Preparation of Medium: Add components, except antibiotic inhibitor, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL of sterile antibiotic inhibitor. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of *Listeria monocytogenes* from specimens containing a mixed bacterial flora. For the isolation of *Listeria* species from pathological specimens.

Listeria Oxford Medium Base with Antibiotic Inhibitor

Composition per liter:

Peptone, special	23.0g
LiCl	15.0g

Agar	10.0g
NaCl	5.0g
Cornstarch	1.0g
Esculin	1.0g
Ammonium ferric citrate	0.5g
Antibiotic inhibitor	10.0mL

pH 7.0 ± 0.2 at 25°C

Source: This medium, without antibiotic inhibitor, is available as a premixed powder from HiMedia.

Caution: LiCl is harmful. Avoid bodily contact and inhalation of vapors. On contact with skin wash with plenty of water immediately.

Antibiotic Inhibitor:

Composition per 10.0mL:

Cycloheximide	0.4g
Colistin sulfate	0.02g
Fosfomycin	0.01g
Acriflavine	5.0mg
Cefotetan	2.0mg
Ethanol (50% solution)	10.0mL

Preparation of Antibiotic Inhibitor: Add antibiotics to 10.0mL of ethanol. Mix thoroughly. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: Add components, except antibiotic inhibitor, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL of sterile antibiotic inhibitor. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of *Listeria monocytogenes* from specimens containing a mixed bacterial flora. For the isolation of *Listeria* species from pathological specimens.

Listeria Selective HiVeg Agar

Composition per liter:

Potassium thiocyanate	37.5g
Agar	13.0g
Plant hydrolysate	10.0g
Plant peptone	10.0g
NaCl	5.0g
Glucose	1.0g
Nalidixic acid	0.04g
Acriflavin hydrochloride (Trypaflavin)	0.01g
Thiaminium dichloride	5.0mg

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation and cultivation of *Listeria* species from clinical specimens.

Listeria Selective HiVeg Broth Base with Antibiotic Inhibitor

Composition per liter:

Plant hydrolysate	17.0g
Yeast extract	6.0g
NaCl	5.0g
Papaic digest of soybean meal	3.0g
Glucose	2.5g
K ₂ HPO ₄	2.5g
Antibiotic inhibitor	10.0mL

pH 7.3 ± 0.2 at 25°C

Source: This medium, without antibiotic inhibitor, is available as a premixed powder from HiMedia.

Antibiotic Inhibitor:

Composition per 10.0mL:

Cycloheximide	0.4g
Colistin sulfate	0.02g
Fosfomycin	0.01g
Acriflavine	5.0mg
Cefotetan	2.0mg
Ethanol (50% solution)	10.0mL

Preparation of Antibiotic Inhibitor: Add antibiotics to 10.0mL of ethanol. Mix thoroughly. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: Add components, except antibiotic inhibitor, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL of sterile antibiotic inhibitor. Mix thoroughly. Distribute into sterile tubes.

Use: For the cultivation of *Listeria monocytogenes* from specimens containing a mixed bacterial flora. For the cultivation of *Listeria* species from pathological specimens.

Listeria Transport Enrichment Medium

Composition per liter:

Sodium glycerophosphate	10.0g
Agar	2.0g
Sodium thioglycolate	1.0g
CaCl ₂	0.1g
Nalidixic acid	0.04g
Acridine solution	2.0mL

pH 7.4 ± 0.2 at 25°C

Acridine Solution:

Composition per 10.0mL:

Acridine	0.04g
----------------	-------

Preparation of Acridine Solution: Add acridine to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Preparation of Medium: Add components, except acridine solution, to distilled/deionized water and bring volume to 998.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 2.0mL acridine solution. Mix thoroughly. Aseptically distribute into sterile tubes in 10.0mL volumes or fill bottles 4/5 full.

Use: For the maintenance—as a transport medium—and enrichment of *Listeria* species.

LIT Medium

Composition per liter:

Beef liver, infusion from.....	453.0g
Na ₂ HPO ₄	8.0g
Pancreatic digest of casein.....	5.0g
Tryptose.....	5.0g
Glucose.....	1.0g
NaCl.....	1.0g
K ₂ HPO ₄	0.5g
KCl.....	0.4g
Hemin.....	10.0mg
Fetal bovine serum, heat inactivated.....	100.0mL

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Filter sterilize. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Herpetomonas mariadeanei*, *Trypanoplasma borreli*, and *Trypanosoma cruzi*.

Lithium Chloride Phenylethanol Moxalactam Plating Agar

See: LPM Agar

Litmus Lactose Agar (LL Agar)

Composition per liter:

Agar.....	10.0g
Lactose.....	10.0g
Meat peptone.....	5.0g
Beef extract.....	3.0g
Litmus.....	1.0g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the maintenance of lactic acid bacteria and differentiation of bacteria on the basis of lactose fermentation. Bacteria that ferment lactose appear as red colonies and others as dark blue-purple colonies.

Litmus Lactose Agar with Crystal Violet (LLK Agar)

Composition per liter:

Agar.....	10.0g
Lactose.....	10.0g
Meat peptone.....	5.0g
Beef extract.....	3.0g

Litmus.....	1.0g
Crystal Violet.....	5.0mg

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the maintenance of lactic acid bacteria and for the differentiation of several bacteria on the basis of lactose fermentation. Bacteria that ferment lactose appear as red colonies. Bacteria that do not ferment lactose appear as dark blue-purple colonies.

Litmus Lactose HiVeg Agar

Composition per liter:

Plant peptone.....	23.0g
Lactose.....	20.0g
Agar.....	15.0g
Plant extract.....	5.0g
NaCl.....	5.0g
Synthetic detergent No. V.....	2.0g
Litmus.....	0.5g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the maintenance of lactic acid bacteria and differentiation of bacteria on the basis of lactose fermentation. Bacteria that ferment lactose appear as red colonies and others as dark blue-purple colonies.

Litmus Milk

Composition per liter:

Skim milk.....	100.0g
Azolitmin.....	0.5g
Na ₂ SO ₃	0.5g

pH 6.5 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems and Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 20 min at 10 psi pressure–115°C.

Use: For the maintenance of lactic acid bacteria and for the differentiation of several bacteria, especially *Clostridium* species, based on their action on milk. Bacteria that do not ferment carbohydrates, such as *Proteus vulgaris* or *Moraxella lacunata*, show no change in the azolitmin litmus indicator. Bacteria that ferment lactose or glucose with the production of gas, such as *Clostridium perfringens*, turn the medium pink and frothy. Bacteria that proteolytically degrade milk lactalbumin turn the medium blue. Bacteria that coagulate milk casein form a curd or clot. Bacteria that peptonize casein, such as *Pseudomonas aeruginosa*, show a dissolution of the clot.

Littman Oxgall Agar

Composition per liter:

Agar.....	20.0g
Oxgall.....	15.0g

Glucose	10.0g
Peptone.....	10.0g
Crystal Violet.....	0.01g
Streptomycin solution	10.0mL
pH 6.5 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Streptomycin Solution:

Composition per 10.0mL:

Streptomycin	0.03g
--------------------	-------

Preparation of Streptomycin Solution: Add streptomycin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except streptomycin solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile streptomycin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes. Allow tubes to cool in a slanted position.

Use: For the selective isolation and cultivation of fungi, especially dermatophytes.

Littman Oxgall HiVeg Agar Base with Streptomycin

Composition per liter:

Agar	20.0g
Plant peptone.....	20.0g
Glucose	10.0g
Synthetic detergent No. II.....	5.0g
Crystal Violet.....	0.01g
Streptomycin solution	10.0mL
pH 7.0 ± 0.2 at 25°C	

Source: This medium, without streptomycin, is available as a premixed powder from HiMedia.

Streptomycin Solution:

Composition per 10.0mL:

Streptomycin	0.03g
--------------------	-------

Preparation of Streptomycin Solution: Add streptomycin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except streptomycin solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile streptomycin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes. Allow tubes to cool in a slanted position.

Use: For the selective isolation and cultivation of fungi, especially dermatophytes.

Littman Oxgall HiVeg Broth Base with Streptomycin

Composition per liter:

Plant peptone.....	20.0g
Glucose	10.0g
Synthetic detergent No. II.....	5.0g
Crystal violet.....	0.01g
Streptomycin solution	10.0mL
pH 7.0 ± 0.2 at 25°C	

Source: This medium, without streptomycin, is available as a premixed powder from HiMedia.

Streptomycin Solution:

Composition per 10.0mL:

Streptomycin.....	0.03g
-------------------	-------

Preparation of Streptomycin Solution: Add streptomycin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except streptomycin solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile streptomycin solution. Mix thoroughly. Aseptically distribute into sterile tubes.

Use: For the selective cultivation of fungi, especially dermatophytes.

Liver Broth

Composition per liter:

Extracted liver tissue, minced.....	30.0g
Infusion from fresh liver.....	23.0g
Peptone	10.0g
K ₂ HPO ₄	1.0g
Agar overlay solution	200.0mL
pH 6.8 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Oxoid Unipath.

Agar Overlay Solution:

Composition per 200.0mL:

Agar, Oxoid Unipath No. 3.....	4.0g
--------------------------------	------

Preparation of Agar Overlay Solution: Add agar to distilled/deionized water and bring volume to 200.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Preparation of Medium: Add components, except agar, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes to a depth of 50mm. Make sure that some liver particles are transferred to each tube. Autoclave for 20 min at 10 psi pressure–115°C. After inoculation, aseptically overlay the broth with 2.0mL of sterile, cooled agar solution per tube.

Use: For the isolation and cultivation of saccharolytic or putrefactive mesophilic and thermophilic anaerobic bacteria from foods.

Liver Broth

Composition per liter:

Beef liver, fresh.....	453.0g
Pancreatic digest of casein.....	10.0g
K ₂ HPO ₄	1.0g
Soluble starch.....	1.0g
pH 7.6 ± 0.2 at 25°C	

Preparation of Medium: Remove the fat from fresh beef liver. Grind the liver. Add 1.0L of distilled/deionized water. Gently heat and bring to boiling. Continue boiling for 60 min. Adjust pH to 7.6. Filter through cheesecloth. Reserve meat. To filtrate, add pancreatic digest of casein, K₂HPO₄, and soluble starch. Bring volume to 1.0L with distilled/deionized water. Refilter solution. Add meat particles to test tubes to a depth of approximately 2cm. Distribute broth into tubes with meat particles in 15.0mL volumes. Autoclave for 20 min at 15 psi pressure–121°C.

Use: For the isolation and cultivation of anaerobic microorganisms, especially *Clostridium botulinum*, from foods.

Liver Broth with Sodium Chloride

Composition per liter:

Beef liver, fresh.....	453.0g
NaCl.....	150.0g
Pancreatic digest of casein.....	10.0g
K ₂ HPO ₄	1.0g
Soluble starch.....	1.0g

pH 7.6 ± 0.2 at 25°C

Preparation of Medium: Remove the fat from fresh beef liver. Grind the liver. Add 1.0L of distilled/deionized water. Gently heat and bring to boiling. Continue boiling for 60 min. Adjust pH to 7.6. Filter through cheesecloth. Reserve meat. To filtrate, add pancreatic digest of casein, K₂HPO₄, NaCl, and soluble starch. Bring volume to 1.0L with distilled/deionized water. Refilter solution. Add meat particles to test tubes to a depth of approximately 2cm. Distribute broth into tubes with meat particles in 15.0mL volumes. Autoclave for 20 min at 15 psi pressure–121°C. After inoculation, overlay each tube with sterile, melted petroleum jelly.

Use: For the cultivation of obligate halophiles from brined and dry-salted vegetables.

Liver Infusion Agar

Composition per liter:

Beef liver, infusion from.....	500.0g
Agar.....	20.0g
Proteose peptone.....	10.0g
NaCl.....	5.0g

pH 6.9 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Brucella* species and other fastidious pathogenic bacteria.

Liver Infusion Agar, HiVeg

Composition per liter:

Agar.....	20.0g
Plant infusion No. 1.....	20.0g
Plant peptone No. 3.....	10.0g
NaCl.....	5.0g

pH 6.9 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Brucella* species and other fastidious pathogenic bacteria.

Liver Infusion Broth

Composition per liter:

Beef liver, infusion from.....	500.0g
Proteose peptone.....	10.0g
NaCl.....	5.0g

pH 6.9 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Brucella* species and other fastidious pathogenic bacteria.

Liver Infusion Broth, HiVeg

Composition per liter:

Plant infusion No. 1.....	20.0g
Plant peptone No. 3.....	10.0g
NaCl.....	5.0g

pH 6.9 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Brucella* species and other fastidious pathogenic bacteria.

Liver Infusion Sake Medium

Composition per liter:

Liver, fresh.....	400.0g
Agar.....	15.0g
Sake.....	400.0mL

Preparation of Medium: Finely mince liver and add to 600.0mL of distilled/deionized water. Gently heat and bring to boiling. Continue boiling for 5–10 min. Filter through Whatman #2 filter paper. To filtrate, add agar and sake. Bring volume to 1.0L with distilled/deionized water. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 25 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Lactobacillus fructivorans* and *Lactobacillus homohiochi*.

Liver Meat Infusion HiVeg Agar

Composition per liter:

Plant infusion No. 2.....	20.0g
Agar.....	11.0g
Na ₂ SO ₃	1.2g
Glucose.....	0.75g
Starch.....	0.75g
Na ₂ CO ₃	0.67g
Ferric ammonium citrate.....	0.5g

pH 7.6 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Make sure that some liver and veal particles are transferred to each tube. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of a variety of anaerobic organisms.

Liver Veal Agar

Composition per liter:

Veal, infusion from	500.0g
Beef liver, infusion from.....	50.0g
Gelatin.....	20.0g
Proteose peptone.....	20.0g
Agar	15.0g
Soluble starch.....	10.0g
Glucose	5.0g
NaCl.....	5.0g
Casein.....	2.0g
NaNO ₃	2.0g
Enzymatic digest of protein.....	1.3g
Pancreatic digest of casein.....	1.3g
pH 7.3 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Make sure that some liver and veal particles are transferred to each tube. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of a variety of anaerobic organisms.

Liver Veal Egg Yolk Agar

Composition per 1080.0mL:

Liver veal agar	1.0L
Egg yolk emulsion, 50%.....	80.0mL
pH 7.3 ± 0.2 at 25°C	

Liver Veal Agar:

Composition per liter:

Veal, infusion from	500.0g
Beef liver, infusion from.....	50.0g
Gelatin.....	20.0g
Proteose peptone.....	20.0g
Agar	15.0g
Soluble starch.....	10.0g
Glucose	5.0g
NaCl.....	5.0g
Casein.....	2.0g
NaNO ₃	2.0g
Enzymatic digest of protein.....	1.3g
Pancreatic digest of casein.....	1.3g

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Liver Veal Agar: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Make sure that some liver and veal particles are transferred to each tube. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C.

Egg Yolk Emulsion, 50%:

Composition per 100.0mL:

Chicken egg yolks.....	11
Whole chicken egg	1
NaCl (0.9% solution).....	50.0mL

Preparation of Egg Yolk Emulsion, 50%: Soak eggs with 1:100 dilution of saturated mercuric chloride solution for 1 min. Crack eggs and separate yolks from whites. Mix egg yolks with 1 chicken egg. Beat to form emulsion. Measure 50.0mL of egg yolk emulsion and add to 50.0mL of 0.9% NaCl solution. Mix thoroughly. Filter sterilize. Warm to 45°–50°C.

Preparation of Medium: To 1.0L of cooled sterile liver veal agar, aseptically add 80.0mL of sterile egg yolk emulsion, 50%. Mix thoroughly. Pour into sterile Petri dishes. Dry plates at 35°C for 24 hr.

Use: For the cultivation of a variety of anaerobic organisms.

LL Agar

See: [Litmus Lactose Agar](#)

LLK Agar

See: [Litmus Lactose Agar with Crystal Violet](#)

LMX Broth Modified, Fluorocult (Fluorocult LMX Broth, Modified)

Composition per liter:

Tryptose	5.0
NaCl.....	5.0
Sorbitol	1.0
Tryptophan.....	1.0
K ₂ HPO ₄	2.7g
KH ₂ PO ₄	2.0g
Lauryl sulfate sodium salt.....	0.1g
1-Isopropyl-β-D-1-thio-galactopyranoside (IPTG)	0.1g
5-Bromo-4-chloro-3-indolyl-β-D-galactopyranoside (X-GAL) ..	0.08g
4-Methylumbelliferyl-β-D-glucuronide	0.05g
pH: 6.8 ± 0.2 at 25°C	

Source: This medium is available from Merck.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into test tubes. Autoclave for 15 min at 15 psi pressure–121°C. The broth is clear and yellowish brown.

Use: For the simultaneous detection of total coliforms and *E. coli* in water, food, and dairy products by the fluorogenic procedure. A color change of the broth from yellow to blue-green indicates the presence of coliforms. A blue fluorescence under long-wave UV light permits the rapid detection of *E. coli*. As tryptophan is added to the broth, the indole reaction is easily done by adding KOVACS reagent. The formation of a red ring additionally confirms the presence of *E. coli*.

Lobosphaera Medium

Composition per liter:

Polypeptone™	10.0g
Glycerol	7.5g
Yeast extract.....	2.0g
K ₂ HPO ₄	1.0g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O.....	0.5g
pH 6.5 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.5. Filter sterilize. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Lobosphaera* species.

Loefer's Medium

Composition per liter:

Proteose peptone	15.0g
Casitone	5.0g
Glucose	5.0g
NaCl	2.0g
Na ₂ HPO ₄	1.0g
KH ₂ PO ₄	1.0g
Yeast extract	0.5g
MgCl ₂	0.3g
Asolectin solution	10.0mL

Asolectin Solution:

Asolectin	1.0g
Ethanol	100.0mL

Preparation of Asolectin Solution: Add 1.0g of asolectin to ethanol and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into screw-capped tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Tetrahymena patula*.

Loeffler Blood Serum Medium

Composition per liter:

Beef blood serum	750.0mL
Dextrose broth	250.0mL
pH 7.1 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Dextrose Broth:

Composition per liter:

Tryptose	10.0g
Glucose	5.0g
Sodium chloride	5.0g
Beef extract	3.0g

Preparation of Dextrose Broth: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Combine 750.0mL of beef blood serum with 250.0mL of dextrose broth. Mix thoroughly. Distribute into screw-capped tubes. Slant tubes in the autoclave. Close the autoclave door loosely. Autoclave for 10 min at 0 psi pressure–100°C. Close the autoclave door tightly. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Corynebacterium diphtheriae*. For demonstration of pigment production and proteolysis by *Corynebacterium diphtheriae*.

Loeffler Blood Serum Medium

Composition per liter:

Beef blood serum	750.0mL
Dextrose broth	250.0mL
pH 7.1 ± 0.2 at 25°C	

Dextrose Broth:

Composition per liter:

Enzymatic digest of protein	2.5g
Glucose	1.25g
NaCl	1.25g
Beef extract	0.75g

Preparation of Dextrose Broth: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Combine 750.0mL of beef blood serum with 250.0mL of dextrose broth. Mix thoroughly. Distribute into screw-capped tubes. Slant tubes in the autoclave. Close the autoclave door loosely. Autoclave for 10 min at 0 psi pressure–100°C. Close the autoclave door tightly. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Corynebacterium diphtheriae*. For demonstration of pigment production and proteolysis by *Corynebacterium diphtheriae*.

Loeffler HiVeg Medium Base with Asolectin

Composition per liter:

Glucose	2.5g
Plant extract	2.5g
Plant special peptone	2.5g
NaCl	1.25g
Asolectin solution	10.0mL
pH 7.6 ± 0.2 at 25°C	

Source: This medium, without asolectin, is available as a premixed powder from HiMedia.

Asolectin Solution:

Composition per 100.0mL:

Asolectin	1.0g
Ethanol	100.0mL

Preparation of Asolectin Solution: Add 1.0g of asolectin to ethanol and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into screw-capped tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Tetrahymena patula*.

Loeffler Medium

Composition per liter:

Beef serum	70.0g
Egg, dried	7.5g
Heart muscle, solids from infusion	0.72g
Glucose	0.71g
Peptic digest of animal tissue	0.71g
NaCl	0.36g
pH 7.6 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into screw-capped tubes. Slant tubes in the autoclave. Close the autoclave door loosely. Autoclave for 10 min at 0 psi pressure–100°C. Close the autoclave door tightly. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Corynebacterium diphtheriae*. For demonstration of pigment production and proteolysis by *Corynebacterium*

diphtheriae. For the cultivation and maintenance of *Moraxella lacunata*.

Loeffler Slant

Composition per liter:

Tryptose	5.0g
Glucose	1.0g
Beef serum	750.0mL

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into screw-capped tubes. Slant tubes in the autoclave. Close the autoclave door loosely. Autoclave for 10 min at 0 psi pressure–100°C. Close the autoclave door tightly. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Corynebacterium diphtheriae*. For demonstration of pigment production and proteolysis by *Corynebacterium diphtheriae*. For the cultivation and maintenance of *Moraxella lacunata*.

Loeffler Slant, Modified

Composition per liter:

Glucose	1.0g
Peptone.....	0.5g
Beef serum	300.0mL

pH 7.6 ± 0.2 at 25°C

Preparation of Medium: Add peptone and glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Add beef serum. Mix thoroughly. Adjust pH to 7.6. Distribute into screw-capped tubes in 3.0mL volumes. Slant tubes in the autoclave. Autoclave for 30 min at 0 psi pressure–100°C.

Use: For the cultivation of *Corynebacterium diphtheriae*. For demonstration of pigment production and proteolysis by *Corynebacterium diphtheriae*. For the cultivation and maintenance of *Moraxella lacunata*.

LOM Agar

See: [Lysine Ornithine Mannitol Agar](#)

Lombard–Dowell Agar (LD Agar)

Agar	20.0g
Pancreatic digest of casein.....	5.0g
Yeast extract.....	5.0g
NaCl.....	2.5g
L-Cystine	0.4g
L-Tryptophan	0.2g
Na ₂ SO ₃	0.1g
Hemin.....	10.0mg
NaOH (1N).....	5.0mL
Vitamin K ₁ solution.....	1.0mL

pH 7.5 ± 0.2 at 25°C

Vitamin K₁ Solution:

Composition per 100.0mL:

Vitamin K ₁	1.0g
Ethanol	99.0mL

Preparation of Vitamin K₁ Solution: Add vitamin K₁ to 99.0mL of absolute ethanol. Mix thoroughly.

Preparation of Medium: Add hemin and L-cystine to 5.0mL of NaOH. Mix thoroughly. Add remaining components. Bring volume to

1.0L with distilled/deionized water. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the cultivation and identification of a variety of obligate anaerobic bacteria. For the cultivation of *Bacteroides species*, *Fusobacterium species*, *Clostridium species*, and nonspore-forming Gram-positive anaerobes.

Lombard-Dowell Bile Agar (LD Bile Agar)

Composition per liter:

Agar	20.0g
Oxgall	20.0g
Pancreatic digest of casein.....	5.0g
Yeast extract.....	5.0g
NaCl.....	2.5g
D-Glucose	1.0g
L-Cystine	0.4g
L-Tryptophan.....	0.2g
Na ₂ SO ₃	0.1g
Hemin	10.0mg
Bile.....	200.0mL
NaOH (1N).....	5.0mL
Vitamin K ₁ solution	1.0mL

pH 7.5 ± 0.2 at 25°C

Vitamin K₁ Solution:

Composition per 100.0mL:

Vitamin K ₁	1.0g
Ethanol.....	99.0mL

Preparation of Vitamin K₁ Solution: Add vitamin K₁ to 99.0mL of absolute ethanol. Mix thoroughly.

Preparation of Medium: Add hemin and L-cystine to 5.0mL of NaOH. Mix thoroughly. Add remaining components. Bring volume to 1.0L with distilled/deionized water. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Pour into sterile Petri dishes.

Use: For the cultivation and identification of a variety of obligate anaerobic bacteria in the presence of 20% bile.

Lombard-Dowell Broth (LD Broth)

Composition per liter:

Pancreatic digest of casein.....	5.0g
Yeast extract.....	5.0g
NaCl.....	2.5g
Agar	0.7g
L-Tryptophan.....	0.2g
Na ₂ SO ₃	0.1g
NaOH (1N).....	5.0mL
Hemin solution.....	1.0mL
Vitamin K ₁ solution	1.0mL

pH 7.5 ± 0.2 at 25°C

Hemin Solution:

Composition per 100.0mL:

Hemin	1.0g
NaOH (1N solution).....	20.0mL

Preparation of Hemin Solution: Add hemin to 20.0mL of 1N NaOH solution. Mix thoroughly. Bring volume to 100.0mL with distilled/deionized water.

Vitamin K₁ Solution:**Composition per 100.0mL:**

Vitamin K ₁	1.0g
Ethanol	99.0mL

Preparation of Vitamin K₁ Solution: Add vitamin K₁ to 99.0mL of absolute ethanol. Mix thoroughly.

Preparation of Medium: Add tryptophan to 5.0mL of NaOH. Mix thoroughly. Add remaining components. Bring volume to 1.0L with distilled/deionized water. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.5. Distribute into screw-capped tubes in 7.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Cool tubes, with caps loose, under 85% N₂ + 10% H₂ + 5% CO₂. Tighten caps.

Use: For the cultivation of a wide variety of anaerobic bacteria.

Lombard-Dowell Egg Yolk Agar
(LD Egg Yolk Agar)
(Egg Yolk Agar, Lombard-Dowell)

Composition per 9100.0mL:

Na ₂ HPO ₄ ·12H ₂ O	5.0g
Glucose	2.0g
LD Agar	9000.0mL
Egg yolk emulsion	100.0mL
MgSO ₄ ·7H ₂ O (5% solution)	0.2mL

pH 7.5 ± 0.2 at 25°C

LD Agar:**Composition per liter:**

Agar	20.0g
Pancreatic digest of casein	5.0g
Yeast extract	5.0g
NaCl	2.5g
L-Cystine	0.4g
L-Tryptophan	0.2g
Na ₂ SO ₃	0.1g
Hemin	10.0mg
NaOH (1N NaOH)	5.0mL
Vitamin K ₁ solution	1.0mL

Preparation of LD Agar: Add hemin and L-cystine to 5.0mL of NaOH. Mix thoroughly. Add remaining components. Mix thoroughly. Gently heat and bring to boiling.

Vitamin K₁ Solution:**Composition per 100.0mL:**

Vitamin K ₁	1.0g
Ethanol	99.0mL

Preparation of Vitamin K₁ Solution: Add vitamin K₁ to 99.0mL of absolute ethanol. Mix thoroughly.

Egg Yolk Emulsion:**Composition:**

Chicken egg yolks	11
Whole chicken egg	1

Preparation of Egg Yolk Emulsion: Soak eggs with 1:100 dilution of saturated mercuric chloride solution for 1 min. Crack eggs and separate yolks from whites. Mix egg yolks with 1 chicken egg.

Preparation of Medium: Combine components, except egg yolk emulsion. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 100.0mL of egg yolk emulsion. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the cultivation of a wide variety of anaerobic bacteria. For the differentiation of anaerobic bacteria based on lecithinase production, lipase production, and proteolytic ability. Bacteria that produce lecithinase appear as colonies surrounded by a zone of insoluble precipitate. Bacteria that produce lipase appear as colonies with a pearly iridescent sheen. Bacteria that produce proteolytic activity appear as colonies surrounded by a clear zone.

Lombard-Dowell Esculin Agar
(LD Esculin Agar)
(Esculin Agar, Lombard-Dowell)

Composition per liter:

Agar	20.0g
Pancreatic digest of casein	5.0g
Yeast extract	5.0g
NaCl	2.5g
Esculin	1.0g
Ferric citrate	0.5g
L-Cystine	0.4g
L-Tryptophan	0.2g
Hemin	10.0mg
NaOH (1N)	5.0mL
Vitamin K ₁ solution	1.0mL

pH 7.5 ± 0.2 at 25°C

Vitamin K₁ Solution:**Composition per 100.0mL:**

Vitamin K ₁	1.0g
Ethanol	99.0mL

Preparation of Vitamin K₁ Solution: Add vitamin K₁ to 99.0mL of absolute ethanol. Mix thoroughly.

Preparation of Medium: Add hemin and L-cystine to 5.0mL of NaOH. Mix thoroughly. Add remaining components. Bring volume to 1.0L with distilled/deionized water. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the cultivation of a wide variety of anaerobic bacteria. For the differentiation of anaerobic bacteria based on esculin hydrolysis, H₂S production, and catalase production. Bacteria that hydrolyze esculin appear as colonies surrounded by a red-brown to dark brown zone. Bacteria that produce H₂S appear as black colonies.

Lombard-Dowell Gelatin Agar
(LD Gelatin Agar)

Composition per liter:

Agar	20.0g
Pancreatic digest of casein	5.0g
Yeast extract	5.0g
Gelatin	4.0g
NaCl	2.5g
Glucose	1.0g
L-Cystine	0.4g
L-Tryptophan	0.2g
Na ₂ SO ₃	0.1g
Hemin	10.0mg
NaOH (1N)	5.0mL
Vitamin K ₁ solution	1.0mL

pH 7.5 ± 0.2 at 25°C

Vitamin K₁ Solution:**Composition per 100.0mL:**

Vitamin K ₁	1.0g
Ethanol	99.0mL

Preparation of Vitamin K₁ Solution: Add vitamin K₁ to 99.0mL of absolute ethanol. Mix thoroughly.

Preparation of Medium: Add hemin and L-cystine to 5.0mL of NaOH. Mix thoroughly. Add remaining components, except agar and gelatin. Bring volume to 750.0mL with distilled/deionized water. Mix thoroughly. Gently heat and bring to boiling. In a separate flask, add gelatin to 100.0mL of cold distilled/deionized water. Gently heat and bring to 70°C. Add gelatin solution to the 750.0mL of basal medium. Mix thoroughly. Add agar. Bring volume to 1.0L with distilled/deionized water. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the cultivation of a wide variety of anaerobic bacteria. For the differentiation of anaerobic bacteria based on gelatinase production. After incubation of plates, gelatinase activity is determined by the addition of Frazier's reagent. Bacteria that hydrolyze gelatin appear as colonies surrounded by a clear zone.

Lombard-Dowell Neomycin Agar (Egg Yolk Agar with Neomycin)

Composition per 9100.0mL:

Na ₂ HPO ₄ ·12H ₂ O	5.0g
Glucose	2.0g
Neomycin sulfate	0.1g
LD Agar	9000.0mL
Egg yolk emulsion	100.0mL
MgSO ₄ ·7H ₂ O (5% solution)	0.2mL
pH 7.5 ± 0.2 at 25°C	

LD Agar:**Composition per liter:**

Agar	20.0g
Pancreatic digest of casein	5.0g
Yeast extract	5.0g
NaCl	2.5g
L-Cystine	0.4g
L-Tryptophan	0.2g
Na ₂ SO ₃	0.1g
Hemin	10.0mg
NaOH (1N NaOH)	5.0mL
Vitamin K ₁ solution	1.0mL

Preparation of LD Agar: Add hemin and L-cystine to 5.0mL of NaOH. Mix thoroughly. Add remaining components. Mix thoroughly. Gently heat and bring to boiling.

Vitamin K₁ Solution:**Composition per 100.0mL:**

Vitamin K ₁	1.0g
Ethanol	99.0mL

Preparation of Vitamin K₁ Solution: Add vitamin K₁ to 99.0mL of absolute ethanol. Mix thoroughly.

Egg Yolk Emulsion:**Composition:**

Chicken egg yolks	11
Whole chicken egg	1

Preparation of Egg Yolk Emulsion: Soak eggs with 1:100 dilution of saturated mercuric chloride solution for 1 min. Crack eggs and separate yolks from whites. Mix egg yolks with 1 chicken egg.

Preparation of Medium: Combine components, except egg yolk emulsion and neomycin sulfate. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 100.0mL of egg yolk emulsion and neomycin sulfate. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the selective cultivation of a wide variety of anaerobic bacteria. For the differentiation of anaerobic bacteria based on lecithinase production, lipase production, and proteolytic ability. Bacteria that produce lecithinase appear as colonies surrounded by a zone of insoluble precipitate. Bacteria that produce lipase appear as colonies with a pearly iridescent sheen. Bacteria that produce proteolytic activity appear as colonies surrounded by a clear zone.

Long-Term Preservation Medium

Composition per liter:

NaCl	30.0g
Peptone	10.0g
Agar	3.0g
Yeast extract	3.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into screw-capped tubes in 4.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of a wide variety of bacteria.

Low Iron YC Agar

Composition per 1033.0mL:

Solution 1	1.0L
Solution 4	30.0mL
Solution 2	2.0mL
Solution 3	1.0mL
pH 7.4 ± 0.2 at 25°C	

Solution 1:**Composition per liter:**

Yeast extract	20.0g
Noble agar	10.0g
Casamino acids	10.0g
KH ₂ PO ₄	5.0g
CaCl ₂	1.0g
Tryptophan	0.05g

Preparation of Solution 1: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.4. Gently heat and bring to boiling. Filter through #40 ashless filter paper.

Solution 2:**Composition per 100.0mL:**

MgSO ₄ ·7H ₂ O	22.5g
CuSO ₄ ·5H ₂ O	0.5g
ZnSO ₄ ·5H ₂ O	0.2g
β-Alanine	0.115g
Nicotinic Acid	0.115g
MnCl ₂ ·4H ₂ O	0.075g
Pimelic acid	7.5mg
HCl, concentrated	3.0mL

Preparation of Solution 2: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Solution 3:**Composition per 100.0mL:**

L-Cystine	20.0g
HCl, concentrated	20.0mL

Preparation of Solution 3: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Solution 4:**Composition per 100.0mL:**

Maltose	50.0g
CaCl ₂ ·2H ₂ O	0.5g

Preparation of Solution 4: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 10 min at 11 psi pressure–116°C. Cool to 45°–50°C.

Preparation of Medium: To 1.0L of solution 1, add 2.0mL of solution 2 and 1.0mL of solution 3. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 30.0mL of sterile solution 4. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Corynebacterium diphtheriae*.

Low Iron YC Broth**Composition per 1033.0mL:**

Solution 1	1.0L
Solution 4	30.0mL
Solution 2	2.0mL
Solution 3	1.0mL

pH 7.4 ± 0.2 at 25°C

Solution 1:**Composition per liter:**

Yeast extract	20.0g
Casamino acids	10.0g
KH ₂ PO ₄	5.0g
CaCl ₂ ·2H ₂ O	1.0g
Tryptophan	0.05g

Preparation of Solution 1: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.4. Gently heat and bring to boiling. Filter through #40 ashless filter paper.

Solution 2:**Composition per 100.0mL:**

MgSO ₄ ·7H ₂ O	22.5g
CuSO ₄ ·5H ₂ O	0.5g
ZnSO ₄ ·5H ₂ O	0.2g
β-Alanine	0.115g
Nicotinic acid	0.115g
MnCl ₂ ·4H ₂ O	0.075g
Pimelic acid	7.5mg
HCl, concentrated	3.0mL

Preparation of Solution 2: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Solution 3:**Composition per 100.0mL:**

L-Cystine	20.0g
HCl, concentrated	20.0mL

Preparation of Solution 3: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Solution 4:**Composition per 100.0mL:**

Maltose	50.0g
CaCl ₂ ·2H ₂ O	0.5g

Preparation of Solution 4: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 10 min at 11 psi pressure–116°C. Cool to 25°C.

Preparation of Medium: To 1.0L of solution 1, add 2.0mL of solution 2 and 1.0mL of solution 3. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 30.0mL of sterile solution 4. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Corynebacterium diphtheriae*.

Low Phosphate Buffered Basal Medium, Modified**Composition per 1030.0mL:**

Pectin	4.0g
NH ₄ Cl	1.0g
Na ₂ HPO ₄	0.72g
KH ₂ PO ₄	0.3g
MgCl ₂ ·6H ₂ O	0.2g
Reducing agent	20.0mL
Yeast extract solution	10.0mL
Trace minerals	10.0mL
Wolfe's vitamin solution	5.0mL
Resazurin (0.2% solution)	1.0mL
FeSO ₄ ·7H ₂ O (2.5% solution)	0.03mL

pH 7.3 ± 0.1 at 25°C

Reducing Agent:**Composition per 20.0mL:**

Na ₂ S·9H ₂ O	0.5g
---	------

Preparation of Reducing Agent: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Gas with 100% N₂ for 20 min. Cap with a rubber stopper. Autoclave for 45 min at 15 psi pressure–121°C. Use freshly prepared solution.

Yeast Extract Solution:**Composition per 10.0mL:**

Yeast extract	1.0g
---------------------	------

Preparation of Yeast Extract Solution: Add yeast extract to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 45 min at 15 psi pressure–121°C. Cool to 25°C.

Trace Minerals:**Composition per liter:**

Nitrilotriacetic acid	12.8g
NaCl	1.0g
CoCl ₂ ·6H ₂ O	0.16g
CaCl ₂ ·2H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g
MnCl ₂ ·4H ₂ O	0.1g
ZnCl ₂	0.1g
NiSO ₄ ·6H ₂ O	0.026g
CuCl ₂	0.02g
Na ₂ SeO ₃	0.02g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g

Preparation of Trace Minerals: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5

with KOH. Add remaining components. Add distilled/deionized water to 1.0L.

Wolfe's Vitamin Solution:

Composition per liter:

Pyridoxine-HCl	0.01g
Thiamine-HCl	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
Calcium pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Thioctic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Cyanocobalamin	0.1mg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components, except yeast extract solution and reducing agent, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Cool under 90% N₂ + 10% CO₂. Anaerobically distribute into tubes in 6.0mL volumes. Autoclave for 45 min at 15 psi pressure–121°C. Aseptically add 0.06mL of sterile yeast extract solution to each tube. Mix thoroughly. Immediately prior to inoculation, aseptically add 0.12mL of sterile reducing agent to each tube. Mix thoroughly.

Use: For the cultivation and maintenance of *Clostridium thermosulfurogenes*.

Lowenstein-Gruft Medium

Composition per 1600.0mL:

Potato starch	30.0g
Asparagine	3.6g
KH ₂ PO ₄	2.4g
Magnesium citrate	0.6g
Malachite Green	0.4g
MgSO ₄ ·7H ₂ O	0.24g
Nalidixic acid	0.056g
Ribonucleic acid	0.08mg
Homogenized whole egg	1.0L
Glycerol	12.0mL
Penicillin	80,000U

Homogenized Whole Egg:

Composition per liter:

Whole eggs	18–24
------------------	-------

Preparation of Homogenized Whole Egg: Use fresh eggs, less than 1 week old. Scrub the shells with soap. Let stand in a soap solution for 30 min. Rinse in running water. Soak eggs in 70% ethanol for 15 min. Break the eggs into a sterile container. Homogenize by shaking. Filter through four layers of sterile cheesecloth into a sterile graduated cylinder. Measure out 1.0L.

Preparation of Medium: Add glycerol to 600.0mL of distilled/deionized water. Mix thoroughly. Add remaining components, except fresh egg mixture. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 1.0L of homogenized whole egg. Mix thoroughly. Distribute into sterile screw-capped tubes. Place tubes in a slanted position. Inpsissate at 85°C (moist heat) for 45 min.

Use: For the cultivation and differentiation of *Mycobacterium* species. *Mycobacterium tuberculosis* appears as granular, rough, dry colonies.

Mycobacterium kansasii appears as smooth to rough photochromogenic colonies. *Mycobacterium gordonae* appears as smooth yellow-orange colonies. *Mycobacterium avium* appears as smooth, colorless colonies. *Mycobacterium smegmatis* appears as wrinkled, creamy white colonies.

Lowenstein-Jensen Medium

Composition per 1600.0mL:

Potato starch	30.0g
Asparagine	3.6g
KH ₂ PO ₄	2.4g
Magnesium citrate	0.6g
Malachite Green	0.4g
MgSO ₄ ·7H ₂ O	0.24g
Homogenized whole egg	1.0L
Glycerol	12.0mL

Source: This medium is available as a prepared medium from BD Diagnostic Systems and Oxoid Unipath.

Homogenized Whole Egg:

Composition per liter:

Whole eggs	18–24
------------------	-------

Preparation of Homogenized Whole Egg: Use fresh eggs, less than 1 week old. Scrub the shells with soap. Let stand in a soap solution for 30 min. Rinse in running water. Soak eggs in 70% ethanol for 15 min. Break the eggs into a sterile container. Homogenize by shaking. Filter through four layers of sterile cheesecloth into a sterile graduated cylinder. Measure out 1.0L.

Preparation of Medium: Add glycerol to 600.0mL of distilled/deionized water. Mix thoroughly. Add remaining components, except fresh egg mixture. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 1.0L of homogenized whole egg. Mix thoroughly. Distribute into sterile screw-capped tubes. Place tubes in a slanted position. Inpsissate at 85°C (moist heat) for 45 min.

Use: For the cultivation and differentiation of *Mycobacterium* species. *Mycobacterium tuberculosis* appears as granular, rough, dry colonies. *Mycobacterium kansasii* appears as smooth to rough photochromogenic colonies. *Mycobacterium gordonae* appears as smooth yellow-orange colonies. *Mycobacterium avium* appears as smooth, colorless colonies. *Mycobacterium smegmatis* appears as wrinkled, creamy white colonies. Also used for the cultivation and maintenance of *Gordona* species, *Nocardia* species, *Rhodococcus* species, and *Tsukamurella paurometabolum*.

Lowenstein-Jensen Medium with Sodium Chloride

Composition per 1600.0mL:

NaCl	80.0g
Potato starch	30.0g
Asparagine	3.6g
KH ₂ PO ₄	2.4g
Magnesium citrate	0.6g
Malachite Green	0.4g
MgSO ₄ ·7H ₂ O	0.24g
Homogenized whole egg	1.0L
Glycerol	12.0mL

Homogenized Whole Egg:

Composition per liter:

Whole eggs	18–24
------------------	-------

Preparation of Homogenized Whole Egg: Use fresh eggs, less than 1 week old. Scrub the shells with soap. Let stand in a soap solution for 30 min. Rinse in running water. Soak eggs in 70% ethanol for 15 min. Break the eggs into a sterile container. Homogenize by shaking. Filter through four layers of sterile cheesecloth into a sterile graduated cylinder. Measure out 1.0L.

Preparation of Medium: Add glycerol to 600.0mL of distilled/deionized water. Mix thoroughly. Add remaining components, except fresh egg mixture. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 1.0L of homogenized whole egg. Mix thoroughly. Distribute into sterile screw-capped tubes. Place tubes in a slanted position. Inspissate at 85°C (moist heat) for 45 min.

Use: For the cultivation of *Mycobacterium smegmatis* and other salt-tolerant *Mycobacterium* species.

Lowenstein-Jensen Medium with Streptomycin

Composition per 1610.0mL:

Potato starch.....	30.0g
Asparagine	3.6g
KH ₂ PO ₄	2.4g
Magnesium citrate.....	0.6g
Malachite Green.....	0.4g
MgSO ₄ ·7H ₂ O	0.24g
Homogenized whole egg	1.0L
Glycerol	12.0mL
Streptomycin solution	10.0mL

Homogenized Whole Egg:

Composition per liter:

Whole eggs	18–24
------------------	-------

Preparation of Homogenized Whole Egg: Use fresh eggs, less than 1 week old. Scrub the shells with soap. Let stand in a soap solution for 30 min. Rinse in running water. Soak eggs in 70% ethanol for 15 min. Break the eggs into a sterile container. Homogenize by shaking. Filter through four layers of sterile cheesecloth into a sterile graduated cylinder. Measure out 1.0L.

Streptomycin Solution:

Composition per 10.0mL:

Streptomycin	0.1mg
--------------------	-------

Preparation of Streptomycin Solution: Add streptomycin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add glycerol to 600.0mL of distilled/deionized water. Mix thoroughly. Add remaining components, except fresh egg mixture and streptomycin solution. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 1.0L of homogenized whole egg and 10.0mL of sterile streptomycin solution. Mix thoroughly. Distribute into sterile screw-capped tubes. Place tubes in a slanted position. Inspissate at 85°C (moist heat) for 45 min.

Use: For the cultivation and differentiation of *Mycobacterium* species. *Mycobacterium tuberculosis* appears as granular, rough, dry colonies. *Mycobacterium kansasii* appears as smooth to rough photochromogenic colonies. *Mycobacterium gordonae* appears as smooth yellow-orange colonies. *Mycobacterium avium* appears as smooth, colorless colonies. *Mycobacterium smegmatis* appears as wrinkled, creamy white colonies. Also used for the cultivation and maintenance of *Gor-*

dona species, *Nocardia* species, *Rhodococcus* species, and *Tsukamurella paurometabolum*.

Lowenstein-Jensen Medium without Glycerol

Composition per 1600.0mL:

Potato starch.....	30.0g
Asparagine	3.6g
KH ₂ PO ₄	2.4g
Magnesium citrate	0.6g
Malachite green	0.4g
MgSO ₄ ·7H ₂ O	0.24g
Homogenized whole egg	1.0L

Homogenized Whole Egg:

Composition per liter:

Whole eggs	18–24
------------------	-------

Preparation of Homogenized Whole Egg: Use fresh eggs, less than 1 week old. Scrub the shells with soap. Let stand in a soap solution for 30 min. Rinse in running water. Soak eggs in 70% ethanol for 15 min. Break the eggs into a sterile container. Homogenize by shaking. Filter through four layers of sterile cheesecloth into a sterile graduated cylinder. Measure out 1.0L.

Preparation of Medium: Add components, except fresh egg mixture, to 600.0mL of distilled/deionized water. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 1.0L of homogenized whole egg. Mix thoroughly. Distribute into sterile screw-capped tubes. Place tubes in a slanted position. Inspissate at 85°C (moist heat) for 45 min.

Use: For the cultivation and maintenance of *Mycobacterium* species, especially *Mycobacterium bovis* and other species that are sensitive to glycerol.

LPBM Acido-Thermophile Medium

Composition per liter:

Agar	20.0g
Cellulose	5.0g
KH ₂ PO ₄	1.0g
NH ₄ Cl	1.0g
Yeast extract.....	1.0g
Cellulose	0.5g
MgSO ₄ ·7H ₂ O	0.2g
Na ₂ HPO ₄ ·7H ₂ O.....	0.1g
CaCl ₂ ·2H ₂ O	0.02g

pH 5.2 ± 0.2 at 25°C

Preparation of Medium: Add components, except cellulose and cellobiose, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 5.2 with H₃PO₄. Add cellulose and cellobiose. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Acidothermus cellulolyticus*.

LPM Agar

(Lithium Chloride Phenylethanol Moxalactam Plating Agar)

Composition per liter:

Agar	15.0g
Glycine anhydride.....	10.0g

LiCl ₂	5.0g
NaCl.....	5.0g
Pancreatic digest of casein.....	5.0g
Peptic digest of animal tissue.....	5.0g
Beef extract.....	3.0g
Phenylethyl alcohol.....	2.5g
Moxalactam solution.....	2.0mL

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Moxalactam Solution:

Composition per 10.0mL:

Moxalactam.....	0.1g
-----------------	------

Preparation of Moxalactam Solution: Add moxalactam to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except moxalactam solution, to distilled/deionized water and bring volume to 998.0mL. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 12 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 2.0mL of sterile moxalactam solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of *Listeria monocytogenes*.

LPM Agar

(Lithium Phenylethanol Moxalactam Agar)

Composition per liter:

Agar.....	15.0g
Glycine anhydride.....	10.0g
Casein enzymic hydrolysate.....	5.0g
Peptic digest of animal tissue.....	5.0g
Beef extract.....	3.0g
LiCl.....	5.0g
NaCl.....	5.0g
Phenylethyl alcohol.....	2.5g
Selective supplement solution.....	10.0mL

pH 7.3 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Selective Supplement Solution:

Composition per 10.0mL:

Moxalactam.....	20.0mg
-----------------	--------

Preparation of Selective Supplement Solution: Add moxalactam to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Caution: Lithium chloride is harmful. Avoid bodily contact and inhalation of vapors. On contact with skin, wash with plenty of water immediately.

Preparation of Medium: Add components, except selective supplement solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add selective supplement solution. Mix thoroughly. Pour into Petri dishes or aseptically distribute into sterile tubes.

Use: For the isolation and cultivation of *Listeria monocytogenes* from food and dairy products.

LPM Agar with Esculin and Ferric Iron

Composition per liter:

Agar.....	15.0g
Glycine anhydride.....	10.0g
LiCl.....	5.0g
NaCl.....	5.0g
Pancreatic digest of casein.....	5.0g
Peptic digest of animal tissue.....	5.0g
Beef extract.....	3.0g
Phenylethyl alcohol.....	2.5g
Esculin.....	1.0g
Ferric ammonium citrate.....	0.5g
Moxalactam solution.....	2.0mL

pH 7.3 ± 0.2 at 25°C

Moxalactam Solution:

Composition per 10.0mL:

Moxalactam.....	0.1g
-----------------	------

Preparation of Moxalactam Solution: Add moxalactam to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except moxalactam solution, to distilled/deionized water and bring volume to 998.0mL. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 12 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 2.0mL of sterile moxalactam solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of *Listeria monocytogenes*.

LPM HiVeg Agar Base with Moxalactam

Composition per liter:

Agar.....	15.0g
Glycine anhydride.....	10.0g
Plant hydrolysate.....	5.0g
Plant peptone.....	5.0g
LiC.....	5.0g
NaCl.....	5.0g
Plant extract.....	3.0g
Phenylethyl alcohol.....	2.5g
Moxalactam solution.....	2.0mL

pH 7.3 ± 0.2 at 25°C

Source: This medium, without moxalactam, is available as a premixed powder from HiMedia.

Moxalactam Solution:

Composition per 10.0mL:

Moxalactam.....	0.1g
-----------------	------

Preparation of Moxalactam Solution: Add moxalactam to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except moxalactam solution, to distilled/deionized water and bring volume to 998.0mL. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 12 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 2.0mL of sterile moxalactam solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of *Listeria monocytogenes*.

LS Differential HiVeg Medium Base**with Skim Milk and Triphenyltetrazolium Chloride****Composition per liter:**

Glucose	20.0g
Agar	15.0g
Plant hydrolysate.....	10.0g
Plant extract	5.0g
Papaic digest of soybean meal	5.0g
NaCl	5.0g
Yeast extract.....	5.0g
L-Cysteine-HCl.....	0.3g
Skim milk solution.....	100.0mL
Triphenyltetrazolium chloride solution.....	10.0mL

pH 6.1 ± 0.2 at 25°C

Source: This medium, without skim milk and triphenyltetrazolium chloride solution, is available as a premixed powder from HiMedia.

Skim Milk Solution:**Composition per 100.0mL:**

Skim milk, antibiotic free	10.0g
----------------------------------	-------

Preparation of Skim Milk Solution: Add skim milk to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 5 min at 15 psi pressure–121°C. Cool to 50°C.

Triphenyltetrazolium Chloride Solution:**Composition per 10.0mL:**

2,3,5-Triphenyltetrazolium chloride	0.2g
---	------

Preparation of Triphenyltetrazolium Chloride Solution:

Add triphenyltetrazolium chloride to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize. Warm to 50°C.

Preparation of Medium: Add components, except skim milk solution and triphenyltetrazolium chloride solution, to distilled/deionized water and bring volume to 890.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile skim milk solution and sterile triphenyltetrazolium chloride solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the differentiation and enumeration of lactobacilli and streptococci in yogurt. *Lactobacillus* species appear as irregular, red colonies surrounded by a white, opaque zone. *Streptococcus* species appear as round, red colonies surrounded by a clear zone.

LS Differential Medium**(Lactobacillus Streptococcus Differential Medium)****Composition per liter:**

Glucose	20.0g
Agar	13.0g
Pancreatic digest of casein.....	10.0g
Beef extract	5.0g
NaCl	5.0g
Papaic digest of soybean meal	5.0g
Yeast extract.....	5.0g
L-Cysteine-HCl·H ₂ O.....	0.3g
Skim milk solution.....	100.0mL
Triphenyltetrazolium chloride solution.....	10.0mL

pH 6.1 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Skim Milk Solution:**Composition per 100.0mL:**

Skim milk, antibiotic free	10.0g
----------------------------------	-------

Preparation of Skim Milk Solution: Add skim milk to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 5 min at 15 psi pressure–121°C. Cool to 50°C.

Triphenyltetrazolium Chloride Solution:**Composition per 10.0mL:**

2,3,5-Triphenyltetrazolium chloride	0.2g
---	------

Preparation of Triphenyltetrazolium Chloride Solution:

Add triphenyltetrazolium chloride to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize. Warm to 50°C.

Preparation of Medium: Add components, except skim milk solution and triphenyltetrazolium chloride solution, to distilled/deionized water and bring volume to 890.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile skim milk solution and sterile triphenyltetrazolium chloride solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the differentiation and enumeration of lactobacilli and streptococci in yogurt. *Lactobacillus* species appear as irregular, red colonies surrounded by a white, opaque zone. *Streptococcus* species appear as round, red colonies surrounded by a clear zone.

LST-MUG Broth**Composition per liter:**

Tryptose	20.0g
Lactose.....	5.0g
K ₂ HPO ₄	2.75g
KH ₂ PO ₄	2.75g
NaCl.....	5.0g
L-Tryptophan	1.0g
Sodium lauryl sulfate.....	0.1g
4-Methylumbelliferyl-β-D-glucuronide	0.1g

pH 6.8 ± 0.2 at 37°C

Source: This medium is available from Fluka, Sigma-Aldrich.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into test tubes that contain an inverted Durham tube in 10.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the detection of *E. coli* by the fluorogenic method. The presence of *E. coli* results in fluorescence in the UV. A positive indole test provides confirmation. β-D-glucuronidase, which is produced by *E. coli*, cleaves 4-methylumbelliferyl-β-D-glucuronide to 4-methylumbelliferone and glucuronide. The fluorogen 4-methylumbelliferone can be detected under a long wavelength UV lamp.

LT MediumSee: **Lecithin Tween™ Medium****LTH Medium for Thiothrix****Composition per liter:**

HEPES (N-[2-hydroxyethyl]piperazine- N'-2-ethanesulfonic acid) buffer	2.38g

Biotin.....	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except Wolfe's vitamin solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Adjust pH to 7.3 with NaOH. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL of sterile Wolfe's vitamin solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of unidentified bacterium ATCC 49750.

**Luedemann Medium
(DSMZ Medium 877)****Composition per 100.0mL:**

Agar.....	1.5g
Malt extract broth.....	1.5g
Soluble starch.....	1.0g
Glucose.....	1.0g
Yeast extract.....	0.5g
NaCl.....	0.5g
CaCO ₃	0.2g

pH 8.6 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Blastococcus saxosidens* and *Blastococcus sp.*

Luminous Medium**Composition per liter:**

NaCl.....	30.0g
Agar.....	20.0g
NH ₄ Cl.....	5.0g
Pancreatic digest of casein.....	5.0g
Yeast extract.....	5.0g
K ₂ HPO ₄	3.9g
KH ₂ PO ₄	2.1g
CaCO ₃	1.0g
MgSO ₄ ·7H ₂ O.....	1.0g
KCl.....	0.75g
Tris buffer (1M solution, pH 7.5).....	50.0mL
Glycerol.....	3.0mL

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Alteromonas hanedai*, *Photobacterium* species, *Shewanella hanedai*, and *Vibrio* species.

**LUP
(Lupine Medium)****Composition per liter:**

Agar.....	15.0g
Lupine stems.....	variable

Preparation of Medium: Add agar to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boil-

ing. Distribute 6.0mL volumes into tubes. Cut lupine stems into 8.0cm-long pieces. Add 2–3 lupine stems per tube. Autoclave for 15 min at 15 psi pressure–121°C. Allow tubes to cool in a slanted position.

Use: For the cultivation of *Botryosphaeria berengeriana* and *Mycosphaerella ligulicola*.

LuPhet1 Medium (DSMZ Medium 298e)

Composition per liter:

NaCl	1.0g
KCl	0.5g
MgCl ₂ ·6H ₂ O	0.4g
NH ₄ Cl	0.25g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O	0.15g
Resazurin	1.0mg
NaHCO ₃ solution	10.0mL
Sodium lactate solution	10.0mL
Na ₂ S·9H ₂ O solution	10.0mL
Yeast extract solution	10.0mL
Seven vitamin solution	1.0mL
Selenite-tungstate solution	1.0mL
Trace elements solution SL-10	1.0mL
pH 7.2 ± 0.2 at 25°C	

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.36g
-------------------------------------	-------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

NaHCO₃ Solution:

Composition per 10.0mL:

NaHCO ₃	5.0g
--------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

Sodium Lactate Solution:

Composition per 10.0mL:

Sodium lactate	1.5g
----------------	------

Preparation of Sodium Lactate Solution: Add sodium lactate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Yeast Extract Solution:

Composition per 10.0mL:

Yeast extract	1.0g
---------------	------

Preparation of Yeast Extract Solution: Add yeast extract to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Seven Vitamin Solution:

Composition per liter:

Pyridoxine hydrochloride	300.0mg
Thiamine-HCl·2H ₂ O	200.0mg
Nicotinic acid	200.0mg
Vitamin B ₁₂	100.0mg
Calcium pantothenate	100.0mg

<i>p</i> -Aminobenzoic acid	80.0mg
D(+)-Biotin	20.0mg

Preparation of Seven Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Sparge with 100% N₂. Mix thoroughly. Filter sterilize.

Trace Elements Solution SL-10:

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Selenite-Tungstate Solution

Composition per liter:

NaOH	0.5g
Na ₂ WO ₄ ·2H ₂ O	4.0mg
Na ₂ SeO ₃ ·5H ₂ O	3.0mg

Preparation of Selenite-Tungstate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas atmosphere. Add components, except NaHCO₃ solution, sodium lactate solution, Na₂S·9H₂O solution, seven vitamin solution, selenite-tungstate solution, and trace elements solution SL-10, to distilled/deionized water and bring volume to 957.0mL. Mix thoroughly. Adjust pH to 7.2. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 10.0mL NaHCO₃ solution, 10.0mL Na₂S·9H₂O solution, 10.0mL sodium lactate solution, 1.0mL seven vitamin solution, 1.0mL selenite-tungstate solution, and 1.0mL trace elements solution SL-10. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or bottles. After inoculation, flush and repressurize the gas head space of culture bottles with sterile 80% N₂ + 20% CO₂ to 1 bar overpressure.

Use: For the cultivation of *Acetobacterium sp.*

Luria Agar

See: **L Agar**

Luria Agar Base, Miller

Composition per liter:

Agar	15.0g
Tryptone	10.0g
Yeast extract	5.0g
NaCl	0.5g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of bacteria for genetic and molecular studies.

Luria Bertani Agar, Miller (LB Agar, Miller)

Composition per liter:

Agar	15.0g
Tryptone.....	10.0g
NaCl.....	10.0g
Yeast extract.....	5.0g
pH 7.5 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of bacteria for genetic and molecular studies.

Luria Bertani HiVeg Agar, Miller

Composition per liter:

Agar	15.0g
Plant hydrolysate.....	10.0g
NaCl.....	10.0g
Yeast extract.....	5.0g
pH 7.5 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of bacteria for genetic and molecular studies. For the cultivation and maintenance of recombinant strains of *Escherichia coli* for genetic studies.

Luria Bertani HiVeg Broth, Miller

Composition per liter:

Plant hydrolysate.....	10.0g
NaCl.....	10.0g
Yeast extract.....	5.0g
pH 7.5 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of bacteria for genetic and molecular studies. For the cultivation and maintenance of recombinant strains of *Escherichia coli* for genetic studies.

Luria Broth, HiVeg

Composition per liter:

Plant hydrolysate	10.0g
NaCl.....	5.0g
Yeast extract.....	5.0g
pH 7.0 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Escherichia coli*.

Luria HiVeg Agar

Composition per liter:

Agar	15.0g
Plant hydrolysate	10.0g
NaCl.....	5.0g
Yeast extract.....	5.0g
pH 7.0 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the routine cultivation and estimation of not particularly fastidious microorganisms.

Luria HiVeg Agar with Glucose

Composition per liter:

Agar	15.0g
Plant hydrolysate	10.0g
NaCl.....	5.0g
Yeast extract.....	5.0g
Glucose solution	20.0mL
pH 7.0 ± 0.2 at 25°C	

Source: This medium, without glucose solution, is available as a premixed powder from HiMedia.

Glucose Solution:

Composition per 100.0mL:

Glucose	10.0g
---------------	-------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except glucose solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Bring pH to 7.0. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 20.0mL of sterile glucose solution. Mix thoroughly. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Escherichia coli*.

LuTria3 Medium (DSMZ Medium 298d)

Composition per liter:

NaCl.....	1.0g
KCl.....	0.5g

MgCl ₂ ·6H ₂ O.....	0.4g
NH ₄ Cl	0.25g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O.....	0.15g
Resazurin	1.0mg
NaHCO ₃ solution	10.0mL
Butanediol solution.....	10.0mL
Na ₂ S·9H ₂ O solution.....	10.0mL
Seven vitamin solution.....	10.0mL
Triethanolamine hydrochloride solution.....	10.0mL
Trace elements solution SL-10	1.0mL

pH 7.2 ± 0.2 at 25°C

Na₂S·9H₂O Solution:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O.....	0.36g
--	-------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

NaHCO₃ Solution:**Composition per 10.0mL:**

NaHCO ₃	2.5g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

Butanediol Solution:**Composition per 10.0mL:**

2,3 butanediol.....	0.9g
---------------------	------

Preparation of Butanediol Solution: Add butanediol to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Seven Vitamin Solution:**Composition per liter:**

Pyridoxine hydrochloride	300.0mg
Thiamine-HCl·2H ₂ O.....	200.0mg
Nicotinic acid.....	200.0mg
Vitamin B ₁₂	100.0mg
Calcium pantothenate	100.0mg
<i>p</i> -Aminobenzoic acid.....	80.0mg
D(+)-Biotin.....	20.0mg

Preparation of Seven Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Sparge with 100% N₂. Mix thoroughly. Filter sterilize.

Trace Elements Solution SL-10:**Composition per liter:**

FeCl ₂ ·4H ₂ O.....	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thor-

oughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Triethanolamine Hydrochloride Solution:**Composition per 10.0mL:**

Triethanolamine hydrochloride.....	1.4g
------------------------------------	------

Preparation of Triethanolamine Hydrochloride Solution:

Add triethanolamine hydrochloride to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Adjust pH to 7.0. Sparge with 100% N₂. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas atmosphere. Add components, except NaHCO₃ solution, butanediol solution, Na₂S·9H₂O solution, seven vitamin solution, triethanolamine hydrochloride solution, and trace elements solution SL-10, to distilled/deionized water and bring volume to 949.0mL. Mix thoroughly. Adjust pH to 7.2. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 10.0mL NaHCO₃ solution, 10.0mL butanediol solution, 10.0mL Na₂S·9H₂O solution, 10.0mL seven vitamin solution, 10.0mL triethanolamine hydrochloride solution, and 1.0mL trace elements solution SL-10. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or bottles. After inoculation, flush and repressurize the gas head space of culture bottles with sterile 80% N₂ + 20% CO₂ to 1 bar overpressure.

Use: For the cultivation of *Acetobacterium* sp.

LY Agar for *Filobasidium***Composition per liter:**

Agar	15.0g
Lactose.....	1.0g
Yeast extract.....	0.5g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Filobasidium floriforme*.

Lyngby Iron Agar

See: Iron Agar, Lyngby

Lysine Agar, Selective**Composition per liter:**

Agar	15.0g
L-Lysine.....	10.0g
Peptone	5.0g
Glucose	3.5g
Yeast extract.....	3.0g
Bile salts mixture.....	1.5g
Sulfapyridine.....	0.3g
Bromocresol Purple	0.03g
Crystal Violet.....	0.001g

pH 6.8 ± 0.1 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the selective isolation and cultivation of *Salmonella* species from food by the hydrophobic grid membrane filter method.

Lysine Arginine Iron Agar

Composition per liter:

Agar	15.0g
L-Arginine	10.0g
L-Lysine	10.0g
Peptone.....	5.0g
Yeast extract.....	3.0g
Glucose	1.0g
Ferric ammonium citrate.....	0.5g
Sodium thiosulfate	0.04g
Bromcresol Purple	0.02g

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 6.8. Distribute into screw-capped tubes in 5.0mL volumes. Autoclave for 12 min at 15 psi pressure–121°C. Allow tubes to cool in a slanted position.

Use: For the cultivation and differentiation of bacteria based on their ability to decarboxylate lysine, decarboxylate arginine, and produce H₂S. Bacteria that decarboxylate lysine or arginine turn the medium purple. Bacteria that produce H₂S appear as black colonies.

Lysine Arginine Iron HiVeg Agar

Composition per liter:

Agar	15.0g
L-Arginine	10.0g
L-Lysine.....	10.0g
Plant peptone.....	5.0g
Yeast extract.....	3.0g
Glucose	1.0g
Ferric ammonium citrate.....	0.5g
Na ₂ S ₂ O ₃	0.04g
Bromcresol Purple	0.02g

pH 6.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 6.8. Distribute into screw-capped tubes in 5.0mL volumes. Autoclave for 12 min at 15 psi pressure–121°C. Allow tubes to cool in a slanted position.

Use: For the cultivation and differentiation of bacteria based on their ability to decarboxylate lysine, decarboxylate arginine, and produce H₂S. Bacteria that decarboxylate lysine or arginine turn the medium purple.

Lysine Broth Falkow with Sodium Chloride (BAM M44)

Composition per liter:

L-Lysine.....	5.0g
Peptone or gelysate	5.0g
Yeast extract.....	3.0g
Glucose	1.0g
Bromcresol Purple	0.02g

pH 6.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH so that it will be 6.5 ± 0.2 after sterilization. Distribute into 16 × 150mm screw-capped tubes in 5.0mL volumes. Autoclave medium with loosely capped tubes for 10 min at 15 psi pressure–121°C. Screw the caps on tightly for storage and after inoculation.

Use: For the cultivation and differentiation of *Vibrio* spp. based on their ability to decarboxylate the amino acid lysine. Bacteria that decarboxylate lysine turn the medium turbid purple.

Lysine Decarboxylase Broth, Falkow

Composition per liter:

Peptone	5.0g
L-Lysine.....	5.0g
Yeast extract.....	3.0g
Glucose	1.0g
Bromcresol Purple	0.02g

pH 6.5–6.8 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 6.5–6.8. Distribute into tubes in 5.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and differentiation of bacteria, especially *Salmonella*, based on their ability to decarboxylate lysine. Bacteria that decarboxylate lysine turn the medium turbid purple.

Lysine Decarboxylase Broth, Taylor Modification

Composition per liter:

L-Lysine.....	5.0g
Yeast extract.....	3.0g
Glucose	1.0g
Bromcresol Purple	0.02g

pH 6.1 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 6.1. Distribute into tubes in 5.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and differentiation of bacteria, especially *Salmonella*, based on their ability to decarboxylate lysine. Bacteria that decarboxylate lysine turn the medium turbid purple.

Lysine Decarboxylase Broth, Taylor Modification (Lysine Decarboxylase Broth)

Composition per liter:

L-Lysine.....	5.0g
Peptone	5.0g
Yeast extract.....	3.0g
Glucose	1.0g
Bromcresol Purple	0.02g

pH 6.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring

to boiling. Adjust pH to 6.1. Distribute into tubes in 5.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and differentiation of bacteria, especially *Salmonella*, based on their ability to decarboxylate lysine. Bacteria that decarboxylate lysine turn the medium turbid purple.

Lysine Decarboxylase HiVeg Broth

Composition per liter:

Plant peptone.....	5.0g
L-Lysine hydrochloride.....	5.0g
Yeast extract.....	3.0g
Glucose.....	1.0g
Bromcresol Purple.....	0.02g

pH 6.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically distribute into sterile tubes in 1.0mL volumes.

Use: For the cultivation and differentiation of Gram-negative, nonfermentative bacteria based on their ability to decarboxylate lysine. Bacteria that decarboxylate lysine turn the medium purple.

Lysine Decarboxylase Medium

Composition per liter:

Glucose.....	0.5g
KH ₂ PO ₄	0.5g
L-Lysine·HCl.....	0.5g

pH 4.6 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 4.6. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically distribute into sterile tubes in 1.0mL volumes.

Use: For the cultivation and differentiation of Gram-negative, nonfermentative bacteria based on their ability to decarboxylate lysine. Bacteria that decarboxylate lysine turn the medium turbid purple.

Lysine Iron Agar

Composition per liter:

Agar.....	13.5g
L-Lysine.....	10.0g
Pancreatic digest of gelatin.....	5.0g
Yeast extract.....	3.0g
Glucose.....	1.0g
Ferric ammonium citrate.....	0.5g
Na ₂ S ₂ O ₃ ·5H ₂ O.....	0.04g
Bromcresol Purple.....	0.02g

pH 6.7 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems and Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes in 10.0mL volumes. Autoclave for 12 min at 15 psi pressure–121°C. Allow tubes to cool in a slanted position.

Use: For the cultivation and differentiation of members of the Enterobacteriaceae based on their ability to decarboxylate lysine and to form H₂S. Bacteria that decarboxylate lysine turn the medium purple. Bacteria that produce H₂S appear as black colonies.

Lysine Iron Cystine HiVeg Broth Base with Novobiocin

Composition per liter:

L-Lysine hydrochloride.....	10.0g
Plant hydrolysate.....	5.0g
Mannitol.....	5.0g
Yeast extract.....	3.0g
Glucose.....	1.0g
Salicin.....	1.0g
Ferric ammonium citrate.....	0.5g
Na ₂ S ₂ O ₃	0.1g
L-Cystine.....	0.1g
Neutral Red.....	0.025g
Novobiocin solution.....	10.0mL

pH 6.2 ± 0.2 at 25°C

Source: This medium, without novobiocin solution, is available as a premixed powder from HiMedia.

Novobiocin Solution:

Composition per 10.0mL:

Novobiocin.....	0.015g
-----------------	--------

Preparation of Novobiocin Solution: Add novobiocin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except novobiocin solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 2–3 min. Distribute into tubes in 10.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 0.1mL of sterile novobiocin solution to each tube. Mix thoroughly.

Use: For the rapid, presumptive detection of *Salmonella* in foods, food ingredients, and feed materials.

Lysine Iron Cystine Neutral Red Broth

See: [LICNR Broth](#)

Lysine Iron HiVeg Agar

Composition per liter:

Agar.....	15.0g
L-Lysine.....	10.0g
Plant peptone.....	5.0g
Yeast extract.....	3.0g
Glucose.....	1.0g
Ferric ammonium citrate.....	0.5g
Na ₂ S ₂ O ₃	0.04g
Bromcresol Purple.....	0.02g

pH 6.7 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes in 10.0mL volumes. Autoclave for 12 min at 15 psi pressure–121°C. Allow tubes to cool in a slanted position.

Use: For the cultivation and differentiation of members of the Enterobacteriaceae based on their ability to decarboxylate lysine and to form H₂S. Bacteria that decarboxylate lysine turn the medium purple. Bacteria that produce H₂S appear as black colonies. For the differentiation of enteric organisms, especially *Salmonella* serotype Arizona.

Lysine Lactose HiVeg Broth

Composition per liter:

Lactose	10.0g
Plant peptone No. 2	5.0g
L-Lysine	5.0g
Yeast extract	3.0g
Glucose	1.0g
Bromcresol Purple	0.02g

pH 6.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 6.8. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically distribute into sterile tubes in 1.0mL volumes.

Use: For the determination of lysine decarboxylase activity of lactose nonfermenting members of Enterobacteriaceae, especially *Salmonella* species.

Lysine Medium

Composition per liter:

Glucose	44.5g
Agar	17.8g
KH ₂ PO ₄	1.78g
Lysine	1.0g
MgSO ₄ ·7H ₂ O	0.89g
CaCl ₂ ·2H ₂ O	0.178g
NaCl	0.089g
Inositol	0.02g
Calcium pantothenate	2.0mg
Adenine	1.78mg
DL-Methionine	0.89mg
L-Histidine	0.89mg
DL-Tryptophan	0.89mg
Thiamine-HCl	0.4mg
Pyridoxine	0.4mg
Nicotinic acid	0.4mg
FeSO ₄ ·7H ₂ O	0.22mg
<i>p</i> -Aminobenzoic acid	0.2mg
Riboflavin	0.2mg
MnSO ₄ ·H ₂ O	0.035mg
ZnSO ₄ ·7H ₂ O	0.035mg
(NH ₄) ₂ MoO ₄ ·4H ₂ O	0.018mg
H ₃ BO ₃	8.9μg
Biotin	2.0μg
Folic acid	1.0μg
Potassium lactate (50% solution)	10.0mL
Lactic acid	1.0mL

pH 4.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add potassium lactate to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Add re-

maining components, except lactic acid. Mix thoroughly. Gently heat while stirring and bring to boiling. Do not autoclave. Cool to 50°C. Adjust pH to 4.8 by adding 1.0mL of lactic acid. Pour into sterile Petri dishes. Dry the surface of the plates by incubation at 37°C for 24 hr.

Use: For the isolation, cultivation, and enumeration of wild yeasts encountered in brewing.

Lysine Ornithine Mannitol Agar (LOM Agar)

Composition per liter:

Agar	13.5g
L-Ornithine-HCl	6.5g
D-Mannitol	5.25g
L-Lysine-HCl	5.0g
NaCl	5.0g
Yeast extract	3.0g
Bromthymol Blue	0.3g
Vancomycin solution	10.0mL

pH 6.5 ± 0.2 at 25°C

Vancomycin Solution:

Composition per 10.0mL:

Vancomycin-HCl	0.03g
----------------------	-------

Preparation of Vancomycin Solution: Add vancomycin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except vancomycin solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile vancomycin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and differentiation of Gram-negative bacilli based on their ability to decarboxylate lysine or ornithine and mannitol fermentation. Especially useful for the identification of *Enterobacter agglomerans*. Bacteria that ferment mannitol appear as dark yellow colonies. Bacteria that decarboxylate lysine or ornithine appear as green-yellow colonies.

Lysobacter deserti Medium (DSMZ Medium 1060)

Composition per liter:

Solution A	700.0mL
Solution B	300.0mL

pH 8.1 ± 0.2 at 25°C

Solution A:

Composition per 700.0mL:

Agar	15.0g
Glucose	10.0g
Peptone	5.0g
Yeast extract	5.0g
K ₂ HPO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.2g
CaCl ₂ ·2H ₂ O	40.0g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 700.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C.

Solution B:**Composition per 300.0mL:**

NaCl	20.0g
Na ₂ CO ₃	1.0g

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 300.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C.

Preparation of Medium: Aseptically combine 700.0mL sterile solution A and 300.0mL sterile solution B. Mix thoroughly. Adjust pH to 8.1. Pour into Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Lysozyme deserti*.

Lysozyme Broth**Composition per 1005.0mL:**

Basal glycerol broth	1.0L
Lysozyme solution	5.0mL

Basal Glycerol Broth:**Composition per liter:**

Peptone.....	5.0g
Beef extract	3.0g
Glycerol	70.0mL

Preparation of Basal Glycerol Broth: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute 500.0mL of the broth into screw-capped tubes in 5.0mL volumes. Autoclave the tubes and the flask with the remaining broth for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Lysozyme Solution:**Composition per 100.0mL:**

Lysozyme	0.1g
HCl (0.01N solution).....	100.0mL

Preparation of Lysozyme Solution: Add lysozyme to 100.0mL of HCl solution. Mix thoroughly. Filter sterilize. Store for up to 1 week at 4°C.

Preparation of Medium: Add 5.0mL of the sterile lysozyme solution to 95.0mL of the cooled, sterile basal glycerol broth. Mix thoroughly. Aseptically distribute into sterile screw-capped tubes in 5.0mL volumes.

Use: For the cultivation and differentiation of *Nocardia asteroides*, *Streptomyces griseus*, and *Actinomadura madurae* based on sensitivity to lysozyme. *Nocardia asteroides* grows well in both the basal glycerol broth and the lysozyme broth. *Actinomadura madurae* and *Streptomyces griseus* grow well in the basal glycerol broth but not in the lysozyme broth.

Lysozyme Broth**Composition per 1010.0mL:**

Nutrient broth.....	1.0L
Lysozyme solution	10.0mL

pH 6.9 ± 0.2 at 25°C

Nutrient Broth:**Composition per liter:**

Pancreatic digest of gelatin	5.0g
Beef extract	3.0g

Source: Nutrient broth is available as a premixed powder from BD Diagnostic Systems.

Preparation of Nutrient Broth: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute

into bottles in 99.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Lysozyme Solution:**Composition per 100.0mL:**

Lysozyme	0.1g
----------------	------

Preparation of Lysozyme Solution: Add lysozyme to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add 1.0mL of sterile lysozyme solution to 99.0mL of cooled, sterile nutrient broth. Mix thoroughly. Aseptically distribute into sterile tubes in 2.5mL volumes.

Use: For the cultivation and differentiation of *Bacillus cereus* in foods. *Bacillus cereus* is resistant to lysozyme and will grow in this medium.

M Broth**Composition per liter:**

Pancreatic digest of casein.....	12.5g
K ₂ HPO ₄	5.0g
NaCl.....	5.0g
Sodium citrate	5.0g
Yeast extract.....	5.0g
Mannose.....	2.0g
MgSO ₄ ·7H ₂ O	0.8g
Polysorbate 80	0.75g
FeSO ₄	0.04g

pH 7.0 ± 0.22 at 25°C

Source: Available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the detection of *Salmonella* in dried foods and feeds.

M Medium**Composition per liter:**

Beef.....	5.0g
Neopeptone	4.0g
NaCl.....	1.6g
Glucose	0.5g
CaCl ₂	0.06g
KH ₂ PO ₄	0.06g
KCl.....	0.04g
Rabbit blood solution.....	200.0mL

Rabbit Blood Solution:**Composition per liter:**

Rabbit blood.....	500.0mL
-------------------	---------

Preparation of Rabbit Blood Solution: Add 500.0mL of whole rabbit blood to 500.0mL of sterile distilled/deionized water. Freeze and thaw twice to lyse blood cells.

Preparation of Medium: Trim beef to remove fat. Add 5.0g of lean beef to 200.0mL of distilled/deionized water. Gently heat and bring to boiling. Boil for 2–3 min. Filter through Whatman #2 filter paper. Add other components, except rabbit blood solution. Bring volume to 800.0mL with distilled/deionized water. Mix thoroughly. Adjust pH to 7.2 with 1N NaOH. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 200.0mL of lysed rabbit blood solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Herpetomonas megaseliae*.

M1 Medium

Composition per liter:

L-Leucine.....	2.0g
L-Alanine.....	1.0g
L-Isoleucine.....	1.0g
L-Phenylalanine.....	1.0g
L-Proline.....	1.0g
L-Tryptophane.....	1.0g
L-Asparagine.....	0.5g
L-Lysine.....	0.5g
L-Methionine.....	0.5g
L-Tyrosine.....	0.4g
L-Valine.....	0.2g
L-Serine.....	0.2g
MgSO ₄ ·7H ₂ O.....	0.2g
NaCl.....	0.2g
KH ₂ PO ₄	0.14g
L-Arginine.....	0.1g
L-Cysteine.....	0.1g
L-Glycine.....	0.1g
L-Histidine.....	0.1g
L-Threonine.....	0.1g
CaCl ₂	2.0mg
FeCl ₃ ·6H ₂ O.....	2.0mg
Tris(hydroxymethyl)aminomethane buffer (0.01M solution, pH 7.6).....	1.0L
pH 7.6 ± 0.2 at 25°C	

Preparation of Medium: Add solid components to 1.0L of Tris buffer. Mix thoroughly. Filter sterilize. Aseptically distribute into tubes or flasks.

Use: For the cultivation of *Myxococcus xanthus*.

M1-Nocardiopsis arabia Medium (DSMZ Medium 1065)

Composition per liter:

NaCl.....	20.0g
Agar.....	18.0g
Starch.....	10.0g
Yeast extract.....	4.0g
Peptone.....	2.0g
Seawater.....	1.0L
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components to seawater and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Distribute into tubes or flasks. Gently heat while stirring and bring to boiling. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Pour into Petri dishes or leave in tubes.

Use: For the cultivation of *Nocardiopsis arabia*.

M1A Medium

Composition per 1001.0mL:

Sorbitol.....	23.3g
Peptone.....	6.0g
Sucrose.....	3.3g
Pancreatic digest of casein.....	3.3g
Beef heart infusion.....	2.0g
Glucose.....	1.3g

Yeast extract.....	1.0g
Fructose.....	0.3g
Phenol Red.....	20.0mg
Schneider's <i>Drosophila</i> medium.....	533.0mL
Fetal calf serum, heat inactivated.....	167.0mL
Fresh yeast extract solution.....	33.0mL
Penicillin solution.....	8.0mL

Schneider's *Drosophila* Medium:

Composition per liter:

MgSO ₄ ·7H ₂ O.....	3.7g
NaCl.....	2.1g
Yeast extract.....	2.0g
Trehalose.....	2.0g
D-Glucose.....	2.0g
L-Glutamine.....	1.8g
L-Lysine·HCl.....	1.7g
L-Proline.....	1.7g
KCl.....	1.6g
Na ₂ HPO ₄ ·7H ₂ O.....	1.3g
L-Glutamic acid.....	0.8g
L-Methionine.....	0.8g
CaCl ₂ , anhydrous.....	0.6g
KH ₂ PO ₄	0.5g
β-Alanine.....	0.5g
L-Tyrosine.....	0.5g
L-Arginine.....	0.4g
L-Aspartic acid.....	0.4g
L-Histidine.....	0.4g
L-Threonine.....	0.4g
NaHCO ₃	0.4g
Glycine.....	0.3g
L-Serine.....	0.3g
L-Valine.....	0.3g
L-Isoleucine.....	0.2g
L-Leucine.....	0.2g
L-Phenylalanine.....	0.2g
α-Ketoglutaric acid.....	0.2g
Fumaric acid.....	0.1g
Malic acid.....	0.1g
Succinic acid.....	0.1g
L-Cystine.....	0.1g
L-Tryptophan.....	0.1g
L-Cysteine.....	0.06g

Preparation of Schneider's *Drosophila* Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Penicillin Solution:

Composition per 10.0mL:

Penicillin.....	2,500,000U
-----------------	------------

Preparation of Penicillin Solution: Add penicillin to distilled/deionized water and bring volume to 10.0mL. Filter sterilize.

Fresh Yeast Extract Solution:

Composition per 100.0mL:

Baker's yeast, live, pressed, starch-free.....	25.0g
--	-------

Preparation of Fresh Yeast Extract Solution: Add the live Baker's yeast to 100.0mL of distilled/deionized water. Autoclave for 90 min at 15 psi pressure–121°C. Allow to stand. Remove supernatant solution. Adjust pH to 6.6–6.8. Filter sterilize.

Preparation of Medium: Add components—except Schneider's *Drosophila* medium, fetal calf serum, fresh yeast extract solution, and penicillin solution—to distilled/deionized water and bring volume to 260.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 533.0mL of sterile Schneider's *Drosophila* medium, 167.0mL of sterile fetal calf serum, 33.0mL of sterile fresh yeast extract solution, and 8.0mL of sterile penicillin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of *Spiroplasma* species that cause corn stunt.

M3 Agar

Composition per 1020.0mL:

Agar	18.0g
Na ₂ HPO ₄	0.732g
KH ₂ PO ₄	0.466g
NaCl	0.29g
Sodium propionate	0.2g
MgSO ₄ ·7H ₂ O	0.1g
CaCO ₃	0.02g
KNO ₃	0.01g
FeSO ₄ ·7H ₂ O	0.2mg
ZnSO ₄ ·7H ₂ O	0.18mg
MnSO ₄ ·4H ₂ O	0.02mg
Cycloheximide solution	10.0mL
Thiamine-HCl solution	10.0mL

pH 7.0 ± 0.2 at 25°C

Cycloheximide Solution:

Composition per 10.0mL:

Cycloheximide	0.05g
---------------------	-------

Preparation of Cycloheximide Solution: Add cycloheximide to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Thiamine-HCl Solution:

Composition per 10.0mL:

Thiamine-HCl	4.0mg
--------------------	-------

Preparation of Thiamine-HCl Solution: Add thiamine-HCl to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except cycloheximide solution and thiamine-HCl solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL of sterile cycloheximide solution and 10.0mL of thiamine-HCl solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation and cultivation of *Nocardia* species and *Rhodococcus* species.

M3 Agar Medium

Composition per liter:

Agar	18.0g
Na ₂ HPO ₄	0.732g
KH ₂ PO ₄	0.466g
NaCl	0.29g

Sodium propionate	0.2g
KNO ₃	0.1g
MgSO ₄ ·7H ₂ O	0.1g
CaCO ₃	0.02g
Thiamine-HCl	4.0mg
FeSO ₄ ·7H ₂ O	0.2mg
ZnSO ₄ ·7H ₂ O	0.18mg
MnSO ₄ ·4H ₂ O	0.02mg
Cycloheximide solution	10.0mL
Thiamine-HCl solution	10.0mL

pH 7.0 ± 0.2 at 25°C

Cycloheximide Solution:

Composition per 10.0mL:

Cycloheximide	0.04g
---------------------	-------

Preparation of Cycloheximide Solution: Add cycloheximide to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Thiamine-HCl Solution:

Composition per 10.0mL:

Thiamine-HCl	0.04g
--------------------	-------

Preparation of Thiamine-HCl Solution: Add thiamine-HCl to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except cycloheximide solution and thiamine-HCl solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile cycloheximide solution and thiamine-HCl solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Micromonospora* species.

M3 Chytrid Agar

Composition per liter:

Agar	15.0g
Soluble starch	5.0g
Glucose	5.0g
Corn meal, solids from infusion	2.0g
Peptone	1.0g
Yeast extract	1.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Rhizophyidium* species.

M7 Medium

Composition per liter:

Yeast extract solution	200.0mL
Dialyzed fetal bovine serum	100.0mL
L-Methionine solution	30.0mL
Buffer solution	20.0mL
Glucose solution	20.0mL

Yeast Extract Solution:

Composition per liter:

Yeast extract	25.0g
---------------------	-------

Preparation of Yeast Extract Solution: Add yeast extract to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

L-Methionine Solution:

Composition per liter:

L-Methionine..... 1.5g

Preparation of L-Methionine Solution: Add L-methionine to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Glucose Solution:

Composition per liter:

Glucose 270.0g

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Buffer Solution:

Composition per liter:

Na₂HPO₄..... 25.0g

KH₂PO₄..... 18.1g

Preparation of Buffer Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Dialyzed Fetal Bovine Serum:

Composition per 100.0mL:

Fetal bovine serum, heat inactivated.....100.0mL

Preparation of Dialyzed Fetal Bovine Serum: Dialyze the heat-inactivated serum at 0°–4°C against 10 volumes of water. Clean the dialysis tubing before use by boiling in a solution of 0.37g/L of EDTA and rinsing with water. Change the water four times at 8–16 hr intervals. Centrifuge the dialyzed serum for 30 min at 35,000 x g and filter sterilize.

Preparation of Medium: Aseptically combine the sterile solutions. Mix thoroughly. Bring volume to 1.0L with sterile distilled/deionized water.

Use: For the cultivation of *Naegleria fowleri*, *Naegleria gruberi*, and *Nuclearia* species.

M9 Medium

Composition per liter:

Na₂HPO₄..... 6.0g

KH₂PO₄..... 3.0g

NH₄Cl 1.0g

NaCl 0.5g

Glucose solution 10.0mL

MgSO₄·7H₂O solution 1.0mL

Thiamine-HCl solution..... 1.0mL

CaCl₂ solution 1.0mL

pH 7.0 ± 0.2 at 25°C

Glucose Solution:

Composition per 100.0mL:

D-Glucose 20.0g

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

MgSO₄·7H₂O Solution:

Composition per liter:

MgSO₄·7H₂O 246.5g

Preparation of MgSO₄·7H₂O Solution: Add MgSO₄·7H₂O to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Thiamine-HCl Solution:

Composition per 10.0mL:

Thiamine-HCl 10.0mg

Preparation of Thiamine-HCl Solution: Add thiamine-HCl to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

CaCl₂ Solution:

Composition per liter:

CaCl₂ solution 14.7g

Preparation of CaCl₂ Solution: Add CaCl₂ solution to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except MgSO₄·7H₂O solution, glucose solution, thiamine-HCl solution, and CaCl₂ solution, to distilled/deionized water and bring volume to 987.0mL. Mix thoroughly. Adjust pH to 7.0. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add sterile MgSO₄·7H₂O solution, sterile glucose solution, sterile thiamine-HCl solution, and sterile CaCl₂ solution. Mix thoroughly. Distribute into tubes or flasks.

Use: For the cultivation and maintenance of *Escherichia coli* and a variety of other bacteria.

M9 Medium with Arginine

Composition per 1013.0mL:

L-Proline 20.0mg

L-Arginine 20.0mg

10X M9 salts 100.0mL

Glucose solution 10.0mL

CaCl₂·2H₂O solution..... 1.0mL

MgSO₄ solution..... 1.0mL

Thiamine-HCl solution 1.0mL

pH 7.4 ± 0.2 at 25°C

10X M9 Salts:

Composition per liter:

Na₂HPO₄..... 60.0g

KH₂PO₄..... 30.0g

NH₄Cl 10.0g

NaCl 5.0g

Preparation of 10X M9 Salts: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.4.

Glucose Solution:

Composition per 100.0mL:

Glucose 20.0g

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

CaCl₂·2H₂O Solution:

Composition per 100.0mL:

CaCl₂·2H₂O 1.47g

Preparation of CaCl₂·2H₂O Solution: Add CaCl₂·2H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

MgSO₄ Solution:

Composition per 100.0mL:

MgSO₄ 12.04g

Preparation of MgSO₄ Solution: Add MgSO₄ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Thiamine-HCl Solution:

Composition per 10.0mL:

Thiamine-HCl 3.37g

Preparation of Thiamine-HCl Solution: Add thiamine-HCl to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add L-proline, L-arginine, and 10X M9 salts to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL of sterile glucose solution, 1.0mL of sterile CaCl₂·2H₂O solution, 1.0mL of sterile MgSO₄ solution, and 1.0mL of sterile thiamine-HCl solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Escherichia coli*.

**M9 Medium with Arginine
(DSMZ Medium 450)**

Composition per liter:

10X M9 salts 100.0mL
Glucose solution 10.0mL
Calcium chloride solution 10.0mL
Magnesium sulfate solution 10.0mL
Thiamine solution 1.0mL
Proline solution 1.0mL
Arginine solution 1.0mL

pH 7.4 ± 0.2 at 25°C

Glucose Solution:

Composition per 10.0mL:

D-Glucose 2.0g

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Thiamine Solution:

Composition per 10.0mL:

Thiamine-HCl·2H₂O 3.7g

Preparation of Thiamine Solution: Add thiamine-HCl·2H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Arginine Solution:

Composition per 10.0mL:

Arginine 0.2g

Preparation of Arginine Solution: Add arginine to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Proline Solution:

Composition per 10.0mL:

Proline 0.2g

Preparation of Proline Solution: Add proline to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Calcium Chloride Solution:

Composition per 10.0mL:

CaCl₂ 0.1g

Preparation of Calcium Chloride Solution: Add CaCl₂ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Magnesium Sulfate Solution:

Composition per 10.0mL:

MgSO₄ 1.2g

Preparation of Magnesium Sulfate Solution: Add MgSO₄ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

10X M9 Salts Solution:

Composition per liter:

Na₂HPO₄ 60.0g
KH₂PO₄ 30.0g
NH₄Cl 10.0g
NaCl 5.0g
MgSO₄ 1.2g

Preparation of 10X M9 Salts Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Aseptically combine sterile component solutions. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Escherichia coli* arginine auxotrophs.

M9 Medium with Casamino Acids

Composition per liter:

Na₂HPO₄ 6.0g
Casamino acids 5.0g
KH₂PO₄ 3.0g
NH₄Cl 1.0g
NaCl 0.5g
Glucose solution 10.0mL
MgSO₄·7H₂O solution 1.0mL
Thiamine-HCl solution 1.0mL
CaCl₂ solution 1.0mL

pH 7.0 ± 0.2 at 25°C

Glucose solution:

Composition per 100.0mL:

D-Glucose 20.0g

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

MgSO₄·7H₂O Solution:

Composition per liter:

MgSO₄·7H₂O 246.5g

Preparation of MgSO₄·7H₂O Solution: Add MgSO₄·7H₂O to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Thiamine-HCl Solution:

Composition per 10.0mL:

Thiamine-HCl 10.0mg

Preparation of Thiamine-HCl Solution: Add thiamine-HCl to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

CaCl₂ Solution:

Composition per liter:

CaCl₂ solution 14.7g

Preparation of CaCl₂ Solution: Add CaCl₂ solution to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except MgSO₄·7H₂O solution, glucose solution, thiamine-HCl solution, and CaCl₂ solution, to distilled/deionized water and bring volume to 987.0mL. Mix thoroughly. Adjust pH to 7.0. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add sterile MgSO₄·7H₂O solution, sterile glucose solution, sterile thiamine-HCl solution, and sterile CaCl₂ solution. Mix thoroughly. Distribute into tubes or flasks.

Use: For the cultivation and maintenance of *Flavobacterium meningosepticum*.

M9 Medium with Tryptophan

Composition per 1013.0mL:

L-Proline 20.0mg
L-Tryptophan 20.0mg
10X M9 salts 100.0mL
Glucose solution 10.0mL
CaCl₂·2H₂O solution 1.0mL
MgSO₄ solution 1.0mL
Thiamine-HCl solution 1.0mL

pH 7.4 ± 0.2 at 25°C

10X M9 Salts:

Composition per liter:

Na₂HPO₄ 60.0g
KH₂PO₄ 30.0g
NH₄Cl 10.0g
NaCl 5.0g

Preparation of 10X M9 Salts: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.4.

Glucose Solution:

Composition per 100.0mL:

Glucose 20.0g

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

CaCl₂·2H₂O Solution:

Composition per 100.0mL:

CaCl₂·2H₂O 1.47g

Preparation of CaCl₂·2H₂O Solution: Add CaCl₂·2H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

MgSO₄ Solution:

Composition per 100.0mL:

MgSO₄ 12.04g

Preparation of MgSO₄ Solution: Add MgSO₄ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Thiamine-HCl Solution:

Composition per 10.0mL:

Thiamine-HCl 3.37g

Preparation of Thiamine-HCl Solution: Add thiamine-HCl to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add L-proline, L-tryptophan, and 10X M9 salts to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL of sterile glucose solution, 1.0mL of sterile CaCl₂·2H₂O solution, 1.0mL of sterile MgSO₄ solution, and 1.0mL of sterile thiamine-HCl solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Escherichia coli*.

M9 Medium with Tryptophan (DSMZ Medium 451)

Composition per liter:

10X M9 salts 100.0mL
Glucose solution 10.0mL
Calcium chloride solution 10.0mL
Magnesium sulfate solution 10.0mL
Thiamine solution 1.0mL
Proline solution 1.0mL
Tryptophan solution 1.0mL

pH 7.4 ± 0.2 at 25°C

Glucose Solution:

Composition per 10.0mL:

D-Glucose 2.0g

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Thiamine Solution:

Composition per 10.0mL:

Thiamine-HCl·2H₂O 3.7g

Preparation of Thiamine Solution: Add thiamine-HCl·2H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Tryptophan Solution:

Composition per 10.0mL:

Tryptophan 0.2g

Preparation of Tryptophan Solution: Add tryptophan to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Proline Solution:

Composition per 10.0mL:

Proline 0.2g

Preparation of Proline Solution: Add proline to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Calcium Chloride Solution:

Composition per 10.0mL:

CaCl₂ 0.1g

Preparation of Calcium Chloride Solution: Add CaCl₂ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Magnesium Sulfate Solution:**Composition per 10.0mL:**MgSO₄ 1.2g

Preparation of Magnesium Sulfate Solution: Add MgSO₄ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

10X M9 Salts Solution:**Composition per liter:**Na₂HPO₄ 60.0gKH₂PO₄ 30.0gNH₄Cl 10.0g

NaCl 5.0g

MgSO₄ 1.2g

Preparation of 10X M9 Salts Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Aseptically combine sterile component solutions. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Escherichia coli* tryptophan auxotrophs.

M10 Broth**Composition per liter:**

Pancreatic digest of casein 2.0g

Yeast extract 2.0g

Cellobiose 1.0g

Glucose 1.0g

Maltose 1.0g

Starch 1.0g

Resazurin 1.0mg

Mineral solution I 100.0mL

Mineral solution II 100.0mL

Na₂CO₃ solution 50.0mL

Hemin solution 10.0mL

L-Cysteine-HCl solution 10.0mL

Volatile fatty acid mixture 3.1mL

pH 6.8 ± 0.2 at 25°C

Mineral Solution I:**Composition per 100.0mL:**K₂HPO₄ 0.2g

Preparation of Mineral Solution I: Add K₂HPO₄ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Mineral Solution II:**Composition per 100.0mL:**

NaCl 0.4g

(NH₄)₂SO₄ 0.4gKH₂PO₄ 0.3gMgSO₄·7H₂O 0.09gCaCl₂ 0.05g

Preparation of Mineral Solution II: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Na₂CO₃ Solution:**Composition per 100.0mL:**Na₂CO₃ 8.0g

Preparation of Na₂CO₃ Solution: Add Na₂CO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Hemin Solution:**Composition per 100.0mL:**

Hemin 1.0g

NaOH (1N solution) 10.0mL

Preparation of Hemin Solution: Add components to 100.0mL of distilled/deionized water. Mix thoroughly.

L-Cysteine-HCl Solution:**Composition per 10.0mL:**

L-Cysteine-HCl 0.25g

Preparation of L-Cysteine-HCl Solution: Add L-cysteine-HCl to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C.

Volatile Fatty Acid Mixture:**Composition per 31.0mL:**

Acetic acid 17.0mL

Propionic acid 6.0mL

Butyric acid 4.0mL

DL- α -Methylbutyric acid 1.0mL

Isobutyric acid 1.0mL

Isovaleric acid 1.0mL

n-Valeric acid 1.0mL

Preparation of Volatile Fatty Acid Mixture: Combine components. Mix thoroughly. Store under 100% N₂.

Preparation of Medium: Prepare and dispense medium under 100% CO₂. Add components, except L-cysteine-HCl solution and Na₂CO₃ solution, to distilled/deionized water and bring volume to 930.0mL. Mix thoroughly. Sparge with 100% CO₂. Adjust pH to 6.8 with 1N NaOH. Distribute anaerobically in 9.3mL volumes into Hungate tubes. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 0.2mL of sterile L-cysteine-HCl solution and 0.5mL of sterile Na₂CO₃ solution. Check that final pH is 6.8.

Use: For the cultivation of *Enterococcus* species, *Lactobacillus* species, *Streptococcus* species, and *Vagococcus fluvialis*.

M13 *Verrucomicrobium* Medium**Composition per liter:**

Glucose 0.25g

Peptone 0.25g

Yeast extract 0.25g

Distilled water 670.0mL

Artificial seawater 250.0mL

Tris-HCl buffer, (0.1M solution, pH 7.5) 50.0mL

Modified Huntner's basal salts 20.0mL

Vitamin solution 10.0mL

pH 7.5 ± 0.2 at 25°C

Artificial Seawater:**Composition per liter:**

NaCl 23.48g

MgCl₂ 4.98gNa₂SO₄ 3.92gCaCl₂ 1.1g

KCl 0.66g

NaHCO₃ 0.19gH₃BO₃ 0.026gSrCl₂ 0.024g

KBr 6.0mg

NaF 3.0mg

Preparation of Artificial Seawater: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Modified Hutner's Basal Salts:

Composition per liter:

MgSO ₄ ·7H ₂ O	29.7g
Nitrilotriacetic acid	10.0g
CaCl ₂ ·2H ₂ O	3.34g
FeSO ₄ ·7H ₂ O	99.0mg
(NH ₄) ₂ MoO ₄	9.25mg
Metals "44"	50.0mL

Preparation of Modified Hutner's Basal Salts: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L.

Metals "44":

Composition per 100.0mL:

ZnSO ₄ ·7H ₂ O	1.1g
FeSO ₄ ·7H ₂ O	0.5g
EDTA	0.25g
MnSO ₄ ·7H ₂ O	0.154g
CuSO ₄ ·5H ₂ O	0.04g
Co(NO ₃) ₂ ·6H ₂ O	0.025g
Na ₂ B ₄ O ₇ ·10H ₂ O	0.018g

Preparation of Metals "44": Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Vitamin Solution:

Composition per liter:

D-Calcium pantothenate	5.0mg
Riboflavin	5.0mg
Thiamine-HCl	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except modified Hutner's basal salts, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add 20.0mL of sterile modified Hutner's basal salts. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Verrucomicrobium spinosum*.

M14 Medium

Composition per liter:

Yeast extract	1.0g
D-Glucose	1.0g
Tris(hydroxymethyl)aminomethane	0.753g
Artificial seawater	250.0mL
Modified Hutner's basal salts	20.0mL

pH 7.5 ± 0.2 at 25°C

Artificial Seawater:

Composition per liter:

NaCl	23.48g
MgCl ₂	4.98g
Na ₂ SO ₄	3.92g

CaCl ₂	1.1g
KCl	0.66g
NaHCO ₃	0.19g
H ₃ BO ₃	0.026g
SrCl ₂	0.024g
KBr	6.0mg
NaF	3.0mg

Preparation of Artificial Seawater: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Modified Hutner's Basal Salts:

Composition per liter:

MgSO ₄ ·7H ₂ O	29.7g
Nitrilotriacetic acid	10.0g
CaCl ₂ ·2H ₂ O	3.34g
FeSO ₄ ·7H ₂ O	99.0mg
(NH ₄) ₂ MoO ₄	9.25mg
Metals "44"	50.0mL

Preparation of Modified Hutner's Basal Salts: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L.

Metals "44":

Composition per 100.0mL:

ZnSO ₄ ·7H ₂ O	1.1g
FeSO ₄ ·7H ₂ O	0.5g
EDTA	0.25g
MnSO ₄ ·7H ₂ O	0.154g
CuSO ₄ ·5H ₂ O	0.04g
Co(NO ₃) ₂ ·6H ₂ O	0.025g
Na ₂ B ₄ O ₇ ·10H ₂ O	0.018g

Preparation of Metals "44": Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components, except modified Hutner's basal salts, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add 20.0mL of sterile modified Hutner's basal salts. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Pirellula marina*.

M16 Agar

Composition per liter:

Agar	10.0g
Beef extract	5.0g
Pancreatic digest of soybean meal	5.0g
Polypeptone™	5.0g
Sodium acetate·3H ₂ O	3.0g
Yeast extract	2.5g
Ascorbic acid	0.5g
Carbohydrate solution	50.0mL

pH 7.2 ± 0.2 at 25°C

Carbohydrate Solution:

Composition per 50.0mL:

Lactose or glucose	5.0g
--------------------	------

Preparation of Carbohydrate Solution: Add lactose or glucose to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except carbohydrate solution, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.2 with 2N NaOH. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50.0mL of sterile carbohydrate solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of lactobacilli from cheddar cheese.

M17 Agar (LMG Medium 261)

Composition per liter:

Disodium β-glycerophosphate	19.0g
Agar	11.0g
Polypeptone™	5.0g
Beef extract	5.0g
Papaic digest of soybean meal	5.0g
Yeast extract	2.5g
Ascorbic acid	0.5g
Lactose solution	50.0mL
MgSO ₄ ·7H ₂ O (1M solution)	1.0mL

pH 6.9 ± 0.2 at 25°C

Lactose Solution:

Composition per 100.0mL:

Lactose	10.0g
---------------	-------

Preparation of Lactose Solution: Add lactose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except lactose solution, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50.0mL of sterile lactose solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Streptococcus thermophilus* and for the cultivation and maintenance of streptococci and their bacteriophages. Also used for the cultivation and maintenance of starter cultures for cheese and yogurt manufacture as well as detecting streptococcal mutants that are unable to ferment lactose

M17 Agar

Composition per liter:

Disodium β-glycerophosphate	19.0g
Agar	11.0g
Beef extract	5.0g
Papaic digest of soybean meal	5.0g
Yeast extract	2.5g
Ascorbic acid	0.5g
MgSO ₄ ·7H ₂ O	0.25g
Lactose solution	50.0mL

pH 6.9 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Lactose Solution:

Composition per 100.0mL:

Lactose	10.0g
---------------	-------

Preparation of Lactose Solution: Add lactose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except lactose solution, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50.0mL of sterile lactose solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of streptococci and their bacteriophages. Also used for the cultivation and maintenance of starter cultures for cheese and yogurt manufacture as well as detecting streptococcal mutants which are unable to ferment lactose.

M17 Broth

Composition per liter:

Disodium β-glycerophosphate	19.0g
Beef extract	5.0g
Lactose	5.0g
Papaic digest of soybean meal	5.0g
Pancreatic digest of casein	2.5g
Peptic digest of animal tissue	2.5g
Yeast extract	2.5g
Ascorbic acid	0.5g
MgSO ₄ ·7H ₂ O	0.25g

pH 7.15 ± 0.05 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems and Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of streptococci and their bacteriophages. Also used for the cultivation and maintenance of starter cultures for cheese and yogurt manufacture as well as detecting streptococcal mutants that are unable to ferment lactose.

M17 HiVeg Agar Base with Disodium-β-glycerophosphate

Composition per liter:

Disodium-β-glycerophosphate	19.0g
Agar	10.0g
Plant extract	5.0g
Plant peptone	5.0g
Lactose	5.0g
Papaic digest of soybean meal	5.0g
Yeast extract	2.5g
Ascorbic acid	0.5g
MgSO ₄	0.25g

pH 7.1 ± 0.2 at 25°C

Source: This medium, without disodium-β-glycerophosphate, is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of streptococci and their bacteriophages. Also used for the cultivation and maintenance of starter

cultures for cheese and yogurt manufacture as well as detecting streptococcal mutants which are unable to ferment lactose.

M17 Medium for *Filomicrobium fusiforme* (DSMZ Medium 768)

Composition per liter:

Na-acetate	1.0g
KNO ₃	1.0g
Artificial seawater, concentrated.....	500.0mL
Hutner's salts solution	20.0mL
Vitamin solution.....	10.0mL

pH 7.2 ± 0.2 at 25°C

Hutner's Salts Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O	29.7g
Nitritotriacetic acid	10.0g
CaCl ₂ ·2H ₂ O.....	3.335g
FeSO ₄ ·7H ₂ O.....	99.0mg
(NH ₄) ₆ MoO ₇ O ₂₄ ·4H ₂ O	9.25mg
"Metals 44"	50.0mL

"Metals 44":

Composition per 100.0mL:

ZnSO ₄ ·7H ₂ O	1.095g
FeSO ₄ ·7H ₂ O.....	0.5g
Sodium EDTA.....	0.25g
MnSO ₄ ·H ₂ O.....	0.154g
CuSO ₄ ·5H ₂ O.....	39.2mg
Co(NO ₃) ₂ ·6H ₂ O	24.8mg
Na ₂ B ₄ O ₇ ·10H ₂ O.....	17.7mg

Preparation of "Metals 44": Add sodium EDTA to distilled/deionized water and bring volume to 90.0mL. Mix thoroughly. Add a few drops of concentrated H₂SO₄ to retard precipitation of heavy metal ions. Add remaining components. Mix thoroughly. Bring volume to 100.0mL with distilled/deionized water.

Preparation of Hutner's Salts Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Adjust pH to 6.8.

Artificial Seawater, Concentrated:

Composition per liter:

NaCl	70.43g
MgCl ₂ ·6H ₂ O.....	31.86g
Na ₂ SO ₄	11.75g
CaCl ₂ ·2H ₂ O.....	4.35g
NaHCO ₃	2.88g
KCl.....	1.99g
KBr.....	0.29g
H ₃ BO ₃	0.08g

Preparation of Artificial Seawater: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Vitamin Solution:

Composition per liter:

Riboflavin	5.0mg
Thiamine-HCl·2H ₂ O.....	5.0mg
Ca-pantothenate	5.0mg

Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except artificial sea water and vitamin solution, to distilled/deionized water and bring volume to 490.0mL. Mix thoroughly. Adjust pH to 7.2. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add 500.0mL artificial sea water and 10.0mL vitamin solution. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or bottles.

Use: For the cultivation of *Filomicrobium fusiforme*.

M17 Medium for Lactic Streptococci (DSMZ Medium 449)

Composition per liter:

Na ₂ -β-glycerophosphate	19.0g
Peptone from casein.....	5.0g
Soy peptone	5.0g
Peptone bacteriological.....	5.0g
Yeast extract.....	2.5g
Ascorbic acid	0.5g
MgSO ₄ ·7H ₂ O.....	0.25g
Lactose solution	10.0mL

pH 6.9 ± 0.2 at 25°C

Lactose Solution:

Composition per 10.0mL:

Lactose.....	5.0g
--------------	------

Preparation of Lactose Solution: Add lactose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except lactose solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 10.0mL sterile lactose solution. Aseptically distribute to sterile tubes or flasks.

Use: For the cultivation and maintenance of *Lactococcus lactis* subsp. *lactis*=*Streptococcus lactis*.

M17 Medium, Modified

Composition per 1001.2mL:

Disodium-β-glycerophosphate.....	9.5g
Pancreatic digest of casein.....	5.0g
Meat peptone	5.0g
Papaic digest of soybean meal.....	5.0g
Yeast extract.....	2.5g
Ascorbic acid	0.5g
MgSO ₄ ·7H ₂ O.....	0.25g
Lactose solution.....	50.0mL
CaCl ₂ solution.....	1.2mL

pH 7.15 ± 0.05 at 25°C

Lactose Solution:

Composition per 50.0mL:

Lactose.....	8.0g
--------------	------

Preparation of Lactose Solution: Add lactose to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize.

CaCl₂ Solution:

Composition per 100.0mL:

CaCl₂·2H₂O..... 14.7g

Preparation of CaCl₂ Solution: Add CaCl₂·2H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except lactose solution and CaCl₂ solution, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 50.0mL of sterile lactose solution and 1.2mL of sterile CaCl₂ solution. Mix thoroughly. Aseptically adjust pH to 7.15 ± 0.05. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Streptococcus thermophilus*.

M40 Y

See: **Medium for Osmophilic Fungi**

M40 Y Agar (Harrold's Agar)

Composition per liter:

Sucrose..... 400.0g
Agar..... 20.0g
Malt extract..... 20.0g
Yeast extract..... 5.0g

Preparation of Medium: Add components, except sucrose, to distilled/deionized water and bring volume to 400.0mL. Mix thoroughly. In a separate flask, add sucrose to distilled/deionized water and bring volume to 600.0mL. Mix thoroughly. Autoclave both solutions separately for 15 min at 15 psi pressure–121°C. Cool to 50°C. Combine the sterile solutions. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Ascosphaera osmophila*, *Aspergillus halophilicus*, *Aspergillus penicilloides*, *Aspergillus restrictus*, *Aspergillus tonophilus*, *Eremascus albus*, *Eremascus fertilis*, *Eurotium halophilicum*, *Eurotium herbariorum*, *Geomyces pulvereus*, *Monascus bisporus*, *Monascus eremophilus*, *Oidiodendron sindenia*, *Penicillium isariiforme*, *Penicillium ochro-chloron*, *Penicillium pinophilum*, *Physalospora tucumanensis*, *Polypaecilum pisce*, *Saccharomyces cerevisiae*, *Trichophaea abundans*, *Trichophaea contradicta*, *Wallemia sebi*, *Wardomyces dimerus*, *Xeromyces bisporus*, and *Zygosaccharomyces rouxii*.

M56 Agar

Composition per liter:

Agar..... 15.0g
Na₂HPO₄..... 8.7g
KH₂PO₄..... 5.3g
D-Glucose..... 4.0g
(NH₄)₂SO₄..... 2.0g
MgSO₄·7H₂O..... 0.1g
L-Histidine..... 0.05g
L-Leucine..... 0.05g
Uracil..... 0.03g
Ca(NO₃)₂·4H₂O..... 5.0mg

FeSO₄·7H₂O..... 5.0mg
ZnSO₄·7H₂O..... 5.0mg
pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Escherichia coli*.

M56 Medium

Composition per liter:

Na₂HPO₄..... 8.7g
KH₂PO₄..... 5.3g
D-Glucose..... 4.0g
(NH₄)₂SO₄..... 2.0g
MgSO₄·7H₂O..... 0.1g
L-Histidine..... 0.05g
L-Leucine..... 0.05g
Uracil..... 0.03g
Ca(NO₃)₂·4H₂O..... 5.0mg
FeSO₄·7H₂O..... 5.0mg
ZnSO₄·7H₂O..... 5.0mg

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Escherichia coli*.

M63 Medium, 5X

Composition per liter:

KH₂PO₄..... 68.0g
(NH₄)₂SO₄..... 10.0g
FeSO₄·7H₂O..... 2.5mg
Carbohydrate solution..... 10.0mL
MgSO₄·7H₂O solution..... 1.0mL

pH 7.0 ± 0.2 at 25°C

Carbohydrate Solution:

Composition per 100.0mL:

Carbohydrate..... 20.0g

Preparation of Carbohydrate Solution: Add carbohydrate to distilled/deionized water and bring volume to 100.0mL. Glucose or glycerol may be used. Mix thoroughly. Filter sterilize.

MgSO₄·7H₂O Solution:

Composition per 100.0mL:

MgSO₄·7H₂O..... 24.65g

Preparation of MgSO₄·7H₂O Solution: Add MgSO₄·7H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except carbohydrate solution and MgSO₄·7H₂O solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. To prepare medium for use (1×), aseptically dilute 200.0mL of 5× stock solution with 789.0mL of sterile distilled/deionized water. Aseptically add 10.0mL of sterile carbohydrate solution and 1.0mL of sterile MgSO₄·7H₂O solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Escherichia coli*.

MA Medium

Composition per 1002.0mL:

Peptone.....	10.0g
Pancreatic digest of casein.....	10.0g
Ribonucleic acid from <i>Torula</i> yeast.....	1.0g
Asolectin.....	0.2g
Artificial seawater.....	500.0mL
Vitamin solution.....	2.0mL

Preparation of Medium: Emulsify asolectin in warm, distilled water before adding remaining powdered ingredients. Adjust pH to 7.2. Add vitamin mix and artificial seawater; readjust to pH 7.2, if necessary. Dispense 5.0mL per 16 x 125mm screw-capped test tube and autoclave at 121°C for 15 min.

Artificial Seawater:

Composition per 500.0mL:

Aqua-Marin sea salts.....	20.8g
---------------------------	-------

Source: Aqua-Marin sea salts are available from Aquatrol, Inc., Anaheim, CA.

Preparation of Artificial Seawater: Add Aqua-Marin sea salts to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly.

Vitamin Solution:

Composition per 110.0mL:

Thiamine-HCl).....	150.0mg
Calcium D-(+)-pantothenate.....	100.0mg
Folic acid.....	50.0mg
Nicotinamide.....	50.0mg
Pyridoxal-HCl.....	50.0mg
Riboflavin.....	50.0mg
DL-6-Thioctic acid.....	1.0mg
Biotin solution.....	10.0mL

Biotin Solution:

Composition per 10.0mL:

Biotin.....	0.01mg
-------------	--------

Preparation of Biotin Solution: Add biotin to 10.0mL of absolute ethanol. Mix thoroughly.

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. For long-term storage, preserve under nitrogen at -20°C.

Preparation of Medium: Add components, except vitamin solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure-121°C. Aseptically add 2.0mL of sterile vitamin solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Anophryoides soldoi*, *Metanophrys diminuta*, *Mesanoophrys chesapeakeensis*, *Miamiensis avidus*, *Parauronema acutum*, and *Paranophrys* species.

MAB1 Medium

Composition per 1003.0mL:

NaCl.....	20.0g
MgCl ₂ ·6H ₂ O.....	3.0g
Na ₂ SO ₄	3.0g
KCl.....	0.5g
NH ₄ Cl.....	0.25g
Yeast extract.....	0.2g
KH ₂ PO ₄	0.2g
Sodium benzoate.....	0.15g
CaCl ₂ ·2H ₂ O.....	0.15g
Resazurin.....	1.0mg
Wolfe's vitamin solution.....	20.0mL
NaHCO ₃ solution.....	10.0mL
Na ₂ S·9H ₂ O solution.....	10.0mL
Na ₂ SeO ₃ /Na ₂ WO ₄ solution.....	1.0mL
Sodium dithionite solution.....	1.0mL
Trace elements solution SL-10.....	1.0mL

pH 7.2 ± 0.2 at 25°C

Wolfe's Vitamin Solution:

Composition per liter:

Pyridoxine-HCl.....	10.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Lipoic acid.....	5.0mg
Nicotinic acid.....	5.0mg
Riboflavin.....	5.0mg
Thiamine-HCl.....	5.0mg
Calcium DL-pantothenate.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

NaHCO₃ Solution:

Composition per 10.0mL:

NaHCO ₃	2.5g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize. Sparge with 80% N₂ + 20% CO₂.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	0.3g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure-121°C.

Na₂SeO₃/Na₂WO₄ Solution:

Composition per liter:

NaOH.....	0.5g
Na ₂ WO ₄ ·2H ₂ O.....	4.0mg
Na ₂ SeO ₃ ·5H ₂ O.....	3.0mg

Preparation of Na₂SeO₃/Na₂WO₄ Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Sodium Dithionite Solution:

Composition per 10.0mL:

Sodium dithionium 0.2g

Preparation of Sodium Dithionite Solution: Add sodium dithionium to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution SL-10:

Composition per liter:

FeCl₂·4H₂O 1.5g
 CoCl₂·6H₂O 190.0mg
 MnCl₂·4H₂O 100.0mg
 ZnCl₂ 70.0mg
 Na₂MoO₄·2H₂O 36.0mg
 NiCl₂·6H₂O 24.0mg
 H₃BO₃ 6.0mg
 CuCl₂·2H₂O 2.0mg
 HCl (25% solution) 10.0mL

Preparation of Trace Elements Solution SL-10: Prepare and dispense under 80% N₂ + 20% CO₂. Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare medium and dispense under 80% N₂ + 20% CO₂. Add components, except Wolfe's vitamin solution, NaHCO₃ solution, sodium dithionite solution, Na₂S·9H₂O solution, Na₂SeO₃/Na₂WO₄ solution, and trace elements solution SL-10, to distilled/deionized water and bring volume to 960.0mL. Mix thoroughly. Adjust pH to 7.2. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 20.0mL of Wolfe's vitamin solution, 10.0mL of sterile NaHCO₃ solution, 10.0mL of sterile Na₂S·9H₂O solution, 1.0mL Na₂SeO₃/Na₂WO₄ solution, 1.0mL of sterile sodium dithionite solution, and 1.0mL of sterile trace elements solution SL-10. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or flasks.

Use: For the cultivation of *Desulfotomaculum* species.

MACA with Maltose

Composition per liter:

Yeast extract 20.0g
 Agar 10.0g
 Maltose 10.0g
 Glucose 10.0g
 Proteose peptone No. 3 5.0g
 KH₂PO₄ 2.0g
 Sorbitan monooleate complex 0.1g
 pH 6.7 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Lactobacillus sanfrancisco*.

MacConkey Agar

Composition per liter:

Pancreatic digest of gelatin 17.0g
 Agar 13.5g
 Lactose 10.0g
 NaCl 5.0g
 Bile salts 1.5g
 Pancreatic digest of casein 1.5g
 Peptic digest of animal tissue 1.5g
 Neutral Red 0.03g
 Crystal Violet 1.0mg

pH 7.1 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation, cultivation, and differentiation of coliforms and enteric pathogens based on the ability to ferment lactose. Lactose-fermenting organisms appear as red to pink colonies. Lactose-nonfermenting organisms appear as colorless or transparent colonies.

MacConkey Agar

Composition per liter:

Peptone 20.0g
 Agar 12.0g
 Lactose 10.0g
 Bile salts 5.0g
 NaCl 5.0g
 Neutral Red 0.075g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation, cultivation, and differentiation of coliforms and enteric pathogens based on the ability to ferment lactose. Lactose-fermenting organisms appear as red to pink colonies. Lactose-nonfermenting organisms appear as colorless or transparent colonies.

MacConkey Agar Base, HiVeg

Composition per liter:

Plant peptone 17.0g
 Agar 13.5g
 NaCl 5.0g
 Plant peptone No. 3 3.0g
 Synthetic detergent 1.5g
 Neutral Red 0.03g
 Crystal Violet 1.0mg

pH 7.1 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while

stirring until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and differentiation of lactose-fermenting and nonfermenting Gram-negative bacteria. Lactose-fermenting organisms appear as red to pink colonies. Lactose-nonfermenting organisms appear as colorless or transparent colonies.

MacConkey Agar with 0.15% Bile Salts, Crystal Violet, and Sodium Chloride, HiVeg

Composition per liter:

Plant peptone No. 2.....	17.0g
Agar	15.0g
Lactose	10.0g
NaCl	5.0g
Plant hydrolysate.....	1.5g
Plant peptone.....	1.5g
Synthetic detergent.....	1.5g
Neutral Red	0.03g
Crystal Violet	1.0mg

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation, cultivation, and differentiation of enteric pathogens, especially enterococci, in clinical specimens and in materials of sanitary importance.

MacConkey Agar, CS

Composition per liter:

Peptone.....	17.0g
Agar	13.5g
Lactose.....	10.0g
NaCl	5.0g
Proteose peptone.....	3.0g
Bile salts.....	1.5g
Neutral Red	0.03g
Crystal Violet	1.0mg

pH 7.1 ± 0.2 at 25°C

Source: This medium is available as a prepared medium from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and differentiation of lactose-fermenting and lactose-nonfermenting Gram-negative bacteria while also controlling the swarming of *Proteus* species, if present. Lactose-fermenting organisms appear as red to pink colonies. Lactose-nonfermenting organisms appear as colorless or transparent colonies.

MacConkey Agar, Fluorocult (Fluorocult MacConkey Agar)

Composition per liter:

Peptone from casein.....	17.0g
Agar	13.5g

Lactose.....	10.0g
NaCl.....	5.0g
Peptone from meat.....	3.0g
Bile salt mixture.....	1.5g
4-Methylumbelliferyl-β-D-glucuronide.....	0.1g
Neutral Red.....	0.03g
Crystal Violet.....	0.001g

pH 7.1 ± 0.2 at 25°C

Source: This medium is available from Merck.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Pour into sterile Petri dishes. The plates are clear and red to red-brown.

Use: For the isolation of *Salmonella*, *Shigella*, and coliform bacteria, in particular *E. coli*, from various materials. The bile salts and Crystal Violet largely inhibit the growth of Gram-positive microbial flora. Lactose together with the pH indicator Neutral Red are used to detect lactose-positive colonies and *E. coli* can be seen among these because of fluorescence under UV light.

MacConkey Agar with Sorbitol

See: Sorbitol MacConkey Agar

MacConkey Agar without Crystal Violet

Composition per liter:

Agar	12.0g
Lactose.....	10.0g
Pancreatic digest of casein.....	10.0g
Peptic digest of animal tissue	10.0g
Bile salts.....	5.0g
NaCl.....	5.0g
Neutral Red.....	0.05g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the detection of members of the Enterobacteriaceae and enterococci as well as some staphylococci. For the isolation and detection of coliforms and enteric pathogens from water and wastewater.

MacConkey Agar without Crystal Violet with Sodium Chloride and 0.5% Sodium Taurocholate, HiVeg

Composition per liter:

Agar	20.0g
Plant peptone	20.0g
Lactose.....	10.0g
Synthetic detergent No. V.....	5.0g
NaCl.....	5.0g
Neutral Red.....	0.04g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while

stirring until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation, cultivation, and differentiation of *Vibrio* spp. in clinical specimens and in materials of sanitary importance.

MacConkey Agar without Crystal Violet and Sodium Chloride with 0.5% Sodium Taurocholate, HiVeg

Composition per liter:

Agar	20.0g
Plant peptone.....	20.0g
Lactose	10.0g
Synthetic detergent No. V.....	5.0g
Neutral Red	0.04g

pH 7.2 ± 0.2 at 25°C

Source: This medium, without NaCl, is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation, cultivation, and differentiation of enteric pathogens, especially enterococci, in clinical specimens and in materials of sanitary importance.

MacConkey Agar without Salt

Composition per liter:

Peptone.....	20.0g
Agar	12.0g
Lactose	10.0g
Bile salts.....	5.0g
Neutral Red	0.075g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems and Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or distribute into sterile tubes. Dry the surface of plates before inoculation.

Use: For the isolation and detection of coliforms and enteric pathogens from urine. Provides a low electrolyte medium on which most *Proteus* species will not swarm and therefore avoids overgrowth of the plate.

MacConkey Agar No. 2 (MacConkey II Agar)

Composition per liter:

Peptone.....	20.0g
Agar	15.0g
Lactose	10.0g
NaCl.....	5.0g
Bile salts No. 2.....	1.5g
Neutral Red	0.05g
Crystal Violet	1.0mg

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems and Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation, cultivation, and differentiation of enteric pathogens, especially enterococci, in clinical specimens and in materials of sanitary importance.

MacConkey Agar No. 3

Composition per liter:

Peptone	20.0g
Agar	15.0g
Lactose.....	10.0g
NaCl.....	5.0g
Bile salts No. 3.....	1.5g
Neutral Red.....	0.03g
Crystal Violet.....	0.001g

pH 7.1 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation, cultivation, and differentiation of enteric pathogens, especially *Salmonella* and *Shigella*, in clinical specimens and in foods.

MacConkey Broth

Composition per liter:

Pancreatic digest of gelatin.....	20.0g
Lactose.....	10.0g
Oxgall	5.0g
Bromcresol Purple	0.02g

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. If testing 10.0mL samples, prepare medium double strength. Mix thoroughly. Gently heat while stirring until boiling. Distribute into test tubes containing inverted Durham tubes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the selective isolation and cultivation of coliforms in milk and water.

MacConkey Broth

Composition per liter:

Peptone	20.0g
Lactose.....	10.0g
Bile salts.....	5.0g
NaCl.....	5.0g
Neutral Red.....	0.075g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. If testing 10.0mL samples, prepare

medium double strength. Mix thoroughly. Gently heat while stirring until boiling. Distribute into test tubes containing inverted Durham tubes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the selective isolation and cultivation of coliforms in milk and water.

MacConkey Broth, Purple

Composition per liter:

Peptone.....	20.0g
Lactose.....	10.0g
Bile salts.....	5.0g
NaCl.....	5.0g
Bromcresol Purple.....	0.01g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder or tablets from Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. If testing 10.0mL samples, prepare medium double strength. Mix thoroughly. Gently heat while stirring until boiling. Distribute into test tubes containing inverted Durham tubes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the selective isolation and cultivation of coliforms in milk and water.

MacConkey Broth, Purple, with Bromcresol Purple, HiVeg

Composition per liter:

Plant special peptone.....	23.0g
Lactose.....	10.0g
NaCl.....	5.0g
Synthetic detergent No. V.....	2.0g
Bromcresol Purple.....	0.01g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring until boiling. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the selective isolation, cultivation, and differentiation of enteric bacteria, especially coliforms.

MacConkey HiVeg Agar with Bromthymol Blue

Composition per liter:

Plant peptone.....	17.0g
Agar.....	15.0g
Lactose.....	10.0g
NaCl.....	5.0g
Plant peptone No. 3.....	3.0g
Synthetic detergent.....	1.5g
Bromthymol Blue.....	0.03g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation, cultivation, and differentiation of enteric bacteria.

MacConkey HiVeg Agar with Crystal Violet and Sodium Chloride

Composition per liter:

Plant peptone.....	20.0g
Agar.....	15.0g
Lactose.....	10.0g
NaCl.....	5.0g
Synthetic detergent.....	1.5g
Neutral Red.....	0.05g
Crystal Violet.....	1.0mg

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation, cultivation, and differentiation of enteric bacteria. For the identification of Enterobacteriaceae in the presence of coliforms and lactose nonfermenters from water and sewage.

MacConkey HiVeg Agar with 1.35% Agar, Crystal Violet, and Sodium Chloride

Composition per liter:

Plant peptone No. 2.....	17.0g
Agar.....	13.5g
Lactose.....	10.0g
NaCl.....	5.0g
Plant hydrolysate.....	1.5g
Plant peptone.....	1.5g
Sodium acetate (anhydrous).....	1.5g
Neutral Red.....	0.03g
Crystal Violet.....	1.0mg

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation and differentiation of lactose-fermenting and lactose-nonfermenting enteric bacteria.

MacConkey HiVeg Agar without Crystal Violet and Sodium Chloride

Composition per liter:

Plant peptone.....	23.0g
Agar.....	12.0g
Lactose.....	10.0g
Synthetic detergent.....	2.0g
Neutral Red.....	0.075g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and differentiation of enteric bacteria, restricting swarming of *Proteus* species.

MacConkey HiVeg Agar, Modified

Composition per liter:

Plant peptone.....	17.0g
Agar.....	13.5g
Inositol.....	10.0g
NaCl.....	5.0g
Plant peptone No. 3.....	3.0g
Synthetic detergent.....	1.5g
Neutral Red.....	0.03g
Crystal Violet.....	1.0mg

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation of *Klebsiella* species from water samples.

MacConkey HiVeg Broth (Double Strength) with Neutral Red

Composition per liter:

Plant peptone.....	46.0g
Lactose.....	20.0g
NaCl.....	10.0g
Synthetic detergent.....	4.0g
Neutral Red.....	0.15g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or leave in flasks. Gently heat while stirring until boiling. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the primary isolation of coliforms from large samples such as water or wastewater.

MacConkey HiVeg Broth Purple with Bromo Cresol Purple

Composition per liter:

Plant special peptone.....	23.0g
Lactose.....	10.0g
NaCl.....	5.0g
Synthetic detergent No. V.....	2.0g
Bromocresol Purple.....	0.01g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the presumptive identification of coliforms from water.

MacConkey Sorbitol HiVeg Agar (Sorbitol HiVeg Agar)

Composition per liter:

Plant peptone.....	17.0g
Agar.....	13.5g
D-Sorbitol.....	10.0g
NaCl.....	5.0g
Plant peptone No. 5.....	3.0g
Synthetic detergent No. I.....	1.5g
Neutral Red.....	0.03g
Crystal Violet.....	1.0mg

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of pathogenic *Escherichia coli*.

M-Aeromonas Selective Agar Base, Havelaar

Composition per liter:

Agar.....	13.0g
Dextrin.....	11.4g
Tryptose.....	5.0g
NaCl.....	3.0g
KCl.....	2.0g
Yeast extract.....	2.0g
MgSO ₄ ·7H ₂ O.....	0.1g
Sodium deoxycholate.....	0.1g
Bromthymol Blue.....	0.08g
FeCl ₃ ·6H ₂ O.....	0.06g

pH 7.5 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the detection of *Aeromonas* species in water and other liquid samples by the membrane filter technique.

Magnesium Oxalate Agar (MOX Agar)

Composition per liter:

Pancreatic digest of casein.....	15.0g
Agar.....	15.0g
Papaic digest of soybean meal.....	5.0g
NaCl.....	5.0g
MgCl ₂ ·6H ₂ O.....	4.1g
Sodium oxalate.....	2.68g

pH 7.4–7.6 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Yersinia enterocolitica* from foods.

Magnetic *Spirillum* Growth Medium, Revised (MSGM, Revised)

Composition per liter:

Agar	1.3g
KH ₂ PO ₄	0.68g
Tartaric acid	0.37g
Succinic acid	0.37g
NaNO ₃	0.12g
Sodium acetate	0.05g
Ascorbic acid	0.035g
Wolfe's vitamin solution	10.0mL
Wolfe's mineral solution	5.0mL
Ferric quinate solution	2.0mL
Resazurin (0.1% solution).....	0.45mL
pH 6.75 ± 0.2 at 25°C	

Wolfe's Vitamin Solution:

Composition per liter:

Pyridoxine-HCl	10.0mg
Thiamine-HCl	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
Calcium pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Thioctic acid	5.0mg
Biotin	2.0mg
Folic acid.....	2.0mg
Cyanocobalamin	100.0μg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Wolfe's Mineral Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O	3.0g
Nitriloacetic acid.....	1.5g
NaCl	1.0g
MnSO ₄ ·H ₂ O	0.5g
FeSO ₄ ·7H ₂ O.....	0.1g
CoCl ₂ ·6H ₂ O	0.1g
CaCl ₂	0.1g
ZnSO ₄ ·7H ₂ O	0.1g
CuSO ₄ ·5H ₂ O	0.01g
AlK(SO ₄) ₂ ·12H ₂ O.....	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g

Preparation of Wolfe's Mineral Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L.

Ferric Quinate Solution:

Composition per 100.0mL:

FeCl ₃	0.27g
Quinic acid.....	0.19g

Preparation of Ferric Quinate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: To 1.0L of distilled/deionized water add components in the following order: Wolfe's vitamin solution, Wolfe's mineral solution, ferric quinate solution, resazurin, KH₂PO₄, NaNO₃, ascorbic acid, tartaric acid, succinic acid, sodium acetate, and agar. Mix thoroughly after each addition. Adjust pH to 6.75 with NaOH. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically distribute into sterile screw-capped tubes. Fill tubes to capacity with medium. Use a heavy inoculum in each tube and do not introduce a headspace of air. Screw down caps tightly.

Use: For the cultivation and maintenance of *Aquaspirillum magnetotacticum*.

Magnetospirillum Medium (DSMZ Medium 380)

Composition per liter:

KH ₂ PO ₄	0.68g
L(+)-Tartaric acid.....	0.37g
Succinic acid.....	0.37g
NaNO ₃	0.12g
Na-thioglycolate	0.05g
Na-acetate	0.05g
Resazurin	0.5mg
Vitamin solution.....	10.0mL
Trace elements solution	5.0mL
Ferric quinate solution.....	2.0mL
pH 6.8 ± 0.2 at 25°C	

Trace Elements Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O	3.0g
Nitrilotriacetic acid	1.5g
NaCl.....	1.0g
MnSO ₄ ·2H ₂ O	0.5g
CoSO ₄ ·7H ₂ O.....	0.18g
ZnSO ₄ ·7H ₂ O	0.18g
CaCl ₂ ·2H ₂ O	0.1g
FeSO ₄ ·7H ₂ O.....	0.1g
NiCl ₂ ·6H ₂ O.....	0.025g
KAl(SO ₄) ₂ ·12H ₂ O.....	0.02g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·4H ₂ O	0.01g
CuSO ₄ ·5H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O.....	0.3mg

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl.....	10.0mg
Thiamine-HCl·2H ₂ O.....	5.0mg
Riboflavin	5.0mg
Nicotinic acid.....	5.0mg
D-Ca-pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Lipoic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Ferric Quinate Solution:

Composition per 100.0mL:

FeCl ₃ ·6H ₂ O	0.45g
Quinic acid	0.19g

Preparation of Ferric Quinate Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Sparge with N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Preparation of Medium: Add components, except vitamin solution and ferric quinate solution, to distilled/deionized water and bring volume to 988.0mL. Purge medium with N₂ gas for 10 min. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically and anaerobically add 10.0mL vitamin solution and 2.0mL ferric quinate solution. Mix thoroughly. Purge medium with N₂ gas for 10 min. Under the same atmosphere, anaerobically fill tubes to 1/3 of their volume and seal. Autoclave at 121°C for 15 min. Before inoculation, add sterile air (with hypodermic syringe through the rubber closure) to 1% O₂ concentration in the gas phase.

Use: For the cultivation of *Magnetospirillum magnetotacticum*=*Aquaspirillum magnetotacticum*, and *Magnetospirillum gryphiswaldense*.

Magnetospirillum 2 Medium

Composition per liter:

Sodium acetate	1.0g
K ₂ HPO ₄	0.5g
Sodium thioglycolate	0.5g
NH ₄ Cl	0.1g
Yeast extract	0.1g
Ferric citrate	20.0μg

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into screw-capped tubes in 5.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Allow medium to stand upright at room temperature for 2 to 3 days before inoculation. Do not shake.

Use: For the cultivation and maintenance of *Magnetospirillum gryphiswaldense*.

Magnetospirillum Semi-solid Medium (DSMZ Medium 380)

Composition per liter:

Agar	1.3g
KH ₂ PO ₄	0.68g
L(+)-Tartaric acid	0.37g
Succinic acid	0.37g
NaNO ₃	0.12g
Na-thioglycolate	0.05g
Na-acetate	0.05g
Resazurin	0.5mg
Vitamin solution	10.0mL
Trace elements solution	5.0mL
Ferric quinate solution	2.0mL

pH 6.8 ± 0.2 at 25°C

Trace Elements Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O	3.0g
Nitrilotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·2H ₂ O	0.5g
CoSO ₄ ·7H ₂ O	0.18g
ZnSO ₄ ·7H ₂ O	0.18g
CaCl ₂ ·2H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g
NiCl ₂ ·6H ₂ O	0.025g
KAl(SO ₄) ₂ ·12H ₂ O	0.02g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·4H ₂ O	0.01g
CuSO ₄ ·5H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O	0.3mg

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl	10.0mg
Thiamine-HCl·2H ₂ O	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
D-Ca-pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Ferric Quinate Solution:

Composition per 100.0mL:

FeCl ₃ ·6H ₂ O	0.45g
Quinic acid	0.19g

Preparation of Ferric Quinate Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Sparge with N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°C.

Preparation of Medium: Add components, except vitamin solution and ferric quinate solution, to distilled/deionized water and bring volume to 988.0mL. Purge medium with N₂ gas for 10 min. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°C. Aseptically and anaerobically add 10.0mL vitamin solution and 2.0mL ferric quinate solution. Mix thoroughly. Purge medium with N₂ gas for 10 min. Dispense 12mL of medium per 16 x 150mm anaerobe screw-cap tube under N₂ gas. Prior to inoculation, remove caps briefly under air, tighten the caps again, and wait several hours to establish oxygen gradients. The medium should be slightly pink in color. Strongly reduced conditions will not support growth of the organism. During growth O₂ will be consumed, resazurin decolorized, and the pH increased. Feed oxygen (by adding air) and succinic acid from sterile 0.05M solution (to maintain pH below 7.0). If higher densities of magnetic cell are wanted, ferric quinate also can be fed. For transfer use cell material which has been concentrated at the glass wall of the culture vessel by means of a magnetic rod attached outside.

Use: For the cultivation of *Magnetospirillum magnetotacticum* (*Aquaspirillum magnetotacticum*) and *Magnetospirillum gryphiswaldense*.

Maintenance HiVeg Medium for *B. subtilis* ATCC 6633

Composition per liter:

Agar	15.0g
Plant peptone.....	6.0g
Plant hydrolysate.....	4.0g
Yeast extract.....	3.0g
Plant extract	1.5g
Glucose	1.0g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Bacillus subtilis*.

Maintenance of L Antigen in *Neisseria*

Composition per liter:

Proteose peptone No. 3	20.0g
Agar	15.0g
Na ₂ HPO ₄	5.0g
NaCl.....	5.0g
Glucose	0.5g
Rabbit blood, defibrinated	100.0mL

pH 7.4–7.6 at 25°C

Preparation of Medium: Add components, except rabbit blood, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat while stirring until boiling. Autoclave for 20 min at 15 psi pressure–121°C. Cool to 60°C. Aseptically add 100.0mL of sterile, defibrinated rabbit blood. Maintain at 75°C while shaking for 30 min. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Neisseria gonorrhoeae*.

Maintenance SCY Medium See: SCY Medium

Maintenance (SCY) HiVeg Medium

Composition per liter:

Agar	10.0g
Sucrose.....	1.0g
Plant hydrolysate.....	0.91g
Yeast extract.....	0.25g
NaCl.....	0.05g
Papaic digest of soybean meal	0.03g
K ₂ HPO ₄	0.02g
Thiamine	0.4mg

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Use: For the cultivation and maintenance of iron and sulfur bacteria.

Malachite Green Broth

Composition per liter:

Peptone	15.0g
Beef extract.....	9.0g
Malachite Green.....	0.01mg

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Pseudomonas aeruginosa*.

Maleate Medium for *Pseudomonas fluorescens*

Composition per liter:

Agar	15.0g
K ₂ HPO ₄	1.13g
NH ₄ NO ₃	1.0g
KH ₂ PO ₄	0.48g
MgSO ₄ ·7H ₂ O.....	0.2g
Potassium maleate solution.....	8.61mL

pH 7.0 ± 0.2 at 25°C

Potassium Maleate Solution:

Composition per liter:

Maleic acid.....	116.07g
KOH (10N solution)	200.0mL

Preparation of Potassium Maleate Solution: Add maleic acid to distilled/deionized water and bring volume to 600.0mL. Slowly add KOH solution (generates heat). Bring volume to 1.0L with distilled/deionized water. Adjust pH to 7.0. Filter sterilize.

Preparation of Medium: Add components, except potassium maleate solution, to distilled/deionized water and bring volume to 991.4mL. Mix thoroughly. Gently heat while stirring until boiling. Autoclave for 20 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 8.61mL of the potassium maleate solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Pseudomonas fluorescens* and *Mycoplasma pneumoniae*.

Maleate Medium for *Pseudomonas fluorescens* with Glucose and Phenol Red

Composition per liter:

Agar	15.0g
Glucose	10.0g
K ₂ HPO ₄	1.13g
NH ₄ NO ₃	1.0g
KH ₂ PO ₄	0.48g
MgSO ₄ ·7H ₂ O.....	0.2g
Phenol Red.....	0.04g
Potassium maleate solution.....	8.61mL

pH 7.0 ± 0.2 at 25°C

Potassium Maleate Solution:

Composition per liter:

Maleic acid.....	116.07g
KOH (10N solution)	200.0mL

Preparation of Potassium Maleate Solution: Add maleic acid to distilled/deionized water and bring volume to 600.0mL. Slowly add KOH solution (generates heat). Bring volume to 1.0L with distilled/deionized water. Adjust pH to 7.0. Filter sterilize.

Preparation of Medium: Add components, except potassium maleate solution, to distilled/deionized water and bring volume to 991.4mL. Mix thoroughly. Gently heat while stirring until boiling. Autoclave for 20 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 8.61mL of the potassium maleate solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Pseudomonas fluorescens* and *Mycoplasma pneumoniae*.

Malonate Broth

Composition per liter:

Sodium malonate	3.0g
NaCl	2.0g
(NH ₄) ₂ SO ₄	2.0g
K ₂ HPO ₄	0.6g
KH ₂ PO ₄	0.4g
Bromthymol Blue	0.025g

pH 6.7 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Avoid introduction of carbon and nitrogen from other sources.

Use: For the cultivation and differentiation of coliforms and other enteric organisms, particularly *Enterobacter* and *Escherichia*, based on their ability to utilize malonate as the sole carbon source and ammonium sulfate as the sole nitrogen source. Malonate-utilizing organisms turn the medium blue.

Malonate Broth, Ewing Modified

Composition per liter:

Sodium malonate	3.0g
NaCl	2.0g
(NH ₄) ₂ SO ₄	2.0g
Yeast extract	1.0g
Glucose	0.25g
K ₂ HPO ₄	0.6g
KH ₂ PO ₄	0.4g
Bromthymol Blue	0.025g

pH 6.7 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and differentiation of coliforms and other enteric organisms, particularly *Enterobacter* and *Escherichia*, based on their ability to utilize malonate as a carbon source and ammonium sulfate as a nitrogen source. The small amount of yeast extract and glucose encourages the growth of some organisms that may be distressed or fail to respond. Malonate-utilizing organisms turn the medium blue.

Malt Agar

Composition per liter:

Malt extract	30.0g
Agar	15.0g

pH 5.5 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring until boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–118°C. Do not overheat or agar will not harden. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of yeasts and molds.

Malt Agar

Composition per liter:

Agar	20.0g
Malt extract	12.5g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of fungi.

Malt Agar, 1/3 Strength (ATCC Medium 2365)

Composition per liter:

Agar	15.0g
Malt extract	10.0g

pH 5.5 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring until boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–118°C. Do not overheat or agar will not harden. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of yeasts and molds.

Malt Agar, Blakeslee

Composition per liter:

Glucose	20.0g
Malt extract	20.0g
Agar	16.0g
Mycological peptone	1.0g

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Acremonium chrysogenum*, *Agaricus bisporus*, *Agroclybe aegerita*, *Armillaria mellea*, *Aspergillus* species, *Aureobasidium pullulans*, *Basidiomycetes* species, *Candida* species, *Ceratocystis adiposa*, *Citeromyces matritensis*, *Cladosporium cucumerinum*, *Cochliobolus miyaheanus*, *Colletotrichum destructivum*, *Colletotrichum lindemuthianum*, *Cryptococcus albidus*, numerous other *Cryptococcus* species, *Debaryomyces polymorphus*, *Diaporthe magnusii*, *Diaporthe ephaseolorum*, *Drechslera spicifera*, *Fusarium graminearum*, *Geotrichum lactis*, other *Geotrichum* species, *Hanseniaspora uvarum*, *Hanseniaspora valbyensis*, *Hansenula subpelliculosa*, *Humicola* species, *Kloeckera apiculata*, *Kloeckera corticis*, *Kluyveromyces lodderi*, *Kluyveromyces marxianus*, *Metschnikowia pulcherrima*, *Monilinia fructigena*,

Myrothecium verrucaria, *Myxozyma melibiosi*, *Nadsonia fulvescens*, *Neurospora crassa*, *Octosporomyces octosporus*, *Pachysolen tannophilus*, *Paecilomyces variotii*, *Penicillium aurantiogriseum*, many other *Penicillium* species, *Pithoascus schumacheri*, *Rhizoctonia crocorum*, *Rhizomucor miehei*, *Rhodospiridium toruloides*, *Rhodotorula glutinis*, *Rhodotorula minuta*, *Rhodotorula rubra*, *Saccharomyces cerevisiae*, *Saccharomyces exiguus*, *Saccharomyces ludwigii*, *Saccharomyces capsularis*, *Saccharomyces fibuligera*, *Schizosaccharomyces pombe*, *Sporobolomyces parvoseus*, *Sporobolomyces salmonicolor*, *Sporopachydermia lactativora*, *Stachybotrys* species, *Talaromyces emersonii*, *Taphrina deformans*, *Torulasporea delbrueckii*, *Trichoderma harzianum*, *Trichoderma koningii*, *Trichoderma longibrachiatum*, *Trichoderma reesei*, *Trichoderma viride*, *Trichosporon beigeli*, *Wickerhamia fluorescens*, *Yarrowia lipolytica*, and *Zygosaccharomyces veronae*.

Malt Agar 1% (MA1)

Composition per liter:

Agar 15.0g
Malt extract 10.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Acrodontium griseum*, *Acrodontium simplex*, *Acrophialophora fusispora*, *Acrothecium tenebrosus*, *Acrothecium capsic*, *Agaricus bisporus*, *Chaetocladium jonesii*, *Chaetomium globosum*, *Chaetomium cupreum*, *Chaetomium irregulare*, *Farlowiella carmichaeliana*, and many other filamentous fungi.

Malt Agar 2% (MA2)

Composition per liter:

Malt extract 20.0g
Agar 15.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Acrophialophora fusispora*, *Agaricus augustus*, *Ceratocystis penicillata*, *Chaetocladium brefeldii*, and many other fungi.

Malt Agar 4% (MA4)

Composition per liter:

Malt extract 40.0g
Agar 15.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Chaetomium globosum*, *Chaetomium indicum*, *Chaetomium funicola*, *Chaetomium megalocarpum*, *Chaetomium murorum*, *Chaetomium seminudum*, *Chaetomium pachypodioides*, *Chaetomium perlucidum*, *Chaetomium quadrangulatum*, *Chaetomium reflexum*, *Chaetomium subaffine*, *Chaetomium subspirilliferum*, *Chaetomium succineum*, *Chaetomium luknowense*, *Daedalea quercina*, *Mycosphaerella ligulicola*, *Polypaecilum pisce*, and many other fungi.

Malt Agar 8% (MA8)

Composition per liter:

Malt extract 80.0g
Agar 15.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Moniliella pollinis*.

Malt Agar with 0.5% CaCO₃

Composition per liter:

Malt extract 20.0g
Glucose 20.0g
Agar 15.0g
CaCO₃ 5.0g
Mycological peptone 1.0g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Brettanomyces anomalus*, *Brettanomyces bruxellensis*, *Brettanomyces claussenii*, *Brettanomyces lambicus*, *Dekkera bruxellensis*, and *Dekkera intermedia*.

Malt Agar with 2% Malt

Composition per liter:

Agar 20.0g
Malt extract 20.0g

pH 6.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.5. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of a variety of yeasts and other fungi.

Malt Agar 2% with Lupine Stems (MA2 with Lupine Stems)

Composition per liter:

Malt extract 20.0g
Agar 15.0g
Lupine stems variable

Preparation of Medium: Add components, except lupine stems, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute 6.0mL volumes into tubes. Cut lupine stems into 8.0cm-long pieces. Add 2–3 lupine stems per tube. Autoclave for 15 min at 15 psi pressure–121°C. Allow tubes to cool in a slanted position.

Use: For the cultivation of *Chaetomium bostrychodes*.

Malt Agar 4% with Lupine Stems (MA4 with Lupine Stems)

Composition per liter:

Malt extract 40.0g
Agar 15.0g
Lupine stems variable

Preparation of Medium: Add components, except lupine stems, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute 6.0mL volumes into tubes. Cut lupine stems into 8.0cm-long pieces. Add 2–3 lupine stems per tube. Autoclave for 15 min at 15 psi pressure–121°C. Allow tubes to cool in a slanted position.

Use: For the cultivation of *Chaetomium indicum* and *Chaetospermum chaetosporum*.

Malt Dextrose Peptone Agar (MDPA)

Composition per liter:

Agar	25.0g
Malt extract	20.0g
Glucose	20.0g
Peptone.....	1.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Aspergillus aeneus*, *Aspergillus candidus*, *Odontia uda*, *Oidiodendron chlamydosporicum*, *Oidiodendron cerealis*, *Oidiodendron flavum*, *Oidiodendron griseum*, *Oidiodendron periconioides*, *Oidiodendron tenuissimum*, *Penicillium spinulosum*, and other fungi.

Malt Dextrose 40% Peptone Agar (MDPA 40)

Composition per liter:

Glucose	400.0g
Agar	25.0g
Malt extract	20.0g
Peptone.....	1.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Aspergillus penicilloides*.

Malt 4% Dextrose Peptone Yeast Agar (MDPYA4)

Composition per liter:

Malt extract	40.0g
Agar	20.0g
Glucose	20.0g
Peptone.....	1.0g
Yeast extract.....	1.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Candida glabrata*, *Candida haemulonii*, *Candida lactis-condensi*, *Candida magnoliae*, *Candida nemodendra*, *Metschnikowia pulcherrima*, *Metschnikowia reukaufii*, *Phoma glomerata*, *Saccharomyces exiguus*, and *Trigonopsis variabilis*.

Malt 4% Dextrose Yeast Agar (MDYA4)

Composition per liter:

Malt extract.....	40.0g
Agar	20.0g
Glucose	20.0g
Yeast extract.....	1.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Torulasporea delbrueckii*.

Malt Extract Agar

Composition per liter:

Malt extract.....	30.0g
Agar	15.0g
Peptone	5.0g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 20 min at 10 psi pressure–115°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Xanthomonas* species.

Malt Extract Agar (MEA)

Composition per liter:

Agar	20.0g
Glucose	20.0g
Malt extract	20.0g
Peptone	1.0g

pH 5.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation, cultivation, and identification of heat-resistant filamentous fungi (molds) from foods.

Malt Extract Agar

Composition per liter:

Malt extract.....	30.0g
Agar	15.0g
Mycological peptone	5.0g

pH 5.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring until boiling. Distribute into tubes or flasks. Autoclave for 10 min at 15 psi pressure–115°C. Do not overheat or agar will not harden. If a lower pH (3.5) is desired, cool medium to 55°C and aseptically add 100.0mL of sterile lactic acid. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the detection, isolation, and enumeration of yeasts and molds. The addition of lactic acid suppresses bacterial growth.

Malt Extract Agar

Composition per liter:

Malt extract	30.0g
Agar	20.0g
Chlortetracycline solution.....	10.0mL
pH 5.5 ± 0.2 at 25°C	

Chlortetracycline Solution:

Composition per 10.0mL:

Chlortetracycline.....	0.04mg
------------------------	--------

Preparation of Chlortetracycline Solution: Add chlortetracycline to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except chlortetracycline solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile chlortetracycline solution. Mix thoroughly. Pour into sterile Petri dishes in 20.0mL volumes.

Use: For the cultivation of yeasts and filamentous fungi (molds) from cosmetics.

Malt Extract Agar

Composition per liter:

Malt extract	20.0g
Agar	15.0g
Peptone.....	5.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Candida melibiosica*, *Cryptococcus curvatus*, *Kluyveromyces* species, *Metschnikowia hawaiiensis*, *Rhodospidium paludigenum*, *Saccharomyces cerevisiae*, *Saccharomycodes ludwigii*, *Stephanoascus* species, and *Trichosporon nigrescens*.

Malt Extract Agar (ATCC Medium 109)

Composition per liter:

Agar	15.0g
Maltose.....	12.75g
Dextrin	2.75g
Glycerol	2.35g
Pancreatic digest of gelatin	0.78g
pH 4.6 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring until boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–118°C. Do not overheat or agar will not harden. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of yeasts, molds, and *Flavobacterium lucecoloratum*.

Malt Extract Agar (MEA)

Composition per liter:

Glucose	20.0g
Malt extract	20.0g
Agar	15.0g
Peptone	1.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Arthrinium phaeospermum*, *Aspergillus fumigatus*, *Aspergillus clavatus*, *Penicillium verruculosum*, and *Penicillium spinulosum*.

Malt Extract Agar (BAM M93)

Composition per liter:

Malt extract	30.0g
Agar	20.0g
pH 5.5 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation, cultivation, and identification of heat-resistant filamentous fungi (molds) from foods.

Malt Extract Agar, Blakeslee's

Composition per liter:

Malt extract	20.0g
Glucose	20.0g
Agar	20.0g
Peptone	1.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of a variety of yeasts, including *Candida versatilis*, *Cryptococcus elinovii*, *Kluyveromyces marxianus*, *Pichia* species, *Reniforma strues*, *Rhodotorula mucilaginosa*, *Saccharomyces cerevisiae*, *Saccharomycopsis fibuligera*, *Sporobolomyces roseus*, *Trichosporon nigrescens*, *Yarrowia lipolytica*, *Zygosaccharomyces rouxii*, and numerous filamentous fungi.

Malt Extract Agar, Half Strength (ATCC Medium 2418)

Composition per liter:

Agar	15.0g
Malt extract	10.0g
Peptone	2.5g
pH 5.5 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring until boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–118°C. Do not overheat or agar will not harden. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of yeasts and molds.

**Malt Extract Agar for Yeasts and Molds
(MEAYM)
(BAM M182)**

Composition per liter:

Agar	20.0g
Glucose	20.0g
Malt extract	20.0g
Peptone.....	1.0g
pH 5.4 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation, cultivation, and identification of heat-resistant filamentous fungi (molds) from foods. Recommended for identification of *Aspergillus* spp. and *Penicillium* spp.

Malt Extract Broth

Composition per liter:

Malt extract	6.0g
Glucose	6.0g
Maltose.....	1.8g
Yeast extract.....	1.2g
pH 4.7 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Do not over-heat—this results in darkening of the broth.

Use: For the isolation, cultivation, and enumeration of yeast and filamentous fungi (mold).

Malt Extract Broth

Composition per liter:

Malt extract	17.0g
Mycological peptone.....	3.0g
pH 5.4 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 10 min at 15 psi pressure–115°C.

Use: For the cultivation of molds and yeasts, especially for sterility testing.

Malt Extract Broth

Composition per liter:

Malt extract, purified solids	15.0g
pH 4.7 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes

or flasks. Autoclave for 15 min at 15 psi pressure–118°C. Do not over-heat.

Use: For the cultivation of yeasts and molds.

**Malt Extract Charcoal Medium
(DSMZ Medium 801)**

Composition per liter:

Malt extract	30.0g
Agar	15.0g
Charcoal	3.0g
pH 6.5 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 10 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Boletus edulis*, *Xerocomus badius* DSM 4436, *Antrodia serialis*, and other filamentous fungi.

**Malt Extract Glucose Agar
(DSMZ Medium 735)**

Composition per liter:

Agar	15.0g
Malt extract	10.0g
Glucose	5.0g
pH 7.1 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Morchella esculenta* spp., *Verpa digitaliformis*, *Disciotis venosa*, *Mitrophora semilibera*, *Gyromitra* spp., and *Mitrophora semilibera*.

Malt Extract HiVeg Agar Base

Composition per liter:

Malt extract	30.0g
Agar	15.0g
Plant peptone No. 4.....	5.0g
pH 5.4 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 5.4. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of fungi, especially yeasts.

Malt Extract HiVeg Agar Base, Modified

Composition per liter:

Agar	15.0g
Maltose	12.75g
Dextrin.....	2.75g
Plant peptone	0.78g
pH 6.0 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.0. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of yeasts and molds.

Malt Extract HiVeg Broth Base

Composition per liter:

Malt extract	17.0g
Plant peptone No. 4	3.0g
pH 5.4 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 5.4. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of yeasts and molds.

Malt Extract Peptone Agar

Composition per liter:

Malt extract	30.0g
Agar	15.0g
Soy peptone	3.0g
pH 5.6 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 5.6. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 10 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Basidiobolus ranarum* and *Sclerophoma pityophila*.

Malt Extract Peptone Agar

Composition per liter:

Malt extract	30.0g
Agar	15.0g
Papaic digest of soybean meal	3.0g
pH 6.8 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Ascobolus immersus*, *Aspergillus amstelodami*, and *Aspergillus clavatus*.

Malt Extract Yeast Extract 40% Glucose Agar (MY40G)

Composition per liter:

Glucose	400.0g
Agar	12.0g

Malt extract powder	12.0g
Yeast extract	3.0g
pH 5.5 ± 0.2 at 25°C	

Preparation of Medium: Add components, except glucose, to 550.0mL of distilled/deionized water. Mix thoroughly. Gently heat and bring to boiling. Bring volume to 600.0mL with distilled/deionized water. While the solution is still hot, add the glucose all at once while stirring to avoid formation of lumps. Autoclave for 30 min at 0 psi pressure–100°C.

Use: For the isolation and cultivation of osmotolerant microorganisms from foods.

Malt and Peptone Medium

Composition per liter:

Agar	15.0g
Malt extract	10.0g
Peptone	5.0g
NaCl	1.0g
pH 6.5 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Adjust pH to 6.5. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Flavobacterium* species.

Malt Peptone Yeast Extract Agar

See: MPY Agar

Malt Yeast Agar

Composition per liter:

Agar	20.0g
Glucose	10.0g
Peptone	5.0g
Malt extract	3.0g
Yeast extract	3.0g
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 20 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Arthrobacter viscosus*.

Malt Yeast Extract 50% Glucose Agar (MY50G) (ATCC Medium 2093)

Composition per liter:

Glucose	500.0g
Agar	10.0g
Malt extract	10.0g
Yeast extract	2.5g
pH 5.5 ± 0.2 at 25°C	

Preparation of Medium: Add agar, yeast extract, and malt extract to distilled/deionized water and bring volume to 500mL. Mix thoroughly. Gently heat while stirring until boiling. Slowly add glucose while stirring to avoid lumps. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Do not overheat or agar will not harden. Pour into sterile Petri dishes or leave in tubes. Note: This agar hardens very slowly.

Use: For the cultivation of yeasts and molds.

Malt 2% Yeast Extract Agar (MYA2)

Composition per liter:

Agar	20.0g
Malt extract	20.0g
Yeast extract	1.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Actinomyces elegans*, *Actinospora megalospora*, *Agaricus bisporus*, *Ceratocystis perfecta*, *Ceratocystis cana*, *Ceratocystis seticollis*, *Chaetomium trilaterale*, *Chaetomium indicum*, *Chaetomium seminudum*, *Chaetomium piluliferum*, *Cirrenalia macrocephala*, *Kluyveromyces species*, *Lepista inversa*, *Torula dematia*, *Trichoderma pseudokoningii*, and other fungi.

Malt 4% Yeast Extract Agar (MYA4)

Composition per liter:

Malt extract	40.0g
Agar	20.0g
Yeast extract	1.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Arthrotrichum arthrotrichoides*, *Ascosphaera apis*, *Betisia alvei*, *Ceratocystiopsis minuta*, *Chaetomium spinosum*, *Chaetomium piluliferum*, *Ciboriopsis simulata*, *Dactylella minuta*, *Dactylella rhombospora*, *Dactylella lysipaga*, *Eriopeziza caesia*, *Europhium clavigerum*, *Issatchenkia orientalis*, *Moniliella suaveolens*, and other fungi.

Malt 4% Yeast Extract Agar with Lupine Stems (MYA4 with Lupine Stems)

Composition per liter:

Malt extract	40.0g
Agar	20.0g
Yeast extract	1.0g
Lupine stems	variable

Preparation of Medium: Add components, except lupine stems, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute 6.0mL volumes into tubes. Cut lupine stems into 8.0cm-long pieces. Add 2–3 lupine stems per tube. Autoclave for 15 min at 15 psi pressure–121°C. Allow tubes to cool in a slanted position.

Use: For the cultivation of *Ceratocystiopsis minuta-bicolor*, *Ceratocystiopsis retusi*, *Ceratocystis pilifera*, *Ceratocystis olivaceapini*, *Ceratocystis multiannulata*, *Ceratocystis nigra*, *Ceratocystis olivacea*, *Ceratocystis tremuloaurea*, *Chaetomium indicum*, and *Chaetospermum chaetosporum*.

Malt 8% Yeast Extract Agar (MYA8)

Composition per liter:

Malt extract	80.0g
Agar	20.0g
Yeast extract	1.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Thielavia hyalocarpa*.

Maltea

Composition per liter:

Maltea	40.0g
Agar	22.0g
Yeast extract	3.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Leucogyrophana mollusca*.

Maltose Peptone Yeast Extract Agar

See: [MPY Agar](#)

Maltose Peptone Yeast Extract Broth

See: [MPY Broth](#)

Maltose Peptone Yeast Extract Medium

See: [MPY Agar](#)

Manganese Acetate Agar

Composition per liter:

Agar, highly purified	10.0g
Manganous acetate	0.1g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add manganous acetate to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Add agar. Steam the medium to dissolve agar. Distribute into screw-capped tubes or bottles. Autoclave for 15 min at 15 psi pressure–121°C. Allow tubes or bottles to cool in a slanted position.

Use: For the cultivation of manganese-oxidizing bacteria.

Manganese Agar No. 1 (Mn Agar No. 1)

Composition per liter:

Agar	10.0g
MnCO ₃	2.0g
Beef extract	1.0g
Fe(NH ₄) ₂ (SO ₄) ₂	0.15g
Sodium citrate	0.15g
Yeast extract	0.075g
Cyanocobalamin solution	10.0mL

Cyanocobalamin Solution:

Composition per 10.0mL:

Cyanocobalamin	0.005mg
----------------------	---------

Preparation of Cyanocobalamin Solution: Add cyanocobalamin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except cyanocobalamin, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL of the sterile cyanocobalamin solu-

tion. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of iron and sulfur bacteria. Also used to differentiate *Leptothrix (Sphaerotilus) discophorus* from *Sphaerotilus natans*.

Manganese Agar No. 2 (Mn Agar No. 2)

Composition per liter:

Agar	15.0g
MnSO ₄ ·H ₂ O	10.0mg

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes. Use freshly prepared solution.

Use: For the enumeration, enrichment, and isolation of iron and sulfur bacteria. For the isolation and cultivation of *Leptothrix* species from water.

Manganese Medium for *Pseudomonas* species

Composition per liter:

Noble agar	10.0g
MnCO ₃	1.0g
Fe(NH ₄) ₂ (SO ₄) ₂ ·6H ₂ O	0.15g
Sodium citrate	0.15g
Yeast extract	0.075g
Na ₄ P ₂ O ₇ ·10H ₂ O	0.05g

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Pseudomonas putida* and other *Pseudomonas* species.

Manganese Nutrient Agar

Composition per liter:

Agar	15.0g
Peptone	5.0g
Meat extract	3.0g
MnSO ₄ ·H ₂ O	5.0mg

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and obtaining the sporulation of *Bacillus* species.

Manning Medium (DSMZ Medium 1023)

Composition per liter:

(NH ₄) ₂ SO ₄	6.0g
MgSO ₄ ·7H ₂ O	1.0g
KCl	0.2g
K ₂ HPO ₄	0.2g
Ca(NO ₃) ₂	0.02g

Solution A	100.0mL
Solution B	10.0mL

pH 2.6 ± 0.1 at 25°C

Solution A:

Composition per 100.0mL:

FeSO ₄ ·7H ₂ O	33.4g
--	-------

Preparation of Solution A: Add FeSO₄·7H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B:

Composition per 10.0mL:

Yeast extract	0.2g
---------------------	------

Preparation of Solution B: Add yeast extract to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except solutions A and B, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Adjust pH to 2.6. Gently heat while stirring and bring to boiling. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add solutions A and B. Adjust pH to 2.5–2.7 with 0.1N H₂SO₄.

Use: For the cultivation of iron-oxidizing and heterotrophic acidophilic bacteria from acid mine drainage.

Mannitol Agar

Composition per liter:

Mannitol	25.0g
Agar	15.0g
Yeast extract	5.0g
Peptone	3.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Acetobacter aceti*, *Acetobacter Hansenii*, *Acetobacter pasteurianus*, *Frateuria aurantia*, *Gluconobacter asaii*, *Gluconobacter cerinus*, *Gluconobacter oxydans*, and other bacteria that can utilize mannitol as a carbon source.

Mannitol Agar with Prilion

Composition per liter:

D-Mannitol	15.0g
Agar	13.0g
Meat peptone	10.0g
Meat extract	7.0g
NaCl	3.0g
Na ₂ H ₂ PO ₄	2.0g
Prilion	2.0g
Metachrome Yellow	1.875g
Water Blue	0.625g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and differentiation of *Salmonella* spp. from *Proteus* species.

Mannitol Egg Yolk Polymyxin Agar**Composition per liter:**

Agar	15.0g
D-Mannitol.....	10.0g
Peptone.....	10.0g
NaCl.....	10.0g
Beef extract.....	1.0g
Phenol Red.....	0.025g
Egg yolk emulsion, 50%.....	50.0mL
Polymyxin B solution.....	10.0mL
pH 7.1 ± 0.1 at 25°C	

Source: Available as a prepared medium from BD Diagnostic Systems.

Egg Yolk Emulsion, 50%:**Composition per 100.0mL:**

Chicken egg yolks.....	11
Whole chicken egg.....	1
NaCl (0.9% solution).....	80.0mL

Preparation of Egg Yolk Emulsion, 50%: Soak eggs with 1:100 dilution of saturated mercuric chloride solution for 1 min. Crack eggs and separate yolks from whites. Mix egg yolks with 1 chicken egg. Beat to form emulsion. Measure 50.0mL of egg yolk emulsion and add to 50.0mL of 0.9% NaCl solution. Mix thoroughly. Filter sterilize. Warm to 45°–50°C.

Polymyxin B Solution:**Composition per 10.0mL:**

Polymyxin B.....	100,000U
------------------	----------

Preparation of Polymyxin B Solution: Add polymyxin B to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components—except egg yolk emulsion, 50%, and polymyxin B solution—to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50.0mL of sterile egg yolk emulsion, 50%, and 10.0mL of sterile polymyxin B solution. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the cultivation and enumeration of *Bacillus cereus* from foods.

Mannitol Lysine Crystal Violet Brilliant Green Agar

See: [MLCB Agar](#)

Mannitol Maltose Agar**Composition per liter:**

NaCl.....	20.0g
Agar.....	13.0g
D-Mannitol.....	10.0g
Maltose.....	10.0g
Beef extract.....	5.0g
Papaic digest of soybean meal.....	5.0g
Polypeptone™.....	5.0g
Dye stock solution, 1000X.....	1.0mL
pH 7.8 ± 0.2 at 25°C	

Dye Stock Solution, 1000X:**Composition per 100.0mL:**

Bromthymol Blue.....	4.0g
Cresol Red.....	4.0g
Ethanol, 95%.....	100.0mL

Preparation of Dye Stock Solution, 1000X: Add Bromthymol Blue and Cresol Red to 100.0mL of ethanol. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust to pH 7.8. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Vibrio* species from foods.

Mannitol Motility Test HiVeg Medium**Composition per liter:**

Plant peptone.....	20.0g
Agar.....	3.0g
Mannitol.....	2.0g
Potassium nitrate.....	1.0g
Phenol red.....	0.04g
pH 7.6 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the selective isolation, cultivation, and enumeration of staphylococci from clinical and nonclinical specimens. Mannitol-utilizing organisms turn the medium yellow.

Mannitol Salt Agar**Composition per liter:**

NaCl.....	75.0g
Agar.....	15.0g
D-Mannitol.....	10.0g
Pancreatic digest of casein.....	5.0g
Peptic digest of animal tissue.....	5.0g
Beef extract.....	1.0g
Phenol Red.....	0.025g
pH 7.4 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems and Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the selective isolation, cultivation, and enumeration of staphylococci from clinical and nonclinical specimens. Mannitol-utilizing organisms turn the medium yellow.

**Mannitol Salt Agar
(BAM M97)****Composition per liter:**

NaCl.....	75.0g
Agar.....	15.0g
D-Mannitol.....	10.0g
Polypeptone.....	10.0g

Beef extract	1.0g
Phenol Red	0.025g
pH 7.4 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the selective isolation, cultivation, and enumeration of staphylococci. Mannitol-utilizing organisms turn the medium yellow.

Mannitol Salt Agar with Egg Yolk Emulsion

Composition per liter:

NaCl	75.0g
Agar	15.0g
D-Mannitol	10.0g
Proteose peptone	10.0g
Beef extract	1.0g
Phenol Red	0.025g
Egg yolk emulsion	100.0mL
pH 7.4 ± 0.2 at 25°C	

Source: This medium is available from HiMedia.

Egg Yolk Emulsion

Composition per 100.0mL:

Chicken egg yolks	11
Whole chicken egg	1
NaCl (0.9% solution)	50.0mL

Preparation of Egg Yolk Emulsion: Soak eggs with 1:100 dilution of saturated mercuric chloride solution for 1 min. Crack eggs and separate yolks from whites. Mix egg yolks with 1 chicken egg. Beat to form emulsion. Measure 50.0mL of egg yolk emulsion and add to 50.0mL of 0.9% NaCl solution. Mix thoroughly. Filter sterilize. Warm to 45°–50°C.

Preparation of Medium: Add components, except egg yolk emulsion, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add egg yolk emulsion. Mix thoroughly. Pour into Petri dishes or aseptically distribute into sterile tubes or flasks.

Use: For the selective isolation of pathogenic staphylococci.

Mannitol Salt Broth

Composition per liter:

NaCl	75.0g
Proteose peptone	10.0g
D-Mannitol	10.0g
Beef extract	1.0g
Phenol Red	0.025g
pH 7.4 ± 0.2 at 25°C	

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the selective isolation of presumptive pathogenic staphylococci.

Mannitol Salt Broth

Composition per liter:

NaCl	100.0g
Pancreatic digest of casein	17.0g
Papaic digest of soybean meal	3.0g
K ₂ HPO ₄	2.5g
D-Mannitol	2.5g
Phenol Red	0.025g
pH 7.4 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the selective isolation and cultivation of staphylococci from foods and nonclinical specimens. Mannitol-utilizing organisms turn the medium yellow.

Mannitol Salt HiVeg Agar Base

Composition per liter:

NaCl	75.0g
Agar	15.0g
D-Mannitol	10.0g
Plant peptone No. 3	10.0g
Plant extract	1.0g
Phenol Red	0.025g
pH 7.4 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the selective isolation of pathogenic staphylococci.

Mannitol Salt HiVeg Broth

Composition per liter:

NaCl	75.0g
D-Mannitol	10.0g
Plant peptone No. 3	10.0g
Plant extract	1.0g
Phenol Red	0.025g
pH 7.4 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the selective isolation of presumptive pathogenic staphylococci.

Mannitol Selenite Broth (Selenite Mannitol Broth)

Composition per liter:

NaH ₂ PO ₄	10.0g
Peptic digest of animal tissue	5.0g

Mannitol.....	4.0g
NaHSeO ₃	4.0g
pH 7.1 ± 0.2 at 25°C	

Source: This medium is available from HiMedia.

Caution: Sodium hydrogen selenite (sodium biselenite) is a very toxic, corrosive agent and causes teratogenicity; it should be handled with great care. If there is contact, wash immediately with lots of water.

Preparation of Medium: Add NaHSeO₃ to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Add remaining components. Mix thoroughly. Distribute into tubes or flasks. Gently heat and bring to boiling. Sterilize in a boiling water bath or free flowing steam for 10 min. Do not autoclave. Discard the prepared medium if a large amount of selenite is reduced (indicated by red precipitate at the bottom of the tube).

Use: For the selective enrichment of *Salmonella* spp. from clinical materials.

Mannitol Selenite Broth with Brilliant Green

Composition per liter:

Meat peptone.....	5.0g
Yeast extract.....	5.0g
Mannitol.....	5.0g
K ₂ HPO ₄	4.35g
KH ₂ PO ₄	3.4g
Sodium taurocholate	1.0g
Brilliant Green	0.005g
Na ₂ SeO ₃ ·5H ₂ O.....	1.0g
pH 7.0 ± 0.2 at 25°C	

Source: This medium is available from HiMedia.

Caution: Sodium hydrogen selenite (sodium biselenite) is a very toxic, corrosive agent and causes teratogenicity; it should be handled with great care. If there is contact, wash immediately with lots of water.

Preparation of Medium: Add NaHSeO₃ to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Add remaining components. Mix thoroughly. Distribute into tubes or flasks. Gently heat and bring to boiling. Sterilize in a boiling water bath or free flowing steam for 10 min. Do not autoclave. Discard the prepared medium if a large amount of selenite is reduced (indicated by red precipitate at the bottom of the tube).

Use: For the enrichment of *Salmonella* spp. from feces, foodstuffs, and other materials.

Mannitol Yeast Extract Medium (LMG 135)

Composition per liter:

Agar	20.0g
Mannitol.....	10.0g
Yeast extract.....	1.0g
KH ₂ PO ₄	0.5g
NaCl.....	0.1g
CaCl ₂ ·2H ₂ O solution.....	1.0mL
FeCl ₃ ·6H ₂ O solution.....	1.0mL

CaCl₂·2H₂O Solution:

Composition per 10.0mL:

CaCl ₂ ·2H ₂ O.....	5.28mg
---	--------

Preparation of CaCl₂·2H₂O Solution: Add CaCl₂·2H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly.

FeCl₃·6H₂O Solution:

Composition per 10.0mL:

FeCl ₃ ·6H ₂ O.....	0.66mg
---	--------

Preparation of FeCl₃·6H₂O Solution: Add FeCl₃·6H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Rhizobium* species and *Bradyrhizobium* species.

Mannitol-Yeast Extract-Peptone (MYP) (DSMZ Medium 1087)

Composition per liter:

D-Mannitol	25.0g
Agar	15.0g
Yeast extract	5.0g
Peptone	3.0g
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Distribute into tubes or flasks. Gently heat while stirring and bring to boiling. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Pour into Petri dishes or leave in tubes.

Use: For the cultivation of *Acetobacter fabarum*.

Mannitol Yolk Polymyxin Agar (MYP Agar)

Composition per 110.0mL:

Agar	1.5g
NaCl.....	1.0g
Peptone	1.0g
D-Mannitol	1.0g
(NH ₄) ₂ PO ₄	0.1g
Meat extract.....	0.1g
Phenol Red.....	2.5mg
Egg yolk emulsion, 20%.....	10.0mL
Polymyxin B solution	1.0mL
pH 7.1 ± 0.2 at 25°C	

Egg Yolk Emulsion, 20%:

Composition per 100.0mL:

Chicken egg yolks.....	11
Whole chicken egg	1
NaCl (0.9% solution).....	80.0mL

Preparation of Egg Yolk Emulsion, 20%: Soak eggs with 1:100 dilution of saturated mercuric chloride solution for 1 min. Crack eggs and separate yolks from whites. Mix egg yolks with 1 chicken egg. Measure 20.0mL of egg yolk emulsion and add to 80.0mL of 0.9% NaCl solution. Mix thoroughly. Filter sterilize. Warm to 45–50°C.

Polymyxin B Solution:

Composition per 1.0mL:

Polymyxin B	1.0mg
-------------------	-------

Preparation of Polymyxin B Solution: Add polymyxin B to distilled/deionized water and bring volume to 1.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components—except egg yolk emulsion, 20%, and polymyxin B solution—to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL of sterile egg yolk emulsion, 20%, and 1.0mL of sterile polymyxin B solution. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the cultivation and maintenance of *Bacillus cereus*.

Maricaulis Medium (DSMZ Medium 1025)

Composition per liter:

Sea salts, Sigma	30.0g
NH ₄ Cl	0.5g
Peptone yeast extract solution.....	20.0mL
Glucose solution	2.0mL
Riboflavin solution	5.0mL
pH 7.2 ± 0.2 at 25°C	

Glucose Solution:

Composition per 10.0mL:

Glucose	5.0g
---------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Riboflavin Solution:

Composition per 10.0mL:

Riboflavin	2.0mg
------------------	-------

Preparation of Riboflavin Solution: Add riboflavin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Peptone Yeast Extract Solution:

Composition per 100.0mL:

Peptone.....	10.0g
Yeast extract.....	5.0g

Preparation of Peptone Yeast Extract Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except riboflavin, glucose, and peptone yeast extract solutions, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Adjust pH to 7.2. Gently heat while stirring and bring to boiling. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add riboflavin, glucose, and peptone yeast extract solutions.

Use: For the cultivation of *Maricaulis* spp.

Marine Agar (DSMZ Medium 123)

Composition per liter:

Agar	15.0g
Tryptone.....	10.0g
Peptone.....	5.0g
Yeast extract.....	1.0g
Synthetic seawater	1.0L
pH 7.8 ± 0.2 at 25°C	

Synthetic Seawater:

Composition per liter:

NaCl	24.0g
MgCl ₂ ·6H ₂ O.....	11.0g

Na ₂ SO ₄	4.0g
CaCl ₂ ·6H ₂ O	2.0g
KCl.....	0.7g
KBr	0.1g
SrCl ₂ ·6H ₂ O	0.04g
H ₃ BO ₃	0.03g
NaSiO ₃ ·9H ₂ O.....	5.0mg
NaF	3.0mg
NH ₄ NO ₃	2.0mg
Fe ₃ PO ₄ ·4H ₂ O.....	1.0mg

Preparation of Synthetic Seawater: Add components to distilled water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add agar, tryptone, peptone, and yeast extract to synthetic seawater and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.8. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Halobacillus halophilus*, *Halomonas* spp., *Vibrio harveyi*, *Cobetia marina*, and *Ruegeria atlantica*.

Marine Agar 2216 (DSMZ Medium 604)

Composition per liter:

NaCl.....	19.45g
Agar	15.0g
MgCl ₂	8.8g
Peptone	5.0g
Na ₂ SO ₃	3.24g
CaCl ₂	1.8g
Yeast extract.....	1.0g
KCl.....	0.55g
NaHCO ₃	0.16g
Ferric citrate.....	0.1g
KBr	0.08g
SrCl ₂	0.03g
H ₃ BO ₃	0.02g
Na ₂ HPO ₄	8.0mg
Na ₂ SiO ₃	4.0mg
NaF	2.4mg
NH ₄ NO ₃	1.6mg

pH 7.6 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Hyphomonas* spp., *Oceanospirillum* spp., *Hyphomicrobium indicum*, *Psychroflexus gondwanensis*=*Flavobacterium gondwanense*, *Salegentibacter salegens*=*Flavobacterium salegens*, *Psychromonas antarctica*, *Sulfitobacter mediterraneus*, *Thalassomonas viridans*, *Vibrio* spp., *Marinospirillum minutulum*=*Oceanospirillum minutulum*, *Terasakiella pusilla*=*Oceanospirillum pusillum*, *Pseudoalteromonas atlantica*=*Alteromonas atlantica*, *Pseudomonas atlantica*, *Roseobacter* spp., *Erythrobacter longus*, *Pseudospirillum japonicum*=*Oceanospirillum japonicum*, *Marinobacter hydrocarbonoclasticus* (*Pseudomonas nautica*), *Psychrobacter*

spp., and *Moritella japonica*. For the isolation, cultivation, and maintenance of a wide variety of heterotrophic marine bacteria.

Marine Agar with Biphenyl

Composition per liter:

NaCl	19.45g
Agar	15.0g
MgCl ₂	8.8g
Peptone	5.0g
Na ₂ SO ₃	3.24g
CaCl ₂	1.8g
Yeast extract	1.0g
KCl	0.55g
NaHCO ₃	0.16g
Ferric citrate	0.1g
KBr	0.08g
SrCl ₂	0.03g
H ₃ BO ₃	0.02g
Na ₂ HPO ₄	8.0mg
Na ₂ SiO ₃	4.0mg
NaF	2.4mg
NH ₄ NO ₃	1.6mg
Biphenyl	1.0mg

pH 7.6 ± 0.2 at 25°C

Preparation of Medium: Add components, except biphenyl, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes. After agar solidifies, aseptically add a few crystals of biphenyl to each plate.

Use: For the cultivation and maintenance of biphenyl-utilizing marine bacteria, such as *Cycloclasticus pugetii*.

Marine Agar with Lambda Carrageenan

Composition per 1070.0mL:

Solution A	1.0L
Solution B	60.0mL
Solution C	10.0mL

pH 7.2 ± 0.2 at 25°C

Solution A:

Composition per liter:

NaCl	25.0g
Agar	15.0g
MgSO ₄ ·7H ₂ O	5.0g
Casamino acids	2.5g
Lambda-carrageenan	2.5g
NaNO ₃	2.0g
CaCl ₂ ·2H ₂ O	0.2g
KCl	0.1g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B:

Composition per 100.0mL:

Na ₂ HPO ₄ ·2H ₂ O	3.56g
---	-------

Preparation of Solution B: Add Na₂HPO₄·2H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C:

Composition per 100.0mL:

FeSO ₄ ·7H ₂ O	0.3g
--------------------------------------	------

Preparation of Solution C: Add FeSO₄·7H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Aseptically add 60.0mL of sterile solution B and 10.0mL of sterile solution C to 1.0L of sterile solution A. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of ATCC strain 43554.

Marine Agar with Kappa and Lambda Carrageenan

Composition per 1070.0mL:

Solution A	1.0L
Solution B	60.0mL
Solution C	10.0mL

pH 7.2 ± 0.2 at 25°C

Solution A:

Composition per liter:

NaCl	25.0g
Agar	15.0g
MgSO ₄ ·7H ₂ O	5.0g
Casamino acids	2.5g
NaNO ₃	2.0g
κ-Carrageenan	1.25g
λ-Carrageenan	1.25g
CaCl ₂ ·2H ₂ O	0.2g
KCl	0.1g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B:

Composition per 100.0mL:

Na ₂ HPO ₄ ·2H ₂ O	3.56g
---	-------

Preparation of Solution B: Add Na₂HPO₄·2H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C:

Composition per 100.0mL:

FeSO ₄ ·7H ₂ O	0.3g
--------------------------------------	------

Preparation of Solution C: Add FeSO₄·7H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Aseptically add 60.0mL of sterile solution B and 10.0mL of sterile solution C to 1.0L of sterile solution A. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Pseudomonas carrageenovora*.

Marine Agar with Naphthalene

Composition per liter:

NaCl	19.45g
Agar	15.0g
MgCl ₂	8.8g

Peptone.....	5.0g
Na ₂ SO ₃	3.24g
CaCl ₂	1.8g
Yeast extract.....	1.0g
KCl.....	0.55g
NaHCO ₃	0.16g
Ferric citrate.....	0.1g
KBr.....	0.08g
SrCl ₂	0.03g
H ₃ BO ₃	0.02g
Na ₂ HPO ₄	8.0mg
Na ₂ SiO ₃	4.0mg
NaF.....	2.4mg
NH ₄ NO ₃	1.6mg
Naphthalene.....	1mg

pH 7.6 ± 0.2 at 25°C

Preparation of Medium: Add components, except naphthalene, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes. After agar solidifies, aseptically add a few crystals of naphthalene to each plate.

Use: For the cultivation and maintenance of naphthalene-utilizing marine bacteria

Marine Agar with Sulfur (ATCC Medium 1922)

Composition per liter:

NaCl.....	19.45g
Sulfur.....	10.0g
MgCl ₂	8.8g
Peptone.....	5.0g
Na ₂ SO ₃	3.24g
CaCl ₂	1.8g
Yeast extract.....	1.0g
KCl.....	0.55g
NaHCO ₃	0.16g
Ferric citrate.....	0.1g
KBr.....	0.08g
SrCl ₂	0.03g
H ₃ BO ₃	0.02g
Na ₂ HPO ₄	8.0mg
Na ₂ SiO ₃	4.0mg
NaF.....	2.4mg
NH ₄ NO ₃	1.6mg

pH 7.6 ± 0.2 at 25°C

Preparation of Sulfur: Autoclave sulfur for 15 min at 0 psi pressure–100°C on 3 successive days.

Preparation of Medium: Prepare anaerobically under a gas phase of 80% N₂ + 10% CO₂ + 10% H₂. Add components, except sulfur, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50–55°C. Aseptically add 10.0g of sterile sulfur. Mix thoroughly. Aseptically and anaerobically, under a gas phase of 80% N₂ + 10% CO₂ + 10% H₂, distribute into sterile tubes.

Use: For the cultivation and maintenance of *Thermococcus litoralis*.

Marine Ameba Medium

Composition per liter:

Agar.....	10.0g
Malt extract.....	0.1g
Yeast extract.....	0.1g
Artificial seawater.....	1.0L

Artificial Seawater:

Composition per liter:

NaCl.....	27.5g
MgSO ₄ ·7H ₂ O.....	6.78g
MgCl ₂ ·6H ₂ O.....	5.38g
KCl.....	0.72g
NaHCO ₃	0.2g
CaCl ₂ ·2H ₂ O.....	1.4g

Preparation of Artificial Seawater: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to artificial seawater and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Cochliopodium clarum*, *Heteramoeba clara*, *Lingulamoeba leei*, *Paramoeba pemaquidensis*, and *Vannella* species.

Marine Broth 2216 (LMG Medium 164)

Composition per liter:

NaCl.....	19.45g
MgCl ₂	8.8g
Peptone.....	5.0g
Na ₂ SO ₃	3.24g
CaCl ₂	1.8g
Yeast extract.....	1.0g
KCl.....	0.55g
NaHCO ₃	0.16g
Ferric citrate.....	0.1g
KBr.....	0.08g
SrCl ₂	0.03g
H ₃ BO ₃	0.02g
Na ₂ HPO ₄	8.0mg
Na ₂ SiO ₃	4.0mg
NaF.....	2.4mg
NH ₄ NO ₃	1.6mg

pH 7.6 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Vibrio liquefaciens* and for the isolation, cultivation, and maintenance of a wide variety of heterotrophic marine bacteria.

Marine Broth with Biphenyl

Composition per liter:

NaCl.....	19.45g
MgCl ₂	8.8g

Peptone.....	5.0g
Na ₂ SO ₃	3.24g
CaCl ₂	1.8g
Yeast extract.....	1.0g
KCl.....	0.55g
NaHCO ₃	0.16g
Ferric citrate.....	0.1g
KBr.....	0.08g
SrCl ₂	0.03g
H ₃ BO ₃	0.02g
Na ₂ HPO ₄	8.0mg
Na ₂ SiO ₃	4.0mg
NaF.....	2.4mg
NH ₄ NO ₃	1.6mg
Biphenyl.....	1.0mg

pH 7.6 ± 0.2 at 25°C

Preparation of Medium: Add components, except biphenyl, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add a few crystals of biphenyl to each tube or flask.

Use: For the cultivation of biphenyl-utilizing marine bacteria.

Marine Broth with Lambda Carrageenan

Composition per 1070.0mL:

Solution A.....	1.0L
Solution B.....	60.0mL
Solution C.....	10.0mL

pH 7.2 ± 0.2 at 25°C

Solution A:

Composition per liter:

NaCl.....	25.0g
MgSO ₄ ·7H ₂ O.....	5.0g
Casamino acids.....	2.5g
λ-Carrageenan.....	2.5g
NaNO ₃	2.0g
CaCl ₂ ·2H ₂ O.....	0.2g
KCl.....	0.1g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B:

Composition per 100.0mL:

Na ₂ HPO ₄ ·2H ₂ O.....	3.56g
--	-------

Preparation of Solution B: Add Na₂HPO₄·2H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C:

Composition per 100.0mL:

FeSO ₄ ·7H ₂ O.....	0.3g
---	------

Preparation of Solution C: Add FeSO₄·7H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Aseptically add 60.0mL of sterile solution B and 10.0mL of sterile solution C to 1.0L of sterile solution A. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of ATCC strain 43554.

Marine Broth with Kappa and Lambda Carrageenan

Composition per 1070.0mL:

Solution A.....	1.0L
Solution B.....	60.0mL
Solution C.....	10.0mL

pH 7.2 ± 0.2 at 25°C

Solution A:

Composition per liter:

NaCl.....	25.0g
MgSO ₄ ·7H ₂ O.....	5.0g
Casamino acids.....	2.5g
NaNO ₃	2.0g
κ-Carrageenan.....	1.25g
λ-Carrageenan.....	1.25g
CaCl ₂ ·2H ₂ O.....	0.2g
KCl.....	0.1g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B:

Composition per 100.0mL:

Na ₂ HPO ₄ ·2H ₂ O.....	3.56g
--	-------

Preparation of Solution B: Add Na₂HPO₄·2H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C:

Composition per 100.0mL:

FeSO ₄ ·7H ₂ O.....	0.3g
---	------

Preparation of Solution C: Add FeSO₄·7H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Aseptically add 60.0mL of sterile solution B and 10.0mL of sterile solution C to 1.0L of sterile solution A. Mix thoroughly. Distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Pseudomonas carrageenovora*.

Marine Broth with Naphthalene

Composition per liter:

NaCl.....	19.45g
MgCl ₂	8.8g
Peptone.....	5.0g
Na ₂ SO ₃	3.24g
CaCl ₂	1.8g
Yeast extract.....	1.0g
KCl.....	0.55g
NaHCO ₃	0.16g
Ferric citrate.....	0.1g
KBr.....	0.08g
SrCl ₂	0.03g
H ₃ BO ₃	0.02g
Na ₂ HPO ₄	8.0mg
Na ₂ SiO ₃	4.0mg
NaF.....	2.4mg
NH ₄ NO ₃	1.6mg
Naphthalene.....	1mg

pH 7.6 ± 0.2 at 25°C

Preparation of Medium: Add components, except naphthalene, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add a few crystals of naphthalene to each tube or flask.

Use: For the cultivation of naphthalene-utilizing marine bacteria.

Marine Broth with Sulfur

Composition per liter:

NaCl	19.45g
Sulfur	10.0g
MgCl ₂	8.8g
Peptone	5.0g
Na ₂ SO ₃	3.24g
CaCl ₂	1.8g
Yeast extract	1.0g
KCl	0.55g
NaHCO ₃	0.16g
Ferric citrate	0.1g
KBr	0.08g
SrCl ₂	0.03g
H ₃ BO ₃	0.02g
Na ₂ HPO ₄	8.0mg
Na ₂ SiO ₃	4.0mg
NaF	2.4mg
NH ₄ NO ₃	1.6mg

pH 7.6 ± 0.2 at 25°C

Preparation of Sulfur: Autoclave for 15 min at 0 psi pressure–100°C on three successive days.

Preparation of Medium: Prepare anaerobically under a gas phase of 80% N₂ + 10% CO₂ + 10% H₂. Add components, except sulfur, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 10.0g of sulfur. Mix thoroughly. Aseptically and anaerobically, under a gas phase of 80% N₂ + 10% CO₂ + 10% H₂, distribute into sterile tubes.

Use: For the cultivation of *Thermococcus litoralis*.

Marine *Caulobacter* Medium

Composition per liter:

Proteose peptone	10.0g
Yeast extract	3.0g
Artificial seawater	1.0L

pH 7.2–7.4 at 25°C

Artificial Seawater:

Composition per liter:

Commercially available marine aquarium salts mixture	variable
--	----------

Preparation of Artificial Seawater: Add commercially available marine aquarium salts mixture to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Combine components. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Caulobacter halobacteroides* and *Caulobacter maris*.

Marine Chlorobiaceae Medium 2

Composition per 1051.0mL:

Solution 1	950.0mL
Na ₂ S·9H ₂ O solution	60.0mL
NaHCO ₃ solution	40.0mL
Vitamin B ₁₂ solution	1.0mL

pH 6.8 ± 0.2 at 25°C

Solution 1:

Composition per 950.0mL:

NaCl	20.0g
MgSO ₄ ·7H ₂ O	3.0g
KH ₂ PO ₄	1.0g
NH ₄ Cl	0.5g
CaCl ₂ ·2H ₂ O	0.05g
Trace elements solution SL-8	1.0mL

Preparation of Solution 1: Add components to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Trace Elements Solution SL-8:

Composition per liter:

Disodium EDTA	5.2g
FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	0.19g
MnCl ₂ ·4H ₂ O	0.1g
ZnCl ₂	0.07g
H ₃ BO ₃	0.06g
NaMoO ₄ ·2H ₂ O	0.04g
CuCl ₂ ·2H ₂ O	0.02g
NiCl ₂ ·6H ₂ O	0.02g

Preparation of Trace Elements Solution SL-8: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Na₂S·9H₂O Solution:

Composition per 100.0mL:

Na ₂ S·9H ₂ O	5.0g
-------------------------------------	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 100.0mL. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

NaHCO₃ Solution:

Composition per 100.0mL:

NaHCO ₃	5.0g
--------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Vitamin B₁₂ Solution:

Composition per 100.0mL:

Vitamin B ₁₂	2.0mg
-------------------------	-------

Preparation of Vitamin B₁₂ Solution: Add vitamin B₁₂ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: To 950.0mL of cooled, sterile solution 1, aseptically add 60.0mL of sterile Na₂S·9H₂O solution, 40.0mL of sterile NaHCO₃ solution, and 1.0mL of sterile vitamin B₁₂ solution. Mix thoroughly. Adjust pH to 6.8 with sterile H₂SO₄ or Na₂CO₃. Aseptically distribute into sterile 50.0mL or 100.0mL bottles with metal screw caps and rubber seals. Completely fill bottles with medium except for a pea-sized air bubble.

Use: For the isolation and cultivation of marine members of the Chlorobiaceae.

Marine Chromatiaceae Medium 2

Composition per 1051.0mL:

Solution 1	950.0mL
Na ₂ S·9H ₂ O solution	60.0mL
NaHCO ₃ solution	40.0mL
Vitamin B ₁₂ solution	1.0mL
pH 7.3 ± 0.2 at 25°C	

Solution 1:

Composition per 950.0mL:

NaCl	20.0g
MgSO ₄ ·7H ₂ O	3.0g
KH ₂ PO ₄	1.0g
NH ₄ Cl	0.5g
CaCl ₂ ·2H ₂ O	0.05g
Trace elements solution SL-8	1.0mL

Preparation of Solution 1: Add components to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Trace Elements Solution SL-8:

Composition per liter:

Disodium EDTA	5.2g
FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	0.19g
MnCl ₂ ·4H ₂ O	0.1g
ZnCl ₂	0.07g
H ₃ BO ₃	0.06g
NaMoO ₄ ·2H ₂ O	0.04g
CuCl ₂ ·2H ₂ O	0.02g
NiCl ₂ ·6H ₂ O	0.02g

Preparation of Trace Elements Solution SL-8: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Na₂S·9H₂O Solution:

Composition per 100.0mL:

Na ₂ S·9H ₂ O	5.0g
---	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 100.0mL. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

NaHCO₃ Solution:

Composition per 100.0mL:

NaHCO ₃	5.0g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Vitamin B₁₂ Solution:

Composition per 100.0mL:

Vitamin B ₁₂	2.0mg
-------------------------------	-------

Preparation of Vitamin B₁₂ Solution: Add vitamin B₁₂ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: To 950.0mL of cooled, sterile solution 1, aseptically add 60.0mL of sterile Na₂S·9H₂O solution, 40.0mL of sterile NaHCO₃ solution, and 1.0mL of sterile vitamin B₁₂ solution. Mix thoroughly. Adjust pH to 7.3 with sterile H₂SO₄ or Na₂CO₃. Aseptical-

ly distribute into sterile 50.0mL or 100.0mL bottles with metal screw caps and rubber seals. Completely fill bottles with medium except for a pea-sized air bubble.

Use: For the isolation and cultivation of marine members of the Chromatiaceae.

Marine *Cytophaga* Agar

Composition per liter:

Agar	15.0g
Nutrient broth	8.0g
Yeast extract	5.0g
Salt solution	1.0L

Salt Solution:

Composition per liter:

NaCl	12.86g
MgCl ₂	2.48g
KCl	0.75g
CaCl ₂	0.56g
Fe(SO ₄) ₂ (NH ₄) ₂	0.048g

Preparation of Salt Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add solid components to 1.0L of salt solution. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Cytophaga* species.

Marine *Cytophaga* Medium

Composition per liter:

NaCl	24.7g
Agar	15.0g
MgSO ₄ ·7H ₂ O	6.3g
MgCl ₂ ·6H ₂ O	4.6g
Tryptic digest of casein	1.0g
Yeast extract	1.0g
KCl	0.7g
NaHCO ₃ solution	10.0mL
CaCl ₂ ·2H ₂ O solution	10.0mL

pH 7.2 ± 0.2 at 25°C

NaHCO₃ Solution:

Composition per 10.0mL:

NaHCO ₃	0.2g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

CaCl₂·2H₂O Solution:

Composition per 10.0mL:

CaCl ₂ ·2H ₂ O	1.2g
--	------

Preparation of CaCl₂·2H₂O Solution: Add CaCl₂·2H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except NaHCO₃ solution and CaCl₂·2H₂O solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 10.0mL of sterile NaHCO₃ solution and 10.0mL of

sterile $\text{CaCl}_2 \cdot 2\text{H}_2\text{O}$ solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Cytophaga* species, *Flexibacter* species, *Microscilla* species, and *Saprospira grandis*.

Marine *Cytophaga* Medium A

Composition per liter:

Agar	15.0g
Pancreatic digest of casein	2.0g
Beef extract	0.5g
Yeast extract	0.5g
Sodium acetate	0.2g
Seawater	700.0mL

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure– 121°C . Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Flexibacter maritimus*.

Marine *Cytophaga* Medium B

Composition per liter:

Agar	15.0g
Pancreatic digest of casein	2.0g
Beef extract	0.5g
Yeast extract	0.5g
Sodium acetate	0.2g
Seawater	500.0mL

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure– 121°C . Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Vibrio ordalii*.

Marine *Cytophaga* Medium C

Composition per liter:

Agar	15.0g
Pancreatic digest of casein	2.0g
Beef extract	0.5g
Yeast extract	0.5g
Sodium acetate	0.2g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to seawater and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure– 121°C . Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Cytophaga agarovorans*, *Cytophaga fermentans*, and *Cytophaga salmonicolor*.

Marine *Desulfovibrio* Medium

Composition per liter:

Solution A	980.0mL
Solution B	10.0mL
Solution C	10.0mL

pH 7.8 ± 0.2 at 25°C

Solution A:

Composition per 980.0mL:

NaCl	25.0g
DL-Sodium lactate	2.0g
$\text{MgSO}_4 \cdot 7\text{H}_2\text{O}$	2.0g
Na_2SO_4	1.0g
NH_4Cl	1.0g
Yeast extract	1.0g
K_2HPO_4	0.5g
$\text{CaCl}_2 \cdot 2\text{H}_2\text{O}$	0.1g
Resazurin	1.0mg

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 3–4 min. Allow to cool to room temperature while gassing under 100% N_2 .

Solution B:

Composition per 10.0mL:

$\text{FeSO}_4 \cdot 7\text{H}_2\text{O}$	0.5g
---	------

Preparation of Solution B: Add $\text{FeSO}_4 \cdot 7\text{H}_2\text{O}$ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly.

Solution C:

Composition per 10.0mL:

Ascorbic acid	0.1g
Sodium thioglycolate	0.1g

Preparation of Solution C: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly.

Preparation of Medium: To 980.0mL of cooled solution A, anaerobically add 10.0mL of solution B and 10.0mL of solution C. Mix thoroughly. Adjust pH to 7.8 with NaOH. Distribute into tubes or flasks. During distribution, swirl the medium to keep the precipitate in suspension. Autoclave for 15 min at 15 psi pressure– 121°C .

Use: For the cultivation and maintenance of *Desulfovibrio desulfuricans*, *Desulfovibrio salexigens*, and *Desulfovibrio vulgaris*.

Marine Flagellate Medium

Composition per 15.0mL:

Rice grains	2.0g
Seawater	15.0mL

Preparation of Medium: Autoclave rice grains for 15 min at 15 psi pressure– 121°C . Add 2.0g of sterile rice grains to 15.0mL of filter-sterilized seawater. Aseptically distribute into T-25 tissue culture flasks.

Use: For the cultivation of *Acanthoecopsis unguiculata*, *Amastigomonas* species, *Bicosoeca vacillans*, *Bodo designis*, *Bodo variabilis*, *Caecitellus parvulus*, *Choanoeca perplexa*, *Codosiga gracilis*, *Diaphanoeca grandis*, *Entosiphon* species, *Goniomonas* species, *Proccryptobia* species, *Pseudobodo tremulans*, *Rhynchomonas nasuta*, *Salpingoeca urceolata*, *Stephanoecca diplocostata*, and *Stephanopogon apogon*.

Marine Flagellate Medium with B-Vitamins

Composition per liter:

Seawater	990.0mL
Vitamin solution	10.0mL

Vitamin Solution:

Composition per 100.0mL:

Thiamine-HCl	0.15g
Calcium D-(+)-pantothenate	0.05g
Nicotinamide	0.05g

Pyridoxal-HCl	0.05g
Riboflavin	0.05g
Folic acid	0.025g
Pyridoxamine-HCl	0.025g
Biotin	12.5mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Allow natural seawater to age for 2 months. Filter sterilize. Aseptically add 100.0mL of sterile vitamin solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Oikomonas* species.

Marine Glucose Trypticase™ Yeast Extract Agar (MGTY Agar)

Composition per liter:

Agar	8.0g
Glucose	2.0g
Pancreatic digest of casein	1.0g
Yeast extract	1.0g
L-Cysteine-HCl·H ₂ O	0.5g
Seawater	750.0mL
Tris-HCl buffer (5.0 mM, pH 7.5)	50.0mL
Resazurin (0.1% solution)	1.0mL

pH 7.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks under 97% N₂ + 3% H₂. Cap with rubber stoppers and place tubes in a press. Autoclave for 15 min at 15 psi pressure–121°C with fast exhaust.

Use: For the cultivation and maintenance of *Spirochaeta isovaleric*.

Marine Glucose Trypticase™ Yeast Extract Broth (MGTY Broth)

Composition per liter:

Glucose	2.0g
Pancreatic digest of casein	1.0g
Yeast extract	1.0g
L-Cysteine-HCl·H ₂ O	0.5g
Seawater	750.0mL
Tris-HCl buffer (5.0 mM, pH 7.5)	50.0mL
Resazurin (0.1% solution)	1.0mL

pH 7.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks under 97% N₂ + 3% H₂. Cap with rubber stoppers and place tubes in a press. Autoclave for 15 min at 15 psi pressure–121°C with fast exhaust.

Use: For the cultivation and maintenance of *Spirochaeta isovaleric*.

Marine Methanogenium Alcohol Medium

Composition per 1003.0mL:

NaCl	21.0g
MgCl ₂ ·6H ₂ O	3.0g
NaCl	1.0g
KCl	0.5g
MgCl ₂ ·6H ₂ O	0.5g

NH ₄ Cl	0.4g
Sodium acetate·3H ₂ O	0.4g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O	0.1g
NaHCO ₃ solution	60.0mL
2-Propanol	5.0mL
Na ₂ S·9H ₂ O solution	3.0mL
Cyanocobalamin solution	1.0mL
Selenite-molybdate-tungstate solution	1.0mL
Thiamine solution	1.0mL
Trace elements solution	1.0mL
Vitamin solution	1.0mL

Trace Elements Solution:

Composition per 100.0mL:

FeSO ₄ ·7H ₂ O	1400.0mg
ZnSO ₄ ·7H ₂ O	145.0mg
CoCl ₂ ·6H ₂ O	120.0mg
MnCl ₂ ·4H ₂ O	100.0mg
NiCl ₂ ·6H ₂ O	50.0mg
H ₃ BO ₃	6.0mg
CuSO ₄ ·5H ₂ O	3.0mg
HCl (25%, w/v)	8.0mL

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Selenite-Molybdate-Tungstate Solution:

Composition per liter:

NaOH	0.2g
Na ₂ MoO ₄ ·2H ₂ O	40.0mg
Na ₂ WO ₄ ·2H ₂ O	33.0mg
Na ₂ SeO ₃ ·2H ₂ O	5.0mg

Preparation of Selenite-Molybdate-Tungstate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

NaHCO₃ Solution:

Composition per liter:

NaHCO ₃	84.0g
--------------------------	-------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:

Composition per 100.0mL:

Na ₂ S·9H ₂ O	2.5g
NaOH	1 pellet

Preparation of Na₂S·9H₂O Solution: Bring 100.0mL of distilled/deionized water to boiling. Cool to room temperature while sparging with 100%N₂. Dissolve 1 pellet of NaOH in the anaerobic water. Weigh out a little more than 2.5g of Na₂S·9H₂O. Briefly rinse the crystals in distilled/deionized water. Dry the crystals by blotting on paper towels or filter paper. Add 2.5g of washed Na₂S·9H₂O crystals to 100.0mL of anaerobic NaOH solution. Distribute into serum bottles fitted with butyl rubber stoppers and aluminum seals. Do not grease stoppers. Pressurize to 60kPa with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Store at room temperature in an anaerobic chamber.

Preparation of 2-Propanol: Filter sterilize 10.0mL of 2-propanol. Sparge with 100% N₂.

Vitamin Solution:**Composition** per liter:

Sodium 2-mercaptoethanesulfonate.....	0.25g
Pyridoxine-HCl.....	0.15g
Calcium pantothenate.....	0.1g
Nicotinic acid.....	0.1g
<i>p</i> -Aminobenzoic acid.....	40.0mg
Biotin.....	10.0mg
Potassium phosphate buffer (25mM solution, pH 7.0).....	1.0L

Preparation of Vitamin Solution: Combine components. Mix thoroughly. Filter sterilize. Sparge with 100% N₂.

Thiamine Solution:**Composition** per liter:

Thiamine-HCl.....	0.1g
Sodium phosphate buffer (0.1M solution, pH 3.6).....	1.0L

Preparation of Thiamine Solution: Combine components. Mix thoroughly. Filter sterilize. Sparge with 100% N₂.

Cyanocobalamin Solution:**Composition** per liter:

Cyanocobalamin.....	50.0mg
---------------------	--------

Preparation of Cyanocobalamin Solution: Add cyanocobalamin to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Sparge with 100% N₂.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂. Add components, except NaHCO₃ solution, 2-propanol, Na₂S·9H₂O solution, cyanocobalamin solution, selenite-molybdate-tungstate solution, thiamine solution, trace elements solution, and vitamin solution, to distilled/deionized water and bring volume to 930.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 60.0mL of sterile NaHCO₃ solution, 5.0mL of sterile 2-propanol, 3.0mL of sterile Na₂S·9H₂O solution, 1.0mL of sterile cyanocobalamin solution, 1.0mL of sterile selenite-molybdate-tungstate solution, 1.0mL of sterile thiamine solution, 1.0mL of sterile trace elements solution, and 1.0mL of sterile vitamin solution. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or bottles.

Use: For the cultivation of marine *Methanogenium* species.

Marine Methanol Medium**Composition** per liter:

NaCl.....	20.0g
(NH ₄) ₂ SO ₄	2.0g
K ₂ HPO ₄	2.0g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O.....	0.3g
Methanol.....	10.0mL
Vitamin B ₁₂ solution.....	10.0mL
Trace metals solution.....	1.0mL

pH 7.0 ± 0.2 at 25°C

Vitamin B₁₂ Solution:**Composition** per 100.0mL:

Vitamin B ₁₂	10.0μg
-------------------------------	--------

Preparation of Vitamin B₁₂ Solution: Add the vitamin B₁₂ to distilled/deionized water and bring volume to 100.0mL. Adjust pH to 5. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Metals Solution:**Composition** per liter:

ZnSO ₄ ·7H ₂ O.....	1.4g
MnSO ₄ ·H ₂ O.....	0.84g
FeSO ₄ ·7H ₂ O.....	0.28g
CuSO ₄ ·5H ₂ O.....	0.25g
Na ₂ MoO ₄ ·2H ₂ O.....	0.24g
CoCl ₂ ·6H ₂ O.....	0.24g
CaCl ₂ ·2H ₂ O.....	0.15g

Preparation of Trace Metals Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components, except vitamin B₁₂ solution and methanol, to distilled/deionized water and bring volume to 980.0mL. Adjust pH to 7.0 with NaOH. Autoclave for 15 min at 15 psi pressure–121°C. Filter sterilize methanol. Aseptically add sterile vitamin B₁₂ solution and filter-sterilized methanol. Distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Methylophaga thalassica*.

Marine MethyloTroph Agar**Composition** per 1003.0mL:

Agarose.....	12.0g
Bis (2-hydroxyethyl) aminotris (hydroxy-methyl) methane.....	2.0g
KH ₂ PO ₄	0.14g
Ferric ammonium citrate.....	0.06g
Methanol.....	2.0mL
Vitamin B ₁₂ solution.....	1.0mL

pH 7.4 ± 0.2 at 25°C

Vitamin B₁₂ Solution:**Composition** per 100.0mL:

Vitamin B ₁₂	0.1mg
-------------------------------	-------

Preparation of Vitamin Solution: Add vitamin B₁₂ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Store at 5°C.

Preparation of Medium: Add components, except methanol and vitamin B₁₂ solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.4. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 2.0mL of filter-sterilized methanol and 1.0mL of sterile vitamin B₁₂ solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Alteromonas* species, *Methylophaga marina*, *Methylophaga thalassica*, and *Methylophilus* species.

Marine MethyloTroph Broth**Composition** per 1003.0mL:

Bis (2-hydroxyethyl) aminotris (hydroxy-methyl) methane.....	2.0g
KH ₂ PO ₄	0.14g
Ferric ammonium citrate.....	0.06g
Methanol.....	2.0mL
Vitamin B ₁₂ solution.....	1.0mL

pH 7.4 ± 0.2 at 25°C

Vitamin B₁₂ Solution:**Composition** per 100.0mL:

Vitamin B ₁₂	0.1mg
-------------------------------	-------

Preparation of Vitamin Solution: Add vitamin B₁₂ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Store at 5°C.

Preparation of Medium: Add components, except methanol and vitamin B₁₂ solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.4. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 2.0mL of filter-sterilized methanol and 1.0mL of sterile vitamin B₁₂ solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Alteromonas* species, *Methylophaga marina*, *Methylophaga thalassica*, and *Methylophilus* species.

Marine Oxidation Fermentation HiVeg Medium (MOF HiVeg Medium)

Composition per liter:

NaCl	9.7g
MnCl ₂	4.4g
Agar	3.0g
Na ₂ SO ₄	1.6g
Plant hydrolysate	1.0g
CaCl ₂	0.9g
(NH ₄) ₂ SO ₄	0.5g
Tris hydroxymethyl aminomethane	0.5g
KCl	0.275g
Yeast extract	0.1g
NaHCO ₃	0.08g
KBr	0.04g
SrCl ₂	0.017g
H ₃ BO ₃	0.011g
Phenol Red	0.01g
Na ₂ HPO ₄	4.0mg
Sodium silicate	2.0mg
NaI	1.2mg
NH ₄ NO ₃	0.8mg

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the differentiation of marine bacteria on the basis of fermentative and oxidative metabolism of carbohydrates.

Marine Peptone Succinate Salts Medium (PSS Medium)

Composition per liter:

Peptone	10.0g
Succinic acid	1.0g
(NH ₄) ₂ SO ₄	1.0g
MgSO ₄ ·7H ₂ O	1.0g
FeCl ₃ ·6H ₂ O	2.0mg
MnSO ₄ ·H ₂ O	2.0mg
Synthetic seawater	1.0L

pH 6.8 ± 0.2 at 25°C

Synthetic Seawater:

Composition per liter:

NaCl	27.5g
MgCl ₂	5.0g

MgSO ₄ ·7H ₂ O	2.0g
KCl	1.0g
CaCl ₂	0.5g
FeSO ₄	1.0mg

Preparation of Synthetic Seawater: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to 1.0L of synthetic seawater. Mix thoroughly. Gently heat while stirring and bring to boiling. Adjust pH to 6.8 with KOH. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Oceanospirillum beijerinckii* and *Oceanospirillum multiglobuliferum*.

Marine Peptone Yeast Medium with Magnesium Sulfate

Composition per liter:

NaCl	20.0g
Peptone	10.0g
MgSO ₄ ·7H ₂ O	2.0g
(NH ₄) ₂ SO ₄	2.0g
Yeast extract	1.0g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Oceanospirillum pusillum*.

Marine Pseudomonas Medium

Composition per liter:

Agar	15.0g
Nutrient broth	8.0g
Yeast extract	5.0g
Salt solution	1.0L

Salt Solution:

Composition per liter:

NaCl	12.86g
MgCl ₂	2.48g
KCl	0.75g
CaCl ₂	0.56g
Fe(SO ₄) ₂ (NH ₄) ₂	0.048g

Preparation of Salt Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to 1.0L of salt solution. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Alteromonas haloplanktis*.

Marine Rhodococcus Medium

Composition per liter:

Yeast extract	10.0g
Malt extract	4.0g
Glucose	4.0g
Seawater	750.0mL

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Rhodococcus marinonascens*.

Marine *Rhodopseudomonas* Medium

Composition per liter:

NaCl	30.4g
Yeast extract	1.0g
Disodium succinate	1.0g
KH ₂ PO ₄	0.5g
MgSO ₄ ·7H ₂ O	0.4g
NH ₄ Cl	0.4g
CaCl ₂ ·2H ₂ O	0.05g
Ferric citrate (0.1% solution)	5.0mL
Trace elements solution SL-6	1.0mL
Ethanol	0.5mL

pH 6.8 ± 0.2 at 25°C

Trace Elements Solution SL-6:

Composition per liter:

H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
MnCl ₂ ·4H ₂ O	0.03g
Na ₂ MoO ₄ ·H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 3.4.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Rhodopseudomonas marina*.

Marine *Rhodopseudomonas* Medium

Composition per liter:

NaCl	30.0g
Peptone	2.5g
Yeast extract	2.5g

pH 7.0 ± 0.4 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into screw-capped tubes. Autoclave for 15 min at 15 psi pressure–121°C. Before inoculating, loosen the screw caps, heat the medium to drive out O₂, and screw down the cap tightly.

Use: For the cultivation of *Rhodopseudomonas marina*.

Marine Salts Medium

Composition per liter:

NaCl	81.0g
Yeast extract	10.0g
MgSO ₄	9.6g

MgCl ₂	7.0g
Proteose peptone No.3	5.0g
KCl	2.0g
Glucose	1.0g
CaCl ₂	0.36g
NaHCO ₃	0.06g
NaBr	0.026g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of marine bacteria.

Marine Spirochete Medium (DSMZ Medium 1008)

Composition per liter:

Trypticase peptone	2.0g
Yeast extract	1.0g
Na-thioglycolate	1.0g
Resazurin	0.5mg
Charcoal-filtered, natural seawater	800.0mL
Cellobiose solution	20.0mL

pH 7.5 ± 0.2 at 25°C

Cellobiose Solution:

Composition per 100.0mL:

Cellobiose	10.0g
------------------	-------

Preparation of Cellobiose Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Preparation of Medium: Add components, except thioglycolate and cellobiose solution, to seawater and bring volume to 800.0mL. Mix thoroughly. Bring volume to 980.0mL with distilled/deionized water. (Note: Bottled water from Biomaris GmbH can be used instead of filtered seawater.) Gently heat and bring to boiling. Boil for 3 min. Cool to room temperature while sparging with 100% N₂. Add the thioglycolate. Adjust pH to 7.5 with 10N NaOH. Dispense into tubes or bottles under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically and anoxically add cellobiose solution.

Use: For the cultivation of *Spirochaeta bajacaliforniensis*.

Marine Salts Medium for *Sporosarcina halophila*

Composition per liter:

Marine salts mix	100.0g
Agar	20.0g
Yeast extract	10.0g
Proteose peptone No. 3	5.0g
Glucose	1.0g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Sporosarcina halophila*.

Marine Spirochete Medium**Composition** per liter:

Cellobiose	2.0g
Peptone.....	2.0g
Yeast extract.....	1.0g
Sodium thioglycolate	1.0g
Seawater, charcoal filtered.....	800.0mL

pH 7.5 ± 0.2 at 25°C

Preparation of Medium: Add components, except sodium thioglycolate, to glass-distilled water and bring volume to 1.0L. Mix thoroughly. Bubble 100% N₂ into medium for 1.5 min. Add sodium thioglycolate. Adjust pH to 7.5 with 10N KOH. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Spirochaeta bajacaliforniensis*.

**Marine Thermococcus Medium
(DSMZ Medium 760)****Composition** per liter:

NaCl	19.45g
MgCl ₂	8.8g
Sulfur	5.0g
Peptone.....	5.0g
Na ₂ SO ₃	3.24g
CaCl ₂	1.8g
Yeast extract.....	1.0g
KCl.....	0.55g
NaHCO ₃	0.16g
Ferric citrate.....	0.1g
KBr.....	0.08g
SrCl ₂	0.03g
H ₃ BO ₃	0.02g
Na ₂ HPO ₄	8.0mg
Na ₂ SiO ₃	4.0mg
NaF.....	2.4mg
NH ₄ NO ₃	1.6mg
Na ₂ S·9H ₂ O solution	0.5mL

pH 6.0 ± 0.2 at 25°C

Na₂S·9H₂O Solution:**Composition** per 10.0mL:

Na ₂ S·9H ₂ O	1.0g
---	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Neutralize to pH 7.0 with sterile HCl.

Preparation of Medium: Add components, except sulfur and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter through normal filter paper. An iron sediment will collect in the filter. Gently heat while stirring and bring to boiling. Boil for 5 min. Cool under an anaerobic gas mixture of N₂. Adjust pH to 6.0. Distribute the medium into Hungate tubes or serum bottles containing finely divided sulfur (0.5% w/v). Seal the tubes or bottles under the same anaerobic gas used when cooling the medium. Sterilize the medium at 100°C for 3 hr on 3 consecutive days. Reduce the medium by adding 10% neutralized Na₂S·9H₂O solution to a final concentration of 0.05%. The medium should not give a heavy black precipitate; if it does the iron sediment was not adequately removed by filtering in the initial stages and the medium should be made again, making sure that the iron is removed by filtering.

Use: For the cultivation and maintenance of *Thermococcus aegaeus* DSM 12767.

**Marine Thermococcus Medium
(DSMZ Medium 760)****Composition** per liter:

Use: For the cultivation and maintenance of *Thermococcus litoralis* DSM 5473, *Thermococcus litoralis* 5474, *Thermococcus fumicolans* DSM 12820, and *Thermococcus sibiricus* DSM 12597.

Marinithermus hydrothermalis Medium (DSMZ Medium 973)

Composition per liter:

NaCl	30.0g
MgCl ₂ ·6H ₂ O	4.18g
MgSO ₄ ·7H ₂ O	3.4g
Yeast extract	1.0g
Tryptone	1.0g
KCl	0.33g
NH ₄ Cl	0.25g
K ₂ HPO ₄	0.14g
CaCl ₂ ·2H ₂ O	0.14g
Fe(NH ₄) ₂ (SO ₄) ₂ ·6H ₂ O	10.0mg
NiCl ₂ ·6H ₂ O	0.5mg
Na ₂ Se ₃ ·5H ₂ O	0.5mg
Trace elements solution	10.0mL

pH 7.0 ± 0.2 at 25°C

Trace Elements Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O	3.0g
Nitrilotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·2H ₂ O	0.5g
CoSO ₄ ·7H ₂ O	0.18g
ZnSO ₄ ·7H ₂ O	0.18g
CaCl ₂ ·2H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g
NiCl ₂ ·6H ₂ O	0.025g
KAl(SO ₄) ₂ ·12H ₂ O	0.02g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·4H ₂ O	0.01g
CuSO ₄ ·5H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O	0.3mg

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Marinithermus hydrothermalis*.

Marinitoga Medium (DSMZ Medium 904)

Composition per 1045.0mL:

Sea salts	30.0g
PIPES	6.0g
Yeast extract	1.0g
Tryptone	1.0g
Resazurin	0.5mg
Glucose solution	25.0mL
Na ₂ S·9H ₂ O solution	10.0mL
L-Cysteine solution	10.0mL

pH 7.0 ± 0.2 at 25°C

Glucose Solution:

Composition per 25.0mL:

Glucose	2.5g
---------	------

Preparation of Glucose Solution: Add sucrose to distilled/deionized water and bring volume to 25.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

L-Cysteine Solution:

Composition per 10.0mL:

L-Cysteine-HCl·H₂O 0.5g

Preparation of L-Cysteine Solution: Add L-cysteine-HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na₂S·9H₂O 0.5g

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare and dispense medium under 100% N₂. Add components, except glucose solution, L-cysteine-HCl·H₂O solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Distribute into anaerobe tubes or bottles. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add per liter, 50.0mL glucose solution, 10.0mL L-cysteine-HCl·H₂O solution, and 10.0mL Na₂S·9H₂O. Mix thoroughly. The final pH should be 7.0.

Use: For the cultivation of *Marinitoga camini* and *Caloranaerobacter azorensis*.

**Marinitoga piezophila Medium
(DSMZ Medium 945)**

Composition per liter:

NaCl 30.0g
Yeast extract 5.0g
Trypticase™ 5.0g
MES 1.95g
NH₄Cl 1.0g
Na-acetate 0.83g
K₂HPO₄ 0.3g
KH₂PO₄ 0.3g
MgCl₂·6H₂O 0.2g
CaCl₂·2H₂O 0.1g
KCl 0.1g
Resazurin 0.5mg
Maltose solution 100.0mL
Na₂S·9H₂O solution 10.0mL
Cysteine solution 10.0mL

pH 6.0 ± 0.2 at 25°C

Maltose Solution:

Composition per 100.0mL:

Maltose 4.96g

Preparation of Maltose Solution: Add maltose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Cysteine Solution:

Composition per 10.0mL:

L-Cysteine-HCl·H₂O 0.3g

Preparation of L-Cysteine Solution: Add L-cysteine-HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly.

ly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na₂S·9H₂O 0.3g

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Sparge with N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Store anaerobically.

Preparation of Medium: Add components, except maltose solution, NaHCO₃ solution, and Na₂S·9H₂O solution, to 880.0mL distilled/deionized water. Mix thoroughly. Sparge for 30 min with 100% N₂. Adjust pH to 6.0 with concentrated NaOH. Distribute under 100% N₂ into anaerobic tubes or bottles. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically and anaerobically add 100.0mL sterile maltose solution, 10.0mL sterile Na₂S·9H₂O solution, and 10.0mL sterile cysteine solution per liter medium. Mix thoroughly.

Use: For the cultivation of *Marinitoga piezophila*.

**Marinitoga piezophila Medium
(DSMZ Medium 945)**

Composition per liter:

NaCl 30.0g
Sulfur 10.0g
Yeast extract 5.0g
Trypticase™ 5.0g
MES 1.95g
NH₄Cl 1.0g
Na-acetate 0.83g
K₂HPO₄ 0.3g
KH₂PO₄ 0.3g
MgCl₂·6H₂O 0.2g
CaCl₂·2H₂O 0.1g
KCl 0.1g
Resazurin 0.5mg
Na₂S·9H₂O solution 10.0mL
Cysteine solution 10.0mL

pH 6.0 ± 0.2 at 25°C

Cysteine Solution:

Composition per 10.0mL:

L-Cysteine-HCl·H₂O 0.3g

Preparation of L-Cysteine Solution: Add L-cysteine-HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na₂S·9H₂O 0.3g

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Sparge with N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Store anaerobically.

Preparation of Sulfur: Sterilize sulfur by steaming for 3 hr on each of 3 successive days.

Preparation of Medium: Add components, except sulfur, cysteine solution, and Na₂S·9H₂O solution, to 980.0mL distilled/deionized water. Mix thoroughly. Sparge for 30 min with 100% N₂. Adjust pH to 6.0

with concentrated NaOH. Distribute under 100% N₂ into anaerobic tubes or bottles containing appropriate amounts of sterile sulfur (1g steam-sterilized sulfur per 100mL medium). Autoclave for 20 min at 110°C. Cool to room temperature. Aseptically and anaerobically add 10.0mL sterile Na₂S·9H₂O solution and 10.0mL sterile cysteine solution per liter medium. Mix thoroughly.

Use: For the cultivation of *Marinitoga piezophila*.

Marinobacter lutaensis Medium (DSMZ Medium 1066)

Composition per liter:

Peptone	4.0g
Yeast extract	2.0g
NaCl	25.0g
MgCl ₂ ·6H ₂ O	2.0g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Distribute into tubes or flasks. Gently heat while stirring and bring to boiling. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Marinobacter lutaensis*.

Marinobacter Medium (DSMZ Medium 941)

Composition per liter:

NaCl	6.0g
NH ₄ Cl	1.0g
Na-acetate	1.0g
MgSO ₄ ·7H ₂ O	0.2g
KCl	0.1g
KH ₂ PO ₄	0.1g
Peptone	0.1g
CaCl ₂ ·2H ₂ O	0.04g
Trace elements solution SL-7	1.0mL
Vitamin solution, concentrated	1.0mL

pH 7.2 ± 0.2 at 25°C

Trace Elements Solution SL-7:

Composition per liter:

FeCl ₂ ·7H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	62.0mg
CuCl ₂ ·2H ₂ O	17.0mg
HCl (25% solution)	6.5mL

Preparation of Trace Elements Solution SL-7: Add FeCl₂·7H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Vitamin Solution, Concentrated:

Composition per 100.0mL:

Pyridoxine-HCl	10.0mg
Thiamine-HCl·2H ₂ O	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
D-Ca-pantothenate	5.0mg

<i>p</i> -Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution, Concentrated: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Marionobacter* sp.

Marinobacter Medium (DSMZ Medium 970)

Composition per liter:

NaCl	11.7g
MgSO ₄	7.85g
TRIS	6.0g
Yeast extract	5.0g
Peptone	5.0g
NH ₄ Cl	3.0g
CaCl ₂	1.47g
KCl	0.74g

pH 7.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Marinobacter* sp.

Marinococcus albus Agar (LMG Medium 212)

Composition per liter:

NaCl	81.0g
Agar	15.0g
Yeast	10.0g
MgSO ₄ ·7H ₂ O	9.6g
MgCl ₂ ·6H ₂ O	7.0g
Proteose peptone	5.0g
KCl	2.0g
Glucose	1.0g
CaCl ₂	0.36g
NaB	226.0mg
NaHCO ₃	60.0mg

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Marinococcus albus*.

Marinococcus albus Medium

Composition per liter:

NaCl	81.0g
Yeast extract	10.0g
MgSO ₄ ·7H ₂ O	9.6g
MgCl ₂ ·6H ₂ O	7.0g
Proteose peptone No. 3	5.0g

KCl.....	2.0g
Glucose	1.0g
CaCl ₂	0.36g
NaHCO ₃	0.06g
NaBr.....	0.026g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Marinococcus albus*.

***Marinomonas vaga* Medium**
See: Nutrient Agar with 3% NaCl

***Marinomonas vaga* Medium**
(DSMZ Medium 617)

Composition per liter:

NaCl.....	30.0g
Agar.....	15.0g
Beef extract.....	10.0g
Peptone.....	10.0g

pH 7.1 ± 0.2 at 25°C

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Marinomonas communis*=*Alteromonas communis* and *Marinomonas vaga*=*Alteromonas vaga*.

Martin-Lewis Agar

Composition per liter:

Agar.....	12.0g
Hemoglobin.....	10.0g
Pancreatic digest of casein.....	7.5g
Selected meat peptone.....	7.5g
NaCl.....	5.0g
K ₂ HPO ₄	4.0g
Cornstarch.....	1.0g
KH ₂ PO ₄	1.0g
Supplement solution.....	10.0mL
VCAT inhibitor.....	10.0mL

pH 7.2 ± 0.22 at 25°C

Source: Martin-Lewis agar is available as a prepared medium from BD Diagnostic Systems.

Supplement Solution:

Composition per liter:

Glucose.....	100.0g
L-Cysteine·HCl.....	25.9g
L-Glutamine.....	10.0g
L-Cystine.....	1.1g
Adenine.....	1.0g
Nicotinamide adenine dinucleotide.....	0.25g
Vitamin B ₁₂	0.1g
Thiamine pyrophosphate.....	0.1g
Guanine·HCl.....	0.03g
Fe(NO ₃) ₃ ·6H ₂ O.....	0.02g
<i>p</i> -Aminobenzoic acid.....	0.013g
Thiamine·HCl.....	3.0mg

Source: The supplement solution IsoVitaleX[®] enrichment is available from BD Diagnostic Systems. This enrichment may be replaced by supplement VX from BD Diagnostic Systems.

Preparation of Supplement Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

VCAT Inhibitor:

Composition per 10.0mL:

Colistin.....	7.5mg
Trimethoprim lactate.....	5.0mg
Vancomycin.....	4.0mg
Anisomycin.....	0.02g

Preparation of VCAT Inhibitor: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except supplement solution and VCAT inhibitor, to distilled/deionized water and bring volume to 980.0mL. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile supplement solution and sterile VCAT inhibitor. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the isolation and cultivation of pathogenic *Neisseria* from specimens containing mixed flora of bacteria and fungi.

Martin-Lewis Agar, Enriched

Composition per liter:

Agar.....	12.0g
Pancreatic digest of casein.....	7.5g
Selected meat peptone.....	7.5g
NaCl.....	5.0g
K ₂ HPO ₄	4.0g
Cornstarch.....	1.0g
KH ₂ PO ₄	1.0g
<i>Sarcina lutea</i> suspension.....	20.0mL
Horse serum, inactivated.....	20.0mL
Supplement solution.....	10.0mL
PCAT inhibitor.....	10.0mL

pH 7.2 ± 0.22 at 25°C

Source: The supplement solution (IsoVitaleX[®] enrichment) is available from BD Diagnostic Systems. This enrichment may be replaced by supplement VX from BD Diagnostic Systems.

***Sarcina lutea* Suspension:**

Composition per 20.0mL:

<i>Sarcina lutea</i> FDA 1001.....	10 ⁶ –10 ⁷ cells
------------------------------------	--

Preparation of *Sarcina lutea* Suspension: Aseptically wash the growth of 24-hr cultures of *Sarcina lutea* FDA 1001 cells from Thayer-Martin plates with sterile soybean casein digest broth. Standardize the suspension by adding additional sterile tryptic soy broth to yield 40% light transmission at 530nm wavelength.

Soybean Casein Digest Broth:

Composition per liter:

Pancreatic digest of casein.....	17.0g
NaCl.....	5.0g
Papaic digest of soybean meal.....	3.0g
K ₂ HPO ₄	2.5g
Glucose.....	2.5g

pH 7.3 ± 0.2 at 25°C

Preparation of Soybean Casein Digest Broth: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Supplement Solution:

Composition per liter:

Glucose	100.0g
L-Cysteine-HCl	25.9g
L-Glutamine	10.0g
L-Cystine	1.1g
Adenine	1.0g
Nicotinamide adenine dinucleotide	0.25g
Vitamin B ₁₂	0.1g
Thiamine pyrophosphate	0.1g
Guanine-HCl	0.03g
Fe(NO ₃) ₃ ·6H ₂ O	0.02g
p-Aminobenzoic acid	0.013g
Thiamine-HCl	3.0mg

Preparation of Supplement Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

PCAT Inhibitor:

Composition per 10.0mL:

Anisomycin	0.02g
Colistin	7.5mg
Trimethoprim lactate	5.0mg
Penicillin G	25,000U

Preparation of PCAT Inhibitor: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components—except *Sarcina lutea* suspension, horse serum, supplement solution, and PCAT inhibitor—to distilled/deionized water and bring volume to 940.0mL. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 20.0mL of sterile *Sarcina lutea* suspension, 20.0mL of sterile horse serum, 10.0mL of supplement solution, and 10.0mL of sterile PCAT inhibitor. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the isolation and cultivation of pathogenic *Neisseria*, especially penicillinase-producing strains, from specimens containing mixed flora of bacteria and fungi.

Mating Agar

Composition per liter:

Agar	40.0g
Sucrose	10.0g
Xylose	2.0g
KH ₂ PO ₄	1.0g
MgSO ₄	0.5g
Yeast extract	0.5g
CaCl ₂	0.1g
NaCl	0.1g
Biotin	5.0μg

pH 5.7 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 5.7. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Filobasidiella neoformans*.

Maximum Recovery Diluent

Composition per liter:

NaCl	8.5g
Peptone	1.0g

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: This diluent is a physiologically isotonic and protective medium for maximal recovery of microorganisms from a variety of sources.

M-Azide HiVeg Broth Base with Triphenyltetrazolium Chloride

Composition per liter:

Saccharose	100.0g
Plant hydrolysate No. 1	40.0g
Yeast extract	10.0g
K ₂ HPO ₄	4.0g
Glucose	2.0g
NaN ₃	0.4g
Triphenyltetrazolium chloride solution	5.0mL

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Caution: Sodium azide is toxic. Azides also react with metals and disposal must be highly diluted.

Triphenyltetrazolium Chloride Solution:

Composition per 5.0mL:

Triphenyltetrazolium chloride	0.1g
-------------------------------	------

Preparation of Triphenyltetrazolium Chloride Solution: Add triphenyltetrazolium chloride to distilled/deionized water and bring volume to 5.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except triphenyltetrazolium chloride solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 5.0mL triphenyltetrazolium chloride solution. Mix thoroughly. Aseptically distribute into tubes.

Use: For the detection and enrichment of fecal streptococci in water and sewage by the membrane filtration method.

MB Medium (DSMZ Medium 924)

Composition per liter:

NaCl	10.0g
NaHCO ₃	4.0g
Yeast extract	2.0g
Trypticase™	2.0g
NH ₄ Cl	1.0g
MgCl ₂ ·6H ₂ O	1.0g
KCl	0.5g
CaCl ₂ ·2H ₂ O	0.4g

K ₂ HPO ₄	0.4g
Resazurin	0.5mg
Sodium formate solution.....	50.0mL
Na ₂ S·9H ₂ O solution	10.0mL
Cysteine-HCl·H ₂ O solution	10.0mL
Vitamin solution.....	10.0mL
Trace elements solution	10.0mL
Selenite-tungstate solution.....	1.0mL
pH 7.2 ± 0.2 at 25°C	

Cysteine Solution:**Composition per 10.0mL:**

L-Cysteine-HCl·H ₂ O	0.25g
---------------------------------------	-------

Preparation of Cysteine Solution: Add L-cysteine-HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Sodium Formate Solution:**Composition per 50.0mL:**

Na-formate	6.8g
------------------	------

Preparation of Sodium Formate Solution: Add sodium formate to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Selenite-Tungstate Solution**Composition per liter:**

NaOH	0.5g
Na ₂ WO ₄ ·2H ₂ O	4.0mg
Na ₂ SeO ₃ ·5H ₂ O	3.0mg

Preparation of Selenite-Tungstate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Na₂S·9H₂O Solution:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O	0.25g
---	-------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Sparge with N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Store anaerobically.

Trace Elements Solution:**Composition per liter:**

MgSO ₄ ·7H ₂ O	3.0g
Nitritotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·2H ₂ O	0.5g
CoSO ₄ ·7H ₂ O	0.18g
ZnSO ₄ ·7H ₂ O	0.18g
CaCl ₂ ·2H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g
NiCl ₂ ·6H ₂ O	0.025g
KAl(SO ₄) ₂ ·12H ₂ O	0.02g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·4H ₂ O	0.01g
CuSO ₄ ·5H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O	0.3mg

Preparation of Trace Elements Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Vitamin Solution:**Composition per liter:**

Pyridoxine-HCl.....	10.0mg
Thiamine-HCl·2H ₂ O.....	5.0mg
Riboflavin	5.0mg
Nicotinic acid.....	5.0mg
D-Ca-pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Lipoic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Preparation of Medium: Prepare and dispense medium under an oxygen-free 80% N₂ + 20% CO₂ gas mixture. Add components, except sodium formate solution, NaHCO₃, cysteine solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 920.0mL. Mix thoroughly. Gently heat and bring to boiling. Boil for 3 min. Cool to 25°C while sparging with 80% N₂ + 20% CO₂. Add solid NaHCO₃. Mix thoroughly. Adjust pH to 6.8–7.0. Distribute into tubes or bottles. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add per liter 50.0mL sterile sodium formate solution, 10.0mL of sterile cysteine solution, and 10.0mL of sterile Na₂S·9H₂O solution. Mix thoroughly. The final pH should be 7.2.

Use: For the cultivation of *Methanocalculus taiwanensis*, *Methanococcus voltae* (*Methanococcus voltae*), and *Methanofollis aquaemaris*.

MB Medium (DSMZ Medium 924)

Composition per liter:

NaCl	5.0g

FeSO ₄ ·7H ₂ O	0.1g
NiCl ₂ ·6H ₂ O	0.025g
KAl(SO ₄) ₂ ·12H ₂ O	0.02g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·4H ₂ O	0.01g
CuSO ₄ ·5H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O	0.3mg

Preparation of Trace Elements Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl	10.0mg
Thiamine-HCl·2H ₂ O	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
D-Ca-pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Preparation of Medium: Prepare and dispense medium under an oxygen-free 80% N₂ + 20% CO₂ gas mixture. Add components, except sodium formate solution, NaHCO₃, cysteine solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 920.0mL. Mix thoroughly. Gently heat and bring to boiling. Boil for 3 min. Cool

to 25°C while sparging with 80% N₂ + 20% CO₂. Add solid NaHCO₃. Mix thoroughly. Adjust pH to 6.8–7.0. Distribute into tubes or bottles. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add per liter 50.0mL sterile sodium formate solution, 10.0mL of sterile cysteine solution, and 10.0mL of sterile Na₂S·9H₂O solution. Mix thoroughly. The final pH should be 6.5.

Use: For the cultivation of *Methanofollis aquaemaris* DSM 14661.

MB Medium (DSMZ Medium 924)

Composition per liter:

NaCl	10.0g
NaHCO ₃	4.0g
Yeast extract	2.0g
Trypticase™	2.0g
NH ₄ Cl	1.0g
MgCl ₂ ·6H ₂ O	1.0g
KCl	0.5g
CaCl ₂ ·2H ₂ O	0.4g
K ₂ HPO ₄	0.4g
Resazurin	0.5mg
Sodium acetate solution	50.0mL
Sodium formate solution	50.0mL
Na ₂ S·9H ₂ O solution	10.0mL
Cysteine-HCl·H ₂ O solution	10.0mL
Vitamin solution	10.0mL
Trace elements solution	10.0mL
Selenite-tungstate solution	1.0mL

pH 7.2 ± 0.2 at 25°C

Cysteine Solution:

Composition per 10.0mL:

L-Cysteine·HCl·H ₂ O	0.25g
---------------------------------------	-------

Preparation of Cysteine Solution: Add L-cysteine·HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Sodium Formate Solution:

Composition per 50.0mL:

Na-formate	6.8g
------------------	------

Preparation of Sodium Formate Solution: Add sodium formate to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Sodium Acetate Solution:

Composition per 50.0mL:

Na-acetate	1.6g
------------------	------

Preparation of Sodium Acetate Solution: Add sodium acetate to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Selenite-Tungstate Solution

Composition per liter:

NaOH	0.5g
Na ₂ WO ₄ ·2H ₂ O	4.0mg
Na ₂ SeO ₃ ·5H ₂ O	3.0mg

Preparation of Selenite-Tungstate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Na₂S·9H₂O Solution:**Composition per 10.0mL:**

Na₂S·9H₂O 0.25g

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Sparge with N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Store anaerobically.

Trace Elements Solution:**Composition per liter:**

MgSO₄·7H₂O 3.0g
 Nitrilotriacetic acid 1.5g
 NaCl 1.0g
 MnSO₄·2H₂O 0.5g
 CoSO₄·7H₂O 0.18g
 ZnSO₄·7H₂O 0.18g
 CaCl₂·2H₂O 0.1g
 FeSO₄·7H₂O 0.1g
 NiCl₂·6H₂O 0.025g
 KAl(SO₄)₂·12H₂O 0.02g
 H₃BO₃ 0.01g
 Na₂MoO₄·4H₂O 0.01g
 CuSO₄·5H₂O 0.01g
 Na₂SeO₃·5H₂O 0.3mg

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Vitamin Solution:**Composition per liter:**

Pyridoxine-HCl 10.0mg
 Thiamine-HCl·2H₂O 5.0mg
 Riboflavin 5.0mg
 Nicotinic acid 5.0mg
 D-Ca-pantothenate 5.0mg
p-Aminobenzoic acid 5.0mg
 Lipoic acid 5.0mg
 Biotin 2.0mg
 Folic acid 2.0mg
 Vitamin B₁₂ 0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Preparation of Medium: Prepare and dispense medium under an oxygen-free 80% N₂ + 20% CO₂ gas mixture. Add components, except sodium acetate solution, sodium formate solution, NaHCO₃, cysteine solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 870.0mL. Mix thoroughly. Gently heat and bring to boiling. Boil for 3 min. Cool to 25°C while sparging with 80% N₂ + 20% CO₂. Add solid NaHCO₃. Mix thoroughly. Adjust pH to 6.8–7.0. Distribute into tubes or bottles. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add per liter 50.0mL sterile sodium acetate solution, 50.0mL sterile sodium formate solution, 10.0mL of sterile cysteine solution, and 10.0mL of sterile Na₂S·9H₂O solution. Mix thoroughly. The final pH should be 7.2.

Use: For the cultivation of *Methanocalculus taiwanensis* DSM 14648.

Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add per liter 50.0mL sterile sodium acetate solution, 50.0mL sterile sodium formate solution, 10.0mL of sterile cysteine solution, and 10.0mL of sterile Na₂S·9H₂O solution. Mix thoroughly. The final pH should be 7.2.

Use: For the cultivation of *Methanocalculus taiwanensis* DSM 14663.

M-BCG Yeast and Mold Agar**Composition per liter:**

Glucose	50.0g
Agar	15.0g
Biopeptone	10.0g
Yeast extract	9.0g
MgSO ₄ ·7H ₂ O	2.1g
KH ₂ PO ₄	2.0g
Diastase	0.05g

Thiamine hydrochloride	0.05g
Bromocresol Green	0.026g
pH 4.6 ± 0.2 at 25°C	

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the detection of fungi in routine analysis of beverages using the membrane filter technique.

m-Bismuth Sulfite Broth

See: **Bismuth Sulfite Broth**

M-Bismuth Sulfite Broth**Composition per liter:**

Peptic digest of animal tissue	20.0g
Bismuth sulfite indicator	16.0g
Glucose	10.0g
Plant extract	10.0g
Na ₂ HPO ₄	8.0g
FeSO ₄	0.6g
Brilliant Green	0.05g
pH 7.7 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly and heat with frequent agitation until boiling. Boil for 1 min. Do not autoclave. Cool to 45°–50°C. Mix to disperse the precipitate and aseptically distribute into sterile tubes or flasks. Use 2.0–2.2mL of medium for each membrane filter.

Use: For the selective isolation of *Salmonella typhi* and other enteric bacilli and for the detection of *Salmonella* by the membrane filter method.

M-Bismuth Sulfite HiVeg Broth**Composition per liter:**

Plant peptone	20.0g
Bismuth sulfite indicator	16.0g
Glucose	10.0g
Plant extract	10.0g
Na ₂ HPO ₄	8.0g
FeSO ₄	0.6g
Brilliant Green	0.05g
pH 7.7 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly and heat with frequent agitation until boiling. Boil for 1 min. Do not autoclave. Cool to 45°–50°C. Mix to disperse the precipitate and aseptically distribute into sterile tubes or flasks. Use 2.0–2.2mL of medium for each membrane filter.

Use: For the selective isolation of *Salmonella typhi* and other enteric bacilli and for the detection of *Salmonella* by the membrane filter method.

MBM Acetate Medium (Mineral Base Medium with Acetate)

Composition per liter:

Agar	16.0g
NaCl	5.0g
K ₂ HPO ₄	1.0g
NH ₄ H ₂ PO ₄	1.0g
Sodium acetate·3H ₂ O	1.0g
MgSO ₄ ·7H ₂ O	0.1g
Bromthymol Blue	0.01g

pH 6.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.5. Gently heat and bring to boiling. Distribute into screw-capped tubes in 3.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Allow tubes to cool in a slanted position.

Use: For determining the nutritional independence of bacteria. Bacteria that are nutritionally independent turn the medium blue.

MBM Medium

See: [Methylene Blue Milk Medium](#)

MBM Medium (Modified) (DSMZ Medium 1020)

Composition per liter:

NaNO ₃	0.2g
KH ₂ PO ₄	0.2g
NH ₄ Cl	0.2g
MgCl ₂ ·6H ₂ O	0.4g
KCl	0.2g
CaCl ₂ ·2H ₂ O	0.1g
Resazurin	1.0mg
Thiosulfate solution	10.0mL
Trace elements solution SL-4	2.0mL

pH 7.0 ± 0.2 at 25°C

Thiosulfate Solution:

Composition per 10.0mL:

Na ₂ S ₂ O ₃	2.5g
---	------

Preparation of Thiosulfate Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Trace Elements Solution SL-4:

Composition per liter:

EDTA	0.5g
FeSO ₄ ·7H ₂ O	0.2g
Trace elements solution SL-6	100.0mL

Trace Elements Solution SL-6:

Composition per liter:

MnCl ₂ ·4H ₂ O	0.5g
H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
Na ₂ MoO ₄ ·2H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Trace Elements Solution SL-4: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Preparation of Medium: Add components, except thiosulfate solution and trace elements SL-4 solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Sparge solution with 80% N₂ and 20% CO₂ gas mixture to make it anoxic. Distribute into culture vessels (e.g., 20mL in 120mL serum bottles) under a gas atmosphere of 80% N₂ and 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Prior to inoculation, add the trace elements solution and thiosulfate solution to the medium. Adjust pH to 7.0. After inoculation, pressurize culture vessels to 0.5 bar overpressure with 100% H₂ gas.

Use: For the cultivation of *Sulfuricurvum kujiense*.

m-Brilliant Green Broth See: [Brilliant Green Broth](#)

M-Brilliant Green Broth

Composition per liter:

Proteose peptone	20.0g
Lactose	20.0g
Saccharose	20.0g
NaCl	10.0g
Yeast extract	6.0g
Phenol Red	0.16g
Brilliant Green	0.025g

pH 6.9 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes containing inverted Durham tubes, in 10.0mL amounts for testing 1.0mL or less of sample. Gently heat and bring to boiling. Do not autoclave. Cool the broth rapidly. Medium is sensitive to light.

Use: For the detection of coliform microorganisms in foods, dairy products, water, and wastewater, as well as in other materials of sanitary importance.

M-Brilliant Green HiVeg Broth

Composition per liter:

Plant peptone No. 3	20.0g
Lactose	20.0g
Saccharose	20.0g
NaCl	10.0g
Yeast extract	6.0g
Phenol Red	0.16g
Brilliant Green	0.025g

pH 6.9 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes containing inverted Durham tubes, in 10.0mL amounts for testing 1.0mL or less of sample. Gently heat and bring to boiling. Do not autoclave. Cool the broth rapidly. Medium is sensitive to light.

Use: For the detection of coliform microorganisms in foods, dairy products, water, and wastewater, as well as in other materials of sanitary importance.

M-Broth, HiVeg

Composition per liter:

Plant hydrolysate.....	12.5g
K ₂ HPO ₄	5.0g
NaCl.....	5.0g
Sodium citrate.....	5.0g
Yeast extract.....	5.0g
D-Mannose.....	2.0g
MgSO ₄	0.8g
MnCl ₂	0.14g
FeSO ₄	0.04g
Polysorbate 80.....	0.75mL

pH 7.0 ± 0.22 at 25°C

Source: This medium, without polysorbate 80, is available as a pre-mixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the detection of *Salmonella* in dried foods and feeds.

MCA

Composition per liter:

Carrots.....	200.0g
Agar.....	15.0g

Preparation of Medium: Peel and slice fresh carrots. Place carrots in a blender. Add 500.0mL of distilled/deionized water. Blend for 40 sec at high speed. Filter through four layers of cheesecloth. Squeeze out juice from the residue. Bring volume of filtrate to 1.0L with distilled/deionized water. Add agar. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Phytophthora megasperma*.

McBride Agar, Modified

Composition per liter:

Agar.....	15.0g
Glycine anhydride.....	10.0g
Tryptose.....	10.0g
NaCl.....	5.0g
Beef extract.....	3.0g
Phenylethanol.....	2.5g
LiCl.....	0.5g
Cycloheximide solution.....	10.0mL

pH 7.3 ± 0.2 at 25°C

Cycloheximide Solution:

Composition per 10.0mL:

Cycloheximide.....	0.2g
--------------------	------

Preparation of Cycloheximide Solution: Add cycloheximide to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: Add components, except cycloheximide solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile cycloheximide solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation of *Listeria monocytogenes* from dairy products.

McBride *Listeria* Agar

Composition per liter:

Agar.....	15.0g
Glycine.....	10.0g
Pancreatic digest of casein.....	5.0g
Peptic digest of animal tissue.....	5.0g
NaCl.....	5.0g
Beef extract.....	3.0g
Phenylethyl alcohol.....	2.5g
LiCl.....	0.5g

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the selective isolation of *Listeria monocytogenes* from clinical and nonclinical specimens containing mixed flora.

McBride *Listeria* HiVeg Agar Base with Blood and Selective Supplement

Composition per liter:

Agar.....	15.0g
Glycine anhydride.....	10.0g
Plant hydrolysate No. 1.....	10.0g
NaCl.....	5.0g
Plant extract.....	3.0g
Phenyl ethanol.....	2.5g
LiCl.....	0.5g
Sheep blood, defibrinated.....	50.0mL
Selective supplement solution.....	10.0mL

pH 7.3 ± 0.2 at 25°C

Source: This medium, without blood or selective supplement solution, is available as a premixed powder from HiMedia.

Caution: LiCl is harmful. Avoid bodily contact and inhalation of vapors. On contact with skin wash with plenty of water immediately.

Selective Supplement Solution:

Composition per 10.0mL:

Cycloheximide.....	0.2g
--------------------	------

Preparation of Selective Supplement Solution: Add cycloheximide to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: Add components, except blood and selective supplement solution, to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Gently heat and bring to boiling.

Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 50.0mL defibrinated blood and 10.0mL selective supplement solution. Mix thoroughly. Pour into sterile Petri dishes or leave in tubes.

Use: For the selective isolation of *Listeria monocytogenes* from clinical and nonclinical specimens containing mixed flora.

McBride *Listeria* HiVeg Agar Base, Modified, with Blood and Selective Supplement (Modified McBride *Listeria* HiVeg Agar Base)

Composition per liter:

Agar	15.0g
Glycine anhydride	10.0g
NaCl	5.0g
Plant extract	3.0g
Phenyl ethanol	2.5g
LiCl	0.5g
Sheep blood, defibrinated	50.0mL
Selective supplement solution	10.0mL

pH 7.3 ± 0.2 at 25°C

Source: This medium, without blood or selective supplement solution, is available as a premixed powder from HiMedia.

Caution: LiCl is harmful. Avoid bodily contact and inhalation of vapors. On contact with skin wash with plenty of water immediately.

Selective Supplement Solution:

Composition per 10.0mL:

Cycloheximide	0.2g
---------------------	------

Preparation of Selective Supplement Solution: Add cycloheximide to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: Add components, except blood and selective supplement solution, to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 50.0mL defibrinated blood and 10.0mL selective supplement solution. Mix thoroughly. Pour into sterile Petri dishes or leave in tubes.

Use: For the selective isolation of *Listeria monocytogenes* from clinical and nonclinical specimens containing mixed flora.

McCarthy Agar

Composition per liter:

Cornstarch	10.0g
Naladixic acid	0.015g
Colistin	0.01g
GC agar base	1.0L

pH 7.2 ± 0.2 at 25°C

GC Agar Base:

Composition per liter:

Agar	10.0g
Pancreatic digest of casein	7.5g
Peptic digest of animal tissue	7.5g
NaCl	5.0g
K ₂ HPO ₄	4.0g

Cornstarch	1.0g
KH ₂ PO ₄	1.0g

Preparation of GC Agar Base: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: To 1.0L of GC agar base, add the cornstarch. Gently heat while stirring to dissolve. Add the naladixic acid and colistin. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and differentiation of *Gardnerella vaginalis* (*Haemophilus vaginalis*, *Corynebacterium vaginale*) from genitourinary specimens. Bacteria that can utilize starch appear as colonies surrounded by a clear zone.

McClung Carbon-Free Broth

Composition per liter:

NaNO ₃	2.0g
K ₂ HPO ₄	0.8g
MgSO ₄ ·7H ₂ O	0.5g
FeCl ₃	0.01g
MnCl ₂ ·4H ₂ O	8.0mg
ZnSO ₄	2.0mg

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat without boiling until salts dissolve. Cool to 25°C. Adjust pH to 7.2. Filter sterilize.

Use: For use as a basal medium in determining the carbon assimilation capabilities of microorganisms.

McClung-Toabe Agar

Composition per liter:

Proteose peptone	40.0g
Agar	25.0g
Na ₂ HPO ₄	5.0g
Glucose	2.0g
NaCl	2.0g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.1g
Egg yolk emulsion, 50%	100.0mL

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Egg Yolk Emulsion, 50%:

Composition per 100.0mL:

Chicken egg yolks	11
Whole chicken egg	1
NaCl (0.9% solution)	50.0mL

Preparation of Egg Yolk Emulsion, 50%: Soak eggs with 1:100 dilution of saturated mercuric chloride solution for 1 min. Crack eggs and separate yolks from whites. Mix egg yolks with 1 chicken egg. Beat to form emulsion. Measure 50.0mL of egg yolk emulsion and add to 50.0mL of 0.9% NaCl solution. Mix thoroughly. Filter sterilize. Warm to 45°–50°C.

Preparation of Medium: Add components, except egg yolk emulsion, 50%, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Asepti-

cally add 100.0mL of sterile egg yolk emulsion, 50%. Mix thoroughly. Pour into sterile Petri dishes in 15.0mL volumes.

Use: For the isolation and cultivation of *Clostridium perfringens* in foods.

McClung-Toabe Agar, Modified

Composition per liter:

Proteose peptone No. 2	40.0g
Agar	20.0g
Na ₂ HPO ₄	5.0g
Glucose	2.0g
NaCl	2.0g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.1g
Egg yolk emulsion, 50%	100.0mL
Hemin solution	1.0mL
pH 7.6 ± 0.2 at 25°C	

Egg Yolk Emulsion, 50%:

Composition per 100.0mL:

Chicken egg yolks	11
Whole chicken egg	1
NaCl (0.9% solution)	50.0mL

Preparation of Egg Yolk Emulsion, 50%: Soak eggs with 1:100 dilution of saturated mercuric chloride solution for 1 min. Crack eggs and separate yolks from whites. Mix egg yolks with 1 chicken egg. Beat to form emulsion. Measure 50.0mL of egg yolk emulsion and add to 50.0mL of 0.9% NaCl solution. Mix thoroughly. Filter sterilize. Warm to 45°–50°C.

Hemin Solution:

Composition per 100.0mL:

Hemin	0.5g
NaOH (1N solution)	20.0mL

Preparation of Hemin Solution: Add hemin to 20.0mL of 1N NaOH solution. Mix thoroughly. Bring volume to 100.0mL with distilled/deionized water.

Preparation of Medium: Add components, except egg yolk emulsion, 50%, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 100.0mL of sterile egg yolk emulsion, 50%. Mix thoroughly. Pour into sterile Petri dishes in 20.0mL volumes.

Use: For the cultivation of a wide variety of anaerobic bacteria. For the differentiation of anaerobic bacteria based on lecithinase production and lipase production. Bacteria that produce lecithinase appear as colonies surrounded by a zone of insoluble precipitate. Bacteria that produce lipase appear as colonies with a pearly iridescent sheen.

McClung-Toabe Agar, Modified

Composition per liter:

Proteose peptone No. 2	40.0g
Agar	20.0g
Na ₂ HPO ₄	5.0g
Glucose	2.0g
NaCl	2.0g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.1g
Neomycin	0.1g

Egg yolk emulsion, 50%	100.0mL
Hemin solution	1.0mL
pH 7.6 ± 0.2 at 25°C	

Egg Yolk Emulsion, 50%:

Composition per 100.0mL:

Chicken egg yolks	11
Whole chicken egg	1
NaCl (0.9% solution)	50.0mL

Preparation of Egg Yolk Emulsion, 50%: Soak eggs with 1:100 dilution of saturated mercuric chloride solution for 1 min. Crack eggs and separate yolks from whites. Mix egg yolks with 1 chicken egg. Beat to form emulsion. Measure 50.0mL of egg yolk emulsion and add to 50.0mL of 0.9% NaCl solution. Mix thoroughly. Filter sterilize. Warm to 45°–50°C.

Hemin Solution:

Composition per 100.0mL:

Hemin	0.5g
NaOH (1N solution)	20.0mL

Preparation of Hemin Solution: Add hemin to 20.0mL of 1N NaOH solution. Mix thoroughly. Bring volume to 100.0mL with distilled/deionized water.

Preparation of Medium: Add components, except egg yolk emulsion, 50%, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 100.0mL of sterile egg yolk emulsion, 50%. Mix thoroughly. Pour into sterile Petri dishes in 20.0mL volumes.

Use: For the cultivation of *Clostridium* species. For the differentiation of *Clostridium* species based on lecithinase production and lipase production. Bacteria that produce lecithinase appear as colonies surrounded by a zone of insoluble precipitate. Bacteria that produce lipase appear as colonies with a pearly iridescent sheen.

McClung-Toabe Agar, Modified

Composition per liter:

Proteose peptone No. 2	20.0g
Agar	20.0g
Yeast extract	5.0g
Pancreatic digest of casein	5.0g
NaCl	5.0g
Sodium thioglycolate	1.0g
Egg yolk emulsion, 50%	80.0mL
pH 7.6 ± 0.2 at 25°C	

Egg Yolk Emulsion, 50%:

Composition per 100.0mL:

Chicken egg yolks	11
Whole chicken egg	1
NaCl (0.9% solution)	50.0mL

Preparation of Egg Yolk Emulsion, 50%: Soak eggs with 1:100 dilution of saturated mercuric chloride solution for 1 min. Crack eggs and separate yolks from whites. Mix egg yolks with 1 chicken egg. Beat to form emulsion. Measure 50.0mL of egg yolk emulsion and add to 50.0mL of 0.9% NaCl solution. Mix thoroughly. Filter sterilize. Warm to 45°–50°C.

Preparation of Medium: Add components, except egg yolk emulsion, 50%, to distilled/deionized water and bring volume to 920.0mL. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Asepti-

cally add 80.0mL of sterile egg yolk emulsion, 50%. Mix thoroughly. Pour into sterile Petri dishes in 20.0mL volumes.

Use: For the cultivation of *Clostridium botulinum*.

McClung-Toabe Egg Yolk Agar, CDC Modified (CDC Modified McClung-Toabe Egg Yolk Agar)

Composition per liter:

Pancreatic digest of casein.....	40.0g
Agar	25.0g
NaHPO ₄	5.0g
Yeast extract.....	5.0g
D-Glucose	2.0g
NaCl.....	2.0g
Egg yolk emulsion	100.0mL
MgSO ₄ (5% solution)	0.2mL

pH 7.4 ± 0.2 at 25°C

Egg Yolk Emulsion:

Composition:

Chicken egg yolks.....	11
Whole chicken egg.....	1

Preparation of Egg Yolk Emulsion: Soak eggs with 1:100 dilution of saturated mercuric chloride solution for 1 min. Crack eggs. Separate yolks from whites for 11 eggs. Mix egg yolks with 1 chicken egg.

Preparation of Medium: Add components, except egg yolk emulsion, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 60°C. Aseptically add 100.0mL of sterile egg yolk emulsion. Mix thoroughly. Pour into sterile Petri dishes in 20.0mL volumes.

Use: For the isolation, cultivation, and differentiation of anaerobic bacteria from foods. Bacteria that produce lecithinase appear as colonies surrounded by an insoluble opaque precipitate. Bacteria that produce lipase activity appear as colonies with a sheen or “pearly” surface. Bacteria that possess proteolytic activity appear as colonies surrounded by a clear zone.

McClung-Toabe Egg Yolk Agar, CDC Modified (CDC Modified McClung-Toabe Egg Yolk Agar)

Composition per liter:

Pancreatic digest of casein.....	40.0g
Agar	25.0g
Na ₂ HPO ₄	5.0g
Yeast extract.....	5.0g
Glucose	2.0g
NaCl.....	2.0g
KH ₂ PO ₄	1.0g
Egg yolk emulsion, 50%.....	100.0mL
MgSO ₄ ·7H ₂ O (5% solution).....	0.2mL

pH 7.3 ± 0.2 at 25°C

Egg Yolk Emulsion, 50%:

Composition per 100.0mL:

Chicken egg yolks.....	11
Whole chicken egg.....	1
NaCl (0.9% solution).....	50.0mL

Preparation of Egg Yolk Emulsion, 50%: Soak eggs with 1:100 dilution of saturated mercuric chloride solution for 1 min. Crack eggs and separate yolks from whites. Mix egg yolks with 1 chicken egg. Beat to form emulsion. Measure 50.0mL of egg yolk emulsion and add

to 50.0mL of 0.9% NaCl solution. Mix thoroughly. Filter sterilize. Warm to 45°–50°C.

Preparation of Medium: Add components—except egg yolk emulsion, 50%—to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 100.0mL of sterile egg yolk emulsion, 50%. Mix thoroughly. Pour into sterile Petri dishes in 15.0mL volumes.

Use: For the cultivation of a wide variety of anaerobic bacteria. For the differentiation of anaerobic bacteria based on lecithinase production, lipase production, and proteolytic ability. Bacteria that produce lecithinase appear as colonies surrounded by a zone of insoluble precipitate. Bacteria that produce lipase appear as colonies with a pearly iridescent sheen. Bacteria that produce proteolytic activity appear as colonies surrounded by a clear zone.

McClung Toabe HiVeg Agar Base with Egg Yolk

Composition per liter:

Plant peptone No. 3.....	40.0g
Agar	25.0g
Na ₂ HPO ₄	5.0g
Glucose	2.0g
NaCl.....	2.0g
KH ₂ PO ₄	1.0g
MgSO ₄	0.1g
Egg yolk emulsion, 50%.....	100.0mL

pH 7.3 ± 0.2 at 25°C

Source: This medium, without egg yolk emulsion, is available as a premixed powder from HiMedia.

Egg Yolk Emulsion, 50%:

Composition per 100.0mL:

Chicken egg yolks.....	11
Whole chicken egg	1
NaCl (0.9% solution).....	50.0mL

Preparation of Egg Yolk Emulsion, 50%: Soak eggs with 1:100 dilution of saturated mercuric chloride solution for 1 min. Crack eggs and separate yolks from whites. Mix egg yolks with 1 chicken egg. Beat to form emulsion. Measure 50.0mL of egg yolk emulsion and add to 50.0mL of 0.9% NaCl solution. Mix thoroughly. Filter sterilize. Warm to 45°–50°C.

Preparation of Medium: Add components, except egg yolk emulsion, 50%, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 20 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 100.0mL of sterile egg yolk emulsion, 50%. Mix thoroughly. Pour into sterile Petri dishes in 15.0mL volumes.

Use: For the isolation and cultivation of *Clostridium perfringens* in foods.

M-CP Agar Base

Composition per liter:

Tryptose	30.0g
Yeast extract.....	20.0g
Agar	15.0g
Sucrose.....	5.0g
L-Cysteine·HCl·H ₂ O	1.0g
MgSO ₄ ·7H ₂ O	0.1g
FeCl ₃ ·6H ₂ O	0.09g
Indoxyl β-D-glucoside	0.06g

Bromocresol Purple	0.04g
Selective supplement solution B.....	20.0mL
Selective supplement solution A.....	10.0mL
pH 7.6 ± 0.2 at 25°C	

Source: This medium is available from HiMedia.

Selective Supplement Solution A:

Composition per 10.0mL:

D-Cycloserine.....	400.0mg
Polymyxin B sulfate.....	25.0mg

Preparation of Selective Supplement Solution A: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Selective Supplement Solution B:

Composition per 20.0mL:

Phenolphthalein diphosphate	0.1g
-----------------------------------	------

Preparation of Selective Supplement Solution B: Add phenolphthalein diphosphate to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except selective supplement solutions A and B, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add selective supplement solutions A and B. Mix thoroughly. Pour into Petri dishes or aseptically distribute into sterile tubes.

Use: Recommended by the Directive of the Council of the European Union 98/83/EC for the isolation and enumeration of *Clostridium perfringens* from water samples using the membrane filtration technique.

M-CP HiVeg Agar Base with Phenolphthalein Diphosphate

Composition per liter:

Plant hydrolysate No. 1.....	30.0g
Agar	15.0g
L-Cysteine-HCl.....	1.0g
MgSO ₄ ·7H ₂ O	0.1g
FeCl ₃ ·6H ₂ O	0.09
Indoxyl β-D-glucoside.....	0.06
Bromocresol Purple	0.04
Sucrose.....	5.0g
Yeast extract.....	20.0g
Phenolphthalein diphosphate solution	10.0mL
pH 7.2 ± 0.2 at 25°C	

Source: This medium, without phenolphthalein diphosphate, is available as a premixed powder from HiMedia.

Phenolphthalein Diphosphate Solution:

Composition per 10.0mL:

Phenolphthalein diphosphate	2.0g
-----------------------------------	------

Preparation of Phenolphthalein Diphosphate Solution: Add phenolphthalein diphosphate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except phenolphthalein diphosphate solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat while stirring until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45–50°C. Aseptically add 10.0mL of sterile phenolphthalein diphosphate solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and identification of *Providencia stuartii*.

m-CP Medium

Composition per liter:

Tryptose	30.0g
Yeast extract.....	20.0g
Agar	15.0g
Sucrose.....	5.0g
L-Cysteine-HCl·H ₂ O	1.0g
MgO ₄ ·7H ₂ O	0.1g
Bromocresol Purple	0.04g
Phenolphthalein biphosphate tetrazolium salt solution	10.0mL
Selective supplement solution	4.0mL
Indoxyl-β-D-glucoside solution	4.0mL
Ferric chloride solution.....	1.0mL

pH 7.6 ± 0.2 at 25°C

Selective Supplement Solution:

Composition per 4.0mL:

D-Cycloserine.....	0.4g
Polymyxin B sulfate	25.0mg

Preparation of Selective Supplement Solution: Add components to 4.0mL of distilled/deionized water. Mix thoroughly. Filter sterilize.

Phenolphthalein Biphosphate Tetrazolium

Salt Solution:

Composition per 10.0mL:

Phenolphthalein biphosphate tetrazolium salt	25.0mg
---	--------

Preparation of Phenolphthalein Biphosphate Tetrazolium

Salt Solution: Add phenolphthalein biphosphate tetrazolium salt to 10.0mL of distilled/deionized water. Mix thoroughly. Filter sterilize.

Indoxyl-β-D-glucoside Solution:

Composition per 10.0mL:

Indoxyl-β-D-glucoside	0.45g
-----------------------------	-------

Preparation of Indoxyl-β-D-glucoside Solution: Add indoxyl-β-D-glucoside to 10.0mL of distilled/deionized water. Mix thoroughly. Filter sterilize.

Ferric Chloride Solution:

Composition per 4.0mL:

FeCl ₃ ·6H ₂ O	30.0mg
--	--------

Preparation of Ferric Chloride Solution: Add FeCl₃·6H₂O to 4.0mL of distilled/deionized water. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except selective supplement solution, phenolphthalein biphosphate tetrazolium salt solution, indoxyl-β-D-glucoside solution, and ferric chloride solution, to distilled/deionized water and bring volume to 981.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45–50°C. Aseptically add 4.0mL of selective supplement solution. Mix thoroughly. Aseptically add 10.0mL phenolphthalein biphosphate tetrazolium salt solution, 4.0mL indoxyl-β-D-glucoside solution, and 1.0mL ferric chloride solution. Mix thoroughly. Pour into sterile Petri dishes or aseptically distribute into tubes.

Use: A selective, chromogenic medium for the rapid identification and enumeration of *Clostridium perfringens* in water samples, including water used in food and beverage production.

MCP Medium
(Modified MacConkey Medium)
(MacConkey Phosphatase Medium)

Composition per liter:

Pancreatic digest of gelatin	17.0g
Agar	13.5g
Lactose	10.0g
NaCl	5.0g
Bile salts.....	1.5g
Pancreatic digest of casein	1.5g

pH 7.2 ± 0.2 at 25°C

Source: This medium, without phenolphthalein diphosphate, is available as a premixed powder from HiMedia.

Phenolphthalein Diphosphate Solution:**Composition per 10.0mL:**

Phenolphthalein diphosphate	2.0g
-----------------------------------	------

Preparation of Phenolphthalein Diphosphate Solution: Add phenolphthalein diphosphate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except phenolphthalein diphosphate solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat while stirring until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45–50°C. Aseptically add 10.0mL of sterile phenolphthalein diphosphate solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and identification of *Providencia stuartii*.

MD Medium

Composition per liter:

Agar	20.0g
L-Malic acid.....	20.0g
Pancreatic digest of casein.....	10.0g
D-Glucose	5.0g
Casamino acids	3.0g
Pancreatic digest of soybean meal	1.5g
Tween™ 80	1.0g
Yeast extract.....	1.0g
Bromcresol Green solution	20.0mL

pH 7.0 ± 0.2 at 25°C

Bromcresol Green Solution:**Composition per 30.0mL:**

Bromcresol Green	0.1g
NaOH (0.01N solution).....	30.0mL

Preparation of Bromcresol Green Solution: Add Bromcresol Green to 30.0mL of NaOH solution. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Adjust pH to 7.0 with 10N KOH. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of *Salmonella* species from foods.

MD 1 Medium

Composition per liter:

Pancreatic digest of casein.....	3.0g
MgSO ₄ ·7H ₂ O	2.0g
CaCl ₂	0.5g
Trace elements solution	1.0mL
Vitamin B ₁₂ solution	1.0mL

Trace Elements Solution:**Composition per liter:**

EDTA	8.0g
MnCl ₂ ·4H ₂ O	0.1g
CoCl ₂	0.02g
KBr	0.02g
ZnCl ₂	0.02g
CuSO ₄	0.01g
H ₃ BO ₃	0.01g
NaMoO ₄ ·2H ₂ O.....	0.01g
BaCl ₂	5.0mg
LiCl	5.0mg
SnCl ₂ ·2H ₂ O.....	5.0mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Vitamin B₁₂ Solution:**Composition per 10.0mL:**

Vitamin B ₁₂	5.0mg
-------------------------------	-------

Preparation of Vitamin B₁₂ Solution: Add vitamin B₁₂ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of myxobacteria.

MD1- Medium
(DSMZ Medium 1118)

Composition per liter:

Casitone	3.0g
MgSO ₄ ·7H ₂ O	2.0g
CaCl ₂ ·2H ₂ O	0.7g
Vitamin solution	10.0mL
Trace elements solution SL-4	1.0mL

pH 7.1 ± 0.2 at 25°C

Trace Elements Solution SL-4:**Composition per liter:**

EDTA	0.5g
FeSO ₄ ·7H ₂ O.....	0.2g
Trace elements solution SL-6	100.0mL

Trace Elements Solution SL-6:**Composition per liter:**

MnCl ₂ ·4H ₂ O	0.5g
H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
Na ₂ MoO ₄ ·2H ₂ O	0.03g

NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Trace Elements Solution SL-4: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Vitamin Solution:

Composition per 10.0ml:

Vitamin B ₁₂	0.5mg
-------------------------------	-------

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except vitamin solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Adjust pH to 7.1. Distribute into tubes or flasks. Gently heat while stirring and bring to boiling. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL sterile vitamin solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Myxococcus xanthus*.

Composition per liter:

NaCl	15.0g
Peptone.....	10.0g
Meat extract	3.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Alcaligenes* species.

Meat Infusion Agar, HiVeg (Standard Infusion Agar, HiVeg)

Composition per liter:

Agar	25.0g
Plant infusion	10.0g
Plant peptone.....	10.0g
NaCl	5.0g

pH 7.5 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the mass cultivation of organisms for vaccine or toxin production.

M-EC Test Agar

Composition per liter:

Agar	15.0g
Lactose.....	10.0g
NaCl	7.5g
Proteose peptone	5.0g
Dipotassium phosphate	3.3g
Yeast extract.....	3.0g
KH ₂ PO ₄	1.0g
Sodium lauryl sulphate	0.2g
Sodium deoxycholate.....	0.1g
Bromcresol Purple	0.08g
Bromphenol Red	0.08g

pH 7.3 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Do not autoclave. Pour into sterile Petri dishes or leave in tubes.

Use: For the detection of *Escherichia coli* in water samples using the membrane filter technique.

MED IIa

Composition per liter:

Tris buffer stock solution.....	10.0mL
CaCl ₂ (5.0% solution).....	10.0mL
MgSO ₄ ·7H ₂ O (3.33% solution).....	1.0mL

pH 7.2 ± 0.2 at 25°C

Tris Buffer Stock Solution:

Composition per 500.0mL:

Tris(hydroxymethyl)aminomethane·HCl.....	35.01g
Tris(hydroxymethyl)aminomethane	3.35g

Preparation of Tris Buffer Stock Solution: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Adjust pH to 7.2.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 20 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Vampirovibrio chlorellavorus*.

Medium A

Composition per liter:

D-Glucose	20.0g
Agar	20.0g
Yeast extract.....	10.0g
Biotin	1.0mg
Calcium pantothenate	1.0mg

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components, except biotin and calcium pantothenate, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Add biotin and calcium pantothenate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize. Aseptically add the sterile biotin and calcium pantothenate solution to the cooled sterile basal medium. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Zymomonas mobilis*.

Medium A for Producing Lysates

Composition per liter:

Nutrient broth.....	8.0g
KCl.....	1.0g
MgSO ₄ ·7H ₂ O.....	0.25g
MnCl ₂	1.25mg
FeSO ₄ (1.0mM solution).....	1.0mL
Ca(NO ₃) ₂ (1.0M solution).....	1.0mL

pH 7.0–7.2 at 25°C

Preparation of Medium: Add components, except FeSO₄ and Ca(NO₃)₂, to distilled/deionized water and bring volume to 998.0mL. Mix thoroughly. Adjust pH to 7.0–7.2. Autoclave for 30 min at 15 psi pressure–115°C. Cool to 45°–50°C. Prepare 1.0mM FeSO₄ solution and 1.0M Ca(NO₃)₂ solution separately. Filter sterilize both solutions. Aseptically add the sterile FeSO₄ solution and sterile Ca(NO₃)₂ solution to the cooled sterile basal medium. Mix thoroughly. Distribute into sterile tubes or flasks.

Use: For the cultivation of microorganisms to be lysed.

Medium 2A**Composition per liter:**

Arginine	10.0g
NaCl	5.0g
Agar	4.0g
Peptone.....	1.0g
K ₂ HPO ₄ ·3H ₂ O.....	0.3g
Phenol Red.....	0.01g

pH 7.2–7.4 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and differentiation of *Pseudomonas* species based on their production of arginine dihydrolase activity.

Medium AS4**Composition per liter:**

Sucrose.....	80.0g
PPO broth without Crystal Violet.....	500.0mL
Horse serum	200.0mL
Phenol Red (0.5% solution).....	5.0mL

pH 7.2 ± 0.2 at 25°C

PPO Broth without Crystal Violet:**Composition per 500.0mL:**

Beef heart, solids from infusion.....	11.53g
Peptone.....	2.33g
NaCl.....	1.15g

Source: PPO broth without Crystal Violet is available as a premixed powder from BD Diagnostic Systems.

Preparation of PPO Broth without Crystal Violet: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Beef heart for infusion may be substituted; 100.0g of beef heart for infusion is equivalent to 500.0g of fresh heart tissue.

Preparation of Medium: Add components, except horse serum, to distilled/deionized water and bring volume to 800.0mL. Mix thoroughly. Adjust pH to 7.2. Autoclave for 10 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 200.0mL of noninactivated, sterile horse serum. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Spiroplasma melliferum*.

Medium for *Acetivibrio cellulolyticus*

See: BC Medium

Medium for Aciduric, Thermophilic *Bacillus* Strains**Composition per liter:**

Solution A.....	500.0mL
Solution B.....	500.0mL

pH 4.3 ± 0.2 at 25°C

Solution A:**Composition per 500.0mL:**

KH ₂ PO ₄	3.0g
Glucose.....	1.0g
Starch.....	1.0g
Tryptone.....	1.0g
Yeast extract.....	1.0g
MgSO ₄ ·7H ₂ O.....	0.5g

CaCl ₂ ·2H ₂ O.....	0.25g
(NH ₄) ₂ SO ₄	0.2g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Adjust pH to 4.3. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C.

Solution B:**Composition per 500.0mL:**

Agar.....	20.0g
-----------	-------

Preparation of Solution B: Add agar to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C.

Preparation of Medium: Aseptically combine 500.0mL of solution A and 500.0mL of solution B. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of aciduric, thermophilic *Bacillus* strains.

Medium 2508-85-1 with Amino Acids**Composition per liter:**

Agar.....	20.0g
Nutrient broth.....	8.0g
D-Glucose.....	5.0g
Polypeptone™.....	5.0g
Yeast extract.....	5.0g
L-Lysine.....	0.1g
L-Methionine.....	0.05g
Diaminopimelic acid.....	0.05g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 30 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Escherichia coli*.

Medium for Ammonia Oxidizers**Composition per liter:**

MgSO ₄ ·7H ₂ O.....	0.2g
(NH ₄) ₂ SO ₄	0.13g
K ₂ HPO ₄	0.09g
CaCl ₂ ·2H ₂ O.....	0.02g
Chelated iron.....	1.0mg
MnCl ₂ ·4H ₂ O.....	0.2mg
Na ₂ MoO ₄ ·2H ₂ O.....	0.1mg
ZnSO ₄ ·7H ₂ O.....	0.1mg
CuSO ₄ ·5H ₂ O.....	0.02mg
CoCl ₂ ·6H ₂ O.....	2.0μg

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation, cultivation, and enrichment of ammonia-oxidizing bacteria from soil.

Medium for Ammonia Oxidizers**Composition per liter:**

(NH ₄) ₂ SO ₄	2.0g
MgSO ₄ ·7H ₂ O.....	0.2g
CaCl ₂ ·2H ₂ O.....	0.02g
K ₂ HPO ₄	0.02g
Chelated iron.....	1.0mg

MnCl ₂ ·4H ₂ O.....	0.2mg
Na ₂ MoO ₄ ·2H ₂ O	0.1mg
ZnSO ₄ ·7H ₂ O	0.1mg
CuSO ₄ ·5H ₂ O	0.02mg
CoCl ₂ ·6H ₂ O	2.0μg

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation, cultivation, and enrichment of ammonia-oxidizing bacteria from soil.

Medium for Ammonia Oxidizers

Composition per liter:

K ₂ HPO ₄	0.5g
(NH ₄) ₂ SO ₄	0.5g
Phenol Red.....	0.5g
MgSO ₄ ·7H ₂ O	0.05g
CaCl ₂ ·2H ₂ O.....	0.02g
NaCl	0.02g
Na ₂ MoO ₄ ·2H ₂ O	2.4μg
Metals “44”	1.0mL

Metals “44”:

Composition per 100.0mL:

ZnSO ₄ ·7H ₂ O	1.1g
FeSO ₄ ·7H ₂ O.....	0.5g
EDTA	0.25g
MnSO ₄ ·7H ₂ O	0.154g
CuSO ₄ ·5H ₂ O	0.04g
Co(NO ₃) ₂ ·6H ₂ O	0.025g
Na ₂ B ₄ O ₇ ·10H ₂ O.....	0.018g

Preparation of Metals “44”: Add a few drops of H₂SO₄ to distilled/deionized water to inhibit precipitate formation. Add components to acidified distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation, cultivation, and enrichment of ammonia-oxidizing bacteria from soil.

Medium for Ammonia Oxidizers

Composition per liter:

(NH ₄) ₂ SO ₄	0.5g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O.....	0.04g
MgSO ₄ ·7H ₂ O	0.04g
Ferric citrate.....	0.5mg
Phenol Red.....	0.5mg

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation, cultivation, and enrichment of ammonia-oxidizing bacteria from soil.

Medium for Ammonia Oxidizers, Brackish

Composition per liter:

CaCO ₃	5.0g
NH ₄ Cl	0.5g

K ₂ HPO ₄	0.05g
Seawater.....	400.0mL

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation, cultivation, and enrichment of ammonia-oxidizing bacteria from brackish specimens.

Medium for Ammonia Oxidizers, Marine

Composition per liter:

(NH ₄) ₂ SO ₄	1.32g
MgSO ₄ ·7H ₂ O	0.2g
Chelated iron.....	0.13g
K ₂ HPO ₄	0.11g
CaCl ₂ ·2H ₂ O	0.02g
ZnSO ₄ ·7H ₂ O	0.1mg
CuSO ₄ ·5H ₂ O.....	0.02mg
CoCl ₂ ·6H ₂ O	2.0μg
MnCl ₂ ·4H ₂ O	2.0μg
Na ₂ MoO ₄ ·2H ₂ O	1.0μg
Seawater.....	1.0L

Preparation of Medium: Combine components. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation, cultivation, and enrichment of marine ammonia-oxidizing bacteria.

Medium for Ammonia-Oxidizing Bacteria

Composition per liter:

(NH ₄) ₂ SO ₄	235.0mg
KH ₂ PO ₄	200.0mg
CaCl ₂ ·2H ₂ O	40.0mg
MgSO ₄ ·7H ₂ O	40.0mg
Iron-EDTA-Phenol Red solution	1.0mL
Na ₂ CO ₃ solution.....	variable

Na₂CO₃ Solution:

Composition per 100.0mL:

Na ₂ CO ₃	5.0g
---------------------------------------	------

Preparation of Na₂CO₃ Solution: Add Na₂CO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Iron-EDTA-Phenol Red Solution:

Composition per 100.0mL:

FeSO ₄ ·7H ₂ O.....	50.0mg
Sodium EDTA.....	50.0mg
Phenol Red.....	50.0mg

Preparation of Iron-EDTA-Phenol Red Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components, except Na₂CO₃ solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Add enough sterile Na₂CO₃ solution to turn the medium pale pink. During incubation and growth of bacteria, add additional sterile Na₂CO₃ solution to restore the pale pink color. Growth is complete when no further color change is observed.

Use: For the cultivation of *Nitrosolobus multiformis* and *Nitrosomonas europaea*.

Medium B for Sulfate Reducers (Postgate's Medium B for Sulfate Reducers)

Composition per liter:

Sodium lactate.....	3.5g
MgSO ₄ ·7H ₂ O.....	2.0g
NH ₄ Cl.....	1.0g
CaSO ₄	1.0g
Yeast extract.....	1.0g
KH ₂ PO ₄	0.5g
FeSO ₄ ·7H ₂ O.....	0.5g
Ascorbic acid.....	0.1g
Thioglycollic acid.....	0.1g

pH 7.0–7.5 at 25°C

Preparation of Medium: Add components, except ascorbic acid and thioglycollic acid, to tap water and bring volume to 1.0L. For marine bacteria, NaCl may be added or seawater used in place of tap water. Mix thoroughly. Adjust pH to 7.0–7.5. Thioglycolate and ascorbate should be added immediately prior to sterilization. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation, cultivation, and maintenance of *Desulfovibrio* species and *Desulfotomaculum* species. This medium turns black as a result of H₂S production due to bacterial growth.

Medium for *Bacillus schlegelii*

Composition per liter:

Agar.....	15.0g
Na ₂ HPO ₄ ·2H ₂ O.....	2.9g
KH ₂ PO ₄	2.3g
NH ₄ Cl.....	1.0g
MgSO ₄ ·7H ₂ O.....	0.5g
NaHCO ₃	0.5g
CaCl ₂ ·2H ₂ O.....	0.01g
MnSO ₄ ·H ₂ O.....	10.0mg
Ferric ammonium citrate solution.....	20.0mL
Trace elements solution SL-6.....	5.0mL

pH 6.8 ± 0.2 at 25°C

Ferric Ammonium Citrate Solution:

Composition per 20.0mL:

Ferric ammonium citrate.....	0.05g
------------------------------	-------

Preparation of Ferric Ammonium Citrate Solution: Add ferric ammonium citrate to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution SL-6:

Composition per liter:

MnCl ₂ ·4H ₂ O.....	0.5g
H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O.....	0.2g
ZnSO ₄ ·7H ₂ O.....	0.1g
Na ₂ MoO ₄ ·2H ₂ O.....	0.03g
NiCl ₂ ·6H ₂ O.....	0.02g
CuCl ₂ ·2H ₂ O.....	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components, except ferric ammonium citrate solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 20.0mL of sterile ferric ammonium citrate solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the chemolithotrophic growth of *Bacillus schlegelii*.

Medium for *Bacillus stearothermophilus*

Composition per 1001.0mL:

NH ₄ Cl.....	1.0g
K ₂ HPO ₄	0.5g
Yeast extract.....	0.2g
Casamino acids.....	0.1g
MgSO ₄ ·7H ₂ O.....	0.02g
Phenol solution.....	100.0mL
Trace elements solution SL-4.....	1.0mL

pH 7.4 ± 0.2 at 25°C

Phenol Solution:

Composition per 100.0mL:

Phenol.....	0.47g
-------------	-------

Preparation of Phenol Solution: Add phenol to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Trace Elements Solution SL-4:

Composition per liter:

EDTA.....	0.5g
FeSO ₄ ·7H ₂ O.....	0.2g
Trace elements solution SL-6.....	100.0mL

Trace Elements Solution SL-6:

Composition per liter:

MnCl ₂ ·4H ₂ O.....	0.5g
H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O.....	0.2g
ZnSO ₄ ·7H ₂ O.....	0.1g
Na ₂ MoO ₄ ·2H ₂ O.....	0.03g
NiCl ₂ ·6H ₂ O.....	0.02g
CuCl ₂ ·2H ₂ O.....	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Trace Elements Solution SL-4: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except phenol solution and trace elements solution SL-4, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 100.0mL of sterile phenol solution and 1.0mL of sterile trace elements solution SL-4. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Bacillus stearothermophilus*.

Medium BG11 for Cyanobacteria

See: BG11 Agar and BG11 Medium

Medium BG11 for Marine Cyanobacteria

See: BG11 Marine Agar and BG11 Marine Broth

**Medium with Biphenyl
(DSMZ Medium 457d)**

Composition per liter:

Na ₂ HPO ₄	2.44g
KH ₂ PO ₄	1.52g
(NH ₄) ₂ SO ₄	0.5g
MgSO ₄ ·7H ₂ O.....	0.2g
CaCl ₂ ·2H ₂ O.....	0.05g
Trace elements solution SL-4.....	10.0mL
Biphenyl solution.....	25.0mL

pH 6.9 ± 0.2 at 25°C

Trace Elements Solution SL-4:

Composition per liter:

EDTA.....	0.5g
FeSO ₄ ·7H ₂ O.....	0.2g
Trace elements solution SL-6.....	100.0mL

Trace Elements Solution SL-6:

Composition per liter:

H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O.....	0.2g
ZnSO ₄ ·7H ₂ O.....	0.1g
MnCl ₂ ·4H ₂ O.....	0.03g
Na ₂ MoO ₄ ·H ₂ O.....	0.03g
NiCl ₂ ·6H ₂ O.....	0.02g
CuCl ₂ ·2H ₂ O.....	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 3.4.

Preparation of Trace Elements Solution SL-4: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Biphenyl Solution:

Composition per liter:

Biphenyl.....	10.0g
---------------	-------

Preparation of Biphenyl Solution: Add biphenyl to 1.0L ethanol. Mix thoroughly. Filter sterilize using a cellulose filter membrane.

Preparation of Medium: Add components, except biphenyl solution, to 1.0L distilled/deionized water. Adjust pH to 6.9. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Add an aliquot of the biphenyl solution to a sterile flask so that the final concentration will be 0.25g/L biphenyl, and let the ethanol evaporate. Aseptically add sterile medium to the crystal-layered flask.

Use: For the cultivation of biphenyl- utilizing bacteria.

**Medium C for Sulfate Reducers
(Postgate's Medium C for Sulfate Reducers)**

Composition per liter:

Sodium lactate.....	6.0g
Na ₂ SO ₄	4.5g
NH ₄ Cl.....	1.0g
Yeast extract.....	1.0g
KH ₂ PO ₄	0.5g
Sodium citrate·2H ₂ O.....	0.3g
CaCl ₂ ·6H ₂ O.....	0.06g
MgSO ₄ ·7H ₂ O.....	0.06g
FeSO ₄ ·7H ₂ O.....	0.004g

pH 7.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. For marine bacteria, NaCl may be

added or sea water used in place of distilled/deionized water. Mix thoroughly. Adjust pH to 7.5. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For detection, culturing, and storage of *Desulfovibrio* species and many *Desulfotomaculum* species. This medium should be used when a clear culture medium is desired such as for chemostat culture. This medium may be cloudy after sterilization but usually clears on cooling. It turns black as a result of H₂S production due to bacterial growth.

**Medium for Campylobacter DSM 806
(DSMZ Medium 121)**

Composition per liter:

Na-aspartate.....	10.0g
MgSO ₄ ·7H ₂ O.....	1.0g
Yeast extract.....	0.2g
CaCl ₂ ·2H ₂ O.....	28.0mg
Resazurin.....	1.0mg
Cysteine phosphate solution.....	100.0mL
Trace elements solution SL-10.....	1.0mL

pH 7.0 ± 0.2 at 25°C

Trace Elements Solution SL-10:

Composition per liter:

FeCl ₂ ·4H ₂ O.....	1.5g
CoCl ₂ ·6H ₂ O.....	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	36.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O.....	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Gas under 80% N₂ + 20% CO₂.

Cysteine Phosphate Solution:

Composition per 100.0mL:

K ₂ HPO ₄	0.75g
NaH ₂ PO ₄	0.25g
Cysteine-HCl·H ₂ O.....	0.25g

Preparation of Cysteine Phosphate Solution: Add components to 100.0mL distilled/deionized water. Mix thoroughly. Gas under 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except cysteine phosphate solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Adjust pH to 7.0. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 100.0mL of sterile cysteine phosphate solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Sulfurospirillum* sp.

Medium for Carbon Monoxide Oxidizers

Composition per liter:

Agar.....	12.0g
Na ₂ HPO ₄ ·12H ₂ O.....	4.5g
NH ₄ Cl.....	1.5g
KH ₂ PO ₄	0.75g
MgSO ₄ ·7H ₂ O.....	0.2g

CaCl ₂ ·2H ₂ O.....	0.03g
Ferric ammonium citrate.....	0.018g
Trace elements solution SL-6.....	1.0mL
pH 7.0 ± 0.2 at 25°C	

Trace Elements Solution SL-6:**Composition per liter:**

MnCl ₂ ·4H ₂ O.....	0.5g
H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O.....	0.2g
ZnSO ₄ ·7H ₂ O.....	0.1g
Na ₂ MoO ₄ ·2H ₂ O.....	0.03g
NiCl ₂ ·6H ₂ O.....	0.02g
CuCl ₂ ·2H ₂ O.....	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or distribute into sterile tubes. After inoculation, incubate in an atmosphere of 80% CO + 10% O₂ + 10% N₂.

Use: For the chemoautotrophic cultivation and maintenance of *Alcaligenes* species, *Pseudomonas carboxydohydrogena*, and other *Pseudomonas* species.

Medium for Carbon Monoxide Oxidizers**Composition per liter:**

Agar.....	12.0g
Na ₂ HPO ₄ ·12H ₂ O.....	4.5g
Sodium acetate.....	3.0g
NH ₄ Cl.....	1.5g
KH ₂ PO ₄	0.75g
MgSO ₄ ·7H ₂ O.....	0.2g
CaCl ₂ ·2H ₂ O.....	0.03g
Ferric ammonium citrate.....	0.018g
Trace elements solution SL-6.....	1.0mL
pH 7.0 ± 0.2 at 25°C	

Trace Elements Solution SL-6:**Composition per liter:**

MnCl ₂ ·4H ₂ O.....	0.5g
H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O.....	0.2g
ZnSO ₄ ·7H ₂ O.....	0.1g
Na ₂ MoO ₄ ·2H ₂ O.....	0.03g
NiCl ₂ ·6H ₂ O.....	0.02g
CuCl ₂ ·2H ₂ O.....	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or distribute into sterile tubes. After inoculation incubate in air.

Use: For the chemoorganotrophic cultivation and maintenance of *Alcaligenes* species, *Pseudomonas carboxydohydrogena*, and other *Pseudomonas* species.

**Medium for Chlorate Respirers
(DSMZ Medium 908)****Composition per liter:**

Solution A.....	1.0L
Solution B.....	10.0mL
Solution C.....	10.0mL
Vitamin solution.....	5.0mL
Trace elements solution SL-10.....	1.0mL
pH 7.2 ± 0.2 at 25°C	

Solution A:**Composition per liter:**

NaHCO ₃	2.5g
Na-acetate.....	1.36g
NaClO ₃	1.0g
NaH ₂ PO ₄	0.6g
NH ₄ Cl.....	0.25g
KCl.....	0.1g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Solution B:**Composition per 10.0mL:**

MgSO ₄	30.0mg
CaCl ₂ ·2H ₂ O.....	10.0mg

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Solution C:

Na ₂ MoO ₄	25.0mg
Na ₂ WO ₄ ·2H ₂ O.....	25.0mg

Preparation of Solution C: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Vitamin Solution:**Composition per liter:**

Vitamin B ₁₂	50.0mg
Pantothenic acid.....	50.0mg
Riboflavin.....	50.0mg
Alpha-lipoic acid.....	50.0mg
p-Aminobenzoic acid.....	50.0mg
Thiamine-HCl·2H ₂ O.....	50.0mg
Nicotinic acid.....	25.0mg
Nicotinamide.....	25.0mg
Biotin.....	20.0mg
Folic acid.....	20.0mg
Pyridoxamine-HCl.....	10.0mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Trace Elements Solution SL-10:**Composition per liter:**

FeCl ₂ ·4H ₂ O.....	1.5g
H ₃ BO ₃	300.0mg
CoCl ₂ ·6H ₂ O.....	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg

ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	7.7mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Preparation of Medium: Aseptically and anaerobically combine 1000.0mL solution A, 10.0mL solution B and 10.0mL solution C. Aseptically and anaerobically add 5.0mL vitamin solution and 1.0mL trace elements solution SL-10. Mix thoroughly. The pH should be 7.2.

Use: For the cultivation of *Dechloromonas agitata* and *Azospira oryzae*.

Medium with Chloroacrylic Acid (DSMZ Medium 457c)

Composition per liter:

Na ₂ HPO ₄	2.44g
KH ₂ PO ₄	1.52g
(NH ₄) ₂ SO ₄	0.5g
MgSO ₄ ·7H ₂ O	0.2g
CaCl ₂ ·2H ₂ O	0.05g
Chloroacrylic acid solution	20.0mL
Trace elements solution SL-4	10.0mL

pH 6.9 ± 0.2 at 25°C

Trace Elements Solution SL-4:

Composition per liter:

EDTA	0.5g
FeSO ₄ ·7H ₂ O	0.2g
Trace elements solution SL-6	100.0mL

Trace Elements Solution SL-6:

Composition per liter:

H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
MnCl ₂ ·4H ₂ O	0.03g
Na ₂ MoO ₄ ·H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 3.4.

Preparation of Trace Elements Solution SL-4: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Chloroacrylic Acid Solution:

Composition per liter:

3-Chloroacrylic acid	4.0g
----------------------------	------

Preparation of Chloroacrylic Acid Solution: Add 3-chloroacrylic acid to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Filter sterilize.

Preparation of Medium: Add components, except chloroacrylic acid solution, to 1.0L distilled/deionized water. Adjust pH to 6.9. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Aseptically add 20.0mL sterile chloroacrylic acid solution. Mix thoroughly. Aseptically distribute to sterile tubes or flasks.

Use: For the cultivation of chloroacrylic acid-utilizing *Burkholderia* sp. (*Burkholderia cepacia*), *Rhodococcus erythropolis* (*Arthrobacter picolinophilus*), and *Nocardia* spp.

Medium for *Chlorobium ferrooxidans* (DSMZ Medium 29a)

Composition per 5.0L:

Solution A	4.0L
Solution B	860.0mL
Solution E	100.0mL
Solution F	30.0mL
Solution C	5.0mL
Solution D	5.0mL

pH 6.8 at 25°C

Solution A:

Composition per 4.0L:

MgSO ₄	2.5g
KH ₂ PO ₄	1.7g
NH ₄ Cl	1.7g
KCl	1.7g
CaCl ₂ ·2H ₂ O	1.25g
Na-acetate	0.82g

Preparation of Solution A: Add components to 4.0L distilled water. Mix thoroughly. Autoclave for 45 min at 15 psi pressure–121°C in a 5-liter special bottle or flask with four openings at the top, together with a teflon-coated magnetic bar. In this 5-liter bottle, two openings are for tubes in the central, silicon rubber stopper; one is a short, gas-inlet tube with a sterile cotton filter, and the other is an outlet tube for medium, which reaches the bottom of the vessel at one end and has, at the other end, a silicon rubber tube with a pinch cock and a bell for aseptic dispensing of the medium into bottles. The other two openings have gas-tight screw caps; one of these openings is for the addition of sterile solutions and the other serves as a gas outlet. After autoclaving, cool solution A to room temperature under a N₂ atmosphere with a positive pressure of 0.05–0.1 atm (a manometer for low pressure will be required). Saturate the cold medium with CO₂ by magnetic stirring for 30 min under a CO₂ atmosphere of 0.05–0.1 atm.

Solution B:

Distilled water	860.0mL
-----------------------	---------

Preparation of Solution B: Autoclave distilled water for 15 min at 15 psi pressure–121°C in a cotton-stoppered Erlenmeyer flask. Cool to room temperature under an atmosphere of N₂ in an anaerobic jar.

Solution C:

Composition per 100.0mL:

Vitamin B ₁₂	2.0mg
-------------------------------	-------

Preparation of Solution C: Add vitamin B₁₂ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge under 100% N₂ gas for 3 min. Filter sterilize. Store under N₂ gas.

Solution D:

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
H ₃ BO ₃	300.0mg
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg

NiCl ₂ ·6H ₂ O	24.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	7.7mL

Preparation of Solution D: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution E:

Composition per 100.0mL:

NaHCO ₃	4.2g
--------------------------	------

Preparation of Solution E: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% CO₂ until saturated. Filter sterilize under 100% CO₂ into a sterile, gas-tight 100.0mL screw-capped bottle.

Solution F:

Composition per 100.0mL:

FeSO ₄	25.0g
-------------------------	-------

Preparation of Solution F: Add FeSO₄ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% CO₂ until saturated. Filter sterilize under 100% CO₂ into a sterile, gas-tight 100.0mL screw-capped bottle.

Preparation of Medium: Add solutions B, C, D, and E to solution A through one of the screw-cap openings against a stream of either N₂ gas or, better, a mixture of 95% N₂ and 5% CO₂ while the medium is magnetically stirred. Adjust the pH of the medium with sterile HCl or Na₂CO₃ solution (2M solutions) to pH 6.8. Distribute the medium aseptically through the medium outlet tube into sterile, 100mL bottles (with metal caps and autoclavable rubber seals) using the positive gas pressure (0.05–0.1 atm) of the N₂/CO₂ gas mixture: Leave a small air bubble in each bottle to meet possible pressure changes. The tightly sealed, screw-cap bottles can be stored for several weeks or months in the dark.

Use: For the cultivation of *Chlorobium ferrooxidans*.

Medium D

See: **Castenholz D Medium**

Medium D, Modified

See: **Castenholz D Medium, Modified**

Medium D for Sulfate Reducers (Postgate's Medium D for Sulfate Reducers)

Composition per liter:

Sodium pyruvate	3.5g
MgCl ₂ ·6H ₂ O	1.6g
NH ₄ Cl	1.0g
Yeast extract	1.0g
KH ₂ PO ₄	0.5g
CaCl ₂ ·2H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.004g

pH 7.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Malate or fumarate may also be used as a carbon source. For marine bacteria, NaCl may be added or seawater used in place of distilled/deionized water. Mix thoroughly. Adjust pH to 7.5. Filter sterilize. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Desulfovibrio* species and *Desulfotomaculum* species that can grow in the absence of sulfate.

Medium D for Sulfate Reducers (Postgate's Medium D for Sulfate Reducers)

Composition per liter:

MgCl ₂ ·6H ₂ O	1.6g
Choline chloride	1.0g
NH ₄ Cl	1.0g
Yeast extract	1.0g
KH ₂ PO ₄	0.5g
CaCl ₂ ·2H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.004g

pH 7.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Malate or fumarate may also be used as a carbon source. For marine bacteria, NaCl may be added or seawater used in place of distilled/deionized water. Mix thoroughly. Adjust pH to 7.5. Filter sterilize. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Desulfovibrio* species and *Desulfotomaculum* species that can grow in the absence of sulfate.

Medium D for *Thermus*

Composition per liter:

Pancreatic digest of casein	1.0g
Yeast extract	1.0g
NaNO ₃	0.7g
KNO ₃	0.1g
MgSO ₄ ·7H ₂ O	0.1g
Na ₂ HPO ₄	0.1g
Nitritotriacetic acid	0.1g
CaSO ₄ ·2H ₂ O	0.06g
NaCl	8.0mg
MnSO ₄ ·H ₂ O	2.2mg
ZnSO ₄ ·7H ₂ O	0.5mg
H ₃ BO ₃	0.5mg
FeCl ₃	0.28mg
Na ₂ MoO ₄ ·2H ₂ O	0.03mg
CuSO ₄	0.02mg

pH 8.2 ± 0.2 at 25°C

Preparation of Medium: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Readjust pH to 8.2 with H₂SO₄ or KOH. Add distilled/deionized water to 1.0L. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Thermus* species.

Medium D for *Thermus*, Modified

Composition per liter:

Agar	25.0g
Pancreatic digest of casein	1.0g
Yeast extract	1.0g
Salt solution	100.0mL

pH 8.2 ± 0.2 at 25°C

Salt Solution:

Composition per liter:

NaNO ₃	6.89g
Na ₂ HPO ₄ ·12H ₂ O	2.8g

KNO ₃	1.03g
Nitrilotriacetic acid	1.0g
MgSO ₄ ·7H ₂ O	1.0g
CaSO ₄ ·2H ₂ O	0.6g
NaCl	0.08g
FeCl ₃ ·6H ₂ O solution	10.0mL
Trace elements solution	10.0mL

FeCl₃·6H₂O Solution:**Composition per 100.0mL:**

FeCl ₃ ·6H ₂ O	47.0mg
--	--------

Preparation of FeCl₃·6H₂O Solution: Add FeCl₃·6H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Trace Elements Solution:**Composition per liter:**

MnSO ₄ ·4H ₂ O	1.7g
ZnSO ₄ ·7H ₂ O	0.5g
H ₃ BO ₃	0.5g
CoCl ₂ ·6H ₂ O	46.0mg
CuSO ₄ ·5H ₂ O	25.0mg
Na ₂ MoO ₄ ·2H ₂ O	25.0mg
H ₂ SO ₄	0.5mL

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Salt Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Readjust pH to 8.2 with H₂SO₄ or KOH. Add distilled/deionized water to 1.0L.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 8.2. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Thermus aquaticus*.

Medium D2**Composition per liter:**

Agar	15.0g
Glucose	10.0g
LiCl	5.0g
Pancreatic digest of casein	4.0g
Yeast extract	2.0g
Tris(hydroxymethyl)amino-methane-HCl buffer	1.2g
NH ₄ Cl	1.0g
MgSO ₄ ·7H ₂ O	0.3g
Polymyxin sulfate solution	10.0mL
NaN ₃ solution	10.0mL

pH 6.9 ± 0.2 at 25°C

Polymyxin Sulfate Solution:**Composition per 10.0mL:**

Polymyxin sulfate	0.04g
-------------------------	-------

Preparation of Polymyxin Sulfate Solution: Add polymyxin sulfate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize. Use freshly prepared solution.

NaN₃ Solution:**Composition per 10.0mL:**

NaN ₃	2.0mg
------------------------	-------

Preparation of NaN₃ Solution: Add NaN₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize. Use freshly prepared solution.

Caution: Sodium azide is toxic. Azides also react with metals and disposal must be highly diluted.

Preparation of Medium: Add components, except polymyxin sulfate solution and NaN₃ solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile polymyxin sulfate solution and NaN₃ solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation and cultivation of *Corynebacterium* species.

Medium D4**Composition per liter:**

Agar	15.0g
Sucrose	10.0g
NH ₄ Cl	5.0g
Na ₂ HPO ₄ , anhydrous	2.3g
Pancreatic digest of casein	1.0g
Sodium dodecyl sulfate	0.6g
Glycerol	10.0mL

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the selective isolation and cultivation of *Pseudomonas syringae*.

Medium DG

See: Castenholz DG Medium

Medium DGN

See: Castenholz DGN Medium

**Medium for DSM 14457 and DSM 14458
(DSMZ Medium 956)****Composition per liter:**

KH ₂ PO ₄	2.0g
(NH ₄) ₂ SO ₄	2.0g
NaCl	0.5g
MgSO ₄ ·7H ₂ O	0.125g
FeSO ₄ ·7H ₂ O	0.02g
Methanol solution	10.0mL

pH 7.2 ± 0.2 at 25°C

Methanol Solution:**Composition per 10.0mL:**

Methanol	5.0mL
----------------	-------

Preparation of Methanol Solution: Add methanol to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except methanol solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add 10.0mL sterile methanol solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Methylobacterium lusitanum* and *Methylobacterium suomiense*.

Medium for DSM 14457 and DSM 14458 (DSMZ Medium 956)

Composition per liter:

KH ₂ PO ₄	2.0g
(NH ₄) ₂ SO ₄	2.0g
NaCl.....	0.5g
MgSO ₄ ·7H ₂ O.....	0.125g
FeSO ₄ ·7H ₂ O.....	0.02g
Methylamine solution.....	10.0mL

pH 7.2 ± 0.2 at 25°C

Methylamine Solution:

Composition per 10.0mL:

Methylamine.....	3.0g
------------------	------

Preparation of Methylamine Solution: Add methylamine to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except methylamine solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add 10.0mL sterile methylamine solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Methylobacterium lusitanum* and *Methylobacterium suomiense*.

Medium E for *Bacillus*

Composition per liter:

NaCl.....	50.0g
K ₂ HPO ₄	10.6g
Sucrose.....	10.0g
KH ₂ PO ₄	5.3g
(NH ₄) ₂ SO ₄	1.0g
MgSO ₄	0.25g
Trace salts solution.....	10.0mL

Trace Salts Solution:

Composition per liter:

MnSO ₄ ·H ₂ O.....	3.0g
Disodium EDTA.....	1.0g
FeSO ₄ ·7H ₂ O.....	0.1g
CaCl ₂ ·2H ₂ O.....	0.1g
CoCl ₂ ·6H ₂ O.....	0.1g
ZnSO ₄ ·7H ₂ O.....	0.1g
CuSO ₄ ·5H ₂ O.....	0.01g
AlK(SO ₄) ₂ ·12H ₂ O.....	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O.....	0.01g

Preparation of Trace Salts Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Bacillus* species.

Medium E for Sulfate Reducers (Postgate's Medium E for Sulfate Reducers)

Composition per liter:

Agar.....	15.0g
Sodium lactate.....	3.5g
MgCl ₂ ·6H ₂ O.....	2.0g
NH ₄ Cl.....	1.0g
Na ₂ SO ₄	1.0g
CaCl ₂ ·2H ₂ O.....	1.0g
Yeast extract.....	1.0g
KH ₂ PO ₄	0.5g
Ascorbic acid.....	0.1g
Thioglycollic acid.....	0.1g
FeSO ₄ ·7H ₂ O.....	0.004g

pH 7.6 ± 0.2 at 25°C

Preparation of Medium: Add components, except ascorbic acid and thioglycollic acid, to tap water and bring volume to 1.0L. For marine bacteria, NaCl may be added or seawater used in place of tap water. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.6. Thioglycolate and ascorbate should be added immediately prior to sterilization. Distribute into screw-capped tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and enumeration of *Desulfovibrio* species and *Desulfotomaculum* species as black colonies in deep agar cultures. Also used for the isolation of pure cultures of *Desulfovibrio* species and *Desulfotomaculum* species.

Medium E-2

Composition per liter:

K ₂ HPO ₄ ·3H ₂ O.....	7.5g
KH ₂ PO ₄	3.7g
NaNH ₄ HPO ₄ ·4H ₂ O.....	3.5g
Tap water.....	1.0L
Thiamine solution.....	10.0mL
MgSO ₄ ·7H ₂ O solution.....	10.0mL
<i>n</i> -Octane.....	variable

pH 7.0 ± 0.2 at 25°C

Thiamine Solution:

Composition per 10.0mL:

Thiamine.....	10.0mg
---------------	--------

Preparation of Thiamine Solution: Add thiamine to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly.

MgSO₄·7H₂O Solution:

Composition per 10.0mL:

MgSO ₄ ·7H ₂ O.....	0.246g
---	--------

Preparation of MgSO₄·7H₂O Solution: Add MgSO₄·7H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly.

Preparation of Medium: Add components, except octane, to tap water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Inoculate tubes and place in a desiccator to which *n*-octane has been added and evaporated.

Use: For the cultivation of a recombinant strain of *Escherichia coli* that utilizes hydrocarbons.

Medium for *Ectothiorhodospira***Composition per 1001.0mL:**

Basal medium	800.0mL
Solution C	200.0mL
Vitamin solution B	1.0mL

Basal Medium:**Composition per 800.0mL:**

NaCl	180.0g
Na ₂ SO ₄	20.0g
Na ₂ CO ₃	6.0g
Na ₂ S·9H ₂ O	1.0g
Sodium succinate	1.0g
NH ₄ Cl	0.8g
KH ₂ PO ₄	0.5g
Yeast extract	0.5g
MgCl ₂ ·6H ₂ O	0.1g
CaCl ₂ ·7H ₂ O	0.05g
Trace elements solution A	1.0mL

pH 8.5 ± 0.2 at 25°C

Trace Elements Solution A:**Composition per liter:**

FeCl ₂ ·4H ₂ O	1.8g
H ₃ BO ₃	500.0mg
CoCl ₂ ·6H ₂ O	250.0mg
ZnCl ₂	100.0mg
MnCl ₂ ·4H ₂ O	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	30.0mg
CuCl ₂ ·2H ₂ O	10.0mg
NiCl ₂ ·6H ₂ O	10.0mg
Na ₂ SeO ₃ ·5H ₂ O	10.0mg

Preparation of Trace Elements Solution A: Add components to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Adjust pH to 3 with 1N HCl. Bring volume to 1.0L with distilled/deionized water.

Preparation of Basal Solution: Add components to distilled/deionized water and bring volume to 800.0mL. Mix thoroughly. Adjust pH to 8.5. Distribute into screw-capped bottles. Autoclave for 15 min at 14 psi pressure–120°C.

Vitamin Solution B:**Composition per 100.0mL:**

Nicotinamide	35.0mg
Thiamine dichloride	30.0mg
<i>p</i> -Aminobenzoic acid	20.0mg
Biotin	10.0mg
Calcium DL-pantothenate	10.0mg
Pyridoxal·HCl	10.0mg
Vitamin B ₁₂	5.0mg

Preparation of Vitamin Solution B: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Solution C:**Composition per 200.0mL:**

NaHCO ₃	14.0g
--------------------------	-------

Preparation of Solution C: Add NaHCO₃ to distilled/deionized water and bring volume to 200.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: To 800.0mL of sterile basal solution, aseptically add 200.0mL of sterile solution C and 1.0mL of sterile vitamin solution B. Mix thoroughly.

Use: For the cultivation and maintenance of *Ectothiorhodospira halochloris*.

Medium with EDTA as Carbon and Nitrogen Source**Composition per liter:**

Agar	15.0g
MgSO ₄ ·7H ₂ O	0.3g
Disodium ethylenediaminetetraacetate	0.25g
CaCl ₂ ·2H ₂ O	0.244g
Ferric ammonium citrate	0.05g
Phosphate solution	50.0mL
Trace elements solution SL-6	5.0mL
Schlegel's vitamin solution	5.0mL

pH 7.6 ± 0.4 at 25°C

Phosphate Solution:**Composition per 50.0mL:**

Na ₂ HPO ₄ ·2H ₂ O	3.57g
KH ₂ PO ₄	0.67g

Preparation of Phosphate Solution: Add components to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Adjust pH to 7.6. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution SL-6:**Composition per liter:**

MnCl ₂ ·4H ₂ O	0.5g
H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
Na ₂ MoO ₄ ·2H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Schlegel's Vitamin Solution:**Composition per 100.0mL:**

Nicotinic acid	2.0g
Pyridoxamine	5.0mg
Cyanocobalamin	2.0mg
<i>p</i> -Aminobenzoate	1.0mg
Thiamine	1.0mg
Calcium DL-pantothenate	0.5mg
Biotin	0.2mg

Preparation of Schlegel's Vitamin Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Filter sterilize.

Preparation of Medium: Add components, except phosphate solution and Schlegel's vitamin solution, to distilled/deionized water and bring volume to 945.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 50.0mL of sterile phosphate solution and 5.0mL of sterile Schlegel's vitamin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of bacteria that can utilize EDTA as a carbon source.

**Medium with EDTA as Carbon Source
(DSMZ Medium 473)****Composition per liter:**

Agar	15.0g
MgSO ₄ ·7H ₂ O	0.49g

Na ₂ -EDTA.....	0.2g
Ferric ammonium citrate.....	0.08g
Ca(NO ₃) ₂ ·4H ₂ O.....	0.02g
Phosphate solution.....	10.0mL
Trace elements solution SL-6.....	5.0mL
Vitamin solution.....	5.0mL
pH 7.5 ± 0.2 at 25°C	

Phosphate Solution:**Composition per 10.0mL:**

KH ₂ PO ₄	0.272g
---------------------------------------	--------

Preparation of Phosphate Solution: Add KH₂PO₄ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Vitamin Solution:**Composition per 100.0mL:**

KH ₂ PO ₄	0.272g
Biotin.....	0.08g
Folic acid.....	0.08g
Thiamin-HCl.....	0.08g

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Trace Elements Solution SL-6:**Composition per liter:**

H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O.....	0.2g
ZnSO ₄ ·7H ₂ O.....	0.1g
MnCl ₂ ·4H ₂ O.....	0.03g
Na ₂ MoO ₄ ·H ₂ O.....	0.03g
NiCl ₂ ·6H ₂ O.....	0.02g
CuCl ₂ ·2H ₂ O.....	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 3.4.

Preparation of Medium: Add components, except vitamin solution and phosphate solution, to 985.0mL distilled/deionized water. Adjust pH to 7.5. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes (20.0mL per Petri dish). Cool to room temperature. Aseptically add 10.0mL sterile phosphate solution and 5.0mL sterile vitamin solution. Mix thoroughly. Aseptically distribute to sterile tubes or flasks.

Use: For the cultivation of unclassified bacterium DSM6780.

Medium for *Erythrobacter longus* (DSMZ Medium 695)

Composition per liter:

Peptone.....	2.0g
Soytone.....	1.0g
Yeast extract.....	1.0g
Proteose peptone No.3.....	1.0g
Ferric citrate solution.....	2.0mL
Artificial seawater.....	700.0mL
pH 7.5 ± 0.2 at 25°C	

Artificial Seawater:**Composition per liter:**

NaCl.....	23.477g
MgCl ₂ ·6H ₂ O.....	4.981g
Na ₂ SO ₄	3.917g

CaCl ₂	1.12g
KCl.....	664.0mg
NaHCO ₃	192.0mg
H ₃ BO ₃	26.0mg
SrCl ₂	24.0mg
KBr.....	6.0mg
NaF.....	3.0mg

Preparation of Artificial Seawater: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Ferric Citrate Solution:**Composition per 10.0mL:**

Ferric citrate.....	0.5g
---------------------	------

Preparation of Ferric Citrate Solution: Add ferric citrate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly.

Preparation of Medium: Add components, except artificial sea water, to distilled/deionized water and bring volume to 300.0mL. Mix thoroughly. Adjust pH to 7.5. Aseptically add 700.0mL artificial sea water. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or bottles.

Use: For the cultivation of *Erythrobacter longus*.

Medium F

Composition per liter:

MgSO ₄ ·7H ₂ O.....	0.5g
(NH ₄) ₂ SO ₄	0.15g
KCl.....	0.05g
KH ₂ PO ₄	0.05g
Ca(NO ₃) ₂	0.01g
FeSO ₄ ·7H ₂ O solution.....	10.0mL
pH 3.5 ± 0.2 at 25°C	

FeSO₄·7H₂O Solution:**Composition per 10.0mL:**

FeSO ₄ ·7H ₂ O.....	1.0g
---	------

Preparation of FeSO₄·7H₂O Solution: Add the FeSO₄·7H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except FeSO₄·7H₂O solution, to tap water and bring volume to 990.0mL. Mix thoroughly. Gently heat until dissolved. Adjust pH to 3.5. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL of sterile FeSO₄·7H₂O solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Thiobacillus* species.

Medium F for Sulfate Reducers (Postgate's Medium F for Sulfate Reducers)

Composition per liter:

Agar.....	12.0g
Pancreatic digest of casein.....	10.0g
Sodium lactate.....	3.5g
Ferrous citrate.....	0.5g
Na ₂ SO ₃	0.5g
MgSO ₄ ·7H ₂ O.....	0.2g
Ascorbic acid.....	0.1g
Sodium thioglycolate.....	0.1g
pH 7.1 ± 0.2 at 25°C	

Preparation of Medium: Add components, except ascorbic acid and thioglycolic acid, to tap water and bring volume to 1.0L. For marine bacteria, NaCl may be added or seawater used in place of tap water. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.1. Thioglycolate and ascorbate should be added immediately prior to sterilization. Distribute into screw-capped tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For isolation and cultivation of *Desulfotomaculum nigrificans*, *Desulfovibrio* species, and other *Desulfotomaculum* species especially in food. These bacteria form black colonies in deep agar cultures.

Medium for Freshwater Flexibacteria

Composition per 1002.0mL:

Casamino acids	1.0g
MgSO ₄ ·7H ₂ O	1.0g
Tris (hydroxymethyl) amino methane.....	1.0g
CaCl ₂ ·2H ₂ O.....	0.1g
KNO ₃	0.1g
Sodium glycerophosphate.....	0.1g
Thiamine	1.0mg
Cobalamine	1.0µg
Glucose solution	1.0mL
Trace elements solution	1.0mL

pH 7.5 ± 0.2 at 25°C

Glucose Solution:

Composition per 100.0mL:

Glucose	10.0g
---------------	-------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Trace Elements Solution:

Composition per liter:

ZnCl ₂	20.8g
H ₃ BO ₃	2.85g
MnCl ₂ ·4H ₂ O.....	1.8g
Sodium tartrate.....	1.77g
FeSO ₄	1.36g
CoCl ₂ ·6H ₂ O	40.4mg
CuCl ₂ ·2H ₂ O	26.9mg
Na ₂ MoO ₄ ·2H ₂ O	25.2mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except glucose solution and trace elements solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 1.0mL of sterile glucose solution and 1.0mL of sterile trace elements solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Cytophaga psychrophila*, *Flectobacillus major*, *Flexibacter aurantiacus*, *Flexibacter aurantiacus*, *Flexibacter elegans*, *Flexibacter flexilis*, *Flexibacter roseolus*, *Flexibacter ruber*, *Flexibacter sancti*, and *Herpetosiphon geysericola*.

**Medium with Fluoranthene
(DSMZ Medium 457b)**

Composition per liter:

Na ₂ HPO ₄	2.44g
--	-------

KH ₂ PO ₄	1.52g
(NH ₄) ₂ SO ₄	0.5g
MgSO ₄ ·7H ₂ O.....	0.2g
Twen 80	0.2g
Fluoranthene solution	50.0mL
CaCl ₂ ·2H ₂ O	0.05g
Trace elements solution SL-4	10.0mL
Fluoranthene solution	50.0mL

pH 6.9 ± 0.2 at 25°C

Trace Elements Solution SL-4:

Composition per liter:

EDTA.....	0.5g
FeSO ₄ ·7H ₂ O.....	0.2g
Trace elements solution SL-6	100.0mL

Trace Elements Solution SL-6:

Composition per liter:

H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O.....	0.1g
MnCl ₂ ·4H ₂ O.....	0.03g
Na ₂ MoO ₄ ·H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O.....	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 3.4.

Preparation of Trace Elements Solution SL-4: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Fluoranthene Solution:

Composition per liter:

Fluoranthene	2.0g
--------------------	------

Preparation of Fluoranthene Solution: Add fluoranthene to 1.0L acetone. Mix thoroughly. Filter sterilize using a cellulose filter membrane.

Preparation of Medium: Add components, except fluoranthene solution, to 1.0L distilled/deionized water. Adjust pH to 6.9. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Add an aliquot of the fluoranthene solution to a sterile flask so that the final concentration will be 0.1g/L fluoranthene, and let the acetone evaporate. Aseptically add sterile medium to the crystal-layered flask.

Use: For the cultivation of fluoranthene-utilizing *Pseudomonas frederiksbergensis* *Sphingomonas* sp. (*Pseudomonas paucimobilis*), and other bacteria.

**Medium G for Sulfate Reducers
(Postgate's Medium G for Sulfate Reducers)**

Composition per 1015.2mL:

Solution 1.....	970.0mL
Solution 4.....	30.0mL
Solution 8A, 8B, 8C, 8D, or 8E.....	10.0mL
Solution 5.....	3.0mL
Solution 2.....	1.0mL
Solution 3.....	1.0mL
Solution 6.....	0.1mL
Solution 7.....	0.1mL

pH 7.2 ± 0.2 at 25°C

Solution 1:**Composition** per 970.0mL:

Na ₂ SO ₄	3.0g
NaCl.....	1.2g
MgCl ₂ ·6H ₂ O.....	0.4g
KCl.....	0.3g
NH ₄ Cl.....	0.3g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O.....	0.15g

Preparation of Solution 1: Add components to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Adjust pH to 7.2 with 2N HCl. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution 2:**Composition** per 10.0mL:

NaOH.....	5.0mg
Na ₂ SeO ₃	0.03mg

Preparation of Solution 2: Add NaOH and Na₂SeO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution 3:**Composition** per liter:

FeCl ₂ ·4H ₂ O.....	1.5g
CoCl ₂ ·6H ₂ O.....	0.12g
MnCl ₂ ·4H ₂ O.....	0.1g
ZnCl ₂	0.07g
H ₃ BO ₃	0.06g
NiCl ₂ ·6H ₂ O.....	0.025g
NaMoO ₄ ·2H ₂ O.....	0.025g
CuCl ₂ ·2H ₂ O.....	0.015g

Preparation of Solution 3: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution 4:**Composition** per 30.0mL:

NaHCO ₃	2.55g
--------------------------	-------

Preparation of Solution 4: Add NaHCO₃ to distilled/deionized water and bring volume to 30.0mL. Mix thoroughly. Gas with 100% CO₂ for 10–15 min. Filter sterilize.

Solution 5:**Composition** per 3.0mL:

Na ₂ S·9H ₂ O.....	0.36g
--	-------

Preparation of Solution 5: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 3.0mL. Mix thoroughly. Gas with 100% N₂ for 5–10 min. Cap tube with a rubber stopper. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution 6:**Composition** per 100.0mL:

Thiamine-HCl.....	0.01g
Cyanocobalamin.....	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Biotin.....	1.0mg

Preparation of Solution 6: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Solution 7:**Composition** per 100.0mL:

Succinic acid.....	0.6g
Isobutyric acid.....	0.5g
Valeric acid.....	0.5g
2-Methylbutyric acid.....	0.5g
3-Methylbutyric acid.....	0.5g
Caproic acid.....	0.2g

Preparation of Solution 7: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Adjust pH to 9.0 with NaOH. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution 8A:**Composition** per 100.0mL:

Sodium acetate·3H ₂ O.....	20.0g
---------------------------------------	-------

Solution 8B:**Composition** per 100.0mL:

Propionic acid.....	7.0g
---------------------	------

Solution 8C:**Composition** per 100.0mL:

<i>n</i> -Butyric acid.....	8.0g
-----------------------------	------

Solution 8D:**Composition** per 100.0mL:

Benzoic acid.....	5.0g
-------------------	------

Solution 8E:**Composition** per 100.0mL:

<i>n</i> -Palmitic acid.....	5.0g
------------------------------	------

Preparation of Solutions 8A–E: Add the appropriate amount of component to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Adjust pH to 9.0 with NaOH. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Preparation of Medium: To 970.0mL of cooled, sterile solution 1, aseptically add 1.0mL of sterile solution 2, 1.0mL of sterile solution 3, 30.0mL of sterile solution 4, 3.0mL of sterile solution 5, 0.1mL of sterile solution 6, 0.1mL of sterile solution 7, and 10.0mL of sterile solution 8A, 8B, 8C, 8D, or 8E. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the isolation and cultivation of *Desulfovibrio baarsii*, *Desulfovibrio sapovorans*, *Desulfobacter* species, *Desulfonema* species, *Desulfobulbus* species, and *Desulfotomaculum acetoxidans*.

Medium for Halophilic Archaea (DSMZ Medium 1184)

Composition per liter:

NaCl.....	195.0g
MgSO ₄ ·7H ₂ O.....	50.8g
MgCl ₂ ·6H ₂ O.....	32.5g
Yeast extract.....	5.0g
KCl.....	5.0g
CaCl ₂ ·2H ₂ O.....	0.8g
NaBr.....	0.6g
NaHCO ₃	0.16g

pH 6.7 ± 0.3 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.5–7.0. Distribute into tubes or flasks. Gently heat while stirring and bring to

boiling. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of halophilic archaea. For the cultivation of *Pycnoporus cinnabarinus* and *Natrinema ejinorensis*.

Medium for Halophilic Bacilli

Composition per liter:

NaCl	100.0g
Casamino acids	10.0g
Yeast extract	10.0g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of halophilic *Bacillus* species.

Medium for Hydrocarbon-Degrading Bacteria

Composition per 1020.0mL:

NH ₄ Cl	0.5g
MgSO ₄ ·7H ₂ O	0.5g
NaCl	0.4g
Hydrocarbon	20.0mL
KH ₂ PO ₄ solution	0.5mL
Na ₂ HPO ₄ ·H ₂ O solution	0.5mL

KH₂PO₄ Solution:

Composition per 100.0mL:

KH ₂ PO ₄	10.0g
---------------------------------------	-------

Preparation of KH₂PO₄ Solution: Add KH₂PO₄ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Na₂HPO₄·H₂O Solution:

Composition per 100.0mL:

Na ₂ HPO ₄ ·H ₂ O	10.0g
--	-------

Preparation of Na₂HPO₄·H₂O Solution: Add Na₂HPO₄·H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Preparation of Medium: Add components—except hydrocarbon, KH₂PO₄ solution, and Na₂HPO₄·H₂O solution—to distilled/deionized water and bring volume to 999.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 0.5mL of sterile KH₂PO₄ solution and 0.5mL of the sterile Na₂HPO₄·H₂O solution. Mix thoroughly. Aseptically distribute into sterile tubes in 10.0mL volumes. Add 0.2mL of sterile hydrocarbon to each tube.

Use: For the cultivation and enumeration of hydrocarbon-degrading bacteria in fresh water.

Medium for Hydrocarbon-Degrading Bacteria (Naphthalene Mineral Salts Medium)

Composition per liter:

K ₂ HPO ₄	1.0g
(NH ₄) ₂ SO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.3g
CaCl ₂	0.1g
FeSO ₄ ·7H ₂ O	0.02g
Naphthalene	2.0mL

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components, except naphthalene, to distilled/deionized water and bring volume to 998.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 2.0mL of sterile naphthalene to 20.0mL of sterile basal salts. Ultrasonically homogenize the solution. Add the naphthalene–basal salts homogenate back to the remainder of the sterile basal salts medium. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and enrichment of hydrocarbon-degrading bacteria.

Medium K

See: **Kievskaya Broth**

Medium K

(DSMZ Medium 1122)

Composition per liter:

Agar	20.0g
(NH ₄) ₂ SO ₄	2.0g
KH ₂ PO ₄	2.0g
NaCl	0.5g
MgSO ₄ ·7H ₂ O	0.125g
FeSO ₄ ·7H ₂ O	0.002g
Methanol, sterilized by filtration	10.0mL

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components, except methanol, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Adjust pH to 7.2. Gently heat while stirring and bring to boiling. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 10.0 sterile methanol. Mix thoroughly. Pour into Petri dishes or aseptically distribute into sterile tubes.

Use: For the cultivation of *Methylobacillus pratensis* and *Methylovorus mays*.

Medium for Lactobacilli (ATCC Medium 980)

Composition per liter:

Agar	20.0g
Peptone	12.5g
Glucose	11.0g
Sodium acetate	10.0g
Yeast extract	5.5g
KH ₂ PO ₄	0.25g
K ₂ HPO ₄	0.25g
MgSO ₄	0.1g
MnSO ₄ ·4H ₂ O	0.05g
FeSO ₄ ·7H ₂ O	0.05g

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.8. Autoclave for 10 min at 15 psi pressure–120°C. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Pediococcus acidilactici* and *Bacillus* species.

Medium 4 m 1

Composition per liter:

Agar	15.0g
Peptone	3.0g

Pancreatic digest of casein.....	3.0g
Yeast extract.....	3.0g
Maltose.....	2.0g
Lactose.....	1.0g
Sodium dichromate solution.....	100.0mL
pH 7.0 ± 0.2 at 25°C	

Sodium Dichromate Solution:**Composition per 100.0mL:**

Sodium dichromate.....	0.05g
------------------------	-------

Preparation of Sodium Dichromate Solution: Add sodium dichromate to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Preparation of Medium: Add components, except sodium dichromate solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.2. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile sodium dichromate solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of *Corynebacterium sepedonicum*.

Medium M71**Composition per liter:**

Agar.....	20.0g
Peptone.....	10.0g
Glucose.....	5.0g
H ₃ BO ₃	1.0g
Pancreatic digest of casein.....	1.0g
Cycloheximide.....	0.05g
2,3,5-Triphenyltetrazolium·HCl solution.....	10.0mL

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

2,3,5-Triphenyltetrazolium·HCl Solution:**Composition per 10.0mL:**

2,3,5-Triphenyltetrazolium·HCl.....	0.05g
-------------------------------------	-------

Preparation of 2,3,5-Triphenyltetrazolium·HCl Solution:

Add 2,3,5-triphenyltetrazolium·HCl to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except 2,3,5-triphenyltetrazolium·HCl solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL of sterile 2,3,5-triphenyltetrazolium·HCl solution. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the selective isolation and cultivation of *Pseudomonas syringae*.

Medium 523M**Composition per liter:**

Agar.....	15.0g
Sucrose.....	10.0g
Casamino acids.....	2.0g
K ₂ HPO ₄	2.0g
Yeast extract.....	2.0g
MgSO ₄ ·7H ₂ O.....	0.3g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Clavibacter toxicus*.

Medium for Marine Flexibacteria**Composition per 1001.0mL:**

Pancreatic digest of casein.....	5.0g
Yeast extract.....	5.0g
Tris (hydroxymethyl) amino methane.....	1.0g
KNO ₃	0.5g
Sodium glycerophosphate.....	0.1g
Trace elements solution.....	1.0mL
pH 7.0 ± 0.2 at 25°C	

Trace Elements Solution:**Composition per liter:**

ZnCl ₂	20.8g
H ₃ BO ₃	2.85g
MnCl ₂ ·4H ₂ O.....	1.8g
Sodium tartrate.....	1.77g
FeSO ₄	1.36g
CoCl ₂ ·6H ₂ O.....	40.4mg
CuCl ₂ ·2H ₂ O.....	26.9mg
Na ₂ MoO ₄ ·2H ₂ O.....	25.2mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except trace elements solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 1.0mL of sterile trace elements solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Cytophaga aprica*, *Cytophaga diffluens*, *Cytophaga johnsonae*, *Cytophaga lytica*, *Cytophaga* species, *Flexibacter aggregans*, *Flexibacter aurantiacus*, *Flexibacter litoralis*, *Flexibacter tractuosus*, *Flexithrix dorotheae*, *Herpetosiphon cohaerens*, *Herpetosiphon nigricans*, *Herpetosiphon persicus*, *Microscilla arenaria*, *Microscilla furvescens*, *Microscilla marina*, *Microscilla sericea*, and *Saprospira grandis*.

**Medium for Marine Methylotrophs
(DSMZ Medium 750)****Composition per liter:**

NaCl.....	25.0g
Agar.....	20.0g
Peptone.....	10.0g
Beef extract.....	7.0g
K ₂ HPO ₄	1.0g
(NH ₄) ₂ SO ₄	1.0g
Methanol.....	10.0mL
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components, except methanol, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 10.0mL filter sterilized methanol. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Methylophaga marina* and *Methylophaga thalassica*.

Medium for *Methylobacterium podarium* (DSMZ Medium 1032)

Composition per liter:

Agar	15.0g
Na ₂ HPO ₄ ·2H ₂ O	7.9g
KH ₂ PO ₄	1.5g
NH ₄ Cl	0.8g
MgSO ₄ ·7H ₂ O	0.1g
Methylamine solution	30.0mL
Trace metal solution (Kelly solution T)	10.0mL

pH 7.3 ± 0.2 at 25°C

Methylamine Solution:

Composition per 10.0ml:

Methylamine	0.5g
-------------------	------

Preparation of Methylamine Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Trace Metal Solution (Kelly Solution T):

Composition per liter:

EDTA	50.0g
NaOH	9.0g
CaCl ₂ ·2H ₂ O	7.34g
FeSO ₄ ·7H ₂ O	5.0g
MnCl ₂ ·4H ₂ O	2.5g
ZnSO ₄ ·7H ₂ O	1.0g
CoCl ₂ ·6H ₂ O	0.5g
(NH ₄) ₂ MoO ₄	0.5g
CuSO ₄ ·5H ₂ O	0.2g

Preparation of Trace Metal Solution: Add EDTA to 400.0mL distilled/deionized water. Add NaOH with constant mixing. This is best done in a 1–2L beaker on a magnetic stirrer. Add the other salts individually to about 30–40mL water to dissolve before adding to the EDTA-NaOH solution. Allow each component to mix thoroughly before adding the next component. Adjust pH to 6.0 using 1M NaOH (approximately 24.0mL). Bring volume to 1.0L with distilled/deionized water. Filter sterilize. Do not autoclave! Store in a dark bottle.

Preparation of Medium: Add components, except trace metal solution and methylamine solution, to distilled/deionized water and bring volume to 960.0mL. Mix thoroughly. Adjust pH to 7.4. Gently heat while stirring and bring to boiling. Mix thoroughly. Autoclave for 10 min at 105 psi pressure–115°C. Cool to 50°C. Aseptically add methylamine solution and trace metal solution. Mix thoroughly. Pour into Petri dishes or aseptically distribute into sterile tubes.

Use: For the cultivation of *Methylobacterium podarium*.

Medium N

Composition per liter:

Agar	20.0g
Glucose	20.0g
Yeast nitrogen base without amino acids	6.7g
Casamino acids, vitamin free	2.0g
Isoleucine	0.1g
Valine	0.1g
Deoxythymidine-5'-monophosphate solution	10.0mL

Deoxythymidine-5'-Monophosphate Solution:

Composition per 10.0mL:

Deoxythymidine-5'-monophosphate	15.0mg
---------------------------------------	--------

Preparation of Deoxythymidine-5'-Monophosphate Solution:

Add deoxythymidine-5'-monophosphate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except deoxythymidine-5'-monophosphate solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 60°C. Aseptically add 10.0mL of sterile deoxythymidine-5'-monophosphate solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Saccharomyces cerevisiae*.

Medium N for Sulfate Reducers

(Postgate's Medium N for Sulfate Reducers)

Composition per liter:

(NH ₄) ₂ SO ₄	7.0g
Sodium lactate	6.0g
NH ₄ Cl	1.0g
Yeast extract	1.0g
KH ₂ PO ₄	0.5g
Sodium citrate·2H ₂ O	0.3g
FeSO ₄ ·7H ₂ O	0.1g
CaCl ₂ ·6H ₂ O	0.06g
MgSO ₄ ·7H ₂ O	0.06g

pH 7.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. For marine bacteria, NaCl may be added or seawater used in place of distilled/deionized water. Mix thoroughly. Adjust pH to 7.5. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the detection, culturing, and storage of *Desulfovibrio* species and many *Desulfotomaculum* species. This medium should be used when a clear culture medium is desired such as for chemostat culture. This medium may be cloudy after sterilization but usually clears on cooling. It turns black as a result of H₂S production due to bacterial growth.

Medium ND

See: Castenholz ND Medium

Medium for Nitrite Oxidizers

Composition per liter:

KHCO ₃	1.5g
KH ₂ PO ₄	0.5g
K ₂ HPO ₄	0.5g
KNO ₂	0.3g
MgSO ₄ ·7H ₂ O	0.2g
NaCl	0.2g
CaCl ₂ ·2H ₂ O	0.01g
FeSO ₄ ·7H ₂ O	0.01g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation, cultivation, and enrichment of nitrate-oxidizing bacteria.

Medium for Nitrite Oxidizers, Marine

Composition per liter:

MgSO ₄ ·7H ₂ O	0.1g
NaNO ₂	0.07g
CaCl ₂ ·2H ₂ O	6.0mg
K ₂ HPO ₄	1.74mg
Chelated iron	1.0mg
MnCl ₂ ·4H ₂ O	66.0μg
Na ₂ MoO ₄ ·2H ₂ O	30.0μg
ZnSO ₄ ·7H ₂ O	30.0μg
CuSO ₄ ·5H ₂ O	6.0μg
CoCl ₂ ·6H ₂ O	0.6μg
Seawater	700.0mL

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation, cultivation, and enrichment of marine nitrate-oxidizing bacteria.

Medium for Osmophilic Fungi (M 40 Y)

Composition per liter:

Sucrose	400.0g
Agar	20.0g
Malt extract	20.0g
Yeast extract	5.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of osmophilic fungi.

Medium with Phenanthrene (DSMZ Medium 457b)

Composition per liter:

Na ₂ HPO ₄	2.44g
KH ₂ PO ₄	1.52g
(NH ₄) ₂ SO ₄	0.5g
MgSO ₄ ·7H ₂ O	0.2g
Tween 80	0.2g
CaCl ₂ ·2H ₂ O	0.05g
Phenanthrene solution	50.0mL
Trace elements solution SL-4	10.0mL
pH 6.9 ± 0.2 at 25°C	

Trace Elements Solution SL-4:

Composition per liter:

EDTA	0.5g
FeSO ₄ ·7H ₂ O	0.2g
Trace elements solution SL-6	100.0mL

Preparation of Trace Elements Solution SL-4: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Trace Elements Solution SL-6:

Composition per liter:

H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g

ZnSO ₄ ·7H ₂ O	0.1g
MnCl ₂ ·4H ₂ O	0.03g
Na ₂ MoO ₄ ·H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 3.4.

Phenanthrene Solution:

Composition per liter:

Phenanthrene	2.0g
--------------	------

Preparation of Phenanthrene Solution: Add phenanthrene to 1.0L acetone. Mix thoroughly. Filter sterilize using a cellulose filter membrane.

Preparation of Medium: Add components, except phenanthrene solution, to 1.0L distilled/deionized water. Adjust pH to 6.9. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Add an aliquot of the phenanthrene solution to a sterile flask so that the final concentration will be 0.1g/L phenanthrene, and let the acetone evaporate. Aseptically add sterile medium to the crystal-layered flask.

Use: For the cultivation of phenanthrene-utilizing *Sphingomonas* sp. (*Pseudomonas paucimobilis*), *Pseudomonas frederiksbergensis*, and other bacteria.

Medium with Polyhydroxybutyric Acid as Carbon Source (DSMZ Medium 474)

Composition per liter:

Agar	16.0g
Na ₂ HPO ₄	2.44g
KH ₂ PO ₄	1.52g
(NH ₄) ₂ SO ₄	0.5g
MgSO ₄ ·7H ₂ O	0.2g
CaCl ₂ ·2H ₂ O	0.05g
PHB solution	66.0mL
Trace elements solution SL-4	10.0mL
pH 6.9 ± 0.2 at 25°C	

Trace Elements Solution SL-4:

Composition per liter:

EDTA	0.5g
FeSO ₄ ·7H ₂ O	0.2g
Trace elements solution SL-6	100.0mL

Trace Elements Solution SL-6:

Composition per liter:

H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
MnCl ₂ ·4H ₂ O	0.03g
Na ₂ MoO ₄ ·H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 3.4.

Preparation of Trace Elements Solution SL-4: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

PHB Solution:**Composition** per 100.0mL:Poly- β -hydroxybutyric acid (PHB)..... 3.0g

Preparation of PHB Solution: Add poly- β -hydroxybutyric acid (PHB) to 100.0mL distilled/deionized water. Stir overnight. Sonicate until a white homogenous suspension is obtained. Autoclave for 5 min at 15 psi pressure–121°C. Cool to room temperature.

Preparation of Medium: Add components, except PHB solution, to 1.0L distilled/deionized water. Adjust pH to 6.9. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Use 500.0mL to prepare bottom layer of a double agar plate by aseptically pouring 10.0mL amounts into sterile Petri dishes. Allow to solidify. Warm the PHB solution to 50°C. Aseptically add 33 mL of sterile PHB solution to the remaining 500.0mL of the medium. Mix thoroughly. Pour the PHB containing agar as a top layer over the solidified base agar.

Use: For the cultivation of *Comamonas testosteroni*.

Medium for *Prosthecomicrobium* and *Ancalomicrobium*

Composition per liter:

Agar 15.0g
 Peptone..... 0.1g
 Hutner's mineral base solution20.0mL
 Vitamin solution..... 10.0mL

Hutner's Mineral Base Solution:**Composition** per liter:

MgSO₄·7H₂O 29.7g
 Nitrilotriacetic acid 10.0g
 CaCl₂·2H₂O..... 3.34g
 FeSO₄·7H₂O..... 0.1g
 (NH₄)₂MoO₄ 9.25mg
 Metals "44" 50.0mL

Preparation of Hutner's Mineral Base Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L.

Metals "44":**Composition** per 100.0mL:

ZnSO₄·7H₂O 1.1g
 FeSO₄·7H₂O..... 0.5g
 EDTA 0.25g
 MnSO₄·7H₂O 0.154g
 CuSO₄·5H₂O 0.04g
 Co(NO₃)₂·6H₂O 0.025g
 Na₂B₄O₇·10H₂O..... 0.018g

Preparation of Metals "44": Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Vitamin Solution:**Composition** per liter:

Pyridoxine-HCl 0.01g
 Calcium pantothenate 5.0mg
 Nicotinamide 5.0mg
 Riboflavin 5.0mg
 Thiamine HCl 5.0mg
 Biotin 2.0mg
 Folic acid..... 2.0mg
 Vitamin B₁₂ 0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except vitamin solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile vitamin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation of *Prosthecomicrobium* species and *Ancalomicrobium* species.

Medium for *Prosthecomicrobium* and *Ancalomicrobium*

Composition per liter:

(NH₄)₂SO₄ 0.25g
 Glucose 0.25g
 Na₂HPO₄..... 0.071g
 Modified Hutner's basal salts20.0mL
 Vitamin solution..... 10.0mL
 pH 7.2 ± 0.2 at 25°C

Modified Hutner's Basal Salts:**Composition** per liter:

MgSO₄·7H₂O 29.7g
 Nitrilotriacetic acid 10.0g
 CaCl₂·2H₂O 3.34g
 FeSO₄·7H₂O..... 0.1g
 (NH₄)₂MoO₄ 9.25mg
 Metals "44" 50.0mL

Preparation of Modified Hutner's Basal Salts: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Readjust pH to 7.2 with H₂SO₄ or KOH. Add distilled/deionized water to 1.0L. Store at 5°C.

Metals "44":**Composition** per 100.0mL:

ZnSO₄·7H₂O 1.1g
 FeSO₄·7H₂O..... 0.5g
 EDTA 0.25g
 MnSO₄·7H₂O 0.154g
 CuSO₄·5H₂O 0.04g
 Co(NO₃)₂·6H₂O 0.025g
 Na₂B₄O₇·10H₂O..... 0.018g

Preparation of Metals "44": Add a few drops of H₂SO₄ to distilled/deionized water to inhibit precipitate formation. Add components to acidified distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Vitamin Solution:**Composition** per liter:

Thiamine-HCl 5.0mg
 D-Calcium pantothenate 5.0mg
 Riboflavin 5.0mg
 Biotin 2.0mg
 Folic acid 2.0mg
 Vitamin B₁₂..... 0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except vitamin solution, to distilled deionized water and bring volume to 990.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add 10.0mL of sterile vitamin solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Prosthecomicrobium enhydrium*, *Prosthecomicrobium pneumaticum*, and *Ancalomicrobium* species.

Medium for *Prosthecomicrobium* and *Ancalomicrobium*, Modified

Composition per liter:

Agar	15.0g
Glucose	1.0g
(NH ₄) ₂ SO ₄	0.25g

Preparation of Medium: Add components, except vitamin solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add 10.0mL of sterile vitamin solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Ancalomicrobium adetum* and *Prosthecomicrobium* species.

Medium R

Composition per liter:

Na ₂ S ₂ O ₃ ·5H ₂ O	5.0g
KNO ₃	2.0g
MgCl ₂ ·6H ₂ O.....	0.5g
NH ₄ Cl	0.5g
KH ₂ PO ₄ solution.....	10.0mL
NaHCO ₃ solution.....	10.0mL
FeSO ₄ ·7H ₂ O solution.....	10.0mL

pH 7.0 ± 0.2 at 25°C

KH₂PO₄ Solution:

Composition per 10.0mL:

KH ₂ PO ₄	2.0g
---------------------------------------	------

Preparation of KH₂PO₄ Solution: Add KH₂PO₄ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

NaHCO₃ Solution:

Composition per 10.0mL:

NaHCO ₃	1.0g
--------------------------	------

Preparation of NaHCO₃ Solution: Add the NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

FeSO₄·7H₂O Solution:

Composition per 10.0mL:

FeSO ₄ ·7H ₂ O.....	10.0mg
---	--------

Preparation of FeSO₄·7H₂O Solution: Add the FeSO₄·7H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components—except KH₂PO₄ solution, NaHCO₃ solution, and FeSO₄·7H₂O solution—to tap water and bring volume to 970.0mL. Mix thoroughly. Gently heat until dissolved. Adjust pH to 7.0. Autoclave for 15 min at 15 psi pressure—121°C. Cool to 45°–50°C. Aseptically add 10.0mL of sterile KH₂PO₄ solution, 10.0mL of NaHCO₃ solution, and 10.0mL of FeSO₄·7H₂O solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Thiobacillus denitrificans*.

Medium for *Roseospira* (DSMZ Medium 998)

Composition per liter:

NaCl	20.0g
MgCl ₂ ·6H ₂ O.....	1.0g
MgSO ₄ ·7H ₂ O	0.25g
NH ₄ Cl	0.5g
Yeast extract.....	0.5g
KH ₂ PO ₄	0.3g
CaCl ₂ ·2H ₂ O.....	0.05g
NaHCO ₃ solution	10.0mL
Acetate solution	10.0mL
Succinate solution	10.0mL
Trace elements solution SL-12	1.0mL
Vitamin V7 solution.....	1.0mL

pH 6.9 ± 0.2 at 25°C

Acetate Solution:

Composition per 10.0mL:

Sodium acetate.....	0.41g
---------------------	-------

Preparation of Acetate Solution: Add sodium acetate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 20% CO₂ + 80% N₂. Filter sterilize.

Succinate Solution:

Composition per 10.0mL:

Sodium succinate.....	0.85g
-----------------------	-------

Preparation of Succinate Solution: Add sodium succinate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 20% CO₂ + 80% N₂. Filter sterilize.

NaHCO₃ Solution:

Composition per 10.0mL:

NaHCO ₃	1.5g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 20% CO₂ + 80% N₂. Filter sterilize.

Vitamin Solution V7:

Composition per liter:

Pyridoxine-HCl.....	50.0mg
Nicotinic acid.....	20.0mg
Vitamin B ₁₂	20.0mg
Thiamine-HCl·2H ₂ O.....	10.0mg
<i>p</i> -Aminobenzoic acid.....	10.0mg
D-Ca-pantothenate	5.0mg
Biotin	2.0mg

Preparation of Vitamin Solution V7: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Trace Elements Solution SL-12:

Composition per liter:

FeSO ₄ ·7H ₂ O.....	1.1g
H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.19g
MnCl ₂ ·2H ₂ O	0.05g
ZnCl ₂	42.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
Na ₂ MoO ₄ ·4H ₂ O.....	18.0mg
CuCl ₂ ·2H ₂ O	2.0mg

Preparation of Trace Elements Solution SL-12: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except bicarbonate, vitamin, acetate, and succinate solutions, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Gently heat while stirring and bring to boiling. Boil for 1 min. Cool to room temperature while sparging with 90% N₂ + 10% CO₂ gas. Autoclave for 15 min at 15 psi pressure—121°C. Aseptically add bicarbonate and vitamin solutions. Mix thoroughly. Adjust pH to 6.9. Distribute into sterile 50mL screw-capped bottles. Add the organic acetate and succinate substrates.

Use: For the cultivation of *Roseospira* spp.

Medium for *Roseospira*

Composition per liter:

NaCl	20.0g
MgCl ₂ ·6H ₂ O	1.0g

MgSO ₄ ·7H ₂ O	0.25g
NH ₄ Cl	0.5g
Yeast extract.....	0.5g
KH ₂ PO ₄	0.3g
CaCl ₂ ·2H ₂ O.....	0.05g
NaHCO ₃ solution	10.0mL
Acetate solution	10.0mL
Succinate solution	10.0mL
Na ₂ S·9H ₂ O solution	10.0mL
Trace elements solution SL-12	1.0mL
Vitamin V7 solution.....	1.0mL

pH 6.9 ± 0.2 at 25°C

Acetate Solution:**Composition** per 10.0mL:

Sodium acetate	0.41g
----------------------	-------

Preparation of Acetate Solution: Add sodium acetate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 20% CO₂ + 80% N₂. Filter sterilize.

Succinate Solution:**Composition** per 10.0mL:

Sodium succinate	0.85g
------------------------	-------

Preparation of Succinate Solution: Add sodium succinate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 20% CO₂ + 80% N₂. Filter sterilize.

NaHCO₃ Solution:**Composition** per 10.0mL:

NaHCO ₃	1.5g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 20% CO₂ + 80% N₂. Filter sterilize.

Vitamin Solution V7:**Composition** per liter:

Pyridoxine-HCl.....	50.0mg
Nicotinic acid.....	20.0mg
Vitamin B ₁₂	20.0mg
Thiamine-HCl·2H ₂ O.....	10.0mg
<i>p</i> -Aminobenzoic acid.....	10.0mg
D-Ca-pantothenate.....	5.0mg
Biotin	2.0mg

Preparation of Vitamin Solution V7: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Trace Elements Solution SL-12:**Composition** per liter:

FeSO ₄ ·7H ₂ O.....	1.1g
H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O.....	0.19g
MnCl ₂ ·2H ₂ O.....	0.05g
ZnCl ₂	42.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
Na ₂ MoO ₄ ·4H ₂ O.....	18.0mg
CuCl ₂ ·2H ₂ O.....	2.0mg

Preparation of Trace Elements Solution SL-12: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Na₂S·9H₂O Solution:**Composition** per 10.0mL:

Na ₂ S·9H ₂ O.....	0.2g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Preparation of Medium: Add components, except sulfide, bicarbonate, vitamin, acetate, and succinate solutions, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Gently heat while stirring and bring to boiling. Boil for 1 min. Cool to room temperature while sparging with 90% N₂ + 10% CO₂ gas. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add bicarbonate and vitamin solutions. Mix thoroughly. Adjust pH to 6.9. Distribute into sterile 50mL screw-capped bottles. Add sulfide and organic acetate and succinate substrates.

Use: For the cultivation of *Roseospira navarrensis*.

Medium S**Composition** per liter:

Na ₂ S ₂ O ₃ ·5H ₂ O.....	5.0g
(NH ₄) ₂ SO ₄	4.0g
KH ₂ PO ₄	4.0g
MgSO ₄	0.5g
CaCl ₂	0.25g
FeSO ₄	0.01g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Thiobacillus* species.

Medium S**Composition** per liter:

Glucose.....	10.0g
K ₂ HPO ₄	4.0g
Peptone.....	4.0g
Yeast extract.....	4.0g
KH ₂ PO ₄	2.0g
MgSO ₄ ·7H ₂ O.....	0.5g

pH 7.7 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the general cultivation of a wide variety of bacteria.

Medium SP 4**Composition** per liter:

Pancreatic digest of casein.....	11.0g
Peptone.....	5.3g
Glucose.....	5.0g
NaCl.....	0.875g
Beef extract.....	0.525g
Yeast extract.....	0.525g
Beef heart, solids from infusion.....	0.35g
Fetal bovine serum, heat inactivated.....	170.0mL
Yeast extract solution.....	100.0mL
CMRL 1066, 10X solution.....	50.0mL
Fresh yeast extract solution.....	35.0mL

Phenol Red solution	20.0mL
Penicillin solution	10.0mL
pH 7.6 ± 0.2 at 25°C	

Yeast Extract Solution:

Composition per 100.0mL:

Yeast extract	2.0g
---------------------	------

Preparation of Yeast Extract Solution: Add yeast extract to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

CMRL 1066, 10X Solution:

Composition per liter:

NaCl	6.8g
NaHCO ₃	2.2g
D-Glucose	1.0g
KCl	0.4g
L-Cysteine·HCl·H ₂ O	0.26g
CaCl ₂ , anhydrous	0.2g
MgSO ₄ ·7H ₂ O	0.2g
NaH ₂ PO ₄ ·H ₂ O	0.14g
L-Glutamine	0.1g
Sodium acetate·3H ₂ O	0.083g
L-Glutamic acid	0.075g
L-Arginine·HCl	0.07g
L-Lysine·HCl	0.07g
L-Leucine	0.06g
Glycine	0.05g
Ascorbic acid	0.05g
L-Proline	0.04g
L-Tyrosine	0.04g
L-Aspartic acid	0.03g
L-Threonine	0.03g
L-Alanine	0.025g
L-Phenylalanine	0.025g
L-Serine	0.025g
L-Valine	0.025g
L-Cystine	0.02g
L-Histidine·HCl·H ₂ O	0.02g
L-Isoleucine	0.02g
Phenol Red	0.02g
L-Methionine	0.015g
Deoxyadenosine	0.01g
Deoxycytidine	0.01g
Deoxyguanosine	0.01g
Glutathione, reduced	0.01g
Thymidine	0.01g
Hydroxy-L-proline	0.01g
L-Tryptophan	0.01g
Nicotinamide adenine dinucleotide	7.0mg
Tween™ 80	5.0mg
Sodium glucuronate·H ₂ O	4.2mg
Coenzyme A	2.5mg
Coccarboxylase	1.0mg
Flavin adenine dinucleotide	1.0mg
Nicotinamide adenine dinucleotide phosphate	1.0mg
Uridine triphosphate	1.0mg
Choline chloride	0.5mg
Cholesterol	0.2mg
5-Methyldeoxycytidine	0.1mg
Inositol	0.05mg

p-Aminobenzoic acid	0.05mg
Niacin	0.025mg
Niacinamide	0.025mg
Pyridoxine	0.025mg
Pyridoxal·HCl	0.025mg
Biotin	0.01mg
D-Calcium pantothenate	0.01mg
Folic acid	0.01mg
Riboflavin	0.01mg
Thiamine·HCl	0.01mg

Source: CMRL 1066, 10X medium is available as a premixed powder from BD Diagnostics.

Preparation of CMRL 1066, 10X Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Filter sterilize.

Fresh Yeast Extract Solution:

Composition per 100.0mL:

Baker's yeast, live, pressed, starch-free	25.0g
---	-------

Preparation of Fresh Yeast Extract Solution: Add the live Baker's yeast to 100.0mL of distilled/deionized water. Autoclave for 90 min at 15 psi pressure–121°C. Allow to stand. Remove supernatant solution. Adjust pH to 6.6–6.8. Filter sterilize.

Phenol Red Solution:

Composition per 100.0mL:

Phenol Red	0.01g
------------------	-------

Preparation of Phenol Red Solution: Add Phenol Red to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Penicillin Solution:

Composition per 10.0mL:

Penicillin	1,000,000U
------------------	------------

Preparation of Penicillin Solution: Add penicillin to distilled/deionized water and bring volume to 10.0mL. Filter sterilize.

Preparation of Medium: Add components—except fetal bovine serum, yeast extract solution, CMRL 1066, 10X solution, fresh yeast extract solution, Phenol Red solution, and penicillin solution—to distilled/deionized water and bring volume to 615.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 170.0mL of sterile fetal bovine serum, 100.0mL of sterile yeast extract solution, 50.0mL of sterile CMRL 1066, 10X solution, 35.0mL of sterile fresh yeast extract solution, 20.0mL of sterile Phenol Red solution, and 10.0mL of sterile penicillin solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the isolation and cultivation of *Spiroplasma* species from ticks.

**Medium for Sulfate Reducers
(ATCC Medium 1282)**

Composition per 1050.0mL:

Modified Baar's medium for sulfate reducers	1020.0mL
Organic acid solution	10.0mL
Wolfe's vitamin solution	10.0mL
Wolfe's mineral solution	10.0mL

pH 7.5 ± 0.2 at 25°C

Modified Baar's Medium for Sulfate Reducers:**Composition per 1020.0mL:**

Component I	400.0mL
Component III	400.0mL
Component II	200.0mL
Fe(NH ₄) ₂ (SO ₄) ₂ (5% solution)	20.0mL

Component I:**Composition per 400.0mL:**

Sodium citrate	5.0g
MgSO ₄	2.0g
CaSO ₄	1.0g
NH ₄ Cl	1.0g

Preparation of Component I: Add components to distilled/deionized water and bring volume to 400.0mL. Mix thoroughly. Adjust pH to 7.5. Autoclave for 15 min at 15 psi pressure–121°C.

Component II:**Composition per 200.0mL:**

K ₂ HPO ₄	0.5g
---------------------------------------	------

Preparation of Component II: Add K₂HPO₄ to distilled/deionized water and bring volume to 200.0mL. Mix thoroughly. Adjust pH to 7.5. Autoclave for 15 min at 15 psi pressure–121°C.

Component III:**Composition per 400.0mL:**

Sodium lactate	3.5g
Yeast extract	1.0g

Preparation of Component III: Add components to distilled/deionized water and bring volume to 400.0mL. Mix thoroughly. Adjust pH to 7.5. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Modified Baar's Medium for Sulfate Reducers: Aseptically combine the three sterile solutions, except the Fe(NH₄)₂(SO₄)₂ solution. Mix thoroughly. Distribute 5.0mL volumes into tubes under 97% N₂ + 3% H₂. Add medium to tubes while still warm to exclude as much O₂ as possible. Prepare a 5% solution of ferrous ammonium sulfate, Fe(NH₄)₂(SO₄)₂. Sterilize by filtration. Add 0.2mL of sterile Fe(NH₄)₂(SO₄)₂ solution to 10.0mL of medium immediately prior to inoculation.

Organic Acid Solution:**Composition per 100.0mL:**

Butyric acid	5.18mL
Caproic acid	2.4mL
Octanoic acid	1.25mL

Preparation of Organic Acid Solution: Add components to distilled/deionized water and bring volume to 75.0mL. Adjust pH to 7.0 with 5*N* NaOH. Bring volume to 100.0mL with distilled/deionized water. Filter sterilize.

Wolfe's Vitamin Solution:**Composition per liter:**

Pyridoxine-HCl	10.0mg
Thiamine-HCl	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
Calcium pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Thioctic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Cyanocobalamin	100.0μg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Wolfe's Mineral Solution:**Composition per liter:**

MgSO ₄ ·7H ₂ O	3.0g
Nitrilotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·H ₂ O	0.5g
FeSO ₄ ·7H ₂ O	0.1g
CoCl ₂ ·6H ₂ O	0.1g
CaCl ₂	0.1g
ZnSO ₄ ·7H ₂ O	0.1g
CuSO ₄ ·5H ₂ O	0.01g
AlK(SO ₄) ₂ ·12H ₂ O	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g

Preparation of Wolfe's Mineral Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Filter sterilize.

Preparation of Medium: To each test tube containing 10.0mL of modified Baar's medium for sulfate reducers, aseptically add 0.1mL of sterile organic acid solution, 0.1mL of sterile Wolfe's vitamin solution, and 0.1mL of sterile Wolfe's mineral solution immediately prior to inoculation.

Use: For the cultivation and maintenance of *Desulfotomaculum thermobenzoicum* and *Desulfovibrio sapovorans*.

Medium for Sulfate Reducers
(Postgate's Medium for Sulfate Reducers)
(ATCC Medium 1283)

Composition per liter:

Part A	869.0mL
Part C	100.0mL
Part D	10.0mL
Part E	10.0mL
Part F	10.0mL
Part B	1.0mL

pH 7.7 ± 0.2 at 25°C

Part A:**Composition per 869.0mL:**

Na ₂ SO ₄	3.0g
NaCl	1.0g
KCl	0.5g
MgCl ₂ ·6H ₂ O	0.4g
NH ₄ Cl	0.3g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O	0.15g

Preparation of Part A: Add components to distilled/deionized water and bring volume to 869.0mL. Mix thoroughly. Prepare and autoclave part A under 90% N₂ + 10% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Part B:**Composition per liter:**

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	0.19g
MnCl ₂ ·4H ₂ O	0.1g

ZnCl ₂	0.07g
H ₃ BO ₃	0.06g
Na ₂ MoO ₄ ·2H ₂ O.....	0.04g
NiCl ₂ ·6H ₂ O.....	0.02g
CuCl ₂ ·2H ₂ O.....	0.02g
HCl, 25%.....	10.0mL

Preparation of Part B: Add the FeCl₂·4H₂O to the HCl. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Part C:

Composition per 100.0mL:

NaHCO ₃	5.0g
--------------------------	------

Preparation of Part C: Add the NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Gas with 90% N₂ + 10% CO₂ to remove residual O₂.

Part D:

Composition per 10.0mL:

Sodium butyrate.....	0.7g
Sodium caproate.....	0.3g
Sodium octanoate.....	0.15g

Preparation of Part D: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Part E:

Composition per 10.0mL:

Yeast extract.....	1.0g
Thiamine-HCl.....	100.0μg
<i>p</i> -Aminobenzoic acid.....	40.0μg
D(+)-Biotin.....	10.0μg

Preparation of Part E: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Part F:

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	0.4g
--	------

Preparation of Part F: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Preparation of Medium: To 869.0mL of sterile cooled part A, aseptically add the remaining sterile solutions in the following order: part B, part C, part D, part E, and part F. Mix thoroughly. Adjust pH to 7.7. Anaerobically distribute under 80% N₂ + 20% CO₂ into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Desulfovibrio baarsii* and *Desulfovibrio sapovorans*.

Medium for Thermophilic Actinomycetes

Composition per liter:

Agar.....	20.0g
Soluble starch.....	10.0g
Maize extract.....	5.0g
NaCl.....	5.0g

Peptone.....	5.0g
CaCl ₂	0.5g

pH 6.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of thermophilic actinomycetes.

Medium for *Treponema pectinovorum*

Composition per liter:

Polypeptone™.....	5.0g
Heart infusion broth.....	5.0g
Yeast extract.....	5.0g
NaCl.....	5.0g
K ₂ HPO ₄	2.0g
(NH ₄) ₂ SO ₄	2.0g
Agar.....	1.0g
Pectin.....	0.8g
L-Cysteine-HCl·H ₂ O.....	0.68g
Rumen fluid.....	500.0mL
Resazurin (25.0 mg/100.0mL water).....	4.0mL

pH 7.0–7.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Prepare and distribute anaerobically under 90% N₂ + 10% CO₂. Mix thoroughly. Adjust pH to 7.0–7.2. Distribute into screw-capped tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Treponema pectinovorum*.

Medium for *Ureaplasma*

See: **B Broth**

Medium VTY

Composition per 100.0mL:

Peptone.....	1.0g
Noble agar.....	0.7g
Yeast extract.....	0.5g
L-Cysteine-HCl·H ₂ O.....	0.1g
Salts A.....	20.0mL
Salts B.....	20.0mL
Glucose solution.....	5.0mL
NaHCO ₃ (5% solution).....	1.0mL
Hemin solution.....	1.0mL
Volatile fatty acid solution.....	0.31mL
Resazurin (0.1% solution).....	0.1mL

pH 7.2 ± 0.2 at 25°C

NaHCO₃ Solution:

Composition per 10.0mL:

NaHCO ₃	0.5g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Glucose Solution:

Composition per 10.0mL:

Glucose.....	1.0g
--------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Salts A:

Composition per liter:

CaCl ₂ ·2H ₂ O.....	0.6g
MgSO ₄	0.45g

Preparation of Salts A: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Salts B:

Composition per liter:

NaCl.....	4.5g
(NH ₄) ₂ SO ₄	4.5g
Potassium phosphate buffer (0.05M, pH 7.4).....	1.0L

Preparation of Salts B: Add NaCl and (NH₄)₂SO₄ to 1.0L of 0.05M potassium phosphate buffer, pH 7.4. Mix thoroughly.

Hemin Solution:

Composition per liter:

Hemin.....	0.5g
NaOH (0.01N solution).....	1.0mL

Preparation of Hemin Solution: Add hemin to 1.0mL of 0.01N NaOH solution. Mix thoroughly.

Volatile Fatty Acid Solution:

Composition per 31.0mL:

Acetic acid.....	17.0mL
Propionic acid.....	6.0mL
<i>n</i> -Butyric acid.....	4.0mL
<i>n</i> -Valeric acid.....	1.0mL
Isovaleric acid.....	1.0mL
Isobutyric acid.....	1.0mL
DL- α -Methylbutyric acid.....	1.0mL

Preparation of Volatile Fatty Acid Solution: Combine components. Mix thoroughly.

Preparation of Medium: Add components, except glucose and NaHCO₃ solutions, to distilled/deionized water and bring volume to 94.0mL. Mix thoroughly. Adjust pH to 7.2. Gently heat and gas with 95% N₂ + 5% CO₂ until reduced. Anaerobically distribute into tubes or flasks. Cap with rubber stoppers. Autoclave for 20 min at 15 psi pressure–121°C. Cool to 50°C. Filter sterilize glucose solution and NaHCO₃ solution separately. Aseptically and anaerobically add sterile glucose solution and sterile NaHCO₃ solution to cooled, sterile basal medium.

Use: For the cultivation and maintenance of *Roseburia cecicola*.

Megasphaera Medium

Composition per liter:

Yeast extract.....	4.0g
K ₂ HPO ₄	3.2g
KH ₂ PO ₄	1.6g
Agar.....	1.0g
NH ₄ Cl.....	0.5g
Sodium thioglycolate.....	0.45g
CaCl ₂	0.2g
MgCl ₂	0.2g
Sodium lactate (60% solution).....	16.0mL

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Megasphaera elsdenii*.

Mehlman's Maintenance HiVeg Medium

Composition per liter:

Plant peptone No. 3.....	15.0g
Yeast extract.....	7.5g
K ₂ HPO ₄	5.0g
Plant hydrolysate.....	5.0g
Agar.....	3.0g
(NH ₄) ₂ SO ₄	1.5g
Starch, soluble.....	1.0g
Neutral Red.....	0.02g

pH 7.3 ± 0.22 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Campylobacter* spp.

Melin–Norkrans Medium (MN)

Composition per 1001.2mL:

Agar.....	15.0g
Glucose.....	10.0g
Malt extract.....	2.8g
KH ₂ PO ₄	0.5g
(NH ₄) ₂ HPO ₄	0.25g
MgSO ₄ ·7H ₂ O.....	0.15g
CaCl ₂	0.05g
NaCl.....	0.025g
Thiamine.....	0.1mg
Biotine.....	0.005mg
Oligo solution.....	1.66mL
FeCl ₃ solution.....	1.2mL

FeCl₃ Solution:

Composition per 10.0mL:

FeCl ₃	1.0g
-------------------------	------

Preparation of FeCl₃ Solution: Add FeCl₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly.

Oligo Solution:

Composition per 1.66mL:

Lilly and Barnett solution.....	1.0mL
Hoagland 1% solution.....	0.66mL

Hoagland Solution:

Composition per 100.0mL:

Fe(NO ₃) ₃ ·9H ₂ O·H ₃ BO ₃	2.86g
MnCl ₂	1.81g
ZnSO ₄ ·7H ₂ O.....	0.22g
CuSO ₄ ·5H ₂ O.....	0.08g
H ₂ MoO ₄ ·H ₂ O.....	0.01g

Preparation of Hoagland Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Lilly and Barnett Solution:

Composition per 100.0mL:

Fe(NO ₃) ₃ ·9H ₂ O.....	723.5mg
ZnSO ₄ ·7H ₂ O.....	439.8mg

Preparation of Lilly and Barnett Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Oligo Solution: Combine 1.0mL of Lilly and Barnett solution and 0.66mL of 1% Hoagland solution.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Agaricus xanthoderma*, *Agaricus macrorporus*, *Antrodia serialis*, *Armillaria mellea*, *Auricularia fuscococcinea*, *Boletinus merulioides*, *Boletus leucophaeus*, *Cephalophora irregularis*, *Circinella umbellata*, *Kuehneromyces mutabilis*, *Laccaria laccata*, *Lentinus tigrinus*, *Lenzites betulina*, *Leucogyrophana mollusca*, *Lycoperdon foetidum*, *Macrolepiota rhacodes*, *Macrolepiota procera*, *Pholiota lenta*, *Phoma exigua*, and many other fungi.

***Melissococcus pluton* Medium**

Composition per liter:

Glucose.....	10.0g
Neopeptone.....	5.0g
Peptone.....	2.5g
Yeast extract.....	2.5g
Soluble starch.....	2.0g
Pancreatic digest of casein.....	2.0g
L-Cysteine·HCl·H ₂ O.....	0.25g
Phosphate buffer (1M, pH 6.7).....	50.0mL

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Gently heat and bring to boiling. Distribute into tubes or flasks that have been flushed with 90% N₂ + 10% CO₂. Cap with butyl rubber stoppers. Place tubes in a press. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Melissococcus pluton*.

***Melissococcus pluton* Medium**

Composition per liter:

Agar.....	20.0g
KH ₂ PO ₄	13.5g
Glucose.....	10.0g
Peptone.....	10.0g
Soluble starch.....	10.0g

pH 6.6 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 6.6 with KOH. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Melissococcus pluton*.

***Melissococcus plutonius* Agar
(LMG Medium 110)**

Composition per liter:

Agar.....	20.0g
Glucose.....	10.0g
Neopeptone.....	5.0g
Peptone.....	2.5g
Yeast extract.....	2.5g
Starch, soluble.....	2.0g
Trypticase™.....	2.0g
L-Cysteine·HCl.....	0.25g
Phosphate buffer solution.....	50.0mL

Phosphate Buffer Solution:

Composition per liter:

KH ₂ PO ₄	4.5g
Na ₂ HPO ₄ ·2H ₂ O.....	5.8g

Preparation of Phosphate Buffer Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.7.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Anaerobically distribute into tubes sparged with a gas mixture of 100% N₂ + 10% CO₂. Immediately plug with butyl rubber stoppers. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Melissococcus plutonius*.

**Membrane *Clostridium perfringens* Medium
(m-CP Medium)**

Composition per 1040.0mL:

Tryptose.....	30.0g
Yeast extract.....	20.0g
Agar.....	15.0g
Sucrose.....	5.0g
L-Cysteine·HCl·H ₂ O.....	1.0g
MgSO ₄ ·7H ₂ O.....	0.1g
Bromocresol Purple.....	0.04g
Phenolphthalein solution.....	20.0mL
Indoxyl-β-D-glucoside solution.....	8.0mL
Selective supplement solution.....	8.0mL
Ferric chloride solution.....	4.0mL

pH 7.6 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Selective Supplement Solution:

Composition per 8.0mL:

D-Cycloserine.....	0.8g
Polymyxin B sulfate.....	50.0mg

Preparation of Selective Supplement Solution: Add components to distilled/deionized water and bring volume to 8.0mL. Mix thoroughly. Filter sterilize.

Indoxyl-β-D-glucoside Solution:

Composition per 10.0mL:

Indoxyl-β-D-glucoside.....	75.0mg
----------------------------	--------

Preparation of Indoxyl-β-D-glucoside Solution: Add indoxyl-β-D-glucoside to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Ferric Chloride Solution:**Composition per 10.0mL:**FeCl₃·6H₂O 0.45g

Preparation of Ferric Chloride Solution: Add ferric chloride to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Phenolphthalein Solution:**Composition per 20.0mL:**

Phenolphthalein biphosphate tetrasodium salt 0.15g

Preparation of Phenolphthalein Solution: Add phenolphthalein biphosphate tetrasodium salt to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except selective supplement solution, phenolphthalein solution, ferric chloride solution, and indoxyl-β-D-glucoside solution to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 8.0mL selective supplement solution, 20.0mL phenolphthalein solution, 4.0mL ferric chloride solution, and 8.0mL indoxyl-β-D-glucoside solution. Mix thoroughly. Pour into sterile Petri dishes or aseptically distribute into sterile tubes.

Use: For the rapid isolation and presumptive identification of *Clostridium perfringens* from food and water samples. A selective and chromogenic medium for the presumptive identification of *Clostridium perfringens*, especially from water samples. Recommended in European Council Directive 98/83/EC for testing the quality of water intended for human consumption. *C. perfringens* colonies have a characteristic opaque yellow appearance. Most other *Clostridium* spp. will appear as either purple colonies, due to the lack of sucrose fermentation, or blue/green colonies where the organism is still cleaving indoxyl-β-D-glucoside and also fermenting sucrose.

Membrane Lactose Glucuronide Agar (MLGA)

Composition per liter:

Peptone 40.0g
Lactose 30.0g
Agar 10.0g
Yeast extract 6.0g
Sodium lauryl sulfate 1.0g
Sodium pyruvate 0.5g
5-Bromo-4-chloro-3-indoxyl-β-D-glucuronic acid 0.2g
Phenol Red 0.2g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available from Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Pour into sterile Petri dishes.

Use: For the direct enumeration of *E. coli* and coliforms in foods by the membrane filtration method. The chromogenic substrate 5-bromo-4-chloro-3-indoxyl-β-D-glucuronic acid (BCIG) is cleaved by the enzyme β-glucuronidase and produces a blue chromophore that builds up within the bacterial cells. In addition, the incorporation of Phenol Red detects lactose fermentation and results in yellow colonies when acid is produced. Since coliform colonies are lactose positive, they will ap-

pear yellow on this medium and as *E. coli* colonies are both lactose and β-glucuronidase positive, they will appear green.

Membrane Lauryl Sulfate Broth

Composition per liter:

Peptone 39.0g
Lactose 30.0g
Yeast extract 6.0g
Sodium lauryl sulfate 1.0g
Phenol Red 0.2g

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the enumeration of coliform organisms and *Escherichia coli* in water.

m-Endo Agar, LES

See: Endo Agar, LES

m-Endo Broth

See: Endo Broth

M-Endo HiVeg Agar LES

Composition per liter:

Agar 15.0g
Lactose 9.4g
Plant hydrolysate No. 1 7.5g
NaCl 3.7g
Plant hydrolysate 3.7g
Plant peptone 3.7g
K₂HPO₄ 3.3g
Na₂SO₃ 1.6g
Yeast extract 1.2g
KH₂PO₄ 1.0g
Basic Fuchsin 0.8g
Synthetic detergent No. III 0.1g
Sodium lauryl sulfate 0.05g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Caution: Basic Fuchsin is a potential carcinogen and care must be taken to avoid inhalation of the powdered dye and contact with the skin.

Preparation of Medium: Add ethanol to approximately 900.0mL of distilled/deionized water. Add remaining components. Bring volume to 1.0L with distilled/deionized water. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile 60mm Petri dishes in 4.0mL volumes. Protect from the light.

Use: For the cultivation and enumeration of coliform bacteria by the membrane filter method.

M-Endo HiVeg Broth

Composition per liter:

Lactose 25.0g
Plant peptone 20.0g
K₂HPO₄ 7.0g
Yeast extract 6.0g

Na ₂ SO ₃	2.5g
Basic Fuchsin	1.0g
pH 7.2 ± 0.1 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Caution: Basic Fuchsin is a potential carcinogen and care must be taken to avoid inhalation of the powdered dye and contact with the skin.

Preparation of Medium: Add ethanol to approximately 900.0mL of distilled/deionized water. Add remaining components. Bring volume to 1.0L with distilled/deionized water. Mix thoroughly. Gently heat and bring to boiling. Rapidly cool broth below 45°C. Do not autoclave. Use 1.8–2.0mL for each filter pad. Protect from the light. Prepare broth freshly.

Use: For the cultivation and enumeration of coliform bacteria from water by the membrane filter method.

M-Endo HiVeg Broth MF (MF Endo HiVeg Medium) (M-Coliform HiVeg Broth)

Composition per liter:

Lactose	12.5g
Plant hydrolysate No. 1	10.0g
Plant hydrolysate	5.0g
Plant special peptone	5.0g
NaCl	5.0g
K ₂ HPO ₄	4.375g
Na ₂ SO ₃	2.1g
Yeast extract	1.5g
KH ₂ PO ₄	1.375g
Basic Fuchsin	1.05g
Synthetic detergent No. III	0.1g
Sodium lauryl sulfate	0.05g
pH 7.2 ± 0.1 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Caution: Basic Fuchsin is a potential carcinogen and care must be taken to avoid inhalation of the powdered dye and contact with the skin.

Preparation of Medium: Add ethanol to approximately 900.0mL of distilled/deionized water. Add remaining components. Bring volume to 1.0L with distilled/deionized water. Mix thoroughly. Gently heat and bring to boiling. Rapidly cool broth below 45°C. Do not autoclave. Use 1.8–2.0mL for each filter pad. Protect from the light. Prepare broth freshly.

Use: For the cultivation and enumeration of coliform bacteria from water by the membrane filter method.

Meniscus glaucopsis Agar

Composition per liter:

Agar	15.0g
CaCO ₃	10.0g
Maltose	5.0g
Yeast extract	1.0g
KH ₂ PO ₄	0.5g
NaCl	0.4g
NH ₄ Cl	0.4g
Sodium thioglycolate	0.3g

MgSO ₄ ·7H ₂ O	0.2g
CaCl ₂ ·H ₂ O	0.01g
FeSO ₄ ·7H ₂ O	1.0mg
Resazurin (0.025% solution)	4.0mL
Trace elements solution SL-6	1.0mL
Vitamin solution	10.0mL
pH 7.3 ± 0.2 at 25°C	

Trace Elements Solution SL-6:

Composition per liter:

H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
MnCl ₂ ·4H ₂ O	0.03g
Na ₂ MoO ₄ ·H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 3.4.

Vitamin Solution:

Composition per liter:

Vitamin B ₁₂	2.8mg
Thiamine-HCl	0.28mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except vitamin solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Adjust pH to 7.3 with 10% Na₂CO₃. Gently heat and bring to boiling. Continue boiling until resazurin changes color. Cool to 50°C. Distribute into tubes in 7.0mL volumes under O₂-free 97% N₂ + 3% H₂. Cap with rubber stoppers under O₂-free 97% N₂ + 3% H₂. Place tubes in a press. Autoclave for 15 min at 15 psi pressure–121°C using fast exhaust. Cool to 50°C. Aseptically add 0.25mL of sterile vitamin solution to each tube.

Use: For the cultivation and maintenance of *Meniscus glaucopsis*.

Meniscus glaucopsis Broth

Composition per liter:

Maltose	5.0g
Agar	3.0g
Yeast extract	1.0g
KH ₂ PO ₄	0.5g
NaCl	0.4g
NH ₄ Cl	0.4g
Sodium thioglycolate	0.3g
MgSO ₄ ·7H ₂ O	0.2g
CaCl ₂ ·H ₂ O	0.01g
FeSO ₄ ·7H ₂ O	1.0mg
Resazurin (0.025% solution)	4.0mL
Trace elements solution SL-6	1.0mL
Vitamin solution	10.0mL
pH 7.3 ± 0.2 at 25°C	

Trace Elements Solution SL-6:

Composition per liter:

H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
MnCl ₂ ·4H ₂ O	0.03g

Na ₂ MoO ₄ ·H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 3.4.

Vitamin Solution:

Composition per liter:

Vitamin B ₁₂	2.8mg
Thiamine-HCl	0.28mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except vitamin solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Adjust pH to 7.3 with 10% Na₂CO₃. Gently heat and bring to boiling. Continue boiling until resazurin changes color. Cool to 50°C. Distribute into tubes in 7.0mL volumes under O₂-free 97% N₂ + 3% H₂. Cap with rubber stoppers under O₂-free 97% N₂ + 3% H₂. Place tubes in a press. Autoclave for 15 min at 15 psi pressure–121°C using fast exhaust. Cool to 50°C. Aseptically add 0.25mL of sterile vitamin solution to each tube.

Use: For the cultivation and maintenance of *Meniscus glaucopsis*.

M-Enrichment Broth

Composition per liter:

Proteose peptone	40.0g
Yeast extract	6.0g
NaCl	5.0g
K ₂ HPO ₄	3.0g

pH 7.0 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the preliminary enrichment of organisms on membrane filter prior to using selective media.

m-Enterococcus Agar

See: *Enterococcus* Agar

M-Enterococcus Agar Base

with Polysorbate 80 and Sodium Carbonate

Composition per liter:

Agar	10.0g
Casein enzymic hydrolysate	15.0g
Papaic digest of soybean meal	5.0g
Yeast extract	5.0g
K ₂ HPO ₄	4.0g
Glucose	2.0g
NaN ₃	0.4g
Triphenyl tetrazolium chloride	0.1g
Sodium carbonate solution	2.0mL
Polysorbate 80	0.5mL

pH 7.2 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Caution: Sodium azide has a tendency to form explosive metal azides with plumbing materials. It is advisable to use enough water to flush off the disposables.

Sodium Carbonate Solution:

Composition per 10.0mL:

Na ₂ CO ₃	1.0g
---------------------------------------	------

Preparation of Sodium Carbonate Solution: Add Na₂CO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except polysorbate 80 and sodium carbonate solution, to distilled/deionized water and bring volume to 997.5mL. Mix thoroughly. Gently heat to dissolve components. Do not autoclave. Cool to 50°C. Add polysorbate 80 and sodium carbonate solution. Mix thoroughly. Pour into Petri dishes or aseptically distribute into sterile tubes.

Use: For the selective isolation and enumeration of enterococci from water, sewage, food, or other materials.

M-Enterococcus Agar Base, Modified

Composition per liter:

Yeast extract	30.0g
Pancreatic digest of gelatin	10.0g
Agar	15.0g
NaCl	15.0g
Esculin	1.0g
Nalidixic acid	0.25g
NaN ₃	0.15g
Cycloheximide	0.05g
Selective supplement solution	15.0mL

pH 7.1 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Caution: Sodium azide has a tendency to form explosive metal azides with plumbing materials. It is advisable to use enough water to flush off the disposables.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Selective Supplement Solution:

Composition per 20.0mL:

2,3,5-Triphenyl tetrazolium chloride	0.2g
--	------

Preparation of Selective Supplement Solution: Add 2,3,5-triphenyl tetrazolium chloride to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except selective supplement solution, to distilled/deionized water and bring volume to 985.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add selective supplement solution. Mix thoroughly. Pour into Petri dishes or aseptically distribute into sterile tubes.

Use: For the recovery of enterococci in water samples using the membrane filter technique.

M-Enterococcus HiVeg Agar Base

Composition per liter:

Plant hydrolysate	15.0g
Agar	10.0g
Papaic digest of soybean meal	5.0g
Yeast extract	5.0g

KH ₂ PO ₄	4.0g
Glucose	2.0g
NaN ₃	0.4g
Triphenyl tetrazolium chloride.....	0.1g
pH 7.2 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Caution: Sodium azide is toxic. Azides also react with metals and disposal must be highly diluted.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Cool to 45°–50°C. Do not autoclave. Pour into sterile Petri dishes.

Use: For the isolation, cultivation, and enumeration of enterococci in water, sewage, and feces by the membrane filter method. For the direct plating of specimens for the detection and enumeration of fecal streptococci.

MeReSa Agar Base with Methicillin

(Methicillin-Resistant *Staphylococcus aureus* Agar)

Composition per liter:

Agar	20.0g
Casein enzymic hydrolysate	10.0g
Glycine.....	10.0g
Mannitol.....	10.0g
NaCl.....	10.0g
Sodium pyruvate.....	10.0g
LiCl.....	5.0g
Beef extract.....	5.0g
Indicator mix.....	0.13g
MRSA selective supplement.....	10.0mL
pH 7.0 ± 0.2 at 25°C	

Source: This medium, without MRSA selective supplement, is available as a premixed powder from HiMedia.

Caution: Lithium chloride is harmful. Avoid bodily contact and inhalation of vapors. On contact with skin wash with plenty of water immediately.

MRSA Selective Supplement:

Composition per 10.0mL:

Methicillin.....	4.0mg
------------------	-------

Preparation of MRSA Selective Supplement: Add methicillin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except MRSA selective supplement, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 10.0mL MRSA selective supplement. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of methicillin-resistant *Staphylococcus aureus* (MRSA).

MeReSa Agar Base with Oxacillin

(Methicillin-Resistant *Staphylococcus aureus* Agar)

Composition per liter:

Agar	20.0g
Casein enzymic hydrolysate	10.0g

Glycine.....	10.0g
Mannitol.....	10.0g
NaCl.....	10.0g
Sodium pyruvate.....	10.0g
LiCl.....	5.0g
Beef extract.....	5.0g
Indicator mix.....	0.13g
MRSA selective supplement.....	10.0mL
pH 7.0 ± 0.2 at 25°C	

Source: This medium, without MRSA supplement solution, is available as a premixed powder from HiMedia.

Caution: Lithium chloride is harmful. Avoid bodily contact and inhalation of vapors. On contact with skin wash with plenty of water immediately.

MRSA Selective Supplement:

Composition per 10.0mL:

Oxacillin	2.0mg
-----------------	-------

Preparation of MRSA Selective Supplement: Add oxacillin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except MRSA selective supplement, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 10.0mL MRSA selective supplement. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of methicillin-resistant *Staphylococcus aureus* (MRSA).

MES Agar

See: U Agar Plates

Metal Acetate Agar

Composition per liter:

Agar	15.0g
Sodium acetate.....	2.0g
Beijerinck's solution	50.0mL
Phosphate buffer solution	50.0mL
Trace elements solution	1.0mL
pH 6.8 ± 0.2 at 25°C	

Beijerinck's Solution:

Composition per liter:

NH ₄ Cl	10.0g
MgSO ₄ ·7H ₂ O.....	0.4g
CaCl ₂ ·2H ₂ O	0.2g

Preparation of Beijerinck's Solution: Add CaCl₂·2H₂O to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Add the remaining components to distilled/deionized water and bring volume to 500.0mL in a separate flask. Combine the two solutions.

Phosphate Buffer Solution:

Composition per liter:

K ₂ HPO ₄	28.8g
KH ₂ PO ₄	14.4g

Preparation of Phosphate Buffer Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.8. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution:**Composition per liter:**

EDTA	50.0g
H ₃ BO ₃ solution	200.0mL
ZnSO ₄ ·7H ₂ O solution	100.0mL
CoCl ₂ ·6H ₂ O solution.....	50.0mL
CuSO ₄ ·5H ₂ O solution	50.0mL
FeSO ₄ ·7H ₂ O solution.....	50.0mL
MnCl ₂ ·4H ₂ O solution.....	50.0mL
(NH ₄) ₆ Mo ₇ O ₂₄ ·4H ₂ O solution	50.0mL

H₃BO₃ Solution:**Composition per 200.0mL:**

H ₃ BO ₃	11.4g
--------------------------------------	-------

Preparation of H₃BO₃ Solution: Add H₃BO₃ to distilled/deionized water and bring volume to 200.0mL. Mix thoroughly.

ZnSO₄·7H₂O Solution:**Composition per 100.0mL:**

ZnSO ₄ ·7H ₂ O	22.0g
--	-------

Preparation of ZnSO₄·7H₂O Solution: Add ZnSO₄·7H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

MnCl₂·4H₂O Solution:**Composition per 50.0mL:**

MnCl ₂ ·4H ₂ O.....	5.06g
---	-------

Preparation of MnCl₂·4H₂O Solution: Add MnCl₂·4H₂O to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly.

FeSO₄·7H₂O Solution:**Composition per 50.0mL:**

FeSO ₄ ·7H ₂ O.....	4.99g
---	-------

Preparation of FeSO₄·7H₂O Solution: Add FeSO₄·7H₂O to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly.

CoCl₂·6H₂O Solution:**Composition per 50.0mL:**

CoCl ₂ ·6H ₂ O	1.61g
--	-------

Preparation of CoCl₂·6H₂O Solution: Add CoCl₂·6H₂O to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly.

CuSO₄·5H₂O Solution:**Composition per 50.0mL:**

CuSO ₄ ·5H ₂ O	1.57g
--	-------

Preparation of CuSO₄·5H₂O Solution: Add CuSO₄·5H₂O to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly.

(NH₄)₆Mo₇O₂₄·4H₂O Solution:**Composition per 50.0mL:**

(NH ₄) ₆ Mo ₇ O ₂₄ ·4H ₂ O	1.1g
--	------

Preparation of (NH₄)₆Mo₇O₂₄·4H₂O Solution: Add 1.1 g of (NH₄)₆Mo₇O₂₄·4H₂O to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly.

Preparation of Trace Elements Solution: Add EDTA to distilled/deionized water and bring volume to 250.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling until dissolved. Add 200.0mL of H₃BO₃ solution, 100.0mL of ZnSO₄·7H₂O solution, 50.0mL of MnCl₂·4H₂O solution, 50.0mL of FeSO₄·7H₂O solution, 50.0mL of CoCl₂·6H₂O solution, 50.0mL of CuSO₄·5H₂O solution, and 50.0mL of (NH₄)₆Mo₇O₂₄·4H₂O solution. Gently heat and bring to boiling. Cool to 70°C. Adjust pH to 6.8 with hot (70°C) 20% KOH so-

lution. Add distilled/deionized water and bring volume to 1.0L. Allow solution to stand in a 2.0L cotton-stoppered flask at room temperature until the solution turns purple (approximately 2 weeks). Filter using two layers of Whatman #1 filter paper. Filter until clear.

Preparation of Medium: Add components, except phosphate buffer solution, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 50.0mL of sterile phosphate solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Chlamydomonas reinhardtii*.

Metal Acetate Broth**Composition per liter:**

Sodium acetate.....	2.0g
Beijerinck's solution	50.0mL
Phosphate buffer solution	50.0mL
Trace elements solution	1.0mL
pH 6.8 ± 0.2 at 25°C	

Beijerinck's Solution:**Composition per liter:**

NH ₄ Cl	10.0g
MgSO ₄ ·7H ₂ O	0.4g
CaCl ₂ ·2H ₂ O	0.2g

Preparation of Beijerinck's Solution: Add CaCl₂·2H₂O to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Add the remaining components to distilled/deionized water and bring volume to 500.0mL in a separate flask. Combine the two solutions.

Phosphate Buffer Solution:**Composition per liter:**

K ₂ HPO ₄	28.8g
KH ₂ PO ₄	14.4g

Preparation of Phosphate Buffer Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.8. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution:**Composition per liter:**

EDTA	50.0g
H ₃ BO ₃ solution	200.0mL
ZnSO ₄ ·7H ₂ O solution	100.0mL
CoCl ₂ ·6H ₂ O solution	50.0mL
CuSO ₄ ·5H ₂ O solution	50.0mL
FeSO ₄ ·7H ₂ O solution.....	50.0mL
MnCl ₂ ·4H ₂ O solution	50.0mL
(NH ₄) ₆ Mo ₇ O ₂₄ ·4H ₂ O solution	50.0mL

H₃BO₃ Solution:**Composition per 200.0mL:**

H ₃ BO ₃	11.4g
--------------------------------------	-------

Preparation of H₃BO₃ Solution: Add H₃BO₃ to distilled/deionized water and bring volume to 200.0mL. Mix thoroughly.

ZnSO₄·7H₂O Solution:**Composition per 100.0mL:**

ZnSO ₄ ·7H ₂ O	22.0g
--	-------

Preparation of ZnSO₄·7H₂O Solution: Add ZnSO₄·7H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

MnCl₂·4H₂O Solution:**Composition** per 50.0mL:MnCl₂·4H₂O..... 5.06g**Preparation of MnCl₂·4H₂O Solution:** Add MnCl₂·4H₂O to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly.**FeSO₄·7H₂O Solution:****Composition** per 50.0mL:FeSO₄·7H₂O..... 4.99g**Preparation of FeSO₄·7H₂O Solution:** Add FeSO₄·7H₂O to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly.**CoCl₂·6H₂O Solution:****Composition** per 50.0mL:CoCl₂·6H₂O..... 1.61g**Preparation of CoCl₂·6H₂O Solution:** Add CoCl₂·6H₂O to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly.**CuSO₄·5H₂O Solution:****Composition** per 50.0mL:CuSO₄·5H₂O..... 1.57g**Preparation of CuSO₄·5H₂O Solution:** Add CuSO₄·5H₂O to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly.**(NH₄)₆Mo₇O₂₄·4H₂O Solution:****Composition** per 50.0mL:(NH₄)₆Mo₇O₂₄·4H₂O..... 1.1g**Preparation of (NH₄)₆Mo₇O₂₄·4H₂O Solution:** Add 1.1 g of (NH₄)₆Mo₇O₂₄·4H₂O to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly.**Preparation of Trace Elements Solution:** Add EDTA to distilled/deionized water and bring volume to 250.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling until dissolved. Add 200.0mL of H₃BO₃ solution, 100.0mL of ZnSO₄·7H₂O solution, 50.0mL of MnCl₂·4H₂O solution, 50.0mL of FeSO₄·7H₂O solution, 50.0mL of CoCl₂·6H₂O solution, 50.0mL of CuSO₄·5H₂O solution, and 50.0mL of (NH₄)₆Mo₇O₂₄·4H₂O solution. Gently heat and bring to boiling. Cool to 70°C. Adjust pH to 6.8 with hot (70°C) 20% KOH solution (approximately 80.0–90.0mL). Add distilled/deionized water and bring volume to 1.0L. Allow solution to stand in a 2.0L cotton-stoppered flask at room temperature until the solution turns purple (approximately 2 weeks). Filter using two layers of Whatman #1 filter paper. Filter until clear. Store at 4°C or at –20°C.**Preparation of Medium:** Add components, except phosphate buffer solution, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 50.0mL of sterile phosphate solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.**Use:** For the cultivation of *Chlamydomonas reinhardtii*.**Metal Acetate Yeast Broth with Arginine****Composition** per liter:

Preparation of $\text{CuSO}_4 \cdot 5\text{H}_2\text{O}$ Solution: Add $\text{CuSO}_4 \cdot 5\text{H}_2\text{O}$ to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly.

$(\text{NH}_4)_6\text{Mo}_7\text{O}_{24} \cdot 4\text{H}_2\text{O}$ Solution:

Composition per 50.0mL:

$(\text{NH}_4)_6\text{Mo}_7\text{O}_{24} \cdot 4\text{H}_2\text{O}$ 1.1g

Preparation of $(\text{NH}_4)_6\text{Mo}_7\text{O}_{24} \cdot 4\text{H}_2\text{O}$ Solution: Add 1.1 g of $(\text{NH}_4)_6\text{Mo}_7\text{O}_{24} \cdot 4\text{H}_2\text{O}$ to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly.

Preparation of Trace Elements Solution: Add EDTA to distilled/deionized water and bring volume to 250.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling until dissolved. Add 200.0mL of H_3BO_3 solution, 100.0mL of $\text{ZnSO}_4 \cdot 7\text{H}_2\text{O}$ solution, 50.0mL of $\text{MnCl}_2 \cdot 4\text{H}_2\text{O}$ solution, 50.0mL of $\text{FeSO}_4 \cdot 7\text{H}_2\text{O}$ solution, 50.0mL of $\text{CoCl}_2 \cdot 6\text{H}_2\text{O}$ solution, 50.0mL of $\text{CuSO}_4 \cdot 5\text{H}_2\text{O}$ solution, and 50.0mL of $(\text{NH}_4)_6\text{Mo}_7\text{O}_{24} \cdot 4\text{H}_2\text{O}$ solution. Gently heat and bring to boiling. Cool to 70°C. Adjust pH to 6.8 with hot (70°C) 20% KOH solution (approximately 80.0–90.0mL). Add distilled/deionized water and bring volume to 1.0L. Allow solution to stand in a 2.0L cotton-stoppered flask at room temperature until the solution turns purple (approximately 2 weeks). Filter using two layers of Whatman #1 filter paper. Filter until clear. Store at 4°C or –20°C.

Preparation of Medium: Add components, except phosphate buffer solution, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 50.0mL of sterile phosphate solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Chlamydomonas reinhardtii*.

Metallogenium Cultivation Broth

Composition per liter:

Gum arabic 20.0g
 MnCO_3 0.5g

MnCO_3 :

Composition per 100.0mL:

MnCl_2 20.0g
 NaHCO_3 (25% solution) 25.0mL

Preparation of MnCO_3 : Add MnCl_2 to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Add NaHCO_3 solution. Filter through Whatman #1 filter paper. Save the MnCO_3 precipitate. Wash and store under distilled/deionized water.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Metallogenium* species.

Metallogenium Cultivation Broth

Composition per liter:

Starch, hydrolyzed 20.0g
 MnCO_3 0.5g

MnCO_3 :

Composition per 100.0mL:

MnCl_2 20.0g
 NaHCO_3 (25% solution) 25.0mL

Preparation of MnCO_3 : Add MnCl_2 to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Add NaHCO_3 solution. Filter through Whatman #1 filter paper. Save the MnCO_3 precipitate. Wash and store under distilled/deionized water.

Preparation of Medium: Hydrolyze starch with HCl. Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Metallogenium* species.

Metallogenium Isolation Agar

Composition per liter:

Agar 15.0g
Manganese acetate 0.1g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of *Metallogenium* species.

Metallogenium Medium

Composition per liter:

MnCO_3 2.0g
Starch, hydrolyzed 1.0g
DNA 0.01g
Catalase 5.0mg
Mycoplasma broth base 100.0mL
Yeast extract, ultrafiltrate 100.0mL
Horse serum 10.0mL

***Mycoplasma* Broth Base:**

Composition per liter:

Pancreatic digest of casein 7.0g
NaCl 5.0g
Beef extract 3.0g
Yeast extract 3.0g
Beef heart, solids from infusion 2.0g

Preparation of *Mycoplasma* Broth Base: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

MnCO_3 :

Composition per 100.0mL:

MnCl_2 20.0g
 NaHCO_3 (25% solution) 25.0mL

Preparation of MnCO_3 : Add MnCl_2 to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Add NaHCO_3 solution. Filter through Whatman #1 filter paper. Save the MnCO_3 precipitate. Wash and store under distilled/deionized water.

Preparation of Medium: Add MnCO_3 , hydrolyzed starch, and DNA to 25.0mL of distilled/deionized water. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 100.0mL of sterile *Mycoplasma* broth base, 100.0mL of ultrafiltrate of yeast extract, 10.0mL of horse serum, and 5.0mg of catalase. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Metallogenium* species.

Metallosphaera Medium

Composition per liter:

$(\text{NH}_4)_2\text{SO}_4$ 1.3g
Yeast extract 1.0g
 KH_2PO_4 0.28g
 $\text{MgSO}_4 \cdot 7\text{H}_2\text{O}$ 0.25g

CaCl ₂ ·2H ₂ O.....	0.07g
FeCl ₃ ·6H ₂ O.....	0.02g
Na ₂ B ₄ ·10H ₂ O.....	4.5mg
MnCl ₂ ·4H ₂ O.....	1.8mg
ZnSO ₄ ·7H ₂ O.....	0.22mg
CuCl ₂ ·2H ₂ O.....	0.05mg
Na ₂ MoO ₄ ·2H ₂ O.....	0.03mg
VO ₂ SO ₄ ·2H ₂ O.....	0.03mg
CoSO ₄	0.01mg

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 2.0 using 10N H₂SO₄. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Metallosphaera sedula*.

Methanobacillus Medium

Composition per liter:

KH ₂ PO ₄	9.0g
K ₂ HPO ₄	6.0g
NH ₄ Cl.....	5.0g
MgCl ₂	1.0g
CaCl ₂	0.01g
FeSO ₄ ·7H ₂ O.....	0.01g
Ethanol.....	10.0mL

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Filter sterilize ethanol. Add components, except ethanol, to tap water and bring volume to 990.0mL. Mix thoroughly. Gently heat until dissolved. Autoclave for 20 min at 10psi pressure–115°C. Cool to 45°–50°C. Aseptically add sterile ethanol. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the selective isolation and cultivation of *Methanobacillus* species from mixed cultures.

Methanobacteria Medium

Composition per liter:

Mineral solution 2.....	50.0mL
Sodium carbonate solution.....	50.0mL
Mineral solution 1.....	25.0mL
L-Cysteine-sulfide reducing agent.....	20.0mL
Wolfe's mineral solution.....	10.0mL
Wolfe's vitamin solution.....	10.0mL
Resazurin (0.025% solution).....	4.0mL

pH 7.2 ± 0.2 at 25°C

Mineral Solution 1:

Composition per liter:

K ₂ HPO ₄	6.0g
---------------------------------------	------

Preparation of Medium: Add K₂HPO₄ to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Mineral Solution 2:

Composition per liter:

NaCl.....	12.0g
KH ₂ PO ₄	6.0g
(NH ₄) ₂ SO ₄	6.0g
MgSO ₄ ·7H ₂ O.....	2.4g
CaCl ₂ ·2H ₂ O.....	1.6g

Preparation of Mineral Solution 2: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Sodium Carbonate Solution:

Composition per 100.0mL:

Na ₂ CO ₃	8.0g
---------------------------------------	------

Preparation of Sodium Carbonate Solution: Add Na₂CO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

L-Cysteine-Sulfide Reducing Agent:

Composition per 20.0mL:

L-Cysteine-HCl·H ₂ O.....	0.3g
Na ₂ S·9H ₂ O.....	0.3g

Preparation of L-Cysteine-Sulfide Reducing Agent: Add L-cysteine-HCl·H₂O to 10.0mL of distilled/deionized water. Mix thoroughly. In a separate tube, add Na₂S·9H₂O to 10.0mL of distilled/deionized water. Mix thoroughly. Gas both solutions with 100% N₂ and cap tubes. Autoclave both solutions for 15 min at 15 psi pressure–121°C using fast exhaust. Cool to 50°C. Aseptically combine the two solutions under 100% N₂.

Wolfe's Mineral Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O.....	3.0g
Nitrilotriacetic acid.....	1.5g
NaCl.....	1.0g
MnSO ₄ ·H ₂ O.....	0.5g
FeSO ₄ ·7H ₂ O.....	0.1g
CoCl ₂ ·6H ₂ O.....	0.1g
CaCl ₂	0.1g
ZnSO ₄ ·7H ₂ O.....	0.1g
CuSO ₄ ·5H ₂ O.....	0.01g
AlK(SO ₄) ₂ ·12H ₂ O.....	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O.....	0.01g

Preparation of Wolfe's Mineral Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water and bring volume to 1.0L.

Wolfe's Vitamin Solution:

Composition per liter:

Pyridoxine-HCl.....	10.0mg
Thiamine-HCl.....	5.0mg
Riboflavin.....	5.0mg
Nicotinic acid.....	5.0mg
Calcium pantothenate.....	5.0mg
p-Aminobenzoic acid.....	5.0mg
Thioctic acid.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Cyanocobalamin.....	100.0µg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except vitamin solution and L-cysteine-sulfide reducing agent, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool under 80% N₂ + 20% CO₂. Aseptically add the sterile vitamin solution and then the sterile L-cysteine-sulfide reducing agent. Adjust the pH to 7.2. Distribute aseptically and anaerobically into sterile tubes.

Use: For the cultivation and maintenance of *Acetogenium kivui*, *Methanobacterium formicicum*, *Methanobacterium thermoautotrophicum*, and *Methanobrevibacter arboriphilicus*.

Methanobacteria Medium with Glucose and Yeast Extract

Composition per liter:

Glucose	5.0g
Yeast extract.....	2.0g
Mineral solution 2.....	50.0mL
Sodium carbonate solution.....	50.0mL
Mineral solution 1.....	25.0mL
L-Cysteine-sulfide reducing agent.....	20.0mL
Wolfe's mineral solution.....	10.0mL
Wolfe's vitamin solution.....	10.0mL
Resazurin (0.025% solution).....	4.0mL

pH 7.2 ± 0.2 at 25°C

Mineral Solution 1:

Composition per liter:

K ₂ HPO ₄	6.0g
---------------------------------------	------

Preparation of Mineral Solution 1: Add K₂HPO₄ to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Mineral Solution 2:

Composition per liter:

NaCl.....	12.0g
KH ₂ PO ₄	6.0g
(NH ₄) ₂ SO ₄	6.0g
MgSO ₄ ·7H ₂ O.....	2.4g
CaCl ₂ ·2H ₂ O.....	1.6g

Preparation of Mineral Solution 2: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Sodium Carbonate Solution:

Composition per 100.0mL:

Na ₂ CO ₃	8.0g
---------------------------------------	------

Preparation of Sodium Carbonate Solution: Add Na₂CO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

L-Cysteine-Sulfide Reducing Agent:

Composition per 20.0mL:

L-Cysteine-HCl·H ₂ O.....	0.3g
Na ₂ S·9H ₂ O.....	0.3g

Preparation of L-Cysteine-Sulfide Reducing Agent: Add L-cysteine-HCl·H₂O to 10.0mL of distilled/deionized water. Mix thoroughly. In a separate tube, add Na₂S·9H₂O to 10.0mL of distilled/deionized water. Mix thoroughly. Gas both solutions with 100% N₂ and cap tubes. Autoclave both solutions for 15 min at 15 psi pressure–121°C using fast exhaust. Cool to 50°C. Aseptically combine the two solutions under 100% N₂.

Wolfe's Mineral Solution:

Composition per liter

MgSO ₄ ·7H ₂ O.....	3.0g
Nitrilotriacetic acid.....	1.5g
NaCl.....	1.0g
MnSO ₄ ·H ₂ O.....	0.5g
FeSO ₄ ·7H ₂ O.....	0.1g
CoCl ₂ ·6H ₂ O.....	0.1g
CaCl ₂	0.1g

ZnSO ₄ ·7H ₂ O.....	0.1g
CuSO ₄ ·5H ₂ O.....	0.01g
AlK(SO ₄) ₂ ·12H ₂ O.....	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O.....	0.01g

Preparation of Wolfe's Mineral Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L.

Wolfe's Vitamin Solution:

Composition per liter:

Pyridoxine-HCl.....	10.0mg
Thiamine-HCl.....	5.0mg
Riboflavin.....	5.0mg
Nicotinic acid.....	5.0mg
Calcium pantothenate.....	5.0mg
p-Aminobenzoic acid.....	5.0mg
Thioctic acid.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Cyanocobalamin.....	100.0µg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except vitamin solution and L-cysteine-sulfide reducing agent, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool under 80% N₂ + 20% CO₂. Aseptically add the sterile vitamin solution and then the sterile L-cysteine-sulfide reducing agent. Adjust the pH to 7.2. Distribute aseptically and anaerobically into sterile tubes.

Use: For the cultivation and maintenance of *Clostridium saccharolyticum*, *Clostridium thermoaceticum*, and *Clostridium thermohydrosulfuricum*.

Methanobacteria Medium with Xylose, Yeast Extract, and Tryptone

Composition per liter:

Pancreatic digest of casein.....	10.0g
Xylose.....	5.0g
Yeast extract.....	3.0g
Mineral solution 2.....	50.0mL
Sodium carbonate solution.....	50.0mL
Mineral solution 1.....	25.0mL
L-Cysteine-sulfide reducing agent.....	20.0mL
Wolfe's mineral solution.....	10.0mL
Wolfe's vitamin solution.....	10.0mL
Resazurin (0.025% solution).....	4.0mL

pH 7.2 ± 0.2 at 25°C

Mineral Solution 1:

Composition per liter:

K ₂ HPO ₄	6.0g
---------------------------------------	------

Preparation of Medium: Add K₂HPO₄ to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Mineral Solution 2:

Composition per liter:

NaCl.....	12.0g
KH ₂ PO ₄	6.0g

(NH ₄) ₂ SO ₄	6.0g
MgSO ₄ ·7H ₂ O.....	2.4g
CaCl ₂ ·2H ₂ O.....	1.6g

Preparation of Mineral Solution 2: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Sodium Carbonate Solution:

Composition per 100.0mL:

Na ₂ CO ₃	8.0g
---------------------------------------	------

Preparation of Sodium Carbonate Solution: Add Na₂CO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

L-Cysteine-Sulfide Reducing Agent:

Composition per 20.0mL:

L-Cysteine-HCl·H ₂ O.....	0.3g
Na ₂ S·9H ₂ O.....	0.3g

Preparation of L-Cysteine-Sulfide Reducing Agent: Add L-cysteine-HCl·H₂O to 10.0mL of distilled/deionized water. Mix thoroughly. In a separate tube, add Na₂S·9H₂O to 10.0mL of distilled/deionized water. Mix thoroughly. Gas both solutions with 100% N₂ and cap tubes. Autoclave both solutions for 15 min at 15 psi pressure–121°C using fast exhaust. Cool to 50°C. Aseptically combine the two solutions under 100% N₂.

Wolfe's Mineral Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O.....	3.0g
Nitritotriacetic acid.....	1.5g
NaCl.....	1.0g
MnSO ₄ ·H ₂ O.....	0.5g
FeSO ₄ ·7H ₂ O.....	0.1g
CoCl ₂ ·6H ₂ O.....	0.1g
CaCl ₂	0.1g
ZnSO ₄ ·7H ₂ O.....	0.1g
CuSO ₄ ·5H ₂ O.....	0.01g
AlK(SO ₄) ₂ ·12H ₂ O.....	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O.....	0.01g

Preparation of Wolfe's Mineral Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L.

Wolfe's Vitamin Solution:

Composition per liter:

Pyridoxine-HCl.....	10.0mg
Thiamine-HCl.....	5.0mg
Riboflavin.....	5.0mg
Nicotinic acid.....	5.0mg
Calcium pantothenate.....	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Thioctic acid.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Cyanocobalamin.....	100.0μg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except vitamin solution and L-cysteine-sulfide reducing agent, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Autoclave for 15 min

at 15 psi pressure–121°C. Cool under 80% N₂ + 20% CO₂. Aseptically add the sterile vitamin solution and then the sterile L-cysteine-sulfide reducing agent. Adjust the pH to 7.2. Distribute aseptically and anaerobically into sterile tubes.

Use: For the cultivation and maintenance of *Thermobacteroides acetothylicus*.

Methanobacteria Medium with Yeast Extract, Sodium Acetate, and Methanol

Composition per liter:

Glucose.....	5.0g
Sodium acetate.....	4.1g
Yeast extract.....	2.0g
Mineral solution 2.....	50.0mL
Sodium carbonate solution.....	50.0mL
Mineral solution 1.....	25.0mL
L-cysteine-sulfide reducing agent.....	20.0mL
Wolfe's mineral solution.....	10.0mL
Wolfe's vitamin solution.....	10.0mL
Methanol.....	4.0mL
Resazurin (0.025% solution).....	4.0mL

pH 7.2 ± 0.2 at 25°C

Mineral Solution 1:

Composition per liter:

K ₂ HPO ₄	6.0g
---------------------------------------	------

Preparation of Mineral Solution 1: Add K₂HPO₄ to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Mineral Solution 2:

Composition per liter:

NaCl.....	12.0g
KH ₂ PO ₄	6.0g
(NH ₄) ₂ SO ₄	6.0g
MgSO ₄ ·7H ₂ O.....	2.4g
CaCl ₂ ·2H ₂ O.....	1.6g

Preparation of Mineral Solution 2: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Sodium Carbonate Solution:

Composition per 100.0mL:

Na ₂ CO ₃	8.0g
---------------------------------------	------

Preparation of Sodium Carbonate Solution: Add Na₂CO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

L-Cysteine-Sulfide Reducing Agent:

Composition per 20.0mL:

L-Cysteine-HCl·H ₂ O.....	300.0mg
Na ₂ S·9H ₂ O.....	300.0mg

Preparation of L-Cysteine-Sulfide Reducing Agent: Add L-cysteine-HCl·H₂O to 10.0mL of distilled/deionized water. Mix thoroughly. In a separate tube, add Na₂S·9H₂O to 10.0mL of distilled/deionized water. Mix thoroughly. Gas both solutions with 100% N₂ and cap tubes. Autoclave both solutions for 15 min at 15 psi pressure–121°C using fast exhaust. Cool to 50°C. Aseptically combine the two solutions under 100% N₂.

Wolfe's Mineral Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O.....	3.0g
Nitritotriacetic acid.....	1.5g

NaCl	1.0g
MnSO ₄ ·H ₂ O	0.5g
FeSO ₄ ·7H ₂ O	0.1g
CoCl ₂ ·6H ₂ O	0.1g
CaCl ₂	0.1g
ZnSO ₄ ·7H ₂ O	0.1g
CuSO ₄ ·5H ₂ O	0.01g
AlK(SO ₄) ₂ ·12H ₂ O	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g

Preparation of Wolfe's Mineral Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L.

Wolfe's Vitamin Solution:

Composition per liter:

Pyridoxine-HCl	10.0mg
Thiamine-HCl	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
Calcium pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Thioctic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Cyanocobalamin	100.0μg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except vitamin solution, L-cysteine-sulfide reducing agent, and methanol, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool under 80% N₂ + 20% CO₂. Filter sterilize methanol. Aseptically add 4.0mL of sterile methanol to cooled, sterile basal medium. Aseptically add the sterile vitamin solution and then the sterile L-cysteine-sulfide reducing agent. Adjust the pH to 7.2. Distribute aseptically and anaerobically into sterile tubes.

Use: For the cultivation and maintenance of *Butyribacterium methylotrophicum*.

Methanobacterium alcaliphilum Medium

Composition per liter:

NaHCO ₃	10.0g
Yeast extract	2.0g
Peptone	2.0g
NH ₄ Cl	1.0g
L-Cysteine-HCl·H ₂ O	0.5g
K ₂ HPO ₄	0.4g
MgCl ₂ ·6H ₂ O	0.1g
CaCl ₂	0.02g
Resazurin	1.0mg
Salt solution	5.0mL

pH 8.4 ± 0.2 at 25°C

Salt Solution:

Composition per 100.0mL:

Sodium EDTA·2H ₂ O	0.1g
CoCl ₂ ·6H ₂ O	0.03g
MnCl ₂ ·4H ₂ O	0.02g

ZnCl ₂	0.02g
AlCl ₃ ·6H ₂ O	8.0mg
CuCl ₂ ·2H ₂ O	4.0mg
NiSO ₄ ·6H ₂ O	4.0mg
Na ₂ SeO ₃	2.7mg
FeSO ₄ ·7H ₂ O	2.0mg
H ₃ BO ₃	2.0mg
NaMoO ₄ ·2H ₂ O	2.0mg

Preparation of Salt Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components, except NaHCO₃, yeast extract, peptone, and L-cysteine-HCl·H₂O, to distilled/deionized water and bring volume to 990.0mL. Gently heat and bring to boiling under O₂-free 100% N₂. Continue boiling until resazurin becomes pale, indicating partial reduction. Add the yeast extract, peptone, and L-cysteine-HCl·H₂O and continue boiling under O₂-free 100% N₂ until resazurin becomes colorless, indicating complete reduction. Cool to room temperature under O₂-free 100% N₂. Add NaHCO₃ to 10.0mL of distilled/deionized water. Mix thoroughly. Gas with O₂-free 100% N₂ in a sealed tube. Add reduced NaHCO₃ solution to cooled reduced medium. Distribute anaerobically into tubes. Cap with butyl rubber stoppers and secure with closures. Autoclave for 15 min at 15 psi pressure–121°C with fast exhaust.

Use: For the cultivation and maintenance of *Methanobacterium alcaliphilum*.

Methanobacterium Enrichment Medium

Composition per liter:

CaCO ₃	100.0g
K ₂ HPO ₄	5.0g
(NH ₄) ₂ SO ₄	0.3g
MgSO ₄ ·7H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.02g
Na ₂ CO ₃ solution	10.0mL
Na ₂ S·9H ₂ O solution	10.0mL
Ethanol	10.0mL
Yeast autolysate	5.0mL

pH 7.2 ± 0.2 at 25°C

Na₂CO₃ Solution:

Composition per 10.0mL:

NaHCO ₃	0.5g
--------------------	------

Preparation of Na₂CO₃ Solution: Add Na₂CO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.1g
-------------------------------------	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Filter sterilize ethanol. Add components—except ethanol, Na₂CO₃ solution, and Na₂S·9H₂O solution—to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile ethanol, Na₂CO₃ solution, and Na₂S·9H₂O solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and enrichment of *Methanobacterium* species.

Methanobacterium espanolae Medium**Composition per 1020.0mL:**

Sodium acetate·3H ₂ O	2.5g
Na ₂ CO ₃	0.5g
(NH ₄) ₂ SO ₄	0.45g
K ₂ HPO ₄	0.29g
KH ₂ PO ₄	0.18g
MgSO ₄ ·7H ₂ O	0.12g
CaCl ₂ ·2H ₂ O	0.06g
NaCl	0.05g
L-Cysteine-HCl	0.25g
Na ₂ S·9H ₂ O	0.25g
Resazurin	1.0mg
Trace elements solution	10.0mL
Vitamin solution	10.0mL

pH 5.5 ± 0.2 at 25°C

Trace Elements Solution:**Composition per liter:**

MgSO ₄ ·7H ₂ O	3.0g
Nitritotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·2H ₂ O	0.5g
CoSO ₄ ·7H ₂ O	0.18g
ZnSO ₄ ·7H ₂ O	0.18g
CaCl ₂ ·2H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g
NiCl ₂ ·6H ₂ O	0.025g
KAl(SO ₄) ₂ ·12H ₂ O	0.02g
CuSO ₄ ·5H ₂ O	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O	0.3mg

Preparation of Trace Elements Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L.

Vitamin Solution:**Composition per liter:**

Pyridoxine-HCl	10.0mg
Calcium DL-pantothenate	5.0mg
Lipoic acid	5.0mg
Nicotinic acid	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Riboflavin	5.0mg
Thiamine-HCl	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Adjust pH to 7.0. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂.

Preparation of Medium: Prepare and dispense the medium anaerobically with 80% N₂ and 20% CO₂. Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 5.5–6.0. Anaerobically distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Check the pH of the medium after autoclaving.

Use: For the cultivation of *Methanobacterium espanolae*.

Methanobacterium formicicum Medium**Composition per liter:**

NaCH ₃ CO ₂	2.0g
(NH ₄) ₂ SO ₄	1.48g
NaCl	0.45g
L-Cysteine-HCl·H ₂ O	0.27g
CaCl ₂ ·2H ₂ O	0.06g
Fe(NH ₄)(SO ₄) ₂	0.06g
MgSO ₄	45.0mg
Na ₂ MoO ₄	24.0mg
K ₂ HPO ₄	21.0mg
KH ₂ PO ₄	21.0mg
Resazurin	1.0mg
Na ₂ SeO ₃	0.2mg
Na ₂ S·9H ₂ O solution	1.0mL

pH 6.8 ± 0.2 at 25°C

Na₂S·9H₂O Solution:**Composition per 100.0mL:**

Na ₂ S·9H ₂ O	25.0g
-------------------------------------	-------

Preparation of Na₂S·9H₂O Solution: Bring 100.0mL of distilled/deionized water to boiling. Cool to room temperature while sparging with 100%N₂. Add Na₂S·9H₂O to the 100.0mL of anaerobic water. Mix thoroughly. Distribute into serum bottles fitted with butyl rubber stoppers and aluminum seals. Do not grease stoppers. Autoclave for 20 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.8 with concentrated HCl. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool medium while sparging with 100% N₂. Prior to inoculation, aseptically and anaerobically add 1.0mL of sterile Na₂S·9H₂O solution per liter of medium. Repeat the addition of 1.0mL of sterile Na₂S·9H₂O solution per liter of medium every 48 hr during growth.

Use: For the cultivation of *Methanobacterium formicicum*.

Methanobacterium Mass-Culturing Medium**Composition per liter:**

NH ₄ Cl	2.0g
NaCl	0.6g
KH ₂ PO ₄	0.42g
K ₂ HPO ₄	0.23g
Na ₂ CO ₃	0.16g
MgCl ₂ ·2H ₂ O	0.04g
CaCl ₂ ·2H ₂ O	0.03g
Resazurin	0.001g
Na ₂ S·9H ₂ O solution	10.0mL
Trace elements solution	10.0mL

Na₂S·9H₂O Solution:**Composition per 100.0mL:**

NaOH	1 pellet
Na ₂ S·9H ₂ O	2.5g

Preparation of Na₂S·9H₂O Solution: Bring 100.0mL of distilled/deionized water to boiling. Cool to room temperature while sparging with 100%N₂. Dissolve 1 pellet of NaOH in the anaerobic water. Weigh out a little more than 2.5g of Na₂S·9H₂O. Briefly rinse the crystals in distilled/deionized water. Dry the crystals by blotting on paper towels or filter paper. Add 2.5g of washed Na₂S·9H₂O crystals to 100.0mL of anaerobic NaOH solution. Distribute into serum bottles fitted with butyl rubber stoppers and aluminum seals. Do not grease stop-

pers. Pressurize to 60kPa with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Store at room temperature in an anaerobic chamber.

Trace Elements Solution:

Composition per liter:

Sodium nitrilotriacetate.....	1.67g
CoCl ₂ ·6H ₂ O.....	0.18g
FeCl ₂ ·4H ₂ O.....	0.14g
MnCl ₂ ·4H ₂ O.....	0.09g
NiCl ₂ ·6H ₂ O.....	0.09g
ZnCl ₂	0.09g
CaCl ₂	0.06g
Na ₂ MoO ₄ ·2H ₂ O.....	0.046g
CuSO ₄	0.045g

Preparation of Trace Elements Solution: Add sodium nitrilotriacetate to 500.0mL of distilled/deionized water. Adjust pH to 6.5. Add remaining components. Add distilled/deionized water to 1.0L. Adjust pH to 7.0.

Preparation of Medium: Prepare and dispense medium under 80% H₂ + 20% CO₂. Add components, except Na₂CO₃ and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 3 min. Cool to room temperature while sparging with 80% H₂ + 20% CO₂. Add Na₂CO₃. Mix thoroughly. Anaerobically distribute 9.9mL volumes into anaerobic tubes. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 0.1mL of sterile Na₂S·9H₂O solution to each tube. Mix thoroughly.

Use: For the cultivation of *Methanobacterium* species.

Methanobacterium Medium

Composition per 1010.0mL:

NaHCO ₃	4.0g
Sodium formate.....	2.0g
Sodium acetate.....	1.0g
Yeast extract.....	1.0g
L-Cysteine·HCl.....	0.5g
KH ₂ PO ₄	0.5g
Na ₂ S·9H ₂ O.....	0.5g
MgSO ₄ ·7H ₂ O.....	0.4g
NaCl.....	0.4g
NH ₄ Cl.....	0.4g
CaCl ₂ ·2H ₂ O.....	0.05g
FeSO ₄ ·7H ₂ O.....	2.0mg
Resazurin.....	1.0mg
Sludge fluid.....	50.0mL
Fatty acid mixture.....	20.0mL
Trace elements solution SL-10.....	1.0mL

pH 6.7 ± 0.2 at 25°C

Sludge Fluid:

Composition per 100.0mL:

Yeast extract.....	0.4g
Sludge.....	100.0mL

Preparation of Sludge Fluid: To 100.0mL of sludge from an anaerobic digester, add 0.4g of yeast extract. Sparge with 100% N₂ for a few minutes. Incubate at 37°C for 24 hr. Centrifuge the sludge at 13,000 × g for 15 min. Decant the clear supernatant solution. Sparge with 100% N₂ for a few minutes. Store in screw-capped bottles at room temperature in the dark.

Fatty Acid Mixture:

Composition per 20.0mL:

α-Methylbutyric acid.....	0.5g
Isobutyric acid.....	0.5g
Isovaleric acid.....	0.5g
Valeric acid.....	0.5g

Preparation of Fatty Acid Mixture: Add components to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Adjust pH to 7.5 with concentrated NaOH.

Trace Elements Solution SL-10:

Composition per liter:

FeCl ₂ ·4H ₂ O.....	1.5g
CoCl ₂ ·6H ₂ O.....	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	36.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O.....	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare and dispense medium anaerobically under 80% H₂ + 20% CO₂. Add components to distilled/deionized water and bring volume to 1010.0mL. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Methanobacterium* species.

Methanobacterium ruminantium Medium

Composition per liter:

NaHCO ₃	6.0g
NaCl.....	2.0g
L-Cysteine·HCl·H ₂ O.....	1.0g
K ₂ HPO ₄ ·3H ₂ O.....	1.0g
KH ₂ PO ₄	1.0g
NH ₄ Cl.....	1.0g
CaCl ₂ ·2H ₂ O.....	0.1g
MgSO ₄ ·7H ₂ O.....	0.1g
Resazurin.....	1.0mg
Rumen fluid.....	300.0mL
Na ₂ S·9H ₂ O solution.....	10.0mL

6.8 ± 0.2 at 25°C

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	0.25g
--	-------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Preparation of Medium: Prepare and distribute medium anaerobically under 80% H₂ + 20% CO₂. Add components, except rumen fluid and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 690.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling until resazurin turns colorless, indicating reduction. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 10.0mL of sterile Na₂S·9H₂O solution and 300.0mL of sterile ru-

men fluid. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or flasks.

Use: For the cultivation of *Methanobacterium ruminantium*.

Methanobacterium subterraneum Medium (DSMZ Medium 814)

Composition per liter:

Na-formate	3.2g
Na-acetate	1.0g
Tryptone	1.0g
K ₂ HPO ₄	0.5g
NaCl	0.45g
NH ₄ Cl	0.4g
MgCl ₂ ·6H ₂ O	0.03g
FeSO ₄ ·7H ₂ O	0.003g
Resazurin	0.5mg
Trace elements solution	10.0mL
Cysteine solution	10.0mL
Na ₂ S·9H ₂ O solution	10.0mL
NaHCO ₃ solution	10.0mL
Seven vitamin solution	1.0mL

pH 8.3 ± 0.2 at 25°C

NaHCO₃ Solution:

Composition per 10.0mL:

NaHCO ₃	2.0g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Must be prepared freshly.

Cysteine Solution:

Composition per 10.0mL:

L-Cysteine-HCl·H ₂ O	0.25g
---------------------------------------	-------

Preparation of Cysteine Solution: Add L-cysteine-HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.25g
---	-------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Sparge with N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Store anaerobically.

Trace Elements Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O	3.0g
Nitrilotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·2H ₂ O	0.5g
CoSO ₄ ·7H ₂ O	0.18g
ZnSO ₄ ·7H ₂ O	0.18g
CaCl ₂ ·2H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g
NiCl ₂ ·6H ₂ O	0.025g
KAl(SO ₄) ₂ ·12H ₂ O	0.02g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·4H ₂ O	0.01g

CuSO ₄ ·5H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O	0.3mg

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Seven Vitamin Solution:

Composition per liter:

Pyridoxine hydrochloride	300.0mg
Thiamine-HCl·2H ₂ O	200.0mg
Nicotinic acid	200.0mg
Vitamin B ₁₂	100.0mg
Calcium pantothenate	100.0mg
<i>p</i> -Aminobenzoic acid	80.0mg
D(+)-Biotin	20.0mg

Preparation of Seven Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Sparge with 100% N₂. Mix thoroughly. Filter sterilize.

Preparation of Medium: Prepare and dispense medium under 100% N₂. Add components, except Na₂S·9H₂O solution, seven vitamin solution, cysteine solution, and NaHCO₃ solution, to distilled/deionized water and bring volume to 969.0mL. Mix thoroughly. Flush medium with N₂ for 5 min. Adjust medium pH to 8.3. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 1.0mL seven vitamin mix, 10.0mL cysteine solution, 10.0mL Na₂S·9H₂O, and 10.0mL NaHCO₃ solution. Mix thoroughly. Adjust pH to 8.3. Aseptically and anaerobically distribute into sterile tubes or bottles.

Use: For the cultivation of *Methanobacterium subterraneum*.

Methanobacterium thermoautotrophicum Marburg Medium

Composition per liter:

L-Cysteine-HCl·H ₂ O	12.5g
Na ₂ S·9H ₂ O	12.5g
KH ₂ PO ₄	6.8g
NH ₄ Cl	2.1g
Na ₂ CO ₃ (1M solution)	32.0mL
Trace elements solution	10.0mL
Resazurin (0.2% solution)	0.3mL

Trace Elements Solution:

Composition per liter:

MgCl ₂ ·6H ₂ O	4.0g
Nitrilotriacetic acid	3.0g
FeCl ₂ ·4H ₂ O	1.0g
NiCl ₂ ·6H ₂ O	0.12g
CoCl ₂ ·6H ₂ O	0.02g
NaMoO ₄ ·2H ₂ O	0.02g

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with NaOH. Add remaining components. Mix thoroughly. Add distilled/deionized water to 1.0L. Adjust pH to 7.0.

Preparation of Medium: Prepare and dispense medium under 80% H₂ + 20% CO₂. Add components, except L-cysteine-HCl·H₂O and Na₂S·9H₂O, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 3 min. Cool to room temperature while sparging with 80% H₂ + 20% CO₂. Add L-cysteine-HCl·H₂O and Na₂S·9H₂O. Mix thoroughly. Anaerobically distribute into serum bottles fitted with butyl rubber stop-

pers and aluminum seals. Do not grease stoppers. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Methanobacterium thermoautotrophicum*.

Methanobacterium thermoautotrophicum Medium (DSMZ Medium 131)

Composition per liter:

Na ₂ CO ₃	4.0g
(NH ₄) ₂ SO ₄	1.5g
NaCl	0.6g
KH ₂ PO ₄	0.3g
K ₂ HPO ₄	0.15g
MgSO ₄ ·7H ₂ O	0.12g
CaCl ₂ ·2H ₂ O	0.08g
FeSO ₄ ·7H ₂ O	4.0mg
Resazurin	1.0mg
Vitamin solution	10.0mL
Trace elements solution	10.0mL
L-Cysteine solution	10.0mL
Na ₂ S·9H ₂ O solution	10.0mL

pH 7.2 ± 0.2 at 25°C

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl	10.0mg
Thiamine-HCl·2H ₂ O	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
Ca-pantothenate	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
<i>p</i> -Aminobenzoic acid	1.0mg
Vitamin B ₁₂	0.01mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Trace Elements Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O	6.2g
NaCl	1.0g
Na ₂ -EDTA	0.64g
MnSO ₄ ·4H ₂ O	0.55g
ZnSO ₄ ·7H ₂ O	0.18g
CoCl ₂ ·6H ₂ O	0.17g
CaCl ₂ ·2H ₂ O	0.13g
FeSO ₄ ·7H ₂ O	0.1g
CuSO ₄	0.05g
NiCl ₂ ·6H ₂ O	0.025g
KAl(SO ₄) ₂ ·12H ₂ O	0.018g
Na ₂ MoO ₄ ·4H ₂ O	0.011g
H ₃ BO ₃	0.01g

Preparation of Trace Elements Solution: Add Na₂-EDTA to 500.0mL distilled/deionized water. Mix thoroughly. Add other components and bring volume to 1.0L with distilled/deionized water. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	1.5g
---	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Sparge with N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Store anaerobically.

L-Cysteine Solution:

Composition per 10.0mL:

L-Cysteine·HCl·H ₂ O	1.5g
---------------------------------------	------

Preparation of L-Cysteine Solution: Add L-cysteine·HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare and dispense medium under an oxygen-free 80% H₂ + 20% CO₂ gas mixture. Add components, except vitamin solution, L-cysteine solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C while sparging with 80% H₂ + 20% CO₂. Aseptically and anaerobically add 10.0mL vitamin solution, 10.0mL of sterile L-cysteine solution, and 10.0mL of sterile Na₂S·9H₂O solution. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or flasks. Alternately the medium can be distributed to tubes under anaerobic conditions and autoclaved in tubes prior to addition of substrate solution, vitamin solution, and Na₂S·9H₂O solution. Appropriate amounts of these solutions can then be added to each tube by syringes to yield the desired concentrations.

Use: For the cultivation of *Ectothiorhodospira shaposhnikovii* and *Methanothermobacter thermoautotrophicus*.

Methanobacterium thermoautotrophicum Medium

Composition per liter:

Na ₂ CO ₃	4.0g
(NH ₄) ₂ SO ₄	1.5g
NaCl	0.6g
KH ₂ PO ₄	0.3g
K ₂ HPO ₄	0.15g
MgSO ₄ ·7H ₂ O	0.12g
CaCl ₂ ·2H ₂ O	0.08g
FeSO ₄ ·7H ₂ O	4.0mg
Resazurin	1.0mg
Trace elements solution	10.0mL
Vitamin solution	10.0mL
L-Cysteine·HCl solution	10.0mL
Na ₂ S·9H ₂ O solution	10.0mL

pH 7.2 ± 0.2 at 25°C

Trace Elements Solution:

Composition per liter:

NaCl	1.0g
Disodium EDTA	0.64g
MnSO ₄ ·4H ₂ O	0.55g
MgSO ₄ ·7H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.18g
CoCl ₂ ·6H ₂ O	0.17g
CuSO ₄	0.15g
CaCl ₂ ·2H ₂ O	0.13g
FeSO ₄ ·7H ₂ O	0.1g
NiCl ₂ ·H ₂ O	0.025g
KAl(SO ₄) ₂ ·12H ₂ O	0.018g
Na ₂ MoO ₄ ·2H ₂ O	0.011g
H ₃ BO ₃	0.01g

Preparation of Trace Elements Solution: Add disodium EDTA to 500.0mL of distilled/deionized water. Mix thoroughly to dissolve. Add remaining components. Bring volume to 1.0L with distilled/deionized water.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl	10.0mg
Calcium DL-pantothenate	5.0mg
Nicotinic acid	5.0mg
Riboflavin	5.0mg
Thiamine-HCl	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
<i>p</i> -Aminobenzoic acid	1.0mg
Cyanocobalamin	0.01mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Adjust pH to 7.0. Mix thoroughly.

L-Cysteine-HCl Solution:

Composition per 10.0mL:

L-Cysteine-HCl	1.5g
----------------	------

Preparation of L-Cysteine-HCl Solution: Add L-cysteine-HCl to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 80% N₂ + 20% CO₂ for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	1.5g
-------------------------------------	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare and dispense medium under 80% H₂ + 20% CO₂. Add components, except L-cysteine-HCl solution and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Anaerobically distribute into tubes or flasks fitted with butyl rubber stoppers. Autoclave for 15 min at 15 psi pressure–121°C. Anaerobically add 10.0mL of sterile L-cysteine-HCl solution and 10.0mL of sterile Na₂S·9H₂O solution to each liter of medium or, using a syringe, inject the appropriate amount of sterile L-cysteine-HCl solution and sterile Na₂S·9H₂O solution into individual tubes containing medium.

Use: For the cultivation and maintenance of *Methanobacterium thermoautotrophicum* and *Methanoculleus oldenburgensis*.

Methanobacterium thermoautotrophicum Medium, Taylor and Pirt

Composition per liter:

Na ₂ CO ₃	4.0g
(NH ₄) ₂ SO ₄	3.0g
NaCl	1.2g
KH ₂ PO ₄	0.6g
L-Cysteine-HCl·H ₂ O	0.5g
K ₂ HPO ₄	0.3g
Nitritotriacetic acid	0.03g
CoCl ₂	0.02g
CaCl ₂	0.01g
FeSO ₄	0.01g

MgSO ₄	0.01g
MnSO ₄	0.01g
ZnSO ₄	2.0mg
Resazurin	1.0mg
AlK(SO ₄) ₂	0.2mg
CuSO ₄	0.2mg
H ₃ BO ₃	0.2mg
Na ₂ MoO ₄	0.2mg
Na ₂ S·9H ₂ O solution	10.0mL

pH 7.2 ± 0.2 at 25°C

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.5g
-------------------------------------	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Preparation of Medium: Prepare and distribute medium anaerobically under 80% H₂ + 20% CO₂. Add components, except Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling until resazurin turns colorless, indicating reduction. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 10.0mL of sterile Na₂S·9H₂O solution. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or flasks.

Use: For the cultivation of *Methanobacterium thermoautotrophicum*.

Methanobacterium thermoautotrophicum MS Medium

Composition per liter:

NaHCO ₃	8.4g
Pancreatic digest of casein	2.0g
Yeast extract	2.0g
MgCl ₂ ·6H ₂ O	1.0g
NH ₄ Cl	1.0g
K ₂ HPO ₄	0.84g
CaCl ₂ ·2H ₂ O	0.4g
Reazurin	0.001g
Trace minerals solution	1.0mL

pH 7.1 ± 0.2 at 25°C

Trace Minerals Solution:

Composition per liter:

Disodium EDTA·2H ₂ O	0.5g
ZnSO ₄ ·2H ₂ O	0.21g
CoCl ₂ ·6H ₂ O	0.15g
AlK(SO ₄) ₂	0.14g
FeSO ₄ ·7H ₂ O	0.1g
MnSO ₄ ·H ₂ O	0.1g
Na ₂ WO ₄ ·2H ₂ O	0.03g
CuCl ₂ ·2H ₂ O	0.02g
NiCl ₂ ·6H ₂ O	0.02g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g
Na ₂ SeO ₄	0.01g

Preparation of Trace Minerals Solution: Add components, except MnSO₄·H₂O, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.1. Add MnSO₄·H₂O. Mix thoroughly.

Preparation of Medium: Prepare and dispense medium under 80% H₂ + 20% CO₂. Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Con-

tinue boiling for 3 min. Cool to room temperature while sparging with 80% H₂ + 20% CO₂. Adjust pH to 7.1 with 6N HCl. Anaerobically distribute into serum bottles fitted with butyl rubber stoppers and aluminum seals. Do not grease stoppers. Autoclave for 15 min at 15 psi pressure–121°C. Store at room temperature in an anaerobic chamber.

Use: For the cultivation of *Methanobacterium thermoautotrophicum*.

Methanobacterium Transduction Agar

Composition per liter:

Agar solution.....	500.0mL
Basal salts solution.....	100.0mL
Na ₂ CO ₃ solution.....	24.0mL
Titanium (III) citrate solution	16.0mL
Trace elements solution	10.0mL
L-Cysteine/Na ₂ S solution.....	10.0mL

Agar Solution:

Composition per 500.0mL:

Agar	15.0g
------------	-------

Preparation of Agar Solution: Add agar to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Gently heat and bring to boiling. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 60°C while sparging with 80% N₂ + 20% CO₂.

Basal Salts Solution:

Composition per liter:

KH ₂ PO ₄	68.0g
NH ₄ Cl	21.2g
Resazurin	10.0mg

Preparation of Basal Salts Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂.

Trace Elements Solution:

Composition per liter:

Nitritotriacetic acid	9.55g
MgCl ₂ ·7H ₂ O.....	4.06g
FeCl ₂ ·7H ₂ O.....	0.98g
NaWO ₄ ·6H ₂ O.....	0.264g
NiCl ₂ ·6H ₂ O.....	0.118g
Na ₂ Se ₂ O ₃	0.1g
NaMoO ₄ ·2H ₂ O.....	0.024g
CoCl ₂ ·6H ₂ O.....	0.023g

Preparation of Trace Elements Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 7.0 with KOH. Add remaining components one at a time. Add distilled/deionized water to 1.0L. Adjust pH to 7.0. Sparge with 100% N₂.

Na₂CO₃ Solution:

Composition per liter:

Na ₂ CO ₃	10.6g
---------------------------------------	-------

Preparation of Na₂CO₃ Solution: Add Na₂CO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂.

L-Cysteine/Na₂S Solution:

Composition per 50.0mL:

L-Cysteine-HCl.....	5.0g
Na ₂ S·9H ₂ O.....	5.0g

Preparation of L-Cysteine/Na₂S Solution: Gently heat and bring 50.0mL of distilled/deionized water to boiling. Add L-

cysteine-HCl and Na₂S·9H₂O. Mix thoroughly. Cool while sparging with 100% N₂. Bring volume to 50.0mL with distilled/deionized water. Sparge with 100% N₂. Adjust pH to 10.0 with 3N NaOH.

Titanium (III) Citrate Solution:

Composition per 55.0mL:

Sodium citrate·9H ₂ O.....	2.9g
Titanium (III) chloride.....	0.75g

Preparation of Titanium (III) Citrate Solution: Add components to distilled/deionized water and bring volume to 55.0mL. Mix thoroughly. Filter sterilize. Sparge with 100% N₂.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂. Add components, except agar solution and titanium citrate solution, to distilled/deionized water and bring volume to 484.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically and anaerobically add 55.0mL of sterile titanium citrate solution to 500.0mL of sterile agar solution. Add the agar/titanium/citrate solution to the rest of the medium. Mix thoroughly. Aseptically and anaerobically, under an atmosphere of 80% H₂ + 20% CO₂, distribute into sterile Petri dishes, sterile tubes, or sterile bottles.

Use: For the cultivation of *Methanobacterium* species for transduction.

Methanobacterium Transduction Medium

Composition per liter:

Basal salts solution	100.0mL
Na ₂ CO ₃ solution	24.0mL
Trace elements solution	10.0mL
L-Cysteine/Na ₂ S solution.....	10.0mL

Basal Salts Solution:

Composition per liter:

KH ₂ PO ₄	68.0g
NH ₄ Cl	21.2g
Resazurin	10.0mg

Preparation of Basal Salts Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂.

Trace Elements Solution:

Composition per liter:

Nitritotriacetic acid	9.55g
MgCl ₂ ·7H ₂ O.....	4.06g
FeCl ₂ ·7H ₂ O.....	0.98g
NaWO ₄ ·6H ₂ O.....	0.264g
NiCl ₂ ·6H ₂ O.....	0.118g
Na ₂ Se ₂ O ₃	0.1g
NaMoO ₄ ·2H ₂ O.....	0.024g
CoCl ₂ ·6H ₂ O.....	0.023g

Preparation of Trace Elements Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 7.0 with KOH. Add remaining components one at a time. Add distilled/deionized water to 1.0L. Adjust pH to 7.0. Sparge with 100% N₂.

Na₂CO₃ Solution:

Composition per liter:

Na ₂ CO ₃	10.6g
---------------------------------------	-------

Preparation of Na₂CO₃ Solution: Add Na₂CO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂.

L-Cysteine/Na₂S Solution:**Composition per 50.0mL:**

L-Cysteine·HCl.....	5.0g
Na ₂ S·9H ₂ O.....	5.0g

Preparation of L-Cysteine/Na₂S Solution: Gently heat and bring 50.0mL of distilled/deionized water to boiling. Add L-cysteine·HCl and Na₂S·9H₂O. Mix thoroughly. Cool while sparging with 100% N₂. Bring volume to 50.0mL with distilled/deionized water. Sparge with 100% N₂. Adjust pH to 10.0 with 3N NaOH.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂. Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Anaerobically distribute into tubes or bottles. Autoclave for 15 min at 15 psi pressure–121°C. Prior to inoculation, pressurize to 200kPa with an atmosphere of 80% H₂ + 20% CO₂.

Use: For the cultivation of *Methanobacterium* species for transduction.

Methanobacterium wolfei* Medium*Composition per liter:**

Na ₂ CO ₃	4.0g

Na ₂ MoO ₄ ·4H ₂ O.....	0.01g
CuSO ₄ ·5H ₂ O.....	0.01g
Na ₂ SeO ₃ ·5H ₂ O.....	0.3mg

Preparation of Trace Elements Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Vitamin Solution:**Composition per liter:**

Pyridoxine·HCl.....	10.0mg
Thiamine·HCl·2H ₂ O.....	5.0mg
Riboflavin.....	5.0mg
Nicotinic acid.....	5.0mg
D-Ca-pantothenate.....	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg

Lipoic acid	5.0mg
Biotin	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	0.3g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Sparge with N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Store anaerobically.

NaHCO₃ Solution:

Composition per 100.0mL:

NaHCO ₃	10.0g
--------------------------	-------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Must be prepared freshly.

Preparation of Medium: Prepare and dispense medium under 80% H₂ + 20% CO₂ gas mixture. Add components, except NaHCO₃ solution and Na₂S·9H₂O solution, to 1.0L distilled/deionized water. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Dispense 5.0mL aliquots into Hungate tubes under 80% H₂ + 20% CO₂ gas mixture. Autoclave for 15 min at 15 psi pressure–121°C. Prior to use inject, for each 5.0mL medium, 0.2mL sterile NaHCO₃ solution and 0.05mL sterile Na₂S·9H₂O solution. The pH should be 7.0. After inoculation, pressurize culture vessels to 2 bar 80% H₂ + 20% CO₂ overpressure.

Use: For the cultivation of *Methanobacterium formicicum*, *Methanosarcina barkeri*, *Methanosarcina mazei*=*Methanococcus mazei* (*Methanosarcina frisia*), *Methanobacterium bryantii*, and *Methanobacterium oryzae* (*Methanobacterium* sp.).

Methanobacterium II Medium (DSMZ Medium 825)

Composition per 1060.0mL:

Yeast extract.....	1.0g
NH ₄ Cl	1.0g
NaCl	0.6g
Cysteine-HCl·H ₂ O	0.5g
Sodium acetate.....	0.5g
K ₂ HPO ₄	0.3g
KH ₂ PO ₄	0.3g

Methanol solution	10.0mL

pH 7.0 ± 0.2 at 25°C

Methanol Solution:

Composition per 100.0mL:

Methanol	15.0mL
----------------	--------

Preparation of Methanol Solution: Add methanol to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O.....	3.0g
Nitrilotriacetic acid.....	1.5g
NaCl.....	1.0g
MnSO ₄ ·2H ₂ O.....	0.5g
CoSO ₄ ·7H ₂ O.....	0.18g
ZnSO ₄ ·7H ₂ O.....	0.18g
CaCl ₂ ·2H ₂ O.....	0.1g
FeSO ₄ ·7H ₂ O.....	0.1g
NiCl ₂ ·6H ₂ O.....	0.025g
KAl(SO ₄) ₂ ·12H ₂ O.....	0.02g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·4H ₂ O.....	0.01g
CuSO ₄ ·5H ₂ O.....	0.01g
Na ₂ SeO ₃ ·5H ₂ O.....	0.3mg

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl.....	10.0mg
Thiamine-HCl·2H ₂ O.....	5.0mg
Riboflavin.....	5.0mg
Nicotinic acid.....	5.0mg
D-Ca-pantothenate	5.0mg
p-Aminobenzoic acid.....	5.0mg
Lipoic acid.....	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	0.3g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Sparge with N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Store anaerobically.

NaHCO₃ Solution:

Composition per 100.0mL:

NaHCO ₃	10.0g
--------------------------	-------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Must be prepared freshly.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas mixture. Add components, except methanol solution, NaHCO₃ solution, and Na₂S·9H₂O solution, to 1.0L distilled/deionized water. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Dispense 5.0mL aliquots into Hungate tubes under 80% H₂ + 20% CO₂ gas mixture. Autoclave for 15 min at 15 psi pressure–121°C. Prior to

use inject, for each 5.0mL medium, 0.2mL sterile NaHCO₃ solution, 0.05mL sterile Na₂S·9H₂O solution, and 0.05mL sterile methanol solution. The pH should be 7.0.

Use: For the cultivation of *Methanosarcina barkeri* DSM 10131 and *Methanosarcina mazei*=*Methanococcus mazei* (*Methanosarcina frisia*) DSM 10132.

Methanobacterium II Medium (DSMZ Medium 825)

Composition per 1065.0mL:

Yeast extract	1.0g
NH ₄ Cl	1.0g
NaCl	0.6g
Cysteine-HCl·H ₂ O	0.5g
Sodium acetate	0.5g
K ₂ HPO ₄	0.3g
KH ₂ PO ₄	0.3g
MgCl ₂ ·6H ₂ O	0.2g
CaCl ₂ ·2H ₂ O	0.1g
KCl	0.1g
Resazurin	0.5mg
NaHCO ₃ solution	40.0mL
Na-formate solution	15.0mL
Trace elements solution	10.0mL
Vitamin solution	10.0mL
Na ₂ S·9H ₂ O solution	10.0mL

pH 7.0 ± 0.2 at 25°C

Na-Formate Solution:

Composition per 10.0mL:

Na-formate	5.0g
------------	------

Preparation of Na-Formate Solution: Add Na-formate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O	3.0g
Nitritotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·2H ₂ O	0.5g
CoSO ₄ ·7H ₂ O	0.18g
ZnSO ₄ ·7H ₂ O	0.18g
CaCl ₂ ·2H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g
NiCl ₂ ·6H ₂ O	0.025g
KAl(SO ₄) ₂ ·12H ₂ O	0.02g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·4H ₂ O	0.01g
CuSO ₄ ·5H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O	0.3mg

Preparation of Trace Elements Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl	10.0mg
Thiamine-HCl·2H ₂ O	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg

D-Ca-pantothenate	5.0mg
p-Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.3g
-------------------------------------	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Sparge with N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Store anaerobically.

NaHCO₃ Solution:

Composition per 100.0mL:

NaHCO ₃	10.0g
--------------------	-------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Must be prepared freshly.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas mixture. Add components, except Na-formate solution, NaHCO₃ solution, and Na₂S·9H₂O solution, to 1.0L distilled/deionized water. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Dispense 5.0mL aliquots into Hungate tubes under 80% H₂ + 20% CO₂ gas mixture. Autoclave for 15 min at 15 psi pressure–121°C. Prior to use inject, for each 5.0mL medium, 0.2mL sterile NaHCO₃ solution, 0.05mL sterile Na₂S·9H₂O solution, and 0.075mL sterile Na-formate solution. The pH should be 7.0.

Use: For the cultivation of *Methanobacterium formicicum* DSM 10111.

Methanobacterium II Medium (DSMZ Medium 825)

Composition per 1075.0mL:

Yeast extract	1.0g
NH ₄ Cl	1.0g
NaCl	0.6g
Cysteine-HCl·H ₂ O	0.5g
Sodium acetate	0.5g
K ₂ HPO ₄	0.3g
KH ₂ PO ₄	0.3g

Trace elements solution	10.0mL
Vitamin solution	10.0mL
Na ₂ S·9H ₂ O solution	10.0mL
Trypticase™ solution	10.0mL

pH 7.0 ± 0.2 at 25°C

Trypticase™ Solution:

Composition per 10.0mL:

Trypticase™	1.0g
-------------	------

Preparation of Trypticase™ Solution: Add Trypticase™ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Na-Formate Solution:

Composition per 10.0mL:

Na-formate 5.0g

Preparation of Na-Formate Solution: Add Na-formate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution:

Composition per liter:

MgSO₄·7H₂O 3.0g
 Nitrotriacetic acid 1.5g
 NaCl 1.0g
 MnSO₄·2H₂O 0.5g
 CoSO₄·7H₂O 0.18g
 ZnSO₄·7H₂O 0.18g
 CaCl₂·2H₂O 0.1g
 FeSO₄·7H₂O 0.1g
 NiCl₂·6H₂O 0.025g
 KAl(SO₄)₂·12H₂O 0.02g
 H₃BO₃ 0.01g
 Na₂MoO₄·4H₂O 0.01g
 CuSO₄·5H₂O 0.01g
 Na₂SeO₃·5H₂O 0.3mg

Preparation of Trace Elements Solution: Add nitrotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl 10.0mg
 Thiamine-HCl·2H₂O 5.0mg
 Riboflavin 5.0mg
 Nicotinic acid 5.0mg
 D-Ca-pantothenate 5.0mg
p-Aminobenzoic acid 5.0mg
 Lipoic acid 5.0mg
 Biotin 2.0mg
 Folic acid 2.0mg
 Vitamin B₁₂ 0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na₂S·9H₂O 0.3g

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Sparge with N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Store anaerobically.

NaHCO₃ Solution:

Composition per 100.0mL:

NaHCO₃ 10.0g

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Auto-

clave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Must be prepared freshly.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas mixture. Add components, except Trypticase™ solution, Na-formate solution, NaHCO₃ solution, and Na₂S·9H₂O solution, to 1.0L distilled/deionized water. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Dispense 5.0mL aliquots into Hungate tubes under 80% H₂ + 20% CO₂ gas mixture. Autoclave for 15 min at 15 psi pressure–121°C. Prior to use inject, for each 5.0mL medium, 0.2mL sterile NaHCO₃ solution, 0.05mL sterile Trypticase™ solution, 0.05mL sterile Na₂S·9H₂O solution, and 0.075mL sterile Na-formate solution. The pH should be 7.0.

Use: For the cultivation of *Methanobacterium oryzae* DSM 11106.

Methanobrevibacter curvatus Medium (DSMZ Medium 734)

Composition per 1010.0mL:

NaCl 1.0g
 KCl 0.5g
 Casamino acids 0.5g
 Yeast extract 0.5g
 MgCl₂·6H₂O 0.4g
 NH₄Cl 0.3g
 KH₂PO₄ 0.2g
 Na₂SO₄ 0.15g
 CaCl₂·2H₂O 0.1g
 Resazurin 0.5mg
 NaHCO₃ solution 40.0mL
 Dithionite solution 10.0mL
 Trace elements solution SL-10 1.0mL
 Selenite-tungstate solution 1.0mL
 Seven vitamin solution 1.0mL

pH 7.4 ± 0.2 at 25°C

NaHCO₃ Solution:

Composition per 40.0mL:

NaHCO₃ 5.8g

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 40.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Must be prepared freshly.

Selenite-Tungstate Solution

Composition per liter:

NaOH 0.5g
 Na₂WO₄·2H₂O 4.0mg
 Na₂SeO₃·5H₂O 3.0mg

Preparation of Selenite-Tungstate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Dithionite Solution

Composition per 10.0mL:

Na-dithionite 2.0mg

Preparation of Dithionite Solution: Add Na-dithionite to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Trace Elements Solution SL-10:

Composition per liter:

FeCl₂·4H₂O 1.5g
 CoCl₂·6H₂O 190.0mg

MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	36.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O.....	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Seven Vitamin Solution:

Composition per liter:

Pyridoxine hydrochloride.....	300.0mg
Thiamine-HCl·2H ₂ O.....	200.0mg
Nicotinic acid.....	200.0mg
Vitamin B ₁₂	100.0mg
Calcium pantothenate.....	100.0mg
<i>p</i> -Aminobenzoic acid.....	80.0mg
D(+)-Biotin.....	20.0mg

Preparation of Seven Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Sparge with 100% N₂. Mix thoroughly. Filter sterilize.

Preparation of Medium: Prepare and dispense medium under 80% H₂ + 20% CO₂ gas atmosphere. Add components, except NaHCO₃ solution, seven vitamin solution, selenite-tungstate solution, and trace elements solution SL-10, to distilled/deionized water and bring volume to 947.0mL. Mix thoroughly. Adjust pH to 7.6. Sparge with 80% H₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 40.0mL NaHCO₃ solution, 1.0mL selenite-tungstate solution, 1.0mL seven vitamin solution, and 1.0mL trace elements solution SL-10. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or bottles. Adjust pH to 7.6. Prior to inoculation add dithionite solution (0.1mL per 10mL medium) as reductant.

Use: For the cultivation of *Methanobrevibacter curvatus*.

Methanobrevibacter curvatus Medium (DSMZ Medium 734)

Composition per 1022.0mL:

NaCl.....	1.0g
KCl.....	0.5g
Casamino acids.....	0.5g
Yeast extract.....	0.5g
MgCl ₂ ·6H ₂ O.....	0.4g
NH ₄ Cl.....	0.3g
KH ₂ PO ₄	0.2g
Na ₂ SO ₄	0.15g
CaCl ₂ ·2H ₂ O.....	0.1g
Resazurin.....	0.5mg
Rumen fluid, bovine, clarified.....	400mL
NaHCO ₃ solution.....	40.0mL
Dithionite solution.....	10.0mL
MOPS buffer.....	10.0mL
Nutrient supplement solution.....	2.0mL
Trace elements solution SL-10.....	1.0mL
Selenite-tungstate solution.....	1.0mL
Seven vitamin solution.....	1.0mL

pH 7.2 ± 0.2 at 25°C

NaHCO₃ Solution:

Composition per 40.0mL:

NaHCO ₃	5.8g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 40.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Must be prepared freshly.

Selenite-Tungstate Solution:

Composition per liter:

NaOH.....	0.5g
Na ₂ WO ₄ ·2H ₂ O.....	4.0mg
Na ₂ SeO ₃ ·5H ₂ O.....	3.0mg

Preparation of Selenite-Tungstate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Dithionite Solution:

Composition per 10.0mL:

Na-dithionite.....	2.0mg
--------------------	-------

Preparation of Dithionite Solution: Add Na-dithionite to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Trace Elements Solution SL-10:

Composition per liter:

FeCl ₂ ·4H ₂ O.....	1.5g
CoCl ₂ ·6H ₂ O.....	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	36.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O.....	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Seven Vitamin Solution:

Composition per liter:

Pyridoxine hydrochloride.....	300.0mg
Thiamine-HCl·2H ₂ O.....	200.0mg
Nicotinic acid.....	200.0mg
Vitamin B ₁₂	100.0mg
Calcium pantothenate.....	100.0mg
<i>p</i> -Aminobenzoic acid.....	80.0mg
D(+)-Biotin.....	20.0mg

Preparation of Seven Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Sparge with 100% N₂. Mix thoroughly. Filter sterilize.

Nutrient Supplement Solution:

Composition per liter:

Pancreatic digest of gelatin.....	5.0g
Beef extract.....	3.0g

Preparation of Nutrient Supplement Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

MOPS Buffer:**Composition** per 10.0mL:

MOPS [3-(<i>N</i> -morpholino) propane sulfonic acid]	2.1g
Na-acetate	0.3g
EDTA	0.1g

Preparation of MOPS Buffer: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Adjust to pH 7.2. Filter sterilize.

Preparation of Medium: Prepare and dispense medium under 80% H₂ + 20% CO₂ gas atmosphere. Add components, except clarified bovine rumen fluid, MOPS buffer, nutrient supplement solution, NaHCO₃ solution, seven vitamin solution, selenite-tungstate solution, and trace elements solution SL-10, to distilled/deionized water and bring volume to 547.0mL. Mix thoroughly. Adjust pH to 7.2. Sparge with 80% H₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 400.0mL sterile clarified bovine rumen fluid, 10.0mL MOPS buffer, 2.0mL nutrient supplement solution, 40.0mL NaHCO₃ solution, 1.0mL selenite-tungstate solution, 1.0mL seven vitamin solution, and 1.0mL trace elements solution SL-10. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or bottles. Adjust pH to 7.2. Prior to inoculation add dithionite solution (0.1mL per 10mL medium) as reductant.

Use: For the cultivation of *Methanobrevibacter curvatus* DSM 11111 (strain RFM-2).

CaCl ₂ ·2H ₂ O	0.6g
--------------------------------------	------

Preparation of Calcium Chloride Solution: Add CaCl₂·2H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

L-Cysteine Solution:

Composition per 10.0mL:

L-Cysteine·HCl·H ₂ O	0.5g
---------------------------------	------

Preparation of L-Cysteine Solution: Add L-cysteine·HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.3g
-------------------------------------	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

NaHCO₃ Solution:

Composition per 20.0mL:

NaHCO ₃	2.0g
--------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Must be prepared freshly.

Trace Elements Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O	3.0g
Nitritotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·2H ₂ O	0.5g
CoSO ₄ ·7H ₂ O	0.18g
ZnSO ₄ ·7H ₂ O	0.18g
CaCl ₂ ·2H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g
NiCl ₂ ·6H ₂ O	0.025g
KAl(SO ₄) ₂ ·12H ₂ O	0.02g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·4H ₂ O	0.01g
CuSO ₄ ·5H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O	0.3mg

Preparation of Trace Elements Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Preparation of Medium: Prepare and dispense medium under sparge with 80% N₂ + 20% CO₂. Add components, except NaHCO₃ solution, magnesium chloride solution, calcium chloride solution, L-cysteine·HCl·H₂O solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Boil for 3 min. Cool to room temperature while sparging with 80% N₂ + 20% CO₂. Add 10.0mL L-cysteine·HCl·H₂O solution and 20.0mL NaHCO₃ solution. Mix thoroughly. Adjust pH to 7.5. Distribute into anaerobic tubes or bottles. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add per liter, 30.0mL magnesium chloride solution, 10.0mL calcium chloride solution, and 10.0mL Na₂S·9H₂O. Mix thoroughly. After inoculation pressurize vessels with 80% H₂ + 20% CO₂ gas mixture to 1 bar overpressure and add sulfide from a sterile, anaerobic stock solution. The final pH of the medium should be 7.2–7.6.

Use: For the cultivation of *Methanocalculus halotolerans*.

***Methanocalculus pumilus* Medium
(DSMZ Medium 892)**

Composition per 1080.0mL:

NaCl	10.0g
Yeast extract	2.0g
Trypticase™	2.0g
NH ₄ Cl	0.9g
K ₂ HPO ₄	0.4g
MgCl ₂ ·6H ₂ O	0.36g
Resazurin	0.5mg
Na ₂ CO ₃ solution	50.0mL
Na ₂ S·9H ₂ O solution	15.0mL
L-Cysteine·HCl·H ₂ O solution	15.0mL
Vitamin solution	10.0mL
Trace elements solution	10.0mL

L-Cysteine Solution:

Composition per 15.0mL:

L-Cysteine·HCl·H ₂ O	0.5g
---------------------------------	------

Preparation of L-Cysteine Solution: Add L-cysteine·HCl·H₂O to distilled/deionized water and bring volume to 15.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂CO₃ Solution:**Composition** per 50.0mL:Na₂CO₃ 5.0g

Preparation of Na₂CO₃ Solution: Add Na₂CO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

Na₂S·9H₂O Solution:**Composition** per 15mL:Na₂S·9H₂O 0.5g

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 15.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Trace Elements Solution:**Composition** per liter:

MgSO₄·7H₂O 3.0g
 Nitrilotriacetic acid 1.5g
 NaCl 1.0g
 MnSO₄·2H₂O 0.5g
 CoSO₄·7H₂O 0.18g
 ZnSO₄·7H₂O 0.18g
 CaCl₂·2H₂O 0.1g
 FeSO₄·7H₂O 0.1g
 NiCl₂·6H₂O 0.025g
 KAl(SO₄)₂·12H₂O 0.02g
 H₃BO₃ 0.01g
 Na₂MoO₄·4H₂O 0.01g
 CuSO₄·5H₂O 0.01g
 Na₂SeO₃·5H₂O 0.3mg

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Vitamin Solution:**Composition** per liter:

Pyridoxine-HCl 10.0mg
 Thiamine-HCl·2H₂O 5.0mg
 Riboflavin 5.0mg
 Nicotinic acid 5.0mg
 D-Ca-pantothenate 5.0mg
p-Aminobenzoic acid 5.0mg
 Lipoic acid 5.0mg
 Biotin 2.0mg
 Folic acid 2.0mg
 Vitamin B₁₂ 0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Preparation of Medium: Add components, except Na₂CO₃ solution, Na₂S·9H₂O solution, and L-cysteine solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂ for 30 min. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically distribute 5.0mL aliquots into Hungate tubes under 100% N₂. Aseptically and anaerobically add per 5.0mL medium 0.25mL Na₂CO₃ solution, 0.075mL Na₂S·9H₂O solution, and 0.075mL L-cysteine solution. Mix thoroughly. Replace N₂ atmosphere with atmosphere of 80% H₂ + 20% CO₂. Repeat atmosphere replacement several times with overpressurization. The initial pH of 9.0 will decrease over a 30 min

period to 7.3–7.5. After inoculation use atmosphere of 80% H₂ + 20% CO₂ to 1.5 bar overpressure.

Use: For the cultivation of *Methanocalculus pumilus*.

Methanococcal Complex Medium

See: *Methanococcus* McC Medium

Methanococcoides Medium**Composition** per liter:

NaCl 18.0g
 NaHCO₃ 5.0g
 MgCl₂·6H₂O 4.0g
 MgSO₄·7H₂O 3.45g
 Trimethylamine-HCl 3.0g
 Trypticase™ 2.0g
 Yeast extract 2.0g
 Sodium acetate 1.0g
 L-Cysteine-HCl 0.5g
 Na₂S·9H₂O 0.5g
 KCl 0.335g
 NH₄Cl 0.25g
 CaCl₂·2H₂O 0.14g
 K₂HPO₄ 0.14g
 Fe(NH₄)₂(SO₄)₂·7H₂O 2.0mg
 Resazurin 1.0mg
 Trace elements solution 10.0mL
 Vitamin solution 10.0mL

pH 7.0 ± 0.2 at 25°C

Trace Elements Solution:**Composition** per liter:

MgSO₄·7H₂O 3.0g
 Nitrilotriacetic acid 1.5g
 NaCl 1.0g
 MnSO₄·2H₂O 0.5g
 CoSO₄·7H₂O 0.18g
 ZnSO₄·7H₂O 0.18g
 CaCl₂·2H₂O 0.1g
 FeSO₄·7H₂O 0.1g
 NiCl₂·6H₂O 0.025g
 KAl(SO₄)₂·12H₂O 0.02g
 CuSO₄·5H₂O 0.01g
 H₃BO₃ 0.01g
 Na₂MoO₄·2H₂O 0.01g
 Na₂SeO₃·5H₂O 0.3mg

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Adjust pH to 7.0. Add distilled/deionized water to 1.0L.

Vitamin Solution:**Composition** per liter:

Pyridoxine-HCl 10.0mg
 Calcium DL-pantothenate 5.0mg
 Lipoic acid 5.0mg
 Nicotinic acid 5.0mg
p-Aminobenzoic acid 5.0mg
 Riboflavin 5.0mg
 Thiamine-HCl 5.0mg
 Biotin 2.0mg
 Folic acid 2.0mg
 Vitamin B₁₂ 0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Adjust pH to 7.0. Mix thoroughly.

Preparation of Medium: Prepare the medium anaerobically under 80% H₂ + 20% CO₂. Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Methanococcoides methylutens*.

Methanococcus deltae Medium

Composition per liter:

NaCl	35.0g
NaHCO ₃	5.0g
MgCl ₂ ·6H ₂ O	4.0g
NH ₄ Cl	2.7g
Sodium acetate	2.5g
L-Cysteine·HCl	0.3g
K ₂ HPO ₄	0.3g
KH ₂ PO ₄	0.3g
Na ₂ S·9H ₂ O	0.3g
MgSO ₄ ·7H ₂ O	0.13g
Resazurin	1.0mg
(NH ₄) ₂ SO ₄	0.3mg
Trace elements solution	10.0mL
Vitamin solution	10.0mL
L-Cysteine·HCl solution	10.0mL
Na ₂ S·9H ₂ O solution	10.0mL

pH 6.9 ± 0.2 at 25°C

Trace Elements Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O	3.0g
Nitilotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·2H ₂ O	0.5g
CoSO ₄ ·7H ₂ O	0.18g
ZnSO ₄ ·7H ₂ O	0.18g
CaCl ₂ ·2H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g
NiCl ₂ ·6H ₂ O	0.025g
KAl(SO ₄) ₂ ·12H ₂ O	0.02g
CuSO ₄ ·5H ₂ O	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O	0.3mg

Preparation of Trace Elements Solution: Add nitilotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Adjust pH to 7.0. Add distilled/deionized water to 1.0L.

Vitamin Solution:

Composition per liter:

Pyridoxine·HCl	10.0mg
Calcium DL-pantothenate	5.0mg
Lipoic acid	5.0mg
Nicotinic acid	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Riboflavin	5.0mg
Thiamine·HCl	5.0mg
Biotin	2.0mg

Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Adjust pH to 7.0. Mix thoroughly.

L-Cysteine·HCl Solution:

Composition per 10.0mL:

L-Cysteine·HCl	0.3g
----------------	------

Preparation of L-Cysteine·HCl Solution: Add L-cysteine·HCl to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.3g
-------------------------------------	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare and dispense medium under 80% H₂ + 20% CO₂. Add components, except L-cysteine·HCl solution and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Anaerobically distribute into tubes or flasks fitted with butyl rubber stoppers. Autoclave for 15 min at 15 psi pressure–121°C. Anaerobically add 10.0mL of sterile L-cysteine·HCl solution and 10.0mL of sterile Na₂S·9H₂O solution to each liter of medium or, using a syringe, inject the appropriate amount of sterile L-cysteine·HCl solution and sterile Na₂S·9H₂O solution into individual tubes containing medium.

Use: For the cultivation and maintenance of *Methanococcus deltae*.

Methanococcus jannaschii Medium

Composition per liter:

NaCl	30.0g
MgSO ₄ ·7H ₂ O	3.40g
MgCl ₂ ·2H ₂ O	2.7g
NaHCO ₃	1.0g
Na ₂ S·9H ₂ O	0.5g
KCl	0.33g
NH ₄ Cl	0.25g
CaCl ₂ ·2H ₂ O	0.14g
K ₂ HPO ₄	0.14g
Fe(NH ₄) ₂ (SO ₄) ₂ ·6H ₂ O	0.01g

Vitamin solution	10.0mL
L-Cysteine·HCl solution	10.0mL
Na ₂ S·9H ₂ O solution	10.0mL

pH 6.0 ± 0.2 at 25°C

Trace Elements Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O	3.0g
Nitilotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·2H ₂ O	0.5g
CoSO ₄ ·7H ₂ O	0.18g
ZnSO ₄ ·7H ₂ O	0.18g
CaCl ₂ ·2H ₂ O	0.1g

FeSO ₄ ·7H ₂ O	0.1g
NiCl ₂ ·6H ₂ O	0.025g
KAl(SO ₄) ₂ ·12H ₂ O	0.02g
CuSO ₄ ·5H ₂ O	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O	0.3mg

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Adjust pH to 7.0. Add distilled/deionized water to 1.0L.

Vitamin Solution:

Composition per liter:

Pyridoxine·HCl	10.0mg
Calcium DL-pantothenate	5.0mg
Lipoic acid	5.0mg
Nicotinic acid	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Riboflavin	5.0mg
Thiamine·HCl	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Adjust pH to 7.0. Mix thoroughly.

L-Cysteine·HCl Solution:

Composition per 10.0mL:

L-Cysteine·HCl	0.5g
----------------	------

Preparation of L-Cysteine·HCl Solution: Add L-cysteine·HCl to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.3g
-------------------------------------	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare and dispense medium under 80% H₂ + 20% CO₂. Add components, except L-cysteine·HCl solution and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Anaerobically distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Anaerobically add 10.0mL of sterile L-cysteine·HCl solution and 10.0mL of sterile Na₂S·9H₂O solution to each liter of medium or, using a syringe, inject the appropriate amount of sterile L-cysteine·HCl solution and sterile Na₂S·9H₂O solution into individual tubes containing medium.

Use: For the cultivation and maintenance of *Methanococcus* species.

Methanococcus jannaschii Medium

Composition per 1020.0mL:

PIPES (piperazine- <i>N,N'</i> -bis[2-ethanesulfonic acid]) buffer	15.12g
MgCl ₂ ·6H ₂ O	4.3g
MgSO ₄ ·7H ₂ O	3.4g
NaCl	3.0g
NH ₄ Cl	0.25g
K ₂ HPO ₄	0.14g

CaCl ₂ ·2H ₂ O	0.14g
KCl	0.33g
Minerals solution	10.0mL
Na ₂ S ₂ O ₃ solution	10.0mL
β-Mercaptoethanol solution	10.0mL
SeO ₂ solution	1.0mL

pH 7.0 ± 0.2 at 25°C

Minerals Solution:

Composition per liter:

Nitrilotriacetic acid	4.5g
FeCl ₂ ·4H ₂ O	0.4g
CoCl ₂ ·2H ₂ O	0.17g
MnCl ₂ ·4H ₂ O	0.1g
ZnCl ₂	0.1g
NaMoO ₄ ·6H ₂ O	36.0mg
CaCl ₂ ·H ₂ O	27.0mg

Preparation of Minerals Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Na₂S₂O₃ Solution:

Composition per 10.0mL:

Na ₂ S ₂ O ₃ ·5H ₂ O	0.63g
--	-------

Preparation of Na₂S₂O₃ Solution: Add Na₂S₂O₃·5H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

β-Mercaptoethanol Solution:

Composition per 10.0mL:

β-Mercaptoethanol	0.39g
-------------------	-------

Preparation of β-Mercaptoethanol Solution: Add β-mercaptoethanol to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

SeO₂ Solution:

Composition per 100.0mL:

SeO ₂	0.011g
------------------	--------

Preparation of SeO₂ Solution: Add SeO₂ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Prepare and dispense medium under 100% N₂. Add components, except Na₂S₂O₃ solution and β-mercaptoethanol solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 3 min. Cool to room temperature while sparging with 100% N₂. Adjust pH to 7.0 with KOH. Anaerobically distribute 100.0mL volumes into anaerobic bottles. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 1.0mL of sterile Na₂S₂O₃ solution and 1.0mL of sterile β-mercaptoethanol solution to each bottle. Mix thoroughly. Prior to inoculation, flush each bottle with 80% H₂ + 20% CO₂.

Use: For the cultivation of *Methanococcus jannaschii*.

Methanococcus McC Medium

Composition per 1100.0mL:

NaHCO ₃	5.0g
Yeast extract	2.0g
L-Cysteine·HCl·H ₂ O	0.5g
General salts solution	500.0mL
NaCl solution	75.0mL
Na ₂ S·9H ₂ O solution	20.0mL
K ₂ HPO ₄ solution	10.0mL

Trace minerals solution.....	10.0mL
Sodium acetate solution.....	10.0mL
Iron stock solution.....	5.0mL
Resazurin solution.....	1.0mL

General Salts Solution:**Composition per liter:**

MgSO ₄ ·7H ₂ O.....	6.9g
MgCl ₂ ·6H ₂ O.....	5.5g
NH ₄ Cl.....	1.0g
KCl.....	0.67g
CaCl ₂ ·2H ₂ O.....	0.28g

Preparation of General Salts Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

NaCl Solution:**Composition per 100.0mL:**

NaCl.....	29.3g
-----------	-------

Preparation of NaCl Solution: Add NaCl to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Na₂S·9H₂O Solution:**Composition per 100.0mL:**

NaOH.....	1 pellet
Na ₂ S·9H ₂ O.....	2.5g

Preparation of Na₂S·9H₂O Solution: Bring 100.0mL of distilled/deionized water to boiling. Cool to room temperature while sparging with 100%N₂. Dissolve 1 pellet of NaOH in the anaerobic water. Weigh out a little more than 2.5g of Na₂S·9H₂O. Briefly rinse the crystals in distilled/deionized water. Dry the crystals by blotting on paper towels or filter paper. Add 2.5g of washed Na₂S·9H₂O crystals to 100.0mL of anaerobic NaOH solution. Distribute into serum bottles fitted with butyl rubber stoppers and aluminum seals. Do not grease stoppers. Pressurize to 60kPa with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Store at room temperature in an anaerobic chamber.

K₂HPO₄ Solution:**Composition per 100.0mL:**

K ₂ HPO ₄	1.4g
---------------------------------------	------

Preparation of K₂HPO₄ Solution: Add K₂HPO₄ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Trace Minerals Solution:**Composition per liter:**

Nitrilotriacetic acid.....	1.5g
Na ₂ WO ₄ ·2H ₂ O.....	1.0g
Fe(NH ₄) ₂ (SO ₄) ₂ ·6H ₂ O.....	0.2g
Na ₂ SeO ₃	0.2g
Na ₂ MoO ₄ ·2H ₂ O.....	0.1g
Mn ₄ ·2H ₂ O.....	0.1g
Zn ₄ ·7H ₂ O.....	0.1g
NiCl ₂ ·7H ₂ O.....	0.025g
CuSO ₄ ·5H ₂ O.....	0.01g

Preparation of Trace Minerals Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Adjust pH to 7.0.

Sodium Acetate Solution:**Composition per 100.0mL:**

Sodium acetate·3H ₂ O.....	13.6g
---------------------------------------	-------

Preparation of Sodium Acetate Solution: Add sodium acetate·3H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Iron Stock Solution:**Composition per 100.0mL:**

Fe(NH ₄) ₂ (SO ₄) ₂ ·6H ₂ O.....	0.2g
---	------

Preparation of Iron Stock Solution: Add Fe(NH₄)₂(SO₄)₂·6H₂O to 5.0mL of distilled H₂O containing 2 drops of concentrated HCl. Mix thoroughly. When the Fe(NH₄)₂(SO₄)₂·6H₂O has dissolved, bring the volume to 100.0mL with distilled/deionized water.

Resazurin Solution:**Composition per 10.0mL:**

Resazurin.....	10.0mg
----------------	--------

Preparation of Resazurin Solution: Add resazurin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly.

Preparation of Medium: Prepare and dispense medium under 80% H₂ + 20% CO₂. Add components, except NaHCO₃ and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 1080.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 3 min. Cool to room temperature while sparging with 80% H₂ + 20% CO₂. Add NaHCO₃. Mix thoroughly. Anaerobically distribute 9.8mL volumes into anaerobic tubes. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 0.2mL of sterile Na₂S·9H₂O solution to each tube. Mix thoroughly.

Use: For the cultivation of *Methanococcus* species.

Methanococcus McN Medium**Composition per 1100.0mL:**

Na₂S·9H₂O Solution:**Composition per 100.0mL:**

Na ₂ S·9H ₂ O.....	2.5g
NaOH.....	1 pellet

Preparation of Na₂S·9H₂O Solution: Bring 100.0mL of distilled/deionized water to boiling. Cool to room temperature while

sparging with 100% N₂. Dissolve 1 pellet of NaOH in the anaerobic water. Weigh out a little more than 2.5g of Na₂S·9H₂O. Briefly rinse the crystals in distilled/deionized water. Dry the crystals by blotting on paper towels or filter paper. Add 2.5g of washed Na₂S·9H₂O crystals to 100.0mL of anaerobic NaOH solution. Distribute into serum bottles fitted with butyl rubber stoppers and aluminum seals. Do not grease stoppers. Pressurize to 60kPa with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Store at room temperature in an anaerobic chamber.

K₂HPO₄ Solution:

Composition per 100.0mL:

K₂HPO₄..... 1.4g

Preparation of K₂HPO₄ Solution: Add K₂HPO₄ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Trace Minerals Solution:

Composition per liter:

Nitilotriacetic acid 1.5g
 Na₂WO₄·2H₂O 1.0g
 Fe(NH₄)₂(SO₄)₂·6H₂O 0.2g
 Na₂SeO₃ 0.2g
 Na₂MoO₄·2H₂O 0.1g
 Mn₄·2H₂O 0.1g
 Zn₄·7H₂O 0.1g
 NiCl₂·7H₂O 0.025g
 CuSO₄·5H₂O 0.01g

Preparation of Trace Minerals Solution: Add nitilotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Adjust pH to 7.0.

Iron Stock Solution:

Composition per 100.0mL:

Fe(NH₄)₂(SO₄)₂·6H₂O 0.2g

Preparation of Iron Stock Solution: Add Fe(NH₄)₂(SO₄)₂·6H₂O to 5.0mL of distilled H₂O containing 2 drops of concentrated HCl. Mix thoroughly. When the Fe(NH₄)₂(SO₄)₂·6H₂O has dissolved, bring the volume to 100.0mL with distilled/deionized water.

Resazurin Solution:

Composition per 10.0mL:

Resazurin 10.0mg

Preparation of Resazurin Solution: Add resazurin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly.

Preparation of Medium: Prepare and dispense medium under 80% H₂ + 20% CO₂. Add components, except NaHCO₃ and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 1080.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 3 min. Cool to room temperature while sparging with 80% H₂ + 20% CO₂. Add NaHCO₃. Mix thoroughly. Anaerobically distribute 9.8mL volumes into anaerobic tubes. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 0.2mL of sterile Na₂S·9H₂O solution to each tube. Mix thoroughly.

Use: For the cultivation of *Methanococcus* species.

Methanococcus McNail Medium

Composition per 1100.0mL:

NaHCO₃ 5.0g
 L-Leucine 1.0g
 L-Isoleucine 0.5g
 L-Cysteine-HCl·H₂O 0.5g
 General salts solution 500.0mL

NaCl solution 75.0mL
 Na₂S·9H₂O solution 20.0mL
 K₂HPO₄ solution 10.0mL
 Trace minerals solution 10.0mL
 Sodium acetate solution 10.0mL
 Pantoyllactone solution 10.0mL
 Iron stock solution 5.0mL
 Resazurin solution 1.0mL

General Salts Solution:

Composition per liter:

MgSO₄·7H₂O 6.9g
 MgCl₂·6H₂O 5.5g
 NH₄Cl 1.0g
 KCl 0.67g
 CaCl₂·2H₂O 0.28g

Preparation of General Salts Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

NaCl Solution:

Composition per 100.0mL:

NaCl 29.3g

Preparation of NaCl Solution: Add NaCl to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Na₂S·9H₂O Solution:

Composition per 100.0mL:

NaOH 1 pellet
 Na₂S·9H₂O 2.5g

Preparation of Na₂S·9H₂O Solution: Bring 100.0mL of distilled/deionized water to boiling. Cool to room temperature while sparging with 100% N₂. Dissolve 1 pellet of NaOH in the anaerobic water. Weigh out a little more than 2.5g of Na₂S·9H₂O. Briefly rinse the crystals in distilled/deionized water. Dry the crystals by blotting on paper towels or filter paper. Add 2.5g of washed Na₂S·9H₂O crystals to 100.0mL of anaerobic NaOH solution. Distribute into serum bottles fitted with butyl rubber stoppers and aluminum seals. Do not grease stoppers. Pressurize to 60kPa with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Store at room temperature in an anaerobic chamber.

K₂HPO₄ Solution:

Composition per 100.0mL:

K₂HPO₄ 1.4g

Preparation of K₂HPO₄ Solution: Add K₂HPO₄ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Trace Minerals Solution:

Composition per liter:

Nitilotriacetic acid 1.5g
 Na₂WO₄·2H₂O 1.0g
 Fe(NH₄)₂(SO₄)₂·6H₂O 0.2g
 Na₂SeO₃ 0.2g
 Na₂MoO₄·2H₂O 0.1g
 Mn₄·2H₂O 0.1g
 Zn₄·7H₂O 0.1g
 NiCl₂·7H₂O 0.025g
 CuSO₄·5H₂O 0.01g

Preparation of Trace Minerals Solution: Add nitilotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Adjust pH to 7.0.

Sodium Acetate Solution:**Composition** per 100.0mL:Sodium acetate·3H₂O 13.6g

Preparation of Sodium Acetate Solution: Add 13.6g of sodium acetate·3H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Pantoyllactone Solution:**Composition** per 100.0mL:

Pantoyllactone 0.013g

Preparation of Pantoyllactone Solution: Add pantoyllactone to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Iron Stock Solution:**Composition** per 100.0mL:Fe(NH₄)₂(SO₄)₂·6H₂O 0.2g

Preparation of Iron Stock Solution: Add Fe(NH₄)₂(SO₄)₂·6H₂O to 5.0mL of distilled H₂O containing 2 drops of concentrated HCl. Mix thoroughly. When the Fe(NH₄)₂(SO₄)₂·6H₂O has dissolved, bring the volume to 100.0mL with distilled/deionized water.

Resazurin Solution:**Composition** per 10.0mL:

Resazurin 10.0mg

Preparation of Resazurin Solution: Add resazurin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly.

Preparation of Medium: Prepare and dispense medium under 80% H₂ + 20% CO₂. Add components, except NaHCO₃ and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 1080.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 3 min. Cool to room temperature while sparging with 80% H₂ + 20% CO₂. Add NaHCO₃. Mix thoroughly. Anaerobically distribute 9.8mL volumes into anaerobic tubes. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 0.2mL of sterile Na₂S·9H₂O solution to each tube. Mix thoroughly.

Use: For the cultivation of *Methanococcus* species.

Methanococcus* Medium*Composition** per liter:

NaCl	18.0g
Mg ₂ SO ₄ ·7H ₂ O	3.45g

Na ₂ MoO ₄ ·4H ₂ O	0.01g

CuSO ₄ ·5H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O	0.3mg

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl	10.0mg
Thiamine-HCl·2H ₂ O	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
D-Ca-pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.5g
---	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Sparge with N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Store anaerobically.

L-Cysteine Solution:

Composition per 10.0mL:

L-Cysteine·HCl·H ₂ O	0.5g
---------------------------------------	------

Preparation of L-Cysteine Solution: Add L-cysteine·HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare and dispense medium under an oxygen-free 80% H₂ + 20% CO₂ gas mixture. Add components, except vitamin solution, L-cysteine solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C while sparging with 80% H₂ + 20% CO₂. Aseptically and anaerobically add 10.0mL vitamin solution, 10.0mL of sterile L-cysteine solution, and 10.0mL of sterile Na₂S·9H₂O solution. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or flasks. Alternately the medium can be distributed to tubes under anaerobic conditions and autoclaved in tubes prior to addition of substrate solution, vitamin solution, and Na₂S·9H₂O solution. Appropriate amounts of these solutions can then be added to each tube by syringes to yield the desired concentrations. After inoculation, pressurize culture vessels to 2 bar 80% H₂ + 20% CO₂ overpressure.

Use: For the cultivation of *Methanococcus* sp.

Methanococcus vannielii Medium

Composition per 1020.0mL:

Solution A	500.0mL
Inorganic salts solution	500.0mL
Na ₂ S·9H ₂ O solution	10.0mL
Na ₂ CO ₃ solution	10.0mL

Solution A:

Composition per 500.0mL:

Sodium formate	10.0g
Phenol Red	3.0mg
Methylene Blue	2.0mg

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Inorganic Salts Solution:

Composition per 500.0mL:

K ₂ HPO ₄ ·3H ₂ O	1.45g
NH ₄ Cl	1.0g
KH ₂ PO ₄	0.75g
MgCl ₂ ·6H ₂ O	0.2g
Nitrilotriacetic acid	0.04g
CaCl ₂ ·2H ₂ O	0.02g
FeCl ₂ ·4H ₂ O	3.6mg
CoCl ₂ ·6H ₂ O	1.5mg
MnCl ₂ ·4H ₂ O	0.9mg
ZnCl ₂	0.9mg
H ₃ BO ₂	0.17mg
Na ₂ MoO ₄ ·2H ₂ O	0.09mg

Preparation of Inorganic Salts Solution: Add nitrilotriacetic acid to 250.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Readjust pH to 7.2 with H₂SO₄ or KOH. Add distilled/deionized water to 500.0mL. Filter sterilize.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.3g
---	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Na₂CO₃ Solution:

Composition per 10.0mL:

Na ₂ CO ₃	2.5g
---------------------------------------	------

Preparation of Na₂CO₃ Solution: Add Na₂CO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Preparation of Medium: Prepare and distribute medium anaerobically under 80% N₂ + 20% CO₂. Aseptically and anaerobically combine 500.0mL of sterile inorganic salts solution, 500.0mL of sterile solution A, 10.0mL of sterile Na₂S·9H₂O solution, and 10.0mL of sterile Na₂CO₃ solution. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or flasks.

Use: For the isolation and cultivation of *Methanococcus vannielii* from marine mud.

Methanococcus vannielii Medium

Composition per liter:

Sodium formate	15.0g
K ₂ HPO ₄	3.48g
CoCl ₂ ·6H ₂ O	2.38g
NH ₄ Cl	1.0g
L-Cysteine·HCl·H ₂ O	0.3g
MgSO ₄ ·7H ₂ O	0.2g
CaCl ₂ ·2H ₂ O	0.01g
FeSO ₄ ·7H ₂ O	0.01g

MnSO ₄ ·H ₂ O	7.5mg
Na ₂ MoO ₄ ·2H ₂ O	7.5mg
Na ₂ SeO ₃	1.7mg
Na ₂ S·9H ₂ O solution	10.0mL

Na₂S·9H₂O Solution:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O	0.15g
---	-------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Preparation of Medium: Prepare and distribute medium anaerobically under 100% N₂. Add components, except Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling until resazurin turns colorless, indicating reduction. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 10.0mL of sterile Na₂S·9H₂O solution. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or flasks.

Use: For the cultivation of *Methanococcus vannielii*.

HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O	0.5g
---	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Before use, neutralize to pH 7.0 with sterile HCl.

L-Cysteine Solution:**Composition per 10.0mL:**

L-Cysteine·HCl·H ₂ O	0.5g
---------------------------------------	------

Preparation of L-Cysteine Solution: Add L-cysteine·HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare and dispense medium under 80% H₂ + 20% CO₂ gas atmosphere. Add components, except L-cysteine solution, Na₂S·9H₂O solution, and trace elements solution SL-10, to distilled/deionized water and bring volume to 920.0mL. Mix thoroughly. Adjust pH to 6.8. Sparge with 80% H₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 10.0mL L-cysteine solution, 10.0mL Na₂S·9H₂O solution, and 1.0mL trace elements solution SL-10. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or bottles. After inoculation, flush and repressurize the gas head space of culture bottles with sterile 80% H₂ + 20% CO₂ to 1 bar overpressure. Alternately, the medium without L-cysteine solution, Na₂S·9H₂O solution, and trace elements solution SL-10 can be distributed to tubes anaerobically prior to autoclaving. After autoclaving in tubes the appropriate volumes of the individual solutions can be injected through the stoppers so that the final concentrations of the medium are achieved.

Use: For the cultivation of *Methanococcoides* spp. and *Methanobolus bombayensis*.

Methanoculleus olentangyi Medium**Composition per liter:**

NaHCO ₃	5.0g
NH ₄ Cl	2.7g
Sodium acetate.....	2.5g
NaCl.....	0.61g

NiCl ₂ ·6H ₂ O	0.025g
Na ₂ SeO ₃ ·5H ₂ O.....	0.3mg

Preparation of Trace Elements Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L.

Vitamin Solution:**Composition per liter:**

Pyridoxine·HCl.....	10.0mg
Calcium DL-pantothenate.....	5.0mg
Lipoic acid	5.0mg

Nicotinic acid.....	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Riboflavin.....	5.0mg
Thiamine-HCl.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

L-Cysteine-HCl Solution:

Composition per 10.0mL:

L-Cysteine-HCl.....	0.3g
---------------------	------

Preparation of L-Cysteine-HCl Solution: Add L-cysteine-HCl to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	0.3g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare and dispense medium under 80% H₂ + 20% CO₂. Add components, except L-cysteine-HCl solution and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Anaerobically distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Anaerobically add 10.0mL of sterile L-cysteine-HCl solution and 10.0mL of sterile Na₂S·9H₂O solution to each liter of medium or, using a syringe, inject the appropriate amount of sterile L-cysteine-HCl solution and sterile Na₂S·9H₂O solution into individual tubes containing medium.

Use: For the cultivation and maintenance of *Methanoculleus oleanthangi*.

Methanogen Enrichment Medium, Barker

Composition per liter:

CaCO ₃	20.0g
NH ₄ Cl.....	1.0g
K ₂ HPO ₄ ·3H ₂ O.....	0.4g
MgCl ₂ ·6H ₂ O.....	0.1g
Methanol.....	20.0mL

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components, except methanol and CaCO₃, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add filter-sterilized methanol solution. Mix thoroughly. Add 1.0g of CaCO₃ to each of 50.0mL screw-capped bottles. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Fill each bottle to capacity with enrichment medium.

Use: For the cultivation of methanogenic bacteria.

Methanogen Medium

Composition per 106.0mL:

CaCO ₃	10.0g
Calcium acetate.....	2.0g
NH ₄ Cl.....	0.1g
K ₂ HPO ₄ ·3H ₂ O.....	0.04g
MgCl ₂ ·6H ₂ O.....	0.01g

Na ₂ S·9H ₂ O solution.....	3.0mL
Na ₂ CO ₃ solution.....	3.0mL

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	0.1g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Na₂CO₃ Solution:

Composition per 10.0mL:

Na ₂ CO ₃	0.5g
---------------------------------------	------

Preparation of Na₂CO₃ Solution: Add Na₂CO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Preparation of Medium: Prepare and distribute medium anaerobically under 100% N₂. Add components, except Na₂S·9H₂O solution and Na₂CO₃ solution, to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 3.0mL of sterile Na₂S·9H₂O solution and 3.0mL of sterile Na₂CO₃ solution. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or flasks.

Use: For the cultivation and enrichment of acetate-utilizing methanogenic bacteria.

Methanogen Medium, Zeikus

Composition per 1010.0mL:

Inorganic salts solution.....	500.0mL
Vitamin solution.....	500.0mL
Na ₂ S·9H ₂ O solution.....	10.0mL

pH 7.0 ± 0.2 at 25°C

Inorganic Salts Solution:

Composition per 500.0mL:

K ₂ HPO ₄ ·3H ₂ O.....	1.45g
NH ₄ Cl.....	1.0g
KH ₂ PO ₄	0.75g
MgCl ₂ ·6H ₂ O.....	0.2g
Nitrilotriacetic acid.....	0.04g
CaCl ₂ ·2H ₂ O.....	0.02g
FeCl ₂ ·4H ₂ O.....	3.6mg
CoCl ₂ ·6H ₂ O.....	1.5mg
MnCl ₂ ·4H ₂ O.....	0.9mg
ZnCl ₂	0.9mg
H ₃ BO ₃	0.17mg
Na ₂ MoO ₄ ·2H ₂ O.....	0.09mg

Preparation of Inorganic Salts Solution: Add nitrilotriacetic acid to 250.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Readjust pH to 7.2 with H₂SO₄ or KOH. Add distilled/deionized water to 500.0mL. Filter sterilize.

Vitamin Solution:

Composition per 500.0mL:

Pyridoxine-HCl.....	1.0mg
<i>p</i> -Aminobenzoic acid.....	0.5mg
Ca-D-pantothenate.....	0.5mg
Nicotinic acid.....	0.5mg
Riboflavin.....	0.5mg
Thiamine-HCl.....	0.5mg
Thioctic acid.....	0.5mg

Biotin	0.2mg
Folic acid.....	0.2mg
Vitamin B ₁₂	0.01mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Filter sterilize.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	0.3g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Preparation of Medium: Prepare and distribute medium anaerobically under 95% N₂ + 5% CO₂. Aseptically and anaerobically combine 500.0mL of sterile inorganic salts solution, 500.0mL of sterile vitamin solution, and 10.0mL of sterile Na₂S·9H₂O solution. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or flasks.

Use: For the cultivation of methanogenic bacteria.

Methanogenium aggregans Medium (DSMZ Medium 321)

Composition per liter:

Na-formate.....	5.0g
Na ₂ CO ₃	1.5g
Na-acetate.....	1.0g
Trypticase™.....	1.0g
Yeast extract.....	1.0g

Sludge fluid.....	5.0mL

pH 6.8 ± 0.2 at 25°C

Mineral Solution:

Composition per liter:

NaCl.....	12.0g
KH ₂ PO ₄	6.0g
(NH ₄) ₂ SO ₄	6.0g
MgSO ₄ ·7H ₂ O.....	2.6g
CaCl ₂ ·2H ₂ O.....	0.16g

Preparation of Mineral Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Trace Elements Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O.....	3.0g
Nitilotriacetic acid.....	1.5g
NaCl.....	1.0g
MnSO ₄ ·2H ₂ O.....	0.5g
CoSO ₄ ·7H ₂ O.....	0.18g
ZnSO ₄ ·7H ₂ O.....	0.18g
CaCl ₂ ·2H ₂ O.....	0.1g
FeSO ₄ ·7H ₂ O.....	0.1g
NiCl ₂ ·6H ₂ O.....	0.025g
KAl(SO ₄) ₂ ·12H ₂ O.....	0.02g

H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·4H ₂ O.....	0.01g
CuSO ₄ ·5H ₂ O.....	0.01g
Na ₂ SeO ₃ ·5H ₂ O.....	0.3mg

Preparation of Trace Elements Solution: Add nitilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Cysteine Solution:

Composition per 10.0mL:

L-Cysteine·HCl·H ₂ O.....	0.2g
--------------------------------------	------

Preparation of Cysteine Solution: Add L-cysteine·HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	0.2g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Sludge Fluid:

Composition per 500.0mL:

Yeast extract.....	2.0g
Sludge.....	500.0mL

Preparation of Sludge Fluid: Add yeast extract to sludge from an anaerobic digester. Gas with nitrogen gas for a few minutes. Incubate at 37°C for 24 hours. Centrifuge the sludge at 13,000 x g. Autoclave for 15 min at 15 psi pressure–121°C. Place the resulting, clear supernatant in screw-capped vessels under nitrogen gas. The sludge fluid can be stored at room temperature in the dark.

Preparation of Medium: Prepare and dispense medium under an oxygen-free 80% H₂ + 20% CO₂ gas mixture. Add components, except sludge fluid, cysteine solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 975.0mL. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C while sparging with 80% H₂ + 20% CO₂. Aseptically and anaerobically add 5.0mL sterile sludge fluid, 10.0mL of sterile cysteine solution, and 10.0mL of sterile Na₂S·9H₂O solution. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or flasks.

Use: For the cultivation of *Methanocorpusculum aggregans* (*Methanogenium aggregans*).

Methanogenium aggregans Medium

Composition per liter:

Sodium formate.....	5.0g
NH ₄ Cl.....	1.0g

Na ₂ MoO ₄ ·2H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O	0.3mg

Preparation of Trace Elements Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Adjust pH to 7.0. Add distilled/deionized water to 1.0L.

L-Cysteine-HCl Solution:**Composition per 10.0mL:**

L-Cysteine-HCl	0.2g
----------------------	------

Preparation of L-Cysteine-HCl Solution: Add L-cysteine-HCl to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O	0.2g
---	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂CO₃ Solution:**Composition per 10.0mL:**

Na ₂ CO ₃	1.5g
---------------------------------------	------

Preparation of Na₂CO₃ Solution: Add Na₂CO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Sludge Fluid:**Composition per 100.0mL:**

Yeast extract	0.4g
Sludge	100.0mL

Preparation of Sludge Fluid: To 100.0mL of sludge from an anaerobic digester, add 0.4g of yeast extract. Sparge with 100% N₂ for a

few minutes. Incubate at 37°C for 24 hr. Centrifuge the sludge at 13,000 × g for 15 min. Decant the clear supernatant solution. Sparge with 100% N₂ for a few minutes. Store in screw-capped bottles at room temperature in the dark.

Preparation of Medium: Prepare and dispense medium under 80% H₂ + 20% CO₂. Add components, except L-cysteine-HCl solution, Na₂S·9H₂O solution, and Na₂CO₃ solution, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Adjust pH to 6.8. Anaerobically distribute into tubes or flasks fitted with butyl rubber stoppers. Autoclave for 15 min at 15 psi pressure–121°C. Anaerobically add 10.0mL of sterile L-cysteine-HCl solution, 10.0mL of sterile Na₂S·9H₂O solution, and 10.0mL of sterile Na₂CO₃ solution to each liter of medium or, using a syringe, inject the appropriate amount of sterile L-cysteine-HCl solution, sterile Na₂S·9H₂O solution, and sterile Na₂CO₃ solution into individual tubes containing medium.

Use: For the cultivation and maintenance of *Methanocorpusculum aggregans*.

Methanogenium Alcohol Medium**Composition per 1003.0mL:**

NiCl ₂ ·6H ₂ O	50.0mg
H ₃ BO ₃	6.0mg
CuSO ₄ ·5H ₂ O	3.0mg
HCl (25%, w/v)	8.0mL

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Selenite-Molybdate-Tungstate Solution:**Composition per liter:**

NaOH	0.2g
Na ₂ MoO ₄ ·2H ₂ O	40.0mg
Na ₂ WO ₄ ·2H ₂ O	33.0mg
Na ₂ SeO ₃ ·2H ₂ O	5.0mg

Preparation of Selenite-Molybdate-Tungstate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

NaHCO₃ Solution:**Composition per liter:**NaHCO₃ 84.0g

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:**Composition per 100.0mL:**Na₂S·9H₂O 2.5g

NaOH 1 pellet

Preparation of Na₂S·9H₂O Solution: Bring 100.0mL of distilled/deionized water to boiling. Cool to room temperature while sparging with 100%N₂. Dissolve 1 pellet of NaOH in the anaerobic water. Weigh out a little more than 2.5g of Na₂S·9H₂O. Briefly rinse the crystals in distilled/deionized water. Dry the crystals by blotting on paper towels or filter paper. Add 2.5g of washed Na₂S·9H₂O crystals to 100.0mL of anaerobic NaOH solution. Distribute into serum bottles fitted with butyl rubber stoppers and aluminum seals. Do not grease stoppers. Pressurize to 60kPa with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Store at room temperature in an anaerobic chamber.

Preparation of 2-Propanol: Filter sterilize 10.0mL of 2-propanol. Sparge with 100% N₂.

Vitamin Solution:**Composition per liter:**

Sodium 2-mercaptoethanesulfonate 0.25g

Pyridoxine·HCl 0.15g

Calcium pantothenate 0.1g

Nicotinic acid 0.1g

p-Aminobenzoic acid 40.0mg

Biotin 10.0mg

Potassium phosphate buffer (25mM solution, pH 7.0) 1.0L

Preparation of Vitamin Solution: Combine components. Mix thoroughly. Filter sterilize. Sparge with 100% N₂.

Thiamine Solution:**Composition per liter:**

Thiamine·HCl 0.1g

Sodium phosphate buffer (0.1M solution, pH 3.6) 1.0L

Preparation of Thiamine Solution: Combine components. Mix thoroughly. Filter sterilize. Sparge with 100% N₂.

Cyanocobalamin Solution:**Composition per liter:**

Cyanocobalamin 50.0mg

Preparation of Cyanocobalamin Solution: Add cyanocobalamin to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Sparge with 100% N₂.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂. Add components, except NaHCO₃ solution, 2-propanol, Na₂S·9H₂O solution, cyanocobalamin solution, selenite-molybdate-tungstate solution, thiamine solution, trace elements solution, and vitamin solution, to distilled/deionized water and bring volume to 930.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 60.0mL of sterile NaHCO₃ solution, 5.0mL of sterile 2-propanol, 3.0mL of sterile Na₂S·9H₂O solution, 1.0mL of sterile cyanocobalamin solution, 1.0mL of sterile selenite-molybdate-tungstate solution, 1.0mL of sterile thiamine solution, 1.0mL of sterile trace elements so-

lution, and 1.0mL of sterile vitamin solution. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or bottles.

Use: For the cultivation of *Methanogenium* species.

***Methanogenium bourgense* Medium (DSMZ Medium 322)**

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare and dispense medium under 80% H₂ + 20% CO₂. Add components, except Na₂CO₃ solution and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Adjust pH to 6.7. Anaerobically distribute into tubes or flasks fitted with butyl rubber stoppers. Autoclave for 15 min at 15 psi pressure–121°C. Anaerobically add 10.0mL of sterile Na₂CO₃ solution and 10.0mL of sterile Na₂S·9H₂O solution to each liter of medium or, using a syringe, inject the appropriate amount of sterile Na₂CO₃ solution and sterile Na₂S·9H₂O solution into individual tubes containing medium.

Use: For the cultivation and maintenance of *Methanogenium bourgense*.

NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 3.4.

Wolfe's Vitamin Solution:**Composition per liter:**

Pyridoxine-HCl	10.0mg
Thiamine-HCl	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
Calcium pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Thioctic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Cyanocobalamin	100.0μg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂. Add components, except Wolfe's vitamin solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Adjust pH to 6.8. Autoclave for 15 min at 15 psi pressure–121°C. Cool under 80% N₂ + 20% CO₂. Aseptically add sterile Wolfe's vitamin solution. Aseptically and anaerobically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Methanococcus frisius*, *Methanococcus maripaludis*, *Methanococcus thermolithotrophicus*, and *Methanoplanus limicola*.

Methanogenium Medium**Composition per liter:**

NaHCO ₃	4.0g
Sodium acetate	4.0g
Sodium formate	2.0g
Yeast extract	1.0g
L-Cysteine-HCl	0.5g
KH ₂ PO ₄	0.5g
Na ₂ S·9H ₂ O	0.5g
MgSO ₄ ·7H ₂ O	0.4g
NaCl	0.4g
NH ₄ Cl	0.4g
CaCl ₂ ·2H ₂ O	0.05g
NiCl ₂ ·6H ₂ O	24.0mg
FeSO ₄ ·7H ₂ O	2.0mg
Resazurin	1.0mg
Sludge fluid	50.0mL
Fatty acid mixture	20.0mL
Trace elements solution SL-10	1.0mL

pH 6.7 ± 0.2 at 25°C

Sludge Fluid:**Composition per 100.0mL:**

Sludge	100.0mL
Yeast extract	0.4g

Preparation of Sludge Fluid: To 100.0mL of sludge from an anaerobic digester, add 0.4g of yeast extract. Sparge with 100% N₂ for a few minutes. Incubate at 37°C for 24 hr. Centrifuge the sludge at 13,000 × g for 15 min. Decant the clear supernatant solution. Sparge with 100% N₂ for a few minutes. Store in screw-capped bottles at room temperature in the dark.

Fatty Acid Mixture:**Composition per 20.0mL:**

α-Methylbutyric acid	0.5g
Isobutyric acid	0.5g
Isovaleric acid	0.5g
Valeric acid	0.5g

Preparation of Fatty Acid Mixture: Add components to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Adjust pH to 7.5 with concentrated NaOH.

Trace Elements Solution SL-10:**Composition per liter:**

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare and dispense medium anaerobically under 80% H₂ + 20% CO₂. Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Methanobacterium* species, *Methanococcus* species, *Methanocorpusculum* species, *Methanoculleus* species, *Methanogenium* species, *Methanoplanus* species, and *Thermotoga* species.

H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂CO₃ Solution:**Composition per 10.0mL:**

Na ₂ CO ₃	0.5g
---------------------------------------	------

Preparation of Na₂CO₃ Solution: Add Na₂CO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare and dispense medium under 80% H₂ + 20% CO₂. Add components, except NaHCO₃ solution, trimethylamine-HCl solution, Na₂S·9H₂O solution, yeast extract solution, vitamin solution, trace elements solution SL-10, and Na₂CO₃ solution, to

distilled/deionized water and bring volume to 840.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Anaerobically add 100.0mL of sterile NaHCO₃ solution, 20.0mL of sterile trimethylamine-HCl solution, 10.0mL of sterile Na₂S·9H₂O solution, 10.0mL of sterile yeast extract solution, 10.0mL of sterile vitamin solution, and 10.0mL of sterile trace elements solution SL-10. Mix thoroughly. Add a sufficient quantity of sterile Na₂CO₃ solution to bring the pH to 7.4.

Use: For the cultivation and maintenance of *Methanohalobium evestigatus*.

Methanohalophilus euhalobius Medium

Composition per 1010.0mL:

NaCl	60.0g
MgCl ₂ ·6H ₂ O	2.4g
Yeast extract	2.0g
KCl	1.0g
Disodium EDTA	0.5g
NH ₄ Cl	0.5g
KH ₂ PO ₄	0.4g
Resazurin	0.5mg
Trimethylamine solution	50.0mL
NaHCO ₃ solution	40.0mL
CaCl ₂ solution	20.0mL
Na ₂ S·9H ₂ O solution	15.0mL
L-Cysteine-HCl solution	15.0mL
Wolfe's mineral solution	10.0mL
Wolfe's vitamin solution	5.0mL

pH 6.8–7.0 at 25°C

Trimethylamine Solution:

Composition per 50.0mL:

Trimethylamine-HCl	10.0g
--------------------	-------

Preparation of Trimethylamine Solution: Add trimethylamine-HCl to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

NaHCO₃ Solution:

Composition per 40.0mL:

NaHCO ₃	4.0g
--------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 40.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

CaCl₂ Solution:

Composition per 20.0mL:

CaCl ₂ ·2H ₂ O	2.0g
--------------------------------------	------

Preparation of CaCl₂ Solution: Add CaCl₂·2H₂O to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂ gas mixture. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:

Composition per 20.0mL:

Na ₂ S·9H ₂ O	0.6g
-------------------------------------	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Before use, neutralize to pH 7.0 with sterile HCl.

L-Cysteine-HCl Solution:

Composition per 20.0mL:

L-Cysteine-HCl·H ₂ O	0.6g
---------------------------------	------

Preparation of L-Cysteine-HCl Solution: Add L-cysteine-HCl·H₂O to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Wolfe's Mineral Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O	3.0g
Nitrilotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·2H ₂ O	0.5g
CoCl ₂ ·6H ₂ O	0.1g
ZnSO ₄ ·7H ₂ O	0.1g
CaCl ₂ ·2H ₂ O	0.1g

H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O	0.3mg

Preparation of Wolfe's Mineral Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Adjust pH to 6.8.

Wolfe's Vitamin Solution:

Composition per liter:

Pyridoxine-HCl	10.0mg
p-Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Nicotinic acid	5.0mg
Riboflavin	5.0mg
Thiamine-HCl	5.0mg
Calcium DL-pantothenate	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas mixture. Add components, except trimethylamine solution, NaHCO₃ solution, CaCl₂ solution, L-cysteine-HCl solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 860.0mL. Mix thoroughly. Adjust pH to 6.8–7.0. Sparge with 80% N₂ + 20% CO₂ gas mixture. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 50.0mL of sterile trimethylamine solution, 40.0mL of sterile NaHCO₃ solution, 20.0mL of sterile CaCl₂ solution, 15.0mL of sterile L-cysteine-HCl solution, and 15.0mL of sterile Na₂S·9H₂O solution. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or bottles.

Use: For the cultivation of *Methanohalophilus euhalobius*.

Methanohalophilus halophilus Medium

Composition per 1011.0mL:

NaCl	70.0g
KCl	0.33g

KH ₂ PO ₄	0.33g
NH ₄ Cl	0.33g
Yeast extract.....	0.05g
K ₂ SO ₄	0.01g
Resazurin	1.0mg
Methylamine-HCl solution.....	20.0mL
MgCl ₂ /CaCl ₂ solution	10.0mL
NaHCO ₃ solution	10.0mL
Vitamin solution.....	10.0mL
L-Cysteine-HCl solution.....	10.0mL
Na ₂ S·9H ₂ O solution	10.0mL
Trace elements solution SL-10	1.0mL

pH 7.2 ± 0.2 at 25°C

MgCl₂/CaCl₂ Solution:**Composition per 10.0mL:**

MgCl ₂ ·6H ₂ O.....	0.33g
CaCl ₂ ·2H ₂ O.....	0.33g

Preparation of MgCl₂/CaCl₂ Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

NaHCO₃ Solution:**Composition per 10.0mL:**

NaHCO ₃	5.0g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Vitamin Solution:**Composition per liter:**

Pyridoxine-HCl	10.0mg
Calcium DL-pantothenate	5.0mg
Nicotinic acid.....	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Riboflavin	5.0mg
Thiamine-HCl	5.0mg
Biotin	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Sparge with 80% H₂ + 20% CO₂.

Methylamine-HCl Solution:**Composition per 20.0mL:**

Methylamine-HCl	5.0g
-----------------------	------

Preparation of Methylamine-HCl Solution: Add methylamine-HCl to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

L-Cysteine-HCl Solution:**Composition per 10.0mL:**

L-Cysteine-HCl.....	0.2g
---------------------	------

Preparation of L-Cysteine-HCl Solution: Add L-cysteine-HCl to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O.....	0.2g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution SL-10:**Composition per liter:**

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare and dispense medium under 80% H₂ + 20% CO₂. Add components, except MgCl₂/CaCl₂ solution, NaHCO₃ solution, vitamin solution, methylamine-HCl solution, L-cysteine-HCl solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 840.0mL. Mix thoroughly. Adjust pH to 6.9–7.0. Sparge with 80% H₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Anaerobically add 10.0mL of sterile MgCl₂/CaCl₂ solution, 10.0mL of sterile NaHCO₃ solution, 10.0mL of sterile vitamin solution, 20.0mL of sterile methylamine-HCl solution, 10.0mL of sterile L-cysteine-HCl solution, and 10.0mL of sterile Na₂S·9H₂O solution. Mix thoroughly.

Use: For the cultivation and maintenance of *Methanohalophilus halophilus*.

Methanohalophilus mahii* Medium*Composition per 1010.0mL:**

NaCl.....	87.0g
MgCl ₂ ·6H ₂ O	6.0g
NaHCO ₃	4.0g
Trypticase™.....	2.0g
Yeast extract.....	2.0g
KCl.....	1.5g
NH ₄ Cl	1.0g
CaCl ₂ ·2H ₂ O	0.4g
K ₂ HPO ₄ ·3H ₂ O	0.4g
Coenzyme M (mercaptoethane sulfonic acid).....	0.2g
Resazurin	1.0mg
Trace elements solution	10.0mL
Na ₂ S·9H ₂ O solution	10.0mL
Methanol	4.0mL

pH 7.0 ± 0.2 at 25°C

Trace Elements Solution:**Composition per liter:**

MgSO ₄ ·7H ₂ O	3.0g
Nitrilotriacetic acid	1.5g
NaCl.....	1.0g
MnSO ₄ ·2H ₂ O	0.5g
FeSO ₄ ·7H ₂ O.....	0.1g
CoSO ₄ ·7H ₂ O.....	0.18g
ZnSO ₄ ·7H ₂ O.....	0.18g

CaCl ₂ ·2H ₂ O.....	0.1g
KAl(SO ₄) ₂ ·12H ₂ O.....	0.02g
CuSO ₄ ·5H ₂ O.....	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O.....	0.01g
NiCl ₂ ·6H ₂ O.....	0.025g
Na ₂ SeO ₃ ·5H ₂ O.....	0.3mg

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Adjust pH to 7.0. Add distilled/deionized water to 1.0L.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	0.25g
--	-------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂. Add components, except Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 10.0mL of sterile Na₂S·9H₂O solution. Mix thoroughly.

Use: For the cultivation and maintenance of *Methanohalophilus mahii*.

Methanohalophilus Medium See: *Halomethanococcus* Medium

Methanohalophilus oregonense Medium

Composition per 1010.0mL:

NaCl.....	29.0g
Trimethylamine·HCl.....	2.0g

H ₃ BO ₃	0.01g

Na ₂ MoO ₄ ·2H ₂ O.....	0.01g
NiCl ₂ ·6H ₂ O.....	0.025g
Na ₂ SeO ₃ ·5H ₂ O.....	0.3mg

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Adjust pH to 7.0. Add distilled/deionized water to 1.0L.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	0.3g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂CO₃ Solution:

Composition per 10.0mL:

Na ₂ CO ₃	1.0g
---------------------------------------	------

Preparation of Na₂CO₃ Solution: Add Na₂CO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂. Add components, except Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 10.0mL of sterile Na₂S·9H₂O solution. Mix thoroughly. Adjust pH to 8.5 with a sufficient quantity of sterile Na₂CO₃ solution (approximately 0.1mL per 10.0mL of medium).

Use: For the cultivation and maintenance of *Methanohalophilus oregonense*.

Methanohalophilus zhilinae Medium

Composition per liter:

NaCl.....	40.0g
MgCl ₂ ·6H ₂ O.....	3.5g
MgSO ₄ ·7H ₂ O.....	3.0g
Trypticase™.....	2.0g
Yeast extract.....	2.0g
KCl.....	1.0g
NH ₄ Cl.....	1.0g
L-Cysteine·HCl.....	0.5g
K ₂ HPO ₄	0.4g
Resazurin.....	1.0mg
Na ₂ SeO ₃ ·5H ₂ O.....	0.1mg
Trimethylamine·HCl solution.....	20.0mL
NaHCO ₃ solution.....	10.0mL
Na ₂ CO ₃ solution.....	10.0mL
Na ₂ S·9H ₂ O solution.....	10.0mL
Trace elements solution.....	5.0mL

pH 9.2 ± 0.2 at 25°C

Trimethylamine·HCl Solution:

Composition per 20.0mL:

Trimethylamine·HCl.....	2.0g
-------------------------	------

Preparation of Trimethylamine·HCl Solution: Add trimethylamine·HCl to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

NaHCO₃ Solution:**Composition per 10.0mL:**NaHCO₃ 0.5g

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂CO₃ Solution:**Composition per 10.0mL:**Na₂CO₃ 2.0g

Preparation of Na₂CO₃ Solution: Add Na₂CO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:**Composition per 10.0mL:**Na₂S·9H₂O 0.25g

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution:**Composition per liter:**

MgSO₄·7H₂O 3.0g
 Nitritotriacetic acid 1.5g
 NaCl 1.0g
 MnSO₄·2H₂O 0.5g
 CoSO₄·7H₂O 0.18g
 ZnSO₄·7H₂O 0.18g
 CaCl₂·2H₂O 0.1g
 FeSO₄·7H₂O 0.1g
 KAl(SO₄)₂·12H₂O 0.02g
 CuSO₄·5H₂O 0.01g
 H₃BO₃ 0.01g
 Na₂MoO₄·2H₂O 0.01g
 NiCl₂·6H₂O 0.025g
 Na₂SeO₃·5H₂O 0.3mg

Preparation of Trace Elements Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Adjust pH to 7.0. Add distilled/deionized water to 1.0L.

Preparation of Medium: Prepare and dispense medium under 100% N₂. Add components, except trimethylamine·HCl solution, NaHCO₃ solution, Na₂CO₃ solution, L-cysteine·HCl, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 5 min. Allow to cool to room temperature while sparging with 100% N₂. Add L-cysteine·HCl. Distribute medium into tubes and seal. Autoclave for 15 min at 15 psi pressure–121°C. Anaerobically add 20.0mL of sterile trimethylamine·HCl solution, 10.0mL of sterile NaHCO₃ solution, 10.0mL of sterile Na₂CO₃ solution, and 10.0mL of sterile Na₂S·9H₂O solution. Mix thoroughly. Check pH.

Use: For the cultivation and maintenance of *Methanohalophilus zhilinae*.

Methanol Agar (LMG Medium 72)

Composition per liter:

Agar 15.0g
 K₂HPO₄ 1.2g

KH₂PO₄ 0.62g
 (NH₄)₂SO₄ 0.5g
 MgSO₄·7H₂O 0.2g
 NaCl 0.1g
 CaCl₂·2H₂O 34.0mg
 FeCl₃·6H₂O 1.0mg
 Methanol 10.0mL
 Trace elements solution 1.0mL

pH 7.0 ± 0.2 at 25°C

Trace Elements Solution:**Composition per liter:**

ZnSO₄·7H₂O 70.0mg
 Na₂MoO₄·2H₂O 10.0mg
 H₃BO₃ 10.0mg
 MnSO₄·H₂O 7.0mg
 CuSO₄·5H₂O 5.0mg
 CoCl₂·6H₂O 5.0mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components, except methanol, to 990.0mL distilled/deionized water. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°C. Aseptically add 10.0mL sterile methanol. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Methylobacterium* spp., *Methylobacillus glycogens*, and *Methylophilus methylotrophus*.

Methanol Ammonium Salts Medium

Composition per liter:

MgSO₄·7H₂O 1.0g
 NH₄Cl 0.5g
 Na₂HPO₄ 0.33g
 KH₂PO₄ 0.26g
 CaCl₂ 0.2g
 Ferrous EDTA 5.0mg
 Na₂MoO₄·2H₂O 2.0mg
 FeSO₄·7H₂O 500.0µg
 ZnSO₄·7H₂O 400.0µg
 EDTA 250.0µg
 CoCl₂·6H₂O 50.0µg
 MnCl₂·4H₂O 20.0µg
 H₃BO₄ 15.0µg
 NiCl₂·6H₂O 10.0µg
 Methanol 5.0mL

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Add Na₂HPO₄ and KH₂PO₄ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. In a separate container, add remaining components, except methanol, to distilled/deionized water and bring volume to 895.0mL. Mix thoroughly. Autoclave both solutions for 15 min at 15 psi pressure–121°C. Cool to room temperature. Filter sterilize methanol. Aseptically add the sterile phosphate solution and the sterile methanol to the cooled, sterile basal medium. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the maintenance and cultivation of *Methylomonas methylotrophus*.

Methanol Medium (ATCC Medium 436)

Composition per liter:

Agar	15.0g
K ₂ HPO ₄	7.0g
(NH ₄) ₂ SO ₄	3.0g
KH ₂ PO ₄	2.0g
MgSO ₄ ·7H ₂ O	0.5g
Yeast extract.....	0.2g
FeSO ₄ ·7H ₂ O.....	0.01g
MnSO ₄ ·H ₂ O	8.0mg
Biotin	0.2μg
Thiamine-HCl	0.2μg
Methanol	10.0mL

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components, except methanol, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Filter sterilize methanol. Aseptically add the sterile methanol to the cooled, sterile basal medium. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Ancylobacter* species, *Methanomonas methylovora*, and *Methylobacterium* species.

Methanol Medium (ATCC Medium 1096)

Composition per liter:

NH ₄ NO ₃	0.75g
FeCl ₃	0.743g
Methanol	0.45g
MgSO ₄	0.09g
KH ₂ PO ₄	0.044g
Na ₂ MoO ₄ ·2H ₂ O	0.1mg

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Prepare and dispense medium under 97% N₂ + 3% H₂. Add components, except methanol, to distilled/deionized water and bring volume to 999.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Filter sterilize methanol. Aseptically add the sterile methanol to the cooled, sterile basal medium. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Ancylobacter* species, *Methylobacterium* species, and *Methanomonas methylovora*.

Methanol Medium for *Achromobacter*

Composition per liter:

NH ₄ Cl	5.0g
KH ₂ PO ₄	2.0g
NaCl	0.5g
MgSO ₄	0.2g
Yeast extract.....	0.2g
FeSO ₄	2.0mg
MnCl ₂	2.0mg
Methanol	20.0mL

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components, except methanol, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Filter sterilize methanol. Aseptically add the sterile methanol to the

cooled, sterile basal medium. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Achromobacter methanophilus*, *Methylobacterium rhodesianum*, *Pseudomonas insueta*, and *Pseudomonas polysaccharogenes*.

Methanol Medium with 1% Peptone

Composition per liter:

Agar	15.0g
Peptone	10.0g
K ₂ HPO ₄	7.0g
(NH ₄) ₂ SO ₄	3.0g
KH ₂ PO ₄	2.0g
MgSO ₄ ·7H ₂ O	0.5g
Yeast extract.....	0.2g
FeSO ₄ ·7H ₂ O.....	0.01g
MnSO ₄ ·H ₂ O	8.0mg
Biotin	0.2μg
Thiamine-HCl	0.2μg
Methanol	10.0mL

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components, except methanol, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Filter sterilize methanol. Aseptically add the sterile methanol to the cooled, sterile basal medium. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Methylobacterium* species.

Methanol Mineral Salts Medium

Composition per liter:

Agar	20.0g
(NH ₄) ₂ SO ₄	2.0g
NH ₄ Cl	2.0g
(NH ₄) ₂ HPO ₄	2.0g
Yeast extract.....	2.0g
KH ₂ PO ₄	1.0g
K ₂ HPO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.5g
Fe ₂ SO ₄ ·7H ₂ O	0.01g
CaCl ₂ ·2H ₂ O	0.01g
Methanol	10.0mL

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components, except methanol, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Filter sterilize methanol. Aseptically add the sterile methanol to the cooled, sterile basal medium. Mix thoroughly. Aseptically distribute into sterile Petri dishes or sterile tubes.

Use: For the cultivation and maintenance of *Pseudomonas viscogena*.

Methanol Salts Medium

Composition per liter:

Agar, noble.....	20.0g
K ₂ HPO ₄	1.2g
KH ₂ PO ₄	0.62g
(NH ₄) ₂ SO ₄	0.5g
MgSO ₄ ·7H ₂ O	0.2g

NaCl	0.1g
CaCl ₂ ·6H ₂ O	0.05g
ZnSO ₄ ·7H ₂ O	70.0μg
H ₃ BO ₃	10.0μg

Methanol	1.0mL
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components, except methanol, to distilled/deionized water and bring volume to 999.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 1.0mL of filter-sterilized methanol. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Hyphomicrobium* species, *Methylobacillus glycogenes*, *Methylobacterium extorquens*, *Methylobacterium fuji-sawaense*, *Methylobacterium mesophilicum*, *Methylobacterium organophilum*, *Methylobacterium radiotolerans*, *Methylobacterium rhodesianum*, *Methylobacterium rhodinum*, *Methylobacterium* species, *Methylobacterium zatmanii*, *Methylomonas* species, *Methylophilus methylotrophus*, *Methylovorus glucosotrophus*, *Paracoccus* species, *Protaminobacter thiaminophaga*, and *Pseudomonas insueta*.

Methanol Urea Mineral Salts Medium

Composition per liter:

Na ₂ HPO ₄	2.13g
KH ₂ PO ₄	1.36g
(NH ₄) ₂ SO ₄	0.5g
MgSO ₄ ·7H ₂ O	0.2g
CaCl ₂ ·2H ₂ O	0.01g
FeSO ₄ ·7H ₂ O	5.0mg
MnSO ₄ ·5H ₂ O	2.5mg
NaMoO ₄ ·2H ₂ O	2.5mg
Urea solution	30.0mL
Methanol	5.0mL

Urea Solution:

Composition per 50.0mL:

Urea	10.0g
------	-------

Preparation of Urea Solution: Add urea to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize.

Preparation of Methanol: Filter sterilize 5.0mL of methanol using a teflon filter.

Preparation of Medium: Add components, except urea solution and methanol, to distilled/deionized water and bring volume to 965.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 30.0mL of sterile urea solution and 5.0mL of sterile methanol. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Hyphomicrobium vulgare*.

Methanol-Utilizing Bacteria Medium B

Composition per liter:

Na ₂ HPO ₄	3.0g

Methanol	10.0mL
pH 7.1 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.1. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of methanol-utilizing bacteria.

Methanol-Utilizing Bacteria Medium B

Composition per liter:

Na ₂ HPO ₄	3.0g
(NH ₄) ₂ SO ₄	3.0g
KH ₂ PO ₄	1.4g
Yeast extract	0.2g
MgSO ₄ ·7H ₂ O	0.2g
CaCl ₂ ·2H ₂ O	30.0mg
Ferric citrate	30.0mg
MnCl ₂ ·4H ₂ O	5.0mg
ZnSO ₄ ·7H ₂ O	5.0mg
CuSO ₄ ·5H ₂ O	0.5mg
Methanol	10.0mL
pH 7.1 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.1. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of methanol-utilizing bacteria.

Methanol-Utilizing Bacteria Medium D

Composition per liter:

Na ₂ HPO ₄	3.0g
(NH ₄) ₂ SO ₄	3.0g
KH ₂ PO ₄	1.4g
MgSO ₄ ·7H ₂ O	0.2g
CaCl ₂ ·2H ₂ O	30.0mg
Ferric citrate	30.0mg
MnCl ₂ ·4H ₂ O	5.0mg
ZnSO ₄ ·7H ₂ O	5.0mg
CuSO ₄ ·5H ₂ O	0.5mg
Thiamine-HCl	0.4mg
Methanol	10.0mL
pH 9.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically adjust pH to 9.0 with filter-sterilized 10% NaCO₃ solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Paracoccus alcaliphilus*.

Methanol-Utilizing Bacteria Medium D**Composition per liter:**

Na ₂ HPO ₄	3.0g

CuSO ₄ ·5H ₂ O.....	0.01g
AlK(SO ₄) ₂ ·12H ₂ O.....	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O.....	0.01g

Preparation of Wolfe's Mineral Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L.

Wolfe's Vitamin Solution:**Composition per liter:**

Pyridoxine·HCl.....	10.0mg
Thiamine·HCl.....	5.0mg
Riboflavin.....	5.0mg
Nicotinic acid.....	5.0mg
Calcium pantothenate.....	5.0mg
p-Aminobenzoic acid.....	5.0mg
Thioctic acid.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Cyanocobalamin.....	100.0µg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂. Add components, except methanol and Wolfe's vitamin solution, to distilled/deionized water and bring volume to 985.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool under 80% N₂ + 20% CO₂. Aseptically add sterile Wolfe's vitamin solution and sterile methanol. Adjust pH to 6.5. Aseptically and anaerobically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Methanobolus siciliae* and *Methanobolus tindarius*.

Methanobolus 2 Medium

Composition per liter:

NaCl	18.0g
NaHCO ₃	5.0g
MgCl ₂ ·6H ₂ O	4.0g
MgSO ₄ ·7H ₂ O	3.45g
Trypticase™	2.0g
Yeast extract	2.0g
Sodium acetate	1.0g
L-Cysteine·HCl	0.5g
Na ₂ S·9H ₂ O	0.4g
KCl	0.335g
NH ₄ Cl	0.25g
CaCl ₂ ·2H ₂ O	0.14g
K ₂ HPO ₄	0.14g
Fe(NH ₄) ₂ (SO ₄) ₂ ·7H ₂ O	2.0mg
Resazurin	1.0mg
Na ₂ WO ₄ ·2H ₂ O	0.03mg
Trace elements solution	10.0mL
Vitamin solution	10.0mL
Methanol solution	5.0mL

pH 6.8–7.0 at 25°C

Trace Elements Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O	3.0g
Nitrilotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·2H ₂ O	0.5g
CoSO ₄ ·7H ₂ O	0.18g
ZnSO ₄ ·7H ₂ O	0.18g
CaCl ₂ ·2H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g
NiCl ₂ ·6H ₂ O	0.025g
KAl(SO ₄) ₂ ·12H ₂ O	0.02g
CuSO ₄ ·5H ₂ O	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O	0.3mg

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Adjust pH to 7.0. Add distilled/deionized water to 1.0L.

Vitamin Solution:

Composition per liter:

Pyridoxine·HCl	10.0mg
Calcium DL-pantothenate	5.0mg

Nicotinic acid	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Riboflavin	5.0mg
Thiamine·HCl	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Sparge with 80% H₂ + 20% CO₂.

Methanol Solution:

Composition per 5.0mL:

Methanol	5.0mL
----------	-------

Preparation of Methanol Solution: Sparge 5.0mL of methanol with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂. Add components, except vitamin solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Adjust pH to 6.9–7.0. Anaerobically distribute into tubes or flasks fitted with butyl rubber stoppers. Autoclave for 15 min at 15 psi pressure–121°C. Anaerobically add 10.0mL of sterile vitamin solution and 10.0mL of sterile methanol to each liter of medium or, using a syringe, inject the appropriate amount of sterile vitamin solution and sterile methanol into individual tubes containing medium.

Use: For the cultivation and maintenance of *Methanobolus siciliae*, *Methanobolus vulcani*, and *Methanosarcina* species.

Methanobolus taylorii Medium (DSMZ Medium 490a)

Composition per liter:

NaCl	29.0g
Yeast extract	2.0g
Trypticase™ peptone	2.0g
MgCl ₂ ·6H ₂ O	1.7g
KCl	1.5g
NH ₄ Cl	1.0g
Resazurin	1.0g
Mercaptoethanesulfonic acid (coenzyme M)	0.5g
K ₂ HPO ₄ ·3H ₂ O	0.4g
Trace elements solution	10.0mL
Trimethylamine·HCl solution	10.0mL
Na ₂ S·9H ₂ O solution	10.0mL
NaHCO ₃ solution	10.0mL

pH 8.5 ± 0.2 at 25°C

Trace Elements Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O	3.0g
Nitrilotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·2H ₂ O	0.5g
CoSO ₄ ·7H ₂ O	0.18g
ZnSO ₄ ·7H ₂ O	0.18g
CaCl ₂ ·2H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g
NiCl ₂ ·6H ₂ O	0.025g
KAl(SO ₄) ₂ ·12H ₂ O	0.02g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·4H ₂ O	0.01g

CuSO ₄ ·5H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O	0.3mg

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.3g
---	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Sparge with N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Store anaerobically.

Trimethylamine·HCl Solution:

Composition per 10.0mL:

Trimethylamine·HCl	2.0g
--------------------------	------

Preparation of Trimethylamine·HCl Solution: Add trimethylamine·HCl to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

NaHCO₃ Solution:

Composition per 10.0mL:

NaHCO ₃	2.0g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Should be prepared freshly.

Preparation of Medium: Prepare and dispense medium under an oxygen-free 100% N₂ gas mixture. Add components, except trimethylamine·HCl solution, NaHCO₃ solution, and Na₂S·9H₂O solution, to 970.0mL distilled/deionized water. Mix thoroughly. Sparge for 20 min with 100% N₂. Adjust pH to 8.0. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically and anaerobically add 10.0mL sterile trimethylamine·HCl solution, and 10.0mL Na₂S·9H₂O solution. Adjust pH to 8.5 using sterile NaHCO₃ solution, approximately 10.0mL per liter medium. Aseptically and anaerobically distribute to sterile tubes or flasks under 100% N₂.

Use: For the cultivation of *Methanobolus taylorii*.

Methanomicrobium Medium

Composition per liter:

NaHCO ₃	2.0g
Yeast extract	1.0g
Pancreatic digest of casein	1.0g
NaCl	0.6g
L-Cysteine·HCl·H ₂ O	0.5g
Na ₂ S·9H ₂ O	0.5g
K ₂ HPO ₄	0.3g
KH ₂ PO ₄	0.3g
(NH ₄) ₂ SO ₄	0.3g
MgSO ₄ ·7H ₂ O	0.13g
CaCl ₂ ·2H ₂ O	8.0mg
FeSO ₄ ·7H ₂ O	2.0mg
Rumen fluid, clarified	300.0mL
Fatty acid mixture	20.0mL
Wolfe's mineral solution	10.0mL

Wolfe's vitamin solution	10.0mL
Resazurin (0.1% solution)	1.0mL
pH 6.5 ± 0.2 at 25°C	

Fatty Acid Mixture:

Composition per liter:

Valeric acid	0.7mL
Isovaleric acid	0.7mL
α-Methylbutyric acid	0.5mL
Isobutyric acid	0.5mL

Preparation of Fatty Acid Mixture: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Wolfe's Mineral Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O	3.0g
Nitrilotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·H ₂ O	0.5g
FeSO ₄ ·7H ₂ O	0.1g
CoCl ₂ ·6H ₂ O	0.1g
CaCl ₂	0.1g
ZnSO ₄ ·7H ₂ O	0.1g
CuSO ₄ ·5H ₂ O	0.01g
AlK(SO ₄) ₂ ·12H ₂ O	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g

Preparation of Wolfe's Mineral Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L.

Wolfe's Vitamin Solution:

Composition per liter:

Pyridoxine·HCl	10.0mg
Thiamine·HCl	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
Calcium pantothenate	5.0mg
p-Aminobenzoic acid	5.0mg
Thioctic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Cyanocobalamin	100.0μg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂. Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.5. Distribute into tubes or flasks under 80% N₂ + 20% CO₂. Cap with rubber stoppers. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Methanomicrobium mobile*.

Methanomicrobium mobile Medium (DSMZ Medium 161)

Composition per liter:

NaHCO ₃	2.0g
Yeast extract	1.0g
Trypticase™	1.0g
NaCl	0.6g

Cysteine-HCl·H ₂ O	0.5g
Na ₂ S·9H ₂ O	0.5g
K ₂ HPO ₄	0.3g
KH ₂ PO ₄	0.3g
(NH ₄) ₂ SO ₄	0.3g
MgSO ₄ ·7H ₂ O	0.13g
CaCl ₂ ·2H ₂ O	0.008g
FeSO ₄ ·7H ₂ O	0.002g
Resazurin	0.001g
Rumen fluid, clarified	300.0mL
Fatty acid mixture	20.0mL
Trace elements solution	10.0mL
Vitamin solution	10.0mL

pH 6.5 ± 0.2 at 25°C

Trace Elements Solution:**Composition per liter:**

MgSO ₄ ·7H ₂ O	3.0g
Nitrilotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·2H ₂ O	0.5g
CoSO ₄ ·7H ₂ O	0.18g
ZnSO ₄ ·7H ₂ O	0.18g
CaCl ₂ ·2H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g
NiCl ₂ ·6H ₂ O	0.025g
KAl(SO ₄) ₂ ·12H ₂ O	0.02g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·4H ₂ O	0.01g
CuSO ₄ ·5H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O	0.3mg

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Vitamin Solution:**Composition per liter:**

Pyridoxine-HCl	10.0mg
Thiamine-HCl·2H ₂ O	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
D-Ca-pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Fatty Acid Mixture:**Composition per 20.0mL:**

Valeric acid	0.5g
Isovaleric acid	0.5g
α-Methylbutyric acid	0.5g
Isobutyric acid	0.5g
Distilled water	20.0mL

Preparation of Fatty Acid Mixture: Add components to 20.0mL distilled/deionized water. Mix thoroughly.

Preparation of Medium: Prepare and dispense medium under an oxygen-free 80% H₂ + 20% CO₂ gas mixture. Add components, except vitamin solution, to 990.0mL distilled/deionized water. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Adjust pH to 6.5 with concentrated NaOH. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C while sparging with 80% H₂ + 20% CO₂. Aseptically and anaerobically add 10.0mL sterile vitamin solution. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or flasks. Alternately the medium can be distributed to tubes under anaerobic conditions and autoclaved in tubes prior to addition of vitamin solution. Appropriate amounts of the vitamin solution can then be added to each tube by syringes. After inoculation, pressurize culture vessels to 2 bar 80% H₂ + 20% CO₂ overpressure.

Use: For the cultivation of *Methanomicrobium mobile*.

Methanomicrobium paynteri Medium**Composition per liter:**

3-(<i>N</i> -morpholino) propane sulfonic acid (MOPS buffer)	20.93g
NaCl	6.31g
NaHCO ₃	5.0g
Sodium acetate·3H ₂ O	4.14g
MgSO ₄ ·7H ₂ O	3.40g
MgCl ₂ ·2H ₂ O	2.75g
NH ₄ Cl	1.5g
KCl	0.34g
CaCl ₂ ·2H ₂ O	0.14g
K ₂ HPO ₄	0.14g
Fe(NH ₄) ₂ (SO ₄) ₂ ·6H ₂ O	2.0mg
Resazurin	1.0mg
Trace elements solution	10.0mL
Vitamin solution	10.0mL
L-Cysteine-HCl solution	10.0mL
Na ₂ S·9H ₂ O solution	10.0mL

pH 7.0 ± 0.2 at 25°C

Trace Elements Solution:**Composition per liter:**

MgSO ₄ ·7H ₂ O	3.0g
NaCl	1.0g
Nitrilotriacetic acid	1.5g
MnSO ₄ ·2H ₂ O	0.5g
CoSO ₄ ·7H ₂ O	0.18g
ZnSO ₄ ·7H ₂ O	0.18g
CaCl ₂ ·2H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g
KAl(SO ₄) ₂ ·12H ₂ O	0.02g
CuSO ₄ ·5H ₂ O	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g
NiCl ₂ ·6H ₂ O	0.025g
Na ₂ SeO ₃ ·5H ₂ O	0.3mg

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Adjust pH to 7.0. Add distilled/deionized water to 1.0L.

Vitamin Solution:**Composition per liter:**

Pyridoxine-HCl	10.0mg
Calcium DL-pantothenate	5.0mg
Lipoic acid	5.0mg

Nicotinic acid	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Riboflavin	5.0mg
Thiamine-HCl	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Sparge with 80% H₂ + 20% CO₂.

L-Cysteine-HCl Solution:

Composition per 10.0mL:

L-Cysteine-HCl	0.5g
----------------	------

Preparation of L-Cysteine-HCl Solution: Add L-cysteine-HCl to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.5g
-------------------------------------	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare and dispense medium under 80% H₂ + 20% CO₂. Add components, except MOPS buffer, L-cysteine-HCl solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 890.0mL. Mix thoroughly. Sparge with O₂-free 80% H₂ + 20% CO₂. In a separate flask, add MOPS buffer to distilled/deionized water and bring volume to 90.0mL. Adjust pH to 7.0 with 2M KOH. Add the 90.0mL of MOPS solution to the 890.0mL of medium and continue sparging with O₂-free 80% H₂ + 20% CO₂. Anaerobically distribute into tubes or flasks fitted with butyl rubber stoppers. Autoclave for 15 min at 15 psi pressure–121°C. Anaerobically add 10.0mL of sterile L-cysteine-HCl solution and 10.0mL of sterile Na₂S·9H₂O solution to each liter of medium or, using a syringe, inject the appropriate amount of sterile L-cysteine-HCl solution and sterile Na₂S·9H₂O solution into individual tubes containing medium.

Use: For the cultivation and maintenance of *Methanomicrobium paynteri*.

Methanomicrococcus Medium (DSMZ Medium 120b)

Composition 1112.0mL:

NaCl	2.25g
Yeast extract	2.0g
Casitone	2.0g

KH ₂ PO ₄	0.227g
FeSO ₄ ·7H ₂ O	0.002g
Resazurin	0.001g
NaHCO ₃ solution	40.0mL
Methanol solution	20.0mL
L-Cysteine-HCl·H ₂ O solution	15.0mL
Na ₂ S·9H ₂ O solution	15.0mL
Na-acetate solution	10.0mL
Vitamin solution	10.0mL

Coenzyme M solution	1.0mL
Trace elements solution SL-10	1.0mL
pH 7.2 ± 0.2 at 25°C	

Vitamin Solution:

Composition per liter:

Pyridoxamine-HCl	10.0mg
Pantothenic acid	5.0mg
Riboflavin	5.0mg
Alpha-lipoic acid	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Thiamine-HCl·2H ₂ O	5.0mg
Nicotinic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

Trace Elements Solution SL-10:

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

NaHCO₃ Solution:

Composition per 100.0mL:

NaHCO ₃	5.0g
--------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:

Composition per 100.0mL:

Na ₂ S·9H ₂ O	3.0g
-------------------------------------	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Before use, neutralize to pH 7.0 with sterile HCl.

Methanol Solution:

Composition per 100.0mL:

Methanol	50.0mL
----------	--------

Preparation of Methanol Solution: Add methanol to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na-Acetate Solution:

Composition per 100.0mL:

Na-acetate	25.0g
------------	-------

Preparation of Na-Acetate Solution: Add Na-acetate to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Coenzyme M Solution:

Composition per 10.0mL:

Coenzyme M 0.1g

Preparation of Coenzyme M Solution: Add coenzyme M to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

L-Cysteine Solution:

Composition per 100.0mL:

L-Cysteine·HCl·H₂O 3.0g

Preparation of L-Cysteine Solution: Add L-cysteine·HCl·H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas atmosphere. Add components, except vitamin solution, NaHCO₃ solution, methanol solution, L-cysteine-HCl·H₂O solution, Na₂S·9H₂O solution, Na-acetate solution, coenzyme M solution, and trace elements solution SL-10, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 10.0mL vitamin solution, 40.0mL NaHCO₃ solution, 20.0mL methanol solution, 15.0mL L-cysteine-HCl·H₂O solution, 15.0mL Na₂S·9H₂O solution, 10.0mL Na-acetate solution, 1.0mL coenzyme M solution, and 1.0mL trace elements solution SL-10. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or bottles. After inoculation, flush and repressurize the gas head space of culture bottles with sterile 80% H₂ + 20% CO₂ to 1 bar overpressure.

Use: For the cultivation of *Methanomicrococcus blatticola*.

Methanomonas Autotrophic Medium

Composition per liter:

NaNO₃ 2.0g
 Na₂HPO₄ 0.21g
 MgSO₄·7H₂O 0.2g
 NaH₂PO₄ 0.09g
 KCl 0.04g
 CaCl₂ 0.015g
 FeSO₄·7H₂O 1.0mg
 ZnSO₄·7H₂O 0.3mg
 CuSO₄·5H₂O 0.2mg
 H₃BO₃ 0.06mg
 MnSO₄·H₂O 0.03mg
 MoO₃ 0.015mg

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until dissolved. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the autotrophic cultivation of *Methanomonas* species.

Methanopyrus Medium

Composition per liter:

NaCl 11.80g
 MgCl₂·6H₂O 4.50g
 MgSO₄·7H₂O 1.75g
 Na₂SO₄ 0.81g

CaCl₂·2H₂O 0.78g
 KCl 0.30g
 KH₂PO₄ 0.09g
 K₂HPO₄·3H₂O 0.07g
 Na₂WO₄·2H₂O 2.0mg
 (NH₄)₂Fe(SO₄)₂·6H₂O 2.0mg
 (NH₄)₂Ni(SO₄)₂ 2.0mg
 Resazurin 0.2mg
 Marine trace elements 10.0mL
 Trace elements solution 10.0mL
 Vitamin solution 10.0mL
 NaHCO₃ solution 10.0mL
 Na₂S·9H₂O solution 10.0mL

pH 6.5 ± 0.2 at 25°C

Marine Trace Elements:

Composition per liter:

NaBr 4.0g
 SrCl₂·6H₂O 1.8g
 H₃BO₃ 1.3g
 Sodium silicate 100.0mg
 NaF 60.0mg
 KNO₃ 40.0mg
 KI 1.25mg
 Na₂HPO₄·3H₂O 0.25mg

Preparation of Marine Trace Elements: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Trace Elements Solution:

Composition per liter:

MgSO₄·7H₂O 3.0g
 Nitrilotriacetic acid 1.5g
 NaCl 1.0g
 MnSO₄·2H₂O 0.5g
 CoSO₄·7H₂O 0.18g
 ZnSO₄·7H₂O 0.18g
 CaCl₂·2H₂O 0.1g
 FeSO₄·7H₂O 0.1g
 NiCl₂·6H₂O 0.025g
 KAl(SO₄)₂·12H₂O 0.02g
 CuSO₄·5H₂O 0.01g
 H₃BO₃ 0.01g
 Na₂MoO₄·2H₂O 0.01g
 Na₂SeO₃·5H₂O 0.3mg

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Adjust pH to 7.0. Add distilled/deionized water to 1.0L.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl 10.0mg
 Calcium DL-pantothenate 5.0mg
 Lipoic acid 5.0mg
 Nicotinic acid 5.0mg
p-Aminobenzoic acid 5.0mg
 Riboflavin 5.0mg
 Thiamine-HCl 5.0mg
 Biotin 2.0mg
 Folic acid 2.0mg
 Vitamin B₁₂ 0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Sparge with 80% H₂ + 20% CO₂.

NaHCO₃ Solution:

Composition per 10.0mL:

NaHCO₃..... 0.5g

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na₂S·9H₂O..... 0.5g

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare and dispense medium under 80% H₂ + 20% CO₂. Add components, except vitamin solution, NaHCO₃ solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Anaerobically distribute into tubes or flasks fitted with butyl rubber stoppers. Autoclave for 15 min at 15 psi pressure–121°C. Anaerobically add 10.0mL of sterile vitamin solution, 10.0mL of sterile NaHCO₃ solution, and 10.0mL of sterile Na₂S·9H₂O solution to each liter of medium or, using a syringe, inject the appropriate amount of sterile vitamin solution, sterile NaHCO₃ solution, and sterile Na₂S·9H₂O solution into individual tubes containing medium. Check that final pH of medium is 6.5.

Use: For the cultivation and maintenance of *Methanopyrus kandleri*.

***Methanosarcina acetivorans* Medium**

Composition per liter:

NaCl..... 23.4g
 Agar..... 10.0g
 MgSO₄..... 6.3g
 Na₂CO₃..... 5.0g
 Trimethylamine·HCl..... 3.0g
 Yeast extract..... 1.0g
 NH₄Cl..... 1.0g
 KCl..... 0.8g
 Na₂HPO₄..... 0.6g
 L-Cysteine·HCl·H₂O..... 0.25g
 Na₂S·9H₂O..... 0.25g
 CaCl₂·2H₂O..... 0.14g
 Resazurin..... 1.0mg
 Wolfe's mineral solution..... 10.0mL

pH 7.2 ± 0.2 at 25°C

Wolfe's Mineral Solution:

Composition per liter:

MgSO₄·7H₂O..... 3.0g
 Nitrilotriacetic acid..... 1.5g
 NaCl..... 1.0g
 MnSO₄·H₂O..... 0.5g
 FeSO₄·7H₂O..... 0.1g
 CoCl₂·6H₂O..... 0.1g
 CaCl₂..... 0.1g
 ZnSO₄·7H₂O..... 0.1g
 CuSO₄·5H₂O..... 0.01g
 AlK(SO₄)₂·12H₂O..... 0.01g

H₃BO₃..... 0.01g
 Na₂MoO₄·2H₂O..... 0.01g

Preparation of Wolfe's Mineral Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L.

Preparation of Medium: Add components, except Na₂S·9H₂O, to glass-distilled water and bring volume to 990.0mL. Mix thoroughly. Methanol or methylamine·HCl may be substituted for the trimethylamine·HCl at a concentration of 50 mM. Heat gently and bring to boiling. Adjust pH to 7.2 with 6N HCl. Autoclave for 5 min at 10 psi pressure–115°C. Cool to 50°C under 80% N₂ + 20% CO₂. If a large precipitate is present, add a small amount of HCl and mix thoroughly. Add Na₂S·9H₂O. Mix thoroughly. Distribute into tubes under 80% N₂ + 20% CO₂. Cap with butyl rubber stoppers. Autoclave for 15 min at 15 psi pressure–121°C. A precipitate will form but resolubilizes as the medium cools. Invert tubes as they are cooling to facilitate resolubilization. Allow tubes to cool in a slanted position.

Use: For the cultivation and maintenance of *Methanococcoides methylutens* and *Methanosarcina acetivorans*.

***Methanosarcina acetivorans* Medium**

Composition per 1010.0mL:

NaCl..... 23.4g
 MgSO₄·7H₂O..... 9.45g
 Na₂CO₃..... 5.0g
 Yeast extract..... 1.0g
 NH₄Cl..... 1.0g
 CaCl₂·2H₂O..... 0.14g
 KCl..... 0.1g
 Na₂HPO₄..... 0.6g
 L-Cysteine·HCl·H₂O..... 0.025g
 Na₂S·9H₂O..... 0.025g
 Resazurin..... 1.0mg
 Trace elements solution..... 10.0mL
 Methanol..... 5.0mL

pH 6.8 ± 0.2 at 25°C

Trace Elements Solution:

Composition per liter:

Nitrilotriacetic acid..... 12.8g
 FeCl₃·6H₂O..... 1.35g
 NaCl..... 1.0g
 NiCl₂·6H₂O..... 0.12g
 MnCl₂·4H₂O..... 0.1g
 CaCl₂·2H₂O..... 0.1g
 ZnCl₂..... 0.1g

CuSO ₄ ·5H ₂ O.....	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O.....	0.01g

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Mix thoroughly. Add distilled/deionized water to 1.0L. Adjust pH to 6.8.

Vitamin Solution:

Composition per liter:

Calcium DL-pantothenate.....	5.0g
Vitamin B ₁₂	0.1g
Pyridoxine-HCl.....	10.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Lipoic acid.....	5.0mg
Nicotinic acid.....	5.0mg
Riboflavin.....	5.0mg
Thiamine-HCl.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

L-Cysteine·HCl·H₂O Solution:

Composition per 100.0mL:

L-Cysteine·HCl·H ₂ O.....	2.5g
--------------------------------------	------

Preparation of L-Cysteine·HCl·H₂O Solution: Bring 100.0mL of distilled/deionized water to boiling. Cool to room temperature while sparging with 100% N₂. Add L-cysteine·HCl·H₂O to the 100.0mL of anaerobic water. Distribute into serum bottles fitted with butyl rubber stoppers and aluminum seals. Do not grease stoppers. Autoclave for 20 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:

Composition per 100.0mL:

NaOH.....	1 pellet
Na ₂ S·9H ₂ O.....	2.5g

Preparation of Na₂S·9H₂O Solution: Bring 100.0mL of distilled/deionized water to boiling. Cool to room temperature while sparging with 100%N₂. Dissolve 1 pellet of NaOH in the anaerobic water. Weigh out a little more than 2.5g of Na₂S·9H₂O. Briefly rinse the crystals in distilled/deionized water. Dry the crystals by blotting on paper towels or filter paper. Weigh out 2.5g of washed Na₂S·9H₂O crystals. Add to the 100.0mL of anaerobic NaOH solution. Distribute into serum bottles fitted with butyl rubber stoppers and aluminum seals. Do not grease stoppers. Pressurize to 60kPa with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Store at room temperature in an anaerobic chamber.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂. Add components, except methanol, L-cysteine·HCl·H₂O solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 3 min. Cool to room temperature while sparging with 80% H₂ + 20% CO₂. Anaerobically distribute 9.7mL volumes into anaerobic tubes. Autoclave for 20 min at 15 psi pressure–121°C. Aseptically and anaerobically add 0.1mL of sterile methanol, 0.1mL of sterile L-cysteine·HCl·H₂O solution, and 0.1mL of sterile Na₂S·9H₂O solution to each tube. Mix thoroughly.

Use: For the cultivation of *Methanosarcina barkeri*.

Methanosarcina BCYT Medium (DSMZ Medium 318)

Composition per liter:

KHCO ₃	2.0g
NH ₄ Cl.....	1.0g
NaCl.....	0.6g
Yeast extract.....	0.5g
Trypticase™.....	0.5g
KH ₂ PO ₄	0.3g
MgCl ₂ ·6H ₂ O.....	0.1g
CaCl ₂ ·2H ₂ O.....	0.08g
Resazurin.....	1.0mg
Cysteine solution.....	10.0mL
Na ₂ S·9H ₂ O solution.....	10.0mL
Trace elements solution.....	10.0mL
Vitamin solution.....	10.0mL
Methanol.....	5.0mL

pH 6.8 ± 0.2 at 25°C

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl.....	10.0mg
Thiamine-HCl·2H ₂ O.....	5.0mg
Riboflavin.....	5.0mg
Nicotinic acid.....	5.0mg
D-Ca-pantothenate.....	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Lipoic acid.....	5.0mg

Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Trace Elements Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O	3.0g
Nitrilotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·2H ₂ O	0.5g
CoSO ₄ ·7H ₂ O	0.18g
ZnSO ₄ ·7H ₂ O	0.18g
CaCl ₂ ·2H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g
NiCl ₂ ·6H ₂ O	0.025g
KAl(SO ₄) ₂ ·12H ₂ O	0.02g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·4H ₂ O	0.01g
CuSO ₄ ·5H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O	0.3mg

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.3g
---	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Cysteine Solution:

Composition per 10.0mL:

L-Cysteine·HCl·H ₂ O	0.3g
---------------------------------------	------

Preparation of Cysteine Solution: Add L-cysteine·HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except methanol, vitamin solution, cysteine solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 985.0mL. Mix thoroughly. Sparge with 100% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C while sparging with 100% CO₂. Aseptically and anaerobically add 5.0mL filter sterilized methanol, 10.0mL vitamin solution, 10.0mL cysteine solution, and 10.0mL of sterile Na₂S·9H₂O solution. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or flasks.

Use: For the cultivation of *Methanosarcina* spp.

Methanosarcina DPB Medium

Composition per 1001.0mL:

Sodium acetate·3H ₂ O	4.1g
NH ₄ Cl	1.4g
K ₂ HPO ₄	1.3g
KH ₂ PO ₄	1.3g
MgSO ₄	0.5g

KAl(SO ₄) ₂ ·12H ₂ O	0.02g
CuSO ₄ ·5H ₂ O	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Mix thoroughly. Add distilled/deionized water to 1.0L. Adjust pH to 6.8.

Vitamin Solution:

Composition per liter:

Calcium DL-pantothenate	5.0g
Vitamin B ₁₂	0.1g
Pyridoxine·HCl	10.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Nicotinic acid	5.0mg
Riboflavin	5.0mg
Thiamine·HCl	5.0mg
Biotin	2.0mg
Folic acid	2.0mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Na₂S·9H₂O Solution:

Composition per 100.0mL:

Na ₂ S·9H ₂ O	25.0g
---	-------

Preparation of Na₂S·9H₂O Solution: Bring 100.0mL of distilled/deionized water to boiling. Cool to room temperature while sparging with 100% N₂. Add Na₂S·9H₂O to the 100.0mL of anaerobic water. Mix thoroughly. Distribute into serum bottles fitted with butyl rubber stoppers and aluminum seals. Do not grease stoppers. Autoclave for 20 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.8 with concentrated HCl. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool medium while sparging with 100% N₂. Prior to inoculation, aseptically and anaerobically add 1.0mL of sterile Na₂S·9H₂O solution per liter of me-

dium. Repeat the addition of 1.0mL of sterile Na₂S·9H₂O solution per liter of medium every 48 hr during growth.

Use: For the cultivation of *Methanosarcina* species.

Methanosarcina frisia Medium

Composition per liter:

NaCl	18.0g
NaHCO ₃	5.0g
MgCl ₂ ·6H ₂ O	4.0g
MgSO ₄ ·7H ₂ O	3.45g
Trypticase™	2.0g
Yeast extract	2.0g
Sodium acetate	1.0g
KCl	0.335g
NH ₄ Cl	0.25g
CaCl ₂ ·2H ₂ O	0.14g
K ₂ HPO ₄	0.14g
L-Cysteine·HCl	0.5g
Na ₂ S·9H ₂ O	0.5g
Fe(NH ₄) ₂ (SO ₄) ₂ ·7H ₂ O	2.0mg
Resazurin	1.0mg
Trace elements solution	10.0mL
Vitamin solution	10.0mL
Methanol solution	2.0mL

pH 6.8–7.0 at 25°C

Trace Elements Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O	3.0g
Nitritotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·2H ₂ O	0.5g
CoSO ₄ ·7H ₂ O	0.18g
ZnSO ₄ ·7H ₂ O	0.18g
CaCl ₂ ·2H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g
KAl(SO ₄) ₂ ·12H ₂ O	0.02g
CuSO ₄ ·5H ₂ O	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g
NiCl ₂ ·6H ₂ O	0.025g
Na ₂ SeO ₃ ·5H ₂ O	0.3mg

Preparation of Trace Elements Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Adjust pH to 7.0. Add distilled/deionized water to 1.0L.

Vitamin Solution:

Composition per liter:

Pyridoxine·HCl	10.0mg
Calcium DL-pantothenate	5.0mg
Lipoic acid	5.0mg
Nicotinic acid	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Riboflavin	5.0mg
Thiamine·HCl	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂.

Methanol Solution:

Composition per 10.0mL:

Methanol	10.0mL
----------	--------

Preparation of Methanol Solution: Sparge 10.0mL of methanol with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂. Add components, except methanol solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Anaerobically distribute into tubes or flasks fitted with butyl rubber stoppers. Autoclave for 15 min at 15 psi pressure–121°C. Anaerobically add 10.0mL of sterile methanol solution to each liter of medium or, using a syringe, inject the appropriate amount of sterile methanol solution into individual tubes containing medium.

Use: For the cultivation and maintenance of *Methanosarcina frisia*.

Methanosarcina Mass-Culturing Medium

Composition per liter:

NaCl	0.58g
NH ₄ Cl	0.53g
K ₂ HPO ₄	0.44g
KH ₂ PO ₄	0.35g
MgCl ₂ ·6H ₂ O	0.04g
CaCl ₂ ·2H ₂ O	0.03g
Resazurin	0.001g
Trace elements solution	10.0mL
Vitamin solution	10.0mL
Methanol	8.0mL
Na ₂ S·9H ₂ O solution	8.0mL

Trace Elements Solution:

Composition per liter:

Sodium nitritotriacetate	1.67g
CoCl ₂ ·6H ₂ O	0.18g
FeCl ₂ ·4H ₂ O	0.14g
MnCl ₂ ·4H ₂ O	0.09g
NiCl ₂ ·6H ₂ O	0.09g
ZnCl ₂	0.09g
CaCl ₂	0.06g
Na ₂ MoO ₄ ·2H ₂ O	0.046g
CuSO ₄	0.045g

Preparation of Trace Elements Solution: Add sodium nitritotriacetate to 500.0mL of distilled/deionized water. Adjust pH to 6.5. Add remaining components. Add distilled/deionized water to 1.0L. Adjust pH to 7.0.

Vitamin Solution:

Composition per liter:

Calcium DL-pantothenate	5.0g
Vitamin B ₁₂	0.1g
Pyridoxine·HCl	10.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Nicotinic acid	5.0mg
Riboflavin	5.0mg
Thiamine·HCl	5.0mg
Biotin	2.0mg
Folic acid	2.0mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Methanol: Filter sterilize 10.0mL of methanol.

Na₂S·9H₂O Solution:

Composition per 100.0mL:

NaOH.....	1 pellet
Na ₂ S·9H ₂ O.....	2.5g

Preparation of Na₂S·9H₂O Solution: Bring 100.0mL of distilled/deionized water to boiling. Cool to room temperature while sparging with 100%N₂. Dissolve 1 pellet of NaOH in the anaerobic water. Weigh out a little more than 2.5g of Na₂S·9H₂O. Briefly rinse the crystals in distilled/deionized water. Dry the crystals by blotting on paper towels or filter paper. Add 2.5g of washed Na₂S·9H₂O crystals to 100.0mL of anaerobic NaOH solution. Distribute into serum bottles fitted with butyl rubber stoppers and aluminum seals. Do not grease stoppers. Pressurize to 60kPa with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Store at room temperature in an anaerobic chamber.

Preparation of Medium: Prepare and dispense medium under 80% H₂ + 20% CO₂. Add components, except methanol, vitamin solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 974.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 3 min. Cool to room temperature while sparging with 80% H₂ + 20% CO₂. Anaerobically distribute 9.7mL volumes into anaerobic tubes. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 0.1mL of sterile vitamin solution, 0.08mL of sterile methanol, and 0.08mL of sterile Na₂S·9H₂O solution to each tube. Mix thoroughly.

Use: For the cultivation of *Methanosarcina* species.

Methanosarcina mazei Alpha Basal Medium

Composition per liter:

NaHCO ₃	4.4g
Pancreatic digest of casein.....	2.0g
Yeast extract.....	2.0g
NH ₄ Cl.....	1.0g
Na ₂ S·6H ₂ O.....	0.5g
K ₂ HPO ₄	0.4g
Sodium acetate·3H ₂ O.....	0.27g
MgCl ₂ ·6H ₂ O.....	0.08g
CaCl ₂ ·2H ₂ O.....	0.04g
CoCl ₂ ·6H ₂ O.....	1.5mg
FeSO ₄ ·7H ₂ O.....	1.0mg
MnCl ₂ ·4H ₂ O.....	1.0mg
Resazurin.....	1.0mg
H ₃ BO ₄	0.1mg
NaMoO ₄ ·2H ₂ O.....	0.1mg
ZnCl ₂	0.1mg

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Prepare and dispense medium under 70% N₂ + 30% CO₂. Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Sparge with 70% N₂ + 30% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically distribute into sterile tubes or bottles.

Use: For the cultivation of *Methanosarcina mazei*.

Methanosarcina mazei Medium (DSMZ Medium 120)

Composition 1112.0mL:

NaCl.....	2.25g
Yeast extract.....	2.0g
Casitone.....	2.0g
NaHCO ₃	0.85g
NH ₄ Cl.....	0.5g
MgSO ₄ ·7H ₂ O.....	0.5g
K ₂ HPO ₄	0.348g
CaCl ₂ ·2H ₂ O.....	0.25g
KH ₂ PO ₄	0.227g
FeSO ₄ ·7H ₂ O.....	0.002g
Resazurin.....	0.001g
Methanol solution.....	20.0mL
L-Cysteine-HCl·H ₂ O solution.....	15.0mL
Na ₂ S·9H ₂ O solution.....	15.0mL
Na-acetate solution.....	10.0mL
Vitamin solution.....	10.0mL
NaHCO ₃ solution.....	10.0mL
Trace elements solution SL-10.....	1.0mL

pH 6.5–6.8 at 25°C

Vitamin Solution:

Composition per liter:

Pyridoxamine-HCl.....	10.0mg
Pantothenic acid.....	5.0mg
Riboflavin.....	5.0mg
Alpha-lipoic acid.....	5.0mg
p-Aminobenzoic acid.....	5.0mg
Thiamine-HCl·2H ₂ O.....	5.0mg
Nicotinic acid.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

Trace Elements Solution SL-10:

Composition per liter:

FeCl ₂ ·4H ₂ O.....	1.5g
CoCl ₂ ·6H ₂ O.....	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	36.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O.....	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

NaHCO₃ Solution:

Composition per 100.0mL:

NaHCO ₃	5.0g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge

with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:

Composition per 100.0mL:

Na₂S·9H₂O 3.0g

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Before use, neutralize to pH 7.0 with sterile HCl.

Methanol Solution:

Composition per 100.0mL:

Methanol 50.0mL

Preparation of Methanol Solution: Add methanol to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na-Acetate Solution:

Composition per 100.0mL:

Na-acetate 25.0g

Preparation of Na-Acetate Solution: Add Na-acetate to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

L-Cysteine Solution:

Composition per 100.0mL:

L-Cysteine-HCl·H₂O 3.0g

Preparation of L-Cysteine Solution: Add L-cysteine-HCl·H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas atmosphere. Add components, except vitamin solution, NaHCO₃ solution, methanol solution, L-cysteine-HCl·H₂O solution, Na₂S·9H₂O solution, Na-acetate solution, and trace elements solution SL-10, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.5. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 10.0mL vitamin solution, 10.0mL NaHCO₃ solution, 20.0mL methanol solution, 15.0mL L-cysteine-HCl·H₂O solution, 15.0mL Na₂S·9H₂O solution, 10.0mL Na-acetate solution, and 1.0mL trace elements solution SL-10. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or bottles. After inoculation, flush and repressurize the gas head space of culture bottles with sterile 80% H₂ + 20% CO₂ to 1 bar overpressure.

Use: For the cultivation of *Methanosarcina mazei*.

Methanosarcina Medium

Composition per liter:

Agar 20.0g
 NaCl 2.25g
 Yeast extract 2.0g
 Pancreatic digest of casein 2.0g
 NH₄Cl 0.5g
 MgSO₄·7H₂O 0.5g
 K₂HPO₄ 0.35g
 CaCl₂·2H₂O 0.25g
 KH₂PO₄ 0.23g
 FeSO₄·7H₂O 2.0mg
 NaHCO₃ solution 20.0mL

L-Cysteine-sulfide reducing agent 20.0mL
 Wolfe's vitamin solution 10.0mL
 Methanol 10.0mL
 Resazurin (0.025% solution) 4.0mL
 Trace elements solution SL-6 3.0mL
 pH 6.8 ± 0.2 at 25°C

NaHCO₃ Solution:

Composition per 20.0mL:

NaHCO₃ 850.0mg

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize. Gas with 100% CO₂ for 20 min.

L-Cysteine-Sulfide Reducing Agent:

Composition per 20.0mL:

L-Cysteine-HCl·H₂O 0.3g
 Na₂S·9H₂O 0.3g

Preparation of L-Cysteine-Sulfide Reducing Agent: Add L-cysteine-HCl·H₂O to 10.0mL of distilled/deionized water. Mix thoroughly. In a separate tube, add Na₂S·9H₂O to 10.0mL of distilled/deionized water. Mix thoroughly. Gas both solutions with 100% N₂ and cap tubes. Autoclave both solutions for 15 min at 15 psi pressure–121°C using fast exhaust. Cool to 50°C. Aseptically combine the two solutions under 100% N₂.

Wolfe's Vitamin Solution:

Composition per liter:

Pyridoxine-HCl 10.0mg
 Thiamine-HCl 5.0mg
 Riboflavin 5.0mg
 Nicotinic acid 5.0mg
 Calcium pantothenate 5.0mg
p-Aminobenzoic acid 5.0mg
 Thioctic acid 5.0mg
 Biotin 2.0mg
 Folic acid 2.0mg
 Cyanocobalamin 100.0μg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Trace Elements Solution SL-6:

Composition per liter:

H₃BO₃ 0.3g
 CoCl₂·6H₂O 0.2g
 ZnSO₄·7H₂O 0.1g
 MnCl₂·4H₂O 0.03g
 Na₂MoO₄·H₂O 0.03g
 NiCl₂·6H₂O 0.02g
 CuCl₂·2H₂O 0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 3.4.

Preparation of Medium: Add components, except NaHCO₃ solution, L-cysteine-sulfide reducing agent, Wolfe's vitamin solution, and methanol, to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool under 80% N₂ + 20% CO₂. Aseptically and anaerobically add the sterile NaHCO₃ solution, the sterile L-cysteine-sulfide reducing agent, the sterile Wolfe's vitamin solution, and filter-sterilized methanol. Mix

thoroughly. Adjust pH to 6.8. Aseptically and anaerobically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Bifidobacterium asteroides*, *Methanosarcina barkeri*, *Methanosarcina* species, and *Methanosarcina vacuolata*.

Methanosarcina Medium (BCYT)

Composition per liter:

KHCO ₃	2.0g
NH ₄ Cl.....	1.0g
NaCl.....	0.6g
Pancreatic digest of casein.....	0.5g
Yeast extract.....	0.5g
KH ₂ PO ₄	0.3g
MgCl ₂ ·6H ₂ O.....	0.1g
CaCl ₂ ·2H ₂ O.....	0.08g
Resazurin.....	1.0mg
Trace elements solution.....	10.0mL
Vitamin solution.....	10.0mL
L-Cysteine·HCl·H ₂ O solution.....	10.0mL
Na ₂ S·9H ₂ O solution.....	10.0mL
Methanol.....	5.0mL

pH 6.8 ± 0.2 at 25°C

Trace Elements Solution:

Composition per liter:

Nitrilotriacetic acid.....	12.8g
FeCl ₃ ·6H ₂ O.....	1.35g
NaCl.....	1.0g
NiCl ₂ ·6H ₂ O.....	0.12g
MnCl ₂ ·4H ₂ O.....	0.1g
CaCl ₂ ·2H ₂ O.....	0.1g
ZnCl ₂	0.1g
Na ₂ SeO ₃ ·5H ₂ O.....	0.026g
CuCl ₂ ·2H ₂ O.....	0.025g
CoCl ₂ ·6H ₂ O.....	0.024g
Na ₂ MoO ₄ ·2H ₂ O.....	0.024g
H ₃ BO ₃	0.01g

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to approximately 500.0mL of distilled/deionized water. Dissolve by adding KOH and adjust pH to 6.5. Add remaining components. Bring volume to 1.0L with additional distilled/deionized water. Adjust pH to 7.0 with KOH.

Vitamin Solution:

Composition per liter:

Pyridoxine·HCl.....	10.0mg
Calcium DL-pantothenate.....	5.0mg
Lipoic acid.....	5.0mg
Nicotinic acid.....	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Riboflavin.....	5.0mg
Thiamine·HCl.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Sparge with 80% N₂ + 20% CO₂.

L-Cysteine·HCl·H₂O Solution:

Composition per 10.0mL:

L-Cysteine·HCl·H ₂ O.....	0.25g
--------------------------------------	-------

Preparation of L-Cysteine·HCl·H₂O Solution: Add L-cysteine·HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 80% N₂ + 20% CO₂ for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	0.3g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except vitamin solution, L-cysteine·HCl·H₂O solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 960.0mL. Mix thoroughly. Sparge under 80% N₂ + 20% CO₂ for 3–4 min. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 20.0mL of sterile vitamin solution, 10.0mL of sterile L-cysteine·HCl·H₂O solution, and 10.0mL of sterile Na₂S·9H₂O solution. Mix thoroughly. Aseptically and anaerobically distribute into sterile screw-capped bottles under 80% N₂ + 20% CO₂.

Use: For the cultivation and maintenance of *Methanosarcina mazei* and *Methanosarcina thermophila*.

Methanosarcina Medium

Composition per liter:

NaCl.....	2.25g
Pancreatic digest of casein.....	2.0g
Yeast extract.....	2.0g
NaHCO ₃	0.85g

pH 6.5–6.8 at 25°C

Methanol Solution:

Composition per 10.0mL:

Methanol.....	5.0mL
---------------	-------

Preparation of Methanol Solution: Add methanol to distilled/deionized water and bring volume to 10.0mL. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Vitamin Solution:

Composition per liter:

Pyridoxine·HCl.....	10.0mg
Calcium DL-pantothenate.....	5.0mg
Lipoic acid.....	5.0mg
Nicotinic acid.....	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg

Riboflavin	5.0mg
Thiamine·HCl	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Sparge with 80% N₂ + 20% CO₂.

L-Cysteine·HCl·H₂O Solution:

Composition per 10.0mL:

L-Cysteine·HCl·H ₂ O	0.3g
---------------------------------------	------

Preparation of L-Cysteine·HCl·H₂O Solution: Add L-cysteine·HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.3g
---	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution SL-10:

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂.

Preparation of Medium: Add components, except methanol solution, vitamin solution, L-cysteine·HCl·H₂O solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 960.0mL. Mix thoroughly. Sparge under 80% N₂ + 20% CO₂ for 3–4 min. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 10.0mL of sterile methanol, 10.0mL of sterile vitamin solution, 10.0mL of sterile L-cysteine·HCl·H₂O solution, and 10.0mL of sterile Na₂S·9H₂O solution. Mix thoroughly. Aseptically and anaerobically distribute into sterile screw-capped bottles under 80% N₂ + 20% CO₂.

Use: For the cultivation and maintenance of *Methanosarcina* species.

Methanosarcina MP Medium

Composition per 1015.0mL:

NH ₄ Cl	1.0g
Yeast extract	1.0g
L-Cysteine·HCl	0.5g
K ₂ HPO ₄	0.4g
MgCl ₂ ·6H ₂ O	0.2g
Resazurin	1.0mg
Mineral solution	50.0mL

Trace elements solution	10.0mL
Na ₂ CO ₃ solution	10.0mL
Na ₂ S·9H ₂ O solution	10.0mL
Methanol	5.0mL

pH 6.8 ± 0.2 at 25°C

Mineral Solution:

Composition per liter:

NaCl	12.0g
KH ₂ PO ₄	6.0g
(NH ₄) ₂ SO ₄	6.0g
MgSO ₄ ·7H ₂ O	2.6g
CaCl ₂ ·2H ₂ O	0.16g

Preparation of Mineral Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Trace Elements Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O	3.0g
Nitrilotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·2H ₂ O	0.5g
CoSO ₄ ·7H ₂ O	0.18g
ZnSO ₄ ·7H ₂ O	0.18g
CaCl ₂ ·2H ₂ O	0.1g

Na ₂ MoO ₄ ·2H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O	0.3mg

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Adjust pH to 7.0. Add distilled/deionized water to 1.0L.

Na₂CO₃ Solution:

Composition per 10.0mL:

Na ₂ CO ₃	1.0g
---------------------------------------	------

Preparation of Na₂CO₃ Solution: Add Na₂CO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.25g
---	-------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂. Add components, except L-cysteine·HCl, Na₂CO₃ solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 5 min. Cool to room temperature while sparging with 80% N₂ + 20% CO₂. Add L-cysteine·HCl. Mix thoroughly. Adjust pH to 6.8–7.0. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 10.0mL of sterile Na₂CO₃ solution and 10.0mL of sterile Na₂S·9H₂O solution. Mix thoroughly.

Use: For the cultivation and maintenance of *Methanosarcina* species.

Methanosarcina Nitrogen-Fixing Medium**Composition** per 1005.0mL:

NaH ₂ PO ₄	1.38g
K ₂ HPO ₄	0.34g
MgCl ₂ ·2H ₂ O.....	0.1g
Yeast extract.....	0.1g
CaCl ₂ ·2H ₂ O.....	0.05g
Resazurin.....	0.001g
Trace elements solution.....	10.0mL
Methanol.....	2.0mL
Na ₂ S·9H ₂ O solution.....	2.0mL
NaHCO ₃ solution.....	1.0mL

pH 7.0 ± 0.2 at 25°C

Trace Elements Solution:**Composition** per liter:

Nitrilotriacetic acid.....	4.5g
FeCl ₂ ·7H ₂ O.....	0.4g
H ₃ BO ₃	0.19g
CoCl ₂ ·6H ₂ O.....	0.17g
MnCl ₂ ·4H ₂ O.....	0.1g
ZnCl ₂	0.1g
NiCl ₂ ·6H ₂ O.....	0.02g
Na ₂ MoO ₄ ·6H ₂ O.....	0.01g

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Adjust pH to 7.0 with 10N NaOH. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Methanol: Sparge 2-propanol with 100% N₂. Filter sterilize.

Na₂S·9H₂O Solution:**Composition** per 10.0mL:

Na ₂ S·9H ₂ O.....	2.0g
NaOH.....	0.1g

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O and NaOH to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Before use, neutralize to pH 7.0 with sterile HCl.

NaHCO₃ Solution:**Composition** per 10.0mL:

NaHCO ₃	1.0g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare and dispense medium under 100% N₂. Add components, except methanol, Na₂S·9H₂O solution, and NaHCO₃ solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.5. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 2.0mL of sterile methanol, 2.0mL of sterile Na₂S·9H₂O solution, and 2.0mL of sterile NaHCO₃ solution. Mix thoroughly. Adjust pH to 7.0 by adding sterile anaerobic 10N NaOH. Aseptically and anaerobically distribute into sterile tubes or bottles.

Use: For the cultivation of nitrogen-fixing *Methanosarcina* species.

Methanosarcina semesiae Medium**Composition** per 1214.0mL:

Solution A.....	950.0mL
NaHCO ₃ solution.....	50.0mL

Solution E.....	30.0mL
Na ₂ S·9H ₂ O solution.....	15.0mL
Solution D.....	10.0mL
Solution F.....	10.0mL
Solution G.....	10.0mL
Trace elements solution.....	10.0mL
Vitamin solution.....	10.0mL
Methanol solution.....	5.0mL
Solution B.....	1.0mL
Solution C.....	1.0mL
Seven vitamin solution.....	1.0mL
Dithionite solution.....	1.0mL

pH 7.2 ± 0.2 at 25°C

Solution A:**Composition** per 950.0mL:

KH ₂ PO ₄	1.4g
NH ₄ Cl.....	0.5g
MgCl ₂ ·6H ₂ O.....	0.2g
CaCl ₂ ·2H ₂ O.....	0.15g
Resazurin.....	1.0mg

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

Solution B:**Composition** per liter:

FeCl ₂ ·4H ₂ O.....	1.5g
CoCl ₂ ·6H ₂ O.....	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	36.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O.....	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Solution B: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C:**Composition** per liter:

NaOH.....	0.5g
Na ₂ WO ₄ ·2H ₂ O.....	4.0mg
Na ₂ SeO ₃ ·5H ₂ O.....	3.0mg

Preparation of Solution C: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Solution D:**Composition** per liter:

Pyridoxine-HCl.....	10.0mg
Thiamine-HCl·2H ₂ O.....	5.0mg
Riboflavin.....	5.0mg
Nicotinic acid.....	5.0mg
D-Ca-pantothenate.....	5.0mg
p-Aminobenzoic acid.....	5.0mg
Lipoic acid.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Solution D: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Solution E:

Composition per 100.0mL:

NaHCO₃ 5.0g

Preparation of Solution E: Add NaHCO₃ to distilled/deionized water and bring volume to 150.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

Solution F:

Composition per 10.0mL:

Na₂-maleate 1.6g

Preparation of Solution F: Add Na₂-maleate to distilled/deionized water and bring volume to 150.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

Solution G:

Composition per 10.0mL:

Na₂S·9H₂O 0.25g

Preparation of Solution G: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

NaHCO₃ Solution:

Composition per 100.0mL:

NaHCO₃ 5.0g

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Trace Elements Solution:

Composition per liter:

MgSO₄·7H₂O 3.0g

Nitrilotriacetic acid 1.5g

NaCl 1.0g

MnSO₄·2H₂O 0.5g

CoSO₄·7H₂O 0.18g

ZnSO₄·7H₂O 0.18g

CaCl₂·2H₂O 0.1g

FeSO₄·7H₂O 0.1g

NiCl₂·6H₂O 0.025g

KAl(SO₄)₂·12H₂O 0.02g

H₃BO₃ 0.01g

Na₂MoO₄·4H₂O 0.01g

CuSO₄·5H₂O 0.01g

Na₂SeO₃·5H₂O 0.3mg

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl 10.0mg

Thiamine-HCl·2H₂O 5.0mg

Riboflavin 5.0mg

Nicotinic acid 5.0mg

D-Ca-pantothenate 5.0mg

p-Aminobenzoic acid 5.0mg

Lipoic acid 5.0mg

Biotin 2.0mg

Folic acid 2.0mg

Vitamin B₁₂ 0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Seven Vitamin Solution:

Composition per liter:

Pyridoxine hydrochloride 300.0mg

Thiamine-HCl·2H₂O 200.0mg

Nicotinic acid 200.0mg

Vitamin B₁₂ 100.0mg

Calcium pantothenate 100.0mg

p-Aminobenzoic acid 80.0mg

D(+)-Biotin 20.0mg

Preparation of Seven Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Sparge with 100% N₂. Mix thoroughly. Filter sterilize.

Methanol Solution:

Composition per 100.0mL:

Methanol 50.0mL

Preparation of Methanol Solution: Add methanol to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:

Composition per 20.0mL:

Na₂S·9H₂O 0.6g

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Dithionite Solution

Composition per 10.0mL:

Na-dithionite 0.25g

Preparation of Dithionite Solution: Add Na-dithionite to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂. Combine component solutions A-G; do not add NaHCO₃ solution, Na₂S·9H₂O solution, trace elements solution, vitamin solution, methanol solution, seven vitamin solution, and dithionite solution. Mix thoroughly. Flush medium with 80% N₂ + 20% CO₂ for 5 min. Distribute into serum bottles. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. For every 10.0mL medium aseptically and anaerobically add from sterile anaerobic solution: 0.5mL NaHCO₃ solution, 0.1mL trace elements solution, 0.1mL vitamin solution, 0.01mL seven vitamin solution, 0.01mL dithionite solution, 0.15mL Na₂S·9H₂O solution, and 0.05mL methanol solution. Final pH should be 7.0.

Use: For the cultivation of *Methanosarcina semesiae*.

Methanosarcina Thermophilic Medium
(DSMZ Medium 164)

Composition per 1051.0mL:

NaCl 2.25g

Yeast extract 2.0g

Casitone	2.0g
NH ₄ Cl	0.5g
MgSO ₄ ·7H ₂ O	0.5g
K ₂ HPO ₄	0.348g
CaCl ₂ ·2H ₂ O.....	0.25g
KH ₂ PO ₄	0.227g
FeSO ₄ ·7H ₂ O.....	0.002g
Resazurin	0.001g
Rumen fluid, clarified.....	50.0mL
Methanol solution	10.0mL
Vitamin solution.....	10.0mL
NaHCO ₃ solution	10.0mL
L-Cysteine solution	10.0mL
Na ₂ S·9H ₂ O solution	10.0mL
Trace elements solution SL-10	1.0mL
pH 6.5–6.8 at 25°C	

Vitamin Solution:**Composition per liter:**

Pyridoxine-HCl.....	10.0mg
Thiamine-HCl·2H ₂ O.....	5.0mg
Riboflavin	5.0mg
Nicotinic acid.....	5.0mg
D-Ca-pantothenate.....	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Lipoic acid	5.0mg
Biotin	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

Methanol Solution:**Composition per 100.0mL:**

Methanol	50.0mL
----------------	--------

Preparation of Methanol Solution: Add methanol to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:**Composition per 100.0mL:**

Na ₂ S·9H ₂ O.....	3.0g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Before use, neutralize to pH 7.0 with sterile HCl.

NaHCO₃ Solution:**Composition per 100.0mL:**

NaHCO ₃	8.5g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Must be prepared freshly.

Trace Elements Solution SL-10:**Composition per liter:**

FeCl ₂ ·4H ₂ O	1.5g
H ₃ BO ₃	300.0mg
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg

Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

L-Cysteine Solution:**Composition per 10.0mL:**

L-Cysteine·HCl·H ₂ O	0.3g
---------------------------------------	------

Preparation of L-Cysteine Solution: Add L-cysteine·HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas atmosphere. Add components, except vitamin solution, NaHCO₃ solution, methanol solution, L-cysteine·HCl·H₂O solution, Na₂S·9H₂O solution, and trace elements solution SL-10, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.5. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 10.0mL vitamin solution, 10.0mL NaHCO₃ solution, 10.0mL methanol solution, 10.0mL L-cysteine·HCl·H₂O solution, 10.0mL Na₂S·9H₂O solution, and 1.0mL trace elements solution SL-10. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or bottles. After inoculation, flush and repressurize the gas head space of culture bottles with sterile 80% H₂ + 20% CO₂ to 1 bar overpressure. Alternately, the medium without vitamin solution, NaHCO₃ solution, methanol solution, L-cysteine·HCl·H₂O solution, Na₂S·9H₂O solution, and trace elements solution SL-10 can be distributed to tubes anaerobically prior to autoclaving. After autoclaving in tubes the appropriate volumes of the individual solutions can be injected through the stoppers so that the final concentrations of the medium are achieved.

Use: For the cultivation of *Methanosarcina thermophila*.

Methanosarcina Thermophilic Medium (DSMZ Medium 164)

Composition per 1051.0mL:

NaCl.....	2.25g
Yeast extract.....	2.0g
Casitone	2.0g
NH ₄ Cl	0.5g
MgSO ₄ ·7H ₂ O	0.5g
K ₂ HPO ₄	0.348g
CaCl ₂ ·2H ₂ O	0.25g
KH ₂ PO ₄	0.227g
FeSO ₄ ·7H ₂ O.....	0.002g
Resazurin	0.001g
Sludge fluid.....	50.0mL
Methanol solution	10.0mL
Vitamin solution.....	10.0mL
NaHCO ₃ solution	10.0mL
L-Cysteine solution	10.0mL
Na ₂ S·9H ₂ O solution	10.0mL
Trace elements solution SL-10	1.0mL
pH 6.5–6.8 at 25°C	

Sludge Fluid:**Composition** per 500.0mL:

Yeast extract.....	2.0g
Sludge	500.0mL

Preparation of Sludge Fluid: Add yeast extract to sludge from an anaerobic digester. Gas with nitrogen gas for a few minutes. Incubate at 37°C for 24 hr. Centrifuge the sludge at 13,000 x g. Autoclave for 15 min at 15 psi pressure–121°C. Place the resulting, clear supernatant in screw-capped vessels under nitrogen gas. The sludge fluid can be stored at room temperature in the dark.

Vitamin Solution:**Composition** per liter:

Pyridoxine-HCl.....	10.0mg
Thiamine-HCl·2H ₂ O.....	5.0mg
Riboflavin	5.0mg
Nicotinic acid.....	5.0mg
D-Ca-pantothenate.....	5.0mg
p-Aminobenzoic acid.....	5.0mg
Lipoic acid	5.0mg
Biotin	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

Methanol Solution:**Composition** per 100.0mL:

Methanol	50.0mL
----------------	--------

Preparation of Methanol Solution: Add methanol to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:**Composition** per 100.0mL:

Na ₂ S·9H ₂ O.....	3.0g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Before use, neutralize to pH 7.0 with sterile HCl.

NaHCO₃ Solution:**Composition** per 100.0mL:

NaHCO ₃	8.5g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Must be prepared freshly.

Trace Elements Solution SL-10:**Composition** per liter:

FeCl ₂ ·4H ₂ O.....	1.5g
H ₃ BO ₃	300.0mg
CoCl ₂ ·6H ₂ O.....	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	36.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
CuCl ₂ ·2H ₂ O.....	2.0mg
HCl (25% solution).....	7.7mL

Preparation of Trace Elements Solution SL-10: Add 1.5g of FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

L-Cysteine Solution:**Composition** per 10.0mL:

L-Cysteine-HCl·H ₂ O.....	0.3g
--------------------------------------	------

Preparation of L-Cysteine Solution: Add L-cysteine-HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas atmosphere. Add components, except vitamin solution, NaHCO₃ solution, methanol solution, L-cysteine-HCl·H₂O solution, Na₂S·9H₂O solution, and trace elements solution SL-10, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.5. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 10.0mL vitamin solution, 10.0mL NaHCO₃ solution, 10.0mL methanol solution, 10.0mL L-cysteine-HCl·H₂O solution, 10.0mL Na₂S·9H₂O solution, and 1.0mL trace elements solution SL-10. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or bottles. After inoculation, flush and repressurize the gas head space of culture bottles with sterile 80% H₂ + 20% CO₂ to 1 bar overpressure. Alternately, the medium without vitamin solution, NaHCO₃ solution, methanol solution, L-cysteine-HCl·H₂O solution, Na₂S·9H₂O solution, and trace elements solution SL-10 can be distributed to tubes anaerobically prior to autoclaving. After autoclaving in tubes the appropriate volumes of the individual solutions can be injected through the stoppers so that the final concentrations of the medium are achieved.

Use: For the cultivation of *Methanosarcina thermophila*.

Na ₂ S·9H ₂ O solution.....	10.0mL
Methanol solution.....	5.0mL
Vitamin solution.....	1.0mL

pH 6.5 ± 0.2 at 25°C

Trace Elements Solution:**Composition per liter:**

MgSO ₄ ·7H ₂ O	3.0g
Nitrilotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·2H ₂ O	0.5g
CoSO ₄ ·7H ₂ O	0.18g
ZnSO ₄ ·7H ₂ O	0.18g
CaCl ₂ ·2H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g
NiCl ₂ ·6H ₂ O	0.025g
KAl(SO ₄) ₂ ·12H ₂ O	0.02g
CuSO ₄ ·5H ₂ O	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O	0.3mg

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Adjust pH to 7.0. Add distilled/deionized water to 1.0L.

L-Cysteine-HCl·H₂O Solution:**Composition per 10.0mL:**

L-Cysteine-HCl·H ₂ O	0.875g
---------------------------------------	--------

Preparation of L-Cysteine-HCl·H₂O Solution: Add L-cysteine-HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 80% N₂ + 20% CO₂ for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O	0.375g
---	--------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Methanol Solution:**Composition per 10.0mL:**

Methanol	10.0mL
----------------	--------

Preparation of Methanol Solution: Sparge 10.0mL of methanol with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Vitamin Solution:**Composition per 10.0mL:**

Calcium-D-pantothenate	20.0mg
Nicotinamide	20.0mg
Pyridoxine-HCl	20.0mg
Riboflavin	20.0mg
Thiamine-HCl	20.0mg
Biotin	10.0mg
<i>p</i> -Aminobenzoic acid	1.0mg
Folic acid	0.5mg
Vitamin B ₁₂	0.2mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Sparge with 80% N₂ + 20% CO₂.

Preparation of Medium: Add components, except methanol solution, L-cysteine-HCl·H₂O solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 975.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 5 min. Cool to room temperature while sparging with 100% N₂. Autoclave for 15 min

at 15 psi pressure–121°C. Aseptically and anaerobically add 10.0mL of sterile L-cysteine-HCl·H₂O solution, 10.0mL of sterile Na₂S·9H₂O solution, and 5.0mL of sterile methanol solution. Mix thoroughly. Aseptically and anaerobically distribute into sterile screw-capped bottles under 100% N₂.

Use: For the cultivation and maintenance of *Methanospaera stadmanae*.

Methanospaera Medium II**Composition per 1005.5mL:**

NaHCO ₃	3.0g
Sodium acetate·3H ₂ O	3.0g
Trypticase™	1.0g
Yeast extract	1.0g
Fe(NH ₄) ₂ (SO ₄) ₂ ·7H ₂ O	2.0mg
Resazurin	1.0mg
NiCl ₂ ·6H ₂ O	0.2mg
Na ₂ SeO ₃ ·5H ₂ O (1mM)	0.1mg
Mineral solution 1	40.0mL
Mineral solution 2	40.0mL
Trace elements solution	10.0mL
Vitamin solution	10.0mL
L-Cysteine-HCl·H ₂ O solution	10.0mL
Na ₂ S·9H ₂ O solution	10.0mL
Methanol solution	5.0mL

pH 7.0 ± 0.2 at 25°C

Mineral Solution 1:**Composition per liter:**

K ₂ HPO ₄	6.0g
---------------------------------------	------

Preparation of Mineral Solution 1: Add K₂HPO₄ to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Mineral Solution 2:**Composition per liter:**

NaCl	12.0g
KH ₂ PO ₄	6.0g
(NH ₄) ₂ SO ₄	6.0g
MgSO ₄ ·7H ₂ O	2.6g
CaCl ₂ ·2H ₂ O	0.16g

Preparation of Mineral Solution 2: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Trace Elements Solution:**Composition per liter:**

MgSO ₄ ·7H ₂ O	3.0g
Nitrilotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·2H ₂ O	0.5g
CoSO ₄ ·7H ₂ O	0.18g
ZnSO ₄ ·7H ₂ O	0.18g
CaCl ₂ ·2H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g
NiCl ₂ ·6H ₂ O	0.025g
KAl(SO ₄) ₂ ·12H ₂ O	0.02g
CuSO ₄ ·5H ₂ O	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O	0.3mg

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH.

Add remaining components. Adjust pH to 7.0. Add distilled/deionized water to 1.0L.

Vitamin Solution:**Composition** per liter:

Pyridoxine-HCl	10.0mg
Calcium DL-pantothenate	5.0mg
Lipoic acid	5.0mg
Nicotinic acid	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Riboflavin	5.0mg
Thiamine-HCl	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂.

L-Cysteine-HCl-H₂O Solution:**Composition** per 10.0mL:

L-Cysteine-HCl-H ₂ O	0.3g
---------------------------------	------

Preparation of L-Cysteine-HCl-H₂O Solution: Add L-cysteine-HCl-H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 80% N₂ + 20% CO₂ for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:**Composition** per 10.0mL:

Na ₂ S·9H ₂ O	0.3g
-------------------------------------	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Methanol Solution:**Composition** per 10.0mL:

Methanol	10.0mL
----------	--------

Preparation of Methanol Solution: Sparge 10.0mL of methanol with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except L-cysteine-HCl-H₂O solution, Na₂S·9H₂O solution, and methanol solution, to distilled/deionized water and bring volume to 975.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 5 min. Cool to room temperature while sparging with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 10.0mL of sterile L-cysteine-HCl-H₂O solution, 10.0mL of sterile Na₂S·9H₂O solution, and 5.0mL of sterile methanol solution. Mix thoroughly. Aseptically and anaerobically distribute into sterile screw-capped bottles under 100% N₂.

Use: For the cultivation and maintenance of *Methanosphaera cuniculi*.

Methanosphaerula Medium (DSMZ Medium 1094)

Composition per liter:

Solution A	1.0L
Solution B	1.0mL
Solution C	12.55mL
Solution D	20.0mL
Solution E	10.0mL

Solution F	10.0mL
Solution G	10.0mL
Solution H	10.0mL

pH 6.9 ± 0.2 at 25°C

Solution A:**Composition** per liter:

NH ₄ Cl	26.8mg
KH ₂ PO ₄	13.6mg
KCl	1.5mg

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Solution B:**Composition** per liter:

Na ₂ EDTA	37.229g
KAl(SO ₄) ₂ ·12H ₂ O	3.446g
CaCl ₂ ·2H ₂ O	2.336g
MgSO ₄ ·7H ₂ O	1.556g
FeCl ₂ ·4H ₂ O	1.344g
CoCl ₂ ·6H ₂ O	0.24g
ZnCl ₂	0.075g
MnSO ₄ ·2H ₂ O	0.026g
NiCl ₂ ·6H ₂ O	0.024g
NaMoO ₄ ·2H ₂ O	0.024g
H ₃ BO ₃	0.019g
CuSO ₄	0.009g

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Solution C:**Composition** per 12.55mL:

TRIS-HCl, 1.0M, pH 8.0	7.2mL
Sodium nitrilotriacetic acid, 0.5M	4.8mL
TiCl ₃ , 15% in HCl	0.55mL

Preparation of Solution C: Combine solutions. Mix thoroughly. Filter sterilize. Store under N₂ gas atmosphere.

Solution D:**Composition** per 20.0mL:

MES	3.905g
NaOH	0.8g

Preparation of Solution D: Add components to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Adjust to pH 7.5 with NaOH. Filter sterilize. Store under N₂ gas atmosphere.

Solution E:**Composition** per liter:

Pyridoxine-HCl	10.0mg
Thiamine-HCl·2H ₂ O	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
D-Ca-pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Solution E: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize. Store under N₂ gas atmosphere.

Solution F:**Composition per 10.0mL:**

2-Mercaptoethanesulfonic acid (coenzyme M) 0.082g

Preparation of Solution F: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with N₂ gas. Autoclave for 15 min at 15 psi pressure–121°C. Store under N₂ gas atmosphere.

Solution G:**Composition per 10.0mL:**

Na-acetate 0.68g

Preparation of Solution G: Add Na-acetate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with N₂ gas. Autoclave for 15 min at 15 psi pressure–121°C. Store under N₂ gas atmosphere.

Solution H:**Composition per 10.0mL:**Na₂S·9H₂O 0.96mg

Preparation of Solution H: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with N₂ gas. Filter sterilize. Store in sealed vial under N₂ gas atmosphere.

Preparation of Medium: Add 1.0mL of solution B to 1.0L of solution A. Gently heat and bring to boiling. Boil for 1 min. Cool to room temperature under 80% N₂ + 20% CO₂ gas mixture. Dispense under same gas atmosphere into culture vessels. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add solutions C to H in the sequence indicated and let medium equilibrate overnight. After inoculation pressurize vials to 1 bar overpressure with 80% H₂ + 20% CO₂ gas mixture. The final pH should be 5.7.

Use: For the cultivation of *Methanospiraerula* spp.

Methanospirillum hungatei JMA Medium**Composition per liter:**

Sodium acetate 2.5g
 NH₄Cl 1.9g
 Mineral solution 1 75.0mL
 Mineral solution 2 75.0mL
 Wolfe's mineral solution 10.0mL
 Vitamin solution 10.0mL
 L-Cysteine·HCl·H₂O solution 10.0mL
 Na₂S·9H₂O solution 10.0mL
 FeSO₄·6H₂O solution 6.0mL
 Na₂CO₃ solution 4.8mL
 Resazurin 1.0mL
 NiCl₂·6H₂O solution 0.1mL

FeSO₄·6H₂O Solution:**Composition per 100.0mL:**FeSO₄·6H₂O 0.2g

Preparation of FeSO₄·6H₂O Solution: Add FeSO₄·6H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

NiCl₂·6H₂O Solution:**Composition per liter:**NiCl₂·6H₂O 1.2g

Preparation of NiCl₂·6H₂O Solution: Add NiCl₂·6H₂O to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Mineral Solution 1:**Composition per liter:**K₂HPO₄ 39.0g

Preparation of Mineral Solution 1: Add K₂HPO₄ to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Mineral Solution 2:**Composition per liter:**

KH₂PO₄ 24.0g
 (NH₄)₂SO₄ 6.0g
 MgSO₄·7H₂O 1.2g
 CaCl₂·2H₂O 0.79g
 NaCl 0.59g

Preparation of Mineral Solution 2: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Wolfe's Mineral Solution:**Composition per liter:**

MgSO₄·7H₂O 3.0g
 Nitrilotriacetic acid 1.5g
 NaCl 1.0g
 MnSO₄·2H₂O 0.5g
 CoCl₂·6H₂O 0.1g
 ZnSO₄·7H₂O 0.1g
 CaCl₂·2H₂O 0.1g
 FeSO₄·7H₂O 0.1g
 NiCl₂·6H₂O 0.025g
 KAl(SO₄)₂·12H₂O 0.02g
 CuSO₄·5H₂O 0.01g
 H₃BO₃ 0.01g
 Na₂MoO₄·2H₂O 0.01g
 Na₂SeO₃·5H₂O 0.3mg

Preparation of Wolfe's Mineral Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components one at a time. Add distilled/deionized water to 1.0L. Adjust pH to 6.8.

Vitamin Solution:**Composition per liter:**

Calcium DL-pantothenate 5.0g
 Vitamin B₁₂ 0.1g
 Pyridoxine·HCl 10.0mg
p-Aminobenzoic acid 5.0mg
 Lipoic acid 5.0mg
 Nicotinic acid 5.0mg
 Riboflavin 5.0mg
 Thiamine·HCl 5.0mg
 Biotin 2.0mg
 Folic acid 2.0mg
 Vitamin B₁₂ 0.4mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Na₂CO₃ Solution:**Composition per liter:**Na₂CO₃ 0.84g

Preparation of Na₂CO₃ Solution: Add Na₂CO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:**Composition per 10.0mL:**Na₂S·9H₂O 0.2g

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Before use, neutralize to pH 7.0 with sterile HCl.

L-Cysteine·HCl·H₂O Solution:

Composition per 10.0mL:

L-Cysteine·HCl·H₂O 0.22g

Preparation of L-Cysteine·HCl·H₂O Solution: Add L-cysteine·HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂. Add components, except Na₂CO₃ solution, L-cysteine·HCl solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 975.2mL. Mix thoroughly. Gently heat and bring to boiling. Cool while sparging with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 4.8mL of sterile Na₂CO₃ solution, 10.0mL of sterile L-cysteine·HCl solution, and 10.0mL of sterile Na₂S·9H₂O solution. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or bottles.

Use: For the cultivation of *Methanospirillum hungatei*.

Methanospirillum hungatei Medium

Composition per 100.0mL:

Na₂CO₃ 0.4g
Sodium formate 0.2g
Pancreatic digest of casein 0.2g
Yeast extract 0.2g
NaCl 0.05g
L-Cysteine·HCl·H₂O 0.03g
K₂HPO₄ 0.02g
KH₂PO₄ 0.02g
(NH₄)₂SO₄ 0.02g
MgSO₄·7H₂O 9.0mg
CaCl₂·2H₂O 6.0mg
Resazurin 0.1mg
Na₂S·9H₂O solution 10.0mL
Vitamin solution 1.0mL
Trace metal solution 1.0mL

pH 7.0 ± 0.2 at 25°C

Na₂S·9H₂O Solution:

Composition per 10.0 mL:

Na₂S·9H₂O 0.03g

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Vitamin Solution:

Composition per 1000.0mL:

Pyridoxine·HCl 1.0mg
p-Aminobenzoic acid 0.5mg
Calcium-D-pantothenate 0.5mg
Nicotinic acid 0.5mg
Riboflavin 0.5mg
Thiamine·HCl 0.5mg
Thioctic acid 0.5mg
Biotin 0.2mg
Folic acid 0.2mg
Vitamin B₁₂ 0.01mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Trace Metal Solution:

Composition per liter:

K₂HPO₄·3H₂O 9.0g
K₂HPO₄ 6.0g
NH₄Cl 5.0g
MgCl₂·6H₂O 1.0g
CaCl₂·2H₂O 0.01g

Preparation of Trace Metal Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Prepare and distribute medium anaerobically under 80% H₂ + 20% CO₂. Add components, except Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 90.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling until resazurin turns colorless, indicating reduction. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 10.0mL of sterile Na₂S·9H₂O solution. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or flasks.

Use: For the cultivation of *Methanospirillum hungatei*.

Methanospirillum hungatei SAM Medium

Composition per liter:

Na₂CO₃ 2.63
Sodium acetate·3H₂O 2.5g
(NH₄)₂SO₄ 0.45g
K₂HPO₄ 0.3g
KH₂PO₄ 0.18g
MgSO₄·9H₂O 0.12g
CaCl₂·2H₂O 0.06g
NaCl 0.05g
Na₂CO₃ solution 20.0mL
Trace minerals solution 10.0mL
Vitamin solution 10.0mL
L-Cysteine/Na₂S solution 10.0mL
FeSO₄·7H₂O solution 5.0mL
Resazurin solution 0.2mL

pH 7.1 ± 0.2 at 25°C

Na₂CO₃ Solution:

Composition per liter:

Na₂CO₃ 100.0g

Preparation of Na₂CO₃ Solution: Bring 1.0L of distilled/deionized water to boiling. Cool to room temperature while sparging with 80% H₂ + 20% CO₂. Add Na₂CO₃. Distribute into serum bottles fitted with butyl rubber stoppers and aluminum seals. Do not grease stoppers. Autoclave for 15 min at 15 psi pressure–121°C. Store at room temperature in an anaerobic chamber.

Trace Minerals Solution:

Composition per liter:

Nitrolotriacetic acid 1.5g
MnSO₄·2H₂O 0.5g
Na₂MoO₄·2H₂O 0.24g
Na₂WO₄·2H₂O 0.165g
Na₂SeO₃ 0.15g
CoCl₂·6H₂O 0.1g
NiCl₂·6H₂O 0.1g
ZnSO₄·7H₂O 0.1g
AlK(SO₄)₂·12H₂O 0.01g

CuSO ₄ ·5H ₂ O	0.01g
H ₃ BO ₃	0.01g

Preparation of Trace Minerals Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Mix thoroughly. Add distilled/deionized water to 1.0L. Adjust pH to 7.0.

Vitamin Solution:

Composition per liter:

Vitamin B ₁₂	0.1g
Pyridoxine-HCl	10.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Nicotinic acid	5.0mg
Riboflavin	5.0mg
Thiamine-HCl	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.4mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

L-Cysteine/Na₂S Solution:

Composition per liter:

L-Cysteine-HCl	1.25g
Na ₂ S·7H ₂ O	1.25g

Preparation of L-Cysteine/Na₂S Solution: Gently heat and bring 75.0mL of distilled/deionized water to boiling. Add L-cysteine-HCl. Adjust pH to 10.0 with 3*N* NaOH. Add Na₂S·9H₂O. Mix thoroughly. Gently heat and bring to boiling. Cool to room temperature while sparging with 100% N₂. Bring volume to 100.0mL with distilled/deionized water. Gently heat and bring to boiling. Cool to 60°C while sparging with 100% N₂. Anaerobically distribute into serum bottles. Autoclave for 15 min at 15 psi pressure–121°C.

FeSO₄·6H₂O Solution:

Composition per 100.0mL:

FeSO ₄ ·6H ₂ O	0.2g
--	------

Preparation of FeSO₄·6H₂O Solution: Add FeSO₄·6H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Resazurin Solution:

Composition per 10.0mL:

Resazurin	10.0mg
-----------------	--------

Preparation of Resazurin Solution: Add resazurin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly.

Preparation of Medium: Prepare and dispense medium under 80% H₂ + 20% CO₂. Add components, except Na₂CO₃, Na₂CO₃ solution, and L-cysteine/Na₂S solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Gently heat and bring to boiling. Continue boiling for 3 min. Cool to 60°C while sparging with 80% H₂ + 20% CO₂. Add Na₂CO₃ and L-cysteine/Na₂S solution. Mix thoroughly. Anaerobically distribute 10.0mL volumes into anaerobic tubes. Autoclave for 20 min at 15 psi pressure–121°C. Aseptically and anaerobically add 0.2mL of sterile Na₂CO₃ solution to each tube. Mix thoroughly. Adjust pH to 7.1.

Use: For the cultivation of *Methanospirillum hungatei*.

Methanospirillum SK Medium

Composition per liter:

NaCl	18.0g
Isopropanol	7.5g

NaHCO ₃	5.0g
MgCl ₂ ·6H ₂ O	4.0g
MgSO ₄ ·7H ₂ O	3.45g
Trypticase™	2.0g
Yeast extract	2.0g
Sodium acetate	1.0g
L-Cysteine-HCl	0.5g
KCl	0.335g
NH ₄ Cl	0.25g
CaCl ₂ ·2H ₂ O	0.14g
K ₂ HPO ₄	0.14g
Fe(NH ₄) ₂ (SO ₄) ₂ ·7H ₂ O	2.0mg
Resazurin	1.0mg
Trace elements solution	10.0mL
Vitamin solution	10.0mL
Na ₂ S·9H ₂ O solution	10.0mL

pH 7.0–7.4 at 25°C

Trace Elements Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O	3.0g
Nitrilotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·2H ₂ O	0.5g
CoSO ₄ ·7H ₂ O	0.18g
ZnSO ₄ ·7H ₂ O	0.18g
CaCl ₂ ·2H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g
NiCl ₂ ·6H ₂ O	0.025g
KAl(SO ₄) ₂ ·12H ₂ O	0.02g
CuSO ₄ ·5H ₂ O	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O	0.3mg

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to approximately 500.0mL of distilled/deionized water. Dissolve by adding KOH and adjust pH to 6.5. Add remaining components. Bring volume to 1.0L with additional distilled/deionized water. Adjust pH to 7.0 with KOH.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl	10.0mg
Calcium DL-pantothenate	5.0mg
Lipoic acid	5.0mg
Nicotinic acid	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Riboflavin	5.0mg
Thiamine-HCl	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.4g
---	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly.

Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 10.0mL of sterile Na₂S·9H₂O solution. Mix thoroughly.

Use: For the cultivation and maintenance of *Methanospirillum hungatei*.

Methanothermobacter/Methanobacterium Transduction Agar (DSMZ Medium 863)

Composition per 1016.0mL:

Agar	15.0g
Basal salts solution.....	100.0mL
Sodium carbonate solution.....	24.0mL
Titanium (III) citrate solution	16.0mL
Trace elements solution	10.0mL
Cysteine solution.....	5.0mL
NaS solution.....	5.0mL

pH 7.0 ± 0.2 at 25°C

Sodium Carbonate Solution:

Composition per 100.0mL:

Na ₂ CO ₃	10.6g
---------------------------------------	-------

Preparation of Sodium Carbonate Solution: Add Na₂CO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Store anaerobically.

Basal Salts Solution:

Composition per liter:

KH ₂ PO ₄	68.0g
NH ₄ Cl	21.2g
Resazurin	10.0mg

Preparation of Basal Salts Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂.

Trace Elements Solution:

Composition per liter:

Nitritotriacetic acid	9.55g
MgCl ₂ ·6H ₂ O.....	4.06g
FeCl ₂ ·4H ₂ O	0.98g
NaWO ₄ ·6H ₂ O.....	0.264g
NiCl ₂ ·6H ₂ O	0.118g
Na ₂ Se ₂ O ₃	0.1g
Na ₂ MoO ₄ ·4H ₂ O	0.024g
CoCl ₂ ·6H ₂ O	0.023g

Preparation of Trace Elements Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 7.0 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Cysteine Solution:

Composition per 10.0mL:

L-Cysteine·HCl·H ₂ O	1.0g
---------------------------------------	------

Preparation of Cysteine Solution: Add L-cysteine·HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Adjust pH to 10.0. Sparge with 100% N₂. Store anaerobically.

NaS Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	1.0g
--	------

Preparation of NaS Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Adjust pH to 10.0. Sparge with N₂. Store anaerobically.

Titanium (III) Citrate Solution:

Sodium citrate, 0.2M.....	50.0mL
Titanium(III) chloride, 15%.....	5.0mL

Preparation of Titanium (III) Citrate Solution: Mix solutions. Neutralize with sodium carbonate solution. Sparge with N₂. Store anaerobically.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas atmosphere. Add components, except titanium citrate solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 60°C. Add 16.0mL titanium citrate solution. Mix thoroughly. Pour into sterile Petri dishes or distribute to sterile tubes. Store anaerobically.

Use: For the transduction of *Methanobacter* spp. and *Methanobacterium* spp.

Methanothermobacter/Methanobacterium Transduction Medium (DSMZ Medium 863)

Composition per liter:

Basal salts solution	100.0mL
Sodium carbonate solution	24.0mL
Trace elements solution	10.0mL
Cysteine solution	5.0mL
NaS solution.....	5.0mL

pH 7.0 ± 0.2 at 25°C

Sodium Carbonate Solution:

Composition per 100.0mL:

Na ₂ CO ₃	10.6g
---------------------------------------	-------

Preparation of Sodium Carbonate Solution: Add Na₂CO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Store anaerobically.

Basal Salts Solution:

KH ₂ PO ₄	68.0g
NH ₄ Cl	21.2g
Resazurin	10.0mg

Preparation of Basal Salts Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂.

Trace Elements Solution:

Nitritotriacetic acid	9.55g
MgCl ₂ ·6H ₂ O	4.06g
FeCl ₂ ·4H ₂ O	0.98g
NaWO ₄ ·6H ₂ O	0.264g
NiCl ₂ ·6H ₂ O	0.118g
Na ₂ Se ₂ O ₃	0.1g
Na ₂ MoO ₄ ·4H ₂ O	0.024g
CoCl ₂ ·6H ₂ O	0.023g

Preparation of Trace Elements Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH

to 7.0 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Cysteine Solution:

Composition per 10.0mL:

L-Cysteine-HCl·H₂O 1.0g

Preparation of Cysteine Solution: Add L-cysteine-HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Adjust pH to 10.0. Sparge with 100% N₂. Store anaerobically.

NaS Solution:

Composition per 10.0mL:

Na₂S·9H₂O 1.0g

Preparation of NaS Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Adjust pH to 10.0. Sparge with N₂. Store anaerobically.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas atmosphere. Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Anaerobically distribute 10.0mL aliquots into serum vials under 80% N₂ + 20% CO₂ gas atmosphere. Seal vials. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Pressurize to 2 bar with 80% N₂ + 20% CO₂ gas atmosphere.

Use: For the transduction of *Methanobacter* spp. and *Methanobacterium* spp.

Methanothermus fervidus Medium

Composition per liter:

Na₂SO₄ 3.4g
 NaHCO₃ 2.0g
 Trypticase™ 2.0g
 Yeast extract 2.0g
 L-Cysteine-HCl 0.5g
 Na₂S·9H₂O 0.5g
 FeSO₄·7H₂O 2.0mg
 Ni(NH₄)₂(SO₄)₂ 2.0mg
 Resazurin 1.0mg
 Mineral solution 1 37.5mL
 Mineral solution 2 37.5mL
 Trace elements solution 10.0mL
 Vitamin solution 10.0mL

pH 6.5 ± 0.2 at 25°C

Mineral Solution 1:

Composition per liter:

K₂HPO₄ 6.0g

Preparation of Mineral Solution 1: Add K₂HPO₄ to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Mineral Solution 2:

Composition per liter:

NaCl 12.0g
 K₂HPO₄ 6.0g
 (NH₄)₂SO₄ 6.0g
 MgSO₄·7H₂O 2.4g
 CaCl₂·2H₂O 1.6g

Preparation of Mineral Solution 2: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Trace Elements Solution:

Composition per liter:

MgSO₄·7H₂O 3.0g
 Nitrilotriacetic acid 1.5g

NaCl 1.0g
 MnSO₄·2H₂O 0.5g
 CoSO₄·7H₂O 0.18g
 ZnSO₄·7H₂O 0.18g
 CaCl₂·2H₂O 0.1g
 FeSO₄·7H₂O 0.1g
 NiCl₂·6H₂O 0.025g
 KAl(SO₄)₂·12H₂O 0.02g
 CuSO₄·5H₂O 0.01g
 H₃BO₃ 0.01g
 Na₂MoO₄·2H₂O 0.01g
 Na₂SeO₃·5H₂O 0.3mg

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to approximately 500.0mL of distilled/deionized water. Dissolve by adding KOH and adjust pH to 6.5. Add remaining components. Bring volume to 1.0L with additional distilled/deionized water. Adjust pH to 7.0 with KOH.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl 10.0mg
 Calcium DL-pantothenate 5.0mg
 Lipoic acid 5.0mg
 Nicotinic acid 5.0mg
 p-Aminobenzoic acid 5.0mg
 Riboflavin 5.0mg
 Thiamine-HCl 5.0mg
 Biotin 2.0mg
 Folic acid 2.0mg
 Vitamin B₁₂ 0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂.

Preparation of Medium: Add components, except NaHCO₃ and Na₂S·9H₂O, to distilled/deionized water and bring volume to 1.0L. Adjust pH to 6.5 with 10N H₂SO₄. Add NaHCO₃ and sparge with 80% N₂ + 20% CO₂ for 15 min. Add Na₂S·9H₂O. Mix thoroughly. Anaerobically distribute 20.0mL of medium into 100mL alkali-rich soda lime glass bottles. Pressurize to 2 bar with 80% H₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Methanothermus fervidus*.

Methanothermus fervidus Medium

Composition per liter:

Na₂SO₄ 3.4g
 NaHCO₃ 2.0g
 L-Cysteine-HCl 0.5g
 Na₂S·9H₂O 0.5g
 FeSO₄·7H₂O 2.0mg
 Ni(NH₄)₂(SO₄)₂ 2.0mg
 Resazurin 1.0mg
 Mineral solution 1 37.5mL
 Mineral solution 2 37.5mL
 Trace elements solution 10.0mL

pH 6.5 ± 0.2 at 25°C

Mineral Solution 1:

Composition per liter:

K₂HPO₄ 6.0g

Preparation of Mineral Solution 1: Add K_2HPO_4 to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Mineral Solution 2:

Composition per liter:

NaCl	12.0g
K_2HPO_4	6.0g
$(NH_4)_2SO_4$	6.0g
$MgSO_4 \cdot 7H_2O$	2.4g
$CaCl_2 \cdot 2H_2O$	1.6g

Preparation of Mineral Solution 2: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Trace Elements Solution:

Composition per liter:

$MgSO_4 \cdot 7H_2O$	3.0g
Nitrilotriacetic acid	1.5g
NaCl	1.0g
$MnSO_4 \cdot 2H_2O$	0.5g
$CoSO_4 \cdot 7H_2O$	0.18g
$ZnSO_4 \cdot 7H_2O$	0.18g
$CaCl_2 \cdot 2H_2O$	0.1g
$FeSO_4 \cdot 7H_2O$	0.1g
$NiCl_2 \cdot 6H_2O$	0.025g
$KAl(SO_4)_2 \cdot 12H_2O$	0.02g
$CuSO_4 \cdot 5H_2O$	0.01g
H_3BO_3	0.01g
$Na_2MoO_4 \cdot 2H_2O$	0.01g
$Na_2SeO_3 \cdot 5H_2O$	0.3mg

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to approximately 500.0mL of distilled/deionized water. Dissolve by adding KOH and adjust pH to 6.5. Add remaining components. Bring volume to 1.0L with additional distilled/deionized water. Adjust pH to 7.0 with KOH.

Preparation of Medium: Add components, except $NaHCO_3$ and $Na_2S \cdot 9H_2O$, to distilled/deionized water and bring volume to 1.0L. Adjust pH to 6.5 with 10N H_2SO_4 . Add $NaHCO_3$ and sparge with 80% N_2 + 20% CO_2 for 15 min. Add $Na_2S \cdot 9H_2O$. Mix thoroughly. Anaerobically distribute 20.0mL of medium into 100mL alkali-rich soda lime glass bottles. Pressurize to 2 bar with 80% H_2 + 20% CO_2 . Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Methanothermus sociabilis*.

Methanotherix Medium

Composition per liter:

Sodium acetate	6.8g
$KHCO_3$	4.0g
NH_4Cl	1.0g
NaCl	0.6g
KH_2PO_4	0.3g
$MgCl_2 \cdot 6H_2O$	0.1g
$CaCl_2 \cdot 2H_2O$	0.08g
Resazurin	1.0mg
Trace elements solution	10.0mL
Vitamin solution	10.0mL
L-Cysteine-HCl-H ₂ O solution	10.0mL
$Na_2S \cdot 9H_2O$ solution	10.0mL

pH 7.0 ± 0.2 at 25°C

Trace Elements Solution:

Composition per liter:

Nitrilotriacetic acid	12.8g
$FeCl_3 \cdot 6H_2O$	1.35g
NaCl	1.0g
$NiCl_2 \cdot 6H_2O$	0.12g
$CaCl_2 \cdot 2H_2O$	0.10g
$MnCl_2 \cdot 4H_2O$	0.10g
$ZnCl_2$	0.10g
$Na_2SeO_3 \cdot 5H_2O$	0.026g
$CuCl_2 \cdot 2H_2O$	0.025g
$CoCl_2 \cdot 6H_2O$	0.024g
$Na_2MoO_4 \cdot 2H_2O$	0.024g
H_3BO_3	0.01g

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to approximately 500.0mL of distilled/deionized water. Dissolve by adding KOH and adjust pH to 6.5. Add remaining components. Bring volume to 1.0L with additional distilled/deionized water. Adjust pH to 7.0 with KOH.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl	10.0mg
Calcium DL-pantothenate	5.0mg
Lipoic acid	5.0mg
Nicotinic acid	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Riboflavin	5.0mg
Thiamine-HCl	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Sparge with 80% N_2 + 20% CO_2 .

L-Cysteine-HCl-H₂O Solution:

Composition per 10.0mL:

L-Cysteine-HCl-H ₂ O	0.3g
---------------------------------------	------

Preparation of L-Cysteine-HCl-H₂O Solution: Add L-cysteine-HCl-H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 80% N_2 + 20% CO_2 for 15 min at 15 psi pressure–121°C.

$Na_2S \cdot 9H_2O$ Solution:

Composition per 10.0mL:

$Na_2S \cdot 9H_2O$	0.3g
---------------------------	------

Preparation of $Na_2S \cdot 9H_2O$ Solution: Add $Na_2S \cdot 9H_2O$ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 80% N_2 + 20% CO_2 . Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except vitamin solution, L-cysteine-HCl-H₂O solution, and $Na_2S \cdot 9H_2O$ solution, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 10.0mL of sterile vitamin solution, 10.0mL of sterile L-cysteine-HCl-H₂O solution, and 10.0mL of sterile $Na_2S \cdot 9H_2O$ solution. Mix thoroughly. Check that final pH is 7.0. Use 20% inoculum.

Use: For the cultivation and maintenance of *Methanosaeta concilii*.

***Methermicrococcus* Medium (DSMZ Medium 1084)**

Composition per liter:

NaCl	24.0g
MgCl ₂ ·6H ₂ O.....	10.2g
Yeast extract	2.0g
KCl	0.34g
NH ₄ Cl	0.25g
K ₂ HPO ₄	0.2g
Resazurin	0.5mg
Cysteine solution.....	10.0mL
Sulfide solution.....	10.0mL
Bicarbonate solution	10.0mL
Coenzyme M solution.....	10.0mL
Methanol	8.0mL
Sludge fluid.....	5.0mL

pH 9.5 ± 0.2 at 25°C

Methanol:

Composition per 10.0mL:

Methanol	10.0mL
----------------	--------

Preparation of Methanol: Sparge 10.0mL of methanol with 100% N₂. Filter sterilize.

Coenzyme M Solution:

Composition per 10.0mL:

Mercaptoethanesulfonic acid (coenzyme M)	2.5g
--	------

Preparation of Coenzyme M: Add coenzyme M to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Bicarbonate Solution:

Composition per 10.0mL:

NaHCO ₃	2.5g
--------------------------	------

Preparation of Bicarbonate Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 20% CO₂ + 80% H₂. Filter sterilize.

Sulfide Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	0.5g
--	------

Preparation of Sulfide Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Cysteine Solution:

Composition per 10.0mL:

L-Cysteine-HCl·2H ₂ O	0.3g
--	------

Preparation of Cysteine Solution: Add L-cysteine-HCl·2H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Sludge Fluid:

Composition per 500.0mL:

Yeast extract.....	2.0g
Sludge	500.0mL

Preparation of Sludge Fluid: Add yeast extract to sludge from an anaerobic digester. Gas with nitrogen gas for a few minutes. Incubate at 37°C for 24 hr. Centrifuge the sludge at 13,000 x g. Autoclave for 15 min at 15 psi pressure–121°C. Place the resulting, clear supernatant in

screw-capped vessels under nitrogen gas. The sludge fluid can be stored at room temperature in the dark.

Preparation of Medium: Add components, except bicarbonate, sludge fluid, methanol, coenzyme M, cysteine, and sulfide solutions, to distilled/deionized water and bring volume to 947.0mL. Gently heat and bring to boiling. Boil medium for 1 min. Cool to room temperature under 80% N₂ + 20% CO₂ gas mixture. Dispense under same gas atmosphere into culture vessels. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature under 80% N₂ + 20% CO₂ gas mixture. Aseptically add coenzyme M, methanol, sludge fluid, cysteine, and sulfide from sterile anoxic stock solutions. Adjust pH to 6.0–6.5.

Use: For the cultivation of *Methermicrococcus* spp.

Methyl Red Voges-Proskauer Broth

See: **MRVP Broth**

Methyl Red Voges-Proskauer Medium

See: **MRVP Medium**

Methylamine Salts Medium

Composition per liter:

Agar	15.0g
Methylamine-HCl	6.75g
K ₂ HPO ₄	2.12g
KH ₂ PO ₄	1.0g
Solution A.....	5.0mL
Solution B	1.0mL

pH 7.0 ± 0.2 at 25°C

Solution A:

Composition per 100.0mL:

MgSO ₄ ·7H ₂ O	2.0g
CaCl ₂ ·2H ₂ O	0.2g
FeSO ₄ ·7H ₂ O.....	0.2g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Solution B:

Composition per 100.0mL:

MnSO ₄ ·7H ₂ O	0.05g
Na ₂ MoO ₄ ·2H ₂ O	0.05g

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Methylobacterium extorquens* and *Pseudomonas* species.

Methylene Blue Milk Medium (MBM Medium)

Composition per liter:

Skim milk, dehydrated.....	100.0g
Methylene Blue.....	10.0g

pH 6.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 20 min at 10 psi pressure–115°C.

Use: For the cultivation and differentiation of group D streptococci (enterococci) from other *Streptococcus* species.

Methylobacterium Agar

Composition per liter:

Agar	12.0g
KNO ₃	1.0g
Na ₂ HPO ₄	0.23g
MgSO ₄ ·7H ₂ O	0.2g
NaH ₂ PO ₄	0.07g
CaCl ₂ ·2H ₂ O	0.02g
FeSO ₄ ·7H ₂ O	1.0mg
ZnSO ₄ ·7H ₂ O	70.0μg
H ₃ BO ₃	10.0μg
MnSO ₄ ·5H ₂ O	10.0μg
MoO ₃	10.0μg
CuSO ₄ ·5H ₂ O	5.0μg
Methanol, filter sterilized	5.0mL
pH 6.8 ± 0.2 at 25°C	

Preparation of Medium: Add components, except methanol, to distilled/deionized water and bring volume to 995.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 5.0mL of filter-sterilized methanol. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Methylobacterium organophilum*.

Methylobacterium Medium (DSMZ Medium 125)

Composition per liter:

Agar	12.0g
KNO ₃	1.0g
Na ₂ HPO ₄	0.23g
MgSO ₄ ·7H ₂ O	0.2g
NaH ₂ PO ₄	0.07g
CaCl ₂ ·2H ₂ O	0.02g
FeSO ₄ ·7H ₂ O	1.0mg
ZnSO ₄ ·7H ₂ O	70.0μg
MoO ₃	10.0μg
H ₃ BO ₃	10.0μg
MnSO ₄ ·5H ₂ O	10.0μg
CuSO ₄ ·5H ₂ O	5.0μg
Methanol	15.0mL
pH 4.0–5.4 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.8. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Acidomonas methanolica* and *Methanomonas methylovora*.

Methylobacterium Medium (DSMZ Medium 125)

Composition per liter:

Agar	12.0g
KNO ₃	1.0g
Na ₂ HPO ₄	0.23g

MgSO ₄ ·7H ₂ O	0.2g
NaH ₂ PO ₄	0.07g
CaCl ₂ ·2H ₂ O	0.02g
FeSO ₄ ·7H ₂ O	1.0mg
ZnSO ₄ ·7H ₂ O	70.0μg
MoO ₃	10.0μg
H ₃ BO ₃	10.0μg
MnSO ₄ ·5H ₂ O	10.0μg
CuSO ₄ ·5H ₂ O	5.0μg
Methanol	5.0mL

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.8. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Methylobacterium organophilum*.

Methylobacterium Medium (DSMZ Medium 125)

Composition per liter:

KNO ₃	1.0g
Na ₂ HPO ₄	0.23g
MgSO ₄ ·7H ₂ O	0.2g
NaH ₂ PO ₄	0.07g
CaCl ₂ ·2H ₂ O	0.02g
FeSO ₄ ·7H ₂ O	1.0mg
ZnSO ₄ ·7H ₂ O	70.0μg
MoO ₃	10.0μg
H ₃ BO ₃	10.0μg
MnSO ₄ ·5H ₂ O	10.0μg
CuSO ₄ ·5H ₂ O	5.0μg
Methane/air mixture (4:1)	variable

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.8. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Sparge and incubate under methane/air mixture (4:1).

Use: For the cultivation and maintenance of *Methylobacterium organophilum*.

Methylobacterium Medium

Composition per liter:

Agar	15.0g
K ₂ HPO ₄	1.2g
KH ₂ PO ₄	0.62g
(NH ₄) ₂ SO ₄	0.5g
MgSO ₄ ·7H ₂ O	0.2g
NaCl	0.1g
CaCl ₂ ·2H ₂ O	34.0mg
FeCl ₃ ·H ₂ O	1.0mg
Trace elements solution	1.0mL
Methanol, filter sterilized	10.0mL

pH 7.0 ± 0.2 at 25°C

Trace Elements Solution:

Composition per liter:

ZnSO ₄ ·7H ₂ O	70.0mg
H ₃ BO ₃	10.0mg

Na ₂ MoO ₄ ·2H ₂ O	10.0mg
MnSO ₄ ·H ₂ O	7.0mg
CoCl ₂ ·H ₂ O	5.0mg
CuSO ₄ ·5H ₂ O	5.0mg

Preparation of Medium: Add components, except methanol, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 10.0mL of sterile methanol. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Methylobacterium* species.

Methylobacterium thiocyanatum Medium (DSMZ Medium 805)

Composition per liter:

Na ₂ HPO ₄ ·2H ₂ O	7.9g
Glucose	4.5g
K ₂ HPO ₄	1.5g
KSCN	0.25g
MgSO ₄ ·7H ₂ O	0.1g
Iron sulfate solution	1.0mL

pH 7.1 ± 0.1 at 25°C

Iron Sulfate Solution:

Composition per 10.0mL:

FeSO ₄ ·7H ₂ O	0.2g
--	------

Preparation of Iron Sulfate Solution: Add FeSO₄·7H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 10 min at 10 psi pressure–115°C.

Use: For the cultivation of *Methylobacterium thiocyanatum*.

Methylocapsa acidophila Medium (DSMZ Medium 922)

Composition per liter:

KH ₂ PO ₄	100.0mg
MgSO ₄ ·7H ₂ O	50.0mg
CaCl ₂ ·2H ₂ O	10.0mg
Trace elements	1.0mL

pH 4.5–5.8 at 25°C

Trace Elements:

Composition per liter:

EDTA	5.0g
FeSO ₄ ·7H ₂ O	2.0g
CoCl ₂ ·6H ₂ O	0.2g
CuCl ₂ ·5H ₂ O	0.1g
ZnSO ₄ ·7H ₂ O	0.1g
Na ₂ MoO ₄	0.03g
NiCl ₂ ·6H ₂ O	0.02g

Preparation of Trace Elements: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. The final pH should be 4.5–5.8. The medium is fairly weakly buffered so the pH

should be checked before and after autoclaving. Incubate under atmosphere of 10–30% methane.

Use: For the cultivation of *Methylocapsa acidiphila*.

Methylocapsa acidophila Medium (DSMZ Medium 922)

Composition per liter:

KNO ₃	100.0mg
KH ₂ PO ₄	100.0mg
MgSO ₄ ·7H ₂ O	50.0mg
CaCl ₂ ·2H ₂ O	10.0mg
Trace elements	1.0mL

pH 4.5–5.8 at 25°C

Trace Elements:

Composition per liter:

EDTA	5.0g
FeSO ₄ ·7H ₂ O	2.0g
CoCl ₂ ·6H ₂ O	0.2g
CuCl ₂ ·5H ₂ O	0.1g
ZnSO ₄ ·7H ₂ O	0.1g
Na ₂ MoO ₄	0.03g
NiCl ₂ ·6H ₂ O	0.02g

Preparation of Trace Elements: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. The final pH should be 4.5–5.8. The medium is fairly weakly buffered so the pH should be checked before and after autoclaving. Incubate under atmosphere of 10–30% methane.

Use: For the cultivation and enhanced growth of *Methylocapsa acidiphila*.

Methylocella silverstris Medium (DSMZ Medium 1181)

Composition per liter:

Na ₂ HPO ₄ ·12H ₂ O	0.717g
KH ₂ PO ₄ ·2H ₂ O	0.272g
MgSO ₄ ·7H ₂ O	0.2g
NaNO ₃	0.2g
CaCl ₂ ·2H ₂ O	6.0mg
Fe(III)NH ₄ -EDTA	4.0mg
Phosphate buffer solution	5.0mL
Trace elements solution	0.5mL

pH 5.8 ± 0.2 at 25°C

Phosphate Buffer Solution:

Composition per liter:

NaH ₂ PO ₄ ·2H ₂ O	28.71g
Na ₂ HPO ₄ ·12H ₂ O	5.73g

Preparation of Phosphate Buffer Solution: Add components to distilled/deionized water and bring volume to 1.0L. Filter sterilize

Trace Elements Solution:

Composition per liter:

H ₃ BO ₃	30.0mg
CaCl ₂ ·2H ₂ O	20.0mg
ZnSO ₄ ·2H ₂ O	10.0mg

MnCl ₂ ·4H ₂ O.....	3.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	3.0mg
CuCl ₂ ·6H ₂ O.....	1.0mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except phosphate buffer solution, to distilled/deionized water and bring volume to 995.0mL. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add 5.0mL sterile phosphate buffer solution. Adjust pH to 5.8.

Use: For the cultivation of *Methylocella silverstris*.

Methylococcus Medium

Composition per liter:

Agar.....	8.0g
NaNO ₃ (20% solution).....	10.0mL
L-F salts solution.....	10.0mL
Sodium-potassium phosphate buffer.....	6.5mL

pH 7.1 ± 0.2 at 25°C

Sodium-Potassium Phosphate Buffer:

Composition per liter:

KH ₂ PO ₄	136.0g
NaOH.....	28.8g

Preparation of Sodium-Potassium Phosphate Buffer: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.1.

L-F Salts Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O (10% solution).....	200.0mL
CaCl ₂ ·2H ₂ O (10% solution).....	20.0mL
FeSO ₄ (10% solution).....	10.0mL
ZnSO ₄ ·7H ₂ O (1% solution).....	4.9mL
H ₃ BO ₃ (1% solution).....	0.6mL
MnSO ₄ ·H ₂ O (1% solution).....	0.27mL
CuSO ₄ ·5H ₂ O (1% solution).....	0.2mL

Preparation of L-F Salts Solution: Filter sterilize FeSO₄ solution immediately prior to use. Add all components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.1. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Methylococcus* species.

Methylohalomonas Medium (DSMZ Medium 1171)

Composition per liter:

NaCl.....	120.0g
K ₂ HPO ₄	2.0g
NH ₄ Cl.....	0.5g
Magnesium sulfate solution.....	10.0mL
Thiosulfate solution.....	10.0mL
Bicarbonate solution.....	10.0mL
Vitamin solution.....	10.0mL

Methanol.....	2.0mL
Trace elements solution SL-6.....	1.0mL
pH 7.5 ± 0.2 at 25°C	

Trace Elements Solution SL-6:

Composition per liter:

MnCl ₂ ·4H ₂ O.....	0.5g
H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O.....	0.2g
ZnSO ₄ ·7H ₂ O.....	0.1g
Na ₂ MoO ₄ ·2H ₂ O.....	0.03g
NiCl ₂ ·6H ₂ O.....	0.02g
CuCl ₂ ·2H ₂ O.....	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Magnesium Sulfate Solution:

Composition per 10.0mL:

MgSO ₄ ·7H ₂ O.....	2.0g
---	------

Preparation of Magnesium Sulfate Solution: Add MgSO₄·7H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Vitamin Solution:

Composition per 10.0mL:

Vitamin B ₁₂	0.1mg
-------------------------------	-------

Preparation of Vitamin Solution: Add vitamin B₁₂ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Methanol:

Composition per 10.0mL:

Methanol.....	10.0mL
---------------	--------

Preparation of Methanol: Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Bicarbonate Solution:

Composition per 10.0mL:

NaHCO ₃	11.0g
--------------------------	-------

Preparation of Bicarbonate Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Thiosulfate Solution:

Composition per 10.0mL:

NaS ₂ O ₃ ·5H ₂ O.....	18.0g
---	-------

Preparation of Thiosulfate Solution: Add NaS₂O₃·5H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Preparation of Medium: Add components, except methanol, vitamin, bicarbonate, thiosulfate, and magnesium sulfate solutions, to distilled/deionized water and bring volume to 960.0mL. Mix thoroughly. Distribute into closed vessels with a medium to headspace ratio of 1:5 to 1:10. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add the methanol, vitamin, bicarbonate, thiosulfate, and magnesium sulfate solutions.

Use: For the cultivation of *Methylohalomonas* spp.

***Methylohalomonas* Medium with Acetate (DSMZ Medium 1171)**

Composition per liter:

NaCl	120.0g
K ₂ HPO ₄	2.0g
NH ₄ Cl	0.5g
Magnesium sulfate solution.....	10.0mL
Thiosulfate solution	10.0mL
Bicarbonate solution	10.0mL
Acetate solution	10.0mL
Vitamin solution.....	10.0mL
Trace elements solution SL-6	1.0mL
pH 7.5 ± 0.2 at 25°C	

Trace Elements Solution SL-6:

Composition per liter:

MnCl ₂ ·4H ₂ O.....	0.5g
H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
Na ₂ MoO ₄ ·2H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Magnesium Sulfate Solution:

Composition per 10.0mL:

MgSO ₄ ·7H ₂ O	2.0g
--	------

Preparation of Magnesium Sulfate Solution: Add MgSO₄·7H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Vitamin Solution:

Composition per 10.0mL:

Vitamin B ₁₂	0.1mg
-------------------------------	-------

Preparation of Vitamin Solution: Add vitamin B₁₂ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Acetate Solution:

Composition per 10.0mL:

Sodium acetate	0.2g
----------------------	------

Preparation of Acetate Solution: Add sodium acetate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Bicarbonate Solution:

Composition per 10.0mL:

NaHCO ₃	11.0g
--------------------------	-------

Preparation of Bicarbonate Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Thiosulfate Solution:

Composition per 10.0mL:

Na ₂ S ₂ O ₃ ·5H ₂ O.....	18.0g
---	-------

Preparation of Thiosulfate Solution: Add Na₂S₂O₃·5H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly.

Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Preparation of Medium: Add components, except acetate, vitamin, bicarbonate, thiosulfate, and magnesium sulfate solutions, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Distribute into closed vessels with a medium to headspace ratio of 1:5 to 1:10. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add the acetate, vitamin, bicarbonate, thiosulfate, and magnesium sulfate solutions.

Use: For the cultivation with faster growth rates of *Methylohalomonas* spp.

***Methylomicrobium* Medium (DSMZ Medium 1180)**

Composition per liter:

NaCl	30.0g
MgSO ₄ ·7H ₂ O	0.2g
CaCl ₂ ·2H ₂ O	0.02g
KNO ₃	1.0g
Bicarbonate solution	50.0mL
Phosphate buffer solution	20.0mL
Carbonate solution	5.0mL
Trace elements solution	1.0mL
pH 8.7 ± 0.2 at 25°C	

Phosphate Buffer Solution:

Composition per liter:

Na ₂ HPO ₄ ·12H ₂ O.....	30.0g
KH ₂ PO ₄	14.0g

Preparation of Phosphate Buffer Solution: Add components to distilled/deionized water and bring volume to 1.0L. Filter sterilize

Bicarbonate Solution:

Composition per 100.0mL:

NaHCO ₃	7.2g
--------------------------	------

Preparation of Bicarbonate Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Carbonate Solution:

Composition per 10.0mL:

Na ₂ CO ₃	1.1g
---------------------------------------	------

Preparation of Carbonate Solution: Add Na₂CO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Trace Elements Solution:

Composition per liter:

EDTA	5.0g
FeSO ₄ ·7H ₂ O.....	2.0g
CoCl ₂ ·6H ₂ O	0.2g
CuCl ₂ ·2H ₂ O	0.1g
ZnSO ₄ ·7H ₂ O	0.1g
MnCl ₂ ·4H ₂ O	0.03g
H ₃ BO ₃	0.03g
Na ₂ MoO ₄ ·2H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except carbonate, bicarbonate, and phosphate buffer solutions, to distilled/deionized water and bring volume to 925.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add the carbonate, bicarbonate, and phosphate buffer solutions. Aseptically distribute into culture vessels.

Use: For the cultivation with faster growth rates of *Methylomicrobium* spp.

***Methylonatrum* Medium (DSMZ Medium 1170)**

Composition per liter:

NaCl	18.0g
K ₂ HPO ₄	1.0g
Magnesium sulfate solution	10.0mL
Thiosulfate solution	10.0mL
Carbonate solution	10.0mL
Vitamin solution	10.0mL
Methanol	2.0mL
Trace elements solution SL-6	1.0mL
pH 10.0 ± 0.2 at 25°C	

Trace Elements Solution SL-6:

Composition per liter:

MnCl ₂ ·4H ₂ O	0.5g
H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g

Na ₂ MoO ₄ ·2H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Magnesium Sulfate Solution:

Composition per 10.0mL:

MgSO ₄ ·7H ₂ O	2.0g
--	------

Preparation of Magnesium Sulfate Solution: Add MgSO₄·7H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Vitamin Solution:

Composition per 10.0mL:

Vitamin B ₁₂	0.1mg
-------------------------------	-------

Preparation of Vitamin Solution: Add vitamin B₁₂ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Carbonate Solution:

Composition per 10.0mL:

Na ₂ CO ₃	11.0g
---------------------------------------	-------

Preparation of Carbonate Solution: Add Na_2CO_3 to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Thiosulfate Solution:

Composition per 10.0mL:

$\text{NaS}_2\text{O}_3 \cdot 5\text{H}_2\text{O}$ 18.0g

Preparation of Thiosulfate Solution: Add $\text{NaS}_2\text{O}_3 \cdot 5\text{H}_2\text{O}$ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Acetate Solution:

Composition per 10.0mL:

Sodium acetate 0.2g

Preparation of Acetate Solution: Add sodium acetate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Preparation of Medium: Add components, except acetate, vitamin, carbonate, thiosulfate, and magnesium sulfate solutions, to distilled/deionized water and bring volume to 960.0mL. Mix thoroughly. Distribute into closed vessels with a medium to headspace ratio of 1:5 to 1:10. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add the acetate, vitamin, carbonate, thiosulfate, and magnesium sulfate solutions.

Use: For the cultivation with faster growth rates of *Methylophaga* spp.

Methylophaga Agar

Composition per 103.0mL:

Agar solution 50.0mL
 Mineral base, 2X 50.0mL
 Solution T 2.0mL
 Vitamin B₁₂ solution 1.0mL
 Methanol 0.3mL

pH 7.3 ± 0.2 at 25°C

Agar Solution:

Composition per 500.0mL:

Agar 15.0g

Preparation of Agar Solution: Add agar to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C.

Mineral Base, 2X:

Composition per 500.0mL:

NaCl 24.0g
 $\text{MgCl}_2 \cdot 6\text{H}_2\text{O}$ 3.0g
 $\text{MgSO}_4 \cdot 7\text{H}_2\text{O}$ 2.0g
 $\text{CaCl}_2 \cdot 2\text{H}_2\text{O}$ 1.0g
 KCl 0.5g
 Bis-Tris buffer (bis[2-hydroxyethyl]amino-
 tris[hydroxymethyl]-methane) 0.5g
 Wolfe's mineral solution 10.0mL

Preparation of Mineral Base, 2X: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Adjust pH to 7.3. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C.

Wolfe's Mineral Solution:

Composition per liter:

$\text{MgSO}_4 \cdot 7\text{H}_2\text{O}$ 3.0g
 Nitrilotriacetic acid 1.5g
 NaCl 1.0g
 $\text{MnSO}_4 \cdot \text{H}_2\text{O}$ 0.5g
 $\text{FeSO}_4 \cdot 7\text{H}_2\text{O}$ 0.1g
 $\text{CoCl}_2 \cdot 6\text{H}_2\text{O}$ 0.1g
 CaCl_2 0.1g
 $\text{ZnSO}_4 \cdot 7\text{H}_2\text{O}$ 0.1g
 $\text{CuSO}_4 \cdot 5\text{H}_2\text{O}$ 0.01g
 $\text{AlK}(\text{SO}_4)_2 \cdot 12\text{H}_2\text{O}$ 0.01g
 H_3BO_3 0.01g
 $\text{Na}_2\text{MoO}_4 \cdot 2\text{H}_2\text{O}$ 0.01g

Preparation of Wolfe's Mineral Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L.

Solution T:

Composition per 100.0mL:

NH_4Cl 10.0g
 Bis-Tris buffer (bis[2-hydroxyethyl]amino-
 tris[hydroxymethyl]-methane) 10.0g
 KH_2PO_4 0.7g
 Ferric ammonium citrate 0.3g

Preparation of Solution T: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Adjust pH to 7.3. Autoclave for 15 min at 15 psi pressure–121°C.

Vitamin B₁₂ Solution:

Composition per 10.0mL:

Vitamin B₁₂ 1.0µg

Preparation of Vitamin B₁₂ Solution: Add vitamin B₁₂ to 10.0mL of distilled/deionized water. Mix thoroughly. Filter sterilize.

Preparation of Medium: Aseptically mix 50.0mL of the sterile agar solution with 50.0mL of the sterile mineral base, 2X. Aseptically combine sterile solution T and sterile vitamin B₁₂ solution with the sterile mineral base. Filter sterilize methanol and add to basal medium. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Methylophaga marina*.

**Methylophaga alcalica Agar
 (DSMZ Medium 976)**

Composition per liter:

NaCl 30.0g
 Agar 20.0g
 KH_2PO_4 1.0g
 KNO_3 1.0g
 $\text{MgSO}_4 \cdot 7\text{H}_2\text{O}$ 0.22g
 Na_2CO_3 solution 50.0mL
 Methanol solution 50.0mL
 Trace elements solution 1.0mL

pH 9.5 ± 0.2 at 25°C

Methanol Solution:

Composition per 50.0mL:

Methanol 10.0mL

Preparation of Methanol Solution: Add methanol to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂CO₃ Solution:**Composition per 50.0mL:**Na₂CO₃ 5.0g

Preparation of Na₂CO₃ Solution: Add Na₂CO₃ to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components, except methanol solution and Na₂CO₃ solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 50.0mL sterile Na₂CO₃ solution and 50.0mL sterile methanol solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Methylophaga alcalica*.

***Methylophaga* Broth**

Composition per 103.0mL:

Mineral base 100.0mL

Solution T 2.0mL

Vitamin B₁₂ solution 1.0mL

Methanol 0.3mL

pH 7.3 ± 0.2 at 25°C

Mineral Base:**Composition per liter:**

NaCl 24.0g

MgCl₂·6H₂O 3.0gMgSO₄·7H₂O 2.0gCaCl₂·2H₂O 1.0g

KCl 0.5g

Bis-Tris buffer (bis[2-hydroxyethyl]amino-tris[hydroxymethyl]-methane) 0.5g

Wolfe's mineral solution 10.0mL

Preparation of Mineral Base: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.3. Autoclave for 15 min at 15 psi pressure–121°C.

Wolfe's Mineral Solution:**Composition per liter:**MgSO₄·7H₂O 3.0g

Nitrilotriacetic acid 1.5g

NaCl 1.0g

MnSO₄·H₂O 0.5gFeSO₄·7H₂O 0.1gCoCl₂·6H₂O 0.1gCaCl₂ 0.1gZnSO₄·7H₂O 0.1gCuSO₄·5H₂O 0.01gAlK(SO₄)₂·12H₂O 0.01gH₃BO₃ 0.01gNa₂MoO₄·2H₂O 0.01g

Preparation of Wolfe's Mineral Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L.

Solution T:**Composition per 100.0mL:**NH₄Cl 10.0g

Bis-Tris buffer (bis[2-hydroxyethyl]amino-tris[hydroxymethyl]-methane) 10.0g

KH₂PO₄ 0.7g

Ferric ammonium citrate 0.3g

Preparation of Solution T: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Adjust pH to 7.3. Autoclave for 15 min at 15 psi pressure–121°C.

Vitamin B₁₂ Solution:**Composition per 10.0mL:**Vitamin B₁₂ 1.0µg**Preparation of Vitamin B₁₂ Solution:** Add vitamin B₁₂ to 10.0mL of distilled/deionized water. Mix thoroughly. Filter sterilize.**Preparation of Medium:** Aseptically combine sterile solution T and sterile vitamin B₁₂ solution with the sterile mineral base. Filter sterilize methanol and add to basal medium. Aseptically distribute into sterile tubes or sterile flasks.**Use:** For the cultivation and maintenance of *Methylophaga marina*.***Methylophaga* Medium****Composition per liter:**

M-FC HiVeg Agar Base with Rosolic Acid

Composition per liter:

Agar	15.0g
Lactose	12.5g
Plant hydrolysate No. 1	10.0g
Plant peptone No. 3	5.0g
NaCl	5.0g
Yeast extract	3.0g
Synthetic detergent No. 1	1.5g
Aniline Blue	0.1g
Rosolic acid solution	10.0mL

pH 7.4 ± 0.2 at 25°C

Source: This medium, without rosolic acid, is available as a premixed powder from HiMedia.

Rosolic Acid Solution:

Composition per 100.0mL:

Rosolic acid	1.0g
--------------------	------

Preparation of Rosolic Acid Solution: Add rosolic acid to 0.2N NaOH and bring volume to 100.0L. Mix thoroughly.

Preparation of Medium: Add 10.0mL rosolic acid solution to 950.0mL of distilled/deionized water. Mix thoroughly. Add other components and bring volume to 1.0L with distilled/deionized water. Mix thoroughly. Gently heat and bring to boiling with frequent mixing. Do not autoclave. Pour into sterile Petri dishes or leave in tubes.

Use: For the detection and enumeration of fecal coliforms using the membrane filter technique.

M-FC HiVeg Agar Base, Modified with Rosolic Acid

Composition per liter:

Agar	15.0g
Plant hydrolysate No. 1	10.0g
Inositol	10.0g
Plant peptone No. 3	5.0g
NaCl	5.0g
Yeast extract	3.0g
Synthetic detergent No. 1	1.5g
Aniline blue	0.1g
Rosolic acid solution	10.0mL

pH 7.4 ± 0.2 at 25°C

Source: This medium, without rosolic acid, is available as a premixed powder from HiMedia.

Rosolic Acid Solution:

Composition per 100.0mL:

Rosolic acid	1.0g
--------------------	------

Preparation of Rosolic Acid Solution: Add rosolic acid to 0.2N NaOH and bring volume to 100.0L. Mix thoroughly.

Preparation of Medium: Add 10.0mL rosolic acid solution to 950.0mL of distilled/deionized water. Mix thoroughly. Add other components and bring volume to 1.0L with distilled/deionized water. Mix thoroughly. Gently heat and bring to boiling with frequent mixing. Do not autoclave. Pour into sterile Petri dishes or leave in tubes.

Use: For the detection and enumeration of fecal coliforms using membrane filter technique.

M-FC HiVeg Broth Base with Rosolic Acid

Composition per liter:

Lactose	12.5g
Plant hydrolysate No. 1	10.0g
Plant peptone No. 3	5.0g
NaCl	5.0g
Yeast extract	3.0g
Synthetic detergent No. 1	1.5g
Aniline blue	0.1g
Rosolic acid solution	10.0mL

pH 7.4 ± 0.2 at 25°C

Source: This medium, without rosolic acid, is available as a premixed powder from HiMedia.

Rosolic Acid Solution:

Composition per 100.0mL:

Rosolic acid	1.0g
--------------------	------

Preparation of Rosolic Acid Solution: Add rosolic acid to 0.2N NaOH and bring volume to 100.0L. Mix thoroughly.

Preparation of Medium: Add 10.0mL of rosolic acid solution to 950.0mL of distilled/deionized water. Mix thoroughly. Add other components and bring volume to 1.0L with distilled/deionized water. Mix thoroughly. Gently heat and bring to boiling with frequent mixing. Do not autoclave. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of fecal coliform bacteria from waters and the enumeration of coliform bacteria using the membrane filtration method.

M-FC Agar

Composition per liter:

Agar	15.0g
Tryptose	10.0g
Inositol	10.0g
Proteose peptone	5.0g
NaCl	5.0g
Yeast extract	3.0g
Bile salts mixture	1.5g
Aniline Blue	0.1g
Selective supplement solution	10.0mL
Rosolic acid solution	10.0mL

pH 7.4 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Rosolic Acid Solution:

Composition per 10.0mL:

Rosolic acid	0.1g
--------------------	------

Preparation of Rosolic Acid Solution: Add rosolic acid to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Selective Supplement Solution:

Composition per 10.0mL:

Carbenicillin..... 0.05g

Preparation of Selective Supplement Solution: Add carbenicillin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except selective supplement solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add selective supplement solution. Mix thoroughly. Pour into Petri dishes or aseptically distribute into sterile tubes.

Use: For the rapid enumeration of *Klebsiella* using the membrane filter technique.

M-FC Agar Base

Composition per liter:

Agar 15.0g
 Lactose 12.5g
 Tryptose 10.0g
 Proteose peptone 5.0g
 NaCl 5.0g
 Yeast extract 3.0g
 Bile salts mixture 1.5g
 Aniline Blue 0.1g
 Rosolic acid solution..... 10.0mL

pH 7.4 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Rosolic Acid Solution:

Composition per 10.0mL:

Rosolic acid..... 0.1g

Preparation of Rosolic Acid Solution: Add rosolic acid to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat to dissolve components. Do not autoclave. Cool to 50°C. Pour into Petri dishes or aseptically distribute into sterile tubes.

Use: For the detection and enumeration of fecal coliforms using the membrane filter technique at 44.5°C.

 Vitamin solution 10.0mL
 L-Cysteine-HCl solution 10.0mL
 Na₂S·9H₂O solution 10.0mL

pH 6.9 ± 0.2 at 25°C

NaHCO₃ Solution:

Composition per 100.0mL:

NaHCO₃..... 5.0g

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Trimethylamine-HCl Solution:

Composition per 20.0mL:

Trimethylamine-HCl 5.0g

Preparation of Trimethylamine-HCl Solution: Add trimethylamine-HCl to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂CO₃ Solution:

Composition per 10.0mL:

Na₂CO₃ 0.5g

Preparation of Na₂CO₃ Solution: Add Na₂CO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution:

Composition per liter:

MgSO₄·7H₂O 3.0g
 Nitrilotriacetic acid 1.5g
 NaCl 1.0g
 MnSO₄·2H₂O 0.5g
 CoSO₄·7H₂O 0.18g
 ZnSO₄·7H₂O 0.18g
 CaCl₂·2H₂O 0.1g
 FeSO₄·7H₂O 0.1g
 NiCl₂·6H₂O 0.025g
 KAl(SO₄)₂·12H₂O 0.02g
 CuSO₄·5H₂O 0.01g
 H₃BO₃ 0.01g
 Na₂MoO₄·2H₂O 0.01g
 Na₂SeO₃·5H₂O 0.3mg

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to approximately 500.0mL distilled/deionized water. Dissolve by adding KOH and adjust pH to 6.5. Add remaining components. Bring volume to 1.0L with additional distilled/deionized water. Adjust pH to 7.0 with KOH.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl 10.0mg
 Calcium DL-pantothenate 5.0mg
 Lipoic acid 5.0mg

Nicotinic acid.....	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Riboflavin.....	5.0mg
Thiamine-HCl.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Sparge with 100% N₂.

L-Cysteine-HCl Solution:

Composition per 10.0mL:

L-Cysteine-HCl.....	0.5g
---------------------	------

Preparation of L-Cysteine-HCl Solution: Add L-cysteine-HCl to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	0.5g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except NaHCO₃ solution, trimethylamine-HCl solution, Na₂CO₃ solution, vitamin solution, L-cysteine-HCl solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 860.0mL. Mix thoroughly. Sparge with 100% N₂ for 20 min. Then sparge with 80% N₂ + 20% CO₂ for 10 min. Anaerobically distribute into tubes or bottles. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 80.0mL of sterile NaHCO₃ solution, 20.0mL of sterile trimethylamine-HCl solution, 10.0mL of sterile Na₂CO₃ solution, 10.0mL of sterile vitamin solution, 10.0mL of sterile L-cysteine-HCl solution, and 10.0mL of sterile Na₂S·9H₂O solution. Mix thoroughly.

Use: For the cultivation and maintenance of *Methanohalobium* species, *Methanohalophilus halophilus*, and *Methanohalophilus* species.

MG Medium

Composition per liter:

NaCl.....	150.0g
MgSO ₄ ·7H ₂ O.....	3.45g
MgCl ₂ ·6H ₂ O.....	2.75g
Sodium acetate.....	1.0g
KCl.....	0.335g
NH ₄ Cl.....	0.25g
CaCl ₂ ·2H ₂ O.....	0.14g
K ₂ HPO ₄ ·3H ₂ O.....	0.14g
Resazurin.....	1.0mg
NaHCO ₃ solution.....	80.0mL
Trimethylamine-HCl solution.....	20.0mL
Na ₂ CO ₃ solution.....	10.0mL
Trace elements solution.....	10.0mL
Vitamin solution.....	10.0mL
L-Cysteine-HCl solution.....	10.0mL
Na ₂ S·9H ₂ O solution.....	10.0mL

pH 6.9 ± 0.2 at 25°C

NaHCO₃ Solution:

Composition per 100.0mL:

NaHCO ₃	5.0g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Trimethylamine-HCl Solution:

Composition per 20.0mL:

Trimethylamine-HCl.....	5.0g
-------------------------	------

Preparation of Trimethylamine-HCl Solution: Add trimethylamine-HCl to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂CO₃ Solution:

Composition per 10.0mL:

Na ₂ CO ₃	0.5g
---------------------------------------	------

Preparation of Na₂CO₃ Solution: Add Na₂CO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O.....	3.0g
Nitrilotriacetic acid.....	1.5g
NaCl.....	1.0g
MnSO ₄ ·2H ₂ O.....	0.5g
CoSO ₄ ·7H ₂ O.....	0.18g
ZnSO ₄ ·7H ₂ O.....	0.18g
CaCl ₂ ·2H ₂ O.....	0.1g
FeSO ₄ ·7H ₂ O.....	0.1g
NiCl ₂ ·6H ₂ O.....	0.025g
KAl(SO ₄) ₂ ·12H ₂ O.....	0.02g
CuSO ₄ ·5H ₂ O.....	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O.....	0.01g
Na ₂ SeO ₃ ·5H ₂ O.....	0.3mg

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to approximately 500.0mL of distilled/deionized water. Dissolve by adding KOH and adjust pH to 6.5. Add remaining components. Bring volume to 1.0L with additional distilled/deionized water. Adjust pH to 7.0 with KOH.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl.....	10.0mg
Calcium DL-pantothenate.....	5.0mg
Lipoic acid.....	5.0mg
Nicotinic acid.....	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Riboflavin.....	5.0mg
Thiamine-HCl.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Sparge with 100% N₂.

L-Cysteine-HCl Solution:

Composition per 10.0mL:

L-Cysteine-HCl.....	0.5g
---------------------	------

Preparation of L-Cysteine-HCl Solution: Add L-cysteine-HCl to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:**Composition per 10.0mL:**Na₂S·9H₂O 0.5g

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except NaHCO₃ solution, trimethylamine-HCl solution, Na₂CO₃ solution, vitamin solution, L-cysteine-HCl solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 860.0mL. Mix thoroughly. Sparge with 100% N₂ for 20 min. Then sparge with 80% N₂ + 20% CO₂ for 10 min. Anaerobically distribute into tubes or bottles. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 80.0mL of sterile NaHCO₃ solution, 20.0mL of sterile trimethylamine-HCl solution, 10.0mL of sterile Na₂CO₃ solution, 10.0mL of sterile vitamin solution, 10.0mL of sterile L-cysteine-HCl solution, and 10.0mL of sterile Na₂S·9H₂O solution. Mix thoroughly.

Use: For the cultivation and maintenance of *Methanohalophilus* species.

MGA Agar**Composition per liter:**

Agar 20.0g

Glucose 2.0g

L-Asparagine 1.0g

K₂HPO₄ 0.5gMgSO₄·7H₂O 0.5g

Trace salts solution 1.0mL

pH 7.4 ± 0.2 at 25°C

Trace Salts Solution:**Composition per liter:**FeSO₄·7H₂O 10.0gCuSO₄·5H₂O 1.0gMnSO₄·7H₂O 1.0gZnSO₄·7H₂O 1.0g

Preparation of Trace Salts Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 8.0.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of *Actinomadura* species, *Actinopolyspora* species, *Excellispora* species, and *Microspora* species.

See: **Green Yeast and Mold Broth**

MGTY AgarSee: **Marine Glucose Trypticase™ Yeast Extract Agar****MGTY Broth**See: **Marine Glucose Trypticase™ Yeast Extract Broth**

MH Agar 15%
(LMG Medium 258)

Composition per liter:

NaCl 121.5g

Agar 20.0g

MgSO₄·7H₂O 14.4g
MgCl₂ 10.5g
Yeast extract 10.0g
Proteose peptone no.3 5.0g
KCl 3.0g
Glucose 1.0g
CaCl₂ 0.54g
NaBr 39.0mg
NaHCO₃ solution 10.0mL

pH 7.5 ± 0.2 at 25°C

NaHCO₃ Solution:**Composition per 10.0mL:**NaHCO₃ 0.09g

Preparation of NaHCO₃ Solution: Add NaHCO₃ to 10.0mL of distilled/deionized water. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except NaHCO₃ solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL sterile NaHCO₃ solution. Pour into sterile Petri dishes or aseptically distribute into sterile tubes.

Use: For cultivation and maintenance of *Bacillus halophilus*.

MH IH Agar**Composition per liter:**

Solution A 490.0mL

Solution B 490.0mL

Supplement solution 20.0mL

pH 6.9 ± 0.2 at 25°C

Solution A:**Composition per 490.0mL:**

Beef infusion 300.0g

Acid hydrolysate of casein 17.5g

Agar 17.0g

Starch 1.5g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 490.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Solution B:**Composition per 490.0mL:**

Hemoglobin 10.0g

Preparation of Solution B: Add hemoglobin to distilled/deionized water and bring volume to 490.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Supplement Solution:**Composition per liter:**

Glucose 100.0g

L-Cysteine-HCl 25.9g

L-Glutamine 10.0g

L-Cystine 1.1g

Adenine 1.0g

Nicotinamide adenine dinucleotide 0.25g

Vitamin B₁₂ 0.1g

Thiamine pyrophosphate 0.1g

Guanine-HCl 0.03g

Fe(NO₃)₃·6H₂O 0.02g

<i>p</i> -Aminobenzoic acid.....	0.013g
Thiamine-HCl	3.0mg

Source: The supplement solution IsoVitaleX® enrichment is available from BD Diagnostic Systems. This enrichment may be replaced by supplement VX from BD Diagnostic Systems.

Preparation of Supplement Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Aseptically combine cooled, sterile solution A and cooled, sterile solution B. Mix thoroughly. Adjust pH to 6.9 with sterile 1N HCl or sterile 1N KOH. Aseptically add 20.0mL of sterile supplement solution. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and differentiation of *Legionella* species.

MH Medium

Composition per liter:

NaCl	60.7g
Agar	20.0g
MgCl ₂ ·6H ₂ O.....	15.0g
Yeast extract.....	10.0g
MgSO ₄ ·7H ₂ O	7.4g
Proteose peptone No. 3	5.0g
KCl.....	1.5g
Glucose	1.0g
CaCl ₂	0.27g
NaHCO ₃	0.45g
NaBr.....	0.19g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Deleya salina* and *Volcaniella eurihalina*.

MH Medium

Composition per liter:

NaCl	60.7g
MgCl ₂ ·6H ₂ O.....	15.0g
Yeast extract.....	10.0g
MgSO ₄ ·7H ₂ O	7.4g
Proteose peptone No. 3	5.0g

pH 7.5 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.5. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Bacillus halophilus*.

MIB with Maltose

Composition per liter:

Yeast extract.....	20.0g
Maltose.....	10.0g
Glucose.....	10.0g
Proteose peptone No. 3.....	5.0g
KH ₂ PO ₄	2.0g
Sorbitan monooleate complex.....	0.1g
pH 6.7 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Lactobacillus sanfrancisco*.

Micro Assay Culture Agar

Composition per liter:

Yeast extract.....	20.0g
Agar.....	10.0g
Glucose.....	10.0g
Proteose peptone No. 3.....	5.0g
KH ₂ PO ₄	2.0g
Sorbitan monooleate complex.....	0.1g
pH 6.7 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes in 10.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Just prior to solidification of the agar, disperse precipitate by gently twirling tube.

Use: For carrying stock cultures of lactobacilli and other test microorganisms used in microbiological assays. For the general cultivation of lactobacilli.

Micro Assay Culture Agar

Composition per liter:

Agar.....	10.0g
Glucose.....	10.0g
Proteose peptone No. 3.....	5.0g
Yeast extract.....	5.0g
KH ₂ PO ₄	2.0g
Polysorbate 80.....	0.1g
pH 7.2 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of lactobacilli and other microorganisms used in microbiological assays.

Micro Assay Culture Broth

Composition per liter:

Glucose	10.0g
Proteose Peptone No. 3	5.0g
Yeast Extract	5.0g
KH ₂ PO ₄	2.0g
Polysorbate 80.....	0.1g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of lactobacilli and other microorganisms used in microbiological assays.

Micro Inoculum Broth

Composition per liter:

Yeast extract.....	20.0g
Glucose	10.0g
Proteose peptone No. 3	5.0g
KH ₂ PO ₄	2.0g
Sorbitan monooleate complex	0.1g

pH 6.7 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes in 10.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of lactobacilli used in microbiological assays. It is of particular value in the preparation of the inoculum for these tests.

Micro Vitamin Test Culture HiVeg Agar

Composition per liter:

Yeast extract.....	20.0g
Agar	15.0g
Glucose	10.0g
Plant peptone.....	5.0g
KH ₂ PO ₄	2.0g
Polysorbate 80.....	0.1g

pH 6.7 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of lactobacilli and other microorganisms used in microbiological assays.

Micro Vitamin Test Inoculum HiVeg Broth

Composition per liter:

Yeast extract.....	20.0g
Glucose	10.0g

Plant peptone No. 3.....	5.0g
KH ₂ PO ₄	2.0g
Polysorbate 80	0.1g

pH 6.7 ± 0.1 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of lactobacilli and other microorganisms used in microbiological assays.

Microbacterium Medium

Composition per liter:

Glucose	10.0g
KH ₂ PO ₄	5.0g
K ₂ HPO ₄	5.0g
Potassium aspartate.....	5.0g
(NH ₄) ₂ SO ₄	2.0g
MgSO ₄ ·7H ₂ O.....	0.5g
Calcium pantothenate	0.2g
β-Mercaptopurine	0.1g
FeSO ₄ ·7H ₂ O.....	0.01g
Thiamine·HCl	0.01g
Biotin	0.1mg

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 10 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Microbacterium* species.

Microbial Content Test Agar

Composition per liter:

Agar	15.0g
Pancreatic digest of casein.....	15.0g
NaCl.....	5.0g
Tween™ 80.....	5.0g
Enzymatic hydrolysate of soybean meal	5.0g
Lecithin	0.7g

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Boil for 1–2 min. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For use in the microbial content test of water-soluble cosmetic products. Also used for determining the efficiency of sanitization of containers, equipment, and environmental surfaces.

Microbial Content Test HiVeg Agar (Tryptone Soy HiVeg Agar with Lecithin and Tween 80)

Composition per liter:

Agar	15.0g
Plant hydrolysate	15.0g

Papaic digest of soybean meal	5.0g
NaCl	5.0g
Lecithin	0.7g
Polysorbate 80.....	5.0mL

pH 7.3 ± 0.2 at 25°C

Source: This medium, without polysorbate 80, is available as a pre-mixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Boil for 1–2 min. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For use in the microbial content test of water-soluble cosmetic products. Also used for determining the efficiency of sanitization of containers, equipment, and environmental surfaces.

Microcella alkaliphila Medium (DSMZ Medium 1063)

Composition per liter:

Pancreatic digest of casein	17.0g
NaCl	5.0g
Papaic digest of soybean meal	3.0g
Yeast extract	3.0g
K ₂ HPO ₄	2.5g
Glucose	2.5g
Na-sesquicarbonate solution	100.0mL
Mineral salt solution	50.0mL
Vitamin solution.....	5.0mL
Trace elements solution SL-10	1.0mL

pH 9.5 ± 0.2 at 25°C

Sodium Sesquicarbonate Solution:

Composition per 100.0mL:

Na ₂ CO ₃ , anhydrous.....	10.6g
NaHCO ₃	8.42g

Preparation of Sodium Sesquicarbonate Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Mineral Solution:

Composition per liter:

KH ₂ PO ₄	10.0g
MgCl ₂ ·6H ₂ O.....	6.6g
NaCl	8.0g
NH ₄ Cl	8.0g
CaCl ₂ ·2H ₂ O.....	1.0g

Preparation of Mineral Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl	6.2mg
Nicotinic acid.....	2.5mg
Thiamine-HCl	1.25mg
<i>p</i> -Aminobenzoic acid.....	1.25mg
Pantothenic acid.....	0.62mg
Biotin	0.25mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Trace Elements Solution SL-10:

Composition per liter:

MgSO ₄ ·7H ₂ O	3.0g
Nitrilotriacetic acid	1.5g
NaCl.....	1.0g
MnSO ₄ ·2H ₂ O	0.5g
CoSO ₄ ·7H ₂ O.....	0.18g
ZnSO ₄ ·7H ₂ O	0.18g
CaCl ₂ ·2H ₂ O	0.1g
FeSO ₄ ·7H ₂ O.....	0.1g
NiCl ₂ ·6H ₂ O.....	0.025g
KAl(SO ₄) ₂ ·12H ₂ O.....	0.02g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·4H ₂ O	0.01g
CuSO ₄ ·5H ₂ O.....	0.01g
Na ₂ SeO ₃ ·5H ₂ O.....	0.3mg

Preparation of Trace Elements Solution SL-10: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly. Adjust pH to 7.0.

Preparation of Medium: Add components, except sodium sesquicarbonate solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add sterile 1M sodium sesquicarbonate solution to achieve a final pH of 9.5. Aseptically dispense into tubes, flasks, or bottles.

Use: For the cultivation of *Microcella alkaliphila*.

Micrococcus Medium

Composition per liter:

Agar	15.0g
Peptone	5.0g
Yeast extract.....	3.0g
Beef extract.....	1.5g
Glucose	1.0g

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Staphylococcus aureus* and *Micrococcus* species.

Micrococcus Medium, FDA

Composition per liter:

Agar	15.0g
Proteose peptone.....	10.0g
Beef extract.....	5.0g
NaCl.....	5.0g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Staphylococcus aureus* and *Micrococcus* species.

Micrococcus/Sarcina Medium**Composition per liter:**

Agar	16.0g
Pancreatic digest of casein	5.0g
Sodium succinate·6H ₂ O	2.0g
Starch	2.0g
Yeast autolysate	1.0g
Sodium citrate·2H ₂ O	0.5g
Sodium acetate·3H ₂ O	0.3g
K ₂ HPO ₄	0.2g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Micrococcus luteus* and *Sarcina* species.

Microcycclus eburneus Medium**Composition per liter:**

K ₂ HPO ₄	7.0g
(NH ₄) ₂ SO ₄	3.0g
KH ₂ PO ₄	2.0g
MgSO ₄ ·7H ₂ O	0.5g
Yeast extract	0.2g
Thiamine·HCl	0.2mg
Biotin	0.02mg
FeSO ₄ ·7H ₂ O	2.0μg
MnSO ₄ ·4H ₂ O	2.0μg

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Microcycclus eburneus*.

Microcycclus major Medium**Composition per liter:**

Glucose	1.0g
Peptone	1.0g
KNO ₃	0.1g
K ₂ HPO ₄	0.07g
MgSO ₄ ·7H ₂ O	0.03g
Trace elements solution	1.0mL

Trace Elements Solution:**Composition per liter:**

Disodium EDTA	10.0g
FeSO ₄ ·7H ₂ O	9.3g
NaBO ₃ ·4H ₂ O	2.6g
MnCl ₂ ·4H ₂ O	1.8g
CaCl ₂	1.2g
(NH ₄) ₆ Mo ₇ O ₂₄ ·4H ₂ O	1.0g
ZnSO ₄ ·7H ₂ O	0.2g
CuSO ₄ ·5H ₂ O	0.08g
Co(NO ₃) ₂ ·H ₂ O	0.02g

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Microcycclus major*.

Microcycclus marinus Medium**Composition per liter:**

NaCl	23.5g
MgCl ₂	5.0g
Na ₂ SO ₄	4.0g
CaCl ₂ ·2H ₂ O	1.5g
KCl	0.7g
NaHCO ₃	0.2g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Microcycclus marinus*.

Microcycclus Medium**Composition per liter:**

Agar	15.0g
Glucose	5.0g
Peptone	5.0g
Yeast extract	5.0g

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Flectobacillus major* and *Microcycclus* species.

Microcycclus/Spirosoma Medium**Composition per liter:**

Agar	15.0g
Glucose	1.0g
Peptone	1.0g
Yeast extract	1.0g

pH 6.8–7.0 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Spirosoma linguale* and *Microcycclus* species.

***Microcycclus Medium*
(DSMZ Medium 776)****Composition per liter:**

Glucose	0.5g
Peptone	0.5g
Yeast extract	0.5g
Na-glutamate	0.5g
KH ₂ PO ₄	0.5g
(NH ₄) ₂ SO ₄	0.1g
MgSO ₄ ·7H ₂ O	0.1g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0.

Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Microlunatus phosphovorus* and *Kineosphaera limosa*.

Micromonospora megalomicea Agar

Composition per liter:

Soluble starch.....	20.0g
Agar	15.0g
Glucose	10.0g
Pancreatic digest of casein.....	5.0g
Yeast extract.....	5.0g
CaCO ₃	1.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Micromonospora rhodorangea* and *Micromonospora rosaria*.

Micromonospora Starch Agar

Composition per liter:

Starch, soluble.....	20.0g
Agar	15.0g
Glucose	10.0g
N-Z amine type A.....	5.0g
Yeast extract.....	5.0g
CaCO ₃	1.0g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Ampullariella campanulata*, *Micromonospora aurantiaca*, *Micromonospora brunnea*, *Micromonospora chalcone*, *Micromonospora halophytica*, *Micromonospora inositol*, *Micromonospora melanosporea*, *Micromonospora purpurea*, *Micromonospora purpureochromogenes*, *Micromonospora rhodorangea*, and *Micromonospora glauca*.

Microvirgula Medium (DSMZ Medium 957)

Composition per liter:

Na-succinate.....	1.5g
KNO ₃	1.5g
(NH ₄) ₂ SO ₄	1.0g
KH ₂ PO ₄	0.82g
K ₂ HPO ₄	0.7g
MgSO ₄ ·7H ₂ O.....	0.5g
Yeast extract.....	0.25g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Distribute into tubes or bottles. Autoclave for 15 min at 15 psi pressure–121°C. The final pH should be 7.0.

Use: For the cultivation of *Microvirgula aerodenitrificans*.

Middlebrook 13A Medium

Composition per 112.5mL:

Casein hydrolysate.....	0.1g
Tween™ 80.....	0.02g
Sodium polyanetholesulfonate.....	0.025g
Middlebrook 7H9 broth.....	100.0mL
Middlebrook 13A enrichment.....	12.5mL
Catalase.....	36,000U
¹⁴ C-substrate.....	125μCi (185kBq)

pH 6.6 ± 0.2 at 25°C

Middlebrook 7H9 Broth:

Composition per liter:

Na ₂ HPO ₄	2.5g
KH ₂ PO ₄	1.0g
Monosodium glutamate.....	0.5g
(NH ₄) ₂ SO ₄	0.5g
Sodium citrate.....	0.1g
MgSO ₄ ·7H ₂ O.....	0.05g
Ferric ammonium citrate.....	0.04g
CuSO ₄ ·5H ₂ O.....	1.0mg
Pyridoxine.....	1.0mg
ZnSO ₄ ·7H ₂ O.....	1.0mg
Biotin.....	0.5mg
CaCl ₂ ·2H ₂ O.....	0.5mg
Glycerol.....	2.0mL

Preparation of Middlebrook 7H9 Broth: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Middlebrook 13A Enrichment:

Composition per 20.0mL:

Bovine serum albumin.....	3.0g
---------------------------	------

Preparation of Middlebrook 13A Enrichment: Add bovine serum albumin to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: To 100.0mL of Middlebrook 7H9 broth, add remaining components, except Middlebrook 13A enrichment. Mix thoroughly. Filter sterilize. Aseptically distribute into bottles in 4.0mL volumes. Prior to inoculation, aseptically add 0.5mL of Middlebrook 13A enrichment to each bottle. Mix thoroughly.

Use: For the cultivation of *Mycobacterium* species from the blood of patients suspected of having mycobacteremia.

Middlebrook ADC Enrichment

(Middlebrook Albumin Dextrose Catalase Enrichment)

Composition per 100.0mL:

Bovine albumin fraction V.....	5.0g
Glucose.....	2.0g
Catalase.....	0.003g

Source: This medium is available as a prepared enrichment from BD Diagnostic Systems.

Preparation of Enrichment: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Use: For use as a supplement to other Middlebrook media for the isolation, cultivation, and maintenance of *Mycobacterium* species. Also used as a supplement to other Middlebrook media for determining the antimicrobial susceptibility of mycobacteria.

Middlebrook 7H9 Broth with Middlebrook ADC Enrichment

Composition per liter:

Na ₂ HPO ₄	2.5g
KH ₂ PO ₄	1.0g
Monosodium glutamate	0.5g
(NH ₄) ₂ SO ₄	0.5g
Sodium citrate.....	0.1g
MgSO ₄ ·7H ₂ O.....	0.05g
Ferric ammonium citrate.....	0.04g
CuSO ₄ ·5H ₂ O.....	1.0mg
Pyridoxine.....	1.0mg
ZnSO ₄ ·7H ₂ O.....	1.0mg
Biotin.....	0.5mg
CaCl ₂ ·2H ₂ O.....	0.5mg
Middlebrook ADC enrichment.....	100.0mL
Glycerol.....	2.0mL

pH 6.6 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Middlebrook ADC Enrichment:

Composition per 100.0mL:

Bovine albumin fraction V.....	5.0g
Glucose.....	2.0g
Catalase.....	3.0mg

Source: This enrichment is available as a prepared enrichment from BD Diagnostic Systems.

Preparation of Middlebrook ADC Enrichment: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add glycerol to 900.0mL of distilled/deionized water and add remaining components, except Middlebrook ADC enrichment. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 100.0mL of sterile Middlebrook ADC enrichment. Mix thoroughly. Distribute into sterile tubes or flasks.

Use: For the isolation, cultivation, and maintenance of *Mycobacterium* species, including *Mycobacterium tuberculosis*. Also used for determining the antimicrobial susceptibility of mycobacteria.

Middlebrook 7H9 Broth with Middlebrook OADC Enrichment

Composition per liter:

Na ₂ HPO ₄	2.5g
KH ₂ PO ₄	1.0g
Monosodium glutamate	0.5g
(NH ₄) ₂ SO ₄	0.5g
Sodium citrate.....	0.1g
MgSO ₄ ·7H ₂ O.....	0.05g
Ferric ammonium citrate.....	0.04g
CuSO ₄ ·5H ₂ O.....	1.0mg
Pyridoxine.....	1.0mg
ZnSO ₄ ·7H ₂ O.....	1.0mg
Biotin.....	0.5mg
CaCl ₂ ·2H ₂ O.....	0.5mg
Middlebrook OADC enrichment.....	100.0mL
Glycerol.....	2.0mL

pH 6.6 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Middlebrook OADC Enrichment:

Composition per 100.0mL:

Bovine albumin fraction V.....	5.0g
Glucose.....	2.0g
NaCl.....	0.85g
Oleic acid.....	0.05g
Catalase.....	4.0mg

Source: This enrichment is available as a prepared enrichment from BD Diagnostic Systems.

Preparation of Middlebrook OADC Enrichment: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add glycerol to 900.0mL of distilled/deionized water and add remaining components, except Middlebrook OADC enrichment. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 100.0mL of sterile Middlebrook OADC enrichment. Mix thoroughly. Distribute into sterile tubes or flasks.

Use: For the isolation, cultivation, and maintenance of *Mycobacterium* species, including *Mycobacterium tuberculosis*. Also used for determining the antimicrobial susceptibility of mycobacteria.

Middlebrook 7H9 Broth with Middlebrook OADC Enrichment and Triton™ WR 1339

Composition per liter:

Na ₂ HPO ₄	2.5g
KH ₂ PO ₄	1.0g
Monosodium glutamate	0.5g
(NH ₄) ₂ SO ₄	0.5g
Sodium citrate.....	0.1g
MgSO ₄ ·7H ₂ O.....	0.05g
Ferric ammonium citrate.....	0.04g
CuSO ₄ ·5H ₂ O.....	1.0mg
Pyridoxine.....	1.0mg
ZnSO ₄ ·7H ₂ O.....	1.0mg
Biotin.....	0.5mg
CaCl ₂ ·2H ₂ O.....	0.5mg
Middlebrook OADC enrichment	
with Triton™ WR 1339.....	100.0mL
Glycerol.....	2.0mL

pH 6.6 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Middlebrook OADC Enrichment with Triton™ WR 1339:

Composition per 100.0mL:

Bovine albumin fraction V.....	5.0g
Glucose.....	2.0g
NaCl.....	0.85g
Triton™ WR 1339.....	0.25g
Oleic acid.....	0.05g
Catalase.....	4.0mg

Source: This enrichment is available as a prepared enrichment from BD Diagnostic Systems.

Preparation of Middlebrook OADC Enrichment with Triton™ WR 1339: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add glycerol to 900.0mL of distilled/deionized water and add remaining components, except Middlebrook OADC enrichment with Triton™ WR 1339. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 100.0mL of sterile Middlebrook OADC enrichment with Triton™ WR 1339. Mix thoroughly. Distribute into sterile tubes or flasks.

Use: For the isolation, cultivation, and maintenance of *Mycobacterium* species, including *Mycobacterium tuberculosis*. Also used for determining the antimicrobial susceptibility of mycobacteria.

Middlebrook 7H9 Broth, Supplemented

Composition per liter:

Na ₂ HPO ₄	2.5g
KH ₂ PO ₄	1.0g
Monosodium glutamate.....	0.5g
(NH ₄) ₂ SO ₄	0.5g
Tween™ 80.....	0.5g
Sodium citrate.....	0.1g
MgSO ₄ ·7H ₂ O.....	0.05g
Ferric ammonium citrate.....	0.04g
Mycobactin J.....	2.0mg
CuSO ₄ ·5H ₂ O.....	1.0mg
Pyridoxine.....	1.0mg
ZnSO ₄ ·7H ₂ O.....	1.0mg
Biotin.....	0.5mg
CaCl ₂ ·2H ₂ O.....	0.5mg
Dubos oleic albumin complex.....	100.0mL
Glycerol.....	2.0mL

pH 6.6 ± 0.2 at 25°C

Source: Mycobactin J is available from Allied Laboratories, Inc.

Dubos Oleic Albumin Complex:

Composition per 100.0mL:

Bovine serum albumin, fraction V.....	5.0g
Oleic acid, sodium salt.....	0.05g
NaCl (0.85% solution).....	100.0mL

Preparation of Dubos Oleic Albumin Complex: Add bovine serum albumin and oleic acid to 100.0mL of NaCl solution. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except Dubos oleic albumin complex, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile Dubos oleic albumin complex. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Mycobacterium avium*.

Middlebrook 7H10 Agar with Glycerol

See: Middlebrook 7H10 Agar with Middlebrook ADC Enrichment

Middlebrook 7H10 Agar with Middlebrook ADC Enrichment

Composition per liter:

Agar.....	15.0g
Na ₂ HPO ₄	1.5g

KH ₂ PO ₄	1.5g
(NH ₄) ₂ SO ₄	0.5g
L-Glutamic acid.....	0.5g
Sodium citrate.....	0.4g
Ferric ammonium citrate.....	0.04g
MgSO ₄ ·7H ₂ O.....	0.025g
ZnSO ₄ ·7H ₂ O.....	1.0mg
CuSO ₄ ·5H ₂ O.....	1.0mg
Pyridoxine.....	1.0mg
Biotin.....	0.5mg
CaCl ₂ ·2H ₂ O.....	0.5mg
Malachite Green.....	0.25mg
Middlebrook ADC enrichment.....	100.0mL
Glycerol.....	5.0mL

pH 6.6 ± 0.2 at 25°C

Middlebrook ADC Enrichment:

Composition per 100.0mL:

Bovine albumin fraction V.....	5.0g
Glucose.....	2.0g
Catalase.....	0.003g

Source: The medium and enrichment are available as a prepared enrichment from BD Diagnostic Systems.

Preparation of Middlebrook ADC Enrichment: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add glycerol to 900.0mL of distilled/deionized water and add remaining components, except Middlebrook ADC enrichment. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 100.0mL of sterile Middlebrook ADC enrichment. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation, cultivation, and maintenance of *Mycobacterium* species, including *Mycobacterium tuberculosis*. Also used for determining the antimicrobial susceptibility of mycobacteria.

Middlebrook 7H10 Agar with Middlebrook OADC Enrichment (Middlebrook and Cohn 7H10 Agar)

Composition per liter:

Agar.....	15.0g
Na ₂ HPO ₄	1.5g
KH ₂ PO ₄	1.5g
(NH ₄) ₂ SO ₄	0.5g
L-Glutamic acid.....	0.5g
Sodium citrate.....	0.4g
Ferric ammonium citrate.....	0.04g
MgSO ₄ ·7H ₂ O.....	0.025g
ZnSO ₄ ·7H ₂ O.....	1.0mg
CuSO ₄ ·5H ₂ O.....	1.0mg
Pyridoxine.....	1.0mg
Biotin.....	0.5mg
CaCl ₂ ·2H ₂ O.....	0.5mg
Malachite Green.....	0.25mg
Middlebrook OADC enrichment.....	100.0mL
Glycerol.....	5.0mL

pH 6.6 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Middlebrook OADC Enrichment:**Composition per 100.0mL:**

Bovine albumin fraction V	5.0g
Glucose	2.0g
NaCl	0.85g
Oleic acid	0.05g
Catalase	4.0mg

Source: This enrichment is available as a prepared enrichment from BD Diagnostic Systems.

Preparation of Middlebrook OADC Enrichment: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add glycerol to 900.0mL of distilled/deionized water and add remaining components, except Middlebrook OADC enrichment. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 100.0mL of sterile Middlebrook OADC enrichment. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation, cultivation, and maintenance of *Mycobacterium* species, including *Mycobacterium tuberculosis*. Also used for determining the antimicrobial susceptibility of mycobacteria.

**Middlebrook 7H10 Agar
with Middlebrook OADC Enrichment and Hemin
(Hemin Medium for *Mycobacterium*)**

Composition per liter:

Agar	15.0g
Na ₂ HPO ₄	1.5g
KH ₂ PO ₄	1.5g
(NH ₄) ₂ SO ₄	0.5g
L-Glutamic acid	0.5g
Sodium citrate	0.4g
Ferric ammonium citrate	0.04g
MgSO ₄ ·7H ₂ O	0.025g
ZnSO ₄ ·7H ₂ O	1.0mg
CuSO ₄ ·5H ₂ O	1.0mg
Pyridoxine	1.0mg
Biotin	0.5mg
CaCl ₂ ·2H ₂ O	0.5mg
Malachite Green	0.25mg
Middlebrook OADC enrichment	100.0mL
Glycerol	5.0mL
Hemin solution	3.9mL

pH 6.6 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Middlebrook OADC Enrichment:**Composition per 100.0mL:**

Bovine albumin fraction V	5.0g
Glucose	2.0g
NaCl	0.85g
Oleic acid	0.05g
Catalase	4.0mg

Preparation of Middlebrook OADC Enrichment: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Hemin Solution:**Composition per 100.0mL:**

Hemin	1.0g
NaOH (1N solution)	20.0mL

Preparation of Hemin Solution: Add hemin to 20.0mL of 1N NaOH solution. Mix thoroughly. Bring volume to 100.0mL with distilled/deionized water.

Preparation of Medium: Add glycerol to 891.1mL of distilled/deionized water and add remaining components, except Middlebrook OADC enrichment. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 100.0mL of sterile Middlebrook OADC enrichment. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation, cultivation, and maintenance of *Mycobacterium* species, including *Mycobacterium tuberculosis*. For the cultivation and maintenance of *Mycobacterium haemophilum*. Also used for determining the antimicrobial susceptibility of mycobacteria.

**Middlebrook 7H10 Agar with Middlebrook OADC
Enrichment and Triton™ WR 1339**

Composition per liter:

Agar	15.0g
Na ₂ HPO ₄	1.5g
KH ₂ PO ₄	1.5g
(NH ₄) ₂ SO ₄	0.5g
L-Glutamic acid	0.5g
Sodium citrate	0.4g
Ferric ammonium citrate	0.04g
MgSO ₄ ·7H ₂ O	0.025g
ZnSO ₄ ·7H ₂ O	1.0mg
CuSO ₄ ·5H ₂ O	1.0mg
Pyridoxine	1.0mg
Biotin	0.5mg
CaCl ₂ ·2H ₂ O	0.5mg
Malachite Green	0.25mg
Middlebrook OADC enrichment with Triton™ WR 1339	100.0mL
Glycerol	5.0mL

pH 6.6 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Middlebrook OADC Enrichment with Triton™ WR 1339:**Composition per 100.0mL:**

Bovine albumin fraction V	5.0g
Glucose	2.0g
NaCl	0.85g
Triton™ WR 1339	0.25g
Oleic acid	0.05g
Catalase	4.0mg

Source: This enrichment is available as a prepared enrichment from BD Diagnostic Systems.

Preparation of Middlebrook OADC Enrichment with Triton™ WR 1339: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add glycerol to 900.0mL of distilled/deionized water and add remaining components, except Middlebrook OADC enrichment with Triton™ WR 1339. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–

121°C. Cool to 50°–55°C. Aseptically add 100.0mL of sterile Middlebrook OADC enrichment with Triton™ WR 1339. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation, cultivation, and maintenance of *Mycobacterium* species, including *Mycobacterium tuberculosis*. Also used for determining the antimicrobial susceptibility of mycobacteria.

Middlebrook 7H10 Agar with Streptomycin

Composition per liter:

Agar	15.0g
Na ₂ HPO ₄	1.5g
KH ₂ PO ₄	1.5g
(NH ₄) ₂ SO ₄	0.5g
L-Glutamic acid.....	0.5g
Sodium citrate.....	0.4g
Ferric ammonium citrate.....	0.04g
MgSO ₄ ·7H ₂ O.....	0.025g
ZnSO ₄ ·7H ₂ O.....	1.0mg
CuSO ₄ ·5H ₂ O.....	1.0mg
Pyridoxine.....	1.0mg
Biotin.....	0.5mg
CaCl ₂ ·2H ₂ O.....	0.5mg
Malachite Green.....	0.25mg
Glycerol.....	5.0mL
Streptomycin.....	100.0mg

pH 6.6 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add glycerol to 1.0L of distilled/deionized water and add remaining components. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add streptomycin. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation, cultivation, and maintenance of *Mycobacterium kansasii*.

Middlebrook 7H11 Agar, Selective

Composition per liter:

Agar	15.0g
Na ₂ HPO ₄	1.5g
KH ₂ PO ₄	1.5g
Pancreatic digest of casein.....	1.0g
(NH ₄) ₂ SO ₄	0.5g
L-Glutamic acid.....	0.5g
Sodium citrate.....	0.4g
MgSO ₄ ·7H ₂ O.....	0.05g
Ferric ammonium citrate.....	0.04g
Pyridoxine.....	1.0mg
ZnSO ₄ ·7H ₂ O.....	1.0mg
CuSO ₄ ·5H ₂ O.....	1.0mg
CaCl ₂ ·2H ₂ O.....	0.5mg
Malachite Green.....	0.25mg
D-Biotin.....	0.5µg
Middlebrook OADC enrichment.....	100.0mL
Antibiotic solution.....	10.0mL
Glycerol.....	5.0mL

pH 6.6 ± 0.2 at 25°C

Middlebrook OADC Enrichment:

Composition per 100.0mL:

Bovine albumin fraction V.....	5.0g
Glucose.....	2.0g
NaCl.....	0.85g
Oleic acid.....	0.05g
Catalase.....	4.0mg

Source: This enrichment is available as a prepared enrichment from BD Diagnostic Systems.

Preparation of Middlebrook OADC Enrichment: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Antibiotic Solution:

Composition per 10.0mL:

Carbenicillin.....	0.05mg
Trimethoprim lactate.....	0.02mg
Amphotericin B.....	0.01mg
Polymyxin B.....	200,000U

Preparation of Antibiotic Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add glycerol to 890.0mL of distilled/deionized water and add remaining components, except Middlebrook OADC enrichment and antibiotic solution. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 100.0mL of sterile Middlebrook OADC enrichment and 10.0mL of sterile antibiotic solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation and cultivation of pathogenic mycobacteria from specimens potentially contaminated with bacteria and fungi.

Middlebrook 7H11 Agar with Middlebrook ADC Enrichment (Mycobacteria 7H11 Agar with Middlebrook ADC Enrichment)

Composition per liter:

Agar	15.0g
Na ₂ HPO ₄	1.5g
KH ₂ PO ₄	1.5g
Pancreatic digest of casein.....	1.0g
(NH ₄) ₂ SO ₄	0.5g
L-Glutamic acid.....	0.5g
Sodium citrate.....	0.4g
MgSO ₄ ·7H ₂ O.....	0.05g
Ferric ammonium citrate.....	0.04g
Pyridoxine.....	1.0mg
Malachite Green.....	0.25mg
D-Biotin.....	0.5µg
Middlebrook ADC enrichment.....	100.0mL
Glycerol.....	5.0mL

pH 6.6 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Middlebrook ADC Enrichment:

Composition per 100.0mL:

Bovine albumin fraction V.....	5.0g
--------------------------------	------

Glucose	2.0g
Catalase	0.003g

Source: This enrichment is available as a prepared enrichment from BD Diagnostic Systems.

Preparation of Middlebrook ADC Enrichment: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add glycerol to 900.0mL of distilled/deionized water and add remaining components, except Middlebrook ADC enrichment. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 100.0mL of sterile Middlebrook ADC enrichment. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of drug-resistant (isoniazid [INH]) strains of *Mycobacterium tuberculosis*. For the cultivation of particularly fastidious strains of tubercle bacilli that occur following treatment of tuberculosis patients with secondary antitubercular drugs. Generally, these strains fail to grow on 7H10 medium.

**Middlebrook 7H11 Agar with
Middlebrook OADC Enrichment
(Mycobacteria 7H11 Agar with
Middlebrook OADC Enrichment)**

Middlebrook 7H12 Medium

Composition per 102.5mL:

Bovine serum albumin	0.5g
Casein hydrolysate	0.1g
Catalase	4800U
¹⁴ C-Palmitic acid	100μCi
Middlebrook 7H9 broth	100.0mL
Antibiotic solution	2.5mL

pH 6.8 ± 0.1 at 25°C

Middlebrook 7H9 Broth:

Composition per liter:

Na ₂ HPO ₄	2.5g
KH ₂ PO ₄	1.0g
Monosodium glutamate	0.5g
(NH ₄) ₂ SO ₄	0.5g
Sodium citrate	0.1g
MgSO ₄ ·7H ₂ O	0.05g
Ferric ammonium citrate	0.04g
CuSO ₄ ·5H ₂ O	1.0mg
Pyridoxine	1.0mg
ZnSO ₄ ·7H ₂ O	1.0mg
Biotin	0.5mg
CaCl ₂ ·2H ₂ O	0.5mg
Glycerol	2.0mL

Preparation of Middlebrook 7H9 Broth: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Antibiotic Solution:

Composition per 5.0mL:

Nalidixic acid	0.2g
Azlocillin	0.1g
Amphotericin B	0.05g

Trimethoprim	0.05g
Polymyxin B	500,000U

Preparation of Antibiotic Solution: Add components to distilled/deionized water and bring volume to 5.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: To 100.0mL of Middlebrook 7H9 broth, add remaining components, except antibiotic solution. Mix thoroughly. Filter sterilize. Aseptically distribute into bottles in 4.0mL volumes. Prior to inoculation, aseptically add 0.1mL of antibiotic solution to each bottle. Mix thoroughly.

Use: For the cultivation of *Mycobacterium* species from the blood of patients suspected of having mycobacteremia.

Middlebrook and Cohn 7H10 Agar

See: **Middlebrook 7H10 Agar with Middlebrook OADC Enrichment**

Middlebrook Medium (DSMZ Medium 645)

Composition per liter:

Agar	15.0g
Na ₂ HPO ₄	1.5g
KH ₂ PO ₄	1.5g
(NH ₄) ₂ SO ₄	0.5g
L-Glutamic acid	0.5g
Sodium citrate	0.4g
Ferric ammonium citrate	0.04g
MgSO ₄ ·7H ₂ O	0.025g
ZnSO ₄ ·7H ₂ O	1.0mg
CuSO ₄ ·5H ₂ O	1.0mg
Pyridoxine	1.0mg
Biotin	0.5mg
CaCl ₂ ·2H ₂ O	0.5mg
Malachite Green	0.25mg
Middlebrook OADC enrichment	100.0mL
Glycerol	5.0mL

pH 6.6 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Middlebrook OADC Enrichment:

Composition per 100.0mL:

Bovine albumin fraction V	5.0g
Glucose	2.0g
Catalase	0.003g
Distilled water	100.0mL

Source: This enrichment is available as a prepared enrichment from BD Diagnostic Systems.

Preparation of Middlebrook OADC Enrichment: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add glycerol to 900.0mL of distilled/deionized water and add remaining components, except Middlebrook OADC enrichment. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 100.0mL of sterile Middlebrook OADC enrichment. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation, cultivation, and maintenance of *Mycobacterium* species.

Middlebrook Medium with Mycobactin (DSMZ Medium 780)

Composition per liter:

Agar	15.0g
Na ₂ HPO ₄	1.5g
KH ₂ PO ₄	1.5g
(NH ₄) ₂ SO ₄	0.5g
L-Glutamic acid	0.5g
Sodium citrate	0.4g
Ferric ammonium citrate	0.04g
MgSO ₄ ·7H ₂ O	0.025g
Mycobactin J	2.0mg
ZnSO ₄ ·7H ₂ O	1.0mg
CuSO ₄ ·5H ₂ O	1.0mg
Pyridoxine	1.0mg
Biotin	0.5mg
CaCl ₂ ·2H ₂ O	0.5mg
Malachite Green	0.25mg
Middlebrook ADC enrichment	100.0mL
Glycerol	5.0mL

pH 6.6 ± 0.2 at 25°C

Source: Mycobactin J is available from Allied Laboratories, Inc.

Middlebrook ADC Enrichment:

Composition per 100.0mL:

Bovine albumin fraction V	5.0g
Glucose	2.0g
Catalase	0.003g
Distilled water	100.0mL

Source: This medium and enrichment is available from BD Diagnostic Systems.

Preparation of Middlebrook ADC Enrichment: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add glycerol to 900.0mL of distilled/deionized water and add remaining components, except Middlebrook ADC enrichment and mycobactin. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 100.0mL of sterile Middlebrook ADC enrichment and mycobactin. The mycobactin is dissolved in 2.0mL ethanol. Be sure to add all of the mycobactin; wash with additional 2.0mL ethanol if needed. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Mycobacterium avium* subsp. *paratuberculosis*.

Middlebrook OADC Enrichment (Middlebrook Oleic Albumin Dextrose Catalase Enrichment)

Composition per 100.0mL:

Bovine albumin fraction V	5.0g
Glucose	2.0g
NaCl	0.85g
Oleic acid	0.05g
Catalase	4.0mg

Source: This enrichment is available as a prepared enrichment from BD Diagnostic Systems.

Preparation of Enrichment: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Use: For use as a supplement to other Middlebrook media for the isolation, cultivation, and maintenance of *Mycobacterium* species. Also used as a supplement to other Middlebrook media for determining the antimicrobial susceptibility of mycobacteria.

**Middlebrook OADC Enrichment
with Triton™ WR 1339
(Middlebrook Oleic Albumin Dextrose Catalase
Enrichment with Triton™ WR 1339)**

Composition per 100.0mL:

Bovine albumin fraction V	5.0g
Glucose	2.0g
NaCl	0.85g
Triton™ WR 1339	0.25g
Oleic acid	0.05g
Catalase	4.0mg

Source: This enrichment is available as a prepared enrichment from BD Diagnostic Systems.

Preparation of Enrichment: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Use: For use as a supplement to other Middlebrook media for the isolation, cultivation, and maintenance of *Mycobacterium* species. Also used as a supplement to other Middlebrook media for determining the antimicrobial susceptibility of mycobacteria.

**MIL Medium
(Motility Indole Lysine Medium)**

Composition per liter:

Peptone.....	10.0g
Pancreatic digest of casein	10.0g
L-Lysine·HCl	10.0g
Yeast extract.....	3.0g
Agar	2.0g
Dextrose	1.0g
Ferric ammonium citrate.....	0.5g
Bromcresol Purple	0.02g
pH 6.6 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder and prepared medium from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring

to boiling. Distribute into tubes in 5.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and differentiation of members of the Enterobacteriaceae on the basis of motility, lysine decarboxylase activity, lysine deaminase activity, and indole production.

Milk Agar
See: Skim Milk Agar

Milk Agar

Composition per liter:

Agar	15.0g
Peptone	5.0g
Yeast extract.....	3.0g
Milk (solids or.....	1.0g
fresh milk)	10.0mL
pH 7.2 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of microorganisms from dairy and water samples.

Milk Agar

Composition per liter:

Mixture A.....	500.0mL
Mixture B.....	500.0mL

Mixture A:

Composition per 500.0mL:

Instant nonfat milk.....	100.0g
--------------------------	--------

Preparation of Mixture A: Add instant nonfat milk to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool rapidly to 55°C.

Mixture B:

Composition per 500.0mL:

Agar	15.0g
Nutrient broth.....	12.5g
NaCl.....	2.5g

Preparation of Mixture B: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool rapidly to 55°C.

Preparation of Medium: Aseptically combine cooled, sterile mixture A with cooled, sterile mixture B. Mix thoroughly. Pour into sterile Petri dishes in 20.0mL volumes.

Use: For the cultivation and estimation of the numbers of *Pseudomonas aeruginosa* in water by the membrane filter method.

Milk HiVeg Agar

Composition per liter:

Agar	15.0g
Plant peptone	5.0g

Yeast extract.....	3.0g
Milk solids	1.0g
pH 7.2 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of microorganisms from dairy and water samples.

Milk HiVeg Agar (Brown and Scott Modified)

Composition per liter:

Instant nonfat milk.....	100.0g
Agar	15.0g
Plant peptone.....	5.0g
NaCl.....	5.0g
Plant extract	1.5g
Yeast extract.....	1.5g
pH 7.2 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components, except milk, to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Separately add nonfat milk to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 5 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically combine the two sterile solutions. Mix thoroughly. Pour into sterile Petri dishes or leave in tubes.

Use: For the confirmation of *Pseudomonas aeruginosa* in swimming pool waters.

Milk Protein Hydrolysate Agar

See: [MPH Agar](#)

Milk Salt HiVeg Agar Base

Composition per liter:

NaCl.....	65.0g
Agar	15.0g
Plant extract	3.0g
Plant peptone.....	5.0g
pH 7.2 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of halophilic microorganisms.

Miller Luria Bertani HiVeg Agar (Luria Bertani HiVeg Agar, Miller)

Composition per liter:

Agar	15.0g
NaCl.....	10.0g

Plant peptones.....	10.0g
Yeast extract.....	5.0g
pH 7.0 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Bacillus subtilis* and *Escherichia coli*.

Miller Luria Bertani HiVeg Broth (Luria Bertani HiVeg Broth, Miller)

Composition per liter:

NaCl.....	10.0g
Plant peptones.....	10.0g
Yeast extract.....	5.0g
pH 7.0 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Bacillus subtilis* and *Escherichia coli*.

Mineral Agar

Composition per liter:

NH ₄ Cl	0.5g
Na ₂ HPO ₄ ·7H ₂ O.....	670.0mg
KH ₂ PO ₄	340.0mg
MgSO ₄ ·7H ₂ O.....	112.0mg
CaCl ₂	14.0mg
ZnSO ₄ ·7H ₂ O	5.0mg
Na ₂ MoO ₄ ·2H ₂ O	2.5mg
FeCl ₃	0.13mg
1,4-Dichlorobenzene.....	variable
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components, except 1,4-dichlorobenzene, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes. After inoculation, place Petri dishes or tubes into a desiccator. Add a few crystals of 1,4-dichlorobenzene to the desiccator.

Use: For the cultivation of dichlorobenzene-degrading *Pseudomonas* species.

Mineral Base E for Autotrophic Growth

Composition per liter:

Noble agar.....	15.0g
K ₂ HPO ₄	1.2g
KH ₂ PO ₄	0.624g
(NH ₄) ₂ SO ₄	0.5g
NaCl.....	0.1g
CaCl ₂ ·6H ₂ O solution.....	10.0mL
MgSO ₄ ·7H ₂ O solution.....	10.0mL

Mineral solution 1.0mL
p-Aminobenzoic acid solution 1.0mL

CaCl₂·6H₂O Solution:**Composition per liter:**

CaCl₂·6H₂O 5.0g

Preparation of CaCl₂·6H₂O Solution: Add CaCl₂·6H₂O to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

MgSO₄·7H₂O Solution:**Composition per liter:**

MgSO₄·7H₂O 20.0g

Preparation of MgSO₄·7H₂O Solution: Add MgSO₄·7H₂O to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

p*-Aminobenzoic Acid Solution:*Composition per 10.0 mL:**

p-Aminobenzoic acid 100.0mg

Preparation of *p*-Aminobenzoic Acid Solution: Add *p*-aminobenzoic acid to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Mineral Solution:**Composition per 1000.0mL:**

Disodium EDTA 1.58g
 ZnSO₄·7H₂O 0.7g
 MnSO₄·4H₂O 0.18g
 FeSO₄·7H₂O 0.16g
 CoCl₂·6H₂O 0.052g
 Na₂MoO₄·2H₂O 0.047g
 CuSO₄·5H₂O 0.047g

Preparation of Medium: Add components, except CaCl₂·6H₂O solution, MgSO₄·7H₂O solution, and *p*-aminobenzoic acid solution, to distilled/deionized water and bring volume to 979.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add in the following order: 10.0mL of sterile CaCl₂·6H₂O solution, 10.0mL of sterile MgSO₄·7H₂O solution, and 1.0mL of sterile *p*-aminobenzoic acid solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks. Incubate inoculated tubes in 50% CO₂.

Use: For the autotrophic cultivation and maintenance of *Pseudomonas thermocarboxydovorans*.

Mineral Base E for Heterotrophic Growth**Composition per liter:**

Noble agar 15.0g
 K₂HPO₄ 1.2g
 KH₂PO₄ 0.624g
 (NH₄)₂SO₄ 0.5g
 NaCl 0.1g
 CaCl₂·6H₂O solution 10.0mL
 MgSO₄·7H₂O solution 10.0mL
 Sodium pyruvate solution 10.0mL
 Mineral solution 1.0mL
p-Aminobenzoic acid solution 1.0mL

CaCl₂·6H₂O Solution:**Composition per liter:**

CaCl₂·6H₂O 5.0g

Preparation of CaCl₂·6H₂O Solution: Add CaCl₂·6H₂O to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

MgSO₄·7H₂O Solution:**Composition per liter:**

MgSO₄·7H₂O 20.0g

Preparation of MgSO₄·7H₂O Solution: Add MgSO₄·7H₂O to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Sodium Pyruvate Solution:**Composition per 10.0mL:**

Sodium pyruvate 2.0g

Preparation of Sodium Pyruvate Solution: Add sodium pyruvate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

p*-Aminobenzoic Acid Solution:*Composition per 10.0mL:**

p-Aminobenzoic acid 100.0mg

Preparation of *p*-Aminobenzoic Acid Solution: Add *p*-aminobenzoic acid to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Mineral Solution:**Composition per 100.0mL:**

Disodium EDTA 1.58g
 ZnSO₄·7H₂O 0.7g
 MnSO₄·4H₂O 0.18g
 FeSO₄·7H₂O 0.16g
 CoCl₂·6H₂O 0.052g
 Na₂MoO₄·2H₂O 0.047g
 CuSO₄·5H₂O 0.047g

Preparation of Medium: Add components, except CaCl₂·6H₂O solution, MgSO₄·7H₂O solution, sodium pyruvate solution, and *p*-aminobenzoic acid solution, to distilled/deionized water and bring volume to 969.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add in the following order: 10.0mL of the sterile CaCl₂·6H₂O solution, 10.0mL of the sterile MgSO₄·7H₂O solution, 10.0mL of sterile sodium pyruvate solution, and 1.0mL of sterile *p*-aminobenzoic acid solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the heterotrophic cultivation and maintenance of *Pseudomonas thermocarboxydovorans*.

Mineral Base Medium with Acetate

See: **MBM Acetate Medium**

Mineral Lactate Medium**Composition per liter:**

K₂HPO₄·3H₂O 1.13g
 NaCl 1.0g
 NH₄Cl 1.0g
 KH₂PO₄ 0.88g
 MgSO₄·7H₂O 0.5g
 Sodium lactate 0.5g
 CaCl₂·2H₂O 5.0mg
 Trace elements solution 1.2mL

pH 7.0 ± 0.2 at 25°C

Trace Elements Solution:**Composition** per liter:

Disodium EDTA	50.0g
ZnSO ₄ ·7H ₂ O	22.0g
CaCl ₂ ·2H ₂ O	5.54g
MnCl ₂ ·4H ₂ O	5.06g
FeSO ₄ ·7H ₂ O	5.0g
CoCl ₂ ·6H ₂ O	1.61g
CuSO ₄ ·5H ₂ O	1.57g
(NH ₄) ₆ Mo ₇ O ₂₄ ·4H ₂ O	1.1g

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0 with KOH.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Pseudomonas* species and *Spirillum* species.

Mineral Medium**Composition** per liter:

Yeast extract	2.0g
Mineral base 5X	200.0mL
Trace elements solution SL-6	1.0mL
Thiamine·HCl	3.0μg
Biotin	0.2μg

pH 6.8 ± 0.2 at 25°C

Mineral Base 5X:**Composition** per liter:

NaCl	5.0g
NH ₄ Cl	2.0g
KH ₂ PO ₄	1.35g
MgSO ₄ ·7H ₂ O	1.0g
K ₂ HPO ₄	0.87g
CaCl ₂	0.05g
FeCl ₃ ·6H ₂ O	1.25mg

Preparation of Mineral Base 5X: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Trace Elements Solution SL-6:**Composition** per liter:

H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
MnCl ₂ ·4H ₂ O	0.03g
Na ₂ MoO ₄ ·H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 3.4.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.8. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Arthrobacter* species.

Mineral Medium**Composition** per liter:

NH ₄ Cl	0.5g
Yeast extract	0.2g
1,4-Dichlorobenzene	0.1g
Na ₂ HPO ₄ ·7H ₂ O	670.0mg
KH ₂ PO ₄	340.0mg
MgSO ₄ ·7H ₂ O	112.0mg
CaCl ₂	14.0mg
ZnSO ₄ ·7H ₂ O	5.0mg
Na ₂ MoO ₄ ·2H ₂ O	2.5mg
FeCl ₃	0.13mg

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of dichlorobenzene-degrading *Pseudomonas* species.

**Mineral Medium
(DSMZ Medium 994)****Composition** per liter:

D-Glucose	3.6g
KH ₂ PO ₄	1.0g
NH ₄ Cl	0.6g
NaCl	0.4g
MgSO ₄ ·7H ₂ O	0.4g
CaCl ₂ ·2H ₂ O	0.5mg
Vitamin solution	5.0mL
Trace elements solution SL-4	1.0mL

pH 6.8 ± 0.2 at 25°C

Vitamin Solution:**Composition** per liter:

Thiamine·HCl·2H ₂ O	50.0mg
Riboflavin	50.0mg
Vitamin B ₁₂	50.0mg
D-Ca-pantothenate	50.0mg
<i>p</i> -Aminobenzoic acid	50.0mg
Lipoic acid	50.0mg
Nicotinic acid	25.0mg
Niconinamide	25.0mg
Biotin	20.0mg
Folic acid	20.0mg
Pyridoxine·HCl	10.0mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly for several hours. Filter sterilize.

Trace Elements Solution SL-4:**Composition** per liter:

EDTA	0.5g
FeSO ₄ ·7H ₂ O	0.2g
Trace elements solution SL-6	100.0mL

Trace Elements Solution SL-6:**Composition** per liter:

MnCl ₂ ·4H ₂ O	0.5g
H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
Na ₂ MoO ₄ ·2H ₂ O	0.03g

NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Trace Elements Solution SL-4: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except vitamin and trace elements solutions, to distilled/deionized water and bring volume to 994.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add sterile trace elements and vitamin solutions. Mix thoroughly. Adjust pH to 6.8. Aseptically dispense into tubes, flasks, or bottles.

Use: For the cultivation of *Stenotrophomonas maltophilia*.

Mineral Medium (DSMZ Medium 1007)

Composition per liter:

KNO ₃	0.25g
KH ₂ PO ₄	0.1g
MgSO ₄ ·7H ₂ O	0.05g
CaCl ₂ ·2H ₂ O	0.01g
Methanol	75.0mL
Trace elements solution	1.0mL

pH 5.7 ± 0.2 at 25°C

Trace Elements Solution:

Composition per liter:

EDTA	5.0g
FeSO ₄ ·7H ₂ O	2.0g
CoCl ₂ ·6H ₂ O	0.2g
CuCl ₂ ·2H ₂ O	0.1g
ZnSO ₄ ·7H ₂ O	0.1g
MnCl ₂ ·4H ₂ O	0.03g
H ₃ BO ₃	0.03g
Na ₂ MoO ₄ ·2H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except trace elements solution, to distilled/deionized water and bring volume to 999.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add sterile trace elements solution. Mix thoroughly. Adjust pH to 5.7. Aseptically dispense into tubes, flasks, or bottles. Note: Methane can be substituted for methanol for the growth of some strains.

Use: For the cultivation of *Methylocella tundrae* and *Methylocystis heyeri*.

Mineral Medium A

Composition per liter:

(NH ₄) ₂ SO ₄	1.0g
K ₂ HPO ₄	1.0g

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Saccharobacterium ovale*.

Mineral Medium with 3-Aminophenol (DSMZ Medium 465f)

Composition per liter:

Na ₂ HPO ₄ ·2H ₂ O	3.5g
KH ₂ PO ₄	1.0g
(NH ₄) ₂ SO ₄	0.5g
MgCl ₂ ·6H ₂ O	0.1g
Ca(NO ₃) ₂ ·4H ₂ O	0.05g
Aminophenol solution	10.0mL
Trace elements solution SL-4	1.0mL

pH 7.25 ± 0.2 at 25°C

Trace Elements Solution SL-4:

Composition per liter:

EDTA	0.5g
FeSO ₄ ·7H ₂ O	0.2g
Trace elements solution SL-6	100.0mL

Trace Elements Solution SL-6:

Composition per liter:

H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
MnCl ₂ ·4H ₂ O	0.03g
Na ₂ MoO ₄ ·H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 3.4.

Preparation of Trace Elements Solution SL-4: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Aminophenol Solution:

Composition per 100.0mL:

3-Aminophenol	1.0g
---------------------	------

Preparation of Aminophenol Solution: Add 100.0mL boiling water to 1.0g aminophenol crystals. Stir the solution to mix thoroughly. Cool to room temperature. Sterilize by filtration.

Preparation of Medium: Add components, except aminophenol solution, to 990.0mL distilled/deionized water. Adjust pH to 7.25. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL aminophenol solution. Mix thoroughly. Aseptically distribute to sterile tubes or flasks.

Use: For the cultivation of *Arthrobacter* sp. and other aminophenol-utilizing bacteria.

Mineral Medium with Antipyrin

Composition per liter:

Antipyrin	1.0g
Na ₂ HPO ₄ ·12H ₂ O	0.7g
(NH ₄) ₂ HPO ₄	0.7g
KH ₂ PO ₄	0.3g
(NH ₄) ₂ H ₂ PO ₄	0.3g
MgSO ₄ ·7H ₂ O	0.25g
(NH ₄) ₂ SO ₄	0.1g
CaCl ₂ ·6H ₂ O	0.05g
H ₃ BO ₃	0.5mg
MnSO ₄ ·4H ₂ O	0.4mg
ZnSO ₄ ·7H ₂ O	0.4mg
FeCl ₃ ·6H ₂ O	0.2mg

$(\text{NH}_4)_6\text{Mo}_7\text{O}_{24}\cdot 4\text{H}_2\text{O}$	0.2mg
KI	0.1mg
$\text{CuSO}_4\cdot 5\text{H}_2\text{O}$	0.04mg
Vitamin solution	20.0mL
pH 6.8–7.0 at 25°C	

Vitamin Solution:**Composition per 20.0mL:**

Biotin	0.1mg
Vitamin B ₁₂	0.03mg

Preparation of Vitamin Solution: Add biotin and vitamin B₁₂ to 20.0mL of distilled/deionized water. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except vitamin solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Adjust pH to 6.8–7.0 with 1N NaOH. Autoclave for 20 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add the sterile vitamin solution. Mix thoroughly. Distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Phenylobacterium immobile*.

Mineral Medium with Atrazine (DSMZ Medium 465i)

Composition per liter:

$\text{Na}_2\text{HPO}_4\cdot 2\text{H}_2\text{O}$	3.5g
Na-citrate	1.0g
KH_2PO_4	1.0g
$\text{MgCl}_2\cdot 6\text{H}_2\text{O}$	0.1g
CaCl_2	0.05g
Atrazine solution	10.0mL
Trace elements solution SL-4	1.0mL
pH 7.25 ± 0.2 at 25°C	

Trace Elements Solution SL-4:**Composition per liter:**

EDTA	0.5g
$\text{FeSO}_4\cdot 7\text{H}_2\text{O}$	0.2g
Trace elements solution SL-6	100.0mL

Preparation of Trace Elements Solution SL-4: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Trace Elements Solution SL-6:**Composition per liter:**

H_3BO_3	0.3g
$\text{CoCl}_2\cdot 6\text{H}_2\text{O}$	0.2g
$\text{ZnSO}_4\cdot 7\text{H}_2\text{O}$	0.1g
$\text{MnCl}_2\cdot 4\text{H}_2\text{O}$	0.03g
$\text{Na}_2\text{MoO}_4\cdot \text{H}_2\text{O}$	0.03g
$\text{NiCl}_2\cdot 6\text{H}_2\text{O}$	0.02g
$\text{CuCl}_2\cdot 2\text{H}_2\text{O}$	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 3.4.

Atrazine Solution:**Composition per 10.0mL:**

Atrazine	100mg
----------------	-------

Preparation of Atrazine Solution: Add (2-chloro-4(ethylamino)-6-(isopropylamino)-1,3,5-triazine) to 10.0mL methanol. Mix thoroughly. Shortly sonicate to reduce particle size.

Preparation of Medium: Add components, except atrazine solution, to 990.0mL distilled/deionized water. Adjust pH to 7.25. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add 10.0mL atrazine solution. Mix thoroughly. Aseptically distribute to sterile tubes or flasks.

Use: For the cultivation of *Pseudomonas* sp. and other atrazine-utilizing bacteria.

Mineral Medium with Benzylcyanide (DSMZ Medium 465d)

Composition per liter:

$\text{Na}_2\text{HPO}_4\cdot 2\text{H}_2\text{O}$	3.5g
KH_2PO_4	1.0g
$\text{MgCl}_2\cdot 6\text{H}_2\text{O}$	0.1g
$\text{Ca}(\text{NO}_3)_2\cdot 4\text{H}_2\text{O}$	0.05g
Benzylcyanide solution	10.0mL
Glucose solution	10.0mL
Trace elements solution SL-4	1.0mL
pH 7.25 ± 0.2 at 25°C	

Trace Elements Solution SL-4:**Composition per liter:**

EDTA	0.5g
$\text{FeSO}_4\cdot 7\text{H}_2\text{O}$	0.2g
Trace elements solution SL-6	100.0mL

Trace Elements Solution SL-6:**Composition per liter:**

H_3BO_3	0.3g
$\text{CoCl}_2\cdot 6\text{H}_2\text{O}$	0.2g
$\text{ZnSO}_4\cdot 7\text{H}_2\text{O}$	0.1g
$\text{MnCl}_2\cdot 4\text{H}_2\text{O}$	0.03g
$\text{Na}_2\text{MoO}_4\cdot \text{H}_2\text{O}$	0.03g
$\text{NiCl}_2\cdot 6\text{H}_2\text{O}$	0.02g
$\text{CuCl}_2\cdot 2\text{H}_2\text{O}$	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 3.4.

Preparation of Trace Elements Solution SL-4: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Glucose Solution:**Composition per 10.0mL:**

Glucose	1.8g
---------------	------

Preparation of Glucose Solution: Add glucose to 10.0mL distilled/deionized water. Mix thoroughly. Filter sterilize.

Benzylcyanide Solution:**Composition per 100.0mL:**

Benzylcyanide	0.12g
---------------------	-------

Preparation of Benzylcyanide Solution: Add benzylcyanide to 10.0mL distilled/deionized water. Mix thoroughly. Do not sterilize.

Preparation of Medium: Add components, except benzylcyanide solution and glucose solution, to 980.0mL distilled/deionized water. Adjust pH to 7.25. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add 10.0mL glucose solution and 10.0mL benzylcyanide solution to the medium. Mix thoroughly. Aseptically distribute the medium to sterile tubes or flasks.

Use: For the cultivation of *Pseudomonas* sp., *Rhodococcus erythropolis*, and other benzylcyanide-utilizing bacteria.

Mineral Medium, Brunner**Composition per liter:**

Na ₂ HPO ₄	2.44g
KH ₂ PO ₄	1.52g
(NH ₄) ₂ SO ₄	0.5g
MgSO ₄ ·7H ₂ O.....	0.2g
CaCl ₂ ·2H ₂ O.....	0.05g
Trace elements solution SL-4.....	10.0mL

pH 6.9 ± 0.2 at 25°C

Trace Elements Solution SL-4:**Composition per liter:**

EDTA.....	0.5g
FeSO ₄ ·7H ₂ O.....	0.2g
Trace elements solution SL-6.....	100.0mL

Trace Elements Solution SL-6:**Composition per liter:**

MnCl ₂ ·4H ₂ O.....	0.5g
H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O.....	0.2g
ZnSO ₄ ·7H ₂ O.....	0.1g
Na ₂ MoO ₄ ·2H ₂ O.....	0.03g
NiCl ₂ ·6H ₂ O.....	0.02g
CuCl ₂ ·2H ₂ O.....	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Trace Elements Solution SL-4: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Alcaligenes* species, *Bacillus benzoovorans*, *Bacillus gordonae*, *Comamonas acidovorans*, *Hyphomicrobium* species, *Moraxella* species, *Nocardia* species, *Pseudomonas* species, *Rhodococcus* species, *Sphingomonas* species, and *Xanthobacter* species.

Mineral Medium with Camphor**Composition per liter:**

Na ₂ HPO ₄ ·12H ₂ O.....	9.0g
Ferric ammonium citrate.....	5.0g
MnSO ₄ ·H ₂ O.....	3.0g
NH ₄ Cl.....	2.0g
KH ₂ PO ₄	1.5g
MgSO ₄ ·7H ₂ O.....	0.2g
ZnSO ₄ ·7H ₂ O.....	0.2g
Titriplex I.....	10.0mg
CoSO ₄	10.0μg
Camphor crumbs.....	variable

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components, except camphor crumbs, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Inoculate tubes or flasks and place in a dessicator jar in which crumbs of camphor will be evaporated.

Use: For the cultivation of bacteria that can utilize camphor as sole carbon source.

Mineral Medium for Chemolithotrophic Growth**Composition per 985.0mL:**

Agar.....	15.0g
Na ₂ HPO ₄ ·2H ₂ O.....	2.9g
KH ₂ PO ₄	2.3g
NH ₄ Cl.....	1.0g
MgSO ₄ ·7H ₂ O.....	0.5g
NaHCO ₃	0.5g
CaCl ₂ ·2H ₂ O.....	0.01g
Ferric ammonium citrate solution.....	20.0mL
Trace elements solution SL-6.....	5.0mL

pH 6.8 ± 0.2 at 25°C

Ferric Ammonium Citrate Solution:**Composition per 20.0mL:**

Ferric ammonium citrate.....	0.05g
------------------------------	-------

Preparation of Ferric Ammonium Citrate Solution: Add ferric ammonium citrate to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution SL-6:**Composition per liter:**

MnCl ₂ ·4H ₂ O.....	0.5g
H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O.....	0.2g
ZnSO ₄ ·7H ₂ O.....	0.1g
Na ₂ MoO ₄ ·2H ₂ O.....	0.03g
NiCl ₂ ·6H ₂ O.....	0.02g
CuCl ₂ ·2H ₂ O.....	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components, except ferric ammonium citrate solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 20.0mL of sterile ferric ammonium citrate solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the chemolithotrophic growth and cultivation of a wide variety of bacteria.

Mineral Medium with Chloridazon**Composition per liter:**

Chloridazon.....	1.0g
Na ₂ HPO ₄ ·12H ₂ O.....	0.7g
(NH ₄) ₂ HPO ₄	0.7g
KH ₂ PO ₄	0.3g
(NH ₄) ₂ H ₂ PO ₄	0.3g
MgSO ₄ ·7H ₂ O.....	0.25g
(NH ₄) ₂ SO ₄	0.1g
CaCl ₂ ·6H ₂ O.....	0.05g
H ₃ BO ₃	0.5mg
MnSO ₄ ·4H ₂ O.....	0.4mg
ZnSO ₄ ·7H ₂ O.....	0.4mg
FeCl ₃ ·6H ₂ O.....	0.2mg
(NH ₄) ₆ Mo ₇ O ₂₄ ·4H ₂ O.....	0.2mg
KI.....	0.1mg
CuSO ₄ ·5H ₂ O.....	0.04mg
Vitamin solution.....	20.0mL

pH 6.8–7.0 at 25°C

Vitamin Solution:**Composition per 20.0mL:**

Biotin	0.1mg
Vitamin B ₁₂	0.03mg

Preparation of Vitamin Solution: Add biotin and vitamin B₁₂ to 20.0mL of distilled/deionized water. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except vitamin solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Adjust pH to 6.8–7.0 with 1N NaOH. Autoclave for 20 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add the sterile vitamin solution. Mix thoroughly. Distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Phenylbacterium immobile*.

Mineral Medium with 2-Chlorobenzoate (DSMZ Medium 457a)

Composition per liter:

Na ₂ HPO ₄	2.44g
KH ₂ PO ₄	1.52g
(NH ₄) ₂ SO ₄	0.5g
MgSO ₄ ·7H ₂ O	0.2g
Tween 80	0.2g
CaCl ₂ ·2H ₂ O	0.05g
Trace elements solution SL-4	10.0mL
Chlorobenzoate solution	10.0mL

pH 7.4 ± 0.2 at 25°C

Trace Elements Solution SL-4:**Composition per liter:**

EDTA	0.5g
FeSO ₄ ·7H ₂ O	0.2g
Trace elements solution SL-6	100.0mL

Trace Elements Solution SL-6:**Composition per liter:**

H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
MnCl ₂ ·4H ₂ O	0.03g
Na ₂ MoO ₄ ·H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 3.4.

Preparation of Trace Elements Solution SL-4: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Chlorobenzoate Solution:**Composition per liter:**

2-Chlorobenzoic acid	78.3g
----------------------------	-------

Preparation of Chlorobenzoate Solution: Add 2-chlorobenzoic acid to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Slowly add concentrated NaOH to adjust pH to 7.4. Filter sterilize.

Preparation of Medium: Add components, except chlorobenzoate solution, to 990.0mL distilled/deionized water. Adjust pH to 7.4. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add 10.0mL chlorobenzoate solution. Mix thoroughly. Aseptically distribute to sterile tubes or flasks.

Use: For the cultivation of chlorobenzoate-utilizing bacteria.

Mineral Medium with Crude Oil**Composition per 100.0mL:**

K ₂ HPO ₄	0.45g
(NH ₄) ₂ SO ₄	0.1g
MgSO ₄ ·7H ₂ O	0.02g
NaCl	0.01g
CaCl ₂	0.01g
FeCl ₃	0.002g
Crude oil	5.0mL

pH 7.2 ± 0.3 at 25°C

Preparation of Medium: Add components, except crude oil, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 5.0mL of filter-sterilized crude oil. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Acinetobacter baumannii*.

Mineral Medium with Cyanuric Acid as Nitrogen Source (DSMZ Medium 465g)

Composition per liter:

Na ₂ HPO ₄ ·2H ₂ O	3.5g
KH ₂ PO ₄	1.0g
MgCl ₂ ·6H ₂ O	0.1g
Ca(NO ₃) ₂ ·4H ₂ O	0.05g
Cyanuric acid solution	10.0mL
Vitamin solution	10.0mL
Glycerol solution	10.0mL
Trace elements solution SL-4	1.0mL

pH 7.25 ± 0.2 at 25°C

Trace Elements Solution SL-4:**Composition per liter:**

EDTA	0.5g
FeSO ₄ ·7H ₂ O	0.2g
Trace elements solution SL-6	100.0mL

Trace Elements Solution SL-6:**Composition per liter:**

H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
MnCl ₂ ·4H ₂ O	0.03g
Na ₂ MoO ₄ ·H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 3.4.

Preparation of Trace Elements Solution SL-4: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Vitamin Solution:**Composition per liter:**

Vitamin B ₁₂	50.0mg
Pantothenic acid	50.0mg
Riboflavin	50.0mg
Alpha-lipoic acid	50.0mg
p-Aminobenzoic acid	50.0mg
Thiamine-HCl·2H ₂ O	50.0mg
Nicotinic acid	25.0mg

Nicotinamide.....	25.0mg
Biotin	20.0mg
Folic acid.....	20.0mg
Pyridoxamine-HCl.....	10.0mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Cyanuric Acid Solution:

Composition per 10.0mL:

Cyanuric acid.....	645.0mg
--------------------	---------

Preparation of Cyanuric Acid Solution: Add cyanuric acid to 10.0mL distilled/deionized water. Mix thoroughly. Adjust pH to 7.0. Filter sterilize.

Glycerol Solution:

Composition per 10.0mL:

Glycerol	5.5g
----------------	------

Preparation of Glycerol Solution: Add glycerol to distilled/deionized water. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except cyanuric acid solution, glycerol solution, and vitamin solution, to 1.0L distilled/deionized water. Adjust pH to 7.25. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL cyanuric acid solution, 10.0mL glycerol solution, and 10.0mL vitamin solution. Mix thoroughly. Aseptically distribute to sterile tubes or flasks.

Use: For the cultivation of *Gordonia rubripertincta*=*Rhodococcus rubropertinctus* and other cyanuric acid-utilizing bacteria.

Mineral Medium with Dichlorobenzoate

Composition per liter:

Na ₂ HPO ₄	2.78g
KH ₂ PO ₄	2.78g
(NH ₄) ₂ SO ₄	1.0g
Hutner's mineral base	20.0mL
2,4-Dichlorobenzoate solution.....	10.0mL

pH 6.8 ± 0.2 at 25°C

Hutner's Mineral Base:

Composition per liter:

MgSO ₄ ·7H ₂ O.....	29.7g
Nitritotriacetic acid.....	10.0g
CaCl ₂ ·2H ₂ O.....	3.34g
FeSO ₄ ·7H ₂ O.....	99.0mg
(NH ₄) ₂ MoO ₄	9.25mg
Metals "44".....	50.0mL

Preparation of Hutner's Mineral Base: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Readjust pH to 7.2 with H₂SO₄ or KOH. Add distilled/deionized water to 1.0L.

Metals "44":

Composition per 100.0mL:

ZnSO ₄ ·7H ₂ O.....	1.1g
FeSO ₄ ·7H ₂ O.....	0.5g
EDTA.....	0.25g
MnSO ₄ ·7H ₂ O.....	0.154g
CuSO ₄ ·5H ₂ O.....	0.04g
Co(NO ₃) ₂ ·6H ₂ O.....	0.025g
Na ₂ B ₄ O ₇ ·10H ₂ O.....	0.018g

Preparation of Metals "44": Add a few drops of H₂SO₄ to distilled/deionized water to inhibit precipitate formation. Add components to acidified distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

2,4-Dichlorobenzoate Solution:

Composition per 10.0mL:

2,4-Dichlorobenzoate.....	5.0mg
---------------------------	-------

Preparation of 2,4-Dichlorobenzoate Solution: Add 2,4-dichlorobenzoate to 10.0mL of distilled/deionized water. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except 2,4-dichlorobenzoate solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Adjust pH to 6.8 with 1N KOH. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add the sterile 2,4-dichlorobenzoate solution. Mix thoroughly. Distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Actinomyces viscosus*.

Mineral Medium with Dichloromethane (DSMZ Medium 465c)

Composition per liter:

Na ₂ HPO ₄ ·2H ₂ O.....	3.5g
KH ₂ PO ₄	1.0g
(NH ₄) ₂ SO ₄	0.5g
MgCl ₂ ·6H ₂ O.....	0.1g
Ca(NO ₃) ₂ ·4H ₂ O.....	0.05g
Bromthymol blue.....	50.0mg
Methanol.....	10.0mL
Trace elements solution SL-4.....	1.0mL
Dichloromethane.....	variable

pH 7.25 ± 0.2 at 25°C

Trace Elements Solution SL-4:

Composition per liter:

EDTA.....	0.5g
FeSO ₄ ·7H ₂ O.....	0.2g
Trace elements solution SL-6.....	100.0mL

Trace Elements Solution SL-6:

Composition per liter:

H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O.....	0.2g
ZnSO ₄ ·7H ₂ O.....	0.1g
MnCl ₂ ·4H ₂ O.....	0.03g
Na ₂ MoO ₄ ·H ₂ O.....	0.03g
NiCl ₂ ·6H ₂ O.....	0.02g
CuCl ₂ ·2H ₂ O.....	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 3.4.

Preparation of Trace Elements Solution SL-4: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components, except methanol and dichloromethane, to 1.0L distilled/deionized water. Adjust pH to 7.25. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Inoculate the medium and supply methanol via incubation atmosphere (up to 10.0mL methanol per liter medium). Subsequently feed small amounts of dichloromethane (toxic to bacteria at 2 mmol per liter or less) via incubation atmosphere. Readjust pH of the culture with sterile 1M NaOH as necessary.

Use: For the cultivation of *Methylophilus leisingeri*, *Rhizobium radiobacter*, and other dichloromethane-utilizing bacteria.

Mineral Medium with 2,4-Dichlorophenoxyacetic Acid

Composition per liter:

Na ₂ HPO ₄ ·12H ₂ O	9.0g
Ferric ammonium citrate	5.0g
MnSO ₄ ·H ₂ O	3.0g
NH ₄ Cl	2.0g
KH ₂ PO ₄	1.5g
MgSO ₄ ·7H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.2g
Titriplex I	10.0mg
CoSO ₄	10.0μg
2,4-Dichlorophenoxyacetic acid solution	10.0mL
pH 7.0 ± 0.2 at 25°C	

2,4-Dichlorophenoxyacetic Acid Solution:

Composition per 10.0mL:

2,4-Dichlorophenoxyacetic acid	0.5g
--------------------------------	------

Preparation of 2,4-Dichlorophenoxyacetic Acid Solution:

Add 2,4-dichlorophenoxyacetic acid to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except 2,4-dichlorophenoxyacetic acid solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL of sterile 2,4-dichlorophenoxyacetic acid solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of bacteria that can utilize 2,4-dichlorophenoxyacetic acid as sole carbon source.

Mineral Medium with 2,4-Dichlorotoluene

Composition per liter:

NH ₄ Cl	0.5g
Yeast extract	0.1g
2,4-Dichlorotoluene	0.1g
Na ₂ HPO ₄ ·7H ₂ O	670.0mg
KH ₂ PO ₄	340.0mg
MgSO ₄ ·7H ₂ O	112.0mg
CaCl ₂	14.0mg
ZnSO ₄ ·7H ₂ O	5.0mg
Na ₂ MoO ₄ ·2H ₂ O	2.5mg
FeCl ₃	0.13mg
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of 2,4-dichlorotoluene-degrading *Pseudomonas* species.

Mineral Medium with Glucose

Composition per liter:

Agar	20.0g
Na ₂ HPO ₄	4.8g
KH ₂ PO ₄	4.4g
NH ₄ Cl	1.0g
MgSO ₄ ·7H ₂ O	0.5g

Solution B	10.0mL
Solution A	5.0mL
pH 6.8 ± 0.2 at 25°C	

Solution A:

Composition per 100.0mL:

Ferric ammonium citrate	1.0g
CaCl ₂	0.1g

Preparation of Solution A: Add ferric ammonium citrate and CaCl₂ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Solution B:

Composition per 100.0mL:

Glucose	10.0g
---------	-------

Preparation of Solution B: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except solution A and solution B, to distilled/deionized water and bring volume to 985.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add sterile solution A and sterile solution B. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Alcaligenes latus*.

Mineral Medium H-3

Composition per liter:

Agar (if needed)	20.0g
Na ₂ HPO ₄ ·2H ₂ O	2.9g
KH ₂ PO ₄	2.3g
NH ₄ Cl	1.0g
MgSO ₄ ·7H ₂ O	0.5g
NaHCO ₃	0.5g
CaCl ₂ ·2H ₂ O	0.01g
Ferric ammonium citrate solution	20.0mL
Trace elements solution	5.0mL

Ferric Ammonium Citrate Solution:

Composition per 20.0mL:

Ferric ammonium citrate	0.05g
-------------------------	-------

Preparation of Ferric Ammonium Citrate Solution: Add ferric ammonium citrate to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution:

Composition per liter:

H ₃ BO ₃	0.3g
CoCl ₃ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
MnCl ₂ ·4H ₂ O	0.03g
Na ₂ MoO ₄ ·2H ₂ O	0.03g
CuCl ₂ ·2H ₂ O	0.01g
NiCl ₂ ·6H ₂ O	0.002g

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components, except ferric ammonium citrate solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 20.0mL of sterile ferric ammonium citrate solution. Mix thorough-

ly. Pour into sterile Petri dishes or distribute into sterile tubes. Incubate cultures in 60% H₂ + 28% N₂ + 10% CO₂ + 2% O₂.

Use: For the chemolithotrophic growth of *Alcaligenes eutrophus*.

Mineral Medium for Hydrogen Bacteria

Composition per liter:

Agar	15.0g
Na ₂ HPO ₄ ·2H ₂ O	2.9g
KH ₂ PO ₄	2.3g
NH ₄ Cl	1.0g
MgSO ₄ ·7H ₂ O	0.5g
NaHCO ₃	0.5g
CaCl ₂ ·2H ₂ O	0.01g
Ferric ammonium citrate solution	20.0mL

Ferric Ammonium Citrate Solution:

Composition per 20.0mL:

Ferric ammonium citrate	0.05g
-------------------------------	-------

Preparation of Ferric Ammonium Citrate Solution: Add ferric ammonium citrate to 20.0mL of distilled/deionized water. Filter sterilize.

Preparation of Medium: Add components, except ferric ammonium citrate solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add the sterile ferric ammonium citrate solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes. Incubate inoculated medium at 30°C under 60% H₂ + 25% N₂ + 10% CO₂ + 5% O₂.

Use: For the cultivation and maintenance of *Alcaligenes eutrophus*, *Hydrogenophaga flava*, and *Hydrogenophaga pseudoflava*.

Mineral Medium with 2-Hydroxybiphenyl (DSMZ Medium 465a)

Composition per 1010.0mL:

Na ₂ HPO ₄ ·2H ₂ O	3.5g
KH ₂ PO ₄	1.0g
(NH ₄) ₂ SO ₄	0.5g
MgCl ₂ ·6H ₂ O	0.1g
Ca(NO ₃) ₂ ·4H ₂ O	0.05g
Hydroxybiphenyl solution	10.0mL
Trace elements solution SL-4	1.0mL
pH 7.25 ± 0.2 at 25°C	

Trace Elements Solution SL-4:

Composition per liter:

EDTA	0.5g
FeSO ₄ ·7H ₂ O	0.2g
Trace elements solution SL-6	100.0mL

Trace Elements Solution SL-6:

Composition per liter:

H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
MnCl ₂ ·4H ₂ O	0.03g
Na ₂ MoO ₄ ·H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 3.4.

Preparation of Trace Elements Solution SL-4: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Hydroxybiphenyl Solution:

Composition per 100.0mL:

2-Hydroxybiphenyl	5.0g
-------------------------	------

Preparation of Hydroxybiphenyl Solution: Add 2-hydroxybiphenyl to 100.0mL ethanol. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except hydroxybiphenyl solution, to 1.0L distilled/deionized water. Adjust pH to 7.25. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add hydroxybiphenyl solution to a sterile culture vessel so that the final concentration of 2-hydroxybiphenyl will be 0.5g/L medium. Let the ethanol evaporate under sterile conditions. Aseptically add the liquid medium to the culture vessel to achieve the appropriate concentration of biphenyl.

Use: For the cultivation of *Pseudomonas* sp. and other hydroxybiphenyl-utilizing bacteria.

Mineral Medium M9

Composition per 1013.0mL:

Proline	20.0mg
10X M9 salts	100.0mL
Glucose solution	10.0mL
CaCl ₂ ·2H ₂ O solution	1.0mL
MgSO ₄ solution	1.0mL
Thiamine-HCl solution	1.0mL

pH 7.4 ± 0.2 at 25°C

10X M9 Salts:

Composition per liter:

Na ₂ HPO ₄	60.0g
KH ₂ PO ₄	30.0g
NH ₄ Cl	10.0g
NaCl	5.0g

Preparation of 10X M9 Salts: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.4.

Glucose Solution:

Composition per 100.0mL:

Glucose	20.0g
---------------	-------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

CaCl₂·2H₂O Solution:

Composition per 100.0mL:

CaCl ₂ ·2H ₂ O	1.47g
--	-------

Preparation of CaCl₂·2H₂O Solution: Add CaCl₂·2H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

MgSO₄ Solution:

Composition per 100.0mL:

MgSO ₄	12.04g
-------------------------	--------

Preparation of MgSO₄ Solution: Add MgSO₄ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Thiamine-HCl Solution:

Composition per 10.0mL:

Thiamine-HCl	3.37g
--------------------	-------

Preparation of Thiamine-HCl Solution: Add thiamine-HCl to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add proline and 10X M9 salts to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL of sterile glucose solution, 1.0mL of sterile CaCl₂·2H₂O solution, 1.0mL of sterile MgSO₄ solution, and 1.0mL of sterile thiamine-HCl solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Escherichia coli* JM strains.

Mineral Medium with 6-Methylnicotinate (DSMZ Medium 465h)

Composition per liter:

Na ₂ HPO ₄ ·2H ₂ O	3.5g
KH ₂ PO ₄	1.0g
(NH ₄) ₂ SO ₄	0.5g
MgCl ₂ ·6H ₂ O	0.1g
Ca(NO ₃) ₂ ·4H ₂ O	0.05g
Nicotinate solution	10.0mL
Selenite-tungstate solution	1.0mL
Vitamin solution	1.0mL
Trace elements solution SL-4	1.0mL
pH 7.25 ± 0.2 at 25°C	

Trace Elements Solution SL-4:

Composition per liter:

EDTA	0.5g
FeSO ₄ ·7H ₂ O	0.2g
Trace elements solution SL-6	100.0mL

Trace Elements Solution SL-6:

Composition per liter:

H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
MnCl ₂ ·4H ₂ O	0.03g
Na ₂ MoO ₄ ·H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 3.4.

Preparation of Trace Elements Solution SL-4: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Vitamin Solution:

Composition per liter:

Vitamin B ₁₂	50.0mg
Pantothenic acid	50.0mg
Riboflavin	50.0mg
Alpha-lipoic acid	50.0mg
p-Aminobenzoic acid	50.0mg
Thiamine-HCl·2H ₂ O	50.0mg
Nicotinic acid	25.0mg
Nicotinamide	25.0mg
Biotin	20.0mg
Folic acid	20.0mg
Pyridoxamine-HCl	10.0mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Selenite-Tungstate Solution

Composition per liter:

NaOH	0.5g
Na ₂ WO ₄ ·2H ₂ O	4.0mg
Na ₂ SeO ₃ ·5H ₂ O	3.0mg

Preparation of Selenite-Tungstate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Nicotinate Solution:

Composition per 10.0mL:

6-Methylnicotinate	5.0g
--------------------	------

Preparation of Nicotinate Solution: Add nicotinate to 10.0mL distilled/deionized water. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Preparation of Medium: Add components, except nicotinate solution, selenite-tungstate solution, and vitamin solution, to 989.0mL distilled/deionized water. Adjust pH to 7.25. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add 10.0mL nicotinate solution, 1.0mL selenite-tungstate solution, and 1.0mL vitamin solution. Mix thoroughly. Aseptically distribute to sterile tubes or flasks.

Use: For the cultivation of *Paenibacillus* sp. and other nicotinate-utilizing bacteria.

Mineral Medium (N₄)

Composition per liter:

HEPES buffer	11.92g
NaCl	0.5g
(NH ₄) ₂ SO ₄	0.5g
KH ₂ PO ₄	0.2g
MgSO ₄ ·7H ₂ O	0.04g
CaCl ₂ ·2H ₂ O	0.02g
FeSO ₄ /EDTA solution	10.0mL
Phenol Red (0.04%)	1.0mL

FeSO₄/EDTA Solution:

Composition per 100.0mL:

EDTA	0.019g
FeSO ₄ ·7H ₂ O	0.018g

Preparation of FeSO₄/EDTA Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Bacillus* species.

Mineral Medium, Nagel and Andreesen (DSMZ Medium 461)

Composition per liter:

MgSO ₄ ·7H ₂ O	0.5g
NH ₄ Cl	0.3g
NaCl	0.05g
CaCl ₂	0.01g
MnSO ₄	0.01g
Phosphate solution	50.0mL

Vitamin solution.....	5.0mL
Trace elements solution SL-10	1.0mL
pH 7.5 ± 0.2 at 25°C	

Phosphate Solution:**Composition per 50.0mL:**

Na ₂ HPO ₄ ·2H ₂ O.....	1.45g
KH ₂ PO ₄	0.25g

Preparation of Phosphate Solution: Add components to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Adjust pH to 7.5. Autoclave for 15 min at 15 psi pressure–121°C.

Vitamin Solution:**Composition per liter:**

Folic acid.....	20.0g
α-Lipoic acid.....	50.0mg
<i>p</i> -Aminobenzoic acid.....	50.0mg
Pantothenic acid.....	50.0mg
Riboflavin.....	50.0mg
Thamine-HCl.....	50.0mg
Vitamin B ₁₂	50.0mg
Nicotinamide.....	25.0mg
Biotin.....	20.0mg
Nicotinic acid.....	20.0mg
Pyridoxamine-HCl.....	10.0mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Stir for 2 hr. Filter sterilize.

Trace Elements Solution SL-10:**Composition per liter:**

FeCl ₂ ·4H ₂ O.....	1.5g
CoCl ₂ ·6H ₂ O.....	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	36.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O.....	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except phosphate solution, vitamin solution, and trace elements solution SL-10, to distilled/deionized water and bring volume to 944.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 50.0mL of sterile phosphate solution, 5.0mL of sterile vitamin solution, and 1.0mL of sterile trace elements solution SL-10. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Arthrobacter* species, *Mycobacterium* species, *Paracoccus denitrificans*, *Pseudomonas putida*, and *Rhodococcus* species.

Mineral Medium with Naphthalene**Composition per liter:**

Na ₂ HPO ₄ ·12H ₂ O.....	9.0g
Ferric ammonium citrate.....	5.0g
MnSO ₄ ·H ₂ O.....	3.0g
NH ₄ Cl.....	2.0g
KH ₂ PO ₄	1.5g

MgSO ₄ ·7H ₂ O.....	0.2g
ZnSO ₄ ·7H ₂ O.....	0.2g
Titriplex I.....	10.0mg
CoSO ₄	10.0μg
Naphthalene crumbs.....	variable
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components, except naphthalene crumbs, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Inoculate tubes or flasks and place in a dessicator jar in which crumbs of naphthalene will be evaporated.

Use: For the cultivation of bacteria that can utilize naphthalene as sole carbon source.

Mineral Medium with Nicotinic Acid**Composition per liter:**

Na ₂ HPO ₄ ·12H ₂ O.....	9.0g
Ferric ammonium citrate.....	5.0g
MnSO ₄ ·H ₂ O.....	3.0g
NH ₄ Cl.....	2.0g
KH ₂ PO ₄	1.5g
MgSO ₄ ·7H ₂ O.....	0.2g
ZnSO ₄ ·7H ₂ O.....	0.2g
Titriplex I.....	10.0mg
CoSO ₄	10.0μg
Nicotinic acid solution.....	10.0mL
pH 7.0 ± 0.2 at 25°C	

Nicotinic Acid Solution:**Composition per 10.0mL:**

Nicotinic acid.....	0.5g
---------------------	------

Preparation of Nicotinic Acid Solution: Add nicotinic acid to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except nicotinic acid solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL of sterile nicotinic acid solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of bacteria that can utilize nicotinic acid as sole carbon source.

**Mineral Medium with *o*-Nitrophenol
(DSMZ Medium 461c)****Composition per liter:**

MgSO ₄ ·7H ₂ O.....	0.5g
NH ₄ Cl.....	0.3g
NaCl.....	0.05g
CaCl ₂	0.01g
MnSO ₄	0.01g
<i>o</i> -Nitrophenol solution.....	200.0mL
Phosphate solution.....	100.0mL
Trace elements solution SL-10.....	1.0mL
pH 7.2 ± 0.2 at 25°C	

Trace Elements Solution SL-10:**Composition per liter:**

FeCl ₂ ·4H ₂ O.....	1.5g
H ₃ BO ₃	300.0mg
CoCl ₂ ·6H ₂ O.....	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg

ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	36.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
CuCl ₂ ·2H ₂ O.....	2.0mg
HCl (25% solution).....	7.7mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Phosphate Solution:

Composition per 100.0mL:

Na ₂ HPO ₄ ·2H ₂ O.....	1.45g
KH ₂ PO ₄	0.25g

Preparation of Phosphate Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

o-Nitrophenol Solution:

Composition per liter:

<i>o</i> -Nitrophenol.....	0.5g
----------------------------	------

Preparation of *o*-Nitrophenol Solution: Dissolve *o*-nitrophenol in phosphate buffer (50 mM, pH 7.5) and bring volume to 1.0L. Sterilize by filtration.

Preparation of Medium: Add components, except phosphate solution and *o*-nitrophenol solution, to distilled/deionized water and bring volume to 700.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add 100.0mL phosphate solution and 200.0mL *o*-nitrophenol solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *o*-nitrophenol-utilizing bacteria.

Mineral Medium with PCP (DSMZ Medium 465b)

Composition per liter:

Na ₂ HPO ₄ ·2H ₂ O.....	3.5g
KH ₂ PO ₄	1.0g
(NH ₄) ₂ SO ₄	0.5g
MgCl ₂ ·6H ₂ O.....	0.1g
Ca(NO ₃) ₂ ·4H ₂ O.....	0.05g
Pentachlorophenol solution.....	100.0mL
Trace elements solution SL-4.....	1.0mL
pH 7.25 ± 0.2 at 25°C	

Trace Elements Solution SL-4:

Composition per liter:

EDTA.....	0.5g
FeSO ₄ ·7H ₂ O.....	0.2g
Trace elements solution SL-6.....	100.0mL

Trace Elements Solution SL-6:

Composition per liter:

H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O.....	0.2g
ZnSO ₄ ·7H ₂ O.....	0.1g
MnCl ₂ ·4H ₂ O.....	0.03g
Na ₂ MoO ₄ ·H ₂ O.....	0.03g
NiCl ₂ ·6H ₂ O.....	0.02g
CuCl ₂ ·2H ₂ O.....	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 3.4.

Preparation of Trace Elements Solution SL-4: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Pentachlorophenol Solution:

Composition per liter:

Pentachlorophenol.....	1.0g
------------------------	------

Preparation of Pentachlorophenol Solution: Add pentachlorophenol to 1.0L 0.1M NaOH. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except pentachlorophenol solution, to 900.0mL distilled/deionized water. Adjust pH to 7.25. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 100.0mL sterile pentachlorophenol solution. Mix thoroughly. Aseptically distribute to sterile tubes or flasks.

Use: For the cultivation of *Spingobium chlorophenicum*=*Spingomonas chlorophenolica* and other pentachlorophenol-utilizing bacteria.

Mineral Medium, pH 7.25

Composition per liter:

Na ₂ HPO ₄ ·2H ₂ O.....	3.5g
KH ₂ PO ₄	1.0g
(NH ₄) ₂ SO ₄	0.5g
MgCl ₂ ·6H ₂ O.....	0.1g
Ca(NO ₃) ₂ ·4H ₂ O.....	0.05g
Trace elements solution SL-4.....	1.0mL
pH 7.25 ± 0.2 at 25°C	

Trace Elements Solution SL-4:

Composition per liter:

EDTA.....	0.5g
FeSO ₄ ·7H ₂ O.....	0.2g
Trace elements solution SL-6.....	100.0mL

Trace Elements Solution SL-6:

Composition per liter:

MnCl ₂ ·4H ₂ O.....	0.5g
H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O.....	0.2g
ZnSO ₄ ·7H ₂ O.....	0.1g
Na ₂ MoO ₄ ·2H ₂ O.....	0.03g
NiCl ₂ ·6H ₂ O.....	0.02g
CuCl ₂ ·2H ₂ O.....	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Trace Elements Solution SL-4: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Azotobacter* species, *Pseudomonas* species, and *Spingomonas* species.

Mineral Medium with Phenol

Composition per liter:

Phenol.....	1.0g
K ₂ HPO ₄	1.0g
NH ₄ NO ₃	1.0g
(NH ₄) ₂ SO ₄	0.5g

MgSO ₄	0.5g
KH ₂ PO ₄	0.5g
NaCl.....	0.5g
CaCl ₂	0.02g
FeSO ₄	0.02g
Wolfe's mineral solution	10.0mL

Wolfe's Mineral Solution:**Composition per liter:**

MgSO ₄ ·7H ₂ O	3.0g
Nitritotriacetic acid	1.5g
NaCl.....	1.0g
MnSO ₄ ·H ₂ O	0.5g
FeSO ₄ ·7H ₂ O.....	0.1g
CoCl ₂ ·6H ₂ O	0.1g
CaCl ₂	0.1g
ZnSO ₄ ·7H ₂ O	0.1g
CuSO ₄ ·5H ₂ O	0.01g
AlK(SO ₄) ₂ ·12H ₂ O.....	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g

Preparation of Wolfe's Mineral Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L.

Preparation of Medium: Add components, except phenol, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add the phenol. Mix thoroughly. Distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Pseudomonas putida*.

Mineral Medium with Phenylacetate**Composition per liter:**

Na ₂ HPO ₄ ·12H ₂ O.....	9.0g
Ferric ammonium citrate.....	5.0g
MnSO ₄ ·H ₂ O	3.0g
NH ₄ Cl	2.0g
KH ₂ PO ₄	1.5g
MgSO ₄ ·7H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.2g
Titriplex I	10.0mg
CoSO ₄	10.0μg
Phenylacetic acid solution	10.0mL

pH 7.0 ± 0.2 at 25°C

Phenylacetic Acid Solution:**Composition per 10.0mL:**

Phenylacetic acid	0.5g
-------------------------	------

Preparation of Phenylacetic Acid Solution: Add phenylacetic acid to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except phenylacetic acid solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL of sterile phenylacetic acid solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of bacteria that can utilize phenylacetic acid as sole carbon source.

**Mineral Medium with Pyrrolic Acid
(DSMZ Medium 461b)****Composition per liter:**

MgSO ₄ ·7H ₂ O.....	0.5g
NH ₄ Cl	0.3g
NaCl.....	0.05g
CaCl ₂	0.01g
MnSO ₄	0.01g
Phosphate solution.....	100.0mL
Pyrrolic acid solution.....	10.0mL
Trace elements solution SL-10	1.0mL

pH 7.2 ± 0.2 at 25°C

Trace Elements Solution SL-10:**Composition per liter:**

FeCl ₂ ·4H ₂ O.....	1.5g
H ₃ BO ₃	300.0mg
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	36.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
CuCl ₂ ·2H ₂ O.....	2.0mg
HCl (25% solution).....	7.7mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Phosphate Solution:**Composition per 100.0mL:**

Na ₂ HPO ₄ ·2H ₂ O.....	1.45g
KH ₂ PO ₄	0.25g

Preparation of Phosphate Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Pyrrolic Acid Solution:**Composition per liter:**

Pyrrolic acid.....	10.0g
--------------------	-------

Preparation of Pyrrolic Acid Solution: Dissolve pyrrolic acid in phosphate buffer (50 mM, pH 7.5) and bring volume to 1.0L. Sterilize by filtration.

Preparation of Medium: Add components, except phosphate solution and pyrrolic acid solution, to distilled/deionized water and bring volume to 890.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add 100.0mL phosphate solution and 10.0mL pyrrolic acid solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of pyrrolic acid-utilizing bacteria.

**Mineral Medium with Quinoline
(DSMZ Medium 461a)****Composition per liter:**

MgSO ₄ ·7H ₂ O.....	0.5g
NH ₄ Cl	0.3g
NaCl.....	0.05g
CaCl ₂	0.01g
MnSO ₄	0.01g

Phosphate solution	100.0mL
Quinoline emulsion	100.0mL
Vitamin solution	5.0mL
Trace elements solution SL-10	1.0mL
pH 7.2 ± 0.2 at 25°C	

Trace Elements Solution SL-10:**Composition per liter:**

FeCl ₂ ·4H ₂ O	1.5g
H ₃ BO ₃	300.0mg
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	7.7mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Vitamin Solution:**Composition per liter:**

Vitamin B ₁₂	50.0mg
Pantothenic acid	50.0mg
Riboflavin	50.0mg
Alpha-lipoic acid	50.0mg
<i>p</i> -Aminobenzoic acid	50.0mg
Thiamine-HCl·2H ₂ O	50.0mg
Nicotinic acid	25.0mg
Nicotinamide	25.0mg
Biotin	20.0mg
Folic acid	20.0mg
Pyridoxamine-HCl	10.0mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Phosphate Solution:**Composition per 100.0mL:**

Na ₂ HPO ₄ ·2H ₂ O	1.45g
KH ₂ PO ₄	0.25g

Preparation of Phosphate Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Quinoline Emulsion:**Composition per liter:**

Quinoline	3.0g
-----------------	------

Preparation of Quinoline Emulsion: Prepare an emulsion of quinoline in 50 mM phosphate buffer by stirring or ultrasonication. Add quinoline acid to phosphate buffer (50 mM, pH 7.5) and bring volume to 1.0L. Stir vigorously or sonicate to form emulsion. Autoclave for 15 min at 15 psi pressure–121°C in a gas tight vessel. Cool to room temperature.

Preparation of Medium: Add components, except phosphate solution, vitamin solution, and quinoline emulsion to distilled/deionized water and bring volume to 795.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically

add 100.0mL phosphate solution, 5.0mL vitamin solution, and 100.0mL quinoline emulsion. Mix thoroughly. Aseptically distribute into sterile tubes or flasks

Use: For the cultivation of *Rhodococcus rhodochrous* (*Rhodococcus roseus*) and other quinoline-utilizing bacteria.

Mineral Medium S with 1% Sucrose**Composition per liter:**

Sucrose	10.0g
NH ₄ H ₂ PO ₄	1.5g
MgSO ₄ ·7H ₂ O	0.2g
CaCl ₂	0.1g
KCl	0.1g
FeCl ₃	0.005g
NaOH (1N solution)	10.0mL

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Saccharobacterium acuminatum*.

Mineral Medium with Salicylate**Composition per liter:**

Na ₂ HPO ₄ ·12H ₂ O	9.0g
Ferric ammonium citrate	5.0g
MnSO ₄ ·H ₂ O	3.0g
NH ₄ Cl	2.0g
KH ₂ PO ₄	1.5g
MgSO ₄ ·7H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.2g
Titriplex I	10.0mg
CoSO ₄	10.0μg
Salicylic acid solution	10.0mL

pH 7.0 ± 0.2 at 25°C

Salicylic Acid Solution:**Composition per 10.0mL:**

Salicylic acid	0.5g
----------------------	------

Preparation of Salicylic Acid Solution: Add salicylic acid to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except salicylic acid solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL of sterile salicylic acid solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of bacteria that can utilize salicylic acid as sole carbon source.

Mineral Medium with Santonin**Composition per liter:**

K ₂ HPO ₄	6.3g
α-Santonin	4.0g
KH ₂ PO ₄	1.82g
NH ₄ NO ₃	1.0g
CaCl ₂ ·2H ₂ O	0.75g
MgSO ₄ ·7H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.06g

MnSO ₄ (anhydrous)	600.0μg
Na ₂ MoO ₄ ·2H ₂ O	600.0μg
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Pseudomonas* species.

Mineral Medium with Sulfobenzoic Acid (DSMZ Medium 465e)

Composition per liter:	
Na ₂ HPO ₄ ·2H ₂ O	3.5g
KH ₂ PO ₄	1.0g
(NH ₄) ₂ SO ₄	0.5g
MgCl ₂ ·6H ₂ O	0.1g
Ca(NO ₃) ₂ ·4H ₂ O	0.05g
2-Sulfobenzoic acid	50.0mL
Vitamin solution	2.5mL
Trace elements solution SL-4	1.0mL
pH 7.25 ± 0.2 at 25°C	

Trace Elements Solution SL-4:

Composition per liter:	
EDTA	0.5g
FeSO ₄ ·7H ₂ O	0.2g
Trace elements solution SL-6	100.0mL

Trace Elements Solution SL-6:

Composition per liter:	
H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
MnCl ₂ ·4H ₂ O	0.03g
Na ₂ MoO ₄ ·H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 3.4.

Preparation of Trace Elements Solution SL-4: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Vitamin Solution:

Composition per 100.0mL:	
Pyridoxamine	5.0mg
Vitamin B ₁₂	2.0mg
Nicotinic acid	2.0mg
Thiamine-HCl·2H ₂ O	1.0mg
<i>p</i> -Aminobenzoate	1.0mg
Ca-pantothenate	0.5mg
Biotin	0.2mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

2-Sulfobenzoic Acid Solution:

Composition per 100.0mL:	
2-Sulfobenzoic acid	2.0g

Preparation of 2-Sulfobenzoic Acid Solution: Add 2-sulfobenzoic acid to 100.0mL distilled/deionized water. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except vitamin solution and 2-sulfobenzoic acid solution, to 947.5mL distilled/deionized water. Adjust pH to 7.25. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add 2-sulfobenzoic acid solution and vitamin solution. Mix thoroughly. Aseptically distribute to sterile tubes or flasks.

Use: For the cultivation of sulfobenzoic acid-utilizing bacteria.

Mineral Medium with Toluene

Composition per liter:	
Na ₂ HPO ₄ ·12H ₂ O	9.0g
Ferric ammonium citrate	5.0g
MnSO ₄ ·H ₂ O	3.0g
NH ₄ Cl	2.0g
KH ₂ PO ₄	1.5g
MgSO ₄ ·7H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.2g
Titriplex I	10.0mg
CoSO ₄	10.0μg
Toluene	1 drop
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components, except toluene, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Inoculate tubes or flasks and place in a dessicator jar in which 1 drop of toluene will be evaporated.

Use: For the cultivation of bacteria that can utilize toluene as sole carbon source.

Mineral Medium with Vitamins

Composition per 1002.5mL:	
Mineral medium	1000.0mL
Schlegel's vitamin solution	2.5mL

Mineral Medium:

Composition per 1010.0mL:	
Na ₂ HPO ₄	2.44g
KH ₂ PO ₄	1.52g
(NH ₄) ₂ SO ₄	0.5g
MgSO ₄ ·7H ₂ O	0.2g
CaCl ₂ ·2H ₂ O	0.05g
Trace elements solution SL-4	10.0mL
pH 6.9 ± 0.2 at 25°C	

Trace Elements Solution SL-4:

Composition per liter:	
EDTA	0.5g
FeSO ₄ ·7H ₂ O	0.2g
Trace elements solution SL-6	100.0mL

Trace Elements Solution SL-6:

Composition per liter:	
MnCl ₂ ·4H ₂ O	0.5g
H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
Na ₂ MoO ₄ ·2H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Trace Elements Solution SL-4: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Schlegel's Vitamin Solution:

Composition per 100.0mL:

Nicotinic acid.....	2.0g
Pyridoxamine.....	5.0mg
Cyanocobalamin.....	2.0mg
<i>p</i> -Aminobenzoate.....	1.0mg
Thiamine.....	1.0mg
Calcium DL-pantothenate.....	0.5mg
Biotin.....	0.2mg

Preparation of Schlegel's Vitamin Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Filter sterilize.

Preparation of Medium: Add components, except Schlegel's vitamin solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 2.5mL of sterile Schlegel's vitamin solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Pseudomonas chlororaphis* and *Rhodococcus* species.

Mineral Pectin 5 Medium

See: [MP 5 Medium](#)

Mineral Pectin 7 Medium

See: [MP 7 Medium](#)

Mineral Salts Agar

Composition per liter:

Agar.....	15.0g
NaNO ₃	2.0g
K ₂ HPO ₄	1.2g
MgSO ₄	0.5g
KCl.....	0.5g
KH ₂ PO ₄	0.14g
Yeast extract.....	0.02g
Fe ₂ (SO ₄) ₃ ·H ₂ O.....	0.01g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Gently heat and bring to boiling. Distribute into tubes. Autoclave for 15 min at 15 psi pressure–121°C. Allow tubes to cool in a slanted position. Add a strip of sterile filter paper onto cooled slant. Inoculate organisms on filter paper.

Use: For the cultivation and maintenance of *Cytophaga aurantiaca* and *Sporocytophaga myxococcoides*.

Mineral Salts Enrichment Medium

Composition per liter:

KH ₂ PO ₄	1.36g
(NH ₄) ₂ SO ₄	0.5g
MgSO ₄ ·7H ₂ O.....	0.2g
CaCl ₂ ·2H ₂ O.....	0.01g
FeSO ₄ ·7H ₂ O.....	5.0mg
MnSO ₄ ·7H ₂ O.....	2.5mg
Na ₂ MoO ₄ ·2H ₂ O.....	2.5mg
Na ₂ HPO ₄	2.13mg

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the enrichment and cultivation of *Caulobacter* species.

Mineral Salts with Butane

Composition per liter of tap water:

(NH ₄) ₂ HPO ₄	8.0g
Na ₂ HPO ₄ ·12H ₂ O.....	2.5g
KH ₂ PO ₄	2.0g
MgSO ₄ ·7H ₂ O.....	0.5g
Yeast extract.....	100.0mg
CaCl ₂ ·2H ₂ O.....	60.0mg
FeSO ₄ ·7H ₂ O.....	30.0mg
MnCl ₂ ·4H ₂ O.....	60.0μg
CuSO ₄ ·5H ₂ O.....	15.0μg

pH 7.1 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Incubate inoculated medium in 88% air + 7% *n*-butane + 5% CO₂.

Use: For the cultivation and maintenance of *Pseudomonas butanovora*.

Mineral Salts Medium

Composition per liter:

Na ₂ HPO ₄	4.0g
KH ₂ PO ₄	1.5g
NH ₄ Cl.....	1.0g
MgSO ₄ ·7H ₂ O.....	0.2g
Ferric ammonium citrate.....	5.0mg
Modified Hoagland trace elements solution.....	1.0mL

pH 7.0 ± 0.2 at 25°C

Modified Hoagland Trace Elements Solution:

Composition per 3.6L:

H ₃ BO ₃	11.0g
MnCl ₂ ·4H ₂ O.....	7.0g
AlCl ₃	1.0g
CoCl ₂	1.0g
CuCl ₂	1.0g
KI.....	1.0g
NiCl ₂	1.0g
ZnCl ₂	1.0g
BaCl ₂	0.5g
KBr.....	0.5g
LiCl.....	0.5g
Na ₂ MoO ₄	0.5g
SeCl ₄	0.5g
SnCl ₂ ·2H ₂ O.....	0.5g
NaVO ₃ ·H ₂ O.....	0.1g

Preparation of Modified Hoagland Trace Elements Solution: Prepare each component as a separate solution. Dissolve each salt in approximately 100.0mL of distilled/deionized water. Adjust the pH of each solution to below 7.0. Combine all the salt solutions and bring the volume to 3.6L with distilled/deionized water. Adjust the pH to 3–4. A yellow precipitate may form after mixing. After a few days, it will turn into a fine white precipitate. Mix the solution thoroughly before using.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Rhodococcus rhodochrous*.

Mineral Salts Medium with Methanol

Composition per liter:

NaNH ₄ HPO ₄ ·4H ₂ O	1.74g
NaH ₂ PO ₄ ·H ₂ O	0.54g
MgSO ₄ ·7H ₂ O	0.2g
KCl	0.04g
FeSO ₄ ·7H ₂ O	5.0mg
Methanol	5.0mL
Trace minerals solution	1.0mL

pH 7.2 ± 0.2 at 25°C

Trace Minerals Solution:

Composition per liter:

H ₃ BO ₃	2.86g
MnCl ₂ ·4H ₂ O	1.81g
ZnSO ₄ ·7H ₂ O	0.22g
CuSO ₄ ·5H ₂ O	0.08g
CoCl ₂ ·6H ₂ O	0.06g
Na ₂ MoO ₄ ·2H ₂ O	25.0mg

Preparation of Trace Minerals Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components, except methanol, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Filter sterilize methanol. Aseptically add sterile methanol to cooled, sterile basal medium.

Use: For the cultivation and maintenance of *Rhodococcus rhodochrous*.

Mineral Salts Medium with Methanol and Yeast Extract

Composition per liter:

NaNH ₄ HPO ₄ ·4H ₂ O	1.74g
NaH ₂ PO ₄ ·H ₂ O	0.54g
MgSO ₄ ·7H ₂ O	0.2g
Yeast extract	0.2g
KCl	0.04g
FeSO ₄ ·7H ₂ O	5.0mg
Methanol	5.0mL
Trace minerals solution	1.0mL

pH 7.2 ± 0.2 at 25°C

Trace Minerals Solution:

Composition per liter:

H ₃ BO ₃	2.86g
MnCl ₂ ·4H ₂ O	1.81g
ZnSO ₄ ·7H ₂ O	0.22g
CuSO ₄ ·5H ₂ O	0.08g
CoCl ₂ ·6H ₂ O	0.06g
Na ₂ MoO ₄ ·2H ₂ O	25.0mg

Preparation of Trace Minerals Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components, except methanol, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Filter sterilize methanol. Aseptically add sterile methanol to cooled, sterile basal medium. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Pseudomonas* species.

Mineral Salts Medium for Thermophiles

Composition per liter:

NaNO ₃	0.25g
NH ₄ Cl	0.25g
Na ₂ HPO ₄	210.0mg
MgSO ₄ ·7H ₂ O	200.0mg
NaH ₂ PO ₄	90.0mg
KCl	40.0mg
CaCl ₂	15.0mg
FeSO ₄	1.0mg
Trace minerals solution	10.0mL
<i>n</i> -Heptadecane	1.0mL

Trace Minerals Solution:

Composition per liter:

ZnSO ₄ ·7H ₂ O	7.0mg
H ₃ BO ₃	1.0mg
MoO ₃	1.0mg
CuSO ₄ ·5H ₂ O	500.0μg
CoSO ₄ ·7H ₂ O	18.0μg
MnSO ₄ ·5H ₂ O	7.0μg

Preparation of Trace Minerals Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Bacillus thermoleovorans*.

Mineral Salts Peptonized Milk Agar (SPMA)

Composition per liter:

Agar	15.0g
Milk, peptonized	1.0g
Mineral solution	100.0mL

Mineral Solution:

Composition per 100.0mL:

MgSO ₄ ·7H ₂ O	0.5g
CaCl ₂	0.25g
K ₂ HPO ₄	0.25g
(NH ₄) ₂ SO ₄	0.1g
FeCl ₃ ·6H ₂ O	0.01g
MnCl ₂	0.1mg

Preparation of Mineral Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except mineral solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 100.0mL of sterile mineral solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of freshwater *Myxobacterium* species.

Mineral Salts for Thermophiles (L Salts for Thermophiles)

Composition per liter:

NaNO ₃	0.25g
NH ₄ Cl	0.25g
Na ₂ HPO ₄	0.21g
MgSO ₄ ·7H ₂ O.....	0.2g
NaH ₂ PO ₄	0.09g
KCl.....	0.04g
CaCl ₂	0.02g
FeSO ₄	1.0mg
Trace minerals solution.....	10.0mL
<i>n</i> -Heptadecane	1.0mL

Trace Minerals Solution:

Composition per liter:

ZnSO ₄ ·7H ₂ O	7.0mg
H ₃ BO ₄	1.0mg
MoO ₃	1.0mg
CuSO ₄ ·5H ₂ O	500.0μg
CoSO ₄ ·7H ₂ O	18.0μg
MnSO ₄ ·5H ₂ O	7.0μg

Preparation of Trace Minerals Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components, except *n*-heptadecane, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add the *n*-heptadecane. Mix thoroughly. Distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Bacillus thermoleovorans*.

Minerals Modified Glutamate Agar

Composition per liter:

Agar	15.0g
Lactose	10.0g
Sodium glutamate	6.35g
NH ₄ Cl	2.5g
K ₂ HPO ₄	0.9g
Sodium formate.....	0.25g
MgSO ₄ ·7H ₂ O	0.1g
L-Aspartic acid	0.024g
L-Arginine	0.02g
L-Cystine	0.02g
Bromocresol Purple	0.01g
CaCl ₂ ·2H ₂ O.....	0.01g
Ferric ammonium citrate.....	0.01g
Nicotinic acid.....	1.0mg
Pantothenic acid.....	1.0mg
Thiamine	1.0mg

pH 6.7 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 10 min at 11 psi pressure–116°C. Pour into sterile Petri dishes in 20.0mL volumes.

Use: For the cultivation of coliform bacteria from foods.

Minerals Modified Medium

Composition per liter:

Lactose.....	20.0g
Sodium glutamate	12.7g
NH ₄ Cl	5.0g
K ₂ HPO ₄	1.8g
Sodium formate	0.5g
MgSO ₄ ·7H ₂ O.....	0.2g
L-Aspartic acid	0.048g
L-Cystine	0.04g
L-Arginine	0.04g
Ferric ammonium citrate.....	0.02g
CaCl ₂ ·2H ₂ O	0.02g
Bromocresol Purple	0.02g
Thiamine	2.0mg
Nicotinic acid.....	2.0mg
Pantothenic acid.....	2.0mg

pH 6.7 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add NH₄Cl to distilled/deionized water and bring volume to 800.0mL. Add remaining components and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.7. Distribute into tubes or flasks. Autoclave for 10 min at 10 psi pressure–116°C. Check pH after autoclaving. This medium is double strength.

Use: For the enumeration of coliform bacteria in water.

Minimal Agar I

Composition per liter:

Agar	20.0g
Glucose	20.0g
(NH ₄) ₂ SO ₄	5.0g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.5g
NaCl.....	0.1g
CaCl ₂ ·2H ₂ O	0.1g
Inositol	2.0mg
KI	1.0mg
H ₃ BO ₃	0.5mg
ZnSO ₄ ·7H ₂ O	0.4mg
MnSO ₄ ·4H ₂ O	0.4mg
Thiamine-HCl	0.4mg
Pyroxidine-HCl	0.4mg
Niacin.....	0.4mg
Calcium pantothenate	0.4mg
<i>p</i> -Aminobenzoic acid.....	0.2mg
Riboflavin	0.2mg
FeCl ₃	0.2mg
Na ₂ MoO ₄ ·4H ₂ O	0.2mg
CuSO ₄ ·5H ₂ O	0.04mg
Folic acid	2.0μg
Biotin	2.0μg
Growth supplement solution.....	10.0mL

pH 5.5 ± 0.2 at 25°C

Growth Supplement Solution:

Composition per 10.0mL:

L-Tryptophan	20.0mg
Uracil	20.0mg
L-Histidine-HCl.....	20.0mg

Preparation of Growth Supplement Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except growth supplement solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 10.0mL of sterile growth supplement solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Saccharomyces cerevisiae*.

Minimal Agar II

Composition per liter:

Agar	20.0g
Glucose	20.0g
(NH ₄) ₂ SO ₄	5.0g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.5g
NaCl	0.1g
CaCl ₂ ·2H ₂ O	0.1g
Inositol	2.0mg
KI	1.0mg
H ₃ BO ₃	0.5mg
ZnSO ₄ ·7H ₂ O	0.4mg
MnSO ₄ ·4H ₂ O	0.4mg
Thiamine·HCl	0.4mg
Pyroxidine·HCl	0.4mg
Niacin	0.4mg
Calcium pantothenate	0.4mg
<i>p</i> -Aminobenzoic acid	0.2mg
Riboflavin	0.2mg
FeCl ₃	0.2mg
Na ₂ MoO ₄ ·4H ₂ O	0.2mg
CuSO ₄ ·5H ₂ O	0.04mg
Folic acid	2.0μg
Biotin	2.0μg
Growth supplement solution	10.0mL
pH 5.5 ± 0.2 at 25°C	

Growth Supplement Solution:

Composition per 10.0mL:

Adenine sulfate	20.0mg
L-Arginine·HCl	20.0mg
L-Histidine·HCl	20.0mg

Preparation of Growth Supplement Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except growth supplement solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 10.0mL of sterile growth supplement solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Saccharomyces cerevisiae*.

Minimal Agar III

Composition per liter:

Agar	20.0g
Glucose	20.0g

(NH ₄) ₂ SO ₄	5.0g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.5g
NaCl	0.1g
CaCl ₂ ·2H ₂ O	0.1g
Inositol	2.0mg
KI	1.0mg
H ₃ BO ₃	0.5mg
ZnSO ₄ ·7H ₂ O	0.4mg
MnSO ₄ ·4H ₂ O	0.4mg
Thiamine·HCl	0.4mg
Pyroxidine·HCl	0.4mg
Niacin	0.4mg
Calcium pantothenate	0.4mg
<i>p</i> -Aminobenzoic acid	0.2mg
Riboflavin	0.2mg
FeCl ₃	0.2mg
Na ₂ MoO ₄ ·4H ₂ O	0.2mg
CuSO ₄ ·5H ₂ O	0.04mg
Folic acid	2.0μg
Biotin	2.0μg
Growth supplement solution	10.0mL
pH 5.5 ± 0.2 at 25°C	

Growth Supplement Solution:

Composition per 10.0mL:

L-Leucine	30.0mg
L-Tryptophan	20.0mg
Uracil	20.0mg

Preparation of Growth Supplement Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except growth supplement solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 10.0mL of sterile growth supplement solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Saccharomyces cerevisiae*.

Minimal Agar, Davis

Composition per liter:

Agar	15.0g
K ₂ HPO ₄	7.0g
KH ₂ PO ₄	2.0g
(NH ₄) ₂ SO ₄	1.0g
Glucose	1.0g
Sodium citrate	0.5g
MgSO ₄ ·7H ₂ O	0.1g
pH 7.0 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to cold distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation, cultivation, and characterization of nutritional mutants of *Escherichia coli*.

Minimal Broth I**Composition per liter:**

Glucose	20.0g
(NH ₄) ₂ SO ₄	5.0g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.5g
NaCl	0.1g
CaCl ₂ ·2H ₂ O	0.1g
Inositol	2.0mg
KI	1.0mg
H ₃ BO ₃	0.5mg
ZnSO ₄ ·7H ₂ O	0.4mg
MnSO ₄ ·4H ₂ O	0.4mg
Thiamine-HCl	0.4mg
Pyroxidine-HCl	0.4mg
Niacin	0.4mg
Calcium pantothenate	0.4mg
<i>p</i> -Aminobenzoic acid	0.2mg
Riboflavin	0.2mg
FeCl ₃	0.2mg
Na ₂ MoO ₄ ·4H ₂ O	0.2mg
CuSO ₄ ·5H ₂ O	0.04mg
Folic acid	2.0μg
Biotin	2.0μg
Growth supplement solution	10.0mL

pH 5.5 ± 0.2 at 25°C

Growth Supplement Solution:**Composition per 10.0mL:**

L-Tryptophan	20.0mg
Uracil	20.0mg
L-Histidine-HCl	20.0mg

Preparation of Growth Supplement Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except growth supplement solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL of sterile growth supplement solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Saccharomyces cerevisiae*.

Minimal Broth II**Composition per liter:**

Glucose	20.0g
(NH ₄) ₂ SO ₄	5.0g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.5g
NaCl	0.1g
CaCl ₂ ·2H ₂ O	0.1g
Inositol	2.0mg
KI	1.0mg
H ₃ BO ₃	0.5mg
ZnSO ₄ ·7H ₂ O	0.4mg
MnSO ₄ ·4H ₂ O	0.4mg
Thiamine-HCl	0.4mg
Pyroxidine-HCl	0.4mg
Niacin	0.4mg
Calcium pantothenate	0.4mg
<i>p</i> -Aminobenzoic acid	0.2mg
Riboflavin	0.2mg

FeCl ₃	0.2mg
Na ₂ MoO ₄ ·4H ₂ O	0.2mg
CuSO ₄ ·5H ₂ O	0.04mg
Folic acid	2.0μg
Biotin	2.0μg
Growth supplement solution	10.0mL

pH 5.5 ± 0.2 at 25°C

Growth Supplement Solution:**Composition per 10.0mL:**

Adenine sulfate	20.0mg
L-Arginine-HCl	20.0mg
L-Histidine-HCl	20.0mg

Preparation of Growth Supplement Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except growth supplement solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL of sterile growth supplement solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Saccharomyces cerevisiae*.

Minimal Broth III**Composition per liter:**

Agar	20.0g
Glucose	20.0g
(NH ₄) ₂ SO ₄	5.0g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.5g
NaCl	0.1g
CaCl ₂ ·2H ₂ O	0.1g
Inositol	2.0mg
KI	1.0mg
H ₃ BO ₃	0.5mg
ZnSO ₄ ·7H ₂ O	0.4mg
MnSO ₄ ·4H ₂ O	0.4mg
Thiamine-HCl	0.4mg
Pyroxidine-HCl	0.4mg
Niacin	0.4mg

CuSO ₄ ·5H ₂ O	0.04mg
Folic acid	2.0μg
Biotin	2.0μg
Growth supplement solution	10.0mL

pH 5.5 ± 0.2 at 25°C

Growth Supplement Solution:**Composition per 10.0mL:**

L-Leucine	30.0mg
L-Tryptophan	20.0mg
Uracil	20.0mg

Preparation of Growth Supplement Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except growth supplement solution, to distilled/deionized water and bring volume to

990.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL of sterile growth supplement solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Saccharomyces cerevisiae*.

Minimal Broth, Davis

Composition per liter:

K ₂ HPO ₄	7.0g
KH ₂ PO ₄	2.0g
(NH ₄) ₂ SO ₄	1.0g
Glucose.....	1.0g
Sodium citrate.....	0.5g
MgSO ₄ ·7H ₂ O.....	0.1g

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to cold distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation, cultivation, and characterization of nutritional mutants of *Escherichia coli*. Also recommended for the isolation and characterization of nutritional mutants from wild-type strains of *Bacillus subtilis* when used in conjunction with minimal agar Davis and antibiotic medium 3.

Minimal F-Top Agar

Composition per liter:

NaCl.....	8.0g
Agar.....	4.5g
K ₂ HPO ₄	2.1g
KH ₂ PO ₄	0.6g
(NH ₄) ₂ SO ₄	0.3g
Glucose.....	0.3g
Sodium citrate.....	0.15g
MgSO ₄ ·7H ₂ O.....	0.03g

pH 7.0 ± 0.2 at 25°C

Preparation of Minimal Agar: Add components to cold distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the distribution of bacteriophage or bacterial cells evenly in a thin layer over the surface of a plate.

Minimal Lactate Medium

See: [ML Medium](#)

Minimal Medium for Denitrifying Bacteria

Composition per liter:

Solution A.....	980.0mL
Solution B.....	10.0mL
Solution C.....	10.0mL

Solution A:

Composition per 980.0mL:

KNO ₃	5.0g
Carbon source.....	4.0g
(NH ₄) ₂ SO ₄	1.0g

K ₂ HPO ₄ ·3H ₂ O.....	0.87g
KH ₂ PO ₄	0.54g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution B:

Composition per 100.0mL:

MgSO ₄ ·7H ₂ O.....	2.0g
---	------

Preparation of Solution B: Add MgSO₄·7H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution C:

Composition per 100.0mL:

CaCl ₂ ·2H ₂ O.....	0.2g
FeSO ₄ ·7H ₂ O.....	0.1g
MnSO ₄ ·H ₂ O.....	0.05g
CuSO ₄ ·5H ₂ O.....	0.01g
Na ₂ MoO ₄ ·2H ₂ O.....	0.01g
HCl (0.1N solution).....	100.0mL

Preparation of Solution C: Combine components. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Preparation of Medium: Aseptically combine 980.0mL of cooled sterile solution A, 10.0mL of cooled sterile solution B, and 10.0mL of cooled sterile solution C. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the isolation and cultivation of denitrifying bacteria.

Minimal Medium for *Penicillium* Interspecific Hybrids

Composition per liter:

Glucose.....	40.0g
NaNO ₃	3.0g
KH ₂ PO ₄	1.0g
KCl.....	0.5g
MgSO ₄ ·7H ₂ O.....	0.5g
FeSO ₄ ·7H ₂ O.....	0.01g

pH 6.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of genetic variants of *Penicillium* species.

Minimum Essential Medium with Bicarbonate, Serum, and Antibiotics

Composition per 1100.0mL:

Minimum essential medium.....	950.0mL
Fetal bovine serum, heat inactivated.....	100.0mL
NaHCO ₃ solution.....	40.0mL
Penicillin-streptomycin solution.....	10.0mL

pH 7.2 ± 0.2 at 25°C

Minimum Essential Medium (MEM):

Composition per liter:

Inorganic salt solution.....	400.0mL
Other component solution.....	400.0mL
Amino acid solution.....	100.0mL
Vitamin solution.....	100.0mL

Inorganic Salt Solution:**Composition per 400.0mL:**

NaCl	6.8g
KCl	0.4g
CaCl ₂ , anhydrous	0.2g
NaH ₂ PO ₄ ·H ₂ O	0.14g
MgSO ₄ , anhydrous	97.67mg

Preparation of Inorganic Salt Solution: Add components to distilled/deionized water and bring volume to 400.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Other Component Solution:**Composition per 400.0mL:**

D-Glucose	1.0g
Phenol Red	10.0mg

Preparation of Other Component Solution: Add components to distilled/deionized water and bring volume to 400.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Amino Acid Solution:**Composition per 100.0mL:**

L-Glutamine	292.0mg
L-Arginine·HCl	126.1mg
L-Lysine·HCl	72.5mg
L-Isoleucine	52.0mg
L-Leucine	52.0mg
L-Tyrosine, disodium salt	52.0mg
L-Threonine	48.0mg
L-Valine	46.0mg
L-Histidine·HCl·H ₂ O	42.0mg
L-Phenylalanine	32.0mg
L-Cysteine·2HCl	31.0mg
L-Methionine	15.0mg
L-Glutamic acid	14.7mg
L-Aspartic acid	13.3mg
L-Asparagine·H ₂ O	13.2mg
L-Proline	11.5mg
L-Serine	10.5mg
L-Tryptophan	10.0mg
L-Alanine	8.9mg
Glycine	7.5mg

Preparation of Amino Acid Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Vitamin Solution:**Composition per 100.0mL:**

i-Inositol	2.0mg
D-Ca pantothenate	1.0mg
Choline chloride	1.0mg
Folic acid	1.0mg
Niacinamide	1.0mg
Pyridoxal·HCl	1.0mg
Thiamine·HCl	1.0mg
Riboflavin	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Minimum Essential Medium (MEM): Aseptically combine 400.0mL of sterile inorganic salt solution, 400.0mL of sterile other component solution, 100.0mL of sterile amino acid solution, and 100.0mL of sterile vitamin solution.

NaHCO₃ Solution:**Composition per 40.0mL:**

NaHCO ₃	2.0g
--------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 40.0mL. Mix thoroughly. Filter sterilize.

Penicillin-Streptomycin Solution**Composition per 10.0mL:**

Penicillin	0.01g
Streptomycin	0.01g

Preparation of Penicillin-Streptomycin Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Aseptically combine 950.0mL of sterile minimum essential medium, 100.0mL of sterile heat inactivated fetal bovine serum, 40.0mL of sterile NaHCO₃ solution, and 10.0mL of sterile penicillin-streptomycin solution. Adjust pH to 7.2 with humidified 10% CO₂ in 90% air.

Use: For the cultivation of *Encephalitozoon cuniculi*, *Encephalitozoon hellem*, *Encephalitozoon intestinalis*, *Naegleria fowleri*, and *Nosema corneum*.

Minimum Salts with HiVeg Acid Hydrolysate**Composition per liter:**

Na ₂ HPO ₄	6.8g
Glucose	4.0g
Plant acid hydrolysate	4.0g
KH ₂ PO ₄	3.0g
NH ₄ Cl	1.0g
NaCl	0.5g
MgSO ₄	0.24g

pH 6.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Heat gently and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Escherichia coli* strains used for genetic and molecular studies.

MIO HiVeg Medium**(Motility Indole Ornithine HiVeg Medium)****Composition per liter:**

Plant hydrolysate	10.0g
Plant peptone	10.0g
L-Ornithine hydrochloride	5.0g
Yeast extract	3.0g
Agar	2.0g
Glucose	1.0g
Bromocresol Purple	0.02g

pH 6.6 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring to 1.0L. Mix thoroughly. Gently heat and bring to boil-

ing. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the differentiation of Gram-negative enteric bacteria based on their motility, indole production, and ornithine decarboxylase activity.

MIO Medium

See: **Motility Indole Ornithine Medium**

Mist Agar

Composition per liter:

Cow manure, dry.....	50.0g
Agar	15.0g

Preparation of Medium: Add cow manure to 1.0L of tap water. Boil for 1 hr. Filter through cheesecloth. Filter through paper. Add agar to filtrate and bring volume to 1.0L with tap water. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Streptomyces fragmentosporus*.

Mitis Salivarius Agar

Composition per liter:

Sucrose.....	50.0g
Agar	15.0g
Enzymatic digest of protein	10.0g
Proteose peptone	10.0g
K ₂ HPO ₄	4.0g
Dextrose.....	1.0g
Trypan Blue	0.08g
Crystal Violet.....	0.8mg
Na ₂ TeO ₃ solution	1.0mL

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Na₂TeO₃ Solution:

Composition per 10.0mL:

Na ₂ TeO ₃	0.1g
--	------

Preparation of Na₂TeO₃ Solution: Add Na₂TeO₃ to 10.0mL of distilled/deionized water. Mix thoroughly. Filter sterilize.

Caution: Potassium tellurite is toxic.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 999.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool medium to 50°–55°C. Aseptically add 1.0mL of the sterile Na₂TeO₃ solution to the cooled basal medium. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation of *Streptococcus mitis*, *Streptococcus salivarius*, and other viridans streptococci and enterococci.

Mitis Salivarius HiVeg Agar Base with Tellurite

Composition per liter:

Sucrose.....	50.0g
Agar	15.0g
Plant hydrolysate.....	15.0g
Plant peptone.....	5.0g

K ₂ HPO ₄	4.0g
Glucose	1.0g
Trypan Blue	0.075g
Crystal Violet.....	0.8mg
Na ₂ TeO ₃ solution.....	1.0mL

pH 7.0 ± 0.2 at 25°C

Source: This medium, without tellurite, is available as a premixed powder from HiMedia.

Na₂TeO₃ Solution:

Composition per 10.0mL:

Na ₂ TeO ₃	0.1g
--	------

Preparation of Na₂TeO₃ Solution: Add Na₂TeO₃ to 10.0mL of distilled/deionized water. Mix thoroughly. Filter sterilize.

Caution: Potassium tellurite is toxic.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 999.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool medium to 50°–55°C. Aseptically add 1.0mL of the sterile Na₂TeO₃ solution to the cooled basal medium. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation of *Streptococcus mitis*, *Streptococcus salivarius*, and other viridans streptococci and enterococci.

Mitsuokella dentalis Medium

Composition per 1003.3mL:

Yeast extract.....	10.0g
Beef extract.....	5.0g
Glucose	5.0g
Trypticase™.....	5.0g
L-Cysteine·HCl	0.5g
(NH ₄) ₂ SO ₄	0.5g
Resazurin	1.0mg
Bovine serum.....	50.0mL
Mineral solution.....	40.0mL
Hemin solution.....	1.0mL
Vitamin K ₁ solution.....	0.2mL

pH 6.9 ± 0.2 at 25°C

Bovine Serum:

Composition per 50.0mL:

Bovine serum.....	50.0mL
-------------------	--------

Preparation of Bovine Serum: Incubate 50.0mL of bovine serum in a GasPak™ container overnight to make anaerobic.

Mineral Solution:

Composition per liter:

NaHCO ₃	10.0g
NaCl.....	2.0g
K ₂ HPO ₄	1.0g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O.....	0.48g
CaCl ₂ ·2H ₂ O	0.3g

Preparation of Mineral Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Hemin Solution:

Composition per 100.0mL:

Hemin	5.0mg
NaOH (0.002% solution).....	1.0mL

Preparation of Hemin Solution: Add hemin to 1.0mL of NaOH solution. Mix thoroughly.

Vitamin K₁ Solution:

Composition per 100.0mL:

Vitamin K₁ 1.09g

Preparation of Vitamin K₁ Solution: Add vitamin K₁ to 99.0mL of absolute ethanol. Store in the dark at 4°C.

Preparation of Medium: Add components, except L-cysteine-HCl and bovine serum, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 5 min. Cool to room temperature while sparging with 100% CO₂. Add L-cysteine-HCl. Mix thoroughly. Adjust pH to 6.0 with 8N NaOH. After pH has been reached, change sparging gas to 100% N₂. Anaerobically distribute into bottles under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 50.0mL of bovine serum. Mix thoroughly.

Use: For the cultivation and maintenance of *Mitsuokella dentalis*.

Mixed Cereal Agar

Composition per liter:

Gerber™ mixed cereal (oats, wheat,
corn, barley) 50.0g
Agar 15.0g
Sucrose 15.0g
Thiamine-HCl 5.0mg

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Tilletia caries*.

Mixotrophic *Nitrobacter* Medium (DSMZ Medium 756a)

Composition per liter:

NaNO₂ 2.0g
Yeast extract 1.5g
Peptone 1.5g
Na-pyruvate 0.55g
Stock solution 100.0mL
Trace elements solution 1.0mL

pH 7.4 ± 0.2 at 25°C

Stock Solution:

Composition per liter:

NaCl 5.0g
KH₂PO₄ 1.5g
MgSO₄·7H₂O 0.5g
CaCO₃ 0.07g

Preparation of Stock Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Trace Elements Solution:

Composition per liter:

FeSO₄·7H₂O 97.3mg
H₃BO₃ 49.4mg
ZnSO₄·7H₂O 43.1mg
(NH₄)₆Mo₇O₂₄·4H₂O 37.1mg
MnSO₄·2H₂O 33.8mg
CuSO₄·5H₂O 25.0mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.4. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Nitrobacter vulgaris*.

Mixotrophic *Nitrobacter* Medium (LMG Medium 246)

Composition per liter:

NaNO₂ 2.0g
Yeast extract 1.50g
Peptone 1.50g
Na-pyruvate 0.55g
Stock solution 100.0mL
Trace elements solution 1.0mL

pH 7.4 ± 0.2 at 25°C

Stock Solution:

Composition per liter:

NaCl 5.0g
KH₂PO₄ 1.5g
MgSO₄·7H₂O 0.5g
CaCO₃ 0.07g

Preparation of Stock Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Trace Elements Solution:

Composition per liter:

(NH₄)₆Mo₇O₂₄ 437.10mg
FeSO₄·7H₂O 97.30mg
ZnSO₄·7H₂O 43.10mg
H₃BO₃ 39.40mg
MnSO₄·H₂O 33.80mg
CuSO₄·5H₂O 25.00mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.4 with NaOH. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of mixotrophic *Nitrobacter* spp.

Mixotrophic *Nitrobacter* Medium, 10% (DSMZ Medium 756b)

Composition per liter:

NaNO₂ 2.0g
Yeast extract 0.15g
Peptone 0.15g
Na-pyruvate 0.055g
Stock solution 100.0mL
Trace elements solution 1.0mL

pH 8.6 ± 0.2 at 25°C

Stock Solution:

Composition per liter:

NaCl 5.0g
KH₂PO₄ 1.5g

MgSO ₄ ·7H ₂ O	0.5g
CaCO ₃	0.07g

Preparation of Stock Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Trace Elements Solution:

Composition per liter:

FeSO ₄ ·7H ₂ O	97.3mg
H ₃ BO ₃	49.4mg
ZnSO ₄ ·7H ₂ O	43.1mg
(NH ₄) ₆ Mo ₇ O ₂₄ ·4H ₂ O	37.1mg
MnSO ₄ ·2H ₂ O	33.8mg
CuSO ₄ ·5H ₂ O	25.0mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 8.6. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Nitrobacter hamburgensis* and *Nitrobacter vulgaris*.

MJ Medium (DSMZ Medium 1011)

Composition per liter:

NaCl	30.0g
MgCl ₂ ·6H ₂ O	4.18g
MgSO ₄ ·7H ₂ O	3.4g
KCl	0.33g
NH ₄ Cl	0.25g
KH ₂ PO ₄	0.14g
CaCl ₂ ·2H ₂ O	0.014g
Fe(NH ₄) ₂ (SO ₄) ₂ ·6H ₂ O	0.01g
NiCl ₂ ·6H ₂ O	0.5mg
Na ₂ SeO ₃ ·5H ₂ O	0.5mg
Trace elements solution	10.0mL
Vitamin solution	10.0mL
Thiosulfate solution	10.0mL
Bicarbonate solution	10.0mL

pH 6.7 ± 0.2 at 25°C

Bicarbonate Solution:

Composition per 10.0mL:

NaHCO ₃	1.5g
--------------------------	------

Preparation of Bicarbonate Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Thiosulfate Solution:

Composition per 10.0mL:

Na ₂ S ₂ O ₃ ·5H ₂ O	1.5g
--	------

Preparation of Thiosulfate Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Trace Elements Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O	3.0g
Nitritotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·2H ₂ O	0.5g

CoSO ₄ ·7H ₂ O	0.18g
ZnSO ₄ ·7H ₂ O	0.18g
CaCl ₂ ·2H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g
NiCl ₂ ·6H ₂ O	0.025g
KAl(SO ₄) ₂ ·12H ₂ O	0.02g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·4H ₂ O	0.01g
CuSO ₄ ·5H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O	0.3mg

Preparation of Trace Elements Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl	10.0mg
Thiamine-HCl·2H ₂ O	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
D-Ca-pantothenate	5.0mg
p-Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Preparation of Medium: Add components, except thiosulfate, bicarbonate, and vitamin solutions, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Gently heat and bring to boiling. Boil for 1 min. Cool to room temperature while sparging with a gas mixture of 80% N₂ + 20% CO₂. Dispense under the same atmosphere into culture vessels. Fill up to a volume of 20% volume of vessel. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature under an atmosphere of 0% N₂ + 20% CO₂. Aseptically add sterile thiosulfate, bicarbonate, and vitamin solutions. Mix thoroughly. Adjust pH to 6.7. Aseptically dispense into tubes, flasks, or bottles. After inoculation pressurize vessels to 0.5 bar overpressure with 80% N₂ + 20% CO₂ gas mixture. Add sterile air in an amount that is equivalent to a volume of 20% of the headspace. After inoculation reduce medium with 10–20mg sodium dithionite per liter medium, added from a 5% solution freshly prepared under N₂ and filter sterilized. Pressurize vessels to 2 bar overpressure with 80% H₂ and 20% CO₂.

Use: For the cultivation of *Sulfurimonas autotrophica*, *Thiomicrospira thermophila*, and *Desulfothermus okinawensis*.

MJ Medium (DSMZ Medium 1011)

Composition per liter:

NaCl	30.0g
MgCl ₂ ·6H ₂ O	4.18g
MgSO ₄ ·7H ₂ O	3.4g
KCl	0.33g
NH ₄ Cl	0.25g
KH ₂ PO ₄	0.14g
CaCl ₂ ·2H ₂ O	0.014g
Fe(NH ₄) ₂ (SO ₄) ₂ ·6H ₂ O	0.01g

NiCl ₂ ·6H ₂ O	0.5mg
Na ₂ SeO ₃ ·5H ₂ O	0.5mg
Trace elements solution	10.0mL
Vitamin solution	10.0mL
Thiosulfate solution	10.0mL
Bicarbonate solution	10.0mL
Pyruvate solution	10.0mL
Yeast extract solution	10.0mL
Lactate solution	10.0mL

pH 6.7 ± 0.2 at 25°C

Pyruvate Solution:**Composition per 10.0mL:**

Sodium pyruvate	0.5g
-----------------------	------

Preparation of Pyruvate Solution: Add sodium pyruvate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Lactate Solution:**Composition per 10.0mL:**

Sodium lactate	0.5g
----------------------	------

Preparation of Lactate Solution: Add sodium lactate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Yeast Extract Solution:**Composition per 10.0mL:**

Yeast extract	0.1g
---------------------	------

Preparation of Yeast Extract Solution: Add yeast extract to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Bicarbonate Solution:**Composition per 10.0mL:**

NaHCO ₃	1.5g
--------------------------	------

Preparation of Bicarbonate Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Thiosulfate Solution:**Composition per 10.0mL:**

NaS ₂ O ₃ ·5H ₂ O	1.5g
--	------

Preparation of Thiosulfate Solution: Add NaS₂O₃·5H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Trace Elements Solution:**Composition per liter:**

MgSO ₄ ·7H ₂ O	3.0g
Nitrilotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·2H ₂ O	0.5g
CoSO ₄ ·7H ₂ O	0.18g
ZnSO ₄ ·7H ₂ O	0.18g
CaCl ₂ ·2H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g
NiCl ₂ ·6H ₂ O	0.025g
KAl(SO ₄) ₂ ·12H ₂ O	0.02g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·4H ₂ O	0.01g
CuSO ₄ ·5H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O	0.3mg

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Vitamin Solution:**Composition per liter:**

Pyridoxine-HCl	10.0mg
Thiamine-HCl·2H ₂ O	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
D-Ca-pantothenate	5.0mg
p-Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Preparation of Medium: Add components, except lactate, pyruvate, yeast extract, thiosulfate, bicarbonate, and vitamin solutions, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Gently heat and bring to boiling. Boil for 1 min. Cool to room temperature while sparging with a gas mixture of 80% H₂ + 20% CO₂. Dispense under the same atmosphere into culture vessels. Fill up to a volume of 20% volume of vessel. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature under an atmosphere of 80% H₂ + 20% CO₂. Aseptically add sterile lactate, pyruvate, yeast extract, thiosulfate, bicarbonate, and vitamin solutions. Mix thoroughly. Adjust pH to 6.7. Aseptically dispense into tubes, flasks, or bottles. After inoculation pressurize vessels to 0.5 bar overpressure with 80% H₂ + 20% CO₂ gas mixture. Add sterile air in an amount that is equivalent to a volume of 20% of the headspace. After inoculation reduce medium with 10–20 mg sodium dithionite per liter medium, added from a 5% solution freshly prepared under N₂ and filter sterilized. Pressurize vessels to 2 bar overpressure with 80% H₂ and 20% CO₂.

Use: For the cultivation of *Desulfothermus okinawensis*.

MJ Medium for *Thiobacter subterraneus* (DSMZ Medium 1011a)

Composition per liter:

MnCl ₂ ·6H ₂ O	4.18g
NaCl	3.0g
MgSO ₄ ·7H ₂ O	0.34g
KCl	0.33g
NH ₄ Cl	0.25g
KH ₂ PO ₄	0.14g
CaCl ₂ ·2H ₂ O	0.014g
Fe(NH ₄) ₂ (SO ₄) ₂ ·6H ₂ O	0.01g
NiCl ₂ ·6H ₂ O	0.5mg
Na ₂ SeO ₃ ·5H ₂ O	0.5mg
Trace elements solution	10.0mL
Vitamin solution	10.0mL
Thiosulfate solution	10.0mL
Bicarbonate solution	10.0mL

pH 6.7 ± 0.2 at 25°C

Bicarbonate Solution:**Composition per 10.0mL:**

NaHCO ₃	1.5g
--------------------------	------

Preparation of Bicarbonate Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Thiosulfate Solution:

Composition per 10.0mL:

Na₂S₂O₃·5H₂O 1.5g

Preparation of Thiosulfate Solution: Add Na₂S₂O₃·5H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Trace Elements Solution:

Composition per liter:

MgSO₄·7H₂O 3.0g
 Nitrilotriacetic acid 1.5g
 NaCl 1.0g
 MnSO₄·2H₂O 0.5g
 CoSO₄·7H₂O 0.18g
 ZnSO₄·7H₂O 0.18g
 CaCl₂·2H₂O 0.1g
 FeSO₄·7H₂O 0.1g
 NiCl₂·6H₂O 0.025g
 KAl(SO₄)₂·12H₂O 0.02g
 H₃BO₃ 0.01g
 Na₂MoO₄·4H₂O 0.01g
 CuSO₄·5H₂O 0.01g
 Na₂SeO₃·5H₂O 0.3mg

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl 10.0mg
 Thiamine-HCl·2H₂O 5.0mg
 Riboflavin 5.0mg
 Nicotinic acid 5.0mg
 D-Ca-pantothenate 5.0mg
p-Aminobenzoic acid 5.0mg
 Lipoic acid 5.0mg
 Biotin 2.0mg
 Folic acid 2.0mg
 Vitamin B₁₂ 0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Preparation of Medium: Add components, except thiosulfate, bicarbonate, and vitamin solutions, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Gently heat and bring to boiling. Boil for 1 min. Cool to room temperature while sparging with a gas mixture of 80% N₂ + 20% CO₂. Dispense under the same atmosphere into culture vessels. Fill up to a volume of 20% volume of vessel. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature under an atmosphere of 80% N₂ + 20% CO₂. Aseptically add sterile thiosulfate, bicarbonate, and vitamin solutions. Mix thoroughly. Adjust pH to 6.7. Aseptically dispense into tubes, flasks, or bottles. After inoculation pressurize vessels to 0.5 bar overpressure with 80% N₂ + 20% CO₂ gas mixture. Add sterile air in an amount that is equivalent to a volume of 50% of the headspace. After inoculation reduce medium with 10–20mg sodium dithionite per liter medium, added from a 5% solution

freshly prepared under N₂ and filter sterilized. Pressurize vessels to 2 bar overpressure with 80% H₂ and 20% CO₂.

Use: For the cultivation of *Thiobacter subterraneus*.

**MJANHOX-NO₃ Medium with Supplement
(DSMZ Medium 1000)**

Composition per liter:

NaCl 3.0g
 MgCl₂·6H₂O 0.418g
 Na₂SiO₃ 0.5g
 NH₄Cl 0.4g
 MgSO₄·7H₂O 0.34g
 KH₂PO₄ 0.14g
 KCl 0.033g
 CaCl₂·2H₂O 0.014g
 Fe₂(SO₄)₃·7H₂O 0.005g
 NiCl₂·6H₂O 0.005mg
 Na₂SeO₃·5H₂O 0.005mg
 Bicarbonate solution 10.0mL
 Nitrate solution 10.0mL
 Thiosulfate solution 10.0mL
 Trace elements solution 1.0mL
 pH 7.7 ± 0.2 at 25°C

Thiosulfate Solution:

Composition per 10.0mL:

Na₂S₂O₃·5H₂O 2.4g

Preparation of Thiosulfate Solution: Add Na₂S₂O₃·5H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Bicarbonate Solution:

Composition per 10.0mL:

NaHCO₃ 1.5g

Preparation of Bicarbonate Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Nitrate Solution:

Composition per 10.0mL:

NaNO₃ 2.0g

Preparation of Nitrate Solution: Add NaNO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Trace Elements Solution:

Composition per liter:

Nitrilotriacetic acid 1.5g
 MnSO₄·2H₂O 0.5g
 CoSO₄·7H₂O 0.5g
 ZnSO₄·7H₂O 0.18g
 CuSO₄·5H₂O 0.01g
 KAl(SO₄)₂·12H₂O 0.02g
 H₃BO₃ 0.01g
 Na₂MoO₄·4H₂O 0.01g

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Preparation of Medium: Add components, except thiosulfate solution, bicarbonate solution, nitrate solution, and vitamin solution, to

distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Adjust the pH to 7.7. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add thiosulfate solution, bicarbonate solution, nitrate solution, and vitamin solution. Sparge with a gas mixture of 80% H₂ + 20% CO₂ for 5 min. Compress gas mixture into gas phase (> 80% volume of the tube or bottle) at 3 atm.

Use: For the cultivation of *Sulfurihydrogenibium subterraneum*.

m-Kleb Agar

See: Kleb Agar

m-Klebsiella Medium

See: Klebsiella Medium

ML Medium

(Minimal Lactate Medium)

Composition per liter:

Sodium lactate.....	5.0g
MgSO ₄ ·7H ₂ O.....	2.0g
NH ₄ Cl.....	1.0g
Na ₂ SO ₄	1.0g
Yeast extract.....	1.0g
K ₂ HPO ₄	0.5g
L-Cysteine.....	0.5g
CaCl ₂ ·6H ₂ O.....	0.1g
Resazurin.....	1.0mg
NaHCO ₃ solution.....	25.0mL
FeSO ₄ ·7H ₂ O solution.....	25.0mL

pH 6.8 ± 0.2 at 25°C

NaHCO₃ Solution:

Composition per 25.0mL:

NaHCO ₃	4.0g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 25.0mL. Mix thoroughly. Filter sterilize. Gas with O₂-free 97% N₂ + 3% H₂. Cap with a rubber stopper.

FeSO₄·7H₂O Solution:

Composition per 25.0mL:

FeSO ₄ ·7H ₂ O.....	4.0mg
---	-------

Preparation of FeSO₄·7H₂O Solution: Add FeSO₄·7H₂O to distilled/deionized water and bring volume to 25.0mL. Mix thoroughly. Filter sterilize. Gas with O₂-free 97% N₂ + 3% H₂. Cap with a rubber stopper.

Preparation of Medium: Add components, except NaHCO₃ solution and FeSO₄·7H₂O solution, to distilled/deionized water and bring volume to 1.0L. Gently heat and bring to boiling under O₂-free 97% N₂ + 3% H₂. Adjust pH to 6.8. Continue boiling until resazurin becomes colorless, indicating reduction. Distribute anaerobically under O₂-free 97% N₂ + 3% H₂ into tubes in 10.0mL volumes. Cap with rubber stoppers. Place tubes in a press. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Prior to inoculation, add 0.25mL of sterile NaHCO₃ solution and 0.25mL of sterile FeSO₄·7H₂O solution to each test tube containing 10.0mL of sterile basal medium.

Use: For the cultivation and maintenance of *Desulfovibrio* species.

m-Lauryl Sulfate Broth

See: Lauryl Sulfate Broth

M-Lauryl Sulfate HiVeg Broth

Composition per liter:

Plant special peptone.....	39.0g
Lactose.....	30.0g
Yeast extract.....	6.0g
Sodium lauryl sulfate.....	1.0g
Phenol Red.....	0.2g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into bottles or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and enumeration of coliform bacteria, especially *Escherichia coli*, in water by the membrane filter method.

MLCB Agar

(Mannitol Lysine Crystal Violet-Brilliant Green Agar)

Composition per liter:

Agar.....	15.0g
Peptone.....	10.0g
Yeast extract.....	5.0g
L-Lysine·HCl.....	5.0g
NaCl.....	4.0g
Na ₂ S ₂ O ₃	4.0g
Mannitol.....	3.0g
Beef extract.....	2.0g
Ferric ammonium citrate.....	1.0g
Crystal Violet.....	0.01g
Brilliant Green.....	12.5mg

pH 6.8 ± 0.1 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Do not autoclave. Cool to 50°C. Pour into sterile Petri dishes in 20.0mL volumes.

Use: For the selective isolation and cultivation of *Salmonella* species from fecal material and foods.

m-LES, Endo Agar

See: Endo Agar, LES

MM10 Agar

(Modified Medium 10 Agar)

Composition per liter:

Base.....	954.0mL
Dithiothreitol solution.....	20.0mL
Sheep blood.....	20.0mL
Na ₂ CO ₃ solution.....	5.0mL
Menadione solution.....	1.0mL

pH 7.2 ± 0.2 at 25°C

Base:

Composition per 954.0mL:

Agar.....	15.0g
Casein peptone.....	2.0g
Glucose.....	1.0g
Sodium formate.....	1.0g

KNO ₃	0.5g
Yeast extract	0.5g
Hemin	0.01g
Mineral salt solution 1	38.0mL
Mineral salt solution 2	38.0mL
Sodium lactate solution	4.0mL

Preparation of Base: Add components to distilled/deionized water and bring volume to 954.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Mineral Salt Solution 1:

Composition per 100.0mL:

K ₂ HPO ₄	0.6g
---------------------------------------	------

Preparation of Mineral Salt Solution 1: Add K₂HPO₄ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Mineral Salt Solution 2:

Composition per 100.0mL:

NaCl	1.2g
(NH ₄) ₂ SO ₄	1.2g
KH ₂ PO ₄	0.6g
CaCl ₂	0.12g

Preparation of Mineral Salt Solution 2: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Sodium Lactate Solution:

Composition per 100.0mL:

Sodium lactate	60.0g
----------------------	-------

Preparation of Sodium Lactate Solution: Add sodium lactate to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Dithiothreitol Solution:

Composition per 100.0mL:

Dithiothreitol	1.0g
----------------------	------

Preparation of Dithiothreitol Solution: Add dithiothreitol to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Menadione Solution:

Composition per 100.0mL:

Vitamin K ₁ (phytomenadione)	0.05g
Ethanol (95% solution)	100.0mL

Preparation of Menadione Solution: Add vitamin K₁ to 100.0mL of ethanol. Mix thoroughly. Filter sterilize.

Na₂CO₃ Solution:

Composition per 100.0mL:

Na ₂ CO ₃	8.0g
---------------------------------------	------

Preparation of Na₂CO₃ Solution: Add Na₂CO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: To 954.0mL of sterile cooled base, aseptically add 20.0mL of sterile dithiothreitol solution, 20.0mL of sterile, defibrinated sheep blood, 5.0mL of sterile Na₂CO₃ solution, and 1.0mL of sterile menadione solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile screw-capped tubes.

Use: For the isolation and quantitation of plaque bacteria, especially *Streptococcus mutans*, *Streptococcus sanguis*, and *Streptococcus salivarius*.

MMA Salts Medium

Composition per liter:

Agar, noble	20.0g
K ₂ HPO ₄	1.2g
KH ₂ PO ₄	0.62g
(NH ₄) ₂ SO ₄	0.5g
MgSO ₄ ·7H ₂ O	0.2g
NaCl	0.1g
CaCl ₂ ·6H ₂ O	0.05g
ZnSO ₄ ·7H ₂ O	70.0μg
H ₃ BO ₃	10.0μg
MnSO ₄ ·5H ₂ O	10.0μg
Na ₂ MoO ₄ ·2H ₂ O	10.0μg
CoCl ₂ ·6H ₂ O	5.0μg
CuSO ₄ ·5H ₂ O	5.0μg
FeCl ₃ ·6H ₂ O	1.0mg
Monomethylamine solution	10.0mL

pH 7.0 ± 0.2 at 25°C

Monomethylamine Solution:

Composition per 10.0mL:

Monomethylamine	1.0g
-----------------------	------

Preparation of Monomethylamine Solution: Add monomethylamine to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except monomethylamine solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 10.0mL of sterile methylamine solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Hyphomicrobium* species and *Methylophilus methylotrophus*.

MMB Medium

Composition per liter:

Glucose	1.0g
(NH ₄) ₂ SO ₄	0.25g
Peptone	0.15g
Yeast extract	0.15g
Glucose solution	20.0mL
Hutner's basal salts solution	20.0mL
Vitamin solution	10.0mL

pH 7.2 ± 0.2 at 25°C

Glucose Solution:

Composition per 20.0mL:

Glucose	1.5g
---------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize.

Hutner's Basal Salts Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O	29.7g
Nitilotriacetic acid	10.0g
CaCl ₂ ·2H ₂ O	3.335g
FeSO ₄ ·7H ₂ O	99.0mg
(NH ₄) ₆ MoO ₇ O ₂₄ ·4H ₂ O	9.25mg
"Metals 44"	50.0mL

"Metals 44":**Composition per 100.0mL:**

ZnSO ₄ ·7H ₂ O	1.095g
FeSO ₄ ·7H ₂ O	0.5g
Sodium EDTA	0.25g
MnSO ₄ ·H ₂ O	0.154g
CuSO ₄ ·5H ₂ O	39.2mg
Co(NO ₃) ₂ ·6H ₂ O	24.8mg
Na ₂ B ₄ O ₇ ·10H ₂ O	17.7mg

Preparation of "Metals 44": Add sodium EDTA to distilled/deionized water and bring volume to 90.0mL. Mix thoroughly. Add a few drops of concentrated H₂SO₄ to retard precipitation of heavy metal ions. Add remaining components. Mix thoroughly. Bring volume to 100.0mL with distilled/deionized water.

Preparation of Hutner's Basal Salts Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Adjust pH to 6.8.

Vitamin Solution:**Composition per 100.0mL:**

Vitamin B ₁₂	0.01mg
Calcium DL-pantothenate	0.5mg
Nicotinamide	0.5mg
Pyridoxine-HCl	0.5mg
Riboflavin	0.5mg
Thiamine-HCl	0.5mg
Biotin	0.2mg
Folic acid	0.2mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except glucose solution and vitamin solution, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 20.0mL of sterile glucose solution and 10.0mL of sterile vitamin solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Angulomicrobium tetradrale*, *Labrys monachus*, *Prosthecomicrobium polyspheroidum*, and *Aquabacter spiritis*.

MMJS Medium (Modified) (DSMZ Medium 1121)

Composition per liter:

NaCl	20.0g
MgSO ₄ ·7H ₂ O	4.0g
Sulfur, elemental	3.0g
MgCl ₂ ·6H ₂ O	3.0g
Na ₂ S ₂ O ₃ ·5H ₂ O	2.0g
NH ₄ Cl	1.25g
CaCl ₂ ·2H ₂ O	0.8g
KCl	0.33g
K ₂ HPO ₄	0.09g
KH ₂ PO ₄	0.07g
Fe ₂ (SO ₄) ₃ ·7H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O	1.0mg
H ₂ WO ₄	1.0mg
NiCl ₂ ·6H ₂ O	1.0mg
Bicarbonate solution	10.0mL

Trace elements solution	10.0mL
Vitamin solution	1.0mL
pH 6.8 ± 0.2 at 25°C	

Trace Elements Solution:**Composition per liter:**

Nitrilotriacetic acid	1.5g
MnSO ₄ ·2H ₂ O	0.5g
CoSO ₄ ·7H ₂ O	0.5g
ZnSO ₄ ·7H ₂ O	0.18g
CaCl ₂ ·2H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g
NiCl ₂ ·6H ₂ O	0.025g
KAl(SO ₄) ₂ ·12H ₂ O	0.02g
CuSO ₄ ·5H ₂ O	0.01g
H ₃ BO ₃	0.01g
NaBr	0.01g
SrCl ₂ ·6H ₂ O	0.01g
KI	0.01g
Na ₂ MoO ₄ ·4H ₂ O	1.0mg
Na ₂ SeO ₃ ·5H ₂ O	0.3mg

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Vitamin Solution:**Composition per liter:**

Pyridoxine-HCl	10.0mg
Thiamine-HCl·2H ₂ O	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
D-Ca-pantothenate	5.0mg
p-Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Bicarbonate Solution:**Composition per 10.0mL:**

NaHCO ₃	2.0g
--------------------	------

Preparation of Bicarbonate Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except trace elements solution, bicarbonate solution, and vitamin solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Adjust the pH to 6.8. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add the trace elements solution, bicarbonate solution, and vitamin solution. Sparge with a gas mixture of 80% N₂ + 20% CO₂ for 5 min. Compress gas mixture of 79% N₂ + 20% CO₂ + 1% O₂ into gas phase (> 80% volume of the tube or bottle) at 2 atm.

Use: For the cultivation *Sulfurivirga caldicuralii*.

MMN Agar**Composition per liter:**

Agar	15.0g

MgSO ₄ ·7H ₂ O.....	0.04g
CaCl ₂ ·2H ₂ O.....	0.02g
K ₂ HPO ₄ ·3H ₂ O.....	0.02g
Na ₂ CO ₃	0.02g
Citric acid.....	3.0mg
Ferric ammonium citrate.....	3.0mg

Disodium potassium EDTA	0.5mg
Trace metal mix A-5	1.0mL
pH 8.5 ± 0.2 at 25°C	

A-5 Trace Metal Mix:**Composition per liter:**

H ₃ BO ₃	2.86g
MnCl ₂ ·4H ₂ O	1.81g
ZnSO ₄ ·7H ₂ O	0.222g
CuSO ₄ ·5H ₂ O	0.079g
Na ₂ MoO ₄ ·2H ₂ O	0.039g
Co(NO ₃) ₂ ·6H ₂ O	0.049g

Preparation of A-5 Trace Metal Mix: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to 750.0mL of seawater and bring volume to 1.0L with glass-distilled water. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. After autoclaving, adjust pH to 8.5 with KOH.

Use: For the cultivation and maintenance of marine cyanobacteria.

MN Marine Medium with Vitamin B₁₂**Composition per liter:**

Noble agar	10.0g
NaNO ₃	0.75g
MgSO ₄ ·7H ₂ O	0.04g
CaCl ₂ ·2H ₂ O	0.02g
K ₂ HPO ₄ ·3H ₂ O	0.02g
Na ₂ CO ₃	0.02g
Citric acid	3.0mg
Ferric ammonium citrate	3.0mg
Disodium potassium EDTA	0.5mg
Vitamin B ₁₂	20.0μg
Trace metal mix A-5	1.0mL
pH 8.5 ± 0.2 at 25°C	

A-5 Trace Metal Mix:**Composition per liter:**

H ₃ BO ₃	2.86g
MnCl ₂ ·4H ₂ O	1.81g
ZnSO ₄ ·7H ₂ O	0.222g
CuSO ₄ ·5H ₂ O	0.079g
Na ₂ MoO ₄ ·2H ₂ O	0.039g
Co(NO ₃) ₂ ·6H ₂ O	0.049g

Preparation of A-5 Trace Metal Mix: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to 750.0mL of seawater and bring volume to 1.0L with glass-distilled water. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. After autoclaving, adjust pH to 8.5 with KOH.

Use: For the cultivation and maintenance of *Dermocarpa* species, *Dermocarpella* species, *Myxosarcina* species, *Phormidium* species, *Pleurocapsa* species, *Synechococcus* species, *Synechocystis* species, and *Xenococcus* species.

**Mobiluncus Agar
(LMG Medium 117)****Composition per liter:**

Special peptone	23.0g
Agar No. 1	10.0g
Starch, soluble	10.0g

NaCl	5.0g
Resazurin	10.0μg
Rabbit serum	20.0mL
pH 7.1–7.5	

Source: Special peptone and Agar No. 1 are available from Oxoid Unipath.

Preparation of Medium: Add components, except rabbit serum, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 20.0mL sterile rabbit serum. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Mobiluncus curtisii* subsp. *holmesii* and *Mobiluncus mulieris*.

Moderate Halophilic Medium (HM)**Composition per liter:**

NaCl	81.0g
Agar	20.0g
Yeast extract	10.0g
MgSO ₄ ·7H ₂ O	9.6g
MgCl ₂ ·6H ₂ O	7.0g
Proteose peptone No. 3	5.0g
KCl	2.0g
Glucose	1.0g
CaCl ₂ ·2H ₂ O	0.36g
NaHCO ₃	0.06g
NaBr	0.026g
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Bacillus halophilus*, *Halococcus saccharolyticus*, *Marinococcus albus*, *Marinococcus halophilus*, and *Marinococcus hispanicus*.

Modified AEA Sporulation Medium Base**Composition 1070.0mL:**

Biopeptone	10.0g
Yeast extract	10.0g
Na ₂ HPO ₄	4.36g
Ammonium acetate	1.5g
KH ₂ PO ₄	0.25g
MgSO ₄ ·7H ₂ O	0.2g
Raffinose solution	40.0mL
Carbonate solution	10.0mL
Cobalt chloride solution	10.0mL
Sodium ascorbate solution	10.0mL
pH 7.8 ± 0.2 at 25°C	

Source: This medium is available from HiMedia.

Raffinose Solution:**Composition per 40.0mL:**

Raffinose	4.0g
-----------------	------

Preparation of Raffinose Solution: Add raffinose to distilled/deionized water and bring volume to 40.0mL. Mix thoroughly. Filter sterilize.

Carbonate Solution:**Composition** per 10.0mL:

Na₂CO₃ 0.7g

Preparation of Carbonate Solution: Add Na₂CO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Cobalt Chloride Solution:**Composition** per 10.0mL:

CoCl₂..... 0.032g

Preparation of Cobalt Chloride Solution: Add CoCl₂ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Sodium Ascorbate Solution:**Composition** per 10.0mL:

Sodium ascorbate 0.15g

Preparation of Sodium Ascorbate Solution: Add sodium ascorbate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except raffinose, carbonate, cobalt chloride, and sodium ascorbate solutions, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute 15.0mL aliquots into screw capped tubes. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Add 0.6L raffinose solution and 0.2mL each of the carbonate and cobalt chloride solutions dropwise to the medium in each of the tubes. Just before using, steam the medium for 10 min. Cool to room temperature. Aseptically add 0.2mL of freshly prepared sodium ascorbate solution to each tube of the medium.

Use: For the early sporulation of *Clostridium perfringens* from foods.

Modified Biebl and Pfennig's Medium (DSMZ Medium 1069)

Composition per liter:

NaCl 20.0g
 Malate/pyruvate 3.0g
 MgSO₄·7H₂O 2.0g
 KH₂PO₄ 0.5g
 Yeast extract 0.4g
 NH₄Cl 0.34g
 CaCl₂·2H₂O 0.15g
 Ferric citrate solution 5.0mL
 Trace elements solution SL-7 1.0mL
 Vitamin solution 1.0mL

pH 6.8 ± 0.2 at 25°C

Vitamin Solution:**Composition** per 10.0ml:

Vitamin B₁₂ 0.1mg

Preparation of Vitamin Solution: Add vitamin B₁₂ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Ferric Citrate Solution:**Composition** per 10.0mL:

Ferric citrate 0.01g

Preparation of Ferric Citrate Solution: Add ferric citrate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Trace Elements Solution SL-7:**Composition** per 1001.0mL:

CoCl₂·6H₂O 200.0mg
 MnCl₂·4H₂O 100.0mg
 ZnCl₂ 70.0mg
 H₃BO₃ 60.0mg
 Na₂MoO₄·2H₂O 40.0mg
 CuCl₂·2H₂O 20.0mg
 NiCl₂·6H₂O 20.0mg
 HCl (25%) 1.0mL

Preparation of Trace Elements Solution SL-7: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components, except vitamin solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust the pH to 6.8. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add the vitamin solution. Mix thoroughly. Aseptically dispense into culture vessels.

Use: For the cultivation of *Rhodovulum imhoffii*.

Modified Bile Esculin Azide Agar

Composition per liter:

Casein enzymic hydrolysate 17.0g
 Agar 13.5g
 Oxgall 10.0g
 Yeast extract 5.0g
 NaCl 5.0g
 Peptic digest of animal tissue 3.0g
 Sodium citrate 1.0g
 Esculin 1.0g
 Ferric ammonium citrate 0.5g
 NaN₃ 0.25g

pH 7.1 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Caution: Sodium azide has a tendency to form explosive metal azides with plumbing materials. It is advisable to use enough water to flush off the disposables.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the selective isolation and enumeration of group D streptococci.

Modified Buffered Charcoal HiVeg Agar Base with Cysteine

Composition per liter:

Agar 17.0g
 ACES buffer 10.0g
 Plant peptone No. 3 10.0g
 Charcoal, activated 2.0g
 α-Ketoglutarate monopotassium salt 1.0g
 L-Cysteine solution 4.0mL

pH 6.9 ± 0.2 at 25°C

Source: This medium, without L-cysteine solution, is available as a premixed powder from HiMedia.

L-Cysteine Solution:**Composition** per 10.0mL:

L-cysteine·HCl·H₂O 0.4g

L-Cysteine Solution: Add L-cysteine-HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except L-cysteine solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust medium to pH 6.9 with 1N KOH. Heat gently and bring to boiling for 1 min. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 4.0mL of L-cysteine solution. Mix thoroughly. Pour into sterile Petri dishes with constant agitation to keep charcoal in suspension.

Use: For the isolation, cultivation, and maintenance of *Legionella pneumophila* and other *Legionella* species from environmental and clinical specimens.

**Modified *Campylobacter* Blood-Free
Selective Agar Base
(Modified *Campylobacter* Charcoal Differential Agar)
(Modified CCDA)
(BAM M30a)**

Composition per 1012.0mL:

Agar	12.0g
Beef extract	10.0g
Peptone.....	10.0g
NaCl	5.0g
Charcoal	4.0g
Casein hydrolysate.....	3.0g
Yeast extract.....	2.0g
Sodium deoxycholate.....	1.0g
FeSO ₄	0.25g
Sodium pyruvate.....	0.25g
Cefoperazone solution	4.0mL
Amphotericin B solution.....	4.0mL
Rifampicin solution.....	4.0mL
pH 7.4 ± 0.2 at 25°C	

Cefoperazone Solution:

Composition per 10.0mL:

Cefoperazone	0.037g
--------------------	--------

Preparation of Cefoperazone Solution: Add cefoperazone to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Rifampicin Solution:

Composition per 100.0mL:

Rifampicin	0.25g
Ethanol, absolute.....	50.0mL

Preparation of Rifampicin Solution: Add rifampicin to 50.0mL of ethanol. Mix thoroughly. Bring volume to 100.0mL with distilled/deionized water. Filter sterilize.

Amphotericin B Solution:

Composition per 10.0mL:

Amphotericin B.....	0.005g
---------------------	--------

Preparation of Amphotericin B Solution: Add amphotericin B to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize. Can be stored for 1 year at –20°C.

Preparation of Medium: Add components, except cefoperazone solution, amphotericin B solution, and rifampicin solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL of sterile cefopera-

zone solution, 10.0mL of sterile amphotericin B solution, and 10.0mL of sterile rifampicin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Campylobacter* species. For the recovery of injured *Campylobacter* spp. from foods.

**Modified CM + YE Agar
See: CM plus YE Agar, Modified**

**Modified CPLM HiVeg Medium Base
with Horse Serum**

(*Trichomonas* Modified CPLM HiVeg Medium Base)

Composition per liter:

Plant peptone	32.0g
Liver digest	20.0g
L-Cysteine-HCl	2.4g
Maltose	1.6g
Ringer's salt solution, 1/4X.....	1.0L
Horse serum.....	100.0mL
pH 6.0 ± 0.2 at 25°C	

Ringer's Salt Solution, 1/4X:

Composition per 400.0mL:

NaCl.....	9.0g
KCl.....	0.042g
CaCl ₂	0.024g

Preparation of Ringer's Salt Solution, 1/4X: Add components to distilled/deionized water and bring volume to 400.0mL. Mix thoroughly.

Preparation of Medium: Add components, except horse serum, to 1.0L Ringer's salt solution, 1/4X. Mix thoroughly. Adjust pH to 6.0. Gently heat and bring to boiling. Autoclave for 10 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 100.0mL of sterile, heat-inactivated horse serum. Mix thoroughly. Aseptically distribute into sterile, screw-capped tubes or flasks.

Use: For the cultivation of *Trichomonas vaginalis*.

**Modified CPLM HiVeg Medium Base with
Horse Serum, Penicillin, Streptomycin, and Nystatin
(*Trichomonas* Modified CPLM HiVeg Medium Base)**

Composition per liter:

Plant peptone	32.0g
Liver digest	20.0g
L-Cysteine-HCl	2.4g
Maltose	1.6g
Ringer's salt solution, 1/4X.....	1.0L
Horse serum.....	100.0mL
Penicillin-streptomycin solution.....	10.0mL
Nystatin solution.....	10.0mL
pH 6.0 ± 0.2 at 25°C	

Ringer's Salt Solution, 1/4X:

Composition per 400.0mL:

NaCl.....	9.0g
KCl.....	0.042g
CaCl ₂	0.024g

Preparation of Ringer's Salt Solution, 1/4X: Add components to distilled/deionized water and bring volume to 400.0mL. Mix thoroughly.

Penicillin-Streptomycin Solution:**Composition** per 10.0mL:

Streptomycin	0.1g
Penicillin	1,000,000U

Preparation of Penicillin-Streptomycin Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize

Nystatin Solution:**Composition** per 10.0mL:

Nystatin	50,000U
----------------	---------

Preparation of Nystatin Solution: Add nystatin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize

Preparation of Medium: Add components, except horse serum, penicillin-streptomycin solution, and nystatin solution, to 1.0L of Ringer's salt solution, 1/4X. Mix thoroughly. Adjust pH to 6.0. Gently heat and bring to boiling. Autoclave for 10 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 100.0mL of sterile, heat-inactivated horse serum, 10.0mL sterile penicillin-streptomycin solution, and 10.0mL sterile nystatin solution. Mix thoroughly. Aseptically distribute into sterile, screw-capped tubes or flasks.

Use: For the selective cultivation of *Trichomonas vaginalis*.

Modified Differential Clostridial Broth**Composition** per liter:

Meat extract	8.0g
Casein enzymic hydrolysate	5.0g
Meat peptone	5.0g
Sodium acetate	5.0g
Yeast extract	1.0g
Starch	1.0g
Glucose	1.0g
L-Cysteine hydrochloride	0.5g
NaHSO ₃	0.5g
Ammonium ferric citrate	0.5g
Resazurin	0.002g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the detection of *Clostridium* spp. from foods by the MPN technique.

**Modified Duncan Strong HiVeg Medium
(DS HiVeg Medium)****Composition** per liter:

Plant peptone No. 3	15.0g
Na ₂ HPO ₄	10.0g
Raffinose	4.0g
Yeast extract	4.0g
Na-thioglycollate	1.0g

pH 7.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Adjust pH to 7.8 with filter-sterilized 0.66M Na₂CO₃. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and induction of sporulation of *Clostridium perfringens*.

**Modified Duncan Strong Medium
(DS Medium)****Composition** per liter:

Proteose peptone	15.0g
Na ₂ HPO ₄	10.0g
Raffinose	4.0g
Yeast extract	4.0g
Na-thioglycollate	1.0g

pH 7.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Adjust pH to 7.8 with filter-sterilized 0.66M Na₂CO₃. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and induction of sporulation of *Clostridium perfringens*.

**Modified Fungal Agar Base
(Modified Inhibitory Mold Agar)****Composition** per liter:

Glucose	20.0g
Agar	15.0g
Casein enzymic hydrolysate	2.5g
Peptic digest of animal tissue	2.5g
Yeast extract	5.0g
Na ₂ HPO ₄	3.5g
KH ₂ PO ₄	3.4g
NH ₄ Cl	1.4g
NaCO ₃	1.0g
Chloramphenicol	0.1g
MgSO ₄ ·7H ₂ O	0.06g
Polysorbate 80	20.0mL

pH 7.0 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Preparation of Medium: Add components, except polysorbate 80, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Add polysorbate 80. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Mix thoroughly. Pour into Petri dishes or aseptically distribute into sterile tubes.

Use: For the detection and enumeration of molds in cosmetics and toiletries.

**Modified Fungal HiVeg Agar Base
(Modified Inhibitory Mold HiVeg Agar Base)****Composition** per liter:

Glucose	20.0g
Agar	15.0g

Yeast extract.....	5.0g
Na ₂ HPO ₄	3.5g
KH ₂ PO ₄	3.4g
Plant hydrolysate.....	2.5g
Plant peptone.....	2.5g
NH ₄ Cl.....	1.4g
Na ₂ CO ₃	1.0g
Chloramphenicol.....	0.1g
MgSO ₄	0.06g
Polysorbate 80.....	20.0mL

pH 7.0 ± 0.2 at 25°C

Source: This medium, without polysorbate 80, is available as a pre-mixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling with frequent agitation. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation of pathogenic fungi.

Modified FWM Medium (DSMZ Medium 503)

Composition per 1013.0mL:

Solution A.....	940.0mL
Solution E.....	50.0mL
Solution F.....	10.0mL
Solution G.....	10.0mL
Solution B.....	1.0mL
Solution C.....	1.0mL
Solution D.....	1.0mL

pH 7.3 ± 0.2 at 25°C

Solution A:

Composition per 940.0mL:

NaCl.....	1.0g
KCl.....	0.5g
MgCl ₂ ·6H ₂ O.....	0.4g
NH ₄ Cl.....	0.25g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O.....	0.15g
Resazurin.....	0.5mg

Preparation of Solution A: Prepare under 80% N₂ + 20% CO₂ gas atmosphere. Add components to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Adjust pH to 7.2. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution B:

Composition per liter:

FeCl ₂ ·4H ₂ O.....	1.5g
CoCl ₂ ·6H ₂ O.....	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	36.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O.....	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Solution B: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with

80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution C:

Composition per liter:

Pyridoxine hydrochloride.....	300.0mg
Thiamine-HCl·2H ₂ O.....	200.0mg
Nicotinic acid.....	200.0mg
Vitamin B ₁₂	100.0mg
Calcium pantothenate.....	100.0mg
<i>p</i> -Aminobenzoic acid.....	80.0mg
D(+)-Biotin.....	20.0mg

Preparation of Solution C: Add components to distilled/deionized water and bring volume to 1.0L. Sparge with 100% N₂. Mix thoroughly. Filter sterilize.

Solution D:

Composition per liter:

NaOH.....	0.5g
Na ₂ WO ₄ ·2H ₂ O.....	4.0mg
Na ₂ SeO ₃ ·5H ₂ O.....	3.0mg

Preparation of Solution D: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Solution E:

Composition per 100.0mL:

NaHCO ₃	5.0g
--------------------------	------

Preparation of Solution E: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂ gas mixture. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution F:

Composition per 10.0mL:

Na-(D,L)-3-hydroxybutyrate.....	1.5g
---------------------------------	------

Preparation of Solution F: Add Na-(D,L)-3-hydroxybutyrate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂ gas mixture. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution G:

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	0.125g
--	--------

Preparation of Solution G: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas atmosphere. Sequentially add 1.0mL solution B, 1.0mL solution C, 1.0mL solution D, 50.0mL solution E, 10.0mL solution F, and 10.0mL solution G, to 940.0mL solution A. Distribute anaerobically under 80% N₂ + 20% CO₂ into appropriate vessels. The pH should be 7.2–7.4.

Use: For the cultivation of *Clostridium homopropionicum* DSM 5847.

Modified FWM Medium (DSMZ Medium 503)

Composition per 1013.0mL:

Solution A.....	940.0mL
Solution E.....	50.0mL
Solution F.....	10.0mL

Solution G	10.0mL
Solution B	1.0mL
Solution C	1.0mL
Solution D	1.0mL

pH 7.3 ± 0.2 at 25°C

Solution A:

Composition per 940.0mL:

NaCl	1.0g
KCl	0.5g
MgCl ₂ ·6H ₂ O	0.4g
NH ₄ Cl	0.25g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O	0.15g
Resazurin	0.5mg

Preparation of Solution A: Prepare under 80% N₂ + 20% CO₂ gas atmosphere. Add components to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Adjust pH to 7.2. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution B:

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Solution B: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution C:

Composition per liter:

Pyridoxine hydrochloride	300.0mg
Thiamine-HCl·2H ₂ O	200.0mg
Nicotinic acid	200.0mg
Vitamin B ₁₂	100.0mg
Calcium pantothenate	100.0mg
<i>p</i> -Aminobenzoic acid	80.0mg
D(+)-Biotin	20.0mg

Preparation of Solution C: Add components to distilled/deionized water and bring volume to 1.0L. Sparge with 100% N₂. Mix thoroughly. Filter sterilize.

Solution D:

Composition per liter:

NaOH	0.5g
Na ₂ WO ₄ ·2H ₂ O	4.0mg
Na ₂ SeO ₃ ·5H ₂ O	3.0mg

Preparation of Solution D: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Solution E:

Composition per 100.0mL:

NaHCO ₃	5.0g
--------------------	------

Preparation of Solution E: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂ gas mixture. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution F:

Composition per 10.0mL:

Fructose	2.0g
----------	------

Preparation of Solution F: Add fructose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂ gas mixture. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution G:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.125g
-------------------------------------	--------

Preparation of Solution G: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas atmosphere. Sequentially add 1.0mL solution B, 1.0mL solution C, 1.0mL solution D, 50.0mL solution E, 10.0mL solution F, and 10.0mL solution G to 940.0mL solution A. Distribute anaerobically under 80% N₂ + 20% CO₂ into appropriate vessels. The pH should be 7.2–7.4.

Use: For the cultivation of *Clostridium homopropionicum* DSM 5847.

Modified FWM Medium (DSMZ Medium 503)

Composition per 1013.0mL:

Solution A	940.0mL
Solution E	50.0mL
Solution F	10.0mL
Solution G	10.0mL
Solution B	1.0mL
Solution C	1.0mL
Solution D	1.0mL

pH 7.3 ± 0.2 at 25°C

Solution A:

Composition per 940.0mL:

NaCl	1.0g
KCl	0.5g
MgCl ₂ ·6H ₂ O	0.4g
NH ₄ Cl	0.25g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O	0.15g
Resazurin	0.5mg

Preparation of Solution A: Prepare under 80% N₂ + 20% CO₂ gas atmosphere. Add components to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Adjust pH to 7.2. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution B:

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg

H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Solution B: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution C:**Composition** per liter:

Pyridoxine hydrochloride	300.0mg
Thiamine-HCl·2H ₂ O	200.0mg
Nicotinic acid.....	200.0mg
Vitamin B ₁₂	100.0mg
Calcium pantothenate	100.0mg
<i>p</i> -Aminobenzoic acid.....	80.0mg
D(+)-Biotin.....	20.0mg

Preparation of Solution C: Add components to distilled/deionized water and bring volume to 1.0L. Sparge with 100% N₂. Mix thoroughly. Filter sterilize.

Solution D:**Composition** per liter:

NaOH.....	0.5g
Na ₂ WO ₄ ·2H ₂ O	4.0mg
Na ₂ SeO ₃ ·5H ₂ O	3.0mg

Preparation of Solution D: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Solution E:**Composition** per 100.0mL:

NaHCO ₃	5.0g
--------------------------	------

Preparation of Solution E: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂ gas mixture. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution F:**Composition** per 10.0mL:

Na ₂ -succinate.....	2.5g
---------------------------------	------

Preparation of Solution F: Add Na₂-succinate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂ gas mixture. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution G:**Composition** per 10.0mL:

Na ₂ S·9H ₂ O	0.125g
---	--------

Preparation of Solution G: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas atmosphere. Sequentially add 1.0mL solution B, 1.0mL solution C, 1.0mL solution D, 50.0mL solution E, 10.0mL solution F, and 10.0mL solution G to 940.0mL solution A. Distribute anaerobically under 80% N₂ + 20% CO₂ into appropriate vessels. The pH should be 7.2–7.4.

Use: For the cultivation of unidentified bacterium DSM 5849.

Modified FWM Medium (DSMZ Medium 503)

Composition per 1013.0mL:

Solution A.....	940.0mL
Solution E.....	50.0mL
Solution F.....	10.0mL
Solution G.....	10.0mL
Solution B.....	1.0mL
Solution C.....	1.0mL
Solution D.....	1.0mL

pH 7.3 ± 0.2 at 25°C

Solution A:**Composition** per 940.0mL:

NaCl.....	1.0g
KCl.....	0.5g
MgCl ₂ ·6H ₂ O	0.4g
NH ₄ Cl.....	0.25g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O	0.15g
Resazurin	0.5mg

Preparation of Solution A: Prepare under 80% N₂ + 20% CO₂ gas atmosphere. Add components to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Adjust pH to 7.2. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution B:**Composition** per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Solution B: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution C:**Composition** per liter:

Pyridoxine hydrochloride	300.0mg
Thiamine-HCl·2H ₂ O.....	200.0mg
Nicotinic acid.....	200.0mg
Vitamin B ₁₂	100.0mg
Calcium pantothenate	100.0mg
<i>p</i> -Aminobenzoic acid.....	80.0mg
D(+)-Biotin.....	20.0mg

Preparation of Solution C: Add components to distilled/deionized water and bring volume to 1.0L. Sparge with 100% N₂. Mix thoroughly. Filter sterilize.

Solution D:**Composition** per liter:

NaOH.....	0.5g
Na ₂ WO ₄ ·2H ₂ O	4.0mg
Na ₂ SeO ₃ ·5H ₂ O.....	3.0mg

Preparation of Solution D: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Solution E:

Composition per 100.0mL:

NaHCO₃..... 5.0g

Preparation of Solution E: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂ gas mixture. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution F:

Composition per 10.0mL:

Na-(D/L)-3-hydroxybutyrate 1.5g

Preparation of Solution F: Add Na-(D/L)-3-hydroxybutyrate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂ gas mixture. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution G:

Composition per 10.0mL:

Na₂S·9H₂O 0.125g

Preparation of Solution G: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas atmosphere. Sequentially add 1.0mL solution B, 1.0mL solution C, 1.0mL solution D, 50.0mL solution E, 10.0mL solution F, and 10.0mL solution G to 940.0mL solution A. Distribute anaerobically under 80% N₂ + 20% CO₂ into appropriate vessels. The pH should be 7.2–7.4.

Use: For the cultivation of *Desulfococcus biacutus* DSM 5651.

**Modified FWM Medium
(DSMZ Medium 503)**

Composition per 1013.0mL:

Solution A 940.0mL
Solution E 50.0mL
Solution F 10.0mL
Solution G 10.0mL
Solution B 1.0mL
Solution C 1.0mL
Solution D 1.0mL

pH 7.3 ± 0.2 at 25°C

Solution A:

Composition per 940.0mL:

NaCl 1.0g
KCl 0.5g
MgCl₂·6H₂O 0.4g
NH₄Cl 0.25g
KH₂PO₄ 0.2g
CaCl₂·2H₂O 0.15g
Resazurin 0.5mg

Preparation of Solution A: Prepare under 80% N₂ + 20% CO₂ gas atmosphere. Add components to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Adjust pH to 7.2. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution B:

Composition per liter:

FeCl₂·4H₂O 1.5g
CoCl₂·6H₂O 190.0mg
MnCl₂·4H₂O 100.0mg
ZnCl₂ 70.0mg
Na₂MoO₄·2H₂O 36.0mg
NiCl₂·6H₂O 24.0mg
H₃BO₃ 6.0mg
CuCl₂·2H₂O 2.0mg
HCl (25% solution) 10.0mL

Preparation of Solution B: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution C:

Composition per liter:

Pyridoxine hydrochloride 300.0mg
Thiamine-HCl·2H₂O 200.0mg
Nicotinic acid 200.0mg
Vitamin B₁₂ 100.0mg
Calcium pantothenate 100.0mg
p-Aminobenzoic acid 80.0mg
D(+)-Biotin 20.0mg

Preparation of Solution C: Add components to distilled/deionized water and bring volume to 1.0L. Sparge with 100% N₂. Mix thoroughly. Filter sterilize.

Solution D:

Composition per liter:

NaOH 0.5g
Na₂WO₄·2H₂O 4.0mg
Na₂SeO₃·5H₂O 3.0mg

Preparation of Solution D: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Solution E:

Composition per 100.0mL:

NaHCO₃ 5.0g

Preparation of Solution E: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂ gas mixture. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution F:

Composition per 10.0mL:

Xylan 2.0g

Preparation of Solution F: Add xylan to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂ gas mixture. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution G:

Composition per 10.0mL:

Na₂S·9H₂O 0.125g

Preparation of Solution G: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas atmosphere. Sequentially add 1.0mL solution B, 1.0mL solution C, 1.0mL solution D, 50.0mL solution E, 10.0mL solution F, and 10.0mL solution G to 940.0mL solution A. Distribute anaerobically under 80% N₂ + 20% CO₂ into appropriate vessels. The pH should be 7.2–7.4.

Use: For the cultivation of *Cytophaga xylanolytica* DSM 6779.

Modified FWM Medium (DSMZ Medium 503)

Composition per 1013.0mL:

Solution A	940.0mL
Solution E	50.0mL
Solution F	10.0mL
Solution G	10.0mL
Solution B	1.0mL
Solution C	1.0mL
Solution D	1.0mL

pH 7.3 ± 0.2 at 25°C

Solution A:

Composition per 940.0mL:

NaCl	1.0g
KCl	0.5g
MgCl ₂ ·6H ₂ O	0.4g
NH ₄ Cl	0.25g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O	0.15g
Resazurin	0.5mg

Preparation of Solution A: Prepare under 80% N₂ + 20% CO₂ gas atmosphere. Add components to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Adjust pH to 7.2. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution B:

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Solution B: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution C:

Composition per liter:

Pyridoxine hydrochloride	300.0mg
Thiamine-HCl·2H ₂ O	200.0mg
Nicotinic acid	200.0mg
Vitamin B ₁₂	100.0mg
Calcium pantothenate	100.0mg
<i>p</i> -Aminobenzoic acid	80.0mg
D(+)-Biotin	20.0mg

Preparation of Solution C: Add components to distilled/deionized water and bring volume to 1.0L. Sparge with 100% N₂. Mix thoroughly. Filter sterilize.

Solution D:

Composition per liter:

NaOH	0.5g
Na ₂ WO ₄ ·2H ₂ O	4.0mg
Na ₂ SeO ₃ ·5H ₂ O	3.0mg

Preparation of Solution D: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Solution E:

Composition per 100.0mL:

NaHCO ₃	5.0g
--------------------------	------

Preparation of Solution E: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂ gas mixture. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution F:

Composition per 10.0mL:

Xylose	2.0g
--------------	------

Preparation of Solution F: Add xylose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂ gas mixture. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution G:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.125g
---	--------

Preparation of Solution G: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas atmosphere. Sequentially add 1.0mL solution B, 1.0mL solution C, 1.0mL solution D, 50.0mL solution E, 10.0mL solution F, and 10.0mL solution G to 940.0mL solution A. Distribute anaerobically under 80% N₂ + 20% CO₂ into appropriate vessels. The pH should be 7.2–7.4.

Use: For the cultivation of *Cytophaga xylanolytica* DSM 6779.

Modified FWM Medium (DSMZ Medium 503)

Composition per 1013.0mL:

Solution A	940.0mL
Solution E	50.0mL
Solution F	10.0mL
Solution G	10.0mL
Solution B	1.0mL
Solution C	1.0mL
Solution D	1.0mL

pH 7.3 ± 0.2 at 25°C

Solution A:

Composition per 940.0mL:

NaCl	1.0g
KCl	0.5g
MgCl ₂ ·6H ₂ O	0.4g
NH ₄ Cl	0.25g
KH ₂ PO ₄	0.2g

CaCl ₂ ·2H ₂ O.....	0.15g
Resazurin	0.5mg

Preparation of Solution A: Prepare under 80% N₂ + 20% CO₂ gas atmosphere. Add components to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Adjust pH to 7.2. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution B:

Composition per liter:

FeCl ₂ ·4H ₂ O.....	1.5g
CoCl ₂ ·6H ₂ O.....	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	36.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O.....	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Solution B: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution C:

Composition per liter:

Pyridoxine hydrochloride.....	300.0mg
Thiamine-HCl·2H ₂ O.....	200.0mg
Nicotinic acid.....	200.0mg
Vitamin B ₁₂	100.0mg
Calcium pantothenate.....	100.0mg
<i>p</i> -Aminobenzoic acid.....	80.0mg
D(+)-Biotin.....	20.0mg

Preparation of Solution C: Add components to distilled/deionized water and bring volume to 1.0L. Sparge with 100% N₂. Mix thoroughly. Filter sterilize.

Solution D:

Composition per liter:

NaOH.....	0.5g
Na ₂ WO ₄ ·2H ₂ O.....	4.0mg
Na ₂ SeO ₃ ·5H ₂ O.....	3.0mg

Preparation of Solution D: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Solution E:

Composition per 100.0mL:

NaHCO ₃	5.0g
--------------------------	------

Preparation of Solution E: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂ gas mixture. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution F:

Composition per 10.0mL:

Pivalic acid.....	1.0g
NaNO ₃	0.85g

Preparation of Solution F: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100%

N₂ gas mixture. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution G:

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	0.125g
--	--------

Preparation of Solution G: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas atmosphere. Sequentially add 1.0mL solution B, 1.0mL solution C, 1.0mL solution D, 50.0mL solution E, 10.0mL solution F, and 10.0mL solution G to 940.0mL solution A. Distribute anaerobically under 80% N₂ + 20% CO₂ into appropriate vessels. The pH should be 7.2–7.4.

Use: For the cultivation of *Thaera pivalivorans* DSM 14691.

Modified FWM Medium (DSMZ Medium 503)

Composition per 1013.0mL:

Solution A.....	940.0mL
Solution E.....	50.0mL
Solution F.....	10.0mL
Solution G.....	10.0mL
Solution B.....	1.0mL
Solution C.....	1.0mL
Solution D.....	1.0mL

pH 7.3 ± 0.2 at 25°C

Solution A:

Composition per 940.0mL:

NaCl.....	1.0g
KCl.....	0.5g
MgCl ₂ ·6H ₂ O.....	0.4g
NH ₄ Cl.....	0.25g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O.....	0.15g
Resazurin.....	0.5mg

Preparation of Solution A: Prepare under 80% N₂ + 20% CO₂ gas atmosphere. Add components to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Adjust pH to 7.2. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution B:

Composition per liter:

FeCl ₂ ·4H ₂ O.....	1.5g
CoCl ₂ ·6H ₂ O.....	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	36.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O.....	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Solution B: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution C:**Composition per liter:**

Pyridoxine hydrochloride	300.0mg
Thiamine-HCl·2H ₂ O	200.0mg
Nicotinic acid	200.0mg
Vitamin B ₁₂	100.0mg
Calcium pantothenate	100.0mg
<i>p</i> -Aminobenzoic acid	80.0mg
D(+)-Biotin	20.0mg

Preparation of Solution C: Add components to distilled/deionized water and bring volume to 1.0L. Sparge with 100% N₂. Mix thoroughly. Filter sterilize.

Solution D:**Composition per liter:**

NaOH	0.5g
Na ₂ WO ₄ ·2H ₂ O	4.0mg
Na ₂ SeO ₃ ·5H ₂ O	3.0mg

Preparation of Solution D: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Solution E:**Composition per 100.0mL:**

NaHCO ₃	5.0g
--------------------------	------

Preparation of Solution E: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂ gas mixture. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution F:**Composition per 10.0mL:**

Glucose	5.0g
Yeast extract	2.0g

Preparation of Solution F: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂ gas mixture. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution G:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O	0.125g
---	--------

Preparation of Solution G: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas atmosphere. Sequentially add 1.0mL solution B, 1.0mL solution C, 1.0mL solution D, 50.0mL solution E, 10.0mL solution F, and 10.0mL solution G to 940.0mL solution A. Distribute anaerobically under 80% N₂ + 20% CO₂ into appropriate vessels. The pH should be 7.2–7.4.

Use: For the cultivation of *Opitutus* sp. DSM 14424.

Modified FWM Medium (DSMZ Medium 503)

Composition per 1013.0mL:

Solution A	940.0mL
Solution E	50.0mL
Solution F	10.0mL
Solution G	10.0mL
Solution B	1.0mL

Solution C	1.0mL
Solution D	1.0mL

pH 7.3 ± 0.2 at 25°C

Solution A:**Composition per 940.0mL:**

NaCl	1.0g
KCl	0.5g
MgCl ₂ ·6H ₂ O	0.4g
NH ₄ Cl	0.25g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O	0.15g
Resazurin	0.5mg

Preparation of Solution A: Prepare under 80% N₂ + 20% CO₂ gas atmosphere. Add components to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Adjust pH to 7.2. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution B:**Composition per liter:**

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Solution B: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution C:**Composition per liter:**

Pyridoxine hydrochloride	300.0mg
Thiamine-HCl·2H ₂ O	200.0mg
Nicotinic acid	200.0mg
Vitamin B ₁₂	100.0mg
Calcium pantothenate	100.0mg
<i>p</i> -Aminobenzoic acid	80.0mg
D(+)-Biotin	20.0mg

Preparation of Solution C: Add components to distilled/deionized water and bring volume to 1.0L. Sparge with 100% N₂. Mix thoroughly. Filter sterilize.

Solution D:**Composition per liter:**

NaOH	0.5g
Na ₂ WO ₄ ·2H ₂ O	4.0mg
Na ₂ SeO ₃ ·5H ₂ O	3.0mg

Preparation of Solution D: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Solution E:**Composition per 100.0mL:**

NaHCO ₃	5.0g
--------------------------	------

Preparation of Solution E: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with

100% N₂ gas mixture. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution F:

Composition per 10.0mL:

Na ₂ -fumarate.....	3.2g
Na-acetate	0.8g

Preparation of Solution F: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂ gas mixture. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution G:

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	0.125g
--	--------

Preparation of Solution G: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas atmosphere. Sequentially add 1.0mL solution B, 1.0mL solution C, 1.0mL solution D, 50.0mL solution E, 10.0mL solution F, and 10.0mL solution G to 940.0mL solution A. Distribute anaerobically under 80% N₂ + 20% CO₂ into appropriate vessels. The pH should be 7.2–7.4.

Use: For the cultivation of *Geovibrio thiophilus* DSM 11263.

Modified FWM Medium (DSMZ Medium 503)

Composition per 1013.0mL:

Solution A.....	940.0mL
Solution E.....	50.0mL
Solution F.....	10.0mL
Solution G.....	10.0mL
Solution B.....	1.0mL
Solution C.....	1.0mL
Solution D.....	1.0mL

pH 7.3 ± 0.2 at 25°C

Solution A:

Composition per 940.0mL:

NaCl.....	1.0g
KCl.....	0.5g
MgCl ₂ ·6H ₂ O.....	0.4g
NH ₄ Cl.....	0.25g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O.....	0.15g
Resazurin.....	0.5mg

Preparation of Solution A: Prepare under 80% N₂ + 20% CO₂ gas atmosphere. Add components to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Adjust pH to 7.2. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution B:

Composition per liter:

FeCl ₂ ·4H ₂ O.....	1.5g
CoCl ₂ ·6H ₂ O.....	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	36.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg

H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O.....	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Solution B: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution C:

Composition per liter:

Pyridoxine hydrochloride.....	300.0mg
Thiamine-HCl·2H ₂ O.....	200.0mg
Nicotinic acid.....	200.0mg
Vitamin B ₁₂	100.0mg
Calcium pantothenate.....	100.0mg
<i>p</i> -Aminobenzoic acid.....	80.0mg
D(+)-Biotin.....	20.0mg

Preparation of Solution C: Add components to distilled/deionized water and bring volume to 1.0L. Sparge with 100% N₂. Mix thoroughly. Filter sterilize.

Solution D:

Composition per liter:

NaOH.....	0.5g
Na ₂ WO ₄ ·2H ₂ O.....	4.0mg
Na ₂ SeO ₃ ·5H ₂ O.....	3.0mg

Preparation of Solution D: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Solution E:

Composition per 100.0mL:

NaHCO ₃	5.0g
--------------------------	------

Preparation of Solution E: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂ gas mixture. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution F:

Composition per 10.0mL:

Na-glycolate.....	2.0g
Yeast extract.....	1.0g

Preparation of Solution F: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂ gas mixture. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution G:

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	0.125g
--	--------

Preparation of Solution G: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas atmosphere. Sequentially add 1.0mL solution B, 1.0mL solution C, 1.0mL solution D, 50.0mL solution E, 10.0mL solution F, and 10.0mL solution G to 940.0mL solution A. Distribute anaerobically under 80% N₂ + 20% CO₂ into appropriate vessels. The pH should be 7.2–7.4.

Use: For the cultivation of *Clostridium* sp. DSM 11261.

Modified FWM Medium (DSMZ Medium 503)

Composition per 1013.0mL:

Solution A	940.0mL
Solution E	50.0mL
Solution F	10.0mL
Solution G	10.0mL
Solution B	1.0mL
Solution C	1.0mL
Solution D	1.0mL

pH 7.3 ± 0.2 at 25°C

Solution A:

Composition per 940.0mL:

NaCl	1.0g
KCl	0.5g
MgCl ₂ ·6H ₂ O	0.4g
NH ₄ Cl	0.25g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O	0.15g
Resazurin	0.5mg

Preparation of Solution A: Prepare under 80% N₂ + 20% CO₂ gas atmosphere. Add components to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Adjust pH to 7.2. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution B:

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Solution B: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution C:

Composition per liter:

Pyridoxine hydrochloride	300.0mg
Thiamine-HCl·2H ₂ O	200.0mg
Nicotinic acid	200.0mg
Vitamin B ₁₂	100.0mg
Calcium pantothenate	100.0mg
<i>p</i> -Aminobenzoic acid	80.0mg
D(+)-Biotin	20.0mg

Preparation of Solution C: Add components to distilled/deionized water and bring volume to 1.0L. Sparge with 100% N₂. Mix thoroughly. Filter sterilize.

Solution D:

Composition per liter:

NaOH	0.5g
Na ₂ WO ₄ ·2H ₂ O	4.0mg
Na ₂ SeO ₃ ·5H ₂ O	3.0mg

Preparation of Solution D: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Solution E:

Composition per 100.0mL:

NaHCO ₃	5.0g
--------------------------	------

Preparation of Solution E: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂ gas mixture. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution F:

Composition per 10.0mL:

Na-3-hydroxybutyrate	3.0g
Yeast extract	1.0g

Preparation of Solution F: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂ gas mixture. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution G:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.125g
---	--------

Preparation of Solution G: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas atmosphere. Sequentially add 1.0mL solution B, 1.0mL solution C, 1.0mL solution D, 50.0mL solution E, 10.0mL solution F, and 10.0mL solution G to 940.0mL solution A. Distribute anaerobically under 80% N₂ + 20% CO₂ into appropriate vessels. The pH should be 7.2–7.4.

Use: For the cultivation of unclassified bacterium DSM 11262.

Modified FWM Medium (DSMZ Medium 503)

Composition per 1023.0mL:

Solution A	940.0mL
Solution E	50.0mL
Solution F	10.0mL
Solution G	20.0mL
Solution B	1.0mL
Solution C	1.0mL
Solution D	1.0mL

pH 7.3 ± 0.2 at 25°C

Solution A:

Composition per 940.0mL:

Na ₂ SO ₄	2.8g
NaCl	1.0g
KCl	0.5g
MgCl ₂ ·6H ₂ O	0.4g
NH ₄ Cl	0.25g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O	0.15g
Resazurin	0.5mg

Preparation of Solution A: Prepare under 80% N₂ + 20% CO₂ gas atmosphere. Add components to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Adjust pH to 7.2. Sparge with 80% N₂

+ 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution B:

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Solution B: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution C:

Composition per liter:

Pyridoxine hydrochloride	300.0mg
Thiamine-HCl·2H ₂ O	200.0mg
Nicotinic acid	200.0mg
Vitamin B ₁₂	100.0mg
Calcium pantothenate	100.0mg
<i>p</i> -Aminobenzoic acid	80.0mg
D(+)-Biotin	20.0mg

Preparation of Solution C: Add components to distilled/deionized water and bring volume to 1.0L. Sparge with 100% N₂. Mix thoroughly. Filter sterilize.

Solution D:

Composition per liter:

NaOH	0.5g
Na ₂ WO ₄ ·2H ₂ O	4.0mg
Na ₂ SeO ₃ ·5H ₂ O	3.0mg

Preparation of Solution D: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Solution E:

Composition per 100.0mL:

NaHCO ₃	5.0g
--------------------------	------

Preparation of Solution E: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂ gas mixture. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution F:

Composition per 10.0mL:

Syringic acid	0.6 g
---------------------	-------

Preparation of Solution F: Add syringic acid to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Adjust pH to 7.0. Sparge with 100% N₂ gas mixture. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution G:

Composition per 20.0mL:

Na ₂ S·9H ₂ O	0.25g
---	-------

Preparation of Solution G: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas atmosphere. Sequentially add 1.0mL solution B, 1.0mL solution C, 1.0mL solution D, 50.0mL solution E, 10.0mL solution F, and 20.0mL solution G to 940.0mL solution A. Distribute anaerobically under 80% N₂ + 20% CO₂ into appropriate vessels. The pH should be 7.2–7.4. Prior to inoculation the completed medium should equilibrate overnight.

Use: For the cultivation of *Parasporobacterium paucivorans* DSM 15970.

Modified FWM Medium (DSMZ Medium 503)

Composition per 1023.0mL:

Solution A	940.0mL
Solution E	50.0mL
Solution F	10.0mL
Solution G	10.0mL
Solution H	10.0mL
Solution B	1.0mL
Solution C	1.0mL
Solution D	1.0mL

pH 6.5–7.0 at 25°C

Solution A:

Composition per 940.0mL:

NaCl	1.0g
KCl	0.5g
MgCl ₂ ·6H ₂ O	0.4g
NH ₄ Cl	0.25g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O	0.15g
Resazurin	0.5mg

Preparation of Solution A: Prepare under 80% N₂ + 20% CO₂ gas atmosphere. Add components to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Adjust pH to 7.2. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution B:

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Solution B: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution C:

Composition per liter:

Pyridoxine hydrochloride	300.0mg
Thiamine-HCl·2H ₂ O	200.0mg

Nicotinic acid.....	200.0mg
Vitamin B ₁₂	100.0mg
Calcium pantothenate	100.0mg
<i>p</i> -Aminobenzoic acid.....	80.0mg
D(+)-Biotin.....	20.0mg

Preparation of Solution C: Add components to distilled/deionized water and bring volume to 1.0L. Sparge with 100% N₂. Mix thoroughly. Filter sterilize.

Solution D:

Composition per liter:

NaOH.....	0.5g
Na ₂ WO ₄ ·2H ₂ O.....	4.0mg
Na ₂ SeO ₃ ·5H ₂ O.....	3.0mg

Preparation of Solution D: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Solution E:

Composition per 100.0mL:

NaHCO ₃	5.0g
--------------------------	------

Preparation of Solution E: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂ gas mixture. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution F:

Composition per 10.0mL:

Trimethylamine hydrochloride	2.0g
Methanol.....	0.6g

Preparation of Solution F: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂ gas mixture. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution G:

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	0.125g
--	--------

Preparation of Solution G: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution H:

Composition per 10.0mL:

FeSO ₄ ·6H ₂ O.....	0.02g
---	-------

Preparation of Solution H: Add FeSO₄·6H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂ gas mixture. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas atmosphere. Sequentially add 1.0mL solution B, 1.0mL solution C, 1.0mL solution D, 50.0mL solution E, 10.0mL solution F, and 10.0mL solution G to 940.0mL solution A. Distribute anaerobically under 80% N₂ + 20% CO₂ into appropriate vessels. The pH should be 6.5–7.0. After inoculation aseptically inject 0.1mL of solution H for each 10.0mL of medium.

Use: For the cultivation of *Methanomethylovorans hollandica* DSM 15978.

Modified Gorodkova Agar

Composition per liter:

Agar.....	20.0g
Peptic digest of animal tissue	10.0g
NaCl.....	5.0g
Glucose.....	1.0g

pH 6.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling with frequent agitation. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For promoting sporulation of yeasts.

Modified ISP5 Medium (DSMZ Medium 993b)

Composition per liter:

KCl.....	100.0
Agar.....	20.0g
Glycerol.....	10.0g
Yeast extract.....	5.0g
L-asparagine, anhydrous.....	1.0g
K ₂ HPO ₄ , anhydrous.....	1.0g
Trace elements solution.....	1.0mL

pH 7.2 ± 0.2 at 25°C

Trace Elements Solution:

Composition per 100.0mL:

FeSO ₄ ·7H ₂ O.....	0.1g
MnCl ₂ ·4H ₂ O.....	0.1g
ZnSO ₄ ·7H ₂ O.....	0.1g

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Distribute into tubes or flasks. Gently heat while stirring and bring to boiling. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Pour into Petri dishes or leave in tubes.

Use: For the cultivation of *Nesterenkonia xinjiangensis* and *Microbacterium halotolerans*.

Modified ISP5 Medium with Sodium Chloride (DSMZ Medium 993c)

Composition per liter:

NaCl.....	100.0g
Agar.....	20.0g
Glycerol.....	10.0g
L-asparagine, anhydrous.....	1.0g
K ₂ HPO ₄ , anhydrous.....	1.0g
Trace elements solution.....	1.0mL

pH 7.2 ± 0.2 at 25°C

Trace Elements Solution:

Composition per 100.0mL:

FeSO ₄ ·7H ₂ O.....	0.1g
MnCl ₂ ·4H ₂ O.....	0.1g
ZnSO ₄ ·7H ₂ O.....	0.1g

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Distribute into tubes or flasks. Gently heat while stirring and bring to boiling. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Pour into Petri dishes or leave in tubes.

Use: For the cultivation of *Nesterenkonia lutea*.

Modified Lethen HiVeg Agar (Lethen HiVeg Agar, Modified)

Composition per liter:

Agar	20.0g
Plant peptone.....	20.0g
Plant extract	5.0g
Plant hydrolysate.....	5.0g
NaCl	5.0g
Polysorbate 80.....	5.0g
Yeast extract.....	2.0g
Lecithin	0.7g
NaHSO ₃	0.1g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the screening cosmetic products for microbial contamination.

Modified Lethen HiVeg Broth (Lethen HiVeg Broth, Modified)

Composition per liter:

Plant peptone.....	20.0g
Plant extract	5.0g
Plant hydrolysate.....	5.0g
NaCl	5.0g
Polysorbate 80.....	5.0g
Yeast extract.....	2.0g
Lecithin	0.7g
NaHSO ₃	0.1g

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the screening of cosmetic products for microbial contamination.

Modified McBride *Listeria* HiVeg Agar Base with Blood and Cycloheximide

Composition per liter:

Agar	15.0g
Glycine anhydride.....	10.0g

Plant hydrolysate	5.0g
Plant peptone	5.0g
NaCl	5.0g
Plant extract	3.0g
Phenyl ethanol	2.5g
LiCl	0.5g
Sheep blood, defibrinated	50.0mL
Selective supplement solution	10.0mL

pH 7.3 ± 0.2 at 25°C

Source: This medium, without blood or selective supplement solution, is available as a premixed powder from HiMedia.

Caution: LiCl is harmful. Avoid bodily contact and inhalation of vapors. On contact with skin wash with plenty of water immediately.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Selective Supplement Solution:

Composition per 10.0mL:

Cycloheximide.....	0.2g
--------------------	------

Preparation of Selective Supplement Solution: Add cycloheximide to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except blood and selective supplement solution, to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 50.0mL defibrinated blood and 10.0mL selective supplement solution. Mix thoroughly. Pour into sterile Petri dishes or leave in tubes.

Use: For the selective isolation of *Listeria monocytogenes* from clinical and nonclinical specimens containing mixed flora.

Modified Marine Broth (Modified Medium 514) (DSMZ Medium 1173)

Composition per liter:

NaCl	39.45g
Peptone	10.0g
MgCl ₂	8.8g
Yeast extract.....	5.0g
Na ₂ SO ₃	3.24g
CaCl ₂	1.8g
KCl.....	0.55g
NaHCO ₃	0.16g
Ferric citrate.....	0.1g
KBr	0.08g
SrCl ₂	0.03g
H ₃ BO ₃	0.02g
Na ₂ HPO ₄	8.0mg
Na ₂ SiO ₃	4.0mg
NaF	2.4mg
NH ₄ NO ₃	1.6mg

pH 7.6 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Shewanella atlantica*.

Modified MYP Agar Base**Composition per liter:**

Agar	12.0g
Peptic digest of animal tissue.....	10.0g
D-Mannitol	10.0g
NaCl	10.0g
Meat extract	1.0g
Phenol Red	0.025g
Egg yolk emulsion	100.0mL
Selective supplement solution	10.0mL
pH 7.1 ± 0.2 at 25°C	

Source: This medium is available from HiMedia.

Egg Yolk Emulsion**Composition per 100.0mL:**

Chicken egg yolks.....	11
Whole chicken egg.....	1
NaCl (0.9% solution).....	50.0mL

Preparation of Egg Yolk Emulsion: Soak eggs with 1:100 dilution of saturated mercuric chloride solution for 1 min. Crack eggs and separate yolks from whites. Mix egg yolks with 1 chicken egg. Beat to form emulsion. Measure 50.0mL of egg yolk emulsion and add to 50.0mL of 0.9% NaCl solution. Mix thoroughly. Filter sterilize. Warm to 45°–50°C.

Selective Supplement Solution:**Composition per 10.0mL:**

Polymyxin B	1000U
-------------------	-------

Preparation of Selective Supplement Solution: Add polymyxin B to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except egg yolk emulsion and selective supplement solution, to distilled/deionized water and bring volume to 890.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add egg yolk emulsion and selective supplement solution. Mix thoroughly. Pour into Petri dishes or aseptically distribute into sterile tubes.

Use: For the isolation and identification of *Bacillus* species and pathogenic staphylococci.

Modified MYP HiVeg Agar Base with Egg Yolk and Polymyxin B**Composition per liter:**

Agar	12.0g
D-Mannitol	10.0g
Plant peptone.....	10.0g
NaCl	10.0g
Plant extract No. 1	1.0g
Phenol red	0.025g
Egg yolk emulsion, 20%.....	10.0mL
Polymyxin B solution	1.0mL
pH 7.1 ± 0.2 at 25°C	

Source: This medium, without egg yolk emulsion and polymyxin B solution, is available as a premixed powder from HiMedia.

Egg Yolk Emulsion, 20%:**Composition per 100.0mL:**

Chicken egg yolks.....	11
Whole chicken egg.....	1
NaCl (0.9% solution).....	80.0mL

Preparation of Egg Yolk Emulsion, 20%: Soak eggs with 1:100 dilution of saturated mercuric chloride solution for 1 min. Crack eggs and separate yolks from whites. Mix egg yolks with 1 chicken egg. Measure 20.0mL of egg yolk emulsion and add to 80.0mL of 0.9% NaCl solution. Mix thoroughly. Filter sterilize. Warm to 45°–50°C.

Polymyxin B Solution:**Composition per 1.0mL:**

Polymyxin B	1.0mg
-------------------	-------

Preparation of Polymyxin B Solution: Add polymyxin B to distilled/deionized water and bring volume to 1.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components—except egg yolk emulsion, 20%, and polymyxin B solution—to distilled/deionized water and bring volume to 989.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL of sterile egg yolk emulsion, 20%, and 1.0mL of sterile polymyxin B solution. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the cultivation and maintenance of *Bacillus cereus*. For the isolation and identification of *Bacillus* species and pathogenic staphylococci.

Modified Oxford Listeria Selective Agar (Oxford Agar, Modified)**(Listeria Selective Agar, Modified Oxford)****(MOX Agar)****(BAM M103a)****Composition per 1002.0mL:**

Special peptone.....	23.0g
LiCl	15.0g
Agar	12.0g
NaCl.....	5.0g
Cornstarch.....	1.0g
Esculin	1.0g
Ferric ammonium citrate.....	0.5g
Buffered colistin methane sulfonate solution	1.0mL
Buffered moxalactam solution.....	2.0mL
pH 7.2 ± 0.2 at 25°C	

Buffered Colistin Methane Sulfonate**Solution:****Composition per 100.0mL:**

Colistin methane sulfonate	1.0g
Potassium phosphate buffer, 0.1M, pH 6.0.....	100.0mL

Preparation of Buffered Colistin Methane Sulfonate Solution: Add colistin methane sulfonate to 100.0mL 0.1M potassium phosphate buffer. Mix thoroughly. Adjust pH to 6.0. Filter sterilize. Store at –20°C.

Buffered Moxalactam Solution:**Composition per 100.0mL:**

Sodium or ammonium moxalactam.....	1.0g
------------------------------------	------

Preparation of Buffered Moxalactam Solution: Add sodium or ammonium moxalactam to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Store at –20°C.

Preparation of Medium: Gradually add components, except buffered moxalactam solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Gently heat and bring to boiling. Autoclave for 10 min at 15 psi pressure–121°C. Cool quick-

ly to 46°C. Aseptically add 2.0mL of sterile moxalactam solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of *Listeria monocytogenes* from specimens containing a mixed bacterial flora.

Modified PYNFH Medium

Composition per liter:

Peptone.....	10.0g
Yeast extract.....	10.0g
Yeast nucleic acid.....	1.0g
Folic acid.....	15.0mg
Hemin.....	1.0mg
Fetal bovine serum, heat inactivated.....	100.0mL
Buffer solution.....	20.0mL

pH 6.5 ± 0.2 at 25°C

Buffer Solution:

Composition per liter:

Na ₂ HPO ₄	25.0g
KH ₂ PO ₄	18.1g

Preparation of Buffer Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.5. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Preparation of Medium: Add components, except buffer solution and fetal bovine serum, to distilled/deionized water and bring volume to 880.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 20.0mL of sterile buffer solution and 100.0mL of sterile, heat-inactivated fetal bovine serum. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Dexiostoma campyla*, *Hartmannella vermiformis*, *Naegleria australiensis*, *Naegleria fowleri*, *Naegleria gruberi*, *Naegleria jadini*, *Phytomonas davidi*, *Tetrahymena* species, *Vahlkampfia avara*, and *Williaertia magna*.

Modified Rappaport Vassiliadis HiVeg Medium

Composition per liter:

MgCl ₂ ·6H ₂ O.....	40.0g
NaCl.....	8.0g
Papaic digest of soybean meal.....	5.0g
KH ₂ PO ₄	1.6g
Malachite Green.....	0.04g

pH 5.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 10 psi pressure–115°C.

Use: For the selective enrichment of *Salmonella* species from food and environmental specimens.

Modified Rogosa HiVeg Agar (M16 HiVeg Agar)

Composition per liter:

Agar.....	10.0g
Glucose.....	5.0g
Plant extract.....	5.0g
Plant hydrolysate No. 1.....	5.0g

Papaic digest of soybean meal.....	5.0g
Sodium acetate.....	3.0g
Yeast extract.....	2.5g
Ascorbic acid.....	0.5g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.2 with 2N NaOH. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of lactobacilli from cheese. For the cultivation and enumeration of microorganisms encountered in the dairy industry.

Modified Salt Broth

See: Salt Broth, Modified

Modified Semisolid Rappaport Vassiliadis Medium (MSRV Medium)

Composition per liter:

MgCl ₂ , anhydrous.....	10.93g
NaCl.....	7.34g
Casein hydrolysate.....	4.59g
Tryptose.....	4.59g
Agar.....	2.7g
KH ₂ PO ₄	1.47g
Malachite Green oxalate.....	0.037g
Novobiocin solution.....	10.0mL

pH 5.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Novobiocin Solution:

Composition per 10.0mL:

Novobiocin.....	0.02g
-----------------	-------

Preparation of Novobiocin Solution: Add novobiocin to 10.0mL of distilled/deionized water. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except novobiocin solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat to boiling. Do not autoclave. Cool to 45°–50°C. Aseptically add 10.0mL of sterile novobiocin solution. Mix thoroughly. Pour into sterile Petri dishes. Air-dry plates for at least 1 hr.

Use: For the isolation and cultivation of motile *Salmonella* species from food and environmental samples.

Modified Shieh Agar (LMG Medium 215)

Composition per liter:

Agar.....	15.0g
Peptone.....	5.0g
Yeast extract.....	1.0g
MgSO ₄ ·7H ₂ O.....	0.3g
K ₂ HPO ₄	0.1g
KH ₂ PO ₄	50.0mg
NaHCO ₃	50.0mg
Na-acetate.....	10.0mg
BaCl ₂ ·H ₂ O.....	10.0mg

CaCl ₂ ·2H ₂ O.....	6.7 mg
FeSO ₄ ·7H ₂ O.....	1.0mg
pH 7.3 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Flavobacterium* spp., *Flexibacter* spp., *Chitinophaga pinensis*, and *Flectobacillus major*.

Modified Skim Milk HiVeg Agar

Composition per liter:

Agar	15.0g
Plant hydrolysate.....	5.0g
Yeast extract.....	2.5g
Skim milk powder.....	1.0g
Glucose monohydrate.....	1.0g
pH 7.0 ± 0.1 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or aseptically distribute into sterile tubes.

Use: For the cultivation and differentiation of bacteria based on proteolytic activity. For the cultivation and enumeration of lactic streptococci used in manufacturing of cheddar cheese.

Modified Soyabean Bile Broth Base

Composition per liter:

Casein enzymic hydrolysate	17.0g
NaCl.....	5.0g
K ₂ HPO ₄	4.0g
Papaic digest of soybean meal	3.0g
D-Glucose.....	2.5g
Bile salts mixture	1.5g
Selective supplement solution	10.0mL
pH 7.3 ± 0.2 at 25°C	

Source: This medium is available from HiMedia.

Selective Supplement Solution:

Composition per 10.0mL:

Novobiocin.....	10.0mg
-----------------	--------

Preparation of Selective Supplement Solution: Add novobiocin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except selective supplement solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add selective supplement solution. Mix thoroughly. Pour into Petri dishes or aseptically distribute into sterile tubes.

Use: For the detection of *Escherichia coli* O157:H7 from food.

Modified Soybean HiVeg Agar

Composition per liter:

Plant hydrolysate.....	17.0g
Agar	15.0g

NaCl.....	5.0g
Papaic digest of soybean meal	3.0g
K ₂ HPO ₄	2.5g
Glucose	2.5g
Polysorbate 80	10.0mL
pH 7.3 ± 0.2 at 25°C	

Source: This medium, without polysorbate 80, is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.3. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the microbiological assay of polymyxin B, colistin sulfate, and sodium colistimethate.

Modified TH Agar (DSMZ Medium 1061)

Composition per liter:

Agar	15.0g
Tryptone	5.0g
NaCl	5.0g
Yeast extract	3.0g
MnSO ₄ ·2H ₂ O	0.01g
Trace elements solution SL-6	1.0mL
pH 7.5 ± 0.2 at 25°C	

Trace Elements Solution SL-6:

Composition per liter:

MnCl ₂ ·4H ₂ O	0.5g
H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
Na ₂ MoO ₄ ·2H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.5. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into Petri dishes or leave in tubes.

Use: For the cultivation of *Anoxybacillus vouinoviensis*.

Modified Thayer-Martin Agar See: Thayer-Martin Agar, Modified

Modified Thermus Medium (DSMZ Medium 630)

Composition per liter:

Agar	28.0g
Yeast extract.....	2.5g
Tryptone.....	2.5g
MgCl ₂ ·6H ₂ O	200.0mg
Nitilotriacetic acid	100.0mg
CaSO ₄ ·2H ₂ O	40.0mg
Phosphate solution	100.0mL

Ferric citrate solution	0.5mL
Trace elements solution	0.5mL
pH 7.2 ± 0.2 at 25°C	

Phosphate Solution:**Composition per liter:**

Na ₂ HPO ₄ ·12H ₂ O	43.0g
KH ₂ PO ₄	5.44g

Preparation of Phosphate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C.

Ferric Citrate Solution:**Composition per liter:**

Ferric citrate	2.5g
----------------------	------

Preparation of Ferric Citrate Solution: Add ferric citrate to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Trace Elements Solution:**Composition per liter:**

Nitritotriacetic acid	12.8g
FeCl ₂ ·4H ₂ O	1.0g
MnCl ₂ ·4H ₂ O	0.5g
CoCl ₂ ·4H ₂ O	0.3g
Na ₂ MoO ₄ ·4H ₂ O	50.0mg
CuCl ₂ ·2H ₂ O	50.0mg
NiCl ₂ ·6H ₂ O	20.0mg
H ₃ BO ₃	20.0mg

Preparation of Trace Elements Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 7.0 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly. Adjust pH to 6.8.

Preparation of Medium: Add components, except phosphate solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 100.0mL phosphate solution. Mix thoroughly. Adjust pH to 7.2. Pour into Petri dishes or aseptically distribute into sterile tubes.

Use: For the cultivation and maintenance of *Thermus* sp., *Rhodothermus marinus*, and *Albidovulum inexpectatum*.

Modified V.P. HiVeg Broth**Composition per liter:**

Plant peptone No. 3	7.0g
Glucose	5.0g
NaCl	5.0g

pH 6.9 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.9. Distribute into tubes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and differentiation of bacteria based on their ability to produce acetoin.

**Modified VWM Medium
(DSMZ Medium 503a)****Composition per 1013.4mL:**

Solution A	940.0mL
------------------	---------

Solution E	50.0mL
Solution F	10.0mL
Solution G	10.0mL
Solution B	1.0mL
Solution C	1.0mL
Solution D	1.0mL
Solution H	0.4mL

pH 7.3 ± 0.2 at 25°C

Solution A:**Composition per 940.0mL:**

NaCl	1.0g
KCl	0.5g
MgCl ₂ ·6H ₂ O	0.4g
NH ₄ Cl	0.25g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O	0.15g
Resazurin	0.5mg

Preparation of Solution A: Prepare under 80% N₂ + 20% CO₂ gas atmosphere. Add components to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Adjust pH to 7.2. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution B:**Composition per liter:**

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Solution B: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution C:**Composition per liter:**

Pyridoxine hydrochloride	300.0mg
Thiamine-HCl·2H ₂ O	200.0mg
Nicotinic acid	200.0mg
Vitamin B ₁₂	100.0mg
Calcium pantothenate	100.0mg
<i>p</i> -Aminobenzoic acid	80.0mg
D(+)-Biotin	20.0mg

Preparation of Solution C: Add components to distilled/deionized water and bring volume to 1.0L. Sparge with 100% N₂. Mix thoroughly. Filter sterilize.

Solution D:**Composition per liter:**

NaOH	0.5g
Na ₂ WO ₄ ·2H ₂ O	4.0mg
Na ₂ SeO ₃ ·5H ₂ O	3.0mg

Preparation of Solution D: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Solution E:**Composition** per 100.0mL:NaHCO₃ 5.0g

Preparation of Solution E: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂ gas mixture. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution F:**Composition** per 10.0mL:

Taurine 2.5g

Preparation of Solution F: Add taurine to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂ gas mixture. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution G:**Composition** per 10.0mL:Na₂S·9H₂O 0.125g

Preparation of Solution G: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution H:**Composition** per 10.0mL:

Na-dithionite 0.5g

Preparation of Solution H: Add Na-dithionite to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas atmosphere. Sequentially add 1.0mL solution B, 1.0mL solution C, 1.0mL solution D, 50.0mL solution E, 10.0mL solution F, 10.0mL solution G, and 0.4mL solution H to 940.0mL solution A. Distribute anaerobically under 80% N₂ + 20% CO₂ into appropriate vessels. The pH should be 7.2–7.4.

Use: For the cultivation of *Desulfonisporea thiosulfatigenes*.

Moeller Decarboxylase Broth**Composition** per liter:

Amino acid 10.0g
 Peptic digest of animal tissue 5.0g
 Beef extract 5.0g
 Glucose 0.5g
 Bromcresol Purple 0.01g
 Cresol Red 5.0mg
 Pyridoxal 5.0mg

pH 6.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Use L-lysine, L-arginine, or L-ornithine. Mix thoroughly. Gently heat until dissolved. Distribute into screw-capped tubes in 5.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. A slight precipitate may form in the ornithine broth.

Use: For the differentiation of Gram-negative enteric bacteria based on the production of arginine dihydrolase, lysine decarboxylase, or ornithine decarboxylase.

**Moeller Decarboxylase HiVeg Broth Base
(Decarboxylase Broth Base, Moeller)****Composition** per liter:

Plant extract 5.0g
 Plant peptone 5.0g
 Glucose 0.5g
 Bromcresol Purple 0.01g
 Pyridoxal 5.0mg
 Cresol Red 5.0mg

pH 6.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until dissolved. Distribute into screw-capped tubes in 5.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: With the addition of amino acid solutions, this medium is used for the differentiation of Gram-negative enteric bacteria based on the production of amino acid decarboxylation reactions.

**Moeller Decarboxylase HiVeg Broth
Arginine HCl****(Decarboxylase Broth Base, Moeller with Arginine)****Composition** per liter:

L-Arginine hydrochloride 10.0g
 Plant extract 5.0g
 Plant peptone 5.0g
 Glucose 0.5g
 Bromcresol Purple 0.01g
 Pyridoxal 5.0mg
 Cresol Red 5.0mg

pH 6.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until dissolved. Distribute into screw-capped tubes in 5.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the differentiation of Gram-negative enteric bacteria based on the production of arginine dihydrolase.

**Moeller Decarboxylase HiVeg Broth with Lysine HCl
(Decarboxylase Broth Base, Moeller with Lysine)****Composition** per liter:

L-Lysine hydrochloride 10.0g
 Plant extract 5.0g
 Plant peptone 5.0g
 Glucose 0.5g
 Bromcresol Purple 0.01g
 Pyridoxal 5.0mg
 Cresol Red 5.0mg

pH 6.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until dis-

solved. Distribute into screw-capped tubes in 5.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the differentiation of Gram-negative enteric bacteria based on the production of lysine decarboxylase.

Moeller Decarboxylase HiVeg Broth with Ornithine HCl

Composition per liter:

L-Ornithine hydrochloride	10.0g
Plant extract	5.0g
Plant peptone.....	5.0g
Glucose	0.5g
Bromcresol Purple	0.01g
Pyridoxal.....	5.0mg
Cresol Red.....	5.0mg

pH 6.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until dissolved. Distribute into screw-capped tubes in 5.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the differentiation of Gram-negative enteric bacteria based on the production of ornithine decarboxylase.

Moeller KCN Broth Base

Composition per liter:

Na ₂ HPO ₄	5.64g
NaCl	5.0g
Pancreatic digest of casein.....	1.5g
Peptic digest of animal tissue.....	1.5g
KH ₂ PO ₄	0.225g
KCN solution	0.15mL

pH 7.6 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

KCN Solution:

Composition per 100.0mL:

KCN	0.5g
-----------	------

Preparation of KCN Solution: Add KCN to 100.0mL of cold distilled/deionized water. Mix thoroughly and cap. Do not mouth pipette.

Caution: Cyanide is toxic.

Preparation of Medium: Add components, except KCN solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Prior to use, add 0.15mL of KCN solution. Mix thoroughly. Aseptically distribute into sterile tubes.

Use: For the differentiation of Gram-negative enteric bacteria on the basis of their ability to grow in the presence of cyanide.

MOF HiVeg Medium with Carbohydrate

Composition per liter:

NaCl	9.7g
MnCl ₂	4.4g

Agar	3.0g
Na ₂ SO ₄	1.6g
Plant hydrolysate	1.0g
CaCl ₂	0.9g
(NH ₄) ₂ SO ₄	0.5g
Tris hydroxymethyl aminomethane	0.5g
KCl.....	0.275g
Yeast extract.....	0.1g
NaHCO ₃	0.08g
KBr	0.04g
SrCl ₂	0.017g
H ₃ BO ₃	0.011g
Phenol red.....	0.01g
Na ₂ HPO ₄	4.0mg
Sodium silicate.....	2.0mg
NaI	1.2mg
NH ₄ NO ₃	0.8mg
Carbohydrate solution.....	100.0mL

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Carbohydrate Solution:

Composition per 100.0mL:

Carbohydrate.....	10.0g
-------------------	-------

Preparation of Carbohydrate Solution: Add carbohydrate to distilled/deionized water and bring volume to 100.0mL. Adonitol, arabinose, cellobiose, glucose, dulcitol, fructose, galactose, inositol, lactose, maltose, mannitol, raffinose, rhamnose, salicin, sorbitol, sucrose, trehalose, xylose, or other carbohydrates may be used. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except carbohydrate solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat until dissolved. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 100.0mL sterile carbohydrate solution. Mix thoroughly. Aseptically distribute into screw-capped tubes in 5.0mL volumes.

Use: For the differentiation of marine bacteria on the basis of fermentative and oxidative metabolism of carbohydrates.

Molybdate Agar

Composition per 101.5mL:

Base.....	100.0mL
Phosphomolybdic acid solution.....	1.5mL

pH 5.3 ± 0.2 at 25°C

Base:

Composition per liter:

Sucrose.....	40.0g
Agar	15.0g
Meat peptone	10.0g

Preparation of Base: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.6. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Phosphomolybdic Acid Solution:

Composition per 100.0mL:

P ₂ O ₅ ·2OMoO ₃	12.5g
---	-------

Preparation of Base: Add $P_2O_5 \cdot 20MoO_3$ (phospho-12-molybdic acid, 12-molybdophosphoric acid, or PMA) to sterile distilled/deionized water. Mix thoroughly. Do not adjust pH.

Preparation of Medium: To 100.0mL of cooled sterile base, add 1.5mL of phosphomolybdic acid solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and presumptive identification of yeast, especially *Candida* species. *Candida albicans* appears as smooth, medium olive colonies with medium olive bottoms. *Candida stellatoidea* appears as shiny, light gray colonies with light gray bottoms. *Candida tropicalis* appears as smooth, shiny, dark blue/gray colonies with dark blue/gray bottoms. *Candida krusei* appears as smooth, dull white colonies with white bottoms. *Saccharomyces cerevisiae* appears as smooth, shiny light blue/dark blue colonies with dark blue/green bottoms.

Monsur Agar

(Taurocholate Tellurite Gelatin Agar)

Composition per liter:

Gelatin.....	30.0g
Agar	15.0g
Casein peptone	10.0g
NaCl	10.0g
Sodium taurocholate	5.0g
$Na_2CO_3 \cdot H_2O$	1.0g
K_2TeO_3 solution	10.0mL

pH 8.5 ± 0.2 at 25°C

K_2TeO_3 Solution:

Composition per 10.0mL:

K_2TeO_3	0.02g
------------------	-------

Preparation of K_2TeO_3 Solution: Add K_2TeO_3 to 10.0mL of distilled/deionized water. Mix thoroughly. Filter sterilize.

Caution: Potassium tellurite is toxic.

Preparation of Medium: Add components, except K_2TeO_3 solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Add 10.0mL of sterile K_2TeO_3 solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation of *Vibrio cholerae* from fecal specimens.

Moorella glycerini Medium

(DSMZ Medium 793)

Composition per liter:

$NaHCO_3$	10.0g
Yeast extract.....	0.5g
KH_2PO_4	0.33g
NH_4Cl	0.33g
KCl.....	0.33g
$MgCl_2 \cdot 6H_2O$	0.33g
$CaCl_2 \cdot 2H_2O$	0.33g
Resazurin	0.5mg
Vitamin solution.....	10.0mL
$Na_2S \cdot 9H_2O$ solution	10.0mL
Glycerol, 87%.....	3.0mL
Trace elements solution SL-10	1.0mL
Selenite-tungstate solution.....	1.0mL

pH 6.7 ± 0.2 at 25°C

$Na_2S \cdot 9H_2O$ Solution:

Composition per 10.0mL:

$Na_2S \cdot 9H_2O$	0.5g
---------------------------	------

Preparation of $Na_2S \cdot 9H_2O$ Solution: Add $Na_2S \cdot 9H_2O$ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N_2 . Autoclave for 15 min at 15 psi pressure–121°C.

Selenite-Tungstate Solution:

Composition per liter:

NaOH.....	0.5g
$Na_2WO_4 \cdot 2H_2O$	4.0mg
$Na_2SeO_3 \cdot 5H_2O$	3.0mg

Preparation of Selenite-Tungstate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N_2 . Filter sterilize.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl.....	10.0mg
Thiamine-HCl·2H ₂ O.....	5.0mg
Riboflavin	5.0mg
Nicotinic acid.....	5.0mg
D-Ca-pantothenate	5.0mg
p-Aminobenzoic acid.....	5.0mg
Lipoic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H_2 + 20% CO_2 . Filter sterilize.

Trace Elements Solution SL-10:

Composition per liter:

$FeCl_2 \cdot 4H_2O$	1.5g
$CoCl_2 \cdot 6H_2O$	190.0mg
$MnCl_2 \cdot 4H_2O$	100.0mg
$ZnCl_2$	70.0mg
$Na_2MoO_4 \cdot 2H_2O$	36.0mg
$NiCl_2 \cdot 6H_2O$	24.0mg
H_3BO_3	6.0mg
$CuCl_2 \cdot 2H_2O$	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-10: Add $FeCl_2 \cdot 4H_2O$ to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N_2 . Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare and dispense medium under 100% CO_2 gas atmosphere. Add components, except $NaHCO_3$, $Na_2S \cdot 9H_2O$ solution, and vitamin solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Boil for 5 min. Cool to room temperature while sparging with 100% CO_2 . Add solid $NaHCO_3$. Adjust pH to 6.7 by adding NaOH and equilibrating with 100% CO_2 . Distribute into tubes or bottles. Autoclave for 20 min at 15 psi pressure–121°C. Aseptically and anaerobically add 10.0mL $Na_2S \cdot 9H_2O$ solution and vitamin solution, 0.1mL per 10mL medium. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or bottles.

Use: For the cultivation of *Moorella glycerini*.

Moraxella Medium (LMG Medium 204)

Composition per liter:

Special peptone	23.0g
Agar	15.0g
Glucose	5.0g
NaCl	5.0g
Soluble starch.....	1.0g
Cysteine hydrochloride.....	0.3g
Sheep blood, sterile defibrinated	50.0mL
pH 7.1 ± 0.2 at 25°C	

Source: Special peptone is available from Oxoid Unipath.

Preparation of Medium: Add components, except sheep blood, to 950.0mL distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50.0mL sterile sheep blood. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Moraxella osloensis*, *Moraxella atlantae*, and *Cellulomonas hominis*.

Motility GI Medium

Composition per liter:

Gelatin.....	53.4g
Heart infusion broth	25.0g
Agar	3.0g
pH 7.2 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to cold distilled/deionized water and bring to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes in 20.0mL volumes or leave in tubes.

Use: For demonstrating the motility of microorganisms and for separating organisms in their motile phase.

Motility Indole Lysine Medium

See: **MIL Medium**

Motility-Indole-Lysine HiVeg Medium (MIL HiVeg Medium)

Composition per liter:

Plant hydrolysate.....	10.0g
Plant peptone.....	10.0g
L-Lysine hydrochloride	10.0g
Yeast extract.....	3.0g
Agar	2.0g
Glucose	1.0g
Ferric ammonium citrate.....	0.5g
Bromcresol Purple	0.02g
pH 6.6 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes in 5.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and differentiation of members of the Enterobacteriaceae on the basis of motility, lysine decarboxylase activity, lysine deaminase activity, and indole production.

Motility Indole Ornithine Medium (MIO Medium)

Composition per liter:

Pancreatic digest of gelatin.....	10.0g
Pancreatic digest of casein.....	9.5g
L-Ornithine-HCl	5.0g
Yeast extract.....	3.0g
Agar	2.0g
Glucose	1.5g
Bromcresol Purple	0.02g
pH 6.6 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the differentiation of Gram-negative enteric bacteria based on their motility, indole production, and ornithine decarboxylase activity.

Motility Indole Ornithine Medium (MIO Medium) (BAM M99)

Composition per liter:

Tryptone.....	10.0g
Peptone	10.0g
L-Ornithine-HCl	5.0g
Yeast extract.....	3.0g
Agar	2.0g
Glucose	1.0g
Bromcresol Purple	0.02g
pH 6.6 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the differentiation of Gram-negative enteric bacteria based on their motility, indole production, and ornithine decarboxylase activity.

Motility Medium

Composition per liter:

Pancreatic digest of casein.....	10.0g
Glucose	5.0g
Agar	3.0g
Na ₂ HPO ₄	2.5g
Yeast extract.....	2.5g
pH 7.4 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring

to boiling. Distribute into tubes in 2.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Allow tubes to stand at 25°C for 2 days prior to inoculation.

Use: For the cultivation and observation of motility of *Bacillus cereus*.

Motility Medium S

Composition per liter:

Beef heart, solids from infusion.....	500.0g
Gelatin.....	30.0g
Enzymatic hydrolyzate of protein.....	10.0g
NaCl.....	5.0g
K ₂ HPO ₄	2.0g
KNO ₃	2.0g
Agar.....	1.0g
2,3,5-Triphenyltetrazolium chloride solution.....	10.0mL
pH 7.2 ± 0.2 at 25°C	

2,3,5-Triphenyltetrazolium Chloride Solution:

Composition per 10.0mL:

2,3,5-Triphenyltetrazolium chloride.....	0.1g
--	------

Preparation of 2,3,5-Triphenyltetrazolium Chloride Solution: Add 2,3,5-triphenyltetrazolium chloride to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except 2,3,5-triphenyltetrazolium chloride solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 60°C. Aseptically add 10.0mL of the sterile 2,3,5-triphenyltetrazolium chloride solution. Mix thoroughly. Aseptically distribute into sterile tubes. Keep at 4°–8°C until used.

Use: For the determination of bacterial motility.

Motility Nitrate Agar

Composition per liter:

Beef heart, solids from infusion.....	100.0g
Tryptose.....	12.0g
Agar.....	3.0g
NaCl.....	1.0g
KNO ₃	1.0g
Glucose.....	0.5g
pH 7.4 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes in 4.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and observation of motility and nitrate reduction in a variety of Gram-negative bacteria.

Motility Nitrate HiVeg Medium, Buffered

Composition per liter:

Galactose.....	5.0g
Plant extract.....	3.0g
Plant peptone.....	5.0g
KNO ₃	5.0g
Agar.....	3.0g
Na ₂ HPO ₄	2.5g
Glycerol.....	5.0mL
pH 7.4 ± 0.2 at 25°C	

Source: This medium, without glycerol, is available as a premixed powder from HiMedia.

Preparation of Medium: Add glycerol followed by other components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes in 4.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and observation of motility and nitrate reduction in a variety of Gram-negative bacteria.

Motility Nitrate Medium (FDA M101)

Composition per liter:

Beef heart, solids from infusion.....	100.0g
Tryptose.....	12.0g
Agar.....	3.0g
NaCl.....	1.0g
KNO ₃ , nitrite free.....	1.0g
pH 7.4 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into screw-capped tubes in 4.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and differentiation of Gram-negative nonfermentative bacteria from cosmetics based on their motility and their ability to reduce nitrate to nitrite.

Motility Nitrate Medium

Composition per liter:

Beef heart, solids from infusion.....	100.0g
Tryptose.....	12.0g
Agar.....	3.0g
NaCl.....	1.0g
KNO ₃	1.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes in 4.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and observation of motility and nitrate reduction in a variety of Gram-negative nonfermentative bacteria isolated from cosmetics.

Motility Nitrate Medium (BAM M101)

Composition per liter:

Tryptose.....	10.0g
Agar.....	3.0g
Beef heart, infusion from 500g.....	2.0g
Tryptose.....	2.0g
NaCl.....	1.0g
KNO ₃	1.0g
Glucose.....	0.5g
pH 7.2 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat with agitation to dissolve agar. Distribute into screw-cap tubes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the detection of motility in Gram-negative nonfermentative bacteria.

Motility Nitrate Medium, Buffered

Composition per liter:

Peptone.....	5.0g
Galactose.....	5.0g
Agar.....	3.0g
Beef extract.....	3.0g
Na ₂ HPO ₄	2.5g
KNO ₃	1.0g
Glycerin.....	5.0mL

pH 7.3 ± 0.1 at 25°C

Preparation of Medium: Add components, except agar, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until dissolved. Add agar. Gently heat until boiling. Distribute into tubes in 11.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. If not used within 4 hr, heat tubes to 100°C for 10 min.

Use: For the cultivation and observation of the motility of *Clostridium perfringens*.

Motility Sulfide Medium

Composition per liter:

Gelatin.....	80.0g
Proteose peptone.....	10.0g
NaCl.....	5.0g
Agar.....	4.0g
Beef extract.....	3.0g
Sodium citrate.....	2.0g
L-Cystine.....	0.2g
Ferrous ammonium citrate.....	0.2g

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes in 4–5.0mL volumes. Autoclave for 15 min at 10 psi pressure–116°C.

Use: For the determination of bacterial motility and the ability of bacteria to produce H₂S from L-cystine. For the differentiation of Gram-negative bacteria of the Enterobacteriaceae.

Motility Test HiVeg Medium

Composition per liter:

Plant hydrolysate No. 1.....	10.0g
Agar.....	5.0g
NaCl.....	5.0g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes in 4.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the detection of bacterial motility.

Motility Test HiVeg Medium (Edwards and Ewing HiVeg Medium)

Composition per liter:

Plant peptone.....	10.0g
NaCl.....	5.0g
Agar.....	4.0g
Plant extract.....	3.0g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes in 4.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For testing motility of enteric bacteria.

Motility Test HiVeg Medium with Triphenyltetrazolium Chloride (Edwards and Ewing HiVeg Medium)

Composition per liter:

Plant peptone.....	10.0g
NaCl.....	5.0g
Agar.....	4.0g
Plant extract.....	3.0g
Triphenyltetrazolium chloride solution.....	5.0mL

pH 7.2 ± 0.2 at 25°C

Source: This medium, without triphenyltetrazolium chloride solution, is available as a premixed powder from HiMedia.

Triphenyltetrazolium Chloride Solution:

Composition per 5.0mL:

Triphenyltetrazolium chloride.....	0.1g
------------------------------------	------

Preparation of Triphenyltetrazolium Chloride Solution: Add triphenyltetrazolium chloride to distilled/deionized water and bring volume to 5.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except triphenyltetrazolium chloride solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 5.0mL triphenyltetrazolium chloride solution. Mix thoroughly. Aseptically distribute into tubes.

Motility Test and Maintenance Medium

Composition per liter:

Peptone.....	10.0g
NaCl.....	5.0g
Agar.....	4.0g
Beef extract.....	3.0g
2,3,5-Triphenyltetrazolium chloride.....	0.05g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into screw-capped tubes in 8.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation, maintenance, and observation of the motility of *Listeria monocytogenes*.

Motility Test and Maintenance Medium**Composition per liter:**

Agar	9.0g
Tryptose	8.0g
NaCl	5.0g
Pancreatic digest of gelatin	2.5g
Beef extract	1.5g

pH 7.2 ± 0.1 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes in 7.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Pass the cooled tubes into an anaerobic chamber containing 85% N₂ + 10% H₂ + 5% CO₂.

Use: For the cultivation, maintenance, and observation of the motility in a variety of anaerobic bacteria.

Motility Test and Maintenance Medium**Composition per liter:**

Peptone.....	10.0g
NaCl	5.0g
Agar	4.0g
Beef extract.....	3.0g

pH 7.4 ± 0.1 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into screw-capped tubes in 8.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation, maintenance, and observation of motility in members of the Enterobacteriaceae.

Motility Test and Maintenance Medium, Gilardi**Composition per liter:**

Pancreatic digest of casein.....	10.0g
NaCl	5.0g
Agar	3.0g
Yeast extract.....	3.0g

pH 7.2 ± 0.1 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into screw-capped tubes in 3.5mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation, maintenance, and observation of motility in nonfermenting Gram–negative bacteria.

Motility Test and Maintenance Medium, Tatum**Composition per liter:**

Tryptose	8.0g
NaCl	5.0g
Agar	4.0g
Pancreatic digest of gelatin	2.5g
Beef extract	1.5g

pH 6.9 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into screw-capped tubes in 8.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation, maintenance, and observation of motility in nonfermenting Gram–negative bacteria.

Motility Test Medium**Composition per liter:**

Pancreatic digest of gelatin.....	10.0g
NaCl.....	5.0g
Agar	4.0g
Beef extract.....	3.0g
Triphenyltetrazolium chloride solution	5.0mL

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

2,3,5-Triphenyltetrazolium Chloride Solution:**Composition per 10.0mL:**

2,3,5-Triphenyltetrazolium chloride.....	0.1g
--	------

Preparation of 2,3,5-Triphenyltetrazolium Chloride Solution: Add 2,3,5-triphenyltetrazolium chloride to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 995.0mL. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 5.0mL of sterile 2,3,5-triphenyltetrazolium chloride solution. Mix thoroughly. Aseptically distribute into sterile tubes.

Use: For detection of the motility of Gram-negative enteric bacteria.

Motility Test Medium**Composition per liter:**

Tryptose	10.0g
NaCl.....	5.0g
Agar	5.0g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes in 4–5.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Cool tubes quickly in an upright position.

Use: For the determination of bacterial motility.

Motility Test Medium, Semisolid**Composition per liter:**

Peptone	10.0g
NaCl.....	5.0g
Agar	4.0g
Beef extract.....	3.0g

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into screw-capped tubes in 8.0mL or 20.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes in 20.0mL volumes or leave in tubes.

Use: For the cultivation and observation of motility in a variety of bacteria, especially *Salmonella* species.

Motility Test Medium, Semisolid with Sodium Chloride (BAM M103)

Composition per liter:

NaCl	25.0g
Peptone.....	10.0g
Agar	4.0g
Beef extract	3.0g

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into screw-capped tubes in 8.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Leave in tubes.

Use: For the cultivation and observation of motility in a variety of bacteria, especially *Salmonella* spp. and *Listeria* spp. For *Listeria* spp. keep tubes tightly screw capped and sealed with parafilm. For *Salmonella* spp. use Petri plates prepared on the same day as use.

Use: For the cultivation of yeasts and fungi.

MOX Agar

See: **Magnesium Oxalate Agar**

See: **Oxford Agar, Modified**

MOX HiVeg Agar

Composition per liter:

Agar	15.0g
Plant hydrolysate.....	15.0g
Papaic digest of soybean meal	5.0g
NaCl	5.0g
MnCl ₂	4.067g
Sodium oxalate	2.68g

pH 7.5 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Yersinia enterocolitica* from foods.

MP Agar

Composition per liter:

Agar	15.0g
Sodium acetate	0.1g
Basal medium	1.0L
Sodium sulfide solution	3.0mL

pH 7.0–7.5 at 25°C

Basal Medium:

Composition per liter:

CaSO ₄ ·2H ₂ O (saturated solution)	20.0mL
NH ₄ Cl (4% solution).....	5.0mL
Trace elements solution	5.0mL

MgSO ₄ ·7H ₂ O (1% solution).....	1.0mL
K ₂ HPO ₄ (1% solution).....	1.0mL

Preparation of Basal Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Trace Elements Solution:

Composition per liter:

Ferrous EDTA solution	20.0mL
ZnSO ₄ ·7H ₂ O (0.1% solution)	10.0mL
MnSO ₄ ·4H ₂ O (0.02% solution)	10.0mL
CuSO ₄ ·5H ₂ O (0.00005% solution)	10.0mL
H ₃ BO ₃ (0.1% solution)	10.0mL
Co(NO ₃) ₂ or CoCl ₂ ·6H ₂ O (0.01% solution)	10.0mL
Na ₂ MoO ₄ ·2H ₂ O (0.01% solution)	10.0mL

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Ferrous EDTA Solution:

Composition per 100.0mL:

FeSO ₄ ·7H ₂ O.....	7.0g
EDTA	2.0g
HCl, concentrated	1.0mL

Preparation of Ferrous EDTA Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Sodium Sulfide Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	1.0g
--	------

Preparation of Sodium Sulfide Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Prepare freshly.

Preparation of Medium: Add sodium acetate and agar to 1.0L of basal medium. Mix thoroughly. Adjust pH to 7.0–7.5. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 3.0mL of sterile sodium sulfide solution immediately prior to dispensing. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile screw-capped tubes.

Use: For the isolation and cultivation of *Beggiatoa* species and myxotrophic strains of *Thiothrix* species from water and environmental sources.

MP 5 Medium

(Mineral Pectin 5 Medium)

Composition per liter:

Agar solution	500.0mL
Basal medium	250.0mL
Mineral solution.....	250.0mL

pH 5.0–6.0 at 25°C

Agar Solution:

Composition per 500.0mL:

Agar	15.0g
------------	-------

Preparation of Agar Solution: Add agar to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Basal Medium:

Composition per 250.0mL:

Na ₂ HPO ₄	6.0g
Pectin, citrus or apple	5.0g

KH ₂ PO ₄	4.0g
NH ₄ SO ₄	2.0g
Yeast extract.....	1.0g

Preparation of Basal Medium: Add components to distilled/deionized water and bring volume to 250.0mL. Mix thoroughly. Gently heat and bring to boiling.

Mineral Solution:

Composition per 250.0mL:

FeSO ₄ (0.1% solution).....	1.0mL
MgSO ₄ ·7H ₂ O (20% solution).....	1.0mL
CaCl ₂ ·2H ₂ O (0.1% solution).....	1.0mL
H ₃ BO ₃ (0.001% solution).....	1.0mL
MnSO ₄ ·H ₂ O (0.001% solution).....	1.0mL
ZnSO ₄ ·7H ₂ O (0.007% solution).....	1.0mL
CuSO ₄ ·5H ₂ O (0.005% solution).....	1.0mL
MoO ₃ (0.001% solution).....	1.0mL

Preparation of Mineral Solution: Add components to distilled/deionized water and bring volume to 250.0mL. Mix thoroughly.

Preparation of Medium: Combine 250.0mL of basal medium and 250.0mL of mineral solution. Mix thoroughly. Adjust pH to 5.0–6.0 with 1N HCl. Autoclave the basal medium-mineral solution and agar solution separately for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically combine the two sterile solutions. Mix thoroughly. Pour immediately into sterile Petri dishes to prevent hydrolysis of the agar.

Use: For the cultivation of microorganisms that produce polygalactanase.

MP 7 Medium

(Mineral Pectin 7 Medium)

Composition per liter:

Basal medium.....	500.0mL
Mineral solution.....	500.0mL
pH 7.2 ± 0.2 at 25°C	

Basal Medium:

Composition per 500.0mL:

Agar.....	15.0g
Na ₂ HPO ₄	6.0g
Pectin (citrus or apple).....	5.0g
KH ₂ PO ₄	4.0g
NH ₄ SO ₄	2.0g
Yeast extract.....	1.0g

Preparation of Basal Medium: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Gently heat and bring to boiling.

Mineral Solution:

Composition per 500.0mL:

FeSO ₄ (0.1% solution).....	1.0mL
MgSO ₄ ·7H ₂ O (20% solution).....	1.0mL
CaCl ₂ ·2H ₂ O (0.1% solution).....	1.0mL
H ₃ BO ₃ (0.001% solution).....	1.0mL
MnSO ₄ ·H ₂ O (0.001% solution).....	1.0mL
ZnSO ₄ ·7H ₂ O (0.007% solution).....	1.0mL
CuSO ₄ ·5H ₂ O (0.005% solution).....	1.0mL
MoO ₃ (0.001% solution).....	1.0mL

Preparation of Mineral Solution: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly.

Preparation of Medium: Combine 500.0mL of basal medium and 500.0mL of mineral solution. Mix thoroughly. Adjust pH to 7.2. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Pour into sterile Petri dishes.

Use: For the cultivation of microorganisms that produce pectate lyase.

m-PA Agar

See: PA Agar

m-PA-C Agar

See: PA-C Agar

MPH Agar

(Milk Protein Hydrolysate Agar)

Composition per liter:

Agar.....	15.0g
Casein hydrolysate.....	9.0g
Glucose.....	1.0g

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically distribute into sterile tubes. Cool to 43°–45°C before using.

Use: For use in the enumeration of bacteria in water and dairy products.

MPHM Medium

Composition per 1275.0mL:

McCoy's 5A medium, modified.....	1.0L
Peptone solution.....	250.0mL
Hemin solution.....	25.0mL

Source: McCoy's 5A medium, modified, is available from Gibco.

McCoy's 5A Medium, Modified:

Composition per liter:

Inorganic salt solution.....	400.0mL
Other component solution.....	400.0mL
Amino acid solution.....	100.0mL
Vitamin solution.....	100.0mL

Inorganic Salt Solution:

Composition per 400.0mL:

NaCl.....	6.46g
NaHCO ₃	2.2g
NaH ₂ PO ₄ ·H ₂ O.....	0.58g
KCl.....	0.4g
CaCl ₂ , anhydrous.....	0.1g
MgSO ₄ , anhydrous.....	97.67mg

Preparation of Inorganic Salt Solution: Add components to distilled/deionized water and bring volume to 400.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Other Component Solution:

Composition per 400.0mL:

D-Glucose.....	3.0g
Peptone.....	0.6g

Phenol Red.....	0.1g
Glutathione, reduced.....	0.5mg

Preparation of Other Component Solution: Add components to distilled/deionized water and bring volume to 400.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Amino Acid Solution:

Composition per 100.0mL:

L-Glutamine	219.2mg
L-Asparagine	45.0mg
L-Arginine·HCl	42.1mg
L-Isoleucine.....	39.3mg
L-Leucine	39.3mg
L-Lysine·HCl.....	36.5mg
L-Cysteine	31.5mg
L-Serine	26.3mg
L-Tyrosine·2Na·2H ₂ O	26.2mg
L-Glutamic acid.....	22.1mg
L-Histidine·HCl·H ₂ O.....	21.0mg
L-Aspartic acid.....	20.0mg
L-Hydroxyproline.....	19.7mg
L-Threonine.....	17.9mg
L-Valine	17.6mg
L-Proline.....	17.3mg
L-Phenylalanine.....	16.5mg
L-Methionine.....	15.0mg
L-Alanine.....	13.9mg
Glycine.....	7.5mg
L-Tryptophan.....	3.1mg

Preparation of Amino Acid Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Vitamin Solution:

Composition per 100.0mL:

i-Inositol.....	36.0mg
Folic acid.....	10.0mg
Choline chloride.....	5.0mg
Vitamin B ₁₂	2.0mg
<i>p</i> -Aminobenzoic acid.....	1.0mg
Ascorbic acid	0.5mg
Niacinamide	0.5mg
Nicotinic acid.....	0.5mg
Pyridoxal·HCl	0.5mg
Pyridoxine·HCl	0.5mg
Biotin	0.2mg
D-Ca pantothenate.....	0.2mg
Riboflavin	0.2mg
Thiamine·HCl	0.2mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of McCoy's 5A Medium, Modified: Aseptically combine 400.0mL of sterile inorganic salt solution, 400.0mL of sterile other component solution, 100.0mL of sterile amino acid solution, and 100.0mL of sterile vitamin solution.

Peptone Solution:

Composition per 300.0mL:

Proteose peptone No. 3	7.5g
------------------------------	------

Preparation of Peptone Solution: Add components to distilled/deionized water and bring volume to 300.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Hemin Solution:

Composition per 100.0mL:

NaCl.....	0.8g
Na ₂ HPO ₄	0.12g
Hemin	0.05g
KCl.....	0.04g
MgCl ₂ ·6H ₂ O	0.03g
NaH ₂ PO ₄ ·H ₂ O.....	0.02g
CaCl ₂	0.011g

Preparation of Hemin Solution: Add NaCl, KCl, NaH₂PO₄·H₂O, and Na₂HPO₄ to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Separately add the CaCl₂ and MgCl₂·6H₂O to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Combine the two solutions. Mix thoroughly. Add 0.05g of hemin. Mix thoroughly. Adjust to pH 9.0 with 10*N* NaOH to dissolve the hemin. Mix thoroughly. Filter sterilize.

Preparation of Medium: Aseptically combine 1.0L of sterile modified McCoy's medium 5A, 250.0mL of sterile peptone solution, and 25.0mL of sterile hemin solution. Aseptically distribute into sterile screw-capped tubes or flasks.

Use: For the cultivation of *Trypanosoma theileri*.

m-Plate Count Broth

See: Plate Count Broth

MPOB Medium

Composition per 1012.0mL:

Disodium fumarate	3.2g
Na ₂ HPO ₄ ·2H ₂ O.....	0.53g
KH ₂ PO ₄	0.41g
NaCl.....	0.3g
NH ₄ Cl	0.3g
Yeast extract.....	0.2g
CaCl ₂ ·2H ₂ O	0.11g
MgCl ₂ ·6H ₂ O	0.10g
Resazurin	0.5mg
NaHCO ₃ solution	20.0mL
Na ₂ S·9H ₂ O solution.....	10.0mL
Wolfe's vitamin solution.....	10.0mL
Selenite-tungstate solution.....	1.0mL
Trace elements solution SL-10	1.0mL
pH 7.0–7.2 at 25°C	

NaHCO₃ Solution:

Composition per 20.0mL:

NaHCO ₃	4.0g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	0.5g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Wolfe's Vitamin Solution:**Composition per liter:**

Pyridoxine-HCl	10.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Nicotinic acid	5.0mg
Riboflavin	5.0mg
Thiamine-HCl	5.0mg
Calcium DL-pantothenate	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Selenite-tungstate Solution:**Composition per liter:**

NaOH	0.5g
Na ₂ WO ₄ ·2H ₂ O	4.0mg
Na ₂ SeO ₃ ·5H ₂ O	3.0mg

Preparation of Selenite-tungstate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution SL-10:**Composition per liter:**

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare medium under 80% N₂ + 20% CO₂. Add components, except NaHCO₃ solution and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 20.0mL of sterile NaHCO₃ solution and 10.0mL of sterile Na₂S·9H₂O solution. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or flasks. After inoculation, bring culture bottles to 0.7 bar 80% N₂ + 20% CO₂ overpressure.

Use: For the cultivation of *Syntrophobacter* species.

m-Pseudomonas aeruginosa Agar
See: *Pseudomonas aeruginosa* Agar

MPSS Broth**Composition per liter:**

Peptone	5.0g
MgSO ₄ ·7H ₂ O	1.0g
(NH ₄) ₂ SO ₄	1.0g
Succinic acid	1.0g

FeCl ₃ ·6H ₂ O (0.2% solution)	1.0mL
MnSO ₄ ·H ₂ O (0.2% solution)	1.0mL
pH 6.8 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Spirillum volutans*.

MPY Agar
(Malt Peptone
Yeast Extract Agar)
(ATCC Medium 582)

Composition per liter:

Agar	15.0g
Malt extract	5.0g
Xylose	2.0g
Fructose	2.0g
Lactose	2.0g
Peptone	1.0g
Yeast extract	1.0g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Streptomyces naniwaensis*.

MPY Agar
(Maltose Peptone Yeast Extract Medium)
(ATCC Medium 518)

Composition per liter:

Agar	10.0g
Maltose	2.0g
Peptone	2.0g
Yeast extract	1.0g
Potassium phosphate buffer (1M, pH 7.5)	10.0mL

pH 7.5 ± 0.2 at 25°C

Preparation of Medium: Add components, except potassium phosphate buffer, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Filter sterilize potassium phosphate buffer. Aseptically add sterile potassium phosphate buffer to sterile, cooled basal medium. Distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Spirochaeta aurantia*.

MPY Broth
(Maltose Peptone Yeast Extract Broth)

Composition per liter:

Maltose	2.0g
Peptone	2.0g
Yeast extract	1.0g
Potassium phosphate buffer (1M, pH 7.5)	10.0mL

pH 7.5 ± 0.2 at 25°C

Preparation of Medium: Add components, except potassium phosphate buffer, to distilled/deionized water and bring volume to

990.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Filter sterilize potassium phosphate buffer. Aseptically add sterile potassium phosphate buffer to sterile cooled basal medium. Distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Spirochaeta aurantia*.

MPYG Medium

See: Peptone Yeast Extract Glucose Medium, Modified

MRS Agar (DeMan, Rogosa, Sharpe Agar)

Composition per liter:

Glucose	20.0g
Peptone.....	10.0g
Agar	10.0g
Beef extract	8.0g
Sodium acetate·3H ₂ O.....	5.0g
Yeast extract.....	4.0g
K ₂ HPO ₄	2.0g
Triammonium citrate	2.0g
MgSO ₄ ·7H ₂ O	0.2g
MnSO ₄ ·4H ₂ O	0.05g
Sorbitan monooleate	1.0mL

pH 6.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of lactic acid bacteria.

MRS Agar (DeMan, Rogosa, Sharpe Agar)

Composition per liter:

Glucose	18.5g
Agar	13.5g
Pancreatic digest of gelatin	10.0g
Beef extract.....	8.0g
Yeast extract.....	4.0g
Sodium acetate.....	3.0g
K ₂ HPO ₄	2.0g
Ammonium citrate	2.0g
Polysorbate 80.....	1.0g
MgSO ₄ ·7H ₂ O	0.2g
MnSO ₄ ·4H ₂ O	0.05g

pH 6.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of *Lactobacillus* species from clinical specimens, foods, and dairy products.

MRS Agar with Cysteine (LMG Medium 118)

Composition per liter:

Glucose	20.0g
Peptone	10.0g
Agar	12.0g
Beef extract.....	5.0g
Sodium acetate·3H ₂ O.....	5.0g
Yeast extract.....	5.0g
KH ₂ PO ₄	2.0g
Diammonium hydrogen citrate.....	2.0g
MgSO ₄ ·7H ₂ O	0.2g
MnSO ₄ ·4H ₂ O.....	38.0mg
L-Cysteine solution	10.0mL
Tween™ 80.....	1.0mL

pH 6.5 ± 0.2 at 25°C

L-Cysteine Solution:

Composition per 10.0mL:

L-Cysteine.....	0.5g
-----------------	------

Preparation of L-Cysteine Solution: Add 0.1g of L-cysteine to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except L-cysteine solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Adjust pH to 6.5. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 10.0mL of sterile L-cysteine solution. Mix thoroughly. Aseptically pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of *Leuconostoc mesenteroides* and other lactic acid bacteria.

MRS Agar with 0.5% Cysteine (LMG Medium 131)

Composition per liter:

Glucose	20.0g
Agar	12.0g
Peptone	10.0g
Beef extract.....	5.0g
Sodium acetate·3H ₂ O.....	5.0g
Yeast extract.....	5.0g
KH ₂ PO ₄	2.0g
Diammonium hydrogen citrate.....	2.0g
MgSO ₄ ·7H ₂ O	0.2g
MnSO ₄ ·4H ₂ O.....	38.0mg
L-Cysteine·HCl solution	100.0mL
Tween™ 80.....	1.0mL

pH 6.5 ± 0.2 at 25°C

L-Cysteine·HCl Solution:

Composition per 100.0mL:

L-Cysteine·HCl	5.0g
----------------------	------

Preparation of L-Cysteine·HCl Solution: Add 5.0g of L-cysteine·HCl to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except L-cysteine·HCl solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Adjust pH to 6.5. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–

121°C. Cool to 50°C. Aseptically add 100.0mL of sterile L-cysteine-HCl solution. Mix thoroughly. Aseptically pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of *Lactobacillus ruminis* and *Lactobacillus vitulinus*.

MRS Agar with Ethanol (LMG Medium 130)

Composition per liter:

Glucose	20.0g
Agar	12.0g
Peptone.....	10.0g
Beef extract	5.0g
Sodium acetate·3H ₂ O.....	5.0g
Yeast extract.....	5.0g
KH ₂ PO ₄	2.0g
Diammonium hydrogen citrate	2.0g
MgSO ₄ ·7H ₂ O.....	0.2g
MnSO ₄ ·4H ₂ O.....	38.0mg
Ethanol.....	100.0mL
Tween™ 80.....	1.0mL

pH 5.0± 0.2 at 25°C

Preparation of Medium: Add components, except ethanol, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 100.0mL of sterile ethanol. Mix thoroughly. Aseptically distribute into sterile tubes or pour into sterile Petri dishes.

Use: For the cultivation of *Lactobacillus acetotolerans*.

MRS Agar with Tomato Juice, pH 5.2 (LMG Medium 248)

Composition per liter:

Glucose	20.0g
Peptone.....	10.0g
Agar	12.0g
Beef extract	5.0g
Sodium acetate·3H ₂ O.....	5.0g
Yeast extract.....	5.0g
KH ₂ PO ₄	2.0g
Diammonium hydrogen citrate	2.0g
MgSO ₄ ·7H ₂ O.....	0.2g
MnSO ₄ ·4H ₂ O.....	38.0mg
Tomato juice.....	100.0mL
Tween™ 80.....	1.0mL

pH 5.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 5.2 Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of *Lactobacillus kunkeei*.

MRS Agar, Half Strength (LMG Medium 281)

Composition per liter:

Glucose	10.0g
Agar	6.0g

Peptone	5.0g
Beef extract.....	2.5g
Sodium acetate·3H ₂ O.....	2.5g
Yeast extract.....	2.5g
KH ₂ PO ₄	1.0g
Diammonium hydrogen citrate	1.0g
MgSO ₄ ·7H ₂ O.....	0.1g
MnSO ₄ ·4H ₂ O.....	19.0mg
Tween™ 80.....	0.5mL

pH 6.5± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Lactobacillus acidipiscis* and *Weissella thailandensis*.

MRS Broth

Composition per liter:

Glucose	20.0g
Peptone	10.0g
Beef extract	5.0g
Sodium acetate·3H ₂ O.....	5.0g
Yeast extract.....	5.0g
K ₂ HPO ₄	2.0g
Diammonium hydrogen citrate	2.0g
MgSO ₄ ·7H ₂ O.....	0.2g
MnSO ₄ ·4H ₂ O.....	38.0mg
Sorbitan monooleate	1.0mL

pH 6.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Leuconostoc pseudomesenteroides*, *Leuconostoc carnosum*, and *Lactobacillus crispatus*.

MRS Broth (DeMan, Rogosa, Sharpe Broth)

Composition per liter:

Glucose	20.0g
Peptone	10.0g
Beef extract	8.0g
Sodium acetate·3H ₂ O.....	5.0g
Yeast extract.....	4.0g
K ₂ HPO ₄	2.0g
Triammonium citrate	2.0g
MgSO ₄ ·7H ₂ O.....	0.2g
MnSO ₄ ·4H ₂ O.....	0.05g
Sorbitan monooleate	1.0mL

pH 6.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of lactic acid bacteria.

MRS Broth (DeMan, Rogosa, Sharpe Broth)

Composition per liter:

Glucose	18.5g
Pancreatic digest of gelatin	10.0g
Beef extract	8.0g
Yeast extract	4.0g
Sodium acetate	3.0g
K ₂ HPO ₄	2.0g
Ammonium citrate	2.0g
Polysorbate 80	1.0g
MgSO ₄ ·7H ₂ O	0.2g
MnSO ₄ ·4H ₂ O	0.05g

pH 6.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation and cultivation of *Lactobacillus* species from clinical specimens, foods, and dairy products.

MRS Broth with CaCO₃ (LMG Medium 166)

Composition per liter:

CaCO ₃	30.0g
Glucose	20.0g
Peptone	10.0g
Beef extract	5.0g
Sodium acetate·3H ₂ O	5.0g
Yeast extract	5.0g
K ₂ HPO ₄	2.0g
Diammonium hydrogen citrate	2.0g
MgSO ₄ ·7H ₂ O	0.2g
MnSO ₄ ·4H ₂ O	38.0mg
Sorbitan monooleate	1.0mL

pH 6.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Sporolactobacillus inulinus*.

MRS Broth with Cysteine

Composition per liter:

Glucose	18.5g
Pancreatic digest of gelatin	10.0g
Beef extract	8.0g
Yeast extract	4.0g
Sodium acetate	3.0g
K ₂ HPO ₄	2.0g
Ammonium citrate	2.0g
Polysorbate 80	1.0g
MgSO ₄ ·7H ₂ O	0.2g
MnSO ₄ ·4H ₂ O	0.05g
L-Cysteine solution	0.5mL

pH 6.2 ± 0.2 at 25°C

L-Cysteine Solution:

Composition per 10.0mL:

L-Cysteine	0.1g
------------	------

Preparation of L-Cysteine Solution: Add 0.1g of L-cysteine to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except L-cysteine solution, to distilled/deionized water and bring volume to 999.5mL. Mix thoroughly. Adjust pH to 6.2. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 0.5mL of sterile L-cysteine solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the isolation and cultivation of *Leuconostoc mesenteroides*.

MRS Broth with Ethanol (LMG Medium 240)

Composition per liter:

Glucose	20.0g
Peptone	10.0g
Beef extract	5.0g
Sodium acetate·3H ₂ O	5.0g
Yeast extract	5.0g
KH ₂ PO ₄	2.0g
Diammonium hydrogen citrate	2.0g
MgSO ₄ ·7H ₂ O	0.2g
MnSO ₄ ·4H ₂ O	38.0mg
Ethanol	100.0mL
Tween™ 80	1.0mL

pH 5.0 ± 0.2 at 25°C

Preparation of Medium: Add components, except ethanol, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 100.0mL of sterile ethanol. Mix thoroughly. Aseptically distribute into sterile tubes or sterile flasks.

Use: For the cultivation of *Lactobacillus acetotolerans*.

MRS Broth with Ethanol

Composition per liter:

Glucose	20.0g
Peptone	10.0g
Beef extract	8.0g
Sodium acetate·3H ₂ O	5.0g
Yeast extract	4.0g
K ₂ HPO ₄	2.0g
Triammonium citrate	2.0g
MgSO ₄ ·7H ₂ O	0.2g
MnSO ₄ ·4H ₂ O	0.05g
Sorbitan monooleate	1.0mL
Ethanol (95% solution), filter sterilized	100.0mL

pH 5.0 ± 0.2 at 25°C

Preparation of Medium: Add components, except ethanol, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 100.0mL of sterile ethanol. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Lactobacillus acetotolerans*.

MRS Chalk**Composition per liter:**

CaCO ₃	30.0g
Glucose	20.0g
Beef extract	10.0g
Peptone.....	10.0g
Yeast extract.....	5.0g
K ₂ HPO ₄	2.0g
Triammonium citrate.....	2.0g
MgSO ₄ ·7H ₂ O	0.2g
MnSO ₄ ·4H ₂ O	0.05g
Tween™ 80™	1.0mL

pH 6.2 ± 0.4 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.2. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Sporolactobacillus inulinus* and other *Sporolactobacillus* species.

MRS with Fermented Wort**Composition per liter:**

Solution A	800.0mL
Solution B	200.0mL

pH 6.2 ± 0.2 at 25°C

Solution A:**Composition per liter:**

Glucose	20.0g
Peptone.....	10.0g
Agar	10.0g
Beef extract	8.0g
Sodium acetate·3H ₂ O.....	5.0g
Yeast extract.....	4.0g
K ₂ HPO ₄	2.0g
Triammonium citrate.....	2.0g
MgSO ₄ ·7H ₂ O	0.2g
MnSO ₄ ·4H ₂ O	0.05g
Sorbitan monooleate	1.0mL

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C.

Solution B:**Composition per liter:**

Malt extract	15.0g
Maltose.....	12.75g
Dextrin	2.75g
Glycerol	2.35g
K ₂ HPO ₄	1.0g
NH ₄ Cl	1.0g
Pancreatic digest of gelatin.....	0.78g

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Inoculate with *Saccharomyces cerevisiae* to allow wort to ferment. Incubate for 24–48 hr. Allow to cool to room temperature. Filter through Whatman filter paper to remove solids. Filter sterilize.

Preparation of Medium: Aseptically combine 800.0mL of sterile solution A and 200.0mL of sterile solution B. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of yeasts and fungi.

MRS Fructose Medium**Composition per liter:**

Beef extract.....	10.0g
Fructose.....	10.0g
Peptone	10.0g
Yeast extract.....	5.0g
K ₂ HPO ₄	2.0g
Triammonium citrate	2.0g
MgSO ₄ ·7H ₂ O	0.2g
MnSO ₄ ·4H ₂ O	0.05g
Tween™ 80	1.0mL

pH 6.2 ± 0.4 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.2. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Carnobacterium divergens*.

MRS HiVeg Agar**(Lactobacillus MRS HiVeg Agar)****Composition per liter:**

Glucose	20.0g
Peptone	10.0g
Agar	10.0g
Plant extract	8.0g
Sodium acetate·3H ₂ O.....	5.0g
Yeast extract.....	4.0g
K ₂ HPO ₄	2.0g
Triammonium citrate	2.0g
MgSO ₄ ·7H ₂ O	0.2g
MnSO ₄ ·4H ₂ O	0.05g

pH 6.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of lactic acid bacteria.

MRS HiVeg Agar, Modified**(Lactobacilli Heteroferm Screen HiVeg Agar)****Composition per liter:**

Glucose	20.0g
Agar	15.0g
Plant peptone No. 3.....	10.0g
Sodium acetate.....	5.0g
Yeast extract.....	5.0g
2-Phenylethyl alcohol	3.0g
Ammonium citrate	2.0g
K ₂ HPO ₄	2.0g
MgSO ₄	0.1g
MnSO ₄	0.05g

Bromcresol Green	0.04g
Cycloheximide	4.0mg
pH 6.2 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of *Lactobacillus* species from salad dressings.

MRS HiVeg Broth (*Lactobacillus* MRS HiVeg Broth)

Composition per liter:

Glucose	20.0g
Peptone.....	10.0g
Plant extract	8.0g
Sodium acetate·3H ₂ O.....	5.0g
Yeast extract.....	4.0g
K ₂ HPO ₄	2.0g
Triammonium citrate	2.0g
MgSO ₄ ·7H ₂ O	0.2g
MnSO ₄ ·4H ₂ O	0.05g
pH 6.2 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of lactic acid bacteria.

MRS HiVeg Broth, Modified (*Lactobacillus* Heteroferm Screen HiVeg Broth)

Composition per liter:

Glucose	20.0g
Plant peptone no. 3.....	10.0g
Sodium acetate.....	5.0g
Yeast extract.....	5.0g
2-Phenylethyl alcohol	3.0g
Ammonium citrate	2.0g
K ₂ HPO ₄	2.0g
MgSO ₄	0.1g
MnSO ₄	0.05g
Bromcresol Green.....	0.04g
Cycloheximide	4.0mg
pH 6.2 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring

to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation and cultivation of *Lactobacillus* species from foods.

MRS Medium (DSMZ Medium 11)

Composition per liter:

Glucose	20.0g
Casein peptone, tryptic digest.....	10.0g
Meat extract	10.0g
Yeast extract.....	5.0g
Na-acetate	5.0g
K ₂ HPO ₄	2.0g
(NH ₄) ₂ citrate	2.0g
MgSO ₄ ·7H ₂ O	0.2g
MnSO ₄ ·2H ₂ O	0.05g
Tween™ 80.....	1.0mL
pH 6.2–6.5	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.2 – 6.5. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Lactobacillus* spp., *Leuconostoc mesenteroides*, and *Pediococcus pentosaceus*.

MRS Medium, Modified

Composition per liter:

Agar	15.0g
Pancreatic digest of casein.....	10.0g
Beef extract.....	5.0g
Sodium acetate·3H ₂ O.....	5.0g
Yeast extract.....	5.0g
K ₂ HPO ₄ ·3H ₂ O	2.6g
Ammonium citrate	2.0g
Tween™ 80.....	1.0g
L-Cysteine-HCl·H ₂ O	0.5g
MgSO ₄ ·7H ₂ O	0.1g
MnSO ₄ ·4H ₂ O	50.0mg
Carbohydrate solution.....	100.0mL
pH 6.3 ± 0.2 at 25°C	

Carbohydrate Solution:

Composition per 100.0mL:

Fructose.....	7.0g
Glucose	7.0g
Maltose	7.0g
Sodium gluconate	2.0g

Preparation of Carbohydrate Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except carbohydrate solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 6.3. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 100.0mL of sterile carbohydrate solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Lactobacillus pontis*.

MRS Medium, pH 5.5**Composition per liter:**

Glucose	20.0g
Tryptic digest of casein	10.0g
Meat extract	10.0g
Sodium acetate	5.0g
Yeast extract	5.0g
Diammonium citrate	2.0g
K ₂ HPO ₄	2.0g
Tween™ 80	1.0g
MgSO ₄ ·7H ₂ O	0.2g
MnSO ₄ ·H ₂ O	50.0mg

pH 5.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 5.5. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Lactobacillus kefirifaciens*.

MRS, Modified

See: *Lactobacillus Heteroferm Screen Broth*

MRS Medium with L-Cysteine**Composition per liter:**

Glucose	20.0g
Peptone	10.0g
Agar	10.0g
Beef extract	8.0g
L-Cysteine·HCl	5.0g
Sodium acetate·3H ₂ O	5.0g
Yeast extract	4.0g
K ₂ HPO ₄	2.0g
Triammonium citrate	2.0g
MgSO ₄ ·7H ₂ O	0.2g
MnSO ₄ ·4H ₂ O	0.05g
Sorbitan monooleate	1.0mL

pH 6.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Lactobacillus ruminis*.

MRS Medium with L-Cysteine**Composition per liter:**

Glucose	20.0g
Tryptic digest of casein	10.0g
Meat extract	10.0g
Sodium acetate	5.0g
Yeast extract	5.0g
L-Cysteine·HCl	5.0g
Diammonium citrate	2.0g
K ₂ HPO ₄	2.0g
MgSO ₄ ·7H ₂ O	2.0g
Tween™ 80	1.0g
MnSO ₄ ·H ₂ O	0.05g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Lactobacillus* species, *Pectinatus* species, *Selenomonas lacticifex*, *Zymophilus paucivorans*, and *Zymophilus raffinovorans*.

MRS Salts**Composition per liter:**

NaCl	100.0g
Glucose	20.0g
Beef extract	10.0g
Peptone	10.0g
Yeast extract	5.0g
K ₂ HPO ₄	2.0g
Triammonium citrate	2.0g
MgSO ₄ ·7H ₂ O	0.2g
MnSO ₄ ·4H ₂ O	0.05g
Tween™ 80	1.0mL

pH 6.2 ± 0.4 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.2. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Tetragenococcus halophila*.

MRSASelect™**Composition per liter:**

Proprietary

Source: Available from BioRad

Preparation of Medium: Prepared plates.

Use: For the rapid screening of nasal specimens for MRSA (methicillin-resistant *Staphylococcus aureus*).

MRVP Broth**(Methyl Red- Voges-Proskauer Broth)****Composition per liter:**

Glucose	5.0g
KH ₂ PO ₄	5.0g
Pancreatic digest of casein	3.5g
Peptic digest of animal tissue	3.5g

pH 6.9 ± 0.2 at 25°C

Source: Available as a premixed powder from BD Diagnostic Systems and as a prepared medium from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the differentiation of bacteria based on acid production (Methyl Red test) and acetoin production (Voges-Proskauer reaction).

MRVP Broth**(Methyl Red-Voges-Proskauer Broth)****(BAM M104 Medium 1)****Composition per liter:**

Buffered peptone-water powder	7.0g
Glucose	5.0g
KH ₂ PO ₄	5.0g

pH 7.0 ± 0.2 at 25°C

Source: Buffered peptone-water powder is available from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the differentiation of bacteria based on acid production (Methyl Red test) and acetoin production (Voges-Proskauer reaction).

MRVP Broth with Sodium Chloride
(Methyl Red-Voges-Proskauer Broth with NaCl)
(BAM M104 Medium 1)

Composition per liter:

NaCl	30.0g
Buffered peptone-water powder	7.0g
Glucose	5.0g
KH ₂ PO ₄	5.0g
pH 7.0 ± 0.2 at 25°C	

Source: Buffered peptone-water powder is available from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the differentiation of halophilic *Vibrio* spp. based on acid production (Methyl Red test) and acetoin production (Voges-Proskauer reaction).

MRVP Broth with Sodium Chloride
(Methyl Red-Voges-Proskauer Broth with NaCl)
(BAM M104 Medium 2)

Composition per liter:

NaCl	30.0g
Glucose	5.0g
KH ₂ PO ₄	5.0g
Pancreatic digest of casein	3.5g
Peptic digest of animal tissue.....	3.5g
pH 6.9 ± 0.2 at 25°C	

Source: Available as a premixed powder from BD Diagnostic Systems and as a prepared medium from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the differentiation of halophilic *Vibrio* spp. based on acid production (Methyl Red test) and acetoin production (Voges-Proskauer reaction).

MRVP Broth with Sodium Chloride
(Methyl Red-Voges-Proskauer Broth with NaCl)
(Methyl Red-Voges-Proskauer Medium)

Composition per liter:

NaCl	30.0g
Glucose	5.0g
Peptone.....	5.0g
Phosphate buffer	5.0g
pH 7.5 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the differentiation of halophilic *Vibrio* spp. based on acid production (Methyl Red test) and acetoin production (Voges-Proskauer reaction).

MRVP Medium
(Methyl Red-Voges-Proskauer Medium)

Composition per liter:

Glucose	5.0g
Peptone	5.0g
Phosphate buffer	5.0g
pH 7.5 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the differentiation of bacteria based on acid production (Methyl Red test) and acetoin production (Voges-Proskauer reaction).

MS Agar

Composition per liter:

Agar	15.0g
Peptone	1.0g
Yeast extract.....	1.0g
Glucose	1.0g
pH 6.8–7.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Runella slithyformis*.

MS 1 Agar

Composition per liter:

Agar	15.0g
Seawater.....	1.0L

Preparation of Medium: Add agar to 1.0L of natural seawater. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of *Cytophaga* species, *Herpetosiphon* species, *Saprospira* species, and *Flexithrix* species.

MS 3 Agar

Composition per liter:

Agar	15.0g
(NH ₄) ₂ SO ₄	1.0g
Seawater.....	1.0L

Preparation of Medium: Add agar to 500.0mL of natural seawater. Mix thoroughly. Gently heat and bring to boiling. In a separate flask, add (NH₄)₂SO₄ to 500.0mL of natural seawater. Mix thoroughly. Autoclave both solutions separately for 15 min at 15 psi pressure–121°C. Aseptically combine the two sterile solutions. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of *Cytophaga* species, *Herpetosiphon* species, *Saprospira* species, and *Flexithrix* species.

MS 4 Agar

Composition per liter:

Agar	15.0g
Glucose	2.0g
(NH ₄) ₂ SO ₄	1.0g
Seawater.....	1.0L

Preparation of Medium: Add agar to 500.0mL of natural seawater. Mix thoroughly. Gently heat and bring to boiling. Add (NH₄)₂SO₄ to 250.0mL of natural seawater. Mix thoroughly. Add glucose to 250.0mL of natural seawater. Mix thoroughly. Autoclave the three solutions separately for 15 min at 15 psi pressure–121°C. Aseptically combine the three sterile solutions. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of *Cytophaga* species, *Herpetosiphon* species, *Saprospira* species, and *Flexithrix* species.

MS Medium (DSMZ Medium 670)

Composition per liter:

(NH ₄) ₂ SO ₄	2.0g
MgSO ₄ ·7H ₂ O	0.25g
K ₂ HPO ₄	0.1g
KCl.....	0.1g
FeSO ₄ solution.....	50.0mL

pH 2.2 ± 0.2 at 25°C

FeSO₄ Solution:

Composition per 100.0mL:

FeSO ₄ ·7H ₂ O.....	40.0g
---	-------

Preparation of FeSO₄ Solution: Add FeSO₄·7H₂O to 0.2N sulfuric acid and bring volume to 100.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Preparation of Medium: Add components, except FeSO₄ solution, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Adjust pH to 2.2 with 4N sulfuric acid. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 50.0mL sterile FeSO₄ solution. Mix thoroughly. Distribute into tubes or flasks.

Use: For the cultivation and maintenance of *Acidithiobacillus ferrooxidans* DSM2392, DSM9464, and DSM9465.

MS Medium (DSMZ Medium 670)

Composition per liter:

Sulfur	5.0g
(NH ₄) ₂ SO ₄	2.0g
MgSO ₄ ·7H ₂ O	0.25g
K ₂ HPO ₄	0.1g
KCl.....	0.1g

pH 3.5 ± 0.2 at 25°C

Preparation of Medium: Sulfur is sterilized by steaming for 3 hr on each of 3 successive days. Add components, except sulfur, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 3.5 with 1N sulfuric acid. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 5.0g sterile sulfur. Mix thoroughly. Distribute into tubes or flasks.

Use: For the cultivation and maintenance of *Acidithiobacillus* DSM9463.

MS Medium (DSMZ Medium 670)

Composition per liter:

Sulfur	5.0g
(NH ₄) ₂ SO ₄	2.0g
MgSO ₄ ·7H ₂ O	0.25g
K ₂ HPO ₄	0.1g
KCl.....	0.1g
Yeast extract solution.....	10.0mL

pH 3.5 ± 0.2 at 25°C

Yeast Extract Solution:

Composition per 10.0mL:

Yeast extract.....	0.2g
--------------------	------

Preparation of Yeast Extract Solution: Add yeast extract to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Preparation of Medium: Sulfur is sterilized by steaming for 3 hours on each of 3 successive days. Add components, except sulfur and yeast extract solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Adjust pH to 3.5 with 1N sulfuric acid. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 5.0g sterile sulfur and 10.0mL sterile yeast extract solution. Mix thoroughly. Distribute into tubes or flasks.

Use: For the cultivation and maintenance of *Acidithiobacillus caldus* DSM9466.

MS Medium (DSMZ Medium 670)

Composition per liter:

(NH ₄) ₂ SO ₄	2.0g
MgSO ₄ ·7H ₂ O	0.25g
K ₂ HPO ₄	0.1g
KCl.....	0.1g
Glucose solution	20.0mL
Yeast extract solution.....	10.0mL

pH 3.0 ± 0.2 at 25°C

Yeast Extract Solution:

Composition per 10.0mL:

Yeast extract.....	0.1g
--------------------	------

Preparation of Yeast Extract Solution: Add yeast extract to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Glucose Solution:

Composition per 20.0mL:

Glucose	2.0g
---------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except yeast extract solution and glucose solution, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Adjust pH to 3.0 with 2N sulfuric acid. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Aseptically add 20.0mL sterile glucose solution and 10.0mL sterile yeast extract solution. Mix thoroughly. Distribute into tubes or flasks.

Use: For the cultivation and maintenance of *Acidiphillum cryptum* DSM9467.

MS Medium (DSMZ Medium 670)

Composition per liter:

(NH ₄) ₂ SO ₄	2.0g
MgSO ₄ ·7H ₂ O.....	0.25g
K ₂ HPO ₄	0.1g
KCl.....	0.1g
FeSO ₄ solution.....	50.0mL
pH 1.6 ± 0.2 at 25°C	

FeSO₄ Solution:

Composition per 100.0mL:

FeSO ₄ ·7H ₂ O.....	40.0g
---	-------

Preparation of FeSO₄ Solution: Add FeSO₄·7H₂O to 0.2N sulfuric acid and bring volume to 100.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Preparation of Medium: Add components, except FeSO₄ solution, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Adjust pH to 1.6 with 4N sulfuric acid. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 50.0mL sterile FeSO₄ solution. Mix thoroughly. Distribute into tubes or flasks.

Use: For the cultivation and maintenance of *Leptospirillum* sp. DSM9468.

MS Medium for *Acidiphillum cryptum*

Composition per liter:

(NH ₄) ₂ SO ₄	2.0g
MgSO ₄ ·7H ₂ O.....	0.25g
K ₂ HPO ₄	0.1g
KCl.....	0.1g
Glucose solution.....	20.0mL
Yeast extract solution.....	10.0mL
pH 3.0 ± 0.2 at 25°C	

Glucose Solution:

Composition per 100.0mL:

D-Glucose.....	10.0g
----------------	-------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Yeast Extract Solution:

Composition per 10.0mL:

Yeast extract.....	1.0g
--------------------	------

Preparation of Yeast Extract Solution: Add yeast extract to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except glucose solution and yeast extract solution, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Adjust pH to 3.0 with 2N H₂SO₄. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 20.0mL of sterile glucose solution and 10.0mL of sterile yeast extract solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Acidiphillum cryptum*.

MS Medium for *Leptospirillum* species

Composition per liter:

(NH ₄) ₂ SO ₄	2.0g
MgSO ₄ ·7H ₂ O.....	0.25g
K ₂ HPO ₄	0.1g
KCl.....	0.1g
FeSO ₄ solution.....	50.0mL
pH 1.6 ± 0.2 at 25°C	

FeSO₄ Solution:

Composition per 10.0mL:

FeSO ₄ ·7H ₂ O.....	4.0g
---	------

Preparation of FeSO₄ Solution: Add FeSO₄·7H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Preparation of Medium: Add components, except FeSO₄ solution, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Adjust pH to 1.6 with 4N H₂SO₄. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 50.0mL of sterile FeSO₄ solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Leptospirillum* species.

MS Medium for Methanogens

Composition per 408.8mL:

Agar.....	8.0g
NaHCO ₃	2.4g
L-Cysteine-sulfide reducing agent.....	16.0mL
Mineral solution 1.....	15.0mL
Mineral solution 2.....	15.0mL
Sodium formate (20% solution).....	6.0mL
Yeast extract-soybean casein solution.....	4.0mL
Sodium acetate (25% solution).....	4.0mL
Wolfe's vitamin solution.....	4.0mL
Wolfe's mineral solution.....	4.0mL
FeSO ₄ ·7H ₂ O (0.2% solution).....	0.4mL
Resazurin (0.1% solution).....	0.4mL
pH 7.0 ± 0.2 at 25°C	

L-Cysteine-Sulfide Reducing Agent:

Composition per 400.0mL:

L-Cysteine-HCl·H ₂ O.....	5.0g
Na ₂ S (12.5% solution).....	40.0mL
NaOH (1N solution).....	30.0mL

Preparation of L-Cysteine-Sulfide Reducing Agent: Add distilled/deionized water to a 500.0mL round-bottomed flask. Add freshly prepared NaOH solution. Gently heat and bring to boiling under 100% N₂. Remove gassing probe. Add L-cysteine-HCl·H₂O. Add freshly prepared Na₂S solution. Renew gassing for several minutes. Cap with rubber stoppers. Distribute into 8.0mL/18.0mm Hungate tubes.

Mineral Solution 1:

Composition per liter:

K ₂ HPO ₄	6.0g
---------------------------------------	------

Preparation of Mineral Solution 1: Add K₂HPO₄ to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Mineral Solution 2:

Composition per liter:

NaCl.....	12.0g
KH ₂ PO ₄	6.0g

(NH ₄) ₂ SO ₄	6.0g
MgSO ₄ ·7H ₂ O	2.6g
CaCl ₂ ·2H ₂ O.....	0.16g

Preparation of Mineral Solution 2: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Yeast Extract-Soybean Casein Solution:

Composition per 100.0mL:

Yeast extract.....	20.0g
Pancreatic digest of casein.....	20.0g

Preparation of Yeast Extract-Soybean Casein Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Wolfe's Mineral Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O	3.0g
Nitritotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·H ₂ O	0.5g
FeSO ₄ ·7H ₂ O.....	0.1g
CoCl ₂ ·6H ₂ O	0.1g
CaCl ₂	0.1g
ZnSO ₄ ·7H ₂ O	0.1g
CuSO ₄ ·5H ₂ O	0.01g
AlK(SO ₄) ₂ ·12H ₂ O.....	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g

Preparation of Wolfe's Mineral Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L.

Wolfe's Vitamin Solution:

Composition per liter:

Pyridoxine-HCl	10.0mg
Thiamine-HCl	5.0mg
Riboflavin	5.0mg
Nicotinic acid.....	5.0mg
Calcium pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Thioctic acid	5.0mg
Biotin	2.0mg
Folic acid.....	2.0mg
Cyanocobalamin	100.0μg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 408.8mL. Gently heat and bring to boiling under 80% N₂ + 20% CO₂. Continue boiling until resazrin turns colorless, indicating reduction. Adjust pH to 7.0. Anaerobically distribute into tubes under 80% N₂ + 20% CO₂. Cap with rubber stoppers and aluminum crimp closures. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Methanobacterium thermoautotrophicum*, *Methanobacterium wolfei*, *Methanobrevibacter smithii*, *Methanogenium bourgense*, and *Methanogenium* species.

MS Medium (Modified) (DSMZ Medium 1145)

Composition per liter:

MgSO ₄ ·7H ₂ O	7.0g
Sulfur, elemental	5.0g
Na ₂ S ₂ O ₃ ·5H ₂ O	2.0g
MgCl ₂ ·6H ₂ O	0.8g
KCl	0.48g
CaCl ₂ ·2H ₂ O	0.4g
MS Buffer	200.0mL
Solution A.....	20.0mL
Solution D.....	10.0mL
Solution B.....	1.5mL

pH 6.6 ± 0.2 at 25°C

MS Buffer Solution:

Composition per liter:

NaOH.....	4.0g
-----------	------

Preparation of MS Buffer Solution: Prepare anaerobic water by sparging with double distilled water with constant gassing with 100% N₂. Add NaOH to double distilled/deionized anaerobic water and bring volume to 1.0L. Mix thoroughly. Sparge with CO₂ to saturate. Filter sterilize.

Solution A:

Composition per liter:

NH ₄ Cl	100.0g
MgCl ₂ ·6H ₂ O	100.0g
CaCl ₂ ·2H ₂ O	40.0g

Preparation of Solution A: Prepare anaerobic water by sparging with double distilled water with constant gassing with 100% N₂. Add components to double distilled/deionized anaerobic water and bring volume to 1.0L. Mix thoroughly. Adjust pH 4.0 with HCl.

Solution B:

Composition per liter:

K ₂ HPO ₄ ·3H ₂ O	200.0g
--	--------

Preparation of Solution B: Prepare anaerobic water by sparging with double distilled water with constant gassing with 100% N₂. Add K₂HPO₄·3H₂O to double distilled/deionized anaerobic water and bring volume to 1.0L. Mix thoroughly.

Solution D:

Composition per liter:

Na ₂ -EDTA.....	0.5g
CoCl ₂ ·6H ₂ O	150.0mg
MnCl ₂ ·4H ₂ O	100.0mg
FeSO ₄ ·7H ₂ O.....	100.0mg
ZnCl ₂	100.0mg
AlCl ₃ ·6H ₂ O.....	40.0mg
Na ₂ WO ₄ ·2H ₂ O.....	30.0mg
CuCl ₂ ·2H ₂ O	20.0mg
NiSO ₄ ·6H ₂ O.....	20.0mg
Na ₂ MoO ₄ ·2H ₂ O	10.0mg
H ₂ SeO ₃	10.0mg
H ₃ BO ₃	10.0mg

Preparation of Solution D: Prepare anaerobic water by sparging with double distilled water with constant gassing with 100% N₂. Add components to double distilled/deionized anaerobic water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 3.0.

Preparation of Medium: Prepare anaerobic water by sparging with double distilled water with constant gassing with 100% N₂. Add com-

ponents, except sulfur, to double distilled/deionized anaerobic water and bring volume to 1.0L. Adjust pH to 6.6. Autoclave for 15 min at 15 psi pressure–121°C. Sterilize sulfur separately in screw-capped tubes by steaming in a water bath for 3 hr on each of 3 successive days. Aseptically add the sterilized sulfur to the medium. Mix thoroughly.

Use: For the cultivation of *Sulfurihydrogenibium kristjanssonii*.

MS Medium for *Thiobacillus caldus*

Composition per liter:

Sulfur, powdered	5.0g
(NH ₄) ₂ SO ₄	2.0g
MgSO ₄ ·7H ₂ O	0.25g
K ₂ HPO ₄	0.1g
KCl	0.1g
Yeast extract solution	10.0mL
pH 3.5 ± 0.2 at 25°C	

Preparation of Sulfur: Sterilize powdered elemental sulfur by steaming for 3 hr at 0 psi pressure–100°C on 3 successive days.

Yeast Extract Solution:

Composition per 10.0mL:

Yeast extract	0.2g
---------------	------

Preparation of Yeast Extract Solution: Add yeast extract to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except elemental sulfur and yeast extract solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Adjust pH to 3.5 with 1N sulfuric acid. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 5.0g of sterile elemental sulfur and 10.0mL of sterile yeast extract solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Thiobacillus caldus*.

MS Medium for *Thiobacillus ferrooxidans*

Composition per liter:

(NH ₄) ₂ SO ₄	2.0g
MgSO ₄ ·7H ₂ O	0.25g
K ₂ HPO ₄	0.1g
KCl	0.1g
FeSO ₄ solution	50.0mL
pH 2.2 ± 0.2 at 25°C	

FeSO₄ Solution:

Composition per 10.0mL:

FeSO ₄ ·7H ₂ O	4.0g
--------------------------------------	------

Preparation of FeSO₄ Solution: Add FeSO₄·7H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Preparation of Medium: Add components, except FeSO₄ solution, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Adjust pH to 2.2 with 4N H₂SO₄. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 50.0mL of sterile FeSO₄ solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Thiobacillus ferrooxidans*.

MS Medium for *Thiobacillus thiooxidans*

Composition per liter:

Sulfur, powdered	5.0g
(NH ₄) ₂ SO ₄	2.0g
MgSO ₄ ·7H ₂ O	0.25g

K ₂ HPO ₄	0.1g
KCl	0.1g
pH 3.5 ± 0.2 at 25°C	

Preparation of Sulfur: Sterilize powdered elemental sulfur by steaming for 3 hr at 0 psi pressure–100°C on three successive days.

Preparation of Medium: Add components, except elemental sulfur, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 3.5 with 1N sulfuric acid. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 5.0g of sterile elemental sulfur. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Thiobacillus thiooxidans*.

MSA-Fe Medium

Composition per liter:

NaCl	5.8g
Pancreatic digest of casein	2.0g
Yeast extract	2.0g
MgCl ₂ ·6H ₂ O	1.0g
NH ₄ Cl	1.0g
Mercaptoethanesulfonic acid	0.5g
K ₂ HPO ₄ ·3H ₂ O	0.4g
Resazurin	0.5mg
Trace elements solution	10.0mL
pH 7.5 ± 0.2 at 25°C	

Trace Elements Solution:

Composition per 100.0mL:

Disodium EDTA·2H ₂ O	50.0mg
CoCl ₂ ·6H ₂ O	15.0mg
FeSO ₄ ·7H ₂ O	10.0mg
MnCl ₂ ·4H ₂ O	10.0mg
ZnCl ₂	10.0mg
AlCl ₃ ·6H ₂ O	4.0mg
Na ₂ WO ₄ ·2H ₂ O	3.0mg
CuCl ₂ ·2H ₂ O	2.0mg
NiSO ₄ ·6H ₂ O	2.0mg
H ₂ SeO ₃	1.0mg
H ₃ BO ₃	1.0mg
Na ₂ MoO ₄ ·2H ₂ O	1.0mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Prepare and dispense medium under 100% N₂. Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.5 with 2N NaOH. Sparge with 100% N₂ for 30 min. Anaerobically distribute into tubes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Bacillus infermus*.

m-Seven Hour Fecal Coliform Agar

See: Seven-Hour Fecal Coliform Agar

M-Slanetz Enterococcus Broth Base with Triphenyltetrazolium Chloride

Composition per liter:

Sucrose	100.0g
Casein enzymic hydrolysate	25.0g
Peptic digest of animal tissue	15.0g
Yeast extract	10.0g

K ₂ HPO ₄	4.0g
Glucose	2.0g
NaN ₃	0.4g
Triphenyltetrazolium chloride solution.....	5.0mL
pH 7.2 ± 0.2 at 25°C	

Source: This medium, without triphenyltetrazolium chloride solution, is available as a premixed powder from HiMedia.

Caution: Sodium azide is toxic. Azides also react with metals and disposal must be highly diluted.

Triphenyltetrazolium Chloride Solution:

Composition per 5.0mL:

Triphenyltetrazolium chloride.....	0.1g
------------------------------------	------

Preparation of Triphenyltetrazolium Chloride Solution: Add triphenyltetrazolium chloride to distilled/deionized water and bring volume to 5.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except triphenyltetrazolium chloride solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 5.0mL triphenyltetrazolium chloride solution. Mix thoroughly.

Use: For the isolation, cultivation, and enumeration of enterococci in water, sewage, and feces by the membrane filter method. For the direct plating of specimens for the detection and enumeration of fecal streptococci. For the isolation and detection of enterococci using the membrane filter technique.

M-Slanetz *Enterococcus* HiVeg Broth Base with Triphenyltetrazolium Chloride

Composition per liter:

Sucrose.....	100.0g
Plant hydrolysate.....	25.0g
Plant peptone.....	15.0g
Yeast extract.....	10.0g
K ₂ HPO ₄	4.0g
Glucose	2.0g
NaN ₃	0.4g
Triphenyltetrazolium chloride solution.....	5.0mL
pH 7.2 ± 0.2 at 25°C	

Source: This medium, without triphenyltetrazolium chloride solution, is available as a premixed powder from HiMedia.

Caution: Sodium azide is toxic. Azides also react with metals and disposal must be highly diluted.

Triphenyltetrazolium Chloride Solution:

Composition per 5.0mL:

Triphenyltetrazolium chloride.....	0.1g
------------------------------------	------

Preparation of Triphenyltetrazolium Chloride Solution: Add triphenyltetrazolium chloride to distilled/deionized water and bring volume to 5.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except triphenyltetrazolium chloride solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 5.0mL triphenyltetrazolium chloride solution. Mix thoroughly.

Use: For the cultivation, and enumeration of enterococci in water, sewage, and feces by the membrane filter method. For the isolation and detection of enterococci using the membrane filter technique.

M-*Staphylococcus* HiVeg Broth

Composition per liter:

NaCl.....	75.0g
Plant hydrolysate	10.0g
Mannitol.....	10.0g
K ₂ HPO ₄	5.0g
Yeast extract.....	2.5g
Lactose.....	2.0g
NaN ₃	0.049g
pH 7.0 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Caution: Sodium azide is toxic. Azides also react with metals and disposal must be highly diluted.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and enumeration of pathogenic and enterotoxigenic staphylococci by the membrane filter method.

MSL86 Medium

(DSMZ Medium 1068)

Composition per liter:

NaCl.....	10.0g
MgSO ₄ ·7H ₂ O.....	2.0g
NH ₄ Cl	1.0g
Na ₂ SO ₄	1.0g
Yeast extract	0.5g
CaCl ₂ ·2H ₂ O	0.1g
Resazurin	0.5mg
Vitamin solution.....	10.0mL
Sulfide solution.....	10.0mL
Cysteine solution	10.0mL
Lactate solution.....	10.0mL
Trace element solution SL-10.....	1.0mL
pH 7.5 ± 0.2 at 25°C	

Sulfide Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	0.25g
--	-------

Preparation of Sulfide Solution: Add $\text{Na}_2\text{S}\cdot 9\text{H}_2\text{O}$ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N_2 for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Cysteine Solution:

Composition per 10.0mL:

L-Cysteine-HCl $\cdot 2\text{H}_2\text{O}$ 0.25g

Preparation of Cysteine Solution: Add L-cysteine-HCl $\cdot 2\text{H}_2\text{O}$ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N_2 . Filter sterilize.

Lactate Solution:

Composition per 10.0mL:

Sodium lactate 2.5g

Preparation of Lactate Solution: Add sodium lactate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Trace Elements Solution SL-10:

Composition per liter:

$\text{MgSO}_4\cdot 7\text{H}_2\text{O}$ 3.0g

Nitrilotriacetic acid 1.5g

NaCl 1.0g

$\text{MnSO}_4\cdot 2\text{H}_2\text{O}$ 0.5g

$\text{CoSO}_4\cdot 7\text{H}_2\text{O}$ 0.18g

$\text{ZnSO}_4\cdot 7\text{H}_2\text{O}$ 0.18g

$\text{CaCl}_2\cdot 2\text{H}_2\text{O}$ 0.1g

$\text{FeSO}_4\cdot 7\text{H}_2\text{O}$ 0.1g

$\text{NiCl}_2\cdot 6\text{H}_2\text{O}$ 0.025g

$\text{KAl}(\text{SO}_4)_2\cdot 12\text{H}_2\text{O}$ 0.02g

H_3BO_3 0.01g

$\text{Na}_2\text{MoO}_4\cdot 4\text{H}_2\text{O}$ 0.01g

$\text{CuSO}_4\cdot 5\text{H}_2\text{O}$ 0.01g

$\text{Na}_2\text{SeO}_3\cdot 5\text{H}_2\text{O}$ 0.3mg

Preparation of Trace Elements Solution SL-10: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly. Adjust pH to 7.0.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl 10.0mg

Thiamine-HCl $\cdot 2\text{H}_2\text{O}$ 5.0mg

Riboflavin 5.0mg

Nicotinic acid 5.0mg

D-Ca-pantothenate 5.0mg

p-Aminobenzoic acid 5.0mg

Lipoic acid 5.0mg

Biotin 2.0mg

Folic acid 2.0mg

Vitamin B_{12} 0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H_2 + 20% CO_2 . Filter sterilize.

Preparation of Medium: Add components, except lactate, cysteine, sulfide, and vitamin solutions, to distilled/deionized water and bring volume to 960.0mL. Mix thoroughly. Sparge with 100% N_2 gas for at least 45 min. Dispense the medium under same gas atmosphere in culture vessels. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add the lactate, cysteine,

sulfide, and vitamin solutions. Adjust pH of the completed medium to 7.5.

Use: For the cultivation of *Desulfopila aestuarii*.

MSV AcS Agar

Composition per liter:

$\text{Na}_2\text{S}\cdot 9\text{H}_2\text{O}$ 0.187g

Sodium acetate 0.15g

MSV agar 1.0L

pH 7.2–7.5 at 25°C

MSV Agar:

Composition per liter:

Agar 12.0g

$(\text{NH}_4)_2\text{SO}_4$ 0.5g

K_2HPO_4 0.11g

KH_2PO_4 0.085g

$\text{MgSO}_4\cdot 7\text{H}_2\text{O}$ 0.05g

$\text{CaCl}_2\cdot 2\text{H}_2\text{O}$ 0.05g

EDTA 3.0mg

$\text{FeCl}_3\cdot \text{H}_2\text{O}$ 2.0mg

Vitamin mix 1.0mL

Preparation of MSV Agar: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Vitamin Mix:

Composition per 100.0mL:

Calcium pantothenate 0.01g

Niacin 0.01g

Pyridoxine 0.01g

p-Aminobenzoic acid 0.01g

Coccarboxylase 0.01g

Inositol 0.01g

Thiamine 0.01g

Riboflavin 0.01g

Biotin 0.5mg

Cyanocobalamin 0.5mg

Folic acid 0.5mg

Preparation of Vitamin Mix: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: To 1.0L of MSV agar add sodium acetate and $\text{Na}_2\text{S}\cdot 9\text{H}_2\text{O}$. Adjust pH to 7.2–7.5. Gently heat to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation, cultivation, and enrichment of heterotrophic strains of *Thiothrix* species from water and environmental sources.

MSV Agar

Composition per liter:

Agar 12.0g

$(\text{NH}_4)_2\text{SO}_4$ 0.5g

K_2HPO_4 0.11g

KH_2PO_4 0.085g

$\text{MgSO}_4\cdot 7\text{H}_2\text{O}$ 0.05g

$\text{CaCl}_2\cdot 2\text{H}_2\text{O}$ 0.05g

EDTA 3.0mg

$\text{FeCl}_3\cdot \text{H}_2\text{O}$ 2.0mg

Vitamin mix 1.0mL

pH 7.2–7.5 at 25°C

Vitamin Mix:**Composition per 100.0mL:**

Calcium pantothenate	0.01g
Niacin	0.01g
Pyridoxine	0.01g
<i>p</i> -Aminobenzoic acid	0.01g
Coccarboxylase	0.01g
Inositol	0.01g
Thiamine	0.01g
Riboflavin	0.01g
Biotin	0.5mg
Cyanocobalamin	0.5mg
Folic acid	0.5mg

Preparation of Vitamin Mix: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2–7.5. Gently heat to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation, cultivation, and enrichment of heterotrophic strains of *Thiothrix* species from water and environmental sources.

MSV Broth**Composition per liter:**

(NH ₄) ₂ SO ₄	0.5g
K ₂ HPO ₄	0.11g

MgSO ₄ ·7H ₂ O	0.05g
CaCl ₂ ·2H ₂ O	0.05g
EDTA	3.0mg
FeCl ₃ ·H ₂ O	2.0mg
Vitamin mix	1.0mL

pH 7.2–7.5 at 25°C

Vitamin Mix:**Composition per 100.0mL:**

Calcium pantothenate	0.01g
Niacin	0.01g
Pyridoxine	0.01g
<i>p</i> -Aminobenzoic acid	0.01g
Coccarboxylase	0.01g
Inositol	0.01g
Thiamine	0.01g
Riboflavin	0.01g
Biotin	0.5mg
Cyanocobalamin	0.5mg
Folic acid	0.5mg

Preparation of Vitamin Mix: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2–7.5. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation, cultivation, and enrichment of heterotrophic strains of *Thiothrix* species from water and environmental sources.

MSV GS Agar**Composition per liter:**

Na ₂ S·9H ₂ O	0.187g
Glucose	0.15g
MSV agar	1.0L

pH 7.2–7.5 at 25°C

MSV Agar:**Composition per liter:**

Agar	12.0g
(NH ₄) ₂ SO ₄	0.5g
K ₂ HPO ₄	0.11g
KH ₂ PO ₄	0.085g
MgSO ₄ ·7H ₂ O	0.05g
CaCl ₂ ·2H ₂ O	0.05g
EDTA	3.0mg
FeCl ₃ ·H ₂ O	2.0mg
Vitamin mix	1.0mL

Preparation of MSV Agar: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Vitamin Mix:**Composition per 100.0mL:**

Calcium pantothenate	0.01g
Niacin	0.01g
Pyridoxine	0.01g
<i>p</i> -Aminobenzoic acid	0.01g
Coccarboxylase	0.01g
Inositol	0.01g
Thiamine	0.01g
Riboflavin	0.01g
Biotin	0.5mg
Cyanocobalamin	0.5mg
Folic acid	0.5mg

Preparation of Vitamin Mix: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: To 1.0L of MSV Agar add glucose and Na₂S·9H₂O. Adjust pH to 7.2–7.5. Gently heat to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation, cultivation, and enrichment of heterotrophic strains of *Thiothrix* species from water and environmental sources.

MSV I Agar**Composition per liter:**

Glucose	0.15g
MSV agar	1.0L

pH 7.2–7.5 at 25°C

MSV Agar:**Composition per liter:**

Agar	12.0g
(NH ₄) ₂ SO ₄	0.5g
K ₂ HPO ₄	0.11g
KH ₂ PO ₄	0.085g
MgSO ₄ ·7H ₂ O	0.05g
CaCl ₂ ·2H ₂ O	0.05g
EDTA	3.0mg
FeCl ₃ ·H ₂ O	2.0mg
Vitamin mix	1.0mL

Preparation of MSV Agar: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Vitamin Mix:

Composition per 100.0mL:

Calcium pantothenate	0.01g
Niacin	0.01g
Pyridoxine.....	0.01g
<i>p</i> -Aminobenzoic acid.....	0.01g
Coccarboxylase.....	0.01g
Inositol	0.01g
Thiamine	0.01g
Riboflavin	0.01g
Biotin	0.5mg
Cyanocobalamin	0.5mg
Folic acid.....	0.5mg

Preparation of Vitamin Mix: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: To 1.0L of MSV agar, add glucose. Adjust pH to 7.2–7.5. Gently heat to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation, cultivation, and enrichment of heterotrophic strains of *Thiothrix* species from water and environmental sources.

MSV LT Agar

Composition per liter:

Sodium lactate.....	0.5g
Na ₂ S ₂ O ₃	0.5g
MSV agar	1.0L
pH 7.2–7.5 at 25°C	

MSV Agar:

Composition per liter:

Agar	12.0g
(NH ₄) ₂ SO ₄	0.5g
K ₂ HPO ₄	0.11g
KH ₂ PO ₄	0.085g
MgSO ₄ ·7H ₂ O	0.05g
CaCl ₂ ·2H ₂ O.....	0.05g
EDTA	3.0mg
FeCl ₃ ·H ₂ O	2.0mg
Vitamin mix	1.0mL

Preparation of MSV Agar: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Vitamin Mix:

Composition per 100.0mL:

Calcium pantothenate	0.01g
Niacin	0.01g
Pyridoxine.....	0.01g
<i>p</i> -Aminobenzoic acid.....	0.01g
Coccarboxylase.....	0.01g
Inositol	0.01g
Thiamine	0.01g
Riboflavin	0.01g
Biotin	0.5mg
Cyanocobalamin	0.5mg
Folic acid.....	0.5mg

Preparation of Vitamin Mix: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: To 1.0L of MSV agar, add sodium lactate and Na₂S₂O₃. Adjust pH to 7.2–7.5. Gently heat to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation, cultivation, and enrichment of heterotrophic strains of *Thiothrix* species from water and environmental sources.

MSV S Agar

Composition per liter:

Na ₂ S·9H ₂ O.....	0.187g
MSV agar.....	1.0L
pH 7.2–7.5 at 25°C	

MSV Agar:

Composition per liter:

Agar	12.0g
(NH ₄) ₂ SO ₄	0.5g
K ₂ HPO ₄	0.11g
KH ₂ PO ₄	0.085g
MgSO ₄ ·7H ₂ O	0.05g
CaCl ₂ ·2H ₂ O	0.05g
EDTA	3.0mg
FeCl ₃ ·H ₂ O	2.0mg
Vitamin mix	1.0mL

Preparation of MSV Agar: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Vitamin Mix:

Composition per 100.0mL:

Calcium pantothenate	0.01g
Niacin.....	0.01g
Pyridoxine.....	0.01g
<i>p</i> -Aminobenzoic acid.....	0.01g
Coccarboxylase.....	0.01g
Inositol	0.01g
Thiamine	0.01g
Riboflavin	0.01g
Biotin	0.5mg
Cyanocobalamin	0.5mg
Folic acid	0.5mg

Preparation of Vitamin Mix: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: To 1.0L of MSV agar, add Na₂S·9H₂O. Adjust pH to 7.2–7.5. Gently heat to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation, cultivation, and enrichment of heterotrophic strains of *Thiothrix* species from water and environmental sources.

MSV SS Agar

Composition per liter:

Na ₂ S·9H ₂ O.....	0.187g
Sucrose.....	0.15g
MSV agar.....	1.0L
pH 7.2–7.5 at 25°C	

MSV Agar:

Composition per liter:

Agar	12.0g
(NH ₄) ₂ SO ₄	0.5g
K ₂ HPO ₄	0.11g

KH ₂ PO ₄	0.085g
MgSO ₄ ·7H ₂ O.....	0.05g
CaCl ₂ ·2H ₂ O.....	0.05g
EDTA.....	3.0mg
FeCl ₃ ·H ₂ O.....	2.0mg
Vitamin mix.....	1.0mL

Preparation of MSV Agar: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Vitamin Mix:

Composition per 100.0mL:

Calcium pantothenate.....	0.01g
Niacin.....	0.01g
Pyridoxine.....	0.01g
<i>p</i> -Aminobenzoic acid.....	0.01g
Coccarboxylase.....	0.01g
Inositol.....	0.01g
Thiamine.....	0.01g
Riboflavin.....	0.01g
Biotin.....	0.5mg
Cyanocobalamin.....	0.5mg
Folic acid.....	0.5mg

Preparation of Vitamin Mix: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: To 1.0L of MSV agar, add Na₂S·9H₂O and sucrose. Adjust pH to 7.2–7.5. Gently heat to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation, cultivation, and enrichment of heterotrophic strains of *Thiothrix* species from water and environmental sources.

MSV SUC Agar

Composition per liter:

Sodium succinate.....	0.15g
MSV agar.....	1.0L

pH 7.2–7.5 at 25°C

MSV Agar:

Composition per liter:

Agar.....	12.0g
(NH ₄) ₂ SO ₄	0.5g
K ₂ HPO ₄	0.11g
KH ₂ PO ₄	0.085g
MgSO ₄ ·7H ₂ O.....	0.05g
CaCl ₂ ·2H ₂ O.....	0.05g
EDTA.....	3.0mg
FeCl ₃ ·H ₂ O.....	2.0mg
Vitamin mix.....	1.0mL

Preparation of MSV Agar: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Vitamin Mix:

Composition per 100.0mL:

Calcium pantothenate.....	0.01g
Niacin.....	0.01g
Pyridoxine.....	0.01g
<i>p</i> -Aminobenzoic acid.....	0.01g
Coccarboxylase.....	0.01g
Inositol.....	0.01g
Thiamine.....	0.01g
Riboflavin.....	0.01g
Biotin.....	0.5mg

Cyanocobalamin.....	0.5mg
Folic acid.....	0.5mg

Preparation of Vitamin Mix: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: To 1.0L of MSV agar, add sodium succinate. Adjust pH to 7.2–7.5. Gently heat to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation, cultivation, and enrichment of heterotrophic strains of *Thiothrix* species from water and environmental sources.

MSVP Agar

Composition per 984.0mL:

Agar, noble.....	15.0g
HEPES (<i>N</i> -[2-hydroxyethyl]piperazine- <i>N</i> '-2-ethanesulfonic acid) buffer.....	2.383g
(NH ₄) ₂ SO ₄	0.24g
CaCl ₂ ·2H ₂ O.....	0.06g
MgSO ₄ ·7H ₂ O.....	0.06g
Na ₂ HPO ₄	0.03g
KH ₂ PO ₄	0.02g
FeSO ₄ (10mM solution).....	1.0mL
Sodium pyruvate solution.....	5.0mL
Vitamin solution.....	1.0mL

pH 7.2 ± 0.2 at 25°C

Sodium Pyruvate Solution:

Composition per 50.0mL:

Sodium pyruvate.....	10.0g
----------------------	-------

Preparation of Sodium Pyruvate Solution: Add sodium pyruvate to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl.....	100.0mg
<i>p</i> -Aminobenzoic acid.....	50.0mg
D-(+)-Calcium pantothenate.....	50.0mg
Nicotinic acid.....	50.0mg
Riboflavin.....	50.0mg
Thiamine-HCl.....	50.0mg
Biotin.....	20.0mg
Folic acid.....	20.0mg
Vitamin B ₁₂	1.0mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except sodium pyruvate solution and vitamin solution, to distilled/deionized water and bring volume to 994.0mL. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.2. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 5.0mL of sterile sodium pyruvate solution and 1.0mL of sterile vitamin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Leptothrix discophora*.

m-T7 Agar Base

M-Tetrathionate HiVeg Broth Base with Iodine

Composition per liter:

Na ₂ S ₂ O ₃	30.0g
Plant peptone No. 3	5.0g
Synthetic detergent	1.0g
Iodine solution	20.0mL

Source: This medium, without iodine solution, is available as a pre-mixed powder from HiMedia.

Iodine Solution:

Composition per 20.0mL:

Iodine	6.0g
KI	5.0g

Preparation of Iodine Solution: Add iodine and KI to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly.

Preparation of Medium: Add components, except iodine solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Do not autoclave. Cool to 40°C. Add 20.0mL of iodine solution. Mix thoroughly. Distribute into tubes in 10.0mL volumes. Use medium the same day it is prepared.

Use: For the selective isolation and enrichment of *Salmonella typhi* and other salmonellae from fecal specimens, sewage, and other specimens.

m-TGE Broth
See: TGE Broth

MTM II
See: Thayer-Martin Agar, Modified

MTP4 Medium

Composition per 1001.0mL:

Solution A	870.0mL
Solution C	100.0mL
Solution D (Vitamin solution)	10.0mL
Solution E	10.0mL
Solution B (Trace elements solution SL-10)	1.0mL
Methanol	1.0mL
Methanethiol gas	1–2.0mL

pH 7.1–7.4 at 25°C

Solution A:

Composition per 870.0mL:

NaCl	21.0g
MgCl ₂ ·6H ₂ O	3.1g
KCl	0.5g
NH ₄ Cl	0.3g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O	0.15g
Resazurin	1.0mg

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 870.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 3–4 min. Allow to cool to room temperature while gassing under 80% N₂ + 20% CO₂. Continue gas-

sing until pH reaches below 6.0. Seal the flask under 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B (Trace Elements Solution SL-10):

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Solution B (Trace Elements Solution SL-10):

Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C:

Composition per 100.0mL:

NaHCO ₃	5.0g
--------------------------	------

Preparation of Solution C: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Gas under 80% N₂ + 20% CO₂.

Solution D (Vitamin Solution):

Composition per liter:

Pyridoxine-HCl	10.0mg
Calcium DL-pantothenate	5.0mg
Lipoic acid	5.0mg
Nicotinic acid	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Riboflavin	5.0mg
Thiamine-HCl	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Solution D (Vitamin Solution): Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution E:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.4g
---	------

Preparation of Solution E: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Aseptically and anaerobically combine solution A with solution B, solution C, solution D, and solution E, in that order. Mix thoroughly. Anaerobically distribute into sterile tubes or flasks under 80% N₂ + 20% CO₂. Prior to inoculation, aseptically and anaerobically add 1.0mL of filter-sterilized methanol and 1.0–2.0mL of methanethiol gas to each liter of medium. Addition of 10–20mg of sodium dithionite per liter (e.g., from a 5% solution, freshly prepared under N₂ and filter-sterilized) may stimulate growth at the beginning.

Use: For the cultivation and maintenance of *Methanosarcina* species.

m-TT Broth
See: Tetrathionate Broth

Mucate Broth**Composition per liter:**

Mucic acid.....	10.0g
Peptone.....	10.0g
Bromthymol Blue	0.024g
pH 7.4 ± 0.1 at 25°C.	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Add 5N NaOH while stirring until mucic acid dissolves. Distribute into screw-capped tubes in 5.0mL volumes. Autoclave for 10 min at 15 psi pressure–121°C.

Use: For the isolation and cultivation of enterovirulent *Escherichia coli* and *Shigella* species.

Mucate Control Broth**Composition per liter:**

Peptone.....	10.0g
Bromthymol Blue	0.024g
pH 7.4 ± 0.1 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into screw-capped tubes in 5.0mL volumes. Autoclave for 10 min at 15 psi pressure–121°C.

Use: For the isolation and cultivation of enterovirulent *Escherichia coli* and *Shigella* species.

Mucate Control HiVeg Broth**Composition per liter:**

Plant peptone.....	10.0g
Bromthymol Blue	0.024g
pH 7.4 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into screw-capped tubes in 5.0mL volumes. Autoclave for 10 min at 15 psi pressure–121°C.

Use: For the isolation and cultivation of enterovirulent *Escherichia coli* and *Shigella* species.

Mucate HiVeg Broth**Composition per liter:**

Plant peptone.....	10.0g
Mucic acid.....	10.0g
Bromthymol Blue	0.024g
pH 7.4 ± 0.2 at 25°C.	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Add 5N NaOH while stirring until mucic acid dissolves. Distribute into screw-capped tubes in 5.0mL volumes. Autoclave for 10 min at 15 psi pressure–121°C.

Use: For the isolation and cultivation of enterovirulent *Escherichia coli* and *Shigella* species.

MUD SF Broth Base**Composition per liter:**

Tryptose	40.0g
KH ₂ PO ₄	10.0g

D-Galactose.....	2.0g
Tween 80 (polysorbate 80)	1.5g
4-Methylumbelliferyl-β-D-glucoside (MUD).....	0.15g
Selective supplement solution A	10.0mL
Selective supplement solution B.....	1.0mL
pH 7.5 ± 0.2 at 25°C	

Source: This medium is available from HiMedia.

Selective Supplement Solution A:**Composition per 10.0mL:**

Thallium acetate.....	2.0g
Nalidixic acid.....	0.25g

Preparation of Selective Supplement Solution A: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Selective Supplement Solution B:**Composition per 20.0mL:**

2,3,5-Triphenyltetrazolium chloride	0.2g
---	------

Preparation of Selective Supplement Solution B: Add 0.2g of 2,3,5-triphenyltetrazolium chloride to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except selective supplement solutions A and B, to distilled/deionized water and bring volume to 989.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add selective supplement solutions A and B. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the detection and enumeration of intestinal enterococci in surface and wastewater in accordance with ISO committee under ISO 7899-1:1998.

Mueller-Hinton Agar**Composition per liter:**

Beef infusion.....	300.0g
Acid hydrolysate of casein.....	17.5g
Agar	17.0g
Starch	1.5g
pH 7.4 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems and Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation of pathogenic *Neisseria* species. For antimicrobial susceptibility testing of a variety of bacterial species. For the cultivation and maintenance of *Moraxella osloensis* and *Neisseria meningitidis*.

**Mueller-Hinton Agar with Horse Blood
(LMG Medium 49)****Composition per liter:**

Beef, infusion from.....	300.0g
Acid hydrolysate of casein.....	17.5g
Agar	17.0g
Starch	1.5g
Horse blood, sterile defibrinated.....	50.0mL
pH 7.4 ± 0.2 at 25°C	

Source: This medium without horse blood is available as a premixed powder from BD Diagnostic Systems and Oxoid Unipath.

Preparation of Medium: Add components, except horse blood, to 950.0mL distilled/deionized water. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50.0mL sterile horse blood. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Campylobacter* spp., *Arcobacter* spp., *Helicobacter* spp., *Moraxella lincolniai*, and other bacteria.

Mueller-Hinton Agar with IsoVitaleX[®] and Hemoglobin

Composition per liter:

Component A.....	490.0mL
Component B.....	490.0mL
IsoVitaleX [®] enrichment.....	20.0mL
pH 6.9 ± 0.2 at 25°C	

Component A:

Composition per 490.0mL:

Beef infusion.....	300.0g
Acid hydrolysate of casein.....	17.5g
Agar.....	17.0g
Starch.....	1.5g

Preparation of Component A: Add components to distilled/deionized water and bring to 490.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Component B:

Composition per 490.0mL:

Hemoglobin.....	10.0g
-----------------	-------

Preparation of Component B: Add hemoglobin to distilled/deionized water and bring to 490.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

IsoVitaleX[®] Enrichment:

Composition per liter:

Glucose.....	100.0g
L-Cysteine-HCl.....	25.9g
L-Glutamine.....	10.0g
L-Cystine.....	1.1g
Adenine.....	1.0g
Nicotinamide adenine dinucleotide.....	0.25g
Vitamin B ₁₂	0.1g
Thiamine pyrophosphate.....	0.1g
Guanine-HCl.....	0.03g
Fe(NO ₃) ₃ ·6H ₂ O.....	0.02g
p-Aminobenzoic acid.....	0.013g
Thiamine-HCl.....	3.0mg

Source: The supplement solution IsoVitaleX[®] enrichment is available from BD Diagnostic Systems. This enrichment may be replaced by supplement VX from BD Diagnostic Systems.

Preparation of IsoVitaleX[®] Enrichment: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Warm to 45°–50°C.

Preparation of Medium: Aseptically combine 490.0mL of component A, 490.0mL of component B, and 20.0mL of IsoVitaleX[®] enrichment. Mix thoroughly. Adjust pH to 6.9. Pour into sterile Petri dishes in 20.0mL volumes.

Use: For the isolation and cultivation of *Legionella pneumophila*.

Mueller-Hinton Agar with Sodium Chloride (BAM M107)

Composition per liter:

Beef infusion from.....	300.0g
NaCl.....	30.0g
Acid hydrolysate of casein.....	17.5g
Agar.....	17.0g
Starch.....	1.5g
pH 7.3 ± 0.2 at 25°C	

Source: This medium without NaCl is available as a premixed powder from BD Diagnostics and Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 11 psi pressure–116°C. Pour into sterile Petri dishes or leave in tubes.

Use: For antimicrobial susceptibility testing of a variety of halophilic *Vibrio* spp.

Mueller-Hinton Broth

Composition per liter:

Acid hydrolysate of casein.....	17.5g
Beef extract.....	3.0g
Starch.....	1.5g
pH 7.3 ± 0.1 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems and Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 10 min at 10 psi pressure–115°C. Do not overheat.

Use: For the cultivation of a wide variety of microorganisms. For antimicrobial susceptibility testing.

Mueller-Hinton Chocolate Agar

Composition per liter:

Beef infusion.....	300.0g
Acid hydrolysate of casein.....	17.5g
Agar.....	17.0g
Starch.....	1.5g
Sheep blood.....	50.0mL
pH 7.4 ± 0.2 at 25°C	

Preparation of Medium: Add components, except sheep blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile sheep blood. Mix thoroughly. Gently heat to 70°C for 10 min. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Neisseria gonorrhoeae* and *Neisseria meningitidis*. For antimicrobial susceptibility testing of fastidious microorganisms.

Mueller-Hinton II Agar**Composition** per liter:

Acid hydrolysate of casein.....	17.5g
Agar	17.0g
Beef extract	2.0g
Starch	1.5g

pH 7.3 ± 0.1 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For antimicrobial disc diffusion susceptibility testing by the Bauer-Kirby method of a variety of bacteria. This medium supplemented with 5% sheep blood is recommended for use in antimicrobial susceptibility testing of *Streptococcus pneumoniae* and *Haemophilus influenzae*.

Mueller-Hinton HiVeg Agar**Composition** per liter:

Plant infusion	300.0g
Plant acid hydrolysate.....	17.5g
Agar	17.0g
Starch	1.5g

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Neisseria* species and for determination of susceptibility of microorganisms to antimicrobial agents.

Mueller-Hinton HiVeg Agar No. 2**Composition** per liter:

Plant hydrolysate.....	17.5g
Agar	17.0g
Plant infusion	2.0g
Starch, soluble.....	1.5g

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation of pathogenic *Neisseria* species. For testing susceptibility of common and rapidly growing bacteria using antimicrobial discs by the Bauer-Kirby method.

Mueller-Hinton HiVeg Broth**Composition** per liter:

Plant acid hydrolysate.....	17.5g
Plant infusion	2.0g
Starch	1.5g

pH 7.3 ± 0.1 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 10 min at 10 psi pressure–115°C. Do not overheat.

Use: For the cultivation of a wide variety of microorganisms. For antimicrobial susceptibility testing.

Mueller-Hinton Medium with Garden Soil**Composition** per liter:

Garden soil, sterile.....	300.0g
Beef infusion.....	300.0g
Acid hydrolysate of casein.....	17.5g
Agar	17.0g
Starch	1.5g

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes. Swirl flask while pouring to disperse soil.

Use: For the cultivation and maintenance of *Chromobacterium violaceum*.

Mueller-Hinton Medium with Rabbit Serum**Composition** per liter:

Beef infusion.....	300.0g
Acid hydrolysate of casein.....	17.5g
Agar	17.0g
Starch	1.5g
Rabbit serum.....	100.0mL

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components, except rabbit serum, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile rabbit serum. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Corynebacterium* species.

Mueller-Kauffmann Tetrathionate Broth**Composition** per 1028.0mL:

Na ₂ S ₂ O ₃	40.7g
CaCO ₃	25.0g
Pancreatic digest of casein.....	7.0g
Ox bile	4.75g
Soya peptone.....	2.3g
NaCl.....	2.3g
Iodine solution	19.0mL
Brilliant Green solution	9.5mL

Iodine Solution:**Composition** per 100.0mL:

Iodine	20.0g
KI.....	25.0g

Preparation of Iodine Solution: Add the KI to approximately 5.0mL of distilled/deionized water. Mix thoroughly. Add the iodine. Gently heat to dissolve. Bring volume to 100.0mL with distilled/deionized water. Filter sterilize.

Brilliant Green Solution:**Composition** per 100.0mL:

Brilliant Green 0.1g

Preparation of Brilliant Green Solution: Add the Brilliant Green to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Gently heat while stirring and bring to boiling. Continue boiling for 30 min while stirring until dye has dissolved. Filter sterilize. Store protected from light.

Preparation of Medium: Add components, except iodine solution and Brilliant Green solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Do not autoclave. Cool to 45°C. Prior to use, add 19.0mL of iodine solution and 9.5mL of Brilliant Green solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the isolation and cultivation of *Salmonella* species from specimens with a mixed flora.

Mueller-Kauffman Tetrathionate HiVeg Broth Base with Iodine and Brilliant Green

Composition per liter:

Na₂S₂O₃ 40.7g
 CaCO₃ 25.0g
 Plant hydrolysate 9.75
 Papaic digest of soybean meal 2.3g
 NaCl 2.3g
 Synthetic detergent No. II 2.0g
 Iodine solution 19.0mL
 Brilliant Green solution 9.5mL

pH 7.2 ± 0.2 at 25°C

Source: This medium, without iodine and Brilliant Green, is available as a premixed powder from HiMedia.

Iodine Solution:**Composition** per 100.0mL:

Iodine 20.0g
 KI 25.0g

Preparation of Iodine Solution: Add the KI to approximately 5.0mL of distilled/deionized water. Mix thoroughly. Add the iodine. Gently heat to dissolve. Bring volume to 100.0mL with distilled/deionized water. Filter sterilize.

Brilliant Green Solution:**Composition** per 100.0mL:

Brilliant Green 0.1g

Preparation of Brilliant Green Solution: Add the Brilliant Green to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Gently heat while stirring and bring to boiling. Continue boiling for 30 min while stirring until dye has dissolved. Filter sterilize. Store protected from light.

Preparation of Medium: Add components, except iodine solution and Brilliant Green solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Do not autoclave. Cool to 45°C. Prior to use, add 19.0mL of iodine solution and 9.5mL of Brilliant Green solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the isolation and cultivation of *Salmonella* species from specimens with a mixed flora.

Mueller-Tellurite Medium**Composition** per liter:

Casamino acids 20.0g
 Agar 20.0g
 Casein 5.0g
 KH₂PO₄ 0.3g
 MgSO₄·7H₂O 0.1g
 L-Tryptophan 0.05g
 Mueller-tellurite serum 25.0mL

pH 7.4 ± 0.1 at 25°C

Mueller-Tellurite Serum:**Composition** per 100.0mL:

K₂TeO₃ solution 0.4g
 Calcium pantothenate 0.2mg
 Horse or beef serum, sterile 50.0mL
 Sodium lactate solution 40.0mL
 Ethyl alcohol 10.0mL

Preparation of Mueller-Tellurite Serum: Add calcium pantothenate to 1.0mL of distilled/deionized water. Autoclave for 15 min at 15 psi pressure–121°C. Add K₂TeO₃ to 1.0mL of sterile distilled/deionized water. To 40.0mL of cooled, sterile sodium lactate solution, add filter-sterilized ethanol, sterile calcium pantothenate solution, sterile serum, and K₂TeO₃ solution. Mix thoroughly.

Sodium Lactate Solution:**Composition** per 100.0mL:

Lactic acid (85% solution) 50.0mL
 Phenol Red solution (0.2g in 50% ethanol) 0.1mL

Preparation of Sodium Lactate Solution: Add lactic acid to distilled/deionized water and bring volume to 100.0mL. Add 0.1mL of Phenol Red solution. Add enough 40% NaOH solution to adjust pH to 7.0. Gently heat and bring to boiling for 5 min. Add more NaOH solution to retain red color, if necessary. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C.

Caution: Potassium tellurite is toxic.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 975.0mL. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool quickly to 50°C. Aseptically add 25.0mL of Mueller-Tellurite serum. Mix thoroughly. Distribute into sterile Petri dishes. Allow the surface of the plates to dry by partially removing the covers during solidification.

Use: For the isolation, cultivation, and differentiation of *Corynebacterium diphtheriae*.

MUG Bromcresol Purple Broth with Lactose**Composition** per liter:

Casein enzymic hydrolysate 17.0g
 Lactose 10.0g
 NaCl 5.0g
 Papaic digest of soybean meal 3.0g
 Tryptophan 1.0g
 Bromcresol Purple 0.02g
 4-Methylumbelliferyl-β-D-glucuronide (MUG) 0.01g

pH 7.0 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes with inverted Durham tubes. Autoclave for 20 min at 10 psi pressure–115°C.

Use: For the identification of *Escherichia coli* and coliform bacteria from water samples by a fluorogenic assay method.

MUG EC O157 Agar

Composition per liter:

Casein peptone	20.0g
Agar	13.0g
Sorbitol.....	10.0g
NaCl.....	5.0g
Meat extract	2.0g
Na ₂ S ₂ O ₃	2.0g
Sodium deoxycholate.....	1.12g
Yeast extract.....	1.0g
Ferric ammonium citrate.....	0.5g
4-Methylumbelliferyl-β-D-glucuronide (MUG)	0.1g
Bromthymol Blue	0.025g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and differentiation of enterohemorrhagic *Escherichia coli* O157:H7 from foodstuffs, water, and clinical samples by a fluorogenic method.

MUG EC O157 Agar, Modified

Composition per liter:

Peptic digest of animal tissue.....	20.0g
Sorbitol.....	20.0g
Agar	12.0g
NaCl.....	5.0g
Bile salts.....	1.12g
4-Methylumbelliferyl-β-D-glucuronide (MUG)	0.05g
Bromcresol Purple	0.01g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and differentiation of enterohemorrhagic *Escherichia coli* O157:H7 from foodstuffs, water, and clinical samples by a fluorogenic method.

MUG EC Broth

Composition per liter:

Casein enzymic hydrolysate	20.0g
Lactose	5.0g
NaCl.....	5.0g
K ₂ HPO ₄	4.0g
KH ₂ PO ₄	1.5g
Bile salts mixture	1.5g
4-Methylumbelliferyl-β-D-glucuronide (MUG)	0.05g

pH 6.9 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into test tubes that contain an inverted Durham tube in 10.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the detection of *Escherichia coli* in water and food samples by a fluorogenic procedure.

MUG EC Broth, Modified

Composition per liter:

Casein enzymic hydrolysate	40.0g
Salicin	1.0g
Triton X-100	1.0g
4-Methylumbelliferyl-β-D-glucuronide (MUG)	0.1g

pH 6.9 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the detection and enumeration of *Escherichia coli* in surface and waste water by the miniaturized method (MPN) in accordance with the ISO committee under ISO 9308-3:1998.

MUG EC HiVeg Broth

Composition per liter:

Plant hydrolysate	20.0g
Lactose	5.0g
NaCl.....	5.0g
K ₂ HPO ₄	4.0g
KH ₂ PO ₄	1.5g
Synthetic detergent No. 1	1.5g
4-Methylumbelliferyl-β-D-glucuronide (MUG)	0.05g

pH 6.9 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into test tubes that contain an inverted Durham tube in 10.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the detection of *Escherichia coli* in water and food samples by a fluorogenic procedure.

MUG Lauryl Sulfate Broth

Composition per liter:

Casein enzymic hydrolysate	20.0g
Lactose	5.0g
NaCl.....	5.0g
K ₂ HPO ₄	2.75g
KH ₂ PO ₄	2.75g
Sodium lauryl sulfate.....	0.1g
4-Methylumbelliferyl-β-D-glucuronide (MUG)	0.05g

pH 6.8 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the detection of coliform bacteria in water and food specimens by a fluorogenic procedure.

MUG Lauryl Sulfate Broth, Modified

Composition per liter:

Casein enzymatic hydrolysate	20.0g
Lactose	5.0g
NaCl	5.0g
K ₂ HPO ₄	2.75g
KH ₂ PO ₄	2.75g
Sodium lauryl sulfate	0.1g
4-Methylumbelliferyl-β-D-glucuronide (MUG)	0.05g
pH 6.8 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes containing an inverted Durham tube in 10.0mL volumes. Autoclave for 12 min at 15 psi pressure–121°C. Cool broth quickly to 25°C. For testing water samples with 10.0mL volumes, prepare medium double strength.

Use: For the detection of *Escherichia coli* in water and food samples by a fluorogenic procedure.

MUG Lauryl Sulfate HiVeg Broth, Modified

Composition per liter:

Plant hydrolysate	20.0g
Lactose	5.0g
NaCl	5.0g
K ₂ HPO ₄	2.75g
KH ₂ PO ₄	2.75g
Sodium lauryl sulfate	0.1g
4-Methylumbelliferyl-β-D-glucuronide (MUG)	0.05g
pH 6.8 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes containing an inverted Durham tube in 10.0mL volumes. Autoclave for 12 min at 15 psi pressure–121°C. Cool broth quickly to 25°C. For testing water samples with 10.0mL volumes, prepare medium double strength.

Use: For the detection of *Escherichia coli* in water and food samples by a fluorogenic procedure.

MUG MacConkey HiVeg Agar

Composition per liter:

Plant peptone	20.0g
Agar	15.0g
Lactose	10.0g
NaCl	5.0g
Synthetic detergent No. I	1.5g
4-Methylumbelliferyl-β-D-glucuronide (MUG)	0.1g
Neutral Red	0.03g
Crystal Violet	1.0mg
pH 7.4 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation, cultivation, and differentiation of coliforms and enteric pathogens based on the ability to ferment lactose by a fluorogenic procedure.

MUG Nutrient Agar

Composition per liter:

Agar	15.0g
Peptic digest of animal tissue	5.0g
NaCl	5.0g
Beef extract	1.5g
Yeast extract	1.5g
4-Methylumbelliferyl-β-D-glucuronide (MUG)	0.1g
pH 7.4 ± 0.2 at 25°C	

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the detection of *Escherichia coli* in water and food samples by a fluorogenic procedure.

MUG Plate Count Agar

Composition per liter:

Agar	15.0g
Casein enzymic hydrolysate	5.0g
Yeast extract	2.5g
Glucose	1.0g
4-Methylumbelliferyl-β-D-glucuronide (MUG)	0.1g
pH 7.4 ± 0.2 at 25°C	

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the enumeration of bacteria in a variety of samples by a fluorogenic procedure.

MUG Sorbitol Agar

Composition per liter:

Peptic digest of animal tissue	17.0g
Agar	13.5g
D-Sorbitol	10.0g
NaCl	5.0g
Proteose peptone	3.0g
Bile salts mixture	1.5g
4-Methylumbelliferyl-β-D-glucuronide (MUG)	0.1g
Neutral Red	0.03g
Crystal Violet	0.001g
pH 7.1 ± 0.2 at 25°C	

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring

to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and identification of enteropathogenic *Escherichia coli* associated with infant diarrhea by fluorogenic method.

MUG Tryptone Soy Agar

Composition per liter:

Agar	15.0g
Casein enzymic hydrolysate	15.0g
Papaic digest of soybean meal	5.0g
NaCl	5.0g
4-Methylumbelliferyl- β -D-glucuronide (MUG)	0.1g
pH 7.3 \pm 0.2 at 25°C	

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of fastidious and non-fastidious microorganisms by fluorogenic method.

MUG Violet Red Agar

Composition per liter:

Agar	15.0g
Lactose	10.0g
Peptic digest of animal tissue.....	7.0g
NaCl	5.0g
Yeast extract.....	3.0g
Synthetic detergent No. I	1.5g
4-Methylumbelliferyl- β -D-glucuronide (MUG)	0.1g
Neutral Red	0.03g
Crystal Violet	2.0mg
pH 7.4 \pm 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Do not autoclave. Pour immediately into sterile Petri dishes or leave in tubes.

Use: For the differentiation of *Escherichia coli* from dairy products and other foods by a fluorogenic procedure based on their ability to produce β -glucuronidase.

MUG Violet Red HiVeg Agar

Composition per liter:

Agar	15.0g
Lactose	10.0g
Plant peptone.....	7.0g
NaCl	5.0g
Yeast extract.....	3.0g
Synthetic detergent No. I	1.5g
4-Methylumbelliferyl- β -D-glucuronide (MUG)	0.1g
Neutral Red	0.03g
Crystal Violet	2.0mg
pH 7.4 \pm 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Do not autoclave. Pour immediately into sterile Petri dishes or leave in tubes.

Use: For the differentiation of *Escherichia coli* from dairy products and other foods by a fluorogenic procedure based on their ability to produce β -glucuronidase.

MV Medium

Composition per 1001.0mL:

Na ₂ SO ₄	2.0g
MgSO ₄ ·7H ₂ O	1.0g
Na ₂ S ₂ O ₃ ·5H ₂ O	1.0g
NH ₄ Cl	1.0g
Yeast extract.....	1.0g
KH ₂ PO ₄	0.5g
CaCl ₂ ·2H ₂ O	0.1g
Resazurin	0.5mg
Wolfe's vitamin solution	10.0mL
Sodium malate solution	10.0mL
Sodium pyruvate solution.....	10.0mL
NaHCO ₃ solution	10.0mL
Na ₂ S·9H ₂ O solution.....	10.0mL
Trace elements solution SL-10	1.0mL
pH 7.0–7.2 at 25°C	

Sodium Malate Solution:

Composition per 100.0mL:

Sodium malate	1.0g
---------------------	------

Preparation of Sodium Malate Solution: Add sodium malate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Sodium Pyruvate Solution:

Composition per 100.0mL:

Sodium pyruvate.....	1.0g
----------------------	------

Preparation of Sodium Pyruvate Solution: Add sodium pyruvate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

NaHCO₃ Solution:

Composition per 10.0mL:

NaHCO ₃	2.0g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	0.75 μ g
--	--------------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Before use, neutralize to pH 7.0 with sterile HCl.

Wolfe's Vitamin Solution:

Composition per liter:

Pyridoxine-HCl.....	10.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Lipoic acid	5.0mg

Nicotinic acid	5.0mg
Riboflavin	5.0mg
Thiamine-HCl	5.0mg
Calcium DL-pantothenate	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Trace Elements Solution SL-10:

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare and dispense medium under 100% N₂. Add components, except Wolfe's vitamin solution, sodium malate solution, sodium pyruvate solution, NaHCO₃ solution, Na₂S·9H₂O solution, and trace elements solution SL-10, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Adjust pH to 7.0–7.2. Gently heat and bring to boiling. Cool while sparging with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 10.0mL of sterile Wolfe's vitamin solution, 10.0mL of sterile sodium malate solution, 10.0mL of sterile sodium pyruvate solution, 10.0mL of sterile NaHCO₃ solution, 10.0mL of sterile Na₂S·9H₂O solution, and 1.0mL of sterile trace elements solution SL-10. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or bottles.

Use: For the cultivation of *Desulfotomaculum orientis*.

MVL Medium

Composition per liter:

Agar	15.0g
Pancreatic digest of casein	10.0g
Yeast extract	5.0g
Beef extract	2.0g
Glucose	2.0g
Mineral solution 1	75.0mL
Mineral solution 2	75.0mL
Na ₂ CO ₃ (8.0% solution)	50.0mL
Hemin (0.07% solution)	10.0mL
L-Cysteine-HCl·H ₂ O (3.0% solution)	10.0mL
Resazurin (0.1% solution)	1.0mL

pH 7.0 ± 0.2 at 25°C

Mineral Solution 1:

Composition per 100.0 mL:

K ₂ HPO ₄	0.6g
---------------------------------	------

Preparation of Mineral Solution 1: Add K₂HPO₄ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Mineral Solution 2:

Composition per 100.0mL:

(NH ₄) ₂ SO ₄	1.2g
NaCl	1.2g
KH ₂ PO ₄	0.6g
MgSO ₄ ·7H ₂ O	0.12g
CaCl ₂ ·2H ₂ O	0.12g

Preparation of Mineral Solution 2: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Prepare and dispense medium under 100% CO₂. Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Anaerobically distribute into tubes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Tonsillophilus suis*.

MVTY Medium

Composition per liter:

Noble agar	7.0g
Yeast extract	2.0g
Pancreatic digest of casein	2.0g
L-Cysteine-HCl·H ₂ O	1.0g
Salts A	200.0mL
Salts B	200.0mL
NaHCO ₃ solution	100.0mL
Glucose (10% solution)	20.0mL
Resazurin (0.1% solution)	1.0mL
<i>n</i> -Butyric acid	0.4mL
Isobutyric acid	0.2mL
DL-2-Methylbutyric acid	0.2mL
<i>n</i> -Valeric acid	0.2mL
Isovaleric acid	0.2mL

pH 6.9 ± 0.2 at 25°C

Salts A:

Composition per liter:

CaCl ₂	0.45g
MgSO ₄	0.45g

Preparation of Salts A: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Salts B:

Composition per liter:

NaCl	4.5g
(NH ₄) ₂ SO ₄	4.5g
KH ₂ PO ₄	2.25g
K ₂ HPO ₄	2.25g

Preparation of Salts B: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

NaHCO₃ Solution:

Composition per 100.0mL:

NaHCO ₃	5.0g
--------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Separately autoclave the glucose solution, for 15 min at 15 psi pressure–121°C. Prepare and dispense the basal salts A and B under 100% CO₂. Add the agar, yeast extract, pan-

creatic digest of casein, L-cysteine·HCl·H₂O, salts A, salts B, and resazurin to distilled/deionized water and bring volume to 478.0mL. Mix thoroughly. Adjust pH to 7.0. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Add filter sterilized *n*-butyric acid, isobutyric acid, DL-2-methylbutyric acid, *n*-valeric acid, isovaleric acid, sterile NaHCO₃ solution, and sterile glucose solution. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes.

Use: For the cultivation and maintenance of *Treponema saccharophilum*.

MWY Medium (Wadowsky and Yee Medium, Modified)

Composition per liter:

Agar	13.0g
Yeast extract.....	10.0g
Glycine.....	3.0g
ACES buffer (2-[(2-amino-2-oxoethyl)-amino]-ethane sulfonic acid).....	2.0g
Charcoal, activated.....	2.0g
α -Ketoglutarate.....	0.2g
Fe ₄ (P ₂ O ₇) ₃ ·9H ₂ O.....	0.05g
Bromcresol Purple	0.01g
Bromcresol Blue	0.01g
Antibiotic inhibitor	10.0mL
L-Cysteine·HCl·H ₂ O solution.....	10.0mL

pH 6.9 ± 0.2 at 25°C

Antibiotic Inhibitor:

Composition per 10.0mL:

Anisomycin	0.16g
Cefamandole	4.0mg
Vancomycin	1.0mg
Polymyxin B	130,000U

Preparation of Antibiotic Inhibitor: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

L-Cysteine·HCl·H₂O Solution:

Composition per 10.0mL:

L-Cysteine·HCl·H ₂ O.....	0.08g
--------------------------------------	-------

Preparation of L-Cysteine·HCl·H₂O Solution: Add L-cysteine·HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except L-cysteine solution and antibiotic inhibitor, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Adjust medium to pH 6.9 with 1N KOH. Heat gently and bring to boiling for 1 min. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Add 10.0mL of the sterile L-cysteine·HCl·H₂O solution and 10.0mL of the sterile antibiotic solution. Mix thoroughly. Pour into sterile Petri dishes with constant agitation to keep charcoal in suspension.

Use: For the selective isolation and cultivation of *Legionella pneumophila* and other *Legionella* species.

MY Agar

Composition per liter:

Agar	15.0g
Sodium acetate	0.1g
Yeast extract.....	0.1g
Pancreatic digest of gelatin	0.06g

Beef extract.....	0.04g
Basal medium	1.0L
Sodium sulfide solution	3.0mL
pH 7.0–7.5 at 25°C	

Basal Medium:

Composition per liter:

CaSO ₄ ·2H ₂ O (saturated solution).....	20.0mL
NH ₄ Cl (4% solution)	5.0mL
Trace elements solution	5.0mL
K ₂ HPO ₄ (1% solution).....	1.0mL
MgSO ₄ ·7H ₂ O (1% solution).....	1.0mL

Preparation of Basal Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Trace Elements Solution:

Composition per liter:

Ferrous EDTA solution	20.0mL
ZnSO ₄ ·7H ₂ O (0.1% solution).....	10.0mL
MnSO ₄ ·4H ₂ O (0.02% solution).....	10.0mL
CuSO ₄ ·5H ₂ O (0.00005% solution).....	10.0mL
H ₃ BO ₃ (0.1% solution)	10.0mL
Co(NO ₃) ₂ or CoCl ₂ ·6H ₂ O (0.01% solution).....	10.0mL
Na ₂ MoO ₄ ·2H ₂ O (0.01% solution).....	10.0mL

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Ferrous EDTA Solution:

Composition per 100.0mL:

FeSO ₄ ·7H ₂ O.....	7.0g
EDTA	2.0g
HCl, concentrated	1.0mL

Preparation of Ferrous EDTA Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Sodium Sulfide Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	1.0g
--	------

Preparation of Sodium Sulfide Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Prepare freshly.

Preparation of Medium: Add sodium acetate, beef extract, pancreatic digest of gelatin, yeast extract, and agar to 1.0L of basal medium. Mix thoroughly. Adjust pH to 7.0–7.5. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 3.0mL of sterile sodium sulfide solution immediately prior to dispensing. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile screw-capped tubes.

Use: For the isolation and cultivation of *Beggiatoa* species and myxotrophic strains of *Thiothrix* species from water and environmental sources.

MY20 Agar

Composition per liter:

Glucose	200.0g
Agar	20.0g
Peptone	5.0g
Yeast extract.....	3.0g
Malt extract	3.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of a variety of osmophilic heterotrophic bacteria and fungi.

MY40 Agar

Composition per liter:

Sucrose.....	400.0g
Agar	20.0g
Malt extract.....	20.0g
Yeast extract.....	5.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of a variety of osmophilic heterotrophic bacteria and fungi.

MY 40G Agar

Composition per liter:

Glucose	400.0g
Agar	12.0g
Malt extract.....	12.0g
Yeast extract.....	3.0g

pH 5.5 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Steam for 30 min. Distribute into tubes or flasks. Do not autoclave. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of osmophilic microorganisms.

MY60 Agar

Composition per liter:

Sucrose.....	600.0g
Agar	20.0g
Malt extract.....	20.0g
Yeast extract.....	5.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of a variety of osmophilic heterotrophic bacteria and fungi.

**MY Medium
(DSMZ Medium 753)**

Composition per liter:

Maltose.....	20.0g
Yeast extract.....	10.0g
NaCl.....	5.0g
KH ₂ PO ₄	2.0g

pH 6.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.0. Dis-

tribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Zymobacter palmae*.

MY Medium

Composition per liter:

Maltose.....	20.0g
Yeast extract.....	10.0g
NaCl.....	5.0g
KH ₂ PO ₄	2.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Zymobacter palmae*.

**MY10-12 Medium
(DSMZ Medium 982)**

Composition per liter:

Glucose	120.0g
NaCl.....	100.0g
Malt extract.....	20.0g
Agar	20.0g
Yeast extract.....	5.0g

pH 6.7 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Sterilize by steaming for 30 min. Overheating will cause softening. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of osmophilic yeasts and fungi.

**MY10-12 Medium
(DSMZ Medium 982)**

Composition per liter:

Glucose	120.0g
NaCl.....	100.0g
Agar	20.0g
Malt extract.....	20.0g
Yeast extract.....	5.0g

pH 6.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Steam for 30 min at 0 psi pressure–10°C. Overheating will cause softening. Final aw is 0.88.

Use: For the cultivation of *Aspergillus vitricolae*.

MYA2

See: [Malt 2% Yeast Extract Agar](#)

MYA4

See: [Malt 4% Yeast Extract Agar](#)

MYA4 with 40% Sucrose

Composition per liter:

Sucrose.....	400.0g
Agar	20.0g
Yeast extract.....	1.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to

boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Ascosphaera apis* and *Moniliella pollinis*.

MYA8

See: [Malt 8% Yeast Extract Agar](#)

MYCA Medium

Composition per liter:

Yeast extract	3.0g
Casamino acids	2.0g
Sodium DL-malate	1.0g
(NH ₄) ₂ SO ₄	0.5g

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Rhodoferrax fermentans*.

Mycin Assay Agar

Composition per liter:

Glucose	15.0g
Peptone	5.0g
Beef extract	3.0g

pH 7.9 ± 0.1 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the microbiological assay of antibiotics in pharmaceutical products, body fluids, feeds, and other sample materials.

Mycobacteria 7H11 Agar with Middlebrook ADC Enrichment

See: [Middlebrook 7H11 Agar with Middlebrook ADC Enrichment](#)

Mycobacteria 7H11 Agar with Middlebrook OADC Enrichment

See: [Middlebrook 7H11 Agar with Middlebrook ADC Enrichment](#)

Mycobacteria 7H11 Agar with Middlebrook OADC Enrichment and Triton™ WR 1339

See: [Middlebrook 7H11 Agar with Middlebrook OADC Enrichment and Triton™ WR 1339](#)

Mycobacterium Agar

Composition per liter:

Agar	12.0g
Na ₂ HPO ₄ ·12H ₂ O	2.5g
Tryptic digest of casein	2.0g
Proteose peptone No.3	2.0g
Yeast extract	2.0g
Sodium citrate	1.5g
KH ₂ PO ₄	1.0g

MgSO ₄ ·7H ₂ O	0.6g
Glycerol	50.0mL

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Actinomyces israelii*, *Mycobacterium* species, and *Nocardia farcinica*.

Mycobacterium intracellulare Agar

Composition per liter:

Glycerol	20.0g
Urea	20.0g
Agar	15.0g
Peptone	5.0g
Meat extract	3.0g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Mycobacterium phlei*.

Mycobacterium Medium

Composition per liter:

Noble agar	15.0g
(NH ₄) ₂ SO ₄	1.0g
Na ₂ HPO ₄	0.5g
KH ₂ PO ₄	0.5g
MgSO ₄	0.2g
FeSO ₄ ·7H ₂ O	5.0mg
MnSO ₄	2.0mg
Liquid paraffin	5.0mL

Preparation of Medium: Add components, except agar, to distilled/deionized water and bring volume to 1.0L. Homogenize in a blender. Add agar. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Mycobacterium paraffinicum*.

Mycobacterium smegmatis Medium

Composition per liter:

Agar	15.0g
Peptone	10.0g
Beef extract	4.0g
NaCl	5.0g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Mycobacterium smegmatis*.

Mycobacterium Yeast Extract Medium**Composition per liter:**

Agar	15.0g
Pancreatic digest of casein	5.0g
Yeast extract	2.5g
Glucose	1.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Mycobacterium* species and *Rhodococcus* species.

Mycobactin Medium**Serum Agar Medium:****Composition per liter:**

Noble agar	15.0g
Casamino acids	2.5g
Na ₂ HPO ₄ , anhydrous	2.5g
Sodium citrate	1.5g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.6g
Asparagine	0.3g
Crude mycobactin	0.16g
Chloramphenicol	0.05g
Primaricine (myprozine)	0.05g
Penicillin	100,000U
Bovine serum, 56°C-inactivated	200.0mL
Tween™ 80 (1% solution)	50.0mL
Glycerol	25.0mL

pH 7.2 ± 0.2 at 25°C

Preparation of Crude Mycobactin: Grow *Mycobacterium phlei* in 600.0mL of mycobactin production broth for 2 weeks at 37°C. Autoclave the culture for 15 min at 15 psi pressure–121°C. Filter the cells and wash with distilled/deionized water. Dry cells under CaCl₂. Treat 100.0g of dried culture with three successive acetone extractions—500.0mL of acetone for 30 min in a 1.0L flask fitted with a reflux condenser. Evaporate the acetone to dryness. Extract the residue in a Soxhlet apparatus with petroleum ether for 18–20 hr at 40°–60°C. A hard red residue will remain. Dissolve the residue in warm absolute ethanol. Centrifuge for 30 min at 2250 rpm to remove debris. Evaporate the supernatant to dryness. Grind the residue to a powder of crude mycobactin.

Source: Purified mycobactin is available from Allied Labs, Inc., 2520 Hunt St., Ames, IA 50010.

Mycobactin Production Broth:**Composition per 600.0mL:**

Solution B	500.0mL
Solution A	100.0mL

Preparation of Mycobactin Production Broth: Aseptically mix cooled sterile solution A and solution B.

Solution A:**Composition per 100.0mL:**

L-Asparagine	5.0g
Na ₂ HPO ₄	2.0g
KH ₂ PO ₄	1.0g
Glycerol	30.0mL

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Solution B:**Composition per 500.0mL:**

Glucose	10.0g
MgSO ₄ ·7H ₂ O	0.2g

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Preparation of Medium: Add components, except penicillin, chloramphenicol, primaricine, and bovine serum, to distilled/deionized water and bring volume to 800.0mL. Mix thoroughly. Gently heat with a minimum of heat. Autoclave for 15 min at 10 psi pressure–116°C. Cool to 50°C. Aseptically add penicillin, chloramphenicol, primaricine, and sterile bovine serum. Mix thoroughly. Adjust pH to 7.2. Distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Mycobacterium avium* and *Mycobacterium paratuberculosis*.

Mycobactosel™ Agar**Composition per liter:**

Agar	13.5g
Bovine albumin fraction V	5.0g
Glucose	2.0g
Na ₂ HPO ₄	1.5g
KH ₂ PO ₄	1.5g
Pancreatic digest of casein	1.0g
NaCl	0.85g
(NH ₄) ₂ SO ₄	0.5g
Monosodium glutamate	0.5g
Sodium citrate	0.4g
MgSO ₄ ·7H ₂ O	0.05g
Ferric ammonium citrate	0.04g
Pyridoxine	1.0mg
ZnSO ₄ ·7H ₂ O	1.0mg
CuSO ₄ ·5H ₂ O	1.0mg
Biotin	0.5mg
CaCl ₂ ·H ₂ O	0.5mg
Malachite Green	0.25mg
Antibiotic solution	10.0mL
Catalase solution	10.0mL
Glycerol	5.0mL
Oleic acid	0.06mL

pH 6.6 ± 0.2 at 25°C

Source: This medium is available as a prepared medium from BD Diagnostic Systems.

Antibiotic Solution:**Composition per 10.0mL:**

Cycloheximide	0.36g
Nalidixic acid	0.02g
Lincomycin	2.0mg

Preparation of Antibiotic Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Catalase Solution:**Composition per 10.0mL:**

Catalase	3.0mg
----------------	-------

Preparation of Catalase Solution: Add catalase to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except antibiotic solution and catalase solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile antibiotic solution and sterile catalase solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation of mycobacteria from specimens containing mixed flora.

Mycobactosel™ L-J Medium

Composition per liter:

Potato flour	30.0g
L-Asparagine	3.6g
KH ₂ PO ₄ , anhydrous	2.5g
Sodium citrate	0.6g
MgSO ₄ ·7H ₂ O	0.24g
Homogenized whole egg	1.0L
Malachite Green solution	20.0mL
Glycerol	12.0mL
Antibiotic solution	10.0mL

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a prepared medium from BD Diagnostic Systems.

Homogenized Whole Egg:

Composition per liter:

Whole eggs	18–24
------------------	-------

Preparation of Whole Egg: Use fresh eggs, less than 1 week old. Scrub the shells with soap. Let stand in a soap solution for 30 min. Rinse in running water. Soak eggs in 70% ethanol for 15 min. Break the eggs into a sterile container. Homogenize by shaking. Filter through four layers of sterile cheesecloth into a sterile graduated cylinder. Measure out 1.0L.

Malachite Green Solution:

Composition per 20.0mL:

Malachite Green.....	0.4g
----------------------	------

Preparation of Malachite Green Solution: Add Malachite Green to sterile distilled/deionized water and bring volume to 20.0mL in a sterile container. Mix thoroughly.

Antibiotic Solution:

Composition per 10.0mL:

Cycloheximide	0.64g
Nalidixic acid.....	0.056g
Lincomycin	3.2mg

Preparation of Antibiotic Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: Add components—except whole egg, Malachite Green solution, and antibiotic solution—to distilled/deionized water and bring volume to 600.0mL. Mix thoroughly. Autoclave for 30 min at 15 psi pressure–121°C. Cool to room temperature. Add

the homogenized whole egg, Malachite Green solution, and antibiotic solution. Distribute into sterile tubes in 8.0mL volumes. Coagulate medium in a slanted position at 85°C (moist heat) for 50 min.

Use: For the isolation and cultivation of *Mycobacterium* species from clinical specimens.

Mycobiotic Agar

(Cycloheximide Chloramphenicol Agar)

Composition per liter:

Agar	15.0g
Enzymatic hydrolysate of soybean meal	10.0g
Glucose	10.0g
Cycloheximide.....	0.5g
Chloramphenicol.....	0.05g

pH 6.5 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool tubes quickly in a slanted position.

Use: For the selective isolation and cultivation of pathogenic fungi.

Mycological Agar

Composition per liter:

Agar	15.0g
Enzymatic hydrolysate of soybean meal	10.0g
Glucose	10.0g

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the selective isolation, cultivation, and maintenance of pathogenic fungi.

Mycological Agar with Low pH

Composition per liter:

Agar	15.0g
Enzymatic hydrolysate of soybean meal	10.0g
Glucose	10.0g

pH 4.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the selective isolation, cultivation, and maintenance of pathogenic fungi.

Mycological Broth**Composition per liter:**

Glucose	40.0g
Enzymatic hydrolysate of soybean meal	10.0g
pH 7.0 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of fungi.

Mycological Broth with Low pH**Composition per liter:**

Glucose	40.0g
Enzymatic hydrolysate of soybean meal	10.0g
pH 4.8 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 4.8. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of saprophytic species of yeasts and molds. It is also suitable for cultivation of aciduric bacteria.

Mycophil™ Agar**Composition per liter:**

Agar	16.0g
Papaic digest of soybean meal	10.0g
Glucose	10.0g
pH 7.0 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation, maintenance, and enumeration of fungi. For the demonstration of pigment production in fungal species. Also used for the cultivation and maintenance of *Bacillus* species.

Mycophil™ Agar with Low pH**Composition per liter:**

Agar	18.0g
Papaic digest of soybean meal	10.0g
Glucose	10.0g
pH 4.7 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Adjust pH to 4.7 by adding approximately

10.0mL of sterile 10% lactic acid. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and enumeration of yeasts and molds.

Mycophil™ Broth**Composition per liter:**

Glucose	40.0g
Pancreatic digest of casein	5.0g
Peptic digest of animal tissue	5.0g
pH 7.0 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–118°C. Do not overheat.

Use: For the isolation and cultivation of a wide variety of fungi.

Mycoplasma Agar**Composition per liter:**

Basal medium	700.0mL
Horse serum	200.0mL
Fresh yeast extract solution	100.0mL
pH 7.5–7.8 at 25°C	

Basal Medium:**Composition per 700.0mL:**

Sorbitol	50.0g
Beef heart, solids from infusion	16.2g
Noble agar	13.0g
Peptone	3.26g
NaCl	1.62g
Fructose	1.0g
Glucose	1.0g
Sucrose	1.0g
Pancreatic digest of casein	1.0g

Preparation of Basal Medium: Add components to distilled/deionized water and bring volume to 700.0mL. Mix thoroughly. Adjust pH to 7.5–7.8. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C.

Fresh Yeast Extract Solution:**Composition per 100.0mL:**

Baker's yeast, live, pressed, starch-free	25.0g
---	-------

Preparation of Fresh Yeast Extract Solution: Add the live Baker's yeast to 100.0mL of distilled/deionized water. Autoclave for 90 min at 15 psi pressure–121°C. Allow to stand. Remove supernatant solution. Adjust pH to 6.6–6.8.

Preparation of Medium: Filter sterilize horse serum and fresh yeast extract solution. Aseptically add to cooled, sterile basal medium. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Mycoplasma mycoides*, *Spiroplasma apis*, *Spiroplasma citri*, and *Spiroplasma melleiferum*.

Mycoplasma Agar**Composition per 1004.0mL:**

Noble agar	8.0g
Arginine	1.0g
Glucose	1.0g

L-Cysteine-HCl-H ₂ O.....	1.0g
<i>Mycoplasma</i> broth base	850.0mL
Horse serum, not inactivated	100.0mL
Fresh yeast extract (25% solution).....	50.0mL
Phenol Red (1.0% solution).....	2.0mL
DNA calf thymus solution.....	2.0mL
pH 7.8 ± 0.2 at 25°C	

Mycoplasma Broth Base:**Composition per 850.0mL:**

Pancreatic digest of casein.....	7.0g
NaCl.....	5.0g
Beef extract.....	3.0g
Yeast extract.....	3.0g
Beef heart, solids from infusion.....	2.0g

Preparation of *Mycoplasma* Broth Base: Add components to distilled/deionized water and bring volume to 850.0mL. Add the 8.0g of Noble agar. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C.

Fresh Yeast Extract Solution:**Composition per 100.0mL:**

Baker's yeast, live, pressed, starch-free.....	25.0g
--	-------

Preparation of Fresh Yeast Extract Solution: Add the live Baker's yeast to 100.0mL of distilled/deionized water. Autoclave for 90 min at 15 psi pressure–121°C. Allow to stand. Remove supernatant solution. Adjust pH to 6.6–6.8.

DNA Calf Thymus Solution:**Composition per 10.0mL:**

DNA calf thymus.....	1.0g
----------------------	------

Preparation of DNA Calf Thymus Solution: Add DNA calf thymus to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Combine components, except *Mycoplasma* broth base and DNA calf thymus solution, and mix thoroughly. Filter sterilize through a 0.2µm membrane. Add sterile solution to 850.0mL of cooled, sterile *Mycoplasma* broth base. Aseptically add 2.0mL of sterile DNA calf thymus solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Mycoplasma lipophilum* and *Mycoplasma* species.

***Mycoplasma* Agar
(ATCC Medium 555)**

Composition per 103.0mL:

Noble agar.....	0.7g
Hartley's digest broth.....	30.0mL
Pig serum.....	20.0mL
Enzymatic hydrolysate of lactalbumin.....	10.0mL
Hanks' balanced salt solution, 10X.....	4.0mL
Fresh yeast extract solution.....	2.0mL
Phenol Red (0.25% solution).....	1.0mL
pH 7.4 ± 0.2 at 25°C	

Hartley's Digest Broth:**Composition per 10.0L:**

Ox heart.....	3,000.0g
Pancreatin.....	50.0g
Na ₂ CO ₃ , anhydrous (0.8% solution).....	5.0L
HCl, concentrated.....	80.0mL
pH 7.5 ± 0.2 at 25°C	

Preparation of Hartley's Digest Broth: Finely mince the ox heart. Add the meat to 5.0L of distilled/deionized water. Gently heat and bring to 80°C. Add the 5.0L of Na₂CO₃ solution. Cool to 45°C. Add pancreatin and maintain at 45°C for 4 hr while stirring. Add the HCl and steam at 100°C for 30 min. Cool to room temperature. Adjust pH to 8.0 with 1N NaOH. Gently heat and bring to boiling. Continue boiling for 25 min. Filter while hot. Cool to room temperature. Adjust pH to 7.5. Autoclave for 15 min at 15 psi pressure–121°C.

Pig Serum:**Composition per 100.0mL:**

Pig serum.....	100.0mL
----------------	---------

Preparation of Pig Serum: Adjust pH of pig serum to 4.4 with sterile 1N HCl. Do not let pH go below 4.2. Let serum stand at 4°C for 18–20 hr. Adjust pH to 7.0 with sterile 1N NaOH. Centrifuge at 9000 rpm for 20 min. Discard pellet. Filter supernatant solution through a 0.2µm membrane. Store at –70°C.

Fresh Yeast Extract Solution:**Composition per 100.0mL:**

Baker's yeast, live, pressed, starch-free.....	25.0g
--	-------

Preparation of Fresh Yeast Extract Solution: Add the live Baker's yeast to 100.0mL of distilled/deionized water. Autoclave for 90 min at 15 psi pressure–121°C. Allow to stand. Remove supernatant solution. Adjust pH to 6.6–6.8.

Enzymatic Hydrolysate of Lactalbumin:**Composition per 100.0mL:**

Enzymatic hydrolysate of lactalbumin.....	5.0g
---	------

Preparation of Enzymatic Hydrolysate of Lactalbumin: Add enzymatic hydrolysate of lactalbumin to 100.0mL of phosphate buffered saline, 1X, pH 7.0.

Phosphate Buffered Saline Solution, 1X:**Composition per liter:**

NaCl.....	8.0g
Na ₂ HPO ₄ ·7H ₂ O.....	2.16g
KCl.....	0.2g
KH ₂ PO ₄	0.2g
MgCl ₂ ·6H ₂ O.....	0.1g
CaCl ₂	0.1g

Phosphate Buffered Saline Solution, 1X: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Hanks' Balanced Salt Solution, 10X:**Composition per liter:**

NaCl.....	80.0g
Glucose.....	10.0g
KCl.....	4.0g
CaCl ₂	1.4g
MgCl ₂ ·6H ₂ O.....	1.0g
MgSO ₄ ·7H ₂ O.....	1.0g
Na ₂ HPO ₄ ·7H ₂ O.....	0.9g
KH ₂ PO ₄	0.6g

Preparation of Hanks' Balanced Salt Solution, 10X: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Combine components, except agar, in the following order: Hanks' balanced salt solution, 10X, Phenol Red, Hartley's digest broth, pig serum, enzymatic hydrolysate of lactalbumin, and fresh yeast extract solution. Mix thoroughly. Adjust pH to 7.4 with 1N NaOH. Filter sterilize through a 0.2µm membrane. Add 0.7g of No-

ble agar to 36.0mL of distilled/deionized water. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 56°C. Warm basal medium to 56°C. Aseptically combine the two solutions. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Mycoplasma* species.

***Mycoplasma* Agar (ATCC Medium 1435)**

Composition per 930.0mL:

Agar, noninhibitory to mycoplasmas	10.0g
Glucose	1.0g
Nicotinamide adenine dinucleotide	0.1g
PPLO broth without Crystal Violet.....	680.0mL
Swine serum (56°C, 30 min).....	150.0mL
Yeast extract (25% w/v solution).....	100.0mL

pH 7.8 ± 0.2 at 25°C

PPLO Broth without Crystal Violet:

Composition per 680.0mL:

Beef heart, infusion from	11.3g
Peptone.....	2.28g
NaCl.....	1.13g

Source: PPLO broth without Crystal Violet is available as a premixed powder from BD Diagnostic Systems.

Preparation of PPLO Broth without Crystal Violet: Add components and agar to distilled/deionized water and bring volume to 680.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Preparation of Medium: Mix glucose, nicotinamide adenine dinucleotide, swine serum, and fresh yeast extract solution. Mix thoroughly. Heat to 56°C. Add to cooled, sterile PPLO broth without Crystal Violet. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Mycoplasma anseris* and *Mycoplasma lipofaciens*.

***Mycoplasma* Agar Base (PPLO Agar Base)**

Composition per 1300.0mL:

Agar	14.0g
Pancreatic digest of casein.....	7.0g
NaCl.....	5.0g
Beef extract.....	3.0g
Yeast extract.....	3.0g
Beef heart, solids from infusion.....	2.0g
Horse serum.....	260.0mL
Fresh yeast extract solution.....	65.0mL

pH 7.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Fresh Yeast Extract Solution:

Composition per 100.0mL:

Baker's yeast, live, pressed, starch-free.....	25.0g
--	-------

Preparation of Fresh Yeast Extract Solution: Add the live Baker's yeast to 100.0mL of distilled/deionized water. Autoclave for 90 min at 15 psi pressure–121°C. Allow to stand. Remove supernatant solution. Adjust pH to 6.6–6.8.

Preparation of Medium: Add components, except horse serum and fresh yeast extract, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. To each 75.0mL of cooled, sterile basal medium, add 20.0mL of sterile horse serum and 5.0mL of special yeast extract. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the preparation of media for the cultivation of *Mycoplasma*.

***Mycoplasma* Agar with Increased Selectivity**

Composition per 1300.0mL:

Agar	14.0g
Pancreatic digest of casein.....	7.0g
NaCl.....	5.0g
Beef extract.....	3.0g
Yeast extract.....	3.0g
Beef heart, solids from infusion.....	2.0g
Thallous acetate	0.7g
Penicillin.....	70,000U
Horse serum.....	260.0mL
Fresh yeast extract solution	65.0mL

pH 7.8 ± 0.2 at 25°C

Caution: Thallous acetate is a poison.

Fresh Yeast Extract Solution:

Composition per 100.0mL:

Baker's yeast, live, pressed, starch-free.....	25.0g
--	-------

Preparation of Fresh Yeast Extract Solution: Add the live Baker's yeast to 100.0mL of distilled/deionized water. Autoclave for 90 min at 15 psi pressure–121°C. Allow to stand. Remove supernatant solution. Adjust pH to 6.6–6.8.

Preparation of Medium: Add components—except horse serum, special yeast extract, thallous acetate, and penicillin—to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. To each 70.0mL of cooled, sterile basal medium, add 20.0mL of sterile horse serum, 10.0mL of special yeast extract, 50.0mg of thallous acetate, and 5000U of penicillin. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the preparation of media for the cultivation of *Mycoplasma* species.

***Mycoplasma* Agar with Supplement G**

Composition per liter:

Agar	10.0g
Bacteriological peptone	10.0g
Beef extract.....	10.0g
NaCl.....	5.0g
Special mineral supplement.....	0.5g
<i>Mycoplasma</i> supplement G.....	250.0mL

pH 7.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

***Mycoplasma* Supplement G:**

Composition per 20.0mL:

Thallous acetate	25.0mg
Horse serum.....	20.0mL

Yeast extract (25% solution).....	10.0mL
Penicillin.....	20,000U

Preparation of *Mycoplasma* Supplement G: Add components to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize.

Caution: Thallous acetate is a poison.

Preparation of Medium: Add components, except *Mycoplasma* supplement G, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into flasks in 80.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 20.0mL of sterile *Mycoplasma* supplement G to each 80.0mL of basal medium. Mix thoroughly.

Use: For the growth of *Mycoplasma* species.

Mycoplasma Agar with Supplement P

Composition per liter:

Agar.....	10.0g
Bacteriological peptone.....	10.0g
Beef extract.....	10.0g
NaCl.....	5.0g
Special mineral supplement.....	0.5g
<i>Mycoplasma</i> supplement P.....	250.0mL
pH 7.8 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Oxoid Unipath.

Mycoplasma Supplement P:

Composition per 20.0mL:

Glucose.....	0.3g
<i>Mycoplasma</i> broth base.....	0.145g
Thallous acetate.....	8.0mg
Phenol Red.....	1.2mg
Methylene Blue chloride.....	0.3mg
Penicillin.....	12,000U
Horse serum.....	6.0mL
Fresh yeast extract (25% solution).....	3.0mL

Preparation of *Mycoplasma* Supplement P: Add components to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize.

Caution: Thallous acetate is a poison.

Fresh Yeast Extract Solution:

Composition per 100.0mL:

Baker's yeast, live, pressed, starch-free.....	25.0g
--	-------

Preparation of Fresh Yeast Extract Solution: Add the live Baker's yeast to 100.0mL of distilled/deionized water. Autoclave for 90 min at 15 psi pressure–121°C. Allow to stand. Remove supernatant solution. Adjust pH to 6.6–6.8.

Preparation of Medium: Add components, except *Mycoplasma* supplement P, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into bottles in 1.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add 2.0mL of sterile *Mycoplasma* supplement P to each bottle.

Use: For the growth of *Mycoplasma* species.

Mycoplasma Broth

Composition per liter:

Beef heart, infusion from 50g.....	6.0g
NaCl.....	5.0g
<i>Mycoplasma</i> supplement solution.....	300.0mL
pH 7.8 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Mycoplasma Supplement Solution:

Composition per 300.0mL:

Horse serum, desiccated.....	16.0g
Yeast extract.....	0.1g

Preparation of *Mycoplasma* Supplement Solution: Add components to distilled/deionized water and bring volume to 300.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except *Mycoplasma* supplement solution, to distilled/deionized water and bring volume to 700.0mL. Mix thoroughly. Gently heat and bring to boiling. Boil for 1 min. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile *Mycoplasma* supplement solution. Mix thoroughly.

Use: For the cultivation of *Mycoplasma* species.

Mycoplasma Broth

Composition per liter:

Pancreatic digest of casein.....	7.0g
NaCl.....	5.0g
Beef extract.....	3.0g
Yeast extract.....	3.0g
Beef heart, infusion from, solids.....	2.0g
<i>Mycoplasma</i> supplement solution.....	300.0mL
pH 7.8 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Mycoplasma Supplement Solution:

Composition per 300.0mL:

Horse serum.....	200.0mL
Yeast extract (fresh autolysate).....	100.0mL
Thallium acetate.....	50.0 mg

Preparation of *Mycoplasma* Supplement Solution: Combine components. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except *Mycoplasma* supplement solution, to distilled/deionized water and bring volume to 700.0mL. Mix thoroughly. Gently heat and bring to boiling. Boil for 1 min. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile *Mycoplasma* supplement solution. Mix thoroughly.

Use: For the cultivation of *Mycoplasma* species.

Mycoplasma Broth

Composition per liter:

Basal medium.....	700.0mL
Horse serum.....	200.0mL
Fresh yeast extract solution.....	100.0mL
pH 7.5–7.8 at 25°C	

Basal Medium:**Composition** per 700.0mL:

Sorbitol.....	50.0g
Beef heart, solids from infusion.....	16.2g
Peptone.....	3.26g
NaCl.....	1.62g
Fructose.....	1.0g
Glucose.....	1.0g
Sucrose.....	1.0g
Pancreatic digest of casein.....	1.0g

Preparation of Basal Medium: Add components to distilled/deionized water and bring volume to 700.0mL. Mix thoroughly. Adjust pH to 7.5–7.8. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C.

Fresh Yeast Extract Solution:**Composition** per 100.0mL:

Baker's yeast, live, pressed, starch-free.....	25.0g
--	-------

Preparation of Fresh Yeast Extract Solution: Add the live Baker's yeast to 100.0mL of distilled/deionized water. Autoclave for 90 min at 15 psi pressure–121°C. Allow to stand. Remove supernatant solution. Adjust pH to 6.6–6.8.

Preparation of Medium: Filter sterilize horse serum and fresh yeast extract solution. Aseptically add to cooled, sterile basal medium. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Mycoplasma mycoides*, *Spiroplasma apis*, *Spiroplasma citri*, and *Spiroplasma melliferum*.

Mycoplasma Broth**Composition** per 950.0mL:

Glucose.....	1.0g
Nicotinamide adenine dinucleotide.....	0.1g
PPLO broth without Crystal Violet.....	680.0mL
Swine serum (56°C, 30 min).....	150.0mL
Fresh yeast extract solution.....	100.0mL
Phenol Red (0.1% w/v solution).....	20.0mL

pH 7.8 ± 0.2 at 25°C

PPLO Broth without Crystal Violet:**Composition** per 680.0mL:

Beef heart, solids from infusion.....	11.3g
Peptone.....	2.28g
NaCl.....	1.13g

Source: PPLO broth without Crystal Violet is available as a premixed powder from BD Diagnostic Systems.

Preparation of PPLO Broth without Crystal Violet: Add components to distilled/deionized water and bring volume to 680.0mL. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 56°C.

Fresh Yeast Extract Solution:**Composition** per 100.0mL:

Baker's yeast, live, pressed, starch-free.....	25.0g
--	-------

Preparation of Fresh Yeast Extract Solution: Add the live Baker's yeast to 100.0mL of distilled/deionized water. Autoclave for 90 min at 15 psi pressure–121°C. Allow to stand. Remove supernatant solution. Adjust pH to 6.6–6.8.

Preparation of Medium: Mix glucose, nicotinamide adenine dinucleotide, swine serum, fresh yeast extract solution, and Phenol Red. Mix thoroughly. Heat to 56°C. Add to cooled, sterile PPLO broth with-

out Crystal Violet. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Mycoplasma anseris* and *Mycoplasma lipofaciens*.

**Mycoplasma Broth
(ATCC Medium 555)****Composition** per 103.0mL:

Hartley's digest broth.....	30.0mL
Pig serum.....	20.0mL
Enzymatic hydrolysate of lactalbumin.....	10.0mL
Hanks' balanced salt solution, 10X.....	4.0mL
Fresh yeast extract solution.....	2.0mL
Phenol Red (0.25% solution).....	1.0mL

pH 7.4 ± 0.2 at 25°C

Hartley's Digest Broth:**Composition** per 10.0L:

Ox heart.....	3,000.0g
Pancreatin.....	50.0g
Na ₂ CO ₃ , anhydrous (0.8% solution).....	5.0L
HCl, concentrated.....	80.0mL

pH 7.5 ± 0.2 at 25°C

Preparation of Hartley's Digest Broth: Finely mince the ox heart. Add the meat to 5.0L of distilled/deionized water. Gently heat and bring to 80°C. Add the 5.0L of Na₂CO₃ solution. Cool to 45°C. Add pancreatin and maintain at 45°C for 4 hr while stirring. Add the HCl and steam at 100°C for 30 min. Cool to room temperature. Adjust pH to 8.0 with 1N NaOH. Gently heat and bring to boiling. Continue boiling for 25 min. Filter while hot. Cool to room temperature. Adjust pH to 7.5. Autoclave for 15 min at 15 psi pressure–121°C.

Pig Serum:**Composition** per 100.0mL:

Pig serum.....	100.0mL
----------------	---------

Preparation of Pig Serum: Adjust pH of pig serum to 4.4 with sterile 1N HCl. Do not let pH go below 4.2. Let serum stand at 4°C for 18–20 hr. Adjust pH to 7.0 with sterile 1N NaOH. Centrifuge at 9000 rpm for 20 min. Discard pellet. Filter supernatant solution through a 0.2µm membrane. Store at –70°C.

Fresh Yeast Extract Solution:**Composition** per 100.0mL:

Baker's yeast, live, pressed, starch-free.....	25.0g
--	-------

Preparation of Fresh Yeast Extract Solution: Add the live Baker's yeast to 100.0mL of distilled/deionized water. Autoclave for 90 min at 15 psi pressure–121°C. Allow to stand. Remove supernatant solution. Adjust pH to 6.6–6.8.

Enzymatic Hydrolysate of Lactalbumin:**Composition** per 100.0mL:

Enzymatic hydrolysate of lactalbumin.....	5.0g
---	------

Preparation of Enzymatic Hydrolysate of Lactalbumin: Add enzymatic hydrolysate of lactalbumin to 100.0mL of phosphate buffered saline, 1X, pH 7.0.

Phosphate Buffered Saline Solution, 1X:**Composition** per liter:

NaCl.....	8.0g
Na ₂ HPO ₄ ·7H ₂ O.....	2.16g
KCl.....	0.2g
KH ₂ PO ₄	0.2g

MgCl ₂ ·6H ₂ O.....	0.1g
CaCl ₂	0.1g

Hanks' Balanced Salt Solution, 10X:**Composition per liter:**

NaCl.....	80.0g
Glucose.....	10.0g
KCl.....	4.0g
CaCl ₂	1.4g
MgCl ₂ ·6H ₂ O.....	1.0g
MgSO ₄ ·7H ₂ O.....	1.0g
Na ₂ HPO ₄ ·7H ₂ O.....	0.9g
KH ₂ PO ₄	0.6g

Preparation of Hanks' Balanced Salt Solution, 10X: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Combine components in the following order: Hanks' balanced salt solution, 10X, Phenol Red, Hartley's digest broth, pig serum, enzymatic hydrolysate of lactalbumin, and fresh yeast extract solution. Mix thoroughly. Add 36.0mL of distilled/deionized water. Adjust pH to 7.4 with 1N NaOH. Filter sterilize through a 0.2µm membrane. Store at 4°C for up to 3 weeks.

Use: For the cultivation of *Mycoplasma* species.

Mycoplasma* Broth Base*(PPLO Broth Base without Crystal Violet)****Composition per liter:**

Pancreatic digest of casein.....	7.0g
NaCl.....	5.0g
Beef extract.....	3.0g
Yeast extract.....	3.0g
Beef heart, solids from infusion.....	2.0g

pH 7.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Gently heat and bring to boiling. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: Used as a basal medium that should be enriched for the isolation and cultivation of *Mycoplasma* species.

Mycoplasma* Broth Base, Frey with Horse Serum*Composition per 1100.0mL:**

Pancreatic digest of casein.....	7.5g
Papaic digest of soybean meal.....	2.5g
KCl.....	0.4g
MgSO ₄	0.2g
Na ₂ PO ₄	1.6g
KH ₂ PO ₄	0.1g
Horse serum.....	100.0mL

pH 7.7 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components, except horse serum, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pres-

sure–121°C. Cool to 50°C. Add sterile, heat-inactivated horse serum. Mix thoroughly. Aseptically distribute into sterile tubes.

Use: For the cultivation of avian mycoplasmas.

Mycoplasma* Broth Base, Frey with Horse Serum*Composition per 1100.0mL:**

Pancreatic digest.....	7.5g
Yeast extract.....	5.0g
NaCl.....	5.0g
Papaic digest of soybean meal.....	2.5g
Na ₂ HPO ₄	1.6g
KCl.....	0.4g
MgSO ₄ ·7H ₂ O.....	0.2g
KH ₂ PO ₄	0.1g
Horse serum.....	100.0mL

pH 7.7 ± 0.2 at 25°C

Preparation of Medium: Add components, except horse serum, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Add sterile, heat-inactivated horse serum. Mix thoroughly. Aseptically distribute into sterile tubes.

Use: For the cultivation of avian mycoplasmas.

Mycoplasma* Broth, Supplemented*Composition per liter:**

Pancreatic digest of casein.....	7.0g
NaCl.....	5.0g
Beef extract.....	3.0g
Yeast extract.....	3.0g
Beef heart, solids from infusion.....	2.0g
Horse serum.....	260.0mL
Fresh yeast extract solution.....	65.0mL

pH 7.8 ± 0.2 at 25°C

Fresh Yeast Extract Solution:**Composition per 100.0mL:**

Baker's yeast, live, pressed, starch-free.....	25.0g
--	-------

Preparation of Fresh Yeast Extract Solution: Add the live Baker's yeast to 100.0mL of distilled/deionized water. Autoclave for 90 min at 15 psi pressure–121°C. Allow to stand. Remove supernatant solution. Adjust pH to 6.6–6.8.

Preparation of Medium: Add components, except horse serum and fresh yeast extract solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. To each 75.0mL of cooled, sterile basal medium, add 20.0mL of sterile horse serum and 5.0mL of fresh yeast extract solution. Mix thoroughly. Aseptically distribute into sterile tubes.

Use: For the isolation and cultivation of *Mycoplasma* species.

Mycoplasma* Broth with Supplement G*Composition per liter:**

Bacteriological peptone.....	10.0g
Beef extract.....	10.0g
NaCl.....	5.0g
Special mineral supplement, Oxoid Unipath.....	0.5g
<i>Mycoplasma</i> supplement G.....	250.0mL

pH 7.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Mycoplasma Supplement G:**Composition per 20.0mL:**

Thallos acetate	25.0mg
Horse serum	20.0mL
Yeast extract (25% solution)	10.0mL
Penicillin	20,000U

Preparation of Mycoplasma Supplement G: Add components to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize.

Caution: Thallos acetate is a poison.

Preparation of Medium: Add components, except *Mycoplasma* supplement G, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into flasks in 80.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 20.0mL of sterile *Mycoplasma* supplement G to each 80.0mL of basal medium. Mix thoroughly.

Use: For the growth of *Mycoplasma* species.

Mycoplasma Broth with Supplement P**Composition per liter:**

Bacteriological peptone	10.0g
Beef extract	10.0g
NaCl	5.0g
Special mineral supplement, Oxoid Unipath	0.5g
<i>Mycoplasma</i> supplement P	250.0mL
pH 7.8 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Oxoid Unipath.

Mycoplasma Supplement P:**Composition per 20.0mL:**

Glucose	0.3g
<i>Mycoplasma</i> broth base	0.145g
Thallos acetate	8.0mg
Phenol Red	1.2mg
Methylene Blue chloride	0.3mg
Penicillin	12,000U
Horse serum	6.0mL
Yeast extract (25% solution)	3.0mL

Preparation of Mycoplasma Supplement P: Add components to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize.

Caution: Thallos acetate is a poison.

Preparation of Medium: Add components, except *Mycoplasma* supplement P, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into bottles in 1.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add 2.0mL of sterile *Mycoplasma* supplement P to each bottle.

Use: For the cultivation of *Mycoplasma* species.

Mycoplasma Broth with 10% Swine Serum**Composition per liter:**

Pancreatic digest of casein	5.6g
NaCl	4.0g
Yeast extract	2.6g
Beef extract	2.4g
Beef heart, solids from infusion	1.6g

Swine serum, heat inactivated	100.0mL
Fresh yeast extract solution	100.0mL
pH 7.8 ± 0.2 at 25°C	

Fresh Yeast Extract Solution:**Composition per 100.0mL:**

Baker's yeast, live, pressed, starch-free	25.0g
---	-------

Preparation of Fresh Yeast Extract Solution: Add the live Baker's yeast to 100.0mL of distilled/deionized water. Autoclave for 90 min at 15 psi pressure–121°C. Allow to stand. Remove supernatant solution. Adjust pH to 6.6–6.8.

Preparation of Medium: Add components, except swine serum and fresh yeast extract solution, to distilled/deionized water and bring volume to 800.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Add sterile swine serum and fresh yeast extract solution. Mix thoroughly. Aseptically distribute into sterile tubes.

Use: For the cultivation and maintenance of *Mycoplasma columbinum* and *Mycoplasma columborale*.

Mycoplasma HiVeg Agar Base with Horse Serum and Yeast Extract (PPLO HiVeg Agar Base)**Composition per liter:**

Agar	15.0g
Plant peptone	10.0g
Plant infusion	6.0g
NaCl	5.0g
Horse serum	260.0mL
Fresh yeast extract solution	65.0mL
pH 7.8 ± 0.2 at 25°C	

Source: This medium, without horse serum and yeast extract solution, is available as a premixed powder from HiMedia.

Fresh Yeast Extract Solution:**Composition per 100.0mL:**

Baker's yeast, live, pressed, starch-free	25.0g
---	-------

Preparation of Fresh Yeast Extract Solution: Add the live Baker's yeast to 100.0mL of distilled/deionized water. Autoclave for 90 min at 15 psi pressure–121°C. Allow to stand. Remove supernatant solution. Adjust pH to 6.6–6.8.

Preparation of Medium: Add components, except horse serum and fresh yeast extract solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. To each 75.0mL of cooled, sterile basal medium, add 20.0mL of sterile horse serum and 5.0mL of special yeast extract solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the preparation of media for the cultivation of *Mycoplasma*.

Mycoplasma HiVeg Broth Base with Crystal Violet and Tellurite (PPLO HiVeg Broth Base with CV)**Composition per liter:**

Plant peptone	10.0g
Plant infusion	6.0g
NaCl	5.0g
Crystal Violet	0.01g

Chapman tellurite solution.....	2.85mL
Ascitic fluid.....	250.0mL
pH 7.8 ± 0.2 at 25°C	

Source: This medium, without tellurite, is available as a premixed powder from HiMedia.

Chapman Tellurite Solution:

Composition per 100.0mL:

K ₂ TeO ₃	1.0g
---------------------------------------	------

Preparation of Chapman Tellurite Solution: Add K₂TeO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Caution: Potassium tellurite is toxic.

Preparation of Medium: Add components, except ascitic fluid and Chapman tellurite solution, to distilled/deionized water and bring volume to 747.15mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to less than 37°C. Aseptically add sterile ascitic fluid and 2.85mL of Chapman tellurite solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the isolation of *Mycoplasma* species from clinical specimens.

Mycoplasma HiVeg Broth Base without Crystal Violet and with Ascitic Fluid (PPLO HiVeg Broth Base without CV)

Composition per liter:

Plant peptone.....	10.0g
Plant infusion.....	6.0g
NaCl.....	5.0g
Ascitic fluid.....	250.0mL
pH 7.8 ± 0.2 at 25°C	

Source: This medium, without ascitic fluid, is available as a premixed powder from HiMedia.

Preparation of Medium: Add components, except ascitic fluid, to distilled/deionized water and bring volume to 750.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to less than 37°C. Aseptically add sterile ascitic fluid. If desired, 0.5g of thallium acetate or 100,000U of penicillin may be added for a more selective medium. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the enrichment of pleuro-pneumonia-like organisms (PPLOs) and *Mycoplasma* species from clinical specimens.

Mycoplasma Horse Serum Broth (ATCC Medium 1959)

Mycoplasma broth base.....	660.0mL
Horse serum.....	200.0mL
Fresh yeast extract solution.....	100.0mL
Phenol Red (0.1%).....	20.0mL
Glucose solution.....	10.0mL
NaOH (1N solution).....	6.25mL
Arginine solution.....	5.0mL

Mycoplasma Broth Base:

Composition per liter:

Pancreatic digest of casein.....	7.0g
NaCl.....	5.0g
Beef extract.....	3.0g
Yeast extract.....	3.0g
Beef heart, solids from infusion.....	2.0g

Preparation of Mycoplasma Broth Base: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Fresh Yeast Extract Solution:

Composition per 100.0mL:

Baker's yeast, live, pressed, starch-free.....	25.0g
--	-------

Preparation of Fresh Yeast Extract Solution: Add the live Baker's yeast to 100.0mL of distilled/deionized water. Autoclave for 90 min at 15 psi pressure–121°C. Allow to stand. Remove supernatant solution. Adjust pH to 6.6–6.8.

Glucose Solution:

Composition per 10.0mL:

Glucose.....	5.0g
--------------	------

Preparation of Glucose Solution: Add glucose to 10.0mL of distilled/deionized water. Mix thoroughly. Filter sterilize.

Arginine Solution:

Composition per 10.0mL:

L-Arginine.....	4.2g
-----------------	------

Preparation of Arginine Solution: Add arginine to 10.0mL of distilled/deionized water. Mix thoroughly. Filter sterilize.

Preparation of Medium: Combine 660.0mL *Mycoplasma* broth base, 20.0mL Phenol Red, and 6.25mL 1N NaOH. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 5.0mL sterile arginine solution, 100.0mL sterile fresh yeast extract solution, 10.0mL sterile glucose solution, and 200.0mL filter sterilized horse serum. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the preparation of media for the cultivation of *Mycoplasma* spp.

Mycoplasma Liquid Medium

Composition per 1004.0mL:

Arginine.....	1.0g
Glucose.....	1.0g
L-Cysteine·HCl·H ₂ O.....	1.0g
<i>Mycoplasma</i> broth base.....	850.0mL
Horse serum, not inactivated.....	100.0mL
Fresh yeast extract (25% solution).....	50.0mL
Phenol Red (1.0% solution).....	2.0mL
DNA calf thymus solution.....	2.0mL

pH 7.8 ± 0.2 at 25°C

Mycoplasma Broth Base:

Composition per 850.0mL:

Pancreatic digest of casein.....	7.0g
NaCl.....	5.0g
Beef extract.....	3.0g
Yeast extract.....	3.0g
Beef heart, solids from infusion.....	2.0g

Preparation of Mycoplasma Broth Base: Add components to distilled/deionized water and bring volume to 850.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C.

Fresh Yeast Extract Solution:

Composition per 100.0mL:

Baker's yeast, live, pressed, starch-free.....	25.0g
--	-------

Preparation of Fresh Yeast Extract Solution: Add the live Baker's yeast to 100.0mL of distilled/deionized water. Autoclave for 90

min at 15 psi pressure–121°C. Allow to stand. Remove supernatant solution. Adjust pH to 6.6–6.8.

DNA Calf Thymus Solution:

Composition per 10.0mL:

DNA calf thymus 1.0g

Preparation of DNA Calf Thymus Solution: Add DNA calf thymus to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Combine components, except *Mycoplasma* broth base and DNA calf thymus solution, and mix thoroughly. Filter sterilize through a 0.2µm membrane. Add sterile solution to 850.0mL of cooled, sterile *Mycoplasma* broth base. Aseptically add 2.0mL of sterile DNA calf thymus solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Mycoplasma lipophilum* and *Mycoplasma* species.

Mycoplasma Medium

Composition per liter:

Heart infusion broth 25.0g
Mucin, bacteriological grade 5.0g
Agar, purified (optional) 7.0g
Hemoglobin 2.0g
Turkey serum, sterile inactivated 100.0mL
pH 7.8 ± 0.2 at 25°C

Preparation of Medium: Add components, except turkey serum and agar, to 850.0mL distilled water. Adjust pH to 7.8. Heat mixture at 93–95°C for 30 min in a water bath. Restore to original volume. Add 0.5% diatomaceous earth. Mix thoroughly. Filter through Whatman GFA (glass fiber paper) in Buchner filter. Clarify using 0.45µm Millipore filter. Add 15% inactivated turkey serum. Sterilize using S3 (0.1µm) Seitz filter. Use positive pressure. For solid medium: Prepare 42.5mL of double-strength broth and 42.5mL of distilled water containing 0.7g of purified agar. Sterilize the solutions separately and combine aseptically at 56°C with 15.0mL of sterile inactivated turkey serum for a final volume of 150.0mL.

Use: For the cultivation and maintenance of *Mycoplasma hyosynoviae*.

Mycoplasma Medium (CIP Medium 89) (DSMZ Medium 1080)

Composition per liter:

Pancreatic digest of casein 7.0g
NaCl 5.0g
Beef extract 3.0g
Yeast extract 3.0g
Beef heart, infusion from (solids) 2.0g
Selective supplement solution 210.0mL
Yeast extract solution 100.0mL
Phenol Red solution 20.0mL

Yeast Extract Solution:

Composition per 100.0mL:

Yeast extract 25.0g

Preparation of Yeast Extract Solution: Add yeast extract to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Adjust pH to 7.0. Autoclave for 15 min at 15 psi pressure–121°C.

Phenol Red Solution:

Composition per 100.0mL:

Phenol Red 1.0g

Preparation of Phenol Red Solution: Add Phenol Red to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Adjust pH to 7.0. Autoclave for 15 min at 15 psi pressure–121°C.

Selective Supplement Solution:

Composition per 210.0mL:

Ampicillin 1.0g
Horse serum 200.0mL
Arginine solution 10.0mL

Arginine Solution:

Composition per 100.0mL:

L-Arginine 50.0g

Preparation of Arginine Solution: Add L-arginine to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Adjust pH to 7.0.

Preparation of Selective Supplement Solution: Add ampicillin to 10.0mL arginine solution. Add horse serum. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except yeast extract, Phenol Red, and selective supplement solutions, to distilled/deionized water and bring volume to 670.0mL. Mix thoroughly. Adjust pH to 7.2. Distribute into tubes or flasks. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add yeast extract, Phenol Red, and selective supplement solutions. Mix thoroughly. Aseptically distribute into tubes or flasks.

Use: For the cultivation of *Mycoplasma* spp.

Mycoplasma Medium, Revised

Composition per 1030.0mL:

Noble agar 10.0g
Distilled water 360.0mL
Heart infusion broth 300.0mL
Pig serum, heat inactivated 200.0mL
Enzymatic hydrolysate of lactalbumin 100.0mL
Hanks' balanced salt solution, 10X 40.0mL
Fresh yeast extract solution 20.0mL
Phenol Red (0.25% solution) 10.0mL

Heart Infusion Broth:

Composition per liter:

Beef heart, infusion from 500.0g
Tryptose 10.0g
NaCl 5.0g

Preparation of Heart Infusion Broth: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling.

Enzymatic Hydrolysate of Lactalbumin:

Composition per 100.0mL:

Enzymatic hydrolysate of lactalbumin 5.0g
Phosphate buffered saline, 1X, pH7.0 100.0mL

Preparation of Enzymatic Hydrolysate of Lactalbumin: Add enzymatic hydrolysate of lactalbumin to 100.0mL of phosphate buffered saline, 1X, pH 7.0.

Phosphate Buffered Saline Solution, 1X:**Composition per liter:**

NaCl	8.0g
Na ₂ HPO ₄ ·7H ₂ O	2.16
KCl	0.2g
KH ₂ PO ₄	0.2g
MgCl ₂ ·6H ₂ O	0.1g
CaCl ₂	0.1g

Preparation of Phosphate Buffered Saline Solution, 1X: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Hanks' Balanced Salt Solution, 10X:**Composition per liter:**

Na ₂ Cl	80.0g
Glucose	10.0g
KCl	4.0g
CaCl ₂	1.4g
MgCl ₂ ·6H ₂ O	1.0g
MgSO ₄ ·7H ₂ O	1.0g
Na ₂ HPO ₄ ·7H ₂ O	0.9g
KH ₂ PO ₄	0.6g

Preparation of Hanks' Balanced Salt Solution, 10X: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Fresh Yeast Extract Solution:**Composition per 100.0mL:**

Baker's yeast, live, pressed, starch-free	25.0g
---	-------

Preparation of Fresh Yeast Extract Solution: Add the live Baker's yeast to 100.0mL of distilled/deionized water. Autoclave for 90 min at 15 psi pressure–121°C. Allow to stand. Remove supernatant solution. Adjust pH to 6.6–6.8.

Preparation of Medium: Add agar and heart infusion broth to distilled/deionized water and bring volume to 660.0mL. Mix thoroughly. Adjust pH to 7.4. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add pig serum, enzymatic hydrolysate of lactalbumin, Hanks' balanced salt solution, 10X, fresh yeast extract solution, and Phenol Red solution. Mix thoroughly. Aseptically distribute into sterile tubes.

Use: For the cultivation and maintenance of *Mycoplasma dispar*, *Mycoplasma flocculare*, and *Mycoplasma hyopneumoniae*.

Mycoplasma pneumoniae* Isolation Medium*Composition per 1200.0mL:**

Beef heart for infusion	50.0g
Peptone	10.0g
NaCl	5.0g
Water	900.0mL
Yeast extract solution	100.0mL
α-Gamma horse serum, unheated	200.0mL
pH 7.6–7.8 at 25°C	

Yeast Extract Solution:**Composition per 10.0mL:**

Yeast, active, dry, Baker's	250.0g
-----------------------------------	--------

Preparation of Yeast Extract Solution: Add yeast to 1.0L of distilled/deionized water. Mix thoroughly. Gently heat and bring to boiling. Filter through Whatman #2 filter paper. Adjust the pH of the filtrate to 8.0 with NaOH. Distribute into tubes in 10.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Store at –20°C.

Preparation of Medium: Add components, except yeast extract solution and α-gamma horse serum, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile yeast extract solution and α-gamma horse serum. Mix thoroughly. Aseptically distribute into sterile tubes.

Use: For the isolation and cultivation of *Mycoplasma pneumoniae*.

Mycoplasmal Agar**Composition per liter:**

Papaic digest of soy meal	20.0g
Agarose	10.0g
NaCl	5.0g
Phenol Red (2% solution)	1.0mL
pH 7.3 ± 0.2 at 25°C	

Preparation of Medium: Add components, except agarose, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.3 with 1N NaOH. Add agarose. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of human mycoplasmas and ureaplasmas.

Mycorrhiza Medium**Composition per liter:**

Agar	15.0g
Glucose	4.0g
Ammonium tartrate	1.0g
Malt extract	1.0g
KH ₂ PO ₄	0.2g
MgSO ₄ ·7H ₂ O	0.1g
CaCl ₂ ·2H ₂ O	26.0mg
NaCl	20.0mg
Inositol	10.0mg
ZnSO ₄ ·7H ₂ O	0.88mg
MnSO ₄ ·4H ₂ O	0.81mg
FeCl ₃ ·6H ₂ O	0.8mg
Nicotinamide	100.0μg
p-Aminobenzoic acid	100.0μg
Pantothenic acid	100.0μg
Pyridoxine	100.0μg
Thiamine	100.0μg
Biotin	25.0μg
Riboflavin	25.0μg

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until boiling. Distribute into tubes or flasks. Autoclave for 10 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Thelephora terrestris*.

Mycosel™ Agar**(Cycloheximide Chloramphenicol Agar)****Composition per liter:**

Agar	15.5g
Papaic digest of soybean meal	10.0g
Glucose	10.0g

Cycloheximide	0.4g
Chloramphenicol.....	0.05g
pH 6.9 ± 0.2 at 25°C	

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 14 psi pressure–118°C. Avoid overheating. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation of pathogenic fungi from specimens with other fungi and bacteria.

MYCT Medium (DSMZ Medium 972)

Composition per liter:

KH ₂ PO ₄	13.6g
Cyclomaltoheptaose (β-cyclodextrin).....	7.0g
(NH ₄) ₂ SO ₄	4.0g
Yeast extract.....	3.0g
Casein hydrolysate.....	3.0g
Tween™ 80.....	1.0g
MgCl ₂	0.2g
Sodium citrate.....	0.25g
FeSO ₄ ·7H ₂ O.....	25.0mg
MnSO ₄ ·4H ₂ O.....	25.0mg
pH 6.5 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Lactobacillus* sp.

Mykorrhiza Agar

Composition per liter:

Agar.....	15.0g
Malt extract.....	8.0g
Glucose.....	7.0g
Casein hydrolysate.....	1.0g
Yeast extract.....	1.0g
Asparagine.....	0.5g
KH ₂ PO ₄	0.5g
MgSO ₄ ·7H ₂ O.....	0.5g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Klebsiella pneumoniae*.

MYP Agar

See: [Mannitol Yolk Polymyxin Agar](#)

MYP Agar Base, HiVeg with Egg Yolk and Polymyxin B (Phenol Red Egg Yolk Polymyxin Agar Base, HiVeg)

Composition per liter:

Agar.....	15.0g
D-Mannitol.....	10.0g
Plant peptone.....	10.0g

NaCl.....	10.0g
Plant extract No. 1.....	1.0g
Phenol Red.....	0.025g
Egg yolk emulsion, 20%.....	10.0mL
Polymyxin B solution.....	1.0mL
pH 7.1 ± 0.2 at 25°C	

Source: This medium, without egg yolk and polymyxin B, is available as a premixed powder from HiMedia.

Egg Yolk Emulsion, 20%:

Composition per 100.0mL:

Chicken egg yolks.....	11
Whole chicken egg.....	1
NaCl (0.9% solution).....	80.0mL

Preparation of Egg Yolk Emulsion, 20%: Soak eggs with 1:100 dilution of saturated mercuric chloride solution for 1 min. Crack eggs and separate yolks from whites. Mix egg yolks with 1 chicken egg. Measure 20.0mL of egg yolk emulsion and add to 80.0mL of 0.9% NaCl solution. Mix thoroughly. Filter sterilize. Warm to 45°–50°C.

Polymyxin B Solution:

Composition per 1.0mL:

Polymyxin B.....	1.0mg
------------------	-------

Preparation of Polymyxin B Solution: Add polymyxin B to distilled/deionized water and bring volume to 1.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components—except egg yolk emulsion, 20%, and polymyxin B solution—to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL of sterile egg yolk emulsion, 20%, and 1.0mL of sterile polymyxin B solution. Mix thoroughly. Pour into sterile Petri dishes.

Mysorens Medium

Composition per liter:

Peptone.....	10.0g
Meat extract.....	10.0g
Yeast extract.....	5.0g
NaCl.....	3.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Arthrobacter mysorens*.

MYX Agar (DSMZ Medium 729)

Composition per liter:

Na ₂ -glutamate.....	5.0g
Yeast extract.....	1.0g
MgSO ₄ ·7H ₂ O.....	1.0g
Glucose solution.....	10.0mL
pH 7.2 ± 0.2 at 25°C	

Glucose Solution:

Composition per 10.0mL:

Glucose.....	2.0g
--------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except glucose solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Adjust pH to 7.2. Aseptically add 10.0mL glucose solution. Mix thoroughly. Aseptically distribute into sterile tubes or bottles.

Use: For the cultivation of *Taxobacter* spp.

Myxobacteria Medium

Composition per liter:

Agar	15.0g
Skim milk powder.....	5.0g
Yeast extract.....	0.5g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Do not adjust pH. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Archangium primigenium*, *Chondrocooccus macrosporus*, and *Myxococcus coralloides*.

Myxococcus flavescens Medium

Composition per liter:

Agar	15.0g
Soluble starch.....	5.0g
Casitone	2.5g
Galactose.....	1.0g
Raffinose.....	1.0g
Sucrose.....	1.0g
Yeast extract.....	1.0g
MgSO ₄ ·7H ₂ O	0.5g
K ₂ HPO ₄	0.25g

pH 6.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.0. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Myxococcus flavescens*.

Myxococcus Medium

Composition per liter:

Agar	12.0g
Pancreatic digest of casein.....	1.0g
Meat extract	1.0g
Glucose solution	50.0mL

pH 7.2 ± 0.2 at 25°C

Glucose Solution:

Composition per 50.0mL:

Glucose	1.0g
---------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Preparation of Medium: Add components, except glucose solution, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Adjust pH to 7.2. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile glucose solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes or bottles. Allow tubes or bottles to cool in a slanted position.

Use: For the cultivation of *Myxococcus* species.

Myxococcus xanthus Medium

Composition per liter:

Agar	20.0g
Pancreatic digest of casein.....	10.0g
MgSO ₄ ·7H ₂ O	0.5g
K ₂ HPO ₄	0.148g
KH ₂ PO ₄	0.017g

pH 7.6 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Myxococcus xanthus*.

N plus C Medium

Composition per liter:

Pancreatic digest of casein.....	10.0g
Glucose	10.0g
Citric acid·H ₂ O	4.04g
KH ₂ PO ₄	2.0g
Yeast extract.....	1.5g
CaCl ₂ ·2H ₂ O	0.6g
MgSO ₄ ·7H ₂ O	0.6g
FeCl ₂ ·4H ₂ O	0.06g
ZnSO ₄ ·7H ₂ O	0.034g
Hemin solution.....	1.0mL

pH 4.6 ± 0.2 at 25°C

Hemin Solution:

Composition per 100.0mL:

NaOH.....	1.0g
Hemin	250.0mg

Preparation of Hemin Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except hemin solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 4.6. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Prior to inoculation, add 0.1mL of hemin solution per 100.0mL of medium.

Use: For the cultivation and maintenance of *Physarum polycephalum*.

N DeVogel Medium (Vogel N Medium)

Composition per liter:

Sucrose.....	15.0g
KH ₂ PO ₄	5.0g
Trisodium citrate·2H ₂ O	3.0g
NH ₄ NO ₃	2.0g
MgSO ₄ ·7H ₂ O.....	0.2g
CaCl ₂ ·H ₂ O solution	20.0mL
Biotin solution	5.0mL
Trace elements solution	5.0mL

CaCl₂·H₂O Solution:

Composition per 20.0mL:

CaCl ₂ ·H ₂ O	0.1g
---	------

Preparation of CaCl₂·H₂O Solution: Add CaCl₂·H₂O to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly.

Biotin Solution:

Composition per 100.0mL:

Biotin 5.0mg

Preparation of Biotin Solution: Add biotin to 50% ethanol and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Store at 5°C.

Trace Elements Solution:

Composition per 100.0mL:

Citric acid·H₂O 5.0g
 ZnSO₄·7H₂O 5.0g
 Fe(NH₄)₂(SO₄)₂·6H₂O 1.0g
 CuSO₄·5H₂O 0.25g
 H₃BO₃, anhydrous 0.05g
 MnSO₄·H₂O 0.05g
 Na₂MoO₄·2H₂O 0.05g

Preparation of Trace Elements Solutions: Add components successively to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly after addition of each component. Filter sterilize. Add 2–3.0mL of chloroform as a preservative. Store at 25°C.

Preparation of Medium: Add components, except biotin solution and trace elements solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 5.0mL of sterile biotin solution and 5.0mL of sterile trace elements solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Neurospora crassa*.

**NAG Medium
(DSMZ Medium 366)**

Composition per liter:

Agar 15.0g
 Glucose 10.0g
 Peptone 5.0g
 Meat extract 3.0g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Do not overheat. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of *Xanthomonas fragariae*.

Nakayama Glucose Agar

Composition per 1001.0mL:

Yeast extract 15.0g
 Agar 10.0g
 Glucose 10.0g
 Peptone 10.0g
 Solution A 10.0mL
 Solution B 10.0mL
 Solution C 1.0mL

pH 6.8 ± 0.2 at 25°C

Solution A:

Composition per 100.0mL:

K₂HPO₄ 0.5g
 KH₂PO₄ 0.5g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B:

Composition per 100.0mL:

MgSO₄·7H₂O 3.0g
 MnSO₄·5H₂O 0.1g
 NaCl 0.1g
 CuSO₄·5H₂O 0.01g

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C:

Composition per 100.0mL:

Trisodium citrate 2.0g
 FeSO₄·7H₂O 0.1g

Preparation of Solution C: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except solution A, solution B, and solution C, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 10.0mL of sterile solution A, 10.0mL of sterile solution B, and 1.0mL of sterile solution C. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Bacillus laevolacticus*.

NAM Medium

Composition per liter:

Pancreatic digest of casein 15.0g
 Agar 15.0g
 Papaic digest of soybean meal 5.0g
 NaCl 5.0g
 Sheep blood, defibrinated 50.0mL
 Hemin solution 10.0mL
 N-Acetyl muramic acid (NAM) solution 1.0mL

pH 7.3 ± 0.2 at 25°C

Hemin Solution:

Composition per 100.0mL:

Hemin 0.050g
 NaOH (1N solution) 1.0mL

Preparation of Hemin Solution: Add hemin to NaOH solution. Mix thoroughly. Adjust volume to 100.0mL with distilled/deionized water. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

N-Acetyl Muramic Acid (NAM) Solution:

Composition per 10.0mL:

N-Acetyl muramic acid 100.0mg

Preparation of N-Acetyl Muramic Acid (NAM) Solution: Add N-acetyl muramic acid to distilled/deionized water and bring volume to 10.0mL. Filter sterilize.

Preparation of Medium: Add components, except sheep blood, hemin solution, and N-acetyl muramic acid (NAM) solution, to distilled/deionized water and bring volume to 49.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 50.0mL of sterile sheep blood, 10.0mL of sterile hemin solution, and 1.0mL of sterile N-acetyl muramic acid (NAM) solution.

Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes under a gas phase of 80% N₂ + 10% CO₂ + 10% H₂.

Use: For the cultivation of *Bacteroides forsythus*.

NAMn

See: *Nutrient Agar with Manganese*

NANAT Agar

(Nalidixic Acid Novobiocin Actidione Tellurite Agar)

Composition per liter:

Pancreatic digest of casein	17.0g
Agar	15.0g
NaCl	5.0g
Tween™ 80	5.0g
Papaic digest of soybean meal	3.0g
K ₂ HPO ₄	2.5g
Glucose	2.5g
Yeast extract	1.0g
Tellurite solution	10.0mL
Antibiotic solution	10.0mL

pH 7.2 ± 0.2 at 25°C

Tellurite Solution:

Composition per 100.0mL:

K ₂ TeO ₃	0.05g
---------------------------------	-------

Preparation of Tellurite Solution: Add K₂TeO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Antibiotic Solution:

Composition per 10.0mL:

Actidione (cycloheximide)	0.04g
Polymyxin B (optional)	0.03g
Novobiocin	0.025g
Nalidixic acid	0.02g

Preparation of Antibiotic Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Caution: Potassium tellurite is toxic.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: Add components, except tellurite solution and antibiotic solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile tellurite solution and antibiotic solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of *Rhodococcus (Corynebacterium) equi* from animal feces, especially from horses and swine. The addition of polymyxin B inhibits the growth of *Pseudomonas aeruginosa* which may interfere with the isolation of *Rhodococcus equi*.

Nannocystis Agar

Composition per liter:

Agar	15.0g
CaCl ₂ ·2H ₂ O	1.0g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring

to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes. After the agar has solidified, overlay the surface with 0.5mL of a suspension of dead (autoclaved) *Escherichia coli* cells.

Use: For the cultivation and maintenance of *Nannocystis* species.

Naphthalene Medium

Composition per liter:

NH ₄ NO ₃	2.5g
Na ₂ HPO ₄ ·2H ₂ O	1.0g
Naphthalene	0.64g
MgSO ₄ ·7H ₂ O	0.5g
Fe(SO ₄) ₃ ·5H ₂ O	0.01g
Co(NO ₃) ₂ ·6H ₂ O	5.0mg
CaCl ₂ ·2H ₂ O	1.0mg
KH ₂ PO ₄	0.5mg
MnSO ₄ ·2H ₂ O	0.1mg
(NH ₄) ₆ Mo ₇ O ₂₄ ·4H ₂ O	0.1mg

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Pseudomonas alcaligenes*.

Naphthalene Mineral Salts Medium

See: *Medium for Hydrocarbon-Degrading Bacteria*

Naphthalene Sulfonic Acid Medium

Composition per 1004.0mL:

Na ₂ HPO ₄ ·2H ₂ O	3.5g
KH ₂ PO ₄	1.0g
NH ₄ Cl	0.31g
MgCl ₂ ·6H ₂ O	0.1g
Ca(NO ₃) ₂ ·4H ₂ O	0.05g
Solution A	100.0mL
Solution B	3.0mL
Trace elements solution SL-4	1.0mL

pH 7.0 ± 0.2 at 25°C

Solution A:

Composition per liter:

Glucose	3.0g
Glycerol	3.0g
Sodium succinate	3.0g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Solution B:

Composition per liter:

Naphthalene sulfonic acid	2.3g
---------------------------	------

Preparation of Solution B: Add naphthalene sulfonic acid to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Trace Elements Solution SL-4:

Composition per liter:

EDTA	0.5g
FeSO ₄ ·7H ₂ O	0.2g
Trace elements solution SL-6	100.0mL

Preparation of Trace Elements Solution SL-4: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Trace Elements Solution SL-6:

Composition per liter:

MnCl ₂ ·4H ₂ O.....	0.5g
H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O.....	0.2g
ZnSO ₄ ·7H ₂ O.....	0.1g
Na ₂ MoO ₄ ·2H ₂ O.....	0.03g
NiCl ₂ ·6H ₂ O.....	0.02g
CuCl ₂ ·2H ₂ O.....	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components, except solution A, solution B, and trace elements solution SL-4, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 100.0mL of sterile solution A, 3.0mL of sterile solution B, and 1.0mL of sterile trace elements solution SL-4. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Pseudomonas putida*.

**Natranaerobius Medium
(DSMZ Medium 1095)**

Composition per liter:

NaCl.....	100.0g
Yeast extract.....	10.0g
Tryptone.....	10.0g

CuSO ₄ ·5H ₂ O.....	0.01g
Na ₂ SeO ₃ ·5H ₂ O.....	0.3mg

Preparation of Trace Elements Solution SL-10: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly. Adjust pH to 7.0.

Sucrose Solution:

Composition per 10.0mL:

Sucrose.....	5.0g
--------------	------

Preparation of Sucrose Solution: Add sucrose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Carbonate Solution:

Composition per 10.0mL:

Na ₂ CO ₃	68.0g
---------------------------------------	-------

Preparation of Carbonate Solution: Add Na₂CO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Bicarbonate Solution:

Composition per 10.0mL:

NaHCO ₃	38.0g
--------------------------	-------

Preparation of Bicarbonate Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Cysteine Solution:

Composition per 10.0mL:

L-Cysteine-HCl·2H ₂ O.....	0.07g
---------------------------------------	-------

Preparation of Cysteine Solution: Add L-Cysteine-HCl·2H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Preparation of Medium: Add components, except carbonate, bicarbonate, cysteine, sucrose, and vitamin solutions, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Sparge with 100% N₂ gas. Gently heat and bring to boiling. Boil for 1 min. Cool to room temperature while sparging with 100% N₂. Add cysteine, carbonate, and bicarbonate solutions. Adjust pH to 8.5. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add the vitamins and sucrose solutions. Aseptically and anoxically dispense into culture vessels.

Use: For the cultivation of *Natranaerobius* spp.

**Natroniella Medium
(DSMZ Medium 784)**

Composition per liter:

Na ₂ CO ₃	68.3g
NaCl.....	15.7g
NH ₄ Cl.....	1.0g
KCl.....	0.2g
KH ₂ PO ₄	0.2g
Yeast extract.....	0.2g
MgCl ₂ ·6H ₂ O.....	0.1g

Resazurin	0.5mg
NaHCO ₃ solution	100.0mL
Vitamin solution	10.0mL
Na ₂ S·9H ₂ O solution	10.0mL
Ethanol solution	10.0mL
Trace elements solution SL-11	1.0mL
pH 9.7–10.0 at 25°C	

Na₂S·9H₂O Solution:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O	1.0g
---	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

NaHCO₃ Solution:**Composition per 100.0mL:**

NaHCO ₃	38.3g
--------------------------	-------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

Ethanol Solution:**Composition per 10.0mL:**

Ethanol	5.0mL
---------------	-------

Preparation of Ethanol Solution: Add ethanol to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Vitamin Solution:**Composition per liter:**

Pyridoxine-HCl	10.0mg
Thiamine-HCl·2H ₂ O	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
D-Ca-pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Trace Elements Solution SL-4:**Composition per liter:**

EDTA	0.5g
FeSO ₄ ·7H ₂ O	0.2g
Trace elements solution SL-6	100.0mL

Trace Elements Solution SL-6:**Composition per liter:**

H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
MnCl ₂ ·4H ₂ O	0.03g
Na ₂ MoO ₄ ·H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 3.4.

Preparation of Trace Elements Solution SL-4: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Prepare and dispense medium under 100% N₂. Add components, except vitamin solution, NaHCO₃ solution, ethanol solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 870.0mL. Mix thoroughly. Gently heat and bring to boiling. Cool to room temperature while sparging with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically and anaerobically add 10.0mL sterile vitamin solution, 100.0mL of sterile NaHCO₃ solution, 10.0mL sterile ethanol solution, and 10.0mL of sterile Na₂S·9H₂O solution. Mix thoroughly. Adjust pH to 9.7–10.0. Aseptically and anaerobically distribute into sterile tubes or flasks.

Use: For the cultivation of *Natroniella acetigena* (*Acetohalobium* sp.).

***Natroniella* Medium (DSMZ Medium 784)**

Yeast extract solution.....	10.0mL
Vitamin solution.....	2.0mL
Trace elements solution.....	1.0mL

pH 8.9 ± 0.2 at 25°C

Histidine Solution:

Composition per 50.0mL:

Histidine.....	5.0g
----------------	------

Preparation of Histidine Solution: Add histidine to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Sparge

with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Yeast Extract Solution:

Composition per 10.0mL:

Yeast extract.....	0.2g
--------------------	------

Preparation of Yeast Extract Solution: Add yeast extract to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	0.2g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Trace Elements Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O.....	3.0g
Nitrilotriacetic acid.....	1.5g
NaCl.....	1.0g
MnSO ₄ ·2H ₂ O.....	0.5g
CoSO ₄ ·7H ₂ O.....	0.18g
ZnSO ₄ ·7H ₂ O.....	0.18g
CaCl ₂ ·2H ₂ O.....	0.1g
FeSO ₄ ·7H ₂ O.....	0.1g
NiCl ₂ ·6H ₂ O.....	0.025g
KAl(SO ₄) ₂ ·12H ₂ O.....	0.02g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·4H ₂ O.....	0.01g
CuSO ₄ ·5H ₂ O.....	0.01g
Na ₂ SeO ₃ ·5H ₂ O.....	0.3mg

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl.....	10.0mg
Thiamine-HCl·2H ₂ O.....	5.0mg
Riboflavin.....	5.0mg
Nicotinic acid.....	5.0mg
D-Ca-pantothenate.....	5.0mg
p-Aminobenzoic acid.....	5.0mg
Lipoic acid.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Preparation of Medium: Prepare and dispense medium under 100% N₂ gas atmosphere. Add components, except NaHCO₃, NH₄Cl, Na₂CO₃, histidine solution, Na₂S·9H₂O solution, yeast extract solution, and vitamin solution, to distilled/deionized water and bring volume to 928.0mL. Mix thoroughly. Gently heat and bring to boiling. Boil for 5 min. Cool to room temperature while sparging with 100% N₂. Add solid NaHCO₃, NH₄Cl, and Na₂CO₃. Mix thoroughly. Distribute into anaer-

obe tubes or bottles. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add per liter of medium 50.0mL histidine solution, 10.0mL yeast extract solution, 10.0mL Na₂S·9H₂O solution, and 2.0mL vitamin solution. The final pH should be 8.9.

Use: For the cultivation of *Natronincola histidinovorans*.

Natronobacteria Medium

Composition per liter:

NaCl	200.0g
Agar	20.0g
Yeast extract	5.0g
Casamino acids	5.0g
KH ₂ PO ₄	1.0g
KCl	1.0g
NH ₄ Cl	1.0g
Sodium glutamate	1.0g
MgSO ₄ ·7H ₂ O	0.24g
CaSO ₄ ·2H ₂ O	0.17g
Na ₂ CO ₃ solution	100.0mL
Trace elements solution SL-6	1.0mL
pH 9.0 ± 0.2 at 25°C	

Na₂CO₃ Solution:

Composition per 100.0mL:

Na ₂ CO ₃	5.0g
---------------------------------	------

Preparation of Na₂CO₃ Solution: Add Na₂CO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C.

Trace Elements Solution SL-6:

Composition per liter:

H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
MnCl ₂ ·4H ₂ O	0.03g
Na ₂ MoO ₄ ·H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 3.4.

Preparation of Medium: Add components, except Na₂CO₃ solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile Na₂CO₃ solution. Mix thoroughly. Adjust pH to 9.0, if necessary. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Natronobacterium gregoryi*, *Natronobacterium magadii*, *Natronobacterium pharaonis*, and *Natronococcus occultus*.

Natronobacterium Medium

Composition per liter:

NaCl	250.0g
Agar	20.0g
Casamino acids	15.0g
Trisodium citrate·2H ₂ O	3.0g
Glutamic acid	2.5g
MgSO ₄ ·7H ₂ O	2.5g

KCl	2.0g
Na ₂ CO ₃ solution	variable
pH 8.5 ± 0.2 at 25°C	

Na₂CO₃ Solution:

Composition per 100.0mL:

Na ₂ CO ₃	5.0g
---------------------------------	------

Preparation of Na₂CO₃ Solution: Add Na₂CO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except salt and Na₂CO₃ solution, to distilled/deionized water and bring volume to 850.0mL. Mix thoroughly. Gently heat and bring to boiling. Add salt. Mix thoroughly. Bring pH to 7.0. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Adjust pH to 8.5 with sterile Na₂CO₃ solution.

Use: For the cultivation and maintenance of *Natronobacterium magadii*, *Natronobacterium pharaonis*, and *Natronococcus occultus*.

Natronobacterium pharaonis Medium

Composition per liter:

NaCl	250.0g
Casamino acids	15.0g
Sodium citrate	3.0g
Glutamic acid	2.5g
MgSO ₄ ·7H ₂ O	2.0g
KCl	2.0g
pH 8.5 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 8.5. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Natronobacterium pharaonis*.

Nautilia Medium (DSMZ Medium 946)

Composition per liter:

Sulfur	10.0g
NH ₄ Cl	0.33g
KH ₂ PO ₄	0.33g
Resazurin	0.5mg
Synthetic seawater, concentrated	500.0mL
NaHCO ₃ solution	50.0mL
Na ₂ S·9H ₂ O solution	20.0mL
Sodium formate solution	15.0mL
Trace elements solution	10.0mL
Vitamin solution	10.0mL
Selenite-tungstate solution	1.0mL
pH 6.8 ± 0.2 at 25°C	

Synthetic Seawater, Concentrated:

Composition per 500.0mL:

NaCl	55.4g
MgSO ₄ ·7H ₂ O	14.0g
MgCl ₂ ·6H ₂ O	11.0g
CaCl ₂ ·2H ₂ O	1.5g
KCl	1.3g
NaBr	0.2g
H ₃ BO ₃	0.06g
SrCl ₂ ·6H ₂ O	0.03g

Na ₃ -citrate	20.0mg
KI	0.1mg

Preparation of Synthetic Seawater, Concentrated: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly.

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Trace Elements Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O	3.0g
Nitrilotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·2H ₂ O	0.5g
CoSO ₄ ·7H ₂ O	0.18g
ZnSO ₄ ·7H ₂ O	0.18g
CaCl ₂ ·2H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g
NiCl ₂ ·6H ₂ O	0.025g
KAl(SO ₄) ₂ ·12H ₂ O	0.02g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·4H ₂ O	0.01g
CuSO ₄ ·5H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O	0.3mg

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl	10.0mg
Thiamine-HCl·2H ₂ O	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
D-Ca-pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Sodium Formate Solution:

Composition per 50.0mL:

Na-formate	10.0g
------------------	-------

Preparation of Sodium Formate Solution: Add sodium formate to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Na₂S·9H₂O Solution:

Composition per 20.0mL:

Na ₂ S·9H ₂ O	0.6g
---	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

NaHCO₃ Solution:

Composition per 100.0mL:

NaHCO ₃	5.0g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

Selenite-Tungstate Solution

Composition per liter:

NaOH	0.5g
Na ₂ WO ₄ ·2H ₂ O	4.0mg
Na ₂ SeO ₃ ·5H ₂ O	3.0mg

Preparation of Selenite-Tungstate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Preparation of Sulfur: Sterilize sulfur by steaming for 3 h on each of 3 successive days.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas atmosphere. Add components, except sulfur, NaHCO₃ solution, sodium formate solution, Na₂S·9H₂O solution, vitamin solution, selenite-tungstate solution, and trace elements solution, to distilled/deionized water and bring volume to 894.0mL. Mix thoroughly. Adjust pH to 6.8. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 10.0g steam sterilized sulfur, 50.0mL NaHCO₃ solution, 15.0mL sodium formate solution, 20.0mL Na₂S·9H₂O solution, 10.0mL vitamin solution, 1.0mL selenite-tungstate solution, and 10.0mL trace elements solution. Mix thoroughly. Adjust pH to 6.8. Aseptically and anaerobically distribute into sterile tubes or bottles.

Use: For the cultivation of *Caldithrix abyssi* and *Nautilia lithotrophica*.

Nautilia Medium (DSMZ Medium 946)

Composition per liter:

NH ₄ Cl	0.33g
KH ₂ PO ₄	0.33g

Na₂S·9H₂O Solution:

Composition per 20.0mL:

Na ₂ S·9H ₂ O	0.6g
---	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

NaHCO₃ Solution:

Composition per 100.0mL:

NaHCO ₃	5.0g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

Selenite-Tungstate Solution

Composition per liter:

NaOH	0.5g
Na ₂ WO ₄ ·2H ₂ O	4.0mg
Na ₂ SeO ₃ ·5H ₂ O	3.0mg

Preparation of Selenite-Tungstate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Yeast Extract Solution:

Composition per 20.0mL:

Yeast extract	4.0g
---------------------	------

Preparation of Yeast Extract Solution: Add yeast extract to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly.

Sparge with 100% N₂. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas atmosphere. Add components, except NaHCO₃ solution, yeast extract solution, Na₂S·9H₂O solution, vitamin solution, selenite-tungstate solution, and trace elements solution, to distilled/deionized water and bring volume to 894.0mL. Mix thoroughly. Adjust pH to 6.8. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 50.0mL NaHCO₃ solution, 15.0mL yeast extract solution, 20.0mL Na₂S·9H₂O solution, 10.0mL vitamin solution, 1.0mL selenite-tungstate solution, and 10.0mL trace elements solution. Mix thoroughly. Adjust pH to 6.8. Aseptically and anaerobically distribute into sterile tubes or bottles.

Use: For the cultivation of *Caldithrix abyssi* DSM 13497.

NBA Medium

Composition per liter:

Pancreatic digest of gelatin	5.0g
Casamino acids	5.0g
Beef extract	3.0g
Yeast extract	1.0g

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Bdellovibrio* species.

NBY Medium

(Nutrient Broth Yeast Extract Medium)

Composition per liter:

Nutrient broth, dehydrated	8.0g
Yeast extract	2.0g
K ₂ HPO ₄	2.0g
KH ₂ PO ₄	0.5g
Glucose solution	50.0mL
MgSO ₄ ·7H ₂ O (1M solution)	1.0mL

Glucose Solution:

Composition per 50.0mL:

D-Glucose	5.0g
-----------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except glucose solution, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile glucose solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Curtobacterium flaccumfaciens* and *Pseudomonas syringae*.

NBY Medium

(Nutrient Broth Yeast Extract Medium) (ATCC Medium 763)

Composition per liter:

Agar	15.0g
Nutrient broth	8.0g

Yeast extract.....	2.0g
K ₂ HPO ₄	2.0g
KH ₂ PO ₄	0.5g
Glucose solution	50.0mL
MgSO ₄ solution.....	50.0mL

Glucose Solution:

Composition per 50.0mL:

D-Glucose	5.0g
-----------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize.

MgSO₄ Solution:

Composition per 50.0mL:

MgSO ₄ ·7H ₂ O	0.25g
--	-------

Preparation of MgSO₄ Solution: Add the solid MgSO₄·7H₂O to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C.

Preparation of Medium: Add components, except glucose solution and MgSO₄ solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 25 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile glucose solution and MgSO₄ solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Bacillus sphaericus*.

Neisseria Medium

Composition per liter:

Biosate	10.0g
Polypeptone™.....	10.0g
NaCl.....	5.0g
Myosate.....	3.0g
Agar	1.5g
Phenol Red.....	0.017g
Carbohydrate solution.....	50.0mL

pH 7.4–7.6 at 25°C

Carbohydrate Solution:

Composition per 50.0mL:

Carbohydrate.....	10.0g
-------------------	-------

Preparation of Carbohydrate Solution: Add glucose, sucrose, or maltose to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except carbohydrate solution, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile carbohydrate solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Neisseria* species.

Neisseria meningitidis Medium

Composition per liter:

Beef infusion.....	300.0g
Acid hydrolysate of casein.....	17.5g
Agar	17.0g
Starch	1.5g
Antibiotic solution	10.0mL

pH 7.4 ± 0.2 at 25°C

Antibiotic Solution:

Composition per 10.0mL:

Vancomycin	3.0mg
Colistin.....	7.5mg
Nystatin.....	12,500U

Preparation of Antibiotic Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except antibiotic solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile antibiotic solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation and cultivation of *Neisseria meningitidis*.

Nelson Culture Medium for Naegleria

Composition per 100.0mL:

Glucose	0.17g
Panmede.....	0.17g
Na ₂ HPO ₄	14.2mg
KH ₂ PO ₄	13.6mg
NaCl.....	12.0mg
CaCl ₂ ·2H ₂ O	0.4mg
MgSO ₄ ·7H ₂ O	0.4mg
Bovine serum, heat-inactivated fetal	10.0mL

Source: Panmede is available from Paines and Byrne Ltd., Greenford, England, and Harrisons and Crosfield, Inc., Bronxville, NY.

Preparation of Medium: Add components, except bovine serum, to distilled/deionized water and bring volume to 90.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 10.0mL of sterile, heat-inactivated fetal bovine serum. Mix thoroughly. Aseptically distribute into sterile tubes or flasks. Use immediately.

Use: For the cultivation of *Naegleria fowleri* and *Paratetramitus jugosus*.

Nelson Culture Medium for Naegleria

Composition per 100.0mL:

Glucose	0.17g
Liver infusion.....	0.17g
Na ₂ HPO ₄	14.2mg
KH ₂ PO ₄	13.6mg
NaCl.....	12.0mg
CaCl ₂ ·2H ₂ O	0.4mg
MgSO ₄ ·7H ₂ O	0.4mg
Bovine serum, heat-inactivated fetal	10.0mL

Preparation of Medium: Add components, except bovine serum, to distilled/deionized water and bring volume to 90.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 10.0mL of sterile, heat-inactivated fetal bovine serum. Mix thoroughly. Aseptically distribute into sterile tubes or flasks. Use immediately.

Use: For the cultivation of *Naegleria fowleri* and *Paratetramitus jugosus*.

Nelson Medium for *Naegleria fowleri***Composition per liter:**

Glucose	1.0g
Ox liver digest.....	1.0g
Page's amoeba saline	1.0L
Fetal calf serum, inactivated	20.0mL

Page's Amoeba Saline:**Composition per liter:**

Na ₂ HPO ₄	0.142g
KH ₂ PO ₄	0.136g
NaCl.....	0.12g
MgSO ₄ ·7H ₂ O.....	4.0mg
CaCl ₂ ·2H ₂ O.....	4.0mg

Preparation of Page's Amoeba Saline: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly.

Preparation of Medium: Add the glucose and ox liver digest to 1.0L of Page's amoeba saline. Mix thoroughly. Distribute into screw-capped tubes in 10.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 0.2mL of sterile fetal calf serum to each tube. Mix thoroughly.

Use: For the cultivation of *Naegleria fowleri*.

***Neocallimastix* Medium
(ANO2 Fungus II)****Composition per liter:**

NaHCO ₃	6.6g
Cellobiose	2.0g
Glucose	2.0g
Maltose.....	2.0g
Starch	2.0g
PIPES (piperazine- <i>N,N'</i> - bis[2-ethanesulfonic acid]) buffer	1.0g
Trypticase™ peptone	1.0g
Yeast extract.....	1.0g
L-Cysteine·HCl·H ₂ O	0.5g
KH ₂ PO ₄	0.5g
MgCl ₂ ·6H ₂ O.....	0.4g
NaCl	0.4g
NH ₄ Cl	0.4g
Na ₂ S·9H ₂ O.....	0.1g
CaCl ₂ ·2H ₂ O.....	50.0mg
Resazurin	1.0mg
Rumen fluid	100.0mL
Wolfe's vitamin solution	10.0mL
Trace elements solution SL-10	1.0mL
	pH 6.9 ± 0.2 at 25°C

Wolfe's Vitamin Solution:**Composition per liter:**

Pyridoxine·HCl.....	10.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Lipoic acid	5.0mg
Nicotinic acid.....	5.0mg
Riboflavin	5.0mg
Thiamine·HCl	5.0mg
Calcium DL-pantothenate.....	5.0mg
Biotin	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Trace Elements Solution SL-10:**Composition per liter:**

FeCl ₂ ·4H ₂ O.....	1.5g
CoCl ₂ ·6H ₂ O.....	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	36.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O.....	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly.

Preparation of Medium: Prepare and dispense medium under 100% CO₂. Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 3 min. Cool to room temperature while sparging with 100% CO₂. Anaerobically distribute into tubes. Autoclave for 15 min at 15 psi pressure–121°C. Adjust pH to 6.9.

Use: For the cultivation of *Neocallimastix frontalis*.

Neomycin Agar**Composition per liter:**

Agar	15.0g
Peptone	6.0g
Pancreatic digest of casein.....	4.0g
Yeast extract.....	3.0g
Beef extract.....	1.5g
Glucose	1.0g
Neomycin solution.....	10.0mL
	pH 7.0 ± 0.2 at 25°C

Neomycin Solution:**Composition per 10.0mL:**

Neomycin sulfate.....	1.0g
-----------------------	------

Preparation of Neomycin Solution: Add neomycin sulfate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except neomycin solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile neomycin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Micrococcus luteus*.

Neomycin Agar, Modified**Composition per liter:**

Agar	15.0g
Peptone	6.0g
Pancreatic digest of casein.....	4.0g
Yeast extract.....	3.0g
Beef extract.....	1.5g
Glucose	1.0g

Methanol	20.0mL
Neomycin solution	10.0mL
pH 7.0 ± 0.2 at 25°C	

Neomycin Solution:**Composition per 10.0mL:**

Neomycin sulfate	1.0g
------------------------	------

Preparation of Neomycin Solution: Add neomycin sulfate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except methanol and neomycin solution, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Filter sterilize methanol. To cooled, sterile basal medium, aseptically add sterile methanol and sterile neomycin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Bordetella bronchiseptica*.

Neomycin Assay Agar

See: **Antibiotic Medium 11**

Neomycin Blood Agar**Composition per liter:**

Pancreatic digest of casein	14.5g
Agar	14.0g
Papaic digest of soybean meal	5.0g
NaCl	5.0g
Growth factors	1.5g
Sheep blood, defibrinated	50.0mL
Neomycin solution	10.0mL
pH 7.3 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Neomycin Solution:**Composition per 10.0mL:**

Neomycin sulfate	0.03g
------------------------	-------

Preparation of Neomycin Solution: Add neomycin sulfate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except sheep blood and neomycin solution, to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile sheep blood and sterile neomycin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of group A streptococci (*Streptococcus pyogenes*) and group B streptococci (*Streptococcus agalactiae*) from throat cultures and other clinical specimens.

Neomycin Luria Agar**Composition per liter:**

Agar	15.0g
Pancreatic digest of casein	10.0g

Yeast extract	5.0g
NaCl	0.5g
Glucose solution	20.0mL
Neomycin solution	10.0mL
pH 7.0 ± 0.1 at 25°C	

Glucose Solution:**Composition per 100.0mL:**

Glucose	10.0g
---------------	-------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Neomycin Solution:**Composition per 10.0mL:**

Neomycin sulfate	12.0mg
------------------------	--------

Preparation of Neomycin Solution: Add neomycin sulfate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except glucose solution and neomycin solution, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 20.0mL of sterile glucose solution and 10.0mL of sterile neomycin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Escherichia coli*.

Neomycin Medium No. 1**Composition per liter:**

Agar	15.0g
Peptone	5.0g
NaCl	5.0g
Yeast extract	2.0g
Beef extract	1.0g
Sucrose solution	20.0mL
Neomycin solution	10.0mL
pH 7.0 ± 0.1 at 25°C	

Sucrose Solution:**Composition per 100.0mL:**

Sucrose	2.5g
---------------	------

Preparation of Sucrose Solution: Add sucrose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Neomycin Solution:**Composition per 10.0mL:**

Neomycin sulfate	500.0mg
------------------------	---------

Preparation of Neomycin Solution: Add neomycin sulfate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except sucrose solution and neomycin solution, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 20.0mL of sterile sucrose solution and 10.0mL of sterile neomycin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Micrococcus luteus* and *Pseudomonas aeruginosa*.

Neopeptone Glucose Agar**Composition** per liter:

Agar	20.0g
Glucose	10.0g
Neopeptone	5.0g

pH 6.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Adjust pH to 6.5. Pour into sterile Petri dishes or leave in tubes.

Use: For the maintenance of stock cultures of a variety of microorganisms.

Neopeptone Glucose Rose Bengal Aureomycin[®] Agar**Composition** per liter:

Agar	20.0g
Neopeptone	5.0g
Glucose	1.0g
Tetracycline solution.....	5.0mL
Rose Bengal solution	3.5mL

pH 6.5 ± 0.2 at 25°C

Tetracycline Solution:**Composition** per 150.0mL:

Tetracycline.....	1.0g
-------------------	------

Preparation of Tetracycline Solution: Add tetracycline to distilled/deionized water and bring volume to 150.0mL. Mix thoroughly. Filter sterilize.

Rose Bengal Solution:**Composition** per 100.0mL:

Rose Bengal	1.0g
-------------------	------

Preparation of Rose Bengal Solution: Add Rose Bengal to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except tetracycline solution, to distilled/deionized water and bring volume to 995.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 5.0mL of sterile tetracycline solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of a wide variety of fungal species.

Neopeptone Infusion Agar**Composition** per liter:

Beef heart, infusion from	500.0g
Neopeptone	20.0g
Agar	20.0g
NaCl	5.0g
Sheep blood, defibrinated	50.0mL

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components, except sheep blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile sheep blood. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of a wide variety of fastidious microorganisms.

**Nesterenkonia Modified Medium
(DSMZ Medium 993a)****Composition** per liter:

MgCl ₂ ·6H ₂ O	100.0g
Agar	20.0g
Glycerol	10.0g
Yeast extract.....	5.0g
L-Asparagine, anhydrous	1.0g
K ₂ HPO ₄ , anhydrous	1.0g
Trace elements solution	1.0mL

pH 7.2 ± 0.2 at 25°C

Trace Elements Solution:**Composition** per 100.0mL:

FeSO ₄ ·7H ₂ O.....	0.1g
MnCl ₂ ·4H ₂ O	0.1g
ZnSO ₄ ·7H ₂ O	0.1g

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Distribute into tubes or flasks. Gently heat while stirring and bring to boiling. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Pour into Petri dishes or leave in tubes.

Use: For the cultivation of *Nesterenkonia* spp.

Neurospora Culture Agar**Composition** per liter:

Maltose	40.0g
Agar	15.0g
Proteose peptone No. 3	5.0g
Yeast extract.....	5.0g

pH 6.7 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes in 8.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Allow tubes to cool in a slanted position.

Use: For the cultivation of *Neurospora intermedia* used in the microbiological assay of pyridoxine. Also used for the cultivation of other fungi.

Neurospora Medium**Composition** per liter:

Agar	15.0g
Glucose	5.0g
Malt syrup, spray dried	5.0g
Sucrose.....	5.0g
Yeast extract.....	2.5g
Vitamin solution.....	10.0mL
Casein, hydrolyzed	5.0mL

Vitamin Solution:**Composition per liter:**

Ribonucleic acid, alkali hydrolyzed.....	0.5g
Inositol.....	0.4g
Choline.....	0.2g
Nicotinamide.....	0.2g
Pantothenic acid.....	0.2g
Thiamine.....	0.1g
<i>p</i> -Aminobenzoic acid.....	0.05g
Pyridoxine.....	0.05g
Riboflavin.....	0.05g
Folic acid.....	4.0μg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except vitamin solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL of sterile vitamin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Neurospora* species on complete medium.

Neurospora Medium**Composition per liter:**

Sucrose.....	15.0g
Ammonium tartrate.....	5.0g
KH ₂ PO ₄	1.0g
NH ₄ NO ₃	1.0g
MgSO ₄ ·7H ₂ O.....	0.5g
CaCl ₂	0.1g
NaCl.....	0.1g
ZnCl ₂	2.0mg
FeCl ₃	0.2mg
Cu Cl ₂	0.1mg
MnCl ₂	0.02mg
Na ₂ MoO ₄ ·2H ₂ O.....	0.02mg
H ₃ BO ₃	0.01mg
Biotin.....	1.0μg

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Neurospora* species on minimal medium.

Neurospora Minimal Medium**Composition per liter:**

Sucrose.....	20.0g
Ammonium tartrate.....	5.0g
KH ₂ PO ₄	1.0g
NaNO ₃	1.0g
MgSO ₄ ·7H ₂ O.....	0.5g
CaCl ₂ ·2H ₂ O.....	0.1g
NaCl.....	0.1g
ZnSO ₄ ·7H ₂ O.....	5.5mg
FeSO ₄ ·7H ₂ O.....	0.54mg
CuSO ₄ ·5H ₂ O.....	0.39mg
MnSO ₄ ·4H ₂ O.....	0.063mg
H ₃ BO ₃	0.057mg

Na ₂ MoO ₄ ·2H ₂ O.....	0.05mg
Biotin.....	5.0μg

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Neurospora* species and the detection of *Neurospora* mutants.

Neurospora Minimal Medium**Composition per liter:**

Sucrose.....	20.0g
Agar.....	20.0g
KH ₂ PO ₄	5.0g
Trisodium citrate·2H ₂ O.....	2.5g
NH ₄ NO ₃	2.0g
MgSO ₄ ·7H ₂ O.....	0.2g
CaCl ₂ ·2H ₂ O.....	0.1g
Sucrose-agar solution.....	200.0mL
Biotin solution.....	1.0mL
Trace elements solution.....	0.1mL

pH 5.8 ± 0.2 at 25°C

Sucrose-Agar Solution:**Composition per 200.0mL:**

Sucrose.....	20.0g
Agar.....	20.0g

Preparation of Sucrose-Agar Solution: Add components to distilled/deionized water and bring volume to 200.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Biotin Solution:**Composition per 10.0mL:**

Biotin.....	50.0μg
-------------	--------

Preparation of Biotin Solution: Add biotin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Trace Elements Solution:**Composition per 100.0mL**

Citric acid·H ₂ O.....	5.0g
ZnSO ₄ ·7H ₂ O.....	5.0g
Fe(NH ₄) ₂ (SO ₄) ₂ ·6H ₂ O.....	1.0g
CuSO ₄ ·5H ₂ O.....	0.25g
MnSO ₄ ·H ₂ O.....	0.05g
H ₃ BO ₃	0.05g
Na ₂ MoO ₄ ·2H ₂ O.....	0.05g

Preparation of Trace Elements Solution: Add components one at a time to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Add 1.0mL of chloroform as a preservative. Store at room temperature.

Preparation of Medium: Add trisodium citrate·2H₂O, KH₂PO₄, NH₄NO₃, MgSO₄·7H₂O, and CaCl₂·2H₂O to distilled/deionized water and bring volume to 800.0mL. Make sure that one component is dissolved completely before adding the next one. This is conveniently done in a Fernbach flask on a shaker. Mix thoroughly. Filter sterilize. Warm solution to 45°–50°C. Add 200.0mL of sterile sucrose-agar solution, 1.0mL of sterile biotin solution, and 0.1mL of sterile trace elements solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Cochliobolus sativus*, *Fusarium solani*, *Neurospora crassa*, and *Neurospora sitophila*.

Neutral Red Broth
See: LICNR Broth

Nevskia Medium
(DSMZ Medium 828)

Composition per liter:

Na-lactate	0.56g
MgSO ₄ ·7H ₂ O	0.05g
CaCl ₂ ·2H ₂ O	0.014g
Potassium phosphate buffer, 1M, pH 7	27.5mL
Trace elements solution SL-9	0.5mL
Seven vitamin solution.....	0.5mL
pH 7.1 ± 0.2 at 25°C	

Trace Elements Solution SL-9:

Composition per liter:

Nitritotriacetic acid	12.8g
FeCl ₂ ·4H ₂ O	3.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-9: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Adjust pH to 6.0. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Seven Vitamin Solution:

Composition per liter:

Pyridoxine hydrochloride	300.0mg
Thiamine-HCl·2H ₂ O	200.0mg
Nicotinic acid.....	200.0mg
Vitamin B ₁₂	100.0mg
Calcium pantothenate	100.0mg
<i>p</i> -Aminobenzoic acid.....	80.0mg
D(+)-Biotin.....	20.0mg

Preparation of Seven Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Sparge with 100% N₂. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except seven vitamin solution, to distilled/deionized water and bring volume to 999.5mL. Mix thoroughly. Adjust pH to 7.1. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add 0.5mL seven vitamin solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Nevskia ramosa*.

New York City Medium

Composition per liter:

NYC basal medium.....	640.0mL
Horse blood cells	200.0mL
Horse plasma, citrated.....	120.0mL
Yeast dialysate.....	25.0mL

Glucose solution	10.0mL
Antibiotic VCNT solution	5.0mL
pH 7.4 ± 0.2 at 25°C	

NYC Basal Medium:

Composition per 640.0mL:

Solution 1.....	400.0mL
Solution 3.....	200.0mL
Solution 2.....	40.0mL

Preparation of NYC Basal Medium: Combine solution 1, solution 2, and solution 3. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Solution 1:

Composition per 400.0mL:

Agar	20.0g
------------	-------

Preparation of Solution 1: Add agar to distilled/deionized water and bring volume to 400.0mL. Mix thoroughly. Melt agar in autoclave for 10 min at 0 psi pressure–100°C. Cool to 45°–50°C.

Solution 2:

Composition per 40.0mL:

Cornstarch.....	1.0g
-----------------	------

Preparation of Solution 2: Add cornstarch to distilled/deionized water and bring volume to 40.0mL. Mix thoroughly. Warm to 45°–50°C.

Solution 3:

Composition per 200.0mL:

Proteose peptone No. 3	15.0g
NaCl.....	5.0g
K ₂ HPO ₄	4.0g
KH ₂ PO ₄	1.0g

Preparation of Solution 3: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Cool to 45°–50°C.

Horse Blood Cells:

Composition per 200.0mL:

Horse blood cells, sedimented	6.0mL
-------------------------------------	-------

Preparation of Horse Blood Cells: Cow blood may be used instead of horse blood but do not use sheep blood. Use cells freshly packed by sedimentation. Do not pack by centrifugation. Aseptically add 6.0mL of sedimented blood cells to 200.0mL of sterile distilled/deionized water. Mix thoroughly.

Horse Plasma, Citrated:

Composition per 6.0L:

Horse blood.....	5400.0mL
Citrate solution.....	600.0mL

Preparation of Horse Plasma, Citrated: Place 600.0mL of sterile citrate solution into a receiving bottle. Draw horse blood to the 6.0L mark. Allow cells to sediment out. Aseptically remove plasma.

Citrate Solution:

Composition per liter:

Sodium citrate.....	150.0g
NaCl.....	81.13g

Preparation of Citrate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Glucose Solution:

Composition per 10.0mL:

D-Glucose	5.0g
-----------------	------

Preparation of Glucose Solution: Add D-glucose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 10 min at 10 psi pressure–115°C. Cool to 45°–50°C.

Yeast Dialysate:

Composition per 2500.0mL:

Baker's yeast, fresh..... 908.0g

Preparation of Yeast Dialysate: Add fresh baker's yeast to 2500.0mL of distilled/deionized water. Mix thoroughly. Autoclave for 10 min at 15 psi pressure–121°C. Cool to 25°C. Put into dialysis tubing. Dialyze against 2.0L of distilled/deionized water for 48 hr at 4°C.

Antibiotic VCNT Solution:

Composition per 5.0mL:

Colistin..... 7.5mg
Trimethoprim lactate 3.0mg
Vancomycin-HCl..... 2.0mg
Nystatin..... 12.5U

Preparation of Antibiotic Solution: Add components to distilled/deionized water and bring volume to 5.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Have all solutions prepared and at 45°–50°C. Aseptically combine components. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the isolation and cultivation of pathogenic *Neisseria* species. Used as a transport medium for urogenital and other clinical specimens. For the isolation and presumptive identification of Mycoplasmatales, including large-colony species (*Mycoplasma pneumoniae*) and T-mycoplasmas from urogenital specimens.

New York City Medium, Modified

Composition per liter:

NYC basal medium..... 840.0mL
α-Gamma horse serum (Flow Labs)..... 120.0mL
Yeast dialysate..... 25.0mL
Glucose solution 10.0mL
Antibiotic LCNT solution..... 5.0mL

pH 7.4 ± 0.2 at 25°C

NYC Basal Medium:

Composition per 840.0mL:

Horse blood..... 5400.0mL
Solution 1 600.0mL
Solution 3 200.0mL
Solution 2 40.0mL

Preparation of NYC Basal Medium: Combine solution 1, solution 2, and solution 3. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Solution 1:

Composition per 600.0mL:

Agar 20.0g

Preparation of Solution 1: Add agar to distilled/deionized water and bring volume to 600.0mL. Mix thoroughly. Melt agar in autoclave for 10 min at 0 psi pressure–100°C. Cool to 45°–50°C.

Solution 2:

Composition per 40.0mL:

Cornstarch..... 1.0g

Preparation of Solution 2: Add cornstarch to distilled/deionized water and bring volume to 40.0mL. Mix thoroughly. Warm to 45°–50°C.

Solution 3:

Composition per 200.0mL:

Proteose peptone No. 3..... 15.0g
NaCl..... 5.0g
K₂HPO₄..... 4.0g
KH₂PO₄..... 1.0g

Preparation of Solution 3: Add components to distilled/deionized water and bring volume to 200.0mL. Mix thoroughly. Gently heat and bring to boiling. Cool to 45°–50°C.

Glucose Solution:

Composition per 10.0mL:

D-Glucose..... 5.0g

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 10 min at 10 psi pressure–115°C. Cool to 45°–50°C.

Yeast Dialysate:

Composition per 2500.0mL:

Baker's yeast, fresh..... 908.0g

Preparation of Yeast Dialysate: Add fresh Baker's yeast to 2500.0mL of distilled/deionized water. Mix thoroughly. Autoclave for 10 min at 15 psi pressure–121°C. Cool to 25°C. Put into dialysis tubing. Dialyze against 2.0L of distilled/deionized water for 48 hr at 4°C.

Antibiotic LCNT Solution:

Composition per 5.0mL:

Colistin..... 7.5mg
Lincomycin-HCl 4.0mg
Trimethoprim lactate 3.0mg
Nystatin..... 12.5U

Preparation of Antibiotic LCNT Solution: Add the components to distilled/deionized water and bring volume to 5.0mL. Mix thoroughly. Filter sterilize the solution.

Preparation of Medium: Have all solutions prepared and at 45°–50°C. Aseptically combine components. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the isolation and cultivation of pathogenic *Neisseria* species. Used as a transport medium for urogenital and other clinical specimens. For the isolation and presumptive identification of Mycoplasmatales, including large-colony species (*Mycoplasma pneumoniae*) and T-mycoplasmas from urogenital specimens.

Niacin Assay HiVeg Medium

Composition per liter:

Glucose 40.0g
Sodium acetate..... 20.0g
Plant acid hydrolysate, vitamin free 12.0g
KH₂PO₄..... 1.0g
K₂HPO₄..... 1.0g
L-Cystine..... 0.4g
MgSO₄ 0.4g
DL-Tryptophan 0.2g
Adenine sulfate 0.02g
FeSO₄..... 0.02g
Guanine hydrochloride 0.02g
MnSO₄ 0.02g
Uracil 0.02g
NaCl..... 0.02g
Pyridoxine hydrochloride 0.4mg
Riboflavin (Vitamin B₂) 0.4mg

Calcium pantothenate	0.2mg
Thiamine hydrochloride.....	0.2mg
<i>p</i> -Aminobenzoic acid (PABA).....	0.1mg
Biotin	0.08mg

pH 6.7 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 2–3 min. Distribute into tubes in 5.0mL volumes. Add standard solution or test solutions to each tube. Adjust the volume of each tube to 10.0mL with distilled/deionized water. Autoclave for 10 min at 15 psi pressure–121°C.

Use: For the microbiological assay of nicotinic acid or nicotinamide (niacin) using *Lactobacillus plantarum* as the test organism.

Niacin Assay Medium

Composition per liter:

Glucose	40.0g
Sodium acetate	20.0g
Vitamin assay casamino acids.....	12.0g
K ₂ HPO ₄	1.0g
KH ₂ PO ₄	1.0g
L-Cystine	0.4g
MgSO ₄ ·7H ₂ O	0.4g
DL-Tryptophan.....	0.2g
Adenine sulfate	0.02g
FeSO ₄ ·5H ₂ O.....	0.02g
Guanine·HCl	0.02g
MnSO ₄ ·H ₂ O	0.02g
NaCl	0.02g
Uracil	0.02g
Pyridoxine·HCl	0.4mg
Riboflavin	0.4mg
Calcium pantothenate	0.2mg
Thiamine·HCl	0.2mg
<i>p</i> -Aminobenzoic acid.....	0.1mg
Biotin	0.8μg

pH 6.7 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 2–3 min. Distribute into tubes in 5.0mL volumes. Add standard solution or test solutions to each tube. Adjust the volume of each tube to 10.0mL with distilled/deionized water. Autoclave for 10 min at 15 psi pressure–121°C.

Use: For the microbiological assay of nicotinic acid or nicotinamide (niacin) using *Lactobacillus plantarum* as the test organism.

Nickels and Leesment Agar, Modified

Composition per liter:

Part 1	750.0mL
Part 2	100.0mL
Part 3	100.0mL
Part 4	50.0mL

pH 6.65 ± 0.2 at 25°C

Part 1:

Composition per 750.0mL:

Pancreatic digest of casein.....	20.0g
Lactose.....	10.0g
Yeast extract.....	5.0g
NaCl.....	4.0g
Gelatin.....	2.5g
Sodium citrate.....	2.0g

Preparation of Part 1: Add components to distilled/deionized water and bring volume to 750.0mL. Mix thoroughly. Adjust pH to 6.65.

Part 2:

Composition per 500.0mL:

Nonfat dry milk.....	50.0g
----------------------	-------

Preparation of Part 2: Add nonfat dry milk to distilled/deionized water and bring volume to 500.0mL. Inoculate with *Lactobacillus bulgaricus*. Incubate at 20°C for 24 hr. Centrifuge at 5000 rpm for 10 min to separate the curd. Collect the supernatant solution. Autoclave for 15 min at 15 psi pressure–121°C. Store at 4°C.

Part 3:

Composition per 100.0mL:

Calcium citrate.....	13.3g
Carboxymethylcellulose	0.8g

Preparation of Part 3: Combine the calcium citrate and carboxymethylcellulose in a mortar and grind until a fine powder. Add powder to 100.0mL of hot distilled/deionized water. Mix thoroughly. Filter through cheesecloth.

Part 4:

Composition per 50.0mL:

Calcium lactate	8.0g
-----------------------	------

Preparation of Part 4: Add calcium lactate to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Gently heat until dissolved.

Preparation of Medium: Prepare each of the four parts separately. Autoclave each part for 15 min at 15 psi pressure–121°C. Aseptically combine part 1, part 2, part 3, and part 4. Mix thoroughly. Pour into sterile Petri dishes. Swirl flask while dispensing medium.

Use: For the isolation and cultivation of acid-producing microorganisms from foods.

Nickerson Medium

See: BiGGY Agar

Nicotinic Acid Medium (DSMZ Medium 152)

Composition per liter:

Yeast extract.....	10.0g
Nicotinic acid.....	5.0g
Cysteine-HCl·H ₂ O	0.5g
NaHCO ₃	0.4g
NaCl.....	80.0mg
KH ₂ PO ₄	40.0mg
K ₂ HPO ₄	40.0mg
CaCl ₂ ·2H ₂ O	8.0mg
MgSO ₄ ·7H ₂ O	8.0mg
Distilled water.....	1000.0mL

pH 8.2 ± 0.2 at 25°C

Preparation of Medium: Add nicotinic acid to distilled/deionized water and bring volume to 1.0L. Gently heat and bring to boiling. Boil with mixing until nicotinic acid is fully dissolved. Cool to 25°C. Add remaining components. Readjust volume to 1.0L with distilled/deionized water. Mix thoroughly. Adjust pH to 8.2. Distribute into tubes or flasks under 100% nitrogen atmosphere. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Eubacterium barkeri*.

Niger Seed Agar

See: Bird Seed Agar

Niger Seed Salts Agar with Yeast Extract

Composition per liter:

Niger seeds.....	50.0g
Agar	20.0g
Glucose	1.0g
Yeast extract.....	1.0g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O.....	0.5g

Preparation of Medium: Add Niger seeds to 250.0mL of distilled/deionized water in a blender container. Soak the seeds at 60°–70°C for 1.5 hr. Blend. Filter through Whatman #1 filter paper. Reserve filtrate. Combine filtrate with remaining components. Add distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Arthroderma otae* and *Arthroderma vanbreuseghemii*.

NIH Agar

Composition per liter:

Pancreatic digest of casein.....	15.0g
Agar	15.0g
Glucose	5.5g
Yeast extract.....	5.0g
NaCl.....	2.5g
L-Cystine.....	0.05g

pH 7.1 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of microorganisms isolated from sterility testing of biological products. Also used as a solid medium for sterility testing.

NIH Thioglycolate Broth

Composition per liter:

Pancreatic digest of casein.....	15.0g
Glucose	5.5g
Yeast extract.....	5.0g
NaCl.....	2.5g

L-Cystine.....	0.5g
Sodium thioglycolate.....	0.5g
pH 7.1 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For sterility testing of biological products that are turbid or otherwise cannot be cultivated in fluid thioglycolate broth because of its viscosity.

Nine K Medium (9K Medium)

Composition per liter:

FeSO ₄ ·7H ₂ O.....	50.0g
(NH ₄) ₂ SO ₄	3.0g
Ca(NO ₃) ₂	1.0g
K ₂ HPO ₄	0.5g
MgSO ₄ ·7H ₂ O.....	0.5g
KCl.....	0.1g
H ₂ SO ₄ , 10N.....	1.0mL

pH 3.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 3.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Thiobacillus ferrooxidans*.

Nitrate Agar

Composition per liter:

Agar	12.0g
Peptone	5.0g
Beef extract.....	3.0g
KNO ₃	1.0g

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes. Autoclave for 15 min at 15 psi pressure–121°C. Allow tubes to cool in a slanted position.

Use: For the differentiation of aerobic and facultative Gram-negative microorganisms based on their ability to reduce nitrate. Test for nitrates with sulfanilic acid and α-naphthylamine reagents. Bacteria that reduce nitrate to nitrite turn the reagents red or pink.

Nitrate Assimilation Medium, Auxanographic Method for Yeast Identification

Composition per liter:

Noble agar.....	20.0g
Glucose	10.0g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O.....	0.5g
NaCl.....	0.1g
CaCl ₂ ·2H ₂ O.....	0.1g
DL-Methionine.....	0.02g
DL-Tryptophan.....	0.02g
L-Histidine·HCl.....	0.01g

Inositol	2.0mg
H ₃ BO ₃	0.5mg
ZnSO ₄ ·7H ₂ O	0.4mg
MnSO ₄ ·4H ₂ O	0.4mg
Thiamine-HCl	0.4mg
Pyridoxine	0.4mg
Niacin	0.4mg
Calcium pantothenate	0.4mg
<i>p</i> -Aminobenzoic acid	0.2mg
Riboflavin	0.2mg
FeCl ₃	0.2mg
Na ₂ MoO ₄ ·4H ₂ O	0.2mg
KI	0.1mg
CuSO ₄ ·5H ₂ O	0.04mg
Folic Acid	2.0μg
Biotin	2.0μg

pH 4.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into screw-capped tubes in 20.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For nitrate assimilation tests by the auxanographic method.

Nitrate Broth
(International Streptomyces Project Medium 8)
(ISP Medium 8)
(ATCC Medium 872)

Composition per liter:

Peptone	5.0g
Beef extract	3.0g
KNO ₃	1.0g

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the differentiation of aerobic and facultative Gram-negative microorganisms based on their ability to reduce nitrate. Test for nitrates with sulfanilic acid and α-naphthylamine reagents. Bacteria that reduce nitrate to nitrite turn the reagents red or pink.

Nitrate Broth

Composition per liter:

Pancreatic digest of gelatin	20.0g
KNO ₃	2.0g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the differentiation of aerobic and facultative Gram-negative microorganisms based on their ability to reduce nitrate. Test for nitrates with sulfanilic acid and α-naphthylamine reagents. Bacteria that reduce nitrate to nitrite turn the reagents red or pink.

Nitrate Broth, *Campylobacter*

Composition per liter:

Beef heart, solids from infusion	500.0g
Tryptose	10.0g
NaCl	5.0g
KNO ₃	2.0g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Distribute 4.0mL volumes into test tubes that contain inverted Durham tubes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the differentiation of *Campylobacter* species based on their ability to reduce nitrate.

Nitrate Broth, Enriched

Composition per liter:

Pancreatic digest of casein	13.0g
NaCl	5.0g
Yeast extract	5.0g
Heart muscle, solids from infusion	2.0g
KNO ₃	2.0g

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into test tubes that contain an inverted Durham tube. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the differentiation of aerobic and facultative Gram-negative microorganisms based on their ability to reduce nitrate to nitrite or form N₂ gas. Test for nitrates with sulfanilic acid and α-naphthylamine reagents. Bacteria that reduce nitrate to nitrite turn the reagents red or pink.

Nitrate HiVeg Agar

Composition per liter:

Agar	12.0g
Plant peptone	5.0g
Plant extract	3.0g
KNO ₃	1.0g

pH 6.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes. Autoclave for 15 min at 15 psi pressure–121°C. Allow tubes to cool in a slanted position.

Use: For the detection of nitrate reduction by bacteria.

Nitrate HiVeg Broth

Composition per liter:

Plant peptone	5.0g
Plant extract	3.0g
KNO ₃	1.0g

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the differentiation of aerobic and facultative Gram-negative microorganisms based on their ability to reduce nitrate. Test for nitrates with sulfanilic acid and α -naphthylamine reagents. Bacteria that reduce nitrate to nitrite turn the reagents red or pink.

Nitrate Liquid Medium

Composition per liter:

Solution A	500.0mL
Solution B	250.0mL
Solution C	250.0mL

Solution A:

Composition per 500.0mL:

Mannitol	10.0g
KNO ₃	0.6g
Na ₂ HPO ₄ ·12H ₂ O	0.45g
Na ₂ SO ₄	0.03g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution B:

Composition per 250.0mL:

MgSO ₄ ·7H ₂ O	0.12g
CaCl ₂ ·6H ₂ O	0.1g
FeCl ₃ ·6H ₂ O	0.01g

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 250.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution C:

Composition per 250.0mL:

Calcium pantothenate	0.5mg
Thiamine-HCl	0.1mg
Biotin	0.5µg

Preparation of Solution C: Add components to distilled/deionized water and bring volume to 250.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Aseptically combine 500.0mL of cooled, sterile solution A, 250.0mL of cooled, sterile solution B, and 250.0mL of sterile solution C. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the isolation and cultivation of *Rhizobium* species.

Nitrate Methanol Medium

Composition per liter:

NaNO ₃	5.0g
K ₂ HPO ₄	2.0g
NaCl	1.0g
MgSO ₄ ·7H ₂ O	0.02g
Na ₂ MoO ₄ ·H ₂ O	1.0mg
Riboflavin	0.2mg
Calcium pantothenate	0.2mg
Pyridoxine-HCl	0.2mg
Nicotinic acid	0.2mg
Thiamine-HCl	0.1mg

<i>p</i> -Aminobenzoic acid	0.1mg
Biotin	0.01mg
Methanol	10.0mL

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components, except methanol, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Filter sterilize methanol. Aseptically add sterile methanol to cooled sterile medium. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Methylobacterium rhodinum*.

Nitrate Mineral Salts Medium (NMS Medium)

Composition per liter:

Noble agar	12.5g
MgSO ₄ ·7H ₂ O	1.0g
KNO ₃	1.0g
Na ₂ HPO ₄ ·12H ₂ O	0.717g
KH ₂ PO ₄	0.272g
CaCl ₂ ·6H ₂ O	0.2g
Ferric ammonium EDTA	4.0mg
Trace elements solution	0.5mL

pH 6.8 ± 0.2 at 25°C

Trace Elements Solution:

Composition per liter:

Disodium EDTA	0.5g
FeSO ₄ ·7H ₂ O	0.2g
H ₃ BO ₃	0.03g
CoCl ₂ ·6H ₂ O	0.02g
ZnSO ₄ ·7H ₂ O	0.01g
MnCl ₂ ·4H ₂ O	3.0mg
Na ₂ MoO ₄ ·2H ₂ O	3.0mg
NiCl ₂ ·6H ₂ O	2.0mg
CaCl ₂ ·2H ₂ O	1.0mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 6.8. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Methylobacterium* species, *Methylococcus capsulatus*, *Methylomonas agile*, and *Methylomonas methanica*.

Nitrate Mineral Salts Medium with Methanol (NMS Medium with Methanol)

Composition per liter:

Noble agar	12.5g
MgSO ₄ ·7H ₂ O	1.0g
KNO ₃	1.0g
Na ₂ HPO ₄ ·12H ₂ O	0.717g
KH ₂ PO ₄	0.272g
CaCl ₂ ·6H ₂ O	0.2g
Ferric ammonium EDTA	4.0mg

Trace elements solution	0.5mL
Methanol	1.0mL
pH 6.8 ± 0.2 at 25°C	

Trace Elements Solution:**Composition per liter:**

Disodium EDTA	0.5g
FeSO ₄ ·7H ₂ O	0.2g
H ₃ BO ₃	0.03g
CoCl ₂ ·6H ₂ O	0.02g
ZnSO ₄ ·7H ₂ O	0.01g
MnCl ₂ ·4H ₂ O	3.0mg
Na ₂ MoO ₄ ·2H ₂ O	3.0mg
NiCl ₂ ·6H ₂ O	2.0mg
CaCl ₂ ·2H ₂ O	1.0mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components, except methanol, to distilled/deionized water and bring volume to 999.0mL. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 6.8. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Filter sterilize methanol. Aseptically add sterile methanol to cooled sterile medium. Mix thoroughly. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Methylobacterium fuji-sawaense*, *Methylobacterium* species, and *Methylomonas clara*.

Nitrate Reduction Broth**Composition per liter:**

Pancreatic digest of gelatin	5.0g
Beef extract	3.0g
KNO ₃	1.0g
pH 6.9 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into test tubes that contain an inverted Durham tube. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the differentiation of members of the Pseudomonadaceae based on their ability to reduce nitrate to nitrite or form N₂ gas. Test for nitrates with sulfanilic acid and α-naphthylamine reagents. Bacteria that reduce nitrate to nitrite turn the reagents red or pink.

Nitrate Reduction Broth**Composition per liter:**

Pancreatic digest of casein	13.0g
NaCl	5.0g
Yeast extract	5.0g
Heart muscle, solids from infusion	2.0g
KNO ₃ or NaNO ₃	2.0g
pH 7.4 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into test tubes that contain an inverted Durham tube. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the differentiation of a variety of Gram-negative bacteria based on their ability to reduce nitrate to nitrite or form N₂ gas. Test for nitrates with sulfanilic acid and α-naphthylamine reagents. Bacteria that reduce nitrate to nitrite turn the reagents red or pink.

Nitrate Reduction Broth**Composition per liter:**

Pancreatic digest of casein	13.0g
NaCl	5.0g
Yeast extract	5.0g
Heart muscle, solids from infusion	2.0g
KNO ₃ or NaNO ₃	2.0g
pH 7.4 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into test tubes that contain an inverted Durham tube. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the differentiation of a variety of nonfermenting Gram-negative bacteria based on their ability to reduce nitrate to nitrite or form N₂ gas. Test for nitrates with sulfanilic acid and α-naphthylamine reagents. Bacteria that reduce nitrate to nitrite turn the reagents red or pink.

Nitrate Reduction Broth, Clark**Composition per liter:**

Peptone	20.0g
KNO ₃ or NaNO ₃	2.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into test tubes that contain an inverted Durham tube. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the differentiation of a variety of Gram-negative bacteria based on their ability to reduce nitrate to nitrite or form N₂ gas. Test for nitrates with sulfanilic acid and α-naphthylamine reagents. Bacteria that reduce nitrate to nitrite turn the reagents red or pink.

**Nitrate Reduction Broth for
Pseudomonas and Related Genera****Composition per liter:**

Peptone	5.0g
NaCl	5.0g
Yeast extract	2.0g
Beef extract	1.0g
NaNO ₃	0.1g
pH 7.4 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into test tubes that contain an inverted Durham tube. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the differentiation of members of the Pseudomonadaceae based on their ability to reduce nitrate to nitrite or form N₂ gas. Test for nitrates with sulfanilic acid and α-naphthylamine reagents. Bacteria that reduce nitrate to nitrite turn the reagents red or pink.

**Nitratiruptor and Nitratifactor Medium
(DSMZ Medium 1024)****Composition per liter:**

Sulfur, elemental	3.0g
Na ₂ S ₂ O ₃ ·5H ₂ O	1.0g
NaNO ₃	1.0g
Bicarbonate solution	10.0mL

Vitamin solution.....	10.0mL
DMJ synthetic seawater	1.0L
pH 7.0 ± 0.2 at 25°C	

Bicarbonate Solution:**Composition** per 10.0mL:

NaHCO ₃	1.0g
--------------------------	------

Preparation of Bicarbonate Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

DMJ Synthetic Seawater:**Composition** per liter:

NaCl	30.0g
MgCl ₂ ·6H ₂ O.....	4.18g
MgSO ₄ ·7H ₂ O	3.4g
KCl.....	0.33g
NH ₄ Cl	0.25g
K ₂ HPO ₄	0.14g
CaCl ₂ ·2H ₂ O.....	0.14g
Fe(NH ₄) ₂ (SO ₄) ₂ ·6H ₂ O	0.01g
NiCl ₂ ·6H ₂ O	0.5mg
Na ₂ SeO ₃ ·5H ₂ O.....	0.5mg
Trace elements solution SL-10	10.0mL

Trace Elements Solution SL-10:**Composition** per liter:

MgSO ₄ ·7H ₂ O	3.0g
Nitrilotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·2H ₂ O	0.5g
CoSO ₄ ·7H ₂ O	0.18g
ZnSO ₄ ·7H ₂ O	0.18g
CaCl ₂ ·2H ₂ O.....	0.1g
FeSO ₄ ·7H ₂ O.....	0.1g
NiCl ₂ ·6H ₂ O	0.025g
KAl(SO ₄) ₂ ·12H ₂ O.....	0.02g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·4H ₂ O	0.01g
CuSO ₄ ·5H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O.....	0.3mg

Preparation of Trace Elements Solution SL-10: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly. Adjust pH to 7.0.

Preparation of DMJ Synthetic Seawater: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Vitamin Solution:**Composition** per liter:

Pyridoxine-HCl.....	10.0mg
Thiamine-HCl·2H ₂ O.....	5.0mg
Riboflavin	5.0mg
Nicotinic acid.....	5.0mg
D-Ca-pantothenate.....	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Lipoic acid	5.0mg
Biotin	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Preparation of Medium: Add components, except sulfur, bicarbonate solution, and vitamin solution to seawater and bring volume to 1.0L. Dispense into serum bottles. Autoclave for 15 min at 15 psi pressure–121°C under an atmosphere of air. Sterilize sulfur separately in screw-capped tubes by steaming in a water bath for 3 hr on each of 3 successive days. Aseptically add the sterilized sulfur, bicarbonate, and vitamin solutions. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Seal the serum tubes with butyl rubber stoppers. Increase the 80% H₂ + 20% CO₂ gas phase pressure to 300 kPa.

Use: For the cultivation of *Nitriliruptor* spp. and *Nitratifactor* spp.

Nitriliruptor alkaliphilus Medium (DSMZ Medium 1105)

Composition per liter:

Na ₂ CO ₃	22.0g
Na ₂ HCO ₃	8.0g
NaCl.....	6.0g
K ₂ HPO ₄	0.5g
Isobutyroamide solution	10.0mL
Trace elements solution	1.0mL
Magnesium sulfate solution.....	1.0mL
Vitamin solution.....	1.0mL
Thiosulfate solution	0.01mL

pH 9.5 ± 0.5 at 25°C

Isobutyroamide Solution:**Composition** per 10.0ml:

Isobutyroamide	0.87g
----------------------	-------

Preparation of Isobutyroamide Solution: Add isobutyroamide to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Vitamin Solution:**Composition** per 10.0ml:

Vitamin B ₁₂	1.0mg
-------------------------------	-------

Preparation of Vitamin Solution: Add vitamin B₁₂ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Magnesium Sulfate Solution:**Composition** per 10.0mL:

MgSO ₄ ·7H ₂ O	2.0g
--	------

Preparation of Magnesium Sulfate Solution: Add MgSO₄·7H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Thiosulfate Solution:**Composition** per 10.0mL:

Na ₂ S ₂ O ₃ ·5H ₂ O	1.6g
--	------

Preparation of Thiosulfate Solution: Add Na₂S₂O₃·5H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Adjust to pH 10.0. Filter sterilize.

Trace Elements Solution:**Composition** per liter:

EDTA	5.0g
FeSO ₄ ·7H ₂ O.....	2.0g
H ₃ BO ₃	0.01g

ZnSO ₄ ·7H ₂ O	0.3g
CoCl ₂ ·6H ₂ O	0.2g
MnCl ₂ ·4H ₂ O.....	0.03g
NiCl ₂ ·2H ₂ O.....	0.02g
NaMoO ₄ ·2H ₂ O.....	0.02g
CuCl ₂	0.01g

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 3-4.

Preparation of Medium: Add components, except vitamin, trace elements, thiosulfate, isobutyroamide, and magnesium sulfate solutions, to distilled/deionized water and bring volume to 987.0mL. Mix thoroughly. Dispense into closed bottles. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. After cooling, there may be some precipitate on the bottom. Decant into sterile bottle to eliminate precipitate. Aseptically add vitamin, trace elements, thiosulfate, isobutyroamide, and magnesium sulfate solutions. Adjust pH to 9.5. Aseptically dispense into culture vessels.

Use: For the cultivation of *Nitritoliruptor alkaliphilus*.

Nitritotriacetate Medium

Composition per 1002.0mL:

MgSO ₄ ·7H ₂ O	1.0g
Nitritotriacetate	1.0g
Na ₂ HPO ₄ ·2H ₂ O.....	0.41g
KH ₂ PO ₄	0.26g
CaCl ₂ ·2H ₂ O.....	0.2g
Trace elements solution	1.0mL
Vitamin solution.....	1.0mL

pH 6.5 ± 0.2 at 25°C

Trace Elements Solution:

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	120.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	68.0mg
H ₃ BO ₃	62.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	24.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
CuCl ₂ ·2H ₂ O.....	17.0mg
HCl (0.05M solution).....	1.0L

Preparation of Trace Elements Solution: Add FeCl₂·4H₂O to 1.0L of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly.

Vitamin Solution:

Composition per liter:

Folic acid.....	20.0g
α-Lipoic acid.....	50.0mg
p-Aminobenzoic acid.....	50.0mg
Pantothenic acid.....	50.0mg
Riboflavin	50.0mg
Thiamine-HCl.....	50.0mg
Vitamin B ₁₂	50.0mg
Nicotinamide.....	25.0mg
Biotin	20.0mg
Nicotinic acid.....	20.0mg
Pyridoxamine-HCl	10.0mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Stir for 2-3 hr. Filter sterilize.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Chelatobacter heintzii* and *Chelatococcus saccharophobus*.

Nitritincola Medium (DSMZ Medium 1174)

Composition per liter:

NaCl	17.5g
Na-acetate	10.0g
Na ₂ B ₄ O ₇	4.0g
NH ₄ Cl	0.5g
K ₂ HPO ₄	0.25g
Yeast extract	0.10g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 9.0. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Use: For the cultivation of *Nitritincola* spp.

Nitrobacter agilis Medium

Composition per liter:

CaCO ₃	10.0g
NaCl.....	0.3g
Na ₂ CO ₃	0.25g
KNO ₂	0.17g
K ₂ HPO ₄	0.14g
MgSO ₄ ·7H ₂ O.....	0.14g
FeSO ₄ ·7H ₂ O.....	0.03g
MnSO ₄ ·4H ₂ O.....	0.01g
Biotin solution	10.0mL

Biotin Solution:

Composition per 10.0mL:

Biotin	0.15g
--------------	-------

Preparation of Biotin Solution: Add biotin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add Na₂CO₃ to distilled/deionized water and bring volume to 200.0mL. Mix thoroughly. In a separate flask, add the remaining components, except the biotin solution, to distilled/deionized water and bring volume to 790.0mL. Autoclave the Na₂CO₃ solution and salts solution separately for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically combine the sterile Na₂CO₃ solution, sterile salts solution, and sterile biotin solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Nitrobacter agilis*.

Nitrobacter Medium 203

Composition per liter:

Solution C	1.0mL
Solution A.....	0.5mL
Solution B.....	0.5mL
Solution D.....	0.5mL

Solution E	0.5mL
Solution F	0.2mL

Solution A:**Composition per 100.0mL:**

CaCl ₂	2.0g
-------------------------	------

Preparation of Solution A: Add CaCl₂ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Solution B:**Composition per 100.0mL:**

MgSO ₄ ·7H ₂ O	20.0g
--	-------

Preparation of Solution B: Add MgSO₄·7H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Solution C:**Composition per 100.0mL:**

Chelated iron (Sequestrene)	0.1g
-----------------------------------	------

Preparation of Solution C: Add chelated iron to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Solution D:**Composition per liter:**

MnCl ₂ ·4H ₂ O	0.2g
Na ₂ MoO ₄ ·2H ₂ O	0.1g
ZnSO ₄ ·7H ₂ O	0.1g
CuSO ₄ ·5H ₂ O	0.02g
CoCl ₂ ·6H ₂ O	2.0mg

Preparation of Solution D: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Solution E:**Composition per 100.0mL:**

NaNO ₂	41.4g
-------------------------	-------

Preparation of Solution E: Add NaNO₂ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Solution F:**Composition per 100.0mL:**

K ₂ HPO ₄	1.74g
---------------------------------------	-------

Preparation of Solution F: Add K₂HPO₄ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add the appropriate volumes of solutions A–F to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Nitrobacter* species and *Nitrobacter winogradskyi*.

Nitrobacter Medium 204**Composition per liter:**

Seawater	700.0mL
Solution C	1.0mL
Solution A	0.5mL
Solution B	0.5mL
Solution D	0.5mL
Solution E	0.5mL
Solution F	0.2mL

Solution A:**Composition per 100.0mL:**

CaCl ₂	2.0g
-------------------------	------

Preparation of Solution A: Add CaCl₂ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Solution B:**Composition per 100.0mL:**

MgSO ₄ ·7H ₂ O	20.0g
--	-------

Preparation of Solution B: Add MgSO₄·7H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Solution C:**Composition per 100.0mL:**

Chelated iron (Sequestrene)	0.1g
-----------------------------------	------

Preparation of Solution C: Add chelated iron to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Solution D:**Composition per liter:**

MnCl ₂ ·4H ₂ O	0.2g
Na ₂ MoO ₄ ·2H ₂ O	0.1g
ZnSO ₄ ·7H ₂ O	0.1g
CuSO ₄ ·5H ₂ O	0.02g
CoCl ₂ ·6H ₂ O	2.0mg

Preparation of Solution D: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Solution E:**Composition per 100.0mL:**

NaNO ₂	41.4g
-------------------------	-------

Preparation of Solution E: Add NaNO₂ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Solution F:**Composition per 100.0mL:**

K ₂ HPO ₄	1.74g
---------------------------------------	-------

Preparation of Solution F: Add K₂HPO₄ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add the appropriate volumes of solutions A–F and seawater to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Nitrococcus mobilis*.

Nitrobacter Medium B**Composition per liter:**

NaNO ₂	1.0g
K ₂ HPO ₄	0.5g
MgSO ₄	0.5g
NaCl	0.3g
Fe ₂ (SO ₄) ₃	5.0mg
MnSO ₄	2.0mg
Marble chips	as needed

pH 7.5 ± 0.2 at 25°C

Preparation of Medium: Add components, except marble chips, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Wash marble chips in distilled/deionized water. Put a few chips into test tubes. Autoclave for 60 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically distribute cooled sterile medium into test tubes to cover marble chips.

Use: For the cultivation of *Nitrobacter* species.

Nitrococcus Medium**Composition** per 1004.0mL:

NaNO ₂ solution.....	1.0mL
K ₂ HPO ₄ solution.....	1.0mL
NaHCO ₃ solution.....	1.0mL
Chelated metals solution.....	1.0mL
pH 7.5 ± 0.1 at 25°C	

NaNO₂ Solution:**Composition** per 100.0mL:

NaNO ₂	10.0g
-------------------------	-------

Preparation of NaNO₂ Solution: Add NaNO₂ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

K₂HPO₄ Solution:**Composition** per 100.0mL:

K ₂ HPO ₄	2.5g
---------------------------------------	------

Preparation of K₂HPO₄ Solution: Add K₂HPO₄ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

NaHCO₃ Solution:**Composition** per 100.0mL:

NaHCO ₃	5.0g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Chelated Metals Solution:**Composition** per liter:

EDTA.....	6.0g
FeCl ₃ ·6H ₂ O.....	1.0g
MnSO ₄ ·H ₂ O.....	0.6g
ZnSO ₄ ·7H ₂ O.....	0.3g
Na ₂ MoO ₄ ·2H ₂ O.....	0.15g
CoCl ₂ ·6H ₂ O.....	4.0mg
CuSO ₄ ·5H ₂ O.....	4.0mg

Preparation of Chelated Metals Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Adjust pH of 1.0L of seawater to pH 7.5 with NaOH. Add 1.0mL of chelated metals solution to the seawater. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 1.0mL each of sterile NaNO₂, K₂HPO₄, and NaHCO₃ solutions. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Nitrococcus* species.

Nitrogen-Fixing Hydrocarbon Oxidizers Medium**Composition** per liter:

Na ₂ HPO ₄	0.3g
KH ₂ PO ₄	0.2g
MgSO ₄ ·7H ₂ O.....	0.1g
FeSO ₄ ·7H ₂ O.....	5.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	2.0mg

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and enrichment of nitrogen-fixing hydrocarbon-oxidizing bacteria.

Nitrogen-Fixing Marine Medium**Composition** per liter:

Noble agar.....	10.0g
MgSO ₄ ·7H ₂ O.....	0.04g
CaCl ₂ ·2H ₂ O.....	0.02g
K ₂ HPO ₄ ·3H ₂ O.....	0.02g
Na ₂ CO ₃	0.02g
Citric acid.....	3.0mg
Ferric ammonium citrate.....	3.0mg
Disodium potassium EDTA.....	0.5mg
Seawater.....	750.0mL
Trace metals A-5 mix.....	1.0mL
pH 8.5 ± 0.2 at 25°C	

Trace Metals A-5 Mix:**Composition** per liter:

H ₃ BO ₃	2.86g
MnCl ₂ ·4H ₂ O.....	1.81g
ZnSO ₄ ·7H ₂ O.....	0.222g
CuSO ₄ ·5H ₂ O.....	0.079g
Co(NO ₃) ₂ ·6H ₂ O.....	0.05g
Na ₂ MoO ₄ ·2H ₂ O.....	0.039g

Preparation of Trace Metals A-5 Mix: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to glass-distilled water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Adjust pH to 8.5 with KOH. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Anabaena* species.

Nitrogen-Free Agar**Composition** per liter:

Agar.....	15.0g
CaCO ₃	1.0g
K ₂ HPO ₄	1.0g
MgSO ₄ ·7H ₂ O.....	0.2g
NaCl.....	0.2g
FeSO ₄ ·7H ₂ O.....	0.1g
Na ₂ MoO ₄ ·2H ₂ O.....	5.0mg
Glucose solution.....	50.0mL
pH 7.0 ± 0.2 at 25°C	

Glucose Solution:**Composition** per 50.0mL:

Glucose.....	10.0g
--------------	-------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except glucose solution and agar, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Add agar. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 50.0mL of sterile glucose solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Azomonas agilis*, *Azomonas insignis*, *Azomonas macrocytogenes*, *Azorhizophilus paspali*, *Azotobacter beijerinckii*, *Azotobacter chroococcum*, *Azotobacter vinelandii*, *Beijerinckia acida*, *Beijerinckia fluminensis*, *Beijerinckia indica*, *Beijerinckia mobilis*, and *Derxia gummosa*.

Nitrogen-Free Agar (Norris Agar)

Composition per liter:

Agar	15.0g
CaCO ₃	1.0g
K ₂ HPO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.2g
NaCl	0.2g
FeSO ₄ ·7H ₂ O	0.1g
Na ₂ MoO ₄ ·2H ₂ O	5.0mg
Glucose solution	50.0mL

Glucose Solution:

Composition per 100.0mL:

Glucose	20.0g
---------------	-------

Preparation of Glucose Solution: Add 20.0g of glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Warm to 50°C.

Preparation of Medium: Add components, except glucose solution, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Adjust pH to 7.2. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 50.0mL of sterile glucose solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Azomonas agilis*, *Azotobacter chroococcum*, and *Azotobacter vinelandii*.

Nitrogen-Free Medium for *Pseudomonas stutzeri*

Composition per liter:

Disodium DL-malate	6.6g
K ₂ HPO ₄	0.5g
MgSO ₄ ·7H ₂ O	0.2g
Yeast extract	0.2g
NaCl	0.1g
FeCl ₃ ·6H ₂ O	15.0mg

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Pseudomonas stutzeri*.

Nitrogen-Free Mineral Agar for *Derxia*

Composition per liter:

Agar	15.0g
Glucose	10.0g
K ₂ HPO ₄	0.5g
MgSO ₄ ·7H ₂ O	0.25g
NaCl	0.25g
CaCl ₂	0.1g
FeSO ₄ ·7H ₂ O	0.1g
Na ₂ MoO ₄ ·2H ₂ O	5.0mg

pH 6.9 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.9. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Derxia gummosa*.

Nitrogen-Free Mineral Medium for *Beijerinckia*

Composition per liter:

Glucose	20.0g
KH ₂ PO ₄	0.8g
MgSO ₄ ·7H ₂ O	0.5g
K ₂ HPO ₄	0.2g
FeCl ₃ ·6H ₂ O	0.1g
CaCl ₂ ·2H ₂ O	0.05g
Na ₂ MoO ₄ ·2H ₂ O	5.0mg

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Beijerinckia indica*.

Nitrosococcus Medium

Composition per liter:

(NH ₄) ₂ SO ₄	1.32g
MgSO ₄ ·7H ₂ O	0.38g
CaCl ₂ ·2H ₂ O	0.02g
K ₂ HPO ₄	8.7mg
Chelated iron	1.0mg
MnCl ₂ ·4H ₂ O	0.2mg
Na ₂ MoO ₄ ·2H ₂ O	0.1mg
ZnSO ₄ ·7H ₂ O	0.1mg
CoCl ₂ ·6H ₂ O	2.0µg
Phenol Red (0.04% solution)	3.25mL

pH 7.5–7.8 at 25°C

Preparation of Medium: Add components to filtered seawater and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.5–7.8 with 1N HCl. Distribute into tubes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Nitrosococcus oceanus*.

Nitrosococcus oceanus Medium

Composition per 1001.0mL:

Phenol Red	5.0g
NH ₄ Cl	0.635g
MgSO ₄ ·7H ₂ O	0.357g
K ₂ HPO ₄	43.0mg
CaCl ₂ ·H ₂ O	20.0mg
Chelated metals solution	1.0mL

pH 7.5 ± 0.2 at 25°C

Chelated Metals Solution:

Composition per liter:

EDTA	6.0g
FeCl ₃ ·6H ₂ O	1.0g
MnSO ₄ ·H ₂ O	0.6g
ZnSO ₄ ·7H ₂ O	0.3g
Na ₂ MoO ₄ ·2H ₂ O	0.15g
CoCl ₂ ·6H ₂ O	4.0mg
CuSO ₄ ·5H ₂ O	4.0mg

Preparation of Chelated Metals Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except chelated metals solution, to filtered seawater and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.5 with sterile 0.1M K₂CO₃. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 1.0mL of sterile chelated met-

als solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Nitrosococcus oceanus*.

Nitrosolobus Medium **(ATCC Medium 438)**

Composition per liter:

(NH ₄) ₂ SO ₄	1.65g
MgSO ₄ ·7H ₂ O.....	0.2g
K ₂ HPO ₄	0.087g
CaCl ₂ ·2H ₂ O.....	0.02g
Phenol Red.....	5.0mg
Disodium EDTA.....	1.0mg
MnCl ₂ ·4H ₂ O.....	0.2mg
Na ₂ MoO ₄ ·2H ₂ O.....	0.1mg
ZnSO ₄ ·7H ₂ O.....	0.1mg
CuSO ₄ ·5H ₂ O.....	0.02mg
CoCl ₂ ·6H ₂ O.....	2.0μg

pH 7.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.5 with 0.1M K₂CO₃. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Nitrosolobus multiformis*.

Nitrosolobus Medium **(ATCC Medium 929)**

Composition per liter:

(NH ₄) ₂ SO ₄	1.32g
MgSO ₄ ·7H ₂ O.....	0.38g
K ₂ HPO ₄	0.087g
CaCl ₂ ·2H ₂ O.....	0.02g
Chelated iron.....	1.0mg
MnCl ₂ ·4H ₂ O.....	0.2mg
Na ₂ MoO ₄ ·2H ₂ O.....	0.1mg
ZnSO ₄ ·7H ₂ O.....	0.1mg
CoCl ₂ ·6H ₂ O.....	2.0μg
Phenol Red (0.5% solution).....	0.25mL

pH 7.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.5 with 0.1M K₂CO₃. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Nitrosolobus multiformis*.

Nitrosomonas europaea Medium

Composition per liter:

(NH ₄) ₂ SO ₄	1.7g
MgSO ₄ ·7H ₂ O.....	0.2g
CaCl ₂ ·2H ₂ O.....	0.02g
K ₂ HPO ₄	0.015g
Ferric EDTA.....	1.0mg
Trace elements solution.....	1.0mL

pH 7.5 ± 0.2 at 25°C

Trace Elements Solution:

Composition per 100.0mL:

MnCl ₂ ·4H ₂ O.....	0.02g
Na ₂ MoO ₄ ·2H ₂ O.....	0.01g

ZnSO ₄ ·7H ₂ O.....	0.01g
CuSO ₄ ·5H ₂ O.....	2.0mg
CoCl ₂ ·6H ₂ O.....	0.2mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.5 with K₂CO₃. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. After inoculation, maintain pH at 7.5–7.8 with sterile 50% K₂CO₃ solution.

Use: For the cultivation and maintenance of *Nitrosomonas europaea*.

Nitrosomonas Medium

Composition per liter:

(NH ₄) ₂ SO ₄	3.0g
K ₂ HPO ₄	0.5g
MgSO ₄ ·7H ₂ O.....	0.05g
CaCl ₂ ·2H ₂ O.....	4.0mg
Cresol Red (0.0005% solution).....	25.0mL
Ferric EDTA solution.....	0.1mL

pH 8.2–8.4 at 25°C

Ferric EDTA Solution:

Composition per 100.0mL:

FeSO ₄ ·7H ₂ O.....	0.5g
Disodium EDTA.....	0.14g
H ₂ SO ₄ , concentrated.....	0.05mL

Preparation of Ferric EDTA Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add CaCl₂·2H₂O and MgSO₄·7H₂O to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. In a separate flask, add remaining components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Autoclave both solutions separately for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically combine the two sterile solutions. Mix thoroughly. Aseptically distribute into sterile tubes or flasks. After inoculation, maintain pH at 8.2–8.4 with sterile 50% K₂CO₃ solution.

Use: For the cultivation and maintenance of *Nitrosomonas europaea*.

Nitrospira moscoviensis Medium **(DSMZ Medium 756d)**

Composition per liter:

NaNO ₂	0.5g
Stock solution.....	100.0mL
Trace elements solution.....	1.0mL

pH 8.6 ± 0.2 at 25°C

Stock Solution:

Composition per liter:

NaCl.....	5.0g
KH ₂ PO ₄	1.5g
MgSO ₄ ·7H ₂ O.....	0.5g
CaCO ₃	0.07g

Preparation of Stock Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Trace Elements Solution:

Composition per liter:

FeSO ₄ ·7H ₂ O.....	97.3mg
H ₃ BO ₃	49.4mg

ZnSO ₄ ·7H ₂ O	43.1mg
(NH ₄) ₆ Mo ₇ O ₂₄ ·4H ₂ O	37.1mg
MnSO ₄ ·2H ₂ O	33.8mg
CuSO ₄ ·5H ₂ O	25.0mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 8.6. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Allow to stand for 2–3 days so that pH adjusts itself to 7.4–7.6.

Use: For the cultivation of *Nitrospira moscoviensis*.

NL 333-Agar Medium (DSMZ Medium 984)

Composition per liter:

Agar-Agar	20.0g
Starch, soluble	10.0g
Malt extract	10.0g
Glucose	5.0g
Yeast extract	3.0g
Casein peptone	3.0g
NH ₄ NO ₃	3.0g
CaCO ₃	2.0g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Distribute into tubes or flasks. Gently heat while stirring and bring to boiling. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Pour into Petri dishes or leave in tubes.

Use: For the cultivation of a *Micromonospora* spp.

NMS Medium

See: [Nitrate Mineral Salts Medium](#)

NMS Medium

Composition per 1000.5mL:

Purified agar	12.5g
KNO ₃	1.0g
MgSO ₄ ·7H ₂ O	1.0g
Na ₂ HPO ₄ ·12H ₂ O	0.717g
KH ₂ PO ₄	0.272g
CaCl ₂ ·6H ₂ O	0.2g
Ferric ammonium EDTA	4.0mg
Trace elements solution	0.5mL

pH 6.8 ± 0.2 at 25°C

Trace Elements Solution:

Composition per liter:

Disodium EDTA	0.5g
FeSO ₄ ·7H ₂ O	0.2g
H ₃ BO ₃	30.0mg
CoCl ₂ ·6H ₂ O	20.0mg
ZnSO ₄ ·7H ₂ O	10.0mg
MnCl ₂ ·4H ₂ O	3.0mg
Na ₂ MoO ₄ ·2H ₂ O	3.0mg
NiCl ₂ ·6H ₂ O	2.0mg
CaCl ₂ ·2H ₂ O	1.0mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except trace elements solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.8. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 0.5mL of sterile trace elements solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Methylomonas clara*.

NMS Medium with Methanol

See: [Nitrate Mineral Salts Medium with Methanol](#)

NMS Medium for Methanotrophs (DSMZ Medium 1179)

Composition per liter:

Agar, purified	12.5g
MgSO ₄ ·7H ₂ O	1.0g
Na ₂ HPO ₄ ·12H ₂ O	0.717g
K ₂ HPO ₄	0.272g
CaCl ₂ ·2H ₂ O	0.2g
Fe(III)NH ₄ -EDTA	4.0mg
KNO ₃	1.0g
Trace elements solution	0.5mL

pH 6.8 ± 0.2 at 25°C

Trace Elements Solution:

Composition per liter:

Disodium EDTA	0.5g
FeSO ₄ ·7H ₂ O	0.2g
H ₃ BO ₃	0.03g
CoCl ₂ ·6H ₂ O	0.02g
ZnSO ₄ ·7H ₂ O	0.01g
MnCl ₂ ·4H ₂ O	3.0mg
Na ₂ MoO ₄ ·2H ₂ O	3.0mg
NiCl ₂ ·6H ₂ O	2.0mg
CaCl ₂ ·2H ₂ O	1.0mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.8. Distribute into tubes or flasks. Gently heat while stirring and bring to boiling. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Pour into Petri dishes or leave in tubes.

Use: For the cultivation of *Methylocystis hirsuta*.

NNN Medium

(Novy, MacNeal, and Nicole Medium)

Composition per liter:

Agar	7.0g
NaCl	3.0g
Rabbit blood, defibrinated	150.0mL

Preparation of Medium: Add components, except rabbit blood, to distilled/deionized water and bring volume to 850.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add sterile rabbit blood. Mix thoroughly. Aseptically distribute into sterile tubes in 5.0mL volumes. Allow tubes to cool in a slanted position at 4°C.

Use: For the cultivation and maintenance of *Leishmania* species and *Trypanosoma cruzi*.

Nocardia histidans Medium

Composition per liter:

Agar	20.0g
Yeast extract	10.0g
Glucose	10.0g
Na ₂ HPO ₄	0.95g
KH ₂ PO ₄	0.91g
MgSO ₄ ·7H ₂ O	0.5g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Nocardia histidans* and *Streptomyces* species.

Nocardia Medium

Composition per liter:

Agar	20.0g
Peptone	10.0g
Beef extract	5.0g
NaCl	2.5g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Rhodococcus globerulus* and *Nocardia* species.

Nocardia Medium 1

Composition per 1010.0mL:

Agar	12.0g
Proteose peptone	10.0g
Veal infusion solids	10.0g
NaCl	3.0g
Na ₂ HPO ₄	2.0g
Glucose	2.0g
Sodium acetate	1.0g
Adenine sulfate	0.01g
Guanine-HCl	0.01g
Uracil	0.01g
Xanthine	0.01g
Thiamine	0.02mg
Additives solution	10.0mL

pH 7.4 ± 0.2 at 25°C

Additives Solution:

Composition per 10.0mL:

Actidione (cycloheximide)	0.05mg
Mycostatin	0.05mg
Dimethylchlorotetracycline-HCl	5.0µg

Preparation of Additives Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: Add components, except additives solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add additives solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of *Nocardia*.

Nocardia Medium 2

Composition per 1010.0mL:

Agar	12.0g
Proteose peptone	10.0g
Veal infusion solids	10.0g
NaCl	3.0g
Na ₂ HPO ₄	2.0g
Glucose	2.0g
Sodium acetate	1.0g
Adenine sulfate	0.01g
Guanine-HCl	0.01g
Uracil	0.01g
Xanthine	0.01g
Thiamine	0.02mg
Additives solution	10.0mL

pH 7.4 ± 0.2 at 25°C

Additives Solution:

Composition per 10.0mL:

Actidione (cycloheximide)	0.05mg
Mycostatin	0.05mg
Methacycline-HCl	0.01mg

Preparation of Additives Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: Add components, except additives solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add additives solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of *Nocardia*.

Nocardia Medium 3

Composition per 1010.0mL:

Agar	12.0g
Proteose peptone	10.0g
Veal infusion solids	10.0g
NaCl	3.0g
Na ₂ HPO ₄	2.0g
Glucose	2.0g
Sodium acetate	1.0g
Adenine sulfate	0.01g
Guanine-HCl	0.01g
Uracil	0.01g
Xanthine	0.01g
Thiamine	0.02mg
Actidione	0.05mg
Mycostatin	0.05mg
Chlortetracycline-HCl	0.045mg

Demethylchlortetracycline-HCl	5.0µg
Additives solution	10.0mL
pH 7.4 ± 0.2 at 25°C	

Additives Solution:

Composition per 10.0mL:

Actidione (cycloheximide)	0.05mg
Mycostatin	0.05mg
Dimethylchlortetracycline-HCl.....	5.0µg

Preparation of Additives Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: Add components, except additives solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add additives solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of *Nocardia*.

***Nocardia* Medium 4**

Composition per 1010.0mL:

Agar	12.0g
Proteose peptone	10.0g
Veal infusion solids.....	10.0g
NaCl	3.0g
Na ₂ HPO ₄	2.0g
Glucose	2.0g
Sodium acetate.....	1.0g
Adenine sulfate	0.01g
Guanine-HCl	0.01g
Uracil	0.01g
Xanthine.....	0.01g
Thiamine	0.02mg
Additives solution	10.0mL
pH 7.4 ± 0.2 at 25°C	

Additives Solution:

Composition per 10.0mL:

Actidione (cycloheximide)	0.05mg
Mycostatin	0.05mg
Chlortetracycline-HCl	0.045mg
Methacycline-HCl	0.01mg

Preparation of Additives Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: Add components, except additives solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add additives solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of *Nocardia* species.

Nonfat Dry Milk, Reconstituted

Composition per liter:

Milk, nonfat dry	100.0g
pH 6.8 ± 0.2 at 25°C	

Preparation of Medium: Add 100.0g of nonfat dry milk to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Salmonella* species and monkey kidney cells in tissue culture.

Nonnutrient Agar

Composition per liter:

Agar	15.0g
------------	-------

Preparation of Medium: Add agar to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Naegleria lovaniensis*.

Nonnutrient Agar Plates

Composition per liter:

Agar	15.0g
Page's amoeba saline	1.0L

Page's Amoeba Saline:

Composition per liter:

Na ₂ HPO ₄	0.142g
KH ₂ PO ₄	0.136g
NaCl	0.12g
MgSO ₄ ·7H ₂ O	4.0mg
CaCl ₂ ·2H ₂ O	4.0mg

Preparation of Page's Amoeba Saline: Add components to distilled/deionized water and bring volume to 1.0mL. Mix thoroughly.

Preparation of Medium: Add agar to 1.0L of Page's amoeba saline. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 60°C. Pour into sterile Petri dishes in 20.0mL volumes. Store at 4°C for up to 3 months.

Use: For the isolation and cultivation of pathogenic free-living amoebae.

Norris Agar

See: **Nitrogen-Free Agar**

NOS Medium, Modified

Composition per 100.67mL:

Basal medium	94.0mL
NaHCO ₃ solution.....	2.67mL
TPP/VFA mixture	2.0mL
Rabbit serum, heat inactivated.....	2.0mL
pH 7.4 ± 0.2 at 25°C	

Basal Medium:

Composition per 94.0mL:

Pancreatic digest of casein.....	1.0g
Pancreatic digest of gelatin.....	0.48g
Yeast extract.....	0.25g
Brain heart, solids from infusion	0.2g
Peptic digest of animal tissue	0.2g

D-Glucose	0.2g
NaCl	0.17g
Glucose	0.1g
L-Cysteine-HCl·H ₂ O	0.1g
Na ₂ HPO ₄	0.085g
Sodium thioglycolate	0.05g
L-Asparagine	0.025g
Resazurin (0.1% w/v solution)	0.1mL

Preparation of Basal Medium: Add components to distilled/deionized water and bring volume to 94.0mL. Mix thoroughly. Gently heat and bring to boiling. Gas under O₂-free 85% N₂ + 10% CO₂ + 5% H₂. Stopper and wire flask closed. Autoclave for 20 min at 15 psi pressure–121°C. Cool to 45°–50°C.

NaHCO₃ Solution:

Composition per 10.0mL:

NaHCO ₃	0.75g
--------------------	-------

Preparation of NaHCO₃ Solution: Add the NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

TPP/VFA Mixture:

Composition per 10.9mL:

Thiamine pyrophosphate (0.2% solution)	1.5mL
VFA solution	1.0mL

Preparation of TPP/VFA Mixture: Add components to distilled/deionized water and bring volume to 10.9mL. Mix thoroughly. Filter sterilize. Store at –20°C.

VFA Solution:

Composition per 100.0mL:

NaOH (0.1N solution)	98.0mL
Isobutyric acid	0.5mL
2-Methylbutyric acid	0.5mL
Isovaleric acid	0.5mL
Valeric acid	0.5mL

Preparation of VFA Solution: Add volatile fatty acids to 98.0mL of NaOH solution. Mix thoroughly. Filter sterilize. Store at 4°C.

Preparation of Medium: Open the flask containing 94.0mL of cooled sterile basal medium while flushing with O₂-free 85% N₂ + 10% CO₂ + 5% H₂. Aseptically add sterile NaHCO₃ solution, sterile TPP/VFA mixture, and filter-sterilized rabbit serum. Mix thoroughly.

Use: For the cultivation and maintenance of *Treponema vincentii* and other *Treponema* species.

NOS Spirochete Medium

Composition per 1045.0mL:

Basal medium	1.0L
NaHCO ₃ (10% solution)	20.0mL
Rabbit serum, heat inactivated	20.0mL
Thiamine pyrophosphate (0.2% solution)	3.0mL
VFA solution	2.0mL

pH 7.4 ± 0.2 at 25°C

Basal Medium:

Composition per liter:

Pancreatic digest of casein	10.0g
Pancreatic digest of gelatin	4.85g

Noble agar	3.0g
Yeast extract	2.5g
Brain heart, solids from infusion	2.0g
Peptic digest of animal tissue	2.0g
Glucose	2.0g
NaCl	1.65g
Glucose	1.0g
L-Cysteine-HCl·H ₂ O	1.0g
Na ₂ HPO ₄	0.85g
Sodium thioglycolate	0.5g
L-Asparagine	0.25g

Preparation of Basal Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Gas under O₂-free 80% N₂ + 10% CO₂ + 10% H₂. Stopper and wire flask closed. Autoclave for 20 min at 15 psi pressure–121°C. Cool to 45°–50°C.

VFA Solution:

Composition per 100.0mL:

KOH (0.1N solution)	98.0mL
Isobutyric acid	0.5mL
2-Methylbutyric acid	0.5mL
Isovaleric acid	0.5mL
Valeric acid	0.5mL

Preparation of VFA Solution: Add volatile fatty acids to 98.0mL of KOH solution. Mix thoroughly. Filter sterilize. Store at 4°C.

Preparation of Medium: Combine 20.0mL of NaHCO₃ solution, 20.0mL of rabbit serum, 3.0mL of thiamine pyrophosphate solution, and 2.0mL of VFA solution. Mix thoroughly. Filter sterilize. Open the flask containing 1.0L of cooled, sterile basal medium while flushing with O₂-free 85% N₂ + 10% CO₂ + 5% H₂. Aseptically add the filter-sterilized mixture. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Treponema denticola* and *Treponema socranskii*.

Novobiocin Agar

Composition per liter:

Agar	15.0g
Peptone	5.0g
NaCl	5.0g
Yeast extract	2.0g
Beef extract	1.0g
Novobiocin solution	10.0mL

Novobiocin Solution:

Composition per 10.0mL:

Novobiocin	10.0mg
------------	--------

Preparation of Novobiocin Solution: Add novobiocin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except novobiocin solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL of sterile novobiocin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Staphylococcus aureus*.

NPB Medium (DSMZ Medium 995)

Composition per liter:

Tryptone peptone	10.0g
D-Glucose	5.0g
Yeast extract	2.0g
MgSO ₄ ·7H ₂ O	1.0g
K ₂ HPO ₄	1.0g
KH ₂ PO ₄	0.5g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Distribute into tubes or flasks. Gently heat while stirring and bring to boiling. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Catellibacterium nectariphilum*.

NSMP, Modified

Composition per liter:

Casamino acids	5.0g
Glucose	2.0g
KH ₂ PO ₄	0.86g
Sodium citrate	0.6g
K ₂ HPO ₄	0.55g
MgCl ₂ ·6H ₂ O	0.43g
CaCl ₂	0.1g
MnCl ₂ ·4H ₂ O	0.016g
ZnCl ₂	7.0mg
FeCl ₃	3.0mg

pH 6.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Bacillus thuringiensis*.

NTYG

Composition per liter:

Glucose	10.0g
Pancreatic digest of casein	5.0g
Yeast extract	5.0g
Fetal bovine serum, dialyzed	20.0mL
Sheep blood, defibrinated	10.0mL

Fetal Bovine Serum, Dialyzed:

Composition per 100.0mL:

Fetal bovine serum, heat inactivated	100.0mL
--	---------

Preparation of Fetal Bovine Serum, Dialyzed: Dialyze the heat-inactivated serum at 0–4°C against 10 volumes of distilled/deionized water. Clean the dialysis tubing before use by boiling in 1.0L of a 0.037% EDTA solution. Rinse the tubing with distilled/deionized water. Change the water four times at 8–16 hr intervals. Centrifuge the dialyzed serum for 30 min at 35,000X g. Filter sterilize.

Preparation of Medium: Add components, except dialyzed fetal bovine serum and sheep blood, to distilled/deionized water and bring volume to 975.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 20.0mL of sterile, dialyzed fetal bovine serum, and 5.0mL of sterile sheep blood. Mix thoroughly. Aseptically distribute into sterile screw-capped tubes or flasks.

Use: For the cultivation of *Naegleria lovaniensis*.

Nutrient Agar (LMG Medium 160)

Composition per liter:

Agar	3.0g
Lab-Lemco beef extract	1.0g
Peptone	1.0g
NaCl	0.5g

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of heterotrophic bacteria.

Nutrient Agar

Composition per liter:

Agar	15.0g
Peptone	5.0g
NaCl	5.0g
Yeast extract	2.0g
Beef extract	1.0g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of a wide variety of microorganisms.

Nutrient Agar (ATCC Medium 3) (BAM M113)

Composition per liter:

Agar	15.0g
Pancreatic digest of gelatin	5.0g
Beef extract	3.0g

pH 6.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of a wide variety of bacteria and for the enumeration of organisms in water, sewage, feces, and other materials. For the cultivation of *Bacillus cereus*.

Nutrient Agar (Oxoid CM3) (LMG Medium 1)

Composition per liter:

Agar	15.0g
Peptone	5.0g
NaCl	5.0g

Yeast extract.....	2.0g
Lab-Lemco beef extract.....	1.0g
pH 7.4 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Pseudomonas* spp., *Acidovorax* spp., *Ralstonia* spp., *Delftia acidovorans*, *Burkholderia* spp., *Comamonas testosteroni*, *Microbacterium flavescens*, and other bacteria.

Nutrient Agar, 1.5% (ATCC Medium 105)

Composition per liter:

Agar.....	15.0g
NaCl.....	8.0g
Pancreatic digest of gelatin.....	5.0g
Beef extract.....	3.0g
pH 7.3 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of a variety of nonfastidious bacteria.

Nutrient Agar, Alkaline (LMG Medium 53)

Composition per liter:

Agar.....	15.0g
Peptone.....	5.0g
NaCl.....	5.0g
Yeast extract.....	2.0g
Lab-Lemco beef extract.....	1.0g
pH 9.5–10.0 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 9.5–10.0 with sterile Na₂CO₃ solution. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Bacillus alcalophilus* and *Bacillus cohnii*.

Nutrient Agar, Buffered

Composition per liter:

Agar.....	15.0g
Peptone.....	5.0g
NaCl.....	5.0g
Na ₂ HPO ₄ ·12H ₂ O.....	2.39g
Yeast extract.....	2.0g
Beef extract.....	1.0g
KH ₂ PO ₄	0.45g
pH 6.8 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 6.8. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Acidovorax avenae*, *Acidovorax avenae*, *Acidovorax delafieldii*, *Acidovorax facilis*, *Acidovorax konjaci*, *Acidovorax temperans*, *Aminobacter aminovorans*, *Chryseomonas luteola*, *Comamonas acidovorans*, *Comamonas testosteroni*, *Flavimonas oryzihabitans*, *Flavobacterium breve*, *Flavobacterium mizutaii*, *Hydrogenoflava palleronii*, *Hydrogenophaga flava*, *Hydrogenophaga pseudoflava*, *Hydrogenophaga taeniospiralis*, numerous *Pseudomonas* species, *Sphingobacterium multivorum*, *Sphingobacterium spiritivorum*, *Weeksella virosa*, *Weeksella zoohelcum*, and *Moraxella atlantae*.

Nutrient Agar with Formate, Fumarate, and Horse Blood (LMG Medium 250)

Composition per liter:

Agar.....	15.0g
Peptone.....	5.0g
NaCl.....	5.0g
Fumaric acid.....	3.0g
Sodium formate.....	2.0g
Yeast extract.....	2.0g
Lab-Lemco beef extract.....	1.0g
Horse blood, sterile defibrinated.....	50.0mL
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components, except horse blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Adjust pH to 7.2. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°C. Aseptically add 50.0mL sterile defibrinated horse blood. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Campylobacter rectus* and *Campylobacter gracilis*.

Nutrient Agar, Half Strength

Composition per liter:

Agar.....	15.0g
Peptone.....	2.5g
NaCl.....	2.5g
Yeast extract.....	1.0g
Beef extract.....	0.5g
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Chromobacterium* species and *Thermomonospora chromogena*.

Nutrient Agar 1.5%, HiVeg

Composition per liter:

Agar.....	15.0g
NaCl.....	8.0g

Plant peptone..... 5.0g
 Plant extract 3.0g
 pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of a wide variety of microorganisms.

Nutrient Agar 1.5%, HiVeg with Ascitic Fluid

Composition per liter:

Agar 15.0g
 NaCl 8.0g
 Plant peptone..... 5.0g
 Plant extract 3.0g
 Ascitic fluid..... 250.0mL
 pH 7.4 ± 0.2 at 25°C

Source: This medium, without ascitic fluid, is available as a premixed powder from HiMedia.

Preparation of Medium: Add components, except ascitic fluid, to distilled/deionized water and bring volume to 750.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to less than 37°C. Aseptically add sterile ascitic fluid. If desired, 0.5g of thallium acetate or 100,000U of penicillin may be added for a more selective medium. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the enrichment of pleuro-pneumonia-like organisms (PPLOs) and *Mycoplasma* species from clinical specimens.

Nutrient Agar with Maltose

Composition per liter:

Agar 15.0g
 Maltose..... 10.0g
 Pancreatic digest of gelatin 5.0g
 Beef extract 3.0g
 pH 6.8 ± 0.2 at 25°C

Source: Nutrient agar is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Nocardia corynebacteroides*.

Nutrient Agar No. 2

Composition per liter:

Agar 20.0g
 Meat extract 10.0g
 Peptone..... 10.0g
 NaCl 5.0g
 pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring

to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of a wide variety of bacteria.

**Nutrient Agar No. 2, Diluted 1/10
 (DSMZ Medium 952)**

Composition per liter:

Agar 20.0g
 Peptone 1.0g
 Meat extract 1.0g
 NaCl 0.5g
 pH 7.1 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.1. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Agromonas oligotrophica*.

Nutrient Agar No. 2, Diluted 1/10

Composition per liter:

Agar 20.0g
 Meat extract 1.0g
 Peptone 1.0g
 NaCl 0.5g
 pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Agromonas oligotrophica* and *Kurthia gibsonii*.

**Nutrient Agar No. 2 Diluted 1/100
 (DSMZ Medium 952)**

Composition per liter:

Agar 20.0g
 Peptone 0.1g
 Meat extract 0.1g
 NaCl 50.0mg
 pH 7.1 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.1. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Bacillus pumilus*.

Nutrient Agar No. 2 Diluted 1/100

Composition per liter:

Agar 20.0g
 Meat extract 0.1g
 Peptone 0.1g
 NaCl 50.0mg
 pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0.

Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Agromonas oligotrophica*.

Nutrient Agar No. 2, HiVeg

Composition per liter:

Agar	15.0g
Plant extract	10.0g
Plant peptone.....	10.0g
NaCl.....	5.0g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of a wide variety of microorganisms.

Nutrient Agar Oxoid CM3 with Phosphate (DSMZ Medium 605a)

Composition per liter:

Agar	15.0g
Peptone.....	5.0g
NaCl.....	5.0g
Na ₂ HPO ₄ ·12H ₂ O.....	2.39g
Yeast extract.....	2.0g
Lab-Lemco beef extract.....	1.0g
KH ₂ PO ₄	0.45g

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Devosia riboflavina*, *Brevundimonas diminuta*, and *Herbaspirillum rubrisubalbicans*.

Nutrient Agar with 1% Peptone, HiVeg

Composition per liter:

Agar	15.0g
Plant peptone.....	10.0g
Plant extract	5.0g
NaCl.....	5.0g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of a wide variety of microorganisms.

Nutrient Agar, pH 5.0 (Oxoid Nutrient Agar No. 1, pH 5.0)

Composition per liter:

Agar	15.0g
Peptone	5.0g
NaCl.....	5.0g
Yeast extract.....	2.0g
Beef extract.....	1.0g

pH 5.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 5.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Pseudomonas phenazinium*.

Nutrient Agar pH 6.0

Composition per liter:

Agar	15.0g
Peptone	5.0g
Beef extract.....	3.0g

pH 6.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 6.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of microorganisms that prefer a slightly acid nutrient agar.

Nutrient Agar pH 6.0 with 0.8% NaCl, HiVeg

Composition per liter:

Agar	15.0g
NaCl.....	8.0g
Plant peptone	5.0g
Plant extract	3.0g

pH 6.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of microorganisms that prefer a slightly acid nutrient agar.

Nutrient Agar pH 6.8 (LMG Medium 2)

Composition per liter:

Agar	15.0g
Peptone	5.0g
NaCl.....	5.0g
Na ₂ HPO ₄ ·12 H ₂ O.....	2.39g
Yeast extract.....	2.0g

Lab-Lemco beef extract	1.0g
KH ₂ PO ₄	0.45g
pH 6.8 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.8. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Acidovorax facilis*, *Pseudomonas geniculata*, *Arthrobacter siderocapsulatus*, *Delftia acidovorans*, *Pseudomonas* spp., and various other heterotrophic bacteria.

Nutrient Agar, pH 6.8, HiVeg

Composition per liter:

Agar	15.0g
Plant peptone	5.0g
Plant extract	3.0g
pH 6.8 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of a wide variety of microorganisms.

Nutrient Agar pH 6.8, HiVeg with Blood

Composition per liter:

Agar	15.0g
Plant peptone	5.0g
Plant extract	3.0g
Sheep blood, defibrinated	50.0mL
pH 6.8 ± 0.2 at 25°C	

Source: This medium, without blood, is available as a premixed powder from HiMedia.

Preparation of Medium: Add components, except sheep blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Heat with frequent agitation and boil for 1 min to completely dissolve. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50.0mL of sterile, defibrinated sheep blood. Mix thoroughly and pour into sterile Petri dishes.

Use: For the cultivation of streptococci and other fastidious microorganisms.

Nutrient Agar pH 6.8 with Horse Blood

(LMG Medium 234)

Composition per liter:

Agar	15.0g
Peptone	5.0g
NaCl	5.0g
Na ₂ HPO ₄ ·12 H ₂ O	2.39g
Yeast extract	2.0g
Lab-Lemco beef extract	1.0g
KH ₂ PO ₄	0.45g
Horse blood, sterile defibrinated	50.0mL
pH 6.8 ± 0.2 at 25°C	

Preparation of Medium: Add components, except horse blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Adjust pH to 6.8. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50.0mL sterile horse blood. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Neisseria weaveri*.

Nutrient Agar pH 8.0

Composition per liter:

Agar	15.0g
Pancreatic digest of gelatin	5.0g
Beef extract	3.0g
pH 8.0 ± 0.2 at 25°C.	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 8.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes. Allow tubes to cool in a slanted position.

Use: For the cultivation and maintenance of *Bacillus alcalophilus*.

Nutrient Agar pH 9.0 (ATCC Medium 2029)

Composition per liter:

Agar	15.0g
Pancreatic digest of gelatin	5.0g
Beef extract	3.0g
pH 9.0 ± 0.1 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 9.0. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of alkilophilic bacteria.

Nutrient Agar pH 9.5

Composition per liter:

Agar	15.0g
Pancreatic digest of gelatin	5.0g
Beef extract	3.0g
Na ₂ CO ₃ solution	variable
pH 9.5–10.0 at 25°C	

Na₂CO₃ Solution:

Composition per 100.0mL:

Na ₂ CO ₃	5.0g
---------------------------------------	------

Preparation of Na₂CO₃ Solution: Add Na₂CO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C.

Preparation of Medium: Add components, except Na₂CO₃ solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Adjust pH to 9.5 with sterile Na₂CO₃ solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes. Allow tubes to cool in a slanted position.

Use: For the cultivation and maintenance of *Bacillus alcalophilus*.

Nutrient Agar pH 10.0 (ATCC Medium 2030)

Composition per liter:

Agar	15.0g
Pancreatic digest of gelatin	5.0g
Beef extract	3.0g

pH 10.0 ± 0.1 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 10.0. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of alkilophilic bacteria.

Nutrient Agar with Cysteine (ATCC Medium 812)

Composition per liter:

Agar	15.0g
Pancreatic digest of gelatin	5.0g
Beef extract	3.0g
L-Cysteine.....	0.1g

pH 6.8 ± 0.2 at 25°C

Source: Nutrient agar is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Salmonella choleraesuis*.

Nutrient Agar with Dihydrostreptomycin

Composition per liter:

Agar	15.0g
Pancreatic digest of gelatin	5.0g
Beef extract	3.0g
Dihydrostreptomycin solution	10.0mL

pH 6.8 ± 0.2 at 25°C

Source: Nutrient agar is available as a premixed powder from BD Diagnostic Systems.

Dihydrostreptomycin Solution:

Composition per 10.0mL:

Dihydrostreptomycin	0.625g
---------------------------	--------

Preparation of Dihydrostreptomycin Solution: Add dihydrostreptomycin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except dihydrostreptomycin solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile dihydrostreptomycin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Escherichia coli*, *Micrococcus luteus*, *Shigella* species, and *Vibrio cholerae*.

Nutrient Agar with Erythromycin

Composition per liter:

Agar	15.0g
Peptone	5.0g
Beef extract.....	3.0g
Erythromycin solution	10.0mL

pH 6.8 ± 0.2 at 25°C.

Erythromycin Solution:

Composition per 10.0mL:

Erythromycin	0.6g
--------------------	------

Preparation of Erythromycin Solution: Add erythromycin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except erythromycin solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile erythromycin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Micrococcus luteus*.

Nutrient Agar with Ethanolamine

Composition per liter:

Agar	15.0g
Pancreatic digest of gelatin	5.0g
Beef extract	3.0g
Ethanolamine	2.0mL

pH 6.8 ± 0.2 at 25°C

Source: Nutrient agar is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Flavobacterium tirrenicum* and *Pseudomonas* species.

Nutrient Agar with Ethylene Glycol

Composition per liter:

Agar	15.0g
Pancreatic digest of gelatin	5.0g
Beef extract	3.0g
Ethylene glycol	2.0mL

pH 6.8 ± 0.2 at 25°C

Source: Nutrient agar is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Pseudomonas putida*.

Nutrient Agar with Glucose

Composition per liter:

Agar	15.0g
Pancreatic digest of gelatin	5.0g

Beef extract	3.0g
Glucose	10.0g
pH 6.8 ± 0.2 at 25°C	

Source: Nutrient agar is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Amycolata saturnea*, *Arthrobacter* species, *Corynebacterium* species, *Curtobacterium flaccumfaciens*, *Deinococcus radiodurans*, *Escherichia coli*, *Hafnia alvei*, *Micrococcus aurantiacus*, *Myxomicrobium multiplex*, *Nocardia petroleophila*, *Nocardia* species, *Pseudomonas* species, *Rhodococcus rhodochrous*, *Streptomyces piedadensis*, and *Xanthomonas* species.

Nutrient Agar with Horse Serum (LMG Medium 38)

Composition per liter:

Agar	15.0g
Peptone.....	5.0g
NaCl	5.0g
Yeast extract.....	2.0g
Lab-Lemco beef extract.....	1.0g
Horse serum	100.0mL
pH 7.4 ± 0.2 at 25°C	

Preparation of Medium: Add components, except horse serum, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool medium to 45–50°C. Aseptically add 100.0mL of sterile horse serum. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of fastidious bacteria.

Nutrient Agar with Horse Serum

Composition per liter:

Agar	15.0g
Pancreatic digest of gelatin	5.0g
Beef extract.....	3.0g
Horse serum	100.0mL
pH 6.8 ± 0.2 at 25°C	

Source: Nutrient agar is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components, except horse serum, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile horse serum. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Alysiella filiformis* and *Simonsiella crassa*.

Nutrient Agar with 10% Horse Serum (DSMZ Medium 302)

Composition per liter:

Agar	15.0g
Pancreatic digest of gelatin	5.0g

Beef extract	3.0g
Horse serum.....	100.0mL
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components, except horse serum, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 100.0mL filter sterilized horse serum. Mix thoroughly. Pour into sterile Petri dishes or aseptically distribute into tubes.

Use: For the isolation and cultivation of *Simonsiella crassa*.

Nutrient Agar with Manganese (NAMn)

Composition per liter:

Agar	15.0g
Pancreatic digest of gelatin.....	5.0g
Beef extract.....	3.0g
Manganese sulfate solution.....	1.0mL
pH 6.8 ± 0.2 at 25°C	

Manganese Sulfate Solution:

Composition per 100.0mL:

MnSO ₄ ·H ₂ O	3.08g
---	-------

Preparation of Manganese Sulfate Solution: Add MnSO₄·H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Bacillus* species from canned foods. For enhanced spore production by *Bacillus* species.

Nutrient Agar with Manganese Sulfate (ATCC Medium 1859)

Composition per liter:

Agar	15.0g
Pancreatic digest of gelatin.....	5.0g
Beef extract.....	3.0g
Manganese sulfate solution.....	1.0mL
pH 6.8 ± 0.2 at 25°C	

Manganese Sulfate Solution:

Composition per 100.0mL:

MnSO ₄ ·H ₂ O	0.5g
---	------

Preparation of Manganese Sulfate Solution: Add MnSO₄·H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of *Paenibacillus chondroitinus* and *Paenibacillus alginolyticus*.

Nutrient Agar with 1% Methanol (ATCC Medium 620)

Composition per liter:

Agar	15.0g
Pancreatic digest of gelatin.....	5.0g

Beef extract	3.0g
Methanol	10.0mL
pH 6.8 ± 0.2 at 25°C	

Source: Nutrient agar is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Filter sterilize methanol. Add components, except methanol, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile methanol. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Bacillus* species, *Methylobacterium clara*, and *Pseudomonas methanolica*.

Nutrient Agar with 2% Methanol (ATCC Medium 628)

Composition per liter:

Agar	15.0g
Pancreatic digest of gelatin	5.0g
Beef extract	3.0g
Methanol	20.0mL
pH 6.8 ± 0.2 at 25°C	

Source: Nutrient agar is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Filter sterilize methanol. Add components, except methanol, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile methanol. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Pseudomonas* species.

Nutrient Agar with 0.5% Sodium Chloride

Composition per liter:

Agar	15.0g
NaCl	5.0g
Pancreatic digest of gelatin	5.0g
Beef extract	3.0g
pH 6.8 ± 0.2 at 25°C	

Source: Nutrient agar is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Agrobacterium tumefaciens*, *Escherichia coli*, *Pseudomonas aeruginosa*, *Salmonella choleraesuis*, *Shigella dysenteriae*, *Shigella flexneri*, *Vibrio* species, and *Yersinia* species.

Nutrient Agar with 0.5% Sodium Chloride, pH 9.5-10.0 (LMG Medium 253)

Composition per liter:

Agar	15.0g
NaCl	10.0g
Peptone	5.0g

Yeast extract	2.0g
Lab-Lemco beef extract	1.0g
pH 9.5–10.0	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Adjust pH to 9.5–10.0 with sterile Na₂CO₃ solution. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Bacillus* spp.

Nutrient Agar with 1.5% Sodium Chloride

Composition per liter:

NaCl	15.0g
Agar	15.0g
Pancreatic digest of gelatin	5.0g
Beef extract	3.0g
pH 6.8 ± 0.2 at 25°C	

Source: Nutrient agar is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Photobacterium leiognathi*, *Pseudomonas fluorescens*, and *Vibrio natriegens*.

Nutrient Agar with 2% Sodium Chloride

Composition per liter:

NaCl	20.0g
Agar	15.0g
Pancreatic digest of gelatin	5.0g
Beef extract	3.0g
pH 6.8 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Vibrio alginolyticus*, *Vibrio bivalvii*, *Vibrio mediterranei*, *Vibrio natriegens*, *Vibrio ordali*, *Vibrio orientalis*, *Vibrio parahaemolyticus*, *Vibrio pelagius*, and *Vibrio vulnificus*.

Nutrient Agar with 3% Sodium Chloride (LMG Medium 257)

Composition per liter:

NaCl	35.0g
Agar	15.0g
Peptone	5.0g
Yeast extract	2.0g
Lab-Lemco beef extract	1.0g
pH 7.4 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Adjust pH to 9.5–10.0 with sterile Na₂CO₃ solution. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Bacillus cirroflagellus*.

Nutrient Agar with 3% Sodium Chloride**Composition per liter:**

NaCl	30.0g
Agar	15.0g
Pancreatic digest of gelatin	5.0g
Beef extract	3.0g
pH 6.8 ± 0.2 at 25°C	

Source: Nutrient agar is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Bacillus* species, *Alteromonas nigrifaciens*, *Halococcus* species, *Planococcus citreus*, *Pseudomonas beijerinckii*, *Staphylococcus* species, *Streptococcus pyogenes*, and *Vibrio* species.

**Nutrient Agar
with 5% Sodium Chloride, pH 9.5–10.0
(LMG Medium 254)**

Composition per liter:

NaCl	55.0g
Agar	15.0g
Peptone.....	5.0g
Yeast extract.....	2.0g
Lab-Lemco beef extract.....	1.0g
pH 9.5–10.0	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Adjust pH to 9.5–10.0 with sterile Na₂CO₃ solution. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Bacillus haloalkaliphilus*.

Nutrient Agar with 10% Sodium Chloride**Composition per liter:**

NaCl	100.0g
Agar	15.0g
Pancreatic digest of gelatin	5.0g
Beef extract	3.0g
pH 6.8 ± 0.2 at 25°C	

Source: Nutrient agar is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Paracoccus halodenitrificans* and *Micrococcus* species.

**Nutrient Agar with 10% Sodium Chloride
and Maltose**

Composition per liter:

NaCl	100.0g
Agar	15.0g

Maltose	10.0g
Pancreatic digest of gelatin	5.0g
Beef extract	3.0g
pH 6.8 ± 0.2 at 25°C	

Source: Nutrient agar is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Paracoccus halodenitrificans* and *Micrococcus* species.

**Nutrient Agar with 0.5% Sodium Chloride
and Sodium Citrate**

Composition per liter:

Agar	15.0g
NaCl	5.0g
Pancreatic digest of gelatin	5.0g
Beef extract	3.0g
Sodium citrate	2.94g
pH 6.8 ± 0.2 at 25°C	

Source: Nutrient agar is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Escherichia coli*.

**Nutrient Agar with Nalidixic Acid
(ATCC Medium 2089)**

Composition per liter:

Agar	15.0g
Pancreatic digest of gelatin	5.0g
NaCl	5.0g
Beef extract	3.0g
Nalidixic acid solution.....	10.0mL
pH 6.8 ± 0.2 at 25°C	

Nalidixic Acid Solution:**Composition per 10.0mL:**

Nalidixic acid.....	0.1g
---------------------	------

Preparation of Nalidixic Acid Solution: Add nalidixic acid to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except nalidixic acid solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile nalidixic acid solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of nalidixic acid-resistant bacteria.

**Nutrient Agar with Phosphate
See: [Nutrient Agar, Buffered](#)**

Nutrient Agar with Phytone™**Composition per liter:**

Agar	15.0g
Phytone™	10.0g
Pancreatic digest of gelatin	5.0g
Beef extract	3.0g
pH 6.8 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of a wide variety of bacteria.

Nutrient Agar with Potato Starch**Composition per liter:**

Agar	15.0g
Potato starch	10.0g
Pancreatic digest of gelatin	5.0g
Beef extract	3.0g
pH 6.8 ± 0.2 at 25°C	

Source: Nutrient agar is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Bacillus polymyxa* and *Bacillus subtilis*.

Nutrient Agar with Soil Extract**Composition per liter:**

Agar	15.0g
Pancreatic digest of gelatin	5.0g
Beef extract	3.0g
Soil extract	250.0mL
pH 6.8 ± 0.2 at 25°C	

Source: Nutrient agar is available as a premixed powder from BD Diagnostic Systems.

Soil Extract:**Composition per 300.0mL:**

African Violet soil	115.5g
Na ₂ CO ₃	0.3g

Preparation of Soil Extract: Add components to tap water and bring volume to 300.0mL. Autoclave for 60 min at 15 psi pressure–121°C. Filter through Whatman filter paper.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the cultivation and maintenance of *Aerobacterium* species, *Bacillus* species, and *Saccharomonospora viridis*.

Nutrient Agar with Streptomycin**Composition per liter:**

Agar	15.0g
Peptone	5.0g

Beef extract	3.0g
Streptomycin solution	10.0mL
pH 6.8 ± 0.2 at 25°C	

Streptomycin Solution:**Composition per 10.0mL:**

Streptomycin	0.02g
--------------------	-------

Preparation of Streptomycin Solution: Add streptomycin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except streptomycin solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile streptomycin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Corynebacterium glutamicum* and *Corynebacterium herculis*.

Nutrient Agar with Sucrose**Composition per liter:**

Sucrose	20.0g
Agar	15.0g
Pancreatic digest of gelatin	5.0g
Beef extract	3.0g
pH 6.8 ± 0.2 at 25°C	

Source: Nutrient agar is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Pseudomonas* species.

**Nutrient Agar with 2% Sucrose
(ATCC Medium 1297)****Composition per liter:**

Sucrose	20.0 g
Agar	15.0g
Pancreatic digest of gelatin	5.0g
Beef extract	3.0g
pH 6.8 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of osmophilic bacteria

Nutrient Agar with Tetracycline**Composition per liter:**

Agar	15.0g
Pancreatic digest of gelatin	5.0g
Beef extract	3.0g
Tetracycline solution	10.0mL
pH 6.8 ± 0.2 at 25°C	

Source: Nutrient agar is available as a premixed powder from BD Diagnostic Systems.

Tetracycline Solution:**Composition per 10.0mL:**

Tetracycline..... 0.025g

Preparation of Tetracycline Solution: Add tetracycline to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except tetracycline solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile tetracycline solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Salmonella choleraesuis*.

Nutrient Agar with Uracil**Composition per liter:**

Agar 15.0g

Pancreatic digest of gelatin 5.0g

Beef extract 3.0g

Uracil 0.01g

pH 6.8 ± 0.2 at 25°C

Source: Nutrient agar is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Escherichia coli*.

Nutrient Agar with 5% Urea**Composition per liter:**

Agar 15.0g

Pancreatic digest of gelatin 5.0g

Beef extract 3.0g

Urea solution..... 100.0mL

pH 6.8 ± 0.2 at 25°C

Urea Solution:**Composition per 100.0mL:**

Urea..... 50.0g

Preparation of Urea Solution: Add urea to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except urea solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 100.0mL of sterile urea solution. Mix thoroughly. Pour into sterile Petri dishes or aseptically distribute into sterile tubes.

Use: For the cultivation and maintenance of *Aspergillus* species.

**Nutrient Agar with Ureum
(LMG Medium 139)****Composition per liter:**

Ureum 20.0g

Agar 15.0g

Peptone..... 5.0g

NaCl..... 5.0g

Yeast extract..... 2.0g

Lab-Lemco beef extract..... 1.0g

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Sporosarcina pasteurii*.

Nutrient Agar with V-8™ Juice**Composition per liter:**

Agar 15.0g

Pancreatic digest of gelatin 5.0g

Beef extract..... 3.0g

V-8™ juice..... 200.0mL

pH 6.8 ± 0.2 at 25°C

Source: Nutrient agar is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Pseudomonas tolaasii*.

Nutrient Agar with Yeast Extract**Composition per liter:**

Yeast extract..... 20.0g

Agar 15.0g

Pancreatic digest of gelatin 5.0g

Beef extract..... 3.0g

pH 6.8 ± 0.2 at 25°C

Source: Nutrient agar is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Bacillus anthracis* and *Comamonas testosteroni*.

Nutrient Broth**Composition per liter:**

Peptone 5.0g

NaCl..... 5.0g

Yeast extract..... 2.0g

Beef extract..... 1.0g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of a wide variety of nonfastidious microorganisms.

Nutrient Broth (DSMZ Medium 948)

Composition per liter:

Peptone.....	5.0g
NaCl.....	5.0g
Yeast extract.....	2.0g
Lab-Lemco beef extract.....	1.0g
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Psychrobacter urativorans*.

Nutrient Broth

Composition per liter:

Pancreatic digest of gelatin.....	5.0g
Beef extract.....	3.0g
pH 6.9 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of a wide variety of nonfastidious microorganisms.

Nutrient Broth with Bovine Serum

Composition per liter:

NaCl.....	10.0g
Pancreatic digest of gelatin.....	5.0g
Beef extract.....	3.0g
Bovine serum.....	100.0mL
pH 6.9 ± 0.2 at 25°C	

Preparation of Medium: Add components, except bovine serum, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile bovine serum. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Pseudomonas anguilliseptica*.

Nutrient Broth, Diluted 1:100

Nutrient Broth:

Composition per liter:

Pancreatic digest of gelatin.....	5.0g
Beef extract.....	3.0g
pH 6.8 ± 0.2 at 25°C	

Preparation of Nutrient Broth: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add 10.0mL of nutrient broth to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Agromonas oligotrophica*.

Nutrient Broth Glycerol Medium

Composition per liter:

Glycerol.....	100.0g
Pancreatic digest of gelatin.....	5.0g
Beef extract.....	3.0g
pH 7.2–7.4 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Pseudomonas* species.

Nutrient Broth with Manganese Sulfate

Composition per liter:

MnSO ₄	5.0g
Pancreatic digest of gelatin.....	5.0g
Beef extract.....	3.0g
pH 6.9 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Bacillus chondroitinus* and *Bacillus alginoliticus*.

Nutrient Broth with Rifampicin

Composition per liter:

Peptone.....	5.0g
NaCl.....	5.0g
Yeast extract.....	2.0g
Beef extract.....	1.0g
Rifampicin solution.....	10.0mL
pH 7.4 ± 0.2 at 25°C	

Rifampicin Solution:

Composition per 10.0mL:

Rifampicin.....	10.0mg
-----------------	--------

Preparation of Rifampicin Solution: Add rifampicin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except rifampicin solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Adjust pH to 7.4. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add 10.0mL of sterile rifampicin solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Agrobacterium tumefaciens*.

Nutrient Broth with 6% Sodium Chloride

Composition per liter:

NaCl.....	60.0g
Pancreatic digest of gelatin.....	5.0g
Beef extract.....	3.0g
pH 6.8 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of organisms in water, sewage, feces, and other materials. For the cultivation and maintenance of *Paracoccus halodenitrificans*.

Nutrient Broth Sodium Chloride Thymine Medium**Composition** per liter:

Pancreatic digest of gelatin	5.0g
NaCl	5.0g
Beef extract	3.0g
Thymine	0.03g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Salmonella choleraesuis*.

Nutrient Broth Salts Medium**Composition** per liter:

Pancreatic digest of gelatin	5.0g
Beef extract	3.0g
NaCl	3.0g
MgSO ₄ ·7H ₂ O	0.2g
CaCl ₂ ·2H ₂ O	0.15g
MnSO ₄ ·H ₂ O	0.05g

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Bacillus subtilis*.

Nutrient Broth, Standard II**Composition** per liter:

Special peptone	8.6g
NaCl	6.4g

pH 7.5 ± 0.1 at 37°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of a variety of fastidious and nonfastidious microorganisms.

Nutrient Broth, 1/2 Strength**Composition** per liter:

Pancreatic digest of gelatin	2.5g
Beef extract	1.5g

pH 6.9 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Cytophaga allerginae*, *Cytophaga allergi-nae*, and *Thermomonospora chromogena*.

Nutrient Broth with Streptomycin**Composition** per liter:

Peptone	5.0g
Beef extract	3.0g
Streptomycin solution	10.0mL

pH 6.8 ± 0.2 at 25°C

Streptomycin Solution:**Composition** per 10.0mL:

Streptomycin	0.02g
--------------------	-------

Preparation of Streptomycin Solution: Add streptomycin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except streptomycin solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile streptomycin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Corynebacterium glutamicum* and *Corynebacterium herculis*.

Nutrient Broth No. 2**Composition** per liter:

Beef extract	10.0g
Peptone	10.0g
NaCl	5.0g

pH 7.5 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of a variety of fastidious and nonfastidious microorganisms.

Nutrient Broth Yeast Extract MediumSee: **NCY Medium****Nutrient Broth Yeast Extract Medium**See: **NY Medium****Nutrient Gelatin****Composition** per liter:

Gelatin	120.0g
Pancreatic digest of gelatin	5.0g
Beef extract	3.0g

pH 6.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems and Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring to 50°C. Distribute into tubes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and differentiation of bacteria based on their ability to liquefy gelatin.

Nutrient Gelatin**Composition** per liter:

Beef heart, solids from infusion	500.0g
Gelatin	120.0g
Tryptose	10.0g
NaCl	5.0g

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring

to boiling. Distribute into screw-capped tubes in 4.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of Gram-negative, nonfermentative bacteria from foods.

Nutrient Gelatin, CDC (BAM M115)

Composition per liter:

Gelatin.....	120.0g
Pancreatic digest of casein.....	13.0g
NaCl.....	5.0g
Yeast extract.....	5.0g
Heart muscle, solids from infusion.....	2.0g

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Cool to 55°C. Adjust pH to 7.4. Distribute into screw-capped tubes in 4.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of Gram-negative, nonfermentative bacteria from foods.

Nutrient Glucose Agar (LMG Medium 51)

Composition per liter:

Agar.....	15.0g
Glucose.....	10.0g
Peptone.....	5.0g
NaCl.....	5.0g
Yeast extract.....	2.0g
Lab-Lemco beef extract.....	1.0g

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Paenibacillus* spp., *Pseudomonas amygdali*, *Bacillus circulans*, *Brevibacillus laterosporus*, *Brevibacillus invocatus*, and other bacteria.

Nutrient HiVeg Agar

Composition per liter:

Agar.....	15.0g
Plant peptone.....	5.0g
NaCl.....	5.0g
Plant extract.....	1.5g
Yeast extract.....	1.5g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of a wide variety of microorganisms. This medium may be used for blood culture work with the addition of 5–10% sterile defibrinated blood.

Nutrient HiVeg Agar, 1.5%

Composition per liter:

Agar.....	15.0g
Plant peptone.....	5.0g
NaCl.....	5.0g
Plant extract.....	3.0g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes. This medium may be used for blood culture work with the addition of 5–10% sterile defibrinated blood.

Use: For the cultivation and maintenance of a wide variety of microorganisms.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of a variety of microorganisms.

Nutrient HiVeg Agar pH 6.0 with 0.8% Sodium Chloride

Composition per liter:

Agar.....	15.0g
NaCl.....	8.0g
Plant peptone.....	5.0g
Plant extract.....	3.0g

pH 6.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of a wide variety of microorganisms. For the microbiological analysis of water and cultivation of bacteria requiring slightly acidic pH.

Nutrient HiVeg Agar with Manganese

Composition per liter:

Agar.....	15.0g
Plant peptone No. 2.....	5.0g
Plant extract.....	3.0g
MnSO ₄	0.03g

pH 6.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Bacillus* species from canned foods. For enhanced spore production by *Bacillus* species.

Nutrient HiVeg Agar for Oxidase**Composition per liter:**

Agar	15.0g
NaCl	5.0g
Plant extract no. 1	1.0g
Plant peptone.....	1.0g
pH 7.2 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the confirmation of presence of oxidase in microorganisms in water.

Nutrient HiVeg Agar with 1% Peptone**Composition per liter:**

Agar	15.0g
Plant peptone.....	10.0g
NaCl.....	5.0g
Plant extract	5.0g
pH 7.4 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes. This medium may be used for blood culture work with the addition of 5–10% sterile defibrinated blood.

Use: For the cultivation and maintenance of a wide variety of microorganisms.

Nutrient HiVeg Agar No. 2**Composition per liter:**

Agar	15.0g
Plant peptone.....	10.0g
Plant extract	10.0g
NaCl.....	5.0g
pH 7.2 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of a wide variety of microorganisms.

Nutrient HiVeg Broth**Composition per liter:**

Plant peptone.....	5.0g
NaCl.....	5.0g
Plant extract	1.5g
Yeast extract.....	1.5g
pH 7.4 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of a wide variety of microorganisms.

Nutrient HiVeg Broth with 1% Peptone**Composition per liter:**

Plant extract	10.0g
Plant peptone	10.0g
NaCl.....	5.0g
pH 7.2 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of a wide variety of microorganisms.

**Nutrient HiVeg Broth, pH 6.9
without Sodium Chloride****Composition per liter:**

Plant peptone	5.0g
Plant extract	3.0g
pH 6.9 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of a wide variety of microorganisms.

**Nutrient Soil Extract Agar
(LMG Medium 30)****Composition per liter:**

Agar	15.0g
Yeast extract.....	2.0g
Peptone	5.0g
NaCl.....	5.0g
Lab-Lemco beef extract.....	1.0g
Soil extract.....	1.0L
pH 7.4 ± 0.2 at 25°C	

Soil Extract:**Composition per liter:**

Soil.....	1.0kg
CaCO ₃	2.0g

Preparation of Soil Extract: Add 1.0kg soil to 1.0L tap water. Autoclave for 30 min at 15 psi pressure–121°C. Add 2.0g CaCO₃. Filter through Whatman filter paper. Bring volume to 1.0L with tap water. Mix thoroughly.

Preparation of Medium: Add components to 1.0L soil extract. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of soil bacteria.

Nutrient Yeast Glucose Medium

Composition per liter:

Glucose	10.0g
Pancreatic digest of gelatin	5.0g
Yeast extract	5.0g
Beef extract	3.0g

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Erwinia amylovora*.

NWRI Agar (HPC Agar)

Composition per liter:

Agar	15.0g
Peptone	3.0g
Soluble casein	0.5g
K ₂ HPO ₄	0.2g
MgSO ₄	0.05g
FeCl ₃	1.0mg

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.2. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For estimation of the number of live heterotrophic bacteria in water using the heterotrophic plate count technique.

NY Medium (Nutrient Broth Yeast Extract Medium)

Composition per liter:

NaCl	8.0g
Peptone	5.0g
Yeast extract	5.0g
Beef extract	3.0g

pH 7.2–7.4 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Pseudomonas* species.

Nystatin Assay Agar See: Antibiotic Medium 19

N-Z Amine A™ Glycerol Agar

Composition per liter:

Agar	15.0g
N-Z Amine A™	5.0g

Beef extract	1.0g
Glycerol	70.0mL

pH 6.5–7.0 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of *Actinomadura* species, *Actinopolyspora* species, *Excelllopora* species, and *Microspora* species.

N-Z Amine A™ Medium

Composition per liter:

N-Z Amine A™	5.0g
Beef extract	1.0g
Glycerol	80.0mL

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Nocardia brevicatena*.

N-Z Amine A™ Medium with Soluble Starch and Glucose

Composition per liter:

Soluble starch	20.0g
Agar	15.0g
Glucose	10.0g
Yeast extract	5.0g
N-Z-Amine A™	5.0g
CaCO ₃	1.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Actinomadura* species, *Actinoplanes* species, *Amycolatopsis fastidiosa*, *Catenuloplanes japonicus*, *Dactylosporangium* species, *Geodermatophilus obscurus*, *Glycomyces* species, *Kitasatospora medicidica*, *Micromonospora* species, *Saccharomonospora caesia*, *Saccharothrix aerocolonigenes*, *Streptomyces* species, and *Streptosporangium* species.

N-Z Amine Medium (DSMZ Medium 554)

Composition per liter:

Starch, soluble	20.0g
Agar	15.0g
Glucose	10.0g
Yeast extract	5.0g
N-Z-Amine	5.0g
CaCO ₃	1.0g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Streptomycesnojiriensis*, *Streptomycespulveraceus*, *Streptomycescapillisspiralis*, *Saccharothrixmutabilis* subsp. *mutabilis*=*Nocardioopsismutabilis*, *Couchioplanes*

caeruleus subsp. *caeruleus*=*Actinoplanes caeruleus*, *Micromonospora inositola*, *Dactylosporangium vinaceum*, *Frankia* sp., *Streptosporangium koreanum*, *Streptosporangium roseum* subsp. *incarnatum*, *Actinomadura fibrosa*, *Micromonospora* sp., *Amycolatopsis kentuckyensis*, and *Amycolatopsis pretoriensis*.

NZC Broth

Composition per liter:

N-Z Amine A™	10.0g
NaCl	5.0g
MgCl ₂ ·6H ₂ O	2.0g
Casamino acids solution	5.0mL

Casamino Acids Solution:

Composition per 10.0mL:

Casamino acids	2.0g
----------------	------

Preparation of Casamino Acids Solution: Add casamino acids to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except casamino acids solution, to distilled/deionized water and bring volume to 990.0mL.

Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 5.0mL of sterile casamino acids solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Escherichia coli*.

NZCYM Medium

Composition per liter:

Pancreatic digest of casein	10.0g
NaCl	5.0g
Yeast extract	5.0g
Maltose	2.0g
MgSO ₄ ·7H ₂ O	2.0g
Casamino acids	1.0g

pH 7.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Escherichia coli* and *Pseudomonas* species.

NZM Broth

Composition per liter:

Enzymatic digest of casein	10.0g
NaCl	5.0g
MgSO ₄ ·7H ₂ O	2.0g

pH 7.0 ± 0.2 at 25°C

Source: This medium is available from Acumedia, Neogen Corp.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of recombinant strains of *Escherichia coli*.

NZY Agar

Composition per liter:

Agar	20.0g
N-Z Amine A™	10.0g
NaCl	5.0g

Yeast extract	5.0g
MgCl ₂ ·6H ₂ O	2.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes. Autoclave for 15 min at 15 psi pressure–121°C. Allow tubes to cool in a slanted position.

Use: For the cultivation and maintenance of a variety of microorganisms.

NZY Agar

Composition per liter:

Agar	11.0g
N-Z Amine A™	10.0g
NaCl	5.0g
Yeast extract	5.0g
MgCl ₂ ·6H ₂ O	2.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the cultivation and enumeration of a variety of microorganisms.

NZY Broth

Composition per liter:

N-Z Amine A™	10.0g
NaCl	5.0g
Yeast extract	5.0g
MgCl ₂ ·6H ₂ O	2.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and enumeration of a variety of microorganisms.

NZYM Broth

Composition per liter:

Enzymatic digest of casein	10.0g
NaCl	5.0g
Yeast extract	5.0g
Casamino acids	1.0g
MgSO ₄ ·7H ₂ O	0.98g

pH 7.0 ± 0.2 at 25°C

Source: This medium is available from Acumedia, Neogen Corp.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of recombinant strains of *Escherichia coli*.

O157:H7(+) Plating Medium

Composition per liter:

Agar	15.0g
Sorbitol	12.0g
Salicin	10.0g
Inositol	10.0g
Peptone	10.0g
Adonitol	8.0g
NaCl	5.0g
Tryptone	5.0g
Proteose peptone	3.0g

Bile salts No. 3	1.25g
Indoxyl- β -D-galactopyranoside	0.12g
5-Bromo-4-chloro-3-indoxyl- β -D-galactopyranoside	0.12g
Phenol Red	0.1g
Isopropyl- β -D-thiogalactopyranoside	0.1g
Novobiocin solution	1.0mL
Tellurite solution	1.0mL

pH 6.8 \pm 0.2 at 25°C

Source: This medium is available as a premixed powder from BIO-SYNTH International, Inc.

Novobiocin Solution:

Composition per 10.0mL:

Novobiocin	0.1g
------------------	------

Preparation of Novobiocin Solution: Add novobiocin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Tellurite Solution:

Composition per 10.0mL:

K ₂ TeO ₃	0.01g
---------------------------------------	-------

Preparation of Tellurite Solution: Add K₂TeO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Caution: Potassium tellurite is toxic.

Preparation of Medium: Add components, except novobiocin solution and tellurite solution, to distilled/deionized water and bring volume to 998.0mL. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 1.0mL sterile novobiocin solution and 1.0 sterile tellurite solution. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the detection of *Escherichia coli* O157:H7. *E. coli* O157:H7 grow with blue-black colonies and *E. coli* non-O157 with green-yellow colonies.

O157:H7 ID Agar

Composition per liter:

Proprietary

Source: This medium is available from bioMérieux.

Use: A new chromogenic medium for the detection of *Escherichia coli* O157:H7. In accordance with USDA, BAM and ISO 16654 standards, O157:H7 ID Agar allows the detection and presumptive identification of *E. coli* O157:H7.

OA

See: **Oat Meal Agar**

Oak Wilt Fungus HiVeg Agar

Composition per liter:

Malt extract	22.0g
Agar	15.0g
Plant peptone No. 4	8.0g
Synthetic detergent No. II	5.0g

pH 5.7 \pm 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of oak wilt fungi.

Oat Flake Medium (DSMZ Medium 189)

Composition per liter:

Oat flakes	30.0g
Agar	15.0g

pH 7.2 \pm 0.2 at 25°C

Preparation of Medium: Add rolled oats to 500.0mL distilled/deionized water. Gently heat and bring to boiling. Boil for 10 min. Filter. Add agar and bring volume to 1.0L with distilled/deionized water. Mix thoroughly. Gently heat and bring to boiling. Mix by shaking. Distribute into tubes or flasks. Autoclave for 20 min at 15 psi pressure–121°C. Mix by shaking. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of actinomycetes and fungi.

Oat Flakes Agar

Composition per liter:

Oat flakes	30.0g
Agar	15.0g

Preparation of Medium: Add oat flakes to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 10 min. Add agar. Autoclave for 20 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or distribute into sterile tubes. Swirl flask while decanting medium.

Use: For the cultivation and maintenance of *Actinoplanes* species and *Streptomyces glaucoflavus*.

Oat Flakes Agar with Yeast Extract (DSMZ Medium 248)

Composition per liter:

Oat flakes	20.0g
Agar	12.0g
Yeast extract	2.0g
Trace elements solution	1.0mL

pH 7.2 \pm 0.2 at 25°C

Trace Elements Solution:

Composition per 100.0mL:

FeSO ₄ ·7H ₂ O	0.1g
MnCl ₂ ·4H ₂ O	0.1g
ZnSO ₄ ·7H ₂ O	0.1g

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add oat flakes to 500.0mL distilled/deionized water. Gently heat and bring to boiling. Boil for 20 min. Filter through cheese cloth. Add agar and yeast extract to the filtrate and bring volume to 1.0L with distilled/deionized water. Mix thoroughly. Add 1.0mL trace elements solution. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Streptomyces purpureus*=*Kitasatoa purpurea* and *Thermoactinomyces putidus*.

Oat Flakes Agar with Yeast Extract

Composition per liter:

Oat flakes	20.0g
Agar	12.0g

Yeast extract.....	2.0g
Trace elements solution SL-6	1.0mL
pH 7.2 ± 0.2 at 25°C	

Trace Elements Solution SL-6:**Composition per liter:**

MnCl ₂ ·4H ₂ O.....	0.5g
H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
Na ₂ MoO ₄ ·2H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add oat flakes to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 10 min. Filter through cheesecloth. Add remaining components to filtrate and bring volume to 1.0L with distilled/deionized water. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of actinomycetes.

Oatmeal Agar
See: ISP Medium 3

Oatmeal Agar**Composition per liter:**

Agar	15.0g
Oat flakes	10.0g
Oatmeal.....	10.0g
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Actinomadura* species, *Actinoplanes* species, *Geodermatophilus obscurus*, *Glycomyces harbinensis*, *Microbispora rosea*, *Micromonospora* species, *Nocardioidea* species, *Nocardioidea luteus*, *Promicromonospora citrea*, *Sporichthya polymorpha*, *Streptomyces* species, *Streptosporangium amethystogenes*, *Streptosporangium roseum*, *Streptosporangium violaceochromogenes*, *Thermoactinomyces putidus*, and *Thermoactinomyces vulgaris*.

Oatmeal Agar**Composition per 750.0mL:**

Oatmeal, instant for babies	40.0g
Agar	5.0g

Preparation of Medium: Add agar to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Gently heat and bring to boiling. Add instant oatmeal for babies to distilled/deionized water and bring volume to 250.0mL. Mix thoroughly. Add the oatmeal solution to the melted agar solution. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or aseptically distribute into sterile tubes.

Use: For the cultivation of fungi.

**Oatmeal Agar
(ATCC 551)****Composition per liter:**

Oatmeal.....	60.0g
Agar	12.5g
pH 6.0 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For cultivation of fungi and actinomycetes, particularly for macrospore formation.

**Oatmeal Agar
(OA)****Composition per liter:**

Agar	12.0g
Oatmeal, rolled oats	10.0g
Glycerin	5.0mL
Lactic acid.....	0.2mL

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of many filamentous fungi.

**Oatmeal Agar A
(ISP-3)
(DSMZ Medium 609)****Composition per liter:**

Oatmeal (Quaker White Oats)	20.0g
Agar	18.0g
Trace salts solution	1.0mL
pH 7.0 ± 0.2 at 25°C	

Trace Salts Solution:**Composition per 100.0mL:**

FeSO ₄ ·7H ₂ O.....	0.1g
MnCl ₂ ·4H ₂ O	0.1g
ZnSO ₄ ·7H ₂ O	0.1g

Preparation of Trace Salts Solution: Add components to 100.0mL distilled/deionized water. Mix thoroughly.

Preparation of Medium: Add oats to 1.0L distilled/deionized water. Adjust pH to 7.2. Gently heat and bring to boiling. Cook or steam for 20 min. Filter through cheesecloth. Add 18.0g agar. Add 1.0mL trace salts solution. Bring volume to 1.0L with distilled/deionized water. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into Petri dishes or distribute to sterile tubes.

Use: For the cultivation of various fungi.

Oatmeal Agar B**Composition per liter:**

Agar	15.0g
Oatmeal, powdered.....	3.0g
K ₂ HPO ₄	0.5g

KNO ₃	0.2g
MgSO ₄ ·7H ₂ O	0.2g
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Actinomadura viridis*, *Actinoplanes awajinensis*, *Actinoplanes brasiliensis*, *Actinoplanes consetensis*, *Actinoplanes derwentensis*, *Actinoplanes durhamensis*, *Actinoplanes humidus*, *Actinoplanes palleronii*, *Actinoplanes pyriformis*, *Amycolatopsis orientalis*, *Excellospora viridilutea*, *Kineospora aurantiaca*, *Microbispora bispora*, *Microbispora rosea*, *Microtetraspera fastidiosa*, *Microtetraspera flexuosa*, *Microtetraspera fusca*, *Microtetraspera glauca*, *Microtetraspera polychroma*, *Microtetraspera pusilla*, *Nocardioidea albus*, *Nocardioidea fulvus*, *Nocardioidea streptosporus*, *Planobispora longispora*, *Planomonospora parontospora*, *Streptomyces* species, *Streptomycoidea glaucoflavus*, *Streptosporangium album*, *Thermomonospora curvata*, and *Thermomonospora mesophila*.

Oatmeal Agar A (ISP-3) (DSMZ Medium 609)

Composition per liter:

Oatmeal (Quaker White Oats)	20.0g
Agar	18.0g
Trace salts solution.....	1.0mL
pH 7.0 ± 0.2 at 25°C	

Trace Salts Solution:

Composition per 100.0mL:

FeSO ₄ ·7H ₂ O.....	0.1g
MnCl ₂ ·4H ₂ O.....	0.1g
ZnSO ₄ ·7H ₂ O	0.1g

Preparation of Trace Salts Solution: Add components to 100.0mL distilled/deionized water. Mix thoroughly.

Preparation of Medium: Add oats to 1.0L distilled/deionized water. Adjust pH to 7.2. Gently heat and bring to boiling. Cook or steam for 20 min. Filter through cheesecloth. Add 18.0g agar. Add 1.0mL trace salts solution. Bring volume to 1.0L with distilled/deionized water. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into Petri dishes or distribute to sterile tubes.

Use: For the cultivation of various fungi.

Oatmeal Agar B

Composition per liter:

Agar	15.0g
Oatmeal, powdered	3.0g
K ₂ HPO ₄	0.5g
KNO ₃	0.2g
MgSO ₄ ·7H ₂ O	0.2g
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Actinomadura viridis*, *Actinoplanes awajinensis*, *Actinoplanes brasiliensis*, *Actinoplanes consetensis*, *Actinoplanes derwentensis*, *Actinoplanes durhamensis*, *Actinoplanes humidus*, *Actinoplanes palleronii*, *Actinoplanes pyriformis*, *Amycolatopsis orientalis*, *Excellospora viridilutea*, *Kineospora aurantiaca*, *Microbispora bispora*, *Microbispora rosea*, *Microtetraspera fastidiosa*, *Microtetraspera flexuosa*, *Microtetraspera fusca*, *Microtetraspera glauca*, *Microtetraspera polychroma*, *Microtetraspera pusilla*, *Nocardioidea albus*, *Nocardioidea fulvus*, *Nocardioidea streptosporus*, *Planobispora longispora*, *Planomonospora parontospora*, *Streptomyces* species, *Streptomycoidea glaucoflavus*, *Streptosporangium album*, *Thermomonospora curvata*, and *Thermomonospora mesophila*.

Oatmeal Agar with Lupine Stems

Composition per liter:

Oatmeal.....	30.0g
Agar	20.0g
Lupine stems.....	variable

Preparation of Medium: Add oatmeal to 1.0L of distilled/deionized water. Gently heat and bring to boiling. Continue boiling for 20 min. Strain through muslin. Bring volume of filtrate to 1.0L with distilled/deionized water. Add 20.0g of agar. Gently heat and bring to boiling. Distribute into tubes. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes. Cut green lupine stems into 1.0cm pieces. Place 6 to 9 lupine stem pieces in tubes with 3.0mL of distilled/deionized water. Autoclave for 15 min at 15 psi pressure–121°C. Melt agar tubes by gently heating. Cool to 50°C. Aseptically add 1 sterile lupine stem to each tube. Allow to solidify in a slanted position.

Use: For the cultivation and maintenance of *Ascochyta fabae*, *Ascochyta pinodes*, *Ascochyta pisi*, *Ascochyta punctata*, *Ascochyta viciae-annonicae*, *Ascochyta viciae-villosae*, and *Colletotrichum orbiculare*.

Oatmeal Agar with Lupine Stems (OA-LUP)

Composition per liter:

Agar	12.0g
Oatmeal, rolled oats	10.0g
Glycerin	5.0mL
Lactic acid.....	0.2mL
Lupine stems.....	variable

Preparation of Medium: Add components, except lupine stems, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute 6.0mL volumes into tubes. Cut lupine stems into 8.0cm long pieces. Add 2–3 lupine stems per tube. Autoclave for 15 min at 15 psi pressure–121°C. Allow tubes to cool in a slanted position.

Use: For the cultivation of *Ceratocystis brunnea*, *Ceratocystis major*, and *Ceratocystis radicicola*.

Oatmeal Nitrate Agar

Composition per liter:

Agar	15.0g
Oatmeal.....	3.0g
K ₂ HPO ₄	0.5g
KNO ₃	0.2g
MgSO ₄	0.2g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Microtetraspora flexuosa*.

Oatmeal Salts Agar

Composition per liter:

Agar	18.0g
Oatmeal, baby (Beechnut™)	10.0g
MgSO ₄	1.0g
KH ₂ PO ₄	1.0g
NaNO ₃	1.0g

pH 5.6 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 5.6. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of fungi.

Oatmeal Soy Peptone Medium

Composition per liter:

Agar	20.0g
Oatmeal	20.0g
Glucose	2.0g
Soy peptone	2.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Streptomyces metachromogenes* and *Actinosporangium* species.

OAY Agar

Composition per liter:

Oatmeal	20.0g
Agar	18.0g
Yeast extract	1.0g
Trace salts solution	1.0mL

Trace Salts Solution:

Composition per 100.0mL:

FeSO ₄ ·7H ₂ O	0.1g
MnCl ₂ ·4H ₂ O	0.1g
ZnSO ₄ ·7H ₂ O	0.1g

Preparation of Trace Salts Solution: Add components to distilled/deionized water and bring the volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add oatmeal to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Steam for 20 min. Filter through cheesecloth. Add agar. Add sufficient distilled/deionized water to bring volume to 999.0mL. Gently heat and bring to boiling. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 1.0mL of sterile trace salts solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Actinomadura citrea*, *Actinomadura coerulea*, *Actinomadura cremea*, *Actinomadura kijaniata*, *Actinomadura rubrobrunea*, *Actinomadura vinacea*, *Actinomadura viridis*, *Actinoplanes* species, *Glycomyces harbinensis*, *Microbispora rosea*, *Micromonospora* species, *Microstreptospora cinerea*, *Microtetraspora africana*, *Microtetraspora fastidiosa*, *Microtetraspora ferruginea*, *Microtetraspora roseola*, *Microtetraspora roseovalea*, *Microtetraspora rubra*, *Microtetraspora salmonea*, *Saccharothrix coeruleofusca*, *Saccharothrix longispora*, *Spirillospora rubra*, *Streptomyces* species, *Streptosporangium pseudovulgare*, *Streptosporangium sibiricum*, and *Thermoactinomyces vulgaris*.

Oceanithermus Medium (DSMZ Medium 1149)

Composition per liter:

NaCl	20.0g
Yeast extract	2.0g
K ₂ HPO ₄	0.78g
KH ₂ PO ₄	0.75g
NH ₄ Cl	0.53g
MgCl ₂ ·6H ₂ O	0.36g
CaCl ₂ ·2H ₂ O	0.33g
NaNO ₃	0.2g
Na ₂ SO ₄	0.14g
Bicarbonate solution	100.0mL
Trace elements solution	10.0mL
Vitamin solution	10.0mL

Bicarbonate Solution:

Composition per 100.0mL:

NaHCO ₃	5.0g
--------------------------	------

Preparation of Bicarbonate Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Adjust pH to 6.5. Filter sterilize.

Trace Elements Solution:

Composition per liter:

Nitritotriacetic acid	12.8g
FeCl ₃ ·6H ₂ O	1.35g
NaCl	1.0g
NiCl ₂ ·6H ₂ O	0.12g
MnCl ₂ ·4H ₂ O	0.1g
CaCl ₂ ·2H ₂ O	0.1g
ZnCl ₂	0.1g
Na ₂ SeO ₃ ·5H ₂ O	0.026g
CuCl ₂ ·2H ₂ O	0.025g
CoCl ₂ ·6H ₂ O	0.024g
Na ₂ MoO ₄ ·2H ₂ O	0.024g
H ₃ BO ₃	0.01g

Preparation of Trace Elements Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly. Adjust pH to 7.0.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl	10.0mg
Thiamine-HCl·2H ₂ O	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
D-Ca-pantothenate	5.0mg
Biotin	2.0mg
Folic acid	2.0mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except bicarbonate solution and vitamin solution, to distilled/deionized water and bring volume to 890.0mL. Mix thoroughly. Adjust pH to 7.0. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add bicarbonate and vitamin solutions. Mix thoroughly. Aseptically distribute into tubes or flasks.

Use: For the cultivation of *Oceanithermus* spp.

Oceanithermus profundus Medium (DSMZ Medium 975)

Composition per liter:

NaCl	30.0g
HEPES	2.38g
NH ₄ Cl	0.33g
KCl	0.33g
Potassium nitrate solution	10.0mL
Calcium chloride solution	10.0mL
Magnesium chloride solution	10.0mL
Yeast extract solution	10.0mL
Sucrose solution	10.0mL
Tryptone solution	10.0mL
Vitamin solution	1.0mL
Trace elements solution	1.0mL

pH 7.0–7.5 at 25°C

Potassium Nitrate Solution:

Composition per 10.0mL:

KNO ₃	0.33g
------------------	-------

Preparation of Potassium Nitrate Solution: Add KNO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Magnesium Chloride Solution:

Composition per 10.0mL:

MgCl ₂ ·6H ₂ O	0.33g
--------------------------------------	-------

Preparation of Magnesium Chloride Solution: Add 0.33g of MgCl₂·6H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Calcium Chloride Solution:

Composition per 10.0mL:

CaCl ₂ ·2H ₂ O	0.33g
--------------------------------------	-------

Preparation of Calcium Chloride Solution: Add CaCl₂·2H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Yeast Extract Solution:

Composition per 10.0mL:

Yeast extract	0.2g
---------------	------

Preparation of Yeast Extract Solution: Add yeast extract to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Sucrose Solution:

Composition per 10.0mL:

Sucrose	2.0g
---------	------

Preparation of Sucrose Solution: Add sucrose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Tryptone Solution:

Composition per 10.0mL:

Tryptone	1.0g
----------	------

Preparation of Tryptone Solution: Add tryptone to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Trace Elements Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O	3.0g
Nitrilotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·2H ₂ O	0.5g
CoSO ₄ ·7H ₂ O	0.18g
ZnSO ₄ ·7H ₂ O	0.18g
CaCl ₂ ·2H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g
NiCl ₂ ·6H ₂ O	0.025g
KAl(SO ₄) ₂ ·12H ₂ O	0.02g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·4H ₂ O	0.01g
CuSO ₄ ·5H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O	0.3mg

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl	10.0mg
Thiamine-HCl·2H ₂ O	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
D-Ca-pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Preparation of Medium: Prepare and dispense medium under 100% N₂ gas atmosphere. Add components, except yeast extract solution, sucrose solution, calcium chloride solution, magnesium chloride solution, potassium nitrate solution, tryptone solution, vitamin solution, and trace elements solution, to distilled/deionized water and bring volume to 938.0mL. Mix thoroughly. Distribute into anaerobe tubes or bottles. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add per liter, 10.0mL sucrose solution, 10.0mL yeast extract solution, 10.0mL potassium nitrate solution, 10.0mL tryptone solution, 10.0mL magnesium chloride solution, 10.0mL calcium chloride solution, 1.0mL vitamin solution, and 1.0mL trace elements solution. Mix thoroughly. Adjust pH to 7.0–7.5

Use: For the cultivation of *Oceanithermus profundus*.

Ochromonas Medium**Composition per liter:**

Glucose	20.0g
Vitamin-free casamino acids	10.0g
Diammonium hydrogen citrate	1.6g
KH ₂ PO ₄	0.6g
DL-Methionine	0.4g
MgSO ₄ ·7H ₂ O	0.4g
CaCO ₃	0.3g
ZnSO ₄ ·7H ₂ O	0.22g
L-Cystine	0.2g
DL-Tryptophan	0.2g
MnSO ₄ ·H ₂ O	0.123g
EDTA	0.1g
Na ₂ MoO ₄ ·2H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	20.0mg
Inositol	20.0mg
CoSO ₄ ·7H ₂ O	6.0mg
Choline chloride	4.0mg
Thiamine	4.0mg
PAB	2.0mg
H ₃ BO ₃	1.2mg
CuSO ₄ ·5H ₂ O	800.0μg
Biotin	20.0μg
KI	20.0μg
Tween™ 80	2.0mL

pH 5.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 5.8. Gently heat and bring to boiling. Continue boiling for 2–3 min. Distribute 5.0mL volumes into 6 × 125mm screw-capped test tubes. Swirl the medium while dispensing to evenly distribute the fine precipitate which forms. Autoclave for 10 min at 15 psi pressure–121°C. Do not overheat.

Use: For the cultivation of *Ochromonas malhamensis*.

Ochromonas Medium**Composition per liter:**

Glucose	20.0g
Vitamin-free casamino acids	10.0g
Diammonium hydrogen citrate	1.6g
KH ₂ PO ₄	0.6g
MgSO ₄ ·7H ₂ O	0.4g

L-Cystine	0.2g
DL-Tryptophan	0.2g
MnSO ₄ ·H ₂ O	0.123g
EDTA	0.1g
Na ₂ MoO ₄ ·2H ₂ O	0.1g
DL-Methionine	0.4g
FeSO ₄ ·7H ₂ O	20.0mg
Inositol	20.0mg
CoSO ₄ ·7H ₂ O	6.0mg
Choline chloride	4.0mg
Thiamine	4.0mg
PAB	2.0mg
H ₃ BO ₃	1.2mg
Vitamin B ₁₂	0.4ng
CuSO ₄ ·5H ₂ O	800.0μg
Biotin	20.0μg

KI	20.0μg
Tween™ 80	2.0mL

pH 5.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 5.8. Gently heat and bring to boiling. Continue boiling for 2–3 min. Distribute 5.0mL volumes into 6 × 125mm screw-capped test tubes. Swirl the medium while dispensing to evenly distribute the fine precipitate which forms. Autoclave for 10 min at 15 psi pressure–121°C. Do not overheat.

Use: For the maintenance of *Ochromonas malhamensis*.

Oddoux Medium**Composition per liter:**

Agar	13.0g
Malt extract	8.0g
Glucose	7.0g
Casein hydrolysate	1.0g
Asparagine	0.5g
KH ₂ PO ₄	0.5g
MgSO ₄ ·7H ₂ O	0.5g
Vitamin solution	10.0mL

Vitamin Solution:**Composition per 10.0mL:**

Calcium pantothenate	0.5mg
Nicotinamide	0.5mg
Pyridoxine HCl	0.5mg
Riboflavin	0.5mg
Thiamine	0.5mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except vitamin solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL of sterile vitamin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Boletus granulatus*, *Boletus luteus*, *Lactarius deliciosus*, and *Tricholoma equestre*.

OF Basal HiVeg Medium with Carbohydrate**Composition per liter:**

NaCl	5.0g
Agar	2.0g
Plant hydrolysate	2.0g
K ₂ HPO ₄	0.3g
Bromthymol Blue	0.08g
Carbohydrate solution	100.0mL

pH 6.8 ± 0.2 at 25°C

Source: This medium, without carbohydrate solution, is available as a premixed powder from HiMedia.

Carbohydrate Solution:**Composition per 100.0mL:**

Carbohydrate	10.0g
--------------	-------

Preparation of Carbohydrate Solution: Add carbohydrate to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except carbohydrate solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes in 3.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 0.3mL of sterile carbohydrate solution to each tube. Mix thoroughly.

Use: For the cultivation and differentiation of a variety of microorganisms based on their ability to ferment a specific carbohydrate. Bacteria that ferment the specific carbohydrate turn the medium yellow.

OF Glucose Medium, Semisolid

See: **Oxidative Fermentative Glucose Medium, Semisolid**

OF Glucose Medium, Semisolid with Sodium Chloride

See: **Oxidative Fermentative Glucose Medium, Semisolid, with Sodium Chloride**

OF Test Medium

See: **Oxidative Fermentative Test Medium**

Ogawa Egg Medium

Composition per liter:

Chicken eggs, whole	200.0mL
Sodium glutamate-KH ₂ PO ₄ solution	100.0mL
Glycerol	6.0mL
Malachite Green (2.0% solution)	6.0mL
pH 6.8 ± 0.2 at 25°C	

Sodium Glutamate-KH₂PO₄ Solution:

Composition per 100.0mL:

Sodium glutamate	1.0g
KH ₂ PO ₄	1.0g

Preparation of Sodium Glutamate-KH₂PO₄ Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Soak eggs with 1:100 dilution of saturated mercuric chloride solution for 1 min. Aseptically break eggs into a sterile graduated cylinder. Homogenize eggs. Add remaining components. Mix thoroughly. Aseptically distribute into sterile tubes in 10.0mL volumes. Inpsissate at 90°C (moist heat) for 60 min.

Use: For the selective isolation and cultivation of *Nocardia* and *Rhodococci* species.

Ogawa TB Medium

Composition per 300.0mL:

KH ₂ PO ₄	1.0g
Homogenized whole egg	200.0mL
Glycerol	6.0mL
Malachite Green (2% solution)	6.0mL
pH 6.5 ± 0.2 at 25°C	

Homogenized Whole Egg:

Composition per liter:

Whole eggs	18–24
------------	-------

Preparation of Homogenized Whole Egg: Use fresh eggs, less than 1 week old. Scrub the shells with soap. Let stand in a soap solution for 30 min. Rinse in running water. Soak eggs in 70% ethanol for 15 min. Break the eggs into a sterile container. Homogenize by shaking. Filter through four layers of sterile cheesecloth into a sterile graduated cylinder. Measure out 1.0L.

Preparation of Medium: Add components, except homogenized whole egg, to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 200.0mL of sterile homogenized whole egg. Mix thoroughly. Aseptically distribute into sterile screw-capped tubes in 7.0mL volumes. Inpsissate at 85°–90°C (moist heat) for 60 min.

Use: For the isolation and cultivation of *Mycobacterium* species, except for *Mycobacterium leprae*.

OGYE Agar

See: **Oxytetracycline Glucose Yeast Extract Agar**

Oil Agar Medium

Composition per liter:

Agar, purified	20.0g
NaCl	10.0g
Oil powder	10.0g
NH ₄ NO ₃	1.0g
MgSO ₄	0.5g
Amphotericin B solution	10.0mL
K ₂ HPO ₄ solution	7.0mL
KH ₂ PO ₄ solution	3.0mL
FeCl ₃	0.1mL

Oil Powder:

Composition per 10.0g:

Hydrocarbon	10.0g
Silica gel	10.0g
Diethyl ether	30.0mL

Preparation of Oil Powder: Add 10.0g of hydrocarbon to 30.0mL of diethyl ether. Mix thoroughly. Add 10.0g of silica gel. Allow ether to evaporate.

Amphotericin B Solution:

Composition per 10.0mL:

Amphotericin B	0.01g
----------------	-------

Preparation of Amphotericin B Solution: Add amphotericin B to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

K₂HPO₄ Solution:

Composition per 100.0mL:

K ₂ HPO ₄	10.0g
---------------------------------	-------

Preparation of K₂HPO₄ Solution: Add K₂HPO₄ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

KH₂PO₄ Solution:

Composition per 100.0mL:

KH ₂ PO ₄	10.0g
---------------------------------	-------

Preparation of KH₂PO₄ Solution: Add KH₂PO₄ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Preparation of Medium: Add components—except amphotericin B solution, K₂HPO₄ solution, and KH₂PO₄ solution—to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL of sterile amphotericin B solution, 7.0mL of sterile K₂HPO₄ solution, and 3.0mL of sterile KH₂PO₄ solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and enumeration of hydrocarbon-utilizing bacteria by direct plating of estuarine water and sediment samples.

Oleic Albumin Complex

Composition per liter:

Bovine albumin fraction V	50.0g
NaCl	8.5g
Oleic acid	0.6mL

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Use: For use in media employed for the cultivation of mycobacteria.

OM-2 Medium (DSMZ Medium 782)

Composition per liter:

NH ₄ -oxalate	15.0g
NaHCO ₃	10.0g
NaH ₂ PO ₄ ·2H ₂ O	10.0g
Na ₂ S ₂ O ₃ ·5H ₂ O	1.0g
NaCl	0.7g
KCl	0.57g
MgCl ₂ ·6H ₂ O	0.1g
CaCl ₂ ·2H ₂ O	0.01g

pH 6.9 ± 0.2 at 25°C

Preparation of Medium: Add NH₄-oxalate, NaH₂PO₄·2H₂O, and NaHCO₃ to distilled/deionized water and bring volume to 1.0L. Mix thoroughly after adding each until dissolved. Add remaining components. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 20 min at 15 psi pressure–121°C.

Use: For the cultivation of *Ammoniphilus oxalivorans* and *Ammoniphilus oxalaticus*.

ONE Broth-*Listeria* (Oxoid Novel Enrichment (ONE) Broth-*Listeria*)

Composition per 1005.0mL:

Peptone	28.0g
Salt mix	10.0g
Carbohydrate mix	6.0g
ONE Broth- <i>Listeria</i> selective supplement (proprietary)	5.0mL

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add components, except ONE Broth-*Listeria* selective supplement, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 5.0mL ONE Broth-*Listeria* selective supplement. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the selective enrichment of *Listeria* spp. from food and environmental samples. A selective enrichment broth for *Listeria* species from food samples in 24 hr.

Önöz *Salmonella* Agar

Composition per liter:

Agar	15.0g
Sucrose	13.0g
Lactose	11.5g

Trisodium citrate–5,5–hydrate	9.3g
Meat peptone	6.8g
Beef extract	6.0g
L-Phenylalanine	5.0g
Na ₂ S ₂ O ₃ ·5H ₂ O	4.25g
Bile salt mixture	3.825g
Yeast extract	3.0g
Na ₂ HPO ₄ ·2H ₂ O	1.0g
Ferric citrate	0.5g
Metachrome Yellow	0.47g
MgSO ₄ ·7H ₂ O	0.4g
Aniline Blue	0.25g
Neutral Red	0.022g
Brilliant Green	0.00166g

pH 7.1 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of *Salmonella* from feces.

ONPG Broth

Composition per liter:

Peptone water	750.0mL
ONPG solution	250.0mL

pH 7.2–7.4 at 25°C

ONPG Solution:

Composition per 250.0mL:

ONPG (<i>o</i> -nitrophenyl-β-D-galactopyranoside)	1.5g
Sodium phosphate buffer (0.01M, pH 7.5)	250.0mL

Preparation of ONPG Solution: Add ONPG to 250.0mL of sodium phosphate buffer. Mix thoroughly. Filter sterilize.

Peptone Water:

Composition per 750.0mL:

Peptone	7.5g
NaCl	3.75g

Preparation of Peptone Water: Add components to distilled/deionized water and bring volume to 750.0mL. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 8.0–8.4. Continue boiling for 10 min. Filter through Whatman #1 filter paper. Readjust pH of filtrate to 7.2–7.4. Autoclave for 20 min at 10 psi pressure–115°C. Cool to 25°C.

Preparation of Medium: Aseptically combine the sterile ONPG solution with the cooled, sterile peptone water. Mix thoroughly. Aseptically distribute into tubes in 2.5–3.0mL volumes. Store at 4°C for up to 1 month.

Use: For the differentiation of a variety of Gram-negative bacteria based on production of β-galactosidase. For the differentiation of lactose-delayed bacteria from lactose-negative bacteria. For the differentiation of *Pseudomonas cepacia* (positive) and *Pseudomonas maltophilia* (positive) from other *Pseudomonas* species (negative). Bacteria that produce β-galactosidase turn the medium yellow.

ONR7a Medium (DSMZ Medium 950)

Composition per liter:

Solution 1	800.0mL
Solution 2	150.0mL
Solution 3	50.0mL

Solution 1:**Composition** per 800.0mL:

NaCl	22.79g
Na ₂ SO ₄	3.98g
TAPSO	1.3g
KCl	0.72g
NH ₄ Cl	0.27g
NaBr	83.0mg
NaHCO ₃	31.0mg
H ₃ BO ₃	27.0mg
NaF	2.60mg
Na ₂ HPO ₄ ·7H ₂ O	89.0mg

pH 7.6 ± 0.2 at 25°C

Preparation of Solution 1: Add components to distilled/deionized water and bring volume to 800.0mL. Mix thoroughly. Adjust pH to 7.6 with NaOH. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution 2:**Composition** per 150.0mL:

MgCl ₂ ·6H ₂ O	11.18g
CaCl ₂ ·2H ₂ O	1.46g
SrCl ₂ ·6H ₂ O	24.0mg

Preparation of Solution 2: Add components to distilled/deionized water and bring volume to 150.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution 3:**Composition** per 50.0mL:

FeCl ₂ ·4H ₂ O	2.0mg
--	-------

Preparation of Solution 3: Add FeCl₂·4H₂O to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Preparation of Medium: Aseptically combine 800.0mL sterile solution 1, 150.0mL sterile solution 2, and 50.0mL sterile solution 3. Mix thoroughly. Distribute into sterile tubes or flasks.

Use: For the cultivation of *Oleiphilus messinensis*.

ONR7a Medium (DSMZ Medium 983)

Composition per liter:

NaCl	22.79g
Agar	15.0g
Na ₂ SO ₄	3.98g
CaCl ₂ ·2H ₂ O	1.46g
TAPSO	1.3g
MgCl ₂ ·6H ₂ O	1.18g
KCl	0.72g
NH ₄ Cl	0.27g
Na ₂ HPO ₄	89.0mg
NaBr	83.0mg
NaHCO ₃	31.0mg
H ₃ BO ₃	27.0mg
SrCl ₂ ·6H ₂ O	24.0mg
NaF	2.6mg
FeCl ₂ ·4H ₂ O	2.0mg
Tetradecane	10.0mL

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components, except tetradecane, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Adjust pH to 7.0. Distribute into tubes or flasks. Gently heat while stirring and bring to boiling. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Pour into Petri dishes. Invert after agar solidifies. Add tetradecane to the lid of the Petri dish.

Use: For the cultivation of *Oleispira antarctica*.

OR Indicator Agar (Oxidation-Reduction Indicator Agar)

Composition per liter:

Agar	15.0g
Sodium glycerol phosphate	10.0g
Sodium thioglycolate	1.7g
CaCl ₂ ·2H ₂ O	0.1g
Methylene Blue	6.0mg

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For use as an indicator of oxygen-free conditions in anaerobic culture chambers.

Oral *Fusobacterium* Medium

Composition per liter:

Agar	15.0g
Proteose peptone	10.0g
Na ₂ HPO ₄	5.0g
Glucose	5.0g
Beef extract	3.0g
Soluble starch	2.0g
NaNO ₃	1.0g
Yeast extract	1.0g
L-Cysteine·HCl·H ₂ O	0.5g
Ethyl Violet solution	10.0mL
Bacitracin solution	10.0mL

pH 7.6 ± 0.2 at 25°C

Ethyl Violet Solution:**Composition** per 10.0mL:

Ethyl Violet	0.04g
--------------------	-------

Preparation of Ethyl Violet Solution: Add Ethyl Violet to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Bacitracin Solution:**Composition** per 10.0mL:

Bacitracin	1.0mg
------------------	-------

Preparation of Bacitracin Solution: Add bacitracin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except Ethyl Violet solution and bacitracin solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile Ethyl Violet solution and bacitracin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation and cultivation of oral *Fusobacterium* species, especially *Fusobacterium nucleatum*.

Oral *Treponema* Medium**Composition per 1250.0mL:**

Veal heart, fresh ground	1.0Kg
Thiopeptone	20.0g
NaCl	10.0g
Ionagar No. 2	2.0g
Glutathione (1% solution).....	100.0mL
Rabbit serum or ascitic fluid.....	100.0mL
Eggs, whole fresh.....	2

pH 6.8–7.0 at 25°C

Preparation of Medium: Add agar to 50.0mL of distilled/deionized water. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. In a separate flask, add finely ground veal heart to 1.0L of distilled/deionized water. Add remaining components, except glutathione, rabbit serum, and agar. Gently heat and bring to 70°C. Adjust pH to 7.4. Gently heat and bring to 100°C. Continue heating at 100°C for 2 hr. Skim off fat. Filter through glass wool. Adjust pH to 7.6. Gently heat and bring to 100°C. Maintain at 100°C for 30 min. Store at 4°C for 18 hr. Sterilize in an Arnold sterilizer for 30 min at 100°C on 2 consecutive days. Cool to 45°–50°C. Aseptically add rabbit serum, glutathione solution, and sterile cooled agar solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the isolation and cultivation of *Treponema denticola* and *Treponema oralis*.

Orange Serum Agar**Composition per liter:**

Agar	17.0g
Pancreatic digest of casein.....	10.0g
Glucose	4.0g
Yeast extract.....	3.0g
K ₂ HPO ₄	2.5g
Orange serum.....	200.0mL

pH 5.5 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and enumeration of microorganisms associated with the spoilage of citrus products. For the cultivation of lactobacilli, other aciduric microorganisms, and pathogenic fungi.

Orange Serum Agar**Composition per liter:**

Agar	14.0g
Pancreatic digest of casein.....	10.0g
Glucose	4.0g
Orange serum, equivalent solids.....	3.5g
Yeast extract.....	3.0g
K ₂ HPO ₄	2.5g

pH 5.5 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring

to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and enumeration of spoilage organisms from citrus products.

Orange Serum Agar**Composition per liter:**

Agar	15.5g
Orange serum.....	10.0g
Pancreatic digest of casein.....	10.0g
Glucose	4.0g
Yeast extract.....	3.0g
K ₂ HPO ₄	2.5g

pH 5.5 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 10 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the enumeration and cultivation of microorganisms from citrus juice and other products. For the cultivation of lactobacilli, pathogenic fungi, and other aciduric microorganisms.

Orange Serum Broth Concentrate 10X**Composition per liter:**

Pancreatic digest of casein.....	10.0g
Glucose	4.0g
Yeast extract.....	3.0g
K ₂ HPO ₄	2.5g
Orange serum concentrate.....	100.0mL

pH 5.6 ± 0.2 at 25°C

Source: This medium is available as a premixed solution from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and enumeration of microorganisms associated with the spoilage of citrus products. For the cultivation of lactobacilli, other aciduric microorganisms, and pathogenic fungi.

Orange Serum HiVeg Agar**Composition per liter:**

Agar	17.0g
Plant hydrolysate	10.0g
Orange serum (solids from 200mL).....	9.0g
Glucose	4.0g
Yeast extract.....	3.0g
K ₂ HPO ₄	2.5g

pH 5.5 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and enumeration of microorganisms associated with the spoilage of citrus products. For the cultivation of lactobacilli, other aciduric microorganisms, and pathogenic fungi.

Orange Serum HiVeg Broth

Composition per liter:

Plant hydrolysate.....	10.0g
Orange serum (solids from 200mL).....	9.0g
Glucose	4.0g
Yeast extract.....	3.0g
K ₂ HPO ₄	2.5g

pH 5.5 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of lactobacilli, other aciduric microorganisms, and pathogenic fungi.

Organic Acid Medium KP

(Organic Acid Medium, Kauffmann and Petersen)

Composition per liter:

Gelatin.....	10.0g
Bromthymol Blue	0.024g
Organic acid solution	100.0mL

pH 7.4 ± 0.2 at 25°C

Organic Acid Solution:

Composition per 100.0mL:

Organic acid.....	10.0g
-------------------	-------

Preparation of Organic Acid Solution: Add organic acid to distilled/deionized water and bring volume to 100.0mL. Sodium potassium D-tartrate, sodium citrate, or mucic acid may be used. Mix thoroughly.

Preparation of Medium: Add components, except organic acid solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile organic acid solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and differentiation of members of the Enterobacteriaceae based on their ability to utilize different organic acids as carbon source. Bacteria that utilize tartrate, citrate, or mucate turn the medium yellow.

Organic Medium 79

Composition per liter:

Glucose	10.0g
Peptone.....	10.0g
NaCl.....	6.0g
Pancreatic digest of casein.....	2.0g
Yeast extract.....	2.0g

pH 7.8 ± 0.2 at 25°C

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Acinetobacter* species, *Actinomadura aurantiaca*, *Actinomadura madurae*, *Actinomadura pelletieri*, *Actinomadura vinacea*, *Amycolatopsis mediterranei*, *Amycolatopsis orientalis*, *Amycolatopsis sulphurea*, *Bacillus cereus*, *Bacillus laterosporus*, *Bacillus licheniformis*, *Bacillus stearothermophilus*, *Cellulomonas cellulans*, *Cellulomonas turbata*, *Citrobacter freundii*, *Citrobacter koseri*, *Comamonas acidovorans*, *Corynebacterium pseudodiphtheriticum*, *Corynebacterium xerosis*, *Enterobacter aerogenes*, *Escherichia coli*, *Gordona bronchialis*, *Gordona rubropertinctus*, *Gordona sputi*, *Gordona terrae*, *Microbispora rosea*, *Microstreptospora cinerea*, *Mycobacterium fortuitum*, *Mycobacterium kansasii*, *Mycobacterium vaccae*, *Nocardia amarae*, *Nocardia asteroides*, *Nocardia brasiliensis*, *Nocardia carnea*, *Nocardia farcinica*, *Nocardia globerula*, *Nocardia otitidiscaviarum*, *Nocardia petroleophila*, *Nocardia* species, *Nocardia transvalensis*, *Nocardia vaccinii*, *Nocardioides* species, *Oerskovia* species, *Promicromonospora citrea*, *Promicromonospora enterophila*, *Proteus mirabilis*, *Proteus rettgeri*, *Proteus vulgaris*, *Pseudomonas aeruginosa*, *Pseudomonas boreopolis*, *Pseudomonas perlurida*, *Pseudomonas putida*, *Pseudomonas stutzeri*, *Rhodococcus coprophilus*, *Rhodococcus equi*, *Rhodococcus erythropolis*, *Rhodococcus maris*, *Rhodococcus rhodnii*, *Rhodococcus rhodochrous*, *Rhodococcus ruber*, *Saccharomonospora viridis*, *Saccharopolyspora hirsuta*, *Saccharopolyspora rectivirgula*, *Saccharothrix aerocolonigenes*, *Staphylococcus aureus*, *Thermoactinomyces glaucus*, and *Tsukamurella paurometabolum*.

Ornithine Broth (BAM M44)

Composition per liter:

L-Ornithine.....	5.0g
Peptone or gelysate	5.0g
Yeast extract.....	3.0g
Glucose	1.0g
Bromcresol Purple	0.02g

pH 6.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH so that it will be 6.5 ± 0.2 after sterilization. Distribute into 16 × 150mm screw-capped tubes in 5.0mL volumes. Autoclave medium with loosely capped tubes for 10 min at 15 psi pressure–121°C. Screw the caps on tightly for storage and after inoculation.

Use: For the cultivation and differentiation of bacteria based on their ability to decarboxylate the amino acid ornithine. Bacteria that decarboxylate ornithine turn the medium turbid purple.

Ornithine Broth with Sodium Chloride (BAM M44)

Composition per liter:

L-Ornithine.....	5.0g
Peptone or gelysate	5.0g
Yeast extract.....	3.0g
Glucose	1.0g
Bromcresol Purple	0.02g

pH 6.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH so that it will be 6.5 ± 0.2 after sterilization. Distribute into 16 × 150mm screw-capped tubes in 5.0mL volumes. Autoclave medium with loosely capped tubes for 10 min at 15 psi pressure–121°C. Screw the caps on tightly for storage and after inoculation.

Use: For the cultivation and differentiation of *Vibrio* spp. based on their ability to decarboxylate the amino acid ornithine. Bacteria that decarboxylate ornithine turn the medium turbid purple.

Orotic Acid Medium

Composition per liter:

K ₂ HPO ₄	6.95g
Tryptone.....	5.0g
Sodium orotate.....	2.5g
KH ₂ PO ₄	1.36g
Sodium thioglycolate.....	0.5g
Yeast extract.....	0.5g
Riboflavin.....	15.0mg
Resazurin.....	1.0mg

pH 7.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Anaerobically distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Clostridium oroticum*.

OS Medium (DSMZ Medium 887)

Composition per liter:

NaHCO ₃	1.0g
Na ₂ S ₂ O ₃ ·5H ₂ O.....	1.0g
NaCl.....	256.0mg
Na ₂ SO ₄	23.0mg
KCl.....	15.0mg
H ₃ BO ₃	10.3mg
KH ₂ PO ₄	1.7mg
CaCl ₂ ·2H ₂ O.....	0.8mg
NaNO ₃	0.3mg
FeCl ₃ ·6H ₂ O.....	0.1mg
MnSO ₄ ·4H ₂ O.....	0.06mg
Trace elements solution.....	10.0mL

pH 7.0 ± 0.2 at 25°C

Trace Elements Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O.....	3.0g
Nitritotriacetic acid.....	1.5g
NaCl.....	1.0g
MnSO ₄ ·2H ₂ O.....	0.5g
CoSO ₄ ·7H ₂ O.....	0.18g
ZnSO ₄ ·7H ₂ O.....	0.18g
CaCl ₂ ·2H ₂ O.....	0.1g
FeSO ₄ ·7H ₂ O.....	0.1g
NiCl ₂ ·6H ₂ O.....	0.025g
KAl(SO ₄) ₂ ·12H ₂ O.....	0.02g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·4H ₂ O.....	0.01g
CuSO ₄ ·5H ₂ O.....	0.01g
Na ₂ SeO ₃ ·5H ₂ O.....	0.3mg

Preparation of Trace Elements Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0 with

Na₂SO₄. Autoclave for 15 min at 15 psi pressure–121°C. Distribute 10mL medium into 28mL serum bottles and seal with a rubber stopper. Gas with atmosphere of 94% N₂ + 3% H₂ + 3% O₂ at 300kPa.

Use: For the cultivation and maintenance of *Thermocrinis ruber*.

OS Solid Medium (DSMZ Medium 887)

Composition per liter:

Gelrite.....	15.0g
NaHCO ₃	1.0g
Na ₂ S ₂ O ₃ ·5H ₂ O.....	1.0g
NaCl.....	256.0mg
Na ₂ SO ₄	23.0mg
KCl.....	15.0mg
H ₃ BO ₃	10.3mg
KH ₂ PO ₄	1.7mg
CaCl ₂ ·2H ₂ O.....	0.8mg
NaNO ₃	0.3mg
FeCl ₃ ·6H ₂ O.....	0.1mg
MnSO ₄ ·4H ₂ O.....	0.06mg
Trace elements solution.....	10.0mL

pH 7.0 ± 0.2 at 25°C

Trace Elements Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O.....	3.0g
Nitritotriacetic acid.....	1.5g
NaCl.....	1.0g
MnSO ₄ ·2H ₂ O.....	0.5g
CoSO ₄ ·7H ₂ O.....	0.18g
ZnSO ₄ ·7H ₂ O.....	0.18g
CaCl ₂ ·2H ₂ O.....	0.1g
FeSO ₄ ·7H ₂ O.....	0.1g
NiCl ₂ ·6H ₂ O.....	0.025g

Na ₂ MoO ₄ ·4H ₂ O.....	0.01g
CuSO ₄ ·5H ₂ O.....	0.01g
Na ₂ SeO ₃ ·5H ₂ O.....	0.3mg

Preparation of Trace Elements Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0 with Na₂SO₄. Autoclave for 15 min at 15 psi pressure–121°C. Pour into Petri dishes. Incubate under atmosphere of 94% N₂ + 3% H₂ + 3% O₂.

Use: For the cultivation and maintenance of *Thermocrinis ruber*.

Osmophilic Agar

Composition per liter:

Glucose.....	50.0g
Agar.....	15.0g
Yeast extract.....	3.0g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Zygosaccharomyces rouxii*.

**Osmophilic Fungi Medium
(M 40 Y)
(DSMZ Medium 187)**

Composition per liter:

Sucrose.....	400.0g
Malt extract.....	20.0g
Agar.....	20.0g
Yeast extract.....	5.0g
pH 6.6 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Eremascus fertilis*, *Eurotium glabrum*, *Eurotium tonophilum*, *Zygosaccharomyces rouxii*, *Eurotium intermedium*, *Eremascus albus*, *Eurotium tonophilum*, *Chrysosporium xerophilum*, *Walleimia sebi*, *Eurotium chevalieri*, *Eurotium rubrum*, *Zygosaccharomyces bisporus*, *Zygosaccharomyces bailii*, and *Zygosaccharomyces rouxii*.

**OSrt Broth
(ATCC Medium 2340)**

Composition per liter:

Yeast extract.....	2.0 g
Glycerol.....	10.0 mL

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into flasks or tubes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Geodermatophilus obscurus* subspecies *utahensis*.

OTI Medium, Modified

Composition per 1100.0mL:

Beef heart, solids from infusion.....	100.0g
NaCl.....	6.0g
Polypeptone™.....	5.0g
Yeast extract.....	5.0g
K ₂ HPO ₄	2.0g
Tryptose.....	2.0g
Agar.....	1.6g
Pectin.....	0.8g
Glucose.....	0.8g
Starch.....	0.8g
Sucrose.....	0.8g
Maltose.....	0.8g
Sodium pyruvate.....	0.8g
Ribose.....	0.8g
L-Cysteine·HCl·H ₂ O.....	0.68g
MgSO ₄ ·7H ₂ O.....	0.1g
Rumen fluid, clarified.....	500.0 mL
Rabbit serum, inactivated.....	50.0mL
Thiamine pyrophosphate solution.....	50.0mL
pH 7.0 ± 0.2 at 25°C	

Thiamine Pyrophosphate Solution:

Composition per 50.0mL:

Thiamine pyrophosphate.....	7.5mg
-----------------------------	-------

Preparation of Thiamine Pyrophosphate Solution: Add thiamine pyrophosphate to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Prepare and dispense medium under O₂-free 100% N₂. Add components, except rabbit serum and thiamine pyrophosphate solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.0. Anaerobically distribute into tubes in 10.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 0.5 mL of sterile rabbit solution and 0.5mL of sterile thiamine pyrophosphate solution to each tube. Mix thoroughly.

Use: For the cultivation and maintenance of *Treponema socranskii*.

Ottow's Agar Medium

Composition per liter:

Agar.....	13.0g
Peptone.....	7.5g
Beef extract.....	5.0g
NaCl.....	5.0g
Casamino acids.....	2.5g
Yeast extract.....	2.5g
Glucose.....	1.0g

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Bacillus pallidus*.

Ottow's Medium

Composition per liter:

Peptone.....	7.5g
Meat extract.....	5.0g
NaCl.....	5.0g
Casamino acids.....	2.5g
Yeast extract.....	2.5g
Glucose.....	1.0g
pH 8.5 ± 0.2 at 25°C	

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Bacillus pallidus*, *Bacillus thermocloacae*, and *Sphaerobacter thermophilus*.

Oxacillin Resistance Screening Agar Base

Composition per liter:

NaCl.....	55.0g
Agar.....	12.5g
Peptic digest of animal tissue.....	11.8g
Mannitol.....	10.0g
Yeast extract.....	9.0g
LiCl.....	5.0g
Aniline Blue.....	0.2g
pH 7.2 ± 0.2 at 25°C	

Source: This medium is available from HiMedia.

Caution: Lithium chloride is harmful. Avoid bodily contact and inhalation of vapors. On contact with skin, wash with plenty of water immediately.

Selective Supplement Solution:

Composition per 10.0mL:

Oxacillin.....	2.0mg
Polymyxin B	50,000U

Preparation of Selective Supplement Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except selective supplement solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add selective supplement solution. Mix thoroughly. Pour into Petri dishes or aseptically distribute into sterile tubes.

Use: For the screening of oxacillin-resistant microorganisms.

Oxalate Maintenance Medium

Composition per liter:

Pancreatic digest of casein.....	10.0g
Sodium oxalate	5.0g
Na ₂ CO ₃	4.0g
Yeast extract.....	1.0g
Sodium acetate.....	0.82g
(NH ₄) ₂ SO ₄	0.5g
L-Cysteine·HCl·H ₂ O	0.5g
K ₂ HPO ₄	0.25g
KH ₂ PO ₄	0.25g
MgSO ₄ ·7H ₂ O	0.025g
Resazurin	0.001g

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Add components, except Na₂CO₃ and L-cysteine·HCl·H₂O, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.8. Gently heat and bring to boiling. Cool under O₂-free 100% CO₂. Add Na₂CO₃ and L-cysteine·HCl·H₂O. Mix thoroughly. Anaerobically distribute into tubes. Cap with rubber stoppers. Place tubes in a press. Autoclave for 15 min at 15 psi pressure–121°C with fast exhaust.

Use: For the cultivation and maintenance of *Oxalobacter formigenes*.

Oxalate Medium

Basal Medium:

Composition per liter:

K ₂ HPO ₄	4.4g
KH ₂ PO ₄	3.4g
Potassium oxalate.....	2.0g
(NH ₄) ₂ SO ₄	0.5g
MgSO ₄ ·7H ₂ O	0.2g
FeCl ₃	0.015g
Phenol Red (0.4% solution).....	5.0mL
Mineral stock solution	1.0mL

Mineral Stock Solution:

Composition per liter:

ZnSO ₄ ·7H ₂ O	11.0g
MnSO ₄ ·H ₂ O	5.0g
Na ₂ MoO ₄ ·2H ₂ O	2.0g
CoSO ₄	0.05g

H ₃ BO ₃	0.05g
CuSO ₄ ·5H ₂ O	7.0mg

Preparation of Mineral Stock Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation and cultivation of oxalate-decomposing *Alcaligenes* species.

Oxalate Medium, Modified

Composition per liter:

Pancreatic digest of casein.....	10.0g
Sodium oxalate	5.0g
Na ₂ CO ₃	4.0g
Yeast extract.....	1.0g
Sodium acetate.....	0.82g
(NH ₄) ₂ SO ₄	0.5g
L-Cysteine·HCl·H ₂ O	0.5g
K ₂ HPO ₄	0.25g
KH ₂ PO ₄	0.25g
MgSO ₄ ·7H ₂ O	0.025g
Resazurin	0.001g
Trace elements solution	20.0mL

pH 7.0 ± 0.2 at 25°C

Trace Elements Solution:

Composition per liter:

H ₃ BO ₃	0.03g
CoCl ₂ ·6H ₂ O	0.02g
ZnSO ₄ ·7H ₂ O	0.01g
MnCl ₂ ·4H ₂ O	3.0mg
Na ₂ MoO ₄ ·2H ₂ O	3.0mg
NiCl ₂ ·6H ₂ O	2.0mg
CuCl ₂ ·6H ₂ O	1.0mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components, except Na₂CO₃ and L-cysteine·HCl·H₂O, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Gently heat and bring to boiling. Cool under O₂-free 100% CO₂. Add Na₂CO₃ and L-cysteine·HCl·H₂O. Mix thoroughly. Anaerobically distribute into tubes. Cap with rubber stoppers. Place tubes in a press. Autoclave for 15 min at 15 psi pressure–121°C with fast exhaust.

Use: For the cultivation and maintenance of *Oxalobacter formigenes*.

Oxalate Utilization Medium

Composition per liter:

Agar	12.0g
Potassium oxalate	1.0g
NaCl.....	1.0g
(NH ₄) ₂ HPO ₄	1.0g
KH ₂ PO ₄	0.5g
MgSO ₄ ·7H ₂ O	0.2g
CaCl ₂ solution.....	80.0mL

pH 7.0 ± 0.2 at 25°C

CaCl₂ Solution:

Composition per 100.0mL:

CaCl ₂	1.47g
-------------------------	-------

Preparation of CaCl₂ Solution: Add CaCl₂ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Gently heat until dissolved. Filter sterilize.

Preparation of Medium: Add components, except CaCl₂ solution, to distilled/deionized water and bring volume to 920.0mL. Mix thoroughly. Gently heat and bring to boiling. Distribute into flasks in 92.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 8.0mL of sterile CaCl₂ solution to each flask. A fine precipitate of calcium oxalate will form. Mix thoroughly. Pour into sterile Petri dishes. Swirl flask while dispensing agar to disperse precipitate evenly.

Use: For the cultivation and differentiation of streptomycetes based on oxalate utilization. Bacteria that utilize oxalate turn the medium dark blue.

Oxalobacter Medium

Composition per 1001.0mL:

Sodium oxalate	10.0g
Na ₂ CO ₃	4.0g
Yeast extract	1.0g
Sodium acetate	0.82g
L-Cysteine·HCl	0.5g
(NH ₄) ₂ SO ₄	0.5g
K ₂ HPO ₄	0.25g
KH ₂ PO ₄	0.25g
MgSO ₄ ·7H ₂ O	0.025g
Resazurin	1.0mg
Trace elements solution SL-10	1.0mL
pH 6.8 ± 0.2 at 25°C	

Trace Elements Solution SL-10:

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% CO₂. Anaerobically distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Aureobacterium testaceum* and *Oxalobacter formigenes*.

Oxford Agar

(Listeria Selective Agar, Oxford)

Composition per liter:

Special peptone	23.0g
LiCl	15.0g
Agar	10.0g
NaCl	5.0g

Cornstarch	1.0g
Esculin	1.0g
Ferric ammonium citrate	0.5g
Antibiotic inhibitor	10.0mL
pH 7.0 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Oxoid Unipath.

Caution: Lithium chloride is harmful. Avoid bodily contact and inhalation of vapors. On contact with skin, wash with plenty of water immediately.

Antibiotic Inhibitor:

Composition per 10.0mL:

Cycloheximide	0.4g
Colistin sulfate	0.02g
Fosfomycin	0.01g
Acriflavine	5.0mg
Cefotetan	2.0mg
Ethanol (50% solution)	10.0mL

Preparation of Antibiotic Inhibitor: Add antibiotics to 10.0mL of ethanol. Mix thoroughly. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: Add components, except antibiotic inhibitor, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL of sterile antibiotic inhibitor. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of *Listeria monocytogenes* from specimens containing a mixed bacterial flora.

Oxford Agar, Modified

(Listeria Selective Agar, Modified Oxford)

(MOX Agar)

Composition per liter:

Special peptone	23.0g
LiCl	15.0g
Agar	12.0g
NaCl	5.0g
Cornstarch	1.0g
Esculin	1.0g
Ferric ammonium citrate	0.5g
Antibiotic inhibitor	10.0mL
pH 7.0 ± 0.2 at 25°C	

Caution: Lithium chloride is harmful. Avoid bodily contact and inhalation of vapors. On contact with skin, wash with plenty of water immediately.

Antibiotic Inhibitor:

Composition per 10.0mL:

Moxalactam	0.015g
Colistin sulfate	0.01g

Preparation of Antibiotic Inhibitor: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except antibiotic inhibitor, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 10 min at

15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL of sterile antibiotic inhibitor. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of *Listeria monocytogenes* from specimens containing a mixed bacterial flora.

Oxford Medium (BAM M118)

Composition per liter:

Special peptone	23.0g
LiCl	15.0g
Agar	10.0g
NaCl	5.0g
Cornstarch	1.0g
Esculin	1.0g
Ferric ammonium citrate	0.5g
Antibiotic inhibitor	10.0mL

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Caution: Lithium chloride is harmful. Avoid bodily contact and inhalation of vapors. On contact with skin, wash with plenty of water immediately.

Supplement Mix:

Composition per 10.0mL:

Cycloheximide	0.4g
Colistin sulfate	0.02g
Fosfomycin	0.01g
Acriflavine	5.0mg
Cefotetan	2.0mg
Ethanol (50% solution)	10.0mL

Preparation of Supplement Mix: Add components to 10.0mL of ethanol. Mix thoroughly. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: Add components, except supplement mix, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 10.0mL of sterile supplement mix. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of *Listeria monocytogenes* from specimens containing a mixed bacterial flora.

Oxidation-Fermentation Medium (OF Medium)

Composition per liter:

NaCl	5.0g
Agar	2.5g
Pancreatic digest of casein	2.0g
K ₂ HPO ₄	0.3g
Bromthymol Blue	0.03g
Carbohydrate solution	100.0mL

pH 6.8 ± 0.1 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Carbohydrate Solution:

Composition per 100.0mL:

Carbohydrate	10.0g
--------------------	-------

Preparation of Carbohydrate Solution: Add carbohydrate to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except carbohydrate solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 100.0mL of sterile carbohydrate solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For differentiating Gram-negative bacteria based upon determining the oxidative and fermentative metabolism of carbohydrates.

Oxidation-Fermentation Medium, Hugh-Leifson's (Hugh-Leifson's Oxidation Fermentation Medium)

Composition per liter:

NaCl	5.0g
Agar	3.0g
Peptone	2.0g
K ₂ HPO ₄	0.3g
Carbohydrate solution	100.0mL
Bromthymol Blue solution (0.2%)	15.0mL

pH 7.1 ± 0.2 at 25°C

Carbohydrate Solution:

Composition per 100.0mL:

Carbohydrate	10.0g
--------------------	-------

Preparation of Carbohydrate Solution: Add carbohydrate to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except carbohydrate solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 100.0mL of sterile carbohydrate solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For differentiating Gram-negative bacteria, such as *Vibrio* species, based upon determining the oxidative and fermentative metabolism of carbohydrates. Bacteria that ferment the carbohydrate turn the medium yellow.

Oxidation-Fermentation Medium, King's (King's OF Medium)

Composition per liter:

Agar	3.0g
Pancreatic digest of casein	2.0g
Carbohydrate solution	100.0mL
Phenol Red (1.5% solution)	2.0mL
Carbohydrate solution	100.0mL

pH to 7.3 ± 0.2

Preparation of Medium: Add components, except carbohydrate solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 100.0mL of sterile carbohydrate solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Carbohydrate Solution:**Composition** per 100.0mL:

Carbohydrate..... 10.0g

Preparation of Carbohydrate Solution: Add carbohydrate to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except carbohydrate solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 100.0mL of sterile carbohydrate solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For differentiating bacteria based upon determining the oxidative and fermentative metabolism of carbohydrates. Bacteria that ferment the carbohydrate turn the medium yellow.

 Carbohydrate solution..... 100.0mL

pH 6.8 ± 0.1 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems and Oxoid Unipath.

Carbohydrate Solution:**Composition** per 100.0mL:

Carbohydrate..... 10.0g

Preparation of Carbohydrate Solution: Add carbohydrate to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except carbohydrate solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 100.0mL of sterile carbohydrate solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For differentiating bacteria based upon determining the oxidative and fermentative metabolism of carbohydrates. Bacteria that ferment the carbohydrate turn the medium yellow.

**Oxidative-Fermentative Glucose Medium, Semisolid
(OF Glucose Medium, Semisolid)****Composition** per liter:

Glucose..... 10.0g
 NaCl..... 5.0g
 Agar..... 2.0g
 Pancreatic digest of casein..... 2.0g
 K₂HPO₄..... 0.3g
 Bromthymol Blue..... 0.08g

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For differentiating Gram-negative bacteria based upon determining the oxidative and fermentative metabolism of glucose. Bacteria that ferment glucose turn the medium yellow.

Oxidative-Fermentative**Glucose Medium, Semisolid, with Sodium Chloride
(OF Glucose Medium, Semisolid with NaCl)****Composition** per liter:

NaCl..... 20.0g
 Glucose..... 10.0g
 Agar..... 2.0g
 Pancreatic digest of casein..... 2.0g
 K₂HPO₄..... 0.3g
 Bromthymol Blue..... 0.08g

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For differentiating halophilic *Vibrio* species based upon determining the oxidative and fermentative metabolism of glucose. Bacteria that ferment glucose turn the medium yellow.

**Oxidative-Fermentative Test Medium
(OF Test Medium)****Composition** per liter:

NaCl..... 5.0g
 Agar..... 3.0g
 Peptone..... 2.0g
 K₂HPO₄..... 0.3g
 Bromthymol Blue..... 0.03g
 Carbohydrate solution..... 100.0mL

Carbohydrate Solution:**Composition** per 100.0mL:

Carbohydrate..... 10.0g

Preparation of Carbohydrate Solution: Add carbohydrate to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except carbohydrate solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes in 3.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 0.3mL of sterile carbohydrate solution to each tube. Mix thoroughly.

Use: For the cultivation and differentiation of a variety of microorganisms based on their ability to ferment a specific carbohydrate. Bacteria that ferment the specific carbohydrate turn the medium yellow.

**Oxytetra Glucose Yeast Agar Base
(OGYE Agar Base)****Composition** per liter:

Glucose..... 20.0g
 Agar..... 12.0g

Yeast extract.....	5.0g
Oxytetracycline solution.....	10.0mL
pH 7.0 ± 0.2 at 25°C	

Source: This medium, without oxytetracycline solution, is available as a premixed powder from HiMedia.

Oxytetracycline Solution:

Composition per 10.0mL:

Oxytetracycline.....	0.1g
Tris(hydroxymethyl) aminomethane buffer (0.1M, pH 7.0)....	10.0mL

Preparation of Oxytetracycline Solution: Add oxytetracycline to 10.0mL of Tris buffer. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except oxytetracycline solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 10 min at 10 psi pressure–115°C. Cool to 45°–50°C. Aseptically add sterile oxytetracycline solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation, enumeration, and cultivation of yeasts and other fungi from foods.

Oxytetra Glucose Yeast Agar Base with Biotin

Composition per liter:

Glucose.....	20.0g
Agar.....	12.0g
Yeast extract.....	5.0g
Biotin.....	0.0001g
Selective supplement solution.....	10.0mL
pH 7.0 ± 0.2 at 25°C	

Source: This medium is available from HiMedia.

Selective Supplement Solution:

Composition per 10.0mL:

Oxytetracycline.....	50.0mg
----------------------	--------

Preparation of Selective Supplement Solution: Add oxytetracycline to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except selective supplement solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add selective supplement solution. Mix thoroughly. Pour into Petri dishes or aseptically distribute into sterile tubes.

Use: For the isolation and enumeration of yeasts and molds from food-stuffs.

Oxytetracycline Glucose Yeast Extract Agar (OGYE Agar)

Composition per liter:

Glucose.....	20.0g
Agar.....	12.0g
Yeast extract.....	5.0g
Biotin.....	0.1mg
Oxytetracycline solution.....	10.0mL
pH 7.0 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Oxoid Unipath.

Oxytetracycline Solution:

Composition per 10.0mL:

Oxytetracycline.....	0.1g
Tris(hydroxymethyl) aminomethane buffer (0.1M, pH 7.0).....	10.0mL

Preparation of Oxytetracycline Solution: Add oxytetracycline to 10.0mL of Tris buffer. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except oxytetracycline solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 10 min at 10 psi pressure–115°C. Cool to 45°–50°C. Aseptically add sterile oxytetracycline solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation, enumeration, and cultivation of yeasts and other fungi from foods.

Oxytetracycline Glucose Yeast Extract Agar (OGYE Agar)

Composition per liter:

Glucose.....	20.0g
Agar.....	12.0g
Yeast extract.....	5.0g
Oxytetracycline solution.....	10.0mL
pH 7.0 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Oxytetracycline Solution:

Composition per 10.0mL:

Oxytetracycline.....	0.1g
----------------------	------

Preparation of Oxytetracycline Solution: Add oxytetracycline to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except oxytetracycline solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile oxytetracycline solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation, enumeration, and cultivation of yeasts and other fungi from foods.

OZR Medium

Composition per liter:

Agar.....	15.0g
Pancreatic digest of casein.....	1.0g
Yeast extract.....	1.0g

Preparation of Medium: Add components to seawater and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Leucothrix mucor*.

P Agar

Composition per liter:

Agar.....	15.0g
Peptone.....	10.0g
NaCl.....	5.0g

Yeast extract.....	5.0g
Glucose	1.0g
pH 7.5 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Staphylococcus* species.

P-2 Medium

Composition per liter:

Yeast extract.....	5.0g
K ₂ HPO ₄	3.0g
KH ₂ PO ₄	2.0g
NH ₄ Cl	2.0g
L-Cysteine·HCl.....	0.5g
Na ₂ S·9H ₂ O	0.5g
MgCl ₂ ·6H ₂ O.....	0.2g
CaCl ₂ ·2H ₂ O.....	0.05g
Resazurin	0.5mg
Glucose solution	5.0g
pH 7.0–7.2 at 25°C	

Glucose Solution:

Composition per 100.0mL:

D-Glucose.....	5.0g
----------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare and dispense medium under 100% N₂. Add components, except glucose solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Adjust pH to 7.0–7.2. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 100.0mL of sterile glucose solution. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or bottles.

Use: For the cultivation of *Clostridium uzonii*, *Thermoanaerobium crenophilum*, and *Thermoanaerobium olidum*.

PA Agar

See: *Pseudomonas aeruginosa* Agar

PA Broth

See: *Presence Absence Broth*

PA HiVeg Broth

Composition per liter:

Plant hydrolysate No. 1.....	9.83g
Lactose	7.46g
Plant peptone.....	5.0g
Plant extract	3.0g
NaCl	2.46g
KH ₂ PO ₄	1.35g
K ₂ HPO ₄	1.35g
Sodium lauryl sulfate.....	0.05g
Bromcresol Purple	0.8.5mg
pH 6.8 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.5. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 55°–60°C. Readjust pH to 7.1. Mix thoroughly. Pour into 50mm × 12mm Petri dishes in 3.0mL volumes.

Use: For the cultivation and estimation of numbers of *Pseudomonas aeruginosa* in water by the membrane filter method. For the detection of presence and absence of coliform bacteria in water from treatment plants or distribution systems.

Pablum Cereal Agar

Composition per liter:

Pablum cereal, precooked.....	100.0g
Agar	18.0g
Chloramphenicol.....	0.05g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of dematiaceous fungi and stimulation of spore formation.

PA-C Agar (mPA-C Agar)

Composition per liter:

Agar	12.0g
L-Lysine·HCl.....	5.0g
NaCl.....	5.0g
Na ₂ S ₂ O ₃	5.0g
Yeast extract.....	2.0g
MgSO ₄ ·7H ₂ O.....	1.5g
Lactose.....	1.25g
Sucrose.....	1.25g
Xylose.....	1.25g
Ferric ammonium citrate.....	0.8g
Phenol Red.....	0.08g
Nalidixic acid.....	0.037g
Kanamycin.....	8.0mg

pH 7.2 ± 0.1 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the selective recovery and enumeration of *Pseudomonas aeruginosa* from water samples.

Packer's Agar

See: *Azide Blood Agar with Crystal Violet*

Pagano Levin Agar

Composition per liter:

Glucose	40.0g
Agar	15.0g
Peptone	10.0g
Yeast extract.....	1.0g

Neomycin..... 0.5g
 2,3,5-Triphenyltetrazolium chloride 0.1g
 pH 6.0 ± 0.1 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components, except neomycin and 2,3,5-triphenyltetrazolium chloride, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add neomycin and 2,3,5-triphenyltetrazolium chloride. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes. Allow tubes to cool in a slanted position.

Use: For the isolation, cultivation, and differentiation of *Candida* species. *Candida albicans* appears as smooth, shiny, cream-light pink colonies.

Pages Balanced Salt Solution (PBS)

Composition per liter:

Solution A500.0mL
 Solution B500.0mL

Solution A:

Composition per 500.0mL:

Na₂HPO₄..... 2.84g
 KH₂PO₄..... 2.72g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Autoclave for 20 min at 15 psi pressure–121°C. Cool to 25°C.

Solution B:

Composition per 500.0mL:

NaCl 0.24g
 CaCl₂·2H₂O..... 8.0mg
 MgSO₄·7H₂O 8.0mg

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Autoclave for 20 min at 15 psi pressure–121°C. Cool to 25°C.

Preparation of Medium: Aseptically combine component solutions. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Tokophrya lemnae*.

Pai Medium

Composition per liter:

Homogenized whole egg666.0mL
 NaCl (0.85% solution)334.0mL

pH 6.75 ± 0.2 at 25°C

Homogenized Whole Egg:

Composition per liter:

Whole eggs 18-24

Preparation of Homogenized Whole Egg: Use fresh eggs, less than 1 week old. Scrub the shells with soap. Let stand in a soap solution for 30 min. Rinse in running water. Soak eggs in 70% ethanol for 15 min. Break the eggs into a sterile container. Homogenize by shaking. Filter through four layers of sterile cheesecloth into a sterile graduated cylinder. Measure out 1.0L.

Preparation of Medium: Combine components. Mix thoroughly. Aseptically distribute into sterile tubes. Inspissate tubes in a slanted position at 80°–90°C (moist heat) for 30 min.

Use: For the maintenance of stock cultures of *Salmonella typhi* and other *Salmonella* species.

Pai Medium

Composition per 1120.0mL:

Glucose 5.0g
 Homogenized whole egg 1.0L
 Glycerol 120.0mL

pH 6.75 ± 0.2 at 25°C

Homogenized Whole Egg:

Composition per liter:

Whole eggs 18–24

Preparation of Homogenized Whole Egg: Use fresh eggs, less than 1 week old. Scrub the shells with soap. Let stand in a soap solution for 30 min. Rinse in running water. Soak eggs in 70% ethanol for 15 min. Break the eggs into a sterile container. Homogenize by shaking. Filter through four layers of sterile cheesecloth into a sterile graduated cylinder. Measure out 1.0L.

Preparation of Medium: Combine components. Mix thoroughly. Aseptically distribute into sterile tubes. Inspissate tubes in a slanted position at 80°–90°C (moist heat) for 30 min.

Use: For the isolation and cultivation of *Corynebacterium* spp.

PALCAM Agar (Polymyxin Acriflavine Lithium Chloride Ceftazidime Esculin Mannitol Agar)

Composition per liter:

Peptone 23.0g
 LiCl₂ 15.0g
 Agar 10.0g
 Mannitol..... 10.0g
 NaCl..... 5.0g
 Yeast extract..... 3.0g
 Starch 1.0g
 Esculin 0.8g
 Ferric ammonium citrate..... 0.5g
 Glucose 0.5g
 Phenol Red..... 0.08g
 PALCAM selective supplement..... 10.0mL

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

PALCAM Selective Supplement:

Composition per 10.0mL:

Ceftazidime..... 20.0mg
 Polymyxin B 10.0mg
 Acriflavine-HCl 5.0mg

Preparation of PALCAM Selective Supplement: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except PALCAM selective supplement, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile PALCAM selective supplement. Mix thoroughly.

Use: For the selective isolation, cultivation, and differentiation of *Listeria monocytogenes* and other *Listeria* species from foods.

**PALCAM Agar with Egg Yolk Emulsion
(Polymyxin Acriflavine Lithium Chloride Ceftriaxime
Esculin Mannitol Agar with Egg Yolk Emulsion)**

Composition per liter:

Peptone.....	23.0g
LiCl ₂	15.0g
Agar	10.0g
Mannitol.....	10.0g
NaCl	5.0g
Yeast extract.....	3.0g
Starch	1.0g
Esculin	0.8g
Ferric ammonium citrate.....	0.5g
Glucose	0.5g
Phenol Red.....	0.08g
Egg yolk emulsion	25.0mL
PALCAM selective supplement.....	10.0mL

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

PALCAM Selective Supplement:

Composition per 10.0mL:

Ceftazidime.....	20.0mg
Polymyxin B	10.0mg
Acriflavine-HCl.....	5.0mg

Preparation of PALCAM Selective Supplement: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Egg Yolk Emulsion:

Composition:

Chicken egg yolks.....	11
Whole chicken egg.....	1

Preparation of Egg Yolk Emulsion: Soak eggs with 1:100 dilution of saturated mercuric chloride solution for 1 min. Crack eggs and separate yolks from whites. Mix egg yolks with 1 chicken egg.

Preparation of Medium: Add components, except PALCAM selective supplement and egg yolk emulsion, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile PALCAM selective supplement and egg yolk emulsion. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation, cultivation, and differentiation of *Listeria monocytogenes* and other *Listeria* species from foods. The addition of egg yolk emulsion aids in the recovery of damaged *Listeria*.

PALCAM Listeria Selective Agar

See: **PALCAM Agar**

Palleroni and Doudoroff Mineral Base Agar, Modified

Composition per liter:

Agar	15.0g
Na ₂ HPO ₄ ·12H ₂ O.....	6.0g
KH ₂ PO ₄	2.4g
NH ₄ ·Cl	1.0g

MgSO ₄ ·7H ₂ O	0.5g
CaCl ₂ ·6H ₂ O	0.01g
FeCl ₃ ·6H ₂ O	0.01g

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Alcaligenes eutrophus*, *Alcaligenes latus*, and *Alcaligenes xylosoxydans*.

Pantothenate Assay HiVeg Medium

Composition per liter:

Glucose	40.0g
Sodium acetate.....	20.0g
Plant acid hydrolysate.....	10.0g
K ₂ HPO ₄	1.0g
KH ₂ PO ₄	1.0g
L-Cystine.....	0.4g
MgSO ₄	0.4g
DL-Tryptophan	0.2g
Adenine sulfate	0.02g
FeSO ₄	0.02g
Guanine hydrochloride	0.02g
MnSO ₄	0.02g
NaCl.....	0.02g
Uracil	0.02g
Pyridoxine.....	8.0mg
Riboflavin	4.0mg
Thiamine hydrochloride.....	2.0mg
p-Aminobenzoic acid (PABA).....	2.0mg
Niacin.....	1.0mg
Biotin	0.8µg

pH 6.7 ± 0.1 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 2–3 min. Distribute into tubes in 5.0mL volumes. Add standard solution or test solution to each tube. Adjust the volume of each tube to 10.0mL with distilled/deionized water. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the microbiological assaying of pantothenic acid and its salts using *Lactobacillus plantarum* as the test organism.

Pantothenate Assay Medium

Composition per 100.0mL:

Glucose	40.0g
Sodium acetate.....	20.0g
Vitamin assay casamino acids	10.0g
K ₂ HPO ₄	1.0g
KH ₂ PO ₄	1.0g
L-Cystine	0.4g
MgSO ₄ ·7H ₂ O	0.4g
DL-Tryptophan.....	0.2g
Adenine sulfate	0.02g
FeSO ₄ ·7H ₂ O.....	0.02g
Guanine-HCl	0.02g
MnSO ₄ ·H ₂ O.....	0.02g

NaCl	0.02g
Uracil	0.02g
Niacin	1.0mg
Pyridoxine	0.8mg
Riboflavin	0.4mg
<i>p</i> -Aminobenzoic acid	0.2mg
Thiamine-HCl	0.2mg
Biotin	0.8μg
pH 6.7 ± 0.1 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 2–3 min. Distribute into tubes in 5.0mL volumes. Add standard solution or test solution to each tube. Adjust the volume of each tube to 10.0mL with distilled/deionized water. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the microbiological assaying of pantothenic acid and its salts using *Lactobacillus plantarum* as the test organism.

Pantothenate Assay Medium

Composition per liter:

Glucose	38.0g
Sodium acetate	20.0g
Vitamin-free casamino acids	10.0g
K ₂ HPO ₄	3.0g
(NH ₄) ₂ SO ₄	2.0g
NaCl	1.0g
MgSO ₄ ·7H ₂ O	0.4g
L-Tryptophan	0.1g
MnSO ₄ ·H ₂ O	0.026g
Xanthine	0.02g
Adenine	0.02g
Guanine	0.02g
Uracil	0.02g
(NH ₄) ₂ SO ₄ ·FeSO ₄ ·6H ₂ O	0.02g
Niacin	5.0mg
Pyridoxine-HCl	4.0mg
Riboflavin	2.0mg
Thiamine-HCl	1.0mg
<i>p</i> -Aminobenzoic acid	1.0mg
Biotin	0.05mg

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 2–3 min. Distribute into tubes in 5.0mL volumes. Add standard solution or test solution to each tube. Adjust the volume of each tube to 10.0mL with distilled/deionized water. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For determination of the pantothenate content of pharmaceutical products and other materials using *Lactobacillus plantarum* as the test organism.

Pantothenate Culture Agar, USP

Composition per liter:

Yeast extract	20.0g
Agar	15.0g

Glucose	5.0g
Sodium acetate	5.0g
pH 6.8 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks in 10.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the maintenance of *Lactobacillus plantarum* used in the microbiological assay of pantothenic acid or pantothenate. Also used for the cultivation of other *Lactobacillus* species.

Pantothenate Inoculum HiVeg Broth

Composition per liter:

Plant hydrolysate No. 4	15.0g
Glucose	10.0g
Tomato juice (100 ml)	5.0g
Yeast extract	5.0g
KH ₂ PO ₄	2.0g
Polysorbate 80	1.0g
pH 6.8 ± 0.1 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 2–3 min. Distribute into tubes in 5.0mL volumes. Add standard solution or test solution to each tube. Adjust the volume of each tube to 10.0mL with distilled/deionized water. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the microbiological assaying of pantothenic acid and its salts using *Lactobacillus plantarum* as the test organism.

Pantothenate Medium, AOAC USP

Composition per liter:

Glucose	40.0g
Sodium acetate	20.0g
Vitamin assay casamino acids	10.0g
K ₂ HPO ₄	1.0g
KH ₂ PO ₄	1.0g
L-Cystine	0.4g
MgSO ₄ ·7H ₂ O	0.4g
L-Tryptophan	0.1g
Sorbitan monooleate complex	0.1g
Adenine sulfate	0.02g
FeSO ₄ ·7H ₂ O	0.02g
Guanine-HCl	0.02g
MnSO ₄ ·H ₂ O	0.02g
NaCl	0.02g
Uracil	0.02g
Nicotinic acid	1.0mg
Pyridoxine-HCl	0.8mg
Riboflavin	0.4mg
<i>p</i> -Aminobenzoic acid	0.2mg
Thiamine-HCl	0.2mg
Biotin	0.8μg
pH 6.7 ± 0.1 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 2–3 min. Distribute into tubes in 5.0mL volumes. Add standard solution or test solution to each tube. Adjust the volume of each tube to 10.0mL with distilled/deionized water. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the determination of pantothenic acid and its salts using *Lactobacillus plantarum* as the test organism.

Panthenol Assay Medium

Composition per 950.0mL:

Panthenol supplement	475.0mL
Base medium	225.0mL
pH 6.0 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Base Medium:

Composition per 900.0mL:

Glucose	15.0g
Pancreatic digest of casein, charcoal treated	10.0g
Sodium citrate	2.0g
Vitamin assay casamino acids	2.0g
K ₂ HPO ₄	1.0g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.8g
L-Tryptophan	0.2g
MnSO ₄ ·H ₂ O	0.16g
L-Cystine	0.15g
FeSO ₄ ·7H ₂ O	0.04g
Liver concentrate	0.04g
NaCl	0.04g
Adenine sulfate	0.01g
Guanine·HCl	0.01g
Uracil	0.01g
<i>p</i> -Aminobenzoic acid	2.0mg
β-Alanine	2.0mg
Nicotinic acid	2.0mg
Pyridoxine·HCl	2.0mg
Riboflavin	2.0mg
Thiamine·HCl	2.0mg
Folic acid	0.02mg
Biotin	0.016mg

Preparation of Base Medium: Add components to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Mix thoroughly.

Panthenol Supplement:

Composition per 100.0mL:

Glycerol	33.0g
Sorbitan monooleate complex	2.0g
Lactic acid	0.68g

Preparation of Panthenol Supplement: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Distribute base medium into 50.0mL flasks in 4.5mL volumes. Add standard solution or test solution to each flask. Adjust the volume in each flask to 9.5mL with distilled/deionized water. Autoclave for 10 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 0.5mL of panthenol supplement to each flask.

Use: For the microbiological assaying of panthenol using *Gluconobacter oxydans* subspecies *suboxydans* as the test organism.

Papillibacter Medium (DSMZ Medium 872)

Composition per 1070.0mL:

Yeast extract	5.0g
Trypticase™	5.0g
NaCl	1.0g
Cysteine-HCl·H ₂ O	0.5g
KCl	0.5g
MgCl ₂ ·6H ₂ O	0.4g
NH ₄ Cl	0.3g
K ₂ HPO ₄	0.2g
CaCl ₂ ·2H ₂ O	0.1g
Resazurin	0.5mg
NaHCO ₃ solution	50.0mL
Na ₂ S·9H ₂ O solution	10.0mL
Cinnamate solution	10.0mL
Trace elements solution SL-10	1.0mL
pH 7.0–7.5 at 25°C	

Cinnamate Solution:

Composition per 10.0mL:

Na-trans-cinnamate	0.8g
--------------------------	------

Preparation of Cinnamate Solution: Add Na-trans-cinnamate to distilled/deionized water and bring volume to 10.0mL. Sparge with N₂. Filter sterile.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.3g
---	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Sparge with N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Store anaerobically.

NaHCO₃ Solution:

Composition per 100.0mL:

NaHCO ₃	10.0g
--------------------------	-------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Must be prepared freshly.

Trace Elements Solution SL-10:

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
H ₃ BO ₃	300.0mg
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	7.7mL

Preparation of Trace Elements Solution SL-10: Add 1.5g of FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas atmosphere. Add components, except cysteine, NaHCO₃ solution, Na₂S·9H₂O solution, and cinnamate solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Boil for 10 min. Cool to room temperature while sparging with 80% N₂ + 20% CO₂. Add 0.5g cysteine-HCl·H₂O. Mix thoroughly. Adjust pH to 7.0. Distribute into anaerobe tubes. Autoclave for 15 min at 15 psi pressure–121°C. For every 10.0mL medium inject 0.5mL sterile NaHCO₃ solution, 0.1mL Na₂S·9H₂O solution, and 0.1mL cinnamate solution. Mix thoroughly. Final pH is 7.0–7.5.

Use: For the cultivation of *Papillibacter cinnamivorans*.

Paracoccus alcaliphilus Medium (DSMZ Medium 772)

Composition per liter:

(NH ₄) ₂ SO ₄	3.0g
Na ₂ HPO ₄	3.0g
Yeast extract.....	2.0g
KH ₂ PO ₄	1.4g
MgSO ₄ ·7H ₂ O.....	0.2g
Fe-citrate.....	30.0mg
CaCl ₂ ·2H ₂ O.....	30.0mg
MnCl ₂ ·4H ₂ O.....	5.0mg
ZnSO ₄ ·7H ₂ O.....	5.0mg
CuSO ₄ ·2H ₂ O.....	0.5mg
Methanol.....	10.0mL
NaHCO ₃ solution.....	variable

pH 9.0 ± 0.2 at 25°C

NaHCO₃ Solution:

Composition per 50.0mL:

NaHCO ₃	5.0g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

Preparation of Medium: Add components, except NaHCO₃ solution and methanol, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Filter sterilize 10.0mL of methanol. Aseptically add the 10.0mL filter sterilized methanol. Mix thoroughly. Adjust pH to 9.0 using the sterile NaHCO₃ solution.

Use: For the cultivation of *Paracoccus alcaliphilus*.

Paracoccus alcaliphilus Medium (DSMZ Medium 772)

Composition per liter:

(NH ₄) ₂ SO ₄	3.0g
Na ₂ HPO ₄	3.0g
KH ₂ PO ₄	1.4g
MgSO ₄ ·7H ₂ O.....	0.2g
Fe-citrate.....	30.0mg
CaCl ₂ ·2H ₂ O.....	30.0mg
MnCl ₂ ·4H ₂ O.....	5.0mg
ZnSO ₄ ·7H ₂ O.....	5.0mg
CuSO ₄ ·2H ₂ O.....	0.5mg
Thiamine-HCl·2H ₂ O.....	0.4mg
Methanol.....	10.0mL
NaHCO ₃ solution.....	variable

pH 9.0 ± 0.2 at 25°C

NaHCO₃ Solution:

Composition per 50.0mL:

NaHCO ₃	5.0g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

Preparation of Medium: Add components, except NaHCO₃ solution and methanol, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL filter sterilized methanol. Adjust pH to 9.0 using the sterile NaHCO₃ solution.

Use: For the cultivation of *Paracoccus alcaliphilus*.

Paracoccus aminophilus *Paracoccus aminovorans* Medium (DSMZ Medium 774)

Composition per liter:

Agar.....	20.0g
Peptone.....	5.0g
Yeast extract.....	5.0g
Glucose.....	5.0g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Paracoccus aminovorans* and *Paracoccus aminophilus*.

Paracoccus halodenitrificans Agar

Composition per liter:

NaCl.....	60.0g
Agar.....	15.0g
Peptone.....	5.0g
NaCl.....	5.0g
Yeast extract.....	4.0g
Beef extract.....	1.0g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Deleya aquamarina*, *Deleya halophila*, *Deleya venusta*, *Halomonas halmophila*, *Marinococcus communis*, *Micrococcus halobius*, *Micrococcus varians*, and *Paracoccus halodenitrificans*.

Paracoccus halodenitrificans Agar

Composition per liter:

NaCl.....	60.0g
Urea.....	20.0g
Agar.....	15.0g
Peptone.....	5.0g
Meat extract.....	3.0g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0.

Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Paracoccus halodenitrificans*.

***Paracoccus kocurii* Medium (DSMZ Medium 773)**

Composition per liter:

NaH ₂ PO ₄ ·2H ₂ O.....	1.71g
K ₂ HPO ₄	1.41g
(NH ₄) ₂ SO ₄	1.0g
Hutner's salt solution.....	20.0mL
Tetramethyl ammonium chloride solution.....	10.0mL
Thiamine hydrochloride solution.....	10.0mL
pH 6.9 ± 0.2 at 25°C	

Tetramethyl Ammonium Chloride Solution:

Composition per 10.0mL:

Tetramethyl ammonium chloride.....	1.0g
------------------------------------	------

Preparation of Tetramethyl Ammonium Chloride Solution:

Add tetramethyl ammonium chloride to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Thiamine Hydrochloride Solution:

Composition per 10.0mL:

Thiamine-HCl·2H ₂ O.....	0.5mg
-------------------------------------	-------

Preparation of Thiamine Hydrochloride Solution:

Add thiamine-HCl·2H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Hutner's Salt Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O.....	29.7g
Nitrilotriacetic acid.....	10.0g
CaCl ₂ ·2H ₂ O.....	3.335g
FeSO ₄ ·7H ₂ O.....	99.0mg
(NH ₄) ₆ MoO ₇ O ₂₄ ·4H ₂ O.....	9.25mg
"Metals 44".....	50.0mL

"Metals 44":

Composition per 100.0mL:

ZnSO ₄ ·7H ₂ O.....	1.095g
FeSO ₄ ·7H ₂ O.....	0.5g
Sodium EDTA.....	0.25g
MnSO ₄ ·H ₂ O.....	0.154g
CuSO ₄ ·5H ₂ O.....	39.2mg
Co(NO ₃) ₂ ·6H ₂ O.....	24.8mg
Na ₂ B ₄ O ₇ ·10H ₂ O.....	17.7mg

Preparation of "Metals 44": Add sodium EDTA to distilled/deionized water and bring volume to 90.0mL. Mix thoroughly. Add a few drops of concentrated H₂SO₄ to retard precipitation of heavy metal ions. Add remaining components. Mix thoroughly. Bring volume to 100.0mL with distilled/deionized water.

Preparation of Hutner's Salt Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Adjust pH to 6.8.

Preparation of Medium: Add components, except tetramethyl ammonium chloride solution and thiamine hydrochloride solution, to distilled/deionized water and bring volume to 980.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room tempera-

ture. Aseptically add 10.0mL sterile tetramethyl ammonium chloride solution and 10.0mL sterile thiamine hydrochloride solution. Mix thoroughly. Adjust pH to 6.9.

Use: For the cultivation of *Paracoccus kocurii*.

Paraffin Agar

Composition per liter:

Agar.....	15.0g
K ₂ HPO ₄	6.0g
NH ₄ NO ₃	4.0g
KH ₂ PO ₄	2.0g
Paraffin, liquid.....	1.0g
ZnSO ₄ ·7H ₂ O.....	0.049g
MnCl ₂ ·4H ₂ O.....	0.046g
FeSO ₄ ·7H ₂ O.....	5.4mg
CuSO ₄ ·5H ₂ O.....	2.5mg
Na ₂ B ₄ O ₇ ·10H ₂ O.....	0.94mg
(NH ₄) ₆ Mo ₇ O ₂₄ ·4H ₂ O.....	0.2mg

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the selective isolation and cultivation of streptomycetes.

Paraffin Medium with McClung Carbon-Free Broth

Composition per liter:

Paraffin pellets.....	1lb
McClung carbon-free broth.....	1.0L
pH 7.2 ± 0.2 at 25°C	

McClung Carbon-Free Broth:

Composition per liter:

NaNO ₃	2.0g
K ₂ HPO ₄	0.8g
MgSO ₄ ·7H ₂ O.....	0.5g
FeCl ₃	0.01g
MnCl ₂ ·4H ₂ O.....	0.008g
ZnSO ₄	0.002g

Preparation of McClung Carbon-Free Broth: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat (low heat for 15–30 min) until salts dissolve. Cool to 25°C. Adjust pH to 7.2, if necessary. Filter sterilize.

Preparation of Medium: Fill glass screw-capped tubes 60% full with paraffin pellets. Place on slanted rack and autoclave for 15 min at 121°C. Let tubes cool in a slanted position. Add 2.5mL of sterile McClung carbon-free broth to each paraffin slant. Tighten screw caps. Sterility is tested by the addition of 2.5mL of sterile Trypticase™ soy broth and sample to each slant.

Use: For use in the sterility testing of various specimens.

Paramecium Medium

Composition per liter:

Solution C.....	500.0mL
Solution A.....	10.0mL
Solution B.....	1.0mL

Solution A:

Composition per liter:

Thiamine-HCl.....	1.5g
Calcium pantothenate.....	1.0g

Nicotinamide.....	0.5g
Pyridoxal-HCl.....	0.5g
Riboflavin.....	0.5g
Folic acid.....	0.5g
α -Lipoic acid.....	0.1g
Biotin.....	0.1mg

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute while stirring into screw-capped tubes in 10.0mL volumes. Store at -20°C . Thaw as needed.

Solution B:

Composition per 100.0mL:

TEM-4T (Hachmeister, Pittsburgh).....	10.0g
Stigmasterol.....	0.5g
Ethanol, absolute.....	100.0mL

Preparation of Solution B: Add TEM-4T and stigmasterol to 100.0mL of hot ethanol. Mix thoroughly. Store at 4°C .

Solution C:

Composition per 500.0mL:

Proteose peptone.....	10.0g
Pancreatic digest of casein.....	5.0g
Ribonucleic acid.....	1.0g
$\text{MgSO}_4 \cdot 7\text{H}_2\text{O}$	0.5g

Preparation of Solution C: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly.

Preparation of Medium: Combine 500.0mL of solution C, 10.0mL of solution A, and 1.0mL of solution B. Mix thoroughly. Bring volume to 1.0L with distilled/deionized water. Adjust pH to 7.0–7.2 with 0.1N NaOH. Autoclave for 20 min at 15 psi pressure– 121°C . Cool to 45° – 50°C . Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Paramecium* species to be used as host cells by bacterial symbionts.

Park and Sanders Enrichment Broth

Composition per 1010.0mL:

Basal medium.....	1.0L
Supplement A.....	5.0mL
Supplement B.....	5.0mL

pH 7.0 ± 0.2 at 25°C

Basal Medium:

Composition per liter:

Pancreatic digest of casein.....	10.0g
Peptic digest of animal tissue.....	10.0g
NaCl.....	5.0g
Yeast extract.....	2.0g
Glucose.....	1.0g
Sodium pyruvate.....	0.25g
NaHSO_3	0.1g
Horse blood, lysed.....	50.0mL

Preparation of Basal Medium: Add components, except horse blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure– 121°C . Cool to 25°C . Aseptically add sterile horse blood. Mix thoroughly.

Supplement A:

Composition per 5.0mL:

Vancomycin.....	0.01g
Trimethoprim lactate.....	0.01g

Preparation of Supplement A: Add components to distilled/deionized water and bring volume to 5.0mL. Mix thoroughly. Filter sterilize.

Supplement B:

Composition per 5.0mL:

Cefoperazone.....	0.032g
Cycloheximide.....	0.1g

Preparation of Supplement B: Add components to distilled/deionized water and bring volume to 5.0mL. Mix thoroughly. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: To 1.0L of cooled, sterile basal medium, aseptically add 5.0mL of sterile supplement A. Mix thoroughly. Aseptically distribute into flasks in 100.0mL volumes. Inoculate medium with food samples. Incubate at 31° – 32°C for 4 hr to recover and resuscitate injured cells. Aseptically add 0.5mL of supplement B to each 100.0mL of medium. Incubate cultures at 37°C for 2 hr.

Use: For the cultivation and enrichment of *Campylobacter* species from foods.

Park and Sanders Enrichment HiVeg Broth Base with Horse Blood and Selective Antibiotics

Composition per liter:

Plant hydrolysate.....	10.0g
Plant peptone.....	10.0g
NaCl.....	5.0g
Yeast extract.....	2.0g
Glucose.....	1.0g
Sodium pyruvate.....	0.25g
Sodium biselenite.....	0.1g
Horse blood, lysed.....	50.0mL
Supplement A.....	5.0mL
Supplement B.....	5.0mL

pH 7.0 ± 0.2 at 25°C

Source: This medium, without horse blood and selective antibiotic supplements, is available as a premixed powder from HiMedia.

Supplement A:

Composition per 5.0mL:

Vancomycin.....	0.01g
Trimethoprim lactate.....	0.01g

Preparation of Supplement A: Add components to distilled/deionized water and bring volume to 5.0mL. Mix thoroughly. Filter sterilize.

Supplement B:

Composition per 5.0mL:

Cefoperazone.....	0.032g
Cycloheximide.....	0.1g

Preparation of Supplement B: Add components to distilled/deionized water and bring volume to 5.0mL. Mix thoroughly. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: Add components, except horse blood, supplement A and supplement B, to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure– 121°C . Cool to 25°C . Asepti-

cally add 50.0mL sterile horse blood. Mix thoroughly. Aseptically add 5.0mL of sterile supplement A. Mix thoroughly. Aseptically distribute into flasks in 100.0mL volumes. Inoculate medium with food samples. Incubate at 31°–32°C for 4 hr to recover and resuscitate injured cells. Aseptically add 0.5mL of supplement B to each 100.0mL of medium. Incubate cultures at 37°C for 2 hr.

Use: For the cultivation and enrichment of *Campylobacter* species from foods.

Paromomycin Vancomycin Blood Agar
See: **PV Blood Agar**

***Pasteurella haemolytica* Selective Medium**

Composition per 1010.0mL:

Tryptose agar with peptic digest of blood..... 1.0L
Antibiotic solution 10.0mL
pH 7.2 ± 0.2 at 25°C

Tryptose Agar with Peptic Digest of Blood:

Composition per liter:

Agar 15.0g
Pancreatic digest of casein 10.0g
Peptic digest of animal tissue..... 10.0g
NaCl 5.0g
Glucose 1.0g
Peptic digest of blood 50.0mL

Preparation of Tryptose Agar with Peptic Digest of Blood:

Add components to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add peptic digest of blood. Mix thoroughly.

Antibiotic Solution:

Composition per 10.0mL:

Actidione (cycloheximide) 0.1g
Novobiocin 2.0mg
Neomycin 1.5mg

Preparation of Antibiotic Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: To 1.0L of cooled, sterile tryptose agar with peptic digest of blood, aseptically add 10.0mL of sterile antibiotic solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective cultivation of *Pasteurella haemolytica*.

***Pasteurella multocida* Selective Medium**

Composition per 1020.0mL:

Tryptose agar with peptic digest of blood..... 1.0L
Antibiotic solution 10.0mL
K₂TeO₃ solution 10.0mL
pH 7.2 ± 0.2 at 25°C

Tryptose Agar with Peptic Digest of Blood:

Composition per liter:

Agar 15.0g
Pancreatic digest of casein 10.0g
Peptic digest of animal tissue..... 10.0g
NaCl 5.0g

Glucose 1.0g
Peptic digest of blood 50.0mL

Preparation of Tryptose Agar with Peptic Digest of Blood:

Add components to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add peptic digest of blood. Mix thoroughly.

Antibiotic Solution:

Composition per 10.0mL:

Actidione (cycloheximide) 0.1g
Novobiocin 0.01g
Erythrocin 5.0mg

Preparation of Antibiotic Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

K₂TeO₃ Solution:

Composition per 10.0mL:

K₂TeO₃ 5.0mg

Preparation of K₂TeO₃ Solution: Add K₂TeO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Caution: Potassium tellurite is toxic.

Preparation of Medium: To 1.0L of cooled, sterile tryptose agar with peptic digest of blood, aseptically add 10.0mL of sterile antibiotic solution and 10.0mL of sterile K₂TeO₃ solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective cultivation of *Pasteurella multocida*.

Payne, Seghal, and Gibbons Medium
(DSMZ Medium 1160)

Composition per liter:

NaCl 250.0g
MgSO₄·7H₂O 20.0g
Yeast extract 10.0g
Casamino acids 7.5g
Trisodium citrate 3.0g
KCl 2.0g
FeCl₂·4H₂O 36.0mg
MnCl₂·4H₂O 0.36mg

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.4. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Haloarcula californiae*, *Haloarcula hispanica*, *Haloarcula japonica*, *Haloarcula marismortui*, *Haloarcula sinaiensis*, *Haloarcula vallismortis*, *Halobacterium cutirubrum*, *Halobacterium distributum*, *Halobacterium lacusprofundi*, *Halobacterium saccharovororum*, *Haloferax gibbonsii*, *Haloferax mediterranei*, *Halobacterium salinarium*, *Halobacterium simoncinii*, *Halobacterium* species, *Halobacterium trapanicum*, *Halobacterium volcanii*, *Halococcus morrhuae*, *Halococcus saccharolyticus*, *Halococcus* species, *Halococcus turkmenicus*, *Haloferax denitrificans*, *Halomonas elongata*, and *Salinicoccus roseus*. For the cultivation of *Natrinema pallidum*.

PB90-1 Medium (DSMZ Medium 298g)

Composition per liter:

NaCl	1.0g
KCl	0.5g
MgCl ₂ ·6H ₂ O	0.4g
NH ₄ Cl	0.25g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O	0.15g
Resazurin	1.0mg
NaHCO ₃ solution	10.0mL
Butanediol solution	10.0mL
Na ₂ S·9H ₂ O solution	10.0mL
Vitamin solution	10.0mL
Seven vitamin solution	10.0mL
Glucose solution	10.0mL
Trace elements solution SL-10	1.0mL

pH 7.2 ± 0.2 at 25°C

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.36g
-------------------------------------	-------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

NaHCO₃ Solution:

Composition per 10.0mL:

NaHCO ₃	2.5g
--------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

Butanediol Solution:

Composition per 10.0mL:

2,3 butanediol	0.9g
----------------	------

Preparation of Butanediol Solution: Add butanediol to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Trace Elements Solution SL-10:

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl	10.0mg
Thiamine-HCl·2H ₂ O	5.0mg
Riboflavin	5.0mg

Nicotinic acid	5.0mg
D-Ca-pantothenate	5.0mg
p-Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Seven Vitamin Solution:

Composition per liter:

Pyridoxine hydrochloride	300.0mg
Thiamine-HCl·2H ₂ O	200.0mg
Nicotinic acid	200.0mg
Vitamin B ₁₂	100.0mg
Calcium pantothenate	100.0mg
p-Aminobenzoic acid	80.0mg
D(+)-Biotin	20.0mg

Preparation of Seven Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Sparge with 100% N₂. Mix thoroughly. Filter sterilize.

Glucose Solution:

Composition per 10.0mL:

Glucose	0.7g
---------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas atmosphere. Add components, except NaHCO₃ solution, butanediol solution, Na₂S·9H₂O solution, vitamin solution, seven vitamin solution, glucose solution, and trace elements solution SL-10, to distilled/deionized water and bring volume to 939.0mL. Mix thoroughly. Adjust pH to 7.2. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 10.0mL NaHCO₃ solution, 10.0mL butanediol solution, 10.0mL Na₂S·9H₂O solution, 10.0mL vitamin solution, 10.0mL seven vitamin solution, 10.0mL glucose solution, and 1.0mL trace elements solution SL-10. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or bottles. After inoculation, flush and repressurize the gas head space of culture bottles with sterile 80% N₂ + 20% CO₂ to 1 bar overpressure.

Use: For the cultivation of *Opitutus terrae*.

PBS

See: [Pages Balanced Salt Solution](#)

PCA

Composition per liter:

Potatoes	300.0g
Carrots	25.0g
Agar	15.0g

Preparation of Medium: Slice potatoes with skin. Peel and slice carrots. Place 300.0g of potatoes and 25.0g of carrots in 1.0L of distilled/deionized water. Gently heat and bring to boiling. Allow to boil for 20 min. Filter through Whatman filter paper. Add agar to filtrate. Bring volume to 1.0 L with distilled/deionized water. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Auto-

clave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Cochliobolus ravenelii*, *Humicola fuscoatra*, *Humicola grisea*, *Pyrenophora tritici-repentis*, and *Verticillium fungicola*.

PCA+T+T

Composition per liter:

Potatoes	300.0g
Carrots	25.0g
Agar	15.0g
β-sitosterol	30.0mg
Tryptophan	20.0mg

Preparation of Medium: Slice potatoes with skin. Peel and slice carrots. Place 300.0g of potatoes and 25.0g of carrots in 1.0L of distilled/deionized water. Gently heat and bring to boiling. Allow to boil for 20 min. Filter through Whatman filter paper. Add agar and other components to filtrate. Bring volume to 1.0L with distilled/deionized water. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Phytophthora nicotianae*, *Phytophthora citrophthora*, and *Phytophthora cactorum*.

PD2 Medium

Composition per liter:

Agar	15.0g
Pancreatic digest of casein	4.0g
Papaic digest of soybean meal	2.0g
K ₂ HPO ₄	1.5g
Disodium succinate	1.0g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O	1.0g
Trisodium citrate	1.0g
Bovine serum albumin solution	10.0mL
Hemin chloride solution	10.0mL

pH 7.0 ± 0.2 at 25°C

Bovine Serum Albumin Solution:

Composition per 10.0mL:

Bovine serum albumin	2.0g
----------------------------	------

Preparation of Bovine Serum Albumin Solution: Add bovine serum albumin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Hemin Chloride Solution:

Composition per 100.0mL:

Hemin chloride	0.1g
NaOH (0.05N solution)	100.0mL

Preparation of Hemin Chloride Solution: Add hemin chloride to 100.0mL of NaOH solution. Mix thoroughly.

Preparation of Medium: Add components, except bovine serum albumin solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.0. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile bovine serum albumin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of PD-ALS (Pierce's disease-almond leaf scorch) bacteria.

PD3 Agar (LMG Medium 200)

Composition per liter:

Agar	15.0g
Pancreatic digest of casein	4.0g
Papaic digest of soybean meal	2.0g
Potato starch	2.0g
K ₂ HPO ₄	1.5g
Trisodium citrate	1.0g
Disodium succinate	1.0g
MgSO ₄ ·7H ₂ O	1.0g
KH ₂ PO ₄	1.0g
Hemin chloride solution	10.0mL

pH 7.0 ± 0.2 at 25°C

Hemin Chloride Solution:

Composition per 100.0mL:

Hemin chloride	0.1g
NaOH (0.05N solution)	100.0mL

Preparation of Hemin Chloride Solution: Add hemin chloride to 100.0mL of NaOH solution. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave into tubes.

Use: For the isolation and cultivation of PD-ALS (Pierce's disease-almond leaf scorch) bacteria.

PDA Agar

See: [Potato Dextrose Agar](#)

PDA and Yeast Medium

See: [Potato Dextrose Agar and Yeast Medium](#)

PDA-LUP

Composition per liter:

Potatoes	500.0g
Glucose	20.0g
Agar	15.0g
Lupine stems	variable

Preparation of Medium: Slice potatoes with skin. Place 500.0g of potatoes in 1.0L of distilled/deionized water. Gently heat to 60°C. Allow to steep at 60°C for 60 min. Filter through cheesecloth. Add agar and glucose to filtrate. Bring volume to 1.0L with distilled/deionized water. Mix thoroughly. Gently heat and bring to boiling. Distribute 6.0mL volumes into tubes. Cut lupine stems into 8.0cm-long pieces. Add 2–3 lupine stems per tube. Autoclave for 15 min at 15 psi pressure–121°C. Allow tubes to cool in a slanted position.

Use: For the cultivation of *Ceratocystis adiposa*, *Ceratocystis coerule-scens*, and *Ceratocystis fimbriata*.

PDAMB Agar

See: [Potato Dextrose Agar with Methionine and Biotin](#)

PDM-114 Medium

Composition per liter:

Base solution	770.0mL
Bovine serum, heat inactivated	100.0mL
Solution A	50.0mL

Solution B	50.0mL
Special 107 vitamin mix	30.0mL
pH 6.8 ± 0.2 at 25°C	

Base Solution:**Composition per 770.0mL:**

Pancreatic digest of casein	20.0g
NaCl	2.0g
L-Cysteine·HCl	1.0g
Ascorbic acid	0.2g
Ammonium chloride	0.16g
Adenine	73.0mg
Guanosine	59.0mg
Adenosine 5'-monophosphate	52.0mg
Uracil	37.0mg
Cytosine	30.0mg
Ferric ammonium citrate	22.8mg
Adenosine 5'-diphosphate	16.6mg
Adenosine 5'-triphosphate	7.6mg

Preparation of Base Solution: Add components to distilled/deionized water and bring volume to 770.0mL. Mix thoroughly. Adjust pH to 6.8 with NaOH. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Solution A:**Composition per 50.0.0mL:**

Glucose	10.0g
---------------	-------

Preparation of Solution A: Add glucose to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize.

Solution B:**Composition per 50.0.0mL:**

K ₂ HPO ₄	1.0g
KH ₂ PO ₄	0.6g

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Special 107 Vitamin Mix:**Composition per 120.0.0mL:**

Solution 4 vitamins	100.0mL
Solution 2	1.2mL
Solution 1	0.4mL
Solution 3	0.4mL

Solution 1:**Composition per 100.0mL:**

Absolute ethanol	100.0mL
DL-6,8-Thioctic acid, oxidized	100.0mg

Preparation of Solution 1: Add DL-6,8-thioctic acid to absolute ethanol and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Solution 2:**Composition per 100.0mL:**

Vitamin B ₁₂	40.0mg
-------------------------------	--------

Preparation of Solution 2: Add vitamin B₁₂ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Solution 3:

Tween™ 80	50.0g
Absolute ethanol	100.0mL

Preparation of Solution 3: Add Tween™ 80 to absolute ethanol and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Solution 4 Vitamins:**Composition per liter:**

Vitamin B ₁₂	10.0mg
Calcium D-(+)-pantothenate	2.3mg
Choline chloride	1.25mg
Riboflavin	0.7mg
Vitamin A, crystallized alcohol	0.25mg
Calciferol (vitamin D ₂)	0.25mg
i-Inositol	0.125mg
p-Aminobenzoic acid	0.125mg
Niacin	0.0625mg
Niacinamide	0.0625mg
Pyridoxal·HCl	0.0625mg
Pyridoxine·HCl	0.0625mg
α-Tocopherol phosphate, disodium salt	0.025mg
Biotin	0.025mg
Folic acid	0.025mg
Menadione (vitamin K ₃)	0.025mg
Thiamine·HCl	0.025mg

Preparation of Solution 4 Vitamins: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Special 107 Vitamin Mix: Aseptically combine 0.4mL of sterile solution 1, 1.2mL of sterile solution 2, 0.4mL of sterile solution 3, and 100.0mL of sterile solution 4 vitamins. Bring volume to 120.0mL with sterile distilled/deionized water.

Preparation of Medium: Aseptically combine 770.0mL of sterile base solution, 100.0mL of heat-inactivated bovine serum, 50.0mL of sterile solution A, 50.0mL of sterile solution B, and 30.0mL of sterile special 107 vitamin mix. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Entamoeba histolytica*.

PDY Agar

See: [Potato Dextrose Yeast Agar](#)

PDY Agar

See: [Potato Dextrose Yeast Agar](#)

PE-2 HiVeg Medium**Composition per liter:**

Plant peptone	20.0g
Yeast extract	3.0g
Bromcresol Purple	0.04g
Alaska seed peas	variable

pH 6.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components, except alaska seed peas, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into screw-cap tubes. Add 8–10 untreated Alaska seed peas per tube and let the tubes stand for 1 hr to permit hydration. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Clostridium botulinum* from foods.

PE2 Medium**Composition per liter:**

Peptone	20.0g
Yeast extract	3.0g

Alaska seed peas	416–520
Bromcresol Purple solution	2.0mL

Bromcresol Purple Solution:**Composition per 100.0mL:**

Bromcresol Purple	2.0g
Ethanol	10.0mL

Preparation of Bromcresol Purple Solution: Add Bromcresol Purple to 10.0mL of ethanol. Mix thoroughly. Bring volume to 100.0mL with distilled/deionized water. Filter sterilize.

Preparation of Medium: Add components, except Alaska seed peas, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until dissolved. Add 8–10 Alaska seed peas to each of 18 × 150 mm screw-capped tubes. Distribute the broth into each tube in 19.0mL volumes. Allow tubes to stand for 1 hr. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Clostridium botulinum* from foods.

Pea Agar Medium**Composition per 3.0L:**

Dry peas	360.0g
Agar	45.0g

Preparation of Medium: Add dry peas to 2.2L of distilled/deionized water. Autoclave for 2 hr at 15 psi pressure–121°C. Filter pea mash through cheesecloth. Reserve filtrate. Bring volume of filtrate to 3.0L with distilled/deionized water. Mix thoroughly. Add agar. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes. Allow tubes to cool in a slanted position.

Use: For the cultivation and maintenance of *Ascochyta pinodes*, *Ascochyta pisi*, and *Phoma medicaginis*.

Pectin Agar**Composition per plate:**

Base agar	15.0mL
Pectin gel	7.0mL

Base Agar:**Composition per liter:**

Agar	15.0g
K ₂ HPO ₄	5.0g
CaCl ₂ ·2H ₂ O	3.0g
NH ₄ Cl	1.0g
MgSO ₄ ·7H ₂ O	0.2g
Tris(hydroxymethyl)amino– methane buffer (1M, pH 8.0)	100.0mL
Trace elements solution	1.0mL

Preparation of Base Agar: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Trace Elements Solution:**Composition per liter:**

Disodium EDTA	8.0g
MnCl ₂ ·4H ₂ O	0.1g
CoCl ₂ ·6H ₂ O	0.02g
ZnCl ₂	0.02g
KBr	0.02g
KI	0.02g

CuSO ₄	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g
H ₃ BO ₃	0.01g
LiCl	5.0mg
SnCl ₂ ·2H ₂ O	5.0mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Pectin Gel:**Composition per liter:**

Pectin, low esterified	20.0g
------------------------------	-------

Preparation of Pectin Gel: Add pectin to 70°C distilled/deionized water and bring volume to 1.0L. Autoclave for 10 min at 7 psi pressure–110°C. Cool to 45°–50°C.

Preparation of Medium: Pour cooled, sterile base agar into sterile Petri dishes in 15.0mL volumes. Allow agar to solidify. Overlay each plate with 7.0mL of cooled, sterile pectin gel. The pectin may take 5 hr to form a gel.

Use: For the isolation and cultivation of *Cytophaga* species, *Herpetosiphon* species, *Saprospira* species, and *Flexithrix* species.

Pectin Medium**Composition per liter:**

Pectin	30.0g
Yeast extract	5.0g
Bromthymol Blue (0.1% solution)	1.0mL
CaCl ₂ ·2H ₂ O (10.0% solution)	0.6mL
pH 7.3 ± 0.2 at 25°C	

Preparation of Medium: Add 100.0mL of distilled/deionized water to a 2.0L flask and place on a magnetic stirrer with no heat. While stirring, slowly add CaCl₂·2H₂O, Bromthymol Blue solution, yeast extract, and pectin. Add slowly to ensure each particle is wetted. Gently heat and bring to almost boiling. Adjust pH to 7.3 with 1N NaOH. Do not overshoot pH 7.3.

Use: For the isolation and presumptive identification of *Yersinia enterocolitica* and *Yersinia pseudotuberculosis* from other fermenting Gram-negative bacilli such as *Enterocolitica agglomerans* which is often confused with *Yersinia*. *Enterocolitica agglomerans* does not produce pectinase. *Yersinia enterocolitica* is strongly positive for pectinase activity. *Yersinia pseudotuberculosis* is weakly positive for pectinase activity. *Yersinia pestis* is negative for pectinase activity. Also used for the differentiation of *Klebsiella oxytoca*, which is pectinase positive.

**Pectobacterium carotovorum Medium
(LMG Medium 172)****Composition per liter:**

Glucose	5.0g
Peptone	5.0g
Yeast extract	3.0g
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Pectobacterium carotovorum* subsp. *odoriferum*.

***Pediococcus cerevisiae* and
Aerococcus viridans Medium**

Composition per liter:

Pancreatic digest of casein.....	12.5g
Glucose.....	10.0g
Yeast extract.....	7.5g
K ₂ HPO ₄	5.0g
NaCl.....	5.0g
Sodium citrate.....	5.0g
MgSO ₄	0.8g
Tween™ 80.....	0.2g
MnCl ₂	0.14g
FeSO ₄	0.04g
Thiamine·HCl.....	0.1mg

pH 6.7 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until dissolved. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Pediococcus cerevisiae* and *Aerococcus viridans*.

***Pediococcus damnosus* Medium**

Composition per liter:

Glucose.....	20.0g
Tryptic digest of casein.....	10.0g
Meat extract.....	10.0g
Sodium acetate.....	5.0g
Yeast extract.....	5.0g
K ₂ HPO ₄	2.0g
Diammonium citrate.....	2.0g
Tween™ 80.....	1.0g
MgSO ₄ ·7H ₂ O.....	0.2g
MnSO ₄ ·H ₂ O.....	0.05g

pH 5.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 5.2. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Lactobacillus acetotolerans*, *Lactobacillus lindneri*, and *Pediococcus damnosus*.

***Pediococcus halophilus* Medium**

Composition per liter:

NaCl.....	65.0g
Glucose.....	20.0g
Pancreatic digest of casein.....	10.0g
Meat extract.....	10.0g
Sodium acetate.....	5.0g
Yeast extract.....	5.0g
K ₂ HPO ₄	2.0g
Diammonium citrate.....	2.0g
Tween™ 80.....	1.0g
MgSO ₄ ·7H ₂ O.....	0.2g
MnSO ₄ ·H ₂ O.....	0.05g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Tetragenococcus halophilus*.

***Pediococcus* Medium
(Lactobacilli MRS Broth)**

Composition per liter:

Glucose.....	20.0g
Beef extract.....	10.0g
Peptone.....	10.0g
Sodium acetate.....	5.0g
Yeast extract.....	5.0g
Ammonium citrate.....	2.0g
Na ₂ HPO ₄	2.0g
Tween™ 80.....	1.0g
MgSO ₄ ·7H ₂ O.....	0.1g
MnSO ₄ ·5H ₂ O.....	0.05g

pH 5.2 ± 0.2 at 25°C

Source: This medium is available from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Pediococcus damnosus*.

***Pediococcus* Medium with Mevalonic Acid
(Lactobacilli MRS Broth with Melvalonic Acid)**

Composition per liter:

Mevalonic acid.....	30.0g
Glucose.....	20.0g
Beef extract.....	10.0g
Peptone.....	10.0g
Sodium acetate.....	5.0g
Yeast extract.....	5.0g
Ammonium citrate.....	2.0g
Na ₂ HPO ₄	2.0g
Tween™ 80.....	1.0g
MgSO ₄ ·7H ₂ O.....	0.1g
MnSO ₄ ·5H ₂ O.....	0.05g

pH 5.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Pediococcus damnosus*.

***Pedomicrobium* PSM Medium**

Composition per liter:

Yeast extract.....	0.5g
Sodium acetate solution.....	10.0mL
Vitamin solution.....	10.0mL
Trace elements solution.....	1.0mL

pH 7.1 ± 0.2 at 25°C

Sodium Acetate Solution:

Composition per 10.0mL:

Sodium acetate·3H ₂ O.....	1.36g
---------------------------------------	-------

Preparation of Sodium Acetate Solution: Add sodium acetate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Vitamin Solution:**Composition per liter:**

Pyridoxine-HCl	10.0mg
Thiamine-HCl	5.0mg
Calcium pantothenate	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
D-Biotin	2.0mg
Folic acid	2.0mg
Cyanocobalamin	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Trace Elements Solution:**Composition per 50.0mL:**

ZnSO ₄ ·7H ₂ O	0.55g
FeSO ₄ ·7H ₂ O	0.25g
EDTA	0.125g
MnSO ₄ ·H ₂ O	0.077g
CuSO ₄ ·5H ₂ O	0.02g
Co(NO ₃) ₂ ·6H ₂ O	0.012g
Na ₂ B ₄ O ₇ ·10H ₂ O	8.85mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except sodium acetate solution and vitamin solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Adjust pH to 7.1 with KOH. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add sterile sodium acetate solution and 10.0mL of sterile vitamin solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Pedomicrobium americanum* and *Pedomicrobium ferrugineum*.

Pedomicrobium* PSM Medium with Ribose*Composition per liter:**

Peptone	0.25g
Yeast extract	0.25g
Ribose solution	10.0mL
Vitamin solution	10.0mL
Trace elements solution	1.0mL

pH 7.1 ± 0.2 at 25°C

Ribose Solution:**Composition per 100.0mL:**

D-Ribose	10.0g
----------------	-------

Preparation of Ribose Solution: Add ribose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Vitamin Solution:**Composition per liter:**

Pyridoxine-HCl	10.0mg
Thiamine-HCl	5.0mg
Calcium pantothenate	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
D-Biotin	2.0mg
Folic acid	2.0mg
Cyanocobalamin	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Trace Elements Solution:**Composition per 50.0mL:**

ZnSO ₄ ·7H ₂ O	0.55g
FeSO ₄ ·7H ₂ O	0.25g
EDTA	0.125g
MnSO ₄ ·H ₂ O	0.077g
CuSO ₄ ·5H ₂ O	0.02g
Co(NO ₃) ₂ ·6H ₂ O	0.012g
Na ₂ B ₄ O ₇ ·10H ₂ O	8.85mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except ribose solution and vitamin solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Adjust pH to 7.1 with KOH. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 10.0mL of sterile ribose solution and 10.0mL of sterile vitamin solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Pedomicrobium americanum* and *Pedomicrobium ferrugineum*.

Pedomicrobium* PYVM Medium*Composition per liter:**

Peptone	0.25g
Yeast extract	0.25g
Trace elements solution	20.0mL
Malate solution	10.0mL
Vitamin solution	10.0mL

pH 7.1 ± 0.2 at 25°C

Malate Solution:**Composition per 100.0mL:**

Malic acid	1.36g
------------------	-------

Preparation of Malate Solution: Add malic acid to distilled/deionized water and bring volume to 100.0mL. Adjust pH to 7.0 with concentrated NaOH. Mix thoroughly. Filter sterilize.

Vitamin Solution:**Composition per liter:**

Pyridoxine-HCl	10.0mg
Thiamine-HCl	5.0mg
Calcium pantothenate	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
D-Biotin	2.0mg
Folic acid	2.0mg
Cyanocobalamin	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Trace Elements Solution:**Composition per 50.0mL:**

ZnSO ₄ ·7H ₂ O	0.55g
FeSO ₄ ·7H ₂ O	0.25g
EDTA	0.125g
MnSO ₄ ·H ₂ O	0.077g

CuSO ₄ ·5H ₂ O	0.02g
Co(NO ₃) ₂ ·6H ₂ O	0.012g
Na ₂ B ₄ O ₇ ·10H ₂ O	8.85mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except malate solution and vitamin solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Adjust pH to 7.1 with KOH. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 10.0mL of sterile malate solution and 10.0mL of sterile vitamin solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Pedomicrobium* species.

Pedomicrobium PYVM Medium

Composition per liter:

Peptone.....	0.25g
Yeast extract.....	0.25g
Modified Hutner's basal salts	20.0mL
DL-Malate solution.....	10.0mL
Vitamin solution.....	10.0mL

pH 7.5 ± 0.2 at 25°C

Modified Hutner's Basal Salts:

Composition per liter:

MgSO ₄ ·7H ₂ O	29.7g
Nitrilotriacetic acid	10.0g
CaCl ₂ ·2H ₂ O.....	3.34g
FeSO ₄ ·7H ₂ O.....	0.1g
(NH ₄) ₂ MoO ₄	9.25mg
Metals "44".....	50.0mL

Preparation of Modified Hutner's Basal Salts: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Readjust pH to 7.2 with H₂SO₄ or KOH. Add distilled/deionized water to 1.0L. Store at 5°C.

Metals "44":

Composition per 100.0 mL:

ZnSO ₄ ·7H ₂ O	1.1g
FeSO ₄ ·7H ₂ O.....	0.5g
EDTA.....	0.25g
MnSO ₄ ·7H ₂ O	0.154g
CuSO ₄ ·5H ₂ O.....	0.04g
Co(NO ₃) ₂ ·6H ₂ O	0.025g
Na ₂ B ₄ O ₇ ·10H ₂ O.....	0.018g

Preparation of Metals "44": Add a few drops of H₂SO₄ to distilled/deionized water to inhibit precipitate formation. Add components to acidified distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

DL-Malate Solution:

Composition per 100.0mL:

DL-Malic acid.....	20.0g
--------------------	-------

Preparation of DL-Malate Solution: Add malic acid to distilled/deionized water and bring volume to 80.0mL. Mix thoroughly. Adjust pH to 7.5 with NaOH. Bring volume to 100.0mL with distilled/deionized water. Filter sterilize.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl.....	10.0mg
Riboflavin.....	5.0mg
Nicotinamide.....	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Thiamine-HCl.....	5.0mg
Calcium D-(+)-pantothenate	5.0mg
D-(+)-Biotin.....	2.0mg
Folic acid.....	2.0mg
Cyanocobalamine.....	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except DL-malate solution and vitamin solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL of sterile DL-malate solution and 10.0mL of sterile vitamin solution. Mix thoroughly. Distribute into sterile tubes or flasks.

Use: For the cultivation of *Pedomicrobium americanum*.

Pelobacter acetylenicus Medium

Composition per liter:

NaCl.....	20.0g
MgCl ₂ ·6H ₂ O	3.0g
KCl.....	0.5g
NH ₄ Cl.....	0.25g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O	0.15g
Resazurin.....	1.0mg
NaHCO ₃ solution.....	10.0mL
Na ₂ S·9H ₂ O solution.....	10.0mL
Acetoin solution.....	10.0mL
Trace elements solution SL-10	1.0mL

pH 7.2 ± 0.2 at 25°C

NaHCO₃ Solution:

Composition per 10.0mL:

NaHCO ₃	2.5g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	0.36g
--	-------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Acetoin Solution:

Composition per 10.0mL:

Acetoin.....	1.0g
--------------	------

Preparation of Acetoin Solution: Add acetoin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution SL-10:**Composition** per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	0.19g
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂. Add components, except NaHCO₃ solution, Na₂S·9H₂O solution, and acetoin solution, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 10.0mL of sterile NaHCO₃ solution, 10.0mL of sterile Na₂S·9H₂O solution, and 10.0mL of sterile acetoin solution or, using a syringe, inject the appropriate amount of sterile NaHCO₃ solution, sterile Na₂S·9H₂O solution, and sterile acetoin solution into individual tubes containing medium.

Use: For the cultivation and maintenance of *Pelobacter acetylenicus*.

Pelobacter acidigallici* Medium*Composition** per 1001.0mL:

NaCl.....	20.0g
MgCl ₂ ·6H ₂ O.....	3.0g
KCl.....	0.5g
NH ₄ Cl	0.25g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O.....	0.15g
Resazurin	1.0mg
NaHCO ₃ solution	10.0mL
Na ₂ S·9H ₂ O solution	10.0mL
Gallic acid solution	10.0mL
Trace elements solution SL-10	1.0mL

pH 7.2 ± 0.2 at 25°C

NaHCO₃ Solution:**Composition** per 10.0mL:

NaHCO ₃	2.5g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize. Sparge with 80% N₂ + 20% CO₂.

Na₂S·9H₂O Solution:**Composition** per 10.0mL:

Na ₂ S·9H ₂ O.....	0.36g
--	-------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Gallic Acid Solution:**Composition** per 10.0mL:

Gallic acid.....	1.0g
------------------	------

Preparation of Gallic Acid Solution: Add gallic acid to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize. Sparge with 80% N₂ + 20% CO₂.

Trace Elements Solution SL-10:**Composition** per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	0.19g
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly.

Preparation of Medium: Prepare and dispense medium under 80% H₂ + 20% CO₂. Add components, except NaHCO₃ solution, Na₂S·9H₂O solution, gallic acid solution, and trace elements solution SL-10, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 10.0mL of sterile NaHCO₃ solution, 10.0mL of sterile Na₂S·9H₂O solution, 10.0mL of sterile gallic acid solution, and 1.0mL of sterile trace elements solution SL-10 or, using a syringe, inject the appropriate amount of sterile NaHCO₃ solution, sterile Na₂S·9H₂O solution, sterile gallic acid solution, and sterile trace elements solution SL-10 into individual tubes containing medium.

Use: For the cultivation and maintenance of *Pelobacter acidigallici*.

Pelobacter carbinolicus* Medium*Composition** per 1001.0mL:

Gallic acid..... 1.88g

NaOH (1M solution)..... variable

Preparation of Sodium Gallate Solution: Add gallic acid to distilled/deionized water and bring volume to 8.0mL. Mix thoroughly. Add sufficient NaOH solution to bring pH to 7.3. Filter sterilize. Sparge with 80% N₂ + 20% CO₂.

L-Cysteine-HCl·H₂O Solution:**Composition per 10.0mL:**L-Cysteine-HCl·H₂O..... 0.3g

Preparation of L-Cysteine-HCl·H₂O Solution: Add L-cysteine-HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:**Composition per 10.0mL:**Na₂S·9H₂O..... 0.3g

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂. Add components, except sodium gallate solution, NaHCO₃ solution, Na₂S·9H₂O solution, and vitamin solution, to distilled/deionized water and bring volume to 960.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 10.0mL of sterile NaHCO₃ solution, 10.0mL of sterile Na₂S·9H₂O solution, 10.0mL of sterile sodium gallate solution, and 10.0mL of sterile vitamin solution or, using a syringe, inject the appropriate amount of sterile NaHCO₃ solution, sterile Na₂S·9H₂O solution, sterile sodium gallate solution, and sterile vitamin solution into individual tubes containing medium.

Use: For the cultivation and maintenance of *Pelobacter acidigallici*.

Pelobacter Medium with Gallic Acid

Composition per liter:

Solution A	950.0mL
Solution B	25.0mL
Solution C	25.0mL

pH 7.2 ± 0.2 at 25°C

Solution A:

Composition per liter:

NaCl	20.0g
MgCl ₂ ·6H ₂ O	3.65g
NaHCO ₃	2.5g
KCl	0.5g
NH ₄ Cl	0.25g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O	0.15g
Resazurin	0.5mg
Modified Wolfe's mineral solution	10.0mL
Wolfe's vitamin solution	10.0mL

Preparation of Solution A: Prepare and dispense solution under 80% N₂ + 20% CO₂. Add components, except NaHCO₃, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 3 min. Cool to room temperature while sparging with 80% N₂ + 20% CO₂. Add NaHCO₃. Mix thoroughly. Anaerobically distribute 9.5mL volumes into anaerobic tubes. Autoclave for 15 min at 15 psi pressure–121°C.

Modified Wolfe's Mineral Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O	3.0g
Nitritotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·H ₂ O	0.5g
CaCl ₂	0.1g
CoCl ₂ ·6H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g
ZnSO ₄ ·7H ₂ O	0.1g
AlK(SO ₄) ₂ ·12H ₂ O	0.01g
CuSO ₄ ·5H ₂ O	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g
Na ₂ SeO ₃	0.01g
NaWO ₄ ·2H ₂ O	0.01g
NiCl ₂ ·6H ₂ O	0.01g

Preparation of Modified Wolfe's Mineral Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components one at a time. Add distilled/deionized water to 1.0L. Adjust pH to 6.8.

Wolfe's Vitamin Solution:

Composition per liter:

Pyridoxine-HCl	10.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Nicotinic acid	5.0mg
Riboflavin	5.0mg
Thiamine-HCl	5.0mg
Calcium DL-pantothenate	5.0mg
Biotin	2.0mg

Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Solution B:

Composition per 25.0mL:

Gallic acid	0.85g
-------------------	-------

Preparation of Solution B: Prepare solution B immediately prior to use. Add gallic acid to distilled/deionized water and bring volume to 25.0mL. Mix thoroughly. Rapidly adjust pH to 6.5. Filter sterilize. Sparge with 100% N₂.

Solution C:

Composition per 25.0mL:

Na ₂ S·9H ₂ O	0.4g
---	------

Preparation of Solution C: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 25.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Aseptically and anaerobically add 0.25mL of sterile solution B and 0.25mL of sterile solution C to each tube containing 9.5mL of sterile solution A. Mix thoroughly. Adjust pH to 7.2.

Use: For the cultivation of *Pelobacter acidigallici* and *Pelobacter massiliensis*.

Pelobacter propionicus Medium (DSMZ Medium 298)

Composition per liter:

NaCl	1.0g
KCl	0.5g
MgCl ₂ ·6H ₂ O	0.4g
NH ₄ Cl	0.25g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O	0.15g
Resazurin	1.0mg
NaHCO ₃ solution	10.0mL
Butanediol solution	10.0mL
Na ₂ S·9H ₂ O solution	10.0mL
Trace elements solution SL-10	1.0mL

pH 7.2 ± 0.2 at 25°C

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.36g
---	-------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

NaHCO₃ Solution:

Composition per 10.0mL:

NaHCO ₃	2.5g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

Butanediol Solution:

Composition per 10.0mL:

2,3-Butanediol	0.9g
----------------------	------

Preparation of Butanediol Solution: Add butanediol to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Trace Elements Solution SL-10:

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas atmosphere. Add components, except NaHCO₃ solution, butanediol solution, Na₂S·9H₂O solution, and trace elements solution SL-10, to distilled/deionized water and bring volume to 969.0mL. Mix thoroughly. Adjust pH to 7.2. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 10.0mL NaHCO₃ solution, 10.0mL butanediol solution, 10.0mL Na₂S·9H₂O solution, and 1.0mL trace elements solution SL-10. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or bottles. After inoculation, flush and repressurize the gas head space of culture bottles with sterile 80% N₂ + 20% CO₂ to 1 bar overpressure.

Use: For the cultivation of *Pelobacter propionicus*.

Pelobacter propionicus Medium

Trace elements solution SL-10	1.0mL

pH 7.2 ± 0.2 at 25°C

Trace Elements Solution SL-10:

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution SL-10: Prepare and dispense under 80% N₂ + 20% CO₂. Add FeCl₂·4H₂O to 10.0mL of HCl

solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Gas under 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

2,3-Butanediol Solution:

Composition per 50.0mL:

2,3-Butanediol	0.9g
----------------------	------

Preparation of 2,3-Butanediol Solution: Add 2,3-butanediol to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize. Gas under 80% N₂ + 20% CO₂.

NaHCO₃ Solution:

Composition per 20.0mL:

NaHCO ₃	2.5g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize. Gas under 80% N₂ + 20% CO₂.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.36g
---	-------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare medium and dispense under 80% N₂ + 20% CO₂. Add components, except 2,3-butanediol solution, NaHCO₃ solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 920.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 50.0mL of sterile 2,3-butanediol solution, 20.0mL of sterile NaHCO₃ solution, and 10.0mL of sterile Na₂S·9H₂O solution. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Pelobacter propionicus*.

Pelobacter venetianus Marine Medium (DSMZ Medium 296)

Composition per liter:

NaCl	20.0g
MgCl ₂ ·6H ₂ O	3.0g
KCl	0.5g
NH ₄ Cl	0.25g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O	0.15g
Resazurin	1.0mg
NaHCO ₃ solution	10.0mL
Polyethylene glycol solution	10.0mL
Na ₂ S·9H ₂ O solution	10.0mL
Trace elements solution SL-10	1.0mL

pH 7.2 ± 0.2 at 25°C

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.36g
---	-------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

NaHCO₃ Solution:

Composition per 10.0mL:

NaHCO ₃	2.5g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

Polyethylene Glycol Solution:

Composition per 10.0mL:

Polyethylene glycol (molecular weight 106–20000)..... 1.0g

Preparation of Polyethylene Glycol Solution: Add polyethylene glycol to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Trace Elements Solution SL-10:

Composition per liter:

FeCl₂·4H₂O..... 1.5g
CoCl₂·6H₂O..... 190.0mg
MnCl₂·4H₂O..... 100.0mg
ZnCl₂..... 70.0mg
Na₂MoO₄·2H₂O..... 36.0mg
NiCl₂·6H₂O..... 24.0mg
H₃BO₃..... 6.0mg
CuCl₂·2H₂O..... 2.0mg
HCl (25% solution)..... 10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas atmosphere. Add components, except NaHCO₃ solution, polyethylene glycol solution, Na₂S·9H₂O solution, and trace elements solution SL-10, to distilled/deionized water and bring volume to 969.0mL. Mix thoroughly. Adjust pH to 7.2. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 10.0mL NaHCO₃ solution, 10.0mL polyethylene glycol solution, 10.0mL Na₂S·9H₂O solution, and 1.0mL trace elements solution SL-10. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or bottles. After inoculation, flush and repressurize the gas head space of culture bottles with sterile 80% N₂ + 20% CO₂ to 1 bar overpressure.

Use: For the cultivation of *Pelobacter venetianus*.

***Pelobacter venetianus* Medium**

 H₃BO₃ 6.0mg
 CuCl₂·2H₂O 2.0mg
 HCl (25% solution) 10.0mL

Preparation of Trace Elements Solution SL-10: Prepare and dispense under 80% N₂ + 20% CO₂. Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Gas under 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare medium and dispense under 80% N₂ + 20% CO₂. Add components, except NaHCO₃ solution, Na₂S·9H₂O solution, polyethylene glycol solution, and trace elements solution SL-10, to distilled/deionized water and bring volume to 960.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 10.0mL of sterile NaHCO₃ solution, 10.0mL of sterile Na₂S·9H₂O solution, 10.0mL of sterile polyethylene glycol solution, and 10.0mL of sterile trace elements solution SL-10. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of marine strains of *Pelobacter venetianus*.

**Pelotomaculum Medium
(DSMZ Medium 960)**

Composition per liter:

NaHCO₃ 2.5g
 NH₄Cl 0.54g
 MgCl₂·6H₂O 0.2g
 CaCl₂·2H₂O 0.15g
 KH₂PO₄ 0.14g
 Yeast extract 0.1g
 Resazurin 0.5mg
 Na-pyruvate solution 20.0mL
 Cysteine solution 10.0mL
 Na₂S·9H₂O solution 10.0mL
 Vitamin solution 5.0mL

Trace elements solution 1.0mL
 Selenite-tungstate solution 1.0mL
 pH 7.0 ± 0.2 at 25°C

Na-Pyruvate Solution:

Composition per 20.0mL:

Na-pyruvate 2.2g

Preparation of Na-Pyruvate Solution: Add Na-pyruvate to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na₂S·9H₂O 0.3g

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Cysteine Solution:

Composition per 10.0mL:

L-Cysteine-HCl-H₂O 0.3g

Preparation of Cysteine Solution: Add L-cysteine-HCl-H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl 10.0mg
 Thiamine-HCl·2H₂O 5.0mg
 Riboflavin 5.0mg
 Nicotinic acid 5.0mg
 D-Ca-pantothenate 5.0mg
 p-Aminobenzoic acid 5.0mg
 Lipoic acid 5.0mg
 Biotin 2.0mg
 Folic acid 2.0mg
 Vitamin B₁₂ 0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Trace Elements Solution:

Composition per liter:

MgSO₄·7H₂O 3.0g
 Nitrotriacetic acid 1.5g
 NaCl 1.0g
 MnSO₄·2H₂O 0.5g
 CoSO₄·7H₂O 0.18g
 ZnSO₄·7H₂O 0.18g
 CaCl₂·2H₂O 0.1g
 FeSO₄·7H₂O 0.1g
 NiCl₂·6H₂O 0.025g
 KAl(SO₄)₂·12H₂O 0.02g
 H₃BO₃ 0.01g
 Na₂MoO₄·4H₂O 0.01g
 CuSO₄·5H₂O 0.01g
 Na₂SeO₃·5H₂O 0.3mg

Preparation of Trace Elements Solution: Add nitrotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to

6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Selenite-Tungstate Solution

Composition per liter:

NaOH.....	0.5g
Na ₂ WO ₄ ·2H ₂ O.....	4.0mg
Na ₂ SeO ₃ ·5H ₂ O.....	3.0mg

Preparation of Selenite-Tungstate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Preparation of Medium: Add components, except Na-pyruvate solution, cysteine solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 960.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Equilibrate with this gas mixture to reach pH 7.0. Distribute into anaerobe tubes or bottles. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add per liter of medium 20.0mL sterile Na-pyruvate solution, 10.0mL sterile cysteine solution, and 10.0mL of sterile Na₂S·9H₂O solution. Mix thoroughly.

Use: For the cultivation of *Pelotomaculum thermopropionicum*.

Pelotomaculum Medium (DSMZ Medium 960)

Composition per liter:

NaHCO ₃	2.5g
NH ₄ Cl.....	0.54g
MgCl ₂ ·6H ₂ O.....	0.2g
CaCl ₂ ·2H ₂ O.....	0.15g
KH ₂ PO ₄	0.14g
Yeast extract.....	0.1g
Resazurin.....	0.5mg
Ethanol solution.....	20.0mL
Cysteine solution.....	10.0mL
Na ₂ S·9H ₂ O solution.....	10.0mL
Vitamin solution.....	5.0mL
Trace elements solution.....	1.0mL
Selenite-tungstate solution.....	1.0mL

pH 7.0 ± 0.2 at 25°C

Ethanol Solution:

Composition per 20.0mL:

Ethanol.....	0.92mL
--------------	--------

Preparation of Ethanol Solution: Add ethanol to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	0.3g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Cysteine Solution:

Composition per 10.0mL:

L-Cysteine-HCl·H ₂ O.....	0.3g
--------------------------------------	------

Preparation of Cysteine Solution: Add L-cysteine-HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thorough-

ly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl.....	10.0mg
Thiamine-HCl·2H ₂ O.....	5.0mg
Riboflavin.....	5.0mg

**Pentachloronitrobenzene Rose Bengal Yeast Extract
Sucrose Agar
(PRYES Agar)**

Composition per liter:

Sucrose.....	150.0g
Agar.....	20.0g
Yeast extract.....	20.0g
Pentachloronitrobenzene (PCNB).....	0.1g
Chloramphenicol.....	0.05g
Chlortetracycline·HCl.....	0.05g
Rose Bengal.....	0.025g

pH 5.6 ± 0.2 at 25°C

Preparation of Medium: Add components, except chloramphenicol and chlortetracycline, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 5.6 with tartaric acid. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add chloramphenicol and chlortetracycline. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the cultivation and differentiation of nephrotoxin-producing strains of *Penicillium viridicatum* and related species isolated from foods. Colonies exhibiting a violet brown pigment on the reverse are counted as potential ochratoxin- and citrinin-producing strains of *Penicillium viridicatum*. Colonies exhibiting a yellow reverse and obverse are counted as potential xanthomegnin- and viomellein-producing strains of *Penicillium viridicatum* and *Penicillium aurantiogriseum* (*Penicillium cyclopium*).

Pentachlorophenol Medium

Composition per liter:

NH ₄ NO ₃	2.5g
Na ₂ HPO ₄ ·2H ₂ O.....	1.0g
MgSO ₄ ·7H ₂ O.....	0.5g

(NH ₄) ₆ Mo ₇ O ₂₄ ·4H ₂ O.....	0.1mg

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Flavobacterium* species.

Pentachlorophenol Medium

Composition per 1007.0mL:

Sodium glutamate.....	4.0g
K ₂ HPO ₄	0.65g
NaNO ₃	0.5g

KH ₂ PO ₄	0.19g
MgSO ₄ ·7H ₂ O.....	0.1g
Pentachlorophenol solution.....	5.0mL
FeSO ₄ solution.....	2.0mL
pH 7.3 ± 0.1 at 25°C	

Pentachlorophenol Solution:**Composition per 100.0mL:**

Pentachlorophenol.....	1.0g
NaOH (0.5N solution).....	100.0mL

Preparation of Pentachlorophenol Solution: Add pentachlorophenol to 100.0mL of NaOH solution. Mix thoroughly. Filter sterilize.

FeSO₄ Solution:**Composition per 100.0mL:**

FeSO ₄	2.5g
-------------------------	------

Preparation of FeSO₄ Solution: Add FeSO₄ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except pentachlorophenol solution and FeSO₄ solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.3–7.4. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 2.0mL of sterile FeSO₄ solution. Mix thoroughly. Aseptically distribute into sterile flasks. Inoculate flasks and place on a shaker at 200 rpm at 25–30°C. Monitor growth with a spectrophotometer at 560 nm. When absorbance at 560 nm (A₅₆₀) is 0.5, add 5.0mL of sterile pentachlorophenol solution per liter of medium.

Use: For the cultivation of *Pseudomonas mendocina*.

PEP Medium**Composition per liter:**

Agar.....	10.0g
Peptone.....	5.0g
Yeast extract.....	0.5g
K ₂ HPO ₄	0.1g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of *Spirochaeta aurantia*.

**Pept Carb Soluble Starch Agar
(Peptone Carbonate Starch Agar)****Composition per liter:**

Solution A.....	900.0mL
Solution B.....	100.0mL

Solution A:**Composition per 900.0mL:**

Soluble starch.....	20.0g
Agar.....	15.0g
Peptone.....	5.0g
Yeast extract.....	5.0g
K ₂ HPO ₄	1.0g
MgSO ₄ ·7H ₂ O.....	0.2g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 10 psi pressure–115°C. Cool to 45–50°C.

Solution B:**Composition per 100.0mL:**

Na ₂ CO ₃	10.0g
---------------------------------------	-------

Preparation of Solution B: Add Na₂CO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 10 psi pressure–115°C. Cool to 45–50°C.

Preparation of Medium: Aseptically combine cooled sterile solution A with cooled sterile solution B. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Bacillus* species.

**Peptococcus glycinophilus Medium
(DSMZ Medium 228)****Composition per liter:**

Yeast extract.....	10.0g
NaCl.....	8.0g
Trypticase™ peptone.....	5.0g
Peptone.....	5.0g
Beef extract.....	5.0g
Glycine.....	3.0g
K ₂ HPO ₄	2.0g
L-Cysteine-HCl.....	0.5g
Resazurin.....	1.0mg
Salt solution.....	40.0mL
Hemin solution.....	10.0mL
Tween™ 80.....	1.0mL
Vitamin K ₁ solution.....	0.2mL
pH 7.2± 0.2 at 25°C	

Salt Solution:**Composition per liter:**

NaHCO ₃	10.0g
NaCl.....	2.0g
K ₂ HPO ₄	1.0g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O.....	0.5g
CaCl ₂ ·2H ₂ O.....	0.25g

Preparation of Salt Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Vitamin K₁ Solution:**Composition per 20.0mL:**

Vitamin K ₁	0.1g
------------------------------	------

Preparation of Vitamin K₁ Solution: Add vitamin K₁ to 20.0mL of 95% ethanol. Mix thoroughly. Store refrigerated in a brown bottle.

Hemin Solution:**Composition per 20.0mL:**

Hemin.....	50.0mg
NaOH (1N solution).....	20.0mL

Preparation of Hemin Solution: Add hemin to 1.0mL of 1N NaOH solution. Mix thoroughly. Bring volume to 20.0mL with distilled/deionized water. Store refrigerated.

Preparation of Medium: Add components, except L-cysteine-HCl, vitamin K₁ solution, and hemin solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Sparge with CO₂. Add L-cysteine-HCl. Cool to 25°C. Aseptically add 10.0mL hemin solution and 0.2mL vitamin K₁ solution. Mix thoroughly. Adjust pH to 7.2 using 8N NaOH. Distribute into

tubes or flasks under N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Micromonas micros*=*Peptostreptococcus micros*.

Peptococcus glycinophilus Medium

Composition per liter:

Pancreatic digest of casein	5.0g
Yeast extract	5.0g
Glycine	3.0g
Agar	2.0g
Reducing agent	20.0mL
Potassium phosphate buffer (1M, pH 7.1)	5.0mL
Salts B	1.0mL

Reducing Agent:

Composition per 100.0mL:

NaHCO ₃	5.0g
Na ₂ S ₂ O ₄	1.0g

Preparation of Reducing Agent: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Salts B:

Composition per 100.0mL:

MgSO ₄ ·7H ₂ O	20.0g
FeSO ₄ ·7H ₂ O	1.0g
MnSO ₄ ·H ₂ O	0.5g

Preparation of Salts B: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Peptostreptococcus micros* (*Peptococcus glycinophilus*).

Peptococcus Medium

Composition per liter:

Casein peptone	10.0g
Beef extract	3.0g
Yeast extract	3.0g
Glucose	2.0g
L-Cysteine·HCl	0.5g
Salt solution	40.0mL
Tween™ 80	1.0mL

pH 7.2 ± 0.2 at 25°C

Salt Solution:

Composition per liter:

NaHCO ₃	10.0g
NaCl	2.0g
K ₂ HPO ₄	1.0g
KH ₂ PO ₄	1.0g
CaCl ₂	0.2g
MgSO ₄ ·7H ₂ O	0.2g

Preparation of Salt Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Gemella morbillorum*, *Megasphaera elsdenii*, and *Streptococcus pleomorphus*.

Peptone Broth

Composition per liter:

Peptone	5.0g
---------	------

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add peptone to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes that contain a 3-inch strip of Whatman #1 filter paper. Add enough broth to cover about two thirds of the filter paper. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Cellvibrio gilvus* and *Pseudomonas* species.

Peptone Carbonate Starch Agar

See: [Pept Carb Soluble Starch Agar](#)

Peptone Cholic Acid Recovery

Composition per liter:

Meat extract	10.0g
Peptone	10.0g
Cholic acid	10.0g
NaCl	5.0g
NaOH	1.0g

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 6.8. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Arthrobacter* species and *Corynebacterium* species.

Peptone Corn Agar

Composition per liter:

Agar	16.0g
Corn steep liquor	5.0g
NaCl	5.0g
Peptone	5.0g
CaCl ₂ ·2H ₂ O	0.5g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Actinomadura rubrobrunea*, *Pseudonocardia thermophila*, *Saccharopolyspora hordei*, *Thermoactinomyces candidus*, *Thermoactinomyces intermedius*, *Thermoactinomyces putidus*, *Saccharopolyspora rectivirgula*, *Streptomyces macrosporeus*, *Streptomyces rimosus*, *Thermoactinomyces dichotomicus*, *Thermoactinomyces thalophilus*, and *Thermoactinomyces vulgaris*.

Peptone, Czapek's

Composition per liter:

Agar	15.0g
Sucrose	15.0g
Peptone	5.0g
NaNO ₃	3.0g

K ₂ HPO ₄	1.0g
KCl.....	0.5g
MgSO ₄	0.5g
FeSO ₄	0.01g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Pilimelia anulata*, *Pilimelia terevasa*, and other *Pilimelia* species.

Peptone Fumarate Sulfate Medium

See: **PFS Medium**

Peptone Glucose Liver Extract Medium

See: **PGLE Medium**

Peptone Glucose Salt Agar

See: **PGS Agar**

Peptone Glucose Yeast Extract Agar

See: **PGY Agar**

Peptone Glycerol Phosphate Broth

See: **PGP Broth**

Peptone Iron Agar

Composition per liter:

Agar	15.0g
Peptone.....	15.0g
Proteose peptone.....	5.0g
Sodium glycerophosphate.....	1.0g
Ferric ammonium citrate.....	0.5g
Na ₂ S ₂ O ₃	0.08g

pH 6.7 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes. Autoclave for 15 min at 15 psi pressure–121°C. Allow tubes to cool in an upright position.

Use: For the cultivation and differentiation of microorganisms based on their ability to produce H₂S. Microorganisms that produce H₂S turn the medium black.

Peptone Iron HiVeg Agar

Composition per liter:

Agar	15.0g
Plant peptone.....	15.0g
Plant peptone No. 3.....	5.0g
Sodium glycerophosphate.....	1.0g
Ferric ammonium citrate.....	0.5g
Na ₂ S ₂ O ₃	0.08g

pH 6.7 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to

boiling. Distribute into tubes. Autoclave for 15 min at 15 psi pressure–121°C. Allow tubes to cool in an upright position.

Use: For the cultivation and differentiation of microorganisms based on their ability to produce H₂S. Microorganisms that produce H₂S turn the medium black.

Peptone Meat Extract Glycerol Agar

Composition per liter:

Agar	12.0g
Proteose peptone No. 3.....	5.0g
Meat extract.....	3.0g
Glycerol	20.0mL

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Mycobacterium intracellulare*, *Mycobacterium kansasii*, *Mycobacterium terrae*, *Mycobacterium vaccae*, *Nocardia vaccinii*, and *Rhodococcus* species.

Peptone Meat Extract Soil Extract Agar (PFE Agar)

Composition per liter:

Agar	12.0g
Proteose peptone No. 3.....	5.0g
Meat extract.....	3.0g
Tap water	850.0mL
Soil extract.....	150.0mL
Glycerol	20.0mL

pH 7.0 ± 0.2 at 25°C

Soil Extract:

Composition per liter:

Garden soil, air dried.....	400.0g
-----------------------------	--------

Preparation of Soil Extract: Pass 400.0g of air-dried garden soil through a coarse sieve. Add soil to 960.0mL of tap water. Mix thoroughly. Autoclave for 60 min at 15 psi pressure–121°C. Cool to room temperature. Allow residue to settle. Decant supernatant solution. Filter through Whatman filter paper. Distribute into bottles in 200.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Store at room temperature until clear.

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Mycobacterium avium*, *Mycobacterium gastri*, *Mycobacterium kansasii*, *Mycobacterium marinum*, *Mycobacterium scrofulaceum*, and *Mycobacterium terrae*.

Peptone Medium

Composition per liter:

Peptone	10.0g
---------------	-------

Preparation of Medium: Add peptone to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Escherichia coli*.

Peptone Recovery Broth

Composition per liter:

Meat extract	10.0g
Peptone.....	10.0g
NaCl.....	5.0g
pH 6.8 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.8. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Brevibacterium* species.

Peptone-Reduced Agar

Composition per liter:

Agar	12.5g
Peptone.....	10.0g
Beef extract	5.0g
NaCl.....	3.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Arthrobacter* species.

Peptone Sodium Cholate

Composition per liter:

Meat extract	10.0g
Peptone.....	10.0g
NaCl.....	5.0g
Sodium cholate	5.0g
pH 6.8 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.8. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Arthrobacter* species.

Peptone Sorbitol Bile Broth

Composition per liter:

Sorbitol.....	10.0g
Na ₂ HPO ₄	8.23g
NaCl.....	5.0g
Peptone.....	5.0g
Bile salts No. 3	1.5g
NaH ₂ PO ₄	1.2g
pH 7.6 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into bottles in 100.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the enrichment and cultivation of *Yersinia* species.

Peptone Sorbitol HiVeg Broth

Composition per liter:

Sorbitol.....	10.0g
Na ₂ HPO ₄	8.23g
Plant peptone.....	5.0g
NaCl.....	5.0g

Synthetic detergent No. 1.....	1.5g
NaH ₂ PO ₄	1.2g
pH 7.6 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into bottles in 100.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the enrichment and cultivation of *Yersinia* species.

Peptone Starch Carbonate Medium

Composition per liter:

Agar	15.0g
Soluble starch.....	10.0g
Peptone	5.0g
Yeast extract.....	5.0g
K ₂ HPO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.2g
Na ₂ CO ₃ solution.....	100.0mL

Na₂CO₃ Solution:

Composition per 100.0mL:

Na ₂ CO ₃	10.0g
---------------------------------------	-------

Preparation of Na₂CO₃ Solution: Add Na₂CO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Preparation of Medium: Add components, except Na₂CO₃ solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile Na₂CO₃ solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Bacillus alcalophilus* and other *Bacillus* species.

Peptone Starch Dextrose Agar

(PSD Agar)

(Dunkelberg Agar)

Composition per liter:

Proteose peptone No. 3	20.0g
Agar	15.0g
Soluble starch.....	10.0g
Glucose	2.0g
Na ₂ HPO ₄	1.0g
NaH ₂ PO ₄	1.0g
pH 6.8 ± 0.2 at 25°C	

Preparation of Medium: Add starch to approximately 100.0mL of cold distilled/deionized water. Mix thoroughly. Add starch solution to 400.0mL of boiling distilled/deionized water. Add remaining components. Mix thoroughly. Bring volume to 1.0L with distilled/deionized water. Autoclave for 12 min at 8 psi pressure–112°C. Pour into sterile Petri dishes or distribute into screw-capped tubes.

Use: For the selective isolation and cultivation of *Gardnerella vaginalis*.

Peptone Succinate Agar

Composition per liter:

Agar	15.0g
Peptone	5.0g

Succinic acid.....	1.68g
MgSO ₄ ·7H ₂ O.....	1.0g
(NH ₄) ₂ SO ₄	1.0g
FeCl ₃ ·6H ₂ O.....	2.0mg
MnSO ₄ ·H ₂ O.....	2.0mg

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Aquaspirillum bengal*, *Aquaspirillum dispar*, and *Spirillum volutans*.

Peptone Succinate Agar

Composition per liter:

Peptone.....	5.0g
Succinic acid.....	1.68g
Agar.....	1.5g
MgSO ₄ ·7H ₂ O.....	1.0g
NH ₄ SO ₄	1.0g
FeCl ₃ ·6H ₂ O.....	2.0mg
MnSO ₄ ·H ₂ O.....	2.0mg

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Aquaspirillum serpens*.

Peptone Succinate Agar in Seawater

Composition per liter:

Peptone.....	5.0g
Succinic acid.....	1.68g
Agar.....	1.5g
MgSO ₄ ·7H ₂ O.....	1.0g
(NH ₄) ₂ SO ₄	1.0g
FeCl ₃ ·6H ₂ O.....	2.0mg
MnSO ₄ ·H ₂ O.....	2.0mg
Seawater.....	1.0L

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Combine components. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Oceanospirillum maris*.

Peptone Succinate Salts Broth (PSS Broth)

Composition per 100.0mL:

Peptone.....	1.0g
MgSO ₄ ·7H ₂ O.....	0.1g
(NH ₄) ₂ SO ₄	0.1g
Succinic acid.....	0.1g
FeCl ₃ ·6H ₂ O.....	0.2mg
MnSO ₄ ·H ₂ O.....	0.2mg

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.8 with KOH. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Spirillum* species.

Peptone Succinate Salts Medium (PSS Medium)

Composition per liter:

Peptone.....	10.0g
MgSO ₄ ·7H ₂ O.....	1.0g
(NH ₄) ₂ SO ₄	1.0g
Succinic acid.....	1.0g
FeCl ₃ ·6H ₂ O.....	2.0mg
MnSO ₄ ·H ₂ O.....	2.0mg
Synthetic seawater.....	1.0L

pH 6.8 ± 0.2 at 25°C

Synthetic Seawater:

Composition per liter:

NaCl.....	27.5g
MgCl ₂	5.0g
MgSO ₄	2.0g
KCl.....	1.0g
CaCl ₂	0.5g
FeSO ₄	1.0μg

Preparation of Synthetic Seawater: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add solid components to 1.0L synthetic seawater. Mix thoroughly. Adjust pH to 6.8 with 2N KOH. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Aquaspirillum anulus*.

Peptone Succinate Salts in Seawater

Composition per liter:

Peptone.....	10.0g
MgSO ₄ ·7H ₂ O.....	1.0g
(NH ₄) ₂ SO ₄	1.0g
Succinic acid.....	1.0g
FeCl ₃ ·6H ₂ O.....	2.0mg
MnSO ₄ ·H ₂ O.....	2.0mg
Synthetic seawater.....	1.0L

pH 6.8 ± 0.2 at 25°C

Synthetic Seawater:

Composition per liter:

NaCl.....	27.5g
MgCl ₂	5.0g
MgSO ₄	2.0g
KCl.....	1.0g
CaCl ₂	0.5g
FeSO ₄	1.0μg

Preparation of Synthetic Seawater: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add solid components to 1.0L synthetic seawater. Mix thoroughly. Adjust pH to 6.8 with 2N KOH. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Oceanospirillum maris*.

Peptone Sucrose Broth**Composition per liter:**

Sucrose.....	20.0g
Peptone.....	10.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Xanthomonas campestris*.

Peptone Water**Composition per liter:**

Peptone.....	10.0g
NaCl.....	5.0g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems and Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of nonfastidious microorganisms, for carbohydrate fermentation tests, and for performing the indole test.

Peptone Water with Andrade's Indicator**Composition per liter:**

Peptone.....	10.0g
NaCl.....	5.0g
Andrade's indicator.....	100.0mL
Carbohydrate solution.....	20.0mL

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Andrade's Indicator:**Composition per 100.0mL:**

NaOH (1N solution).....	16.0mL
Acid Fuchsin.....	0.1 g

Preparation of Andrade's Indicator: Add Acid Fuchsin to NaOH solution and bring volume to 100.0mL with distilled/deionized water.

Caution: Acid Fuchsin is a potential carcinogen and care must be taken to avoid inhalation of the powdered dye and contact with the skin.

Carbohydrate Solution:**Composition per 20.0mL:**

Carbohydrate.....	5.0–10.0g
-------------------	-----------

Preparation of Carbohydrate Solution: Add carbohydrate to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except carbohydrate solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Adjust pH to 7.4 if necessary. Distribute into tubes containing an inverted Durham tube. Fill each tube with 9.8mL of medium. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 0.2mL of sterile carbohydrate solution to each tube.

Use: For use in carbohydrate fermentation tests. Fermentation is determined by the production of acid—broth turns pink—and formation of gas—bubble trapped in Durham tube.

Peptone Water, HiVeg**Composition per liter:**

Plant peptone.....	10.0g
NaCl.....	5.0g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of nonfastidious microorganisms, for carbohydrate fermentation tests, and for performing the indole test. Note: When sterile solutions are to be added after autoclaving, reduce the volume of water for reconstitution by an equal amount. When used for carbohydrate fermentation studies add inverted Durham tubes into the final containers.

**Peptone Yeast Extract Agar
(ATCC Medium 526)****Composition per liter:**

Agar.....	15.0g
Peptone.....	10.0g
Yeast extract.....	3.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Bdellovibrio bacteriovorus* and *Bdellovibrio stolpii*.

**Peptone Yeast Extract Agar
(ATCC Medium 1093)****Composition per liter:**

Agar.....	15.0g
Peptone.....	0.5g
Yeast extract.....	0.5g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Angiococcus disciformis*.

**Peptone Yeast Extract Agar
(ATCC 135)****Composition per liter:**

Agar.....	15.0g
Peptone.....	10.0g
Yeast extract.....	0.5g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Arthrobacter* species.

Peptone Yeast Extract Agar (ATCC 1815)

Composition per liter:

Agar	20.0g
Glucose	5.0g
Peptone.....	5.0g
Yeast extract.....	3.0g
K ₂ HPO ₄	0.2g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Glycomyces tenuis*.

Peptone Yeast Extract Carboxymethyl Cellulose Medium

See: **PY CMC Medium**

Peptone Yeast Extract Glucose Agar

Composition per liter:

Agar	15.0g
Glucose	10.0g
Peptone.....	5.0g
Yeast extract.....	5.0g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Alcaligenes latus*, *Clavibacter iranicum*, *Clavibacter michiganense*, *Clavibacter rathayi*, *Clavibacter tritici*, *Curtobacterium flaccumfaciens*, *Erwinia amylovora*, *Erwinia mallotivora*, *Erwinia nigrifluens*, *Erwinia quercina*, *Erwinia rubrifaciens*, *Erwinia salicis*, *Gordona bronchialis*, *Gordona terrae*, *Rhodococcus fascians*, and *Acinetobacter baumannii*.

Peptone Yeast Extract Glucose Agar with Casein

Composition per liter:

Agar	15.0g
Glucose	10.0g
Peptone.....	5.0g
Yeast extract.....	5.0g
Casein hydrolysate.....	0.1g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Clavibacter michiganense*.

Peptone Yeast Extract Glucose Broth

Peptone Yeast Extract Glucose Medium, Modified (MPYG Medium)

Composition per 950.0mL:

Peptone	10.0g
Yeast extract.....	10.0g
Glucose	5.0g
L-Cysteine·HCl·H ₂ O.....	0.5g
(NH ₄) ₂ SO ₄	0.5g
Salt solution.....	40.0mL
Vitamin K-heme solution.....	10.0mL
Resazurin (0.025% solution).....	4.0mL
Volatile fatty acid solution.....	3.1mL

pH 7.0 ± 0.2 at 25°C

Salt Solution:

Composition per liter:

NaHCO ₃	10.0g
NaCl.....	2.0g
K ₂ HPO ₄	1.0g
KH ₂ PO ₄	1.0g
CaCl ₂ , anhydrous.....	0.2g
MgSO ₄	0.2g

Preparation of Salt Solution: Add CaCl₂ and MgSO₄ to 300.0mL of distilled/deionized water. Mix thoroughly until dissolved. Bring volume to 800.0mL with distilled/deionized water. Add remaining components while stirring. Bring volume to 1.0L. Mix thoroughly. Store at 4°C.

Vitamin K-Heme Solution:

Composition per liter:

Part A.....	100.0mL
Part B.....	1.0mL

Preparation of Vitamin K-Heme Solution: Aseptically add 1.0mL of sterile part B to 100.0mL of cooled sterile part A. Mix thoroughly.

Part A:

Composition per 100.0mL:

Hemin.....	50.0mg
NaOH (1N solution).....	1.0mL

Preparation of Part A: Add hemin to NaOH solution and bring volume to 100.0mL with distilled/deionized water. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Part B:

Composition per 30.0mL:

Menadione (vitamin K ₃).....	100.0mg
Ethanol (95% solution).....	30.0mL

Preparation of Part B: Add menadione to ethanol. Mix thoroughly. Filter sterilize.

Volatile Fatty Acid Solution:

Composition per 31.0mL:

Acetic acid.....	17.0mL
Propionic acid.....	6.0mL
n-Butyric acid.....	4.0mL
n-Valeric acid.....	1.0mL
Isovaleric acid.....	1.0mL

Isobutyric acid.....	1.0mL
DL- α -Methyl butyric acid.....	1.0mL

Preparation of Volatile Fatty Acid Solution: Combine components. Mix thoroughly.

Preparation of Medium: Add components—except vitamin K-heme solution, L-cysteine·HCl·H₂O, and volatile fatty acid solution—to distilled/deionized water and bring volume to 936.9mL. Gently heat and bring to boiling under 97% N₂ + 3% H₂. Continue boiling until resazurin turns colorless, indicating reduction. Cool to 45°–50°C. Add vitamin K-heme solution, L-cysteine·HCl·H₂O, and volatile fatty acid solution. Adjust pH to 7.0. Distribute into tubes under 97% N₂ + 3% H₂. Cap with rubber stoppers. Place tubes in a press. Autoclave for 15 min at 15 psi pressure–121°C with fast exhaust.

Use: For the cultivation and maintenance of *Acetivibrio ethanolgignens*, *Butyrivibrio fibrisolvens*, *Lachnospira multipara*, and *Succinivibrio dextrinosolvens*.

Peptone Yeast Extract Medium (ATCC Medium 828)

Composition per liter:

Peptone.....	20.0g
Yeast extract.....	1.5g
pH 7.0 \pm 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Acinetobacter lwoffii*.

Peptone Yeast Extract Medium (ATCC Medium 1366)

Composition per liter:

Peptone.....	10.0g
NaCl.....	5.0g
Yeast extract.....	5.0g
pH 7.2 \pm 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.2. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Xenorhabdus nematophilus*.

Peptone Yeast Extract Medium (PY Medium) (ATCC Medium 1524)

Composition per 950.0mL:

Yeast extract.....	10.0g
Peptone.....	5.0g
Pancreatic digest of casein.....	5.0g
L-Cysteine·HCl·H ₂ O.....	0.5g
Salt solution.....	40.0mL
Hemin solution.....	10.0mL
Resazurin (0.025% solution).....	4.0mL
Vitamin K ₁ solution.....	0.2mL

pH 7.0 \pm 0.2 at 25°C

Salt Solution:

Composition per liter:

NaHCO ₃	10.0g
NaCl.....	2.0g
K ₂ HPO ₄	1.0g
KH ₂ PO ₄	1.0g
CaCl ₂ , anhydrous.....	0.2g
MgSO ₄	0.2g

Preparation of Salt Solution: Add CaCl₂ and MgSO₄ to 300.0mL of distilled/deionized water. Mix thoroughly until dissolved. Bring volume to 800.0mL with distilled/deionized water. Add remaining components while stirring. Bring volume to 1.0L. Mix thoroughly. Store at 4°C.

Hemin Solution:

Composition per 100.0mL:

Hemin.....	0.05g
NaOH (1N solution).....	1.0mL

Preparation of Hemin Solution: Add hemin to NaOH solution and bring volume to 100.0mL with distilled/deionized water. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Vitamin K₁ Solution:

Composition per 30.0mL:

Vitamin K ₁	0.15g
Ethanol (95% solution).....	30.0mL

Preparation of Vitamin K₁ Solution: Add vitamin K₁ to ethanol. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components—except vitamin K₁ solution, hemin solution, and L-cysteine·HCl·H₂O, to distilled/deionized water and bring volume to 939.8mL. Gently heat and bring to boiling under 80% N₂ + 10% H₂ + 10% CO₂. Continue boiling until resazurin turns colorless, indicating reduction. Cool to 45°–50°C. Add vitamin K₁ solution, hemin solution, and L-cysteine·HCl·H₂O. Adjust pH to 7.0. Distribute into tubes under 80% N₂ + 10% H₂ + 10% CO₂. Cap with rubber stoppers. Place tubes in a press. Autoclave for 15 min at 15 psi pressure–121°C with fast exhaust.

Use: For the cultivation and maintenance of *Megasphaera cerevisiae* and *Clostridium* species.

Peptone Yeast Extract Medium with GlucoseSee: **PY Medium with Glucose****Peptone Yeast Extract Salt Agar**See: **PYS Agar****Peptone Yeast Extract Salt Medium**See: **PY Salt Medium****Peptone Yeast Glutamate Medium****Composition per liter:**

Peptone.....	20.0g
Yeast extract.....	10.0g
Monosodium glutamate.....	4.0g
Sodium thioglycolate.....	1.0g
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Peptococcus aerogenes* and a variety of other bacteria.

**Peptone Yeast Medium with Magnesium Sulfate
(DSMZ Medium 790)**

Composition per liter:

Peptone.....	10.0g
Yeast extract, dehydrated.....	1.0g
MgSO ₄ ·7H ₂ O.....	2.0g
(NH ₄) ₂ SO ₄	2.0g
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Aquaspirillum psychrophilum* and *Aquaspirillum peregrinum* subsp. *integrum*.

Peptone Yeast Medium with MgSO₄**Composition per liter:**

Peptone.....	10.0g
MgSO ₄ ·7H ₂ O.....	2.0g
(NH ₄) ₂ SO ₄	2.0g
Yeast extract.....	1.0g
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Aquaspirillum itersonii*, *Aquaspirillum peregrinum*, and *Aquaspirillum psychrophilum*.

**Peptone Yeast Trypticase™ Agar
(ATCC Medium 118)**

Composition per liter:

Agar.....	15.0g
Peptone.....	6.0g
Trypticase™ (pancreatic digest of casein).....	4.0g

Yeast extract.....	3.0g
Beef extract.....	1.5g
Glucose.....	1.0g
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of a variety of heterotrophic bacteria.

**Peptonized Milk Agar
(PMA Medium)**

Composition per liter:

Agar.....	15.0g
Milk, peptonized.....	1.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of freshwater *Myxobacterium* species.

Perfringens Agar, OPSPSee: **Clostridium perfringens Agar, OPSP**

**Perfringens HiVeg Agar Base (O.P.S.P.)
with Antibiotics**

Composition per liter:

Agar.....	15.0g
Plant hydrolysate.....	15.0g
Plant extract No. 2.....	7.0g
Papaic digest of soybean meal.....	5.0g
Yeast extract.....	5.0g
Tris buffer.....	1.5g
Ferric ammonium citrate.....	1.0g
Na ₂ S ₂ O ₅	1.0g
Antibiotic inhibitor.....	10.0mL
pH 7.3 ± 0.2 at 25°C	

Source: This medium, without antibiotic inhibitor, is available as a premixed powder from HiMedia.

Antibiotic Inhibitor:**Composition per 10.0mL:**

Sodium sulfadiazine.....	0.1g
Oleandomycin phosphate.....	0.5mg
Polymyxin B.....	10,000U

Preparation of Antibiotic Inhibitor: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except antibiotic inhibitor, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile antibiotic inhibitor. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the presumptive identification and enumeration of *Clostridium perfringens* in foods.

**Perfringens HiVeg Agar Base
with Egg Yolk and Antibiotics
(T.S.C./S.F.P. HiVeg Agar Base)**

Composition per liter:

Agar	15.0g
Plant hydrolysate No. 1	15.0g
Papaic digest of soybean meal	5.0g
Plant extract	5.0g
Yeast extract	5.0g
Na ₂ S ₂ O ₅	1.0g
Ferric ammonium citrate	1.0g
Egg yolk emulsion	25.0mL
Perfringens SFP supplement	4.0mL
Perfringens TSC supplement	4.0mL

pH 7.6 ± 0.2 at 25°C

Source: This medium, without egg yolk emulsion, perfringens SFP supplement, and perfringens TSC supplement, is available as a pre-mixed powder from HiMedia.

Egg Yolk Emulsion:

Composition per 100.0mL:

Chicken egg yolks	9
Whole chicken egg	1
NaCl (0.9% solution)	25.0mL

Preparation of Egg Yolk Emulsion: Soak eggs with 1:100 dilution of saturated mercuric chloride solution for 1 min. Crack eggs and separate yolks from whites. Mix egg yolks with 1 chicken egg. Beat to form emulsion. Measure 50.0mL of egg yolk emulsion and add to 50.0mL of 0.9% NaCl solution. Mix thoroughly. Filter sterilize. Warm to 45°–50°C.

Perfringens SFP Supplement:

Composition per 10.0mL:

Kanamycin sulfate	30.0mg
Polymyxin B	75,000U

Preparation of Perfringens SFP Supplement: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Perfringens TSC Supplement:

Composition per 10.0mL:

D-Cycloserine	1.0g
---------------------	------

Preparation of Perfringens TSC Supplement: Add D-cycloserine to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except perfringens SFP supplement, egg yolk emulsion, and perfringens TSC supplement, to distilled/deionized water and bring volume to 975mL. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 55°C. Aseptically add 25.0mL egg yolk emulsion, 4.0mL perfringens SFP supplement, and 4.0mL perfringens TSC supplement. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation, enumeration, and presumptive identification of *Clostridium perfringens* from foods.

**Perkinsus Agar Medium
(ATCC Medium 2289)**

Composition per liter:

Modified Perkinsus Medium	485.0mL
Agar Medium	485.0mL

Fetal bovine serum, heat inactivated	20.0mL
Lipid concentrate	10.0mL

Modified Perkinsus Medium

Composition per liter:

HEPES	11.92g
Nutrient mix F-12 Ham	10.8g
Dulbecco's modified Eagle's medium	8.4g
L-Glutamine	0.29g
NaHCO ₃	1.3g
SASW 2X solution	860.0mL
JPL carbohydrate solution	20.0mL
Phenol Red (0.5%) solution	1.0mL

SASW 2X Solution:

Composition per liter:

Seawater, synthetic basal mixture	36.4g
---	-------

Preparation of 2X SASW Solution: Add seawater synthetic basal mixture to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

JLP Carbohydrate Solution:

Composition per 100.0mL:

Glucose	5.0g
Galactose	1.0g
Trehalose	1.0g

Preparation of JLP Carbohydrate Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Phenol Red Solution:

Composition per 10.0mL:

Phenol Red	0.05g
------------------	-------

Preparation of Phenol Red Solution: Add Phenol Red to distilled/deionized water and bring volume to 10.0mL.

Preparation of Modified Perkinsus Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Agar Medium:

Composition per liter:

Agar	30.0g
------------	-------

Preparation of Agar Medium: Add agar to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Lipid Concentrate:

Composition per liter:

Pluronic™ F68	10.0g
Tween™ 80	2.5g
Cod liver oil	1.0g
Cholesterol	0.45g
DL- α -Tocopherol acetate	0.2g

Preparation of Lipid Concentrate: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Warm Modified Perkinsus Medium to 50°C and combine with Agar Medium at 50°C. Mix thoroughly and maintain at 50°C. Aseptically add heat-inactivated fetal bovine serum and lipid concentrate. Mix thoroughly. Aliquot in 20mL amounts to Petri dishes and allow to solidify.

Use: For the cultivation of *Perkinsus marinus*, *P. andrewsi*, *P. chesapeakei*, and *P. atlanticus*.

Perkinsus Medium

Composition per liter:

NaCl	9.0g
NaHCO ₃	2.1g
Glucose	1.1g

Phenol Red	1.2mg
Thiamine·HCl	2.0mg
FeSO ₄ ·7H ₂ O	0.8mg
Choline chloride	1.7mg
Calcium DL-pantothenate	1.7mg
Thymidine	0.7mg
Niacinamide	1.6mg
Pyridoxal	1.0mg
Inositol	0.7mg
Riboflavin	0.5mg
Lipoic acid	0.2mg
Pyridoxine·HCl	0.2mg
ZnSO ₄ ·7H ₂ O	0.03mg
FeNO ₃ ·7H ₂ O	0.025mg
Biotin	0.02mg
CuSO ₄ ·5H ₂ O	3.0µg

SASW solution	910.0mL
HEPES (N-[2-hydroxyethyl] piperazine-N'-2-ethanesulfonic acid) buffer (1.0M solution)	25.0mL
Fetal bovine serum, heat inactivated	20.0mL
JLP carbohydrate solution	10.0mL
Lipid concentrate (100X)	10.0mL
NaHCO ₃ solution	8.6mL
L-Glutamine solution	5.0mL
Phenol Red solution	0.5mL

SASW Solution:

Composition per liter:

Seawater, synthetic basal mixture	18.2g
-----------------------------------	-------

Preparation of SASW Solution: Add seawater synthetic basal mixture to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

JLP Carbohydrate Solution:

Composition per 100.0mL:

Glucose	5.0g
Galactose	1.0g
Trehalose	1.0g

Preparation of JLP Carbohydrate Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Phenol Red Solution:

Composition per 10.0mL:

Phenol Red	0.05g
------------	-------

Preparation of Phenol Red Solution: Add Phenol Red to distilled/deionized water and bring volume to 10.0mL.

Glutamine Solution:

Composition per 10.0mL:

L-Glutamine	0.29g
-------------	-------

Preparation of Glutamine Solution: Add L-glutamine to distilled/deionized water and bring volume to 10.0mL.

NaHCO₃ Solution:

Composition per 10.0mL:

NaHCO ₃	0.75g
--------------------	-------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL.

Lipid Concentrate:

Composition per liter:

Pluronic™ F68	10.0g
Tween™ 80	2.5g
Cod liver oil	1.0g
Cholesterol	0.45g
DL-α-Tocopherol acetate	0.2g

Preparation of Lipid Concentrate: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add all components, except lipid concentrate and fetal bovine serum, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Aseptically add 20.0mL of sterile fetal bovine serum and 10.0mL sterile lipid concentrate. Mix thoroughly. Aseptically distribute into sterile tubes or flasks. Use immediately.

Use: For the cultivation of *Perkinsus marinus*, *P. andrewsi*, *P. chesapeakei*, and *P. atlanticus*.

Persephonella Medium (DSMZ Medium 996)

Composition per liter:

NaCl	29.0g
MgSO ₄ ·7H ₂ O	7.0g
NaOH	2.0g
Na ₂ S ₂ O ₃	2.0g
MgCl ₂ ·6H ₂ O	1.36g
KCl	0.5g
CaCl ₂ ·2H ₂ O	0.4g
K ₂ HPO ₄	0.3g
NH ₄ Cl	0.2g
Trace elements solution	10.0mL

pH 6.0 ± 0.2 at 25°C

Trace Elements Solution:

Composition per liter:

Na-EDTA·2H ₂ O	0.5g
CoCl ₂ ·6H ₂ O	0.15g
MnCl ₂ ·4H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g
ZnCl ₂	0.1g
AlCl ₃ ·6H ₂ O	40.0mg
Na ₂ O ₄ W·6H ₂ O	30.0mg
CuCl	20.0mg
Ni ₂ SO ₄ ·6H ₂ O	20.0mg
Se-acide	10.0mg
H ₃ BO ₃	10.0mg
Na ₂ MoO ₄ ·2H ₂ O	10.0mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Adjust pH to 3.0. Mix thoroughly.

Preparation of Medium: Prepare anaerobic distilled/deionized water by sparging with 100% CO₂. Add components to distilled/deionized anaerobic water and bring volume to 1.0L. Adjust pH to 6.0 with H₂SO₄. Autoclave for 15 min at 15 psi pressure–121°C. Dispense under a CO₂ atmosphere into Bellco tubes (5mL medium per 27mL tube). Stopper with butyl stoppers. Cap and crimp closures. Autoclave for 15 min at 15 psi pressure–121°C. After autoclaving a white precipitate might be present; this precipitate can be redissolved by shaking the medium. It can take up to an hour before all precipitate is dissolved. Add 3.8% O₂ to each tube (1mL of O₂ per 27mL tube). After inoculation pressurize the tubes with H₂ to 20psi (or 138kPa).

Use: For the cultivation of *Persephonella* spp.

Petragnani Medium

Composition per 2398.0mL:

Skim milk	100.0g
Potato flour	36.4g
L-Asparagine	5.1g
Pancreatic digest of casein	5.1g
Malachite Green	1.2g
Whole egg	1277.0mL
Egg yolk	121.0mL
Glycerol	60.0mL

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a prepared medium from BD Diagnostic Systems.

Preparation of Medium: Add components—except whole egg, egg yolk, and glycerol—to distilled/deionized water and bring volume

to 940.0mL. Mix thoroughly. Add glycerol. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Scrub the eggshells with soap. Let stand in a soap solution for 30 min. Rinse in running water. Soak eggs in 70% ethanol for 15 min. Break the eggs into a sterile container. Homogenize by shaking. Filter through four layers of sterile cheesecloth into a sterile graduated cylinder. Measure out 1277.0mL. Add separated egg yolks to another sterile container. Measure out 121.0mL. Aseptically add homogenized whole egg and egg yolk to cooled sterile basal medium. Mix thoroughly. Aseptically distribute into sterile tubes. Inspissate at 85°–90°C (moist heat) for 45 min.

Use: For the isolation and cultivation of *Mycobacterium* species from clinical specimens. For the cultivation and maintenance of *Mycobacterium smegmatis*.

Petragnani Medium

Composition per 2285.0mL:

Potato	500.0g
Potato flour	36.0g
Malachite Green	1.2g
Whole egg	1200.0mL
Whole milk	900.0mL
Egg yolk	115.0mL
Glycerol	70.0mL

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a prepared medium from BD Diagnostic Systems.

Preparation of Medium: Peel and dice potato. Add potato to 500.0mL of distilled/deionized water. Gently heat and bring to boiling. Continue boiling for 30 min. Filter solids through two layers of cheesecloth. Combine potato solids with remaining components, except whole egg, egg yolk, and glycerol. Mix thoroughly. Add glycerol. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Scrub the eggshells with soap. Let stand in a soap solution for 30 min. Rinse in running water. Soak eggs in 70% ethanol for 15 min. Break the eggs into a sterile container. Homogenize by shaking. Filter through four layers of sterile cheesecloth into a sterile graduated cylinder. Measure out 1200.0mL. Add separated egg yolks to another sterile container. Measure out 115.0mL. Aseptically add homogenized whole egg and egg yolk to cooled sterile basal medium. Mix thoroughly. Aseptically distribute into sterile tubes. Inspissate at 85°–90°C (moist heat) for 45 min.

Use: For the isolation and cultivation of *Mycobacterium* species from clinical specimens. For the cultivation and maintenance of *Mycobacterium smegmatis*.

Petrotoga Medium

Composition per liter:

NaCl	18.0g
MgSO ₄ ·7H ₂ O	3.45g
MgCl ₂ ·7H ₂ O	2.75g
NaHCO ₃	1.0g
L-Cysteine·HCl·H ₂ O	0.5g
KCl	0.335g
NH ₄ Cl	0.25g
CaCl ₂ ·2H ₂ O	0.14g
K ₂ HPO ₄	0.14g
Fe(NH ₄) ₂ (SO ₄) ₂ ·7H ₂ O	2.0mg
Resazurin	1.0mg
Glucose solution	50.0mL

Trace elements solution SL-6	10.0mL
Pancreatic digest of casein solution	10.0mL
Yeast extract solution	10.0mL
Na ₂ S·9H ₂ O solution	10.0mL
Wolfe's vitamin solution	10.0mL
pH 6.5–6.7 at 25°C	

Glucose Solution:**Composition** per 50.0mL:

D-Glucose	5.0g
-----------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution SL-6:**Composition** per liter:

H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
MnCl ₂ ·4H ₂ O	0.03g
Na ₂ MoO ₄ ·H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 3.4.

Pancreatic Digest of Casein Solution:**Composition** per 10.0mL:

Pancreatic digest of casein	1.0g
-----------------------------------	------

Preparation of Pancreatic Digest of Casein Solution: Add pancreatic digest of casein to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Yeast Extract Solution:**Composition** per 10.0mL:

Yeast extract	1.0g
---------------------	------

Preparation of Yeast Extract Solution: Add yeast extract to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:**Composition** per 10.0mL:

Na ₂ S·9H ₂ O	0.5g
---	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Wolfe's Vitamin Solution:**Composition** per liter:

Pyridoxine·HCl	10.0mg
Thiamine·HCl	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
Calcium pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Thioctic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Cyanocobalamin	100.0μg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Sparge with 100% N₂.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂. Add components, except NaHCO₃, glucose solution, pancreatic digest of casein solution, yeast extract solution, Na₂S·9H₂O solution, and Wolfe's vitamin solution, to distilled/deionized water and bring volume to 910.0mL. Mix thoroughly. Adjust pH to 6.5–6.7. Gently heat and bring to boiling. Continue boiling for 3 min. Cool to room temperature while sparging with 80% N₂ + 20% CO₂. Add NaHCO₃. Adjust pH to 6.5–6.7. Anaerobically distribute 9.1mL volumes into anaerobic tubes. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 0.5mL of sterile glucose solution, 0.1mL of sterile pancreatic digest of casein solution, 0.1mL of sterile yeast extract solution, 0.1mL of sterile Na₂S·9H₂O solution, and 0.1mL of sterile Wolfe's vitamin solution to each tube. Mix thoroughly.

Use: For the cultivation of *Petrotoga miotherma*.

***Petrotoga* Medium (ATCC 1881)**

Composition per liter:

NaCl	20.0g
Sodium PIPES (piperazine- <i>N,N'</i> -bis[2-ethanesulfonic acid]) buffer	5.24g
Pancreatic digest of casein	5.0g
Yeast extract	2.0g
Resazurin	1.0g
Soluble starch	1.0g
L-Cysteine·HCl·H ₂ O	0.5g
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components, except L-cysteine·HCl·H₂O, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.4. Gently heat and bring to boiling. Continue boiling for 3 min. Cool to room temperature while sparging with 100% N₂. Add L-cysteine·HCl·H₂O. Mix thoroughly. Anaerobically distribute into tubes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Petrotoga miotherma*.

PFE Agar

See: Peptone Meat Extract Soil Extract Agar

Pfennig's Medium I, Modified for Marine Purple Sulfur Bacteria (DSMZ Medium 28)

Composition per 5.0L:

Solution A	4.0L
Solution B	860.0mL
Solution E	100.0mL
Solution F	20.0mL
Solution C	5.0mL
Solution D	5.0mL
pH 7.3 at 25°C	

Solution A:**Composition** per 4.0L:

NaCl	100.0g
MgSO ₄	15.0g
KH ₂ PO ₄	1.7g
NH ₄ Cl	1.7g

KCl.....	1.7g
CaCl ₂ ·2H ₂ O.....	1.25g

Preparation of Solution A: Add components to 4.0L distilled water. Mix thoroughly. Autoclave for 45 min at 15 psi pressure–121°C in 5-liter special bottle or flask with four openings at the top, together with a teflon-coated magnetic bar. In this 5-liter bottle, two openings for tubes are in the central, silicon rubber stopper: a short, gas-inlet tube with a sterile cotton filter and an outlet tube for medium, which reaches the bottom of the vessel at one end and has, at the other end, a silicon rubber tube with a pinch cock and a bell for aseptic dispensing of the medium into bottles. The other two openings have gas-tight screw caps; one of these openings is for the addition of sterile solutions and the other serves as a gas outlet. After autoclaving, cool to room temperature under a N₂ atmosphere with a positive pressure of 0.05–0.1 atm (a manometer for low pressure will be required). Saturate the cold medium with CO₂ by magnetic stirring for 30 min under a CO₂ atmosphere of 0.05–0.1 atm.

Solution B:

Distilled water.....	860.0mL
----------------------	---------

Preparation of Solution B: Autoclave distilled water for 15 min at 15 psi pressure–121°C in a cotton-stoppered Erlenmeyer flask. Cool to room temperature under an atmosphere of N₂ in an anaerobic jar.

Solution C:

Composition per 100.0mL:

Vitamin B ₁₂	2.0mg
-------------------------------	-------

Preparation of Solution C: Add vitamin B₁₂ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge under 100% N₂ gas for 3 min. Filter sterilize. Store under N₂ gas.

Solution D:

Composition per liter:

Disodium ethylenediamine-tetraacetate (Disodium EDTA).....	3.0g
FeSO ₄ ·7H ₂ O.....	1.1g
H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O.....	0.19g
MnCl ₂ ·2H ₂ O.....	50.0mg
ZnCl ₂	42.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	18.0mg
CuCl ₂ ·2H ₂ O.....	2.0mg

Preparation of Solution D: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Solution E:

Composition per 100.0mL:

NaHCO ₃	7.5g
--------------------------	------

Preparation of Solution E: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% CO₂ until saturated. Filter sterilize under 100% CO₂ into a sterile, gas-tight 100.0mL screw-capped bottle.

Solution F:

Composition per 100.0mL:

Na ₂ S·9H ₂ O.....	10.0g
--	-------

Preparation of Solution F: Add Na₂S·9H₂O to distilled/deionized water in a 250.0mL screw-capped bottle fitted with a butyl rubber septum and bring volume to 100.0mL. Mix thoroughly. Sparge under

100% N₂ gas for 3 min. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Preparation of Medium: Add solutions B, C, D, E, and F to solution A through one of the screw-cap openings against a stream of either N₂ gas or, better, a mixture of 95% N₂ and 5% CO₂ while the medium is magnetically stirred. Adjust the pH of the medium with sterile HCl or Na₂CO₃ solution (2M solution) to pH 7.3. Distribute the medium aseptically through the medium outlet tube into sterile, 100mL bottles (with metal caps and autoclavable rubber seals) using the positive gas pressure (0.05–0.1 atm) of the N₂/CO₂ gas mixture. Leave a small air bubble in each bottle to meet possible pressure changes. The tightly sealed, screw-cap bottles can be stored for several weeks or months in the dark. During the first 24 hr, the iron of the medium precipitates in the form of black flocks. No other sediment should arise in the otherwise clear medium. Incubate in the light using a tungsten lamp. Feed periodically with neutralized solution of sodium sulfide to replenish sulfide and with other supplement solutions.

Use: For the cultivation of marine purple sulfur bacteria.

Pfennig's Medium 1, Modified for Marine Purple Sulfur Bacteria (DSMZ Medium 28)

Composition per 4990.0mL:

Solution A.....	4000.0mL
Solution B.....	860.0mL
Solution E.....	100.0mL
Solution F.....	20.0mL
Solution C (Vitamin B ₁₂ solution).....	5.0mL
Solution D (Trace elements solution SL-12B).....	5.0mL
Neutralized sulfide solution.....	As needed

pH 7.3 ± 0.2 at 25°C

Solution A:

Composition per 4000.0mL:

NaCl.....	100.0g
MgSO ₄ ·7H ₂ O.....	15.0g
CaCl ₂ ·2H ₂ O.....	1.25g
KH ₂ PO ₄	1.7g
NH ₄ Cl.....	1.7g
KCl.....	1.7g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 4.0L. Mix thoroughly. Adjust pH to 6.0. Dispense into a 5L flask with four openings at the top (two openings are in a central silicon rubber stopper and two openings are gas-tight screw caps). Add a teflon-coated magnetic stir bar to the flask. Autoclave for 45 min at 15 psi pressure–121°C. Cool to room temperature under 100% N₂ at 0.05–0.1 atm pressure (use a manometer to measure low pressure).

Solution B:

Composition per 860.0mL:

Distilled/deionized water.....	860.0mL
--------------------------------	---------

Preparation of Solution B: Add 860.0mL of distilled/deionized water to a cotton-stoppered flask. Autoclave for 20 min at 15 psi pressure–121°C. Cool to room temperature under 100% N₂ in an anaerobic jar.

Solution C (Vitamin B₁₂ Solution):

Composition per 5.0mL:

Vitamin B ₁₂	1.0mg
-------------------------------	-------

Preparation of Solution C (Vitamin B₁₂ Solution): Add vitamin B₁₂ to distilled/deionized water and bring volume to 5.0mL. Mix thoroughly. Filter sterilize.

Solution D (Trace Elements Solution SL-12B):

Composition per liter:

Disodium ethylenediamine-tetraacetate (Na ₂ -EDTA).....	3.0g
FeSO ₄ ·7H ₂ O.....	1.1g
H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O.....	0.19g
MnCl ₂ ·2H ₂ O.....	50.0mg
ZnCl ₂	42.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	18.0mg
CuCl ₂ ·2H ₂ O.....	2.0mg

Preparation of Solution D (Trace Elements Solution SL-12B):

Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Solution E:

Composition per 100.0mL:

NaHCO ₃	7.5g
--------------------------	------

Preparation of Solution E: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% CO₂ until saturated. Filter sterilize under 100% CO₂ into a sterile, gas-tight 100.0mL screw-capped bottle.

Solution F:

Composition per 100.0mL:

Na ₂ S·9H ₂ O.....	10.0g
--	-------

Preparation of Solution F: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Dispense into a screw-capped bottle. Sparge with 100% N₂ for 3–4 min. Autoclave for 15 min at 15 psi pressure–121°C.

Neutralized Sulfide Solution:

Composition per 100.0mL:

Na ₂ S·9H ₂ O.....	1.5g
--	------

Preparation of Neutralized Sulfide Solution: Add Na₂S·9H₂O to distilled/deionized water in a 250.0mL screw-capped bottle fitted with a butyl rubber septum and bring volume to 100.0mL. Add a magnetic stir bar. Mix thoroughly. Sparge under 100% N₂ gas for 3 min. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Adjust pH to about 7.3 with sterile 2M H₂SO₄. Do not open the bottle to add H₂SO₄; use a sterile syringe. Stir the solution continuously to avoid precipitation of elemental sulfur. The final solution should be clear and yellow in color.

Preparation of Medium: Saturate cooled solution A under 100% CO₂ at 0.05–0.1 atm pressure for 30 min with magnetic stirring. Add 860.0mL of solution B, 5.0mL of solution C, 5.0mL of solution D, 100.0mL of solution E, and 20.0mL of solution F through one of the screw-capped openings under 95% N₂ and 5% CO₂ with magnetic stirring. Adjust pH to 7.3 with sterile 2M HCl or sterile 2M Na₂CO₃ solution. Aseptically and anaerobically distribute the medium through the medium outlet tube into sterile 100.0mL bottles under 95% N₂ and 5% CO₂ at 0.05–0.1 atm pressure. Leave a small gas bubble in each bottle to accommodate pressure changes. After 24 hr, the iron in the medium will precipitate out of solution as black flocs. No other sediment should arise in the otherwise clear medium. Incubate in the light using a tungsten lamp. Feed periodically with neutralized solution of

sodium sulfide to replenish sulfide and with other supplement solutions.

Use: For the cultivation of purple sulfur bacteria. For the cultivation of purple sulfur bacteria. For the cultivation and maintenance of *Amoebobacter pendens*, *Amoebobacter roseus*, *Chromatium minus*, *Chromatium minutissimum*, *Chromatium okenii*, *Chromatium* species, *Chromatium vinosum*, *Chromatium violascens*, *Chromatium weissei*, *Lamprocystis roseopersicina*, and *Streptomyces venezuelae*.

Pfennig's Medium 1 with 1% Salt

Composition per 4990.0mL:

Solution A.....	4000.0mL
Solution B.....	860.0mL
Solution E.....	100.0mL
Solution F.....	20.0mL
Solution C (Vitamin B ₁₂ solution).....	5.0mL
Solution D (Trace elements solution SL-12B).....	5.0mL
pH 7.3 ± 0.2 at 25°C	

Solution A:

Composition per 4000.0mL:

NaCl.....	50.0g
CaCl ₂ ·2H ₂ O.....	1.25g
KH ₂ PO ₄	1.7g
NH ₄ Cl.....	1.7g
KCl.....	1.7g
MgSO ₄	2.5g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 4.0L. Mix thoroughly. Adjust pH to 6.0. Dispense into a 5L flask with four openings at the top (two openings are in a central silicon rubber stopper and two openings are gas-tight screw caps). Add a teflon-coated magnetic stir bar to the flask. Autoclave for 45 min at 15 psi pressure–121°C. Cool to room temperature under 100% N₂ at 0.05–0.1 atm pressure (use a manometer to measure low pressure).

Solution B:

Composition per 860.0mL:

Distilled/deionized water.....	860.0mL
--------------------------------	---------

Preparation of Solution B: Add 860.0mL of distilled/deionized water to a cotton-stoppered flask. Autoclave for 20 min at 15 psi pressure–121°C. Cool to room temperature under 100% N₂ in an anaerobic jar.

Solution C (Vitamin B₁₂ Solution):

Composition per 5.0mL:

Vitamin B ₁₂	1.0mg
-------------------------------	-------

Preparation of Solution C (Vitamin B₁₂ Solution): Add vitamin B₁₂ to distilled/deionized water and bring volume to 5.0mL. Mix thoroughly. Filter sterilize.

Solution D (Trace Elements Solution SL-12B):

Composition per liter:

Disodium ethylenediamine-tetraacetate (Na ₂ -EDTA).....	3.0g
FeSO ₄ ·7H ₂ O.....	1.1g
H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O.....	0.19g
MnCl ₂ ·2H ₂ O.....	50.0mg

Distilled/deionized water	860.0mL
---------------------------------	---------

Preparation of Solution B: Add 860.0mL of distilled/deionized water to a cotton-stoppered flask. Autoclave for 20 min at 15 psi pressure–121°C. Cool to room temperature under 100% N₂ in an anaerobic jar.

Solution C (Vitamin B₁₂ Solution):**Composition** per 5.0mL:

Vitamin B ₁₂	1.0mg
-------------------------------	-------

Preparation of Solution C (Vitamin B₁₂ Solution): Add vitamin B₁₂ to distilled/deionized water and bring volume to 5.0mL. Mix thoroughly. Filter sterilize.

Solution D (Trace Elements Solution SL-12B):**Composition** per liter:

Disodium ethylenediamine-tetraacetate (Na ₂ -EDTA)	3.0g
FeSO ₄ ·7H ₂ O	1.1g
H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.19g
MnCl ₂ ·2H ₂ O	50.0mg
ZnCl ₂	42.0mg
NiCl ₂ ·6H ₂ O	24.0mg
Na ₂ MoO ₄ ·2H ₂ O	18.0mg
CuCl ₂ ·2H ₂ O	2.0mg

Preparation of Solution D (Trace Elements Solution SL-12B):

Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Solution E:**Composition** per 100.0mL:

NaHCO ₃	7.5g
--------------------------	------

Preparation of Solution E: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% CO₂ until saturated. Filter sterilize under 100% CO₂ into a sterile, gas-tight 100.0mL screw-capped bottle.

Solution F:**Composition** per 100.0mL:

Na ₂ S·9H ₂ O	10.0g
---	-------

Preparation of Solution F: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Dispense into a screw-capped bottle. Sparge with 100% N₂ for 3–4 min. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Saturate cooled solution A under 100% CO₂ at 0.05–0.1 atm pressure for 30 min with magnetic stirring. Add 860.0mL of solution B, 5.0mL of solution C, 5.0mL of solution D, 100.0mL of solution E, and 20.0mL of solution F through one of the screw-capped openings under 95% N₂ and 5% CO₂ with magnetic stirring. Adjust pH to 7.3 with sterile 2M HCl or sterile 2M Na₂CO₃ solution. Aseptically and anaerobically distribute the medium through the medium outlet tube into sterile 100.0mL bottles under 95% N₂ and 5% CO₂ at 0.05–0.1 atm pressure. Leave a small gas bubble in each bottle to accommodate pressure changes. After 24 hr, the iron in the medium will precipitate out of solution as black flocs.

Use: For the cultivation and maintenance of *Amoebobacter pendens*.

**Pfennig's Medium 2, Modified
for Green Sulfur Bacteria****Composition** per 5000.0mL:

Solution A	4000.0mL
Solution B	860.0mL
Solution E	100.0mL
Solution F	30.0mL
Solution C (Vitamin B ₁₂ solution)	5.0mL
Solution D (Trace elements solution SL-10B)	5.0mL

pH 6.8 ± 0.2 at 25°C

Solution A:**Composition** per 4000.0mL:

CaCl ₂ ·2H ₂ O	1.25g
KH ₂ PO ₄	1.7g
NH ₄ Cl	1.7g
KCl	1.7g
MgSO ₄	2.5g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 4.0L. Mix thoroughly. Adjust pH to 6.0. Dispense into a 5L flask with four openings at the top (two openings are in a central silicon rubber stopper and two openings are gas-tight screw caps). Add a teflon-coated magnetic stir bar to the flask. Autoclave for 45 min at 15 psi pressure–121°C. Cool to room temperature under 100% N₂ at 0.05–0.1 atm pressure (use a manometer to measure low pressure).

Solution B:**Composition** per 860.0mL:

Distilled/deionized water	860.0mL
---------------------------------	---------

Preparation of Solution B: Add 860.0mL of distilled/deionized water to a cotton-stoppered flask. Autoclave for 20 min at 15 psi pressure–121°C. Cool to room temperature under 100% N₂ in an anaerobic jar.

Solution C (Vitamin B₁₂ Solution):**Composition** per 5.0mL:

Vitamin B ₁₂	1.0mg
-------------------------------	-------

Preparation of Solution C (Vitamin B₁₂ Solution): Add vitamin B₁₂ to distilled/deionized water and bring volume to 5.0mL. Mix thoroughly. Filter sterilize.

Solution D (Trace Elements Solution SL-10B):**Composition per liter:**

FeCl ₂ ·4H ₂ O	1.5g
H ₃ BO ₃	300.0mg
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Solution D (Trace Elements Solution SL-10B):

Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly.

Solution E:**Composition per 100.0mL:**

NaHCO ₃	7.5g
--------------------------	------

Preparation of Solution E: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% CO₂ until saturated. Filter sterilize under 100% CO₂ into a sterile, gas-tight 100.0mL screw-capped bottle.

Solution F:**Composition per 100.0mL:**

Na ₂ S·9H ₂ O	10.0g
---	-------

Preparation of Solution F: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Dispense into a screw-capped bottle. Sparge with 100% N₂ for 3–4 min. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Saturate cooled solution A under 100% CO₂ at 0.05–0.1 atm pressure for 30 min with magnetic stirring. Add 860.0mL of solution B, 5.0mL of solution C, 5.0mL of solution D, 100.0mL of solution E, and 20.0mL of solution F through one of the screw-capped openings under 95% N₂ and 5% CO₂ with magnetic stirring. Adjust pH to 6.8 with sterile 2M HCl or sterile 2M Na₂CO₃ solution. Aseptically and anaerobically distribute the medium through the medium outlet tube into sterile 100.0mL bottles under 95% N₂ and 5% CO₂ at 0.05–0.1 atm pressure. Leave a small gas bubble in each bottle to accommodate pressure changes. After 24 hr, the iron in the medium will precipitate out of solution as black flocs.

Use: For the cultivation and maintenance of *Chlorobium limicola* and *Chlorobium phaeovibrioides*.

Pfennig's Medium 2 Modified for Green Sulfur Bacteria (DSMZ Medium 29)

Composition per 5.0L:

Solution A	4.0L
Solution B	860.0mL
Solution E	100.0mL
Solution F	30.0mL
Solution C	5.0mL
Solution D	5.0mL
Neutralized sulfide solution	As needed
pH 6.8 at 25°C	

Solution A:**Composition per 4.0L:**

MgSO ₄	2.5g
KH ₂ PO ₄	1.7g

NH ₄ Cl	1.7g
KCl	1.7g
CaCl ₂ ·2H ₂ O	1.25g

Preparation of Solution A: Add components to 4.0L distilled water. Mix thoroughly. Autoclave for 45 min at 15 psi pressure–121°C in 5-liter special bottle or flask with four openings at the top, together with a teflon-coated magnetic bar. In this 5-liter bottle, two openings for tubes are in the central, silicon rubber stopper: a short, gas-inlet tube with a sterile cotton filter; and an outlet tube for medium, which reaches the bottom of the vessel at one end and has, at the other end, a silicon rubber tube with a pinch cock and a bell for aseptic dispensing of the medium into bottles. The other two openings have gas-tight screw caps; one of these openings is for the addition of sterile solutions and the other serves as a gas outlet. After autoclaving, cool to room temperature under a N₂ atmosphere with a positive pressure of 0.05–0.1 atm (a manometer for low pressure will be required). Saturate the cold medium with CO₂ by magnetic stirring for 30 min under a CO₂ atmosphere of 0.05–0.1 atm.

Solution B:

Distilled water	860.0mL
-----------------------	---------

Preparation of Solution B: Autoclave distilled water for 15 min at 15 psi pressure–121°C in a cotton-stoppered Erlenmeyer flask. Cool to room temperature under an atmosphere of N₂ in an anaerobic jar.

Solution C:**Composition per 100.0mL:**

Vitamin B ₁₂	2.0mg
-------------------------------	-------

Preparation of Solution C: Add vitamin B₁₂ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge under 100% N₂ gas for 3 min. Filter sterilize. Store under N₂ gas.

Solution D:**Composition per liter:**

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	300.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	7.7mL

Preparation of Solution D: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution E:**Composition per 100.0mL:**

NaHCO ₃	7.5g
--------------------------	------

Preparation of Solution E: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% CO₂ until saturated. Filter sterilize under 100% CO₂ into a sterile, gas-tight 100.0mL screw-capped bottle.

Solution F:**Composition per 100.0mL:**

Na ₂ S·9H ₂ O	10.0g
---	-------

Preparation of Solution F: Add Na₂S·9H₂O to distilled/deionized water in a 250.0mL screw-capped bottle fitted with a butyl rubber septum and bring volume to 100.0mL. Mix thoroughly. Sparge under

100% N₂ gas for 3 min. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Neutralized Sulfide Solution:

Composition per 100.0mL:

Na₂S·9H₂O 1.5g

Preparation of Neutralized Sulfide Solution: Add Na₂S·9H₂O to distilled/deionized water in a 250.0mL screw-capped bottle fitted with a butyl rubber septum and bring volume to 100.0mL. Add a magnetic stir bar. Mix thoroughly. Sparge under 100% N₂ gas for 3 min. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Adjust pH to about 6.8 with sterile 2M H₂SO₄. Do not open the bottle to add H₂SO₄; use a sterile syringe. Stir the solution continuously to avoid precipitation of elemental sulfur. The final solution should be clear and yellow in color.

Preparation of Medium: Add solution B, C, D, E, and F to solution A through one of the screw-cap openings against a stream of either N₂ gas or, better, a mixture of 95% N₂ and 5% CO₂ while the medium is magnetically stirred. Adjust the pH of the medium with sterile HCl or Na₂CO₃ solution (2M solution) to pH 6.8. Distribute the medium aseptically through the medium outlet tube into sterile, 100mL bottles (with metal caps and autoclavable rubber seals) using the positive gas pressure (0.05–0.1 atm) of the N₂/CO₂ gas mixture. Leave a small air bubble in each bottle to meet possible pressure changes. The tightly sealed, screw-cap bottles can be stored for several weeks or months in the dark. During the first 24 hr, the iron of the medium precipitates in the form of black flocs. No other sediment should arise in the otherwise clear medium. Incubate in the light using a tungsten lamp. Feed periodically with neutralized solution of sodium sulfide to replenish sulfide and with other supplement solutions.

Use: For the cultivation of green sulfur bacteria.

Pfennig's Medium 2 with Salt

Composition per 5000.0mL:

Solution A 4000.0mL
 Solution B 860.0mL
 Solution E 100.0mL
 Solution F 30.0mL
 Solution C (Vitamin B₁₂ solution) 5.0mL
 Solution D (Trace elements solution SL-10B) 5.0mL
 pH 6.8 ± 0.2 at 25°C

Solution A:

Composition per 4000.0mL:

NaCl 50.0g
 CaCl₂·2H₂O 1.25g
 KH₂PO₄ 1.7g
 NH₄Cl 1.7g
 KCl 1.7g
 MgSO₄ 2.5g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 4.0L. Mix thoroughly. Adjust pH to 6.0. Dispense into a 5L flask with four openings at the top (two openings are in a central silicon rubber stopper and two openings are gas-tight screw caps). Add a teflon-coated magnetic stir bar to the flask. Autoclave for 45 min at 15 psi pressure–121°C. Cool to room temperature under 100% N₂ at 0.05–0.1 atm pressure (use a manometer to measure low pressure).

Solution B:

Composition per 860.0mL:

Distilled/deionized water 860.0mL

Preparation of Solution B: Add 860.0mL of distilled/deionized water to a cotton-stoppered flask. Autoclave for 20 min at 15 psi pressure–121°C. Cool to room temperature under 100% N₂ in an anaerobic jar.

Solution C (Vitamin B₁₂ Solution):

Composition per 5.0mL:

Vitamin B₁₂ 1.0mg

Preparation of Solution C (Vitamin B₁₂ Solution): Add vitamin B₁₂ to distilled/deionized water and bring volume to 5.0mL. Mix thoroughly. Filter sterilize.

Solution D (Trace Elements Solution SL-10B):

Composition per liter:

FeCl₂·4H₂O 1.5g
 CoCl₂·6H₂O 0.19g
 MnCl₂·4H₂O 100.0mg
 ZnCl₂ 70.0mg
 Na₂MoO₄·2H₂O 36.0mg
 NiCl₂·6H₂O 24.0mg
 H₃BO₃ 6.0mg
 CuCl₂·2H₂O 2.0mg
 HCl (25% solution) 10.0mL

Preparation of Solution D (Trace Elements Solution SL-10B):

Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly.

Solution E:

Composition per 100.0mL:

NaHCO₃ 7.5g

Preparation of Solution E: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% CO₂ until saturated. Filter sterilize under 100% CO₂ into a sterile, gas-tight 100.0mL screw-capped bottle.

Solution F:

Composition per 100.0mL:

Na₂S·9H₂O 10.0g

Preparation of Solution F: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Dispense into a screw-capped bottle. Sparge with 100% N₂ for 3–4 min. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Saturate cooled solution A under 100% CO₂ at 0.05–0.1 atm pressure for 30 min with magnetic stirring. Add 860.0mL of solution B, 5.0mL of solution C, 5.0mL of solution D, 100.0mL of solution E, and 20.0mL of solution F through one of the screw-capped openings under 95% N₂ and 5% CO₂ with magnetic stirring. Adjust pH to 6.8 with sterile 2M HCl or sterile 2M Na₂CO₃ solution. Aseptically and anaerobically distribute the medium through the medium outlet tube into sterile 100.0mL bottles under 95% N₂ and 5% CO₂ at 0.05–0.1 atm pressure. Leave a small gas bubble in each bottle to accommodate pressure changes. After 24 hr, the iron in the medium will precipitate out of solution as black flocs.

Use: For the cultivation and maintenance of *Chlorobium phaeobacteroides*, *Chlorobium vibrioforme*, *Pelodictyon luteolum*, *Pelodictyon phaeum*, and *Prosthecochloris aestuarii*.

Pfizer Selective *Enterococcus* Agar (PSE Agar)

Peptone C 17.0g
 Agar 15.0g

Bile.....	10.0g
NaCl.....	5.0g
Yeast extract.....	5.0g
Peptone B.....	3.0g
Esculin.....	1.0g
Sodium citrate.....	1.0g
Ferric ammonium citrate.....	0.5g
NaN ₃	0.25g

pH 7.1 ± 0.2 at 25°C

Caution: Sodium azide is toxic. Azides also react with metals and disposal must be highly diluted.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the selective isolation, cultivation, and enumeration of *Enterococcus* species by the multiple tube technique.

Pfizer Selective *Enterococcus* HiVeg Agar

Composition per liter:

Plant hydrolysate.....	21.0g
Agar.....	15.0g
Plant peptone.....	6.0g
NaCl.....	5.0g
Yeast extract.....	5.0g
Synthetic detergent.....	3.0g
Esculin.....	1.0g
Sodium citrate.....	1.0g
Ferric ammonium citrate.....	0.5g

pH 7.1 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Caution: Sodium azide is toxic. Azides also react with metals and disposal must be highly diluted.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the selective isolation, cultivation, and enumeration of *Enterococcus* species by the multiple tube technique.

Pfizer TB Medium Base with Glycerol, Egg Yolk, Glucose, and Malachite Green

Composition per liter:

Agar.....	15.0g
Potato starch.....	15.0g
Casein acid hydrolysate.....	10.0g
K ₂ HPO ₄	3.5g
Beef extract.....	3.0g
L-Asparagine.....	3.0g
Citric acid.....	0.1g
Ferric ammonium citrate.....	0.1g
MgSO ₄	0.015g
Egg yolk emulsion.....	100.0mL

Glycerol.....	40.0mL
Malachite Green solution.....	13.0mL
Glucose solution.....	1.0mL

pH 7.0 ± 0.2 at 35°C

Source: This medium, without glycerol, glucose solution, Malachite Green solution, and egg yolk emulsion, is available as a premixed powder from HiMedia.

Egg Yolk Emulsion:

Composition per 100.0mL:

Chicken egg yolks.....	9
Whole chicken egg.....	1
NaCl (0.9% solution).....	25.0mL

Preparation of Egg Yolk Emulsion: Soak eggs with 1:100 dilution of saturated mercuric chloride solution for 1 min. Crack eggs and separate yolks from whites. Mix egg yolks with 1 chicken egg. Beat to form emulsion. Measure 50.0mL of egg yolk emulsion and add to 50.0mL of 0.9% NaCl solution. Mix thoroughly. Filter sterilize. Warm to 45°–50°C.

Glucose Solution:

Composition per 100.0mL:

Glucose.....	20.0g
--------------	-------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Malachite Green Solution:

Composition per 20.0mL:

Malachite Green.....	0.2g
----------------------	------

Preparation of Malachite Green Solution: Add Malachite Green to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add glycerol and the other components, except glucose solution, egg yolk emulsion, and Malachite Green solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 12 psi pressure–118°C. Cool to 55°C. Aseptically add 100.0mL egg yolk emulsion, 1.0mL glucose solution, and 13.0mL Malachite Green solution. Mix thoroughly. Aseptically dispense into sterile tubes. Allow to solidify as slants.

Use: For the cultivation of *Mycobacterium tuberculosis*.

PFS Medium

(Peptone Fumarate Sulfate Medium)

Composition per liter:

Peptone.....	10.0g
Fumaric acid.....	2.0g
(NH ₄) ₂ SO ₄	1.0g
MgSO ₄ ·7H ₂ O.....	0.5g
FeCl ₃ ·6H ₂ O.....	0.2mg
MnSO ₄ ·H ₂ O.....	0.2mg

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0 with KOH. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Aquaspirillum fasciculus*.

PGA (Potato Glucose Agar)

Composition per liter:

Potatoes	500.0g
Glucose	20.0g
Agar	15.0g
Yeast extract	5.0g

Preparation of Medium: Slice potatoes with skin. Place 500.0g of potatoes in 1.0L of distilled/deionized water. Gently heat and bring to boiling. Allow to boil for 20 min. Filter through Whatman filter paper. Add agar and other components to filtrate. Bring volume to 1.0L with distilled/deionized water. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of numerous filamentous fungi.

PGLE Medium (Peptone Glucose Liver Extract Medium)

Composition per liter:

Agar	25.0g
Glucose	20.0g
Peptone	5.0g
Yeast extract	5.0g
K ₂ HPO ₄	1.0g
Liver extract	0.5g

pH 9.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Enterobacter cloacae*.

PGP Broth (Peptone Glycerol Phosphate Broth)

Composition per liter:

Peptone	5.0g
K ₂ HPO ₄	2.0g
Glycerol	10.0mL

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Serratia marcescens*.

PGS Agar (Peptone Glucose Salt Agar)

Composition per liter:

Agar	15.0g
Glucose	10.0g
NaCl	10.0g
Peptone	10.0g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Rhodococcus australis*.

PGT Medium

Composition per liter:

Casamino acids	30.0g
L-Glutamic acid	0.5g
MgSO ₄ ·7H ₂ O	0.45g
Maltose	0.2g
L-Cystine	0.2g
DL-Tryptophan	0.1g
Solution 3	100.0mL
Solution 2	2.0mL
Calcium pantothenate (0.1% solution)	0.5mL

pH 6.8 ± 0.2 at 25°C

Solution 3:

Composition per 500.0mL:

Maltose	200.0g
CaCl ₂	1.5g
Calcium pantothenate (0.1% solution)	3.0mL
FeSO ₄ (1% in 1N HCl)	0.2mL

Preparation of Solution 3: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Autoclave for 15 min at 7 psi pressure–111°C. Cool to 45°–50°C.

Solution 2:

Composition per 100.0mL:

β-Alanine	0.115g
Nicotinic acid	0.115g
CuSO ₄ ·5H ₂ O	0.05g
ZnSO ₄ ·7H ₂ O	0.045g
MnCl ₂ ·4H ₂ O	0.015g
Pimelic acid	7.5mg
HCl, concentrated	3.0mL

Preparation of Solution 2: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components, except solution 3, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Adjust pH to 6.8 with 50% KOH. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile solution 3. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Corynebacterium diphtheriae*.

PGY Agar (Peptone Glucose Yeast Extract Agar)

Composition per liter:

Agar	15.0g
Peptone	10.0g
Yeast extract	5.0g
Glucose	1.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Micrococcus luteus*.

PH Medium (DSMZ Medium 1077)

Composition per 1118.0mL:

Pancreatic digest of casein	7.0g
NaCl	5.0g

Beef extract	3.0g
Yeast extract	3.0g
Beef heart, solids from infusion	2.0g
Supplement solution	200.0mL
pH 7.8 ± 0.2 at 25°C	

Supplement Solution:**Composition per liter:**

Horse serum, inactivated	187.0mL
Yeast extract solution	93.6mL
Fish sperm DNA solution, filter sterilized	18.7mL

Yeast Extract Solution:**Composition per 100.0mL:**

Yeast extract	25.0g
---------------------	-------

Preparation of Yeast Extract Solution: Add yeast extract to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Supplement Solution: Aseptically add components to sterile distilled/deionized water and bring volume to 318.0mL. Mix thoroughly.

Preparation of Medium: Add components, except supplement solution, to distilled/deionized water and bring volume to 800.0L. Mix thoroughly. Adjust pH to 6.5. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 318.0mL of supplement solution. Adjust pH to 7.8. Mix thoroughly. Aseptically distribute into culture vessels.

Use: For the cultivation of *Mycoplasma orale*.

PHB Delafield Agar (LMG Medium 123)

Composition per liter:

Agar	20.0g
NH ₄ Cl	1.0g
MgSO ₄ ·7H ₂ O	0.5g
Casamino acids	0.1g
Ferric ammonium citrate	0.05g
Yeast extract	0.05g
Phosphate buffer solution	1.0L
Solution A/B	264.0mL
pH 6.8 ± 0.2 at 25°C	

Phosphate Buffer Solution:**Composition per liter:**

KH ₂ PO ₄	4.5g
Na ₂ HPO ₄ ·2H ₂ O	5.8g

Preparation of Phosphate Buffer Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.8.

Solution A/B:**Composition per 700.0mL:**

Solution A	140.0mL
Solution B	560.0mL

Solution A:**Composition per 140.0mL:**

Poly-β-hydroxybutyrate, powdered	1.75g
--	-------

Preparation of Solution A: Add poly-β-hydroxybutyrate to distilled/deionized water and bring volume to 140.0mL. Mix thoroughly. Sonicate for 30 min. Autoclave for 15 min at 15 psi pressure–121°C. Sonicate again for 30 min in the sterile bottle. Warm to 50°C.

Solution B:**Composition per 560.0mL:**

Agar	14.0g
------------	-------

Preparation of Solution B: Add agar to distilled/deionized water and bring volume to 560.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C.

Preparation of Solution A/B: Aseptically combine 140.0mL of solution A with 560.0mL of solution B. Warm to 50°C.

Preparation of Medium: Combine components except solution A/B. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes. Allow agar to solidify. Bring the Petri dishes to 65°C. Aseptically add 4.0mL of sterile solution A/B onto the surface of each agar plate.

Use: For the cultivation and maintenance of *Pseudomonas lemoignei* Delafield.

PHB Medium

See: **Poly-β-Hydroxybutyrate Medium**

PHB/Pyruvate Medium (DSMZ Medium 193a)

Composition per 991.0mL:

Solution A	870.0mL
Solution C	100.0mL
Solution D	10.0mL
Solution E (Vitamin solution)	10.0mL
Solution B (Trace elements solution SL-10)	1.0mL
pH 7.1–7.4 at 25°C	

Solution A:**Composition per 870.0mL:**

Na-pyruvate	5.0g
NaCl	7.0g
Na ₂ SO ₄	3.0g
MgCl ₂ ·6H ₂ O	1.3g
Poly-hydroxybutyrate (PHB)	1.0g
KH ₂ PO ₄	0.2g
NH ₄ Cl	0.3g
KCl	0.5g
CaCl ₂ ·2H ₂ O	0.15g
Resazurin	1.0mg

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 870.0mL. Mix thoroughly.

Solution B (Trace Elements Solution SL-10):**Composition per liter:**

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Solution B (Trace Elements Solution SL-10): Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C:**Composition** per 100.0mL:NaHCO₃ 5.0g

Preparation of Solution C: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Flush with 80% N₂ + 20% CO₂ to remove dissolved oxygen.

Solution D:**Composition** per 10.0mL:Na-acetate·3H₂O 2.5g

Preparation of Solution D: Add Na-acetate·3H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution E (Vitamin Solution):**Composition** per liter:

Pyridoxine-HCl 10.0mg

Thiamine-HCl·2H₂O 5.0mg

Riboflavin 5.0mg

Nicotinic acid 5.0mg

D-Ca-pantothenate 5.0mg

p-Aminobenzoic acid 5.0mg

Lipoic acid 5.0mg

Biotin 2.0mg

Folic acid 2.0mg

Vitamin B₁₂ 0.10mg

Solution E (Vitamin Solution): Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution F:**Composition** per 10.0mL:Na₂S·9H₂O 0.4g

Preparation of Solution F: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Gently heat solution A and bring to boiling. Boil solution A for a few minutes. Cool to room temperature. Gas with 80% N₂ + 20% CO₂ gas mixture to reach a pH below 6. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Sequentially add 1.0mL solution B, 100.0mL solution C, 10.0mL solution D, 10.0mL solution E, and 10.0mL solution F. Distribute anaerobically under 80% N₂ + 20% CO₂ into appropriate vessels. Addition of 10–20mg sodium dithionite per liter from a 5% (w/v) solution, freshly prepared under N₂ and filter sterilized, may stimulate growth. After inoculation, pressurize vessels up to 1 bar H₂ + CO₂ (80% + 20%) overpressure.

Use: For the cultivation of unclassified bacterium DSM 6754.

PHC Medium
(Polyhexamethylene Carbonate Medium)
(DSMZ Medium 885)

K₂HPO₄ 1.6g

Polyhexamethylene carbonate, emulsified 1.0g

(NH₄)₂SO₄ 1.0gYKH₂PO₄ 0.2g

Yeast extract 0.1g

Surfactant, Plysurf A210G 60.0mg

CaCl₂·2H₂O 20.0mg

NaCl 10.0mg

FeSO₄·7H₂O 10.0mgNa₂MoO₄·4H₂O 0.5mgNa₂WO₄·2H₂O 0.5mgMnSO₄ 0.5mg

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Roseateles depolymerans*.

Phenethyl Alcohol Agar
(Phenylethanol Agar)
(Phenylethyl Alcohol Agar)

Composition per liter:

Agar 15.0g

Pancreatic digest of casein 15.0g

NaCl 5.0g

Papaic digest of soybean meal 5.0g

β-Phenethyl alcohol 2.5g

Blood 50.0mL

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components, except blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 13 psi pressure–118°C. Cool to 45°–50°C. Aseptically add sterile defibrinated blood. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation of Gram-positive bacteria, particularly Gram-positive cocci, from specimens with a mixed flora. Do not use for the observation of hemolytic reactions.

Phenol Nutrient-Supplemented Broth

Composition per 1000.05mL:(NH₄)₂SO₄ 2.0gNa₂HPO₄ 1.0g

Nutrient broth 20.0mL

Phenol (90% solution) 1.05mL

pH 6.8 ± 0.2 at 25°C

Nutrient Broth:**Composition** per liter:

Peptone 5.0g

Beef extract 3.0g

Preparation of Nutrient Broth: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling.

Preparation of Medium: Add components, except phenol, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add phenol. Mix thoroughly.

Use: For the cultivation of ATCC strain 1413.

Phenol Red Adonitol Broth

Composition per liter:

Proteose peptone 10.0g

NaCl 5.0g

Adonitol	5.0g
Beef extract	1.0g
Phenol Red	0.018g
pH 7.4 ± 0.2 at 25°C	

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes with inverted Durham tubes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the detection of adonitol fermenting bacteria.

Phenol Red Agar

Composition per liter:

Agar	15.0g
Pancreatic digest of casein	10.0g
NaCl	5.0g
Phenol Red	0.018g
Carbohydrate solution	20.0mL
pH 7.4 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Carbohydrate Solution:

Composition per 20.0mL:

Carbohydrate	5.0–10.0g
--------------------	-----------

Preparation of Carbohydrate Solution: Add carbohydrate to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except carbohydrate solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Adjust pH to 7.4 if necessary. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 20.0mL of sterile carbohydrate solution. Pour into sterile Petri dishes or distribute into sterile tubes. Allow tubes to cool in a slanted position.

Use: For the determination of fermentation reactions. Bacteria that can ferment the added carbohydrate turn the medium yellow.

Phenol Red Agar

Composition per liter:

Agar	15.0g
Proteose peptone No. 3	10.0g
NaCl	5.0g
Beef extract	1.0g
Phenol Red	0.025g
Carbohydrate solution	20.0mL
pH 7.4 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Carbohydrate Solution:

Composition per 20.0mL:

Carbohydrate	5.0–10.0g
--------------------	-----------

Preparation of Carbohydrate Solution: Add carbohydrate to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except carbohydrate solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Adjust pH to 7.4 if necessary. Autoclave for 15 min at

15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 20.0mL of sterile carbohydrate solution. Pour into sterile Petri dishes or distribute into sterile tubes. Allow tubes to cool in a slanted position.

Use: For the determination of fermentation reactions. Bacteria that can ferment the added carbohydrate turn the medium yellow.

Phenol Red Arabinose Broth

Composition per liter:

Proteose peptone	10.0g
NaCl	5.0g
Arabinose	5.0g
Beef extract	1.0g
Phenol Red	0.018g
pH 7.4 ± 0.2 at 25°C	

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes with inverted Durham tubes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the detection of arabinose-fermenting bacteria.

Phenol Red Broth

Composition per liter:

Pancreatic digest of casein	10.0g
NaCl	5.0g
Phenol Red	0.018g
Carbohydrate solution	20.0mL
pH 7.4 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Carbohydrate Solution:

Composition per 20.0mL:

Carbohydrate	5.0–10.0g
--------------------	-----------

Preparation of Carbohydrate Solution: Add carbohydrate to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except carbohydrate solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Adjust pH to 7.4 if necessary. Distribute into tubes containing an inverted Durham tube. Fill each tube with 9.8mL of medium. Autoclave for 15 min at 13 psi pressure–118°C. Cool to 45°–50°C. Aseptically add 0.2mL of sterile carbohydrate solution to each tube.

Use: For the determination of fermentation reactions in the differentiation of microorganisms. Fermentation is determined by the production of acid—broth turns yellow—and formation of gas—bubble trapped in Durham tube.

Phenol Red Broth Base with Plant Extract No. 1

Composition per liter:

Plant hydrolysate	10.0g
NaCl	5.0g
Plant extract No. 1	1.0g
Phenol Red	0.018g
pH 7.4 ± 0.2 at 25°C	

Source: This medium, without carbohydrate, is available as a premixed powder from HiMedia.

Carbohydrate Solution:**Composition per 20.0mL:**

Carbohydrate..... 5.0–10.0g

Preparation of Carbohydrate Solution: Add carbohydrate to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except carbohydrate solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Adjust pH to 7.4 if necessary. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 20.0mL of sterile carbohydrate solution. Aseptically distribute into sterile tubes or flasks.

Use: For the determination of fermentation reactions. Bacteria that can ferment the added carbohydrate turn the medium yellow.

Phenol Red Carbohydrate Broth (BAM M121)

Composition per liter:

Pancreatic digest of casein..... 10.0g
NaCl..... 5.0g
Beef extract..... 1.0g
Carbohydrate solution..... 200.0mL
Phenol Red solution..... 7.2mL

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostics.

Phenol Red Solution:**Composition per 10.0mL:**

Phenol Red..... 0.025g

Preparation of Phenol Red Solution: Add Phenol Red to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly.

Carbohydrate Solution:**Composition per 200.0mL:**

Carbohydrate..... 5.0–10.0g

Preparation of Carbohydrate Solution: Add carbohydrate (5.0g dulcitol, 10.0g lactose, or 10.0g sucrose) to distilled/deionized water and bring volume to 200.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except carbohydrate solution, to distilled/deionized water and bring volume to 800.0mL. Mix thoroughly. Adjust pH to 7.4 if necessary. Distribute into tubes containing an inverted Durham tube. Fill each tube with 8.0mL of medium. Autoclave for 15 min at 13 psi pressure–118°C. Cool to 45°–50°C. Aseptically add 2.0mL of sterile carbohydrate solution to each tube.

Use: For the determination of fermentation reactions in the differentiation of microorganisms, such as *Salmonella* spp. Fermentation is determined by the production of acid—broth turns yellow—and formation of gas—bubble trapped in Durham tube.

Phenol Red Carbohydrate Broth with Sodium Chloride (BAM M121)

Composition per liter:

NaCl..... 30.0g
Pancreatic digest of casein..... 10.0g
Beef extract..... 1.0g

Carbohydrate solution..... 200.0mL
Phenol Red solution..... 7.2mL
pH 7.4 ± 0.2 at 25°C

Source: This medium, without added NaCl, is available as a premixed powder from BD Diagnostics.

Phenol Red Solution:**Composition per 10.0mL:**

Phenol Red..... 0.025g

Preparation of Phenol Red Solution: Add Phenol Red to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly.

Carbohydrate Solution:**Composition per 200.0mL:**

Carbohydrate..... 5.0–10.0g

Preparation of Carbohydrate Solution: Add carbohydrate (5.0g dulcitol, 10.0g lactose, or 10.0g sucrose) to distilled/deionized water and bring volume to 200.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except carbohydrate solution, to distilled/deionized water and bring volume to 800.0mL. Mix thoroughly. Adjust pH to 7.4 if necessary. Distribute into tubes containing an inverted Durham tube. Fill each tube with 8.0mL of medium. Autoclave for 15 min at 13 psi pressure–118°C. Cool to 45°–50°C. Aseptically add 2.0mL of sterile carbohydrate solution to each tube.

Use: For the determination of fermentation reactions in the differentiation of halophilic *Vibrio* spp. Fermentation is determined by the production of acid—broth turns yellow—and formation of gas—bubble trapped in Durham tube.

Phenol Red Dextrose Broth

Composition per liter:

Proteose peptone..... 10.0g
NaCl..... 5.0g
Glucose..... 5.0g
Beef extract..... 1.0g
Phenol Red..... 0.018g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes with inverted Durham tubes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For glucose fermentation studies of microorganisms.

Phenol Red Dulcitol HiVeg Broth

Composition per liter:

Plant peptone No. 3..... 10.0g
Dulcitol..... 5.0g
NaCl..... 5.0g
Plant extract..... 1.0g
Phenol Red..... 0.018g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the determination of the ability of a microorganism to ferment dulcitol. Fermentation is determined by the production of acid—medium turns yellow.

Phenol Red Galactose Broth

Composition per liter:

Proteose peptone	10.0g
NaCl	5.0g
Galactose	5.0g
Beef extract	1.0g
Phenol Red	0.018g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes with inverted Durham tubes. Autoclave for 15 min at 15 psi pressure—121°C.

Use: For galactose fermentation studies of microorganisms.

Phenol Red Glucose Broth

Composition per liter:

Pancreatic digest of casein	10.0g
Glucose	5.0g
NaCl	5.0g
Phenol Red	0.018g

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.3 if necessary. Distribute into tubes containing an inverted Durham tube. Fill each tube with 10.0mL of medium. Autoclave for 15 min at 13 psi pressure—118°C.

Use: For determination of the ability of a microorganism to ferment glucose. Fermentation is determined by the production of acid—broth turns yellow—and formation of gas—bubble trapped in Durham tube.

Phenol Red Glucose Broth (BAM M122)

Composition per liter:

Proteose peptone No. 3	10.0g
Glucose	5.0g
NaCl	5.0g
Beef extract	1.0g
Phenol Red solution	7.2mL

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostics.

Phenol Red Solution:

Composition per 10.0mL:

Phenol Red	0.025g
------------------	--------

Preparation of Phenol Red Solution: Add Phenol Red to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.4 if necessary. Distribute into tubes containing an inverted Durham tube.

Fill each tube with 10.0mL of medium. Autoclave for 10 min at 13 psi pressure—118°C.

Use: For determination of the ability of a microorganism to ferment glucose. Fermentation is determined by the production of acid—broth turns yellow—and formation of gas—bubble trapped in Durham tube.

Phenol Red Glucose Broth, HiVeg

Composition per liter:

Plant peptone No. 3	10.0g
Glucose	5.0g
NaCl	5.0g
Plant extract	1.0g
Phenol Red	0.018g

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.3 if necessary. Distribute into tubes containing an inverted Durham tube. Fill each tube with 10.0mL of medium. Autoclave for 15 min at 13 psi pressure—118°C.

Use: For determination of the ability of a microorganism to ferment glucose. Fermentation is determined by the production of acid—broth turns yellow—and formation of gas—bubble trapped in Durham tube.

Phenol Red Glucose Broth with Sodium Chloride (BAM M122)

Composition per liter:

NaCl	30.0g
Proteose peptone No. 3	10.0g
Glucose	5.0g
Beef extract	1.0g
Phenol Red solution	7.2mL

pH 7.4 ± 0.2 at 25°C

Source: This medium, without added NaCl, is available as a premixed powder from BD Diagnostics.

Phenol Red Solution:

Composition per 10.0mL:

Phenol Red	0.025g
------------------	--------

Preparation of Phenol Red Solution: Add Phenol Red to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.4 if necessary. Distribute into tubes containing an inverted Durham tube. Fill each tube with 10.0mL of medium. Autoclave for 10 min at 13 psi pressure—118°C.

Use: For determination of the ability of halophilic *Vibrio* spp. to ferment glucose. Fermentation is determined by the production of acid—broth turns yellow—and formation of gas—bubble trapped in Durham tube.

Phenol Red Glucose HiVeg Agar

Composition per liter:

Agar	15.0g
Plant peptone No. 3	10.0g
Glucose	10.0g
NaCl	5.0g

Plant extract	1.0g
Phenol Red.....	0.025g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 13 psi pressure–118°C. Pour into sterile Petri dishes or leave in tubes. Allow tubes to cool in a slanted position.

Use: For the determination of the ability of a microorganism to ferment glucose. Fermentation is determined by the production of acid—medium turns yellow.

Phenol Red HiVeg Agar Base with Carbohydrate

Composition per liter:

Agar	15.0g
Plant peptone No. 3.....	10.0g
NaCl.....	5.0g
Plant extract	1.0g
Phenol Red.....	0.025g
Carbohydrate solution.....	20.0mL

pH 7.4 ± 0.2 at 25°C

Source: This medium, without carbohydrate, is available as a premixed powder from HiMedia.

Carbohydrate Solution:

Composition per 20.0mL:

Carbohydrate.....	5.0–10.0g
-------------------	-----------

Preparation of Carbohydrate Solution: Add carbohydrate to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except carbohydrate solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Adjust pH to 7.4 if necessary. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 20.0mL of sterile carbohydrate solution. Pour into sterile Petri dishes or distribute into sterile tubes. Allow tubes to cool in a slanted position.

Use: For the determination of fermentation reactions. Bacteria that can ferment the added carbohydrate turn the medium yellow.

Phenol Red HiVeg Broth Base

Composition per liter:

Plant peptone No. 3.....	10.0g
NaCl.....	5.0g
Plant extract	1.0g
Phenol Red.....	0.018g
Carbohydrate solution.....	20.0mL

pH 7.4 ± 0.2 at 25°C

Source: This medium, without carbohydrate, is available as a premixed powder from HiMedia.

Carbohydrate Solution:

Composition per 20.0mL:

Carbohydrate.....	5.0–10.0g
-------------------	-----------

Preparation of Carbohydrate Solution: Add carbohydrate to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except carbohydrate solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Adjust pH to 7.4 if necessary. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 20.0mL of sterile carbohydrate solution. Aseptically distribute into sterile tubes or flasks.

Use: For the determination of fermentation reactions. Bacteria that can ferment the added carbohydrate turn the medium yellow.

Phenol Red Inositol Broth

Composition per liter:

Proteose peptone.....	10.0g
NaCl.....	5.0g
Inositol.....	5.0g
Beef extract.....	1.0g
Phenol Red.....	0.018g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes with inverted Durham tubes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For inositol fermentation studies of microorganisms.

Phenol Red Lactose Agar

Composition per liter:

Agar	15.0g
Lactose.....	10.0g
Proteose peptone No. 3.....	10.0g
NaCl.....	5.0g
Beef extract.....	1.0g
Phenol Red.....	25.0mg

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 13 psi pressure–118°C. Pour into sterile Petri dishes or leave in tubes. Allow tubes to cool in a slanted position.

Use: For the determination of the ability of a microorganism to ferment lactose. Fermentation is determined by the production of acid—medium turns yellow.

Phenol Red Lactose Broth

Composition per liter:

Pancreatic digest of casein.....	10.0g
Lactose.....	5.0g
NaCl.....	5.0g
Phenol Red.....	0.018g

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.3 if necessary. Distribute into tubes containing an inverted Durham tube.

Fill each tube with 10.0mL of medium. Autoclave for 15 min at 13 psi pressure—118°C.

Use: For determination of the ability of a microorganism to ferment lactose. Fermentation is determined by the production of acid—broth turns yellow—and formation of gas—bubble trapped in Durham tube.

Phenol Red Lactose Broth

Composition per liter:

Proteose peptone	10.0g
NaCl	5.0g
Lactose	5.0g
Beef extract	1.0g
Phenol Red	0.018g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes with inverted Durham tubes. Autoclave for 15 min at 15 psi pressure—121°C.

Use: For the detection of lactose-fermenting bacteria.

Phenol Red Lactose Broth

Composition per liter:

Peptic digest of animal tissue.....	10.0g
Lactose	10.0g
NaCl	5.0g
Beef extract	1.0g
Phenol Red	0.018g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes with inverted Durham tubes. Autoclave for 15 min at 15 psi pressure—121°C.

Use: For lactose fermentation studies in accordance with the ISO Committee under the specification ISO 9308-1:1990.

Phenol Red Lactose HiVeg Agar

Composition per liter:

Agar	15.0g
Plant peptone No. 3.....	10.0g
Lactose	10.0g
NaCl	5.0g
Plant extract	1.0g
Phenol Red	0.025g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 13 psi pressure—118°C. Pour into sterile Petri dishes or leave in tubes. Allow tubes to cool in a slanted position.

Use: For the determination of the ability of a microorganism to ferment lactose. Fermentation is determined by the production of acid—medium turns yellow.

Phenol Red Lactose HiVeg Broth

Composition per liter:

Plant peptone No. 3.....	10.0g
Lactose.....	5.0g
NaCl.....	5.0g
Plant extract	1.0g
Phenol Red.....	0.018g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 13 psi pressure—118°C.

Use: For the determination of the ability of a microorganism to ferment lactose. Fermentation is determined by the production of acid—medium turns yellow.

Phenol Red Maltose Broth

Composition per liter:

Proteose peptone.....	10.0g
NaCl.....	5.0g
Maltose	5.0g
Beef extract.....	1.0g
Phenol Red.....	0.018g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes with inverted Durham tubes. Autoclave for 15 min at 15 psi pressure—121°C.

Use: For maltose fermentation studies of microorganisms.

Phenol Red Maltose HiVeg Agar

Composition per liter:

Agar	15.0g
Plant peptone No. 3.....	10.0g
Maltose	10.0g
NaCl.....	5.0g
Plant extract	1.0g
Phenol Red.....	0.025g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 13 psi pressure—118°C. Pour into sterile Petri dishes or leave in tubes. Allow tubes to cool in a slanted position.

Use: For the determination of the ability of a microorganism to ferment maltose. Fermentation is determined by the production of acid—medium turns yellow.

Phenol Red Maltose HiVeg Broth

Composition per liter:

Plant peptone No. 3.....	10.0g
Maltose	5.0g

NaCl.....	5.0g
Plant extract.....	1.0g
Phenol Red.....	0.018g
pH 7.4 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 13 psi pressure–118°C.

Use: For the determination of the ability of a microorganism to ferment maltose. Fermentation is determined by the production of acid—medium turns yellow.

Phenol Red Mannitol Agar

Composition per liter:

Agar.....	15.0g
Mannitol.....	10.0g
Proteose peptone No. 3.....	10.0g
NaCl.....	5.0g
Beef extract.....	1.0g
Phenol Red.....	25.0mg
pH 7.4 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 13 psi pressure–118°C. Pour into sterile Petri dishes or leave in tubes. Allow tubes to cool in a slanted position.

Use: For determination of the ability of a microorganism to ferment mannitol. Fermentation is determined by the production of acid—medium turns yellow.

Phenol Red Mannitol Broth

Composition per liter:

Pancreatic digest of casein.....	10.0g
D-Mannitol.....	5.0g
NaCl.....	5.0g
Phenol Red.....	0.018g
pH 7.3 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.3 if necessary. Distribute into tubes containing an inverted Durham tube. Fill each tube with 10.0mL of medium. Autoclave for 15 min at 13 psi pressure–118°C.

Use: For determination of the ability of a microorganism to ferment mannitol. Fermentation is determined by the production of acid—broth turns yellow—and formation of gas—bubble trapped in Durham tube.

Phenol Red Mannitol HiVeg Agar

Composition per liter:

Agar.....	15.0g
Plant peptone No. 3.....	10.0g
Mannitol.....	10.0g

NaCl.....	5.0g
Plant extract.....	1.0g
Phenol Red.....	0.025g
pH 7.4 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 13 psi pressure–118°C. Pour into sterile Petri dishes or leave in tubes. Allow tubes to cool in a slanted position.

Use: For the determination of the ability of a microorganism to ferment mannitol. Fermentation is determined by the production of acid—medium turns yellow.

Phenol Red Mannitol HiVeg Broth

Composition per liter:

Plant peptone No. 3.....	10.0g
Mannitol.....	5.0g
NaCl.....	5.0g
Plant extract.....	1.0g
Phenol Red.....	0.018g
pH 7.4 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 13 psi pressure–118°C.

Use: For the determination of the ability of a microorganism to ferment mannitol. Fermentation is determined by the production of acid—medium turns yellow.

Phenol Red Raffinose Broth

Composition per liter:

Proteose peptone.....	10.0g
NaCl.....	5.0g
Raffinose.....	5.0g
Beef extract.....	1.0g
Phenol Red.....	0.018g
pH 7.4 ± 0.2 at 25°C	

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes with inverted Durham tubes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For raffinose fermentation studies of microorganisms.

Phenol Red Rhamnose Broth

Composition per liter:

Proteose peptone.....	10.0g
NaCl.....	5.0g
Rhamnose.....	5.0g
Beef extract.....	1.0g
Phenol Red.....	0.018g
pH 7.4 ± 0.2 at 25°C	

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes with inverted Durham tubes. Autoclave for 15 min at 15 psi pressure—121°C.

Use: For rhamnose fermentation studies of microorganisms.

Phenol Red Salicin Broth

Composition per liter:

Proteose peptone	10.0g
NaCl	5.0g
Salicin	5.0g
Beef extract	1.0g
Phenol Red	0.018g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes with inverted Durham tubes. Autoclave for 15 min at 15 psi pressure—121°C.

Use: For salicin fermentation studies of microorganisms.

Phenol Red Sorbitol Broth

Composition per liter:

Proteose peptone	10.0g
NaCl	5.0g
Sorbitol	5.0g
Beef extract	1.0g
Phenol Red	0.018g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes with inverted Durham tubes. Autoclave for 15 min at 15 psi pressure—121°C.

Use: For sorbitol fermentation studies of microorganisms.

Phenol Red Starch Broth

Composition per liter:

Proteose peptone	10.0g
NaCl	5.0g
Starch	5.0g
Beef extract	1.0g
Phenol Red	0.018g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes with inverted Durham tubes. Autoclave for 15 min at 15 psi pressure—121°C.

Use: For starch fermentation studies of microorganisms.

Phenol Red Sucrose Broth

Composition per liter:

Pancreatic digest of casein	10.0g
NaCl	5.0g

Sucrose.....	5.0g
Phenol Red.....	0.018g

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.3 if necessary. Distribute into tubes containing an inverted Durham tube. Fill each tube with 10.0mL of medium. Autoclave for 15 min at 13 psi pressure—118°C.

Use: For determination of the ability of a microorganism to ferment sucrose. Fermentation is determined by the production of acid—broth turns yellow—and formation of gas—bubble trapped in Durham tube.

Phenol Red Sucrose Broth

Composition per liter:

Proteose peptone	10.0g
NaCl	5.0g
Sucrose.....	5.0g
Beef extract	1.0g
Phenol Red.....	0.018g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes with inverted Durham tubes. Autoclave for 15 min at 15 psi pressure—121°C.

Use: For sucrose fermentation studies of microorganisms.

Phenol Red Sucrose HiVeg Agar

Composition per liter:

Agar	15.0g
Plant peptone No. 3.....	10.0g
Sucrose.....	10.0g
NaCl.....	5.0g
Plant extract	1.0g
Phenol Red.....	0.025g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 13 psi pressure—118°C. Pour into sterile Petri dishes or leave in tubes. Allow tubes to cool in a slanted position.

Use: For the determination of the ability of a microorganism to ferment sucrose. Fermentation is determined by the production of acid—medium turns yellow.

Phenol Red Sucrose HiVeg Broth

Composition per liter:

Plant peptone No. 3.....	10.0g
NaCl.....	5.0g
Sucrose.....	5.0g
Plant extract	1.0g
Phenol Red.....	0.018g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 13 psi pressure–118°C.

Use: For the determination of the ability of a microorganism to ferment sucrose. Fermentation is determined by the production of acid—medium turns yellow.

Phenol Red Tartrate Agar

Composition per liter:

Agar	15.0g
Peptone.....	10.0g
Potassium tartrate.....	10.0g
NaCl.....	5.0g
Phenol Red.....	0.024g
pH 7.6 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to cold distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 13 psi pressure–118°C. Pour into sterile Petri dishes or leave in tubes. Allow tubes to cool in an upright position.

Use: For the differentiation of Gram-negative bacteria of the intestinal groups, particularly members of the *Salmonella* (paratyphoid) group based on their ability to ferment tartrate.

Phenol Red Tartrate Broth

Composition per liter:

Pancreatic digest of casein.....	10.0g
Potassium tartrate.....	10.0g
Agar	5.0g
NaCl.....	5.0g
Phenol Red.....	0.024g
pH 7.6 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the differentiation of Gram-negative bacteria of the intestinal groups, particularly members of the *Salmonella* (paratyphoid) group based on their ability to ferment tartrate.

Phenol Red Tartrate HiVeg Agar

Composition per liter:

Agar	15.0g
Plant peptone.....	10.0g
Sodium potassium tartrate	10.0g
NaCl.....	5.0g
Phenol Red.....	0.024g
pH 7.6 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to cold distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 13 psi pressure–118°C. Pour into sterile Petri dishes or leave in tubes. Allow tubes to cool in an upright position.

Use: For the differentiation of Gram-negative bacteria of the intestinal groups, particularly members of the *Salmonella* (paratyphoid) group based on their ability to ferment tartrate.

Phenol Red Trehalose Broth

Composition per liter:

Proteose peptone.....	10.0g
NaCl.....	5.0g
Trehalose.....	5.0g
Beef extract.....	1.0g
Phenol Red.....	0.018g
pH 7.4 ± 0.2 at 25°C	

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes with inverted Durham tubes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For trehalose fermentation studies of microorganisms.

Phenol Red Xylose Broth

Composition per liter:

Proteose peptone.....	10.0g
NaCl.....	5.0g
Xylose.....	5.0g
Beef extract.....	1.0g
Phenol Red.....	0.018g
pH 7.4 ± 0.2 at 25°C	

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes with inverted Durham tubes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For xylose fermentation studies of microorganisms.

Phenolphthalein Phosphate HiVeg Agar

Composition per liter:

Agar	15.0g
Plant peptone	5.0g
NaCl.....	5.0g
Plant extract.....	3.0g
Sodium phenolphthalein phosphate.....	0.012g
pH 7.4 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the identification of phosphatase-positive *Staphylococcus aureus*.

Phenylalanine Agar (Phenylalanine Deaminase Medium)

Composition per liter:

Agar	12.0g
NaCl.....	5.0g
Yeast extract.....	3.0g

DL-Phenylalanine.....	2.0g
Na ₂ HPO ₄	1.0g
pH 7.3 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 10 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the differentiation of enteric Gram-negative bacilli on the basis of their ability to produce phenylpyruvic acid from phenylalanine. After appropriate incubation of bacteria, ferric chloride reagent is added on the agar. Formation of a green color in 1–5 min indicates the production of phenylpyruvic acid.

Phenylalanine Malonate Broth

Composition per liter:

Sodium malonate	3.0g
DL-Phenylalanine.....	2.0g
NaCl	2.0g
(NH ₄) ₂ SO ₄	2.0g
Yeast extract.....	1.0g
K ₂ HPO ₄	0.6g
KH ₂ PO ₄	0.4g
Bromthymol Blue	0.025g
pH 7.3 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 10 min at 10 psi pressure–115°C.

Use: For the differentiation of Gram-negative enteric bacilli on the basis of malonate utilization and formation of pyruvic acid from phenylalanine.

Phenylethanol Agar

Composition per liter:

Agar	15.0g
Tryptose	10.0g
NaCl	5.0g
Beef extract.....	3.0g
Phenylethanol.....	2.5g
pH 7.3 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation of staphylococci and streptococci from specimens containing a mixed flora.

Phenylethanol Blood Agar

Composition per liter:

Agar	15.0g
Tryptose	10.0g

NaCl.....	5.0g
Beef extract.....	3.0g
Phenylethanol	2.5g
Blood, defibrinated	50.0mL
pH 7.3 ± 0.2 at 25°C	

Preparation of Medium: Add components, except blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 13 psi pressure–118°C. Cool to 45°–50°C. Aseptically add sterile defibrinated blood. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation of staphylococci and streptococci from specimens containing a mixed flora.

Phenylethyl Alcohol Agar

See: [Phenethyl Alcohol Agar](#)

Phenylethyl Alcohol HiVeg Agar

Composition per liter:

Agar	15.0g
Plant hydrolysate	15.0g
Papaic digest of soybean meal.....	5.0g
NaCl.....	5.0g
Phenylethyl alcohol	2.5g
pH 7.3 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation of staphylococci and streptococci from specimens containing a mixed flora.

Phenylketonuria Test Agar

See: [PKU Test Agar](#)

Phenylobacterium Agar

Composition per liter:

Agar	20.0g
Chloridazon herbicide.....	2.0g
Peptone	1.0g
Yeast extract.....	1.0g
Na ₂ HPO ₄ ·12H ₂ O.....	0.7g
(NH ₄) ₂ HPO ₄	0.7g
KH ₂ PO ₄	0.3g
NH ₄ H ₂ PO ₄	0.3g
MgSO ₄ ·7H ₂ O.....	0.25g
(NH ₄) ₂ SO ₄	0.1g
CaCl ₂ ·6H ₂ O	0.05g
H ₃ BO ₃	0.5mg
MnSO ₄ ·4H ₂ O.....	0.4mg
ZnSO ₄ ·7H ₂ O.....	0.4mg
FeCl ₃ ·6H ₂ O.....	0.2mg
(NH ₄) ₆ Mo ₇ O ₂₄ ·4H ₂ O	0.2mg
Biotin	0.1mg
KJ.....	0.1mg
CuSO ₄ ·5H ₂ O.....	0.04mg
Vitamin B ₁₂	0.03mg
pH 6.8–7.0 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Phenylobacterium immobile*.

Phenylobacterium Medium

Composition per liter:

Agar	15.0g
Antipyrin	1.0g
Na ₂ HPO ₄ ·12H ₂ O	0.7g
(NH ₄) ₂ HPO ₄	0.7g
KH ₂ PO ₄	0.3g
NH ₄ H ₂ PO ₄	0.3g
MgSO ₄ ·7H ₂ O	0.25g
FeCl ₃ ·6H ₂ O	0.2g
(NH ₄) ₂ SO ₄	0.1g
CaCl ₂ ·6H ₂ O	50.0mg
H ₃ BO ₃	0.5mg
MnSO ₄ ·4H ₂ O	0.4mg
ZnSO ₄ ·7H ₂ O	0.4mg
(NH ₄) ₂ MoO ₄	0.2mg
Biotin	0.1mg
CuSO ₄ ·5H ₂ O	0.1mg
KI	0.1mg
Vitamin B ₁₂	30.0µg

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Phenylobacterium immobile*.

Phenylobacterium Medium

Composition per liter:

Antipyrine	1.0g
Na ₂ HPO ₄ ·12H ₂ O	0.7g
(NH ₄) ₂ HPO ₄	0.7g
KH ₂ PO ₄	0.3g
NH ₄ H ₂ PO ₄	0.3g
(NH ₄) ₂ SO ₄	0.1g
MgSO ₄ ·7H ₂ O	0.25g
CaCl ₂ ·6H ₂ O	0.05g
H ₃ BO ₃	0.5mg
MnSO ₄ ·4H ₂ O	0.4mg
ZnSO ₄ ·7H ₂ O	0.4mg
FeCl ₃ ·6H ₂ O	0.2mg
(NH ₄) ₂ MoO ₄	0.2mg
Biotin	0.1mg
KI	0.1mg
CuSO ₄ ·5H ₂ O	0.04mg
Vitamin B ₁₂	0.03mg

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Phenylobacterium immobile*.

Phosphate Mineral Salts Medium with Octane

Composition per liter:

(NH ₄) ₂ HPO ₄	10.0g
K ₂ HPO ₄	5.0g
Na ₂ SO ₄	0.5g
Octane	10.0mL

Preparation of Medium: Add components, except octane, to tap water and bring volume to 990.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Prior to inoculation, filter sterilize octane. Aseptically add sterile octane to sterile medium. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Pseudomonas oleovorans*.

Photobacterium Agar (DSMZ Medium 32)

Composition per liter:

Seawater aquarium salt	33.0g
Agar	20.0g
Tris	6.0g
Yeast extract	5.0g
Tryptone	5.0g
NH ₄ Cl	5.0g
Glycerol	3.0g
CaCO ₃	1.0g

pH 7.2–7.5 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2–7.5. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Vibrio fischeri*.

Photobacterium Agar

Composition per liter:

Seawater aquarium salt	33.0g
Agar	20.0g
Tris(hydroxymethyl)aminomethane	6.0g
NH ₄ Cl	5.0g
Pancreatic digest of casein	5.0g
Yeast extract	5.0g
Glycerol	3.0g
CaCO ₃	1.0g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Acetobacter pasteurianus*.

Photobacterium Broth (DSMZ Medium 608)

Composition per liter:

NaCl	30.0g
Na-glycerol phosphate	23.5g
Tryptone	5.0g
KH ₂ PO ₄	3.0g

Yeast extract.....	2.5g
CaCO ₃	1.0g
NH ₄ Cl.....	0.3g
Mg ₂ SO ₄	0.3g
FeCl ₂	0.01g
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Shewanella hanedai*=*Alteromonas hanedai*.

Photobacterium Broth

Composition per liter:

NaCl.....	30.0g
Sodium glycerol phosphate.....	23.5g
Pancreatic digest of casein.....	5.0g
KH ₂ PO ₄	3.0g
Yeast extract.....	2.5g
CaCO ₃	1.0g
NH ₄ Cl.....	0.3g
MgSO ₄ ·7H ₂ O.....	0.3g
FeCl ₃	0.01g
pH 7.0 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks to form a shallow layer of medium. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and demonstration of luminescence by photobacteria. For the cultivation and maintenance of *Alteromonas hanedai*, *Photobacterium phosphoreum*, *Shewanella hanedai*, *Vibrio fischeri*, *Vibrio harveyi*, and other *Vibrio* species.

Photobacterium Broth

Composition per liter:

Seawater aquarium salt.....	33.0g
Tris(hydroxymethyl)aminomethane.....	6.0g
NH ₄ Cl.....	5.0g
Pancreatic digest of casein.....	5.0g
Yeast extract.....	5.0g
Glycerol.....	3.0g
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Acetobacter pasteurianus*.

Photobacterium HiVeg Broth

Composition per liter:

NaCl.....	30.0g
Sodium glycerophosphate.....	23.5g
Plant hydrolysate.....	5.0g
KH ₂ PO ₄	3.0g
Yeast extract.....	2.5g
CaCO ₃	1.0g

NH ₄ Cl.....	0.3g
MgSO ₄	0.3g
FeCl ₃	0.01g
pH 7.0 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks to form a shallow layer of medium. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and demonstration of luminescence by photobacteria. For the cultivation and maintenance of *Vibrio* species.

Photobacterium Medium (DSMZ Medium 32)

Composition per liter:

Seawater aquarium salt.....	33.0g
Tris.....	6.0g
Yeast extract.....	5.0g
Tryptone.....	5.0g
NH ₄ Cl.....	5.0g
Glycerol.....	3.0g
pH 7.2–7.5 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2–7.5. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Vibrio fischeri*.

Photobacterium MPY Medium

Composition per liter:

NaCl.....	28.2g
MgSO ₄ ·7H ₂ O.....	6.9g
MgCl ₂ ·6H ₂ O.....	5.5g
Peptone.....	5.0g
Yeast extract.....	3.0g
CaCl ₂ ·2H ₂ O.....	1.5g
KCl.....	0.7g
pH 7.4 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Photobacterium leiognathi*.

Phthalic Acid Medium

Composition per liter:

Solution 1.....	400.0mL
Solution 2.....	400.0mL
Potassium hydrogen phthalate solution.....	200.0mL
pH 6.8 ± 0.2 at 25°C	

Solution 1:

Composition per 400.0mL:

KH ₂ PO ₄	9.1g
(NH ₄) ₂ SO ₄	1.2g

Preparation of Solution 1: Add components to distilled/deionized water and bring volume to 400.0mL. Mix thoroughly. Adjust pH to 6.8

with KOH. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution 2:

Composition per 400.0mL:

MgSO ₄ ·7H ₂ O	0.4g
FeSO ₄ ·7H ₂ O	0.01g

Preparation of Solution 2: Add components to distilled/deionized water and bring volume to 400.0mL. Mix thoroughly. Adjust pH to 6.8 with KOH. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Potassium Hydrogen Phthalate Solution:

Composition per 200.0mL:

Potassium hydrogen phthalate	1.0g
------------------------------------	------

Preparation of Potassium Hydrogen Phthalate Solution: Add potassium hydrogen phthalate to distilled/deionized water and bring volume to 200.0mL. Mix thoroughly. Adjust pH to 6.8 with KOH. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Preparation of Medium: Aseptically combine the three sterile solutions. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Pseudomonas cepacia*.

PHYG Medium

Composition per 110.1mL:

Beef heart, solids from infusion	10.0g
Polypeptone™	2.0g
Gelatin	1.0g
Glucose	1.0g
Yeast extract	1.0g
NaHCO ₃	0.5g
Tryptose	0.2g
Agar	0.16g
NaCl	0.1g
L-Cysteine·HCl·H ₂ O	0.09g
(NH ₄) ₂ SO ₄	0.05g
Resazurin	0.16mg
Salts solution	50.0mL
Rabbit serum, inactivated	10.0mL
Thiamine pyrophosphate solution	0.1mL
pH 7.2–7.5 at 25°C	

Salts Solution:

Composition per 400.0mL:

K ₂ HPO ₄	0.9g
NaCl	0.8g
KH ₂ PO ₄	0.4g
MnCl ₂ ·4H ₂ O	0.16g
MgSO ₄	0.08g

Preparation of Salts Solution: Add components to distilled/deionized water and bring volume to 400.0mL. Mix thoroughly.

Thiamine Pyrophosphate Solution:

Composition per 10.0mL:

Thiamine pyrophosphate	0.05g
------------------------------	-------

Preparation of Thiamine Pyrophosphate Solution: Add thiamine pyrophosphate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except rabbit serum and thiamine pyrophosphate solution, to distilled/deionized water and

bring volume to 100.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL of sterile rabbit serum and 0.1mL of sterile thiamine pyrophosphate solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of treponemes.

Phymatotrichum Medium

Composition per liter:

Glucose	40.0g
Agar	20.0g
NH ₄ NO ₃	1.19g
MgSO ₄ ·7H ₂ O	0.75g
KCl	0.15g
K ₂ HPO ₄ (0.1M solution)	28.1mL
KH ₂ PO ₄ (0.1M solution)	18.8mL
Fe ₂ (SO ₄) ₃ ·2H ₂ O (0.23M solution)	1.0mL
MnSO ₄ ·H ₂ O (0.045M solution)	1.0mL
ZnSO ₄ ·7H ₂ O (0.38M solution)	1.0mL

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Phymatotrichum omnivorum*.

Phytone™ Yeast Extract Agar

Composition per liter:

Glucose	40.0g
Agar	17.0g
Papaic digest of soybean meal	10.0g
Yeast extract	5.0g
Chloramphenicol	0.05g
Streptomycin	0.03g

pH 6.6 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the selective isolation of dermatophytes, particularly *Trichophyton verrucosum*, and other pathogenic fungi, from clinical specimens.

Picrophilus Medium

Composition per 1020.0mL:

(NH ₄) ₂ SO ₄	1.3g
KH ₂ PO ₄	0.28g
MgSO ₄ ·7H ₂ O	0.25g
CaCl ₂ ·2H ₂ O	0.07g
FeCl ₃ ·6H ₂ O	0.02g
Na ₂ B ₄ ·10H ₂ O	4.5mg
MnCl ₂ ·4H ₂ O	1.8mg
ZnSO ₄ ·7H ₂ O	0.22mg
CuCl ₂ ·2H ₂ O	0.05mg
Na ₂ MoO ₄ ·2H ₂ O	0.03mg
VO ₂ SO ₄ ·2H ₂ O	0.03mg
CoSO ₄	0.01mg

Sulfuric acid solution.....	1.0L
Yeast extract solution.....	20.0mL
pH 1.0 ± 0.2 at 25°C	

Sulfuric Acid Solution:

Composition per liter:

H ₂ SO ₄ (0.5M solution).....	300.0mL
---	---------

Preparation of Sulfuric Acid Solution: Add 300.0mL of 0.5M H₂SO₄ solution to 700.0mL of distilled/deionized water. Mix thoroughly.

Yeast Extract Solution:

Composition per 20.0mL:

Yeast extract.....	2.0g
--------------------	------

Preparation of Yeast Extract Solution: Add yeast extract to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Combine components, except yeast extract solution. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 20.0mL of sterile yeast extract solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Picrophilus oshimae* and *Picrophilus torridus*.

Pike Streptococcal Broth

Composition per liter:

Pancreatic digest of casein.....	10.0g
Tryptose.....	10.0g
Yeast extract.....	10.0g
Glucose.....	0.2g
NaN ₃	0.065g
Crystal Violet.....	2.0mg
Rabbit blood, defibrinated.....	50.0mL
pH 7.4 ± 0.2 at 25°C	

Caution: Sodium azide is toxic. Azides also react with metals and disposal must be highly diluted.

Preparation of Medium: Add components, except rabbit blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Distribute into flasks in 100.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 5.0mL of sterile rabbit blood to each flask. Mix thoroughly.

Use: For the isolation and enrichment of hemolytic streptococci from throat swabs and other clinical specimens. After incubation of bacteria for 18–24 hr in this medium, they may be isolated by streaking the culture onto blood agar plates.

Pike Streptococcal HiVeg Broth Base with Blood

Composition per liter:

Yeast extract.....	10.0g
Plant hydrolysate.....	10.0g
Plant hydrolysate No. 1.....	10.0g
Glucose.....	0.2g
NaN ₃	0.065g
Crystal Violet.....	2.0mg
Rabbit blood, defibrinated.....	50.0mL
pH 7.4 ± 0.2 at 25°C	

Caution: Sodium azide is toxic. Azides also react with metals and disposal must be highly diluted.

Preparation of Medium: Add components, except rabbit blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Distribute into flasks in 100.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 5.0mL of sterile rabbit blood to each flask. Mix thoroughly.

Use: For the isolation and enrichment of hemolytic streptococci from throat swabs and other clinical specimens. After incubation of bacteria for 18–24 hr in this medium, they may be isolated by streaking the culture onto blood agar plates.

Pikovskayas Agar

Composition per liter:

Agar.....	15.0g
Glucose.....	10.0g
Ca ₃ (PO ₄) ₂	5.0g
Yeast extract.....	0.5g
(NH ₄) ₂ SO ₄	0.5g
KCl.....	0.2g
MgSO ₄ ·7H ₂ O.....	0.1g
MnSO ₄ ·2H ₂ O.....	0.1mg
FeSO ₄	0.1mg

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the detection of phosphate-solubilizing microorganisms.

Pilobolus Agar

Composition per liter:

Agar.....	15.0g
Sodium acetate.....	10.0g
Yeast extract.....	2.0g
K ₂ HPO ₄	1.0g
(NH ₄) ₂ SO ₄	0.66g
MgSO ₄ ·7H ₂ O.....	0.5g
Thiamine.....	10.0mg
Hemin.....	10.0mg
NaOH (0.1N solution).....	37.5mL
pH 8.0 ± 0.2 at 25°C	

Preparation of Medium: Add hemin to NaOH solution and mix thoroughly to dissolve. Add remaining components and bring volume to 1.0L with distilled/deionized water. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Pilobolus* species.

**Pilobolus Medium
(DSMZ Medium 192)**

Composition per liter:

Agar.....	15.0g
Na-acetate.....	10.0g
Yeast extract.....	2.0g
K ₂ HPO ₄	1.0g
(NH ₄) ₂ SO ₄	0.66g
MgSO ₄ ·7H ₂ O.....	0.5g

Thiamine-HCl·2H ₂ O	10.0mg
Hemin solution	37.5 mL
pH 8.0 ± 0.2 at 25°C	

Hemin Solution:**Composition per 10.0mL:**

Hemin	10.0mg
-------------	--------

Preparation of Hemin Solution: Add hemin to 37.5 mL 0.1N NaOH. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 8.0. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Pilobolus sphaerosporus*.

PIM

See: *Prototheca Isolation Agar*

Pine and Drouhet's *Histoplasma* Yeast Phase Medium

Composition per liter:

Casein hydrolysate-vitamin- glucose base	500.0mL
Agar starch base	500.0mL

Casein Hydrolysate-Vitamin-Glucose Base:**Composition per 500.0mL:**

Glucose	10.0g
Citric acid	10.0g
L-Cysteine-HCl	1.0g
L-Asparagine	1.0g
Glutathione, reduced	0.5g
L-Tryptophan	0.02g
Solution I	250.0mL
Solution II	10.0mL
Solution III	40.0mL
Solution IV	10.0mL
Solution V	1.0mL
Solution VI	0.1mL
Solution VII	0.1mL

Solution I:**Composition per liter:**

KH ₂ PO ₄	8.0g
(NH ₄) ₂ SO ₄	8.0g
MgSO ₄ ·7H ₂ O	0.86g
CaCl ₂	0.08g

Preparation of Solution I: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Store at 5°C.

Solution II:**Composition per liter:**

FeSO ₄ ·7H ₂ O	5.7g
MnCl ₂ ·6H ₂ O	0.8g
Na ₂ MoO ₄ ·2H ₂ O	0.15g
HCl, concentrated	1.0mL

Preparation of Solution II: Add the concentrated HCl to 100.0mL of distilled/deionized water. Add FeSO₄·7H₂O, MnCl₂·6H₂O, and Na₂MoO₄·2H₂O, in that order. Make sure each salt is completely dissolved before adding the next. Mix thoroughly. Bring volume to 1.0L

with distilled/deionized water. Mix thoroughly. Store at 5°C. Solution is good until a red precipitate forms.

Solution III:**Composition per 100.0mL:**

Acid hydrolysate of casein, vitamin free	10.0g
--	-------

Preparation of Solution III: Add acid hydrolysate of casein to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Gently heat until dissolved.

Solution IV:**Composition per liter:**

Inositol	0.2g
Thiamine-HCl	0.2g
Calcium pantothenate	0.2g
Riboflavin	0.2g
Nicotinamide	0.1g
Biotin	10.0mg

Preparation of Solution IV: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Store at 5°C. Suspension is good for 6 months to 1 year.

Solution V:**Composition per 100.0mL:**

Hemin	0.2g
NH ₄ OH, concentrated solution	2–3 drops

Preparation of Solution V: Add hemin to 10.0mL of distilled/deionized water. Dissolve by adding a few drops of concentrated NH₄OH. Mix thoroughly. Bring volume to 100.0mL with distilled/deionized water. Store at 5°C.

Solution VI:**Composition per 100.0mL:**

DL-Thioctic acid	10.0mg
Ethanol (95% solution)	10.0mL

Preparation of Solution VI: Add thioctic acid to 10.0mL of 95% ethanol. Mix thoroughly. Store at –20°C.

Solution VII:**Composition per 10.0mL:**

Coenzyme A	10.0mg
Na ₂ S·5H ₂ O (0.05% solution in freshly boiled, distilled/deionized H ₂ O)	2 drops

Preparation of Solution VII: Add coenzyme A to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Add 2 drops of 0.05% Na₂S·5H₂O solution. Store at –20°C.

Preparation of Casein Hydrolysate-Vitamin-Glucose Base:

Add components to distilled/deionized water and bring volume to 450.0mL. Mix thoroughly. Adjust pH to 6.5 with 20% KOH solution. Bring volume to 500.0mL with distilled/deionized water. Mix thoroughly. Filter sterilize.

Agar Starch Base:**Composition per 500.0mL:**

Agar	12.5g
Potato starch, insoluble	2.0g
Solution VIII	10.0mL

Solution VIII:**Composition per 100.0mL:**

Oleic acid	0.1g
------------------	------

Preparation of Solution VIII: Add oleic acid to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Adjust pH to

7.0 with NaOH. Bring volume to 100.0mL with distilled/deionized water.

Preparation of Agar Starch Base: Add potato starch to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Pour into 440.0mL of boiling, distilled/deionized water. Add 10.0mL of solution VIII and the agar. Mix thoroughly. Autoclave for 20 min at 15 psi pressure–121°C.

Preparation of Medium: Aseptically combine 500.0mL of filter-sterilized casein hydrolysate-vitamin-glucose base with 500.0mL of hot agar starch base. Mix thoroughly. Heat nearly to boiling while stirring constantly. Aseptically distribute into sterile tubes. Allow tubes to cool in a slanted position.

Use: For the cultivation and maintenance of *Blastomyces dermatitidis* and *Histoplasma capsulatum* in the yeast phase.

Pirellula marina Medium M14

Composition per liter:

Glucose	1.0g
Yeast extract	1.0g
Artificial seawater	680.0mL
Tris-HCl buffer, (0.1M solution, pH 7.5)	50.0mL
Hutner's basal salts	20.0mL
Vitamin solution	10.0mL
pH 7.5 ± 0.2 at 25°C	

Artificial Seawater:

Composition per liter:

NaCl	23.47g
MgCl ₂ ·6H ₂ O	10.64g
Na ₂ SO ₄	3.92g
CaCl ₂	1.1g
KCl	664.0mg
NaHCO ₃	192.0mg
KBr	96.0mg
H ₃ BO ₃	26.0mg
SrCl ₂	24.0mg
NaF	3.0mg

Preparation of Artificial Seawater: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Vitamin Solution:

Composition per liter:

Nicotinamide	9.0mg
Calcium DL-pantothenate	5.0mg
Riboflavin	5.0mg
Thiamine-HCl	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Cyanocobalamin	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except vitamin solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL of sterile vitamin solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Pirellula marina*.

Pisu Medium

Composition per 1512.0mL:

Agar base	960.0mL
Horse serum, sterile	360.0mL
L-Cystine solution	180.0mL
Lead acetate solution	12.0mL
pH 6.8 ± 0.2 at 25°C	

Agar Base:

Composition per liter:

Proteose peptone No. 3	20.0g
Agar	7.0g
NaCl	5.0g
Meat extract	4.0g

Preparation for Agar Base: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Dissolve in steam for 15 min at 0 psi pressure–100°C. Cool to 45°–50°C. Adjust pH to 7.5. Filter sterilize. Distribute into 200.0mL Erlenmeyer flasks in 80.0mL volumes. Autoclave for 60 min at 0 psi pressure–100°C. Cool to 60°C.

L-Cystine Solution:

Composition per 200.0mL:

L-Cystine	2.0g
-----------------	------

Preparation of L-Cystine Solution: Add L-cystine to distilled/deionized water and bring volume to 200.0mL. Mix thoroughly. Filter sterilize.

Lead Acetate Solution:

Composition per 100.0mL:

Lead acetate	10.0g
--------------------	-------

Preparation of Lead Acetate Solution: Add lead acetate to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: To each flask containing 80.0mL of cooled, sterile agar base, aseptically add 30.0mL of sterile horse serum, 15.0mL of sterile L-cystine solution, and 1.0mL of sterile lead acetate solution. Mix thoroughly. Aseptically distribute into small sterile tubes in 2.0–3.0mL volumes.

Use: For the cultivation and differentiation of bacteria based on their ability to produce cystinase. Cystinase-producing bacteria turn the medium black.

Pityrosporium Agar

Composition per liter:

Malt extract	40.0g
Ox bile, desiccated	20.0g
Agar	15.0g
Tween™ 40	10.0g
Glycerol monooleate	2.5g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Pityrosporium* species.

Pityrosporium Medium

Composition per liter:

Malt extract	30.0g
Agar	22.5g

Ox bile, desiccated	20.0g
Tween™ 40	10.0g
Peptone.....	7.5g
Glycerol monooleate.....	2.5g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of a variety of yeasts including *Malassezia furfur*, *Malassezia pachydermatis*, *Pityrosporium ovale*, and other *Pityrosporium* species.

Pityrosporium Medium II

Composition per liter:

Glucose	40.0g
Agar	18.0g
Neopeptone	10.0g
Glycerol monostearate	2.5g
Yeast extract.....	0.1g
Olive oil	20.0mL
Tween™ 80.....	2.0mL

pH 5.6 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 5.6. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Malassezia furfur*.

PKU Test Agar (Phenylketonuria Test Agar)

Composition per liter:

Agar	15.0g
K ₂ HPO ₄	15.0g
Glucose	10.0g
KH ₂ PO ₄	5.0g
(NH ₄)Cl.....	2.5g
(NH ₄)NO ₃	0.5g
Asparagine	0.5g
DL-Alanine.....	0.5g
L-Glutamic acid.....	0.5g
Na ₂ SO ₄	0.5g
MgSO ₄ ·7H ₂ O	0.05g
FeCl ₃	5.0mg
MnCl ₂ ·4H ₂ O.....	5.0mg
β-2-Thienylalanine.....	3.3mg
CaCl ₂ ·2H ₂ O.....	2.5mg
<i>Bacillus subtilis</i> spore suspension.....	10.0mL

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 5 min. Do not autoclave. Cool to 50°C. Add 10.0mL of a suspension of *Bacillus subtilis* ATCC 6633 spores. Mix thoroughly. Pour into sterile Petri dishes or other containers.

Use: For the determination of phenylalanine concentrations in serum or urine. Used in the Guthrie-modified bacterial-inhibition assay procedure for screening newborn infants for phenylketonuria (PKU).

PKU Test Agar (Phenylketonuria Test Agar)

Composition per liter:

K ₂ HPO ₄	15.0g
Agar	13.5g
Glucose	5.0g
KH ₂ PO ₄	5.0g
(NH ₄)Cl.....	2.5g
L-Asparagine	0.5g
L-Glutamic acid.....	0.5g
Na ₂ SO ₄	0.5g
(NH ₄)NO ₃	0.5g
L-Alanine.....	0.25g
MgSO ₄ ·7H ₂ O	0.05g
FeCl ₃	0.005g
MnSO ₄	0.005g
CaCl ₂ ·2H ₂ O	2.5mg
β-2-Thienylalanine solution.....	1.0mL

pH 6.9 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

β-2-Thienylalanine Solution:

Composition per 100.0mL:

β-2-Thienylalanine	0.33g
--------------------------	-------

Preparation of β-2-Thienylalanine Solution: Add β-2-thienylalanine to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except β-2-thienylalanine solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 5 min. Do not autoclave. Cool to 50°C. Add 10.0mL of a suspension of *Bacillus subtilis* ATCC 6633 spores and 1.0mL of sterile β-2-thienylalanine solution. Mix thoroughly. Pour into sterile Petri dishes or other containers.

Use: For the determination of phenylalanine concentrations in serum or urine. Used in the Guthrie-modified bacterial-inhibition assay procedure for screening newborn infants for phenylketonuria (PKU).

PL Agar

Composition per liter:

Agar	15.0g
Mannitol.....	7.5g
L-Arabinose	5.0g
Peptone	5.0g
NaCl.....	5.0g
Lysine.....	2.0g
Yeast extract.....	2.0g
Bile salts No. 2.....	1.0g
Inositol.....	1.0g
Phenol Red.....	0.08g

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.4. Distribute into tubes or flasks. Autoclave

for 15 min at 10 psi pressure–115°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of *Pleisomonas shigelloides* from foods.

PL HiVeg Agar

Composition per liter:

Agar	15.0g
Mannitol.....	7.5g
Plant peptone.....	5.0g
L-Arabinose.....	5.0g
NaCl.....	5.0g
Yeast extract.....	2.0g
Lysine.....	2.0g
Inositol.....	1.0g
Synthetic detergent.....	1.0g
Phenol Red.....	0.08g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.4. Distribute into tubes or flasks. Autoclave for 15 min at 10 psi pressure–115°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of *Pleisomonas shigelloides* from foods.

Plaice Medium

Composition per liter:

Fresh plaice, minced	200.0g
NaCl.....	120.0g
Peptone.....	20.0g

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Soak plaice in 4.0L of water and allow to stand for 2 hr. Boil for 1 hr and filter. Add peptone and NaCl. Adjust pH. Boil for a few minutes and filter. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of bioluminescent bacteria.

Planctomyces Medium

Composition per liter:

Glucose	1.0g
(NH ₄) ₂ SO ₄	0.25g
Peptone.....	0.15g
Yeast extract.....	0.15g
Seawater, aged filtered.....	1.0L

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Planctomyces* species.

Plant Mycoplasma Agar

Composition per 291.2mL:

Schneider's <i>Drosophila</i> medium	160.0mL
Solution 1	70.0mL
Fetal calf serum.....	50.0mL

Fresh yeast extract solution	10.0mL
Phenol Red (0.5% solution).....	1.2mL

pH 7.4 ± 0.2 at 25°C

Schneider's *Drosophila* Medium:

Composition per liter:

MgSO ₄ ·7H ₂ O.....	3.7g
NaCl.....	2.1g
Yeast extract.....	2.0g
Trehalose.....	2.0g
D-Glucose.....	2.0g
L-Glutamine.....	1.8g
L-Lysine·HCl.....	1.7g
L-Proline.....	1.7g
KCl.....	1.6g
Na ₂ HPO ₄ ·7H ₂ O.....	1.3g
L-Glutamic acid.....	0.8g
L-Methionine.....	0.8g
CaCl ₂ , anhydrous.....	0.6g
KH ₂ PO ₄	0.5g
β-Alanine.....	0.5g
L-Tyrosine.....	0.5g
L-Arginine.....	0.4g
L-Aspartic acid.....	0.4g
L-Histidine.....	0.4g
L-Threonine.....	0.4g
NaHCO ₃	0.4g
Glycine.....	0.3g
L-Serine.....	0.3g
L-Valine.....	0.3g
L-Isoleucine.....	0.2g
L-Leucine.....	0.2g
L-Phenylalanine.....	0.2g
α-Ketoglutaric acid.....	0.2g
Fumaric acid.....	0.1g
Malic acid.....	0.1g
Succinic acid.....	0.1g
L-Cystine.....	0.1g
L-Tryptophan.....	0.1g
L-Cysteine.....	0.06g

Preparation of Schneider's *Drosophila* Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Solution 1:

Composition per 70.0mL:

Sorbitol	7.0g
Noble agar.....	5.0g
Beef heart, solids from infusion.....	5.0g
Peptone.....	1.8g
Pancreatic digest of casein.....	1.0g
Sucrose.....	1.0g
NaCl.....	0.5g
D-Fructose.....	0.1g
D-Glucose.....	0.1g

Preparation of Solution 1: Add components to distilled/deionized water and bring volume to 70.0mL. Mix thoroughly. Adjust pH to 7.8 with 1N NaOH. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C.

Fresh Yeast Extract Solution:

Composition per 100.0mL:

Baker's yeast, live, pressed, starch-free.....	25.0g
--	-------

Preparation of Fresh Yeast Extract Solution: Add the live Baker's yeast to 100.0mL of distilled/deionized water. Autoclave for 90 min at 15 psi pressure–121°C. Allow to stand. Remove supernatant solution. Adjust pH to 6.6–6.8.

Preparation of Medium: Bring fetal calf serum and Phenol Red solution to 56°C. Rapidly bring Schneider's *Drosophila* medium to 37°C. Rapidly combine the components. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Spiroplasma floricola*, *Spiroplasma kunkelii*, *Spiroplasma melliferum*, and *Spiroplasma* species.

Plant Mycoplasma Broth

Composition per 291.2mL:

Schneider's <i>Drosophila</i> medium	160.0mL
Solution 1	70.0mL
Fetal calf serum.....	50.0mL
Fresh yeast extract solution.....	10.0mL
Phenol Red (0.5% solution).....	1.2mL
pH 7.4 ± 0.2 at 25°C	

Schneider's *Drosophila* Medium:

Composition per liter:

MgSO ₄ ·7H ₂ O	3.7g
NaCl	2.1g
Trehalose	2.0g
Yeast extract.....	2.0g
D-Glucose	2.0g
L-Glutamine.....	1.8g
L-Lysine·HCl	1.7g
L-Proline	1.7g
KCl.....	1.6g
Na ₂ HPO ₄ ·7H ₂ O.....	1.3g
L-Glutamic acid.....	0.8g
L-Methionine	0.8g
CaCl ₂ , anhydrous	0.6g
KH ₂ PO ₄	0.5g
β-Alanine	0.5g
L-Tyrosine.....	0.5g
L-Arginine	0.4g
L-Aspartic acid	0.4g
L-Histidine.....	0.4g
L-Threonine	0.4g
NaHCO ₃	0.4g
Glycine.....	0.3g
L-Serine	0.3g
L-Valine	0.3g
L-Isoleucine.....	0.2g
L-Leucine.....	0.2g
L-Phenylalanine.....	0.2g
α-Ketoglutaric acid.....	0.2g
Fumaric acid	0.1g
Malic acid	0.1g
Succinic acid.....	0.1g
L-Cystine	0.1g
L-Tryptophan.....	0.1g
L-Cysteine.....	0.06g

Preparation of Schneider's *Drosophila* Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Solution 1:

Composition per 70.0mL:

Sorbitol	7.0g
Beef heart, solids from infusion.....	5.0g
Peptone	1.8g
Pancreatic digest of casein.....	1.0g
Sucrose.....	1.0g
NaCl.....	0.5g
D-Fructose.....	0.1g
D-Glucose.....	0.1g

Preparation of Solution 1: Add components to distilled/deionized water and bring volume to 70.0mL. Mix thoroughly. Adjust pH to 7.8 with 1N NaOH. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Fresh Yeast Extract Solution:

Composition per 100.0mL:

Baker's yeast, live, pressed, starch-free.....	25.0g
--	-------

Preparation of Fresh Yeast Extract Solution: Add the live Baker's yeast to 100.0mL of distilled/deionized water. Autoclave for 90 min at 15 psi pressure–121°C. Allow to stand. Remove supernatant solution. Adjust pH to 6.6–6.8.

Preparation of Medium: Bring fetal calf serum and Phenol Red solution to 56°C. Rapidly bring Schneider's *Drosophila* medium to 37°C. Rapidly combine the components. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Spiroplasma floricola*, *Spiroplasma kunkelii*, *Spiroplasma melliferum*, and *Spiroplasma* species.

Plate Count Agar

Composition per liter:

Agar	15.0g
Pancreatic digest of casein.....	5.0g
Yeast extract.....	2.5g
Glucose	1.0g
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Chelatobacter heintzii*, *Chelatococcus saccharophobus*, and *Pseudomonas* species.

Plate Count Agar

(Tryptone Glucose Yeast Agar)

Composition per liter:

Agar	9.0g
Pancreatic digest of casein.....	5.0g
Yeast extract.....	2.5g
Glucose	1.0g
pH 7.0 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave

for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the enumeration of viable bacteria in milk and dairy products. Also used for the estimation of the number of live heterotrophic bacteria in water. For the cultivation and maintenance of *Brevibacterium casei*, *Brevibacterium epidermidis*, and *Methylobacterium mesophilicum*.

Plate Count Agar (ATCC Medium 1048)

Composition per liter:

Agar	15.0g
Pancreatic digest of casein.....	5.0g
Yeast extract.....	2.5g
Glucose	1.0g
pH 7.0 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems and Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the enumeration of bacteria in milk, water, food, and dairy products.

Plate Count Agar with Antibiotic

Composition per liter:

Agar	9.0g
Pancreatic digest of casein.....	5.0g
Yeast extract.....	2.5g
Glucose	1.0g
Chloramphenicol.....	0.1g
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of yeasts from foods.

Plate Count Agar with Antibiotic-Free Skim Milk

Composition per liter:

Agar	10.0g
Pancreatic digest of casein.....	5.0g
Yeast extract.....	2.5g
Skim milk, antibiotic free	1.0g
Glucose	1.0g
pH 6.9 ± 0.1 at 25°C	

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the enumeration of viable bacteria in milk and dairy products.

Plate Count Agar, HiVeg (Standard Methods Agar, HiVeg)

Composition per liter:

Agar	15.0g
Plant hydrolysate	5.0g
Yeast extract.....	2.5g
Glucose	1.0g
pH 7.0 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the enumeration of viable bacteria in milk and dairy products. Also used for the estimation of the number of live heterotrophic bacteria in water.

Plate Count Agar, Modified

Composition per liter:

Pancreatic digest of casein.....	20.0g
Yeast extract.....	20.0g
Agar	10.0g
Glucose	4.0g
pH 7.0 ± 0.1 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into bottles. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and enumeration of microorganisms from food by the plate count method.

Plate Count Agar, Special

Composition per liter:

Agar	30.1g
Pancreatic digest of casein.....	6.13g
Yeast extract.....	3.06g
Glucose	1.23g
pH 7.0 ± 0.2 at 25°C	

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 20 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the enumeration of viable bacteria in raw milk, milk, and other dairy products.

Plate Count Broth (m-Plate Count Broth)

Composition per liter:

Yeast extract.....	5.0g
Glucose	2.0g
pH 7.0 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the determination of bacterial counts by the membrane filter method.

Plate Count HiVeg Agar

Composition per liter:

Agar	9.0g
Plant hydrolysate.....	5.0g
Yeast extract.....	2.5g
Glucose	1.0g

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the enumeration of viable bacteria in milk and dairy products by the pour plate technique.

Plate Count MUG Agar

Composition per liter:

Agar	14.0g
Casein peptone.....	5.0g
Yeast extract.....	2.5g
D(+)-Glucose.....	1.0g
Tryptophan.....	1.0g
4-Methylumbelliferyl-β-D-glucuronide.....	0.07g

pH 7.0 ± 0.2 at 37°C

Source: This medium is available from Fluka, Sigma-Aldrich.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Pour into sterile Petri dishes.

Use: For the determination of bacterial counts in milk, dairy products, water, and other material. *E. coli* can be identified by fluorescence in the UV and verified by means of a positive indole test.

Plates with Fluoranthene (DSMZ Medium 462a)

Composition per 1052.0mL:

Agar	15.0g
Na ₂ HPO ₄	2.44g
KH ₂ PO ₄	1.52g
(NH ₄) ₂ SO ₄	0.5g
MgSO ₄ ·7H ₂ O.....	0.2g
CaCl ₂ ·2H ₂ O.....	0.05g
Fluoranthene solution	50.0mL
Trace elements solution SL-4	10.0mL
Vitamin solution.....	2.5mL

pH 7.1 ± 0.2 at 25°C

Trace Elements Solution SL-4:

Composition per liter:

EDTA	0.5g
FeSO ₄ ·7H ₂ O.....	0.2g
Trace elements solution SL-6	100.0mL

Trace Elements Solution SL-6:

Composition per liter:

H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O.....	0.2g
ZnSO ₄ ·7H ₂ O.....	0.1g
MnCl ₂ ·4H ₂ O.....	0.03g
Na ₂ MoO ₄ ·H ₂ O.....	0.03g
NiCl ₂ ·6H ₂ O.....	0.02g
CuCl ₂ ·2H ₂ O.....	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 3.4.

Preparation of Trace Elements Solution SL-4: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Vitamin Solution:

Composition per liter:

Pyridoxamine.....	5.0mg
Vitamin B ₁₂	2.0mg
Nicotinic acid.....	2.0mg
p-Aminobenzoate.....	1.0mg
Thiamine-HCl·2H ₂ O.....	1.0mg
Ca-pantothenate.....	0.5mg
Biotin	0.2mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Fluoranthene Solution:

Composition per 100.0mL:

Fluoranthene	10.0g
--------------------	-------

Preparation of Fluoranthene Solution: Add fluoranthene to 100.0mL acetone. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except vitamin solution and fluoranthene solution, to 1.0L distilled/deionized water. Adjust pH to 7.1. Gently heat and bring to boil. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°C. Aseptically add 2.5mL vitamin solution. Mix thoroughly. Pour into sterile Petri dishes (20.0mL per Petri dish). Allow plates to dry for 48 hr. Aseptically spread 1.0mL of fluoranthene solution onto the surface of the dried plates. Allow the acetone to evaporate under sterile conditions.

Use: For the cultivation of *Mycobacterium gilvum*, *Sphingomonas* sp. (*Sphingomonas paucimobilis*), unclassified bacterium (*Gordona* sp.), *Mycobacterium* sp., *Sphingomonas* sp., and other biphenyl-utilizing bacteria.

Plesiomonas Differential Agar

See: Inositol Brilliant Green Bile Salts Agar

PLET Agar

Composition per liter:

Beef heart, solids from infusion.....	500.0g
Agar	15.0g
Tryptose	10.0g
NaCl.....	5.0g
Ethylenediamine tetracetic acid (EDTA).....	0.3g
Thallos acetate	0.04g
Antibiotic inhibitor	10.0mL

Antibiotic Inhibitor:

Composition per 10.0mL:

Lysozyme	300,000U
Polymyxin	30,000U

Preparation of Antibiotic Inhibitor: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except antibiotic inhibitor, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add sterile antibiotic inhibitor. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation and cultivation of *Bacillus anthracis*.

Pluton Medium

Composition per 1010.0mL:

Glucose	10.0g
Malt extract	5.0g
Neopeptone	5.0g
Peptone.....	2.5g
Yeast extract.....	2.5g
Starch	2.0g
Trypticase™	2.0g
Potassium phosphate buffer (1M solution, pH 7.2)	50.0mL
L-Cysteine-HCl solution.....	10.0mL

pH 7.2 ± 0.2 at 25°C

L-Cysteine-HCl Solution:

Composition per 10.0mL:

L-Cysteine-HCl.....	0.25g
---------------------	-------

Preparation of L-Cysteine-HCl Solution: Add L-cysteine-HCl to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except L-cysteine-HCl solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Distribute 10.0mL volumes into tubes. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 0.1mL of sterile L-cysteine-HCl solution to each tube. Mix thoroughly.

Use: For the cultivation of *Melissococcus pluton*.

PM Indicator Agar

Composition per liter:

Agar	15.0g
Glucose	5.25g
Peptone.....	5.0g
Beef extract.....	3.0g
Pancreatic digest of casein.....	1.7g
Sorbitan monooleate complex	1.0g
NaCl	0.5g
Papaic digest of soybean meal	0.3g
K ₂ HPO ₄	0.25g
Bromcresol Purple	0.06g

pH 7.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring

to boiling. Do not autoclave. Inoculate medium with a suspension of *Bacillus stearothermophilus* spores. Pour into 100mm flat-bottomed Petri dishes in 6.0mL volumes. Use medium immediately.

Use: For the rapid detection of trace amounts of penicillin in milk using the AOAC *Bacillus stearothermophilus* Qualitative Disc Method II.

PMA Medium

See: **Peptonized Milk Agar**

PMP Broth

Composition per liter:

Na ₂ HPO ₄	7.9g
D-Mannitol	2.5g
Peptone	2.5g
NaH ₂ PO ₄	1.1g

pH 7.6 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the enrichment and cultivation of *Yersinia pseudotuberculosis* from food.

PmTG Agar

Composition per liter:

Agar	10.0g
Glucose	5.0g
Peptonized milk	1.0g
Pancreatic digest of casein.....	1.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Monoblepharis polymorpha*.

PMY Medium

Composition per liter:

Agar	15.0g
Glucose	10.0g
NaCl.....	5.0g
Polypeptone™	5.0g
Beef extract.....	2.0g
Yeast extract.....	1.0g
MgSO ₄ ·7H ₂ O	0.5g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Xanthomonas campestris*.

PMYA II Medium

Composition per liter:

Agar	15.0g
Milk, peptonized	1.0g
Yeast extract.....	0.2g
Sodium acetate.....	0.02g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring

to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of *Flavobacterium* species.

Poly-β-Hydroxybutyrate Medium (PHB Medium)

Composition per liter:

Part A	900.0mL
Part B	100.0mL
pH 7.2 ± 0.2 at 25°C	

Part A:

Composition per 900.0mL:

K ₂ HPO ₄ ·3H ₂ O	0.6g
KH ₂ PO ₄	0.2g
MgSO ₄ ·7H ₂ O	0.2g
(NH ₄) ₂ SO ₄	0.2g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Adjust pH to 7.2. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Part B:

Composition per 100.0mL:

Glucose	10.0g
---------------	-------

Preparation of Medium: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Preparation of Medium: Aseptically combine 900.0mL of cooled, sterile part A and 100.0mL of cooled, sterile part B. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and differentiation of *Pseudomonas* species based on their ability to produce intracellular poly-β-hydroxybutyrate. Production of poly-β-hydroxybutyrate is determined by staining cells with Sudan Black B.

Polyangium Agar

Composition per liter:

Agar	10.0g
K ₂ HPO ₄	1.0g
KNO ₃	1.0g
MgSO ₄ ·7H ₂ O	0.3g
CaCl ₂ ·2H ₂ O	0.13g
FeCl ₃ ·6H ₂ O	32.0mg
Filter paper strips	variable
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes. Allow tubes to cool in a slanted position. Aseptically add a strip of sterile filter paper to the surface of solidified slants. For Petri dishes, add 4–6 strips of sterile filter paper to the surface of the agar in each plate.

Use: For the cultivation and maintenance of *Polyangium cellulosum*.

Polymyxin Acriflavine LiCl Ceftazidime Esculin Mannitol Agar

See: PALCAM Agar

Polymyxin Base Agar *See: Antibiotic Medium 9*

Polymyxin Pyruvate Egg Yolk Mannitol Bromthymol Blue Agar (PEMBA)

Composition per 110.0mL:

Agar	1.8g
D-Mannitol	1.0g
Sodium pyruvate	1.0g
Na ₂ HPO ₄	0.25g
NaCl	0.2g
Peptone	0.1g
KH ₂ PO ₄	0.025g
Bromthymol Blue	0.01g
MgSO ₄ ·7H ₂ O	0.01g
Antibiotic inhibitor	5.0mL
Egg yolk emulsion (20% solution)	5.0mL
pH 7.4 ± 0.2 at 25°C	

Antibiotic Inhibitor:

Composition per 5.0mL:

Polymyxin B	10,000U
-------------------	---------

Preparation of Antibiotic Inhibitor: Add components to distilled/deionized water and bring volume to 5.0mL. Mix thoroughly. Filter sterilize.

Egg Yolk Emulsion, 20% Solution:

Composition per 100.0mL:

Chicken egg yolks	11
Whole chicken egg	1
NaCl (0.9% solution)	80.0mL

Preparation of Egg Yolk Emulsion, 20% Solution: Soak eggs with 1:100 dilution of saturated mercuric chloride solution for 1 min. Crack eggs and separate yolks from whites. Mix egg yolks with 1 chicken egg. Measure 20.0mL of egg yolk emulsion and add to 80.0mL of 0.9% NaCl solution. Mix thoroughly. Filter sterilize. Warm to 45°–50°C.

Preparation of Medium: Add components, except antibiotic inhibitor and egg yolk emulsion, 20%, to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile antibiotic inhibitor and egg yolk emulsion, 20%. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the cultivation of *Bacillus cereus*.

Polymyxin Seed Agar *See: Antibiotic Medium 10*

Polymyxin Staphylococcus Medium

Composition per liter:

Agar	15.0g
Pancreatic digest of gelatin	5.0g
Beef extract	3.0g
Lecithin	0.7g
Polymyxin	0.075g
Tween™ 80	10.2mL
pH 6.8 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the selective isolation and cultivation of pathogenic, coagulase-positive *Staphylococcus aureus*. *Proteus* species will grow on this medium but appear as translucent colonies.

Polypectate Gel Medium

Composition per liter:

Sodium polypectate.....	70.0g
K ₂ HPO ₄	5.0g
Peptone.....	5.0g
KH ₂ PO ₄	1.0g
CaCl ₂ ·2H ₂ O.....	0.6g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components, except sodium polypectate, to 500.0mL of boiling water. Put into a blender and mix on low speed to dissolve. Add the sodium polypectate slowly with the blender on low speed to minimize air bubbles. Adjust pH to 7.0. Bring volume to 1.0L with distilled/deionized water. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Pour into sterile Petri dishes.

Use: For the cultivation of microorganisms and detection of pectate-degrading enzymes.

Polysorbate 80 Agar (Tween™ 80 Agar)

Composition per 1010.0mL:

Agar.....	15.0g
Peptone.....	10.0g
Tween™ 80.....	10.0mL

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components, except Tween™ 80, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 20 min at 15 psi pressure–121°C. Cool to 45°–50°C. Add 10.0mL Tween™ 80. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the cultivation of a variety of microorganisms.

Polysorbate 80 HiVeg Agar

Composition per liter:

Agar.....	15.0g
Plant peptone.....	10.0g
Polysorbate 80.....	10.0g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components, except Tween™ 80, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 20 min at 15 psi pressure–121°C. Cool to 45°–50°C. Pour into sterile Petri dishes.

Use: For the cultivation of a variety of microorganisms.

Pontecorvo's *Aspergillus* Medium

Composition per liter:

Glucose.....	30.0g
NaNO ₃	6.0g
KH ₂ PO ₄	1.52g
KCl.....	0.52g
MgSO ₄ ·7H ₂ O.....	0.52g
ZnSO ₄	0.001g

FeCl ₃	0.85mg
Biotin.....	40.0µg
Trace metals solution.....	1.0mL
pH 6.2 ± 0.2 at 25°C	

Trace Metals Solution:

Composition per liter:

CuSO ₄ ·5H ₂ O.....	0.25g
Na ₂ B ₄ O ₇ ·10H ₂ O.....	0.1g
MnCl ₂ ·4H ₂ O.....	50.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	50.0mg

Preparation of Trace Metals Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 6.2 with KOH. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Aspergillus awamori*.

Pontecorvo's *Aspergillus* Medium with 0.05% Yeast Extract

Composition per liter:

Glucose.....	30.0g
NaNO ₃	6.0g
KH ₂ PO ₄	1.52g
KCl.....	0.52g
MgSO ₄ ·7H ₂ O.....	0.52g
Yeast extract.....	0.5g
ZnSO ₄	0.001g
FeCl ₃	0.85mg
Biotin.....	40.0µg
Trace metals solution.....	1.0mL

pH 6.2 ± 0.2 at 25°C

Trace Metals Solution:

Composition per liter:

CuSO ₄ ·5H ₂ O.....	0.25g
Na ₂ B ₄ O ₇ ·10H ₂ O.....	0.1g
MnCl ₂ ·4H ₂ O.....	50.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	50.0mg

Preparation of Trace Metals Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 6.2 with KOH. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Aspergillus nidulans*.

Porcine Heart Agar

Composition per liter:

Porcine heart, infusion from.....	375.0g
Agar.....	15.0g
Papaic digest of soybean meal.....	6.5g
Glucose.....	5.0g
NaCl.....	5.0g
Proteose peptone No. 3.....	5.0g
Yeast extract.....	3.5g
Sheep blood, defibrinated.....	50.0mL

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components, except sheep blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile sheep blood. Mix thoroughly. Pour into sterile Petri dishes.

Use: For determination of the sensitivity of microorganisms using the disc plate technique.

Pork Plasma Fibrinogen Overlay Agar

Composition per plate:

Baird-Parker agar, modified.....	15.0mL
Pork plasma fibrinogen overlay agar.....	8.0mL
pH 7.0 ± 0.1 at 25°C	

Baird-Parker Agar, Modified:

Composition per liter:

Agar.....	17.0g
Glycine.....	12.0g
Sodium pyruvate.....	10.0g
Pancreatic digest of casein.....	10.0g
Beef extract.....	5.0g
LiCl.....	5.0g
Yeast extract.....	1.0g
Chapman tellurite solution.....	1.0mL
pH 7.0 ± 0.2 at 25°C	

Chapman Tellurite Solution:

Composition per 100.0mL:

K ₂ TeO ₃	1.0g
---------------------------------------	------

Preparation of Chapman Tellurite Solution: Add K₂TeO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Baird-Parker Agar, Modified: Add components, except Chapman tellurite solution, to distilled/deionized water and bring volume to 999.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 1.0mL of sterile Chapman tellurite solution. Mix thoroughly but gently.

Pork Plasma Fibrinogen Overlay Agar:

Composition per 100.5mL:

Agar solution.....	50.0mL
Bovine fibrinogen solution.....	47.5mL
Pork plasma.....	2.5mL
Trypsin inhibitor solution.....	0.5mL

Agar Solution:

Composition per 50.0mL:

Agar.....	0.7g
-----------	------

Preparation of Agar Solution: Add agar to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Bovine Fibrinogen Solution:

Composition per 50.0mL:

Bovine fibrinogen, fraction I.....	0.4g
Sodium phosphate buffer (0.05M solution, pH 7.0).....	50.0mL

Preparation of Bovine Fibrinogen Solution: Grind bovine fibrinogen in a mortar to a fine powder. Add bovine fibrinogen to

50.0mL of sodium phosphate buffer. Mix thoroughly on a magnetic stirrer for 30 min. Filter through Whatman #1 filter paper. Filter sterilize.

Pork Plasma:

Composition per 10.0mL:

Pork plasma-EDTA.....	10.0mL
-----------------------	--------

Preparation of Pork Plasma: Filter sterilize fresh or rehydrated commercial pork plasma-EDTA.

Trypsin Inhibitor Solution:

Composition per 5.0mL:

Trypsin inhibitor.....	0.015g
Sodium phosphate buffer (0.05M solution, pH 7.0).....	5.0mL

Preparation of Trypsin Inhibitor Solution: Add trypsin inhibitor to 5.0mL of sodium phosphate buffer. Mix thoroughly. Filter sterilize.

Preparation of Pork Plasma Fibrinogen Overlay Agar:

Aseptically combine 50.0mL of cooled, sterile agar solution, 47.5mL of sterile bovine fibrinogen solution, 2.5mL of sterile pork plasma, and 0.5mL of trypsin inhibitor solution. Mix thoroughly. Maintain at 45°–50°C but use within 1 hr.

Caution: Potassium tellurite is toxic.

Preparation of Medium: Pour cooled, sterile Baird-Parker agar, modified, into sterile Petri dishes in 15.0mL volumes. Allow agar to solidify. Overlay each plate with 8.0mL of sterile pork plasma fibrinogen overlay agar.

Use: For the cultivation of *Staphylococcus aureus* from foods.

Porphyrobacter tepidarius Medium (DSMZ Medium 791)

Composition per liter:

Sodium glutamate.....	0.5g
Sodium succinate.....	0.5g
Sodium acetate.....	0.5g
Yeast extract.....	0.5g
Casamino acids.....	0.5g
(NH ₄) ₂ SO ₄	0.5g
Sodium thiosulfate.....	0.5g
Basal salts solution.....	5.0mL
Phosphate solution.....	5.0mL
Vitamin solution.....	1.0mL

pH 7.5 ± 0.2 at 25°C

Basal Salts Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O.....	24.65g
NaCl.....	23.4g
Tri-sodium EDTA.....	4.53g
CaCl ₂ ·2H ₂ O.....	2.94g
FeSO ₄ ·7H ₂ O.....	1.11g
MnSO ₄ ·4H ₂ O.....	112.0mg
H ₃ BO ₃	31.0mg
ZnSO ₄ ·7H ₂ O.....	29.0mg
Co(NO ₃) ₂ ·6H ₂ O.....	29.0mg
CuSO ₄ ·5H ₂ O.....	25.4mg
Na ₂ MoO ₄ ·4H ₂ O.....	24.0mg

Preparation of Basal Salts Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Phosphate Solution:**Composition per liter:**

KH ₂ PO ₄	75.0g
K ₂ HPO ₄	78.0g

Preparation of Phosphate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Vitamin Solution**Composition per 100.0mL:**

Tri-sodium EDTA	200.0mg
Nicotinic acid.....	100.0mg
Thiamine	100.0mg
<i>p</i> -Aminobenzoic acid.....	50.0mg
Calcium pantothenate	50.0mg
Pyridoxine hydrochloride	50.0mg
Folic acid.....	50.0mg
Biotin	5.0mg
Vitamin B ₁₂	1.0mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except vitamin solution, to distilled/deionized water and bring volume to 999.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 1.0mL sterile vitamin solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Porphyrobacter tepidarius*, *Porphyrobacter cryptus*, and *Porphyrobacter* sp.

Postgate's Medium**Composition per liter:**

MgSO ₄ ·7H ₂ O	2.0g
CaSO ₄	1.0g
NH ₄ Cl	1.0g
Yeast extract.....	1.0g
K ₂ HPO ₄	0.5g
Sodium lactate (70% solution).....	3.5mL

Preparation of Medium: Add components, except FeSO₄·7H₂O, ascorbic acid, and thioglycollic acid, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂ for 10–15 min. Add FeSO₄·7H₂O, ascorbic acid, and thioglycollic acid. Mix thoroughly. Continue to sparge with 80% N₂ + 20% CO₂ and adjust pH to 7.4. Anaerobically distribute into tubes or flasks. Autoclave for 10 min at 10 psi pressure–115°C.

Use: For the cultivation of *Desulfobulbus propionicus*, *Desulfotomaculum nigrificans*, *Desulfotomaculum orientis*, *Desulfotomaculum ruminis*, *Desulfovibrio africanus*, *Desulfovibrio desulfuricans*, *Desulfovibrio gigas*, *Desulfovibrio multispirans*, *Desulfovibrio* species, and *Desulfovibrio vulgaris*.

Potassium Cyanide Broth**Composition per liter:**

Na ₂ HPO ₄	5.64g
NaCl.....	5.0g
Proteose peptone No. 3.....	3.0g
KH ₂ PO ₄	0.225g
KCN solution.....	15.0mL

pH 7.6 ± 0.2 at 25°C

KCN Solution:**Composition per 100.0mL:**

KCN.....	0.5g
----------	------

Preparation of KCN Solution: Add KCN to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Caution: Cyanide is toxic.

Preparation of Medium: Add components, except KCN solution, to distilled/deionized water and bring volume to 985.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 15.0mL of KCN solution. Mix thoroughly. Distribute into sterile screw-capped tubes or flasks in 1.0–1.5mL volumes. Close caps tightly.

Use: For the cultivation and differentiation of urease-negative, Gram-negative enteric bacteria. *Salmonella* species and *Shigella* species are nonmotile in this medium. *Proteus* species are motile in this medium.

Potassium Cyanide HiVeg Broth Base with KCN**Composition per liter:**

Na ₂ HPO ₄	5.64g
NaCl.....	5.0g
Plant peptone No. 3.....	3.0g
KH ₂ PO ₄	0.225g
KCN solution.....	15.0mL

pH 7.6 ± 0.2 at 25°C

Source: This medium, without potassium cyanide solution, is available as a premixed powder from HiMedia.

KCN Solution:**Composition per 100.0mL:**

KCN.....	0.5g
----------	------

Preparation of KCN Solution: Add KCN to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Caution: Cyanide is toxic.

Preparation of Medium: Add components, except KCN solution, to distilled/deionized water and bring volume to 985.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 15.0mL of KCN solution. Mix thoroughly. Distribute into sterile screw-capped tubes or flasks in 1.0–1.5mL volumes. Close caps tightly.

Use: For the cultivation and differentiation of urease-negative, Gram-negative enteric bacteria. *Salmonella* species and *Shigella* species are nonmotile in this medium. *Proteus* species are motile in this medium.

Potassium Tellurite Agar

Composition per liter:

Beef heart, solids from infusion.....	500.0g
Agar	15.0g
Tryptose	10.0g
NaCl.....	5.0g
Blood, defibrinated	50.0mL
K ₂ TeO ₃ solution.....	20.0mL

pH 6.0 ± 0.2 at 25°C

K₂TeO₃ Solution:

Composition per 20.0mL:

K ₂ TeO ₃	0.5g
---------------------------------------	------

Preparation of K₂TeO₃ Solution: Add K₂TeO₃ to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize.

Caution: Potassium tellurite is toxic.

Preparation of Medium: Add components, except K₂TeO₃ solution, to distilled/deionized water and bring volume to 930.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile K₂TeO₃ solution and 50.0mL of blood. Rabbit or sheep blood may be used. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes. Allow tubes to cool in a slanted position.

Use: For the cultivation and differentiation of *Enterococcus faecalis*. *Enterococcus faecalis* appears as black colonies.

Potato Agar

Composition per liter:

Potatoes.....	200.0g
Agar	20.0g

Preparation of Medium: Dice potatoes and place in 1.0L of tap water. Gently heat and bring to boiling. Boil potatoes until thoroughly cooked. Filter through cheesecloth. Bring volume of filtrate to 1.0L with tap water. Add 20.0g of agar. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Cercospora medicaginis*, *Metarhizium anisopliae*, *Metarhizium flavoviride*, *Phoma chrysanthemi*, *Phoma eupyrena*, *Phoma exigua*, *Phoma foveata*, *Phoma lingam*, *Phoma macrostoma*, *Phoma pinodella*, *Phoma putaminum*, *Polyscytalum pustulans*, *Sclerotium cepivorum*, *Ulocladium atrum*, *Ulocladium botrytis*, *Ulocladium chartarum*, *Ulocladium corsortiale*, and *Ulocladium curcubitae*.

Potato Agar with Cereal Culms

Composition per liter:

Potatoes.....	200.0g
Agar	20.0g
Cereal culms	variable

Preparation of Medium: Peel and dice potatoes. Add potatoes to 1.0L of tap water. Gently heat and bring to boiling. Boil potatoes until thoroughly cooked. Filter through cheesecloth. Bring volume of filtrate to 1.0L with tap water. Add 20.0g of agar. Gently heat and bring to boiling. Distribute into tubes. Autoclave for 15 min at 15 psi pressure–121°C. Cut cereal culms into 1.0cm pieces. Place 6 to 9 cereal culm pieces in tubes with 3.0mL of distilled/deionized water. Autoclave for 15 min at 15 psi pressure–121°C. Melt agar tubes by gently heating. Cool to 50°C. Aseptically add 2 to 3 sterile cereal culm pieces to each tube. Allow to solidify in a slanted position.

Use: For the cultivation of fungi.

Potato Carrot Agar

Composition per liter:

Potatoes.....	20.0g
Carrots.....	20.0g
Agar	20.0g

Preparation of Medium: Wash and peel potatoes and carrots. Grate potatoes and carrots and place in 1.0L of tap water. Gently heat and bring to boiling. Boil for 30 min. Filter through cheesecloth. Bring volume of filtrate to 1.0L with tap water. Add 20.0g of agar. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 20 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Alternaria alternata*, *Alternaria brassicae*, *Alternaria citri*, *Alternaria dianthi*, *Alternaria dianthicola*, *Alternaria radicina*, *Alternaria solani*, *Alternaria tenuissima*, *Chalaropsis thielavioides*, *Cladosporium fulvum*, *Drechslera bicolor*, *Drechslera cynodontis*, *Drechslera graminea*, *Drechslera rostrata*, *Drechslera sorokiniana*, *Drechslera spicifera*, *Drechslera teres*, *Drechslera verticillata*, *Drechslera victoriae*, *Embellisia allii*, *Glomerella cingulata*, *Helminthosporium carbonum*, *Helminthosporium solini*, *Monilinia fructicola*, and *Trichurus spiralis*.

Potato Carrot Agar

Composition per liter:

Potato, infusion from.....	250.0g
Carrot, infusion from.....	200.0g
Agar	15.0g

pH 6.5 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of fungi and other aciduric microorganisms. For the reproduction of *Pyronema domesticum* and for the cultivation and maintenance of *Actinoplanes awajinensis*, *Actinoplanes nirasakiensis*, *Amorphosphorangium auranticolor*, *Streptomyces flavus*, and *Thermoactinomyces vulgaris*.

Potato Carrot Agar, Diluted 1/10**Composition per liter:**

Potato, peeled and cut	30.0g
Agar	15.0g
Carrot, peeled and cut	2.5g

Preparation of Medium: Boil potatoes and carrots until cooked and filter through cheesecloth. Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Actinoplanes kinshanensis*, *Actinoplanes nipponensis*, *Actinoplanes pyriformis*, *Actinoplanes* species, *Actinoplanes utahensis*, *Microbispora rosea*, *Planobispora longispora*, *Planomonospora venezuelensis*, *Spirillospora albida*, and *Streptosporangium album*.

Potato Carrot Agar with Manganese**Composition per liter:**

Agar	20.0g
Potatoes	20.0g
Carrots	20.0g
Manganese solution	10.0mL

pH 6.5 ± 0.2 at 25°C

Manganese Solution:**Composition per 100.0mL:**

MnCl ₂ ·4H ₂ O	15.0g
--	-------

Preparation of Manganese Solution: Add MnCl₂·4H₂O to to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Wash and peel potatoes and carrots. Grate potatoes and carrots and place in 1.0L of tap water. Gently heat and bring to boiling. Boil for 30 min. Filter through cheesecloth. Bring volume of filtrate to 900.0mL with tap water. Add 20.0g of agar. Gently heat and bring to boiling. Distribute into flasks. Autoclave for 20 min at 15 psi pressure–121°C. Cool to 55°C. Aseptically add 100.0mL of sterile manganese solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into tubes.

Use: For the selective cultivation and maintenance of *Alternaria*, *Epicoccum*, and *Phoma* species. The addition of manganese inhibits the growth of other fungi.

Potato Carrot Broth**Composition per liter:**

Potatoes	20.0g
Carrots	20.0g

Preparation of Medium: Wash and peel potatoes and carrots. Grate potatoes and carrots and place in 1.0L of tap water. Gently heat and bring to boiling. Boil for 30 min. Filter through cheesecloth. Bring volume of filtrate to 1.0L with tap water. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 20 min at 15 psi pressure–121°C.

Use: For the cultivation of *Alternaria species* and a variety of other fungi.

Potato Carrot Broth**Composition per liter:**

Potato, infusion from	250.0g
Carrot, infusion from	200.0g

pH 6.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Alternaria* and a variety of other fungi.

Potato Carrot Medium**Composition per liter of tap water:**

Potatoes, sliced with skin	300.0g
Carrots, peeled and sliced	25.0g
Agar	15.0g

Preparation of Medium: Slice potatoes with the skin on. Peel carrots and slice. Add potatoes and carrots to approximately 700.0mL of tap water. Gently heat and bring to boiling. Continue boiling for 20 min. Filter through cheesecloth. Bring volume of filtrate to 1.0L with distilled/deionized water. Add agar. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 20 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Actinoplanes awajinensis*, *Actinoplanes nirasakinensis*, *Amorphosporangium auranticolor*, *Streptomyces flavus*, and *Thermoactinomyces vulgaris*.

**Potato Dextrose Adenine Agar
(ATCC Medium 2204)****Composition per liter:**

Glucose	20.0g
Agar	15.0g
Potatoes, infusion from	500.0mL
Adenine solution	50.0mL

pH 5.6 ± 0.2 at 25°C

Potato Infusion:**Composition per 500.0mL:**

Potatoes	300.0g
----------------	--------

Preparation of Potato Infusion: Peel and dice potatoes. Add 500.0mL of distilled/deionized water. Gently heat and bring to boiling. Continue boiling for 30 min. Filter through cheesecloth. Reserve filtrate.

Adenine Solution:**Composition per 50.0mL:**

Adenine	0.1g
---------------	------

Preparation of Adenine Solution: Add adenine to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except adenine solution, to distilled/deionized water and bring volume to 950.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50.0mL of sterile adenine solution. Mix thoroughly. Pour into sterile Petri dishes or distribute to sterile tubes.

Use: For the cultivation of yeasts and molds.

Potato Dextrose Agar**Composition per liter:**

Glucose	20.0g
Agar	15.0g
Potato, infusion from	4.0g
Tartaric acid solution.....	14.0mL

pH 5.6 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems and Oxoid Unipath.

Tartaric Acid Solution:**Composition per 50.0mL:**

Tartaric acid	5.0g
---------------------	------

Preparation of Tartaric Acid Solution: Add tartaric acid to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 986.0mL. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 14.0mL of sterile tartaric acid solution. Mix thoroughly. If medium is to be used for the enumeration of yeasts and molds in butter, adjust pH to 3.5. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and enumeration of yeasts and molds. For the enumeration of yeasts and molds in butter by the plate count method.

Potato Dextrose Agar**Composition per liter:**

Agar	20.0g
Glucose	20.0g
Potato infusion	200.0mL

pH 5.6 ± 0.2 at 25°C

Potato Infusion:**Composition per 10.0mL:**

Potatoes, unpeeled and sliced	200.0g
-------------------------------------	--------

Preparation of Potato Infusion: Add potato slices to 1.0L of distilled/deionized water. Gently heat and bring to boiling. Continue boiling for 30 min. Filter through cheesecloth. Reserve filtrate.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and enumeration of yeasts and filamentous fungi (molds) from foods.

Potato Dextrose Agar**Composition per liter:**

Potatoes	300.0g
Glucose	20.0g
Agar	15.0g

Preparation of Medium: Dice potatoes and place in 500.0mL of boiling water for 30 min. Strain through cheesecloth. Adjust volume to 1.0L with distilled/deionized water. Mix thoroughly. Add agar. Gently heat and bring to boiling. Add 20.0g of glucose. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of numerous fungi such as *Cephaleuros virescens*.

**Potato Dextrose Agar
(PDA Agar)****Composition per liter:**

Glucose	20.0g
Agar	15.0g
Potatoes, infusion from	1.0L

Potatoes, Infusion From:**Composition per liter:**

Potatoes.....	300.0g
---------------	--------

Preparation of Potatoes, Infusion From: Peel and dice potatoes. Add 500.0mL of distilled/deionized water. Gently heat and bring to boiling. Continue boiling for 30 min. Filter through cheesecloth. Bring volume of filtrate to 1.0L.

Preparation of Medium: To 1.0L of potato infusion, add glucose and agar. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Bacillus megaterium*, *Bacillus subtilis*, *Pseudomonas lindbergii*, *Pseudomonas syringae*, *Streptomyces testaceus*, and *Xanthomonas campestris*.

**Potato Dextrose Agar
(PDA Agar)
(ATCC Medium 336)****Composition per liter:**

Glucose	20.0g
Agar	15.0g
Potatoes, infusion from.....	500.0mL

pH 5.6 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Potato Infusion:**Composition per 500.0mL:**

Potatoes.....	300.0g
---------------	--------

Preparation of Potato Infusion: Peel and dice potatoes. Add 500.0mL of distilled/deionized water. Gently heat and bring to boiling. Continue boiling for 30 min. Filter through cheesecloth. Reserve filtrate.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of yeasts and molds from dairy products and other foods. Also used to induce sporulation in many fungi.

**Potato Dextrose Agar
(BAM M127)****Composition per liter:**

Agar	20.0g
Glucose	20.0g
Potato infusion	1.0L

pH 5.6 ± 0.2 at 25°C

Potato Infusion:**Composition per liter:**

Potatoes, unpeeled and sliced	200.0g
-------------------------------------	--------

Preparation of Potato Infusion: Add unpeeled potato slices to 1.0L of distilled/deionized water. Gently heat and bring to boiling. Continue boiling for 30 min. Filter through cheesecloth. Reserve filtrate. Bring volume to 1.0L with distilled/deionized water.

Preparation of Medium: Add agar and glucose to 1.0L potato infusion. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and enumeration of yeasts and filamentous fungi (molds) from foods.

Potato Dextrose Agar with Antibiotics

Composition per liter:

Glucose	20.0g
Agar	15.0g
Potato, infusion from	4.0g
Antibiotic solution	20.0mL

Antibiotic Solution:

Composition per 100.0mL:

Chlortetracycline-HCl	0.5g
Chloramphenicol	0.5g

Preparation of Antibiotic Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except antibiotic solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 20.0mL of sterile antibiotic solution. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the cultivation of fungi from foods.

Potato Dextrose Agar with Gentamicin (ATCC Medium 2286)

Composition per liter:

Glucose	20.0g
Agar	15.0g
Potatoes, infusion from	500.0mL
Gentamicin solution	10.0mL

pH 5.6 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Potato Infusion:

Composition per 500.0mL:

Potatoes	300.0g
----------------	--------

Preparation of Potato Infusion: Peel and dice potatoes. Add 500.0mL of distilled/deionized water. Gently heat and bring to boiling. Continue boiling for 30 min. Filter through cheesecloth. Reserve filtrate.

Gentamicin Solution:

Composition per 10.0mL:

Gentamycin	100.0mg
------------------	---------

Preparation of Gentamicin Solution: Add gentamycin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except gentamicin, to distilled/deionized water and bring volume to 990.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL of sterile gentamicin solution. Mix thoroughly. Pour into sterile Petri dishes or sterile tubes.

Use: For the cultivation of yeasts and molds from dairy products and other foods.

Potato Dextrose Agar with 2% Glucose and 60% Sucrose Composition per liter:

Sucrose	600.0g
Glucose	20.0g
Agar	15.0g
Potato, solids from infusion	4.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation and cultivation of *Saccharomyces rouxii* from chocolate syrup.

Potato Dextrose Agar with Methionine and Biotin (PDAMB Agar)

Composition per liter:

Glucose	20.0g
Agar	15.0g
DL-Methionine	100.0mg
Biotin	1.0mg
Potato infusion	500.0mL

pH 5.6 ± 0.2 at 25°C

Potato Infusion:

Composition per 500.0mL:

Potatoes	300.0g
----------------	--------

Preparation of Potato Infusion: Peel and dice potatoes. Add 500.0mL of distilled/deionized water. Gently heat and bring to boiling. Continue boiling for 30 min. Filter through cheesecloth. Reserve filtrate.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Cryphonectria gyrosa* and *Cryphonectria parasitica*.

Potato Dextrose Agar, pH 5.0 (ATCC Medium 368)

Composition per liter:

Glucose	20.0g
Agar	15.0g
Potatoes, infusion from	500.0mL

pH 5.0 ± 0.2 at 25°C

Potato Infusion:

Composition per 500.0mL:

Potatoes	300.0g
----------------	--------

Preparation of Potato Infusion: Peel and dice potatoes. Add 500.0mL of distilled/deionized water. Gently heat and bring to boiling.

Continue boiling for 30 min. Filter through cheesecloth. Reserve filtrate.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 5.0. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of yeasts and molds from dairy products and other foods.

Potato Dextrose Agar with 7.5% Sodium Chloride

Composition per liter:

NaCl	75.0g
Glucose	20.0g
Agar	15.0g
Potato infusion	500.0mL

pH 5.6 ± 0.2 at 25°C

Potato Infusion:

Composition per 500.0mL:

Potatoes	300.0g
----------------	--------

Preparation of Potato Infusion: Peel and dice potatoes. Add 500.0mL of distilled/deionized water. Gently heat and bring to boiling. Continue boiling for 30 min. Filter through cheesecloth. Reserve filtrate.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Aspergillus caesiellus*, *Aspergillus gracilis*, *Aspergillus mangini*, *Aspergillus montevidensis*, *Aspergillus niveus*, *Aspergillus penicilloides*, *Aspergillus repens*, *Aspergillus ruber*, *Aspergillus sulphureus*, *Aspergillus versicolor*, and *Eurotium chevalierii*.

Potato Dextrose Agar, 1/3 Strength (ATCC Medium 2369)

Composition per liter:

Glucose	6.67g
Agar	15.0g
Potatoes, infusion from	333.0mL

pH 5.6 ± 0.2 at 25°C

Potato Infusion:

Composition per liter:

Potatoes	300.0g
----------------	--------

Preparation of Potato Infusion: Peel and dice potatoes. Add 500.0mL of distilled/deionized water. Gently heat and bring to boiling. Continue boiling for 30 min. Filter through cheesecloth. Bring volume to 1.0L. Reserve filtrate.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of yeasts and molds.

Potato Dextrose Agar, 1/4 Strength (ATCC Medium 2218)

Composition per liter:

Glucose	20.0g
Agar	15.0g
Potatoes, infusion from	125.0mL

pH 5.6 ± 0.2 at 25°C

Potato Infusion:

Composition per 500.0mL:

Potatoes	300.0g
----------------	--------

Preparation of Potato Infusion: Peel and dice potatoes. Add 500.0mL of distilled/deionized water. Gently heat and bring to boiling. Continue boiling for 60 min. Filter through cheesecloth. Reserve filtrate.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of yeasts and molds from dairy products and other foods.

Potato Dextrose Agar and Yeast Medium (PDA and Yeast Medium) (ATCC Medium 104)

Composition per liter:

Glucose	20.0g
Agar	15.0g
KH ₂ PO ₄	2.0g
Yeast extract	1.5g
MgSO ₄ ·7H ₂ O	0.5g
Potato infusion	500.0mL

Potato Infusion:

Composition per 500.0mL:

Potatoes	300.0g
----------------	--------

Preparation of Potato Infusion: Peel and dice potatoes. Add 500.0mL of distilled/deionized water. Gently heat and bring to boiling. Continue boiling for 30 min. Filter through cheesecloth. Reserve filtrate.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Pseudomonas fluorescens*, *Streptovorticillium baldaccii*, and *Xanthomonas campestris*.

Potato Dextrose Agar with Thiamine (ATCC Medium 2391)

Composition per liter:

Glucose	20.0g
Agar	15.0g
Thiamine-HCl	2.0mg
Potatoes, infusion from	500.0mL

pH 5.6 ± 0.2 at 25°C

Potato Infusion:

Composition per 500.0mL:

Potatoes	300.0g
----------------	--------

Preparation of Potato Infusion: Peel and dice potatoes. Add 500.0mL of distilled/deionized water. Gently heat and bring to boiling. Continue boiling for 60 min. Filter through cheesecloth. Bring volume to 500.0mL with distilled/deionized water. Reserve filtrate.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of yeasts and molds.

Potato Dextrose Broth

Composition per liter:

Potatoes, infusion from	200.0g
Glucose	20.0g
pH 5.1 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Potatoes, Infusion From:

Composition per 500.0mL:

Potatoes	300.0g
----------------	--------

Preparation of Potatoes, Infusion From: Peel and dice potatoes. Add 500.0mL of distilled/deionized water. Gently heat and bring to boiling. Continue boiling for 30 min. Filter through cheesecloth.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of a wide variety of yeasts and molds.

Potato Dextrose Broth with Yeast Extract

Composition per liter:

Potato, peeled and cut	200.0g
Glucose	10.0g
Yeast extract	3.0g
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Peel and cut potatoes. Add potatoes to 500.0mL of water. Boil potatoes for 20 min. Filter through cheesecloth. Add glucose and yeast extract to filtrate. Bring volume to 1.0L with distilled/deionized water. Mix thoroughly. Adjust pH to 7.2. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of a variety of fungi.

**Potato Dextrose L-Isoleucine Agar
(ATCC Medium 2205)**

Composition per liter:

Glucose	20.0g
Agar	15.0g
Potatoes, infusion from	500.0mL
L-Isoleucine solution	50.0mL
pH 5.6 ± 0.2 at 25°C	

Potato Infusion:

Composition per 500.0mL:

Potatoes	300.0g
----------------	--------

Preparation of Potato Infusion: Peel and dice potatoes. Add 500.0mL of distilled/deionized water. Gently heat and bring to boiling. Continue boiling for 30 min. Filter through cheesecloth. Reserve filtrate.

L-Isoleucine Solution:

Composition per 50.0mL:

L-Isoleucine	0.13g
--------------------	-------

Preparation of L-Isoleucine Solution: Add L-isoleucine to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except L-isoleucine solution, to distilled/deionized water and bring volume to 950.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50.0mL of sterile L-isoleucine solution. Mix thoroughly. Pour into sterile Petri dishes or distribute to sterile tubes.

Use: For the cultivation of yeasts and molds.

**Potato Dextrose Salt Agar
(BAM M127)**

Composition per liter:

NaCl	75.0g
Agar	20.0g
Glucose	20.0g
Potato infusion	1.0L
pH 5.6 ± 0.2 at 25°C	

Potato Infusion:

Composition per liter:

Potatoes, unpeeled and sliced	200.0g
-------------------------------------	--------

Preparation of Potato Infusion: Add unpeeled potato slices to 1.0L of distilled/deionized water. Gently heat and bring to boiling. Continue boiling for 30 min. Filter through cheesecloth. Reserve filtrate. Bring volume to 1.0L with distilled/deionized water.

Preparation of Medium: Add agar and glucose to 1.0L potato infusion. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and enumeration of halophilic yeasts and halophilic filamentous fungi (molds) from foods.

**Potato Dextrose Yeast Agar
(PDY Agar)**

Composition per liter:

Glucose	20.0g
Agar	15.0g
Yeast extract	5.0g
Potato infusion	500.0mL
pH 5.6 ± 0.2 at 25°C	

Potato Infusion:

Composition per 500.0mL:

Potatoes	300.0g
----------------	--------

Preparation of Potato Infusion: Peel and dice potatoes. Add 500.0mL of distilled/deionized water. Gently heat and bring to boiling. Continue boiling for 30 min. Filter through cheesecloth. Reserve filtrate.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Bacillus* species and fungi; also used to induce sporulation in many fungi.

Potato Extract Agar

Composition per liter:

Agar	15.0g
Peptone.....	5.0g
NaCl.....	5.0g
Yeast extract.....	2.0g
Beef extract powder.....	1.0g
Potato extract	20.0mL

pH 7.4 ± 0.2 at 25°C

Potato Extract:

Composition per liter:

Potatoes.....	300.0g
---------------	--------

Preparation of Potato Extract: Peel and dice potatoes. Add 500.0mL of distilled/deionized water. Gently heat and bring to boiling. Continue boiling for 30 min. Filter through cheesecloth.

Use: For the cultivation of a wide variety of yeasts and molds.

Potato Flakes Agar

Composition per liter:

Potato flakes.....	20.0g
Agar	15.0g
Glucose	10.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and induction of sporulation in all fungi.

Potato Glucose Agar

Composition per liter:

Potato, infusion from	500.0g
Glucose	20.0g
Agar	15.0g

Preparation of Medium: Peel and slice potatoes thinly. Add 800.0mL of distilled/deionized water immediately to potatoes to prevent oxidation. Gently heat and bring to 60°C. Maintain at 60°C for 60 min. Filter through cheesecloth. Adjust volume of filtrate to 1.0L with distilled/deionized water. Add agar. Gently heat and bring to boiling. Add glucose. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 20 min at 10 psi pressure–115°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Nocardia asteroides*, *Pseudomonas caryophylli*, *Pseudomonas syringae*, *Rhodococcus* species, *Streptomyces nobilis*, *Streptomyces prasinusporus*, and *Streptomyces* species.

Potato Infusion Agar

Composition per liter:

Potatoes, infusion from.....	200.0g
Agar	15.0g
Glucose	10.0g
Proteose peptone.....	10.0g
Beef extract	5.0g

NaCl.....	5.0g
Glycerol	20.0mL
pH 6.8 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Potatoes, Infusion From:

Composition per 500.0mL:

Potatoes.....	300.0g
---------------	--------

Preparation of Potatoes, Infusion From: Peel and dice potatoes. Add 500.0mL of distilled/deionized water. Gently heat and bring to boiling. Continue boiling for 30 min. Filter through cheesecloth.

Preparation of Medium: Add glycerol to 500.0mL of distilled/deionized water. Add remaining components. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation of *Brucella abortus*.

Potato Infusion Agar (ATCC Medium 421)

Composition per liter:

Potato	200.0g
Agar	15.0g

Preparation of Medium: Peel and finely dice potatoes. Add to 500.0mL of distilled/deionized water. Gently heat and bring to boiling. Continue boiling for 20 min. Filter through cheesecloth. Bring volume of filtrate to 1.0L with distilled/deionized water. Add agar. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Streptomyces fradiae*.

Potato Infusion HiVeg Agar

Composition per liter:

Potato, infusion from	200.0g
Agar	15.0g
Glucose	10.0g
Plant peptone	10.0g
Plant extract	5.0g
NaCl.....	5.0g

pH 6.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of fungi and other aciduric microorganisms.

Potato Infusion with Inorganic Salts

Composition per liter:

Potato	200.0g
Agar	15.0g
K ₂ HPO ₄	0.5g
MgSO ₄ ·7H ₂ O.....	0.4g
CaCl ₂ ·2H ₂ O.....	0.1g
ZnSO ₄ ·7H ₂ O.....	0.03g

MnSO ₄ ·5H ₂ O	0.02g
CuSO ₄ ·5H ₂ O	0.01g
FeSO ₄ ·7H ₂ O	0.01g

Preparation of Medium: Peel and dice potatoes. Add 500.0mL of distilled/deionized water. Gently heat and bring to boiling. Continue boiling for 30 min. Filter through cheesecloth. Bring volume of filtrate to 1.0L. Add agar. Mix thoroughly. Gently heat and bring to boiling. Add remaining components. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Bacillus macquariensis*.

Potato Malt Agar

Composition per liter:

Potatoes, infusion from	200.0g
Sucrose	60.0g
Agar	20.0g
Malt extract	20.0g
Peptone	1.0g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Potatoes, Infusion From:

Composition per 500.0mL:

Potatoes	300.0g
----------------	--------

Preparation of Potatoes, Infusion From: Peel and dice potatoes. Add 500.0mL of distilled/deionized water. Gently heat and bring to boiling. Continue boiling for 30 min. Filter through cheesecloth.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of fungi and other aciduric microorganisms.

Potato Malt Agar with Filter Paper

Composition per liter:

Potatoes	240.0g
Agar	15.0g
Malt extract	5.0g
Filter paper	variable

Preparation of Medium: Wash and peel potatoes. Dice potatoes and place in 1.0L of tap water. Gently heat and bring to boiling. Boil for 30 min. Filter through cheesecloth. Bring volume of filtrate to 1.0L with tap water. Add 15.0g of agar and 5.0g of malt extract. Gently heat and bring to boiling. Distribute into tubes. Add a strip of white filter paper to each tube. Autoclave for 20 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Chaetomium cochliodes* and *Chaetomium globosum*.

Potato Malt HiVeg Agar

Composition per liter:

Potatoes, infusion from	200.0g
Sucrose	60.0g
Agar	20.0g

Malt extract	20.0g
Plant peptone	1.0g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of yeasts and molds. For the cultivation and maintenance of smut fungi and other phytopathogenic fungi.

Potato Medium

Composition per liter:

Potato	60.0g
Agar	15.0g
Glucose	10.0g
Peptone	10.0g
Yeast extract	5.0g
CaCO ₃	1.0g

Preparation of Medium: Peel and dice potato. Homogenize in a blender. Add potato and remaining components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Clostridium laniganii*.

Potato P-YE *Thermus* Medium

Composition per liter:

Agar	20.0g
Peptone	5.0g
Yeast extract	0.2g
Potatoes, infusion from	200.0mL

pH 7.8 ± 0.2 at 25°C

Potatoes, Infusion From:

Composition per 500.0mL:

Potatoes	300.0g
----------------	--------

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Thermus ruber*.

Potato Sucrose Agar

Composition per liter:

Potato extract	200.0g
Sucrose	20.0g
Agar	20.0g

pH 6.5 ± 0.2 at 25°C

Preparation of Medium: Wash and peel potatoes. Dice potatoes and place in a muslin bag. Suspend bag in 500.0mL of tap water. Gently heat and bring to boiling. Boil for 10 min. Remove the muslin bag with the potatoes. Bring volume of potato extract to 1.0L with tap water. Add 20.0g of agar and 5.0g of malt extract. Mix thoroughly. Adjust pH to 6.5 with CaCO₃. Gently heat and bring to boiling. Distribute into

tubes or flasks. Autoclave for 20 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Candida famata*, *Colletotrichum capsici*, *Colletotrichum coccodes*, *Colletotrichum crassipes*, *Colletotrichum dematium*, *Colletotrichum gloeosporioides*, *Microdochium nivale*, and numerous *Fusarium* species.

Potato Yeast Agar

Composition per liter:

Diced potatoes.....	300.0g
Glucose	20.0g
Agar	15.0g
Yeast extract.....	5.0g

Preparation of Medium: Dice potatoes and place in 500.0mL of boiling water for 30 min. Strain through cheesecloth. Adjust volume to 1.0L with distilled/deionized water. Mix thoroughly. Add agar. Gently heat and bring to boiling. Add 20.0g of glucose. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Paecilomyces fumosoroseus*.

Powell and Errington's Medium

Composition per 1060.0mL:

Solution 1	50.0mL
Solution 3	50.0mL
Solution 4	10.0mL
Solution 2	5.0mL

pH 7.0 ± 0.2 at 25°C

Solution 1:

Composition per liter:

(NH ₄) ₂ HPO ₄	238.0g
K ₂ SO ₄	70.0g
NaH ₂ PO ₄ ·2H ₂ O.....	31.0g

Preparation of Solution 1: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Solution 2:

Composition per liter:

MgO	10.0g
FeCl ₃ ·6H ₂ O	5.4g
CaCO ₃	2.0g
ZnSO ₄ ·7H ₂ O	1.44g
MnSO ₄ ·4H ₂ O	1.11g
Na ₂ MoO ₄ ·2H ₂ O	0.49g
CoSO ₄ ·7H ₂ O	0.28g
CuSO ₄ ·5H ₂ O	0.25g
H ₃ BO ₄	0.062g
HCl, concentrated	50.0mL

Preparation of Solution 2: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Solution 3:

Composition per 50.0mL:

Citric acid.....	4.2g
Glucose	3.6g
L-Glutamic acid.....	2.94g
Succinic acid.....	1.18g

Preparation of Solution 3: Add components to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize.

Solution 4:

Composition per 10.0mL:

Na ₂ S ₂ O ₃ ·5H ₂ O.....	1.24g
---	-------

Preparation of Solution 4: Add Na₂S₂O₃·5H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add 50.0mL of solution 1 and 5.0mL of solution 2. Mix thoroughly. Bring volume to 1.0L with distilled/deionized water. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Adjust pH to 7.0 with sterile NaOH. Aseptically add 50.0mL of solution 3 and 10.0mL of sterile solution 4. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of a variety of heterotrophic microorganisms.

PP Agar

Composition per liter:

Agar	15.0g
Polypeptone™	10.0g
Yeast extract.....	2.0g
MgSO ₄ ·7H ₂ O.....	1.0g

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Bacillus sphaericus*.

PP Medium

Composition per liter:

Proteose peptone.....	10.0g
Pancreatic digest of peptone.....	10.0g
Ribonucleic acid from <i>Torula</i> yeast.....	1.0g
Asolectin.....	0.2g
Artificial seawater.....	167.0mL
Vitamin solution.....	2.0mL

Artificial Seawater:

Composition per 167.0mL:

Aqua-Marin sea salts	6.95g
----------------------------	-------

Source: Aqua-Marin sea salts are available from Aquatrol, Inc., Anaheim, CA.

Preparation of Artificial Seawater: Add Aqua-Marin sea salts to distilled/deionized water and bring volume to 167.0mL. Mix thoroughly. Filter sterilize.

Vitamin Solution:

Composition per 100.0mL:

Thiamine-HCl	150.0mg
Calcium D-(+)-pantothenate	100.0mg
Folic acid	50.0mg
Nicotinamide.....	50.0mg
Pyridoxal-HCl.....	50.0mg
Riboflavin.....	50.0mg
DL-6 Thioctic acid.....	1.0mg
Biotin solution	10.0mL

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. For long-term storage, preserve under nitrogen at –20°C.

Biotin Solution:

Composition per 10.0mL:

Biotin 0.01mg

Preparation of Biotin Solution: Add biotin to 10.0mL of absolute ethanol. Mix thoroughly.

Preparation of Medium: Add ascolectin to 500.0mL of distilled/deionized water. Gently heat to 80°C. Mix thoroughly. Add other components, except artificial seawater and vitamin solution, to distilled/deionized water and bring volume to 831.0mL. Mix thoroughly. Adjust pH to 7.2. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 167.0mL of sterile artificial seawater and 2.0mL of sterile vitamin solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Potomacus pottsii*.

PP Starch Medium

Composition per liter:

Polypeptone™ 10.0g
Soluble starch..... 10.0g
K₂HPO₄..... 3.0g
MgSO₄·7H₂O 1.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Bacillus mycoides*.

PPB, Modified Caldwell and Bryant

Composition per liter:

Pancreatic digest of casein..... 2.0g
Yeast extract..... 2.0g
Cellobiose 1.0g
Glucose 1.0g
Maltose..... 1.0g
Starch 1.0g
Resazurin 1.0mg
Rumen fluid, clarified..... 150.0mL
Mineral solution I..... 100.0mL
Mineral solution II..... 100.0mL
Na₂CO₃ solution..... 50.0mL
Hemin solution..... 10.0mL
L-Cysteine-HCl solution..... 10.0mL
Volatile fatty acid mixture..... 3.1mL

pH 6.8 ± 0.2 at 25°C

Mineral Solution I:

Composition per 100.0mL:

K₂HPO₄..... 0.2g

Preparation of Mineral Solution I: Add K₂HPO₄ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Mineral Solution II:

Composition per 100.0mL:

NaCl 0.4g
(NH₄)₂ SO₄..... 0.4g
KH₂PO₄..... 0.3g
MgSO₄·7H₂O 0.09g
CaCl₂..... 0.05g

Preparation of Mineral Solution II: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Na₂CO₃ Solution:

Composition per 100.0mL:

Na₂CO₃ 8.0g

Preparation of Na₂CO₃ Solution: Add Na₂CO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Hemin Solution:

Composition per 100.0mL:

Hemin 1.0g
NaOH (1N solution)..... 10.0mL

Preparation of Hemin Solution: Add components to 100.0mL of distilled/deionized water. Mix thoroughly.

L-Cysteine-HCl Solution:

Composition per 10.0mL:

L-Cysteine-HCl 0.25g

Preparation of L-Cysteine-HCl Solution: Add L-cysteine-HCl to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C.

Volatile Fatty Acid Mixture:

Composition per 31.0mL:

Acetic acid 17.0mL
Propionic acid 6.0mL
Butyric acid..... 4.0mL
DL-α-Methylbutyric acid 1.0mL
Isobutyric acid 1.0mL
Isovaleric acid..... 1.0mL
n-Valeric acid..... 1.0mL

Preparation of Volatile Fatty Acid Mixture: Combine components. Mix thoroughly. Store under 100% N₂.

Preparation of Medium: Prepare and dispense medium under 100% CO₂. Add components, except L-cysteine-HCl solution and Na₂CO₃ solution, to distilled/deionized water and bring volume to 930.0mL. Mix thoroughly. Sparge with 100% CO₂. Adjust pH to 6.8 with 1N NaOH. Distribute anaerobically 9.3mL volumes into Hungate tubes. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 0.2mL of sterile L-cysteine-HCl solution and 0.5mL of sterile Na₂CO₃ solution. Check that final pH is 6.8. (Note: if not properly gassed with 100% CO₂, the medium pH can be as high as 9.5.)

Use: For the cultivation of *Anaerovibrio lipolytica*, *Bacteroides* species, *Butyrivibrio crossotus*, *Butyrivibrio fibrisolvens*, *Eubacterium cellulosolvans*, *Eubacterium ruminantium*, *Fibrobacter succinogenes*, *Lachnospira multiparus*, *Megasphaera elsdenii*, *Rhodococcus torques*, *Ruminobacter amylophilus*, *Ruminococcus albus*, *Ruminococcus bromii*, *Ruminococcus flavifaciens*, *Selenomonas ruminantium*, *Succinomonas amylolytica*, *Succinovibrio dextrinisolvans*, and *Veillonella parvula*.

**PPES-II Agar Medium
(DSMZ Medium 1075)**

Composition per liter:

Agar 15.0g
Peptone 2.0g
Proteose peptone No. 3 1.0g
Soytone 1.0g
Yeast extract 1.0g

Fe(III)-EDTA	0.1g
Artificial seawater.....	1.0L
pH 7.8 ± 0.2 at 25°C	

Artificial Seawater:**Composition per 100.0mL:**

NaCl	30.0g
MgCl ₂ ·6H ₂ O.....	10.8g
MgSO ₄ ·7H ₂ O.....	5.4g
CaCl ₂ ·2H ₂ O.....	1.0g
KCl.....	0.7g

Preparation of Artificial Seawater: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to the artificial seawater and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.8. Distribute into tubes or flasks. Gently heat while stirring and bring to boiling. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Pour into Petri dishes or leave in tubes.

Use: For the cultivation of *Roseivivax halotolerans*.

PPES II Medium**Composition per liter:**

Agar	15.0g
Polypeptone™.....	2.0g
Yeast extract.....	1.0g
Papaic digest of soybean meal.....	1.0g
Proteose peptone No. 3.....	1.0g
Ferric phosphate, soluble.....	0.1g
Marine mud extract.....	100.0mL

pH 7.6 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Erythrobacter longus*, *Haloferax mediterranei*, and *Roseobacter denitrificans*.

PPGA Medium**Composition per liter:**

Agar	18.0g
Glucose	5.0g
Peptone.....	5.0g
NaCl.....	3.0g
Na ₂ HPO ₄	1.2g
KH ₂ PO ₄	0.5g
Potato decoction.....	1.0L

pH 7.0 ± 0.2 at 25°C

Potato Decoction:**Composition per liter:**

Potatoes.....	200.0g
---------------	--------

Preparation of Potato Decoction: Peel and dice potatoes. Add 1.0L of distilled/deionized water. Gently heat and bring to boiling. Continue boiling for 20 min. Filter through two layers of cheesecloth. Bring volume of filtrate to 1.0L with distilled/deionized water.

Preparation of Medium: Combine components. Gently heat and bring to boiling. Adjust pH to 7.0. Distribute into tubes or flasks. Au-

toclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Burkholderia glumae* and *Burkholderia plantarii*.

PPLO Agar**Composition per liter:**

Agar	14.0g
Beef heart, infusion from 50g.....	6.0g
NaCl.....	5.0g
<i>Mycoplasma</i> supplement solution.....	300.0mL

pH 7.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Mycoplasma* Supplement Solution:*Composition per 300.0mL:**

Horse serum, desiccated.....	16.0g
Yeast extract.....	0.1g

Preparation of *Mycoplasma* Supplement Solution: Add components to distilled/deionized water and bring volume to 300.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except *Mycoplasma* supplement solution, to distilled/deionized water and bring volume to 700.0mL. Mix thoroughly. Gently heat and bring to boiling. Boil for 1 min. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile *Mycoplasma* supplement solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Mycoplasma* species.

PPLO Agar**Composition per liter:**

Agar	14.0g
Pancreatic digest of casein.....	7.0g
NaCl.....	5.0g
Beef extract.....	3.0g
Yeast extract.....	3.0g
Beef heart, solids from infusion.....	2.0g
<i>Mycoplasma</i> supplement solution.....	300.0mL

pH 7.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Mycoplasma* Supplement Solution:*Composition per 300.0mL:**

Horse serum.....	200.0mL
Yeast extract (fresh autolysate).....	100.0mL
Thallium acetate.....	50.0 mg

Preparation of *Mycoplasma* Supplement Solution: Combine components. Mix thoroughly. Filter sterilize

Preparation of Medium: Add components, except *Mycoplasma* supplement solution, to distilled/deionized water and bring volume to 700.0mL. Mix thoroughly. Gently heat and bring to boiling. Boil for 1 min. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile *Mycoplasma* supplement solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Mycoplasma* species.

PPLO Agar

Composition per liter:

Beef heart, infusion from	50.0g
Agar	14.0g
Peptone.....	10.0g
NaCl	5.0g
Bovine serum	100.0mL

pH 7.8 ± 0.2 at 25°C

Preparation of Medium: Add components, except bovine serum, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile bovine serum. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of *Mycoplasma* species (pleuropneumonia-like organisms).

PPLO Agar

Composition per liter:

Beef heart, infusion from	50.0g
Agar	14.0g
Peptone.....	10.0g
NaCl	5.0g
Ascitic fluid.....	250.0mL

pH 7.8 ± 0.2 at 25°C

Preparation of Medium: Add components, except ascitic fluid, to distilled/deionized water and bring volume to 750.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile ascitic fluid. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of *Mycoplasma* species (pleuropneumonia-like organisms).

PPLO Agar Base

See: Mycoplasma Agar Base

PPLO Agar with Additives for Mycoplasma

Composition per 1010.0mL:

Agar	15.0g
Arginine	1.74g
Glutamine.....	1.46g
Phenol Red.....	0.02g
PPLO broth	700.0mL
Horse serum, not inactivated	200.0mL
Yeast extract solution, fresh	100.0mL
Vitamins in Eagle’s medium, 100X	10.0mL

pH 7.1 ± 0.2 at 25°C

PPLO Broth:

Composition per liter:

Beef heart, infusion from	50.0g
Peptone.....	10.0g
NaCl	5.0g

Preparation of PPLO Broth: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling.

Yeast Extract Solution:

Composition per 300.0mL:

Baker’s yeast, live, pressed, starch-free.....	75.0g
--	-------

Preparation of Yeast Extract Solution: Add the live Baker’s yeast to 300.0mL of distilled/deionized water. Autoclave for 90 min at 15 psi pressure–121°C. Allow to stand. Remove supernatant solution. Adjust pH to 6.6–6.8. Filter sterilize.

Vitamins in Eagle’s Medium, 100X:

Composition per liter:

Inositol.....	2.0mg
Calcium pantothenate	1.0mg
Choline chloride.....	1.0mg
Folic acid	1.0mg
Nicotinamide.....	1.0mg
Pyridoxal	1.0mg
Thiamine-HCl	1.0mg
Riboflavin	0.1mg

Preparation of Vitamins in Eagle’s Medium, 100X: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components—except fresh yeast extract solution, horse serum, and vitamins in Eagle’s medium, 100X—to distilled/deionized water and bring volume to 690.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile fresh yeast extract solution, horse serum, and vitamins in Eagle’s medium, 100X. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Mycoplasma arginini* and *Spiroplasma apis*.

PPLO Agar, pH 7.6 with Additives for Mycoplasma

Composition per liter:

Agar	15.0g
L-Cysteine-HCl-H ₂ O	1.0g
PPLO broth	700.0mL
Horse serum, not inactivated	200.0mL
Yeast extract solution, fresh.....	100.0mL

pH 7.6 ± 0.2 at 25°C

PPLO Broth:

Composition per liter:

Beef heart, infusion from.....	50.0g
Peptone	10.0g
NaCl.....	5.0g

Preparation of PPLO Broth: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling.

Yeast Extract Solution:

Composition per 300.0mL:

Baker’s yeast, live, pressed, starch-free.....	75.0g
--	-------

Preparation of Yeast Extract Solution: Add the live Baker’s yeast to 300.0mL of distilled/deionized water. Autoclave for 90 min at 15 psi pressure–121°C. Allow to stand. Remove supernatant solution. Adjust pH to 6.6–6.8. Filter sterilize.

Preparation of Medium: Add components, except fresh yeast extract solution and horse serum, to distilled/deionized water and bring volume to 700.0mL. Mix thoroughly. Gently heat and bring to boiling.

Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile fresh yeast extract solution and horse serum. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Mycoplasma faucium*.

PPLO Broth

Composition per liter:

Beef heart, infusion from 50g	6.0g
NaCl	5.0g
<i>Mycoplasma</i> supplement solution.....	300.0mL
pH 7.8 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Mycoplasma Supplement Solution:

Composition per 300.0mL:

Horse serum, desiccated	16.0g
Yeast extract.....	0.1g

Preparation of *Mycoplasma* Supplement Solution: Add components to distilled/deionized water and bring volume to 300.0mL. Mix thoroughly. Filter sterilize

Preparation of Medium: Add components, except *Mycoplasma* supplement solution, to distilled/deionized water and bring volume to 700.0mL. Mix thoroughly. Gently heat and bring to boiling. Boil for 1 min. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile *Mycoplasma* supplement solution. Mix thoroughly.

Use: For the cultivation of *Mycoplasma* species.

PPLO Broth

Composition per liter:

Pancreatic digest of casein.....	7.0g
NaCl	5.0g
Beef extract	3.0g
Yeast extract.....	3.0g
Beef heart, solids from infusion.....	2.0g
<i>Mycoplasma</i> supplement solution.....	300.0mL
pH 7.8 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Mycoplasma Supplement Solution:

Composition per 300.0mL:

Horse serum	200.0mL
Yeast extract (fresh autolysate).....	100.0mL
Thallium acetate.....	50.0 mg

Preparation of *Mycoplasma* Supplement Solution: Combine components. Mix thoroughly. Filter sterilize

Preparation of Medium: Add components, except *Mycoplasma* supplement solution, to distilled/deionized water and bring volume to 700.0mL. Mix thoroughly. Gently heat and bring to boiling. Boil for 1 min. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile *Mycoplasma* supplement solution. Mix thoroughly.

Use: For the cultivation of *Mycoplasma* species.

PPLO Broth, pH 7.6 with Additives for *Mycoplasma*

Composition per liter:

L-Cysteine-HCl-H ₂ O.....	1.0g
PPLO broth	700.0mL
Horse serum, not inactivated	200.0mL
Yeast extract solution, fresh.....	100.0mL
pH 7.6 ± 0.2 at 25°C	

PPLO Broth:

Composition per liter:

Beef heart, infusion from.....	50.0g
Peptone	10.0g
NaCl.....	5.0g

Preparation of PPLO Broth: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling.

Yeast Extract Solution:

Composition per 300.0mL:

Baker's yeast, live, pressed, starch-free.....	75.0g
--	-------

Preparation of Yeast Extract Solution: Add the live Baker's yeast to 300.0mL of distilled/deionized water. Autoclave for 90 min at 15 psi pressure–121°C. Allow to stand. Remove supernatant solution. Adjust pH to 6.6–6.8. Filter sterilize.

Preparation of Medium: Add components, except fresh yeast extract solution and horse serum, to distilled/deionized water and bring volume to 700.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile fresh yeast extract solution and horse serum. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Mycoplasma faucium*.

PPLO Broth with Additives for *Mycoplasma*

Composition per 1010.0mL:

Arginine	1.74g
Glutamine	1.46g
Phenol Red.....	0.02g
PPLO broth	700.0mL
Horse serum, not inactivated	200.0mL
Yeast extract solution, fresh.....	100.0mL
Vitamins in Eagle's medium, 100X.....	10.0mL
pH 7.1 ± 0.2 at 25°C	

PPLO Broth:

Composition per liter:

Beef heart, infusion from.....	50.0g
Peptone	10.0g
NaCl.....	5.0g

Preparation of PPLO Broth: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling.

Yeast Extract Solution:

Composition per 300.0mL:

Baker's yeast, live, pressed, starch-free.....	75.0g
--	-------

Preparation of Yeast Extract Solution: Add the live Baker's yeast to 300.0mL of distilled/deionized water. Autoclave for 90 min at 15 psi pressure–121°C. Allow to stand. Remove supernatant solution. Adjust pH to 6.6–6.8. Filter sterilize.

Vitamins in Eagle's Medium, 100X:**Composition per liter:**

Inositol	2.0mg
Calcium pantothenate	1.0mg
Choline chloride	1.0mg
Folic acid	1.0mg
Nicotinamide	1.0mg
Pyridoxal	1.0mg
Thiamine-HCl	1.0mg
Riboflavin	0.1mg

Preparation of Vitamins in Eagle's Medium, 100X: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components—except fresh yeast extract solution, horse serum, and vitamins in Eagle's medium, 100X—to distilled/deionized water and bring volume to 690.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile fresh yeast extract solution, horse serum, and vitamins in Eagle's medium, 100X. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Mycoplasma arginini* and *Spiroplasma apis*.

PPLO Broth with Bovine Serum**Composition per liter:**

Beef heart, infusion from	50.0g
Peptone	10.0g
NaCl	5.0g
Phenol Red (1% solution)	2.0mL
Yeast extract solution, fresh	100.0mL
Glucose solution	25.0mL
Bovine serum, filter sterilized	10.0mL

pH 7.5 ± 0.2 at 25°C

Yeast Extract Solution:**Composition per 300.0mL:**

Baker's yeast, live, pressed, starch-free	75.0g
---	-------

Preparation of Yeast Extract Solution: Add the live Baker's yeast to 300.0mL of distilled/deionized water. Autoclave for 90 min at 15 psi pressure–121°C. Allow to stand. Remove supernatant solution. Adjust pH to 6.6–6.8. Filter sterilize.

Glucose Solution:**Composition per 100.0mL:**

D-Glucose	20.0g
-----------------	-------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components—except fresh yeast extract solution, glucose solution, and bovine serum—to distilled/deionized water and bring volume to 865.0mL. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.5. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile fresh yeast extract solution, glucose solution, and bovine serum. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Acholeplasma morum*.

PPLO Broth with Crystal Violet**Composition per liter:**

Beef heart, infusion from	50.0g
Peptone	10.0g
NaCl	5.0g
Crystal Violet	0.01g
Ascitic fluid	250.0mL
Chapman tellurite solution	2.85mL

pH 7.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Chapman Tellurite Solution:**Composition per 100.0mL:**

K ₂ TeO ₃	1.0g
---------------------------------------	------

Preparation of Chapman Tellurite Solution: Add K₂TeO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Caution: Potassium tellurite is toxic.

Preparation of Medium: Add components, except ascitic fluid and Chapman tellurite solution, to distilled/deionized water and bring volume to 747.15mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to less than 37°C. Aseptically add sterile ascitic fluid and 2.85mL of Chapman tellurite solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the isolation of *Mycoplasma* species from clinical specimens.

PPLO Broth without Crystal Violet**Composition per liter:**

Beef heart, infusion from	50.0g
Peptone	10.0g
NaCl	5.0g
Thallium acetate (optional)	0.5g
Penicillin (optional)	100,000U
Ascitic fluid	250.0mL

pH 7.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components, except ascitic fluid, to distilled/deionized water and bring volume to 750.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to less than 37°C. Aseptically add sterile ascitic fluid. If desired, 0.5g of thallium acetate or 100,000U of penicillin may be added for a more selective medium. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the enrichment of pleuro-pneumonia-like organisms (PPOs) and *Mycoplasma* species from clinical specimens.

PPLO Broth without Crystal Violet with Calf Serum, Fresh Yeast Extract, and Sodium Acetate**Composition per liter:**

Beef heart, infusion from	50.0g
Peptone	10.0g
Sodium acetate	9.0g
NaCl	5.0g

Yeast extract solution, fresh.....	250.0mL
Calf serum.....	100.0mL
pH 7.8 ± 0.2 at 25°C	

Yeast Extract Solution:**Composition per 300.0mL:**

Baker's yeast, live, pressed, starch-free.....	75.0g
--	-------

Preparation of Yeast Extract Solution: Add the live Baker's yeast to 300.0mL of distilled/deionized water. Autoclave for 90 min at 15 psi pressure–121°C. Allow to stand. Remove supernatant solution. Adjust pH to 6.6–6.8. Filter sterilize.

Preparation of Medium: Add components, except fresh yeast extract solution and calf serum, to distilled/deionized water and bring volume to 550.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile fresh yeast extract solution and calf serum. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Mycoplasma* species.

PPLO Broth without Crystal Violet with Horse Serum**Composition per liter:**

Beef heart, infusion from.....	50.0g
Peptone.....	10.0g
NaCl.....	5.0g
Horse serum, inactivated.....	200.0mL
pH 7.8 ± 0.2 at 25°C	

Preparation of Medium: Add components, except horse serum, to distilled/deionized water and bring volume to 800.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile horse serum. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Acholeplasma* species and *Mycoplasma* species.

PPLO Broth without Crystal Violet with Horse Serum and Fresh Yeast Extract**Composition per liter:**

Beef heart, solids from infusion.....	50.0g
Peptone.....	10.0g
NaCl.....	5.0g
Yeast extract solution, fresh.....	250.0mL
Horse serum.....	200.0mL
pH 7.8 ± 0.2 at 25°C	

Yeast Extract Solution:**Composition per 300.0mL:**

Baker's yeast, live, pressed, starch-free.....	75.0g
--	-------

Preparation of Yeast Extract Solution: Add the live Baker's yeast to 300.0mL of distilled/deionized water. Autoclave for 90 min at 15 psi pressure–121°C. Allow to stand. Remove supernatant solution. Adjust pH to 6.6–6.8. Filter sterilize.

Preparation of Medium: Add components, except fresh yeast extract solution and horse serum, to distilled/deionized water and bring volume to 550.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile fresh yeast extract solution and horse serum. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Mycoplasma putrefaciens*.

PPLO Broth without Crystal Violet with Horse Serum, Glucose, and Fresh Yeast Extract**Composition per liter:**

Beef heart, infusion from.....	50.0g
Peptone.....	10.0g
Glucose.....	5.0g
NaCl.....	5.0g
Yeast extract solution, fresh.....	250.0mL
Horse serum.....	200.0mL
pH 7.8 ± 0.2 at 25°C	

Yeast Extract Solution:**Composition per 300.0mL:**

Baker's yeast, live, pressed, starch-free.....	75.0g
--	-------

Preparation of Yeast Extract Solution: Add the live Baker's yeast to 300.0mL of distilled/deionized water. Autoclave for 90 min at 15 psi pressure–121°C. Allow to stand. Remove supernatant solution. Adjust pH to 6.6–6.8. Filter sterilize.

Preparation of Medium: Add components, except fresh yeast extract solution and horse serum, to distilled/deionized water and bring volume to 550.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile fresh yeast extract solution and horse serum. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Mycoplasma putrefaciens*, *Mycoplasma collis*, and *Mycoplasma cricetuli*.

PPLO Broth without Crystal Violet with Sodium Acetate, Fresh Yeast Extract, and Calf Serum (ATCC Medium 843)**Composition per liter:**

Beef heart, infusion from.....	50.0g
Peptone.....	10.0g
NaCl.....	5.0g
Sodium acetate.....	1.0g
Calf serum.....	100.0mL
Yeast extract solution, fresh.....	50.0mL
pH 7.8 ± 0.2 at 25°C	

Yeast Extract Solution:**Composition per 300.0mL:**

Baker's yeast, live, pressed, starch-free.....	75.0g
--	-------

Preparation of Yeast Extract Solution: Add the live Baker's yeast to 300.0mL of distilled/deionized water. Autoclave for 90 min at 15 psi pressure–121°C. Allow to stand. Remove supernatant solution. Adjust pH to 6.6–6.8. Filter sterilize.

Preparation of Medium: Add components, except fresh yeast extract solution and calf serum, to distilled/deionized water and bring volume to 850.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add sterile fresh yeast extract solution and calf serum. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Acholeplasma laidlawii*.

PPLO Broth with Penicillin**Composition per 1010.0mL:**

Pancreatic digest of casein.....	7.0g
NaCl.....	5.0g
Beef extract.....	3.0g
Yeast extract.....	3.0g

Beef heart, solids from infusion.....	2.0g
<i>Mycoplasma</i> supplement solution.....	300.0mL
Penicillin solution	10.0mL
pH 7.8 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

***Mycoplasma* Supplement Solution:**

Composition per 300.0mL:

Horse serum	200.0mL
Yeast extract (fresh autolysate).....	100.0mL
Thallium acetate.....	50.0 mg

Preparation of *Mycoplasma* Supplement Solution: Combine components. Mix thoroughly. Filter sterilize.

Penicillin Solution:

Composition per 10.0mL:

Penicillin	500,000U
------------------	----------

Preparation of Penicillin Solution: Add penicillin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except *Mycoplasma* supplement solution and penicillin solution, to distilled/deionized water and bring volume to 700.0mL. Mix thoroughly. Gently heat and bring to boiling. Boil for 1 min. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile *Mycoplasma* supplement solution and penicillin solution. Mix thoroughly.

Use: For the selective cultivation of *Mycoplasma* species.

**PPNG Selective Medium
(Penicillinase-Producing *Neisseria gonorrhoeae*
Medium)**

Composition per plate:

Quadrant I	10.0mL
Quadrant II.....	10.0mL

Quadrant I:

Composition per 10.0mL:

Martin Lewis agar	10.0mL
-------------------------	--------

Quadrant II:

Composition per 10.0mL:

Martin Lewis agar, enriched	10.0mL
-----------------------------------	--------

Use: For the differentiation and presumptive identification of penicillinase-producing strains of *Neisseria gonorrhoeae*. The PPNG selective medium is a two-sectored plate, each containing a different medium. See Martin-Lewis agars for additional information.

PPT Agar, 1M

Composition per liter:

NaCl	58.4g
Agar	18.0g
Proteose peptone No. 3	10.0g
Pancreatic digest of casein.....	10.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Pseudomonas* species.

PPYG Medium

Composition per liter:

Agar	15.0g
Glucose	5.0g
Peptone	5.0g
NaCl.....	1.5g
Na ₂ HPO ₄ ·12H ₂ O.....	1.5g
Yeast extract.....	1.5g
MgCl ₂ ·6H ₂ O	0.1g
Na ₂ CO ₃ solution	50.0mL
Glucose solution	50.0mL

pH 10.5–11.0 at 25°C

Na₂CO₃ Solution:

Composition per 50.0mL:

Na ₂ CO ₃	5.03g
---------------------------------------	-------

Preparation of Na₂CO₃ Solution: Add Na₂CO₃ to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize.

Glucose Solution:

Composition per 50.0mL:

D-Glucose.....	5.0g
----------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except Na₂CO₃ solution and glucose solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile Na₂CO₃ solution and glucose solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Exiguobacterium aurantiacum*.

PRAS-PYG with Tween™ 80

Composition per 1054.25mL:

Glucose	10.0g
Yeast extract.....	10.0g
Peptone	5.0g
Pancreatic digest of casein.....	5.0g
L-Cysteine·HCl·H ₂ O	0.5g
Salts solution.....	40.0mL
Hemin solution.....	10.0mL
Resazurin 0.025%.....	4.0mL
Tween™ 80.....	0.25mL
Vitamin K ₁ solution	0.2mL

pH 7.0 ± 0.2 at 25°C

Salts Solution:

Composition per liter:

NaHCO ₃	10.0g
NaCl.....	2.0g
K ₂ HPO ₄	1.0g
KH ₂ PO ₄	1.0g
CaCl ₂ (anhydrous).....	0.2g
MgSO ₄	0.2g

Preparation of Salts Solution: Dissolve CaCl₂ and MgSO₄ in 300.0mL of distilled water. Add 500.0mL of water, and add the remaining salts while swirling slowly. Add 200.0mL of distilled water, mix, and store at 4°C.

Hemin Solution:**Composition per 100.0mL:**

Hemin.....	50.0mg
NaOH (1N solution).....	1.0mL

Preparation of Hemin Solution: Dissolve hemin in 1.0mL of 1N NaOH solution. Bring volume to 100.0mL with distilled/deionized water. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Vitamin K₁ Solution:**Composition per 30.15mL:**

Ethanol (95% solution).....	30.0mL
Vitamin K ₁	0.15mL

Preparation of Vitamin K₁ Solution: Combine components. Mix thoroughly. Store at 4°C in the dark. Discard solution after 1 month.

Preparation of Medium: Prepare and dispense medium under 97% N₂ + 3% H₂. Add components, except glucose, Tween™ 80, and L-cysteine-HCl·H₂O, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 3 min. Cool to room temperature while sparging with 97% N₂ + 3% H₂. Add glucose, Tween™ 80, and L-cysteine-HCl·H₂O. Mix thoroughly. Anaerobically distribute into sterile tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Clostridium puniceum*.

**Pre-Enrichment HiVeg Broth Base
with Magnesium Sulfate and Calcium Chloride**

Composition per liter:

Yeast extract.....	20.0g
Plant special peptone.....	10.0g
Na ₂ HPO ₄	7.1g
KCl.....	1.0g
NaCl.....	1.0g
Magnesium sulfate solution.....	10.0mL
Calcium chloride solution.....	10.0mL

pH 8.3 ± 0.2 at 25°C

Source: This medium, without magnesium sulfate and calcium chloride solutions, is available as a premixed powder from HiMedia.

Magnesium Sulfate Solution:**Composition per 10.0mL:**

MgSO ₄	0.01g
-------------------------	-------

Preparation of Magnesium Sulfate Solution: Add MgSO₄ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Calcium Chloride Solution:**Composition per 10.0mL:**

CaCl ₂	0.01g
-------------------------	-------

Preparation of Calcium Chloride Solution: Add CaCl₂ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except magnesium chloride solution and calcium chloride solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL of sterile magnesium sulfate solution and 10.0mL of sterile calcium chloride solution. Mix thoroughly. Aseptically distribute to sterile tubes or flasks.

Use: For the isolation, enrichment, and cultivation of *Yersinia enterocolitica* from foods.

**Preenrichment Medium
(PEM)**

Composition per liter:

Yeast extract.....	20.0g
Special peptone.....	10.0g
Na ₂ HPO ₄	7.1g
NaCl.....	1.0g
KCl.....	1.0g
MgSO ₄ ·7H ₂ O solution.....	10.0mL
CaCl ₂ ·2H ₂ O solution.....	10.0mL

pH 8.3 ± 0.2 at 25°C

MgSO₄·7H₂O Solution:**Composition per 10.0mL:**

MgSO ₄ ·7H ₂ O.....	0.01g
---	-------

Preparation of MgSO₄·7H₂O Solution: Add MgSO₄·7H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

CaCl₂·2H₂O Solution:

CaCl ₂ ·2H ₂ O.....	0.01g
---	-------

Preparation of CaCl₂·2H₂O Solution: Add the CaCl₂·2H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except MgSO₄·7H₂O solution and CaCl₂·2H₂O solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Adjust pH to 8.3. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile MgSO₄·7H₂O solution and CaCl₂·2H₂O solution. Mix thoroughly. Aseptically distribute into sterile tubes.

Use: For the isolation and enrichment of *Yersinia enterocolitica* from foods.

Preferred Medium

Composition per liter:

Peptone.....	20.0g
Glucose.....	20.0g
Agar.....	15.0g
Casamino acids.....	10.0g
Yeast extract.....	10.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Kluyveromyces lactis*.

**Presence-Absence Broth
(P-A Broth)**

Composition per liter:

Pancreatic digest of casein.....	10.0g
Lactose.....	7.5g
Pancreatic digest of gelatin.....	5.0g
Beef extract.....	3.0g
NaCl.....	2.5g
K ₂ HPO ₄	1.375g
KH ₂ PO ₄	1.375g

Sodium lauryl sulfate	0.05g
Bromcresol Purple	8.5mg
pH 6.8 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 333.0mL. Mix thoroughly. Distribute into screw-capped 250.0mL milk dilution bottles in 50.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the detection of coliform bacteria in water from treatment plants or distribution systems using the presence-absence coliform test.

Preston Blood-Free Medium
See: *Campylobacter* Charcoal
Differential Agar

Preston Enrichment Broth

Composition per liter:

Beef extract	10.0g
Peptone.....	10.0g
NaCl	5.0g
Horse blood, lysed	50.0mL
Antibiotic solution	10.0mL
pH 7.5 ± 0.2 at 25°C	

Antibiotic Solution:

Composition per 10.0mL:

Cycloheximide	0.1g
Rifampicin	0.01g
Trimethoprim lactate.....	0.01g
Polymyxin B	5000U

Preparation of Antibiotic Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: Add components, except horse blood and antibiotic solution, to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile horse blood and antibiotic solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the isolation and enrichment of *Campylobacter* species from foods.

Preston HiVeg Agar Base
with Horse Blood and Antibiotics

Composition per liter:

Agar	12.0g
Plant extract	10.0g
Plant peptone.....	10.0g
NaCl	5.0g
Horse blood, lysed	50.0mL
Antibiotic solution	10.0mL
pH 7.5 ± 0.2 at 25°C	

Source: This medium, without horse blood and antibiotics, is available as a premixed powder from HiMedia.

Antibiotic Solution:

Composition per 10.0mL:

Cycloheximide	0.1g
Rifampicin	0.01g
Trimethoprim lactate.....	0.01g
Polymyxin B	5000U

Preparation of Antibiotic Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: Add components, except horse blood and antibiotic solution, to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile horse blood and antibiotic solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the isolation and enrichment of *Campylobacter* species from foods.

Preston's *Campylobacter* Medium
See: *Campylobacter* Selective Medium, Preston's

Presumpto Media

Composition per plate:

Quadrant I	5.0mL
Quadrant II.....	5.0mL
Quadrant III	5.0mL
Quadrant IV	5.0mL

Quadrant I:

Composition per 5.0mL:

Lombard-Dowell agar	5.0mL
---------------------------	-------

Quadrant II:

Composition per 5.0mL:

Lombard-Dowell bile agar.....	5.0mL
-------------------------------	-------

Quadrant III:

Composition per 5.0mL:

Lombard-Dowell egg yolk agar.....	5.0mL
-----------------------------------	-------

Quadrant IV:

Composition per 5.0mL:

Lombard-Dowell esculin agar	5.0mL
-----------------------------------	-------

Preparation of Quadrant Media: Sterilize Lombard-Dowell Agar by autoclaving for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Add additional components as filter sterilized solutions. Mix and distribute as 5.0mL aliquots into quadrants.

Use: For the differentiation and presumptive identification of anaerobic bacteria. The Presumpto media is a four-sectored plate each containing a different medium.

Prey Seawater Broth
(DSMZ Medium 1013)

Composition per liter:

Artificial seawater.....	700.0mL
Trace elements solution	10.0mL
pH 7.7 ± 0.3 at 25°C	

Artificial Seawater:**Composition per liter:**

NaCl	27.7g
MgSO ₄ ·7H ₂ O	7.0g
MgCl ₂ ·6H ₂ O	5.5g
CaCl ₂ ·2H ₂ O	2.25g
KCl	0.65g
NaBr	0.1g
H ₃ BO ₃	30.0mg
SrCl ₂ ·6H ₂ O	15.0mg
Citric acid	10.0mg
KI	0.05mg

Preparation of Artificial Seawater: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Trace Elements Solution:**Composition per liter:**

MgSO ₄ ·7H ₂ O	3.0g
Nitrilotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·2H ₂ O	0.5g
CoSO ₄ ·7H ₂ O	0.18g
ZnSO ₄ ·7H ₂ O	0.18g
CaCl ₂ ·2H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g
KAl(SO ₄) ₂ ·12H ₂ O	0.02g
CuSO ₄ ·5H ₂ O	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g
NiCl ₂ ·6H ₂ O	0.025g
Na ₂ SeO ₃ ·5H ₂ O	0.3mg

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.7. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Grow prey bacterium *E. coli* DSM 15416) on agar plates using marine agar 2216. For 50mL prey seawater broth use one 24 h old agar plate and wash off grown cells in 3.0–5.0mL artificial seawater. The prey seawater broth should contain approx. 10⁷ to 10⁹ cells. Inoculate the medium immediately after preparation and incubate the suspension with shaking until a decrease in turbidity is visible.

Use: For the cultivation of *Bacteriovorax litoralis*.

Pril Xylose Ampicillin Agar (PXA Agar)

Composition per liter:

Agar	15.0g
Xylose	10.0g
Pancreatic digest of gelatin	5.0g
Beef extract	3.0g
Pril	0.2g
Ampicillin	0.03g
Phenol Red	0.025g

pH 6.8 ± 0.2 at 25°C

Note: Pril is a quaternary ammonium detergent composed of a mixture of primary alkyl sulfate, alkyl-benzyl sulfonate, and salts. It is available from Böhme Fettchemie GmbH, Düsseldorf, Germany.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the selective isolation and cultivation of *Aeromonas hydrophila*.

Pringsheim's Medium

Composition per liter:

KNO ₃	0.2g
(NH ₄) ₂ HPO ₄	0.02g
MgSO ₄ ·7H ₂ O	0.01g
CaCl ₂ ·2H ₂ O	0.005g
FeCl ₂	0.5mg

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of cyanobacteria.

Propionibacterium Agar

Composition per liter:

Agar	15.0g
Casein peptone, tryptic digest	10.0g
Sodium lactate	10.0g
Yeast extract	5.0g

pH 7.0–7.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0–7.2. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Propionibacterium acidipropionici* and *Propionibacterium thoenii*.

Propionibacterium Agar

Composition per liter:

Agar	15.0g
Pancreatic digest of casein	10.0g
Sodium lactate	10.0g
Yeast extract	5.0g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Aerococcus viridans*, *Arthrobacter globiformis*, *Arthrobacter* species, *Brachybacterium faecium*, *Brochothrix campestris*, *Carnobacterium divergens*, *Carnobacterium gallinarum*, *Carnobacterium mobile*, *Carnobacterium piscicola*, *Clavibacter michiganensis*, *Clavibacter* species, *Corynebacterium amycolatum*, *Corynebacterium cystitidis*, *Corynebacterium jeikeium*, *Corynebacterium matruchotii*, *Corynebacterium mycetoides*, *Corynebacterium pilosum*, *Corynebacterium* species, *Corynebacterium urealyticum*, *Corynebacterium xerosis*, *Deinococcus radiophilus*, *Dermabacter hominus*, *Enterococcus avium*, *Enterococcus casseliflavus*, *Enterococcus cecorum*, *Enterococcus dispar*, *Enterococcus*

durans, *Enterococcus faecalis*, *Enterococcus faecium*, *Enterococcus gallinarum*, *Enterococcus malodoratus*, *Enterococcus mundtii*, *Enterococcus pseudoavium*, *Enterococcus raffinosus*, *Enterococcus saccharolyticus*, *Enterococcus seriolicida*, *Enterococcus solitarius*, *Enterococcus sulfureus*, *Gluconobacter oxydans*, *Kurthia sibirica*, *Lactobacillus maltaromicus*, *Lactococcus garvieae*, *Lactococcus lactis*, *Lactococcus piscium*, *Lactococcus plantarum*, *Lactococcus raffinolactis*, *Microbacterium arborescens*, *Micrococcus luteus*, *Pediococcus urinaequi*, *Pseudomonas putida*, *Rhodococcus equi*, *Rhodococcus maris*, *Rhodococcus* species, *Staphylococcus aureus*, *Staphylococcus capitis*, *Staphylococcus cohnii*, *Staphylococcus delphini*, *Staphylococcus lentus*, *Staphylococcus lugdunensis*, *Staphylococcus muscae*, *Staphylococcus schleiferi*, *Staphylococcus simulans*, *Staphylococcus xylosus*, *Streptococcus acidominimus*, *Streptococcus alactolyticus*, *Streptococcus anginosus*, *Streptococcus canis*, *Streptococcus cricetus*, *Streptococcus downei*, *Streptococcus dysgalactiae*, *Streptococcus equi*, *Streptococcus ferus*, *Streptococcus gordonii*, *Streptococcus hyointestinalis*, *Streptococcus macacae*, *Streptococcus mitis*, *Streptococcus mutans*, *Streptococcus parasanguis*, *Streptococcus parauberis*, *Streptococcus pneumoniae*, *Streptococcus porcinus*, *Streptococcus pyogenes*, *Streptococcus rattus*, *Streptococcus salivarius*, *Streptococcus sanguis*, *Streptococcus sobrinus*, *Streptococcus* species, *Streptococcus uberis*, *Streptococcus vestibularis*, *Thermoactinomyces intermedius*, *Vagococcus fluvialis*, and *Vagococcus salmoninarum*.

Propionibacterium Medium

Composition per liter:

Yeast extract.....	10.0g
Na ₂ HPO ₄ ·2H ₂ O.....	3.0g
KH ₂ PO ₄	1.0g
Lactate solution.....	40.0mL

pH 7.0 ± 0.2 at 25°C

Lactate Solution:

Composition per 100.0mL:

Sodium lactate.....	70.0g
---------------------	-------

Preparation of Lactate Solution: Add 70.0g of sodium lactate to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components, except lactate solution, to distilled/deionized water and bring volume to 960.0mL. Mix thoroughly. Add 40.0mL of lactate solution. Mix thoroughly. Adjust pH to 7.0. Distribute into screw-capped tubes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Propionibacterium acidipropionici*, *Propionibacterium freudenreichii*, *Propionibacterium jensenii*, and *Propionibacterium thoenii*.

Propionigenium maris Medium

Composition per 1014.0mL:

Solution A.....	940.0mL
Solution E (NaHCO ₃ solution).....	50.0mL
Solution F (Substrate solution).....	10.0mL
Solution G (Na ₂ S·9H ₂ O solution).....	10.0mL
Solution B (Trace elements solution SL-10).....	2.0mL
Solution C (Seven vitamin solution).....	1.0mL
Solution D (Selenite-tungstate solution).....	1.0mL

pH 7.2–7.4 at 25°C

Solution A:

Composition per 940.0mL:

NaCl.....	1.0g
Yeast extract.....	0.5g
KCl.....	0.5g
MgCl ₂ ·6H ₂ O.....	0.4g
NH ₄ Cl.....	0.25g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O.....	0.15g
Resazurin.....	0.5mg

Preparation of Solution A: Prepare and dispense under 80% N₂ + 20% CO₂. Add components to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B (Trace Elements Solution SL-10):

Composition per liter:

FeCl ₂ ·4H ₂ O.....	1.5g
CoCl ₂ ·6H ₂ O.....	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	36.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O.....	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Solution B (Trace Elements Solution SL-10):

Prepare and dispense under 100% N₂. Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C (Seven Vitamin Solution):

Composition per liter:

Pyridoxine·HCl.....	300.0mg
Nicotinic acid.....	200.0mg
Thiamine·HCl.....	200.0mg
Calcium pantothenate.....	100.0mg
Cyanocobalamine.....	100.0mg
<i>p</i> -Aminobenzoic acid.....	80.0mg
D(+)-Biotin.....	20.0mg

Preparation of Solution C (Seven Vitamin Solution): Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Sparge with 100% N₂.

Solution D (Selenite-Tungstate Solution):

Composition per liter:

NaOH.....	0.5g
Na ₂ WO ₄ ·2H ₂ O.....	4.0mg
Na ₂ SeO ₃ ·5H ₂ O.....	3.0mg

Preparation of Solution D (Selenite Tungstate Solution): Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Sparge with 100% N₂.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	0.6g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution E (NaHCO₃ Solution):**Composition** per 50.0mL:NaHCO₃ 2.5g

Preparation of Solution E (NaHCO₃ Solution): Add NaHCO₃ to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution F (Substrate Solution):**Composition** per 10.0mL:

Disodium succinate 2.5g

Preparation of Solution F (Substrate Solution): Add disodium succinate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution G (Na₂S·9H₂O Solution):**Composition** per 10.0mL:Na₂S·9H₂O 0.3g

Preparation of Solution G (Na₂S·9H₂O Solution): Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: To 940.0mL of sterile solution A, aseptically and anaerobically add 1.0mL of sterile solution B, 1.0mL of sterile solution C, 1.0mL of sterile solution D, 50.0mL of sterile solution E, 10.0mL of sterile solution F, and 10.0mL of sterile solution G. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or flasks.

Use: For the cultivation of *Propionigenium maris*.

***Propionigenium modestum* Medium
(DSMZ Medium 293)**

Composition per liter:

NaCl 20.0g
MgCl₂·6H₂O 3.0g
KCl 0.5g
NH₄Cl 0.25g
KH₂PO₄ 0.2g
CaCl₂·2H₂O 0.15g
Resazurin 1.0mg
NaHCO₃ solution 10.0mL
Na₂-succinate solution 10.0mL
Na₂S·9H₂O solution 10.0mL
Trace elements solution SL-10 1.0mL
pH 7.2 ± 0.2 at 25°C

Na₂S·9H₂O Solution:**Composition** per 10.0mL:Na₂S·9H₂O 0.36g

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

NaHCO₃ Solution:**Composition** per 10.0mL:NaHCO₃ 2.5g

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

Na₂-succinate Solution:**Composition** per 10.0mL:Na₂-succinate 3.25g

Preparation of Na₂-succinate Solution: Add Na₂-succinate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Trace Elements Solution SL-10:**Composition** per liter:

FeCl₂·4H₂O 1.5g
CoCl₂·6H₂O 190.0mg
MnCl₂·4H₂O 100.0mg
ZnCl₂ 70.0mg
Na₂MoO₄·2H₂O 36.0mg
NiCl₂·6H₂O 24.0mg
H₃BO₃ 6.0mg
CuCl₂·2H₂O 2.0mg
HCl (25% solution) 10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas atmosphere. Add components, except NaHCO₃ solution, Na₂-succinate solution, Na₂S·9H₂O solution, and trace elements solution SL-10, to distilled/deionized water and bring volume to 969.0mL. Mix thoroughly. Adjust pH to 7.2. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 10.0mL NaHCO₃ solution, 10.0mL Na₂-succinate solution, 10.0mL Na₂S·9H₂O solution, and 1.0mL trace elements solution SL-10. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or bottles. After inoculation, flush and repressurize the gas head space of culture bottles with sterile 80% N₂ + 20% CO₂ to 1 bar overpressure.

Use: For the cultivation of *Propionigenium modestum*.

 HCl (25% solution)..... 10.0mL

Preparation of Trace Elements Solution SL-10: Prepare and dispense under 80% N₂ + 20% CO₂. Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Gas under 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare medium and dispense under 80% N₂ + 20% CO₂. Add components, except NaHCO₃ solution, Na₂S·9H₂O solution, disodium succinate solution, and trace elements solution SL-10, to distilled/deionized water and bring volume to 969.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 10.0mL of sterile NaHCO₃ solution, 10.0mL of sterile Na₂S·9H₂O solution, 10.0mL of sterile disodium succinate solution, and 1.0mL of sterile trace elements solution SL-10. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Propionigenium modestum*.

Propionispira* Medium*Composition per liter:**

Sodium lactate..... 4.0g
 Yeast extract..... 1.0g
 Mineral solution 2..... 50.0mL
 Sodium carbonate solution..... 50.0mL

Mineral solution 1	25.0mL
L-Cysteine-sulfide reducing agent	20.0mL
Wolfe's mineral solution	10.0mL
Wolfe's Vitamin solution	10.0mL
Resazurin (0.025% solution).....	4.0mL
pH 7.2 ± 0.2 at 25°C	

Mineral Solution 1:**Composition per liter:**

K ₂ HPO ₄	6.0g
---------------------------------------	------

Preparation of Mineral Solution 1: Add K₂HPO₄ to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Mineral Solution 2:**Composition per liter:**

NaCl.....	12.0g
KH ₂ PO ₄	6.0g
(NH ₄) ₂ SO ₄	6.0g
MgSO ₄ ·7H ₂ O.....	2.4g
CaCl ₂ ·2H ₂ O.....	1.6g

Preparation of Mineral Solution 2: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Sodium Carbonate Solution:**Composition per 100.0mL:**

Na ₂ CO ₃	8.0g
---------------------------------------	------

Preparation of Sodium Carbonate Solution: Add Na₂CO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

L-Cysteine-Sulfide Reducing Agent:**Composition per 20.0mL:**

L-Cysteine·HCl·H ₂ O.....	300.0mg
Na ₂ S·9H ₂ O.....	300.0mg

Preparation of L-Cysteine-Sulfide Reducing Agent: Add L-cysteine-HCl·H₂O to 10.0mL of distilled/deionized water. Mix thoroughly. In a separate tube, add Na₂S·9H₂O to 10.0mL of distilled/deionized water. Mix thoroughly. Gas both solutions with 100% N₂ and cap tubes. Autoclave both solutions for 15 min at 15 psi pressure–121°C using fast exhaust. Cool to 50°C. Aseptically combine the two solutions under 100% N₂.

Wolfe's Mineral Solution:**Composition per liter**

MgSO ₄ ·7H ₂ O.....	3.0g
Nitilotriacetic acid.....	1.5g
NaCl.....	1.0g
MnSO ₄ ·H ₂ O.....	0.5g
FeSO ₄ ·7H ₂ O.....	0.1g
CoCl ₂ ·6H ₂ O.....	0.1g
CaCl ₂	0.1g
ZnSO ₄ ·7H ₂ O.....	0.1g
CuSO ₄ ·5H ₂ O.....	0.01g
AlK(SO ₄) ₂ ·12H ₂ O.....	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O.....	0.01g

Preparation of Wolfe's Mineral Solution: Add nitilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L.

Wolfe's Vitamin Solution:**Composition per liter:**

Pyridoxine-HCl.....	10.0mg
Thiamine-HCl.....	5.0mg
Riboflavin.....	5.0mg
Nicotinic acid.....	5.0mg
Calcium pantothenate.....	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Thioctic acid.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Cyanocobalamin.....	100.0µg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except Wolfe's vitamin solution and L-cysteine-sulfide reducing agent, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool under 80% N₂ + 20% CO₂. Aseptically add the sterile Wolfe's vitamin solution and then the sterile L-cysteine-sulfide reducing agent. Adjust the pH to 7.2. Distribute aseptically and anaerobically into sterile tubes.

Use: For the cultivation and maintenance of *Propionispora arboris*.

Propionispora Medium (DSMZ Medium 503c)

Composition per 1010.0mL:

Solution A.....	940.0mL
Solution B.....	50.0mL
Solution C.....	10.0mL
Solution D.....	10.0mL

pH 7.1 ± 0.2 at 25°C

Solution A:**Composition per 940.0mL:**

Yeast extract.....	1.0g
NaCl.....	1.0g
KCl.....	0.5g
MgCl ₂ ·6H ₂ O.....	0.4g
KH ₂ PO ₄	0.2g
NH ₄ Cl.....	0.25g
CaCl ₂ ·2H ₂ O.....	0.15g
Resazurin.....	0.5mg
Trace elements solution SL-10.....	1.0mL

Preparation of Solution A: Prepare under 80% N₂ + 20% CO₂ gas atmosphere. Add components to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Adjust pH to 7.2. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Trace Elements Solution SL-10:**Composition per liter:**

FeCl ₂ ·4H ₂ O.....	1.5g
CoCl ₂ ·6H ₂ O.....	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	36.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O.....	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B:

Composition per 100.0mL:

NaHCO₃..... 5.0g

Preparation of Solution B: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂ gas mixture. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution C:

Composition per 100.0mL:

Fructose..... 5.0g

Preparation of Solution C: Add fructose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂ gas mixture. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution D:

Composition per 10.0mL:

Na₂S·9H₂O..... 0.125g

Preparation of Solution D: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas atmosphere. Sequentially add 50.0mL solution B, 10.0mL solution C, and 10.0mL solution D, to 940.0mL solution A. Distribute anaerobically under 80% N₂ + 20% CO₂ into appropriate vessels. The pH should be 7.0–7.2.

Use: For the cultivation of *Propionispora vibrioides*.

Propionivibrio/Acetivibrio/Formivibrio Medium

Composition per 1012.0mL:

Solution A.....950.0mL
 Solution E.....30.0mL
 Solution D (Vitamin solution)..... 10.0mL
 Solution F..... 10.0mL
 Solution G..... 10.0mL
 Solution B (Trace elements solution SL-10).....1.0mL
 Solution C (Selenite-tungstate solution).....1.0mL
 pH 6.7 ± 0.2 at 25°C

Solution A:

Composition per 950.0mL:

KH₂PO₄..... 1.4g
 NH₄Cl..... 0.5g
 MgCl₂·6H₂O..... 0.2g
 CaCl₂·2H₂O..... 0.15g
 Resazurin..... 1.0mg

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B (Trace Elements Solution SL-10):

Composition per liter:

FeCl₂·4H₂O..... 1.5g
 CoCl₂·6H₂O..... 190.0mg
 MnCl₂·4H₂O..... 100.0mg
 ZnCl₂..... 70.0mg

Na₂MoO₄·2H₂O..... 36.0mg
 NiCl₂·6H₂O..... 24.0mg
 H₃BO₃..... 6.0mg
 CuCl₂·2H₂O..... 2.0mg
 HCl (25% solution)..... 10.0mL

Preparation of Solution B (Trace Elements Solution SL-10):

Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C (Selenite-Tungstate Solution):

Composition per liter:

NaOH..... 0.5g
 Na₂WO₄·2H₂O..... 4.0mg
 Na₂SeO₃·5H₂O..... 3.0mg

Preparation of Solution C (Selenite-Tungstate Solution):

Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution D (Vitamin Solution):

Composition per liter:

Pyridoxine-HCl..... 10.0mg
 Calcium DL-pantothenate..... 5.0mg
 Lipoic acid..... 5.0mg
 Nicotinic acid..... 5.0mg
 p-Aminobenzoic acid..... 5.0mg
 Riboflavin..... 5.0mg
 Thiamine-HCl..... 5.0mg
 Biotin..... 2.0mg
 Folic acid..... 2.0mg
 Vitamin B₁₂..... 0.1mg

Preparation of Solution D (Vitamin Solution):

Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

Solution E:

Composition per 30.0mL:

NaHCO₃..... 1.5g

Preparation of Solution E: Add NaHCO₃ to distilled/deionized water and bring volume to 30.0mL. Mix thoroughly. Filter sterilize. Sparge with 80% N₂ + 20% CO₂.

Solution F:

Composition per 10.0mL:

Disodium maleate..... 1.6g

Preparation of Solution F: Add disodium maleate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution G:

Composition per 10.0mL:

Na₂S·9H₂O..... 0.25g

Preparation of Solution G: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Aseptically and anaerobically combine 950.0mL of sterile solution A with 1.0mL of sterile solution B, 1.0mL of sterile solution C, 10.0mL of sterile solution D, 30.0mL of sterile solution E, 10.0mL of sterile solution F, and 10.0mL of sterile solution G,

in that order. Mix thoroughly. Final pH should be 6.7–6.8. Aseptically and anaerobically distribute into sterile tubes or flasks under 80% N₂ + 20% CO₂.

Use: For the cultivation and maintenance of *Propionivibrio dicarboxylicus*.

Propionivibrio/Acetivibrio/Formivibrio Medium

Composition per 1012.0mL:

Solution A	950.0mL
Solution E	30.0mL
Solution D (Vitamin solution).....	10.0mL
Solution F.....	10.0mL
Solution G.....	10.0mL
Solution B (Trace elements solution SL-10).....	1.0mL
Solution C (Selenite-tungstate solution).....	1.0mL
pH 7.7–7.9 at 25°C	

Solution A:

Composition per 950.0mL:

KH ₂ PO ₄	1.4g
NH ₄ Cl	0.5g
MgCl ₂ ·6H ₂ O.....	0.2g
CaCl ₂ ·2H ₂ O.....	0.15g
Yeast extract.....	50.0mg
Resazurin	1.0mg

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B (Trace Elements Solution SL-10):

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Solution B (Trace Elements Solution SL-10):

Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C (Selenite-Tungstate Solution):

Composition per liter:

NaOH.....	0.5g
Na ₂ WO ₄ ·2H ₂ O	4.0mg
Na ₂ SeO ₃ ·5H ₂ O.....	3.0mg

Preparation of Solution C (Selenite-Tungstate Solution):

Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution D (Vitamin Solution):

Composition per liter:

Pyridoxine-HCl.....	10.0mg
Calcium DL-pantothenate.....	5.0mg
Lipoic acid	5.0mg
Nicotinic acid.....	5.0mg

<i>p</i> -Aminobenzoic acid.....	5.0mg
Riboflavin	5.0mg
Thiamine-HCl	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Solution D (Vitamin Solution): Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Solution E:

Composition per 30.0mL:

NaHCO ₃	1.5g
--------------------------	------

Preparation of Solution E: Add NaHCO₃ to distilled/deionized water and bring volume to 30.0mL. Mix thoroughly. Filter sterilize. Sparge with 100% N₂.

Solution F:

Composition per 10.0mL:

Cinnamic acid.....	1.6g
NaOH (1N solution).....	variable

Preparation of Solution F: Add cinnamic acid to distilled/deionized water and bring volume to 8.0mL. Mix thoroughly. Add sufficient quantity of 1N NaOH solution to bring pH to 7.8. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution G:

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	0.25g
--	-------

Preparation of Solution G: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Aseptically and anaerobically under 100% N₂ combine 950.0mL of sterile solution A with 1.0mL of sterile solution B, 1.0mL of sterile solution C, 10.0mL of sterile solution D, 30.0mL of sterile solution E, 10.0mL of sterile solution F, and 10.0mL of sterile solution G, in that order. Mix thoroughly. Final pH should be 7.7–7.9. If necessary, add about 15.0mL of sterile anaerobic 5% Na₂CO₃ solution to 1.0L of medium to adjust pH. Aseptically and anaerobically distribute into sterile tubes or flasks under 100% N₂.

Use: For the cultivation and maintenance of *Acetivibrio multivorans*.

Propionivibrio/Acetivibrio/Formivibrio Medium

Composition per 1012.0mL:

Solution A.....	950.0mL
Solution E	30.0mL
Solution D (Vitamin solution).....	10.0mL
Solution F.....	10.0mL
Solution G.....	10.0mL
Solution B (Trace elements solution SL-10).....	1.0mL
Solution C (Selenite-tungstate solution).....	1.0mL
pH 7.5–7.7 at 25°C	

Solution A:

Composition per 950.0mL:

KH ₂ PO ₄	1.4g
NH ₄ Cl	0.5g
MgCl ₂ ·6H ₂ O	0.2g
CaCl ₂ ·2H ₂ O	0.15g
Yeast extract.....	50.0mg
Resazurin	1.0mg

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B (Trace Elements Solution SL-10):

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Solution B (Trace Elements Solution SL-10):

Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C (Selenite-Tungstate Solution):

Composition per liter:

NaOH	0.5g
Na ₂ WO ₄ ·2H ₂ O	4.0mg
Na ₂ SeO ₃ ·5H ₂ O	3.0mg

Preparation of Solution C (Selenite-Tungstate Solution):

Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution D (Vitamin Solution):

Composition per liter:

Pyridoxine-HCl	10.0mg
Calcium DL-pantothenate	5.0mg
Lipoic acid	5.0mg
Nicotinic acid	5.0mg
p-Aminobenzoic acid	5.0mg
Riboflavin	5.0mg
Thiamine-HCl	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Solution D (Vitamin Solution): Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Solution E:

Composition per 30.0mL:

NaHCO ₃	1.5g
--------------------------	------

Preparation of Solution E: Add NaHCO₃ to distilled/deionized water and bring volume to 30.0mL. Mix thoroughly. Filter sterilize. Sparge with 100% N₂.

Solution F:

Composition per 10.0mL:

Trisodium citrate	2.94g
-------------------------	-------

Preparation of Solution F: Add trisodium citrate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution G:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.25g
---	-------

Preparation of Solution G: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Aseptically and anaerobically under 100% N₂ combine 950.0mL of sterile solution A with 1.0mL of sterile solution B, 1.0mL of sterile solution C, 10.0mL of sterile solution D, 30.0mL of sterile solution E, 10.0mL of sterile solution F, and 10.0mL of sterile solution G, in that order. Mix thoroughly. Final pH should be 7.5–7.7. If necessary, add sterile anaerobic 5% Na₂CO₃ solution to adjust pH. Aseptically and anaerobically distribute into sterile tubes or flasks under 100% N₂.

Use: For the cultivation and maintenance of *Formivibrio citricus*.

Proskauer-Beck Medium for *Mycobacterium*

Composition per liter:

Asparagine	5.0g
KH ₂ PO ₄	5.0g
Magnesium citrate	2.5g
MgSO ₄ ·7H ₂ O	0.6g
Glycerol	20.0mL

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components, one at a time, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Make sure one salt is totally dissolved before the next one is added. Adjust pH to 7.8 with 40% NaOH. Autoclave for 15 min at 15 psi pressure–121°C. The pH of the medium after autoclaving should be 7.4. Filter through Whatman #1 filter paper to remove any precipitate. Distribute into tubes or flasks. Autoclave again for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Mycobacterium tuberculosis*.

***Prostheco bacter* Medium**

Composition per liter:

Glucose	0.25g
(NH ₄) ₂ SO ₄	0.25g
Na ₂ HPO ₄	0.071g
Hutner's mineral base	20.0mL

Hutner's Mineral Base:

Composition per liter:

MgSO ₄ ·7H ₂ O	29.7g
Nitrilotriacetic acid	10.0g
CaCl ₂ ·2H ₂ O	3.34g
FeSO ₄ ·7H ₂ O	0.1g
(NH ₄) ₂ MoO ₄	9.25mg
Metals "44"	50.0mL

Preparation of Hutner's Mineral Base: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Readjust pH to 7.2 with H₂SO₄ or KOH. Add distilled/deionized water to 1.0L. Store at 5°C.

Metals "44":

Composition per 100.0mL:

ZnSO ₄ ·7H ₂ O	1.1g
FeSO ₄ ·7H ₂ O	0.5g
EDTA	0.25g

MnSO ₄ ·7H ₂ O	0.154g
CuSO ₄ ·5H ₂ O	0.04g
Co(NO ₃) ₂ ·6H ₂ O	0.025g
Na ₂ B ₄ O ₇ ·10H ₂ O	0.018g

Preparation of Metals "44": Add a few drops of H₂SO₄ to distilled/deionized water to inhibit precipitate formation. Add components to acidified distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Prosthecomicrobium fusiformis*.

Prosthecomicrobium and Ancalomicrobium Medium

Composition per 1030.0mL:

Ammonium sulfate	0.25g
Glucose	0.25g
Na ₂ HPO ₄	71.0mg
Modified Hutner's basal salts	20.0mL
Vitamin solution	10.0mL

Modified Hutner's Basal Salts:

Composition per liter:

MgSO ₄ ·7H ₂ O	29.7g
Nitritotriacetic acid	10.0g
CaCl ₂ ·2H ₂ O	3.34g
FeSO ₄ ·7H ₂ O	99.0mg
Ammonium molybdate	9.25mg
Metals "44"	50.0mL

Preparation of Modified Hutner's Basal Salts: Dissolve the nitritotriacetic acid first and neutralize the solution with KOH. Add other components and adjust the pH to 7.2 with KOH or H₂SO₄. There may be a slight precipitate. Store at 5°C.

Metals "44"

Composition per liter:

ZnSO ₄ ·7H ₂ O	1.1g
FeSO ₄ ·7H ₂ O	0.5g
CuSO ₄ ·5H ₂ O	0.04g
EDTA	0.25g
MnSO ₄ ·7H ₂ O	0.154g
Co(NO ₃) ₂ ·6H ₂ O	0.025g
Na ₂ B ₄ O ₇ ·10H ₂ O	0.018g

Preparation of Metals "44": Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Add aseptically to sterile modified Hutner's basal salts solution.

Vitamin Solution:

Composition per liter:

Cyanocobalamin	10.0mg
Pyridoxine·HCl	10.0mg
Thiamine·HCl	10.0mg
Calcium DL-pantothenate	5.0mg
Nicotinamide	5.0mg
Biotin	2.0mg
Folic acid	2.0mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except modified Hutner's basal salts solution and vitamin solution, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 20.0mL of modified Hutner's basal salts solution and 10.0mL of sterile vitamin solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Prosthecomicrobium enhydrium* and *Prosthecomicrobium pneumaticum*.

Proteose Agar

Composition per liter:

Agar	15.0g
Proteose peptone No. 3	15.0g
Yeast extract	7.5g
Casamino acids	5.0g
K ₂ HPO ₄	5.0g
(NH ₄) ₂ SO ₄	1.5g
Starch, soluble	1.0g

pH 9.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes in 10.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Allow tubes to cool in a slanted position.

Use: For the cultivation of *Vibrio* species from foods.

Proteose HiVeg Agar

Composition per liter:

Agar	15.0g
Plant peptone No. 3	15.0g
K ₂ HPO ₄	5.0g
Plant acid hydrolysate	5.0g
Yeast extract	7.5g
(NH ₄) ₂ SO ₄	1.5g
Starch, soluble	1.0g

pH 9.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 10 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Vibrio* species from foods.

Proteose No. 3 Agar (ATCC Medium 50)

Composition per liter:

Proteose peptone No. 3	20.0g
Agar	15.0g
Na ₂ HPO ₄	5.0g
NaCl	5.0g
Glucose	0.5g

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 10 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Escherichia coli* and other bacteria.

Proteose No. 3 Agar

Composition per 1010.0mL:

Proteose peptone No. 3	20.0g
Agar	15.0g
Na ₂ HPO ₄	5.0g
NaCl.....	5.0g
Glucose	0.5g
Hemoglobin solution.....	500.0mL
Supplement A	10.0mL

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Hemoglobin Solution:

Composition per 500.0mL:

Hemoglobin	10.0g
------------------	-------

Preparation of Hemoglobin Solution: Add hemoglobin to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Supplement A:

Composition per 10.0mL:

Supplement A contains yeast concentrate with Crystal Violet.

Preparation of Supplement A: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except hemoglobin solution and supplement A, to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–60°C. Aseptically add 500.0mL of sterile hemoglobin solution and 10.0mL of sterile supplement A. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of *Neisseria* species, *Hemophilus* species, and other fastidious bacteria. For the cultivation and maintenance of *Escherichia coli*.

Proteose No. 3 Agar

Composition per 1010.0mL:

Proteose peptone No. 3	20.0g
Agar	15.0g
Na ₂ HPO ₄	5.0g
NaCl.....	5.0g
Glucose	0.5g
Hemoglobin solution.....	500.0mL
Supplement B.....	10.0mL

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Hemoglobin Solution:

Composition per 500.0mL:

Hemoglobin	10.0g
------------------	-------

Preparation of Hemoglobin Solution: Add hemoglobin to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Supplement B:

Composition per 10.0mL:

Supplement B contains yeast concentrate, glutamine, coenzyme, co-carboxylase, hematin, and growth factors.

Preparation of Supplement B: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except hemoglobin solution and supplement B, to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–60°C. Aseptically add 500.0mL of sterile hemoglobin solution and 10.0mL of sterile supplement B. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of *Neisseria* species, *Hemophilus* species, and other fastidious bacteria. For the cultivation and maintenance of *Escherichia coli*.

Proteose No. 3 Agar

Composition per 1010.0mL:

Proteose peptone No. 3	20.0g
Agar	15.0g
Na ₂ HPO ₄	5.0g
NaCl.....	5.0g
Glucose	0.5g
Hemoglobin solution	500.0mL
Supplement VX	10.0mL

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Hemoglobin Solution:

Composition per 500.0mL:

Hemoglobin	10.0g
------------------	-------

Preparation of Hemoglobin Solution: Add hemoglobin to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Supplement VX:

Composition per 10.0mL:

Supplement B contains essential growth factors.

Preparation of Supplement VX: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except hemoglobin solution and supplement VX, to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–60°C. Aseptically add 500.0mL of sterile hemoglobin solution and 10.0mL of sterile supplement VX. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of *Neisseria* species, *Hemophilus* species, and other fastidious bacteria. For the cultivation and maintenance of *Escherichia coli*.

Proteose Yeast Extract Medium

Composition per liter:

Proteose peptone	20.0g
Glucose	10.0g
Yeast extract	5.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of a variety of bacteria.

Prototheca Isolation Agar (PIM)

Composition per liter:

Agar	20.0g
Glucose	10.0g
Potassium hydrogen phthalate	10.0g
NaOH	0.9g
NH ₄ Cl	0.3g
5-Fluorocytosine	0.25g
KH ₂ PO ₄	0.2g
MgSO ₄	0.1g
Thiamine-HCl	0.001g

pH 5.1 ± 0.1 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 5.1. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Prototheca moriformis* and *Prototheca ulmea*.

Provasoli Medium

Composition per liter:

NaCl	11.75g
MgCl ₂ ·6H ₂ O	5.35g
Na ₂ SO ₄	2.0g
CaCl ₂ ·2H ₂ O	0.75g
Tris(hydroxymethyl)aminomethane	0.5g
KCl	0.35g
Na ₂ HPO ₄	0.05g

pH 7.6 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation and cultivation of *Leucothrix* species from marine habitats.

Prune Agar

Composition per liter:

Agar	17.0g
Lactose	5.0g
Prunes	5.0g
Yeast extract	1.0g

pH 5.8–6.0 at 25°C
