter:

Glutamic acid.....	5.0g
K ₂ HPO ₄	0.1g
MgSO ₄ ·7H ₂ O.....	0.1g
pH 7.3 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Glutamic acid may be replaced by 1.0g of folic acid if desired. Mix thoroughly. Gently heat and bring to

boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Flavobacterium* species.

HYA Agar

Composition per liter:

Agar.....	15.0g
Proteose peptone No. 3.....	10.0g
Beef extract.....	1.0g
Lactose solution.....	10.0mL
Galactose solution.....	10.0mL
Glucose solution.....	10.0mL

pH 6.8 ± 0.2 at 25°C

Lactose Solution:

Composition per 10.0mL:

Lactose.....	5.0g
--------------	------

Preparation of Lactose Solution: Add lactose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Galactose Solution:

Composition per 10.0mL:

Galactose.....	2.5g
----------------	------

Preparation of Galactose Solution: Add galactose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Glucose Solution:

Composition per 10.0mL:

Glucose.....	2.5g
--------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components—except lactose solution, galactose solution, and glucose solution—to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 6.8. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile lactose solution, galactose solution, and glucose solution. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the cultivation of acidogenic microorganisms, especially *Lactobacillus bulgaricus* and *Streptococcus thermophilus*, from foods.

Hydrogen-Oxidizing Bacteria Medium

Composition per 1020.0mL:

Solution I.....	1.0L
Solution II.....	10.0mL
Solution III.....	10.0mL

Solution I:

Composition per liter:

Na ₂ HPO ₄ ·12H ₂ O.....	9.0g
KH ₂ PO ₄	1.5g
NH ₄ Cl.....	1.0g
MgSO ₄ ·7H ₂ O.....	0.2g
Trace elements solution.....	1.0mL

Preparation of Solution I: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until dissolved. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Trace Elements Solution:**Composition per liter:**

H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
MnCl ₂ ·4H ₂ O	0.03g
NaMoO ₄ ·2H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Solution II:**Composition per 100.0mL:**

CaCl ₂ ·2H ₂ O	0.1g
Ferric ammonium citrate	0.05g

Preparation of Solution II: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution III:**Composition per 100.0mL:**

NaHCO ₃	5.0g
--------------------------	------

Preparation of Solution III: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Aseptically combine 1.0L of cooled, sterile solution I, 10.0mL of cooled, sterile solution II, and 10.0mL of sterile solution III. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of hydrogen-oxidizing bacteria.

Hydrogen-oxidizing Medium (DSMZ Medium 1003)

Composition per liter:

MgSO ₄ ·7H ₂ O	7.0g
Na ₂ S ₂ O ₃	2.0g
MES	1.95g
MgCl ₂ ·6H ₂ O	0.78g
KCl	0.48g
CaCl ₂ ·2H ₂ O	0.4g
Trace elements solution	10.0mL
Solution A	2.0mL
Solution B	1.5mL

pH 6.0 ± 0.2 at 25°C

Solution A:**Composition per liter:**

NH ₄ Cl	100.0g
MgCl ₂ ·6H ₂ O	100.0g
CaCl ₂ ·2H ₂ O	40.0g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 4.0 with HCl.

Solution B:**Composition per liter:**

K ₂ HPO ₄ ·3H ₂ O	200.0g
--	--------

Preparation of Solution B: Add K₂HPO₄·3H₂O to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Trace Elements Solution:**Composition per liter:**

Na-EDTA	0.5g
CoCl ₂	0.15g
MnCl ₂ ·4H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g
ZnCl ₂	0.1g
AlCl ₃ ·6H ₂ O	0.04g
Na ₂ WO ₄ ·2H ₂ O	0.03g
CuCl ₂ ·2H ₂ O	0.02g
NiSO ₄ ·6H ₂ O	0.02g
H ₃ BO ₃	0.01g
Na ₂ SeO ₄	0.01g
NaMoO ₄ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust the pH to 3.0.

Preparation of Medium: Sparge 1.0L of distilled/deionized water with 100% CO₂ to produce anaerobic water. Add components to 1.0L of the anaerobic water. Mix thoroughly. The pH should be 6.0. Sparge with 100% CO₂ for 20 min. Dispense 5.0mL aliquots into sealable culture tubes. Place stopper on culture tube and crimp tube cap onto stopper. Autoclave for 20 min at 15 psi pressure–121°C. Add 1.0mL of O₂ to each tube before inoculation. After inoculation pressurize the tubes with H₂ (138 KP).

Use: For the cultivation of *Sulfurihydrogenibium azorense*.

Hydrogenivirga okinawensis Medium (DSMZ Medium 1131)

Composition per liter:

Agar	20.0g
Mannitol	10.0g
Yeast extract	0.3g
K ₂ HPO ₄	0.2g
MgSO ₄ ·7H ₂ O	0.2g
NaCl	0.05g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Distribute into tubes or flasks. Gently heat while stirring and bring to boiling. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Pour into Petri dishes or leave in tubes.

Use: For the cultivation of *Hydrogenivirga okinawensis*.

Hydrogenobacter acidophilus Medium (DSMZ Medium 743)

Composition per liter:

Sulfur	5.0g
(NH ₄) ₂ SO ₄	1.0g
K ₂ HPO ₄	1.0g
NaCl	1.0g
MgSO ₄ ·7H ₂ O	0.3g
FeSO ₄ ·7H ₂ O	1.0mg
CaCl ₂	1.0mg
NiSO ₄ ·6H ₂ O	0.06mg
Trace elements solution	0.5mL

pH 3.0 ± 0.2 at 25°C

Trace Elements Solution:**Composition per liter:**

ZnSO ₄ ·7H ₂ O	28.0mg
MoO ₃	4.0mg
H ₃ BO ₃	4.0mg
MnSO ₄ ·5H ₂ O	4.0mg
CoCl ₂ ·6H ₂ O	4.0mg
CuSO ₄ ·5H ₂ O	2.0mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂.

Preparation of Medium: Autoclave sulfur for 15 min at 9 psi pressure–113°C. Add components, except sulfur, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Add 5.0g sterile sulfur. Mix thoroughly by swirling. Adjust pH to 3.0 with HCl. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Hydrogenobaculum acidophilum*=*Hydrogenobacter acidophilus*.

Hydrogenobacter halophilus Medium (DSMZ Medium 744)

Composition per liter:

NaCl	29.3g
K ₂ HPO ₄	2.5g
(NH ₄) ₂ SO ₄	2.0g
KH ₂ PO ₄	0.5g
MgSO ₄ ·7H ₂ O	0.2g
CaCl ₂	10.0mg
FeSO ₄ ·7H ₂ O	10.0mg
NiSO ₄ ·7H ₂ O	0.6mg
Trace elements solution	0.5mL

pH 6.9 ± 0.2 at 25°C

Trace Elements Solution:**Composition per liter:**

ZnSO ₄ ·7H ₂ O	28.0mg
MoO ₃	4.0mg
H ₃ BO ₃	4.0mg
MnSO ₄ ·5H ₂ O	4.0mg
CoCl ₂ ·6H ₂ O	4.0mg
CuSO ₄ ·5H ₂ O	2.0mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Adjust pH to 6.9. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Hydrogenovibrio marinus*.

Hydrogenobacter halophilus Medium

Composition per liter:

NaCl	29.3g
K ₂ HPO ₄	2.5g
(NH ₄) ₂ SO ₄	2.0g
KH ₂ PO ₄	0.5g
CaCl ₂ ·2H ₂ O	0.25g
MgSO ₄ ·7H ₂ O	0.2g
FeSO ₄ ·7H ₂ O	10.0mg

NiSO ₄ ·7H ₂ O	0.6mg
Trace elements solution	2.0mL

Trace Elements Solution:**Composition per liter:**

ZnSO ₄ ·7H ₂ O	7.0mg
MoO ₃	1.0mg
H ₃ BO ₃	1.0mg
MnSO ₄ ·H ₂ O	1.0mg
CoCl ₂ ·6H ₂ O	1.0mg
CuSO ₄ ·5H ₂ O	0.5mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Hydrogenovibrio marinus*.

Hydrogenobacter thermophilus Medium

Composition per liter:

Na ₂ HPO ₄	4.5g
KH ₂ PO ₄	1.5g
NH ₄ NO ₃	1.0g
NaCl	1.0g
MgSO ₄ ·7H ₂ O	0.2g
CaCl ₂	10.0mg
FeSO ₄ ·7H ₂ O	10.0mg
NiSO ₄ ·7H ₂ O	0.06mg
Trace elements solution	2.0mL

Trace Elements Solution:**Composition per liter:**

ZnSO ₄ ·7H ₂ O	7.0mg
MoO ₃	1.0mg
H ₃ BO ₃	1.0mg
MnSO ₄ ·H ₂ O	1.0mg
CoCl ₂ ·6H ₂ O	1.0mg
CuSO ₄ ·5H ₂ O	0.5mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Calderobacterium hydrogenophilum* and *Hydrogenobacter thermophilus*.

Hydrogenothermus hirschii Medium (DSMZ Medium 783)

Composition per liter:

MgSO ₄ ·7H ₂ O	7.0g
MgCl ₂ ·6H ₂ O	5.5g
NaHCO ₃	2.0g
KCl	0.65g
CaCl ₂ ·2H ₂ O	0.5g
Sulfur, powdered	0.5g
NH ₄ Cl	0.15g
K ₂ HPO ₄	0.15g
NaBr	0.1g

Trace elements solution	10.0mL
CaCO ₃ solution	5.0mL
pH 7.0 ± 0.2 at 25°C	

CaCO₃ Solution:**Composition per 10.0mL:**

CaCO ₃	1.0g
-------------------------	------

Preparation of CaCO₃ Solution: Add CaCO₃ to 10.0mL of distilled/deionized water. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Trace Elements Solution:**Composition per liter:**

MgSO ₄ ·7H ₂ O	3.0g
Nitritotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·2H ₂ O	0.5g
CoSO ₄ ·7H ₂ O	0.18g
ZnSO ₄ ·7H ₂ O	0.18g
CaCl ₂ ·2H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g
NiCl ₂ ·6H ₂ O	0.025g
KAl(SO ₄) ₂ ·12H ₂ O	0.02g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·4H ₂ O	0.01g
CuSO ₄ ·5H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O	0.3mg

Preparation of Trace Elements Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Preparation of Medium: Prepare the medium aerobically. Add sulfur to 900.0mL distilled/deionized water. Dissolve sulfur using Ultra-Turrax dispersing instrument. Add remaining components. Bring volume to 1.0L with distilled/deionized water. Adjust pH to 7.0 using H₂SO₄. Fill 20.0mL medium into 100mL serum bottles. Seal with a rubber stopper. Change atmosphere to 80% H₂ + 20% CO₂ with an overpressure of two atmospheres. Autoclave for 20 min at 15 psi pressure–121°C. Cool to room temperature. Inject 20.0mL filter sterilized air and 0.1mL sterile CaCO₃ solution. Shake to mix.

Use: For the cultivation of *Hydrogenophilus hirschii* (*Hydrogenothermophilus hirschii*).

Hydroxybenzoate Agar**Composition per 1001.0mL:**

Solution A	490.0mL
Solution D	500.0mL
Solution B	10.0mL
Solution C	1.0mL

pH 7.0 ± 0.2 at 25°C

Solution A:**Composition per 490.0mL:**

4-Hydroxybenzoic acid	3.0g
(NH ₄) ₂ SO ₄	3.0g
NaCl	2.5g
K ₂ HPO ₄	1.6g
Yeast extract	0.5g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 490.0mL. Mix thoroughly. Gently heat and

bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Solution B:**Composition per 10.0mL:**

MgSO ₄ ·7H ₂ O	0.27g
--	-------

Preparation of Solution B: Add MgSO₄·7H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Solution C:**Composition per 1.0mL:**

Fe(NH ₄) ₂ (SO ₄) ₂ ·6H ₂ O	0.05g
--	-------

Preparation of Solution C: Add component to distilled/deionized water and bring volume to 1.0mL. Mix thoroughly. Filter sterilize. Prepare solution immediately before adding to solutions A and B.

Solution D:**Composition per 500.0mL:**

Agar	14.0g
------------	-------

Preparation of Solution D: Add agar to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Preparation of Medium: Aseptically combine cooled sterile solution A, cooled sterile solution B, and cooled sterile solution D. Immediately add 1.0mL of freshly prepared sterile solution C. Adjust pH to 7.0 with 6N NaOH. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Comamonas testosteroni*.

**Hydroxybenzoate Agar
(*p*-Hydroxybenzoate Agar)****Composition per liter:**

Agar	20.0g
(NH ₄) ₂ HPO ₄	3.0g
<i>p</i> -hydroxybenzoic acid	3.0g
K ₂ HPO ₄	1.2g
NaCl	0.5g
MgSO ₄ ·7H ₂ O	0.2g
FeSO ₄ ·7H ₂ O	0.1g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *p*-hydroxybenzoate-utilizing bacteria.

Hydroxybenzoate Broth**Composition per 1001.0mL:**

Solution A	990.0mL
Solution B	10.0mL
Solution C	1.0mL

pH 7.0 ± 0.2 at 25°C

Solution A:**Composition per 990.0mL:**

4-Hydroxybenzoic acid	3.0g
(NH ₄) ₂ SO ₄	3.0g
NaCl	2.5g

K ₂ HPO ₄	1.6g
Yeast extract.....	0.5g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Solution B:

Composition per 10.0mL:

MgSO ₄ ·7H ₂ O.....	0.27g
---	-------

Preparation of Solution B: Add MgSO₄·7H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Solution C:

Composition per 1.0mL:

Fe(NH ₄) ₂ (SO ₄) ₂ ·6H ₂ O.....	0.05g
---	-------

Preparation of Solution C: Add component to distilled/deionized water and bring volume to 1.0mL. Mix thoroughly. Filter sterilize. Prepare solution immediately before adding to solutions A and B.

Preparation of Medium: Aseptically combine cooled sterile solution A and cooled sterile solution B. Immediately add 1.0mL of freshly prepared sterile solution C. Adjust pH to 7.0 with 6*N* NaOH. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Comamonas testosteroni*.

Hydroxybenzoate Medium

Composition per liter:

Noble agar.....	20.0g
(NH ₄) ₂ HPO ₄	3.0g
K ₂ HPO ₄	1.2g
NaCl.....	0.5g
MgSO ₄ ·7H ₂ O.....	0.2g
FeSO ₄ ·7H ₂ O.....	0.1g
<i>p</i> -Hydroxybenzoic acid solution.....	50.0mL

pH 7.0 ± 0.2 at 25°C

p-Hydroxybenzoic Acid Solution:

Composition per 50.0mL:

<i>p</i> -Hydroxybenzoic acid.....	3.0g
------------------------------------	------

Preparation of *p*-Hydroxybenzoic Acid Solution: Add *p*-hydroxybenzoic acid to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except *p*-hydroxybenzoic acid solution, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.0 with 5*N* NaOH. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile *p*-hydroxybenzoic acid solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Pseudomonas putida*.

Hydroxybenzoate Medium

Composition per 1002.0mL:

Solution A.....	920.0mL
Solution B.....	50.0mL
Solution E (Vitamin solution).....	10.0mL
Solution F.....	10.0mL
Solution G.....	10.0mL

Solution C (Trace elements solution SL-10).....	1.0mL
Solution D.....	1.0mL

pH 7.2–7.5 at 25°C

Solution A:

Composition per 920.0mL:

NaCl.....	1.0g
KCl.....	0.5g
MgCl ₂ ·6H ₂ O.....	0.4g
NH ₄ Cl.....	0.25g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O.....	0.15g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 920.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B:

Composition per 50.0mL:

NaHCO ₃	2.5g
--------------------------	------

Preparation of Solution B: Add NaHCO₃ to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C (Trace Elements Solution SL-10):

Composition per liter:

FeCl ₂ ·4H ₂ O.....	1.5g
CoCl ₂ ·6H ₂ O.....	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	36.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O.....	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Solution C (Trace Elements Solution SL-10):

Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Gas under 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution D:

Composition per 10.0mL:

NaOH.....	5.0mg
Na ₂ WO ₄ ·2H ₂ O.....	40.0μg
Na ₂ SeO ₃ ·5H ₂ O.....	30.0μg

Preparation of Solution D: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution E (Vitamin Solution):

Composition per liter:

Pyridoxine-HCl.....	10.0mg
Calcium DL-pantothenate.....	5.0mg
Lipoic acid.....	5.0mg
Nicotinic acid.....	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Riboflavin.....	5.0mg
Thiamine-HCl.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Solution E (Vitamin Solution): Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution F:

Composition per 10.0mL:

Sodium dihydroxybenzoate 0.4g

Preparation of Solution F: Add sodium dihydroxybenzoate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize. Sparge with 80% N₂ + 20% CO₂.

Solution G:

Composition per 10.0mL:

Na₂S·9H₂O 0.36g

Preparation of Solution G: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂. Aseptically and anaerobically combine 920.0mL of sterile solution A, 50.0mL of sterile solution B, 1.0mL of sterile solution C, 1.0mL of sterile solution D, 10.0mL of sterile solution E, 10.0mL of sterile solution F, and 10.0mL of sterile solution G. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Clostridium* species.

Hydroxybenzoic Acid Medium

Composition per liter:

Agar 15.0g
 K₂HPO₄·3H₂O 4.25g
 NH₄Cl 2.0g
 4-Hydroxybenzoic acid 1.0g
 NaH₂PO₄·H₂O 1.0g
 MgSO₄·7H₂O 0.2g
 Nitrilotriacetic acid 0.1g
 FeSO₄·7H₂O 0.012g
 MnSO₄·H₂O 3.0mg
 ZnSO₄·7H₂O 3.0mg
 CoSO₄ 1.0mg

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add 4-hydroxybenzoic acid and nitrilotriacetic acid to approximately 600.0mL of distilled/deionized water. Adjust pH to 8.0 with concentrated NaOH. Add remaining components. Mix thoroughly. Readjust pH to 7.2. Bring volume to 1.0L with distilled/deionized water. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Bacillus* species.

Hydroxybutyrate Medium (3HB Medium) (LMG Medium 186)

Composition per liter:

Agar 20.0g
 DL-3-hydroxybutyrate 3.0g
 NH₄Cl 1.0g
 MgSO₄·7H₂O 0.5g
 Ferric ammonium citrate 50.0mg
 Yeast extract 50.0mg
 Buffer solution 333.3mL

pH 6.8 ± 0.2 at 25°C

Buffer Solution:

KH₂PO₄ 0.45g
 Na₂HPO₄·12 H₂O 2.39g

Preparation of Buffer Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Paucimonas lemoignei*.

Hyperthermus butylicus Medium

Composition per 1010.0mL:

NaCl 17.0g
 Pancreatic digest of casein 6.0g
 Sulfur, powdered 6.0g
 MgSO₄·7H₂O 3.5g
 MgCl₂·6H₂O 2.75g
 NiCl₂·6H₂O 2.0g
 Yeast extract 2.0g
 CaCl₂·2H₂O 0.75g
 KH₂PO₄ 0.5g
 NH₄Cl 0.5g
 KCl 0.325g
 NaBr 0.05g
 H₃BO₃ 0.015g
 (NH₄)₂SO₄ 10.0mg
 SrCl₂·6H₂O 7.5mg
 Citric acid 5.0mg
 KI 2.5mg
 Resazurin 1.0mg
 Trace elements solution 10.0mL
 Na₂S·9H₂O solution 10.0mL

pH 6.0–6.5 at 25°C

Trace Elements Solution:

Composition per liter:

MgSO₄·7 H₂O 3.0g
 Nitrilotriacetic acid 1.5 g
 CaCl₂·2 H₂O 1.0g
 NaCl 1.0g
 MnSO₄·2 H₂O 0.5g
 CoSO₄·7 H₂O 0.18g
 ZnSO₄·7 H₂O 0.18g
 FeSO₄·7 H₂O 0.1g
 NiCl₂·6 H₂O 0.025g
 KAl(SO₄)₂·12 H₂O 0.02g
 CuSO₄·5 H₂O 0.01g
 H₃BO₃ 0.01g
 Na₂MoO₄·2 H₂O 0.01g
 Na₂SeO₃·5 H₂O 0.3mg

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Adjust pH to 7.0 with KOH. Add distilled/deionized water to 1.0L.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na₂S·9H₂O 0.5g

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly.

Gas under 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.0–6.5 with 6N H₂SO₄. Sparge with 100% N₂. Sterilize by bringing to 90°C for 60 min on 3 consecutive days. Immediately prior to inoculation, add 10.0mL of sterile Na₂S·9H₂O solution. Mix thoroughly.

Use: For the cultivation and maintenance of *Hyperthermus butylicus*.

Hyphomicrobium Enrichment Medium

Composition per 100.0mL:

KNO ₃	0.04g
Na ₂ HPO ₄ ·7H ₂ O	0.02g
MgSO ₄ ·7H ₂ O	0.48mg
FeCl ₃ ·7H ₂ O	0.02mg
MnCl ₂ ·4H ₂ O	0.01mg

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and enrichment of *Hyphomicrobium* species.

Hyphomicrobium Medium

Composition per liter:

Agar	15.0g
Na ₂ HPO ₄	2.13g
KH ₂ PO ₄	1.36g
MgSO ₄ ·7H ₂ O	0.2g
CaCl ₂ ·2H ₂ O	9.95mg
FeSO ₄ ·7H ₂ O	5.0mg
MnSO ₄ ·4H ₂ O	2.5mg
Na ₂ MoO ₄ ·2H ₂ O	2.5mg
Urea solution	30.0mL
Methanol	4.0mL

Urea Solution:

Composition per 100.0mL:

Urea	20.0g
------------	-------

Preparation of Urea Solution: Add urea to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Filter sterilize methanol. Add components, except urea solution and methanol, to distilled/deionized water and bring volume to 966.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile urea solution and sterile methanol. Mix thoroughly. Aseptically distribute into sterile tubes or bottles.

Use: For the cultivation of *Hyphomicrobium* species.

Hyphomicrobium Medium

Composition per liter:

Noble agar	18.0g
Na ₂ HPO ₄	2.15g
KH ₂ PO ₄	1.36g
(NH ₄) ₂ SO ₄	0.5g
MgSO ₄ ·7H ₂ O	0.2g
Trace elements solution	5.0mL
Methylamine-HCl solution	20.0mL

pH 7.1 ± 0.1 at 25°C

Trace Elements Solution:

Composition per 100.0mL:

CuCl ₂	0.15g
FeSO ₄ ·7H ₂ O	0.1g
Na ₂ MoO ₄ ·2H ₂ O	0.05g
MnSO ₄ ·H ₂ O	0.035g

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Methylamine-HCl Solution:

Composition per 20.0mL:

Methylamine-HCl	3.38g
-----------------------	-------

Preparation of Methylamine-HCl Solution: Add methylamine-HCl to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except methylamine-HCl solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile methylamine-HCl solution. Mix thoroughly. Adjust pH to 7.1, if necessary. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Hyphomicrobium aestuarii*, *Hyphomicrobium facilis*, *Hyphomicrobium hollandicum*, *Hyphomicrobium vulgare*, and *Hyphomicrobium zavarzinii*.

Hyphomicrobium Medium 337a

Composition per liter:

KH ₂ PO ₄	1.3g
Na ₂ HPO ₄	1.13g
(NH ₄) ₂ SO ₄	0.5g
MgSO ₄ ·7H ₂ O	0.2g
CaCl ₂ ·2H ₂ O	3.09mg
FeSO ₄ ·7H ₂ O	2.0mg
Na ₂ MoO ₄ ·2H ₂ O	1.0mg
MnSO ₄ ·4H ₂ O	0.88mg

pH 7.2–7.5 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the enrichment and cultivation of *Hyphomicrobium* species.

Hyphomicrobium methylovorum Medium

Composition per liter:

Agar	15.0g
(NH ₄) ₂ HPO ₄	3.0g
NaCl	1.0g
MgSO ₄ ·7H ₂ O	0.2g
FeSO ₄ ·7H ₂ O	10.0mg
MnSO ₄ ·2H ₂ O	5.0mg
Tap water	1.0L
Methanol	10.0mL
Vitamin mixture	5.0mL

Vitamin Mixture:

Composition per liter:

Inositol	200.0mg
Choline	100.0mg
Calcium DL-pantothenate	40.0mg

Niacin.....	40.0mg
Pyridoxine-HCl.....	40.0mg
Riboflavin.....	40.0mg
<i>p</i> -Aminobenzoic acid.....	20.0mg
Thiamine-HCl.....	20.0mg
Biotin.....	0.2mg
Folic acid.....	0.2mg
Cyanocobalamin.....	2.0µg

Preparation of Vitamin Mixture: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Methanol: Filter sterilize 10.0mL of methanol.

Preparation of Medium: Add components, except methanol and vitamin mixture, to distilled/deionized water and bring volume to 985.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL of sterile methanol and 5.0mL of sterile vitamin mixture. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Hyphomicrobium methylovorum*.

Hyphomicrobium Strain X Agar

Composition per liter:

Agar.....	15.0g
Methylamine-HCl.....	3.4g
K ₂ HPO ₄	1.55g
(NH ₄) ₂ SO ₄	1.0g
NaH ₂ PO ₄ ·H ₂ O.....	0.5g
MgSO ₄ ·7H ₂ O.....	0.2g
Trace elements solution.....	0.2mL

pH 7.2 ± 0.2 at 25°C

Trace Elements Solution:

Composition per liter:

Disodium EDTA.....	50.0g
ZnSO ₄ ·7H ₂ O.....	22.0g
CaCl ₂ ·2H ₂ O.....	5.54g
MnCl ₂ ·4H ₂ O.....	5.06g
FeSO ₄ ·7H ₂ O.....	5.0g
CoCl ₂ ·6H ₂ O.....	1.61g
CuSO ₄ ·5H ₂ O.....	1.57g
(NH ₄) ₆ Mo ₇ O ₂₄ ·4H ₂ O.....	1.1g

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Adjust pH to 7.0 with KOH.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Hyphomicrobium* species.

Hyphomicrobium Strain X Broth

Composition per liter:

K ₂ HPO ₄	1.55g
(NH ₄) ₂ SO ₄	1.0g
Methylamine-HCl.....	0.7g
NaH ₂ PO ₄ ·H ₂ O.....	0.5g
MgSO ₄ ·7H ₂ O.....	0.2g
Trace elements solution.....	0.2mL

pH 7.2 ± 0.2 at 25°C

Trace Elements Solution:

Composition per liter:

Disodium EDTA.....	50.0g
ZnSO ₄ ·7H ₂ O.....	22.0g
CaCl ₂ ·2H ₂ O.....	5.54g
MnCl ₂ ·4H ₂ O.....	5.06g
FeSO ₄ ·7H ₂ O.....	5.0g
CoCl ₂ ·6H ₂ O.....	1.61g
CuSO ₄ ·5H ₂ O.....	1.57g
(NH ₄) ₆ Mo ₇ O ₂₄ ·4H ₂ O.....	1.1g

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Adjust pH to 7.0 with KOH.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Hyphomicrobium* species.

Hyphomonas Enrichment Medium

Composition per liter:

Peptone.....	0.05g
Yeast extract.....	0.05g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation and cultivation of *Hyphomonas* species.

Hyphomonas Medium

Composition per liter:

Pancreatic digest of casein.....	2.0g
MgCl ₂ ·2H ₂ O.....	2.0g
Yeast extract.....	1.0g

pH 7.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.5 using indicator paper. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Hyphomonas polymorpha*.

Hypoxanthine Agar

Composition per 1100.0mL:

Agar.....	15.0g
Peptone.....	5.0g
Hypoxanthine solution.....	5.0g
Beef extract.....	3.0g

pH 7.0 ± 0.1 at 25°C

Hypoxanthine Solution:

Composition per 100.0mL:

Hypoxanthine.....	5.0g
-------------------	------

Preparation of Hypoxanthine Solution: Add hypoxanthine to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except hypoxanthine solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 100.0mL of sterile hypoxanthine solu-

tion. Mix thoroughly. Pour into sterile 15mm × 100mm Petri dishes in 25.0mL volumes.

Use: For the cultivation and differentiation of bacteria based on hypoxanthine hydrolysis. Bacteria that hydrolyze hypoxanthine, such as *Streptomyces griseus*, appear with a clear zone under and around the colonies. *Nocardia asteroides* does not hydrolyze hypoxanthine.

IBB Agar

See: **Inositol Brilliant Green Bile Salts Agar**

Idiomarina Medium (DSMZ Medium 1016)

Composition per liter:

NaCl	30.0-60.0g
Glucose	10.0g
Proteose peptone	5.0g
Yeast extract	3.0g
Malt extract	3.0g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Distribute into tubes or flasks. Gently heat while stirring and bring to boiling. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Idiomarina* spp.

IE Medium

Composition per 1011.0mL:

Agar	15.0g
Peptone.....	5.0g
Yeast extract.....	1.0g
Basal salts solution.....	1.0L
Lactose solution	10.0g
Trace elements solution	1.0mL

Basal Salts Solution:

Composition per liter:

MgSO ₄	0.5g
Phosphate solution	20.0mL
(NH ₄) ₂ SO ₄ (36% solution)	5.0mL

Phosphate Solution:

Composition per liter:

K ₂ HPO ₄	95.0g
NaH ₂ PO ₄ ·2H ₂ O.....	78.0g

Preparation of Phosphate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Basal Salts Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.8-7.0.

Lactose Solution:

Composition per 10.0mL:

Lactose	2.5g
---------------	------

Preparation of Lactose Solution: Add lactose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize. Warm to 50°–55°C.

Trace Elements Solution:

Composition per liter:

Disodium EDTA	0.5g
---------------------	------

FeSO ₄ ·7H ₂ O.....	0.2g
H ₃ BO ₃	0.03g
CoCl ₂ ·6H ₂ O	0.02g
ZnSO ₄ ·7H ₂ O	0.01g
MnCl ₂ ·4H ₂ O	3.0mg
Na ₂ MoO ₄ ·2H ₂ O	3.0mg
NiCl ₂ ·6H ₂ O	2.0mg
CaCl ₂ ·2H ₂ O	1.0mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Combine components, except lactose solution and trace elements solution. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 10.0mL of sterile lactose solution and 1.0mL of sterile trace elements solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Bacillus* species.

IFO Agar

Composition per liter:

Agar	20.0g
(NH ₄) ₂ HPO ₄	3.0g
NaCl.....	1.0g
MgSO ₄ ·7H ₂ O	0.2g
FeSO ₄ ·7H ₂ O.....	10.0mg
MnSO ₄ ·6H ₂ O	5.0mg
Riboflavin	0.02mg
Calcium pantothenate	0.02mg
Pyridoxine-HCl.....	0.02mg
Nicotinic acid.....	0.02mg
<i>p</i> -Aminobenzoic acid.....	0.01mg
Thiamine-HCl	0.01mg
Biotin	1.0μg
Methanol	10.0mL

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components, except agar and methanol, to distilled/deionized water and bring volume to 490.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. In a separate flask, add agar to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically combine the two sterile solutions. Aseptically add 10.0mL of filter-sterilized methanol. Mix thoroughly. Adjust pH to 7.0. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Hyphomicrobium methylovorum*.

IFO Broth

Composition per liter:

(NH ₄) ₂ HPO ₄	3.0g
NaCl.....	1.0g
MgSO ₄ ·7H ₂ O	0.2g
FeSO ₄ ·7H ₂ O.....	10.0mg
MnSO ₄ ·6H ₂ O	5.0mg
Riboflavin	20.0μg
Calcium pantothenate	20.0μg
Pyridoxine-HCl.....	20.0μg
Nicotinic acid.....	20.0μg

<i>p</i> -Aminobenzoic acid.....	10.0μg
Thiamine-HCl	10.0μg
Biotin	1.0μg
Methanol	10.0mL
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components, except methanol, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL of filter-sterilized methanol. Mix thoroughly. Adjust pH to 7.0. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Hyphomicrobium methylovorum*.

IFO Medium 802

Composition per liter:

Polypeptone™.....	10.0g
Yeast extract.....	2.0g
MgSO ₄ ·7H ₂ O	1.0g
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Sphingomonas asaccharolytica*, *Sphingomonas pruni*, *Sphingomonas mali*, and *Sphingomonas rosa*.

Ignicoccus Medium (DSMZ Medium 897)

Composition per liter:

NaCl	13.65g
Sulfur, powdered	5.0g
MgSO ₄ ·7H ₂ O	3.5g
MgCl ₂ ·6H ₂ O.....	2.75g
Meat extract	1.0g
KH ₂ PO ₄	0.5g
CaCl ₂ ·2H ₂ O.....	0.38g
KCl.....	0.33g
(NH ₄) ₂ SO ₄	0.25g
NaBr.....	0.05g
H ₃ BO ₃	15.0mg
SrCl ₂ ·6H ₂ O.....	7.50mg
KI	0.05mg
Resazurin	0.5mg
Na ₂ S·9H ₂ O solution	10.0mL
pH 5.5 ± 0.2 at 25°C	

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.2g
---	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Sparge with N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Store anaerobically.

Preparation of Medium: Add components, except Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 990.0mL. Sparge medium with N₂ gas for 30–60 min. Mix thoroughly. Add 10.0mL Na₂S·9H₂O solution. Mix thoroughly. Adjust pH to 5.5 with H₂SO₄. Distribute into tubes or bottles under 80% H₂ and 20% CO₂ gas mixture. Heat the vessels containing medium in boiling water for 1 hr

before inoculation. After inoculation pressurize the vessels with 80% H₂ and 20% CO₂ gas mixture to 2 bar overpressure.

Use: For the cultivation of *Ignicoccus islandicus* and *Ignicoccus pacificus*.

Ignisphaera Medium (DSMZ Medium 1043)

Composition per liter:

Trypticase peptone.....	2.0g
Starch, soluble.....	2.0g
(NH ₄) ₂ SO ₄	1.3g
MgSO ₄ ·7H ₂ O	0.28g
KH ₂ PO ₄	0.28g
Yeast extract.....	0.1g
L-Cysteine.....	0.3g
CaCl ₂ ·2H ₂ O	74.0mg
Resazurin	0.5mg
FeCl ₂ ·6H ₂ O	0.5mg
Trace elements solution	10.0mL
FeCl ₂ solution	10.0mL
Na ₂ S·9H ₂ O solution.....	10.0mL

pH 6.5 ± 0.2 at 25°C

FeCl₂ Solution:

Composition per 10.0mL:

FeCl ₂ ·6H ₂ O	0.5mg
--	-------

Preparation of FeCl₂ Solution: Add FeCl₂·6H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.3g
---	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Trace Elements Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O	3.0g
Nitrilotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·2H ₂ O	0.5g
CoSO ₄ ·7H ₂ O	0.18g
ZnSO ₄ ·7H ₂ O	0.18g
CaCl ₂ ·2H ₂ O	0.1g
FeSO ₄ ·7H ₂ O.....	0.1g
NiCl ₂ ·6H ₂ O	0.025g
KAl(SO ₄) ₂ ·12H ₂ O.....	0.02g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·4H ₂ O	0.01g
CuSO ₄ ·5H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O.....	0.3mg

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Preparation of Medium: Add components, except iron chloride and sulfide solutions, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Boil for 1

min. Cool to room temperature while sparging with 100% N₂. Add FeCl₃ solution. Adjust pH to 6.3. Dispense under an atmosphere of 100% N₂ into suitable culture vessels (e.g., aliquots of 20mL medium into 50mL serum bottles). Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Adjust pH to 6.5. Prior to inoculation aseptically and anoxically add sulfide solution.

Use: For the cultivation of *Ignisphaera* spp.

IGP Medium

See: **Intracellular Growth Phase Medium**

Ilyobacter Agar

Composition per liter:

NaCl	20.0g
Agar	15.0g
MgCl ₂ ·6H ₂ O	3.0g
KCl	0.5g
NH ₄ Cl	0.25g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O	0.15g
Resazurin	1.0mg
Sodium sulfide solution	10.0mL
Sodium L-tartrate solution	10.0mL
NaHCO ₃ solution	10.0mL
Trace elements solution SL-7	1.0mL

pH 7.2 ± 0.2 at 25°C

Sodium Sulfide Solution:

Composition per 100.0mL:

Na ₂ S·9H ₂ O	3.6g
---	------

Preparation of Sodium Sulfide Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C under N₂. Maintain under 100% N₂.

Sodium L-Tartrate Solution:

Composition per 10.0mL:

Sodium L-tartrate	2.0g
-------------------------	------

Preparation of Sodium L-Tartrate Solution: Add sodium L-tartrate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize. Maintain under 80% N₂ + 20% CO₂.

NaHCO₃ Solution:

Composition per 10.0mL:

NaHCO ₃	2.5g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize. Maintain under 80% N₂ + 20% CO₂.

Trace Elements Solution SL-7:

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	0.19g
MnCl ₂ ·4H ₂ O	0.1g
ZnCl ₂	0.07g
H ₃ BO ₃	0.062g
Na ₂ MoO ₄ ·2H ₂ O	0.036g
NiCl ₂ ·6H ₂ O	0.024g
CuCl ₂ ·2H ₂ O	0.017g
HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution SL-7: Add the FeCl₂·4H₂O to the HCl. Add distilled/deionized water and bring vol-

ume to 1.0L. Add remaining components. Mix thoroughly. Filter sterilize. Maintain under 80% N₂ + 20% CO₂.

Preparation of Medium: Add components—except agar, sodium sulfide solution, sodium L-tartrate solution, NaHCO₃ solution, and trace elements solution SL-7—to distilled/deionized water and bring volume to 469.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Maintain under 80% N₂ + 20% CO₂. Aseptically add 10.0mL of sodium L-tartrate solution, 10.0mL of NaHCO₃ solution, and 1.0mL of trace elements solution SL-7 under 80% N₂ + 20% CO₂. Mix thoroughly. In a separate flask, add agar to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Combine sterile agar and sterile basal medium. Adjust pH to 7.2. Aseptically add 10.0mL of sodium sulfide solution. Pour into sterile Petri dishes or distribute into sterile tubes. Maintain under 80% N₂ + 20% CO₂.

Use: For the cultivation and maintenance of *Ilyobacter tartaricus*.

Ilyobacter Broth

Composition per liter:

NaCl	20.0g
MgCl ₂ ·6H ₂ O	3.0g
KCl	0.5g
NH ₄ Cl	0.25g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O	0.15g
Resazurin	1.0mg
Sodium sulfide solution	10.0mL
Sodium L-tartrate solution	10.0mL
NaHCO ₃ solution	10.0mL
Trace elements solution SL-7	1.0mL

pH 7.2 ± 0.2 at 25°C

Sodium Sulfide Solution:

Composition per 100.0mL:

Na ₂ S·9H ₂ O	3.6g
---	------

Preparation of Sodium Sulfide Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C under 100% N₂. Maintain under 100% N₂.

Sodium L-Tartrate Solution:

Composition per 10.0mL:

Sodium L-tartrate	2.0g
-------------------------	------

Preparation of Sodium L-Tartrate Solution: Add sodium L-tartrate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize. Maintain under 80% N₂ + 20% CO₂.

NaHCO₃ Solution:

Composition per 10.0mL:

NaHCO ₃	2.5g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize. Maintain under 80% N₂ + 20% CO₂.

Trace Elements Solution SL-7:

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	0.19g
MnCl ₂ ·4H ₂ O	0.1g
ZnCl ₂	0.07g

H ₃ BO ₃	0.062g
Na ₂ MoO ₄ ·2H ₂ O	0.036g
NiCl ₂ ·6H ₂ O	0.024g
CuCl ₂ ·2H ₂ O	0.017g
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-7: Add the FeCl₂·4H₂O to the HCl. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Filter sterilize. Maintain under 80% N₂ + 20% CO₂.

Preparation of Medium: Add components—except sodium sulfide solution, sodium L-tartrate solution, NaHCO₃ solution, and trace elements solution SL-7—to distilled/deionized water and bring volume to 969.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Maintain under 80% N₂ + 20% CO₂. Aseptically add 10.0mL of sodium L-tartrate solution, 10.0mL of NaHCO₃ solution, and 1.0mL of trace elements solution SL-7 under 80% N₂ + 20% CO₂. Mix thoroughly. Aseptically distribute into sterile tubes or flasks under 80% N₂ + 20% CO₂. Adjust pH to 7.2. At time of inoculation add sodium sulfide solution to a final concentration of 0.1%.

Use: For the cultivation and maintenance of *Ilyobacter tartaricus*.

***Ilyobacter* Medium**

Composition per liter:

Crotonic acid.....	1.7g
NaCl.....	1.0g
Yeast extract.....	1.0g
Na ₂ HPO ₄ ·12H ₂ O.....	0.7g
KCl.....	0.5g
MgCl ₂ ·6H ₂ O.....	0.4g
NH ₄ Cl.....	0.3g
Na ₂ SO ₄	0.1g
Sodium sulfide solution.....	10.0mL
CaCl ₂ ·2H ₂ O (1.0%).....	1.0mL
FeCl ₃ (0.5%).....	1.0mL
Modified SL-7 trace elements solution.....	1.0mL
Resazurin (0.1%).....	1.0mL
Selenite-tungstate solution.....	1.0mL
pH 6.8–7.2 at 25°C	

Sodium Sulfide Solution:

Composition per 100.0mL:

Na ₂ S·9H ₂ O.....	3.6g
--	------

Preparation of Sodium Sulfide Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C under N₂. Maintain under 100% N₂.

Modified SL-7 Trace Elements Solution:

Composition per liter:

CoCl ₂ ·6H ₂ O	0.2g
MnCl ₂ ·4H ₂ O.....	0.1g
ZnCl ₂	0.07g
H ₃ BO ₃	0.06g
Na ₂ MoO ₄ ·2H ₂ O	0.04g
CuCl ₂ ·2H ₂ O	0.02g
NiCl ₂ ·6H ₂ O.....	0.02g
HCl (1N).....	3.0mL

Preparation of Modified SL-7 Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Maintain under 80% N₂ + 20% CO₂.

Selenite-Tungstate Solution:

Composition per liter:

NaOH.....	0.5g
Na ₂ WO ₄ ·2H ₂ O.....	4.0mg
Na ₂ SeO ₃ ·5HO.....	3.0mg

Preparation of Selenite-Tungstate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Maintain under 80% N₂ + 20% CO₂.

Preparation of Medium: Add components—except sodium sulfide solution, modified SL-7 trace elements solution, and selenite-tungstate solution—to distilled/deionized water and bring volume to 969.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Adjust pH to 5.5. Cool to 45°–50°C under 100% N₂. Maintain under 100% N₂. Aseptically add 1.0mL of sterile modified SL-7 trace elements solution and 1.0mL of sterile selenite-tungstate solution under 100% N₂. Mix thoroughly. Aseptically distribute into sterile tubes or flasks under 100% N₂. At time of inoculation, add sodium sulfide solution to a final concentration of 1.0%. Maintain under 100% N₂.

Use: For the cultivation and maintenance of *Ilyobacter delafieldii*.

***Ilyobacter polytropus* Medium**

Composition per 1011.0mL:

Solution A.....	1.0L
Solution B.....	10.0mL
Vitamin solution.....	1.0mL

pH 7.2–7.4 at 25°C

Solution A:

Composition per liter:

NaHCO ₃	4.5g
Na ₂ SO ₄	2.84g
Sodium 3-hydroxybutyrate.....	1.3g
NaCl.....	1.17g
Yeast extract.....	1.0g
MgCl ₂ ·6H ₂ O.....	0.4g
KCl.....	0.3g
NH ₄ Cl.....	0.27g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O.....	0.15g
Resazurin.....	0.5mg
Trace elements solution.....	1.0mL

Preparation of Solution A: Add components, except NaHCO₃ and vitamin solution, and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 3 to 4 min. Allow to cool to room temperature while gassing under O₂-free 80% N₂ + 20% CO₂. Add NaHCO₃ and continue gassing with O₂-free 80% N₂ + 20% CO₂ until pH reaches 6.9–7.1. Seal the flask under 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution:

Composition per liter:

FeCl ₂ ·4H ₂ O.....	1.5g
CoCl ₂ ·6H ₂ O.....	120.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	68.0mg
H ₃ BO ₃	62.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	24.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
CuCl ₂ ·2H ₂ O.....	17.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution: Add $\text{FeCl}_2 \cdot 4\text{H}_2\text{O}$ to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Gas under 100% N_2 .

Vitamin Solution:

Composition per 100.0mL:

Thiamine-HCl	10.0mg
<i>p</i> -Aminobenzoic acid	4.0mg
D(+)-Biotin	1.0mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Gas under 100% N_2 .

Solution B:

Composition per 10.0mL:

$\text{Na}_2\text{S} \cdot 9\text{H}_2\text{O}$	0.36g
---	-------

Preparation of Solution B: Add $\text{Na}_2\text{S} \cdot 9\text{H}_2\text{O}$ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gas under 100% N_2 . Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: To 1.0L of sterile solution A, add 10.0mL of sterile solution B and 1.0mL of sterile vitamin solution. Mix thoroughly. Adjust final pH to 7.2–7.4.

Use: For the cultivation and maintenance of *Ilyobacter polytropus*.

***Ilyobacter tartaricus* Medium**

Composition per liter:

NaCl	20.0g
$\text{MgCl}_2 \cdot 6\text{H}_2\text{O}$	3.0g
KCl	0.5g
NH_4Cl	0.25g
KH_2PO_4	0.2g
$\text{CaCl}_2 \cdot 2\text{H}_2\text{O}$	0.15g
Resazurin	1.0mg
NaHCO_3 solution	20.0mL
Sodium L-tartrate solution	10.0mL
$\text{Na}_2\text{S} \cdot 9\text{H}_2\text{O}$ solution	10.0mL
Trace elements solution SL-10	1.0mL

pH 7.2 ± 0.2 at 25°C

NaHCO_3 Solution:

Composition per 20.0mL:

NaHCO_3	2.5g
------------------------	------

Preparation of NaHCO_3 Solution: Add NaHCO_3 to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize. Gas under 80% N_2 + 20% CO_2 .

Sodium L-Tartrate Solution:

Composition per 10.0mL:

Sodium L-tartrate	2.0g
-------------------------	------

Preparation of Sodium L-Tartrate Solution: Add sodium L-tartrate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize. Gas under 80% N_2 + 20% CO_2 .

$\text{Na}_2\text{S} \cdot 9\text{H}_2\text{O}$ Solution:

Composition per 10.0mL:

$\text{Na}_2\text{S} \cdot 9\text{H}_2\text{O}$	0.36g
---	-------

Preparation of $\text{Na}_2\text{S} \cdot 9\text{H}_2\text{O}$ Solution: Add $\text{Na}_2\text{S} \cdot 9\text{H}_2\text{O}$ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gas under 100% N_2 . Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution SL-10:

Composition per liter:

$\text{FeCl}_2 \cdot 4\text{H}_2\text{O}$	1.5g
$\text{CoCl}_2 \cdot 6\text{H}_2\text{O}$	190.0mg
$\text{MnCl}_2 \cdot 4\text{H}_2\text{O}$	100.0mg
ZnCl_2	70.0mg
$\text{Na}_2\text{MoO}_4 \cdot 2\text{H}_2\text{O}$	36.0mg
$\text{NiCl}_2 \cdot 6\text{H}_2\text{O}$	24.0mg
H_3BO_3	6.0mg
$\text{CuCl}_2 \cdot 2\text{H}_2\text{O}$	2.0mg
HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution SL-10: Add $\text{FeCl}_2 \cdot 4\text{H}_2\text{O}$ to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Gas under 100% N_2 . Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except NaHCO_3 solution, sodium L-tartrate solution, and $\text{Na}_2\text{S} \cdot 9\text{H}_2\text{O}$ solution, to distilled/deionized water and bring volume to 960.0mL. Mix thoroughly. Gas under 80% N_2 + 20% CO_2 . Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 20.0mL of sterile NaHCO_3 solution, 10.0mL of sterile sodium L-tartrate solution, and 10.0mL of sterile $\text{Na}_2\text{S} \cdot 9\text{H}_2\text{O}$ solution. Mix thoroughly. Distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Ilyobacter tartaricus*.

***Ilyobacter tartaricus* Medium**

Composition per liter:

NaCl	20.0g

NiCl₂·6H₂O..... 24.0mg
H₃BO₃..... 6.0mg
CuCl₂·2H₂O..... 2.0mg
HCl (25% solution)..... 10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except NaHCO₃ solution, sodium L-tartrate solution, yeast extract solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gas under 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 20.0mL of sterile NaHCO₃ solution, 10.0mL of sterile sodium L-tartrate solution, 10.0mL of sterile yeast extract solution, and 10.0mL of sterile Na₂S·9H₂O solution. Mix thoroughly. Distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Propionigenium modestum*.

IM

See: **Infection Medium**

Imhoff's Medium, Modified

Composition per liter:

NaCl..... 30.0g
NaHCO₃..... 3.0g
KH₂PO₄..... 1.0g
NH₄Cl..... 1.0g
Sodium acetate..... 1.0g
Na₂SO₄..... 0.7g
MgCl₂·6H₂O..... 0.5g
Sodium ascorbate..... 0.5g
CaCl₂·2H₂O..... 0.1g
Yeast extract..... 0.1g
Sodium sulfide solution..... 10.0mL
SLA trace elements solution..... 1.0mL
VA vitamin solution..... 1.0mL

pH 6.9–7.0 at 25°C

Sodium Sulfide Solution:

Composition per 100.0mL:

Na₂S·9H₂O..... 2.0g

Preparation of Sodium Sulfide Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C under N₂. Maintain under 100% N₂.

SLA Trace Elements Solution:

Composition per liter:

FeCl₂·4H₂O..... 1.8g
H₃BO₃..... 0.5g
CoCl₂·6H₂O..... 0.25g
ZnCl₂..... 0.1g
MnCl₂·4H₂O..... 0.07g
Na₂MoO₄·2H₂O..... 0.03g
CuCl₂·2H₂O..... 0.01g
Na₂SeO₃·5H₂O..... 0.01g
NiCl₂·6H₂O..... 0.01g

Preparation of SLA Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 2–3. Filter sterilize.

VA Vitamin Solution:

Composition per 500.0mL:

Nicotinamide..... 0.17g
Thiamine-HCl..... 0.15g
p-Aminobenzoic acid..... 0.1g
Biotin..... 0.05g
Calcium pantothenate..... 0.05g
Pyridoxine·2HCl..... 0.05g
Cyanocobalamin..... 0.02g

Preparation of VA Vitamin Solution: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components—except sodium sulfide solution, SLA trace elements solution, and VA vitamin solution—to distilled/deionized water and bring volume to 988.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 1.0mL of sterile SLA trace elements solution and 1.0mL of sterile VA vitamin solution. Aseptically add 10.0mL of sterile sodium sulfide solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Rhodobacter adriaticus* and *Rhodobacter sulfidophilus*.

Imidazole Utilization Medium

Composition per liter:

Imidazole..... 5.0g
KH₂PO₄..... 0.5g
MgSO₄·7H₂O..... 0.5g
CaCl₂..... 3.0mg
FeSO₄·7H₂O..... 3.0mg
Molybdenum solution..... 1.0mL
Trace elements solution..... 1.0mL

pH 6.0 ± 0.2 at 25°C

Molybdenum Solution:

Composition per 18.0mL:

Na₂MoO₄·2H₂O..... 0.5mg

Preparation of Molybdenum Solution: Add components to distilled/deionized water and bring volume to 18.0mL. Mix thoroughly. Filter sterilize.

Trace Elements Solution:**Composition per 18.0mL:**

H ₃ BO ₃	11.0mg
MnCl ₂ ·4H ₂ O	7.0mg
Al ₂ (SO ₄) ₃ ·18 H ₂ O	1.94mg
Co(NO ₃) ₂ ·6H ₂ O	1.0mg
CuSO ₄ ·5H ₂ O	1.0mg
NiSO ₄ ·6H ₂ O	1.0mg
ZnSO ₄ ·H ₂ O	0.62mg
KBr	0.5mg
KI	0.5mg
LiCl	0.5mg
SnCl ₂ ·2H ₂ O	0.5mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 18.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except molybdenum solution and trace elements solution, to distilled/deionized water and bring volume to 998.0mL. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 1.0mL of molybdenum solution and 1.0mL of trace elements solution. Mix thoroughly. Adjust pH to 6.0 with phosphoric acid. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Pseudomonas* species.

Indole Medium**Composition per 200.0mL:**

K ₂ HPO ₄	3.13g
L-Tryptophan	1.0g
NaCl	1.0g
KH ₂ PO ₄	0.27g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 200.0mL. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the differentiation of microorganisms by means of indole production from the tryptophan test.

Indole Medium**Composition per liter:**

Pancreatic digest of casein	20.0g
-----------------------------------	-------

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add pancreatic digest of casein to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the differentiation of microorganisms by means of the indole test.

**Indole Medium, CDC
(BAM M65)****Composition per liter:**

Pancreatic digest of casein	20.0g
-----------------------------------	-------

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add pancreatic digest of casein to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Dis-

tribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the differentiation of microorganisms by means of the indole test.

**Indole Nitrate HiVeg Medium
(Tryptone Nitrate HiVeg Medium)****Composition per liter:**

Plant hydrolysate	20.0g
Na ₂ HPO ₄	2.0g
Agar	1.0g
Glucose	1.0g
Potassium nitrate	1.0g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling with frequent agitation. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the identification of microorganisms by means of the nitrate reduction and indole tests.

**Indole Nitrate Medium
(Trypticase™ Nitrate Broth)****Composition per liter:**

Pancreatic digest of casein	20.0g
Na ₂ HPO ₄	2.0g
Agar	1.0g
Glucose	1.0g
KNO ₃	1.0g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling with frequent agitation. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the identification of microorganisms by means of the nitrate reduction and indole tests.

**Infection Medium
(IM)****Composition per 100.0mL:**

Pancreatic digest of gelatin	0.05g
Bile salts No. 3	0.05g
Brain heart, solids from infusion	0.02g
Peptic digest of animal tissue	0.02g
NaCl	0.017g
Glucose	0.01g
Na ₂ HPO ₄	8.0mg
Earle's balanced salts solution	80.0mL
Fetal bovine serum, heat inactivated (2 hr at 55°C)	20.0mL

pH 7.4 ± 0.2 at 25°C

Earle's Balanced Salts Solution:**Composition per liter:**

NaCl	6.8g
NaHCO ₃	2.2g

Glucose	1.0g
KCl.....	0.4g
CaCl ₂ ·2H ₂ O.....	0.265g
MgSO ₄ ·7H ₂ O.....	0.2g
NaH ₂ PO ₄ ·H ₂ O.....	0.14g

Preparation of Earle's Balanced Salts Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Combine components. Mix thoroughly. Filter sterilize. Store at 4°–10°C.

Use: For the screening of *Escherichia coli* for pathogenicity using the HeLa cell test for invasiveness.

Infusion Agar See: Blood Agar Base

Infusion Broth

Composition per liter:

Pancreatic digest of casein.....	13.0g
NaCl.....	5.0g
Yeast extract.....	5.0g
Heart muscle, solids from infusion.....	2.0g
pH 7.4 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of a wide variety of microorganisms.

Infusion Cystine Agar Base, HiVeg

Composition per liter:

Agar	15.0g
Glucose	10.0g
Plant infusion	10.0g
Plant peptone No. 3.....	10.0g
NaCl.....	5.0g
L-Cystine.....	1.0g
pH 7.2 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling with frequent agitation. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the cultivation of Gram-negative cocci and other pathogenic organisms.

Infusion Cystine Agar Base, HiVeg with Hemoglobin

Composition per liter:

Agar	15.0g
Glucose	10.0g
Plant infusion	10.0g
Plant peptone No. 3.....	10.0g
NaCl.....	5.0g

L-Cystine.....	1.0g
Hemoglobin solution, 2%.....	100.0mL
pH 7.2 ± 0.2 at 25°C	

Source: This medium, without hemoglobin solution, is available as a premixed powder from HiMedia.

Preparation of Medium: Add components, except hemoglobin solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling with frequent agitation. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 100.0mL of sterile hemoglobin solution. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the cultivation of Gram-negative cocci and other pathogenic organisms. With added hemoglobin it is used for cultivation of *Francisella tularensis*.

Inhibitory Mold Agar

Composition per liter:

Agar	15.0g
Glucose	5.0g
Yeast extract.....	5.0g
Pancreatic digest of casein.....	3.0g
Na ₂ HPO ₄	2.0g
Peptic digest of animal tissue	2.0g
Starch	2.0g
Dextrin.....	1.0g
MgSO ₄ ·7H ₂ O.....	0.8g
Chloramphenicol.....	0.125g
FeSO ₄	0.04g
NaCl.....	0.04g
MnSO ₄	0.16g
pH 6.7 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling with frequent agitation. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation of pathogenic fungi.

Inorganic Salts-Maltose Medium (DSMZ Medium 754)

Composition per liter:

Yeast extract.....	4.0g
Peptone	2.0g
Inorganic salt solution.....	980.0mL
Maltose solution.....	20.0mL

Maltose Solution:

Composition per liter:

Maltose	5.0g
---------------	------

Preparation of Maltose Solution: Add maltose to 20.0mL distilled/deionized water. Mix thoroughly. Filter sterilize.

Inorganic Salt Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O.....	49.37g
NaCl.....	43.8g
CaCl ₂ ·2H ₂ O.....	1.29g

Preparation of Inorganic Salt Solution: Add components in the order CaCl₂·2H₂O, NaCl, MgSO₄·7H₂O to 900.0mL distilled/deionized water. After addition of each, mix thoroughly to prevent precipitation. Add distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components except maltose solution to 980.0mL inorganic salt solution. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 20.0mL sterile maltose solution. Mix thoroughly. Aseptically distribute to sterile tubes or flasks.

Use: For the cultivation of *Spirochaeta halophila*.

Inorganic Salts Maltose Medium

Composition per liter:

Yeast extract.....	4.0g
Peptone.....	2.0g
Inorganic salts solution.....	980.0mL
Maltose solution.....	20.0mL

pH 7.5 ± 0.2 at 25°C

Inorganic Salts Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O.....	49.37g
NaCl.....	43.8g
CaCl ₂ ·2H ₂ O.....	1.29g

Preparation of Inorganic Salts Solution: Add NaCl first and then other components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Maltose Solution:

Composition per 100.0mL:

Maltose.....	25.0g
--------------	-------

Preparation of Maltose Solution: Add maltose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except maltose solution, to inorganic salts solution and bring volume to 980.0mL. Mix thoroughly. Adjust pH to 7.5 with KOH. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 20.0mL of sterile maltose solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Spirochaeta halophila*.

Inorganic Salt Medium (Modified Raggios Medium)

Composition per liter:

Na ₂ CO ₃	3.0g
KI.....	0.75g
MgSO ₄ ·7H ₂ O.....	0.7g
CaCl ₂ ·2H ₂ O.....	0.446g
KH ₂ PO ₄	0.2g
Na ₂ SO ₄	0.2g
KCl.....	0.165g
MnSO ₄ ·2H ₂ O.....	6.64mg
ZnSO ₄ ·7H ₂ O.....	2.67mg
FeCl ₃ ·4H ₂ O.....	2.5mg
H ₃ BO ₃	1.5mg
Na ₂ MoO ₄ ·2H ₂ O.....	0.25mg
CuSO ₄ ·5H ₂ O.....	0.07mg

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of soil microorganisms such as *Rhizobium* spp.

Inorganic Salts Starch Agar

See: [ISP Medium 4](#)

Inositol Assay Medium

Composition per liter:

Glucose.....	100.0g
Potassium citrate.....	10.0g
Citric acid.....	2.0g
KH ₂ PO ₄	1.1g
KCl.....	0.85g
L-Asparagine.....	0.8g
L-Glutamic acid.....	0.6g
L-Isoleucine.....	0.5g
L-Leucine.....	0.5g
L-Lysine.....	0.5g
L-Valine.....	0.5g
L-Arginine.....	0.48g
DL-Alanine.....	0.4g
DL-Threonine.....	0.4g
CaCl ₂	0.25g
MgSO ₄ ·7H ₂ O.....	0.25g
DL-Aspartic acid.....	0.2g
DL-Phenylalanine.....	0.2g
Glycine.....	0.2g
L-Methionine.....	0.2g
L-Tyrosine.....	0.2g
L-Proline.....	0.2g
L-Histidine.....	0.124g
DL-Serine.....	0.1g
L-Cystine.....	0.1g
DL-Tryptophan.....	0.08g
FeCl ₃	0.05g
MnSO ₄ ·7H ₂ O.....	0.05g
Calcium pantothenate.....	5.0mg
Pyridoxine-HCl.....	1.0mg
Thiamine-HCl.....	0.5mg
Biotin.....	0.01mg

pH 5.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 5 min at 15 psi pressure–121°C.

Use: For the microbiological assaying of inositol using *Saccharomyces uvarum* as the test organism.

Inositol Assay Medium KB

Composition per liter:

Glucose.....	40.0g
(NH ₄) ₂ SO ₄	4.0g
DL-Asparagine.....	4.0g
KH ₂ PO ₄	3.0g
MgSO ₄ ·7H ₂ O.....	1.0g

CaCl ₂	0.98g
FeSO ₄ ·7H ₂ O.....	0.5mg
Calcium pantothenate.....	0.4mg
Nicotinic acid.....	0.4mg
Pyridoxine.....	0.4mg
Thiamine.....	0.4mg
H ₃ BO ₃	0.2mg
KI.....	0.2mg
CuSO ₄ ·5H ₂ O.....	0.09mg
MnSO ₄ ·7H ₂ O.....	0.08mg
ZnSO ₄ ·7H ₂ O.....	0.08mg
(NH ₄) ₆ Mo ₇ O ₂₄ ·4H ₂ O.....	0.04mg
Riboflavin.....	0.02mg
Biotin.....	0.4μg

pH 5.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 5 min at 15 psi pressure–121°C.

Use: For the microbiological assaying of inositol using *Kloekera apiculata* as the test organism.

Inositol Brilliant Green Bile Salts Agar (IBB Agar) (*Plesiomonas* Differential Agar)

Composition per liter:

Agar.....	15.0g
meso-Inositol.....	10.0g
Proteose peptone.....	10.0g
Bile salts No. 3.....	8.5g
Meat extract.....	5.0g
NaCl.....	5.0g
Neutral Red (2% solution).....	1.25mL
Brilliant Green (0.1% solution).....	0.33mL

pH 7.2 ± 0.1 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation of *Aeromonas* and *Plesiomonas* species.

Inositol Brilliant Green HiVeg Agar (*Plesiomonas* Differential HiVeg Agar)

Composition per liter:

Plant peptone No. 3.....	15.0g
Agar.....	13.5g
meso-Inositol.....	10.0g
Plant extract No. 1.....	6.5g
NaCl.....	5.0g
Synthetic detergent No. I.....	2.0g
Neutral Red.....	0.025g
Brilliant Green.....	0.33mg

pH 7.2 ± 0.1 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation of *Aeromonas* and *Plesiomonas* species.

Inositol Gelatin Deep's

Composition per liter:

Gelatin.....	120.0g
Inositol.....	10.0g
Na ₂ HPO ₄	5.0g
Yeast extract.....	5.0g
Phenol Red.....	0.05g

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.4. Distribute into tubes in 5.0mL volumes. Autoclave for 15 min at 10 psi pressure–115°C.

Use: For the cultivation of *Plesiomonas shigelloides* from foods.

Inositol Urea Caffeic Acid Medium

Composition per liter:

Agar solution.....	900.0mL
Base solution.....	100.0mL

Agar Solution:

Composition per 900.0mL:

Agar.....	15.0g
-----------	-------

Preparation of Agar Solution: Add agar to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Base Solution:

Composition per 100.0mL:

Inositol.....	10.0g
Urea.....	5.0g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O.....	0.5g
Caffeic acid.....	0.2g
NaCl.....	0.1g
CaCl ₂ ·2H ₂ O.....	0.1g
Gentamicin sulfate.....	0.04g
H ₃ BO ₃	0.5mg
ZnSO ₄ ·7H ₂ O.....	0.4mg
MnSO ₄ ·4H ₂ O.....	0.4mg
Thiamine·HCl.....	0.4mg
Pyroxidine·HCl.....	0.4mg
Niacin.....	0.4mg
Calcium pantothenate.....	0.4mg
p-Aminobenzoic acid.....	0.2mg
Riboflavin.....	0.2mg
FeCl ₃	0.2mg
Na ₂ MoO ₄ ·4H ₂ O.....	0.2mg
KI.....	0.1mg
CuSO ₄ ·5H ₂ O.....	0.04mg
Folic acid.....	2.0μg
Biotin.....	2.0μg
Ferric citrate solution (1% solution).....	1.0mL

Preparation of Base Solution: Add components, except urea, to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Gently heat just until components are dissolved. Cool to 75°–80°C. Add urea. Mix thoroughly. Do not heat after addition of urea. Do not autoclave. Filter sterilize.

Preparation of Medium: Aseptically combine the cooled, sterile agar solution with the sterile base solution. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the selective isolation and differentiation of *Cryptococcus* species based on inositol and urea utilization and pigment production from caffeic acid. On this medium, only *Cryptococcus* species utilize inositol as sole carbon source and urea as sole nitrogen source. *Cryptococcus neoformans* appears as dark brown colonies. Other *Cryptococcus* species are unpigmented.

**Intracellular Growth Phase Medium
(IGP Medium)**

Composition per 100.0mL:

Gentamicin sulfate	500.0mg
Lysozyme	30.0mg
Eagle MEM	72.0mL

Dulbecco's phosphate-buffered saline	20.0mL
Fetal bovine serum	8.0mL
pH 7.2–7.4 at 25°C	

Eagle MEM:

Composition per liter:

NaCl	8.0g
Glucose	1.0g
KCl	0.4g
CaCl ₂ ·2H ₂ O	0.14g
MgSO ₄ ·7H ₂ O	0.1g
KH ₂ PO ₄	0.06g
Na ₂ HPO ₄	0.05g
L-Isoleucine	0.026g
L-Leucine	0.026g
L-Lysine	0.026g
L-Threonine	0.024g
L-Valine	0.0235g
L-Tyrosine	0.018g
L-Arginine	0.0174g
L-Phenylalanine	0.0165g
L-Cystine	0.012g
L-Histidine	8.0mg
L-Methionine	7.5mg
Phenol Red	5.0mg
L-Tryptophan	4.0mg
Inositol	1.8mg
Biotin	1.0mg
Folic acid	1.0mg
Calcium pantothenate	1.0mg
Choline chloride	1.0mg
Nicotinamide	1.0mg
Pyridoxal-HCl	1.0mg
Thiamine-HCl	1.0mg
Riboflavin	0.1mg

Preparation of Eagle MEM: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Dulbecco's Phosphate-Buffered Saline:

Composition per liter:

NaCl	8.0g
Na ₂ HPO ₄ ·7H ₂ O	2.16g
KCl	0.2g
KH ₂ PO ₄	0.2g
CaCl ₂	0.1g
MnCl ₂ ·6H ₂ O	0.1g

Preparation of Dulbecco's Phosphate-Buffered Saline: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Combine components. Mix thoroughly. Filter sterilize. Aseptically distribute into sterile tubes or flasks.

Use: For the screening of *Escherichia coli* for pathogenicity using the HeLa cell test for invasiveness.

Ion Agar for *Ureaplasma*

Composition per 101.45mL:

HEPES (<i>N</i> -[2-hydroxyethyl]piperazine- <i>N'</i> -[2-ethanesulfonic acid]) buffer	1.19g
Ionagar No. 2	0.75g
Pancreatic digest of casein	0.7g
NaCl	0.5g
Beef extract	0.3g

Yeast extract.....	0.3g
Beef heart, solids from infusion.....	0.2g
Yeast extract.....	0.1g
Horse serum, normal sterile.....	10.0mL
Ampicillin solution.....	1.0mL
Urea solution.....	0.25mL
Nystatin solution.....	0.1mL
Tripeptide solution.....	0.1mL

pH 7.2 ± 0.2 at 25°C

Ampicillin Solution:**Composition per 10.0mL:**

Ampicillin.....	1.0g
-----------------	------

Preparation of Ampicillin Solution: Add ampicillin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Urea Solution:**Composition per 100.0mL:**

Urea.....	10.0g
-----------	-------

Preparation of Urea Solution: Add urea to distilled/deionized water and bring volume to 100.0mL. Filter sterilize. Store at -20°C.

Nystatin Solution:**Composition per 1.0mL:**

Nystatin.....	50,000U
---------------	---------

Preparation of Nystatin Solution: Add nystatin to distilled/deionized water and bring volume to 1.0mL. Filter sterilize.

Tripeptide Solution:**Composition per 10.0mL:**

Glycyl-L-histidyl-L-lysine acetate.....	0.2mg
---	-------

Preparation of Tripeptide Solution: Add glycyl-L-histidyl-L-lysine acetate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize. Store at -20°C.

Preparation of Medium: Add components—except horse serum, ampicillin solution, urea solution, nystatin solution, and tripeptide solution—to distilled/deionized water and bring volume to 90.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure-121°C. Cool to 45°-50°C. Aseptically add 10.0mL of sterile horse serum, 1.0mL of sterile ampicillin solution, 0.25mL of sterile urea solution, 0.1mL of sterile nystatin solution, and 0.1mL of sterile tripeptide solution. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the cultivation of *Ureaplasma* species from clinical specimens.

Ionic Medium with Pipecolate**Composition per liter:**

Agar.....	30.0g
Ionic medium.....	950.0mL
Pipecolic acid·HCl solution.....	50.0mL

Ionic Medium:**Composition per liter:**

K ₂ HPO ₄	4.1g
Na ₂ HPO ₄	3.34g
KH ₂ PO ₄	2.26g
NaH ₂ PO ₄	2.24g
Salt solution.....	10.0mL

Preparation of Ionic Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Salt Solution:**Composition per liter:**

MgSO ₄ ·7H ₂ O.....	14.8g
FeSO ₄ ·7H ₂ O.....	0.55g
MnSO ₄	0.045g
H ₂ SO ₄ , concentrated.....	0.2mL

Preparation of Salt Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Pipecolic Acid·HCl Solution:**Composition per 100.0mL:**

Pipecolic acid·HCl.....	4.14g
-------------------------	-------

Preparation of Pipecolic Acid·HCl Solution: Add pipecolic acid·HCl to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Adjust pH to 7.0.

Preparation of Medium: Add agar to 950.0mL of ionic medium. Mix thoroughly. Gently heat and bring to boiling. Add 50.0mL of pipecolic acid·HCl. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure-121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Pseudomonas putida*.

Irgasan[®] Ticarcillin Chlorate Broth (ITC Broth)**Composition per liter:**

MgCl ₂ ·6H ₂ O.....	60.0g
Pancreatic digest of casein.....	10.0g
NaCl.....	5.0g
KClO ₄	1.0g
Yeast extract.....	1.0g
Malachite Green (0.2% solution).....	5.0mL
Irgasan solution.....	1.0mL
Ticarcillin solution.....	1.0mL

pH 7.6 ± 0.2 at 25°C

Irgasan Solution:**Composition per 10.0mL:**

Irgasan (triclosan).....	1.0mg
--------------------------	-------

Preparation of Irgasan Solution: Add Irgasan to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Ticarcillin Solution:**Composition per 10.0mL:**

Ticarcillin.....	1.0 mg
------------------	--------

Preparation of Ticarcillin Solution: Add ticarcillin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except Irgasan solution and ticarcillin solution, to distilled/deionized water and bring volume to 998.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure-121°C. Cool to 45°-50°C. Adjust to pH 7.6. Aseptically add 1.0mL of Irgasan solution and 1.0mL of ticarcillin solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the selective isolation and cultivation of *Yersinia* species.

Iron Agar, Lyngby (Lyngby Iron Agar)

Composition per liter:

Peptone.....	20.0g
Agar.....	12.0g
NaCl.....	5.0g
Beef extract.....	3.0g
Yeast extract.....	3.0g
L-Cysteine.....	0.6g
Ferric citrate.....	0.3g
Na ₂ S ₂ O ₃	0.3g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and enumeration of H₂S-producing bacteria and total counts of heterotrophic bacteria from fish and fish products.

Iron Bacteria Isolation Medium

Composition per liter:

Agar.....	10.0g
(NH ₄) ₂ SO ₄	0.5g
Glucose.....	0.15g
CaCO ₃	0.1g
K ₂ HPO ₄	0.05g
MgSO ₄ ·7H ₂ O.....	0.05g
KCl.....	0.05g
Ca(NO ₃) ₂	0.01g
Vitamin solution.....	10.0mL

Vitamin Solution:

Composition per 10.0mL:

Thiamine.....	0.4mg
Cyanocobalamin.....	0.01mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except vitamin solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL of vitamin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation of iron bacteria.

Iron Milk Medium

Composition per liter:

Iron filings.....	1.0g
Whole milk.....	1.0L

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Add iron filings, which may be small balls of steel wool, to whole milk and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of lactic acid bacteria. For the cultivation and differentiation of *Clostridium* species. The medium turns black if H₂S is produced. The medium turns red if acid is produced from milk carbohydrate fermentation. Acid and gas production is characteristic of *Clostridium perfringens* and *Clostridium butyricum*.

Iron Milk Medium, Modified

Composition per 1050.0mL:

Whole milk, fresh.....	1.0L
FeSO ₄ ·7H ₂ O.....	1.0g

Preparation of Medium: Add FeSO₄·7H₂O to distilled/deionized water and bring volume to 50.0mL. Add slowly to 1.0L of whole milk. Mix thoroughly. Distribute into tubes in 11.0mL volumes. Autoclave for 12 min at 13 psi pressure–118°C.

Use: For the cultivation and enumeration of *Clostridium perfringens* in foods.

Iron-Oxidizing Medium

Composition per liter:

(NH ₄) ₂ SO ₄	3.0g
K ₂ HPO ₄	0.5g
MgSO ₄ ·7H ₂ O.....	0.5g
KCl.....	0.1g
Ca(NO ₃) ₂	0.01g
FeSO ₄ ·7H ₂ O solution.....	300.0mL
H ₂ SO ₄ (10N).....	1.0mL

pH 3.0–3.6 at 25°C

FeSO₄·7H₂O Solution:

Composition per 300.0mL:

FeSO ₄ ·7H ₂ O.....	44.22g
---	--------

Preparation of FeSO₄·7H₂O Solution: Add FeSO₄·7H₂O to distilled/deionized water and bring volume to 300.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Preparation of Medium: Add components, except FeSO₄·7H₂O solution, to distilled/deionized water and bring volume to 700.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 300.0mL of sterile FeSO₄·7H₂O solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the enumeration, isolation, and cultivation of iron and sulfur bacteria, such as *Thiobacillus ferrooxidans*.

Iron Sulfite Agar

Composition per liter:

Agar.....	12.0g
Pancreatic digest of casein.....	10.0g
Ferric citrate.....	0.5g
Na ₂ S·9H ₂ O.....	0.5g

pH 7.1 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Mix thoroughly. Pour into sterile Petri dishes or leave in tubes.

Use: For the detection of thermophilic anaerobic organisms.

Iron Sulfite HiVeg Agar**Composition per liter:**

Agar	15.0g
Plant hydrolysate.....	10.0g
Iron (III) citrate	0.5g
Na ₂ SO ₃	0.5g
pH 7.1 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Mix thoroughly. Pour into sterile Petri dishes or leave in tubes.

Use: For the detection of thermophilic anaerobic organisms.

Irradiated Tryptone Soya Broth

See: Cold Filterable Tryptone Soya Broth

Irradiated Vegetable Peptone Broth

See: Cold Filterable Vegetable Peptone Broth

Islam GBS Agar

See: GBS Agar Base, Islam

ISM Agar**Composition per liter:**

MgSO ₄ ·7H ₂ O	49.2g
NaCl	43.5g
Agar	7.5g
Yeast extract.....	4.0g
Peptone.....	2.0g
CaCl ₂ ·2H ₂ O.....	1.5g
Maltose solution.....	100.0mL

Maltose Solution:**Composition per 100.0mL:**

Maltose.....	5.0g
--------------	------

Preparation of Maltose Solution: Add maltose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except maltose solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile maltose solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Spirochaeta halophila*.

Islams Medium Base for Group B Streptococci**Composition per liter:**

Proteose peptone	23.0g
Agar	10.0g
Na ₂ HPO ₄	5.749g
Starch, soluble.....	5.0g
KH ₂ PO ₄	1.482g
Horse serum, sterile inactivated.....	50.0mL
pH 7.4 ± 0.2 at 25°C	

Source: This medium is available from HiMedia.

Preparation of Medium: Add components, except horse serum, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Autoclave for 15 min at 10 psi pressure–115°C. Cool to 50°C. Aseptically add horse serum. Mix thoroughly. Pour into Petri dishes or aseptically distribute into sterile tubes.

Use: For the identification and cultivation of Group B streptococci from clinical specimens.

ISM Broth**Composition per liter:**

MgSO ₄ ·7H ₂ O	49.2g
NaCl.....	43.5g
Yeast extract.....	4.0g
Peptone	2.0g
CaCl ₂ ·2H ₂ O	1.5g
Maltose solution.....	100.0mL

Maltose Solution:**Composition per 100.0mL:**

Maltose	5.0g
---------------	------

Preparation of Maltose Solution: Add maltose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except maltose solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile maltose solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Spirochaeta halophila*.

Iso-Sensitest Agar**Composition per liter:**

Casein, hydrolyzed	11.0g
Agar	8.0g
Peptones.....	3.0g
NaCl.....	3.0g
Na ₂ HPO ₄	2.0g
Glucose	2.0g
Sodium acetate.....	1.0g
Soluble starch.....	1.0g
Magnesium glycerophosphate	0.2g
Calcium gluconate	0.1g
L-Cysteine·HCl.....	0.02g
L-Tryptophan.....	0.02g
Adenine.....	0.01g
Guanine.....	0.01g
Xanthine.....	0.01g
Uracil	0.01g
Nicotinamide.....	3.0mg
Pantothenate.....	3.0mg
Pyridoxine.....	3.0mg
MnCl ₂ ·4H ₂ O	2.0mg
CoSO ₄	1.0mg
CuSO ₄ ·5H ₂ O.....	1.0mg
FeSO ₄ ·7H ₂ O.....	1.0mg
Menadione	1.0mg
Cyanocobalamin	1.0mg
ZnSO ₄ ·7H ₂ O	1.0mg

Biotin	0.3mg
Thiamine	0.04mg

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For antimicrobial susceptibility testing.

Iso Sensitest Broth

Composition per liter:

Casein, hydrolyzed.....	11.0g
Peptones	3.0g
NaCl	3.0g
Glucose	2.0g
Na ₂ HPO ₄	2.0g
Sodium acetate	1.0g
Soluble starch.....	1.0g
Magnesium glycerophosphate	0.2g
Calcium gluconate	0.1g
L-cysteine-HCl	0.02g
L-Tryptophan	0.02g
Adenine	0.01g
Guanine	0.01g
Xanthine	0.01g
Uracil	0.01g
Nicotinamide.....	3.0mg
Pantothenate.....	3.0mg
Pyridoxine.....	3.0mg
MnCl ₂ ·4H ₂ O.....	2.0mg
CoSO ₄	1.0mg
CuSO ₄ ·5H ₂ O.....	1.0mg
FeSO ₄ ·7H ₂ O.....	1.0mg
Menadione	1.0mg
Cyanocobalamin	1.0mg
ZnSO ₄ ·7H ₂ O.....	1.0mg
Biotin	0.3mg
Thiamine	0.04mg

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For antimicrobial susceptibility testing.

Isoleucine Hydroxamate Medium

Composition per liter:

Agar	15.0g
K ₂ HPO ₄	7.0g
Glucose	5.0g
KH ₂ PO ₄	3.0g
L-Isoleucine hydroxamate	1.0g
(NH ₄) ₂ SO ₄	1.0g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Serratia marcescens*.

Isonema Medium

Composition per liter:

Pancreatic digest of casein.....	1.0g
Seawater.....	990.0mL
Horse serum, heat inactivated.....	10.0mL

Preparation of Medium: Add pancreatic digest of casein to seawater and bring volume to 990.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 10.0mL of heat-inactivated horse serum. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Isonema papillatum*.

Isosphaera Agar

Composition per 1000.5mL:

Solution A	800.0mL
Solution B	100.0mL
Solution C	100.0mL
Vitamin solution.....	0.5mL

pH 7.6 ± 0.2 at 25°C

Solution A:

Composition per 800.0mL:

Agar, noble.....	15.0g
NaCl.....	0.25g
(NH ₄) ₂ SO ₄	0.125g
KCl.....	0.125g
MgSO ₄ ·7H ₂ O.....	0.1g
CaCl ₂ ·2H ₂ O.....	80.0mg
KH ₂ PO ₄	75.0mg
FeCl ₃	73.0μg
Trace elements solution SL-7	2.5mL

Trace Elements Solution SL-7:

Composition per liter:

FeCl ₂ ·4H ₂ O.....	1.5g
CoCl ₂ ·6H ₂ O.....	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
H ₃ BO ₃	62.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	36.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
CuCl ₂ ·2H ₂ O.....	17.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-7: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly.

Preparation of Solution A: Add agar to 400.0mL of distilled/deionized water. In another flask, add remaining components to 400.0mL of distilled/deionized water. Mix thoroughly. Adjust pH to 7.6 with NaOH. Remove any precipitate that forms by filtering through Whatman #1 filter paper. Autoclave both solutions separately for 15 min at 15 psi pressure–121°C. Aseptically combine the two sterile solutions. Cool to 50°–55°C.

Solution B:

Composition per 100.0mL:

NaHCO ₃	0.42g
--------------------------	-------

Preparation of Solution B: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Warm to 50°–55°C.

Solution C:

Composition per 100.5mL:

Glucose	0.25g
Casamino acids	0.25g

Preparation of Solution C: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Warm to 50°–55°C.

Vitamin Solution:

Composition per 100.0mL:

Nicotinic acid	200.0mg
Thiamine HCl	200.0mg
<i>p</i> -Aminobenzoic acid	20.0mg
Biotin	2.0mg
Vitamin B ₁₂	25.0μg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Warm to 50°–55°C.

Preparation of Medium: Aseptically combine 800.0mL of sterile solution A with 100.0mL of sterile solution B, 100.0mL of sterile solution C, and 0.5mL of sterile vitamin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Isosphaera pallida*.

***Isosphaera* Broth**

Composition per 1000.5mL:

Solution A	800.0mL
Solution B	100.0mL
Solution C	100.0mL
Vitamin solution	0.5mL

pH 7.6 ± 0.2 at 25°C

Solution A:

Composition per 800.0mL:

NaCl	0.25g
(NH ₄) ₂ SO ₄	0.125g
KCl	0.125g
MgSO ₄ ·7H ₂ O	0.1g
CaCl ₂ ·2H ₂ O	80.0mg
KH ₂ PO ₄	75.0mg
FeCl ₃	73.0μg
Trace elements solution SL-7	2.5mL

Trace Elements Solution SL-7:

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
H ₃ BO ₃	62.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
CuCl ₂ ·2H ₂ O	17.0mg
HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution SL-7: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly.

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 800.0mL. Mix thoroughly. Adjust pH to 7.6 with NaOH. Remove any precipitate that forms by filtering through

Whatman #1 filter paper. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B:

Composition per 100.0mL:

NaHCO ₃	0.42g
--------------------------	-------

Preparation of Solution B: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Solution C:

Composition per 100.5mL:

Glucose	0.25g
Casamino acids	0.25g

Preparation of Solution C: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Vitamin Solution:

Composition per 100.0mL:

Nicotinic acid	200.0mg
Thiamine HCl	200.0mg
<i>p</i> -Aminobenzoic acid	20.0mg
Biotin	2.0mg
Vitamin B ₁₂	25.0μg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Vitamin Solution: Aseptically combine 800.0mL of sterile solution A with 100.0mL of sterile solution B, 100.0mL of sterile solution C, and 0.5mL of sterile vitamin solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Isosphaera pallida*.

***Isosphaera pallida* Medium
(DSMZ Medium 765)**

Composition per 1005.0mL:

Solution A	900.0mL
NaHCO ₃ solution	100.0mL
Vitamin solution	5.0mL

pH 7.9 ± 0.2 at 25°C

Solution A:

Composition per 900.0mL:

KCl	4.0g
MgSO ₄ ·7H ₂ O	2.0g
(NH ₄) ₂ SO ₄	1.0g
NaCl	1.0g
KH ₂ PO ₄	0.3g
Glucose	0.25g
Casamino acids	0.25g
CaCl ₂ ·2H ₂ O	0.2g
FeCl ₃	0.292mg
Trace elements solution SL-7a	1.0mL

Trace Elements Solution SL-7a:

CoCl ₂ ·6H ₂ O	200.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
H ₃ BO ₃	60.0mg
Na ₂ MoO ₄ ·4H ₂ O	40.0mg
NiCl ₂ ·6H ₂ O	20.0mg
CuCl ₂ ·2H ₂ O	20.0mg
HCl (25%)	1.0mL

Preparation of Trace Elements Solution SL-7a: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Sparge with 95% air + 5% CO₂.

Vitamin Solution:

Composition per 100.0mL:

Nicotinic acid.....	20.0mg
Thiamine-HCl·2H ₂ O.....	10.0mg
<i>p</i> -Aminobenzoic acid.....	0.2mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

NaHCO₃ Solution:

Composition per 100.0mL:

NaHCO ₃	4.2g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize. Seal in serum bottle under 100% CO₂.

Preparation of Medium: Dispense under 95% air + 5% CO₂. Fill serum bottles so that the gas to liquid ratio is about 5:1 (v/v). Sparge with 95% air + 5% CO₂. Seal bottles. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Using a syringe, inject 10.0mL sterile NaHCO₃ solution/90.0mL solution A. Then inject 0.5 mL sterile vitamin solution per 100.0mL of the resulting medium.

Use: For the cultivation of *Isosphaera pallida*=*Isocystis pallida*.

IsoVitaleX[®] Enrichment

Composition per liter:

Glucose.....	100.0g
L-Cysteine-HCl.....	25.9g
L-Glutamine.....	10.0g
Adenine.....	1.0g
Thiamine pyrophosphate.....	0.1g
Vitamin B ₁₂	0.1g
Guanine-HCl.....	0.03g
Fe(NO ₃) ₃ ·9H ₂ O.....	0.02g
<i>p</i> -Aminobenzoic acid.....	0.013g
Thiamine-HCl.....	0.003g

Preparation of IsoVitaleX[®] Enrichment: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Use: As a nutrient supplement for the isolation and cultivation of fastidious microorganisms.

ISP HiVeg Medium No. 1 (Tryptone Yeast Extract HiVeg Broth)

Composition per liter:

Plant hydrolysate.....	5.0g
Yeast extract.....	3.0g

pH 7.0–7.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Streptomyces* species according to the International *Streptomyces* Project.

ISP HiVeg Medium No. 2 (Yeast Malt HiVeg Agar)

Composition per liter:

Agar.....	20.0g
Glucose.....	10.0g
Plant peptone.....	5.0g
Malt extract.....	3.0g
Yeast extract.....	3.0g

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Streptomyces* species according to the International *Streptomyces* Project.

ISP HiVeg Medium No. 6 (Peptone Yeast Extract Iron HiVeg Agar)

Composition per liter:

Agar.....	15.0g
Plant peptone.....	15.0g
Plant peptone No. 3.....	5.0g
K ₂ HPO ₄	1.0g
Yeast extract.....	1.0g
Ferric ammonium citrate.....	0.5g
Na ₂ S ₂ O ₃	0.08g

pH 6.7 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Streptomyces* species.

ISP2 Medium (DSMZ Medium 987)

Composition per liter:

Agar.....	20.0g
Malt extract.....	10.0g
Yeast extract.....	4.0g
Glucose.....	4.0g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Distribute into tubes or flasks. Gently heat while stirring and bring to boiling. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Pour into Petri dishes or leave in tubes.

Use: For the cultivation of *Streptacidiphilus jiangxiensis*.

ISP 5 Medium (DSMZ Medium 993)

Composition per liter:

Agar	20.0g
Glycerol	10.0g
L-asparagine, anhydrous	1.0g
K ₂ HPO ₄ , anhydrous	1.0g
Trace elements solution	1.0mL
pH 7.2 ± 0.2 at 25°C	

Trace Elements Solution:

Composition per 100.0mL:

FeSO ₄ ·7H ₂ O	0.1g
MnCl ₂ ·4H ₂ O	0.1g
ZnSO ₄ ·7H ₂ O	0.1g

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Distribute into tubes or flasks. Gently heat while stirring and bring to boiling. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Pour into Petri dishes or leave in tubes.

Use: For the cultivation of *Acrocarpospora macrocephala*.

ISP Medium 1 (International *Streptomyces* Project Medium 1) (Tryptone Yeast Extract Broth)

Composition per liter:

Pancreatic digest of casein	5.0g
Yeast extract	3.0g
pH 7.0–7.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Streptomyces* species according to the International *Streptomyces* Project.

ISP Medium 2 (International *Streptomyces* Project Medium 2) (Yeast Extract Malt Extract Agar)

Composition per liter:

Agar	20.0g
Malt extract	10.0g
Yeast extract	4.0g
Glucose	4.0g
pH 7.3 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Streptomyces* species according to the International *Streptomyces* Project.

ISP Medium 2 with 5% Sodium Chloride

Composition per liter:

NaCl	50.0g
Agar	20.0g

Malt extract	10.0g
Glucose	4.0g
Yeast extract	4.0g
pH 7.3–7.5 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Streptomyces* species.

ISP Medium 3 (International *Streptomyces* Project Medium 3) (Oatmeal Agar)

Composition per liter:

Oatmeal	20.0g
Agar	18.0g
Trace salts solution	1.0mL

Trace Salts Solution:

Composition per 100.0mL:

FeSO ₄ ·7H ₂ O	0.1g
MnCl ₂ ·4H ₂ O	0.1g
ZnSO ₄ ·7H ₂ O	0.1g

Preparation of Trace Salts Solution: Add components to distilled/deionized water and bring the volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add oatmeal to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Steam for 20 min. Filter through cheesecloth. Add agar. Add sufficient distilled/deionized water to bring volume to 999.0mL. Gently heat and bring to boiling. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 1.0mL of sterile trace salts solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Streptomyces* species according to the International *Streptomyces* Project.

ISP Medium 4 (International *Streptomyces* Project Medium 4) (Inorganic Salts Starch Agar)

Composition per liter:

Agar	20.0g
Soluble starch	10.0g
CaCO ₃	2.0g
(NH ₄) ₂ SO ₄	2.0g
K ₂ HPO ₄	1.0g
MgSO ₄ ·7H ₂ O	1.0g
NaCl	1.0g
FeSO ₄ ·7H ₂ O	1.0mg
MnCl ₂ ·7H ₂ O	1.0mg
ZnSO ₄ ·7H ₂ O	1.0mg
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling with frequent agitation. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For characterizing *Streptomyces* species. For the cultivation and maintenance of *Actinomadura fastidiosa*, *Actinomadura roseoviolacea*, *Actinomadura* species, *Actinoplanes* species, *Amycolatopsis mediterranei*, *Kitasatosporia grisea*, *Kitasatosporia papulosa*, *Saccharomonospora internatus*, *Streptomyces* species, *Streptosporangium* species, *Saccharomonospora hirsuta*, and *Streptoverticillium* species.

ISP Medium 4 with Glucose
(International Streptomyces Project Medium 4 with Glucose)

Composition per liter:

Agar	20.0g
Glucose	20.0g
Soluble starch.....	10.0g
CaCO ₃	2.0g
(NH ₄) ₂ SO ₄	2.0g
K ₂ HPO ₄	1.0g
MgSO ₄ ·7H ₂ O	1.0g
NaCl	1.0g
FeSO ₄ ·7H ₂ O.....	1.0mg
MnCl ₂ ·7H ₂ O.....	1.0mg
ZnSO ₄ ·7H ₂ O	1.0mg

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling with frequent agitation. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes with swirling or leave in tubes.

Use: For the cultivation and maintenance of *Streptomyces purpureus*.

ISP Medium 4 with Yeast Extract
(International Streptomyces Project Medium 4 with Yeast Extract)

Composition per liter:

Agar	20.0g
Soluble starch.....	10.0g
CaCO ₃	2.0g
(NH ₄) ₂ SO ₄	2.0g
K ₂ HPO ₄	1.0g
MgSO ₄ ·7H ₂ O	1.0g
NaCl	1.0g
Yeast extract.....	1.0g
FeSO ₄ ·7H ₂ O.....	1.0mg
MnCl ₂ ·7H ₂ O.....	1.0mg
ZnSO ₄ ·7H ₂ O	1.0mg

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling with frequent agitation. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes with swirling or leave in tubes.

Use: For the cultivation and maintenance of *Thermomonospora mesouiformis*.

ISP Medium 5
(International Streptomyces Project Medium 5)
(Glycerol Asparagine Agar)

Composition per liter:

Agar	20.0g
Glycerol	10.0g

L-Asparagine	1.0g
K ₂ HPO ₄	1.0g
Trace salts solution	1.0mL
pH 7.4 ± 0.2 at 25°C	

Trace Salts Solution:

Composition per 100.0mL:

FeSO ₄ ·7H ₂ O.....	0.1g
MnCl ₂ ·4H ₂ O	0.1g
ZnSO ₄ ·7H ₂ O	0.1g

Preparation of Trace Salts Solution: Add components to distilled/deionized water and bring the volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except trace salts solution, to distilled/deionized water and bring volume to 999.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 1.0mL of sterile trace salts solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Pseudonocardia* species and *Streptomyces peucetius*.

ISP Medium 6
(International Streptomyces Project Medium 6)
(Peptone Yeast Extract Iron Agar)

Composition per liter:

Agar	15.0g
Peptone	15.0g
Proteose peptone.....	5.0g
K ₂ HPO ₄	1.0g
Yeast extract.....	1.0g
Ferric ammonium citrate.....	0.5g
Na ₂ S ₂ O ₃	0.08g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Streptomyces* species.

ISP Medium 7
See: Tyrosine Agar

ISP Medium 8
See: Nitrate Broth

ISP Medium 9
(International Streptomyces Project Medium 9)

Composition per liter:

K ₂ HPO ₄ ·3H ₂ O	5.65g
(NH ₄) ₂ SO ₄	2.64g
KH ₂ PO ₄	2.38g
MgSO ₄ ·7H ₂ O	1.0g
Carbohydrate solution.....	100.0mL
Pridham and Gottlieb trace salts.....	1.0mL

pH 6.8–7.0 at 25°C

Carbohydrate Solution:

Composition per 100.0mL:

Carbohydrate.....	10.0g
-------------------	-------

Preparation of Carbohydrate Solution: Add carbohydrate to distilled/deionized water and bring volume to 100.0mL. Use glucose, arabinose, sucrose, xylose, inositol, mannitol, fructose, rhamnose, raffinose, or cellulose. Mix thoroughly. Filter sterilize.

Pridham And Gottlieb Trace Salts:

Composition per 100.0mL:

MnCl ₂ ·7H ₂ O.....	0.79g
CuSO ₄ ·5H ₂ O.....	0.64g
ZnSO ₄ ·7H ₂ O.....	0.15g
FeSO ₄ ·7H ₂ O.....	0.11g

Preparation of Pridham and Gottlieb Trace Salts: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components, except carbohydrate solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling with frequent agitation. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile carbohydrate solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and differentiation of *Streptomyces purpureus* and other *Streptomyces* species based on carbohydrate utilization.

ISS1 Medium (DSMZ Medium 889)

Composition per liter:

NaCl.....	20.0g
MgSO ₄ ·7H ₂ O.....	7.0g
MgCl ₂ ·6H ₂ O.....	5.5g
NaHCO ₃	2.0g
KCl.....	0.65g
CaCl ₂ ·2H ₂ O.....	0.5g
NH ₄ Cl.....	0.3g
K ₂ HPO ₄	0.2g
Yeast extract.....	0.2g
NaBr.....	0.1g
Trace elements solution.....	10.0mL

pH 7.0 ± 0.2 at 25°C

Trace Elements Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O.....	3.0g
Nitritotriacetic acid.....	1.5g
NaCl.....	1.0g
MnSO ₄ ·2H ₂ O.....	0.5g
CoSO ₄ ·7H ₂ O.....	0.18g
ZnSO ₄ ·7H ₂ O.....	0.18g
CaCl ₂ ·2H ₂ O.....	0.1g
FeSO ₄ ·7H ₂ O.....	0.1g
NiCl ₂ ·6H ₂ O.....	0.025g
KAl(SO ₄) ₂ ·12H ₂ O.....	0.02g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·4H ₂ O.....	0.01g
CuSO ₄ ·5H ₂ O.....	0.01g
Na ₂ SeO ₃ ·5H ₂ O.....	0.3mg

Preparation of Trace Elements Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0 using H₂SO₄. Distribute into anaerobe tubes or bottles. Autoclave for 15 min at 15 psi pressure–121°C. Provide an atmosphere of 78% H₂ + 20% CO₂ + 2% O₂.

Use: For the cultivation of unclassified bacterium DSM 12045.

ITC Broth See: Irgasan® Ticarcillin Chlorate Broth

ITC HiVeg Broth Base with Ticarcillin and Potassium Chlorate (TTC HiVeg Broth Base)

Composition per liter:

MnCl ₂ ·6H ₂ O.....	60.0g
Plant hydrolysate.....	10.0g
NaCl.....	5.0g
Yeast extract.....	1.0g
Malachite Green.....	0.01g
Irgansan (Trichlosan).....	1.0mg
Ticarcillin solution.....	10.0mL
Potassium chlorate solution	

pH 6.9 ± 0.2 at 25°C

Source: This medium, without ticarcillin and potassium chlorate, is available as a premixed powder from HiMedia.

Ticarcillin Solution:

Composition per 10.0mL:

Ticarcillin.....	1.0mg
------------------	-------

Preparation of Ticarcillin Solution: Add ticarcillin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Potassium Chlorate Solution:

Composition per 10.0mL:

KClO ₃	1.0g
-------------------------	------

Preparation of Potassium Chlorate Solution: Add KClO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Caution: Potassium chlorate is a highly oxidizable agent and can cause explosions. Take proper precautions when handling.

Preparation of Medium: Add components, except ticarcillin and potassium chlorate solutions, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL ticarcillin solution and 10.0mL potassium chlorate solution. Mix thoroughly. Distribute into tubes or flasks.

Use: For the selective isolation and cultivation of *Yersinia* species. For the selective enrichment and enumeration of *Yersinia enterocolitica*.

IUT Medium Base with Glycerol and Egg Emulsion

Composition per 1600.0mL:

L-Asparagine.....	3.6g
KH ₂ PO ₄	2.46g
Magnesium citrate.....	0.6g
Malachite Green.....	0.4g
MgSO ₄ ·7H ₂ O.....	0.24g

Egg emulsion	1.0L
Glycerol	12.0mL
pH 7.0 ± 0.2 at 25°C	

Source: This medium is available from HiMedia.

Egg Emulsion:

Composition per 1.0L:

Eggs	Variable
------------	----------

Preparation of Egg Emulsion: Soak whole eggs with 1:100 dilution of saturated mercuric chloride solution for 1 min. Crack eggs. Beat to form emulsion. Avoiding the formation of air bubbles. Sterilize by inspissation at 85°C for 1 hr.

Preparation of Medium: Add glycerol to distilled/deionized water and bring volume to 600.0mL. Mix thoroughly. Add remaining components other than egg emulsion. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Add sterile whole egg emulsion. Aseptically distribute into culture vessels.

Use: For the cultivation of *Mycobacterium tuberculosis*.

J Agar

Composition per liter:

Agar	20.0g
Yeast extract.....	15.0g
Pancreatic digest of casein.....	5.0g
K ₂ HPO ₄	3.0g
Glucose solution	10.0mL
pH 7.3–7.5 at 25°C	

Glucose Solution:

Composition per 10.0mL:

Glucose	2.0g
---------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except glucose solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile glucose solution. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the cultivation of *Bacillus* species and *Sporolactobacillus* species.

J Broth

Composition per liter:

Yeast extract.....	15.0g
Pancreatic digest of casein.....	5.0g
pH 7.3–7.5 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.3–7.5. Distribute into tubes or flasks. Autoclave for 20 min at 15 psi pressure–121°C.

Use: For the cultivation of *Bacillus* species and *Sporolactobacillus* species for performing the Voges-Proskauer test.

JB Medium with Glucose

Composition per liter:

Yeast extract.....	15.0g
Pancreatic digest of casein.....	5.0g

K ₂ HPO ₄	3.0g
Glucose	2.0g
pH 7.3–7.5 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Bacillus popilliae*.

JD1 Medium

Composition per liter:

Beef heart, solids from infusion.....	25.0g
Agar	15.0g
Peptone	5.0g
NaCl.....	2.5g
Bovine albumin.....	0.5g
Hemin chloride	0.04g
pH 7.8 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of PD-ALS (Pierce's disease–almond leaf scorch) bacteria.

JD3 Medium

Composition per liter:

Pancreatic digest of casein.....	4.0g
Papaic digest of soybean meal.....	2.0g
Trisodium citrate.....	2.0g
K ₂ HPO ₄	1.5g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O.....	1.0g
Disodium succinate.....	0.01g
Bovine serum albumin solution.....	100.0mL
Hemin chloride solution	10.0mL
pH 7.0 ± 0.2 at 25°C	

Bovine Serum Albumin Solution:

Composition per 100.0mL:

Bovine serum albumin fraction V.....	2.0g
--------------------------------------	------

Preparation of Bovine Serum Albumin Solution: Add 2.0g of bovine serum albumin fraction V to 100.0mL of distilled/deionized water. Mix thoroughly. Filter sterilize.

Hemin Chloride Solution:

Composition per 10.0mL:

Hemin chloride	0.01g
----------------------	-------

Preparation of Hemin Chloride Solution: Add 0.01g of hemin chloride to 10.0 mL of 0.5N NaOH. Mix thoroughly.

Preparation of Medium: Add components, except bovine serum albumin solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Adjust to pH 7.0. Autoclave for 20 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 100.0mL of sterile bovine serum albumin solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of ATCC strain 33107.

Jensen's Medium**Composition per liter:**

Sucrose.....	20.0g
Agar.....	15.0g
CaCO ₃	2.0g
K ₂ HPO ₄	1.0g
MgSO ₄ ·7H ₂ O.....	0.5g
NaCl.....	0.5g
FeSO ₄ ·7H ₂ O.....	0.1g
Na ₂ MoO ₄ ·2H ₂ O.....	5.0mg

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the detection and cultivation of nitrogen fixing bacteria.

JO**Composition per liter:**

Agar.....	20.0g
Sucrose.....	6.35g
NaNO ₃	1.5g
Yeast extract.....	0.50g
K ₂ HPO ₄	0.35g
MgSO ₄	0.25g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of fungi with inhibition of *Mucor* species.

Johnson's Marine Medium**Composition per liter:**

Peptone.....	5.0g
Yeast extract.....	1.0g
Na ₂ S ₂ O ₃	0.3g
FeSO ₄ ·7H ₂ O.....	0.2g
Filtered, aged seawater.....	750.0mL

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of marine bacteria.

**Jones–Kendrick
Pertussis Transport Medium****Composition per liter:**

Beef heart, solids from infusion.....	500.0g
Agar.....	20.0g
Soluble starch.....	10.0g
Tryptose.....	10.0g
NaCl.....	5.0g
Charcoal powder, activated.....	4.0g
Yeast extract.....	3.5g
Penicillin solution.....	10.0mL

pH 7.4 ± 0.2 at 25°C

Penicillin Solution:**Composition per 10.0mL:**

Penicillin.....	300U
-----------------	------

Preparation of Penicillin Solution: Add penicillin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except penicillin solution, starch, yeast extract, heart infusion, and agar, to water. Boil to dissolve. Add charcoal, mix well, and autoclave. Cool to 50°C, add penicillin, and dispense into small bottles as slants. Cool and seal tightly. Store at 5°C. Stable for 2 to 3 months.

Use: For the cultivation and transport of *Bordetella pertussis* between clinical isolation and laboratory cultivation.

Jordan's Tartrate Agar**Composition per liter:**

Agar.....	15.0g
Pancreatic digest of casein.....	10.0g
Sodium potassium tartrate.....	10.0g
NaCl.....	5.0g
Phenol Red.....	0.024g

pH 7.7 ± 0.3 at 25°C

Source: This medium is available as a prepared medium in tubes from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.7. Distribute into tubes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the differentiation and identification of members of the Enterobacteriaceae, especially *Salmonella* species, based upon the ability to utilize tartrate. Utilization of tartrate turns the medium yellow. *Salmonella enteritidis* utilizes tartrate. *Salmonella paratyphi A* does not utilize tartrate.

K101 Flexibacter Medium**Composition per liter:**

Agar.....	10.0g
Casamino acids.....	1.0g
Glucose.....	1.0g
Tris(hydroxymethyl)aminomethane buffer.....	1.0g
CaCl ₂	0.1g
KNO ₃	0.1g
MgSO ₄ ·7H ₂ O.....	0.1g
Sodium glycerophosphate.....	0.1g
Thiamine·HCl.....	1.0mg
Cyanocobalamin.....	1.0µg
Trace elements solution HO-LE.....	1.0mL

pH 7.5 ± 0.2 at 25°C

Trace Elements Solution HO-LE:**Composition per liter:**

H ₃ BO ₃	2.85g
MnCl ₂ ·4H ₂ O.....	1.8g
Sodium tartrate.....	1.77g
FeSO ₄ ·7H ₂ O.....	1.36g
CoCl ₂ ·6H ₂ O.....	0.04g
CuCl ₂ ·2H ₂ O.....	0.027g
Na ₂ MoO ₄ ·2H ₂ O.....	0.025g
ZnCl ₂	0.02g

Preparation of Trace Elements Solution HO-LE: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except trace elements solution HO-LE, to distilled/deionized water and bring volume to 999.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 1.0mL of trace elements solution HO-LE. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Cytophaga* species, *Flexibacter* species, *Herpetosiphon geysericola*, and *Myxococcus fulvus*.

K7 Medium (DSMZ Medium 1199)

Composition per liter:

Agar	20.0g
Glucose	1.0g
Yeast extract	1.0g
Peptone	1.0g

pH 5.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 5.5. Distribute into tubes or flasks. Gently heat while stirring and bring to boiling. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Pour into Petri dishes or leave in tubes.

Use: For the cultivation of *Novosphingobium acidiphilum*.

Kado's Agar

Composition per liter:

Agar	15.0g
Sucrose	10.0g
Pancreatic digest of casein	8.0g
Yeast extract	4.0g
K ₂ HPO ₄	2.0g
MgSO ₄ ·7H ₂ O	30.0mg

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Lactococcus lactis* subspecies *hordniae*.

Kanamycin Esculin Azide Agar

Composition per liter:

Pancreatic digest of casein	20.0g
Agar	10.0g
NaCl	5.0g
Yeast extract	5.0g
Esculin	1.0g
Sodium citrate	1.0g
Ferric ammonium citrate	0.5g
NaN ₃	0.15g
Kanamycin sulfate solution	10.0mL

pH 7.0 ± 0.2 at 25°C

Caution: Sodium azide is toxic. Azides also react with metals and disposal must be highly diluted.

Source: This medium is available as a premixed powder from Oxoid Unipath.

Kanamycin Sulfate Solution:

Composition per 10.0mL:

Kanamycin sulfate	20.0mg
-------------------------	--------

Preparation of Kanamycin Sulfate Solution: Add kanamycin sulfate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation of enterococci from foods.

Kanamycin Esculin Azide Broth

Composition per liter:

Pancreatic digest of casein	20.0g
NaCl	5.0g
Yeast extract	5.0g
Esculin	1.0g
Sodium citrate	1.0g
Ferric ammonium citrate	0.5g
NaN ₃	0.15g
Kanamycin sulfate solution	10.0mL

pH 7.0 ± 0.2 at 25°C

Caution: Sodium azide is toxic. Azides also react with metals and disposal must be highly diluted.

Source: This medium is available as a premixed powder from Oxoid Unipath.

Kanamycin Sulfate Solution:

Composition per 10.0mL:

Kanamycin sulfate	0.02g
-------------------------	-------

Preparation of Kanamycin Sulfate Solution: Add kanamycin sulfate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation of enterococci from foods.

Kanamycin Esculin Azide HiVeg Agar

Composition per liter:

Plant hydrolysate	20.0g
Agar	12.0g
NaCl	5.0g
Yeast extract	5.0g
Esculin	1.0g
Sodium citrate	1.0g
Ferric ammonium citrate	0.5g
NaN ₃	0.15g
Kanamycin sulfate	0.02g

pH 7.0 ± 0.2 at 25°C

Caution: Sodium azide is toxic. Azides also react with metals and disposal must be highly diluted.

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation of enterococci from foods.

Kanamycin Esculin Azide HiVeg Agar Base with Kanamycin

Composition per liter:

Plant hydrolysate.....	20.0g
Agar	10.0g
Yeast extract.....	5.0g
NaCl.....	5.0g
Esculin	1.0g
Sodium citrate.....	1.0g
Ferric ammonium citrate.....	0.5g
NaN ₃	0.15g
Kanamycin sulfate solution	10.0mL
pH 7.0 ± 0.2 at 25°C	

Source: This medium, without kanamycin sulfate solution, is available as a premixed powder from HiMedia.

Caution: Sodium azide is toxic. Azides also react with metals and disposal must be highly diluted.

Kanamycin Sulfate Solution:

Composition per 10.0mL:

Kanamycin sulfate	0.02g
-------------------------	-------

Preparation of Kanamycin Sulfate Solution: Add kanamycin sulfate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation of enterococci from foods.

Kanamycin Esculin Azide HiVeg Broth

Composition per liter:

Plant hydrolysate.....	20.0g
NaCl.....	5.0g
Yeast extract.....	5.0g
Esculin	1.0g
Sodium citrate.....	1.0g
Ferric ammonium citrate.....	0.5g
NaN ₃	0.15g
Kanamycin sulfate	0.02g
pH 7.0 ± 0.2 at 25°C	

Caution: Sodium azide is toxic. Azides also react with metals and disposal must be highly diluted.

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of enterococci from foods.

Kanamycin Esculin Azide HiVeg Broth Base with Kanamycin

Composition per liter:

Plant hydrolysate.....	20.0g
NaCl.....	5.0g
Yeast extract.....	5.0g
Esculin	1.0g
Sodium citrate.....	1.0g
Ferric ammonium citrate.....	0.5g
NaN ₃	0.15g
Kanamycin sulfate solution	10.0mL
pH 7.0 ± 0.2 at 25°C	

Caution: Sodium azide is toxic. Azides also react with metals and disposal must be highly diluted.

Source: This medium, without kanamycin sulfate solution, is available as a premixed powder from HiMedia.

Kanamycin Sulfate Solution:

Composition per 10.0mL:

Kanamycin sulfate	0.02g
-------------------------	-------

Preparation of Kanamycin Sulfate Solution: Add kanamycin sulfate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of enterococci from foods.

Kanamycin L Broth Medium

Composition per liter:

Pancreatic digest of casein.....	10.0g
NaCl.....	5.0g
Yeast extract.....	5.0g
Glucose	1.0g
Kanamycin solution.....	10.0mL

Kanamycin Solution:

Composition per 10.0mL:

Kanamycin.....	50.0mg
----------------	--------

Preparation of Kanamycin Solution: Add kanamycin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except kanamycin solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Bring pH to 7.0. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL of sterile kanamycin solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Escherichia coli*.

Kanamycin Luria Agar

Composition per liter:

Agar	15.0g
Pancreatic digest of casein.....	10.0g
Yeast extract.....	5.0g
NaCl.....	0.5g
Glucose solution	20.0mL
Kanamycin solution.....	10.0mL

Glucose Solution:**Composition per 100.0mL:**

Glucose 10.0g

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Kanamycin Solution:**Composition per 10.0mL:**

Kanamycin 10.0mg

Preparation of Kanamycin Solution: Add kanamycin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except glucose solution and kanamycin solution, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Bring pH to 7.0. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 20.0mL of sterile glucose solution and 10.0mL of sterile kanamycin solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Escherichia coli*.

Kanamycin Vancomycin Blood Agar (KVBA)

Composition per liter:

Agar 17.5g

Pancreatic digest of casein 15.0g

Papaic digest of soybean meal 5.0g

NaCl 5.0g

Kanamycin 0.1g

Sheep blood, defibrinated 50.0mL

Vancomycin solution 10.0mL

Vitamin K₁ solution 1.0mL**Vancomycin Solution:****Composition per 10.0mL:**

Vancomycin 7.5mg

Preparation of Vancomycin Solution: Add vancomycin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Vitamin K₁ Solution:**Composition per 100.0mL:**Vitamin K₁ 1.0g

Preparation of Vitamin K₁ Solution: Add vitamin K₁ to 99.0mL of absolute ethanol. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except sheep blood, vancomycin solution, and vitamin K₁ solution, to distilled/deionized water and bring volume to 939.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sheep blood, vancomycin solution, and 1.0mL vitamin K₁ solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation of anaerobes, particularly *Bacteroides*, from clinical specimens.

Kanamycin Vancomycin Laked Blood Agar

Composition per liter:

Agar 17.5g

Pancreatic digest of casein 15.0g

Papaic digest of soybean meal 5.0g

NaCl 5.0g

Kanamycin 0.075g

Sheep blood, laked 50.0mL

Vancomycin solution 10.0mL

Vitamin K₁ solution 1.0mL**Vancomycin Solution:****Composition per 10.0mL:**

Vancomycin 7.5mg

Preparation of Vancomycin Solution: Add vancomycin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Vitamin K₁ Solution:**Composition per 100.0mL:**Vitamin K₁ 1.0g

Preparation of Vitamin K₁ Solution: Add vitamin K₁ to 99.0mL of absolute ethanol. Mix thoroughly. Filter sterilize.

Preparation of Medium: The blood is laked (hemolyzed) by freezing whole blood overnight and then thawing. Add components, except sheep blood, vancomycin solution, and vitamin K₁ solution, to distilled/deionized water and bring volume to 939.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sheep blood, vancomycin solution, and 1.0mL of vitamin K₁ solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For isolation of the *Bacteroides melaninogenicus* group.

Karmali's *Campylobacter* Medium

See: Campylobacter Selective Medium, Karmali's

Kasai Medium

Composition per liter:

Pancreatic digest of casein 20.0g

Soluble starch 20.0g

L-Cysteine-HCl·H₂O 5.0gK₂HPO₄ 5.0g

NaCl 5.0g

Yeast extract 2.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation and cultivation of *Leptotrichia buccalis* from saliva and plaque.

KC Bottom Agar

Composition per liter:

Agar 10.0g

Pancreatic digest of casein 10.0g

KCl 2.5g

NaCl 2.5g

CaCl₂ solution 1.0mL**CaCl₂ Solution:****Composition per 10.0mL:**CaCl₂·2H₂O 1.47g

Preparation of CaCl₂ Solution: Add CaCl₂·2H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except CaCl_2 solution, to distilled/deionized water and bring volume to 999.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 1.0mL of CaCl_2 solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Escherichia coli*.

KC Broth

Composition per liter:

Pancreatic digest of casein.....	10.0g
KCl.....	5.0g
CaCl_2 solution.....	0.5mL

CaCl_2 Solution:

Composition per 10.0mL:

$\text{CaCl}_2 \cdot 2\text{H}_2\text{O}$	1.47g
---	-------

Preparation of CaCl_2 Solution: Add $\text{CaCl}_2 \cdot 2\text{H}_2\text{O}$ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except CaCl_2 solution, to distilled/deionized water and bring volume to 999.5mL. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 0.5mL of CaCl_2 solution. Mix thoroughly. Aseptically distribute into sterile tubes.

Use: For the cultivation of *Escherichia coli*.

KC Top Agar

Composition per liter:

Pancreatic digest of casein.....	10.0g
Agar.....	8.0g
NaCl.....	5.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Escherichia coli*.

KCN Broth

Composition per liter:

Na_2HPO_4	5.64g
NaCl.....	5.0g
Peptone.....	3.0g
KH_2PO_4	0.225g
KCN (0.5% solution).....	15.0mL

pH 7.6 ± 0.2 at 25°C

Caution: Cyanide is toxic.

Preparation of Medium: Add components, except KCN solution, to distilled/deionized water and bring volume to 985.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add KCN solution. Mix thoroughly. Aseptically distribute into sterile tubes. Stopper immediately.

Use: For the differentiation of Enterobacteriaceae based upon growth in the presence of potassium cyanide.

KDM-2 Medium

Composition per liter:

Peptone.....	10.0g
L-Cysteine·HCl.....	1.0g
Yeast extract.....	0.5g
Calf serum.....	100.0mL

pH 6.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Renibacterium salmoninarum*.

Keister's Modified TYI-S-33 Medium

Composition per liter:

Pancreatic digest of casein.....	20.0g
Glucose.....	10.0g
Yeast extract.....	10.0g
L-Cysteine·HCl.....	2.0g
NaCl.....	2.0g
K_2HPO_4	1.0g
Bovine bile.....	0.75g
KH_2PO_4	0.6g
Ascorbic acid.....	0.2g
Ferric ammonium citrate.....	22.8mg
Bovine serum, heat inactivated.....	100.0mL

Preparation of Medium: Add components, except bovine serum, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 1.0L of sterile, heat-inactivated bovine serum. Mix thoroughly. Aseptically distribute into sterile, screw-capped tubes or flasks.

Use: For the cultivation of *Giardia cati*, *Giardia intestinalis*, and *Hexamita* species.

Kelly Medium, Nonselective Modified

Composition per 1430.0mL:

HEPES buffer (<i>N</i> -2-hydroxyethylpiperazine- <i>N</i> -2-ethanesulfonic acid).....	6.0g
Proteose peptone No. 2.....	5.0g
D-Glucose.....	3.0g
NaHCO_3	2.2g
Pancreatic digest of casein.....	1.0g
Yeast, autolyzed.....	1.0g
Sodium pyruvate.....	0.8g
Sodium citrate.....	0.7g
<i>N</i> -Acetylglucosamine.....	0.4g
$\text{MgCl}_2 \cdot 6\text{H}_2\text{O}$	0.3g
Gelatin solution.....	200.0mL
Bovine serum albumin solution.....	143.0mL
CMRL-1066 medium with glutamine, 10X.....	100.0mL
Rabbit serum, heat inactivated.....	86.0mL
Hemin solution.....	1.0mL

pH 7.2 ± 0.2 at 25°C

CMRL-1066 Medium with Glutamine, 10X:

Composition per liter:

NaCl.....	6.8g
NaHCO_3	2.2g
D-Glucose.....	1.0g
KCl.....	0.4g
L-Cysteine·HCl· H_2O	0.26g

CaCl ₂ , anhydrous	0.2g

p-Aminobenzoic acid	0.05mg
Niacin	0.025mg
Niacinamide	0.025mg
Pyridoxine	0.025mg
Pyridoxal·HCl	0.025mg
Biotin	0.01mg
D-Calcium pantothenate	0.01mg
Folic acid	0.01mg
Riboflavin	0.01mg
Thiamine·HCl	0.01mg

pH 7.2 ± 0.2 at 25°C

Source: This solution is available as a premixed powder from BD Diagnostics.

Preparation of CMRL-1066 Medium with Glutamine, 10X: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Filter sterilize.

Gelatin Solution:**Composition per 200.0mL:**

Gelatin..... 14.0g

Preparation of Gelatin Solution: Add gelatin to distilled/deionized water and bring volume to 200.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C.

Hemin Solution:**Composition per 100.0mL:**

Hemin..... 1.0g

NaOH (1N solution)..... 20.0mL

Preparation of Hemin Solution: Add hemin to 20.0mL of 1N NaOH solution. Mix thoroughly. Bring volume to 100.0mL with distilled/deionized water.

Bovine Serum Albumin Solution:**Composition per 200.0mL:**

Bovine serum albumin..... 70.0g

Preparation of Bovine Serum Albumin Solution: Add bovine serum albumin to distilled/deionized water and bring volume to 200.0mL. Filter sterilize.

Preparation of Medium: Add components, except gelatin solution, bovine serum albumin solution, and rabbit serum, to distilled/deionized water and bring volume to 1001.0mL. Mix thoroughly. Bring pH to 7.6 with 5N NaOH. Filter sterilize. Aseptically add 200.0mL of sterile gelatin solution, 143.0mL of sterile bovine serum albumin, and 86.0mL of sterile heat-inactivated rabbit serum. Mix thoroughly. Aseptically dispense into sterile tubes or flasks.

Use: For the isolation of *Borrelia burgdorferi* and other spirochetes.

Kelly Medium, Selective Modified**Composition per 1270.0mL:**

Bovine serum albumin fraction V..... 50.0g

HEPES buffer (N-2-hydroxyethylpiperazine-N-2-ethanesulfonic acid)..... 6.0g

Glucose..... 5.0g

Neopeptone..... 5.0g

NaHCO₃..... 2.2g

Sodium pyruvate..... 0.8g

Sodium citrate..... 0.7g

N-Acetylglucosamine..... 0.4g

Kanamycin..... 8.0mg

5-Fluorouracil..... 2.3mg

Gelatin solution..... 200.0mL

CMRL-1066 medium with glutamine, 10X..... 100.0mL

Rabbit serum, partially hemolyzed..... 70.0mL

pH 7.7 ± 0.2 at 25°C

Gelatin Solution:**Composition per 200.0mL:**

Gelatin..... 14.0g

Preparation of Gelatin Solution: Add gelatin to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C.

CMRL-1066 Medium with Glutamine, 10X:**Composition per liter:**

pH 7.2 ± 0.2 at 25°C

Source: This solution is available as a premixed powder from BD Diagnostics.

Preparation of CMRL-1066 Medium with Glutamine, 10X:

Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Filter sterilize.

Preparation of Medium: Add components, except gelatin solution, partially hemolyzed rabbit serum, kanamycin, and 5-fluorouracil, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Bring pH to 7.6 with 5N NaOH. Filter sterilize. Aseptically add 200.0mL of sterile gelatin solution, 70.0mL of partially hemolyzed rabbit serum, 8.0mg of kanamycin, and 230.0mg of 5-fluorouracil. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the isolation of *Borrelia burgdorferi*.

Kempler–McKay Agar

See: **KM Agar**

Kenknight and Munaier's Medium

Composition per liter:

Agar	15.0g
Glucose	1.0g
K ₂ HPO ₄	0.1g
NaNO ₃	0.1g
KCl	0.1g
MgSO ₄ ·7H ₂ O	0.1g

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For isolating *Actinomyces* spp. from soil.

Kerosene Mineral Salts Medium

Composition per liter:

KH ₂ PO ₄	1.0g
K ₂ HPO ₄	1.0g
NH ₄ NO ₃	1.0g
MgSO ₄ ·7H ₂ O	0.2g
CaCl ₂	0.02g
FeCl ₃	0.05g
Kerosene	20.0mL

pH 6.9–7.0 at 25°C

Preparation of Medium: Add components, except kerosene, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.9–7.0 with dilute NaOH. Distribute into tubes in 10.0mL volumes or flasks in 100.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Overlay tubes with 0.2mL of kerosene per tube. Overlay flasks with 2.0mL of kerosene per flask.

Use: For the cultivation and maintenance of *Pseudomonas aeruginosa*.

Ketogluconate Broth

Composition per liter:

Potassium gluconate	20.0g
KH ₂ PO ₄	5.4g
KNO ₃	2.0g

pH 6.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Aseptically distribute into sterile tubes.

Use: For use in identifying bacteria that can utilize 2-ketogluconate.

Ketolactonate Broth

Composition per liter:

Agar	20.0g
Lactose	10.0g
Yeast extract.....	10.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For use in the identification of agrobacteria and other bacteria based upon production of 3-ketogluconate. After incubation, Benedict's solution is added to the plates. Yellow zones around colonies indicate positive production of 3-ketogluconate.

KF Streptococcal Agar Base with Triphenyltetrazolium Chloride

Composition per liter:

Agar	15.0g
Maltose.....	20.0g
Plant special peptone	10.0g
Sodium glycerophosphate.....	10.0g
Yeast extract.....	10.0g
NaCl	5.0g
Lactose	1.0g
NaN ₃	0.4g
Bromcresol Purple	0.018g
2,3,5-Triphenyltetrazolium chloride solution.....	10.0mL
pH 7.2 ± 0.2 at 25°C	

Caution: Sodium azide is toxic. Azides also react with metals and disposal must be highly diluted.

2,3,5-Triphenyltetrazolium Chloride Solution:

Composition per 10.0mL:

2,3,5-Triphenyltetrazolium chloride	0.1g
---	------

Preparation of 2,3,5-Triphenyltetrazolium Chloride Solution: Add 2,3,5-triphenyltetrazolium chloride to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except 2,3,5-triphenyltetrazolium chloride solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 10 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 2,3,5-triphenyltetrazolium chloride solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the detection and enumeration of fecal streptococci in waters and examination of feces and other materials.

KF Streptococcal HiVeg Agar Base

Composition per liter:

Agar	20.0g
Maltose.....	20.0g
Plant special peptone	10.0g
Sodium glycerophosphate.....	10.0g
Yeast extract.....	10.0g

NaCl.....	5.0g
Lactose.....	1.0g
NaN ₃	0.4g
2,3,5-Triphenyltetrazolium chloride solution	10.0mL
pH 7.2 ± 0.2 at 25°C	

Source: This medium, without 2,3,5-triphenyltetrazolium chloride solution, is available as a premixed powder from HiMedia.

Caution: Sodium azide is toxic. Azides also react with metals and disposal must be highly diluted.

2,3,5-Triphenyltetrazolium Chloride Solution:

Composition per 10.0mL:

2,3,5-Triphenyltetrazolium chloride.....	0.1g
--	------

Preparation of 2,3,5-Triphenyltetrazolium Chloride Solution: Add 2,3,5-triphenyltetrazolium chloride to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except 2,3,5-triphenyltetrazolium chloride solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 10 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 2,3,5-triphenyltetrazolium chloride solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the detection and enumeration of fecal streptococci in waters and examination of feces and other materials.

KF Streptococcal HiVeg Broth Base with BCP and Triphenyltetrazolium Chloride

Composition per liter:

Maltose	20.0g
Proteose peptone	10.0g
Sodium glycerophosphate.....	10.0g
Yeast extract.....	10.0g
NaCl.....	5.0g
Lactose.....	1.0g
Na ₂ CO ₃	0.636g
NaN ₃	0.4g
Bromcresol Purple	0.018g
2,3,5-Triphenyltetrazolium chloride solution	10.0mL
pH 7.2 ± 0.2 at 25°C	

Source: This medium, without 2,3,5-triphenyltetrazolium chloride solution, is available as a premixed powder from HiMedia.

Caution: Sodium azide is toxic. Azides also react with metals and disposal must be highly diluted.

2,3,5-Triphenyltetrazolium Chloride Solution:

Composition per 10.0mL:

2,3,5-Triphenyltetrazolium chloride.....	0.1g
--	------

Preparation of 2,3,5-Triphenyltetrazolium Chloride Solution: Add 2,3,5-triphenyltetrazolium chloride to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except 2,3,5-triphenyltetrazolium chloride solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 10 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 2,3,5-triphenyltetrazolium chloride solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the selective cultivation of fecal streptococci.

KF Streptococcal HiVeg Broth Base with Triphenyltetrazolium Chloride

Composition per liter:

Maltose.....	20.0g
Plant special peptone	10.0g
Sodium glycerophosphate.....	10.0g
Yeast extract.....	10.0g
NaCl.....	5.0g
Lactose.....	1.0g
Na ₂ CO ₃	0.636g
NaN ₃	0.4g
Phenol Red.....	0.018g
2,3,5-Triphenyltetrazolium chloride solution	10.0mL

pH 7.2 ± 0.2 at 25°C

Source: This medium, without 2,3,5-Triphenyltetrazolium chloride solution, is available as a premixed powder from HiMedia.

Caution: Sodium azide is toxic. Azides also react with metals and disposal must be highly diluted.

2,3,5-Triphenyltetrazolium Chloride Solution:

Composition per 10.0mL:

2,3,5-Triphenyltetrazolium chloride	0.1g
---	------

Preparation of 2,3,5-Triphenyltetrazolium Chloride Solution: Add 2,3,5-triphenyltetrazolium chloride to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except 2,3,5-triphenyltetrazolium chloride solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 10 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 2,3,5-triphenyltetrazolium chloride solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the selective cultivation of fecal streptococci.

KF Streptococcus Agar

Composition per liter:

Agar.....	20.0g
Maltose.....	20.0g
Proteose peptone	10.0g

KG Agar

See: **Kim-Goepfert Agar**

KG HiVeg Agar Base

Composition per liter:

Agar	18.0g
Plant peptone	1.0g
Yeast extract	0.5g
Phenol Red	0.025g
Egg yolk emulsion, 50%	100.0mL
Polymyxin B solution	1.0mL

pH 6.8 ± 0.2 at 25°C

Source: This medium, without egg yolk emulsion and polymyxin B solution, is available as a premixed powder from HiMedia.

Egg Yolk Emulsion, 50%:

Composition per 100.0mL:

Chicken egg yolks	11
Whole chicken egg	1
NaCl (0.9% solution)	50.0mL

Preparation of Egg Yolk Emulsion, 50%: Soak eggs with 1:100 dilution of saturated mercuric chloride solution for 1 min. Crack eggs and separate yolks from whites. Mix egg yolks with 1 chicken egg. Beat to form emulsion. Measure 50.0mL of egg yolk emulsion and add to 50.0mL of 0.9% NaCl solution. Mix thoroughly. Filter sterilize. Warm to 45°–50°C.

Polymyxin B Solution:

Composition per 5.0mL:

Polymyxin B sulfate	500,000U
---------------------------	----------

Preparation of Polymyxin B Solution: Add polymyxin B sulfate to distilled/deionized water and bring volume to 5.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except egg yolk emulsion and polymyxin B solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Adjust pH to 6.8. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 100.0mL of sterile egg yolk emulsion, 50%, and 1.0mL of sterile polymyxin B solution. Mix thoroughly. Pour into sterile Petri dishes. Allow plates to dry in the dark at 30°C for 24 hr before using.

Use: For the cultivation and differentiation of *Bacillus cereus*.

Kidney Bean Agar

Composition per liter:

Kidney beans, dry	30.0g
Agar	15.0g

Preparation of Medium: Add dry kidney beans to distilled/deionized water and bring volume to 1.0L. Autoclave for 30 min at 15 psi pressure–121°C. Filter solids through cheesecloth. Add agar to filtrate. Mix thoroughly. Bring volume to 1.0L with distilled/deionized water. Gently heat and bring to boiling. Distribute into tubes or flasks. Auto-

clave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Conidiobolus stromoi-deus*, *Phialophora gregata*, *Phytophthora cactorum*, *Phytophthora cryptogea*, *Phytophthora erythroseptica*, *Phytophthora fragariae*, *Phytophthora heveae*, and *Phytophthora syringae*.

Kievskaya Agar (Medium K)

Composition per liter:

Agar	15.0g
KNO ₃	1.0g
KH ₂ PO ₄	1.0g
K ₂ HPO ₄	1.0g
NaCl	1.0g
MgSO ₄	0.2g
CaCl ₂	0.02g
FeCl ₃	1.0mg

pH 6.8–7.0 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 30 min at 3 psi pressure–105°C. Pour into sterile Petri dishes or leave in tubes. After inoculation, incubate in an atmosphere of natural gas.

Use: For the cultivation of *Rhodococcus luteus*, *Rhodococcus rhodochrous*, *Rhodococcus ruber*, *Rhodococcus* species, and other bacteria that can grow on natural gas.

Kievskaya Broth (Medium K)

Composition per liter:

KNO ₃	1.0g
KH ₂ PO ₄	1.0g
K ₂ HPO ₄	1.0g
NaCl	1.0g
MgSO ₄	0.2g
CaCl ₂	0.02g
FeCl ₃	1.0mg

pH 6.8–7.0 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 30 min at 15 psi pressure–121°C. After inoculation, sparge medium with natural gas.

Use: For the cultivation of *Rhodococcus luteus*, *Rhodococcus rhodochrous*, *Rhodococcus ruber*, *Rhodococcus* species, and other bacteria that can grow on natural gas.

Kievskaya Broth with *n*-Hexadecane

Composition per liter:

KNO ₃	1.0g
KH ₂ PO ₄	1.0g
K ₂ HPO ₄	1.0g
NaCl	1.0g
MgSO ₄	0.2g
CaCl ₂	0.02g
FeCl ₃	1.0mg
<i>n</i> -Hexadecane	10.0mL

pH 6.8–7.0 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Gordona terrae*, *Rhodococcus erythropolis*, *Rhodococcus luteus*, and *Rhodococcus maris*.

Kim-Goepfert Agar (KG Agar)

Composition per 1001.0mL:

Solution A	900.0mL
Egg yolk emulsion, 50%	100.0mL
Polymyxin B solution	1.0mL
pH 6.8 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Solution A:

Composition per 900.0mL:

Agar	18.0g
Peptone.....	1.0g
Yeast extract.....	0.5g
Phenol Red.....	0.025g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Adjust pH to 6.8. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Egg Yolk Emulsion, 50%:

Composition per 100.0mL:

Chicken egg yolks.....	11
Whole chicken egg.....	1
NaCl (0.9% solution).....	50.0mL

Preparation of Egg Yolk Emulsion, 50%: Soak eggs with 1:100 dilution of saturated mercuric chloride solution for 1 min. Crack eggs and separate yolks from whites. Mix egg yolks with 1 chicken egg. Beat to form emulsion. Measure 50.0mL of egg yolk emulsion and add to 50.0mL of 0.9% NaCl solution. Mix thoroughly. Filter sterilize. Warm to 45°–50°C.

Polymyxin B Solution:

Composition per 5.0mL:

Polymyxin B sulfate.....	500,000U
--------------------------	----------

Preparation of Polymyxin B Solution: Add polymyxin B to distilled/deionized water and bring volume to 5.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: To 900.0mL of cooled, sterile solution A, aseptically add 100.0mL of sterile egg yolk emulsion, 50%, and 1.0mL of sterile polymyxin B solution. Mix thoroughly. Pour into sterile Petri dishes. Allow plates to dry in the dark at 30°C for 24 hr before using.

Use: For the cultivation and differentiation of *Bacillus cereus*.

Kimmig's Agar

Composition per liter:

Agar	15.0g
Glucose	10.0g
Pancreatic digest of gelatin	9.5g
Beef extract	5.5g
NaCl.....	5.0g
Peptone.....	5.0g
Glycerol	5.0mL
pH 6.9 ± 0.2 at 35°C	

Preparation of Medium: Add glycerol and then other components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the assay of fungistatic agents. For agar dilution testing of antifungal agents. For the cultivation and preservation of various fungi.

Kimmig Fungi HiVeg Agar Base with Kimmig Supplement

Composition per liter:

Glucose	19.0g
Plant peptone	15.0g
Agar	15.0g
NaCl.....	1.0g
Cycloheximide.....	0.4g
Kimmig selective supplement.....	10.0mL
Glycerol	5.0mL
pH 6.9 ± 0.2 at 35°C	

Source: This medium, without glycerol or Kimmig selective supplement, is available as a premixed powder from HiMedia.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Kimmig Selective Supplement:

Composition per 10.0mL:

Novobiocin	200.0mg
Colistin sulfate.....	80.0mg

Preparation of Kimmig Selective Supplement: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add glycerol and then other components, except Kimmig selective supplement, to distilled/deionized water and bring volume to 990.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 10.0mL sterile Kimmig selective supplement. Mix thoroughly. Pour into sterile Petri dishes or leave in tubes.

Use: For the assay of fungistatic agents. For agar dilution testing of antifungal agents. For the cultivation and preservation of various fungi.

Kimmig Fungi HiVeg Agar Base with George Kimmig Supplement

Composition per liter:

Glucose	19.0g
Plant peptone	15.0g
Agar	15.0g
NaCl.....	1.0g
Cycloheximide.....	0.4g
George Kimmig selective supplement.....	10.0mL
Glycerol	5.0mL
pH 6.9 ± 0.2 at 35°C	

Source: This medium, without glycerol or George Kimmig selective supplement, is available as a premixed powder from HiMedia.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

George Kimmig Selective Supplement:

Composition per 10.0mL:

Penicillin G.....	40,000U
Streptomycin.....	40,000U

Preparation of George Kimmig Selective Supplement: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add glycerol and then other components, except George Kimmig selective supplement, to distilled/deionized water and bring volume to 990.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 10.0mL sterile George Kimmig selective supplement. Mix thoroughly. Pour into sterile Petri dishes or leave in tubes.

Use: For the assay of fungistatic agents. For agar dilution testing of antifungal agents. For the cultivation and preservation of various fungi.

King's Medium A

Composition per liter:

Proteose peptone	20.0g
Agar	15.0g
Glycerol	10.0g
K ₂ SO ₄	10.0g
MgCl ₂ ·6H ₂ O.....	3.5g

pH 7.2–7.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the nonselective isolation, cultivation, and pigment production of *Pseudomonas*.

King's Medium B

Composition per liter:

Agar	20.0g
Proteose peptone No. 3	20.0g
K ₂ HPO ₄ , anhydrous	1.5g
MgSO ₄ ·7H ₂ O	1.5g
Glycerol	15.0mL

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the nonselective isolation, cultivation, and pigment production of *Pseudomonas* species.

King's Medium B

Composition per liter:

Proteose peptone No. 3	20.0g
Agar	15.0g
K ₂ HPO ₄	1.5g
MgSO ₄ ·7H ₂ O	1.5g
Glycerol	10.0mL

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Pseudomonas glumae*.

King's OF Basal Medium (Oxidation-Fermentation Medium, King's) (King's OF Medium) (BAM M70)

Composition per liter:

Agar	3.0g
Pancreatic digest of casein.....	2.0g
Carbohydrate solution.....	100.0mL
Phenol Red (1.5% solution).....	2.0mL

pH to 7.3 ± 0.2

Carbohydrate Solution:

Composition per 100.0mL:

Carbohydrate.....	10.0g
-------------------	-------

Preparation of Carbohydrate Solution: Add carbohydrate to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except carbohydrate solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 100.0mL of sterile carbohydrate solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For differentiating bacteria based upon determining the oxidative and fermentative metabolism of carbohydrates. Bacteria that ferment the carbohydrate turn the medium yellow.

King's OF HiVeg Medium Base with Carbohydrate

Composition per liter:

Agar	0.3g
Plant hydrolysate	0.2g
Phenol Red.....	3.0mg
Carbohydrate solution.....	100.0mL

pH 6.9 ± 0.2 at 35°C

Source: This medium, without carbohydrate solution, is available as a premixed powder from HiMedia.

Carbohydrate Solution:

Composition per 100.0mL:

Carbohydrate.....	10.0g
-------------------	-------

Preparation of Carbohydrate Solution: Add carbohydrate to distilled/deionized water and bring volume to 100.0mL. Adonitol, arabinose, cellobiose, glucose, dulcitol, fructose, galactose, inositol, lactose, maltose, mannitol, raffinose, rhamnose, salicin, sorbitol, sucrose, trehalose, xylose, or other carbohydrates may be used. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except carbohydrate solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 100.0mL of sterile carbohydrate solution. Mix thoroughly. Aseptically distribute into tubes.

Use: For studying oxidation fermentation of carbohydrates by *Campylobacter* species.

King's OF Medium

See: Oxidation-Fermentation Medium, King's

Kirchner Enrichment Medium**Composition per liter:**

Na ₂ HPO ₄ ·12H ₂ O	19.0g
Asparagine	5.0g
KH ₂ PO ₄	2.5g
Sodium citrate	2.5g
MgSO ₄	0.6g
Serum	100.0mL
Glycerol	20.0mL
Penicillin solution	10.0mL
Phenol Red (0.4% solution).....	3.0mL

pH 7.4–7.6 at 25°C

Penicillin Solution:**Composition per 10.0mL:**

Penicillin	100,000U
------------------	----------

Preparation of Penicillin Solution: Add penicillin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except serum and penicillin solution, to distilled/deionized water and bring volume to 890.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile serum and penicillin solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and enrichment of *Mycobacterium* species.

Kirchner Medium Base, Modified**Composition per liter:**

L-Asparagine	5.0g
KH ₂ PO ₄	4.0g
Na ₂ HPO ₄	3.0g
Sodium citrate	2.5g
MgSO ₄ ·7H ₂ O	0.6g
Horse serum, sterile inactivated	100.0mL
Selective supplement solution	10.0mL

pH 7.4 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Selective Supplement Solution:**Composition per 10.0mL:**

Penicillin	100,000U
Amphotericin B.....	5.0mg

Preparation of Selective Supplement Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except horse serum and selective supplement solution, to distilled/deionized water and bring volume to 890.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add horse serum and selective supplement solution. Mix thoroughly. Pour into Petri dishes or aseptically distribute into sterile tubes.

Use: For the cultivation of *Mycobacterium tuberculosis*.

K-L Virulence Agar**(Klebs-Loeffler Virulence Agar)****(Elek Agar)****(Corynebacterium diphtheriae Virulence Test Medium)****Composition per 1300.0mL:**

K-L agar base.....	1.0L
Rabbit serum	200.0mL

K ₂ TeO ₃ solution.....	100.0mL
K-L filter strips	100

pH 7.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

K-L Agar Base:**Composition per liter:**

Meat peptone	20.0g
Agar	15.0g
NaCl.....	2.5g

Preparation of K-L Agar Base: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C.

K₂TeO₃ Solution:**Composition per 100.0mL:**

K ₂ TeO ₃	0.3g
---------------------------------------	------

Preparation of K₂TeO₃ Solution: Add K₂TeO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Caution: Potassium tellurite is toxic.

K-L Filter Strips:**Composition:**

Whatman No. 3 filter paper	as needed
Diphtheria toxin solution	10.0mL

Preparation of K-L Strips: Cut Whatman No. 3 filter paper into 1.5cm × 7cm strips. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically dip each strip into a sterile solution containing 1000U of purified diphtheria toxin/mL. Drain off excess liquid.

Preparation of Medium: Filter sterilize rabbit serum. To 1.0L of cooled, sterile K-L agar base, aseptically add sterile rabbit serum and sterile K₂TeO₃ solution. Mix thoroughly. Pour into sterile Petri dishes in 13.0mL volumes. Before the agar solidifies, aseptically add one K-L filter strip across the diameter of the plate. Allow the filter strip to sink to the bottom of the plate or press it down with sterile forceps. Allow the agar to solidify. Dry the surface of the plates by incubating at 35°C with lid of plate ajar for 2 hr.

Use: For *in vitro* toxigenicity testing of *Corynebacterium diphtheriae* by the agar diffusion technique. *Corynebacterium diphtheriae* that produce toxin form white precipitin lines at approximately 45° angles from the culture streak line.

K-L Virulence Agar**(Klebs-Loeffler Virulence Agar)****Composition per 1250.0mL:**

K-L agar base.....	1.0L
K-L enrichment.....	200.0mL
K ₂ TeO ₃ solution.....	50.0mL
K-L filter strips	100

pH 7.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

K-L Agar Base:**Composition per liter:**

Meat peptone	20.0g
Agar	15.0g
NaCl.....	2.5g

Preparation of K-L Agar Base: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C.

K-L Enrichment:

Composition per 200.0mL:

Casamino acids	4.0g
Glycerol	100.0mL
Tween™ 80	100.0mL

Preparation of K-L Enrichment: Combine components. Mix thoroughly. Filter sterilize.

K₂TeO₃ Solution:

Composition per 100.0mL:

K ₂ TeO ₃	1.0g
---------------------------------------	------

Preparation of K₂TeO₃ Solution: Add K₂TeO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Caution: Potassium tellurite is toxic.

K-L Filter Strips:

Composition:

Diphtheria toxin solution	10.0mL
Whatman No. 3 filter paper	as needed

Preparation of K-L Strips: Cut Whatman #3 filter paper into 1.5cm × 7cm strips. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically dip each strip into a sterile solution containing 1000U of purified diphtheria toxin/mL. Drain off excess liquid.

Preparation of Medium: To 1.0L of cooled, sterile K-L agar base, aseptically add sterile K-L enrichment and sterile K₂TeO₃ solution. Mix thoroughly. Pour into sterile Petri dishes in 13.0mL volumes. Before the agar solidifies, aseptically add one K-L filter strip across the diameter of the plate. Allow the filter strip to sink to the bottom of the plate or press it down with sterile forceps. Allow the agar to solidify. Dry the surface of the plates by incubating at 35°C with lid of plate ajar for 2 hr.

Use: For *in vitro* toxigenicity testing of *Corynebacterium diphtheriae* by the agar diffusion technique. *Corynebacterium diphtheriae* that produce toxin form white precipitin lines at approximately 45° angles from the culture streak line.

**Kleb Agar
(m-Kleb Agar)**

Composition per liter:

Agar	15.0g
Proteose peptone No. 3	10.0g
NaCl	5.0g
Adonitol	5.0g
Beef extract	1.0g
Aniline Blue	0.1g
Sodium lauryl sulfate	0.1g
Phenol Red	0.025g
Ethanol (95% solution)	20.0mL
Carbenicillin solution	10.0mL

pH 7.4 ± 0.2 at 25°C

Carbenicillin Solution:

Composition per 10.0mL:

Carbenicillin	0.05g
---------------------	-------

Preparation of Carbenicillin Solution: Add carbenicillin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except ethanol and carbenicillin solution, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 20.0mL of ethanol and 10.0mL of carbenicillin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the enumeration of bacteria from waters.

Klebs-Loeffler Virulence Agar

See: K-L Virulence Agar

**Klebsiella Medium
(m-Klebsiella Medium)**

Composition per 1041.0mL:

Agar	15.0g
Adonitol	4.0g
2X Salt solution	500.0mL
Uric acid solution	200.0mL
Phenol Red solution	10.0mL
Sodium taurocholate solution	30.0mL
Carbenicillin solution	1.0mL

2X Salt Solution:

Composition per liter:

KCl	8.0g
K ₂ HPO ₄	3.0g
NaCl	2.0g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.2g

Preparation of 2X Salt Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Uric Acid Solution:

Composition per 200.0mL:

Uric acid	0.3g
-----------------	------

Preparation of Uric Acid Solution: Dissolve uric acid in a small volume of 1N NaOH. Bring volume to 200.0mL with distilled/deionized water. Adjust pH to 7.1 with 1N HCl. Filter sterilize.

Phenol Red Solution:

Composition per 10.0mL:

Phenol Red	0.1g
------------------	------

Preparation of Phenol Red Solution: Add Phenol Red to sterile distilled/deionized water and bring volume to 10.0mL. Mix thoroughly.

Sodium Taurocholate Solution:

Composition per 30.0mL:

Sodium taurocholate	0.4g
---------------------------	------

Preparation of Sodium Taurocholate Solution: Add sodium taurocholate to sterile distilled/deionized water and bring volume to 30.0mL. Mix thoroughly.

Carbenicillin Solution:

Composition per 1.0mL:

Carbenicillin	5.0mg
---------------------	-------

Preparation of Carbenicillin Solution: Add carbenicillin to distilled/deionized water and bring volume to 1.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add adonitol and agar to 500.0mL of 2X salt solution. Bring volume to 800.0mL with distilled/deionized water. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 200.0mL of uric acid solution, 30.0mL of sodium taurocholate solution, 10.0mL of Phenol Red solution, and 1.0mL of carbenicillin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the enumeration of *Klebsiella* species by the membrane filter method.

***Klebsiella* Selective Agar**

Composition per liter:

Agar	26.0g
DL-Phenylalanine.....	10.0g
L-Ornithine-HCl.....	10.0g
Raffinose	7.0g
Pancreatic digest of casein.....	2.5g
Yeast extract.....	2.5g
K ₂ HPO ₄	2.0g
Phenol Red solution.....	10.0mL
Carbenicillin solution.....	10.0mL

pH 5.6 ± 0.2 at 25°C

Phenol Red Solution:

Composition per 10.0mL:

Phenol Red.....	0.5g
-----------------	------

Preparation of Phenol Red Solution: Add Phenol Red to 50% ethanol and bring volume to 10.0mL. Mix thoroughly.

Carbenicillin Solution:

Composition per 1.0mL:

Carbenicillin.....	5.0mg
--------------------	-------

Preparation of Carbenicillin Solution: Add carbenicillin to distilled/deionized water and bring volume to 1.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except carbenicillin solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL carbenicillin solution. Mix thoroughly. Adjust pH to 5.6–5.7 with sterile 1N HCl. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and identification of *Klebsiella pneumoniae* from clinical specimens.

Kligler Iron Agar

Composition per liter:

Peptone.....	20.0g
Agar	12.0g
Lactose	10.0g
NaCl.....	5.0g
Beef extract.....	3.0g
Yeast extract.....	3.0g
Glucose	1.0g
Ferric citrate.....	0.3g
Na ₂ S ₂ O ₃	0.3g
Phenol Red.....	0.05g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems and Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the differentiation and identification of Enterobacteriaceae based upon sugar fermentation and hydrogen sulfide production. Sugar fermentation is indicated by the medium turning yellow. H₂S production results in the medium turning black.

Kligler Iron Agar

Composition per liter:

Agar	15.0g
Lactose.....	10.0g
Pancreatic digest of casein.....	10.0g
Peptic digest of animal tissue.....	10.0g
NaCl.....	5.0g
Glucose	1.0g
Ferric ammonium citrate.....	0.5g
Na ₂ S ₂ O ₃	0.5g
Phenol Red.....	0.025g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the differentiation and identification of Enterobacteriaceae based upon sugar fermentation and hydrogen sulfide production. Sugar fermentation is indicated by the medium turning yellow. H₂S production results in the medium turning black.

Kligler Iron Agar (FDA M71)

Composition per liter:

Lactose.....	20.0g
Agar	15.0g
Pancreatic digest of casein.....	10.0g
Peptic digest of animal tissue.....	10.0g
NaCl.....	5.0g
Glucose	1.0g
Ferric ammonium citrate.....	0.5g
Na ₂ S ₂ O ₃	0.5g
Phenol Red.....	0.025g

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the differentiation and identification of Enterobacteriaceae based upon sugar fermentation and hydrogen sulfide production. Sugar fermentation is indicated by the medium turning yellow. H₂S production results in the medium turning black.

Kligler Iron Agar (BAM M71)

Composition per liter:

Lactose.....	20.0g
Polypeptone.....	20.0g

Agar	15.0g
Peptic digest of animal tissue.....	10.0g
NaCl	5.0g
Glucose	1.0g
Ferric ammonium citrate.....	0.5g
Na ₂ S ₂ O ₃	0.5g
Phenol Red.....	0.025g

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the differentiation and identification of Enterobacteriaceae based upon sugar fermentation and hydrogen sulfide production. Sugar fermentation is indicated by the medium turning yellow. H₂S production results in the medium turning black.

Kligler Iron Agar with Sodium Chloride (BAM M71)

Composition per liter:

NaCl	25.0g
Lactose	20.0g
Polypeptone	20.0g
Agar	15.0g
Peptic digest of animal tissue.....	10.0g
NaCl	5.0g
Glucose	1.0g
Ferric ammonium citrate.....	0.5g
Na ₂ S ₂ O ₃	0.5g
Phenol Red.....	0.025g

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the differentiation and identification of *Vibrio* spp. based upon sugar fermentation and hydrogen sulfide production. Sugar fermentation is indicated by the medium turning yellow. H₂S production results in the medium turning black.

Kligler Iron HiVeg Agar

Composition per liter:

Plant special peptone	15.0g
Lactose	10.0g
Agar	15.0g
Plant peptone No. 3.....	5.0g
NaCl	5.0g
Plant extract	3.0g
Yeast extract.....	3.0g
Glucose	1.0g
Na ₂ S ₂ O ₃	0.3g
FeSO ₄	0.2g
Phenol Red.....	0.024g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring

to boiling. Distribute into tubes. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the differentiation and identification of Enterobacteriaceae based upon sugar fermentation and hydrogen sulfide production. Sugar fermentation is indicated by the medium turning yellow. H₂S production results in the medium turning black.

Kligler Iron HiVeg Agar, Modified

Composition per liter:

Plant hydrolysate	20.0g
Agar	15.0g
Lactose.....	10.0g
NaCl.....	5.0g
Plant extract	3.0g
Yeast extract.....	3.0g
Glucose, anhydrous.....	1.0g
Na ₂ S ₂ O ₃ ·5H ₂ O.....	0.3g
FeSO ₄	0.2g
Phenol Red.....	0.025g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the differentiation and identification of Enterobacteriaceae based upon sugar fermentation and hydrogen sulfide production. Recommended for identification of *Yersinia enterocolitica*.

KM Agar (Kempler-McKay Agar)

Composition per liter:

Agar	15.0g
Milk, nonfat	10.0g
Glucose	5.0g
Milk protein hydrolysate.....	2.5g
Solution 1	10.0mL
Solution 2.....	10.0mL

pH 6.6 ± 0.2 at 25°C

Solution 1:

Composition per 100.0mL:

K ₃ Fe(CN) ₆	10.0g
--	-------

Caution: Cyanide is toxic.

Preparation of Solution 1: Add K₃Fe(CN)₆ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Solution 2:

Composition per 40.0mL:

Ferric citrate.....	1.0g
Sodium citrate.....	1.0g

Preparation of Solution 2: Add components to distilled/deionized water and bring volume to 40.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except solution 1 and solution 2, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 6.6. Autoclave for 12 min at 10 psi pressure–115°C. Cool to 45°–50°C. Aseptically add sterile solution 1 and solution 2. Mix thoroughly. Pour into

sterile Petri dishes. Allow plates to dry in the dark at 30°C for 24 hr before using.

Use: For the isolation and cultivation of acidogenic microorganisms from foods. For the differentiation of citrate-fermenting lactic bacteria, such as *Lactobacillus lactis* subspecies *diacetylactis*, from the noncitrate-fermenting *Lactobacillus lactis* subspecies *cremoris*.

Knisely Medium for *Bacillus anthracis*

Composition per liter:

Beef heart, solids from infusion.....	500.0g
Agar	15.0g
Pancreatic digest of casein.....	10.0g
NaCl.....	5.0g
EDTA.....	200.0mg
Lysozyme.....	40.0mg
Thallos acetate.....	40.0mg
Polymyxin.....	30,000U

Preparation of Medium: Add components, except EDTA, lysozyme, thallos acetate, and polymyxin, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.3. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile EDTA, lysozyme, thallos acetate, and polymyxin. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Bacillus anthracis*.

Koch's K1 Medium

Composition per liter:

Glucose.....	1.8g
Peptone.....	0.6g
Yeast extract.....	0.4g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of a variety of fungi.

Kohn Two Tube Medium No. 1 Base with Urea

Composition per liter:

Agar.....	16.0g
Peptic digest of animal tissue.....	15.0g
Mannitol.....	10.0g
Beef extract.....	2.0g
Yeast extract.....	2.0g
Glucose.....	1.0g
Phenol Red.....	0.05g
Urea solution.....	25.0mL

pH 7.3 ± 0.2 at 25°C

Source: This medium, without urea solution, is available as a premixed powder from HiMedia.

Urea Solution:

Composition per 100.0mL:

Urea.....	5.0g
-----------	------

Preparation of Urea Solution: Add urea to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring

to boiling. Distribute into tubes. Autoclave for 15 min at 10 psi pressure–115°C. Cool to 60°C. Aseptically add 25mL of sterile urea solution. Mix thoroughly. Allow to solidify as a slant in tubes with a generous butt.

Use: For the identification of Enterobacteriaceae on the basis of glucose and mannitol fermentation and urease production.

Kohn Two Tube Medium No. 2

Composition per liter:

Casein enzymic hydrolysate.....	10.0g
Peptic digest of animal tissue.....	10.0g
Salicin.....	10.0g
Sucrose.....	10.0g
NaCl.....	5.0g
Agar.....	3.0g
Na ₂ HPO ₄	0.09g
Bromthymol Blue.....	0.02g
Na ₂ S ₂ O ₃	0.016g

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes. Autoclave for 15 min at 10 psi pressure–115°C. Allow to solidify in tubes in an upright position.

Use: For the identification of members of Enterobacteriaceae on the basis of sucrose and salicin fermentation, motility, H₂S production, and indole production.

Kohn Two Tube HiVeg Medium No. 1 Base with Urea

Composition per liter:

Agar.....	16.0g
Plant peptone.....	15.0g
Mannitol.....	10.0g
Plant extract.....	2.0g
Yeast extract.....	2.0g
Glucose.....	1.0g
Phenol Red.....	0.05g
Urea solution.....	25.0mL

pH 7.3 ± 0.2 at 25°C

Source: This medium, without urea solution, is available as a premixed powder from HiMedia.

Urea Solution:

Composition per 100.0mL:

Urea.....	5.0g
-----------	------

Preparation of Urea Solution: Add urea to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes. Autoclave for 15 min at 10 psi pressure–115°C. Cool to 60°C. Aseptically add 25.0mL of sterile urea solution. Mix thoroughly. Allow to solidify as a slant in tubes with a generous butt.

Use: For the identification of Enterobacteriaceae on the basis of glucose and mannitol fermentation and urease production.

Kohn Two Tube HiVeg Medium No. 2**Composition per liter:**

Plant hydrolysate.....	10.0g
Plant peptone.....	10.0g
Salicin.....	10.0g
Sucrose.....	10.0g
NaCl.....	5.0g
Agar.....	3.0g
Na ₂ HPO ₄	0.09g
Bromthymol Blue.....	0.02g
Na ₂ S ₂ O ₃	0.016g

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes. Autoclave for 15 min at 10 psi pressure–115°C. Allow to solidify in tubes in an upright position.

Use: For the identification of members of Enterobacteriaceae on the basis of sucrose and salicin fermentation, motility, H₂S production, and indole production.

KoKo Medium**Composition per 1020.0mL:**

K ₂ HPO ₄	1.6g
NaH ₂ PO ₄ ·2H ₂ O.....	1.0g
Peptone, meat.....	1.0g
Pancreatic digest of casein.....	1.0g
Yeast extract.....	1.0g
NH ₄ Cl.....	0.5g
MgSO ₄ ·6H ₂ O.....	0.16g
Resazurin.....	0.5mg
Glucose solution.....	100.0mL
NaHCO ₃ solution.....	10.0mL
CaCl ₂ ·2H ₂ O solution.....	10.0mL
L-Cysteine·HCl·H ₂ O solution.....	10.0mL
Na ₂ S·9H ₂ O solution.....	10.0mL
Trace elements solution SL-4.....	10.0mL
Wolfe's vitamin solution.....	10.0mL

pH 7.0 ± 0.2 at 25°C

Glucose Solution:**Composition per 100.0mL:**

D-Glucose.....	5.0g
----------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

NaHCO₃ Solution:**Composition per 10.0mL:**

NaHCO ₃	1.0g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

CaCl₂ Solution:**Composition per 10.0mL:**

CaCl ₂ ·2H ₂ O.....	0.06g
---	-------

Preparation of CaCl₂ Solution: Add CaCl₂·2H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

L-Cysteine·HCl·H₂O Solution:**Composition per 10.0mL:**

L-Cysteine·HCl·H ₂ O.....	0.3g
--------------------------------------	------

Preparation of L-Cysteine·HCl·H₂O Solution: Add L-cysteine·HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O.....	0.3g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Before use, neutralize to pH 7.0 with sterile HCl.

Trace Elements Solution SL-4:**Composition per liter:**

EDTA.....	0.5g
FeSO ₄ ·7H ₂ O.....	0.2g
Trace elements solution SL-6.....	100.0mL

Trace Elements Solution SL-6:**Composition per liter:**

MnCl ₂ ·4H ₂ O.....	0.5g
H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O.....	0.2g
ZnSO ₄ ·7H ₂ O.....	0.1g
Na ₂ MoO ₄ ·2H ₂ O.....	0.03g
NiCl ₂ ·6H ₂ O.....	0.02g
CuCl ₂ ·2H ₂ O.....	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Trace Elements Solution SL-4: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Wolfe's Vitamin Solution:**Composition per liter:**

Pyridoxine·HCl.....	10.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Lipoic acid.....	5.0mg
Nicotinic acid.....	5.0mg
Riboflavin.....	5.0mg
Thiamine·HCl.....	5.0mg
Calcium DL-pantothenate.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Preparation of Medium: Prepare and dispense medium under 100% N₂. Add components, except glucose solution, NaHCO₃ solution, CaCl₂·2H₂O solution, L-cysteine·HCl·H₂O solution, Na₂S·9H₂O solution, and Wolfe's vitamin solution, to distilled/deionized water and bring volume to 850.0mL. Mix thoroughly. Adjust pH to 7.0. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 100.0mL of sterile glucose solution, 10.0mL of sterile NaHCO₃ solution, 10.0mL of sterile CaCl₂·2H₂O solution, 10.0mL of sterile L-cysteine·HCl·H₂O solution, 10.0mL of sterile Na₂S·9H₂O solution, and 10.0mL of sterile Wolfe's vitamin

solution. Mix thoroughly. The pH should be 7.0. A buffer solution of 1% MOPS from a 10% anaerobic solution at pH 6.9–7.0 may be added aseptically and anaerobically to enhance the buffer capacity of the medium. Aseptically and anaerobically distribute into sterile tubes or bottles.

Use: For the cultivation of *Thermoanaerobacter italicus*.

Korthof Medium

Composition per 1088.0mL:

NaCl.....	1.4g
Na ₂ HPO ₄ ·2H ₂ O.....	0.88g
Peptone.....	0.8g
KH ₂ PO ₄	0.24g
CaCl ₂	0.04g
KCl.....	0.04g
NaHCO ₃	0.02g
Rabbit serum, inactivated.....	80.0mL
Rabbit hemoglobin solution.....	8.0mL
pH 7.2 ± 0.2 at 25°C	

Rabbit Hemoglobin Solution:

Composition per 20.0mL:

Rabbit blood clot.....	10.0mL
------------------------	--------

Preparation of Rabbit Hemoglobin Solution: Add rabbit blood clot to 10.0mL of distilled/deionized water. Lyse the clot by freezing and thawing.

Preparation of Medium: Add components, except rabbit serum and rabbit hemoglobin solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Cool to 25°C. Filter through Whatman #1 filter paper. Distribute into flasks in 100.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 8.0mL of rabbit serum and 0.8mL of rabbit hemoglobin solution to each flask. Mix thoroughly.

Use: For the cultivation of *Leptospira* species.

Korthof Medium, Modified

Composition per liter:

NaCl.....	1.4g
Na ₂ HPO ₄ ·2H ₂ O.....	0.88g
Peptone.....	0.8g
KH ₂ PO ₄	0.24g
CaCl ₂	0.04g
KCl.....	0.04g
NaHCO ₃	0.02g
Rabbit serum, heat inactivated at 56°C.....	100.0mL
pH 7.2–7.6 at 25°C	

Preparation of Medium: Add components, except rabbit serum, to distilled/deionized water and bring volume to 900.0L. Mix thoroughly. Gently heat and bring to boiling. Boil for 20 min. Cool overnight at 4°C. Filter through Whatman #2 filter paper. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–56°C. Aseptically add 100.0mL of rabbit serum. Mix thoroughly.

Use: For the cultivation of *Leptospira* species.

Koser Citrate Broth (BAM M72)

Composition per liter:

Sodium citrate.....	3.0g
NaNH ₄ HPO ₄ ·4H ₂ O.....	1.5g

KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O.....	0.2g
pH 6.7 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the differentiation of *Escherichia coli* and *Enterobacter aerogenes* based on citrate utilization.

Koser Citrate Medium

Composition per liter:

Sodium citrate.....	3.0g
NaNH ₄ HPO ₄ ·4H ₂ O.....	1.5g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O.....	0.2g
pH 6.7 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the differentiation of *Escherichia coli* and *Enterobacter aerogenes* based on citrate utilization.

Kosmachev's Medium

Composition per liter:

Agar.....	15.0g
CaCO ₃	4.0g
KNO ₃	1.0g
(NH ₄) ₂ SO ₄	1.0g
Na ₂ HPO ₄	1.0g
MgSO ₄ ·7H ₂ O.....	0.5g
FeSO ₄ ·7H ₂ O.....	0.01g
Yeast autolysate (30% solution).....	15.0mL

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of *Actinomadura* species, *Actinopolyspora* species, *Excellispora* species, and *Microspora* species.

KPL Medium

Composition per 1141.0mL:

Agar.....	15.0g
Galactose.....	10.0g
Glucose.....	10.0g
Lactic acid whey.....	1.0L
White table wine.....	140.0mL
Tween™ 80.....	1.0mL
pH 5.5 ± 0.2 at 25°C	

Lactic Acid Whey:

Composition per liter:

Skim milk (10% solution).....	1.0L
-------------------------------	------

Preparation of Lactic Acid Whey: Adjust the pH of the skim milk to 5.5 with lactic acid. Gently heat and bring to boiling. Continue boiling for 30 min. Filter through Whatman #1 filter paper.

Preparation of Medium: Combine components, except white table wine. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 5.5. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Filter sterilize white table wine. To cooled, sterile basal medium, aseptically add sterile white table wine. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Lactobacillus kefiranoferens*.

Kracke Blood Culture HiVeg Medium

Composition per liter:

NaCl	49.0g
Glucose	10.0g
Plant peptone No. 3	10.0g
Na ₂ HPO ₄	2.0g
Plant infusion	2.0g
Plant special infusion	1.0g
Sodium citrate	1.0g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of pathogens in cases of bacteremia. The medium is inoculated with blood from a patient. Approximately 10–15mL of blood normally is inoculated into 50mL of medium.

Krainsky's Asparagine Agar

Composition per liter:

Agar	15.0g
Glucose	10.0g
K ₂ HPO ₄	0.5g
L-Asparagine	0.5g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Streptomyces fragmentans*.

KRANEP Agar Base

Composition per liter:

KSCN	25.5g
Agar	18.3g
Sodium pyruvate	8.2g
Pancreatic digest of gelatin	6.1g
LiCl	5.1g
Mannitol	5.1g
Beef extract	3.7g
NaN ₃	0.05g

Cycloheximide	0.041g
Egg yolk emulsion	100.0mL
pH 6.8 ± 0.2 at 25°C	

Caution: Sodium azide is toxic. Azides also react with metals and disposal must be highly diluted.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Source: This medium is available as a premixed powder from Oxoid Unipath.

Egg Yolk Emulsion:

Composition:

Chicken egg yolks	11
Whole chicken egg	1

Preparation of Egg Yolk Emulsion: Soak eggs with 1:100 dilution of saturated mercuric chloride solution for 1 min. Crack eggs and separate yolks from whites. Mix egg yolks with 1 chicken egg.

Preparation of Medium: Add components, except egg yolk emulsion, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 100.0mL of egg yolk emulsion. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and enumeration of staphylococci from foods.

KRANEP HiVeg Agar Base with Egg Yolk Emulsion

Composition per liter:

Potassium thiocyanate	25.5g
Agar	15.0g
Sodium pyruvate	8.2g
LiCl	5.1g
Mannitol	5.1g
Plant peptone	5.0g
NaCl	5.0g
Plant extract	1.5g
Yeast extract	1.5g
NaN ₃	0.05g
Cycloheximide	0.041g
Egg yolk emulsion	100.0mL

pH 6.8 ± 0.2 at 25°C

Source: This medium, without egg yolk emulsion, is available as a premixed powder from HiMedia.

Caution: Sodium azide is toxic. Azides also react with metals and disposal must be highly diluted.

Caution: Lithium Chloride is harmful. Avoid bodily contact and inhalation of vapors. On contact with skin wash with plenty of water immediately.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Egg Yolk Emulsion:

Composition per liter:

Egg yolks	30.0mL
NaCl, 0.9% solution	70.0mL

Preparation of Egg Yolk Emulsion: Soak eggs with 1:100 dilution of saturated mercuric chloride solution for 1 min. Crack 11 eggs and separate yolks from whites. Mix egg yolks. Measure 30.0mL of egg yolk emulsion and add to 70.0mL of 0.9% sterile NaCl solution. Mix thoroughly. Warm to 45°–50°C.

Preparation of Medium: Add components, except egg yolk emulsion, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 100.0mL of egg yolk emulsion. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and enumeration of staphylococci from foods.

Kreb's Yeast Lactate Medium

Composition per liter:

Yeast extract.....	10.0g
Na ₂ HPO ₄ ·2H ₂ O.....	3.0g
KH ₂ PO ₄	1.0g
Sodium lactate solution.....	40.0mL
pH 7.0 ± 0.2 at 25°C	

Sodium Lactate Solution:

Composition per 100.0mL:

Sodium lactate.....	70.0g
---------------------	-------

Preparation of Sodium Lactate Solution: Add sodium lactate to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except sodium lactate solution, to distilled/deionized water and bring volume to 960.0mL. Mix thoroughly. Bring pH to 7.0. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 40.0mL of sterile sodium lactate solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Propionibacterium acidipropionici*, *Propionibacterium freudenreichii*, *Propionibacterium intermedium*, *Propionibacterium jensenii*, *Propionibacterium* species, and *Propionibacterium thoenii*.

Kundrant Agar

Composition per liter:

Agar.....	10.0g
Meat peptone.....	7.8g
Casein peptone.....	7.8g
Starch.....	4.0g
Gelatin.....	4.0g
NaCl.....	3.0g
Yeast extract.....	2.8g
Glucose.....	1.0g
Bromcresol Purple.....	1.6mg
pH 6.8 ± 0.2 at 25°C	

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the qualitative detection of residues from sulfonamides and other antimicrobics in animal-derived foods.

Kunkee Medium

Composition per 1000.88mL:

Pancreatic digest of casein.....	20.0g
Glucose.....	5.0g
Peptone.....	5.0g

Yeast extract.....	5.0g
Filtered tomato juice.....	250.0mL
Ethanol (96% solution).....	176.0mL
Tween™ 80.....	0.5mL
pH 5.5 ± 0.2 at 25°C	

Preparation of Medium: Add components, except ethanol, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes in 5.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add 0.88mL of ethanol solution to each tube containing 5.0mL of medium.

Use: For the cultivation of *Lactobacillus fructivorans*.

Kupferberg Trichomonas Base

Composition per liter:

Pancreatic digest of casein.....	20.0g
L-Cysteine·HCl·H ₂ O.....	1.5g
Agar.....	1.0g
Maltose.....	1.0g
Methylene Blue.....	3.0mg
Bovine serum.....	50.0mL
pH 6.0 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components, except bovine serum, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50.0mL of bovine serum. If desired, additional selectivity can be obtained by aseptically adding 250,000U of penicillin and 1.0g of streptomycin or 1.0g of chloramphenicol. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of the *Trichomonas* species from clinical specimens.

Kupferberg Trichomonas Broth

Composition per liter:

Enzymatic digest of protein.....	20.0g
L-Cysteine·HCl·H ₂ O.....	1.5g
Agar.....	1.0g
Maltose.....	1.0g
Chloramphenicol.....	0.1g
Methylene Blue.....	3.0mg
Bovine serum.....	50.0mL
pH 6.0 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components, except bovine serum, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add bovine serum. If desired, additional selectivity can be obtained by aseptically adding 250,000U penicillin and 1.0g streptomycin or 1.0g chloramphenicol. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of the *Trichomonas* species from clinical specimens.

**Kupferberg *Trichomonas* HiVeg Broth Base
with Serum and Selective Supplement
(*Trichomonas* HiVeg Broth Base, Kupferberg)**

Composition per liter:

Plant hydrolysate.....	20.0g
Agar	1.0g
L-Cysteine-HCl.....	1.5g
Maltose.....	1.0g
Methylene Blue.....	3.0mg
Bovine serum.....	50.0mL
Selective supplement.....	10.0mL

pH 6.0 ± 0.2 at 25°C

Source: This medium, without bovine serum and selective supplement, is available as a premixed powder from HiMedia.

Selective Supplement Solution:**Composition per 10.0mL:**

Penicillin.....	250,000U
-----------------	----------

Preparation of Selective Supplement Solution: Add penicillin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except bovine serum and selective supplement, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50.0mL of bovine serum and 10.0mL selective supplement.

Use: For the cultivation of *Trichomonas* species from clinical specimens.

**Kupferberg *Trichomonas* HiVeg Broth Base
with Serum and Selective Supplement
(*Trichomonas* HiVeg Broth Base, Kupferberg)**

Composition per liter:

Plant hydrolysate.....	20.0g
Agar	1.0g
L-Cysteine-HCl.....	1.5g
Maltose.....	1.0g
Methylene Blue.....	3.0mg
Bovine serum.....	50.0mL
Selective supplement.....	10.0mL

pH 6.0 ± 0.2 at 25°C

Source: This medium, without bovine serum and selective supplement, is available as a premixed powder from HiMedia.

Selective Supplement Solution:**Composition per 10.0mL:**

Streptomycin.....	1.0g
-------------------	------

Preparation of Selective Supplement Solution: Add streptomycin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except bovine serum and selective supplement, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50.0mL of bovine serum and 10.0mL selective supplement.

Use: For the cultivation of *Trichomonas* species from clinical specimens.

**Kupferberg *Trichomonas* HiVeg Broth Base
with Serum and Selective Supplement
(*Trichomonas* HiVeg Broth Base, Kupferberg)**

Composition per liter:

Plant hydrolysate.....	20.0g
Agar	1.0g
L-Cysteine-HCl.....	1.5g
Maltose.....	1.0g
Methylene Blue.....	3.0mg
Bovine serum.....	50.0mL
Selective supplement.....	10.0mL

pH 6.0 ± 0.2 at 25°C

Source: This medium, without bovine serum and selective supplement, is available as a premixed powder from HiMedia.

Selective Supplement Solution:**Composition per 10.0mL:**

Chloramphenicol.....	1.0g
----------------------	------

Preparation of Selective Supplement Solution: Add chloramphenicol to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except bovine serum and selective supplement, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50.0mL of bovine serum and 10.0mL selective supplement.

Use: For the cultivation of *Trichomonas* species from clinical specimens.

***Kushneria aurantia* Medium
(DSMZ Medium 1195)**

Composition per liter:

NaCl.....	78.0g
MgSO ₄ ·7H ₂ O.....	20.3g
MgCl ₂ ·6H ₂ O.....	13.0g
Yeast extract.....	5.0g
KCl.....	2.0g
CaCl ₂ ·2H ₂ O.....	0.33g
NaBr.....	0.23g
NaHCO ₃	0.06g

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.3. Distribute into tubes or flasks. Gently heat while stirring and bring to boiling. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Kushneria aurantia*.

KVBA

See: **Kanamycin Vancomycin Blood Agar**

KYE Agar**Composition per liter:**

Agar.....	15.0g
NaNO ₃	2.5g
KH ₂ PO ₄	1.0g
Yeast extract.....	1.0g
MgSO ₄ ·7H ₂ O.....	0.3g

CaCl ₂ ·6H ₂ O.....	0.15g
NaCl.....	0.1g
FeCl ₃	10.0mg
pH 10.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of a variety of alkaliphilic bacteria.

L Agar (Luria Agar)

Composition per liter:

Agar.....	15.0g
Pancreatic digest of casein.....	10.0g
Yeast extract.....	5.0g
NaCl.....	0.5g
Glucose solution.....	20.0mL
pH 7.0 ± 0.2 at 25°C	

Glucose Solution:

Composition per 100.0mL:

Glucose.....	10.0g
--------------	-------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except glucose solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Bring pH to 7.0. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 20.0mL of sterile glucose solution. Mix thoroughly. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Escherichia coli*.

L Broth (Luria Broth)

Composition per liter:

Pancreatic digest of casein.....	10.0g
NaCl.....	5.0g
Yeast extract.....	5.0g
Glucose.....	1.0g
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Escherichia coli*.

L Broth DAP Thymidine

Composition per liter:

Pancreatic digest of casein.....	10.0g
NaCl.....	5.0g
Yeast extract.....	5.0g
Diaminopimelic acid solution.....	10.0mL
Thymidine solution.....	10.0mL
pH 7.0 ± 0.2 at 25°C	

Diaminopimelic Acid Solution:

Composition per 10.0mL:

Diaminopimelic acid.....	0.1g
--------------------------	------

Preparation of Diaminopimelic Acid Solution: Add diaminopimelic acid to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Thymidine Solution:

Composition per 10.0mL:

Thymidine.....	0.01g
----------------	-------

Preparation of Thymidine Solution: Add thymidine to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except diaminopimelic acid solution and thymidine solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Bring pH to 7.0. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL of sterile diaminopimelic acid solution and 10.0mL of sterile thymidine solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Escherichia coli*.

L Diphasic Blood Agar Medium (ATCC Medium 947)

Composition per 1150.0mL:

Blood agar, diphasic base medium.....	700.0mL
Rabbit blood, defibrinated.....	300.0mL
Locke's solution.....	150.0mL
pH 7.2–7.4 at 25°C	

Blood Agar, Diphasic Base Medium:

Composition per 750.0mL:

Beef.....	25.0g
Agar.....	10.0g
Neopeptone.....	10.0g
NaCl.....	2.5g

Preparation of Blood Agar, Diphasic Base Medium: Trim beef to remove fat. Add 25.0g of lean beef to 250.0mL of distilled/deionized water. Gently heat and bring to boiling. Boil for 2–3 min. Filter through Whatman #2 filter paper. Add agar, neopeptone, and NaCl to filtrate. Bring volume to 750.0mL with distilled/deionized water. Mix thoroughly. Adjust pH to 7.2–7.4. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C.

Locke's Solution:

Composition per liter:

NaCl.....	8.0g
Glucose.....	2.5g
KH ₂ PO ₄	0.3g
CaCl ₂	0.2g
KCl.....	0.2g

Preparation of Locke's Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C.

Preparation of Medium: Aseptically combine 700.0mL of sterile blood agar, diphasic base medium, with 300.0mL of sterile defibrinated rabbit blood warmed to 50°–55°C. Mix thoroughly. Aseptically distribute 5.0mL volumes into 16 × 125mm screw-capped test tubes. Allow to cool in a slanted position. Overlay the agar in each tube with 1.0mL of sterile Locke's solution.

Use: For the cultivation and maintenance of *Trypanosoma* species, *Leishmania donovani*, *Herpetomonas* species, and *Trypanosoma neveuilemairei*.

L Diphasic Blood Agar Medium (ATCC Medium 1011)

Composition per 1150.0mL:

Blood agar, diphasic base medium	700.0mL
Rabbit blood, defibrinated	300.0mL
Locke's solution	150.0mL
pH 7.2–7.4 at 25°C	

Blood Agar, Diphasic Base Medium:

Composition per 750.0mL:

Beef	25.0g
Agar	10.0g
Neopeptone	10.0g
NaCl	2.5g

Preparation of Blood Agar, Diphasic Base Medium: Trim beef to remove fat. Add 25.0g of lean beef to 250.0mL of distilled/deionized water. Gently heat and bring to boiling. Boil for 2–3 min. Filter through Whatman #2 filter paper. Add agar, neopeptone, and NaCl to filtrate. Bring volume to 750.0mL with distilled/deionized water. Mix thoroughly. Adjust pH to 7.2–7.4. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C.

Locke's Solution:

Composition per liter:

NaCl	8.0g
Glucose	2.5g
KH ₂ PO ₄	0.3g
CaCl ₂	0.2g
KCl	0.2g

Preparation of Locke's Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C.

Preparation of Medium: Aseptically combine 700.0mL of sterile blood agar, diphasic base medium, with 300.0mL of sterile defibrinated rabbit blood warmed to 50°–55°C. Mix thoroughly. Aseptically distribute 5.0mL volumes into 16 × 125mm screw-capped test tubes. Allow to cool in a slanted position. Overlay the agar in each tube with 3.0mL of sterile Locke's solution.

Use: For the cultivation and maintenance of *Trypanosoma* species.

L and F Basal Salts, Modified with Heptadecane

Composition per liter:

NH ₄ Cl	2.0g
Na ₂ HPO ₄	0.21g
MgSO ₄ ·7H ₂ O	0.2g
NaH ₂ PO ₄	0.09g
KCl	0.04g
CaCl ₂	0.015g
FeSO ₄ ·7H ₂ O	1.0mg
ZnSO ₄ ·7H ₂ O	0.07mg
H ₃ BO ₃	0.01mg
MnSO ₄ ·5H ₂ O	0.01mg
MoO ₃	0.01mg
CuSO ₄ ·5H ₂ O	5.0μg
Heptadecane	2.0mL
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components, except heptadecane, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute equally into four 250.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 60°C. Filter sterilize heptadecane. To one 250.0mL fraction of basal salts, aseptically add 0.5mL of sterile heptadecane. Pour mixture into a sterile blender. Homogenize slowly to mix heptadecane with basal salts and not to create excess bubbles. Rapidly distribute medium to sterile screw-capped tubes. Chill tubes quickly in an ice pack or in the refrigerator. Allow tubes to solidify in a slanted position.

Use: For the cultivation and maintenance of *Thermoleophilum album* and *Thermoleophilum minutum*.

L Medium (ATCC Medium 167)

Composition per liter:

Agar	20.0g
NaNO ₃	2.0g
Na ₂ HPO ₄	0.21g
MgSO ₄ ·7H ₂ O	0.2g
NaH ₂ PO ₄	0.09g
KCl	0.04g
CaCl ₂	0.015g
FeSO ₄ ·7H ₂ O	1.0mg
Salts solution	1.0mL

Salts Solution:

Composition per 100.0mL:

ZnSO ₄ ·7H ₂ O	7.0mg
H ₃ BO ₃	1.0mg
MnSO ₄ ·5H ₂ O	1.0mg
MoO ₃	1.0mg
CuSO ₄ ·5H ₂ O	0.5mg

Preparation of Salts Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Methylococcus capsulatus* and *Pseudomonas methanica*.

L Medium (ATCC Medium 1154)

Composition per liter:

Pancreatic digest of casein	10.0g
NaCl	5.0g
Yeast extract	5.0g
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Distribute into tubes or flasks. Autoclave for 25 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Escherichia coli*.

L Medium with Ampicillin

Composition per liter:

Pancreatic digest of casein	10.0g
NaCl	5.0g

Yeast extract.....	5.0g
Ampicillin solution	20.0mg
pH 7.0 ± 0.2 at 25°C	

Ampicillin Solution:**Composition per 10.0mL:**

Ampicillin	0.02g
------------------	-------

Preparation of Ampicillin Solution: Add ampicillin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Escherichia coli*.

L Medium with DAP and THY**(L Medium with Diaminopimelic Acid and Thymidine)****Composition per liter:**

Pancreatic digest of casein.....	10.0g
NaCl	5.0g
Yeast extract.....	5.0g
Glucose solution	10.0mL
Diaminopimelic acid solution.....	10.0mL
Thymidine solution.....	10.0mL

pH 7.0 ± 0.2 at 25°C

Glucose Solution:**Composition per 10.0mL:**

D-Glucose	1.0g
-----------------	------

Preparation of Glucose Solution: Add D-glucose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Diaminopimelic Acid Solution:**Composition per 10.0mL:**

DL-Diaminopimelic acid.....	0.1g
-----------------------------	------

Preparation of Diaminopimelic Acid Solution: Add diaminopimelic acid to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Thymidine Solution:**Composition per 10.0mL:**

Thymidine.....	0.02g
----------------	-------

Preparation of Thymidine Solution: Add thymidine to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components—except glucose solution, diaminopimelic acid solution, and thymidine solution—to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.0. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile glucose solution, diaminopimelic acid solution, and thymidine solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Escherichia coli*.

**L Medium with DAP, THY, and AMP
(L Medium with Diaminopimelic
Acid, Thymidine, and Ampicillin)****Composition per liter:**

Pancreatic digest of casein.....	10.0g
NaCl.....	5.0g
Yeast extract.....	5.0g
Diaminopimelic acid solution.....	10.0mL
Thymidine solution.....	10.0mL
Ampicillin solution.....	10.0mL

pH 7.0 ± 0.2 at 25°C

Diaminopimelic Acid Solution:**Composition per 10.0mL:**

DL-Diaminopimelic acid	0.1g
------------------------------	------

Preparation of Diaminopimelic Acid Solution: Add DL-diaminopimelic acid to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Thymidine Solution:**Composition per 10.0mL:**

Thymidine.....	0.04g
----------------	-------

Preparation of Thymidine Solution: Add thymidine to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Ampicillin Solution:**Composition per 10.0mL:**

Ampicillin.....	0.02mg
-----------------	--------

Preparation of Ampicillin Solution: Add ampicillin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components—except ampicillin solution, diaminopimelic acid solution, and thymidine solution—to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.0. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile ampicillin solution, diaminopimelic acid solution, and thymidine solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Escherichia coli*.

L Medium with Diaminopimelic Acid and Thymidine

See: [L Medium with DAP and THY](#)

**L Medium with Diaminopimelic
Acid, Thymidine, and Ampicillin**

See: [L Medium with DAP, THY, and AMP](#)

L Medium with Methanol**Composition per liter:**

Agar	20.0g
NaNO ₃	2.0g
Na ₂ HPO ₄	0.21g
MgSO ₄ ·7H ₂ O.....	0.2g
NaH ₂ PO ₄	0.09g
KCl.....	0.04g
CaCl ₂	0.015g
FeSO ₄ ·7H ₂ O.....	1.0mg
Methanol	20.0mL
Salts solution.....	1.0mL

Salts Solution:**Composition per 100.0mL:**

ZnSO ₄ ·7H ₂ O	7.0mg
H ₃ BO ₃	1.0mg
MnSO ₄ ·5H ₂ O	1.0mg
MoO ₃	1.0mg
CuSO ₄ ·5H ₂ O	0.5mg

Preparation of Salts Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components, except methanol, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Filter sterilize methanol. Aseptically add 20.0mL of sterile methanol to cooled, sterile basal medium. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Methylobacillus glyco-*
genes.

L Medium for *Salmonella***Composition per liter:**

Pancreatic digest of casein	10.0g
NaCl	5.0g
Yeast extract	5.0g
Glucose	1.0g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Salmonella choleraesuis*.

L Medium with Tetracycline**Composition per liter:**

Pancreatic digest of casein	10.0g
NaCl	5.0g
Yeast extract	5.0g
Tetracycline solution	10.0mL

pH 7.0 ± 0.2 at 25°C

Tetracycline Solution:**Composition per 10.0mL:**

Tetracycline	0.02mg
--------------------	--------

Preparation of Tetracycline Solution: Add tetracycline to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except tetracycline solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.0. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile tetracycline solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Escherichia coli*.

L15 Medium, Modified Leibovitz**Composition per liter:**

NaCl	8.0g
DL-Threonine	0.6g

Sodium pyruvate	0.6g
DL-Alanine	0.5g
L-Arginine, free base	0.5g
KCl	0.4g
L-Asparagine-H ₂ O	0.3g
L-Histidine, free base	0.3g
L-Glutamine	0.3g
L-Isoleucine	0.3g
L-Phenylalanine	0.3g
L-Tyrosine	0.3g
DL-Methionine	0.2g
DL-Valine	0.2g

<i>Listeria mono</i> selective supplement I	10.0mL
<i>Listeria mono</i> selective supplement II	10.0mL

pH 7.2 ± 0.2 at 25°C

Source: This medium, without *Listeria mono* enrichment supplement II, *Listeria mono* selective supplement I, and *Listeria mono* selective supplement II, is available as a premixed powder from BioChemika.

Caution: LiCl is harmful. Avoid bodily contact and inhalation of vapors. On contact with skin wash with plenty of water immediately.

Listeria mono Enrichment Supplement II Solution:**Composition** per 10.0mL:

L-phosphatidylinositol 1.0g

Preparation of *Listeria mono* Enrichment Supplement II Solution: Add L-phosphatidylinositol to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Listeria mono Selective Supplement I Solution:**Composition** per 10.0mL:

Polymyxin B sulfate 76,700U

Preparation of *Listeria mono* Selective Supplement I Solution: Add polymyxin B sulfate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Listeria mono Selective Supplement II Solution:**Composition** per 10.0mL:

Ceftazidime 20.0mg

Nalidixic acid, sodium salt 20.0mg

Amphotericin B 10.0mg

Preparation of *Listeria mono* Selective Supplement II Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except *Listeria mono* enrichment supplement II, *Listeria mono* selective supplement I, and *Listeria mono* selective supplement II, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL *Listeria mono* enrichment supplement II, 10.0mL *Listeria mono* selective supplement I, and 10.0mL *Listeria mono* selective supplement II. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective and differential isolation of *Listeria monocytogenes* from clinical and food specimens.

L. mono Confirmatory HiVeg Agar Base**Composition** per liter:

Plant special peptone 30.0g

Agar 12.0g

LiCl 10.0g

B.C. indicator 8.6g

Yeast extract 6.0g

NaCl 5.0g

 α -Methyl-D-mannoside 3.0gNa₂HPO₄, anhydrous 2.5g*Listeria mono* enrichment supplement II 10.0mL*Listeria mono* selective supplement I 10.0mL*Listeria mono* selective supplement II 10.0mL

pH 7.2 ± 0.2 at 25°C

Source: This medium, without *Listeria mono* enrichment supplement II, *Listeria mono* selective supplement I, and *Listeria mono* selective supplement II, is available as a premixed powder from HiMedia.

Caution: LiCl is harmful. Avoid bodily contact and inhalation of vapors. On contact with skin wash with plenty of water immediately.

Listeria mono Enrichment Supplement II Solution:**Composition** per 10.0mL:

L-phosphatidylinositol 1.0g

Preparation of *Listeria mono* Enrichment Supplement II Solution: Add L-phosphatidylinositol to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Listeria mono Selective Supplement I Solution:**Composition** per 10.0mL:

Polymyxin B sulfate 76,700U

Preparation of *Listeria mono* Selective Supplement I Solution: Add polymyxin B sulfate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Listeria mono Selective Supplement II Solution:**Composition** per 10.0mL:

Ceftazidime 20.0mg

Nalidixic acid, sodium salt 20.0mg

Amphotericin B 10.0mg

Preparation of *Listeria mono* Selective Supplement II Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except *Listeria mono* enrichment supplement II, *Listeria mono* selective supplement I, and *Listeria mono* selective supplement II, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL *Listeria mono* enrichment supplement II, 10.0mL *Listeria mono* selective supplement I, and 10.0mL *Listeria mono* selective supplement II. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective and differential isolation of *Listeria monocytogenes* from clinical and food specimens.

L. mono Differential HiVeg Agar Base**Composition** per liter:

Plant peptone No. 1 18.0g

Agar 15.0g

LiCl 10.0g

Yeast extract 10.0g

Plant hydrolysate 6.0g

NaCl 5.0g

Na₂HPO₄, anhydrous 2.5g

Glucose 2.0g

Sodium pyruvate 2.0g

Magnesium glycerophosphate 1.0g

MgSO₄ 0.5g

Chromogenic substrate 0.05g

Listeria mono enrichment supplement II 10.0mL*Listeria mono* selective supplement I 10.0mL*Listeria mono* selective supplement II 10.0mL

pH 7.2 ± 0.2 at 25°C

Source: This medium, without *Listeria mono* enrichment supplement II, *Listeria mono* selective supplement I, and *Listeria mono* selective supplement II, is available as a premixed powder from HiMedia.

Caution: LiCl is harmful. Avoid bodily contact and inhalation of vapors. On contact with skin wash with plenty of water immediately.

Listeria mono Enrichment Supplement II Solution:**Composition** per 10.0mL:

L-phosphatidylinositol 1.0g

Preparation of *Listeria mono* Enrichment Supplement II Solution: Add L-phosphatidylinositol to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Listeria mono Selective Supplement I Solution:**Composition per 10.0mL:**

Polymyxin B sulfate..... 76,700U

Preparation of *Listeria mono* Selective Supplement I Solution: Add polymyxin B sulfate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Listeria mono Selective Supplement II Solution:**Composition per 10.0mL:**

Ceftazidime 20.0mg

Nalidixic acid, sodium salt 20.0mg

Amphotericin B 10.0mg

Preparation of *Listeria mono* Selective Supplement II Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except *Listeria mono* enrichment supplement II, *Listeria mono* selective supplement I, and *Listeria mono* selective supplement II, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL *Listeria mono* enrichment supplement II, 10.0mL *Listeria mono* selective supplement I, and 10.0mL *Listeria mono* selective supplement II. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective and differential isolation of *Listeria monocytogenes* from clinical and food specimens.

L Salts for Thermophiles

See: **Mineral Salts for Thermophiles**

Lab-Lemco Agar**Composition per liter:**

Agar 15.0g

Peptone..... 5.0g

Lab Lemco meat extract 3.0g

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of a variety of heterotrophic microorganisms.

Lab-Lemco Broth**Composition per liter:**

Peptone..... 5.0g

Lab Lemco meat extract 3.0g

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of a variety of heterotrophic microorganisms, including microorganisms from wastewater.

Lachica's Medium

See: **SA Agar, Modified**

Lachica's Medium Base**Composition per liter:**

Beef heart, infusion from 500.0g

Agar 15.0g

Tryptose 10.0g

NaCl..... 5.0g

Amylose Azure 3.0g

Selective supplement solution 10.0mL

pH 7.4 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Selective Supplement Solution:**Composition per 10.0mL:**

Ampicillin..... 10.0mg

Preparation of Selective Supplement Solution: Add ampicillin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except selective supplement solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add selective supplement solution. Mix thoroughly. Pour into Petri dishes or aseptically distribute into sterile tubes.

Use: For the isolation and cultivation of *Aeromonas hydrophila* from foods stored under different temperature conditions.

Lactate Agar**Composition per liter:**

Yeast extract..... 3.0g

K₂HPO₄..... 2.8g

Agar 2.0g

Peptone 2.0g

KH₂PO₄..... 0.52g

Sodium lactate (60% solution)..... 10.0mL

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.2. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Serpens flexibilis*.

Lactate Broth**Composition per liter:**

Yeast extract..... 3.0g

K₂HPO₄..... 2.8g

Peptone 2.0g

KH₂PO₄..... 0.52g

Sodium lactate (60% solution)..... 10.0mL

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.2. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Serpens flexibilis*.

Lactate Seawater Minimal Medium**Composition per liter:**

Tris(hydroxymethyl)aminomethane-HCl	7.88g
Sodium or potassium lactate	2.0g
NH ₄ Cl	1.0g
K ₂ HPO ₄ ·3H ₂ O	0.075g
FeSO ₄ ·7H ₂ O	0.028g
Artificial seawater	500.0mL

pH 7.5 ± 0.2 at 25°C

Artificial Seawater:**Composition per liter:**

MgSO ₄ ·7H ₂ O	24.7g
NaCl	23.4g
CaCl ₂ ·2H ₂ O	2.9g
KCl	1.5g

Preparation of Artificial Seawater: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.5. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of ATCC strains 27134 and 27136.

Lactic Acid Bacteria Broth**Composition per liter:**

Sodium acetate	12.0g
Pancreatic digest of casein	10.0g
Yeast autolysate	5.0g
Glucose	10.0g
Solution A	5.0mL
Solution B	5.0mL

pH 5.1 ± 0.2 at 25°C

Source: Yeast autolysate is available from Oxoid Unipath.

Solution A:**Composition per 100.0mL:**

K ₂ HPO ₄	10.0g
KH ₂ PO ₄	10.0g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Solution B:**Composition per 100.0mL:**

MgSO ₄ ·7H ₂ O	4.0g
FeSO ₄ ·7H ₂ O	0.2g
MnSO ₄ ·H ₂ O	0.2g
NaCl	0.2g

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Lactobacillus malefermentans*.

Lactic Acid Bacteria Medium**Composition per liter:**

Agar	15.0g
Glucose	10.0g
KH ₂ PO ₄	5.0g
Peptone	5.0g

Sodium acetate·3H ₂ O	5.0g
Yeast extract	5.0g
Diammonium hydrogen citrate	2.0g
Tween™ 80	1.0g
Sorbic acid	0.5g
MgSO ₄ ·7H ₂ O	0.5g
MnSO ₄ ·4H ₂ O	0.2g
FeSO ₄ ·7H ₂ O	0.05g

pH 5.3–5.4 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 5.3–5.4. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of lactic acid bacteria from wine.

Lactic Acid Bacteria Selective Agar Base**Composition per liter:**

Casein enzymic hydrolysate	20.0g
Agar	17.0g
Maltose	10.0g
Yeast extract	5.0g
Fructose	5.0g
Glucose	5.0g
Potassium aspartate	2.5g
Potassium glutamate	2.5g
Betaine hydrochloride	2.0g
Diammonium hydrogen citrate	2.0g
MgSO ₄ ·7H ₂ O	2.0g
KH ₂ PO ₄	2.0g
Liver concentrate	1.0g
MnSO ₄ ·2H ₂ O	0.66g
N-acetyl glucosamine	0.5g
Selective supplement solution	20.0mL

pH 5.4 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Selective Supplement Solution:**Composition per 20.0mL:**

2-Phenylethanol	3.0g
Cycloheximide	10.0mg
Polysorbate 80	10.0mL

Preparation of Selective Supplement Solution: Add components to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: Add components, except selective supplement solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add selective supplement solution. Mix thoroughly. Pour into Petri dishes or aseptically distribute into sterile tubes.

Use: For the selective isolation of lactic acid bacteria from beer and brewing processes.

Lactic Agar**Composition per liter:**

Casein enzymic hydrolysate	20.0g
Agar	15.0g

Yeast extract.....	5.0g
Glucose.....	5.0g
Lactose.....	5.0g
Sucrose.....	5.0g
NaCl.....	4.0g
Gelatin.....	2.5g
Sodium acetate.....	1.5g
Ascorbic acid.....	0.5g

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the enumeration and identification of lactic streptococci and lactobacilli by the pour plate method.

Lactic Agar for Yogurt Bacteria, Modified

Composition per liter:

Elliker agar.....	1.0L
Milk solution.....	70.0mL

pH 6.8 ± 0.1 at 25°C

Elliker Agar:

Composition per liter:

Pancreatic digest of casein.....	20.0g
Agar.....	15.0g
Yeast extract.....	10.0g
Gelatin.....	4.0g
Glucose.....	3.0g
Ascorbic acid.....	2.5g
Lactose.....	2.5g
NaCl.....	2.5g
Sodium acetate.....	2.5g
Sucrose.....	2.5g

Preparation of Elliker Agar: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Milk Solution:

Composition per 100.0mL:

Nonfat dry milk solids.....	11.0g
-----------------------------	-------

Preparation of Milk Solution: Add nonfat dry milk solids to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 12 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Preparation of Medium: Add 70.0mL of sterile milk solution to 1.0L of cooled, sterile Elliker agar. Mix thoroughly. Pour into sterile Petri dishes. Allow plates to dry at 28°–30°C for 18–24 hr.

Use: For the cultivation of acidogenic microorganisms, especially *Lactobacillus* species and lactic streptococci, from foods.

Lactic Bacteria Broth

Composition per liter:

Sodium acetate.....	12.0g
Glucose.....	10.0g
Pancreatic digest of casein.....	10.0g
Yeast autolysate.....	5.0g
Solution A.....	5.0mL
Solution B.....	5.0mL

pH 5.1–5.3 at 25°C

Solution A:

Composition per 100.0mL:

K ₂ HPO ₄	10.0g
KH ₂ PO ₄	10.0g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Solution B:

Composition per 100.0mL:

MgSO ₄ ·7H ₂ O.....	4.0g
FeSO ₄	0.2g
MnSO ₄ ·5H ₂ O.....	0.2g
NaCl.....	0.2g

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Lactobacillus buchneri*, *Lactobacillus delbrueckii*, and *Pediococcus damnosus*.

Lactic Bacteria Differential Agar

Composition per liter:

Agar.....	15.0g
Casein enzymic hydrolysate.....	10.0g
Casein acid hydrolysate.....	3.0g
Fructose.....	2.5g
KH ₂ PO ₄	2.5g
Papaic digest of soybean meal.....	1.5g
Yeast extract.....	1.0g
Polysorbate 80.....	1.0g
Bromcresol Green.....	0.055g

pH 7.0 ± 0.2 at 25°C

Source: This medium, without polysorbate 80, is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the differentiation of homofermentative and heterofermentative lactic acid bacteria.

Lactic Bacteria Differential HiVeg Agar

Composition per liter:

Agar.....	15.0g
Plant hydrolysate.....	10.0g
Plant acid hydrolysate.....	3.0g
Fructose.....	2.5g
KH ₂ PO ₄	2.5g
Papaic digest of soybean meal.....	1.5g
Yeast extract.....	1.0g
Bromcresol Green.....	0.055g
Polysorbate 80.....	1.0mL

pH 7.0 ± 0.2 at 25°C

Source: This medium, without polysorbate 80, is available as a pre-mixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 5.3–5.4.

Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the differentiation of homofermentative and heterofermentative lactic acid bacteria.

Lactic Bacteria Differential HiVeg Broth

Composition per liter:

Plant hydrolysate.....	10.0g
Plant acid hydrolysate.....	3.0g
Fructose.....	2.5g
KH ₂ PO ₄	2.5g
Papaic digest of soybean meal.....	1.5g
Yeast extract.....	1.0g
Bromcresol Green.....	0.055g
Polysorbate 80.....	1.0mL
pH 7.0 ± 0.2 at 25°C	

Source: This medium, without polysorbate 80, is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 5.3–5.4. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the differentiation of homofermentative and heterofermentative lactic acid bacteria.

Lactic HiVeg Agar

Composition per liter:

Plant hydrolysate.....	22.5g
Agar.....	15.0g
Glucose.....	5.0g
Lactose.....	5.0g
Sucrose.....	5.0g
Yeast extract.....	5.0g
NaCl.....	4.0g
Sodium acetate.....	1.5g
Ascorbic acid.....	0.5g
pH 6.0 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 5.3–5.4. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the enumeration and identification of lactic streptococci and lactobacilli by the pour plate method.

Lactic Streak Agar

Composition per liter:

Agar.....	15.0g
Sodium carboxymethylcellulose.....	10.0g
Calcium citrate.....	10.0g
Beef extract.....	5.0g
Papaic digest of soybean meal.....	5.0g
Polypeptone™.....	5.0g
Yeast extract.....	5.0g
Lactose.....	1.5g

L-Arginine-HCl.....	1.5g
Bromcresol Purple (0.1% solution).....	20.0mL
pH 6.0 ± 0.1 at 25°C	

Preparation of Medium: Add components—except Bromcresol Purple solution, calcium citrate, and sodium carboxymethylcellulose—to distilled/deionized water and bring volume to 800.0mL. Mix thoroughly. Gently heat and bring to boiling. In a blender, add the calcium citrate and sodium carboxymethylcellulose to 200.0mL of distilled/deionized water. Blend until mixed. Add the 200.0mL of citrate/carboxymethylcellulose solution to the hot agar solution. Mix thoroughly. Adjust pH to 6.0. Distribute into flasks in 100.0mL volumes. Autoclave for 10 min at 10 psi pressure–115°C. Cool to 45°–50°C. Aseptically add 2.0mL of sterile Bromcresol Purple to each flask. Mix thoroughly. Pour into sterile Petri dishes. Allow plates to dry at 37°C for 1 hr before use.

Use: For the differentiation of lactic streptococci. Bacteria that produce acid from lactose appear as yellow colonies.

Lactic Streak HiVeg Agar

Composition per liter:

Agar.....	15.0g
Calcium citrate.....	10.0g
Sodium carboxymethylcellulose.....	10.0g
Plant extract.....	5.0g
Plant peptone.....	5.0g
Papaic digest of soybean meal.....	5.0g
Yeast extract.....	5.0g
L-Arginine hydrochloride.....	1.5g
Lactose.....	1.5g
Bromcresol Purple.....	2.0mg
pH 6.0 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0mL. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 6.0. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the differentiation of lactic streptococci. Bacteria that produce acid from lactose appear as yellow colonies.

Lactobacilli Agar, AOAC (Lactobacilli Agar, Association of Official Analytical Chemists)

Composition per liter:

Milk, peptonized.....	15.0g
Agar.....	10.0g
Glucose.....	10.0g
Yeast extract.....	5.0g
KH ₂ PO ₄	2.0g
Sorbitan monooleate complex.....	1.0g
Tomato juice.....	100.0mL
pH 6.8 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 2–3 min. Distribute into tubes in

10.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Allow tubes to cool in an upright position.

Use: For the cultivation and maintenance of stock cultures of *Lactobacillus casei* ATCC 7469, *Lactobacillus fermentum* ATCC 9338, *Lactobacillus leichmannii* ATCC 4797, and *Lactobacillus viridescens* ATCC 12706 used in the microbiological assay of vitamins.

Lactobacilli Broth, AOAC
(Lactobacilli Broth, Association of
Official Analytical Chemists)

Composition per liter:

Milk, peptonized	15.0g
Glucose	10.0g
Yeast extract	5.0g
KH ₂ PO ₄	2.0g
Sorbitan monooleate complex	1.0g
Tomato juice	100.0mL

pH 6.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 2–3 min. Distribute into tubes in 10.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and preparation of inocula of stock cultures of *Lactobacillus casei* ATCC 7469, *Lactobacillus fermentum* ATCC 9338, *Lactobacillus leichmannii* ATCC 4797, and *Lactobacillus viridescens* ATCC 12706 used in the microbiological assay of vitamins.

Lactobacilli deMan-
Rogosa-Sharpe Broth
See: Lactobacilli MRS Broth

Lactobacilli HiVeg Broth
(Elliker Broth, HiVeg)

Composition per liter:

Plant extract	20.0g
Yeast extract	10.0g
Gelatin	4.0g
Glucose	3.0g
Ascorbic acid	2.5g
Lactose	2.5g
NaCl	2.5g
Sodium acetate	2.5g
Sucrose	2.5g

pH 6.8 ± 0.1 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Lactobacillus* species and lactic streptococci, from foods.

Lactobacilli MRS Broth
(Lactobacilli deMan-Rogosa-Sharpe Broth)

Composition per liter:

Glucose	20.0g
Beef extract	10.0g

Peptone	10.0g
Sodium acetate	5.0g
Yeast extract	5.0g
Ammonium citrate	2.0g
Na ₂ HPO ₄	2.0g
Tween™ 80	1.0g
MgSO ₄ ·7H ₂ O	0.1g
MnSO ₄ ·5H ₂ O	0.05g

pH 6.5 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Lactobacillus* species. Also used for the cultivation and maintenance of *Aerococcus viridans*, *Bifidobacterium coryneforme*, *Lactococcus plantarum*, *Leuconostoc* species, *Pectinatus cerevisiiphilus*, *Pediococcus* species, and *Sporolactobacillus inulinus*.

with Mevalonic Acid

Lactobacilli MRS Broth
See: Pediococcus Medium

Lactobacilli MRS Broth with Cysteine

Composition per liter:

Glucose	20.0g
Beef extract	10.0g
Peptone	10.0g
Sodium acetate	5.0g
Yeast extract	5.0g
L-Cysteine	2.0g
Ammonium citrate	2.0g
Na ₂ HPO ₄	2.0g
Tween™ 80	1.0g
MgSO ₄ ·7H ₂ O	0.1g
MnSO ₄ ·5H ₂ O	0.05g

pH 6.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Lactobacillus* species, including *L. ruminis* and *L. vitulinus*.

Lactobacilli MRS Broth with 0.5% Cysteine
(ATCC 1844)

Composition per liter:

Glucose	20.0g
Beef extract	10.0g
Peptone	10.0g
Sodium acetate	5.0g
Yeast extract	5.0g
L-Cysteine-HCl	5.0g
Ammonium citrate	2.0g

Na ₂ HPO ₄	2.0g
Tween™ 80.....	1.0g
MgSO ₄ ·7H ₂ O.....	0.1g
MnSO ₄ ·5H ₂ O.....	0.05g

pH 6.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Lactobacillus sharpeae*.

Lactobacilli MRS Broth with Ethanol

Composition per liter:

Glucose.....	20.0g
Beef extract.....	10.0g
Peptone.....	10.0g
Sodium acetate.....	5.0g
Yeast extract.....	5.0g
L-Cysteine.....	2.0g
Ammonium citrate.....	2.0g
Na ₂ HPO ₄	2.0g
Tween™ 80.....	1.0g
MgSO ₄ ·7H ₂ O.....	0.1g
MnSO ₄ ·5H ₂ O.....	0.05g
Ethanol (95% solution).....	100.0mL

pH 5.0 ± 0.2 at 25°C

Preparation of Medium: Add components, except ethanol, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Filter sterilize ethanol. Aseptically add 100.0mL of sterile ethanol. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Lactobacillus* species.

Lactobacillus Agar 2

Composition per liter:

Glucose.....	20.0g
Sodium acetate.....	20.0g
Agar.....	15.0g
Tryptic digest of casein.....	10.0g
Yeast extract.....	5.0g
Meat extract.....	2.0g
K ₂ HPO ₄	0.5g
KH ₂ PO ₄	0.5g
MgSO ₄ ·7H ₂ O.....	200.0mg
DL-Mevalonic acid.....	30.0mg
FeSO ₄ ·7H ₂ O.....	10.0mg
MnSO ₄ ·H ₂ O.....	7.5mg
Ethanol.....	40.0mL
Tween™ 80.....	1.0mL

pH 5.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Lactobacillus fructivorans* and *Lactobacillus homiohiochii*.

Lactobacillus bifidus Medium

Composition per liter:

Lactose.....	70.0g
Sodium acetate, anhydrous.....	50.0g
Pancreatic digest of casein.....	10.0g
K ₂ HPO ₄	5.0g
Tween™ 80.....	1.0g
Alanine.....	0.4g
L-Cystine.....	0.4g
Tryptophan.....	0.4g
Asparagine.....	0.2g
Adenine.....	0.02g
Guanine.....	0.02g
Uracil.....	0.02g
Xanthine.....	0.02g
Pyridoxine-HCl.....	2.4mg
Nicotinic acid.....	1.2mg
Calcium pantothenate.....	0.8mg
Riboflavin.....	0.4mg
Thiamine-HCl.....	0.4mg
p-Aminobenzoic acid.....	0.02mg
Folic acid.....	0.02mg
Biotin.....	8.0μg
Ascorbic acid solution.....	100.0mL
Human milk, skimmed.....	20.0mL
Salts B.....	10.0mL

pH 6.8 ± 0.2 at 25°C

Salts B:

Composition per 250.0mL:

MgSO ₄ ·7H ₂ O.....	10.0g
FeSO ₄ ·7H ₂ O.....	0.5g
NaCl.....	0.5g
MnSO ₄ ·2H ₂ O.....	0.337g

Preparation of Salts B: Add components to distilled/deionized water and bring volume to 250.0mL. Mix thoroughly.

Ascorbic Acid Solution:

Composition per 100.0mL:

Ascorbic acid.....	1.0g
--------------------	------

Preparation of Ascorbic Acid Solution: Add ascorbic acid to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Adjust pH to 6.5. Filter sterilize.

Preparation of Medium: Add components, except ascorbic acid solution and human milk, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 100.0mL of sterile ascorbic acid solution. Mix thoroughly. This constitutes a double-strength medium. To prepare a single-strength medium, aseptically combine 500.0mL of sterile double-strength medium, 480.0mL of sterile distilled/deionized water, and 20.0mL of sterile human milk. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Bifidobacterium (Lactobacillus) bifidum*.

Lactobacillus bulgaricus Agar (LB Agar)

Composition per 900.0mL:

Agar.....	20.0g
Glucose.....	20.0g

Beef extract	10.0g
Pancreatic digest of casein	10.0g
Yeast extract	5.0g
K ₂ HPO ₄	2.0g
Tween™ 80	1.0g
Acetate buffer	80.0mL
Tomato juice, filtered	40.0mL

pH 6.8 ± 0.2 at 25°C

Acetate Buffer:**Composition per liter:**

Sodium acetate	113.55g
Acetic acid	10.0mL

Preparation of Acetate Buffer: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components, except acetate buffer, to distilled/deionized water and bring volume to 920.0mL. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 6.8. Add 80.0mL of acetate buffer. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the isolation, cultivation, and enumeration of *Lactobacillus bulgaricus* from foods.

Lactobacillus bulgaricus HiVeg Agar Base with Tomato Juice and Acetate Buffer

Composition per liter:

Agar	20.0g
Glucose	20.0g
Plant extract	10.0g
Plant hydrolysate	10.0g
Yeast extract	5.0g
K ₂ HPO ₄	2.0g
Tomato juice	2.0g
Polysorbate 80	1.0g
Acetate buffer	80.0mL
Tomato juice, filtered	40.0mL

pH 6.8 ± 0.2 at 25°C

Source: This medium, without tomato juice and acetate buffer, is available as a premixed powder from HiMedia.

Acetate Buffer:**Composition per liter:**

Sodium acetate	113.55g
Acetic acid	10.0mL

Preparation of Acetate Buffer: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components, except acetate buffer, to distilled/deionized water and bring volume to 920.0mL. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 6.8. Add 80.0mL of acetate buffer. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the isolation, cultivation, and enumeration of *Lactobacillus bulgaricus* from foods.

Lactobacillus Chloramphenicol Agar 1

Composition per liter:

Milk, peptonized	15.0g
Agar	10.0g
Glucose	10.0g

Yeast extract	5.0g
KH ₂ PO ₄	2.0g
Sorbitan monooleate complex	1.0g
Chloramphenicol	0.3g
Tomato juice	100.0mL

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 2–3 min. Distribute into tubes in 10.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Allow tubes to cool in an upright position.

Use: For the cultivation of *Lactobacillus casei*.

Lactobacillus Chloramphenicol Broth 1

Composition per liter:

Milk, peptonized	15.0g
Glucose	10.0g
Yeast extract	5.0g
KH ₂ PO ₄	2.0g
Sorbitan monooleate complex	1.0g
Chloramphenicol	0.3g
Tomato juice	100.0mL

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 2–3 min. Distribute into tubes in 10.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Lactobacillus casei*.

Lactobacillus Chloramphenicol Medium 2

Composition per liter:

Glucose	18.5g
Agar	13.5g
Pancreatic digest of gelatin	10.0g
Beef extract	8.0g
Yeast extract	4.0g
Sodium acetate	3.0g
K ₂ HPO ₄	2.0g
Ammonium citrate	2.0g
Polysorbate 80	1.0g
MgSO ₄ ·7H ₂ O	0.2g
Chloramphenicol	0.1g
MnSO ₄ ·4H ₂ O	0.05g

pH 6.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Lactobacillus casei* and *Pediococcus acidilactici*.

Lactobacillus Heteroferm Screen Agar (MRS, Modified)

Composition per liter:

Glucose	20.0g
Agar	15.0g
Proteose peptone No. 3	10.0g

Sodium acetate.....	5.0g
Yeast extract.....	5.0g
2-Phenylethyl alcohol.....	3.0g
Ammonium citrate.....	2.0g
K ₂ HPO ₄	2.0g
MgSO ₄ ·7H ₂ O.....	0.1g
MnSO ₄ ·H ₂ O.....	0.05g
Bromocresol Green.....	0.04g
Cycloheximide.....	4.0mg
Tween™ 80.....	1.0mL

pH 5.5 ± 0.01 at 25°C

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Adjust pH to 5.5 with glacial acetic acid. Pour into sterile Petri dishes.

Use: For the isolation and cultivation of *Lactobacillus* species from salad dressings.

Lactobacillus Heteroferm Screen Broth (MRS, Modified)

Composition per liter:

Glucose.....	20.0g
Proteose peptone No. 3.....	10.0g
Sodium acetate.....	5.0g
Yeast extract.....	5.0g
2-Phenylethyl alcohol.....	3.0g
Ammonium citrate.....	2.0g
K ₂ HPO ₄	2.0g
MgSO ₄ ·7H ₂ O.....	0.1g
MnSO ₄ ·H ₂ O.....	0.05g
Bromocresol Green.....	0.04g
Cycloheximide.....	4.0mg
Tween™ 80.....	1.0mL

pH 4.3 ± 0.01 at 25°C

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 4.3 with concentrated HCl. Distribute into test tubes that contain an inverted Durham tube. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation and cultivation of *Lactobacillus* species from foods.

Lactobacillus homohiochii Medium

Composition per liter:

D-Glucose.....	20.0g
Tryptic digest of casein.....	10.0g
Yeast extract.....	5.0g
Meat extract.....	2.0g
K ₂ HPO ₄	0.5g
KH ₂ PO ₄	0.5g
MgSO ₄ ·7H ₂ O.....	0.2g
DL-Mevalonic acid.....	30.0mg
Sodium acetate.....	20.0mg
FeSO ₄ ·7H ₂ O.....	10.0mg
MnSO ₄ ·H ₂ O.....	7.5mg

Ethanol.....	40.0mL
Tween™ 80.....	1.0mL

pH 5.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 5.2. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Lactobacillus homohiochii*.

Lactobacillus Medium (ATCC Medium 78)

Composition per liter:

Pancreatic digest of casein.....	20.0g
Agar.....	15.0g
Tryptose.....	5.0g
Yeast extract.....	5.0g
Glucose.....	3.0g
Lactose.....	2.0g
Liver extract concentrate.....	1.0g
Tween™ 80.....	0.05g
Tomato juice, filtered.....	200.0mL

pH 6.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 6.5. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Lactobacillus fermentum* and *Lactobacillus salivarius*.

Lactobacillus Medium (ATCC Medium 169)

Composition per liter:

Glucose.....	10.0g
Proteose peptone.....	7.5g
Yeast extract.....	7.5g
KH ₂ PO ₄	2.0g
L-Cysteine·HCl·H ₂ O.....	1.0g
Tween™ 80.....	0.1g
Tomato juice, filtered.....	100.0mL

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Lactobacillus casei*.

Lactobacillus Medium (ATCC Medium 1006)

Composition per liter:

Agar.....	20.0g
Pancreatic digest of casein.....	10.0g
Glucose.....	5.0g
Yeast extract.....	5.0g
KH ₂ PO ₄	3.0g
K ₂ HPO ₄	3.0g

Tryptose	3.0g
Sodium acetate	1.0g
L-Cysteine·HCl·H ₂ O	0.2g
Salt solution R	5.0mL
Tween™ 80	1.0mL

pH 6.3 ± 0.2 at 25°C

Salt Solution R:**Composition per 100.0mL:**

MgSO ₄ ·7H ₂ O	11.5g
MnSO ₄ ·2H ₂ O	2.4g
FeSO ₄ ·7H ₂ O	0.68g

Preparation of Salt Solution R: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Store at 4°C.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Lactobacillus delbrueckii* and *Lactobacillus jensenii*.

Lactobacillus Medium**Composition per liter:**

Glucose	20.0g
Sodium acetate	20.0g
Tryptone	10.0g
Yeast extract	5.0g
Beef extract	2.0g
K ₂ HPO ₄	0.5g
KH ₂ PO ₄	0.5g
MgSO ₄ ·7H ₂ O	200.0mg
FeSO ₄ ·7H ₂ O	10.0mg
MnSO ₄ ·H ₂ O	7.5mg
Ethanol	40.0mL
Mevalonic acid solution	10.0mL
Tween™ 80	1.0mL

pH 5.2 ± 0.2 at 25°C

Mevalonic Acid Solution:**Composition per 10.0mL:**

DL-Mevalonic acid	30.0mg
-------------------------	--------

Preparation of Mevalonic Acid Solution: Add DL-mevalonic acid to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except mevalonic acid solution and ethanol, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 40.0mL of filter-sterilized ethanol and 10.0mL of sterile mevalonic acid solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Lactobacillus homohiochii*.

***Lactobacillus Medium*
(*Lactobacillus Sake Medium*)****Composition per liter:**

Agar	13.0g
Yeast extract	5.0g
Liver extract concentrate	0.2g
Sake	700.0mL

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Lactobacillus fructivorans* and *Lactobacillus homohiochii*.

***Lactobacillus Medium II*
(DSMZ Medium 93)****Composition per liter:**

Glucose	20.0g
Na-acetate	20.0g
Agar	15.0g
Pancreatic digest of casein	10.0g
Yeast extract	5.0g
Meat extract	2.0g
KH ₂ PO ₄	0.5g
K ₂ HPO ₄	0.5g
MgSO ₄ ·7H ₂ O	0.2g
DL-Mevalonic acid	30.0mg
FeSO ₄ ·7H ₂ O	10.0mg
MnSO ₄ ·2H ₂ O	7.5mg
Ethanol	40.0mL
Tween™ 80	1.0mL

pH 5.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Lactobacillus fructivorans* and *Lactobacillus homohiochii*.

Lactobacillus Medium III**Composition per liter:**

Pancreatic digest of casein	10.0g
Fructose	7.0g
Glucose	7.0g
Maltose	7.0g
Meat extract	5.0g
Sodium acetate·3H ₂ O	5.0g
Yeast extract	5.0g
K ₂ HPO ₄ ·3H ₂ O	2.6g
Diammonium citrate	2.0g
Sodium gluconate	2.0g
L-Cysteine·HCl	0.5g
MgSO ₄ ·7H ₂ O	0.1g
MnSO ₄ ·4H ₂ O	0.05g
Tween™ 80	1.0mL

pH 6.3 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.3. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Lactobacillus* species.

***Lactobacillus Medium IV*
(DSMZ Medium 859)****Composition per liter:**

Tryptone	10.0g
Yeast extract	5.0g

Na-acetate·3H ₂ O	5.0g
Glucose	4.0g
Maltose	4.0g
Meat extract	3.0g
K ₂ HPO ₄ ·3H ₂ O	2.6g
(NH ₄) ₂ citrate	2.0g
Cysteine-HCl·H ₂ O	0.5g
MgSO ₄ ·7H ₂ O	0.1g
MnSO ₄ ·4H ₂ O	0.05g
Tween™ 80	1.0mL

pH 6.3 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Lactobacillus panis*.

Lactobacillus 8664 Medium

Composition per liter:

Maltose	20.0g
Peptone	10.0g
Yeast extract	10.0g
Glucose	5.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Lactobacillus brevis*.

Lactobacillus MRS HiVeg Agar (MRS HiVeg Agar)

Composition per liter:

Glucose	20.0g
Agar	12.0g
Plant extract	10.0g
Plant peptone No. 3	10.0g
Sodium acetate	5.0g
Yeast extract	5.0g
Ammonium citrate	2.0g
K ₂ HPO ₄	2.0g
Polysorbate 80	1.0g
MgSO ₄	0.1g
MnSO ₄	0.05g

pH 6.5 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0mL. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 6.5. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the cultivation of *Lactobacillus* species.

Lactobacillus MRS HiVeg Broth (MRS HiVeg Broth)

Composition per liter:

Glucose	20.0g
Plant extract	10.0g
Plant peptone No. 3	10.0g
Sodium acetate	5.0g
Yeast extract	5.0g

Ammonium citrate	2.0g
K ₂ HPO ₄	2.0g
Polysorbate 80	1.0g
MgSO ₄	0.1g
MnSO ₄	0.05g

pH 6.5 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Lactobacillus* species.

Lactobacillus Orotic Acid Medium

Composition per liter:

Milk, peptonized	15.0g
Glucose	10.0g
Yeast extract	5.0g
KH ₂ PO ₄	2.0g
Sorbitan monooleate complex	1.0g
Orotic acid	25.0mg
D-Pantothenic acid	0.2mg
Tomato juice	100.0mL
L-Cysteine-HCl·H ₂ O solution	7.5mL

pH 6.8 ± 0.2 at 25°C

L-Cysteine-HCl·H₂O Solution:

Composition per 10.0mL:

L-Cysteine-HCl·H ₂ O	0.15g
---------------------------------	-------

Preparation of L-Cysteine-HCl·H₂O Solution: Add L-cysteine-HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 2–3 min. Distribute into bottles in 20.0mL volumes. Add 0.15mL of L-cysteine-HCl·H₂O solution to each bottle containing 20.0mL of medium. Autoclave for 15 min at 15 psi pressure–121°C. Screw caps tightly to maintain reduced conditions.

Use: For the cultivation of *Lactobacillus helveticus*.

Lactobacillus rimae Medium

Composition per liter:

Yeast extract	10.0g
Peptone	5.0g
Pancreatic digest of casein	5.0g
Glucose	5.0g
(NH ₄) ₂ SO ₄	0.5g
L-Cysteine-HCl	0.5g
Resazurin	1.0mg
Mineral solution	40.0mL
Fatty acid mixture	3.1mL
Hemin solution	0.5mL
Vitamin K ₁	0.2mL

pH 6.9 ± 0.2 at 25°C

Mineral Solution:

Composition per liter:

NaHCO ₃	10.0g
NaCl	2.0g

KH ₂ PO ₄	1.0g
K ₂ HPO ₄	1.0g
MgSO ₄ ·7H ₂ O.....	0.48g
CaCl ₂ ·2H ₂ O.....	0.3g

Preparation of Mineral Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Fatty Acid Mixture:

Composition per 31.0mL:

Acetic acid.....	17.0mL
Propionic acid.....	6.0mL
<i>n</i> -Butyric acid.....	4.0mL
<i>n</i> -Valeric acid.....	1.0mL
<i>iso</i> -Valeric acid.....	1.0mL
<i>iso</i> -Butyric acid.....	1.0mL
DL-2-Methylbutyric acid.....	1.0mL

Preparation of Fatty Acid Mixture: Combine components. Mix thoroughly. Adjust pH to 7.5 with concentrated NaOH.

Hemin Solution:

Composition per 1.0mL:

Hemin.....	5.0mg
NaOH (1 <i>N</i> solution).....	1.0mL

Preparation of Hemin Solution: Add hemin to 1.0mL of NaOH solution. Mix thoroughly.

Preparation of Medium: Add components, except L-cysteine-HCl, hemin solution, and fatty acid mixture, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 5 min. Cool to room temperature while sparging with 100% CO₂. Add L-cysteine-HCl, hemin solution, and fatty acid mixture. Adjust pH to 6.9 with 8*N* NaOH while continuing to sparge with 100% CO₂. After pH has been reached, sparge with 100% N₂. Anaerobically distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Acetivibrio ethanoligigenens*, *Lactobacillus rimae*, *Lactobacillus uli*, and *Sphaerotilus natans*.

Lactobacillus rimae Medium with Tween™

Composition per liter:

Yeast extract.....	10.0g
Peptone.....	5.0g
Pancreatic digest of casein.....	5.0g
Glucose.....	5.0g
(NH ₄) ₂ SO ₄	0.5g
L-Cysteine-HCl.....	0.5g
Tween™ 80.....	0.2g
Resazurin.....	1.0mg
Mineral solution.....	40.0mL
Fatty acid mixture.....	3.1mL
Hemin solution.....	0.5mL
Vitamin K ₁	0.2mL

pH 6.9 ± 0.2 at 25°C

Mineral Solution:

Composition per liter:

NaHCO ₃	10.0g
NaCl.....	2.0g
KH ₂ PO ₄	1.0g
K ₂ HPO ₄	1.0g
MgSO ₄ ·7H ₂ O.....	0.48g
CaCl ₂ ·2H ₂ O.....	0.3g

Preparation of Mineral Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Fatty Acid Mixture:

Composition per 31.0mL:

Acetic acid.....	17.0mL
Propionic acid.....	6.0mL
<i>n</i> -Butyric acid.....	4.0mL
<i>n</i> -Valeric acid.....	1.0mL
<i>iso</i> -Valeric acid.....	1.0mL
<i>iso</i> -Butyric acid.....	1.0mL
DL-2-Methylbutyric acid.....	1.0mL

Preparation of Fatty Acid Mixture: Combine components. Mix thoroughly. Adjust pH to 7.5 with concentrated NaOH.

Hemin Solution:

Composition per 1.0mL:

Hemin.....	5.0mg
NaOH (1 <i>N</i> solution).....	1.0mL

Preparation of Hemin Solution: Add hemin to 1.0mL of NaOH solution. Mix thoroughly.

Preparation of Medium: Add components, except L-cysteine-HCl, hemin solution, and fatty acid mixture, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 5 min. Cool to room temperature while sparging with 100% CO₂. Add L-cysteine-HCl, hemin solution, and fatty acid mixture. Adjust pH to 6.9 with 8*N* NaOH while continuing to sparge with 100% CO₂. After pH has been reached, sparge with 100% N₂. Anaerobically distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Lactobacillus rimae* and *Lactobacillus uli*.

Lactobacillus Selection Agar

See: LBS™ Agar

Lactobacillus Selection Agar Base

Composition per liter:

Sodium acetate.....	25.0g
Glucose.....	20.0g
Agar.....	15.0g
Casein enzymic hydrolysate.....	10.0g
KH ₂ PO ₄	6.0g
Yeast extract.....	5.0g
Ammonium citrate.....	2.0g
Polysorbate 80.....	1.0g
MgSO ₄ ·7H ₂ O.....	0.575g
MnSO ₄ ·2H ₂ O.....	0.12g
FeSO ₃	0.034g
Acetic acid, glacial.....	1.32mL

pH 5.5 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Preparation of Medium: Add acetic acid to distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Distribute into tubes or flasks. Gently heat and bring to boiling. Boil for 1–2 min. Do not autoclave unless storage is needed. If storage is necessary sterilize by autoclaving for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and enumeration of lactobacilli from foods.

Lactobacillus Selection BrothSee: **LBS™ Broth****Lactobacillus Selection HiVeg Agar Base
with Acetic Acid and Polysorbate****Composition** per liter:

Sodium acetate·3H ₂ O	25.0g
Glucose	20.0g
Agar	15.0g
Plant hydrolysate	10.0g
KH ₂ PO ₄	6.0g
Yeast extract	5.0g
Ammonium citrate	2.0g
MgSO ₄	0.575g
FeSO ₄	0.034g
MnSO ₄	0.12g
Acetic acid, glacial	1.32 mL
Polysorbate 80	1.0mL

pH 5.5 ± 0.2 at 25°C

Source: This medium, without polysorbate 80 or glacial acetic acid, is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 5.5. Do not autoclave. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation, cultivation, and enumeration of lactobacilli from foods.

Acetic acid, glacial	1.32mL

pH 5.4 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Preparation of Medium: Add acetic acid to distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Distribute into tubes or flasks. Gently heat and bring to boiling. Boil for 1–2 min. Do not autoclave unless storage is needed. If storage is necessary, sterilize by autoclaving for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the selective isolation, cultivation, and enumeration of lactobacilli.

Lactobacillus-Streptococcus Differential MediumSee: **L-S Differential Medium****Lactococcus piscium Medium****Composition** per liter:

Glucose	10.0g
Peptone	10.0g
Beef extract	8.0g
NaCl	5.0g
Yeast extract	3.0g
KH ₂ PO ₄	1.5g

MgSO ₄ ·7H ₂ O	0.2g
MnSO ₄ ·4H ₂ O	0.05g
pH 6.8 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.8. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Lactococcus piscium*.

Lactose Blue Agar (B.T.B. Lactose Agar, Modified)

Composition per liter:

Lactose	15.5g
Agar	13.0g
NaCl	5.0g
Peptic digest of animal tissue.....	3.5g
Casein enzymic hydrolysate	3.5g
Bromthymol Blue	0.04g
pH 7.0 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the differentiation of lactose-fermenting and non-fermenting bacteria belonging to Enterobacteriaceae.

Lactose Blue HiVeg Agar (B.T.B. Lactose HiVeg Agar, Modified)

Composition per liter:

Lactose	15.5g
Agar	13.0g
NaCl	5.0g
Plant extract	3.5g
Plant hydrolysate	3.5g
Bromthymol Blue	0.04g
pH 7.0 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the differentiation of lactose-fermenting and non-fermenting bacteria belonging to Enterobacteriaceae.

Lactose Broth

Composition per liter:

Lactose	5.0g
Pancreatic digest of gelatin	5.0g
Beef extract	3.0g
pH 6.9 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems and Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes containing an inverted Durham tube in 10.0mL volumes. Autoclave for 12 min at 15 psi pressure–121°C. Cool broth quickly to 25°C. For testing water samples with 10.0mL volumes, prepare medium double strength.

Use: For the detection of lactose-fermenting, Gram-negative coliforms, as a pre-enrichment broth for *Salmonella* species, and in the study of lactose fermentation of bacteria in general.

Lactose Casein Hydrolysate Medium

Composition per liter:

Lactose	37.5g
Agar	15.0g
Casein hydrolysate.....	3.0g
KH ₂ PO ₄	1.0g
MnSO ₄	0.5g
Microelements solution	2.0mL
pH 6.0 ± 0.2 at 25°C	

Microelements Solution:

Composition per liter:

Fe(NO ₃) ₃ ·9H ₂ O.....	723.5mg
ZnSO ₄ ·7H ₂ O	439.8mg
MnSO ₄ ·4H ₂ O	203.0mg
H ₂ SO ₄	variable

Preparation of Microelements Solution: Add components, one at a time, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Be sure one component is dissolved before adding the next. Add sulfuric acid to yield a clear solution.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until boiling. Adjust pH to 6.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Drechslera catenaria*.

Lactose Distillers Solubles Medium

Composition per liter:

Lactose.....	20.0g
Distillers solubles.....	15.0g
Yeast, autolyzed.....	5.0g
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Streptomyces avermitilis*.

Lactose Egg Yolk Milk Agar

Composition per 1206.0mL:

Lactose.....	12.0g
Agar	1.0g
Columbia blood agar base	800.0mL
Skim milk.....	150.0mL
Egg yolk emulsion, 50%.....	36.0mL
Inhibitor solution	20.0mL
Neutral Red (1% solution).....	3.25mL
pH 7.0 ± 0.2 at 25°C	

Columbia Blood Agar Base:**Composition per 800.0mL:**

Agar	15.0g
Pantone.....	10.0g
Bitone.....	10.0g
NaCl.....	5.0g
Tryptic digest of beef heart.....	3.0g
Cornstarch.....	1.0g

Preparation of Columbia Blood Agar Base: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until boiling.

Egg Yolk Emulsion, 50%:**Composition per 100.0mL:**

Chicken egg yolks.....	11
Whole chicken egg.....	1
NaCl (0.9% solution).....	50.0mL

Preparation of Egg Yolk Emulsion, 50%: Soak eggs with 1:100 dilution of saturated mercuric chloride solution for 1 min. Crack eggs and separate yolks from whites. Mix egg yolks with 1 chicken egg. Beat to form emulsion. Measure 50.0mL of egg yolk emulsion and add to 50.0mL of 0.9% NaCl solution. Mix thoroughly. Filter sterilize. Warm to 45°–50°C.

Inhibitor Solution:**Composition per 20.0mL:**

Neomycin sulfate.....	0.18g
NaN ₃	0.24g

Caution: Sodium azide is toxic. Azides also react with metals and disposal must be highly diluted.

Preparation of Inhibitor Solution: Add neomycin sulfate and NaN₃ to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Combine Columbia blood agar base, lactose, agar, and Neutral Red and bring volume to 1.0L. Adjust pH to 7.0. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 55°C. Filter sterilize skim milk. To 1.0L of cooled, sterile agar mixture, aseptically add 150.0mL of sterile skim milk, 36.0mL of sterile egg yolk emulsion, 50%, and 20.0mL of sterile inhibitor solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Clostridium* species.

Lactose Gelatin Medium**Composition per liter:**

Gelatin.....	120.0g
Tryptose.....	15.0g
Lactose.....	10.0g
Yeast extract.....	10.0g
Phenol Red (0.5% solution).....	10.0mL

pH 7.5 ± 0.2 at 25°C

Preparation of Medium: Add tryptose, yeast extract, and lactose to distilled/deionized water and bring volume to 400.0mL. Mix thoroughly. Add gelatin to distilled/deionized water and bring volume to 590.0mL. Gently heat gelatin solution while stirring and bring to 50°–60°C. Add Phenol Red. Mix the two solutions together. Distribute into tubes in 10.0mL volumes. Autoclave for 10 min at 15 psi pressure–121°C. If medium is not used in 8 hr, deoxygenate by heating to 50°–70°C for 2–3 hr prior to inoculation.

Use: For the cultivation of *Clostridium perfringens*.

Lactose Gelatin Medium, Modified**Composition per liter:**

Gelatin.....	120.0g
Tryptose.....	15.0g
Yeast extract.....	10.0g
Lactose.....	10.0g
Na ₂ HPO ₄	5.0g
Phenol Red.....	0.05g

pH 7.8 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into screw-cap tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Just before use heat to remove oxygen and cool rapidly.

Use: For the cultivation of *Haemophilus* spp.

Lactose HiVeg Broth**Composition per liter:**

Plant peptone.....	5.0g
Lactose.....	5.0g
Plant extract.....	3.0g

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the detection of coliform bacteria in water, foods, and dairy products as per standard methods.

Lactose Lecithin Agar**Composition per liter:**

Agar.....	15.0g
Casein enzymic hydrolysate.....	12.65g
Lactose.....	10.0g
Peptic digest of animal tissue.....	5.5g
NaCl.....	5.5g
Yeast extract.....	3.85g
Pancreatic digest of heart muscle.....	3.3g
Corn starch.....	1.1g
Egg lecithin.....	0.66g
L-Cysteine·HCl·H ₂ O.....	0.5g
NaN ₃	0.2g
Neomycin sulfate.....	0.15g
CaCl ₂ ·2H ₂ O.....	0.05g
Bromocresol Purple.....	0.025g

pH 6.8 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Caution: Sodium azide has a tendency to form explosive metal azides with plumbing materials. It is advisable to use enough water to flush off the disposables.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and differentiation of histotoxic clostridia from clinical specimens.

Lactose Medium

Composition per liter:

Agar	15.0g
K ₂ HPO ₄	0.5g
(NH ₄) ₂ SO ₄	0.5g
NaCl.....	50.0mg
Lactose solution.....	50.0mL

pH 7.2 ± 0.2 at 25°C

Lactose Solution:

Composition per 50.0mL:

Lactose	5.0g
---------------	------

Preparation of Lactose Solution: Add lactose to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except lactose solution, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Adjust pH to 7.2. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 50.0mL of sterile lactose solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of unidentified bacterium ATCC 51468.

Lactose Minimal Medium

Composition per liter:

Agar	20.0g
Lactose	15.0g
K ₂ HPO ₄	5.0g
NH ₄ Cl	2.0g
NaCl.....	1.0g
MgSO ₄	0.1g
Yeast extract.....	0.1g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Xanthomonas campestris*.

Lactose Peptone Agar

Composition per liter:

Agar	15.0g
Lactose	0.5g
Peptone.....	0.5g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Acytostelium subglobosum*, numerous *Dictyostelium* species, *Didymium nigripes*, *Drechslera biseptata*, several *Mortierella* species, *Nodulisporium griseobrunneum*, *Penicillium chrysogenum*, *Polysphondylium pallidum*, *Polysphondylium violaceum*, *Pythium insidiosum*, and *Trichomyces* species.

Lactose Peptone Agar, Double Strength

Composition per liter:

Agar	18.0g
Lactose	1.0g
Peptone.....	1.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of various fungi.

Lactose Peptone Agar, Half Strength

Composition per liter:

Agar	15.0g
Lactose.....	0.25g
Peptone.....	0.25g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of various fungi.

Lactose Peptone Broth

Composition per liter:

Casein enzymic hydrolysate	17.0g
Lactose.....	10.0g
NaCl.....	5.0g
Papaic digest of soybean meal.....	3.0g
Bromcresol Purple	0.02g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes with inverted Durham tubes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the detection of coliform organisms in water.

Lactose Ricinoleate Broth

Composition per liter:

Lactose.....	10.0g
Peptone	5.0g
Sodium ricinoleate.....	1.0g

pH 7.6 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the selective cultivation of members of the Enterobacteriaceae.

Lactose Sulfite Broth Base

Composition per liter:

Lactose.....	10.0g
Casein enzymic hydrolysate.....	5.0g
Yeast extract.....	2.5g
NaCl.....	2.5g
L-Cysteine-HCl·H ₂ O.....	0.3g
Sodium metabisulfite solution.....	50.0mL
Ferric ammonium citrate.....	50.0mL

pH 7.1 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Selective Sodium Metabisulfite Solution:**Composition** per 100.0mL:

Sodium metabisulfite 1.2g

Preparation of Sodium Metabisulfite Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Selective Ferric Ammonium Citrate Solution:**Composition** per 100.0mL:

Ferric ammonium citrate 1.0g

Preparation of Ferric Ammonium Citrate Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except sodium metabisulfite and ferric ammonium citrate solutions, to distilled/deionized water and bring volume to 999.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add sodium metabisulfite and ferric ammonium citrate solutions. Mix thoroughly. Pour into Petri dishes or aseptically distribute into sterile tubes.

Use: For the detection and enumeration of *Clostridium perfringens* in pharmaceutical products.

Lambda Broth**Composition** per liter:

Pancreatic digest of casein 10.0g

NaCl 2.5g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 25 min at 15 psi pressure–121°C.

Use: For the cultivation of *Escherichia coli* in the preparation of bacteriophage lysates.

Lambda Plates**Composition** per liter:

Agar 10.0g

Pancreatic digest of casein 10.0g

NaCl 2.5g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes in 45.0mL volumes per plate.

Use: For use as a base agar to support the cultivation of *Escherichia coli* in the preparation of bacteriophages.

Lambda Top Agar**Composition** per liter:

Pancreatic digest of casein 10.0g

Agar 7.0g

NaCl 2.5g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Distribute into flasks in 100.0mL volumes. Reautoclave for 15 min at 15 psi pressure–121°C. Store at 25°C.

Use: For use as a top agar for the distribution of bacteriophage or *Escherichia coli*.

Lange Medium**Composition** per liter:

Agar 20.0g

Maltose 5.0g

Ca(NO₃)₂ 0.5gMgSO₄ 0.5gK₂HPO₄ 0.25g

Peptone 0.1g

Horse dung extract 100.0mL

Horse Dung Extract:**Composition** per liter:

Horse dung, fresh 100.0g

Preparation of Horse Dung Extract: Add fresh horse dung to distilled/deionized water and bring volume to 1.0L. Autoclave for 50 min at 15 psi pressure–121°C. Filter through Whatman #1 filter paper. Reserve filtrate.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Coprinus xanthothrix*.

Lash Serum Medium**Composition** per liter:

Casamino acids 14.0g

NaCl 6.0g

Glucose 2.0g

Maltose 1.5g

Sodium lactate (60% solution) 0.5g

KCl 0.1g

CaCl₂·2H₂O 0.1g

Serum solution 500.0mL

pH 5.8 ± 0.2 at 25°C

Serum Solution:**Composition** per 500.0mL:NaHCO₃ 0.1g

Bovine serum 200.0mL

Preparation of Serum Solution: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except serum solution, to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Distribute into tubes in 5.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 5.0mL of sterile serum solution to each tube. Mix thoroughly.

Use: For the cultivation of *Trichomonas vaginalis* from clinical specimens.

**Lasseur Medium
(LMG 170)****Composition** per liter:

Glycerol 25.0g

Agar 15.0g

L-Asparagine 9.0g

MgSO₄·7H₂O 5.0gK₂HPO₄ 2.5gCaCl₂·2H₂O 0.54gFeSO₄·7H₂O 0.1g

pH 6.7 ± 0.2 at 25°C

Preparation of Medium: Add K_2HPO_4 to 20.0mL of distilled/deionized water. Mix thoroughly. Add remaining components. Bring volume to 1.0L with distilled/deionized water. Gently heat and bring to boiling. Adjust pH to 6.7. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Pseudomonas fluorescens*.

Lauryl Sulfate Broth (m-Lauryl Sulfate Broth)

Composition per liter:

Peptone.....	39.0g
Lactose.....	30.0g
Yeast extract.....	6.0g
Sodium lauryl sulfate.....	1.0g
Phenol Red.....	0.2g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into bottles or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and enumeration of coliform bacteria, especially *Escherichia coli*, in water by the membrane filter method.

Lauryl Sulfate Broth (Lauryl Tryptose Broth)

Composition per liter:

Pancreatic digest of casein.....	20.0g
Lactose.....	5.0g
NaCl.....	5.0g
K_2HPO_4	2.75g
KH_2PO_4	2.75g
Sodium lauryl sulfate.....	0.1g

pH 6.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes containing an inverted Durham tube in 10.0mL volumes. Autoclave for 12 min at 15 psi pressure–121°C. Cool broth quickly to 25°C. For testing water samples with 10.0mL volumes, prepare medium double strength.

Use: For the detection of coliform bacteria in a variety of specimens. Also, for the enumeration of coliform bacteria by the multiple-tube fermentation technique.

Lauryl Sulfate Broth, Fluorocult (Fluorocult Lauryl Sulfate Broth)

Composition per liter:

Tryptose.....	20.0g
Lactose.....	5.0g
NaCl.....	5.0g
K_2HPO_4	2.75g
KH_2PO_4	2.75g
L-tryptophan.....	1.g

Sodium lauryl sulfate.....	0.1g
4-Methylumbelliferyl-β-D-glucuronide.....	0.1g
pH 6.8 ± 0.2 at 25°C	

Source: This medium is available from Merck.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Cool. Distribute into test tubes containing inverted Durham tubes. Autoclave for 15 min at 15 psi pressure–121°C. The prepared broth is clear and yellowish-brown.

Use: For the detection of *E. coli* in milk. The medium complies with the German-DIN-Norm 10183 for the examination of milk, with the regulations acc. to § 35 LMBG (01.00/54) for the examination of food, and according to ISO/DIS 11886-2.2 (1994) for milk and milk products. The lauryl sulfate largely inhibits the growth of undesirable microbial flora. The presence of *E. coli* is indicated by fluorescence under a long wavelength UV lamp. A positive indole reaction and gas formation due to fermentation of lactose confirm the results.

Lauryl Sulfate Broth with MUG

Composition per liter:

Pancreatic digest of casein.....	20.0g
Lactose.....	5.0g
NaCl.....	5.0g
K_2HPO_4	2.75g
KH_2PO_4	2.75g
Sodium lauryl sulfate.....	0.1g
4-Methylumbelliferyl-β-D-glucuronide (MUG).....	0.05g

pH 6.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes containing an inverted Durham tube in 10.0mL volumes. Autoclave for 12 min at 15 psi pressure–121°C. Cool broth quickly to 25°C. For testing water samples with 10.0mL volumes, prepare medium double strength.

Use: For the detection of *Escherichia coli* in water and food samples by a fluorogenic procedure.

Lauryl Sulfate HiVeg Broth (Lauryl Tryptose HiVeg Broth)

Composition per liter:

Plant hydrolysate No. 1.....	20.0g
NaCl.....	5.0g
Lactose.....	5.0g
K_2HPO_4	2.75g
KH_2PO_4	2.75g
Sodium lauryl sulfate.....	0.1g

pH 6.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into bottles or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and enumeration of coliform bacteria in water, wastewater, dairy products, and other foods.

Lauryl Tryptose BrothSee: **Lauryl Sulfate Broth****Lauryl Tryptose Broth with MUG
(Lauryl Sulfate Broth with MUG)****(LST-MUG)****(BAM M77)****Composition per liter:**

Pancreatic digest of casein.....	20.0g
Lactose.....	5.0g
NaCl.....	5.0g
K ₂ HPO ₄	2.75g
KH ₂ PO ₄	2.75g
Sodium lauryl sulfate.....	0.1g
4-Methylumbelliferyl-β-D-glucuronide (MUG).....	0.05g
pH 6.8 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes containing an inverted Durham tube in 10.0mL volumes. Autoclave for 12 min at 15 psi pressure–121°C. Cool broth quickly to 25°C. For testing water samples with 10.0mL volumes, prepare medium double strength.

Use: For the detection of *Escherichia coli* in water and food samples by a fluorogenic procedure.

Lauryl Tryptose Mannitol Broth with Tryptophan**Composition per liter:**

Pancreatic digest of casein.....	20.0g
Lactose.....	5.0g
NaCl.....	5.0g
K ₂ HPO ₄	2.75g
KH ₂ PO ₄	2.75g
Sodium lauryl sulfate.....	0.1g
L-Tryptophan.....	0.2g
pH 6.8 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes containing an inverted Durham tube in 10.0mL volumes. Autoclave for 10 min at 10 psi pressure–115°C. Cool broth quickly to 25°C.

Use: For the detection of *Escherichia coli* in water samples.

LAVMm2 Medium**Composition per liter:**

Lactalbumin hydrolysate.....	10.0g
Sodium acetate.....	5.0g
MgCl ₂ ·6H ₂ O.....	20.3mg
Nitritotriacetic acid.....	19.1mg
CaCl ₂	11.1mg
FeSO ₄	0.152mg
Thiamine-HCl.....	0.05mg
Cupric acetate.....	0.04mg
Biotin.....	0.02mg
pH 8.0–8.1 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.5 with Na₂CO₃. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. The pH should be 8.0–8.1 after autoclaving.

Use: For the cultivation of *Caryophanon latum*.

LB Agar**Composition per liter:**

Agar.....	15.0g
Pancreatic digest of casein.....	10.0g
NaCl.....	5.0g
Yeast extract.....	5.0g
1N NaOH.....	1.0mL
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.0. Distribute into tubes or flasks. Autoclave for 25 min at 15 psi pressure–121°C. Pour into sterile Petri dishes in 35–40.0mL volumes.

Use: For the cultivation of *Escherichia coli*.

LB AgarSee: **Lactobacillus bulgaricus Agar****LB Broth, Modified****Composition per liter:**

Pancreatic digest of casein.....	10.0g
NaCl.....	5.8g
Yeast extract.....	5.0g
NaCl solution.....	16.8mL
Glucose solution.....	10.0mL
CaCl ₂ ·2H ₂ O solution.....	2.0mL
MgCl ₂ solution.....	1.6mL
pH 7.0 ± 0.2 at 25°C	

NaCl Solution:**Composition per 100.0mL:**

NaCl.....	25.0g
-----------	-------

Preparation of NaCl Solution: Add NaCl to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Glucose Solution:**Composition per 100.0mL:**

D-Glucose.....	40.0g
----------------	-------

Preparation of Glucose Solution: Add D-glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

CaCl₂·2H₂O Solution:**Composition per 10.0mL:**

CaCl ₂ ·2H ₂ O.....	0.735g
---	--------

Preparation of CaCl₂·2H₂O Solution: Add CaCl₂·2H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

MgCl₂ Solution:**Composition per 10.0mL:**

MgCl ₂	0.95g
-------------------------	-------

Preparation of MgCl₂ Solution: Add MgCl₂ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components—except NaCl solution, glucose solution, CaCl₂·2H₂O solution, and MgCl₂ solution—to distilled/deionized water and bring volume to 969.6mL. Mix thoroughly. Adjust pH to 7.0. Autoclave for 30 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 16.8mL of sterile NaCl solution, 10.0mL of sterile glucose solution, 2.0mL of sterile CaCl₂·2H₂O solution, and 1.6mL of sterile MgCl₂ solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Escherichia coli*.

LB Medium
(LB Broth, Miller)
(ATCC Medium 1065)
(ATCC Medium 1082)

Composition per liter:

NaCl	10.0g
Pancreatic digest of casein	10.0g
Yeast extract	5.0g

Source: This medium is available from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Bacillus subtilis*, *Corynebacterium glutamicum*, *Enterobacter cloacae*, *Erwinia uredovora*, *Escherichia coli*, *Klebsiella oxytoca*, and *Salmonella choleraesuis*.

LB Medium
(Luria-Bertani Medium)

Composition per liter:

NaCl	10.0g
Pancreatic digest of casein	10.0g
Yeast extract	5.0g
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Bacillus subtilis*, *Daptobacter* species, and *Escherichia coli*.

LB Medium
(Luria Broth)
(Lenox Broth)

Composition per liter:

Pancreatic digest of casein	10.0g
NaCl	5.0g
Yeast extract	5.0g
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Distribute into tubes or flasks. Autoclave for 25 min at 15 psi pressure–121°C.

Use: For the cultivation of *Escherichia coli*.

LB Medium with Ampicillin
(ATCC Medium 1315)

Composition per liter:

NaCl	10.0g
Pancreatic digest of casein	10.0g

Yeast extract	5.0g
Ampicillin solution	10.0mL
pH 7.0 ± 0.2 at 25°C	

Ampicillin Solution:

Composition per 10.0mL:

Ampicillin	0.1mg
------------------	-------

Preparation of Ampicillin Solution: Add ampicillin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except ampicillin solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Adjust pH to 7.0. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile ampicillin solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Escherichia coli*.

LB Medium with Ampicillin
(ATCC Medium 1364)

Composition per liter:

NaCl	10.0g
Pancreatic digest of casein	10.0g
Yeast extract	5.0g
Ampicillin solution	10.0mL
pH 7.0 ± 0.2 at 25°C	

Ampicillin Solution:

Composition per 10.0mL:

Ampicillin	0.02mg
------------------	--------

Preparation of Ampicillin Solution: Add ampicillin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except ampicillin solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Adjust pH to 7.0. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile ampicillin solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Escherichia coli*.

LB Medium with Chloramphenicol

Composition per liter:

NaCl	10.0g
Pancreatic digest of casein	10.0g
Yeast extract	5.0g
Chloramphenicol	0.01g
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Escherichia coli*.

LB Medium with Glucose

Composition per liter:

NaCl	10.0g
Pancreatic digest of casein	10.0g
Glucose	5.0g
Yeast extract	5.0g
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Escherichia coli*.

LB Medium with IPTG Medium

Composition per liter:

NaCl.....	10.0g
Pancreatic digest of casein.....	10.0g
Yeast extract.....	5.0g
IPTG solution.....	10.0mL
pH 7.0 ± 0.2 at 25°C	

IPTG Solution:

Composition per 10.0mL:

IPTG (Isopropylthio-β-galactoside).....	0.24g
---	-------

Preparation of IPTG Solution: Add IPTG to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except IPTG solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Adjust pH to 7.0. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add sterile IPTG solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Escherichia coli*.

LB Medium with Kanamycin

Composition per liter:

Pancreatic digest of casein.....	10.0g
NaCl.....	10.0g
Yeast extract.....	5.0g
Kanamycin solution.....	50.0mL

Kanamycin Solution:

Composition per 50.0mL:

Kanamycin.....	50.0mg
----------------	--------

Preparation of Kanamycin Solution: Add kanamycin to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize. Warm to 50°C.

Preparation of Medium: Add components, except kanamycin solution, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50–55°C. Aseptically add 50.0mL of sterile kanamycin solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Escherichia coli*.

LB Medium with 25mg of Kanamycin (ATCC Medium 1236)

Composition per liter:

NaCl.....	10.0g
Pancreatic digest of casein.....	10.0g
Yeast extract.....	5.0g
Kanamycin.....	0.025g
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Escherichia coli*.

LB Medium with 50mg of Kanamycin

Composition per liter:

NaCl.....	10.0g
Pancreatic digest of casein.....	10.0g
Yeast extract.....	5.0g
Kanamycin.....	0.05g
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Escherichia coli*.

LB Medium with 100mg of Kanamycin (ATCC Medium 1468)

Composition per liter:

NaCl.....	10.0g
Pancreatic digest of casein.....	10.0g
Yeast extract.....	5.0g
Kanamycin.....	0.1g
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Erwinia uredovora*.

LB Medium with Rifampicin

Composition per liter:

NaCl.....	10.0g
Pancreatic digest of casein.....	10.0g
Yeast extract.....	5.0g
Rifampicin.....	0.1g
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Enterobacter cloacae*.

LB Medium with Tetracycline

Composition per liter:

NaCl.....	10.0g
Pancreatic digest of casein.....	10.0g
Yeast extract.....	5.0g
Tetracycline.....	0.02g
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Escherichia coli*.

LB Medium with Tetracycline and Ampicillin (ATCC Medium 1226)

Composition per liter:

NaCl.....	10.0g
Pancreatic digest of casein.....	10.0g

Yeast extract.....	5.0g
Antibiotic solution	10.0mL
pH 7.0 ± 0.2 at 25°C	

Antibiotic Solution:**Composition per 10.0mL:**

Ampicillin	0.01g
Tetracycline.....	0.01g

Preparation of Antibiotic Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except antibiotic solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Adjust pH to 7.0. Autoclave for 15 min at 15 psi pressure—121°C. Cool to 45°–50°C. Aseptically add sterile antibiotic solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Escherichia coli*.

LB Medium with Tetracycline and Ampicillin (ATCC Medium 1235)

Composition per liter:

NaCl.....	10.0g
Pancreatic digest of casein.....	10.0g
Yeast extract.....	5.0g
Antibiotic solution	10.0mL
pH 7.0 ± 0.2 at 25°C	

Antibiotic Solution:**Composition per 10.0mL:**

Ampicillin	0.01g
Tetracycline.....	5.0mg

Preparation of Antibiotic Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except antibiotic solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Adjust pH to 7.0. Autoclave for 15 min at 15 psi pressure—121°C. Cool to 45°–50°C. Aseptically add sterile antibiotic solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Escherichia coli*.

LB Medium with Thiamine Monophosphate

See: LB Medium with TMP

LB Medium with Thiamine Pyrophosphate

See: LB Medium with TPP

LB Medium with TMP

(LB Medium with Thiamine Monophosphate)

Composition per liter:

NaCl.....	10.0g
Pancreatic digest of casein.....	10.0g
Yeast extract.....	5.0g
Thiamine monophosphate.....	0.038mg
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure—121°C.

Use: For the cultivation and maintenance of *Escherichia coli*.

LB Medium with TPP

(LB Medium with Thiamine Pyrophosphate)

Composition per liter:

NaCl.....	10.0g
Pancreatic digest of casein.....	10.0g
Yeast extract.....	5.0g
Thiamine pyrophosphate	0.046mg
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure—121°C.

Use: For the cultivation and maintenance of *Escherichia coli*.

LB Medium for X1776

Composition per liter:

NaCl.....	10.0g
Pancreatic digest of casein.....	10.0g
Yeast extract.....	5.0g
Glucose solution	10.0mL
Diaminopimelic acid solution.....	10.0mL
Thymidine solution	10.0mL
pH 7.0 ± 0.2 at 25°C	

Glucose Solution:**Composition per 10.0mL:**

D-Glucose	0.8g
-----------------	------

Preparation of Glucose Solution: Add D-glucose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Diaminopimelic Acid Solution:**Composition per 10.0mL:**

DL-Diaminopimelic acid	0.1g
------------------------------	------

Preparation of Diaminopimelic Acid Solution: Add diaminopimelic acid to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Thymidine Solution:**Composition per 10.0mL:**

Thymidine.....	0.02g
----------------	-------

Preparation of Thymidine Solution: Add thymidine to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components—except glucose solution, diaminopimelic acid solution, and thymidine solution—to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure—121°C. Cool to 45°–50°C. Aseptically add sterile glucose solution, diaminopimelic acid solution, and thymidine solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Bacillus subtilis* and *Escherichia coli*.

LB Medium for X1776 with Tetracycline and Ampicillin

Composition per liter:

NaCl.....	10.0g
Pancreatic digest of casein.....	10.0g
Yeast extract.....	5.0g

Antibiotic solution	10.0mL
Glucose solution	10.0mL
Diaminopimelic acid solution	10.0mL
Thymidine solution	10.0mL
pH 7.0 ± 0.2 at 25°C	

Antibiotic Solution:**Composition per 10.0mL:**

Ampicillin	0.01g
Tetracycline	0.01g

Preparation of Antibiotic Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Glucose Solution:**Composition per 10.0mL:**

D-Glucose	0.8g
-----------------	------

Preparation of Glucose Solution: Add D-glucose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Diaminopimelic Acid Solution:**Composition per 10.0mL:**

DL-Diaminopimelic acid	0.1g
------------------------------	------

Preparation of Diaminopimelic Acid Solution: Add diaminopimelic acid to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Thymidine Solution:**Composition per 10.0mL:**

Thymidine	0.02g
-----------------	-------

Preparation of Thymidine Solution: Add thymidine to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components—except glucose solution, diaminopimelic acid solution, and thymidine solution—to distilled/deionized water and bring volume to 960.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile antibiotic solution, glucose solution, diaminopimelic acid solution, and thymidine solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Bacillus subtilis* and *Escherichia coli*.

LB Modified Broth (ATCC Medium 1620)

Composition per 1030.4mL:

Tryptone	10.0g
NaCl	5.8g
Yeast extract	5.0g

NaCl Solution:**Composition per 100.0mL:**

NaCl	20.0g
------------	-------

Preparation of NaCl Solution: Add NaCl to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

MgCl₂ Solution:**Composition per 10.0mL:**

MgCl ₂	0.9g
-------------------------	------

Preparation of MgCl₂ Solution: Add MgCl₂ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

CaCl₂ Solution:**Composition per 10.0mL:**

CaCl ₂	0.5g
-------------------------	------

Preparation of CaCl₂ Solution: Add CaCl₂ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Glucose Solution:**Composition per 100.0mL:**

D-Glucose	40.0g
-----------------	-------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components except salts and glucose solutions to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 30 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 16.8mL NaCl solution, 1.6 mL MgCl₂ solution, 2.0mL CaCl₂ solution, and 10.0mL glucose solution. Mix thoroughly.

Use: For the cultivation of *Escherichia coli* (Migula) Castellani and Chalmers.

LB Streptomycin Medium

Composition per liter:

NaCl	10.0g
Pancreatic digest of casein	10.0g
Yeast extract	5.0g
Streptomycin solution	10.0mL

pH 7.0 ± 0.2 at 25°C

Streptomycin Solution:**Composition per 10.0mL:**

Streptomycin	0.2g
--------------------	------

Preparation of Streptomycin Solution: Add streptomycin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except streptomycin solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Adjust pH to 7.0. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile streptomycin solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Escherichia coli*.

LB Top Agar

Composition per liter:

Pancreatic digest of casein	10.0g
Agar	7.0g
NaCl	5.0g
Yeast extract	5.0g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.0. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Distribute into flasks in 100.0mL volumes. Reautoclave for 15 min at 15 psi pressure–121°C. Store at 25°C.

Use: For use as a top agar for the distribution of bacteriophage or *Escherichia coli*.

LBE Medium

Composition per liter:

NaCl	10.0g
Pancreatic digest of casein	10.0g
Yeast extract	5.0g
Glucose solution	10.0mL
50X medium E	4.0mL

pH 7.0 ± 0.2 at 25°C

Glucose Solution:

Composition per 100.0mL:

D-Glucose	20.0g
-----------------	-------

Preparation of Glucose Solution: Add D-glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

50X Medium E:

Composition per liter:

K ₂ HPO ₄ , anhydrous	500.0g
Na(NH ₄)HPO ₄ ·4H ₂ O	175.0g
Citric acid·H ₂ O	100.0g
MgSO ₄ ·7H ₂ O	10.0g

Preparation of 50X Medium E: Add components to 670.0mL of distilled/deionized water in the following order: MgSO₄·7H₂O, citric acid·H₂O, K₂HPO₄, and Na(NH₄)HPO₄·4H₂O. Mix thoroughly. Bring volume to 1.0L with distilled/deionized water.

Preparation of Medium: Add components—except glucose solution and 50X medium E—to distilled/deionized water and bring volume to 986.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL of sterile glucose solution and 4.0mL of sterile 50X medium E. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Escherichia coli*.

LBS™ Agar

(*Lactobacillus* Selection Agar)

Composition per liter:

Sodium acetate·3H ₂ O	25.0g
Glucose	20.0g
Agar	15.0g
Pancreatic digest of casein	10.0g
KH ₂ PO ₄	6.0g
Yeast extract	5.0g
Ammonium citrate	2.0g
Polysorbate 80	1.0g
MgSO ₄	0.575g
FeSO ₄	0.034g
MnSO ₄	0.12g
Acetic acid, glacial	1.32mL

pH 5.5 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components, except acetic acid, to distilled/deionized water and bring volume to 998.7mL. Mix thoroughly. Gently heat and bring to boiling. Add glacial acetic acid. Mix thoroughly. Gently heat while stirring and bring to 90°–100°C for 2–3 min.

Do not autoclave. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation, cultivation, and enumeration of lactobacilli.

LBS™ Broth

(*Lactobacillus* Selection Broth)

Composition per liter:

Sodium acetate·3H ₂ O	25.0g
Glucose	20.0g
Pancreatic digest of casein	10.0g
KH ₂ PO ₄	6.0g
Yeast extract	6.0g
Ammonium citrate	2.0g
Polysorbate 80	1.0g
MgSO ₄	0.575g
FeSO ₄	0.034g
MnSO ₄	0.12g
Acetic acid, glacial	1.32mL

pH 5.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components, except acetic acid, to distilled/deionized water and bring volume to 998.7mL. Mix thoroughly. Gently heat and bring to boiling. Add glacial acetic acid. Mix thoroughly. Gently heat while stirring and bring to 90°–100°C for 2–3 min. Do not autoclave. Aseptically distribute into sterile tubes.

Use: For the selective isolation and cultivation of lactobacilli.

LBS Oxgall Agar

See: *Lactobacillus* Selection Oxgall Agar

LC Broth

Composition per liter:

NaCl	10.0g
Pancreatic digest of casein	10.0g
Yeast extract	5.0g
Glucose	1.0g
CaCl ₂ ·2H ₂ O (1M solution)	5.0mL
MgSO ₄ ·7H ₂ O (1M solution)	5.0mL

pH 7.4 ± 0.2 at 25°C

CaCl₂·2H₂O Solution:

Composition per 100.0mL:

CaCl ₂ ·2H ₂ O	14.7g
--	-------

Preparation of CaCl₂·2H₂O Solution: Add CaCl₂·2H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

MgSO₄·7H₂O Solution:

Composition per 100.0mL:

MgSO ₄ ·7H ₂ O	24.65g
--	--------

Preparation of MgSO₄·7H₂O Solution: Add MgSO₄·7H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except CaCl₂·2H₂O solution and MgSO₄·7H₂O solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Adjust pH to 7.4. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically

add 5.0mL of sterile $\text{CaCl}_2 \cdot 2\text{H}_2\text{O}$ solution and 5.0mL of sterile $\text{MgSO}_4 \cdot 7\text{H}_2\text{O}$ solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Escherichia coli*.

LD Agar

See: [Lombard-Dowell Agar](#)

LD Bile Agar

See: [Lombard-Dowell Bile Agar](#)

LD Broth

See: [Lombard-Dowell Broth](#)

LD Egg Yolk Agar

See: [Lombard-Dowell Egg Yolk Agar](#)

LD Esculin Agar

See: [Lombard-Dowell Esculin Agar](#)

LD Esculin HiVeg Agar (Lombard-Dowell Esculin Agar, HiVeg)

Composition per liter:

Agar	20.0g
Plant hydrolysate No. 1	5.0g
Yeast extract	5.0g
NaCl	2.5g
Esculin	1.0g
Ferric citrate	0.5g
L-Cystine	0.4g
L-Tryptophan	0.2g
$\text{Fe}_4(\text{P}_2\text{O}_7)_3 \cdot \text{H}_2\text{O}$	0.01g
Vitamin K_1	0.01g
pH 7.5 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure– 121°C . Pour into sterile Petri plates.

Use: For the cultivation of a wide variety of anaerobic bacteria. For the differentiation of anaerobic bacteria based on esculin hydrolysis, H_2S production, and catalase production. Bacteria that hydrolyze esculin appear as colonies surrounded by a red-brown to dark brown zone. Bacteria that produce H_2S appear as black colonies.

LD Gelatin Agar

See: [Lombard-Dowell Gelatin Agar](#)

LD HiVeg Agar (Lombard-Dowell Agar, HiVeg)

Composition per liter:

Agar	20.0g
Plant hydrolysate	5.0g
Yeast extract	5.0g
NaCl	2.5g
L-Cystine	0.4g
L-Tryptophan	0.2g
Na_2SO_3	0.1g

Vitamin K_1	0.01g
$\text{Fe}_4(\text{P}_2\text{O}_7)_3 \cdot \text{H}_2\text{O}$	0.01g
pH 7.5 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure– 121°C . Pour into sterile Petri plates.

Use: For the cultivation and identification of a variety of obligate anaerobic bacteria. For the cultivation of *Bacteroides* species, *Fusobacterium* species, *Clostridium* species, and nonspore-forming Gram-positive anaerobes.

Lead Acetate Agar

Composition per liter:

Agar	15.0g
Peptone	15.0g
Proteose peptone	5.0g
Glucose	1.0g
Lead acetate	0.2g
$\text{Na}_2\text{S}_2\text{O}_3$	0.08g
pH 6.6 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure– 121°C . Pour into sterile Petri dishes or leave in tubes. Allow tubes to cool in a slanted position.

Use: For the cultivation and differentiation of Gram-negative coliform bacteria based on H_2S production. Bacteria that produce H_2S turn the medium brown.

LEB, FDA

See: [Listeria Enrichment Broth, FDA](#)

Lecithin Agar

Composition per liter:

Fraction B	500.0mL
Fraction A	450.0mL
Fraction C	50.0mL
pH 7.2 ± 0.2 at 25°C	

Fraction A:

Composition per 500.0mL:

Agar	18.0g
Tryptone	10.0g
Yeast extract	5.0g
Glucose	5.0g

Preparation of Fraction A: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure– 121°C . Cool to 43°C .

Fraction B:

Composition per 450.0mL:

Crude soy lecithin	30.0g
--------------------------	-------

Preparation of Fraction B: Add crude soy lethicin to distilled/deionized water and bring volume to 450.0mL. Mix thoroughly. Gently heat and bring to boiling. Swirl to form a viscous sol. Sonicate until homogeneous. Blending of unheated fraction A in a Waring blender for 2 min at high speed is also satisfactory. Autoclave for 15 min at 15 psi pressure– 121°C . Cool to 43°C .

Fraction C:**Composition per 50.0mL:**CaCl₂..... 0.6g

Preparation of Fraction C: Add CaCl₂ to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 43°C.

Preparation of Medium: Combine fractions with gentle swirling. To prevent separation, immediately pour into sterile Petri plates.

Use: For the detection of microbial phospholipases.

Lecithin HiVeg Agar**Composition per liter:**

Agar 20.5g
 Plant hydrolysate..... 15.0g
 Papaic digest of soybean meal 5.0g
 Polysorbate 80..... 5.0g
 NaCl..... 5.0g
 Na₂S₂O₃ 1.0g
 L-Histidine..... 1.0g
 Lecithin 0.7g

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri plates.

Use: For the detection of bacterial contamination of surfaces in unprotected and protected areas.

Lecithin Lactose Agar**Composition per liter:**

Agar 15.0g
 Pancreatic digest of casein 12.7g
 Lactose 10.0g
 NaCl..... 5.5g
 Peptic digest of animal tissue..... 5.5g
 Yeast extract..... 3.9g
 Pancreatic digest of heart muscle..... 3.3g
 Cornstarch..... 1.1g
 Egg lecithin 0.66g
 L-Cysteine·HCl·H₂O..... 0.5g
 NaN₃..... 0.2g
 Neomycin sulfate 0.15g
 CaCl₂..... 0.05g
 Bromocresol Purple 0.02g

pH 6.8 ± 0.2 at 25°C

Caution: Sodium azide is toxic. Azides also react with metals and disposal must be highly diluted.

Source: This medium is available as a prepared medium from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the isolation, cultivation, and differentiation of histolytic clostridia from clinical specimens based on lecithinase production and lactose fermentation. It is especially useful for the differentiation of *Clostridium perfringens*, *Clostridium sordelli*, *Clostridium novyi*, *Clostridium septicum*, and *Clostridium histolyticum*. Bacteria that produce lecithinase appear as colonies surrounded by an opalescent zone. Bacteria that ferment lactose appear as colonies surrounded by a yellow zone.

Lecithin Lipase Anaerobic Agar**Composition per liter:**

Pancreatic digest of casein..... 40.0g
 Agar 25.0g
 Yeast extract..... 5.0g
 Na₂HPO₄·12H₂O..... 5.0g
 Glucose 2.0g
 NaCl..... 2.0g
 KH₂PO₄..... 1.0g
 MgSO₄·7H₂O 0.1g
 Egg yolk emulsion 100.0mL

pH 7.6 ± 0.2 at 25°C

Egg Yolk Emulsion:**Composition:**

Chicken egg yolks..... 11
 Whole chicken egg 1

Preparation of Egg Yolk Emulsion: Soak eggs with 1:100 dilution of saturated mercuric chloride solution for 1 min. Crack eggs and separate yolks from whites. Mix egg yolks with 1 chicken egg. Filter sterilize.

Preparation of Medium: Add components, except egg yolk emulsion, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile egg yolk emulsion. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation, cultivation, and differentiation of *Clostridium* species based on lecithinase production and lipase production. Bacteria that produce lecithinase appear as colonies surrounded by a zone of insoluble precipitate. Bacteria that produce lipase appear as colonies with a pearly iridescent sheen.

**Lecithin Tween™ Medium
(LT Medium)****Composition per liter:**

Tween™ 80 30.0g
 Agar 15.0g
 Pancreatic digest of casein..... 10.0g
 Peptic digest of animal tissue 10.0g
 NaCl..... 5.0g
 Lecithin 5.0g
 Na₂S₂O₃·5H₂O 5.0g
 Glycerol 3.0g
 Histidine, free base 1.0g
 Glucose 1.0g

pH 7.5 ± 0.2 at 25°C

Antibiotic Solution:**Composition per 10.0mL:**

5-Fluorocytosine 0.2g
 Fosfomicin 0.1g
 Ticarcillin 0.1g

Preparation of Antibiotic Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except antibiotic solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile antibiotic solution. Mix thoroughly. Pour into sterile Petri dishes in 20.0mL volumes.

Use: For the isolation and cultivation of multiresistant lipophilic *Corynebacterium* species, especially *Corynebacterium* group JK found primarily in infections in immunocompromised hosts and patients with prosthetic valve endocarditis.

Lee's Agar

Composition per liter:

Agar	18.0g
Pancreatic digest of casein	10.0g
Yeast extract	10.0g
Lactose	5.0g
Sucrose	5.0g
CaCO ₃	3.0g
K ₂ HPO ₄	0.5g
Bromcresol Purple (0.2% solution)	10.0mL
pH 7.0 ± 0.2 at 25°C	

Bromcresol Purple Solution:

Composition per 10.0mL:

Bromcresol Purple	0.02g
-------------------------	-------

Preparation of Bromcresol Purple Solution: Add Bromcresol Purple to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except Bromcresol Purple solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Adjust pH to 7.0. Gently heat and bring to boiling. Autoclave for 20 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile Bromcresol Purple solution. Mix thoroughly. Pour into sterile, chilled Petri dishes in 20–25mL volumes. Swirl flask while dispensing to evenly suspend CaCO₃. Dry plates at 30°C for 18–24 hr before use.

Use: For the isolation, cultivation, and enumeration of *Lactobacillus bulgaricus* from yogurt.

Lee's HiVeg Agar

Composition per liter:

Agar	18.0g
Plant hydrolysate	10.0g
Yeast extract	10.0g
Lactose	5.0g
Sucrose	5.0g
CaCO ₃	3.0g
K ₂ HPO ₄	0.5g
Bromcresol Purple	0.02g
pH 7.0 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Gently heat and bring to boiling. Autoclave for 20 min at 15 psi pressure–121°C. Mix thoroughly. Pour into sterile, chilled Petri dishes in 20–

25mL volumes. Swirl flask while dispensing to evenly suspend CaCO₃. Dry plates at 30°C for 18–24 hr before use.

Use: For the isolation, cultivation, and enumeration of *Lactobacillus bulgaricus* from yogurt.

Lee's Multidifferential Agar

Composition per liter:

Tomato juice, desiccated	20.0g
Peptonized milk	20.0g
Glucose	10.0g
Yeast extract	10.0g
Agar	15.0g
CaCO ₃	5.0g
Calcium pantothenate	2.0g
Citric acid	1.1g
Polysorbate 80	0.5g
K ₂ HPO ₄	0.5g
KH ₂ PO ₄	0.5g
MgSO ₄ ·7H ₂ O	0.2g
FeSO ₄ ·7H ₂ O	0.01g
MnSO ₄ ·7H ₂ O	0.01g
NaCl	0.01g
Bromcresol Green	0.022g
Cycloheximide	7.0mg
pH 5.5 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 10 min at 15 psi pressure–121°C. Pour into sterile Petri plates while swirling to prevent calcium carbonate from settling. The medium will have a white precipitate of calcium carbonate.

Use: For the detection of most organisms commonly encountered in a brewery. Acid producing bacteria are identified by the development of a clear zone around the colonies. Further identification is facilitated by the characteristic color reactions.

Lee's Multidifferential HiVeg Agar

Composition per liter:

Tomato juice, desiccated	20.0g
Plant hydrolysate No. 3	20.0g
Agar	15.0g
Glucose	10.0g
Yeast extract	10.0g
CaCO ₃	5.0g
Calcium pantothenate	2.0g
Citric acid	1.1g
Polysorbate 80	0.5g
K ₂ HPO ₄	0.5g
KH ₂ PO ₄	0.5g
MgSO ₄ ·7H ₂ O	0.2g
FeSO ₄ ·7H ₂ O	0.01g
MnSO ₄ ·7H ₂ O	0.01g
NaCl	0.01g
Bromcresol Green	0.022g
Cycloheximide	7.0mg
pH 6.7 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Pour into sterile Petri plates while swirling to prevent calcium carbonate from settling. The medium will have a white precipitate of calcium carbonate.

Use: For the detection of most organisms commonly encountered in a brewery. Acid producing bacteria are identified by the development of a clear zone around the colonies. Further identification is facilitated by the characteristic color reactions.

**Legionella Agar Base
(Legionella Medium)
(BCYE α Agar, Modified)**

Composition per liter:

Agar	17.0g
Yeast extract	10.0g
ACES buffer (N-2-acetamido- 2-aminoethane sulfonic acid)	6.0g
Charcoal, activated	1.5g
KOH	1.5g
α -Ketoglutarate	1.0g
Legionella agar enrichment	10.0mL
pH 6.85–7.0 at 25°C	

Source: This medium is available as a prepared medium from BD Diagnostic Systems.

Legionella Agar Enrichment:

Composition per 10.0mL:

L-Cysteine-HCl-H ₂ O	0.4g
Fe ₄ (P ₂ O ₇) ₃	0.25g

Preparation of Legionella Agar Enrichment: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except *Legionella* agar enrichment, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Add 10.0mL of sterile *Legionella* agar enrichment. Adjust pH to 6.9 at 50°C by adding 4.0–4.5mL of 1.0N KOH. This is a critical step. Mix thoroughly. Pour into sterile Petri dishes in 20.0mL volumes. Swirl medium while pouring to keep charcoal in suspension.

Use: For the preparation of *Legionella* agars. For the isolation and cultivation of *Legionella* species from clinical and nonclinical materials.

**Legionella pneumophila Medium
(Charcoal Yeast Extract Diphasic
Blood Culture Medium)
(Diphasic Blood Culture Buffered
Charcoal Yeast Extract Medium)
(CYE-DBC)**

Composition per liter:

Agar phase	500.0mL
Broth phase	500.0mL
pH 6.9–7.0 at 25°C	

Agar Phase:

Composition per 500.0mL:

Agar	17.0g
Charcoal, activated	2.0g

Preparation of Agar Phase: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Gently heat and bring to boiling. Distribute in 20.0mL volumes into 125.0mL serum bottles with aluminum crimp seals and rubber stoppers. Autoclave for 20 min at 15 psi pressure–121°C. Cool to 50°C. Swirl medium to put charcoal in suspension. Allow agar to solidify so that a slant with a 6.0cm height is formed.

Broth Phase:

Composition per 500.0mL:

Yeast extract	20.0g
L-Cysteine-HCl-H ₂ O solution	0.4g
Fe(NO ₃) ₃ ·9H ₂ O solution	0.1g

Preparation of Broth Phase: Add yeast extract to distilled/deionized water and bring volume to 480.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add sterile L-cysteine-HCl-H₂O solution and Fe(NO₃)₃·9H₂O solution. Mix thoroughly. Adjust pH to 6.9 with 6.0mL of sterile 1N KOH.

L-Cysteine-HCl-H₂O Solution:

Composition per 10.0mL:

L-Cysteine-HCl-H ₂ O	0.04g
---------------------------------------	-------

Preparation of L-Cysteine-HCl-H₂O Solution: Add L-cysteine-HCl-H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Fe(NO₃)₃·9H₂O Solution:

Composition per 10.0mL:

Fe(NO ₃) ₃ ·9H ₂ O	0.04g
--	-------

Preparation of Fe(NO₃)₃·9H₂O Solution: Add Fe(NO₃)₃·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add 20.0mL of sterile broth phase to 125.0mL serum bottles containing 20.0mL of solidified agar phase. Seal bottles by crimping metal caps over rubber stoppers.

Use: For the isolation and cultivation of *Legionella pneumophila* from blood cultures.

Legionella Selective Agar

Composition per liter:

Agar	15.0g
ACES (2-[(2-amino-2-oxoethyl)-amino]ethane sulfonic acid) buffer	10.0g
Yeast extract	10.0g
Charcoal, activated	2.0g
α -Ketoglutarate	1.0g
L-Cysteine-HCl-H ₂ O solution	10.0mL
Fe ₄ (P ₂ O ₇) ₃ solution	10.0mL
Antibiotic solution	10.0mL
pH 6.85–7.0 at 25°C	

Source: This medium is available as a prepared medium from BD Diagnostic Systems.

L-Cysteine-HCl-H₂O Solution:

Composition per 10.0mL:

L-Cysteine-HCl-H ₂ O	0.4g
---------------------------------------	------

Preparation of L-Cysteine·HCl·H₂O Solution: Add L-cysteine·HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Fe₄(P₂O₇)₃ Solution:

Composition per 10.0mL:

Fe₄(P₂O₇)₃ 0.25g

Preparation of Fe₄(P₂O₇)₃ Solution: Add Fe₄(P₂O₇)₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Antibiotic Solution:

Composition per 10.0mL:

Anisomycin 10.0mg

Colistin 3.75mg

Vancomycin 2.0mg

Preparation of Antibiotic Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components—except L-cysteine·HCl·H₂O, Fe₄(P₂O₇)₃, and antibiotic solutions—to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile L-cysteine·HCl·H₂O, Fe₄(P₂O₇)₃, and antibiotic solutions. Mix thoroughly. Pour into sterile Petri dishes. Swirl medium while pouring to keep charcoal in suspension.

Use: *Legionella* selective agar is used in qualitative procedures for the isolation of *Legionella* species from clinical and nonclinical specimens.

Legume Extract Agar

Composition per liter:

Alfalfa roots 35.0g

Agar 20.0g

Soybean meal 10.0g

Sucrose 10.0g

CaCO₃ 5.0g

Glucose 5.0g

K₂HPO₄ 1.0g

MgSO₄·7H₂O 0.2g

CaCl₂ 0.1g

NaCl 0.1g

FeCl₃ 1.0mg

Preparation of Medium: Wash the alfalfa roots well and cut them up. Add 10.0g of soybean meal. Add three times the volume of distilled/deionized water. Steam for 1 hr. Let stand at 25°C overnight. Bring volume to 1.0L with distilled/deionized water. Filter through paper pulp. To the filtrate, add the K₂HPO₄, CaCl₂, MgSO₄·7H₂O, NaCl, FeCl₃, and agar. Autoclave for 20 min at 15 psi pressure–121°C. Cool to 45°–50°C. Add the CaCO₃, sucrose, and glucose. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 20 min at 10 psi pressure–115°C.

Use: For the cultivation of *Rhizobium* species.

Leifson HiVeg Agar

Composition per liter:

Agar 12.0g

Lactose 10.0g

Plant extract No. 1 6.5g

Na₂S₂O₃ 5.4g

Plant peptone No. 1 5.0g

Synthetic detergent No. III 3.0g

Ferric citrate 1.0g

Neutral Red 0.02g

pH 7.5 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Gently bring to boiling. Do not autoclave. Pour into sterile Petri plates.

Use: For the isolation of *Salmonella* and *Shigella* species.

Leifson Medium

Composition per liter:

Agar 15.0g

Pancreatic digest of casein 2.0g

MgCl₂ 1.0g

Yeast extract 1.0g

pH 8.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 8.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the direct isolation and routine culturing of *Hyphomonas* species.

Leifson's Deoxycholate HiVeg Agar, Modified

(Hugh Leifson Deoxycholate HiVeg Agar, Modified)

Composition per liter:

Agar 15.0g

Lactose 10.0g

Plant extract 5.0g

Plant peptone 5.0g

Sodium citrate 5.0g

Na₂S₂O₃ 5.0g

Synthetic detergent No. III 2.5g

Ferric citrate 1.0g

Neutral Red 0.025g

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Gently bring to boiling. Do not autoclave. Pour into sterile Petri plates.

Use: For the selective isolation and differentiation of *Salmonella* and *Shigella* species.

Leishmania Medium

Composition per 100.0mL:

Sodium citrate 1.2g

NaCl 1.0g

Rabbit blood solution 10.0mL

Rabbit Blood Solution:

Composition per 10.0mL:

Rabbit blood, defibrinated 5.0mL

Preparation of Rabbit Blood Solution: Add 5.0mL of whole rabbit blood to 5.0mL of sterile distilled/deionized water. Freeze and thaw twice to lyse blood cells.

Preparation of Medium: Add components, except rabbit blood solution, to distilled/deionized water and bring volume to 90.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL of sterile rabbit blood solution. Mix thoroughly. Aseptically distribute into sterile, screw-capped tubes or flasks.

Use: For the cultivation of *Leishmania donovani*, *Leishmania hertigi*, and *Leishmania tropica*.

LEMB Agar

See: **Levine EMB Agar**

Lenox Broth

See: **LB Medium**

Leonian's Agar

Composition per liter:

Agar	20.0g
Maltose.....	6.25g
Malt extract.....	6.25g
KH ₂ PO ₄	1.25g
Peptone.....	0.625g
MgSO ₄ ·7H ₂ O.....	0.625g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Amorphotheca resiniae*, *Apiosordaria rotula*, *Arachnotheca glomerata*, *Ascotricha erinacea*, *Auxarthron pseudauxarthron*, *Coniochaeta extramundana*, *Coniochaetidium ostreum*, *Coprinus velox*, *Cylindrocladium couratariae*, *Dicranidion fragile*, *Dicranidion gracilis*, *Eupenicillium brefeldianum*, *Isaria sulfurea*, *Linderina macrospora*, *Microthecium retisporum*, *Nigrospora sacchari*, *Orbicula parietina*, *Pectinotrichum llanense*, *Penicillium ochrochloron*, *Penicillium pinophilum*, *Pseudogymnoascus roseus*, *Thielavia terricola*, *Triangularia batistae*, *Tripospermum myrti*, and *Zopfiella pleuropora*.

Leptospira HiVeg Medium Base, Korthof, Modified with Rabbit Serum

Composition per liter:

NaCl	1.4g
Na ₂ HPO ₄	0.88g
Plant peptone.....	0.8g
KH ₂ PO ₄	0.24g
CaCl ₂	0.04g
KCl.....	0.04g
NaHCO ₃	0.02g
Rabbit serum, heat inactivated at 56°C.....	100.0mL

pH 7.2 ± 0.2 at 25°C

Source: This medium, without rabbit serum, is available as a pre-mixed powder from HiMedia.

Preparation of Medium: Add components, except rabbit serum, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 10 psi pressure–115°C. Cool to 50°–56°C. Aseptically add 100.0mL of rabbit serum. Mix thoroughly.

Use: For the cultivation of *Leptospira* species.

Leptospira HiVeg Medium Base, Korthof, Modified with Rabbit Serum and Hemoglobin

Composition per liter:

NaCl.....	1.4g
Na ₂ HPO ₄	0.88g
Plant peptone.....	0.8g
KH ₂ PO ₄	0.24g
CaCl ₂	0.04g
KCl.....	0.04g
NaHCO ₃	0.02g
Rabbit serum, heat inactivated at 56°C.....	80.0mL
Hemoglobin solution.....	8.0mL

pH 7.2 ± 0.2 at 25°C

Source: This medium, without rabbit serum, is available as a pre-mixed powder from HiMedia.

Hemoglobin Solution:

Composition per 50.0mL:

Bovine hemoglobin.....	1.0g
------------------------	------

Preparation of Hemoglobin Solution: Add bovine hemoglobin to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Preparation of Medium: Add components, except rabbit serum, and hemoglobin solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 10 psi pressure–115°C. Cool to 50°–56°C. Aseptically add 80.0mL of rabbit serum and 8.0mL of hemoglobin solution. Mix thoroughly. Aseptically dispense into tubes.

Use: For the cultivation of *Leptospira* species.

Leptospira Medium

Composition per liter:

(NH ₄) ₂ Fe(SO ₄) ₂ ·6H ₂ O.....	6.0g
NaH ₂ PO ₄	0.53g
L-Asparagine.....	0.5g
Glycerol.....	0.2g
Tween™ 60.....	0.2g
MgSO ₄ ·7H ₂ O.....	0.15g
KH ₂ PO ₄	0.069g
Tween™ 80.....	0.05g
EDTA.....	0.01g
CaCO ₃	4.0mg
Thiamine·HCl.....	1.0mg
Vitamin B ₁₂	1.0μg

pH 7.4–7.6 at 25°C

Preparation of Medium: Add components, except thiamine·HCl, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 1.0mg of thiamine·HCl. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Leptospira* species.

Leptospira Medium (DSMZ Medium 1113)

Composition per liter:

Agarose.....	1.5g
Na ₂ HPO ₄	1.0g

NaCl	1.0g
KH ₂ PO ₄	0.3g
NH ₄ Cl	0.25g
Thiamine	5.0mg
<i>Leptospira</i> enrichment EMJH (a solution of albumin, polysorbate 80 and additional growth factors available from BD Diagnostics	
	100.0mL
	pH 7.5 ± 0.2 at 25°C

Preparation of Medium: Add agarose to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat while stirring and bring to boiling. Boil with mixing until agarose dissolves. Add the other components, except *Leptospira* enrichment EMJH. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Mix thoroughly. Warm the *Leptospira* enrichment to approximately 25°C and add to the warm medium. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Leptospira* spp.

Leptospira Medium, EMJH (*Leptospira* Medium, Ellinghausen-McCullough/ Johnson-Harris)

Composition per liter:

Na ₂ HPO ₄	1.0g
NaCl	1.0g
KH ₂ PO ₄	0.3g
NH ₄ Cl	0.25g
Thiamine	5.0mg
Rabbit serum	100.0mL
	pH 7.5 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components, except rabbit serum, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add sterile rabbit serum. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Leptospira* species.

Leptospira Medium, Modified

Composition per liter:

Agar	1.5g
NaCl	0.5g
Peptone	0.3g
Beef extract	0.2g
Hemin solution	2.5mL
Sterile rabbit serum	100.0mL
	pH 7.3 ± 0.1 at 25°C

Hemin Solution:

Composition per 100.0mL:

Hemin	0.05g
NaOH (1N solution)	1.0mL

Preparation of Hemin Solution: Add hemin to 1.0mL of 1N NaOH solution. Mix thoroughly. Bring volume to 100.0mL with distilled/deionized water. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Preparation of Medium: Add components, except hemin solution and rabbit serum, to distilled/deionized water and bring volume to 897.5mL. Mix thoroughly. Gently heat and bring to boiling. Adjust pH

to 7.4. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 2.5mL of sterile hemin solution and 100.0mL of sterile rabbit serum. Mix thoroughly. The pH of the medium should be 7.3. Store at 4°C for 24 hr. Inactivate medium at 56°C for 60 min. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Leptospira biflexa*, *Leptospira borgpetersenii*, *Leptospira interrogans*, *Leptospira meyeri*, *Leptospira noguchii*, *Leptospira santarosai*, and *Leptospira weili*.

Leptospira Protein-Free Medium (*Leptospira* PF Medium)

Composition per liter:

TES (<i>N</i> -Tris[hydroxymethyl]methyl-2-aminoethane sulfonic acid) buffer	1.2g
NaCl	0.9g
Sodium pyruvate	0.2g
CT-Tween™ 60	12.0mL
CT-Tween™ 40	3.0mL
MgCl ₂ -CaCl ₂ solution	1.0mL
Cyanocobalamin (0.02% solution)	1.0mL
Glycerol (10% solution)	1.0mL
KH ₂ PO ₄ (1% solution)	1.0mL
MnSO ₄ ·H ₂ O (0.1% solution)	1.0mL
ZnSO ₄ (0.4% solution)	0.1mL
	pH 7.6 ± 0.2 at 25°C

CT-Tween™ 60:

Composition per 200.0mL:

Charcoal, Norit A	40.0g
Tween™ 60	20.0g

Preparation of CT-Tween™ 60: Add Tween™ 60 to 200.0mL of distilled/deionized water. Mix thoroughly. While stirring, add charcoal. Stir mixture for 18 hr at 25°C. Allow charcoal to settle out of suspension for 18 hr at 4°C. Carefully decant the Tween™ solution off the sediment. Centrifuge the Tween™ solution at 10,000 × g for 1 hr. Decant supernatant solution. Pass Tween™ solution through a thin-channel ultrafiltration XM 100 membrane. Store stock solution at –20°C.

CT-Tween™ 40:

Composition per 200.0mL:

Charcoal, Norit A	40.0g
Tween™ 40	20.0g

Preparation of CT-Tween™ 40: Add Tween™ 40 to 200.0mL of distilled/deionized water. Mix thoroughly. While stirring, add charcoal. Stir mixture for 18 hr at 25°C. Allow charcoal to settle out of suspension for 18 hr at 4°C. Carefully decant the Tween™ solution off the sediment. Centrifuge the Tween™ solution at 10,000 × g for 1 hr. Decant supernatant solution. Pass Tween™ solution through a thin-channel ultrafiltration XM 100 membrane. Store stock solution at –20°C.

MgCl₂-CaCl₂ Solution:

Composition per 100.0mL:

CaCl ₂ ·2H ₂ O	1.5g
MgCl ₂ ·6H ₂ O	1.5g

Preparation of MgCl₂-CaCl₂ Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Leptospira* species.

Leptospirillum ferrooxidans* Medium*Composition per liter:**

FeSO ₄ ·7H ₂ O.....	30.0g
CaCl ₂ ·2H ₂ O.....	0.147g
(NH ₄) ₂ SO ₄	0.13g
KH ₂ PO ₄	27.0mg
MgCl ₂ ·6H ₂ O.....	25.0mg
Trace elements solution	1.0mL
pH 2.0 ± 0.2 at 25°C	

Trace Elements Solution:**Composition per liter:**

CoCl ₂ ·6H ₂ O.....	0.12g
MnCl ₂ ·4H ₂ O.....	0.1g
Na ₂ MoO ₄ ·2H ₂ O.....	85.2mg
ZnCl ₂	70.0mg
H ₃ BO ₃	31.0mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add H₂SO₄ to 900.0mL of distilled/deionized water and bring pH to 3.0. Add components. Mix thoroughly. Bring volume to 1.0L with distilled/deionized water. Mix thoroughly. Adjust pH to 2.0 with H₂SO₄. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Leptospirillum ferrooxidans*.

***Leptospirillum* HH Medium
(DSMZ Medium 882)****Composition per 1001.0mL:**

Solution A.....	950.0mL
Solution B.....	50.0mL
Trace elements solution	1.0mL
pH 1.8 ± 0.2 at 25°C	

Solution A:

CaCl ₂ ·2H ₂ O.....	147.0mg
(NH ₄) ₂ SO ₄	132.0mg
MgCl ₂ ·6H ₂ O.....	53.0mg
KH ₂ PO ₄	27.0mg

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Adjust pH to 1.8 with 10N H₂SO₄. Autoclave for 30 min at 112°C. Cool to room temperature.

Solution B:

FeSO ₄ ·7H ₂ O.....	20.0g
H ₂ SO ₄ , 0.25N.....	50.0mL

Preparation of Solution B: Add FeSO₄·7H₂O to 50.0mL 0.25N H₂SO₄. Mix thoroughly. The pH should be 1.2. Autoclave for 30 min at 112°C. Cool to room temperature.

Trace Elements Solution:

ZnCl ₂	68.0mg
CuCl ₂ ·2H ₂ O.....	67.0mg
CoCl ₂ ·6H ₂ O.....	64.0mg
MnCl ₂ ·2H ₂ O.....	62.0mg
H ₃ BO ₃	31.0mg
Na ₂ MoO ₄	10.0mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 1.8 with 10N H₂SO₄. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Preparation of Medium: Aseptically mix 950.0mL of solution A and 50.0mL solution B. Mix thoroughly. Aseptically add 1.0mL trace elements solution. Mix thoroughly. Adjust pH to 1.8.

Use: For the cultivation of *Acidithiobacillus ferrooxidans*=*Thiobacillus ferrooxidans* and *Leptospirillum* spp.

Leptothrix ochracea* Medium*Composition per liter:**

Agar.....	10.0g
Manganous acetate.....	0.1g
Manganese bicarbonate solution.....	100.0mL
pH 7.0 ± 0.2 at 25°C	

Manganese Bicarbonate Solution:**Composition per 100.0mL:**

MnCO ₃	2.0g
-------------------------	------

Preparation of Manganese Bicarbonate Solution: Add MnCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Gas with 100% CO₂ for 20 min. Filter through Whatman #1 filter paper.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Leptothrix ochracea*.

Leptothrix* 2X PYG Medium*Composition per liter:**

HEPES (<i>N</i> -2-Hydroxyethyl piperazine- <i>N'</i> - 2-ethanesulfonic acid) buffer.....	3.57g
MgSO ₄ ·7H ₂ O.....	0.6g
Glucose.....	0.5g
Peptone.....	0.5g
Yeast extract.....	0.5g
CaCl ₂ ·2H ₂ O.....	0.07g
MnSO ₄ ·H ₂ O.....	0.017g
pH 7.3 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.3. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Leptothrix discophora*.

Leptothrix* Strains Medium*Composition per liter:**

Agar.....	7.5g
MnCO ₂	2.0g
Beef extract.....	1.0g
Fe(NH ₄) ₂ (SO ₄) ₂	0.15g
Sodium citrate.....	0.15g
Yeast extract.....	0.075g
Vitamin B ₁₂	5.0μg
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Leptothrix cholodnii*, *Leptothrix discophora*, and *Sphaerotilus natans*.

Leptothrix Strains Medium**Composition per liter:**

Agar	12.0g
Peptone.....	5.0g
MgSO ₄ ·7H ₂ O	0.2g
Ferric ammonium citrate.....	0.15g
CaCl ₂	0.05g
FeCl ₃ ·6H ₂ O	0.01g
MnSO ₄ ·H ₂ O	0.01g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of *Leptothrix* species.

Leptotrichia buccalis Medium**Composition per liter:**

Agar	15.0g
Nutrient broth.....	8.0g
Yeast extract.....	2.0g
Glucose solution	10.0mL
L-Cysteine solution.....	10.0mL
Hemin solution.....	4.0mL

pH 7.2–7.6 at 25°C

Glucose Solution:**Composition per 10.0mL:**

D-Glucose	2.0g
-----------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

L-Cysteine Solution:**Composition per 10.0mL:**

L-Cysteine·HCl·H ₂ O.....	1.0g
--------------------------------------	------

Preparation of L-Cysteine Solution: Add L-cysteine·HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Hemin Solution:**Composition per 10.0mL:**

Hemin.....	2.5mg
Triethanolamine (50% solution)	10.0mL

Preparation of Hemin Solution: Add hemin to 10.0mL of triethanolamine solution. Mix thoroughly.

Preparation of Medium: Add components, except glucose solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile glucose solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Leptotrichia buccalis*.

Leptotrichia Medium**Composition per liter:**

Pancreatic digest of casein.....	10.0g
NaCl.....	5.0g
Peptone.....	5.0g
Yeast extract.....	3.0g

Na ₂ HPO ₄	2.5g
L-Cysteine·HCl·H ₂ O	0.5g
Horse serum.....	100.0mL
Tomato decoction.....	50.0mL

pH 7.2–7.4 at 25°C

Tomato Decoction:**Composition per 100.0mL:**

Tomatoes.....	50.0mL
---------------	--------

Preparation of Tomato Decoction: Mince fresh tomatoes and measure 50.0mL. Add 50.0mL of tap water. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 10 min. Filter through Whatman #1 filter paper. Autoclave filtrate for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except horse serum and tomato decoction, to distilled/deionized water and bring volume to 850.0mL. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.2–7.4. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add sterile horse serum and tomato decoction. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Leptotrichia buccalis*.

LES Endo Agar

See: Endo Agar, LES

Lethen Agar**Composition per liter:**

Agar	15.0g
Tween™ 80.....	7.0g
Pancreatic digest of casein.....	5.0g
Beef extract.....	3.0g
Glucose	1.0g
Lecithin.....	1.0g

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For determination of the antimicrobial activity of quaternary ammonium compounds.

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the determination of the antimicrobial activity of quaternary ammonium compounds.

Lethen HiVeg Agar, Modified

Composition per liter:

Agar.....	20.0g
Plant peptone.....	20.0g
Plant extract.....	5.0g
Plant hydrolysate.....	5.0g
NaCl.....	5.0g
Polysorbate 80.....	5.0g
Yeast extract.....	2.0g
Lecithin.....	0.7g
NaHSO ₃	0.1g

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the screening of cosmetic products for microbial contamination.

Lethen HiVeg Broth, AOAC

Composition per liter:

Plant peptone.....	10.0g
Plant extract.....	5.0g
Polysorbate 80.....	5.0g
NaCl.....	5.0g
Lecithin.....	0.7g

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the determination of the antimicrobial activity of quaternary ammonium compounds.

Lethen HiVeg Broth, Modified

Composition per liter:

Plant peptone.....	20.0g
Plant extract.....	5.0g
Plant hydrolysate.....	5.0g
NaCl.....	5.0g
Polysorbate 80.....	5.0g
Yeast extract.....	2.0g
Lecithin.....	0.7g
NaHSO ₃	0.1g

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the screening of cosmetic products for microbial contamination.

Leuconostoc Medium**Composition per liter:**

CaCO ₃	50.0g
Malt extract	50.0g
Agar	15.0g
NaCl	2.5g
Beef extract	1.0g
Polypeptone™	1.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 10 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Leuconostoc mesenteroides*.

Leuconostoc oenos Medium**Composition per liter:**

Tryptic digest of casein	10.0g
Glucose	10.0g
Fructose	5.0g
Yeast extract	5.0g
Diammonium citrate	3.5g
L-Cysteine-HCl	0.5g
MgSO ₄ ·7H ₂ O	200.0mg
MnSO ₄ ·H ₂ O	50.0mg
Tomato juice, filtered	100.0mL
Tween™ 80	1.0mL

pH 4.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 4.8. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Leuconostoc oenos*.

Leuconostoc oenos Medium**Composition per liter:**

Glucose	10.0g
Peptone	10.0g
Yeast extract	5.0g
MnSO ₄ ·4H ₂ O	0.1g
Tomato juice	250.0mL
L-Cysteine-HCl solution	10.0mL

pH 4.8 ± 0.2 at 25°C

L-Cysteine-HCl Solution:**Composition per 10.0mL:**

L-Cysteine-HCl	0.5g
----------------------	------

Preparation of L-Cysteine-HCl Solution: Add L-cysteine-HCl to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except L-cysteine-HCl solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add sterile L-cysteine-HCl solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Leuconostoc oenos*.

Leuconostoc oenos Medium**Composition per liter:**

Glucose	10.0g
Tryptone	10.0g
Fructose	5.0g
Yeast extract	5.0g
Diammonium citrate	3.5g
L-Cysteine-HCl	0.5g
So ₄ Mg·7H ₂ O	0.2g
MnSO ₄ ·H ₂ O	0.05g
Tomato juice, filtered	100.0mL
Tween™ 80	1.0mL

pH 4.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 4.8. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Leuconostoc oenos*.

Leucothrix Medium**Composition per liter:**

Pancreatic digest of casein	10.0g
Synthetic seawater	1000.0mL

pH 7.8 ± 0.2 at 25°C

Synthetic Seawater:**Composition per liter:**

NaCl	24.0g
MgCl ₂ ·6H ₂ O	11.0g
Na ₂ SO ₄	4.0g
CaCl ₂ ·6H ₂ O	2.0g
KCl	0.7g
KBr	0.1g
SrCl ₂ ·6H ₂ O	0.04g
H ₃ BO ₃	0.03g
NaSiO ₃ ·9H ₂ O	5.0mg
NaF	3.0mg
NH ₄ NO ₃	2.0mg
FePO ₄ ·4H ₂ O	1.0mg

Preparation of Synthetic Seawater: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add 10.0g of pancreatic digest of casein to 1.0L of synthetic seawater. Mix thoroughly. Adjust pH to 7.8. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Leucothrix* species.

**Leucothrix Medium
(ATCC Medium 429)****Composition per liter:**

NaCl	11.7g
Monosodium glutamate	10.0g
MgCl ₂ ·6H ₂ O	5.35g
Na ₂ SO ₄	2.0g
CaCl ₂ ·2H ₂ O	0.75g
Tris(hydroxymethyl)aminomethane buffer	0.5g
KCl	0.35g
Na ₂ HPO ₄	0.05g

pH 7.6 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Leucothrix mucor*.

***Leucothrix* Medium (ATCC Medium 430)**

Composition per liter:

NaCl	11.7g
MgCl ₂ ·6H ₂ O	5.35g
Na ₂ SO ₄	2.0g
CaCl ₂ ·2H ₂ O	0.75g
Pancreatic digest of casein	0.5g
Yeast extract	0.5g
Tris(hydroxymethyl)aminomethane buffer	0.5g
KCl	0.35g
Na ₂ HPO ₄	0.05g

pH 7.6 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Leucothrix mucor*.

***Leucothrix mucor* Medium**

Composition per liter:

NaCl	11.75g
Monosodium glutamate	10.0g
MgCl ₂ ·6H ₂ O	5.35g
Na ₂ SO ₄	2.0g
Sodium lactate	2.0g
CaCl ₂ ·6H ₂ O	1.12g
Tris (hydroxymethyl)aminomethane buffer	0.5g
KCl	0.35g
Na ₂ HPO ₄	0.05g

pH 7.6 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Leucothrix mucor*.

Levine EMB Agar (Levine Eosin Methylene Blue Agar) (Eosin Methylene Blue Agar, Levine) (LEMB Agar)

Composition per liter:

Agar	15.0g
Lactose	10.0g
Peptone	10.0g
K ₂ HPO ₄	2.0g
Eosin Y	0.4g
Methylene Blue	0.065mg

pH 7.1 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring

to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation, cultivation, and differentiation of Gram-negative enteric bacteria based on lactose fermentation. Bacteria that ferment lactose, especially the coliform bacterium *Escherichia coli*, appear as colonies with a green metallic sheen or blue-black to brown color. Bacteria that do not ferment lactose appear as colorless or transparent light purple colonies.

Levinthal's Agar

Composition per 105.0mL:

Nutrient agar, sterile	100.0mL
Rabbit blood or human blood, sterile	5.0mL
pH 6.8 ± 0.2 at 25°C	

Nutrient Agar:

Composition per liter:

Agar	15.0g
Pancreatic digest of gelatin	5.0g
Beef extract	3.0g

Source: Nutrient agar is available as a premixed powder from BD Diagnostic Systems.

Preparation of Nutrient Agar: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Preparation of Medium: To 100.0mL of cooled, sterile nutrient agar, aseptically add 5.0mL of human blood or rabbit blood. Mix thoroughly. Heat in a boiling water bath for 5 min. Allow the deposit to settle out of suspension. Pour the clear supernatant solution into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Haemophilus* species.

Levinthal's HiVeg Medium Base with Blood

Composition per liter:

Agar	20.0g
Plant extract	10.0g
Plant peptone	10.0g
NaCl	5.0g
Rabbit blood or human blood, sterile	50.0mL
pH 7.6 ± 0.2 at 25°C	

Source: This medium, without blood, is available as a premixed powder from HiMedia.

Preparation of Medium: Add components, except blood, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50.0mL of human blood or rabbit blood. Mix thoroughly. Heat in a boiling water bath for 5 min. Allow the deposit to settle out of suspension. Pour the clear supernatant solution into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Haemophilus* species.

Levinthal's Medium Base

Composition per liter:

Agar	20.0g
Peptic digest of animal tissue	10.0g
Beef extract	10.0g

NaCl	5.0g
Rabbit or human blood	50.0mL
pH 7.6 ± 0.2 at 25°C	

Source: This medium is available from HiMedia.

Preparation of Medium: Add components, except blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add blood. Mix thoroughly. Heat in boiling water bath. Allow the deposits to settle. Distribute clear supernatant into sterile tubes.

Use: For the cultivation of *Haemophilus* spp.

LGI Medium

See: *Azospirillum amazonense* Medium

LHET2 Medium

Composition per liter:

Solution A	500.0mL
Solution B	500.0mL
pH 2.5–3.0 at 25°C	

Solution A:

Composition per 500.0mL:

(NH ₄) ₂ SO ₄	2.0g
K ₂ HPO ₄	0.51g
MgSO ₄ ·7H ₂ O	0.5g
KCl	0.1g
Pancreatic digest of casein	0.06g
NaCl	0.02g
Papaic digest of soybean meal	0.01g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 2.5–3.0 with 1N H₂SO₄. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Solution B:

Composition per 500.0mL:

Agar	12.0g
Glucose	1.0g

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Preparation of Medium: Aseptically combine sterile solution A and sterile solution B. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Acidiphilium cryptum*.

LHET2 Medium with Yeast Extract or Yeast Autolysate

Composition per liter:

Solution A	500.0mL
Solution B	500.0mL
pH 2.5–3.0 at 25°C	

Solution A:

Composition per 500.0mL:

(NH ₄) ₂ SO ₄	2.0g
K ₂ HPO ₄	0.51g
MgSO ₄ ·7H ₂ O	0.5g
KCl	0.1g

Yeast extract or yeast autolysate	0.1g
Pancreatic digest of casein	0.06g
NaCl	0.02g
Papaic digest of soybean meal	0.01g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 2.5–3.0 with 1N H₂SO₄. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Solution B:

Composition per 500.0mL:

Agar	12.0g
Glucose	1.0g

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Preparation of Medium: Aseptically combine sterile solution A and sterile solution B. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Acidiphilium angustum*, *Acidiphilium facilis*, and *Acidiphilium rubrum*.

Lichen Fungi Medium

Composition per liter:

Agar	20.0g
Malt extract	20.0g
Yeast extract	2.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Acarospora fuscata*, *Acarospora smaragdula*, *Anaptychia ciliaris*, *Anthracotheicum albescens*, *Arthonia cinnabarina*, *Bacidia incompta*, *Baeomyces roseus*, *Buellia stillingiana*, *Caloplaca aurantiaca*, *Candelariella vitellina*, *Cetraria islandica*, numerous *Cladonia* species, *Dermatocarpon fluviatile*, *Graphis tenella*, *Lecanora cinerea*, *Lecanora dispersa*, *Lecanora rubina*, *Lecidea* species, *Microthelia albidella*, *Opegrapha lichenoides*, *Parmelia centrifuga*, *Parmelia conspersa*, *Phisica millegrana*, *Phisica stellaris*, *Porina sandwichensis*, *Pyrenula nitida*, *Ramalina americana*, *Sarcogyne simplex*, *Stereocaulon vulcani*, *Umbilicaria papulosa*, *Usnea florida*, *Xanthoria parietina*, and other fungi from lichen symbiotic relationships.

LICNR Broth

(Lysine Iron Cystine Neutral Red Broth)

Composition per 500.0mL:

L-Lysine·HCl	10.0g
Mannitol	5.0g
Pancreatic digest of casein	5.0g
Yeast extract	3.0g
Glucose	1.0g
Salicin	1.0g
Ferric ammonium citrate	0.5g
L-Cystine	0.1g
Na ₂ S ₂ O ₃	0.1g
Neutral Red	0.025g
Novobiocin solution	10.0mL

pH 6.2 ± 0.2 at 25°C

Novobiocin Solution:**Composition** per 10.0mL:

Novobiocin..... 0.015g

Preparation of Novobiocin Solution: Add novobiocin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except novobiocin solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 2–3 min. Distribute into tubes in 10.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 0.1mL of sterile novobiocin solution to each tube. Mix thoroughly.

Use: For the rapid, presumptive detection of *Salmonella* in foods, food ingredients, and feed materials.

Lima Bean Agar (ATCC Medium 322)

Composition per liter:Lima beans, infusion from 62.5g 8.0g
Agar 15.0g

pH 5.6 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of a variety of phytopathological fungi and other fungi.

Lima Bean Agar

Composition per liter:Lima beans, solids from infusion..... 62.5g
Agar 15.0g

pH 5.6 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of a variety of phytopathological fungi and other fungi.

Lima Bean Agar

Composition per liter:Lima beans, frozen..... 250.0g
Agar 5.0g

pH 6.3 ± 0.3 at 25°C

Preparation of Medium: Add lima beans to distilled/deionized water and bring volume to 1.0L. Blend for 10 min. Add agar. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of numerous *Colletotrichum* species, *Coniothyrium fuckelii*, *Diheterospora chlamydosporia*, *Glomerella cingulata*, *Graphium fragrans*, *Monochaetia mali*, *Penicillium crustosum*, *Phleospora idahoensis*, *Phoma eupyrena*, *Phoma lingam*, *Phyllosticta sojaecola*, numerous *Phytophthora* species, *Polysphondy-*

lium violaceum, *Pythium anandrum*, *Pythium irregulare*, *Pythium vexans*, *Scopulariopsis fimicola*, and *Sphaerostilbe repens*.

Limnobacter Medium (DSMZ Medium 919)

Composition per liter:Yeast extract..... 0.5g
Proteose peptone 0.5g
Casamino acids 0.5g
Glucose 0.5g
Soluble starch..... 0.5g
Sodium pyruvate..... 0.3g
K₂HPO₄..... 0.3g
MgSO₄·7H₂O 0.05g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Limnobacter thiooxidans*.

Lindane Medium

Composition per liter:Yeast extract..... 5.0g
γ-Hexachlorocyclohexane (Lindane)..... 0.1g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Clostridium sphenoides*.

Lineola Agar

Composition per liter:Mannitol..... 25.0g
Agar 15.0g
Yeast extract..... 5.0g
Peptone 3.0g

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Bacillus macroides* and other *Bacillus* species.

Lipovitellin Salt Mannitol Agar

Composition per liter:NaCl..... 75.0g
Egg yolk..... 20.0g
Agar 15.0g
D-Mannitol 10.0g
Polypeptone™ 10.0g
Beef extract..... 1.0g
Phenol Red..... 0.025g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the detection of *Staphylococcus aureus* in swimming pool water based on lipovitellin-lipase activity and mannitol fermentation. *Staphylococcus aureus* and other bacteria with lipovitellin-lipase activity attack the egg yolk and appear as colonies surrounded by an opaque zone. Bacteria that ferment mannitol appear as colonies surrounded by a yellow zone.

Liquid Broth

Composition per liter:

Beef heart, infusion from	250.0g
Calf brain, infusion from	200.0g
Proteose peptone	10.0g
NaCl	5.0g
Na ₂ HPO ₄	2.5g
Glucose	2.0g
Sodium polyanethol sulfonate	0.5g
pH 7.4 ± 0.2 at 25°C	

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the screening of blood specimens from suspected cases of bacteremia.

Listeria Enrichment Broth

Composition per liter:

Pancreatic digest of casein	17.0g
Yeast extract	6.0g
NaCl	5.0g
Papaic digest of soybean meal	3.0g
Glucose	2.5g
K ₂ HPO ₄	2.5g
Cycloheximide	0.05g
Nalidixic acid	0.04g
Acriflavine-HCl	0.015g
pH 7.3 ± 0.2 at 25°C	

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation and cultivation of *Listeria monocytogenes* according to the FDA formula.

Listeria Enrichment Broth, FDA (LEB, FDA)

Composition per liter:

Soybean casein digest broth yeast extract	1.0L
Nalidixic acid solution	8.0mL
Cycloheximide solution	5.1mL
Acriflavin-HCl solution	3.0mL
pH 7.3 ± 0.2 at 25°C	

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Soybean Casein Digest Broth Yeast Extract:

Composition per liter:

Pancreatic digest of casein	17.0g
Yeast extract	6.0g
NaCl	5.0g
Papaic digest of soybean meal	3.0g
K ₂ HPO ₄	2.5g
Glucose	2.5g

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Soybean Casein Digest Broth Yeast Extract:

Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Nalidixic Acid Solution:

Composition per 100.0mL:

Nalidixic acid	0.5g
----------------------	------

Preparation of Nalidixic Acid Solution: Add nalidixic acid to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Cycloheximide Solution:

Composition per 100.0mL:

Cycloheximide	1.5g
Ethanol	40.0mL

Preparation of Cycloheximide Solution: Add cycloheximide to 40.0mL of ethanol. Mix thoroughly. Bring volume to 100.0mL with distilled/deionized water. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Acriflavin-HCl Solution:

Composition per 100.0mL:

Acriflavin-HCl solution	0.5g
-------------------------------	------

Preparation of Acriflavin-HCl Solution: Add acriflavin-HCl solution to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components—except nalidixic acid solution, acriflavin solution, and cycloheximide solution—to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 8.0mL of sterile nalidixic acid solution, 5.1mL of sterile cycloheximide solution, and 3.0mL of sterile acriflavin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and enrichment of *Listeria monocytogenes* from foods.

Listeria Enrichment Broth I, USDA FSIS (Listeria Primary Selective Enrichment Broth, UVM I) (University of Vermont I Listeria Primary Selective Enrichment Broth)

Composition per liter:

NaCl	20.0g
Na ₂ HPO ₄	12.0g
Beef extract	5.0g
Proteose peptone	5.0g
Pancreatic digest of casein	5.0g
Yeast extract	5.0g

KH ₂ PO ₄	1.35g
Esculin	1.0g
Nalidixic acid solution	1.0mL
Acriflavine solution	1.0mL
pH 7.4 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Oxoid Unipath.

Nalidixic Acid Solution:

Composition per 10.0mL:

Nalidixic acid.....	0.2g
NaOH (0.1M solution).....	10.0mL

Preparation of Nalidixic Acid Solution: Add nalidixic acid to 10.0mL of NaOH solution. Mix thoroughly. Filter sterilize.

Acriflavine Solution:

Composition per 10.0mL:

Acriflavine	0.12g
-------------------	-------

Preparation of Acriflavine Solution: Add acriflavine to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize. Use freshly prepared solution.

Preparation of Medium: Add components, except nalidixic acid solution and acriflavine solution, to distilled/deionized water and bring volume to 998.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 1.0mL of sterile nalidixic acid solution. Mix thoroughly. Store at 4°C. Immediately prior to use, aseptically add 1.0mL of sterile acriflavine solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the selective isolation, cultivation, and enrichment of *Listeria monocytogenes* from food, milk, and dairy products.

***Listeria* Enrichment Broth II,**

USDA FSIS

(*Listeria* Primary Selective Enrichment Broth, UVM II)

(University of Vermont II *Listeria* Primary Selective Enrichment Broth)

Composition per liter:

NaCl.....	20.0g
Na ₂ HPO ₄	12.0g
Beef extract	5.0g
Protease peptone	5.0g
Pancreatic digest of casein.....	5.0g
Yeast extract.....	5.0g
KH ₂ PO ₄	1.35g
Esculin	1.0g
Nalidixic acid solution.....	1.0mL
Acriflavine solution	1.0mL
pH 7.4 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Oxoid Unipath.

Nalidixic Acid Solution:

Composition per 10.0mL:

Nalidixic acid.....	0.2g
NaOH (0.1M solution).....	10.0mL

Preparation of Nalidixic Acid Solution: Add nalidixic acid to 10.0mL of NaOH solution. Mix thoroughly. Filter sterilize.

Acriflavine Solution:

Composition per 10.0mL:

Acriflavine	0.25g
-------------------	-------

Preparation of Acriflavine Solution: Add acriflavine to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize. Use freshly prepared solution.

Preparation of Medium: Add components, except nalidixic acid solution and acriflavine solution, to distilled/deionized water and bring volume to 998.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 1.0mL of sterile nalidixic acid solution. Mix thoroughly. Store at 4°C. Immediately prior to use, aseptically add 1.0mL of sterile acriflavine solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the selective isolation, cultivation, and enrichment of *Listeria monocytogenes* from food, milk, and dairy products.

***Listeria* Enrichment HiVeg Agar**

Composition per liter:

Potassium thiocyanate	37.5g
Agar	13.0g
Plant hydrolysate	10.0g
Plant peptone	10.0g
NaCl.....	5.0g
Glucose	1.0g
Acriflavin hydrochloride (Trypaflavin).....	0.01g
Thiaminium dichloride	5.0mg

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the selective isolation of *Listeria monocytogenes* from clinical specimens.

***Listeria* Enrichment HiVeg Broth**

Composition per liter:

Potassium thiocyanate	37.5g
Plant hydrolysate	10.0g
Plant peptone	10.0g
NaCl.....	5.0g
Glucose	1.0g
Acriflavin hydrochloride (Trypaflavin).....	0.01g
Thiaminium dichloride	5.0mg

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the selective enrichment of *Listeria monocytogenes* from clinical specimens.

Listeria Enrichment HiVeg Broth, Modified

Composition per liter:

NaCl	20.0g
Plant hydrolysate No. 1	10.0g
Na ₂ HPO ₄	9.6g
Yeast extract	5.0g
Plant extract	5.0g
KH ₂ PO ₄	1.35g
Esculin	1.0g
Nalidixic acid	0.02g
Acriflavin hydrochloride (Trypaflavin)	0.012g
pH 7.4 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the selective enrichment of *Listeria* species.

Listeria Enrichment HiVeg Medium Base with Acriflavine and Nalidixic Acid (UVM)

Composition per liter:

NaCl	20.0g
Na ₂ HPO ₄	12.0g
Plant extract	5.0g
Plant hydrolysate	5.0g
Plant peptone No. 3	5.0g
Yeast extract	5.0g
KH ₂ PO ₄	1.35g
Esculin	1.0g
Nalidixic acid solution	1.0mL
Acriflavine solution	1.0mL
pH 7.4 ± 0.2 at 25°C	

Source: This medium, without nalidixic acid or acriflavine solutions, is available as a premixed powder from HiMedia.

Nalidixic Acid Solution:

Composition per 10.0mL:

Nalidixic acid	0.2g
NaOH (0.1M solution)	10.0mL

Preparation of Nalidixic Acid Solution: Add nalidixic acid to 10.0mL of NaOH solution. Mix thoroughly. Filter sterilize.

Acriflavine Solution:

Composition per 10.0mL:

Acriflavine	0.12g
-------------------	-------

Preparation of Acriflavine Solution: Add acriflavine to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize. Use freshly prepared solution.

Preparation of Medium: Add components, except nalidixic acid solution and acriflavine solution, to distilled/deionized water and bring volume to 998.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 1.0mL of sterile nalidixic acid solution. Mix thoroughly. Store at 4°C. Immediately prior to use, aseptically add 1.0mL of sterile acriflavine solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the selective isolation, cultivation, and enrichment of *Listeria monocytogenes* from food, milk, and dairy products. For the selective isolation and cultivation of *Listeria monocytogenes* from clinical specimens.

Listeria Fermentation Broth

Composition per liter:

Proteose peptone No. 3	10.0g
NaCl	5.0g
Beef extract	1.0g
Bromcresol Purple	0.1g
Carbohydrate solution	10.0mL

Carbohydrate Solution:

Composition per 10.0mL:

Carbohydrate	5.0g
--------------------	------

Preparation of Carbohydrate Solution: Add carbohydrate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize. Use glucose, salicin, rhamnose, dulcitol, or raffinose.

Preparation of Medium: Add components, except carbohydrate solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile carbohydrate solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and differentiation of *Listeria* species based on the fermentation of glucose, salicin, rhamnose, dulcitol, and raffinose.

Listeria Identification HiVeg Agar Base with PALCAM Selective Supplement (PALCAM)

Composition per liter:

Plant peptone	23.0g
LiCl	15.0g
Agar	13.0g
Mannitol	10.0g
NaCl	5.0g
Starch	1.0g
Esculin	0.8g
Ammonium ferric citrate	0.5g
Glucose	0.5g
Phenol Red	0.08g
PALCAM selective supplement	10.0mL
pH 7.0 ± 0.2 at 25°C	

Source: This medium, without PALCAM selective supplement, is available as a premixed powder from HiMedia.

Caution: LiCl is harmful. Avoid bodily contact and inhalation of vapors. On contact with skin wash with plenty of water immediately.

PALCAM Selective Supplement:

Composition per 10.0mL:

Ceftazidime	20.0mg
Polymyxin B	10.0mg
Acriflavine-HCl	5.0mg

Preparation of PALCAM Selective Supplement: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except PALCAM selective supplement, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile PALCAM selective supplement. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the selective isolation and identification of *Listeria monocytogenes* and other *Listeria* species from foods.

Listeria Identification HiVeg Broth Base with PALCAM Selective Supplement (PALCAM)

Composition per liter:

Plant peptone.....	23.0g
LiCl	10.0g
D-Mannitol	5.0g
Yeast extract.....	5.0g
Polysorbate 80.....	2.0g
Soy lecithin	1.0g
Esculin	0.8g
Ammonium ferric citrate	0.5g
Phenol Red.....	0.08g
PALCAM selective supplement.....	10.0mL
pH 7.2 ± 0.2 at 25°C	

Source: This medium, without PALCAM selective supplement, is available as a premixed powder from HiMedia.

Caution: LiCl is harmful. Avoid bodily contact and inhalation of vapors. On contact with skin wash with plenty of water immediately.

PALCAM Selective Supplement:

Composition per 10.0mL:

Ceftazidime.....	20.0mg
Polymyxin B	10.0mg
Acriflavine-HCl.....	5.0mg

Preparation of PALCAM Selective Supplement: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except PALCAM selective supplement, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile PALCAM selective supplement. Mix thoroughly.

Use: For the selective cultivation of *Listeria monocytogenes* and other *Listeria* species.

Listeria Motility HiVeg Medium

Composition per liter:

Plant hydrolysate.....	20.0g
Plant peptone.....	6.1g
Agar	3.5g
pH 7.3 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For testing motility of *Listeria monocytogenes*.

Listeria Motility Medium

Composition per liter:

Casein enzymatic hydrolysate	20.0g
Peptic digest of animal tissue	6.1g
Agar	3.5g
pH 7.3 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For testing motility of *Listeria monocytogenes*.

Listeria Oxford HiVeg Medium Base with Antibiotic Inhibitor

Composition per liter:

Plant special peptone	23.0g
LiCl	15.0g
Agar	10.0g
NaCl.....	5.0g
Cornstarch.....	1.0g
Esculin	1.0g
Ammonium ferric citrate	0.5g
Antibiotic inhibitor	10.0mL
pH 7.0 ± 0.2 at 25°C	

Source: This medium, without antibiotic inhibitor, is available as a premixed powder from HiMedia.

Caution: LiCl is harmful. Avoid bodily contact and inhalation of vapors. On contact with skin wash with plenty of water immediately.

Antibiotic Inhibitor:

Composition per 10.0mL:

Cycloheximide.....	0.4g
Colistin sulfate	0.02g
Fosfomycin	0.01g
Acriflavine	5.0mg
Cefotetan.....	2.0mg
Ethanol (50% solution).....	10.0mL

Preparation of Antibiotic Inhibitor: Add antibiotics to 10.0mL of ethanol. Mix thoroughly. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.
