INTRODUCTION

Overview

The fourth edition of the *Handbook of Microbiological Media* includes the formulations and descriptions of 7,080 media used for cultivating microorganisms—more than 1500 more than in the previous edition. These include both classic and modern media used for the identification, cultivation, and maintenance of diverse bacteria, archaea, and fungi. Some of these microbiological media are produced by major suppliers of dehydrated media—including Oxoid, HiMedia, and BD Diagnostics (Difco, BBL, and GIBCO). These include all the media normally used in the clinical microbiology diagnostic laboratory and for the routine examination of food and water. Other media described in the fourth edition of the *Handbook of Microbiological Media* are used to cultivate specific strains of bacteria, archaea, fungi, and protists, including many anaerobes and extremophiles. The fourth edition of the *Handbook of Microbiological Media* includes the media needed to cultivate the numerous microorganisms currently available from the world's global bioresource centers (BRCs).

The breadth of culture media in this comprehensive resource is enormous and has greatly expanded in recent years with the exploration of extreme habitats and the use of molecular methods to identify new lineages of bacteria and archaea. The media also represent significant advances in the ability to use chromogenic substrates to identify specific species and strains of bacteria, e.g., *E. coli* O157 and methicillin resistant *Staphylococcus aureus* (MRSA). These media are extremely useful for clinical diagnostics and for the protection of the food supply from pathogenic microorganisms. Additionally many culture media are now available that are free of animal components. Plant based media eliminate possible contamination with prions which is important for production of vaccines and pharmaceuticals.

Organization

The media described in the *Handbook of Microbiological Media* are organized alphabetically. Synonyms for media are listed. The description of each medium includes its name(s), composition, instructions for preparation, commercial sources, safety cautions where needed, and uses.

Names of Media

Media often have numerous names. For the most part the fourth edition of the *Handbook of Microbiological Media* retains the original names assigned in the literature. In some cases media with identical compositions produced by different companies have different names. For example, Trypticase™ Soy Agar produced as a BBL product of BD Diagnostic Systems, Tryptone Soy Agar produced by Oxoid Unipath, and Tryptic Soy Agar produced as a Difco product of BD Diagnostic Systems have identical compositions. Many media also are known by acronyms. TSA, for example, is the common acronym for Trypticase™ Soy Agar. The fourth edition of the *Handbook of Microbiological Media* gives the various synonymous names and directs the reader to see the entry where the information about that medium is given. In cases where modifications to a medium yield a new medium, such media generally are listed with the original medium name, followed by the term modified—for example, TSA, Modified, rather than Modified TSA. Media that do not have formal names are listed according to the organism grown on that medium—for example, *Bacillus stearothermophilus* Broth.

Composition of Media

Media for the cultivation of microorganisms contain the substances necessary to support the growth of microorganisms. Due to the diversity of microorganisms and their diverse metabolic pathways, there are numerous media. Even slight differences in the composition of a

medium can result in dramatically different growth characteristics of microorganisms.

When methods for culturing microorganisms were first developed in the nineteenth century, largely by Robert Koch and his colleagues, animal and plant tissues were principally used as sources of nutrients used to support microbial growth. One of the major discoveries of Fanny Hesse in Koch's laboratory was that agar could be used to form solidified culture media on which microorganisms would grow. Extracts of plants and animal tissues were prepared as broths or mixed with agar to form a variety of culture media. Virtually any plant, animal, or animal organ was considered for use in preparing media. Infusions were prepared from beef heart, calf brains, and beef liver, as a few examples. These classic infusions still form the primary components of many media that are widely used today, such as Brain Heart Infusion Agar and Liver Broth. In the last few years attempts have been made to reformulate many media containing animal tissue extracts with plant materials. This has added greatly to the number of media that are commercially available.

The composition section of each medium describes the ingredients that make up the medium, their amounts, and the pH. It lists those ingredients in order of decreasing amount. Solids are listed first showing the weights to be added, followed by liquids showing the volumes to be included in the medium.

The composition uses generic terms where these are applicable. For example, pancreatic digest of casein is marketed by various manufacturers as trypticase, tryptone, and other commercial product names. While there may well be differences between these products, such differences are undefined. Variations also occur between batches of products produced as digests of animal tissues.

Media for the cultivation of microorganisms have a source of carbon for incorporation into biomass. For autotrophs, the carbon source most often is carbon dioxide, which may be supplied as bicarbonate within the medium. Carbohydrates, such as glucose, or other organic compounds, such as acetate, various lipids, proteins, hydrocarbons, and other organic compounds, are included in media as sources of carbon for heterotrophs. These carbon sources may also serve as the supply of energy. Other compounds, such as ammonium ions, nitrite ions, elemental sulfur, and reduced iron, may be used as the sources of energy for the cultivation of autotrophs. Nitrogen also is required for microbial growth. It may be supplied as inorganic nitrogen compounds for the cultivation of some microorganisms but more commonly is supplied as proteins, peptones, or amino acids. Phosphates and metals, such as magnesium and iron, are also necessary components of microbiological media. Phosphates may also serve as buffers to maintain the pH of the medium within the growth tolerance limits of the microorganism being cultivated. Various additional growth factors may also be included in the media.

Agars

Agar is the most common solidifying agent used in microbiological media. Agar is a polysaccharide extract from marine algae. It melts at 84°C and solidifies at 38°C. Agar concentrations of 15.0g/L typically are used to form solid media. Lower concentrations of 7.5–10.0g/L are used to produce soft agars or semisolid media. Below are some agars used as solidifying agents in various media.

Agar Bacteriological (Agar No. 1)

An agar with low calcium and magnesium.

Agar, Bacto

A purified agar with reduced pigmented compounds, salts, and extraneous matter.

Agar, BiTek™

Agar prepared as a special technical grade.

Agar, Flake

A technical-grade agar.

Agar, Grade A

A select-grade agar containing minerals.

Agar, Granulated

A high-grade granulated agar that has been filtered, decolorized, and purified.

Agarose

A low-sulfate neutral gelling fraction of agar that is a complex galactose polysaccharide of near neutral charge.

Agar, Purified

A very high-grade agar that has been filtered, decolorized, and purified by washing and extraction of refined agars. It has reduced mineral content.

Agar Technical (Agar No. 3)

A technical-grade agar.

Ionagar

A purified agar.

Noble Agar

An agar that has been extensively washed and is essentially free of impurities.

Purified Agar

An agar that has been extensively washed and extracted with water and organic solvent.

Peptones

Many complex media, that is, media in which not all the specific chemical components are known, contain peptones as the source of nitrogen. Peptones are hydrolyzed proteins formed by enzymatic or acidic digestion. Casein most often is used as the protein substrate for forming peptones, but other substances, such as soybean meal, also are commonly employed.

Below is a list of some of the peptones that are used as ingredients in various media.

Acidase™ Peptone

A hydrochloric acid hydrolysate of casein. It has a nitrogen content of 8% and is deficient in cystine and tryptophan.

Bacto Casitone

A pancreatic digest of casein.

Bacto Peptamin

A peptic digest of animal tissues.

Bacto Peptone

An enzymatic digest of animal tissues. It has a high concentration of low molecular weight peptones and amino acids.

Bacto Proteose Peptone

An enzymatic digest of animal tissues. It has a high concentration of high molecular weight peptones.

Bacto Soytone

A enzymatic hydrolysate of soybean meal.

Bacto Tryptone

A pancreatic digest of casein.

Bacto Triplets

An enzymatic hydrolysate containing numerous peptides, including those of higher molecular weights.

Biosate™ Peptone

A hydrolysate of plant and animal proteins.

Casein Hydrolysate

A hydrolysate of casein prepared with hydrochloric acid digestion under pressure and neutralized with sodium hydroxide. It contains total nitrogen of 7.6% and NaCl of 28.3%.

Gelatone

A pancreatic digest of gelatin.

Gelysate™ Peptone

A pancreatic digest of gelatin deficient in cystine and tryptophan and which has a low carbohydrate content.

HiVeg Peptone

An enzymic hydrolysate of vegetable proteins that gives comparable growth promoting properties as animal origin peptone.

HiVeg Peptone No. 1

An enzymic hydrolysate of specially selected vegetable proteins that gives comparable growth promoting properties as animal origin peptone No. 1.

HiVeg Peptone No. 2

An enzymic hydrolysate of vegetable proteins that gives comparable growth promoting properties as gelatin peptone.

HiVeg Peptone No. 3

An enzymic hydrolysate of vegetable proteins that gives comparable growth promoting properties as proteose peptone.

HiVeg Peptone No. 4

An enzymic hydrolysate of vegetable proteins that gives comparable growth promoting properties as mycological peptone.

HiVeg Peptone No. 5

An enzymic hydrolysate of vegetable proteins that gives comparable growth promoting properties as bio peptone.

HiVeg Peptone B

An enzymic hydrolysate of vegetable proteins that gives comparable growth promoting properties as proteose peptone.

HiVeg Peptone C

An enzymic hydrolysate of vegetable proteins that gives comparable growth promoting properties as animal origin peptone A.

HiVeg Special Peptone

An enzymic hydrolysate of vegetable proteins that gives comparable growth promoting properties as neopeptone and animal special peptone.

Lactoalbumin Hydrolysate

A pancreatic digest of lactoalbumin, a milk whey protein. It has high levels of amino acids. It contains total nitrogen of 11.9% and NaCl of 1.4%.

Liver Digest Neutralized

A papaic digest of liver that contains total nitrogen of 11.0% and NaCl of 1.6%.

Mycological Peptone

A peptone that contains total nitrogen of 9.5% and NaCl of 1.1%.

Myosate™ Peptone

A pancreatic digest of heart muscle.

Neopeptone

An enzymatic digest of protein.

Peptone Bacteriological Neutralized

A mixed pancreatic and papaic digest of animal tissues. It contains total nitrogen of 14.0% and NaCl of 1.6%.

Peptone P

A peptic digest of fresh meat that has a high sulfur content and contains total nitrogen of 11.12% and NaCl of 9.3%.

Peptonized Milk

A pancreatic digest of high-grade skim milk powder. It has a high carbohydrate and calcium concentration. It contains total nitrogen of 5.3% and NaCl of 1.6%.

Phytone™ Peptone

A papaic digest of soybean meal. It has a high vitamin and a high carbohydrate content.

Polypeptone™ Peptone

A mixture of peptones composed of equal parts of pancreatic digest of casein and peptic digest of animal tissue.

Proteose Peptone

A specialized peptone prepared from a mixture of peptones that contains a wide variety of high molecular weight peptides. It contains total nitrogen of 12.7% and NaCl of 8.0%.

Proteose Peptone No. 2

An enzymatic digest of animal tissues with a high concentration of high molecular weight peptones.

Proteose Peptone No. 3

An enzymatic digest of animal tissues. It has a high concentration of high molecular weight peptones.

Soy Peptone (Soya Peptone)

A papaic digest of soybean meal with a high carbohydrate concentration. It contains total nitrogen of 8.7% and NaCl of 0.4%.

Soytone

A papaic digest of soybean meal.

Special Peptone

A mixture of peptones, including meat, plant, and yeast digests. It contains a wide variety of peptides, nucleotides, and minerals. It contains total nitrogen of 11.7% and NaCl of 3.5%.

Thiotone™ E Peptone

An enzymatic digest of animal tissue.

Trypticase™ Peptone

A pancreatic digest of casein. It has a very low carbohydrate content and a relatively high tryptophan content.

Tryptone

A pancreatic digest of casein. It contains total nitrogen of 12.7% and NaCl of 0.4%.

Tryptone T

A pancreatic digest of casein with lower levels of calcium, magnesium, and iron than tryptone. It contains total nitrogen of 11.7% and NaCl of 4.9%.

Tryptose

An enzymatic hydrolysate containing high molecular weight peptides. It contains total nitrogen of 12.2% and NaCl of 5.7%.

Meat and Plant Extracts

Meat and plant infusions are aqueous extracts that are commonly used as sources of nutrients for the cultivation of microorganisms. Such infusions contain amino acids and low molecular weight peptides, carbohydrates, vitamins, minerals, and trace metals. Extracts of animal tissues contain relatively high concentrations of water-soluble protein components and glycogen. Extracts of plant tissues contain relatively high concentrations of carbohydrates.

With regard to infusions, many media list as an ingredient infusion from beef heart or another animal tissue. This ingredient is prepared by boiling a given amount of the animal tissue (e.g., 500.0g), and then using the liquid or, more commonly, drying the broth and using the solids from the infusion. The actual weight of the dry solids extracted from the hot water used to create the infusion varies, and so the ingredient typically is simply listed as 500.0g beef heart infusion, although the actual weight of sol-

ids recovered from the infusion and used in the medium is far less. Brain heart infusion is prepared from calf brains and beef heart.

Below is a list of some of the meat and plant extracts that are used as ingredients in various media.

Bacto Beef

A desiccated powder of lean beef.

Bacto Beef Extract

An extract of beef (paste).

Bacto Beef Extract Desiccated

An extract of desiccated beef.

Bacto Beef Heart for Infusion

A desiccated powder of beef heart.

Bacto Liver

A desiccated powder of beef liver.

HiVeg Acid Hydrolysate

An acid hydrolysate of vegetable proteins suitable for use in culture media requiring amino acid mixture with growth promotional characteristics matches with casein acid hydrolysate.

HiVeg Acid Hydrolysate No. 1

An acid hydrolysate of vegetable proteins with growth enhancing performance similar to casein acid hydrolysate.

HiVeg Extract

An extract of vegetable proteins with growth enhancing performance similar to beef extract.

HiVeg Extract No. 1

An extract of vegetable proteins with growth enhancing performance similar to meat extract.

HiVeg Extract No. 2

An extract of vegetable proteins with growth enhancing performance similar to liver extract.

HiVeg Hydrolysate

An enzymatic hydrolysate of vegetable proteins with growth enhancing performance similar to casein enzyme hydrolysate (tryptone).

HiVeg Hydrolysate No. 1

An enzymatic hydrolysate of vegetable proteins with growth enhancing performance similar to milk proteins (tryptose).

HiVeg Hydrolysate No. 2

An enzymatic hydrolysate of vegetable proteins with growth enhancing performance similar to liver hydrolysate.

HiVeg Hydrolysate No. 3

An enzymatic hydrolysate of vegetable proteins with growth enhancing performance similar to peptonized milk.

HiVeg Hydrolysate No. 4

An enzymatic hydrolysate of vegetable proteins rich in amino acids.

HiVeg Hydrolysate No. 6

A hydrolysate of vegetable proteins with growth enhancing performance similar to casein enzyme hydrolysate Type-II.

HiVeg Hydrolysate C

An enzymatic hydrolysate of plant extract with growth enhancing performance similar to casein enzyme hydrolysate.

HiVeg Infusion

An infusion from vegetables with growth enhancement similar to heart infusion.

HiVeg Infusion No. 1

An infusion from vegetables with growth enhancement similar to liver infusion.

HiVeg Infusion Powder

An infusion from vegetables with growth enhancement similar to brain heart infusion.

HiVeg Special Infusion

An infusion from vegetables with growth enhancement similar to brain heart infusion.

Lab-Lemco

A meat extract powder.

Liver Desiccated

Dehydrated ox livers.

Malt Extract

A water-soluble extract from germinated grain dried by low-temperature evaporation. It has a high carbohydrate content. It contains total nitrogen of 1.1% and NaCl of 0.1%.

Growth Factors

Many microorganisms have specific growth factor requirements that must be included in media for their successful cultivation. Vitamins, amino acids, fatty acids, trace metals, and blood components often must be added to media. In some cases, specific defined components are used to meet the growth factor requirements. Incorporation of growth factors is used to enrich, that is, to increase the numbers of particular species of microorganisms. Most often, mixtures of growth factors are used in microbiological media. Acid hydrolysates of casein commonly are used as sources of amino acids. Extracts of yeast cells also are employed as sources of amino acids and vitamins for the cultivation of microorganisms. Many media, particularly those employed in the clinical laboratory, contain blood or blood components that serve as essential nutrients for fastidious microorganisms. X factor (heme) and V factor (nicotinamide adenine dinucleotide) often are supplied by adding hemoglobin, IsoVitaleX, and/or Supplement VX. Below is a list of some of the growth factors that are used as ingredients in various media.

Bacto Casamino Acids

A mixture of amino acids formed by acid hydrolysis of casein.

Bacto Vitamin-Free Casamino Acids

A mixture of amino acids formed by acid hydrolysis of casein that is free of vitamins.

Bovine Albumin

Bovine albumin fraction V 0.2% in 0.85% saline solution.

Bovine Blood, Citrated

Calf blood washed and treated with sodium citrate as an anticoagulant.

Bovine Blood, Defibrinated

Calf blood treated to denature fibrinogen without causing cell lysis.

***Campylobacter* Growth Supplement**

Sodium pyruvate, sodium metabisulfite, and FeSO₄.

Castenholz Salts

Agar, NaNO₃, Na₂HPO₄, KNO₃, nitrilotriacetic acid, MgSO₄·7H₂O, CaSO₄·2H₂O, NaCl, FeCl₃, MnSO₄, H₃BO₃, ZnSO₄, CoCl₂·6H₂O, Na₂MoO₄, CuSO₄, and H₂SO₄.

CM1 Broth Powder

Lab Lemco beef extract, yeast extract, peptone, NaCl.

CVA Enrichment

Glucose, L-cysteine·HCl·H₂O, vitamin B₁₂, L-glutamine, L-cystine·2HCl, adenine, nicotinamide adenine dinucleotide, cocarboxylase, guanine·HCl, Fe(NO₃)₃, *p*-aminobenzoic acid, and thiamine·HCl.

Cysteine Sulfide Reducing Agent

L-Cysteine·HCl·H₂O and Na₂S·9H₂O.

Dubos Medium Albumin

Albumin fraction V, glucose, and saline solution.

Dubos Oleic Albumin Complex

Alkalinized oleic acid, albumin fraction V, and saline solution.

Egg Yolk Emulsion

Chicken egg yolks and whole chicken egg.

Egg Yolk Emulsion, 50%

Chicken egg yolks, whole chicken egg, and saline solution.

EY Tellurite Enrichment

Egg yolk suspension with potassium tellurite.

Fildes Enrichment

A peptic digest of sheep or horse blood that is a rich source of growth factors, including hemin and nicotinamide adenine dinucleotide.

Fresh Yeast Extract Solution

Live, pressed, starch-free, hydrolyzed Baker's yeast.

Hemin Solution

Hemin and NaOH.

Hemoglobin

Dried bovine hemoglobin. Used to provide hemin required by many fastidious microorganisms.

Hemoglobin Solution 2%

Provides hemin required by many fastidious microorganisms.

HiVeg Yeast Hydrolysate

A dried extract from autolysing yeast cells (*Saccharomyces*) that is rich in vitamins and other nutritive substances such as free amino acids.

Hoagland Trace Elements Solution, Modified

H₃BO₃, MnCl₂·4H₂O, AlCl₃, CoCl₂, CuCl₂, KI, NiCl₂, ZnCl₂, BaCl₂, Na₂MoO₄, SeCl₄, SnCl₂·2H₂O, NaVO₃·H₂O, KBr, and LiCl.

Horse Blood, Citrated

Horse blood washed and treated with sodium citrate used as an anticoagulant.

Horse Blood, Defibrinated

Horse blood treated to denature fibrinogen without causing cell lysis.

Horse Blood, Hemolysed

Horse blood treated to lyse cells.

Horse Blood, Oxalated

Horse blood treated with potassium oxalate as an anticoagulant.

Horse Serum

Horse blood is allowed to clot at 2°–8°C so that the serum separates; the serum is filter sterilized. Serum usually is inactivated by heating to 56°C for 30 min to eliminate lipases that would cause degradation of lipids and inactivation of complement.

Hutner's Mineral Base

MgSO₄·7H₂O, CaCl₂·2H₂O, FeSO₄·7H₂O, Na₂B₄O₇·10H₂O, (NH₄)₂MoO₄, FeSO₄·7H₂O, MnSO₄·7H₂O, Co(NO₃)₂·6H₂O, ZnSO₄·7H₂O, CuSO₄·5H₂O, EDTA, and nitrilotriacetic acid.

IsoVitaleX[®] Enrichment

Glucose, L-cysteine·HCl, L-glutamine, L-cystine, adenine, nicotinamide adenine dinucleotide, vitamin B₁₂, thiamine pyrophosphate, guanine·HCl, Fe(NO₃)₃·6H₂O, *p*-aminobenzoic acid, and thiamine·HCl.

***Legionella* Agar Enrichment**

L-Cysteine and ferric pyrophosphate.

Legionella BCYE Growth Supplement

ACES buffer/KOH, ferric pyrophosphate, L-cysteine-HCl, and α -ketoglutarate. For the enrichment of *Legionella* species.

Leptospira Enrichment

Lyophilized pooled rabbit serum containing hemoglobin that provides long-chain fatty acids and B vitamins for growth of *Leptospira* species.

Metals "44"

ZnSO₄·7H₂O, FeSO₄·7H₂O, MnSO₄·7H₂O, Na₂B₄O₇·10H₂O, CuSO₄·5H₂O, Co(NO₃)₂·6H₂O, and EDTA.

Middlebrook ADC Enrichment

NaCl, bovine albumin fraction V, glucose, and catalase. The albumin binds free fatty acids that may be toxic to mycobacteria.

Middlebrook OADC Enrichment

NaCl, bovine albumin, glucose, oleic acid, and catalase. The albumin binds free fatty acids that may be toxic to mycobacteria; the enrichment provides oleic acid used by *Mycobacterium tuberculosis* for growth.

Mycoplasma Enrichment without Penicillin

Horse serum, fresh autolysate of yeast-yeast extract, and thallium acetate. Provides cholesterol and nucleic acids for growth of *Mycoplasma* species. The thallium selectively inhibits other microorganisms.

Mycoplasma Supplement

Yeast extract and horse serum.

Nitsch's Trace Elements

MnSO₄, H₃BO₃, ZnSO₄, Na₂MoO₄, CuSO₄, CoCl₂·6H₂O, and H₂SO₄.

Oleic Albumin Complex

NaCl, bovine albumin fraction V, and oleic acid. The albumin binds free fatty acids that may be toxic to mycobacteria, and the enrichment provides oleic acid that is used by *Mycobacterium tuberculosis* for growth.

PPLO Serum Fraction

Serum fraction A.

Rabbit Blood, Citrated

Rabbit blood washed and treated with sodium citrate as an anticoagulant.

Rabbit Blood, Defibrinated

Rabbit blood treated to denature fibrinogen without causing cell lysis.

RPF Supplement

Fibrinogen, rabbit plasma, trypsin inhibitor, and potassium tellurite. For the selection and nutrient supplementation of *Staphylococcus aureus*.

Sheep Blood, Citrated

Sheep blood washed and treated with sodium citrate as an anticoagulant.

Sheep Blood, Defibrinated

Sheep blood treated to denature fibrinogen without causing cell lysis.

SLA Trace Elements

FeCl₂·4H₂O, H₃BO₃, CoCl₂·6H₂O, ZnCl₂, Na₂MoO₄·2H₂O, MnCl₂·4H₂O, NiCl₂·6H₂O, CuCl₂·2H₂O, and Na₂SeO₃·5H₂O.

Soil Extract

African Violet soil and Na₂CO₃.

Supplement A

Yeast concentrate with Crystal Violet.

Supplement B

Yeast concentrate, glutamine, coenzyme, cocarboxylase, hematin, and growth factors.

Supplement C

Yeast concentrate.

Supplement VX

Essential growth factors V and X.

Trace Elements Mixture

Ethylenediamine tetraacetic acid (EDTA), ZnSO₄·7H₂O, CaCl₂, MnCl₂·4H₂O, FeSO₄·7H₂O, (NH₄)₆Mo₇O₂₄·4H₂O, CoCl₂·6H₂O, and CuSO₄·5H₂O.

Trace Elements Solution HO-LE

H₃BO₃, MnCl₂·4H₂O, sodium tartrate, FeSO₄·7H₂O, ZnCl₂, CoCl₂·6H₂O, CuCl₂·2H₂O, and Na₂MoO₄·2H₂O.

Trace Elements Solution SL-6

H₃BO₃, CoCl₂·6H₂O, ZnSO₄·7H₂O, MnCl₂·4H₂O, NiCl₂·6H₂O, Na₂MoO₄·H₂O, and CuCl₂·2H₂O.

Trace Elements Solution SL-7

FeCl₂·4H₂O, CoCl₂·6H₂O, MnCl₂·4H₂O, ZnCl₂, H₃BO₃, Na₂MoO₄·2H₂O, NiCl₂·6H₂O, CuCl₂·2H₂O, and HCl.

Trace Elements Solution SL-8

Disodium EDTA, FeCl₂·4H₂O, CoCl₂·6H₂O, MnCl₂·4H₂O, NiCl₂·6H₂O, ZnCl₂, H₃BO₃, NaMoO₄·2H₂O, and CuCl₂·2H₂O.

Trace Elements Solution SL-10

FeCl₂·4H₂O, CoCl₂·6H₂O, MnCl₂·4H₂O, NiCl₂·6H₂O, H₃BO₃, ZnCl₂, Na₂MoO₄·2H₂O, CuCl₂·2H₂O, and HCl (25% solution).

Trace Metals A-5 Mix

ZnSO₄·7H₂O, Co(NO₃)₂·6H₂O, Na₂MoO₄·2H₂O, CuSO₄·5H₂O, H₃BO₃, and MnCl₂·4H₂O.

VA Vitamin Solution

Nicotinamide, thiamine·HCl, *p*-aminobenzoic acid, biotin, calcium pantothenate, pyridoxine·2HCl, and cyanocobalamin.

Vitamin K₁ Solution

Vitamin K₁ and ethanol.

Vitox Supplement

Glucose, L-cysteine·HCl, L-glutamine, L-cystine, adenine sulfate, nicotinamide adenine dinucleotide, cocarboxylase, guanine·HCl, Fe(NO₃)₃·6H₂O, *p*-aminobenzoic acid, vitamin B₁₂, and thiamine·HCl.

Wolfe's Mineral Solution

MgSO₄·7H₂O, nitriloacetic acid, NaCl, MnSO₄·H₂O, FeSO₄·7H₂O, CoCl₂·6H₂O, CaCl₂, ZnSO₄·7H₂O, CuSO₄·5H₂O, AlK(SO₄)₂·12H₂O, Na₂MoO₄·2H₂O, and H₃BO₃.

Wolfe's Vitamin Solution

Pyridoxine·HCl, thiamine·HCl, riboflavin, nicotinic acid, calcium pantothenate, *p*-aminobenzoic acid, thioctic acid, biotin, folic acid, and cyanocobalamin.

Yeast Autolysate Growth Supplement

Yeast autolysate fractions, glucose, and NaHCO₃.

Yeast Dialysate

Active, dried yeast.

Yeast Extract

A water-soluble extract of autolyzed yeast cells.

Yeast Extract Powder

A dried extract obtained from yeast cells (*Saccharomyces*) prepared under controlled conditions that retains its vitamin content and other nutritive values such as free amino acids.

Yeastolate

A water-soluble fraction of autolyzed yeast cells rich in vitamin B complex.

Selective Components

Many media contain selective components that inhibit the growth of nontarget microorganisms. Selective media are especially useful in the isolation of specific microorganisms from mixed populations. In many media for the study of microorganisms in nature, compounds are included in the media as sole sources of carbon or nitrogen so that only a few types of microorganisms can grow. Selective toxic compounds are also frequently used to select for the cultivation of particular microbial species. The isolation of a pathogen from a stool specimen, for example, where there is a high abundance of nonpathogenic normal microbiota, requires selective media. Often, antimicrobics or other selectively toxic compounds are incorporated into media to suppress the growth of the background microbiota while permitting the cultivation of the target organism of interest. Bile salts, selenite, tetrathionate, tellurite, azide, phenylethanol, sodium lauryl sulfate, high sodium chloride concentrations, and various dyes—such as eosin, Crystal Violet, and Methylene Blue—are used as selective toxic chemicals. Antimicrobial agents used to suppress specific types of microorganisms include ampicillin, chloramphenicol, colistin, cycloheximide, gentamicin, kanamycin, nalidixic acid, sulfadiazine, and vancomycin. Various combinations of antimicrobics are effective in suppressing classes of microorganisms, such as enteric bacteria.

Below are some of the selective agents, principally antimicrobial mixtures used for the selective isolation of pathogens.

Ampicillin Selective Supplement

Ampicillin. Used in media for the selection of *Aeromonas hydrophila*.

Anaerobe Selective Supplement GN

Hemin, menadione, sodium succinate, nalidixic acid, and vancomycin. For the selection of Gram-negative anaerobes.

Anaerobe Selective Supplement NS

Hemin, menadione, sodium pyruvate, and nalidixic acid. For the selection of non-sporulating anaerobes.

***Bacillus cereus* Selective Supplement**

Polymyxin B. For the selection of *Bacillus cereus*.

***Bordetella* Selective Supplement**

Cephalexin. For the selection of *Bordetella* species.

***Brucella* Selective Supplement**

Polymyxin B, bacitracin, cycloheximide, nalidixic acid, nystatin, and vancomycin. For the selection of *Brucella* species.

***Campylobacter* Selective Supplement Blaser-Wang**

Vancomycin, polymyxin B, trimethoprim, amphotericin B, cephalothin. For the selection of *Campylobacter* species.

***Campylobacter* Selective Supplement Butzler**

Bacitracin, cycloheximide, colistin sulfate, sodium cephalosporin, and novobiocin. For the selection of *Campylobacter* species.

***Campylobacter* Selective Supplement Preston**

Polymyxin B, rifampicin, trimethoprim, and cycloheximide. For the selection of *Campylobacter* species.

***Campylobacter* Selective Supplement Skirrow**

Vancomycin, trimethoprim, and polymyxin B. For the selection of *Campylobacter* species.

CCDA Selective Supplement

Cefoperazone and amphotericin B. For the selection of *Campylobacter* species.

Cefoperazone Selective Supplement

Cefoperazone. For the selection of *Campylobacter* species.

CFC Selective Supplement

Cetrimide, fucidin, and cephaloridine. For the selection of pseudomonads.

Chapman Tellurite Solution

Potassium tellurite 1% solution.

Chloramphenicol Selective Supplement

Chloramphenicol. For the selection of yeasts and filamentous fungi.

***Clostridium difficile* Selective Supplement**

D-Cycloserine and cefoxitin. For the selection of *Clostridium difficile*.

CN Inhibitor

Cesulodin and novobiocin. It inhibits enteric Gram-negative microorganisms.

CNV Antimicrobial

Colistin sulfate, nystatin, and vancomycin.

CNVT Antimicrobial

Colistin sulfate, nystatin, vancomycin, and trimethoprim lactate.

Colbeck's Egg Broth

Egg emulsion and saline solution.

Fraser Supplement

Ferric ammonium sulfate, nalidixic acid, and acriflavin hydrochloride. For the selection of *Listeria* species.

***Gardnerella vaginalis* Selective Supplement**

Gentamicin sulfate, nalidixic acid, and amphotericin B. For the selection of *Gardnerella vaginalis*.

GC Selective Supplement

Yeast autolysate, glucose, Na₂HCO₃, vancomycin, colistin methane sulfonate, nystatin, and trimethoprim. For the selection of *Neisseria* species.

***Helicobacter pylori* Selective Supplement Dent**

Vancomycin, trimethoprim, cefulodin, and amphotericin B. For the selection of *Helicobacter pylori*.

Kanamycin Sulfate Selective Supplement

Kanamycin sulfate. For the selection of enterococci.

LCAT Selective Supplement

Lincomycin, colistin sulfate, amphotericin B, and trimethoprim. For the selection of *Neisseria* species.

***Legionella* BMPA Selective Supplement**

Cefamandole, polymyxin B, and anisomycin. For the selection of *Legionella* species.

***Legionella* GVPC Selective Supplement**

Glycine, vancomycin hydrochloride, polymyxin B sulfate, and cycloheximide. For the selection of *Legionella* species.

***Legionella* MWY Selective Supplement**

Glycine, polymyxin B, anisomycin, vancomycin, Bromthymol B, and Bromcresol Purple. For the selection of *Legionella* species.

***Listeria* Primary Selective Enrichment Supplement**

Nalidixic acid and acriflavin. For the selection of *Listeria* species.

***Listeria* Selective Enrichment Supplement**

Nalidixic acid, cycloheximide, and acriflavin. For the selection of *Listeria* species.

Listeria Selective Supplement MOX
Colistin and moxalactam. For the selection of *Listeria monocytogenes*.

Listeria Selective Supplement Oxford
Cycloheximide, colistin sulfate, acriflavin, cefotetan, and fosfomycin. For the selection of *Listeria* species.

Modified Oxford Antimicrobial Supplement
Moxalactam and colistin sulfate.

MSRV Selective Supplement
Novobiocin. For the selection of *Salmonella*.

Mycoplasma Supplement G
Horse serum, yeast extract, thallos acetate, and penicillin. For the selection of *Mycoplasma* species.

Mycoplasma Supplement P
Horse serum, yeast extract, thallos acetate, glucose, Phenol Red, Methylene Blue, penicillin, and *Mycoplasma* broth base. For the selection of *Mycoplasma* species.

Mycoplasma Supplement S
Yeast extract, horse serum, thallium acetate, and penicillin.

Oxford Antimicrobial Supplement
Cycloheximide, colistin, acriflavin, cefotetan, and fosfomycin.

Oxgall
Dehydrated fresh bile. For the selection of bile-tolerant bacteria.

Oxytetracycline GYE Supplement
Oxytetracycline in a buffer. For the selection of yeasts and filamentous fungi.

PALCAM Selective Supplement
Polymyxin B, acriflavin hydrochloride, and ceftazidime. For the selection of *Listeria monocytogenes*.

Perfringens OPSP Selective Supplement A
Sodium sulfadiazine. For the selection of *Clostridium perfringens*.

Perfringens SFP Selective Supplement A
Kanamycin sulfate and polymyxin B. For the selection of *Clostridium perfringens*.

Perfringens TSC Selective Supplement A
D-Cycloserine. For the selection of *Clostridium perfringens*.

Sodium Desoxycholate
Sodium salt of desoxycholic acid.

Sodium Taurocholate
Sodium salt of conjugated bile acid—75% sodium taurocholate and 25% bile salts. For the selection of bile-tolerant bacteria.

STAA Selective Supplement
Streptomycin sulfate, cycloheximide, and thallos acetate. For the selection of *Brochothrix thermosphacta*.

Staph/Strep Selective Supplement
Nalidixic acid and colistin sulfate. For the selection of *Staphylococcus* species and *Streptococcus* species.

Streptococcus Selective Supplement COA
Colistin sulfate and oxolinic acid. For the selection of *Streptococcus* species.

Sulfamandelate Supplement
Sodium sulfacetamide and sodium mandelate. For the selection of *Salmonella* species.

Tellurite Solution

A solution containing potassium tellurite. Inhibits Gram-negative and most Gram-positive microorganisms. For the isolation of *Corynebacterium* species, *Streptococcus* species, *Listeria* species, and *Candida albicans*.

Tinsdale Supplement

Serum, potassium tellurite, and sodium thiosulfate. For the selection of *Corynebacterium diphtheriae*.

V C A Inhibitor

Vancomycin, colistin, anisomycin, and trimethoprim. Inhibits most Gram-negative and Gram-positive bacteria and yeasts. For the isolation of *Neisseria* species.

V C A T Inhibitor

Vancomycin, colistin, anisomycin, and trimethoprim lactate. Inhibits most Gram-negative and Gram-positive bacteria and yeasts. For the isolation of *Neisseria* species.

V C N Inhibitor

Colistin, vancomycin, and nystatin. Inhibits most Gram-negative and Gram-positive bacteria and yeasts. For the isolation of *Neisseria* species.

V C N T Inhibitor

Colistin, vancomycin, nystatin, and trimethoprim lactate. Inhibits most Gram-negative and Gram-positive bacteria and yeasts. For the isolation of *Neisseria* species.

Yersinia Selective Supplement

Cefsulodin, irgasan, and novobiocin. For the selection of *Yersinia enterocolitica*.

Differential Components

The differentiation of many microorganisms is based upon the production of acid from various carbohydrates and other carbon sources or the decarboxylation of amino acids. Some media include indicators, particularly of pH, that permit the visual detection of changes in pH resulting from such metabolic reactions. A number of new media also include chromogenic dyes that change color when specific enzymatic reactions occur. Some of these have been developed based upon molecular biology determinations of specific genes that are useful for the differentiation of bacterial taxa.

Below is a list of some commonly used pH indicators.

pH Indicator	pH Range	Acid Color	Alkaline Color
<i>m</i> -Cresol Purple	0.5–2.5	Red	Yellow
Thymol Blue	1.2–2.8	Red	Yellow
Bromphenol Blue	3.0–4.6	Yellow	Blue
Bromcresol Green	3.8–5.4	Yellow	Blue
Chlorcresol Green	4.0–5.6	Yellow	Blue
Methyl Red	4.2–6.3	Red	Yellow
Chlorphenol Red	5.0–6.6	Yellow	Red
Bromcresol Purple	5.2–6.8	Yellow	Purple
Bromthymol Blue	6.0–7.6	Yellow	Blue
Phenol Red	6.8–8.4	Yellow	Red
Cresol Red	7.2–8.8	Yellow	Red
<i>m</i> -Cresol Purple	7.4–9.0	Yellow	Purple
Thymol Blue	8.0–9.6	Yellow	Blue
Cresolphthalein	8.2–9.8	Colorless	Red
Phenolphthalein	8.3–10.0	Colorless	Red

pH Buffers

Maintaining the pH of media usually is accomplished by the inclusion of suitable buffers. Because microorganisms grow optimally only within certain limits of a pH range, the pH generally is maintained within a few tenths of a pH unit.

For the phosphate buffers, the pH is established by using varying volumes of equimolar concentrations of Na_2HPO_4 and NaH_2PO_4 .

pH	Na_2HPO_4 (mL)	NaH_2PO_4 (mL)
5.4	3.0	97.0
5.6	5.0	95.0
5.8	7.8	92.2
6.0	12.0	88.0
6.2	18.5	81.5
6.4	26.5	73.5
6.6	37.5	62.5
6.8	50.0	50.0
7.0	61.1	38.9
7.2	71.5	28.5
7.4	80.4	19.6
7.6	86.8	13.2
7.8	91.4	8.6
8.0	94.5	5.5

Trademarks

The names of some media, components of media, and other terms are registered trademarks. The trademarked items referred to in the *Handbook of Microbiological Media* are listed below.

American Type Culture Collection[®] and ATCC[®] are trademarks of the American Type Culture Collection.

Bacto[®], BiTek[®], and Difco[®] are trademarks of Difco Laboratories (registered trademarks owned by Becton Dickinson and Company).

Oxoid[®] and Lab-Lemco[®] are trademarks of Unipath Ltd.

HiVeg[®] and HiChrome[®] are registered trademarks of HiMedia Laboratories Pvt. Limited, India.

CHROMagar[®] registered trademark of CHROMagar Microbiology diagnostics

CandiSelect 4[®] registered trademark of BioRad

Acidase[®], BBL[®], Biosate[®], CTA Medium[®], DTA Medium[®], DCLS Agar[®], Desoxycholate[®], Desoxycholate Agar[®], Desoxycholate Citrate Agar[®], Enterococcosel[®], Eugonagar[®], Eugonbroth[®], GC-Lect[®], Gelysate[®], IsoVitalX[®], Mycobactosel[®], Mycophil[®], Mycosel[®], Myosate[®], Phytone[®], Polypeptone[®], Salmon[®]- β -D-GAL, Selenite-F Enrichment[®], Thiotone[®], Trichosel[®], Triton[®], Trypticase[®], TSA II[®], and TSI Agar[®] are trademarks of Becton Dickinson and Co.

Preparation of Media

The ingredients in a medium are usually dissolved, and the medium is then sterilized. When agar is used as a solidifying agent, the medium must be heated gently, usually to boiling, to dissolve the agar. In some cases where interactions of components, such as metals, would cause precipitates, solutions must be prepared and occasionally sterilized separately before mixing the various solutions to prepare the complete medium. The pH often is adjusted prior to sterilization, but in some cases sterile acid or base is used to adjust the pH of the medium following sterilization. Many media are sterilized by exposure to elevated temperatures. The most common method is to autoclave the medium. Different sterilization procedures are employed when heat-labile compounds are included in the formulation of the medium.

Tyndallization

Exposure to steam at 100°C for 30 min will kill vegetative bacterial cells but not endospores. Such exposure can be achieved using flowing steam in an Arnold sterilizer. By allowing the medium to cool and incubate under conditions where endospore germination will occur and by repeating the 100°C–30 min exposure on three successive days, the medium can be sterilized because all the endospores will have germinated and the heat exposure will have killed all the vegetative cells. This process of repetitive exposure to 100°C is called tyndallization, after its discoverer, John Tyndall.

Inspissation

Inspissation is a heat exposure method that is employed with high-protein materials, such as egg-containing media, that cannot withstand the high temperatures used in autoclaving. This process causes coagulation of the protein without greatly altering its chemical properties. Several different protocols can be followed for inspissation. Using an Arnold sterilizer or a specialized inspissator, the medium is exposed to 75°–80°C for 2 hr on each of three successive days. Inspissation using an autoclave employs exposure to 85°–90°C for 10 min achieved by having a mixture of air and steam in the chamber, followed by a 15 min exposure during which the temperature is raised to 121°C using only steam under pressure in the chamber; the temperature then is slowly lowered to less than 60°C.

Autoclaving

Autoclaving uses exposure to steam, generally under pressure, to kill microorganisms. Exposure for 15 min to steam at 15 psi—121°C is most commonly used. Such exposure kills vegetative bacterial cells and bacterial endospores. However, some substances do not tolerate such exposures, and lower temperatures and different exposure times are sometimes employed. Media containing carbohydrates often are sterilized at 116°–118°C in order to prevent the decomposition of the carbohydrate and the formation of toxic compounds that would inhibit microbial growth. Below is a list of pressure–temperature relationships.

Pressure—psi	Temperature—°C
0	100.0
1	101.9
2	103.6
3	105.3
4	106.9
5	108.4
6	109.8
7	111.3
8	112.6
9	113.9
10	115.2
11	116.4
12	117.6
13	118.8
14	119.9
15	121.0
16	122.0
17	123.0
18	124.0
19	125.0
20	126.0
21	126.9
22	127.8
23	128.7
24	129.6
25	130.4

Filtration

Filtration is commonly used to sterilize media containing heat-labile compounds. Liquid media are passed through sintered glass or membranes, typically made of cellulose acetate or nitrocellulose, with small pore sizes. A membrane with a pore size of 0.2µm will trap bacterial cells and, therefore, sometimes is called a bacteriological filter. By preventing the passage of microorganisms, filtration renders fluids free of bacteria and eukaryotic microorganisms, that is, free of living organisms, and hence sterile. Many carbohydrate solutions, antibiotic solutions, and vitamin solutions are filter sterilized and added to media that have been cooled to temperatures below 50°C.

Caution about Hazardous Components

Some media contain components that are toxic or carcinogenic. Appropriate safety precautions must be taken when using media with such components. Basic fuchsin and acid fuchsin are carcinogens, and caution must be used in handling media with these compounds to avoid dangerous exposure that could lead to the development of malignancies. Thallium salts, sodium azide, sodium biselenite, and cyanide are among the toxic components found in some media. These compounds are poisonous, and steps must be taken to avoid ingestion, inhalation, or skin contact. Azides also react with many metals, especially copper, to form explosive metal azides. The disposal of azides must avoid contact with copper or achieve sufficient dilution to avoid the formation of such hazardous explosive compounds. Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation. Media with sulfur-containing compounds may result in the formation of hydrogen sulfide, which is a toxic gas. Care must be used to ensure proper ventilation. Media with human blood or human blood components must be handled with great caution to avoid exposure to human immunodeficiency virus and other pathogens that contaminate some blood supplies. Proper handling and disposal procedures must be followed with blood-containing as well as other media that are used to cultivate microorganisms.

Uses of Media

The *Handbook of Microbiological Media* contains all the media used to cultivate bacteria, archaea, fungi, and protists of the American Type Culture Collection, the media used to cultivate bacteria, archaea, and fungi of the Deutsche Sammlung von Mikroorganismen (DSM), the media used to cultivate bacteria, archaea, and fungi of the Japanese Collection of Microorganisms (JCM), the media used to cultivate bacteria of the British National Culture Collections of Industrial and Marine Bacteria, the media used to cultivate bacteria of the Spanish Culture Collection of Microorganisms, the media used to cultivate bacteria of the Belgian Culture Collection of Microorganisms (BCCM), the media used to cultivate bacteria of the Finnish VTM Culture Collection of Microorganisms, the media used to cultivate bacteria of the Russian Culture Collection of Microorganisms, and the media used for the testing of waters, wastewaters, and foods—including those recommended by the USEPA and FDA for the standard methods examination of water and food.

Sources of Media

The *Handbook of Microbiological Media* includes the media produced by major suppliers of dehydrated media, including Oxoid Unipath, HiMedia, and BD Diagnostic Systems which supplies Difco and BBL products. There also are a number of suppliers of these media that service different regions. Some of these suppliers also can provide prepared media. This is especially useful for some laboratories that do not have the personnel to oversee the quality assurance needed to prepare media. Quality assurance is a critical part of media preparation.

A Medium, 5X

Composition per liter:

K ₂ HPO ₄	52.5g
KH ₂ PO ₄	22.5g
(NH ₄) ₂ SO ₄	5.0g
Sodium citrate·2H ₂ O	2.5g
Carbon source solution	10.0mL
MgSO ₄ ·7H ₂ O solution	1.0mL
pH 7.0 ± 0.2 at 25°C	

Carbon Source Solution:

Composition per 100.0mL:

Glycerol or sucrose	20.0g
---------------------------	-------

Preparation of Carbon Source Solution: Add glycerol or glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

MgSO₄·7H₂O Solution:

Composition per 100.0mL:

MgSO ₄ ·7H ₂ O	24.65g
--	--------

Preparation of MgSO₄·7H₂O Solution: Add MgSO₄·7H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except carbon source solution and MgSO₄·7H₂O solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. To prepare medium for use (1×), aseptically dilute 200.0mL of 5× stock solution with 789.0mL of sterile distilled/deionized water. Aseptically add 10.0mL of sterile carbon source solution and 1.0mL of sterile MgSO₄·7H₂O solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Escherichia coli*.

A 1 Broth

Composition per liter:

Pancreatic digest of casein	20.0g
Lactose	5.0g
NaCl	5.0g
Salicin	0.5g
Triton™ X-100	1.0mL
pH 6.9 ± 0.1 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into test tubes containing an inverted Durham tube. Autoclave for 10 min at 15 psi pressure–121°C.

Use: For the detection of fecal coliforms in foods, treated wastewater, and seawater by a most-probable-number (MPN) method. Multiple dilutions of samples (3, 5, or 10 replicates per dilution) are added to tubes containing A 1 broth. After incubation, test tubes with gas accumulation in the Durham tubes are scored positive and those with no gas as negative. A MPN table is consulted to determine the most probable number of fecal coliforms.

A-1 HiVeg Broth

Composition per liter:

Plant hydrolysate	20.0g
Lactose	5.0g

NaCl	5.0g
Polyethylene glycol p-isoactylphenyl ether (Triton™ X-100)	1.0g
Salicin	0.5g
pH 6.9 ± 0.1 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into test tubes containing an inverted Durham tube. Autoclave for 10 min at 15 psi pressure–121°C.

Use: For the detection of fecal coliforms in foods, treated wastewater, and seawater by a most-probable-number (MPN) method. Multiple dilutions of samples (3, 5, or 10 replicates per dilution) are added to tubes containing A 1 broth. After incubation, test tubes with gas accumulation in the Durham tubes are scored positive and those with no gas as negative. A MPN table is consulted to determine the most probable number of fecal coliforms.

A-1 Medium (BAM M1)

Composition per liter:

Pancreatic digest of casein	20.0g
Lactose	5.0g
NaCl	5.0g
Salicin	0.5g
Triton™ X-100	1.0mL
pH 6.9 ± 0.1 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.9. Distribute into test tubes containing an inverted Durham tube. Medium may be cloudy prior to autoclaving. Autoclave for 10 min at 15 psi pressure–121°C.

Use: For the detection of fecal coliforms in foods and waters by a most-probable-number (MPN) method. Multiple dilutions of samples (3, 5, or 10 replicates per dilution) are added to tubes containing A-1 medium. After incubation, test tubes with gas accumulation in the Durham tubes are scored positive and those with no gas as negative. A MPN table is consulted to determine the most probable number of fecal coliforms.

A1 Medium (DSMZ Medium 1054)

Composition per liter:

Agar	20.0g
Starch	10.0g
Yeast extract	4.0g
Bacto peptone	2.0g
Seawater (Biomaris) (natural or artificial)	1.0L
pH 7.3 ± 0.2 at 25°C	

Preparation of Medium: Add components to seawater and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Saccharomonospora saliphila*.

A 1 Minimal Medium**Composition** per liter:

L-Asparagine	5.0g
(NH ₄) ₂ SO ₄	5.0g
Sodium pyruvate	5.0g
MgSO ₄ ·7H ₂ O	2.0g
Spermadine·3HCl	0.125g
L-Asparagine	0.1g
L-Isoleucine	0.1g
L-Methionine	0.1g
L-Phenylalanine	0.1g
L-Valine	0.1g
L-Leucine	0.05g
KH ₂ PO ₄	0.013g
FeCl ₃ ·6H ₂ O	2.7mg
CaCl ₂	1.1mg
Cyanocobalamin	1.0mg
Tris(hydroxymethyl)aminomethane buffer (0.01M solution, pH 7.6)	1.0L
	pH 7.6 ± 0.2 at 25°C

Preparation of Medium: Add solid components to 1.0L of Tris buffer. Mix thoroughly. Filter sterilize. Aseptically distribute into tubes or flasks.

Use: For the cultivation of *Myxococcus xanthus*.

A 3 Agar**Composition** per 202.4mL:

Agar base	140.0mL
Supplement solution	62.4mL
	pH 6.0 ± 0.2 at 25°C

Agar Base:**Composition** per liter:

Pancreatic digest of casein	17.0g
Ionagar No. 2	7.5g
NaCl	5.0g
Papaic digest of soybean meal	3.0g
K ₂ HPO ₄	2.5g
Glucose	2.5g

Source: Ionagar No. 2 is available from Oxoid Unipath.

Preparation of Agar Base: Add components, except agar, to distilled/deionized water and bring volume to 1.0L. Adjust pH to 5.5. Add agar. Mix thoroughly. Gently heat and bring to boiling. Distribute into screw-capped bottles in 140.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Supplement Solution:**Composition** per 62.4mL:

Horse serum-urea solution	40.0mL
Fresh yeast extract solution	20.0mL
Penicillin solution	2.0mL
Phenol Red solution	0.4mL

Preparation of Supplement Solution: Aseptically combine components. Mix thoroughly.

Horse Serum-Urea Solution:**Composition** per 40.0mL:

Urea	0.2g
Horse serum, unheated	40.0mL

Preparation of Horse Serum-Urea Solution: Add urea to 40.0mL of horse serum. Mix thoroughly. Filter sterilize.

Fresh Yeast Extract Solution:**Composition:**

Baker's yeast, live, pressed, starch-free	25.0g
---	-------

Preparation of Fresh Yeast Extract Solution: Add the live Baker's yeast to 100.0mL of distilled/deionized water. Autoclave for 90 min at 15 psi pressure–121°C. Allow to stand. Remove supernatant solution. Adjust pH to 6.6–6.8. Filter sterilize.

Penicillin Solution:**Composition** per 10.0mL:

Penicillin G	1,000,000U
--------------	------------

Preparation of Penicillin Solution: Add penicillin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Phenol Red Solution:**Composition** per 10.0mL:

Phenol Red	0.1g
------------	------

Preparation of Phenol Red Solution: Add Phenol Red to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Aseptically combine 140.0mL of cooled, sterile agar base and 62.4mL of sterile supplement solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Ureaplasma urealyticum* from urine. Also used for the cultivation of other *Ureaplasma* species.

A 3B Agar**Composition** per 101.5mL:

Agar base	80.0mL
Supplement solution	21.5mL
	pH 6.0 ± 0.2 at 25°C

Agar Base:**Composition** per liter:

Pancreatic digest of casein	17.0g
Ionagar No. 2	7.5g
NaCl	5.0g
Papaic digest of soybean meal	3.0g
K ₂ HPO ₄	2.5g
Glucose	2.5g

Source: Ionagar No. 2 is available from Oxoid Unipath.

Preparation of Agar Base: Add components, except agar, to distilled/deionized water and bring volume to 1.0L. Adjust pH to 5.5. Add agar. Mix thoroughly. Gently heat and bring to boiling. Distribute into screw-capped bottles in 80.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Supplement Solution:**Composition** per 21.5mL:

Horse serum-urea solution	20.0mL
Penicillin solution	1.0mL
L-Cysteine-HCl·H ₂ O solution	0.5mL

Preparation of Supplement Solution: Aseptically combine components. Mix thoroughly.

Horse Serum-Urea Solution:**Composition** per 40.0mL:

Urea	0.2g
Horse serum, unheated	40.0mL

Preparation of Horse Serum-Urea Solution: Add urea to 40.0mL of horse serum. Mix thoroughly. Filter sterilize.

Penicillin Solution:

Composition per 10.0mL:

Penicillin G 1,000,000U

Preparation of Penicillin Solution: Add penicillin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

L-Cysteine-HCl-H₂O Solution:

Composition per 10.0mL:

L-Cysteine-HCl-H₂O 0.2g

Preparation of L-Cysteine-HCl-H₂O Solution: Add L-cysteine-HCl-H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Aseptically combine 80.0mL of cooled, sterile agar base and 21.5mL of sterile supplement solution. Mix thoroughly.

Use: For the cultivation of *Ureaplasma urealyticum* from urine. Also used for the cultivation of other *Ureaplasma* species.

**A 7 Agar
(Shepard's Differential Agar)**

Composition per 205.7mL:

Agar base 160.0mL

Supplement solution 45.7mL

pH 6.0 ± 0.2 at 25°C

Agar Base:

Composition per 165.0mL:

Pancreatic digest of casein 2.72g

Agar 2.1g

NaCl 0.8g

Papaic digest of soybean meal 0.48g

K₂HPO₄ 0.4g

Glucose 0.4g

MnSO₄·H₂O 0.15g

Preparation of Agar Base: Add components, except agar, to distilled/deionized water and bring volume to 165.0mL. Adjust pH to 5.5. Add agar. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Supplement Solution:

Composition per 45.72mL:

Horse serum, unheated 40.0mL

Fresh yeast extract solution 2.0mL

Penicillin solution 2.0mL

CVA enrichment 1.0mL

L-Cysteine-HCl-H₂O solution 0.5mL

Urea solution 0.22mL

Preparation of Supplement Solution: Aseptically combine components. Mix thoroughly.

Fresh Yeast Extract Solution:

Composition per 100.0mL:

Baker's yeast, live, pressed, starch-free 25.0g

Preparation of Fresh Yeast Extract Solution: Add the live Baker's yeast to 100.0mL of distilled/deionized water. Autoclave for 90 min at 15 psi pressure–121°C. Allow to stand. Remove supernatant solution. Adjust pH to 6.6–6.8. Filter sterilize.

Penicillin Solution:

Composition per 10.0mL:

Penicillin G 1,000,000U

Preparation of Penicillin Solution: Add penicillin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

CVA Enrichment:

Composition per liter:

Glucose 100.0g

L-Cysteine-HCl-H₂O 25.9g

L-Glutamine 10.0g

L-Cystine-2HCl 1.0g

Adenine 1.0g

Nicotinamide adenine dinucleotide 0.25g

Coccarboxylase 0.1g

Guanine-HCl 0.03g

Fe(NO₃)₃ 0.02g

Vitamin B₁₂ 0.01g

p-Aminobenzoic acid 0.013g

Thiamine-HCl 3.0mg

Preparation of CVA Enrichment: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

L-Cysteine-HCl-H₂O Solution:

Composition per 10.0mL:

L-Cysteine-HCl-H₂O 0.4g

Preparation of L-Cysteine-HCl-H₂O Solution: Add L-cysteine-HCl-H₂O solution to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Urea Solution:

Composition per 10.0mL:

Urea, ultrapure 1.0g

Preparation of Urea Solution: Add urea to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Aseptically combine 160.0mL of cooled, sterile agar base and 45.9mL of sterile supplement solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and differentiation of *Ureaplasma urealyticum* from urine based on its ability to produce ammonia from urea. Bacteria that produce ammonia appear as golden to dark brown colonies. Also used for the cultivation of other *Ureaplasma* species.

A 7 Agar, Modified

Composition per 205.7mL:

Agar base 160.0mL

Supplement solution 45.7mL

pH 6.0 ± 0.2 at 25°C

Agar Base:

Composition per 165.0mL:

Agar 10.0g

Pancreatic digest of casein 2.72g

NaCl 0.8g

Papaic digest of soybean meal 0.48g

K₂HPO₄ 0.4g

Glucose 0.4g

MnSO₄·H₂O 0.15g

Preparation of Agar Base: Add components, except agar, to distilled/deionized water and bring volume to 165.0mL. Adjust pH to 5.5. Add agar. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Supplement Solution:

Composition per 45.72mL:

Horse serum, unheated.....	40.0mL
Fresh yeast extract solution.....	2.0mL
Penicillin solution	2.0mL
CVA enrichment.....	1.0mL
L-Cysteine·HCl·H ₂ O solution.....	0.5mL
Urea solution.....	0.22mL

Preparation of Supplement Solution: Aseptically combine components. Mix thoroughly.

Fresh Yeast Extract Solution:

Composition per 100.0mL:

Baker's yeast, live, pressed, starch-free.....	25.0g
--	-------

Preparation of Fresh Yeast Extract Solution: Add the live Baker's yeast to 100.0mL of distilled/deionized water. Autoclave for 90 min at 15 psi pressure–121°C. Allow to stand. Remove supernatant solution. Adjust pH to 6.6–6.8. Filter sterilize.

Penicillin Solution:

Composition per 10.0mL:

Penicillin G	1,000,000U
--------------------	------------

Preparation of Penicillin Solution: Add penicillin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

CVA Enrichment:

Composition per liter:

Glucose	100.0g
L-Cysteine·HCl·H ₂ O.....	25.9g
L-Glutamine.....	10.0g
L-Cystine·2HCl.....	1.0g
Adenine	1.0g
Nicotinamide adenine dinucleotide	0.25g
Coccarboxylase.....	0.1g
Guanine·HCl	0.03g
Fe(NO ₃) ₃	0.02g
<i>p</i> -Aminobenzoic acid.....	0.013g
Vitamin B ₁₂	0.01g
Thiamine·HCl	3.0mg

Preparation of CVA Enrichment: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

L-Cysteine·HCl·H₂O Solution:

Composition per 10.0mL:

L-Cysteine·HCl·H ₂ O.....	0.4g
--------------------------------------	------

Preparation of L-Cysteine·HCl·H₂O Solution: Add L-cysteine·HCl·H₂O solution to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Urea Solution:

Composition per 10.0mL:

Urea, ultrapure	1.0g
-----------------------	------

Preparation of Urea Solution: Add urea to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Aseptically combine 160.0mL of cooled, sterile agar base and 45.9mL of sterile supplement solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and differentiation of *Ureaplasma urealyticum* from urine based on its ability to produce ammonia from urea. Bacteria that produce ammonia appear as golden to dark brown colonies. Also used for the cultivation of other *Ureaplasma* species.

A 7B Agar

Composition per 205.7mL:

Agar base	160.0mL
Supplement solution	45.7mL
pH 6.0 ± 0.2 at 25°C	

Agar Base:

Composition per 165.0mL:

Pancreatic digest of casein.....	2.72g
Agar	2.1g
NaCl.....	0.8g
Papaic digest of soybean meal.....	0.48g
K ₂ HPO ₄	0.4g
Glucose	0.4g
Putrescine·2HCl.....	0.33g
MnSO ₄ ·H ₂ O.....	0.15g

Preparation of Agar Base: Add components, except agar, to distilled/deionized water and bring volume to 165.0mL. Adjust pH to 5.5. Add agar. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Supplement Solution:

Composition per 45.72mL:

Horse serum, unheated.....	40.0mL
Fresh yeast extract solution	2.0mL
Penicillin solution	2.0mL
CVA enrichment	1.0mL
L-Cysteine·HCl·H ₂ O solution.....	0.5mL
Urea solution.....	0.22mL

Preparation of Supplement Solution: Aseptically combine components. Mix thoroughly.

Fresh Yeast Extract Solution:

Composition per 100.0mL:

Baker's yeast, live, pressed, starch-free.....	25.0g
--	-------

Preparation of Fresh Yeast Extract Solution: Add the live Baker's yeast to 100.0mL of distilled/deionized water. Autoclave for 90 min at 15 psi pressure–121°C. Allow to stand. Remove supernatant solution. Adjust pH to 6.6–6.8. Filter sterilize.

Penicillin Solution:

Composition per 10.0mL:

Penicillin G	1,000,000U
--------------------	------------

Preparation of Penicillin Solution: Add penicillin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

CVA Enrichment:

Composition per liter:

Glucose	100.0g
L-Cysteine·HCl·H ₂ O.....	25.9g
L-Glutamine	10.0g
L-Cystine·2HCl	1.0g
Adenine.....	1.0g

Nicotinamide adenine dinucleotide	0.25g
Cocarboxylase.....	0.1g
Guanine-HCl	0.03g
Fe(NO ₃) ₃	0.02g
<i>p</i> -Aminobenzoic acid.....	0.013g
Vitamin B ₁₂	0.01g
Thiamine-HCl	3.0mg

Preparation of CVA Enrichment: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

L-Cysteine-HCl·H₂O Solution:

Composition per 10.0mL:

L-Cysteine-HCl·H ₂ O.....	0.4g
--------------------------------------	------

Preparation of L-Cysteine-HCl·H₂O Solution: Add L-cysteine-HCl·H₂O solution to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Urea Solution:

Composition per 10.0mL:

Urea, ultrapure	1.0g
-----------------------	------

Preparation of Urea Solution: Add urea to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Aseptically combine 160.0mL of cooled, sterile agar base and 45.9mL of sterile supplement solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and differentiation of *Ureaplasma urealyticum* from urine based on its ability to produce ammonia from urea. Bacteria that produce ammonia appear as golden to dark brown colonies. Also used for the cultivation of other *Ureaplasma* species.

A 8B Agar

Composition per 84.6mL:

Agar base	80.0mL
Supplement solution	4.6mL

pH 6.0 ± 0.2 at 25°C

Agar Base:

Composition per 165.0mL:

Pancreatic digest of casein.....	2.72g
Agar	2.1g
NaCl.....	0.8g
Papaic digest of soybean meal	0.48g
K ₂ HPO ₄	0.4g
Glucose	0.4g
MnSO ₄ ·H ₂ O	0.15g
CaCl ₂ ·2H ₂ O.....	0.03g
Putrescine·2HCl	34.0mg

Preparation of Agar Base: Add components, except agar, to distilled/deionized water and bring volume to 165.0mL. Adjust pH to 5.5. Add agar. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Supplement Solution:

Composition per 4.6mL:

Horse serum, unheated.....	1.0mL
Fresh yeast extract solution.....	1.0mL
Penicillin solution	1.0mL
Urea solution.....	1.0mL
L-Cysteine-HCl·H ₂ O solution	0.5mL
GHL tripeptide solution.....	0.1mL

Preparation of Supplement Solution: Aseptically combine components. Mix thoroughly.

Fresh Yeast Extract Solution:

Composition per 100.0mL:

Baker's yeast, live, pressed, starch-free.....	25.0g
--	-------

Preparation of Fresh Yeast Extract Solution: Add the live Baker's yeast to 100.0mL of distilled/deionized water. Autoclave for 90 min at 15 psi pressure–121°C. Allow to stand. Remove supernatant solution. Adjust pH to 6.6–6.8. Filter sterilize.

Penicillin Solution:

Composition per 10.0mL:

Penicillin G	1,000,000U
--------------------	------------

Preparation of Penicillin Solution: Add penicillin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

GHL Tripeptide Solution:

Composition per 10.0mL:

GHL (Glycyl-L-histidyl-L-lysine acetate) tripeptide	0.2g
---	------

Preparation of GHL Tripeptide Solution: Add GHL (Glycyl-L-histidyl-L-lysine acetate) tripeptide to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

L-Cysteine-HCl·H₂O Solution:

Composition per 10.0mL:

L-Cysteine-HCl·H ₂ O	0.4g
---------------------------------------	------

Preparation of L-Cysteine-HCl·H₂O Solution: Add L-cysteine-HCl·H₂O solution to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Urea Solution:

Composition per 10.0mL:

Urea, ultrapure	1.0g
-----------------------	------

Preparation of Urea Solution: Add urea to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Aseptically combine 80.0mL of cooled, sterile agar base and 4.6mL of sterile supplement solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Ureaplasma urealyticum* from urine. Also used for the cultivation of other *Ureaplasma* species.

AAHC Medium for YAK Clones

Composition per liter:

Glucose	20.0g
Acid hydrolysate of casein.....	10.0g
Yeast nitrogen base without amino acids.....	6.7g
Adenine hemi-sulfate.....	40.0mg

Preparation of Medium: Add glucose, yeast nitrogen base without amino acids, and adenine hemi-sulfate to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Add acid hydrolysate of casein to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically combine the two sterile solutions. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Saccharomyces cerevisiae*.

AAM Medium (DSMZ Medium 57)

Composition per liter:

Casamino acids	7.0g
Yeast extract	7.0g
Tryptone	5.0g
Meat extract	5.0g
Na-acetate	2.5g
MgSO ₄ ·7H ₂ O	200.0mg
MnSO ₄ ·2H ₂ O	50.0mg
Tween™ 80	1.0mL

pH 5.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 5.4. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Lactobacillus* spp.

AATCC Bacteriostasis Agar (American Association of Textile Chemists and Colorists Bacteriostasis Agar)

Composition per liter:

Agar	15.0g
Peptone	10.0g
Beef extract	5.0g
NaCl	5.0g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the maintenance of cultures of *Escherichia coli* and *Staphylococcus aureus*. For the detection of antibacterial activity of fabrics. Test cultures of *Escherichia coli* or *Staphylococcus aureus* are inoculated onto an agar plate and a sample of sterile fabric is placed on the surface. Lack of bacterial growth indicates the fabric has antibacterial activity.

AATCC Bacteriostasis Agar See: FDA Agar

AATCC Bacteriostasis Broth See: FDA Broth

AATCC Bacteriostasis HiVeg Agar

Composition per liter:

Agar	15.0g
Plant peptone	10.0g
Plant extract	5.0g
NaCl	5.0g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring

to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the detection of antibacterial activity of fabrics.

AATCC Bacteriostasis HiVeg Broth

Composition per liter:

Plant peptone	10.0g
Plant extract	5.0g
NaCl	5.0g

pH 6.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the detection of antibacterial testing of antiseptics and disinfectants.

AATCC Mineral Salts Iron Agar (American Association of Textile Chemists and Colorists Mineral Salts Iron Agar)

Composition per liter:

Agar	20.0g
(NH ₄) ₂ NO ₃	3.0g
KH ₂ PO ₄	2.5g
K ₂ HPO ₄	2.0g
MgSO ₄ ·7H ₂ O	0.2g
FeSO ₄ ·7H ₂ O	0.1g

pH 5.6 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For testing the resistance of textiles to fungi that cause mildew and rot. Also used to test the effectiveness of fungicides used on textiles for preventing the growth of fungi. Cultures of *Chaetomium globosum* or *Aspergillus niger* are inoculated onto the plate and a sample of fabric is placed on top. Lack of growth of these fungi on the textile is indicative of resistance to mildew.

Abeyta-Hunt Bark Agar

Composition per 1016.0mL:

Beef heart, infusion from	500.0g
Agar	15.0g
Tryptose	10.0g
NaCl	5.0g
Yeast extract	2.0g
Horse blood, lysed	50.0mL
Cefoperazone solution	4.0mL
Rifampicin solution	4.0mL
Amphotericin B solution	4.0mL
Ferrous sulfate pyruvate metabisulfite solution	4.0mL

pH 7.4 ± 0.2 at 25°C

Amphotericin B Solution:**Composition** per 100.0mL:

Amphotericin B..... 0.05g

Preparation of Amphotericin B Solution: Add amphotericin B to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Cefoperazone Solution:**Composition** per 100.0mL:

Sodium cefoperazone..... 0.08g

Preparation of Cefoperazone Solution: Add sodium cefoperazone to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Rifampicin Solution:**Composition** per 100.0mL

Rifampicin 0.25g

Preparation of Rifampicin Solution: Add rifampicin to 70.0mL ethanol. Mix thoroughly. Add distilled/deionized water to bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Ferrous Sulfate, Pyruvate, Metabisulfite Solution:**Composition** per 100.0mL:FeSO₄..... 6.25g

Na-pyruvate 6.25g

Na-metabisulfite..... 6.25g

Preparation of Ferrous Sulfate, Pyruvate, Metabisulfite Solution: Add Na-pyruvate to 20mL distilled/deionized water. Mix thoroughly. Add Na-metabisulfite and FeSO₄. Bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except cefoperazone solution, amphotericin B solution, rifampicin solution, ferrous sulfate pyruvate metabisulfide solution, and horse blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 4.0mL cefoperazone solution, 4.0mL amphotericin B solution, 4.0mL rifampicin solution, 4.0mL ferrous sulfate pyruvate metabisulfide solution, and 50.0mL lysed horse blood. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of *Campylobacter* spp.

ABY Agar**(Acid Bismuth Yeast Agar)****Composition** per liter:

Agar 20.0g

Glucose 20.0g

Bi₂(SO₃)₂..... 8.0g(NH₄)₂SO₄..... 3.0gKH₂PO₄..... 3.0gMgSO₄·7H₂O 0.25gCaCl₂·2H₂O..... 0.25g

Biotin 10.0µg

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool tubes in a slanted position.

Use: For the selective isolation and differentiation of *Candida albicans* from other *Candida* species. *Candida albicans* and *Candida tropicalis* colonies appear as smooth, brownish-black round colonies.

Other *Candida* species are differentially pigmented or produce diffusible pigments. Usually used in conjunction with BiGGY agar to differentiate further *Candida*; on BiGGY agar, *Candida albicans* appears as brown to black colonies with no pigment diffusion and no sheen, whereas *Candida tropicalis* appears as dark brown colonies with black centers, black pigment diffusion, and a sheen.

**AC Agar
(AC Medium)****Composition** per liter:

Proteose peptone No. 3 20.0g

Glucose 5.0g

Beef extract 3.0g

Yeast extract..... 3.0g

Malt extract..... 3.0g

Ascorbic acid 0.2g

Agar 1.0g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and isolation of anaerobes, microaerophiles, and aerobes. Recommended for the sterility testing of solutions and other materials not containing mercurial preservatives.

AC Broth**Composition** per liter:

Proteose peptone No. 3 20.0g

Glucose 5.0g

Beef extract 3.0g

Yeast extract..... 3.0g

Malt extract..... 3.0g

Ascorbic acid 0.2g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and isolation of a wide variety of microorganisms, including anaerobes, microaerophiles, and aerobes. Recommended for the sterility testing of solutions and other materials not containing mercurial preservatives.

AC HiVeg Agar**Composition** per liter:

Plant peptone No. 3..... 20.0g

Glucose 5.0g

Plant extract 3.0g

Yeast extract..... 3.0g

Malt extract..... 3.0g

Ascorbic acid 0.2g

Agar 1.0g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks or bottles. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and isolation of anaerobes, microaerophiles, and aerobes. Recommended for the sterility testing of solutions and other materials not containing mercurial preservatives.

AC HiVeg Broth

Composition per liter:

Plant peptone No. 3	20.0g
Glucose	5.0g
Plant extract	3.0g
Yeast extract	3.0g
Malt extract	3.0g
Ascorbic acid	0.2g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and isolation of a wide variety of microorganisms, including anaerobes, microaerophiles, and aerobes. Recommended for the sterility testing of solutions and other materials not containing mercurial preservatives.

AC Medium

See: [AC Agar](#)

Acanthamoeba Medium

Composition per liter:

Proteose peptone	15.0g
Glucose	15.0g
KH ₂ PO ₄	0.3g
L-Methionine	14.9mg
Thiamine	1.0mg
Biotin	0.2mg
Vitamin B ₁₂	1.0µg
Salt solution	1.0mL

pH 5.5 ± 0.2 at 25°C

Salt Solution:

Composition per 100.0mL:

MgSO ₄ ·7H ₂ O	2.46g
CaCl ₂ ·2H ₂ O	0.15g
FeCl ₃	0.02g

Preparation of Salt Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 5.5. Filter through Whatman paper to remove particles. Distribute into screw-capped tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Acanthamoeba* species.

ACB90 Medium (DSMZ Medium 298h)

Composition per liter:

NaCl	1.0g
KCl	0.5g
MgCl ₂ ·6H ₂ O	0.4g
NH ₄ Cl	0.25g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O	0.15g
Resazurin	1.0mg
NaHCO ₃ solution	10.0mL
Butanediol solution	10.0mL
Na ₂ S·9H ₂ O solution	10.0mL
Vitamin solution	10.0mL
Seven vitamin solution	10.0mL
Glucose solution	10.0mL
Trace elements solution SL-10	1.0mL

pH 7.2 ± 0.2 at 25°C

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.36g
-------------------------------------	-------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

NaHCO₃ Solution:

Composition per 10.0mL:

NaHCO ₃	2.5g
--------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

Butanediol Solution:

Composition per 10.0mL:

2,3 butanediol	0.9g
----------------	------

Preparation of Butanediol Solution: Add butanediol to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Trace Elements Solution SL-10:

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl	10.0mg
Thiamine-HCl·2H ₂ O	5.0mg
Riboflavin	5.0mg

Nicotinic acid.....	5.0mg
D-Ca-pantothenate.....	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Lipoic acid.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Seven Vitamin Solution:

Composition per liter:

Pyridoxine hydrochloride.....	300.0mg
Thiamine-HCl·2H ₂ O.....	200.0mg
Nicotinic acid.....	200.0mg
Vitamin B ₁₂	100.0mg
Calcium pantothenate.....	100.0mg
<i>p</i> -Aminobenzoic acid.....	80.0mg
D(+)-Biotin.....	20.0mg

Preparation of Seven Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Sparge with 100% N₂. Mix thoroughly. Filter sterilize.

Cellobiose Solution:

Composition per 10.0mL:

Cellobiose.....	0.7g
-----------------	------

Preparation of Cellobiose Solution: Add cellobiose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas atmosphere. Add components, except NaHCO₃ solution, butanediol solution, Na₂S·9H₂O solution, vitamin solution, seven vitamin solution, cellobiose solution, and trace elements solution SL-10, to distilled/deionized water and bring volume to 939.0mL. Mix thoroughly. Adjust pH to 7.2. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 10.0mL NaHCO₃ solution, 10.0mL butanediol solution, 10.0mL Na₂S·9H₂O solution, 10.0mL vitamin solution, 10.0mL seven vitamin solution, 10.0mL cellobiose solution, and 1.0mL trace elements solution SL-10. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or bottles. After inoculation, flush and repressurize the gas head space of culture bottles with sterile 80% N₂ + 20% CO₂ to 1 bar overpressure.

Use: For the cultivation of an unclassified bacterium (*Brevigemma cellulytica*) DSM 11249.

ACC Medium

Composition per liter:

Proteose peptone.....	20.0g
Agar.....	12.0g
Glycerol.....	1.5g
K ₂ SO ₄	1.5g
MgSO ₄ ·7H ₂ O.....	1.5g
Antibiotic solution.....	10.0mL

pH 7.2 ± 0.2 at 25°C.

Antibiotic Solution:

Composition per 10.0mL:

Cycloheximide.....	0.075g
Ampicillin.....	0.05g
Chloramphenicol.....	0.0125g

Preparation of Antibiotic Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: Add components, except antibiotic solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile antibiotic solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation and cultivation of fluorescent *Pseudomonas* species.

ACE Medium

Composition per liter:

NaCl.....	18.0g
MgCl ₂ ·6H ₂ O.....	6.0g
NaHCO ₃	2.0g
MgSO ₄ ·7H ₂ O.....	1.0g
Yeast extract.....	1.0g
L-Cysteine-HCl.....	0.5g
KCl.....	0.335g
NH ₄ Cl.....	0.25g
CaCl ₂ ·2H ₂ O.....	0.14g
K ₂ HPO ₄	0.14g
Fe(NH ₄) ₂ (SO ₄) ₂ ·6H ₂ O.....	2.0mg
Resazurin.....	1.0mg
Glucose solution.....	20.0mL
Wolfe's vitamin solution.....	10.0mL

pH 7.6 ± 0.2 at 25°C

Glucose Solution:

Composition per 50.0mL:

D-Glucose.....	10.0g
----------------	-------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Wolfe's Vitamin Solution:

Composition per liter:

Pyridoxine-HCl.....	10.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Lipoic acid.....	5.0mg
Nicotinic acid.....	5.0mg
Riboflavin.....	5.0mg
Thiamine-HCl.....	5.0mg
Calcium DL-pantothenate.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except L-cysteine-HCl, NaHCO₃, and glucose solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Adjust pH to 7.6. Gently heat and bring to boiling. Continue boiling for 3 min. Cool to room temperature while sparging with O₂-free 100% N₂. Add L-cysteine-HCl and NaHCO₃. Anaerobically distribute 9.8mL volumes into anaerobic

tubes. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 0.2mL of sterile glucose solution to each tube. Mix thoroughly.

Use: For the cultivation of unclassified bacterium DSM 6211 and unclassified bacterium DSM 6226.

Acetamide Agar

Composition per liter:

Agar	15.0g
Acetamide	10.0g
NaCl	5.0g
K ₂ HPO ₄	1.0g
NH ₄ H ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.2g
Bromthymol Blue	0.08g

pH 6.9 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool tubes in a slanted position to produce a long slant.

Use: For the differentiation of nonfermentative Gram-negative bacteria, especially *Pseudomonas aeruginosa*. Can be used as a confirmatory test for water analysis. Bacteria that deamidate acetamide turn the medium blue.

Acetamide Agar

Composition per liter:

Agar	15.0g
Acetamide	10.0g
NaCl	5.0g
K ₂ HPO ₄	1.39g
KH ₂ PO ₄	0.73g
MgSO ₄ ·7H ₂ O	0.5g
Phenol Red	0.012g

pH 6.9 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool tubes in a slanted position to produce a long slant.

Use: For the differentiation of nonfermentative Gram-negative bacteria, especially *Pseudomonas aeruginosa*. Can be used as a confirmatory test for water analysis. Bacteria that deamidate acetamide turn the medium red.

Acetamide Broth

Composition per liter:

Acetamide	10.0g
NaCl	5.0g
K ₂ HPO ₄	1.39g
KH ₂ PO ₄	0.73g
MgSO ₄ ·7H ₂ O	0.5g
Phenol Red	0.012g

pH 6.9 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the differentiation of nonfermentative Gram-negative bacteria, especially *Pseudomonas aeruginosa*. Can be used as a confirmatory test for water analysis. Bacteria that deamidate acetamide turn the broth purplish red.

Acetamide Broth

Composition per liter:

Acetamide	2.0g
KH ₂ PO ₄	1.0g
NaCl	0.2g
MgSO ₄ , anhydrous	0.2g
Na ₂ MoO ₄ ·2H ₂ O	5.0mg
FeSO ₄	0.5mg

pH 7.0 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Preparation of Medium: Add components, except acetamide, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Add acetamide. Adjust pH to 7.0. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the differentiation of nonfermentative Gram-negative bacteria, especially *Pseudomonas aeruginosa*.

Acetamide Cetrimide Glycerol Mannitol Selective Medium

Composition per liter:

Agar	15.0g
K ₂ SO ₄	10.0g
D-Mannitol	5.0g
MgCl ₂ ·6H ₂ O	1.4g
Cetrimide	0.3g
Peptone	0.2g
Acetamide solution	100.0mL
Glycerol	5.0mL

pH 7.0 ± 0.2 at 25°C

Acetamide Solution:

Composition per 100.0mL:

Acetamide	10.0g
Phenol Red	0.012g

Preparation of Acetamide Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except acetamide solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Adjust pH to 7.0. Gently heat and bring to boiling. Autoclave for 20 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile acetamide solution. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the cultivation of *Pseudomonas aeruginosa*, *Pseudomonas fluorescens*, *Pseudomonas putida*, *Pseudomonas alcaligenes*, *Pseudomonas cepacia*, and *Pseudomonas pseudoalcaligenes*.

Acetamide Medium

Composition per liter:

Agar, noble	20.0g
Glucose	20.0g

KH ₂ PO ₄	15.0g
CsCl ₂ solution	12.5mL
Acetamide solution	10.0mL
CaCl ₂ ·2H ₂ O solution	4.1mL
MgSO ₄ ·7H ₂ O solution	2.4mL
Trace elements solution	1.0mL

CsCl₂ Solution:**Composition per 100.0mL:**

CsCl ₂	16.84g
-------------------------	--------

Preparation of CsCl₂ Solution: Add CsCl₂ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Acetamide Solution:**Composition per 100.0mL:**

Acetamide	5.91g
-----------------	-------

Preparation of Acetamide Solution: Add acetamide to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

CaCl₂·2H₂O Solution:**Composition per 100.0mL:**

CaCl ₂ ·2H ₂ O	14.7g
--	-------

Preparation of CaCl₂·2H₂O Solution: Add CaCl₂·2H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

MgSO₄·7H₂O Solution:**Composition per 100.0mL:**

MgSO ₄ ·7H ₂ O	24.65g
--	--------

Preparation of MgSO₄·7H₂O Solution: Add MgSO₄·7H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution:**Composition per liter:**

FeSO ₄ ·7H ₂ O	5.0g
CoCl ₂ ·6H ₂ O	3.7g
MnSO ₄ ·1H ₂ O	1.6g
ZnSO ₄ ·7H ₂ O	1.4g

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components, except CsCl₂ solution, acetamide solution, CaCl₂·2H₂O solution, and MgSO₄·7H₂O solution, to distilled/deionized water and bring volume to 971.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 12.5mL of sterile CsCl₂ solution, 10.0mL of sterile acetamide solution, 4.1mL of sterile CaCl₂·2H₂O solution, and 2.4mL of sterile MgSO₄·7H₂O solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Trichoderma longibrachiatum*.

Acetamide Medium (BAM M2)

Composition per liter:

Stock basal solution	400.0mL
Stock acetamide solution	100.0mL

pH 6.9 ± 0.2 at 25°C

Stock Basal Solution:**Composition per 400.0mL:**

Agar	0.5g
KH ₂ PO ₄ solution, 0.5M	14.0mL
K ₂ HPO ₄ solution, 0.5M	6.0mL
PR-CV solution	1.0mL

Preparation of Stock Basal Solution: Add components, except PR-CV solution, to distilled/deionized water and bring volume to 400.0mL. Mix thoroughly. Gently heat and bring to boiling with agitation to dissolve agar. Add 1.0mL PR-CV solution.

PR-CV Solution:**Composition per 200.0mL:**

Phenol Red	2.0g
Crystal Violet	0.2g

Preparation of PR-CV Solution: Add components to distilled/deionized water and bring volume to 200.0mL. Mix thoroughly. Add 5N NaOH while stirring until components are dissolved.

Stock Acetamide Solution:**Composition per 100.0mL:**

Acetamide	1.0g
-----------------	------

Preparation of Stock Acetamide Solution: Add acetamide to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Store over methylene chloride in a screw-capped container. Can be stored indefinitely at room temperature.

Preparation of Medium: Combine 400.0mL stock basal solution and 100.0mL stock acetamide solution. Mix thoroughly. Distribute into tubes or flasks. Steam for 10 min at 100°C. Cool.

Use: For the differentiation of nonfermentative Gram-negative bacteria, especially *Pseudomonas aeruginosa*, e.g., in milk.

Acetamide Nutrient Broth

Composition per liter:

Acetamide	2.0g
KH ₂ PO ₄	1.0g
NaCl	0.2g
MgSO ₄ , anhydrous	0.158g
Na ₂ MoO ₄ ·2H ₂ O	5.0mg
FeSO ₄	0.5mg

pH 7.0 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Preparation of Medium: Add components, except acetamide, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Add acetamide. Adjust pH to 7.0. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the differentiation of nonfermentative Gram-negative bacteria, especially *Pseudomonas aeruginosa*.

Acetate Agar

Composition per liter:

Agar	20.0g
Glucose	10.0g
Peptic digest of animal tissue	5.0g
Meat extract	5.0g
Yeast extract	5.0g
Sodium acetate	27.22g
Tween™ 80	0.5mL

pH 5.4 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 5.4. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into Petri dishes or leave in tubes.

Use: For the isolation and cultivation of *Leuconostoc* species and *Pediococcus* species.

Acetate Agar

Composition per liter:

Meat extract	50.0g
Glucose	10.0g
Peptone.....	5.0g
Yeast extract.....	5.0g
Sodium acetate buffer	100.0mL
Tween™ 80.....	0.5mL

pH 5.4 ± 0.2 at 25°C

Sodium Acetate Buffer:

Composition per liter:

Sodium acetate·3H ₂ O.....	272.2g
---------------------------------------	--------

Preparation of Sodium Acetate Buffer: Add sodium acetate to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 5.4 with glacial acetic acid. Filter sterilize.

Preparation of Medium: Add components, except sodium acetate buffer, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 5.4. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 100.0mL of sterile sodium acetate buffer. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the isolation and cultivation of *Leuconostoc* species and *Pediococcus* species.

Acetate Agar

Composition per liter:

Agar	15.0g
Yeast extract.....	2.0g
Sodium acetate.....	1.0g
Pancreatic digest of casein.....	1.0g

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Caryophanon latum*.

Acetate Agar (BAM M3)

Composition per liter:

Agar	20.0g
NaCl.....	5.0g
Sodium acetate.....	2.0g
KH ₂ PO ₄	1.0g
(NH ₄) ₂ PO ₄	1.0g
MgSO ₄	0.2g
Bromthymol Blue	0.08g

pH 6.7 ± 0.2 at 25°C

Preparation of Medium: Add components, except MgSO₄, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 6.7. Add 0.2g MgSO₄. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically distribute into tubes or flasks. For slants distribute aliquots into tubes prior to autoclaving. After autoclaving allow tubes to cool in inclined position to obtain a 5cm slant.

Use: For the cultivation of *Leuconostoc* species.

Acetate Differential Agar

(Sodium Acetate Agar)

(Simmons' Citrate Agar, Modified)

Composition per liter:

Agar	20.0g
NaCl.....	5.0g
Sodium acetate.....	2.0g
(NH ₄) ₂ PO ₄	1.0g
K ₂ HPO ₄	1.0g
MgSO ₄ ·7H ₂ O.....	0.2g
Bromthymol Blue	0.08g

pH 6.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to cold distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes to produce a 1 cm butt and 30 cm slant. Autoclave for 15 min at 15 psi pressure–121°C. Cool tubes in a slanted position.

Use: For the differentiation of *Shigella* species from *Escherichia coli* and also for the differentiation of nonfermenting Gram-negative bacteria. Bacteria that can utilize acetate as the sole carbon source turn the medium blue.

Acetate HiVeg Agar

Composition per liter:

Sodium acetate·3H ₂ O.....	27.22g
Agar	20.0g
Glucose	10.0g
Yeast extract.....	5.0g
Plant peptone	5.0g
Plant extract No.1	5.0g
Tween™ 80.....	0.5mL

pH 5.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically adjust pH to 5.4. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of *Leuconostoc* species and *Pediococcus* species.

Acetic Acid Agar

Composition per liter:

Agar	25.0g
Sodium acetate, anhydrous	4.5g
Yeast extract.....	1.0g

Wort solution.....	500.0mL
Sucrose solution.....	500.0mL

Wort Solution:**Composition per 500.0mL:**

Malt extract.....	55.0g
-------------------	-------

Preparation of Wort Solution: Add malt extract to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly.

Sucrose Solution:**Composition per 500.0mL:**

Sucrose.....	50.0g
--------------	-------

Preparation of Sucrose Solution: Add sucrose to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly.

Preparation of Medium: Combine components. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Tetragenococcus halophilus*.

Acetic Acid Bacterium Medium (DSMZ Medium 989)

Composition per liter:

Agar.....	15.0g
Peptone.....	5.0g
Yeast extract.....	5.0g
Glucose.....	5.0g
MgSO ₄ ·7H ₂ O.....	1.0g

pH 6.6–7.0 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of acetic acid bacteria.

Acetic Acid Broth

Composition per liter:

Sodium acetate, anhydrous.....	4.5g
Yeast extract.....	1.0g
Wort solution.....	500.0mL
Sucrose solution.....	500.0mL

Wort Solution:**Composition per 500.0mL:**

Malt extract.....	55.0g
-------------------	-------

Preparation of Wort Solution: Add malt extract to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly.

Sucrose Solution:**Composition per 500.0mL:**

Sucrose.....	50.0g
--------------	-------

Preparation of Sucrose Solution: Add sucrose to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly.

Preparation of Medium: Combine components. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Tetragenococcus halophilus*.

Acetitomaculum Medium

Composition per liter:

NaCl.....	7.0g
Glucose.....	5.0g
NaHCO ₃	4.0g
Yeast extract.....	1.5g
MgCl ₂ ·6H ₂ O.....	1.2g
KCl.....	0.5g
NH ₄ Cl.....	0.3g
CaCl ₂ ·2H ₂ O.....	0.15g
Na ₂ SO ₄	0.1g
NiCl ₂ ·6H ₂ O.....	1.0mg
Resazurin.....	0.5mg
Na ₂ WO ₄ ·2H ₂ O.....	0.1mg
Ascorbic acid.....	50.0µg
Choline chloride.....	50.0µg
D-myo-Inositol.....	50.0µg
Nicotinamide.....	50.0µg
Glucose solution.....	50.0mL
Trace elements solution.....	10.0mL
Vitamin solution.....	10.0mL
Reducing agent solution.....	10.0mL

pH 7.0 ± 0.2 at 25°C

Glucose Solution:**Composition per 50.0mL:**

D-Glucose.....	5.0g
----------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Dispense solution anaerobically under 100% N₂ gas. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution:**Composition per liter:**

MgSO ₄ ·7H ₂ O.....	3.0g
Nitritotriacetic acid.....	1.5g
CaCl ₂ ·2H ₂ O.....	1.0g
NaCl.....	1.0g
MnSO ₄ ·2H ₂ O.....	0.5g
CoSO ₄ ·7H ₂ O.....	0.18g
ZnSO ₄ ·7H ₂ O.....	0.18g
FeSO ₄ ·7H ₂ O.....	0.1g
NiCl ₂ ·6H ₂ O.....	0.025g
KAl(SO ₄) ₂ ·12H ₂ O.....	0.02g
CuSO ₄ ·5H ₂ O.....	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O.....	0.01g
Na ₂ SeO ₃ ·5H ₂ O.....	0.3mg

Preparation of Trace Elements Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add distilled/deionized water to 1.0L. Add remaining components. Mix thoroughly.

Vitamin Solution:**Composition per liter:**

Pyridoxine-HCl.....	10.0mg
Calcium DL-pantothenate.....	5.0mg
Lipoic acid.....	5.0mg
Nicotinic acid.....	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Riboflavin.....	5.0mg
Thiamine-HCl.....	5.0mg
Biotin.....	2.0mg

Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Reducing Agent Solution:

Composition per 110.0mL:

L-Cysteine·HCl·H ₂ O.....	2.5g
Na ₂ S·9H ₂ O.....	2.5g

Preparation of Reducing Agent Solution: Add 110.0mL of distilled/deionized water to a 250.0mL flask. Boil under N₂ gas for 1 min. Cool to room temperature. Add L-cysteine·HCl·H₂O and dissolve. Adjust to pH 9 with 5N NaOH. Add washed Na₂S·9H₂O and dissolve. Distribute in 10.0mL volumes into tubes. Autoclave for 10 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except NaHCO₃, glucose solution, and reducing agent solution, to distilled/deionized water and bring volume to 920.0mL. Gently heat and bring to boiling. Continue boiling for 3 min. Cool to room temperature under 80% N₂ + 20% CO₂. Add solid NaHCO₃ and bring pH to 6.8–7.0 by gassing. Distribute anaerobically under 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Prior to inoculation of cultures, aseptically and anaerobically add 0.1mL of sterile reducing agent solution and 0.5mL of sterile glucose solution to each tube containing 9.4mL of sterile basal medium.

Use: For the cultivation and maintenance of *Acetitomaculum ruminus*.

Acetitomaculum ruminus Medium (LMG Medium 224)

Composition per liter:

NaCl.....	7.0g
NaHCO ₃	4.0g
Yeast extract.....	1.5g
MgCl ₂ ·6H ₂ O.....	1.2g
KCl.....	0.5g
NH ₄ Cl.....	0.3g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O.....	0.15g
Na ₂ SO ₄	0.1g
Resazurin.....	0.5mg
Ascorbic acid.....	50.0µg
Myo-inositol.....	50.0µg
Niacinamide.....	50.0µg
Choline chloride.....	50.0µg
Glucose solution.....	10.0mL
L-Cysteine·HCl·H ₂ O solution.....	10.0mL
Na ₂ S·9H ₂ O solution.....	10.0mL
Wolfe's mineral solution.....	10.0mL
Wolfe's vitamin solution.....	10.0mL

pH 6.9 ± 0.2 at 25°C

Glucose Solution:

Composition per 10.0mL:

Glucose.....	5.0g
--------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

L-Cysteine·HCl·H₂O Solution:

Composition per 100.0mL:

L-Cysteine·HCl·H ₂ O.....	3.0g
--------------------------------------	------

Preparation of L-Cysteine·HCl·H₂O Solution: Bring 100.0mL of distilled/deionized water to boiling. Cool to room temperature while sparging with 100% N₂. Add L-cysteine·HCl·H₂O to the 100.0mL of anaerobic water. Distribute into serum bottles fitted with butyl rubber stoppers and aluminum seals. Do not grease stoppers. Autoclave for 20 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:

Composition per 100.0mL:

NaOH.....	1 pellet
Na ₂ S·9H ₂ O.....	3.0g

Preparation of Na₂S·9H₂O Solution: Bring 100.0mL of distilled/deionized water to boiling. Cool to room temperature while sparging with 100% N₂. Dissolve 1 pellet of NaOH in the anaerobic water. Weigh out a little more than 3.0g of washed Na₂S·9H₂O crystals. Briefly rinse the crystals in distilled/deionized water. Dry the crystals by blotting on paper towels or filter paper. Weigh out 2.5g of washed Na₂S·9H₂O crystals. Add to the 100.0mL of anaerobic NaOH solution. Distribute into serum bottles fitted with butyl rubber stoppers and aluminum seals. Do not grease stoppers. Pressurize to 60kPa with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Store at room temperature in an anaerobic chamber.

Wolfe's Mineral Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O.....	3.0g
Nitritotriacetic acid.....	1.5g
NaCl.....	1.0g
MnSO ₄ ·2H ₂ O.....	0.5g
CoCl ₂ ·6H ₂ O.....	0.1g
ZnSO ₄ ·7H ₂ O.....	0.1g
CaCl ₂ ·2H ₂ O.....	0.1g
FeSO ₄ ·7H ₂ O.....	0.1g
NiCl ₂ ·6H ₂ O.....	0.025g
KAl(SO ₄) ₂ ·12H ₂ O.....	0.02g
CuSO ₄ ·5H ₂ O.....	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O.....	0.01g
Na ₂ SeO ₃ ·5H ₂ O.....	0.3mg

Preparation of Wolfe's Mineral Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Adjust pH to 6.8.

Wolfe's Vitamin Solution:

Composition per liter:

Pyridoxine-HCl.....	10.0mg
p-Aminobenzoic acid.....	5.0mg
Lipoic acid.....	5.0mg
Nicotinic acid.....	5.0mg
Riboflavin.....	5.0mg
Thiamine-HCl.....	5.0mg
Calcium DL-pantothenate.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂. Add components, except bicarbonate, glucose solution, L-cysteine·HCl·H₂O solution, and Na₂S·9H₂O solution, to distilled/de-

ionized water and bring volume to 970.0mL. Mix thoroughly. Add solid bicarbonate and equilibrate pH to 6.8–7 by gassing. Gently heat and bring to boiling. Continue boiling for 3 min. Cool to room temperature while sparging with 80% N₂ + 20% CO₂. Anaerobically distribute 9.7mL volumes into anaerobic tubes. Autoclave for 20 min at 15 psi pressure–121°C. Aseptically and anaerobically add 0.1mL of sterile glucose, 0.1mL of sterile L-cysteine-HCl-H₂O solution, and 0.1mL of sterile Na₂S·9H₂O solution to each tube. Mix thoroughly.

Use: For the cultivation of *Acetitomaculum ruminus*.

Acetivibrio cellulolyticus Medium

Composition per 1170.0mL:

Cellobiose or cellulose (MN 300, Whatman CF II, Kleenex tissue paper, or HCl-treated cotton).....	3.0g
NaHCO ₃	2.0g
L-Cysteine-HCl.....	0.25g
Na ₂ S·9H ₂ O.....	0.25g
FeSO ₄ ·7H ₂ O.....	0.02g
Resazurin.....	0.001g
Mineral solution 1.....	75.0mL
Mineral solution 2.....	75.0mL
Cellobiose solution.....	50.0mL
Trace elements solution.....	10.0mL
Vitamin solution.....	10.0mL
Reducing agent solution.....	10.0mL

pH 7.2 ± 0.2 at 25°C

Mineral Solution 1:

Composition per liter:

K ₂ HPO ₄	3.9g
---------------------------------------	------

Preparation of Mineral Solution 1: Add K₂HPO₄ to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Mineral Solution 2:

Composition per liter:

(NH ₄) ₂ SO ₄	6.0g
K ₂ HPO ₄	2.4g
MgSO ₄ ·7H ₂ O.....	1.2g
CaCl ₂ ·2H ₂ O.....	0.72g
NaCl.....	0.59g

Preparation of Mineral Solution 2: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Cellobiose Solution:

Composition per 50.0mL:

D-Cellobiose.....	5.0g
-------------------	------

Preparation of Cellobiose Solution: Add cellobiose to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Sparge under 100% N₂ gas for 3 min. Filter sterilize. Store under N₂ gas.

Trace Elements Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O.....	3.0g
Nitritotriacetic acid.....	1.5g
CaCl ₂ ·2H ₂ O.....	1.0g
NaCl.....	1.0g
MnSO ₄ ·2H ₂ O.....	0.5g
CoSO ₄ ·7H ₂ O.....	0.18g
ZnSO ₄ ·7H ₂ O.....	0.18g
FeSO ₄ ·7H ₂ O.....	0.1g
NiCl ₂ ·6H ₂ O.....	0.025g
KAl(SO ₄) ₂ ·12H ₂ O.....	0.02g

CuSO ₄ ·5H ₂ O.....	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O.....	0.01g
Na ₂ SeO ₃ ·5H ₂ O.....	0.3mg

Preparation of Trace Elements Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add distilled/deionized water to 1.0L. Add remaining components. Mix thoroughly. Adjust pH to 7.0 with 1N KOH.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl.....	10.0mg
Calcium DL-pantothenate.....	5.0mg
Lipoic acid.....	5.0mg
Nicotinic acid.....	5.0mg
p-Aminobenzoic acid.....	5.0mg
Riboflavin.....	5.0mg
Thiamine-HCl.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Reducing Agent Solution:

Composition per 110.0mL:

L-Cysteine-HCl-H ₂ O.....	2.5g
Na ₂ S·9H ₂ O.....	2.5g

Preparation of Reducing Agent Solution: Add 110.0mL of distilled/deionized water to a 250.0mL flask. Boil under N₂ gas for 1 min. Cool to room temperature. Add L-cysteine-HCl-H₂O and dissolve. Adjust to pH 9 with 5N NaOH. Add washed Na₂S·9H₂O and dissolve. Distribute under N₂ gas in 10.0mL volumes into tubes. Autoclave for 10 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except cellobiose solution and reducing agent solution, to distilled/deionized water and bring volume to 940.0mL. Gently heat and bring to boiling. Continue boiling for 3 min. Cool to room temperature under 80% N₂ + 20% CO₂. Adjust pH to 7.6 by gassing. Distribute anaerobically under 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. After autoclaving, the pH of the medium will be 7.2. Prior to inoculation of cultures, aseptically and anaerobically add 0.1mL of sterile reducing agent solution and 0.5mL of sterile cellobiose solution to each tube containing 9.4mL of sterile basal medium.

Use: For the cultivation and maintenance of *Acetivibrio cellulolyticus*.

Acetivibrio Desulfovibrio Medium (LMG Medium 105)

Composition per liter:

Solution A.....	869.0mL
Solution C.....	100.0mL
Solution D.....	10.0mL
Solution E.....	10.0mL
Solution F.....	10.0mL
Solution B.....	1.0mL

pH 7.7 ± 0.2 at 25°C

Solution A:

Composition per 869.0mL:

Na ₂ SO ₄	3.0g
NaCl.....	1.0g

KCl.....	0.5g
MgCl ₂ ·6H ₂ O.....	0.4g
NH ₄ Cl	0.3g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O.....	0.15g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 869.0mL. Mix thoroughly. Prepare and autoclave part A under 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Solution B:

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	0.19g
MnCl ₂ ·4H ₂ O.....	0.1g
ZnCl ₂	0.07g
H ₃ BO ₃	0.06g
Na ₂ MoO ₄ ·2H ₂ O	0.04g
NiCl ₂ ·6H ₂ O.....	0.02g
CuCl ₂ ·2H ₂ O	0.02g
HCl, 25%	10.0mL

Preparation of Solution B: Add the FeCl₂·4H₂O to the HCl. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Solution C:

Composition per 100.0mL:

NaHCO ₃	5.0g
--------------------------	------

Preparation of Solution C: Add the NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Gas with 80% N₂ + 20% CO₂ to remove residual O₂.

Solution D:

Composition per 10.0mL:

Sodium butyrate.....	0.7g
Sodium caproate	0.3g
Sodium octanoate.....	0.15g

Preparation of Solution D: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Solution E:

Composition per 10.0mL:

Yeast extract.....	1.0g
Thiamine-HCl	100.0μg
<i>p</i> -Aminobenzoic acid.....	40.0μg
D(+)-Biotin	10.0μg

Preparation of Solution E: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Solution F:

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	0.4g
--	------

Preparation of Solution F: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Preparation of Medium: To 869.0mL of sterile cooled Solution A, aseptically add the remaining sterile solutions in the following order:

solution B, solution C, solution D, solution E, and solution F. Mix thoroughly. Adjust pH to 7.7. Anaerobically distribute under 90% N₂ + 10% CO₂ into sterile tubes or flasks.

Use: For the cultivation of *Acetivibrio ethanoligignens* and *Desulfovibrio sapovorans*.

Acetobacter Agar

Composition per liter:

Agar	15.0g
Yeast extract.....	5.0g
(NH ₄) ₂ SO ₄	3.3g
KH ₂ PO ₄	1.0g
MgSO ₄	0.25g
Vitamin solution.....	200.0mL
Glucose solution	15.0mL
Trace elements solution	1.0mL

Trace Elements Solution:

Composition per 100.0mL:

CaCl ₂ ·2H ₂ O	1.457g
FeSO ₄ ·7H ₂ O	0.366g
ZnSO ₄ ·7H ₂ O.....	0.178g
MnSO ₄ ·H ₂ O.....	0.101g
Na ₂ MoO ₄ ·2H ₂ O.....	23.4mg
CuSO ₄ ·5H ₂ O.....	7.8mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Vitamin Solution:

Composition per 100.0mL:

<i>m</i> -Inositol.....	200.0mg
Calcium DL-pantothenate.....	40.0mg
Nicotinic acid.....	40.0mg
Pyridoxine-HCl	40.0mg
Thiamine-HCl	40.0mg
<i>p</i> -Aminobenzoic acid.....	20.0mg
Riboflavin	20.0mg
Biotin	0.2mg
Folic acid	0.2mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Glucose Solution:

Composition per 100.0mL:

Glucose	40.0g
---------------	-------

Preparation of Glucose Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except vitamin solution, glucose solution, and trace elements solution, to distilled/deionized water and bring volume to 784.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 200.0mL of sterile vitamin solution, 15.0mL of sterile glucose solution, and 1.0mL of sterile trace elements solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Acetobacter xylinum*.

Acetobacter Agar

Composition per liter:

Glucose	50.0g
CaCO ₃	30.0g
Agar	15.0g
Yeast extract.....	10.0g

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes. Cool rapidly.

Use: For the cultivation and maintenance of *Acetobacter aceti*, *Acetobacter diazotrophicus*, *Acetobacter Hansenii*, *Acetobacter liquefaciens*, *Acidomonas methanolica*, *Frateuria aurantia*, *Gluconobacter cerinus*, and *Gluconobacter oxydans*.

Acetobacter Agar (Glucose)

Composition per liter:

Agar	15.0g
CaCO ₃	10.0g
Yeast extract.....	10.0g
Glucose	3.0g

pH 7.4 ± 0.1 at 25°C

Source: This medium is available as a premixed powder from Sigma-Aldrich.

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly to ensure that CaCO₃ is evenly distributed. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes. Cool rapidly.

Use: For the cultivation and maintenance of glucose positive *Acetobacter* species.

Acetobacter Broth

Composition per liter:

Yeast extract.....	5.0g
(NH ₄) ₂ SO ₄	3.3g
KH ₂ PO ₄	1.0g
MgSO ₄	0.25g
Vitamin solution.....	200.0mL
Glucose solution	15.0mL
Trace elements solution	1.0mL

Trace Elements Solution:

Composition per 100.0mL:

CaCl ₂ ·2H ₂ O	1.457g
FeSO ₄ ·7H ₂ O	0.366g
ZnSO ₄ ·7H ₂ O	0.178g
MnSO ₄ ·H ₂ O.....	0.101g
Na ₂ MoO ₄ ·2H ₂ O.....	23.4mg
CuSO ₄ ·5H ₂ O.....	7.8mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Vitamin Solution:

Composition per 100.0mL:

m-Inositol	200.0mg
Calcium DL-pantothenate.....	40.0mg
Nicotinic acid.....	40.0mg

Pyridoxine-HCl	40.0mg
Thiamine-HCl	40.0mg
p-Aminobenzoic acid.....	20.0mg
Riboflavin	20.0mg
Biotin	0.2mg
Folic acid	0.2mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Glucose Solution:

Composition per 100.0mL:

Glucose	40.0g
---------------	-------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except vitamin solution, glucose solution, and trace elements solution, to distilled/deionized water and bring volume to 784.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 200.0mL of sterile vitamin solution, 15.0mL of sterile glucose solution, and 1.0mL of sterile trace elements solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Acetobacter xylinum*.

Acetobacter diazotrophicus Agar

Composition per liter:

Glucose	50.0g
CaCO ₃	30.0g
Agar	25.0g
Yeast extract.....	10.0g

pH 5.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly to evenly distribute CaCO₃. Bring pH to 5.5. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool rapidly to 50°–55°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Acetobacter diazotrophicus*.

Acetobacter europaeus Medium

Composition per liter:

Glucose	5.0g
Peptone	3.0g
Yeast extract.....	2.0g
Acetic acid	40.0mL
Ethanol.....	30.0mL

Preparation of Acetic Acid: Filter sterilize 40.0mL of acetic acid using a teflon filter.

Preparation of Ethanol: Filter sterilize 30.0mL of ethanol using a teflon filter.

Preparation of Medium: Add components, except acetic acid and ethanol, to distilled/deionized water and bring volume to 930.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 40.0mL of sterile acetic acid and 30.0mL of sterile ethanol. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Acetobacter europaeus*.

Acetobacter/Gluconobacter Agar**Composition per liter:**

Glucose	100.0g
Agar	25.0g
CaCO ₃	20.0g
Yeast extract	10.0g

pH 7.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Acetobacter aceti*, *Acetobacter liquefaciens*, *Acetobacter pasteurianus*, *Acetobacter xylinum*, *Frateuria aurantia*, and *Gluconobacter oxydans*.

Acetobacter HiVeg Agar with Plant Extract**Composition per liter:**

Glucose	20.0g
Agar	20.0g
CaCO ₃	10.0g
Plant hydrolysate	5.0g
Plant extract No. 2	2.0g

pH 7.4 ± 0.1 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly to ensure that CaCO₃ is evenly distributed. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes. Cool rapidly.

Use: For the cultivation and maintenance of glucose positive *Acetobacter* species.

Acetobacter Medium**Composition per liter:**

Agar	15.0g
Autolyzed yeast	10.0g
CaCO ₃	10.0g
Glucose	3.0g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes to produce a 1 cm butt and 30cm slant. Autoclave for 15 min at 15 psi pressure–121°C. Agitate tubes to mix CaCO₃. Cool tubes rapidly in a slanted position to keep the CaCO₃ in suspension.

Use: For the cultivation and maintenance of *Acetobacter* species and *Gluconobacter* species.

Acetobacter peroxydans Medium**Composition per liter:**

Agar	15.0g
Malt extract	15.0g
Yeast extract	5.0g
Ethanol (50% solution)	60.0mL

Ethanol Solution:**Composition per 100.0mL:**

Ethanol (50% solution)	100.0mL
------------------------------	---------

Preparation of Ethanol Solution: Filter sterilize.

Preparation of Medium: Add components, except ethanol solution, to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Add 60.0mL of sterile ethanol solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Acetobacter peroxydans* and *Acetobacter pasteurianus*.

Acetobacter xylinum Medium**Composition per liter:**

Glucose	20.0g
Peptone	5.0g
Yeast extract	5.0g
Na ₂ HPO ₄	2.7g
Citric acid	1.5g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Acetobacter xylinum*.

Acetobacter xylinum Medium**Composition per liter:**

Glucose	50.0g
Yeast extract	5.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Acetobacter xylinum*.

***Acetobacterium Autotrophic Medium*
(DSMZ Medium 135)****Composition per liter:**

NaHCO ₃	10.0g
Yeast extract	2.0g
NH ₄ Cl	1.0g
K ₂ HPO ₄	0.45g
KH ₂ PO ₄	0.33g
MgSO ₄ ·7H ₂ O	0.1g
Resazurin	1.0mg
Fructose solution	25.0mL
Trace elements solution	20.0mL
Vitamin solution	20.0mL
Cysteine solution	10.0mL
Na ₂ S·9H ₂ O solution	10.0mL

pH 8.2 ± 0.2 at 25°C

Na₂S·9H₂O Solution:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O	0.5g
---	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Sparge with N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Store anaerobically.

Cysteine Solution:**Composition per 10.0mL:**

L-Cysteine·HCl·H ₂ O	0.5g
---------------------------------------	------

Preparation of Cysteine Solution: Add L-cysteine-HCl-H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Fructose Solution:

Composition per 25.0mL:

Fructose..... 10.0g

Preparation of Fructose Solution: Add fructose to distilled/deionized water and bring volume to 25.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Trace Elements Solution:

Composition per liter:

MgSO₄·7H₂O..... 3.0g
 Nitrilotriacetic acid..... 1.5g
 NaCl..... 1.0g
 MnSO₄·2H₂O..... 0.5g
 CoSO₄·7H₂O..... 0.18g
 ZnSO₄·7H₂O..... 0.18g
 CaCl₂·2H₂O..... 0.1g
 FeSO₄·7H₂O..... 0.1g
 NiCl₂·6H₂O..... 0.025g
 KAl(SO₄)₂·12H₂O..... 0.02g
 H₃BO₃..... 0.01g
 Na₂MoO₄·4H₂O..... 0.01g
 CuSO₄·5H₂O..... 0.01g
 Na₂SeO₃·5H₂O..... 0.3mg

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl..... 10.0mg
 Thiamine-HCl·2H₂O..... 5.0mg
 Riboflavin..... 5.0mg
 Nicotinic acid..... 5.0mg
 D-Ca-pantothenate..... 5.0mg
 p-Aminobenzoic acid..... 5.0mg
 Lipoic acid..... 5.0mg
 Biotin..... 2.0mg
 Folic acid..... 2.0mg
 Vitamin B₁₂..... 0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Preparation of Medium: Prepare and dispense medium under 80% H₂ + 20% CO₂ gas atmosphere. Add components, except NaHCO₃, Na₂CO₃ solution, Na₂S·9H₂O solution, vitamin solution, and cysteine solution, to distilled/deionized water and bring volume to 935.0mL. Mix thoroughly. Gently heat and bring to boiling. Boil for 5 min. Cool while sparging with 80% H₂ + 20% CO₂. Add 10.0g solid NaHCO₃. Equilibrate with 80% N₂ + 20% CO₂ until pH is approximately 7.4. Distribute into bottles. Autoclave under 80% H₂ + 20% CO₂ for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add approximately 0.25mL sterile Na₂CO₃ solution to each 10.0mL of medium so that pH is adjusted to 8.2. For every 10.0mL of medium inject 0.1mL Na₂S·9H₂O solution, 0.2mL vitamin solution, and 0.1mL cysteine solution. Incubate under 80% H₂ + 20% CO₂ gas atmosphere.

Use: For the cultivation and heterotrophic growth of *Acetobacterium* spp.

Acetobacterium carbinolicum Medium

Composition per 1011.2mL:

NaHCO₃..... 4.5g
 Na₂SO₄..... 2.84g
 NaCl..... 1.17g
 Yeast extract..... 1.0g
 MgCl₂·6H₂O..... 0.4g
 KCl..... 0.3g
 NH₄Cl..... 0.27g
 KH₂PO₄..... 0.2g
 CaCl₂·2H₂O..... 0.15g
 Resazurin..... 0.5mg
 Reducing agent solution..... 10.0mL
 Ethanol solution..... 1.2mL
 Trace elements solution..... 1.0mL
 Vitamin solution..... 1.0mL

pH 7.0–7.2 at 25°C

Trace Elements Solution:

Composition per liter:

FeCl₂·4H₂O..... 1.5g
 CoCl₂·6H₂O..... 120.0mg
 MnCl₂·4H₂O..... 100.0mg
 ZnCl₂..... 68.0mg
 H₃BO₃..... 62.0mg
 Na₂MoO₄·2H₂O..... 24.0mg
 NiCl₂·6H₂O..... 24.0mg
 CuCl₂·2H₂O..... 17.0mg
 HCl (0.05M solution)..... 1000.0mL

Preparation of Trace Elements Solution: Add components one at a time to 1.0L of 0.05M HCl solution. Mix thoroughly.

Vitamin Solution:

Composition per 100.0mL

Thiamine-HCl..... 10.0mg
 p-Aminobenzoic acid..... 4.0mg
 D(+)-Biotin..... 1.0mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Flush with 80% N₂ + 20% CO₂.

Reducing Agent Solution:

Composition per 10.0mL:

Na₂S·9H₂O..... 0.36g

Preparation of Reducing Agent Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 10 min at 15 psi pressure–121°C.

Ethanol Solution:

Composition per 10.0mL:

Ethanol (95% solution)..... 10.0mL

Preparation of Ethanol Solution: Filter sterilize. Sparge with N₂ gas for 1 min.

Preparation of Medium: Add components, except NaHCO₃, ethanol, and reducing agent solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Boil for a few minutes. Allow to cool to room temperature under 80% N₂ + 20% CO₂. Add the NaHCO₃ and adjust pH to 6.9–7.1. Distribute into tubes or flasks under 80% N₂ + 20% CO₂. Autoclave for 15 min at 15

psi pressure–121°C. Cool to room temperature. Before inoculation, add sterile anaerobic Na₂CO₃ (0.25mL of 5% Na₂CO₃ per 10.0mL of medium) to bring the pH to 8.2. Add sterile ethanol and reducing agent solution.

Use: For the cultivation and maintenance of *Acetobacterium malicum* and *Acetobacterium carbinolicum*.

Acetobacterium dehalogenans Medium (DSMZ Medium 787)

Composition per liter:

NaHCO ₃	10.0g
Yeast extract.....	2.0g
NH ₄ Cl.....	1.0g
K ₂ HPO ₄	0.45g
KH ₂ PO ₄	0.33g
MgSO ₄ ·7H ₂ O.....	0.1g
Resazurin.....	1.0mg
NaHCO ₃ solution.....	30.0mL
Na ₂ CO ₃ solution.....	20.0mL
Trace elements solution.....	20.0mL
Vitamin solution.....	20.0mL
Na-syringate solution.....	10.0mL
Cysteine solution.....	10.0mL

pH 7.4 ± 0.2 at 25°C

NaHCO₃ Solution:

Composition per 100.0mL:

NaHCO ₃	10.0g
--------------------------	-------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

Cysteine Solution:

Composition per 10.0mL:

L-Cysteine·HCl·H ₂ O.....	0.3g
--------------------------------------	------

Preparation of Cysteine Solution: Add L-cysteine·HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Na-syringate Solution:

Composition per 20.0mL:

Na-syringate.....	1.2g
-------------------	------

Preparation of Na-syringate Solution: Add Na-syringate to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Trace Elements Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O.....	3.0g
Nitrilotriacetic acid.....	1.5g
NaCl.....	1.0g
MnSO ₄ ·2H ₂ O.....	0.5g
CoSO ₄ ·7H ₂ O.....	0.18g
ZnSO ₄ ·7H ₂ O.....	0.18g
CaCl ₂ ·2H ₂ O.....	0.1g
FeSO ₄ ·7H ₂ O.....	0.1g
NiCl ₂ ·6H ₂ O.....	0.025g
KAl(SO ₄) ₂ ·12H ₂ O.....	0.02g
H ₃ BO ₃	0.01g

Na ₂ MoO ₄ ·4H ₂ O.....	0.01g
CuSO ₄ ·5H ₂ O.....	0.01g
Na ₂ SeO ₃ ·5H ₂ O.....	0.3mg

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl.....	10.0mg
Thiamine-HCl·2H ₂ O.....	5.0mg
Riboflavin.....	5.0mg
Nicotinic acid.....	5.0mg
D-Ca-pantothenate.....	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Lipoic acid.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas atmosphere. Add components, except NaHCO₃ solution, Na₂CO₃ solution, vitamin solution, Na-syringate solution, and cysteine solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Boil for 5 min. Cool while sparging with 80% N₂ + 20% CO₂. Distribute 9.0mL aliquots into serum bottles. Autoclave under 80% N₂ + 20% CO₂ for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add approximately 0.20mL sterile Na₂CO₃ solution to each 9.0mL of medium so that pH is adjusted to 7.4. For every 9.0mL of medium inject 1.0mL NaHCO₃ solution, 0.15mL Na-syringate solution, 0.2mL vitamin solution, and 0.17mL cysteine solution.

Use: For the cultivation of *Acetobacterium dehalogenans*.

Acetobacterium Heterotrophic Medium (DSMZ Medium 135)

Composition per liter:

NaHCO ₃	10.0g
Yeast extract.....	2.0g
NH ₄ Cl.....	1.0g
K ₂ HPO ₄	0.45g
KH ₂ PO ₄	0.33g
MgSO ₄ ·7H ₂ O.....	0.1g
Resazurin.....	1.0mg
Na ₂ CO ₃ solution.....	25.0mL
Trace elements solution.....	20.0mL
Vitamin solution.....	20.0mL
Fructose solution.....	10.0mL
Cysteine solution.....	10.0mL
Na ₂ S·9H ₂ O solution.....	10.0mL

pH 8.2 ± 0.2 at 25°C

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	0.5g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Sparge with N₂.

Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Store anaerobically.

Cysteine Solution:

Composition per 10.0mL:

L-Cysteine-HCl·H₂O 0.5g

Preparation of Cysteine Solution: Add L-cysteine-HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Fructose Solution:

Composition per 10.0mL:

Fructose 5.0g

Preparation of Fructose Solution: Add fructose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Trace Elements Solution:

Composition per liter:

MgSO₄·7H₂O 3.0g
 Nitrilotriacetic acid 1.5g
 NaCl 1.0g
 MnSO₄·2H₂O 0.5g
 CoSO₄·7H₂O 0.18g
 ZnSO₄·7H₂O 0.18g
 CaCl₂·2H₂O 0.1g
 FeSO₄·7H₂O 0.1g
 NiCl₂·6H₂O 0.025g
 KAl(SO₄)₂·12H₂O 0.02g
 H₃BO₃ 0.01g
 Na₂MoO₄·4H₂O 0.01g
 CuSO₄·5H₂O 0.01g
 Na₂SeO₃·5H₂O 0.3mg

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl 10.0mg
 Thiamine-HCl·2H₂O 5.0mg
 Riboflavin 5.0mg
 Nicotinic acid 5.0mg
 D-Ca-pantothenate 5.0mg
 p-Aminobenzoic acid 5.0mg
 Lipoic acid 5.0mg
 Biotin 2.0mg
 Folic acid 2.0mg
 Vitamin B₁₂ 0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas atmosphere. Add components, except NaHCO₃, Na₂CO₃ solution, Na₂S·9H₂O solution, vitamin solution, fructose solution, and cysteine solution, to distilled/deionized water and bring volume to 925.0mL. Mix thoroughly. Gently heat and bring to boiling. Boil for 5 min. Cool while sparging with 80% N₂ + 20% CO₂. Add 10.0g solid NaHCO₃. Equilibrate with 80% N₂ + 20% CO₂ until pH is approximate-

ly 7.4. Distribute into bottles. Autoclave under 80% N₂ + 20% CO₂ for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add approximately 0.25mL sterile Na₂CO₃ solution to each 10.0mL of medium so that pH is adjusted to 8.2. For every 10.0mL of medium inject 0.1mL Na₂S·9H₂O solution, 0.1mL fructose solution, 0.2mL vitamin solution, and 0.1mL cysteine solution.

Use: For the cultivation and heterotrophic growth of *Acetobacterium* spp.

Acetobacterium Medium

Composition per 1060.0mL:

NaHCO₃ 10.0g
 Yeast extract 2.0g
 NH₄Cl 1.0g
 K₂HPO₄ 0.45g
 KH₂PO₄ 0.33g
 MgSO₄·7H₂O 0.1g
 Resazurin 1.0mg
 Fructose solution 50.0mL
 Trace elements solution 20.0mL
 Vitamin solution 20.0mL
 Reducing agent solution 10.0mL

pH 8.2 ± 0.2 at 25°C

Fructose Solution:

Composition per 50.0mL:

Fructose 10.0g

Preparation of Fructose Solution: Add fructose to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Sparge under 100% N₂ gas for 3 min. Filter sterilize. Store under N₂ gas.

Trace Elements Solution:

Composition per liter:

MgSO₄·7H₂O 3.0g
 Nitrilotriacetic acid 1.5g
 CaCl₂·2H₂O 1.0g
 NaCl 1.0g
 MnSO₄·2H₂O 0.5g
 CoSO₄·7H₂O 0.18g
 ZnSO₄·7H₂O 0.18g
 FeSO₄·7H₂O 0.1g
 NiCl₂·6H₂O 0.025g
 KAl(SO₄)₂·12H₂O 0.02g
 CuSO₄·5H₂O 0.01g
 H₃BO₃ 0.01g
 Na₂MoO₄·2H₂O 0.01g
 Na₂SeO₃·5H₂O 0.3mg

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add distilled/deionized water to 1.0L. Add remaining components. Mix thoroughly.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl 10.0mg
 Calcium DL-pantothenate 5.0mg
 Lipoic acid 5.0mg
 Nicotinic acid 5.0mg
 p-Aminobenzoic acid 5.0mg
 Riboflavin 5.0mg
 Thiamine-HCl 5.0mg
 Biotin 2.0mg

Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Reducing Agent Solution:

Composition per 10.0mL:

L-Cysteine·HCl·H ₂ O.....	0.5g
Na ₂ S·9H ₂ O.....	0.5g

Preparation of Reducing Agent Solution: Add 10.0mL of distilled/deionized water to a test tube. Gently heat and bring to boiling. Boil under N₂ gas for 1 min. Cool to room temperature. Add L-cysteine·HCl·H₂O and dissolve. Adjust pH to 9 with 5N NaOH. Add washed Na₂S·9H₂O and dissolve. Autoclave for 10 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except NaHCO₃, fructose solution, and reducing agent solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Boil for a few minutes. Allow to cool to room temperature under 80% N₂ + 20% CO₂. Add the NaHCO₃ and adjust pH to 7.4. Distribute into tubes or flasks under 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Before inoculation, add sterile anaerobic Na₂CO₃ (0.25mL of 5% Na₂CO₃ per 10.0mL of medium) to bring the pH to 8.2. Add sterile fructose solution and reducing agent solution.

Use: For the cultivation and maintenance of *Acetobacterium* species.

Acetobacterium Medium

Composition per 1060.0mL:

Yeast extract.....	2.0g
NH ₄ Cl.....	1.0g
K ₂ HPO ₄	0.45g
NaHCO ₃	1.0g
KH ₂ PO ₄	0.33g
MgSO ₄ ·7H ₂ O.....	0.1g
Resazurin.....	1.0mg
Fructose solution.....	50.0mL
Trace elements solution.....	20.0mL
Vitamin solution.....	20.0mL
Reducing agent solution.....	10.0mL
Metal solution.....	1.0mL

pH 6.5 ± 0.2 at 25°C

Fructose Solution:

Composition per 50.0mL:

Fructose.....	10.0g
---------------	-------

Preparation of Fructose Solution: Add fructose to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Sparge under 100% N₂ gas for 3 min. Filter sterilize. Store under N₂ gas.

Trace Elements Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O.....	3.0g
Nitilotriacetic acid.....	1.5g
CaCl ₂ ·2H ₂ O.....	1.0g
NaCl.....	1.0g
MnSO ₄ ·2H ₂ O.....	0.5g
CoSO ₄ ·7H ₂ O.....	0.18g
ZnSO ₄ ·7H ₂ O.....	0.18g
FeSO ₄ ·7H ₂ O.....	0.1g
NiCl ₂ ·6H ₂ O.....	0.025g

KAl(SO ₄) ₂ ·12H ₂ O.....	0.02g
CuSO ₄ ·5H ₂ O.....	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O.....	0.01g
Na ₂ SeO ₃ ·5H ₂ O.....	0.3mg

Preparation of Trace Elements Solution: Add nitilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add distilled/deionized water to 1.0L. Add remaining components. Mix thoroughly.

Vitamin Solution:

Composition per liter:

Pyridoxine·HCl.....	10.0mg
Calcium DL-pantothenate.....	5.0mg
Lipoic acid.....	5.0mg
Nicotinic acid.....	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Riboflavin.....	5.0mg
Thiamine·HCl.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Reducing Agent Solution:

Composition per 10.0mL:

L-Cysteine·HCl·H ₂ O.....	0.5g
Na ₂ S·9H ₂ O.....	0.5g

Preparation of Metal Solution: Add 10.0mL of distilled/deionized water to a test tube. Gently heat and bring to boiling. Boil under N₂ gas for 1 min. Cool to room temperature. Add L-cysteine·HCl·H₂O and dissolve. Adjust pH to 9 with 5N NaOH. Add washed Na₂S·9H₂O and dissolve. Autoclave for 10 min at 15 psi pressure–121°C.

Metal Solution:

Composition per liter:

Na ₂ SeO ₃ ·5H ₂ O.....	3.0mg
Na ₂ WO ₄ ·2H ₂ O.....	0.5g

Preparation of Reducing Agent Solution: Add 10.0mL of distilled/deionized water to a test tube. Gently heat and bring to boiling. Boil under N₂ gas for 1 min. Cool to room temperature. Add L-cysteine·HCl·H₂O and dissolve. Adjust pH to 9 with 5N NaOH. Add washed Na₂S·9H₂O and dissolve. Autoclave for 10 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except NaHCO₃, fructose solution, and reducing agent solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Boil for a few minutes. Allow to cool to room temperature under 80% N₂ + 20% CO₂. Add the NaHCO₃ and adjust pH to 6.5. Distribute into tubes or flasks under 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Before inoculation, add sterile fructose solution and reducing agent solution.

Use: For the cultivation and maintenance of *Clostridium thermoautotrophicum*.

Acetobacterium Medium

Composition per 1001.0mL:

Solution A.....	870.0mL
Solution C.....	100.0mL
Solution D.....	10.0mL

Solution E (Vitamin solution).....	10.0mL
Solution F.....	10.0mL
Solution B (Trace elements solution SL-10)	1.0mL
pH 7.1–7.4 at 25°C	

Solution A:

Composition per 870.0mL:

Na ₂ SO ₄	3.0g
NaCl.....	1.0g
Yeast extract.....	0.5g
KCl.....	0.5g
MgCl ₂ ·6H ₂ O.....	0.4g
NH ₄ Cl.....	0.3g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O.....	0.15g
Resazurin	1.0mg

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 870.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 3–4 min. Allow to cool to room temperature while gassing under 80% N₂ + 20% CO₂. Continue gassing until pH reaches below 6.0. Seal the flask under 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B (Trace Elements Solution SL-10):

Composition per liter:

FeCl ₂ ·4H ₂ O.....	1.5g
CoCl ₂ ·6H ₂ O.....	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	36.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O.....	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Solution B (Trace Elements Solution SL-10):

Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C:

Composition per 100.0mL:

NaHCO ₃	5.0g
--------------------------	------

Preparation of Solution C: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Gas under 80% N₂ + 20% CO₂.

Solution D:

Composition per 10.0mL:

Methoxyacetate.....	0.9g
---------------------	------

Preparation of Solution D: Add methoxyacetate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution E (Vitamin Solution):

Composition per liter:

Pyridoxine-HCl.....	10.0mg
Calcium DL-pantothenate.....	5.0mg
Lipoic acid.....	5.0mg
Nicotinic acid.....	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Riboflavin.....	5.0mg
Thiamine-HCl.....	5.0mg

Biotin.....	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Solution E (Vitamin Solution): Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution F:

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	0.4g
--	------

Preparation of Solution F: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Aseptically and anaerobically combine solution A with solution B, solution C, solution D, solution E, and solution F, in that order. Mix thoroughly. Anaerobically distribute into sterile tubes or flasks under 80% N₂ + 20% CO₂.

Use: For the cultivation and maintenance of *Acetobacterium* species.

**Acetobacterium Medium
(ATCC Medium 1612)**

Composition per liter:

Fructose.....	10.0g
NaHCO ₃	10.0g
Yeast extract.....	2.0g
NH ₄ Cl.....	1.0g
L-Cysteine-HCl·H ₂ O.....	0.5g
Na ₂ S·9H ₂ O.....	0.5g
K ₂ HPO ₄	0.45g
KH ₂ PO ₄	0.33g
MgSO ₄ ·7H ₂ O.....	0.1g
Resazurin	1.0mg
Wolfe’s mineral solution.....	20.0mL
Wolfe’s vitamin solution.....	20.0mL

pH 7.4 ± 0.2 at 25°C

Wolfe’s Mineral Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O.....	3.0g
Nitritotriacetic acid.....	1.5g
NaCl.....	1.0g
MnSO ₄ ·H ₂ O.....	0.5g
FeSO ₄ ·7H ₂ O.....	0.1g
CoCl ₂ ·6H ₂ O.....	0.1g
CaCl ₂	0.1g
ZnSO ₄ ·7H ₂ O.....	0.1g
CuSO ₄ ·5H ₂ O.....	0.01g
AlK(SO ₄) ₂ ·12H ₂ O.....	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O.....	0.01g

Preparation of Wolfe’s Mineral Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add distilled/deionized water to 1.0L. Add remaining components.

Wolfe’s Vitamin Solution:

Composition per liter:

Pyridoxine-HCl.....	10.0mg
Thiamine-HCl.....	5.0mg
Riboflavin.....	5.0mg

Nicotinic acid.....	5.0mg
Calcium pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Thioctic acid	5.0mg
Biotin	2.0mg
Folic acid.....	2.0mg
Cyanocobalamin	100.0µg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add all components, except fructose, and bring volume to 1.0L with distilled/deionized water. Mix thoroughly. Equilibrate to pH 7.4 by gassing with 80% N₂ + 20% CO₂. Distribute into test tubes. Autoclave for 15 min at 15 psi pressure–121°C. Add sterile anaerobic Na₂CO₃ (0.25mL of 5% Na₂CO₃ per 10.0mL of medium) to bring the pH to 8.2. Add sterile fructose solution to give a final concentration of 1%. If autotrophic growth is desired omit fructose and gas with 80% H₂ + 20% CO₂.

Use: For the cultivation and maintenance of *Acetobacterium* species, *Clostridium acetivum*, and other bacteria that can ferment fructose to acetic acid.

Acetobacterium Medium (ATCC Medium 1019)

Composition per liter:

NaHCO ₃	3.0g
Yeast extract.....	1.0g
NH ₄ Cl	1.0g
KH ₂ PO ₄	0.4g
K ₂ HPO ₄	0.4g
MgSO ₄ ·7H ₂ O	0.1g
Fructose (20% solution).....	25.0mL
Wolfe's vitamin solution.....	10.0mL
Wolfe's mineral solution.....	10.0mL
Resazurin (0.01% solution).....	1.0mL

pH 6.7 ± 0.2 at 25°C

Wolfe's Vitamin Solution:

Composition per liter:

Pyridoxine-HCl.....	10.0mg
Thiamine-HCl	5.0mg
Riboflavin	5.0mg
Nicotinic acid.....	5.0mg
Calcium pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Thioctic acid	5.0mg
Biotin	2.0mg
Folic acid.....	2.0mg
Cyanocobalamin	100.0µg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Wolfe's Mineral Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O	3.0g
Nitritotriacetic acid	1.5g
MnSO ₄ ·H ₂ O	0.5g
NaCl	1.0g
FeSO ₄ ·7H ₂ O.....	0.1g
CoCl ₂ ·6H ₂ O	0.1g
CaCl ₂	0.1g

ZnSO ₄ ·7H ₂ O	0.1g
CuSO ₄ ·5H ₂ O.....	0.01g
AlK(SO ₄) ₂ ·12H ₂ O.....	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g

Preparation of Wolfe's Mineral Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add distilled/deionized water to 1.0L. Add remaining components.

Preparation of Medium: Add all components, except fructose, to distilled/deionized water and bring volume to 975.0mL. Boil to remove dissolved O₂. Add 40.0mL of a solution containing 1.25% L-cysteine-HCl-H₂O and 1.25% Na₂S·9H₂O. Autoclave for 15 min at 15 psi pressure–121°C. Immediately gas with 90% N₂ + 10% CO₂ to maintain anaerobiosis until cooled to 50°C. Add 25.0mL of a filter-sterilized 20% fructose solution. If necessary, adjust pH to 6.7. Aseptically distribute into tubes under anaerobic conditions. Cap with rubber stoppers.

Use: For the cultivation and maintenance of *Acetobacterium* species.

Acetobacterium Medium (DSMZ 614)

Composition per liter:

MgCl ₂ ·6H ₂ O	0.52g
Yeast extract.....	0.5g
KCl.....	0.33g
KH ₂ PO ₄	0.33g
NH ₄ Cl	0.33g

Fructose solution.....	100.0mL
Wolfe's mineral solution.....	10.0mL
Wolfe's vitamin solution.....	10.0mL
NaHCO ₃ solution.....	10.0mL
Na ₂ S·9H ₂ O solution.....	10.0mL

pH 6.8–7.0 at 25°C

Fructose Solution:

Composition per 100.0mL:

D-Fructose.....	10.0g
-----------------	-------

Preparation of Fructose Solution: Add fructose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Wolfe's Vitamin Solution:

Composition per liter:

Pyridoxine-HCl.....	10.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Lipoic acid.....	5.0mg
Nicotinic acid.....	5.0mg
Riboflavin	5.0mg
Thiamine-HCl	5.0mg
Calcium DL-pantothenate.....	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Wolfe's Mineral Solution:**Composition per liter:**

MgSO ₄ ·7H ₂ O	3.0g
Nitritotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·2H ₂ O	0.5g
CoCl ₂ ·6H ₂ O	0.1g
ZnSO ₄ ·7H ₂ O	0.1g
CaCl ₂ ·2H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g
NiCl ₂ ·6H ₂ O	0.025g
KAl(SO ₄) ₂ ·12H ₂ O	0.02g
CuSO ₄ ·5H ₂ O	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O	0.3mg

Preparation of Wolfe's Mineral Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Adjust pH to 6.8.

NaHCO₃ Solution:**Composition per 10.0mL:**

NaHCO ₃	1.0g
--------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O	0.7g
-------------------------------------	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Before use, neutralize to pH 7.0 with sterile HCl.

Preparation of Medium: Prepare and dispense medium under 100% N₂. Add components, except fructose solution, NaHCO₃ solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 880.0mL. Mix thoroughly. Adjust pH to 6.8–7.0. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 100.0mL of sterile fructose solution, 10.0mL of sterile NaHCO₃ solution, and 10.0mL of sterile Na₂S·9H₂O solution. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or bottles.

Use: For the cultivation of *Acetobacterium bakii* and *Acetobacterium paludosum*.

Acetobacterium 2 Medium**Composition per 1050.0mL:**

NaCl	20.0g
NaHCO ₃	10.0g
Yeast extract	2.0g
Ethylene glycol	1.25g
NH ₄ Cl	1.0g
K ₂ HPO ₄	0.45g
KH ₂ PO ₄	0.33g
MgSO ₄ ·7H ₂ O	0.1g
Resazurin	1.0mg
Ethylene glycol solution	20.0mL
Trace elements solution	20.0mL

Vitamin solution	20.0mL
Reducing agent solution	10.0mL

Trace Elements Solution:**Composition per liter:**

MgSO ₄ ·7H ₂ O	3.0g
Nitritotriacetic acid	1.5g
CaCl ₂ ·2H ₂ O	1.0g
NaCl	1.0g
MnSO ₄ ·2H ₂ O	0.5g
CoSO ₄ ·7H ₂ O	0.18g
ZnSO ₄ ·7H ₂ O	0.18g
FeSO ₄ ·7H ₂ O	0.1g
NiCl ₂ ·6H ₂ O	0.025g
KAl(SO ₄) ₂ ·12H ₂ O	0.02g
CuSO ₄ ·5H ₂ O	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O	0.3mg

Preparation of Trace Elements Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add distilled/deionized water to 1.0L. Add remaining components. Mix thoroughly.

Vitamin Solution:**Composition per liter:**

Pyridoxine-HCl	10.0mg
Calcium DL-pantothenate	5.0mg
Lipoic acid	5.0mg
Nicotinic acid	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Riboflavin	5.0mg
Thiamine-HCl	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Reducing Agent Solution:**Composition per 10.0mL:**

L-Cysteine-HCl·H ₂ O	0.5g
Na ₂ S·9H ₂ O	0.5g

Preparation of Reducing Agent Solution: Add 10.0mL of distilled/deionized water to a test tube. Gently heat and bring to boiling. Boil under N₂ gas for 1 min. Cool to room temperature. Add L-cysteine-HCl·H₂O and dissolve. Adjust pH to 9 with 5N NaOH. Add washed Na₂S·9H₂O and dissolve. Autoclave for 10 min at 15 psi pressure–121°C.

Ethylene Glycol Solution:**Composition per 20.0mL:**

Ethylene glycol	5.0g
-----------------	------

Preparation of Ethylene Glycol Solution: Add ethylene glycol to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Sparge under 100% N₂ gas for 3 min. Filter sterilize. Store under N₂ gas.

Preparation of Medium: Add components, except NaHCO₃, ethylene glycol solution, and reducing agent solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Boil for a few minutes. Allow to cool to room temperature under 80% N₂ + 20% CO₂. Add the NaHCO₃ and adjust pH to

7.4. Distribute into tubes or flasks under 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Before inoculation, add sterile anaerobic Na₂CO₃ (0.25mL of 5% Na₂CO₃ per 10.0mL of medium) to bring the pH to 8.2. Add sterile ethylene glycol solution and reducing agent solution.

Use: For the cultivation and maintenance of *Acetobacterium woodii*.

Acetobacterium sp. KoMAcI Medium (DSMZ Medium 478)

Composition per 1001.0mL:

Solution A	870.0mL
Solution C	100.0mL
Solution D	10.0mL
Solution E (Vitamin solution)	10.0mL
Solution F	10.0mL
Solution B (Trace element solution SL-10)	1.0mL
	pH 7.1–7.4 at 25°C

Solution A:

Composition per 870.0mL:

Na ₂ SO ₄	3.0g
NaCl	1.0g
Yeast extract	0.5g
KCl	0.5g
MgCl ₂ ·6H ₂ O	0.4g
NH ₄ Cl	0.3g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O	0.15g
Resazurin	1.0mg

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 870.0mL. Mix thoroughly.

Solution B (Trace Elements Solution SL-10):

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Solution B (Trace Elements Solution SL-10):

Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C:

Composition per 100.0mL:

NaHCO ₃	5.0g
--------------------	------

Preparation of Solution C: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Flush with 80% N₂ + 20% CO₂ to remove dissolved oxygen.

Solution D:

Composition per 10.0mL:

Methoxyacetate	0.9g
----------------	------

Preparation of Solution D: Add methoxyacetate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution E (Vitamin Solution):

Composition per liter:

Pyridoxine-HCl	10.0mg
Thiamine-HCl·2H ₂ O	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
D-Ca-pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.10mg

Solution E (Vitamin Solution): Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution F:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.4g
-------------------------------------	------

Preparation of Solution F: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Gently heat solution A and bring to boiling. Boil solution A for a few minutes. Cool to room temperature. Gas with 80% N₂ + 20% CO₂ gas mixture to reach a pH below 6. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Sequentially add 1.0mL solution B, 100.0mL solution C, 10.0mL solution D, 10.0mL solution E, and 10.0mL solution F. Distribute anaerobically under 80% N₂ + 20% CO₂ into appropriate vessels. Addition of 10–20mg sodium dithionite per liter from a 5% (w/v) solution, freshly prepared under N₂ and filter-sterilized, may stimulate growth.

Use: For the cultivation of *Acetobacterium sp.*

Acetobacterium sp. Medium (DSMZ Medium 614)

Substrate solution	10.0mL
Na ₂ S·9H ₂ O solution	10.0mL

pH 7.5 ± 0.2 at 25°C

Substrate Solution:

Composition per 10.0mL:

Na-lactate	4.0g
------------	------

Preparation of Substrate Solution: Add Na-lactate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 10% N₂. Filter sterilize.

NaHCO₃ Solution:

Composition per 10.0mL:

NaHCO ₃	1.0g
--------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na₂S·9H₂O 0.7g

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Sparge with N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Store anaerobically. Before use, neutralize sodium sulfide with sterile hydrochloric acid.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl 10.0mg
Thiamine-HCl·2H₂O 5.0mg
Riboflavin 5.0mg
Nicotinic acid 5.0mg
D-Ca-pantothenate 5.0mg
p-Aminobenzoic acid 5.0mg
Lipoic acid 5.0mg
Biotin 2.0mg
Folic acid 2.0mg
Vitamin B₁₂ 0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Trace Elements Solution:

Composition per liter:

MgSO₄·7H₂O 3.0g
Nitrilotriacetic acid 1.5g
NaCl 1.0g
MnSO₄·2H₂O 0.5g
CoSO₄·7H₂O 0.18g
ZnSO₄·7H₂O 0.18g
CaCl₂·2H₂O 0.1g
FeSO₄·7H₂O 0.1g
NiCl₂·6H₂O 0.025g
KAl(SO₄)₂·12H₂O 0.02g
H₃BO₃ 0.01g
Na₂MoO₄·4H₂O 0.01g
CuSO₄·5H₂O 0.01g
Na₂SeO₃·5H₂O 0.3mg

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Preparation of Medium: Prepare and dispense medium under 100% N₂ gas atmosphere. Add components, except NaHCO₃ solution, substrate solution, Na₂S·9H₂O solution, and vitamin solution, to distilled/deionized water and bring volume to 960.0mL. Mix thoroughly. Adjust pH to 7.5. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 10.0mL NaHCO₃ solution, 10.0mL substrate solution, 10.0mL Na₂S·9H₂O solution, and 10.0mL vitamin solution. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or bottles.

Use: For the cultivation of *Acetobacterium fimetarium* DSM 8238.

**Acetobacterium sp. Medium
(DSMZ Medium 614)**

Composition per liter:

MgCl₂·6H₂O 0.52g
Yeast extract 0.5g
KCl 0.33g
NH₄Cl 0.33g
KH₂PO₄ 0.33g
CaCl₂·2H₂O 0.22g
Resazurin 1.0mg
Trace elements solution 10.0mL
Vitamin solution 10.0mL
NaHCO₃ solution 10.0mL
Substrate solution 10.0mL
Na₂S·9H₂O solution 10.0mL

pH 6.9 ± 0.2 at 25°C

Substrate Solution:

Composition per 10.0mL:

Fructose 10.0g

Preparation of Substrate Solution: Add fructose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 10% N₂. Filter sterilize.

NaHCO₃ Solution:

Composition per 10.0mL:

NaHCO₃ 1.0g

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na₂S·9H₂O 0.7g

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Sparge with N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Store anaerobically. Before use, neutralize sodium sulfide with sterile hydrochloric acid.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl 10.0mg
Thiamine-HCl·2H₂O 5.0mg
Riboflavin 5.0mg
Nicotinic acid 5.0mg
D-Ca-pantothenate 5.0mg
p-Aminobenzoic acid 5.0mg
Lipoic acid 5.0mg
Biotin 2.0mg
Folic acid 2.0mg
Vitamin B₁₂ 0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Trace Elements Solution:

Composition per liter:

MgSO₄·7H₂O 3.0g
Nitrilotriacetic acid 1.5g
NaCl 1.0g
MnSO₄·2H₂O 0.5g
CoSO₄·7H₂O 0.18g

ZnSO ₄ ·7H ₂ O	0.18g
CaCl ₂ ·2H ₂ O.....	0.1g
FeSO ₄ ·7H ₂ O.....	0.1g
NiCl ₂ ·6H ₂ O.....	0.025g
KAl(SO ₄) ₂ ·12H ₂ O.....	0.02g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·4H ₂ O.....	0.01g
CuSO ₄ ·5H ₂ O.....	0.01g
Na ₂ SeO ₃ ·5H ₂ O.....	0.3mg

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Preparation of Medium: Prepare and dispense medium under 100% N₂ gas atmosphere. Add components, except NaHCO₃ solution, substrate solution, Na₂S·9H₂O solution, and vitamin solution, to distilled/deionized water and bring volume to 960.0mL. Mix thoroughly. Adjust pH to 6.8–7.0. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 10.0mL NaHCO₃ solution, 10.0mL substrate solution, 10.0mL Na₂S·9H₂O solution, and 10.0mL vitamin solution. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or bottles.

Use: For the cultivation of *Acetobacterium fimetarium* DSM 8237 and *Acetobacterium fimetarium* DSM 8239.

Acetobacterium tundrae Medium (DSMZ Medium 900)

Yeast extract.....	1.0g
MgCl ₂ ·6H ₂ O.....	0.52g
KCl.....	0.33g
NH ₄ Cl.....	0.33g
KH ₂ PO ₄	0.33g
CaCl ₂ ·2H ₂ O.....	0.3g
Resazurin.....	0.5mg
Fructose solution.....	30.0mL
NaHCO ₃ solution.....	20.0mL
L-Cysteine solution.....	10.0mL
Na ₂ S·9H ₂ O solution.....	10.0mL
Trace mineral solution SL-10.....	1.0mL
Seven vitamin solution.....	1.0mL

pH 7.0 ± 0.2 at 25°C

L-Cysteine Solution:

Composition per 10.0mL:

L-Cysteine·HCl·H ₂ O.....	0.3g
--------------------------------------	------

Preparation of L-Cysteine Solution: Add L-cysteine·HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

NaHCO₃ Solution:

Composition per 20.0mL:

NaHCO ₃	5.0g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	0.3g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Fructose Solution:

Composition per 30.0mL:

Glucose.....	5.0g
--------------	------

Preparation of Fructose Solution: Add glucose to distilled/deionized water and bring volume to 30.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Seven Vitamin Solution:

Composition per liter:

Pyridoxine hydrochloride.....	300.0mg
Thiamine·HCl·2H ₂ O.....	200.0mg
Nicotinic acid.....	200.0mg
Vitamin B ₁₂	100.0mg
Calcium pantothenate.....	100.0mg
<i>p</i> -Aminobenzoic acid.....	80.0mg
D(+)-Biotin.....	20.0mg

Preparation of Seven Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Sparge with 100% N₂. Mix thoroughly. Filter sterilize.

Trace Elements Solution SL-10:

Composition per liter:

FeCl ₂ ·4H ₂ O.....	1.5g
CoCl ₂ ·6H ₂ O.....	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	36.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O.....	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas atmosphere. Add components, except seven vitamin solution, NaHCO₃ solution, fructose solution, L-cysteine-solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 929.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Distribute into anaerobe tubes or bottles. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add, per liter of medium, 1.0mL seven vitamin solution, 20.0mL NaHCO₃ 30.0mL fructose solution, 10.0mL L-cysteine·HCl·H₂O solution, and 10.0mL Na₂S·9H₂O solution. Mix thoroughly. The final pH should be 7.0.

Use: For the cultivation of *Acetobacterium tundrae*.

Acetobacteroides glycinophilus Medium

Composition per 1020.0mL:

Na ₂ HPO ₄	5.8g
KH ₂ PO ₄	3.0g
NH ₄ Cl.....	1.0g
MgCl ₂ ·6H ₂ O.....	0.2g
Resazurin.....	1.0mg
CaCl ₂ ·2H ₂ O.....	0.13g

Trace elements solution	10.0mL
Vitamin solution	5.0mL
Yeast extract solution	5.0mL
Glycine solution	5.0mL
NaHCO ₃ solution	5.0mL
Na ₂ S·9H ₂ O solution	5.0mL

pH 7.2–7.4 at 25°C

Trace Elements Solution:**Composition per liter:**

Nitrilotriacetic acid	2.8g
NaCl	1.0g
FeCl ₃ ·4H ₂ O	0.2g
CoCl ₂ ·6H ₂ O	0.17g
CaCl ₂ ·2H ₂ O	0.1g
MnCl ₂ ·4H ₂ O	0.1g
ZnCl ₂	0.1g
NiCl ₂ ·6H ₂ O	0.026g
CuCl ₂	0.02g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g
Na ₂ SeO ₄ ·5H ₂ O	0.02g

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add distilled/deionized water to 1.0L. Add remaining components. Mix thoroughly.

Vitamin Solution:**Composition per liter:**

Pyridoxine-HCl	10.0mg
Calcium DL-pantothenate	5.0mg
Lipoic acid	5.0mg
Nicotinic acid	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Riboflavin	5.0mg
Thiamine-HCl	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Yeast Extract Solution:**Composition per 5.0mL:**

Yeast extract	0.5g
---------------------	------

Preparation of Yeast Extract Solution: Add yeast extract to distilled/deionized water and bring volume to 5.0mL. Mix thoroughly. Sparge under 100% N₂ gas for 3 min. Autoclave for 15 min at 15 psi pressure–121°C. Store under N₂ gas.

Glycine Solution:**Composition per 5.0mL:**

Glycine	1.5g
---------------	------

Preparation of Glycine Solution: Add glycine to distilled/deionized water and bring volume to 5.0mL. Mix thoroughly. Sparge under 100% N₂ gas for 3 min. Autoclave for 15 min at 15 psi pressure–121°C. Store under N₂ gas.

NaHCO₃ Solution:**Composition per 5.0mL:**

NaHCO ₃	0.5g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 5.0mL. Mix thoroughly. Sparge under 100% N₂ gas for 3 min. Autoclave for 15 min at 15 psi pressure–121°C. Store under N₂ gas.

Na₂S·9H₂O Solution:**Composition per 5.0mL:**

Na ₂ S·9H ₂ O	0.5g
---	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 5.0mL. Mix thoroughly. Sparge under 100% N₂ gas for 3 min. Autoclave for 15 min at 15 psi pressure–121°C. Store under N₂ gas.

Preparation of Medium: Add components, except yeast extract solution, glycine solution, NaHCO₃ solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 1.0L. Adjust pH to 7.2–7.4 with NaOH. Mix thoroughly. Gently heat and bring to boiling. Boil for a few minutes. Allow to cool to room temperature under 100% N₂. Distribute into tubes or flasks under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Before inoculation, aseptically and anaerobically add yeast extract solution, glycine solution, NaHCO₃ solution, and Na₂S·9H₂O solution.

Use: For the cultivation and maintenance of *Acetobacteroides glycinophilus*.

Acetogen Medium**Composition per 421.8mL:**

NaHCO ₃	2.4g
NH ₄ Cl	0.2g
Yeast extract	0.2g
Stock salts solution #1	40.0mL
Potassium phosphate buffer	20.0mL
Clarified rumen fluid	20.0mL
Stock salts solution #2	4.0mL
Trace minerals solution	4.0mL
Vitamin solution	4.0mL
Reducing agent solution	4.0mL
Tungstate solution	0.4mL
Resazurin (0.1% solution)	0.4mL

Potassium Phosphate Buffer:**Composition per 830.0mL:**

K ₂ HPO ₄	15.68g
KH ₂ PO ₄	4.72g

Preparation of Potassium Phosphate Buffer: Dissolve K₂HPO₄ in 600.0mL of distilled/deionized water and KH₂PO₄ in 230.0mL of distilled/deionized water. Mix the two solutions together and use.

Stock Salts Solution #1:**Composition per liter:**

KCl	1.6g
NaCl	1.4g
MgSO ₄ ·7H ₂ O	0.2g

Preparation of Stock Salts Solution #1: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Stock Salts Solution #2:**Composition per liter:**

CaCl ₂ ·2H ₂ O	0.1g
--	------

Preparation of Stock Salts Solution #2: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Trace Minerals Solution:**Composition** per liter:

Nitritotriacetic acid	1.5g
MgSO ₄ ·7H ₂ O	3.0g
MnSO ₄ ·H ₂ O	0.5g
NaCl	1.0g
NiCl ₂ ·6H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g
CoCl ₂ ·6H ₂ O	0.1g
CaCl ₂	0.1g
ZnSO ₄ ·7H ₂ O	0.1g
Na ₂ SeO ₃ ·5H ₂ O	0.01g
CuSO ₄ ·5H ₂ O	0.01g
AlK(SO ₄) ₂ ·12H ₂ O	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g

Preparation of Trace Minerals Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Bring volume to 1.0L with distilled/deionized water. Add remaining components. Mix thoroughly.

Vitamin Solution:**Composition** per liter:

Pyridoxine·HCl	10.0mg
Ascorbic acid	5.0mg
Calcium pantothenate	5.0mg
Choline chloride	5.0mg
Lipoic acid	5.0mg
<i>i</i> -Inositol	5.0mg
Niacinamide	5.0mg
Nicotinic acid	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Pyridoxal·HCl	5.0mg
Riboflavin	5.0mg
Thiamine·HCl	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Store frozen.

Tungstate Solution:**Composition** per liter:

Na ₂ WO ₄ ·2H ₂ O	99.0mg
--	--------

Preparation of Tungstate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Reducing Agent Solution:**Composition** per 110.0mL:

L-Cysteine·HCl·H ₂ O	2.5g
Na ₂ S·9H ₂ O	2.5g

Preparation of Reducing Agent Solution: Add 110.0mL of distilled/deionized water to a 250.0mL round-bottomed flask. Boil under N₂ gas for 1 min. Cool to room temperature. Add L-cysteine·HCl and dissolve. Adjust to pH 9 with 5N NaOH. Add washed Na₂S·9H₂O and dissolve. Distribute in amounts needed into tubes or flasks. Autoclave for 10 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except NaHCO₃ and reducing agent, to distilled/deionized water and bring volume to 417.8mL. Mix thoroughly. Gently heat and bring to boiling under 80% N₂ + 20% CO₂. Cool to 45°–50°C. Add NaHCO₃ and reducing agent.

Distribute into tubes or flasks under 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. After inoculation, exchange head-space with 80% H₂ + 20% CO₂.

Use: For the cultivation and maintenance of acetogenic anaerobes such as some *Clostridium* species.

Acetogenium Medium**Composition** per liter:

Na ₂ HPO ₄ ·12H ₂ O	6.1g
NaH ₂ PO ₄ ·H ₂ O	4.5g
L-Cysteine·HCl	0.5g
Na ₂ S·9H ₂ O	0.5g
NaCl	0.45g
NH ₄ Cl	0.31g
K ₂ HPO ₄	0.22g
KH ₂ PO ₄	0.22g
(NH ₄) ₂ SO ₄	0.22g
MgSO ₄ ·7H ₂ O	0.09g
CaCl ₂ ·2H ₂ O	6.0mg
FeSO ₄ ·7H ₂ O	2.0mg
Resazurin	1.0mg
Trace elements solution	10.0mL

pH 6.5 ± 0.2 at 25°C

Trace Elements Solution:**Composition** per liter:

MgSO ₄ ·7H ₂ O	3.0g
Nitritotriacetic acid	1.5g
CaCl ₂ ·2H ₂ O	1.0g
NaCl	1.0g
MnSO ₄ ·2H ₂ O	0.5g
CoSO ₄ ·7H ₂ O	0.18g
ZnSO ₄ ·7H ₂ O	0.18g
FeSO ₄ ·7H ₂ O	0.1g
NiCl ₂ ·6H ₂ O	0.025g
KAl(SO ₄) ₂ ·12H ₂ O	0.02g
CuSO ₄ ·5H ₂ O	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O	0.3mg

Preparation of Trace Elements Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add distilled/deionized water to 1.0L. Add remaining components. Mix thoroughly. Adjust pH to 7.0 with KOH.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Adjust pH to 7.2–7.4 with NaOH. Mix thoroughly. Gently heat and bring to boiling. Boil for a few minutes. Allow to cool to room temperature under 80% H₂ + 20% CO₂. Distribute into tubes or flasks under 80% H₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Acetogenium kivui*.

Acetohalobium Medium**Composition** per 1025.0mL:

NaCl	150.0g
MgCl ₂ ·6H ₂ O	4.0g
CaCl ₂ ·2H ₂ O	0.33g
KCl	0.33g
KH ₂ PO ₄	0.33g
NH ₄ Cl	0.33g

Resazurin	1.0mg
Trace elements solution	10.0mL
Vitamin solution	10.0mL
Trimethylamine-HCl solution	10.0mL
Yeast extract solution	5.0mL
NaHCO ₃ solution	5.0mL
Na ₂ S·9H ₂ O solution	5.0mL

pH 7.6 ± 0.2 at 25°C

Trace Elements Solution:**Composition per liter:**

MgSO ₄ ·7H ₂ O	3.0g
Nitilotriacetic acid	1.5 g
CaCl ₂ ·2H ₂ O	1.0g
NaCl	1.0g
MnSO ₄ ·2H ₂ O	0.5g
CoSO ₄ ·7H ₂ O	0.18g
ZnSO ₄ ·7H ₂ O	0.18g
FeSO ₄ ·7H ₂ O	0.1g
NiCl ₂ ·6H ₂ O	0.025g
KAl(SO ₄) ₂ ·12H ₂ O	0.02g
CuSO ₄ ·5H ₂ O	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O	0.3mg

Preparation of Trace Elements Solution: Add nitilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add distilled/deionized water to 1.0L. Add remaining components. Mix thoroughly. Adjust pH to 7.0 with KOH.

Vitamin Solution:**Composition per liter:**

Pyridoxine-HCl	10.0mg
Calcium DL-pantothenate	5.0mg
Lipoic acid	5.0mg
Nicotinic acid	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Riboflavin	5.0mg
Thiamine-HCl	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Trimethylamine-HCl Solution:**Composition per 10.0mL:**

Trimethylamine-HCl	2.4g
--------------------------	------

Preparation of Trimethylamine-HCl Solution: Add trimethylamine-HCl to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge under 100% N₂ gas for 3 min. Autoclave for 15 min at 15 psi pressure–121°C. Store under N₂ gas. 4.5g of glycine betaine may be used in place of trimethylamine-HCl.

Yeast Extract Solution:**Composition per 5.0mL:**

Yeast extract	0.05g
---------------------	-------

Preparation of Yeast Extract Solution: Add yeast extract to distilled/deionized water and bring volume to 5.0mL. Mix thoroughly. Sparge under 100% N₂ gas for 3 min. Autoclave for 15 min at 15 psi pressure–121°C. Store under N₂ gas.

NaHCO₃ Solution:**Composition per 5.0mL:**

NaHCO ₃	0.5g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 5.0mL. Mix thoroughly. Sparge under 100% N₂ gas for 3 min. Autoclave for 15 min at 15 psi pressure–121°C. Store under N₂ gas.

Na₂S·9H₂O Solution:**Composition per 5.0mL:**

Na ₂ S·9H ₂ O	0.5g
---	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 5.0mL. Mix thoroughly. Sparge under 100% N₂ gas for 3 min. Autoclave for 15 min at 15 psi pressure–121°C. Store under N₂ gas.

Preparation of Medium: Add components, except vitamin solution, trimethylamine-HCl solution, yeast extract solution, NaHCO₃ solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 1.0L. Adjust pH to 7.2–7.4 with NaOH. Mix thoroughly. Gently heat and bring to boiling. Boil for a few minutes. Allow to cool to room temperature under 100% N₂. Distribute into tubes or flasks under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Before inoculation, aseptically and anaerobically add vitamin solution, trimethylamine-HCl solution, yeast extract solution, NaHCO₃ solution, and Na₂S·9H₂O solution. If necessary, adjust pH to 7.6 with sterile anaerobic Na₂CO₃ solution.

Use: For the cultivation and maintenance of *Acetohalobium arabaticum*.

Acetohalobium Medium**Composition per liter:**

NaCl	150.0g
MgCl ₂ ·6H ₂ O	4.0g
NaHCO ₃	4.0g
Trimethylamine-HCl	2.4g
Na ₂ S·9H ₂ O	0.5g
CaCl ₂ ·2H ₂ O	0.33g
KCl	0.33g
KH ₂ PO ₄	0.33g
NH ₄ Cl	0.33g
Yeast extract	0.05g
Resazurin	1.0mg
Wolfe's mineral solution	10.0mL
Wolfe's vitamin solution	10.0mL

pH 7.8 ± 0.2 at 25°C

Wolfe's Mineral Solution:**Composition per liter:**

MgSO ₄ ·7H ₂ O	3.0g
Nitilotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·2H ₂ O	0.5g
CoCl ₂ ·6H ₂ O	0.1g
ZnSO ₄ ·7H ₂ O	0.1g
CaCl ₂ ·2H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g
NiCl ₂ ·6H ₂ O	0.025g
KAl(SO ₄) ₂ ·12H ₂ O	0.02g
CuSO ₄ ·5H ₂ O	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O	0.3mg

Preparation of Wolfe's Mineral Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components one at a time. Add distilled/deionized water to 1.0L. Adjust pH to 6.8.

Wolfe's Vitamin Solution:

Composition per liter:

Pyridoxine-HCl	10.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Nicotinic acid	5.0mg
Riboflavin	5.0mg
Thiamine-HCl	5.0mg
Calcium DL-pantothenate	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂. Add components, except NaHCO₃ and Na₂S·9H₂O, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling for 3 min. Cool to room temperature while sparging with 80% N₂ + 20% CO₂. Add NaHCO₃. Mix thoroughly. Continue sparging for 5 min. Add Na₂S·9H₂O. Mix thoroughly. Adjust pH to 7.8 with Na₂CO₃. Anaerobically distribute into tubes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Acetohalobium arabaticum*.

Acetohalobium Medium

Composition per liter:

NaCl	150.0g
MgCl ₂ ·6H ₂ O	4.0g
NaHCO ₃	4.0g
Glycinebetaine	4.0g
Na ₂ S·9H ₂ O	0.5g
CaCl ₂ ·2H ₂ O	0.33g
KCl	0.33g
KH ₂ PO ₄	0.33g
NH ₄ Cl	0.33g
Yeast extract	0.05g
Resazurin	1.0mg
Wolfe's mineral solution	10.0mL
Wolfe's vitamin solution	10.0mL

pH 7.8 ± 0.2 at 25°C

Wolfe's Mineral Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O	3.0g
Nitrilotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·2H ₂ O	0.5g
CoCl ₂ ·6H ₂ O	0.1g
ZnSO ₄ ·7H ₂ O	0.1g
CaCl ₂ ·2H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g
NiCl ₂ ·6H ₂ O	0.025g
KAl(SO ₄) ₂ ·12H ₂ O	0.02g
CuSO ₄ ·5H ₂ O	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O	0.3mg

Preparation of Wolfe's Mineral Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components one at a time. Add distilled/deionized water to 1.0L. Adjust pH to 6.8.

Wolfe's Vitamin Solution:

Composition per liter:

Pyridoxine-HCl	10.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Nicotinic acid	5.0mg
Riboflavin	5.0mg
Thiamine-HCl	5.0mg
Calcium DL-pantothenate	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂. Add components, except NaHCO₃ and Na₂S·9H₂O, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 3 min. Cool to room temperature while sparging with 80% N₂ + 20% CO₂. Add NaHCO₃. Mix thoroughly. Continue sparging for 5 min. Add Na₂S·9H₂O. Mix thoroughly. Adjust pH to 7.8 with Na₂CO₃. Anaerobically distribute into tubes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Acetohalobium arabaticum*.

Acetomicrobium faecalis Medium

Composition per 1010.0mL:

NaHCO ₃	6.0g
Sodium acetate	5.0g
Glucose	4.0g
Pancreatic digest of casein	2.0g
Yeast extract	2.0g
L-Cysteine-HCl	0.5g
NaCl	0.5g
K ₂ HPO ₄	0.225g
KH ₂ PO ₄	0.225g
(NH ₄) ₂ SO ₄	0.225g
MgSO ₄ ·7H ₂ O	0.1g
CaCl ₂ ·2H ₂ O	0.07g
Resazurin	1.0mg
Trace elements solution	10.0mL
Vitamin solution	10.0mL

Trace Elements Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O	3.0g
Nitrilotriacetic acid	1.5g
CaCl ₂ ·2H ₂ O	1.0g
NaCl	1.0g
MnSO ₄ ·2H ₂ O	0.5g
CoSO ₄ ·7H ₂ O	0.18g
ZnSO ₄ ·7H ₂ O	0.18g
FeSO ₄ ·7H ₂ O	0.1g
NiCl ₂ ·6H ₂ O	0.025g
KAl(SO ₄) ₂ ·12H ₂ O	0.02g
CuSO ₄ ·5H ₂ O	0.01g

H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O.....	0.01g
Na ₂ SeO ₃ ·5H ₂ O.....	0.3mg

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add distilled/deionized water to 1.0L. Add remaining components. Mix thoroughly. Adjust pH to 7.0 with KOH.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl.....	10.0mg
Calcium DL-pantothenate.....	5.0mg
Lipoic acid.....	5.0mg
Nicotinic acid.....	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Riboflavin.....	5.0mg
Thiamine-HCl.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except vitamin solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Boil for a few minutes. Allow to cool to room temperature under 80% N₂ + 20% CO₂. Distribute into tubes or flasks under 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Before inoculation, aseptically and anaerobically add vitamin solution.

Use: For the cultivation and maintenance of *Acetomicrobium faecalis*.

Acetomicrobium flavidum Agar (LMG Medium 71)

Composition per liter:

Agar.....	15.0g
Pancreatic digest of casein.....	10.0g
Lab-Lemco beef extract.....	3.0g
Yeast extract.....	3.0g
Glucose.....	2.0g
L-Cysteine hydrochloride.....	0.5g
Salt solution.....	40.0mL
Tween™ 80.....	1.0mL

pH 7.2 ± 0.2 at 25°C

Salt solution:

Composition per liter:

NaHCO ₃	10.0g
K ₂ HPO ₄	1.0g
KH ₂ PO ₄	1.0g
CaCl ₂ ·2H ₂ O.....	0.26g
MgSO ₄ ·7H ₂ O.....	0.2g

Preparation of Salt Solution: Add components to 1.0L of distilled/deionized water. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Acetomicrobium flavidum*.

Acetomicrobium flavidum Agar

Composition per liter:

Agar.....	15.0g
Casitone.....	10.0g
Beef extract.....	3.0g
Yeast extract.....	3.0g
Glucose.....	2.0g
L-Cysteine-HCl.....	0.5g
Salt solution.....	40.0mL
Tween™ 80.....	1.0mL

pH 7.2 ± 0.2 at 25°C

Salt Solution:

Composition per liter:

NaHCO ₃	10.0g
K ₂ HPO ₄	1.0g
KH ₂ PO ₄	1.0g
CaCl ₂ ·2H ₂ O.....	0.26g
MgSO ₄ ·7H ₂ O.....	0.2g

Preparation of Salt Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Acetomicrobium flavidum*.

Acetomicrobium flavidum Broth (LMG Medium 71)

Composition per liter:

Pancreatic digest of casein.....	10.0g
Lab-Lemco beef extract.....	3.0g
Yeast extract.....	3.0g
Glucose.....	2.0g
L-Cysteine hydrochloride.....	0.5g
Salt solution.....	40.0mL
Tween™ 80.....	1.0mL

pH 7.2 ± 0.2 at 25°C

Salt solution:

Composition per liter:

NaHCO ₃	10.0g
K ₂ HPO ₄	1.0g
KH ₂ PO ₄	1.0g
CaCl ₂ ·2H ₂ O.....	0.26g
MgSO ₄ ·7H ₂ O.....	0.2g

Preparation of Salt Solution: Add components to 1.0L of distilled/deionized water. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Acetomicrobium flavidum*.

Acetomicrobium flavidum Broth

Composition per liter:

Casitone.....	10.0g
Beef extract.....	3.0g
Yeast extract.....	3.0g
Glucose.....	2.0g

L-Cysteine-HCl.....	0.5g
Salt solution	40.0mL
Tween™ 80	1.0mL
pH 7.2 ± 0.2 at 25°C	

Salt Solution:**Composition per liter:**

NaHCO ₃	10.0g
K ₂ HPO ₄	1.0g
KH ₂ PO ₄	1.0g
CaCl ₂ ·2H ₂ O.....	0.26g
MgSO ₄ ·7H ₂ O.....	0.2g

Preparation of Salt Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Acetomicrobium flavidum*.

Acetonema Medium**Composition per liter:**

Betaine·H ₂ O.....	6.7g
NaHCO ₃	4.0g
NaCl.....	2.25g
Yeast extract.....	2.0g
Pancreatic digest of casein.....	2.0g
NH ₄ Cl.....	0.5g
MgSO ₄ ·7H ₂ O.....	0.5g
K ₂ HPO ₄	0.348g
CaCl ₂ ·2H ₂ O.....	0.25g
KH ₂ PO ₄	0.227g
FeSO ₄ ·7H ₂ O.....	2.0mg
Resazurin.....	1.0mg
NaHSeO ₃	26.3µg
Glucose solution.....	50.0mL
Vitamin solution.....	10.0mL
Reducing agent solution.....	10.0mL
Trace elements solution SL-10.....	1.0mL
pH 7.0 ± 0.2 at 25°C	

Vitamin Solution:**Composition per liter:**

Pyridoxine-HCl.....	10.0mg
Calcium DL-pantothenate.....	5.0mg
Lipoic acid.....	5.0mg
Nicotinic acid.....	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Riboflavin.....	5.0mg
Thiamine-HCl.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Glucose Solution:**Composition per 50.0mL:**

D-Glucose.....	5.0g
----------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Dispense so-

lution anaerobically under 100% N₂ gas. Autoclave for 15 min at 15 psi pressure–121°C.

Reducing Agent Solution:**Composition per 10.0mL:**

Dithiothreitol.....	0.154g
---------------------	--------

Preparation of Reducing Agent Solution: Add 10.0mL of distilled/deionized water to a flask. Boil under N₂ gas for 1 minute. Cool to room temperature. Add dithiothreitol and dissolve. Autoclave for 10 min at 15 psi pressure–121°C.

Trace Elements Solution SL-10:**Composition per liter:**

FeCl ₂ ·4H ₂ O.....	1.5g
CoCl ₂ ·6H ₂ O.....	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	36.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O.....	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly.

Preparation of Medium: Add components, except NaHCO₃, glucose solution, and reducing agent solution, to distilled/deionized water and bring volume to 940.0mL. Gently heat and bring to boiling. Continue boiling for 3 min. Cool to room temperature under 80% N₂ + 20% CO₂. Add NaHCO₃ and bring pH to 7.0 by gassing. Distribute anaerobically under 80% N₂ + 20% CO₂ into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Prior to inoculation of cultures, aseptically and anaerobically add 0.1mL of sterile reducing agent solution and 0.5mL of sterile glucose solution to each tube containing 9.4mL of sterile basal medium.

Use: For the cultivation and maintenance of *Acetonema longum* and *Clostridium mayombeii*.

**Acetylglucosamine Medium
(*N*-Acetylglucosamine Medium)****Composition per liter:**

<i>N</i> -Acetylglucosamine.....	20.0g
Beef extract.....	10.0g
Peptone.....	10.0g
Yeast extract.....	5.0g
K ₂ HPO ₄	2.0g
Triammonium citrate.....	2.0g
MgSO ₄ ·7H ₂ O.....	0.2g
MnSO ₄ ·4H ₂ O.....	0.05g
Tween™ 80.....	1.0mL
pH 6.2 ± 0.4 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.2. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of bacteria that can utilize *N*-acetylglucosamine.

***Acholeplasma Medium*
(ATCC Medium 1039)****Composition per liter:**

Papaic digest of soybean meal.....	10.0g
Agar.....	3.0g

PPLO broth without Crystal Violet.....	900.0mL
Fresh yeast extract solution.....	100.0mL
pH 7.8 ± 0.2 at 25°C	

PPLO Broth without Crystal Violet:**Composition per 900.0mL:**

Beef heart, infusion from	225.0g
Peptone.....	9.0g
NaCl	4.5g

Source: PPLO broth without Crystal Violet is available as a premixed powder from BD Diagnostic Systems.

Preparation of PPLO Broth without Crystal Violet: Add components to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Fresh Yeast Extract Solution:**Composition per 100.0mL:**

Baker's yeast, live, pressed, starch-free.....	25.0g
--	-------

Preparation of Fresh Yeast Extract Solution: Add the live Baker's yeast to 100.0mL of distilled/deionized water. Mix thoroughly. Autoclave for 90 min at 15 psi pressure–121°C. Allow to stand. Remove supernatant solution. Adjust pH to 6.6–6.8.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into test tubes or flasks. Autoclave for 10 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Acholeplasma* species.

Acholeplasma Medium (ATCC Medium 1215)

Composition per 1020.0mL:

PPLO broth without Crystal Violet.....	700.0mL
Fetal bovine serum, heat inactivated.....	100.0mL
Fresh yeast extract solution.....	100.0mL
Tween™-glucose-BSA solution	100.0mL
Phenol Red (0.1% solution).....	20.0mL

PPLO Broth without Crystal Violet:**Composition per 700.0mL:**

Beef heart, infusion from	175.0g
Peptone.....	7.0g
NaCl	3.5g

Source: PPLO broth without Crystal Violet is available as a premixed powder from BD Diagnostic Systems.

Preparation of PPLO Broth without Crystal Violet: Add components to distilled/deionized water and bring volume to 700.0mL. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Fresh Yeast Extract Solution:**Composition per 100.0mL:**

Baker's yeast, live, pressed, starch-free.....	25.0g
--	-------

Preparation of Fresh Yeast Extract Solution: Add the live Baker's yeast to 100.0mL of distilled/deionized water. Autoclave for 90 min at 15 psi pressure–121°C. Allow to stand. Remove supernatant solution. Adjust pH to 6.6–6.8.

Tween™-Glucose-BSA Solution:

Glucose	2.0g
Tween™ 80	0.1g
Bovine serum albumin, fraction V (1% solution).....	100.0mL

Preparation of Tween™-Glucose-BSA Solution: Add glucose and Tween™ 80 to 100.0mL of bovine serum albumin solution and mix thoroughly. Filter sterilize solution through a 0.2µm membrane filter.

Preparation of Medium: Aseptically mix components. Distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Acholeplasma* species.

Achromobacter Choline Medium

Composition per liter:

NaCl.....	30.0g
Agar	18.0g
Choline chloride.....	5.0g
K ₂ HPO ₄	1.0g
MgSO ₄ ·7H ₂ O.....	0.5g
FeSO ₄ ·7H ₂ O.....	0.01g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix well and warm gently until dissolved. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the cultivation and maintenance of *Achromobacter cholinophagum* and other bacteria that can utilize choline as a carbon source.

Achromobacter Choline Medium, Modified

Composition per liter:

NaCl.....	30.0g
Agar	15.0g
Choline chloride.....	5.0g
K ₂ HPO ₄	1.0g
MgSO ₄ ·7H ₂ O.....	1.0g
FeSO ₄ ·7H ₂ O.....	0.018g

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add agar, MgSO₄·7H₂O, and FeSO₄·7H₂O to 500.0mL distilled/deionized water. Mix thoroughly. Bring volume to 1.0L with distilled/deionized water. Gently heat and bring to boiling. Add choline chloride. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Achromobacter cholinophagum*.

Achromobacter Medium (ATCC Medium 457)

Composition per liter:

K ₂ HPO ₄	7.32g
Ammonium tartrate.....	4.6g
KH ₂ PO ₄	1.09g
MgSO ₄ ·7H ₂ O.....	0.04g
FeSO ₄ ·7H ₂ O.....	0.04g
CaCl ₂ ·2H ₂ O	0.014g
MgSO ₄ ·7H ₂ O.....	0.002g

pH 7.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix well and warm gently until dissolved. Distribute into test tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Achromobacter* species and *Alcaligenes* species.

***Achromobacter* Medium (ATCC Medium 589)**

Composition per liter:

Agar	20.0g
K ₂ HPO ₄	7.0g
Methionine.....	5.0g
KH ₂ PO ₄	2.0g
(NH ₄) ₂ SO ₄	1.0g
Sodium citrate.....	0.4g
MgSO ₄ ·7H ₂ O.....	0.1g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the cultivation and maintenance of *Achromobacter* species.

***Achromobacter pestifer* Medium**

Composition per liter:

Agar	15.0g
Yeast extract.....	12.5g
Beef extract.....	10.0g
Peptone.....	10.0g
NaCl.....	5.0g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Achromobacter pestifer*.

Acid Bismuth Yeast Agar

See: **ABY Agar**

Acid Broth

Composition per liter:

Glucose	5.0g
Proteose peptone.....	5.0g
Yeast extract.....	5.0g
K ₂ HPO ₄	4.0g

pH 5.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation of bacteria from canned foods.

Acid Broth

Composition per liter:

Invert sugar	10.0g
Peptic digest of animal tissue.....	10.0g
Yeast extract.....	7.5g

pH 4.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation of bacteria from canned foods.

Acid Egg Medium

Composition per 1640.0mL:

Potato starch.....	30.0g
KH ₂ PO ₄	12.3g
Malachite Green.....	0.4g
MgSO ₄ ·7H ₂ O.....	0.3g
Penicillin G.....	100,000IU
Fresh egg mixture.....	1.0L
Glycerol.....	12.0mL

Source: This medium is available as a prepared medium from Oxoid Unipath.

Preparation of Medium: Add components to 1.0L of fresh egg mixture. Mix thoroughly. Gently heat and bring to boiling. Bring volume to 1640.0mL with distilled/deionized water. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C with tubes in an upright position.

Use: For the cultivation and maintenance of *Mycobacterium tuberculosis*.

Acid Glucose Salts Medium

Composition per liter:

Glucose	5.0g
MgSO ₄ ·7H ₂ O.....	0.5g
(NH ₄) ₂ SO ₄	0.15g
KH ₂ PO ₄	0.1g
KCl.....	50.0mg
Ca(NO ₃) ₂	10.0mg

pH 3.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Thiobacillus organoparus*.

Acid HiVeg Broth

Sucrose.....	10.0g
Plant peptone.....	10.0g
Yeast extract.....	7.5g

pH 4.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically adjust pH to 4.0.

Use: For the isolation of acid tolerant bacteria from canned foods.

Acid Products Test Broth

Composition per liter:

Invert sugar	10.0g
Peptone.....	10.0g
Yeast extract.....	7.5g

pH 4.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Cool to 25°C. Adjust pH to 4.0 with 25% tartaric acid solution. Distribute into screw-capped flasks in 300.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of acid tolerant microorganisms from foods. For the sterility testing of canned foods.

Acid Rhodospirillaceae Medium

Composition per 1050.0 mL:

Ammonium acetate	1.5g
KH ₂ PO ₄	0.5g
MgSO ₄ ·7H ₂ O	0.4g
NaCl	0.4g
NH ₄ Cl	0.4g
Disodium succinate	0.25g
Yeast extract	0.2g
CaCl ₂ ·2H ₂ O	0.05g
Ferric citrate solution	5.0mL
Trace elements solution SL-6	1.0mL
Vitamin B ₁₂ solution	0.4mL
Neutralized sulfide solution	variable

pH 5.7 ± 0.2 at 25°C

Ferric Citrate Solution:

Composition per 10.0mL:

Ferric citrate	10.0mg
----------------	--------

Preparation of Ferric Citrate Solution: Add ferric citrate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge under 100% N₂ gas for 3 min. Autoclave for 15 min at 15 psi pressure–121°C. Store under N₂ gas.

Trace Elements Solution SL-6:

Composition per liter:

MnCl ₂ ·4H ₂ O	0.5g
H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
Na ₂ MoO ₄ ·2H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Vitamin B₁₂ Solution:

Composition per 100.0mL:

Vitamin B ₁₂	10.0mg
-------------------------	--------

Preparation of Vitamin B₁₂ Solution: Add vitamin B₁₂ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge under 100% N₂ gas for 3 min. Autoclave for 15 min at 15 psi pressure–121°C. Store under N₂ gas.

Neutralized Sulfide Solution:

Composition per 100.0mL:

Na ₂ S·9H ₂ O	1.5g
-------------------------------------	------

Preparation of Neutralized Sulfide Solution: Add Na₂S·9H₂O to distilled/deionized water in a 250.0mL screw-capped bottle fitted with a butyl rubber septum and bring volume to 100.0mL. Add a magnetic stir bar. Mix thoroughly. Sparge under 100% N₂ gas for 3 min. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Adjust pH to about 7.3 with sterile 2M H₂SO₄. Do not open the bottle to add H₂SO₄; use a sterile syringe. Stir the solution continuously

to avoid precipitation of elemental sulfur. The final solution should be clear and yellow in color.

Preparation of Medium: Add components, except neutralized sulfide solution, to distilled/deionized water and bring volume to 1050.0mL. Mix thoroughly. Gently heat and bring to boiling. Boil for 3–4 min under a stream of 100% N₂. Distribute 45.0mL of the prepared medium into 50.0mL screw-capped tubes that have been flushed with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Before inoculation, aseptically and anaerobically add 0.25–0.50mL of neutralized sulfide solution.

Use: For the cultivation and maintenance of members of the family Rhodospirillaceae, including *Rhodomicrobium vannielii* and *Rhodospseudomonas acidophila*.

Acid Tomato Broth

Composition per liter:

Glucose	10.0g
Peptone	10.0g
Yeast extract	5.0g
MgSO ₄ ·7H ₂ O	0.2g
MnSO ₄ ·4H ₂ O	0.05g
Tomato juice	250.0mL
L-Cysteine solution	0.5mL

L-Cysteine Solution:

Composition per 10.0mL:

L-Cysteine	0.1g
------------	------

Preparation of L-Cysteine Solution: Add 0.1g of L-cysteine to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except L-cysteine solution, to distilled/deionized water and bring volume to 999.5mL. Mix thoroughly. Adjust pH to 4.8. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 0.5mL of sterile L-cysteine solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of a variety of fungi.

Acidaminobacter Medium

Composition per liter:

NaHCO ₃	2.0g
Glycine	1.5g
NaCl	1.2g
KCl	0.4g
MgCl ₂ ·6H ₂ O	0.4g
Na ₂ S·9H ₂ O	0.3g
KH ₂ PO ₄	0.2g
Na ₂ SO ₄	0.2g
Yeast extract	0.2g
CaCl ₂ ·2H ₂ O	0.15g
Resazurin	1.0mg
Na ₂ SeO ₃ ·5H ₂ O	30.0µg
Vitamin solution	10.0mL
NaHCO ₃ solution	5.0mL
Na ₂ S·9H ₂ O solution	5.0mL
Trace elements solution SL-10	1.0mL

pH 7.4 ± 0.2 at 25°C

Trace Elements Solution SL-10:

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg

MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	36.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O.....	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly.

Vitamin Solution:

Composition per liter:

Pyridoxine·HCl.....	10.0mg
Calcium DL-pantothenate.....	5.0mg
Lipoic acid.....	5.0mg
Nicotinic acid.....	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Riboflavin.....	5.0mg
Thiamine·HCl.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

NaHCO₃ Solution:

Composition per 5.0mL:

NaHCO ₃	0.5g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 5.0mL. Mix thoroughly. Sparge under 100% N₂ gas for 3 min. Autoclave for 15 min at 15 psi pressure–121°C. Store under N₂ gas.

Na₂S·9H₂O Solution:

Composition per 5.0mL:

Na ₂ S·9H ₂ O.....	0.5g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 5.0mL. Mix thoroughly. Sparge under 100% N₂ gas for 3 min. Autoclave for 15 min at 15 psi pressure–121°C. Store under N₂ gas.

Preparation of Medium: Add components, except vitamin solution, NaHCO₃ solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Boil for a few minutes. Allow to cool to room temperature under 100% N₂. Distribute into tubes or flasks under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Before inoculation, aseptically and anaerobically add vitamin solution, NaHCO₃ solution, and Na₂S·9H₂O solution. Mix thoroughly. Check that final pH is 7.4.

Use: For the cultivation and maintenance of *Acidaminobacter hydrog-enoformans*.

Acidaminococcus fermentans Medium

Composition per liter:

Casamino acids.....	10.0g
Glucose.....	5.0g
Pancreatic digest of casein.....	5.0g
Yeast extract.....	5.0g

Sodium glutamate.....	4.0g
KH ₂ PO ₄	2.0g
Arginine.....	1.0g
Glycine.....	1.0g
L-Cysteine·HCl.....	0.5g
DL-Tryptophan.....	0.1g
Tween™ 80.....	0.5mL

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Acidaminococcus fermentans*.

Acidaminococcus Medium VR

Composition per liter:

Acid-hydrolyzed casein (vitamin and salt free).....	20.0g
Glucose.....	5.0g
L-Cysteine·HCl·H ₂ O.....	0.35g
DL-Tryptophan.....	0.1g
Guanine.....	0.01g
Uracil.....	0.01g
Hypoxanthine.....	0.01g
Pyridoxal.....	1.0mg
Calcium pantothenate.....	1.0mg
Thiamine.....	50.0μg
Niacin.....	50.0μg
Riboflavin.....	50.0μg
<i>p</i> -Aminobenzoic acid.....	10.0μg
Biotin.....	2.0μg
Folic acid.....	1.0μg
Vitamin B ₁₂	1.0μg
VR salts A.....	30.0mL
VR salts B.....	4.0mL

pH 7.0 ± 0.2 at 25°C

VR Salts A:

Composition per 500.0mL:

Na ₂ HPO ₄	37.5g
KH ₂ PO ₄	12.5g

Preparation of VR Salts A: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly.

VR Salts B:

Composition per liter:

MgSO ₄ ·7H ₂ O.....	24.0g
CaCl ₂ ·2H ₂ O.....	0.5g
FeSO ₄ ·7H ₂ O.....	0.5g
ZnSO ₄ ·7H ₂ O.....	0.25g
MnSO ₄ ·H ₂ O.....	0.25g
CoCl ₂ ·6H ₂ O.....	0.25g
VSO ₄ ·7H ₂ O.....	0.25g
Na ₂ MoO ₄ ·2H ₂ O.....	0.25g
CuSO ₄ ·5H ₂ O.....	0.125g

Preparation of VR Salts B: Add components to distilled/deionized water and bring volume to 700.0mL. Add 2.0mL of concentrated HCl and heat until dissolved. Add 5.0g of nitrilotriacetic acid to 300.0mL distilled/deionized water. Adjust pH with 10N NaOH to 7.0. Stir vigorously and slowly add the nitrilotriacetic acid solution to the larger volume of salt so-

lution until dissolved. Add distilled/deionized water and bring volume to 1.0L. Filter through paper. Store in a cool place.

Preparation of Medium: Filter sterilize vitamins as separate solution. Add aseptically to sterile basal medium. If necessary, adjust pH with solid K_2CO_3 to 7.0. Prepare and distribute medium anaerobically using Hungate techniques with 100% N_2 gas.

Use: For the cultivation and maintenance of *Acidaminococcus fermentans*.

Acidianus brierleyi Medium

Composition per liter:

Sulfur flowers	10.0g
$(NH_4)_2SO_4$	3.0g
$K_2HPO_4 \cdot 3H_2O$	0.5g
$MgSO_4 \cdot 7H_2O$	0.5g
KCl	0.1g
$Ca(NO_3)_2$	0.01g
Yeast extract solution	10.0mL
pH 1.5–2.5 at 25°C	

Yeast Extract Solution:

Composition per 10.0mL:

Yeast extract	0.2g
---------------	------

Preparation of Yeast Extract Solution: Add yeast extract to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except sulfur flowers and yeast extract solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Sulfur flowers are sterilized separately by steaming for 3 hr on 3 consecutive days. Aseptically combine the basal solution, sterile sulfur flowers, and sterile yeast extract solution. Adjust pH to 1.5–2.5 with 6N H_2SO_4 .

Use: For the cultivation and maintenance of *Acidianus brierleyi*.

Acidianus infernus Medium

Composition per liter:

$(NH_4)_2SO_4$	1.3g
Yeast extract	1.0g
Sulfur flowers	1.0g
KH_2PO_4	0.28g
$MgSO_4 \cdot 7H_2O$	0.25g
$CaCl_2 \cdot 2H_2O$	0.07g
$FeCl_3 \cdot 6H_2O$	0.02g
$Na_2B_4O_7 \cdot 10H_2O$	4.5mg
$MnCl_2 \cdot 4H_2O$	1.8mg
$ZnSO_4 \cdot 7H_2O$	0.22mg
$CuCl_2 \cdot 2H_2O$	0.05mg
$Na_2MoO_4 \cdot 2H_2O$	0.03mg
$VOSO_4 \cdot 2H_2O$	0.03mg
$CoSO_4$	0.01mg
pH 2.5 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 2.5 with 10N H_2SO_4 . Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the aerobic cultivation and maintenance of *Acidianus infernus*, *Acidianus brierleyi*, and *Desulfurolobus ambivalens*.

Acidianus infernus Medium

Composition per liter:

$(NH_4)_2SO_4$	1.3g
Sulfur flowers	1.0g
KH_2PO_4	0.28g
$MgSO_4 \cdot 7H_2O$	0.25g
$CaCl_2 \cdot 2H_2O$	0.07g
$FeCl_3 \cdot 6H_2O$	0.02g
$Na_2B_4O_7 \cdot 10H_2O$	4.5mg
$MnCl_2 \cdot 4H_2O$	1.8mg
Resazurin	1.0mg
$ZnSO_4 \cdot 7H_2O$	0.22mg
$CuCl_2 \cdot 2H_2O$	0.05mg
$Na_2MoO_4 \cdot 2H_2O$	0.03mg
$VOSO_4 \cdot 2H_2O$	0.03mg
$CoSO_4$	0.01mg
Yeast extract solution	10.0mL
pH 2.5 ± 0.2 at 25°C	

Yeast Extract Solution:

Composition per 10.0mL:

Yeast extract	0.5g
---------------	------

Preparation of Yeast Extract Solution: Add yeast extract to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except sulfur flowers and yeast extract solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Allow to cool under 80% N_2 + 20% CO_2 . Autoclave for 15 min at 15 psi pressure–121°C. Sulfur flowers are sterilized separately by steaming for 3 hr on 3 consecutive days. Aseptically and anaerobically combine the basal solution, sterile sulfur flowers, and sterile yeast extract solution. Adjust pH to 2.5 with 6N H_2SO_4 . Pressurize the culture bottles to 100kPa with 80% N_2 + 20% CO_2 .

Use: For the anaerobic cultivation and maintenance of *Acidianus infernus*, *Acidianus brierleyi*, and *Desulfurolobus ambivalens*.

Acidianus infernus Medium

Composition per liter:

Sulfur flowers	5.0g
$(NH_4)_2SO_4$	1.3g
Yeast extract	1.0g

Yeast extract solution	10.0mL

pH 2.5 ± 0.2 at 25°C

Glucose Solution:**Composition per 10.0mL:**

Glucose	1.0g
---------	------

Preparation of Glucose Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Yeast Extract Solution:**Composition per 10.0mL:**

Yeast extract	0.2g
---------------	------

Preparation of Yeast Extract Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly.

Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Adjust pH to 2.5. Aseptically add 10.0mL sterile glucose solution and 10.0mL sterile yeast extract solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Acidicaldus organivorans*.

Acidic Rhodospirillaceae Medium

Composition per 1006.0mL:

Disodium succinate.....	1.0g
KH ₂ PO ₄	0.5g
MgSO ₄ ·7H ₂ O.....	0.4g
NaCl.....	0.4g
NH ₄ Cl.....	0.4g
Yeast extract.....	0.2g
CaCl ₂ ·H ₂ O.....	50.0mg
Ferric citrate solution.....	5.0mL
Trace elements solution.....	1.0mL

Ferric Citrate Solution:

Composition per 100.0mL:

Ferric citrate.....	0.1g
---------------------	------

Preparation of Ferric Citrate Solution: Add ferric citrate to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Trace Elements Solution:

Composition per liter:

H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O.....	0.2g
ZnSO ₄ ·7H ₂ O.....	0.1g
MnCl ₂ ·4H ₂ O.....	0.03g
Na ₂ MoO ₄ ·2H ₂ O.....	0.03g
NiCl ₂ ·6H ₂ O.....	0.02g
CuCl ₂ ·2H ₂ O.....	0.01g

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except ferric citrate solution and trace elements solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 5.0mL of sterile ferric citrate solution and 1.0mL of sterile trace elements solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Rhodopseudomonas acidophila*.

Acidic Tomato Medium for *Leuconostoc*

Composition per liter:

Agar.....	15.0g
Glucose.....	10.0g
Peptone.....	10.0g
Yeast extract.....	5.0g
MgSO ₄ ·7H ₂ O.....	0.2g
MnSO ₄ ·4H ₂ O.....	0.05g
Tomato juice.....	250.0mL

pH 4.8 ± 0.2 at 25°C

Preparation of Medium: Add solid components to 750.0mL of distilled/deionized water. Add tomato juice. Mix well and warm gently until dissolved. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the cultivation and maintenance of *Leuconostoc oenos* and other *Leuconostoc* species.

Acidified Potato Dextrose Agar (APDA)

Composition per liter:

Glucose.....	20.0g
Agar.....	15.0g
Potatoes, infusion from.....	500.0mL
Lactic acid solution.....	5.0mL

pH 5.6 ± 0.2 at 25°C

Potato Infusion:

Composition per 500.0mL:

Potatoes.....	300.0g
---------------	--------

Preparation of Potato Infusion: Peel and dice potatoes. Add 500.0mL of distilled/deionized water. Gently heat and bring to boiling. Continue boiling for 30 min. Filter through cheesecloth. Reserve filtrate.

Lactic Acid Solution:

Composition per 10.0mL:

Lactic acid.....	2.5g
------------------	------

Preparation of Lactic Acid Solution: Add lactic acid to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except lactic acid solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 20 min at 15 psi pressure–121°C. Cool to 50°C. Add 5.0mL of lactic acid solution. Mix thoroughly. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation, cultivation, and identification of oak wilt fungi.

Acidimicrobium Medium

Composition per liter:

MgSO ₄ ·7H ₂ O.....	0.5g
(NH ₄) ₂ SO ₄	0.4g
K ₂ HPO ₄	0.2g
KCl.....	0.1g
FeSO ₄ ·7H ₂ O.....	10.0mg
Yeast extract solution.....	20.0mL

pH 2.0 ± 0.2 at 25°C

Yeast Extract Solution:

Composition per 20.0mL:

Yeast extract.....	10.0g
--------------------	-------

Preparation of Yeast Extract Solution: Add yeast extract to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except yeast extract solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Adjust pH to 2.0 with H₂SO₄. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 20.0mL of sterile yeast extract solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the heterotrophic cultivation of *Sulfobacillus acidophilus*.

Acidimicrobium Medium**Composition per liter:**

FeSO ₄ ·7H ₂ O.....	13.9g
MgSO ₄ ·7H ₂ O.....	0.5g
(NH ₄) ₂ SO ₄	0.4g
K ₂ HPO ₄	0.2g
KCl.....	0.1g

pH 1.7 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 1.7 with H₂SO₄. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the autotrophic cultivation of *Sulfobacillus acidophilus*.

Acidiphilium Medium**Composition per liter:**

(NH ₄) ₂ SO ₄	2.0g
K ₂ HPO ₄	0.5g
MgSO ₄ ·7H ₂ O.....	0.5g
KCl.....	0.1g
Glucose solution.....	10.0mL
Yeast extract solution.....	10.0mL

pH 3.0 ± 0.2 at 25°C

Glucose Solution:**Composition per 10.0mL:**

D-Glucose.....	1.0g
----------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Yeast Extract Solution:**Composition per 10.0mL:**

Yeast extract.....	0.3g
--------------------	------

Preparation of Yeast Extract Solution: Add yeast extract to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except glucose solution and yeast extract solution, to distilled/deionized water and bring volume to 1080.0mL. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 3.0 using 1N H₂SO₄. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Before inoculation, aseptically add glucose solution and yeast extract solution. Mix thoroughly.

Use: For the cultivation and maintenance of *Acidiphilium cryptum*.

Acidobacterium Medium**Composition per liter:**

(NH ₄) ₂ SO ₄	2.0g
Glucose.....	1.0g
K ₂ HPO ₄	0.5g
MgSO ₄ ·7H ₂ O.....	0.5g
KCl.....	0.1g
Yeast extract.....	0.1g

pH 3.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 3.5 with H₂SO₄. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Acidobacterium capsulatum*.

Acidolobus aceticus Medium**(DSMZ Medium 901)****Composition per 1055mL:**

Sulfur, powdered.....	10.0g
NH ₄ Cl.....	0.33g
KCl.....	0.33g
KH ₂ PO ₄	0.33g
MgCl ₂ ·6H ₂ O.....	0.33g
CaCl ₂ ·2H ₂ O.....	0.33g
Resazurin.....	0.5mg
Yeast extract solution.....	30.0mL
Na ₂ S·9H ₂ O solution.....	15.0mL
Vitamin solution.....	10.0mL
Trace elements solution SL-10.....	1.0mL

pH 3.5–3.8 at 25°C

Trace Elements Solution SL-10:**Composition per liter:**

FeCl ₂ ·4H ₂ O.....	1.5g
CoCl ₂ ·6H ₂ O.....	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	36.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O.....	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

Vitamin Solution:**Composition per liter:**

Pyridoxine-HCl.....	10.0mg
Thiamine-HCl·2H ₂ O.....	5.0mg
Riboflavin.....	5.0mg
Nicotinic acid.....	5.0mg
D-Ca-pantothenate.....	5.0mg
p-Aminobenzoic acid.....	5.0mg
Lipoic acid.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Na₂S·9H₂O Solution:**Composition per 20.0mL:**

Na ₂ S·9H ₂ O.....	0.6g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature. Neutralize to pH 7.0 with HCl.

Yeast Extract Solution:**Composition per 30.0mL:**

Yeast extract.....	3.0g
--------------------	------

Preparation of Yeast Extract Solution: Add yeast extract to distilled/deionized water and bring volume to 30.0mL. Mix thoroughly.

Sparge with 100% N₂. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Preparation of Medium: Prepare and dispense medium under 100% CO₂. Add components, except vitamin solution, Na₂S·9H₂O solution, and yeast extract solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 3.5 with H₂SO₄. Distribute to anaerobe tubes or bottles. Heat to 90°C for 1 hr on each of 3 successive days. Aseptically and anaerobically add, per liter of medium, 10.0mL sterile vitamin solution, 15.0mL of sterile Na₂S·9H₂O solution, and 30.0mL sterile yeast extract solution. Mix thoroughly. The final pH should be 3.5–3.8.

Use: For the cultivation of *Acidilobus aceticus*.

Acidomonas Agar

Composition per liter:

Solution A	500.0mL
Solution B	500.0mL

Solution A:

Composition per 500.0mL:

Glucose	10.0g
Peptone.....	5.0g
Malt extract	3.0g
Yeast extract.....	3.0g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 4.0. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C.

Solution B:

Composition per 500.0mL:

Agar	20.0g
------------	-------

Preparation of Solution B: Add 20.0g of agar to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C.

Preparation of Medium: Aseptically mix 500.0mL of solution A with 500.0mL of solution B. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Acidomonas methanolica*.

Acidomonas methanolica Agar

Composition per liter:

Solution A	500.0mL
Solution B	500.0mL

pH 4.0 ± 0.2 at 25°C

Solution A:

Composition per 500.0mL:

Glucose	20.0g
Yeast extract.....	5.0g
(NH ₄) ₂ SO ₄	3.0g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O.....	0.7g
NaCl.....	0.5g
Ca(NO ₃) ₂ ·4H ₂ O.....	0.4g
K ₂ HPO ₄ ·3H ₂ O.....	0.16g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C.

Solution B:

Composition per 500.0mL:

Agar	20.0g
------------	-------

Preparation of Solution B: Add agar to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C.

Preparation of Medium: Aseptically mix 500.0mL of solution A and 500.0mL of solution B. Mix thoroughly. Aseptically adjust pH to 4.0. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Acidomonas methanolica*.

Acidophilic Bacillus stearothermophilus Agar

Composition per liter:

Part B	600.0mL
Part A	400.0mL

pH 5.0 ± 0.2 at 25°C

Part A:

Composition per 400.0mL:

Soluble starch.....	10.0g
Pancreatic digest of casein.....	5.0g
Yeast extract.....	5.0g
KH ₂ PO ₄	1.0g
CaCl ₂ ·2H ₂ O	0.5g
MnCl ₂ ·4H ₂ O	0.5g

Preparation of Part A: Add components to distilled/deionized water and bring volume to 400.0mL. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 4.7. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C.

Part B:

Composition per 600.0mL:

Agar	20.0g
------------	-------

Preparation of Part B: Add agar to distilled/deionized water and bring volume to 600.0mL. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C.

Preparation of Medium: Aseptically combine solution A and solution B. Mix thoroughly. Adjust pH to 5.0. Pour into sterile Petri dishes.

Use: For the cultivation and maintenance of *Bacillus stearothermophilus* and other acidophilic *Bacillus* species.

Acidophilic Bacillus stearothermophilus Broth

Composition per liter:

Soluble starch.....	10.0g
Pancreatic digest of casein.....	5.0g
Yeast extract.....	5.0g
KH ₂ PO ₄	1.0g
CaCl ₂ ·2H ₂ O	0.5g
MnCl ₂ ·4H ₂ O	0.5g

pH 5.0 ± 0.2 at 25°C

Preparation of Medium: Dissolve all components in 1.0L of distilled/deionized water. Mix thoroughly. Gently heat and bring to boiling. Adjust to pH 5.0. Autoclave for 15 min at 15 psi pressure–121°C. Precipitate will dissolve after cooling and mixing.

Use: For the cultivation and maintenance of *Bacillus stearothermophilus* and other acidophilic *Bacillus* species.

Acidophilium Agar**Composition per liter:**

Solution A	500.0mL
Solution B	500.0mL
pH 3.5 ± 0.2 at 25°C	

Solution A:**Composition per 500.0mL:**

Agar	12.0g
------------	-------

Preparation of Solution A: Add agar to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C.

Solution B:**Composition per 500.0mL:**

Mannitol	1.0g
MgSO ₄ ·7H ₂ O	0.5g
(NH ₄) ₂ SO ₄	0.1g
Tryptone soya broth	0.1g
KCl	50.0mg
KH ₂ PO ₄	50.0mg
Ca(NO ₃) ₂	10.0mg

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Bring pH to 3.5. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C.

Preparation of Medium: Aseptically combine 500.0mL of solution A with 500.0mL of solution B. Mix thoroughly. Pour into sterile Petri dishes or aseptically distribute into sterile tubes.

Use: For the cultivation and maintenance of *Acidiphilium cryptum* and other *Acidiphilium* species.

***Aciduliprofundum Medium*
(DSMZ Medium 1083)****Composition per liter:**

NaCl	30.0g
MgSO ₄ ·7H ₂ O	3.5g
MgCl ₂ ·6H ₂ O	2.75g
CaCl ₂ ·2H ₂ O	0.38g
KCl	0.33g
NaBr	0.05g
(NH ₄) ₂ SO ₄	0.10g
KH ₂ PO ₄	0.28g
Wolfe's mineral elixir	1.0mL
Resazurin	0.5mg
Sodium citrate	2.94g
Yeast extract	1.0g
Tryptone	1.0g
Sulfur, powdered	10.0g
Na ₂ S·9H ₂ O solution	10.0mL
pH 4.5 ± 0.2 at 25°C	

Wolfe's Mineral Elixir:**Composition per liter:**

MgSO ₄ ·7H ₂ O	30.0g
NaCl	10.0g
MnSO ₄ ·2H ₂ O	5.0g
(NH ₄) ₂ NiSO ₄ ·6H ₂ O	2.8g
CoCl ₂ ·6H ₂ O	1.8g
ZnSO ₄ ·7H ₂ O	1.8g
FeSO ₄ ·7H ₂ O	1.0g
CaCl ₂ ·2H ₂ O	1.0g

KAl(SO ₄) ₂ ·12H ₂ O	0.18g
CuSO ₄ ·5H ₂ O	0.1g
H ₃ BO ₃	0.1g
Na ₂ MoO ₄ ·2H ₂ O	0.1g
Na ₂ SeO ₄	0.1g
Na ₂ WO ₄ ·2H ₂ O	0.1g

Preparation of Wolfe's Mineral Elixir: Adjust pH of 1.0L of distilled/deionized water to 1.0 with dilute H₂SO₄. Add remaining components one at a time. Mix thoroughly to dissolve.

Na₂S·9H₂O Solution:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O	0.5g
---	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature. Adjust pH to 4.5.

Preparation of Medium: Add components, except Na₂S·9H₂O solution and sulfur, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Boil for 1 min. Cool to room temperature while sparging with 80% N₂ + 20% CO₂. Distribute into serum bottles containing the sulfur. Distribute under 80% N₂ + 20% CO₂, e.g., 20mL into 120mL serum bottles. Autoclave for 60 min at 3 psi pressure–105°C. Cool to 25°C. Aseptically inject Na₂S·9H₂O solution, 0.2mL per 20mL medium. Mix thoroughly. Adjust pH to 4.5.

Use: For the cultivation of *Aciduliprofundum* sp.

**Actidione® Agar
(Cycloheximide Agar)****Composition per liter:**

Glucose	50.0g
Agar	15.0g
Pancreatic digest of casein	5.0g
Yeast extract	4.0g
KH ₂ PO ₄	0.55g
KCl	0.425g
CaCl ₂ ·2H ₂ O	0.125g
MgSO ₄ ·7H ₂ O	0.125g
Bromocresol Green	22.0mg
Actidione® (cycloheximide)	10.0mg
FeCl ₃	2.5mg

pH 5.5 ± 0.2 at 25°C

Source: Actidione® Agar is available as a prepared medium from Oxoid Unipath.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the enumeration and detection of bacteria in specimens containing large numbers of yeasts and molds.

Actidione HiVeg Agar with Actidione®**Composition per liter:**

Glucose	50.0g
Agar	15.0g

Plant hydrolysate.....	5.0g
Yeast extract.....	4.0g
KH ₂ PO ₄	0.55g
KCl.....	0.425g
CaCl ₂ ·2H ₂ O.....	0.125g
MgSO ₄ ·7H ₂ O.....	0.125g
Bromocresol Green.....	22.0mg
Actidione® (cycloheximide).....	10.0mg
MnSO ₄ ·4H ₂ O.....	2.5mg
FeCl ₃	2.5mg

pH 5.5 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the enumeration and detection of bacteria in specimens containing large numbers of yeasts and molds.

Actidione HiVeg Agar Base with Actidione®

Composition per liter:

Glucose.....	50.0g
Agar.....	15.0g
Plant hydrolysate.....	5.0g
Yeast extract.....	4.0g
KH ₂ PO ₄	0.55g
KCl.....	0.425g
CaCl ₂ ·2H ₂ O.....	0.125g
MgSO ₄ ·7H ₂ O.....	0.125g
Bromocresol Green.....	22.0mg
MnSO ₄ ·4H ₂ O.....	2.5mg
FeCl ₃	2.5mg
Cycloheximide solution.....	10.0mL

pH 5.5 ± 0.2 at 25°C

Source: This medium, without actidione (cycloheximide), is available as a premixed powder from HiMedia.

Cycloheximide Solution:

Composition per 10.0mL:

Cycloheximide.....	0.025g
--------------------	--------

Preparation of Cycloheximide Solution: Add cycloheximide to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: Add components, except cycloheximide solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 10.0mL cycloheximide solution. Pour into sterile Petri dishes or leave in tubes.

Use: For the enumeration and detection of bacteria in specimens containing large numbers of yeasts and molds.

Actidione HiVeg Agar Base without Actidione® with Antibiotics

Composition per liter:

Glucose.....	50.0g
Agar.....	15.0g
Plant hydrolysate.....	5.0g
Yeast extract.....	4.0g
KH ₂ PO ₄	0.55g
KCl.....	0.425g
CaCl ₂ ·2H ₂ O.....	0.125g
MgSO ₄ ·7H ₂ O.....	0.125g
Bromocresol Green.....	22.0mg
MnSO ₄ ·4H ₂ O.....	2.5mg
FeCl ₃	2.5mg
Antibiotic solution.....	10.0mL

pH 5.5 ± 0.2 at 25°C

Antibiotic Solution:

Composition per 10.0mL:

Ampicillin or streptomycin.....	20.0mg
---------------------------------	--------

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Antibiotic Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except antibiotic solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 10.0mL antibiotic solution. Pour into sterile Petri dishes or leave in tubes.

Use: For the selective isolation of dermatophytes.

Actinobacillus lignieresii Medium

Composition per 1010.0mL:

Agar.....	10.0g
Hartley's digest broth.....	900.0mL
Filde's enrichment.....	100.0mL
Antibiotic solution.....	10.0mL

pH 7.5 ± 0.2 at 25°C

Hartley's Digest Broth:

Composition per 10.0L:

Ox heart.....	3000.0g
Pancreatin.....	50.0g
Na ₂ CO ₃ , anhydrous (0.8% solution).....	5.0L
HCl, concentrated.....	80.0mL

Preparation of Hartley's Digest Broth: Finely mince the ox heart. Add the meat to 5.0L of distilled/deionized water. Gently heat and bring to 80°C. Add Na₂CO₃ solution. Cool to 45°C. Add pancreatin and maintain at 45°C for 4 hr while stirring. Add the HCl and steam at 100°C for 30 min. Cool to room temperature. Adjust pH to 8.0 with 1N NaOH. Gently heat and bring to boiling. Continue boiling for 25 min. Filter while hot through Whatman #1 filter paper. Cool to room temperature. Adjust pH to 7.5.

Filde's Enrichment Solution:

Composition per 206.0mL:

Pepsin.....	1.0g
NaCl (0.85% solution).....	150.0mL

Sheep blood, defibrinated	50.0mL
HCl.....	6.0mL

Source: Filde's enrichment solution is available as a premixed powder from BD Diagnostic Systems and Oxoid Unipath.

Preparation of Filde's Enrichment Solution: Combine components. Mix thoroughly. Incubate at 56°C for 4 hr. Bring pH to 7.0 with 20% NaOH. Adjust pH to 7.2 with HCl. Do not autoclave. Add 0.25 mL of chloroform and store at 4°C. Before use, heat to 56°C to remove chloroform.

Antibiotic Solution:

Composition per 10.0mL:

Oleandomycin phosphate.....	0.02g
Neomycin sulfate	1.5mg

Preparation of Antibiotic Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add agar to 900.0mL of Hartley's digest broth. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 100.0mL of Filde's enrichment solution and 10.0mL of antibiotic solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of *Actinobacillus lignieresii*.

Actinobolin Medium

Composition per liter:

Milk, peptonized	15.0g
Glucose	10.0g
Yeast extract.....	5.0g
KH ₂ PO ₄	2.0g
Sorbitan monooleate complex	1.0g
Tomato juice.....	100.0mL
Actinobolin	1.0mg/mL

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 2–3 min. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Enterococcus durans*.

Actinomyces Agar

Composition per liter:

Agar	20.0g
K ₂ HPO ₄	13.0g
Heart muscle, solids from infusion	10.0g
Peptic digest of animal tissue.....	10.0g
Glucose	5.0g
Yeast extract.....	5.0g
NaCl	5.0g
Pancreatic digest of casein.....	4.0g
KH ₂ PO ₄	2.0g
(NH ₄) ₂ SO ₄	1.0g
L-Cysteine·HCl·H ₂ O.....	1.0g
Soluble starch.....	1.0g
MgSO ₄ ·7H ₂ O	0.2g
CaCl ₂ ·2H ₂ O.....	0.01g

pH 6.9 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. If a semisolid medium is desired, add 7.0g of agar instead of 20.0g. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 10 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the maintenance or cultivation of a variety of anaerobic bacteria, including *Actinomyces* species, *Eubacterium* species, *Fusobacterium* species, *Propionibacterium* species, and others.

Actinomyces Broth

Composition per liter:

K ₂ HPO ₄	13.0g
Heart muscle, solids from infusion	10.0g
Peptic digest of animal tissue	10.0g
Glucose	5.0g
Yeast extract.....	5.0g
NaCl.....	5.0g
Pancreatic digest of casein.....	4.0g
KH ₂ PO ₄	2.0g
(NH ₄) ₂ SO ₄	1.0g
L-Cysteine·HCl·H ₂ O.....	1.0g
Soluble starch.....	1.0g
MgSO ₄ ·7H ₂ O	0.2g
CaCl ₂ ·2H ₂ O	0.01g

pH 6.9 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 10 min at 15 psi pressure–121°C.

Use: For the maintenance or cultivation of a variety of anaerobic bacteria including *Actinomyces* species, *Eubacterium* species, *Fusobacterium* species, *Propionibacterium* species, and others.

Actinomyces Broth

Composition per liter:

Beef heart, infusion from.....	500.0g
KH ₂ PO ₄	15.0g
Peptic digest of animal tissue	10.0g
Glucose	5.0g
Yeast extract.....	5.0g
NaCl.....	5.0g
Pancreatic digest of casein.....	4.0g
KH ₂ PO ₄	2.0g
(NH ₄) ₂ SO ₄	1.0g
L-Cysteine·HCl·H ₂ O.....	1.0g
Soluble starch.....	1.0g
MgSO ₄ ·7H ₂ O	0.2g
CaCl ₂ ·2H ₂ O	0.02g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 10 min at 15 psi pressure–121°C.

Use: For the maintenance or cultivation of a variety of anaerobic bacteria, including *Actinomyces* species, *Eubacterium* species, *Fusobacterium* species, *Propionibacterium* species, and others.

***Actinomyces* Broth (DSMZ Medium 1029)**

Composition per liter:

Pancreatic digest of casein	17.0g
KH ₂ PO ₄	15.0g
Yeast extract.....	10.0g
Glucose	5.0g
NaCl.....	5.0g
Heart muscle, solids from infusion.....	2.0g
(NH ₄) ₂ SO ₄	1.0g
L-Cysteine·HCl·H ₂ O.....	1.0g
Soluble starch.....	1.0g
MgSO ₄ ·7H ₂ O.....	0.2g
CaCl ₂ ·2H ₂ O.....	0.01g

pH 6.9 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the maintenance or cultivation of a variety of *Actinomyces* species and other anaerobic bacteria.

***Actinomyces* HiVeg Agar**

Composition per liter:

Agar	20.0g
KH ₂ PO ₄	15.0g
Plant hydrolysate No. 1.....	10.0g
Plant special infusion.....	10.0g
Yeast extract.....	5.0g
Glucose	5.0g
NaCl.....	5.0g
Plant hydrolysate.....	4.0g
KH ₂ PO ₄	2.0g
(NH ₄) ₂ SO ₄	1.0g
L-Cysteine·HCl·H ₂ O.....	1.0g
Soluble starch.....	1.0g
MgSO ₄ ·7H ₂ O.....	0.2g
CaCl ₂ ·2H ₂ O.....	0.02g

pH 6.9 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the maintenance or cultivation of a variety of anaerobic bacteria, including *Actinomyces* species, *Eubacterium* species, *Fusobacterium* species, *Propionibacterium* species, and others.

***Actinomyces* HiVeg Broth**

Composition per liter:

KH ₂ PO ₄	15.0g
Plant hydrolysate No. 1.....	10.0g
Plant special infusion.....	10.0g
Yeast extract.....	5.0g
Glucose	5.0g
NaCl.....	5.0g
Plant hydrolysate.....	4.0g
KH ₂ PO ₄	2.0g
(NH ₄) ₂ SO ₄	1.0g

L-Cysteine·HCl·H ₂ O	1.0g
Soluble starch.....	1.0g
MgSO ₄ ·7H ₂ O.....	0.2g
CaCl ₂ ·2H ₂ O	0.02g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 10 min at 15 psi pressure–121°C.

Use: For the maintenance or cultivation of a variety of anaerobic bacteria, including *Actinomyces* species, *Eubacterium* species, *Fusobacterium* species, *Propionibacterium* species, and others.

***Actinomyces humiferus* Medium**

Composition per liter:

Pancreatic digest of casein.....	17.0g
NaCl.....	5.0g
Pancreatic digest of soybean meal.....	3.0g
K ₂ HPO ₄	2.5g
Glucose	2.5g
Horse blood.....	50.0mL

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Actinomyces humiferus*.

***Actinomyces* Isolation Agar**

Composition per liter:

Agar	15.0g
Glycerol	5.0g
Sodium propionate.....	4.0g
Sodium caseinate	2.0g
K ₂ HPO ₄	0.5g
Asparagine	0.1g
MgSO ₄ ·7H ₂ O.....	0.1g
FeSO ₄ ·7H ₂ O.....	0.001g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of *Actinomyces* species.

Actinomycete Growth Medium

Composition per liter:

Succinic acid.....	1.18g
L-Glutamine	0.29g
CaCl ₂ ·2H ₂ O	0.2g
KH ₂ PO ₄	0.2g
MgSO ₄ ·7H ₂ O.....	0.2g
NaCl.....	0.1g
<i>m</i> -Inositol.....	0.09g
Ferric EDTA	0.037g
MnSO ₄ ·H ₂ O.....	4.5mg
H ₃ BO ₃	1.5mg
ZnSO ₄ ·7H ₂ O.....	1.5mg
Nicotonic acid.....	0.5mg
Pyridoxine-HCl.....	0.5mg

Thiamine-HCl	0.1mg
CuSO ₄ ·5H ₂ O	0.04mg
Na ₂ MoO ₄ ·2H ₂ O	0.025mg
pH 6.4 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of actinomycetes.

Actinomycete Isolation Agar

Composition per liter:

Agar	15.0g
Glycerol	5.0g
Sodium propionate	4.0g
Sodium caseinate	2.0g
K ₂ HPO ₄	0.5g
Asparagine	0.1g
MgSO ₄ ·7H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	1.0mg
pH 8.1 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components, except glycerol, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Add 5.0g of glycerol. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation and cultivation of aerobic *Actinomyces* from soil and water.

Actinomycete Isolation HiVeg Agar

Composition per liter:

Agar	15.0g
Sodium propionate	4.0g
Plant protein	2.0g
L-Asparagine	0.1g
K ₂ HPO ₄	0.5g
MgSO ₄ ·7H ₂ O	0.1g
FeSO ₄	1.0mg
Glycerol	5.0mL
pH 8.1 ± 0.2 at 25°C	

Source: This medium, without glycerol, is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and propagation of actinomycetes from soil and water.

Actinoplanes Medium

Composition per liter:

Oatmeal, baby cereal	60.0g
Yeast	2.5g
K ₂ HPO ₄	1.0g
KCl	0.5g
MgSO ₄ ·7H ₂ O	0.5g
FeSO ₄ ·7H ₂ O	0.01g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Actinoplanes* species.

Actinopolyspora Medium

Composition per liter:

Agar	20.0g
Maltose	10.0g
N-Z-amine A	2.0g
Yeast extract	1.0g
Beef extract	1.0g
pH 7.3 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Actinopolyspora thermovinacea*.

Activated Carbon Medium (DSMZ Medium 811)

Composition per liter:

Agar	15.0g
Na ₂ HPO ₄ ·12H ₂ O	9.0g
Activated carbon	5.0g
KH ₂ PO ₄	1.5g
NH ₄ Cl	1.5g
MgSO ₄ ·7H ₂ O	0.2g
CaCl ₂ ·2H ₂ O	20.0mg
NH ₄ -Fe-III-Citrate	1.2mg
Trace elements solution TS2	1.0mL
pH 7.5 ± 0.1 at 25°C	

Trace Elements Solution TS2:

Composition per liter:

Na ₂ MoO ₄ ·4H ₂ O	900.0mg
H ₃ BO ₃	300.0mg
CoCl ₂ ·6H ₂ O	200.0mg
ZnSO ₄ ·7H ₂ O	100.0mg
MnCl ₂ ·4H ₂ O	30.0mg
NiCl ₂ ·6H ₂ O	20.0mg
Na ₂ SeO ₃	20.0mg
CuCl ₂ ·2H ₂ O	10.0mg

Trace Elements Solution TS2: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components, except activated carbon, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. After all components are dissolved add activated carbon. Bring volume to 1.0L with distilled/deionized water. Adjust pH to 7.5. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into Petri dishes or leave in tubes.

Use: For the cultivation of *Streptomyces thermoautotrophicus*.

Adams Agar

Composition per liter:

Agar	20.0g
Sodium acetate	2.3g
Glucose	0.4g
pH 7.2 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 5–8 psi pressure–108°–112°C. Pour into sterile Petri dishes or distribute into sterile tubes. For tubes allow to solidify in a slanted position.

Use: For the examination of sporulation in yeasts.

**AE Medium (4a/3e)
(Gluconobacter Medium)
(LMG Medium 269)**

Composition per liter:

Agar	15.0g
Glucose	10.0g
Peptone.....	3.0g
Yeast extract.....	2.0g
Acetic acid, glacial.....	40.0mL
Ethanol, 96%.....	30.0mL

Preparation of Medium: Add components, except acetic acid and ethanol, to 930.0mL distilled/deionized water. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 40.0mL filter sterilized acetic acid and 30.0mL filter sterilized 96% ethanol. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Gluconacetobacter entanii* and other *Gluconacetobacter* spp.

A₂E₆ Medium

Composition per liter:

NaCl	23.48g
MgCl ₂ ·6H ₂ O.....	10.63g
Na ₂ SO ₄	3.92g
Glucose	3.0g
Tris buffer	3.0g
Glutamic acid.....	1.5g
CaCl ₂ , anhydrous	1.11g
KCl.....	0.66g
NaHCO ₃	0.19g
Sodium glycerophosphate.....	0.15g
KBr.....	0.1g
(NH ₄) ₂ SO ₄	0.05g
SrCl ₂ ·6H ₂ O.....	0.04g
H ₃ BO ₃	0.03g
FeCl ₃ ·6H ₂ O	0.01g
K ₂ HPO ₄	0.01g
Metal mixture.....	3.0mL
Vitamin solution.....	1.0mL

pH 6.4–6.6 at 25°C

Metal Mixture:

Composition per 100.0mL:

EDTA	1.0g
H ₃ BO ₃	1.0g
MnCl ₂ ·4H ₂ O.....	0.15g
FeCl ₃ ·6H ₂ O	0.05g
ZnCl ₂	0.01g
CoCl ₂ ·6H ₂ O	0.005g

Preparation of Metal Mixture: Add components to distilled/deionized water and bring volume to 100.0L. Mix thoroughly.

Vitamin Solution:

Composition per liter:

Thiamine.....	1.0g
Biotin	0.003g

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except vitamin solution, to distilled/deionized water and bring volume to 999.0mL. Mix thoroughly. Adjust pH to 6.4–6.6. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 1.0mL of sterile vitamin solution. Mix thoroughly. Aseptically distribute into sterile screw-capped tubes or flasks.

Use: For the cultivation of *Cryptocodium cohnii*.

AE Sporulation Medium, Modified

Composition per 1079.2mL:

Polypeptone™	10.0g
Yeast extract.....	10.0g
Na ₂ HPO ₄	4.36g
Ammonium acetate.....	1.5g
KH ₂ PO ₄	0.25g
MgSO ₄ ·7H ₂ O	0.2g
Raffinose solution	39.6mL
Na ₂ CO ₃ solution	13.2mL
CoCl ₂ ·6H ₂ O solution.....	13.2mL
Sodium ascorbate solution.....	13.2mL

pH 7.8 ± 0.1 at 25°C

Raffinose Solution:

Composition per 100.0mL:

Raffinose.....	10.0g
----------------	-------

Preparation of Raffinose Solution: Add raffinose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Na₂CO₃ Solution:

Composition per 100.0mL:

Na ₂ CO ₃	7.0g
---------------------------------------	------

Preparation of Na₂CO₃ Solution: Add Na₂CO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

CoCl₂·6H₂O Solution:

Composition per 100.0mL:

CoCl ₂ ·6H ₂ O.....	0.32g
---	-------

Preparation of CoCl₂·6H₂O Solution: Add CoCl₂·6H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Sodium Ascorbate Solution:

Composition per 100.0mL:

Sodium ascorbate.....	1.5g
-----------------------	------

Preparation of Sodium Ascorbate Solution: Add sodium ascorbate to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Use freshly prepared solution.

Preparation of Medium: Add components—except raffinose solution, Na₂CO₃ solution, CoCl₂·6H₂O solution, and sodium ascorbate so-

lution—to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.5 using 2M sodium carbonate solution. Distribute into tubes in 15.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 0.6mL of sterile raffinose solution, 0.2mL of sterile Na₂CO₃ solution, and 0.2mL of sterile CoCl₂·6H₂O solution to each tube. Mix thoroughly. Prior to inoculation, steam medium for 10 min. Cool to 25°C. Aseptically add 0.2mL of sterile sodium ascorbate solution to each tube.

Use: For the cultivation and sporulation of *Clostridium perfringens*.

Aero Pseudo Selective Agar

Composition per liter:

Agar	12.0g
Starch, soluble.....	20.0g
Sodium glutamate	2.0g
KH ₂ PO ₄	2.0g
MgSO ₄ ·7H ₂ O.....	0.5g
Phenol Red.....	0.36g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Selective Supplement Solution:

Composition per 10.0mL:

Pimaricin.....	0.01g
Penicillin G.....	100,000 units

Preparation of Selective Supplement Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except selective supplement solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add selective supplement solution. Mix thoroughly. Pour into Petri dishes or aseptically distribute into sterile tubes.

Use: For the selective cultivation of *Pseudomonas* spp. and *Aeromonas* spp. For the detection of *Aeromonas* and *Pseudomonas* in foods, water, and food processing equipment.

Aerobic Low Peptone Basal Medium

See: [ALP Basal Medium](#)

Aeromonas Differential Agar (Dextrin Fuchsin Sulfite Agar)

Composition per liter:

Dextrin	15.0g
Agar	13.0g
Pancreatic digest of casein.....	10.0g
Na ₂ HPO ₄	7.75g
NaCl	5.0g
Beef extract.....	3.0g
Na ₂ SO ₃	1.6g
Acid Fuchsin solution.....	50.0mL

pH 7.5 ± 0.2 at 25°C

Acid Fuchsin Solution:

Composition per 50.0mL:

Acid Fuchsin.....	0.25g
Aqueous dioxan, 5%.....	50.0mL

Preparation of Acid Fuchsin Solution: Add Acid Fuchsin to 50.0mL of 5% aqueous dioxan. Mix well to dissolve.

Caution: Acid Fuchsin is a potential carcinogen and care must be taken to avoid inhalation of the powdered dye and contamination of the skin.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and differentiation of *Aeromonas* species from other Gram-negative rods such as *Pseudomonas* and Enterobacteriaceae. Specimens with low numbers of *Aeromonas* may first be enriched by growth in starch broth for 4–9 days. After 24 hrs of growth on this agar, colonies are sprayed with Nadi reagent (1% solution of *N,N,N',N'*-tetramethyl-*p*-phenylene-diammonium dichloride). A positive Nadi reaction (dextrin degradation) is indicated by a purple color at the periphery of the colony. Dextrin fermentation is also indicated by red colonies. *Aeromonas* species appear as large, convex, dark red colonies with a purple periphery.

Aeromonas hydrophila Medium

Composition per liter:

Inositol.....	10.0g
Pancreatic digest of casein.....	10.0g
L-Ornithine-HCl.....	5.0g
Proteose peptone.....	5.0g
Agar.....	3.0g
Yeast extract.....	3.0g
Mannitol.....	1.0g
Ferric ammonium citrate.....	0.5g
Na ₂ S ₂ O ₃ ·5H ₂ O.....	0.4g
Bromcresol Purple.....	0.02g

pH 6.7 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until dissolved. Adjust pH to 6.7. Distribute into tubes in 5.0mL volumes. Autoclave for 12 min at 15 psi pressure–121°C.

Use: For the isolation and cultivation of *Aeromonas hydrophila*.

Aeromonas Isolation Medium

Composition per liter:

Agar.....	12.5g
Na ₂ S ₂ O ₃	10.67g
Special peptone.....	5.0g
NaCl.....	5.0g
Xylose.....	3.75g
L-Lysine-HCl.....	3.5g
Yeast extract.....	3.0g
Sorbitol.....	3.0g
Bile salts.....	3.0g
Inositol.....	2.5g
L-Arginine-HCl.....	2.0g
Lactose.....	1.5g
Ferric ammonium citrate.....	0.8g
Bromthymol Blue.....	0.04g
Thymol Blue.....	0.04g
Ampicillin solution.....	2.5mL

pH 8.0 ± 0.1 at 25°C

Source: This medium without ampicillin is available from Sigma Aldrich.

Ampicillin Solution:

Composition per 5.0mL:

Ampicillin 10.0mg

Preparation of Ampicillin Solution: Add ampicillin to distilled/deionized water and bring volume to 5.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except ampicillin solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Do not autoclave. Cool to 50°C. Aseptically add 2.5mL of ampicillin solution. Pour into sterile Petri dishes.

Use: For the isolation and selective differentiation of *Aeromonas hydrophila* and other *Aeromonas* species from clinical specimens and foods. *Aeromonas* species appear as small (0.5–1.5mm), dark green colonies with darker centers.

***Aeromonas* Isolation HiVeg Medium**

Composition per liter:

Agar 12.5g
 Na₂S₂O₃ 10.67g
 Plant special peptone 5.0g
 NaCl 5.0g
 Xylose 3.75g
 L-Lysine-HCl 3.5g
 Yeast extract 3.0g
 Sorbitol 3.0g
 Synthetic detergent 3.0g
 Inositol 2.5g
 L-Arginine-HCl 2.0g
 Lactose 1.5g
 Ferric ammonium citrate 0.8g
 Bromthymol Blue 0.04g
 Thymol Blue 0.04g
 Ampicillin solution 2.5mL

pH 8.0 ± 0.1 at 25°C

Source: This medium without ampicillin is available from HiMedia.

Ampicillin Solution:

Composition per 5.0mL:

Ampicillin 10.0mg

Preparation of Ampicillin Solution: Add ampicillin to distilled/deionized water and bring volume to 5.0mL. Mix thoroughly. Filter sterilize.

Source: Ampicillin supplement solution is also available from HiMedia.

Preparation of Medium: Add components, except ampicillin solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Do not autoclave. Cool to 50°C. Aseptically add 2.5mL of ampicillin solution. Pour into sterile Petri dishes.

Use: For the isolation and selective differentiation of *Aeromonas hydrophila* and other *Aeromonas* species from clinical specimens and foods. *Aeromonas* species appear as small (0.5–1.5mm), dark green colonies with darker centers.

***Aeromonas* Medium
(Ryan's *Aeromonas* Medium)**

Composition per liter:

Agar 12.5g
 Na₂S₂O₃ 10.67g
 Proteose peptone 5.0g
 NaCl 5.0g
 Xylose 3.75g
 L-Lysine-HCl 3.5g
 Yeast extract 3.0g
 Sorbitol 3.0g
 Bile salts No. 3 3.0g
 Inositol 2.5g
 L-Arginine-HCl 2.0g
 Lactose 1.5g
 Ferric ammonium citrate 0.8g
 Bromthymol Blue 0.04g
 Thymol Blue 0.04g

pH 8.0 ± 0.1 at 25°C

Source: This medium is available as a dehydrated powder from Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Do not autoclave. Cool to 50°C and aseptically add 5.0mg of ampicillin. Pour into sterile Petri dishes.

Use: For the isolation and selective differentiation of *Aeromonas hydrophila* and other *Aeromonas* species from clinical and nonclinical specimens. *Aeromonas* species appear as small (0.5–1.5mm), dark green colonies with darker centers.

***Aeropyrum* JXT Medium
(DSMZ Medium 820)**

Composition per liter:

Yeast extract 1.0g
 Trypticase™ peptone 1.0g
 Na₂S₂O₃·5H₂O 1.0g
 Seawater 1000.0mL

pH 7.1 ± 0.2 at 25°C

Artificial Seawater:

Composition per liter:

NaCl 23.477g
 MgCl₂·6H₂O 4.981g
 Na₂SO₄ 3.917g
 CaCl₂ 1.12g
 KCl 664.0mg
 NaHCO₃ 192.0mg
 H₃BO₃ 26.0mg
 SrCl₂ 24.0mg
 KBr 6.0mg
 NaF 3.0mg

Preparation of Artificial Seawater: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components to 1.0L artificial seawater (filtered natural seawater can be used instead of artificial seawater). Mix thoroughly. Adjust pH to 7.0–7.2. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Aeropyrum pernix*.

AFPA**(*Aspergillus flavus/parasiticus* Agar)****Composition per liter:**

Yeast extract.....	20.0g
Agar	15.0g
Peptone.....	10.0g
Ferric ammonium citrate.....	0.5g
DChloramphenicol.....	100.0mg
ichloran (Botran®).....	2.0mg

pH 6.3 ± 0.2 at 25°C

Source: This medium is available as a dehydrated powder from Oxoid Unipath.

Preparation of Medium: Add components, except chloramphenicol, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Add 100.0mg of chloramphenicol. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the selective isolation and enumeration of *Aspergillus flavus* and *Aspergillus parasiticus*. Colonies of these fungi appear with dark yellow-orange color on the reverse side.

AG Medium**(DSMZ Medium 955)****Composition per liter:**

CaCO ₃	7.0g
Peptone.....	5.0g
Yeast extract.....	5.0g
Malt extract.....	2.0g
Glycerol.....	1.5g
Glucose.....	1.0g

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Kozakia baliensis*.

Agar Medium ASee: **Antibiotic Medium 1****Agar Medium C**See: **Antibiotic Medium 4****Agar Medium for Differential Enumeration of Lactic Streptococci****Composition per 1170.0mL:**

Agar.....	15.0g
Carboxymethylcellulose.....	15.0g
Calcium citrate.....	10.0g
Pancreatic digest of casein.....	5.0g
Yeast extract.....	5.0g
L-Arginine-HCl.....	5.0g
Casamino acids.....	2.5g
K ₂ HPO ₄	1.25g
Calcium carbonate solution.....	100.0mL
Nonfat milk solution.....	50.0mL
Bromcresol Purple solution.....	20.0mL

pH 5.9 ± 0.2 at 25°C

Calcium Carbonate Solution:**Composition per 100.0mL:**

CaCO ₃	3.0g
-------------------------	------

Preparation of Calcium Carbonate Solution: Add CaCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Nonfat Milk Solution:**Composition per 100.0mL:**

Nonfat milk.....	11.0g
------------------	-------

Preparation of Nonfat Milk Solution: Add nonfat milk to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Bromcresol Purple Solution:**Composition per 20.0mL:**

Bromcresol Purple.....	0.02g
------------------------	-------

Preparation of Bromcresol Purple Solution: Add Bromcresol Purple to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add agar to 500.0mL of distilled/deionized water. Gently heat and bring to boiling. In a separate flask, add carboxymethylcellulose and calcium citrate to 500.0mL of distilled/deionized water. Gently heat while stirring until a white, turbid suspension is formed. Combine the two solutions. Add the pancreatic digest of casein, yeast extract, K₂HPO₄, casamino acids, and arginine. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 5.6 with 6N HCl. Distribute into screw-capped bottles in 100.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Immediately prior to pouring plates, aseptically add 5.0mL of sterile nonfat milk solution, 10.0mL of sterile calcium carbonate solution, and 2.0mL of sterile Bromcresol Purple solution to each screw-capped bottle. Mix thoroughly. The pH should be 5.9. Pour into cold, sterile Petri dishes.

Use: For the cultivation, differentiation, and enumeration of *Lactobacillus lactis*, *Lactobacillus lactis* subspecies *cremoris*, and *Lactobacillus lactis* subspecies *diacetylactis*. Lactose-fermenting bacteria such as *Lactobacillus lactis* subspecies *cremoris* appear as yellow colonies. Arginine-utilizing bacteria such as *Lactobacillus lactis* and *Lactobacillus lactis* subspecies *diacetylactis* appear as purple colonies. Citrate-utilizing bacteria such as *Lactobacillus lactis* subspecies *diacetylactis* appear as colonies surrounded by a clear zone.

Agar Medium P**(PM Indicator Agar)****Composition per liter:**

Agar.....	15.0g
Glucose.....	5.25g
Peptone.....	5.0g
Beef extract.....	3.0g
Pancreatic digest of casein.....	1.7g
Tween™ 80.....	1.0g
NaCl.....	0.5g
Papaic digest of soybean meal.....	0.3g
K ₂ HPO ₄	0.25g
Bromcresol Purple.....	0.06g

pH 7.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Bacillus stearothermophilus* for the detection of penicillin in milk.

AGRE 1964

Agrobacterium Agar

Composition per liter:

Agar	15.0g
Mannitol	8.0g
NaCl	5.0g
Yeast extract	5.0g
(NH ₄) ₂ SO ₄	2.0g
Casamino acids	0.5g

pH 6.6 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.6. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Agrobacterium rhizogenes* and *Agrobacterium tumefaciens*.

Agrobacterium Agar

Composition per liter:

Agar	15.0g
Glucose	10.0g
Yeast extract	10.0g
(NH ₄) ₂ SO ₄	1.0g
KH ₂ PO ₄	0.25g

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Agrobacterium azotophilum*, *Agrobacterium radiobacter*, *Agrobacterium rhizogenes*, *Agrobacterium rubi*, *Agrobacterium tumefaciens*, and *Agrobacterium vitis*.

Agrobacterium Agar with Biotin

Composition per liter:

Agar	15.0g
Mannitol	8.0g
NaCl	5.0g
Yeast extract	5.0g
(NH ₄) ₂ SO ₄	2.0g
Casamino acids	0.5g
Biotin solution	0.1mL

pH 6.6 ± 0.2 at 25°C

Biotin Solution:

Composition per 10.0mL:

Biotin	0.2mg
--------------	-------

Preparation of Biotin Solution: Add biotin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except biotin solution, to distilled/deionized water and bring volume to 999.9mL. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 6.6. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically

add 0.1mL of sterile biotin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of slow-growing *Agrobacterium rhizogenes* and *Agrobacterium tumefaciens*.

Agrobacterium Mannitol Medium

Composition per liter:

Mannitol	10.0g
L-Glutamate	2.0g
KH ₂ PO ₄	0.5g
Yeast extract	0.3g
MgSO ₄ ·7H ₂ O	0.2g
NaCl	0.2g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Agrobacterium rhizogenes*.

Agrobacterium Medium

Composition per liter:

Agar	18.0g
Erythritol	5.0g
NaNO ₃	2.5g
CaCl ₂	0.2g
MgSO ₄ ·7H ₂ O	0.2g
NaCl	0.2g
KH ₂ PO ₄	0.1g
Ferric EDTA	1.3mg
Biotin	2μg
Supplement	10.0mL

pH 7.0 ± 0.2 at 25°C

Supplement:

Composition per liter:

Cycloheximide	0.25g
Bacitracin	0.1g
Na ₂ SeO ₃	0.1g
Tyrosine	1.0mg

Preparation of Supplement: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: Add components, except supplement, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Adjust pH to 7.0 with 1N NaOH. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile supplement. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation and cultivation of *Agrobacterium* species biotype 2.

Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Adjust pH to 7.2. Pour into sterile Petri dishes or leave in tubes.

Use: For the selective isolation and cultivation of *Agrobacterium* species.

Agrobacterium tumefaciens* Modified Roy and Sasser Medium for Grapevine Strains*Composition per 1020mL:**

Agar.....	15.0g
Adonitol.....	4.0g
H ₃ BO ₃	1.0g
K ₂ HPO ₄	0.9g
KH ₂ PO ₄	0.7g
NaCl.....	0.2g
MgSO ₄ ·7H ₂ O.....	0.2g
Yeast extract.....	0.14g
Cycloheximide solution.....	10.0mL
Triphenyl tetrazolium chloride solution.....	1.0mL
D-Cycloserine solution.....	1.0mL
Trimethoprim solution.....	1.0mL

Cycloheximide Solution:**Composition per 10.0mL:**

Cycloheximide.....	0.025g
--------------------	--------

Preparation of Cycloheximide Solution: Add cycloheximide to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Triphenyl Tetrazolium Chloride Solution:**Composition per 10.0mL:**

Triphenyltetrazolium chloride.....	0.8g
------------------------------------	------

Preparation of Triphenyl Tetrazolium Chloride Solution:

Add triphenyltetrazolium chloride to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

D-Cycloserine Solution:**Composition per 10.0mL:**

D-Cycloserine.....	0.2g
--------------------	------

Preparation of D-Cycloserine Solution:

Add D-cycloserine to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Trimethoprim Solution:**Composition per 10.0mL:**

Trimethoprim.....	0.025g
-------------------	--------

Preparation of Trimethoprim Solution:

Add trimethoprim to distilled/deionized water and bring volume to 10.0mL. Add a drop of dilute HCl. Mix thoroughly. Gently heat while mixing until dissolved. Filter sterilize.

Preparation of Medium: Add components, except cycloheximide solution and triphenyl tetrazolium chloride solution, D-cycloserine solution, and trimethoprim solution to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Distribute 100.0mL into flasks. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add, per 100.0mL of medium, 0.1 mL sterile triphenyl tetrazolium chloride solution, 0.1mL sterile D-cycloserine solution, 0.1mL sterile trimethoprim solution, and 1.0mL cycloheximide solution. Mix thoroughly. Aseptically pour into sterile Petri dishes.

Use: For the selective cultivation of *Agrobacterium tumefaciens* biovar 3.

Agrobacterium tumefaciens Selective Medium

Composition per 1020mL:

Agar	15.0g
L(-)Arabitol	3.04g
K ₂ HPO ₄	1.04g
KH ₂ PO ₄	0.54g
Sodium taurocholate	0.29g
MgSO ₄ ·7H ₂ O	0.25g
NH ₄ NO ₃	0.16g
Cycloheximide solution	10.0mL
Selenite solution.....	10.0mL
Crystal Violet (0.1% solution)	2.0mL

Selenite Solution:

Composition per 10.0mL:

NaOH.....	0.5g
Na ₂ SeO ₃ ·5H ₂ O.....	0.1g

Preparation of Selenite Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Cycloheximide Solution:

Composition per 10.0mL:

Cycloheximide	0.02g
---------------------	-------

Preparation of Cycloheximide Solution: Add cycloheximide to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: Add components, except cycloheximide solution and selenite solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute 100.0mL into flasks. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add, per 100.0mL of medium, 1.0mL sterile selenite solution and 1.0mL cycloheximide solution. Mix thoroughly. Aseptically pour into sterile Petri dishes.

Use: For the selective cultivation of *Agrobacterium tumefaciens* biovar 1.

Agrobacterium tumefaciens Selective Medium

Composition per 1020mL:

Agar	15.0g
Erythritol.....	3.05g
K ₂ HPO ₄	1.04g

Beef extract	3.0g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Alcaligenes* species.

Alcaligenes xyloxydans Medium with Benzoate

Composition per liter:

Solution A	500.0mL
Solution B	500.0mL

pH 7.4 ± 0.2 at 25°C

Solution A:

Composition per 500.0mL

K ₂ HPO ₄	0.65g
KH ₂ PO ₄	0.19g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B:

Composition per 500.0mL:

Sodium glutamate	4.0g
NaNO ₃	0.5g
MgSO ₄ ·7H ₂ O	0.1g
Trace elements solution SL-4	2.0mL

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution SL-4:

Composition per liter:

EDTA	0.5g
FeSO ₄ ·7H ₂ O	0.2g
Trace elements solution SL-6	100.0mL

Trace Elements Solution SL-6:

Composition per liter:

MnCl ₂ ·4H ₂ O	0.5g
H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
Na ₂ MoO ₄ ·2H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Trace Elements Solution SL-4: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Aseptically combine solution A and solution B. Mix thoroughly. Adjust pH to 7.4. Distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Alcaligenes xyloxydans*.

Alcaliphilic Amphibacillus Strains Medium

(DSMZ Medium 931)

Composition per liter:

Na ₂ CO ₃	63.6g
NaHCO ₃	50.4g
KH ₂ PO ₄	0.2g
MgCl ₂	0.1g
NH ₄ Cl	0.5g
KCl	0.2g
Resazurin	0.01g
Sucrose solution	50.0mL
Na ₂ S·9H ₂ O solution	10.0mL

Yeast extract solution.....	10.0mL
Vitamin solution.....	10.0mL
Trace elements solution	1.0mL
pH 9.5-10.0 at 25°C	

Sucrose Solution:**Composition per 50.0mL:**

Sucrose.....	5.0g
--------------	------

Preparation of Sucrose Solution: Add sucrose to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Yeast Extract Solution:**Composition per 10.0mL:**

Yeast extract.....	0.2g
--------------------	------

Preparation of Yeast Extract Solution: Add yeast extract to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Na₂S·9H₂O Solution:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O.....	0.7g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Trace Elements Solution:**Composition per liter:**

MgSO ₄ ·7H ₂ O	3.0g
Nitrilotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·2H ₂ O	0.5g
CoSO ₄ ·7H ₂ O	0.18g
ZnSO ₄ ·7H ₂ O	0.18g
CaCl ₂ ·2H ₂ O.....	0.1g
FeSO ₄ ·7H ₂ O.....	0.1g
NiCl ₂ ·6H ₂ O.....	0.025g
KAl(SO ₄) ₂ ·12H ₂ O.....	0.02g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·4H ₂ O	0.01g
CuSO ₄ ·5H ₂ O.....	0.01g
Na ₂ SeO ₃ ·5H ₂ O.....	0.3mg

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Vitamin Solution:**Composition per liter:**

Pyridoxine-HCl.....	10.0mg
Thiamine-HCl·2H ₂ O.....	5.0mg
Riboflavin	5.0mg
Nicotinic acid.....	5.0mg
D-Ca-pantothenate.....	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Lipoic acid	5.0mg
Biotin	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Preparation of Medium: Prepare and dispense medium under 100% N₂ gas atmosphere. Add components, except NaHCO₃, NH₄Cl, Na₂CO₃, sucrose solution, Na₂S·9H₂O solution, yeast extract solution, and vitamin solution, to distilled/deionized water and bring volume to 920.0mL. Mix thoroughly. Gently heat and bring to boiling. Boil for 5 min. Cool to room temperature while sparging with 100% N₂. Add solid NaHCO₃, NH₄Cl, and Na₂CO₃. Mix thoroughly. Distribute into anaerobe tubes or bottles. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add per liter of medium 50.0mL sucrose solution, 10.0mL yeast extract solution, 10.0mL Na₂S·9H₂O solution, and 10.0mL vitamin solution. The final pH should be 9.5–10.0.

Use: For the cultivation of *Amphibacillus fermentum* and *Amphibacillus tropicus*.

Alcanivorax borkumensis Medium (DSMZ Medium 809)

Composition per liter:

NaCl.....	23.0g
Sodium pyruvate.....	10.0g
MgCl ₂ ·2H ₂ O	6.16g
MgSO ₄ ·7H ₂ O	5.8g
NaNO ₃	5.0g
CaCl ₂ ·2H ₂ O	1.47g
Na ₂ HPO ₄ ·7H ₂ O.....	0.89g
FeSO ₄ ·7H ₂ O.....	0.03g

pH 7.0–7.5 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Alcanivorax borkumensis*.

Algae Culture Broth

Composition per liter:

NaNO ₃	1.0g
MgSO ₄ ·7H ₂ O	0.513g
NH ₄ Cl	0.5g
K ₂ HPO ₄	0.25g
CaCl ₂ ·2H ₂ O	0.058g
FeCl ₃	3.0mg

pH 7.4 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation and cultivation of algae.

Algal Proteose Agar

Composition per liter:

Agar	15.0g
Proteose peptone.....	1.0g
Bristol's solution	1.0L

Bristol's Solution:**Composition per 1000.1mL:**

NaNO ₃ solution.....	10.0g
KH ₂ PO ₄ solution.....	7.0g
K ₂ HPO ₄ solution.....	3.0g
MgSO ₄ ·7H ₂ O solution.....	3.0g
CaCl ₂ solution.....	1.0g
NaCl solution.....	1.0g
FeCl ₃ solution.....	0.1mL

NaNO₃ Solution:**Composition per 400.0mL:**

NaNO ₃	10.0g
-------------------------	-------

Preparation of NaNO₃ Solution: Add NaNO₃ to distilled/deionized water and bring volume to 400.0mL. Mix thoroughly.

CaCl₂ Solution:**Composition per 400.0mL:**

CaCl ₂	1.0g
-------------------------	------

Preparation of CaCl₂ Solution: Add CaCl₂ to distilled/deionized water and bring volume to 400.0mL. Mix thoroughly.

MgSO₄·7H₂O Solution:**Composition per 400.0mL:**

MgSO ₄ ·7H ₂ O.....	3.0g
---	------

Preparation of MgSO₄·7H₂O Solution: Add MgSO₄·7H₂O to distilled/deionized water and bring volume to 400.0mL. Mix thoroughly.

K₂HPO₄ Solution:**Composition per 400.0mL:**

K ₂ HPO ₄	3.0g
---------------------------------------	------

Preparation of K₂HPO₄ Solution: Add K₂HPO₄ to distilled/deionized water and bring volume to 400.0mL. Mix thoroughly.

KH₂PO₄ Solution:**Composition per 400.0mL:**

KH ₂ PO ₄	7.0g
---------------------------------------	------

Preparation of KH₂PO₄ Solution: Add KH₂PO₄ to distilled/deionized water and bring volume to 400.0mL. Mix thoroughly.

NaCl Solution:**Composition per 400.0mL:**

NaCl.....	1.0g
-----------	------

Preparation of NaCl Solution: Add NaCl to distilled/deionized water and bring volume to 400.0mL. Mix thoroughly.

FeCl₃ Solution:**Composition per 100.0mL:**

FeCl ₃	1.0g
-------------------------	------

Preparation of FeCl₃ Solution: Add FeCl₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Bristol's Solution: Add 10.0mL of NaNO₃ solution, 10.0mL of CaCl₂ solution, 10.0mL of MgSO₄·7H₂O solution, 10.0mL of NaNO₃ solution, 10.0mL of K₂HPO₄ solution, 10.0mL of KH₂PO₄ solution, and 10.0mL of NaCl solution to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Add 0.1mL of FeCl₃ solution. Mix thoroughly.

Preparation of Medium: Add proteose peptone and agar to 1.0L of Bristol's solution. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Ankistrodesmus angustus*, *Ankistrodesmus braunii*, *Botrydium becherianum*, *Botrydium cystosum*, *Botrydium stoloniferum*, *Bracteacoccus grandis*, *Bumilleria sicula*, *Characium polymorphum*, *Chlamydomonas* species, *Chlorella* species, *Chlorosphaera klebsii*, *Coelastrum proboscideum*, *Crucigenia apiculata*, *Dictyochloris fragrans*, *Dictyosphaerium ehrenbergianum*, *Dictyosphaerium pulchellum*, *Elakatothrix viridis*, *Haematococcus lacustris*, *Interfilum paradoxum*, *Klebsoridium subtilissimum*, *Lobomonas piriformis*, *Mesotaenium caldariorum*, *Mischococcus sphaerocephalus*, *Monodus subterraneus*, *Muriella aurantiaca*, *Muriella decolor*, *Nephrochlamys subsolitaria*, *Nephrodiella brevis*, *Oocystis* species, *Ophiocytium majus*, *Pediastrum tetras*, *Polyedriella helvetica*, *Protosiphon botryoides*, *Scenedesmus armatus*, *Scenedesmus communis*, *Scenedesmus obliquus*, *Tetracystis disociata*, *Tribonema aequale*, *Ulothrix gigas*, *Vitreochlamys incisa*, and *Vischeria punctata*.

Alginate Utilization Medium**Composition per liter:**

Solution B.....	500.0mL
Solution A.....	400.0mL
Solution C.....	100.0mL

Solution A:**Composition per 400.0mL:**

Marine salts.....	38.0g
-------------------	-------

Preparation of Solution A: Add marine salts to distilled/deionized water and bring volume to 400.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B:**Composition per 500.0mL:**

Agar.....	20.0g
Sodium alginate.....	10.0g

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C:**Composition per 100.0mL:**

Tris-HCl buffer.....	0.067g
NaNO ₃	0.047g
Ferric EDTA.....	66.5mg
Sodium glycerophosphate.....	6.67mg
Thiamine-HCl.....	67.0µg
Vitamin B ₁₂	1.3µg
Biotin.....	0.67µg

Preparation of Solution C: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Aseptically combine solutions A, B, and C. For liquid medium, omit agar from solution B.

Use: For the cultivation of microorganisms that can utilize alginate as a carbon source. Growth on alginate (production of alginase) is a diagnostic test used in the differentiation of *Vibrio* species.

Alicyclobacillus acidoterrestris* Agar*Composition per 1001.0mL:**

Solution A.....	500.0mL
Solution C.....	500.0mL
Solution B.....	1.0mL

pH 4.0 ± 0.2 at 25°C

Solution A:**Composition per 500.0mL:**

Glucose	5.0g
KH ₂ PO ₄	3.0g
Yeast extract.....	2.0g
MgSO ₄ ·7H ₂ O.....	0.5g
CaCl ₂ ·7H ₂ O.....	0.25g
(NH ₄) ₂ SO ₄	0.2g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Adjust pH to 4.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C.

Solution B:**Composition per liter:**

MnCl ₂ ·4H ₂ O.....	0.5g
H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O.....	0.2g
ZnSO ₄ ·7H ₂ O.....	0.1g
Na ₂ MoO ₄ ·2H ₂ O.....	0.03g
NiCl ₂ ·6H ₂ O.....	0.02g
CuCl ₂ ·2H ₂ O.....	0.01g

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Warm to 50°–55°C.

Solution C:**Composition per 500.0mL:**

Agar	15.0g
------------	-------

Preparation of Solution C: Add agar to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C.

Preparation of Medium: Aseptically combine 500.0mL of solution A, 1.0mL of solution B, and 500.0mL of solution C. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Alicyclobacillus acidoterrestris*.

Alicyclobacillus acidoterrestris* Broth*Composition per 1001.0mL:**

Solution A.....	1.0L
Solution B.....	1.0mL
pH 4.0 ± 0.2 at 25°C	

Solution A:**Composition per liter:**

Glucose	5.0g
KH ₂ PO ₄	3.0g
Yeast extract.....	2.0g
MgSO ₄ ·7H ₂ O.....	0.5g
CaCl ₂ ·7H ₂ O.....	0.25g
(NH ₄) ₂ SO ₄	0.2g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 4.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B:**Composition per liter:**

MnCl ₂ ·4H ₂ O.....	0.5g
H ₃ BO ₃	0.3g

CoCl ₂ ·6H ₂ O.....	0.2g
ZnSO ₄ ·7H ₂ O.....	0.1g
Na ₂ MoO ₄ ·2H ₂ O.....	0.03g
NiCl ₂ ·6H ₂ O.....	0.02g
CuCl ₂ ·2H ₂ O.....	0.01g

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Aseptically combine 1.0L of solution A with 1.0mL of solution B. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Alicyclobacillus acidoterrestris*.

***Alicyclobacillus acidoterrestris* Medium
(LMG Medium 141)****Composition per liter:**

Agar	30.0g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except trace elements solution SL-6, to distilled/deionized water and bring volume to 999.0mL. Mix thoroughly. Adjust pH to 4.0. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 1.0mL of sterile trace elements solution SL-6. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Alicyclobacillus* spp., *Bacillus* sp., and *Bacillus naganoensis*.

Alicyclobacillus Medium (DSMZ Medium 402)

Composition per liter:

Yeast extract.....	5.0g
Glucose.....	5.0g

KH ₂ PO ₄	3.0g
MgSO ₄ ·7H ₂ O.....	0.5g
CaCl ₂ ·2H ₂ O.....	0.25g
(NH ₄) ₂ SO ₄	0.2g
Trace elements solution SL-6.....	1.0mL
pH 4.0 ± 0.2 at 25°C	

Trace Elements Solution SL-6:**Composition per liter:**

MnCl ₂ ·4H ₂ O.....	0.5g
H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O.....	0.2g
ZnSO ₄ ·7H ₂ O.....	0.1g
Na ₂ MoO ₄ ·2H ₂ O.....	0.03g
NiCl ₂ ·6H ₂ O.....	0.02g
CuCl ₂ ·2H ₂ O.....	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except trace elements solution SL-6, to distilled/deionized water and bring volume to 999.0mL. Mix thoroughly. Adjust pH to 4.0. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 1.0mL of sterile trace elements solution SL-6. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Alicyclobacillus cycloheptanicus*.

Alkalibacterium olivapovliticus Agar (DSMZ Medium 923)

Composition per liter:

Yeast extract.....	5.0g
Na glutamate.....	1.0g
(NH ₄) ₂ SO ₄	1.0g
K ₂ HPO ₄	0.15g
MgSO ₄ ·7H ₂ O.....	0.025g
Agar solution.....	400.0mL
Na ₂ CO ₃ solution.....	100.0mL
pH 9.5 ± 0.2 at 25°C	

Agar Solution:**Composition per 400.0mL:**

Agar.....	20.0g
-----------	-------

Preparation of Agar Solution: Add agar to distilled/deionized water and bring volume to 400.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 55°C.

Na₂CO₃ Solution:**Composition per 100.0mL:**

Na ₂ CO ₃	10.0g
---------------------------------------	-------

Preparation of Na₂CO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 55°C.

Preparation of Medium: Add components, except agar solution and Na₂CO₃ solution, to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 55°C. Aseptically add 100.0mL sterile Na₂CO₃ solution. Mix thoroughly. Aseptically add 400.0mL sterile agar solution. Mix thoroughly. Pour into Petri dishes or aseptically distribute into sterile tubes.

Use: For the cultivation of *Bacillus sp.* and *Alkalibacterium olivapovliticus* (*Alkalibacterium olivoapovliticus*).

Alkalibacterium olivapovliticus Medium (DSMZ Medium 923)

Composition per liter:

Yeast extract.....	5.0g
Na glutamate.....	1.0g
(NH ₄) ₂ SO ₄	1.0g
K ₂ HPO ₄	0.15g
MgSO ₄ ·7H ₂ O.....	0.025g
Na ₂ CO ₃ solution.....	100.0mL

pH 9.5 ± 0.2 at 25°C

Na₂CO₃ Solution:

Composition per 100.0mL:

Na ₂ CO ₃	10.0g
---------------------------------------	-------

Preparation of Na₂CO₃ Solution: Add Na₂CO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Preparation of Medium: Add components, except Na₂CO₃ solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 100.0mL sterile Na₂CO₃ solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Bacillus sp.* and *Alkalibacterium olivapovliticus* (*Alkalibacterium olivoapovliticus*).

Alkaliflexus Medium (DSMZ Medium 1175)

Composition per liter:

NH ₄ Cl.....	0.2g
MgCl ₂ ·6H ₂ O.....	0.05g
KH ₂ PO ₄	0.2g
Na ₂ S·9H ₂ O solution.....	100.0mL
Yeast extract.....	100.0mL
Cellobiose solution.....	50.0mL
Na ₂ CO ₃ solution.....	50.0mL
NaHCO ₃ solution.....	50.0mL

pH 10.0 ± 0.2 at 25°C

Yeast Extract Solution:

Composition per 100.0mL:

Yeast extract.....	0.2g
--------------------	------

Preparation of Yeast Extract Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Cellobiose Solution:

Composition per 50.0mL:

Cellobiose.....	3.0g
-----------------	------

Preparation of Cellobiose Solution: Add components to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Sparge with N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Na₂CO₃ Solution:

Composition per 50.0mL:

Na ₂ CO ₃	7.4g
---------------------------------------	------

Preparation of Na₂CO₃ Solution: Add components to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Sparge with N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

NaHCO₃ Solution:

Composition per 50.0mL:

NaHCO ₃	18.5g
--------------------------	-------

Preparation of NaHCO₃ Solution: Add components to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Sparge with N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Na₂S·9H₂O Solution:

Composition per 100.0mL:

Na ₂ S·9H ₂ O.....	0.5g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Preparation of Medium: Add components, except Na₂S·9H₂O solution, cellobiose solution, and yeast extract solution, to distilled/deionized water and bring volume to 750.0mL. Mix thoroughly. Gently heat and bring to boiling. Boil for several minutes. Cool to room temperature while sparging with N₂. Add the Na₂CO₃ solution and the NaHCO₃ solution. The pH should be 10.0. Distribute into serum bottles or Hungate tubes. Seal the tubes under N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically inject Na₂S·9H₂O, cellobiose, and yeast extract solutions to give concentrations of 10%, 5%, and 10%, respectively.

Use: For the maintenance or cultivation of *Alkaliflexus* spp.

Alkaline *Bacillus* Medium

Composition per liter:

Agar.....	15.0g
Peptone.....	10.0g
Glucose.....	10.0g
Yeast extract.....	5.0g
K ₂ HPO ₄	1.0g
Na ₂ CO ₃ solution.....	100.0mL

pH 8.5–11.0 at 25°C

Na₂CO₃ Solution:

Composition per 100.0mL:

Na ₂ CO ₃	10.0g
---------------------------------------	-------

Preparation of Na₂CO₃ Solution: Add Na₂CO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except Na₂CO₃ solution, to distilled/deionized water and bring volume to 900.0mL. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 10 psi pressure–115°C. Cool to 45°–50°C. Aseptically add sterile Na₂CO₃ solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of alkalophilic microorganisms such as *Bacillus alcalophilus*, *Bacillus circulans*, and other *Bacillus* species.

Alkaline Cellulose Agar**Composition per liter:**

Solution A	900.0mL
Solution B	100.0mL

Solution A:**Composition per 900.0mL:**

Agar	15.0g
Cellulose powder MN 300	15.0g
NH ₄ NO ₃	2.0g
K ₂ HPO ₄	1.0g
Peptone	1.0g
Yeast extract	0.5g
CaCl ₂	0.4g
MgSO ₄ ·7H ₂ O	0.4g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Adjust pH to 7.0 with 1N HCl. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C.

Solution B:**Composition per 100.0mL:**

Na ₂ CO ₃	0.5g
---------------------------------------	------

Preparation of Solution B: Add 0.5g of Na₂CO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Adjust pH to 9.4 with 6% NaHCO₃ solution. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C.

Preparation of Medium: Aseptically combine 900.0mL of solution A with 100.0mL of solution B. Mix thoroughly. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of cellulose-utilizing bacteria.

Alkaline HiVeg Peptone Water**Composition per liter:**

NaCl	10.0g
Plant peptone	10.0g
pH 8.4 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 8.5. Distribute into tubes or flasks. Autoclave for 10 min at 15 psi pressure–121°C.

Use: For the enrichment of *Vibrio* species from foods.

Alkaline Nutrient Agar**Composition per liter:**

Agar	15.0g
Peptone	5.0g
Beef extract	3.0g
pH 9.5–10.0 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically adjust to pH 9.5–10.0 with sterile 9% Na₂CO₃ solution. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Bacillus alcalophilus* and *Bacillus* species.

Alkaline Nutrient Agar**Composition per liter:**

Agar	20.0g
Pancreatic digest of gelatin	5.0g
Beef extract	3.0g
pH 10.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically adjust pH with 10% sterile Na₂S₂O₃ solution. Mix thoroughly. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Bacillus alcalophilus*.

Alkaline Nutrient Agar**Composition per liter:**

Agar	15.0g
Peptone	5.0g
NaCl	5.0g
Yeast extract	2.0g
Beef extract	1.0g
Sodium sesquicarbonate solution	100.0mL
pH 9.7 ± 0.2 at 25°C	

Sodium Sesquicarbonate Solution:**Composition per 100.0mL:**

Na ₂ CO ₃ , anhydrous	10.6g
NaHCO ₃	8.42g

Preparation of Sodium Sesquicarbonate Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Warm to 50°–55°C.

Preparation of Medium: Add components, except sodium sesquicarbonate solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add sterile sodium sesquicarbonate solution. Mix thoroughly. Adjust pH to 9.7. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of alkaliphilic bacteria, including *Bacillus alcalophilus*, *Bacillus cohnii*, and other *Bacillus* species.

Alkaline Peptone Agar**Composition per liter:**

NaCl	20.0g
Agar	15.0g
Peptone	10.0g
pH 8.5 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 8.5. Distribute into tubes. Autoclave for 15 min at 15 psi pressure–121°C. Allow tubes to cool in a slanted position.

Use: For the cultivation of *Vibrio cholerae* and other *Vibrio* species.

**Alkaline Peptone Salt Broth
(APS Broth)****Composition per liter:**

NaCl	30.0g
Peptone	10.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 8.5. Distribute into tubes in 10.0mL volumes. Autoclave for 10 min at 15 psi pressure–121°C.

Use: For the cultivation of *Vibrio cholerae* and other *Vibrio* species from foods.

Alkaline Peptone Water

Composition per liter:

NaCl	10.0g
Peptone.....	10.0g

pH 8.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 8.5. Distribute into tubes or flasks. Autoclave for 10 min at 15 psi pressure–121°C.

Use: For the cultivation and transport of *Vibrio cholerae* and other *Vibrio* species from foods.

Alkaline Peptone Water

Composition per liter:

Peptone.....	10.0g
NaCl	5.0g

pH 9.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 9.0. Distribute into tubes or flasks. Autoclave for 20 min at 15 psi pressure–121°C.

Use: For the cultivation of a variety of alkalophilic microorganisms, especially *Vibrio* species.

Alkaline Peptone Water

Composition per liter:

NaCl	30.0g
Peptone.....	20.0g

pH 8.4 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 8.4. Distribute into tubes or flasks. Autoclave for 20 min at 15 psi pressure–121°C.

Use: For the cultivation of a variety of alkalophilic microorganisms.

Alkaline Polypectate Agar

Composition per liter:

Agar	16.0g
Na ₂ CO ₃	10.0g
Peptone.....	6.0g
Sodium polypectate.....	5.0g
Yeast extract.....	3.0g
K ₂ HPO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.2g
MnSO ₄	40.0mg

pH 10.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Bring pH to 10.0. Gently heat and bring to boiling. Distribute into tubes or flasks. Auto-

clave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of pectinolytic bacteria.

Alkaline Starch Agar

Composition per liter:

Starch	20.0g
Agar	16.0g
Na ₂ CO ₃	10.0g
Peptone	6.0g
Yeast extract.....	3.0g
K ₂ HPO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.2g
MnSO ₄	40.0mg

pH 9.7 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Bring pH to 9.7. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of alkaliniphilic starch-utilizing bacteria.

Alkaline Xylan Agar

Composition per liter:

Agar	15.0g
Larchwood xylan	10.0g
Polypeptone™	5.0g
Yeast extract.....	5.0g
K ₂ HPO ₄	0.45g
MgSO ₄ ·7H ₂ O	0.2g

pH 10.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically adjust pH with 10% sterile Na₂S₂O₃ solution. Mix thoroughly. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Bacillus* species.

Alkaline Xylan Broth

Composition per liter:

Xylan.....	10.0g
Yeast extract.....	3.0g
NH ₄ NO ₃	2.0g
K ₂ HPO ₄	1.0g
Polypepton	300.0mg
MgSO ₄ ·7H ₂ O	200.0mg
CaCl ₂ ·2H ₂ O	100.0mg
FeSO ₄ ·7H ₂ O.....	5.0mg
MnSO ₄ ·7H ₂ O	5.0mg
Resazurin	1.0mg

pH 10.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically adjust pH with 10% sterile Na₂S₂O₃ solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Amphibacillus xylanus*.

Alkaline Xylan Medium**Composition per 1001.0mL:**

Xylan.....	10.0g
Yeast extract.....	3.0g
NH ₄ NO ₃	2.0g
K ₂ HPO ₄	1.0g
Polypeptone™.....	0.3g
MgSO ₄ ·7H ₂ O.....	0.2g
CaCl ₂ ·2H ₂ O.....	0.1g
FeSO ₄ ·7H ₂ O.....	5.0mg
MnSO ₄ ·7H ₂ O.....	5.0mg
Resazurin.....	1.0mg
Titanium citrate solution.....	1.0mL
Na ₂ CO ₃ (10% solution).....	variable

pH 10.0 ± 0.2 at 25°C

Titanium Citrate Solution:**Composition per 50.0mL:**

TiCl ₂	0.75g
Trisodium citrate.....	2.58g

Preparation of Titanium Citrate Solution: Add components to approximately 30.0mL of distilled/deionized water. Mix thoroughly. Adjust pH to 7.0 with Na₂CO₃. Bring volume to 50.0mL with distilled/deionized water.

Preparation of Medium: Prepare and dispense medium under 100% N₂. Add components, except titanium citrate solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 3 min. Cool to room temperature while sparging with 100% N₂. Anaerobically distribute into anaerobic tubes. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Adjust pH to 10.0 with filter-sterilized 10% Na₂CO₃ solution. Immediately prior to inoculation, reduce medium by adding 1.0mL of titanium citrate solution per liter of medium.

Use: For the cultivation of *Amphibacillus xylanus*.

Alkaline Yeast Extract Malt Medium**Composition per liter:**

Malt extract.....	10.0g
Yeast extract.....	4.0g
Glucose.....	4.0g
Na ₂ CO ₃ (10% solution).....	100.0mL

pH 8.5–11.0 at 25°C

Preparation of Medium: Add components, except Na₂CO₃, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Separately sterilize a 10% Na₂CO₃ solution and aseptically add 100.0mL. Adjust pH, if necessary, to 8.5–11.0.

Use: For the cultivation of *Nocardiopsis dassonvillei*.

**Alkaliphilic Halomonas Medium
(DSMZ Medium 1034)****Composition per liter:**

Yeast extract.....	10.0g
Sodium citrate.....	3.0g
MgSO ₄ ·7H ₂ O.....	1.0g
Solution C.....	100.0mL
Solution D.....	10.0mL

Solution A.....	1.0mL
Solution B.....	1.0mL

pH 9.0 ± 0.2 at 25°C

Solution A:**Composition per 10.0mL:**

MnCl ₂ ·4H ₂ O.....	3.6mg
---	-------

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Solution B:**Composition per 10.0mL:**

FeSO ₄ ·7H ₂ O.....	0.5g
---	------

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Solution C:**Composition per 100.0mL:**

NaCl.....	100.0g
-----------	--------

Preparation of Solution C: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Solution D:**Composition per 10.0mL:**

Na ₂ CO ₃	3.0g
---------------------------------------	------

Preparation of Solution D: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Preparation of Medium: Add components, except solutions A, B, C, and D, to distilled/deionized water and bring volume to 890.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add solutions A, B, C, and D. Mix thoroughly. The pH should be 9.0.

Use: For the maintenance or cultivation of alkaliphilic *Halomonas* spp.

Alkaliphilic Methanogen Medium**Composition per liter:**

NaCl.....	15.0g
NaHCO ₃	10.0g
Methanol.....	5.0g
Na ₂ CO ₃	4.0g
Na ₂ S·9H ₂ O.....	1.0g
NH ₄ Cl.....	0.5g
Yeast extract.....	0.5g
KH ₂ PO ₄	0.3g
NiCl ₂ ·6H ₂ O.....	2.0mg
Resazurin.....	0.5mg
Wolfe's mineral solution.....	10.0mL
Selenite/tungstate solution.....	1.0mL

pH 9.2–9.4 at 25°C

Wolfe's Mineral Solution:**Composition per liter:**

MgSO ₄ ·7H ₂ O.....	3.0g
Nitritotriacetic acid.....	1.5g
NaCl.....	1.0g
MnSO ₄ ·2H ₂ O.....	0.5g
CoCl ₂ ·6H ₂ O.....	0.1g
ZnSO ₄ ·7H ₂ O.....	0.1g

CaCl ₂ ·2H ₂ O.....	0.1g
FeSO ₄ ·7H ₂ O.....	0.1g
NiCl ₂ ·6H ₂ O.....	0.025g
KAl(SO ₄) ₂ ·12H ₂ O.....	0.02g
CuSO ₄ ·5H ₂ O.....	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O.....	0.01g
Na ₂ SeO ₃ ·5H ₂ O.....	0.3mg

Preparation of Wolfe's Mineral Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Adjust pH to 6.8.

Selenite/Tungstate Solution:

Composition per liter:

NaOH.....	0.5g
Na ₂ WO ₄ ·2H ₂ O.....	4.0mg
Na ₂ SeO ₃ ·5H ₂ O.....	3.0mg

Preparation of Selenite/Tungstate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare and dispense medium under 100% N₂. Add components, except NaHCO₃ and Na₂S·9H₂O, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 5 min. Cool to room temperature while sparging with 100% N₂. Add NaHCO₃ and Na₂S·9H₂O. Mix thoroughly. Anaerobically distribute into tubes. Autoclave for 15 min at 15 psi pressure–121°C. Adjust pH to 9.2–9.4.

Use: For the cultivation of *Methanohalophilus zhilinae*.

Alkaliphilic Spirochete Medium

Composition per 1011.0mL:

Na ₂ CO ₃	10.0g
NaCl.....	10.0g
NH ₄ Cl.....	1.0g
K ₂ HPO ₄	0.2g
KCl.....	0.2g
Yeast extract.....	0.5g
NaHCO ₃ solution.....	50.0mL
Sucrose solution.....	20.0mL
Na ₂ S·9H ₂ O solution.....	10.0mL
Wolfe's vitamin solution.....	10.0mL
Trace elements solution SL-6.....	1.0mL

pH 9.7 ± 0.2 at 25°C

NaHCO₃ Solution:

Composition per 50.0mL:

NaHCO ₃	15.0g
--------------------------	-------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize. Sparge with 100% N₂.

Sucrose Solution:

Composition per 20.0mL:

Sucrose.....	5.0g
--------------	------

Preparation of Sucrose Solution: Add sucrose to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	1.0g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Before use, neutralize to pH 7.0 with sterile HCl.

Wolfe's Vitamin Solution:

Composition per liter:

Pyridoxine-HCl.....	10.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Lipoic acid.....	5.0mg
Nicotinic acid.....	5.0mg
Riboflavin.....	5.0mg
Thiamine-HCl.....	5.0mg
Calcium DL-pantothenate.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Sparge with 100% N₂.

Trace Elements Solution SL-6:

Composition per liter:

MnCl ₂ ·4H ₂ O.....	0.5g
H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O.....	0.2g
ZnSO ₄ ·7H ₂ O.....	0.1g
Na ₂ MoO ₄ ·2H ₂ O.....	0.03g
NiCl ₂ ·6H ₂ O.....	0.02g
CuCl ₂ ·2H ₂ O.....	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Prepare and dispense medium under 100% N₂. Add components, except NaHCO₃ solution, sucrose solution, Na₂S·9H₂O solution, and Wolfe's vitamin solution, to distilled/deionized water and bring volume to 910.0mL. Mix thoroughly. Adjust pH to 9.7 with 6*N* NaOH (about 15.0mL). Gently heat and bring to boiling. Cool to room temperature while sparging with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 50.0mL of sterile NaHCO₃ solution, 20.0mL of sterile sucrose solution, 10.0mL of sterile Na₂S·9H₂O solution, and 10.0mL of sterile Wolfe's vitamin solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Spirochaeta africana*, *Spirochaeta alkalica*, and *Spirochaeta asiatica*.

Alkaliphilic Sulphur Respiring Strains Medium (DSMZ Medium 925)

Composition per liter:

Mineral base.....	997.0mL
KSCN solution.....	10.0mL
Trace elements solution.....	2.0mL
Magnesium chloride solution.....	1.0mL

pH 10.0 ± 0.2 at 25°C

Mineral Base:

Composition per liter:

Na ₂ CO ₃	20.0g
NaHCO ₃	10.0g

NaCl	5.0g
K ₂ HPO ₄	1.0g

Preparation of Mineral Base: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Autoclave for 20 min at 110°C. The pH should be about 10.0.

Trace Elements Solution:

Composition per liter:

H ₃ BO ₃	300.0mg
CoCl ₂ ·6H ₂ O	200.0mg
ZnSO ₄ ·7H ₂ O	100.0mg
MnCl ₂ ·4H ₂ O.....	30.0mg
Na ₂ MoO ₄ ·4H ₂ O	30.0mg
NiCl ₂ ·6H ₂ O	20.0mg
CuCl ₂ ·2H ₂ O	10.0mg
EDTA	5.0mg
FeSO ₄ ·7H ₂ O.....	2.0mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Adjust pH to 3.0 with HCl. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Magnesium Chloride Solution:

Composition per 10.0mL:

MgCl ₂ ·6H ₂ O.....	2.0g
---	------

Preparation of Magnesium Chloride Solution: Add MgCl₂·6H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. A white colloid will dissolve after mixing. Autoclave for 15 min at 15 psi pressure–121°C.

KSCN Solution:

Composition per 10.0mL:

KSCN.....	1.5g
-----------	------

Preparation of KSCN Solution: Add KSCN to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Preparation of Medium: Aseptically add 10.0mL sterile KSCN solution, 2.0mL sterile trace elements solution, and 1.0mL sterile magnesium chloride solution to 987.0mL sterile mineral base. Aseptically distribute to sterile tubes, flasks, or bottles.

Use: For the cultivation of *Thialkalivibrio paradoxus* DSM 13531 and *Thialkalivibrio thiooxydans* DSM 13532.

Alkaliphilic Sulphur Respiring Strains Medium (DSMZ Medium 925)

Composition per liter:

Mineral base.....	967.0mL
Thiosulfate solution	20.0mL
Ammonium chloride solution	10.0mL
Trace elements solution	2.0mL
Magnesium chloride solution.....	1.0mL
pH 10.0 ± 0.2 at 25°C	

Mineral Base:

Composition per liter:

Na ₂ CO ₃	20.0g
NaHCO ₃	10.0g
NaCl	5.0g
K ₂ HPO ₄	1.0g

Preparation of Mineral Base: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Autoclave for 20 min at 110°C. The pH should be about 10.0.

Trace Elements Solution:

Composition per liter:

H ₃ BO ₃	300.0mg
CoCl ₂ ·6H ₂ O	200.0mg
ZnSO ₄ ·7H ₂ O	100.0mg
MnCl ₂ ·4H ₂ O	30.0mg
Na ₂ MoO ₄ ·4H ₂ O	30.0mg
NiCl ₂ ·6H ₂ O	20.0mg
CuCl ₂ ·2H ₂ O	10.0mg
EDTA	5.0mg
FeSO ₄ ·7H ₂ O.....	2.0mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Adjust pH to 3.0 with HCl. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Magnesium Chloride Solution:

Composition per 10.0mL:

MgCl ₂ ·6H ₂ O	2.0g
--	------

Preparation of Magnesium Chloride Solution: Add MgCl₂·6H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. A white colloid will dissolve after mixing. Autoclave for 15 min at 15 psi pressure–121°C.

Thiosulfate Solution:

Composition per liter:

Na ₂ S ₂ O ₃ ·5H ₂ O	9.92g
--	-------

Preparation of Thiosulfate Solution: Add Na₂S₂O₃·5H₂O to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Ammonium Chloride Solution:

Composition per 10.0mL:

NH ₄ Cl	0.27g
--------------------------	-------

Preparation of Ammonium Chloride Solution: Add NH₄Cl to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Preparation of Medium: Aseptically add 20.0mL sterile thiosulfate solution, 10.0mL sterile ammonium chloride solution, 2.0mL sterile trace elements solution, and 1.0mL sterile magnesium chloride solution to 967.0mL sterile mineral base. Aseptically distribute to sterile tubes, flasks, or bottles.

Use: For the cultivation of *Thialkalivibrio thiooxydans* DSM 13541.

Alkaliphilic Sulphur Respiring Strains Medium (DSMZ Medium 925)

Composition per liter:

Mineral base.....	967.0mL
Thiosulfate solution	20.0mL
Potassium nitrate solution.....	10.0mL
Trace elements solution	2.0mL
Magnesium chloride solution	1.0mL
pH 10.0 ± 0.2 at 25°C	

Mineral Base:**Composition per liter:**

Na ₂ CO ₃	20.0g
NaHCO ₃	10.0g
NaCl	5.0g
K ₂ HPO ₄	1.0g

Preparation of Mineral Base: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Autoclave for 20 min at 110°C. The pH should be about 10.0.

Trace Elements Solution:**Composition per liter:**

H ₃ BO ₃	300.0mg
CoCl ₂ ·6H ₂ O	200.0mg
ZnSO ₄ ·7H ₂ O	100.0mg
MnCl ₂ ·4H ₂ O	30.0mg
Na ₂ MoO ₄ ·4H ₂ O	30.0mg
NiCl ₂ ·6H ₂ O	20.0mg
CuCl ₂ ·2H ₂ O	10.0mg
EDTA	5.0mg
FeSO ₄ ·7H ₂ O	2.0mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Adjust pH to 3.0 with HCl. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Magnesium Chloride Solution:**Composition per 10.0mL:**

MgCl ₂ ·6H ₂ O	2.0g
--	------

Preparation of Magnesium Chloride Solution: Add MgCl₂·6H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. A white colloid will dissolve after mixing. Autoclave for 15 min at 15 psi pressure–121°C.

Thiosulfate Solution:**Composition per liter:**

Na ₂ S ₂ O ₃ ·5H ₂ O	9.92g
--	-------

Preparation of Thiosulfate Solution: Add Na₂S₂O₃·5H₂O to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Potassium Nitrate Solution:**Composition per 100.0mL:**

KNO ₃	10.1g
------------------------	-------

Preparation of Potassium Nitrate Solution: Add KNO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Preparation of Medium: Aseptically add 20.0mL sterile thiosulfate solution, 10.0mL sterile potassium nitrate solution, 2.0mL sterile trace elements solution, and 1.0mL sterile magnesium chloride solution to 967.0mL sterile mineral base. Aseptically distribute to sterile tubes, flasks, or bottles.

Use: For the cultivation of *Thi alkalivibrio paradoxus* DSM 13542.

Alkaliphilic Sulphur Respiring Strains Medium (DSMZ Medium 925)

Composition per liter:

Mineral base	967.0mL
Thiosulfate solution	20.0mL

KSCN solution	10.0mL
Trace elements solution	2.0mL
Magnesium chloride solution	1.0mL
pH 10.0 ± 0.2 at 25°C	

Mineral Base:**Composition per liter:**

Na ₂ CO ₃	20.0g
NaHCO ₃	10.0g
NaCl	5.0g
K ₂ HPO ₄	1.0g

Preparation of Mineral Base: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Autoclave for 20 min at 110°C. The pH should be about 10.0.

Trace Elements Solution:**Composition per liter:**

H ₃ BO ₃	300.0mg
CoCl ₂ ·6H ₂ O	200.0mg
ZnSO ₄ ·7H ₂ O	100.0mg
MnCl ₂ ·4H ₂ O	30.0mg
Na ₂ MoO ₄ ·4H ₂ O	30.0mg
NiCl ₂ ·6H ₂ O	20.0mg
CuCl ₂ ·2H ₂ O	10.0mg
EDTA	5.0mg
FeSO ₄ ·7H ₂ O	2.0mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Adjust pH to 3.0 with HCl. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Magnesium Chloride Solution:**Composition per 10.0mL:**

MgCl ₂ ·6H ₂ O	2.0g
--	------

Preparation of Magnesium Chloride Solution: Add MgCl₂·6H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. A white colloid will dissolve after mixing. Autoclave for 15 min at 15 psi pressure–121°C.

Thiosulfate Solution:**Composition per liter:**

Na ₂ S ₂ O ₃ ·5H ₂ O	9.92g
--	-------

Preparation of Thiosulfate Solution: Add Na₂S₂O₃·5H₂O to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

KSCN Solution:**Composition per 10.0mL:**

KSCN	0.5g
------------	------

Preparation of KSCN Solution: Add KSCN to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Preparation of Medium: Aseptically add 20.0mL sterile thiosulfate solution, 10.0mL sterile KSCN solution, 2.0mL sterile trace elements solution, and 1.0mL sterile magnesium chloride solution to 967.0mL sterile mineral base. Aseptically distribute to sterile tubes, flasks, or bottles.

Use: For the cultivation of *Thi alkalivibrio* sp. DSM 13533.

Alkaliphilic Sulphur Respiring Strains Medium (DSMZ Medium 925)

Composition per liter:

Mineral base.....	967.5mL
Thiosulfate solution	20.0mL
KSCN solution.....	10.0mL
Trace elements solution	2.0mL
Magnesium chloride solution.....	0.5mL
pH 10.0 ± 0.2 at 25°C	

Mineral Base:

Composition per liter:

Na ₂ CO ₃	20.0g
NaHCO ₃	10.0g
NaCl.....	5.0g
K ₂ HPO ₄	1.0g

Preparation of Mineral Base: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Autoclave for 20 min at 110°C. The pH should be about 10.0.

Trace Elements Solution:

Composition per liter:

H ₃ BO ₃	300.0mg
CoCl ₂ ·6H ₂ O	200.0mg
ZnSO ₄ ·7H ₂ O	100.0mg
MnCl ₂ ·4H ₂ O.....	30.0mg
Na ₂ MoO ₄ ·4H ₂ O	30.0mg
NiCl ₂ ·6H ₂ O.....	20.0mg
CuCl ₂ ·2H ₂ O	10.0mg
EDTA.....	5.0mg
FeSO ₄ ·7H ₂ O.....	2.0mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Adjust pH to 3.0 with HCl. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Magnesium Chloride Solution:

Composition per 10.0mL:

MgCl ₂ ·6H ₂ O.....	2.0g
---	------

Preparation of Magnesium Chloride Solution: Add MgCl₂·6H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. A white colloid will dissolve after mixing. Autoclave for 15 min at 15 psi pressure–121°C.

Thiosulfate Solution:

Composition per liter:

Na ₂ S ₂ O ₃ ·5H ₂ O	9.92g
--	-------

Preparation of Thiosulfate Solution: Add Na₂S₂O₃·5H₂O to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

KSCN Solution:

Composition per 10.0mL:

KSCN.....	0.5g
-----------	------

Preparation of KSCN Solution: Add KSCN to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Preparation of Medium: Aseptically add 20.0mL sterile thiosulfate solution, 10.0mL sterile KSCN solution, 2.0mL sterile trace elements solution, and 0.5mL sterile magnesium chloride solution to

967.5mL sterile mineral base. Aseptically distribute to sterile tubes, flasks, or bottles.

Use: For the cultivation of *Thioalkalivibrio versutus* DSM 13738, *Thioalkalivibrio versutus* DSM 13741, and *Thioalkalivibrio denitrificans*.

Alkaliphilic Sulphur Respiring Strains Medium (DSMZ Medium 925)

Composition per liter:

Mineral base.....	947.5mL
Thiosulfate solution	40.0mL
KSCN solution.....	10.0mL
Trace elements solution	2.0mL
Magnesium chloride solution	0.5mL
pH 10.0 ± 0.2 at 25°C	

Mineral Base:

Composition per liter:

Na ₂ CO ₃	20.0g
NaHCO ₃	10.0g
NaCl.....	5.0g
K ₂ HPO ₄	1.0g

Preparation of Mineral Base: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Autoclave for 20 min at 110°C. The pH should be about 10.0.

Trace Elements Solution:

Composition per liter:

H ₃ BO ₃	300.0mg
CoCl ₂ ·6H ₂ O	200.0mg
ZnSO ₄ ·7H ₂ O	100.0mg
MnCl ₂ ·4H ₂ O	30.0mg
Na ₂ MoO ₄ ·4H ₂ O	30.0mg
NiCl ₂ ·6H ₂ O.....	20.0mg
CuCl ₂ ·2H ₂ O	10.0mg
EDTA.....	5.0mg
FeSO ₄ ·7H ₂ O.....	2.0mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Adjust pH to 3.0 with HCl. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Magnesium Chloride Solution:

Composition per 10.0mL:

MgCl ₂ ·6H ₂ O.....	2.0g
---	------

Preparation of Magnesium Chloride Solution: Add MgCl₂·6H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. A white colloid will dissolve after mixing. Autoclave for 15 min at 15 psi pressure–121°C.

Thiosulfate Solution:

Composition per liter:

Na ₂ S ₂ O ₃ ·5H ₂ O	9.92g
--	-------

Preparation of Thiosulfate Solution: Add Na₂S₂O₃·5H₂O to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

KSCN Solution:

Composition per 10.0mL:

KSCN.....	0.5g
-----------	------

Preparation of KSCN Solution: Add KSCN to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Preparation of Medium: Aseptically add 40.0mL sterile thiosulfate solution, 10.0mL sterile KSCN solution, 2.0mL sterile trace elements solution, and 0.5mL sterile magnesium chloride solution to 947.5mL sterile mineral base. Aseptically distribute to sterile tubes, flasks, or bottles.

Use: For the cultivation of *Thiokalimicrobium aerophilum* (*Thioalkalimicrobium aerophilum*) DSM 13739 and *Thiokalimicrobium sibiricum* (*Thioalkalimicrobium sibiricum*) DSM 13740.

Alkaliphilic *Thermococcus Medium* (DSMZ Medium 926)

Composition per 1082.0mL:

Base solution.....	1000.0mL
Glycine solution.....	50.0mL
Yeast extract solution.....	20.0mL
Polysulfide solution.....	12.0mL

Base Solution:

Composition per 2000.0mL:

NaCl.....	27.7g
MgSO ₄ ·7H ₂ O.....	7.0g
MgCl ₂ ·6H ₂ O.....	5.5g
K ₂ HPO ₄	1.0g
KCl.....	0.65g
NaHCO ₃	0.32g
NaBr.....	0.1g
H ₃ BO ₃	0.03g
KI.....	15.0mg
CaCl ₂ ·2H ₂ O.....	0.05mg
Trace elements solution.....	20.0mL

Preparation of Base Solution: Sparge 2.0L of distilled/deionized water with 100% N₂ to remove O₂. Add components to 2000.0mL of O₂-free distilled/deionized water. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Do not adjust the pH.

Trace Elements Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O.....	3.0g
Nitritotriacetic acid.....	1.5g
NaCl.....	1.0g
MnSO ₄ ·2H ₂ O.....	0.5g
CoSO ₄ ·7H ₂ O.....	0.18g
ZnSO ₄ ·7H ₂ O.....	0.18g
CaCl ₂ ·2H ₂ O.....	0.1g
FeSO ₄ ·7H ₂ O.....	0.1g
NiCl ₂ ·6H ₂ O.....	0.025g
KAl(SO ₄) ₂ ·12H ₂ O.....	0.02g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·4H ₂ O.....	0.01g
CuSO ₄ ·5H ₂ O.....	0.01g
Na ₂ SeO ₃ ·5H ₂ O.....	0.3mg

Preparation of Trace Elements Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Polysulfide Solution:

Composition per 100.0mL:

Na ₂ S·9H ₂ O.....	1.2g
Sulfur.....	0.16g

Preparation of Polysulfide Solution: Sparge 100.0mL distilled/deionized water with 100% N₂. Add Na₂S·9H₂O. Mix thoroughly. Add sulfur. The solution will be dark yellow. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Yeast Extract Solution:

Composition per 100.0mL:

Yeast extract.....	10.0g
--------------------	-------

Preparation of Yeast Extract Solution: Add yeast extract to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Glycine Solution:

Composition per 100.0mL:

Glycine.....	15.0g
--------------	-------

Preparation of Glycine Solution: Add glycine to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Preparation of Medium: Aseptically and anaerobically add 50.0mL sterile glycine solution, 20.0mL sterile yeast extract solution, and 12.0mL sterile polysulfide solution to 1.0L sterile base solution. Mix thoroughly. Aseptically and anaerobically distribute to sterile tubes or bottles. Do not adjust pH.

Use: For the cultivation of *Thermococcus alcaliphilus* DSM 10322.

Alkaliphilic *Thermococcus Medium* (DSMZ Medium 926)

Composition per 1082.0mL:

Base solution.....	1000.0mL
Casamino acids solution.....	20.0mL
Polysulfide solution.....	8.0mL

Base Solution:

Composition per 2000.0mL:

NaCl.....	27.7g
MgSO ₄ ·7H ₂ O.....	7.0g
MgCl ₂ ·6H ₂ O.....	5.5g
K ₂ HPO ₄	1.0g
KCl.....	0.65g
NaHCO ₃	0.32g
NaBr.....	0.1g
H ₃ BO ₃	0.03g
KJ.....	15.0mg
CaCl ₂ ·2H ₂ O.....	0.05mg
Trace elements solution.....	20.0mL

Preparation of Base Solution: Sparge 2.0L of distilled/deionized water with 100% N₂ to remove O₂. Add components to 2000.0mL of O₂-free distilled/deionized water. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Do not adjust the pH.

Trace Elements Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O.....	3.0g
Nitritotriacetic acid.....	1.5g

NaCl	1.0g
MnSO ₄ ·2H ₂ O	0.5g
CoSO ₄ ·7H ₂ O	0.18g
ZnSO ₄ ·7H ₂ O	0.18g
CaCl ₂ ·2H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g
NiCl ₂ ·6H ₂ O	0.025g
KAl(SO ₄) ₂ ·12H ₂ O	0.02g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·4H ₂ O	0.01g
CuSO ₄ ·5H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O	0.3mg

Preparation of Trace Elements Solution: Add nitilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Polysulfide Solution:

Composition per 100.0mL:

Na ₂ S·9H ₂ O	1.2g
Sulfur	0.16g

Preparation of Polysulfide Solution: Sparge 100.0mL distilled/deionized water with 100% N₂. Add Na₂S·9H₂O. Mix thoroughly. Add sulfur. The solution will be dark yellow. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Casamino Acids Solution:

Composition per 100.0mL:

Casamino acids	10.0g
----------------------	-------

Preparation of Casamino Acids Solution: Add casamino acids to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Preparation of Medium: Aseptically and anaerobically add 20.0mL sterile casamino acids solution, and 12.0mL sterile polysulfide solution to 1.0L sterile base solution. Mix thoroughly. Aseptically and anaerobically distribute to sterile tubes or bottles. There may be precipitation of material and the medium will turn pale yellow due to the addition of the polysulfide. The color will disappear as the strain grows. Do not adjust pH.

Use: For the cultivation of *Thermococcus acidaminovorans* DSM 11096.

Alkalophile Medium

Composition per liter:

Agar	15.0g
Peptone	5.0g
NaCl	5.0g
Yeast extract	2.0g
Beef extract	1.0g
Sodium sesquicarbonate solution	15.0mL
pH 9.5 ± 0.2 at 25°C	

Sodium Sesquicarbonate Solution:

Composition per 100.0mL:

Sodium sesquicarbonate	9.0g
------------------------------	------

Preparation of Sodium Sesquicarbonate Solution: Add sodium sesquicarbonate to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except sodium sesquicarbonate solution, to distilled/deionized water and bring volume to

985.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 15.0mL of filter-sterilized sodium sesquicarbonate solution to adjust pH to 9.5. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Bacillus alcalophilus*, *Bacillus circulans*, *Bacillus submarinus*, and other *Bacillus* species.

Alkalophilic Halophile Agar

Composition per liter:

Solution A	500.0mL
Solution B	500.0mL
pH 9.5 ± 1.0 at 25°C	

Solution A:

Composition per 500.0mL:

NaCl	200.0g
Na ₂ CO ₃ ·10H ₂ O	50.0g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C.

Solution B:

Composition per liter:

Agar	20.0g
Yeast extract	10.0g
Casamino acids	7.5g
Trisodium citrate	3.0g
KCl	2.0g
MgSO ₄ ·7H ₂ O	1.0g
FeSO ₄ ·7H ₂ O	50.0mg
MnCl ₂ ·4H ₂ O	0.36mg

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C.

Preparation of Medium: Aseptically combine 500.0mL of solution A with 500.0mL of solution B. Mix thoroughly. Bring pH to 9.5. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Natronobacterium gregoryi*, *Natronobacterium magadii*, *Natronobacterium pharaonis*, *Natronobacterium vacuolata*, and *Natronococcus occultus*.

Alkalophilic Halophile Broth

Composition per liter:

Solution A	500.0mL
Solution B	500.0mL
pH 9.5 ± 1.0 at 25°C	

Solution A:

Composition per 500.0mL:

NaCl	200.0g
Na ₂ CO ₃ ·10H ₂ O	50.0g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B:

Composition per liter:

Yeast extract	10.0g
Casamino acids	7.5g
Trisodium citrate	3.0g

KCl.....	2.0g
MgSO ₄ ·7H ₂ O.....	1.0g
FeSO ₄ ·7H ₂ O.....	50.0mg
MnCl ₂ ·4H ₂ O.....	0.36mg

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Aseptically combine 500.0mL of solution A with 500.0mL of solution B. Mix thoroughly. Bring pH to 9.5. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Natronobacterium gregoryi*, *Natronobacterium magadii*, *Natronobacterium pharaonis*, *Natronobacterium vacuolata*, and *Natronococcus occultus*.

Alkvisco Medium

Composition per liter:

Agar.....	15.0g
Beef extract.....	10.0g
Peptone.....	10.0g
NaCl.....	5.0g
Acrylonitrile.....	0.5g
KCN.....	10.0mg

pH 6.5–8.0 at 25°C

Caution: Cyanide is toxic. Acrylonitrile is a carcinogen; use appropriate precautions.

Preparation of Medium: Add components, except acrylonitrile, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 10 min at 15 psi pressure–121°C. Add acrylonitrile to 20.0mL of distilled/deionized water and filter sterilize. Add aseptically to the sterile basal medium.

Use: For the cultivation and maintenance of *Bacillus subtilis* and *Corynebacterium* species.

Allantoin Agar

Composition per liter:

Agar.....	15.0g
Na ₂ HPO ₄ ·12H ₂ O.....	9.0g
NaCl.....	5.0g
KH ₂ PO ₄	1.5g
Meat extract.....	1.0g
Yeast extract.....	1.0g
MgSO ₄ ·7H ₂ O.....	0.2g
MnCl ₂ ·4H ₂ O.....	20.0mg
CaCl ₂	1.2mg
Glucose-allantoin solution.....	100.0mL

Glucose-Allantoin Solution:

Composition per 100.0mL:

Glucose.....	5.0g
Allantoin.....	1.0g

Preparation of Glucose-Allantoin Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Warm to 50°C.

Preparation of Medium: Add components, except glucose-allantoin solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 100.0mL of sterile glucose-allantoin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Bacillus* species.

Allantoin Broth

Composition per liter:

Na ₂ HPO ₄ ·12H ₂ O.....	9.0g
NaCl.....	5.0g
KH ₂ PO ₄	1.5g
Meat extract.....	1.0g
Yeast extract.....	1.0g
MgSO ₄ ·7H ₂ O.....	0.2g
MnCl ₂ ·4H ₂ O.....	20.0mg
CaCl ₂	1.2mg
Glucose-allantoin solution.....	100.0mL

Glucose-Allantoin Solution:

Composition per 100.0mL:

Glucose.....	5.0g
Allantoin.....	1.0g

Preparation of Glucose-Allantoin Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except glucose-allantoin solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 100.0mL of sterile glucose-allantoin solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Bacillus* species.

Allantoin Mineral Medium

Composition per liter:

Allantoin.....	20.0g
Agar.....	15.0g
K ₂ HPO ₄	0.8g
MgSO ₄ ·7H ₂ O.....	0.5g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O.....	0.05g
FeSO ₄ ·7H ₂ O.....	0.01g
MnSO ₄ ·H ₂ O.....	1.0mg

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Bacillus fastidiosus*, *Bacillus* species, *Mycobacterium vaccae*, and *Saccharopolyspora rectivirgula*.

Allen and Arnon Medium with Nitrate

Composition per 1000.25mL:

Noble agar.....	10.0g
KNO ₃	0.253g
NaNO ₃	0.212g
Solution A.....	25.0mL
Solution B.....	6.25mL

Solution A:

Composition per 2.0L:

MgSO ₄ ·7H ₂ O (4% solution).....	500.0mL
CaCl ₂ ·2H ₂ O (1.2% solution).....	500.0mL
NaCl (3.8% solution).....	500.0mL
Microelements stock solution.....	500.0mL

Preparation of Solution A: Prepare individual solutions and combine.

Microelements Stock Solution:

Composition per 1090.0mL:

H ₃ BO ₃	572.0mg
MnCl ₂ ·4H ₂ O.....	360.0mg
ZnSO ₄ ·7H ₂ O	44.0mg
MoO ₃	36.0mg
CuSO ₄ ·5H ₂ O	15.8mg
CoCl ₂ ·6H ₂ O	8.0mg
NH ₄ VO ₃	4.6mg
A & A FeEDTA solution	160.0mL

Preparation of Microelements Stock Solution: Add components to distilled/deionized water and bring volume to 1090.0mL. Mix well.

A & A FeEDTA Solution:

Composition per 550.0mL:

Disodium EDTA·2H ₂ O	20.4g
FeSO ₄ ·7H ₂ O.....	13.7g
KOH.....	5.2g

Preparation of A & A FeEDTA Solution: Dissolve 5.2g of KOH in 186.0mL of distilled/deionized water. Add 20.4g of disodium EDTA·2H₂O. Add 13.7g of FeSO₄·7H₂O to 364.0mL of distilled/deionized water. Combine the EDTA solution with the FeSO₄ solution. Sparge solution with filtered air until color changes. The pH is about 3.5.

Solution B:

Composition per 500.0mL:

K ₂ HPO ₄	28.0g
---------------------------------------	-------

Preparation of Solution B: Add K₂HPO₄ to distilled/deionized water and bring volume to 500.0mL.

Preparation of Medium: Add agar, KNO₃, and NaNO₃ to distilled/deionized water and bring volume to 969.0mL. Mix thoroughly. Gently heat and bring to boiling. Add 25.0mL of solution A. Autoclave for 15 min at 15 psi pressure–121°C. Add 6.25mL of solution B aseptically after sterilization.

Use: For the cultivation and maintenance of *Anabaena* species and *Nostoc* species.

**Allisonella Medium
(DSMZ Medium 1006)**

Composition per liter:

DL-Histidine	7.8g
Na ₂ CO ₃	4.0g
Yeast extract.....	4.0g
Trypticase.....	1.0g
(NH ₄) ₂ SO ₄	480.0mg
NaCl.....	480.0mg
K ₂ HPO ₄	292.0mg
KH ₂ PO ₄	292.0mg
MgSO ₄ ·7H ₂ O	100.0mg
CaCl ₂ ·2H ₂ O.....	64.0mg
Resazurin	1.0mg
Cysteine solution.....	10.0mL
Volatile fatty acid mixture.....	3.1mL

pH 6.0 ± 0.2 at 25°C

Cysteine Solution:

Composition per 10.0mL:

L-Cysteine·HCl·H ₂ O	0.5g
---------------------------------------	------

Preparation of Cysteine Solution: Add L-cysteine·HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Volatile Fatty Acid Mixture:

Composition per 7.75mL:

Acetic acid	4.25mL
Propionic acid.....	1.50mL
Butyric acid.....	1.0mL
DL-2-Methyl butyric acid.....	0.25mL
iso-Butyric acid.....	0.25mL
iso-Valeric acid	0.25mL
n-Valeric acid.....	0.25mL

Preparation of Volatile Fatty Acid Mixture: Combine components. Mix thoroughly.

Preparation of Medium: Add components, except cysteine solution, volatile fatty acid mixture, and bicarbonate, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Boil for several minutes. Cool to room temperature while sparging with 100% CO₂. Add the solid Na₂CO₃ and 3.1 mL volatile fatty acid mixture and 10.0mL cysteine solution. Adjust the pH to 6.0. Distribute into serum bottles or Hungate tubes under 100% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the maintenance or cultivation of *Allisonella* spp.

Almond Curd Agar

Composition per 4–6 servings:

Almonds.....	0.5 pound
Agar	0.5 cup
Sweetened water	2.0 cups

Sweetened Water:

Composition per 2.0 cups:

Sucrose.....	0.5 cup
--------------	---------

Preparation of Sweetened Water: Bring 2.0 cups of tap water to boiling. Add sucrose. Mix thoroughly until dissolved. Cool to 4°C.

Preparation of Medium: Blanch and skin almonds. Add 0.25 pound in blender with 2.0 cups of tap water. Blend to a paste. Filter through two layers of cheesecloth. Squeeze cheesecloth to obtain all liquid. Discard solids. Repeat process with remaining 0.25 pound of almonds and 2.0 cups of tap water. In a separate container add agar to 3.0 cups of water. Gently heat and bring to boiling. Boil while stirring continuously until agar dissolves and begins to thicken. Add almond filtrate. Cook for 1 min. Pour into a rectangular pan. Cool to room temperature. Bring curd to 4°C. Prior to utilization, cut into cubes or diamond shapes. Place approximately 0.25 cup sweetened water into a container and add almond curd cubes.

Use: For the refreshment and culinary enjoyment of microbiologists.

**ALOA Medium
(Agar *Listeria Ottavani* & Agosti)
(BAM M10a)**

Composition per liter:

Agar	18.0g
Peptone	18.0g
LiCl.....	10.0g
Yeast extract.....	10.0g
Tryptone.....	6.0g
NaCl.....	5.0g

Na ₂ HPO ₄	2.5g
Na-pyruvate	2.0g
Glucose	2.0g
Mg-glycerophosphate	1.0g
MgSO ₄	0.5g
5-Bromo4-chloro-indolyl-β-D-glucopyranoside.....	0.05g
Phosphatidylinositol solution.....	50.0mL
Nalidixic acid solution.....	5.0mL
Ceftazidime solution.....	5.0mL
Cycloheximide solution.....	5.0mL
Polymyxin B solution.....	5.0mL

pH 7.2 ± 0.2 at 25°C

Nalidixic Acid Solution:**Composition per 5.0mL:**

Nalidixic acid.....	0.02g
---------------------	-------

Preparation of Nalidixic Acid Solution: Add nalidixic acid to distilled/deionized water and bring volume to 5.0mL. Mix thoroughly. Filter sterilize.

Ceftazidime Solution:**Composition per 5.0mL:**

Ceftazidime.....	0.02g
------------------	-------

Preparation of Ceftazidime Solution: Add ceftazidime to distilled/deionized water and bring volume to 5.0mL. Mix thoroughly. Filter sterilize.

Cycloheximide Solution:**Composition per 5.0mL:**

Cycloheximide.....	0.05g
Ethanol.....	2.5mL

Preparation of Cycloheximide Solution: Add cycloheximide to 2.5mL of ethanol. Mix thoroughly. Bring volume to 5.0mL with distilled/deionized water. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Polymyxin B Solution:**Composition per 5.0mL:**

Polymyxin B.....	76700U
------------------	--------

Preparation of Polymyxin B Solution: Add polymyxin B to distilled/deionized water and bring volume to 5.0mL. Mix thoroughly. Filter sterilize.

Phosphatidylinositol Solution:**Composition per 50.0mL:**

L-α-phosphatidylinositol.....	2.0g
-------------------------------	------

Preparation of Phosphatidylinositol Solution: Add L-α-phosphatidylinositol to cold distilled/deionized water and bring volume to 50.0mL. Stir for 30 min so a homogeneous suspension is obtained. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 48–50°C.

Preparation of Medium: Add components, except phosphatidylinositol solution, nalidixic acid solution, ceftazidime solution, cycloheximide solution, and polymyxin B solution, to distilled/deionized water and bring volume to 930.0mL. Mix thoroughly. Adjust the pH to 7.2. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50.0mL sterile phosphatidylinositol solution, 5.0mL sterile nalidixic acid solution, 5.0mL sterile ceftazidime solution, 5.0mL sterile cycloheximide solution, and 5.0mL sterile polymyxin B solution. Mix thoroughly. Pour into Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of *Listeria* spp.

ALOA Medium
(Agar *Listeria* Ottavani & Agosti)
(BAM M10a)

Composition per liter:

Agar.....	18.0g
Peptone.....	18.0g

pH 7.2 ± 0.2 at 25°C

Nalidixic Acid Solution:**Composition per 5.0mL:**

Nalidixic acid.....	0.02g
---------------------	-------

Preparation of Nalidixic Acid Solution: Add nalidixic acid to distilled/deionized water and bring volume to 5.0mL. Mix thoroughly. Filter sterilize.

Ceftazidime Solution:**Composition per 5.0mL:**

Ceftazidime.....	0.02g
------------------	-------

Preparation of Ceftazidime Solution: Add ceftazidime to distilled/deionized water and bring volume to 5.0mL. Mix thoroughly. Filter sterilize.

Amphotericin B Solution:**Composition per 10.0mL:**

Amphotericin B.....	0.01g
Dimethylformamide.....	7.5mL
HCL, 1M.....	2.5mL

Preparation of Amphotericin B Solution: Add amphotericin B to 2.5mL of 1M HCl. Mix thoroughly. Add 7.5 mL of dimethylformamide. Mix thoroughly. Filter sterilize.

Polymyxin B Solution:**Composition per 5.0mL:**

Polymyxin B.....	76700U
------------------	--------

Preparation of Polymyxin B Solution: Add polymyxin B to distilled/deionized water and bring volume to 5.0mL. Mix thoroughly. Filter sterilize.

Phosphatidylinositol Solution:**Composition per 50.0mL:**

L-α-phosphatidylinositol.....	2.0g
-------------------------------	------

Preparation of Phosphatidylinositol Solution: Add L-α-phosphatidylinositol to cold distilled/deionized water and bring volume to 50.0mL. Stir for 30 min so a homogeneous suspension is obtained. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 48–50°C.

Preparation of Medium: Add components, except phosphatidylinositol solution, nalidixic acid solution, ceftazidime solution, am-

photicin B solution, and polymyxin B solution, to distilled/deionized water and bring volume to 920.0mL. Mix thoroughly. Adjust the pH to 7.2. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50.0mL sterile phosphatidylinositol solution, 5.0mL sterile nalidixic acid solution, 5.0mL sterile cetazidime solution, 10.0mL sterile amphotericin B solution, and 5.0mL sterile polymyxin B solution. Mix thoroughly. Pour into Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of *Listeria* spp. For the isolation and cultivation of *Listeria* spp. according to ISO standard 11290.

ALP Basal Medium (Aerobic Low Peptone Basal Medium)

Composition per liter:

Agar	15.0g
(NH ₄) ₂ SO ₄	1.0g
Pancreatic digest of casein.....	0.5g
Yeast extract.....	0.5g
MgSO ₄ ·7H ₂ O.....	0.2g
KCl.....	0.2g
Phenol Red.....	0.02g
Substrate solution.....	50.0mL

pH 7.8 ± 0.2 at 25°C

Substrate Solution:

Composition per 50.0mL:

Substrate.....	0.1g
----------------	------

Preparation of Substrate Solution: Add substrate to distilled/deionized water and bring volume to 50.0mL. Use sugars, carbohydrates, *n*-butanol, other alcohols, or any acidogenic carbon source. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except substrate solution, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.8. Distribute into screw-capped tubes in 3.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 0.15mL of sterile substrate solution to each tube. Mix thoroughly. Allow tubes to cool in a slanted position.

Use: For the cultivation and differentiation of microorganisms based on their ability to utilize a variety of carbon sources such as carbohydrates, alcohols, and other acidogenic substrates.

ALP Basal Medium Low pH (Aerobic Low Peptone Basal Medium)

Composition per liter:

Agar	15.0g
(NH ₄) ₂ SO ₄	1.0g
Pancreatic digest of casein.....	0.5g
Yeast extract.....	0.5g
Glucose.....	0.2g
MgSO ₄ ·7H ₂ O.....	0.2g
KCl.....	0.2g
Phenol Red.....	0.02g
Substrate solution.....	50.0mL

pH 6.5 ± 0.2 at 25°C

Substrate Solution:

Composition per 50.0mL:

Substrate.....	0.1g
----------------	------

Preparation of Substrate Solution: Add substrate to distilled/deionized water and bring volume to 50.0mL. Use gelatin, aliphatic acids, or any alkalogenic carbon source. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except substrate solution, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 6.5. Distribute into screw-capped tubes in 3.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 0.15mL of sterile substrate solution to each tube. Mix thoroughly. Allow tubes to cool in a slanted position.

Use: For the cultivation and differentiation of microorganisms based on their ability to utilize a variety of carbon sources such as gelatin, aliphatic acids, and other alkalophilic substrates.

Alternative Thioglycollate Medium (NIH Thioglycollate Broth)

Composition per liter:

Casein enzymatic hydrolysate	15.0g
Glucose.....	5.5g
Yeast extract.....	5.0g
NaCl.....	2.5g
L-Cystine.....	0.5g
Sodium thioglycollate.....	0.5g

pH 7.1 ± 0.1 at 25°C

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 10 min at 15 psi pressure–121°C.

Use: For the sterility testing of certain biological products that are turbid or viscous.

Alternative Thioglycollate Medium

Composition per liter:

Plant hydrolysate	15.0g
Glucose.....	5.5g
Yeast extract.....	5.0g
NaCl.....	2.5g
L-Cystine.....	0.5g
Sodium thioglycollate.....	0.5g

pH 7.1 ± 0.1 at 25°C

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 10 min at 15 psi pressure–121°C.

Use: For the sterility testing of certain biological products that are turbid or viscous.

Alteromonas denitrificans Medium

Composition per liter:

Peptone.....	0.5g
Pancreatic digest of casein.....	0.5g
Yeast extract.....	0.5g
Aged seawater.....	800.0mL

Preparation of Medium: Add components, except aged seawater, to tap water and bring volume to 200.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 800.0mL of filter-sterilized aged seawater. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Alteromonas denitrificans*.

***Alteromonas Medium* (LMG Medium 28)**

Composition per 1012mL:

Agar base	1.0L
Methanol	10.0mL
Solution A	1.0mL
Solution B	1.0mL

pH 7.0± 0.2 at 25°C

Agar Base:

Composition per liter:

NaCl	20.0g
Agar	15.0g
(NH ₄) ₂ SO ₄	2.0g
K ₂ HPO ₄	2.0g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.3g

Preparation of Agar Base: Add components to 1.0L of distilled/deionized water. Mix thoroughly.

Solution A:

Composition per 100.0mL:

MnSO ₄ ·2H ₂ O	76mg
FeSO ₄ ·7H ₂ O	28mg
CuSO ₄ ·5H ₂ O	25mg
Na ₂ MoO ₄ ·2H ₂ O	24mg
CoCl ₂ ·6H ₂ O	24mg
CaCl ₂ ·2H ₂ O	15mg
ZnSO ₄ ·7H ₂ O	0.14mg

Preparation of Solution A: Add components to 100.0mL of distilled/deionized water. Mix thoroughly.

Solution B:

Composition per 100.0mL:

Vitamin B ₁₂	0.1mg
-------------------------------	-------

Preparation of Solution B: Add Vitamin B₁₂ to 100.0mL of distilled/deionized water. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add 1.0mL Solution A to 1.0L Agar Base. Mix thoroughly. Adjust pH to 7.0. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 1.0mL sterile Solution B and 10.0mL filter-sterilized methanol. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Alteromonas* spp.

AMB Agar

Composition per liter:

Agar	15.0g
Starch, soluble	5.0g
Pancreatic digest of casein	2.5g
MgSO ₄ ·7H ₂ O	0.5g
K ₂ HPO ₄	0.25g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of myxobacteria.

AMB Broth

Composition per liter:

Starch, soluble	5.0g
Pancreatic digest of casein	2.5g
MgSO ₄ ·7H ₂ O	0.5g
K ₂ HPO ₄	0.25g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of myxobacteria.

AMB Medium

Composition per liter:

Meat infusion	25.0g
K ₂ HPO ₄	15.0g
Glucose	5.0g
Yeast extract	5.0g
Pancreatic digest of casein	4.0g
L-Cysteine	1.0g
(NH ₄) ₂ SO ₄	1.0g
Starch, soluble	1.0g
MgSO ₄	0.2g
CaCl ₂	0.01g

pH 6.9 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Eubacterium alactolyticum*, *Eubacterium budayl*, *Eubacterium moniliforme*, and *Eubacterium tortuosum*.

AMH

(DSMZ Medium 1110)

Composition per liter:

NaCl	20.0g
Sulfur, powdered	5.0g

MgCl ₂ ·6H ₂ O.....	3.0g
KCl.....	0.5g
NH ₄ Cl.....	0.25g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O.....	0.15g
Resazurin.....	0.5mg
Vitamin solution.....	10.0mL
Na ₂ S·9H ₂ O solution.....	10.0mL
NaHCO ₃ solution.....	10.0mL
Trace elements solution SL-10.....	1.0mL
Selenite-tungstate solution.....	1.0mL

pH 7.0 ± 0.2 at 25°C

NaHCO₃ Solution:**Composition** per 10.0mL:

NaHCO ₃	2.5g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 20% CO₂ + 80% H₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Na₂S·9H₂O Solution:**Composition** per 10.0mL:

Na ₂ S·9H ₂ O.....	0.5g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Vitamin Solution:**Composition** per liter:

Pyridoxine-HCl.....	10.0mg
Thiamine-HCl·2H ₂ O.....	5.0mg
Riboflavin.....	5.0mg
Nicotinic acid.....	5.0mg
D-Ca-pantothenate.....	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Lipoic acid.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Selenite/Tungstate Solution:**Composition** per liter:

NaOH.....	0.5g
Na ₂ WO ₄ ·2H ₂ O.....	4.0mg
Na ₂ SeO ₃ ·5H ₂ O.....	3.0mg

Preparation of Selenite/Tungstate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution SL-10:**Composition** per liter:

FeCl ₂ ·4H ₂ O.....	1.5g
CoCl ₂ ·6H ₂ O.....	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	36.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
H ₃ BO ₃	6.0mg

CuCl ₂ ·2H ₂ O.....	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except bicarbonate solution, sulfide solution, sulfur, and vitamin solution, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Gently heat and bring to boiling. Boil for several minutes. Cool to room temperature while sparging with 80% H₂ + 20% CO₂. Add the bicarbonate solution, sulfide solution, and vitamin solution. Distribute into screw-capped tubes or bottles. Autoclave for 15 min at 15 psi pressure–121°C. Place the sulfur in screw-capped tubes or bottles. Autoclave for 15 min at 8 psi pressure–112°C. Before use, aseptically and anoxically layer the sulfur onto the surface of sterile liquid basal medium. Adjust the final pH to 7.0. After inoculation, pressurize culture vials to 1 bar overpressure with 80% H₂ and 20% CO₂ gas mixture.

Use: For the maintenance or cultivation of *Nautilia profundicola*.

Amies Modified Transport Medium with Charcoal**Composition** per liter:

Charcoal.....	10.0g
Agar.....	4.0g
NaCl.....	3.0g
Na ₂ HPO ₄	1.15g
Sodium thioglycolate.....	1.0g
KCl.....	0.2g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O.....	0.1g
MgCl ₂ ·6H ₂ O.....	0.1g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into flasks or tubes. Autoclave for 20 min at 15 psi pressure–121°C. While cooling, turn tubes to uniformly suspend charcoal.

Use: For the transport of swab specimens to prolong the survival of microorganisms, especially *Neisseria gonorrhoeae*, between collection and culturing. Addition of charcoal to this medium neutralizes metabolic products that may be toxic to *Neisseria gonorrhoeae*.

Amies Modified Transport Medium with Charcoal**Composition** per liter:

Charcoal.....	10.0g
NaCl.....	8.0g
Agar.....	3.6g
Na ₂ HPO ₄	1.15g
Sodium thioglycolate.....	1.0g
KCl.....	0.2g
CaCl ₂ ·2H ₂ O.....	0.1g
MgCl ₂ ·6H ₂ O.....	0.1g
KH ₂ PO ₄	0.2g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems and Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into flasks or tubes. Autoclave for 20 min at 15 psi pressure–121°C. While cooling, turn tubes to uniformly suspend charcoal.

Use: For the transport of swab specimens to prolong the survival of microorganisms, especially *Neisseria gonorrhoeae*, between collection and culturing. Addition of charcoal to this medium neutralizes metabolic products that may be toxic to *Neisseria gonorrhoeae*.

Amies Transport Medium without Charcoal

Composition per liter:

Agar	4.0g
NaCl	3.0g
Na ₂ HPO ₄	1.15g
Sodium thioglycolate	1.0g
KCl	0.2g
CaCl ₂ ·2H ₂ O	0.1g
MgCl ₂ ·6H ₂ O	0.1g
KH ₂ PO ₄	0.2g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into flasks or tubes. Autoclave for 20 min at 15 psi pressure–121°C.

Use: For the transport of swab specimens to prolong the survival of microorganisms, especially *Neisseria gonorrhoeae*, between collection and culturing.

Amies Transport Medium without Charcoal

Composition per liter:

NaCl	8.0g
Agar	3.6g
Na ₂ HPO ₄	1.15g
Sodium thioglycolate	1.0g
KCl	0.2g
CaCl ₂ ·2H ₂ O	0.1g
MgCl ₂ ·6H ₂ O	0.1g
KH ₂ PO ₄	0.2g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into flasks or tubes. Autoclave for 20 min at 15 psi pressure–121°C.

Use: For the transport of swab specimens to prolong the survival of microorganisms, especially *Neisseria gonorrhoeae*, between collection and culturing.

Aminiphilus Medium (DSMZ Medium 1082)

Composition per liter:

Trypticase peptone	10.0g
Casamino acids	10.0g

NaCl	1.0g
KCl	0.5g
MgCl ₂ ·6H ₂ O	0.4g
NH ₄ Cl	0.3g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O	0.15g
Resazurin	0.5mg
NaHCO ₃ solution	10.0mL
Vitamin solution	10.0mL
Na ₂ S·9H ₂ O solution	10.0mL
Trace elements solution SL-10	1.0mL

pH 7.1 ± 0.2 at 25°C

NaHCO₃ Solution:

Composition per 10.0mL:

NaHCO ₃	2.5g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 20% CO₂ + 80% H₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Na₂S·9H₂O Solution:

Composition per 100.0mL:

Na ₂ S·9H ₂ O	0.6g
---	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl	10.0mg
Thiamine-HCl·2H ₂ O	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
D-Ca-pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Trace Elements Solution SL-10:

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except $\text{Na}_2\text{S}\cdot 9\text{H}_2\text{O}$ solution, bicarbonate solution, and vitamin solution, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Gently heat and bring to boiling. Boil for several minutes. Cool to room temperature while sparging with 20% CO_2 + 80% N_2 . Dispense into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically and anoxically add the $\text{Na}_2\text{S}\cdot 9\text{H}_2\text{O}$ solution, bicarbonate solution, and vitamin solution. The pH should be 7.1.

Use: For the maintenance or cultivation of *Aminiphilus* spp.

Amino Acid Assay Medium

Composition per liter:

Glucose	50.0g
Sodium acetate	40.0g
NH_4Cl	6.0g
KH_2PO_4	1.2g
K_2HPO_4	1.2g
Asparagine	0.8g
L-Glutamic acid	0.6g
Pyridoxamine-HCl	0.6g
Pyridoxal-HCl	0.6g
DL-Valine	0.5g
L-Lysine-HCl	0.5g
DL-Isoleucine	0.5g
DL-Leucine	0.5g
L-Arginine-HCl	0.5g
DL-Threonine	0.4g
$\text{MgSO}_4\cdot 7\text{H}_2\text{O}$	0.4g
DL-Alanine	0.4g
DL-Phenylalanine	0.2g
L-Tyrosine	0.2g
Lysine	0.2g
L-Aspartic acid	0.2g
DL-Methionine	0.2g
L-Proline	0.2g
L-Histidine-HCl	0.12g
DL-Serine	0.1g
L-Cystine	0.1g
DL-Tryptophan	0.08g
$\text{MnSO}_4\cdot 7\text{H}_2\text{O}$	0.04g
FeSO_4	0.02g
NaCl	0.02g
Adenine sulfate	0.02g
Guanine-HCl	0.02g
Uracil	0.02g
Xanthine	0.02g
Nicotinic acid	2.0mg
Pyridoxine-HCl	2.0mg
Thiamine-HCl	1.0mg
Calcium pantothenate	1.0mg
Riboflavin	1.0mg
<i>p</i> -Aminobenzoic acid	0.2mg
Folic acid	0.02mg
Biotin	2.0 μ g

pH 6.7 \pm 0.2 at 25°C

Source: This medium is available, without cystine, lysine, or methionine, as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to 1.0L of distilled water, omitting the specific amino acid to be assayed for in the procedure. Heat to boiling for 2–3 min. Distribute into tubes. Autoclave for 10 min at 15 psi pressure–121°C.

Use: For the microbiological assay for amino acids. *Pediococcus acidilactici* ATCC 8042 and *Enterococcus hirae* ATCC 8043 are used as test microorganisms.

Amino-butyric Acid Medium

Composition per liter:

Agar	15.0g
DL-Amino-butyric acid	10.0g
K_2HPO_4	7.0g
Glucose	5.0g
KH_2PO_4	3.0g
$(\text{NH}_4)_2\text{SO}_4$	1.0g
$\text{MgSO}_4\cdot 7\text{H}_2\text{O}$	0.5g

pH 7.0 \pm 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the cultivation and maintenance of *Serratia marcescens* and other microorganisms that can utilize amino-butyric acid as a carbon source.

Ammonifex Medium

Composition per 1010.0mL:

NaCl	1.0g
$\text{Na}_2\text{S}\cdot 9\text{H}_2\text{O}$	0.5g
$\text{K}_2\text{HPO}_4\cdot 3\text{H}_2\text{O}$	0.3g
KH_2PO_4	0.22g
$(\text{NH}_4)_2\text{SO}_4$	0.22g
NaHCO_3	0.2g
$\text{MgSO}_4\cdot 7\text{H}_2\text{O}$	0.09g
$\text{CaCl}_2\cdot 2\text{H}_2\text{O}$	0.06g
$\text{FeSO}_4\cdot 7\text{H}_2\text{O}$	2.0mg
$\text{NiCl}_2\cdot 6\text{H}_2\text{O}$	0.2mg
Resazurin	0.5mg
KNO_3 solution	10.0mL
Selenite/tungstate solution	3.0mL
Wolfe's mineral solution	1.0mL

pH 5.4 \pm 0.2 at 25°C

Selenite/Tungstate Solution:

Composition per liter:

NaOH	0.5g
$\text{Na}_2\text{WO}_4\cdot 2\text{H}_2\text{O}$	4.0mg
$\text{Na}_2\text{SeO}_3\cdot 5\text{H}_2\text{O}$	3.0mg

Preparation of Selenite/Tungstate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N_2 . Autoclave for 15 min at 15 psi pressure–121°C.

Wolfe's Mineral Solution:

Composition per liter:

$\text{MgSO}_4\cdot 7\text{H}_2\text{O}$	3.0g
Nitritotriacetic acid	1.5g
NaCl	1.0g
$\text{MnSO}_4\cdot 2\text{H}_2\text{O}$	0.5g
$\text{CoCl}_2\cdot 6\text{H}_2\text{O}$	0.1g
$\text{ZnSO}_4\cdot 7\text{H}_2\text{O}$	0.1g
$\text{CaCl}_2\cdot 2\text{H}_2\text{O}$	0.1g
$\text{FeSO}_4\cdot 7\text{H}_2\text{O}$	0.1g
$\text{NiCl}_2\cdot 6\text{H}_2\text{O}$	0.025g
$\text{KAl}(\text{SO}_4)_2\cdot 12\text{H}_2\text{O}$	0.02g
$\text{CuSO}_4\cdot 5\text{H}_2\text{O}$	0.01g

H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O	0.3mg

Preparation of Wolfe's Mineral Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Adjust pH to 6.8.

KNO₃ Solution:

Composition per 100.0mL:

KNO ₃	10.0g
------------------------	-------

Preparation of KNO₃ Solution: Add KNO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare and dispense medium under 100% N₂. Add components, except Na₂S·9H₂O and KNO₃ solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Add Na₂S·9H₂O. Mix thoroughly. Adjust pH to 6.5 with 20% HCl. Sparge with 100% N₂ for 30 min. Dispense anaerobically into tubes in 10.0mL aliquots. Evacuate headspace under vacuum. Pressurize tubes to 200 kPa with 80% H₂ + 20% CO₂ gas mixture. Autoclave for 15 min at 15 psi pressure–121°C. Adjust pH to 5.4. Prior to use, aseptically and anaerobically add 0.1mL of sterile KNO₃ to each tube.

Use: For the cultivation of *Ammonifex* species.

Ammonium Mineral Salts Agar

See: [AMS Agar](#)

Ammonium Mineral Salts Agar without Methanol

See: [AMS Agar without Methanol](#)

Ammonium Phosphate Agar

Composition per liter:

Agar	15.0g
Glucose	10.0g
(NH ₄) ₃ PO ₄	1.0g
KCl	0.2g
MgSO ₄ ·7H ₂ O	0.2g
Bromocresol Purple	0.05g
pH 7.0 ± 0.2 at 25°C	

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the cultivation of microorganisms that use ammonium phosphate as a source of nitrogen. For the differentiation of micrococci from staphylococci.

Ammonium Yeast Extract Medium

See: [Bacillus pasteurii NH₄ YE Medium](#)

AMO.1 Medium

Composition per 1012.0mL:

Yeast extract	10.0g
NaCl	5.8g
N-Methylhydantoin	5.64g
NaHCO ₃	4.5g

L-Serine	2.0g
L-Threonine	2.0g
Pancreatic digest of casein	0.5g
L-Cysteine	0.5g
MgCl ₂ ·6H ₂ O	0.4g
KCl	0.3g
NH ₄ Cl	0.27g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O	0.15g
Wolfe's vitamin solution	10.0mL
NaHSeO ₃ solution	1.0mL
Trace elements solution SL-10	1.0mL
pH 8.3 ± 0.2 at 25°C	

Wolfe's Vitamin Solution:

Composition per liter:

Pyridoxine-HCl	10.0mg
p-Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Nicotinic acid	5.0mg
Riboflavin	5.0mg
Thiamine-HCl	5.0mg
Calcium DL-pantothenate	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Na₂SeO₃ Solution:

Composition per liter:

Na ₂ SeO ₃ ·5H ₂ O	0.2mg
---	-------

Preparation of Na₂SeO₃ Solution: Add Na₂SeO₃·5H₂O to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution SL-10:

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare anaerobically. Add components, except NaHCO₃ and L-cysteine, to distilled/deionized water and bring volume to 1.0L. Sparge with 100% N₂ for 30 min. Adjust pH to 8.3 with 10N NaOH. Add NaHCO₃ and L-cysteine (solid substances). Mix thoroughly. Sparge with 80% N₂ + 20% CO₂ mixture. Flush the headspace of the medium vessel with the 80% N₂ + 20% CO₂ mixture. Autoclave for 15 min at 15 psi pressure–121°C. Sparge with 80% N₂ + 20% CO₂ mixture for 30 min. Aseptically and anaerobically distribute into sterile tubes or bottles.

Use: For the cultivation of *Tissierella creatinini*.

Amoebobacter Medium**Composition** per 4990.0mL:

Solution A	4000.0mL
Solution B	860.0mL
Solution E	100.0mL
Solution F	20.0mL
Solution C (Vitamin B ₁₂ solution)	5.0mL
Solution D	5.0mL

pH 7.3 ± 0.2 at 25°C

Solution A:**Composition** per 4000.0mL:

MgSO ₄	2.5g
KH ₂ PO ₄	1.7g
NH ₄ Cl	1.7g
KCl	1.7g
CaCl ₂ ·2H ₂ O	1.25g
Na ₂ S ₂ O ₃ ·5H ₂ O	0.25g
Sodium acetate·3H ₂ O	0.14g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 4.0L. Mix thoroughly. Adjust pH to 6.0. Dispense into a 5L flask with four openings at the top (two openings are in a central silicon rubber stopper and two openings are gas-tight screw caps). Add a teflon-coated magnetic stir bar to the flask. Autoclave for 45 min at 15 psi pressure–121°C. Cool to room temperature under 100% N₂ at 0.05–0.1 atm pressure (use a manometer to measure low pressure).

Solution B:**Composition** per 860.0mL:

Distilled/deionized water	860.0mL
---------------------------------	---------

Preparation of Solution B: Add 860.0mL of distilled/deionized water to a cotton-stoppered flask. Autoclave for 20 min at 15 psi pressure–121°C. Cool to room temperature under 100% N₂ in an anaerobic jar.

Solution C (Vitamin B₁₂ Solution):**Composition** per 5.0mL:

Vitamin B ₁₂	1.0mg
-------------------------------	-------

Preparation of Solution C (Vitamin B₁₂ Solution): Add vitamin B₁₂ to distilled/deionized water and bring volume to 5.0mL. Mix thoroughly. Filter sterilize.

Solution D:**Composition** per liter:

Disodium ethylenediamine-tetraacetate (Disodium EDTA)	3.0g
FeSO ₄ ·7H ₂ O	1.1g
H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.19g
MnCl ₂ ·2H ₂ O	50.0mg
ZnCl ₂	42.0mg
NiCl ₂ ·6H ₂ O	24.0mg
Na ₂ MoO ₄ ·2H ₂ O	18.0mg
CuCl ₂ ·2H ₂ O	2.0mg

Preparation of Solution D: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Solution E:**Composition** per 100.0mL:

NaHCO ₃	7.5g
--------------------------	------

Preparation of Solution E: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% CO₂ until saturated. Filter sterilize under 100% CO₂ into a sterile, gas-tight 100.0mL screw-capped bottle.

Solution F:**Composition** per 100.0mL:

Na ₂ S·9H ₂ O	10.0g
---	-------

Preparation of Solution F: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Dispense into a screw-capped bottle. Sparge with 100% N₂ for 3–4 min. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Saturate cooled solution A under 100% CO₂ at 0.05–0.1 atm pressure for 30 min with magnetic stirring. Add 860.0mL of solution B, 5.0mL of solution C, 5.0mL of solution D, 100.0mL of solution E, and 20.0mL of solution F through one of the screw-capped openings under 95% N₂ and 5% CO₂ with magnetic stirring. Adjust pH to 7.3 with sterile 2M HCl or sterile 2M Na₂CO₃ solution. Aseptically and anaerobically distribute the medium through the medium outlet tube into sterile 100.0mL bottles under 95% N₂ + 5% CO₂ at 0.05–0.1 atm pressure. Leave a small gas bubble in each bottle to accommodate pressure changes. After 24 hr, the iron in the medium will precipitate out of solution as black flocs.

Use: For the cultivation and maintenance of *Amphibacillus xylanus*, *Amoebobacter pediformis*, and *Amoebobacter purpureus*.

Amphibacillus Medium**Composition** per liter:

Agar	15.0g
Glucose	10.0g
Yeast extract	3.0g
NH ₄ NO ₃	2.0g
K ₂ HPO ₄	1.0g
Polypeptone™ (pancreatic digest of casein and peptic digest of animal tissue)	0.3g
MgSO ₄ ·7H ₂ O	0.2g
CaCl ₂ ·2H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	5.0mg
MnSO ₄ ·7H ₂ O	5.0mg

pH 9.7 ± 0.2 at 25°C

Sodium Sesquicarbonate Solution:**Composition** per 100.0mL:

Na ₂ CO ₃ , anhydrous	10.6g
NaHCO ₃	8.42g

Preparation of Sodium Sesquicarbonate Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Warm to 50°–55°C.

Preparation of Medium: Add components, except sodium sesquicarbonate solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add sterile sodium sesquicarbonate solution. Mix thoroughly. Adjust pH to 9.7. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Amphibacillus xylanus*.

Ampicillin Dextrin Agar**Composition** per liter:

Agar	15.0g
Dextrin	10.0g

NaCl	3.0g
Yeast extract	2.0g
KCl	2.0g
MgSO ₄ ·7H ₂ O	0.2g
FeCl ₃ ·4H ₂ O	0.1g
Selective supplement solution	10.0mL
pH 8.0 ± 0.2 at 25°C	

Source: This medium is available from HiMedia.

Selective Supplement Solution:

Composition per 10.0mL:

Sodium deoxycholate	100.0mg
Ampicillin	10.0mg

Preparation of Selective Supplement Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except selective supplement solution and kanamycin solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL of sterile selective supplement solution. Mix thoroughly. Pour into Petri dishes or aseptically distribute into sterile tubes.

Use: For the selective isolation and differentiation of *Aeromonas* spp. from water samples.

Ampicillin Dextrin Agar with Vancomycin (ADA-V)

Composition per liter:

Agar	13.0g
Dextrin	11.4g
Tryptose	5.0g
NaCl	3.0g
KCl	2.0g
Yeast extract	2.0g
MgSO ₄ ·7H ₂ O	1.0g
Bromothymol Blue	0.08g
FeCl ₃ ·6H ₂ O	0.06g
Sodium deoxycholate	1.0mg
Ampicillin solution	10.0mL
Vancomycin solution	10.0mL
pH 8.0 ± 0.2 at 25°C	

Ampicillin Solution:

Composition per 10.0mL:

Ampicillin	10.0mg
------------------	--------

Preparation of Ampicillin Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Vancomycin Solution:

Composition per 10.0mL:

Vancomycin	2.0mg
------------------	-------

Preparation of Vancomycin Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except sodium deoxycholate, ampicillin solution, and vancomycin solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Adjust pH to 8.0. Add sodium deoxycholate. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add ampicillin and vanco-

mycin solutions. Mix thoroughly. Pour into Petri dishes or aseptically distribute into sterile tubes.

Use: For the selective isolation and differentiation of *Aeromonas* spp. from water samples.

Ampicillin Kanamycin Nutrient Agar

Composition per liter:

Agar	15.0g
Peptone	5.0g
NaCl	5.0g
Yeast extract	2.0g
Beef extract	1.0g
Ampicillin solution	10.0mL
Kanamycin solution	10.0mL

Ampicillin Solution:

Composition per 10.0mL:

Ampicillin	50.0mg
------------------	--------

Preparation of Ampicillin Solution: Add ampicillin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Kanamycin Solution:

Composition per 10.0mL:

Kanamycin	25.0mg
-----------------	--------

Preparation of Kanamycin Solution: Add kanamycin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except ampicillin solution and kanamycin solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL of sterile ampicillin solution and 10.0mL of sterile kanamycin solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of fungi and various antibiotic-resistant bacteria, including *Escherichia coli*.

Ampicillin L Broth Medium

Composition per liter:

Pancreatic digest of casein	10.0g
NaCl	5.0g
Yeast extract	5.0g
Glucose	1.0g
Ampicillin solution	10.0mL
pH 7.0 ± 0.2 at 25°C	

Ampicillin Solution:

Composition per 10.0mL:

Ampicillin	50.0mg
------------------	--------

Preparation of Ampicillin Solution: Add ampicillin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except ampicillin solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Bring pH to 7.0. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL of sterile ampicillin solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Escherichia coli*.

Ampicillin TY Salt Medium**Composition per liter:**

NaCl	10.0g
Pancreatic digest of casein	10.0g
Yeast extract	5.0g
Ampicillin solution	10.0mL

pH 7.0 ± 0.2 at 25°C

Ampicillin Solution:**Composition per 10.0mL:**

Ampicillin	50.0mg
------------------	--------

Preparation of Ampicillin Solution: Add ampicillin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except ampicillin solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Bring pH to 7.0. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL of sterile ampicillin solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of various antibiotic resistant bacteria, including *Escherichia coli*.

AMS Agar**(Ammonium Mineral Salts Agar)****Composition per liter:**

Agar	15.0g
MgSO ₄ ·7H ₂ O	1.0g
K ₂ HPO ₄	0.7g
KH ₂ PO ₄	0.54g
NH ₄ Cl	0.5g
CaCl ₂ ·2H ₂ O	0.2g
FeSO ₄ ·7H ₂ O	4.0mg
H ₃ BO ₄	0.3mg
CoCl ₂ ·6H ₂ O	0.2mg
ZnSO ₄ ·7H ₂ O	0.1mg
Na ₂ MoO ₄ ·2H ₂ O	0.06mg
MnCl ₂ ·4H ₂ O	0.03mg
NiCl ₂ ·6H ₂ O	0.02mg
CuCl ₂ ·2H ₂ O	0.01mg

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Add sterile methanol to a concentration of 0.5% aseptically to cooled basal medium.

Use: For the cultivation and maintenance of bacteria that can utilize methanol as a carbon source, such as *Methylobacterium* species, *Methylomonas* species, and *Methylophilus* species.

AMS Agar without Methanol**(Ammonium Mineral Salts Agar without Methanol)****Composition per liter:**

Agar	15.0g
MgSO ₄ ·7H ₂ O	1.0g
K ₂ HPO ₄	0.7g
KH ₂ PO ₄	0.54g
NH ₄ Cl	0.5g
CaCl ₂ ·2H ₂ O	0.2g
FeSO ₄ ·7H ₂ O	4.0mg

H ₃ BO ₄	0.3mg
CoCl ₂ ·6H ₂ O	0.2mg
ZnSO ₄ ·7H ₂ O	0.1mg
Na ₂ MoO ₄ ·2H ₂ O	0.06mg
MnCl ₂ ·4H ₂ O	0.03mg
NiCl ₂ ·6H ₂ O	0.02mg
CuCl ₂ ·2H ₂ O	0.01mg

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Methylosinus trichosporium* and other methane-oxidizing bacteria. Cultures are grown under an atmosphere of 50% methane.

AMS Medium**Composition per liter:**

NaCl	26.0g
MgSO ₄ ·7H ₂ O	12.0g
Peptone	5.0g
Beef extract	3.0g
CaCl ₂ ·2H ₂ O	1.5g
KCl	0.7g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Alteromonas espejiana*.

AMS Medium, Modified**Composition per liter:**

NaCl	24.0g
Proteose peptone	10.0g
MgSO ₄ ·7H ₂ O	7.0g
MgCl ₂ ·6H ₂ O	5.3g
Yeast extract	3.0g
KCl	0.7g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Alteromonas haloplanktis*, *Alteromonas macleodii*, *Alteromonas nigrifaciens*, *Alteromonas rubra*, *Cytophaga lytica*, *Cytophaga marinostrava*, and *Pseudomonas elongata*.

Amygdalin Medium**Composition per liter:**

Peptone	10.0g
Beef extract	5.0g
NaCl	5.0g
Agar	3.0g
Amygdalin solution	200.0mL
Bromthymol Blue (0.05% solution)	5.0mL

pH 7.0 ± 0.2 at 25°C

Amygdalin Solution:**Composition per 200.0mL:**

Amygdalin	10.0g
-----------------	-------

Preparation of Amygdalin Solution: Add amygdalin to distilled/deionized water and bring volume to 200.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except amygdalin solution, to distilled/deionized water and bring volume to 800.0mL. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.0. Autoclave for 20 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile amygdalin solution. Mix thoroughly. Aseptically distribute into sterile tubes with cotton plugs. Allow tubes to cool in a slanted position, forming a short slant.

Use: For the cultivation and differentiation of *Serratia* species based on their ability to produce acid and HCN from amygdalin.

ANI Medium

Composition per liter:

Pancreatic digest of casein.....	10.0g
Sulfur, powdered.....	8.0g
NaCl.....	2.5g
K ₂ HPO ₄	1.5g
Disodium thioglycolate solution.....	1.0g
Resazurin.....	1.0mg

pH 7.3 ± 0.2 at 25°C

Disodium Thioglycolate Solution:

Composition per 10.0mL:

Disodium thioglycolate.....	1.0g
-----------------------------	------

Preparation of Disodium Thioglycolate Solution: Add disodium thioglycolate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except powdered sulfur and disodium thioglycolate solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Allow to cool under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Powdered sulfur is sterilized separately by steaming for 3 hr on 3 consecutive days. Aseptically and anaerobically combine the basal solution, sterile powdered sulfur, and sterile disodium thioglycolate solution under 100% N₂.

Use: For the cultivation of *Thermococcus* species.

Anacker-Ordal Agar (DSMZ Medium 1039)

Composition per liter:

Agar.....	11.0g
Pancreatic digest of casein.....	0.5g
Yeast extract.....	0.5g
Sodium acetate.....	0.2g
Meat extract.....	0.2g

pH 7.2 ± 0.1 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Flexibacter* spp.

Anacker and Ordal Medium

Composition per liter:

Agar.....	10.0g
Pancreatic digest of casein.....	0.5g

Yeast extract.....	0.5g
Sodium acetate.....	0.2g
Beef extract.....	0.2g

pH 7.3 ± 0.1 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Flexibacter columnaris*.

Anacker and Ordal Medium, Enriched

Composition per liter:

Agar.....	10.0g
Pancreatic digest of casein.....	5.0g
Yeast extract.....	0.5g
Sodium acetate.....	0.2g
Beef extract.....	0.2g

pH 7.3 ± 0.1 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Flexibacter psychrophilus*.

Anaerobacter Medium

Composition per liter:

Yeast extract.....	1.0g
CaCl ₂ ·2H ₂ O.....	0.33g
KCl.....	0.33g
KH ₂ PO ₄	0.33g
MgCl ₂ ·6H ₂ O.....	0.33g
NH ₄ Cl.....	0.33g
Resazurin.....	1.0mg
NaHCO ₃ solution.....	30.0mL
Sucrose solution.....	10.0mL
L-Cysteine·HCl solution.....	10.0mL
Na ₂ S·9H ₂ O solution.....	10.0mL
Trace elements solution SL-10.....	1.0mL

pH 7.0 ± 0.2 at 25°C

NaHCO₃ Solution:

Composition per 30.0mL:

NaHCO ₃	1.5g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 30.0mL. Mix thoroughly. Sparge under 80% N₂ + 20% CO₂ for 3 min. Autoclave for 15 min at 15 psi pressure–121°C.

Sucrose Solution:

Composition per 100.0mL:

Sucrose.....	20.0g
--------------	-------

Preparation of Sucrose Solution: Add sucrose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C.

L-Cysteine·HCl Solution:

Composition per 10.0mL:

L-Cysteine·HCl.....	0.3g
---------------------	------

Preparation of L-Cysteine-HCl Solution: Add L-cysteine-HCl to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na₂S·9H₂O 0.3g

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C.

Trace Elements Solution SL-10:

Composition per liter:

FeCl₂·4H₂O 1.5g
 CoCl₂·6H₂O 190.0mg
 MnCl₂·4H₂O 100.0mg
 ZnCl₂ 70.0mg
 Na₂MoO₄·2H₂O 36.0mg
 NiCl₂·6H₂O 24.0mg
 H₃BO₃ 6.0mg
 CuCl₂·2H₂O 2.0mg
 HCl (25% solution) 10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly.

Preparation of Medium: Add components, except NaHCO₃ solution, sucrose solution, L-cysteine-HCl solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Sparge under 100% N₂ for 3–4 min. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add the sterile NaHCO₃ solution, sucrose solution, L-cysteine-HCl solution, and Na₂S·9H₂O solution. Mix thoroughly. Final pH of the medium should be 7.0.

Use: For the cultivation and maintenance of *Anaerobacter polyendosporus*.

Anaerobaculum thermoterrenum Medium (DSMZ Medium 104a)

Composition per liter:

Yeast extract 10.0g
 NaCl 8.0g
 Trypticase™ peptone 5.0g
 Peptone 5.0g
 Beef extract 5.0g
 Glucose 5.0g
 K₂HPO₄ 2.0g
 L-Cysteine-HCl 0.5g
 Resazurin 1.0mg
 Na₂S·9H₂O solution 50.0mL
 Salt solution 40.0mL
 Glucose solution 10.0mL

pH 7.0± 0.2 at 25°C

Salt Solution:

Composition per liter:

NaHCO₃ 10.0g
 NaCl 2.0g
 K₂HPO₄ 1.0g

KH₂PO₄ 1.0g
 MgSO₄·7H₂O 0.5g
 CaCl₂·2H₂O 0.25g

Preparation of Salt Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Na₂S·9H₂O Solution:

Composition per 100.0mL:

Na₂S·9H₂O 5.0g

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 100.0mL. Sparge with N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Store anaerobically.

Glucose Solution:

Composition per 100.0mL:

D-Glucose 10.0g

Preparation of Glucose Solution: Add D-glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Store anaerobically.

Preparation of Medium: Add components, except L-cysteine-HCl, glucose solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Gently heat and bring to boiling. Sparge with CO₂. Add L-cysteine-HCl. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 50.0mL sterile Na₂S·9H₂O solution and 10.0mL sterile glucose solution. Mix thoroughly. Adjust pH to 7.0 with 8N NaOH. Distribute into sterile tubes or flasks under anaerobic N₂.

Use: For the cultivation and maintenance of *Anaerobaculum thermoterrenum*.

Anaerobe Agar (LMG Medium 41)

Composition per liter:

Agar Base 800.0mL
 Solution A 100.0mL
 Solution B 100.0mL

pH 6.9 ± 0.2 at 25°C

Agar Base:

Composition per 800.0mL:

Agar 30.5g
 Tryptone 5.0g
 Yeast extract 5.0g
 (NH₄)₂SO₄ 0.5g
 Sodium thioglycolate 0.5g
 MgSO₄·7H₂O 0.1g
 Fe(NH₄)₂(SO₄)₂·6H₂O 55.0mg
 Na₂MoO₄·2H₂O 2.4 mg
 Na₂SeO₃·5H₂O 0.23 mg

Preparation of Agar Base: Add components to distilled/deionized water and bring volume to 800.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Solution A:

Composition per 100.0mL:

Glucose 18.0g
 K₂HPO₄ 7.0g
 KH₂PO₄ 5.5g

Preparation of Solution A: Add components to 100.0mL of distilled/deionized water. Mix thoroughly. Filter sterilize.

Solution B:

Composition per 100.0mL:

NaHCO₃ 10.0g

Preparation of Solution B: Add NaHCO₃ to 100.0mL of distilled/deionized water. Mix thoroughly. Filter sterilize.

Preparation of Medium: Aseptically add solutions A and B to the agar base. Adjust pH to 6.9. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes. Incubate anaerobically under 100% CO₂ gas atmosphere.

Use: For the cultivation of anaerobic bacteria.

Anaerobe Agar

Composition per 1001.5mL:

Agar 20.0g
 Pancreatic digest of casein 17.0g
 NaCl 5.0g
 Yeast extract 5.0g
 Papaic digest of soybean meal 3.0g
 K₂HPO₄ 2.5g
 Glucose 2.5g
 L-Cystine solution 5.0mL
 Vitamin K₁ solution 1.0mL
 Hemin solution 0.5mL

pH 7.5 ± 0.2 at 25°C

L-Cystine Solution:

Composition per 5.0mL:

L-Cystine 0.4g
 NaOH (1N solution) 5.0mL

Preparation of L-Cystine Solution: Add L-cystine to 5.0mL of NaOH solution. Mix thoroughly.

Vitamin K₁ Solution:

Composition per 100.0mL:

Vitamin K₁ 1.0g
 Ethanol 99.0mL

Preparation of Vitamin K₁ Solution: Add vitamin K₁ to 99.0mL of absolute ethanol. Mix thoroughly. Filter sterilize.

Hemin Solution:

Composition per 100.0mL:

Hemin 1.0g
 NaOH (1N solution) 20.0mL

Preparation of Hemin Solution: Add hemin to 20.0mL of 1N NaOH solution. Mix thoroughly. Bring volume to 100.0mL with distilled/deionized water. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Preparation of Medium: Add components, except vitamin K₁ solution and hemin solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Adjust pH to 7.5. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 1.0mL of sterile vitamin K₁ solution and 0.5mL of sterile hemin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of anaerobes from cosmetic products.

**Anaerobe Agar
(BAM M11)**

Composition per 1001.5mL:

Agar 15.0g
 Pancreatic digest of casein 15.0g
 Pancreatic digest of soybean meal 5.0g
 NaCl 5.0g
 L-Cysteine·HCl·H₂O solution 5.0mL
 Vitamin K₁ solution 1.0mL
 Hemin solution 0.5mL

pH 7.0 ± 0.2 at 25°C

L-Cysteine·HCl·H₂O Solution:

Composition per 5.0mL:

L-Cysteine·HCl·H₂O 0.4g
 NaOH (1N solution) 5.0mL

Preparation of L-Cysteine·HCl·H₂O Solution: Add L-cysteine·HCl·H₂O to 5.0mL 1N NaOH. Mix thoroughly. Filter sterilize.

Hemin Solution:

Composition per 100.0mL:

Hemin 1.0g

Preparation of Hemin Solution: Add hemin to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool. Refrigerate at 4°C for storage.

Vitamin K₁ Solution:

Composition per 100.0mL:

Vitamin K₁ 1.0g
 Ethanol, absolute 20.0mL

Preparation of Vitamin K₁ Solution: Add vitamin K₁ to 100.0mL of 95% ethanol. Mix thoroughly. Solution may require 2–3 days with intermittent shaking to completely dissolve. Filter sterilize. Refrigerate at 4°C for storage.

Preparation of Medium: Add components, except hemin solution and vitamin K₁ solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.0 ± 0.2 at 25°C. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 0.5mL of sterile hemin solution and 1.0mL of sterile vitamin K₁ solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes. Reduce medium for 24h by incubation in an anaerobic glove box or GasPak jar prior to use.

Use: For the cultivation of anaerobic bacteria such as *Brucella* and *Clostridium* spp.

**Anaerobe Medium
(LMG Medium 41)**

Composition per liter:

Agar Base 800.0mL
 Solution A 100.0mL
 Solution B 100.0mL

pH 6.9 ± 0.2 at 25°C

Agar Base:

Composition per 800.0mL:

Tryptone 5.0g
 Yeast extract 5.0g
 (NH₄)₂SO₄ 0.5g
 Sodium thioglycolate 0.5g
 Agar 0.5g
 MgSO₄·7H₂O 0.1g

Fe(NH ₄) ₂ (SO ₄) ₂ ·6H ₂ O	55.0mg
Na ₂ MoO ₄ ·2H ₂ O	2.4 mg
Na ₂ SeO ₃ ·5H ₂ O	0.23 mg

Preparation of Agar Base: Add components to distilled/deionized water and bring volume to 800.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Solution A:

Composition per 100.0mL:

Glucose	18.0g
K ₂ HPO ₄	7.0g
KH ₂ PO ₄	5.5g

Preparation of Solution A: Add components to 100.0mL of distilled/deionized water. Mix thoroughly. Filter sterilize.

Solution B:

Composition per 100.0mL:

NaHCO ₃	10.0g
--------------------------	-------

Preparation of Solution B: Add components to 100.0mL of distilled/deionized water. Mix thoroughly. Filter sterilize.

Preparation of Medium: Aseptically add solutions A and B to the sterile agar base. Adjust pH to 6.9. Mix thoroughly. Distribute into sterile tubes. Incubate anaerobically under 100% CO₂ gas atmosphere.

Use: For the cultivation of anaerobic bacteria.

Anaerobe Medium No. 1

Composition per 1011.0mL:

Beef extract.....	10.0g
Peptone.....	10.0g
Glucose	5.0g
Yeast extract.....	5.0g
NH ₄ Cl	1.0g
K ₂ HPO ₄	0.45g
KH ₂ PO ₄	0.33g
MgSO ₄ ·7H ₂ O	0.1g
L-Cysteine-HCl·H ₂ O solution	10.0mL
Na ₂ S·9H ₂ O solution	10.0mL
Resazurin (0.1% solution).....	1.0mL

pH 7.5 ± 0.2 at 25°C

L-Cysteine-HCl·H₂O Solution:

Composition per 10.0mL:

L-Cysteine-HCl·H ₂ O	0.5g
---------------------------------------	------

Preparation of L-Cysteine-HCl·H₂O Solution: Add L-cysteine-HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.5g
---	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except L-cysteine-HCl·H₂O solution and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL of sterile L-cysteine-HCl·H₂O solution and 10.0mL of sterile Na₂S·9H₂O solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Acetobacterium woodii* and *Acetobacterium wieringae*.

Anaerobic Acetoin Medium

Composition per 1006.0mL:

Solution A.....	916.0mL
Solution B.....	70.0mL
Solution C.....	10.0mL
Solution D.....	10.0mL

pH 7.2 ± 0.2 at 25°C

Solution A:

Composition per 916.0mL:

Acetoin.....	1.5g
Pancreatic digest of casein.....	1.0g
Resazurin	1.0mg
Mineral solution.....	50.0mL
Rumen fluid, clarified.....	50.0mL
Vitamin solution.....	5.0mL
Trace elements solution SL-10	1.0mL

Mineral Solution:

Composition per liter:

Nitritotriacetic acid	12.5g
NaCl.....	1.0g
FeCl ₃ ·4H ₂ O.....	0.2g
MnCl ₂ ·4H ₂ O.....	0.1g
CaCl ₂ ·2H ₂ O.....	0.1g
ZnCl ₂	0.1g
CuCl ₂	0.02g
Na ₂ SeO ₃	0.02g
CoCl ₂ ·6H ₂ O.....	0.017g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O.....	0.01g

Preparation of Mineral Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl.....	6.2mg
Nicotinic acid.....	2.5mg
Thiamine-HCl	1.25mg
<i>p</i> -Aminobenzoic acid.....	1.25mg
Pantothenic acid.....	0.62mg
Biotin	0.25mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Trace Elements Solution SL-10:

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O.....	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	36.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized

water and bring volume to 1.0L. Add remaining components. Mix thoroughly.

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 916.0mL. Adjust pH to 7.2. Gently heat and bring to boiling. Continue boiling for a few minutes. Allow to cool to room temperature under 80% N₂ + 20% CO₂. Distribute into bottles under 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B:

Composition per 70.0mL:

NaHCO₃ 3.5g

Preparation of Solution B: Add NaHCO₃ to distilled/deionized water and bring volume to 70.0mL. Mix thoroughly. Filter sterilize. Sparge with 80% N₂ + 20% CO₂ for 15 min.

Solution C:

Composition per 10.0mL:

L-Cysteine-HCl 0.3g

Preparation of Solution C: Add L-cysteine-HCl to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂ for 3–4 min. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C.

Solution D:

Composition per 10.0mL:

Na₂S·9H₂O 0.3g

Preparation of Solution D: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂ for 3–4 min. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C.

Preparation of Medium: To 916.0mL of sterile solution A add 70.0mL of sterile solution B, 10.0mL of sterile solution C, and 10.0mL of sterile solution D. Mix thoroughly.

Use: For the cultivation of anaerobic bacteria that can metabolize acetoin.

Anaerobic Agar

Composition per liter:

Pancreatic digest of casein 20.0g

Agar 15.0g

NaCl 5.0g

Sodium thioglycolate 2.0g

Sodium formaldehyde sulfoxylate 1.0g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.2. Distribute into tubes until medium is 3 inches deep. Autoclave for 20 min at 15 psi pressure–121°C.

Use: For the anaerobic cultivation of *Bacillus* species and *Sporolactobacillus* species.

Anaerobic Agar

Composition per liter:

Pancreatic digest of casein 20.0g

Agar 15.0g

Yeast extract 15.0g

NaCl 5.0g

Sodium thioglycolate 2.0g

Sodium formaldehyde sulfoxylate 1.0g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.2. Distribute into tubes until medium is 3 inches deep. Autoclave for 20 min at 15 psi pressure–121°C.

Use: For the anaerobic cultivation of *Bacillus* species, especially *Bacillus larvae*, *Bacillus popilliae*, and *Bacillus lentimorbus*.

Anaerobic Agar

Composition per liter:

Agar 20.0g

Pancreatic digest of casein 20.0g

Glucose 10.0g

NaCl 5.0g

Sodium thioglycolate 2.0g

Sodium formaldehyde sulfoxylate 1.0g

Methylene Blue 2.0mg

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media and BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.2. Distribute into tubes until medium is 3 inches deep. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of a variety of anaerobic microorganisms, especially *Clostridium* species.

Anaerobic Agar

Composition per liter:

Pancreatic digest of casein 17.5g

Agar 15.0g

Glucose 10.0g

Papaic digest of soybean meal 2.5g

NaCl 2.5g

Sodium thioglycolate 2.0g

Sodium formaldehyde sulfoxylate 1.0g

L-Cystine 0.4g

Methylene Blue 2.0mg

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Use with Brewer anaerobic Petri dishes or in tubes or ordinary plates and incubate in anaerobic jars.

Use: For the cultivation of *Clostridium* species and for anaerobic microorganisms.

Anaerobic Agar, Brewer

Composition per liter:

Agar 15.0g

Proteose peptone 10.0g

Pancreatic digest of casein 5.0g

Yeast extract 5.0g

NaCl 2.5g

Sodium thioglycolate 2.0g

Sodium formaldehyde sulfoxylate	1.0g
Resazurin	2.0mg
pH 7.2 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.2. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into Petri dishes or leave in tubes.

Use: For the cultivation of a variety of anaerobic microorganisms, especially *Clostridium* species.

Anaerobic Agar without Dextrose

Composition per liter:

Pancreatic digest of casein	17.5g
Agar	15.0g
NaCl	2.5g
Sodium thioglycolate	2.0g
Sodium formaldehyde sulfoxylate	1.0g
Methylene Blue	2.0mg
pH 7.2 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.2. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into Petri dishes or leave in tubes.

Use: For the cultivation of a variety of anaerobic microorganisms, especially *Clostridium* species.

Anaerobic Basal Agar with Blood

Composition per liter:

Peptic digest of animal tissue	16.0g
Agar	12.0g
Yeast extract	7.0g
NaCl	5.0g
Starch	1.0g
Glucose	1.0g
Sodium pyruvate	1.0g
L-Arginine	1.0g
Sodium succinate	0.5g
Fe ₄ (P ₂ O ₇)·H ₂ O	0.5g
NaHCO ₃	0.4g
L-Cysteine HCl	0.25g
Dithiothreitol	0.25g
Hemin	5.0mg
Vitamin K	5.0mg
Horse blood, defibrinated	100.0mL
pH 7.0 ± 0.2 at 25°C	

Source: This medium is available from HiMedia.

Preparation of Medium: Add components, except horse blood, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Adjust pH to 7.0. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 100.0mL of sterile horse blood. Mix thoroughly. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of anaerobic microorganisms, especially *Bacteroides* species and other fastidious anaerobes.

Anaerobic Blood Agar Base with Blood and Neomycin

Composition per liter:

Casein enzymic hydrolysate	14.5g
Agar	14.0g
Papaic digest of soybean meal	5.0g
NaCl	5.0g
Growth factors	1.5g
Sheep blood, sterile defibrinated	50.0mL
Selective supplement solution	10.0mL
pH 7.3 ± 0.2 at 25°C	

Source: This medium is available from HiMedia.

Selective Supplement Solution:

Composition per 10.0mL:

Neomycin sulfate	30.0mg
------------------------	--------

Preparation of Selective Supplement Solution: Add neomycin sulfate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except sheep blood and selective supplement, to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Adjust pH to 7.3. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 50.0mL of sterile sheep blood and 10.0mL of selective supplement solution. Mix thoroughly. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of Group A and Group B streptococci from throat cultures and other clinical samples.

Anaerobic Broth

Composition per liter:

Pancreatic digest of casein	17.5g
Glucose	10.0g
NaCl	2.5g
Papaic digest of soybean meal	2.5g
Sodium thioglycolate	2.0g
Sodium formaldehyde sulfoxylate	1.0g
L-Cystine	0.4g
Methylene Blue	2.0mg
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of a variety of anaerobic and microaerophilic microorganisms.

Anaerobic Cellulolytic Medium

Composition per liter:

NH ₄ Cl	1.0g
Cellobiose	1.0g
Yeast extract	1.0g
MgSO ₄	0.5g
KCl	0.5g
L-Cysteine·HCl·H ₂ O	0.5g
K ₂ HPO ₄	0.4g
Resazurin	1.0mg
Wolfe's mineral solution	20.0mL
Na ₂ CO ₃ solution	10.0mL
Na ₂ S·9H ₂ O solution	10.0mL
pH 6.9 ± 0.1 at 25°C	

Wolfe's Mineral Solution:**Composition per liter**

MgSO ₄ ·7H ₂ O	3.0g
Nitritotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·H ₂ O	0.5g
FeSO ₄ ·7H ₂ O	0.1g
CoCl ₂ ·6H ₂ O	0.1g
CaCl ₂	0.1g
ZnSO ₄ ·7H ₂ O	0.1g
CuSO ₄ ·5H ₂ O	0.01g
AlK(SO ₄) ₂ ·12H ₂ O	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g

Preparation of Wolfe's Mineral Solution: Add nitritotriacetic acid to approximately 500.0mL of distilled/deionized water and adjust pH to 6.5 with KOH to dissolve. Bring volume to 1.0L with distilled/deionized water. Add other compounds. Mix thoroughly.

Na₂CO₃ Solution:**Composition per 100.0mL:**

Na ₂ CO ₃	10.0g
---------------------------------	-------

Preparation of Na₂CO₃ Solution: Add Na₂CO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Na₂S·9H₂O Solution:**Composition per 100.0mL:**

Na ₂ S·9H ₂ O	15.0g
-------------------------------------	-------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except Na₂CO₃ solution and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 980.0mL. Boil medium under 80% N₂ + 10% CO₂ + 10% H₂ until medium is colorless. Cool and distribute anaerobically into test tubes in 10.0mL volumes using 80% N₂ + 10% CO₂ + 10% H₂. Stopper the tubes anaerobically. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add 10.0mL of sterile Na₂CO₃ solution and 10.0mL of sterile Na₂S·9H₂O solution to each tube. Mix thoroughly.

Use: For the cultivation and maintenance of microorganisms that can utilize cellobiose as sole carbon source, such as *Clostridium cellulovorans*.

Anaerobic Cholesterol Medium (DSMZ Medium 858)

Composition per 1010mL:

Cholesterol	0.5g
Solution A	900.0mL
Solution B	50.0mL
Solution F (NaHCO ₃ solution)	50.0mL
Solution D (Vitamin solution)	5.0mL
Solution C (Trace elements solution SL-10)	2.5mL
Solution E (Selenite tungstate solution)	2.5mL

pH 7.0 ± 0.2 at 25°C

Solution A:**Composition per 200mL:**

NaNO ₃	0.16g
MgSO ₄ ·7H ₂ O	0.10g

NH ₄ Cl	0.10g
CaCl ₂	0.02g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 200.0mL. Sparge with 100% N₂. Mix thoroughly.

Solution B:**Composition per 100.0mL:**

KH ₂ PO ₄	1.0g
---------------------------------	------

Preparation of Solution B: Add KH₂PO₄ to distilled/deionized water and bring volume to 100.0mL. Sparge with 80% N₂ + 20% CO₂. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C (Trace Elements Solution SL–10):**Composition per liter:**

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Solution C (Trace Elements Solution SL–10):

Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution D (Vitamin Solution):**Composition per liter:**

Vitamin B ₁₂	50.0mg
Pantothenic acid	50.0mg
Riboflavin	50.0mg
Alpha-lipoic acid	50.0mg
p-Aminobenzoic acid	50.0mg
Thiamine-HCl·2H ₂ O	50.0mg
Nicotinic acid	25.0mg
Nicotine amide	25.0mg
Biotin	20.0mg
Folic acid	20.0mg
Pyridoxamine-HCl	10.0mg

Preparation of Solution D (Vitamin Solution): Add components to distilled/deionized water and bring volume to 1.0L. Sparge with 100% N₂. Mix thoroughly. Filter sterilize.

Solution E (Selenite Tungstate Solution):**Composition per liter:**

NaOH	0.5g
Na ₂ WO ₄ ·2H ₂ O	4.0mg
Na ₂ SeO ₃ ·5H ₂ O	3.0mg

Preparation of Solution E (Selenite Tungstate Solution): Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Solution F (NaHCO₃ Solution):**Composition per 100.0mL:**

NaHCO ₃	8.4g
--------------------	------

Preparation of Solution F (NaHCO₃ Solution): Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thor-

oughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Distribute solution A into anaerobic tubes or bottles. Distribute appropriate amounts of cholesterol, 5.0mg cholesterol per 10.0mL solution A. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Add to 9.0mL solution A: 500µl sterile solution B, 500µl sterile solution F, 25µl sterile solution C, 25µl sterile solution E, and 50µl sterile solution D. Adjust pH to 7.0.

Use: For the cultivation of unclassified bacterium DSM 12783 and *Sterolibacterium denitrificans* DSM 13999 = ATCC BAA-354.

Anaerobic Citrate Medium

Composition per liter:

Ferric citrate.....	17.0g
Sodium acetate.....	6.8g
NaHCO ₃	2.5g
NH ₄ Cl.....	1.5g
NaH ₂ PO ₄ ·H ₂ O.....	0.6g
KCl.....	0.1g
Trace elements solution.....	10.0mL
Wolfe's vitamin solution.....	10.0mL

pH 7.0 ± 0.2 at 25°C

Trace Elements Solution:

Composition per liter:

Na ₂ WO ₄	25.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
Wolfe's mineral solution.....	1.0L

Wolfe's Mineral Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O.....	3.0g
Nitritotriacetic acid.....	1.5g
NaCl.....	1.0g
MnSO ₄ ·H ₂ O.....	0.5g
CaCl ₂	0.1g
CoCl ₂ ·6H ₂ O.....	0.1g
FeSO ₄ ·7H ₂ O.....	0.1g
ZnSO ₄ ·7H ₂ O.....	0.1g
AlK(SO ₄) ₂ ·12H ₂ O.....	0.01g
CuSO ₄ ·5H ₂ O.....	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O.....	0.01g

Preparation of Wolfe's Mineral Solution: Add nitritotriacetic acid to approximately 500.0mL of water and adjust to pH 6.5 with KOH to dissolve the compound. Bring volume to 1.0L with remaining water and add remaining compounds one at a time.

Preparation of Trace Elements Solution: Combine components. Mix thoroughly.

Wolfe's Vitamin Solution:

Composition per liter:

Pyridoxine-HCl.....	10.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Lipoic acid.....	5.0mg
Nicotinic acid.....	5.0mg
Riboflavin.....	5.0mg
Thiamine-HCl.....	5.0mg
Calcium DL-pantothenate.....	5.0mg
Biotin.....	2.0mg

Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂. Add ferric citrate to 500.0mL of boiling distilled/deionized water. Mix thoroughly. Cool to room temperature while sparging with 80% N₂ + 20% CO₂. Add remaining components. Add distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0 with NaOH. Continue sparging with 80% N₂ + 20% CO₂. Anaerobically distribute into tubes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Geobacter metallireducens*.

Anaerobic CNA Agar (Anaerobic Colistin Nalidixic Acid Agar)

Composition per liter:

Agar.....	13.0g
Pancreatic digest of casein.....	12.0g
Peptic digest of animal tissue.....	5.0g
NaCl.....	5.0g
Yeast extract.....	3.0g
Beef extract.....	3.0g
Cornstarch.....	1.0g
Glucose.....	1.0g
L-Cysteine-HCl·H ₂ O.....	0.5g
Vitamin K ₁	10.0mg
Hemin.....	10.0mg
Colistin.....	10.0mg
Nalidixic acid.....	10.0mg
Sheep blood, defibrinated.....	50.0mL

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components, except sheep blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50.0mL of sterile, defibrinated sheep blood. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the selective isolation of anaerobic streptococci.

Anaerobic CNA Agar Base with Blood

Composition per liter:

Agar.....	13.5g
Casein enzymic hydrolysate.....	12.0g
Peptic digest of animal tissue.....	5.0g
NaCl.....	5.0g
Yeast extract.....	3.0g
Beef extract.....	3.0g
Corn starch.....	1.0g
Glucose.....	1.0g
L-Cystine hydrochloride.....	0.5g
Dithiothreitol (DTE).....	0.1g
Vitamin K ₁	0.01g
Hemin.....	0.01g
Colistin.....	0.01g
Nalidixic acid.....	0.01g
Sheep blood, sterile defibrinated.....	50.0mL

pH 7.0 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Preparation of Medium: Add components, except sheep blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Adjust pH to 7.0. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 50.0mL of sterile sheep blood. Mix thoroughly. Pour into sterile Petri dishes or leave in tubes.

Use: For the selective isolation of anaerobic streptococci.

Anaerobic Egg Yolk Agar

Composition per 1080.0mL:

Agar	20.0g
Proteose peptone	20.0g
NaCl	5.0g
Pancreatic digest of casein	5.0g
Yeast extract	5.0g
Egg yolk emulsion, 50%	80.0mL

pH 7.0 ± 0.2 at 25°C

Egg Yolk Emulsion, 50%:

Composition per 100.0mL:

Chicken egg yolks	11
Whole chicken egg	1
NaCl (0.9% solution)	50.0mL

Preparation of Egg Yolk Emulsion, 50%: Soak whole eggs with 1:100 dilution of saturated mercuric chloride solution for 1 min. Crack eggs and separate yolks from whites. Mix egg yolks with 1 chicken egg. Beat to form emulsion. Measure 50.0mL of egg yolk emulsion and add to 50.0mL of 0.9% NaCl solution. Mix thoroughly. Filter sterilize. Warm to 45°–50°C.

Preparation of Medium: Add components, except egg yolk emulsion, 50%, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 80.0mL of sterile egg yolk emulsion, 50%. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes. Allow plates to dry at 35°C for 24 hr.

Use: For the cultivation of *Clostridium* species. For the cultivation of *Yersinia enterocolitica*.

Anaerobic Egg Yolk Agar

Composition per liter:

Agar	20.0g
Proteose peptone	20.0g
Pancreatic digest of casein	5.0g
NaCl	5.0g
Yeast extract	5.0g
Egg yolk emulsion, 50%	20.0mL

pH 7.0 ± 0.2 at 25°C

Egg Yolk Emulsion, 50%:

Composition per 100.0mL:

Chicken egg yolks	2
NaCl (0.9% solution)	10.0mL

Preparation of Egg Yolk Emulsion, 50%: Soak eggs with 1:100 dilution of saturated mercuric chloride solution for 1 min. Crack eggs and separate yolks from whites. Beat to form emulsion. Measure 10.0mL of egg yolk emulsion and add to 10.0mL of 0.9% NaCl solution. Mix thoroughly. Filter sterilize. Warm to 45°–50°C.

Preparation of Medium: Add components, except egg yolk emulsion, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile egg yolk emulsion. Mix thoroughly. Pour into sterile Petri dishes. Allow plates to dry at 35°C for 24 hr.

Use: For the cultivation of *Yersinia enterocolitica*.

Anaerobic Egg Yolk Agar (BAM M12)

Composition per liter:

Agar	20.0g
Proteose peptone	20.0g
Pancreatic digest of casein	5.0g
NaCl	5.0g
Yeast extract	5.0g
Egg yolk emulsion, 50%	80.0mL

pH 7.0 ± 0.2 at 25°C

Egg Yolk Emulsion, 50%:

Composition per 80.0mL:

Chicken egg yolks	2 or more
NaCl (0.85% solution)	40.0mL

Preparation of Egg Yolk Emulsion, 50%: Wash fresh eggs with stiff brush and drain. Soak eggs in 70% ethanol for 1 hour. Crack eggs aseptically and separate yolks from whites. Drain contents of yolk sacs into sterile stoppered graduate cylinder and discard sacs. Measure 40.0mL of egg yolk emulsion and add 40.0mL of 0.85% NaCl solution. Mix thoroughly by inverting graduate cylinder. Warm to 45°–50°C.

Preparation of Medium: Add components, except egg yolk emulsion, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 80.0mL sterile egg yolk emulsion. Mix thoroughly. Pour into sterile Petri dishes. Allow plates to dry at ambient temperature for 2–3 days or at 35°C for 24 hr. Check plates for contamination before use.

Use: For the cultivation of *Yersinia enterocolitica*.

Anaerobic Egg Yolk Base with Egg Yolk Emulsion

Composition per liter:

Agar	20.0g
Proteose peptone	20.0g
Casein enzymatic hydrolysate	5.0g
Yeast extract	5.0g
NaCl	5.0g
Egg yolk emulsion	80.0mL

pH 7.0 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Egg Yolk Emulsion:

Composition per liter:

Egg yolks	30.0mL
NaCl, 0.9% solution	70.0mL

Preparation of Egg Yolk Emulsion: Soak eggs with 1:100 dilution of saturated mercuric chloride solution for 1 min. Crack 11 eggs and separate yolks from whites. Mix egg yolks. Measure 30.0mL of egg yolk emulsion and add to 70.0mL of 0.9% sterile NaCl solution. Mix thoroughly. Warm to 45°–50°C.

Preparation of Medium: Add components, except egg yolk emulsion, to distilled/deionized water and bring volume to 920.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile egg yolk emulsion. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the cultivation of *Clostridium perfringens* from foods.

Anaerobic D-Gluconate Medium

Composition per liter:

Agar	15.0g
Pancreatic digest of casein	10.0g
Yeast extract	5.0g
D-Gluconate	4.0g
MgSO ₄ ·7H ₂ O	2.5g
(NH ₄) ₂ SO ₄	1.4g
L-Cysteine-HCl·H ₂ O	1.0g
CaCl ₂ ·2H ₂ O	0.15g
FeSO ₄ ·7H ₂ O	0.02g
Resazurin	1.0mg
NaHCO ₃ solution	10.0mL

pH 7.1 ± 0.2 at 25°C

NaHCO₃ Solution:

Composition per 100.0mL:

NaHCO ₃	10.0g
--------------------------	-------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except NaHCO₃ solution, to distilled/deionized water and bring volume to 990.0mL. Prepare anaerobically under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL of the sterile NaHCO₃ solution. Mix thoroughly. Adjust pH to 7.1.

Use: For the cultivation and maintenance of microorganisms that can utilize D-gluconate as a carbon source, such as *Bacteroides pectinophilus*.

Anaerobic Glucuronic Acid Medium

Composition per liter:

Agar	15.0g
Pancreatic digest of casein	10.0g
Yeast extract	5.0g
Glucuronic acid	4.0g
MgSO ₄ ·7H ₂ O	2.5g
(NH ₄) ₂ SO ₄	1.4g
L-Cysteine-HCl·H ₂ O	1.0g
CaCl ₂ ·2H ₂ O	0.15g
FeSO ₄ ·7H ₂ O	0.02g
Resazurin	1.0mg
NaHCO ₃ solution	10.0mL

pH 7.1 ± 0.2 at 25°C

NaHCO₃ Solution:

Composition per 100.0mL:

NaHCO ₃	10.0g
--------------------------	-------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except NaHCO₃ solution, to distilled/deionized water and bring volume to 990.0mL. Pre-

pare anaerobically under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL of the sterile NaHCO₃ solution. Mix thoroughly. Adjust pH to 7.1.

Use: For the cultivation and maintenance of microorganisms that can utilize D-glucuronate as a carbon source, such as *Bacteroides galacturonicus*.

Anaerobic HiVeg Agar

Composition per liter:

Agar	20.0g
Plant hydrolysate	20.0g
Glucose	10.0g
NaCl	5.0g
Sodium thioglycolate	2.0g
Sodium formaldehyde sulfoxylate	1.0g
Methylene Blue	2.0mg

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.2. Distribute into tubes until medium is 3 inches deep. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of a variety of anaerobic microorganisms, especially *Clostridium* species.

Anaerobic HiVeg Agar (Brewer)

Composition per liter:

Agar	15.0g
Glucose	10.0g
Plant petone No. 3	10.0g
Plant hydrolysate	5.0g
NaCl	5.0g
Yeast extract	5.0g
Sodium thioglycolate	2.0g
Sodium formaldehyde sulfoxylate	1.0g
Resazurin	2.0mg

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.2. Distribute into tubes until medium is 3 inches deep. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of a variety of anaerobic microorganisms, especially *Clostridium* species.

Anaerobic HiVeg Agar Base with Egg Yolk Emulsion

Composition per liter:

Agar	20.0g
Plant petone No. 3	20.0g
Plant hydrolysate	5.0g
NaCl	5.0g
Yeast extract	5.0g
Egg yolk emulsion	100.0mL

pH 7.2 ± 0.2 at 25°C

Source: This medium, without egg yolk emulsion, is available as a premixed powder from HiMedia.

Egg Yolk Emulsion:**Composition per liter:**

Egg yolks	30.0mL
NaCl, 0.9% solution	70.0mL

Preparation of Egg Yolk Emulsion: Soak eggs with 1:100 dilution of saturated mercuric chloride solution for 1 min. Crack 11 eggs and separate yolks from whites. Mix egg yolks. Measure 30.0mL of egg yolk emulsion and add to 70.0mL of 0.9% sterile NaCl solution. Mix thoroughly. Warm to 45°–50°C.

Preparation of Medium: Add components, except egg yolk emulsion, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile egg yolk emulsion. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the cultivation of *Clostridium perfringens* from foods.

Anaerobic HiVeg Agar without Dextrose**Composition per liter:**

Plant hydrolysate	17.5g
Agar	15.0g
NaCl	2.5g
Sodium thioglycolate	2.0g
Sodium formaldehyde sulfoxylate	1.0g
Methylene Blue	2.0mg

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of a variety of anaerobic microorganisms. With added blood for the detection of hemolytic activity of clostridia, streptococci, and other anaerobic bacteria. With added carbohydrate for fermentation studies.

Anaerobic HiVeg Agar without Dextrose and Eh Indicator**Composition per liter:**

Plant hydrolysate	20.0g
Agar	15.0g
NaCl	5.0g
Sodium thioglycolate	2.0g
Sodium formaldehyde sulfoxylate	1.0g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of a variety of anaerobic microorganisms. With added blood for the detection of hemolytic activity of clostridia, streptococci, and other anaerobic bacteria.

Anaerobic LKV Blood Agar**Composition per liter:**

Agar	15.0g
Pancreatic digest of casein	13.0g
Peptic digest of animal tissue	10.0g
NaCl	5.0g
Yeast extract	2.0g
Glucose	1.0g
NaHSO ₃	0.1g
Sheep blood, laked	50.0mL
Antibiotic solution	10.0mL
Hemin solution	1.0mL
Vitamin K ₁ solution	1.0mL

pH 7.1–7.8 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Antibiotic Solution:**Composition per 10.0mL:**

Kanamycin	0.075g
Vancomycin	7.5mg

Preparation of Antibiotic Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Vitamin K₁ Solution:**Composition per 100.0mL:**

Vitamin K ₁	0.1g
Ethanol	99.0mL

Preparation of Vitamin K₁ Solution: Add vitamin K₁ to 99.0mL of absolute ethanol. Mix thoroughly.

Hemin Solution:**Composition per 100.0mL:**

Hemin	0.01g
NaOH (1N solution)	20.0mL

Preparation of Hemin Solution: Add hemin to 20.0mL of 1N NaOH solution. Mix thoroughly. Bring volume to 100.0mL with distilled/deionized water.

Preparation of Medium: Add components—except sheep blood, antibiotic solution, and vitamin K₁ solution—to distilled/deionized water and bring volume to 939.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50.0mL of sterile sheep blood, 10.0mL of sterile antibiotic solution, and 1.0mL of sterile vitamin K₁ solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of anaerobic Gram-negative microorganisms, especially *Bacteroides* species.

Anaerobic Oxalate Medium**Composition per 1011.0mL:**

Solution A	870.0mL
Solution C	100.0mL
Solution D	20.0mL
Solution E (Vitamin solution)	10.0mL
Solution F	10.0mL
Solution B (Trace elements solution SL-10)	1.0mL

pH 7.1–7.4 at 25°C

Solution A:**Composition per 870.0mL:**

Na ₂ SO ₄	3.0g
NaCl.....	1.0g
KCl.....	0.5g
MgCl ₂ ·6H ₂ O.....	0.4g
NH ₄ Cl.....	0.3g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O.....	0.15g
Resazurin.....	1.0mg

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 870.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 3–4 min. Allow to cool to room temperature while gassing under 80% N₂ + 20% CO₂. Continue gassing until pH reaches below 6.0. Seal the flask under 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B (Trace Elements Solution SL-10):**Composition per liter:**

FeCl ₂ ·4H ₂ O.....	1.5g
CoCl ₂ ·6H ₂ O.....	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	36.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O.....	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Solution B: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C:**Composition per 100.0mL:**

NaHCO ₃	5.0g
--------------------------	------

Preparation of Solution C: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Gas under 80% N₂ + 20% CO₂.

Solution D:**Composition per 20.0mL:**

Ammonium oxalate.....	3.0g
Yeast extract.....	1.0g
Sodium acetate.....	0.41g

Preparation of Solution D: Add components to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution E (Vitamin Solution):**Composition per liter:**

Pyridoxine-HCl.....	10.0mg
Calcium DL-pantothenate.....	5.0mg
Lipoic acid.....	5.0mg
Nicotinic acid.....	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Riboflavin.....	5.0mg
Thiamine-HCl.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Solution E (Vitamin Solution): Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution F:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O.....	0.4g
--	------

Preparation of Solution F: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Aseptically and anaerobically combine solution A with solution B, solution C, solution D, solution E, and solution F, in that order. Mix thoroughly. Anaerobically distribute into sterile tubes or flasks under 80% N₂ + 20% CO₂.

Use: For the cultivation of *Clostridium oxalicum* and *Oxalobacter vibrioformis*.

Anaerobic Thioglycollate Medium Base with Serum**Composition per liter:**

Casein enzymic hydrolysate.....	17.0g
Meat extract.....	7.5g
D-Glucose.....	6.0g
Liver hydrolysate.....	3.0g
Papaic digest of soybean meal.....	3.0g
NaCl.....	2.5g
Agar.....	0.7g
Sodium thioglycollate.....	0.5g
L-Cysteine.....	0.25g
Na ₂ SO ₃	0.1g
Serum, sterile.....	100.0mL

pH 7.3 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Preparation of Medium: Add components, except serum, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Adjust pH to 7.0. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 100.0mL of sterile serum. Mix thoroughly. Aseptically distribute into sterile tubes.

Use: For the selective isolation of anaerobic bacteria.

Anaerobic Trypticase™ Soy Agar with Calf Blood (ATCC Medium 1664)**Composition per liter:**

Pancreatic digest of casein.....	15.0g
Agar.....	15.0g
Papaic digest of soybean meal.....	5.0g
NaCl.....	5.0g
Calf blood, defibrinated.....	100.0mL

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components, except calf blood, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Prepare medium anaerobically with 80% N₂ + 10% CO₂ + 10% H₂. Gently heat while stirring and bring to boiling for 1 min. Autoclave for 15 min at 15 psi pressure–121°C. Do not overheat. Cool to 45°–50°C. Aseptically add 100.0mL sterile, defibrinated calf blood. Pour into sterile Petri dishes.

Use: For the isolation and cultivation of fastidious as well as nonfastidious microorganisms. For the differentiation of *Haemophilus* species.

Anaerobic Tryptone Soya Agar**Composition per liter**

Agar	20.0g
Casein enzymatic hydrolysate	15.0g
Papaic digest of soybean meal	5.0g
NaCl	5.0g
Yeast extract	5.0g
L-Cysteine	0.4g
Hemin	5.0mg
Vitamin K ₁	10.0mg

pH 7.5 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the detection of anaerobic bacteria in cosmetics such as talcum powder.

Anaerobic TVLS Medium**Composition per liter:**

Pancreatic digest of casein	17.0g
Beef extract	7.5g
Glucose	6.0g
Enzymatic hydrolysate of soybean meal	3.0g
Liver hydrolysate	3.0g
NaCl	2.5g
Na ₂ SO ₃	0.7g
Sodium thioglycolate	0.5g
L-Cysteine·HCl·H ₂ O	0.25g
Agar	0.1g
Bovine serum	100.0mL

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components, except bovine serum, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 100.0mL of bovine serum. Distribute into sterile tubes.

Use: For the isolation and cultivation of anaerobic microorganisms.

**Anaerobiospirillum thomasi Medium
(DSMZ Medium 800)****Composition per 1070mL:**

Pancreatic digest of casein	10.0g
Gelatin peptone	10.0g
NaCl	5.0g
Yeast extract	5.0g
Glucose	1.0g
L-Arginine	1.0g
Sodium pyruvate	1.0g
Hemin	5.0mg
Menadione	0.5mg
Fildes enrichment solution	100.0mL
NaHCO ₃ solution	50.0mL
Na ₂ S·9H ₂ O solution	10.0mL
Cysteine solution	10.0mL

pH 6.9 ± 0.2 at 25°C

Fildes Enrichment Solution:**Composition per 206.0mL:**

Pepsin	1.0g
NaCl (0.85% solution)	150.0mL
Sheep blood, defibrinated	50.0mL
HCl	6.0mL

Source: Fildes enrichment solution is available as a premixed powder from BD Diagnostic Systems and Oxoid Unipath.

Preparation of Fildes Enrichment Solution: Combine components. Mix thoroughly. Incubate at 56°C for 4 hr. Bring pH to 7.0 with 20% NaOH. Adjust pH to 7.2 with HCl. Do not autoclave. Add 0.25 mL of chloroform and store at 4°C. Before use, heat to 56°C to remove chloroform.

Na₂S·9H₂O Solution:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O	0.3g
---	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Cysteine Solution:**Composition per 10.0mL:**

L-Cysteine·HCl·H ₂ O	0.3g
---------------------------------------	------

Preparation of Cysteine Solution: Add L-cysteine·HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

NaHCO₃ Solution:**Composition per 100.0mL:**

NaHCO ₃	5.0g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas atmosphere. Add components, except Fildes enrichment solution, cysteine solution, NaHCO₃ solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool while sparging with 80% N₂ + 20% CO₂. Aseptically and anaerobically add 100.0mL Fildes enrichment solution, 10.0mL cysteine solution, 50.0mL NaHCO₃ solution, and 10.0mL Na₂S·9H₂O solution. Aseptically and anaerobically distribute to sterile tubes or bottles.

Use: For the cultivation of *Anaerobiospirillum thomasi*.

**Anaerobranca gottschalkii Medium
(DSMZ Medium 895)****Composition 1070mL:**

NaCl	10.0g
(NH ₄) ₂ SO ₄	1.0g
K ₂ HPO ₄	0.5g
L-Cysteine	0.5g
NH ₄ Cl	0.4g
Yeast extract	0.25g
Tryptone	0.25g
Na ₂ S ₂ O ₃ ·5H ₂ O	0.1g
MgSO ₄ ·7H ₂ O	0.1g

CaCl ₂ ·2H ₂ O.....	0.05g
FeSO ₄ ·7H ₂ O.....	2.0mg
Resazurin	0.5mg
Na ₂ CO ₃ solution.....	50.0mL
Soluble starch solution.....	20.0mL
Trace elements solution	10.0mL
Vitamin solution, 10 fold conc.....	1.0mL

pH 9.4 ± 0.2 at 25°C

Trace Elements Solution:**Composition per liter:**

MgSO ₄ ·7H ₂ O.....	3.0g
Nitrilotriacetic acid	1.5g
NaCl.....	1.0g
MnSO ₄ ·2H ₂ O.....	0.5g
CoSO ₄ ·7H ₂ O.....	0.18g
ZnSO ₄ ·7H ₂ O.....	0.18g
CaCl ₂ ·2H ₂ O.....	0.1g
FeSO ₄ ·7H ₂ O.....	0.1g
NiCl ₂ ·6H ₂ O.....	0.025g
KAl(SO ₄) ₂ ·12H ₂ O.....	0.02g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·4H ₂ O.....	0.01g
CuSO ₄ ·5H ₂ O.....	0.01g
Na ₂ SeO ₃ ·5H ₂ O.....	0.3mg

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Vitamin Solution:**Composition per 100.0mL:**

Pyridoxine-HCl.....	10.0mg
Thiamine-HCl·2H ₂ O.....	5.0mg
Riboflavin	5.0mg
Nicotinic acid.....	5.0mg
D-Ca-pantothenate.....	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Lipoic acid.....	5.0mg
Biotin	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Na₂CO₃ Solution:**Composition per 100.0mL:**

Na ₂ CO ₃	5.0g
---------------------------------------	------

Preparation of Na₂CO₃ Solution: Add Na₂CO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Soluble Starch Solution:**Composition per 50.0mL:**

Starch, soluble.....	5.0g
----------------------	------

Preparation of Soluble Starch Solution: Add starch to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except starch solution, Na₂CO₃ solution, and L-cysteine, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Cool

to 25°C while sparging with 100% N₂. Add 0.5g L-cysteine. Mix thoroughly. Distribute to anaerobe tubes or bottles. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically and anaerobically add, per liter of medium, 20.0mL sterile starch solution, and 50.0mL sterile Na₂CO₃ solution. Final pH is 9.3–9.5.

Use: For the cultivation of *Anaerobranca gottschalkii*.

Anaerobranca Medium**Composition per 1015.0mL:**

Yeast extract.....	5.0g
Na ₂ HPO ₄ ·2H ₂ O.....	3.9g
Sodium fumarate.....	1.5g
KCl.....	0.5g
KH ₂ PO ₄	0.5g
L-Cysteine-HCl·H ₂ O.....	0.125g
Na ₂ S·9H ₂ O.....	0.125g
Wolfe's vitamin solution.....	10.0mL
Wolfe's mineral solution.....	5.0mL

pH 8.5 ± 0.2 at 25°C

Wolfe's Vitamin Solution:**Composition per liter:**

Pyridoxine-HCl.....	10.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Lipoic acid.....	5.0mg
Nicotinic acid.....	5.0mg
Riboflavin.....	5.0mg
Thiamine-HCl.....	5.0mg
Calcium DL-pantothenate.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Wolfe's Mineral Solution:**Composition per liter:**

MgSO ₄ ·7H ₂ O.....	3.0g
Nitrilotriacetic acid.....	1.5g
NaCl.....	1.0g
MnSO ₄ ·2H ₂ O.....	0.5g
CoCl ₂ ·6H ₂ O.....	0.1g
ZnSO ₄ ·7H ₂ O.....	0.1g
CaCl ₂ ·2H ₂ O.....	0.1g
FeSO ₄ ·7H ₂ O.....	0.1g
NiCl ₂ ·6H ₂ O.....	0.025g
KAl(SO ₄) ₂ ·12H ₂ O.....	0.02g
CuSO ₄ ·5H ₂ O.....	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O.....	0.01g
Na ₂ SeO ₃ ·5H ₂ O.....	0.3mg

Preparation of Wolfe's Mineral Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Adjust pH to 6.8.

Preparation of Medium: Prepare and dispense medium under 100% N₂. Add components, except Wolfe's vitamin solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Adjust pH to 8.5. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 10.0mL of sterile

Wolfe's vitamin solution. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or bottles.

Use: For the cultivation of *Anaerobranca horikoshii*.

Anaerocellum Medium

Composition per liter:

Cellobiose or starch	5.0g
NaHCO ₃	1.5g
Na ₂ S·9H ₂ O	0.5g
Yeast extract	0.5g
CaCl ₂ ·2H ₂ O	0.33g
KCl	0.33g
KH ₂ PO ₄	0.33g
MgCl ₂ ·6H ₂ O	0.33g
NH ₄ Cl	0.33g
Resazurin	0.5mg
NaHCO ₃ solution	100.0mL
Cellobiose or starch solution	50.0mL
Vitamin solution	10.0mL
Na ₂ S·9H ₂ O solution	10.0mL
Trace elements solution SL-10	1.0mL

pH 7.1–7.3 at 25°C

NaHCO₃ Solution:

Composition per 100.0mL:

NaHCO ₃	5.0g
--------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Gas under 80% N₂ + 20% CO₂.

Cellobiose or Starch Solution:

Composition per 50.0mL:

Cellobiose or starch	5.0g
----------------------	------

Preparation of Cellobiose or Starch Solution: Add cellobiose or starch to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize. Gas under 100% N₂.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.5g
-------------------------------------	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Vitamin Solution:

Composition per liter:

Pyridoxine·HCl	10.0mg
Calcium DL-pantothenate	5.0mg
Lipoic acid	5.0mg
Nicotinic acid	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Riboflavin	5.0mg
Thiamine·HCl	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution SL-10:

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly.

Preparation of Medium: Add components, except NaHCO₃ solution, cellobiose or starch solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 830.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 3–4 min. Allow to cool to room temperature under 80% N₂ + 20% CO₂. Distribute into bottles under 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add sterile NaHCO₃ solution, sterile cellobiose or starch solution, and sterile Na₂S·9H₂O solution. Mix thoroughly.

Use: For the cultivation and maintenance of *Anaerocellum thermophilum* and *Dictyoglomus turgidus*.

Anaerocellum Medium

Composition per liter:

NaHCO ₃	1.5g
Na ₂ S·9H ₂ O	0.5g
CaCl ₂ ·2H ₂ O	0.33g
KCl	0.33g
KH ₂ PO ₄	0.33g
MgCl ₂ ·6H ₂ O	0.33g
NH ₄ Cl	0.33g
Yeast extract	0.2g
Resazurin	0.5mg
NaHCO ₃ solution	100.0mL
Cellobiose or starch solution	50.0mL
Vitamin solution	10.0mL
Na ₂ S·9H ₂ O solution	10.0mL
Trace elements solution SL-10	1.0mL

pH 7.1–7.3 at 25°C

NaHCO₃ Solution:

Composition per 100.0mL:

NaHCO ₃	5.0g
--------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Gas under 80% N₂ + 20% CO₂.

Cellobiose or Starch Solution:

Composition per 50.0mL:

Cellobiose or starch	5.0g
----------------------	------

Preparation of Cellobiose or Starch Solution: Add cellobiose or starch to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize. Gas under 100% N₂.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.5g
-------------------------------------	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Vitamin Solution:

Composition per liter:

Pyridoxine·HCl	10.0mg
Calcium DL-pantothenate	5.0mg
Lipoic acid	5.0mg
Nicotinic acid	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Riboflavin	5.0mg
Thiamine·HCl	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution SL-10:

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly.

Preparation of Medium: Add components, except NaHCO₃ solution, cellobiose or starch solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 830.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 3–4 min. Allow to cool to room temperature under 80% N₂ + 20% CO₂. Distribute into bottles under 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add sterile NaHCO₃ solution, sterile cellobiose or starch solution, and sterile Na₂S·9H₂O solution. Mix thoroughly.

Use: For the cultivation and maintenance of *Anaerocellum thermophilum* and *Dictyoglossus turgidus*.

Anaerofilum Medium

Composition per liter:

NaHCO ₃	4.0g
Sodium formate	2.0g
Sodium acetate	1.0g
Yeast extract	1.0g
L-Cysteine·HCl	0.5g
KH ₂ PO ₄	0.5g
Na ₂ S·9H ₂ O	0.5g
MgSO ₄ ·7H ₂ O	0.4g
NaCl	0.4g
NH ₄ Cl	0.4g
CaCl ₂ ·2H ₂ O	0.05g
FeSO ₄ ·7H ₂ O	2.0mg

Resazurin	1.0mg
Glucose solution	20.0mL
Fatty acid mixture	20.0mL
Trace elements solution SL-10	1.0mL
pH 6.7 ± 0.2 at 25°C	

Fatty Acid Mixture:

Composition per 20.0mL:

α-Methylbutyric acid	0.5g
Isobutyric acid	0.5g
Isovaleric acid	0.5g
Valeric acid	0.5g

Preparation of Fatty Acid Mixture: Add components to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Adjust pH to 7.5 with concentrated NaOH.

Glucose Solution:

Composition per 20.0mL:

D-Glucose	50.0g
-----------------	-------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution SL-10:

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly.

Preparation of Medium: Prepare and dispense medium anaerobically under 80% H₂ + 20% CO₂. Add components, except glucose solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Adjust pH to 6.7. Sparge with 80% H₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 20.0mL of sterile glucose solution. Aseptically and anaerobically distribute into sterile tubes or bottles.

Use: For the cultivation of *Anaerofilum agile* and *Anaerofilum pentosovorans*.

Anaerolinea Medium (DSMZ Medium 1004)

Composition per liter:

NaHCO ₃	2.5g
Yeast extract	2.3g
NH ₄ Cl	0.54g
MgCl ₂ ·6H ₂ O	0.2g
CaCl ₂ ·2H ₂ O	0.15g
KH ₂ PO ₄	0.14g
Resazurin	1.0mg
Glucose solution	10.0mL
L-Cysteine solution	10.0mL
Vitamin solution	10.0mL
Na ₂ S·9H ₂ O solution	10.0mL

Selenite tungstate solution	1.0mL
Trace elements solution SL-11	1.0mL
pH 7.0 ± 0.1 at 25°C	

Na₂S·9H₂O Solution:**Composition per 100.0mL:**

Na ₂ S·9H ₂ O	0.25g
---	-------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Vitamin Solution:**Composition per liter:**

Pyridoxine-HCl	10.0mg
Thiamine-HCl·2H ₂ O	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
D-Ca-pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Glucose Solution:**Composition per 10.0mL:**

Glucose	2.2g
---------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

L-Cysteine Solution:**Composition per 10.0mL:**

L-Cysteine·HCl·H ₂ O	0.25g
---------------------------------------	-------

Preparation of L-Cysteine Solution: Add L-cysteine·HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution SL-11:**Composition per liter:**

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
Na ₂ -EDTA	5.2g
CuCl ₂ ·2H ₂ O	2.0mg

Preparation of Trace Elements Solution SL-11: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.0.

Selenite/Tungstate Solution:**Composition per liter:**

NaOH	0.5g
Na ₂ WO ₄ ·2H ₂ O	4.0mg
Na ₂ SeO ₃ ·5H ₂ O	3.0mg

Preparation of Selenite/Tungstate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except vitamin solution, NaHCO₃, L-cysteine solution, Na₂S·9H₂O solution and glucose solution, to distilled/deionized water and bring volume to 960.0mL. Mix thoroughly. Gently heat and bring to boiling. Cool to room temperature while sparging with 20% CO₂ + 80% N₂. Add solid bicarbonate. Mix thoroughly. Adjust pH to 7.0. Dispense into tubes or bottles. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C under 20% CO₂ + 80% N₂. Aseptically and anaerobically add sterile glucose, L-cysteine, vitamin, and Na₂S·9H₂O solutions. The final pH should be 7.0.

Use: For the cultivation and maintenance of *Anaerolinea* spp.

Anaerolinea Medium with Sucrose (DSMZ Medium 1004)

Composition per liter:

NaHCO ₃	2.5g
NH ₄ Cl	0.54g
MgCl ₂ ·6H ₂ O	0.2g
CaCl ₂ ·2H ₂ O	0.15g
KH ₂ PO ₄	0.14g
Yeast extract	0.1g
Resazurin	1.0mg
Sucrose solution	20.0mL
L-Cysteine solution	10.0mL
Vitamin solution	10.0mL
Na ₂ S·9H ₂ O solution	10.0mL
Selenite/tungstate solution	1.0mL
Trace elements solution SL-11	1.0mL
pH 7.0 ± 0.2 at 25°C	

Sucrose Solution:**Composition per 20.0mL:**

Sucrose	7.2g
---------------	------

Preparation of Sucrose Solution: Add sucrose to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Na₂S·9H₂O Solution:**Composition per 100.0mL:**

Na ₂ S·9H ₂ O	0.25g
---	-------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Vitamin Solution:**Composition per liter:**

Pyridoxine-HCl	10.0mg
Thiamine-HCl·2H ₂ O	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
D-Ca-pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

L-Cysteine Solution:

Composition per 10.0mL:

L-Cysteine-HCl·H₂O 0.25g

Preparation of L-Cysteine Solution: Add L-cysteine-HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution SL-11:

Composition per liter:

FeCl₂·4H₂O 1.5g
 CoCl₂·6H₂O 190.0mg
 MnCl₂·4H₂O 100.0mg
 ZnCl₂ 70.0mg
 Na₂MoO₄·H₂O 36.0mg
 NiCl₂·6H₂O 24.0mg
 H₃BO₃ 6.0mg
 Na₂-EDTA 5.2g
 CuCl₂·2H₂O 2.0mg

Preparation of Trace Elements Solution SL-11: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.0.

Selenite/Tungstate Solution:

Composition per liter:

NaOH 0.5g
 Na₂WO₄·2H₂O 4.0mg
 Na₂SeO₃·5H₂O 3.0mg

Preparation of Selenite/Tungstate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except vitamin solution, NaHCO₃, sucrose solution, L-cysteine solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Cool to room temperature while sparging with 20% CO₂ + 80% N₂. Add solid bicarbonate. Mix thoroughly. Adjust pH to 7.0. Dispense into tubes or bottles. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C under 20% CO₂ + 80% N₂. Aseptically and anaerobically add sterile sucrose, L-cysteine, vitamin, and Na₂S·9H₂O solutions. The final pH should be 7.0.

Use: For the cultivation and maintenance of *Anaerolinea thermolimos*, *Bellilinea caldistulae*, and *Levilinea saccharolytica*.

**Anaerolinea Medium without Glucose
(DSMZ Medium 1004)**

Composition per liter:

NaHCO₃ 2.5g
 NH₄Cl 0.54g
 MgCl₂·6H₂O 0.2g
 CaCl₂·2H₂O 0.15g
 KH₂PO₄ 0.14g
 Yeast extract 0.1g
 Resazurin 1.0mg
 L-Cysteine solution 10.0mL
 Vitamin solution 10.0mL
 Na₂S·9H₂O solution 10.0mL

Selenite/tungstate solution 1.0mL
 Trace elements solution SL-11 1.0mL
 pH 7.0 ± 0.1 at 25°C

Na₂S·9H₂O Solution:

Composition per 100.0mL:

Na₂S·9H₂O 0.25g

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl 10.0mg
 Thiamine-HCl·2H₂O 5.0mg
 Riboflavin 5.0mg
 Nicotinic acid 5.0mg
 D-Ca-pantothenate 5.0mg
p-Aminobenzoic acid 5.0mg
 Lipoic acid 5.0mg
 Biotin 2.0mg
 Folic acid 2.0mg
 Vitamin B₁₂ 0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

L-Cysteine Solution:

Composition per 10.0mL:

L-Cysteine-HCl·H₂O 0.25g

Preparation of L-Cysteine Solution: Add L-cysteine-HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution SL-11:

Composition per liter:

FeCl₂·4H₂O 1.5g
 CoCl₂·6H₂O 190.0mg
 MnCl₂·4H₂O 100.0mg
 ZnCl₂ 70.0mg
 Na₂MoO₄·H₂O 36.0mg
 NiCl₂·6H₂O 24.0mg
 H₃BO₃ 6.0mg
 Na₂-EDTA 5.2g
 CuCl₂·2H₂O 2.0mg

Preparation of Trace Elements Solution SL-11: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.0.

Selenite/Tungstate Solution:

Composition per liter:

NaOH 0.5g
 Na₂WO₄·2H₂O 4.0mg
 Na₂SeO₃·5H₂O 3.0mg

Preparation of Selenite/Tungstate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except vitamin solution, NaHCO₃, L-cysteine solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly.

Gently heat and bring to boiling. Cool to room temperature while sparging with 20% CO₂ + 80% N₂. Add solid bicarbonate. Mix thoroughly. Adjust pH to 7.0. Dispense into tubes or bottles. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C under 20% CO₂ + 80% N₂. Aseptically and anaerobically add sterile L-cysteine, vitamin, and Na₂S·9H₂O solutions. The final pH should be 7.0.

Use: For the cultivation and maintenance of *Leptolinea tardivitalis*.

Anaeromyxobacter Medium (DSMZ Medium 1200)

Composition per liter:

Solution A	900.0mL
Solution B	90.0mL
Solution C	18.0mL
Solution D	18.0mL
Solution F	18.0mL
Solution E	4.0mL

pH 7.2 ± 0.2 at 25°C

Solution A:

Composition per 900.0mL:

NaCl	1.0g
MgCl ₂ ·6H ₂ O	0.5g
Sodium acetate	0.4g
NH ₄ Cl	0.3g
KCl	0.3g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O	15.0mg
Resazurin	1.0mg
Selenite/tungstate solution	2.0mL
Trace element solution SL-10B	1.0mL

Selenite/Tungstate Solution:

Composition per liter:

NaOH	0.5g
Na ₂ WO ₄ ·2H ₂ O	4.0mg
Na ₂ SeO ₃ ·5H ₂ O	3.0mg

Preparation of Selenite/Tungstate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution SL-10B:

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
H ₃ BO ₃	300.0mg
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution SL-10B: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly.

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Sparge with 20% CO₂ + 80% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Solution B:

Composition per 100.0mL:

NaHCO ₃	5.0g
--------------------	------

Preparation of Solution B: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 20% CO₂ + 80% H₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Solution C:

Composition per 50.0mL:

DL-Dithiothreitol	385.0mg
-------------------	---------

Preparation of Solution C: Add DL-dithiothreitol to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Solution D:

Composition per 50.0mL:

L-Cysteine·HCl·H ₂ O	37.5mg
Na ₂ S·9H ₂ O solution	10.0mL

Preparation of Solution D: Add L-cysteine·HCl·H₂O to distilled/deionized water and bring volume to 40.0mL. Mix thoroughly. Add 10.0mL Na₂S·9H₂O solution. Sparge with 20% CO₂ + 80% H₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	40.0mg
-------------------------------------	--------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly.

Solution E:

Composition per 50.0mL:

Fumarate	4.0g
----------	------

Preparation of Solution E: Add fumarate to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Solution F (Vitamin Solution):

Composition per liter:

Pyridoxine-HCl	10.0mg
Thiamine-HCl·2H ₂ O	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
D-Ca-pantothenate	5.0mg
p-Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Solution F (Vitamin Solution): Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Preparation of Medium: Aseptically and anoxically add 1.0mL solution B per 10 mL solution A. Adjust pH to 7.2. Add 0.2mL solution C, 0.2mL solution D, 0.2mL solution F, and 0.05mL solution E, each per 10mL solution A.

Use: For the cultivation and maintenance of *Anaeromyxobacter* spp.

Anaerospirillum Medium

Composition per liter:

Polypeptone™	10.0g
Glucose	10.0g

Yeast extract.....	5.0g
Na ₂ CO ₃	3.0g
NaCl	2.0g
K ₂ HPO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.2g
pH 6.5 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Distribute into tubes or flasks using anaerobic techniques and 100% CO₂ as gas phase.

Use: For the cultivation of *Anaerospirillum succiniciproducens*.

Anaerovibrio burkinabensis Medium

Composition per 1011.0mL:

Solution A	870.0mL
Solution C	100.0mL
Solution D	10.0mL
Solution E (Vitamin solution)	10.0mL
Solution F	10.0mL
Solution G	10.0mL
Solution B (Trace elements solution SL-10)	1.0mL
pH 6.8–7.2 at 25°C	

Solution A:

Composition per 870.0mL:

Na ₂ SO ₄	3.0g
NaCl	1.0g
KCl.....	0.5g
MgCl ₂ ·6H ₂ O.....	0.4g
NH ₄ Cl	0.3g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O.....	0.15g
Resazurin	1.0mg

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 870.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 3–4 min. Allow to cool to room temperature while gassing under 80% N₂ + 20% CO₂. Continue gassing until pH reaches below 6.0. Seal the flask under 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B (Trace Elements Solution SL-10):

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Solution B (Trace Elements Solution SL-10): Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C:

Composition per 100.0mL:

NaHCO ₃	5.0g
--------------------------	------

Preparation of Solution C: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Gas under 80% N₂ + 20% CO₂.

Solution D:

Composition per 10.0mL:

Sodium lactate	2.5g
----------------------	------

Preparation of Solution D: Add sodium lactate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution E (Vitamin Solution):

Composition per liter:

Pyridoxine-HCl.....	10.0mg
Calcium DL-pantothenate.....	5.0mg
Lipoic acid	5.0mg
Nicotinic acid.....	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Riboflavin	5.0mg
Thiamine-HCl	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Solution E (Vitamin Solution): Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution F:

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	0.4g
--	------

Preparation of Solution F: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution G:

Composition per 10.0mL:

Yeast extract.....	1.0g
--------------------	------

Preparation of Solution F: Add yeast extract to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Aseptically and anaerobically combine solution A with solution B, solution C, solution D, solution E, solution F, and solution G in that order. Mix thoroughly. Anaerobically distribute into sterile tubes or flasks under 80% N₂ + 20% CO₂.

Use: For the cultivation and maintenance of *Anaerovibrio burkinabensis*.

Ancalomicrobium adetum Medium

Composition per liter:

Ammonium sulfate	0.25g
Glucose	0.25g
Na ₂ HPO ₄	71.0mg
Modified Hutner’s basal salts	20.0mL
Vitamin solution.....	10.0mL

Modified Hutner’s Basal Salts:

Composition per liter:

MgSO ₄ ·7H ₂ O.....	29.7g
Nitritotriacetic acid.....	10.0g
CaCl ₂ ·2H ₂ O	3.34g
FeSO ₄ ·7H ₂ O.....	99.0mg

Ammonium molybdate	9.25mg
Metals "44"	50.0mL

Preparation of Modified Hutner's Basal Salts: Dissolve the nitrilotriacetic acid first and neutralize the solution with KOH. Add other components and adjust the pH to 7.2 with KOH or H₂SO₄. There may be a slight precipitate. Store at 5°C.

Metals "44"

Composition per 100.0mL:

ZnSO ₄ ·7H ₂ O	1.1g
FeSO ₄ ·7H ₂ O	0.5g
CuSO ₄ ·5H ₂ O	0.04g
EDTA	0.25g
MnSO ₄ ·7H ₂ O	0.154g
Co(NO ₃) ₂ ·6H ₂ O	0.025g
Na ₂ B ₄ O ₇ ·10H ₂ O	0.018g

Preparation of Metals "44": Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Add aseptically to sterile modified Hutner's basal salts solution.

Vitamin Solution:

Composition per liter:

Thiamine HCl	5.0g
Calcium DL-pantothenate	5.0mg
Nicotinamide	5.0mg
Riboflavin	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except modified Hutner's basal salts solution and vitamin solution, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 20.0mL of modified Hutner's basal salts solution and 10.0mL of sterile vitamin solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Ancalomicrobium adetum*.

Ancalomicrobium Medium

Composition per liter:

Glucose	0.25g
(NH ₄) ₂ SO ₄	0.25g
Na ₂ HPO ₄	0.071g
Hutner's basal salts solution	20.0mL
Vitamin solution	10.0mL

pH 7.0 ± 0.2 at 25°C

Hutner's Basal Salts Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O	29.7g
Nitrilotriacetic acid	10.0g
CaCl ₂ ·2H ₂ O	3.335g
FeSO ₄ ·7H ₂ O	99.0mg
(NH ₄) ₆ MoO ₇ O ₂₄ ·4H ₂ O	9.25mg
"Metals 44"	50.0mL

"Metals 44":

Composition per 100.0mL:

ZnSO ₄ ·7H ₂ O	1.095g
FeSO ₄ ·7H ₂ O	0.5g

Sodium EDTA	0.25g
MnSO ₄ ·H ₂ O	0.154g
CuSO ₄ ·5H ₂ O	39.2mg
Co(NO ₃) ₂ ·6H ₂ O	24.8mg
Na ₂ B ₄ O ₇ ·10H ₂ O	17.7mg

Preparation of Metals "44": Add sodium EDTA to distilled/deionized water and bring volume to 90.0mL. Mix thoroughly. Add a few drops of concentrated H₂SO₄ to retard precipitation of heavy metal ions. Add remaining components. Mix thoroughly. Bring volume to 100.0mL with distilled/deionized water.

Preparation of Hutner's Basal Salts Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Adjust pH to 6.8. Filter sterilize.

Vitamin Solution:

Composition per liter:

Calcium DL-pantothenate	5.0mg
Nicotinamide	5.0mg
Riboflavin	5.0mg
Thiamine-HCl	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Cyanocobalamin	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except Hutner's basal salts solution and vitamin solution, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Adjust pH to 7.0. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 20.0mL of sterile Hutner's basal salts solution and 10.0mL of sterile vitamin solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Ancalomicrobium adetum*.

Ancylobacter/Spirosoma Agar

Composition per liter:

Agar	20.0g
Glucose	1.0g
Peptone	1.0g
Yeast extract	1.0g

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.8. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Ancylobacter aquaticus*, *Ancylobacter* species, *Aquaspirillum metamorphum*, *Aquaspirillum serpens*, *Flectobacillus major*, *Methylobacterium mesophilicum*, *Runella slithyiformis*, *Shewanella putrefaciens*, and *Spirosoma linguale*.

Ancylobacter Spirosoma Medium (DSMZ Medium 7)

Composition per liter:

Agar	15.0g
Glucose	1.0g

Peptone.....	1.0g
Yeast extract.....	1.0g
pH 7.1 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Spirosoma linguale*.

Andersen's Pork Pea Agar

Composition per 1685.0mL:

Agar	16.0g
Peptone.....	5.0g
Pancreatic digest of casein.....	1.6g
K ₂ HPO ₄	1.25g
Soluble starch.....	1.0g
Sodium thioglycolate.....	0.5g
Pork infusion.....	800.0mL
Thioglycolate agar	660.0mL
Pea infusion.....	200.0mL
NaHCO ₃ solution.....	25.0mL
pH 7.2 ± 0.2 at 25°C	

Pork Infusion:

Composition per liter:

Pork, fresh lean ground.....	454.0g
------------------------------	--------

Preparation of Pork Infusion: Add ground pork to distilled/deionized water and bring volume to 1.0L. Autoclave for 60 min at 0 psi pressure–100°C. Filter through two layers of cheesecloth. Cool to 4°C. Skim fat from surface. Warm to 25°C. Centrifuge at 5000 rpm for 10 min. Discard pellet.

Pea Infusion:

Composition per 450.0mL:

Green peas, fresh or frozen.....	454.0g
Diatomaceous earth (celite).....	10.0g

Preparation of Pea Infusion: Add green peas to 450.0mL of distilled/deionized water. Blend until smooth. Autoclave for 60 min at 0 psi pressure–100°C. Centrifuge at 5000 rpm for 10 min. Discard pellet. Clarify supernatant solution with diatomaceous earth (celite). Filter through Whatman #4 filter paper. Use filtrate solution.

Thioglycolate Agar:

Composition per liter:

Agar	20.75g
Pancreatic digest of casein.....	15.0g
Glucose	5.5g
Yeast extract.....	5.0g
NaCl.....	2.5g
L-Cystine	0.5g
Sodium thioglycolate.....	0.5g
Resazurin	1.0mg
pH 7.1 ± 0.2 at 25°C	

Preparation of Thioglycolate Agar: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

NaHCO₃ Solution:

Composition per 100.0mL:

NaHCO ₃	5.0g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Combine components, except NaHCO₃ solution and thioglycolate agar. Mix thoroughly. Adjust pH to 7.2. Autoclave for 5 min at 15 psi pressure–121°C. While medium is still hot, add 25.0g of celite. Filter through Whatman #4 filter paper with suction. Autoclave for 12 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 25.0mL of sterile NaHCO₃ solution. Mix thoroughly. Pour into sterile Petri dishes in 15.0mL volumes. Allow agar to solidify. Cover agar with 10.0mL of sterile, cooled thioglycolate agar.

Use: For the cultivation of mesophilic *Clostridium* species. For the recovery of endospores from foods following heat treatments.

Anderson's Marine Agar

Composition per liter:

Agar	15.0g
Peptone	2.5g
Yeast extract.....	2.5g
FePO ₄	0.1g
Filtered, aged seawater	750.0mL
pH 7.4–7.6 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.4–7.6. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Vibrio* species.

Anderson's Marine Broth

Composition per liter:

Peptone	2.5g
Yeast extract.....	2.5g
FePO ₄	0.1g
Filtered, aged seawater	750.0mL
pH 7.4–7.6 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.4–7.6. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Vibrio* species.

Anderson's Marine Medium

Composition per liter:

Peptone	2.5g
Yeast extract.....	2.5g
FePO ₄	0.1g
Filtered, aged seawater	750.0mL
pH 7.4 ± 0.2 at 25°C	

Preparation of Medium: Add components, except seawater, to distilled/deionized water and bring volume to 250.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 750.0mL of sterile aged seawater. Mix thoroughly. Bring pH to 7.4. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Flavobacterium* species, *Micrococcus* species, *Planococcus* species, *Pseudomonas fluorescens*, and *Vibrio* species.

Andrade HiVeg Peptone Water**Composition** per liter:

Plant peptone.....	10.0g
NaCl.....	5.0g
Andrade indicator.....	0.1g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Caution: Acid Fuchsin in Andrade indicator is a potential carcinogen and care must be taken to avoid inhalation of the powdered dye and contact with the skin.

Use: For the determination of carbohydrate fermentation reactions of microorganisms, particularly members of the Enterobacteriaceae. A specific carbohydrate is added to the medium to test the fermentation of that carbohydrate. A Durham tube is used to collect gas produced during the fermentation reaction. Acid production is indicated by a pink color.

Andrade Peptone Water**Composition** per liter:

Peptic digest of animal tissue.....	10.0g
NaCl.....	5.0g
Andrade indicator.....	0.1g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Caution: Acid Fuchsin in Andrade indicator is a potential carcinogen and care must be taken to avoid inhalation of the powdered dye and contact with the skin.

Use: For the determination of carbohydrate fermentation reactions of microorganisms, particularly members of the Enterobacteriaceae. A specific carbohydrate is added to the medium to test the fermentation of that carbohydrate. A Durham tube is used to collect gas produced during the fermentation reaction. Acid production is indicated by a pink color.

Andrade Peptone Water with HiVeg Extract No. 1**Composition** per liter:

Plant peptone.....	10.0g
NaCl.....	5.0g
Plant extract No. 1.....	3.0g
Andrade indicator.....	0.1g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Caution: Acid Fuchsin in Andrade indicator is a potential carcinogen and care must be taken to avoid inhalation of the powdered dye and contact with the skin.

Use: With added carbohydrates, for the determination of carbohydrate fermentation reactions of microorganisms, particularly members of the Enterobacteriaceae. A specific carbohydrate is added to the medium to test the fermentation of that carbohydrate. A Durham tube is used to collect gas produced during the fermentation reaction. Acid production is indicated by a pink color.

Andrade Peptone Water with Meat Extract**Composition** per liter:

Peptic digest of animal tissue.....	10.0g
NaCl.....	5.0g
Meat extract.....	3.0g
Andrade indicator.....	0.1g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Caution: Acid Fuchsin in Andrade indicator is a potential carcinogen and care must be taken to avoid inhalation of the powdered dye and contact with the skin.

Use: With added carbohydrates, for the determination of carbohydrate fermentation reactions of microorganisms, particularly members of the Enterobacteriaceae. A specific carbohydrate is added to the medium to test the fermentation of that carbohydrate. A Durham tube is used to collect gas produced during the fermentation reaction. Acid production is indicated by a pink color.

Andrade's Broth**Composition** per liter:

Pancreatic digest of gelatin.....	10.0g
NaCl.....	5.0g
Beef extract.....	3.0g
Andrade's indicator.....	10.0mL
Carbohydrate solution.....	50.0mL

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a prepared medium from BD Diagnostic Systems, in tubes containing adonitol, arabinose, cellobiose, dulcitol, fructose, galactose, glucose, inositol, lactose, maltose, mannitol, raffinose, rhamnose, salicin, sorbitol, sucrose, trehalose, or xylose.

Andrade's Indicator**Composition** per 100.0mL:

NaOH (1N solution).....	16.0mL
Acid Fuchsin.....	0.1g

Preparation of Andrade's Indicator: Add Acid Fuchsin to NaOH solution and bring volume to 100.0mL with distilled/deionized water.

Carbohydrate Solution:**Composition** per 100.0mL:

Carbohydrate.....	10.0g
-------------------	-------

Preparation of Carbohydrate Solution: Add carbohydrate to distilled/deionized water and bring volume to 100.0mL. Adonitol, ara-

binose, cellobiose, dulcitol, fructose, galactose, glucose, inositol, lactose, maltose, mannitol, raffinose, rhamnose, salicin, sorbitol, sucrose, trehalose, xylose, or other carbohydrates may be used. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except carbohydrate solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute in 10.0mL volumes into test tubes containing inverted Durham tubes. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Add 0.5mL of sterile carbohydrate solution to each tube.

Caution: Acid Fuchsin is a potential carcinogen and care must be taken to avoid inhalation of the powdered dye and contact with the skin.

Use: For the determination of carbohydrate fermentation reactions of microorganisms, particularly members of the Enterobacteriaceae. A Durham tube is used to collect gas produced during the fermentation reaction. Acid production is indicated by a pink color.

Andrade's Carbohydrate Broth and Indicator (BAM M13)

Composition per liter:

Pancreatic digest of gelatin	10.0g
NaCl	10.0g
Beef extract	3.0g
Carbohydrate solution	100.0mL
Andrade's indicator	10.0mL

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a prepared medium from BBL Microbiology Systems, in tubes containing adonitol, arabinose, cellobiose, glucose, dulcitol, fructose, galactose, inositol, lactose, maltose, mannitol, raffinose, rhamnose, salicin, sorbitol, sucrose, trehalose, or xylose.

Andrade's Indicator

Composition per 26.0mL:

NaOH (1N solution)	16.0mL
Acid Fuchsin	0.21g

Preparation of Andrade's Indicator: Add Acid Fuchsin to NaOH solution and bring volume to 26.0mL with distilled/deionized water.

Carbohydrate Solution:

Composition per 100.0mL:

Carbohydrate	5.0–10.0g
--------------------	-----------

Preparation of Carbohydrate Solution: Add carbohydrate to distilled/deionized water and bring volume to 100.0mL. For glucose, lactose, sucrose, and mannitol, add 10.0g to distilled/deionized water and bring volume to 100.0mL. For dulcitol, salicin, and other carbohydrates, add 5.0g to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except carbohydrate solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Cool. Aseptically add 100mL of sterile carbohydrate solution to 900mL of sterile medium. Mix thoroughly. Aseptically distribute into tubes or flasks. Alternately, prior to autoclaving, distribute 9.0mL volumes into test tubes containing inverted Durham tubes. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Add 1.0mL of sterile carbohydrate solution to each tube.

Caution: Acid Fuchsin is a potential carcinogen and care must be taken to avoid inhalation of the powdered dye and contact with the skin.

Use: For the determination of carbohydrate fermentation reactions of microorganisms, particularly members of the Enterobacteriaceae. A Durham tube is used to collect gas produced during the fermentation reaction. Acid production is indicated by a pink color.

Anisoin Minimal Medium

Composition per liter:

KH ₂ PO ₄ ·3H ₂ O	3.8g
K ₂ HPO ₄	2.1g
NH ₄ Cl	2.0g
MgSO ₄ ·7H ₂ O	0.3g
Anisoin	0.136g
NaCl	0.1g
Trace elements solution	1.0mL

pH 6.7 ± 0.2 at 25°C

Trace Elements Solution:

Composition per liter:

Fe ₂ (SO ₄) ₃ ·H ₂ O	0.6g
CoSO ₄ ·7H ₂ O	0.2g
CuSO ₄ ·5H ₂ O	0.2g
MnSO ₄ ·H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.2g

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Pseudomonas fluorescens*.

ANO2 Fungus II

See: *Neocallimastix* Medium

Anoxybacillus amylolyticus Medium (DSMZ Medium 1046)

Composition per liter:

Yeast extract	6.0g
NaCl	6.0g

pH 5.6 ± 0.2 at 25°C

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Anoxybacillus amylolyticus*.

Anoxybacillus Medium (DSMZ Medium 898)

Composition per liter:

NaHCO ₃	10.0g
NaCl	5.0g
Na ₂ CO ₃	2.76g
NH ₄ Cl	1.0g
Yeast extract	0.5g
KH ₂ PO ₄	0.2g
KCl	0.2g
MgCl ₂ ·6H ₂ O	0.1g
Resazurin	0.5mg
Glucose solution	50.0mL

Vitamin solution.....	10.0mL
Na ₂ S·9H ₂ O solution	10.0mL
Trace elements solution SL-10	1.0mL
pH 9.5–9.7 at 25°C	

Na₂S·9H₂O Solution:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O	0.5g
---	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Before use, neutralize to pH 7.0 with sterile HCl.

Glucose Solution:**Composition per 50.0mL:**

Glucose	5.0g
---------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Vitamin Solution:**Composition per liter:**

Pyridoxine-HCl.....	10.0mg
Thiamine-HCl·2H ₂ O.....	5.0mg
Riboflavin	5.0mg
Nicotinic acid.....	5.0mg
D-Ca-pantothenate.....	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Lipoic acid	5.0mg
Biotin	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Trace Elements Solution SL-10:**Composition per liter:**

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare and dispense medium under 100% N₂. Add components, except glucose solution, Na₂S·9H₂O solution, and vitamin solution, to distilled/deionized water and bring volume to 930.0mL. Mix thoroughly. Sparge with 100% N₂ for 30–60 min. Adjust pH to 8.0–8.5 with NaOH. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 50.0mL sterile glucose solution, 10.0mL sterile Na₂S·9H₂O solution, and 10.0mL sterile vitamin solution. Mix thoroughly. The final pH should be 9.5–9.7. Aseptically and anaerobically under 100% N₂ distribute into sterile tubes or bottles.

Use: For the cultivation of *Anoxybacillus pushchinoensis* (*Anoxybacillus pushchinensis*).

Anoxynatronum Medium (DSMZ Medium 1187)

Composition per liter:

KCl	0.2g
NH ₄ Cl	0.5g
K ₂ HPO ₄	0.2g
MgCl ₂ ·6H ₂ O	0.1g
NaHCO ₃ solution	50.0mL
Na ₂ CO ₃ solution.....	50.0mL
Glucose solution	50.0mL
Na ₂ S·9H ₂ O solution.....	10.0mL
Yeast extract solution.....	10.0mL
Trace elements solution SL-10	1.0mL
Vitamin solution	1.0mL

pH 9.0 ± 0.2 at 25°C

Na₂CO₃ Solution:**Composition per 50.0mL:**

Na ₂ CO ₃	25.0g
---------------------------------------	-------

Preparation of Na₂CO₃ Solution: Add Na₂CO₃ to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Sparge with N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

NaHCO₃ Solution:**Composition per 50.0mL:**

NaHCO ₃	25.0g
--------------------------	-------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Sparge with N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Yeast Extract Solution:**Composition per 10.0mL:**

Yeast extract.....	0.2g
--------------------	------

Preparation of Yeast Extract Solution: Add yeast extract to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Glucose Solution:**Composition per 50.0mL:**

Glucose	5.0g
---------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Vitamin Solution:**Composition per liter:**

Pyridoxine-HCl.....	10.0mg
Thiamine-HCl·2H ₂ O.....	5.0mg
Riboflavin	5.0mg
Nicotinic acid.....	5.0mg
D-Ca-pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Lipoic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na₂S·9H₂O 0.7g

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Trace Elements Solution SL-10:

Composition per liter:

FeCl₂·4H₂O 1.5g
CoCl₂·6H₂O 190.0mg
MnCl₂·4H₂O 100.0mg
ZnCl₂ 70.0mg
Na₂MoO₄·2H₂O 36.0mg
NiCl₂·6H₂O 24.0mg
H₃BO₃ 6.0mg
CuCl₂·2H₂O 2.0mg
HCl (25% solution) 10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except vitamin solution, yeast extract solution, glucose solution, NaHCO₃ solution, Na₂CO₃ solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 830.0mL. Mix thoroughly. Gently heat and bring to boiling. Cool to room temperature while sparging with 100% N₂. Dispense into tubes or bottles. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C under 100% N₂. Aseptically and anaerobically add sterile vitamin solution, yeast extract solution, glucose solution, NaHCO₃ solution, Na₂CO₃ solution, and Na₂S·9H₂O solution. The final pH should be 9.0.

Use: For the cultivation and maintenance of *Anoxyratronum* spp.

Anthracis Chromogenic Agar

Composition per liter:

Proprietary.

Source: This medium is available as a premixed powder from BIO-SYNTH International, Inc.

Preparation of Medium: Per manufacturer's directions.

Use: For the rapid identification and isolation of *Bacillus anthracis* based on the detection of phosphatidylcholine-specific phospholipase C activity by 5-bromo–4-chloro–3-indoxyl-cholinophosphate hydrolysis. The medium incorporates chromogenic substrates for detecting specific enzyme activities in *Bacillus anthracis*, *B. cereus*, and *B. thuringiensis*. The enzymes targeted by the chromogenic medium are not present in other *Bacillus* species, allowing for specific isolation of these three *Bacillus* species. Inclusion of inhibitory compounds into the medium prevents the growth of environmental contaminants. The use of proprietary chromogenic substrates, X-IP and X-CP, allows for the differentiation of *Bacillus anthracis* from near-neighbors *B. cereus* and *B. thuringiensis*. Cream to pale teal-blue colored of *Bacillus anthracis* after 20–24h, teal-blue colonies of *Bacillus anthracis* after

36–48 h at 35–37°C. Dark teal-blue colonies of *Bacillus cereus*/*Bacillus thuringiensis* after 20–24h at 35–37°C.

Anthranilic Acid Medium, Revised

Composition per 1040.0mL:

Na₂HPO₄ 6.0g
KH₂PO₄ 3.0g
NH₄Cl 1.0g
NaCl 0.5g
Glucose solution 25.0mL
CaCl₂ solution 10.0mL
MgSO₄ solution 10.0mL
Anthranilic acid solution 5.0mL

Glucose Solution:

Composition per 100.0mL:

D-Glucose 20.0g

Preparation of Glucose Solution: Add D-glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

CaCl₂ Solution:

Composition per 100.0mL:

CaCl₂·2H₂O 0.147g

Preparation of CaCl₂ Solution: Add CaCl₂ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

MgSO₄ Solution:

Composition per 10.0mL:

MgSO₄·7H₂O 2.47g

Preparation of MgSO₄ Solution: Add MgSO₄·7H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Anthranilic Acid Solution:

Composition per 100.0mL:

Anthranilic acid 1.0g
Ethanol (95% solution) 100.0mL

Preparation of Anthranilic Acid Solution: Add anthranilic acid to 100.0mL of ethanol. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except glucose solution, CaCl₂ solution, MgSO₄ solution, and anthranilic acid solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 25.0mL of sterile glucose solution, 10.0mL of sterile CaCl₂ solution, 10.0mL of sterile MgSO₄ solution, and 5.0mL of sterile anthranilic acid solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Escherichia coli*.

Antibiotic Assay Medium No. 1 (Seed Agar)

Composition per liter:

Agar 15.0g
Peptone 6.0g
Casein enzymatic hydrolysate 4.0g
Yeast extract 3.0g
Beef extract 1.5g
Glucose 1.0g

pH 6.6 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For antibiotic assay testing. Widely employed as seed agar in the preparation of plates for microbiological agar diffusion antibiotic assays.

Antibiotic Assay Medium No. 2 (Base Agar)

Composition per liter:

Agar	15.0g
Peptone.....	6.0g
Yeast extract.....	3.0g
Beef extract.....	1.5g
pH 6.6 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For antibiotic assay testing. For use as a base layer in antibiotic assay testing. Especially useful for the plate assay of bacitracin and penicillin G.

Antibiotic Assay Medium No. 3 (Assay Broth)

Composition per liter:

Peptone.....	5.0g
K ₂ HPO ₄	3.68g
NaCl.....	3.5g
Beef extract.....	1.5g
Yeast extract.....	1.5g
KH ₂ PO ₄	1.32g
Glucose.....	1.0g
pH 7.0 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For antibiotic assay testing. Used for the serial dilution assay of penicillins and other antibiotics. Used in the turbidimetric assay of penicillin and tetracycline with *Staphylococcus aureus*.

Antibiotic Assay Medium No. 4 (Yeast Beef Agar)

Composition per liter:

Agar	15.0g
Peptone.....	6.0g
Yeast extract.....	3.0g

Beef extract.....	1.5g
Glucose.....	1.0g
pH 6.6 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For antibiotic assay testing.

Antibiotic Assay Medium No. 5 (Streptomycin Assay Agar with Yeast Extract)

Composition per liter:

Agar	15.0g
Peptone.....	6.0g
Yeast extract.....	3.0g
Beef extract.....	1.5g
pH 7.9 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For antibiotic assay testing. For the streptomycin assay using the cylinder plate technique and *Bacillus subtilis* as test organism.

Antibiotic Assay Medium No. 6

Composition per liter:

Casein enzymatic hydrolysate	17.0g
NaCl.....	5.0g
Papaic digest of soybean meal.....	3.0g
Glucose.....	2.5g
K ₂ HPO ₄	2.5g
MnSO ₄ ·H ₂ O.....	0.03g
pH 7.0 ± 0.1 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For antibiotic assay testing. For inoculum development and spore induction of *Bacillus subtilis* for antibiotic assays.

Antibiotic Assay Medium No. 8 (Base Agar with low pH)

Composition per liter:

Agar	15.0g
Peptone.....	6.0g
Yeast extract.....	3.0g
Beef extract.....	1.5g
pH 5.9 ± 0.1 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For antibiotic assay testing. For use as the base agar and the seed agar in the plate assay of tetracycline. For use as the seed agar in the plate assay of vancomycin, mitomycin, and mithramycin.

Antibiotic Assay Medium No. 9 (Polymyxin Base Agar)

Composition per liter:

Agar	20.0g
Casein enzymatic hydrolysate	17.0g
NaCl	5.0g
Papaic digest of soybean meal	3.0g
K ₂ HPO ₄	2.5g
Glucose	2.5g

pH 7.2 ± 0.1 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For antibiotic assay testing. For base agar for the plate assay of carbenicillin, colistimethate, and polymyxin B.

Antibiotic Assay Medium No. 10 (Polymyxin Seed Agar)

Composition per liter:

Casein enzymatic hydrolysate	17.0g
Agar	12.0g
NaCl	5.0g
Papaic digest of soybean meal	3.0g
K ₂ HPO ₄	2.5g
Glucose	2.5g

pH 7.2 ± 0.2 at 25°C

Source: This medium, without polysorbate 80, is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For antibiotic assay testing. For seed agar for the plate assay of carbenicillin, colistimethate, and polymyxin B.

Antibiotic Assay Medium No. 11 (Neomycin, Erythromycin Assay Agar)

Composition per liter:

Agar	15.0g
Peptone	6.0g
Casein enzymatic hydrolysate	4.0g
Yeast extract	3.0g
Beef extract	1.5g
Glucose	1.0g

pH 8.3 ± 0.2 at 25°C

Source: This medium, without polysorbate 80, is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For antibiotic assay testing. For analyzing the neomycin content in pharmaceutical preparations.

Antibiotic Assay Medium No. 12 (Nystatin Assay Agar)

Composition per liter:

Agar	25.0g
Peptone	10.0g
Glucose	10.0g
NaCl	10.0g
Yeast extract	5.0g
Beef extract	2.5g

pH 6.0 ± 0.1 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For antibiotic assay effectiveness testing. For the assay of antifungal antibiotics like amphotericin and nystatin.

Antibiotic Assay Medium No. 13

Composition per liter:

Glucose	20.0g
Peptone	10.0g

pH 5.6 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For testing the effectiveness of antibiotics on yeast and molds.

Antibiotic Assay Medium No. 19

Agar	23.5g
Glucose	10.0g
NaCl	10.0g
Peptone	9.4g
Yeast extract	4.7g
Beef extract	2.4g

pH 6.1 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For assaying the mycostatic activity of pharmaceutical preparations. For seed agar for the plate assay to test the effectiveness of nystatin, amphotericin B, and natamycin.

Antibiotic Assay Medium No. 20 (Yeast Beef Broth)

Composition per liter:

Peptone.....	15.0g
Glucose.....	11.0g
Yeast extract.....	6.5g
K ₂ HPO ₄	3.68g
NaCl.....	3.5g
Beef extract.....	1.5g
KH ₂ PO ₄	1.32g

pH 6.6 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For assaying the mycostatic activity of pharmaceutical preparations.

Antibiotic Assay Medium No. 32

Composition per liter:

Agar.....	15.0g
Peptone.....	6.0g
Casein enzymatic hydrolysate.....	4.0g
Yeast extract.....	3.0g
Beef extract.....	1.5g
Glucose.....	1.0g
MnSO ₄ ·4H ₂ O.....	0.3g

pH 6.6 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For preparing inoculum of *Bacillus subtilis* ATCC 6633 during assay of dihydrostreptomycin and vancomycin.

Antibiotic Assay Medium No. 34

Composition per liter:

Peptone.....	10.0g
Beef extract.....	10.0g
Glycerol.....	10.0g
NaCl.....	3.0g

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For antibiotic assay effectiveness testing of bleomycin using *Mycobacterium smegmatis* ATCC 607.

Antibiotic Assay Medium No. 35

Composition per liter:

Agar.....	17.0
Peptone.....	10.0g
Beef extract.....	10.0g
NaCl.....	3.0g

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For antibiotic assay effectiveness testing of bleomycin using *Mycobacterium smegmatis* ATCC 607.

Antibiotic Assay Medium No. 36

Composition per liter:

Agar.....	15.0g
Casein enzymatic hydrolysate.....	15.0g
NaCl.....	5.0g
Papaic digest of soybean meal.....	5.0g

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: A general purpose medium for cultivating a wide variety of fastidious microorganisms.

Antibiotic Assay Medium No. 37

Composition per liter:

Casein enzymatic hydrolysate.....	17.0g
NaCl.....	5.0g
Papaic digest of soybean meal.....	3.0g
Glucose.....	2.5g
K ₂ HPO ₄	2.5g

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 10 min at 15 psi pressure–121°C.

Use: A general purpose medium for cultivating a wide variety of fastidious microorganisms.

Antibiotic Assay Medium No. 38

Composition per liter:

Agar.....	15.0g
Peptone.....	15.0g
Glucose.....	5.5g
Papaic digest of soybean meal.....	5.0g

NaCl	4.0g
L-Cysteine-HCl-H ₂ O	0.7g
Na ₂ SO ₃	0.2g
pH 7.0 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For microbiological assay of ticarcillin using *Pseudomonas aeruginosa* ATCC 29336.

Antibiotic Assay Medium No. 39

Composition per liter:

Peptone	5.0g
K ₂ HPO ₄	3.68g
NaCl	3.5g
Beef extract	1.5g
Yeast extract	1.5g
KH ₂ PO ₄	1.32g
Glucose	1.0g
pH 7.9 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the microbiological assay of neomycin and streptomycin using *Klebsiella pneumoniae* ATCC 10031 as the test organism.

Antibiotic Assay Medium No. 40

Composition per liter:

Yeast extract	20.0g
Agar	10.0g
Glucose	10.0g
Casein enzymatic hydrolysate	2.5g
Peptone	2.5g
KH ₂ PO ₄	2.0g
Tween™ 80	0.1g
pH 6.7 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the microbiological assay of Thiostrepton using *Streptococcus faecium* ATCC 10541.

Antibiotic Assay Medium No. 41

Composition per liter:

Glucose	20.0g
Sodium citrate	10.0g
Casein enzymatic hydrolysate	9.0g
Yeast extract	5.0g

K ₂ HPO ₄	1.0g
KH ₂ PO ₄	1.0g
pH 6.8 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 10 min at 15 psi pressure–121°C.

Use: For the microbiological assay of thiostrepton using *Streptococcus faecium* ATCC 10541.

Antibiotic Assay Medium B

Composition per liter:

Casein enzymatic hydrolysate	17.0g
Agar	15.0g
Glucose	5.0g
NaCl	5.0g
Papaic digest of soybean meal	3.0g
K ₂ HPO ₄	2.5g
pH 7.3 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the microbiological assay of colistimethate using *Bordetella bronchiseptica* or *Escherichia coli*.

Antibiotic Assay Medium C

Composition per liter:

Peptone	6.0g
K ₂ HPO ₄	3.68g
NaCl	3.5g
Yeast extract	3.0g
Beef extract	1.5g
KH ₂ PO ₄	1.32g
Glucose	1.0g
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 10 min at 15 psi pressure–121°C.

Use: For the microbiological assay of Rifampin using *Escherichia coli*, Colistimethate using *Escherichia coli*, erythromycin, framycetin, gentamicin, gramicidin, kanamycin, neomycin, and vancomycin using *Staphylococcus aureus*, and gramicin using *Enterococcus hirae*.

Antibiotic Assay Medium D

Composition per liter:

Casein peptone	5.0g
K ₂ HPO ₄	3.68g
NaCl	3.5g
KNO ₃	2.0g
Heart extract	1.5g
Yeast extract	1.5g
KH ₂ PO ₄	1.32g
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 10 min at 15 psi pressure–121°C.

Use: For the microbiological assay of erythromycin using *Klebsiella pneumoniae*.

Antibiotic Assay Medium E

Composition per liter:

Na ₂ HPO ₄ ·12H ₂ O	26.9g
Agar	10.0g
Peptone.....	5.0g
Meat extract	3.0g

pH 7.9 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the microbiological assay of framycetin using *Bacillus subtilis*.

Antibiotic Assay Medium F

Composition per liter:

Agar	23.5g
Glucose	10.0g
NaCl	10.0g
Peptone.....	9.4g
Yeast extract.....	4.7g
Beef extract	2.4g

pH 6.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the microbiological assay of nystatin using *Saccharomyces cerevisiae* or *Candida tropicalis*.

Antibiotic Assay Medium G

Composition per liter:

Agar	15.0g
Meat extract	10.0g
Peptone.....	10.0g
NaCl	3.0g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the microbiological assay of bleomycin using *Mycobacterium smegmatis*.

Antibiotic Assay Medium H

Composition per liter:

D-Glucose.....	10.0g
Casein enzymatic hydrolysate	6.0g
Yeast extract.....	2.0g

pH 8.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 10 min at 15 psi pressure–121°C.

Use: For the microbiological assay of apramycin using *Salmonella choleraesuis*.

Antibiotic Assay Medium L-AODC

Composition per liter:

Agar	15.0g
Glucose, anhydrous.....	10.0g
Yeast extract.....	2.5g
K ₂ HPO ₄	0.69g
KH ₂ PO ₄	0.45g

pH 6.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the microbiological assay of monensin using *Bacillus subtilis*.

Antibiotic Assay Medium M-AODC

Composition per liter:

Agar	20.0g
Glucose	10.0g
Yeast extract.....	2.5g
K ₂ HPO ₄	0.69g
KH ₂ PO ₄	0.45g

pH 6.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the microbiological assay of monensin using *Bacillus subtilis*.

Antibiotic HiVeg Assay Medium No. 1

(Antibiotic HiVeg Assay Medium - A)

(Seed HiVeg Agar)

Composition per liter:

Agar	15.0g
Plant peptone	6.0g
Plant hydrolysate	4.0g
Yeast extract.....	3.0g
Plant extract	1.5g
Glucose	1.0g

pH 6.6 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For antibiotic assay testing. Widely employed as seed agar in the preparation of plates for microbiological agar diffusion antibiotic assays.

Antibiotic HiVeg Assay Medium No. 2

(Antibiotic HiVeg Assay Medium - B)

(Seed HiVeg Agar)

Composition per liter:

Agar	15.0g
Plant peptone	6.0g

Yeast extract.....	3.0g
Plant extract	1.5g
pH 6.6 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For antibiotic assay testing. For use as a base layer in antibiotic assay testing. Especially useful for the plate assay of bacitracin and penicillin G.

Antibiotic HiVeg Assay Medium No. 3 (Antibiotic HiVeg Assay Medium - C)

Composition per liter:

Plant peptone.....	5.0g
K ₂ HPO ₄	3.68g
NaCl.....	3.5g
Yeast extract.....	1.5g
Plant extract	1.5g
KH ₂ PO ₄	1.32g
Glucose	1.0g
pH 7.0 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For antibiotic assay testing. Used for the serial dilution assay of penicillins and other antibiotics. Used in the turbidimetric assay of penicillin and tetracycline with *Staphylococcus aureus*.

Antibiotic HiVeg Assay Medium No. 4 (Yeast Beef HiVeg Agar)

Composition per liter:

Agar	15.0g
Plant peptone.....	6.0g
Yeast extract.....	3.0g
Plant extract	1.5g
Glucose	1.0g
pH 6.6 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For antibiotic assay testing.

Antibiotic HiVeg Assay Medium No. 5 (Streptomycin HiVeg Agar with Yeast Extract) (Antibiotic HiVeg Assay Medium - E)

Composition per liter:

Agar	15.0g
Plant peptone.....	6.0g

Yeast extract.....	3.0g
Plant extract	1.5g
pH 7.9 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For antibiotic assay testing. For the streptomycin assay using the cylinder plate technique and *Bacillus subtilis* as test organism.

Antibiotic HiVeg Assay Medium No. 6

Composition per liter:

Plant hydrolysate	17.0g
NaCl.....	5.0g
Papaic digest of soybean meal.....	3.0g
Glucose	2.5g
K ₂ HPO ₄	2.5g
MnSO ₄ ·H ₂ O.....	0.03g
pH 7.0 ± 0.1 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For antibiotic assay testing. For inoculum development and spore induction of *Bacillus subtilis* for antibiotic assays.

Antibiotic HiVeg Assay Medium No. 8 (Base HiVeg Agar w/ low pH) (Antibiotic HiVeg Assay Medium F)

Composition per liter:

Agar	15.0g
Plant peptone	6.0g
Yeast extract.....	3.0g
Plant extract	1.5g
pH 5.9 ± 0.1 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For antibiotic assay testing. For use as the base agar and the seed agar in the plate assay of tetracycline. For use as the seed agar in the plate assay of vancomycin, mitomycin, and mithramycin.

Antibiotic HiVeg Assay Medium No. 9 (Polymyxin HiVeg Base Agar)

Composition per liter:

Agar	20.0g
Plant hydrolysate	17.0g
NaCl.....	5.0g
Papaic digest of soybean meal.....	3.0g

K ₂ HPO ₄	2.5g
Glucose	2.5g
pH 7.2 ± 0.1 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For antibiotic assay testing. For base agar for the plate assay of carbenicillin, colistimethate, and polymyxin B.

Antibiotic HiVeg Assay Medium No. 10 (Polymyxin Seed HiVeg Agar) (Antibiotic HiVeg Assay Medium H)

Composition per liter:

Plant hydrolysate.....	17.0g
Agar	12.0g
Polysorbate 80.....	10.0g
NaCl	5.0g
Papaic digest of soybean meal	3.0g
K ₂ HPO ₄	2.5g
Glucose	2.5g
pH 7.2 ± 0.2 at 25°C	

Source: This medium, without polysorbate 80, is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For antibiotic assay testing. For seed agar for the plate assay of carbenicillin, colistimethate, and polymyxin B.

Antibiotic HiVeg Assay Medium No. 11 (Neomycin, Erythromycin HiVeg Assay Agar)

Composition per liter:

Agar	15.0g
Plant peptone.....	6.0g
Plant hydrolysate.....	4.0g
Yeast extract.....	3.0g
Plant extract	1.5g
Glucose	1.0g
pH 8.3 ± 0.2 at 25°C	

Source: This medium, without polysorbate 80, is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For antibiotic assay testing. For analyzing the neomycin content in pharmaceutical preparations.

Antibiotic HiVeg Assay Medium No. 12 (Nystatin HiVeg Assay Agar)

Composition per liter:

Agar	25.0g
Plant peptone.....	10.0g

Glucose	10.0g
NaCl.....	10.0g
Yeast extract.....	5.0g
Plant extract	2.5g
pH 6.0 ± 0.1 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For antibiotic assay effectiveness testing. For the assay of antifungal antibiotics like amphotericin and nystatin.

Antibiotic HiVeg Assay Medium No. 13

Composition per liter:

Glucose	20.0g
Plant peptone	10.0g
pH 5.6 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For testing the effectiveness of antibiotics on yeast and molds.

Antibiotic HiVeg Assay Medium No. 19 (Antibiotic HiVeg Assay Medium G)

Agar	23.5g
Glucose	10.0g
NaCl.....	10.0g
Plant peptone	9.4g
Yeast extract.....	4.7g
Plant extract	2.4g
pH 6.1 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For assaying the mycostatic activity of pharmaceutical preparations. For seed agar for the plate assay to test the effectiveness of nystatin, amphotericin B, and natamycin.

Antibiotic HiVeg Assay Medium No. 20 (Yeast Beef HiVeg Broth)

Composition per liter:

Plant peptone	15.0g
Glucose	11.0g
Yeast extract.....	6.5g
K ₂ HPO ₄	3.68g
NaCl.....	3.5g
Plant extract	1.5g
KH ₂ PO ₄	1.32g
pH 6.6 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For assaying the mycostatic activity of pharmaceutical preparations.

Antibiotic HiVeg Assay Medium No. 32

Composition per liter:

Agar	15.0g
Plant peptone.....	6.0g
Plant hydrolysate.....	4.0g
Yeast extract.....	3.0g
Plant extract	1.5g
Glucose	1.0g
MnSO ₄ ·4H ₂ O	0.3g
pH 6.6 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For preparing inoculum of *Bacillus subtilis* ATCC 6633 during assay of dihydrostreptomycin and vancomycin.

Antibiotic HiVeg Assay Medium No. 35 (Antibiotic HiVeg Assay Medium - I)

Composition per liter:

Agar	17.0g
Plant peptone.....	10.0g
Plant extract	10.0g
Glycerol	10.0g
NaCl.....	3.0g
pH 7.0 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For antibiotic assay effectiveness testing of bleomycin using *Mycobacterium smegmatis* ATCC 607.

Antibiotic HiVeg Assay Medium No. 36 (Antibiotic HiVeg Assay Medium - J)

Composition per liter:

Agar	15.0g
Plant hydrolysate.....	15.0g
NaCl.....	5.0g
Papaic digest of soybean meal.....	5.0g
pH 7.3 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: A general purpose medium for cultivating a wide variety of fastidious microorganisms.

Antibiotic HiVeg Assay Medium No. 37

Composition per liter:

Plant hydrolysate	15.0g
NaCl.....	5.0g
Papaic digest of soybean meal.....	5.0g
pH 7.3 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 10 min at 15 psi pressure–121°C.

Use: A general purpose medium for cultivating a wide variety of fastidious microorganisms.

Antibiotic HiVeg Assay Medium No. 38

Composition per liter:

Agar	15.0g
Plant peptone	15.0g
Glucose	5.5g
Papaic digest of soybean meal.....	5.0g
NaCl.....	4.0g
L-Cysteine·HCl·H ₂ O	0.7g
Na ₂ SO ₃	0.2g
pH 7.2 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For microbiological assay of ticarcillin using *Pseudomonas aeruginosa* ATCC 29336.

Antibiotic HiVeg Assay Medium No. 39

Composition per liter:

Plant peptone	5.0g
K ₂ HPO ₄	3.68g
NaCl.....	3.5g
Plant extract	1.5g
Yeast extract.....	1.5g
KH ₂ PO ₄	1.32g
Glucose	1.0g
pH 7.9 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the microbiological assay of neomycin and streptomycin using *Klebsiella pneumoniae* ATCC 10031 as the test organism.

Antibiotic HiVeg Assay Medium No. 40

Composition per liter:

Yeast extract.....	20.0g
Agar.....	10.0g
Glucose.....	10.0g
Plant hydrolysate.....	2.5g
Plant peptone.....	2.5g
KH ₂ PO ₄	2.0g
Tween™ 80.....	0.1g

pH 6.7 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the microbiological assay of thiostrepton using *Streptococcus faecium* ATCC 10541.

Antibiotic HiVeg Assay Medium No. 41

Composition per liter:

Glucose.....	20.0g
Sodium citrate.....	10.0g
Plant hydrolysate.....	9.0g
Yeast extract.....	5.0g
K ₂ HPO ₄	1.0g
KH ₂ PO ₄	1.0g

pH 6.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 10 min at 15 psi pressure–121°C.

Use: For the microbiological assay of thiostrepton using *Streptococcus faecium* ATCC 10541.

Antibiotic Medium 1 (Penassay Seed Agar) (Seed Agar)/(Agar Medium A)

Composition per liter:

Agar.....	15.0g
Pancreatic digest of gelatin.....	6.0g
Pancreatic digest of casein.....	4.0g
Yeast extract.....	3.0g
Beef extract.....	1.5g
Glucose.....	1.0g

pH 6.6 ± 0.1 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For antibiotic assay testing, detection of antibiotics in milk, and determination of the antimicrobial effectiveness of antibiotics.

Antibiotic Medium 1 with Tetracycline

Composition per liter:

Agar.....	15.0g
Pancreatic digest of gelatin.....	6.0g
Pancreatic digest of casein.....	4.0g
Yeast extract.....	3.0g
Beef extract.....	1.5g
Glucose.....	1.0g
Tetracycline solution.....	10.0mL

pH 6.6 ± 0.1 at 25°C

Tetracycline Solution:

Composition per 10.0mL:

Tetracycline.....	0.02g
-------------------	-------

Preparation of Tetracycline Solution: Add tetracycline to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except tetracycline solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile tetracycline solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective cultivation and maintenance of *Salmonella choleraesuis*.

Antibiotic Medium 1 with Tetracycline, Streptomycin, and Chloramphenicol

Composition per liter:

Agar.....	15.0g
Pancreatic digest of gelatin.....	6.0g
Pancreatic digest of casein.....	4.0g
Yeast extract.....	3.0g
Beef extract.....	1.5g
Glucose.....	1.0g
Antibiotic solution.....	10.0mL

pH 6.6 ± 0.1 at 25°C

Antibiotic Solution:

Composition per 10.0mL:

Tetracycline.....	0.02g
Streptomycin.....	0.02g
Chloramphenicol.....	0.02g

Preparation of Antibiotic Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except antibiotic solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile antibiotic solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective cultivation and maintenance of *Salmonella choleraesuis*.

Antibiotic Medium 2
(Base Agar)
(Penassay Base Agar)

Composition per liter:

Agar	15.0g
Pancreatic digest of gelatin	6.0g
Yeast extract	3.0g
Beef extract	1.5g

pH 6.6 ± 0.1 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems and Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For use as a base layer in antibiotic assay testing. Especially useful for the plate assay of bacitracin and penicillin G.

Antibiotic Medium 3
(Penassay Broth)

Composition per liter:

Pancreatic digest of gelatin	5.0g
NaCl	3.5g
Yeast extract	1.5g
Beef extract	1.5g
Glucose	1.0g
K ₂ HPO ₄	3.68g
KH ₂ PO ₄	1.32g

pH 7.0 ± 0.05 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems and Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For antibiotic assay testing. Used for the serial dilution assay of penicillins and other antibiotics. Used in the turbidimetric assay of penicillin and tetracycline with *Staphylococcus aureus*. For the cultivation and maintenance of *Bacillus subtilis*, *Salmonella choleraesuis*, and *Staphylococcus aureus*. For the cloning of plasmids in *Streptococcus mutans*.

Antibiotic Medium 3 Plus

Composition per liter:

Agar	15.0g
Peptone	5.0g
K ₂ HPO ₄	3.68g
NaCl	3.5g
Yeast extract	2.5g
Glucose	1.75g
Beef extract	1.5g
KH ₂ PO ₄	1.32g

pH 7.0 ± 0.05 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For antibiotic assay testing and for the cultivation of *Escherichia coli*.

Antibiotic Medium 4
(Yeast Beef Agar)
(Agar Medium C)

Composition per liter:

Agar	15.0g
Pancreatic digest of gelatin	6.0g
Yeast extract	3.0g
Beef extract	1.5g
Glucose	1.0g

pH 6.6 ± 0.05 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For antibiotic assay testing.

Antibiotic Medium 5
(Streptomycin Assay Agar with Yeast Extract)

Composition per liter:

Agar	15.0g
Pancreatic digest of gelatin	6.0g
Yeast extract	3.0g
Beef extract	1.5g

pH 7.9 ± 0.1 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems and Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For antibiotic assay testing. For the streptomycin assay using the cylinder plate technique and *Bacillus subtilis* as test organism.

Antibiotic Medium 6

Composition per liter:

Pancreatic digest of casein	17.0g
NaCl	5.0g
Papaic digest of soybean meal	3.0g
Glucose	2.5g
K ₂ HPO ₄	2.5g
MnSO ₄ ·H ₂ O	0.03g

pH 7.0 ± 0.1 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For antibiotic assay testing.

Antibiotic Medium 7

Composition per liter:

Agar	15.0g
Pancreatic digest of gelatin	6.0g

Yeast extract.....	3.0g
Beef extract.....	1.5g

pH 7.0 ± 0.1 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For use as a base layer in antibiotic assay testing. Especially useful for the plate assay of bacitracin and penicillin G.

Antibiotic Medium 8 (Base Agar with Low pH)

Composition per liter:

Agar	15.0g
Pancreatic digest of gelatin	6.0g
Yeast extract.....	3.0g
Beef extract.....	1.5g

pH 5.9 ± 0.1 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For antibiotic assay testing. For use as the base agar and the seed agar in the plate assay of tetracycline. For use as the seed agar in the plate assay of vancomycin, mitomycin, and mithramycin.

Antibiotic Medium 9 (Polymyxin Base Agar)

Composition per liter:

Agar	20.0g
Pancreatic digest of casein.....	17.0g
NaCl.....	5.0g
Papaic digest of soybean meal.....	3.0g
K ₂ HPO ₄	2.5g
Glucose.....	2.5g

pH 7.2 ± 0.1 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For antibiotic assay testing. For base agar for the plate assay of carbenicillin, colistimethate, and polymyxin B.

Antibiotic Medium 10 (Polymyxin Seed Agar)

Composition per liter:

Pancreatic digest of casein.....	17.0g
Agar	12.0g
Polysorbate 80.....	10.0g
NaCl.....	5.0g
Papaic digest of soybean meal.....	3.0g
K ₂ HPO ₄	2.5g
Glucose.....	2.5g

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For antibiotic assay testing. For seed agar for the plate assay of carbenicillin, colistimethate, and polymyxin B.

Antibiotic Medium 11 (Neomycin Assay Agar)

Composition per liter:

Agar	15.0g
Pancreatic digest of gelatin.....	6.0g
Pancreatic digest of casein.....	4.0g
Yeast extract.....	3.0g
Beef extract.....	1.5g
Glucose.....	1.0g

pH 8.0 ± 0.1 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems and Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For antibiotic assay testing. For base agar and seed agar for the plate assay to test the effectiveness of neomycin sulfate, amoxicillin, ampicillin, clindamycin, cyclacillin, erythromycin, gentamycin, neomycin, oleandomycin, and sisomycin.

Antibiotic Medium 12

Composition per liter:

Agar	25.0g
Peptone.....	10.0g
Glucose.....	10.0g
NaCl.....	10.0g
Yeast extract.....	5.0g
Beef extract.....	2.5g

pH 6.0 ± 0.1 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For antibiotic assay effectiveness testing.

Antibiotic Medium 13 (Sabouraud Liquid Broth, Modified) (Fluid Sabouraud Medium)

Composition per liter:

Glucose.....	20.0g
Pancreatic digest of casein.....	5.0g
Peptic digest of animal tissue.....	5.0g

pH 5.7 ± 0.1 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For testing the effectiveness of antibiotics on yeast and molds.

Antibiotic Medium 19 (Nystatin Assay Agar)

Composition per liter:

Agar	23.5g
Glucose	10.0g
NaCl	10.0g
Pancreatic digest of gelatin	9.4g
Yeast extract	4.7g
Beef extract	2.4g

pH 6.1 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For assaying the mycostatic activity of pharmaceutical preparations. For seed agar for the plate assay to test the effectiveness of nystatin, amphotericin B, and natamycin.

Antibiotic Medium 20

Composition per liter:

Glucose	11.0g
Pancreatic digest of casein	10.0g
Yeast extract	6.5g
Pancreatic digest of gelatin	5.0g
K ₂ HPO ₄	3.68g
NaCl	3.5g
Beef extract	1.5g
KH ₂ PO ₄	1.32g

pH 6.6 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For assaying the mycostatic activity of pharmaceutical preparations.

Antibiotic Medium 21

Composition per liter:

Glucose	11.0g
Pancreatic digest of gelatin	5.0g
K ₂ HPO ₄	3.68g
NaCl	3.5g
Yeast extract	1.5g
Beef extract	1.5g
KH ₂ PO ₄	1.32g

pH 6.6 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For assaying the mycostatic activity of pharmaceutical preparations.

Antibiotic Sulfonamide Sensitivity Test Agar (ASS Agar)

Composition per liter:

Agar	12.0g
Proteose peptone	10.0g
Beef extract	10.0g
NaCl	3.0g
Glucose	2.0g
Na ₂ HPO ₄	2.0g
Sodium acetate	1.0g
Adenine	0.01g
Guanine	0.01g
Uracil	0.01g
Xanthine	0.01g

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For testing the antimicrobial effectiveness of antibiotics and sulfonamides. For detecting the presence of antimicrobial substances in milk, urine, and other fluids.

Antifungal Assay Agar

Composition per liter:

Glucose	50.0g
Agar	15.0g
Sodium citrate	4.5g
Pancreatic digest of casein	4.0g
Citric acid	1.0g
K ₂ HPO ₄	0.55g
KCl	0.425g
CaCl ₂ ·2H ₂ O	0.125g
MgSO ₄ ·7H ₂ O	0.125g
Inositol	0.025g
MnSO ₄ ·4H ₂ O	2.5mg
Niacin	2.5mg
Calcium pantothenate	2.5mg
FeCl ₃	2.5mg
Pyridoxine hydrochloride	0.25mg
Thiamine	0.25mg
Biotin	0.008mg

pH 5.5 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Sigma Aldrich.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For assaying antifungal activity of pharmaceutical products and other materials by cylinder plate or disc method.

Antifungal Assay HiVeg Agar

Composition per liter:

Glucose	50.0g
Agar	15.0g

Sodium citrate	4.5g
Plant hydrolysate.....	4.0g
Citric acid.....	1.0g
K ₂ HPO ₄	0.55g
KCl.....	0.425g
CaCl ₂ ·2H ₂ O.....	0.125g
MgSO ₄ ·7H ₂ O.....	0.125g
Inositol.....	0.025g
MnSO ₄ ·4H ₂ O.....	2.5mg
Niacin.....	2.5mg
Calcium pantothenate.....	2.5mg
FeCl ₃	2.5mg
Pyridoxine hydrochloride.....	0.25mg
Thiamine.....	0.25mg
Biotin.....	0.008mg

pH 5.5 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For assaying antifungal activity of pharmaceutical products and other materials by cylinder plate or disc method.

Antimicrobial Inhibitor Test Agar pH 6.0

Composition per liter:

Agar	13.0g
NaCl.....	5.0g
Tryptone.....	3.5g
Meat extract.....	3.5g
<i>Bacillus subtilis</i> spore suspension.....	1.0mL

pH 6.0 ± 0.2 at 25°C

Preparation of Medium: Add components, except *Bacillus subtilis* spore suspension, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Adjust pH to 6.0. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Add *Bacillus subtilis* spore suspension. Mix thoroughly. Pour into sterile Petri dishes.

Use: For residual analysis of antimicrobial components in meat and organ samples, using *Bacillus subtilis* ATCC 6633 as test organism.

Antimicrobial Inhibitor Test Agar pH 7.2

Composition per liter:

Agar	13.0g
Peptone.....	7.0g
NaCl.....	5.0g
Na ₃ PO ₄ ·12H ₂ O.....	0.8g
Selective supplement solution.....	10.0mL
<i>Bacillus subtilis</i> spore suspension.....	1.0mL

pH 7.2 ± 0.2 at 25°C

Selective Supplement Solution:

Composition per 10.0mL:

Trimethoprim.....	5.0mg
-------------------	-------

Preparation of Selective Supplement Solution: Add trimethoprim to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except selective supplement solution and *Bacillus subtilis* spore suspension, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Add selective supplement solution and *Bacillus subtilis* spore suspension. Mix thoroughly. Pour into sterile Petri dishes.

Use: For residual analysis of antimicrobial components in meat and organ samples, using *Bacillus subtilis* ATCC 6633 as test organism.

Antimicrobial Inhibitor Test Agar pH 8.0

Composition per liter:

Tryptone.....	3.5g
Meat extract.....	3.5g
NaCl.....	5.0g
Na ₃ PO ₄ ·12H ₂ O.....	2.5g
Agar.....	13.0g
<i>Micrococcus luteus</i> suspension.....	10.0mL
<i>Bacillus subtilis</i> spore suspension.....	1.0mL

pH 8.0 ± 0.2 at 25°C

Preparation of Medium: Add components, except *Bacillus subtilis* spore suspension, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Adjust pH to 8.0. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Add *Bacillus subtilis* spore suspension and *Micrococcus luteus* (10⁴ CFU per mL) suspension. Mix thoroughly. Pour into sterile Petri dishes.

Use: For residual analysis of antimicrobial components in meat and organ samples, using *Bacillus subtilis* ATCC 6633 and *Micrococcus luteus* ATCC 9341 as test organisms.

Antimycin Medium

Composition per liter:

Yeast extract.....	20.0g
Peptone.....	10.0g
Glycerol.....	30.0mL
Antimycin solution.....	10.0mL

pH 5.5 ± 0.2 at 25°C

Antimycin Solution:

Composition per 10.0mL:

Antimycin.....	1.0mg
----------------	-------

Preparation of Antimycin Solution: Add antimycin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except antimycin solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 5.5 with HCl. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 10.0mL of sterile antimycin solution. Mix thoroughly. Aseptically distribute into sterile tubes.

Use: For the cultivation and maintenance of *Candida utilis*.

Antimycotic Sensitivity Test Agar

Composition per liter:

Agar.....	25.0g
Glucose.....	20.0g
Pancreatic digest of casein.....	19.0g
Sodium citrate.....	10.0g

Yeast extract.....	10.0g
Na ₂ HPO ₄	1.0g
pH 6.0 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For testing antimycotic sensitivity by the diffusion method.

AO Agar

Composition per liter:

Agar	11.0g
Sodium acetate	0.5g
Pancreatic digest of casein	0.5g
Yeast extract	0.5g
Beef extract	0.2g
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of *Cytophaga* species, *Herpetosiphon* species, *Saprospira* species, and *Flexithrix* species.

AO Agar

Composition per liter:

Agar	4.0g
Sodium acetate	0.5g
Pancreatic digest of casein	0.5g
Yeast extract	0.5g
Beef extract	0.2g
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the maintenance of *Cytophaga* species, *Herpetosiphon* species, *Saprospira* species, and *Flexithrix* species.

AOAC Letheen Broth (Association of Official Analytical Chemists Letheen Broth)

Composition per liter:

Peptic digest of animal tissue.....	10.0g
Polysorbate 80.....	5.0g
NaCl.....	5.0g
Beef extract	5.0g
Lecithin	0.7g
pH 7.0 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes in 10.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the determination of phenol coefficients of disinfectant products containing cationic surface-active materials. Use according to *Official Methods of Analysis of the Association of Official Analytical Chemists* (AOAC).

Aolpha Medium

Composition per 1041.0mL:

NaCl.....	100.0g
Agar	15.0g
MgSO ₄ ·7H ₂ O	9.5g
MgCl ₂ ·6H ₂ O	5.0g
KCl.....	5.0g
Peptone	5.0g
Yeast extract.....	1.0g
CaCl ₂ ·2H ₂ O	0.2g
(NH ₄) ₂ SO ₄	0.1g
KNO ₃	0.1g
Metals solution.....	20.0mL
Phosphate solution	20.0mL
Vitamin solution.....	1.0mL

pH 7.0 ± 0.2 at 25°C

Metals Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O.....	29.7g
Nitritotriacetic acid	10.0g
CaCl ₂ ·2H ₂ O	3.3g
FeSO ₄ ·7H ₂ O.....	99.0mg
Na ₂ MoO ₄ ·2H ₂ O	12.7mg
Metals “44”	50.0mL

Preparation of Metals Solution: Solubilize nitritotriacetic acid with KOH. Dissolve remaining ingredients. Adjust pH to 7.2 with KOH or H₂SO₄. Autoclave for 15 min at 15 psi pressure–121°C. Add aseptically to sterile basal medium.

Metals “44”:

Composition per 100.0mL:

ZnSO ₄ ·7H ₂ O.....	1.1g
FeSO ₄ ·7H ₂ O.....	0.5g
EDTA	0.25g
MnSO ₄ ·7H ₂ O.....	0.154g
CuSO ₄ ·5H ₂ O	0.04g
Co(NO ₃) ₂ ·6H ₂ O	0.025g
Na ₂ B ₄ O ₇ ·10H ₂ O.....	0.018g

Preparation of Metals “44”: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Add aseptically to sterile basal medium.

Phosphate Solution:

Composition per liter:

K ₂ HPO ₄	2.5g
KH ₂ PO ₄	2.5g

Preparation of Phosphate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Add aseptically to sterile basal medium.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl.....	10.0mg
Calcium pantothenate	5.0mg

Nicotinamide.....	5.0mg
Riboflavin.....	5.0mg
Thiamine-HCl.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Cyanocobalamin.....	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize and add aseptically to sterile basal medium.

Preparation of Medium: Add components—except Metals “44”, phosphate solution, and vitamin solution—to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH of basal medium to 7.0. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C and aseptically add the Metals “44”, phosphate, and vitamin solutions.

Use: For the cultivation and maintenance of *Halomonas meridiana* and other *Halomonas* species.

Aphanomyces Synthetic Medium

Composition per liter:

D-Glucose.....	5.0g
KH ₂ PO ₄	2.0g
L-Asparagine.....	0.75g
MgCl ₂	0.05g
FeCl ₃	5.0mg
MnCl ₂	5.0mg
ZnCl ₂	5.0mg
L-Methionine.....	0.02mg

pH 5.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Adjust pH to 5.5. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Aphanomyces* species.

Aplanobacterium Medium

Composition per liter:

Agar.....	20.0g
Glucose.....	10.0g
Peptone.....	5.0g
Yeast extract.....	5.0g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Xanthomonas* species.

Apple Juice Yeast Extract Medium (AJYE Medium)

Composition per 1200.0mL:

Agar.....	30.0g
Yeast extract.....	10.0g
Apple juice.....	1.0L

pH 4.8 ± 0.2 at 25°C

Preparation of Medium: Add yeast extract to 1.0L of apple juice. Mix thoroughly. Adjust pH to 4.8. Autoclave for 10 min at 9 psi pres-

sure–114°C. Cool to 45°–50°C. In a separate flask, add agar to 200.0mL of distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically combine the sterile apple juice solution with the sterile agar solution. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the cultivation of *Zymomonas* species.

APRY Agar

Composition per liter:

Fructose.....	30.0g
NaCl.....	25.0g
Glucose.....	20.0g
Agar.....	15.0g
Casein enzymatic hydrolysate.....	10.0g
Yeast extract.....	2.5g
Peptic digest of animal tissue.....	5.0g
Acetic acid, glacial.....	5.0mL
Selective supplement solution.....	5.0mL
Potassium sorbate solution.....	1.0mL

pH 6.0 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Potassium Sorbate Solution:

Composition per 10.0mL:

Potassium sorbate.....	1.0g
------------------------	------

Preparation of Potassium Sorbate Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Selective Supplement Solution:

Composition per 10.0mL:

Chlortetracycline.....	50.0mg
------------------------	--------

Preparation of Selective Supplement Solution: Add chlortetracycline to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except acetic acid, selective supplement solution, and potassium sorbate solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add acetic acid, selective supplement solution, and potassium sorbate solution. Mix thoroughly. Pour into Petri dishes or aseptically distribute into sterile tubes.

Use: For the cultivation of acid resistant yeasts, including *Zygosaccharomyces bailii* and *Zygosaccharomyces rouxii* in salads, sauces, and dressings.

APRY Agar Base with Acetic Acid and Sorbate

Composition per liter:

Fructose.....	30.0g
NaCl.....	25.0g
Glucose.....	20.0g
Agar.....	15.0g
Pancreatic digest of casein.....	10.0g
Peptic digest of animal tissue.....	5.0g
Yeast extract.....	2.5g
Acetic acid (conc.).....	5.0mL
Potassium sorbate (10%).....	1.0mL

pH 5.5 ± 0.2 at 25°C

Source: This medium without acetic acid and potassium sorbate is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45–50°C. Aseptically add 5.0mL sterile acetic acid and 1.0mL potassium sorbate solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the detection and isolation of acid resistant yeasts, *Zygosaccharomyces bailii* and *Zygosaccharomyces rouxii*, in salads, sauces, and dressings.

APRY Broth Base with Chloramphenicol

Composition per liter:

Glucose	30.0g
Fructose.....	20.0g
Pancreatic digest of casein.....	15.0g
Polysorbate 80.....	10.0g
Peptic digest of animal tissue.....	5.0g
Yeast extract.....	2.5g
Choramphenicol solution.....	2.0ml

pH 6.5 ± 0.2 at 25°C

Source: This medium without chloramphenicol is available as a premixed powder from HiMedia. Chloramphenicol supplement is available from HiMedia.

Chloramphenicol Solution:

Composition per 2.0mL:

Chloramphenicol.....	50.0mg
Ethanol.....	2.0mL

Preparation of Chloramphenicol Solution: Add chloramphenicol to ethanol and bring volume to 2.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45–50°C. Aseptically add 2.0mL chloramphenicol solution. Mix thoroughly. Distribute into sterile tubes or flasks.

Use: For the detection and isolation of acid resistant yeasts, *Zygosaccharomyces bailii* and *Zygosaccharomyces rouxii*, in salads, sauces, and dressings.

APRY Broth

Composition per liter:

Glucose	30.0g
Fructose.....	20.0g
Casein enzymatic hydrolysate	15.0g
Yeast extract.....	2.5g
Peptic digest of animal tissue.....	5.0g
Polysorbate 80.....	10.0mL
Acetic acid, glacial.....	5.0mL
Selective supplement solution	5.0mL
Potassium sorbate solution.....	1.0mL

pH 6.0 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Potassium Sorbate Solution:

Composition per 10.0mL:

Potassium sorbate	1.0g
-------------------------	------

Preparation of Potassium Sorbate Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Selective Supplement Solution:

Composition per 10.0mL:

Chlortetracycline.....	50.0mg
Chloramphenicol.....	50.0mg

Preparation of Selective Supplement Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except acetic acid, selective supplement solution, and potassium sorbate solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add acetic acid, selective supplement solution, and potassium sorbate solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of acid resistant yeasts, including *Zygosaccharomyces bailii* and *Zygosaccharomyces rouxii* n salads, sauces, and dressings.

APT Agar

Composition per liter:

Agar	15.0g
Pancreatic digest of casein.....	12.5g
Glucose	10.0g
Yeast extract.....	7.5g
NaCl.....	5.0g
K ₂ HPO ₄	5.0g
Sodium citrate	5.0g
Na ₂ CO ₃	1.25g
MgSO ₄ ·7H ₂ O	0.8g
Polysorbate 80	0.2g
MnCl ₂ ·4H ₂ O	0.14g
FeSO ₄ ·7H ₂ O.....	0.04g
Thiamine-HCl	1.0mg

pH 6.7 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 13 psi—118°–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and enumeration of bacteria, especially heterofermentative lactobacilli, from meat and other foods. For the cultivation of streptococci.

APT Agar

Composition per liter:

Agar	13.5g
Pancreatic digest of casein.....	10.0g
Glucose	10.0g
Yeast extract.....	7.5g
NaCl.....	5.0g
KH ₂ PO ₄	5.0g
Sodium citrate	5.0g
Na ₂ CO ₃	1.25g
MgSO ₄ ·7H ₂ O	0.8g

Polysorbate 80.....	0.2g
MnCl ₂ ·4H ₂ O.....	0.14g
FeSO ₄ ·7H ₂ O.....	0.04g
pH 6.7 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 13 psi—118°–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and enumeration of bacteria, especially heterofermentative lactobacilli, from meat and other foods. For the cultivation of streptococci.

APT Broth

Composition per liter:

Pancreatic digest of casein.....	12.5g
Glucose.....	10.0g
Yeast extract.....	7.5g
NaCl.....	5.0g
K ₂ HPO ₄	5.0g
Sodium citrate.....	5.0g
Na ₂ CO ₃	1.25g
MgSO ₄ ·7H ₂ O.....	0.8g
Polysorbate 80.....	0.2g
MnCl ₂ ·4H ₂ O.....	0.14g
FeSO ₄ ·7H ₂ O.....	0.04g
Thiamine-HCl.....	1.0mg
pH 7.7 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi—118°–121°C.

Use: For the cultivation of lactic acid bacteria. For the cultivation of heterofermentative lactobacilli from meat and other foods. The American Public Health Association recommends adding 100.0µg/L of thiamine to this medium.

APT Broth

Composition per liter:

Pancreatic digest of casein.....	10.0g
Glucose.....	10.0g
Yeast extract.....	7.5g
NaCl.....	5.0g
KH ₂ PO ₄	5.0g
Sodium citrate.....	5.0g
Na ₂ CO ₃	1.25g
MgSO ₄ ·7H ₂ O.....	0.8g
Polysorbate 80.....	0.2g
MnCl ₂ ·4H ₂ O.....	0.14g
FeSO ₄ ·7H ₂ O.....	0.04g
pH 7.7 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi—118°–121°C.

Use: For the cultivation of lactic acid bacteria. For the cultivation of heterofermentative lactobacilli from meat and other foods. The American Public Health Association recommends adding 100.0µg/L of thiamine to this medium.

APT HiVeg Agar

Composition per liter:

Agar.....	15.0g
Plant hydrolysate.....	12.5g
Glucose.....	10.0g
Yeast extract.....	7.5g
NaCl.....	5.0g
KH ₂ PO ₄	5.0g
Sodium citrate.....	5.0g
Na ₂ CO ₃	1.25g
MgSO ₄ ·7H ₂ O.....	0.8g
Polysorbate 80.....	0.2g
MnCl ₂ ·4H ₂ O.....	0.14g
FeSO ₄ ·7H ₂ O.....	0.04g
pH 6.7 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi—121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and enumeration of bacteria, especially heterofermentative lactobacilli, from meat and other foods. For the cultivation of streptococci.

APT HiVeg Broth

Composition per liter:

Plant hydrolysate.....	12.5g
Glucose.....	10.0g
Yeast extract.....	7.5g
NaCl.....	5.0g
K ₂ HPO ₄	5.0g
Sodium citrate.....	5.0g
Na ₂ CO ₃	1.25g
MgSO ₄ ·7H ₂ O.....	0.8g
Polysorbate 80.....	0.2g
MnCl ₂ ·4H ₂ O.....	0.14g
FeSO ₄ ·7H ₂ O.....	0.04g
Thiamine-HCl.....	1.0mg
pH 6.7 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi—121°C.

Use: For the cultivation of lactic acid bacteria. For the cultivation of heterofermentative lactobacilli from meat and other foods.

Aquabacter spiritensis Medium (LMG Medium 225)

Sodium succinate	2.0g
Yeast extract	1.0g
KH ₂ PO ₄	1.0g
Peptone	0.4g
NH ₄ Cl	0.2g
NaCl	0.2g
MgSO ₄ ·7H ₂ O	0.2g
CaCl ₂ ·2H ₂ O	10.0mg
Ferric citrate	5.0mg
Vitamin solution	20.0mL
Trace elements solution SL-6	1.0mL

pH 7.0 ± 0.2 at 25°C

Trace Elements Solution SL-6 :

Composition per liter:

H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
MnCl ₂ ·4H ₂ O	0.03g
Na ₂ MoO ₄ ·H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution SL-6 : Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 3.4.

Vitamin Solution:

Composition per liter:

Calcium DL-pantothenate	5.0mg
Riboflavin	5.0mg
Thiamine-HCl	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except vitamin solution, to 980.0mL distilled/deionized water. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 20.0mL sterile vitamin solution. Mix thoroughly. Aseptically distribute to sterile tubes or flasks.

Use: For the cultivation of *Aquabacter spiritensis*.

Aquaspirillum Autotrophic Agar

Composition per liter:

Noble agar	15.0g
Na ₂ HPO ₄ ·12H ₂ O	9.0g
KH ₂ PO ₄	1.5g
NH ₄ Cl	1.0g
MgSO ₄ ·7H ₂ O	0.2g
CaCl ₂ ·2H ₂ O	0.01g
Ferric ammonium citrate	5.0mg
NaHCO ₃ solution	10.0mL
Trace elements solution	3.0mL

pH 7.1 ± 0.2 at 25°C

NaHCO₃ Solution:

Composition per 10.0mL:

NaHCO ₃	0.5g
--------------------	------

Preparation of NaHCO₃ Solution: Add the NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Trace Elements Solution:

Composition per liter:

H ₃ BO ₃	30.0mg
CoCl ₂ ·6H ₂ O	20.0mg
ZnSO ₄ ·7H ₂ O	10.0mg
MnCl ₂ ·4H ₂ O	3.0mg
Na ₂ MoO ₄ ·2H ₂ O	3.0mg
NiCl ₂ ·6H ₂ O	2.0mg
CuCl ₂ ·2H ₂ O	1.0mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components, except NaHCO₃ solution, to double-distilled water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile NaHCO₃ solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes. For autotrophic growth, incubate under 85% H₂ + 10% CO₂ + 5% O₂.

Use: For the autotrophic cultivation and maintenance of *Aquaspirillum autotrophicum*.

Aquaspirillum Autotrophic Broth

Composition per liter:

Na ₂ HPO ₄ ·12H ₂ O	9.0g
KH ₂ PO ₄	1.5g
NH ₄ Cl	1.0g
MgSO ₄ ·7H ₂ O	0.2g
CaCl ₂ ·2H ₂ O	0.01g
Ferric ammonium citrate	5.0mg
NaHCO ₃ solution	10.0mL
Trace elements solution	3.0mL

pH 7.1 ± 0.2 at 25°C

NaHCO₃ Solution:

Composition per 10.0mL:

NaHCO ₃	0.5g
--------------------	------

Preparation of NaHCO₃ Solution: Add the NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Trace Elements Solution:

Composition per liter:

H ₃ BO ₃	30.0mg
CoCl ₂ ·6H ₂ O	20.0mg
ZnSO ₄ ·7H ₂ O	10.0mg
MnCl ₂ ·4H ₂ O	3.0mg
Na ₂ MoO ₄ ·2H ₂ O	3.0mg
NiCl ₂ ·6H ₂ O	2.0mg
CuCl ₂ ·2H ₂ O	1.0mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components, except NaHCO₃ solution, to double-distilled water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile NaHCO₃ solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks. To grow autotrophically, incubate under 85% H₂ + 10% CO₂ + 5% O₂.

Use: For the autotrophic cultivation of *Aquaspirillum autotrophicum*.

Aquaspirillum Heterotrophic Agar

Composition per liter:

Noble agar.....	15.0g
Na ₂ HPO ₄ ·12H ₂ O.....	9.0g
KH ₂ PO ₄	1.5g
NH ₄ Cl.....	1.0g
Sodium succinate.....	1.0g
MgSO ₄ ·7H ₂ O.....	0.2g
CaCl ₂ ·2H ₂ O.....	0.01g
Ferric ammonium citrate.....	5.0mg
Trace elements solution.....	3.0mL

pH 7.1 ± 0.2 at 25°C

Trace Elements Solution:

Composition per liter:

H ₃ BO ₃	30.0mg
CoCl ₂ ·6H ₂ O.....	20.0mg
ZnSO ₄ ·7H ₂ O.....	10.0mg
MnCl ₂ ·4H ₂ O.....	3.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	3.0mg
NiCl ₂ ·6H ₂ O.....	2.0mg
CuCl ₂ ·2H ₂ O.....	1.0mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to double-distilled water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the heterotrophic cultivation and maintenance of *Aquaspirillum autotrophicum*.

Aquaspirillum Heterotrophic Broth

Composition per liter:

Na ₂ HPO ₄ ·12H ₂ O.....	9.0g
KH ₂ PO ₄	1.5g
NH ₄ Cl.....	1.0g
Sodium succinate.....	1.0g
MgSO ₄ ·7H ₂ O.....	0.2g
CaCl ₂ ·2H ₂ O.....	0.01g
Ferric ammonium citrate.....	5.0mg
Trace elements solution.....	3.0mL

pH 7.1 ± 0.2 at 25°C

Trace Elements Solution:

Composition per liter:

H ₃ BO ₃	30.0mg
CoCl ₂ ·6H ₂ O.....	20.0mg
ZnSO ₄ ·7H ₂ O.....	10.0mg
MnCl ₂ ·4H ₂ O.....	3.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	3.0mg
NiCl ₂ ·6H ₂ O.....	2.0mg
CuCl ₂ ·2H ₂ O.....	1.0mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to double-distilled water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically distribute into sterile tubes or flasks.

Use: For the heterotrophic cultivation of *Aquaspirillum autotrophicum*.

Aquaspirillum Medium (DSMZ Medium 888)

Composition per 1026mL:

Casamino acids.....	1.5g
(NH ₄) ₂ SO ₄	1.0g
MgSO ₄ ·7H ₂ O.....	1.0g
Agar.....	0.5g
CaCl ₂ ·6H ₂ O.....	30.0mg
Na ₂ H ₂ PO ₄	10.0mg
Sodium succinate solution.....	10.0mL
Thiosulfate solution.....	10.0mL
Standard vitamin solution.....	5.0mL
Trace elements solution SL-10.....	1.0mL

pH 7.5 ± 0.2 at 25°C

Standard Vitamin Solution:

Composition per 100.0mL:

Thiamine-HCl·2H ₂ O.....	50.0mg
Nicotinic acid.....	50.0mg
Pyridoxine-HCl.....	50.0mg
Ca-pantothenate.....	50.0mg
Riboflavin.....	10.0mg
Vitamin B ₁₂	1.0mg
Folic acid.....	0.2mg
Biotin.....	0.1mg

Preparation of Standard Vitamin Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Trace Elements Solution SL-10:

Composition per liter:

FeCl ₂ ·4H ₂ O.....	1.5g
H ₃ BO ₃	300.0mg
CoCl ₂ ·6H ₂ O.....	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	36.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
CuCl ₂ ·2H ₂ O.....	2.0mg
HCl (25% solution).....	7.7mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Thiosulfate Solution:

Composition per 10.0mL:

Na ₂ S ₂ O ₃ ·5H ₂ O.....	1.0g
---	------

Preparation of Thiosulfate Solution: Add Na₂S₂O₃·5H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Sodium Succinate Solution:

Composition per 10.0mL:

Sodium succinate.....	1.0g
-----------------------	------

Preparation of Sodium Succinate Solution: Add sodium succinate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Preparation of Medium: Add components, except sodium succinate solution, thiosulfate solution, standard vitamin solution, and trace elements solution SL-10, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add 10.0mL sterile sodium succinate solution, 10.0mL sterile thiosulfate solution, 5.0mL sterile standard vitamin solution, and 1.0mL sterile trace elements solution SL-10. Mix thoroughly. Adjust pH to 7.5. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Aquaspirillum* spp.

***Aquincola* Medium (DSMZ Medium 1178)**

Composition per liter:

Yeast extract.....	1.0g
Peptone.....	1.0g
Fructose.....	0.5g
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Aquincola* spp.

***Aquisalimonas* Agar (DSMZ Medium 1182)**

Composition per liter:

Solution A.....	500.0mL
Solution B.....	500.0mL
pH 9.5 ± 0.2 at 25°C	

Solution A:

Composition per 500.0mL:

Agar.....	20.0g
Glucose.....	10.0g
Peptone.....	5.0g
Yeast extract.....	5.0g
K ₂ HPO ₄	1.0g
MgCl ₂ ·6H ₂ O.....	0.2g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C.

Solution B:

Composition per 500.0mL:

NaCl.....	80.0g
Na ₂ CO ₃	20.0g

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C.

Preparation of Medium: Aseptically combine 500.0mL solution A and 500.0mL solution B. The final pH should be 9.5. Pour into Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Aquisalimonas* spp.

***Aquisalimonas* Medium (DSMZ Medium 1182)**

Composition per liter:

Solution A.....	500.0mL
Solution B.....	500.0mL
pH 9.5 ± 0.2 at 25°C	

Solution A:

Composition per 500.0mL:

Glucose.....	10.0g
Peptone.....	5.0g
Yeast extract.....	5.0g
K ₂ HPO ₄	1.0g
MgCl ₂ ·6H ₂ O.....	0.2g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Solution B:

Composition per 500.0mL:

NaCl.....	80.0g
Na ₂ CO ₃	20.0g

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Preparation of Medium: Aseptically combine 500.0mL solution A and 500.0mL solution B. The final pH should be 9.5.

Use: For the cultivation and maintenance of *Aquisalimonas* spp.

Arabinose Agar Base with Selective Supplement

Composition per liter:

Peptone, special.....	23.0g
Agar.....	15.0g
Arabinose.....	10.0g
NaCl.....	5.0g
Corn starch.....	1.0g
Phenol Red.....	0.1g
Selective supplement solution.....	10.0mL
pH 7.8 ± 0.2 at 25°C	

Source: This medium is available from HiMedia.

Selective Supplement Solution:

Composition per 10.0mL:

Thallium acetate.....	0.2g
Nalidixic acid.....	25.0mg

Preparation of Selective Supplement Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except selective supplement solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Adjust pH to 7.8. Gently heat and bring to boiling. Distribute into tubes or flasks. Gently heat and bring to boil. Do not autoclave. Cool to 50°C. Add selective supplement solution. Mix thoroughly. Pour into sterile Petri dishes.

Use: For selective isolation of *Enterococcus faecium* from feces, sewage, and water supplies.

ARC51 Medium (DSMZ Medium 1098)

Composition per liter:

Sea salts, Sigma.....	35.0g
Sodium acetate.....	1.6g
Mercaptoethanesulfonic acid (coenzyme M).....	0.14g
NH ₄ Cl.....	0.1g
Yeast extract.....	0.1g
K ₂ HPO ₄	0.05g

Resazurin	0.5mg
NaHCO ₃ solution	10.0mL
Na ₂ S·9H ₂ O solution	10.0mL
Na ₂ S ₂ O ₃ solution	10.0mL
Wolfe's mineral elixer.....	1.0mL
Seven vitamin solution.....	1.0mL

pH 6.5 ± 0.2 at 25°C

Seven Vitamin Solution:**Composition per liter:**

Pyridoxine hydrochloride	300.0mg
Thiamine-HCl·2H ₂ O	200.0mg
Nicotinic acid.....	200.0mg
Vitamin B ₁₂	100.0mg
Calcium pantothenate	100.0mg
<i>p</i> -Aminobenzoic acid.....	80.0mg
D(+)-Biotin	20.0mg

Preparation of Seven Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Sparge with 100% N₂. Mix thoroughly. Filter sterilize.

Wolfe's Mineral Elixir:**Composition per liter:**

MgSO ₄ ·7H ₂ O	30.0g
NaCl	10.0g
MnSO ₄ ·2H ₂ O	5.0g
(NH ₄) ₂ NiSO ₄ ·6H ₂ O	2.8g
CoCl ₂ ·6H ₂ O	1.8g
ZnSO ₄ ·7H ₂ O	1.8g
FeSO ₄ ·7H ₂ O.....	1.0g
CaCl ₂ ·2H ₂ O.....	1.0g
KAl(SO ₄) ₂ ·12H ₂ O.....	0.18g
CuSO ₄ ·5H ₂ O	0.1g
H ₃ BO ₃	0.1g
Na ₂ MoO ₄ ·2H ₂ O	0.1g
Na ₂ SeO ₄	0.1g
Na ₂ WO ₄ ·2H ₂ O	0.1g

Preparation of Wolfe's Mineral Elixir: Adjust pH of 1.0L of distilled/deionized water to 1.0 with dilute H₂SO₄. Add remaining components one at a time. Mix thoroughly to dissolve.

Na₂S·9H₂O Solution:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O	0.5g
---	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Na₂S₂O₃ Solution:**Composition per 10.0mL:**

Na ₂ S ₂ O ₃ ·5H ₂ O	2.5g
--	------

Preparation of NaHCO₃ Solution: Add Na₂S₂O₃·5H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

NaHCO₃ Solution:**Composition per 50.0mL:**

NaHCO ₃	2.0g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Sparge

with N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Preparation of Medium: Add components, except vitamin solution, bicarbonate solution, thiosulfate solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Gently heat and bring to boiling. Boil for 3 min. Cool to room temperature while sparging with 20% CO₂ + 80% N₂. Dispense into balch tubes or serum bottles under atmosphere of 20% CO₂ + 80% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C under an atmosphere of 20% CO₂ + 80% N₂. Aseptically and anaerobically add sterile vitamin solution, bicarbonate solution, thiosulfate solution, and Na₂S·9H₂O solution. Adjust final pH to 6.5. After inoculation adjust overpressure to 1.5 bar with 20% CO₂ + 80% N₂.

Use: For the cultivation and maintenance of *Archaeoglobus infectus*.

Archaeoglobus Medium**Composition per liter:**

NaCl	18.0g
NaHCO ₃	5.0g
MgCl ₂ ·6H ₂ O	4.0g
MgSO ₄ ·7H ₂ O	3.45g
Sodium L-lactate	1.5g
Yeast extract.....	0.5g
KCl.....	0.34g
NH ₄ Cl	0.25g
CaCl ₂ ·2H ₂ O	0.14g
K ₂ HPO ₄	0.14g
Fe(NH ₄) ₂ (SO ₄) ₂ ·7H ₂ O	2.0mg
Resazurin	1.0mg
Na ₂ S·9H ₂ O solution	25.0mL
Trace elements solution	10.0mL

pH 6.9 ± 0.2 at 25°C

Trace Elements Solution:**Composition per liter:**

MgSO ₄ ·7H ₂ O	3.0g
Nitritotriacetic acid	1.5g
NaCl.....	1.0g
MnSO ₄ ·2H ₂ O	0.5g
CoSO ₄ ·7H ₂ O	0.18g
ZnSO ₄ ·7H ₂ O	0.18g
FeSO ₄ ·7H ₂ O.....	0.1g
CaCl ₂ ·2H ₂ O	0.1g
NiCl ₂ ·6H ₂ O	0.025g
KAl(SO ₄) ₂ ·12H ₂ O	0.02g
CuSO ₄ ·5H ₂ O	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O.....	0.3mg

Na₂S·9H₂O Solution:**Composition per 50.0mL:**

Na ₂ S·9H ₂ O.....	1.0g
--	------

Preparation of Na₂S·9H₂O Solution: Prepare and dispense solution anaerobically under 80% N₂ + 20% CO₂. Add Na₂S·9H₂O to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Adjust pH to 7.0. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Trace Elements Solution: Add nitritotriacetic acid to approximately 500.0mL of distilled/deionized water. Dissolve by adding KOH and adjust pH to 6.5. Add remaining components.

Bring volume to 1.0L with additional distilled/deionized water. Adjust pH to 7.0 with KOH.

Preparation of Medium: Add components, except NaHCO₃ and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 1.0L. Mix well and heat to boiling for a few minutes. Cool rapidly to room temperature while gassing with 80% N₂ + 20% CO₂. Add NaHCO₃ and adjust pH to 6.9. Distribute anaerobically under 80% N₂ + 20% CO₂ and pressurize sealed containers up to 2 bar pressure. Autoclave for 15 min at 15 psi pressure–121°C. Prior to inoculation of cultures, add 0.25mL of sterile Na₂S·9H₂O solution to each tube containing 9.75mL of sterile basal medium.

Use: For the cultivation and maintenance of *Archaeoglobus fulgidus*.

Archaeoglobus profundus Medium

Composition per liter:

NaCl	18.0g
MgCl ₂ ·6H ₂ O	4.0g
MgSO ₄ ·7H ₂ O	3.45g
Na ₂ SO ₄	2.7g
Sodium acetate	1.0g
NaHCO ₃	1.0g
Yeast extract	0.5g
KCl	0.34g
NH ₄ Cl	0.25g
CaCl ₂ ·2H ₂ O	0.14g
K ₂ HPO ₄	0.14g
Fe(NH ₄) ₂ (SO ₄) ₂ ·7H ₂ O	2.0mg
Resazurin	1.0mg
Na ₂ S·9H ₂ O solution	25.0mL
Trace elements solution	10.0mL

pH 6.5 ± 0.2 at 25°C

Trace Elements Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O	3.0g
Nitrilotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·2H ₂ O	0.5g
CoSO ₄ ·7H ₂ O	0.18g
ZnSO ₄ ·7H ₂ O	0.18g
FeSO ₄ ·7H ₂ O	0.1g
CaCl ₂ ·2H ₂ O	0.1g
NiCl ₂ ·6H ₂ O	0.025g
KAl(SO ₄) ₂ ·12H ₂ O	0.02g
CuSO ₄ ·5H ₂ O	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O	0.3mg

Na₂S·9H₂O Solution:

Composition per 50.0mL:

Na ₂ S·9H ₂ O	1.0g
-------------------------------------	------

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to approximately 500.0mL of distilled/deionized water. Dissolve by adding KOH and adjust pH to 6.5. Add remaining components. Bring volume to 1.0L with additional distilled/deionized water. Adjust pH to 7.0 with KOH.

Preparation of Na₂S·9H₂O Solution: Prepare and dispense solution anaerobically under 80% N₂ + 20% CO₂. Add Na₂S·9H₂O to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Adjust pH to 7.0. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except NaHCO₃ and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 1.0L. Mix well and heat to boiling for a few minutes. Cool rapidly to room temperature while gassing with 80% N₂ + 20% CO₂. Add NaHCO₃ and adjust pH to 6.9. Distribute anaerobically under 80% N₂ + 20% CO₂ and pressurize sealed containers up to 2 bar pressure. Autoclave for 15 min at 15 psi pressure–121°C. Prior to inoculation of cultures, add 0.25mL of sterile Na₂S·9H₂O solution to each tube containing 9.75mL of sterile basal medium.

Use: For the cultivation and maintenance of *Archaeoglobus profundus*.

Archaeoglobus veneficus Medium (DSMZ Medium 796)

Composition per liter:

NaCl	18.0g
MgCl ₂ ·6H ₂ O	7.15g
NaHCO ₃	5.0g
KCl	0.33g
NH ₄ Cl	0.25g
K ₂ HPO ₄ ·3H ₂ O	0.18g
CaCl ₂ ·2H ₂ O	0.14g
Fe(NH ₄) ₂ (SO ₄) ₂ ·6H ₂ O	2.0mg
Resazurin	0.5mg
Na ₂ SO ₃ solution	20.0mL
Na ₂ S·9H ₂ O solution	10.0mL
Na-acetate solution	4.0mL
Trace elements solution	1.0mL

pH 1.0 ± 0.2 at 25°C

Na₂S·9H₂O Solution:

Composition per 20.0mL:

Na ₂ S·9H ₂ O	0.5g
-------------------------------------	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 20.0mL. Sparge with N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Store anaerobically.

Na₂SO₃ Solution:

Composition per 10.0mL:

Na ₂ SO ₃	0.5g
---------------------------------	------

Preparation of Na₂SO₃ Solution: Add Na₂SO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Na-acetate Solution:

Composition per 10.0mL:

Na-acetate	2.5g
------------	------

Preparation of Na-acetate Solution: Add Na-acetate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Trace Elements Solution:

Composition per liter:

NaCl	5.0g
MnCl ₂ ·4H ₂ O	2.9g
(NH ₄) ₂ Ni(SO ₄) ₂	1.0g
FeSO ₄ ·7H ₂ O	0.5g
CoCl ₂ ·6H ₂ O	0.5g
CaCl ₂ ·2H ₂ O	0.5g
ZnSO ₄ ·7H ₂ O	0.5g
CuSO ₄ ·5H ₂ O	0.05g

H ₃ BO ₃	0.05g
KAl(SO ₄) ₂ ·12H ₂ O	0.05g
Na ₂ MoO ₄ ·4H ₂ O	0.05g
Na ₂ WO ₄ ·2H ₂ O	0.05g
Na ₂ SeO ₃ ·5H ₂ O	0.05g

Preparation of Trace Elements solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas mixture. Add components, except Na-acetate solution, Na₂S·9H₂O solution, and NaHCO₃, to 986.0mL distilled/deionized water. Mix thoroughly. Gently heat and bring to boiling. Boil for 5 min. Cool to 25°C while sparging with 80% N₂ + 20% CO₂. Add the solid NaHCO₃. Equilibrate with the 80% N₂ + 20% CO₂ gas. Adjust pH to 7.0 with HCl. Add 10.0mL Na₂S·9H₂O solution. Distribute into serum bottles under 80% N₂ + 20% CO₂ gas; 25.0mL medium in 100mL serum bottles. Adjust pH to 1.0. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically and anaerobically inject 0.1mL sterile Na-acetate solution and 0.5mL Na₂SO₃ solution per 25.0mL medium. Mix thoroughly. After inoculation pressurize to 1 bar atmosphere with 80% H₂ + 20% CO₂ gas.

Use: For the cultivation of *Archaeoglobus veneficus*.

Archangium violaceum Medium

Composition per liter:

Monosodium glutamate	1.0g
L-Leucine	0.5g
L-Tyrosine	0.5g
L-Isoleucine	0.3g
L-Proline	0.25g
MgSO ₄ ·7H ₂ O	0.2g
L-Lysine	0.15g
L-Arginine	0.1g
L-Asparagine	0.1g
L-Serine	0.1g
L-Threonine	0.1g
L-Valine	0.1g
L-Alanine	0.05g
L-Glycine	0.05g
L-Histidine	0.05g
L-Methionine	0.05g
Ca ₃ (PO ₄) ₂	0.02g
KCl	0.02g
Tris(hydroxymethyl)aminomethane buffer (0.02m solution, pH 7.5)	1.0L
	pH 7.5 ± 0.2 at 25°C

Preparation of Medium: Add solid components to 1.0L of Tris buffer. Mix thoroughly. Filter sterilize. Aseptically distribute into tubes or flasks.

Use: For the cultivation of *Archangium violaceum*.

Arcobacter Broth Base with Selective Supplement

Composition per liter:

Peptone	18.0g
NaCl	5.0g
Yeast extract	1.0g
Selective supplement solution	10.0mL
	pH 7.2 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Selective Supplement Solution:

Composition per 10.0mL:

Cefoperazone	16.0mg
Amphotericin B	5.0mg

Preparation of Selective Supplement Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except selective supplement solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add selective supplement solution. Mix thoroughly. Pour into Petri dishes or aseptically distribute into sterile tubes.

Use: For the enrichment and cultivation of *Arcobacter* spp.

Arcobacter Medium

Composition per liter:

Agar	15.0g
Special peptone	10.0g
Beef extract	5.0g
NaCl	5.0g
Yeast extract	5.0g
Sodium glutamate	2.0g
Sodium succinate	2.0g
MgCl ₂ ·H ₂ O	1.0g
Horse blood, defibrinated	50.0mL
	pH 7.0 ± 0.2 at 25°C

Source: Special peptone is available from Oxoid Unipath.

Preparation of Medium: Add components, except horse blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.0. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 50.0mL of sterile horse blood. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Arcobacter* species.

Arcobacter nitrofigilis Agar (LMG Medium 86)

Composition per liter:

Agar	15.0g
NaCl	15.0g
Lab-Lemco beef extract	10.0g
Special peptones, Oxoid	10.0g
	pH 7.1 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Arcobacter nitrofigilis*.

Arenavirus Plaquing Medium

Composition per liter:

Eagle's basal medium	1.0L
Agarose solution	1.0L
Fetal calf serum, inactivated	100.0mL
	pH 7.0 ± 0.2 at 25°C

Eagle's Basal Medium:**Composition per liter:**

HEPES (<i>N</i> -2-Hydroxyethylpiperazine- <i>N'</i> -2-ethanesulfonic acid) buffer	9.53g
NaCl	6.8g
NaHCO ₃	2.2g
Glucose	1.0g
KCl	0.4g
CaCl ₂ ·2H ₂ O	0.2g
NaH ₂ PO ₄	0.125g
MgSO ₄ ·7H ₂ O	0.1g
L-Isoleucine	0.026g
L-Leucine	0.026g
L-Lysine	0.026g
L-Threonine	0.024g
L-Valine	0.0235g
L-Tyrosine	0.018g
L-Arginine	0.0174g
L-Phenylalanine	0.0165g
L-Cystine	0.012g
L-Histidine	8.0mg
L-Methionine	7.5mg
L-Tryptophan	4.0mg
Inositol	1.8mg
Biotin	1.0mg
Calcium pantothenate	1.0mg
Choline chloride	1.0mg
Folic acid	1.0mg
Nicotinamide	1.0mg
Pyridoxal·HCl	1.0mg
Thiamine·HCl	1.0mg
Riboflavin	0.1mg

pH 7.2–7.4 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Eagle's Basal Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0 with NaOH. Filter sterilize.

Agarose Solution:**Composition per liter:**

Agarose	20.0g
---------	-------

Preparation of Agarose Solution: Add agarose to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Preparation of Medium: To 1.0L of sterile Eagle's basal medium, aseptically add 1.0L of sterile, cooled agarose solution and 100.0mL of fetal calf serum. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the cultivation of animal tissue culture cells used for the growth of arenaviruses.

Arginine Assay Medium

See: [Amino Acid Assay Medium](#)

**Arginine Broth
(BAM M44)****Composition per liter:**

L-Arginine	5.0g
Peptone or gelysate peptone	5.0g
Yeast extract	3.0g

Glucose	1.0g
Bromocresol Purple	0.02g
pH 6.5 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH so that it will be 6.5 ± 0.2 after sterilization. Distribute into 16 × 150mm screw-capped tubes in 5.0mL volumes. Autoclave medium with loosely capped tubes for 10 min at 15 psi pressure–121°C. Screw the caps on tightly for storage and after inoculation.

Use: For the cultivation and differentiation of bacteria based on their ability to decarboxylate the amino acid arginine. Bacteria that decarboxylate arginine turn the medium turbid purple.

**Arginine Broth with Sodium Chloride
(BAM M44)****Composition per liter:**

L-Arginine	5.0g
Peptone or gelysate peptone	5.0g
Yeast extract	3.0g
Glucose	1.0g
Bromocresol Purple	0.02g
pH 6.5 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH so that it will be 6.5 ± 0.2 after sterilization. Distribute into 16 × 150mm screw-capped tubes in 5.0mL volumes. Autoclave medium with loosely capped tubes for 10 min at 15 psi pressure–121°C. Screw the caps on tightly for storage and after inoculation.

Use: For the cultivation and differentiation of *Vibrio* spp. based on their ability to decarboxylate the amino acid arginine. Bacteria that decarboxylate arginine turn the medium turbid purple.

Arginine Dihydrolase Broth**Composition per liter:**

L-Arginine	10.0g
NaCl	5.0g
Agar	3.0g
Peptone	1.0g
K ₂ HPO ₄	0.3g
Bromocresol Purple	0.016g
pH 6.0 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH so that it will be 6.5 ± 0.2 after sterilization. Distribute into 16 × 150mm screw-capped tubes in 5.0mL volumes. Autoclave medium with loosely capped tubes for 10 min at 15 psi pressure–121°C. Screw the caps on tightly for storage and after inoculation.

Use: For the cultivation and differentiation of bacteria based on their ability to decarboxylate the amino acid arginine. Bacteria that decarboxylate arginine turn the medium turbid purple.

Arginine Dihydrolase HiVeg Broth**Composition per liter:**

L-Arginine	10.0g
NaCl	5.0g
Agar	3.0g

Plant peptone.....	1.0g
K ₂ HPO ₄	0.3g
Bromcresol Purple	0.016g
pH 6.0 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH so that it will be 6.5 ± 0.2 after sterilization. Distribute into 16 × 150mm screw-capped tubes in 5.0mL volumes. Autoclave medium with loosely capped tubes for 10 min at 15 psi pressure–121°C. Screw the caps on tightly for storage and after inoculation.

Use: For the cultivation and differentiation of bacteria based on their ability to decarboxylate the amino acid arginine. Bacteria that decarboxylate arginine turn the medium turbid purple.

Arginine Dihydrolase Medium, Modified

Composition per liter:

L-Arginine	5.0g
Yeast extract.....	3.0g
Glucose	1.0g
Bromcresol Purple	0.015g
pH 6.8 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH so that it will be 6.5 ± 0.2 after sterilization. Distribute into 16 × 150mm screw-capped tubes in 5.0mL volumes. Autoclave medium with loosely capped tubes for 10 min at 15 psi pressure–121°C. Screw the caps on tightly for storage and after inoculation.

Use: For the cultivation and differentiation of bacteria based on their ability to decarboxylate the amino acid arginine. For the confirmation of *Enterobacter sakazakii* from milk and dairy products.

Arginine Glucose Slants (AGS)

Composition per liter:

NaCl	20.0g
Agar	13.5g
Pancreatic digest of casein.....	10.0g
L-Arginine·HCl.....	5.0g
Peptone.....	5.0g
Yeast extract.....	3.0g
Glucose	1.0g
Ferric ammonium citrate.....	0.5g
Na ₂ S ₂ O ₃ ·5H ₂ O	0.3g
Bromcresol Purple	0.02g
pH 6.8–7.0 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes. Autoclave for 12 min at 15 psi pressure–121°C. Allow tubes to cool in a slanted position.

Use: For the cultivation and differentiation of *Vibrio* species.

Arhodomonas Medium (DSMZ Medium 941)

Composition per liter:

NaCl.....	150.0g
NH ₄ Cl	1.0g
Na-acetate	1.0g
MgSO ₄ ·7H ₂ O	0.2g
KCl.....	0.1g
KH ₂ PO ₄	0.1g
Peptone	0.1g
CaCl ₂ ·2H ₂ O	0.04g
Trace elements solution SL-7	1.0mL
Vitamin solution, concentrated	1.0mL
pH 7.2 ± 0.2 at 25°C	

Trace Elements Solution SL-7:

Composition per liter:

FeCl ₂ ·7H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	62.0mg
CuCl ₂ ·2H ₂ O	17.0mg
HCl (25% solution).....	6.5mL

Preparation of Trace Elements Solution SL-7: Add FeCl₂·7H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Vitamin Solution, Concentrated:

Composition per 100.0mL:

Pyridoxine-HCl.....	10.0mg
Thiamine-HCl·2H ₂ O.....	5.0mg
Riboflavin	5.0mg
Nicotinic acid.....	5.0mg
D-Ca-pantothenate	5.0mg
p-Aminobenzoic acid.....	5.0mg
Lipoic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution, Concentrated: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Arhodomonas aquaeolei*.

Armstrong Fusarium Medium

Composition per liter:

Glucose	20.0g
Ca(NO ₃) ₂ ·4H ₂ O	8.4g
KH ₂ PO ₄	1.09g
KCl.....	0.22g
FeCl ₃	0.2μg
MnSO ₄	0.2μg
ZnSO ₄	0.2μg

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Use: For the cultivation of *Fusarium* species.

Arthrobacter Broth

Composition per liter:

Glucose	10.0g
Yeast extract	7.0g
K ₂ HPO ₄	1.0g
KNO ₃	0.5g
MgSO ₄ ·7H ₂ O	0.2g
CaCl ₂ ·2H ₂ O	0.1g
FeCl ₃ ·6H ₂ O	10.0mg

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Arthrobacter atrocyaneus*, *Arthrobacter aurescens*, *Arthrobacter crystallopoietes*, *Arthrobacter globiformis*, *Arthrobacter histidinovorans*, and *Arthrobacter oxydans*.

Arthrobacter Medium

Composition per liter:

Mannitol	10.0g
K ₂ HPO ₄	1.77g
KH ₂ PO ₄	0.68g
MgSO ₄ ·7H ₂ O	0.2g
NaCl	0.14g
CaCl ₂	0.132g
Yeast extract	0.08g
H ₃ BO ₃	2.9mg
FeSO ₄ ·7H ₂ O	2.5mg
Na ₂ MoO ₄ ·2H ₂ O	2.5mg
CoSO ₄ ·7H ₂ O	1.2mg
ZnSO ₄ ·7H ₂ O	1.2mg
CuSO ₄ ·5H ₂ O	0.1mg
MnCl ₂ ·4H ₂ O	0.09mg

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Arthrobacter* species.

Arthrobacter Medium

Composition per liter:

Agar	10.0g
Casein	1.0g
Glucose	1.0g
K ₂ HPO ₄	1.0g
Yeast extract	0.7g
MgSO ₄ ·7H ₂ O	0.25g
(NH ₄) ₂ SO ₄	0.25g

pH 6.9–7.0 at 25°C

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the isolation, cultivation, and enumeration of *Arthrobacter* species from soil.

Arthrobacter Medium

Composition per liter:

Agar	15.0g
Peptone	10.0g
Yeast extract	10.0g
K ₂ HPO ₄	2.0g
Rhodotorulic acid (δ-N-acetyl-L-ornithine) or desferal	20.0μg

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Aureobacterium flavescens*.

Arthrobacter YCWD

Composition per liter:

Pancreatic digest of casein	10.0g
Yeast extract	1.0g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Arthrobacter* species.

Artificial Deep Lake Medium

Composition per liter:

NaCl	180.0g
MgCl ₂ ·6H ₂ O	75.0g
Noble agar	15.0g
Sodium succinate	10.0g
MgSO ₄ ·7H ₂ O	7.4g
KCl	7.4g
CaCl ₂ ·2H ₂ O	1.0g
Yeast extract	1.0g
Vitamin solution	10.0mL

pH 7.4 ± 0.2 at 25°C

Vitamin Solution:

Composition per liter:

Biotin	30.0mg
Cyanocobalamin	20.0mg
Thiamine-HCl	10.0mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize and add aseptically to sterile basal medium.

Preparation of Medium: Add components, except vitamin solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Adjust medium to pH 7.4. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 10.0mL of vitamin solution. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Halobacterium lacusprofundi*.

Artificial Organic Lake Medium
See: *Halomonas subglaciescola* Medium

Artificial Organic Lake Peptone Medium

Composition per 1001.0mL:

NaCl	30.0g
MgSO ₄ ·7H ₂ O	9.5g
KCl	5.0g
Peptone	5.0g
Yeast extract	1.0g
CaCl ₂ ·2H ₂ O	0.2g
KNO ₃	0.1g
(NH ₄) ₂ SO ₄	0.1g
Modified Hutner's basal salts	20.0mL
Phosphate supplement	20.0mL
Artificial organic lake vitamin solution	1.0mL

pH 7.3 ± 0.2 at 25°C

Modified Hutner's Basal Salts:

Composition per liter:

MgSO ₄ ·7H ₂ O	29.7g
Nitritotriacetic acid	10.0g
CaCl ₂ ·2H ₂ O	3.34g
FeSO ₄ ·7H ₂ O	99.0mg
Ammonium molybdate	9.25mg
Metals "44"	50.0mL

Preparation of Modified Hutner's Basal Salts: Dissolve the nitritotriacetic acid first and neutralize the solution with KOH. Add the other components and adjust the pH to 7.2 with KOH or H₂SO₄. There may be a slight precipitate. Store at 5°C.

Metals "44"

Composition per liter:

ZnSO ₄ ·7H ₂ O	1.1g
FeSO ₄ ·7H ₂ O	0.5g
CuSO ₄ ·5H ₂ O	0.04g
EDTA	0.25g
MnSO ₄ ·7H ₂ O	0.154g
Co(NO ₃) ₂ ·6H ₂ O	0.025g
Na ₂ B ₄ O ₇ ·10H ₂ O	0.018g

Preparation of Metals "44": Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Add aseptically to sterile modified Hutner's basal salts solution.

Phosphate Supplement:

Composition per liter:

K ₂ HPO ₄	2.5g
KH ₂ PO ₄	2.5g

Preparation of Phosphate Supplement: Add components to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Artificial Organic Lake Vitamin Solution:

Composition per liter:

Pyridoxine-HCl	10.0mg
Calcium DL-pantothenate	5.0mg
Nicotinamide	5.0mg
Riboflavin	5.0mg

Thiamine-HCl	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Cyanocobalamin	0.1mg

Preparation of Artificial Organic Lake Vitamin Solution:

Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Store at 5°C.

Preparation of Medium: Add components, except modified Hutner's basal salts solution, phosphate supplement solution, and vitamin solution, to distilled/deionized water and bring volume to 959.0mL. Mix thoroughly. Bring pH to 7.3. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 20.0mL of sterile modified Hutner's basal salts solution, 20.0mL of sterile phosphate supplement solution, and 1.0mL of sterile artificial organic lake vitamin solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Halomonas meridiana*.

Artificial Seawater Medium

See: **ASW Medium**

Artificial Seawater Medium

(DSMZ Medium 1010)

Composition per liter:

NaCl	26.4g
MgSO ₄ ·7H ₂ O	6.8g
MgCl ₂ ·6H ₂ O	5.7g
CaCl ₂ ·2H ₂ O	1.47g
KCl	0.66g
Resazurin	0.5g
K ₂ HPO ₄	0.2g
KBr	0.09g
Na ₂ S·9H ₂ O solution	10.0mL
Vitamin solution	10.0mL
Sodium lactate solution	10.0mL
Ammonium chloride solution	10.0mL
Bicarbonate solution	10.0mL
Dihydrogen phosphate solution	10.0mL
Seven vitamin solution	1.0mL
Selenite/tungstate solution	1.0mL
Trace elements solution SL-10	1.0mL

pH 7.3 ± 0.2 at 25°C

Trace Elements Solution SL-10:

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Selenite/Tungstate Solution:**Composition per liter:**

NaOH	0.5g
Na ₂ WO ₄ ·2H ₂ O	4.0mg
Na ₂ SeO ₃ ·5H ₂ O	3.0mg

Preparation of Selenite/Tungstate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O	0.5g
---	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly.

Vitamin Solution:**Composition per liter:**

Pyridoxine-HCl	10.0mg
Thiamine-HCl·2H ₂ O	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
D-Ca-pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Seven Vitamin Solution:**Composition per liter:**

Pyridoxine hydrochloride	300.0mg
Thiamine-HCl·2H ₂ O	200.0mg
Nicotinic acid	200.0mg
Vitamin B ₁₂	100.0mg
Calcium pantothenate	100.0mg
<i>p</i> -Aminobenzoic acid	80.0mg
D(+)-Biotin	20.0mg

Preparation of Seven Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Sparge with 100% N₂. Mix thoroughly. Filter sterilize.

Dihydrogen Phosphate Solution:**Composition per 10.0mL:**

KH ₂ PO ₄	0.2g
---------------------------------------	------

Preparation of Dihydrogen Phosphate Solution: Add KH₂PO₄ to distilled/deionized water and bring volume to 10.0L. Sparge with 100% N₂. Mix thoroughly. Filter sterilize.

Sodium Lactate Solution:**Composition per 10.0mL:**

Sodium lactate	2.3g
----------------------	------

Preparation of Sodium Lactate Solution: Add sodium lactate to distilled/deionized water and bring volume to 10.0L. Sparge with 100% N₂. Mix thoroughly. Filter sterilize.

Bicarbonate Solution:**Composition per 10.0mL:**

NH ₄ Cl	0.25g
--------------------------	-------

Preparation of Bicarbonate Solution: Add NH₄Cl to distilled/deionized water and bring volume to 10.0L. Sparge with 100% N₂. Mix thoroughly. Filter sterilize.

Ammonium Chloride Solution:**Composition per 10.0mL:**

NaHCO ₃	2.5g
--------------------------	------

Preparation of Ammonium Chloride Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0L. Sparge with 100% N₂. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except dihydrogen phosphate, ammonium chloride, bicarbonate, lactate, vitamin, and sulfide solutions, to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Gently heat and bring to boiling. Boil for 3 min. Cool to room temperature while sparging with 20% CO₂ + 80% N₂. Dispense into tubes or bottles under atmosphere of 20% CO₂ + 80% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C under an atmosphere of 20% CO₂ + 80% N₂. Aseptically and anaerobically add sterile dihydrogen phosphate, ammonium chloride, bicarbonate, lactate, vitamin, and sulfide solutions. Adjust final pH to 7.3.

Use: For the cultivation and maintenance of *Desulfobacterium corrodens*.

Artificial Seawater Medium with Propionate (DSMZ Medium 1010)

Composition per liter:

NaCl	26.4g
MgSO ₄ ·7H ₂ O	6.8g
MgCl ₂ ·6H ₂ O	5.7g
CaCl ₂ ·2H ₂ O	1.47g
KCl	0.66g
Resazurin	0.5g
K ₂ HPO ₄	0.2g
KBr	0.09g
Na ₂ S·9H ₂ O solution	10.0mL
Vitamin solution	10.0mL
Phenylpropionate solution	10.0mL
Ammonium chloride solution	10.0mL
Bicarbonate solution	10.0mL
Dihydrogen phosphate solution	10.0mL
Seven vitamin solution	1.0mL
Selenite/tungstate solution	1.0mL
Trace elements solution SL-10	1.0mL

Trace Elements Solution SL-10:**Composition per liter:**

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Selenite/Tungstate Solution:**Composition** per liter:

NaOH	0.5g
Na ₂ WO ₄ ·2H ₂ O	4.0mg
Na ₂ SeO ₃ ·5H ₂ O	3.0mg

Preparation of Selenite/Tungstate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:**Composition** per 10.0mL:

Na ₂ S·9H ₂ O	0.5g
---	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly.

Vitamin Solution:**Composition** per liter:

Pyridoxine-HCl	10.0mg
Thiamine-HCl·2H ₂ O	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
D-Ca-pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Seven Vitamin Solution:**Composition** per liter:

Pyridoxine hydrochloride	300.0mg
Thiamine-HCl·2H ₂ O	200.0mg
Nicotinic acid	200.0mg
Vitamin B ₁₂	100.0mg
Calcium pantothenate	100.0mg
<i>p</i> -Aminobenzoic acid	80.0mg
D(+)-Biotin	20.0mg

Preparation of Seven Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Sparge with 100% N₂. Mix thoroughly. Filter sterilize.

Dihydrogen Phosphate Solution:**Composition** per 10.0mL:

KH ₂ PO ₄	0.2g
---------------------------------------	------

Preparation of Dihydrogen Phosphate Solution: Add KH₂PO₄ to distilled/deionized water and bring volume to 10.0L. Sparge with 100% N₂. Mix thoroughly. Filter sterilize.

Phenylpropionate Solution:**Composition** per 10.0mL:

3-Phenylpropionate	0.45g
--------------------------	-------

Preparation of Phenylpropionate Solution: Add 3-phenylpropionate to distilled/deionized water and bring volume to 10.0L. Sparge with 100% N₂. Mix thoroughly. Filter sterilize.

Bicarbonate Solution:**Composition** per 10.0mL:

NaHCO ₃	0.25g
--------------------------	-------

Preparation of Bicarbonate Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0L. Sparge with 100% N₂. Mix thoroughly. Filter sterilize.

Ammonium Chloride Solution:**Composition** per 10.0mL:

NH ₄ Cl	2.5g
--------------------------	------

Preparation of Ammonium Chloride Solution: Add NH₄Cl to distilled/deionized water and bring volume to 10.0L. Sparge with 100% N₂. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except dihydrogen-phosphate, ammonium chloride, bicarbonate, phenylpropionate, vitamin, and sulfide solutions, to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Gently heat and bring to boiling. Boil for 3 min. Cool to room temperature while sparging with 20% CO₂ + 80% N₂. Dispense into tubes or bottles under an atmosphere of 20% CO₂ + 80% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C under an atmosphere of 20% CO₂ + 80% N₂. Aseptically and anaerobically add sterile dihydrogen phosphate, ammonium chloride, bicarbonate, phenylpropionate, vitamin, and sulfide solutions. Adjust final pH to 7.3.

Use: For the cultivation and maintenance of an unidentified bacterium from Guaymas basin sediment.

Arylsulfatase Agar (Wayne Sulfatase Agar)

Composition per liter:

Agar	15.0g
Na ₂ HPO ₄	2.5g
L-Asparagine	1.0g
KH ₂ PO ₄	1.0g
K ₂ HPO ₄	1.0g
Trisodium phenolphthalein sulfate	0.65g
Pancreatic digest of casein	0.5g
Ferric ammonium citrate	0.05g
MgSO ₄ ·7H ₂ O	0.01g
CaCl ₂ ·2H ₂ O	0.5mg
ZnSO ₄ ·7H ₂ O	0.1mg
CuSO ₄	0.1mg
Glycerol	10.0mL

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add glycerol to approximately 800.0mL of distilled/deionized water. Mix thoroughly. Add remaining components and bring volume to 1.0L with distilled/deionized water. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes. Autoclave for 15 min at 15 psi pressure–121°C. Cool tubes in an upright position.

Use: For the biochemical differentiation of species of *Mycobacterium*. Inoculate tubes with *Mycobacterium* cultures and incubate aerobically at 35°C for 3–14 days. Add 0.5–1.0mL of 2N Na₂CO₃ to each tube and observe color change within 30 min. Development of a pink color is indicative of *Mycobacterium fortuitum* or *Mycobacterium chelonae*. *Mycobacterium tuberculosis* gives a negative reaction.

Ascospore Agar

Composition per liter:

Agar	30.0g
Potassium acetate	10.0g

Yeast extract.....	2.5g
Glucose	1.0g
pH 6.4 ± 0.2 at 25°C	

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the enrichment of ascosporeogenous yeasts and their production of ascospores.

Ashby's Glucose Agar

Composition per liter:

Glucose	20.0g
Agar	15.0g
CaCO ₃	5.0g
K ₂ HPO ₄	0.2g
MgSO ₄ ·7H ₂ O	0.2g
NaCl.....	0.2g
K ₂ SO ₄	0.1g
pH 7.4 ± 0.2 at 25°C	

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into Petri dishes or leave in tubes.

Use: For the cultivation of *Azotobacter* spp. from soil.

Ashby's Mannitol Agar

Composition per liter:

Mannitol.....	20.0g
Agar	15.0g
CaCO ₃	5.0g
K ₂ HPO ₄	0.2g
MgSO ₄ ·7H ₂ O	0.2g
NaCl.....	0.2g
K ₂ SO ₄	0.1g
pH 7.4 ± 0.2 at 25°C	

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into Petri dishes or leave in tubes.

Use: For the cultivation of *Azotobacter* spp. from soil.

Ashby's Nitrogen-Free Agar

Composition per liter:

Agar	15.0g
Mannitol.....	15.0g
CaCl ₂ ·2H ₂ O.....	0.2g
K ₂ HPO ₄	0.2g
MgSO ₄ ·7H ₂ O	0.2g
MoO ₃ (10% solution).....	0.1mL
FeCl ₃ (10% solution).....	0.05mL
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring

to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of bacteria, such as *Azotobacter* species and cyanobacteria, that can utilize atmospheric N₂ as sole nitrogen source.

Ashdown's Medium

Composition per liter:

Pancreatic digest of casein.....	14.5g
Agar	14.0g
Papaic digest of soybean meal.....	5.0g
NaCl.....	5.0g
Neutral Red.....	50.0mg
Crystal Violet.....	5.0mg
Gentamicin.....	4.0mg
Glycerol	40.0mL

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of *Burkholderia pseudomallei* from clinical specimens.

ASLA Agar

Composition per liter:

Sodium lactate	20.0g
Davis agar.....	10.0g
(NH ₄) ₂ SO ₄	3.0g
Na ₂ HPO ₄	1.2g
L-Cysteine-HCl.....	0.5g
MgSO ₄ ·7H ₂ O	0.2g
MnSO ₄ ·4H ₂ O	0.05g
FeSO ₄ ·7H ₂ O.....	0.04g
Vitamin solution.....	10.0mL

pH 6.5 ± 0.2 at 25°C

Vitamin Solution:

Composition per liter:

Biotin	0.1g
Calcium pantothenate	0.1g
<i>p</i> -Aminobenzoic acid.....	0.1g
Thiamine	0.1g

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Store solution at –20°C.

Preparation of Medium: Add components, except vitamin solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL of sterile vitamin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation and cultivation of most *Propionibacterium* species from foods.

ASM Medium

Composition per 1001.2mL:

Na ₂ HPO ₄	866.0mg
NH ₄ ⁺ Cl	535.0mg
KH ₂ PO ₄	531.0mg
K ₂ SO ₄	174.0mg

MgSO ₄ ·7H ₂ O	37.0mg
CaCl ₂ ·2H ₂ O.....	7.35mg
Trace elements solution	1.0mL
FeSO ₄ solution	0.2mL

Trace Elements Solution:**Composition** per liter:

ZnSO ₄ ·7H ₂ O	288.0mg
MnSO ₄ ·4H ₂ O.....	224.0mg
CuSO ₄ ·5H ₂ O.....	125.0mg
KI	83.0mg
H ₃ BO ₃	61.8mg
Na ₂ MoO ₄ ·2H ₂ O.....	48.4mg
CoCl ₂ ·6H ₂ O.....	47.6mg
H ₂ SO ₄ , 1M.....	1.0mL

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

FeSO₄ Solution:**Composition** per liter:

FeSO ₄ ·7H ₂ O	278.0mg
--	---------

Preparation of FeSO₄ Solution: Add FeSO₄·7H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except trace elements solution and FeSO₄ solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 1.0mL of trace elements solution and 0.2mL of sterile FeSO₄ solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Mycobacterium* species.

ASN-III Agar**Composition** per liter:

NaCl.....	25.0g
MgSO ₄ ·7H ₂ O.....	3.5g
MgCl ₂ ·6H ₂ O.....	2.0g
NaNO ₃	0.75g
K ₂ HPO ₄ ·3H ₂ O.....	0.75g
CaCl ₂ ·2H ₂ O.....	0.5g
KCl.....	0.5g
Na ₂ CO ₃	0.02g
Citric acid.....	3.0mg
Ferric ammonium citrate.....	3.0mg
Magnesium EDTA.....	0.5mg
Vitamin B ₁₂	10.0μg
Agar solution.....	100.0mL
A-5 trace metals.....	1.0mL

pH 7.3 ± 0.2 at 25°C

Agar Solution:**Composition** per 100.0mL:

Noble agar.....	10.0g
-----------------	-------

Preparation of Agar Solution: Add agar to glass-distilled water and bring volume to 100.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

A-5 Trace Metals:**Composition** per liter:

H ₃ BO ₃	2.86g
MnCl ₂ ·4H ₂ O.....	1.81g

ZnSO ₄ ·7H ₂ O.....	0.222g
CuSO ₄ ·5H ₂ O.....	0.079g
Co(NO ₃) ₂ ·6H ₂ O.....	0.049g
Na ₂ MoO ₄ ·2H ₂ O.....	0.039g

Preparation of A-5 Trace Metals: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components, except agar solution, to glass-distilled water and bring volume to 900.0mL. Mix well and heat gently until dissolved. Filter sterilize. Warm to 45°–50°C. Aseptically add agar solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Xenococcus* species. For the isolation of cyanobacteria from marine habitats.

ASN-III Broth**Composition** per liter:

NaCl.....	25.0g
MgSO ₄ ·7H ₂ O.....	3.5g
MgCl ₂ ·6H ₂ O.....	2.0g
NaNO ₃	0.75g
K ₂ HPO ₄ ·3H ₂ O.....	0.75g
CaCl ₂ ·2H ₂ O.....	0.5g
KCl.....	0.5g
Na ₂ CO ₃	0.02g
Citric acid.....	3.0mg
Ferric ammonium citrate.....	3.0mg
Magnesium EDTA.....	0.5mg
Vitamin B ₁₂	10.0μg
A-5 trace metals.....	1.0mL

pH 7.3 ± 0.2 at 25°C

A-5 Trace Metals:**Composition** per liter:

H ₃ BO ₃	2.86g
MnCl ₂ ·4H ₂ O.....	1.81g
ZnSO ₄ ·7H ₂ O.....	0.222g
CuSO ₄ ·5H ₂ O.....	0.079g
Co(NO ₃) ₂ ·6H ₂ O.....	0.049g
Na ₂ MoO ₄ ·2H ₂ O.....	0.039g

Preparation of A-5 Trace Metals: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to glass-distilled water and bring volume to 1.0L. Mix well and heat gently until dissolved. Filter sterilize.

Use: For the cultivation of *Xenococcus* species. For the isolation of cyanobacteria from marine habitats.

ASP-2 Medium**Composition** per liter:

NaCl.....	18.0g
MgSO ₄ ·7H ₂ O.....	5.0g
KCl.....	0.6g
NaNO ₃	0.05g
Trace elements solution	10.0mL
Tris buffer solution	4.0mL
CaCl ₂ ·2H ₂ O solution.....	2.8mL
Na ₂ SiO ₃ ·9H ₂ O solution	1.5mL
Vitamin solution.....	1.0mL

K ₂ HPO ₄ solution	0.5mL
Vitamin B ₁₂ solution	0.1mL
pH 7.6 ± 0.2 at 25°C	

CaCl₂·2H₂O Solution:**Composition** per 100.0mL:

CaCl ₂ ·2H ₂ O	13.0g
--	-------

Preparation of CaCl₂·2H₂O Solution: Add CaCl₂·2H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

K₂HPO₄ Solution:**Composition** per 100.0mL:

K ₂ HPO ₄	1.0g
---------------------------------------	------

Preparation of K₂HPO₄ Solution: Add K₂HPO₄ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Tris Buffer Solution:**Composition** per 100.0mL:

Tris[hydroxymethyl]aminomethane buffer	25.0g
--	-------

Preparation of Tris Buffer Solution: Add 25.0g of tris to 65.0mL of distilled/deionized water. Titrate to pH 7.6–7.7 with concentrated HCl. Bring to 100.0mL with distilled/deionized water. Recheck pH after 12 hr.

Vitamin B₁₂ Solution:**Composition** per 100.0mL:

Vitamin B ₁₂	2.0mg
-------------------------------	-------

Preparation of VitaminB₁₂ Solution: Add vitamin B₁₂ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Trace Elements Solution:**Composition** per liter:

EDTA	3.0g
MnCl ₂ ·4H ₂ O	432.0mg
FeCl ₃ ·6H ₂ O	384.0mg
H ₃ BO ₃	342.0mg
ZnCl ₂	31.5mg
CoCl ₂ ·6H ₂ O	2.0mg
CuCl or CuCl ₂	0.25mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Vitamin Solution:**Composition** per 100.0mL:

Inositol	500.0mg
Thymine	300.0mg
Thiamine-HCl	50.0mg
Calcium D-(+)-pantothenate	10.0mg
Nicotinic acid	10.0mg
PABA	1.0mg
Folic acid	0.2mg
Biotin	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Na₂SiO₃·9H₂O Solution:**Composition** per 100.0mL:

Na ₂ SiO ₃ ·9H ₂ O	10.0g
---	-------

Preparation of Na₂SiO₃·9H₂O Solution: Add Na₂SiO₃·9H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Aseptically distribute into sterile, screw-capped tubes or flasks.

Use: For the cultivation of *Chlamydomonas* species.

Asparaginate Glycerol Agar**Composition** per liter:

Agar	15.0g
Sodium asparaginate	1.0g
K ₂ HPO ₄	1.0g
Glycerol	10.0mL
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Nocardia transvalensis*.

Asparagine Broth**Composition** per liter:

DL-Asparagine	30.0g
K ₂ HPO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.5g
pH 6.9–7.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix well until dissolved. Adjust pH to between 6.9 and 7.2. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For a presumptive test medium in the differentiation of nonfermentative Gram-negative bacteria, especially *Pseudomonas aeruginosa*. For use in the multiple tube technique in the microbiological analysis of recreational waters.

**Asparagine Broth
(Coccidioidin and Histoplasmin Broth)****Composition** per liter:

Glucose	10.0g
L-Asparagine	7.0g
NH ₄ Cl	7.0g
MgSO ₄ ·7H ₂ O	1.5g
K ₂ HPO ₄	1.31g
Sodium citrate	0.9g
Ferric citrate	0.3g
Glycerol	25.0mL
pH 6.8 ± 0.2 at 25°C	

Source: This medium is available from HiMedia.

Preparation of Medium: Add glycerol to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Add remaining components. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the preparation of the cultivation of *Coccidioides* and *Histoplasma* for the production of coccidioidin and histoplasmin antigens for immunologic work.

**Asparagine Gelatin Lactate Medium Base
with Lactate****Composition** per liter:

Gelatin	150.0g
Lactate	5.0g
Asparagine	1.0g
K ₂ HPO ₄	0.5g

MgSO ₄ ·7H ₂ O	1.0g
FeNH ₄ (SO ₄) ₂ ·12H ₂ O	1.0mg
pH 7.0 ± 0.2 at 25°C	

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix well until dissolved. Adjust pH to between 6.9 and 7.2. Distribute into tubes or flasks. Autoclave for 15 min at 10 psi pressure–115°C. Pour into Petri dishes or leave in tubes

Use: For the isolation of sulfur bacteria such as *Desulfovibrio* spp.

Asparagine Nitrate Medium

Composition per liter:

Agar	15.0g
Sodium citrate	8.5g
KNO ₃	1.0g
L-Asparagine	1.0g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O	1.0g
CaCl ₂ ·2H ₂ O	0.2g
FeCl ₃	0.1mg
pH 7.2 ± 0.2 at 25°C	

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Pour into Petri dishes or leave in tubes.

Use: For the isolation and cultivation of denitrifying bacteria.

Asparagine Proline Broth

Composition per liter:

K ₂ SO ₄	10.0g
DL-Asparagine	2.0g
L-Proline	1.0g
K ₂ HPO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.5g
Ethanol	25.0mL
pH 7.2 ± 0.2 at 25°C	

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0mL. Mix thoroughly. Distribute into screw cap tubes or bottles. Close the caps almost completely. Autoclave for 15 min at 15 psi pressure–121°C. Quickly seal the caps to prevent evaporation of ethanol.

Use: For the enrichment and cultivation of *Pseudomonas aeruginosa*.

Aspergillus Differential Medium

Composition per liter:

Agar	15.0g
Pancreatic digest of casein	15.0g
Yeast extract	10.0g
Ferric citrate	0.5g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes in 7.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Allow tubes to cool in a slanted position.

Use: For the cultivation and differentiation of *Aspergillus flavus*. *Aspergillus flavus* appears as bright orange colonies.

Aspergillus Differentiation Medium Base with Chloramphenicol

Composition per liter:

Yeast extract	20.0g
Agar	15.0g
Peptic digest of animal tissue	10.0g
Ferric ammonium citrate	0.5g
Chloramphenicol	0.1g
Dichloran	2.0mg
pH 6.3 ± 0.2 at 25°C	

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into Petri dishes or leave in tubes.

Use: For the detection of aflatoxin producing *Aspergillus* spp. from foods.

Aspergillus flavus/parasiticus Agar Base See: [AFPA Base](#)

Aspergillus Medium

Composition per liter:

Agar	15.0g
NaNO ₃	6.0g
Casamino acids	1.0g
Peptone	1.0g
Yeast extract	1.0g
Adenine	0.15g
Vitamin solution	10.0mL
pH 6.0 ± 0.2 at 25°C	

Vitamin Solution:

Composition per 100.0mL:

Biotin	0.01g
Nicotinic acid	0.01g
<i>p</i> -Aminobenzoic acid	0.01g
Pyridoxine-HCl	0.01g
Riboflavin	0.01g
Thiamine-HCl	0.01g

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 10 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except vitamin solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 6.0. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 10.0mL of sterile vitamin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Aspergillus amstelodami*, *Aspergillus awamori*, *Aspergillus flavus*, and *Aspergillus nidulans*.

Aspergillus nidulans Minimal Medium

Composition per 950.0mL:

Solution A	500.0mL
Solution B	250.0mL
Solution C	200.0mL
pH 6.5 ± 0.2 at 25°C	

Solution A:**Composition** per 500.0mL:

NaNO ₃	6.0g
KCl.....	1.52g
KH ₂ PO ₄	1.52g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Adjust pH to 6.5 with 2N NaOH. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C.

Solution B:**Composition** per 250.0mL:

Agar	15.0g
MgSO ₄ ·7H ₂ O	0.52g
FeSO ₄ ·7H ₂ O	1.0μg
ZnSO ₄ ·7H ₂ O	1.0μg

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 250.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C.

Solution C:**Composition** per 200.0mL:

Glucose	10.0g
---------------	-------

Preparation of Solution C: Add glucose to distilled/deionized water and bring volume to 200.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C.

Preparation of Medium: Aseptically combine sterile solution A, sterile solution B, and sterile solution C. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Aspergillus nidulans*.

Aspergillus* Test Medium*Composition** per liter:

Agar	20.0g
Malt extract	20.0g
Peptone.....	1.0g
Glucose solution	100.0mL
Supplement solution	100.0mL

pH 6.5 ± 0.2 at 25°C

Glucose Solution:**Composition** per 100.0mL:

Glucose	20.0g
---------------	-------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Warm to 50°C.

Supplement Solution:**Composition** per 100.0mL:

Uridine	2.44g
Arginine	200.0mg
Methionine	50.0mg
Riboflavin	2.5mg
Nicotinic acid.....	2.0mg
<i>p</i> -Aminobenzoic acid.....	1.0mg
Pyridoxine·HCl	0.05mg
Biotin	0.02mg

Preparation of Supplement Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Warm to 50°C.

Preparation of Medium: Add components, except glucose solution and supplement solution, to distilled/deionized water and bring volume to 800.0mL. Mix thoroughly. Adjust pH to 6.5. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 100.0mL of sterile glucose solution and 100.0mL of sterile supplement solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Emericella (Aspergillus) nidulans*.

ASS Agar

See: **Antibiotic Sulfonamide Sensitivity Test Agar**

Association of Official Analytical Chemists Lethen Broth See: **AOAC Lethen Broth*****Asticcacaulis* Medium****Composition** per liter:

Agar	15.0g
Pancreatic digest of casein.....	0.5g
Yeast extract.....	0.5g
Sodium acetate.....	0.2g

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of *Asticcacaulis* species.

**ASTM Nutrient Salts Agar
(American Society for Testing and
Materials Nutrient Salts Agar)****Composition** per liter:

Agar	15.0g
KH ₂ PO ₄	0.7g
K ₂ HPO ₄	0.7g
MgSO ₄ ·7H ₂ O	0.7g
NH ₄ NO ₃	1.0g
NaCl	5.0mg
FeSO ₄ ·7H ₂ O.....	2.0mg
ZnSO ₄	2.0mg
MnSO ₄ ·H ₂ O	1.0mg

pH 6.5 ± 0.2 at 25°C

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For determination of the susceptibility of plastics to fungal degradation.

**ASW Medium
(Artificial Seawater Medium)****Composition** per liter:

NaCl	27.0g
Agar	15.0g
MgSO ₄ ·7H ₂ O	6.6g
MgCl ₂ ·6H ₂ O	5.6g
CaCl ₂ ·2H ₂ O	1.5g

KNO ₃	1.0g
KH ₂ PO ₄	0.07g
NaHCO ₃	0.04g
Tris-HCl buffer (1.0M, pH 7.6).....	20.0mL
Chelated iron solution.....	1.0mL
Trace metal solution.....	1.0mL

Trace Metal Solution:**Composition per 100.0mL:**

H ₃ BO ₃	60.0mg
MnCl ₂ ·4H ₂ O.....	40.0mg
(NH ₄) ₆ Mo ₇ O ₂₄ ·4H ₂ O.....	37.0mg
CuCl ₂ ·2H ₂ O.....	4.0mg
ZnCl ₂	4.0mg
CoCl ₂ ·6H ₂ O.....	1.5mg

Preparation of Trace Metal Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Chelated Iron Solution:**Composition per 100.0mL:**

FeCl ₃ ·4H ₂ O.....	240.0mg
EDTA.....	14.6g

Preparation of Chelated Iron Solution: Add EDTA to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Adjust pH to 7.6. Add FeCl₃·4H₂O. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Porphyridium purpureum*.

ATB Acid Tomato Broth**Composition per liter:**

Glucose.....	10.0g
Peptone.....	10.0g
Yeast extract.....	5.0g
MgSO ₄ ·7H ₂ O.....	0.2g
MgSO ₄ ·4H ₂ O.....	0.05g
Tomato juice.....	250.0mL

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Lactobacillus fructivorans*, *Lactobacillus homohiochii*, *Lactobacillus kefranofaciens*, and *Leuconostoc oenos*.

Atlas Oil Agar**Composition per liter:**

Bushnell-Haas agar.....	990.0mL
Oil.....	10.0mL

pH 7.0 ± 0.2 at 25°C

Bushnell-Haas Agar:**Composition per 990.0mL:**

Agar.....	15.0g
KH ₂ PO ₄	1.0g
K ₂ HPO ₄	1.0g
NH ₄ NO ₃	1.0g
MgSO ₄ ·7H ₂ O.....	0.2g
FeCl ₃	0.05g
CaCl ₂ ·2H ₂ O.....	0.02g

Preparation of Bushnell-Haas Agar: Add components to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 60°C.

Preparation of Medium: Filter sterilize oil. Aseptically add 10.0mL of sterile oil to 990.0mL of cooled, sterile Bushnell-Haas agar. Put mixture into a sterile blender container. Blend on low speed to minimize the incorporation of air into the medium. Pour into sterile Petri dishes.

Use: For the cultivation and enumeration of hydrocarbon-utilizing bacteria by direct plating of water and sediment samples.

AT5N Medium**Composition per liter:**

CaCO ₃	10.0g
(NH ₄) ₂ SO ₄	1.5g
K ₂ HPO ₄	0.5g
MgSO ₄	50.0mg
KHCO ₃	30.0mg
CaCl ₂ ·2H ₂ O.....	20.0mg

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of bacteria that oxidize ammonia, especially those from wastewater.

**Atopobium/Olsenella Medium
(LMG Medium 152)****Composition per liter:**

Yeast extract.....	10.0g
Peptone.....	5.0g
Casitone.....	5.0g
Glucose.....	5.0g
(NH ₄) ₂ SO ₄	0.5g
L-Cysteine-HCl.....	0.5g
Resazurin.....	1.0mg
Mineral solution.....	40.0mL
Fatty acid mixture.....	3.1mL
Tween™ 80.....	2.0mL
Hemin solution.....	0.5mL
Vitamin K ₁	0.2mL

pH 6.9 ± 0.2 at 25°C

Mineral Solution:**Composition per liter:**

NaHCO ₃	10.0g
NaCl.....	2.0g
K ₂ HPO ₄	1.0g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O.....	0.48g
CaCl ₂ ·2H ₂ O.....	0.3g

Preparation of Mineral Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Fatty Acid Mixture:**Composition per 31.0mL:**

Acetic acid.....	17.0mL
Propionic acid.....	6.0mL
n-Butyric acid.....	4.0mL

<i>n</i> -Valeric acid	1.0mL
<i>iso</i> -Valeric acid	1.0mL
<i>iso</i> -Butyric acid.....	1.0mL
DL-2-Methylbutyric acid.....	1.0mL

Preparation of Fatty Acid Mixture: Combine components. Mix thoroughly. Adjust pH to 7.5 with concentrated NaOH.

Hemin Solution:

Composition per 1.0mL:

Hemin.....	5.0mg
NaOH (1N solution).....	1.0mL

Preparation of Hemin Solution: Add hemin to 1.0mL of NaOH solution. Mix thoroughly.

Preparation of Medium: Add components, except L-cysteine-HCl, hemin solution, and fatty acid mixture, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 5 min. Cool to room temperature while sparging with 100% CO₂. Add L-cysteine-HCl, hemin solution, and fatty acid mixture. Adjust pH to 6.9 with 8N NaOH while continuing to sparge with 100% CO₂. After pH has been reached, sparge with 100% N₂. Anaerobically distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Atopobium rima* and *Olsenella uli*.

ATS Medium

(American Trudeau Society Medium)

Composition per liter:

Potato	20.0g
Malachite Green.....	0.2g
Egg yolk emulsion	500.0mL
Glycerol	10.0mL

pH 6.5–7.0 at 25°C

Source: This medium is available as a prepared medium from BD Diagnostic Systems.

Egg Yolk Emulsion:

Composition:

Chicken egg yolks.....	11
Whole chicken egg.....	1

Preparation of Egg Yolk Emulsion: Soak eggs with 1:100 dilution of saturated mercuric chloride solution for 1 min. Crack eggs and separate yolks from whites. Mix egg yolks with 1 chicken egg.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Distribute into tubes. Autoclave for 15 min at 15 psi pressure–121°C in a slanted position.

Use: For the isolation and cultivation of *Mycobacterium* species other than *Mycobacterium leprae*. Especially useful for the detection of *Mycobacterium tuberculosis* from clinical specimens such as cerebrospinal fluid, pleural fluid, and tissues.

Aureobacterium Agar

Composition per liter:

Agar	20.0g
Casamino acids	10.0g
Yeast extract.....	2.0g
MgSO ₄ ·7H ₂ O.....	1.0g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Aureobacterium arabinogalactanolyticum*, *Aureobacterium esteraromaticum*, *Aureobacterium keratanolyticum*, *Aureobacterium schleiferi*, *Aureobacterium terrae*, and *Aureobacterium trichothecenolyticum*.

Aureobacterium Agar

Composition per liter:

Agar	20.0g
Polypeptone™	10.0g
Yeast extract.....	2.0g
MgSO ₄ ·7H ₂ O.....	1.0g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Aureobacterium* species.

Aureobacterium terregens Medium

Composition per liter:

Casamino acids	2.0g
K ₂ HPO ₄	2.0g
Diammonium citrate	1.0g
Glucose	1.0g
Yeast extract.....	1.0g
MgSO ₄ ·7H ₂ O.....	0.5g
FeCl ₃ ·6H ₂ O.....	10.0mg
Acetylacetone solution.....	1.0mL

pH 7.0 ± 0.2 at 25°C

Acetylacetone Solution:

Composition per 100.0mL:

Acetylacetone	10.0g
Ethanol (95% solution).....	100.0mL

Preparation of Acetylacetone Solution: Add acetylacetone to 100.0mL of ethanol. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except acetylacetone solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add 1.0mL of acetylacetone solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Aureobacterium terregens*.

Aureomycin[®] Rose Bengal Glucose Peptone Agar

Composition per liter:

Agar	20.0g
Glucose	10.0g
Peptone	5.0g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O.....	0.5g
Rose Bengal.....	0.035g
Aureomycin solution	200.0mL

pH 5.4 ± 0.2 at 25°C

Aureomycin Solution:**Composition per 200.0mL:**

Aureomycin-HCl..... 0.07g

Preparation of Aureomycin Solution: Add aureomycin-HCl to distilled/deionized water and bring volume to 200.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except aureomycin solution, to distilled/deionized water and bring volume to 800.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 200.0mL of sterile aureomycin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and enumeration of fungi isolated from sewage and polluted waters.

**Autotrophic *Nitrobacter* Medium
(DSMZ Medium 756c)**

Composition per liter:NaNO₂..... 2.0g

Stock solution..... 100.0mL

Trace elements solution 1.0mL

pH 7.5 ± 0.2 at 25°C

Stock Solution:**Composition per liter:**

NaCl 5.0g

KH₂PO₄..... 1.5gMgSO₄·7H₂O 0.5gCaCO₃ 0.07g

Preparation of Stock Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Trace Elements Solution:**Composition per liter:**FeSO₄·7H₂O..... 97.3mgH₃BO₃ 49.4mgZnSO₄·7H₂O 43.1mg(NH₄)₆Mo₇O₂₄·4H₂O 37.1mgMnSO₄·2H₂O 33.8mgCuSO₄·5H₂O 25.0mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 8.6. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Allow to stand for 2–3 days so that pH adjusts itself to 7.4–7.6.

Use: For the cultivation of *Nitrobacter winogradskyi*.

**Autotrophic *Nitrobacter* Medium
(LMG Medium 247)**

pH 7.5 ± 0.2 at 25°C

Stock Solution:**Composition per liter:**

NaCl 5.0g

KH₂PO₄..... 1.5gMgSO₄·7H₂O 0.5gCaCO₃..... 0.07g

Preparation of Stock Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Trace Elements Solution:**Composition per liter:**(NH₄)Mo₇O₂..... 437.10mgFeSO₄·7H₂O..... 97.30mgZnSO₄·7H₂O 43.10mgH₃BO₃ 39.40mgMnSO₄·H₂O 33.80mgCuSO₄·5H₂O 25.00mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 8.6 with NaOH. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Allow the medium to stand for 2–3 days so that the pH can adjust itself to pH 7.4–7.6.

Use: For the cultivation of autotrophic *Nitrobacter* spp.

**Auxanographic Agar Medium
See: Carbon Assimilation Medium**

AUY**Composition per liter:**

Yeast extract..... 0.5g

Preparation of Medium: Add yeast extract to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter through Whatman #1 filter paper. Distribute 15.0mL into 20 × 125mm screw-capped tubes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Tokophrya infusionum*.

AV Agar with Vitamins**Composition per liter:**

Agar 15.0g

Glucose 1.0g

Glycerol 1.0g

L-Arginine 0.3g

K₂HPO₄..... 0.3g

NaCl 0.3g

MgSO₄·7H₂O 0.2g

Vitamin solution..... 100.0mL

Trace salts solution 1.0mL

Vitamin Solution:**Composition per 100.0mL:***p*-Aminobenzoic acid 0.5mg

Calcium pantothenate 0.5mg

HCl 0.5mg

Inositol 0.5mg

Niacin 0.5mg

Pyridoxine 0.5mg

Riboflavin 0.5mg

Thiamine-HCl 0.5mg

Biotin 0.25mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Trace Salts Solution:

Composition per liter:

FeSO ₄ ·7H ₂ O.....	10.0g
CuSO ₄ ·5H ₂ O.....	1.0g
MnSO ₄ ·7H ₂ O.....	1.0g
ZnSO ₄ ·7H ₂ O.....	1.0g

Preparation of Trace Salts Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components, except vitamin solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 100.0mL of sterile vitamin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of *Actinomadura* species, *Actinopolyspora* species, *Excellulospira* species, and *Microspora* species.

**16AV Medium
(DSMZ Medium 298f)**

Composition per liter:

NaCl.....	1.0g
KCl.....	0.5g
MgCl ₂ ·6H ₂ O.....	0.4g
NH ₄ Cl.....	0.25g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O.....	0.15g
Resazurin.....	1.0mg
NaHCO ₃ solution.....	10.0mL
Butanediol solution.....	10.0mL
Na ₂ S·9H ₂ O solution.....	10.0mL
Yeast extract solution.....	10.0mL
Galactose solution.....	10.0mL
Trace elements solution SL-10.....	1.0mL

pH 7.2 ± 0.2 at 25°C

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	0.36g
--	-------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

NaHCO₃ Solution:

Composition per 10.0mL:

NaHCO ₃	2.5g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

Butanediol Solution:

Composition per 10.0mL:

2,3 butanediol.....	0.9g
---------------------	------

Preparation of Butanediol Solution: Add butanediol to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Galactose Solution:

Composition per 10.0mL:

Galactose.....	2.0g
----------------	------

Preparation of Galactose Solution: Add galactose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Trace Elements Solution SL-10:

Composition per liter:

FeCl ₂ ·4H ₂ O.....	1.5g
CoCl ₂ ·6H ₂ O.....	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	36.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O.....	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Yeast Extract Solution:

Composition per 10.0mL:

Yeast extract.....	1.0g
--------------------	------

Preparation of Yeast Extract Solution: Add yeast extract to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas atmosphere. Add components, except NaHCO₃ solution, butanediol solution, Na₂S·9H₂O solution, galactose solution, yeast extract solution, and trace elements solution SL-10, to distilled/deionized water and bring volume to 949.0mL. Mix thoroughly. Adjust pH to 7.2. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 10.0mL NaHCO₃ solution, 10.0mL butanediol solution, 10.0mL Na₂S·9H₂O solution, 10.0mL galactose solution, 10.0mL yeast extract solution, and 1.0mL trace elements solution SL-10. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or bottles. After inoculation, flush and repressurize the gas head space of culture bottles with sterile 80% N₂ + 20% CO₂ to 1 bar overpressure.

Use: For the cultivation of unclassified bacterium DSM 8385.

Avian Mycoplasma Agar

Composition per liter:

Agar, not inhibitory to mycoplasmas.....	10.0g
PPLO broth without Crystal Violet.....	700.0mL
Swine or horse serum, heat inactivated at 56°C for 30 min.....	150.0mL
Fresh yeast extract solution.....	100.0mL
Phenol Red solution.....	20.0mL
Glucose solution.....	10.0mL
Arginine solution.....	10.0mL
NAD solution.....	10.0mL

PPLO Broth without Crystal Violet:

Composition per 700.0mL:

Beef heart, infusion from.....	175.0g
Peptone.....	7.0g
NaCl.....	3.5g

Source: PPLO broth without Crystal Violet is available as a premixed powder from BD Diagnostic Systems.

Preparation of PPLO Broth without Crystal Violet: Add components to distilled/deionized water and bring volume to 700.0mL. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Beef heart for infusion may be substituted; 100.0g of beef heart for infusion is equivalent to 500.0g of fresh heart tissue.

Fresh Yeast Extract Solution:

Composition per 100.0mL:

Baker's yeast, live, pressed, starch-free..... 25.0g

Preparation of Fresh Yeast Extract Solution: Add the live Baker's yeast to 100.0mL of distilled/deionized water. Autoclave for 90 min at 15 psi pressure–121°C. Allow to stand. Remove supernatant solution. Adjust pH to 6.6–6.8.

Phenol Red Solution:

Composition per 20.0mL:

Phenol Red..... 0.02g

Preparation of Phenol Red Solution: Add Phenol Red to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize.

Glucose Solution:

Composition per 10.0mL:

Glucose..... 1.0g

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Arginine Solution:

Composition per 10.0mL:

Arginine..... 1.0g

Preparation of Arginine Solution: Add arginine to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

NAD Solution:

Composition per 10.0mL:

NAD..... 0.1g

Preparation of NAD Solution: Add NAD to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add 10.0g of agar to 700.0mL of PPLO broth without Crystal Violet. Gently heat to boiling with frequent mixing. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Warm other components to 50°–55°C using a water bath. Aseptically combine all components. Mix thoroughly. Pour into sterile Petri dishes or sterile tubes.

Use: For the cultivation and maintenance of *Mycoplasma* species.

Avian Mycoplasma Broth

Composition per liter:

PPLO broth without Crystal Violet..... 700.0mL

Swine or horse serum, heat inactivated
at 56°C for 30 min..... 150.0mL

Fresh yeast extract solution..... 100.0mL

Phenol Red solution..... 20.0mL

Glucose solution..... 10.0mL

Arginine solution..... 10.0mL

NAD solution..... 10.0mL

PPLO Broth without Crystal Violet:

Composition per 700.0mL:

Beef heart, infusion from..... 175.0g

Peptone..... 7.0g

NaCl..... 3.5g

Source: PPLO broth without Crystal Violet is available as a premixed powder from BD Diagnostic Systems.

Preparation of PPLO Broth without Crystal Violet: Add components to distilled/deionized water and bring volume to 700.0mL. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Beef heart for infusion may be substituted; 100.0g of beef heart for infusion is equivalent to 500.0g of fresh heart tissue.

Fresh Yeast Extract Solution:

Composition per 100.0mL:

Baker's yeast, live, pressed, starch-free..... 25.0g

Preparation of Fresh Yeast Extract Solution: Add the live Baker's yeast to 100.0mL of distilled/deionized water. Autoclave for 90 min at 15 psi pressure–121°C. Allow to stand. Remove supernatant solution. Adjust pH to 6.6–6.8.

Phenol Red Solution:

Composition per 20.0mL:

Phenol Red..... 0.02g

Preparation of Phenol Red Solution: Add Phenol Red to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize.

Glucose Solution:

Composition per 10.0mL:

Glucose..... 1.0g

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Arginine Solution:

Composition per 10.0mL:

Arginine..... 1.0g

Preparation of Arginine Solution: Add arginine to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

NAD Solution:

Composition per 10.0mL:

NAD..... 0.1g

Preparation of NAD Solution: Add NAD to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Aseptically combine components. Distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Mycoplasma* species.

Axenic *Dimastigella* Medium

Composition per liter:

Sonneborn's base *Paramecium* medium..... 980.0mL

Vitamin solution..... 10.0mL

Heat-killed bacterial suspension..... 10.0mL

Sonneborn's Base *Paramecium* Medium:

Composition per liter:

Rye grass cerophyll..... 2.5g

Na₂HPO₄..... 0.5g

Preparation of Sonneborn's Base *Paramecium* Medium: Add cerophyll to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boil. Boil for 5 min. Filter through Whatman #1 filter paper. Add 0.5g of Na₂HPO₄. Bring volume to 1.0L with distilled/deionized water. Mix thoroughly. Distribute 10.0mL volumes into tubes. Autoclave for 15 min at 15 psi pressure–121°C.

Source: Cerophyll can be obtained from Ward's Natural Science Establishment, Inc. Dairy Goat Nutrition distributes Grass Media Culture, which is equivalent. Cereal Leaf Product from Sigma Chemical is similar to cerophyll.

Vitamin Solution:

Composition per 100.0mL:

Calcium D-(+)-pantothenate.....	0.05g
Nicotinamide.....	0.05g
Pyridoxal-HCl.....	0.05g
Riboflavin.....	0.05g
Pyridoxamine-HCl.....	0.025g
Folic acid.....	0.025g
Thiamine-HCl.....	0.15g
Biotin.....	0.0125mg
DL-Thioctic acid.....	0.5mL

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. For long-term storage, preserve under nitrogen at –20°C.

Heat-Killed Bacterial Suspension:

Composition per 100.0mL:

Heat-killed <i>Klebsiella pneumoniae</i>	10 ¹² cells
--	------------------------

Preparation of Heat-Killed Bacterial Suspension: Inoculate a loopful of *Klebsiella pneumoniae* subsp. *pneumoniae* ATCC 27889 into 5.0mL of nutrient broth. Incubate at 35°C overnight. Transfer 0.5mL aliquots of nutrient broth with bacterial suspension to each of ten 1.0L Erlenmeyer flasks, each containing 250.0mL of nutrient broth. Incubate cultures at 35°C for 24 hr. Aseptically transfer bacterial suspensions to 500.0mL sterilized screw-capped centrifuge bottles. Fill bottles with a maximum of 400.0mL. Centrifuge in a refrigerated centrifuge at 5000 rpm for 10 min. Decant supernatant and resuspend pellets in Page's balanced salt solution. Pool all suspensions in a single bottle. Centrifuge in a refrigerated centrifuge at 5000 rpm for 10 min. Discard supernatant and resuspend pellet in Page's balanced salt solution. Final volume of cell suspension should be approximately 400.0mL. Decant supernatant and resuspend pellets in Page's balanced salt solution. Centrifuge in a refrigerated centrifuge at 5000 rpm for 10 min. Discard supernatant and resuspend pellet in Page's balanced salt solution. Final volume of cell suspension should be approximately 400.0mL. Centrifuge in a refrigerated centrifuge at 5000 rpm for 10 min. Decant supernatant and resuspend pellets in Page's balanced salt solution. Final volume this time should only be 100.0mL. Agitate to ensure that cells are thoroughly suspended. Transfer to a 125.0mL screw-capped serum bottle and bring volume to 100.0mL with Page's balanced salt solution. Serially dilute the suspension to a dilution of 10⁻⁹. Plate 0.1mL aliquots in triplicate from the 10⁻⁷ to 10⁻⁹ dilution tubes. Place the aliquots in the center of 100.0mm Petri plates containing nutrient agar and spread evenly over the surfaces with a sterile glass rod. Incubate plates at 35°C overnight. Place the 125.0mL screw-capped serum bottle containing the bacterial suspension in 100.0mL of Page's balanced salt solution into a 60°C water bath. Make sure that the liquid level of the water bath is above that of the suspension in the bottle. At 10-min intervals, swirl the bottle. Incubate for a total of 30 min. Allow the bottle to cool to room temperature. This treatment should kill

all bacterial cells. Determine bacterial cell concentration from the serial dilution plates. Adjust the concentration of the heat-killed bacteria to 10¹⁰ cells per mL. As a check that the cells are not viable, add 3 drops of the cell suspension prepared in step 10 to the edge of a 100.0mm Petri plate containing nutrient agar. Hold the plate vertically to allow the drops to move to the opposite edge. Incubate plate at 35°C for 48 hr.

Nutrient Broth:

Composition per liter:

Pancreatic digest of gelatin.....	5.0g
Beef extract.....	3.0g

Preparation of Nutrient Broth: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Page's Balanced Salt Solution:

Composition per liter:

Solution 1.....	500.0mL
Solution 2.....	500.0mL

Solution 1:

Composition per 500.0mL:

Na ₂ HPO ₄	2.84g
KH ₂ PO ₄	2.72g

Preparation of Solution 1: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution 2:

Composition per 500.0mL:

MgSO ₄ ·7H ₂ O.....	8.0mg
CaCl ₂ ·2H ₂ O.....	8.0mg
NaCl.....	0.24g

Preparation of Solution 2: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Preparation of Page's Balanced Salt Solution: Aseptically combine 500.0mL of solution 1 with 500.0mL of solution 2.

Nutrient Agar:

Composition per liter:

Agar.....	15.0g
Pancreatic digest of gelatin.....	5.0g
Beef extract.....	3.0g

Preparation of Nutrient Agar: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Preparation of Medium: Aseptically add 10.0mL of the vitamin solution to 980.0mL of Sonneborn's base *Paramecium* medium. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically distribute 10.0mL aliquots into T-25 tissue culture flasks. Add 0.1mL of the heat-killed bacterial suspension to each flask. Inoculate immediately with *Dimastigella* species.

Use: For the cultivation of *Dimastigella trypaniformis* and other *Dimastigella* species.

Ayers and Johnson Agar (Stock Culture Agar)

Composition per liter:

Beef heart, infusion from.....	500.0g
Proteose peptone.....	10.0g

Gelatin.....	10.0g
Agar	7.5g
Casein, purified.....	5.0g
Na ₂ HPO ₄	4.0g
Sodium citrate.....	3.0g
Glucose	0.5g

pH 7.50 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the maintenance of cultures of streptococci and other microorganisms.

Azide Agar

See: *Enterococcus Agar*

Azide Blood Agar

Composition per liter:

Agar	15.0g
Pancreatic digest of casein.....	5.0g
Peptic digest of animal tissue.....	5.0g
NaCl.....	5.0g
Beef extract.....	3.0g
NaN ₃	0.2g
Sheep blood, defibrinated.....	50.0mL

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems and Oxoid Unipath.

Caution: Sodium azide is toxic. Azides also react with metals and disposal must be highly diluted.

Preparation of Medium: Add components, except sheep blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45–50°C. Aseptically add 50.0mL of sterile defibrinated sheep blood. Pour into sterile Petri dishes or distribute into sterile tubes. Allow tubes to cool in a slanted position.

Use: For the isolation and differentiation of streptococci and staphylococci from specimens containing mixed flora and from nonclinical specimens such as water and sewage.

Azide Blood Agar Base with Blood

Composition per liter:

Agar	15.0g
Peptone, special.....	10.0g
NaCl.....	5.0g
Beef.....	3.0g
NaN ₃	0.2g
Sheep blood, defibrinated.....	50.0mL

pH 7.2 ± 0.2 at 25°C

Source: This medium without sheep blood is available as a premixed powder from HiMedia.

Caution: Sodium azide is toxic. Azides also react with metals and disposal must be highly diluted.

Preparation of Medium: Add components, except sheep blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and differentiation of streptococci and staphylococci from specimens containing mixed flora and from nonclinical specimens such as water and sewage.

Azide Blood Agar Base, HiVeg with Blood

Composition per liter:

Agar	15.0g
Plant special peptone.....	10.0g
NaCl.....	5.0g
Plant extract.....	3.0g
NaN ₃	0.2g
Sheep blood, defibrinated.....	50.0mL

pH 7.2 ± 0.2 at 25°C

Source: This medium without sheep blood is available as a premixed powder from HiMedia.

Caution: Sodium azide is toxic. Azides also react with metals and disposal must be highly diluted.

Preparation of Medium: Add components, except sheep blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and differentiation of streptococci and staphylococci from specimens containing mixed flora and from nonclinical specimens such as water and sewage.

Azide Blood Agar with Crystal Violet (Packer's Agar)

Composition per liter:

Agar	15.0g
Pancreatic digest of casein.....	5.0g
Peptic digest of animal tissue.....	5.0g
NaCl.....	5.0g
Beef extract.....	3.0g
NaN ₃	0.9g
Crystal Violet.....	2.0mg
Sheep blood, defibrinated.....	50.0mL

pH 7.2 ± 0.2 at 25°C

Caution: Sodium azide is toxic. Azides also react with metals and disposal must be highly diluted.

Preparation of Medium: Add components, except sheep blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45–50°C. Aseptically add 50.0mL of sterile defibrinated sheep blood. Pour into sterile Petri dishes or distribute into sterile tubes. Allow tubes to cool in a slanted position.

Use: For the isolation and enumeration of fecal streptococci from nonclinical specimens such as water and food. Also used for the isolation of *Streptococcus pneumoniae* and *Erysipelothrix rhusiopathiae*.

Azide Broth

(Azide Glucose Broth)

(Azide Dextrose Broth)

Composition per liter:

Pancreatic digest of casein.....	15.0g
Glucose.....	7.5g
NaCl.....	7.5g

Beef extract 4.5g
 NaN₃ 0.2g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Caution: Sodium azide is toxic. Azides also react with metals and disposal must be highly diluted.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Prepare double-strength broth for samples larger than 1.0mL.

Use: For the detection and enrichment of fecal streptococci in water and sewage. Also used in the multiple-tube technique as a presumptive test for the presence of fecal streptococci.

Azide Broth, Rothe
(Azide Glucose Broth, Rothe)
(Azide Dextrose Broth, Rothe)

Composition per liter:

Peptone..... 20.0g
 Glucose 5.0g
 NaCl 5.0g
 K₂HPO₄..... 2.7g
 KH₂PO₄..... 2.7g
 NaN₃ 0.2g

pH 6.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Caution: Sodium azide is toxic. Azides also react with metals and disposal must be highly diluted.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Prepare double-strength broth for samples larger than 1.0mL.

Use: For the detection of enterococci in water and sewage.

Azide Citrate Broth

Composition per liter:

Pancreatic digest of casein..... 20.0g
 Sodium citrate 10.0g
 Yeast extract..... 5.0g
 Glucose 5.0g
 NaCl 5.0g
 K₂HPO₄..... 4.0g
 KH₂PO₄..... 1.5g
 NaN₃ 0.25g

pH 7.0 ± 0.2 at 25°C

Caution: Sodium azide is toxic. Azides also react with metals and disposal must be highly diluted.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–118°C. Prepare double-strength broth for samples larger than 1.0mL.

Use: For the detection and enrichment of fecal streptococci in water and sewage.

Azide Dextrose Broth

See: Azide Broth

Azide Dextrose Broth, Rothe

See: Azide Broth, Rothe

Azide Dextrose HiVeg Broth

Composition per liter:

Plant special peptone 15.0g
 Glucose 7.5g
 NaCl 7.5g
 Plant extract 4.5g
 NaN₃ 0.2g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Caution: Sodium azide is toxic. Azides also react with metals and disposal must be highly diluted.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 12 psi pressure–118°C.

Use: For the detection and enrichment of fecal streptococci in water and sewage. Also used in the multiple-tube technique as a presumptive test for the presence of fecal streptococci in water, sewage, food, and other materials suspected of sewage contamination.

Azide Glucose Broth

See: Azide Broth

Azide Glucose Broth, Rothe

See: Azide Broth, Rothe

Azide Medium

Composition per liter:

Peptone 10.0g
 K₂HPO₄ 5.0g
 Glucose 5.0g
 NaCl 5.0g
 Yeast extract..... 3.0g
 KH₂PO₄ 2.0g
 NaN₃ 0.25g
 Bromcresol Purple solution 2.0mL

pH 7.2 ± 0.2 at 25°C

Bromcresol Purple Solution:

Composition per 10.0mL:

Bromcresol Purple 0.16g
 Ethanol..... 10.0mL

Preparation of Bromcresol Purple Solution: Add Bromcresol Purple to ethanol and bring volume to 10.0mL. Mix thoroughly.

Caution: Sodium azide is toxic. Azides also react with metals and disposal must be highly diluted.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Streptococcus* species and *Staphylococcus* species from clinical and nonclinical specimens.

***Azoarcus* Medium
(LMG Medium 202)**

Composition per liter:

Solution A	750.0mL
Phosphate buffer solution	250.0mL
pH 6.8 ± 0.2 at 25°C	

Solution A:

Composition per 750.0mL:

Malic acid	5.0g
KOH	4.5g
MgSO ₄ ·7H ₂ O	0.2g
NaCl	0.1g
CaCl ₂	20.0mg
MnSO ₄ ·H ₂ O	10.0mg
Na ₂ MoO ₄ ·2H ₂ O	2.0mg
Ferric EDTA solution	10.0mL

Ferric EDTA Solution:

Composition per liter:

Ferric EDTA	0.066g
-------------------	--------

Preparation of Ferric EDTA Solution: Add ferric EDTA to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly.

Preparation of Solution A: Add 5.0g malic acid to 500.0mL distilled/deionized water. Adjust pH to 7.0 with KOH (approximate amount of 4.5g). Add other components. Mix thoroughly. Bring volume to 750.0mL. Adjust pH to 6.8. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Phosphate Buffer Solution:

Composition per liter:

Na ₂ HPO ₄ ·2H ₂ O	5.8g
KH ₂ PO ₄	4.5g

Preparation of Phosphate Buffer Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.8. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Preparation of Medium: Aseptically combine 750.0mL sterile solution A with 250.0mL sterile phosphate buffer solution. Aseptically distribute to sterile tubes or flasks.

Use: For the cultivation of *Azoarcus indigenus*.

***Azoarcus* VM Medium
(LMG Medium 252)**

Composition per liter:

Agar	15.0g
Beef extract	3.0g
DL-malic acid	2.5g

Preparation of Bromthymol Blue Solution: Add Bromthymol Blue to 100.0mL of 0.2N KOH. Mix thoroughly.

Preparation of Medium: Add components, except glucose solution and sodium malate solution, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add 25.0mL of sterile glucose solution and 25.0mL of sterile sodium malate solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Azospirillum* species.

Azospirillum Medium with 0.17% Agar

Composition per liter:

Malic acid	5.0g
Agar	1.75
K ₂ HPO ₄	0.5g
FeSO ₄ ·7H ₂ O.....	0.5g
MgSO ₄ ·7H ₂ O.....	0.2g
NaCl.....	0.1g
CaCl ₂ ·2H ₂ O.....	0.02g
MnSO ₄ ·H ₂ O.....	0.01g
Na ₂ MoO ₄ ·2H ₂ O.....	2.0mg
Bromthymol Blue	2.0mg
Potassium hydroxide solution.....	50.0mL

pH 6.8 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Potassium Hydroxide Solution:

Composition per 50.0mL:

KOH.....	4.0g
----------	------

Preparation of Potassium Hydroxide Solution: Add KOH to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except potassium hydroxide solution, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add potassium hydroxide solution. Mix thoroughly. Pour into Petri dishes or aseptically distribute into sterile tubes.

Use: For the enrichment and cultivation of *Azospirillum* spp.

Azotobacter Agar

Composition per liter:

Agar	15.0g
Sucrose.....	10.0g
MgSO ₄ ·7H ₂ O.....	0.2g
KH ₂ PO ₄	0.15g
K ₂ HPO ₄	0.05g
CaCl ₂	0.02g
Na ₂ MoO ₄	0.002g
FeCl ₃	1.0μg

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Azorhizophilus paspali*.

Azotobacter Agar (Glucose)

Composition per liter:

Agar	15.0g
Glucose	10.0g
Soil extract.....	5.0g
K ₂ HPO ₄	1.0g
MgSO ₄ ·7H ₂ O.....	0.2g
NaCl.....	0.2g
FeSO ₄	5.0mg

pH 7.6 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of glucose positive *Azotobacter* species from soil.

Azotobacter Agar (Mannitol)

Composition per liter:

Agar	15.0g
Mannitol.....	20.0g
Soil extract.....	5.0g
K ₂ HPO ₄	1.0g
MgSO ₄ ·7H ₂ O.....	0.2g
NaCl.....	0.2g
FeSO ₄	1.0mg

pH 7.6 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of mannitol positive *Azotobacter* species from soil.

Azotobacter Agar, Modified I

Composition per liter:

Agar	15.0g
Sucrose.....	10.0g
Glucose	10.0g
MgSO ₄ ·7H ₂ O.....	0.2g
KH ₂ PO ₄	0.15g
CaSO ₄ ·2H ₂ O.....	0.1g
K ₂ HPO ₄	0.05g
CaCl ₂	0.02g
Na ₂ MoO ₄	2.0mg
FeCl ₃	1.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	1.0mg

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.2. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Azotobacter* species.

Azotobacter Agar, Modified II**Composition per liter:**

Sucrose.....	20.0g
Agar	15.0g
KH ₂ PO ₄	0.15g
MgSO ₄ ·7H ₂ O	0.2g
K ₂ HPO ₄	0.05g

FeSO ₄ ·7H ₂ O	0.01g
Na ₂ MoO ₄ ·2H ₂ O	5.0mg
Glucose solution	25.0mL
Mannitol solution	25.0mL

pH 7.3 ± 0.2 at 25°C

Glucose Solution:

Composition per 25.0mL:

D-Glucose	5.0g
-----------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 25.0mL. Mix thoroughly. Filter sterilize. Warm to 50°–55°C.

Mannitol Solution:

Composition per 25.0mL:

Mannitol	5.0g
----------	------

Preparation of Mannitol Solution: Add mannitol to distilled/deionized water and bring volume to 25.0mL. Mix thoroughly. Filter sterilize. Warm to 50°–55°C.

Preparation of Medium: Add components, except glucose solution and mannitol solution, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 25.0mL of sterile glucose solution and 25.0mL of sterile mannitol solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Azotobacter* species.

Azotobacter Medium (ATCC Medium 14)

Composition per liter:

Sucrose	20.0g
Agar	15.0g
K ₂ HPO ₄	0.8g
Yeast extract	0.5g
KH ₂ PO ₄	0.2g
MgSO ₄ ·7H ₂ O	0.2g
CaSO ₄ ·2H ₂ O	0.1g
FeCl ₃	1.0mg
Na ₂ MoO ₄ ·2H ₂ O	1.0mg

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of a variety of bacteria, including *Azomonas* species, *Azotobacter* species, *Beijerinckia dextrii*, *Pseudomonas azotocolligans*, and *Rhodococcus erythropolis*.

Azotobacter Medium (ATCC Medium 240)

Composition per liter:

Agar	15.0g
MgSO ₄ ·7H ₂ O	0.2g
KH ₂ PO ₄	0.15g
K ₂ HPO ₄	0.05g
CaCl ₂	0.02g
Na ₂ MoO ₄ ·2H ₂ O	2.0mg
FeCl ₃	1.0mg

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour agar medium into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of a variety of bacteria, including *Azotobacter* species.

Azotobacter Medium (ATCC Medium 1771)

Composition per liter:

Agar	15.0g
Glucose	10.0g
KH ₂ PO ₄	0.22g
CaSO ₄ ·2H ₂ O	0.1g
MgSO ₄ ·7H ₂ O	0.098g
NaCl	0.058g
K ₂ HPO ₄	0.058g
FeSO ₄ ·7H ₂ O.....	5.0mg
Na ₂ MoO ₄ ·2H ₂ O	0.2mg

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of a variety of bacteria, including *Azotobacter* species.

CaCO ₃	1.0g
MgSO ₄ ·7H ₂ O	0.2g
KH ₂ PO ₄	0.15g
K ₂ HPO ₄	0.05g
CaCl ₂	0.02g

Na ₂ MoO ₄ ·2H ₂ O	2.0mg
Bromthymol Blue solution	10.0mL
FeCl ₃ (10% solution)	0.1mL
pH 7.0 ± 0.2 at 25°C	

Bromthymol Blue Solution:

Composition per 10.0mL:

Bromthymol Blue	0.5g
Ethanol.....	10.0mL

Preparation of Bromthymol Blue Solution: Add Bromthymol Blue to 10.0mL of ethanol. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Azotobacter paspali*.

Azotobacter Supplement (ATCC Medium 11)

Composition per liter:

Agar	15.0g
K ₂ HPO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.2g
NaCl	0.2g
FeSO ₄ ·7H ₂ O.....	5.0mg
Soil extract	100.0mL
Glucose solution	100.0mL

pH 7.6 ± 0.2 at 25°C

Soil Extract:

Composition per 200.0mL:

African Violet soil.....	0.5g
Na ₂ CO ₃	0.5g

Preparation of Soil Extract: Add components to tap water and bring volume to 200.0mL. Autoclave for 60 min at 15 psi pressure–121°C. Filter through Whatman filter paper.

Glucose Solution:

Composition per 100.0mL:

Glucose	20.0g
---------------	-------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except glucose solution, to tap water and bring volume to 900.0mL. Mix thoroughly. Adjust pH to 7.6. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 100.0mL of sterile glucose solution. Mix thoroughly. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Azomonas agilis* and *Azotobacter chroococcum*.

Azotobacter Supplement (ATCC Medium 12)

Composition per liter:

Agar	15.0g
K ₂ HPO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.2g
NaCl	0.2g
FeSO ₄ ·7H ₂ O.....	5.0mg

Soil extract	100.0mL
Mannitol solution	100.0mL
pH 7.6 ± 0.2 at 25°C	

Soil Extract:**Composition per 200.0mL:**

African Violet soil	0.5g
Na ₂ CO ₃	0.5g

Preparation of Soil Extract: Add components to distilled/deionized water and bring volume to 200.0mL. Autoclave for 60 min at 15 psi pressure–121°C. Filter through Whatman filter paper.

Mannitol Solution:**Composition per 100.0mL:**

Mannitol	20.0g
----------------	-------

Preparation of Mannitol Solution: Add mannitol to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except mannitol solution, to tap water and bring volume to 900.0mL. Mix thoroughly. Adjust pH to 7.6. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 100.0mL of sterile mannitol solution. Mix thoroughly. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Azotobacter* species and *Azomonas* species.

Azotobacter Supplement (ATCC Medium 13)

Composition per liter:

Agar	15.0g
K ₂ HPO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.2g
NaCl	0.2g
FeSO ₄ ·7H ₂ O	5.0mg
Soil extract	100.0mL
Glucose solution	100.0mL

pH 6.0 ± 0.2 at 25°C

Soil Extract:**Composition per 200.0mL:**

African Violet soil	0.5g
Na ₂ CO ₃	0.5g

Preparation of Soil Extract: Add components to tap water and bring volume to 200.0mL. Autoclave for 60 min at 15 psi pressure–121°C. Filter through Whatman filter paper.

Glucose Solution:**Composition per 100.0mL:**

Glucose	20.0g
---------------	-------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except glucose solution, to tap water and bring volume to 900.0mL. Mix thoroughly. Adjust pH to 6.0. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add sterile glucose solution. Mix thoroughly. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Beijerinckia* species.

Azotobacter Supplement (ATCC Medium 15)

Composition per liter:

Agar	15.0g
K ₂ HPO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.2g
NaCl	0.2g
FeSO ₄ ·7H ₂ O	5.0mg
Soil extract	100.0mL
Mannitol solution	100.0mL

pH 6.0 ± 0.2 at 25°C

Soil Extract:**Composition per 200.0mL:**

African Violet soil	0.5g
Na ₂ CO ₃	0.5g

Preparation of Soil Extract: Add components to distilled/deionized water and bring volume to 200.0mL. Autoclave for 60 min at 15 psi pressure–121°C. Filter through Whatman filter paper.

Mannitol Solution:**Composition per 100.0mL:**

Mannitol	20.0g
----------------	-------

Preparation of Mannitol Solution: Add mannitol to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except mannitol solution, to tap water and bring volume to 900.0mL. Mix thoroughly. Adjust pH to 6.0. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 100.0mL of sterile mannitol solution. Mix thoroughly. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Azomonas macrocytogenes*.

Azotobacter vinelandii Medium

Composition per liter:

Sodium benzoate	1.0g
K ₂ HPO ₄	0.5g
Mannitol	0.5g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Azotobacter vinelandii* from water samples.

Azotobacter vinelandii Medium

Composition per liter:

Sodium benzoate	1.0g
K ₂ HPO ₄	0.5g
Ethanol	1.0mL

Preparation of Medium: Add components, except ethanol, to distilled/deionized water and bring volume to 999.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 1.0mL of filter-sterilized ethanol. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Azotobacter vinelandii* from soil.

B Broth

(Medium for *Ureaplasma*)

Composition per 100.25mL:

Yeast extract	0.1g
GHL (Glycyl-L-histidyl-L-lysine)	2.0µg

PPLO broth without Crystal Violet.....	50.0mL
Horse serum, not inactivated	10.0mL
Bromthymol Blue (0.4% solution).....	1.0mL
Urea solution.....	0.25mL

pH 6.0 ± 0.2 at 25°C

B Broth (Medium for *Ureaplasma*)

Composition per 100.25mL:

Yeast extract.....	0.1g
GHL (Glycyl-L-histidyl-L-lysine).....	2.0µg
PPLO broth without Crystal Violet.....	50.0mL
Horse serum, not inactivated	10.0mL
Bromthymol Blue (0.4% solution).....	1.0mL
Urea solution.....	0.25mL

pH 6.0 ± 0.2 at 25°C

PPLO Broth without Crystal Violet:**Composition per 50.0mL:**

Beef heart, infusion from.....	1.62g
Peptone.....	0.32g
NaCl.....	0.16g

Source: PPLO broth without Crystal Violet is available as a premixed powder from BD Diagnostic Systems.

Preparation of PPLO Broth without Crystal Violet: Add components to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly.

Urea Solution:**Composition per 10.0mL:**

Urea.....	1.0g
-----------	------

Preparation of Urea Solution: Add urea to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components—except GHL, urea solution, and horse serum—to double glass-distilled water and bring volume to 90.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. To 90.0mL of the sterile medium, aseptically add 2.0µg of GHL, 10.0mL of horse serum, and 0.25mL of sterile urea solution. Mix thoroughly. Aseptically distribute into tubes or flasks.

Use: For the cultivation and maintenance of *Ureaplasma urealyticum* and other *Ureaplasma* species.

B/1t 7 A Medium**Composition per liter:**

Agar.....	20.0g
K ₂ HPO ₄	7.0g
KH ₂ PO ₄	3.0g
Glucose.....	2.0g
(NH ₄) ₂ SO ₄	1.0g
MgSO ₄ ·7H ₂ O.....	0.1g
CaCl ₂ ·2H ₂ O.....	0.01g
Indole.....	0.01g
FeSO ₄ ·7H ₂ O.....	0.5mg

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Escherichia coli* and other bacteria.

B₁₂ Assay HiVeg Medium (Vitamin B₁₂ Assay HiVeg Medium)

Composition per liter:

Glucose.....	40.0g
Sodium acetate.....	20.0g
Plant hydrolysate.....	15.0g
Ascorbic acid.....	4.0g
Polysorbate 80.....	2.0g
K ₂ HPO ₄	1.0g
KH ₂ PO ₄	1.0g
DL-Tryptophan.....	0.4g
MgSO ₄ ·7H ₂ O.....	0.4g
L-Cysteine.....	0.4g
Asparagine.....	0.2g
Adenine sulfate.....	0.02g
FeSO ₄	0.02g
Guanine hydrochloride.....	0.02g
MnSO ₄	0.02g
NaCl.....	0.02g
Uracil.....	0.02g
Xanthine.....	0.02g
Pyridoxal-HCl.....	4.0mg
Pyridoxine-HCl.....	4.0mg
Niacin.....	2.0mg
<i>p</i> -Aminobenzoic acid.....	2.0mg
Riboflavin.....	1.0mg
Thymine-HCl.....	1.0mg
Calcium pantothenate.....	1.0mg
Pyridoxamine-HCl.....	0.8mg
Folic acid.....	0.2mg
Biotin.....	0.01mg

pH 6.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the determination of the vitamin B₁₂ content of pharmaceutical products and other materials. *Lactobacillus leischmanii* ATCC 7830 is used as a test organism. A standard curve can be generated by adding known concentrations of cyanocobalamin and measuring the growth response turbidimetrically at 530 nm.

B₁₂ Assay Medium**Composition per liter:**

Glucose.....	20.5g
Lactose.....	20.0g
Amino acids, vitamin-free casamino acids.....	15.0g
Sodium acetate.....	10.0g
K ₂ HPO ₄	2.5g
Polysorbate 80.....	2.0g
Ascorbic acid.....	1.0g
L-Arginine.....	0.5g
L-Histidine.....	0.25g
L-Phenylalanine.....	0.25g
L-Valine.....	0.25g
L-Asparagine.....	0.2g
MgSO ₄ ·7H ₂ O.....	0.2g
Mercaptoacetic acid.....	0.13g

Calcium pantothenate	0.1g
L-Tryptophan	0.1g
MnSO ₄	0.08g
Adenine	0.04g
Guanine	0.04g
Thymine	0.04g
Uracil	0.04g
(NH ₄) ₂ SO ₄ ·FeSO ₄ ·6H ₂ O	0.03g
KCN	5.0mg
Pyridoxal-HCl	1.0mg
Niacin	1.0mg
Riboflavin	1.0mg
Thiamine-HCl	0.5mg
<i>p</i> -Aminobenzoic acid	0.5mg
Folic acid	0.05mg

pH 6.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Caution: Cyanide is toxic.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 2–3 min. Allow precipitate to settle out. Distribute supernatant into tubes in 5.0mL volumes. Add standard solution or test solutions to each tube. Adjust the volume of each tube to 10.0mL with distilled/deionized water. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the determination of the vitamin B₁₂ content of pharmaceutical products and other materials. *Lactobacillus leischmannii* ATCC 7830 is used as a test organism. A standard curve can be generated by adding known concentrations of cyanocobalamin and measuring the growth response turbidimetrically at 530 nm.

B₁₂ Culture Agar, USP

Composition per liter:

Agar	15.0g
Glucose	10.0g
Proteose peptone No. 3	7.5g
Yeast extract	7.5g
KH ₂ PO ₄	2.0g
Polysorbate 80	0.1g
Tomato juice	100.0mL

pH 6.8 ± 0.1 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes in 10.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Cool tubes in an upright position.

Use: For the cultivation and maintenance of *Lactobacillus leischmannii* ATCC 7830 to be used as the test organism in the Vitamin B₁₂ assay according to the USP.

B₁₂ Inoculum Broth, USP

Composition per liter:

Glucose	10.0g
Proteose peptone No. 3	7.5g
Yeast extract	7.5g
K ₂ HPO ₄	2.0g

Polysorbate 80	0.1g
Tomato juice	100.0mL

pH 6.8 ± 0.1 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes in 10.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the preparation of inoculum cultures of *Lactobacillus leischmannii* ATCC 7830, which is used as the test organism in the vitamin B₁₂ assay according to the USP.

B₁₂ Medium

See: Vitamin B₁₂ Medium

B₁₂ Medium (DSMZ Medium 236)

Composition per liter:

Agar	15.0g
Casein hydrolysate	6.0g
K ₂ HPO ₄	0.2g
MgSO ₄ ·7H ₂ O	0.2g
Asparagine	0.15g
Vitamin B ₁₂	40.0μg
FeSO ₄ ·7H ₂ O	trace
Glycerol	2.0mL

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Escherichia coli*.

B₁₂ Nutrient Agar

See: Vitamin B₁₂ Nutrient Agar

BA Medium

See: BA Medium with Cellulose

BA Medium with Cellobiose

Composition per liter:

NaHCO ₃	2.6g
NH ₄ Cl	1.0g
Yeast extract	0.75g
K ₂ HPO ₄ ·3H ₂ O	0.4g
MgCl ₂ ·6H ₂ O	0.1g
NaCl	0.1g
CaCl ₂ ·2H ₂ O	0.05g
Resazurin	0.5mg
Cellobiose solution	50.0mL
Na ₂ S·9H ₂ O solution	10.0mL
Wolfe's mineral solution	10.0mL
Wolfe's vitamin solution	10.0mL

pH 6.9–7.0 at 25°C

Cellobiose Solution:

Composition per 50.0mL:

Cellobiose	4.0g
------------------	------

Preparation of Cellobiose Solution: Add cellobiose to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na₂S·9H₂O 0.25g

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Before use, neutralize to pH 7.0 with sterile HCl.

Wolfe's Mineral Solution:

Composition per liter:

MgSO₄·7H₂O 3.0g
 Nitritotriacetic acid 1.5g
 NaCl 1.0g
 MnSO₄·2H₂O 0.5g
 CoCl₂·6H₂O 0.1g
 ZnSO₄·7H₂O 0.1g
 CaCl₂·2H₂O 0.1g
 FeSO₄·7H₂O 0.1g
 NiCl₂·6H₂O 0.025g
 KAl(SO₄)₂·12H₂O 0.02g
 CuSO₄·5H₂O 0.01g
 H₃BO₃ 0.01g
 Na₂MoO₄·2H₂O 0.01g
 Na₂SeO₃·5H₂O 0.3mg

Preparation of Wolfe's Mineral Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Adjust pH to 6.8.

Wolfe's Vitamin Solution:

Composition per liter:

Pyridoxine-HCl 10.0mg
p-Aminobenzoic acid 5.0mg
 Lipoic acid 5.0mg
 Nicotinic acid 5.0mg
 Riboflavin 5.0mg
 Thiamine-HCl 5.0mg
 Calcium DL-pantothenate 5.0mg
 Biotin 2.0mg
 Folic acid 2.0mg
 Vitamin B₁₂ 0.1mg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas mixture. Add components, except cellobiose solution, Na₂S·9H₂O solution, Wolfe's mineral solution, and Wolfe's vitamin solution, to distilled/deionized water and bring volume to 920.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂ gas mixture. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 50.0mL of sterile cellobiose solution, 10.0mL of sterile Wolfe's mineral solution, 10.0mL of sterile Wolfe's vitamin solution, and 10.0mL of sterile Na₂S·9H₂O solution. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or bottles.

Use: For the cultivation of *Caldicellulosiruptor lactoaceticus*.

**BA Medium with Cellulose
(DSMZ Medium 671)**

Composition per liter:

NaHCO₃ 2.6g
 Cellulose 2.0g
 NH₄Cl 1.0g
 Yeast extract 0.75g
 K₂HPO₄·3H₂O 0.4g
 MgCl₂·6H₂O 0.1g
 NaCl 0.1g
 CaCl₂·2H₂O 0.05g
 Resazurin 0.5mg
 Na₂S·9H₂O solution 10.0mL
 Wolfe's mineral solution 10.0mL
 Wolfe's vitamin solution 10.0mL

pH 6.9–7.0 at 25°C

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na₂S·9H₂O 0.25g

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Before use, neutralize to pH 7.0 with sterile HCl.

Wolfe's Mineral Solution:

Composition per liter:

MgSO₄·7H₂O 3.0g
 Nitritotriacetic acid 1.5g
 NaCl 1.0g
 MnSO₄·2H₂O 0.5g
 CoCl₂·6H₂O 0.1g
 ZnSO₄·7H₂O 0.1g
 CaCl₂·2H₂O 0.1g
 FeSO₄·7H₂O 0.1g
 NiCl₂·6H₂O 0.025g
 KAl(SO₄)₂·12H₂O 0.02g
 CuSO₄·5H₂O 0.01g
 H₃BO₃ 0.01g
 Na₂MoO₄·2H₂O 0.01g
 Na₂SeO₃·5H₂O 0.3mg

Preparation of Wolfe's Mineral Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Adjust pH to 6.8.

Wolfe's Vitamin Solution:

Composition per liter:

Pyridoxine-HCl 10.0mg
p-Aminobenzoic acid 5.0mg
 Lipoic acid 5.0mg
 Nicotinic acid 5.0mg
 Riboflavin 5.0mg
 Thiamine-HCl 5.0mg
 Calcium DL-pantothenate 5.0mg
 Biotin 2.0mg
 Folic acid 2.0mg
 Vitamin B₁₂ 0.1mg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas mixture. Add components, except Na₂S·9H₂O solution, Wolfe's mineral solution, and Wolfe's vitamin solution, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂ gas mixture. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 10.0mL of sterile Wolfe's mineral solution, 10.0mL of sterile Wolfe's vitamin solution, and 10.0mL of sterile Na₂S·9H₂O solution. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or bottles.

Use: For the cultivation of *Caldicellulosiruptor lactoaceticus* and *Caldicellulosiruptor kristjanssonii*.

Baar's Medium for Sulfate Reducers

Composition per liter:

Sodium lactate.....	3.5g
MgSO ₄ ·7H ₂ O.....	2.0g
K ₂ HPO ₄	1.0g
CaSO ₄	1.0g
NH ₄ Cl.....	0.5g
Ferrous ammonium sulfate solution.....	10.0mL
Yeast extract solution.....	10.0mL

pH 7.5 ± 0.2 at 25°C

Ferrous Ammonium Sulfate Solution:

Composition per 10.0mL:

Fe(NH ₄) ₂ (SO ₄) ₂	0.5g
---	------

Preparation of Ferrous Ammonium Sulfate Solution: Add Fe(NH₄)₂(SO₄)₂ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Yeast Extract Solution:

Composition per 10.0mL:

Yeast extract.....	1.0g
--------------------	------

Preparation of Yeast Extract Solution: Add yeast extract to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except ferrous ammonium sulfate solution and yeast extract solution, to tap water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL of sterile ferrous ammonium sulfate solution and sterile yeast extract solution. Aseptically distribute into tubes or flasks.

Use: For the cultivation and maintenance of *Desulfotomaculum nigrificans*.

Baar's Medium for Sulfate Reducers, Modified

Composition per 1020.0mL:

Component I.....	400.0mL
Component III.....	400.0mL
Component II.....	200.0mL
Ferrous ammonium sulfate solution.....	20.0mL

pH 7.5 ± 0.2 at 25°C

Component I:

Composition per 400.0mL:

Sodium citrate.....	5.0g
MgSO ₄	2.0g
CaSO ₄	1.0g
NH ₄ Cl.....	1.0g

Preparation of Component I: Add components to distilled/deionized water and bring volume to 400.0mL. Mix thoroughly. Adjust pH to 7.5. Autoclave for 15 min at 15 psi pressure–121°C.

Component II:

Composition per 200.0mL:

K ₂ HPO ₄	0.5g
---------------------------------------	------

Preparation of Component II: Add K₂HPO₄ to distilled/deionized water and bring volume to 200.0mL. Mix thoroughly. Adjust pH to 7.5. Autoclave for 15 min at 15 psi pressure–121°C.

Component III:

Composition per 400.0mL:

Sodium lactate.....	3.5g
Yeast extract.....	1.0g

Preparation of Component III: Add components to distilled/deionized water and bring volume to 400.0mL. Mix thoroughly. Adjust pH to 7.5. Autoclave for 15 min at 15 psi pressure–121°C.

Ferrous Ammonium Sulfate Solution:

Composition per 20.0mL:

Fe(NH ₄) ₂ (SO ₄) ₂	1.0g
---	------

Preparation of Ferrous Ammonium Sulfate Solution: Add Fe(NH₄)₂(SO₄)₂ to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Aseptically combine component I, component II, and component III. Mix thoroughly. Distribute 5.0mL volumes into tubes under 97% N₂ + 3% H₂. Add medium to tubes while still warm to exclude as much O₂ as possible. Aseptically add 0.1mL of sterile ferrous ammonium sulfate solution to 5.0mL of medium immediately prior to inoculation.

Use: For the cultivation and maintenance of *Desulfovibrio*, *Desulfobulbus*, *Desulfotomaculum*, and *Thermodesulfobacterium* species.

Baar's Medium for Sulfate Reducers, Modified with 2.5% Sodium Chloride

Composition per 1020.0mL:

Component I.....	400.0mL
Component III.....	400.0mL
Component II.....	200.0mL
Ferrous ammonium sulfate solution.....	20.0mL

pH 7.5 ± 0.2 at 25°C

Component I:

Composition per 400.0mL:

NaCl.....	25.0g
Sodium citrate.....	5.0g
MgSO ₄	2.0g
CaSO ₄	1.0g
NH ₄ Cl.....	1.0g

Preparation of Component I: Add components to distilled/deionized water and bring volume to 400.0mL. Mix thoroughly. Adjust pH to 7.5. Autoclave for 15 min at 15 psi pressure–121°C.

Component II:

Composition per 200.0mL:

K ₂ HPO ₄	0.5g
---------------------------------------	------

Preparation of Component II: Add K₂HPO₄ to distilled/deionized water and bring volume to 200.0mL. Mix thoroughly. Adjust pH to 7.5. Autoclave for 15 min at 15 psi pressure–121°C.

Component III:**Composition** per 400.0mL:

Sodium lactate.....	3.5g
Yeast extract.....	1.0g

Preparation of Component III: Add components to distilled/deionized water and bring volume to 400.0mL. Mix thoroughly. Adjust pH to 7.5. Autoclave for 15 min at 15 psi pressure–121°C.

Ferrous Ammonium Sulfate Solution:**Composition** per 20.0mL:

Fe(NH ₄) ₂ (SO ₄) ₂	1.0g
---	------

Preparation of Ferrous Ammonium Sulfate Solution: Add Fe(NH₄)₂(SO₄)₂ to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Aseptically combine component I, component II, and component III. Mix thoroughly. Distribute 5.0mL volumes into tubes under 97% N₂ + 3% H₂. Add medium to tubes while still warm to exclude as much O₂ as possible. Aseptically add 0.1mL of sterile ferrous ammonium sulfate solution to 5.0mL of medium immediately prior to inoculation.

Use: For the cultivation of *Desulfovibrio africanus* and other *Desulfovibrio* species that prefer 2.5% NaCl.

Bacillus acidocaldarius* Agar*Composition** per liter:

Solution A.....	500.0mL
Solution B.....	500.0mL

pH 3.0–4.0 at 25°C

Solution A:**Composition** per 500.0mL:

KH ₂ PO ₄	3.0g
Yeast extract.....	1.0g
Glucose.....	1.0g
MgSO ₄ ·7H ₂ O.....	0.5g
CaCl ₂ ·2H ₂ O.....	0.25g
(NH ₄) ₂ SO ₄	0.2g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 500.0mL. Adjust pH to 3.0–4.0. Mix thoroughly. Autoclave for 10 min at 15 psi pressure–121°C. Cool to 50°–55°C.

Solution B:**Composition** per 500.0mL:

Agar.....	30.0g
-----------	-------

Preparation of Solution B: Add agar to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C.

Preparation of Medium: Aseptically mix 500.0mL of solution A and 500.0mL of solution B. Mix thoroughly. Aseptically adjust pH to 3.0–4.0. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Bacillus acidocaldarius*.

Bacillus acidocaldarius* Agar*Composition** per liter:

Solution A.....	500.0mL
Solution B.....	500.0mL

pH 3.5 ± 0.5 at 25°C

Solution A:**Composition** per 500.0mL:

Yeast extract.....	1.0g
KH ₂ PO ₄	0.6g
MgSO ₄ ·7H ₂ O.....	0.5g
CaCl ₂ ·2H ₂ O.....	0.25g
(NH ₄) ₂ SO ₄	0.2g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Bring pH to 3.5. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C.

Solution B:**Composition** per 500.0mL:

Agar.....	20.0g
Glucose.....	1.0g

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C.

Preparation of Medium: Aseptically combine 500.0mL of solution A with 500.0mL of solution B. Mix thoroughly. Pour into sterile Petri dishes or aseptically distribute into sterile tubes.

Use: For the cultivation and maintenance of *Alicyclobacillus acidocaldarius*.

Bacillus acidoterrestris* Agar*Composition** per 1001.0mL:

Solution A.....	500.0mL
Solution C.....	500.0mL
Solution B (Trace elements solution SL-6).....	1.0mL

pH 4.0 ± 0.2 at 25°C

Solution A:**Composition** per 500.0mL:

Glucose.....	5.0g
KH ₂ PO ₄	3.0g
Yeast extract.....	2.0g
MgSO ₄ ·7H ₂ O.....	0.5g
CaCl ₂ ·2H ₂ O.....	0.25g
(NH ₄) ₂ SO ₄	0.2g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Adjust pH to 4.0. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C:**Composition** per 500.0mL:

Agar.....	15.0g
-----------	-------

Preparation of Solution C: Add agar to distilled/deionized water and bring volume to 500.0mL. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C.

Solution B (Trace Elements Solution SL-6):**Composition** per liter:

MnCl ₂ ·4H ₂ O.....	0.5g
H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O.....	0.2g
ZnSO ₄ ·7H ₂ O.....	0.1g
Na ₂ MoO ₄ ·2H ₂ O.....	0.03g
NiCl ₂ ·6H ₂ O.....	0.02g
CuCl ₂ ·2H ₂ O.....	0.01g

Preparation of Solution B (Trace Elements Solution SL-6):

Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Aseptically combine 500.0mL of sterile solution A, 500.0mL of sterile solution C, and 1.0mL of sterile solution B. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Bacillus acidoterrestris*, *Alicyclobacillus acidoterrestris*, and *Alicyclobacillus cycloheptanicus*.

Bacillus acidoterrestris* Broth*Composition per 1001.0mL:**

Solution A	1.0L
Solution B (Trace elements solution SL-6).....	1.0mL
	pH 4.0 ± 0.2 at 25°C

Solution A:**Composition per liter:**

Glucose	5.0g
KH ₂ PO ₄	3.0g
Yeast extract.....	2.0g
MgSO ₄ ·7H ₂ O.....	0.5g
CaCl ₂ ·2H ₂ O.....	0.25g
(NH ₄) ₂ SO ₄	0.2g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 4.0. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B (Trace Elements Solution SL-6):**Composition per liter:**

MnCl ₂ ·4H ₂ O.....	0.5g
H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O.....	0.2g
ZnSO ₄ ·7H ₂ O.....	0.1g
Na ₂ MoO ₄ ·2H ₂ O.....	0.03g
NiCl ₂ ·6H ₂ O.....	0.02g
CuCl ₂ ·2H ₂ O.....	0.01g

Preparation of Solution B (Trace Elements Solution SL-6):

Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Aseptically combine 1.0L of sterile solution A and 1.0mL of sterile solution B. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Bacillus acidoterrestris*, *Alicyclobacillus acidoterrestris*, and *Alicyclobacillus cycloheptanicus*.

Bacillus* Agar*Composition per liter:**

Agar	20.0g
(NH ₄) ₂ SO ₄	1.3g
Glucose	1.0g
Yeast extract.....	1.0g
KH ₂ PO ₄	0.37g
MgSO ₄ ·7H ₂ O.....	0.25g
CaCl ₂ ·2H ₂ O.....	0.07g
FeCl ₃	0.02g
	pH 4.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 3.5. Prepare a separate agar solution by

adding 20.0g/500.0mL of distilled/deionized water. Autoclave solutions separately for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically combine both solutions. This procedure avoids acid hydrolysis of the agar. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of acidophilic *Bacillus* species such as *Bacillus acidocaldarius*.

Bacillus* Agar, Modified*Composition per liter:**

Agar	20.0g
Glucose	1.0g
Yeast extract.....	1.0g
KH ₂ PO ₄	0.6g
MgSO ₄ ·7H ₂ O.....	0.5g
CaCl ₂ ·2H ₂ O.....	0.25g
(NH ₄) ₂ SO ₄	0.2g
	pH 3.0–4.0 at 25°C

Preparation of Medium: Add components, except agar and glucose, to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 3.5. Prepare a separate agar and glucose solution by adding 20.0g of agar and 1.0g of glucose to 500.0mL of distilled/deionized water. Autoclave solutions separately for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically combine both solutions. This procedure avoids acid hydrolysis of the agar. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of acidophilic *Bacillus* species such as *Bacillus acidocaldarius*.

Bacillus* Agar, 1/4 Strength*Composition per liter:**

Agar	18.0g
Yeast extract.....	2.5g
Pancreatic digest of casein.....	1.0g
	pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Bacillus megaterium*.

Bacillus benzoovorans* Agar*Composition per liter:**

Agar	15.0g
Yeast extract.....	6.0g
Peptone	5.0g
NaCl.....	5.0g
Na ₂ HPO ₄ ·12H ₂ O.....	3.6g
Sodium benzoate.....	2.0g
Beef extract.....	1.0g
KH ₂ PO ₄	0.98g
NH ₄ Cl.....	0.5g
MgSO ₄ ·7H ₂ O.....	0.03g
Trace elements solution.....	0.2mL
	pH 7.0–7.2 at 25°C

Trace Elements Solution:**Composition per 100.0mL:**

FeSO ₄ ·7H ₂ O.....	0.1g
MnCl ₂ ·4H ₂ O.....	0.1g
ZnSO ₄ ·7H ₂ O.....	0.1g

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Bacillus benzoovorans*.

Bacillus benzoovorans Agar

Composition per liter:

Modified Palleroni and Doudoroff mineral base medium450.0mL
Enriched <i>Cytophaga</i> agar450.0mL
Sodium benzoate solution100.0mL
pH 7.0 ± 0.2 at 25°C	

Modified Palleroni and Doudoroff Mineral Base Medium:

Composition per 500.0mL:

Agar 15.0g
Na ₂ HPO ₄ ·12H ₂ O 6.0g
KH ₂ PO ₄ 2.4g
NH ₄ ·Cl 1.0g
MgSO ₄ ·7H ₂ O 0.5g
CaCl ₂ ·6H ₂ O 0.01g
FeCl ₃ ·6H ₂ O 0.01g

Preparation of Modified Palleroni and Doudoroff Mineral Base Medium: Add components to distilled/deionized water and bring volume to 450.0mL. Mix thoroughly. Adjust pH to 7.2. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C.

Enriched *Cytophaga* Agar:

Composition per 500.0mL:

Agar 15.0g
Pancreatic digest of casein 0.5g
Beef extract 0.5g
Yeast extract 0.5g
Sodium acetate 0.2g

Preparation of Enriched *Cytophaga* Agar: Add components to distilled/deionized water and bring volume to 450.0mL. Mix thoroughly. Adjust pH to 6.8. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C.

Sodium Benzoate Solution:

Composition per 100.0mL:

Sodium benzoate 5.0g
-----------------	------------

Preparation of Sodium Benzoate Solution: Add sodium benzoate to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Aseptically combine 450.0mL of modified Palleroni and Doudoroff mineral base medium, 450.0mL of enriched *Cytophaga* agar, and 100.0mL sodium benzoate solution. Mix thoroughly. Pour into sterile Petri dishes or aseptically distribute into sterile tubes.

Use: For the cultivation of *Bacillus benzoovorans*.

Bacillus Broth

Composition per liter:

(NH ₄) ₂ SO ₄ 1.3g
Glucose 1.0g

Yeast extract 1.0g
KH ₂ PO ₄ 0.37g
MgSO ₄ ·7H ₂ O 0.25g
CaCl ₂ ·2H ₂ O 0.07g
FeCl ₃ 0.02g

pH 4.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 4.0 with 10N H₂SO₄. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of acidophilic *Bacillus* species such as *Bacillus acidocaldarius*.

Bacillus Broth, 1/4 Strength

Composition per liter:

Yeast extract 2.5g
Pancreatic digest of casein 1.0g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Bacillus megaterium*.

Bacillus cereus Agar Base with Egg Yolk Emulsion and Polymyxin

Composition per liter:

Agar 15.0g
Sodium pyruvate 10.0g
Mannitol 10.0g
Na ₂ HPO ₄ 2.5g
NaCl 2.0g
Peptone 1.0g
KH ₂ PO ₄ 0.25g
Bromthymol Blue 0.12g
MgSO ₄ ·7H ₂ O 0.1g
Egg yolk emulsion 100.0mL
Selective supplement solution 10.0mL

pH 7.2 ± 0.2 at 25°C

Source: This medium, without egg yolk emulsion, is available as a premixed powder from HiMedia.

Selective Supplement Solution:

Composition per 10.0mL:

Polymyxin B 100,000 U
-------------	-----------------

Preparation of Selective Supplement Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Egg Yolk Emulsion:

Composition per liter:

Egg yolks 30.0mL
NaCl, 0.9% solution 70.0mL

Preparation of Egg Yolk Emulsion: Soak eggs with 1:100 dilution of saturated mercuric chloride solution for 1 min. Crack 11 eggs and separate yolks from whites. Mix egg yolks. Measure 30.0mL of egg yolk emulsion and add to 70.0mL of 0.9% sterile NaCl solution. Mix thoroughly. Warm to 45°–50°C.

Preparation of Medium: Add components, except egg yolk emulsion, and selective supplement solution, to distilled/deionized water

and bring volume to 890.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure—121°C. Cool to 45°–50°C. Aseptically add 100.0mL egg yolk emulsion and 10.0mL sterile selective supplement solution. Mix well. Pour into sterile Petri dishes or sterile tubes.

Use: For the isolation, detection, and enumeration of *Bacillus cereus*.

***Bacillus cereus* HiVeg Agar Base with Egg Yolk Emulsion**

Composition per liter:

Agar	15.0g
Sodium pyruvate	10.0g
Mannitol	10.0g
Na ₂ HPO ₄	2.5g
NaCl	2.0g
Plant peptone	1.0g
KH ₂ PO ₄	0.25g
Bromthymol Blue	0.12g
MgSO ₄ ·7H ₂ O	0.1g
Egg yolk emulsion	100.0mL

pH 7.2 ± 0.2 at 25°C

Source: This medium, without egg yolk emulsion, is available as a premixed powder from HiMedia.

Egg Yolk Emulsion:

Composition per liter:

Egg yolks	30.0mL
NaCl, 0.9% solution	70.0mL

Preparation of Egg Yolk Emulsion: Soak eggs with 1:100 dilution of saturated mercuric chloride solution for 1 min. Crack 11 eggs and separate yolks from whites. Mix egg yolks. Measure 30.0mL of egg yolk emulsion and add to 70.0mL of 0.9% sterile NaCl solution. Mix thoroughly. Warm to 45°–50°C.

Preparation of Medium: Add components, except egg yolk emulsion, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure—121°C. Cool to 45°–50°C. Aseptically add 100.0mL egg yolk emulsion. Mix well. Pour into sterile Petri dishes or sterile tubes.

Use: For the isolation, detection, and enumeration of *Bacillus cereus*.

***Bacillus cereus* Medium (BCM)**

Composition per 110.0mL:

Agar	2.0g
D-Mannitol	1.0g
(NH ₄) ₂ PO ₄	0.1g
KCl	0.02g
MgSO ₄ ·7H ₂ O	0.02g
Yeast extract	0.02g
Bromcresol Purple	4.0mg
Egg yolk emulsion, 20%	10.0mL

pH 7.0 ± 0.2 at 25°C

Egg Yolk Emulsion, 20%:

Composition per 100.0mL:

Chicken egg yolks	11
Whole chicken egg	1
NaCl (0.9% solution)	80.0mL

Preparation of Egg Yolk Emulsion, 20%: Soak eggs with 1:100 dilution of saturated mercuric chloride solution for 1 min. Crack eggs and separate yolks from whites. Mix egg yolks with 1 chicken egg. Measure 20.0mL of egg yolk emulsion and add to 80.0mL of 0.9% NaCl solution. Mix thoroughly. Filter sterilize. Warm to 45°–50°C.

Preparation of Medium: Add components—except egg yolk emulsion, 20%—to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure—121°C. Cool to 45°–50°C. Aseptically add 10.0mL of sterile egg yolk emulsion, 20%. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Bacillus cereus*.

***Bacillus cereus* Motility Medium**

See: BC Motility Medium

***Bacillus cereus* Selective Agar Base**

Composition per liter:

Agar	15.0g
Sodium pyruvate	10.0g
Mannitol	10.0g
Na ₂ HPO ₄	2.5g
NaCl	2.0g
Peptone	1.0g
KH ₂ PO ₄	0.25g
Bromthymol Blue	0.12g
MgSO ₄ ·7H ₂ O	0.1g
Egg yolk emulsion	25.0mL
Polymyxin B solution	10.0mL

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Egg Yolk Emulsion:

Composition:

Chicken egg yolks	11
Whole chicken egg	1

Preparation of Egg Yolk Emulsion: Soak eggs with 1:100 dilution of saturated mercuric chloride solution for 1 min. Crack eggs and separate yolks from whites. Mix egg yolks with 1 chicken egg.

Polymyxin B Solution:

Composition per 10.0mL:

Polymyxin B	100,000U
-------------------	----------

Preparation of Polymyxin B Solution: Add polymyxin B to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except egg yolk emulsion and polymyxin B solution, to distilled/deionized water and bring volume to 965.0mL. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure—121°C. Cool to 50°C. Aseptically add sterile polymyxin B and 25.0mL of sterile egg yolk emulsion. Mix thoroughly. Pour into sterile Petri dishes or leave in tubes.

Use: For the selection and presumptive identification of *Bacillus cereus*. Also for the isolation and enumeration of these bacteria. *Bacillus cereus* grows as moderate-sized (5mm) crenated colonies, which are turquoise, surrounded by a precipitate of egg yolk, which is also turquoise.

Bacillus coagulans Medium

Composition per liter:

Agar	20.0g
Glucose	5.0g
Proteose peptone	5.0g
Yeast extract	5.0g
K ₂ HPO ₄	4.0g
MnSO ₄ ·4H ₂ O solution	10.0mL
CaCl ₂ solution	10.0mL

pH 5.0 ± 0.2 at 25°C

MnSO₄·4H₂O Solution:

Composition per 10.0mL:

MnSO ₄ ·4H ₂ O	0.05mg
--	--------

Preparation of MnSO₄·4H₂O Solution: Add MnSO₄·4H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

CaCl₂ Solution:

Composition per 10.0mL:

CaCl ₂	0.045mg
-------------------------	---------

Preparation of CaCl₂ Solution: Add CaCl₂ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except MnSO₄·4H₂O solution and CaCl₂ solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Avoid overheating. Cool to 45°–50°C. Aseptically add sterile MnSO₄·4H₂O solution and CaCl₂ solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Bacillus coagulans*.

Bacillus cycloheptanicus Agar

Composition per 1001.0mL:

Solution A	500.0mL
Solution C	500.0mL
Solution B (Trace elements solution SL-6)	1.0mL

pH 4.0 ± 0.2 at 25°C

Solution A:

Composition per liter:

Yeast extract	5.0g
Glucose	5.0g
KH ₂ PO ₄	3.0g
MgSO ₄ ·7H ₂ O	0.5g
CaCl ₂ ·2H ₂ O	0.25g
(NH ₄) ₂ SO ₄	0.2g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 4.0. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C:

Composition per 500.0mL:

Agar	15.0g
------------	-------

Preparation of Solution C: Add agar to distilled/deionized water and bring volume to 500.0mL. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C.

Solution B (Trace Elements Solution SL-6):

Composition per liter:

MnCl ₂ ·4H ₂ O	0.5g
H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
Na ₂ MoO ₄ ·2H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Solution B (Trace Elements Solution SL-6):

Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium:

Aseptically combine 500.0mL of sterile solution A, 500.0mL of sterile solution C, and 1.0mL of sterile solution B. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Bacillus cycloheptanicus*, *Alicyclobacillus acidoterrestris*, and *Alicyclobacillus cycloheptanicus*.

Bacillus cycloheptanicus Broth

Composition per 1001.0mL:

Solution A	1.0L
Solution B (Trace elements solution SL-6)	1.0mL

pH 4.0 ± 0.2 at 25°C

Solution A:

Composition per liter:

Yeast extract	5.0g
Glucose	5.0g
KH ₂ PO ₄	3.0g
MgSO ₄ ·7H ₂ O	0.5g
CaCl ₂ ·2H ₂ O	0.25g
(NH ₄) ₂ SO ₄	0.2g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 4.0. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B (Trace Elements Solution SL-6):

Composition per liter:

MnCl ₂ ·4H ₂ O	0.5g
H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
Na ₂ MoO ₄ ·2H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Solution B (Trace Elements Solution SL-6):

Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Aseptically combine 1.0L of sterile solution A and 1.0mL of sterile solution B. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Bacillus cycloheptanicus*, *Alicyclobacillus acidoterrestris*, and *Alicyclobacillus cycloheptanicus*.

MgSO ₄ ·7H ₂ O	0.5g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O	50.0mg
FeSO ₄ ·7H ₂ O	10.0mg
MnSO ₄ ·4H ₂ O	1.0mg

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Bacillus fastidiosus*.

Bacillus fastidiosus* Medium*Composition** per liter:

Agar	15.0g
Na ₂ HPO ₄ ·12H ₂ O	6.0g
Yeast extract	2.5g
Uric acid	1.0g
Mineral solution	100.0mL

pH 7.0 ± 0.2 at 25°C

Mineral Solution:**Composition** per 100.0mL:

KH ₂ PO ₄	0.1g
MgSO ₄ ·7H ₂ O	0.03g
CaCl ₂	0.01g
NaCl	0.01g
FeCl ₃ ·6H ₂ O	1.0mg

Preparation of Mineral Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Bacillus fastidiosus*.

***Bacillus filiformis* Medium
(DSMZ Medium 992)****Composition** per liter:

Yeast extract	10.0g
Sodium citrate	3.0g
KCl	2.0g
MgSO ₄ ·7H ₂ O	1.0g
Sodium chloride solution	100.0mL
Sodium carbonate solution	10.0mL
Iron sulfate solution	1.0mL
Manganese chloride solution	1.0mL

pH 9.0 ± 0.2 at 25°C

Iron Sulfate Solution:**Composition** per liter:

FeSO ₄ ·7H ₂ O	50.0g
--------------------------------------	-------

Preparation of Iron Sulfate Solution: Add FeSO₄·7H₂O to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Sodium Chloride Solution:**Composition** per 100.0mL:

NaCl	100.0g
------	--------

Preparation of Sodium Chloride Solution: Add NaCl to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Manganese Chloride Solution:**Composition** per liter:

MnCl ₂ ·4H ₂ O	0.36g
--------------------------------------	-------

Preparation of Manganese Chloride Solution: Add MnCl₂·4H₂O to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Sodium Carbonate Solution:**Composition** per 10.0mL:

Na ₂ CO ₃	3.0g
---------------------------------	------

Preparation of Sodium Carbonate Solution: Add Na₂CO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except sodium chloride and sodium carbonate solutions, to distilled/deionized water and bring volume to 890.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 100.0mL sterile sodium chloride solution and 10.0mL sterile sodium carbonate solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of a *Bacillus filiformis*.

***Bacillus halodenitrificans* Agar
(LMG Medium 142)****Composition** per liter:

NaCl	100.0g
Agar	15.0g
Sodium acetate·3H ₂ O	10.0g
Na ₂ HPO ₄	3.8g
KH ₂ PO ₄	1.3g
(NH ₄) ₂ SO ₄	1.0g
Mg(NO ₃) ₂ ·6H ₂ O	1.0g
Yeast extract	1.0g
Magnesium nitrate solution	100.0mL

pH 7.2 ± 0.2 at 25°C

Magnesium Nitrate Solution:**Composition** per 100.0mL:

Mg(NO ₃) ₂ ·6H ₂ O	1.0g
--	------

Preparation of Magnesium Nitrate Solution: Add Mg(NO₃)₂·6H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except magnesium nitrate solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Adjust pH to 7.2 with KOH. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 100.0mL sterile magnesium nitrate solution. Mix thoroughly. Aseptically pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Bacillus halodenitrificans*.

**Bacillus mascerans Medium
(TSBY Salt Medium)
(LMG 199)**

Composition per liter:

NaCl	18.0g
Pancreatic digest of casein	17.0g
MgCl ₂ ·H ₂ O	4.0g
MgSO ₄ ·7H ₂ O	3.45g
Yeast extract	3.0g
Papaic digest of soybean meal	3.0g
K ₂ HPO ₄	2.5g
Glucose	2.5g
KCl	0.34g
NH ₄ Cl	0.25g
CaCl ₂ ·2H ₂ O	0.14g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Bacillus mascerans*, *Carnobacterium alterfunditum*, and *Carnobacterium funditum*.

Bacillus Medium

Composition per liter:

Agar	25.0g
Peptone	6.0g
Pancreatic digest of casein	3.0g
Yeast extract	3.0g
Beef extract	1.5g
MnSO ₄ ·4H ₂ O	1.0µg

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Bacillus* species.

Bacillus Medium

Composition per liter:

(NH ₄) ₂ HPO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.2g
KCl	0.2g
Yeast extract	0.2g
Glucose solution	50.0mL
Bromcresol Purple solution	15.0mL

pH 7.0 ± 0.2 at 25°C

Glucose Solution:

Composition per 100.0mL:

Glucose	10.0g
---------------	-------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Bromcresol Purple Solution:

Composition per 20.0mL:

Bromcresol Purple	0.32g
Ethanol (95% solution)	20.0mL

Preparation of Bromcresol Purple Solution: Add Bromcresol Purple to 20.0mL of ethanol. Mix thoroughly.

Preparation of Medium: Add components, except glucose solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute 9.5mL volumes into test tubes that contain an inverted Durham tube. Autoclave for 20 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 0.5mL of sterile glucose to each tube. Mix thoroughly.

Use: For cultivation and differentiation of *Bacillus* species based on acid and gas production from glucose.

**Bacillus Medium
(ATCC Medium 21)**

Composition per liter:

Glycerol	20.0g
L-Glutamic acid	4.0g
Citric acid	2.0g
K ₂ HPO ₄	0.5g
Ferric ammonium citrate	0.5g
MgSO ₄	0.5g

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Bacillus licheniformis*.

**Bacillus Medium
(ATCC Medium 455)**

Composition per liter:

Soluble starch	30.0g
Agar	20.0g
Polypeptone™	5.0g
Yeast extract	5.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Swirl medium to resuspend starch. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Bacillus subtilis*. Also used to detect amylase-producing microorganisms.

**Bacillus Medium
(ATCC Medium 552)**

Composition per liter:

Peptone	10.0g
Lactose	5.0g
NaCl	5.0g
Beef extract	3.0g
K ₂ HPO ₄	2.0g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Bacillus* species.

Bacillus pasteurii* Agar*Composition** per liter:

Agar	15.0g
Peptone.....	5.0g
NaCl	5.0g
Yeast extract.....	4.0g
Beef extract.....	1.0g
Urea solution.....	50.0mL
pH 8.0 ± 0.2 at 25°C	

Urea Solution:**Composition** per 100.0mL:

Urea.....	20.0g
-----------	-------

Preparation of Urea Solution: Add urea to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Warm to 50°–55°C.

Preparation of Medium: Add components, except urea solution, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 50.0mL of sterile urea solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Bacillus pasteurii*.

Bacillus pasteurii* Agar*Composition** per liter:

Urea.....	20.0g
Agar	15.0g
Peptone.....	5.0g
Meat extract.....	3.0g
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Gently heat and bring to boiling. Adjust pH to 7.0. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Bacillus pasteurii* and *Sporosarcina ureae*.

Bacillus pasteurii* Medium*Composition** per liter:

Urea.....	20.0g
Agar	15.0g
Peptone.....	5.0g
NaCl	5.0g
Yeast extract.....	2.0g
Beef extract.....	1.0g
pH 7.4 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Bacillus pasteurii*.

***Bacillus pasteurii* NH₄ YE Medium
(Ammonium Yeast Extract Medium)****Composition** per liter:

Yeast extract.....	20.0g
Agar	20.0g
(NH ₄) ₂ SO ₄	10.0g
pH 9.0 ± 0.2 at 25°C	

Preparation of Medium: Add each component to a separate flask and bring volume of each to 333.0mL with 0.13m Tris buffer, pH 9.0. Autoclave ingredients separately for 15 min at 15 psi pressure–121°C. No growth occurs if components are sterilized together. Cool to 50°–55°C and aseptically combine solutions. Pour into sterile Petri dishes.

Use: For the cultivation and maintenance of *Bacillus pasteurii*.

Bacillus pasteurii* Sporulation Agar*Composition** per liter:

Urea.....	20.0g
Agar	15.0g
Peptone.....	5.0g
Meat extract.....	3.0g
MnSO ₄ ·H ₂ O.....	10.0mg
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Gently heat and bring to boiling. Adjust pH to 7.0. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the induction of sporulation in various species, including *Bacillus pasteurii* and *Sporosarcina ureae*.

Bacillus polymyxa* Agar*Composition** per liter:

Agar	20.0g
Starch, soluble.....	10.0g
Peptone.....	5.0g
Yeast extract.....	5.0g
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Bacillus macerans*, *Bacillus polymyxa*, and *Bacillus thermoglucosidasius*.

Bacillus popilliae* Maintenance Medium*Composition** per liter:

Agar	20.0g
Yeast extract.....	15.0g
Pancreatic digest of casein.....	5.0g
K ₂ HPO ₄	3.0g
Glucose solution.....	10.0mL
pH 7.2 ± 0.2 at 25°C	

Glucose Solution:**Composition** per 10.0mL:

Glucose.....	2.0g
--------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except glucose solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile glucose solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Bacillus popilliae*.

Bacillus popilliae Medium**Composition per liter:**

Yeast extract.....	10.0g
Acid hydrolysate of casein.....	7.95g
K ₂ HPO ₄	3.0g
Beef extract.....	1.36g
Trehalose.....	1.0g
Starch.....	0.68g

pH 7.3 ± 0.1 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until dissolved. Do not overheat. Filter sterilize. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Bacillus popilliae*.

Bacillus popilliae Medium**Composition per liter:**

Yeast extract.....	15.0g
K ₂ HPO ₄	3.0g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Bacillus popilliae*.

Bacillus Pullulan Salts**Composition per liter:**

Pullulan.....	2.5g
NaCl.....	1.0g
NH ₄ Cl.....	1.0g
KH ₂ PO ₄	0.5g
MgSO ₄ ·7H ₂ O.....	0.5g
Yeast extract.....	0.1g
CaCl ₂ ·2H ₂ O.....	0.05g
Trace mineral solution.....	10.0mL
Vitamin solution.....	10.0mL

pH 6.0 ± 0.2 at 25°C

Trace Mineral Solution:**Composition per liter:**

CoCl ₂ ·6H ₂ O.....	0.2g
FeSO ₄ ·7H ₂ O.....	0.13g
ZnCl ₂ ·2H ₂ O.....	0.1g
MnCl ₂ ·4H ₂ O.....	0.1g
CaCl ₂ ·2H ₂ O.....	20.0mg
Na ₂ SeO ₃	20.0mg
Na ₂ WO ₄ ·2H ₂ O.....	20.0mg
NaMoO ₄ ·2H ₂ O.....	1.0mg
H ₃ BO ₃	0.5mg
CuSO ₄ ·5H ₂ O.....	0.4mg
KI.....	0.1mg

Preparation of Trace Mineral Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Vitamin Solution:**Composition per liter:**

Pyridoxine-HCl.....	10.0mg
Thiamine-HCl.....	5.0mg
Riboflavin.....	5.0mg
Nicotinic acid.....	5.0mg

Calcium pantothenate.....	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Thioctic acid.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Cyanocobalamin.....	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except vitamin solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 6.0. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add sterile vitamin solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Bacillus* species that can degrade pullulan.

Bacillus racemilacticus Agar**Composition per liter:**

Agar.....	15.0g
CaCO ₃	5.0g
Glucose.....	5.0g
Peptone.....	5.0g
Yeast extract.....	5.0g

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Bacillus kaustophilus* and *Bacillus racemilacticus*.

Bacillus racemilacticus Agar**Composition per liter:**

Agar.....	15.0g
CaCO ₃	5.0g
Glucose.....	5.0g
Peptone.....	5.0g
Yeast extract.....	5.0g

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Gently heat and bring to boiling. Adjust pH to 6.8. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Bacillus racemilacticus*, *Bacillus coagulans*, *Bacillus laevolacticus*, and other *Bacillus* species.

**Bacillus racemilacticus Agar
(YEPG with 0.5% CaCO₃)****Composition per liter:**

Agar.....	15.0g
CaCO ₃	5.0g
Glucose.....	5.0g
Peptone.....	5.0g
Yeast extract.....	5.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Bacillus racemilacticus* and other *Bacillus* species.

Bacillus schlegelii Agar (LMG Medium 85)

Composition per liter:

Agar	30.0g
Na ₂ HPO ₄ ·12 H ₂ O	9.0g
KH ₂ PO ₄	1.5g
Sodium pyruvate	1.5g
NH ₄ Cl	1.0g
MgSO ₄ ·7H ₂ O	0.2g
MnSO ₄ ·H ₂ O	10.0mg
CaCl ₂ ·2H ₂ O	10.0mg
Ferric ammonium citrate	5.0mg
Trace elements solution	3.0mL

pH 7.1 ± 0.2 at 25°C

Trace Elements Solution:

Composition per liter:

H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
Na ₂ MoO ₄ ·2H ₂ O	30.0mg
MnCl ₂ ·4H ₂ O	30.0mg
NiCl ₂ ·6H ₂ O	20.0mg
CuCl ₂ ·2H ₂ O	10.0mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Bacillus schlegelii*.

Bacillus schlegelii Agar

Composition per liter:

Noble agar	30.0g
Na ₂ HPO ₄ ·2H ₂ O	4.5g
KH ₂ PO ₄	1.5g
NH ₄ Cl	1.0g
MgSO ₄ ·7H ₂ O	0.2g
MnSO ₄ ·H ₂ O	0.01g
CaCl ₂ ·2H ₂ O	0.01g
Ferric ammonium citrate	5.0mg
Agar solution	200.0mL
Pyruvate solution	100.0mL
Trace elements solution SL-6	3.0mL

pH 7.1 ± 0.2 at 25°C

Agar Solution:

Composition per 200.0mL:

Noble agar	30.0g
------------------	-------

Preparation of Agar Solution: Add agar to distilled/deionized water and bring volume to 200.0mL. Mix thoroughly. Gently heat and

bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Pyruvate Solution:

Composition per 100.0mL:

Sodium pyruvate	1.5g
-----------------------	------

Preparation of Pyruvate Solution: Add sodium pyruvate to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Warm to 45°–50°C.

Trace Elements Solution SL-6 :

Composition per liter:

H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
MnCl ₂ ·4H ₂ O	0.03g
Na ₂ MoO ₄ ·H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution SL-6 : Add components to distilled/deionized water and bring volume to 1.0L. Adjust pH to 3.4.

Preparation of Medium: Add components, except sodium pyruvate solution and agar solution, to distilled/deionized water and bring volume to 700.0mL. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.1. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Add sodium pyruvate solution and agar solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Bacillus schlegelii*.

Bacillus schlegelii Broth

Composition per liter:

Na ₂ HPO ₄ ·2H ₂ O	4.5g
KH ₂ PO ₄	1.5g
NH ₄ Cl	1.0g
MgSO ₄ ·7H ₂ O	0.2g
MnSO ₄ ·H ₂ O	0.01g
CaCl ₂ ·2H ₂ O	0.01g
Ferric ammonium citrate	5.0mg
Pyruvate solution	100.0mL
SL-6 trace elements	3.0mL

pH 7.1 ± 0.2 at 25°C

Pyruvate Solution:

Composition per 100.0mL:

Sodium pyruvate	1.5g
-----------------------	------

Preparation of Pyruvate Solution: Add sodium pyruvate to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Trace Elements Solution SL-6 :

Composition per liter:

H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
MnCl ₂ ·4H ₂ O	0.03g
Na ₂ MoO ₄ ·H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution SL-6 : Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 3.4.

Preparation of Medium: Add components, except sodium pyruvate solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.1. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add sodium pyruvate solution. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Bacillus schlegelii*.

Bacillus schlegelii Chemolithotrophic Growth Medium (DSMZ Medium 261)

Composition per liter:

Na ₂ HPO ₄ ·2H ₂ O.....	4.5g
KH ₂ PO ₄	1.5g
NH ₄ Cl.....	1.0g
MgSO ₄ ·7H ₂ O.....	0.2g
MnSO ₄ ·2H ₂ O.....	0.01g
CaCl ₂ ·2H ₂ O.....	0.01g
Ferric ammonium citrate.....	5.0mg
Trace elements solution SL-6.....	3.0mL
pH 7.1 ± 0.2 at 25°C	

Trace Elements Solution SL-6:

Composition per liter:

MnCl ₂ ·4H ₂ O.....	0.5g
H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O.....	0.2g
ZnSO ₄ ·7H ₂ O.....	0.1g
Na ₂ MoO ₄ ·2H ₂ O.....	0.03g
NiCl ₂ ·6H ₂ O.....	0.02g
CuCl ₂ ·2H ₂ O.....	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.1. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the chemolithotrophic cultivation of *Bacillus schlegelii*. Incubation is at 65°C under an atmosphere of 5% O₂, 10% CO₂, 45% H₂.

Bacillus schlegelii Heterotrophic Growth Medium (DSMZ Medium 260)

Composition per liter:

Na ₂ HPO ₄ ·2H ₂ O.....	4.5g
Na-pyruvate.....	1.5g
KH ₂ PO ₄	1.5g
NH ₄ Cl.....	1.0g
MgSO ₄ ·7H ₂ O.....	0.2g
MnSO ₄ ·2H ₂ O.....	0.01g
CaCl ₂ ·2H ₂ O.....	0.01g
Ferric ammonium citrate.....	5.0mg
Trace elements solution SL-6.....	3.0mL
pH 7.1 ± 0.2 at 25°C	

Trace Elements Solution SL-6:

Composition per liter:

MnCl ₂ ·4H ₂ O.....	0.5g
H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O.....	0.2g

ZnSO ₄ ·7H ₂ O.....	0.1g
Na ₂ MoO ₄ ·2H ₂ O.....	0.03g
NiCl ₂ ·6H ₂ O.....	0.02g
CuCl ₂ ·2H ₂ O.....	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.1. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the heterotrophic cultivation of *Bacillus schlegelii*. Incubation is at 65°C.

Bacillus schlegelii Medium (LMG Medium 85)

Composition per liter:

Na ₂ HPO ₄ ·12 H ₂ O.....	9.0g
KH ₂ PO ₄	1.5g
Sodium pyruvate.....	1.5g
NH ₄ Cl.....	1.0g
MgSO ₄ ·7H ₂ O.....	0.2g
MnSO ₄ ·H ₂ O.....	10.0mg
CaCl ₂ ·2H ₂ O.....	10.0mg
Ferric ammonium citrate.....	5.0mg
Trace elements solution.....	3.0mL
pH 7.1 ± 0.2 at 25°C	

Trace Elements Solution:

Composition per liter:

H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O.....	0.2g
ZnSO ₄ ·7H ₂ O.....	0.1g
Na ₂ MoO ₄ ·2H ₂ O.....	30.0mg
MnCl ₂ ·4H ₂ O.....	30.0mg
NiCl ₂ ·6H ₂ O.....	20.0mg
CuCl ₂ ·2H ₂ O.....	10.0mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute in 30–50 mL amounts in Erlenmeyer flasks. Autoclave for 15 min at 15 psi pressure–121°C. Incubate without agitation.

Use: For the cultivation of *Bacillus schlegelii*.

Bacillus selenitireducens Medium (DSMZ Medium 968)

Composition per liter:

NaCl.....	90.0g
Na ₂ CO ₃	10.6g
NaHCO ₃	4.2g
Na-lactate.....	1.70g
NaNO ₃	1.25g
Yeast extract.....	0.2g
K ₂ HPO ₄	0.15g
(NH ₄) ₂ SO ₄	0.1g
KH ₂ PO ₄	0.08g
MgSO ₄	25.0mg
Resazurin.....	0.5mg

Cysteine solution.....	10.0mL
Na ₂ S·9H ₂ O solution	10.0mL
Trace elements solution SL-10	1.0mL
Selenite tungstate solution	1.0mL
pH 9.8 ± 0.2 at 25°C	

Cysteine Solution:**Composition per 10.0mL:**

L-Cysteine·HCl·H ₂ O	0.25g
---------------------------------------	-------

Preparation of Cysteine Solution: Add L-cysteine·HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O	0.25g
---	-------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Sparge with N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Trace Elements Solution SL-10:**Composition per liter:**

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Selenite Tungstate Solution**Composition per liter:**

NaOH	0.5g
Na ₂ WO ₄ ·2H ₂ O	4.0mg
Na ₂ SeO ₃ ·5H ₂ O	3.0mg

Preparation of Selenite Tungstate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Preparation of Medium: Add components, except NaHCO₃, Na₂CO₃, cysteine solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Boil for 3 min. Cool to room temperature while sparging with 80% N₂ gas. Add solid NaHCO₃ and Na₂CO₃. Adjust pH to 9.8. Distribute to anaerobe tubes or bottles. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically and anaerobically add per liter 10.0mL sterile cysteine solution and 10.0mL sterile Na₂S·9H₂O solution. Mix thoroughly.

Use: For the cultivation of *Bacillus selenitireducens* and *Bacillus arseniciselenatis*.

Bacillus stearothermophilus Broth**Composition per liter:**

Pancreatic digest of casein	10.0g
-----------------------------------	-------

Yeast extract	5.0g
K ₂ HPO ₄	2.0g
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Bacillus stearothermophilus*.

Bacillus stearothermophilus Defined Broth**Composition per 100.0mL:**

Mineral salts solution.....	10.0mL
Potassium phosphate buffer	5.0mL
L-Glutamate·HCl (1% solution)	4.0mL
L-Leucine (1% solution).....	1.64mL
L-Lysine·HCl (1% solution)	1.4mL
L-Serine (1% solution)	1.4mL
L-Aspartate (1% solution)	1.3mL
L-Valine (1% solution)	1.26mL
Biotin (0.01% solution)	1.0mL
Glucose (20% solution)	1.0mL
L-Isoleucine (1% solution)	1.0mL
L-Proline (1% solution)	1.0mL
Nicotinic acid (0.01% solution).....	1.0mL
Thiamine·HCl (0.01% solution)	1.0mL
L-Phenylalanine (1% solution).....	0.86mL
L-Alanine (1% solution).....	0.84mL
L-Threonine (1% solution)	0.84mL
L-Arginine·HCl (1% solution).....	0.64mL
L-Tyrosine (1% solution).....	0.56mL
L-Methionine (1% solution).....	0.52mL
Glycine (1% solution).....	0.5mL
L-Asparagine·H ₂ O (1% solution).....	0.5mL
L-Cystine (1% solution)	0.5mL
L-Glutamine (1% solution).....	0.5mL
L-Histidine·HCl·H ₂ O (1% solution).....	0.42mL
L-Tryptophan (1% solution).....	0.3mL
CaCl ₂ (5% solution)	0.01mL
FeCl ₃ ·6H ₂ O (0.05% solution)	0.01mL
MnCl ₂ (10mm solution).....	0.01mL
ZnSO ₄ ·7H ₂ O (5% solution)	0.01mL
pH 7.3 ± 0.2 at 25°C	

Mineral Salts Solution:**Composition per liter:**

NaCl	10.0g
NH ₄ Cl	10.0g
MgSO ₄	4.0g

Preparation of Mineral Salts Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Potassium Phosphate Buffer:**Composition per 500.0mL:**

K ₂ HPO ₄	125.0g
KH ₂ PO ₄	30.0g

Preparation of Potassium Phosphate Buffer: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Use: For the cultivation of *Bacillus stearothermophilus* in a chemically defined medium.

Bacillus stearothermophilus Sporulation Broth

Composition per liter:

Agar	20.0g
Pancreatic digest of gelatin	5.0g
Yeast extract	4.0g
Beef extract	3.0g
MnCl ₂ ·4H ₂ O	10.0μg
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and sporulation of *Bacillus stearothermophilus*.

Bacillus thermoalcalophilus Medium

Composition per liter:

Yeast extract	10.0g
Sodium acetate	3.0g
KCl	1.8g
Na ₂ SO ₄	0.4g
K ₂ HPO ₄	0.3g
KH ₂ PO ₄	0.3g
MgSO ₄	0.2g
FeSO ₄	0.01g
pH 8.2 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 8.2. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Bacillus thermoalcalophilus*.

Bacillus thermoantarcticus Medium

Composition per liter:

Yeast extract	6.0g
NaCl	3.0g
Soil extract	500.0mL
pH 5.6–5.8 at 25°C	

Soil Extract:

Composition per liter:

Garden soil, air dried	400.0g
------------------------------	--------

Preparation of Soil Extract: Pass 400.0g of air-dried garden soil through a coarse sieve. Add soil to 960.0mL of tap water. Mix thoroughly. Autoclave for 60 min at 15 psi pressure–121°C. Cool to room temperature. Allow residue to settle. Decant supernatant solution. Filter through Whatman filter paper. Distribute into bottles in 200.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Store at room temperature until clear.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 5.6–5.8. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Bacillus thermoantarcticus*.

Bacillus thermoglucosidasius Agar

Composition per liter:

Agar	30.0g
Starch	10.0g
Peptone	5.0g
Beef extract	3.0g
K ₂ HPO ₄	3.0g
Yeast extract	3.0g
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 20 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Bacillus thermoglucosidasius*.

Bacillus thermoglucosidasius Agar

Composition per liter:

Agar	30.0g
Soluble starch	10.0g
Peptone	5.0g
Beef extract	3.0g
KH ₂ PO ₄	3.0g
Yeast extract	3.0g
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Gently heat and bring to boiling. Adjust pH to 7.0. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Bacillus thermoglucosidasius*.

Bacillus thermoleovorans Medium

Composition per liter:

<i>n</i> -Heptadecane	1.0g
(NH ₄) ₂ HPO ₄	1.0g
Yeast extract	1.0g
KCl	0.2g
MgSO ₄ ·7H ₂ O	0.2g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Bacillus thermoleovorans*.

Bacillus thuringiensis Medium

Composition per liter:

Glucose	3.0g
(NH ₄) ₂ SO ₄	2.0g
Yeast extract	2.0g
K ₂ HPO ₄ ·3H ₂ O	0.5g
MgSO ₄ ·7H ₂ O	0.2g
CaCl ₂ ·2H ₂ O	0.08g
MnSO ₄ ·4H ₂ O	0.05g
pH 7.3 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.3.

Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Bacillus thuringiensis*.

Bacillus tusciae Medium

Composition per liter:

Na ₂ HPO ₄ ·2H ₂ O.....	2.9g
KH ₂ PO ₄	2.3g
NH ₄ Cl.....	1.0g
MgSO ₄ ·7H ₂ O.....	0.5g
NaHCO ₃	0.5g
Fe(NH ₄) citrate.....	0.05g
CaCl ₂ ·2H ₂ O.....	0.01g
MnSO ₄ ·H ₂ O.....	0.01g
Ferric ammonium citrate solution.....	20.0mL
Trace elements solution SL-6.....	5.0mL
pH 4.0 ± 0.2 at 25°C	

Ferric Ammonium Citrate Solution:

Composition per 20.0mL:

Ferric ammonium citrate.....	0.05g
------------------------------	-------

Preparation of Ferric Ammonium Citrate Solution: Add ferric ammonium citrate to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution SL-6:

Composition per liter:

MnCl ₂ ·4H ₂ O.....	0.5g
H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O.....	0.2g
ZnSO ₄ ·7H ₂ O.....	0.1g
Na ₂ MoO ₄ ·2H ₂ O.....	0.03g
NiCl ₂ ·6H ₂ O.....	0.02g
CuCl ₂ ·2H ₂ O.....	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except ferric ammonium citrate solution and trace elements solution SL-6, to distilled/deionized water and bring volume to 975.0mL. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 4.0. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 20.0mL of sterile ferric ammonium citrate solution and 5.0mL of sterile trace elements solution SL-6. Mix thoroughly. Aseptically distribute into sterile tubes or flasks. For chemolithotrophic growth, incubate the culture under 2% O₂ + 10% CO₂ + 60% H₂ + 28% N₂.

Use: For the chemolithotrophic growth of *Bacillus tusciae*.

Bacillus tusciae Medium

Composition per liter:

Agar.....	15.0g
Na ₂ HPO ₄ ·2H ₂ O.....	2.9g
KH ₂ PO ₄	2.3g
NH ₄ Cl.....	1.0g
MgSO ₄ ·7H ₂ O.....	0.5g
NaHCO ₃	0.5g
Fe(NH ₄) citrate.....	0.05g
CaCl ₂ ·2H ₂ O.....	0.01g
MnSO ₄ ·H ₂ O.....	0.01g

Ferric ammonium citrate solution.....	20.0mL
Carbon source.....	10.0mL
Trace elements solution SL-6.....	5.0mL
pH 4.0 ± 0.2 at 25°C	

Ferric Ammonium Citrate Solution:

Composition per 20.0mL:

Ferric ammonium citrate.....	0.05g
------------------------------	-------

Preparation of Ferric Ammonium Citrate Solution: Add ferric ammonium citrate to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Carbon Source:

Composition per 10.0mL:

Carbohydrate.....	2.0g
Organic acid (alternate).....	1.0g

Preparation of Carbon Source: Add either carbohydrate or organic acid to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Trace Elements Solution SL-6:

Composition per liter:

MnCl ₂ ·4H ₂ O.....	0.5g
H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O.....	0.2g
ZnSO ₄ ·7H ₂ O.....	0.1g
Na ₂ MoO ₄ ·2H ₂ O.....	0.03g
NiCl ₂ ·6H ₂ O.....	0.02g
CuCl ₂ ·2H ₂ O.....	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except ferric ammonium citrate solution, trace elements solution SL-6, and carbon source, to distilled/deionized water and bring volume to 965.0mL. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 4.0. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 20.0mL of sterile ferric ammonium citrate solution, 10.0mL of sterile carbon source, and 5.0mL of sterile trace elements solution SL-6. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the heterotrophic growth of *Bacillus tusciae*.

Bacillus Xylose Salts

Composition per liter:

Yeast extract.....	5.0g
Xylose.....	5.0g
NaCl.....	1.0g
NH ₄ Cl.....	1.0g
KH ₂ PO ₄	0.5g
MgSO ₄ ·7H ₂ O.....	0.5g
CaCl ₂ ·2H ₂ O.....	0.05g
Trace mineral solution.....	10.0mL
Vitamin solution.....	10.0mL
pH 4.0 ± 0.2 at 25°C	

Trace Mineral Solution:

Composition per liter:

CoCl ₂ ·6H ₂ O.....	0.2g
FeSO ₄ ·7H ₂ O.....	0.13g
ZnCl ₂ ·2H ₂ O.....	0.1g
MnCl ₂ ·4H ₂ O.....	0.1g

CaCl ₂ ·2H ₂ O.....	20.0mg
Na ₂ SeO ₃	20.0mg
Na ₂ WO ₄ ·2H ₂ O.....	20.0mg
NaMoO ₄ ·2H ₂ O.....	1.0mg
H ₃ BO ₃	0.5mg
CuSO ₄ ·5H ₂ O.....	0.4mg
KI.....	0.1mg

Preparation of Trace Mineral Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl.....	10.0mg
Thiamine-HCl.....	5.0mg
Riboflavin.....	5.0mg
Nicotinic acid.....	5.0mg
Calcium pantothenate.....	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Thioctic acid.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Cyanocobalamin.....	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH of medium to 4.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Bacillus* species that can utilize xylose as a carbon source.

Bacterial Cell Agar (BCA)

Composition per liter:

Tryptose.....	17.36g
Agar.....	15.0g
NaCl.....	8.68g
Beef extract.....	5.2g
Yeast extract.....	1.7g

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components, except agar, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 30°C. Inoculate with a culture of *Aeromonas hydrophila*. Incubate with shaking at 30°C for 72 hr. Centrifuge culture in 40.0mL volumes at 10,000 × g for 10 min. Wash the cells four times in sterile 0.85% saline. Resuspend the cell pellet in 25.0mL of distilled/deionized water. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. In a separate flask, add 15.0g of agar to 1.0L of distilled/deionized water. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically combine 25.0mL of washed cells and 250.0mL of cooled, sterile agar solution. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the cultivation of freshwater *Myxobacterium* species.

Bacterium Medium

Composition per liter:

Agar.....	20.0g
Peptone.....	6.0g

Yeast extract.....	3.0g
Beef extract.....	1.5g
Glucose.....	1.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: An archaic medium used for the cultivation and growth of bacteria originally classified in the genus *Bacterium* but now classified in the genera *Brevibacterium* and *Kurthia*.

Bacteroides Bile Esculin Agar (BBE Agar)

Composition per liter:

Oxgall.....	20.0g
Pancreatic digest of casein.....	15.0g
Agar.....	15.0g
Papaic digest of soybean meal.....	5.0g
NaCl.....	5.0g
Esculin.....	1.0g
Ferric ammonium citrate.....	0.5g
Gentamicin solution.....	2.5mL
Hemin solution.....	2.5mL
Vitamin K ₁ solution.....	1.0mL

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Gentamicin Solution:

Composition per 10.0mL:

Gentamicin.....	0.4mg
-----------------	-------

Preparation of Gentamicin Solution: Add gentamicin to 10.0mL of distilled/deionized water. Mix thoroughly. Filter sterilize.

Hemin Solution:

Composition per 100.0mL:

Hemin.....	0.5g
NaOH (1N solution).....	10.0mL

Preparation of Hemin Solution: Add components to 100.0mL of distilled/deionized water. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Vitamin K₁ Solution:

Composition per 100.0mL:

Vitamin K ₁	1.0g
Ethanol.....	99.0mL

Preparation of Vitamin K₁ Solution: Add vitamin K₁ to 99.0mL of absolute ethanol. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except hemin solution, gentamicin solution, and vitamin K₁ solution, to distilled/deionized water and bring volume to 994.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 2.5mL of sterile hemin solution, 2.5mL of sterile gentamicin solution, and 1.0mL of sterile vitamin K₁ solution.

Use: For the selection and presumptive identification of the *Bacteroides fragilis* group. For the differentiation of *Bacteroides* species based on the hydrolysis of esculin and presence of catalase. After incubation for 48 hr, bacteria of the *Bacteroides fragilis* group appear as gray, circular, raised colonies larger than 1.0mm. Esculin hydrolysis is indicated by the presence of a blackened zone around the colonies.

Bacteroides cellulosolvens* Medium*Composition per liter:**

Cellobiose or cellulose.....	5.0g
NaHCO ₃	2.0g
NH ₄ Cl.....	0.68g
K ₂ HPO ₄	0.3g
L-Cysteine·HCl·H ₂ O.....	0.25g
Na ₂ S·9H ₂ O.....	0.25g
KH ₂ PO ₄	0.18g
(NH ₄) ₂ SO ₄	0.15g
MgSO ₄ ·7H ₂ O.....	0.12g
CaCl ₂ ·2H ₂ O.....	0.06g
FeSO ₄ ·7H ₂ O.....	0.02g
Resazurin.....	1.0mg
Trace elements solution.....	10.0mL
Vitamin solution.....	10.0mL

pH 7.0 ± 0.2 at 25°C

Trace Elements Solution:**Composition per liter:**

MgSO ₄ ·7H ₂ O.....	3.0g
Nitrilotriacetic acid.....	1.5g
CaCl ₂ ·2H ₂ O.....	1.0g
NaCl.....	1.0g
MnSO ₄ ·2H ₂ O.....	0.5g
CoSO ₄ ·7H ₂ O.....	0.18g
ZnSO ₄ ·7H ₂ O.....	0.18g
FeSO ₄ ·7H ₂ O.....	0.1g
NiCl ₂ ·6H ₂ O.....	0.025g
KAl(SO ₄) ₂ ·12H ₂ O.....	0.02g
CuSO ₄ ·5H ₂ O.....	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O.....	0.01g
Na ₂ SeO ₃ ·5H ₂ O.....	0.3mg

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to approximately 500.0mL distilled/deionized water. Dissolve by adding KOH and adjust pH to 6.5. Add remaining components. Bring volume to 1.0L with additional distilled/deionized water. Adjust pH to 7.0 with KOH.

Vitamin Solution:**Composition per liter:**

Pyridoxine·HCl.....	10.0mg
Calcium DL-pantothenate.....	5.0mg
Lipoic acid.....	5.0mg
Nicotinic acid.....	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Riboflavin.....	5.0mg
Thiamine·HCl.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Cellobiose Solution:**Composition per 50.0mL:**

D-Cellobiose (or cellulose).....	5.0g
----------------------------------	------

Preparation of Cellobiose Solution: Add cellobiose (or cellulose) to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except cellobiose solution, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 50.0mL of sterile cellobiose (or cellulose) solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Bacteroides cellulosolvens*.

***Bacteroides* HiVeg Agar Base
with Selective Supplement
(BBE)****Composition per liter:**

Plant hydrolysate.....	25.0g
Agar.....	15.0g
Papaic digest of soybean meal.....	10.0g
NaCl.....	5.0g
Synthetic detergent No. II.....	2.0g
Esculin.....	1.0g
Ferric ammonium citrate.....	0.5g
Fe ₄ (P ₂ O ₇) ₃ ·H ₂ O.....	0.01g
Vitamin K ₁	0.01g
Selective supplement solution.....	10.0mL

pH 7.2 ± 0.2 at 25°C

Source: This medium, without selective supplement, is available as a premixed powder from HiMedia.

Selective Supplement Solution:**Composition per 10.0mL:**

Gentamicin.....	0.1mg
-----------------	-------

Preparation of Selective Supplement Solution: Add gentamicin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except selective supplement, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Heat with frequent agitation and boil for 1 min to completely dissolve. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Add 10.0mL of sterile selective supplement. Mix thoroughly. Pour into sterile Petri dishes or leave in tubes.

Use: For the selection and presumptive identification of the *Bacteroides fragilis* group. For the differentiation of *Bacteroides* species based on the hydrolysis of esculin and presence of catalase. After incubation for 48 hr, bacteria of the *Bacteroides fragilis* group appear as gray, circular, raised colonies larger than 1.0mm. Esculin hydrolysis is indicated by the presence of a blackened zone around the colonies.

Bacteroides* Medium*Composition per liter:**

Pancreatic digest of casein.....	27.0g
Yeast extract.....	3.0g
K ₂ HPO ₄	2.5g
K ₂ CO ₃	2.0g
NaCl.....	2.0g
Hemin solution.....	10.0mL
Vitamin K ₁ solution.....	0.2mL

Hemin Solution:**Composition per 100.0mL:**

Hemin.....	1.0g
NaOH (1N solution).....	20.0mL

Preparation of Hemin Solution: Add hemin to 20.0mL of 1N NaOH solution. Mix thoroughly. Bring volume to 100.0mL with distilled/deionized water.

Vitamin K₁ Solution:

Composition per 100.0mL:

Vitamin K ₁	1.0g
Ethanol	99.0mL

Preparation of Vitamin K₁ Solution: Add vitamin K₁ to 99.0mL of absolute ethanol. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Bacteroides asaccharolyticus* and *Bacteroides melaninogenicus*.

Bacteroides nodosus Agar

Composition per liter:

Agar	14.0g
Liver hydrolysate	10.0g
Proteose peptone No. 3	10.0g
Trypsin 1:250	10.0g
NaCl	5.0g
Yeast extract	2.0g
L-Cysteine-HCl solution	2.5mL

pH 7.4 ± 0.2 at 25°C

L-Cysteine-HCl Solution:

Composition per 10.0mL:

L-Cysteine HCl	1.0g
----------------------	------

Preparation of L-Cysteine-HCl Solution: Dissolve 1.0g of L-cysteine-HCl in distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize. Warm to 50°C.

Preparation of Medium: Add components, except agar and L-cysteine-HCl solution, to distilled/deionized water and bring volume to 997.5mL. Mix thoroughly. Adjust pH to 8.5. Gently heat and bring to boiling. Boil for 5 min. Filter and allow to cool to 25°C. Adjust pH to 7.4. Add 14.0g of agar. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 2.5mL of sterile L-cysteine-HCl solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Bacteroides nodosus*.

Bacteroides vulgatus Medium (LMG Medium 204)

Composition per liter:

Special peptone	23.0g
Agar	15.0g
Glucose	5.0g
NaCl	5.0g
Soluble starch	1.0g
Cysteine hydrochloride	0.3g
Horse blood, sterile defibrinated	50.0mL

pH 7.1 ± 0.2 at 25°C

Preparation of Medium: Add components, except horse blood, to 950.0mL distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50.0mL sterile

horse blood. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Bacteroides vulgatus*.

BAF Agar

Composition per liter:

Glucose	30.0g
Agar	15.0g
Peptone	2.0g
KH ₂ PO ₄	0.5g
MgSO ₄ ·7H ₂ O	0.5g
Yeast extract	0.2g
CaCl ₂ ·2H ₂ O	100.0mg
FeCl ₃ ·6H ₂ O	10.0mg
MnSO ₄	5.0mg
ZnSO ₄ ·7H ₂ O	1.0mg
Folic acid	100.0µg
Inositol	50.0µg
Thiamine-HCl	50.0µg
Biotin	1.0µg

pH 5.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Gently heat and bring to boiling. Adjust pH to 5.8. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of a wide variety of bacteria.

BAGG Broth

(Buffered Azide Glucose Glycerol Broth)

Composition per liter:

Pancreatic digest of casein	10.0g
Peptic digest of animal tissue	10.0g
Glucose	5.0g
NaCl	5.0g
K ₂ HPO ₄	4.0g
KH ₂ PO ₄	1.5g
NaN ₃	0.5g
Bromocresol Purple	0.015g
Glycerol	5.0mL

pH 6.9 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Caution: Sodium azide is toxic. Azides also react with metals and disposal must be highly diluted.

Preparation of Medium: Add 5.0mL of glycerol to 900.0mL of distilled/deionized water. Add remaining components and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes in 10.0mL volumes. Autoclave for 15 min at 10 psi pressure–116°C.

Use: For the cultivation of fecal streptococci from a variety of clinical and nonclinical specimens. It is recommended for qualitative presumptive and confirmatory tests for fecal streptococci.

BAGG Broth Base with Glycerol

(Buffered Azide Glucose Glycerol Broth Base)

Composition per liter:

Tryptose	20.0g
Glucose	5.0g

NaCl	5.0g
K ₂ HPO ₄	4.0g
KH ₂ PO ₄	1.5g
NaN ₃	0.5g
Bromcresol Purple	0.015g
Glycerol	5.0mL

pH 6.9 ± 0.2 at 25°C

Source: This medium without glycerol is available as a premixed powder from HiMedia.

Caution: Sodium azide is toxic. Azides also react with metals and disposal must be highly diluted.

Preparation of Medium: Add 5.0mL of glycerol to 900.0mL of distilled/deionized water. Add remaining components and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes in 10.0mL volumes. Autoclave for 15 min at 10 psi pressure–115°C.

Use: For the cultivation of fecal streptococci from a variety of clinical and nonclinical specimens. It is recommended for qualitative presumptive and confirmatory tests for fecal streptococci.

BAGG HiVeg Broth Base with Glycerol

(Buffered Azide Glucose Glycerol HiVeg Broth Base)

Composition per liter:

Plant hydrolysate No. 1	20.0g
Glucose	5.0g
NaCl	5.0g
K ₂ HPO ₄	4.0g
KH ₂ PO ₄	1.5g
NaN ₃	0.5g
Bromcresol Purple	0.015g
Glycerol	5.0mL

pH 6.9 ± 0.2 at 25°C

Source: This medium without glycerol is available as a premixed powder from HiMedia.

Caution: Sodium azide is toxic. Azides also react with metals and disposal must be highly diluted.

Preparation of Medium: Add 5.0mL of glycerol to 900.0mL of distilled/deionized water. Add remaining components and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes in 10.0mL volumes. Autoclave for 15 min at 10 psi pressure–115°C.

Use: For the cultivation of fecal streptococci from a variety of clinical and nonclinical specimens. It is recommended for qualitative presumptive and confirmatory tests for fecal streptococci.

Baird-Parker Agar

Composition per liter:

Agar	17.0g
Glycine	12.0g
Sodium pyruvate	10.0g
Pancreatic digest of casein	10.0g
Beef extract	5.0g
LiCl	5.0g
Yeast extract	1.0g

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath and BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Pour into sterile Petri dishes.

Use: Used as a base for the preparation of egg-tellurite-glycine-pyruvate agar for the selective isolation and enumeration of coagulase-positive staphylococci from food, skin, soil, air, and other materials.

Baird-Parker Agar

Composition per liter:

Agar	17.0g
Glycine	12.0g
Sodium pyruvate	10.0g
Pancreatic digest of casein	10.0g
Beef extract	5.0g
LiCl	5.0g
Yeast extract	1.0g
Sulfamethazine solution	10.0mL

pH 7.0 ± 0.2 at 25°C

Sulfamethazine Solution:

Composition per 10.0mL:

Sulfamethazine	0.05g
----------------------	-------

Preparation of Sulfamethazine Solution: Add sulfamethazine to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except sulfamethazine solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile sulfamethazine solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: Used as a base for the preparation of egg-tellurite-glycine-pyruvate agar for the selective isolation and enumeration of coagulase-positive staphylococci from food, skin, soil, air, and other materials.

Baird-Parker Agar Base with Egg Yolk Tellurite Enrichment

Composition per liter:

Agar	20.0g
Glycine	12.0g
Casein enzymatic hydrolysate	10.0g
Sodium pyruvate	10.0g
Plant extract	5.0g
LiCl	5.0g
Yeast extract	1.0g
Egg yolk tellurite enrichment	50.0mL

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Caution: Lithium chloride is harmful. Avoid bodily contact and inhalation of vapors. On contact with skin wash with plenty of water immediately.

Egg Yolk Tellurite Enrichment:

Composition per 100.0mL:

Chicken egg yolks	10
K ₂ TeO ₃	0.15g
NaCl (0.9% solution)	50.0mL

Preparation of Egg Yolk Tellurite Enrichment: Soak eggs with 1:100 dilution of saturated mercuric chloride solution for 1 min. Crack 11 eggs and separate yolks from whites. Mix egg yolks. Measure 30.0mL of egg yolk emulsion and add to 70.0mL of 0.9% NaCl solution. Mix thoroughly. Add 0.15g K₂TeO₃. Filter sterilize. Warm to 45°–50°C.

Caution: Potassium tellurite is toxic.

Preparation of Medium: Add components, except egg yolk tellurite enrichment, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50 mL of egg yolk tellurite enrichment. Mix well. Pour into sterile Petri dishes or sterile tubes.

Use: For the selective isolation and enumeration of coagulase-positive staphylococci.

Baird-Parker Agar Base, HiVeg with Egg Yolk Tellurite Enrichment

Composition per liter:

Agar	20.0g
Glycine.....	12.0g
Plant hydrolysate.....	10.0g
Sodium pyruvate	10.0g
Plant extract	5.0g
LiCl	5.0g
Yeast extract.....	1.0g
Egg yolk tellurite enrichment	50.0mL
pH 7.0 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Caution: Lithium chloride is harmful. Avoid bodily contact and inhalation of vapors. On contact with skin wash with plenty of water immediately.

Egg Yolk Tellurite Enrichment:

Composition per 100.0mL:

Chicken egg yolks.....	10
K ₂ TeO ₃	0.15g
NaCl (0.9% solution).....	50.0mL

Preparation of Egg Yolk Tellurite Enrichment: Soak eggs with 1:100 dilution of saturated mercuric chloride solution for 1 min. Crack 11 eggs and separate yolks from whites. Mix egg yolks. Measure 30.0mL of egg yolk emulsion and add to 70.0mL of 0.9% NaCl solution. Mix thoroughly. Add 0.15g K₂TeO₃. Filter sterilize. Warm to 45°–50°C.

Caution: Potassium tellurite is toxic.

Preparation of Medium: Add components, except egg yolk tellurite enrichment, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50 mL of egg yolk tellurite enrichment. Mix well. Pour into sterile Petri dishes or sterile tubes.

Use: For the selective isolation and enumeration of coagulase-positive staphylococci.

Baird-Parker Agar, Supplemented

Composition per liter:

Agar	17.0g
Glycine.....	12.0g
Sodium pyruvate.....	10.0g
Pancreatic digest of casein.....	10.0g
Beef extract.....	5.0g
LiCl.....	5.0g
Yeast extract.....	1.0g
RPF supplement.....	100.0mL
pH 7.0 ± 0.2 at 25°C	

RPF Supplement:

Composition per 100.0mL:

Bovine fibrinogen.....	3.75g
Trypsin inhibitor	25.0mg
K ₂ TeO ₃	25.0mg
Rabbit plasma	25.0mL

Caution: Potassium tellurite is toxic.

Preparation of RPF Supplement: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except RPF supplement, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 100.0mL of filter-sterilized RPF supplement. Mix thoroughly but gently. Pour into sterile Petri dishes.

Use: For the selective isolation and enumeration of coagulase-positive staphylococci from food, skin, soil, air, and other materials. For the differentiation and identification of staphylococci on the basis of their ability to coagulate plasma. Colonies surrounded by an opaque zone of coagulated plasma are diagnostic for *Staphylococcus aureus*.

Baird-Parker Egg Yolk Agar (ISO)

Composition per 1050.0mL:

Agar	20.0g
L-Glycine	12.0g
Pancreatic digest of casein.....	10.0g
Sodium pyruvate.....	10.0g
Meat extract	5.0g
LiCl.....	5.0g
Yeast extract.....	1.0g
Egg yolk tellurite enrichment	50.0mL
pH 7.2 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Oxoid Unipath.

Caution: Lithium chloride is harmful. Avoid bodily contact and inhalation of vapors. On contact with skin wash with plenty of water immediately.

Egg Yolk Tellurite Enrichment:

Composition per 100.0mL:

Chicken egg yolks.....	10
K ₂ TeO ₃	0.15g
NaCl (0.9% solution).....	50.0mL

Preparation of Egg Yolk Tellurite Enrichment: Soak eggs with 1:100 dilution of saturated mercuric chloride solution for 1 min. Crack 11 eggs and separate yolks from whites. Mix egg yolks. Measure 30.0mL of egg yolk emulsion and add to 70.0mL of 0.9% NaCl solu-

tion. Mix thoroughly. Add 0.15g K₂TeO₃. Filter sterilize. Warm to 45°–50°C.

Caution: Potassium tellurite is toxic.

Preparation of Medium: Add components, except egg yolk tellurite enrichment, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50 mL of egg yolk tellurite enrichment. Mix well. Pour into sterile Petri dishes or sterile tubes.

Use: For the selective isolation and enumeration of coagulase-positive staphylococci. A selective medium for the isolation and enumeration of coagulase-positive staphylococci from food, with formulation conforming to that recommended in ISO 6888-1:1999.

Baird-Parker Medium (BAM M17)

Composition per liter:

Agar	20.0g
Glycine.....	12.0g
Sodium pyruvate.....	10.0g
Pancreatic digest of casein.....	10.0g
Beef extract.....	5.0g
LiCl·6H ₂ O.....	5.0g
Yeast extract.....	1.0g
Egg yolk tellurite enrichment.....	50.0mL
pH 7.0 ± 0.2 at 25°C	

Egg Yolk Tellurite Enrichment:

Composition per 100.0mL:

Chicken egg yolks.....	10
K ₂ TeO ₃	0.15g
NaCl (0.9% solution).....	50.0mL

Preparation of Egg Yolk Tellurite Enrichment: Soak eggs with 1:100 dilution of saturated mercuric chloride solution for 1 min. Crack 11 eggs and separate yolks from whites. Mix egg yolks. Measure 30.0mL of egg yolk emulsion and add to 70.0mL of 0.9% NaCl solution. Mix thoroughly. Add 0.15g K₂TeO₃. Filter sterilize. Warm to 45°–50°C.

Caution: Potassium tellurite is toxic.

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components, except EY tellurite enrichment, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 48°–50°C. Aseptically add 50.0mL of sterile EY tellurite enrichment. Mix thoroughly. Pour into sterile Petri dishes. The medium must be densely opaque. Dry plates before use. Plates can be stored for up to 5 days at 20–25°C before use.

Use: For the selective isolation and enumeration of coagulase-positive staphylococci from foods.

Baird-Parker Medium (BAM M17)

Composition per liter:

Agar	20.0g
Glycine.....	12.0g
Sodium pyruvate.....	10.0g
Pancreatic digest of casein.....	10.0g

Beef extract.....	5.0g
LiCl·6H ₂ O.....	5.0g
Yeast extract.....	1.0g
Egg yolk tellurite enrichment.....	50.0mL
pH 7.0 ± 0.2 at 25°C	

Egg Yolk Tellurite Enrichment:

Composition per 100.0mL:

Chicken egg yolks.....	10
K ₂ TeO ₃	0.15g
NaCl (0.9% solution).....	50.0mL

Preparation of Egg Yolk Tellurite Enrichment: Soak eggs with 1:100 dilution of saturated mercuric chloride solution for 1 min. Crack 11 eggs and separate yolks from whites. Mix egg yolks. Measure 30.0mL of egg yolk emulsion and add to 70.0mL of 0.9% NaCl solution. Mix thoroughly. Add 0.15g K₂TeO₃. Filter sterilize. Warm to 45°–50°C.

Caution: Potassium tellurite is toxic.

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components, except egg yolk tellurite enrichment, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 48°–50°C. Aseptically add 50.0mL of sterile egg yolk tellurite enrichment. Mix thoroughly. Pour into sterile Petri dishes. The medium must be densely opaque. Dry plates before use. Plates can be stored for up to 5 days at 20–25°C before use.

Use: For the selective isolation and enumeration of coagulase-positive staphylococci from foods.

Balamuth Medium

Composition per 200.0mL:

Dehydrated egg yolk.....	36.0g
Dried liver concentrate.....	1.0g
Rice starch.....	0.2g
Potassium phosphate buffer, pH 7.5.....	125.0mL
NaCl solution.....	125.0mL
pH 7.3 ± 0.2 at 25°C	

NaCl Solution

Composition per 200.0mL:

NaCl.....	1.6g
-----------	------

Preparation of NaCl Solution: Add NaCl to distilled/deionized water and bring volume to 200.0mL. Mix thoroughly.

Potassium Phosphate Buffer, 0.067M

Composition per 200.0mL:

K ₂ HPO ₄ (1M solution).....	8.6mL
KH ₂ PO ₄ (1M solution).....	4.66mL

Preparation of Potassium Phosphate Buffer: Combine the K₂HPO₄ and KH₂PO₄ solutions. Bring volume to 200.0mL with distilled/deionized water. Adjust pH to 7.5.

Preparation of Medium: Add dehydrated egg yolk to 36.0mL of distilled/deionized water. Add 125.0mL of 0.8% NaCl. Mix thoroughly in a blender. Heat in a covered, double boiler until infusion reaches 80°C and maintain at this temperature for 20 min. Add 20.0mL of distilled/deionized H₂O. Filter through a layer of cheesecloth. To 90–100.0mL of filtrate add 0.8% NaCl solution to bring volume to 125.0mL. Autoclave for 20 min at 15 psi pressure–121°C. Cool to 4°C.

Filter. To filtrate, add an equal volume of 0.067M potassium phosphate buffer, pH 7.5. Add 1.0g of dried liver concentrate. Mix thoroughly. Distribute into tubes or flasks in 10.0mL volumes. Autoclave for 20 min at 15 psi pressure–121°C. Prior to inoculation, add 0.01g of rice starch to each tube.

Use: For the cultivation and maintenance of *Entamoeba histolytica* and other intestinal protozoa.

**BAM Agar
(ATCC Medium 1655)**

Composition per liter:

Agar	30.0g
Glucose	5.0g
KH ₂ PO ₄	3.0g
Yeast extract.....	1.0g
MgSO ₄ ·7H ₂ O	0.5g
CaCl ₂ ·2H ₂ O.....	0.25g
(NH ₄) ₂ SO ₄	0.2g
Trace elements	1.0mL

pH 4.0 ± 0.2 at 25°C

Trace Elements:

Composition per liter:

CaCl ₂ ·2H ₂ O.....	0.66g
Na ₂ MoO ₄ ·2H ₂ O	0.3g
ZnSO ₄ ·7H ₂ O	0.18g
CoCl ₂ ·6H ₂ O	0.18g
CuSO ₄ ·5H ₂ O	0.16g
MnSO ₄ ·4H ₂ O	0.15g
H ₃ BO ₃	0.1g

Preparation of Trace Elements: Add components to 1.0L of distilled/deionized water. Mix thoroughly.

Preparation of Medium: Add components, except agar, to distilled/deionized water and bring volume to 800.0mL. Mix thoroughly. Gently heat and bring to boiling. Adjust medium to pH 4.0 with H₂SO₄. Add agar to 200.0mL of distilled/deionized water. Autoclave agar separately to avoid acid hydrolysis. Autoclave for 15 min at 15 psi pressure–121°C. Mix the two solutions together. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Bacillus acidoterrestris*.

BAM Broth

Composition per liter:

Glucose	5.0g
KH ₂ PO ₄	3.0g
Yeast extract.....	1.0g
MgSO ₄ ·7H ₂ O	0.5g
CaCl ₂ ·2H ₂ O.....	0.25g
(NH ₄) ₂ SO ₄	0.2g
Trace elements	1.0mL

pH 4.0 ± 0.2 at 25°C

Trace Elements:

Composition per liter:

CaCl ₂ ·2H ₂ O.....	0.66g
Na ₂ MoO ₄ ·2H ₂ O	0.3g
ZnSO ₄ ·7H ₂ O	0.18g
CoCl ₂ ·6H ₂ O	0.18g
CuSO ₄ ·5H ₂ O	0.16g

MnSO ₄ ·4H ₂ O	0.15g
H ₃ BO ₃	0.1g

Preparation of Trace Elements: Add components to 1.0L of distilled/deionized water. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust medium to pH 4.0 with H₂SO₄. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Bacillus acidoterrestris*.

**BAM SM Agar
(ATCC Medium 1656)**

Composition per liter:

Agar	20.0g
Yeast extract.....	6.0g
Glucose	5.0g
KH ₂ PO ₄	3.0g
MgSO ₄ ·7H ₂ O	0.5g
CaCl ₂ ·2H ₂ O	0.25g
(NH ₄) ₂ SO ₄	0.2g
Trace elements	1.0mL

pH 4.0 ± 0.2 at 25°C

Trace Elements:

Composition per liter:

CaCl ₂ ·2H ₂ O	0.66g
Na ₂ MoO ₄ ·2H ₂ O	0.3g
ZnSO ₄ ·7H ₂ O	0.18g
CoCl ₂ ·6H ₂ O	0.18g
CuSO ₄ ·5H ₂ O	0.16g
MnSO ₄ ·4H ₂ O	0.15g
H ₃ BO ₃	0.1g

Preparation of Trace Elements: Add components to 1.0L of distilled/deionized water. Mix thoroughly.

Preparation of Medium: Add components, except agar, to distilled/deionized water and bring volume to 800.0mL. Mix thoroughly. Gently heat and bring to boiling. Adjust medium to pH 4.0 with H₂SO₄. Add agar to 200.0mL of distilled/deionized water. Autoclave agar separately to avoid acid hydrolysis. Autoclave for 15 min at 15 psi pressure–121°C. Mix the two solutions together. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Bacillus cycloheptanicus*.

BAM SM Agar, Modified

Composition per liter:

Agar	30.0g
Glucose	5.0g
KH ₂ PO ₄	3.0g
Yeast extract.....	1.0g

CoCl ₂ ·6H ₂ O	0.18g
CuSO ₄ ·5H ₂ O	0.16g
MnSO ₄ ·4H ₂ O	0.15g
H ₃ BO ₃	0.10g

Preparation of Trace Elements: Add components to 1.0L of distilled/deionized water. Mix thoroughly.

Preparation of Medium: Add components, except agar, to distilled/deionized water and bring volume to 800.0mL. Mix thoroughly. Gently heat and bring to boiling. Adjust medium to pH 4.0 with H₂SO₄. Add agar to 200.0mL of distilled/deionized water. Autoclave agar separately to avoid acid hydrolysis. Autoclave for 15 min at 15 psi pressure–121°C. Mix the two solutions together. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Bacillus cycloheptanicus*.

BAM SM Broth

Composition per liter:

Yeast extract	6.0g
Glucose	5.0g
KH ₂ PO ₄	3.0g
MgSO ₄ ·7H ₂ O	0.5g
CaCl ₂ ·2H ₂ O	0.25g
(NH ₄) ₂ SO ₄	0.2g
Trace elements	1.0mL

pH 4.0 ± 0.2 at 25°C

Trace Elements:

Composition per liter:

CaCl ₂ ·2H ₂ O	0.66g
Na ₂ MoO ₄ ·2H ₂ O	0.3g
ZnSO ₄ ·7H ₂ O	0.18g
CoCl ₂ ·6H ₂ O	0.18g
CuSO ₄ ·5H ₂ O	0.16g
MnSO ₄ ·4H ₂ O	0.15g
H ₃ BO ₃	0.1g

Preparation of Trace Elements: Add components to 1.0L of distilled/deionized water. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust medium to pH 4.0 with H₂SO₄. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Bacillus cycloheptanicus*.

Bandoni's MYP Medium

Composition per liter:

Agar	15.0g
Malt extract	7.0g
Papaic digest of soybean meal	1.0g
Yeast extract	0.5g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Coleosporium tussilaginis* and *Cystofilobasidium capitatum*.

Basal Medium (DSMZ Medium 1001)

Composition per liter:

NaHCO ₃	2.5g
NH ₄ Cl	0.25g
NaH ₂ PO ₄	0.6g
KCl	1.0g
Iron nitrilotriacetic acid solution	20.0mL
Vitamin mix	10.0mL
Mineral mix	10.0mL
Sodium acetate solution	10.0mL

pH 6.9 ± 0.2 at 25°C

Mineral Mix:

Composition per liter:

MgSO ₄ ·7H ₂ O	3.0g
Nitrilotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·2H ₂ O	0.5g
ZnCl ₂	0.13g
CoCl ₂ ·6H ₂ O	0.1g
CaCl ₂ ·2H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g
Na ₂ MoO ₄ ·4H ₂ O	0.025g
NaWO ₄ ·2H ₂ O	0.025g
NiCl ₂ ·6H ₂ O	0.024g
CuSO ₄ ·5H ₂ O	0.01g
KAl(SO ₄) ₂ ·12H ₂ O	0.01g
H ₃ BO ₃	0.01g

Preparation of Mineral Mix: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Vitamin Mix:

Composition per liter:

Pyridoxine-HCl	10.0mg
Thiamine-HCl·2H ₂ O	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
D-Ca-pantothenate	5.0mg
p-Aminobenzoic acid	5.0mg
Thioctic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Mix: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Sodium Acetate Solution:

Composition per 100.0mL:

Sodium acetate	13.6g
----------------------	-------

Preparation of Sodium Acetate Solution: Add sodium acetate to distilled/deionized water and bring volume to 80.0mL with distilled/deionized water. Mix thoroughly. Bring volume to 100.0mL with distilled/deionized water. Sparge with 100% N₂ for 45 min. Seal in bottle. Autoclave for 15 min at 15 psi pressure–121°C.

Iron Nitrioloacetic Acid Solution:**Composition** per 100.0mL:

FeCl ₃ ·6H ₂ O	13.5g
Sodium nitrilotriacetic acid (NTA)	12.8g
NaHCO ₃	8.2g

Preparation of Iron Nitrioloacetic Acid: Add NaHCO₃ to distilled/deionized water and bring volume to 70.0mL with distilled/deionized water. Mix thoroughly. Add NTA. Mix thoroughly. Add FeCl₃·6H₂O. Adjust pH to 6.5 using 10N NaOH. Bring volume to 100.0mL with distilled/deionized water. Stir for about 15 minutes to allow components to go into solution. Sparge with 100% N₂ for 45 min. Filter sterilize. Aseptically and anoxically dispense into sterile serum bottles.

Preparation of Medium: Add components, except iron nitrioloacetic acid solution and sodium acetate solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Bubble the medium with 80:20 N₂:CO₂ (final pH should be 6.8 to 7.0). Approximately 10.0mL of media (anaerobic culture tube) should be gassed for 5 min in the aqueous phase (bubbled) and the headspace gassed for 1 min prior to sealing the container. Autoclave for 15 min at 15 psi pressure–121°C. Add electron donor (acetate-final conc. of 10mM-) and electron acceptor (Fe(III)NTA (final conc. of 10mM), from sterile, anaerobic stock solutions using a sterile syringe and needle flushed with anaerobic gas. This medium should not be exposed to direct sunlight!

Use: For the cultivation of a *Rhodospirillum rubrum*.

Basal Mineral Medium**Composition** per liter:

NH ₄ Cl	0.8g
K ₂ HPO ₄	0.7g
MgSO ₄ ·7H ₂ O	0.01g
Disodium EDTA	9.2mg
FeSO ₄ ·7H ₂ O	7.0mg
CaSO ₄ ·2H ₂ O	2.0mg
H ₃ BO ₃	0.1mg
ZnSO ₄ ·7H ₂ O	0.1mg
MnSO ₄ ·4H ₂ O	0.02mg
Co(NO ₃) ₂	0.01mg
NaMoO ₄ ·2H ₂ O	0.01mg
CuSO ₄ ·5H ₂ O	0.5μg

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Use: For the cultivation of *Beggiatoa* species.

Basal Synthetic Medium**Composition** per liter:

L-Glutamic acid	20.0g
(NH ₄) ₂ SO ₄	4.0g
K ₂ HPO ₄	1.88g
KH ₂ PO ₄	0.57g
MgSO ₄ ·7H ₂ O	0.2g
Salt solution	10.0mL

Salt Solution:**Composition** per liter:

FeCl ₃ ·6H ₂ O	0.6g
MnCl ₂ ·4H ₂ O	0.6g
ZnCl ₂	0.6g

CuSO ₄ ·5H ₂ O	0.6g
CaCl ₂ ·2H ₂ O	0.6g
NaCl	0.6g

Preparation of Salt Solution: Add components to 1.0L of distilled/deionized water. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Acinetobacter lwoffii*.

Basal Thermophile Medium**Composition** per liter:

Solution 1	850.0mL
Solution 2	100.0mL
Solution 3	50.0mL

Solution 1:**Composition** per 850.0mL:

Pancreatic digest of casein	10.0g
K ₂ HPO ₄	1.5g
NH ₄ Cl	0.9g
KH ₂ PO ₄	0.75g
MgCl ₂ ·6H ₂ O	0.2g
Trace elements solution	9.0mL
Wolfe's vitamin solution	5.0mL
Resazurin (0.2% solution)	1.0mL
FeSO ₄ ·7H ₂ O (10% solution)	0.03mL

Preparation of Solution 1: Add components to distilled/deionized water and bring volume to 850.0mL. Mix thoroughly. Autoclave for 45 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Solution 2:**Composition** per 100.0mL:

Yeast extract	3.0g
---------------------	------

Preparation of Solution 2: Add yeast extract to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 45 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Solution 3:**Composition** per 50.0mL:

Glucose	5.0g
---------------	------

Preparation of Solution 3: Add glucose to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Autoclave for 45 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Trace Elements Solution:**Composition** per liter:

Nitrilotriacetic acid	12.5g
NaCl	1.0g
FeCl ₃ ·4H ₂ O	0.2g
MnCl ₂ ·4H ₂ O	0.1g
CaCl ₂ ·2H ₂ O	0.1g
ZnCl ₂	0.1g
CuCl ₂	0.02g
Na ₂ SeO ₃	0.02g
CoCl ₂ ·6H ₂ O	0.017g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to 100.0mL of distilled/deionized water. Adjust pH to 6.5 with

KOH. Add remaining components and bring volume to 1.0L. Mix thoroughly.

Wolfe's Vitamin Solution:

Composition per liter:

Pyridoxine-HCl	10.0mg
Thiamine-HCl	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
Calcium pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Thioctic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Cyanocobalamin	0.1mg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Na₂S·9H₂O Solution:

Composition per 100.0mL:

Na ₂ S·9H ₂ O	10.0g
---	-------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Aseptically combine solution 1, solution 2, and solution 3 under 100% N₂. Distribute into tubes in 10.0mL volumes under 100% N₂. Immediately prior to inoculation, aseptically add 0.1mL of sterile Na₂S·9H₂O solution to each tube.

Use: For the cultivation and maintenance of *Clostridium* species, *Ferrobacterium nodosum*, and *Thermoanaerobium brockii*.

Base Agar

See: **Antibiotic Medium 2**

Base Agar with Low pH

See: **Antibiotic Medium 8**

Base Cholesterol Medium

Composition per liter:

Casitone	10.0g
Yeast extract	10.0g
Cholesterol, ash free	2.0g
CaCl ₂	1.0g
Lecithin, type IV	1.0g
Sodium thioglycolate	0.5g
Resazurin	1.0mg

Preparation of Medium: Prepare and dispense medium under 100% N₂. Add cholesterol and lecithin to distilled/deionized water and bring volume to 200.0mL of water. Mix thoroughly. Sparge with 100% N₂ for 10 min. Add other components to distilled/deionized water and bring volume to 800.0mL of water. Mix thoroughly. Combine the two solutions. Adjust pH to 7.5 with KOH. Gently heat and bring to boiling. Continue boiling while sparging with 100% N₂ until the resazurin turns colorless. Cool under 100% N₂. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Mix well after autoclaving.

Use: For the cultivation of *Eubacterium coprostanoligenes*.

Base Layer Agar with Nutrient Overlay Agar

Composition per 2.5L:

Fat substrate	50.0g
Nutrient agar	1.5L
Basal medium	1.0L

Fat Substrate:

Composition:

Fat	50.0g
-----------	-------

Preparation of Fat Substrate: Tributyrin, corn oil, soybean oil, any cooking oil, lard, tallow, or triglycerides that do not contain antioxidants or other inhibitory substances may be used. Remove free fatty acids in the fat substrate by dissolving 50.0g of fat substrate in 500.0mL of petroleum ether. Pass the solution through an activated alumina column. Remove the petroleum ether by evaporation on a steam table under 100% N₂. Autoclave for 30 min at 15 psi pressure–121°C. Cool to 50°C.

Nutrient Agar:

Composition per liter:

Agar	15.0g
Pancreatic digest of gelatin	5.0g
Beef extract	3.0g

Preparation of Nutrient Agar: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Source: The medium is available as a premixed powder from BD Diagnostic Systems.

Basal Medium:

Composition per liter:

Agar	15.0g
Victoria Blue B solution	200.0mL

Preparation of Basal Medium: Add agar to 800.0mL of distilled/deionized water. If tributyrin is used as the fat substrate, add agar to 1.0L of distilled/deionized water. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. If tributyrin is not used as the fat substrate, aseptically add 200.0mL of Victoria Blue B solution. Mix thoroughly.

Victoria Blue B Solution:

Composition per 200.0mL:

Victoria Blue B	0.12g
-----------------------	-------

Preparation of Victoria Blue B Solution: Add the Victoria Blue B to 200.0mL of distilled/deionized water. Mix thoroughly. Filter sterilize. Warm to 50°C.

Preparation of Medium: Aseptically combine 1.0L of sterile basal medium with 50.0g of sterile fat substrate in a warm, sterile blender container. Blend for 1 min until homogenized. Rapidly pour into sterile Petri dishes in 7.0mL volumes. Dry the surface of the plates by partially opening the lids in a laminar flow hood for 15 min. Add dilution of food samples to be tested. When the inoculum is dry, pour nutrient agar as an overlay onto each plate. Use 10–12mL of nutrient agar per plate.

Use: For the isolation, cultivation, and identification of lipolytic microorganisms from food.

Basic Cultivation Medium

Composition per liter:

Yeast extract	10.0g
Glucose	5.0g
(NH ₄) ₂ PO ₄	1.5g

K ₂ HPO ₄	1.0g
MgSO ₄ ·7H ₂ O.....	0.2g
Fe ₂ (SO ₄) ₃ ·5H ₂ O.....	0.01g
ZnSO ₄ ·7H ₂ O.....	0.002g
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of a wide variety of microorganisms.

Basic Mineral Medium

Composition per liter:

NH ₄ NO ₃	2.5g
Na ₂ HPO ₄ ·2H ₂ O.....	1.0g
MgSO ₄ ·7H ₂ O.....	0.5g
Fe(SO ₄) ₃ ·5H ₂ O.....	0.01g
Co(NO ₃) ₂ ·6H ₂ O.....	0.005g
CaCl ₂ ·2H ₂ O.....	1.0mg
KH ₂ PO ₄	0.5mg
MnSO ₄ ·2H ₂ O.....	0.1mg
(NH ₄) ₆ Mo ₇ O ₂₄ ·4H ₂ O.....	0.1mg

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: To supply the mineral nutrients necessary for the cultivation of a wide variety of microorganisms. Various carbon sources can be added as sterilized solutions for testing carbon utilization capabilities.

BBE Agar

See: Bacteroides Bile Esculin Agar

BBSG Agar

See: Bile Salts Brilliant Green Starch Agar

BC Medium

(Medium for *Acetivibrio cellulolyticus*)

Composition per liter:

Cellulose powder.....	3.0g
NaHCO ₃	2.0g
Mineral solution 1.....	75.0mL
Mineral solution 2.....	75.0mL
Cysteine-sulfide reducing solution.....	12.8mL
FeSO ₄ ·7H ₂ O solution.....	10.0mL
Vitamin mixture.....	10.0mL
Wolfe's mineral solution.....	10.0mL
Resazurin (0.1% solution).....	1.0mL
pH 7.6 ± 0.2 at 25°C	

Caution: This medium contains sodium sulfide and may produce toxic H₂S gas. Prepare in a chemical fume hood.

Mineral Solution 1:

Composition per liter:

K ₂ HPO ₄	3.9g
---------------------------------------	------

Preparation of Mineral Solution 1: Add K₂HPO₄ to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Mineral Solution 2:

Composition per liter:

NH ₄ Cl.....	12.0g
Na ₂ SO ₄	2.5g

KH ₂ PO ₄	2.4g
MgSO ₄ ·7H ₂ O.....	1.2g
CaCl ₂ ·2H ₂ O.....	0.8g

Preparation of Mineral Solution 2: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

FeSO₄·7H₂O Solution:

Composition per 100.0mL:

FeSO ₄ ·7H ₂ O.....	0.2g
---	------

Preparation of FeSO₄·7H₂O Solution: Dissolve FeSO₄·7H₂O in 100.0mL of distilled/deionized water. Add three drops of concentrated HCl. Mix thoroughly.

Vitamin Mixture:

Composition per liter:

Pyridoxine-HCl.....	10.0mg
Thiamine-HCl.....	5.0mg
Cyanocobalamin.....	5.0mg
Lipoic acid (thioctic acid).....	5.0mg
Biotin.....	2.0mg
<i>p</i> -Aminobenzoic acid.....	0.5mg

Preparation of Vitamin Mixture: Add components to distilled/deionized water and bring volume to 1.0L. Store below –20°C.

Wolfe's Mineral Solution:

Composition per liter

MgSO ₄ ·7H ₂ O.....	3.0g
Nitriloacetic acid.....	1.5g
MnSO ₄ ·H ₂ O.....	0.5g
NaCl.....	1.0g
FeSO ₄ ·7H ₂ O.....	0.1g
CoCl ₂ ·6H ₂ O.....	0.1g
CaCl ₂	0.1g
ZnSO ₄ ·7H ₂ O.....	0.1g
CuSO ₄ ·5H ₂ O.....	0.01g
AlK(SO ₄) ₂ ·12H ₂ O.....	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O.....	0.01g

Preparation of Wolfe's Mineral Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water and adjust to pH 6.5 with KOH to dissolve. Bring volume to 1.0L with distilled/deionized water. Add remaining components one at a time.

Cysteine-Sulfide Reducing Solution:

Composition per 200.0mL:

L-Cysteine-HCl·H ₂ O.....	2.5g
Na ₂ S·9H ₂ O.....	2.5g

Preparation of Cysteine-Sulfide Reducing Solution: Add L-cysteine-HCl·H₂O to 50.0mL of distilled/deionized water. Quickly adjust pH to 10 with fresh 3N NaOH and flush under 100% N₂. Add Na₂S·9H₂O. Bring volume to 200.0mL with distilled/deionized water. Boil under 100% N₂. Transfer anaerobically to tubes or flasks and stopper. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add cellulose and NaHCO₃ to distilled/deionized water and bring volume to 800.0mL. Add all other components except cysteine-sulfide reducing solution. Heat and boil under 90% N₂ + 10% CO₂. Cool and continue flushing under 90% N₂ + 10% CO₂. The pH should be 7.6 at room temperature; do not adjust. Add 8.0mL of cysteine-sulfide reducing solution. Add 4.8mL more of cysteine-sulfide reducing solution. Distribute anaerobically into tubes in 7.0mL volumes and cap.

Use: For the cultivation and maintenance of *Acetivibrio cellulolyticus*, *Acetivibrio cellulosolvens*, *Bacteroides cellulosolvens*, and other cellulose-degrading microorganisms.

BC Motility Medium (*Bacillus cereus* Motility Medium)

Composition per liter:

Pancreatic digest of casein.....	10.0g
Glucose.....	5.0g
Agar.....	3.0g
Na ₂ HPO ₄	2.5g
Yeast extract.....	2.5g
pH 7.4 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes in 2.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and observation of motility of *Bacillus cereus*.

BC Motility Test HiVeg Medium

Composition per liter:

Plant hydrolysate.....	10.0g
Glucose.....	5.0g
Agar.....	3.0g
Na ₂ HPO ₄	2.5g
Yeast extract.....	2.5g
pH 7.4 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes in 2.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and observation of motility of *Bacillus cereus*.

BCA

See: **Bacterial Cell Agar**

BCG Glucose Agar (Snyder Test Agar)

Composition per liter:

Agar.....	20.0g
Glucose.....	20.0g
Peptic digest of animal tissue.....	20.0g
NaCl.....	5.0g
Bromcresol Green.....	0.02
pH 4.8 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes in 10.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Do not overheat. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and enumeration of lactobacilli in saliva and indication of dental caries activity.

BCG Glucose HiVeg Agar (Snyder Test HiVeg Agar)

Composition per liter:

Agar.....	20.0g
Glucose.....	20.0g
Plant peptone.....	20.0g
NaCl.....	5.0g
Bromcresol Green.....	0.02
pH 4.8 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes in 10.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Do not overheat. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and enumeration of lactobacilli in saliva and indication of dental caries activity.

BCM

See: **Bacillus cereus Medium**

BCM *Bacillus cereus* Group Plating Medium

Composition per liter:

Proprietary

Source: This medium is available from Biosynth International, Inc.

Use: For detection of *Bacillus cereus* in food. The medium contains 5-bromo-4-chloro-3-indoxyl-myoinositol-1-phosphate as a chromogenic substrate, which changes from colorless to turquoise upon enzymatic cleavage. *B. cereus*, *B. mycoides*, *B. thuringiensis*, and *B. weihenstephanensis* secrete phosphatidylinositol phospholipase C and so grow as turquoise colonies with species-specific morphologies.

BCM O157:H7(+) Plating Medium

Composition per liter:

Proprietary

Source: This medium is available from Biosynth International, Inc.

Use: For detection of this highly pathogenic EHEC serovar BCM O157:H7(+).

BCP Azide Broth (Bromcresol Purple Azide Broth)

Composition per liter:

Casein peptone.....	10.0g
Yeast extract.....	10.0g
D-Glucose.....	5.0g
NaCl.....	5.0g
K ₂ HPO ₄	2.7g
KH ₂ PO ₄	2.7g
NaN ₃	0.5g
Bromcresol Purple.....	0.032g
pH 6.9 ± 0.2 at 25°C	

Caution: Sodium azide is toxic. Azides also react with metals and disposal must be highly diluted.

Preparation of Medium: Add components to distilled/deionized water to 1.0L. Mix thoroughly. Gently heat to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For use in the confirmation test for the presence of fecal streptococci in water and wastewater.

BCP Broth

See: **Bromcresol Purple Dextrose Broth**

BCP D Agar

(Bromcresol Purple Deoxycholate Agar)

Composition per liter:

Agar	25.0g
Lactose	10.0g
Sucrose	10.0g
Pancreatic digest of casein	7.5g
Thiopeptone	7.5g
NaCl	5.0g
Yeast extract	2.0g
Sodium citrate	2.0g
Sodium deoxycholate	1.0g
Bromcresol Purple	0.02g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Pour into sterile Petri dishes without sterilization. Do not autoclave. Use the same day.

Use: For the isolation, cultivation, and differentiation of Gram-negative enteric bacilli from clinical and nonclinical specimens. For the isolation, cultivation, and identification of microorganisms from fecal specimens. For the isolation and cultivation of *Salmonella*, *Shigella*, and other nonlactose- and nonsucrose-fermenting microorganisms. Nonlactose/nonsucrose fermenting microorganisms appear as colorless or blue colonies. Lactose/sucrose-fermenting microorganisms, such as coliform bacteria, appear as yellow-opaque white colonies surrounded by a zone of precipitated deoxycholate.

BCP DCLS Agar

(Bromcresol Purple Deoxycholate Citrate Lactose Sucrose Agar)

Composition per liter:

Agar	14.0g
Sodium citrate	10.0g
Lactose	7.5g
Sucrose	7.5g
Pancreatic digest of casein	7.5g
Peptone	7.5g
NaCl	5.0g
Na ₂ S ₂ O ₃ ·5H ₂ O	5.0g
Yeast extract	3.0g
Meat extract	3.0g
Sodium deoxycholate	2.5g
Bromcresol Purple	0.02g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Pour into sterile Petri dishes without sterilization. Do not autoclave. Use the same day.

Use: For the differential isolation of Gram-negative enteric bacilli from clinical and nonclinical specimens. For the isolation and identification of microorganisms from fecal specimens. For the isolation of *Salmonella*, *Shigella*, and other nonlactose- and nonsucrose-fermenting microorganisms. Nonlactose/nonsucrose-fermenting microorganisms appear as colorless or blue colonies. Lactose/sucrose-fermenting microorganisms, such as coliform bacteria, appear as yellow-opaque white colonies surrounded by a zone of precipitated deoxycholate.

BCP MS G Agar

See: **Bromcresol Purple Milk Solids Glucose Agar**

BCYE Agar with Cysteine

(BCYE Alpha Base)

(Buffered Charcoal Yeast Extract Agar)

Composition per liter:

Agar	15.0g
Yeast extract	10.0g
ACES buffer (2-[(2-amino-2-oxoethyl)-amino]-ethane sulfonic acid)	10.0g
Charcoal, activated	2.0g
α-Ketoglutarate	1.0g
L-Cysteine·HCl·H ₂ O	0.4g
Fe ₄ (P ₂ O ₇) ₃ ·9H ₂ O	0.25g
L-Cysteine solution	4.0mL

pH 6.9 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

L-Cysteine Solution:

Composition per 10.0mL:

L-cysteine·HCl·H ₂ O	0.4g
---------------------------------------	------

Preparation of L-Cysteine Solution: Add L-cysteine·HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except L-cysteine solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust medium to pH 6.9 with 1N KOH. Heat gently and bring to boil for 1 min. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 4.0mL of L-cysteine solution. Mix thoroughly. Pour into sterile Petri dishes with constant agitation to keep charcoal in suspension.

Use: For the isolation, cultivation, and maintenance of *Legionella pneumophila* and other *Legionella* species from environmental and clinical specimens.

BCYE Differential Agar

(Buffered Charcoal Yeast Extract Differential Agar)

Composition per liter:

Agar	15.0g
Yeast extract	10.0g
ACES buffer (2-[(2-amino-2-oxoethyl)-amino]-ethane sulfonic acid)	10.0g
Charcoal, activated	2.0g
α-Ketoglutarate	1.0g
L-Cysteine·HCl·H ₂ O	0.4g
Fe ₄ (P ₂ O ₇) ₃ ·9H ₂ O	0.25g

Bromocresol Purple	0.01g
Bromthymol Blue	0.01g
pH 6.9 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components, except L-cysteine-HCl·H₂O, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust medium to pH 6.9 with 1N KOH. Heat gently and bring to boiling for 1 min. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Add 4.0mL of a 10% solution of L-cysteine-HCl·H₂O that has been filter sterilized. Mix thoroughly. Pour into sterile Petri dishes with constant agitation to keep charcoal in suspension.

Use: For the isolation, cultivation, and maintenance of *Legionella pneumophila* and other *Legionella* species from environmental and clinical specimens. For the presumptive differential identification of *Legionella* species based on colony color and morphology. *Legionella pneumophila* appears as light blue/green colonies. *Legionella micdadei* appears as blue/gray or dark blue colonies.

BCYE Medium, Diphasic Blood Culture (Buffered Charcoal Yeast Extract Medium, Diphasic Blood Culture)

Composition per liter:

Agar phase	1.0L
Broth phase	1.0L
pH 6.9 ± 0.2 at 25°C	

Agar Phase:

Composition per liter:

Agar	20.0g
ACES buffer (2-[(2-amino-2-oxoethyl)- amino]-ethane sulfonic acid)	10.0g
Yeast extract	10.0g
Charcoal, activated, acid washed	4.0g
KOH	2.8g
α-Ketoglutarate	1.0g
L-Cysteine-HCl·H ₂ O solution	10.0mL
Fe ₄ (P ₂ O ₇) ₃ ·9H ₂ O solution	10.0mL

L-Cysteine-HCl·H₂O Solution:

Composition per 10.0mL:

L-Cysteine-HCl·H ₂ O	0.4g
---------------------------------------	------

Preparation of L-Cysteine-HCl·H₂O Solution: Add L-cysteine-HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Fe₄(P₂O₇)₃·9H₂O Solution:

Composition per 10.0mL:

Fe ₄ (P ₂ O ₇) ₃ ·9H ₂ O	0.25g
--	-------

Preparation of Fe₄(P₂O₇)₃·9H₂O Solution: Add Fe₄(P₂O₇)₃·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Agar Phase: Add components, except L-cysteine-HCl·H₂O solution and Fe₄(P₂O₇)₃ solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Adjust medium to pH 6.9 with 1N KOH. Heat gently and bring to boiling for 1 min. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add the L-cysteine-HCl·H₂O solution and Fe₄(P₂O₇)₃·9H₂O solution. Mix thoroughly.

Broth Phase:

Composition per liter:

ACES buffer (2-[(2-amino-2-oxoethyl)- amino]-ethane sulfonic acid)	10.0g
Yeast extract	10.0g
Charcoal, activated, acid washed	4.0g
KOH	2.4g
α-Ketoglutarate	1.0g
Sodium polyaneolsulfonate	0.3g
L-Cysteine-HCl·H ₂ O solution	10.0mL
Fe ₄ (P ₂ O ₇) ₃ ·9H ₂ O solution	10.0mL

L-Cysteine-HCl·H₂O Solution:

Composition per 10.0mL:

L-Cysteine-HCl·H ₂ O	0.4g
---------------------------------------	------

Preparation of L-Cysteine-HCl·H₂O Solution: Add L-cysteine-HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Fe₄(P₂O₇)₃·9H₂O Solution:

Composition per 10.0mL:

Fe ₄ (P ₂ O ₇) ₃ ·9H ₂ O	0.25g
--	-------

Preparation of Fe₄(P₂O₇)₃·9H₂O Solution: Add Fe₄(P₂O₇)₃·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Broth Phase: Add components, except L-cysteine-HCl·H₂O solution and Fe₄(P₂O₇)₃ solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Adjust medium to pH 6.9 with 1N KOH. Heat gently and bring to boiling for 1 min. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add the cysteine-HCl·H₂O solution and Fe₄(P₂O₇)₃·9H₂O solution. Mix thoroughly.

Preparation of Medium: Aseptically distribute cooled sterile agar phase into sterile blood culture bottles in 100.0mL volumes. Allow bottles to cool in a slanted position. Aseptically add 50.0mL of sterile broth phase to each blood culture bottle.

Use: For the isolation and cultivation of *Legionella pneumophila* and other *Legionella* species from blood samples.

BCYE Selective Agar with CCVC (Buffered Charcoal Yeast Extract Selective Agar with Cephalothin, Colistin, Vancomycin, and Cycloheximide)

Composition per 1014.0mL:

Agar	15.0g
Yeast extract	10.0g
ACES buffer (2-[(2-amino-2-oxoethyl)- amino]-ethane sulfonic acid)	10.0g
Charcoal, activated	2.0g
α-Ketoglutarate	1.0g
Fe ₄ (P ₂ O ₇) ₃ ·9H ₂ O	0.25g
Antibiotic solution	10.0mL
Cysteine-HCl·H ₂ O solution	4.0mL

pH 6.9 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

L-Cysteine-HCl·H₂O Solution:

Composition per 10.0mL:

L-Cysteine-HCl·H ₂ O	1.0g
---------------------------------------	------

Preparation of L-Cysteine-HCl-H₂O Solution: Add L-cysteine-HCl-H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Antibiotic Solution:

Composition per 10.0mL:

Cycloheximide	80.0mg
Colistin.....	16.0mg
Cephalothin.....	4.0mg
Vancomycin	0.5mg

Preparation of Antibiotic Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: Add components, except L-cysteine and antibiotic solutions, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust medium to pH 6.9 with 1N KOH. Heat gently and bring to boil for 1 min. Autoclave for 15 min at 15 psi pressure-121°C. Cool to 50°-55°C. Add 4.0mL of L-cysteine-HCl-H₂O solution and 10.0mL of sterile antibiotic solution. Mix thoroughly. Pour into sterile Petri dishes with constant agitation to keep charcoal in suspension.

Use: For the isolation, cultivation, and maintenance of *Legionella pneumophila* and other *Legionella* species from environmental and clinical specimens. For the selective recovery of *Legionella pneumophila* while reducing contaminating microorganisms from environmental water samples.

BCYE Selective Agar with GPVA

(Buffered Charcoal Yeast Extract Selective Agar with Glycine, Polymyxin B, Vancomycin, and Anisomycin)

Composition per 1014.0mL:

Agar	15.0g
Yeast extract.....	10.0g
ACES buffer (2-[(2-amino-2-oxoethyl)-amino]-ethane sulfonic acid).....	10.0g
Charcoal, activated.....	2.0g
α-Ketoglutarate.....	1.0g
Fe ₄ (P ₂ O ₇) ₃ ·9H ₂ O.....	0.25g
Antibiotic solution	10.0mL
L-Cysteine-HCl-H ₂ O solution	4.0mL
pH 6.9 ± 0.2 at 25°C	

L-Cysteine-HCl-H₂O Solution:

Composition per 10.0mL:

L-Cysteine-HCl-H ₂ O.....	1.0g
--------------------------------------	------

Preparation of L-Cysteine-HCl-H₂O Solution: Add L-cysteine-HCl-H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Antibiotic Solution:

Composition per 10.0mL:

Glycine.....	3.0g
Anisomycin	0.08g
Vancomycin	5.0mg
Polymyxin B	100,000U

Preparation of Antibiotic Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except L-cysteine-HCl-H₂O solution and antibiotic solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust medium to pH 6.9 with 1N KOH. Heat gently and bring to boil for 1 min. Autoclave for 15 min at 15 psi pressure-121°C. Cool to 50°-55°C. Add 4.0mL of L-cysteine-HCl-H₂O solution and 10.0mL of sterile antibiotic solution. Mix thoroughly. Pour into sterile Petri dishes with constant agitation to keep charcoal in suspension.

Use: For the isolation, cultivation, and maintenance of *Legionella pneumophila* and other *Legionella* species from environmental and clinical specimens. For the selective recovery of *Legionella pneumophila* while reducing contaminating microorganisms from potable water samples.

BCYE Selective Agar with GVPC

(Buffered Charcoal Yeast Extract Selective Agar with Glycine, Vancomycin, Polymyxin B, and Cycloheximide)

Composition per 1014.0mL:

Agar	15.0g
Yeast extract.....	10.0g
ACES buffer (2-[(2-amino-2-oxoethyl)-amino]-ethane sulfonic acid).....	10.0g
Charcoal, activated	2.0g
α-Ketoglutarate.....	1.0g
Fe ₄ (P ₂ O ₇) ₃ ·9H ₂ O.....	0.25g
Antibiotic solution	10.0mL
L-Cysteine-HCl-H ₂ O solution	4.0mL
pH 6.9 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Oxoid Unipath.

L-Cysteine-HCl-H₂O Solution:

Composition per 10.0mL:

L-Cysteine-HCl-H ₂ O	1.0g
---------------------------------------	------

Preparation of L-Cysteine-HCl-H₂O Solution: Add L-cysteine-HCl-H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Antibiotic Solution:

Composition per 10.0mL:

Glycine.....	3.0g
Cycloheximide.....	0.08g
Vancomycin	1.0mg
Polymyxin B	79,200U

Preparation of Antibiotic Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: Add components, except L-cysteine-HCl-H₂O solution and antibiotic solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust medium to pH 6.9 with 1N KOH. Heat gently and bring to boil for 1 min. Autoclave for 15 min at 15 psi pressure-121°C. Cool to 50°-55°C. Add 4.0mL of L-cysteine-HCl-H₂O solution and 10.0mL of sterile antibiotic solution. Mix thoroughly. Pour into sterile Petri dishes with constant agitation to keep charcoal in suspension.

Use: For the isolation, cultivation, and maintenance of *Legionella pneumophila* and other *Legionella* species from environmental and clinical specimens. For the selective recovery of *Legionella pneumo-*

phila while reducing contaminating microorganisms from potable water samples.

BCYE Selective Agar with PAC

(Buffered Charcoal Yeast Extract Selective Agar with Polymyxin B, Anisomycin, and Cefamandole)

Composition per 1014.0mL:

Agar	15.0g
Yeast extract	10.0g
ACES buffer (2-[(2-amino-2-oxoethyl)-amino]-ethane sulfonic acid)	10.0g
Charcoal, activated	2.0g
α -Ketoglutarate	1.0g
$\text{Fe}_4(\text{P}_2\text{O}_7)_3 \cdot 9\text{H}_2\text{O}$	0.25g
Antibiotic solution	10.0mL
L-Cysteine-HCl-H ₂ O solution	4.0mL
pH 6.9 \pm 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

L-Cysteine-HCl-H₂O Solution:

Composition per 10.0mL:

L-Cysteine-HCl-H ₂ O	1.0g
---------------------------------------	------

Preparation of L-Cysteine-HCl-H₂O Solution: Add L-cysteine-HCl-H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Antibiotic Solution:

Composition per 10.0mL:

Polymyxin B	80,000 U
Anisomycin	80.0mg
Cefamandole	2.0mg

Preparation of Antibiotic Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except L-cysteine-HCl-H₂O solution and antibiotic solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust medium to pH 6.9 with 1N KOH. Heat gently and bring to boiling for 1 min. Autoclave for 15 min at 15 psi pressure-121°C. Cool to 50°-55°C. Add 4.0mL of L-cysteine-HCl-H₂O solution and 10.0mL of sterile antibiotic solution. Mix thoroughly. Pour into sterile Petri dishes with constant agitation to keep charcoal in suspension.

Use: For the isolation, cultivation, and maintenance of *Legionella pneumophila* and other *Legionella* species from environmental and clinical specimens. For the selective recovery of *Legionella pneumophila* while reducing contaminating microorganisms from potable water samples.

BCYE Selective Agar with PAV

(Buffered Charcoal Yeast Extract Selective Agar with Polymyxin B, Anisomycin, and Vancomycin) (Wadowsky-Yee Medium)

Composition per 1014.0mL:

Agar	15.0g
Yeast extract	10.0g
ACES buffer (2-[(2-amino-2-oxoethyl)-amino]-ethane sulfonic acid)	10.0g
Charcoal, activated	2.0g
α -Ketoglutarate	1.0g

$\text{Fe}_4(\text{P}_2\text{O}_7)_3 \cdot 9\text{H}_2\text{O}$	0.25g
Antibiotic solution	10.0mL
L-Cysteine-HCl-H ₂ O solution	4.0mL
pH 6.9 \pm 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

L-Cysteine-HCl-H₂O Solution:

Composition per 10.0mL:

L-Cysteine-HCl-H ₂ O	1.0g
---------------------------------------	------

Preparation of L-Cysteine-HCl-H₂O Solution: Add L-cysteine-HCl-H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Antibiotic Solution:

Composition per 10.0mL:

Anisomycin	80.0mg
Vancomycin	0.5mg
Polymyxin B	40,000 U

Preparation of Antibiotic Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except L-cysteine and antibiotic solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust medium to pH 6.9 with 1N KOH. Heat gently and bring to boil for 1 min. Autoclave for 15 min at 15 psi pressure-121°C. Cool to 50°-55°C. Add 4.0mL of L-cysteine-HCl-H₂O solution and 10.0mL of sterile antibiotic solution. Mix thoroughly. Pour into sterile Petri dishes with constant agitation to keep charcoal in suspension.

Use: For the isolation, cultivation, and maintenance of *Legionella pneumophila* and other *Legionella* species from environmental and clinical specimens. For the selective recovery of *Legionella pneumophila* while reducing contaminating microorganisms from potable water samples.

BCYE α Agar, Modified

See: *Legionella* Agar Base

BCYE α with Alb

(Buffered Charcoal Yeast Extract Agar with Albumin)

Composition per liter:

Agar	15.0g
Yeast extract	10.0g
ACES buffer (2-[(2-amino-2-oxoethyl)-amino]-ethane sulfonic acid)	10.0g
Charcoal, activated	2.0g
α -Ketoglutarate	1.0g
Bovine serum albumin solution	10.0mL
L-Cysteine-HCl-H ₂ O solution	10.0mL
$\text{Fe}_4(\text{P}_2\text{O}_7)_3 \cdot 9\text{H}_2\text{O}$ solution	10.0mL
pH 6.9 \pm 0.2 at 25°C	

Bovine Serum Albumin Solution:

Composition per 10.0mL:

Bovine serum albumin	0.1g
----------------------------	------

Preparation of Bovine Serum Albumin Solution: Add bovine serum albumin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

L-Cysteine·HCl·H₂O Solution:**Composition** per 10.0mL:L-Cysteine·HCl·H₂O 0.4g

Preparation of L-Cysteine·HCl·H₂O Solution: Add L-cysteine·HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Fe₄(P₂O₇)₃·9H₂O Solution:**Composition** per 10.0mL:Fe₄(P₂O₇)₃·9H₂O 0.25g

Preparation of Fe₄(P₂O₇)₃·9H₂O Solution: Add Fe₄(P₂O₇)₃·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components—except Fe₄(P₂O₇)₃·9H₂O solution, L-cysteine·HCl·H₂O solution, and bovine serum albumin solution—to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Adjust medium to pH 6.9 with 1N KOH. Heat gently and bring to boiling for 1 min. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 10.0mL of sterile bovine serum albumin solution, the Fe₄(P₂O₇)₃·9H₂O solution, and the L-cysteine·HCl·H₂O solution. Mix thoroughly. Pour into sterile Petri dishes with constant agitation to keep charcoal in suspension.

Use: For the isolation, cultivation, and maintenance of *Legionella pneumophila* and other *Legionella* species from environmental and clinical specimens.

**BCYE α without L-Cysteine
(Buffered Charcoal Yeast Extract Agar
without L-Cysteine)**

Composition per liter:

Agar 15.0g

Yeast extract 10.0g

ACES buffer (2-[(2-amino-2-oxoethyl)-
amino]-ethane sulfonic acid) 10.0g

Charcoal, activated 2.0g

 α -Ketoglutarate 1.0gFe₄(P₂O₇)₃·9H₂O solution 10.0mLpH 6.9 \pm 0.2 at 25°C**Fe₄(P₂O₇)₃·9H₂O Solution:****Composition** per 10.0mL:Fe₄(P₂O₇)₃·9H₂O 0.25g

Preparation of Fe₄(P₂O₇)₃·9H₂O Solution: Add Fe₄(P₂O₇)₃·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except Fe₄(P₂O₇)₃·9H₂O solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Adjust medium to pH 6.9 with 1N KOH. Heat gently and bring to boiling for 1 min. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 10.0mL of sterile Fe₄(P₂O₇)₃·9H₂O solution. Mix thoroughly. Pour into sterile Petri dishes with constant agitation to keep charcoal in suspension.

Use: For the isolation, cultivation, and maintenance of *Legionella pneumophila* and other *Legionella* species from environmental and clinical specimens.

BCYTSee: *Methanosarcina* Medium**Bdellovibrio Medium****Composition** per Petri dish:

Base layer agar 10.0mL

Semisolid agar 10.0mL

Host medium 1.0mL

Host Medium:**Composition** per liter:

Yeast extract 3.0g

Peptone 0.6g

Preparation of Host Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Distribute into tubes in 10.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Base Layer Agar:**Composition** per liter:

Agar 19.0g

Yeast extract 3.0g

Peptone 0.6g

Preparation of Base Layer Agar: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.2. Distribute into tubes in 10.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Semisolid Agar:**Composition** per liter:

Agar 6.0g

Yeast extract 3.0g

Peptone 0.6g

Preparation of Semisolid Agar: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.2. Distribute into tubes in 10.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Inoculate appropriate bacterial host into 10.0mL of host medium. Hosts include *Erwinia amylovora*, *Escherichia coli*, *Serratia marcescens*, or *Pseudomonas putida*. Incubate host culture for 24–48 hr at 30°C. Melt the base layer agar and semisolid agar. Pour the base layer agar into a sterile Petri dish. Allow base layer agar to solidify. Cool the semisolid agar to 40°–45°C. Add 1.0mL of the previously grown host culture. Mix thoroughly. Pour over the solidified base layer agar.

Use: For the cultivation of *Bdellovibrio bacteriovorus* and *Bdellovibrio starrii*.

B.D.G. Broth, Hajna**Composition** per liter:

Tryptose 20.0g

Glucose 5.0g

NaCl 5.0g

K₂HPO₄ 4.0gKH₂PO₄ 1.5g

Sodium deoxycholate 0.1g

pH 7.0 \pm 0.2 at 25°C

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes with inverted Durham tubes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the selective enrichment and cultivation of enteric bacilli from food and in treated drinking water.

Bean Agar

Composition per liter:

Dry white beans	250.0g
Agar	20.0g

Preparation of Medium: Soak beans in 500.0mL of distilled/deionized water for 12 hr. Autoclave for 20 min at 15 psi pressure–121°C. Filter broth through cotton. Bring volume of filtrate to 1.0L with distilled/deionized water. Add 20.0g of agar to the filtrate. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Arthroderma melis* and *Rhynchospirium secalis*.

Beef Extract Agar

Composition per liter:

Agar	15.0g
Peptone.....	5.0g
Beef extract.....	3.0g

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Heat gently and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of a wide variety of microorganisms. Recommended for the culture of microorganisms from milk and water.

Beef Extract Agar (ATCC Medium 225)

Composition per liter:

Agar	25.0g
Beef extract	10.0g
Peptone.....	10.0g
NaCl.....	5.0g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Heat gently and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of a wide variety of microorganisms, including *Alcaligenes* species, *Pseudomonas aeruginosa*, and *Bacillus sphaericus*.

Beef Extract Agar, HiVeg

Composition per liter:

Agar	15.0g
Plant peptone.....	10.0g
NaCl.....	5.0g
Plant extract	3.0g

pH 7.6 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Heat gently and bring

to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of a wide variety of microorganisms, including *Alcaligenes* species, *Pseudomonas aeruginosa*, and *Bacillus sphaericus*.

Beef Extract Broth

Composition per liter:

Peptone	5.0g
Beef extract.....	3.0g

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Heat gently and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of a wide variety of microorganisms. Recommended for the culture of microorganisms from milk and water.

Beef Extract Broth (ATCC Medium 225)

Composition per liter:

Beef extract.....	10.0g
Peptone	10.0g
NaCl.....	5.0g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Heat gently and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of a wide variety of microorganisms, including *Alcaligenes* species, *Pseudomonas aeruginosa*, and *Bacillus sphaericus*.

Beef Extract Broth, HiVeg

Composition per liter:

Plant peptone	10.0g
NaCl.....	5.0g
Plant extract	3.0g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Heat gently and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of a wide variety of microorganisms. Recommended for the culture of microorganisms from milk and water.

Beef Extract Peptone Serum Medium

Composition per liter:

Agar	25.0g
Beef extract.....	10.0g
Peptone	10.0g
NaCl.....	1.0g
Bovine serum.....	50.0mL

pH 8.5 ± 0.2 at 25°C

Preparation of Medium: Add components, except bovine serum, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Adjust pH to 8.5. Heat gently and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 50.0mL of sterile bovine serum. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Serratia marcescens*.

Beef Extract V

Composition per liter:

Beef extract 24.0g
pH 9.0 at 25°C

Preparation of Medium: Add component to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 9.0 with NaOH. Autoclave for 15 min at 15 psi pressure—118°–121°C.

Use: For use in the elution of viruses that have been adsorbed onto filters during the filtration of water and wastewater samples.

Beef Extract with Sodium Chloride

Composition per liter:

Beef extract 10.0g
NaCl 5.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Bacillus megaterium*.

Beef Infusion Agar

Composition per liter:

Ground defatted beef 453.6g
Agar 20.0g
Peptone 10.0g
NaCl 5.0g
pH 7.6 ± 0.2 at 25°C

Preparation of Medium: Add ground beef to 1.0L of distilled/deionized water. Let stand overnight at 4°C. Gently heat and bring to 80°–90°C for 60 min. Let stand for 2 hr. Filter through muslin. To filtrate, add peptone and salt. Mix thoroughly. Adjust pH to 7.6 with 4% NaOH. Filter through Whatman #1 filter paper. Bring volume of filtrate to 1.0L. Add agar. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of a variety of microorganisms.

Beef Infusion Broth

Composition per liter:

Ground beef, defatted 453.6g
Peptone 10.0g
NaCl 5.0g
pH 7.6 ± 0.2 at 25°C

Preparation of Medium: Add ground beef to 1.0L of distilled/deionized water. Let stand overnight at 4°C. Gently heat and bring to 80°–90°C for 60 min. Let stand for 2 hr. Filter through muslin. To filtrate add peptone and salt. Mix thoroughly. Adjust pH to 7.6 with 4% NaOH. Filter through Whatman #1 filter paper. Bring volume of filtrate to 1.0L. Add agar. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of a variety of microorganisms.

Beef Liver Medium for Anaerobes

Composition per liter:

Beef liver, minced 500.0g
Peptone 10.0g
K₂HPO₄ 1.0g
pH 8.0 ± 0.2 at 25°C

Preparation of Medium: Add beef liver to 1.0L of tap water. Soak for 12–24 hr at 4°C. Skim fat off top. Autoclave for 10 min at 15 psi pressure–121°C. Filter through cheesecloth. Save meat. To filtrate, add peptone and K₂HPO₄. Adjust pH to 8.0. Filter through paper. Add tap water and bring volume to 1.0L. Add a small amount of CaCO₃ to a flask or test tube. Add 0.5 inch of reserved liver. Cover meat with 2 inches of broth. Cap tubes and autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of a variety of *Clostridium* species.

Beggiatoa Agar

Composition per 1010.0mL:

Agar 10.0g
Sodium acetate 0.5g
Pancreatic digest of gelatin 0.31g
Beef extract 0.19g
NH₄Cl 0.45mg
MgSO₄·7H₂O 0.2mg
K₂HPO₄ 0.1mg
CaSO₄ (saturated solution) 20.0mL
Catalase solution 10.0mL
Trace elements solution 5.0mL
pH 7.4 ± 0.2 at 25°C

Catalase Solution:

Composition per 10.0mL:

Catalase 15,000–35,000U

Preparation of Catalase Solution: Add catalase to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Trace Elements Solution:

Composition per liter:

FeSO₄·7H₂O 0.7g
EDTA 0.2g
ZnSO₄·7H₂O 0.01g
MnSO₄·4H₂O 0.002g
H₃BO₃ 10.0mg
CO(NO₃)₂ 1.0mg
Na₂MoO₄·2H₂O 1.0mg
CuSO₄·5H₂O 5.0μg

Preparation of Trace Elements Solution: Add FeSO₄·7H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly.

Preparation of Medium: Add components, except catalase solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.4. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL of sterile catalase solution (freshly prepared). Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Beggiatoa alba*.

Beggiatoa and Thiothrix Medium**Composition per liter:**

CaSO ₄ ·2H ₂ O (saturated solution)	20.0mL
NH ₄ Cl (4% solution)	5.0mL
Trace elements	5.0mL
K ₂ HPO ₄ (1% solution)	1.0mL
MgSO ₄ ·7H ₂ O (1% solution)	1.0mL

Trace Elements:**Composition per liter:**

EDTA solution	20.0mL
Co(NO ₃) ₂ (0.01% solution)	10.0mL
CuSO ₄ ·5H ₂ O (0.00005% solution)	10.0mL
H ₃ BO ₃ (0.1% solution)	10.0mL
MnSO ₄ ·4H ₂ O (0.02% solution)	10.0mL
Na ₂ MoO ₄ ·2H ₂ O (0.01% solution)	10.0mL
ZnSO ₄ ·7H ₂ O (0.1% solution)	10.0mL

Preparation of Trace Elements: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

EDTA Solution:**Composition per 100.0mL:**

FeSO ₄	7.0g
EDTA	2.0g
HCl, concentrated	1.0mL

Preparation of EDTA Solution: Add EDTA and FeSO₄ to concentrated HCl. Mix thoroughly. Carefully add to distilled/deionized water and bring volume to 100.0mL.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Beggiatoa* species and myxotrophic *Thiothrix* species.

Beggiatoa Broth**Composition per 1010.0mL:**

Sodium acetate	0.5g
Pancreatic digest of gelatin	0.31g
Beef extract	0.19g
NH ₄ Cl	0.45mg
MgSO ₄ ·7H ₂ O	0.2mg
K ₂ HPO ₄	0.1mg
CaSO ₄ (saturated solution)	20.0mL
Catalase solution	10.0mL
Trace elements solution	5.0mL

pH 7.4 ± 0.2 at 25°C

Catalase Solution:**Composition per 10.0mL:**

Catalase	15,000–35,000U
----------	----------------

Preparation of Catalase Solution: Add catalase to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Trace Elements Solution:**Composition per liter:**

FeSO ₄ ·7H ₂ O	0.7g
EDTA	0.2g
ZnSO ₄ ·7H ₂ O	0.01g
MnSO ₄ ·4H ₂ O	0.002g
H ₃ BO ₃	10.0mg

CO(NO ₃) ₂	1.0mg
Na ₂ MoO ₄ ·2H ₂ O	1.0mg
CuSO ₄ ·5H ₂ O	5.0μg

Preparation of Trace Elements Solution: Add FeSO₄·7H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly.

Preparation of Medium: Add components, except catalase solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.4. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL of sterile catalase solution (freshly prepared). Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Beggiatoa alba*.

***Beggiatoa Medium*
(ATCC Medium 138)****Composition per liter:**

Yeast extract	2.0g
Agar	2.0g
Sodium acetate	0.5g
CaCl ₂	0.1g
Catalase	10,000U

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components, except catalase, to tap water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10,000 units of sterile catalase.

Use: For the cultivation and maintenance of *Beggiatoa alba* and *Vitreoscilla* species.

***Beggiatoa Medium*
(ATCC Medium 1193)****Composition per liter:**

Sodium sulfide	0.5g
Sodium acetate	0.01g
Yeast extract	0.01g
Nutrient broth	0.01g

pH 7.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Distribute into tubes or flasks.

Use: For the cultivation of *Beggiatoa alba*.

Beijerinckia Agar**Composition per liter:**

Agar	15.0g
K ₂ HPO ₄	0.8g
KH ₂ PO ₄	0.2g
MgSO ₄ ·7H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	20.0mg
Na ₂ MoO ₄ ·2H ₂ O	5.0mg
ZnSO ₄ ·6H ₂ O	5.0mg
CuSO ₄ ·6H ₂ O	4.0mg
MnSO ₄ ·6H ₂ O	2.0mg
Glucose solution	50.0mL

pH 6.5 ± 0.2 at 25°C

Glucose Solution:**Composition per 50.0mL:**

D-Glucose 10.0g

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except glucose solution, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL of sterile glucose solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes

Use: For the cultivation and maintenance of *Beijerinckia dextrii*, *Beijerinckia fluminensis*, *Beijerinckia indica*, *Beijerinckia mobilis*, *Beijerinckia* species, and *Clostridium barkeri*.

Beijerinckia Medium**Composition per liter:**

Glucose 20.0g
 KH₂PO₄ 1.0g
 MgSO₄·7H₂O 0.5g

pH 5.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Beijerinckia* species.

Beijerinckia Medium**Composition per liter:**

Glucose 20.0g
 K₂HPO₄ 0.8g
 MgSO₄·7H₂O 0.5g
 KH₂PO₄ 0.2g
 CaCl₂ 0.05g
 FeCl₃·6H₂O 0.025g
 Na₂MoO₄·2H₂O 5.0mg

pH 6.9 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation and cultivation of *Beijerinckia* species.

Beijerinckia Medium**Composition per liter:**

Sucrose 20.0g
 Agar 15.0g
 KH₂PO₄ 0.8g
 MgSO₄·7H₂O 0.5g
 K₂HPO₄ 0.2g
 FeCl₃·6H₂O 0.1g
 Na₂MoO₄·2H₂O 5.0mg

pH 6.5 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation and cultivation of *Beijerinckia* species.

Beijerinckia Medium, Modified**Composition per liter:**

Agar 15.0g
 Glucose 10.0g
 K₂HPO₄ 0.8g
 KH₂PO₄ 0.2g
 MgSO₄·7H₂O 0.1g
 FeSO₄·7H₂O 20.0mg
 MnSO₄·H₂O 1.3mg
 ZnSO₄·7H₂O 5.0mg
 CuSO₄·5H₂O 4.0mg
 Na₂MoO₄·2H₂O 5.0mg

pH 6.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of *Beijerinckia dextrii*, *Beijerinckia fluminensis*, *Beijerinckia indica*, and *Beijerinckia mobilis*.

Beijerinck's Thiobacillus Medium**Composition per liter:**

Noble agar 20.0g
 Na₂HPO₄ 0.2g
 MgCl₂ 0.1g
 NH₄Cl 0.1g
 Na₂S₂O₃ solution 100.0mL
 NaHCO₃ solution 10.0mL

pH 7.0–7.2 at 25°C

Na₂S₂O₃ Solution:**Composition per 100.0mL:**

Na₂S₂O₃ 5.0g

Preparation of Na₂S₂O₃ Solution: Add Na₂S₂O₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

NaHCO₃ Solution:**Composition per 10.0mL:**

NaHCO₃ 1.0g

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except Na₂S₂O₃ solution and NaHCO₃ solution, to distilled/deionized water and bring volume to 890.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 100.0mL of sterile Na₂S₂O₃ solution and 10.0mL of sterile NaHCO₃ solution. Mix thoroughly. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Thiobacillus thermophilica*.

Bennett's Agar**Composition per liter:**

Agar 15.0g
 Glucose 10.0g
 N-Z amine, type A 2.0g
 Beef extract 1.0g
 Yeast extract 1.0g

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.3. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Actinomadura umbrina*, *Micromonospora purpurea*, *Microtetrastora helvata*, *Nocardia salmonicolor*, and *Streptomyces* species.

Bennett's Agar with Maltose

Composition per liter:

Agar	15.0g
Maltose, technical	10.0g
N-Z amine, type A	2.0g
Beef extract	1.0g
Yeast extract	1.0g

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.3. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Streptomyces* species.

Bennett's Agar with Sucrose

Composition per liter:

Agar	15.0g
Sucrose	10.0g
N-Z amine, type A	2.0g
Beef extract	1.0g
Yeast extract	1.0g

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.3. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Actinomadura madurae*, *Excellorspora viridilutea*, *Geodermatophilus obscurus*, *Intrasporangium calvum*, *Kibdelosporangium aridum*, *Microbispora thermodia-statica*, *Micromonospora coerulea*, *Micromonospora echinospora*, *Micromonospora purpureochromogenes*, *Micromonospora rosaria*, *Microtetrastora flexuosa*, *Promicromonospora enterophila*, *Saccharomonospora glauca*, *Streptomyces cacaoi*, *Thermoactinomyces dichotomicus*, *Thermoactinomyces glaucus*, and *Thermomonospora chromogena*.

Bennet's HiVeg Agar

Composition per liter:

Agar	15.0g
Glucose	10.0g
Plant hydrolysate	2.0g
Plant extract	1.0g
Yeast extract	1.0g

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.3. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 10 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Actinomadura umbrina*, *Micromonospora purpurea*, *Microtetrastora helvata*, *Nocardia salmonicolor*, and *Streptomyces* species.

Bennett's Medium

Composition per liter:

Agar	15.0g
Glucose	10.0g
Pancreatic digest of casein	2.0g
Yeast extract	1.0g
Beef extract	1.0g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Heat gently to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of a variety of soil microorganisms, such as *Streptomyces* species, *Nocardia* species, *Flexibacter* species, *Micromonospora* species, and others.

Bennett's Modified Agar Medium

Composition per liter:

Meer agar (washed agar)	20.0g
Dextrin	10.0g
Pancreatic digest of casein	2.0g
Yeast extract	1.0g
Beef extract	1.0g
CoCl ₂ ·6H ₂ O	0.01g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Heat gently to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Streptomyces* species.

Benzene Sulfonate Medium

Composition per liter:

Agar	15.0g
Sodium benzene sulfonate	1.0g
(NH ₄) ₂ SO ₄	1.0g
K ₂ HPO ₄	0.7g
KH ₂ PO ₄	0.3g
MgSO ₄ ·7H ₂ O	0.2g
CaCl ₂	10.0mg
FeSO ₄ ·7H ₂ O	5.0mg
ZnSO ₄ ·7H ₂ O	70.0μg
CuSO ₄	50.0μg
H ₃ BO ₃	10.0μg
MoO ₃ ·2H ₂ O	10.0μg
MnSO ₄ ·5H ₂ O	2.0μg

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Heat gently to boil-

ing. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Comamonas testosteroni*.

Benzoate Medium

Composition per liter:

Noble agar.....	20.0g
NaCl.....	5.0g
(NH ₄) ₂ HPO ₄	3.0g
Sodium benzoate.....	3.0g
KH ₂ PO ₄	1.2g
Yeast extract.....	0.5g
MgSO ₄ ·7H ₂ O.....	0.2g
Benzoate solution.....	25.0mL

Benzoate Solution:

Composition per 25.0mL:

Sodium benzoate.....	3.0g
----------------------	------

Preparation of Benzoate Solution: Add sodium benzoate to distilled/deionized water and bring volume to 25.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components except benzoate solution to distilled/deionized water and bring volume to 975.0mL. Mix thoroughly. Heat gently to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 25.0mL sterile benzoate solution. Mix thoroughly and pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Pseudomonas putida* and other microorganisms which can utilize benzoate as a carbon source.

Benzoate Medium II

Composition per 1.5L:

Noble agar.....	30.0g
(NH ₄) ₂ HPO ₄	3.0g
NaCl.....	1.67g
KH ₂ PO ₄	1.2g
Yeast extract.....	0.5g
MgSO ₄ ·7H ₂ O.....	0.2g
FeSO ₄ ·7H ₂ O.....	0.1g
Benzoate solution.....	25.0mL

Benzoate Solution:

Composition per 25.0mL:

Sodium benzoate.....	1.0g
----------------------	------

Preparation of Benzoate Solution: Add sodium benzoate to distilled/deionized water and bring volume to 25.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except agar and sodium benzoate, to distilled/deionized water and bring volume to 600.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. In a separate flask, add agar to distilled/deionized water and bring volume to 375.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically combine the two autoclave-sterilized solutions. Mix thoroughly. Aseptically add the sterile benzoate solution. Mix thoroughly. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Pseudomonas putida* and other microorganisms that can utilize benzoate as a carbon source.

Benzoate Minimal Salts Medium

Composition per liter:

K ₂ HPO ₄	10.0g
NaNH ₄ HPO ₄ ·4H ₂ O.....	3.5g
MgSO ₄ ·7H ₂ O.....	0.2g
Citric acid, anhydrous.....	0.2g
Benzoate solution.....	25.0mL

pH 7.0 ± 0.2 at 25°C

Benzoate Solution:

Composition per 25.0mL:

Sodium benzoate.....	2.5g
----------------------	------

Preparation of Benzoate Solution: Add sodium benzoate to distilled/deionized water and bring volume to 25.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 975.0mL. Mix thoroughly. Adjust pH to 7.0. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°C. Aseptically add 25.0mL of sterile benzoate solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of microorganisms that can utilize benzoate as a carbon source.

Benzoate Nitrate Salts Medium (BNS)

Composition per liter:

Solution A.....	700.0mL
Solution B.....	300.0mL

pH 8.2 ± 0.2 at 25°C

Solution A:

Composition per 700.0mL:

KNO ₃	2.0g
Sodium benzoate.....	1.0g
NH ₄ Cl.....	0.3g
Phosphate buffer solution.....	200.0mL

Phosphate Buffer Solution:

Composition per 200.0mL:

K ₂ HPO ₄	5.12g
KH ₂ PO ₄	1.5g

Preparation of Phosphate Buffer: Add components to distilled/deionized water and bring volume to 200.0mL. Mix thoroughly. Adjust pH to 9.0 with KOH.

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 700.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Solution B:

Composition per 300.0mL:

MgSO ₄ ·7H ₂ O.....	0.2g
CaCl ₂	10.0mg
Trace metals solution.....	1.0mL

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 300.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Trace Metals Solution:

Composition per 300.0mL:

MnSO ₄ ·H ₂ O.....	50.0mg
ZnSO ₄ ·7H ₂ O.....	50.0mg
Co(NO ₃) ₂ ·6H ₂ O.....	10.0mg

CuSO ₄	10.0mg
Na ₂ B ₄ O ₇ ·10H ₂ O	10.0mg
Na ₂ MoO ₄ ·2H ₂ O	0.2mg
Ferric EDTA solution	10.0mL

Preparation of Trace Metals Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Ferric EDTA Solution:

Composition per 550.0mL:

EDTA	17.9g
FeSO ₄ ·7H ₂ O	13.7g
KOH	3.23g

Preparation of Ferric EDTA Solution: Add EDTA and KOH to distilled/deionized water and bring volume to 186.0mL. Mix thoroughly. In a separate flask, add FeSO₄·7H₂O to distilled/deionized water and bring volume to 364.0mL. Mix thoroughly. Combine the two solutions. Sparge with air overnight to oxidize the Fe²⁺ to Fe³⁺. Store in the dark.

Preparation of Medium: Aseptically combine 700.0mL of sterile solution A with 300.0mL of sterile solution B. Adjust pH to 8.2. Aseptically distribute into sterile screw-capped tubes. Fill tubes completely.

Use: For the cultivation of *Alcaligenes xylosoxydans*.

Betabacterium Medium

Composition per liter:

Pancreatic digest of casein	10.0g
Agar	10.0g
Yeast extract	5.0g
Glucose	5.0g
K ₂ HPO ₄	2.0g
Liver extract	100.0mL

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add 1 pound of finely ground beef liver to 2.0L of distilled/deionized water. Autoclave for 2.5–3 hr at 15 psi pressure–121°C under flowing steam. The liquid should become fluorescent yellow. Filter through sterile cheesecloth. Save solids and dry at 50°C. Add a few pieces of the dried liver to sterile test tubes or flasks. Prepare basal medium by adding components to distilled/deionized water and bring volume to 1.0L. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add sterile basal medium to each test tube or flask containing liver. Commercial liver extract may be used at a concentration of 0.1%.

Use: For the growth and maintenance of *Lactobacillus* species. *Betabacterium* is an archaic name that was used to describe several bacteria as a subgenus of the *Lactobacillus* group.

BG Sulfa Agar

(Brilliant Green Sulfapyridine Agar)

Composition per liter:

Agar	20.0g
Proteose peptone No. 3	10.0g
Lactose	10.0g
Sucrose	10.0g
NaCl	5.0g
Yeast extract	3.0g
Sodium sulfapyridine	1.0g
Brilliant Green	0.125g

pH 6.9 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Heat gently to boiling. Distribute into tubes or flasks. Autoclave for no longer than 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes if desired.

Use: For the selective isolation of *Salmonella* species other than *Salmonella typhi* from food, dairy products, eggs and egg products, and feed. *Salmonella* appear as red, pink, or white colonies surrounded by zones of bright red.

BG Sulfa HiVeg Agar

(Brilliant Green Sulfa HiVeg Agar)

Composition per liter:

Agar	20.0g
Plant peptone No. 3	10.0g
Lactose	10.0g
Sucrose	10.0g
NaCl	5.0g
Yeast extract	3.0g
Sodium sulphapyridine	1.0g
Phenol Red	0.08g
Brilliant Green	12.5mg

pH 6.9 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Heat gently to boiling. Distribute into tubes or flasks. Autoclave for no longer than 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes if desired.

Use: For the selective isolation of *Salmonella* species other than *Salmonella typhi* from food, dairy products, eggs and egg products, and feed. *Salmonella* appear as red, pink, or white colonies surrounded by zones of bright red.

BG 11 Agar

(Medium BG 11 for Cyanobacteria)

Composition per liter:

Agar	10.0g
NaNO ₃	1.5g
MgSO ₄ ·7H ₂ O	0.075g
K ₂ HPO ₄	0.04g
CaCl ₂ ·2H ₂ O	0.036g
Na ₂ CO ₃	0.02g
Citric acid	6.0mg
Ferric ammonium citrate	6.0mg
Disodium EDTA	1.0mg
Trace metal mix A5	1.0mL

pH 7.1 ± 0.2 at 25°C

Trace Metal Mix A5:

Composition per liter:

H ₃ BO ₃	2.86g
MnCl ₂ ·4H ₂ O	1.81g
Na ₂ MoO ₄ ·2H ₂ O	0.39g
ZnSO ₄ ·7H ₂ O	0.222g
CuSO ₄ ·5H ₂ O	0.079g
Co(NO ₃) ₂ ·6H ₂ O	0.049g

Preparation of Trace Metal Mix A5: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Heat gently to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. For solid medium, pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of a variety of cyanobacteria, including *Anabaena* species, *Calothrix* species, *Chaemisiphon* species, *Chorogloeopsis* species, *Chroococciopsis* species, *Cylindrospermum* species, *Dermocarpa* species, *Fischerella* species, *Gloeobacter* species, *Gloeocapsa* species, *Gloeotheca* species, *Nostoc* species, *Oscillatoria* species, *Phormidium* species, *Pleurocapsa* species, *Pseudanabaena* species, *Scytonema* species, *Spirulina* species, *Synechococcus* species, and *Synechocystis* species.

BG 11 Marine Agar (Medium BG 11 for Marine Cyanobacteria)

Composition per liter:

Agar	10.0g
NaCl	10.0g
NaNO ₃	1.5g
MgSO ₄ ·7H ₂ O	0.075g
K ₂ HPO ₄	0.04g
CaCl ₂ ·2H ₂ O	0.036g
Na ₂ CO ₃	0.02g
Citric acid	6.0mg
Ferric ammonium citrate	6.0mg
EDTA disodium salt	1.0mg
Vitamin B ₁₂ solution	100.0mL
Trace metal mix A5	1.0mL

pH 7.1 ± 0.2 at 25°C

Trace Metal Mix A5:

Composition per liter:

H ₃ BO ₃	2.86g
MnCl ₂ ·4H ₂ O	1.81g
Na ₂ MoO ₄ ·2H ₂ O	0.39g
ZnSO ₄ ·7H ₂ O	0.222g
CuSO ₄ ·5H ₂ O	0.079g
Co(NO ₃) ₂ ·6H ₂ O	0.049g

Preparation of Trace Metal Mix A5: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Vitamin B₁₂ Solution:

Composition per 100.0mL:

Vitamin B ₁₂	1.0μg
-------------------------------	-------

Preparation of Vitamin B₁₂ Solution: Add vitamin B₁₂ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except vitamin B₁₂ solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Heat gently to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 100.0mL of sterile vitamin B₁₂ solution. Mix thoroughly. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Synechococcus* species. For the isolation of cyanobacteria from freshwater habitats.

BG 11 Marine Broth (Medium BG 11 for Marine Cyanobacteria)

Composition per liter:

NaCl	10.0g
NaNO ₃	1.5g
MgSO ₄ ·7H ₂ O	0.075g
K ₂ HPO ₄	0.04g
CaCl ₂ ·2H ₂ O	0.036g
Na ₂ CO ₃	0.02g
Citric acid	6.0mg
Ferric ammonium citrate	6.0mg
EDTA disodium salt	1.0mg
Vitamin B ₁₂ solution	100.0mL
Trace metal mix A5	1.0mL

pH 7.1 ± 0.2 at 25°C

Trace Metal Mix A5:

Composition per liter:

H ₃ BO ₃	2.86g
MnCl ₂ ·4H ₂ O	1.81g
Na ₂ MoO ₄ ·2H ₂ O	0.39g
ZnSO ₄ ·7H ₂ O	0.222g
CuSO ₄ ·5H ₂ O	0.079g
Co(NO ₃) ₂ ·6H ₂ O	0.049g

Preparation of Trace Metal Mix A5: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Vitamin B₁₂ Solution:

Composition per 100.0mL:

Vitamin B ₁₂	1.0μg
-------------------------------	-------

Preparation of Vitamin B₁₂ Solution: Add vitamin B₁₂ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except vitamin B₁₂ solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Heat gently to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 100.0mL of sterile vitamin B₁₂ solution. Mix thoroughly. Distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Synechococcus* species. For the isolation of cyanobacteria from freshwater habitats.

BG 11 Medium (Medium BG 11 for Cyanobacteria)

Composition per liter:

Agar	10.0g
NaNO ₃	1.5g
MgSO ₄ ·7H ₂ O	0.075g
K ₂ HPO ₄	0.04g
CaCl ₂ ·2H ₂ O	0.036g
Na ₂ CO ₃	0.02g
Citric acid	6.0mg
Ferric ammonium citrate	6.0mg
EDTA disodium salt	1.0mg
Trace metal mix A5	1.0mL

pH 7.1 ± 0.2 at 25°C

Trace Metal Mix A5:

Composition per liter:

H ₃ BO ₃	2.86g
MnCl ₂ ·4H ₂ O	1.81g
Na ₂ MoO ₄ ·2H ₂ O	0.39g

ZnSO ₄ ·7H ₂ O	0.222g
CuSO ₄ ·5H ₂ O	0.079g
Co(NO ₃) ₂ ·6H ₂ O	0.049g

Preparation of Trace Metal Mix A5: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Anabaena* species, *Calothrix* species, *Chaemisiphon* species, *Chorogloeopsis* species, *Chroococcidiopsis* species, *Crinalium epipsammum*, *Cylindrospermum* species, *Dermocarpa* species, *Fischerella* species, *Gloebacter violaceus*, *Gloeocapsa* species, *Gloeotheca* species, *Hapalosiphon fontinalis*, *Nostoc* species, *Oscillatoria* species, *Phormidium* species, *Pleurocapsa* species, *Pseudanabaena* species, *Scytonema* species, *Spirulina* species, *Synechococcus* species, *Synechocystis* species, and *Tolypothrix tenuis*.

BG 11 Uracil Agar

Composition per liter:

Agar	10.0g
Uracil	2.8g
NaNO ₃	1.5g
MgSO ₄ ·7H ₂ O	0.075g
K ₂ HPO ₄	0.04g
CaCl ₂ ·2H ₂ O.....	0.036g
Na ₂ CO ₃	0.02g
Citric acid.....	6.0mg
Ferric ammonium citrate.....	6.0mg
EDTA disodium salt.....	1.0mg
Trace metal mix A5.....	1.0mL

pH 7.1 ± 0.2 at 25°C

Trace Metal Mix A5:

Composition per liter:

H ₃ BO ₃	2.86g
MnCl ₂ ·4H ₂ O.....	1.81g
Na ₂ MoO ₄ ·2H ₂ O	0.39g
ZnSO ₄ ·7H ₂ O	0.222g
CuSO ₄ ·5H ₂ O	0.079g
Co(NO ₃) ₂ ·6H ₂ O	0.049g

Preparation of Trace Metal Mix A5: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Heat gently to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the cultivation and maintenance of *Anabaena variabilis*.

BG 11 Uracil Broth

Composition per liter:

Uracil	2.8g
NaNO ₃	1.5g
MgSO ₄ ·7H ₂ O	0.075g
K ₂ HPO ₄	0.04g
CaCl ₂ ·2H ₂ O.....	0.036g
Na ₂ CO ₃	0.02g
Citric acid.....	6.0mg

Ferric ammonium citrate.....	6.0mg
EDTA disodium salt.....	1.0mg
Trace metal mix A5	1.0mL

pH 7.1 ± 0.2 at 25°C

Trace Metal Mix A5:

Composition per liter:

H ₃ BO ₃	2.86g
MnCl ₂ ·4H ₂ O	1.81g
Na ₂ MoO ₄ ·2H ₂ O	0.39g
ZnSO ₄ ·7H ₂ O	0.222g
CuSO ₄ ·5H ₂ O	0.079g
Co(NO ₃) ₂ ·6H ₂ O	0.049g

Preparation of Trace Metal Mix A5: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Heat gently to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Anabena variabilis*.

BHI

See: **Brain Heart Infusion**

BHI Agar

See: **Brain Heart Infusion Agar**

BHI Broth

See: **Brain Heart Infusion Broth**

BHI Glucose Medium

Composition per liter:

Agar	12.0g
Pancreatic digest of gelatin.....	7.25g
Glucose	6.5g
Brain heart, solids from infusion	3.0g
Peptic digest of animal tissue	3.0g
NaCl.....	2.5g
Na ₂ HPO ₄	1.25g

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Actinomadura pelletieri*, *Actinoplanes missouriensis*, *Actinoplanes philippinensis*, *Agromyces ramosus*, *Corynebacterium minutissimum*, *Dermatophilus congolensis*, *Intrasporangium calvum*, *Mycobacterium diernhoferi*, *Mycobacterium* species, *Nocardia asteroides*, *Nocardia brevicatena*, *Nocardia calcarea*, *Nocardia otitidiscaviarum*, *Pseudonocardia thermophila*, *Saccharopolyspora rectivirgula*, *Streptococcus iniae*, and *Streptococcus pyogenes*.

BHI with Glucose (DSMZ Medium 215b)

Composition per liter:

Pancreatic digest of gelatin.....	14.5g
Glucose	8.0g
Brain heart, solids from infusion	6.0g

Peptic digest of animal tissue.....	6.0g
NaCl	5.0g
Na ₂ HPO ₄	2.5g
pH 7.4 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Corynebacterium* spp., *Streptomyces flocculus*, *Mycobacterium* spp., *Nocardia* spp., *Rhodococcus* spp., *Dermatophilus congolensis*, and *Gordonia amicalis*.

BHI with Glycerol and Reducing Agents (DSMZ Medium 215c)

Composition per liter:

Pancreatic digest of gelatin	14.5g
Brain heart, solids from infusion	6.0g
Peptic digest of animal tissue.....	6.0g
NaCl	5.0g
Glucose	3.0g
Na ₂ HPO ₄	2.5g
Glycerol solution.....	10.0mL
L-Cysteine·HCl–Na ₂ S solution.....	10.0mL
pH 7.4 ± 0.2 at 25°C	

Glycerol Solution:

Composition per 100.0mL:

Glycerol	87.0g
----------------	-------

Preparation of Glycerol Solution: Add glycerol to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

L-Cysteine·HCl–Na₂S Solution:

Composition per 100.0mL:

L-Cysteine·HCl.....	2.5g
Na ₂ S·9H ₂ O.....	2.5g

Preparation of L-Cysteine·HCl–Na₂S Solution: Add L-cysteine·HCl to distilled/deionized water and bring volume to 80.0mL. Mix thoroughly. Adjust pH to 11 with NaOH. Add Na₂S·9H₂O. Mix thoroughly. Bring volume to 100.0mL with distilled/deionized water. Gently heat and bring to boiling under 100% N₂. Cool to 25°C under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except L-cysteine·HCl–Na₂S solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling under 100% N₂. Cool to 25°C under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically under 100% N₂ add 10.0mL of L-cysteine·HCl–Na₂S solution. Mix thoroughly. Aseptically under 100% N₂ distribute to tubes. Alternately distribute 10.0mL amounts of the medium without L-cysteine·HCl–Na₂S solution to tubes prior to autoclaving. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 1.0mL of L-cysteine·HCl–Na₂S solution to each tube.

Use: For the cultivation of *Clostridium* sp.

BHI Medium (DSMZ Medium 215)

Composition per liter:

Pancreatic digest of gelatin	14.5g
Brain heart, solids from infusion	6.0g
Peptic digest of animal tissue.....	6.0g

NaCl.....	5.0g
Na ₂ HPO ₄	2.5g
pH 7.4 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Enterococcus hirae*, *Lodobacter fluviatilis*, *Yersinia* spp., *Tatumella ptyseos*, *Mycobacterium vanbaalenii*, *Oligella urethralis*=*Moraxella urethralis*, *Moraxella* (*Branhamella*) *catarrhalis*, *Campylobacter sputorum*, *Helcococcus kunzii*, *Bacillus sporothermodurans*, *Haemophilus actinomycetemcomitans*, *Escherichia coli*, *Pelzaria aurantia*, *Bacillus* spp., *Comamonas nitratorans*, *Salmonella bongori* (*Salmonella choleraesuis* subsp. *bongori*), *Sphingomonas sanguinis* (*Sphingomonas sanguis*), *Arsenophonus nasoniae*, *Streptococcus orisratti*, *Listeria* spp., *Jonesia denitrificans*=*Listeria denitrificans*, *Propionibacterium propionicus*=*Arachnia propionica*, *Corynebacterium* spp., and *Nocardiopsis tropica*.

BHI/1 Medium

Composition per liter:

Pancreatic digest of gelatin	14.5g
Casein hydrolysate.....	10.0g
Glucose	8.0g
Brain heart, solids from infusion	6.0g
Peptic digest of animal tissue	6.0g
NaCl.....	5.0g
Na ₂ HPO ₄	2.5g
pH 7.4 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi–121°C.

Use: For the cultivation and maintenance of *Actinomyces israelii* and *Propionibacterium propionicus*.

BHI/2 Medium

Composition per liter:

Pancreatic digest of gelatin	14.5g
Casein hydrolysate.....	10.0g
Glucose	8.0g
Brain heart, solids from infusion	6.0g
Peptic digest of animal tissue	6.0g
NaCl.....	5.0g
Yeast extract.....	5.0g
Na ₂ HPO ₄	2.5g
pH 7.4 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Actinomyces georgiae*, *Actinomyces gerencseriae*, *Actinomyces naeslundii*, *Actinomyces odontolyticus*, and *Actinomyces viscosus*.

BHI/3 Medium

Composition per liter:

Pancreatic digest of gelatin	14.5g
Casein hydrolysate.....	10.0g
Brain heart, solids from infusion	6.0g
Peptic digest of animal tissue	6.0g

Starch	5.0g
NaCl	5.0g
Glucose	3.0g
Na ₂ HPO ₄	2.5g

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi–121°C.

Use: For the cultivation and maintenance of *Actinomyces bovis*, *Actinomyces gerencseriae*, *Actinomyces naeshlundii*, *Actinomyces odontolyticus*, *Actinomyces viscosus*, and *Streptomyces* species.

BHI with Serum and Glucose

See: [Brain Heart Infusion with Serum and Glucose](#)

BHIS

See: [Brain Heart Infusion, Supplemented](#)

BHIV Agar, 1/10

See: [Brain Heart Infusion Agar, 1/10 with Vitamins](#)

BHIY Media

Composition per liter:

Beef heart, infusion from	250.0g
Calf brains, infusion from	200.0g
Yeast extract	20.0g
Agar	15.0g
Proteose peptone	10.0g
Sodium phosphate	2.5g
Dextrose	0.2g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Streptococcus bovis* and *Streptococcus equinus*.

Bicarbonate Agar

Composition per 100.0mL:

Soybean-casein digest agar	90.0mL
Sodium bicarbonate solution	10.0mL

pH 7.3 ± 0.2 at 25°C

Soybean-Casein Digest Agar :

Composition per liter:

Agar	15.0g
Pancreatic digest of casein	15.0g
Papaic digest of soybean meal	5.0g
NaCl	5.0g

Preparation of Soybean-Casein Digest Agar: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C.

Sodium Bicarbonate Solution:

Composition per 10.0mL:

NaHCO ₃	0.7g
--------------------------	------

Preparation of Sodium Bicarbonate Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize. Use freshly prepared solution.

Preparation of Medium: To 90.0mL of cooled, sterile soybean-casein digest agar, aseptically add 10.0mL of sterile sodium bicarbonate solution. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the cultivation of *Vibrio* species from foods.

Bifidobacterium Medium

Composition per liter:

Glucose	20.0g
Pancreatic digest of casein	20.0g
Yeast extract	10.0g
Peptone	10.0g
Tomato juice	333.0mL
Tween™ 80	2.0mL

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Combine 333.0mL of tomato juice with 666.0mL of distilled/deionized water. Bring to boiling. Filter through paper. Add remaining components to filtrate. Mix thoroughly. Bring volume to 1.0L with distilled/deionized water. Distribute into tubes or flasks. Autoclave for 30 min at 15 psi pressure–110°C.

Use: For the cultivation of *Bifidobacterium infantis*.

Bifidobacterium Agar

Composition per liter:

Peptone, special	23.0g
Agar	15.0g
Glucose	5.0g
NaCl	5.0g
Starch, soluble	1.0g
L-Cysteine hydrochloride	0.3g

pH 6.8 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into Petri dishes or leave in tubes.

Use: For the cultivation of *Bifidobacterium* spp.

Bifidobacterium Broth

Composition per liter:

Glucose	20.0g
Casein enzymatic hydrolysate	20.0g
Tomato juice, solids	16.65g
Peptic digest of animal tissue	10.0g
Yeast extract	10.0g
Tween™ 80	2.0mL

pH 6.8 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Bifidobacterium infantis*.

Bifidobacterium Medium**Composition per liter:**

Tryptic digest of casein	10.0g
Glucose	10.0g
Beef extract	5.0g
Yeast extract	5.0g
K ₂ HPO ₄	3.0g
Tween™ 80	1.0mL
Sodium ascorbate solution	25.0mL
L-Cysteine-HCl solution	25.0mL

pH 6.8 ± 0.2 at 25°C

Sodium Ascorbate Solution:**Composition per 25.0mL:**

Sodium ascorbate	10.0g
------------------------	-------

Preparation of Sodium Ascorbate Solution: Add sodium ascorbate to distilled/deionized water and bring volume to 25.0mL. Mix thoroughly. Filter sterilize.

L-Cysteine-HCl Solution:**Composition per 25.0mL:**

L-Cysteine-HCl	0.5g
----------------------	------

Preparation of L-Cysteine-HCl Solution: Add L-cysteine-HCl to distilled/deionized water and bring volume to 25.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except sodium ascorbate solution and L-cysteine-HCl solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 25.0mL of sterile sodium ascorbate solution and 25.0mL of sterile L-cysteine-HCl solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks. Medium that has not been freshly prepared should be heated in a steamer for 10 min prior to the addition of ascorbate and L-cysteine.

Use: For the cultivation and maintenance of *Bifidobacterium adolescentis*, *Bifidobacterium angulatum*, *Bifidobacterium animalis*, *Bifidobacterium asteroides*, *Bifidobacterium bifidum*, *Bifidobacterium boum*, *Bifidobacterium breve*, *Bifidobacterium catenulatum*, *Bifidobacterium choerinum*, *Bifidobacterium coryneforme*, *Bifidobacterium cuniculi*, *Bifidobacterium dentium*, *Bifidobacterium gallicum*, *Bifidobacterium indicum*, *Bifidobacterium infantis*, *Bifidobacterium longum*, *Bifidobacterium magnum*, *Bifidobacterium merycicum*, *Bifidobacterium minimum*, *Bifidobacterium pseudocatenulatum*, *Bifidobacterium pseudolongum*, *Bifidobacterium pullorum*, *Bifidobacterium ruminantium*, *Bifidobacterium saeculare*, *Bifidobacterium subtile*, *Bifidobacterium suis*, and *Bifidobacterium thermophilum*.

Bifidobacterium Medium**Composition per liter:**

Special peptone	23.0g
Agar	15.0g
NaCl	5.0g
Glucose	5.0g
Starch, soluble	1.0g
L-Cysteine-HCl	0.3g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of numerous *Bifidobacterium* species.

BiGGY Agar
(Bismuth Sulfite Glucose
Glycerin Yeast Extract Agar)
(Nickerson Medium)

Composition per liter:

Agar	16.0g
Glucose	10.0g
Glycine	10.0g
Bismuth ammonium citrate	5.0g
Na ₂ SO ₃	3.0g
Yeast extract	1.0g

pH 6.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath and BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly and heat with frequent agitation until boiling. Distribute into tubes or flasks. Do not autoclave. Cool to approximately 45°–50°C. If desired, add 2mg/L of neomycin sulfate. Swirl to disperse the insoluble material and pour into sterile Petri dishes.

Use: For the detection, isolation, and presumptive identification of *Candida* species. Addition of neomycin helps inhibit bacterial species. *Candida albicans* appears as brown to black colonies with no pigment diffusion and no sheen. *Candida tropicalis* appears as dark brown colonies with black centers, black pigment diffusion, and a sheen. *Candida krusei* appears as shiny, wrinkled, brown to black colonies with yellow pigment diffusion. *Candida pseudotropicalis* appears as flat, shiny red to brown colonies with no pigment diffusion. *Candida parakrusei* appears as flat, shiny, wrinkled, dark reddish-brown colonies with light reddish-brown peripheries and a yellow fringe. *Candida stellatoidea* appears as flat dark brown colonies with a light fringe.

Bile Broth Base, HiVeg with Streptokinase**Composition per liter:**

Plant peptone	20.0g
NaCl	5.0g
Synthetic detergent No. V	5.0g
Streptokinase solution	1.0mL

pH 7.1 ± 0.2 at 25°C

Source: This medium, without streptokinase solution, is available as a premixed powder from HiMedia.

Streptokinase Solution:**Composition per 1.0mL:**

Streptokinase	100,000 units
---------------------	---------------

Streptokinase Solution: Add streptokinase to distilled/deionized water and bring volume to 1.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Heat gently and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 40°C. Aseptically add 1.0mL of streptokinase solution. Mix thoroughly. If desired carbohydrate may also be added to this medium prior to sterilization.

Use: For the culture of blood clots from patients with suspected enteric fever.

Bile Broth Base with Streptokinase**Composition per liter:**

Peptone.....	20.0g
NaCl.....	5.0g
Synthetic detergent No. V.....	5.0g
Streptokinase solution.....	1.0mL

pH 7.1 ± 0.2 at 25°C

Source: This medium, without streptokinase solution, is available as a premixed powder from HiMedia.

Streptokinase Solution:**Composition per 1.0mL:**

Streptokinase.....	100,000 units
--------------------	---------------

Streptokinase Solution: Add streptokinase to distilled/deionized water and bring volume to 1.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Heat gently and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 40°C. Aseptically add 1.0mL of streptokinase solution. Mix thoroughly. If desired carbohydrate may also be added to this medium prior to sterilization.

Use: For the culture of blood clots from patients with suspected enteric fever.

Bile Esculin Agar**Composition per liter:**

Oxgall.....	20.0g
Agar.....	15.0g
Pancreatic digest of gelatin.....	5.0g
Beef extract.....	3.0g
Esculin.....	1.0g
Ferric citrate.....	0.5g
Horse serum.....	50.0mL

pH 6.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath and BD Diagnostic Systems.

Preparation of Medium: Add components, except horse serum, to distilled/deionized water and bring volume to 950.0L. Mix thoroughly and heat with frequent agitation until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50.0mL of filter sterilized horse serum. Distribute into sterile Petri dishes or test tubes. Cool tubes in a slanted position.

Use: For differentiation between group D streptococci and nongroup D streptococci. To differentiate members of the Enterobacteriaceae, particularly *Klebsiella*, *Enterobacter*, and *Serratia*, from other enteric bacteria. To differentiate *Listeria monocytogenes*. Bile tolerance and esculin hydrolysis (seen as a dark brown to black complex) are presumptive for enterococci (group D streptococci).

Bile Esculin Agar**Composition per liter:**

Esculin.....	1.0g
Bile esculin agar base.....	1.0L

pH 6.6 ± 0.2 at 25°C

Bile Esculin Agar Base:**Composition per liter:**

Oxgall.....	40.0g
Agar.....	15.0g

Peptone.....	5.0g
Beef extract.....	3.0g
Ferric citrate.....	0.5g

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Bile Esculin Agar Base: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add desired amount of esculin—typically 1.0g—to bile esculin agar base. Mix thoroughly and heat with frequent agitation until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Distribute into sterile Petri dishes or test tubes. Cool tubes in a slanted position.

Use: For the isolation and presumptive identification of group D streptococci.

**Bile Esculin Agar
(BAM M18)****Composition per liter:**

Oxgall.....	40.0g
Agar.....	15.0g
Pancreatic digest of gelatin.....	5.0g
Beef extract.....	3.0g
Esculin.....	1.0g
Ferric citrate.....	0.5g

pH 6.6 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly and heat with frequent agitation until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Distribute into sterile Petri dishes or test tubes. Cool tubes in a slanted position.

Use: For differentiation between group D streptococci and nongroup D streptococci. To differentiate members of the Enterobacteriaceae, particularly *Klebsiella*, *Enterobacter*, and *Serratia*, from other enteric bacteria. To differentiate *Listeria monocytogenes*. Bile tolerance and esculin hydrolysis (seen as a dark brown to black complex) are presumptive for enterococci (group D streptococci).

Bile Esculin Agar**Composition per liter:**

Bile salts.....	40.0g
Agar.....	15.0g
Pancreatic digest of animal tissue.....	5.0g
Beef extract.....	3.0g
Esculin.....	1.0g
Ferric citrate.....	0.5g

pH 6.6 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly and heat with frequent agitation until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Distribute into sterile Petri dishes or test tubes.

Use: For the isolation and identification of *Yersinia enterocolitica*.

Bile Esculin Agar, HiVeg**Composition per liter:**

Plant peptone.....	25.0g
Agar.....	15.0g
Plant hydrolysate.....	15.0g
Plant extract.....	6.0g
Synthetic detergent No. II.....	2.0g

Esculin	1.0g
Ferric citrate	0.5g
pH 6.6 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly and heat with frequent agitation until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Distribute into sterile Petri dishes or test tubes. Cool tubes in a slanted position.

Use: For the isolation and presumptive identification of group D streptococci.

Bile Esculin Agar with Kanamycin

Composition per liter:

Oxgall	20.0g
Agar	15.0g
Beef extract	3.0g
Esculin	1.0g
Ferric citrate	0.5g
Hemin	10.0mg
Vitamin K ₁	10.0mg
Horse serum	50.0mL
Kanamycin solution	10.0mL
pH 7.1 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Kanamycin Solution:

Composition per 10.0mL:

Kanamycin	1.0g
-----------------	------

Preparation of Kanamycin Solution: Add kanamycin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly and heat with frequent agitation until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50.0mL of 5% filter-sterilized horse serum and 10.0mL of sterile kanamycin solution. Distribute into test tubes or flasks. Cool tubes in a slanted position.

Use: For the selective isolation and/or presumptive identification of bacteria of the *Bacteroides fragilis* group from specimens containing mixed flora. Examine colonies with a long-wavelength UV light. Pigmented colonies of the *Bacteroides* group will fluoresce red-orange. Growth on this medium with blackening of the medium is presumptive for *Bacteroides fragilis*.

Bile Esculin Azide Agar

Composition per liter:

Pancreatic digest of casein	17.0g
Agar	15.0g
Oxgall	10.0g
NaCl	5.0g
Yeast extract	5.0g
Proteose peptone No. 3	3.0g
Esculin	1.0g
Ferric ammonium citrate	0.5g
NaN ₃	0.15g
pH 7.1 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Caution: Sodium azide is toxic. Azides also react with metals and disposal must be highly diluted.

Preparation: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly and heat with frequent agitation until boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Pour into sterile Petri dishes or leave in tubes. Cool tubes in a slanted position.

Use: For the isolation and presumptive identification of group D streptococci.

Bile Esculin Azide HiVeg Agar

Composition per liter:

Plant hydrolysate	20.0g
Agar	15.0g
Plant extract	5.0g
Plant peptone No. 3	5.0g
NaCl	5.0g
Synthetic detergent No. II	5.0g
Esculin	1.0g
Ferric ammonium citrate	0.5g
NaN ₃	0.15g
pH 7.1 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Caution: Sodium azide is toxic. Azides also react with metals and disposal must be highly diluted.

Preparation: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly and heat with frequent agitation until boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Pour into sterile Petri dishes or leave in tubes. Cool tubes in a slanted position.

Use: For the isolation and presumptive identification of group D streptococci.

Bile Esculin HiVeg Agar Base with Esculin

Composition per liter:

Plant peptone	22.0g
Agar	15.0g
Plant hydrolysate	15.0g
Plant extract	6.0g
Synthetic detergent No. II	5.0g
Ferric citrate	0.5g
Esculin solution	4.0mL
pH 6.8 ± 0.2 at 25°C	

Source: This medium, without esculin, is available as a premixed powder from HiMedia.

Esculin Solution:

Composition per 4.0mL:

Esculin	1.0g
---------------	------

Esculin Solution: Add esculin to distilled/deionized water and bring volume to 4.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except esculin solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 4.0mL of sterile escu-

lin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile test tubes.

Use: For the isolation and presumptive identification of group D streptococci.

Bile Esculin HiVeg Agar with Kanamycin

Composition per liter:

Plant peptone no. 2.....	17.0g
Agar	15.0g
Plant extract	6.0g
Synthetic detergent.....	5.0g
Esculin	1.0g
Ferric citrate.....	0.5g
Kanamycin.....	0.1g
Fe ₄ (P ₂ O ₇) ₃ ·H ₂ O.....	0.01g
Vitamin K ₁	0.01g

pH 7.1 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly and heat with frequent agitation until boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Pour into sterile Petri dishes or leave in tubes. Cool tubes in a slanted position.

Use: For the selective isolation and/or presumptive identification of bacteria of the *Bacteroides fragilis* group from specimens containing mixed flora. Examine colonies with a long-wavelength UV light. Pigmented colonies of the *Bacteroides* group will fluoresce red-orange. Growth on this medium with blackening of the medium is presumptive for *Bacteroides fragilis*.

Bile Oxalate Sorbose Broth (BOS Broth)

Composition per liter:

Na ₂ HPO ₄	9.14g
Sodium oxalate	5.0g
Bile salts.....	2.0g
NaCl	1.0g
CaCl ₂ ·2H ₂ O.....	0.01g
MgSO ₄ ·7H ₂ O	0.01g
Asparagine solution	100.0mL
Methionine solution	100.0mL
Sorbose solution.....	100.0mL
Yeast extract solution.....	10.0mL
Sodium pyruvate solution.....	10.0mL
Metanil Yellow solution.....	10.0mL
Sodium nitrofurantoin solution.....	10.0mL
Irgasan [®] solution	1.0mL

pH 7.6 ± 0.2 at 25°C

Asparagine Solution:

Composition per 100.0mL:

Asparagine	1.0g
------------------	------

Preparation of Asparagine Solution: Add asparagine to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Methionine Solution:

Composition per 100.0mL:

Methionine	1.0g
------------------	------

Preparation of Methionine Solution: Add methionine to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Sorbose Solution:

Composition per 100.0mL:

Sorbose	10.0g
---------------	-------

Preparation of Sorbose Solution: Add sorbose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Yeast Extract Solution:

Composition per 10.0mL:

Yeast extract.....	0.025g
--------------------	--------

Preparation of Yeast Extract Solution: Add yeast extract to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Sodium Pyruvate Solution:

Composition per 10.0mL:

Sodium pyruvate.....	0.05g
----------------------	-------

Preparation of Sodium Pyruvate Solution: Add sodium pyruvate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Metanil Yellow Solution:

Composition per 10.0mL:

Metanil Yellow	0.025g
----------------------	--------

Preparation of Metanil Yellow Solution: Add Metanil Yellow to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Sodium Nitrofurantoin Solution:

Composition per 10.0mL:

Sodium nitrofurantoin.....	0.01g
----------------------------	-------

Preparation of Sodium Nitrofurantoin Solution: Add sodium nitrofurantoin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Irgasan[®] Solution:

Composition per 10.0mL:

Irgasan.....	0.04g
Ethanol (95% solution).....	10.0mL

Preparation of Irgasan Solution: Add Irgasan to 10.0mL of ethanol. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except asparagine solution, methionine solution, sorbose solution, yeast extract solution, sodium pyruvate solution, Metanil Yellow solution, sodium nitrofurantoin solution, and Irgasan solution, to distilled/deionized water and bring volume to 659.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 100.0mL of sterile asparagine solution, 100.0mL of sterile methionine solution, 100.0mL of sterile sorbose solution, 10.0mL of sterile yeast extract solution, 10.0mL of sterile sodium pyruvate solution, 10.0mL of sterile Metanil Yellow solution, 10.0mL of sterile sodium nitrofurantoin solution, and 1.0mL of sterile Irgasan solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of *Yersinia enterocolitica* from foods.

Bile Peptone Transport Medium

Composition per liter:

Casein enzymatic hydrolysate	10.0g
NaCl	10.0g
Sodium taurocholate	5.0g
pH 8.5 ± 0.2 at 25°C	

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the transport and preservation of *Vibrio cholerae*.

Bile Salt Agar with Streptokinase

Composition per liter:

Agar	18.0g
Peptone.....	10.0g
Meat extract	10.0g
NaCl	5.0g
Sodium taurocholate	5.0g
Streptokinase solution.....	1.0mL
pH 8.2 ± 0.2 at 25°C	

Source: This medium, without streptokinase solution, is available as a premixed powder from HiMedia.

Streptokinase Solution:

Composition per 1.0mL:

Streptokinase.....	100,000 U
--------------------	-----------

Streptokinase Solution: Add streptokinase to distilled/deionized water and bring volume to 1.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Heat gently and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 40°C. Aseptically add 1.0mL of streptokinase solution. Mix thoroughly. If desired carbohydrate may also be added to this medium prior to sterilization.

Use: For the isolation and cultivation of bile tolerant enteric bacilli.

Bile Salts Brilliant Green Starch Agar (BBGS Agar)

Composition per liter:

Agar	15.0g
Soluble starch.....	10.0g
Proteose peptone	10.0g
Beef extract	5.0g
Bile salts.....	5.0g
Brilliant Green (0.05% solution)	1.0mL
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of *Aeromonas hydrophila* from foods.

Bile Salts Gelatin Agar

Composition per 100.0mL:

Gelatin.....	3.0g
--------------	------

Agar	1.5g
Pancreatic digest of casein.....	1.0g
NaCl.....	1.0g
Sodium taurocholate	0.5g
Na ₂ CO ₃	0.1g
Water.....	100.0mL
pH 8.5 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Vibrio cholerae*.

BIN Medium

Composition per liter:

Beef heart, infusion from.....	250.0g
Calf brains, infusion from.....	200.0g
Agar	15.0g
Proteose peptone.....	10.0g
NaCl.....	5.0g
Na ₂ HPO ₄	2.5g
Glucose	2.0g
Irgasan solution.....	4.0mL
Crystal Violet solution.....	1.0mL
Sodium cholate solution	1.0mL
Sodium deoxycholate solution.....	1.0mL
Nystatin solution.....	1.0mL

pH 7.4 ± 0.2 at 25°C

Sodium Cholate Solution:

Composition per 100.0mL:

Sodium cholate	5.0g
----------------------	------

Preparation of Sodium Cholate Solution: Add sodium cholate to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Sodium Deoxycholate Solution:

Composition per 100.0mL:

Sodium deoxycholate.....	5.0g
--------------------------	------

Preparation of Sodium Deoxycholate Solution: Add sodium deoxycholate to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool 25°C.

Irgasan Solution:

Composition per 50.0mL:

Irgasan DP300	10.0mg
Ethanol, 90%.....	50.0mL

Preparation of Irgasan Solution: Add irgasan to 90% ethanol and bring volume to 50.0mL. Mix thoroughly.

Crystal Violet Solution:

Composition per 10.0mL:

Crystal Violet.....	10.0mg
---------------------	--------

Preparation of Crystal Violet Solution: Add Crystal Violet to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Nystatin Solution:**Composition per 10.0mL:**

Nystatin 2.5g

Preparation of Nystatin Solution: Add nystatin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except irgasan solution, Crystal Violet solution, sodium cholate solution, sodium deoxycholate solution, and nystatin solution, to distilled/deionized water and bring volume to 992.0mL. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 85°C. Aseptically add 4.0mL irgasan solution. Mix thoroughly to volatilize the ethanol. Cool to 50°C. Aseptically add 1.0mL each of Crystal Violet solution, sodium cholate solution, sodium deoxycholate solution, and nystatin solution. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the efficient detection of *Yersinia pestis* from clinical and other specimens. The formulation of this medium is based on brain heart infusion agar, to which the selective agents irgasan, cholate salts, Crystal Violet, and nystatin are introduced to enhance efficiency of recovery of *Y. pestis*.

**Biosynth Chromogenic Medium
for *Listeria monocytogenes*
(BCM for *Listeria monocytogenes*)
(BAM M17a)**

Composition per liter:

Proprietary

Source: This medium is available from Biosynth International, Inc.

Use: To differentiate *Listeria monocytogenes* and *L. ivanovii* from other *Listeria* spp. Supplements render the medium selective. Differential activity for all *Listeria* species is based upon a chromogenic substrate included in the medium. This is a complete test system with a fluorogenic selective enrichment broth and a chromogenic plating medium both detecting the virulence factor phosphatidylinositol specific phospholipase C (PI-PLC). The medium contains a substrate for phosphatidylinositol-specific phospholipase C (PlcA) enzymes. The selective enrichment broth is fluorogenic. The plating medium for rapid detection and enumeration of pathogenic *Listeria* combines cleavage of the chromogenic PI-PLC substrate with the additional production of a white precipitate surrounding the target colonies.

Biotin Assay Medium**Composition per liter:**

Glucose	40.0g
Sodium acetate	20.0g
Vitamin assay casamino acids.....	12.0g
K ₂ HPO ₄	1.0g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.4g
DL-Tryptophane.....	0.2g
L-Cystine	0.2g
Adenine sulfate	0.02g
FeSO ₄	0.02g
Guanine·HCl	0.02g
MgSO ₄ ·7H ₂ O	0.02g
NaCl	0.02g
Uracil	0.02g
Calcium pantothenate	2.0mg

Niacin.....	2.0mg
Pyridoxine·HCl.....	2.0mg
Riboflavin	2.0mg
Thiamine·HCl	2.0mg
<i>p</i> -Aminobenzoic acid.....	0.2mg

pH 6.7 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 2–3 min. Distribute into tubes in 5.0mL volumes. Add standard solution or test solutions to each tube. Adjust the volume of each tube to 10.0mL with distilled/deionized water. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For use in the microbiological assay of biotin using *Lactobacillus plantarum* as the test microorganism.

Biphasic Medium for *Neisseria***Composition per liter:**

Glucose starch agar.....	1.0L
Glucose starch broth	1.0L

pH 7.3 ± 0.2 at 25°C

Glucose Starch Agar:**Composition per liter:**

Agar	20.0g
Gelatin.....	20.0g
Proteose peptone No. 3	15.0g
Soluble starch.....	10.0g
NaCl.....	5.0g
Glucose	2.0g
Na ₂ HPO ₄	3.0g

Preparation of Glucose Starch Agar: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C.

Glucose Starch Broth:**Composition per liter:**

Gelatin.....	20.0g
Proteose peptone No. 3	15.0g
Soluble starch.....	10.0g
NaCl.....	5.0g
Glucose	2.0g
Na ₂ HPO ₄	3.0g

Preparation of Glucose Starch Broth: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Preparation of Medium: Aseptically distribute glucose starch agar into flasks in 100–125mL volumes. Allow agar to solidify. Overlay agar with 25.0mL of sterile glucose starch broth.

Use: For selective isolation and cultivation of *Neisseria* species.

**Biphenyl Agar
(DSMZ Medium 457d)**

Composition per liter:

Agar	15.0g
Na ₂ HPO ₄	2.44g

KH ₂ PO ₄	1.52g
(NH ₄) ₂ SO ₄	0.5g
Biphenyl.....	0.25g
MgSO ₄ ·7H ₂ O.....	0.2g
CaCl ₂ ·2H ₂ O.....	0.05g
Trace elements solution SL-4.....	10.0mL
pH 6.9 ± 0.2 at 25°C	

Trace Elements Solution SL-4:**Composition per liter:**

EDTA.....	0.5g
FeSO ₄ ·7H ₂ O.....	0.2g
Trace elements solution SL-6.....	100.0mL

Trace Elements Solution SL-6:**Composition per liter:**

H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O.....	0.2g
ZnSO ₄ ·7H ₂ O.....	0.1g
MnCl ₂ ·4H ₂ O.....	0.03g
Na ₂ MoO ₄ ·H ₂ O.....	0.03g
NiCl ₂ ·6H ₂ O.....	0.02g
CuCl ₂ ·2H ₂ O.....	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 3.4.

Preparation of Trace Elements Solution SL-4: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Biphenyl Solution:**Composition per liter:**

Biphenyl.....	10.0g
---------------	-------

Preparation of Biphenyl Solution: Add biphenyl to 1.0L ethanol. Mix thoroughly. Filter sterilize using a cellulose filter membrane.

Preparation of Medium: Add components, except biphenyl solution, to 1.0L distilled/deionized water. Adjust pH to 6.9. Heat and gently bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Add an aliquot of the biphenyl solution to the lid of a sterile Petri dish so that the final concentration will be approximately 0.25g/L biphenyl, and let the ethanol evaporate so that the crystals of biphenyl coat the lid of the Petri dish. Aseptically add sterile agar medium to the crystal-layered Petri dish.

Use: For the cultivation of biphenyl-utilizing bacteria.

Bird Seed Agar**(Guizotia abyssinica Creatinine Agar)****(Niger Seed Agar)/(Staib Agar)****Composition per liter:**

Agar.....	15.0g
Glucose.....	15.0g
Creatinine.....	5.0g
KH ₂ PO ₄	3.0g
Biphenyl.....	1.0g
Chloramphenicol.....	0.5g
<i>Guizotia abyssinica</i> seed (niger seed) extract.....	1000.0mL
pH 6.7 ± 0.2 at 25°C	

Preparation of Medium: Prepare seed extract by grinding 50.0g of *Guizotia abyssinica* seed in 1.0L of distilled/deionized water. Boil for 30 min. Filter through cheesecloth and filter paper. Add remaining

components to seed filtrate. Mix thoroughly and heat with frequent agitation until boiling. Distribute into flasks or tubes. Autoclave for 25 min at 15 psi pressure–110°C.

Use: For the selective isolation and differentiation of *Cryptococcus neoformans* from other *Cryptococcus* species and other yeasts.

Bismuth Sulfite Agar**Composition per liter:**

Agar.....	20.0g
Bi ₂ (SO ₃) ₃	8.0g
Pancreatic digest of casein.....	5.0g
Peptic digest of animal tissue.....	5.0g
Beef extract.....	5.0g
Glucose.....	5.0g
Na ₂ HPO ₄	4.0g
FeSO ₄ ·7H ₂ O.....	0.3g

pH 7.5 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath and BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly and heat with frequent agitation until boiling. Boil for 1 min. Do not autoclave. Cool to 45°–50°C. Pour into sterile Petri dishes while gently shaking flask to disperse precipitate. Use plates the same day as prepared.

Use: For the selective isolation and identification of *Salmonella typhi* and other enteric bacilli. *Salmonella typhi* appears as flat, black, “rabbit-eye” colonies surrounded by a zone of black with a metallic sheen.

Bismuth Sulfite Agar**Composition per liter:**

Agar.....	20.0g
Peptic digest of animal tissue.....	10.0g
Bismuth sulfite indicator.....	8.0g
Glucose.....	5.0g
Beef extract.....	5.0g
Na ₂ HPO ₄	4.0g
FeSO ₄	0.3g
Brilliant Green.....	0.025g

pH 7.7 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly and heat with frequent agitation until boiling. Boil for 1 min. Do not autoclave. Cool to 45°–50°C. Mix thoroughly. The sensitivity of the medium depends largely upon uniform dispersion of precipitated bismuth sulfite in the final gel which should be dispersed before pouring the plates. Pour into sterile Petri dishes while gently shaking flask to disperse precipitate. Use plates the same day as prepared.

Use: For the selective isolation and identification of *Salmonella typhi* and other enteric bacilli. *Salmonella typhi* appears as flat, black, “rabbit-eye” colonies surrounded by a zone of black with a metallic sheen.

Bismuth Sulfite Agar, HiVeg**Composition per liter:**

Agar.....	20.0g
Plant peptone.....	10.0g
Bismuth sulfite indicator.....	8.0g
Glucose.....	5.0g

Plant extract	5.0g
Na ₂ HPO ₄	4.0g
FeSO ₄	0.3g
Brilliant Green	0.025g

pH 7.7 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly and heat with frequent agitation until boiling. Boil for 1 min. Do not autoclave. Cool to 45°–50°C. Mix thoroughly. The sensitivity of the medium depends largely upon uniform dispersion of precipitated bismuth sulfite in the final gel which should be dispersed before pouring the plates. Pour into sterile Petri dishes while gently shaking flask to disperse precipitate. Use plates the same day as prepared.

Use: For the selective isolation and identification of *Salmonella typhi* and other enteric bacilli. *Salmonella typhi* appears as flat, black, “rabbit-eye” colonies surrounded by a zone of black with a metallic sheen.

Bismuth Sulfite Agar, Modified

Composition per liter:

Agar	12.7g
Bismuth sulfite indicator	8.0g
Glucose	5.0g
Beef extract	5.0g
Peptic digest of animal tissue	5.0g
Na ₂ HPO ₄	4.0g
FeSO ₄	0.3g
Brilliant Green	0.016

pH 7.5 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly and heat with frequent agitation until boiling. Boil for 1 min. Do not autoclave. Cool to 45°–50°C. Mix thoroughly. The sensitivity of the medium depends largely upon uniform dispersion of precipitated bismuth sulfite in the final gel which should be dispersed before pouring the plates. Pour into sterile Petri dishes while gently shaking flask to disperse precipitate. Use plates the same day as prepared.

Use: For the selective isolation and identification of *Salmonella typhi* and other enteric bacilli. *Salmonella typhi* appears as flat, black, “rabbit-eye” colonies surrounded by a zone of black with a metallic sheen.

Bismuth Sulfite Agar, Modified, HiVeg

Composition per liter:

Agar	12.7g
Bismuth sulfite indicator	8.0g
Glucose	5.0g
Plant extract	5.0g
Plant peptone	5.0g
Na ₂ HPO ₄	4.0g
FeSO ₄	0.3g
Brilliant Green	0.016

pH 7.5 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly and heat with frequent

agitation until boiling. Boil for 1 min. Do not autoclave. Cool to 45°–50°C. Mix thoroughly. The sensitivity of the medium depends largely upon uniform dispersion of precipitated bismuth sulfite in the final gel which should be dispersed before pouring the plates. Pour into sterile Petri dishes while gently shaking flask to disperse precipitate. Use plates the same day as prepared.

Use: For the selective isolation and identification of *Salmonella typhi* and other enteric bacilli. *Salmonella typhi* appears as flat, black, “rabbit-eye” colonies surrounded by a zone of black with a metallic sheen.

Bismuth Sulfite Agar Wilson and Blair (BAM 19)

Composition per liter:

Agar	20.0g
Pancreatic digest of casein	10.0g
Bi ₂ (SO ₃) ₃	8.0g
Beef extract	5.0g
Glucose	5.0g
Na ₂ HPO ₄	4.0g
FeSO ₄ ·7H ₂ O	0.3g
Brilliant Green	0.025g

pH 7.7 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly and heat with frequent agitation until boiling. Boil for 1 min. Do not autoclave. Cool to 45°–50°C. Pour into sterile Petri dishes while gently shaking flask to disperse precipitate. Let plates dry for about 2h with lids partially removed. Use plates the within one day of preparation; medium loses selectivity after 48h.

Use: For the selective isolation and identification of *Salmonella typhi* and other enteric bacilli. *Salmonella typhi* appears as flat, black, “rabbit-eye” colonies surrounded by a zone of black with a metallic sheen.

Bismuth Sulfite Broth (m-Bismuth Sulfite Broth)

Composition per liter:

Bi ₂ (SO ₃) ₃	16.0g
Pancreatic digest of casein	10.0g
Peptic digest of animal tissue	10.0g
Beef extract	10.0g
Glucose	10.0g
Na ₂ HPO ₄	8.0g
FeSO ₄ ·7H ₂ O	0.6g

pH 7.7 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly and heat with frequent agitation until boiling. Boil for 1 min. Do not autoclave. Cool to 45°–50°C. Mix to disperse the precipitate and aseptically distribute into sterile tubes or flasks. Use 2.0–2.2mL of medium for each membrane filter.

Use: For the selective isolation of *Salmonella typhi* and other enteric bacilli and for the detection of *Salmonella* by the membrane filter method.

Bismuth Sulfite Glucose Glycerin Yeast Extract Agar *See: BiGGY Agar*

BL Agar
(Glucose Blood Liver Agar)

Composition per liter:

Agar	15.0g
Glucose	10.0g
Proteose peptone No. 3	10.0g
Pancreatic digest of casein	5.0g
Yeast extract	5.0g
Meat extract	3.0g
Phytone™	3.0g
Tween™ 80	1.0g
Soluble starch	0.5g
Liver extract	150.0mL
Horse blood	50.0mL
L-Cysteine-HCl solution	10.0mL
Solution A	10.0mL
Solution B	5.0mL

pH 7.2 ± 0.2 at 25°C

Liver Extract:

Composition per 170.0mL:

Liver powder	10.0g
--------------------	-------

Preparation of Liver Extract: Add 10.0g of liver powder to 170mL of distilled/deionized water. Gently heat to 60°C. Maintain at 50°–60°C for 1 hr. Gently bring to boiling. Boil for 5 min. Adjust pH to 7.2. Filter through Whatman #2 filter paper.

L-Cysteine-HCl Solution:

Composition per 10.0mL:

L-Cysteine-HCl	0.5g
----------------------	------

Preparation of L-Cysteine-HCl Solution: Dissolve 0.5g of L-cysteine-HCl in distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize. Warm to 50°C.

Solution A:

Composition per 100.0mL:

K ₂ HPO ₄	10.0g
KH ₂ PO ₄	10.0g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C.

Solution B:

Composition per 100.0mL:

MgSO ₄ ·7H ₂ O	4.0g
NaCl	0.2g
FeSO ₄ ·7H ₂ O	0.2g
MnSO ₄ ·H ₂ O	0.2g

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C.

Preparation of Medium: Add components, except liver extract, horse blood, L-cysteine-HCl solution, solution A, and solution B, to distilled/deionized water and bring volume to 775.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 150.0mL of sterile liver extract, 50.0mL of sterile horse blood, 10.0mL of sterile L-cysteine-HCl solution, 10.0 mL of sterile solution A, and 5.0mL of sterile solution B. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Atopobium minutum*, *Bacteroides distasonis*, *Bacteroides ovatus*, *Bacteroides thetaiotaomicron*, *Bacteroides uniformis*, *Bacteroides vulgatus*, numerous *Bifidobacterium* species, *Campylobacter divergens*, *Carnobacterium piscicola*, numerous *Clostridium* species, numerous *Lactobacillus* species, *Lactococcus lactis*, *Leuconostoc lactis*, *Leuconostoc mesenteroides*, and *Propionibacterium thoenii*.

Blastobacter denitrificans Agar
(LMG Medium 157)

Composition per liter:

Agar	15.0g
Tryptone	2.0g
Lab Lemco beef extract	0.5g
Yeast extract	0.5g
Sodium acetate	0.2g
Glucose solution	10.0mL

pH 7.3 ± 0.2 at 25°C

Glucose Solution:

Composition per 10.0mL:

Glucose	2.5g
---------------	------

Preparation of Glucose Solution: Add glucose to 10.0mL of distilled/deionized water. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except glucose solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL glucose solution. Mix thoroughly. Aseptically pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Blastobacter denitrificans*.

Blastobacter denitrificans Agar

Composition per liter:

Agar	15.0g
Pancreatic digest of casein	2.0g
Beef extract	0.5g
Yeast extract	0.5g
Sodium acetate	0.2g
Glucose solution	10.0mL

pH 7.2 ± 0.2 at 25°C

Glucose Solution:

Composition per 10.0mL:

Glucose	2.5g
---------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 10.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except glucose solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 10.0mL of sterile glucose solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Blastobacter denitrificans*.

***Blastobacter* Enrichment Medium**

Composition per liter:

Agar	18.0g
Peptone.....	0.5g
MgSO ₄ ·7H ₂ O	0.13g
KH ₂ PO ₄ ·3H ₂ O.....	0.13g
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the enrichment and cultivation of *Blastobacter* species.

***Blastobacter* Medium**

Composition per liter:

Agar	15.0g
Peptone.....	10.0g
Yeast extract.....	10.0g
NaCl	5.0g
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly and heat with frequent agitation until boiling. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Blastobacter natatorius* and other *Blastobacter* species.

***Blastococcus aggregatus* Medium**

Composition per 1001.0mL:

Tryptone.....	2.0g
Yeast extract.....	2.0g
Tris(hydroxymethyl)amino methane-HCl buffer	1.0g
KNO ₃	0.5g
Sodium glycerophosphate.....	0.1g
Artificial seawater.....	1.0L
Trace elements solution	1.0mL
pH 7.0 ± 0.2 at 25°C	

Artificial Seawater:

Composition per liter:

Commercially available marine aquarium salts mixture variable

Preparation of Artificial Seawater: Add commercially available marine aquarium salts mixture. Prepare according to manufacturer's recommendations. Mix thoroughly.

Trace Elements Solution:

Composition per liter:

H ₃ BO ₃	2.85g
MnCl ₂ ·4H ₂ O.....	1.8g
Sodium tartrate.....	1.77g
FeSO ₄	1.36g

CoCl ₂ ·6H ₂ O	40.4mg
CuCl ₂ ·2H ₂ O	26.9mg
Na ₂ MoO ₄ ·2H ₂ O	25.2mg
ZnCl ₂	20.8mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Combine components. Mix thoroughly. Adjust pH to 7.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Blastococcus aggregatus*.

***Blastocystis* Egg Medium**

Composition per 1300.0mL:

Homogenized whole egg	783.0mL
Stone's modification of Locke's solution	217.0mL
Horse serum, heat inactivated.....	300.0mL

Homogenized Whole Egg:

Composition per liter:

Whole eggs	18–24
------------------	-------

Preparation of Homogenized Whole Egg: Use fresh fertile eggs, less than 1 week old. Scrub the shells with soap. Let stand in a soap solution for 30 min. Rinse in running water. Soak eggs in 70% ethanol for 15 min. Break the eggs into a sterile container. Homogenize by shaking. Filter through four layers of sterile cheesecloth into a sterile graduated cylinder. Measure out 1.0L.

Stone's Modification of Locke's Solution:

Composition per liter:

NaCl.....	8.0g
Na ₂ HPO ₄	2.0g
NaHCO ₃	0.4g
KH ₂ PO ₄	0.3g
CaCl ₂	0.2g
KCl.....	0.2g
MgCl ₂ ·6H ₂ O	0.01g

Preparation of Stone's Modification of Locke's Solution:

Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Distribute homogenized whole egg in 4.0mL volumes into 16 × 125mm screw-capped test tubes. Place tubes in a slanted position. Inspissate at 80°C (moist heat) for 10 min. Allow to cool. Add 4.5mL of Stone's modification of Locke's solution to the surface of the solidified egg in each tube. Close tubes with a rubber stopper. Place tubes in a press. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically replace rubber stoppers with sterile screw caps. Prior to use, aseptically add 1.5mL of heat-inactivated sterile horse serum to each tube.

Use: For the cultivation of *Anophryoides* species, *Blastocystis hominis*, other *Blastocystis* species, *Endolimax nana*, and *Metanophrys* species.

BLE HiVeg Broth Base with *Listeria* Selective Supplement (Buffered *Listeria* Enrichment HiVeg Broth Base with *Listeria* Selective Supplement)

Composition per liter:

Plant hydrolysate	17.0g
Na ₂ HPO ₄ , anhydrous.....	9.6g

Yeast extract.....	6.0g
NaCl.....	5.0g
Papaic digest of soybean meal.....	3.0g
KH ₂ PO ₄	2.5g
Glucose.....	2.5g
Sodium pyruvate.....	1.0g
<i>Listeria</i> selective supplement.....	5.0mL

pH 7.3 ± 0.2 at 25°C

Listeria Selective Supplement:**Composition per 5.0mL:**

Cycloheximide.....	50.0mg
Nalidixic acid.....	40.0mg
Acriflavin hydrochloride.....	15.0mg

Preparation of *Listeria* Selective Supplement: Add components to distilled/deionized water and bring volume to 5.0mL. Mix thoroughly. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Source: This medium, without *Listeria* selective supplement, is available as a premixed powder from HiMedia.

Preparation of Medium: Add components, except *Listeria* selective supplement, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50.0mL of sterile *Listeria* selective supplement. Mix thoroughly.

Use: For the enrichment and isolation of *Listeria monocytogenes*.

Blood Agar**Composition per liter:**

Agar.....	15.0g
Pancreatic digest of casein.....	15.0g
Papaic digest of soybean meal.....	5.0g
NaCl.....	5.0g
Sheep blood, defibrinated.....	50.0mL

pH 7.6 ± 0.2 at 25°C

Preparation of Medium: Add components, except sheep blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50.0mL of sterile sheep blood. Mix thoroughly. Pour into sterile Petri dishes in 20.0mL volumes.

Use: For the cultivation of fastidious microorganisms.

Blood Agar Base**Composition per liter:**

Agar.....	15.0g
Beef extract.....	10.0g
Peptone.....	10.0g
NaCl.....	5.0g
Sheep blood, defibrinated.....	50.0mL

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add components, except sheep blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Heat with frequent agitation and boil for 1 min to completely dissolve. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–

50°C. Aseptically add 50.0mL of sterile, defibrinated sheep blood. Mix thoroughly and pour into sterile Petri dishes.

Use: For the isolation, cultivation, and detection of hemolytic activity of streptococci and other fastidious microorganisms.

**Blood Agar Base
(ATCC Medium 368)****Composition per liter:**

Beef heart, infusion from.....	500.0g
Agar.....	15.0g
Tryptose.....	10.0g
NaCl.....	5.0g

pH 6.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Heat with frequent agitation and boil for 1 min to completely dissolve. Autoclave for 15 min at 15 psi pressure–121°C. Cool the basal medium to 45°–50°C. Aseptically add sterile, defibrinated blood to a final concentration of 5%. Mix thoroughly and pour into sterile Petri dishes.

Use: For the isolation, cultivation, and detection of hemolytic activity of staphylococci, streptococci, and other fastidious microorganisms.

**Blood Agar Base
(BAM M20a)****Composition per liter:**

Beef heart, infusion from.....	500.0g
Agar.....	15.0g
Tryptose.....	10.0g
NaCl.....	5.0g
Sheep blood, defibrinated.....	50.0mL

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Add components, except sheep blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Heat with frequent agitation and boil for 1 min to completely dissolve. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50.0mL of sterile, defibrinated sheep blood. Mix thoroughly and pour into sterile Petri dishes.

Use: For the isolation, cultivation, and detection of hemolytic activity of staphylococci, streptococci, and other fastidious microorganisms.

**Blood Agar Base
(Infusion Agar)****Composition per liter:**

Agar.....	15.0g
Pancreatic digest of casein.....	13.0g
NaCl.....	5.0g
Yeast extract.....	5.0g
Heart muscle, solids from infusion.....	2.0g
Sheep blood, defibrinated.....	50.0mL

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components, except sheep blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Heat with frequent agitation and boil for 1 min to completely dis-

solve. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50.0mL of sterile, defibrinated sheep blood. Mix thoroughly and pour into sterile Petri dishes.

Use: For the isolation, cultivation, and detection of hemolytic activity of streptococci and other fastidious microorganisms.

Blood Agar Base (Infusion Agar) (FDA Medium M21)

Composition per liter:

Heart muscle, infusion from	375.0g
Agar	15.0g
Thiotone	10.0g
NaCl	5.0g
pH 7.3 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 20 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of a variety of microorganisms. For the preparation of blood agar by the addition of sterile blood.

Blood Agar Base with Blood

Composition per liter:

Agar	15.0g
Beef extract	10.0g
Tryptose	10.0g
NaCl	5.0g
Sheep blood, defibrinated	50.0mL
pH 7.3 ± 0.2 at 25°C	

Source: This medium without blood is available as a premixed powder from HiMedia.

Preparation of Medium: Add components, except sheep blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Heat with frequent agitation and boil for 1 min to completely dissolve. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50.0mL of sterile, defibrinated sheep blood. Mix thoroughly and pour into sterile Petri dishes.

Use: For the isolation, cultivation, and detection of hemolytic activity of streptococci and other fastidious microorganisms.

Blood Agar Base, HiVeg with Blood

Composition per liter:

Agar	15.0g
Plant hydrolysate No. 1	10.0g
Plant infusion	10.0g
NaCl	5.0g
Sheep blood, defibrinated	50.0mL
pH 7.3 ± 0.2 at 25°C	

Source: This medium without blood is available as a premixed powder from HiMedia.

Preparation of Medium: Add components, except sheep blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Heat with frequent agitation and boil for 1 min to completely dissolve. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50.0mL of sterile, defibrinated sheep blood. Mix thoroughly and pour into sterile Petri dishes.

Use: For the isolation, cultivation, and detection of hemolytic activity of streptococci and other fastidious microorganisms.

Blood Agar Base, Sheep

Composition per liter:

Pancreatic digest of casein	14.0g
Agar	12.5g
NaCl	5.0g
Peptone	4.5g
Yeast extract	4.5g
Sheep blood, defibrinated	70.0mL
pH 7.3 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool the basal medium to 45°–50°C. Aseptically add 70.0mL of sterile, defibrinated sheep blood. Pour into sterile Petri dishes.

Use: For giving improved hemolytic reactions with sheep blood.

Blood Agar Base with Low pH, HiVeg with Blood

Composition per liter:

Agar	15.0g
Plant hydrolysate No. 1	10.0g
Plant infusion	10.0g
NaCl	5.0g
Sheep blood, defibrinated	50.0mL
pH 6.8 ± 0.2 at 25°C	

Source: This medium without blood is available as a premixed powder from HiMedia.

Preparation of Medium: Add components, except sheep blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Heat with frequent agitation and boil for 1 min to completely dissolve. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50.0mL of sterile, defibrinated sheep blood. Mix thoroughly and pour into sterile Petri dishes.

Use: For the isolation and growth of a wide variety of microorganisms. For the detection of the hemolytic reactions of streptococci and other fastidious microorganisms. The slightly acid pH of this medium enhances distinct hemolytic reactions.

Blood Agar Base with Peptone

Composition per liter:

Agar	15.0g
Beef extract	10.0g
Peptone	10.0g
NaCl	5.0g
pH 7.3 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For use as a base to which blood can be added; for the isolation, cultivation, and detection of hemolytic activity of streptococci and other fastidious microorganisms.

Blood Agar Base with 2.5% Sodium Chloride**Composition per liter:**

Beef heart, infusion from	500.0g
NaCl	30.0g
Agar	15.0g
Tryptose	10.0g
pH 6.8 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Heat with frequent agitation and boil for 1 min to completely dissolve. Autoclave for 15 min at 15 psi pressure–121°C. Cool the basal medium to 45°–50°C. Aseptically add sterile, defibrinated blood to a final concentration of 5%. Mix thoroughly and pour into sterile Petri dishes.

Use: For the cultivation of *Paracoccus halodenitrificans*.

Blood Agar Base with 3.5% Sodium Chloride**Composition per liter:**

Beef heart, infusion from	500.0g
NaCl	40.0g
Agar	15.0g
Tryptose	10.0g
pH 6.8 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Heat with frequent agitation and boil for 1 min to completely dissolve. Autoclave for 15 min at 15 psi pressure–121°C. Cool the basal medium to 45°–50°C. Aseptically add sterile, defibrinated blood to a final concentration of 5%. Mix thoroughly and pour into sterile Petri dishes.

Use: For the cultivation of *Vibrio costicola*.

Blood Agar Base with Special Peptone**Composition per liter:**

Agar	15.0g
Beef extract	10.0g
Special peptone	10.0g
NaCl	5.0g
Sheep blood, defibrinated	50.0mL
pH 7.3 ± 0.2 at 25°C	

Source: Special peptone (L72) is available from Oxoid Unipath.

Preparation of Medium: Add components, except sheep blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Heat with frequent agitation and boil for 1 min to completely dissolve. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50.0mL of sterile, defibrinated sheep blood. Mix thoroughly and pour into sterile Petri dishes.

Use: For the isolation, cultivation, and detection of hemolytic activity of streptococci and other fastidious microorganisms.

**Blood Agar Base No. 2
(BAM M22)****Composition per 1004.0mL:**

Agar	12.0g
Proteose peptone	15.0g
NaCl	5.0g
Yeast extract	5.0g
Liver digest	2.5g

Horse blood, defibrinated	50.0mL
FBP solution	4.0mL
pH 7.4 ± 0.2 at 25°C	

FBP Solution:**Composition per 30.0mL:**

FeSO ₄	0.25g
NaHSO ₃	0.25g
Sodium pyruvate	0.25g

Preparation of FBP Solution: Add components to distilled/deionized water and bring volume to 30.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except horse blood and FBP solution, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 48°C. Aseptically add 50.0mL of sterile horse blood. Mix thoroughly. Aseptically add 4.0mL sterile FBP solution. Mix thoroughly. Pour into sterile Petri dishes in 20.0mL volumes.

Use: For the cultivation of *Brucella* spp. and other fastidious bacteria.

Blood Agar Base No. 2, HiVeg with Blood**Composition per liter:**

Agar	15.0g
Plant peptone No. 3	15.0g
NaCl	5.0g
Yeast extract	5.0g
Plant extract No. 2	2.5g
Horse blood, defibrinated	70.0mL
Selective supplement	2 vials
pH 7.4 ± 0.2 at 25°C	

Source: This medium without blood or supplement is available as a premixed powder from HiMedia.

Preparation of Medium: Add components, except horse blood and selective supplement, to distilled/deionized water and bring volume to 930.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 70.0mL of sterile horse blood. Mix thoroughly. Aseptically add 2 vials of rehydrated selective supplement. For *Brucella* spp. use *Brucella* selective supplement. For *Campylobacter* spp. use *Campylobacter* supplement-I (Blaser-Wang), or *Campylobacter* Supplement II (Butzler), or *Campylobacter* Supplement III (Skirrow), or *Campylobacter* Growth Supplement. For streptococci use Strepto supplement. Mix thoroughly. Pour into sterile Petri dishes in 20.0mL volumes.

Use: For the cultivation of *Brucella* spp., *Campylobacter* spp., *Streptococcus* spp., and other fastidious bacteria.

Blood Agar Base No. 2 with 1.2% Agar, HiVeg™**Composition per liter:**

Plant peptone No. 3	15.0g
Agar	12.0g
NaCl	5.0g
Yeast extract	5.0g
Plant extract No. 2	2.5g
Horse blood, defibrinated	70.0mL
pH 7.4 ± 0.2 at 25°C	

Source: This medium without blood is available as a premixed powder from HiMedia.

Preparation of Medium: Add components, except horse blood and selective supplement, to distilled/deionized water and bring volume to 930.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 70.0mL of sterile horse blood. Mix thoroughly. Aseptically add 2 vials of rehydrated selective supplement. For *Brucella* spp. use *Brucella* selective supplement. For *Campylobacter* spp. use *Campylobacter* supplement-I (Blaser-Wang), or *Campylobacter* Supplement II (Butzler), or *Campylobacter* Supplement III (Skirrow), or *Campylobacter* Growth Supplement. For streptococci use Strepto supplement. Mix thoroughly. Pour into sterile Petri dishes in 20.0mL volumes.

Use: For the cultivation of *Brucella* spp., *Campylobacter* spp., *Streptococcus* spp., and other fastidious bacteria.

Blood Agar, Diphasic

Composition per 800.0mL:

Lean beef, desiccated.....	25.0g
Agar	10.0g
Neopeptone	10.0g
NaCl.....	2.5g
Locke solution.....	200.0mL
Rabbit blood, defibrinated	100.0mL
pH 7.2–7.4 at 25°C	

Locke Solution:

Composition per liter:

NaCl.....	8.0g
Glucose	2.5g
KH ₂ PO ₄	0.3g
KCl.....	0.2g
CaCl ₂ ·2H ₂ O.....	0.2g

Preparation of Locke Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add beef to 500.0mL of distilled/deionized water. Let stand for 60 min. Gently heat and bring to 80°C for 5 min. Filter through Whatman #1 filter paper. To filtrate, add remaining components, except Locke solution and rabbit blood. Mix thoroughly. Adjust pH to 7.2–7.4 with NaOH. Autoclave for 20 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile rabbit blood. Mix thoroughly. Aseptically distribute into sterile tubes in 5.0mL volumes. Allow tubes to cool in a slanted position. Immediately prior to inoculation, overlay agar in each tube with 2.0mL of sterile Locke solution.

Use: For the cultivation of *Trypanosoma* species and *Leishmania* species.

Blood Agar, Diphasic Base Medium

Composition per 750.0mL:

Beef.....	25.0g
Agar	10.0g
Neopeptone	10.0g
NaCl.....	2.5g
pH 7.2–7.4 at 25°C	

Preparation of Medium: Trim beef to remove fat. Add 25.0g of lean beef to 250.0mL of distilled/deionized water. Gently heat and bring to boiling. Boil for 2–3 min. Filter through Whatman #2 filter paper. Add agar, neopeptone, and NaCl to filtrate. Bring volume to 750.0mL with distilled/deionized water. Mix thoroughly. Adjust pH to 7.2–7.4. Gently heat and bring to boiling. Autoclave for 15 min at 15

psi pressure–121°C. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Trypanosoma* species.

Blood Agar with Low pH

Composition per liter:

Beef heart, solids from infusion.....	500.0g
Agar	15.0g
Tryptose	10.0g
NaCl.....	5.0g
Sheep blood, defibrinated	50.0mL
pH 6.8 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components, except sheep blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Heat with frequent agitation and boil for 1 min to completely dissolve. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50.0mL of sterile, defibrinated sheep blood. Mix thoroughly and pour into sterile Petri dishes.

Use: For the isolation and growth of a wide variety of microorganisms. For the detection of the hemolytic reactions of streptococci and other fastidious microorganisms. The slightly acid pH of this medium enhances distinct hemolytic reactions.

Blood Agar No. 2

Composition per liter:

Proteose peptone.....	15.0g
Agar	12.0g
NaCl.....	5.0g
Yeast extract.....	5.0g
Liver digest	2.5g
pH 7.4 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems and Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Heat with frequent agitation and boil for 1 min to completely dissolve. Autoclave for 15 min at 15 psi pressure–121°C. Cool the basal medium to 45°–50°C. Aseptically add sterile, defibrinated blood to a final concentration of 7%. Pour into sterile Petri dishes.

Use: For the isolation, cultivation, and detection of hemolytic activity of streptococci, pneumococci, and other particularly fastidious microorganisms.

Blood Base Agar (LMG Medium 45)

Composition per liter:

Agar	15.0g
Lab-Lemco beef extract.....	10.0g
Special peptones	10.0g
NaCl.....	5.0g
pH 7.1 ± 0.2 at 25°C	

Source: Special peptones is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring

to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of heterotrophic bacteria.

Blood Base Agar with Charcoal (LMG Medium 46)

Composition per liter:

Agar	15.0g
Lab-Lemco beef extract	10.0g
Special peptones	10.0g
NaCl	5.0g
Charcoal	2.0g

pH 7.1 ± 0.2 at 25°C

Source: Special peptones is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of various bacteria.

Blood Base Agar with Horse Blood (LMG Medium 47)

Composition per liter:

Agar	15.0g
Lab-Lemco beef extract	10.0g
Special peptones	10.0g
NaCl	5.0g
Horse blood, sterile defibrinated.....	50.0mL

pH 7.1 ± 0.2 at 25°C

Source: Special peptones is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add components, except horse blood, to 950.0mL distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50.0mL sterile horse blood. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of fastidious bacteria.

Blood Base Agar with Horse Blood, Fumarate, and Formate (LMG Medium 48)

Composition per liter:

Agar	15.0g
Lab-Lemco beef extract	10.0g
Special peptones, Oxoid	10.0g
NaCl	5.0g
Sodium fumarate.....	3.0g
Sodium formate.....	2.0g
Horse blood, sterile defibrinated.....	50.0mL

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components, except horse blood, to 950.0mL distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50.0mL sterile

horse blood. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of fastidious bacteria.

Blood Free *Campylobacter* Selectivity HiVeg Agar Base

Composition per liter:

Agar	12.0g
Plant extract	10.0g
Plant peptone	10.0g
NaCl	5.0g
Charcoal, bacteriological	4.0g
Plant hydrolysate	3.0g
Synthetic detergent No. III	1.0g
FeSO ₄	0.25g
Sodium pyruvate.....	0.25g
Sodium deoxycholate solution.....	10.0mL
Cefazolin solution.....	1.0mL

pH 7.4 ± 0.2 at 25°C

Source: This medium, without deoxycholate and cefazolin solutions, is available as a premixed powder from HiMedia.

Sodium Deoxycholate Solution:

Composition per 100.0mL:

Sodium deoxycholate.....	10.0g
--------------------------	-------

Preparation of Sodium Deoxycholate Solution: Add sodium deoxycholate to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Cefazolin Solution:

Composition per 10.0mL:

Cefazolin.....	0.1g
----------------	------

Preparation of Cefazolin Solution: Add cefazolin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except cefazolin solution and sodium deoxycholate solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Heat with frequent agitation and boil for 1 min to completely dissolve. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Add 10.0mL of sterile sodium deoxycholate solution and 1.0mL of sterile cefazolin solution. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the selective isolation of *Campylobacter* species, especially *Campylobacter jejuni* from human feces.

Blood Glucose Cystine Agar

Composition per 100.0mL:

Nutrient agar	85.0mL
Glucose cystine solution.....	10.0mL
Human blood, fresh	5.0mL

pH 6.8 ± 0.2 at 25°C

Nutrient Agar:

Composition per liter:

Agar	15.0g
Pancreatic digest of gelatin.....	5.0g
Beef extract.....	3.0g

Source: Nutrient agar is available as a premixed powder from BD Diagnostic Systems.

Preparation of Nutrient Agar: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Glucose Cystine Solution:

Composition per 50.0mL:

Glucose	12.5g
L-Cystine-HCl.....	0.5g

Preparation of Glucose Cystine Solution: Add components to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: To 85.0mL of cooled, sterile agar solution, aseptically add 10.0mL of sterile glucose cystine solution and 5.0mL of human blood. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Francisella tularensis*.

BM Medium (DSMZ Medium 1192)

Composition per liter:

NaCl	19.45g
MgCl ₂	8.8g
Peptone.....	5.0g
Na ₂ SO ₃	3.24g
CaCl ₂	1.8g
Yeast extract.....	1.0g
KCl.....	0.55g
NaHCO ₃	0.16g
Ferric citrate.....	0.1g
KBr.....	0.08g
SrCl ₂	0.03g
H ₃ BO ₃	0.02g
Na ₂ HPO ₄	8.0mg
Na ₂ SiO ₃	4.0mg
NaF.....	2.4mg
NH ₄ NO ₃	1.6mg
Biotin	0.02mg
Vitamin B ₁₂	0.001mg
Methanol.....	4.0mL

pH 7.6 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Bacillus methanolicus*.

Bosea Medium (DSMZ Medium 1052)

Composition per liter:

Agar	15.0g
Yeast extract.....	10.0g
ACES	10.0g
Activated charcoal	2.0g

pH 6.9 ± 0.2 at 25°C

Preparation of Medium: Add components, except agar, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.9. Add agar. Gently heat while stirring and bring to boiling.

Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Bosea* spp.

Brain Heart Infusion Agar (BAM M24 Medium 2)

Composition per liter:

Agar	15.0g
Pancreatic digest of gelatin.....	14.5g
Brain heart, solids from infusion.....	6.0g
Peptic digest of animal tissue.....	6.0g
NaCl.....	5.0g
Glucose.....	3.0g
Na ₂ HPO ₄	2.5g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks while shaking to distribute precipitate. Autoclave for 15 min at 15 psi pressure–121°C. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the cultivation of a wide variety of fastidious microorganisms, including bacteria, yeasts, and molds.

Brain Heart Infusion Agar 0.7% (BHI Agar 0.7%) (BAM M23)

Composition per liter:

Pancreatic digest of gelatin.....	14.5g
Agar	7.0g
Brain heart, solids from infusion.....	6.0g
Peptic digest of animal tissue.....	6.0g
NaCl.....	5.0g
Glucose.....	3.0g
Na ₂ HPO ₄	2.5g

pH 5.3 ± 0.2 at 25°C

Source: This medium without agar is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components, except agar, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 5.3 with 1N HCl. Mix thoroughly. Add agar. Gently heat and bring to boiling. Distribute into tubes. Autoclave for 10 min at 15 psi pressure–121°C.

Use: For the detection of staphylococcal enterotoxin.

Brain Heart Infusion Broth (BHI Broth) (BAM M24 Medium 2)

Composition per liter:

Pancreatic digest of gelatin.....	14.5g
Brain heart, solids from infusion.....	6.0g
Peptic digest of animal tissue.....	6.0g
NaCl.....	5.0g
Glucose.....	3.0g
Na ₂ HPO ₄	2.5g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks while shaking to distribute precipitate. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of a wide variety of microorganisms, including bacteria, yeasts, and molds, especially fastidious species.

Blue-Green Agar

Composition per liter:

Agar	10.0g
NaNO ₃	1.5g
MgSO ₄ ·7H ₂ O	0.075g
K ₂ HPO ₄	0.04g
CaCl ₂ ·2H ₂ O.....	0.036g
Na ₂ CO ₃	0.02g
Citric acid.....	6.0mg
Ferric ammonium citrate.....	6.0mg
EDTA disodium salt.....	1.0mg
Vitamin B ₁₂ solution.....	50.0mL
Trace metal mix A5.....	1.0mL

pH 7.1 ± 0.2 at 25°C

Trace Metal Mix A5:

Composition per liter:

H ₃ BO ₃	2.86g
MnCl ₂ ·4H ₂ O.....	1.81g
Na ₂ MoO ₄ ·2H ₂ O	0.39g
ZnSO ₄ ·7H ₂ O	0.222g
CuSO ₄ ·5H ₂ O.....	0.079g
Co(NO ₃) ₂ ·6H ₂ O.....	0.049g

Preparation of Trace Metal Mix A5: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Vitamin B₁₂ Solution:

Composition per 50.0mL:

Vitamin B ₁₂	0.01g
-------------------------------	-------

Preparation of Vitamin B₁₂ Solution: Add vitamin B₁₂ to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except vitamin B₁₂ solution, to glass-distilled water and bring volume to 950.0mL. Mix thoroughly. Heat gently and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool the basal medium to 45°–50°C. Add vitamin B₁₂ solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Synechococcus* species.

Blue-Green Broth

Composition per liter:

NaNO ₃	1.5g
MgSO ₄ ·7H ₂ O	0.075g
K ₂ HPO ₄	0.04g
CaCl ₂ ·2H ₂ O.....	0.036g
Na ₂ CO ₃	0.02g
Citric acid.....	6.0mg
Ferric ammonium citrate.....	6.0mg

EDTA disodium salt.....	1.0mg
Vitamin B ₁₂ solution.....	50.0mL
Trace metal mix A5	1.0mL

pH 7.1 ± 0.2 at 25°C

Trace Metal Mix A5:

Composition per liter:

H ₃ BO ₃	2.86g
MnCl ₂ ·4H ₂ O	1.81g
Na ₂ MoO ₄ ·2H ₂ O	0.39g
ZnSO ₄ ·7H ₂ O	0.222g
CuSO ₄ ·5H ₂ O.....	0.079g
Co(NO ₃) ₂ ·6H ₂ O.....	0.049g

Preparation of Trace Metal Mix A5: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Vitamin B₁₂ Solution:

Composition per 50.0mL:

Vitamin B ₁₂	0.01g
-------------------------------	-------

Preparation of Vitamin B₁₂ Solution: Add vitamin B₁₂ solution to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except vitamin B₁₂, to glass distilled water and bring volume to 950.0mL. Mix thoroughly. Heat gently and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool the basal medium to 45°–50°C. Add vitamin B₁₂ solution. Mix thoroughly. Distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Synechococcus* species.

Blue-Green Nitrogen-Fixing Agar

Composition per liter:

Noble agar.....	10.0g
MgSO ₄ ·7H ₂ O	0.075g
K ₂ HPO ₄	0.04g
CaCl ₂ ·2H ₂ O	0.036g
Na ₂ CO ₃	0.02g
Citric acid.....	6.0mg
Ferric ammonium citrate.....	6.0mg
EDTA disodium salt.....	1.0mg
Trace metal mix A5	1.0mL

pH 7.1 ± 0.2 at 25°C

Trace Metal Mix A5:

Composition per liter:

H ₃ BO ₃	2.86g
MnCl ₂ ·4H ₂ O	1.81g
Na ₂ MoO ₄ ·2H ₂ O	0.39g
ZnSO ₄ ·7H ₂ O	0.222g
CuSO ₄ ·5H ₂ O.....	0.079g
Co(NO ₃) ₂ ·6H ₂ O.....	0.049g

Preparation of Trace Metal Mix A5: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to glass-distilled water and bring volume to 1.0L. Mix thoroughly. Heat gently and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Check pH after autoclaving and readjust if necessary. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Calothrix*, *Fischerella*, and *Nostoc* species.

Blue-Green Nitrogen-Fixing Broth**Composition per liter:**

MgSO ₄ ·7H ₂ O	0.075g
K ₂ HPO ₄	0.04g
CaCl ₂ ·2H ₂ O	0.036g
Na ₂ CO ₃	0.02g
Citric acid	6.0mg
Ferric ammonium citrate	6.0mg
EDTA disodium salt	1.0mg
Trace metal mix A5	1.0mL

pH 7.1 ± 0.2 at 25°C

Trace Metal Mix A5:**Composition per liter:**

H ₃ BO ₃	2.86g
MnCl ₂ ·4H ₂ O	1.81g
Na ₂ MoO ₄ ·2H ₂ O	0.39g
ZnSO ₄ ·7H ₂ O	0.222g
CuSO ₄ ·5H ₂ O	0.079g
Co(NO ₃) ₂ ·6H ₂ O	0.049g

Preparation of Trace Metal Mix A5: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to glass-distilled water and bring volume to 1.0L. Mix thoroughly. Heat gently and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Check pH after autoclaving and readjust if necessary. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Calothrix*, *Fischerella*, and *Nostoc* species.

BMM Agar**Composition per liter:**

Agar	15.0g
FeSO ₄ ·7H ₂ O	10.0g
K ₂ HPO ₄	7.0g
MnSO ₄ ·H ₂ O	6.2g
(NH ₄) ₂ SO ₄	3.0g
KH ₂ PO ₄	2.0g
NaCl	2.0g
MgSO ₄ ·7H ₂ O	0.5g
Yeast extract	0.1g
Thiamine-HCl	100.0µg
Biotin	10.0µg
Methanol	10.0mL

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.2. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Butyribacterium methylotrophicum*.

BMM Broth**Composition per liter:**

FeSO ₄ ·7H ₂ O	10.0g
K ₂ HPO ₄	7.0g
MnSO ₄ ·H ₂ O	6.2g
(NH ₄) ₂ SO ₄	3.0g
KH ₂ PO ₄	2.0g
NaCl	2.0g

MgSO ₄ ·7H ₂ O	0.5g
Yeast extract	0.1g
Thiamine-HCl	100.0µg
Biotin	10.0µg
Methanol	10.0mL

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Butyribacterium methylotrophicum*.

**BMPA-α Medium
(Edelstein BMPA-α Medium)****Composition per liter:**

Agar	13.0g
Yeast extract	10.0g
ACES buffer (2-[(2-amino-2-oxoethyl)-amino]-ethane sulfonic acid)	2.0g
Charcoal, activated	2.0g
α-Ketoglutarate	0.2g
Fe ₄ (P ₂ O ₇) ₃ ·9H ₂ O	0.05g
Antibiotic inhibitor	10.0mL
L-Cysteine-HCl-H ₂ O solution	10.0mL

pH 6.9 ± 0.2 at 25°C

Source: This medium is available as premixed vials from Oxoid Unipath.

Antibiotic Inhibitor:**Composition per 10.0mL:**

Anisomycin	0.08g
Cefamandole	4.0mg
Polymyxin B	80,000U

Preparation of Antibiotic Inhibitor: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

L-Cysteine-HCl-H₂O Solution:**Composition per 10.0mL:**

L-Cysteine-HCl-H ₂ O	0.08g
---------------------------------	-------

Preparation of L-Cysteine-HCl-H₂O Solution: Add L-cysteine-HCl-H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except antibiotic inhibitor and L-cysteine-HCl-H₂O solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Adjust medium to pH 6.9 with 1N KOH. Heat gently and bring to boiling for 1 min. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Add 10.0mL of the sterile L-cysteine-HCl-H₂O solution and 10.0mL of the sterile antibiotic solution. Mix thoroughly. Pour into sterile Petri dishes with constant agitation to keep charcoal in suspension.

Use: For the selective isolation and cultivation of *Legionella pneumophila* and other *Legionella* species.

BMPA-α Medium**(Semiselective Medium for *Legionella pneumophila*)****Composition per liter:**

Agar	15.0g
Yeast extract	10.0g

ACES buffer (2-[(2-amino-2-oxoethyl)-amino]-ethane sulfonic acid).....	10.0g
Charcoal, activated.....	2.0g
α -Ketoglutarate.....	1.0g
$\text{Fe}_4(\text{P}_2\text{O}_7)_3 \cdot 9\text{H}_2\text{O}$	0.25g
Antibiotic inhibitor.....	10.0mL
L-Cysteine-HCl-H ₂ O solution.....	10.0mL
pH 6.9 \pm 0.2 at 25°C	

Antibiotic Inhibitor:**Composition per 10.0mL:**

Anisomycin.....	0.08g
Cefamandole.....	4.0mg
Polymyxin B.....	80,000U

Preparation of Antibiotic Inhibitor: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

L-Cysteine-HCl-H₂O Solution:**Composition per 10.0mL:**

L-Cysteine-HCl-H ₂ O.....	0.4g
--------------------------------------	------

Preparation of L-Cysteine-HCl-H₂O Solution: Add L-cysteine-HCl-H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except antibiotic inhibitor and L-cysteine-HCl-H₂O solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Adjust medium to pH 6.9 with 1N KOH. Heat gently and bring to boiling for 1 min. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Add 10.0mL of the sterile L-cysteine-HCl-H₂O solution and 10.0mL of the sterile antibiotic solution. Mix thoroughly. Pour into sterile Petri dishes with constant agitation to keep charcoal in suspension.

Use: For the selective isolation and cultivation of *Legionella pneumophila* and other *Legionella* species.

BMS Agar**Composition per liter:**

Agar.....	20.0g
L-Malic acid.....	2.5g
Sucrose.....	2.5g
KOH.....	2.0g
Potato extract solution.....	950.0mL
Bromthymol Blue.....	1.0mL
Vitamin solution.....	1.0mL

pH 7.0 \pm 0.2 at 25°C

Potato Extract Solution:**Composition per liter:**

Potatoes, washed, peeled, and sliced.....	200.0g
---	--------

Preparation of Potato Extract Solution: Wash, peel, and slice several large potatoes. Place the potato slices in a gauze bag. Place the bag with the potatoes in 1.0L of distilled/deionized water. Boil for 30 min. Filter through cotton.

Bromthymol Blue Solution:**Composition per 100.0mL:**

Bromthymol Blue.....	0.5g
Ethanol, 95%.....	100.0mL

Preparation of Bromthymol Blue Solution: Add Bromthymol Blue to 100.0mL of 95% ethanol. Mix thoroughly.

Vitamin Solution:**Composition per 100.0mL:**

Biotin.....	10.0g
Pyridoxine.....	20.0mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Dissolve 2.5g of L-malic acid in 50.0mL of distilled/deionized water. Add 1.0mL of Bromthymol Blue solution. Adjust pH to 7.0 by adding KOH so that the solution is green. Add 950.0mL of potato extract solution. Mix thoroughly. Add 20.0g of agar and 2.5g of sucrose. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 1.0mL of sterile vitamin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Azospirillum lipoferum*.

BNS

See: **Benzoate Nitrate Salts Medium**

**Bogoriella Medium
(DSMZ Medium 785)****Composition per liter:**

NaCl.....	40.0g
Na_2CO_3	10.0g
Glucose.....	10.0g
Peptone.....	5.0g
Yeast extract.....	5.0g
KH_2PO_4	1.0g
$\text{MgSO}_4 \cdot 7\text{H}_2\text{O}$	0.2g

pH 9.6 \pm 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Bogoriella caseilytica*.

Bolton Broth**Composition per 505mL:**

Bolton selective enrichment broth base.....	500.0mL
Horse blood, lysed.....	25.0mL
Bolton selective supplement solution.....	5.0mL

pH 7.4 \pm 0.2 at 25°C

Bolton Selective Enrichment Broth Base:**Composition per liter:**

Peptone.....	10.0g
Lactalbumin hydrolysate.....	5.0g
Yeast extract.....	5.0g
NaCl.....	5.0g
α -Ketoglutarate.....	1.0g
Na-pyruvate.....	0.5g
Na-metabisulfite.....	0.5g
Na_2CO_3	0.6g
Hemin.....	0.01g

Preparation of Bolton Selective Enrichment Broth Base: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C.

Bolton Broth Supplement Solution:**Composition** per 5.0mL

Vancomycin	10.0mg
Cefoperazone	10.0mg
Trimethoprim	10.0mg
Cycloheximide	10.0mg
Ethanol	2.5mL

Preparation of Bolton Supplement Solution: Add antibiotics to 2.5mL ethanol. Mix thoroughly. Bring volume to 5.0mL with distilled/deionized water. Mix thoroughly. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: Aseptically combine 500.0mL warm Bolton selective enrichment broth base, 25.0mL lysed horse blood, and 5.0mL Bolton selective supplement solution.

Use: For the enrichment of *Campylobacter* spp. from foods.

Bonner-Addicott Medium**Composition** per liter:

Agar	25.0g
Glucose	20.0g
Ca(NO ₃) ₂ ·4H ₂ O.....	0.236g
KNO ₃	0.081g
KCl.....	0.065g
MgSO ₄ ·7H ₂ O	0.036g
KH ₂ PO ₄	0.012g
Ferric tartrate.....	1.0mg

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of a variety of fungi.

Bordetella pertussis* Selective Medium with Bordet-Gengou Agar Base*Composition** per 1210.0mL:

Bordet-Gengou agar base.....	1.0L
Horse blood, defibrinated	200.0mL
Cephalexin solution	10.0mL
pH 6.7± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Oxoid Unipath.

Bordet-Gengou Agar Base:**Composition** per liter:

Agar	20.0g
NaCl.....	5.5g
Pancreatic digest of casein.....	5.0g
Peptic digest of animal tissue.....	5.0g

Preparation of Bordet-Gengou Agar Base: Add components to 1.0L of 1% glycerol solution. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C.

Cephalexin Solution:**Composition** per 10.0mL:

Cephalexin	0.04g
------------------	-------

Preparation of Cephalexin Solution: Add cephalexin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Aseptically add 10.0mL of sterile cephalexin solution and 200.0mL of defibrinated horse blood to 1.0L Bordet-Gengou agar base. Mix thoroughly and pour into sterile Petri dishes.

Use: For the selective isolation and presumptive identification of *Bordetella pertussis* and *Bordetella parapertussis*. *Bordetella pertussis* appears as small, nearly transparent, “bisected pearl-like” colonies.

Bordetella pertussis* Selective Medium with Charcoal Agar Base*Composition** per 1110.0mL:

Charcoal agar base.....	1.0L
Horse blood, defibrinated	100.0mL
Cephalexin solution	10.0mL
pH 6.7± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Oxoid Unipath.

Charcoal Agar Base:**Composition** per liter:

Agar	12.0g
Beef extract	10.0g
Starch	10.0g
NaCl.....	5.0g
Pancreatic digest of casein.....	5.0g
Peptic digest of animal tissue	5.0g
Charcoal.....	4.0g
Nicotinic acid.....	1.0mg

Preparation of Charcoal Agar Base: Add components of charcoal agar base to distilled/deionized water and bring volume to 1.0L. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C.

Cephalexin Solution:**Composition** per 10.0mL:

Cephalexin	0.04g
------------------	-------

Preparation of Cephalexin Solution: Add cephalexin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Aseptically add 10.0mL of sterile cephalexin solution and 100.0mL of defibrinated horse blood to charcoal agar base. Mix thoroughly and pour into sterile Petri dishes.

Use: For the selective isolation and presumptive identification of *Bordetella pertussis* and *Bordetella parapertussis*. *Bordetella pertussis* appears as small, pale, shiny colonies.

Bordet-Gengou Agar**Composition** per liter:

Agar	20.0g
Glycerol	10.0g
NaCl.....	5.5g
Pancreatic digest of casein.....	5.0g
Peptic digest of animal tissue	5.0g
Potato, solids from infusion.....	4.5g
Rabbit blood.....	200.0mL
pH 6.7± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Oxoid Unipath and BD Diagnostic Systems.

Preparation of Medium: Add 10.0g of glycerol to 980.0mL of distilled/deionized water. Add other components, except rabbit blood, to the glycerol solution. Mix thoroughly. Heat with occasional agitation of the medium. Boil for 1 min. Autoclave for 15 min at 15 psi pressure–121°C. Cool medium to 50°C. Aseptically add 200.0mL of rabbit blood (prewarmed to 35°C) to a concentration of 15–30%. 150.0–200.0mL of sterile, defibrinated horse blood may be used in place of rabbit blood. Mix thoroughly and pour plates or prepare slants.

Use: For the detection and isolation of *Bordetella pertussis* and *Bordetella parapertussis* from clinical specimens. The medium is rendered selective by the addition of methicillin. *Bordetella pertussis* appears as small (<1mm), smooth, pearl-like colonies surrounded by a narrow zone of hemolysis. *Bordetella parapertussis* appears as brown, nonshiny colonies with a green-black coloration on the reverse side. *Bordetella bronchiseptica* appears as brown, nonshiny, moderately sized colonies with a roughly pitted surface.

Bordet-Gengou Agar Base with Rabbit Blood and Glycerol

Composition per liter:

Potatoes, infusion from	125.0g
Agar	20.0g
Peptic digest of animal tissue.....	10.0g
NaCl.....	5.5g
Rabbit blood.....	200.0mL
Glycerol	10.0mL
pH 6.7± 0.2 at 25°C	

Source: This medium without glycerol and blood is available as a premixed powder from HiMedia.

Preparation of Medium: Add 10.0g of glycerol to 790.0mL of distilled/deionized water. Add other components, except rabbit blood, to the glycerol solution. Mix thoroughly. Heat with occasional agitation of the medium. Boil for 1 min. Autoclave for 15 min at 15 psi pressure–121°C. Cool medium to 50°C. Aseptically add 200.0mL of rabbit blood (prewarmed to 35°C). Note: 150.0–200.0mL of sterile, defibrinated horse blood may be used in place of rabbit blood. Mix thoroughly and pour plates or prepare slants.

Use: For the detection and isolation of *Bordetella pertussis* and *Bordetella parapertussis* from clinical specimens. *Bordetella pertussis* appears as small (<1mm), smooth, pearl-like colonies surrounded by a narrow zone of hemolysis. *Bordetella parapertussis* appears as brown, nonshiny colonies with a green-black coloration on the reverse side. *Bordetella bronchiseptica* appears as brown, nonshiny, moderately sized colonies with a roughly pitted surface.

Bordet-Gengou Agar Base with 1.6% Agar

Composition per liter:

Potatoes, infusion from	125.0g
Agar	16.0g
Peptic digest of animal tissue.....	10.0g
NaCl.....	5.5g
Rabbit blood.....	200.0mL
Glycerol	10.0mL
pH 6.7± 0.2 at 25°C	

Source: This medium without glycerol and blood is available as a premixed powder from HiMedia.

Preparation of Medium: Add 10.0g of glycerol to 790.0mL of distilled/deionized water. Add other components, except rabbit blood, to the glycerol solution. Mix thoroughly. Heat with occasional agitation of the medium. Boil for 1 min. Autoclave for 15 min at 15 psi pressure–121°C. Cool medium to 50°C. Aseptically add 200.0mL of rabbit blood (prewarmed to 35°C). 150.0–200.0mL of sterile, defibrinated horse blood may be used in place of rabbit blood. Mix thoroughly and pour plates or prepare slants.

Use: For the detection and isolation of *Bordetella pertussis* and *Bordetella parapertussis* from clinical specimens. *Bordetella pertussis* appears as small (<1mm), smooth, pearl-like colonies surrounded by a narrow zone of hemolysis. *Bordetella parapertussis* appears as brown, nonshiny colonies with a green-black coloration on the reverse side. *Bordetella bronchiseptica* appears as brown, nonshiny, moderately sized colonies with a roughly pitted surface.

Bordet-Gengou HiVeg Agar Base with 1.6% Agar

Composition per liter:

Potatoes, infusion from	125.0g
Agar	16.0g
Plant peptone	10.0g
NaCl.....	5.5g
Rabbit blood.....	200.0mL
Glycerol	10.0mL
pH 6.7± 0.2 at 25°C	

Source: This medium without glycerol and blood is available as a premixed powder from HiMedia.

Preparation of Medium: Add 10.0g of glycerol to 790.0mL of distilled/deionized water. Add other components, except rabbit blood, to the glycerol solution. Mix thoroughly. Heat with occasional agitation of the medium. Boil for 1 min. Autoclave for 15 min at 15 psi pressure–121°C. Cool medium to 50°C. Aseptically add 200.0mL of rabbit blood (prewarmed to 35°C). 150.0–200.0mL of sterile, defibrinated horse blood may be used in place of rabbit blood. Mix thoroughly and pour plates or prepare slants.

Use: For the detection and isolation of *Bordetella pertussis* and *Bordetella parapertussis* from clinical specimens. *Bordetella pertussis* appears as small (<1mm), smooth, pearl-like colonies surrounded by a narrow zone of hemolysis. *Bordetella parapertussis* appears as brown, nonshiny colonies with a green-black coloration on the reverse side. *Bordetella bronchiseptica* appears as brown, nonshiny, moderately sized colonies with a roughly pitted surface.

Bordet-Gengou HiVeg Agar Base with Rabbit Blood and Glycerol

Composition per liter:

Potatoes, infusion from	125.0g
Agar	20.0g
Plant peptone	10.0g
NaCl.....	5.5g
Rabbit blood.....	200.0mL
Glycerol	10.0mL
pH 6.7± 0.2 at 25°C	

Source: This medium without glycerol and blood is available as a premixed powder from HiMedia.

Preparation of Medium: Add 10.0g of glycerol to 790.0mL of distilled/deionized water. Add other components, except rabbit blood, to the glycerol solution. Mix thoroughly. Heat with occasional agitation of the medium. Boil for 1 min. Autoclave for 15 min at 15 psi pressure–

121°C. Cool medium to 50°C. Aseptically add 200.0mL of rabbit blood (prewarmed to 35°C). Note: 150.0–200.0mL of sterile, defibrinated horse blood may be used in place of rabbit blood. Mix thoroughly and pour plates or prepare slants.

Use: For the detection and isolation of *Bordetella pertussis* and *Bordetella parapertussis* from clinical specimens. *Bordetella pertussis* appears as small (<1mm), smooth, pearl-like colonies surrounded by a narrow zone of hemolysis. *Bordetella parapertussis* appears as brown, nonshiny colonies with a green-black coloration on the reverse side. *Bordetella bronchiseptica* appears as brown, nonshiny, moderately sized colonies with a roughly pitted surface.

Bordet-Gengou Medium (ATCC Medium 35)

Composition per liter:

Agar	20.0g
Glycerol	10.0g
Proteose peptone	10.0g
NaCl	5.5g
Pancreatic digest of casein	5.0g
Peptic digest of animal tissue.....	5.0g
Potato, solids from infusion	4.5g
Rabbit blood.....	150.0mL

pH 6.7± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath and BD Diagnostic Systems.

Preparation of Medium: Add 10.0g of glycerol to 980.0mL of distilled/deionized water. Add other components, except rabbit blood, to the glycerol solution. Mix thoroughly. Heat with occasional agitation of the medium. Boil for 1 min. Autoclave for 15 min at 15 psi pressure–121°C. Cool medium to 50°C. Aseptically add 150.0mL of rabbit blood (prewarmed to 35°C). Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes. Allow tubes to cool in a slanted position.

Use: For the detection and isolation of *Bordetella pertussis* and *Bordetella parapertussis* from clinical specimens. The medium is rendered selective by the addition of methicillin. *Bordetella pertussis* appears as small (<1mm), smooth, pearl-like colonies surrounded by a narrow zone of hemolysis. *Bordetella parapertussis* appears as brown, nonshiny colonies with a green-black coloration on the reverse side. *Bordetella bronchiseptica* appears as brown, nonshiny, moderately sized colonies with a roughly pitted surface.

Bordet-Gengou Medium (LMG Medium 23)

Composition per liter:

Agar	20.0g
Proteose peptone	10.0g
NaCl	5.5g
Pancreatic digest of casein.....	5.0g
Peptic digest of animal tissue.....	5.0g
Potato, solids from 125g infusion	4.5g
Rabbit blood, sterile defibrinated.....	150.0mL
Glycerol	10.0mL

pH 6.7± 0.2 at 25°C

Preparation of Medium: Add 10.0mL of glycerol to 850.0mL of distilled/deionized water. Add the other components, except rabbit blood, to the glycerol solution. Mix thoroughly. Heat with occasional agitation of the medium. Boil for 1 min. Autoclave for 15 min at 15 psi

pressure–121°C. Cool medium to 45–50°C. Aseptically add 150.0mL of rabbit blood (prewarmed to 35°C). Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the detection and isolation of *Pseudomonas pertucinogena*.

Borrelia Medium

Composition per 370.0mL:

Solution 4.....	240.0mL
Solution 1.....	80.0mL
Solution 2.....	34.0mL
Rabbit serum, sterile	10.0mL
Solution 3.....	4.0mL
Solution 5.....	0.7mL

Solution 1:

Composition per liter:

Na ₂ HPO ₄ ·7H ₂ O.....	26.52g
Glucose	12.75g
Proteose peptone No.2	5.95g
Pancreatic digest of casein.....	2.55g
NaCl.....	1.2g
Sodium pyruvate.....	1.06g
NaH ₂ PO ₄ ·H ₂ O.....	1.03g
KCl.....	0.85g
MgCl ₂ ·6H ₂ O	0.68g
N-acetylglucosamine.....	0.53g
Sodium citrate·2H ₂ O.....	0.47g

Preparation of Solution 1: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Store at –20°C.

Solution 2:

Composition per 100.0mL:

Bovine albumin fraction V	10.0g
---------------------------------	-------

Preparation of Solution 2: Add bovine albumin to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Adjust pH to 7.8 with NaOH. Store at –20°C.

Solution 3:

Composition per 100.0mL:

NaHCO ₃	4.5g
--------------------------	------

Preparation of Solution 3: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Prepare solution freshly.

Solution 4:

Composition per 100.0mL:

Gelatin.....	7.0g
--------------	------

Preparation of Solution 4: Add gelatin to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 10 psi pressure–115°C. Store at 4°C.

Solution 5:

Composition per 100.0mL:

Phenol Red.....	0.5g
-----------------	------

Preparation of Solution 5: Add Phenol Red to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Store at 4°C.

Preparation of Medium: Combine 80.0mL of solution 1, 34.0mL of solution 2, 4.0mL of solution 3, 0.7mL of solution 5, and 1.3mL of distilled/deionized water. Mix thoroughly. Filter sterilize under pressure. Aseptically distribute into sterile borosilicate screw-capped tubes in 6.0mL volumes. Melt solution 4 by immersing tube in warm water. Add

2.0mL of solution 4 to each screw-capped tube. Add 0.5mL of sterile rabbit serum to each screw-capped tube.

Use: For the cultivation of *Borrelia hermsii*, *Borrelia turicatae*, and *Borrelia parkeri*.

BOS Broth

See: **Bile Oxalate Sorbose Broth**

Bosea thiooxidans Medium (DSMZ Medium 763)

Composition per liter:

Na ₂ S ₂ O ₃ ·5H ₂ O.....	5.0g
Na-succinate.....	5.0g
Na ₂ HPO ₄	4.0g
KH ₂ PO ₄	1.5g
MgCl ₂	0.1g
Na-glutamate.....	0.5g
Yeast extract.....	0.1g

pH 7.5–8.5 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Bosea thiooxidans*.

Botrytis Separation Agar

Composition per liter:

Agar.....	20.0g
Pancreatic digest of casein.....	5.0g
Glycerol.....	5.0g
NaNO ₃	3.0g
Yeast extract.....	3.0g
Sorbose.....	2.5g
KCl.....	1.0g
MgSO ₄	0.5g
KH ₂ PO ₄	0.15g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and differentiation of *Botrytis* species. *Botrytis cinerea* will grow equally well with and without sorbose. *Botrytis alli* is inhibited by sorbose.

Bouillon Medium

Composition per liter:

Peptone.....	15.0g
Meat extract.....	5.0g
NaCl.....	5.0g
K ₂ HPO ₄	5.0g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Heat with frequent agitation and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the general cultivation of heterotrophic microorganisms.

Bovine Serum Albumin Tween™ 80 Agar (BSA Tween™ 80 Agar)

Composition per liter:

Basal medium.....	900.0mL
Albumin supplement.....	100.0mL

Basal Medium:

Composition per liter:

Agar.....	11.0g
Na ₂ HPO ₄	1.0g
NaCl.....	1.0g
KH ₂ PO ₄	0.3g
Glycerol (10% solution).....	1.0mL
NH ₄ Cl (25% solution).....	1.0mL
Sodium pyruvate (10% solution).....	1.0mL
Thiamine (0.5% solution).....	1.0mL

Preparation of Basal Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.4. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Albumin Supplement:

Composition per 100.0mL:

Bovine albumin.....	10.0g
Tween™ 80 (10% solution).....	12.5mL
FeSO ₄ (0.5% solution).....	10.0mL
MgCl ₂ –CaCl ₂ solution.....	1.0mL
Cyanocobalamin (0.02% solution).....	1.0mL
ZnSO ₄ (0.4% solution).....	1.0mL

Preparation of Albumin Supplement: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Adjust pH to 7.4. Filter sterilize.

MgCl₂–CaCl₂ Solution:

Composition per 100.0mL:

CaCl ₂ ·2H ₂ O.....	1.5g
MgCl ₂ ·6H ₂ O.....	1.5g

Preparation of MgCl₂–CaCl₂ Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: To 900.0mL of cooled, sterile basal medium, aseptically add 100.0mL of sterile albumin supplement. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Leptospira* species.

Bovine Serum Albumin Tween™ 80 Broth (BSA Tween™ 80 Broth)

Composition per liter:

Basal medium.....	900.0mL
Albumin supplement.....	100.0mL

pH 7.4 ± 0.2 at 25°C

Basal Medium:

Composition per liter:

Na ₂ HPO ₄	1.0g
NaCl.....	1.0g
KH ₂ PO ₄	0.3g
Glycerol (10% solution).....	1.0mL
NH ₄ Cl (25% solution).....	1.0mL
Sodium pyruvate (10% solution).....	1.0mL
Thiamine (0.5% solution).....	1.0mL

Preparation of Basal Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.4. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Albumin Supplement:

Composition per 100.0mL:

Bovine albumin.....	10.0g
Tween™ 80 (10% solution).....	12.5mL
FeSO ₄ (0.5% solution).....	10.0mL
MgCl ₂ –CaCl ₂ solution.....	1.0mL
Cyanocobalamin (0.02% solution).....	1.0mL
ZnSO ₄ (0.4% solution).....	1.0mL

Preparation of Albumin Supplement: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Adjust pH to 7.4. Filter sterilize.

MgCl₂–CaCl₂ Solution:

Composition per 100.0mL:

CaCl ₂ ·2H ₂ O.....	1.5g
MgCl ₂ ·6H ₂ O.....	1.5g

Preparation of MgCl₂–CaCl₂ Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: To 900.0mL of cooled, sterile basal medium, aseptically add 100.0mL of sterile albumin supplement. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the isolation and cultivation of *Leptospira* species.

**Bovine Albumin Tween™ 80 Medium,
Ellinghausen and McCullough, Modified
(Albumin Fatty Acid Broth,
Leptospira Medium)**

Composition per liter:

Basal medium.....	900.0mL
Albumin fatty acid supplement.....	100.0mL

Basal Medium:

Composition per liter:

Na ₂ HPO ₄ , anhydrous.....	1.0g
NaCl.....	1.0g
KH ₂ PO ₄ , anhydrous.....	0.3g
NH ₄ Cl (25% solution).....	1.0mL
Glycerol (10% solution).....	1.0mL
Sodium pyruvate (10% solution).....	1.0mL
Thiamine-HCl (0.5% solution).....	1.0mL

pH 7.4 ± 0.2 at 25°C

Preparation of Basal Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.4. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Albumin Fatty Acid Supplement:

Composition per 200.0mL:

Bovine albumin fraction V.....	20.0g
Polysorbate (Tween™) 80 (10% solution).....	25.0mL
FeSO ₄ ·7H ₂ O (0.5% solution).....	20.0mL
CaCl ₂ ·2H ₂ O (1.5% solution).....	2.0mL
MgCl ₂ ·2H ₂ O (1.5% solution).....	2.0mL
Vitamin B ₁₂ (0.2% solution).....	2.0mL
ZnSO ₄ ·7H ₂ O (0.4% solution).....	2.0mL
CuSO ₄ ·5H ₂ O (0.3% solution).....	0.2mL

Preparation of Albumin Fatty Acid Supplement: Add bovine albumin to 100.0mL of distilled/deionized water. Mix thoroughly. Add remaining components while stirring. Adjust pH to 7.4. Bring volume to 200.0mL with distilled/deionized water. Filter sterilize. Store this supplement at –20°C.

Preparation of Medium: Aseptically combine 100.0mL of sterile albumin fatty acid supplement and 900.0mL of sterile basal medium. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Leptospira* species.

**Bovine Albumin Tween™ 80 Semisolid Medium,
Ellinghausen and McCullough, Modified
(Albumin Fatty Acid Semisolid Medium, Modified)**

Composition per liter:

Basal medium.....	900.0mL
Albumin fatty acid supplement.....	100.0mL

Basal Medium:

Composition per liter:

Agar.....	2.2g
Na ₂ HPO ₄ , anhydrous.....	1.0g
NaCl.....	1.0g
KH ₂ PO ₄ , anhydrous.....	0.3g
NH ₄ Cl (25% solution).....	1.0mL
Glycerol (10% solution).....	1.0mL
Sodium pyruvate (10% solution).....	1.0mL
Thiamine-HCl (0.5% solution).....	1.0mL

pH 7.4 ± 0.2 at 25°C

Preparation of Basal Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.4. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Albumin Fatty Acid Supplement:

Composition per 200.0mL:

Bovine albumin fraction V.....	20.0g
Polysorbate (Tween™) 80 (10% solution).....	25.0mL
FeSO ₄ ·7H ₂ O (0.5% solution).....	20.0mL
CaCl ₂ ·2H ₂ O (1.5% solution).....	2.0mL
MgCl ₂ ·2H ₂ O (1.5% solution).....	2.0mL
Vitamin B ₁₂ (0.2% solution).....	2.0mL
ZnSO ₄ ·7H ₂ O (0.4% solution).....	2.0mL
CuSO ₄ ·5H ₂ O (0.3% solution).....	0.2mL

Preparation of Albumin Fatty Acid Supplement: Add bovine albumin to 100.0mL of distilled/deionized water. Mix thoroughly. Add remaining components while stirring. Adjust pH to 7.4. Bring volume to 200.0mL with distilled/deionized water. Filter sterilize. Store this supplement at –20°C.

Preparation of Medium: Aseptically combine 100.0mL of sterile albumin fatty acid supplement and 900.0mL of sterile basal medium. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Leptospira* species.

**Bovine Serum Albumin Tween™ 80 Soft Agar
(BSA Tween™ 80 Soft Agar)
(Semisolid BSA Tween™ 80 Medium)**

Composition per liter:

Basal medium.....	900.0mL
Albumin supplement.....	100.0mL

Basal Medium:**Composition per liter:**

Agar	2.0g
Na ₂ HPO ₄	1.0g
NaCl.....	1.0g
KH ₂ PO ₄	0.3g
Glycerol (10% solution).....	1.0mL
NH ₄ Cl (25% solution).....	1.0mL
Sodium pyruvate (10% solution).....	1.0mL
Thiamine (0.5% solution).....	1.0mL

Preparation of Basal Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.4. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Albumin Supplement:**Composition per 100.0mL:**

Bovine albumin.....	10.0g
Tween™ 80 (10% solution).....	12.5mL
FeSO ₄ (0.5% solution).....	10.0mL
CaCl ₂ –MgCl ₂ solution.....	1.0mL
Cyanocobalamin (0.02% solution).....	1.0mL
ZnSO ₄ (0.4% solution).....	1.0mL

Preparation of Albumin Supplement: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Adjust pH to 7.4. Filter sterilize.

CaCl₂–MgCl₂ Solution:**Composition per 100.0mL:**

CaCl ₂ ·2H ₂ O.....	1.5g
MgCl ₂ ·6H ₂ O.....	1.5g

Preparation of CaCl₂–MgCl₂ Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: To 900.0mL of cooled, sterile basal medium, aseptically add 100.0mL of sterile albumin supplement. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Leptospira* species.

BPHD Medium (DSMZ Medium 738)

Composition per liter:

NH ₄ Cl	1.0g
Na ₂ HPO ₄ ·2H ₂ O.....	0.42g
Na ₂ H ₂ PO ₄ ·H ₂ O.....	0.18g
MgCl ₂ ·6H ₂ O.....	0.1g
CaCl ₂ ·2H ₂ O.....	0.1g
KCl.....	0.1g
FeSO ₄ ·7H ₂ O.....	0.04g
Phenol solution.....	20.0mL
Vitamin solution.....	10.0mL
Trace elements solution.....	10.0mL

pH 6.5 ± 0.2 at 25°C

Trace Elements Solution:**Composition per liter:**

MgSO ₄ ·7H ₂ O.....	3.0g
Nitritotriacetic acid.....	1.5g
NaCl.....	1.0g
MnSO ₄ ·2H ₂ O.....	0.5g
CoSO ₄ ·7H ₂ O.....	0.18g
ZnSO ₄ ·7H ₂ O.....	0.18g
CaCl ₂ ·2H ₂ O.....	0.1g

FeSO ₄ ·7H ₂ O.....	0.1g
NiCl ₂ ·6H ₂ O.....	0.025g
KAl(SO ₄) ₂ ·12H ₂ O.....	0.02g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·4H ₂ O.....	0.01g
CuSO ₄ ·5H ₂ O.....	0.01g
Na ₂ SeO ₃ ·5H ₂ O.....	0.3mg

Preparation of Trace Elements Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Vitamin Solution:**Composition per liter:**

Pyridoxine-HCl.....	10.0mg
Thiamine-HCl·2H ₂ O.....	5.0mg
Riboflavin.....	5.0mg
Nicotinic acid.....	5.0mg
D-Ca-pantothenate.....	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Lipoic acid.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Phenol Solution:**Composition per liter:**

Phenol.....	4.7g
-------------	------

Preparation of Phenol Solution: Add phenol to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except phenol solution and vitamin solution, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Adjust pH to 6.5. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 20.0mL phenol solution and 10.0mL vitamin solution. Mix thoroughly. Aseptically distribute into sterile tubes or bottles.

Use: For the cultivation of *Bacillus* sp.

BPL Agar (Brilliant Green Phenol Red Agar)

Composition per liter:

Lactose.....	15.0g
Agar.....	13.0g
NaCl.....	5.0g
Meat peptone.....	7.0g
Phenol Red.....	0.04g
Brilliant Green.....	5.0mg

pH 6.5 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Salmonella* species, with the exception of *S. typhi*, from feces, urine, meat, milk, and other materials.

BPL HiVeg Agar
(Brilliant Green Phenol Red HiVeg Agar)

Composition per liter:

Lactose	15.0g
Agar	13.0g
Plant peptone No. 1	7.0g
NaCl	5.0g
Phenol Red	0.04g
Brilliant Green	5.0mg

pH 6.5 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Salmonella* species, with the exception of *S. typhi*, from feces, urine, meat, milk and other materials.

B.Q.Vaccine Medium HiVeg with Glucose
(Thioglycollate Broth with Plant Extract No. 2)

Composition per liter:

Plant peptone	10.0g
Plant extract No. 2	5.0g
Plant infusion	5.0g
NaCl	5.0g
K ₂ HPO ₄	4.0g
Na-thioglycollate	1.0g
Glucose solution	50.0mL

pH 8.2 ± 0.2 at 25°C

Source: This medium without glucose solution is available as a premixed powder from HiMedia.

Glucose Solution:**Composition per 100.0mL:**

Glucose	20.0g
---------------	-------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except glucose solution, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 50.0mL of sterile glucose solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of anaerobic organisms on a large scale.

B.Q.Vaccine Medium with Glucose
(Thioglycollate Broth with Liver Extract)

Composition per liter:

Liver tissues	250.0g
Muscle tissues	250.0g
Peptic digest of animal tissue	10.0g
NaCl	5.0g
K ₂ HPO ₄	4.0g
Na-thioglycollate	1.0g
Glucose solution	50.0mL

pH 8.2 ± 0.2 at 25°C

Source: This medium without glucose solution is available as a premixed powder from HiMedia.

Glucose Solution:**Composition per 100.0mL:**

Glucose	20.0g
---------------	-------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except glucose solution, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 50.0mL of sterile glucose solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of anaerobic organisms on a large scale.

Brackish Acetate

Composition per liter:

Sodium acetate	1.0g
KNO ₃	1.0g
NaH ₂ PO ₄ ·2H ₂ O	0.05g
Artificial seawater	250.0mL
Modified Hutner's basal salts	20.0mL
Vitamin solution	10.0mL

pH 7.2 ± 0.2 at 25°C

Artificial Seawater:**Composition per liter:**

NaCl	23.5g
MgCl ₂	5.0g
Na ₂ SO ₄	3.9g
CaCl ₂	1.1g
KCl	0.66g
NaHCO ₃	0.19g
KBr	0.1g
H ₃ BO ₃	0.026g
SrCl ₂	0.024g
NaF	3.0mg

Preparation of Artificial Seawater: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Modified Hutner's Basal Salts:**Composition per liter:**

MgSO ₄ ·7H ₂ O	29.7g
Nitritotriacetic acid	10.0g
CaCl ₂ ·2H ₂ O	3.34g
FeSO ₄ ·7H ₂ O	0.1g
(NH ₄) ₂ MoO ₄	9.25mg
Metals "44"	50.0mL

Preparation of Modified Hutner's Basal Salts: Dissolve the nitritotriacetic acid first and neutralize the solution with KOH. Add the other components and adjust the pH to 7.2 with KOH or H₂SO₄. There may be a slight precipitate. Store at 5°C.

Metals "44":**Composition per 100.0mL:**

ZnSO ₄ ·7H ₂ O	1.1g
FeSO ₄ ·7H ₂ O	0.5g
EDTA	0.25g
MnSO ₄ ·7H ₂ O	0.154g
CuSO ₄ ·5H ₂ O	0.04g

Co(NO ₃) ₂ ·6H ₂ O	0.025g
Na ₂ B ₄ O ₇ ·10H ₂ O	0.018g

Preparation of Metals “44”: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Add aseptically to sterile basal medium.

Vitamin Solution:

Composition per liter:

Thiamine-HCl	5.0mg
D-Calcium pantothenate	5.0mg
Riboflavin	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize and add aseptically to sterile basal medium.

Preparation of Medium: Add a few drops of H₂SO₄ to the distilled water to retard precipitation of the metal salts. Add components, except for Metals “44” and vitamin solutions to 250.0mL of artificial seawater and 720.0mL of distilled/deionized water. Adjust pH to 7.2. Distribute into tubes or flasks. Sterilize by autoclaving for 15 min at 15 psi pressure–121°C. Aseptically add Metals “44” and vitamin solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Filomicrobium fusiforme*.

Brackish *Prosthecomicrobium* Medium

Composition per liter:

Agar	15.0g
Peptone.....	0.25g
Yeast extract.....	0.25g
Glucose	0.25g
Artificial seawater.....	250.0mL
Modified Hutner’s basal salts	20.0mL
Vitamin solution.....	10.0mL

pH 7.2 ± 0.2 at 25°C

Artificial Seawater:

Composition per liter:

NaCl	23.477g
MgCl ₂	4.981g
Na ₂ SO ₄	3.917g
CaCl ₂	1.102g
KCl.....	0.664g
NaHCO ₃	0.192g
KBr.....	0.096g
H ₃ BO ₃	0.026g
SrCl ₂	0.024g
NaF.....	3.0mg

Preparation of Artificial Seawater: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Modified Hutner’s Basal Salts:

Composition per liter:

MgSO ₄ ·7H ₂ O	29.7g
Nitrilotriacetic acid	10.0g
CaCl ₂ ·2H ₂ O.....	3.34g
FeSO ₄ ·7H ₂ O.....	0.1g
(NH ₄) ₂ MoO ₄	9.25mg
Metals “44”.....	50.0mL

Preparation of Modified Hutner’s Basal Salts: Dissolve the nitrilotriacetic acid first and neutralize the solution with KOH. Add the other ingredients and readjust the pH with KOH and/or H₂SO₄ to 7.2. There may be a slight precipitate. Store at 5°C.

Metals “44”:

Composition per 100.0mL:

ZnSO ₄ ·7H ₂ O	1.1g
FeSO ₄ ·7H ₂ O.....	0.5g
EDTA	0.25g
MnSO ₄ ·7H ₂ O.....	0.154g
CuSO ₄ ·5H ₂ O.....	0.04g
Co(NO ₃) ₂ ·6H ₂ O.....	0.025g
Na ₂ B ₄ O ₇ ·10H ₂ O.....	0.018g

Preparation of Metals “44”: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Add aseptically to sterile basal medium.

Vitamin Solution:

Composition per liter:

Thiamine-HCl	5.0mg
D-Calcium pantothenate	5.0mg
Riboflavin	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize and add aseptically to sterile basal medium.

Preparation of Medium: Add a few drops of H₂SO₄ to the distilled water to retard precipitation of the metal salts. Add components, except Metals “44” and vitamin solution, to 250.0mL of artificial seawater and 720.0mL of distilled/deionized water. Adjust pH to 7.2. Distribute into tubes or flasks. Sterilize by autoclaving for 15 min at 15 psi pressure–121°C. Aseptically add Metals “44” and vitamin solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Prosthecomicrobium litoralum*.

Brackish Water Ameba Medium

Composition per liter:

Agar	10.0g
Malt extract.....	0.1g
Yeast extract.....	0.1g
Artificial seawater.....	167.0mL

Artificial Seawater:

Composition per liter:

NaCl	27.5g
MgCl ₂ ·6H ₂ O.....	5.38g
MgSO ₄ ·7H ₂ O.....	6.78g
KCl.....	0.72g
NaHCO ₃	0.2g
CaCl ₂ ·2H ₂ O.....	1.4g

Preparation of Artificial Seawater: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Flabellula hogueae*.

Brain Heart CC Agar**(Brain Heart Cycloheximide Chloramphenicol Agar)****Composition** per liter:

Pancreatic digest of casein.....	16.0g
Agar.....	13.5g
Brain heart, solids from infusion.....	8.0g
Peptic digest of animal tissue.....	5.0g
NaCl.....	5.0g
Na ₂ HPO ₄	2.5g
Glucose.....	2.0g
Cycloheximide.....	0.5g
Chloramphenicol.....	0.05g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks while shaking to distribute precipitate. Autoclave for 15 min at 15 psi pressure–118°C.

Use: For the selective isolation of fastidious pathogenic fungi such as *Histoplasma capsulatum* and *Blastomyces dermatitidis* from specimens heavily contaminated with bacteria and other fungi. It may also be used as a base supplemented with sheep blood and gentamicin for enrichment and additional selectivity.

**Brain Heart CC Agar, HiVeg
(Brain Heart Cycloheximide
Chloramphenicol Agar, HiVeg)**

Composition per liter:

Agar.....	15.0g
Plant infusion.....	10.0g
Plant peptone No. 3.....	10.0g
Plant special infusion.....	7.5g
NaCl.....	5.0g
Na ₂ HPO ₄	2.5g
Glucose.....	2.0g
Cycloheximide.....	0.5g
Chloramphenicol.....	0.05g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks while shaking to distribute precipitate. Autoclave for 15 min at 15 psi pressure–118°C.

Use: For the selective isolation of fastidious pathogenic fungi such as *Histoplasma capsulatum* and *Blastomyces dermatitidis* from specimens heavily contaminated with bacteria and other fungi. Brain Heart InfusionSee: **BHI****Brain Heart Infusion****(BHI)****Composition** per liter:

Pancreatic digest of gelatin.....	14.5g
Brain heart, solids from infusion.....	6.0g
Peptic digest of animal tissue.....	6.0g
NaCl.....	5.0g
Glucose.....	3.0g
Na ₂ HPO ₄	2.5g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath and BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of fastidious and nonfastidious microorganisms, including aerobic and anaerobic bacteria, from a variety of clinical and nonclinical specimens. It is particularly useful for culturing streptococci, pneumococci, and meningococci. It is also used for the preparation of inocula for use in antimicrobial susceptibility tests and as a base for blood culture.

**Brain Heart Infusion Agar
(BHI Agar)**

Composition per liter:

Beef heart infusion.....	250.0g
Calf brain infusion.....	200.0g
Agar.....	13.5g
Proteose peptone.....	10.0g
NaCl.....	5.0g
Na ₂ HPO ₄ ·12H ₂ O.....	2.5g
Glucose.....	2.0g

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of a variety of fastidious and nonfastidious aerobic and anaerobic microorganisms.

Brain Heart Infusion Agar**Composition** per liter:

Pancreatic digest of casein.....	16.0g
Agar.....	13.5g
Brain heart, solids from infusion.....	8.0g
Peptic digest of animal tissue.....	5.0g
NaCl.....	5.0g
Glucose.....	2.0g
Na ₂ HPO ₄	2.5g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath and BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks while shaking to distribute precipitate. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of a wide variety of fastidious microorganisms, including bacteria, yeasts, and molds. With the addition of 10% sheep blood, it is used for the isolation and cultivation of many fungal species, including systemic fungi, from clinical and nonclinical specimens. The addition of gentamicin and chloramphenicol with 10% sheep blood produces a selective medium used for the isolation of pathogenic fungi from specimens heavily contaminated with bacteria and saprophytic fungi. It is recommended for the isolation of *Histoplasma capsulatum* and other pathogenic fungi, including *Coccidioides immitis*.

Brain Heart Infusion Agar (BAM M24 Medium 2)

Composition per liter:

Agar	15.0g
Pancreatic digest of gelatin	14.5g
Brain heart, solids from infusion	6.0g
Peptic digest of animal tissue.....	6.0g
NaCl	5.0g
Glucose	3.0g
Na ₂ HPO ₄	2.5g
pH 7.4 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks while shaking to distribute precipitate. Autoclave for 15 min at 15 psi pressure–121°C. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the cultivation of a wide variety of fastidious microorganisms, including bacteria, yeasts, and molds.

Brain Heart Infusion Agar 0.7% (BHI Agar 0.7%) (BAM M23)

Composition per liter:

Beef heart infusion.....	250.0g
Calf brain infusion	200.0g
Proteose peptone	10.0g
Agar	7.0g
NaCl	5.0g
Na ₂ HPO ₄ ·12H ₂ O.....	2.5g
Glucose	2.0g
pH 5.3 ± 0.2 at 25°C	

Source: This medium without agar is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components, except agar, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 5.3 with 1N HCl. Mix thoroughly. Add agar. Gently heat and bring to boiling. Distribute into tubes. Autoclave for 10 min at 15 psi pressure–121°C.

Use: For the detection of staphylococcal enterotoxin.

Brain Heart Infusion Agar 0.7% (BHI Agar 0.7%) (BAM M23)

Composition per liter:

Pancreatic digest of gelatin	14.5g
Agar	7.0g

Brain heart, solids from infusion	6.0g
Peptic digest of animal tissue	6.0g
NaCl	5.0g
Glucose	3.0g
Na ₂ HPO ₄	2.5g
pH 5.3 ± 0.2 at 25°C	

Source: This medium without agar is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components, except agar, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 5.3 with 1N HCl. Mix thoroughly. Add agar. Gently heat and bring to boiling. Distribute into tubes. Autoclave for 10 min at 15 psi pressure–121°C.

Use: For the detection of staphylococcal enterotoxin.

Brain Heart Infusion with 0.7% Agar

Composition per liter:

Beef heart infusion.....	250.0g
Calf brain infusion	200.0g
Proteose peptone.....	10.0g
Agar	7.0g
NaCl	5.0g
Na ₂ HPO ₄ ·12H ₂ O.....	2.5g
Glucose	2.0g
pH 5.3 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 5.3 with 1N HCl. Distribute into tubes in 25.0mL volumes. Autoclave for 10 min at 15 psi pressure–121°C.

Use: For the cultivation of *Staphylococcal* species for the production of enterotoxin.

Brain Heart Infusion Agar with 1% Agar, HiVeg

Composition per liter:

Agar	15.0g
Plant infusion	10.0g
Plant peptone No. 3.....	10.0g
Plant special infusion.....	7.5g
NaCl	5.0g
Na ₂ HPO ₄	2.5g
Glucose	2.0g
pH 7.4 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of a variety of fastidious pathogenic bacteria, yeasts, and molds.

Brain Heart Infusion Agar with 1% Agar, HiVeg

Composition per liter:

Agar	10.0g
Plant infusion	10.0g
Plant peptone No. 3.....	10.0g
Plant special infusion.....	7.5g
NaCl	5.0g

Na ₂ HPO ₄	2.5g
Glucose	2.0g
pH 7.4 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of a variety of fastidious pathogenic bacteria, yeasts, and molds.

Brain Heart Infusion Agar with 1% Agar, HiVeg with Penicillin

Composition per liter:

Agar	15.0g
Plant infusion	10.0g
Plant peptone No. 3.....	10.0g
Plant special infusion.....	7.5g
NaCl	5.0g
Na ₂ HPO ₄	2.5g
Glucose	2.0g
Penicillin solution	2.0mL
pH 7.4 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Penicillin Solution:

Composition per 2.0mL:

Penicillin	0.1g
------------------	------

Preparation of Penicillin Solution: Add penicillin to ethanol and bring volume to 2.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45–50°C. Aseptically add 2.0mL penicillin solution. Mix thoroughly. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of a variety of fastidious pathogenic bacteria, yeasts, and molds.

Brain Heart Infusion Agar with Chloramphenicol

Composition per liter:

Pancreatic digest of casein.....	16.0g
Agar	13.5g
Brain heart, solids from infusion	8.0g
Peptic digest of animal tissue.....	5.0g
NaCl	5.0g
Glucose	2.0g
Na ₂ HPO ₄	2.5g
Sheep blood, defibrinated	50.0mL
Chloramphenicol solution.....	10.0mL
pH 7.4 ± 0.2 at 25°C	

Chloramphenicol Solution:

Composition per 10.0mL:

Chloramphenicol.....	0.05g
----------------------	-------

Preparation of Chloramphenicol Solution: Add chloramphenicol to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except chloramphenicol solution and sheep blood, to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45–50°C. Aseptically add sterile chloramphenicol solution and sheep blood. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of a wide variety of fungal species, especially systemic fungi, from clinical and nonclinical specimens. For the selective isolation of pathogenic fungi from specimens heavily contaminated with bacteria and saprophytic fungi. For the maintenance of fungal species on slant cultures.

Brain Heart Infusion Agar with Cysteine (LMG Medium 282)

Composition per 1010.1mL:

Brain heart infusion agar	1.0L
L-Cysteine solution	10.0mL
pH 7.4 ± 0.2 at 25°C	

Brain Heart Infusion Agar:

Composition per liter:

Beef heart infusion.....	250.0g
Calf brain infusion	200.0g
Agar	13.5g
Proteose peptone.....	10.0g
NaCl	5.0g
Na ₂ HPO ₄ ·12H ₂ O.....	2.5g
Glucose	2.0g

Preparation of Brain Heart Infusion Agar: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45–50°C.

L-Cysteine Solution:

Composition per 10.0mL:

L-Cysteine·HCl·H ₂ O	0.5g
---------------------------------------	------

Preparation of L-Cysteine Solution: Add L-cysteine·HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Aseptically add 10.0mL sterile L-cysteine solution to 1.0L sterile brain heart infusion agar. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Clostridium lactatifermentans*.

Brain Heart Infusion Agar with Kanamycin

Composition per liter:

Pancreatic digest of casein.....	16.0g
Agar	13.5g
Brain/heart, solids from infusion	8.0g
Peptic digest of animal tissue	5.0g
NaCl	5.0g
Glucose	2.0g
Na ₂ HPO ₄	2.5g
Sheep blood, defibrinated	50.0mL
Kanamycin solution	10.0mL

pH 7.4 ± 0.2 at 25°C

Kanamycin Solution:

Composition per 10.0mL:

Kanamycin.....	25.0mg
----------------	--------

Preparation of Kanamycin Solution: Add kanamycin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except kanamycin solution and sheep blood, to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile kanamycin solution and sheep blood. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of fastidious fungi.

Brain Heart Infusion Agar with Penicillin and Streptomycin

Composition per liter:

Pancreatic digest of casein.....	16.0g
Agar	13.5g
Brain heart, solids from infusion	8.0g
Peptic digest of animal tissue.....	5.0g
NaCl	5.0g
Glucose	2.0g
Na ₂ HPO ₄	2.5g
Streptomycin	40.0mg
Penicillin	20,000U
Sheep blood, defibrinated	50.0mL

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components, except sheep blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly and while stirring bring to a boil for 1 min to completely dissolve. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 50.0mL of defibrinated sheep blood. Mix thoroughly. Pour into sterile Petri dishes while agitating gently to distribute the precipitate through the medium.

Use: For the isolation and cultivation of a wide variety of fungal species, especially systemic fungi, from clinical and nonclinical specimens. For the selective isolation of pathogenic fungi from specimens heavily contaminated with bacteria and saprophytic fungi. For the maintenance of fungal species on slant cultures.

Brain Heart Infusion Agar with 10% Sheep Blood, Gentamicin, and Chloramphenicol

Composition per liter:

Pancreatic digest of casein.....	16.0g
Agar	13.5g
Brain heart, solids from infusion	8.0g
Peptic digest of animal tissue.....	5.0g
NaCl	5.0g
Glucose	2.0g
Na ₂ HPO ₄	2.5g
Sheep blood, defibrinated	100.0mL
Antibiotic solution	10.0mL

pH 7.4 ± 0.2 at 25°C

Antibiotic Solution:

Composition per 10.0mL:

Chloramphenicol.....	0.05g
Gentamicin.....	0.05g

Preparation of Antibiotic Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except antibiotic solution and sheep blood, to distilled/deionized water and bring volume to 890.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile antibiotic solution and sheep blood. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of a wide variety of fungal species, especially systemic fungi, from clinical and nonclinical specimens. For the selective isolation of pathogenic fungi from specimens heavily contaminated with bacteria and saprophytic fungi. For the maintenance of fungal species on slant cultures.

Brain Heart Infusion Agar with Tween™ 80 (ATCC Medium 1941)

Composition per liter:

Pancreatic digest of casein.....	16.0g
Agar	13.5g
Brain heart, solids from infusion	8.0g
Peptic digest of animal tissue	5.0g
NaCl.....	5.0g
Glucose	2.0g
Na ₂ HPO ₄	2.5g
Tween™ 80.....	1.0g

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks while shaking to distribute precipitate. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Helicococcus kunzii*.

Brain Heart Infusion Agar with Vitamin B₁₂ (LMG Medium 207)

Composition per 1100.1mL:

Brain heart infusion agar	1.0L
Vitamin B ₁₂ solution	100.0mL

pH 7.4 ± 0.2 at 25°C

Brain Heart Infusion Agar:

Composition per liter:

Beef heart infusion.....	250.0g
Calf brain infusion	200.0g
Agar	13.5g
Proteose peptone.....	10.0g
NaCl.....	5.0g
Na ₂ HPO ₄ ·12H ₂ O.....	2.5g
Glucose	2.0g

Preparation of Brain Heart Infusion Agar: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Vitamin B₁₂ Solution:

Composition per 100.0mL:

Vitamin B ₁₂	0.1mg
-------------------------------	-------

Preparation of Vitamin B₁₂ Solution: Add Vitamin B₁₂ to 100.0mL of distilled/deionized water. Mix thoroughly. Filter sterilize.

Preparation of Medium: Aseptically add 100.01mL vitamin B₁₂ solution to 1.0L sterile brain heart infusion agar. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Bacillus sporothermodurans*.

Brain Heart Infusion Agar, 1/10 with Vitamins (1/10 BHIV Agar)

Composition per liter:

Agar	15.0g
Pancreatic digest of gelatin	1.45g
Brain heart, solids from infusion	0.6g
Peptic digest of animal tissue.....	0.6g
NaCl	0.5g
Glucose	0.3g
Na ₂ HPO ₄	0.25g
Vitamin solution.....	10.0mL

pH 7.4 ± 0.2 at 25°C

Vitamin Solution:

Composition per 10.0mL:

Thiamine	100.0μg
Biotin	50.0μg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except vitamin solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 10.0mL of sterile vitamin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Smittium mucronatum*.

Brain Heart Infusion with Agar, Yeast Extract, Sodium Chloride, Inactivated Horse Serum, and Penicillin

Composition per liter:

NaCl.....	20.0g
Pancreatic digest of gelatin	14.5g
Agar	12.0g
Brain heart, solids from infusion	6.0g
Peptic digest of animal tissue.....	6.0g
Yeast extract.....	5.0g
NaCl	5.0g
Glucose	3.0g
Na ₂ HPO ₄	2.5g
Horse serum, inactivated.....	100.0mL
Penicillin solution	10.0mL

pH 7.4 ± 0.2 at 25°C

Penicillin Solution:

Composition per 10.0mL:

Penicillin	1,000,000U
------------------	------------

Preparation of Penicillin Solution: Add penicillin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except penicillin solution and inactivated horse serum, to distilled/deionized water and bring volume

to 890.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile penicillin solution and horse serum. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of fastidious fungi.

Brain Heart Infusion with Agar, Yeast Extract, Sucrose, Horse Serum, and Penicillin

Composition per liter:

Sucrose.....	100.0g
Pancreatic digest of gelatin	14.5g
Agar	12.0g
Brain heart, solids from infusion	6.0g
Peptic digest of animal tissue	6.0g
Yeast extract.....	5.0g
NaCl	5.0g
Glucose	3.0g
Na ₂ HPO ₄	2.5g
Horse serum.....	100.0mL
Penicillin solution	10.0mL

pH 7.4 ± 0.2 at 25°C

Penicillin Solution:

Composition per 10.0mL:

Penicillin	100,000U
------------------	----------

Preparation of Penicillin Solution: Add penicillin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except penicillin solution and horse serum, to distilled/deionized water and bring volume to 890.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile penicillin solution and horse serum. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of fastidious fungi.

Brain Heart Infusion with Agar, Yeast Extract, Sucrose, Inactivated Horse Serum, and Penicillin

Composition per liter:

Sucrose.....	100.0g
Pancreatic digest of gelatin	14.5g
Agar	12.0g
Brain heart, solids from infusion	6.0g
Peptic digest of animal tissue	6.0g
Yeast extract.....	5.0g
NaCl	5.0g
Glucose	3.0g
Na ₂ HPO ₄	2.5g
Horse serum, inactivated	100.0mL
Penicillin solution	10.0mL

pH 7.4 ± 0.2 at 25°C

Penicillin Solution:

Composition per 10.0mL:

Penicillin	1,000,000U
------------------	------------

Preparation of Penicillin Solution: Add penicillin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except penicillin solution and inactivated horse serum, to distilled/deionized water and bring

volume to 890.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile penicillin solution and horse serum. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of fastidious fungi.

Brain Heart Infusion Agar with Yeast Extract

Composition per liter:

Yeast extract.....	20.0g
Pancreatic digest of casein.....	16.0g
Agar.....	13.5g
Brain heart, solids from infusion.....	8.0g
Peptic digest of animal tissue.....	5.0g
NaCl.....	5.0g
Glucose.....	2.0g
Na ₂ HPO ₄	2.5g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath and BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks while shaking to distribute precipitate. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Mycoplasma equirhinis*.

Brain Heart Infusion Blood Agar

Composition per liter:

Blood agar.....	1.1L
Overlay solution.....	1.0L

pH 7.4 ± 0.2 at 25°C

Blood Agar:

Composition per liter:

Agar.....	18.0g
Pancreatic digest of gelatin.....	14.5g
Brain heart, solids from infusion.....	6.0g
Peptic digest of animal tissue.....	6.0g
NaCl.....	5.0g
Glucose.....	3.0g
Na ₂ HPO ₄	2.5g
Rabbit blood, defibrinated.....	100.0mL

Preparation of Blood Agar: Add components, except rabbit blood, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.4. Distribute 5.0mL of agar solution into tubes. Autoclave for 25 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 0.5mL of sterile rabbit blood to each tube. Mix thoroughly. Allow tubes to cool in a slanted position.

Overlay Solution:

Composition per liter:

Pancreatic digest of gelatin.....	14.5g
Brain heart, solids from infusion.....	6.0g
Peptic digest of animal tissue.....	6.0g
NaCl.....	5.0g
Glucose.....	3.0g
Na ₂ HPO ₄	2.5g

Preparation of Overlay Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prior to inoculation, add 0.5mL of overlay solution to the surface of solidified blood agar slants.

Use: For the cultivation of *Blastocritidia leptocoridis*, *Leishmania aethiopica*, *Leishmania amazonensis*, *Leishmania aristedesi*, *Leishmania braziliensis*, *Leishmania chagasi*, *Leishmania donovani*, *Leishmania enriettii*, *Leishmania garnhami*, *Leishmania gerbilli*, *Leishmania guyanensis*, *Leishmania hertigi*, *Leishmania infantum*, *Leishmania major*, *Leishmania mexicana*, *Leishmania panamensis*, *Leishmania pifanoi*, *Leishmania tropica*, and *Trypanosoma conorrhini*.

Brain Heart Infusion Broth (BHI Broth)

Composition per liter:

Beef heart infusion.....	250.0g
Calf brain infusion.....	200.0g
Proteose peptone.....	10.0g
NaCl.....	5.0g
Na ₂ HPO ₄ ·12H ₂ O.....	2.5g
Glucose.....	2.0g

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of a variety of fastidious and nonfastidious aerobic and anaerobic microorganisms.

Brain Heart Infusion Broth

Composition per liter:

Pancreatic digest of gelatin.....	14.5g
Beef heart, infusion from (solids).....	6.0g
Peptic digest of animal tissue.....	6.0g
NaCl.....	6.0g
Glucose.....	3.0g
Na ₂ HPO ₄	2.5g

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks while shaking to distribute precipitate. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of a wide variety of microorganisms, including bacteria, yeasts, and molds, especially fastidious species.

Brain Heart Infusion Broth, HiVeg

Composition per liter:

Plant special infusion.....	12.5g
Plant peptone.....	10.0g
NaCl.....	5.0g
Plant infusion.....	5.0g
Na ₂ HPO ₄	2.5g
Glucose.....	2.0g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of a microorganisms, including streptococci.

Brain Heart Infusion Broth with 6.5% NaCl

Composition per liter:

NaCl	65.0g
Pancreatic digest of gelatin	14.5g
Beef heart, infusion from (solids)	6.0g
Peptic digest of animal tissue.....	6.0g
Glucose	3.0g
Na ₂ HPO ₄	2.5g
pH 7.4 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks while shaking to distribute precipitate. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the differentiation of enterococci from nonenterococcal species.

Brain Heart Infusion Broth with 6.5% NaCl

Composition per liter:

Beef heart infusion.....	250.0g
Calf brain infusion	200.0g
NaCl	65.0g
Proteose peptone	10.0g
Na ₂ HPO ₄	2.5g
Glucose	2.0g
pH 7.4 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks while shaking to distribute precipitate. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the differentiation of enterococci from nonenterococcal species.

Brain Heart Infusion Broth with 6.5% Sodium Chloride, HiVeg

Composition per liter:

NaCl	65.0g
Plant infusion	10.0g
Plant peptone No. 3.....	10.0g
Plant special infusion.....	7.5g
Glucose	2.0g
Na ₂ HPO ₄	2.0g
pH 7.4 ± 0.2 at 25°C	

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of pathogenic *Vibrio* spp. For the differentiation of enterococci from nonenterococcal species.

Brain Heart Infusion with 0.1% Agar, HiVeg

Composition per liter:

Plant infusion	10.0g
Plant peptone No. 3.....	10.0g

Plant special infusion.....	7.5g
NaCl.....	5.0g
Na ₂ HPO ₄	2.5g
Glucose	2.0g
Agar	1.0g
pH 7.4 ± 0.2 at 25°C	

Source: This medium is available der from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of a variety of fastidious and nonfastidious aerobic and anaerobic microorganisms, including streptococci.

Brain Heart Infusion with Casein

Composition per liter:

Pancreatic digest of gelatin.....	14.5g
Brain heart, solids from infusion	6.0g
Peptic digest of animal tissue	6.0g
NaCl.....	5.0g
Casein	5.0g
Glucose	3.0g
Na ₂ HPO ₄	2.5g
pH 7.4 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Serratia marcescens*.

Brain Heart Infusion Casein Starch

Composition per liter:

Pancreatic digest of gelatin.....	14.5g
Casein hydrolysate.....	10.0g
Brain heart, solids from infusion	6.0g
Peptic digest of animal tissue	6.0g
NaCl.....	5.0g
Glucose	3.0g
Na ₂ HPO ₄	2.5g
Soluble starch.....	1.0g
pH 7.4 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Actinomyces odontolyticus*.

Brain Heart Infusion with Chicken Serum

Composition per liter:

Yeast extract.....	20.0g
Pancreatic digest of casein.....	16.0g
Brain heart, solids from infusion	8.0g
Peptic digest of animal tissue	5.0g
NaCl.....	5.0g
Na ₂ HPO ₄	2.5g
Glucose	2.0g
Chicken serum, heat inactivated	50.0mL
Nicotinamide adenine dinucleotide solution	10.0mL
pH 7.2 ± 0.2 at 25°C	

Nicotinamide Adenine Dinucleotide Solution:**Composition** per 10.0mL:

Nicotinamide adenine dinucleotide 0.1g

Preparation of Nicotinamide Adenine Dinucleotide Solution:

Add 0.1g of nicotinamide adenine dinucleotide to distilled/deionized water and bring volume to 10.0mL. Filter sterilize.

Preparation of Medium: Add components, except chicken serum

and nicotinamide adenine dinucleotide solution, to distilled/deionized water and bring volume to 940.0mL. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 10.0mL of nicotinamide adenine dinucleotide solution and 50.0mL of heat-inactivated chicken serum. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Haemophilus paragallinarum* and *Pasteurella avium*.**Brain Heart Infusion with Cystine****Composition** per liter:

Pancreatic digest of gelatin	14.5g
Brain heart, solids from infusion	6.0g
Peptic digest of animal tissue.....	6.0g
NaCl	5.0g
Glucose	3.0g
Na ₂ HPO ₄	2.5g
Cystine	1.0g

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.**Use:** For the cultivation of *Blastomyces dermatitidis*, *Histoplasma capsulatum*, *Mucor hiemalis*, *Paracoccidioides brasiliensis*, and *Sporothrix schenckii*.**Brain Heart Infusion with Erythromycin
(BHI with Erythromycin)
(DSMZ Medium 215a)****Composition** per liter:

Pancreatic digest of gelatin	14.5g
Brain heart, solids from infusion	6.0g
Peptic digest of animal tissue.....	6.0g
NaCl	5.0g
Glucose	3.0g
Na ₂ HPO ₄	2.5g
Erythromycin solution	10.0mL

pH 7.4 ± 0.2 at 25°C

Erythromycin Solution:**Composition** per 10.0mL:

Erythromycin 10.0mg

Preparation of Erythromycin Solution: Add erythromycin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.**Preparation of Medium:** Add components, except erythromycin solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile

erythromycin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of *Nocardia crassostreae*.**Brain Heart Infusion with Glucose and Horse Serum
(LMG Medium 183)****Composition** per 1300.0mL:

Brain heart infusion agar	1.0L
Horse serum.....	200.0mL
Glucose solution	100.0mL

pH 7.4 ± 0.2 at 25°C

Brain Heart Infusion Agar:**Composition** per liter:

Beef heart infusion.....	250.0g
Calf brain infusion	200.0g
Agar	13.5g
Proteose peptone.....	10.0g
NaCl.....	5.0g
Na ₂ HPO ₄ ·12H ₂ O.....	2.5g
Glucose	2.0g

Preparation of Brain Heart Infusion Agar: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.**Glucose Solution:****Composition** per 100.0mL:

Glucose 10.0g

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.**Preparation of Medium:** Aseptically add 200.0mL sterile horse serum and 100.0mL sterile glucose solution to 1.0L sterile brain heart infusion agar. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.**Use:** For the cultivation of *Streptococcus pyogenes*.**Brain Heart Infusion with Horse Blood
(LMG Medium 231)****Composition** per liter:

Beef heart infusion.....	250.0g
Calf brain infusion	200.0g
Agar	13.5g
Proteose peptone.....	10.0g
NaCl.....	5.0g
Na ₂ HPO ₄ ·12H ₂ O.....	2.5g
Glucose	2.0g
Horse blood.....	50.0mL

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components, except horse blood, to distilled/deionized water and bring volume to 950.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50.0mL sterile horse blood. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.**Use:** For the cultivation of *Helcococcus kunzii* and *Globicatella sulfidifaciens*.

Brain Heart Infusion with PABA**(Brain Heart Infusion with *p*-Aminobenzoic Acid)****Composition per liter:**

Pancreatic digest of gelatin	14.5g
Brain heart, solids from infusion	6.0g
Peptic digest of animal tissue.....	6.0g
NaCl	5.0g
Glucose	3.0g
Na ₂ HPO ₄	2.5g
<i>p</i> -Aminobenzoic acid.....	0.05g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. The addition of 1.0g agar to the medium enhances the growth of anaerobic and microaerophilic microorganisms. Heat with frequent agitation and boil for 1 min to dissolve. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the detection of microorganisms in the blood of patients who have received sulfonamide therapy.

Brain Heart Infusion with PABA and Agar**(Brain Heart Infusion with*****p*-Aminobenzoic Acid and Agar)****Composition per liter:**

Pancreatic digest of gelatin	14.5g
Brain heart, solids from infusion	6.0g
Peptic digest of animal tissue.....	6.0g
NaCl	5.0g
Glucose	3.0g
Na ₂ HPO ₄	2.5g
Agar	1.0g
<i>p</i> -Aminobenzoic acid.....	0.05g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. The addition of 1.0g of agar to the medium enhances the growth of anaerobic and microaerophilic microorganisms. Heat with frequent agitation and boil for 1 min to dissolve. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the detection of microorganisms in the blood of patients who have received sulfonamide therapy.

Brain Heart Infusion with PABA and Agar, HiVeg**Composition per liter:**

Plant infusion	10.0g
Plant peptone.....	10.0g
Plant special infusion	7.5g
Na ₂ HPO ₄	2.5g
NaCl	5.0g
Glucose	2.0g
Agar	1.0g
<i>p</i> -Aminobenzoic acid (PABA).....	0.05g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. The addition of 1.0g agar to the medium enhances the growth of anaerobic and microaerophilic microorganisms. Heat with frequent agitation and boil for 1 min to dissolve. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the detection of microorganisms in the blood of patients who have received sulfonamide therapy.

Brain Heart Infusion**with Paraamino Benzoic Acid, HiVeg****Composition per liter:**

Plant infusion	10.0g
Plant peptone No. 3.....	10.0g
Plant special infusion.....	7.5g
NaCl.....	5.0g
Na ₂ HPO ₄	2.5g
Glucose	2.0g
<i>p</i> -Aminobenzoic acid (PABA).....	0.05g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. The addition of 1.0g agar to the medium enhances the growth of anaerobic and microaerophilic microorganisms. Heat with frequent agitation and boil for 1 min to dissolve. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the detection of microorganisms in the blood of patients who have received sulfonamide therapy.

Brain Heart Infusion with Rabbit Serum**Composition per liter:**

Yeast extract.....	20.0g
Pancreatic digest of casein.....	16.0g
Brain heart, solids from infusion	8.0g
Peptic digest of animal tissue	5.0g
NaCl.....	5.0g
Na ₂ HPO ₄	2.5g
Glucose	2.0g
Rabbit serum, heat inactivated.....	50.0mL
Nicotinamide adenine dinucleotide solution	10.0mL

pH 7.2 ± 0.2 at 25°C

Nicotinamide Adenine Dinucleotide Solution:**Composition per 10.0mL:**

Nicotinamide adenine dinucleotide	0.1g
---	------

Preparation of Nicotinamide Adenine Dinucleotide Solution: Add 0.1g of nicotinamide adenine dinucleotide to distilled/deionized water and bring volume to 10.0mL. Filter sterilize.

Preparation of Medium: Add components, except nicotinamide adenine dinucleotide solution and rabbit serum, to distilled/deionized water and bring volume to 940.0mL. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 10.0mL of a 0.1% filter-sterilized solution of nicotinamide adenine dinucleotide. Asepti-

cally add 50.0mL of heat-inactivated rabbit serum. Distribute aseptically into tubes or flasks.

Use: For the cultivation and maintenance of *Actinobacillus* species.

Brain Heart Infusion with Rabbit Serum and Yeast Extract

Composition per liter:

Pancreatic digest of casein.....	16.0g
Brain heart, solids from infusion.....	8.0g
Peptic digest of animal tissue.....	5.0g
NaCl.....	5.0g
Glucose.....	2.0g
Na ₂ HPO ₄	2.5g
Rabbit serum, heat inactivated.....	200.0mL
Fresh yeast extract (25% solution).....	100.0mL
pH 7.2 ± 0.2 at 25°C	

Fresh Yeast Extract Solution:

Composition per 100.0mL:

Baker's yeast, live, pressed, starch-free.....	25.0g
--	-------

Preparation of Fresh Yeast Extract Solution: Add the live Baker's yeast to 100.0mL of distilled/deionized water. Autoclave for 90 min at 15 psi pressure–121°C. Allow to stand. Remove supernatant solution. Adjust pH to 6.6–6.8.

Preparation of Medium: Add components, except rabbit serum, to distilled/deionized water and bring volume to 800.0mL. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 200.0mL of sterile, heat-inactivated rabbit serum. Distribute aseptically into tubes or flasks.

Use: For the cultivation and maintenance of *Mycoplasma equirhinis*.

Brain Heart Infusion with Serum and Glucose (BHI with Serum and Glucose)

Composition per liter:

Pancreatic digest of gelatin.....	14.5g
Brain heart, solids from infusion.....	6.0g
Peptic digest of animal tissue.....	6.0g
NaCl.....	5.0g
Glucose.....	3.0g
Na ₂ HPO ₄	2.5g
Glucose.....	2.0g
Bovine serum, heat inactivated.....	100.0mL
pH 7.4 ± 0.2 at 25°C	

Preparation of Medium: Prepare and dispense medium anaerobically under 80% N₂ + 10% CO₂ + 10% H₂. Add components, except heat-inactivated fetal bovine serum, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Sparge with 80% N₂ + 10% CO₂ + 10% H₂ gas mixture. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile fetal bovine serum. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes under an atmosphere of 80% N₂ + 10% CO₂ + 10% H₂.

Use: For the cultivation of *Actinomyces hordeovulneris*, *Actinomyces hyovaginalis*, *Serpulina hyodysenteriae*, *Serpulina pilosicoli*, and *Treponema phagedenis*.

Brain Heart Infusion with 3% Sodium Chloride

Composition per liter:

NaCl.....	30.0g
Pancreatic digest of gelatin.....	14.5g
Brain heart, solids from infusion.....	6.0g
Peptic digest of animal tissue.....	6.0g
Glucose.....	3.0g
Na ₂ HPO ₄	2.5g
pH 7.4 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Vibrio parahaemolyticus*.

Brain Heart Infusion with 5% Sodium Chloride

Composition per liter:

NaCl.....	50.0g
Pancreatic digest of gelatin.....	14.5g
Brain heart, solids from infusion.....	6.0g
Peptic digest of animal tissue.....	6.0g
Glucose.....	3.0g
Na ₂ HPO ₄	2.5g
pH 7.4 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Pediococcus halophilus*.

Brain Heart Infusion with Sucrose and Horse Serum

Composition per liter:

Sucrose.....	171.0g
Pancreatic digest of gelatin.....	14.5g
Brain heart, solids from infusion.....	6.0g
Peptic digest of animal tissue.....	6.0g
NaCl.....	5.0g
Glucose.....	3.0g
Na ₂ HPO ₄	2.5g
Horse serum.....	100.0mL
pH 7.4 ± 0.2 at 25°C	

Preparation of Medium: Add components, except horse serum, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 100.0mL sterile horse serum. Mix thoroughly. Distribute into sterile tubes or flasks.

Use: For the cultivation of fastidious fungi.

Brain Heart Infusion, Supplemented (BHIS)

Composition per liter:

Brain heart infusion broth, dehydrated.....	37.0g
Yeast extract.....	5.0g
Supplement solution.....	10.2mL
Resazurin (0.25% solution).....	4.0mL
pH 7.4 ± 0.2 at 25°C	

Supplement Solution:

Composition per 10.2mL:

L-Cysteine·HCl·H ₂ O.....	0.5g
Hemin solution.....	10.0mL
Vitamin K ₁ solution.....	0.2mL

Preparation of Supplement Solution: Add L-cysteine·HCl·H₂O and vitamin K₁ to 10.0mL of hemin solution. Mix thoroughly.

Hemin Solution:

Composition per 100.0mL:

Hemin.....	50.0mg
1N NaOH	1.0mL

Preparation of Hemin Solution: Add components to 100.0mL of distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Vitamin K₁ Solution:

Composition per 30.0mL:

Ethanol (95% solution).....	30.0mL
Vitamin K ₁	0.15mL

Preparation of Vitamin K₁ Solution: Add vitamin K₁ to 30.0mL of 95% ethanol. Mix thoroughly.

Preparation of Medium: Add components (brain heart infusion broth powder, yeast extract, and resazurin) to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly and while stirring bring to boiling for 1 min. Cool to 45°–50°C. Add supplement solution containing hemin solution, vitamin K₁ solution, and L-cysteine. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes while agitating gently to distribute the precipitate through the medium.

Use: For the cultivation of *Centipeda periodontii*.

**Brain Heart Infusion with Thiamine
(LMG Medium 97)**

Composition per liter:

NaCl.....	30.0g
Pancreatic digest of gelatin	14.5g
Brain heart, solids from infusion	6.0g
Peptic digest of animal tissue.....	6.0g
Glucose	3.0g
Na ₂ HPO ₄	2.5g
Thiamine·HCl	1.0mg

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Bacillus larvae*.

Brain Heart Infusion Soil Extract Medium

Composition per liter:

Yeast extract.....	20.0g
Pancreatic digest of casein.....	16.0g
Brain heart, solids from infusion	8.0g
Peptic digest of animal tissue.....	5.0g
NaCl.....	5.0g
Na ₂ HPO ₄	2.5g
Glucose	2.0g
Soil extract.....	250.0mL
Vitamin B ₁₂ solution	1.0mL

pH 7.2 ± 0.2 at 25°C

Soil Extract:

Composition per 400.0mL:

African Violet soil.....	1.0g
Na ₂ CO ₃	1.0g

Preparation of Soil Extract: Autoclave for 60 min at 15 psi pressure–121°C. Filter through paper before using in medium.

Vitamin B₁₂ Solution:

Composition per 1.0mL:

Vitamin B ₁₂	2.0µg
-------------------------------	-------

Preparation of Vitamin B₁₂ Solution: Add vitamin B₁₂ to distilled/deionized water and bring volume to 1.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except glucose, yeast extract, and vitamin B₁₂ solution, to tap water and bring volume to 799.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Add yeast extract and glucose to 200.0mL of tap water. Filter sterilize and add aseptically to cooled, sterile basal medium. Aseptically add 1.0mL of vitamin B₁₂ solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of a wide variety of microorganisms, including bacteria, yeasts, and molds, especially fastidious species from soil. For the isolation of *Histoplasma capsulatum* and other pathogenic fungi, including *Coccidioides immitis*.

Brain Liver Heart Semisolid Medium

Composition per liter:

Beef heart, infusion from.....	250.0g
Calf brains, infusion from.....	200.0g
Liver, infusion from.....	50.0g
Proteose peptone.....	10.0g
NaCl.....	5.0g
Neopeptone.....	3.25g
Pancreatic digest of casein.....	3.25g
Na ₂ HPO ₄	2.5g
Glucose	2.0g
Agar	1.75g

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Leave in tubes.

Use: For the cultivation of fastidious microorganisms. For the cultivation of *Actinomyces bovis*, *Actinomyces israelii*, *Actinomyces naeshlundii*, *Clostridium symbiosum*, and *Eubacterium limosum*.

Brettanomyces Agar Base with Selective Supplement

Composition per liter:

Agar	20.0g
Glucose	10.0g
Peptic digest of animal tissue	5.0g
Yeast extract.....	3.0g
Malt extract.....	3.0g
Chloramphenicol.....	0.1g
Cycloheximide.....	0.1g
Thiamine hydrochloride.....	0.01g
Selective supplement solution	10.0mL

Source: This medium is available from HiMedia.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Selective Supplement Solution:

Composition per 10.0mL:

Chlortetracycline.....	0.1g
Gentamicin.....	0.05g

Preparation of Selective Supplement Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except selective supplement solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add selective supplement solution. Mix thoroughly. Pour into Petri dishes or aseptically distribute into sterile tubes.

Use: For the cultivation of *Brettanomyces* spp. and the detection of this yeast in soft drinks.

***Brevibacillus levickii* Medium (DSMZ Medium 1064)**

Composition per liter:

Agar	18.0g
CaCl ₂ ·2H ₂ O	12.5g
MnSO ₄ ·H ₂ O	2.5g
Yeast extract	2.0g
KH ₂ PO ₄	1.5g
(NH ₄) ₂ SO ₄	1.25g
MgSO ₄ ·7H ₂ O	0.1g

pH 5.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 5.5. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Brevibacillus levickii*.

***Brevibacterium* Medium (ATCC Medium 159)**

Composition per liter:

Agar	25.0g
Glucose	20.0g
CaCO ₃	20.0g
Yeast extract	10.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Brevibacterium* species.

***Brevibacterium* Medium (ATCC Medium 677)**

Composition per liter:

Agar	30.0g
KH ₂ PO ₄	2.0g
Na ₂ HPO ₄	2.0g
(NH ₄) ₂ SO ₄	2.0g
Yeast extract	2.0g
Tween™ 60	2.0g
MgSO ₄ ·7H ₂ O	0.2g
FeSO ₄ ·7H ₂ O	0.1g
MnSO ₄	0.01g
<i>n</i> -Hexadecane	50.0mL

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Blend for 30 min in a blender to disperse the *n*-hexadecane. Distribute into tubes or flasks. Autoclave for 20 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Brevibacterium alkano-philum* and other microorganisms that can utilize hexadecane as a carbon source.

***Brevibacterium* Medium (ATCC Medium 681)**

Composition per liter:

Glucose	10.0g
Peptone	5.0g
Yeast extract	5.0g

pH 5.0–6.0 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Brevibacterium* spp. and *Enterobacter cloacae*.

***Brevundimonas* Agar (LMG Medium 221)**

Composition per liter:

Agar	15.0g
Yeast extract	10.0g
Peptone	2.0g
MgSO ₄ ·7H ₂ O	0.2g
CaCl ₂	0.1g
Riboflavin solution	5.0mL

Riboflavin Solution:

Composition per 10.0mL:

Riboflavin	2.0mg
------------------	-------

Preparation of Riboflavin Solution: Add riboflavin to 10.0mL of distilled/deionized water. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except riboflavin solution, to distilled/deionized water and bring volume to 995.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 5.0mL sterile riboflavin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Brevundimonas* spp. and *Caulobacter henricii*.

Brewer Anaerobic Agar

Composition per liter:

Agar	20.0g
Proteose peptone No. 3	10.0g
Glucose	10.0g
Pancreatic digest of casein	5.0g
Yeast extract	5.0g
NaCl	5.0g
Sodium thioglycollate	2.0g
Sodium formaldehyde sulfoxylate	1.0g
Resazurin	2.0mg

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of anaerobic and microaerophilic microorganisms.

Brewer Thioglycollate HiVeg Medium

Composition per liter:

Plant infusion	17.5g
Plant peptone No. 3	10.0g
Glucose	5.0g
NaCl	5.0g
K ₂ HPO ₄	2.0g
Na-thioglycollate	1.0g
Agar	0.5g
Methylene Blue	2.0mg

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of anaerobic and microaerophilic microorganisms. For testing the sterility of biological products and materials.

Brewer Thioglycollate HiVeg Medium, Modified

Composition per liter:

Plant hydrolysate	17.5g
Glucose	10.0g
NaCl	5.0g
Papaic digest of soybean meal	2.5g
K ₂ HPO ₄	2.0g
Na-thioglycollate	1.0g
Agar	0.5g
Methylene Blue	2.0mg

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of anaerobic and microaerophilic microorganisms. For testing the sterility of biological products and materials.

Brewer Thioglycollate Medium

Composition per liter:

Beef, infusion from	500.0g
Proteose peptone	10.0g
NaCl	5.0g
Glucose	5.0g

K ₂ HPO ₄	2.0g
Sodium thioglycollate	0.5g
Agar	0.5g
Methylene Blue	2.0mg

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of anaerobic and microaerophilic microorganisms. For testing the sterility of biological products and materials.

Brewer Thioglycollate Medium, Modified

Composition per liter:

Tryptic digest of casein	17.0g
Glucose	10.0g
NaCl	5.0g
Enzymatic hydrolysate of soybean meal	3.0g
K ₂ HPO ₄	2.0g
Sodium thioglycollate	1.0g
Agar	0.5g
Methylene Blue	2.0mg

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of anaerobic and microaerophilic microorganisms. For testing the sterility of biological products and materials.

Brewer Thioglycollate Medium, Modified

Composition per liter:

Casein enzymatic hydrolysate	17.5g
Glucose	10.0g
NaCl	5.0g
Papaic digest of soybean meal	2.5g
K ₂ HPO ₄	2.0g
Na-thioglycollate	1.0g
Agar	0.5g
Methylene Blue	2.0mg

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of anaerobic and microaerophilic microorganisms. For testing the sterility of biological products and materials.

Brigg's Liver Broth pH 7.0**Composition per liter:**

Glucose	20.0g
Neopeptone	15.0g
Yeast extract.....	6.0g
NaCl	5.0g
Tween™ 80	1.0g
Soluble starch.....	0.5g
L-Cysteine·HCl·H ₂ O	0.2g
Tomato juice solution.....	400.0mL
Liver extract.....	75.0mL

pH 7.0 ± 0.2 at 25°C

Tomato Juice Solution:**Composition per 500.0mL:**

Tomato juice.....	250.0mL
-------------------	---------

Preparation of Tomato Juice Solution: Add 250.0mL of tomato juice to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Adjust pH to 7.0 with 10% NaOH. Filter through Whatman #2 filter paper.

Liver Extract:**Composition per 170.0mL:**

Liver powder.....	10.0g
-------------------	-------

Preparation of Liver Extract: Add 10.0g of liver powder to 170.0mL of distilled/deionized water. Gently heat to 60°C. Maintain at 50°–60°C for 1 hr. Gently bring to boiling. Boil for 5 min. Adjust pH to 7.2. Filter through Whatman #2 filter paper.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Lactobacillus acetotolerans*.

Brigg's Liver Tomato Broth**Composition per liter:**

Glucose	20.0g
Neopeptone	15.0g
Yeast extract.....	6.0g
NaCl	5.0g
Tween™ 80	1.0g
Soluble starch.....	0.5g
L-Cysteine·HCl.....	0.2g
Tomato juice.....	400.0mL
Liver extract.....	75.0mL

pH 5.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. (Note: 3.0g of proteolysed liver may be used instead of the liver extract.) Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Lactobacillus acetotolerans*.

BRILA MUG Broth**(Brilliant Green 2%-Bile MUG Broth)****Composition per liter:**

Ox-bile (dried)	20.0g
Peptone.....	10.0g
Lactose	10.0g
L-Tryptophan.....	1.0g

Brilliant Green	0.133g
4-Methylumbelliferyl-β-D-glucuronide.....	0.1g

pH 7.2 ± 0.2 at 37°C

Source: This medium is available from Fluka, Sigma-Aldrich.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into test tubes that contain an inverted Durham tube in 10.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the detection of *E. coli* and coliforms. Bile and Brilliant Green extensively inhibit the growth of accompanying flora, in particular Gram-positive microorganisms. The presence of *E. coli* results in fluorescence in the UV. A positive indole test and possibly gas formation from lactose fermentation provide confirmation. β-D-glucuronidase, which is produced by *E. coli*, cleaves 4-methylumbelliferyl-β-D-glucuronide to 4-methylumbelliferone and glucuronide. The fluorogen 4-methylumbelliferone can be detected under a long wavelength UV lamp. The broth can be used in conjunction with the MPN method for *E. coli* and coliform enumeration in the water of bathing areas.

**Brilliance™ Bacillus cereus Agar
(Chromogenic Bacillus cereus Agar)****Composition per liter:**

Agar	13.0g
Peptone	10.0g
Sodium pyruvate.....	10.0g
Yeast extract	4.0g
Na ₂ HPO ₄	2.52g
Chromogenic mix	1.2g
KH ₂ PO ₄	0.28g
<i>Bacillus cereus</i> selective supplement	10.0mL

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Bacillus cereus* Selective Supplement:*Composition per 10.0mL:**

Trimethoprim	10.0mg
Polymyxin B	106,000 U

Preparation of *Bacillus cereus* Selective Supplement Solution:

Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except *Bacillus cereus* selective supplement, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 5.0mL *Bacillus cereus* selective supplement. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the isolation and differentiation of *Bacillus cereus* from food samples.

Brilliance™ Candida Agar**Composition per liter:**

Chromogenic mix	13.6g
Agar	13.6g
Peptone	4.0g
Selective supplement solution	10.0mL

pH 6.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Selective Supplement Solution:

Composition per 10.0mL:

Chloramphenicol..... 0.5g

Preparation of Selective Supplement Solution: Add chloramphenicol to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except selective supplement solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Add 10.0mL selective supplement solution. Gently heat while stirring and bring to boiling. Do not autoclave. Cool to 45°C. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the rapid isolation and identification of clinically important *Candida* species. The green color of *Candida albicans* and *Candida dubliniensis* is caused by the same chromogenic reaction as the dark blue color of *Candida tropicalis*. *Candida glabrata*, *Candida kefyr*, *Candida parapsilosis*, and *Candida lusitanae* appear as a variety of beige/brown/yellow colors, due to the mixture of natural pigmentation and some alkaline phosphatase activity.

**Brilliance™ *E. coli*/Coliform Agar
(Chromogenic *E. coli*/Coliform Agar)**

Composition per liter:

Chromogenic mix 20.3g
Agar 15.0g
Peptone..... 5.0g
NaCl 5.0g
Na₂HPO₄..... 3.5g
Yeast extract..... 3.0g
Lactose 2.5g
KH₂PO₄..... 1.5g
Neutral Red..... 0.03g

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the presumptive identification of *Escherichia coli* and coliforms from food and environmental samples. *E. coli* forms pink colonies.

Brilliance™ *E. coli*/Coliform Selective Agar

Composition per liter:

Agar 10.6g
Peptone..... 8.0g
NaCl 5.0g
Na₂HPO₄..... 2.2g
KH₂PO₄..... 1.8g
Chromogenic mix 0.35g
Sodium lauryl sulfate 0.1g

pH 6.7 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Do not autoclave. Cool to 45°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the presumptive identification of *Escherichia coli* and coliforms from food and environmental samples. *E. coli* forms pink-purple colonies.

**Brilliance™ *Enterobacter sakazakii* Agar
(DFI Agar)
(Druggan, Forsythe and Iverson Agar)**

Composition per liter:

Agar 15.0g
Tryptone..... 15.0g
Soya peptone..... 5.0g
NaCl 5.0g
Ferric ammonium citrate..... 1.0g
Sodium desoxycholate 1.0g
Sodium thiosulphate 1.0g
Chromogen 0.1g

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the differentiation and enumeration of *Enterobacter sakazakii* from infant formula and other food samples. A chromogenic medium for the isolation and differentiation of *Enterobacter sakazakii* (now *Cronobacter sakazakii*) from food and dairy samples, according to the formulation by Druggan, Forsythe, and Iverson

Brilliance™ ESBL Agar

Composition per liter:

Agar 15.0g
Peptones..... 12.0g
NaCl 5.0g
Phosphate buffers..... 4.0g
Chromogenic mix 4.0g
Antibiotic mix 0.28g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Do not autoclave. Cool to 45°C. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the detection of Extended Spectrum β-Lactamase-producing organisms. The medium provides presumptive identification of ESBL-producing *E. coli* and the *Klebsiella*, *Enterobacter*, *Serratia*, and *Citrobacter* group (KESC), direct from clinical samples, in 24 hours.

**Brilliance™ *Listeria* Agar
(Oxoid Chromogenic *Listeria* Agar)
(OCLA)**

Composition per liter:

Peptone 18.5g
LiCl 15.0g

Agar	14.0g
NaCl	9.5g
Yeast extract	4.0g
Maltose	4.0g
Sodium pyruvate	2.0g
X-glucoside chromogenic mix	0.2g
Differential lecithin solution	40.0mL
Selective supplement solution	20.0mL
pH 7.2 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Oxoid Unipath.

Differential Lecithin Solution:

Composition per 40.0mL:

Lecithin	Proprietary
----------------	-------------

Preparation of Differential Lecithin Solution: Available as premixed solution.

Selective Supplement Solution:

Composition per 20.0mL:

Nalidixic acid	26.0mg
Polymyxin B	10.0mg
Ceftazidime	6.0mg
Amphotericin	10.0mg

Preparation of Selective Supplement Solution: Add components to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except differential lecithin solution and selective supplement solution, to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 46°C. Aseptically add differential lecithin solution and selective supplement solution. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the isolation, enumeration, and presumptive identification of *Listeria* species and *Listeria monocytogenes* from food samples. A chromogenic agar for the selective growth and differentiation of *Listeria monocytogenes* and *Listeria* spp.

Brilliance™ MRSA Agar

Composition per liter:

Peptone mix	25.0g
Salt mix	25.0g
Agar	15.0g
Kaolin	13.0g
Chromogenic mix	2.0g
Antibiotic cocktail	4.0mL
pH 7.2 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add components, except antibiotic cocktail, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add antibiotic cocktail. Mix thoroughly. Pour into sterile Petri dishes.

Use: For universal MRSA screening. Oxoid Brilliance MRSA Agar incorporates a novel chromogen that yields a blue color as a result of phosphatase activity, indicative of many staphylococci including *Staphylococcus aureus*. To allow the medium to differentiate MRSA accurately, it contains a combination of antibacterial compounds

designed to inhibit the growth of a wide variety of competitor organisms and MSSA. Also included are compounds to suppress the expression of phosphatase activity in other staphylococci, thus ensuring a high level of sensitivity and specificity.

Brilliance™ Salmonella Agar

Composition per liter:

Chromogenic mix	25.0g
Agar	15.0g
Inhibigen™ mix	14.0g
Salmonella selective supplement solution	10.0mL
pH 7.3 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Oxoid Unipath.

Salmonella Selective Supplement Solution:

Composition per 10.0mL:

Novobiocin	10.0mg
Cefsulodin	24.0mg

Preparation of Selective Supplement Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except *Salmonella* selective supplement solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Add 10.0mL *Salmonella* selective supplement. It is critical that the selective supplement is added prior to heating. Gently heat while stirring and bring to boiling. Do not autoclave. Cool to 50°C. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the presumptive detection and identification of *Salmonella* spp. from foods and clinical specimens. The Inhibigen contained in this medium specifically targets *E.coli*, a particular benefit when testing fecal samples. Additional compounds are added to suppress growth of other competing flora. Differentiation of *Salmonella* from the other organisms that grow on Brilliance *Salmonella* Agar is achieved through the inclusion of two chromogens that target specific enzymes: caprylate esterase and β-glucosidase. The action of the enzymes on the chromogens results in a build-up of color within the colony. The color produced depends on which enzymes the organisms possess. The action of caprylate esterase present in all salmonellae results in a purple colony. Some Enterobacteriaceae species also produce caprylate esterase, but these are differentiated from *Salmonella* by a β-glucosidase substrate. This results in blue colonies, which are easy to distinguish from the purple *Salmonella* colonies.

Brilliance™ UTI Agar

Composition per liter:

Chromogenic mix	26.3g
Agar	15.0g
Peptone	15.0g
pH 7.0 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Mix thoroughly. Pour into sterile Petri dishes or leave in tubes.

Use: For the presumptive identification and differentiation of all the main microorganisms that cause urinary tract infections (UTIs). Brill-

Brilliance UTI Agar contains two specific chromogenic substrates which are cleaved by enzymes produced by *Enterococcus* spp., *Escherichia coli*, and coliforms. In addition, it contains phenylalanine and tryptophan, which provide an indication of tryptophan deaminase activity, indicating the presence of *Proteus* spp., *Morganella* spp., and *Providencia* spp.

Brilliance™ UTI Clarity Agar

Composition per liter:

Chromogenic mix	17.0g
Agar	10.0g
Peptone.....	9.0g
Tryptophan.....	1.0g

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the detection and differentiation of coliform bacteria. For the presumptive identification of the main pathogens which cause infection of the urinary tract. Brilliance UTI Clarity Agar contains two chromogenic substrates which are cleaved by enzymes produced by *E. coli*, *Enterococcus* spp., and coliforms. Of the two chromogens included in the medium, one is metabolized by β-galactosidase, an enzyme produced by *E. coli*, which grow as pink colonies. The other is cleaved by β-glucosidase enzyme activity, allowing the specific detection of enterococci which form blue or turquoise colonies. Cleavage of both the chromogens gives dark blue or purple colonies, and indicates the organism is a coliform. The tryptophan in the medium is an indicator of tryptophan deaminase activity, resulting in colonies of *Proteus*, *Morganella*, and *Providencia* spp. with brown halos.

Brilliant Green Agar

Composition per liter:

Agar	20.0g
Lactose.....	10.0g
Sucrose.....	10.0g
Peptic digest of animal tissue.....	5.0g
Pancreatic digest of casein.....	5.0g
NaCl.....	5.0g
Phenol Red.....	0.08g
Brilliant Green	0.0125g

pH 6.9 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath and BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the selective isolation of *Salmonella* other than *Salmonella typhi* from feces and other specimens, and food and dairy products. *Salmonella* other than *Salmonella typhi* appear as red/pink/white colonies surrounded by a zone of red in the agar, indicating nonlactose/sucrose fermentation. *Proteus* or *Pseudomonas* species may appear as small red colonies. Lactose- or sucrose-fermenting bacteria appear as yellow-green colonies surrounded by a zone of yellow-green in the agar.

Brilliant Green Agar Base with Phosphates and Sulfa Supplement

Composition per liter:

Agar	12.0g
Sucrose.....	10.0g
Plant peptone	10.0g
Lactose.....	10.0g
Plant extract.....	5.0g
Yeast extract.....	3.0g
Na ₂ HPO ₄	1.0g
NaH ₂ PO ₄	0.6g
Phenol Red.....	0.09g
Brilliant Green	4.7mg

pH 6.9 ± 0.2 at 25°C

Source: This medium, without sulfa supplement, is available as a premixed powder from HiMedia.

Sulfa Supplement Solution:

Composition per 10.0mL:

Sodium sulfacetamide.....	1.0g
Sodium mandelate	0.25g

Preparation of Sulfa Supplement Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except sulfa supplement solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL of sterile sulfa supplement solution. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the selective isolation of *Salmonella* other than *Salmonella typhi* from feces and other specimens while inhibiting *Escherichia coli*, *Proteus*, and *Pseudomonas* species.

Brilliant Green Agar, Modified

Composition per liter:

Agar	12.0g
Lactose.....	10.0g
Sucrose.....	10.0g
Beef extract.....	5.0g
Peptone	5.0g
NaCl.....	5.0g
Yeast extract.....	3.0g
Na ₂ HPO ₄	1.0g
NaH ₂ PO ₄	0.6g
Phenol Red.....	0.09g
Brilliant Green	4.7mg

pH 6.9 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Do not autoclave. Cool to 45°–50°C. Addition of 1.0g of sodium sulfacetamide and 250.0mg of sodium mandelate enhances inhibition of contaminating microorganisms. Pour into sterile Petri dishes.

Use: For the selective isolation of *Salmonella* other than *Salmonella typhi* from feces and other specimens, and food and dairy products. *Salmonella* other than *Salmonella typhi* appear as red/pink/white colonies surrounded by a zone of red in the agar, indicating nonlactose/sucrose fermentation. *Proteus* or *Pseudomonas* species may appear as

small red colonies. Lactose- or sucrose-fermenting bacteria appear as yellow-green colonies surrounded by a zone of yellow-green in the agar.

Brilliant Green Agar with Sulfadiazine

Composition per liter:

Agar	20.0g
Lactose	10.0g
Sucrose	10.0g
Pancreatic digest of casein	5.0g
Peptic digest of animal tissue	5.0g
NaCl	5.0g
Yeast extract	3.0g
Phenol Red	0.08g
Sulfadiazine	0.08g
Brilliant Green	0.0125g

pH 6.9 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the selective detection of *Salmonella* in foods, especially from egg products. *Salmonella* other than *Salmonella typhi* appear as red/pink colonies surrounded by a zone of red in the agar indicating nonlactose/sucrose fermentation. *Proteus* or *Pseudomonas* species may appear as small red colonies. Lactose- or sucrose-fermenting bacteria appear as yellow-green colonies surrounded by a zone of yellow-green in the agar.

Brilliant Green Bile Agar

Composition per liter:

Noble agar	10.15g
Pancreatic digest of gelatin	8.25g
Lactose	1.9g
Na ₂ SO ₃	0.205g
Basic Fuchsin	0.078g
Erioglaucine	0.065g
FeCl ₃	0.0295g
KH ₂ PO ₄	0.015g
Oxgall, dehydrated	2.95mg
Brilliant Green	0.03mg

pH 6.9 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Caution: Basic Fuchsin is a potential carcinogen and care must be taken to avoid inhalation of the powdered dye and contamination of the skin.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. For plating 10.0mL samples, prepare the medium double strength. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes. Care should be taken to avoid exposure of the prepared medium to light.

Use: For the detection and enumeration of coliform bacteria in materials of sanitary importance such as water, sewage, and foods. *Escherichia coli* appears as dark red colonies with a pink halo. *Enterobacter* species appear as pink colonies.

Brilliant Green Bile Broth (Brilliant Green Lactose Bile Broth)

Composition per liter:

Oxgall, dehydrated	20.0g
Lactose	10.0g
Pancreatic digest of gelatin	10.0g
Brilliant Green	0.013g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems and Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes containing inverted Durham tubes, in 10.0mL amounts for testing 1.0mL or less of sample. Autoclave for 12 min (not longer than 15 min) at 15 psi pressure–121°C. After sterilization, cool the broth rapidly. Medium is sensitive to light.

Use: For the detection of coliform microorganisms in foods, dairy products, water, and wastewater, as well as in other materials of sanitary importance. Turbidity in the broth and gas in the Durham tube are positive indications of *Escherichia coli*.

Brilliant Green Bile Broth with MUG

Composition per liter:

Oxgall, dehydrated	20.0g
Lactose	10.0g
Pancreatic digest of gelatin	10.0g
MUG (4-Methyl umbelliferyl-β-D-glucuronide)	0.05g
Brilliant Green	0.013g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes containing inverted Durham tubes, in 10.0mL amounts for testing 1.0mL or less of sample. Autoclave for 12 min (not longer than 15 min) at 15 psi pressure–121°C. After sterilization, cool the broth rapidly.

Use: For the detection of coliform microorganisms in foods, dairy products, water, and wastewater, as well as in other materials of sanitary importance. The presence of *Escherichia coli* and other coliforms is determined by the presence of fluorescence in the tube.

Brilliant Green 2%-Bile Broth, Fluorocult® (Fluorocult Brilliant Green 2%-Bile Broth) (BRILA)

Composition per liter:

Ox bile, dried	20.0g
Peptone	10.0g
Lactose	10.0g
L-Tryptophan	1.0g
4-Methylumbelliferyl-β-D-glucuronide	0.1g
Brilliant Green	0.0133g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available from Merck.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Cool. Distribute into test tubes containing inverted Durham tubes.

Autoclave for 15 min at 15 psi pressure–121°C. Do not autoclave longer. The prepared broth is clear and green.

Use: For the cultivation of *Escherichia coli*. Bile and Brilliant Green almost completely inhibit the growth of undesired microbial flora, in particular Gram-positive microorganisms. *E. coli* shows a positive fluorescence under UV light (366 nm). A positive indole reaction and, if necessary, gas formation due to fermenting lactose, confirm the findings.

Brilliant Green Broth (m-Brilliant Green Broth)

Composition per liter:

Proteose peptone No. 3	20.0g
Lactose	20.0g
Sucrose	20.0g
NaCl	10.0g
Yeast extract	6.0g
Phenol Red	0.16g
Brilliant Green	0.025g

pH 6.9 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat with frequent mixing. Boil for 1 min. Cool to 25°C. Add 2.0mL to each sterile absorbent filter used.

Use: For the selective isolation and differentiation of *Salmonella* from polluted water by the membrane filter method.

Brilliant Green HiVeg Agar

Composition per liter:

Agar	10.15g
Plant peptone	8.25g
Lactose	1.9g
Basic Fuchsin	776.0mg
Erioglucine	649.0mg
FeCl ₃	295.0mg
Na ₂ SO ₃	205.0mg
KH ₂ PO ₄	15.3mg
Synthetic detergent No. II	2.95mg
Brilliant Green	29.5µg

pH 6.9 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the selective isolation of *Salmonella* other than *Salmonella typhi* from feces and other specimens, and food and dairy products. *Salmonella* other than *Salmonella typhi* appear as red/pink/white colonies surrounded by a zone of red in the agar, indicating nonlactose/sucrose fermentation. *Proteus* or *Pseudomonas* species may appear as small red colonies. Lactose- or sucrose-fermenting bacteria appear as yellow-green colonies surrounded by a zone of yellow-green in the agar.

Brilliant Green HiVeg Agar Base with Sulfa Supplement

Composition per liter:

Agar	20.0g
Plant peptone No. 3	10.0g
Lactose	10.0g
Sucrose	10.0g
NaCl	5.0g
Yeast extract	3.0g
Phenol Red	0.08g
Brilliant Green	125.0mg
Sulfa supplement solution	10.0mL

pH 6.9 ± 0.2 at 25°C

Source: This medium, without sulfa supplement, is available as a premixed powder from HiMedia.

Sulfa Supplement Solution:

Composition per 10.0mL:

Sodium sulfacetamide	1.0g
Sodium mandelate	0.25g

Preparation of Sulfa Supplement Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except sulfa supplement solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL of sterile sulfa supplement solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the selective isolation of *Salmonella* other than *Salmonella typhi* from feces and other specimens.

Brilliant Green HiVeg Agar Base Modified with Sulfa Supplement

Composition per liter:

Agar	12.0g
Plant peptone No. 3	10.0g
Lactose	10.0g
Sucrose	10.0g
NaCl	5.0g
Yeast extract	3.0g
Phenol Red	0.08g
Brilliant Green	125.0mg
Sulfa supplement solution	10.0mL

pH 6.9 ± 0.2 at 25°C

Source: This medium, without sulfa supplement, is available as a premixed powder from HiMedia.

Sulfa Supplement Solution:

Composition per 10.0mL:

Sodium sulfacetamide	1.0g
Sodium mandelate	0.25g

Preparation of Sulfa Supplement Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except sulfa supplement solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL of sterile sulfa supplement solution. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the selective isolation of *Salmonella* other than *Salmonella typhi* from feces and other specimens.

Brilliant Green HiVeg Broth 2%

Composition per liter:

Plant peptone.....	25.0g
Lactose.....	10.0g
Synthetic detergent No. II.....	5.0g
Brilliant Green.....	13.3mg

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat with frequent mixing. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the selective isolation and differentiation of *Salmonella* from polluted water by the membrane filter method.

Brilliant Green Lactose Bile Broth (BAM M25)

Composition per liter:

Oxgall, dehydrated.....	20.0g
Lactose.....	10.0g
Pancreatic digest of gelatin.....	10.0g
Brilliant Green.....	0.0133g

pH 7.2 ± 0.1 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems and Oxoid Unipath.

Preparation of Medium: Add lactose and pancreatic digest of gelatin to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Add 20.0g oxgall dissolved in 200.0mL distilled/deionized water. The pH of this solution should be 7.0–7.5. Mix thoroughly. Bring volume to 975.0mL with distilled/deionized water. Adjust pH to 7.4. Add 13.3mL of 0.1% aqueous Brilliant Green in distilled/deionized water. Adjust volume to 1.0L with distilled/deionized water. Distribute into tubes containing inverted Durham tubes, in 10.0mL amounts for testing 1.0mL or less of sample. Make sure that the fluid level covers the inverted vials. Autoclave for 15 min at 15 psi pressure–121°C. After sterilization, cool the broth rapidly. Medium is sensitive to light. The final pH should be 7.2 ± 0.1 at 25°C.

Use: For the detection of coliform microorganisms in foods, dairy products, water, and wastewater as well as in other materials of sanitary importance. Turbidity in the broth and gas in the Durham tube are positive indications of *Escherichia coli*.

Brilliant Green Lactose Bile Broth

See: **Brilliant Green Bile Broth**

Brilliant Green Phenol Red Agar

Composition per liter:

Agar.....	15.0g
Lactose.....	15.0g
Peptone.....	10.0g
Meat extract.....	5.0g
NaCl.....	5.0g
Phenol Red.....	0.08g
Brilliant Green.....	0.0125g

pH 6.9 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Salmonella* species.

Brilliant Green Sulfa Agar

See: **BG Sulfa Agar**

Brilliant Green Sulfapyridine Agar

See: **BG Sulfa Agar**

Brochothrix thermosphacta Medium

Composition per liter:

Peptone.....	20.0g
Glycerol.....	15.0g
Agar.....	13.0g
Yeast extract.....	2.0g
K ₂ HPO ₄	1.0g
MgSO ₄ ·7H ₂ O.....	1.0g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of *Brochothrix thermosphacta* from meats and meat products.

Brodie Medium

Composition per liter:

Agar.....	20.0g
Maltose.....	5.0g
Glucose.....	2.0g
Yeast extract.....	2.0g
Glycerol.....	1.0g
MgSO ₄	0.5g
Ca(NO ₃) ₂	0.5g
KH ₂ PO ₄	0.5g
Peptone.....	0.2g
DL-Asparagine.....	0.2g
FeSO ₄	Trace

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Cyathus* species and *Nidula niveo tormentosa*.

Brolacin Agar

See: **CLED Agar**

BROLACIN MUG Agar (Bromothymol Blue Lactose Cystine MUG Agar) (C.L.E.D. MUG Agar)

Composition per liter:

Agar.....	12.0g
Lactose.....	10.0g
Universal peptone.....	4.0g

Casein peptone	4.0g
Meat extract	3.0g
L-cystine	0.128g
4-Methylumbelliferyl- β -D-glucuronide	0.1g
Bromthymol Blue	0.02g
pH 7.3 \pm 0.2 at 37°C	

Source: This medium is available from Fluka, Sigma-Aldrich.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Pour into sterile Petri dishes.

Use: For the enumeration, isolation, and identification of microorganisms in urine. Growth of all urinary microorganisms is favored. Lactose catabolism produces a color change of Bromothymol Blue to yellow. Alkalinization gives a color change to deep-blue. β -D-Glucuronidase, which is produced by *E. coli*, cleaves 4-methylumbelliferyl- β -D-glucuronide to 4-methylumbelliferone and glucuronide. The fluorogen 4-methylumbelliferone can be detected under a long wavelength UV lamp, permitting differentiation of *E. coli* colonies.

Bromcresol Purple Azide Broth

See: [BCP Azide Broth](#)

Bromcresol Purple Broth

Composition per liter:

Peptone	10.0g
NaCl	5.0g
Beef extract	3.0g
Bromcresol Purple	0.04g
Carbohydrate solution	10.0mL
pH 7.0 \pm 0.2 at 25°C	

Carbohydrate Solution:

Composition per 10.0mL:

Carbohydrate	5.0g
--------------------	------

Preparation of Carbohydrate Solution: Add carbohydrate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into test tubes that contain an inverted Durham tube. Autoclave for 10 min at 15 psi pressure–121°C.

Use: For the differentiation of a variety of microorganisms based on their fermentation of specific carbohydrates. Bacteria that ferment the specific carbohydrate turn the medium yellow. When bacteria produce gas, the gas is trapped in the Durham tube.

Bromcresol Purple Broth (BAM M26)

Composition per liter:

Peptone	10.0g
NaCl	5.0g
Beef extract	3.0g
Bromcresol Purple	0.04g
Carbohydrate solution	50.0mL
pH 7.0 \pm 0.2 at 25°C	

Carbohydrate Solution:

Composition per 50.0mL:

Carbohydrate	25.0g
--------------------	-------

Preparation of Carbohydrate Solution: Add carbohydrate to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except carbohydrate solution, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 10 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 50.0mL of carbohydrate solution. Aseptically distribute into tubes or flasks. Alternately distribute the medium without the carbohydrate solution into test tubes that contain an inverted Durham tube prior to autoclaving. Then autoclave for 10 min at 15 psi pressure–121°C. Cool to 25°C, and aseptically add the carbohydrate solution to each tube to yield a final carbohydrate concentration of 5%.

Use: For the differentiation of a variety of microorganisms based on their fermentation of specific carbohydrates. Bacteria that ferment the specific carbohydrate turn the medium yellow. When bacteria produce gas, the gas is trapped in the Durham tube.

Bromcresol Purple Deoxycholate Agar

See: [BCP D Agar](#)

Bromcresol Purple Broth with Sodium Chloride (BAM M26)

Composition per liter:

NaCl	25.0g
Peptone	10.0g
Beef extract	3.0g
Bromcresol Purple	0.04g
Carbohydrate solution	50.0mL
pH 7.0 \pm 0.2 at 25°C	

Carbohydrate Solution:

Composition per 50.0mL:

Carbohydrate	25.0g
--------------------	-------

Preparation of Carbohydrate Solution: Add carbohydrate to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except carbohydrate solution, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 10 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 50.0mL of carbohydrate solution. Aseptically distribute into tubes or flasks. Alternately distribute the medium without the carbohydrate solution into test tubes that contain an inverted Durham tube prior to autoclaving. Then autoclave for 10 min at 15 psi pressure–121°C. Cool to 25°C, and aseptically add the carbohydrate solution to each tube to yield a final carbohydrate concentration of 5%.

Use: For the differentiation of a halophilic *Vibrio* spp. Bacteria that ferment the specific carbohydrate turn the medium yellow. When bacteria produce gas, the gas is trapped in the Durham tube.

Bromcresol Purple Deoxycholate Citrate Lactose Sucrose Agar

See: [BCP DCLS Agar](#)

Bromcresol Purple Dextrose Broth (BCP Broth)

Composition per liter:

Glucose	10.0g
Peptone	5.0g

Beef extract	3.0g
Bromcresol Purple solution	2.0mL
pH 7.0 ± 0.2 at 25°C	

Bromcresol Purple Solution:**Composition per 10.0mL:**

Bromcresol Purple	0.16g
Ethanol (95% solution)	10.0mL

Preparation of Bromcresol Purple Solution: Add Bromcresol Purple to 10.0mL of ethanol. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes in 12–15mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and differentiation of bacteria based on their ability to ferment glucose. Bacteria that ferment glucose turn the medium yellow.

Bromcresol Purple Milk Solids Glucose Agar (BCP MS G Agar)

Composition per 2.0L:

Skim milk powder	80.0g
Glucose	40.0g
Agar	30.0g
Bromcresol Purple solution	2.0mL
pH 6.6 ± 0.2 at 25°C	

Bromcresol Purple Solution:**Composition per 10.0mL:**

Bromcresol Purple	0.16g
Ethanol (95% solution)	10.0mL

Preparation of Bromcresol Purple Solution: Add Bromcresol Purple to 10.0mL of ethanol. Mix thoroughly.

Preparation of Medium: Add skim milk powder and Bromcresol Purple solution to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 8 min at 11 psi pressure–116°C. Cool to 45°–50°C. In a separate flask, add glucose to distilled/deionized water and bring volume to 200.0mL. Mix thoroughly. Autoclave for 8 min at 11 psi pressure–116°C. Cool to 45°–50°C. In a third flask, add agar to distilled/deionized water and bring volume to 800.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically combine the three sterile solutions. Mix thoroughly. Aseptically adjust the pH to 6.6 with sterile 1N HCl. Aseptically distribute into sterile tubes. Allow tubes to cool in a slanted position.

Use: For the cultivation and differentiation of *Trichophyton mentagrophytes*, *Trichophyton rubrum*, and *Microsporium persicolor*.

Bromcresol Purple Milk Yeast Extract with CCG

Composition per liter:

Milk solution	1.0L
Agar solution	900.0mL
Yeast extract solution	40.0mL
Chloramphenicol solution	10.0mL
Cycloheximide solution	10.0mL
Gentamicin solution	0.8mL

Milk Solution:**Composition per liter:**

Skim milk powder	80.0g
Bromcresol Purple solution	2.0mL

Preparation of Milk Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 8 min at 11 psi pressure–116°C. Cool to 45°–50°C.

Bromcresol Purple Solution:**Composition per 10.0mL:**

Bromcresol Purple	0.16g
Ethanol (95% solution)	10.0mL

Preparation of Bromcresol Purple Solution: Add Bromcresol Purple to 10.0mL of ethanol. Mix thoroughly.

Agar Solution:**Composition per 900.0mL:**

Agar	30.0g
------------	-------

Preparation of Agar Solution: Add agar to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Yeast Extract Solution:**Composition per 100.0mL:**

Yeast extract	40.0g
---------------------	-------

Preparation of Yeast Extract Solution: Add yeast extract to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Chloramphenicol Solution:**Composition per 10.0mL:**

Chloramphenicol	0.1g
-----------------------	------

Preparation of Chloramphenicol Solution: Add chloramphenicol to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Cycloheximide Solution:**Composition per 10.0mL:**

Cycloheximide	0.2g
---------------------	------

Preparation of Cycloheximide Solution: Add cycloheximide to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Gentamicin Solution:**Composition per 10.0mL:**

Gentamicin	0.5g
------------------	------

Preparation of Gentamicin Solution: Add gentamicin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Aseptically combine the sterile milk solution and sterile agar solution. Aseptically add 40.0mL of sterile yeast extract solution, 10.0mL of sterile chloramphenicol solution, 10.0mL of sterile cycloheximide solution, and 0.8mL of sterile gentamicin solution. Mix thoroughly. Aseptically distribute into sterile tubes. Allow tubes to cool in a slanted position.

Use: For the isolation, cultivation, and differentiation of *Trichophyton verrucosum* and *Trichophyton schoenleinii*.

Bromo Cresol Purple Azide HiVeg Broth

Composition per liter:

Plant hydrolysate	10.0g
Yeast extract	10.0g

NaCl	5.0g
D-Glucose	5.0g
K ₂ HPO ₄	2.7g
KH ₂ PO ₄	2.7g
NaN ₃	0.5g
Bromo Cresol Purple	32.0mg

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Caution: Sodium azide is toxic. Azides also react with metals and disposal must be highly diluted.

Preparation of Medium: Add components to distilled/deionized water to 1.0L. Mix thoroughly. Gently heat to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 10 psi pressure–115°C.

Use: For use in the confirmation test for the presence of fecal streptococci in water and wastewater.

Bromo Cresol Purple HiVeg Broth Base

Composition per liter:

Plant peptone	10.0g
Carbohydrate (test compound)	10.0g
NaCl	5.0g
Plant extract	3.0g
Bromo Cresol Purple	0.04g

pH 7.0 ± 0.2 at 25°C

Source: This medium without carbohydrate is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes in 12–15mL volumes. Autoclave for 10 min at 15 psi pressure–121°C. Carbohydrate solutions are added to test bacterial fermentative abilities.

Use: For the cultivation and differentiation of bacteria based on their ability to ferment various carbohydrates. Bacteria that ferment the carbohydrate turn the medium yellow.

Bromthymol Blue Agar

Composition per liter:

Agar	11.0g
Peptone	10.0g
NaCl	5.0g
Yeast extract	5.0g
Lactose (33% solution)	27.0mL
Bromthymol Blue (1% solution)	10.0mL
Sodium thiosulfate (50% solution)	2.0mL
Glucose (33% solution)	1.2mL
Maranil solution (5% solution)	1.0mL

pH 7.7–7.8 at 25°C

Preparation of Medium: Add agar, peptone, NaCl, and yeast extract to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 8.0. Autoclave for 20 min at 15 psi pressure–121°C. Cool to 45°–50°C. Filter sterilize separately the lactose solution, Bromthymol Blue solution, sodium thiosulfate solution, glucose solution, and maranil solution. To the cooled, sterile agar solution aseptically add 27.0mL of sterile lactose solution, 10.0mL of sterile Bromthymol Blue solution, 2.0mL of sterile sodium thiosulfate solution, 1.2mL of sterile glucose solution, and 1.0mL of sterile maranil solution. Mix thoroughly. Adjust pH to 7.7–7.8. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation and cultivation of members of the Enterobacteriaceae.

Bromthymol Blue Broth

Composition per 101.45mL:

Pancreatic digest of casein	0.7g
NaCl	0.5g
Beef extract	0.3g
Yeast extract	0.3g
Beef heart, solids from infusion	0.2g
Horse serum	10.0mL
Bromthymol Blue solution	1.0mL
Ampicillin solution	1.0mL
Urea solution	0.25mL
Nystatin solution	0.1mL
Tripeptide solution	0.1mL

pH 6.0 ± 0.2 at 25°C

Bromthymol Blue Solution:

Composition per 50.0mL:

Bromthymol Blue	0.2g
NaOH (0.01N solution)	32.0mL

Preparation of Bromthymol Blue Solution: Add Bromthymol Blue to NaOH solution. Mix thoroughly. Bring volume to 50.0mL with distilled/deionized water. Autoclave for 15 min at 15 psi pressure–121°C. Store at 25°C.

Ampicillin Solution:

Composition per 10.0mL:

Ampicillin	1.0g
------------------	------

Preparation of Ampicillin Solution: Add ampicillin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Urea Solution:

Composition per 100.0mL:

Urea	10.0g
------------	-------

Preparation of Urea Solution: Add urea to distilled/deionized water and bring volume to 100.0mL. Filter sterilize. Store at –20°C.

Nystatin Solution:

Composition per 1.0mL:

Nystatin	50,000U
----------------	---------

Preparation of Nystatin Solution: Add nystatin to distilled/deionized water and bring volume to 1.0mL. Filter sterilize.

Tripeptide Solution:

Composition per 10.0mL:

Glycyl-L-histidyl-L-lysine acetate	0.2mg
--	-------

Preparation of Tripeptide Solution: Add glycyl-L-histidyl-L-lysine acetate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize. Store at –20°C.

Preparation of Medium: Add components—except horse serum, ampicillin solution, urea solution, nystatin solution, and tripeptide solution—to distilled/deionized water and bring volume to 90.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL of sterile horse serum, 1.0mL of sterile ampicillin solution, 0.25mL of sterile urea solution, 0.1mL of sterile nystatin solution, and 0.1mL of sterile tripeptide solution. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the cultivation of *Ureaplasma* species from clinical specimens.

Bromthymol Blue Lactose Agar

See: **BTB Lactose Agar**

Brooks Agar

Composition per liter:

Agar	20.0g
Cornmeal	5.0g
Yeast extract	2.0g
KH ₂ PO ₄	1.5g
Malt extract	1.0g
Pancreatic digest of casein	1.0g
MgSO ₄ ·7H ₂ O	0.5g

Preparation of Medium: Add cornmeal to distilled/deionized water and bring volume to 500.0mL. Gently heat and bring to boiling. Boil for 30 min. Filter through cotton. Bring volume of filtrate to 1.0L with distilled/deionized water. Add remaining components. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Aspergillus japonicus*, *Aspergillus sojae*, and *Phytophthora citrophthora*.

Brucella Agar

Composition per liter:

Agar	15.0g
Pancreatic digest of casein	10.0g
Peptic digest of animal tissue	10.0g
NaCl	5.0g
Yeast extract	2.0g
Glucose	1.0g
NaHSO ₃	0.1g
Horse blood, defibrinated	100.0mL

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems and Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Heat gently with frequent mixing. Boil for 1 min. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Add 100.0mL of sterile defibrinated horse blood. Mix gently and pour into sterile Petri dishes.

Use: For the cultivation and maintenance of *Brucella* species. For the isolation and cultivation of nonfastidious and fastidious microorganisms from a variety of clinical and nonclinical specimens.

Brucella Agar Base Campylobacter Medium

Composition per 1100.0mL:

Cycloheximide (actidione)	0.05g
Sodium cephalosporin	0.015g
Novobiocin	5.0mg
Bacitracin	25,000U
Colistin sulfate	10,000U
<i>Brucella</i> agar base	1.0L
Horse blood, defibrinated	100.0mL

Brucella Agar Base

Composition per liter:

Agar	15.0g
Pancreatic digest of casein	10.0g
Peptic digest of animal tissue	10.0g
NaCl	5.0g
Yeast extract	2.0g
Glucose	1.0g
NaHSO ₃	0.1g

Preparation of Brucella Agar Base: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Optional Supplement:

Composition per 10.0mL:

Sodium pyruvate	0.25g
NaHSO ₃	0.25g
FeSO ₄ ·7H ₂ O	0.25g

Preparation of Optional Supplement: Add components to distilled/deionized water and bring volume to 10.0mL. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: Add components to 1.0L of prepared *Brucella* agar base. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Add 100.0mL of sterile, defibrinated horse blood. Addition of 10.0mL of optional supplement will improve growth. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the selective isolation and cultivation of *Campylobacter jejuni* from fecal specimens or rectal swabs.

Brucella Agar

Composition per liter:

Agar	15.0g
Pancreatic digest of casein	10.0g
Peptic digest of animal tissue	10.0g
NaCl	5.0g
Yeast extract	2.0g
Glucose	1.0g
NaHSO ₃	0.1g
Horse blood, defibrinated	100.0mL

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems and Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Heat gently with frequent mixing. Boil for 1 min. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Add 100.0mL of sterile defibrinated horse blood. Mix gently and pour into sterile Petri dishes.

Use: For the cultivation and maintenance of *Brucella* species. For the isolation and cultivation of nonfastidious and fastidious microorganisms from a variety of clinical and nonclinical specimens.

Brucella Agar with 1.0% Glucose

Composition per liter:

Agar	15.0g
Peptic digest of animal tissue	10.0g
Glucose	10.0g
NaCl	5.0g
Meat extract	5.0g
Sheep blood, defibrinated	100.0mL

Horse serum	50.0mL
Vitamin K ₁ solution	1.0mL
pH 7.5 ± 0.2 at 25°C	

Source: This medium is available from HiMedia.

Vitamin K₁ Solution:

Composition per 20.0mL:

Vitamin K ₁	0.2g
Ethanol, absolute	20.0mL

Preparation of Vitamin K₁ Solution: Add vitamin K₁ to 20.0mL of ethanol. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except sheep blood, horse serum, and vitamin K₁ solution, to distilled/deionized water and bring volume to 849.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 100.0mL of sterile sheep blood, 50.0mL of horse serum, and 1.0mL of sterile vitamin K₁ solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Brucella* species.

Brucella Albimi Broth

See: *Brucella Broth*

Brucella Albimi Broth with 0.16% Agar

Composition per liter:

Pancreatic digest of casein	10.0g
Peptic digest of animal tissue	10.0g
NaCl	5.0g
Yeast extract	2.0g
Agar	1.6g
Glucose	1.0g
NaHSO ₃	0.1g
Horse blood, defibrinated	100.0mL
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components, except horse blood, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Heat gently with frequent mixing. Boil for 1 min. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 100.0mL of sterile defibrinated horse blood. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Campylobacter* species.

***Brucella Albimi Broth* with 0.16% Agar and 1% Glycine (ATCC Medium 2161)**

Composition per liter:

Pancreatic digest of casein	10.0g
Peptic digest of animal tissue	10.0g
Glycine	10.0g
NaCl	5.0g
Yeast extract	2.0g
Agar	1.6g
Glucose	1.0g
NaHSO ₃	0.1g
Horse blood, defibrinated	100.0mL
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components, except horse blood, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Heat gently with frequent mixing. Boil for 1 min. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add

100.0mL of sterile defibrinated horse blood. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Campylobacter* species.

***Brucella Albimi Broth* with Agar and 1.5% Sodium Chloride (ATCC Medium 2160)**

Composition per liter:

NaCl	15.0g
Pancreatic digest of casein	10.0g
Peptic digest of animal tissue	10.0g
Yeast extract	2.0g
Agar	1.6g
Glucose	1.0g
NaHSO ₃	0.1g
Horse blood, defibrinated	100.0mL
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components, except horse blood, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Heat gently with frequent mixing. Boil for 1 min. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 100.0mL of sterile defibrinated horse blood. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Campylobacter nitrofigilis*.

Brucella Albimi Broth with Formate and Fumarate

Composition per 1050.0mL:

Pancreatic digest of casein	10.0g
Peptic digest of animal tissue	10.0g
NaCl	5.0g
Yeast extract	2.0g
Glucose	1.0g
NaHSO ₃	0.1g
Horse blood, defibrinated	100.0mL
Formate-fumarate solution	50.0mL
pH 7.0 ± 0.2 at 25°C	

Formate-Fumarate Solution:

Composition per 100.0mL:

Sodium formate	6.0g
Fumaric acid	6.0g

Preparation of Formate-Fumarate Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Adjust pH to 7.0. Filter sterilize.

Preparation of Medium: Add components, except formate-fumarate solution and horse blood, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Heat gently with frequent mixing. Boil for 1 min. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Add 100.0mL of sterile defibrinated horse blood. Mix gently and aseptically distribute into sterile tubes in 5.0mL volumes. Aseptically add 0.25mL of formate-fumarate solution to each tube containing 5.0mL of medium immediately prior to inoculation.

Use: For the cultivation and maintenance of *Campylobacter mucosalis*.

Brucella Albimi Broth with Sheep Blood

Composition per liter:

Pancreatic digest of casein	10.0g
Peptic digest of animal tissue	10.0g

NaCl	5.0g
Yeast extract	2.0g
Glucose	1.0g
NaHSO ₃	0.1g
Sheep blood, defibrinated	100.0mL
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components, except sheep blood, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Heat gently with frequent mixing. Boil for 1 min. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 100.0mL of sterile defibrinated sheep blood. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Helicobacter nemestrinae* and *Helicobacter pylori*.

Brucella Albimi Medium, Semisolid

Composition per liter:

Pancreatic digest of casein	10.0g
Peptic digest of animal tissue	10.0g
Glycine	10.0g
NaCl	8.5g
Yeast extract	2.0g
Agar	1.6g
Glucose	1.0g
L-Cysteine·HCl·H ₂ O	0.2g
NaHSO ₃	0.1g
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Gently heat and bring to boiling. Distribute into tubes in 10.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Allow tubes to cool in an upright position.

Use: For the cultivation and identification of *Campylobacter* species.

Brucella Anaerobic Blood Agar

Composition per liter:

Vitamin K ₁	0.01g
Anaerobic agar base	1000.0mL
Sheep blood, sterile, defibrinated	50.0mL

Anaerobic Agar Base

Composition per liter:

Pancreatic digest of casein	17.5g
Agar	15.0g
Glucose	10.0g
Papaic digest of soybean meal	2.5g
NaCl	2.5g
Sodium thioglycolate	2.0g
Sodium formaldehyde sulfoxylate	1.0g
L-Cystine·HCl·H ₂ O	0.4g
Methylene Blue	0.002g
pH 7.0 ± 0.2 at 25°C	

Preparation of Anaerobic Agar Base: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Preparation of Medium: To 950.0mL of cooled, sterile anaerobic agar base, aseptically add 10.0mg of vitamin K₁ and 50.0mL of sterile, defibrinated sheep blood.

Use: For the isolation of anaerobes.

Brucella Blood Agar with Hemin and Vitamin K₁

Composition per liter:

Agar	15.0g
Pancreatic digest of casein	10.0g
Peptic digest of animal tissue	10.0g
NaCl	5.0g
Yeast extract	2.0g
Glucose	1.0g
NaHSO ₃	0.1g
Vitamin K ₁	1.0mL
Hemin	1.0mL
Sheep blood, defibrinated	50.0mL

Source: This medium is available as a prepared medium from BD Diagnostic Systems.

Vitamin K₁ Solution:

Composition per 100.0mL:

Vitamin K ₁	1.0g
Ethanol, absolute	99.0mL

Preparation of Vitamin K₁ Solution: Add vitamin K₁ to 99.0mL of absolute ethanol. Mix thoroughly. Filter sterilize.

Hemin Solution:

Composition per 100.0mL:

Hemin	1.0g
NaOH (1N solution)	20.0mL

Preparation of Hemin Solution: Add hemin to 20.0mL of 1N NaOH solution. Mix thoroughly. Bring volume to 100.0mL with distilled/deionized water.

Preparation of Medium: Add components, except vitamin K₁ solution and sheep blood, to distilled/deionized water and bring volume to 949.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 1.0mL of sterile vitamin K₁ solution and 50.0mL of sterile defibrinated sheep blood. Mix gently and pour into sterile Petri dishes.

Use: For the isolation and cultivation of anaerobic microorganisms from clinical and nonclinical specimens. After growth on agar plates, colonies should be examined under a dissecting microscope under long-wave UV light. Members of the pigmented *Bacteroides* group appear as red/orange fluorescent colonies.

Brucella Blood Culture Broth

Composition per liter:

Sucrose	100.0g
Hemin	0.5g
Sodium polyanetholsulfonate (SPS)	0.25g
<i>Brucella</i> broth base	1000.0mL
Vitamin K ₁ solution	1.0mL

pH 7.0 ± 0.2 at 25°C

Brucella Broth Base:

Composition per liter:

Pancreatic digest of casein	10.0g
Peptic digest of animal tissue	10.0g
NaCl	5.0g
Yeast extract	2.0g
Glucose	1.0g
NaHSO ₃	0.1g

Preparation of Brucella Broth Base: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Vitamin K₁ Solution:**Composition per 100.0mL:**

Vitamin K ₁	1.09g
Ethanol, absolute.....	99.0mL

Preparation of Vitamin K₁ Solution: Add vitamin K₁ to 99.0mL of absolute ethanol. Store in the dark at 4°C.

Preparation of Medium: Add components, except vitamin K₁ solution, to prepared *Brucella* broth base. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 1.0mL of vitamin K₁ solution. Distribute into sterile tubes or flasks.

Use: For the isolation and cultivation of microorganisms from blood. Especially useful for the cultivation of anaerobes.

***Brucella* Broth**
(*Brucella* Albimi Broth)

Composition per liter:

Pancreatic digest of casein.....	10.0g
Peptic digest of animal tissue.....	10.0g
NaCl	5.0g
Yeast extract.....	2.0g
Glucose	1.0g
NaHSO ₃	0.1g
Horse blood, defibrinated	50.0mL

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components, except horse blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Heat gently with frequent mixing. Boil for 1 min. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50.0mL of sterile horse blood. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Campylobacter coli*, *Campylobacter fecalis*, and *Brucella* species. Also used for the isolation and cultivation of a wide variety of fastidious and nonfastidious microorganisms.

***Brucella* Broth with Additives**
(ATCC Medium 489)

Composition per liter:

Pancreatic digest of casein.....	10.0g
Peptic digest of animal tissue.....	10.0g
NaCl	3.5g
Yeast extract.....	2.0g
Glucose	1.0g
NaHSO ₃	0.1g
Horse serum, inactivated.....	100.0mL
Fresh yeast extract solution.....	50.0mL

pH 7.0 ± 0.2 at 25°C

Fresh Yeast Extract Solution:**Composition per 100.0mL:**

Baker's yeast, live, pressed, starch-free.....	25.0g
--	-------

Preparation of Fresh Yeast Extract Solution: Add the live Baker's yeast to 100.0mL of distilled/deionized water. Autoclave for 90 min at 15 psi pressure–121°C. Allow to stand. Remove supernatant solution. Adjust pH to 6.6–6.8.

Preparation of Medium: Add components, except horse serum and fresh yeast extract solution, to distilled/deionized water and bring volume to 850.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 100.0mL of sterile horse serum and 50.0mL of sterile fresh yeast extract solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Corynebacterium* species.

***Brucella* Broth with Additives**
(ATCC Medium 490)

Composition per liter:

NaCl.....	30.0g
Pancreatic digest of casein.....	10.0g
Peptic digest of animal tissue	10.0g
Yeast extract.....	2.0g
Glucose	1.0g
NaHSO ₃	0.1g
Horse serum, inactivated	100.0mL
Fresh yeast extract solution	50.0mL

pH 7.0 ± 0.2 at 25°C

Fresh Yeast Extract Solution:**Composition per 100.0mL:**

Baker's yeast, live, pressed, starch-free.....	25.0g
--	-------

Preparation of Fresh Yeast Extract Solution: Add the live Baker's yeast to 100.0mL of distilled/deionized water. Autoclave for 90 min at 15 psi pressure–121°C. Allow to stand. Remove supernatant solution. Adjust pH to 6.6–6.8.

Preparation of Medium: Add components, except horse serum and fresh yeast extract solution, to distilled/deionized water and bring volume to 850.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 100.0mL of horse serum and 50.0mL of sterile fresh yeast extract solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of salt-tolerant *Corynebacterium* species.

***Brucella* Broth with 0.16% Agar**
(ATCC Medium 1116)

Composition per liter:

Pancreatic digest of casein.....	10.0g
Peptic digest of animal tissue	10.0g
NaCl.....	5.0g
Yeast extract.....	2.0g
Agar	1.6g
Glucose	1.0g
NaHSO ₃	0.1g
Horse blood, defibrinated	50.0mL

pH 7.0 ± 0.2 at 25°C

Source: This medium without agar is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components, except horse blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Heat gently with frequent mixing. Boil for 1 min. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50.0mL of sterile horse blood. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Campylobacter fetus* subsp. *fetus* and *Campylobacter jejuni* subsp. *jejuni*.

Brucella Broth Base Campylobacter Medium

Composition per liter:

Cycloheximide (Actidione®).....	50.0mg
Sodium cephalosporin.....	15.0mg
Novobiocin.....	5.0mg
Bacitracin.....	25,000U
Colistin sulfate.....	10,000U
<i>Brucella</i> broth base.....	900.0mL
Horse blood, defibrinated.....	100.0mL
pH 7.0 ± 0.2 at 25°C	

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Brucella Broth Base:

Composition per liter:

Pancreatic digest of casein.....	10.0g
Peptic digest of animal tissue.....	10.0g
NaCl.....	5.0g
Yeast extract.....	2.0g
Glucose.....	1.0g
NaHSO ₃	0.1g

Preparation of Brucella Broth Base: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Optional Supplement:

Composition per 10.0mL:

Sodium pyruvate.....	0.25g
NaHSO ₃	0.25g
FeSO ₄ ·7H ₂ O.....	0.25g

Preparation of Optional Supplement: Add components to distilled/deionized water and bring volume to 10.0mL. Filter sterilize.

Preparation of Medium: Add components, except horse blood, to 900.0mL of prepared *Brucella* broth base. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 100.0mL of sterile, defibrinated horse blood. Addition of 10.0mL of optional supplement will improve growth. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the selective isolation and cultivation of *Campylobacter jejuni* from fecal specimens or rectal swabs. Addition of the optional supplement improves growth.

Brucella Broth, Modified

Composition per liter:

Pancreatic digest of casein.....	10.0g
Peptic digest of animal tissue.....	10.0g
NaCl.....	5.0g
MgSO ₄ ·7H ₂ O.....	2.46g
Yeast extract.....	2.0g
CaCl ₂	1.1g
Glucose.....	1.0g
NaHSO ₃	0.1g
Horse blood, defibrinated.....	100.0mL
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components, except horse blood, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi

pressure–121°C. Cool to 45°–50°C. Aseptically add sterile horse blood. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Campylobacter coli* and *Campylobacter fecalis*.

Brucella Broth with Formate and Fumarate

See: **Brucella Albimi Broth with Formate and Fumarate**

Brucella Broth with Sheep Blood

See: **Brucella Albimi Broth with Sheep Blood**

Brucella FBP Agar

Composition per liter:

Agar.....	15.0g
Pancreatic digest of casein.....	10.0g
Peptic digest of animal tissue.....	10.0g
NaCl.....	5.0g
Yeast extract.....	2.0g
Glucose.....	1.0g
NaHSO ₃	0.1g
FBP solution.....	30.0mL
pH 7.0 ± 0.2 at 25°C	

FBP Solution:

Composition per 30.0mL:

FeSO ₄	0.25g
NaHSO ₃	0.25g
Sodium pyruvate.....	0.25g

Preparation of FBP Solution: Add components to distilled/deionized water and bring volume to 30.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except FBP solution, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 30.0mL of sterile FBP solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Brucella* species.

Brucella FBP Broth

Composition per liter:

Pancreatic digest of casein.....	10.0g
Peptic digest of animal tissue.....	10.0g
NaCl.....	5.0g
Yeast extract.....	2.0g
Glucose.....	1.0g
NaHSO ₃	0.1g
FBP solution.....	30.0mL
pH 7.0 ± 0.2 at 25°C	

FBP Solution:

Composition per 30.0mL:

FeSO ₄	0.25g
Sodium metabisulfite, anhydrous.....	0.25g
Sodium pyruvate, anhydrous.....	0.25g

Preparation of FBP Solution: Add components to distilled/deionized water and bring volume to 30.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except FBP solution, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 30.0mL of sterile FBP solution. Mix thoroughly. Aseptically distribute into sterile tubes.

Use: For the cultivation of *Brucella* species.

***Brucella* HiVeg Agar Base with Blood and Selective Supplement**

Composition per liter:

Agar	15.0g
Plant hydrolysate.....	10.0g
Plant peptone.....	10.0g
NaCl.....	5.0g
Yeast extract.....	2.0g
Glucose	1.0g
NaHSO ₃	0.1g
Horse blood, defibrinated	100.0mL
Selective supplement	10.0mL
pH 7.0 ± 0.2 at 25°C	

Source: This medium, without horse blood or selective supplement, is available as a premixed powder from HiMedia.

Selective Supplement:

Composition per 10.0mL:

Cycloheximide	0.1g
Vancomycin	20.0mg
Nalidixic acid.....	5.0mg
Nystatin.....	1,000,000 U
Bacitracin	250,000 U
Polymyxin B sulfate.....	50,000 U

Preparation of Selective Supplement: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: Add components, except blood and selective supplement, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Heat gently with frequent mixing. Boil for 1 min. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Add 100.0mL of sterile defibrinated horse blood and 10.0mL sterile selective supplement. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the cultivation and maintenance of *Brucella* species. For the isolation and cultivation of nonfastidious and fastidious microorganisms from a variety of clinical and nonclinical specimens.

***Brucella* HiVeg Agar Base, Modified with Blood and Selective Supplement**

Composition per liter:

Agar	15.0g
Plant hydrolysate.....	15.0g
Plant peptone.....	5.0g
NaCl.....	5.0g
Yeast extract.....	2.0g
Glucose	1.0g
Sodium citrate.....	1.0g
NaHSO ₃	0.1g

Horse blood, defibrinated	100.0mL
Selective supplement	10.0mL
pH 7.0 ± 0.2 at 25°C	

Source: This medium, without horse blood or selective supplement, is available as a premixed powder from HiMedia.

Selective Supplement:

Composition per 10.0mL:

Cycloheximide	0.1g
Vancomycin	20.0mg
Nalidixic acid.....	5.0mg
Nystatin.....	1,000,000 U
Bacitracin	250,000 U
Polymyxin B sulfate	50,000 U

Preparation of Selective Supplement: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: Add components, except blood and selective supplement, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Heat gently with frequent mixing. Boil for 1 min. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Add 100.0mL of sterile defibrinated horse blood and 10.0mL sterile selective supplement. Pour into sterile Petri dishes.

Use: For the cultivation and maintenance of *Brucella* species. For the isolation and cultivation of nonfastidious and fastidious microorganisms from a variety of clinical and nonclinical specimens.

***Brucella* HiVeg Broth Base with Blood and Selective Supplement**

Composition per liter:

Plant hydrolysate	10.0g
Plant peptone	10.0g
NaCl.....	5.0g
Yeast extract.....	2.0g
Glucose	1.0g
NaHSO ₃	0.1g
Horse blood, defibrinated	100.0mL
Selective supplement	10.0mL
pH 7.0 ± 0.2 at 25°C	

Source: This medium, without horse blood or selective supplement, is available as a premixed powder from HiMedia.

Selective Supplement:

Composition per 10.0mL:

Cycloheximide	0.1g
Vancomycin	20.0mg
Nalidixic acid.....	5.0mg
Nystatin.....	1,000,000 U
Bacitracin	250,000 U
Polymyxin B sulfate	50,000 U

Preparation of Selective Supplement: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: Add components, except blood and selective supplement, to distilled/deionized water and bring volume to

900.0mL. Mix thoroughly. Heat gently with frequent mixing. Boil for 1 min. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Add 100.0mL of sterile defibrinated horse blood and 10.0mL sterile selective supplement.

Use: For the cultivation and maintenance of *Brucella* species.

Brucella Medium Base

Composition per liter:

Agar	15.0g
Glucose	10.0g
Peptone.....	10.0g
Beef extract.....	5.0g
NaCl.....	5.0g

pH 7.5 ± 0.2 at 25°C

Preparation: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Heat gently and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation of *Campylobacter* species.

Brucella Selective Medium

Composition per liter:

Beef heart, infusion from.....	500.0g
Agar	15.0g
Tryptose	10.0g
NaCl.....	5.0g
Glucose	2.5g
Gelatin.....	1.0g
Sheep blood.....	100.0mL
Antibiotic solution	10.0mL

pH 7.4 ± 0.2 at 25°C

Antibiotic Solution:

Composition per 10.0mL:

Cycloheximide	1.0g
Bacitracin	250,000U
Circulin	250,000U
Polymyxin B	100,000U

Preparation of Antibiotic Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: Add components, except sheep blood and antibiotic solution, to distilled/deionized water and bring volume to 890.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 100.0mL of sterile sheep blood and 10.0mL of sterile antibiotic solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation and cultivation of *Brucella* species.

Brucella Selective Medium with Blood and Serum

Composition per liter:

Brain heart, infusion from.....	500.0g
Agar	15.0g
Tryptose	10.0g
Glucose	2.5g
NaCl.....	5.0g

Gelatin.....	1.0g
Sheep blood, defibrinated.....	100.0mL
Horse serum.....	50.0mL
Vitamin K ₁ solution	1.0mL

pH 7.4 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Vitamin K₁ Solution:

Composition per 20.0mL:

Vitamin K ₁	0.2g
Ethanol, absolute.....	20.0mL

Preparation of Vitamin K₁ Solution: Add vitamin K₁ to 20.0mL of ethanol. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except sheep blood, horse serum, and vitamin K₁ solution, to distilled/deionized water and bring volume to 849.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 100.0mL of sterile sheep blood, 50.0mL of horse serum, and 1.0mL of sterile vitamin K₁ solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Brucella* species.

Brucella Semisolid Medium with Cysteine

Composition per liter:

Peptamin	10.0g
Pancreatic digest of casein.....	10.0g
Glycine.....	10.0g
NaCl.....	5.0g
Yeast extract.....	2.0g
Agar	1.8g
Glucose	1.0g
L-Cysteine·HCl·H ₂ O	0.2g
NaHSO ₃	0.1g
Sodium citrate	0.1g
Neutral Red solution.....	10.0mL

pH 7.0 ± 0.2 at 25°C

Neutral Red Solution:

Composition per 100.0mL:

Neutral Red.....	0.2g
Ethanol.....	10.0mL

Preparation of Neutral Red Solution: Add Neutral Red to 10.0mL of ethanol. Bring volume to 100.0mL.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes in 10.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and differentiation of *Campylobacter* species based on H₂S production from cysteine.

Brucella Semisolid Medium with Glycine

Composition per liter:

Peptamine	10.0g
Pancreatic digest of casein.....	10.0g
Glycine.....	10.0g
NaCl.....	5.0g
Yeast extract.....	2.0g
Agar	1.8g
Glucose	1.0g
NaHSO ₃	0.1g

Sodium citrate	0.1g
Neutral Red solution	10.0mL
pH 7.0 ± 0.2 at 25°C	

Neutral Red Solution:**Composition per 100.0mL:**

Neutral Red	0.2g
Ethanol	10.0mL

Preparation of Neutral Red Solution: Add Neutral Red to 10.0mL of ethanol. Bring volume to 100.0mL.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes in 10.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and differentiation of *Campylobacter* species based on glycine utilization.

Brucella Semisolid Medium with Nitrate**Composition per liter:**

Peptamin	10.0g
Pancreatic digest of casein	10.0g
Glycine	10.0g
KNO ₃	10.0g
NaCl	5.0g
Yeast extract	2.0g
Agar	1.8g
Glucose	1.0g
NaHSO ₃	0.1g
Sodium citrate	0.1g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes in 10.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and differentiation of *Campylobacter* species based on nitrate reduction.

Brucella Semisolid Medium with Sodium Chloride**Composition per liter:**

NaCl	35.0g
Peptamin	10.0g
Pancreatic digest of casein	10.0g
Yeast extract	2.0g
Agar	1.8g
Glucose	1.0g
NaHSO ₃	0.1g
Sodium citrate	0.1g
Neutral Red solution	10.0mL

pH 7.0 ± 0.2 at 25°C

Neutral Red Solution:**Composition per 100.0mL:**

Neutral Red	0.2g
Ethanol	10.0mL

Preparation of Neutral Red Solution: Add Neutral Red to 10.0mL of ethanol. Bring volume to 100.0mL.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes in 10.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and differentiation of *Campylobacter* species based on glycine utilization.

Bryant and Burkey Agar**Composition per liter:**

Casein enzymatic hydrolysate	15.0g
Beef extract	7.5g
Sodium lactate	5.0g
Yeast extract	5.0g
Agar	0.75g
Sodium acetate	5.0g
L-Cysteine hydrochloride	0.6g
Sodium thioglycolate	0.2g
Resazurin	2.5mg

pH 5.9 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the detection of lactate fermenting *Clostridium* spp. in milk and dairy products related to cheese alteration.

Bryant and Burkey Medium**Composition per liter:**

Casein enzymatic hydrolysate	15.0g
Beef extract	7.5g
Sodium lactate	3.0g
Yeast extract	5.0g
Sodium acetate	5.0g
L-Cysteine hydrochloride	0.5g
Resazurin	2.5mg

pH 5.9 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the detection of lactate fermenting *Clostridium* spp. in milk and dairy products related to cheese alteration.

Bryant-Robinson Medium**Composition per 1010.0mL:**

Glucose, cellobiose, or maltose	5.0g
L-Methionine	0.08g
Mineral solution	50.0mL
Na ₂ CO ₃ solution	50.0mL
Hemin solution	10.0mL
L-Cysteine-HCl-Na ₂ S solution	10.0mL
Vitamin solution	5.0mL
VFA solution	4.5mL
Resazurin	1.0mL

pH 6.5 ± 0.2 at 25°C

Mineral Solution:**Composition per liter:**

KH ₂ PO ₄	18.0g
NaCl	18.0g
(NH ₄) ₂ SO ₄	8.0g
CaCl ₂ ·6H ₂ O	0.53g
MgCl ₂ ·6H ₂ O	0.4g

CoCl ₂ ·6H ₂ O	0.2g
MnCl ₂ ·4H ₂ O.....	0.2g
FeSO ₄ ·7H ₂ O.....	0.08g

Preparation of Mineral Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Na₂CO₃ Solution:

Composition per 100.0mL:

Na ₂ CO ₃	8.0g
---------------------------------------	------

Preparation of Na₂CO₃ Solution: Add Na₂CO₃ to O₂-free distilled/deionized water. Mix thoroughly. Gas with 100% CO₂ for 15 min. Autoclave for 15 min at 15 psi pressure–121°C.

Hemin Solution:

Composition per 100.0mL:

Hemin.....	0.01g
NaOH (0.002% solution)	100.0mL

Preparation of Hemin Solution: Add hemin to 100.0mL of NaOH solution. Mix thoroughly.

L-Cysteine-HCl-Na₂S Solution:

Composition per 100.0mL:

L-Cysteine-HCl.....	2.5g
Na ₂ S·9H ₂ O.....	2.5g

Preparation of L-Cysteine-HCl-Na₂S Solution: Add L-cysteine-HCl to distilled/deionized water and bring volume to 80.0mL. Mix thoroughly. Adjust pH to 11 with NaOH. Add Na₂S·9H₂O. Mix thoroughly. Bring volume to 100.0mL with distilled/deionized water. Gently heat and bring to boiling under 100% N₂. Cool to 25°C under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Vitamin Solution:

Composition per 100.0mL:

Calcium pantothenate	0.02g
Nicotinamide.....	0.02g
Pyridoxine-HCl.....	0.02g
Riboflavin	0.02g
Thiamine-HCl	0.02g
<i>p</i> -Aminobenzoic acid.....	1.0mg
Biotin	0.25mg
Folic acid.....	0.25mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

VFA (Volatile Fatty Acid) Solution:

Composition per liter:

Acetic acid	36.0mL
DL- α -Methylbutyric acid.....	2.0mL
Isovaleric acid.....	2.0mL
<i>n</i> -Valeric acid.....	2.0mL
Isobutyric acid.....	1.8mL

Preparation of VFA Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components, except L-cysteine-HCl-Na₂S solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Continue boiling until resazurin turns colorless, indicating reduction. Anaerobically distribute into tubes in 10.0mL volumes. Cap with butyl rubber stoppers. Place tubes in a press. Autoclave for 15 min at 15 psi pressure–121°C. Immediately prior

to inoculation, aseptically and anaerobically add 0.1mL of L-cysteine-HCl-Na₂S solution per tube.

Use: For the cultivation of *Bacteroides* species from rumens.

BS Medium

Composition per 1135.0mL:

NaHCO ₃	2.2g
NH ₄ Cl	0.25g
KH ₂ PO ₄	0.07g
Resazurin	0.5mg
(NH ₄) ₂ (Fe(SO ₄) ₂ ·6H ₂ O.....	0.2mg
Na ₂ SeO ₄	0.1mg
Na ₂ WO ₄ ·2H ₂ O.....	0.1mg
Marine medium/synthetic seawater mix.....	125.0mL
Wolfe's mineral solution.....	10.0mL
Yeast extract solution.....	10.0mL
KNO ₃ solution.....	10.0mL

pH 7.0 ± 0.2 at 25°C

Marine Medium/Synthetic Seawater Mix:

Composition per liter:

NaCl.....	47.15g
MgCl ₂ ·6H ₂ O	18.1g
MgSO ₄ ·7H ₂ O.....	7.0g
Na ₂ SO ₄	3.24g
CaCl ₂ ·2H ₂ O	3.13g
KCl.....	1.2g
Na ₂ CO ₃	0.1g
NaBr.....	0.1g
KBr.....	80.0mg
SrCl ₂ ·6H ₂ O	72.0mg
H ₃ BO ₃	52.0mg
Na ₂ HPO ₄	8.1mg
NaF.....	2.4mg
Sodium silicate.....	0.4mg
KI.....	50.0 μ g

Preparation of Marine Medium/Synthetic Seawater Mix:

Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Wolfe's Mineral Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O.....	3.0g
Nitilotriacetic acid.....	1.5g
NaCl.....	1.0g
MnSO ₄ ·2H ₂ O.....	0.5g
CoCl ₂ ·6H ₂ O.....	0.1g
ZnSO ₄ ·7H ₂ O.....	0.1g
CaCl ₂ ·2H ₂ O.....	0.1g
FeSO ₄ ·7H ₂ O.....	0.1g
NiCl ₂ ·6H ₂ O.....	0.025g
KAl(SO ₄) ₂ ·12H ₂ O.....	0.02g
CuSO ₄ ·5H ₂ O.....	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O.....	0.01g
Na ₂ SeO ₃ ·5H ₂ O.....	0.3mg

Preparation of Wolfe's Mineral Solution: Add nitilotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Adjust pH to 6.8.

Yeast Extract Solution:**Composition** per 10.0mL:

Yeast extract 0.5g

Preparation of Yeast Extract Solution: Add yeast extract to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

KNO₃ Solution:**Composition** per 10.0mL:KNO₃ 1.0g

Preparation of KNO₃ Solution: Add KNO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except yeast extract solution and KNO₃ solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Adjust pH to 7.0 with H₂SO₄. Distribute 20.0mL volumes into 100.0mL bottles. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 0.2mL of sterile yeast extract solution and 0.2mL of sterile KNO₃ solution to each bottle. After inoculation, pressurize bottles to 2 bar with 80% N₂ + 20% CO₂.

Use: For the cultivation of *Pyrobaculum aerophilum*.

Preparation of CMRL 1066 Medium without Glutamine, without Bicarbonate, 10X: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Filter sterilize.

Preparation of Medium: Add components, except rabbit serum and CMRL 1066, to 1.0L of glass-distilled/deionized water. Mix thoroughly. Adjust pH to 7.5 with NaOH. Filter sterilize. Aseptically add 100.0mL of sterile CMRL 1066 and 64.0mL of sterile rabbit serum. Adjust final pH to 7.5–7.6. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Borrelia burgdorferi*, *Borrelia afzelii*, *Borrelia garinii*, *Borrelia anserina*, and *Borrelia japonica*.

BSL for *Corynebacterium* (Buffered Soy Lactose for *Corynebacterium*)

Composition per liter:

Agar	15.0g
Papaic digest of soybean meal	10.0g
Na ₂ HPO ₄	6.0g
KH ₂ PO ₄	3.0g
NH ₄ Cl	1.0g
MgSO ₄ ·7H ₂ O	0.2g
Lactose solution	100.0mL
pH 6.8–7.2 at 25°C	

Lactose Solution:

Composition per 100.0mL:

Lactose	10.0g
---------------	-------

Preparation of Lactose Solution: Add lactose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Preparation of Medium: Add components, except lactose solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Heat gently with frequent mixing. Adjust pH to 6.8–7.2. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile lactose solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Curtobacterium flaccumfaciens*.

BSR Medium

Composition per liter:

Beef heart, solids from infusion	500.0g
Sorbitol	70.0g
Sucrose	10.0g
Tryptose	10.0g
NaCl	5.0g
Fructose	1.0g
Glucose	1.0g
Phenol Red	0.02g
Horse serum	100.0mL
pH 7.6 ± 0.2 at 25°C	

Preparation of Medium: Add components, except horse serum, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Aseptically add 100.0mL of horse serum. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Spiroplasma citri*.

BSTSY Agar

Composition per liter:

Pancreatic digest of casein	17.0g
Agar	15.0g
NaCl	5.0g
Yeast extract	4.0g
Papaic digest of soybean meal	3.0g
K ₂ HPO ₄	2.5g
Glucose	2.5g
Bovine serum	100.0mL

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components, except bovine serum, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile bovine serum. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of *Simonsiella* species and *Alysiella* species.

BT Medium (DSMZ Medium 816)

Composition per 1090mL:

NaCl	1.0g
KCl	0.5g
MgCl ₂ ·6H ₂ O	0.4g
NH ₄ Cl	0.3g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O	0.15g
Resazurin	0.5mg
NaHCO ₃ solution	50.0mL
Na ₂ S·9H ₂ O solution	13.0mL
Hydroxybenzoate solution	10.0mL
Yeast extract solution	5.0mL
Trypticase™ solution	5.0mL
Trace elements solution SL-10	1.0mL
Selenite-tungstate solution	1.0mL
Na ₂ CO ₃ solution	variable

pH 7.6 ± 0.2 at 25°C

Na₂S·9H₂O Solution:

Composition per 20.0mL:

Na ₂ S·9H ₂ O	0.6g
---	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Selenite-Tungstate Solution:

Composition per liter:

NaOH	0.5g
Na ₂ WO ₄ ·2H ₂ O	4.0mg
Na ₂ SeO ₃ ·5H ₂ O	3.0mg

Preparation of Selenite-Tungstate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Na₂CO₃ Solution:

Composition per 100.0mL:

Na ₂ CO ₃	5.0g
---------------------------------------	------

Preparation of Na₂CO₃ Solution: Add Na₂CO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

NaHCO₃ Solution:

Composition per 100.0mL:

NaHCO ₃	10.0g
--------------------------	-------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

Hydroxybenzoate Solution:

Composition per 10.0mL:

3-Hydroxybenzoic acid	2.8g
-----------------------------	------

Preparation of Hydroxybenzoate Solution: Add 3-hydroxybenzoic acid to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Neutralize with NaOH. Filter sterilize.

Trypticase™ Solution:

Composition per 10.0mL:

Trypticase™	1.0g
-------------------	------

Preparation of Trypticase™ Solution: Add Trypticase™ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Yeast Extract Solution:

Composition per 10.0mL:

Yeast extract	1.0g
---------------------	------

Preparation of Yeast Extract Solution: Add yeast extract to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Trace Elements Solution SL-10:

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas atmosphere. Add components, except NaHCO₃ solution, Na₂S·9H₂O solution, yeast extract solution, hydroxybenzoate solution, Trypticase™ solution, selenite-tungstate solution, and Na₂CO₃ solution, to distilled/deionized water and bring volume to 1.0mL. Mix thoroughly. Adjust pH to 7.2–7.6. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 50.0mL NaHCO₃ solution, 13.0mL Na₂S·9H₂O solution, 10.0mL hydroxybenzoate solution, 5.0mL yeast extract solution,

5.0mL Trypticase™ solution, and 1.0mL selenite-tungstate solution. Mix thoroughly. Adjust pH to 7.6 Na₂CO₃ solution. Aseptically and anaerobically distribute into sterile tubes or bottles.

Use: For the cultivation of *Sporotomaculum hydroxybenzoicum*.

BTB Lactose Agar (Bromthymol Blue Lactose Agar)

Composition per liter:

Agar	15.0g
Lactose	10.0g
Proteose peptone	5.0g
Beef extract	3.0g
Bromthymol Blue	0.17g
pH 8.7–7.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Heat gently with frequent mixing. Bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes if desired.

Use: For the isolation and cultivation of pathogenic staphylococci.

BTB Lactose HiVeg Agar (Bromthymol Blue Lactose HiVeg Agar)

Composition per liter:

Agar	15.0g
Lactose	10.0g
Plant peptone No. 3	5.0g
Plant extract	3.0g
Bromthymol Blue	0.17g
pH 8.6 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Heat gently with frequent mixing. Bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes if desired.

Use: For the isolation and cultivation of pathogenic staphylococci.

B.T.B. Lactose Agar, Modified (Lactose Blue HiVeg Agar)

Composition per liter:

Lactose	15.5g
Agar	13.0g
NaCl	5.0g
Casein enzymatic hydrolysate	3.5g
Peptone	3.5g
Bromthymol Blue	0.04g
pH 7.0 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Heat gently with frequent mixing. Bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes if desired.

Use: For the isolation and cultivation of pathogenic staphylococci.

B.T.B. Lactose HiVeg Agar, Modified (Lactose Blue HiVeg Agar)

Composition per liter:

Lactose	15.5g
Agar	13.0g
NaCl	5.0g
Plant hydrolysate	3.5g
Plant peptone	3.5g
Bromthymol Blue	0.04g
pH 7.0 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Heat gently with frequent mixing. Bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes if desired.

Use: For the isolation and cultivation of pathogenic staphylococci.

BTB Teepol® Agar

Composition per liter:

NaCl	20.0g
Agar	15.0g
Peptone	10.0g
Sucrose	10.0g
Beef extract	5.0g
Bromthymol Blue	0.08g
Teepol	2.0mL
pH 7.8 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Teepol may be substituted by 0.1mL of Tergitol™ 7. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.8. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the isolation and cultivation of *Vibrio anguillarum*.

BTU Medium

Composition per liter:

Ground meat, fat free	500.0g
Pancreatic digest of casein	30.0g
K ₂ HPO ₄	5.0g
Yeast extract	5.0g
L-Cysteine·HCl	0.5g
Resazurin	1.0mg
NaOH (1N solution)	25.0mL
Formate-fumarate solution	4.26mL
pH 7.0 ± 0.2 at 25°C	

Formate-Fumarate Solution:

Composition per 100.0mL:

Sodium formate	6.0g
Sodium fumarate	6.0g

Preparation of Formate-Fumarate Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Use lean beef or horse meat. Remove fat and connective tissue. Grind finely. Add ground meat and 25.0mL of NaOH solution to distilled/deionized water and bring volume to 1025.0mL. Gently heat and bring to boiling. Continue boiling for 15

min. without stirring. Cool to room temperature. Remove fat from surface. Filter and retain both meat particles and filtrate. Adjust volume of filtrate to 1.0L with distilled/deionized water. Add pancreatic digest of casein, K_2HPO_4 , yeast extract, and resazurin. Gently heat and bring to boiling. Boil for 1–2 min. Add L-cysteine-HCl. Mix thoroughly. Distribute 7.0mL into tubes that contain meat particles (1 part meat particles to 5 parts fluid). Autoclave for 30 min at 15 psi pressure–121°C. Prior to inoculation, add 30.0 μ L of formate-fumarate solution for each milliliter of medium in the tubes.

Use: For the cultivation of *Bacteroides ureolyticus*.

Buffered Azide Glucose Glycerol Broth

See: [BAGG Broth](#)

Buffered Charcoal Yeast Extract Agar

See: [BCYE Agar](#)

Buffered Charcoal Yeast Extract Agar with Albumin

See: [BCYE \$\alpha\$ with Alb](#)

Buffered Charcoal Yeast Extract Agar without L-Cysteine

See: [BCYE \$\alpha\$ without L-Cysteine](#)

Buffered Charcoal Yeast Extract Differential Agar (DIFF/BCYE)

Composition per 1014.0mL:

Agar	17.0g
ACES (2-[(2-amino-2-oxoethyl)-amino]-ethane sulfonic acid) buffer	10.0g
Yeast extract	10.0g
Charcoal, activated	1.5g
$Fe_4(P_2O_7)_3 \cdot 9H_2O$	0.25g
Bromcresol Purple	0.01g
Bromthymol Blue	0.01g
Antibiotic solution	10.0mL
L-Cysteine-HCl-H ₂ O solution	4.0mL
pH 6.9 \pm 0.2 at 25°C	

Antibiotic Solution:

Composition per 10.0mL:

Vancomycin	1.0mg
Polymyxin B	50,000U

Preparation of Antibiotic Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

L-Cysteine-HCl-H₂O Solution:

Composition per 10.0mL:

L-Cysteine-HCl-H ₂ O	1.0g
---------------------------------------	------

Preparation of L-Cysteine-HCl-H₂O Solution: Add 1.0g of L-cysteine-HCl-H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except L-cysteine-HCl-H₂O solution and antibiotic solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust medium to pH 6.9 with 1N KOH. Heat gently and bring to boil for 1 min. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50–55°C. Add 4.0mL of sterile L-cysteine-HCl-H₂O solution and 10.0mL of sterile antibiotic solution. Mix thoroughly. Pour into sterile Petri dishes with constant agitation to keep charcoal in suspension.

Use: For the isolation, cultivation, and maintenance of *Legionella pneumophila* and other *Legionella* species from environmental and clinical specimens. For the selective recovery of *Legionella pneumophila* while reducing contaminating microorganisms from environmental water samples.

Buffered Charcoal Yeast Extract Medium, Diphasic Blood Culture

Buffered Clostridial Medium with Cellobiose

Composition per liter:

Meat extract	10.0g
Peptone	10.0g
Cellobiose	5.0g
Glucose	5.0g
NaCl	5.0g
Sodium acetate	3.0g
Yeast extract	3.0g
NaHCO ₃	2.75g
Soluble starch	1.0g
L-Cysteine-HCl-H ₂ O	0.5g
Resazurin	1.0mg
Hemin solution	10.0mL
Vitamin K ₁ solution	0.2mL

pH 7.0 \pm 0.2 at 25°C

Hemin Solution:

Composition per 100.0mL:

Hemin	50.0mg
NaOH (1N solution)	1.0mL

Preparation of Hemin Solution: Dissolve hemin in 1.0mL of 1N NaOH solution. Bring volume to 100.0mL with distilled/deionized water. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Vitamin K₁ Solution:**Composition** per 30.15mL:

Ethanol (95% solution)	30.0mL
Vitamin K ₁	0.15mL

Preparation of Vitamin K₁ Solution: Combine components. Mix thoroughly. Store at 4°C in the dark. Discard solution after 1 month.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 10% CO₂ + 10% H₂. Add components, except cellobiose, NaHCO₃, and L-cysteine·HCl·H₂O, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 3 min. Cool to room temperature while sparging with 80% N₂ + 10% CO₂ + 10% H₂. Add cellobiose, NaHCO₃, and L-cysteine·HCl·H₂O, in that order. Mix thoroughly. Adjust pH to 7.0. Anaerobically distribute into tubes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Eubacterium xylophilum* and *Clostridium termitidis*.

Buffered Enrichment Broth (BAM M52)

Composition per liter:

Na ₂ HPO ₄	9.6g
KH ₂ PO ₄	1.35g
Pyruvate solution	11.1mL
Nalidixic acid solution	8.0mL
Cycloheximide solution	5.0mL
Acriflavin solution	2.0mL

pH 7.3 ± 0.1 at 25°C

Nalidixic Acid Solution:**Composition** per 10.0mL:

Nalidixic acid, sodium salt	0.05g
-----------------------------------	-------

Preparation of Nalidixic Acid Solution: Add nalidixic acid to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Acriflavin Solution:**Composition** per 10.0mL:

Acriflavin·HCl	0.05g
----------------------	-------

Preparation of Acriflavin Solution: Add acriflavin·HCl to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Cycloheximide Solution:**Composition** per 10.0mL:

Cycloheximide	0.1g
Ethanol, 40%	10.0mL

Preparation of Cycloheximide Solution: Add cycloheximide to 40% ethanol and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Pyruvate Solution:**Composition** per 20.0mL:

Na-pyruvate	2.0g
-------------------	------

Preparation of Pyruvate Solution: Add Na-pyruvate to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except pyruvate solution, nalidixic acid solution, acriflavin solution, and cycloheximide so-

lution, to distilled/deionized water and bring volume to 973.9.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 11.1mL sterile pyruvate solution. Mix thoroughly. Aseptically add 8.0mL sterile nalidixic acid solution, 5.0mL sterile cycloheximide solution, and 2.0mL sterile acriflavin solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Listeria* spp.

Buffered Glucose HiVeg Broth

Composition per liter:

Buffered plant peptone	7.0g
Glucose	5.0g
K ₂ HPO ₄	5.0g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: Used for the growth of bacteria for the Methyl Red and Voges Proskauer tests.

Buffered HiVeg Peptone Water

Composition per liter:

Plant peptone No. 3	10.0g
NaCl	5.0g
Na ₂ HPO ₄	3.5g
KH ₂ PO ₄	1.5g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: Used as a preenrichment medium for the isolation of *Salmonella*, especially injured microorganisms, from various food sources.

Buffered HiVeg Peptone Water with Sodium Chloride

Composition per liter:

Na ₂ HPO ₄	7.23g
NaCl	4.3g
KH ₂ PO ₄	3.56g
Plant peptone	1.0g

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: Used as a preenrichment medium for the isolation of bacteria from various food sources.

Buffered *Listeria* Enrichment Broth Base with *Listeria* Selective Supplement

Composition per liter:

Casein enzymic hydrolysate	17.0g
Na ₂ HPO ₄	9.6g

Yeast extract.....	6.0g
NaCl.....	5.0g
Papaic digest of soybean meal.....	3.0g
K ₂ HPO ₄	2.5g
Glucose.....	2.5g
KH ₂ PO ₄	1.35g
Sodium pyruvate.....	1.0g
Selective supplement solution.....	10.0mL
pH 7.2 ± 0.2 at 25°C	

Source: This medium is available from HiMedia.

Selective Supplement Solution:

Composition per 10.0mL:

Cycloheximide.....	25.0g
Acridine hydrochloride.....	5.0mg
Nalidixic acid.....	5.0mg

Preparation of Selective Supplement Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: Add components, except selective supplement solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add selective supplement solution. Mix thoroughly. Pour into Petri dishes or aseptically distribute into sterile tubes.

Use: For the enrichment and cultivation *Listeria monocytogenes*.

Buffered Marine Yeast Medium

Composition per liter:

NaCl.....	24.0g
Agar.....	20.0g
Yeast extract.....	5.0g
1M Phosphate buffer, pH 6.8.....	20.0mL
Hutner's mineral base.....	20.0mL
KOH (1N).....	7.0mL
pH 6.8 ± 0.2 at 25°C	

1M Phosphate Buffer, pH 6.8:

Composition per liter:

K ₂ H ₂ PO ₄	85.4g
NaH ₂ PO ₄ ·H ₂ O.....	70.4g

Preparation of 1M Phosphate Buffer, pH 6.8: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.8.

Hutner's Mineral Base:

Composition per liter:

MgSO ₄ ·7H ₂ O.....	29.7g
Nitrotriacetic acid.....	10.0g
CaCl ₂ ·2H ₂ O.....	3.34g
FeSO ₄ ·7H ₂ O.....	0.01g
(NH ₄) ₂ MoO ₄	9.25mg
Metals "44".....	50.0mL

Preparation of Hutner's Mineral Base: Initially add a few drops of H₂SO₄ to the distilled water to retard precipitation. Dissolve the nitrotriacetic acid first and neutralize the solution with KOH. Add the other ingredients and adjust the pH to 7.2 with KOH and/or H₂SO₄. There may be a slight precipitate. Store at 5°C.

Metals "44":

Composition per 100.0mL:

ZnSO ₄ ·7H ₂ O.....	1.1g
FeSO ₄ ·7H ₂ O.....	0.5g
EDTA.....	0.25g
MnSO ₄ ·7H ₂ O.....	0.154g
CuSO ₄ ·5H ₂ O.....	0.04g
Co(NO ₃) ₂ ·6H ₂ O.....	0.025g
Na ₂ B ₄ O ₇ ·10H ₂ O.....	0.018g

Preparation of Metals "44": Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Add aseptically to sterile basal medium.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Pseudomonas* species.

Buffered Peptone Water

Composition per liter:

Pancreatic digest of gelatin.....	10.0g
NaCl.....	5.0g
Na ₂ HPO ₄	3.5g
KH ₂ PO ₄	1.5g
pH 7.2 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems and Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: Used as a preenrichment medium for the isolation of *Salmonella*, especially injured microorganisms, from various food sources.

Buffered S & H Agar

Composition per liter:

Agar.....	15.0g
Peptone.....	5.0g
Yeast extract.....	5.0g
Na ₂ HPO ₄	2.7g
Citric acid·H ₂ O.....	1.15g
Glucose solution.....	40.0mL
pH 5.0 ± 0.2 at 25°C	

Glucose Solution:

Composition per 50.0mL:

Glucose.....	25.0g
--------------	-------

Preparation of Glucose Solution: Add 25.0g of glucose to 50.0mL of distilled/deionized water. Mix thoroughly and gently heat to dissolve. Filter sterilize.

Preparation of Medium: Add components, except glucose solution, to distilled/deionized water and bring volume to 960.0mL. Mix thoroughly. Gently heat to boiling. Adjust pH to 5.0 with HCl. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 40.0mL of sterile glucose solution to sterile basal medium. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Acetobacter xylinum*.

Buffered S & H Broth**Composition per liter:**

Peptone.....	5.0g
Yeast extract.....	5.0g
Na ₂ HPO ₄	2.7g
Citric acid·H ₂ O.....	1.15g
Glucose solution.....	40.0mL

pH 5.0 ± 0.2 at 25°C

Glucose Solution:**Composition per 50.0mL:**

Glucose.....	25.0g
--------------	-------

Preparation of Glucose Solution: Add glucose to 50.0mL of distilled/deionized water. Mix thoroughly and gently heat to dissolve. Filter sterilize.

Preparation of Medium: Add components, except glucose solution, to distilled/deionized water and bring volume to 960.0mL. Mix thoroughly. Gently heat to boiling. Adjust pH to 5.0 with HCl. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 40.0mL of sterile glucose solution to sterile basal medium. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Acetobacter xylinum*.

Buffered Soy Lactose for *Corynebacterium*

See: **BSL for *Corynebacterium***

Buffered Tryptone Glucose Yeast Extract Broth**Composition per liter:**

Yeast extract.....	20.0g
Casein enzymatic hydrolysate.....	50.0g
Peptic digest of animal tissue.....	5.0g
Na ₂ HPO ₄	5.0g
Glucose.....	4.0g
Sodium thioglycolate.....	1.0g

pH 7.3 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or bottles. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation of *Clostridium perfringens* from foods.

Buffered Yeast Agar**Composition per liter:**

Glucose.....	20.0g
Agar.....	15.0g
Yeast extract.....	5.0g
(NH ₄) ₂ SO ₄	0.72g
NH ₄ H ₂ PO ₄	0.26g

pH 5.5 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or bottles. Autoclave for 15 min at 15 psi pressure–121°C. Pour into Petri dishes or leave in tubes.

Use: For the cultivation of yeasts and molds from bottle washing operations.

Buffered Yeast Extract Broth

See: **BYEB**

Burke's Modified Nitrogen-Free Medium**Composition per liter:**

MgSO ₄ ·7H ₂ O.....	0.2g
Na ₂ HPO ₄	0.19g
NaHCO ₃	0.05g
CaSO ₄ ·2H ₂ O.....	0.02g
KH ₂ PO ₄	0.011g
SrCl ₂ ·6H ₂ O.....	0.01g
NaCl.....	0.01g
Adenine.....	0.01g
FeSO ₄ ·7H ₂ O.....	6.0mg
Na ₂ MoO ₃	0.5mg

pH 7.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Azotobacter vinelandii*.

Burke's Modified Nitrogen-Free Medium**Composition per liter:**

Noble agar.....	15.0g
Glucose.....	10.0g
Cellulose.....	10.0g
K ₂ HPO ₄	1.0g
CaCl ₂ ·2H ₂ O.....	0.1g
MgSO ₄ ·7H ₂ O.....	0.02g
FeSO ₄ ·7H ₂ O.....	50.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	25.0mg
Vitamin B ₁₂	0.1mg
Vitamin solution.....	1.0mL

pH 7.2–7.3 ± 0.2 at 25°C

Vitamin Solution:**Composition per 50.0mL:**

Thiamine·HCl.....	843.3mg
Pantothenic acid.....	595.8mg
Nicotinic acid.....	307.8mg
<i>p</i> -Aminobenzoic acid.....	68.6mg
Pyridoxamine·2HCl.....	60.3mg
Biotin.....	50.0mg
Folic acid.....	11.0mg
Vitamin B ₁₂	3.5mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except glucose, cellulose, K₂HPO₄, and vitamin solution, to distilled/deionized water and bring volume to 850.0mL. Mix thoroughly. Adjust pH to 7.2–7.3. In three separate flasks, add glucose, cellulose, and K₂HPO₄ to 50.0mL of distilled/deionized water. Filter sterilize the vitamin solution. Autoclave the other solutions separately for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically combine all the solutions and mix thoroughly. Distribute into sterile tubes or flasks or pour into sterile Petri dishes.

Use: For the cultivation and maintenance of *Streptomyces* species.

Burke's Modified Nitrogen-Free Medium with Benzoate
Composition per liter:

Sodium benzoate.....	0.72g
MgSO ₄ ·7H ₂ O.....	0.2g
Na ₂ HPO ₄	0.189g
NaHCO ₃	0.05g
CaSO ₄ ·2H ₂ O.....	0.02g
KH ₂ PO ₄	0.011g
SrCl ₂ ·6H ₂ O.....	0.01g
NaCl.....	0.01g
Adenine.....	0.01g
FeSO ₄ ·7H ₂ O.....	6.0mg
Na ₂ MoO ₃	0.5mg

pH 7.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Pseudomonas* species and other microorganisms which can utilize benzoate as sole carbon source.

Burkholderia cepacia* Agar*Composition per liter:**

Agar.....	12.0g
Sodium pyruvate.....	7.0g
Peptone.....	5.0g
KH ₂ PO ₄	4.4g
Yeast extract.....	4.0g
Bile salts.....	1.5g
Na ₂ HPO ₄	1.4g
(NH ₄) ₂ SO ₄	1.0g
MgSO ₄	0.2
Phenol Red.....	0.02g
Fe(NH ₄) ₂ (SO ₄) ₂ ·6H ₂ O.....	0.01g
Crystal Violet.....	0.001g
Selective supplement solution.....	10.0mL

pH 6.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Selective Supplement Solution:**Composition per 10.0mL:**

Polymyxin B.....	150,000IU
Ticarcillin.....	100.0mg
Gentamicin.....	5.0mg

Preparation of Selective Supplement Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except selective supplement solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 10.0mL selective supplement solution. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the selective isolation of *Burkholderia cepacia* from the respiratory secretions of patients with cystic fibrosis and for routine testing of non-sterile inorganic salt solutions containing preservative. Slow growing *B. cepacia* can be missed on conventional media such as blood or MacConkey agar due to overgrowth caused by other faster growing organisms found in the respiratory tract of CF patients such as

mucoid *Klebsiella* species, *Pseudomonas aeruginosa*, and *Staphylococcus* species. This may lead to the infection being missed or wrongly diagnosed.

Burkholderia pseudomallei* Selective Agar (BPSA)*Composition per liter:**

Agar.....	15.0g
Pancreatic Digest of Casein.....	5.0g
Maltose.....	4.0g
Yeast Extract.....	2.5g
Glucose.....	1.0g
Neutral Red.....	0.1g
Gentamicin solution.....	10.0mL
Glycerol.....	10.0mL
Nile Blue solution.....	1.0mL

pH 7.0 ± 0.2 at 25°C

Gentamicin Solution:**Composition per 10.0mL:**

Gentamicin.....	20.0mg
-----------------	--------

Preparation of Gentamicin Solution: Add gentamicin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Nile Blue Solution:**Composition per 10.0mL:**

Nile Blue.....	0.2g
----------------	------

Preparation of Nile Blue Solution: Add Nile blue to 10.0mL of a 1% solution of dimethyl sulfoxide. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except gentamicin solution, Nile Blue solution, and glycerol, to distilled/deionized water and bring volume to 979.0mL. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°C. Aseptically add 10.0mL sterile gentamicin solution, 1.0mL sterile Nile blue solution, and 10.0mL filter-sterilized glycerol. Mix thoroughly for 5 min on a heated magnetic stirrer at 40°C. Pour into sterile Petri dishes.

Use: For the cultivation of *Burkholderia pseudomallei* from clinical specimens collected from non-sterile sites with improved recovery of the more easily inhibited strains of *B. pseudomallei*.

Burk's Medium**Composition per liter:**

Sucrose.....	20.0g
MgSO ₄ ·7H ₂ O.....	0.2g
K ₂ HPO ₄	0.8g
KH ₂ PO ₄	0.25g
CaSO ₄	0.13g
FeCl ₃	1.45mg
Na ₂ MoO ₃	0.253mg

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes with inverted Durham tubes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of nitrogen fixing bacteria, such as *Azotobacter* spp., from soil.

Bushnell-Haas Agar**Composition per liter:**

Agar	15.0g
KH ₂ PO ₄	1.0g
K ₂ HPO ₄	1.0g
NH ₄ NO ₃	1.0g
MgSO ₄ ·7H ₂ O.....	0.2g
FeCl ₃	0.05g
CaCl ₂ ·2H ₂ O.....	0.02g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes. For use in cultivating hydrocarbon-utilizing bacteria, layer 0.1–1.0% hydrocarbon on agar surface or aseptically add sterile hydrocarbon to cooled agar prior to pouring plates.

Use: For examining fuels for microbial contamination and for studying hydrocarbon utilization by microorganisms. Also for the cultivation of *Nocardia* species.

Bushnell-Haas Broth**Composition per liter:**

KH ₂ PO ₄	1.0g
K ₂ HPO ₄	1.0g
NH ₄ NO ₃	1.0g
MgSO ₄ ·7H ₂ O.....	0.2g
FeCl ₃	0.05g
CaCl ₂ ·2H ₂ O.....	0.02g

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. For use in cultivating hydrocarbon-utilizing bacteria, layer 0.1–1.0% hydrocarbon on broth surface or add directly to broth.

Use: For examining fuels for microbial contamination and for studying the hydrocarbon utilization by microorganisms. Also for the cultivation of *Nocardia* species.

Bushnell-Haas Medium**Composition per liter:**

KH ₂ PO ₄	1.0g
K ₂ HPO ₄	1.0g
NH ₄ NO ₃	1.0g
Cholesterol.....	0.3g
MgSO ₄ ·7H ₂ O.....	0.2g
FeCl ₃	0.05g
CaCl ₂ ·2H ₂ O.....	0.02g

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. For use in cultivating hydrocarbon-utilizing bacteria, layer 0.1–1.0% hydrocarbon on broth surface or add directly to broth.

Use: For the cultivation of *Nocardia* species.

Butanediol Medium**Composition per liter:**

NaH ₂ PO ₄ ·H ₂ O.....	2.1g
1,4-Butanediol.....	1.0g
NaCl.....	1.0g
NH ₄ Cl.....	1.0g
CaCl ₂ ·2H ₂ O.....	0.5g
MgSO ₄ ·7H ₂ O.....	0.5g
K ₂ HPO ₄	0.3g
Yeast extract.....	0.2g
Modified Wolfe's mineral solution.....	10.0mL

pH 7.0 ± 0.2 at 25°C

Modified Wolfe's Mineral Solution:**Composition per liter:**

MgSO ₄ ·7H ₂ O.....	3.0g
Nitrilotriacetic acid.....	1.5g
NaCl.....	1.0g
MnSO ₄ ·H ₂ O.....	0.5g
CaCl ₂	0.1g
CoCl ₂ ·6H ₂ O.....	0.1g
FeSO ₄ ·7H ₂ O.....	0.1g
ZnSO ₄ ·7H ₂ O.....	0.1g
AlK(SO ₄) ₂ ·12H ₂ O.....	0.01g
CuSO ₄ ·5H ₂ O.....	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O.....	0.01g
Na ₂ SeO ₃	0.01g
NaWO ₄ ·2H ₂ O.....	0.01g
NiCl ₂ ·6H ₂ O.....	0.01g

Preparation of Modified Wolfe's Mineral Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components one at a time. Add distilled/deionized water to 1.0L. Adjust pH to 6.8.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Pseudomonas putida*.

Butyrivibrio Species Medium**Composition per 1001.0mL:**

Na ₂ CO ₃	4.0g
Pancreatic digest of casein.....	2.0g
Yeast extract.....	2.0g
K ₂ HPO ₄	0.3g
Hemin.....	1.0mg
Resazurin.....	1.0mg
Rumen fluid, clarified.....	150.0mL
Minerals solution.....	75.0mL
Carbohydrate solution.....	20.0mL
L-Cysteine·HCl·H ₂ O solution.....	10.0mL
Na ₂ S·9H ₂ O solution.....	10.0mL
Volatile fatty acid mixture.....	3.1mL

pH 6.7 ± 0.2 at 25°C

Minerals Solution:**Composition per liter:**

NaCl.....	12.0g
KH ₂ PO ₄	6.0g
(NH ₄) ₂ SO ₄	6.0g

MgSO ₄ ·7H ₂ O	2.5g
CaCl ₂ ·2H ₂ O	1.6g

Preparation of Minerals Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

L-Cysteine·HCl·H₂O Solution:

Composition per 10.0mL:

L-Cysteine·HCl·H ₂ O	0.25g
---------------------------------------	-------

Preparation of L-Cysteine·HCl·H₂O Solution: Add L-cysteine·HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.25g
---	-------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Carbohydrate Solution:

Composition per 20.0mL:

Glucose	1.0g
Cellobiose	1.0g
Glycerol	1.0g
Maltose.....	1.0g
Starch, soluble.....	1.0g

Preparation of Carbohydrate Solution: Add components to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Sparge under 100% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Volatile Fatty Acid Mixture:

Composition per 7.75mL:

Acetic acid	4.25mL
Propionic acid	1.50mL
Butyric acid.....	1.0mL
DL-2-Methyl butyric acid	0.25mL
<i>iso</i> -Butyric acid.....	0.25mL
<i>iso</i> -Valeric acid	0.25mL
<i>n</i> -Valeric acid	0.25mL

Preparation of Volatile Fatty Acid Mixture: Combine components. Mix thoroughly.

Preparation of Medium: Prepare and dispense medium under 100% CO₂. Add components, except carbohydrate solution, Na₂CO₃, L-cysteine·HCl·H₂O solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 960.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 5 min. Cool to room temperature while sparging with 100% CO₂. Add Na₂CO₃. Continue sparging with 100% CO₂ until pH reaches 6.8. Distribute into rubber-stoppered tubes under 100% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 20.0mL of sterile carbohydrate solution, 10.0mL of sterile L-cysteine·HCl·H₂O solution, and 10.0mL of sterile Na₂S·9H₂O solution or, using a syringe, inject the appropriate amount of sterile carbohydrate solution, sterile Na₂S·9H₂O solution, and sterile L-cysteine·HCl·H₂O solution into individual tubes containing medium.

Use: For the cultivation of *Butyrivibrio* species.

Butzler Medium

See: Campylobacter Selective Medium, Butzler's

Butzler's Campylobacter Medium

See: Campylobacter Selective Medium, Butzler's

BY Agar Medium (ATCC Medium 2038)

Composition per liter:

Agar	15.0g
Yeast extract.....	5.0g
Pancreatic digest of casein.....	5.0g
Beef extract.....	5.0g
NaCl.....	2.5g
K ₂ HPO ₄	0.1g
MgSO ₄ ·7H ₂ O.....	0.05g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Paracoccus thiocyanatus*.

BY+ Medium

Composition per liter:

Glucose	5.0g
Peptone	1.0g
Yeast extract.....	1.0g
Seawater.....	1.0L

Preparation of Medium: Combine components. Mix thoroughly. Gently heat and bring to boiling. Distribute into flasks or tubes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Arenariomyces triseptatus*, *Haliphthoros milfordensis*, *Haliphthoros philippinensis*, *Halosphaeria salina*, *Japonochytrium* species, *Lignincola laevis*, *Lindra thalassiae*, *Schizochytrium aggregatum*, *Thraustochytrium* species, and *Torpedospora radiata*.

BYE Agar

Composition per liter:

Pancreatic digest of casein.....	16.0g
Agar	13.5g
Brain heart, solids from infusion	8.0g
Peptic digest of animal tissue	5.0g
NaCl.....	5.0g
Glucose	2.0g
Na ₂ HPO ₄	2.5g
Yeast extract.....	2.0g
Blood, human or animal, sterile.....	150.0mL

pH 7.8–8.0 ± 0.2 at 25°C

Preparation of Medium: Add components, except blood, to distilled/deionized water and bring volume to 850.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 150.0mL of sterile blood. Outdated, citrated, or heparinized blood (blood from a blood bank is acceptable). Pour into sterile Petri dishes.

Use: For the isolation and cultivation of *Mycoplasma* species and L-forms of bacteria. For the detection of *Mycoplasma* species in tissue culture and cell lines.

BYE HiVeg Agar with Blood

Composition per liter:

Agar	13.0g
Plant infusion	10.0g
Plant peptone No. 3	10.0g
Plant special infusion	7.5g
NaCl	5.0g
Na ₂ HPO ₄	2.5g
Glucose	2.0g
Yeast extract	2.0g
Horse or human blood, sterile	150.0mL
pH 7.9 ± 0.2 at 25°C	

Source: This medium, without blood, is available as a premixed powder from HiMedia.

Preparation of Medium: Add components, except blood, to distilled/deionized water and bring volume to 850.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 150.0mL of sterile blood. Outdated, citrated, or heparinized blood (blood from a blood bank is acceptable). Pour into sterile Petri dishes.

Use: For the isolation and cultivation of *Mycoplasma* species and L-forms of bacteria. For the detection of *Mycoplasma* species in tissue culture and cell lines.

BYE HiVeg Broth with Blood

Composition per liter:

Plant infusion	10.0g
Plant peptone No. 3	10.0g
Plant special infusion	7.5g
NaCl	5.0g
Na ₂ HPO ₄	2.5g
Glucose	2.0g
Yeast extract	2.0g
Horse or human blood, sterile	150.0mL
pH 7.9 ± 0.2 at 25°C	

Source: This medium, without blood, is available as a premixed powder from HiMedia.

Preparation of Medium: Add components, except blood, to distilled/deionized water and bring volume to 850.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 150.0mL of sterile blood. Outdated, citrated, or heparinized blood (blood from a blood bank is acceptable).

Use: For the cultivation of *Mycoplasma* species and L-forms of bacteria.

BYEB

(Buffered Yeast Extract Broth)

Composition per liter:

ACES buffer (2-[(2-amino-2-oxoethyl)-amino]-ethane sulfonic acid)	10.0g
Yeast extract	10.0g
α-Ketoglutarate	1.0g
L-Cysteine·HCl·H ₂ O	0.4g
Fe ₄ (P ₂ O ₇) ₃ ·9H ₂ O	0.25g
pH 6.9 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.9. Filter sterilize. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Legionella pneumophila*.

C/10 Agar

Composition per liter:

Agar	15.0g
Pancreatic digest of casein	3.0g
CaCl ₂ ·2H ₂ O	1.36g
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.2. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Cytophaga flevensis*, *Flexibacter filiformis*, *Myxococcus*

C/10 Medium Reichenbach

Composition per liter:

Agar	15.0g
Pancreatic digest of casein	3.0g
CaCl ₂	1.0g
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components, except agar, to distilled/deionized water and bring volume to 1.0L. Adjust pH to 7.2. Add agar. Mix thoroughly. Gently heat to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Flexibacter filiformis*, *fulvus*, and *Myxococcus xanthus*.

C 3G Spiroplasma Medium

Composition per liter:

Sucrose	100.0g
Phenol Red	10.0mg
PPLO broth without Crystal Violet	500.0mL
Horse serum	150.0mL
Fresh yeast extract solution	50.0mL
CMRL-1066 medium	5.0mL
pH 7.5 ± 0.2 at 25°C	

Source: PPLO broth without Crystal Violet is available as a premixed powder from BD Diagnostic Systems.

PPLO Broth without Crystal Violet:

Composition per 500.0mL:

Beef heart, infusion from	11.52g
Peptone	2.32g
NaCl	1.15g

Preparation of PPLO Broth without Crystal Violet: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly.

Fresh Yeast Extract Solution:

Composition per 100.0mL:

Baker's yeast, live, pressed, starch-free	25.0g
---	-------

Preparation of Fresh Yeast Extract Solution: Add the live Baker's yeast to 100.0mL of distilled/deionized water. Autoclave for 90 min at 15 psi pressure–121°C. Allow to stand. Remove supernatant solution. Adjust pH to 6.6–6.8. Filter sterilize.

CMRL-1066 Medium:

Composition per liter:

NaCl	6.8g
NaHCO ₃	2.2g
D-Glucose	1.0g

Source: CMRL-1066 medium is available as a premixed powder from BD Diagnostics.

Preparation of CMRL-1066 Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Filter sterilize.

Preparation of Medium: Add components—except horse serum, fresh yeast extract, and CMRL medium—to distilled/deionized water and bring volume to 795.0mL. Adjust pH to 7.5. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 150.0mL of sterile horse serum, 50.0mL of sterile fresh yeast extract solution, and 5.0mL of sterile CMRL medium. Distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Spiroplasma* species.

C 3N Spiroplasma Medium

Composition per 100.0mL:

Sucrose	12.0g
Phenol Red	10.0mg
PPLO broth without Crystal Violet	50.0mL
Horse serum	20.0mL
Fresh yeast extract solution	5.0mL
CMRL-1066 medium	0.5mL
pH 7.5 ± 0.2 at 25°C	

PPLO Broth without Crystal Violet:

Composition per 500.0mL:

Beef heart, infusion from	11.52g
Peptone	2.32g
NaCl	1.15g

Source: PPLO broth without Crystal Violet is available as a premixed powder from BD Diagnostic Systems.

Preparation of PPLO Broth without Crystal Violet: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly.

Fresh Yeast Extract Solution:

Composition per 100.0mL:

Baker's yeast, live, pressed, starch-free	25.0g
---	-------

Preparation of Fresh Yeast Extract Solution: Add the live Baker's yeast to 100.0mL of distilled/deionized water. Autoclave for 90 min at 15 psi pressure–121°C. Allow to stand. Remove supernatant solution. Adjust pH to 6.6–6.8. Filter sterilize.

2,3,5-Triphenyltetrazolium chloride solution.....	10.0mL
pH 7.0 ± 0.2 at 25°C	

Source: This medium, without triphenyltetrazolium chloride solution, is available as a premixed powder from HiMedia.

Caution: Sodium azide is toxic. Azides also react with metals and disposal must be highly diluted.

2,3,5-Triphenyltetrazolium Chloride Solution:

Composition per 10.0mL:

2,3,5-Triphenyltetrazolium chloride.....	0.1g
--	------

Preparation of 2,3,5-Triphenyltetrazolium Chloride Solution: Add 2,3,5-triphenyltetrazolium chloride to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except 2,3,5-triphenyltetrazolium chloride solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 10 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL 2,3,5-triphenyltetrazolium chloride solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation, cultivation, and enumeration of enterococci in water, sewage, and feces by the membrane filter method. For the direct plating of specimens for the detection and enumeration of fecal streptococci.

CAE HiVeg Agar Base with Triphenyltetrazolium Chloride

(Citrate Azide *Enterococcus* HiVeg Agar Base)

Composition per liter:

Agar.....	15.0g
Plant hydrolysate.....	15.0g
Sodium citrate.....	15.0g
KH ₂ PO ₄	5.0g
Yeast extract.....	5.0g
Na ₂ CO ₃	2.0g
Polysorbate 80.....	1.0g
NaN ₃	0.4g
2,3,5-Triphenyltetrazolium chloride solution.....	10.0mL
pH 7.0 ± 0.2 at 25°C	

Source: This medium, without triphenyltetrazolium chloride solution, is available as a premixed powder from HiMedia.

Caution: Sodium azide is toxic. Azides also react with metals and disposal must be highly diluted.

2,3,5-Triphenyltetrazolium Chloride Solution:

Composition per 10.0mL:

2,3,5-Triphenyltetrazolium chloride 0.1g

Preparation of 2,3,5-Triphenyltetrazolium Chloride Solution:

Add 2,3,5-triphenyltetrazolium chloride to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium:

Add components, except 2,3,5-triphenyltetrazolium chloride solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 10 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL 2,3,5-triphenyltetrazolium chloride solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation, cultivation, and enumeration of enterococci in water, sewage, and feces by the membrane filter method. For the direct plating of specimens for the detection and enumeration of fecal streptococci.

**Caffeic Acid Ferric Citrate Test Medium
(CAFC Test Medium)
(Caffeic Acid Agar)**

Composition per liter:

Agar 20.0g
 (NH₄)₂SO₄ 5.0g
 Glucose 5.0g
 Yeast extract 2.0g
 K₂HPO₄ 0.8g
 MgSO₄·3H₂O 0.7g
 Caffeic acid·1/2H₂O 0.18g
 Chloramphenicol 0.05g
 Ferric citrate solution 4.0mL

pH 6.5 ± 0.2 at 25°C

Ferric Citrate Solution:

Composition per 20.0mL:

Ferric citrate 100.0mg

Preparation of Ferric Citrate Solution: Add ferric citrate to 20.0mL of distilled/deionized water. Mix thoroughly.

Preparation of Medium: Add components, except chloramphenicol, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Heat to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 0.05g of chloramphenicol. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the isolation and presumptive identification of *Cryptococcus neoformans*. *Cryptococcus neoformans* appears as dark brown colonies. All other *Cryptococcus* species appear as light brown or nonpigmented colonies.

Caffeine Medium

Composition per liter:

Agar 15.0g
 Solution A 400.0mL
 Solution B 400.0mL
 Solution C 200.0mL

pH 5.0 ± 0.2 at 25°C

Solution A:

Composition per 400.0mL:

Na₂HPO₄ 7.8g
 KH₂PO₄ 3.0g
 Caffeine 1.0g
 NaCl 0.58g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 400.0mL. Mix thoroughly. Adjust pH to 5.0.

Solution B:

Composition per 400.0mL:

MgSO₄·7H₂O 0.12g
 CaCl₂·2H₂O 11.0mg

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 400.0mL. Mix thoroughly.

Solution C:

Composition per 200.0mL:

FeCl₃ 16.0mg

Preparation of Solution C: Add FeCl₃ to distilled/deionized water and bring volume to 200.0mL. Mix thoroughly.

Preparation of Medium: To 400.0mL of solution A, add 400.0mL of solution B and 200.0mL of solution C. Adjust pH to 5.0. Add agar. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Pseudomonas* species.

CAGV Medium

See: **Casamino Acid Glucose Medium**

CAL Agar

**(Cellobiose Arginine Lysine Agar)
(Yersinia Isolation Agar)**

Composition per liter:

Agar 20.0g
 L-Arginine·HCl 6.5g
 L-Lysine·HCl 6.5g
 NaCl 5.0g
 Cellobiose 3.5g
 Yeast extract 3.0g
 Sodium deoxycholate 1.5g
 Neutral Red 0.03g

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Heat to boiling. Do not autoclave. Pour into sterile Petri dishes.

Use: For the isolation and characterization of *Yersinia enterocolitica* from fecal specimens and enumeration of *Yersinia enterocolitica* from water and other liquid specimens.

CAL Broth

(Cellobiose Arginine Lysine Broth)

Composition per liter:

L-Arginine·HCl 6.5g
 L-Lysine·HCl 6.5g
 NaCl 5.0g
 Cellobiose 3.5g
 Yeast extract 3.0g

Sodium deoxycholate.....	1.5g
Neutral Red.....	0.03g
pH 7.3 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Heat to boiling. Do not autoclave. Distribute into sterile tubes in 6.0–8.0mL volumes.

Use: For the isolation and characterization of *Yersinia enterocolitica* from fecal specimens and enumeration of *Yersinia enterocolitica* from water and other liquid specimens.

CAL HiVeg Agar (Cellobiose Arginine Lysine HiVeg Agar)

Composition per liter:

Agar	20.0g
L-Arginine	6.5g
L-Lysine hydrochloride	6.5g
NaCl	5.0g
Cellobiose	3.5g
Yeast extract	3.0g
Synthetic detergent No. III	1.5g
Neutral Red	0.03g
pH 7.1 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Heat to boiling. Do not autoclave. Pour into sterile Petri dishes.

Use: For the isolation and characterization of *Yersinia enterocolitica* from fecal specimens and enumeration of *Y. enterocolitica* from water.

CAL HiVeg Broth (Cellobiose Arginine Lysine HiVeg Broth)

Composition per liter:

L-Arginine	6.5g
L-Lysine hydrochloride	6.5g
NaCl	5.0g
Cellobiose	3.5g
Yeast extract	3.0g
Synthetic detergent No. III	1.5g
Neutral Red	0.03g
pH 7.1 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Heat to boiling. Do not autoclave. Distribute into sterile tubes.

Use: For the isolation and characterization of *Yersinia enterocolitica* from fecal specimens and enumeration of *Yersinia enterocolitica* from water and other liquid specimens.

Calcium Caseinate Agar

Composition per liter:

Agar	13.0g
Peptic digest of animal tissue.....	4.0g
Calcium caseinate	3.5g
Meat extract	2.0g
Casein enzymic hydrolysate	2.0g

CaCl ₂ ·2H ₂ O	0.2g
Tri-potassium citrate.....	0.35g
Na ₂ HPO ₄	0.105g
KH ₂ PO ₄	0.035g
NaCl.....	5.0g
pH 7.0 ± 0.2 at 25°C	

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Gently heat and bring to boiling. Boil for 10 min. Autoclave for 15 min at 15 psi pressure–121°C. Mix thoroughly while pouring into Petri dishes.

Use: For the detection and enumeration of proteolytic microorganisms in foodstuffs and other materials.

Calcium Caseinate Agar with Skim Milk

Composition per liter:

Agar	13.0g
Skim Milk	10.0g
Peptic digest of animal tissue	4.0g
Calcium caseinate	3.5g
Meat extract	2.0g
Casein enzymic hydrolysate	2.0g
CaCl ₂ ·2H ₂ O	0.2g
Tri-potassium citrate.....	0.35g
Na ₂ HPO ₄	0.105g
KH ₂ PO ₄	0.035g
NaCl.....	5.0g
pH 7.0 ± 0.2 at 25°C	

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Gently heat and bring to boiling. Boil for 10 min. Autoclave for 15 min at 15 psi pressure–121°C. Mix thoroughly while pouring into Petri dishes.

Use: For the detection and enumeration of proteolytic microorganisms in foodstuffs and other materials.

Caldicellulosiruptor Medium

Composition per liter:

Pancreatic digest of casein.....	2.0g
K ₂ HPO ₄	1.5g
Cellobiose	1.0g
Yeast extract.....	1.0g
NaCl	0.9g
NH ₄ Cl	0.9g
KH ₂ PO ₄	0.75g
L-Cysteine-HCl	0.75g
MgCl ₂ ·6H ₂ O	0.4g
FeCl ₃ ·6H ₂ O	2.5mg
Resazurin	0.5mg
Trace elements solution SL-10	1.0mL
pH 7.2 ± 0.2 at 25°C	

Trace Elements Solution SL-10:

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg

ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare and dispense medium under 100% N₂. Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Anaerobically distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Caldicellulosiruptor saccharolyticus*.

***Caldicellulosiruptor* Medium**

Composition per 1001.0mL:

Pancreatic digest of casein.....	2.0g
K ₂ HPO ₄	1.5g
Cellulose	1.0g
Cellobiose	1.0g
Yeast extract.....	1.0g
NaCl	0.9g
NH ₄ Cl	0.9g
KH ₂ PO ₄	0.75g
MgCl ₂ ·6H ₂ O.....	0.4g
FeCl ₃ ·6H ₂ O	2.5mg
L-Cysteine-HCl.....	0.75g
Resazurin	0.5mg

pH 7.2 ± 0.2 at 25°C

Trace Elements Solution SL-10:

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare and dispense medium under 100% N₂. Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Anaerobically distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Caldicellulosiruptor saccharolyticus*.

***Caldisphaera* Medium (DSMZ Medium 991)**

Composition per liter:

Sulfur, powder	10.0g
MnCl ₂ ·4H ₂ O	1.8g
(NH ₄) ₂ SO ₄	1.3g
KH ₂ PO ₄	0.28g
MgSO ₄ ·7H ₂ O	0.25g
CaCl ₂ ·2H ₂ O	0.07g
FeCl ₃ ·6H ₂ O	0.02g
Na ₂ B ₄ O ₇ ·10H ₂ O.....	4.5mg
Resazurin	1.0mg
ZnSO ₄ ·7H ₂ O	0.22mg
CuCl ₂ ·2H ₂ O	0.05mg
Na ₂ MoO ₄ ·4H ₂ O	0.03mg
VOSO ₄ ·2H ₂ O.....	0.03mg
Na ₃ -citrate·2H ₂ O.....	0.03mg
CoSO ₄	0.01mg
Vitamin solution.....	10.0mL
Na ₂ S·9H ₂ O solution.....	10.0mL
Yeast extract solution.....	5.0mL

pH 4.3 ± 0.2 at 25°C

Yeast Extract Solution:

Composition per 5.0mL:

Yeast extract.....	0.5g
--------------------	------

Preparation of Yeast Extract Solution: Add yeast extract to distilled/deionized water and bring volume to 5.0mL. Mix thoroughly. Sparge under 100% N₂ gas for 3 min. Autoclave for 15 min at 15 psi pressure–121°C. Store under N₂ gas.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	0.5g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl.....	10.0mg
Thiamine-HCl·2H ₂ O.....	5.0mg
Riboflavin	5.0mg
Nicotinic acid.....	5.0mg
D-Ca-pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Lipoic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Preparation of Medium: Add components, except vitamin solution, yeast extract solution, sulfur, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 975.0mL. Mix thoroughly. Gently heat and bring to boiling. Boil for 3 min. Cool to room temperature under 80% N₂ + 20% CO₂. Adjust pH to 3.5 with 10N H₂SO₄. Dispense under same gas atmosphere in suitable culture vessels (e.g., 20.0mL of the medium in 120 mL serum bottles). Autoclave for 15 min at 15 psi pressure–121°C. Steam sulfur for 3 hr on each of 3 successive days. Asep-

tically mix the sterilized sulfur with the medium and add vitamins and yeast extract from sterile, anaerobic stock solutions. Prior to inoculation change atmosphere to 80% H₂ + 20% CO₂. Aseptically and anoxically add Na₂S·9H₂O. Adjust pH to 4.0–4.5 if necessary. After inoculation pressurize vials to 1 bar overpressure with 80% H₂ + 20% CO₂ gas mixture.

Use: For the cultivation of *Caldisphaera* spp.

***Calditerrivibrio* Medium (DSMZ Medium 1112)**

Composition per liter:

NaNO ₃	0.85g
Na-acetate	0.82g
NH ₄ Cl	0.54g
MgCl ₂ ·6H ₂ O	0.2g
CaCl ₂ ·2H ₂ O	0.15g

HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except bicarbonate solution, sulfide solution, and vitamin solution, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Gently heat and bring to boiling. Boils for several minutes. Cool to room temperature while sparging with 80% N₂ + 20% CO₂. Distribute into screw-capped tubes or bottles under an atmosphere of 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Add the bicarbonate solution, sulfide solution, and vitamin solution. Adjust the final pH to 7.0.

Use: For the cultivation of *Calditerrivibrio* spp.

***Caldivirga* Medium (DSMZ Medium 883)**

Composition per liter:

(NH ₄) ₂ SO ₄	1.3g
Sulfur, powdered	10.0g
Na ₂ S·9H ₂ O	0.5g
KH ₂ PO ₄	0.28g
MgSO ₄ ·7H ₂ O	0.25g
CaCl ₂ ·2H ₂ O	0.07g
FeCl ₃ ·6H ₂ O	0.02g
Na ₂ B ₄ O ₇ ·10H ₂ O	4.5mg
MnCl ₂ ·4H ₂ O	1.8mg
Resazurin	0.5mg
ZnSO ₄ ·7H ₂ O	0.22mg
CuCl ₂ ·2H ₂ O	0.05mg
Na ₂ MoO ₄ ·2H ₂ O	0.03mg
VOSO ₄ ·2H ₂ O	0.03mg
CoSO ₄	0.01mg
Na ₂ S·9H ₂ O solution	7.5mL
Yeast extract solution	5.0mL
Na ₃ -citrate·2H ₂ O	3.0mL
Vitamin solution	1.0mL

pH 4.0 ± 0.2 at 25°C

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.3g
---	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Yeast Extract Solution:**Composition** per 10.0mL:

Yeast extract..... 1.0g

Preparation of Yeast Extract Solution: Add yeast extract to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Vitamin Solution:**Composition** per liter:

Pyridoxine-HCl..... 10.0mg
 Thiamine-HCl·2H₂O..... 5.0mg
 Riboflavin..... 5.0mg
 Nicotinic acid..... 5.0mg
 D-Ca-pantothenate..... 5.0mg
p-Aminobenzoic acid..... 5.0mg
 Lipoic acid..... 5.0mg
 Biotin..... 2.0mg
 Folic acid..... 2.0mg
 Vitamin B₁₂..... 0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Preparation of Medium: Add components, except sulfur, vitamin solution, yeast extract solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 3.5 with 4*N* H₂SO₄. Sparge with 100% N₂ for 30 min. Distribute into anaerobe tubes or bottles containing sulfur, 50.0mg sulfur per 5.0mL medium. Autoclave for 20 min at 105°C. Cool to 25°C. Before use inject for every 10.0mL medium, 0.05mL sterile vitamin solution, 0.05mL sterile yeast extract, and 0.075mL sterile Na₂S·9H₂O solution. Mix thoroughly. Final pH of the completed medium is around 4.0. After inoculation, pressurize the tubes to 100 kPa overpressure with 80% H₂ + 20% CO₂ gas mixture.

Use: For the cultivation of *Caldivirga maquilensis*.

***Caloramator proteoclasticus* Medium
(DSMZ Medium 788)**

Composition per liter:

NH₄Cl..... 2.40g
 Na₂HPO₄·2H₂O..... 0.522g
 KH₂PO₄..... 0.48g
 MgCl₂·6H₂O..... 0.40g
 Yeast extract..... 0.20g
 Resazurin..... 0.5mg
 NaHCO₃ solution..... 40.0mL
 Na₂S·9H₂O solution..... 10.0mL
 Calcium chloride solution..... 10.0mL
 Glucose solution..... 10.0mL
 Seven vitamin solution..... 1.0mL
 Trace elements solution SL-10..... 1.0mL
 Selenite-tungstate solution..... 1.0mL

pH 7.3 ± 0.2 at 25°C

Glucose Solution:**Composition** per 10.0mL:

Glucose..... 5.0g

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Calcium Chloride Solution:**Composition** per 10.0mL:

CaCl₂·2H₂O..... 0.2g

Preparation of Calcium Chloride Solution: Add CaCl₂·2H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Selenite-Tungstate Solution:**Composition** per liter:

NaOH..... 0.5g
 Na₂WO₄·2H₂O..... 4.0mg
 Na₂SeO₃·5H₂O..... 3.0mg

Preparation of Selenite-Tungstate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Seven Vitamin Solution:**Composition** per liter:

Pyridoxine hydrochloride..... 300.0mg
 Thiamine-HCl·2H₂O..... 200.0mg
 Nicotinic acid..... 200.0mg
 Vitamin B₁₂..... 100.0mg
 Calcium pantothenate..... 100.0mg
p-Aminobenzoic acid..... 80.0mg
 D(+)-Biotin..... 20.0mg

Preparation of Seven Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Sparge with 100% N₂. Mix thoroughly. Filter sterilize.

NaHCO₃ Solution:**Composition** per 100.0mL:

NaHCO₃..... 10.0g

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

Na₂S·9H₂O Solution:**Composition** per 10.0mL:

Na₂S·9H₂O..... 0.3g

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Trace Elements Solution SL-10:**Composition** per liter:

FeCl₂·4H₂O..... 1.5g
 CoCl₂·6H₂O..... 190.0mg
 MnCl₂·4H₂O..... 100.0mg
 ZnCl₂..... 70.0mg
 Na₂MoO₄·2H₂O..... 36.0mg
 NiCl₂·6H₂O..... 24.0mg
 H₃BO₃..... 6.0mg
 CuCl₂·2H₂O..... 2.0mg
 HCl (25% solution)..... 10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂. Add components, except seven vitamin solution,

NaHCO₃ solution, calcium chloride solution, glucose solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 929.0mL. Mix thoroughly. Sparge with N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically and anaerobically add 1.0mL sterile seven vitamin solution, 40.0mL of sterile NaHCO₃ solution, 10.0mL sterile glucose solution, 10.0mL sterile calcium chloride solution, and 10.0mL of sterile Na₂S·9H₂O solution. Mix thoroughly. Adjust pH to 7.2–7.4. Aseptically and anaerobically distribute into sterile tubes or flasks.

Use: For the cultivation of *Caloramator proteoclasticus*.

Caloramator viterbensis Medium (DSMZ Medium 947)

Composition per liter:

Glycerol	3.0g
KH ₂ PO ₄	2.0g
NaHCO ₃	1.0g
(NH ₄) ₂ SO ₄	0.5g
NH ₄ Cl	0.5g
Yeast extract	0.3g
MgCl ₂ ·6H ₂ O	0.04g
CaCl ₂ ·2H ₂ O	0.04g
Resazurin	0.5mg
Cysteine solution	10.0mL
Na ₂ S·9H ₂ O solution	10.0mL
Trace elements solution SL-10	1.0mL
Selenite-tungstate solution	1.0mL
Vitamin solution	0.2mL

pH 6.3 ± 0.2 at 25°C

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl	10.0mg
Thiamine-HCl·2H ₂ O	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
D-Ca-pantothenate	5.0mg
p-Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Selenite-Tungstate Solution:

Composition per liter:

NaOH	0.5g
Na ₂ WO ₄ ·2H ₂ O	4.0mg
Na ₂ SeO ₃ ·5H ₂ O	3.0mg

Preparation of Selenite-Tungstate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Na₂S·9H₂O Solution:

Composition per 100.0mL:

Na ₂ S·9H ₂ O	1.3g
-------------------------------------	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution SL-10:

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Cysteine Solution:

Composition per 100.0mL:

L-Cysteine·HCl·H ₂ O	1.3g
---------------------------------	------

Preparation of Cysteine Solution: Add L-cysteine·HCl·H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas atmosphere. Add components, except NaHCO₃, Na₂S·9H₂O solution, and cysteine solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Cool to room temperature while sparging with 80% N₂ + 20% CO₂. Add solid NaHCO₃. Adjust pH to 6.3 by equilibrating with the same gas mixture. Distribute to tubes or bottles. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 10.0mL sterile cysteine solution and 10.0mL sterile Na₂S·9H₂O solution. Mix thoroughly. Adjust pH to 6.8. Aseptically and anaerobically distribute into sterile tubes or bottles.

Use: For the cultivation of *Caloramator viterbiensis*.

Calymmatobacterium granulomatis Semidefined Medium

Composition per liter:

Papaic digest of soybean meal	20.0g
NaCl	2.5g
K ₂ HPO ₄	1.5g
Sodium thioglycolate	0.6g
L-Cystine	0.4g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Distribute into screw-capped tubes in 20–22mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Tighten screw caps.

Use: For the cultivation of *Calymmatobacterium granulomatis*.

CAMG Broth

Composition per liter:

K ₂ HPO ₄	5.0g
Pancreatic digest of casein	5.0g
Yeast extract	5.0g
Glucose	2.0g
Tween™ 80	0.5mL

pH 7.0 ± 0.1 at 25°C

Preparation of Medium: Prepare and dispense anaerobically under an atmosphere of 80% N₂ + 10% CO₂ + 10% H₂. Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with a gas mixture of 80% N₂ + 10% CO₂ + 10% H₂. Adjust pH to 7.5. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Actinomyces naeslundii*.

***Caminiella* Medium (DSMZ Medium 964)**

Composition per liter:

Sea salt	30.0g
Sulfur, powdered	12.0g
PIPES buffer	6.05g
D(+)-glucose	5.0g
Peptone	1.0g
Yeast extract	0.5g
Resazurin	0.5mg
Na ₂ S·9H ₂ O solution	10.0mL

pH 7.5 ± 0.2 at 25°C

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.5g
---	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Boil for 3 min. Cool to 25°C while sparging with 80% N₂ + 20% CO₂. Adjust pH to 7.2–7.4. Distribute to anaerobe tubes or bottles under 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add per liter of medium, 10.0mL sterile Na₂S·9H₂O solution. Mix thoroughly. The final pH should be 7.5.

Use: For the cultivation of *Caminiella sporogenes*.

Camphor Minimal Medium

Composition per liter:

Agar	20.0g
K ₂ HPO ₄	4.4g
NH ₄ Cl	2.1g
KH ₂ PO ₄	1.7g
100× salt solution	10.0mL

100X Salt Solution:

Composition per liter:

MgSO ₄	19.5g
FeSO ₄ ·7H ₂ O	5.0g
MnSO ₄ ·H ₂ O	5.0g
Ascorbic acid	1.0g
CaCl ₂ ·2H ₂ O	0.3g

Preparation of 100X Salt Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes. Allow to cool to room temperature. Invert Petri dishes. Spread 0.2mL of 2M D-(+) camphor solution in methylene chloride (CH₂Cl₂) on the inside cover of each plate.

Use: For the cultivation and maintenance of *Pseudomonas putida*.

Campy BAP Medium

See: ***Campylobacter* Selective Medium, Blaser-Wang**

Campy Cefex Agar

See: ***Campylobacter* Isolation Agar B**

Campy THIO Medium

Composition per liter:

Pancreatic digest of casein	20.0g
Agar	15.0g
NaCl	2.5g
K ₂ HPO ₄	1.5g
Sodium thioglycolate	0.6g
L-Cystine	0.4g
Na ₂ SO ₃	0.2g
Antibiotic supplement	10.0mL

Antibiotic Supplement:

Composition per 10.0mL:

Cephalothin	15.0mg
Vancomycin	10.0mg
Trimethoprim	5.0mg
Amphotericin B	2.0mg
Polymyxin B	2500U

Preparation of Antibiotic Supplement: Add components to 10.0mL of distilled/deionized water. Filter sterilize.

Preparation of Medium: Add components, except antibiotic solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL of sterile antibiotic solution. Mix thoroughly. Aseptically distribute into sterile screw-capped tubes in 3.0mL volumes for 1.5cm swabs or 5.0mL volumes for 3.0cm swabs.

Use: For the maintenance—as a holding or transport medium—of *Campylobacter* species isolated from clinical specimens on swabs.

Campylo Thioglycollate HiVeg Medium Base with Selective Supplement

Composition per liter:

Plant hydrolysate	20.0g
NaCl	2.5g
Agar	1.6g
K ₂ HPO ₄	1.5g
Na-thioglycollate	0.6g
L-Cystine	0.4g
Na ₂ SO ₃	0.2g
Selective supplement	10.0mL

pH 7.3 ± 0.2 at 25°C

Source: This medium, without selective supplement, is available as a premixed powder from HiMedia.

Selective Supplement:

Composition per 10.0mL:

Cephalothin	15.0mg
Vancomycin	10.0mg
Trimethoprim	5.0mg
Amphotericin B	2.0mg
Polymyxin B sulfate	2500 U

Preparation of Selective Supplement: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except selective supplement and sodium deoxycholate solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Heat with frequent agitation and boil for 1 min to completely dissolve. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Add 10.0mL of sterile selective supplement. Mix thoroughly.

Use: For the cultivation of *Campylobacter* spp.

Campylobacter Agar

Composition per liter:

Agar	15.0g
Polypeptone™	10.0g
Meat extract	5.0g
NaCl	5.0g
Yeast extract	5.0g
Sodium L-glutamate	2.0g
Sodium succinate·6H ₂ O	2.0g
MgCl ₂ ·6H ₂ O	1.0g
Sheep blood, defibrinated	50.0mL

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components, except sheep blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.0. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 50.0mL of sterile defibrinated sheep blood. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Moraxella lincolni*.

Campylobacter Agar

Composition per liter:

NaCl	150.0g
Agar	20.0g
Yeast extract	10.0g
Glucose	4.0g
KNO ₃	2.0g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Arhodomonas aquaeolei*.

Campylobacter Agar

with 5 Antimicrobics and 10% Sheep Blood

Composition per liter:

Agar	15.0g
Pancreatic digest of casein	10.0g
Peptic digest of animal tissue	10.0g
NaCl	5.0g
Yeast extract	2.0g
Glucose	1.0g
NaHSO ₃	0.1g
Sheep blood, defibrinated	100.0mL
Antibiotic supplement	10.0mL

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a prepared medium from BD Diagnostic Systems.

Antibiotic Supplement:

Composition per 10.0mL:

Cephalothin	0.015g
Vancomycin	0.01g
Trimethoprim	5.0mg
Amphotericin B	2.0mg
Polymyxin B	2500U

Preparation of Antibiotic Supplement: Add components to 10.0mL of distilled/deionized water. Filter sterilize.

Preparation of Medium: Add components, except sheep blood and antibiotic solution, to distilled/deionized water and bring volume to 890.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 100.0mL of sterile sheep blood and 10.0mL of sterile antibiotic solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the primary selective isolation and cultivation of *Campylobacter jejuni* from human fecal specimens.

Campylobacter Agar, Blaser's (Blaser's *Campylobacter Agar*)

Composition per liter:

<i>Campylobacter</i> agar base	990.0mL
Supplement B	10.0mL

pH 7.4 ± 0.2 at 25°C

Campylobacter Agar Base:

Composition per liter:

Proteose peptone	15.0g
Agar	12.0g
NaCl	5.0g
Yeast extract	5.0g
Liver digest	2.5g

Source: *Campylobacter* agar base and *Campylobacter* antimicrobial supplement B are available as a premixed powder from BD Diagnostic Systems.

Preparation of *Campylobacter Agar Base:* Add components to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Supplement B:

Composition per 10.0mL:

Cephalothin	15.0mg
Vancomycin	10.0mg
Trimethoprim	5.0mg
Amphotericin B	2.0mg
Polymyxin B	2500U

Preparation of Supplement B: Add components to 10.0mL of distilled/deionized water. Filter sterilize.

Preparation of Medium: Prepare 990.0mL of *Campylobacter* agar base. Autoclave and cool to 45°–50°C. Aseptically add 10.0mL of sterile supplement B. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the selective isolation of *Campylobacter jejuni* from fecal specimens, food, and environmental specimens.

***Campylobacter* Agar, Skirrow's (Skirrow's *Campylobacter* Agar)**

Composition per liter:

<i>Campylobacter</i> agar base	990.0mL
Supplement S	10.0mL
pH 7.4 ± 0.2 at 25°C	

***Campylobacter* Agar Base:**

Composition per liter:

Proteose peptone	15.0g
Agar	12.0g
NaCl	5.0g
Yeast extract	5.0g
Liver digest	2.5g

Source: *Campylobacter* agar base and *Campylobacter* antimicrobial supplement S are available as a premixed powder from BD Diagnostic Systems.

Preparation of *Campylobacter* Agar Base: Add components to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Supplement S:

Composition per 10.0mL:

Vancomycin	10.0mg
Trimethoprim	5.0mg
Polymyxin B	2500U

Preparation of Supplement S: Add components to 10.0mL of distilled/deionized water. Filter sterilize.

Preparation of Medium: Prepare 990.0mL of *Campylobacter* agar base. Autoclave and cool to 45°–50°C. Aseptically add 10.0mL of sterile supplement S. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the selective isolation of *Campylobacter jejuni* from fecal specimens, food, and environmental specimens.

***Campylobacter* Blood-Free Agar Base, Modified (CCDA, Modified)**

Composition per liter:

Peptone	20.0g
Agar	12.0g
NaCl	5.0g
Activated charcoal	4.0g
Casein hydrolysate	3.0g
Na-desoxycholate	1.0g
Na-pyruvate	0.25g
FeSO ₄	0.25g
Cefoperazone-amphotericin B solution	10.0mL
pH 7.4 ± 0.2 at 25°C	

Cefoperazone-Amphotericin B Solution:

Composition per 10.0mL:

Cefoperazone	0.016g
Amphotericin B	0.005g

Preparation of Cefoperazone-Amphotericin B Solution: Add cefoperazone and amphotericin B to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components except cefoperazone-amphotericin B solution to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–

121°C. Cool to 45°–50°C. Aseptically add 10.0mL of cefoperazone-amphotericin B solution. Mix thoroughly. Pour into sterile Petri dishes or aseptically distribute into tubes or flasks.

Use: For the isolation of *Campylobacter* spp. from foods. The use of *Campylobacter* Blood-Free Selective Agar is specified by the UK Ministry of Agriculture, Fisheries and Food (MAFF) in a validated method for isolation of *Campylobacter* from foods. Amphotericin largely reduces the growth of yeasts and molds. Cefoperazone especially inhibits Enterobacteriaceae.

***Campylobacter* Blood-Free Selective Agar**

Composition per liter:

Agar	12.0g
Beef extract	10.0g
Peptone	10.0g
Charcoal	4.0g
Casein hydrolysate	3.0g
Sodium deoxycholate	1.0g
Fe ₂ SO ₄ ·H ₂ O	0.25g
Sodium pyruvate	0.25g
Cefoperazone solution	10.0mL
pH 7.4 ± 0.2 at 25°C	

Cefoperazone Solution:

Composition per 10.0mL:

Sodium cefoperazone	0.032g
---------------------------	--------

Preparation of Cefoperazone Solution: Add sodium cefoperazone to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except cefoperazone solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Heat with frequent agitation and boil for 1 min to completely dissolve. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Add 10.0mL of sterile cefoperazone solution. Addition of 10.0mg/L of amphotericin B improves the selectivity of the medium. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the selective isolation of *Campylobacter* species, especially *Campylobacter jejuni*, *Campylobacter coli*, and *Campylobacter lariidis*.

***Campylobacter* Charcoal Differential Agar (CCDA) (Preston Blood-Free Medium)**

Composition per liter:

Agar	12.0g
Beef extract	10.0g
Peptone	10.0g
NaCl	5.0g
Charcoal	4.0g
Casein hydrolysate	3.0g
Sodium deoxycholate	1.0g
FeSO ₄	0.25g
Sodium pyruvate	0.25g
Cefoperazone solution	10.0mL
pH 7.5 ± 0.2 at 25°C	

Cefoperazone Solution:

Composition per 10.0mL:

Sodium cefoperazone	0.032g
---------------------------	--------

Preparation of Cefoperazone Solution: Add sodium cefoperazone to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except cefoperazone solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL of sterile cefoperazone solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Campylobacter* species.

Campylobacter Enrichment Broth

Composition per liter:

Beef extract.....	10.0g
Peptone.....	10.0g
Yeast extract.....	6.0g
NaCl.....	5.0g
Horse blood, laked.....	50.0mL
FBP solution.....	4.0mL
Antibiotic solution.....	4.0mL

pH 7.5 ± 0.2 at 25°C

Horse Blood, Laked:

Composition per 50.0mL:

Horse blood, fresh.....	50.0mL
-------------------------	--------

Preparation of Horse Blood, Laked: Add blood to a sterile polypropylene bottle. Freeze overnight at –20°C. Thaw at 8°C. Refreeze at –20°C. Thaw again at 8°C.

FBP Solution:

Composition per 100.0mL:

FeSO ₄	6.25g
NaHSO ₃	6.25g
Sodium pyruvate.....	6.25g

Preparation of FBP Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Antibiotic Solution:

Composition per 10.0mL:

Cycloheximide.....	0.1g
Sodium cefoperazone.....	0.03g
Trimethoprim lactate.....	0.0125g
Rifampicin.....	0.01g

Preparation of Antibiotic Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: Add components—except laked horse blood, FBP solution, and antibiotic solution—to distilled/deionized water and bring volume to 942.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50.0mL of sterile laked horse blood, 4.0mL of FBP solution, and 4.0mL of antibiotic solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of *Campylobacter* species from dairy products.

Campylobacter Enrichment Broth (FDA Medium M29)

Composition per 1024.0mL:

Basal medium.....	950.0mL
Horse blood, lysed.....	50.0mL
Cefoperazone solution.....	8.0mL
FBP solution.....	4.0mL
Trimethoprim lactate solution.....	4.0mL
Vancomycin solution.....	4.0mL
Cycloheximide solution.....	4.0mL

pH 7.5 ± 0.2 at 25°C

Basal Medium:

Composition per 950.0mL:

Beef extract.....	10.0g
Peptone.....	10.0g
Yeast extract.....	6.0g
NaCl.....	5.0g

Preparation of Basal Medium: Add components to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

FBP Solution:

Composition per 100.0mL:

FeSO ₄ ·7H ₂ O.....	6.25g
Na ₂ S ₂ O ₅	6.25g
Sodium pyruvate.....	6.25g

Preparation of FBP: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Cefoperazone Solution:

Composition per 10.0mL:

Cefoperazone.....	0.037g
-------------------	--------

Preparation of Cefoperazone Solution: Add cefoperazone to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Trimethoprim Lactate Solution:

Composition per 10.0mL:

Trimethoprim lactate.....	0.031g
---------------------------	--------

Preparation of Trimethoprim Lactate Solution: Add trimethoprim lactate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Vancomycin Solution:

Composition per 10.0mL:

Vancomycin.....	0.025g
-----------------	--------

Preparation of Vancomycin Solution: Add vancomycin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Cycloheximide Solution:

Composition per 10.0mL:

Cycloheximide.....	0.025g
--------------------	--------

Preparation of Cycloheximide Solution: Add cycloheximide to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: To 950.0mL of cooled sterile basal medium, aseptically add 50.0mL of lysed (fresh, frozen, and thawed) horse blood, 4.0mL of sterile FBP solution, 8.0mL of sterile cefoperazone so-

lution, 4.0mL of sterile trimethoprim lactate solution, 4.0mL of sterile vancomycin solution, and 4.0mL of sterile cycloheximide solution. Mix thoroughly. Aseptically distribute into sterile screw-capped tubes or bottles. Close caps tightly to reduce O₂ absorption. Use within 2 weeks.

Use: For the selective isolation and cultivation of *Campylobacter* species.

***Campylobacter* Enrichment Broth (FDA Medium M29)**

Composition per 1020.0mL:

Basal medium	950.0mL
Horse blood, lysed	50.0mL
FBP solution	4.0mL
Cefoperazone solution	4.0mL
Trimethoprim lactate solution	4.0mL
Vancomycin solution	4.0mL
Cycloheximide solution	4.0mL

pH 7.5 ± 0.2 at 25°C

Basal Medium:

Composition per 950.0mL:

Beef extract	10.0g
Peptone	10.0g
Yeast extract	6.0g
NaCl	5.0g

Preparation of Basal Medium: Add components to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

FBP Solution:

Composition per 100.0mL:

FeSO ₄ ·7H ₂ O	6.25g
Na ₂ S ₂ O ₅	6.25g
Sodium pyruvate	6.25g

Preparation of FBP: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Cefoperazone Solution:

Composition per 10.0mL:

Cefoperazone	0.037g
--------------------	--------

Preparation of Cefoperazone Solution: Add cefoperazone to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Trimethoprim Lactate Solution:

Composition per 10.0mL:

Trimethoprim lactate	0.031g
----------------------------	--------

Preparation of Trimethoprim Lactate Solution: Add trimethoprim lactate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Vancomycin Solution:

Composition per 10.0mL:

Vancomycin	0.025g
------------------	--------

Preparation of Vancomycin Solution: Add vancomycin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Cycloheximide Solution:

Composition per 10.0mL:

Cycloheximide	0.025g
---------------------	--------

Preparation of Cycloheximide Solution: Add cycloheximide to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: To 950.0mL of cooled, sterile basal medium, aseptically add 50.0mL of lysed (fresh, frozen, and thawed) horse blood, 4.0mL of sterile FBP solution, 4.0mL of sterile cefoperazone solution, 4.0mL of sterile trimethoprim lactate solution, 4.0mL of sterile vancomycin solution, and 4.0mL of sterile cycloheximide solution. Mix thoroughly. Aseptically distribute into sterile screw-capped tubes or bottles. Close caps tightly to reduce O₂ absorption. Use within 2 weeks.

Use: For the selective isolation and cultivation of *Campylobacter* species.

***Campylobacter* Enrichment Broth (FDA Medium M29)**

Composition per 1020.0mL:

Basal medium	950.0mL
Horse blood, lysed	50.0mL
FBP solution	4.0mL
Cefoperazone solution	4.0mL
Trimethoprim lactate solution	4.0mL
Rifampicin solution	4.0mL
Cycloheximide solution	4.0mL

pH 7.5 ± 0.2 at 25°C

Basal Medium:

Composition per 950.0mL:

Beef extract	10.0g
Peptone	10.0g
Yeast extract	6.0g
NaCl	5.0g

Preparation of Basal Medium: Add components to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

FBP Solution:

Composition per 100.0mL:

FeSO ₄ ·7H ₂ O	6.25g
Na ₂ S ₂ O ₅	6.25g
Sodium pyruvate	6.25g

Preparation of FBP Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Cefoperazone Solution:

Composition per 10.0mL:

Cefoperazone	0.037g
--------------------	--------

Preparation of Cefoperazone Solution: Add cefoperazone to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Trimethoprim Lactate Solution:

Composition per 10.0mL:

Trimethoprim lactate	0.031g
----------------------------	--------

Preparation of Trimethoprim Lactate Solution: Add trimethoprim lactate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Rifampicin Solution:**Composition per 100.0mL:**

Rifampicin	0.25g
Ethanol, absolute.....	50.0mL

Preparation of Rifampicin Solution: Add rifampicin to 50.0mL of ethanol. Mix thoroughly. Bring volume to 100.0mL with distilled/deionized water. Filter sterilize.

Cycloheximide Solution:**Composition per 10.0mL:**

Cycloheximide	0.025g
---------------------	--------

Preparation of Cycloheximide Solution: Add cycloheximide to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: To 950.0mL of cooled sterile basal medium, aseptically add 50.0mL of lysed (fresh, frozen, and thawed) horse blood, 4.0mL of sterile FBP solution, 4.0mL of sterile cefoperazone solution, 4.0mL of sterile trimethoprim lactate solution, 4.0mL of sterile rifampicin solution, and 4.0mL of sterile cycloheximide solution. Mix thoroughly. Aseptically distribute into sterile screw-capped tubes or bottles. Close caps tightly to reduce O₂ absorption. Use within 2 weeks.

Use: For the selective isolation and cultivation of *Campylobacter* species from dairy products.

Campylobacter* Enrichment Broth*Composition per liter:**

Use: For the isolation and cultivation of *Campylobacter* species from foods.

***Campylobacter* Enrichment Broth
(BAM M28a)****Composition per 1016.0mL:**

Peptone	10.0g
Yeast extract.....	5.0g
Lactalbumin hydrolysate	5.0g
NaCl.....	5.0g
α-Ketoglutaric acid.....	1.0g
Sodium pyruvate	0.5g
Na ₂ CO ₃	0.6g
Na ₂ S ₂ O ₅	0.5g
Hemin	0.01g
Cefoperazone solution	4.0mL
Trimethoprim lactate solution.....	4.0mL
Vancomycin solution	4.0mL
Cycloheximide or amphotericin B solution.....	4.0mL

pH 7.4 ± 0.2 at 25°C

Cefoperazone Solution:**Composition per 10.0mL:**

Cefoperazone	0.05g
--------------------	-------

Preparation of Cefoperazone Solution: Add cefoperazone to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize. Can be stored for 5 days at 4°C, 14 days at -20°C, and 5 months at -70°C.

Trimethoprim Solution:**Composition per 10.0mL:**

Trimethoprim lactate.....	0.066g
---------------------------	--------

Preparation of Trimethoprim Solution: Add trimethoprim lactate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize. Alternately add 0.05g trimethoprim hydrochloride to 3.0mL 0.05N HCl. Heat to 50°C. Stir until dissolved. Add distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize. Can be stored for 1 year at 4°C.

Vancomycin Solution:**Composition per 10.0mL:**

Vancomycin	0.05g
------------------	-------

Preparation of Vancomycin Solution: Add vancomycin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize. Can be stored for 2 months at 4°C.

Cycloheximide Solution:**Composition per 10.0mL:**

Cycloheximide	0.025g
Ethanol.....	2.0mL

Preparation of Cycloheximide Solution: Add cycloheximide to 2.0mL ethanol to dissolve. Mix thoroughly. Add distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize. Can be stored for 1 year at 4°C.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Amphotericin B Solution:

Composition per 10.0mL:

Amphotericin B..... 0.005g

Preparation of Amphotericin B Solution: Add Amphotericin B to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize. Can be stored for 1 year at -20°C.

Preparation of Medium: Add components, except antimicrobial solutions, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure-121°C. Cool to 25°C. Aseptically add 4.0mL of sterile cefoperazone solution, 4.0mL of sterile trimethoprim lactate solution, 4.0mL of sterile vancomycin solution, and either 4.0mL of sterile cycloheximide solution or 4.0mL of sterile amphotericin B solution. Mix thoroughly. Aseptically distribute into sterile screw-capped tubes or bottles. Close caps tightly to reduce O₂ absorption. Use within 2 weeks.

Use: For the selective isolation and cultivation of *Campylobacter* species. For the pre-enrichment of *Campylobacter* spp. in food samples. This medium aids resuscitation of sublethally injured cells and overcomes the damaging effects of food processing.

***Campylobacter* Enrichment HiVeg Broth Base
with Blood and Antibiotics
(Preston Enrichment HiVeg Broth Base)**

Composition per liter:

Plant extract 10.0g
Plant peptone..... 10.0g
NaCl 5.0g
Horse blood, lysed 50.0mL
Antibiotic supplement..... 10.0mL
pH 7.5 ± 0.2 at 25°C

Source: This medium, without horse blood and antibiotic supplement, is available as a premixed powder from HiMedia.

Antibiotic Supplement:

Composition per 10.0mL:

Cycloheximide 0.1g
Rifampicin 0.01g
Trimethoprim lactate..... 0.01g
Polmyxin B 5000U

Preparation of Antibiotic Supplement: Add components to 10.0mL of 50:50 acetone:distilled/deionized water. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: Add components, except horse blood and antibiotic supplement, to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure-121°C. Cool to 45°-50°C. Aseptically add 50.0mL of lysed horse blood and 10.0mL of sterile antibiotic supplement. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the selective isolation of *Campylobacter* species.

***Campylobacter fecalis* Medium**

Composition per 1133.6mL:

Starch, soluble..... 2.4g
Yeast extract..... 2.4g
Blood agar base..... 1.0L
Bovine blood..... 120.0mL
Antibiotic solution 10.0mL
Sodium lactate (60% syrup)..... 3.6mL
pH 6.8 ± 0.2 at 25°C

Blood Agar Base:

Composition per liter:

Beef heart, solids from infusion..... 500.0g
Agar 15.0g
Tryptose 10.0g
NaCl 5.0g

Preparation of Blood Agar Base: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling.

Antibiotic Solution:

Composition per 10.0mL:

Cycloheximide..... 0.12g
Albamacin..... 6.0mg
Bacitracin 6000U

Preparation of Antibiotic Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: To 1.0L of blood agar base, add soluble starch, yeast extract, and sodium lactate. Mix thoroughly. Autoclave for 15 min at 15 psi pressure-121°C. Cool to 45°-50°C. Aseptically add sterile bovine blood and antibiotic solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and isolation of *Campylobacter fecalis*.

***Campylobacter fetus* Medium**

Composition per liter:

Proteose peptone 10.0g
NaCl 5.0g
Beef extract 3.0g
Bovine blood..... 50.0mL
Antibiotic solution 10.0mL
pH 7.2-7.4 at 25°C

Antibiotic Solution:

Composition per 10.0mL:

Novobiocin 2.0mg
Bacitracin 2000U

Preparation of Antibiotic Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except bovine blood and antibiotic solution, to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure-121°C. Cool to 45°-50°C. Aseptically add sterile bovine blood and antibiotic solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the isolation and cultivation of *Campylobacter fetus*.

Campylobacter fetus* Medium*Composition per 1160.0mL:**

Fluid thioglycolate agar	1.0L
Sheep blood, defibrinated	150.0mL
Antibiotic solution	10.0mL
pH 7.1 ± 0.2 at 25°C	

Fluid Thioglycolate Agar:**Composition per liter:**

Agar	15.0g
Pancreatic digest of casein	15.0g
Glucose	5.5g
Yeast extract	5.0g
NaCl	2.5g
Agar	0.75g
L-Cystine	0.5g
Sodium thioglycolate	0.5g
Resazurin	1.0mg

Preparation of Fluid Thioglycolate Agar: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Antibiotic Solution:**Composition per 10.0mL:**

Cycloheximide	0.05g
Novobiocin	5.0mg
Bacitracin	25,000U
Polymyxin B sulfate	10,000U

Preparation of Antibiotic Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: To 1.0L of cooled, sterile, fluid thioglycolate agar, aseptically add 150.0mL of sterile sheep blood and 10.0mL of sterile antibiotic solution.

Use: For the isolation and cultivation of *Campylobacter fetus* from human specimens.

Campylobacter fetus* Selective Medium*Composition per liter:**

Fluid thioglycolate agar	1.0L
Sheep blood, defibrinated	150.0mL
Antibiotic solution	10.0mL

Fluid Thioglycolate Agar:**Composition per liter:**

Agar	15.0g
Pancreatic digest of casein	15.0g
Glucose	5.5g
Yeast extract	5.0g
NaCl	2.5g
Agar	0.75g
L-Cystine	0.5g
Sodium thioglycolate	0.5g
Resazurin	1.0mg

Preparation of Fluid Thioglycolate Agar: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Antibiotic Solution:**Composition per 10.0mL:**

Cycloheximide	0.05g
Cephalothin	0.02g
Novobiocin	5.0mg
Bacitracin	25,000U
Colistin	10,000U

Preparation of Antibiotic Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: To 1.0L of cooled, sterile, fluid thioglycolate agar, aseptically add 150.0mL of sterile sheep blood and 10.0mL of sterile antibiotic solution.

Use: For the isolation and cultivation of *Campylobacter fetus*.

Campylobacter* HiVeg Agar Base with Blood and Antibiotic Supplement*Composition per liter:**

Plant peptone No. 3	15.0g
Agar	12.0g
NaCl	5.0g
Yeast extract	5.0g
Plant extract No. 2	2.5g
Horse blood, lysed	50.0mL
Antibiotic supplement	10.0mL

pH 7.4 ± 0.2 at 25°C

Source: This medium, without horse blood and antibiotic supplement, is available as a premixed powder from HiMedia.

Antibiotic Supplement:**Composition per 10.0mL:**

Cycloheximide	0.1g
Rifampicin	0.01g
Trimethoprim lactate	0.01g
Polymyxin B	5000U

Preparation of Antibiotic Supplement: Add components to 10.0mL of 50:50 acetone:distilled/deionized water. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: Add components, except horse blood and antibiotic supplement, to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50.0mL of lysed horse blood and 10.0mL of sterile antibiotic supplement. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the cultivation of *Campylobacter* species. Normally used with a selective supplement to suppress the growth of other bacterial species.

Campylobacter* HiVeg Agar Base with Blood and Selective Supplement*Composition per liter:**

Plant peptone No. 3	15.0g
Agar	12.0g
NaCl	5.0g
Yeast extract	5.0g

Plant extract No. 2	2.5g
Horse blood, lysed	50.0mL
Selective supplement solution	10.0mL
pH 7.4 ± 0.2 at 25°C	

Source: This medium, without horse blood and antibiotic supplement, is available as a premixed powder from HiMedia.

Selective Supplement Solution:

Composition per 10.0mL:

Cephalothin	15.0mg
Vancomycin	10.0mg
Trimethoprim	5.0mg
Amphotericin B	2.0mg
Polymyxin B sulfate	2500 U

Preparation of Selective Supplement Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except horse blood and selective supplement, to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50.0mL of lysed horse blood and 10.0mL of sterile selective supplement. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the cultivation of *Campylobacter* species. Normally used with a selective supplement to suppress the growth of other bacterial species.

Campylobacter Isolation Agar A

Composition per liter:

Antibiotic Solution:

Composition per 10.0mL:

Cycloheximide	0.1g
Sodium cefoperazone	0.03g

Preparation of Antibiotic Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: Add components, except antibiotic solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile antibiotic solution. Mix thoroughly. Pour into sterile Petri dishes. Swirl flask while pouring to distribute charcoal.

Use: For the isolation and cultivation of *Campylobacter* species.

Campylobacter Isolation Agar B (Campy Cefex Agar)

Composition per liter:

Agar	15.0g
Pancreatic digest of casein	10.0g
Peptic digest of animal tissue	10.0g
NaCl	5.0g
Yeast extract	2.0g
Glucose	1.0g
FeSO ₄	0.5g
Sodium pyruvate	0.5g
NaHSO ₃	0.35g
Horse blood, laked	50.0mL
Antibiotic solution	10.0mL
pH 7.0 ± 0.2 at 25°C	

Horse Blood, Laked:

Composition per 50.0mL:

Horse blood, fresh	50.0mL
--------------------------	--------

Preparation of Horse Blood, Laked: Add blood to a sterile polypropylene bottle. Freeze overnight at –20°C. Thaw at 8°C. Refreeze at –20°C. Thaw again at 8°C.

Antibiotic Solution:

Composition per 10.0mL:

Cycloheximide	0.1g
Sodium cefoperazone	0.033g

Preparation of Antibiotic Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: Add components, except horse blood and antibiotic solution, to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile horse blood and antibiotic solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of *Campylobacter* species.

Campylobacter Medium

Composition per liter:

Sodium aspartate	10.0g
MgSO ₄ ·7H ₂ O	1.0g
K ₂ HPO ₄	0.75g
Yeast extract	0.2g
CaCl ₂ ·2H ₂ O	28.0mg
Resazurin	1.0mg
Phosphate-cysteine solution	100.0mL
Trace elements solution SL-10	1.0mL
pH 7.0 ± 0.2 at 25°C	

Phosphate-Cysteine Solution:

Composition per 100.0mL:

NaH ₂ PO ₄	0.25g
L-Cysteine-HCl	0.25g

Preparation of Phosphate-Cysteine Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution SL-10:**Composition** per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly.

Preparation of Medium: Add components, except phosphate-cysteine solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 100.0mL of sterile phosphate-cysteine solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Campylobacter* species, *Actinobacillus ureae*, *Erysipelothrix rhusiopathiae*, *Helicobacter pylori*, *Moraxella bovis*, *Moraxella nonliquefaciens*, *Moraxella osloensis*, *Pasteurella haemolytica*, and *Pasteurella multocida*.

Campylobacter mucosalis* Medium*Composition** per liter:

Agar	15.0g
Beef extract	10.0g
Special peptone	10.0g
NaCl	5.0g
Sodium fumarate.....	3.0g
Sodium formate.....	2.0g
Horse blood, defibrinated	50.0mL

pH 7.2 ± 0.2 at 25°C

Source: Special peptone (L72) is available from Oxoid Unipath.

Preparation of Medium: Add components, except horse blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Heat with frequent agitation and boil for 1 min to completely dissolve. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45–50°C. Aseptically add 50.0mL of sterile, defibrinated horse blood. Mix thoroughly and pour into sterile Petri dishes.

Use: For the cultivation and maintenance of *Campylobacter mucosalis*.

Campylobacter* Nitrate Broth*Composition** per liter:

Beef heart, infusion from	500.0g
Tryptose	10.0g
NaCl	5.0g
KNO ₃	2.0g

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring

to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Campylobacter* species.

Campylobacter* Nitrate HiVeg Broth*Composition** per liter:

Plant hydrolysate No. 1.....	10.0g
Plant infusion	10.0g
NaCl.....	5.0g
KNO ₃	2.0g

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Campylobacter* species.

Campylobacter rectus* Medium*Composition** per liter:

Yeast extract.....	11.0g
Pancreatic digest of casein.....	9.0g
Beef extract.....	3.0g
NaCl.....	2.0g
Na ₂ HPO ₄	0.4g
Na ₂ CO ₃	0.25g
Resazurin	1.0mg
Formate-fumarate solution.....	100.0mL
Hemin solution.....	10.0mL

pH 7.5 ± 0.2 at 25°C

Formate-Fumarate Solution:**Composition** per 100.0mL:

Sodium fumarate.....	3.0g
Sodium formate	2.0g

Preparation of Formate-Fumarate Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Sparge with 100% N₂ for 3–4 min.

Hemin Solution:**Composition** per 10.0mL:

Hemin	5.0mg
NaOH (1N solution).....	0.1mL

Preparation of Hemin Solution: Add hemin to NaOH solution to dissolve. Add distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂ for 3–4 min. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except formate-fumarate solution and hemin solution, to distilled/deionized water and bring volume to 890.0mL. Sparge with 100% N₂ for 10 min. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 100.0mL of sterile formate-fumarate solution and 10.0mL of sterile hemin solution under 100% N₂. Mix thoroughly. Aseptically and anaerobically distribute into sterile anaerobic tubes.

Use: For the cultivation and maintenance of *Campylobacter curvus* and *Campylobacter rectus*.

**Campylobacter Selective Medium, Blaser-Wang
(Blaser-Wang Campylobacter Medium)
(Blaser's Agar)
(Campy BAP Medium)**

Composition per liter:

<i>Brucella</i> agar base.....	890.0mL
Sheep blood.....	100.0mL
Antibiotic supplement.....	10.0mL

Brucella Agar Base:**Composition per 890.0mL:**

Agar	15.0g
Glucose	10.0g
Pancreatic digest of casein.....	10.0g
NaCl.....	5.0g
Peptic digest of animal tissue.....	5.0g

pH 7.5 ± 0.2 at 25°C

Preparation of *Brucella* Agar Base: Add components to distilled/deionized water and bring volume to 890.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Antibiotic Supplement:**Composition per 10.0mL:**

Cephalothin	15.0mg
Vancomycin	10.0mg
Trimethoprim	5.0mg
Amphotericin B.....	2.0mg
Polymyxin B	2500U

Preparation of Antibiotic Supplement: Add components to 10.0mL of distilled/deionized water. Filter sterilize.

Preparation of Medium: Prepare 890.0mL of *Brucella* agar base. Sterilize as directed. Cool to 50°–55°C and add 100.0mL of sheep blood or 50.0–70.0mL of laked horse blood. Laked blood is prepared by freezing whole blood overnight and thawing to room temperature. Aseptically add 10.0mL of sterile antibiotic supplement. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the selective isolation of *Campylobacter* species.

**Campylobacter Selective Medium, Blaser-Wang
(Blaser-Wang Campylobacter Medium)**

Composition per liter:

Columbia agar base.....	890.0mL
Sheep blood.....	100.0mL
Antibiotic supplement.....	10.0mL

pH 7.3 ± 0.2 at 25°C

Antibiotic Supplement:**Composition per 10.0mL:**

Cephalothin	15.0mg
Vancomycin	10.0mg
Trimethoprim	5.0mg
Amphotericin B.....	2.0mg
Polymyxin B	2,500U

Preparation of Antibiotic Supplement: Add components to 10.0mL of distilled/deionized water. Filter sterilize.

Columbia Agar Base:**Composition per liter:**

Special peptone.....	25.0g
Agar	10.0g

NaCl.....	5.0g
Starch.....	1.0g

Preparation of Columbia Agar Base: Add components to distilled/deionized water and bring volume to 890.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Preparation of Medium: To 890.0mL of cooled, sterile Columbia agar base, aseptically add 100.0mL of sheep blood or 50.0–70.0mL of laked horse blood. Laked blood is prepared by freezing whole blood overnight and thawing to room temperature. Aseptically add 10.0mL of sterile antibiotic supplement. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the selective isolation of *Campylobacter* species.

**Campylobacter Selective Medium, Butzler's
(Butzler's Campylobacter Medium)**

Composition per liter:

<i>Brucella</i> agar base.....	940.0mL
Sheep or horse blood, defibrinated.....	50.0mL
Antibiotic supplement.....	10.0mL

pH 7.5 ± 0.2 at 25°C

Brucella Agar Base:**Composition per liter:**

Agar	15.0g
Glucose	10.0g
Pancreatic digest of casein.....	10.0g
NaCl.....	5.0g
Peptic digest of animal tissue	5.0g

Preparation of *Brucella* Agar Base: Add components to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Antibiotic Supplement:**Composition per 10.0mL:**

Cycloheximide.....	50.0mg
Cephazolin	15.0mg
Novobiocin	5.0mg
Bacitracin.....	25,000U
Colistin sulfate.....	10,000U

Preparation of Antibiotic Supplement: Add components to 10.0mL of distilled/deionized water. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: To 940.0mL of cooled, sterile *Brucella* agar base, aseptically add 50.0mL of defibrinated sheep or horse blood and 10.0mL of sterile antibiotic supplement. Mix thoroughly. For enhanced growth, medium may also be supplemented with 0.25g of Fe₂SO₄·H₂O, 0.25g of sodium metabisulfite, and 0.25g of sodium pyruvate. Pour into sterile Petri dishes.

Use: For the selective isolation of *Campylobacter* species.

**Campylobacter Selective Medium, Butzler's
(Butzler's Campylobacter Medium)**

Composition per liter:

Columbia agar base.....	940.0mL
Blood, horse or sheep	50.0mL
Antibiotic supplement.....	10.0mL

pH 7.3 ± 0.2 at 25°C

Columbia Agar Base:**Composition per liter:**

Peptone.....	25.0g
Agar	10.0g
NaCl.....	5.0g
Starch.....	1.0g

Preparation of Columbia Agar Base: Add components to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Antibiotic Supplement:**Composition per 10.0mL:**

Cycloheximide.....	50.0mg
Cephazolin.....	15.0mg
Novobiocin.....	5.0mg
Bacitracin.....	25,000U
Colistin sulfate.....	10,000U

Preparation of Antibiotic Supplement: Add components to 10.0mL of distilled/deionized water. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: To 940.0mL of cooled, sterile Columbia agar base, aseptically add 50.0mL of defibrinated sheep or horse blood and 10.0mL of sterile antibiotic supplement. Mix thoroughly. The medium may also be supplemented with 0.25g of Fe₂SO₄·H₂O, 0.25g of sodium metabisulfite, and 0.25g of sodium pyruvate. Pour into sterile Petri dishes.

Use: For the selective isolation of *Campylobacter* species.

Campylobacter Selective Medium, Karmali's
(Karmali's *Campylobacter* Medium)

Composition per liter:

Activated charcoal.....	4.0g
Columbia agar base.....	990.0mL
Antibiotic supplement.....	10.0mL

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Columbia Agar Base:**Composition per 990.0mL:**

Peptone.....	25.0g
Agar	10.0g
NaCl.....	5.0g
Starch.....	1.0g

Preparation of Columbia Agar Base: Add components to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Antibiotic Supplement:**Composition per 10.0mL:**

Sodium pyruvate.....	0.05g
Cycloheximide.....	0.05g
Cefoperazone.....	0.016g
Hemin.....	0.016g
Vancomycin.....	0.01g

Preparation of Antibiotic Supplement: Add components to 10.0mL of distilled/deionized water. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: Prepare 990.0mL of Columbia agar base. Sterilize as directed. Cool to 50°–55°C. Add defibrinated sheep or horse blood to a final concentration of 5–7%. Add 10.0mL of sterile antibiotic supplement. Mix thoroughly. For enhanced growth, medium may also be supplemented with 0.25g of Fe₂SO₄·H₂O, 0.25g of sodium metabisulfite, and 0.25g of sodium pyruvate. Pour into sterile Petri dishes. Swirl while pouring to keep charcoal in suspension.

Use: For the selective isolation of *Campylobacter* species.

Campylobacter Selective Medium, Preston's
(Preston's *Campylobacter* Medium)

Composition per liter:

<i>Campylobacter</i> agar base.....	940.0mL
Horse blood, lysed.....	50.0mL
Antibiotic supplement.....	10.0mL

pH 7.5 ± 0.2 at 25°C

Campylobacter* Agar Base:*Composition per liter:**

Agar.....	12.0g
Beef extract.....	10.0g
Peptone.....	10.0g
NaCl.....	5.0g

Preparation of *Campylobacter* Agar Base: Add components to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Antibiotic Supplement:**Composition per 10.0mL:**

Cycloheximide.....	0.1g
Rifampicin.....	0.01g
Trimethoprim lactate.....	0.01g
Polmyxin B.....	5000U

Preparation of Antibiotic Supplement: Add components to 10.0mL of 50:50 acetone:distilled/deionized water. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: To 940.0mL of cooled, sterile *Campylobacter* agar base, aseptically add 50.0mL of lysed horse blood and 10.0mL of sterile antibiotic supplement. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the selective isolation of *Campylobacter* species.

***Campylobacter sputorum* subspecies *bubulus* Medium**

Composition per liter:

Agar.....	1.5g
Brilliant Green.....	0.01g
Ethyl Violet.....	1.25mg
<i>Brucella</i> broth base.....	1.0L
Antibiotic solution.....	10.0mL

pH 7.0 ± 0.2 at 25°C

Brucella* Broth Base:*Composition per liter:**

Pancreatic digest of casein.....	10.0g
Peptic digest of animal tissue.....	10.0g
NaCl.....	5.0g

Yeast extract.....	2.0g
Glucose	1.0g
NaHSO ₃	0.1g

Preparation of *Brucella* Broth Base: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Antibiotic Solution:

Composition per 10.0mL:

Cycloheximide	0.1g
Bacitracin	20,000U

Preparation of Antibiotic Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: To 1.0L of *Brucella* broth base, add agar, Brilliant Green, and Ethyl Violet. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile antibiotic solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and isolation of *Campylobacter sputorum* subspecies *bubulus*.

Campylobacter sputorum subspecies *mucosalis* Medium

Composition per liter:

Yeast extract.....	2.8g
KNO ₃	1.0g
Fluid thioglycolate broth without glucose	1.0L

Fluid Thioglycolate Broth without Glucose:

Composition per liter:

Pancreatic digest of casein.....	15.0g
Yeast extract.....	5.0g
NaCl.....	2.5g
Agar	0.75g
L-Cystine	0.5g
Sodium thioglycolate	0.5g
Resazurin	1.0mg

Preparation of Fluid Thioglycolate Broth without Glucose:

Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Combine components. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and isolation of *Campylobacter sputorum* subspecies *mucosalis*.

Campylobacter Thioglycolate Medium with 5 Antimicrobics

Composition per liter:

Pancreatic digest of casein.....	17.0g
Glucose	6.0g
Papaic digest of soybean meal	3.0g
NaCl.....	2.5g
Agar	1.6g

Sodium thioglycolate.....	0.5g
Na ₂ SO ₃	0.1g
Antibiotic supplement solution.....	10.0mL
pH 7.0 ± 0.2 at 25°C	

Antibiotic Supplement Solution:

Composition per 10.0mL:

Cephalothin.....	0.015g
Vancomycin	0.01g
Trimethoprim	5.0mg
Amphotericin B	2.0mg
Polymyxin B	2500U

Preparation of Antibiotic Supplement Solution: Add components to 10.0mL of distilled/deionized water. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except cephalothin, vancomycin, trimethoprim, amphotericin, and polymyxin B, to distilled deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Add 10.0mL of sterile antibiotic supplement. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the maintenance—as a holding medium or transport medium—of fecal specimens or swabs suspected of containing *Campylobacter jejuni* or other *Campylobacter* species when immediate inoculation of *Campylobacter* growth medium is unavailable.

Candida Agar

Composition per liter:

Agar	20.0g
Glucose	10.0g
Peptic digest of animal tissue	5.0g
Yeast extract.....	3.0g
Malt extract.....	3.0g
Aniline Blue.....	0.1g

pH 6.2 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into Petri dishes or leave in tubes.

Use: For the isolation and differentiation of *Candida albicans*.

Candida BCG Agar Base (Candida Bromcresol Green Agar Base)

Composition per liter:

Glucose	40.0g
Agar	15.0g
Peptone	10.0g
Yeast extract.....	1.0g
Bromcresol Green.....	0.02g
Neomycin solution.....	10.0mL

pH 6.1 ± 0.1 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Neomycin Solution:

Composition per 10.0mL:

Neomycin.....	0.5g
---------------	------

Preparation of Neomycin Solution: Add neomycin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except neomycin solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly and heat gently until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 10.0mL of sterile neomycin solution. Mix thoroughly. Pour into sterile Petri dishes or leave in tubes.

Use: For the selective isolation and identification of *Candida* species. It is a highly differential medium that is used for demonstrating morphological and biochemical reactions characterizing different *Candida* species. *Candida albicans* appears as blunt conical colonies with smooth edges and yellow to blue-green color. *Candida stellatoidea* appears as convex colonies with smooth edges and yellow to green color. *Candida tropicalis* appears as convex colonies with wavy edges and yellow-green to green color with a dark blue-green base. *Candida pseudotropicalis* appears as convex, shiny colonies with smooth edges and green color with a light green edge. *Candida krusei* appears as low conical colonies with spreading edges and blue-green color. *Candida stellatoidea* appears as convex colonies with smooth edges and yellow to green color.

Candida BCG HiVeg Agar Base with Neomycin

Composition per liter:

Glucose	40.0g
Agar	15.0g
Plant peptone.....	10.0g
Yeast extract.....	1.0g
Bromcresol Green.....	0.02g
Neomycin solution.....	10.0mL

pH 6.1 ± 0.1 at 25°C

Source: This medium, without neomycin solution, is available as a premixed powder from HiMedia.

Neomycin Solution:

Composition per 10.0mL:

Neomycin.....	0.5g
---------------	------

Preparation of Neomycin Solution: Add neomycin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except neomycin solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly and heat gently until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 10.0mL of sterile neomycin solution. Mix thoroughly. Pour into sterile Petri dishes or leave in tubes.

Use: For the selective isolation and identification of *Candida* species. It is a highly differential medium that is used for demonstrating morphological and biochemical reactions characterizing different *Candida* species. *Candida albicans* appears as blunt conical colonies with smooth edges and yellow to blue-green color. *Candida stellatoidea* appears as convex colonies with smooth edges and yellow to green color. *Candida tropicalis* appears as convex colonies with wavy edges and yellow-green to green color with a dark blue-green base. *Candida pseudotropicalis* appears as convex, shiny colonies with smooth edges and green color with a light green edge. *Candida krusei* appears as low conical colonies with spreading edges and blue-green color. *Candida stellatoidea* appears as convex colonies with smooth edges and yellow to green color.

Candida Bromcresol Green Agar Base

See: *Candida BCG Agar Base*

Candia Diagnostic Agar

Composition per liter:

Glucose	40.0g
Agar	15.0g
Peptone, mycological.....	10.0g
Ammonium 4- {2-[4-(2-acetamido-2-deoxy-β-D-glucopyranosyloxy)-3-methoxyphenyl]-vinyl}-1-(propan-3-yl-oate)-quinolium bromide	0.32g

pH 6.9 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly and heat with frequent agitation until boiling. Boil until components are fully dissolved. Do not autoclave. Cool to 45°–50°C. Pour into sterile Petri dishes.

Use: For the rapid isolation and identification of *Candida* species. *Candida albicans* and *Candida dubliniensis* produce white colonies with deep-red spots on a yellow transparent background. Colonies of *Candida tropicalis* and *Candida kefyr* are uniformly pink, and colonies of other *Candida* spp., including *Candida glabrata* and *Candida parapsilosis*, appear white.

Candida HiVeg Medium with Antibiotics

Composition per liter:

Agar	15.0g
Glucose	5.0g
K ₂ HPO ₄	5.0g
Na ₂ SO ₃	5.0g
Bismuth sulfite indicator.....	3.0g
Plant peptone No. 4.....	2.5g
Antibiotic solution	10.0mL

Source: This medium, without antibiotics, is available as a premixed powder from HiMedia.

Antibiotic Solution:

Composition per 10.0mL:

Streptomycin.....	25.0mg
Penicillin.....	300 U

Preparation of Antibiotic Solution: Add components to 10.0mL distilled/deionized water. Filter sterilize.

Preparation of Medium: Add components, except antibiotic solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Do not autoclave. Cool to 45°–50°C. Aseptically add 10.0mL of sterile antibiotic solution. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the cultivation of *Candida* species.

Candida Isolation Agar

Composition per liter:

Agar	20.0g
Glucose	10.0g
Peptone	5.0g
Yeast extract.....	3.0g
Malt extract.....	3.0g
Aniline Blue.....	0.1g

pH 5.9 ± 0.5 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and differentiation of *Candida albicans*. *Candida albicans* turns the medium blue.

Candida Medium with Antibiotics

Composition per liter:

Agar	15.0g
Glucose	5.0g
K ₂ HPO ₄	5.0g
Na ₂ SO ₃	5.0g
Bismuth sulfite indicator	3.0g
Mycological peptone	2.5g
Antibiotic solution	10.0mL

Source: This medium, without antibiotics, is available as a premixed powder from HiMedia.

Antibiotic Solution:

Composition per 10.0mL:

Streptomycin	25.0mg
Penicillin	300 U

Preparation of Antibiotic Solution: Add components to 10.0mL distilled/deionized water. Filter sterilize.

Preparation of Medium: Add components, except antibiotic solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Do not autoclave. Cool to 45°–50°C. Aseptically add 10.0mL of sterile antibiotic solution. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the cultivation of *Candida* species.

CandiSelect 4™

Composition per liter:

Proprietary

Source: Available from BioRad.

Preparation of Medium: Prepared plates.

Use: For the direct identification of *Candida albicans* and for the presumptive identification of *Candida tropicalis*, *Candida glabrata*, and *Candida krusei*.

Cantharellus Agar

Composition per liter:

Agar	12.0g
Glucose	4.0g
Sodium succinate	1.35g
KI	1.21g
Na ₂ MoO ₄	1.21g
MnSO ₄ ·H ₂ O	0.845g
NH ₄ Cl	0.58g
KH ₂ PO ₄	0.2g
CuSO ₄ ·5H ₂ O	0.125g
CoCl ₂ ·6H ₂ O	0.12g
MgSO ₄ ·H ₂ O	0.1g
CaCl ₂ ·H ₂ O	26.5mg
NaCl	20.0mg
<i>m</i> -Inositol	10.0mg
EDTA	9.3mg

FeSO ₄ ·7H ₂ O	6.95mg
ZnSO ₄ ·7H ₂ O	1.44mg
H ₃ BO ₄	0.31mg
Calcium DL-pantothenate	0.1mg
Nicotinic acid	0.1mg
<i>p</i> -Aminobenzoic acid	0.1mg
Pyridoxine HCl	0.1mg
Riboflavin	0.1mg
Thiamine HCl	0.1mg
Biotin	0.025mg
Tomato roots	variable

Preparation of Medium: Add components, except tomato root, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes. Add onto the agar a piece of fresh tomato root near the inoculum.

Use: For the cultivation and maintenance of *Cantharellus cibarius*.

Capnocytophaga Medium

Composition per liter:

Pancreatic digest of casein	17.0g
KNO ₃	3.0g
NaCl	3.0g
Yeast extract	3.0g
Hemin	3.0mg
Glucose solution	20.0mL

pH 7.0 ± 0.2 at 25°C

Glucose Solution:

Composition per 20.0mL:

D-Glucose	3.0g
-----------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except glucose solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL of sterile glucose solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Capnocytophaga* species.

Capnocytophaga II Medium (DSMZ Medium 779)

Composition per liter:

Proteose peptone no.3	10.0g
Yeast extract	5.0g
Na ₂ HPO ₄	4.0g
Lab-Lemco meat extract	2.4g
Glucose	1.5g
Starch, soluble	0.5g
Cysteine-HCl·H ₂ O	0.5g
Horse blood	50.0mL

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Add components, except horse blood, to distilled/deionized water and bring volume to 950.0L. Mix thoroughly. Adjust pH to 7.6–7.8. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add 50.0mL horse blood. Mix thoroughly. Aseptically distribute into tubes or flasks. Incubate under 95% air + 5% CO₂ or anaerobically under 95% N₂ + 5% CO₂.

Use: For the cultivation of *Capnocytophaga haemolytica* and *Capnocytophaga granulosa*.

Caprylate Thallous Agar

See: CT Agar

Carbohydrate Consumption Broth Base with Carbohydrate

Composition per liter:

Proteose peptone	10.0g
NaCl	5.0g
Beef extract	1.0g
Bromcresol Purple	0.1g
Carbohydrate solution	50.0mL

pH 6.8 ± 0.2 at 25°C

Source: This medium, without carbohydrate solution, is available as a premixed powder from HiMedia.

Carbohydrate Solution:

Composition per 100.0mL:

Carbohydrate	10.0g
--------------------	-------

Preparation of Carbohydrate Solution: Add carbohydrate to distilled/deionized water and bring volume to 100.0mL. Adonitol, arabinose, cellobiose, glucose, dulcitol, fructose, galactose, inositol, lactose, maltose, mannitol, raffinose, rhamnose, salicin, sorbitol, sucrose, trehalose, xylose, or other carbohydrates may be used. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except carbohydrate solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute in 10.0mL volumes into test tubes containing inverted Durham tubes. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Add 0.5mL of sterile carbohydrate solution to each tube.

Use: For the determination of carbohydrate fermentation reactions of microorganisms, particularly members of the Enterobacteriaceae.

Carbohydrate Fermentation Broth

Composition per liter:

Peptone	10.0g
NaCl	5.0g
Meat extract	3.0g
Carbohydrate solution	50.0mL
Andrade's indicator	10.0mL

pH 7.1 ± 0.2 at 25°C

Andrade's Indicator:

Composition per 100.0mL:

Acid Fuchsin	0.1 g
NaOH (1N solution)	16.0mL

Preparation of Andrade's Indicator: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Carbohydrate Solution:

Composition per 100.0mL:

Carbohydrate	10.0g
--------------------	-------

Preparation of Carbohydrate Solution: Add carbohydrate to distilled/deionized water and bring volume to 100.0mL. Adonitol, arabinose, cellobiose, glucose, dulcitol, fructose, galactose, inositol, lactose, maltose, mannitol, raffinose, rhamnose, salicin, sorbitol, sucrose,

trehalose, xylose, or other carbohydrates may be used. Mix thoroughly. Filter sterilize.

Caution: Acid Fuchsin is a potential carcinogen and care must be taken to avoid inhalation of the powdered dye and contact with the skin.

Preparation of Medium: Add components, except carbohydrate solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute in 10.0mL volumes into test tubes containing inverted Durham tubes. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Add 0.5mL of sterile carbohydrate solution to each tube.

Use: For the determination of carbohydrate fermentation reactions of microorganisms, particularly members of the Enterobacteriaceae. A Durham tube is used to collect gas produced during the fermentation reaction. Acid production is indicated by a pink reaction.

Carbohydrate Consumption HiVeg Broth Base with Carbohydrate

Composition per liter:

Plant peptone No. 3	10.0g
NaCl	5.0g
Plant extract	1.0g
Bromcresol Purple	0.1g
Carbohydrate solution	50.0mL

pH 6.8 ± 0.2 at 25°C

Source: This medium, without carbohydrate solution, is available as a premixed powder from HiMedia.

Carbohydrate Solution:

Composition per 100.0mL:

Carbohydrate	10.0g
--------------------	-------

Preparation of Carbohydrate Solution: Add carbohydrate to distilled/deionized water and bring volume to 100.0mL. Adonitol, arabinose, cellobiose, glucose, dulcitol, fructose, galactose, inositol, lactose, maltose, mannitol, raffinose, rhamnose, salicin, sorbitol, sucrose, trehalose, xylose, or other carbohydrates may be used. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except carbohydrate solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute in 10.0mL volumes into test tubes containing inverted Durham tubes. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Add 0.5mL of sterile carbohydrate solution to each tube.

Use: For the determination of carbohydrate fermentation reactions of microorganisms, particularly members of the Enterobacteriaceae.

Carbohydrate Fermentation Broth

Composition per liter:

Peptone	10.0g
NaCl	5.0g
Meat extract	3.0g
Carbohydrate solution	50.0mL
Andrade's indicator	10.0mL

pH 7.1 ± 0.2 at 25°C

Andrade's Indicator:

Composition per 100.0mL:

Acid Fuchsin	0.1 g
NaOH (1N solution)	16.0mL

Preparation of Andrade's Indicator: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Carbohydrate Solution:

Composition per 100.0mL:

Carbohydrate..... 10.0g

Preparation of Carbohydrate Solution: Add carbohydrate to distilled/deionized water and bring volume to 100.0mL. Adonitol, arabinose, cellobiose, glucose, dulcitol, fructose, galactose, inositol, lactose, maltose, mannitol, raffinose, rhamnose, salicin, sorbitol, sucrose, trehalose, xylose, or other carbohydrates may be used. Mix thoroughly. Filter sterilize.

Caution: Acid Fuchsin is a potential carcinogen and care must be taken to avoid inhalation of the powdered dye and contact with the skin.

Preparation of Medium: Add components, except carbohydrate solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute in 10.0mL volumes into test tubes containing inverted Durham tubes. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Add 0.5mL of sterile carbohydrate solution to each tube.

Use: For the determination of carbohydrate fermentation reactions of microorganisms, particularly members of the Enterobacteriaceae. A Durham tube is used to collect gas produced during the fermentation reaction. Acid production is indicated by a pink reaction.

Carbohydrate Medium Base

See: [CHO Medium Base](#)

Carbon Assimilation Medium

Composition per liter:

Agar solution.....500.0mL
Mineral base medium.....500.0mL

pH 6.5 ± 0.1 at 25°C

Agar Solution:

Composition per liter:

Agar 32.0g

Preparation of Agar Solution: Add agar to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Mineral Base Medium:

Composition per 500.0mL:

Carbohydrate..... 10.0g
NaCl..... 5.0g
NH₄HPO₄..... 1.0g
K₂HPO₄..... 1.0g
MgSO₄·7H₂O, anhydrous..... 0.1g

Preparation of Mineral Base Medium: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Gently heat until dissolved. Filter sterilize. Warm to 45°–50°C.

Preparation of Medium: Combine 500.0mL of cooled, sterile agar solution and 500.0mL of sterile mineral base medium. Mix thoroughly. Aseptically distribute into sterile tubes. Allow tubes to cool in a slanted position.

Use: For the cultivation and differentiation of microorganisms based on their ability to utilize a particular carbon source.

Carbon Assimilation Medium, Auxanographic Method for Yeast Identification

Composition per liter:

Noble agar..... 20.0g
(NH₄)₂SO₄..... 0.5g
KH₂PO₄..... 0.1g
MgSO₄·7H₂O..... 0.05g
NaCl..... 0.01g
CaCl₂·2H₂O..... 0.01g
DL-Methionine..... 2.0mg
DL-Tryptophan..... 2.0mg
L-Histidine·HCl..... 1.0mg
Inositol..... 0.2mg
KI..... 0.01mg
H₃BO₃..... 0.05mg
ZnSO₄·7H₂O..... 0.04mg
MnSO₄·4H₂O..... 0.04mg
Thiamine·HCl..... 0.04mg
Pyridoxine·HCl..... 0.04mg
Niacin..... 0.04mg
Calcium pantothenate..... 0.04mg
p-Aminobenzoic acid..... 0.02mg
Riboflavin..... 0.02mg
FeCl₃..... 0.02mg
Na₂MoO₄·4H₂O..... 0.02mg
CuSO₄·5H₂O..... 4.0µg
Folic acid..... 0.2µg
Biotin..... 0.2µg

pH 4.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into screw-capped tubes in 20.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For carbohydrate assimilation tests by the auxanographic method for the identification of yeasts.

Carbon Monoxide Oxidizers Agar, Modified

Composition per 1001.0mL:

Agar..... 12.0g
Na₂HPO₄·12H₂O..... 4.5g
Sodium acetate..... 3.0g
NH₄Cl..... 1.5g
KH₂PO₄..... 0.75g
MgSO₄·7H₂O..... 0.2g
CaCl₂·2H₂O..... 30.0mg
Ferric ammonium citrate..... 18.0mg
Trace elements solution..... 1.0mL
NaHCO₃ solution..... 10.0mL
Thiamine·HCl solution..... 10.0mL

Trace Elements Solution:

Composition per liter:

Na₂MoO₄·2H₂O..... 0.9g
H₃BO₃..... 0.3g
CoCl₂·6H₂O..... 0.2g
ZnSO₄·7H₂O..... 0.1g
MnCl₂·4H₂O..... 30.0mg
Na₂SeO₃..... 20.0mg
NiCl₂·6H₂O..... 20.0mg
CuCl₂·2H₂O..... 10.0mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

NaHCO₃ Solution:

Composition per 10.0mL:

NaHCO₃ 1.0g

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Filter sterilize.

Thiamine-HCl Solution:

Composition per 10.0mL:

Thiamine-HCl 20.0μg

Preparation of Thiamine-HCl Solution: Add thiamine-HCl to distilled/deionized water and bring volume to 10.0mL. Filter sterilize.

Preparation of Medium: Add components, except NaHCO₃ solution and thiamine-HCl solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 10.0mL of sterile NaHCO₃ solution and 10.0mL of sterile thiamine-HCl solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Carbophilus carboxidus* and *Zavarzinia compransoris*.

Carbon Utilization Test

Composition per liter:

Ionagar 10.0g
 NH₄Cl 1.0g
 MgSO₄·7H₂O 0.5g
 Ferric ammonium citrate 0.05g
 CaCl₂ 0.5mg
 Sodium potassium phosphate
 buffer (0.33M solution, pH 6.8) 1.0L
 Carbon source 10.0mL

pH 6.8 ± 0.2 at 25°C

Carbon Source:

Composition per 10.0mL:

Carbon source 1.0g

Preparation of Carbon Source: Add carbon source to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except carbon source, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile carbon source. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and differentiation of *Pseudomonas* species based on their ability to utilize a specific carbon source.

Carbonate-Buffered Medium CMB4 with Glucose

Composition per 1002.0mL:

NaCl 4.0g
 NaHCO₃ 2.5g
 Glucose 1.0g
 MgCl₂·6H₂O 0.8g
 KCl 0.5g
 NH₄Cl 0.3g
 KH₂PO₄ 0.2g

Resazurin 1.0mg
 Modified Wolfe's mineral solution 10.0mL
 Wolfe's vitamin solution 10.0mL
 Sulfide-calcium solution 2.0mL

pH 6.9 ± 0.2 at 25°C

Modified Wolfe's Mineral Solution:

Composition per liter:

MgSO₄·7H₂O 3.0g
 Nitrilotriacetic acid 1.5g
 NaCl 1.0g
 MnSO₄·H₂O 0.5g
 CaCl₂ 0.1g
 CoCl₂·6H₂O 0.1g
 FeSO₄·7H₂O 0.1g
 ZnSO₄·7H₂O 0.1g
 AlK(SO₄)₂·12H₂O 0.01g
 CuSO₄·5H₂O 0.01g
 H₃BO₃ 0.01g
 Na₂MoO₄·2H₂O 0.01g
 Na₂SeO₃ 0.01g
 NaWO₄·2H₂O 0.01g
 NiCl₂·6H₂O 0.01g

Preparation of Modified Wolfe's Mineral Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components one at a time. Add distilled/deionized water to 1.0L. Adjust pH to 6.8.

Wolfe's Vitamin Solution:

Composition per liter:

Pyridoxine-HCl 10.0mg
p-Aminobenzoic acid 5.0mg
 Lipoic acid 5.0mg
 Nicotinic acid 5.0mg
 Riboflavin 5.0mg
 Thiamine-HCl 5.0mg
 Calcium DL-pantothenate 5.0mg
 Biotin 2.0mg
 Folic acid 2.0mg
 Vitamin B₁₂ 0.1mg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Sulfide-Calcium Solution:

Composition per liter:

Na₂S·9H₂O 36.0g
 CaCl₂·2H₂O 15.0g

Preparation of Sulfide-Calcium Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Sparge with 100% N₂. Anaerobically distribute into tubes. Autoclave at 121°C for 15 min.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂. Add components, except NaHCO₃ and sulfide-calcium solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 3 min. Cool to room temperature while sparging with 80% N₂ + 20% CO₂. Add NaHCO₃. Mix thoroughly. Anaerobically distribute 10.0mL volumes into anaerobic tubes. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 0.02mL of sterile sulfide-calcium solution to each tube. Mix thoroughly. Adjust pH to 6.9.

Use: For the cultivation of *Spirochaeta thermophila*.

Carboxydobacterium Medium**Composition** per liter:

Na ₂ HPO ₄ ·12H ₂ O	9.0g
KH ₂ PO ₄	1.5g
NH ₄ Cl	1.5g
MgSO ₄ ·7H ₂ O	0.2g
CaCl ₂ ·2H ₂ O	20.0mg
Ferric ammonium citrate	1.2mg
TS2 trace elements solution	1.0mL

TS2 Trace Elements Solution:**Composition** per liter:

Na ₂ MoO ₄ ·2H ₂ O	0.9g
H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
MnCl ₂ ·4H ₂ O	30.0mg
Na ₂ SeO ₃	20.0mg
NiCl ₂ ·6H ₂ O	20.0mg
CuCl ₂ ·2H ₂ O	10.0mg

Preparation of TS2 Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Caution: Carbon monoxide (CO) is a toxic gas.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. After inoculation, incubate in an atmosphere of 50% CO + 50% air.

Use: For the autotrophic cultivation of *Oligotropha carboxidovorans*.

Carboxydobacterium Medium**Composition** per liter:

Na ₂ HPO ₄ ·12H ₂ O	9.0g
Sodium acetate	3.0g
KH ₂ PO ₄	1.5g
NH ₄ Cl	1.5g
MgSO ₄ ·7H ₂ O	0.2g
CaCl ₂ ·2H ₂ O	20.0mg
Ferric ammonium citrate	1.2mg
TS2 trace elements solution	1.0mL

TS2 Trace Elements Solution:**Composition** per liter:

Na ₂ MoO ₄ ·2H ₂ O	0.9g
H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
MnCl ₂ ·4H ₂ O	30.0mg
Na ₂ SeO ₃	20.0mg
NiCl ₂ ·6H ₂ O	20.0mg
CuCl ₂ ·2H ₂ O	10.0mg

Preparation of TS2 Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. After inoculation, incubate in air.

Use: For the organotrophic cultivation of *Oligotropha carboxidovorans*.

Carboxydobrachium pacificum Medium**(DSMZ Medium 902)****Composition** per 1050mL:

NaCl	20.0g
MgSO ₄ ·7H ₂ O	3.9g
KCl	0.7g
CaCl ₂ ·2H ₂ O	0.4g
NH ₄ Cl	0.3g
Na ₂ HPO ₄	0.15g
Yeast extract	0.05g
Na ₂ SiO ₃	0.03g
Resazurin	0.5mg
Vitamin solution	10.0mL
NaHCO ₃ solution	10.0mL
Na ₂ S·9H ₂ O solution	10.0mL
L-Cysteine solution	10.0mL
Pyruvate solution	10.0mL
Trace elements solution SL-10	1.0mL

pH 7.0 ± 0.2 at 25°C

Pyruvate Solution:**Composition** per 10.0mL:

Na-pyruvate	2.5g
-------------	------

Preparation of Pyruvate Solution: Add pyruvate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

L-Cysteine Solution:**Composition** per 10.0mL:

L-Cysteine·HCl·H ₂ O	0.45g
---------------------------------	-------

Preparation of L-Cysteine Solution: Add L-cysteine·HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:**Composition** per 10.0mL:

Na ₂ S·9H ₂ O	0.45g
-------------------------------------	-------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

NaHCO₃ Solution:**Composition** per 10.0mL:

NaHCO ₃	0.5g
--------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Must be prepared freshly.

Trace Elements Solution SL-10:**Composition** per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution SL-10: Add $\text{FeCl}_2 \cdot 4\text{H}_2\text{O}$ to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N_2 . Autoclave for 15 min at 15 psi pressure–121°C.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl.....	10.0mg
Thiamine-HCl·2H ₂ O.....	5.0mg
Riboflavin.....	5.0mg
Nicotinic acid.....	5.0mg
D-Ca-pantothenate.....	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Lipoic acid.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H_2 + 20% CO_2 . Filter sterilize.

Preparation of Medium: Prepare and dispense medium under 100% N_2 . Add components, except vitamin solution, NaHCO_3 solution, pyruvate solution, L-cysteine-HCl·H₂O solution, and $\text{Na}_2\text{S} \cdot 9\text{H}_2\text{O}$ solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Sparge with 100% N_2 for at least 30 min. Distribute into anaerobe tubes or bottles. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add per liter, 10.0mL vitamin solution, 10.0mL NaHCO_3 solution, 10.0mL pyruvate solution, 10.0mL L-cysteine-HCl·H₂O solution, and 10.0mL $\text{Na}_2\text{S} \cdot 9\text{H}_2\text{O}$. Mix thoroughly. The final pH should be 7.0.

Use: For the cultivation of *Carboxydibrachium pacificum* (*Carboxydobrachium pacificum*).

Carboxydotherrnus Medium

Composition per 1030.0mL:

$\text{MgCl}_2 \cdot 6\text{H}_2\text{O}$	0.52g
KCl.....	0.33g
KH_2PO_4	0.33g
NH_4Cl	0.33g
$\text{CaCl}_2 \cdot 2\text{H}_2\text{O}$	0.29g
Resazurin.....	0.5mg
Trace elements solution SL-4.....	10.0mL
Vitamin solution.....	10.0mL
Yeast extract solution.....	10.0mL
$\text{Na}_2\text{S} \cdot 9\text{H}_2\text{O}$ solution.....	10.0mL

pH 6.9 ± 0.2 at 25°C

Trace Elements Solution SL-4:

Composition per liter:

EDTA.....	0.5g
$\text{FeSO}_4 \cdot 7\text{H}_2\text{O}$	0.2g
Trace elements solution SL-6.....	100.0mL

Preparation of Trace Elements Solution SL-4: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Trace Elements Solution SL-6:

Composition per liter:

$\text{MnCl}_2 \cdot 4\text{H}_2\text{O}$	0.5g
H_3BO_3	0.3g
$\text{CoCl}_2 \cdot 6\text{H}_2\text{O}$	0.2g
$\text{ZnSO}_4 \cdot 7\text{H}_2\text{O}$	0.1g

$\text{Na}_2\text{MoO}_4 \cdot 2\text{H}_2\text{O}$	0.03g
$\text{NiCl}_2 \cdot 6\text{H}_2\text{O}$	0.02g
$\text{CuCl}_2 \cdot 2\text{H}_2\text{O}$	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl.....	10.0mg
Calcium DL-pantothenate.....	5.0mg
Lipoic acid.....	5.0mg
Nicotinic acid.....	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Riboflavin.....	5.0mg
Thiamine-HCl.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Sparge with 100% N_2 .

Yeast Extract Solution:

Composition per 10.0mL:

Yeast extract.....	10.0mg
--------------------	--------

Preparation of Yeast Extract Solution: Add yeast extract to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N_2 for 15 min at 15 psi pressure–121°C.

$\text{Na}_2\text{S} \cdot 9\text{H}_2\text{O}$ Solution:

Composition per 10.0mL:

$\text{Na}_2\text{S} \cdot 9\text{H}_2\text{O}$	0.7g
---	------

Preparation of $\text{Na}_2\text{S} \cdot 9\text{H}_2\text{O}$ Solution: Prepare and dispense solution anaerobically under 100% N_2 . Add $\text{Na}_2\text{S} \cdot 9\text{H}_2\text{O}$ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Adjust pH to 7.0. Autoclave for 15 min at 15 psi–121°C.

Preparation of Medium: Add components, except vitamin solution, yeast extract solution, and $\text{Na}_2\text{S} \cdot 9\text{H}_2\text{O}$ solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge under 100% N_2 for 10 min. Autoclave under 100% N_2 for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically combine with 10.0mL of sterile vitamin solution, 10.0mL of sterile yeast extract solution, and 10.0mL of sterile $\text{Na}_2\text{S} \cdot 9\text{H}_2\text{O}$ solution. Mix thoroughly. Pressurize inoculation flask with CO (carbon monoxide) gas at 2 bar pressure.

Caution: Carbon monoxide is a toxic gas.

Use: For the cultivation of *Carboxydotherrnus hydrogenoformans*.

Carboxymethyl Cellulose Medium (DSMZ Medium 1111)

Composition per liter:

Carboxymethyl cellulose.....	15.0g
Agar.....	6.0g
Casitone.....	2.0g
$(\text{NH}_4)_2\text{SO}_4$	1.0g
KH_2PO_4	1.0g
$\text{MgSO}_4 \cdot 7\text{H}_2\text{O}$	1.0g
$\text{CaCl}_2 \cdot 2\text{H}_2\text{O}$	1.0g
$\text{FeCl}_3 \cdot 6\text{H}_2\text{O}$	0.2g
KH_2PO_4 solution.....	10.0mL

pH 7.0 ± 0.2 at 25°C

KH₂PO₄ Solution:**Composition** per 10.0mL:KH₂PO₄..... 1.0g

Preparation of KH₂PO₄ Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except KH₂PO₄ solution, to distilled/deionized water and bring volume to 990.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL KH₂PO₄ solution. Mix thoroughly. Pour into Petri dishes or leave in tubes.

Use: For the cultivation of *Cellvibrio japonicus*.

Cardiobacterium hominis* Medium*Composition** per liter:

Glucose 5.0g
 Leucine..... 0.43g
 Threonine 0.28g
 Glutamic acid..... 0.2g
 Valine 0.19g
 Glycine..... 0.18g
 Arginine 0.16g
 Histidine..... 0.13g
 Proline 0.1g
 Tyrosine..... 0.04g
 Buffered salts solution 100.0mL
 Vitamin solution..... 10.0mL

pH 7.0 ± 0.2 at 25°C

Buffered Salts Solution:**Composition** per liter:

Na₂HPO₄..... 284.0g
 KH₂PO₄..... 272.0g
 NaCl 5.0g
 FeSO₄·7H₂O..... 4.0g
 MgSO₄·7H₂O 4.0g
 ZnSO₄·7H₂O 0.4g
 MnSO₄·H₂O 0.3g
 CuSO₄·5H₂O 0.05g

Preparation of Buffered Salts Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Vitamin Solution:**Composition** per liter:

Pyridoxine-HCl 2.0mg
 Calcium pantothenate 1.0mg
 Nicotinamide..... 1.0mg
 Thiamine-HCl 1.0mg
 Biotin 0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Filter sterilize.

Use: For the isolation and cultivation of *Cardiobacterium hominis*.

Cardiobacterium hominis* Medium*Composition** per liter:

K₂HPO₄..... 7.0g
 Yeast extract..... 5.0g
 KH₂PO₄..... 3.0g
 (NH₄)₂SO₄ 0.1g
 MgSO₄·7H₂O 0.01g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Cardiobacterium hominis*.

**Carnation Leaf Agar
(ATCC Medium 2041)****Composition** per liter:

Carnation leaves, dried Variable
 Agar 20.0g

Preparation of Carnation Leaves: Harvest young carnation leaves, *Dianthus caryophyllus*, from actively growing disbudbed plants that are free from pesticide residues. Cut the leaves into pieces approximately 5mm square and dry them in an oven at 40–55°C for 2 hr. (When dry, the leaves should be green and crisp. Loss of pigmentation indicates that the drying temperature was too high.) Place the leaf pieces in aluminum canisters 5cm deep and 9cm in diameter and sterilize with 2.5 megarads of gamma irradiation from a cesium-135 source for 4 days.

Preparation of Medium: Add agar to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes. Float several sterile leaf pieces on each agar surface. Leave medium at room temperature for 3 to 4 days before use to check for growth of possible contaminants on the leaf pieces.

Use: For the cultivation and maintenance of *Cryptosporiopsis abietina* and *Phomopsis occulta*.

Carnitine Chloride Medium**Composition** per liter:

Noble agar..... 15.0g
 DL-Carnitine chloride 10.0g
 Na₂HPO₄..... 10.0g
 KH₂PO₄..... 5.5g
 (NH₄)₂HPO₄..... 2.0g
 NH₄H₂PO₄..... 1.5g
 MgSO₄·7H₂O 0.2g
 Yeast extract..... 0.05g
 CaCl₂..... 0.015g
 Fe₂(SO₄)₃ 0.6mg
 CuSO₄·5H₂O 0.2mg
 MnSO₄·H₂O 0.2mg
 ZnSO₄·7H₂O 0.2mg

pH 7.0 ± 0.1 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Adjust pH to 7.0 with NaOH. Mix thoroughly. Heat gently until boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of bacteria that can use carnitine as a carbon source.

Carnitine Medium for *Torulopsis*

Composition per liter:

Glucose	20.0g
Agar	15.0g
L-Asparagine·H ₂ O	1.0g
KH ₂ PO ₄	0.5g
MgSO ₄ ·7H ₂ O	0.5g
NaCl	0.1g
L-Phenylalanine	80.0mg
DL-Tryptophan	50.0mg
DL-Methionine	20.0mg
Adenine	10.0mg
Cytosine	10.0mg
Inositol	10.0mg
Calcium D-(+)-pantothenate	2.0mg
Thiamine·HCl	2.0mg
Pyridoxine·HCl	2.0mg
Nicotinic acid	2.0mg
DL-Carnitine·HCl	1.0mg
Choline	1.0mg
Biotin	20.0µg

pH 5.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Gently heat and bring to boiling. Adjust pH to 5.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Candida pintolopesii*.

Carnobacterium Medium

Composition per liter:

Agar	15.0g
Beef extract	10.0g
Peptone	10.0g
NaCl	5.0g
Glucose	5.0g
Yeast extract	3.0g

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Carnobacterium piscicola*.

Carr's Ethanol Medium (LMG Medium 228)

Composition per liter:

Yeast extract	30.0g
Agar	20.0g
Bromcresol Blue	22.0mg
Ethanol	20.0mL

Preparation of Medium: Add components, except ethanol, to 980.0mL distilled/deionized water. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°C. Aseptically add 20.0mL sterile ethanol. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Acetobacter pasteurianus*.

Carrot Decoction Agar

Composition per liter:

Carrots	100.0g
Agar	15.0g

Preparation of Medium: Peel and slice carrots. Add to 1.0L of distilled/deionized water. Autoclave for 30 min at 15 psi pressure–121°C. Filter solids through cheesecloth. Add agar to filtrate. Mix thoroughly. Bring volume to 1.0L with distilled/deionized water. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Tuberculina maxima* and *Tuberculina persicina*.

Carrot Potato Dextrose Agar (ATCC Medium 1829)

Composition per liter:

Agar	25.0g
Glucose	20.0g
Pancreatic digest of casein	2.5g
Yeast extract	0.5g
MgSO ₄ ·7H ₂ O	0.3g
CaCO ₃	0.2g
Potatoes, infusion from	500.0mL
Carrot juice (any commercial brand)	15.0 mL

pH 5.6 ± 0.2 at 25°C

Source: Potato dextrose agar, without carrot juice, is available as a premixed powder from BD Diagnostic Systems.

Potato Infusion:

Composition per 500.0mL:

Potatoes	300.0g
----------------	--------

Preparation of Potato Infusion: Peel and dice potatoes. Add 500.0mL of distilled/deionized water. Gently heat and bring to boiling. Continue boiling for 30 min. Filter through cheesecloth. Reserve filtrate.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of yeasts and molds and to induce sporulation.

Cary and Blair Transport Medium

Composition per liter:

Agar	5.0g
NaCl	5.0g
Sodium thioglycolate	1.5g
Na ₂ HPO ₄	1.1g
CaCl ₂ solution	9.0mL

pH 8.0 ± 0.5 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems and Oxoid Unipath.

CaCl₂ Solution:

Composition per 10.0mL:

CaCl ₂	0.1g
-------------------------	------

Preparation of CaCl₂ Solution: Add CaCl₂ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly and heat gently until boiling. Cool to 50°C. Add 9.0mL of a 1% CaCl₂ solution. Adjust the pH to 8.4. Distribute into screw-capped tubes in 7.0mL volumes. Sterilize under flowing steam for 15 min. After sterilization, tighten the screwcaps.

Use: For the maintenance—as a holding medium or transport medium—of clinical specimens during collection or shipment.

Cary and Blair Transport Medium, Modified

Composition per liter:

Agar	5.0g
NaCl	5.0g
Sodium thioglycolate	1.5g
L-Cysteine·HCl·H ₂ O	0.5g
CaCl ₂ ·2H ₂ O	0.1g
Na ₂ HPO ₄	0.1g
NaHSO ₃	0.1g
Resazurin solution	4.0mL

pH 8.4 ± 0.2 at 25°C

Resazurin Solution:

Composition per 380.0mL:

Resazurin	0.05g
Ethanol (95% solution)	200.0mL

Preparation of Resazurin Solution: Add resazurin to 200.0mL of ethanol. Mix thoroughly. Bring volume to 380.0mL with distilled/deionized water.

Preparation of Medium: Add components, except L-cysteine·HCl·H₂O, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gas the solution with 100% CO₂ for 10–15 min. Add the L-cysteine·HCl·H₂O. Mix thoroughly. Adjust pH to 8.4. Anaerobically distribute into tubes under 100% N₂. Cap tubes with butyl rubber stoppers. Autoclave for 15 min at 0 psi pressure–100°C on 3 consecutive days.

Use: For the maintenance—as a holding medium—of clinical specimens during collection or shipment.

Caryophanon latum Medium

Composition per liter:

Papaic digest of soybean meal	2.0g
Pancreatic digest of casein	2.0g
Yeast extract	2.0g
K ₂ HPO ₄	1.0g
Sodium acetate	1.0g
MgSO ₄ ·7H ₂ O	0.27g
Sodium glutamate	0.1g
Thiamine·HCl	0.2mg
Biotin	0.05mg
Tris/HCl-buffer 10mM, pH 7.8	1000.0mL

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Combine components. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Caryophanon latum* and *Vitreoscilla stercoraria*.

Caryophanon Medium

Composition per liter:

Agar	15.0g
Yeast extract	2.0g
Sodium acetate	1.0g
Pancreatic digest of casein	1.0g

pH 7.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Caryophanon tenue* and other *Caryophanon* species.

CAS Medium

Composition per liter:

Pancreatic digest of casein	10.0g
MgSO ₄ ·7H ₂ O	1.0g
K ₂ HPO ₄	0.25g

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of myxobacteria.

Casamino Acids Glucose Medium (CAGV Medium)

Composition per liter:

Agar	20.0g
Glucose	1.0g
Vitamin-free casamino acids	1.0g
Solution A (mineral salts)	20.0mL
Vitamin solution	10.0mL

pH 7.2 ± 0.2 at 25°C

Solution A (Mineral Salts):

Composition per liter:

MgSO ₄ ·7H ₂ O	29.7g
NaMoO ₄ ·2H ₂ O	12.67g
Nitritotriacetic acid	10.0g
CaCl ₂ ·2H ₂ O	3.34g
FeSO ₄ ·7H ₂ O	0.1g
Solution B (metallic salts)	50.0mL

Preparation of Solution A (Mineral Salts): Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Readjust pH to 7.2 with H₂SO₄ or KOH. Add distilled/deionized water to 1.0L.

Solution B (Metallic Salts):

Composition per 100.0mL:

ZnSO ₄ ·7H ₂ O	1.1g
FeSO ₄ ·7H ₂ O	0.5g
Ethylenediaminetetraacetic acid	0.3g
MnSO ₄ ·H ₂ O	0.3g
CuSO ₄ ·5H ₂ O	0.04g
CoCl ₂ ·6H ₂ O	0.02g
Na ₂ B ₄ O ₇ ·10H ₂ O	0.02g

Preparation of Solution B (Metallic Salts): Add a few drops of H₂SO₄ to distilled/deionized water to inhibit precipitate formation.

Add components to acidified distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Vitamin Solution:**Composition per liter:**

Pyridoxine-HCL.....	0.01g
Calcium pantothenate	5.0mg
Nicotinamide.....	5.0mg
Riboflavin	5.0mg
Thiamine-HCl	5.0mg
Biotin	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Microcycilus aquaticus*.

Casamino Acids Medium**Composition per liter:**

Casamino acids	1.0g
Glucose	1.0g
Biotin	0.02mg
Modified Hutner's basal salts	20.0mL

Modified Hutner's Basal Salts:**Composition per liter:**

MgSO ₄ ·7H ₂ O	29.7g
Nitritotriacetic acid	10.0g
CaCl ₂ ·2H ₂ O.....	3.34g
FeSO ₄ ·7H ₂ O.....	0.1g
(NH ₄) ₂ MoO ₄	9.25mg
Metals "44".....	50.0mL

Preparation of Modified Hutner's Basal Salts: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L.

Metals "44":**Composition per 100.0mL:**

ZnSO ₄ ·7H ₂ O	1.1g
FeSO ₄ ·7H ₂ O.....	0.5g
EDTA	0.25g
MnSO ₄ ·7H ₂ O	0.154g
CuSO ₄ ·5H ₂ O.....	0.04g
Co(NO ₃) ₂ ·6H ₂ O	0.025g
Na ₂ B ₄ O ₇ ·10H ₂ O.....	0.018g

Preparation of Metals "44": Acidify distilled/deionized water with a drop of H₂SO₄ to retard precipitation of salts. Add components to distilled/deionized water and bring volume to 100.0mL.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For cultivation of *Ancylobacter aquaticus* and *Enhydrobacter aerosaccus*.

Casamino Acids Peptone Czapek's Agar**Composition per liter:**

Sucrose.....	30.0g
Agar	15.0g
Peptone	2.0g
Casamino acids	1.0g
K ₂ HPO ₄	1.0g
KCl.....	0.5g
MgSO ₄ ·7H ₂ O.....	0.5g
FeSO ₄ ·7H ₂ O.....	0.01g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of *Actinomadura* species, *Actinopolyspora* species, *Excellospora* species, and *Microspora* species.

Casamino Acids and Yeast Extract Agar**Composition per liter:**

NaCl.....	200.0g
MgSO ₄ ·7H ₂ O.....	20.0g
Agar	15.0g
Yeast extract.....	10.0g
Casamino acids	7.5g
Trisodium citrate.....	3.0g
KCl.....	2.0g
FeSO ₄ solution	1.0mL

pH 7.4 ± 0.2 at 25°C

FeSO₄ Solution:**Composition per 10.0mL:**

FeSO ₄ ·7H ₂ O.....	2.5g
---	------

Preparation of FeSO₄ Solution: Add FeSO₄·7H₂O to 0.001M HCl and bring volume to 50.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.4. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Actinopolyspora halophila*.

Casamino Acids Yeast Extract Broth (CYE Broth)**Composition per liter:**

Casamino acids	30.0g
Yeast extract.....	4.0g
K ₂ HPO ₄	0.5g

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Vibrio* species from foods.

Casamino Acids Yeast Extract Lincomycin Medium**Composition per liter:**

Casamino acids	20.0g
K ₂ HPO ₄	8.71g
Yeast extract.....	6.0g
NaCl.....	2.5g

Lincomycin solution	5.0mL
Trace salts solution	1.0mL
pH 8.5 ± 0.2 at 25°C	

Lincomycin Solution:**Composition** per 5.0mL:

Lincomycin	45.0mg
------------------	--------

Preparation of Lincomycin Solution: Add lincomycin to distilled/deionized water and bring volume to 5.0mL. Mix thoroughly. Filter sterilize.

Trace Salts Solution:**Composition** per liter:

MgSO ₄ ·7H ₂ O	50.0g
MnCl ₂ ·4H ₂ O	5.0g
FeCl ₂	5.0g

Preparation of Trace Salts Solution: Add components to distilled/deionized water and bring volume to 1.0L. Add sufficient 0.1N H₂SO₄ to dissolve components. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except trace salts solution and lincomycin solution, to distilled/deionized water and bring volume to 994.0mL. Mix thoroughly. Adjust pH to 8.5. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 1.0mL of sterile trace salts solution and 5.0mL of sterile lincomycin solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of heat-labile, toxin-producing enterotoxigenic *Escherichia coli*.

Casamino Acids Yeast Extract Salts Broth, Gorbach (CA YE Broth)

Composition per liter:

Casamino acids	20.0g
K ₂ HPO ₄	8.71g
Yeast extract	6.0g
NaCl	2.5g
Trace salts solution	1.0mL
pH 8.5 ± 0.2 at 25°C	

Trace Salts Solution:**Composition** per liter:

MgSO ₄ ·7H ₂ O	50.0g
MnCl ₂ ·4H ₂ O	5.0g
FeCl ₂	5.0g

Preparation of Trace Salts Solution: Add components to distilled/deionized water and bring volume to 1.0L. Add sufficient 0.1N H₂SO₄ to dissolve components. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except trace salts solution, to distilled/deionized water and bring volume to 999.0mL. Mix thoroughly. Adjust pH to 8.5. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 1.0mL of sterile trace salts solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of enterotoxigenic *Escherichia coli*.

Casamino Peptone Czapek Medium

Composition per liter:

Sucrose	30.0g
Agar	15.0g
Peptone	2.0g
Casamino acids	1.0g
K ₂ HPO ₄	1.0g

KCl	0.5g
MgSO ₄ ·7H ₂ O	0.5g
FeSO ₄ ·7H ₂ O	0.01g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Actinoplanes* species, *Pseudonocardia compacta*, and *Streptomyces* species.

Casein Agar

Composition per liter:

Agar	10.0g
Skim milk	50.0mL

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and differentiation of aerobic actinomycetes based on casein utilization. Bacteria that utilize casein, such as *Streptomyces* and *Actinomadura* species, appear as colonies surrounded by a clear zone. *Nocardia asteroides*, *Nocardia caviae*, and *Mycobacterium fortuitum* do not utilize casein.

Casein Hydrolysate Yeast Extract HiVeg Broth (CAYE HiVeg Broth)

Composition per liter:

Plant acid hydrolysate	30.0g
Yeast extract	4.0g
Glucose	2.0g
K ₂ HPO ₄	0.5g
pH 7.0 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For cultivation of *Vibrio cholerae* while testing enterotoxigenicity.

Casein Hydrolysate Yeast Extract Salts HiVeg Broth Base with Tracer Salts (CAYES)

Composition per liter:

Plant acid hydrolysate	20.0g
K ₂ HPO ₄	8.71g
Yeast extract	6.0g
NaCl	2.5g
Tracer salts solution	1.0mL
pH 7.0 ± 0.2 at 25°C	

Source: This medium, without tracer salts solution, is available as a premixed powder from HiMedia.

Tracer Salts Solution:**Composition** per 10.0mL:

MgSO ₄	0.5g
MnCl ₂	0.05g

FeCl₃ 0.05g
Sulfuric acid, 1N 10.0mL

Preparation of Tracer Salts Solution: Add components to 0.1N sulfuric acid and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For agar dilution susceptibility tests with imidazole antifungal agents.

Casein Medium

Composition per liter:

NaCl 250.0g
Agar 20.0g
MgCl₂·6H₂O 20.0g
Casein hydrolysate 5.0g
Yeast extract 5.0g
KCl 2.0g
CaCl₂·2H₂O 0.2g
pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat to boiling. Adjust pH to 7.4. Bring volume to 1.0L with distilled/deionized water. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Halobacterium* species and other halophilic bacteria.

Casein Soya Agar, Modified

Composition per liter:

Pancreatic digest of casein 14.5g
Agar 14.0g
Papaic digest of soybean meal 5.0g
NaCl 5.0g
Growth factors 1.5g
pH 7.3 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Do not overheat. Pour into sterile Petri dishes or leave in tubes.

Use: For use as a general-purpose medium for cultivation of various microorganisms.

Casein Soya Agar, Modified with Blood

Composition per liter:

Pancreatic digest of casein 14.5g
Agar 14.0g
Papaic digest of soybean meal 5.0g
NaCl 5.0g
Growth factors 1.5g
Sheep blood, sterile defibrinated 50.0mL
pH 7.3 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Do not overheat. Cool to 50°C. Aseptically add blood. Mix thoroughly. Pour into sterile Petri dishes or leave in tubes.

Use: For use as a general-purpose medium for cultivation of various fastidious microorganisms.

Casein Soya Peptone Medium, HiVeg (Tryptone Soya Agar, HiVeg)

Composition per liter:

Agar 15.0g
Plant peptone 15.0g
NaCl 5.0g
Plant hydrolysate 5.0g
pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of a wide variety of microorganisms.

Casein Yeast Extract Glucose Agar (CYG Agar)

Composition per liter:

Agar 20.0g
Glucose 5.0g
Casein hydrolysate 5.0g
Yeast extract 5.0g
pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For agar dilution susceptibility tests with imidazole antifungal agents.

Casein Yeast Extract Glucose Broth (CYG Broth)

Composition per liter:

Casein hydrolysate 5.0g
Glucose 5.0g
Yeast extract 5.0g
pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For agar dilution susceptibility tests with imidazole antifungal agents.

Casein Yeast Magnesium Agar

Composition per liter:

Agar 15.0g
Casein enzymatic hydrolysate 10.0g

NaCl	5.0g
Yeast extract	5.0g
MgSO ₄	0.98g
pH 7.0 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of recombinant strains of *Escherichia coli*.

Casein Yeast Magnesium HiVeg Agar

Composition per liter:

Agar	15.0g
Plant hydrolysate	10.0g
NaCl	5.0g
Yeast extract	5.0g
MgSO ₄	0.98g
pH 7.0 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of recombinant strains of *Escherichia coli*.

Casein Yeast Magnesium HiVeg Broth

Composition per liter:

Plant hydrolysate	10.0g
NaCl	5.0g
Yeast extract	5.0g
MgSO ₄	0.98g
pH 7.0 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of recombinant strains of *Escherichia coli*.

Casitone Agar

Composition per liter:

Pancreatic digest of casein	20.0g
Agar	15.0g
MgSO ₄ ·7H ₂ O	1.0g
Potassium phosphate buffer (0.01M solution, pH 7.2)	1.0L
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Combine components. Mix thoroughly. Gently heat to boiling. Distribute into tubes or flasks. Adjust pH to 7.2. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Myxococcus* species.

Casitone Agar

Composition per liter:

Agar	12.0g
Beef extract	1.0g
Pancreatic digest of casein (Casitone)	1.0g
Glucose	1.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Myxococcus xanthus*.

Casitone Agar

Composition per liter:

Agar	15.0g
Casitone	3.0g
CaCl ₂	0.1g
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Bring pH to 7.2. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Myxococcus species*.

Casitone Glycerol Yeast Autolysate Broth (CGY Autolysate Broth)

Composition per liter:

Pancreatic digest of casein	5.0g
Yeast autolysate	1.0g
Glycerol	10.0mL

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation, cultivation, and enumeration of iron and sulfur bacteria from the *Sphaerotilus* group.

Casitone Glycerol Yeast Autolysate HiVeg Broth Base with Glycerol (CGY)

Composition per liter:

Plant hydrolysate	5.0g
Yeast autolysate	1.0g
Glycerol	10.0mL
pH 7.2 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Bring pH to 7.2. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the maintenance of iron bacteria especially those belonging to the *Sphaerotilus-Leptothrix* group.

Casitone Yeast Extract Agar**Composition per liter:**

Agar	15.0g
Pancreatic digest of casein	5.0g
Yeast extract	3.0g
MgSO ₄ ·7H ₂ O	1.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Chitinophaga pinensis*.

Casitone Yeast Extract Glucose Agar**Composition per liter:**

Agar	15.0g
Casitone	10.0g
Glucose	5.0g
Yeast extract	5.0g
NaCl	5.0g

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Arthrobacter ilicis*.

Casman Agar Base**Composition per liter:**

Noble agar	14.0g
Proteose peptone No. 3	10.0g
Tryptose	10.0g
NaCl	5.0g
Beef extract	3.0g
Cornstarch	1.0g
Glucose	0.5g
<i>p</i> -Aminobenzoic acid	0.05g
Nicotinamide	0.05g
Blood	50.0mL
Water-lysed blood solution	1.5mL

pH 7.3 ± 0.2 at 25°C

Water-Lysed Blood Solution:**Composition per 8.0mL:**

Blood	2.0mL
-------------	-------

Preparation of Water-Lysed Blood Solution: Add blood to distilled/deionized water and bring volume to 8.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except blood and water-lysed blood solution, to distilled/deionized water and bring volume to 948.5mL. Mix thoroughly. Gently heat to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 50.0mL of sterile blood and 1.5mL of sterile water-lysed blood solution (one part blood to three parts water). Water-lysed blood may be omitted if sterile blood is partially lysed due to storage. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation of fastidious bacteria from clinical specimens. For the cultivation under reduced oxygen tension of fastidious microorganisms such as *Haemophilus influenzae*, *Neisseria meningitidis*, and *Neisseria gonorrhoeae*.

**Casman Agar Base with Rabbit Blood
(Casman-Medium)
(DSMZ Medium 439)****Composition per liter:**

Noble agar	14.0g
Proteose peptone No. 3	10.0g
Tryptose	10.0g
NaCl	5.0g
Beef extract	3.0g
Cornstarch	1.0g
Glucose	0.5g
<i>p</i> -Aminobenzoic acid	0.05g
Nicotinamide	0.05g
Rabbit blood	50.0mL
Water-lysed blood solution	1.5mL

pH 7.3 ± 0.2 at 25°C

Source: Casman agar base is available as a premixed powder from BD Diagnostic Systems.

Water-Lysed Blood Solution:**Composition per 8.0mL:**

Rabbit blood	2.0mL
--------------------	-------

Preparation of Water-Lysed Blood Solution: Add blood to distilled/deionized water and bring volume to 8.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except rabbit blood and water-lysed blood solution, to distilled/deionized water and bring volume to 950.0L. Mix thoroughly. Gently heat to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 50.0mL of sterile rabbit blood and 1.5mL of sterile water-lysed blood solution. Water-lysed blood may be omitted if sterile blood is partially lysed due to storage. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Gardnerella vaginalis*.

Casman HiVeg Agar Base with Blood**Composition per liter:**

Agar	14.0g
Plant hydrolysate No. 1	10.0g
Plant peptone No. 3	10.0g
NaCl	5.0g
Plant extract	3.0g
Corn starch	1.0g
Glucose	0.5g
Nicotinamide	0.05g
<i>p</i> -Amino benzoic acid (PABA)	0.05g
Blood	50.0mL
Water-lysed blood solution	1.5mL

pH 7.3 ± 0.2 at 25°C

Source: This medium, without blood and water-lysed blood solution, is available as a premixed powder from HiMedia.

Water-Lysed Blood Solution:**Composition per 8.0mL:**

Blood	2.0mL
-------------	-------

Preparation of Water-Lysed Blood Solution: Add blood to distilled/deionized water and bring volume to 8.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except blood and water-lysed blood solution, to distilled/deionized water and bring volume to 948.5mL. Mix thoroughly. Gently heat to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 50.0mL of sterile blood and 1.5mL of sterile water-lysed blood solution (one part blood to three parts water). Water-lysed blood may be omitted if sterile blood is partially lysed due to storage. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation of fastidious bacteria from clinical specimens. For the cultivation under reduced oxygen tension of fastidious microorganisms such as *Haemophilus influenzae*, *Neisseria meningitidis*, and *Neisseria gonorrhoeae*.

Casman HiVeg Broth Base with Blood

Composition per liter:

Plant hydrolysate No. 1	10.0g
Plant peptone No. 3	10.0g
NaCl	5.0g
Plant extract	3.0g
Corn starch	1.0g
Glucose	0.5g
Nicotinamide	0.05g
<i>p</i> -Amino benzoic acid (PABA)	0.05g
Blood	50.0mL
Water-lysed blood solution	1.5mL
pH 7.3 ± 0.2 at 25°C	

Source: This medium, without blood and water-lysed blood solution, is available as a premixed powder from HiMedia.

Water-Lysed Blood Solution:

Composition per 8.0mL:

Blood	2.0mL
-------	-------

Preparation of Water-Lysed Blood Solution: Add blood to distilled/deionized water and bring volume to 8.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except blood and water-lysed blood solution, to distilled/deionized water and bring volume to 948.5mL. Mix thoroughly. Gently heat to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 50.0mL of sterile blood and 1.5mL of sterile water-lysed blood solution (one part blood to three parts water). Water-lysed blood may be omitted if sterile blood is partially lysed due to storage. Mix thoroughly.

Use: For the cultivation of fastidious bacteria from clinical specimens. For the cultivation under reduced oxygen tension of fastidious microorganisms such as *Haemophilus influenzae*, *Neisseria meningitidis*, and *Neisseria gonorrhoeae*.

CASO Agar

See: Tryptone Soya Agar

CASO Bouillon

See: Tryptone Soya Agar

CASO MUG Agar

Composition per liter:

Casein peptone	16.0g
Agar	13.0g
NaCl	6.0g
Soy peptone	5.0g

Tryptophan	1.0g
4-Methylumbelliferyl-β-D-glucuronide	0.07g
pH 7.3 ± 0.2 at 25°C	

Source: This medium is available from Fluka, Sigma-Aldrich.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Pour into sterile Petri dishes.

Use: This universal medium without indicator or inhibitor is intended for a broad range of application, including enumeration and cultivation of a wide variety of microorganisms. It is also suitable for the cultivation of more fastidious microorganisms. β-D-glucuronidase, which is produced by *E. coli*, cleaves 4-methylumbelliferyl-β-D-glucuronide to 4-methylumbelliferone and glucuronide. The fluorogen 4-methylumbelliferone can be detected under a long wavelength UV lamp. A positive indole reaction provides confirmation.

Castenholz Agar, Modified (DSMZ Medium 86a)

Composition per liter:

Agar	25.0g
NaNO ₃	0.69g
Na ₂ HPO ₄	0.14g
KNO ₃	0.103g
MgSO ₄ ·7H ₂ O	0.1g
Nitritotriacetic acid	0.1g
CaSO ₄ ·2H ₂ O	0.06g
NaCl	8.0mg
MnSO ₄ ·H ₂ O	2.2mg
ZnSO ₄ ·7H ₂ O	0.5mg
H ₃ BO ₃	0.5mg
FeCl ₃	0.47mg
CoCl ₂ ·6H ₂ O	46.0μg
CuSO ₄ ·5H ₂ O	25.0μg
Na ₂ MoO ₄ ·2H ₂ O	25.0μg
pH 7.8 ± 0.2 at 25°C	

Preparation of Medium: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Mix thoroughly. Readjust pH to 7.8. Bring volume to 1.0L with distilled/deionized water. Mix thoroughly. Gently heat and bring to boil. Autoclave for 15 min at 15 psi pressure–121°C. Pour into plates or aseptically distribute to sterile tubes or flasks.

Use: For the cultivation of *Meiothermus taiwanensis*.

Castenholz D Medium (Medium D)

Composition per liter:

NaNO ₃	0.7g
Na ₂ HPO ₄	0.11g
KNO ₃	0.1g
MgSO ₄ ·7H ₂ O	0.1g
Nitritotriacetic acid	0.1g
CaSO ₄ ·2H ₂ O	0.06g

MgSO ₄ ·7H ₂ O	0.1g
Nitrilotriacetic acid	0.1g
CaSO ₄ ·2H ₂ O	0.06g
NaCl	8.0mg
MnSO ₄ ·H ₂ O	2.2mg
ZnSO ₄ ·7H ₂ O	0.5mg

H ₃ BO ₃	0.5mg
FeCl ₃	0.47mg
CoCl ₂ ·6H ₂ O	46.0μg
CuSO ₄ ·5H ₂ O	25.0μg
Na ₂ MoO ₄ ·2H ₂ O	25.0μg

pH 7.8 ± 0.2 at 25°C

Preparation of Medium: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Mix thoroughly. Readjust pH to 7.8. Bring volume to 1.0L with distilled/deionized water. Mix thoroughly. Distribute into screw-capped tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Meiothermus taiwanensis*.

Castenholz ND Medium (Medium ND)

Composition per liter:

Na ₂ HPO ₄	0.11g
MgSO ₄ ·7H ₂ O	0.1g
Nitrilotriacetic acid	0.1g
CaSO ₄ ·2H ₂ O	0.06g
NaCl	8.0mg
FeCl ₃ solution	1.0mL
Micronutrient solution	0.5mL

pH 7.5 ± 0.2 at 25°C

FeCl₃ Solution:

Composition per liter:

FeCl ₃ ·6H ₂ O	2.28g
--------------------------------------	-------

Preparation of FeCl₃ Solution: Add FeCl₃·6H₂O to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Micronutrient Solution:

Composition per liter:

MnSO ₄ ·H ₂ O	2.28g
H ₃ BO ₃	0.5g
ZnSO ₄ ·7H ₂ O	0.5g
CoCl ₂ ·6H ₂ O	0.025g
CuSO ₄ ·5H ₂ O	0.025g
Na ₂ MoO ₄ ·2H ₂ O	0.025g
H ₂ SO ₄	0.5mL

Preparation of Micronutrient Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Mix thoroughly. Readjust pH to 8.2. Bring volume to 1.0L with distilled/deionized water. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation of cyanobacteria, including thermophilic species, that require reduced nitrogen concentrations.

Castenholz TYE Medium (Castenholz Trypticase™ Yeast Extract Medium)

Composition per liter:

Castenholz salts, 2X	500.0mL
1% TYE	100.0mL

pH 7.6 ± 0.2 at 25°C

Castenholz Salts, 2X:**Composition per liter:**

Agar	30.0g
NaNO ₃	1.4g
Na ₂ HPO ₄	0.22g
KNO ₃	0.21g
Nitrilotriacetic acid	0.2g
MgSO ₄ ·7H ₂ O	0.2g
CaSO ₄ ·2H ₂ O	0.12g
NaCl	0.016g
FeCl ₃ (0.03% solution)	2.0mL
Nitsch's trace elements	2.0mL

Preparation of Castenholz Salts, 2X: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 8.2. Autoclave for 15 min at 15 psi pressure–121°C.

Nitsch's Trace Elements:**Composition per liter:**

MnSO ₄	2.2g
H ₃ BO ₃	0.5g
ZnSO ₄	0.5g
CoCl ₂ ·6H ₂ O	0.046g
Na ₂ MoO ₄	0.025g
CuSO ₄	0.016g
H ₂ SO ₄	0.5mL

Preparation of Nitsch's Trace Elements: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

1% TYE**Composition per liter:**

Pancreatic digest of casein.....	10.0g
Yeast extract.....	10.0g

Preparation of 1% TYE: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Aseptically combine 500.0mL of sterile Castenholz salts, 2X, 100.0mL of sterile 1% TYE, and 400.0mL of sterile distilled/deionized water. Adjust pH to 7.6.

Use: For the cultivation and maintenance of *Thermonema lapsum* and *Thermus* species.

**Castenholz TYE Medium
with 2% Trypticase™ Yeast Extract**

Composition per liter:

Castenholz salts, 2X.....	500.0mL
2% TYE	100.0mL
pH 7.6 ± 0.2 at 25°C	

Castenholz Salts, 2X:**Composition per liter:**

Agar	30.0g
NaNO ₃	1.4g
Na ₂ HPO ₄	0.22g
KNO ₃	0.21g
MgSO ₄ ·7H ₂ O	0.2g
Nitrilotriacetic acid	0.2g
CaSO ₄ ·2H ₂ O	0.12g
NaCl	0.016g
FeCl ₃ solution (0.03% solution)	2.0mL
Nitsch's trace elements	2.0mL

Preparation of Castenholz Salts, 2X: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 8.2. Autoclave for 15 min at 15 psi pressure–121°C.

Nitsch's Trace Elements:**Composition per liter:**

MnSO ₄	2.2g
H ₃ BO ₃	0.5g
ZnSO ₄	0.5g
CoCl ₂ ·6H ₂ O	0.046g
Na ₂ MoO ₄	0.025g
CuSO ₄	0.016g
H ₂ SO ₄	0.5mL

Preparation of Nitsch's Trace Elements: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

2% TYE**Composition per liter:**

Pancreatic digest of casein.....	20.0g
Yeast extract.....	20.0g

Preparation of 2% TYE: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Aseptically combine 500.0mL of sterile Castenholz salts, 2X, 100.0mL of sterile 2% TYE, and 400.0mL of sterile distilled/deionized water. Adjust pH to 7.6.

Use: For the cultivation and maintenance of *Thermus* species.

CAT Medium**(Campylobacter Blood Free Preson Agar****with Cefoperazone, Amphotericin, and Teicoplanin)****Composition per liter:**

Agar	12.0g
Beef extract	10.0g
Peptone	10.0g
NaCl.....	5.0g
Charcoal	4.0g
Casein hydrolysate.....	3.0g
Sodium deoxycholate.....	1.0g
FeSO ₄	0.25g
Sodium pyruvate.....	0.25g
Selective supplement solution	10.0mL

pH 7.5 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Selective Supplement Solution:**Composition per 10.0mL:**

Amphotericin	10.0mg
Sodium cefoperazone.....	8.0mg
Teicoplanin	4.0mg

Preparation of Selective Supplement Solution: Add sodium cefoperazone to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except selective supplement solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically

add 10.0mL of sterile selective supplement solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Campylobacter* species. For the isolation of *Campylobacter* spp., especially *Campylobacter upsaliensis*.

Catenococcus Agar

Composition per 1001.0mL:

Agar, noble	20.0g
NaCl	20.0g
K ₂ HPO ₄	5.54g
NH ₄ Cl	0.5g
MgSO ₄ ·7H ₂ O	0.3g
KH ₂ PO ₄	1.84g
Sodium acetate	0.82g
CaCl ₂ ·2H ₂ O	0.1g
Yeast extract	0.05g
Trace elements solution SL-6	1.0mL
pH 6.8 ± 0.2 at 25°C	

Trace Elements Solution SL-6:

Composition per liter:

MnCl ₂ ·4H ₂ O	0.5g
H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
Na ₂ MoO ₄ ·2H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 6.8. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Catenococcus thiocyclus*.

Catenococcus Medium

Composition per 1003.0mL:

Agar	15.0g
NaCl	15.0g
K ₂ HPO ₄	1.0g
NH ₄ Cl	0.5g
KH ₂ PO ₄	0.15g
CaCl ₂ ·2H ₂ O solution	10.0mL
MgSO ₄ ·7H ₂ O solution	10.0mL
Sodium acetate solution	10.0mL
Yeast extract solution	2.0mL
Trace elements solution SL-4	1.0mL
pH 7.0 ± 0.2 at 25°C	

CaCl₂·2H₂O Solution:

Composition per 10.0mL:

CaCl ₂ ·2H ₂ O	0.1g
--------------------------------------	------

Preparation of CaCl₂·2H₂O Solution: Add CaCl₂·2H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

MgSO₄·7H₂O Solution:

Composition per 10.0mL:

MgSO ₄ ·7H ₂ O	1.0g
--------------------------------------	------

Preparation of MgSO₄·7H₂O Solution: Add MgSO₄·7H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Sodium Acetate Solution:

Composition per 10.0mL:

Sodium acetate	0.82g
----------------	-------

Preparation of Sodium Acetate Solution: Add sodium acetate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Yeast Extract Solution:

Composition per 10.0mL:

Yeast extract	1.0g
---------------	------

Preparation of Yeast Extract Solution: Add yeast extract to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution SL-4:

Composition per liter:

EDTA	0.5g
FeSO ₄ ·7H ₂ O	0.2g
Trace elements solution SL-6	100.0mL

Trace Elements Solution SL-6:

Composition per liter:

MnCl ₂ ·4H ₂ O	0.5g
H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
Na ₂ MoO ₄ ·2H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Trace Elements Solution SL-4: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except CaCl₂·2H₂O solution, MgSO₄·7H₂O solution, sodium acetate solution, yeast extract solution, and trace elements solution SL-4, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 10.0mL of sterile CaCl₂·2H₂O solution, 10.0mL of sterile MgSO₄·7H₂O solution, 10.0mL of sterile sodium acetate solution, 2.0mL of sterile yeast extract solution, and 1.0mL of sterile trace elements solution SL-4. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Catenococcus thiocyclus*.

Caulobacter Medium

Composition per liter:

Agar	10.0g
Peptone	2.0g
Yeast extract	1.0g
MgSO ₄ ·7H ₂ O	0.2g
Riboflavin	1.0mg

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Dis-

tribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Caulobacter* species from fresh water.

Caulobacter Medium

Composition per liter:

Agar	10.0g
Peptone.....	2.0g
Yeast extract.....	1.0g
MgSO ₄ ·7H ₂ O	0.2g

pH 7.0 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Caulobacter* species from fresh water.

Caulobacter Medium

Composition per liter:

Agar	10.0g
Peptone.....	0.5g
Seawater, filtered	1.0L

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Combine components. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Caulobacter* species from marine isolates.

Caulobacter Medium

Composition per liter:

Glucose	1.0g
Peptone.....	1.0g
Yeast extract.....	1.0g
Salt solution	100.0mL

Salt Solution:

Composition per 100.0mL:

EDTA	0.1g
KNO ₃	0.1g
K ₂ HPO ₄	0.066g
MgSO ₄	0.033g
FeSO ₄ ·7H ₂ O.....	9.3mg
NaBO ₃ ·4H ₂ O.....	2.63mg
MgCl ₂ ·4H ₂ O.....	1.81mg
CaCl ₂	1.2mg
(NH ₄) ₆ Mo ₇ O ₂₄ ·7H ₂ O	1.0mg
ZnSO ₄ ·7H ₂ O	0.22mg
CuSO ₄ ·5H ₂ O	0.079mg
Co(NO ₃) ₂ ·H ₂ O	0.02mg

Preparation of Salt Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the enrichment of *Stella* species from polluted waters.

Caulobacter Medium

Composition per liter:

Agar	10.0g
Peptone	2.0g
Yeast extract.....	1.0g
MgSO ₄ ·7H ₂ O.....	0.2g

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Gently heat to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Asticcacaulis excentricus*, *Caulobacter* species, *Labrys monachus*, *Pedomicrobium* species, *Pirellula staleyi*, *Pseudomonas carboxydohydrogena*, and *Stella* species.

Caulobacter Medium II

Composition per liter:

Peptone	10.0g
Yeast extract.....	3.0g
Seawater.....	1.0L

pH 7.2–7.4 at 25°C

Preparation of Medium: Add components to filtered aged seawater and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2–7.4. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Caulobacter halobacteroides* and *Caulobacter maris*.

Caulobacter Medium with Riboflavin

Composition per liter:

Peptone	10.0g
Yeast extract.....	3.0g
Riboflavin	1.0mg
Seawater.....	1.0L

pH 7.2–7.4 at 25°C

Preparation of Medium: Add components to filtered aged seawater and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.3. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Caulobacter vibrioides*.

CBI Agar

See: [Clostridium botulinum Isolation Agar](#)

CC Medium

Composition per liter:

Agar	20.0g
KH ₂ PO ₄	4.0g
Potato starch.....	0.5g
Solution 3.....	100.0mL
Solution 1.....	10.0mL

pH 7.3 ± 0.2 at 25°C

Solution 1:

Composition per liter:

MgSO ₄ ·7H ₂ O.....	20.0g
CaCl ₂ ·2H ₂ O	2.0g
FeSO ₄ ·7H ₂ O.....	0.4g
H ₃ BO ₃	0.02g
MnSO ₄ ·2H ₂ O.....	0.015g
NaMoO ₄ ·2H ₂ O.....	0.015g

KI	0.01g
ZnSO ₄	4.0mg
CoCl ₂ ·4H ₂ O	0.4mg
CuSO ₄ ·5H ₂ O	0.4mg

Preparation of Solution 1: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH with 10.0mL of 10% HCl solution.

Solution 3:

Composition per 100.0mL:

Pancreatic digest of casein	12.0g
Yeast extract	12.0g
L-Cysteine-HCl	0.5g
L-Asparagine	0.03g
DL-Tryptophan	0.02g
Solution 2	12.0mL

Preparation of Solution 3: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Solution 2:

Composition per 100.0mL:

<i>p</i> -Aminobenzoic acid	0.02g
Calcium pantothenate	0.02g
<i>m</i> -Inositol	0.02g
Pyridoxine-HCl	0.02g
Thiamine-HCl	0.02g
Nicotinamide	0.01g
Nicotinic acid	0.01g
Folic acid	5.0mg
Biotin	1.0mg
Vitamin B ₁₂	1.0mL

Preparation of Solution 2: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add KH₂PO₄ to distilled/deionized water and bring volume to 250.0mL. Mix thoroughly. Adjust pH to 7.6 with NaOH. Add 10.0mL of solution 1. In a separate flask, add potato starch to 70.0mL of boiling distilled/deionized water. Add potato starch solution to other solution. Add agar. Bring volume to 900.0mL of distilled/deionized water. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 100.0mL of sterile solution 3. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of *Actinomycetes* species.

CCD Agar with Pyruvate and Cefazolin (Blood-free Selective Medium)

Composition per liter:

Agar	12.0g
Beef extract	10.0g
Peptone	10.0g
NaCl	5.0g
Charcoal, bacteriological	4.0g
Casein hydrolysate	3.0g
Sodium deoxycholate solution	10.0mL
FeSO ₄ solution	5.0mL
Sodium pyruvate solution	5.0mL
Cefazolin solution	1.0mL

pH 7.4 ± 0.2 at 25°C

Source: This medium, without deoxycholate and cefazolin solutions, is available as a premixed powder from HiMedia.

FeSO₄ Solution:

Composition per 10.0mL:

FeSO ₄	0.5g
-------------------------	------

Preparation of FeSO₄ Solution: Add FeSO₄ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool 25°C.

Sodium Pyruvate Solution:

Composition per 10.0mL:

Sodium pyruvate	0.5g
-----------------------	------

Preparation of Sodium Pyruvate Solution: Add sodium pyruvate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool 25°C.

Sodium Deoxycholate Solution:

Composition per 100.0mL:

Sodium deoxycholate	10.0g
---------------------------	-------

Preparation of Sodium Deoxycholate Solution: Add sodium deoxycholate to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool 25°C.

Cefazolin Solution:

Composition per 10.0mL:

Cefazolin	0.1g
-----------------	------

Preparation of Cefazolin Solution: Add cefazolin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except cefazolin solution and sodium deoxycholate solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Heat with frequent agitation and boil for 1 min to completely dissolve. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Add 10.0mL of sterile sodium deoxycholate solution and 1.0mL of sterile cefazolin solution. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the selective isolation of *Campylobacter* species, especially *Campylobacter jejuni* from human feces.

CCDA

See: *Campylobacter Charcoal
Differential Agar*

CCFA

See: *Clostridium difficile Agar*

CCVC Medium (Cephalothin Cycloheximide Vancomycin Colistin Medium)

Composition per liter:

BCYE-alpha base	990.0mL
Antibiotic supplement solution	10.0mL
pH 6.9 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

BCYE-Alpha Base:

Composition per liter:

Agar	15.0g
Yeast extract	10.0g

ACES buffer (2-[(2-amino-2-oxoethyl)-amino]-ethane sulfonic acid).....	10.0g
Charcoal, activated.....	2.0g
α -Ketoglutarate.....	1.0g
$\text{Fe}_4(\text{P}_2\text{O}_7)_3 \cdot 9\text{H}_2\text{O}$	0.25g
L-Cysteine-HCl-H ₂ O solution.....	10.0mL

L-Cysteine-HCl-H₂O Solution:**Composition per 10.0mL:**

L-Cysteine-HCl-H ₂ O.....	0.4g
--------------------------------------	------

Preparation of L-Cysteine-HCl-H₂O Solution: Add L-cysteine-HCl-H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of BCYE-Alpha Base: Add components, except L-cysteine-HCl-H₂O solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Adjust medium to pH 6.9 with 1N KOH. Heat gently and bring to boiling for 1 min. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Add 4.0mL of L-cysteine-HCl-H₂O solution. Mix thoroughly.

Antibiotic Supplement Solution:**Composition per 10.0mL:**

Cycloheximide.....	80.0mg
Colistin.....	16.0mg
Cephalothin.....	4.0mg
Vancomycin.....	0.5mg

Preparation of Antibiotic Supplement Solution: Add components to 10.0mL of distilled/deionized water. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: To cooled BCYE-alpha base, add 10.0mL sterile antibiotic supplement. Mix thoroughly. Adjust pH to 6.9 with sterile 1N KOH. Pour into sterile Petri dishes with constant agitation to keep charcoal in suspension.

Use: For the selective isolation and cultivation of *Legionella* species from environmental samples.

CCY Modified Medium**Composition per liter:**

Yeast extract.....	30.0g
Casamino acids.....	20.0g
Na_2HPO_4	2.48g
KH_2PO_4	0.41g
$\text{MgSO}_4 \cdot 7\text{H}_2\text{O}$	20.0mg
$\text{MnSO}_4 \cdot \text{H}_2\text{O}$	7.5mg
Citric acid.....	6.4mg
$\text{FeSO}_4 \cdot 7\text{H}_2\text{O}$	6.4mg
Sodium pyruvate solution.....	100.00mL

pH 7.3 ± 0.2 at 25°C

Sodium Pyruvate Solution:**Composition per 100.0mL:**

Sodium pyruvate.....	23.2g
----------------------	-------

Preparation of Sodium Pyruvate Solution: Add sodium pyruvate to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except sodium pyruvate solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Adjust pH to 7.3. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 100.0mL of sterile sodium

pyruvate solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Staphylococcus aureus*.

CDC Anaerobe Blood Agar**Composition per liter:**

Agar.....	20.0g
Pancreatic digest of casein.....	15.0g
Papaic digest of soybean meal.....	5.0g
NaCl.....	5.0g
Yeast extract.....	5.0g
L-Cystine.....	0.4g
Sheep blood, defibrinated.....	50.0mL
Vitamin K ₁ solution.....	1.0mL
Hemin solution.....	0.5mL

pH 7.5 ± 0.2 at 25°C

Source: This medium is available as a prepared medium from BD Diagnostic Systems.

Vitamin K₁ Solution:**Composition per 100.0mL:**

Vitamin K ₁	1.0g
Ethanol.....	99.0mL

Preparation of Vitamin K₁ Solution: Add vitamin K₁ to 99.0mL of absolute ethanol. Mix thoroughly. Filter sterilize.

Hemin Solution:**Composition per 100.0mL:**

Hemin.....	1.0g
NaOH (1N solution).....	20.0mL

Preparation of Hemin Solution: Add hemin to 20.0mL of 1N NaOH solution. Mix thoroughly. Bring volume to 100.0mL with distilled/deionized water.

Preparation of Medium: Add components, except vitamin K₁ and sheep blood, to distilled/deionized water and bring volume to 949.0mL. Mix thoroughly. Heat gently and bring to boiling for 1 min. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 1.0mL of vitamin K₁ solution and 50.0mL of sterile, defibrinated sheep blood. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the isolation and cultivation of fastidious and slow-growing, obligate anaerobic bacteria from a variety of clinical and nonclinical specimens. For the isolation and cultivation of *Actinomyces israelii*, *Bacteroides melaninogenicus*, *Bacteroides thetaiotaomicron*, *Clostridium haemolyticum*, and *Fusobacterium necrophorum*.

**CDC Anaerobe Blood Agar
with Kanamycin and Vancomycin****Composition per liter:**

Agar.....	20.0g
Pancreatic digest of casein.....	15.0g
NaCl.....	5.0g
Papaic digest of soybean meal.....	5.0g
Yeast extract.....	5.0g
L-Cystine.....	0.4g
Sheep blood, defibrinated.....	50.0mL
Antibiotic solution.....	10.0mL
Vitamin K ₁ solution.....	1.0mL
Hemin solution.....	0.5mL

pH 7.5 ± 0.2 at 25°C

Source: This medium is available as a prepared medium from BD Diagnostic Systems.

Antibiotic Solution:

Composition per 10.0mL:

Kanamycin	0.1g
Vancomycin	7.5mg

Preparation of Antibiotic Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Vitamin K₁ Solution:

Composition per 100.0mL:

Vitamin K ₁	1.0g
Ethanol	99.0mL

Preparation of Vitamin K₁ Solution: Add vitamin K₁ to 99.0mL of absolute ethanol. Mix thoroughly. Filter sterilize.

Hemin Solution:

Composition per 100.0mL:

Hemin	1.0g
NaOH (1N solution)	20.0mL

Preparation of Hemin Solution: Add hemin to 20.0mL of 1N NaOH solution. Mix thoroughly. Bring volume to 100.0mL with distilled/deionized water.

Preparation of Medium: Add components, except vitamin K₁ solution and sheep blood, to distilled/deionized water and bring volume to 949.0mL. Mix thoroughly. Heat gently and bring to boiling for 1 min. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 1.0mL of sterile vitamin K₁ solution and 50.0mL of sterile, defibrinated sheep blood. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the selective isolation of fastidious and slow-growing, obligate anaerobic Gram-negative bacteria, especially *Bacteroides* species, from a variety of clinical and nonclinical specimens.

**CDC Anaerobe Blood Agar
with Phenylethyl Alcohol
(CDC Anaerobe Blood Agar with PEA)**

Composition per liter:

Agar	20.0g
Pancreatic digest of casein	15.0g
NaCl	5.0g
Papaic digest of soybean meal	5.0g
Yeast extract	5.0g
L-Cystine	0.4g
Sheep blood, defibrinated	50.0mL
Vitamin K ₁ solution	10.0mL
Hemin solution	0.5mL

pH 7.5 ± 0.2 at 25°C

Source: This medium is available as a prepared medium from BD Diagnostic Systems.

Vitamin K₁ Solution:

Composition per 100.0mL:

Vitamin K ₁	0.1g
Phenylethyl alcohol	25.0g
Ethanol	74.0mL

Preparation of Vitamin K₁ Solution: Add components to 74.0mL of absolute ethanol. Mix thoroughly. Filter sterilize.

Hemin Solution:

Composition per 100.0mL:

Hemin	1.0g
NaOH (1N solution)	20.0mL

Preparation of Hemin Solution: Add hemin to 20.0mL of 1N NaOH solution. Mix thoroughly. Bring volume to 100.0mL with distilled/deionized water.

Preparation of Medium: Add components, except vitamin K₁ solution and sheep blood, to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Heat gently and bring to boiling for 1 min. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 1.0mL of vitamin K₁ solution and 50.0mL of sterile, defibrinated sheep blood. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the selective isolation of fastidious and slow-growing, obligate anaerobic bacteria from a variety of clinical and nonclinical specimens.

**CDC Anaerobe Laked Blood Agar
with Kanamycin and Vancomycin
(CDC Anaerobe Laked Blood Agar with KV)**

Composition per liter:

Agar	20.0g
Pancreatic digest of casein	15.0g
Papaic digest of soybean meal	5.0g
Yeast extract	5.0g
L-Cystine	0.4g
Sheep blood, defibrinated, laked	50.0mL
Antibiotic solution	10.0mL
Vitamin K ₁ solution	1.0mL
Hemin solution	0.5mL

pH 7.5 ± 0.2 at 25°C

Source: This medium is available as a prepared medium from BD Diagnostic Systems.

Antibiotic Solution:

Composition per 10.0mL:

Kanamycin	0.1g
Vancomycin	7.5mg

Preparation of Antibiotic Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Vitamin K₁ Solution:

Composition per 100.0mL:

Vitamin K ₁	1.0g
Ethanol	99.0mL

Preparation of Vitamin K₁ Solution: Add vitamin K₁ to 99.0mL of absolute ethanol. Mix thoroughly. Filter sterilize.

Hemin Solution:

Composition per 100.0mL:

Hemin	1.0g
NaOH (1N solution)	20.0mL

Preparation of Hemin Solution: Add hemin to 20.0mL of 1N NaOH solution. Mix thoroughly. Bring volume to 100.0mL with distilled/deionized water.

Preparation of Medium: Add components, except antibiotic solution, vitamin K₁, and laked sheep blood, to distilled/deionized water and bring volume to 939.0mL. Mix thoroughly. Heat gently and bring

to boiling for 1 min. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 1.0mL of sterile vitamin K₁ solution and 10.0mL of sterile antibiotic solution. Mix thoroughly. Aseptically add 50.0mL of sterile, defibrinated, laked sheep blood. Laked blood is prepared by freezing whole blood overnight and thawing to room temperature. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the selective isolation of fastidious and slow-growing, obligate anaerobic bacteria from a variety of clinical and nonclinical specimens.

CDC Modified

McClung-Toabe Egg Yolk Agar

See: McClung-Toabe Egg Yolk Agar, CDC Modified

Cefiximine Rhamnose Sorbitol MacConkey Agar (CR-SMAC Agar Base)

Composition per liter:

Peptone.....	20.0g
Agar	15.0g
Sorbitol.....	10.0g
NaCl	5.0g
Rhamnose.....	5.0g
Bile Salts No. 3	1.5g
Neutral Red	0.03g
Crystal Violet.....	0.001g
Selective supplement solution	10.0mL

pH 7.1 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Selective Supplement Solution:

Composition per 10.0mL:

Cefiximine	0.05mg
------------------	--------

Preparation of Selective Supplement Solution: Add cefiximine to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except selective supplement solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add selective supplement solution. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the detection of *Escherichia coli* O157:H7. This is a elective, differential medium based on Sorbitol MacConkey Agar with added rhamnose and cefixime. This medium provides a selective base with improved differentiation of *E. coli* O157. The addition of rhamnose aids in the differentiation of *Escherichia coli* O157 from background flora. Cefixime reduces the level of competing flora, particularly *Proteus* spp., that often account for large numbers of non-sorbitol fermenting colonies. *E. coli* O157 do not usually ferment sorbitol or rhamnose, so will appear as straw colored colonies. However, rhamnose is fermented by most sorbitol negative *E. coli* of other serogroups. These colonies will be pink/red and will not be counted as presumptive *E. coli* O157 colonies.

Cefoperazone Vancomycin Amphotericin Medium

See: CVA Medium

Cefsulodin Irgasan® Novobiocin Agar (CIN Agar) (Yersinia Selective Agar) (BAM M35)

Composition per 1008.0mL:

Basal medium	757.0mL
Desoxycholate solution.....	200.0mL
Cefsulodin solution.....	10.0mL
Novobiocin solution.....	10.0mL
Crystal Violet solution.....	10.0mL
Strontium chloride solution	10.0mL
Neutral Red solution.....	10.0mL
NaOH, 5N.....	1.0mL
Irgasan solution.....	1.0mL

pH 7.4 ± 0.2 at 25°C

Basal Medium:

Composition per 757.0mL:

Mannitol.....	20.0g
Special peptone.....	20.0g
Agar	12.0g
Sodium pyruvate.....	2.0g
Yeast extract.....	2.0g
NaCl.....	1.0g
Magnesium sulfate solution.....	1.0mL

Preparation of Basal Medium: Add components to distilled/deionized water and bring volume to 757.0mL. Mix thoroughly. Gently heat and bring to boiling with stirring. Cool to about 80°C by placing in a 50°C water bath for about 10 min.

Magnesium Sulfate Solution:

Composition per 10mL:

MgSO ₄ ·7H ₂ O	0.1g
--	------

Preparation of Magnesium Sulfate Solution: Add MgSO₄·7H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly.

Irgasan Solution:

Composition per 10mL:

Irgasan (triclosan).....	0.04g
--------------------------	-------

Preparation of Irgasan Solution: Add irgasan to 95% ethanol and bring volume to 10.0mL. Mix thoroughly. Can be stored for 4 weeks at –20°C.

Desoxycholate Solution:

Composition per 200.0mL:

Na-desoxycholate	0.5g
------------------------	------

Preparation of Desoxycholate Solution: Add desoxycholate to distilled/deionized water and bring volume to 200.0mL. Mix thoroughly. Gently heat and bring to boiling with stirring. Cool to 50–55°C.

Neutral Red Solution:

Composition per 10.0mL:

Neutral Red.....	30.0mg
------------------	--------

Preparation of Neutral Red Solution: Add Neutral Red to 10.0mL of distilled/deionized water. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Crystal Violet Solution:

Composition per 10.0mL:

Crystal Violet.....	1.0mg
---------------------	-------

Preparation of Crystal Violet Solution: Add Crystal Violet to 10.0mL of distilled/deionized water. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Cefsulodin Solution:

Composition per 10.0mL:

Cefsulodin..... 15.0mg

Preparation of Cefsulodin Solution: Add cefsulodin to 10.0mL of distilled/deionized water. Mix thoroughly. Filter sterilize.

Novobiocin Solution:

Composition per 10.0mL:

Novobiocin..... 2.5mg

Preparation of Novobiocin Solution: Add novobiocin to 10.0mL of distilled/deionized water. Mix thoroughly. Filter sterilize.

Strontium Chloride Solution:

Composition per 10.0mL:

SrCl₂·6H₂O..... 1.0g

Preparation of Strontium Chloride: Add strontium chloride to 10.0mL of distilled/deionized water. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add 1.0mL irgasan solution to 757.0mL basal medium. Mix thoroughly. Cool to 50–55°C. Add 200.0mL desoxycholate solution. Mix thoroughly. Solution should remain clear. Aseptically add 1.0mL 5N NaOH, 10.0mL Neutral Red solution, 10.0mL Crystal Violet solution, 10.0mL cefsulodin solution, and 10.0mL novobiocin solution. Mix thoroughly. Slowly add 10.0mL strontium chloride solution while continuously stirring. Adjust pH to 7.4 with 5N NaOH. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation and differentiation of *Yersinia enterocolitica* based on mannitol fermentation. *Yersinia enterocolitica* appears as “bull’s eye” colonies with deep red centers surrounded by a transparent periphery.

Cefsulodin Irgasan® Novobiocin Agar

See: **CIN Agar**

Celery Decoction Agar

Composition per liter:

Potatoes, infusion from..... 50.0g

Agar..... 15.0g

Glucose..... 5.0g

Celery decoction..... 320.0mL

pH 5.6 ± 0.2 at 25°C

Celery Decoction:

Composition per 500.0mL:

Celery leaves and petioles..... 50.0g

Preparation of Celery Decoction: Coarsely cut celery into pieces. Add celery pieces to 500.0mL of distilled/deionized water. Puree in a blender at high speed for 2 min. Strain through a wire sieve. Gently heat and bring to boiling. Maintain at 100°C for 5 min. Strain through a very fine sieve or muslin.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 5.6 with 20% H₂SO₄. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Septoria apiicola*.

Celery Decoction Agar

Composition per liter:

Potatoes, infusion from..... 200.0g

Glucose..... 20.0g

Agar..... 15.0g

Potato dextrose broth..... 4.0g

Celery decoction..... 320.0mL

pH 5.6 ± 0.2 at 25°C

Potatoes, Infusion From:

Composition per 500.0mL:

Potatoes..... 300.0g

Preparation of Potatoes, Infusion From: Peel and dice potatoes. Add 500.0mL of distilled/deionized water. Gently heat and bring to boiling. Continue boiling for 30 min. Filter through cheesecloth.

Celery Decoction:

Composition per 500.0mL:

Celery leaves and petioles..... 50.0g

Preparation of Celery Decoction: Coarsely cut celery into pieces. Add 500.0mL of distilled/deionized water. Puree in a blender at high speed for 2 min. Strain through a kitchen-type sieve. Gently heat and bring to boiling. Continue boiling for 5 min. Strain through a very fine sieve or muslin.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 5.6 with 20% H₂SO₄. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Septoria apiicola*.

Cell Growth Medium

Composition per 2250.0mL:

Eagle’s minimal essential medium

with Hanks’ salts (MEMH)..... 1.0L

L 15 medium, modified Leibovitz..... 1.0L

Fetal calf serum..... 200.0mL

NaHCO₃ solution..... 50.0mL

pH 7.5 at 25°C

MEMH:

Composition per liter:

NaCl..... 8.0g

Glucose..... 1.0g

KCl..... 0.4g

CaCl₂·2H₂O..... 0.14g

MgSO₄·7H₂O..... 0.1g

KH₂PO₄..... 0.06g

Na₂HPO₄..... 0.05g

L-Isoleucine..... 0.026g

L-Leucine..... 0.026g

L-Lysine..... 0.026g

L-Threonine..... 0.024g

L-Valine..... 0.0235g

L-Tyrosine..... 0.018g

L-Arginine..... 0.0174g

L-Phenylalanine..... 0.0165g

L-Cystine..... 0.012g

L-Histidine..... 8.0mg

L-Methionine..... 7.5mg

Phenol Red..... 5.0mg

L-Tryptophan	4.0mg
Inositol	1.8mg
Biotin	1.0mg
Folic acid.....	1.0mg
Calcium pantothenate	1.0mg
Choline chloride.....	1.0mg
Nicotinamide.....	1.0mg
Pyridoxal-HCl	1.0mg
Thiamine-HCl	1.0mg
Riboflavin	0.1mg

Preparation of MEMH: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

L 15 Medium, Modified Leibovitz:

Composition per liter:

NaCl	8.0g
DL-Threonine.....	0.6g
Sodium pyruvate	0.6g
DL-Alanine.....	0.5g
L-Arginine, free base.....	0.5g
KCl.....	0.4g
L-Asparagine-H ₂ O	0.3g
L-Histidine, free base.....	0.3g

Glycine.....	0.2g
L-Serine	0.2g
Na ₂ HPO ₄ , anhydrous	0.2g
CaCl ₂ , anhydrous	0.1g
L-Cysteine, free base	0.1g
L-Leucine-HCl.....	0.1g
Streptomycin	0.1g
MgCl ₂ , anhydrous	0.094g
D-Galactose	0.09g
KH ₂ PO ₄	0.06g
Gentamicin.....	0.05g
L-Tryptophan	0.02g
Phenol Red	0.01g
<i>i</i> -Inositol.....	2.0mg
Choline chloride.....	1.0mg
D-Calcium pantothenate	1.0mg
Folic acid.....	1.0mg
Nicotinamide.....	1.0mg
Pyridoxine-HCl	1.0mg
Thiamine monophosphate-2H ₂ O.....	1.0mg
Riboflavin-5-phosphate	0.1mg
Penicillin G	100,000U

pH 7.5 ± 0.2 at 25°C

Preparation of L 15 Medium, Modified Leibovitz: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Store at 5°C.

NaHCO₃ Solution:

Composition per 100.0mL:

NaHCO ₃	7.5g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Aseptically combine 1.0L of sterile Eagle's minimal essential medium with Hanks' salts (MEMH) and 1.0L of sterile L 15 medium, modified Leibovitz. Mix thoroughly. Immediately prior to use, aseptically add 200.0mL of fetal calf serum and 50.0mL of NaHCO₃ solution. Mix thoroughly. Aseptically distribute into sterile containers.

Use: For the cultivation of mammalian HeLa or Vero tissue culture cells to test the cytopathic effects of *Escherichia coli*.

Cellobiose Arginine Lysine Agar

See: [CAL Agar/Broth](#)

Cellobiose Polymyxin B Colistin Agar, Modified

Composition per liter:

Solution 1	900.0mL
Solution 2	100.0mL
pH 7.6 ± 0.2 at 25°C	

Solution 1:

Composition per 900.0mL:

NaCl.....	20.0g
Agar	15.0g
Peptone	10.0g
Beef extract.....	5.0g
1000× dye stock solution.....	1.0mL

Preparation of Solution 1: Add components to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Adjust pH to 7.6. Gently heat and bring to boiling. Do not autoclave. Cool to 48°–55°C.

1000X Dye Stock Solution:

Composition per 100.0mL:

Bromthymol Blue	4.0g
Cresol Red	4.0g
Ethanol (95% solution).....	100.0mL

Preparation of 1000X Dye Stock Solution: Add Bromthymol Blue and Cresol Red to 100.0mL of ethanol. Mix thoroughly.

Solution 2:

Composition per 100.0mL:

Cellobiose.....	10.0g
Colistin.....	400,000U
Polymyxin B	100,000U

Preparation of Solution 2: Add cellobiose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Gently heat until dissolved. Cool to 25°C. Add colistin and polymyxin B. Mix thoroughly.

Preparation of Medium: Combine cooled solution 1 and solution 2. Mix thoroughly. Do not autoclave. Pour into sterile Petri dishes.

Use: For the cultivation of *Vibrio* species from foods.

Cellobiose Polymyxin Colistin Agar (CPC Agar)

Composition per liter:

Solution A.....	900.0mL
Solution B	100.0mL
pH 7.6 ± 0.2 at 25°C	

Solution A:

Composition per 900.0mL:

NaCl.....	20.0g
Agar	15.0g

Peptone.....	10.0g
Beef extract.....	5.0g
Bromthymol Blue.....	0.04g
Cresol Red.....	0.04g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Adjust pH to 7.6. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C.

Solution B:

Composition per 100.0mL:

Cellobiose.....	15.0g
Colistin.....	1,360,000U
Polymyxin B.....	100,000U

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Aseptically combine 900.0mL of cooled, sterile solution A and 100.0mL of sterile solution B. Mix thoroughly. Pour into sterile Petri dishes. Use within 7 days.

Use: For the cultivation and identification of *Vibrio* species from foods.

Cellulase Solution (BAM M187)

Composition per 100.0mL:

Cellulase.....	1.0g
----------------	------

Preparation of Medium: Add cellulase to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Use: For the pre-treatment of guar gum in the analysis of *Salmonella* spp. The cellulase reduces the viscosity of the guar gum so that it can be pipetted into broth or agar media.

Cellulolytic Agar with Sea Salts

Composition per liter:

Agar.....	20.0g
NH ₄ Cl.....	2.0g
K ₂ HPO ₄	1.65g
Yeast extract.....	1.2g
L-Cysteine·HCl·H ₂ O.....	0.5g
Cellulose suspension.....	200.0mL
Filtered seawater.....	200.0mL
Mineral solution.....	150.0mL
Resazurin (0.1% solution).....	1.0mL
pH 7.2 ± 0.2 at 25°C	

Cellulose Suspension:

Composition per 200.0mL:

Cellulose powder, Whatman CF11.....	8.0g
-------------------------------------	------

Preparation of Cellulose Suspension: Add cellulose powder to 200.0mL of distilled/deionized water and mix thoroughly.

Mineral Solution:

Composition per liter:

NaCl.....	6.0g
(NH ₄) ₂ SO ₄	6.0g
CaCl ₂	0.6g
MgSO ₄	0.6g

Preparation of Mineral Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Prepare and dispense medium anaerobically under 100% N₂. Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2 with 5M NaOH. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Clostridium papyrosolvens* and other marine bacteria that can utilize cellulose as a carbon source.

Cellulolytic Agar for Thermophiles

Composition per liter:

Agar.....	30.0g
K ₂ HPO ₄	1.65g
NH ₄ SO ₄	1.6g
Yeast extract.....	1.0g
NaCl.....	0.96g
L-Cysteine·HCl·H ₂ O.....	0.5g
CaCl ₂	0.096g
MgSO ₄	0.096g
Cellulose suspension.....	200.0mL
Resazurin (0.1% solution).....	1.0mL
pH 7.2 ± 0.2 at 25°C	

Cellulose Suspension:

Composition per 200.0mL:

Cellulose powder, Whatman CF11.....	8.0g
-------------------------------------	------

Preparation of Cellulose Suspension: Add cellulose powder to 200.0mL of distilled/deionized water and mix thoroughly.

Preparation of Medium: Prepare and dispense medium anaerobically in 100% N₂. Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2 with 5M NaOH. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For cultivation of *Clostridium stercorarium* and other bacteria that can utilize cellulose as a carbon source.

Cellulolytic Broth for Thermophiles

Composition per liter:

K ₂ HPO ₄	1.65g
NH ₄ SO ₄	1.6g
Yeast extract.....	1.0g
NaCl.....	0.96g
L-Cysteine·HCl·H ₂ O.....	0.5g
CaCl ₂	0.096g
MgSO ₄	0.096g
Resazurin (0.1% solution).....	1.0mL
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Prepare and dispense medium anaerobically in 100% N₂. Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2 with 5M NaOH. Distribute into tubes or flasks that contain cellulose as a strip (4.5cm × 1.0cm) of Whatman #1 filter paper. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Clostridium stercorarium* and other bacteria that can utilize cellulose as a carbon source.

Cellulolytic Broth with Sea Salts

Composition per liter:

K ₂ HPO ₄	1.65g
NH ₄ Cl.....	1.0g

Yeast extract.....	0.6g
L-Cysteine·HCl·H ₂ O.....	0.5g
Filtered seawater.....	200.0mL
Mineral solution.....	150.0mL
Resazurin (0.1% solution).....	1.0mL
pH 7.2 ± 0.2 at 25°C	

Mineral Solution:**Composition per liter:**

NaCl.....	6.0g
(NH ₄) ₂ SO ₄	6.0g
CaCl ₂	0.6g
MgSO ₄	0.6g

Preparation of Mineral Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Prepare and dispense medium anaerobically in 100% N₂ atmosphere. Add components to distilled/deionized water and bring volume to 1.0L. Adjust pH to 7.2 with 5M NaOH. Distribute into tubes or flasks that contain cellulose as a strip (4.5cm × 1.0cm) of Whatman No. 1 filter paper. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Clostridium papyrosolvens* and other marine bacteria that can utilize cellulose as a carbon source.

Cellulolytic Clostridia Medium**Composition per liter:**

Cellulose.....	20.0g
CaCO ₃	2.0g
K ₂ HPO ₄	1.0g
(NH ₄) ₂ SO ₄	1.0g
MgSO ₄ ·7H ₂ O.....	0.5g
NaCl.....	0.5g
Resazurin.....	1.0mg

pH 7.1 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation, cultivation, and enrichment of cellulolytic *Clostridium* species.

Cellulolytic Medium**Composition per liter:**

NaHCO ₃	2.06g
Cellulose.....	2.0g
NH ₄ Cl.....	0.68g
K ₂ HPO ₄	0.296g
KH ₂ PO ₄	0.18g
(NH ₄) ₂ SO ₄	0.15g
MgSO ₄ ·7H ₂ O.....	0.12g
CaCl ₂ ·2H ₂ O.....	61.0mg
FeSO ₄ ·7H ₂ O.....	21.0mg
Nitritotriacetic acid.....	15.0mg
NaCl.....	10.0mg
MnSO ₄ ·H ₂ O.....	5.0mg
CoCl ₂ ·H ₂ O.....	1.0mg
Resazurin.....	1.0mg
ZnSO ₄ ·7H ₂ O.....	1.0mg
CuSO ₄ ·5H ₂ O.....	0.1mg
H ₃ BO ₃	0.1mg

KAl(SO ₄) ₂ ·12H ₂ O.....	0.1mg
Na ₂ MoO ₄ ·2H ₂ O.....	0.1mg
Wolfe's vitamin solution.....	10.0mL
L-Cysteine·HCl·H ₂ O solution.....	5.0mL
pH 7.5 ± 0.2 at 25°C	

Wolfe's Vitamin Solution:**Composition per liter:**

Pyridoxine·HCl.....	10.0mg
Thiamine·HCl.....	5.0mg
Riboflavin.....	5.0mg
Nicotinic acid.....	5.0mg
Calcium DL-pantothenate.....	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Thioctic acid.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Cyanocobalamin.....	100.0µg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

L-Cysteine·HCl·H₂O Solution:**Composition per 20.0mL:**

L-Cysteine·HCl·H ₂ O.....	1.0g
--------------------------------------	------

Preparation of L-Cysteine·HCl·H₂O Solution: Add L-cysteine·HCl·H₂O to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except Wolfe's vitamin solution and L-cysteine·HCl·H₂O solution, to distilled/deionized water and bring volume to 985.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL of sterile Wolfe's vitamin solution and 5.0mL of sterile L-cysteine·HCl·H₂O solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of cellulolytic bacteria.

Cellulolytic Medium with Rumen Fluid**Composition per liter:**

Basal medium.....	975.0mL
Alkaline solution.....	25.0mL

pH 6.8 ± 0.2 at 25°C

Basal Medium:**Composition per 975.0mL:**

Agar.....	15.0g
NaHCO ₃	6.37g
Pancreatic digest of casein.....	5.0g
Cellobiose.....	5.0g
NaCl.....	0.9g
(NH ₄) ₂ SO ₄	0.9g
K ₂ HPO ₄	0.45g
KH ₂ PO ₄	0.45g
MgSO ₄ ·7H ₂ O.....	0.18g
CaCl ₂	0.09g
Resazurin.....	1.0mg
Rumen fluid, clarified.....	400.0mL

Preparation of Basal Medium: Add components to distilled/deionized water and bring volume to 975.0mL. Mix thoroughly. Gently heat and bring to boiling under a gas phase of 98% CO₂ + 2% H₂. Cool slightly.

Alkaline Solution:**Composition** per 25.0mL:

L-Cysteine-HCl·H ₂ O	0.25g
Na ₂ S·9H ₂ O	0.25g

Preparation of Alkaline Solution: Add components to 25.0mL of distilled/deionized water. Mix thoroughly. Prepare freshly.

Preparation of Medium: Prepare 975.0mL of basal medium. Heat to boiling and cool to 25°C. Add 25.0mL of freshly prepared alkaline solution. Distribute into tubes using anaerobic techniques under a gas phase of 98% CO₂ + 2% H₂. Autoclave for 15 min at 15 psi pressure–121°C. Adjust pH to 6.8.

Use: For the cultivation and maintenance of *Clostridium polysaccharolyticum*.

Cellulolytic Medium with Rumen Fluid and Soluble Starch

Composition per liter:

Basal medium	975.0mL
Alkaline solution	25.0mL
pH 6.8 ± 0.2 at 25°C	

Basal Medium:**Composition** per 975.0mL:

Agar	15.0g
NaHCO ₃	6.37g
Pancreatic digest of casein	5.0g
Cellobiose	5.0g
Soluble starch	5.0g
NaCl	0.9g
(NH ₄) ₂ SO ₄	0.9g
K ₂ HPO ₄	0.45g
KH ₂ PO ₄	0.45g
MgSO ₄ ·7H ₂ O	0.18g
CaCl ₂	0.09g
Resazurin	1.0mg

Preparation of Basal Medium: Add components to distilled/deionized water and bring volume to 975.0mL. Mix thoroughly. Gently heat and bring to boiling under a gas phase of 98% CO₂ + 2% H₂. Cool slightly.

Alkaline Solution:**Composition** per 25.0mL:

L-Cysteine-HCl·H ₂ O	0.25g
Na ₂ S·9H ₂ O	0.25g

Preparation of Alkaline Solution: Add components to 25.0mL of distilled/deionized water. Mix thoroughly. Prepare freshly.

Preparation of Medium: Prepare 975.0mL of basal medium. Heat to boiling and cool to 25°C. Add 25.0mL of freshly prepared alkaline solution. Distribute into tubes using anaerobic techniques under a gas phase of 98% CO₂ + 2% H₂. Autoclave for 15 min at 15 psi pressure–121°C. Adjust pH to 6.8.

Use: For the cultivation of *Selenomonas ruminantium* and *Succinomonas amylolytica*.

Cellulomonas fermentans Medium

Composition per liter:

Yeast extract	5.0g
K ₂ HPO ₄	2.21g
KH ₂ PO ₄	1.5g
(NH ₄) ₂ SO ₄	1.3g

MgCl ₂ ·6H ₂ O	0.1g
CaCl ₂ ·2H ₂ O	0.02g
FeSO ₄ ·7H ₂ O	1.25mg
Resazurin	1.0mg
Cellobiose solution	50.0mL
NaHCO ₃ solution	10.0mL
L-Cysteine-HCl solution	10.0mL

pH 7.4 ± 0.2 at 25°C

Cellobiose Solution:**Composition** per 50.0mL:

D-Cellobiose (or cellulose)	5.0g
-----------------------------------	------

Preparation of Cellobiose Solution: Add cellobiose (or cellulose) to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C.

NaHCO₃ Solution:**Composition** per 10.0mL:

NaHCO ₃	0.8g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C.

L-Cysteine-HCl Solution:**Composition** per 10.0mL:

L-Cysteine-HCl	0.5g
----------------------	------

Preparation of L-Cysteine-HCl Solution: Add L-cysteine-HCl to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except cellobiose solution, NaHCO₃ solution, and L-cysteine-HCl solution, to distilled/deionized water and bring volume to 930.0mL. Mix thoroughly. Sparge under 100% N₂ for 10 min. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 50.0mL of sterile cellobiose solution, 10.0mL of sterile NaHCO₃ solution, and 10.0mL of sterile L-cysteine-HCl solution. Mix thoroughly.

Use: For the cultivation and maintenance of *Cellulomonas fermentans*.

Cellulomonas PTYG Medium (Cellulomonas Peptone Tryptone Yeast Extract Glucose Medium)

Composition per liter:

Agar	15.0g
Glucose	5.0g
Peptone	5.0g
Pancreatic digest of casein	5.0g
Yeast extract	5.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Cellulomonas* species.

Cellulose Agar

Composition per liter:

Agar	20.0g
Cellulose, ball milled	10.0g
KH ₂ PO ₄	1.0g

(NH ₄) ₂ SO ₄	0.5g
L-Asparagine.....	0.5g
KCl.....	0.5g
Yeast extract.....	0.5g
MgSO ₄	0.2g
CaCl ₂	0.1g

pH 6.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Gently heat and bring to boiling. Adjust pH to 6.2. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Achaetomium globosum*, *Chaetomium anahelicinum*, *Chaetomium apiculatum*, *Chaetomium atrobrunneum*, *Chaetomium carinthiacum*, *Chaetomium globosum*, *Chaetomium medusarum*, *Chaetomium quadrangulatum*, *Chaetomium reflexum*, *Chaetomium thielavioideum*, *Chaetomium undulatum*, *Chaetomium variosporum*, and *Chrysosporium pannorum*.

Cellulose Anaerobe Medium (LMG Medium 94)

Composition per liter:

NaHCO ₃	2.1g
Cellulose.....	2.0g
NH ₄ Cl.....	0.68g
KH ₂ PO ₄	0.18g
(NH ₄) ₂ SO ₄	0.15g
MgSO ₄ ·7H ₂ O.....	0.12g
K ₂ HPO ₄	296.0mg
CaCl ₂ ·2H ₂ O.....	61.0mg
FeSO ₄ ·7H ₂ O.....	21.0mg
Nitritotriacetic acid.....	15.0mg
NaCl.....	10.0mg
MnSO ₄ ·H ₂ O.....	5.0mg
CoCl ₂ ·6H ₂ O.....	1.0mg
ZnSO ₄ ·7H ₂ O.....	1.0mg
Resazurin.....	1.0mg
CuSO ₄ ·5H ₂ O.....	0.1mg
KAl(SO ₄) ₂ ·12H ₂ O.....	0.1mg
H ₃ BO ₃	0.1mg
Na ₂ MoO ₄ ·2H ₂ O.....	0.1mg
Vitamin solution.....	5.0mL
Cysteine hydrochloride solution.....	5.0mL

pH 7.1 ± 0.2 at 25°C

Vitamin Solution:

Composition per liter:

Pyridoxine·HCl.....	10.0mg
Calcium DL-pantothenate.....	5.0mg
Lipoic acid.....	5.0mg
Nicotinic acid.....	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Riboflavin.....	5.0mg
Thiamine·HCl.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

L-Cysteine Solution:

Composition per 10.0mL:

L-Cysteine·HCl·H ₂ O.....	0.5g
--------------------------------------	------

Preparation of L-Cysteine Solution: Add L-cysteine·HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components except vitamin solution and cysteine hydrochloride solution. Add 485.0mL distilled/deionized water. Adjust pH to 7.1. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 10.0mL of sterile vitamin solution and 5.0mL sterile cysteine hydrochloride solution. Mix thoroughly. Aseptically distribute to tubes or flasks.

Use: For the cultivation of cellulose-utilizing anaerobic bacteria.

Cellulose Broth

Composition per liter:

Cellulose, powdered.....	1.0g
K ₂ HPO ₄	1.0g
(NH ₄) ₂ SO ₄	1.0g
MgSO ₄ ·7H ₂ O.....	0.2g
CaCl ₂ ·2H ₂ O.....	0.1g
FeCl ₃	0.02g

pH 7.0–7.5 at 25°C

Preparation of Medium: Add cellulose to 100.0mL of distilled/deionized water. Mix thoroughly. In a separate flask, add remaining components to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Autoclave both solutions separately for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically combine the two sterile solutions. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the isolation and cultivation of *Cytophaga* species, *Herpetosiphon* species, *Saprospira* species, and *Flexithrix* species.

Cellulose Overlay Agar

Composition per plate:

Stan 5 agar.....	15.0mL
Cellulose overlay agar.....	5.0mL

Stan 5 Agar:

Composition per liter:

Solution B.....	650.0mL
Solution A.....	350.0mL

Solution A:

Composition per 350.0mL:

CaCl ₂ ·2H ₂ O.....	1.0g
(NH ₄) ₂ SO ₄	1.0g
MgSO ₄ ·7H ₂ O.....	1.0g
Trace elements solution.....	1.0mL

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 350.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Trace Elements Solution:

Composition per liter:

EDTA.....	8.0g
MnCl ₂ ·4H ₂ O.....	0.1g

CoCl ₂	0.02g
KBr.....	0.02g
ZnCl ₂	0.02g
CuSO ₄	0.01g
H ₃ BO ₃	0.01g
NaMoO ₄ ·2H ₂ O.....	0.01g
BaCl ₂	5.0mg
LiCl.....	5.0mg
SnCl ₂ ·2H ₂ O.....	5.0mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Solution B:

Composition per 650.0mL:

Agar.....	10.0g
K ₂ HPO ₄	1.0g

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 650.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Preparation of Stan 5 Agar: Aseptically combine 350.0mL of cooled, sterile solution A and 650.0mL of cooled, sterile solution B. Mix thoroughly.

Cellulose Overlay Agar:

Composition per liter:

Solution A.....	350.0mL
Solution B.....	650.0mL

Solution A:

Composition per 350.0mL:

CaCl ₂ ·2H ₂ O.....	1.0g
(NH ₄) ₂ SO ₄	1.0g
MgSO ₄ ·7H ₂ O.....	1.0g
Trace elements solution.....	1.0mL

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 350.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Trace Elements Solution:

Composition per liter:

EDTA.....	8.0g
MnCl ₂ ·4H ₂ O.....	0.1g
CoCl ₂	0.02g
KBr.....	0.02g
ZnCl ₂	0.02g
CuSO ₄	0.01g
H ₃ BO ₃	0.01g
NaMoO ₄ ·2H ₂ O.....	0.01g
BaCl ₂	5.0mg
LiCl.....	5.0mg
SnCl ₂ ·2H ₂ O.....	5.0mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Solution B:

Composition per 650.0mL:

Agar.....	10.0g
K ₂ HPO ₄	1.0g

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 650.0mL. Mix thoroughly. Gently heat and

bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Preparation of Cellulose Overlay Agar: Aseptically combine 350.0mL of cooled, sterile solution A and 650.0mL of cooled, sterile solution B. Mix thoroughly.

Preparation of Medium: Pour cooled, sterile Stan 5 agar into sterile Petri dishes in 15.0mL volumes. Allow agar to solidify. Overlay each plate with 5.0mL of cellulose overlay agar.

Use: For the cultivation of myxobacteria.

Cellvibrio Medium

Composition per liter:

Agar.....	15.0g
NaNO ₃	5.0g
K ₂ HPO ₄	1.0g
MgSO ₄ ·7H ₂ O.....	0.5g
KCl.....	0.5g
FeSO ₄ ·7H ₂ O.....	10.0mg

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Cellvibrio mixtus*, *Cytophaga aurantiaca*, *Cytophaga hutchinsonii*, and *Sporocytophaga myxococcoides*.

CENS Medium (DSMZ Medium 748)

Composition per liter:

Soytone.....	4.0g
NH ₄ Cl.....	1.0g
K ₂ HPO ₄	0.9g
KH ₂ PO ₄	0.6g
Na ₂ S ₂ O ₃ ·5H ₂ O.....	0.5g
MgSO ₄ ·7H ₂ O.....	0.2g
CaCl ₂ ·2H ₂ O.....	75.0mg
EDTA.....	5.0mg
Vitamin B ₁₂	20.0µg
Biotin.....	15.0µg
Na-pyruvate solution.....	10.0mL
Chelated iron solution.....	2.0mL
True Blue trace elements.....	1.0mL

pH 7.0 ± 0.2 at 25°C

Na-pyruvate Solution:

Composition per 10.0mL:

Na-pyruvate.....	2.2g
------------------	------

Preparation of Na-pyruvate Solution: Add Na-pyruvate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

True Blue Trace Elements:

Composition per 250mL:

EDTA.....	2.5g
MnCl ₂ ·4H ₂ O.....	0.2g
H ₃ BO ₃	0.1g
Na ₂ MoO ₄ ·4H ₂ O.....	0.1g
ZnCl ₂	50.0mg
NiCl ₂ ·6H ₂ O.....	50.0mg

CoCl ₂ ·2H ₂ O	20.0mg
CuCl ₂ ·2H ₂ O	10.0mg
Na ₂ SeO ₃	5.0mg
NaVO ₃ ·H ₂ O	5.0mg

Preparation of True Blue Trace Elements: Add components one at a time to approximately 200.0mL distilled/deionized water. Bring final volume to 250.0mL with additional distilled/deionized water.

Chelated Iron Solution:

Composition per 900mL:

EDTA	2.0g
FeCl ₂ ·4H ₂ O	1.0g
HCl	3.0mL

Preparation of Chelated Iron Solution: Add components to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly.

Preparation of Medium: Add components, except Na-pyruvate solution, to distilled/deionized water and bring volume to 990.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 10.0mL sterile Na-pyruvate solution. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Rhodocista centenaria* (*Rhodospirillum centenum*).

CENS Medium

Composition per liter:

Papaic digest of soybean meal	4.0g
NH ₄ Cl	1.0g
K ₂ HPO ₄	0.9g
KH ₂ PO ₄	0.6g
Na ₂ S ₂ O ₃ ·5H ₂ O	0.5g
MgSO ₄ ·7H ₂ O	0.2g
CaCl ₂ ·2H ₂ O	75.0mg
EDTA	5.0mg
Vitamin B ₁₂	20.0μg
D-Biotin	15.0μg
Sodium pyruvate solution	10.0mL
Chelated iron solution	2.0mL
True Blue trace elements	1.0mL

pH 6.8 ± 0.2 at 25°C

Sodium Pyruvate Solution:

Composition per 10.0mL:

Sodium pyruvate	2.2g
-----------------------	------

Preparation of Sodium Pyruvate Solution: Add sodium pyruvate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Chelated Iron Solution:

Composition per 900.0mL:

EDTA	2.0g
FeCl ₂ ·4H ₂ O	1.0g
HCl, concentrated	3.0mL

Preparation of Chelated Iron Solution: Add components to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly.

True Blue Trace Elements:

Composition per 250.0mL:

EDTA	2.5g
MnCl ₂ ·4H ₂ O	0.2g
H ₃ BO ₃	0.1g
Na ₂ MoO ₄ ·2H ₂ O	0.1g

ZnCl ₂	50.0mg
NiCl ₂ ·6H ₂ O	50.0mg
CoCl ₂ ·6H ₂ O	20.0mg
CuCl ₂ ·2H ₂ O	10.0mg
Na ₂ SeO ₃	5.0mg
NaVO ₃	5.0mg

Preparation of True Blue Trace Elements: Add components, one at a time, to 200.0mL of distilled/deionized water. Mix thoroughly. Bring volume to 250.0mL with distilled/deionized water.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.8. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Rhodospirillum centenum*.

Centenum Medium

Composition per liter of tap water:

Agar	20.0g
Yeast extract	10.0g
Sodium pyruvate	2.2g
K ₂ HPO ₄	1.0g
MgSO ₄	0.5g
Vitamin B ₁₂	0.02mg

pH 7.0–7.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Rhodospirillum* species.

Cephalothin Cycloheximide Vancomycin Colistin Medium

See: [CCVC Medium](#)

Ceratocystis Medium

Composition per liter:

Glucose	5.0g
Ammonium tartrate	5.0g
Asparagine	1.0g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.5g
CaCl ₂	0.1g
NaCl	0.1g
Inositol	10.0mg
ZnSO ₄ ·7H ₂ O	4.43mg
MNSO ₄ ·4H ₂ O	4.05mg
FeCl ₃ ·6H ₂ O	4.0mg
Pyridoxine	0.1mg
Thiamine	0.1mg

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Ceratocystis multiannulata*.

Cereal Agar

Composition per liter:

Cereal, precooked mixed	100.0g
Agar	15.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or distribute into sterile tubes. Allow tubes to cool in a slanted position.

Use: For the cultivation and sporulation of fungi.

Cetrimide Agar, Non-USP

Composition per liter:

Beef heart, solids from infusion	500.0g
Agar	15.0g
Tryptose	10.0g
NaCl	5.0g
Cetrimide	0.9g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 13 psi pressure–118°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the selective isolation, cultivation, and identification of *Pseudomonas aeruginosa* and other Gram-negative, nonfermentative bacteria.

Cetrimide Agar, USP (Pseudose[®] Agar)

Composition per liter:

Pancreatic digest of gelatin	20.0g
Agar	13.6g
K ₂ SO ₄	10.0g
MgCl ₂	1.4g
Cetrimide	0.3g
Glycerol	10.0mL

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 13 psi pressure–118°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the selective isolation, cultivation, and identification of *Pseudomonas aeruginosa* and other Gram-negative, nonfermentative bacteria.

Cetrimide Agar Base with Glycerol

Composition per liter:

Pancreatic digest of gelatin	20.0g
K ₂ SO ₄	10.0g
MgCl ₂	1.4g
Cetrimide	0.3g
Glycerol	10.0mL

pH 7.2 ± 0.2 at 25°C

Source: This medium, without glycerol, is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 13 psi pressure–118°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the selective isolation, cultivation, and identification of *Pseudomonas aeruginosa* and other Gram-negative, nonfermentative bacteria.

Cetrimide Agar Base

with Glycerol and Nalidixic Selective Supplement

Composition per liter:

Pancreatic digest of gelatin	20.0g
K ₂ SO ₄	10.0g
MgCl ₂	1.4g
Cetrimide	0.3g
Glycerol	10.0mL
Nalidixic selective supplement	5.0mL

pH 7.2 ± 0.2 at 25°C

Source: This medium, without glycerol and nalidixic acid supplement, is available as a premixed powder from HiMedia.

Nalidixic Selective Supplement:

Composition per 5.0mL:

Nalidixic acid	15.0mg
----------------	--------

Preparation of Nalidixic Selective Supplement: Add nalidixic acid to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except nalidixic selective supplement, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 5.0mL sterile nalidixic selective supplement. Mix thoroughly. Pour into sterile Petri dishes or leave in tubes.

Use: For the selective isolation, cultivation, and identification of *Pseudomonas aeruginosa* and other Gram-negative, nonfermentative bacteria.

Cetrimide HiVeg Agar Base with Glycerol

Composition per liter:

Plant peptone No. 2	20.0g
K ₂ SO ₄	10.0g
MgCl ₂	1.4g
Cetrimide	0.3g
Glycerol	10.0mL

pH 7.2 ± 0.2 at 25°C

Source: This medium, without glycerol, is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 13 psi pressure–118°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the selective isolation, cultivation, and identification of *Pseudomonas aeruginosa* and other Gram-negative, nonfermentative bacteria.

Cetrimide HiVeg Agar Base

with Glycerol and Nalidixic Selective Supplement

Composition per liter:

Plant peptone No. 2	20.0g
K ₂ SO ₄	10.0g
MgCl ₂	1.4g
Cetrimide	0.3g

Glycerol	10.0mL
Nalidixic selective supplement	5.0mL
pH 7.2 ± 0.2 at 25°C	

Source: This medium, without glycerol and nalidixic acid supplement, is available as a premixed powder from HiMedia.

Nalidixic Selective Supplement:

Composition per 5.0mL:

Nalidixic acid	15.0mg
----------------------	--------

Preparation of Nalidixic Selective Supplement: Add nalidixic to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except nalidixic selective supplement, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 5.0mL sterile nalidixic selective supplement. Mix thoroughly. Pour into sterile Petri dishes or leave in tubes.

Use: For the selective isolation, cultivation, and identification of *Pseudomonas aeruginosa* and other Gram-negative, nonfermentative bacteria.

CF Assay Medium (Citrovorum Factor Assay Medium)

Composition per liter:

Glucose	50.0g
Sodium acetate	40.0g
Vitamin assay casamino acids	10.0g
NH ₄ Cl	6.0g
K ₂ HPO ₄	1.2g
KH ₂ PO ₄	1.2g
MgSO ₄ ·7H ₂ O	0.4g
DL-Alanine	0.2g
DL-Tryptophan	0.2g
L-Cystine	0.2g
L-Cysteine-HCl	0.2g
MgSO ₄ ·7H ₂ O	0.04g
Adenine sulfate	0.02g
FeSO ₄	0.02g
Glycine	0.02g
Guanine-HCl	0.02g
NaCl	0.02g
Uracil	0.02g
Xanthine	0.02g
Pyridoxamine-HCl	6.0mg
Nicotinic acid	2.0mg
Pyridoxine-HCl	2.0mg
Calcium pantothenate	1.0mg
Riboflavin	1.0mg
Thiamine-HCl	1.0mg
Pyridoxal-HCl	600.0µg
<i>p</i> -Aminobenzoic acid	200.0µg
Folic acid	20.0µg
Biotin	2.0µg

pH 6.7 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 2–3 min. Allow precipitate to settle out. Distribute supernatant into tubes in 5.0mL volumes. Add standard solution or test solutions to each tube. Adjust the volume of each tube to

10.0mL with distilled/deionized water. Autoclave for 10 min at 15 psi pressure–121°C.

Use: For the microbiological assay of citrovorum factor using *Pedio-coccus acidilactici*.

CFAT Medium

(Cadmium Fluoride Acriflavin Tellurite Medium)

Composition per liter:

Pancreatic digest of casein	17.0g
Agar	15.0g
Glucose	7.5g
NaCl	5.0g
Papaic digest of soybean meal	3.0g
K ₂ HPO ₄	2.5g
NaF	0.8g
CdSO ₄	0.013g
K ₂ TeO ₃	2.5mg
Neutral acriflavin	1.2mg
Basic Fuchsin	0.25mg
Sheep blood, defibrinated	50.0mL

Caution: Potassium tellurite is toxic.

Preparation of Medium: Add components, except sheep blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Add 50.0mL of sterile, defibrinated sheep blood. Mix thoroughly. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation, cultivation, and enumeration of *Actinomyces viscosus* and *Actinomyces naeslundii* from clinical specimens, especially dental plaque.

CGY Agar

Composition per liter:

Agar	20.0g
Pancreatic digest of casein	5.0g
Yeast extract	1.0g
Glycerol	10.0mL

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Bacillus pseudogordoniae*.

CGY Autolysate Broth

See: **Casitone Glycerol Yeast Autolysate Broth**

CH 1 Medium

Composition per liter:

NaCl	250.0g
Tris(hydroxymethyl)amino methane buffer	12.0g
Glycerol	10.0g
Hy-Case SF	5.0g
Yeast extract	5.0g
Solution 1	50.0mL

Solution 1:**Composition per liter:**

MgCl ₂ ·6H ₂ O.....	40.0g
KCl.....	4.0g
CaCl ₂ ·2H ₂ O.....	0.4g
pH 7.4 ± 0.2 at 25°C	

Preparation of Solution 1: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.4. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Haloarcula vallismortis*.

Chaetomium Medium**Composition per liter:**

Agar.....	15.0g
NaNO ₃	2.0g
K ₂ HPO ₄	1.2g
MgSO ₄ ·7H ₂ O.....	0.5g
KCl.....	0.5g
KH ₂ PO ₄	0.14g
Yeast extract.....	0.02g
Fe ₂ (SO ₄) ₃ ·H ₂ O.....	0.01g
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes. Allow agar to cool. Place a strip of sterile filter paper on top of agar and inoculate filter strip.

Use: For the growth and maintenance of *Chaetomium* species.

Chalquist's Antigen Medium, Modified**Composition per liter:**

Soluble starch.....	0.5g
Pancreatic digest of casein.....	0.05g
L-Cysteine·HCl·H ₂ O.....	0.01g
NAD (nicotinamide adeninedinucleotide).....	0.01g
PPLO broth without Crystal Violet.....	90.0mL
Swine serum, inactivated.....	10.0mL
Phenol Red (1% solution).....	0.25mL
pH 7.6 ± 0.2 at 25°C	

PPLO Broth without Crystal Violet:**Composition per 500.0mL:**

Beef heart, infusion from.....	11.52g
Peptone.....	2.32g
NaCl.....	1.15g

Source: PPLO broth without Crystal Violet is available as a premixed powder from BD Diagnostic Systems.

Preparation of PPLO Broth without Crystal Violet: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Mycoplasma synoviae*.

Chapman Stone Agar**Composition per liter:**

(NH ₄) ₂ SO ₄	75.0g
NaCl.....	55.0g
Gelatin.....	30.0g
Agar.....	15.0g
D-Mannitol.....	10.0g
Pancreatic digest of casein.....	10.0g
K ₂ HPO ₄	5.0g
Yeast extract.....	2.0g
pH 7.0 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 10 min at 15 psi pressure–121°C. Pour into sterile Petri dishes while the medium is still hot. Add 25.0mL of medium per Petri dish.

Use: For the isolation of staphylococci from a variety of specimens.

Charcoal Agar**Composition per liter:**

Beef heart, solids from infusion.....	500.0g
Agar.....	18.0g
Peptone.....	10.0g
Soluble starch.....	10.0g
NaCl.....	5.0g
Charcoal, activated, acid washed.....	4.0g
Yeast extract.....	3.5g
pH 7.3 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling with frequent stirring. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Pour into sterile Petri dishes or leave in tubes. Shake flask while dispensing to keep charcoal in suspension. Allow tubes to cool in a slanted position.

Use: For the cultivation and maintenance of fastidious microorganisms, especially *Bordetella pertussis*, for vaccine production.

Charcoal Agar**Composition per liter:**

Agar.....	12.0g
Beef extract.....	10.0g
Peptone.....	10.0g
Starch.....	10.0g
NaCl.....	5.0g
Charcoal.....	4.0g
Nicotinic acid.....	0.001g
pH 7.4 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling with frequent stirring. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. This medium may be enriched by the addition of blood. Pour into sterile Petri dishes or distribute into tubes. Shake flask while dispensing to keep charcoal in suspension.

Use: For the cultivation and isolation of various bacteria; with the addition of blood, for the cultivation of fastidious bacteria.

Charcoal Agar Base, HiVeg with Blood and Selective Supplement

Composition per liter:

Agar	18.0g
Plant infusion	12.0g
Plant peptone.....	10.0g
Starch	10.0g
NaCl	5.0g
Charcoal	4.0g
Yeast extract.....	3.5g
Sheep blood, defibrinated	50.0mL
Selective supplement solution	10.0mL
pH 7.3 ± 0.2 at 25°C	

Source: This medium, without blood or selective supplement, is available as a premixed powder from HiMedia.

Selective Supplement Solution:

Composition per 10.0mL:

Cefazolin	40.0mg
-----------------	--------

Preparation of Selective Supplement Solution: Add cefazolin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except blood and selective supplement solution, to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Gently heat and bring to boiling with frequent stirring. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50.0 mL sterile sheep blood and 10.0mL sterile selective supplement solution. Mix thoroughly. Pour into sterile Petri plates or distribute into sterile tubes.

Use: For the cultivation and isolation of various bacteria; with the addition of blood, for the cultivation of fastidious bacteria. For the cultivation of *Bordetella pertussis* for vaccine production and the maintenance of stock cultures.

Charcoal Agar with Horse Blood

Composition per liter:

Agar	12.0g
Beef extract	10.0g
Peptone.....	10.0g
Starch	10.0g
NaCl	5.0g
Charcoal, bacteriological	4.0g
Nicotinic acid.....	1.0mg
Horse blood, defibrinated	100.0mL
pH 7.4 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 900.0L. Mix thoroughly. Gently heat and bring to boiling with frequent stirring. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 80°C. Aseptically add 100.0mL of sterile, defibrinated horse blood. Maintain at 80°C for 10 min to form chocolate agar. Pour into sterile Petri dishes or distribute into tubes. Shake flask while dispensing to keep charcoal in suspension.

Use: For the cultivation and isolation of *Haemophilus influenzae*.

Charcoal Agar with Horse Blood and Cephalalexin

Composition per liter:

Agar	12.0g
Beef extract	10.0g
Peptone	10.0g
Starch	10.0g
NaCl	5.0g
Charcoal	4.0g
Nicotinic acid.....	1.0mg
Horse blood, defibrinated	100.0mL
Cephalalexin solution	10.0mL
pH 7.4 ± 0.2 at 25°C	

Cephalalexin Solution:

Composition per 10.0mL:

Cephalalexin	0.04g
--------------------	-------

Preparation of Cephalalexin Solution: Add cephalalexin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except cephalalexin solution and horse blood, to distilled/deionized water and bring volume to 890.0L. Mix thoroughly. Gently heat and bring to boiling with frequent stirring. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 100.0mL of sterile, defibrinated horse blood and 10.0mL of sterile cephalalexin solution. Pour into sterile Petri dishes or distribute into tubes. Shake flask while dispensing to keep charcoal in suspension.

Use: For the cultivation and isolation of *Bordetella pertussis*.

Charcoal Agar Slants

See: Diphasic Medium for Amoeba

Charcoal Blood Agar Base, HiVeg with Blood Penicillin and Diamidodiphenyl Hydrochloride

Composition per liter:

Agar	12.0g
Plant extract	10.0g
Plant peptone	10.0g
Starch	10.0g
NaCl	5.0g
Charcoal	4.0g
Yeast extract.....	3.5g
Sheep blood, defibrinated	50.0mL
Penicillin solution	3.0mL
Diamidodiphenylamine hydrochloride solution	3.0mL
pH 7.5 ± 0.2 at 25°C	

Source: This medium, without blood or selective supplement, is available as a premixed powder from HiMedia.

Penicillin Solution:

Composition per 10.0mL:

Penicillin	1000 units
------------------	------------

Preparation of Penicillin Solution: Add penicillin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Diamidodiphenylamine Hydrochloride Solution:

Composition per 10.0mL:

Diamido hydrochloride.....	0.01g
Diphenylamine hydrochloride	0.01g

Preparation of Diamidodiphenylamine Hydrochloride Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except blood, penicillin solution, and diamidodiphenylamine hydrochloride solution, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling with frequent stirring. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50.0 mL sterile sheep blood and 3.0 mL sterile penicillin solution and 3.0 mL sterile diamidodiphenylamine hydrochloride solution. Mix thoroughly. Pour into sterile Petri plates or distribute into sterile tubes.

Use: For the cultivation and isolation of various bacteria; with the addition of blood, for the cultivation of fastidious bacteria. For the cultivation of *Bordetella pertussis* for vaccine production and the maintenance of stock cultures.

Charcoal Blood Medium

Composition per liter:

Beef heart, solids from infusion.....	500.0g
Agar	18.0g
Peptone.....	10.0g
Soluble starch.....	10.0g
NaCl	5.0g
Charcoal, activated, acid washed.....	4.0g
Yeast extract.....	3.5g
Horse or sheep blood, defibrinated.....	100.0mL
Cephalexin solution	10.0mL

pH 7.4 ± 0.2 at 25°C

Cephalexin Solution:

Composition per 10.0mL:

Cephalexin	0.04g
------------------	-------

Preparation of Cephalexin Solution: Add cephalexin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except blood and cephalexin solution, to distilled/deionized water and bring volume to 890.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile blood and cephalexin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Haemophilus influenzae*.

Charcoal HiVeg Agar Base with Niacin, Blood, and Selective Supplement

Composition per liter:

Agar	12.0g
Plant extract	10.0g
Plant peptone No. 2.....	10.0g
Starch	10.0g
NaCl	5.0g
Charcoal.....	4.0g
Niacin.....	1.0mg
Sheep blood, defibrinated	50.0mL
Selective supplement solution	10.0mL

pH 7.4 ± 0.2 at 25°C

Source: This medium, without blood or selective supplement, is available as a premixed powder from HiMedia.

Selective Supplement Solution:

Composition per 10.0mL:

Cefazolin.....	40.0mg
----------------	--------

Preparation of Selective Supplement Solution: Add cefazolin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except blood and selective supplement solution, to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Gently heat and bring to boiling with frequent stirring. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50.0 mL sterile sheep blood and 10.0mL sterile selective supplement solution. Mix thoroughly. Pour into sterile Petri plates or distribute into sterile tubes.

Use: For the cultivation and isolation of *Bordetella pertussis* and *Haemophilus influenzae*. For the cultivation of *Bordetella pertussis* for vaccine production and the maintenance of stock cultures.

Charcoal Yeast Extract Agar

See: [CYE Agar](#)

Charcoal Yeast Extract Agar, Buffered

See: [CYE Agar, Buffered](#)

Charcoal Yeast Extract Diphasic Blood Culture Medium

See: [Legionella pneumophila Medium](#)

Chase's Medium SP

Composition per liter:

Agar	10.0g
Proteose peptone.....	10.0g
K ₂ HPO ₄	2.0g
(NH ₄) ₂ SO ₄	1.0g
Sucrose solution.....	100.0mL

pH 6.5 ± 0.2 at 25°C

Sucrose Solution:

Composition per 100.0mL:

Sucrose.....	10.0g
--------------	-------

Preparation of Sucrose Solution: Add sucrose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except sucrose solution, to tap water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 100.0mL of sterile sucrose solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of ATCC strain 13949.

CHCA Salts Medium

(Cyclohexane Carboxylic Acid Salts Medium)

Composition per liter:

K ₂ HPO ₄	3.5g
KH ₂ PO ₄	1.5g
Cyclohexane carboxylic acid.....	1.0g
NH ₄ NO ₃	1.0g
MgSO ₄ ·7H ₂ O.....	0.5g
FeSO ₄ ·7H ₂ O.....	0.1g
Yeast extract.....	0.1g

CaCl ₂ ·2H ₂ O.....	0.01g
Na ₂ MoO ₄ ·2H ₂ O.....	0.01g
ZnSO ₄ ·7H ₂ O.....	0.01g
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of bacteria that can utilize cyclohexane carboxylic acid as a carbon source. For the cultivation and maintenance of *Arthrobacter globiformis*.

Cheese Agar

Composition per liter:

Cheese, ripened.....	100.0g
NaCl.....	50.0g
Agar.....	15.0g
Peptone.....	10.0g
Potassium citrate.....	10.0g
Sodium oxalate.....	2.0g
pH 7.4 ± 0.2 at 25°C	

Preparation of Medium: Add the cheese and potassium citrate to distilled/deionized water and bring volume to 300.0mL. Gently heat and bring to 50°C to separate the fat. Discard the fat. In a separate flask, add the remaining components to distilled/deionized water and bring volume to 700.0mL. Gently heat and bring to boiling. Add the 300.0mL of aqueous suspension of cheese solids. Adjust pH to 7.4. Autoclave for 25 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of *Brevibacterium linens*.

Cherry Agar, CBS Formula

Composition per liter:

Pulp of sour stone cherries.....	200.0g
Agar.....	20.0g
pH 3.8 ± 0.2 at 25°C	

Preparation of Medium: Add 1.0L of distilled/deionized water to pulp of sour stone cherries. Gently heat and bring to boiling. Simmer gently for 2 hr. Strain through cloth. Autoclave filtrate for 30 min at 6 psi pressure–110°C. Add agar to distilled/deionized water and bring volume to 800.0mL. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. To sterile agar solution, add 200.0mL of sterile cherry filtrate. Distribute into sterile tubes. Autoclave for 5 min at 15 psi pressure–121°C.

Use: For the cultivation of various fungi.

Cherry Decoction Agar

Composition per liter:

Agar.....	20.0g
Sucrose.....	10.0g
Cherry extract.....	90.0mL
pH 3.8–4.6 at 25°C	

Preparation of Medium: Add agar to distilled/deionized water and bring volume to 500.0mL. Gently heat and bring to boiling. In a separate flask, add sucrose and cherry extract to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Combine the two solutions. Adjust pH to 3.8–4.6. Distribute into tubes or flasks. Sterilize by

tyndallization at 100°C for 30 min on 3 consecutive days. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Acremonium sclerotigenum*, *Amylostereum laevigatum*, *Calcarisporium arbuscula*, *Helicoma morgani*, *Helicoon richonis*, *Inonotus radiatus*, *Phellinus igniarius*, *Phoma leveillei*, *Taphrina californica*, and *Taphrina populina*.

CHI 1776 Medium

Composition per liter:

Pancreatic digest of casein.....	25.0g
Yeast extract.....	7.5g
Glucose solution.....	25.0mL
Tris-HCl buffer, 1M, pH 7.5.....	20.0mL
Diaminopimelic acid solution.....	10.0mL
Thymidine solution.....	10.0mL
MgCl ₂ solution.....	5.0mL

Glucose Solution:

Composition per 100.0mL:

D-Glucose.....	20.0g
----------------	-------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Diaminopimelic Acid Solution:

Composition per 100.0mL:

meso-Diaminopimelic acid.....	1.0g
-------------------------------	------

Preparation of Diaminopimelic Acid Solution: Add meso-diaminopimelic acid to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Thymidine Solution:

Composition per 100.0mL:

Thymidine.....	0.4g
----------------	------

Preparation of Thymidine Solution: Add thymidine to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

MgCl₂ Solution:

Composition per 100.0mL:

MgCl ₂	9.52g
-------------------------	-------

Preparation of MgCl₂ Solution: Add MgCl₂ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except glucose solution, diaminopimelic acid solution, thymidine solution, and MgCl₂ solution, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 25.0mL of sterile glucose solution, 10.0mL of sterile diaminopimelic acid solution, 10.0mL of sterile thymidine solution, and 5.0mL of sterile MgCl₂ solution, Mix thoroughly. Distribute into sterile tubes or flasks.

Use: For the cultivation of *Escherichia coli*.

Chicken Soup Broth

Composition per 5.0L:

Chicken.....	2.5kg
Peppercorns.....	6
Cloves.....	3
Bay leaf.....	2
Celery, stalks including leaves.....	2

Onion, large.....	1
Carrot.....	1
Dill, fresh.....	1/4 cup
NaCl.....	0.1g

Preparation of Medium: Add a nice, whole chicken to a large pot. Add enough tap water to cover the chicken by about 1 in. Stud the whole, peeled onion with the three cloves. Add the onion and remaining ingredients to the pot. Rapidly heat and bring to boiling. Lower heat to a simmer and cook for 1 to 1.5 hr. Remove the chicken and vegetables from the broth. Remove skin and bones from the chicken. Cut up the meat into 1-inch pieces. Return the meat to the broth. If desired, slice the carrot and celery and return them to the broth.

Use: For the growth and nutrition of microbiologists.

China Blue Lactose Agar

Composition per liter:

Agar.....	12.0g
Lactose.....	10.0g
Peptone.....	5.0g
NaCl.....	5.0g
Beef extract.....	3.0g
China Blue.....	0.375g

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation, differentiation, and enumeration of bacteria from dairy products. Lactose-fermenting bacteria appear as blue colonies. Nonlactose-fermenting bacteria appear as colorless colonies.

China Blue Lactose Agar

Composition per liter:

Agar.....	15.0g
Lactose.....	10.0g
Peptic digest of animal tissue.....	5.0g
NaCl.....	5.0g
Plant extract.....	3.0g
China Blue.....	0.3g

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation, differentiation, and enumeration of bacteria from dairy products. Lactose-fermenting bacteria appear as blue colonies. Nonlactose-fermenting bacteria appear as colorless colonies.

China Blue Lactose HiVeg Agar

Composition per liter:

Agar.....	15.0g
Lactose.....	10.0g
Plant peptone.....	5.0g

NaCl.....	5.0g
Plant extract.....	3.0g
China Blue.....	0.3g

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation, differentiation, and enumeration of bacteria from dairy products. Lactose-fermenting bacteria appear as blue colonies. Nonlactose-fermenting bacteria appear as colorless colonies.

Chitin Agar

Composition per liter:

Agar.....	15.0g
Chitin, precipitated.....	3.0g
(NH ₄) ₂ SO ₄	2.0g
Na ₂ HPO ₄	1.1g
KH ₂ PO ₄	0.7g
MgSO ₄ ·7H ₂ O.....	0.2g
FeSO ₄	1.0mg
MnSO ₄	1.0mg

Chitin, Precipitated:

Composition per 2.5L:

Chitin.....	40.0g
HCl, concentrated.....	400.0mL

Preparation of Chitin, Precipitated: Add chitin to 400.0mL of cold concentrated HCl. Add this solution to 2.0L of distilled/deionized water at 5°C. Filter the solution through Whatman #1 filter paper. Dialyze the precipitated chitin against tap water for 12 hr. Adjust the pH to 7.0 with KOH.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of *Cytophaga* species, *Herpetosiphon* species, *Saprospira* species, and *Flexithrix* species.

Chitin Agar

Composition per liter:

Agar.....	20.0g
Chitin.....	4.0g
K ₂ HPO ₄	0.7g
MgSO ₄ ·7H ₂ O.....	0.5g
KH ₂ PO ₄	0.3g
FeSO ₄ ·7H ₂ O.....	0.01g
MnCl ₂ ·4H ₂ O.....	0.001g
ZnSO ₄ ·7H ₂ O.....	0.001g

pH 8.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the selective isolation and cultivation of streptomycetes.

Chlamydia Growth Medium**Composition per 500.0mL:**

Eagle minimum essential medium	
with Earle salts, 10X.....	50.0mL
Fetal calf serum.....	50.0mL
L-Glutamine solution.....	5.0mL
	pH 7.4 ± 0.2 at 25°C

Eagle Minimum Essential Medium with Earle Salts, 10X:**Composition per liter:**

NaCl.....	6.8g
Glucose.....	1.0g
KCl.....	0.4g
CaCl ₂ ·2H ₂ O.....	0.2g
MgCl ₂ ·6H ₂ O.....	0.2g
NaH ₂ PO ₄	0.15g
L-Arginine.....	0.1g
L-Lysine.....	0.06g
L-Isoleucine.....	0.05g
L-Leucine.....	0.05g
L-Threonine.....	0.05g
L-Valine.....	0.05g
L-Tyrosine.....	0.04g
L-Phenylalanine.....	0.03g
L-Histidine.....	0.03g
L-Cystine.....	0.02g
L-Methionine.....	0.02g
L-Tryptophan.....	0.01g
<i>i</i> -Inositol.....	2.0mg
Calcium pantothenate.....	1.0mg
Choline chloride.....	1.0mg
Folic acid.....	1.0mg
Nicotinamide.....	1.0mg
Pyridoxal.....	1.0mg
Thiamine-HCl.....	1.0mg
Riboflavin.....	0.1mg

Preparation of Eagle Minimum Essential Medium with Earle Salts, 10X: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.4 with 7.5% Na₂CO₃ solution. Filter sterilize.

Glutamine Solution:**Composition per 100.0mL:**

L-Glutamine.....	2.92g
NaCl (0.85% solution).....	100.0mL

Preparation of Glutamine Solution: Add the glutamine to the 0.85% NaCl solution. Mix thoroughly. Filter sterilize.

Preparation of Medium: Aseptically combine 50.0mL of sterile Eagle minimum essential medium with Earle salts, 10X, 50.0mL of fetal calf serum, and 5.0mL of sterile glutamine solution. Bring volume to 500.0mL with sterile distilled/deionized water. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Chlamydia* species.

Chlamydia Isolation Medium**Composition per 500.0mL:**

Eagle minimum essential medium	
with Earle salts, 10X.....	50.0mL
Fetal calf serum.....	50.0mL

Selective supplement.....	10.0mL
L-Glutamine solution.....	5.0mL
	pH 7.4 ± 0.2 at 25°C

Eagle Minimum Essential Medium with Earle Salts, 10X:**Composition per liter:**

NaCl.....	6.8g
Glucose.....	1.0g
KCl.....	0.4g
CaCl ₂ ·2H ₂ O.....	0.2g
MgCl ₂ ·6H ₂ O.....	0.2g
NaH ₂ PO ₄	0.15g
L-Arginine.....	0.1g
L-Lysine.....	0.06g
L-Isoleucine.....	0.05g
L-Leucine.....	0.05g
L-Threonine.....	0.05g
L-Valine.....	0.05g
L-Tyrosine.....	0.04g
L-Phenylalanine.....	0.03g
L-Histidine.....	0.03g
L-Cystine.....	0.02g
L-Methionine.....	0.02g
L-Tryptophan.....	0.01g
<i>i</i> -Inositol.....	2.0mg
Calcium pantothenate.....	1.0mg
Choline chloride.....	1.0mg
Folic acid.....	1.0mg
Nicotinamide.....	1.0mg
Pyridoxal.....	1.0mg
Thiamine-HCl.....	1.0mg
Riboflavin.....	0.1mg

Preparation of Eagle Minimum Essential Medium with Earle Salts, 10X: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.4 with 7.5% Na₂CO₃ solution. Filter sterilize.

Selective Supplement:**Composition per 10.0mL:**

Glucose.....	0.594g
Vancomycin.....	0.05g
Gentamicin.....	0.01g
Amphotericin B.....	2.0mg
Cycloheximide.....	2.0mg

Preparation of Selective Supplement: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Glutamine Solution:**Composition per 100.0mL:**

L-Glutamine.....	2.92g
NaCl (0.85% solution).....	100.0mL

Preparation of Glutamine Solution: Add the glutamine to the 0.85% NaCl solution. Mix thoroughly. Filter sterilize.

Preparation of Medium: Aseptically combine 50.0mL of sterile Eagle minimum essential medium with Earle salts, 10X, 50.0mL of fetal calf serum, 10.0mL of selective supplement, and 5.0mL of sterile glutamine solution. Bring volume to 500.0mL with sterile distilled/de-

ionized water. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the isolation and cultivation of *Chlamydia* species.

Chlamydomonas Enriched Medium

Composition per liter:

Agar	15.0g
Sodium acetate, anhydrous	2.0g
Tryptose	2.0g
Yeast extract	2.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 20 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Chlamydomonas reinhardtii*.

Chlamydomonas Mutant Agar

Composition per liter:

Agar	18.0g
K ₂ HPO ₄	1.162g
Sodium acetate	1.0g
NaH ₂ PO ₄	0.92g
Sodium citrate	0.5g
MgSO ₄ ·7H ₂ O	0.3g
NH ₄ NO ₃	0.3g
CaCl ₂	0.04g
FeCl ₃ ·6H ₂ O	0.01g
Trace salts solution	10.0mL

pH 6.8 ± 0.2 at 25°C

Trace Salts Solution:

Composition per liter:

H ₃ BO ₃	0.15g
LiSO ₄ ·4H ₂ O	0.1g
MnSO ₄ ·4H ₂ O	0.04g
CoCl ₂	0.02g
(NH ₄) ₆ Mo ₇ O ₂₄	0.015g
CuSO ₄ ·5H ₂ O	0.004g

Preparation of Trace Salts Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.8. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Chlamydomonas reinhardtii*.

Chlamydomonas Mutant Broth

Composition per liter:

K ₂ HPO ₄	1.162g
Sodium acetate	1.0g
NaH ₂ PO ₄	0.92g
Sodium citrate	0.5g
NH ₄ NO ₃	0.3g
MgSO ₄ ·7H ₂ O	0.3g
CaCl ₂	0.04g
FeCl ₃ ·6H ₂ O	0.01g
Trace salts solution	10.0mL

pH 6.8 ± 0.2 at 25°C

Trace Salts Solution:

Composition per liter:

H ₃ BO ₃	0.15g
LiSO ₄ ·4H ₂ O	0.1g
MnSO ₄ ·4H ₂ O	0.04g
CoCl ₂	0.02g
(NH ₄) ₆ Mo ₇ O ₂₄	0.015g
CuSO ₄ ·5H ₂ O	0.004g

Preparation of Trace Salts Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.8. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Chlamydomonas reinhardtii*.

Chlamydo-spore Agar

Composition per liter:

Purified polysaccharide	20.0g
Agar	15.0g
KH ₂ PO ₄	1.0g
(NH ₄) ₂ SO ₄	1.0g
Trypan Blue	0.1g
Biotin	5.0µg

pH 5.1 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For differentiating *Candida albicans* from other *Candida* species on the basis of chlamydo-spore formation.

Chloramphenicol Ampicillin LB Medium

Composition per liter:

NaCl.....	10.0g
Pancreatic digest of casein.....	10.0g
Yeast extract.....	5.0g
Ampicillin solution	10.0mL
Chloramphenicol solution.....	10.0mL

pH 7.0 ± 0.2 at 25°C

Ampicillin Solution:

Composition per 10.0mL:

Ampicillin.....	40.0mg
-----------------	--------

Preparation of Ampicillin Solution: Add ampicillin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Chloramphenicol Solution:

Composition per 10.0mL:

Chloramphenicol.....	5.0mg
----------------------	-------

Preparation of Chloramphenicol Solution: Add chloramphenicol to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except ampicillin solution and chloramphenicol solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Adjust pH to 7.0. Auto-

clave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL of sterile ampicillin solution and 10.0mL of sterile chloramphenicol solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Escherichia coli*.

Chloramphenicol Erythromycin LB Medium

Composition per liter:

NaCl	10.0g
Pancreatic digest of casein	10.0g
Yeast extract	5.0g
Erythromycin	10.0mL
Chloramphenicol	10.0mL
pH 7.0 ± 0.2 at 25°C	

Erythromycin Solution:

Composition per 10.0mL:

Erythromycin	10mg
--------------------	------

Preparation of Erythromycin Solution: Add erythromycin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Chloramphenicol Solution:

Composition per 10.0mL:

Chloramphenicol	5.0mg
-----------------------	-------

Preparation of Chloramphenicol Solution: Add chloramphenicol to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except erythromycin solution and chloramphenicol solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Adjust pH to 7.0. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL of sterile ampicillin solution and 10.0mL of sterile chloramphenicol solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Escherichia coli*.

Chloramphenicol L Broth Medium No. 1

Composition per liter:

Pancreatic digest of casein	10.0g
NaCl	5.0g
Yeast extract	5.0g
Glucose	1.0g
Chloramphenicol solution	10.0mL
pH 7.0 ± 0.2 at 25°C	

Chloramphenicol Solution:

Composition per 10.0mL:

Chloramphenicol	5.0mg
-----------------------	-------

Preparation of Chloramphenicol Solution: Add chloramphenicol to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except chloramphenicol solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Adjust pH to 7.0. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL of sterile chloramphenicol solution and 10.0mL of sterile chloramphenicol solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Escherichia coli*.

Chloramphenicol L Broth Medium No. 2

Composition per liter:

Pancreatic digest of casein	10.0g
NaCl	5.0g
Yeast extract	5.0g
Glucose	1.0g
Chloramphenicol solution	10.0mL
pH 7.0 ± 0.2 at 25°C	

Chloramphenicol Solution:

Composition per 10.0mL:

Chloramphenicol	12.5mg
-----------------------	--------

Preparation of Chloramphenicol Solution: Add chloramphenicol to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except chloramphenicol solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Adjust pH to 7.0. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL of sterile chloramphenicol solution and 10.0mL of sterile chloramphenicol solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Escherichia coli*.

Chloramphenicol L Broth Medium No. 3

Composition per liter:

Pancreatic digest of casein	10.0g
NaCl	5.0g
Yeast extract	5.0g
Glucose	1.0g
Chloramphenicol solution	10.0mL
pH 7.0 ± 0.2 at 25°C	

Chloramphenicol Solution:

Composition per 10.0mL:

Chloramphenicol	50.0mg
-----------------------	--------

Preparation of Chloramphenicol Solution: Add chloramphenicol to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except chloramphenicol solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Adjust pH to 7.0. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL of sterile chloramphenicol solution and 10.0mL of sterile chloramphenicol solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Escherichia coli*.

Chloramphenicol LB Medium No.1

Composition per liter:

NaCl	10.0g
Pancreatic digest of casein	10.0g
Yeast extract	5.0g
Chloramphenicol	50.0µg

Preparation of Medium: Adjust pH to 7.0. Autoclave at 15 psi pressure–121°C for 15 min. For solid medium, add 15.0g of agar.

Use: For the cultivation and maintenance of *Escherichia coli*.

Chloramphenicol LB Medium No. 2

Composition per liter:

NaCl	10.0g
Pancreatic digest of casein	10.0g

Yeast extract.....	5.0g
Chloramphenicol solution.....	10.0mL
pH 7.0 ± 0.2 at 25°C	

Chloramphenicol Solution:**Composition per 10.0mL:**

Chloramphenicol.....	5.0mg
----------------------	-------

Preparation of Chloramphenicol Solution: Add chloramphenicol to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except chloramphenicol solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Adjust pH to 7.0. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL of sterile ampicillin solution and 10.0mL of sterile chloramphenicol solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Escherichia coli*.

Chloramphenicol Yeast Glucose Agar**Composition per liter:**

Glucose.....	20.0g
Agar.....	14.9g
Yeast extract.....	5.0g
Chloramphenicol.....	0.1g
pH 6.6 ± 0.2 at 25°C	

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the selective enumeration of yeasts and molds in milk and milk products. It is also recommended by ISO Committee under the specifications ISO 7954:1987.

Chlorella Agar**Composition per liter:**

Agar.....	17.0g
KNO ₃	2.5g
KH ₂ PO ₄	2.45g
MgSO ₄ ·7H ₂ O.....	2.4g
K ₂ SO ₄	0.217g
FeSO ₄ ·7H ₂ O.....	1.5mg
MnSO ₄ ·H ₂ O.....	1.4mg
H ₃ BO ₃	0.28mg
ZnSO ₄ ·7H ₂ O.....	0.22mg
Na ₂ MoO ₄ ·2H ₂ O.....	0.05mg
CuSO ₄ ·5H ₂ O.....	0.0078mg
Supplement solution.....	100.0mL
pH 4.5 ± 0.2 at 25°C	

Source: This medium is available from HiMedia.

Supplement Solution:**Composition per 100.0mL:**

Glucose.....	10.0g
Potassium citrate.....	32.0mg

Preparation of Supplement Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except supplement solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add supplement solution. Mix thoroughly. Pour into Petri dishes or aseptically distribute into sterile tubes.

Use: For the cultivation of *Chlorella* spp.

Chlorella Broth**Composition per liter:**

KNO ₃	2.5g
KH ₂ PO ₄	2.45g
MgSO ₄ ·7H ₂ O.....	2.4g
K ₂ SO ₄	0.217g
FeSO ₄ ·7H ₂ O.....	1.5mg
MnSO ₄ ·H ₂ O.....	1.4mg
H ₃ BO ₃	0.28mg
ZnSO ₄ ·7H ₂ O.....	0.22mg
Na ₂ MoO ₄ ·2H ₂ O.....	0.05mg
CuSO ₄ ·5H ₂ O.....	0.0078mg
Supplement solution.....	100.0mL

pH 4.5 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Supplement Solution:**Composition per 100.0mL:**

Glucose.....	10.0g
Potassium citrate.....	32.0mg

Preparation of Supplement Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except supplement solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add supplement solution. Mix thoroughly. Aseptically distribute into sterile tubes.

Use: For the cultivation of *Chlorella* spp.

Chlorella Broth without Glucose and Citrate**Composition per liter:**

KNO ₃	2.5g
KH ₂ PO ₄	2.45g
MgSO ₄ ·7H ₂ O.....	2.4g
K ₂ SO ₄	0.217g
FeSO ₄ ·7H ₂ O.....	1.5mg
MnSO ₄ ·H ₂ O.....	1.4mg
H ₃ BO ₃	0.28mg
ZnSO ₄ ·7H ₂ O.....	0.22mg
Na ₂ MoO ₄ ·2H ₂ O.....	0.05mg
CuSO ₄ ·5H ₂ O.....	0.0078mg
Supplement solution.....	100.0mL

pH 4.5 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Chlorella* spp.

Chlorinated Fatty Acid Medium**Composition** per 1001.0mL:

(NH ₄) ₂ SO ₄	0.5g
MgSO ₄ ·7H ₂ O.....	0.1g
Ca(NO ₃) ₂	0.075g
2-Chloropropionate.....	0.54g
Phosphate buffer (20mM solution, pH 7.2).....	1.0L
Trace elements solution.....	1.0mL
pH 7.2 ± 0.2 at 25°C	

Trace Elements Solution:**Composition** per liter:

FeSO ₄ ·7H ₂ O.....	1.0g
MnSO ₄ ·H ₂ O.....	1.0g
Co(NO ₃) ₂ ·6H ₂ O.....	0.25g
CuCl ₂ ·2H ₂ O.....	0.25g
Na ₂ MoO ₄ ·2H ₂ O.....	0.25g
ZnCl ₂	0.25g
H ₃ BO ₃	0.1g
NH ₄ VO ₃	0.1g
NiSO ₄ ·6H ₂ O.....	0.1g

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Combine components. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Alcaligenes* species.

Chlorobiaceae Medium 1**Composition** per 4990.0mL:

Solution 1.....	4.0L
O ₂ -free water.....	860.0mL
NaHCO ₃ solution.....	100.0mL
Na ₂ S·9H ₂ O solution.....	20.0mL
Trace elements solution.....	5.0mL
Vitamin B ₁₂ solution.....	5.0mL
pH 6.8 ± 0.2 at 25°C	

Solution 1:**Composition** per 4.0L:

MgSO ₄ ·7H ₂ O.....	2.5g
KCl.....	1.7g
KH ₂ PO ₄	1.7g
NH ₄ Cl.....	1.7g
CaCl ₂ ·2H ₂ O.....	1.25g

Preparation of Solution 1: Add components to distilled/deionized water and bring volume to 4.0L. Mix thoroughly. Autoclave for 45 min at 15 psi pressure–121°C. Cool to 25°C under 100% N₂. Saturate with CO₂ by stirring under 100% CO₂ for 30 min.

O₂-Free Water:**Composition** per 860.0mL:

H ₂ O.....	860.0mL
-----------------------	---------

Preparation of O₂-Free Water: Autoclave H₂O for 15 min at 15 psi pressure–121°C. Cool to 25°C under 100% N₂.

NaHCO₃ Solution:**Composition** per 100.0mL:

NaHCO ₃	7.5g
--------------------------	------

Preparation of NaHCO₃ Solution: Add the NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Gas with 100% CO₂ for 20 min. Filter sterilize with positive CO₂ pressure.

Na₂S·9H₂O Solution:**Composition** per 100.0mL:

Na ₂ S·9H ₂ O.....	10.0g
--	-------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water. Mix thoroughly. Gas with 100% N₂ for 15 min in a screw-capped bottle. Tightly close cap. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Trace Elements Solution:**Composition** per liter:

FeCl ₂ ·4H ₂ O.....	1.5g
CoCl ₂ ·6H ₂ O.....	0.19g
MnCl ₂ ·4H ₂ O.....	0.1g
ZnCl ₂	0.07g
H ₃ BO ₃	0.06g
NaMoO ₄ ·2H ₂ O.....	0.04g
CuCl ₂ ·2H ₂ O.....	0.02g
NiCl ₂ ·6H ₂ O.....	0.02g
HCl (25% solution).....	6.5mL

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Vitamin B₁₂ Solution:**Composition** per 100.0mL:

Vitamin B ₁₂	2.0mg
-------------------------------	-------

Preparation of Vitamin B₁₂ Solution: Add vitamin B₁₂ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: To 4.0L of sterile, CO₂-saturated solution 1, aseptically add the remaining components. Mix thoroughly. Adjust pH to 6.8. Aseptically distribute into sterile 100.0mL bottles using positive pressure of 95% N₂ + 5% CO₂. Completely fill bottles with medium except for a pea-sized air bubble.

Use: For the isolation and cultivation of members of the Chlorobiaceae.

Chlorobiaceae Medium 2**Composition** per 1051.0mL:

Solution 1.....	950.0mL
Na ₂ S·9H ₂ O solution.....	60.0mL
NaHCO ₃ solution.....	40.0mL
Vitamin B ₁₂ solution.....	1.0mL
pH 6.8 ± 0.2 at 25°C	

Solution 1:**Composition** per 950.0mL:

KH ₂ PO ₄	1.0g
NH ₄ Cl.....	0.5g
MgSO ₄ ·7H ₂ O.....	0.4g
CaCl ₂ ·2H ₂ O.....	0.05g
Trace elements solution SL-8.....	1.0mL

Preparation of Solution 1: Add components to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Trace Elements Solution SL-8:**Composition** per liter:

Disodium EDTA	5.2g
FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	0.19g
MnCl ₂ ·4H ₂ O.....	0.1g
ZnCl ₂	0.07g
H ₃ BO ₃	0.06g
NaMoO ₄ ·2H ₂ O.....	0.04g
CuCl ₂ ·2H ₂ O	0.02g
NiCl ₂ ·6H ₂ O.....	0.02g

Preparation of Trace Elements Solution SL-8: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Na₂S·9H₂O Solution:**Composition** per 100.0mL:

Na ₂ S·9H ₂ O.....	5.0g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 100.0mL. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

NaHCO₃ Solution:**Composition** per 100.0mL:

NaHCO ₃	5.0g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Vitamin B₁₂ Solution:**Composition** per 100.0mL:

Vitamin B ₁₂	2.0mg
-------------------------------	-------

Preparation of Vitamin B₁₂ Solution: Add vitamin B₁₂ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: To 950.0mL of cooled, sterile solution 1, aseptically add 60.0mL of sterile Na₂S·9H₂O solution, 40.0mL of sterile NaHCO₃ solution, and 1.0mL of sterile vitamin B₁₂ solution. Mix thoroughly. Adjust pH to 6.8 with sterile H₂SO₄ or Na₂CO₃. Aseptically distribute into sterile 50.0mL or 100.0mL bottles with metal screw-caps and rubber seals. Completely fill bottles with medium except for a pea-sized air bubble.

Use: For the isolation and cultivation of freshwater and soil members of the Chlorobiaceae.

Chlorobium thiosulfatophilum* Medium*Composition** per 1050.0mL:

KH ₂ PO ₄	1.0g
NH ₄ Cl	1.0g
MgCl ₂ ·6H ₂ O.....	0.5g
Solution A.....	20.0mL
Solution B	20.0mL
Solution C	10.0mL
Trace elements solution	1.0mL

pH 7.0 ± 0.2 at 25°C

Solution A:**Composition** per 100.0mL:

NaHCO ₃	10.0g
--------------------------	-------

Preparation of Solution A: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B:**Composition** per 100.0mL:

Na ₂ S·9H ₂ O.....	10.0g
--	-------

Preparation of Solution B: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C:**Composition** per 100.0mL:

Na ₂ S ₂ O ₃ ·9H ₂ O.....	10.0g
---	-------

Preparation of Solution C: Add Na₂S₂O₃·9H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution:**Composition** per liter:

FeCl ₃ ·6H ₂ O.....	2.7g
H ₃ BO ₃	0.1g
ZnSO ₄ ·7H ₂ O.....	0.1g
Co(NO ₃) ₂ ·6H ₂ O.....	50.0mg
CuSO ₄ ·5H ₂ O.....	5.0mg
MnCl ₂ ·6H ₂ O.....	5.0mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components, except solution A, solution B, and solution C, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Bring pH to 7.0–7.2 with H₃PO₄. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 0.2mL of sterile solution A, 0.2mL of sterile solution B, and 0.1mL of sterile solution C for each 10.0mL of medium. Mix thoroughly. Use immediately.

Use: For the cultivation and maintenance of *Chlorobium limnicola*.

Chlorobutane Medium**Composition** per 1002.0mL:

NH ₄ NO ₃	4.0g
KH ₂ PO ₄	1.5g
Na ₂ HPO ₄ ·12H ₂ O.....	1.5g
CaSO ₄ ·2H ₂ O.....	10.0mg
MgSO ₄ ·7H ₂ O.....	10.0mg
FeSO ₄ ·7H ₂ O.....	5.0mg
Yeast extract.....	5.0mg
1-Chlorobutane.....	2.0mL

pH 7.0 ± 0.2 at 25°C

Preparation of 1-Chlorobutane: Filter sterilize.

Preparation of Medium: Add components, except 1-chlorobutane, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 2.0mL of sterile 1-chlorobutane. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Corynebacterium* species.

Chloroflexus Agar**Composition** per liter:

Agar.....	15.0g
Glycyl-glycine.....	0.5g

Yeast extract.....	0.5g
Na ₂ S	0.5g
NH ₄ Cl	0.2g
MgSO ₄ ·7H ₂ O	0.1g
Nitrilotriacetic acid	0.1g
NaNO ₃	0.689g
Na ₂ HPO ₄	0.111g
KNO ₃	0.103g
CaSO ₄ ·2H ₂ O	0.06g
NaCl	8.0mg
FeCl ₃ solution	1.0mL
Micronutrient solution	1.0mL

pH 8.2–8.4 at 25°C

FeCl₃ Solution:**Composition per liter:**

FeCl ₃	0.29g
-------------------------	-------

Preparation of FeCl₃ Solution: Add FeCl₃ to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.**Micronutrient Solution:****Composition per liter:**

MnSO ₄ ·7H ₂ O	2.28g
H ₃ BO ₃	0.5g
ZnSO ₄ ·7H ₂ O	0.5g
CoCl ₂ ·6H ₂ O	0.045g
CuSO ₄ ·2H ₂ O	0.025g
Na ₂ MoO ₄ ·2H ₂ O	0.025g
H ₂ SO ₄ , concentrated	0.5mL

Preparation of Micronutrient Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.**Preparation of Medium:** Add components, except Na₂S, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 8.2–8.4. Add Na₂S. Readjust pH to 8.2–8.4. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.**Use:** For the cultivation of *Chloroflexus aurantiacus*.**Chloroflexus aggregans Medium
(DSMZ Medium 87a)****Composition per 1061.0mL:**

Yeast extract.....	1.0g
Glycyl-glycine	1.0g
NaNO ₃	0.5g
Na ₂ HPO ₄ ·7H ₂ O.....	0.1g
MgSO ₄ ·7H ₂ O	0.1g
KNO ₃	0.1g
NaCl	0.1g
CaCl ₂ ·2H ₂ O.....	0.05g
Neutralized sulfide solution	11.0mL
Ferric citrate solution	5.0mL
Trace elements solution SL-6	1.0mL

pH 8.2 ± 0.2 at 25°C

Ferric Citrate Solution:**Composition per 100.0mL:**

Ferric citrate.....	0.1mg
---------------------	-------

Preparation of Ferric Citrate Solution: Add ferric citrate to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge under 100% N₂ gas for 3 min.**Trace Elements Solution SL-6:****Composition per liter:**

MnCl ₂ ·4H ₂ O	0.5g
H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
Na ₂ MoO ₄ ·2H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.**Neutralized Sulfide Solution:****Composition per 100.0mL:**

Na ₂ S·9H ₂ O.....	1.5g
--	------

Preparation of Neutralized Sulfide Solution: Add Na₂S·9H₂O to distilled/deionized water in a 250mL screw-capped bottle fitted with a butyl rubber septum and bring volume to 100.0mL. Add a magnetic stir bar. Mix thoroughly. Sparge under 100% N₂ gas for 3 min. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Adjust pH to about 7.3 with sterile 2M H₂SO₄. Do not open the bottle to add H₂SO₄; use a sterile syringe. Stir the solution continuously to avoid precipitation of elemental sulfur. The final solution should be clear and yellow in color.**Preparation of Medium:** Add components, except neutralized sulfide solution, to distilled/deionized water and bring volume to 1050.0mL. Mix thoroughly. Adjust pH to 8.2. Gently heat and bring to boiling. Continue boiling for 3–4 min under 100% N₂. Distribute 90.0mL of medium into 100mL screw-capped bottles with rubber septa under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Using a sterile syringe, inject 1.0mL of neutralized sulfide solution into each bottle. Incubate the culture at 50°C at a light intensity of 300–500 lux. For heavy cell suspension supplement periodically with sterile yeast extract solution to yield a final concentration of 0.1%.**Use:** For the growth and maintenance of *Chloroflexus aggregans* and *Roseiflexus castenholzii*.**Chloroflexus Broth****Composition per liter:**

NaNO ₃	0.689g
Glycyl-glycine	0.5g
Yeast extract.....	0.5g
Na ₂ S	0.5g
NH ₄ Cl	0.2g
Na ₂ HPO ₄	0.111g
KNO ₃	0.103g
MgSO ₄ ·7H ₂ O	0.1g
Nitrilotriacetic acid	0.1g
CaSO ₄ ·2H ₂ O	0.06g

FeCl ₃ solution	1.0mL
Micronutrient solution	1.0mL

pH 8.2–8.4 at 25°C

FeCl₃ Solution:**Composition per liter:**

FeCl ₃	0.29g
-------------------------	-------

Preparation of FeCl₃ Solution: Add FeCl₃ to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Micronutrient Solution:**Composition** per liter:

MnSO ₄ ·7H ₂ O	2.28g
H ₃ BO ₃	0.5g
ZnSO ₄ ·7H ₂ O	0.5g
CoCl ₂ ·6H ₂ O	0.045g
CuSO ₄ ·2H ₂ O	0.025g
Na ₂ MoO ₄ ·2H ₂ O	0.025g
H ₂ SO ₄ , concentrated	0.5mL

Preparation of Micronutrient Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components, except Na₂S, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 8.2–8.4. Add Na₂S. Readjust pH to 8.2–8.4. Filter sterilize. Distribute into sterile tubes or flasks.

Use: For the cultivation of *Chloroflexus aurantiacus*.

Chloroflexus Medium, Modified**Composition** per 1001.0 mL:

Glycyl-glycine	1.0g
Yeast extract	1.0g
NaNO ₃	0.5g
KNO ₃	0.1g
MgSO ₄ ·7H ₂ O	0.1g
Na ₂ HPO ₄ ·2H ₂ O	0.1g
NaCl	0.1g
CaCl ₂ ·2H ₂ O	0.05g
Neutralized sulfide solution	11.0mL
Ferric citrate solution	1.0mL
Trace elements solution SL-6	1.0mL

pH 8.2 ± 0.2 at 25°C

Neutralized Sulfide Solution:**Composition** per 100.0mL:

Na ₂ S·9H ₂ O	1.5g
-------------------------------------	------

Preparation of Neutralized Sulfide Solution: Add Na₂S·9H₂O to distilled/deionized water in a 250mL screw-capped bottle fitted with a butyl rubber septum and bring volume to 100.0mL. Add a magnetic stir bar. Mix thoroughly. Sparge under 100% N₂ gas for 3 min. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Adjust pH to about 7.3 with sterile 2M H₂SO₄. Do not open the bottle to add H₂SO₄; use a sterile syringe. Stir the solution continuously to avoid precipitation of elemental sulfur. The final solution should be clear and yellow in color.

Ferric Citrate Solution:**Composition** per 100.0mL:

Ferric citrate	0.1g
----------------	------

Preparation of Ferric Citrate Solution: Add ferric citrate to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Trace Elements Solution SL-6:**Composition** per liter:

MnCl ₂ ·4H ₂ O	0.5g
H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
Na ₂ MoO ₄ ·2H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components, except neutralized sulfide solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 3–4 min under 100% N₂. Distribute 90.0mL of medium into 100mL screw-capped bottles under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Using a sterile syringe, inject 1.0mL of neutralized sulfide solution into each bottle.

Use: For the growth and maintenance of *Chloroflexus aurantiacus*.

Chlorohydroxybenzoic Acid Medium**Composition** per liter:

K ₂ HPO ₄ ·3H ₂ O	4.25g
NH ₄ Cl	2.0g
NaH ₂ PO ₄ ·H ₂ O	1.0g
5-Chloro-2-hydroxybenzoic acid	0.5g
MgSO ₄ ·7H ₂ O	0.2g
Nitritotriacetic acid	0.1g
FeSO ₄ ·7H ₂ O	0.012g
MnSO ₄ ·H ₂ O	3.0mg
ZnSO ₄ ·7H ₂ O	3.0mg
CoSO ₄	1.0mg

pH 7.0–7.4 at 25°C

Preparation of Medium: Add 5-chloro-2-hydroxybenzoic acid to 800.0mL of distilled/deionized water. Adjust pH to 7.0 with NaOH. Add remaining components and bring volume to 1.0L. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of bacteria that can utilize 5-chloro-hydroxybenzoic acid. For the cultivation of ATCC strain 35944.

**CHO HiVeg Medium Base
with Carbohydrate Solution****Composition** per liter:

Plant hydrolysate	15.0g
Yeast extract	7.0g
NaCl	2.5g
Agar	0.75g
Na-thioglycollate	0.5g
L-Cystine	0.25
Ascorbic acid	0.1g
Bromthymol Blue	0.01g
Carbohydrate solution	6.25mL

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Carbohydrate Solution:**Composition** per 100.0mL:

Carbohydrate	10.0g
--------------	-------

Preparation of Carbohydrate Solution: Add carbohydrate to distilled/deionized water and bring volume to 100.0mL. Adonitol, arabinose, cellobiose, glucose, dulcitol, fructose, galactose, inositol, lactose, maltose, mannitol, raffinose, rhamnose, salicin, sorbitol, sucrose, trehalose, xylose, or other carbohydrates may be used. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except carbohydrate solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or

flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 6.25mL of sterile carbohydrate solution. Aseptically distribute into sterile tubes or leave in flasks.

Use: Used as a basal medium to which carbohydrates are added for fermentation studies of anaerobic bacteria.

CHO Medium

See: Fermentation Broth

CHO Medium Base (Carbohydrate Medium Base)

Composition per liter:

Pancreatic digest of casein	15.0g
Yeast extract	7.0g
NaCl	2.5g
Agar	0.75g
Sodium thioglycolate	0.5g
L-Cystine	0.25g
Ascorbic acid	0.1g
Bromthymol Blue	0.01g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Use: Used as a basal medium to which carbohydrates are added for fermentation studies of anaerobic bacteria. Generally, 6.25mL of a 10% filter-sterilized solution of carbohydrate is added to the sterile basal medium.

Chocolate Agar

Composition per liter:

Agar	15.0g
Pantone	10.0g
Bitone	10.0g
NaCl	5.0g
Tryptic digest of beef heart	3.0g
Cornstarch	1.0g
Sheep blood, defibrinated	100.0mL
Supplement B	10.0mL

pH 7.3 ± 0.2 at 25°C

Supplement B:

Composition per 10.0mL:

Cephalothin	15.0mg
Vancomycin	10.0mg
Trimethoprim	5.0mg
Amphotericin B	2.0mg
Polymyxin B	2500U

Preparation of Supplement B: Add components to 10.0mL of distilled/deionized water. Mix thoroughly. Filter sterilize.

Source: Supplement B is available from BD Diagnostic Systems.

Preparation of Medium: Add components, except supplement B solution and sheep blood, to distilled/deionized water and bring volume to 890.0mL. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 100.0mL of sterile, defibrinated sheep blood. Gently heat while stirring and bring to 85°C for 5–10 min. Cool to 50°C. Aseptically add

10.0mL of sterile supplement B. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of a variety of fastidious microorganisms.

Chocolate Agar

Composition per liter:

Proteose peptone No. 3	15.0g
Agar	10.0g
NaCl	5.0g
K ₂ HPO ₄	4.0g
Cornstarch	1.0g
KH ₂ PO ₄	1.0g
Hemoglobin solution	100.0mL
Supplement B	10.0mL

pH 7.0 ± 0.2 at 25°C

Source: This medium is available from BD Diagnostic Systems.

Supplement B:

Composition per 10.0mL:

Cephalothin	15.0mg
Vancomycin	10.0mg
Trimethoprim	5.0mg
Amphotericin B	2.0mg
Polymyxin B	2500U

Preparation of Supplement B: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Hemoglobin Solution:

Composition per 100.0mL:

Hemoglobin	10.0g
------------------	-------

Preparation of Hemoglobin Solution: Add hemoglobin to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except hemoglobin solution and supplement B, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 100.0mL of sterile hemoglobin solution. Gently heat while stirring and bring to 85°C for 5–10 min. Cool to 50°C. Aseptically add 10.0mL of sterile supplement B. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of fastidious microorganisms.

Chocolate Agar, Enriched

Composition per liter:

GC medium base	740.0mL
Hemoglobin solution	250.0mL
Supplement B	10.0mL

pH 7.3 ± 0.2 at 25°C

Source: This medium is available from BD Diagnostic Systems.

GC Medium Base:

Composition per 740.0mL:

Agar	20.0g
Proteose peptone No. 3	15.0g
NaCl	5.0g
K ₂ HPO ₄	4.0g
Glucose	1.5g

Cornstarch.....	1.0g
KH ₂ PO ₄	1.0g
pH 7.2 ± 0.2 at 25°C	

Preparation of GC Medium Base: Add components to distilled/deionized water and bring volume to 740.0mL. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Hemoglobin Solution:

Composition per 250.0mL:

Hemoglobin	10.0g
------------------	-------

Preparation of Hemoglobin Solution: Add hemoglobin to distilled/deionized water and bring volume to 250.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Supplement B:

Composition per 10.0mL:

Cephalothin	15.0mg
Vancomycin	10.0mg
Trimethoprim	5.0mg
Amphotericin B.....	2.0mg
Polymyxin B	2500U

Preparation of Supplement B: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: To 740.0mL of cooled sterile GC medium base, aseptically add 250.0mL of sterile hemoglobin solution and 10.0mL of sterile supplement B. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of fastidious microorganisms, especially *Neisseria* species.

Chocolate Agar, Enriched

Composition per liter:

GC medium base.....	740.0mL
Hemoglobin solution.....	250.0mL
Supplement VX.....	10.0mL
pH 7.3 ± 0.2 at 25°C	

Source: This medium is available from BD Diagnostic Systems.

GC Medium Base:

Composition per 740.0mL:

Proteose peptone No. 3	15.0g
Agar	20.0g
NaCl	5.0g
K ₂ HPO ₄	4.0g
Glucose	1.5g
Cornstarch.....	1.0g
KH ₂ PO ₄	1.0g
pH 7.2 ± 0.2 at 25°C	

Preparation of GC Medium Base: Add components to distilled/deionized water and bring volume to 740.0mL. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Hemoglobin Solution:

Composition per 250.0mL:

Hemoglobin	10.0g
------------------	-------

Preparation of Hemoglobin Solution: Add hemoglobin to distilled/deionized water and bring volume to 250.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Supplement VX:

Composition per 10.0mL:

Supplement VX contains essential growth factors.

Preparation of Supplement VX: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: To 740.0mL of cooled sterile GC medium base, aseptically add 250.0mL of sterile hemoglobin solution and 10.0mL of sterile supplement VX. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of fastidious microorganisms, especially *Neisseria* species.

Chocolate Agar-Bartonella C-29 (ATCC Medium 2119)

Composition per 1010.0mL:

GC agar base solution.....	500.0 ml
Hemoglobin solution	500.0 ml
IsoVitaleX [®] enrichment.....	10.0mL

IsoVitaleX[®] Enrichment:

Composition per liter:

Glucose	100.0g
L-Cysteine·HCl.....	25.9g
L-Glutamine	10.0g
L-Cystine	1.1g
Adenine.....	1.0g
Nicotinamide adenine dinucleotide	0.25g

<i>p</i> -Aminobenzoic acid.....	0.013g
Thiamine·HCl	3.0mg

Preparation of IsoVitaleX[®]: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

GC Agar Base Solution:

Composition per 500.0mL:

Agar	10.0g
Pancreatic digest of casein.....	7.5g
Peptic digest of animal tissue	7.5g
NaCl.....	5.0g
K ₂ HPO ₄	4.0g
Cornstarch.....	1.0g
KH ₂ PO ₄	1.0g

Preparation of GC Agar Base: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Hemoglobin Solution:

Composition per 500.0mL:

Hemoglobin	10.0g
------------------	-------

Preparation of Hemoglobin Solution: Add hemoglobin to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Preparation of Medium: Aseptically combine 500.0mL sterile, cooled GC agar base solution and 500.0mL cooled sterile hemoglobin solution. Aseptically add 10.0mL of sterile IsoVitaleX[®] enrichment. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of fastidious microorganisms, especially *Neisseria* and *Haemophilus* species, from a variety of clinical specimens.

Chocolate Agar Base with Hemoglobin and Yeast Autolysate

Composition per liter:

Proteose peptone	20.0g
Agar	15.0g
Na ₂ HPO ₄	5.0g
NaCl	5.0g
Glucose	0.5g
Hemoglobin solution.....	500.0mL
Yeast autolysate solution.....	20.0mL

pH 7.3 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Hemoglobin Solution:

Composition per 500.0mL:

Bovine hemoglobin.....	10.0g
------------------------	-------

Preparation of Hemoglobin Solution: Add bovine hemoglobin to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Yeast Autolysate Solution:

Composition per 20.0mL:

Yeast autolysate.....	10.0g
Glucose	1.0g
NaHCO ₃	0.15g

Preparation of Yeast Autolysate Solution: Add components to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except hemoglobin and yeast autolysate solutions, to distilled/deionized water and bring volume to 480.0mL. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Add 500.0mL sterile hemoglobin solution and 20.0mL sterile yeast autolysate solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation of *Neisseria gonorrhoeae* from chronic and acute cases of gonococcal infections.

Chocolate Agar Base with Hemoglobin and Vitamino Growth Supplement

Composition per liter:

Proteose peptone	20.0g
Agar	15.0g
Na ₂ HPO ₄	5.0g
NaCl	5.0g
Glucose	0.5g
Hemoglobin solution.....	500.0mL
Vitamino growth supplement solution.....	10.0mL

pH 7.3 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Hemoglobin Solution:

Composition per 500.0mL:

Bovine hemoglobin.....	10.0g
------------------------	-------

Preparation of Hemoglobin Solution: Add bovine hemoglobin to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Vitamino Growth Supplement Solution:

Composition per 10.0mL:

L-Glutamine	0.2g
Adenine sulfate	20.0mg
Guanine hydrochloride	0.6mg
p-Aminobenzoic acid (PABA).....	0.26mg
Vitamin B ₁₂	0.2mg

Preparation of Vitamino Growth Supplement Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except hemoglobin and Vitamino growth supplement solutions, to distilled/deionized water and bring volume to 480.0mL. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Add 500.0mL sterile hemoglobin solution and 10.0mL sterile Vitamino growth supplement solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation of *Neisseria gonorrhoeae* from chronic and acute cases of gonococcal infections.

Chocolate II Agar

Composition per liter:

Agar	12.0g
Casein enzymic hydrolysate	7.5g
Meat extract	7.5g
NaCl	5.0g
K ₂ HPO ₄	4.0g
Corn starch.....	1.0g
KH ₂ PO ₄	1.0g
Vitamin B ₁₂	0.2mg
Hemoglobin solution	500.0mL

pH 7.3 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Hemoglobin Solution:

Composition per 500.0mL:

Bovine hemoglobin.....	10.0g
------------------------	-------

Preparation of Hemoglobin Solution: Add bovine hemoglobin to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Preparation of Medium: Add components, except hemoglobin solution, to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Add 500.0mL sterile hemoglobin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation of *Neisseria* and *Haemophilus* species from a variety of clinical specimens.

Chocolate No. 2 Agar Base with Supplements

Composition per liter:

Agar	12.0g
Casein enzymic hydrolysate	7.5g

Meat extract	7.5g
NaCl	5.0g
K ₂ HPO ₄	4.0g
Corn starch	1.0g
KH ₂ PO ₄	1.0g
Hemoglobin solution	480.0mL
Supplement solution	40.0mL

pH 7.3 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Hemoglobin Solution:

Composition per 500.0mL:

Hemoglobin	10.0g
------------------	-------

Preparation of Hemoglobin Solution: Add hemoglobin to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Filter sterilize.

Supplement Solution:

Composition per 40.0mL:

<i>p</i> -Aminobenzoic acid	259.0mg
L-Glutamine	100.0mg
Adenine sulfate	10.0mg
NAD	2.5mg
Vitamin B ₁₂	1.0mg
Coccarboxylase	1.0mg
Guanine-HCl	0.3mg
Fe(NO ₃) ₃	0.2mg
L-Cysteine-HCl	0.13mg
Thiamine-HCl	0.03mg

Preparation of Supplement Solution: Add components to distilled/deionized water and bring volume to 40.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except hemoglobin solution and supplement solution, to distilled/deionized water and bring volume to 480.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add hemoglobin and supplement solutions. Mix thoroughly. Pour into Petri dishes or aseptically distribute into sterile tubes.

Use: For the isolation of *Neisseria* spp. and *Haemophilus* spp. from a variety of clinical specimens.

Chocolate No. 2 Agar Base with Hemoglobin

Composition per liter:

Agar	12.0g
Hemoglobin	10.0g
Pancreatic digest of casein	7.5g
Selected meat peptone	7.5g
NaCl	5.0g
K ₂ HPO ₄	4.0g
Cornstarch	1.0g
KH ₂ PO ₄	1.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of fastidious microorganisms.

Chocolate II Agar with Hemoglobin and IsoVitaleX[®] (GCII Agar with Hemoglobin and IsoVitaleX[®])

Composition per liter:

GCII agar base	990.0mL
IsoVitaleX [®] enrichment	10.0mL

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a prepared medium from BD Diagnostic Systems.

GCII Agar Base:

Composition per liter:

Agar	12.0g
Hemoglobin	10.0g
Pancreatic digest of casein	7.5g
Selected meat peptone	7.5g
NaCl	5.0g
K ₂ HPO ₄	4.0g
Cornstarch	1.0g
KH ₂ PO ₄	1.0g

Preparation of GCII Agar Base: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

IsoVitaleX[®] Enrichment:

Composition per liter:

Glucose	100.0g
L-Cysteine-HCl	25.9g
L-Glutamine	10.0g
L-Cystine	1.1g
Adenine	1.0g
Nicotinamide adenine dinucleotide	0.25g
Vitamin B ₁₂	0.1g
Thiamine pyrophosphate	0.1g
Guanine-HCl	0.03g
Fe(NO ₃) ₃ ·6H ₂ O	0.02g
<i>p</i> -Aminobenzoic acid	0.013g
Thiamine-HCl	3.0mg

Preparation of IsoVitaleX[®]: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Aseptically add 10.0mL of sterile IsoVitaleX[®] enrichment to 990.0L of sterile, cooled GCII agar base. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of fastidious microorganisms, especially *Neisseria* and *Haemophilus* species, from a variety of clinical specimens.

Chocolate HiVeg Agar Base with Hemoglobin and Yeast Autolysate

Composition per liter:

Plant peptone No. 3	20.0g
Agar	15.0g
Na ₂ HPO ₄	5.0g
NaCl	5.0g
Glucose	0.5g
Hemoglobin solution	500.0mL
Yeast autolysate solution	20.0mL

pH 7.3 ± 0.2 at 25°C

Source: This medium, without hemoglobin or yeast autolysate, is available as a premixed powder from HiMedia.

Hemoglobin Solution:

Composition per 500.0mL:

Bovine hemoglobin..... 10.0g

Preparation of Hemoglobin Solution: Add bovine hemoglobin to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Yeast Autolysate Solution:

Composition per 20.0mL:

Yeast autolysate..... 10.0g

Glucose 1.0g

NaHCO₃..... 0.15g

Preparation of Yeast Autolysate Solution: Add components to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except hemoglobin and yeast autolysate solutions, to distilled/deionized water and bring volume to 480.0mL. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Add 500.0mL sterile hemoglobin solution and 20.0mL sterile yeast autolysate solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation of *Neisseria gonorrhoeae* from chronic and acute cases of gonococcal infections.

**Chocolate HiVeg Agar Base
with Hemoglobin and Vitamino Growth Supplement**

Composition per liter:

Plant peptone No. 3..... 20.0g

Agar 15.0g

Na₂HPO₄..... 5.0g

NaCl 5.0g

Glucose 0.5g

Hemoglobin solution..... 500.0mL

Vitamino growth supplement solution..... 10.0mL

pH 7.3 ± 0.2 at 25°C

Source: This medium, without hemoglobin or vitamino growth supplement, is available as a premixed powder from HiMedia.

Hemoglobin Solution:

Composition per 500.0mL:

Bovine hemoglobin..... 10.0g

Preparation of Hemoglobin Solution: Add bovine hemoglobin to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Vitamino Growth Supplement Solution:

Composition per 10.0mL:

L-Glutamine 0.2g

Adenine sulfate 20.0mg

Guanine hydrochloride 0.6mg

p-Aminobenzoic acid (PABA) 0.26mg

Vitamin B₁₂..... 0.2mg

Preparation of Vitamino Growth Supplement Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except hemoglobin and Vitamino growth supplement solutions, to distilled/deionized water

and bring volume to 480.0mL. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Add 500.0mL sterile hemoglobin solution and 10.0mL sterile Vitamino growth supplement solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation of *Neisseria gonorrhoeae* from chronic and acute cases of gonococcal infections.

Chocolate No. 2 HiVeg Agar Base with Hemoglobin

Composition per liter:

Agar 12.0g

Plant extract No.I 7.5g

Plant hydrolysate 7.5g

NaCl 5.0g

K₂HPO₄..... 4.0g

Corn starch..... 1.0g

KH₂PO₄..... 1.0g

Vitamin B₁₂..... 0.2mg

Hemoglobin solution 500.0mL

pH 7.3 ± 0.2 at 25°C

Source: This medium, without hemoglobin, is available as a premixed powder from HiMedia.

Hemoglobin Solution:

Composition per 500.0mL:

Bovine hemoglobin..... 10.0g

Preparation of Hemoglobin Solution: Add bovine hemoglobin to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Preparation of Medium: Add components, except hemoglobin solution, to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Add 500.0mL sterile hemoglobin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation of *Neisseria* and *Haemophilus* species from a variety of clinical specimens.

**Chocolate Tellurite Agar
(Tellurite Blood Agar)**

Composition per liter:

Agar 10.0g

Casein/meat (50/50) peptone 10.0g

Hemoglobin 10.0g

NaCl 5.0g

K₂HPO₄..... 4.0g

Cornstarch..... 1.0g

KH₂PO₄..... 1.0g

K₂TeO₃..... 0.1g

Bio-X enrichment 10.0mL

Bio-X Enrichment:

Composition per liter:

Glucose 100.0g

L-Cysteine-HCl 25.9g

L-Glutamate 10.0g

L-Cystine 1.1g

Adenine 1.0g

Coccarboxylase..... 0.1g

Guanine-HCl 0.03g

FeNO ₃	0.02g
<i>p</i> -Aminobenzoic acid	0.013g
Vitamin B ₁₂	0.01g
NAD (nicotinamide adenine dinucleotide)	250.0mg
Thiamine-HCl	3.0mg
pH 7.2 ± 0.2 at 25°C	

Preparation of Bio-X Enrichment: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Caution: Potassium tellurite is toxic.

Preparation of Medium: Add components, except Bio-X enrichment, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add filter-sterilized Bio-X enrichment. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation and cultivation of *Corynebacterium* species. *Corynebacterium diphtheriae* appears as gray-black colonies.

Cholera HiVeg Medium Base with Tellurite and Blood

Composition per liter:

NaCl	20.0g
Agar	10.0g
Plant extract	10.0g
Plant peptone	10.0g
Sucrose	10.0g
Na ₂ CO ₃	5.0g
Sodium lauryl sulfate	0.1g
Sheep blood, defibrinated	50.0mL
Tellurite solution	2.0mL
pH 8.5 ± 0.2 at 25°C	

Source: This medium, without tellurite or blood, is available as a pre-mixed powder from HiMedia.

Tellurite Solution:

Composition per 10.0mL:

K ₂ TeO ₃	0.1g
---------------------------------------	------

Preparation of Tellurite Solution: Add K₂TeO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Caution: Potassium tellurite is toxic.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Do not autoclave. Cool to 70°C. Aseptically add 2.0mL of sterile tellurite solution and 50.0mL of sterile defibrinated blood. Maintain at 70°C for several minutes. Cool to 50°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation of pathogenic vibrios, especially *Vibrio cholerae*. For the selective isolation of *Vibrio* species from specimens grossly contaminated with Enterobacteriaceae.

Cholera Medium Base with Tellurite and Blood

Composition per liter:

NaCl	20.0g
Agar	10.0g
Peptic digest of animal tissue	10.0g
Beef extract	10.0g
Sucrose	10.0g

Na ₂ CO ₃	5.0g
Sodium lauryl sulfate	0.1g
Sheep blood, defibrinated	50.0mL
Tellurite solution	2.0mL
pH 8.5 ± 0.2 at 25°C	

Source: This medium, without tellurite or blood, is available as a pre-mixed powder from HiMedia.

Tellurite Solution:

Composition per 10.0mL:

K ₂ TeO ₃	0.1g
---------------------------------------	------

Preparation of Tellurite Solution: Add K₂TeO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Caution: Potassium tellurite is toxic.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Do not autoclave. Cool to 70°C. Aseptically add 2.0mL of sterile tellurite solution and 50.0mL of sterile defibrinated blood. Maintain at 70°C for several minutes. Cool to 50°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation of pathogenic vibrios, especially *Vibrio cholerae*. For the selective isolation of *Vibrio* species from specimens grossly contaminated with Enterobacteriaceae.

Cholera Medium TCBS

Composition per liter:

Sucrose	20.0g
Agar	14.0g
Peptone	10.0g
Na ₂ S ₂ O ₃	10.0g
Sodium citrate	10.0g
NaCl	10.0g
Ox bile	8.0g
Yeast extract	5.0g
Ferric citrate	1.0g
Bromthymol Blue	0.04g
Thymol Blue	0.04g
pH 8.6 ± 0.2 at 25°C	

Source: This medium is available as a pre-mixed powder from Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0mL. Mix thoroughly. Gently heat while stirring and bring to boiling. Do not autoclave. Cool to 45°C. Pour into sterile Petri dishes.

Use: For the isolation of pathogenic vibrios, especially *Vibrio cholerae*. This medium is suitable for the growth of *Vibrio cholerae*, *Vibrio parahaemolyticus*, and most other *Vibrios*. Most of the Enterobacteriaceae encountered in feces are totally suppressed for at least 24 hours. Slight growth of *Proteus* species and *Enterococcus faecalis* may occur but the colonies are easily distinguished from vibrio colonies. While inhibiting non-vibrios, it promotes rapid growth of pathogenic vibrios after overnight incubation at 35°C. *Vibrio cholerae* El Tor biotype forms yellow colonies, *Vibrio parahaemolyticus* forms blue-green colonies, *Vibrio alginolyticus* forms yellow colonies, *Vibrio metschnikovii* forms yellow colonies, *Vibrio fluvialis* forms yellow colonies, *Vibrio vulnificus* forms blue-green colonies, *Vibrio mimicus* forms blue-green colonies, *Enterococcus* species form yellow colonies, *Proteus* species form yellow-green colonies, *Pseudomonas* species form

blue-green colonies and some strains of *Aeromonas hydrophila* produce yellow colonies, but *Plesimonas shigelloides* does not usually grow well on this medium.

Cholesterol Medium

Composition per 1030.0mL:

Solution A	500.0mL
Solution B	500.0mL
Amino acid solution	20.0mL
Vitamin solution	10.0mL
pH 6.8 ± 0.2 at 25°C	

Solution A:

Composition per liter:

(NH ₄) ₂ SO ₄	5.0g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.5g
CaCl ₂ ·2H ₂ O	0.1g
NaCl	0.1g
Wolfe's mineral solution	10.0mL

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Wolfe's Mineral Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O	3.0g
Nitrilotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·H ₂ O	0.5g
CaCl ₂	0.1g
CoCl ₂ ·6H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g
ZnSO ₄ ·7H ₂ O	0.1g
AlK(SO ₄) ₂ ·12H ₂ O	0.01g
CuSO ₄ ·5H ₂ O	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g

Preparation of Wolfe's Mineral Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add distilled/deionized water to 1.0L. Add remaining components.

Solution B:

Composition per liter:

Noble agar	15.0g
Cholesterol	2.0g
Tween™ 80	1.0g
Yeast extract	0.5g

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Amino Acid Solution:

Composition per 100.0mL:

L-Histidine	0.5g
DL-Methionine	0.1g
DL-Tryptophan	0.1g

Preparation of Amino Acid Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Filter sterilize.

Vitamin Solution:

Composition per liter:

myo-Inositol	200.0mg
Calcium pantothenate	40.0mg
Niacin	40.0mg
Pyridoxine·HCl	40.0mg
Thiamine	40.0mg
<i>p</i> -Aminobenzoic acid	20.0mg
Riboflavin	20.0mg
Biotin	200.0µg
Folic acid	200.0µg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Filter sterilize.

Preparation of Medium: Combine cooled, sterile solution A and cooled, sterile solution B. Aseptically add filter-sterilized amino acid solution and vitamin solution. Adjust pH to 6.8. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of ATCC strain 31384.

Cholic Acid Medium

Composition per liter:

Noble agar	15.0g
K ₂ HPO ₄	3.5g
Cholic acid	2.0g
(NH ₄) ₂ SO ₄	2.0g
KH ₂ PO ₄	1.5g
MgSO ₄ ·7H ₂ O	0.1g
CaCl ₂ ·2H ₂ O	0.01g
FeSO ₄ ·7H ₂ O	0.5mg

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Nocardia* species and other bacteria that can utilize cholic acid as a carbon source.

Choline Assay Medium

Composition per liter:

Sucrose	40.0g
Potassium sodium tartrate	11.4g
(NH ₄) ₂ NO ₃	2.0g
KH ₂ PO ₄	2.0g
MgSO ₄ ·7H ₂ O	1.0g
CaCl ₂ ·2H ₂ O	0.2g
NaCl	0.2g
ZnSO ₄ ·7H ₂ O	0.02g
FeSO ₄	1.1mg
Na ₃ BO ₃	0.7mg
(NH ₄) ₂ MoO ₃	0.5mg
CuCl	0.3mg
MgSO ₄ ·7H ₂ O	0.11mg
Biotin	0.01mg

pH 5.5 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 2–3 min. Allow precipitate to settle out. Distribute supernatant into 125.0mL flasks in 10.0mL volumes. Add standard solution or test solutions to each flask. Adjust the volume of each flask to 20.0mL with distilled/deionized water. Autoclave for 10 min at 15 psi pressure–121°C.

Use: For the microbiological assay of choline using *Neurospora crassa* as the test microorganism.

Choline Medium

Composition per liter:

NaCl	30.0g
Choline chloride	5.0g
K ₂ HPO ₄	1.0g
MgSO ₄	0.5g
FeSO ₄	0.01g
pH 7.4 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.4. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Achromobacter holinophagum*.

Chondromyces VYZ Agar

Composition per liter:

Agar	15.0g
Fresh baker's yeast cake	5.0g
CaCl ₂	1.0g
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Chondromyces* species.

Chopped Liver Broth

Composition per liter:

Fresh beef liver	500.0g
Peptone	10.0g
K ₂ HPO ₄	1.0g
Soluble starch	1.0g
pH 7.0 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Grind fresh beef liver. Add to 1.0L of distilled/deionized water. Gently heat and bring to boiling. Continue boiling for 60 min. Cool to 25°C. Adjust pH to 7.0. Gently heat and bring to boiling. Continue boiling for 10 min. Filter through cheesecloth. Save chopped liver particles. To filtrate, add remaining components. Bring volume to 1.0L with distilled/deionized water. Adjust pH to 7.0. Filter through Whatman #1 filter paper. Add chopped liver particles to test tubes to a depth of 1.2–2.5 cm. Add 10.0mL of broth to each tube. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation and cultivation of *Clostridium botulinum*, *Clostridium perfringens*, and other anaerobic bacteria from foods.

Chopped Liver HiVeg Broth

Composition per liter:

Plant infusion	100.0g
Plant peptone	10.0g
K ₂ HPO ₄	1.0g
Starch, soluble	1.0g
pH 7.0 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 20 min at 15 psi pressure–121°C.

Use: For the isolation and cultivation of *Clostridium botulinum*, *Clostridium perfringens*, and other anaerobic bacteria from foods.

Chopped Meat Agar

Composition per liter:

Ground meat, fat free	500.0g
Pancreatic digest of casein	30.0g
Agar	15.0g
K ₂ HPO ₄	5.0g
Yeast extract	5.0g
L-Cysteine-HCl	0.5g
Resazurin	1.0mg
NaOH (1N solution)	25.0mL
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Use lean beef or horse meat. Remove fat and connective tissue. Grind finely. Add ground meat and 25.0mL of NaOH solution to distilled/deionized water and bring volume to 1025.0mL. Gently heat and bring to boiling. Continue boiling for 15 min without stirring. Cool to room temperature. Remove fat from surface. Filter and retain both meat particles and filtrate. Adjust volume of filtrate to 1.0L with distilled/deionized water. Add pancreatic digest of casein, agar, K₂HPO₄, yeast extract, and resazurin. Gently heat and bring to boiling. Boil for 1–2 min. Add L-cysteine-HCl. Mix thoroughly. Distribute 7.0mL into tubes that contain meat particles (1 part meat particles to 5 parts fluid). Autoclave for 30 min at 15 psi pressure–121°C.

Use: For the cultivation of various anaerobes.

Chopped Meat Broth

Composition per liter:

Ground meat, fat free	500.0g
Pancreatic digest of casein	30.0g
K ₂ HPO ₄	5.0g
Yeast extract	5.0g
L-Cysteine-HCl	0.5g
Resazurin	1.0mg
NaOH (1N solution)	25.0mL
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Use lean beef or horse meat. Remove fat and connective tissue. Grind finely. Add ground meat and 25.0mL of NaOH solution to distilled/deionized water and bring volume to 1025.0mL. Gently heat and bring to boiling. Continue boiling for 15 min without stirring. Cool to room temperature. Remove fat from surface. Filter and retain both meat particles and filtrate. Adjust volume of filtrate to 1.0L with distilled/deionized water. Add pancreatic digest of casein, K₂HPO₄, yeast extract, and resazurin. Gently heat and bring to

boiling. Boil for 1–2 min. Add L-cysteine-HCl. Mix thoroughly. Distribute 7.0mL into tubes that contain meat particles (1 part meat particles to 5 parts fluid). Autoclave for 30 min at 15 psi pressure–121°C.

Use: For the cultivation of various anaerobes.

Chopped Meat Broth with Carbohydrates (DSMZ Medium 110)

Composition per liter:

Ground meat, fat free	500.0g
Pancreatic digest of casein	30.0g
K ₂ HPO ₄	5.0g
Yeast extract	5.0g
Glucose	4.0g
Cellobiose	1.0g
Maltose	1.0g
Starch, soluble	1.0g
L-Cysteine-HCl	0.5g
Resazurin	1.0mg
NaOH (1N solution)	25.0mL

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Use lean beef or horse meat. Remove fat and connective tissue. Grind finely. Add ground meat and 25.0mL of NaOH solution to distilled/deionized water and bring volume to 1025.0mL. Gently heat and bring to boiling. Continue boiling for 15 min without stirring. Cool to room temperature. Remove fat from surface. Filter and retain both meat particles and filtrate. Adjust volume of filtrate to 1.0L with distilled/deionized water. Add pancreatic digest of casein, K₂HPO₄, yeast extract, and resazurin. Gently heat and bring to boiling. Boil for 1–2 min. Add glucose, cellobiose, maltose, and soluble starch. Add L-cysteine-HCl. Mix thoroughly. Distribute 7.0mL into tubes that contain meat particles (1 part meat particles to 5 parts fluid). Autoclave for 30 min at 15 psi pressure–121°C.

Use: For the cultivation of numerous anaerobes, including *Actinomyces suis*, *Anaerobiospirillum succiniciproducens*, *Bacteroides distasonis*, *Bacteroides eggerthii*, *Bacteroides fragilis*, *Bacteroides helcogenes*, *Bacteroides macacae*, *Bacteroides pyogenes*, *Bacteroides splanchnicus*, *Bacteroides suis*, *Centipeda periodontii*, numerous *Clostridium* species, *Eubacterium brachy*, *Eubacterium eligens*, *Eubacterium hallii*, *Eubacterium limosum*, *Eubacterium plautii*, *Eubacterium ruminantium*, *Eubacterium saburreum*, *Eubacterium siraeum*, *Eubacterium* species, *Eubacterium tarantellus*, *Eubacterium tenue*, *Eubacterium ventriosum*, *Megamonas hypermegas*, *Peptococcus niger*, *Peptostreptococcus productus*, *Prevotella buccae*, *Prevotella buccalis*, *Prevotella denticola*, *Prevotella intermedia*, *Prevotella oralis*, and *Selenomonas sputigena*.

Chopped Meat Broth with Formate and Fumarate (LMG Medium 69)

Composition per liter:

Ground meat, fat free	500.0g
Pancreatic digest of casein	30.0g
K ₂ HPO ₄	5.0g
Yeast extract	5.0g
L-Cysteine-HCl	0.5g
Resazurin	1.0mg
NaOH (1N solution)	25.0mL
Formate-fumarate solution	7.7mL

pH 7.0 ± 0.2 at 25°C

Formate-Fumarate Solution:

Composition per 100.0mL:

Sodium formate	6.0g
Fumaric acid	6.0g

Preparation of Formate-Fumarate Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Adjust pH to 7.0. Filter sterilize.

Preparation of Medium: Use lean beef or horse meat. Remove fat and connective tissue. Grind finely. Add ground meat and 25.0mL of NaOH solution to distilled/deionized water and bring volume to 1025.0mL. Gently heat and bring to boiling. Continue boiling for 15 min without stirring. Cool to room temperature. Remove fat from surface. Filter and retain both meat particles and filtrate. Adjust volume of filtrate to 1.0L with distilled/deionized water. Add pancreatic digest of casein, agar, K₂HPO₄, yeast extract, and resazurin. Gently heat and bring to boiling. Boil for 1–2 min. Add L-cysteine-HCl. Mix thoroughly. Distribute 6.5mL into tubes that contain meat particles (1 part meat particles to 5 parts fluid). Autoclave for 30 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 50 µL of sterile formate/fumarate solution to each tube prior to inoculation.

Use: For the cultivation of various *Clostridium* spp.

Chopped Meat Broth with Vitamin K₁ (LMG Medium 70)

Composition per liter:

Ground meat, fat free	500.0g
Pancreatic digest of casein	30.0g
K ₂ HPO ₄	5.0g
Yeast extract	5.0g
L-Cysteine-HCl	0.5g
Resazurin	1.0mg
NaOH (1N solution)	25.0mL
Vitamin K ₁ solution	7.7mL

pH 7.0 ± 0.2 at 25°C

Vitamin K₁ Solution:

Composition per 50.0mL:

Ethanol (20% solution)	50.0mL
Vitamin K ₁	0.7g

Preparation of Vitamin K₁ Solution: Mix components. Filter sterilize. Store solution protected from light at 5°C. Discard after one month.

Preparation of Medium: Use lean beef or horse meat. Remove fat and connective tissue. Grind finely. Add ground meat and 25.0mL of NaOH solution to distilled/deionized water and bring volume to 1025.0mL. Gently heat and bring to boiling. Continue boiling for 15 min without stirring. Cool to room temperature. Remove fat from surface. Filter and retain both meat particles and filtrate. Adjust volume of filtrate to 1.0L with distilled/deionized water. Add pancreatic digest of casein, agar, K₂HPO₄, yeast extract, and resazurin. Gently heat and bring to boiling. Boil for 1–2 min. Add L-cysteine-HCl. Mix thoroughly. Distribute 6.5mL into tubes that contain meat particles (1 part meat particles to 5 parts fluid). Autoclave for 30 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 50 µL of sterile vitamin K₁ solution to each tube prior to inoculation.

Use: For the cultivation of various *Clostridium* spp.

Chopped Meat Carbohydrate Medium**Composition** per 1240.0mL:

Peptone.....	30.0g
K ₂ HPO ₄	5.0g
Yeast extract.....	5.0g
Cellobiose.....	1.0g
Maltose.....	1.0g
Starch.....	1.0g
L-Cysteine·HCl·H ₂ O.....	0.5g
Chopped meat extract filtrate.....	1.0L
Chopped meat extract solids.....	200.0mL
Resazurin (0.025% solution).....	4.0mL

pH 7.0 ± 0.2 at 25°C

Chopped Meat Extract:**Composition** per liter:

Beef or horse meat.....	500.0g
NaOH (1N solution).....	25.0mL

Preparation of Chopped Meat Extract: Use lean beef or horse meat. Remove fat and connective tissue. Grind. Add meat and NaOH to distilled/deionized water and bring volume to 1.0L. Gently heat and bring to boiling while stirring. Cool to 25°C. Remove fat from surface. Filter. Reserve ground meat particles and filtrate. Add distilled/deionized water to filtrate and bring volume to 1.0L.

Preparation of Medium: To 1.0L of chopped meat extract filtrate, add the remaining components, except the L-cysteine·HCl·H₂O and chopped meat solids. Mix thoroughly. Gently heat to boiling. Cool to room temperature. Add the L-cysteine·HCl·H₂O. Adjust pH to 7.0. Distribute 1 part chopped meat solids (by volume) and 5 parts of liquid (by volume) into tubes under O₂-free 97% N₂ + 3% H₂. Cap with rubber stoppers and place tubes in a press. Autoclave for 15 min at 15 psi pressure–121°C with fast exhaust.

Use: For the cultivation of anaerobic bacteria, including *Clostridium* species, *Eubacterium* species, and *Gemmiger formicilis*.

**Chopped Meat Carbohydrate
Medium with Rumen Fluid
(ATCC Medium 1016)**

Composition per 1390.0mL:

Peptone.....	30.0g
K ₂ HPO ₄	5.0g
Yeast extract.....	5.0g
Cellobiose.....	1.0g
Maltose.....	1.0g
Starch.....	1.0g
L-Cysteine·HCl·H ₂ O.....	0.5g
Chopped meat extract filtrate.....	1.0L
Chopped meat extract solids.....	200.0mL
Rumen fluid.....	150.0mL
Resazurin (0.025% solution).....	4.0mL

pH 7.0 ± 0.2 at 25°C

Chopped Meat Extract:**Composition** per liter:

Beef or horse meat.....	500.0g
NaOH (1N solution).....	25.0mL

Preparation of Chopped Meat Extract: Use lean beef or horse meat. Remove fat and connective tissue. Grind. Add meat and NaOH to distilled/deionized water and bring volume to 1.0L. Gently heat and bring to boiling while stirring. Cool to 25°C. Remove fat from surface.

Filter. Reserve ground meat particles and filtrate. Add distilled/deionized water to filtrate and bring volume to 1.0L.

Preparation of Medium: To 1.0L of chopped meat extract filtrate, add the remaining components, except L-cysteine·HCl·H₂O and chopped meat solids. Mix thoroughly. Gently heat to boiling. Cool to room temperature. Add the L-cysteine·HCl·H₂O. Adjust pH to 7.0. Distribute 1 part chopped meat solids (by volume) and 5 parts of liquid (by volume) into tubes under O₂-free 97% N₂ + 3% H₂. Cap with rubber stoppers and place tubes in a press. Autoclave for 15 min at 15 psi pressure–121°C with fast exhaust.

Use: For the cultivation of anaerobic bacteria, including *Butyrivibrio crossotus*, *Eubacterium* species, and *Ruminococcus* species.

**Chopped Meat Carbohydrate
Medium with Rumen Fluid**

Composition per 1390.0mL:

Peptone.....	30.0g
K ₂ HPO ₄	5.0g
Yeast extract.....	5.0g
Glucose.....	4.0g
Cellobiose.....	1.0g
Maltose.....	1.0g
Starch.....	1.0g
L-Cysteine·HCl·H ₂ O.....	0.5g
Chopped meat extract filtrate.....	1.0L
Chopped meat extract solids.....	200.0mL
Rumen fluid.....	150.0mL
Resazurin (0.025% solution).....	4.0mL

pH 7.0 ± 0.2 at 25°C

Chopped Meat Extract:**Composition** per liter:

Beef or horse meat.....	500.0g
NaOH (1N solution).....	25.0mL

Preparation of Chopped Meat Extract: Use lean beef or horse meat. Remove fat and connective tissue. Grind. Add meat and NaOH to distilled/deionized water and bring volume to 1.0L. Gently heat and bring to boiling while stirring. Cool to 25°C. Remove fat from surface. Filter. Reserve ground meat particles and filtrate. Add distilled/deionized water to filtrate and bring volume to 1.0L.

Preparation of Medium: To 1.0L of chopped meat extract filtrate, add the remaining components, except L-cysteine·HCl·H₂O and chopped meat solids. Mix thoroughly. Gently heat to boiling. Cool to room temperature. Add the L-cysteine·HCl·H₂O. Adjust pH to 7.0. Distribute 1 part chopped meat solids (by volume) and 5 parts of liquid (by volume) into tubes under O₂-free 97% N₂ + 3% H₂. Cap with rubber stoppers and place tubes in a press. Autoclave for 15 min at 15 psi pressure–121°C with fast exhaust.

Use: For the cultivation of anaerobic bacteria, including *Fusobacterium prausnitzii*, *Eubacterium* species, and *Prevotella ruminicola*.

**Chopped Meat Carbohydrate
Medium with Tween™ 80**

Composition per 1240.0mL:

Peptone.....	30.0g
K ₂ HPO ₄	5.0g
Yeast extract.....	5.0g
Cellobiose.....	1.0g
Maltose.....	1.0g
Starch.....	1.0g

Tween™ 80	1.0g
L-Cysteine-HCl·H ₂ O	0.5g
Chopped meat extract filtrate	1.0L
Chopped meat extract solids	200.0mL
Resazurin (0.025% solution)	4.0mL
pH 7.0 ± 0.2 at 25°C	

Chopped Meat Extract:**Composition per liter:**

Beef or horse meat	500.0g
NaOH (1N solution)	25.0mL

Preparation of Chopped Meat Extract: Use lean beef or horse meat. Remove fat and connective tissue. Grind. Add meat and NaOH to distilled/deionized water and bring volume to 1.0L. Gently heat and bring to boiling while stirring. Cool to 25°C. Remove fat from surface. Filter. Reserve ground meat particles and filtrate. Add distilled/deionized water to filtrate and bring volume to 1.0L.

Preparation of Medium: To 1.0L of chopped meat extract filtrate, add the remaining components, except L-cysteine-HCl·H₂O and chopped meat solids. Mix thoroughly. Gently heat to boiling. Cool to room temperature. Add the L-cysteine-HCl·H₂O. Adjust pH to 7.0. Distribute 1 part chopped meat solids (by volume) and 5 parts of liquid (by volume) into tubes under O₂-free 97% N₂ + 3% H₂. Cap with rubber stoppers and place tubes in a press. Autoclave for 15 min at 15 psi pressure–121°C with fast exhaust.

Use: For the cultivation of *Coprococcus* species and *Peptostreptococcus micros*.

Chopped Meat Glucose Agar (LMG Medium 68)

Composition per liter:

Ground meat, fat free	500.0g
Pancreatic digest of casein	30.0g
Agar	15.0g
Glucose	10.0g
K ₂ HPO ₄	5.0g
Yeast extract	5.0g
L-Cysteine-HCl	0.5g
Resazurin	1.0mg
NaOH (1N solution)	25.0mL
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Use lean beef or horse meat. Remove fat and connective tissue. Grind finely. Add ground meat and 25.0mL of NaOH solution to distilled/deionized water and bring volume to 1025.0mL. Gently heat and bring to boiling. Continue boiling for 15 min without stirring. Cool to room temperature. Remove fat from surface. Filter and retain both meat particles and filtrate. Adjust volume of filtrate to 1.0L with distilled/deionized water. Add pancreatic digest of casein, agar, K₂HPO₄, yeast extract, and resazurin. Gently heat and bring to boiling. Boil for 1–2 min. Add L-cysteine-HCl. Mix thoroughly. Distribute 7.0mL into tubes that contain meat particles (1 part meat particles to 5 parts fluid). Autoclave for 30 min at 15 psi pressure–121°C.

Use: For the cultivation of various *Clostridium* spp.

Chopped Meat Glucose Broth (LMG Medium 68)

Composition per liter:

Ground meat, fat free	500.0g
Pancreatic digest of casein	30.0g

Glucose	10.0g
K ₂ HPO ₄	5.0g
Yeast extract	5.0g
L-Cysteine-HCl	0.5g
Resazurin	1.0mg
NaOH (1N solution)	25.0mL
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Use lean beef or horse meat. Remove fat and connective tissue. Grind finely. Add ground meat and 25.0mL of NaOH solution to distilled/deionized water and bring volume to 1025mL. Gently heat and bring to boiling. Continue boiling for 15 min without stirring. Cool to room temperature. Remove fat from surface. Filter and retain both meat particles and filtrate. Adjust volume of filtrate to 1.0L with distilled/deionized water. Add pancreatic digest of casein, agar, K₂HPO₄, yeast extract, and resazurin. Gently heat and bring to boiling. Boil for 1–2 min. Add L-cysteine-HCl. Mix thoroughly. Distribute 7.0mL into tubes that contain meat particles (1 part meat particles to 5 parts fluid). Autoclave for 30 min at 15 psi pressure–121°C.

Use: For the cultivation of various *Clostridium* spp.

Chopped Meat Glucose Medium

Composition per 1240.0mL:

Peptone	30.0g
K ₂ HPO ₄	5.0g
Yeast extract	5.0g
Glucose	5.0g
L-Cysteine-HCl·H ₂ O	0.5g
Chopped meat extract filtrate	1.0L
Chopped meat extract solids	200.0mL
Resazurin (0.025% solution)	4.0mL
pH 7.0 ± 0.2 at 25°C	

Chopped Meat Extract:**Composition per liter:**

Beef or horse meat	500.0g
NaOH (1N solution)	25.0mL

Preparation of Chopped Meat Extract: Use lean beef or horse meat. Remove fat and connective tissue. Grind. Add meat and NaOH to distilled/deionized water and bring volume to 1.0L. Gently heat and bring to boiling while stirring. Cool to 25°C. Remove fat from surface. Filter. Reserve ground meat particles and filtrate. Add distilled/deionized water to filtrate and bring volume to 1.0L.

Preparation of Medium: To 1.0L of chopped meat extract filtrate, add the remaining components, except L-cysteine-HCl·H₂O and chopped meat solids. Mix thoroughly. Gently heat to boiling. Cool to room temperature. Add the L-cysteine-HCl·H₂O. Adjust pH to 7.0. Distribute 1 part chopped meat solids (by volume) and 5 parts of liquid (by volume) into tubes under O₂-free 97% N₂ + 3% H₂. Cap with rubber stoppers and place tubes in a press. Autoclave for 15 min at 15 psi pressure–121°C with fast exhaust.

Use: For the cultivation of *Clostridium* species and *Selenomonas noxia*.

Chopped Meat Glucose Medium with NaCl

Composition per 1205.0mL:

NaCl	30.0g
Peptone	30.0g
K ₂ HPO ₄	5.0g
Yeast extract	5.0g

Glucose	5.0g
L-Cysteine-HCl-H ₂ O.....	0.5g
Chopped meat extract filtrate.....	1.0L
Chopped meat extract solids.....	200.0mL
Resazurin (0.025% solution).....	4.0mL
pH 7.0 ± 0.2 at 25°C	

Chopped Meat Extract:**Composition per liter:**

Beef or horse meat	500.0g
NaOH (1N solution).....	25.0mL

Preparation of Chopped Meat Extract: Use lean beef or horse meat. Remove fat and connective tissue. Grind. Add meat and NaOH to distilled/deionized water and bring volume to 1.0L. Gently heat and bring to boiling while stirring. Cool to 25°C. Remove fat from surface. Filter. Reserve ground meat particles and filtrate. Add distilled/deionized water to filtrate and bring volume to 1.0L.

Preparation of Medium: To 1.0L of chopped meat extract filtrate, add the remaining components, except the L-cysteine-HCl-H₂O and chopped meat solids. Mix thoroughly. Gently heat to boiling. Cool to room temperature. Add the L-cysteine-HCl-H₂O. Adjust pH to 7.0. Distribute 1 part chopped meat solids (by volume) and 5 parts of liquid (by volume) into tubes under O₂-free 97% N₂ + 3% H₂. Cap with rubber stoppers and place tubes in a press. Autoclave for 15 min at 15 psi pressure–121°C with fast exhaust.

Use: For the cultivation and maintenance of anaerobic halophilic bacteria.

Chopped Meat Medium**Composition per 1205.0mL:**

Peptone.....	30.0g
K ₂ HPO ₄	5.0g
Yeast extract.....	5.0g
L-Cysteine-HCl-H ₂ O.....	0.5g
Chopped meat extract filtrate.....	1.0L
Chopped meat extract solids.....	200.0mL
Resazurin (0.025% solution).....	4.0mL
pH 7.0 ± 0.2 at 25°C	

Chopped Meat Extract:**Composition per liter:**

Beef or horse meat	500.0g
NaOH (1N solution).....	25.0mL

Preparation of Chopped Meat Extract: Use lean beef or horse meat. Remove fat and connective tissue. Grind. Add meat and NaOH to distilled/deionized water and bring volume to 1.0L. Gently heat and bring to boiling while stirring. Cool to 25°C. Remove fat from surface. Filter. Reserve ground meat particles and filtrate. Add distilled/deionized water to filtrate and bring volume to 1.0L.

Preparation of Medium: To 1.0L of chopped meat extract filtrate, add the remaining components, except the L-cysteine-HCl-H₂O and chopped meat solids. Mix thoroughly. Gently heat to boiling. Cool to room temperature. Add the L-cysteine-HCl-H₂O. Adjust pH to 7.0. Distribute 1 part chopped meat solids (by volume) and 5 parts of liquid (by volume) into tubes under O₂-free 97% N₂ + 3% H₂. Cap with rubber stoppers and place tubes in a press. Autoclave for 15 min at 15 psi pressure–121°C with fast exhaust.

Use: For the cultivation and maintenance of a variety of anaerobic bacteria, including *Bacteroides* species, *Bifidobacterium* species, *Cap-*

nocytophaga species, *Clostridium* species, *Eubacterium* species, *Fusobacterium* species, *Peptostreptococcus* species, *Prevotella* species, *Propionibacterium* species, *Ruminococcus* species, and others.

Chopped Meat Medium with 10% Fetal Calf Serum**Composition per 1230.0mL:**

Peptone	30.0g
K ₂ HPO ₄	5.0g
Yeast extract.....	5.0g
L-Cysteine-HCl-H ₂ O	0.5g
Chopped meat extract filtrate.....	1.0L
Chopped meat extract solids.....	200.0mL
Fetal calf serum.....	100.0mL
Resazurin (0.025% solution)	4.0mL
pH 7.0 ± 0.2 at 25°C	

Chopped Meat Extract:**Composition per liter:**

Beef or horse meat	500.0g
NaOH (1N solution).....	25.0mL

Preparation of Chopped Meat Extract: Use lean beef or horse meat. Remove fat and connective tissue. Grind. Add meat and NaOH to distilled/deionized water and bring volume to 1.0L. Gently heat and bring to boiling while stirring. Cool to 25°C. Remove fat from surface. Filter. Reserve ground meat particles and filtrate. Add distilled/deionized water to filtrate and bring volume to 1.0L.

Preparation of Medium: To 1.0L of chopped meat extract filtrate, add the remaining components, except the L-cysteine-HCl-H₂O and chopped meat solids. Mix thoroughly. Gently heat to boiling. Cool to room temperature. Add the L-cysteine-HCl-H₂O. Adjust pH to 7.0. Distribute 1 part chopped meat solids (by volume) and 5 parts of liquid (by volume) into tubes under O₂-free 97% N₂ + 3% H₂. Cap with rubber stoppers and place tubes in a press. Autoclave for 15 min at 15 psi pressure–121°C with fast exhaust.

Use: For the cultivation and maintenance of *Actinomyces hordeovulneris*.

Chopped Meat Medium with Formate and Fumarate**Composition per 1230.0mL:**

Peptone	30.0g
K ₂ HPO ₄	5.0g
Yeast extract.....	5.0g
L-Cysteine-HCl-H ₂ O	0.5g
Chopped meat extract filtrate.....	1.0L
Chopped meat extract solids.....	200.0mL
Resazurin (0.025% solution)	4.0mL
Formate-fumarate solution.....	0.05mL
pH 7.0 ± 0.2 at 25°C	

Chopped Meat Extract:**Composition per liter:**

Beef or horse meat	500.0g
NaOH (1N solution).....	25.0mL

Preparation of Chopped Meat Extract: Use lean beef or horse meat. Remove fat and connective tissue. Grind. Add meat and NaOH to distilled/deionized water and bring volume to 1.0L. Gently heat and bring to boiling while stirring. Cool to 25°C. Remove fat from surface. Filter. Reserve ground meat particles and filtrate. Add distilled/deionized water to filtrate and bring volume to 1.0L.

Formate-Fumarate Solution:**Composition per 100.0mL:**

Sodium formate.....	6.0g
Fumaric acid	6.0g

Preparation of Formate-Fumarate Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Adjust pH to 7.0. Filter sterilize.

Preparation of Medium: To 1.0L of chopped meat extract filtrate, add the remaining components, except the L-cysteine·HCl·H₂O, formate-fumarate solution, and chopped meat solids. Mix thoroughly. Gently heat to boiling. Cool to room temperature. Add the L-cysteine·HCl·H₂O. Adjust pH to 7.0. Distribute 1 part chopped meat solids (by volume) and 5 parts of liquid (by volume) into tubes under O₂-free 97% N₂ + 3% H₂. Cap with rubber stoppers and place tubes in a press. Autoclave for 15 min at 15 psi pressure–121°C with fast exhaust. Prior to inoculation, add 0.05mL of formate-fumarate solution to each tube containing approximately 6.5mL of chopped meat medium.

Use: For the cultivation and maintenance of *Bacteroides ureolyticus* and *Wolinella* species.

Chopped Meat Medium with 1% Glucose**Composition per 1230.0mL:**

Peptone.....	30.0g
Glucose	10.0g
K ₂ HPO ₄	5.0g
Yeast extract.....	5.0g
L-Cysteine·HCl·H ₂ O.....	0.5g
Chopped meat extract filtrate.....	1.0L
Chopped meat extract solids.....	200.0mL
Resazurin (0.025% solution).....	4.0mL

pH 7.0 ± 0.2 at 25°C

Chopped Meat Extract:**Composition per liter:**

Beef or horse meat.....	500.0g
NaOH (1N solution).....	25.0mL

Preparation of Chopped Meat Extract: Use lean beef or horse meat. Remove fat and connective tissue. Grind. Add meat and NaOH to distilled/deionized water and bring volume to 1.0L. Gently heat and bring to boiling while stirring. Cool to 25°C. Remove fat from surface. Filter. Reserve ground meat particles and filtrate. Add distilled/deionized water to filtrate and bring volume to 1.0L.

Preparation of Medium: To 1.0L of chopped meat extract filtrate, add the remaining components, except the L-cysteine·HCl·H₂O and chopped meat solids. Mix thoroughly. Gently heat to boiling. Cool to room temperature. Add the L-cysteine. Adjust pH to 7.0. Distribute 1 part chopped meat solids (by volume) and 5 parts of liquid (by volume) into tubes under O₂-free 97% N₂ + 3% H₂. Cap with rubber stoppers and place tubes in a press. Autoclave for 15 min at 15 psi pressure–121°C with fast exhaust.

Use: For the cultivation and maintenance of anaerobic bacteria, including *Bacteroides disiens*, *Coprococcus eutastus*, *Eubacterium formicigenerans*, *Prevotella disiens*, *Ruminococcus torques*, and *Streptococcus hansenii*.

Chopped Meat Medium with Menadione**Composition per 1230.0mL:**

Peptone.....	30.0g
K ₂ HPO ₄	5.0g

Yeast extract.....	5.0g
L-Cysteine·HCl·H ₂ O.....	0.5g
Chopped meat extract filtrate.....	1.0L
Chopped meat extract solids.....	200.0mL
Resazurin (0.025% solution).....	4.0mL
Menadione solution	0.25mL

pH 7.0 ± 0.2 at 25°C

Chopped Meat Extract:**Composition per liter:**

Beef or horse meat.....	500.0g
NaOH (1N solution).....	25.0mL

Preparation of Chopped Meat Extract: Use lean beef or horse meat. Remove fat and connective tissue. Grind. Add meat and NaOH to distilled/deionized water and bring volume to 1.0L. Gently heat and bring to boiling while stirring. Cool to 25°C. Remove fat from surface. Filter. Reserve ground meat particles and filtrate. Add distilled/deionized water to filtrate and bring volume to 1.0L.

Menadione Solution:**Composition per liter:**

Menadione (vitamin K ₃).....	50.0µg
Ethanol (20% solution).....	25.0mL

Preparation of Menadione Solution: Dissolve menadione in ethanol. Filter sterilize.

Preparation of Medium: To 1.0L of chopped meat extract filtrate, add the remaining components, except the L-cysteine·HCl·H₂O, menadione solution, and chopped meat solids. Mix thoroughly. Gently heat to boiling. Cool to room temperature. Add the L-cysteine·HCl·H₂O. Adjust pH to 7.0. Distribute 1 part chopped meat solids (by volume) and 5 parts of liquid (by volume) into tubes under O₂-free 97% N₂ + 3% H₂. Cap with rubber stoppers and place tubes in a press. Autoclave for 15 min at 15 psi pressure–121°C with fast exhaust. Prior to inoculation, add 0.25mL of menadione solution to each tube containing approximately 5.0mL of chopped meat medium.

Use: For the cultivation and maintenance of *Bacteroides gingivalis*, *Bacteroides macacae*, and *Porphyromonas gingivalis*.

**Chopped Meat Medium, Modified
(DSMZ Medium 797)****Composition per 1230.0mL:**

Chopped meat extract solids.....	200.0g
Trypticase™.....	30.0g
Agar	20.0g
K ₂ HPO ₄	5.0g
Yeast extract.....	5.0g
L-Cysteine·HCl·H ₂ O.....	0.5g
Chopped meat extract filtrate.....	1.0L
Hemin solution.....	10.0mL
Resazurin (0.025% solution).....	4.0mL
Vitamin K ₁ solution	0.2mL

pH 7.0 ± 0.2 at 25°C

Chopped Meat Extract:**Composition per liter:**

Beef or horse meat.....	500.0g
NaOH (1N solution).....	25.0mL

Preparation of Chopped Meat Extract: Use lean beef or horse meat. Remove fat and connective tissue. Grind. Add meat and NaOH to distilled/deionized water and bring volume to 1.0L. Gently heat and bring to boiling while stirring. Cool to 25°C. Remove fat from surface.

Filter. Reserve both ground meat particles and filtrate. Add distilled/deionized water to filtrate and bring volume to 1.0L.

Hemin Solution:

Composition per 100.0mL:

Hemin.....	0.05g
NaOH (1N solution).....	1.0mL

Preparation of Hemin Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Vitamin K₁ Solution:

Composition per 30.0mL:

Ethanol (95% solution).....	30.0mL
Vitamin K ₁	0.15mL

Preparation of Vitamin K₁ Solution: Mix components. Store solution protected from light at 5°C. Discard after 1 month.

Preparation of Medium: To 1.0L of chopped meat extract filtrate, add the remaining components, except the L-cysteine-HCl·H₂O, hemin solution, vitamin K₁ solution, and chopped meat solids. Mix thoroughly. Gently heat to boiling. Boil for 5 min. Cool to 25°C while sparging with 80% N₂ + 10% H₂ + 10% CO₂. Add the L-cysteine-HCl·H₂O, hemin solution, and vitamin K₁ solution. Adjust pH to 7.0. Distribute 1 part chopped meat solids (by volume) and 5 parts of liquid (by volume) into tubes under 80% N₂ + 10% H₂ + 10% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Dialister pneumosintes*.

Chopped Meat Medium, Modified

Composition per 1230.0mL:

Pancreatic digest of casein.....	30.0g
Peptone.....	30.0g
Agar.....	20.0g
K ₂ HPO ₄	5.0g
Yeast extract.....	5.0g
L-Cysteine-HCl·H ₂ O.....	0.5g
Chopped meat extract filtrate.....	1.0L
Chopped meat extract solids.....	200.0mL
Hemin solution.....	10.0mL
Resazurin (0.025% solution).....	4.0mL
Vitamin K ₁ solution.....	0.2mL

pH 7.0 ± 0.2 at 25°C

Chopped Meat Extract:

Composition per liter:

Beef or horse meat.....	500.0g
NaOH (1N solution).....	25.0mL

Preparation of Chopped Meat Extract: Use lean beef or horse meat. Remove fat and connective tissue. Grind. Add meat and NaOH to distilled/deionized water and bring volume to 1.0L. Gently heat and bring to boiling while stirring. Cool to 25°C. Remove fat from surface. Filter. Reserve ground meat particles and filtrate. Add distilled/deionized water to filtrate and bring volume to 1.0L.

Hemin Solution:

Composition per 100.0mL:

Hemin.....	0.05g
NaOH (1N solution).....	1.0mL

Preparation of Hemin Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Vitamin K₁ Solution:

Composition per 30.0mL:

Ethanol (95% solution).....	30.0mL
Vitamin K ₁	0.15mL

Preparation of Vitamin K₁ Solution: Mix components. Store solution protected from light at 5°C. Discard after 1 month.

Preparation of Medium: To 1.0L of chopped meat extract filtrate, add the remaining components, except the L-cysteine-HCl·H₂O, hemin solution, vitamin K₁ solution, and chopped meat solids. Mix thoroughly. Gently heat to boiling. Cool to room temperature. Add the L-cysteine-HCl·H₂O, hemin solution, and vitamin K₁ solution. Adjust pH to 7.0. Distribute 1 part chopped meat solids (by volume) and 5 parts of liquid (by volume) into tubes under O₂-free 97% N₂ + 3% H₂. Cap with rubber stoppers and place tubes in a press. Autoclave for 15 min at 15 psi pressure–121°C with fast exhaust.

Use: For the cultivation and maintenance of a variety of anaerobic bacteria, including *Actinomyces* species, *Bacteroides* species, *Clostridium* species, *Eubacterium* species, *Fusobacterium* species, *Peptostreptococcus* species, *Porphyromonas* species, *Prevotella* species, *Propionibacterium* species, *Selenomonas* species, and others.

Chopped Meat Medium, Modified with Arginine

Composition per 1230.0mL:

Pancreatic digest of casein.....	30.0g
Peptone.....	30.0g
Agar.....	20.0g
Arginine.....	5.0g
K ₂ HPO ₄	5.0g
Yeast extract.....	5.0g
L-Cysteine-HCl·H ₂ O.....	0.5g
Chopped meat extract filtrate.....	1.0L
Chopped meat extract solids.....	200.0mL
Hemin solution.....	10.0mL
Resazurin (0.025% solution).....	4.0mL
Vitamin K ₁ solution.....	0.2mL

pH 7.0 ± 0.2 at 25°C

Chopped Meat Extract:

Composition per liter:

Beef or horse meat.....	500.0g
NaOH (1N solution).....	25.0mL
Tween™ 80.....	25.0mL

Preparation of Chopped Meat Extract: Use lean beef or horse meat. Remove fat and connective tissue. Grind. Add meat and NaOH to distilled/deionized water and bring volume to 1.0L. Gently heat and bring to boiling while stirring. Cool to 25°C. Remove fat from surface. Filter. Reserve ground meat particles and filtrate. Add distilled/deionized water to filtrate and bring volume to 1.0L.

Hemin Solution:

Composition per 100.0mL:

Hemin.....	0.05g
NaOH (1N solution).....	1.0mL

Preparation of Hemin Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Vitamin K₁ Solution:

Composition per 30.0mL:

Ethanol (95% solution).....	30.0mL
Vitamin K ₁	0.15mL

Preparation of Vitamin K₁ Solution: Mix components. Store solution protected from light at 5°C. Discard after 1 month.

Preparation of Medium: To 1.0L of chopped meat extract filtrate, add the remaining components, except the L-cysteine-HCl-H₂O, hemin solution, vitamin K₁ solution, and chopped meat solids. Mix thoroughly. Gently heat to boiling. Cool to room temperature. Add the L-cysteine-HCl-H₂O, hemin solution, and vitamin K₁ solution. Adjust pH to 7.0. Distribute 1 part chopped meat solids (by volume) and 5 parts of liquid (by volume) into tubes under O₂-free 97% N₂ + 3% H₂. Cap with rubber stoppers and place tubes in a press. Autoclave for 15 min at 15 psi pressure–121°C with fast exhaust.

Use: For the cultivation and maintenance of *Eubacterium lentum*.

Chopped Meat Medium, Modified with Formate and Fumarate

Composition per 1230.0mL:

Pancreatic digest of casein.....	30.0g
Peptone.....	30.0g
Agar.....	20.0g
K ₂ HPO ₄	5.0g
Yeast extract.....	5.0g
L-Cysteine-HCl-H ₂ O.....	0.5g
Chopped meat extract filtrate.....	1.0L
Chopped meat extract solids.....	200.0mL
Hemin solution.....	10.0mL
Resazurin (0.025% solution).....	4.0mL
Formate-fumarate solution.....	0.25mL
Vitamin K ₁ solution.....	0.2mL

pH 7.0 ± 0.2 at 25°C

Chopped Meat Extract:

Composition per liter:

Beef or horse meat.....	500.0g
NaOH (1N solution).....	25.0mL

Preparation of Chopped Meat Extract: Use lean beef or horse meat. Remove fat and connective tissue. Grind. Add meat and NaOH to distilled/deionized water and bring volume to 1.0L. Gently heat and bring to boiling while stirring. Cool to 25°C. Remove fat from surface. Filter. Reserve ground meat particles and filtrate. Add distilled/deionized water to filtrate and bring volume to 1.0L.

Hemin Solution:

Composition per 100.0mL:

Hemin.....	0.05g
NaOH (1N solution).....	1.0mL

Preparation of Hemin Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Formate-Fumarate Solution:

Composition per 100.0mL:

Sodium formate.....	6.0g
Fumaric acid.....	6.0g

Preparation of Formate-Fumarate Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Adjust pH to 7.0. Filter sterilize.

Vitamin K₁ Solution:

Composition per 30.0mL:

Ethanol (95% solution).....	30.0mL
Vitamin K ₁	0.15mL

Preparation of Vitamin K₁ Solution: Mix components. Store solution protected from light at 5°C. Discard after one month.

Preparation of Medium: To 1.0L of chopped meat extract filtrate, add the remaining components, except the L-cysteine-HCl-H₂O, hemin solution, vitamin K₁ solution, formate-fumarate solution, and chopped meat solids. Mix thoroughly. Gently heat to boiling. Cool to room temperature. Add the L-cysteine-HCl-H₂O, hemin solution, and vitamin K₁ solution. Adjust pH to 7.0. Distribute 1 part chopped meat solids (by volume) and 5 parts of liquid (by volume) into tubes under O₂-free 97% N₂ + 3% H₂. Cap with rubber stoppers and place tubes in a press. Autoclave for 15 min at 15 psi pressure–121°C with fast exhaust. Prior to inoculation, add 0.25mL of formate-fumarate solution to each tube containing approximately 5.0mL of chopped meat medium, modified.

Use: For the cultivation and maintenance of *Bacteroides gracilis*, *Bacteroides ureolyticus*, *Campylobacter mucosalis*, and *Wolinella succinogenes*.

Chopped Meat Medium, Modified with Tween™ 80

Composition per 1230.0mL:

Pancreatic digest of casein.....	30.0g
Peptone.....	30.0g
Agar.....	20.0g
K ₂ HPO ₄	5.0g
Yeast extract.....	5.0g
L-Cysteine-HCl-H ₂ O.....	0.5g
Chopped meat extract filtrate.....	1.0L
Chopped meat extract solids.....	200.0mL
Hemin solution.....	10.0mL
Resazurin (0.025% solution).....	4.0mL
Vitamin K ₁ solution.....	0.2mL

pH 7.0 ± 0.2 at 25°C

Chopped Meat Extract:

Composition per liter:

Beef or horse meat.....	500.0g
NaOH (1N solution).....	25.0mL
Tween™ 80.....	25.0mL

Preparation of Chopped Meat Extract: Use lean beef or horse meat. Remove fat and connective tissue. Grind. Add meat and NaOH to distilled/deionized water and bring volume to 1.0L. Gently heat and bring to boiling while stirring. Cool to 25°C. Remove fat from surface. Filter. Reserve ground meat particles and filtrate. Add distilled/deionized water to filtrate and bring volume to 1.0L.

Hemin Solution:

Composition per 100.0mL:

Hemin.....	0.05g
NaOH (1N solution).....	1.0mL

Preparation of Hemin Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Vitamin K₁ Solution:

Composition per 30.0mL:

Ethanol (95% solution).....	30.0mL
Vitamin K ₁	0.15mL

Preparation of Vitamin K₁ Solution: Mix components. Store solution protected from light at 5°C. Discard after 1 month.

Preparation of Medium: To 1.0L of chopped meat extract filtrate, add the remaining components, except the L-cysteine-HCl-H₂O, hemin solution, vitamin K₁ solution, and chopped meat solids. Mix thoroughly. Gently heat to boiling. Cool to room temperature. Add the L-

cysteine-HCl-H₂O, hemin solution, and vitamin K₁ solution. Adjust pH to 7.0. Distribute 1 part chopped meat solids (by volume) and 5 parts of liquid (by volume) into tubes under O₂-free 97% N₂ + 3% H₂. Cap with rubber stoppers and place tubes in a press. Autoclave for 15 min at 15 psi pressure–121°C with fast exhaust.

Use: For the cultivation and maintenance of *Lactobacillus* species and *Eubacterium bifforme*.

Chopped Meat Medium with 10% Reduced Filtered Rumen Fluid

Composition per 1330.0mL:

Peptone.....	30.0g
K ₂ HPO ₄	5.0g
Yeast extract.....	5.0g
L-Cysteine-HCl-H ₂ O.....	0.5g
Chopped meat extract filtrate.....	1.0L
Chopped meat extract solids.....	200.0mL
Rumen fluid, reduced and filtered.....	100.0mL
Resazurin (0.025% solution).....	4.0mL
pH 7.0 ± 0.2 at 25°C	

Chopped Meat Extract:

Composition per liter:

Beef or horse meat.....	500.0g
NaOH (1N solution).....	25.0mL

Preparation of Chopped Meat Extract: Use lean beef or horse meat. Remove fat and connective tissue. Grind. Add meat and NaOH to distilled/deionized water and bring volume to 1.0L. Gently heat and bring to boiling while stirring. Cool to 25°C. Remove fat from surface. Filter. Reserve ground meat particles and filtrate. Add distilled/deionized water to filtrate and bring volume to 1.0L.

Preparation of Medium: To 1.0L of chopped meat extract filtrate, add the remaining components, except the L-cysteine-HCl-H₂O and chopped meat solids. Mix thoroughly. Gently heat to boiling. Cool to room temperature. Add the L-cysteine-HCl-H₂O. Adjust pH to 7.0. Distribute 1 part chopped meat solids (by volume) and 5 parts of liquid (by volume) into tubes under O₂-free 97% N₂ + 3% H₂. Cap with rubber stoppers and place tubes in a press. Autoclave for 15 min at 15 psi pressure–121°C

Use: For the cultivation and maintenance of *Eubacterium hallii*.

Chopped Meat Medium for *Treponema* spp. (DSMZ Medium 78a)

Composition per 1055.0mL:

Ground meat, fat free.....	500.0g
Pancreatic digest of casein.....	30.0g
K ₂ HPO ₄	5.0g
Yeast extract.....	5.0g
L-Cysteine-HCl.....	0.5g
Resazurin.....	1.0mg
Amino acid solution.....	50.0mL
NaOH (1N solution).....	25.0mL
Vitamin solution.....	5.0mL
pH 7.0 ± 0.2 at 25°C	

Amino Acid Solution:

Composition per liter:

L-Glutamine.....	0.7g
L-Histidine.....	0.6g
L-Serine.....	0.5g

Preparation of Amino Acid Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Vitamin Solution:

Composition per liter:

Vitamin B ₁₂	50.0mg
Pantothenic acid.....	50.0mg
Riboflavin.....	50.0mg
α-Lipoic acid.....	50.0mg
p-Aminobenzoic acid.....	50.0mg
Thiamine-HCl-2H ₂ O.....	50.0mg
Nicotinic acid.....	25.0mg
Nicotine amide.....	25.0mg
Biotin.....	20.0mg
Folic acid.....	20.0mg
Pyridoxamine-HCl.....	10.0mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Use lean beef or horse meat. Remove fat and connective tissue. Grind finely. Add ground meat and 25.0mL of NaOH solution to distilled/deionized water and bring volume to 1025.0mL. Gently heat and bring to boiling. Continue boiling for 15 min without stirring. Cool to room temperature. Remove fat from surface. Filter and retain both meat particles and filtrate. Adjust volume of filtrate to 1.0L with distilled/deionized water. Add pancreatic digest of casein, K₂HPO₄, yeast extract, and resazurin. Gently heat and bring to boiling. Boil for 1–2 min. Add L-cysteine-HCl. Mix thoroughly. Autoclave for 30 min at 15 psi pressure–121°C. Aseptically add amino acid and vitamin solutions. Mix thoroughly. Aseptically distribute 7.0mL amounts into tubes that contain meat particles (1 part meat particles to 5 parts fluid).

Use: For the cultivation of *Treponema brennaborensis*.

Chopped Meat Medium with 0.025% Tween™ 80 (ATCC Medium 1228)

Composition per 1230.0mL:

Peptone.....	30.0g
K ₂ HPO ₄	5.0g
Yeast extract.....	5.0g
L-Cysteine-HCl-H ₂ O.....	0.5g
Tween™ 80.....	0.25g
Chopped meat extract filtrate.....	1.0L
Chopped meat extract solids.....	200.0mL
Resazurin (0.025% solution).....	4.0mL
pH 7.0 ± 0.2 at 25°C	

Chopped Meat Extract:

Composition per liter:

Beef or horse meat.....	500.0g
NaOH (1N solution).....	25.0mL

Preparation of Chopped Meat Extract: Use lean beef or horse meat. Remove fat and connective tissue. Grind. Add meat and NaOH to distilled/deionized water and bring volume to 1.0L. Gently heat and bring to boiling while stirring. Cool to 25°C. Remove fat from surface. Filter. Reserve ground meat particles and filtrate. Add distilled/deionized water to filtrate and bring volume to 1.0L.

Preparation of Medium: To 1.0L of chopped meat extract filtrate, add the remaining components, except the L-cysteine-HCl-H₂O and chopped meat solids. Mix thoroughly. Gently heat to boiling. Cool to room temperature. Add the L-cysteine-HCl-H₂O. Adjust pH to 7.0. Dis-

tribute 1 part chopped meat solids (by volume) and 5 parts of liquid (by volume) into tubes under O₂-free 97% N₂ + 3% H₂. Cap with rubber stoppers and place tubes in a press. Autoclave for 15 min at 15 psi pressure–121°C with fast exhaust.

Use: For the cultivation and maintenance of *Eubacterium* and *Lactobacillus* species.

Chopped Meat Medium with 1% Tween™ 80 (ATCC Medium 737)

Composition per 1230.0mL:

Peptone.....	30.0g
Tween™ 80.....	10.0g
K ₂ HPO ₄	5.0g
Yeast extract.....	5.0g
L-Cysteine·HCl·H ₂ O.....	0.5g
Chopped meat extract filtrate.....	1.0L
Chopped meat extract solids.....	200.0mL
Resazurin (0.025% solution).....	4.0mL
pH 7.0 ± 0.2 at 25°C	

Chopped Meat Extract:

Composition per liter:

Beef or horse meat.....	500.0g
NaOH (1N solution).....	25.0mL

Preparation of Chopped Meat Extract: Use lean beef or horse meat. Remove fat and connective tissue. Grind. Add meat and NaOH to distilled/deionized water and bring volume to 1.0L. Gently heat and bring to boiling while stirring. Cool to 25°C. Remove fat from surface. Filter. Reserve ground meat particles and filtrate. Add distilled/deionized water to filtrate and bring volume to 1.0L.

Preparation of Medium: To 1.0L of chopped meat extract filtrate, add the remaining components, except the L-cysteine·HCl·H₂O and chopped meat solids. Mix thoroughly. Gently heat to boiling. Cool to room temperature. Add the L-cysteine·HCl·H₂O. Adjust pH to 7.0. Distribute 1 part chopped meat solids (by volume) and 5 parts of liquid (by volume) into tubes under O₂-free 97% N₂ + 3% H₂. Cap with rubber stoppers and place tubes in a press. Autoclave for 15 min at 15 psi pressure–121°C with fast exhaust.

Use: For the cultivation and maintenance of *Eubacterium bifforme* and *Lactobacillus* species.

Christensen Agar

Composition per liter:

Agar.....	15.0g
NaCl.....	5.0g
Sodium citrate.....	3.0g
KH ₂ PO ₄	1.0g
L-Cysteine·HCl·H ₂ O.....	0.1g
Phenol Red.....	12.0mg
pH 6.9 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Dispense into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes. Allow tubes to cool in a slanted position.

Use: For the differentiation of enteric pathogens, especially members of the Enterobacteriaceae, and coliforms based on their ability to utilize citrate as a carbon source. Bacteria that can utilize citrate turn the medium pink-red.

Christensen Agar

Composition per liter:

Agar.....	15.0g
NaCl.....	5.0g
Sodium citrate.....	3.0g
KH ₂ PO ₄	1.0g
Yeast extract.....	0.5g
Glucose.....	0.2g
L-Cysteine·HCl·H ₂ O.....	0.1g
Phenol Red.....	12.0mg

pH 6.9 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Dispense into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes. Allow tubes to cool in a slanted position.

Use: For the differentiation of enteric pathogens, especially members of the Enterobacteriaceae, and coliforms based on their ability to utilize citrate as a carbon source. Bacteria that can utilize citrate turn the medium pink-red.

Christensen Citrate Agar (BAM M39)

Composition per liter:

Agar.....	15.0g
NaCl.....	5.0g
Sodium citrate.....	3.0g
KH ₂ PO ₄	1.0g
Yeast extract.....	0.5g
Ferric ammonium citrate.....	0.4g
L-Cysteine·HCl·H ₂ O.....	0.1g
Na ₂ S ₂ O ₅	0.08g
Phenol Red.....	12.0mg

pH 6.9 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Dispense into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes. Allow tubes to cool in a slanted position.

Use: For the differentiation of enteric pathogens, especially members of the Enterobacteriaceae, and coliforms based on their ability to utilize citrate as a carbon source. Bacteria that can utilize citrate turn the medium pink-red.

Christensen Citrate Agar, Modified (Citrate Agar)

Composition per liter:

Agar.....	12.0g
NaCl.....	5.0g
Sodium citrate.....	3.8g
KH ₂ PO ₄	1.0g
Yeast extract.....	0.5g
Glucose.....	0.2g
L-Cysteine·HCl·H ₂ O.....	0.1g
Phenol Red.....	0.02g

pH 6.7 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Dispense into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes. Allow tubes to cool in a slanted position.

Use: For the differentiation of enteric pathogens, especially members of the Enterobacteriaceae, and coliforms based on their ability to utilize citrate as a carbon source. Bacteria that can utilize citrate turn the medium pink-red.

Christensen Citrate Sulfide Medium

Composition per liter:

Agar	15.0g
NaCl	5.0g
Sodium citrate·2H ₂ O	3.0g
KH ₂ HPO ₄	1.0g
Yeast extract	0.5g
Ferric citrate	0.2g
Ammonium citrate	0.2g
Glucose	0.2g
L-Cysteine·HCl·H ₂ O	0.1g
Na ₂ S ₂ O ₃ ·5H ₂ O	0.08g
Phenol Red	0.012g

pH 6.7± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Dispense into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes. Allow tubes to cool in a slanted position.

Use: For the differentiation of enteric pathogens, especially members of the Enterobacteriaceae, and coliforms based on their ability to utilize citrate as a carbon source and production of H₂S. Bacteria that can utilize citrate turn the medium pink-red. H₂S production appears as a blackening of the butt of the tube.

Christensen Citrate Sulfite Agar

Composition per liter:

Agar	14.0g
NaCl	5.0g
Sodium citrate·2H ₂ O	3.0g
KH ₂ HPO ₄	1.0g
Yeast extract	0.5g
Ferric ammonium citrate	0.4g
Ammonium citrate	0.2g
Glucose	0.2g
L-Cysteine·HCl·H ₂ O	0.1g
Na ₂ S ₂ O ₃ ·5H ₂ O	0.08g
Phenol Red	0.012g

pH 6.7± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Dispense into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes. Allow tubes to cool in a slanted position.

Use: For the differentiation of enteric pathogens, especially members of the Enterobacteriaceae, and coliforms based on their ability to utilize citrate as a carbon source and production of H₂S. Bacteria that can utilize citrate turn the medium pink-red. H₂S production appears as a blackening of the butt of the tube.

Christensen's Urea Agar

Composition per liter:

Agar	15.0g
NaCl	5.0g
KH ₂ PO ₄	2.0g
Peptone	1.0g
Glucose	1.0g
Phenol Red	0.012g
Urea solution	100.0mL

pH 6.8 ± 0.1 at 25°C

Urea Solution:

Composition per 100.0mL:

Urea	20.0g
------------	-------

Preparation of Urea: Add urea to 100.0mL of distilled/deionized water. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except urea solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50–55°C. Aseptically add 100.0mL of sterile urea solution. Mix thoroughly. Pour into Petri dishes or distribute into sterile tubes. Allow tubes to solidify in a slanted position.

Use: For the differentiation of a variety of microorganisms, especially members of the Enterobacteriaceae, aerobic actinomycetes, streptococci, and nonfermenting Gram-negative bacteria, on the basis of urease production.

Christensen's Urea Agar with Sodium Chloride (BAM M40)

Composition per liter:

NaCl	20.0g
Agar	15.0g
KH ₂ PO ₄	2.0g
Peptone	1.0g
Glucose	1.0g
Phenol Red	0.012g
Urea solution	100.0mL

pH 6.8 ± 0.1 at 25°C

Urea Solution:

Composition per 100.0mL:

Urea	20.0g
------------	-------

Preparation of Urea: Add urea to 100.0mL of distilled/deionized water. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except urea solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50–55°C. Aseptically add 100.0mL of sterile urea solution. Mix thoroughly. Pour into Petri dishes or distribute into sterile tubes. Allow tubes to solidify in a slanted position.

Use: For the differentiation of halophilic *Vibrio* spp. on the basis of urease production.

Christensen Urea Agar Base

See: Urea Agar

Christensen Urea Broth

See: Urea Broth

Christopher's Semisolid *Brucella* Medium Base**Composition** per liter:

Casein enzymic hydrolysate	10.0g
Peptic digest of animal tissue.....	10.0g
NaCl	5.0g
Yeast extract.....	2.0g
Agar	1.5g
Glucose	1.0g
Sodium pyruvate	0.5g
NaHSO ₃	0.1g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the selective enrichment of *Campylobacter* species from food.

CHROMagar™ *Candida***Composition** per liter:

Glucose	20.0g
Agar	15.0g
Peptone.....	10.0g
Chromogenic mix	2.0g
Chloramphenicol.....	0.5g

Source: CHROMagar *Candida* is available from CHROMagar Microbiology. Prepared medium is also available from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat in a boiling water bath or steam bath. Shake periodically during heating to dissolve components. Heat long enough with shaking every 5 min to ensure complete dissolution. Do not overheat. Cool to 45–50°C. Pour into sterile Petri dishes.

Use: For the differentiation of *Candida* spp. Specific *Candida* spp. give characteristic color reactions, e.g., *Candida albicans* produce distinctive green colonies and *Candida tropicalis* produce distinctive dark blue-gray colonies.

CHROMagar™ *E. coli***Composition** per liter:

Proprietary

Source: CHROMagar *E. coli* is available from CHROMagar Microbiology.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat in a boiling water bath or steam bath. Shake periodically during heating to dissolve components. Heat long enough with shaking every 5 min to ensure complete dissolution. Do not overheat. Adding tellurite can increase specificity. Cool to 45–50°C. Pour into sterile Petri dishes.

Use: For the differentiation and presumptive identification of *Escherichia coli* which forms blue colonies.

CHROMagar™ ECC**Composition** per liter:

Proprietary

Source: CHROMagar EEC is available from CHROMagar Microbiology.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat in a boiling water bath or steam bath. Shake periodically during heating to dissolve components. Heat long enough with shaking every 5 min to ensure complete dissolution. Do not overheat. Adding tellurite can increase specificity. Cool to 45–50°C. Pour into sterile Petri dishes.

Use: For the differentiation and presumptive identification of *Escherichia coli* and other coliform bacteria which form red colonies.

CHROMagar™ *Listeria***Composition** per liter:

Proprietary

Source: CHROMagar *Listeria* is available from CHROMagar Microbiology.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat in a boiling water bath or steam bath. Shake periodically during heating to dissolve components. Heat long enough with shaking every 5 min to ensure complete dissolution. Do not overheat. Adding tellurite can increase specificity. Cool to 45–50°C. Pour into sterile Petri dishes.

Use: For the differentiation and presumptive identification of *Listeria monocytogenes* which form blue colonies surrounded by white halos.

CHROMagar™ *Malassezia***Composition** per liter:

Proprietary

Source: CHROMagar *Malassezia* is available from CHROMagar Microbiology.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat in a boiling water bath or steam bath. Shake periodically during heating to dissolve components. Heat long enough with shaking every 5 min to ensure complete dissolution. Do not overheat. Cool to 45–50°C. Aseptically add glycerol (1.0mL per liter) and Tween 60 (0.5mL per liter). Mix thoroughly. Pour into sterile Petri dishes.

Use: For the differentiation and presumptive identification of *Malassezia* species.

CHROMagar™ MRSA**Composition** per liter:

Chromopeptone.....	40.0g
NaCl.....	25.0g
Agar	14.0g
Chromogenic mix	0.5g
Inhibitory agents	0.07g
Cefoxitin	6.0mg

Source: CHROMagar MRSA is available from CHROMagar Microbiology. Prepared medium is also available from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat in a boiling water bath or steam bath. Shake periodically during heating to dissolve components. Heat long enough with shaking every 5 min to ensure complete dissolution. Do not overheat. Adding tellurite can increase specificity. Cool to 45–50°C. Pour into sterile Petri dishes.

Use: For the qualitative direct detection of nasal colonization by methicillin resistant *Staphylococcus aureus* (MRSA) to aid in the prevention and control of MRSA infections in healthcare settings.

CHROMagar™ O157

Composition per liter:

Proprietary

Source: CHROMagar O157 is available from CHROMagar Microbiology. Prepared medium is also available from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat in a boiling water bath or steam bath. Shake periodically during heating to dissolve components. Heat long enough with shaking every 5 min to ensure complete dissolution. Do not overheat. Adding tellurite can increase specificity. Cool to 45–50°C. Pour into sterile Petri dishes.

Use: For the differentiation and presumptive identification of *Escherichia coli* O157.

CHROMagar™ Orientation

Composition per liter:

Peptone.....	16.0g
Meat extract	16.0g
Yeast extract.....	16.0g
Agar	15.0g
Chromogenic mix	2.0g

pH 7.0 ± 0.2 at 25°C

Source: CHROMagar Orientation is available from CHROMagar Microbiology. Prepared medium is also available from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat in a boiling water bath or steam bath. Shake periodically during heating to dissolve components. Heat long enough with shaking every 5 min to ensure complete dissolution. Do not overheat. Cool to 45–50°C. Pour into sterile Petri dishes.

Use: For the differentiation and presumptive identification of Gram-negative bacteria and *Enterococcus* spp. For use in identifying urinary tract pathogens. Isolates produce characteristic diagnostic colors, e.g., *Escherichia coli* produces pinto red colonies.

CHROMagar™ Pseudomonas

Composition per liter:

Proprietary

Source: CHROMagar *Pseudomonas* is available from CHROMagar Microbiology.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat in a boiling water bath or steam bath. Shake periodically during heating to dissolve components. Heat long enough with shaking every 5 min to ensure complete dissolution. Do not overheat. Cool to 45–50°C. Pour into sterile Petri dishes.

Use: For the detection of *Pseudomonas*. For the simultaneous detection and enumeration of *Pseudomonas aeruginosa* with markedly different coloring (blue colonies).

CHROMagar™ Salmonella

Composition per liter:

Proprietary

Source: CHROMagar *Salmonella* is available from CHROMagar Microbiology. Prepared medium is also available from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat in a boiling water bath or steam bath. Shake periodically during heating to dissolve components. Heat long enough with shaking every 5 min to ensure complete dissolution. Do not overheat. Cool to 45–50°C. Pour into sterile Petri dishes.

Use: For the differentiation and presumptive identification of *Salmonella* spp.

CHROMagar™ Salmonella Plus

Composition per liter:

Proprietary

Source: CHROMagar *Salmonella* Plus is available from CHROMagar Microbiology.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat in a boiling water bath or steam bath. Shake periodically during heating to dissolve components. Heat long enough with shaking every 5 min to ensure complete dissolution. Do not overheat. Cool to 45–50°C. Pour into sterile Petri dishes.

Use: For the isolation of specimens, allowing direct detection of *Salmonella* including *S.Typhi*, *S.Paratyphi* and lactose positive *Salmonella* by colony color according to ISO 6579:2003 norm.

CHROMagar™ Staph. aureus

Composition per liter:

Proprietary

Source: CHROMagar *Staph. aureus* is available from CHROMagar Microbiology. Prepared medium is also available from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat in a boiling water bath or steam bath. Shake periodically during heating to dissolve components. Heat long enough with shaking every 5 min to ensure complete dissolution. Do not overheat. Adding an antibiotic such as tobramycin or methicillin can be used to identify resistant strains. Cool to 45–50°C. Pour into sterile Petri dishes.

Use: For the differentiation and presumptive identification of *Staphylococcus aureus*.

CHROMagar™ StrepB

Composition per liter:

Proprietary

Source: CHROMagar *StrepB* is available from CHROMagar Microbiology.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat in a boiling water bath or steam bath. Shake periodically during heating to dissolve components. Heat long enough with shaking every 5 min to

ensure complete dissolution. Do not overheat. Cool to 45–50°C. Pour into sterile Petri dishes.

Use: For the differentiation and presumptive identification of *Streptococcus* B (*Streptococcus agalactiae*) based upon color formation. *Streptococcus* B forms mauve to pink colonies.

CHROMagar™ Vibrio

Composition per liter:

Proprietary

Source: CHROMagar Vibrio is available from CHROMagar Microbiology.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat in a boiling water bath or steam bath. Shake periodically during heating to dissolve components. Heat long enough with shaking every 5 min to ensure complete dissolution. Do not overheat. Adding tellurite can increase specificity. Cool to 45–50°C. Pour into sterile Petri dishes.

Use: For the differentiation and presumptive identification of *Vibrio parahaemolyticus* which form mauve colonies; *Vibrio cholerae* form turquoise blue colonies and *Vibrio alginolyticus* colonies are colorless.

CHROMagar™ VRE

Composition per liter:

Proprietary

Source: CHROMagar VRE is available from CHROMagar Microbiology.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat in a boiling water bath or steam bath. Shake periodically during heating to dissolve components. Heat long enough with shaking every 5 min to ensure complete dissolution. Do not overheat. Cool to 45–50°C. Pour into sterile Petri dishes.

Use: For the differentiation and presumptive identification of vancomycin resistant *Enterococcus* (*Enterococcus faecalis*/*E. faecium*). Vancomycin resistant *Enterococcus* strains form rose to mauve colonies.

Chromatiaceae Medium 1

Composition per 4990.0mL:

Solution 1	4.0L
O ₂ -free water	860.0mL
NaHCO ₃ solution	100.0mL
Na ₂ S·9H ₂ O solution	20.0mL
Trace elements solution	5.0mL
Vitamin B ₁₂ solution	5.0mL

pH 7.3 ± 0.2 at 25°C

Solution 1:

Composition per 4.0L:

MgSO ₄ ·7H ₂ O	2.5g
KCl	1.7g
KH ₂ PO ₄	1.7g
NH ₄ Cl	1.7g
CaCl ₂ ·2H ₂ O	1.25g

Preparation of Solution 1: Add components to distilled/deionized water and bring volume to 4.0L. Mix thoroughly. Autoclave for 45 min at 15 psi pressure–121°C. Cool to 25°C under 100% N₂. Saturate with CO₂ by stirring under 100% CO₂ for 30 min.

O₂-Free Water:

Composition per 860.0mL:

H ₂ O	860.0mL
------------------------	---------

Preparation of O₂-Free Water: Autoclave H₂O for 15 min at 15 psi pressure–121°C. Cool to 25°C under 100% N₂.

NaHCO₃ Solution:

Composition per 100.0mL:

NaHCO ₃	7.5g
--------------------------	------

Preparation of NaHCO₃ Solution: Add the NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Gas with 100% CO₂ for 20 min. Filter sterilize with positive CO₂ pressure.

Na₂S·9H₂O Solution:

Composition per 100.0mL:

Na ₂ S·9H ₂ O	10.0g
---	-------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water. Mix thoroughly. Gas with 100% N₂ for 15 min in a screw-capped bottle. Tightly close cap. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Trace Elements Solution:

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	0.19g
MnCl ₂ ·4H ₂ O	0.1g
ZnCl ₂	0.07g
H ₃ BO ₃	0.06g
NaMoO ₄ ·2H ₂ O	0.04g
CuCl ₂ ·2H ₂ O	0.02g
NiCl ₂ ·6H ₂ O	0.02g
HCl (25% solution)	6.5mL

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Vitamin B₁₂ Solution:

Composition per 100.0mL:

Vitamin B ₁₂	2.0mg
-------------------------------	-------

Preparation of Vitamin B₁₂ Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: To 4.0L of sterile, CO₂-saturated solution 1, aseptically add the remaining components. Mix thoroughly. Adjust pH to 7.3. Aseptically distribute into sterile 100.0mL bottles using positive pressure of 95% N₂ + 5% CO₂. Completely fill bottles with medium except for a pea-sized air bubble.

Use: For the isolation and cultivation of members of the Chlorobiaceae.

Chromatiaceae Medium 2

Composition per 1051.0mL:

Solution 1	950.0mL
Na ₂ S·9H ₂ O solution	60.0mL
NaHCO ₃ solution	40.0mL
Vitamin B ₁₂ solution	1.0mL

pH 7.3 ± 0.2 at 25°C

Solution 1:

Composition per 950.0mL:

KH ₂ PO ₄	1.0g
NH ₄ Cl	0.5g

MgSO ₄ ·7H ₂ O	0.4g
CaCl ₂ ·2H ₂ O	0.05g
Trace elements solution SL-8	1.0mL

Preparation of Solution 1: Add components to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Trace Elements Solution SL-8:

Composition per liter:

Disodium EDTA	5.2g
FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	0.19g
MnCl ₂ ·4H ₂ O	0.1g
ZnCl ₂	0.07g
H ₃ BO ₃	0.06g
NaMoO ₄ ·2H ₂ O	0.04g
CuCl ₂ ·2H ₂ O	0.02g
NiCl ₂ ·6H ₂ O	0.02g

Preparation of Trace Elements Solution SL-8: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Na₂S·9H₂O Solution:

Composition per 100.0mL:

Na ₂ S·9H ₂ O	5.0g
---	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 100.0mL. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

NaHCO₃ Solution:

Composition per 100.0mL:

NaHCO ₃	5.0g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Vitamin B₁₂ Solution:

Composition per 100.0mL:

Vitamin B ₁₂	2.0mg
-------------------------------	-------

Preparation of Vitamin B₁₂ Solution: Add vitamin B₁₂ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: To 950.0mL of cooled, sterile solution 1, aseptically add 60.0mL of sterile Na₂S·9H₂O solution, 40.0mL of sterile NaHCO₃ solution, and 1.0mL of sterile vitamin B₁₂ solution. Mix thoroughly. Adjust pH to 7.3 with sterile H₂SO₄ or Na₂CO₃. Aseptically distribute into sterile 50.0mL or 100.0mL bottles with metal screw-caps and rubber seals. Completely fill bottles with medium except for a pea-sized air bubble.

Use: For the isolation and cultivation of freshwater and soil members of the Chromatiaceae.

Chromatium Medium (ATCC Medium 37)

Composition per 127.0mL:

Solution 1	76.2mL
Solution 2 + Solution 3	44.8mL
Solution 4	6.0mL

Solution 1:

Composition per 2.5 L:

CaCl ₂	2.0g
-------------------------	------

Preparation of Solution 1: Add CaCl₂ to distilled/deionized water and bring volume to 2.5L. Distribute in 80.0mL volumes into 127.0mL screw-capped bottles. Autoclave for 15 min at 15 psi pressure–121°C.

Solution 2:

Composition per 100.0mL:

Sodium ascorbate	2.4g
KCl	1.0g
KH ₂ PO ₄	1.0g
MgCl ₂ ·6H ₂ O	0.8g
NH ₄ Cl	0.8g
Heavy metal solution	50.0mL
Vitamin solution	15.0mL
Vitamin B ₁₂ solution	3.0mL

Preparation of Solution 2: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Heavy Metal Solution:

Composition per liter:

Ethylenediamine tetraacetate (EDTA)	1.5g
FeSO ₄ ·7H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
MnCl ₂ ·4H ₂ O	0.02g
Modified Hoagland trace elements solution	6.0mL

Preparation of Heavy Metal Solution: Dissolve EDTA in approximately 800.0mL of distilled/deionized water. Add remaining components and bring volume to 1.0L. Mix thoroughly.

Modified Hoagland Trace Elements Solution:

Composition per 3.6L:

H ₃ BO ₃	11.0g
MnCl ₂ ·4H ₂ O	7.0g
AlCl ₃	1.0g
CoCl ₂	1.0g
CuCl ₂	1.0g
KI	1.0g
NiCl ₂	1.0g
ZnCl ₂	1.0g
BaCl ₂	0.5g
KBr	0.5g
LiCl	0.5g
Na ₂ MoO ₄	0.5g
SeCl ₄	0.5g
SnCl ₂ ·2H ₂ O	0.5g
NaVO ₃ ·H ₂ O	0.1g

Preparation of Modified Hoagland Trace Elements Solution: Prepare each component as a separate solution. Dissolve each salt in approximately 100.0mL of distilled/deionized water. Adjust the pH of each solution to below 7.0. Combine all the salt solutions and bring the volume to 3.6L with distilled/deionized water. Adjust the pH to 3–4. A yellow precipitate may form after mixing. After a few days, it will turn into a fine white precipitate. Mix the solution thoroughly before using.

Vitamin B₁₂ Solution:

Composition per 100.0mL:

Vitamin B ₁₂ (cyanocobalamin)	2.0mg
--	-------

Preparation of Vitamin B₁₂ Solution: Add vitamin B₁₂ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Vitamin Solution:

Composition per 100.0mL:

Pyridoxamine·2HCl	5.0mg
-------------------------	-------

Nicotinic acid.....	2.0mg
Thiamine.....	1.0mg
Pantothenic acid.....	0.5mg
Biotin.....	0.2mg
<i>p</i> -Aminobenzoic acid.....	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Solution 3:

Composition per 900.0mL:

NaHCO ₃	4.5g
--------------------------	------

Preparation of Solution 3: Add NaHCO₃ to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Bubble 100% CO₂ through the solution for 30 min. After CO₂ saturation of solution 3, add solution 2 and immediately filter the mixture through a Seitz filter (or a Millipore) using positive CO₂ pressure to push the liquid through.

Solution 4:

Composition per 200.0mL:

Na ₂ S·9H ₂ O.....	3.0g
--	------

Preparation of Solution 4: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 200.0mL. Add a magnetic stir bar to the flask. Autoclave for 15 min at 15 psi pressure–121°C. On a magnetic stirrer, slowly add 2.0mL of sterile 2M H₂SO₄. This partially neutralizes the solution. The solution should turn yellow. H₂S gas will be liberated. Neutralization and distribution of the solution should be done as rapidly as possible under adequate ventilation.

Preparation of Medium: To the 80.0mL of sterile solution 1 in screw-capped bottles, add combined solutions 2 and 3 immediately after filtration and fill bottles to capacity. Mix thoroughly. Aseptically remove 6.0mL of the medium from the bottles and replace it with 6.0mL of neutralized solution 4. Let stand for 24 hr. The medium should form a fine white precipitate before using. To inoculate, remove 6.0mL of the completed medium from the bottles and replace it with 6.0mL of inoculum.

Use: For the cultivation and maintenance of *Chromatium tepidum*.

Chromatium Medium (ATCC Medium 1449)

Composition per liter:

KH ₂ PO ₄	0.5g
NH ₄ Cl.....	0.4g
MgSO ₄ ·7H ₂ O.....	0.2g
CaCl ₂ ·2H ₂ O.....	0.05g
Disodium EDTA.....	0.01g
Trace elements.....	1.0mL
NaHCO ₃ solution.....	50.0mL
Na ₂ S·9H ₂ O solution.....	50.0mL
Sodium pyruvate solution.....	50.0mL

pH 7.0 ± 0.2 at 25°C

Trace Elements:

Composition per liter:

Disodium EDTA.....	5.2g
FeCl ₂ ·4H ₂ O.....	1.5g
CoCl ₂ ·6H ₂ O.....	0.19g
Na ₂ MoO ₄ ·2H ₂ O.....	0.188g
MnCl ₂ ·4H ₂ O.....	0.1g
ZnCl ₂	0.07g
VOSO ₄ ·2H ₂ O.....	0.03g

NiCl ₂ ·6H ₂ O.....	0.025g
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O.....	2.0mg
Na ₂ SeO ₃	2.0mg

Preparation of Trace Elements: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

NaHCO₃ Solution:

Composition per 50.0mL:

NaHCO ₃	2.0g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 50.0mL. Filter sterilize. Use freshly prepared solution.

Na₂S·9H₂O Solution:

Composition per 50.0mL:

Na ₂ S·9H ₂ O.....	1.0g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 50.0mL. Autoclave for 15 min at 15 psi pressure–121°C. Use freshly prepared solution.

Sodium Pyruvate Solution:

Composition per 50.0mL:

Sodium pyruvate.....	0.5g
----------------------	------

Preparation of Sodium Pyruvate Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 50.0mL. Filter sterilize. Use freshly prepared solution. Sodium acetate may be substituted for the sodium pyruvate.

Preparation of Medium: Add components, except NaHCO₃ solution, Na₂S·9H₂O solution, and sodium pyruvate solution, to distilled deionized water and bring volume to 850.0mL. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Add the sterile NaHCO₃ solution, the sterile Na₂S·9H₂O solution, and the sterile sodium pyruvate solution, in that order. Adjust the pH to 7.0. Distribute into screw-capped tubes or flasks. Fill to capacity.

Use: For the cultivation and maintenance of *Chromatium* species.

Chromatium Medium (ATCC Medium 2010)

Composition per 127.0mL:

Solution 1.....	76.2mL
Solution 2 + Solution 3.....	44.8mL
Solution 4.....	6.0mL

Solution 1:

Composition per 2.5L:

NaCl.....	125.0g
CaCl ₂	2.0g

Preparation of Solution 1: Add NaCl and CaCl₂ to distilled/deionized water and bring volume to 2.5L. Distribute in 76.2mL volumes into 127.0mL screw-capped bottles. Autoclave for 15 min at 15 psi pressure–121°C.

Solution 2:

Composition per 100.0mL:

Sodium ascorbate.....	2.4g
KCl.....	1.0g
KH ₂ PO ₄	1.0g
MgCl ₂ ·6H ₂ O.....	0.8g
NH ₄ Cl.....	0.8g
Heavy metal solution.....	50.0mL

Vitamin solution.....	15.0mL
Vitamin B ₁₂ solution.....	3.0mL

Preparation of Solution 2: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Solution 3:

Composition per 900.0mL:

NaHCO ₃	4.5g
--------------------------	------

Preparation of Solution 3: Add NaHCO₃ to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Bubble 100% CO₂ through the solution for 30 min. After CO₂ saturation of solution 3, add solution 2 and immediately filter the mixture through a Seitz filter (or a Millipore) using positive CO₂ pressure to push the liquid through.

Solution 4:

Composition per 200.0mL:

Na ₂ S·9H ₂ O.....	3.0g
--	------

Preparation of Solution 4: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 200.0mL. Add a magnetic stir bar to the flask. Autoclave for 15 min at 15 psi pressure–121°C. On a magnetic stirrer, slowly add 2.0mL of sterile 2M H₂SO₄. This partially neutralizes the solution. The solution should turn yellow. H₂S gas will be liberated. Neutralization and distribution of the solution should be done as rapidly as possible under adequate ventilation.

Heavy Metal Solution:

Composition per liter:

Ethylenediamine tetraacetate (EDTA).....	1.5g
FeSO ₄ ·7H ₂ O.....	0.2g
ZnSO ₄ ·7H ₂ O.....	0.1g
MnCl ₂ ·4H ₂ O.....	0.02g
Modified Hoagland trace elements solution.....	6.0mL

Preparation of Heavy Metal Solution: Dissolve EDTA in approximately 800.0mL of distilled/deionized water. Add remaining components. Bring volume to 1.0L with distilled/deionized water. Mix thoroughly.

Vitamin B₁₂ Solution:

Composition per 100.0mL:

Vitamin B ₁₂ (cyanocobalamin).....	2.0mg
---	-------

Preparation of Vitamin B₁₂ Solution: Add vitamin B₁₂ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Vitamin Solution:

Composition per 100.0mL:

Pyridoxamine·2HCl.....	5.0mg
Nicotinic acid.....	2.0mg
Thiamine.....	1.0mg
Pantothenic acid.....	0.5mg
Biotin.....	0.2mg
<i>p</i> -Aminobenzoic acid.....	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Modified Hoagland Trace Elements Solution:

Composition per 3.6L:

H ₃ BO ₃	11.0g
MnCl ₂ ·4H ₂ O.....	7.0g
AlCl ₃	1.0g
CoCl ₂	1.0g
CuCl ₂	1.0g

KI.....	1.0g
NiCl ₂	1.0g
ZnCl ₂	1.0g
BaCl ₂	0.5g
KBr.....	0.5g
LiCl.....	0.5g
Na ₂ MoO ₄	0.5g
SeCl ₄	0.5g
SnCl ₂ ·2H ₂ O.....	0.5g
NaVO ₃ ·H ₂ O.....	0.1g

Preparation of Modified Hoagland Trace Elements Solution:

Prepare each component as a separate solution. Dissolve each salt in approximately 100.0mL of distilled/deionized water. Adjust the pH of each solution to below 7.0. Combine all the salt solutions and bring the volume to 3.6L with distilled/deionized water. Adjust the pH to 3–4. A yellow precipitate may form after mixing. After a few days, it will turn into a fine white precipitate. Mix the solution thoroughly before using.

Preparation of Medium: To the 80.0mL of sterile solution 1 in screw-capped bottles, add combined solutions 2 and 3 immediately after filtration and fill bottles to capacity. Mix thoroughly. Aseptically remove 6.0mL of the medium from the bottles and replace it with 6.0mL of neutralized solution 4. Let stand for 24 hr. The medium should form a fine white precipitate before using. To inoculate, remove 6.0mL of the completed medium from the bottles and replace it with 6.0mL of inoculum.

Use: For the cultivation of *Ectothiorhodospira mobilis* and *Ectothiorhodospira marismortui*.

Chromatium Medium with Sodium Chloride

Composition per 1051.0mL:

Solution 1.....	950.0mL
Na ₂ S·9H ₂ O solution.....	60.0mL
NaHCO ₃ solution.....	40.0mL
Vitamin B ₁₂ solution.....	1.0mL

pH 3–4 at 25°C

Solution 1:

Composition per 950.0mL:

NaCl.....	30.0g
KH ₂ PO ₄	1.0g
NH ₄ Cl.....	0.5g
MgSO ₄ ·7H ₂ O.....	0.4g
CaCl ₂ ·2H ₂ O.....	0.05g
Trace elements solution SL-8.....	1.0mL

Preparation of Solution 1: Add components to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Trace Elements Solution SL-8:

Composition per liter:

Disodium EDTA.....	5.2g
FeCl ₂ ·4H ₂ O.....	1.5g
CoCl ₂ ·6H ₂ O.....	0.19g
MnCl ₂ ·4H ₂ O.....	0.10g
ZnCl ₂	0.07g
H ₃ BO ₃	0.06g
NaMoO ₄ ·2H ₂ O.....	0.04g
CuCl ₂ ·2H ₂ O.....	0.02g
NiCl ₂ ·6H ₂ O.....	0.02g

Preparation of Trace Elements Solution SL-8: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Na₂S·9H₂O Solution:

Composition per 100.0mL:

Na₂S·9H₂O 5.0g

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 100.0mL. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

NaHCO₃ Solution:

Composition per 100.0mL:

NaHCO₃ 5.0g

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Vitamin B₁₂ Solution:

Composition per 100.0mL:

Vitamin B₁₂ 2.0mg

Preparation of Vitamin B₁₂ Solution: Add vitamin B₁₂ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: To 950.0mL of cooled, sterile solution 1, aseptically add 60.0mL of sterile Na₂S·9H₂O solution, 40.0mL of sterile NaHCO₃ solution, and 1.0mL of sterile vitamin B₁₂ solution. Mix thoroughly. Adjust pH to 7.3 with sterile H₂SO₄ or Na₂CO₃. Aseptically distribute into sterile 50.0mL or 100.0mL bottles with metal screw-caps and rubber seals. Completely fill bottles with medium except for a pea-sized air bubble.

Use: For the cultivation of *Ectothiorhodospira marismortui* and *Ectothiorhodospira mobilis*.

Chromatium salexigens Medium

Composition per 4990.0mL:

Solution A 4000.0mL
 Solution B 860.0mL
 Solution C (Vitamin B₁₂ solution) 5.0mL
 Solution D (Trace elements solution SL-12B) 5.0mL
 Solution E 100.0mL
 Solution F 20.0mL

pH 7.3 ± 0.2 at 25°C

Solution A:

Composition per 4000.0mL:

NaCl 100.0g
 MgCl₂·6H₂O 3.0g
 MgSO₄ 2.5g
 KH₂PO₄ 1.7g
 NH₄Cl 1.7g
 KCl 1.7g
 CaCl₂·2H₂O 1.25g
 Sodium acetate 0.5g
 Na₂S₂O₃ 0.5g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 4.0L. Mix thoroughly. Adjust pH to 6.0. Dispense into a 5.0L flask with four openings at the top (two openings are in a central silicon rubber stopper and two openings are gas-tight screw caps). Add a teflon-coated magnetic stir bar to the flask. Autoclave for 45 min at 15 psi pressure–121°C. Cool to room temperature

under 100% N₂ at 0.05–0.1 atm pressure (use a manometer to measure low pressure).

Solution B:

Composition per 860.0mL:

Distilled/deionized water 860.0mL

Preparation of Solution B: Add 860.0mL of distilled/deionized water to a cotton-stoppered flask. Autoclave for 20 min at 15 psi–121°C. Cool to room temperature under 100% N₂ in an anaerobic jar.

Solution C (Vitamin B₁₂ Solution):

Composition per 5.0mL:

Vitamin B₁₂ 1.0mg

Preparation of Solution C (Vitamin B₁₂ Solution): Add vitamin B₁₂ to distilled/deionized water and bring volume to 5.0mL. Mix thoroughly. Filter sterilize.

Solution D (Trace Elements Solution SL-12B):

Composition per liter:

Disodium ethylenediamine-tetraacetate
 (Disodium EDTA) 3.0g
 FeSO₄·7H₂O 1.1g
 H₃BO₃ 0.3g
 CoCl₂·6H₂O 0.19g
 MnCl₂·2H₂O 50.0mg
 ZnCl₂ 42.0mg
 NiCl₂·6H₂O 24.0mg
 Na₂MoO₄·2H₂O 18.0mg
 CuCl₂·2H₂O 2.0mg

Preparation of Solution D (Trace Elements Solution SL-12B):

Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi–121°C.

Solution E:

Composition per 100.0mL:

NaHCO₃ 7.5g

Preparation of Solution E: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% CO₂ until saturated. Filter sterilize under 100% CO₂ in a sterile, gas-tight 100.0mL screw-capped bottle.

Solution F:

Composition per 100.0mL:

Na₂S·9H₂O 10.0g

Preparation of Solution F: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Dispense into a screw-capped bottle. Sparge with 100% N₂ for 3–4 min. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Saturate cooled solution A under 100% CO₂ at 0.05–0.1 atm pressure for 30 min with magnetic stirring. Add 860.0mL of solution B, 5.0mL of solution C, 5.0mL of solution D, 100.0mL of solution E, and 20.0mL of solution F through one of the screw-capped openings under 95% N₂ and 5% CO₂ with magnetic stirring. Adjust pH to 7.3 with sterile 2M HCl or sterile 2M Na₂CO₃ solution. Aseptically and anaerobically distribute the medium through the medium outlet tube into sterile 100.0mL bottles under 95% N₂ and 5% CO₂ at 0.05–0.1 atm pressure. Leave a small gas bubble in each bottle to accommodate pressure changes. After 24 hr, the iron in the medium will precipitate out of solution as black flocs.

Use: For the growth and maintenance of *Chromatium salexigens*.

Chromatium tepidum Medium**Composition per 1001.0mL:**

NH ₄ Cl	400.0mg
NaCl	400.0mg
MgSO ₄ ·7H ₂ O	200.0mg
CaCl ₂ ·2H ₂ O	50.0mg
Disodium ethylenediamine-tetraacetate (Disodium EDTA)	10.0mg
Ammonium acetate (or sodium pyruvate)	0.5mg
KH ₂ PO ₄	0.5mg
NaHCO ₃ solution	20.0mL
Na ₂ S·9H ₂ O solution	20.0mL
Trace elements solution	1.0mL
pH 7.0 ± 0.2 at 25°C	

NaHCO₃ Solution:**Composition per 20.0mL:**

NaHCO ₃	2.0g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:**Composition per 20.0mL:**

Na ₂ S·9H ₂ O	1.0g
---	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solutions:**Composition per liter:**

Disodium ethylenediamine-tetraacetate (Disodium EDTA)	5.2g
FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
Na ₂ MoO ₄ ·2H ₂ O	188.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
VOSO ₄ ·2H ₂ O	30.0mg
NiCl ₂ ·6H ₂ O	25.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
Na ₂ WO ₄ ·2H ₂ O	2.0mg

Preparation of Trace Elements Solutions: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components, except NaHCO₃ solution and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 960.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 20.0mL of sterile NaHCO₃ solution and 20.0mL of sterile Na₂S·9H₂O solution. Mix thoroughly. Adjust pH to 7.0. Distribute into sterile screw-capped tubes or bottles so that medium completely fills container.

Use: For the growth and maintenance of *Chromatium tepidum*.

Chromatium/Thiocapsa Medium**Composition per 1060.0mL:**

KH ₂ PO ₄	1.0g
NH ₄ Cl	1.0g
MgCl ₂ ·6H ₂ O	0.5g
Solution A	20.0mL
Solution B	20.0mL

Solution C	10.0mL
Solution D	10.0mL
Trace elements solution	1.0mL
pH 7.0 ± 0.2 at 25°C	

Solution A:**Composition per 100.0mL:**

NaHCO ₃	10.0g
--------------------------	-------

Preparation of Solution A: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B:**Composition per 100.0mL:**

Na ₂ S·9H ₂ O	10.0g
---	-------

Preparation of Solution B: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C:**Composition per 100.0mL:**

Na ₂ S ₂ O ₃ ·9H ₂ O	10.0g
--	-------

Preparation of Solution C: Add Na₂S₂O₃·9H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Solution D:**Composition per 100.0mL:**

Sodium malate	10.0g
---------------------	-------

Preparation of Solution D: Add sodium malate to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution:**Composition per liter:**

FeCl ₃ ·6H ₂ O	2.7g
H ₃ BO ₃	0.1g
ZnSO ₄ ·7H ₂ O	0.1g
Co(NO ₃) ₂ ·6H ₂ O	50.0mg
CuSO ₄ ·5H ₂ O	5.0mg
MnCl ₂ ·6H ₂ O	5.0mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components, except solution A, solution B, solution C, and solution D, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Bring pH to 7.0–7.2 with H₃PO₄. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 0.2mL of sterile solution A, 0.2mL of sterile solution B, 0.1mL of sterile solution C, and 0.1mL of sterile solution D for each 10.0mL of medium. Mix thoroughly. Use immediately.

Use: For the cultivation of *Chlorobium limnicola* and *Chromatium* species.

Chromobacterium Medium**Composition per liter:**

NaCl	30.0g
MgCl ₂	10.8g
MgSO ₄	5.4g
Peptone	5.0g

CaCl ₂	1.0g
KCl.....	0.7g
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Chromobacterium* species and *Alteromonas luteoviolacea*.

Chromogenic *E. coli*/Coliform Medium

Composition per liter:

Chromogenic mix	20.3g
Agar	15.0g
Peptone.....	5.0g
NaCl	5.0g
Na ₂ HPO ₄	3.5g
Yeast extract.....	3.0g
Lactose	2.5g
NaH ₂ PO ₄	1.5g
Neutral Red	0.03g
pH 6.8 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Dispense into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the differentiation between *Escherichia coli* and other coliforms in cultures produced from food samples. Agar base uses two enzyme substrates to differentiate between *E. coli* and other coliforms. One chromogenic substrate is cleaved by the enzyme glucuronidase which is specific for *E. coli* and produced by approximately 97% of strains. The second chromogenic substrate is cleaved by galactosidase, an enzyme produced by the majority of coliforms. This results in purple *E. coli* colonies, as they are able to cleave both chromogenic substrates and pink coliform colonies as they are only able to cleave the galactosidase chromogen.

Chromogenic *Enterobacter sakazakii* Agar, DFI Formulation

Composition per liter:

Agar	15.0g
Tryptone.....	15.0g
Soya peptone.....	5.0g
NaCl	5.0g
Ferric ammonium citrate.....	1.0g
Sodium deoxycholate.....	1.0g
Na ₂ S ₂ O ₃	1.0g
Chromogen.....	0.1g
pH 7.3 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Dispense into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes. Allow tubes to cool in a slanted position.

Use: For the differentiation and enumeration of *Enterobacter sakazakii* from infant formula and other food samples. The enzyme α -glucosidase, present in *E. sakazakii*, hydrolyzes the substrate 5-bromo-4-chloro-3-indolyl- α -D-glucopyranoside, thus producing blue-green colonies on this pale yellow medium. *Proteus vulgaris* is also weakly α -glucosidase positive and could grow to give colonies of a similar color

to *E. sakazakii*. However, on this medium, *Proteus* spp. grow as grey colonies: they produce hydrogen sulphide in the presence of ferric ions forming ferrous sulphide. Deoxycholate inhibits the growth of most Gram-positive organisms.

Chromogenic *Candida* Agar

Composition per liter:

Chromogenic mix	13.6g
Agar	13.6g
Peptone	4.0g
Selective supplement solution	10.0mL
pH 6.0 ± 0.2 at 25°C	

Source: This medium is available from Oxoid Unipath.

Selective Supplement Solution:

Composition per 10.0mL:

Chloramphenicol.....	500.0mg
----------------------	---------

Preparation of Selective Supplement Solution: Add chloramphenicol to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0mL. Mix thoroughly. Gently heat while stirring and bring to boiling. Do not autoclave. Cool to 45°C. Pour into sterile Petri dishes.

Use: For the rapid isolation and identification of clinically important *Candida* species. The medium incorporates two chromogens that indicate the presence of the target enzymes: X-NAG (5-bromo-4-chloro-3-indolyl N acetyl β -D-glucosaminide) detects the activity of hexosaminidase. BCIP (5-bromo-6-chloro-3-indolyl phosphate p-toluidine salt) detects alkaline phosphatase activity. An opaque agent has been incorporated into the formulation to improve the color definition on the agar. The broad-spectrum antibacterial agent chloramphenicol is added to the agar to inhibit bacterial growth on the plates.

Chromogenic *Listeria* Agar

Composition per liter:

Peptone	18.5g
LiCl	15.0g
Agar	14.0g
NaCl	9.5g
Yeast extract.....	4.0g
Maltose	4.0g
Sodium pyruvate	2.0g
X-glucoside chromogenic mix	0.2g
Differential lecithin solution.....	40.0mL
Selective supplement solution	20.0mL
pH 7.2 ± 0.2 at 25°C	

Source: This medium is available from Oxoid Unipath.

Differential Lecithin Solution:

Composition per 40.0mL:

Lecithin	Proprietary
----------------	-------------

Preparation of Differential Lecithin Solution: Available as pre-mixed solution.

Selective Supplement Solution:

Composition per 20.0mL:

Nalidixic acid.....	26.0mg
Polymyxin B	10.0mg
Amphotericin	10.0mg
Ceftazidime.....	6.0mg

Preparation of Selective Supplement Solution: Add components to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except differential lecithin solution and selective supplement solution, to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 46°C. Aseptically add differential lecithin solution and selective supplement solution. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the isolation, enumeration, and presumptive identification of *Listeria* spp. and *Listeria monocytogenes*. This selective medium contains the substrate lecithin, which permits differentiation of *L. monocytogenes* and *L. Ivanovii* from other *Listeria* species. Differential activity for all *Listeria* species is due to the addition of a chromogenic substrate.

Chromogenic *Listeria* Agar (ISO)

Composition per liter:

Enzymatic digest of animal tissue	18.0g
Agar	12.0g
LiCl	10.0g
Yeast extract	10.0g
Enzymatic digest of casein	6.0g
NaCl	5.0g
Na ₂ HPO ₄ , anhydrous	2.5g
Glucose	2.0g
Sodium pyruvate	2.0g
Magnesium glycerophosphate	1.0g
MgSO ₄ , anhydrous	0.5g
X-glucoside chromogenic mix	0.05g
L- α -phosphatidylinositol	40.0mL
Selective supplement solution	20.0mL
pH 7.2 \pm 0.2 at 25°C	

Source: This medium is available from Oxoid Unipath.

Selective Supplement Solution:

Composition per 20.0mL:

Nalidixic acid	20.0mg
Ceftazidime	20.0mg
Amphotericin	10.0mg
Polymyxin B	76,700 U

Preparation of Selective Supplement Solution: Add components to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except L- α -phosphatidylinositol and selective supplement solution, to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 46°C. Aseptically add L- α -phosphatidylinositol and selective supplement solution. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the isolation, enumeration, and presumptive identification of *Listeria* spp. and *Listeria monocytogenes*. This selective medium contains the substrate lecithin, which permits differentiation of *L. monocytogenes* and *L. Ivanovii* from other *Listeria* species.

Chromogenic *Listeria* Agar (ISO) Modified

Composition per liter:

Enzymatic digest of animal tissue	18.0g
Agar	12.0g
LiCl	10.0g
Yeast extract	10.0g
Enzymatic digest of casein	6.0g
NaCl	5.0g
Na ₂ HPO ₄ , anhydrous	2.5g
Glucose	2.0g
Sodium pyruvate	2.0g

MgSO ₄ , anhydrous	0.5g
X-glucoside chromogenic mix	0.05g
Differential lecithin solution	40.0mL
Selective supplement solution	20.0mL
pH 7.2 \pm 0.2 at 25°C	

Source: This medium is available from Oxoid Unipath.

Differential Lecithin Solution:

Composition per 40.0mL:

Lecithin	Proprietary
----------------	-------------

Preparation of Differential Lecithin Solution: Available as premixed solution.

Selective Supplement Solution:

Composition per 20.0mL:

Nalidixic acid	20.0mg
Ceftazidime	20.0mg
Amphotericin	10.0mg
Polymyxin B	76,700 U

Preparation of Selective Supplement Solution: Add components to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except differential lecithin solution and selective supplement solution, to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 46°C. Aseptically add differential lecithin solution and selective supplement solution. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the isolation, enumeration, and presumptive identification of *Listeria* spp. and *Listeria monocytogenes*. This selective medium contains the substrate lecithin, which permits differentiation of *L. monocytogenes* and *L. Ivanovii* from other *Listeria* species.

Chromogenic *Salmonella* Esterase Agar (CSE Agar)

Composition per liter:

Agar	12.0g
Lactose	14.65g
Peptone	4.0g
Tryptone	4.0g
Tween™ 20	3.0g
Lab Lemco	3.0g
Na ₃ -citrate dihydrate	0.5g
L-cysteine	0.128g
Tris	0.06g
SLA-octanoate solution	50.0mL

Novobiocin solution.....	10.0mL
Ethyl 4-dimethylaminobenzoate solution.....	10.0mL
pH 7.0 ± 0.2 at 25°C	

Novobiocin Solution:**Composition** per 10.0mL:

Novobiocin.....	70.0mg
-----------------	--------

Preparation of Novobiocin Solution: Add novobiocin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Ethyl 4-dimethylaminobenzoate Solution:**Composition** per 10.0mL:

Ethyl 4-dimethylaminobenzoate.....	0.35g
Methanol.....	8.0mL

Preparation of Ethyl 4-dimethylaminobenzoate Solution: Add ethyl 4-dimethylaminobenzoate to 8.0mL methanol. Mix thoroughly. Bring volume to 10.0mL with distilled/deionized water. Mix thoroughly. Filter sterilize.

SLA-Octonoate Solution:**Composition** per 50.0mL:

4-[2-(4-octanoyloxy-3,5-dimethoxyphenyl)-vinyl]-quinolinium-1-(propan-3-yl carboxylic acid) bromide (SLPA-octanoate; bromide form).....	0.3223g
---	---------

Preparation of SLA-Octonoate Solution: Add SLA-octonoate to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except novobiocin solution, SLA-octonoate solution, and ethyl 4-dimethylaminobenzoate solution, to distilled/deionized water and bring volume to 920.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 10.0mL novobiocin solution, 50.0mL SLA-octonoate solution, and 10.0mL ethyl 4-dimethylaminobenzoate solution. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the detection of *Salmonella* spp. in clinical specimens. For the differentiation of *Salmonella* spp.

Chromogenic Substrate Broth**Composition** per liter:

NaCl.....	10.0g
HEPES (N-[2-hydroxyethyl] piperazine-N'-[2-ethane-sulfonic acid]) buffer.....	6.9g
(NH ₄) ₂ SO ₄	5.0g
<i>o</i> -Nitrophenyl-β-D-galactopyranoside.....	0.5g
Solanium.....	0.5g
MgSO ₄	0.1g
4-Methylumbelliferyl-β-D-glucuronide.....	0.075g
CaCl ₂	0.05g
Na ₂ SO ₃	0.04g
Amphotericin B.....	1.0mg
MnSO ₄	0.5mg
ZnSO ₄	0.5mg

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the detection of coliform bacteria based on their hydrolysis of chromogenic substrates by production of β-D-galactopyranosidase. Bacteria that produce β-D-galactopyranosidase turn the medium yellow.

Chromogenic Urinary Tract Infection (UTI) Medium**Composition** per liter:

Chromogenic mix.....	26.3g
Peptone.....	15.0g
Agar.....	15.0g
pH 6.8 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Pour into sterile Petri dishes.

Use: For the presumptive identification and differentiation of all the main microorganisms that cause urinary tract infections (UTIs). The medium contains two specific chromogenic substrates which are cleaved by enzymes produced by *Enterococcus* spp., *Escherichia coli*, and coliforms. In addition, it contains phenylalanine and tryptophan which provide an indication of tryptophan deaminase activity, indicating the presence of *Proteus* spp., *Morganella* spp., and *Providencia* spp. It is based on electrolyte deficient CLED Medium which provides a valuable non-inhibitory diagnostic agar for plate culture of other urinary organisms, while preventing the swarming of *Proteus* spp. One chromogen, X-Gluc, is targeted towards β-glucosidase, and allows the specific detection of enterococci through the formation of blue colonies. The other chromogen, Red-Gal, is cleaved by the enzyme β-galactosidase which is produced by *Escherichia coli*, resulting in pink colonies. Cleavage of both chromogens occurs in the presence of coliforms, resulting in purple colonies. The medium also contains tryptophan which acts as an indicator of tryptophan deaminase activity, resulting in colonies of *Proteus*, *Morganella*, and *Providencia* spp. appearing brown.

Chromogenic UTI Medium, Clear**Composition** per liter:

Peptone.....	15.0g
Agar.....	15.0g
Chromogenic mix.....	13.0g
pH 7.0 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Pour into sterile Petri dishes.

Use: For the presumptive identification and differentiation of all the main microorganisms that cause urinary tract infections (UTIs). This medium uses the same chromogenic substrates as the existing opaque Chromogenic UTI Medium but has a clear background to make multiple sample testing easier. The medium contains two specific chromogenic substrates which are cleaved by enzymes produced by *Enterococcus* spp., *E. coli*, and coliforms. In addition, it contains tryptophan which indicates tryptophan deaminase activity (TDA), indicating the presence of *Proteus* spp. It is based on Cystine Lactose Electrolyte Deficient (CLED) Medium which provides a valuable non-inhibitory diagnostic agar for plate culture of other urinary organisms,

while preventing the swarming of *Proteus* spp. The chromogen, X-glucoside, is targeted towards β-glucosidase enzyme activity, and allows the specific detection of enterococci through the formation of blue colonies. The other chromogen, Red-Galactoside, is cleaved by the enzyme β-galactosidase which is produced by *E. coli*, resulting in pink colonies. Cleavage of both the chromogens by members of the coliform group results in purple colonies. The medium also contains tryptophan which acts as an indicator of tryptophan deaminase activity (TDA), resulting in halos around the colonies of *Proteus*, *Morganella*, and *Providencia* spp.

**Chrysiogenes Medium
(DSMZ Medium 818)**

Composition per liter:

NaCl	1.2g
NaHCO ₃	0.6g
MgCl ₂ ·6H ₂ O	0.4g
KCl	0.3g
NH ₄ Cl	0.3g
Na ₂ SO ₄	0.3g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O	0.15g
Resazurin	0.5mg
Vitamin solution	10.0mL
Na-acetate solution	10.0mL
KNO ₃ solution	10.0mL
Seven vitamin solution	1.0mL
Trace elements solution SL-12	1.0mL

pH 7.4–7.8 at 25°C

KNO₃ Solution:

Composition per 10.0mL:

KNO ₃	0.5g
------------------	------

Preparation of KNO₃ Solution: Add KNO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Na-Acetate Solution:

Composition per 10.0mL:

Na-acetate	0.5g
------------	------

Preparation of Na-Acetate Solution: Add Na-acetate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Seven Vitamin Solution:

Composition per liter:

Pyridoxine hydrochloride	300.0mg
Thiamine-HCl·2H ₂ O	200.0mg
Nicotinic acid	200.0mg
Vitamin B ₁₂	100.0mg
Calcium pantothenate	100.0mg
p-Aminobenzoic acid	80.0mg
D(+)-Biotin	20.0mg

Preparation of Seven Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Sparge with 100% N₂. Mix thoroughly. Filter sterilize.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl	10.0mg
Thiamine-HCl·2H ₂ O	5.0mg
Riboflavin	5.0mg

Nicotinic acid	5.0mg
D-Ca-pantothenate	5.0mg
p-Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Trace Elements Solution SL-12:

Composition per liter:

Na ₂ -EDTA	5.2g
FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution SL-12: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Adjust pH to 6.5. Sparge with 80% N₂ + 20% CO₂.

Preparation of Medium: Prepare and dispense medium under 100% N₂. Add components, except vitamin solution, seven vitamin solution, KNO₃ solution, and Na-acetate solution, to distilled/deionized water and bring volume to 969.0mL. Mix thoroughly. Sparge with 100% N₂. Adjust pH to 7.6. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 10.0mL sterile KNO₃ solution, 10.0mL sterile vitamin solution, 1.0mL sterile seven vitamin solution, and 10.0mL sterile Na-acetate solution. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or bottles.

Use: For the cultivation of *Chrysiogenes arsenatis*.

Chu's Medium No. 10

Composition per liter:

Ca(NO ₃) ₂ ·4H ₂ O	0.04g
Na ₂ SiO ₃ ·5H ₂ O	0.025g
MgSO ₄ ·7H ₂ O	0.025g
Na ₂ CO ₃	0.02g
FeCl ₃	0.008g
K ₂ HPO ₄	0.005g

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of cyanobacteria.

Chu's No. 10 Medium

Composition per liter:

Agar	15.0g
Ca(NO ₃) ₂ ·4H ₂ O	0.232g
Na ₂ SiO ₃ ·5H ₂ O	0.044g
MgSO ₄ ·7H ₂ O	0.025g
Na ₂ CO ₃	0.02g
K ₂ HPO ₄	0.01g

Citric acid.....	3.5mg
Ferric citrate.....	3.5mg

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Anabaena* species and *Plectonema boryanum*.

Chu's No. 10 Medium, Modified

Composition per liter:

Agar	15.0g
Ca(NO ₃) ₂ ·4H ₂ O.....	0.232g
Na ₂ SiO ₃ ·5H ₂ O.....	0.044g
MgSO ₄ ·7H ₂ O.....	0.025g
Na ₂ CO ₃	0.02g
K ₂ HPO ₄	0.01g
Citric acid.....	3.5mg
Ferric citrate.....	3.5mg
Metal solution	1.0mL

Metal Solution:

Composition per liter:

H ₃ BO ₃	2.4g
MnCl ₂ ·4H ₂ O.....	1.4g
ZnCl ₂	0.4g
CoCl ₂ ·6H ₂ O.....	0.02g
CuCl ₂ ·2H ₂ O.....	0.1mg

Preparation of Metal Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Anabaena* species and *Plectonema boryanum*.

Chu's No. 11 Medium, Modified

Composition per liter:

NaNO ₃	1.5g
MgSO ₄ ·7H ₂ O.....	0.08g
Na ₂ SiO ₃ ·9H ₂ O.....	0.06g
CaCl ₂ ·2H ₂ O.....	0.04g
K ₂ HPO ₄ ·3H ₂ O.....	0.04g
Na ₂ CO ₃	0.02g
Citric acid.....	6.0mg
Ferric ammonium citrate.....	6.0mg
EDTA.....	1.0mg
Seawater.....	999.0mL
Trace metal solution A5 with cobalt.....	1.0mL

pH 7.5 ± 0.2 at 25°C

Trace Metal Solution A5 with Cobalt:

Composition per liter:

H ₃ BO ₃	2.86g
MnCl ₂ ·4H ₂ O.....	1.81g
Na ₂ MoO ₄ ·2H ₂ O.....	0.39g
ZnSO ₄ ·7H ₂ O.....	0.222g
CuSO ₄ ·H ₂ O.....	0.079g
Co(NO ₃) ₂ ·6H ₂ O.....	0.049g

Preparation of Trace Metal Solution A5 with Cobalt: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to seawater and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation and cultivation of cyanobacteria from marine habitats.

CIN Agar

(*Yersinia* Selective Agar)

(Cefsulodin Irgasan[®] Novobiocin Agar)

Composition per liter:

Mannitol.....	20.0g
Agar	12.0g
Pancreatic digest of gelatin.....	10.0g
Beef extract.....	5.0g
Peptic digest of animal tissue.....	5.0g
Sodium pyruvate.....	2.0g
Yeast extract.....	2.0g
NaCl.....	1.0g
Sodium deoxycholate.....	0.5g
Neutral Red.....	0.03g
Cefsulodin.....	0.015g
Irgasan [®] (triclosan).....	4.0mg
Novobiocin.....	2.5mg
Crystal Violet.....	1.0mg

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components, except cefsulodin and novobiocin, to distilled/deionized water and bring volume to 1.0L. Heat, mixing continuously, until boiling. Do not autoclave. Cool to 45°–50°C. Aseptically add cefsulodin and novobiocin. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation and differentiation of *Yersinia enterocolitica* from a variety of clinical and nonclinical specimens based on mannitol fermentation. *Yersinia enterocolitica* appears as "bull's eye" colonies with deep red centers surrounded by a transparent periphery.

Cinnamate Medium

Composition per liter:

NaHCO ₃	2.5g
MgCl ₂ ·6H ₂ O.....	2.03g
Cinnamic acid.....	1.48g
KH ₂ PO ₄	1.36g
NH ₄ Cl.....	0.53g
Na ₂ S·9H ₂ O.....	0.24g
CaCl ₂ ·2H ₂ O.....	0.15g
Yeast extract.....	0.05g
Modified Wolfe's metals.....	10.0mL
Wolfe's vitamin solution.....	10.0mL

pH 7.5–7.7 at 25°C

Modified Wolfe's Metals:

Composition per liter:

Na ₂ SeO ₃	10.0mg
NaWO ₄ ·2H ₂ O.....	10.0mg

NiCl ₂ ·6H ₂ O	10.0mg
Wolfe's metals solution.....	1.0L

Preparation of Modified Wolfe's Metals: Combine the components. Mix thoroughly.

Wolfe's Metals Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O	3.0g
Nitritotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·H ₂ O	0.5g
CaCl ₂	0.1g
CoCl ₂ ·6H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g
ZnSO ₄ ·7H ₂ O	0.1g
AlK(SO ₄) ₂ ·12H ₂ O	0.01g
CuSO ₄ ·5H ₂ O	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g

Preparation of Wolfe's Metals Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add distilled/deionized water to 1.0L. Add remaining components. Mix thoroughly.

Wolfe's Vitamin Solution:

Composition per liter:

Pyridoxine-HCl	0.01g
<i>p</i> -Aminobenzoic acid	5.0mg
Calcium pantothenate	5.0mg
Nicotinic acid	5.0mg
Riboflavin	5.0mg
Thiamine-HCl	5.0mg
Thioctic acid	5.0mg
Biotin	2.0mg
Folic acid.....	2.0mg
Cyanocobalamin	100.0μg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add all components, except NaHCO₃ and Na₂S·9H₂O, to distilled/deionized water and bring volume to 1.0L. Gently heat and bring to boiling under 90% N₂ + 10% CO₂. Cool medium to room temperature while continuing to gas with 90% N₂ + 10% CO₂. Add NaHCO₃ and Na₂S·9H₂O. Adjust pH to 7.5–7.7. Distribute into tubes under 90% N₂ + 10% CO₂ using anaerobic techniques. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of anaerobic bacteria that can utilize cinnamic acid as a carbon source. As a basal medium for the cultivation of *Formivibrio citricus*.

Citrate Agar

See: Simmons Citrate Agar

See: Christensen Citrate Agar, Modified

Citrate Azide Tween Carbonate Base

Composition per liter:

Agar	15.0g
Casein enzymic hydrolysate	15.0g
Sodium citrate	15.0g
Yeast extract.....	5.0g

KH ₂ PO ₄	5.0g
Tween 80.....	1.0g
Selective supplement solution	10.0mL
pH 7.0 ± 0.2 at 25°C	

Source: This medium is available from HiMedia.

Selective Supplement Solution:

Composition per 10.0mL:

Na ₂ CO ₃	1.0g
NaN ₃	0.2g
2,3,5, Triphenyltetrazolium chloride	0.05g

Preparation of Selective Supplement Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Caution: Sodium azide is toxic. Azides also react with metals and disposal must be highly diluted.

Preparation of Medium: Add components, except selective supplement solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add selective supplement solution. Mix thoroughly. Pour into Petri dishes or aseptically distribute into sterile tubes.

Use: For the identification of enterococci in meat, meat products, dairy products, and other foodstuffs.

Citrate Medium, Koser's Modified

Composition per liter:

NaCl	5.0g
Citric acid.....	2.0g
(NH ₄)H ₂ PO ₄	1.0g
K ₂ HPO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.2g
pH 6.8 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.8. Distribute into tubes in 5.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and differentiation of bacteria based on their ability to utilize citrate as a carbon source.

Citrate Phosphate Buffered Glucose Medium

Composition per liter:

Solution A	750.0mL
Solution C	200.0mL
Solution B	50.0mL
pH 3.5 ± 0.2 at 25°C	

Solution A:

Composition per 750.0mL:

(NH ₄) ₂ SO ₄	3.0g
Citric acid, anhydrous	1.92g
Na ₂ HPO ₄	1.23g
MgSO ₄ ·7H ₂ O	0.5g
KCl.....	0.1g
Ca(NO ₃) ₂ ·4H ₂ O	0.02g
FeSO ₄ ·7H ₂ O.....	0.01g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 750.0mL. Mix thoroughly.

Solution B:**Composition** per 50.0mL:

Glucose	10.0g
Yeast extract.....	1.0g

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly.

Solution C:**Composition** per 200.0mL:

Agarose (electrophoresis grade)	6.0g
---------------------------------------	------

Preparation of Solution C: Add agarose to distilled/deionized water and bring volume to 200.0mL. Mix thoroughly.

Preparation of Medium: Prepare solutions A, B, and C. Autoclave solutions separately for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Combine solutions A, B, and C. Mix thoroughly. Immediately distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Acidiphilium organovorum*.

Citrobacter diversus* Medium*Composition** per liter:

Component 1	500.0mL
Component 2	250.0mL
Component 3	250.0mL

Component 1:**Composition** per 500.0mL:

Agar	7.5g
Pancreatic digest of casein	7.5g
Papaic digest of soybean meal	2.5g

Preparation of Component 1: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Component 2:**Composition** per 250.0mL:

Agar	7.5g
Pancreatic digest of casein	7.5g
Papaic digest of soybean meal	2.5g
L-Tyrosine.....	1.0g

Preparation of Component 2: Add components to distilled/deionized water and bring volume to 250.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Component 3:**Composition** per 250.0mL:

L-Tyrosine.....	1.0g
-----------------	------

Preparation of Component 3: Add components to distilled/deionized water and bring volume to 250.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Rapidly cool in ice water (0°C) for 20 min. A fine, white crystalline precipitate should form.

Preparation of Medium: Pour sterile component 1 into sterile Petri dishes in 18.0mL volumes. Allow agar to solidify. Warm component 3 to 50°C for 20 min. Aseptically combine component 2 and component 3. Mix thoroughly. Pour 7.0mL of mixture over the solidified component 1 agar.

Use: For the isolation and cultivation of *Citrobacter diversus*.

Citrovorum Factor Assay Medium

See: **CF Assay Medium**

CK Agar**Composition** per liter:

Agar	15.0g
Glucose	5.0g
KNO ₃	2.0g
CaCl ₂	1.5g
MgSO ₄ ·7H ₂ O	1.5g
K ₂ HPO ₄	0.25g
Ferric citrate.....	0.02g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of myxobacteria.

CK1 Medium**Composition** per liter:

MgSO ₄ ·7H ₂ O	3.0g
KNO ₃	2.0g
CaCl ₂	1.4g
Ferric citrate.....	0.02g
Glucose solution	100.0mL
K ₂ HPO ₄ solution.....	10.0mL

Glucose Solution:**Composition** per 100.0mL:

D-Glucose	10.0g
-----------------	-------

Preparation of Glucose Solution: Add D-glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

K₂HPO₄ Solution:**Composition** per 10.0mL:

K ₂ HPO ₄	2.5mg
---------------------------------------	-------

Preparation of K₂HPO₄ Solution: Add K₂HPO₄ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Preparation of Medium: Add components, except glucose solution and K₂HPO₄ solution, to distilled/deionized water and bring volume to 890.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add sterile glucose solution and K₂HPO₄ solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of myxobacteria.

Clausen HiVeg Medium**Composition** per liter:

Plant hydrolysate	15.0g
Glucose	6.0g
Yeast extract.....	6.0g
Papaic digest of soybean meal	3.0g
NaCl.....	2.5g
K ₂ HPO ₄	2.0g
L-Asparagine.....	1.25g
Sodium citrate	1.0g
Agar	0.75g

Na-thioglycollate	0.5g
L-Cystine	0.5g
MgSO ₄	0.4g
Sodium dithionate	0.4g
Lecithin	0.3g
CaCl ₂	4.0mg
MnCl ₂	2.0mg
CoSO ₄	1.0mg
CuSO ₄	1.0mg
FeSO ₄	1.0mg
Resazurin	1.0mg
ZnSO ₄	1.0mg
Glycerol	5.0mL
Polysorbate 80	3.0mL

pH 7.1 ± 0.2 at 25°C

Source: This medium, without glycerol or polysorbate 80, is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes. The medium must not be resterilized.

Use: For sterility testing by the membrane filter method or the tube dilution method to determine the presence of microbial contamination in a variety of specimens.

Clausen Medium

Composition per liter:

Casein enzymatic hydrolysate	15.0g
Glucose	6.0g
Yeast extract	6.0g
Papaic digest of soybean meal	3.0g
NaCl	2.5g
K ₂ HPO ₄	2.0g
L-Asparagine	1.25g
Sodium citrate	1.0g
Agar	0.75g
Na-thioglycollate	0.5g
L-Cystine	0.5g
MgSO ₄	0.4g
Sodium dithionate	0.4g
Lecithin	0.3g
CaCl ₂	4.0mg
MnCl ₂	2.0mg
CoSO ₄	1.0mg
CuSO ₄	1.0mg
FeSO ₄	1.0mg
Resazurin	1.0mg
ZnSO ₄	1.0mg
Glycerol	5.0mL
Polysorbate 80	3.0mL

pH 7.1 ± 0.2 at 25°C

Source: This medium, without glycerol or polysorbate 80, is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes. The medium must not be resterilized.

Use: For sterility testing by the membrane filter method or the tube dilution method to determine the presence of microbial contamination in a variety of specimens.

Clausen Medium (Dithionite Thioglycolate, HS T, Broth)

Composition per liter:

Pancreatic digest of casein	15.0g
Glucose	6.0g
Yeast extract	6.0g
Glycerol	5.0g
Papaic digest of soybean meal	3.0g
Tween™ 80	3.0g
NaCl	2.5g
K ₂ HPO ₄	2.0g
L-Asparagine	1.25g
Sodium citrate	1.0g
Agar	0.75g
L-Cysteine	0.5g
Sodium thioglycolate	0.5g
MgSO ₄ ·7H ₂ O	0.4g
Sodium dithionite	0.4g
Lecithin	0.3g
CaCl ₂ ·2H ₂ O	4.0mg
MnCl ₂ ·4H ₂ O	2.0mg
CoSO ₄ ·7H ₂ O	1.0mg
CuSO ₄ ·5H ₂ O	1.0mg
FeSO ₄ ·7H ₂ O	1.0mg
ZnSO ₄ ·7H ₂ O	1.0mg
Resazurin	1.0mg

pH 7.1 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add Tween™ 80 and glycerol to distilled/deionized water and bring volume to 1.0L. Add remaining components. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. The medium must not be resterilized.

Use: For sterility testing by the membrane filter method or the tube dilution method to determine the presence of microbial contamination in a variety of specimens.

Clavibacter Medium

Composition per liter:

Agar	15.0g
Glucose	6.0g
Peptone	5.0g
NaCl	5.0g
Yeast extract	4.0g
Beef extract	1.0g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Clavibacter michiganensis*.

Clavibacter michiganensis Medium (LMG Medium 39)

Composition per liter:

Agar	15.0g
Glucose	10.0g
Yeast extract	5.0g
Peptone	5.0g
Casein hydrolysate	0.1g
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to 1.0L soil extract. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Clavibacter michiganensis* subsp. *sepedonicus*.

Clavicornia Medium

Composition per liter:

Agar	15.0g
Malt extract	7.5g
Peptone	1.0g
Yeast extract	0.5g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Clavicornia divaricata*, *Clavicornia pyxidata*, *Favolus arcularius*, *Pistillaria micans*, *Pistillaria setipes*, and *Tremella mesenterica*.

CLED Agar

(Cystine Lactose Electrolyte Deficient Agar) (Brolacin Agar)

Composition per liter:

Agar	15.0g
Lactose	10.0g
Pancreatic digest of casein	4.0g
Pancreatic digest of gelatin	4.0g
Beef extract	3.0g
L-Cystine	0.128g
Bromthymol Blue	0.02g
pH 7.3 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation, enumeration, and presumptive identification of microorganisms from urine.

CLED Agar with Andrade's Indicator (Cystine Lactose Electrolyte Deficient Agar with Andrade's Indicator)

Composition per liter:

Agar	15.0g
Pancreatic digest of casein	10.0g
Peptone	4.0g

Beef extract	3.0g
L-Cystine	0.128g
Bromthymol Blue	0.02g
Andrade's indicator	10.0mL
pH 7.5 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Oxoid Unipath.

Caution: Acid Fuchsin is a potential carcinogen and care must be taken to avoid inhalation of the powdered dye and contamination of the skin.

Andrade's Indicator:

Composition per 100.0mL:

NaOH (1N solution)	16.0mL
Acid Fuchsin	0.1g

Preparation of Andrade's Indicator: Add Acid Fuchsin to NaOH solution and bring volume to 100.0mL with distilled/deionized water.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the differentiation of microorganisms based on colony characteristics.

CLED HiVeg Agar with Andrade's Indicator

Composition per liter:

Agar	15.0g
Lactose	10.0g
Plant hydrolysate	4.0g
Plant peptone	4.0g
Plant extract	3.0g
L-Cystine	0.128g
Andrade's indicator	0.1g
Bromo Thymol Blue	0.02g
pH 7.5 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Caution: Acid Fuchsin in Andrade indicator is a potential carcinogen and care must be taken to avoid inhalation of the powdered dye and contamination of the skin.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and differentiation of urinary pathogens on the basis of lactose fermentation.

CLED HiVeg Agar with Bromthymol Blue

Composition per liter:

Agar	15.0g
Lactose	10.0g
Plant hydrolysate	4.0g
Plant peptone	4.0g
Plant extract	3.0g

L-Cystine	0.128g
Bromthymol Blue	0.02g
pH 7.3 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and differentiation of urinary pathogens on the basis of lactose fermentation.

C.L.E.D. HiVeg Agar Base without Indicator

Composition per liter:

Agar	15.0g
Lactose	10.0g
Plant hydrolysate.....	4.0g
Plant peptone.....	4.0g
Plant extract	3.0g
L-Cystine	0.128g
pH 7.3 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation, enumeration and presumptive identification of bacterial flora in the urinary tract.

Clostridia Medium

Composition per liter:

Sodium L-lactate.....	10.0g
Sodium acetate.....	8.0g
K ₂ HPO ₄	0.5g
(NH ₄) ₂ ·7H ₂ O.....	0.5g
Sodium thioglycolate.....	0.5g
Yeast extract.....	0.5g
MgSO ₄ ·7H ₂ O.....	0.1g
FeSO ₄ ·7H ₂ O.....	0.02g
<i>p</i> -Aminobenzoate.....	100.0μg
Biotin	0.1μg
pH 6.0–7.0 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.0–7.0. Distribute into tubes or flasks. Autoclave for 20 min at 15 psi pressure–121°C.

Use: For the isolation and cultivation of *Clostridium* species that ferment lactate and acetate.

Clostridial Agar

Composition per liter:

Casein enzymatic hydrolysate	17.0g
Agar	14.5g
Glucose	6.0g
Papaic digest of soybean meal	3.0g
NaCl	2.5g
Na-thioglycolate.....	1.8g

Sodium formaldehyde sulphoxylate	1.0g
L-Cystine.....	0.25g
NaN ₃	0.2g
Neomycin sulfate.....	0.15g
pH 7.0 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation of pathogenic Clostridia from mixed flora.

Clostridial HiVeg Agar

Composition per liter:

Plant hydrolysate	17.0g
Agar	14.5g
Glucose	6.0g
Papaic digest of soybean meal.....	3.0g
NaCl.....	2.5g
Na-thioglycolate	1.8g
Sodium formaldehyde sulphoxylate	1.0g
L-Cystine.....	0.25g
NaN ₃	0.2g
Neomycin sulfate.....	0.15g
pH 7.0 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation of pathogenic Clostridia from mixed flora.

Clostridium acetobutylicum Medium

Composition per liter:

Potato flakes, dried	40.0g
Glucose	6.0g
CaCO ₃	2.0g
L-Cysteine·HCl·H ₂ O.....	0.5g
Resazurin	1.0mg

Preparation of Medium: Add potato flakes and CaCO₃ to distilled/deionized water and bring volume to 1.0L. Autoclave for 30 min at 15 psi pressure–121°C. Filter through cheesecloth. To filtrate, add glucose, L-cysteine·HCl·H₂O, and resazurin. Autoclave for 20 min at 15 psi pressure–121°C. Distribute into sterile tubes or flasks.

Use: For the growth and maintenance of *Clostridium acetobutylicum*, *Clostridium beijerinckii*, *Clostridium butyricum*, *Clostridium roseum*, and other *Clostridium* species.

Clostridium acidurici Medium

Composition per liter:

Uric acid.....	2.0g
Yeast extract.....	1.0g
K ₂ HPO ₄	0.91g
KOH.....	0.67g

Sodium thioglycolate	0.5g
MgSO ₄ ·7H ₂ O	0.25g
CaCl ₂ ·2H ₂ O	0.015g
FeSO ₄ ·7H ₂ O	6.0mg
NaHCO ₃ solution	25.0mL
Sodium thioglycolate solution	25.0mL
pH 7.0–7.5 at 25°C	

NaHCO₃ Solution:**Composition per 25.0mL:**

NaHCO ₃	5.0g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 25.0mL. Mix thoroughly. Filter sterilize.

Sodium Thioglycolate Solution:**Composition per 25.0mL:**

Sodium thioglycolate	0.5g
----------------------------	------

Preparation of Sodium Thioglycolate Solution: Add sodium thioglycolate to distilled/deionized water and bring volume to 25.0mL. Mix thoroughly. Autoclave solution separately for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add K₂HPO₄ and KOH to distilled/deionized water and bring volume to 1.0L. Add uric acid. Gently heat until boiling. Add the remaining components, except NaHCO₃ and sodium thioglycolate. Mix thoroughly. Adjust pH to 7.0–7.5. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Add 0.25mL of sterile NaHCO₃ solution and 0.25mL of sterile sodium thioglycolate solution for each 10.0mL of sterile basal medium.

Use: For the cultivation and maintenance of *Clostridium acidurici*, *Clostridium purinolyticum*, and other bacteria that can utilize uric acid as a carbon source.

Clostridium aerotolerans Medium**Composition per liter:**

Agar	15.0g
Xylan	5.0g
Yeast extract	5.0g
Na ₂ CO ₃	4.0g
NaCl	0.45g
(NH ₄) ₂ SO ₄	0.45g
K ₂ HPO ₄	0.225g
KH ₂ PO ₄	0.225g
L-Cysteine·HCl·H ₂ O	0.125g
Na ₂ S·9H ₂ O	0.125g
MgSO ₄ ·7H ₂ O	0.09g
CaCl ₂	0.045g
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Prepare medium anaerobically under 100% CO₂. Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Adjust pH to 7.0. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Clostridium aerotolerans*.

Clostridium aldrichii Agar**Composition per liter:**

Agar	15.0g
Cellobiose	10.0g

NH ₄ Cl	2.0g
K ₂ HPO ₄	1.65g
NaCl	0.9g
(NH ₄) ₂ SO ₄	0.9g
L-Cysteine·HCl·H ₂ O	0.5g
KCl	0.5g
MgSO ₄ ·7H ₂ O	0.5g
Trypticase™	0.5g
Yeast extract	0.5g
Na ₂ S·9H ₂ O	0.2g
CaCl ₂	0.09g
Resazurin	0.5mg
Wolfe's mineral solution	10.0mL
Wolfe's vitamin solution	10.0mL
NaHCO ₃	variable
pH 7.0 ± 0.2 at 25°C	

Wolfe's Mineral Solution:**Composition per liter:**

MgSO ₄ ·7H ₂ O	3.0g
Nitritotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·H ₂ O	0.5g
CaCl ₂	0.1g
CoCl ₂ ·6H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g
ZnSO ₄ ·7H ₂ O	0.1g
AlK(SO ₄) ₂ ·12H ₂ O	0.01g
CuSO ₄ ·5H ₂ O	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g

Preparation of Wolfe's Mineral Solution: Add nitritotriacetic acid to approximately 500.0mL of water and adjust to pH 6.5 with KOH to dissolve the compound. Bring volume to 1.0L with remaining water and add remaining compounds one at a time.

Wolfe's Vitamin Solution:**Composition per liter:**

Pyridoxine·HCl	10.0mg
p-Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Nicotinic acid	5.0mg
Riboflavin	5.0mg
Thiamine·HCl	5.0mg
Calcium DL-pantothenate	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂. Add components, except NaHCO₃, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 3 min. Cool to room temperature while sparging with 80% N₂ + 20% CO₂. Add sufficient NaHCO₃ to bring the pH to 7.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Clostridium aldrichii*.

Clostridium aldrichii Broth**Composition per liter:**

Cellobiose	10.0g
NH ₄ Cl	2.0g
K ₂ HPO ₄	1.65g
NaCl	0.9g
(NH ₄) ₂ SO ₄	0.9g
L-Cysteine-HCl·H ₂ O	0.5g
KCl	0.5g
MgSO ₄ ·7H ₂ O	0.5g
Trypticase™	0.5g
Yeast extract	0.5g
Na ₂ S·9H ₂ O	0.2g
CaCl ₂	0.09g
Resazurin	0.5mg
Wolfe's mineral solution	10.0mL
Wolfe's vitamin solution	10.0mL
NaHCO ₃	variable

pH 7.0 ± 0.2 at 25°C

Wolfe's Mineral Solution:**Composition per liter:**

MgSO ₄ ·7H ₂ O	3.0g
Nitrilotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·H ₂ O	0.5g
CaCl ₂	0.1g
CoCl ₂ ·6H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g
ZnSO ₄ ·7H ₂ O	0.1g
AlK(SO ₄) ₂ ·12H ₂ O	0.01g
CuSO ₄ ·5H ₂ O	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g

Preparation of Wolfe's Mineral Solution: Add nitrilotriacetic acid to approximately 500.0mL of water and adjust to pH 6.5 with KOH to dissolve the compound. Bring volume to 1.0L with remaining water and add remaining compounds one at a time.

Wolfe's Vitamin Solution:**Composition per liter:**

Pyridoxine-HCl	10.0mg
p-Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Nicotinic acid	5.0mg
Riboflavin	5.0mg
Thiamine-HCl	5.0mg
Calcium DL-pantothenate	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂. Add components, except NaHCO₃, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 3 min. Cool to room temperature while sparging with 80% N₂ + 20% CO₂. Add sufficient NaHCO₃ to bring the pH to 7.0. Anaerobically distribute into tubes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Clostridium aldrichii*.

Clostridium Alginate Medium**Composition per liter of seawater:**

Agar	15.0g
Sodium alginate	10.0g
K ₂ HPO ₄	2.0g
Peptone	1.0g
Yeast extract	1.0g
Seawater	1.0L

pH 7.0–7.5 at 25°C

Preparation of Medium: Add K₂HPO₄ to 1.0L of seawater. Mix thoroughly. Gently heat while stirring to dissolve. Filter solution twice. Add remaining components. Mix thoroughly. Adjust pH to 7.0–7.5. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Clostridium alginolyticum* and other bacteria that can utilize alginate as a carbon source.

**Clostridium alkalicellum Medium
(DSMZ Medium 1036)****Composition per liter:**

NaCl	10.0g
NaHCO ₃	7.6g
Na ₂ CO ₃	1.0g
NH ₄ Cl	0.5g
KH ₂ PO ₄	0.2g
KCl	0.2g
Yeast extract	0.2
MgSO ₄ ·7H ₂ O	0.1g
Cellobiose solution	100.0mL
Na ₂ S·9H ₂ O solution	10.0mL
Trace element solution SL-10	1.0mL
Selenite/tungstate solution	1.0mL

pH 8.9 ± 0.2 at 25°C

Cellobiose Solution:**Composition per 100.0mL:**

Cellobiose	3.0g
------------	------

Preparation of Cellobiose Solution: Add cellobiose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Na₂S·9H₂O Solution:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O	0.5g
-------------------------------------	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Selenite/Tungstate Solution:**Composition per liter:**

NaOH	0.5g
Na ₂ WO ₄ ·2H ₂ O	4.0mg
Na ₂ SeO ₃ ·5H ₂ O	3.0mg

Preparation of Selenite/Tungstate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Vitamin Solution:**Composition per liter:**

Pyridoxine-HCl	10.0mg
Thiamine-HCl·2H ₂ O	5.0mg

Riboflavin	5.0mg
Nicotinic acid.....	5.0mg
D-Ca-pantothenate.....	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Lipoic acid	5.0mg
Biotin	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Trace Elements Solution SL-10:

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except cellobiose and sulfide solutions, to distilled/deionized water and bring volume to 890.0mL. Mix thoroughly. Sparge with 100% N₂ for 30–60 min. Dispense under 100% N₂ gas atmosphere. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Aseptically and anoxically add cellobiose and sulfide solutions. Adjust final pH of the medium to pH 8.8–9.0.

Use: For the cultivation of *Clostridium alkallicellum*.

Clostridium aminobutyricum Medium

Composition per liter:

K ₂ HPO ₄	7.05g
Yeast extract.....	3.0g
KH ₂ PO ₄	1.29g
MgCl ₂ ·6H ₂ O.....	0.2g
CaCl ₂ ·2H ₂ O.....	0.01g
FeCl ₃ ·6H ₂ O	0.01g
Methylene Blue.....	2.0mg
MnSO ₄ ·H ₂ O	1.0mg
Na ₂ MoO ₄ ·2H ₂ O	1.0mg
γ-Aminobutyrate solution	100.0mL
Na ₂ CO ₃ solution.....	100.0mL
Na ₂ S·9H ₂ O solution	50.0mL

pH 7.4–7.7 at 25°C

γ-Aminobutyrate Solution:

Composition per 100.0mL:

γ-Aminobutyrate	5.0g
-----------------------	------

Preparation of γ-Aminobutyrate Solution: Add γ-aminobutyrate to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Na₂CO₃ Solution:

Composition per 100.0mL:

Na ₂ CO ₃	2.0g
---------------------------------------	------

Preparation of Na₂CO₃ Solution: Add Na₂CO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:

Composition per 50.0mL:

Na ₂ S·9H ₂ O.....	0.3g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except γ-aminobutyrate solution, Na₂CO₃ solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 750.0mL. Autoclave for 15 min at 15 psi pressure–121°C. Cool under 80% N₂ + 10% CO₂ + 10% H₂. Aseptically add the sterile γ-aminobutyrate solution, Na₂CO₃ solution, and Na₂S·9H₂O solution. Adjust pH to 7.4–7.7. Distribute using anaerobic technique into tubes or flasks.

Use: For the cultivation and maintenance of *Clostridium aminobutyricum* and other bacteria which can utilize aminobutyric acid as a carbon source.

Clostridium aminobutyricum Medium

Composition per liter:

K ₂ HPO ₄	7.0g
γ-Aminobutyric acid	5.0g
Yeast extract.....	3.0g
Agar	1.5g
KH ₂ PO ₄	1.3g
MgCl ₂ ·6H ₂ O	0.2g
CaCl ₂ ·2H ₂ O	0.01g
FeCl ₃ ·6H ₂ O	0.01g
Na ₂ MoO ₄ ·2H ₂ O	1.0mg
Resazurin	1.0mg
NaHCO ₃ solution	20.0mL
Na ₂ S·9H ₂ O solution.....	20.0mL

pH 7.2 ± 0.2 at 25°C

NaHCO₃ Solution:

Composition per 20.0mL:

NaHCO ₃	1.0g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:

Composition per 20.0mL:

Na ₂ S·9H ₂ O.....	0.3g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except NaHCO₃ solution and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 960.0mL. Mix thoroughly. Sparge under 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 20.0mL of sterile NaHCO₃ solution and 20.0mL of sterile Na₂S·9H₂O solution. Mix thoroughly.

Use: For the growth and maintenance of *Clostridium aminobutyricum* and other *Clostridium* species.

Clostridium aminovalericum Medium

Composition per liter:

K ₂ HPO ₄	9.77g
5-Aminovaleric acid	6.0g
Yeast extract.....	5.0g
Mannitol.....	1.0g
KH ₂ PO ₄	0.54g
Sodium thioglycolate	0.5g
MgSO ₄	0.06g
CaSO ₄ ·2H ₂ O	0.034g
Trace elements solution SL-6	1.0mL
pH 7.9 ± 0.2 at 25°C	

Trace Elements Solution SL-6:

Composition per liter:

H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
MnCl ₂ ·4H ₂ O.....	0.03g
Na ₂ MoO ₄ ·H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 3.4.

Preparation of Medium: Prepare medium under 100% N₂. Add components to distilled/deionized water and bring volume to 1.0L. Autoclave for 15 min at 15 psi pressure–121°C. Adjust pH to 7.9. Distribute into tubes or flasks under 100% N₂.

Use: For the cultivation and maintenance of *Clostridium aminovalericum* and other bacteria that can utilize aminovaleric acid as a carbon source.

Clostridium beijerinckii Agar

Composition per liter:

Agar	20.0g
K ₂ HPO ₄	5.0g
Proteose peptone No. 3	5.0g
Sodium thioglycolate	5.0g
Yeast extract.....	5.0g
Polygalacturonic acid solution	50.0mL
pH 7.5 ± 0.2 at 25°C	

Polygalacturonic Acid Solution:

Composition per liter:

Polygalacturonic acid (or pectin).....	4.6g
--	------

Preparation of Polygalacturonic Acid Solution: Dissolve polygalacturonic acid or pectin in small amounts of distilled/deionized water neutralized with 10% NaOH to pH 7.2. Mix intensively. Bring volume to 50.0mL with distilled/deionized water.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.5. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Clostridium beijerinckii*.

Clostridium beijerinckii Broth

Composition per liter:

K ₂ HPO ₄	5.0g
Proteose peptone No. 3	5.0g
Sodium thioglycolate.....	5.0g
Yeast extract.....	5.0g
Polygalacturonic acid solution.....	50.0mL
pH 7.5 ± 0.2 at 25°C	

Polygalacturonic Acid Solution:

Composition per liter:

Polygalacturonic acid (or pectin).....	4.6g
--	------

Preparation of Polygalacturonic Acid Solution: Dissolve polygalacturonic acid or pectin in small amounts of distilled/deionized water neutralized with 10% NaOH to pH 7.2. Mix intensively. Bring volume to 50.0mL with distilled/deionized water.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.5. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Clostridium beijerinckii*.

Clostridium botulinum Isolation Agar (CBI Agar)

Composition per 1033.0mL:

Egg yolk agar base.....	900.0mL
Egg yolk emulsion, 50%.....	100.0mL
Cycloserine solution	25.0mL
Sulfamethoxazole solution.....	4.0mL
Trimethoprim solution	4.0mL
pH 7.4 ± 0.2 at 25°C	

Egg Yolk Agar Base:

Composition per 900.0mL:

Pancreatic digest of casein.....	40.0g
Agar	20.0g
Na ₂ HPO ₄	5.0g
Yeast extract.....	5.0g
Glucose	2.0g
NaCl.....	2.0g
MgSO ₄ ·7H ₂ O solution.....	0.2mL

Preparation of Egg Yolk Agar Base: Add components to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

MgSO₄·7H₂O Solution:

Composition per 100.0mL:

MgSO ₄ ·7H ₂ O	5.0g
--	------

Preparation of MgSO₄·7H₂O Solution: Add MgSO₄·7H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Cycloserine Solution:

Composition per 100.0mL:

Cycloserine	1.0g
-------------------	------

Preparation of Cycloserine Solution: Add cycloserine to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Sulfamethoxazole Solution:**Composition per 100.0mL:**

Sulfamethoxazole..... 1.9g

Preparation of Sulfamethoxazole Solution: Add sulfamethoxazole to distilled/deionized water and bring volume to 50.0mL. Add sufficient 10% NaOH to dissolve. Bring volume to 100.0mL with distilled/deionized water. Mix thoroughly. Filter sterilize.

Trimethoprim Solution:**Composition per 100.0mL:**

Trimethoprim 0.1g

Preparation of Trimethoprim Solution: Add trimethoprim to distilled/deionized water and bring volume to 50.0mL. Gently heat to 55°C. Add sufficient 0.05N HCl to dissolve. Bring volume to 100.0mL with distilled/deionized water. Mix thoroughly. Filter sterilize.

Egg Yolk Emulsion, 50%:**Composition per 100.0mL:**

Chicken egg yolks..... 11

Whole chicken egg..... 1

NaCl (0.9% solution).....50.0mL

Preparation of Egg Yolk Emulsion, 50%: Soak eggs with 1:100 dilution of saturated mercuric chloride solution for 1 min. Crack eggs and separate yolks from whites. Mix egg yolks with 1 chicken egg. Beat to form emulsion. Measure 50.0mL of egg yolk emulsion and add to 50.0mL of 0.9% NaCl solution. Mix thoroughly. Filter sterilize. Warm to 45°–50°C.

Preparation of Medium: Aseptically add warmed, sterile egg yolk emulsion, 50%, and sterile cycloserine solution, sterile sulfamethoxazole solution, and sterile trimethoprim solution to cooled, sterile egg yolk agar base. Mix thoroughly. Pour into sterile Petri dishes.

Use: For isolation, cultivation, and differentiation based on lipase activity of *Clostridium botulinum* types A, B, and F from fecal specimens associated with foodborne and infant botulism. *Clostridium botulinum* types A, B, and F appear as raised colonies surrounded by an opaque zone. Other *Clostridium* species and *Clostridium botulinum* type G appear as pinpoint colonies with no opaque zone.

Clostridium botulinum Isolation HiVeg Agar**Composition per liter:**

Plant hydrolysate..... 40.0g

Agar 20.0g

Na₂HPO₄..... 5.0g

Yeast extract..... 5.0g

Glucose 2.0g

NaCl 2.0g

MgSO₄ 0.01g

Egg yolk emulsion, 50%..... 100.0mL

Cycloserine solution 25.0mL

Sulfamethoxazole solution..... 4.0mL

Trimethoprim solution 4.0mL

pH 7.4 ± 0.2 at 25°C

Source: This medium, without egg yolk emulsion, cycloserine solution, sulfmethoxazole solution, and trimethoprim solution, is available as a premixed powder (*C. botulinum* Isolation HiVeg Agar Base) from HiMedia.

Cycloserine Solution:**Composition per 100.0mL:**

Cycloserine 1.0g

Preparation of Cycloserine Solution: Add cycloserine to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Sulfamethoxazole Solution:**Composition per 100.0mL:**

Sulfamethoxazole 1.9g

Preparation of Sulfamethoxazole Solution: Add sulfamethoxazole to distilled/deionized water and bring volume to 50.0mL. Add sufficient 10% NaOH to dissolve. Bring volume to 100.0mL with distilled/deionized water. Mix thoroughly. Filter sterilize.

Trimethoprim Solution:**Composition per 100.0mL:**

Trimethoprim 0.1g

Preparation of Trimethoprim Solution: Add trimethoprim to distilled/deionized water and bring volume to 50.0mL. Gently heat to 55°C. Add sufficient 0.05N HCl to dissolve. Bring volume to 100.0mL with distilled/deionized water. Mix thoroughly. Filter sterilize.

Egg Yolk Emulsion, 50%:**Composition per 100.0mL:**

Chicken egg yolks..... 11

Whole chicken egg 1

NaCl (0.9% solution)..... 50.0mL

Preparation of Egg Yolk Emulsion, 50%: Soak eggs with 1:100 dilution of saturated mercuric chloride solution for 1 min. Crack eggs and separate yolks from whites. Mix egg yolks with 1 chicken egg. Beat to form emulsion. Measure 50.0mL of egg yolk emulsion and add to 50.0mL of 0.9% NaCl solution. Mix thoroughly. Filter sterilize. Warm to 45°–50°C.

Preparation of Medium: Add components, except egg yolk emulsion, cycloserine solution, sulfmethoxazole solution, and trimethoprim solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add warmed, sterile egg yolk emulsion, 50%, and sterile cycloserine solution, sterile sulfamethoxazole solution, and sterile trimethoprim solution. Mix thoroughly. Pour into sterile Petri dishes.

Use: For isolation, cultivation, and differentiation based on lipase activity of *Clostridium botulinum* types A, B, and F from fecal specimens associated with foodborne and infant botulism. *Clostridium botulinum* types A, B, and F appear as raised colonies surrounded by an opaque zone. Other *Clostridium* species and *Clostridium botulinum* type G appear as pinpoint colonies with no opaque zone.

Clostridium Broth Base**Composition per liter:**

Casein peptone..... 15.0g

Meat extract 10.0g

Yeast extract..... 5.0g

Sodium acetate..... 5.0g

L-Cysteine..... 0.5g

Lactate solution..... 10.0mL

pH 6.0 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Lactate Solution:**Composition per 10.0mL:**

Sodium lactate 5.0g

Preparation of Lactate Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except lactate solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add sterile lactate solution, Mix thoroughly. Aseptically distribute into sterile tubes.

Use: For the identification of spores of *Clostridium tyrobutyricum*, which is usually responsible for “late blowing” in cheese.

Clostridium bryantii Medium

Composition per liter:

NaCl	21.0g
MgCl ₂ ·6H ₂ O	3.1g
Na ₂ SO ₄	3.0g
KCl	0.5g
NH ₄ Cl	0.3g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O	0.15g
Resazurin	1.0mg
NaHCO ₃ solution	20.0mL
Na ₂ S·9H ₂ O solution	20.0mL
Sodium caproate solution	20.0mL
Vitamin solution	20.0mL
Trace elements solution SL-10	1.0mL

pH 7.2 ± 0.2 at 25°C

NaHCO₃ Solution:

Composition per 20.0mL:

NaHCO ₃	5.0g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:

Composition per 20.0mL:

Na ₂ S·9H ₂ O	0.4g
---	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Sodium Caproate Solution:

Composition per 20.0mL:

Sodium caproate	1.4g
-----------------------	------

Preparation of Sodium Caproate Solution: Add sodium caproate to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Vitamin Solution:

Composition per 20.0mL:

Thiamine-HCl	100.0μg
<i>p</i> -Aminobenzoic acid	40.0μg
D(+)-Biotin	10.0μg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize. Sparge with 80% N₂ + 20% CO₂.

Trace Elements Solution SL-10:

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except NaHCO₃ solution, Na₂S·9H₂O solution, sodium caproate solution, and trace elements solution SL-10, to distilled/deionized water and bring volume to 919.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 20.0mL of sterile NaHCO₃ solution, 20.0mL of sterile Na₂S·9H₂O solution, 20.0mL of sterile sodium caproate solution, and 1.0mL of sterile trace elements solution SL-10. Mix thoroughly. Aseptically and anaerobically distribute into sterile screw-capped bottles.

Use: For the cultivation and maintenance of *Syntrophospora bryantii*.

Clostridium bryantii Medium

Composition per liter:

NaCl	21.0g
MgCl ₂ ·6H ₂ O	3.1g
KCl	0.5g
NH ₄ Cl	0.3g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O	0.15g
Resazurin	1.0mg
NaHCO ₃ solution	20.0mL
Na ₂ S·9H ₂ O solution	20.0mL
Sodium caproate solution	20.0mL
Vitamin solution	20.0mL
Trace elements solution SL-10	1.0mL

pH 7.2 ± 0.2 at 25°C

NaHCO₃ Solution:

Composition per 20.0mL:

NaHCO ₃	5.0g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:

Composition per 20.0mL:

Na ₂ S·9H ₂ O	0.4g
---	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Sodium Caproate Solution:

Composition per 20.0mL:

Sodium caproate	1.4g
-----------------------	------

Preparation of Sodium Caproate Solution: Add sodium caproate to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Vitamin Solution:

Composition per 20.0mL:

Thiamine-HCl	100.0µg
<i>p</i> -Aminobenzoic acid	40.0µg
D(+)-Biotin	10.0µg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize. Sparge with 80% N₂ + 20% CO₂.

Trace Elements Solution SL-10:

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except NaHCO₃ solution, Na₂S·9H₂O solution, sodium caproate solution, and trace elements solution SL-10, to distilled/deionized water and bring volume to 919.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 20.0mL of sterile NaHCO₃ solution, 20.0mL of sterile Na₂S·9H₂O solution, 20.0mL of sterile sodium caproate solution, and 1.0mL of sterile trace elements solution SL-10. Mix thoroughly. Aseptically and anaerobically distribute into sterile screw-capped bottles.

Use: For the cultivation and maintenance of *Syntrophospora bryantii*.

***Clostridium caminithermalis* Medium
(DSMZ Medium 986)**

Composition per liter:

Sea salt (Sigma)	30.0g
Glucose	4.0g
NH ₄ Cl	1.0g
Peptone	0.5g
Yeast extract	0.5g
KH ₂ PO ₄	0.3g
K ₂ HPO ₄	0.3g
Resazurin	1.0mg
Glucose solution	100.0mL
Vitamin solution	10.0mL
L-Cysteine-HCl solution	10.0mL
NaHCO ₃ solution	10.0mL
Na ₂ S·9H ₂ O solution	10.0mL

pH 7.0 ± 0.2 at 25°C

Glucose Solution:

Composition per 100.0mL:

Glucose	4.0g
---------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.25g
---	-------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

L-Cysteine-HCl Solution:

Composition per 10.0mL:

L-Cysteine-HCl	0.25g
----------------------	-------

Preparation of L-Cysteine Solution: Add L-cysteine-HCl to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl	10.0mg
Thiamine-HCl·2H ₂ O	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
D-Ca-pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

NaHCO₃ Solution:

Composition per 10.0mL:

NaHCO ₃	2.0g
--------------------------	------

Preparation of NaHCO₃ Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 20% CO₂ + 80% H₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Preparation of Medium: Add components, except vitamin, glucose, bicarbonate, cysteine and sulfide solutions, to distilled/deionized water and bring volume to 860.0mL. Mix thoroughly. Gently heat and bring to boiling. Boil for 3 min. Cool while sparging with 100% N₂. Dispense under 100% N₂ gas atmosphere. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Aseptically and anoxically add vitamin, glucose, bicarbonate, cysteine, and sulfide solutions. Adjust final pH of the medium to pH 7.0.

Use: For the cultivation of *Clostridium caminithermalis*.

***Clostridium cellobioparum* Agar**

Composition per 1025.0mL:

Ground meat, fat free	500.0g
Pancreatic digest of casein	30.0g
Agar	15.0g
K ₂ HPO ₄	5.0g
Yeast extract	5.0g
Glucose	4.0g

Cellobiose	1.0g
Maltose.....	1.0g
Soluble starch.....	1.0g
L-Cysteine·HCl·H ₂ O	0.5g
Resazurin	1.0mg
NaOH (1N solution).....	25.0mL

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Remove fat and connective tissue from lean beef or horse meat. Grind meat finely. Add ground meat to 25.0mL of 1N NaOH. Add 1.0L of distilled/deionized water. Gently heat and bring to boiling. Continue boiling for 15 min while stirring. Cool to room temperature. Skim fat off surface. Filter suspension and retain the filtrate and the meat particles. Bring volume of filtrate to 1.0L with distilled/deionized water. Add remaining components, except L-cysteine·HCl·H₂O. Mix thoroughly. Gently heat and bring to boiling. Cool to 50°–55°C. Add L-cysteine·HCl·H₂O. Adjust pH to 7.0. Distribute 7.0mL of agar into tubes containing meat particles (use 1 part meat particles to 4–5 parts fluid). Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Clostridium cellobioparum*.

Clostridium cellobioparum Broth

Composition per 1025.0mL:

Ground meat, fat free	500.0g
Pancreatic digest of casein.....	30.0g
K ₂ HPO ₄	5.0g
Yeast extract.....	5.0g
Glucose	4.0g
Cellobiose	1.0g
Maltose.....	1.0g
Soluble starch.....	1.0g
L-Cysteine·HCl·H ₂ O	0.5g
Resazurin	1.0mg
NaOH (1N solution).....	25.0mL

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Remove fat and connective tissue from lean beef or horse meat. Grind meat finely. Add ground meat to 25.0mL of 1N NaOH. Add 1.0L of distilled/deionized water. Gently heat and bring to boiling. Continue boiling for 15 min while stirring. Cool to room temperature. Skim fat off surface. Filter suspension and retain the filtrate and the meat particles. Bring volume of filtrate to 1.0L with distilled/deionized water. Add remaining components, except L-cysteine·HCl·H₂O. Mix thoroughly. Gently heat and bring to boiling. Cool to room temperature. Add L-cysteine·HCl·H₂O. Adjust pH to 7.0. Distribute 7.0mL of broth into tubes containing meat particles (use 1 part meat particles to 4–5 parts fluid). Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Clostridium cellobioparum*.

Clostridium cellobioparum Medium

Composition per 1010.0mL:

NaCl.....	1.0g
K ₂ HPO ₄	0.5g
KH ₂ PO ₄	0.5g
(NH ₄) ₂ SO ₄	0.5g
CaCl ₂ ·2H ₂ O	0.1g
MgSO ₄ ·7H ₂ O.....	0.1g
Resazurin	1.0mg
Rumen fluid, clarified.....	300.0mL
Cellobiose solution	50.0mL

NaHCO ₃ solution	30.0mL
Na ₂ S·9H ₂ O solution	20.0mL
L-Cysteine·HCl solution	10.0mL

pH 6.8 ± 0.2 at 25°C

Cellobiose Solution:

Composition per 50.0mL:

D-Cellobiose.....	5.0g
-------------------	------

Preparation of Cellobiose Solution: Add cellobiose to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Sparge under 100% N₂ gas for 3 min. Filter sterilize. Store under N₂ gas.

NaHCO₃ Solution:

Composition per 30.0mL:

NaHCO ₃	10.0g
--------------------------	-------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 30.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:

Composition per 20.0mL:

Na ₂ S·9H ₂ O.....	0.25g
--	-------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

L-Cysteine·HCl Solution:

Composition per 10.0mL:

L-Cysteine·HCl	0.25g
----------------------	-------

Preparation of L-Cysteine·HCl Solution: Add L-cysteine·HCl to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except cellobiose solution, NaHCO₃ solution, Na₂S·9H₂O solution, and L-cysteine·HCl solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Sparge with 100% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 50.0mL of sterile cellobiose solution, 30.0mL of sterile NaHCO₃ solution, 20.0mL of sterile Na₂S·9H₂O solution, and 10.0mL of sterile L-cysteine·HCl solution. Mix thoroughly. Aseptically and anaerobically distribute into sterile screw-capped bottles.

Use: For the cultivation and maintenance of *Clostridium cellobioparum* and *Clostridium polysaccharolyticum*.

Clostridium Cellulolytic Medium

Composition per liter:

Agar	20.0g
Cellulose	7.5g
K ₂ HPO ₄ ·3H ₂ O	2.9g
Yeast extract.....	2.0g
KH ₂ PO ₄	1.5g
(NH ₄) ₂ SO ₄	1.3g
FeSO ₄	1.25g
L-Cysteine·HCl·H ₂ O	1.0g
MgCl ₂ ·6H ₂ O	1.0g
CaCl ₂ ·2H ₂ O	0.15g
Resazurin	2.0mg

pH 7.5 ± 0.2 at 25°C

Preparation of Medium: Add components, except L-cysteine·HCl·H₂O, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Heat to boiling. Adjust pH to 7.5. Prereduce under

100% N₂. Add L-cysteine·HCl·H₂O. Distribute into tubes under 100% N₂. Cap tubes with rubber stoppers. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Clostridium cellulolyticum* and other bacteria that can degrade cellulose.

Clostridium Cellulose Medium

Composition per liter:

Agar	20.0g
Filter paper (or 5.0g Avicel).....	10.0g
CaCO ₃	5.0g
Polypeptone™.....	5.0g
Na ₂ CO ₃ ·10H ₂ O	4.0g
K ₂ HPO ₄	2.2g
Yeast extract.....	2.0g
KH ₂ PO ₄	1.5g
(NH ₄) ₂ SO ₄	1.3g
MgCl ₂ ·6H ₂ O.....	1.0g
L-Cysteine·HCl·H ₂ O	0.5g
CaCl ₂	0.15g
FeSO ₄ ·7H ₂ O.....	6.0mg

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Heat to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Clostridium cellulolyticum* and other bacteria that can degrade cellulose.

Clostridium cellulovorans Medium

Composition per liter:

K ₂ HPO ₄ ·3H ₂ O.....	1.0g
NH ₄ Cl	1.0g
KCl.....	0.5g
MgSO ₄ ·7H ₂ O	0.5g
Pancreatic digest of casein.....	0.5g
Yeast extract.....	0.5g
L-Cysteine·HCl·H ₂ O	0.15g
Resazurin	1.0mg
Cellulose, MN 300 or cellobiose solution	50.0mL
Na ₂ CO ₃ solution.....	30.0mL
Rumen fluid, clarified.....	20.0mL
Na ₂ S·9H ₂ O solution	20.0mL
Trace elements solution SL-10	1.0mL

pH 7.0 ± 0.2 at 25°C

Cellulose Solution:

Composition per 50.0mL:

Cellulose, MN 300 or D-cellobiose	5.0g
---	------

Preparation of Cellulose Solution: Add cellulose or cellobiose to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Sparge under 100% N₂ gas for 3 min. Filter sterilize. Store under N₂ gas.

Na₂CO₃ Solution:

Composition per 30.0mL:

Na ₂ CO ₃	1.0g
---------------------------------------	------

Preparation of Na₂CO₃ Solution: Add Na₂CO₃ to distilled/deionized water and bring volume to 30.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:

Composition per 20.0mL:

Na ₂ S·9H ₂ O.....	0.15g
--	-------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution SL-10:

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly.

Preparation of Medium: Add components, except cellobiose solution, Na₂CO₃ solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 50.0mL of sterile cellobiose solution, 30.0mL of sterile Na₂CO₃ solution, and 20.0mL of sterile Na₂S·9H₂O solution. Mix thoroughly. Aseptically and anaerobically distribute into sterile screw-capped bottles.

Use: For the cultivation and maintenance of *Clostridium cellulovorans*.

Clostridium chartatabidum Medium

Composition per 1001.0mL:

Pancreatic digest of casein.....	2.0g
Glucose	0.5g
Glycerol	0.5g
Maltose	0.5g
Starch, soluble.....	0.5g
Yeast extract.....	0.5g
K ₂ HPO ₄	0.3g
Hemin	1.0mg
Resazurin	1.0mg
Rumen fluid	200.0mL
Cellobiose solution	50.0mL
Mineral solution.....	38.0mL
Na ₂ CO ₃ solution.....	30.0mL
L-Cysteine·HCl·H ₂ O solution	10.0mL
Na ₂ S·9H ₂ O solution.....	10.0mL

pH 6.7 ± 0.2 at 25°C

Cellulose Solution:

Composition per 50.0mL:

Cellulose, MN 300 or D-Cellobiose	0.5g
---	------

Preparation of Cellulose Solution: Add cellulose or cellobiose to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Sparge under 100% CO₂ gas for 3 min. Filter sterilize.

Mineral Solution:**Composition per liter:**

NaCl	12.0g
KH ₂ PO ₄	6.0g
(NH ₄) ₂ SO ₄	6.0g
MgSO ₄ ·7H ₂ O	2.5g
CaCl ₂ ·2H ₂ O	0.6g

Preparation of Mineral Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Na₂CO₃ Solution:**Composition per 30.0mL:**

Na ₂ CO ₃	4.0g
---------------------------------------	------

Preparation of Na₂CO₃ Solution: Add Na₂CO₃ to distilled/deionized water and bring volume to 30.0mL. Mix thoroughly. Sparge with 100% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O	0.25g
---	-------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

L-Cysteine·HCl Solution:**Composition per 10.0mL:**

L-Cysteine·HCl	0.25g
----------------------	-------

Preparation of L-Cysteine·HCl Solution: Add L-cysteine·HCl to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% CO₂ for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except cellobiose solution, Na₂CO₃ solution, Na₂S·9H₂O solution, and L-cysteine·HCl·H₂O solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Sparge with 100% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 50.0mL of sterile cellobiose solution, 30.0mL of sterile Na₂CO₃ solution, 10.0mL of sterile Na₂S·9H₂O solution, and 10.0mL of sterile L-cysteine·HCl·H₂O solution. Mix thoroughly. Aseptically and anaerobically distribute into sterile screw-capped bottles under 100% CO₂.

Use: For the cultivation and maintenance of *Clostridium chartata-bidum*.

Clostridium chauvoei* Blood Agar*Composition per 100.0mL:**

Liver extract	3.0g
Agar	1.6g
Glucose	1.0g
VL broth base	94.0mL
Sheep blood, defibrinated	5.0mL

pH 7.2–7.4 at 25°C

VL Broth Base:**Composition per liter:**

Pancreatic digest of casein	10.0g
NaCl	5.0g
Yeast extract	5.0g
Meat extract	2.0g
Agar	0.6g
L-Cysteine·HCl·H ₂ O	0.4g

Preparation of VL Broth Base: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until dissolved. Adjust pH to 7.2–7.4.

Preparation of Medium: Add liver extract, glucose, and agar to 94.0mL of VL broth base. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile sheep blood. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of *Clostridium chauvoei*.

***Clostridium* CK Medium
(DSMZ Medium 869)****Composition per liter:**

Pancreatic digest of casein	3.2g
NaCl	0.9g
Papaic digest of soybean meal	0.6g
K ₂ HPO ₄	0.5g
Glucose	0.5g
Resazurin	0.5mg
Glucose solution	10.0mL

pH 5.5 ± 0.2 at 25°C

Glucose Solution:**Composition per 10.0mL:**

Glucose	2.0g
---------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Preparation of Medium: Add components, except glucose solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Adjust pH to 5.5. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically and anaerobically add 10.0mL sterile glucose solution. Aseptically and anaerobically distribute into tubes or flasks.

Use: For the cultivation of *Clostridium akagii*, *Clostridium acidisoli*, and *Clostridium uliginosum*.

Clostridium difficile* Agar*Composition per liter:**

<i>Clostridium difficile</i> agar base	920.0mL
Horse blood, defibrinated	70.0mL
<i>Clostridium difficile</i> selective supplement	10.0mL

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Clostridium difficile* Agar Base:*Composition per 920.0mL:**

Proteose peptone	40.0g
Agar	15.0g
Fructose	6.0g
Na ₂ HPO ₄	5.0g
NaCl	2.0g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.1g

Preparation of *Clostridium difficile* Agar Base: Add components to distilled/deionized water and bring volume to 920.0mL. Mix

thoroughly. Gently heat to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

***Clostridium difficile* Selective Supplement:**

Composition per 10.0mL:

D-Cycloserine	500.0mg
Cefoxitin	16.0mg

Preparation of *Clostridium difficile* Selective Supplement:

Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add 10.0mL of sterile *Clostridium difficile* selective supplement and 70.0mL of sterile, defibrinated horse blood to 920.0mL of cooled, sterile *Clostridium difficile* agar base. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation and cultivation of *Clostridium difficile* from clinical and nonclinical specimens.

***Clostridium difficile* Agar (Cycloserine Cefoxitin Fructose Agar) (CCFA)**

Composition per liter:

Peptic digest of animal tissue.....	32.0g
Agar	20.0g
Fructose.....	6.0g
Na ₂ HPO ₄	5.0g
NaCl	2.0g
KH ₂ PO ₄	1.0g
Cycloserine	0.25g
MgSO ₄	0.1g
Neutral Red	0.03g
Cefoxitin solution	10.0mL

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Cefoxitin Solution:

Composition per 10.0mL:

Cefoxitin	16.0mg
-----------------	--------

Preparation of Cefoxitin Solution: Add cefoxitin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL of sterile cefoxitin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation and cultivation of *Clostridium difficile* from clinical and nonclinical specimens.

***Clostridium difficile* HiVeg Agar Base**

Composition per liter:

Plant peptone No. 3.....	40.0g
Agar	15.0g
Fructose.....	6.0g
Na ₂ HPO ₄	5.0g
NaCl	2.0g
KH ₂ PO ₄	1.0g
MgSO ₄	0.1g

Horse blood, defibrinated	70.0mL
<i>Clostridium difficile</i> selective supplement.....	10.0mL
pH 7.4 ± 0.2 at 25°C	

Source: This medium, without blood or selective supplement, is available as a premixed powder from HiMedia.

***Clostridium difficile* Selective Supplement:**

Composition per 10.0mL:

D-Cycloserine.....	500.0mg
Cefoxitin	16.0mg

Preparation of *Clostridium difficile* Selective Supplement:

Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except blood and selective supplement, to distilled/deionized water and bring volume to 920.0mL. Mix thoroughly. Gently heat to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Add 10.0mL of sterile *Clostridium difficile* selective supplement and 70.0mL of sterile, defibrinated horse blood. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation and cultivation of *Clostridium difficile* from fecal specimens.

***Clostridium estertheticum* Medium**

Tryptose	10.0g
Beef extract.....	10.0g
Glucose	5.0g
NaCl	5.0g
Yeast extract.....	3.0g
Sodium acetate.....	3.0g
Soluble starch.....	1.0g
L-Cysteine·HCl·H ₂ O	0.5g
Agar	0.5g
Glucose solution	90.0mL
NaHCO ₃ solution	10.0mL

pH 6.8 ± 0.2 at 25°C

Glucose Solution:

Composition per 90.0mL:

D-Glucose.....	10.0g
----------------	-------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 90.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

NaHCO₃ Solution:

Composition per 10.0mL:

NaHCO ₃	2.0g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas. Add components, except glucose solution and NaHCO₃ solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Adjust pH to 6.8. Sparge with 80% N₂ + 20% CO₂ gas. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 90.0mL of sterile glucose solution and 10.0mL of sterile NaHCO₃ solution. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or bottles.

Use: For the cultivation of *Clostridium estertheticum*.

Clostridium formicoaceticum Agar**Composition per liter:**

Agar	15.0g
K ₂ HPO ₄	10.0g
Yeast extract.....	5.0g
Sodium thioglycolate.....	0.75g
Pyridoxine·HCl.....	1.0mg
Resazurin.....	1.0mg
Fructose solution.....	50.0mL
NaHCO ₃ solution.....	30.0mL
Trace elements solution SL-4.....	10.0mL
pH 8.0 ± 0.2 at 25°C	

Trace Elements Solution SL-4:**Composition per liter:**

EDTA.....	0.5g
FeSO ₄ ·7H ₂ O.....	0.2g
Trace elements solution SL-6.....	100.0mL

Trace Elements Solutions SL-6:**Composition per liter:**

MnCl ₂ ·4H ₂ O.....	0.5g
H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O.....	0.2g
ZnSO ₄ ·7H ₂ O.....	0.1g
Na ₂ MoO ₄ ·2H ₂ O.....	0.03g
NiCl ₂ ·6H ₂ O.....	0.02g
CuCl ₂ ·2H ₂ O.....	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Trace Elements Solution SL-4: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Fructose Solution:**Composition per 50.0mL:**

Fructose.....	5.0g
---------------	------

Preparation of Fructose Solution: Add fructose to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Sparge under 100% N₂ gas for 3 min. Filter sterilize. Store under N₂ gas.

NaHCO₃ Solution:**Composition per 30.0mL:**

NaHCO ₃	10.0g
--------------------------	-------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 30.0mL. Mix thoroughly. Sparge with 100% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except fructose solution and NaHCO₃ solution, to distilled/deionized water and bring volume to 920.0mL. Mix thoroughly. Gently heat and bring to boiling. Cool to 50°C while sparging with 100% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 50.0mL of sterile fructose solution and 30.0mL of sterile NaHCO₃ solution. Mix thoroughly. Adjust pH to 8.0. Aseptically and anaerobically pour into sterile Petri dishes or distribute into sterile screw-capped bottles under 100% CO₂.

Use: For the cultivation and maintenance of *Clostridium formicoaceticum*.

Clostridium formicoaceticum Broth**Composition per liter:**

K ₂ HPO ₄	10.0g
Yeast extract.....	5.0g

Sodium thioglycolate.....	0.75g
Pyridoxine·HCl.....	1.0mg
Resazurin.....	1.0mg
Fructose solution.....	50.0mL
NaHCO ₃ solution.....	30.0mL
Trace elements solution SL-4.....	10.0mL
pH 8.0 ± 0.2 at 25°C	

Trace Elements Solution SL-4:**Composition per liter:**

EDTA.....	0.5g
FeSO ₄ ·7H ₂ O.....	0.2g
Trace elements solution SL-6.....	100.0mL

Trace Elements Solution SL-6:**Composition per liter:**

MnCl ₂ ·4H ₂ O.....	0.5g
H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O.....	0.2g
ZnSO ₄ ·7H ₂ O.....	0.1g
Na ₂ MoO ₄ ·2H ₂ O.....	0.03g
NiCl ₂ ·6H ₂ O.....	0.02g
CuCl ₂ ·2H ₂ O.....	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Trace Elements Solution SL-4: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Fructose Solution:**Composition per 50.0mL:**

Fructose.....	5.0g
---------------	------

Preparation of Fructose Solution: Add fructose to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Sparge under 100% N₂ gas for 3 min. Filter sterilize. Store under N₂ gas.

NaHCO₃ Solution:**Composition per 30.0mL:**

NaHCO ₃	10.0g
--------------------------	-------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 30.0mL. Mix thoroughly. Sparge with 100% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except fructose solution and NaHCO₃ solution, to distilled/deionized water and bring volume to 920.0mL. Mix thoroughly. Sparge with 100% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 50.0mL of sterile fructose solution and 30.0mL of sterile NaHCO₃ solution. Mix thoroughly. Adjust pH to 8.0. Aseptically and anaerobically distribute into sterile screw-capped bottles under 100% CO₂.

Use: For the cultivation of *Clostridium formicoaceticum*.

Clostridium grantii Medium**Composition per liter:**

NaCl.....	19.45g
MgCl ₂	8.8g
Peptone.....	5.0g
Na ₂ SO ₃	3.24g
NaHCO ₃	2.0g
CaCl ₂	1.8g
Yeast extract.....	1.0g
KCl.....	0.55g
Ferric citrate.....	0.1g

KBr.....	0.08g
SrCl ₂	0.03g
H ₃ BO ₃	0.02g
Na ₂ HPO ₄	8.0mg
Na ₂ SiO ₃	4.0mg
NaF.....	2.4mg
NH ₄ NO ₃	1.6mg
Resazurin.....	0.5mg
Glucose solution.....	20.0mL
L-Cysteine·HCl·H ₂ O solution.....	10.0mL
Na ₂ S·9H ₂ O solution.....	10.0mL
NaHCO ₃ solution.....	10.0mL
pH 6.6 ± 0.2 at 25°C	

Glucose Solution:**Composition per 20.0mL:**

D-Glucose.....	5.0g
----------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

L-Cysteine·HCl·H₂O Solution:**Composition per 10.0mL:**

L-Cysteine·HCl·H ₂ O.....	0.3g
--------------------------------------	------

Preparation of L-Cysteine·HCl·H₂O Solution: Add L-cysteine·HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O.....	0.3g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

NaHCO₃ Solution:**Composition per 10.0mL:**

NaHCO ₃	0.16g
--------------------------	-------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except glucose solution, L-cysteine·HCl·H₂O solution, Na₂S·9H₂O solution, and NaHCO₃ solution, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Cool to room temperature while sparging with 80% N₂ + 20% CO₂. Anaerobically distribute 9.5mL volumes into anaerobic tubes. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 0.2mL of sterile glucose solution, 0.1mL of sterile L-Cysteine·HCl·H₂O solution, 0.1mL of sterile Na₂S·9H₂O solution, and 0.1mL of sterile NaHCO₃ solution to each tube. Mix thoroughly.

Use: For the cultivation of *Clostridium grantii*.

Clostridium halophilum Medium**Composition per liter:**

Solution A.....	900.0mL
Solution B.....	80.0mL

Solution C.....	10.0mL
Solution D.....	10.0mL
pH 8.3 ± 0.2 at 25°C	

Solution A:**Composition per 900.0mL:**

NaCl.....	60.0g
Betaine.....	5.86g
MgSO ₄ ·7H ₂ O.....	5.0g
L-Alanine.....	2.2g
NH ₄ Cl.....	1.0g
Yeast extract.....	1.0g
CaCl ₂ ·2H ₂ O.....	25.0mg
Resazurin.....	1.0mg
Na ₂ SeO ₃ ·5H ₂ O.....	15.0μg
Wolfe's vitamin solution.....	10.0mL
Trace elements solution SL-10.....	1.0mL

Wolfe's Vitamin Solution:**Composition per liter:**

Pyridoxine·HCl.....	10.0mg
p-Aminobenzoic acid.....	5.0mg
Lipoic acid.....	5.0mg
Nicotinic acid.....	5.0mg
Riboflavin.....	5.0mg
Thiamine·HCl.....	5.0mg
Calcium DL-pantothenate.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Trace Elements Solution SL-10:**Composition per liter:**

FeCl ₂ ·4H ₂ O.....	1.5g
CoCl ₂ ·6H ₂ O.....	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	36.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O.....	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly.

Preparation of Solution A: Prepare and dispense medium under 80% N₂ + 20% CO₂. Add components to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 3 min. Cool to room temperature while sparging with 80% N₂ + 20% CO₂.

Solution B:**Composition per 80.0mL:**

NaHCO ₃	5.0g
--------------------------	------

Preparation of Solution B: Add NaHCO₃ to distilled/deionized water and bring volume to 80.0mL. Mix thoroughly. Sparge with 100% N₂ for 20 min.

Solution C:**Composition** per 10.0mL:

K ₂ HPO ₄	0.358g
KH ₂ PO ₄	0.223g

Preparation of Solution C: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution D:**Composition** per 10.0mL:

Na ₂ S·9H ₂ O.....	0.3g
--	------

Preparation of Solution D: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂. Anaerobically combine 900.0mL of cooled solution A with 80.0mL of sparged solution B. Mix thoroughly. Adjust pH to 8.3. Anaerobically distribute 9.8mL volumes into anaerobe tubes. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 0.1mL of sterile solution C and 0.1mL of sterile solution D to each tube. Mix thoroughly.

Use: For the cultivation of *Clostridium halophilum*.

***Clostridium histolyticum* Medium (DSMZ Medium 139)**

Composition per liter:

Proteose peptone.....	50.0g
Na ₂ HPO ₄	9.0g
Pancreatic digest of casein.....	8.5g
NaCl.....	2.5g
KH ₂ PO ₄	1.92g
Papaic digest of soybean meal.....	1.5g
K ₂ HPO ₄	1.25g
Glucose.....	1.25g
MgSO ₄ ·7H ₂ O.....	0.08g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Clostridium histolyticum*.

***Clostridium* HiVeg Broth Base with Lactate**

Composition per liter:

Plant hydrolysate.....	15.0g
Plant extract No. 1.....	10.0g
Sodium acetate.....	5.0g
Yeast extract.....	5.0g
L-Cysteine.....	0.5g
Lactate solution.....	10.0mL

pH 6.0 ± 0.2 at 25°C

Source: This medium, without lactate, is available as a premixed powder from HiMedia.

Lactate Solution:**Composition** per 10.0mL:

Sodium lactate.....	5.0g
---------------------	------

Preparation of Lactate Solution: Add sodium lactate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Heat if necessary to completely dissolve.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the identification of spores of *Clostridium tyrobutyricum* which is usually responsible for “late blowing” in cheese.

***Clostridium hydroxybenzoicum* Medium**

Composition per 1055.0mL:

NaCl.....	10.0g
Yeast extract.....	10.0g
L-Arginine·HCl.....	2.1g
L-Lysine·HCl.....	1.8g
Glycine.....	0.75g
NH ₄ Cl.....	0.5g
L-Cysteine·HCl.....	0.4g
Na ₂ S·9H ₂ O.....	0.4g
MgCl ₂ ·7H ₂ O.....	0.1g
CaCl ₂ ·2H ₂ O.....	0.025g
Resazurin.....	1.0mg
Na ₂ WO ₄ ·2H ₂ O.....	0.05mg
Sodium/potassium phosphate buffer (0.02M solution, pH 7.0).....	1.0L
Wolfe’s vitamin solution.....	50.0mL
Wolfe’s mineral solution.....	5.0mL

pH 7.0 ± 0.2 at 25°C

Wolfe’s Vitamin Solution:**Composition** per liter:

Pyridoxine·HCl.....	10.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Lipoic acid.....	5.0mg
Nicotinic acid.....	5.0mg
Riboflavin.....	5.0mg
Thiamine·HCl.....	5.0mg
Calcium DL-pantothenate.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Wolfe’s Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Wolfe’s Mineral Solution:**Composition** per liter:

MgSO ₄ ·7H ₂ O.....	3.0g
Nitritotriacetic acid.....	1.5g
NaCl.....	1.0g
MnSO ₄ ·2H ₂ O.....	0.5g
CoCl ₂ ·6H ₂ O.....	0.1g
ZnSO ₄ ·7H ₂ O.....	0.1g
CaCl ₂ ·2H ₂ O.....	0.1g
FeSO ₄ ·7H ₂ O.....	0.1g
NiCl ₂ ·6H ₂ O.....	0.025g
KAl(SO ₄) ₂ ·12H ₂ O.....	0.02g
CuSO ₄ ·5H ₂ O.....	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O.....	0.01g
Na ₂ SeO ₃ ·5H ₂ O.....	0.3mg

Preparation of Wolfe’s Mineral Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with

KOH. Add remaining components. Add distilled/deionized water to 1.0L. Adjust pH to 6.8.

Preparation of Medium: Prepare and dispense medium under 100% N₂. Combine components. Mix thoroughly. Sparge with 100% N₂. Anaerobically distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Clostridium hydroxybenzoicum*.

Clostridium kluveri Agar

Composition per 100.0mL:

Potassium acetate	1.0g
Sodium thioglycolate	50.0mg
K ₂ HPO ₄	31.0mg
NH ₄ -Cl	25.0mg
KH ₂ PO ₄	23.0mg
MgSO ₄ ·7H ₂ O	20.0mg
FeSO ₄ ·7H ₂ O	2.0mg
MnSO ₄ ·H ₂ O	2.0mg
CaCl ₂ ·2H ₂ O	1.0mg
Na ₂ MoO ₄ ·2H ₂ O	0.2mg
Agar	50.0μg
Resazurin	50.0μg
<i>p</i> -Aminobenzoic acid	20.0μg
Biotin	10.0μg
CaCO ₃	variable
Ethanol	2.0mL

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components, except sodium thioglycolate, ethanol, and CaCO₃, to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 5 min. Cool rapidly to 50°C. Add sodium thioglycolate and ethanol. Distribute into tubes containing a small amount of CaCO₃. Autoclave for 15 min at 15 psi pressure–121°C. Store anaerobically.

Use: For the cultivation and maintenance of *Clostridium kluveri*.

Clostridium kluveri Medium

Composition per liter:

Potassium acetate	5.0g
Sodium thioglycolate	0.5g
K ₂ HPO ₄	0.3g
NH ₄ Cl	0.25g
KH ₂ PO ₄	0.2g
MgSO ₄ ·7H ₂ O	0.2g
CaCl ₂ ·2H ₂ O	0.01g
FeSO ₄ ·7H ₂ O	5.0mg
MnSO ₄ ·4H ₂ O	2.0mg
Na ₂ MoO ₄ ·2H ₂ O	2.0mg
<i>p</i> -Aminobenzoate acid	0.2mg
Biotin	0.01mg
Ethanol	20.0mL
Acetic acid, glacial	2.5mL

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components, except sodium thioglycolate, to distilled/deionized water and bring volume to 1.0L. Gently heat and bring to boiling. Mix thoroughly. Add sodium thioglycolate immediately prior to sterilization. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Adjust pH to 7.0 with sterile 60% K₂CO₃ solution.

Use: For the isolation and cultivation of *Clostridium kluveri*.

Clostridium kluveri Medium

Composition per liter:

Part A	965.0mL
Part B	35.0mL

pH 7.0 ± 0.2 at 25°C

Part A:

Composition per 965.0mL:

Sodium acetate·3H ₂ O	7.5g
(NH ₄) ₂ SO ₄	2.65g
Agar	2.0g
Yeast extract	2.0g
Sodium thioglycolate	0.5g
<i>p</i> -Aminobenzoic acid	0.1mg
Biotin	5.0μg
Potassium phosphate buffer (2M, pH 7.0)	10.0mL
Salt solution	10.0mL

Preparation of Part A: Add components to distilled/deionized water and bring volume to 965.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Salt Solution:

Composition per 100.0mL:

MgSO ₄ ·H ₂ O	2.5g
CaCl ₂	0.15g
FeSO ₄ ·7H ₂ O	0.15g
MnSO ₄ ·2H ₂ O	0.02g
Na ₂ MoO ₄ ·2H ₂ O	0.02g

Preparation of Salt Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Part B:

Composition per liter:

K ₂ CO ₃ (1M solution)	20.0mL
Ethanol (95% solution)	15.0mL

Preparation of Part B: Prepare a 1M solution of K₂CO₃ and filter sterilize. Filter sterilize 25.0mL of 95% ethanol solution. Aseptically combine 20.0mL of sterile K₂CO₃ solution and 15.0mL of sterile ethanol.

Preparation of Medium: Add 35.0mL of sterile Part B to 965.0mL of sterile, cooled Part A. Adjust pH to 7.0 with HCl. Aseptically distribute into tubes under 97% N₂ + 3% H₂. Cap with rubber stoppers.

Use: For the cultivation and maintenance of *Clostridium kluveri*.

Clostridium lentocellum Agar

Composition per 1201.0mL:

Agar	30.0g
K ₂ HPO ₄	1.65g
NH ₄ SO ₄	1.6g
Yeast extract	1.0g
NaCl	0.96g
L-Cysteine-HCl	0.5g
CaCl ₂	96.0mg
MgSO ₄	96.0mg

Cellulose suspension.....	200.0mL
Resazurin (0.1% solution).....	1.0mL
pH 7.2 ± 0.2 at 25°C	

Cellulose Suspension:**Composition per 100.0mL:**

Whatman CF cellulose powder.....	4.0g
----------------------------------	------

Preparation of Cellulose Suspension: Add cellulose powder to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Clostridium lentocellum* and other *Clostridium* species.

Clostridium litorale* Medium*Composition per liter:**

Solution A.....	900.0mL
Solution B.....	80.0mL
Solution C.....	10.0mL
Solution D.....	10.0mL

pH 8.3 ± 0.2 at 25°C

Solution A:**Composition per 900.0mL:**

NaCl.....	10.0g
Betaine.....	5.86g
L-Alanine.....	2.2g
NH ₄ Cl.....	1.0g
Yeast extract.....	1.0g
MgSO ₄ ·7H ₂ O.....	0.5g
CaCl ₂ ·2H ₂ O.....	25.0mg
Resazurin.....	1.0mg
Na ₂ SeO ₃ ·5H ₂ O.....	15.0μg
Wolfe's vitamin solution.....	10.0mL
Trace elements solution SL-10.....	1.0mL

Wolfe's Vitamin Solution:**Composition per liter:**

Pyridoxine-HCl.....	10.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Lipoic acid.....	5.0mg
Nicotinic acid.....	5.0mg
Riboflavin.....	5.0mg
Thiamine-HCl.....	5.0mg
Calcium DL-pantothenate.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Trace Elements Solution SL-10:**Composition per liter:**

FeCl ₂ ·4H ₂ O.....	1.5g
CoCl ₂ ·6H ₂ O.....	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	36.0mg

NiCl ₂ ·6H ₂ O.....	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O.....	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly.

Preparation of Solution A: Prepare and dispense medium under 80% N₂ + 20% CO₂. Add components to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 3 min. Cool to room temperature while sparging with 80% N₂ + 20% CO₂.

Solution B:**Composition per 80.0mL:**

NaHCO ₃	5.0g
--------------------------	------

Preparation of Solution B: Add NaHCO₃ to distilled/deionized water and bring volume to 80.0mL. Mix thoroughly. Sparge with 100% N₂ for 20 min.

Solution C:**Composition per 10.0mL:**

K ₂ HPO ₄	0.358g
KH ₂ PO ₄	0.223g

Preparation of Solution C: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution D:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O.....	0.3g
--	------

Preparation of Solution D: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂. Anaerobically combine 900.0mL of cooled solution A with 80.0mL of sparged solution B. Mix thoroughly. Adjust pH to 8.3. Anaerobically distribute 9.8mL volumes into anaerobe tubes. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 0.1mL of sterile solution C and 0.1mL of sterile solution D to each tube. Mix thoroughly.

Use: For the cultivation of *Clostridium litorale*.

***Clostridium ljungdahlii* Medium
(DSMZ Medium 879)****Composition per liter:**

NH ₄ Cl.....	1.0g
Yeast extract.....	1.0g
NaCl.....	0.8g
MgSO ₄ ·7H ₂ O.....	0.2g
KCl.....	0.1g
KH ₂ PO ₄	0.1g
CaCl ₂ ·2H ₂ O.....	0.02g
Na ₂ WO ₄ ·2H ₂ O.....	0.20mg
Fructose solution.....	50.0mL
Trace elements solution.....	10.0mL
Vitamin solution.....	10.0mL
NaHCO ₃ solution.....	10.0mL

L-Cysteine solution	10.0mL
Na ₂ S·9H ₂ O solution	10.0mL
pH 5.9 ± 0.2 at 25°C	

NaHCO₃ Solution:**Composition per 10.0mL:**

NaHCO ₃	1.0g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

Fructose Solution:**Composition per 50.0mL:**

Fructose	5.0g
----------------	------

Preparation of Fructose Solution: Add fructose to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Na₂S·9H₂O Solution:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O	0.3g
---	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Sparge with N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Store anaerobically.

L-Cysteine Solution:**Composition per 10.0mL:**

L-Cysteine·HCl·H ₂ O	0.3g
---------------------------------------	------

Preparation of L-Cysteine Solution: Add L-cysteine·HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution:**Composition per liter:**

MgSO ₄ ·7H ₂ O	3.0g
Nitritotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·2H ₂ O	0.5g
CoSO ₄ ·7H ₂ O	0.18g
ZnSO ₄ ·7H ₂ O	0.18g
CaCl ₂ ·2H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g
NiCl ₂ ·6H ₂ O	0.025g
KAl(SO ₄) ₂ ·12H ₂ O	0.02g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·4H ₂ O	0.01g
CuSO ₄ ·5H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O	0.3mg

Preparation of Trace Elements Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Vitamin Solution:**Composition per liter:**

Pyridoxine-HCl	10.0mg
Thiamine-HCl·2H ₂ O	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
D-Ca-pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg

Lipoic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas atmosphere. Add components, except NaHCO₃ solution, fructose solution, L-cysteine solution, Na₂S·9H₂O solution, vitamin solution, and trace elements solution SL-10, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Boil for 10 min. Cool to room temperature while sparging with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 50.0mL fructose solution, 10.0mL NaHCO₃ solution, 10.0mL L-cysteine solution, 10.0mL Na₂S·9H₂O solution, 10.0mL vitamin solution, and 10.0mL trace elements solution. Mix thoroughly. Final pH is 5.9. Aseptically and anaerobically distribute into sterile tubes or bottles.

Use: For the cultivation of *Clostridium ljungdahlii*.

Clostridium longisporum Medium (DSMZ Medium 741)

Composition per liter:

Agar	13.5g
Beef extract	10.0g
Pancreatic digest of casein	10.0g
NaCl	5.0g
Glucose	5.0g
Yeast extract	3.0g
Sodium acetate	3.0g
Soluble starch	1.0g
L-Cysteine·HCl·H ₂ O	0.5g

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Prepare and dispense medium under 100% CO₂. Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 10 psi pressure–115°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Clostridium longisporum*.

Clostridium Medium

Composition per liter:

Sodium L-glutamate	10.0g
Sodium thioglycolate	0.5g
Yeast extract	0.5g
K ₂ HPO ₄	0.2g
MgSO ₄ ·7H ₂ O	0.1g

pH 7.6 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the enrichment and isolation of glutamate-fermenting *Clostridium* species.

Clostridium Medium

Composition per liter:

Crotonic acid	6.0g
Pancreatic digest of casein	1.0g

Yeast extract.....	1.0g
Sodium thioglycolate.....	0.5g
NaOH.....	0.30g
(NH ₄) ₂ HPO ₄	0.15g
K ₂ HPO ₄	0.10g
NH ₄ Cl.....	0.05g
CaCl ₂ ·2H ₂ O.....	0.04g
MgCl ₂ ·6H ₂ O.....	0.033g
(NH ₄) ₆ Mo ₇ O ₂₄ ·4H ₂ O.....	10.0mg
<i>p</i> -Aminobenzoic acid.....	0.80mg
FeSO ₄ ·7H ₂ O.....	0.6mg
MgSO ₄ ·7H ₂ O.....	0.6mg
MnSO ₄ ·2H ₂ O.....	0.4mg
Resazurin.....	1.0mg
Biotin.....	0.04mg
K ₂ CO ₃ solution.....	80.0mL
KHCO ₃ solution.....	3.0mL

pH 6.8 ± 0.2 at 25°C

K₂CO₃ Solution:**Composition per 80.0mL:**

K ₂ CO ₃	40.0g
--------------------------------------	-------

Preparation of K₂CO₃ Solution: Add K₂CO₃ to distilled/deionized water and bring volume to 80.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

KHCO₃ Solution:**Composition per 10.0mL:**

KHCO ₃	2.0g
-------------------------	------

Preparation of KHCO₃ Solution: Add KHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except K₂CO₃ solution and KHCO₃ solution, to distilled/deionized water and bring volume to 917.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 80.0mL of sterile K₂CO₃ solution and 3.0mL of sterile KHCO₃ solution. Mix thoroughly. Aseptically and anaerobically distribute into sterile screw-capped bottles under 100% N₂.

Use: For the cultivation of *Clostridium halophilum* and *Clostridium littorale*.

Clostridium Medium**Composition per liter:**

Proteose peptone.....	50.0g
Na ₂ HPO ₄	9.0g
Pancreatic digest of casein.....	8.5g
NaCl.....	2.5g
KH ₂ PO ₄	1.92g
Papaic digest of soybean meal.....	1.5g
K ₂ HPO ₄	1.25g
Glucose.....	1.25g
MgSO ₄ ·7H ₂ O.....	0.08g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Clostridium halophilum* and *Clostridium littorale*.

Clostridium Medium**Composition per liter:**

Uric acid.....	2.0g
Yeast extract.....	1.2g
MgSO ₄ ·7H ₂ O.....	0.05g
CaCl ₂ ·2H ₂ O.....	5.0mg
FeSO ₄ ·7H ₂ O.....	2.0mg
Resazurin.....	1.0mg
KOH (10 <i>N</i> solution).....	3.0mL
K ₂ HPO ₄ ·3H ₂ O (70% solution).....	1.5mL
Mercaptoacetic acid.....	1.5mL

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add KOH solution and K₂HPO₄·3H₂O solution to distilled/deionized water and bring volume to 500.0mL. Gently heat and bring to boiling. Mix thoroughly. Add uric acid slowly. Cool to 45°–50°C. Add remaining components. Add mercaptoacetic acid immediately prior to sterilization. Bring volume to 1.0L with distilled/deionized water. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Adjust pH to 7.2 with sterile 60% K₂CO₃ solution.

Use: For the isolation and cultivation of purine-fermenting *Clostridium* species.

Na ₂ S·9H ₂ O.....	0.6g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 20.0mL. Autoclave for 15 min at 15 psi pressure–121°C. Use freshly prepared solution.

Preparation of Medium: Add components, except Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Distribute anaerobically into sterile tubes. Aseptically add 0.1mL of sterile 1.5% Na₂S·9H₂O solution to each 5.0mL of the medium. Cap with rubber stoppers.

Use: For the cultivation and maintenance of a variety of *Clostridium* species.

Phosphate Solution:**Composition per 100.0mL:**

K ₂ HPO ₄	0.358g
KH ₂ PO ₄	0.223g

Preparation of Phosphate Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O	0.3g
-------------------------------------	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Vitamin Solution:**Composition per liter:**

Pyridoxine·HCl	10.0mg
Calcium DL-pantothenate	5.0mg
Lipoic acid	5.0mg
Nicotinic acid	5.0mg
p-Aminobenzoic acid	5.0mg
Riboflavin	5.0mg
Thiamine·HCl	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Sparge with 100% N₂.

Trace Elements Solution SL-10:**Composition per liter:**

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized

water and bring volume to 1.0L. Add remaining components. Mix thoroughly.

Preparation of Medium: Add components, except phosphate solution and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 890.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 100.0mL of sterile phosphate solution and 10.0mL of sterile Na₂S·9H₂O solution. Mix thoroughly. Aseptically and anaerobically distribute into sterile screw-capped bottles under 80% N₂ + 20% CO₂.

Use: For the cultivation and maintenance of *Clostridium halophilum* and *Clostridium littorale*.

Clostridium methylpentosum Medium**Composition per liter:**

L-Cysteine·HCl	1.0g
Resazurin	1.0mg
Mineral solution A	100.0mL
Mineral solution B	100.0mL
Mineral solution C	100.0mL
NaHCO ₃ solution	20.0mL
Rhamnose solution	20.0mL
Vitamin solution	10.0mL

pH 6.8 ± 0.2 at 25°C

Mineral Solution A:**Composition per 100.0mL:**

KH ₂ PO ₄	0.9g
NaCl	0.9g
NH ₄ Cl	0.9g

Preparation of Mineral Solution A: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Mineral Solution B:**Composition per 100.0mL:**

CaCl ₂ ·2H ₂ O	20.0mg
MnCl ₂ ·4H ₂ O	20.0mg
CoCl ₂ ·6H ₂ O	5.0mg

Preparation of Mineral Solution B: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Mineral solution C:**Composition per 100.0mL:**

MgSO ₄ ·7H ₂ O	20.0mg
FeSO ₄ ·7H ₂ O	5.0mg
CuSO ₄ ·H ₂ O	2.0mg
ZnSO ₄ ·7H ₂ O	2.0mg

Preparation of Mineral Solution C: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

NaHCO₃ Solution:**Composition per 20.0mL:**

NaHCO ₃	1.0g
--------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Rhamnose Solution:**Composition per 20.0mL:**

Rhamnose	2.0g
----------	------

Preparation of Rhamnose Solution: Add rhamnose to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Sparge under 100% N₂ gas for 3 min. Filter sterilize. Store under N₂ gas.

Vitamin Solution:**Composition per liter:**

Pyridoxine-HCl	10.0mg
Calcium DL-pantothenate	5.0mg
Lipoic acid	5.0mg
Nicotinic acid	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Riboflavin	5.0mg
Thiamine-HCl	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components, except NaHCO₃ solution and rhamnose solution, to distilled/deionized water and bring volume to 960.0mL. Mix thoroughly. Adjust pH to 6.5 with KOH. Sparge under 100% N₂ for 3–4 min. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 20.0mL of sterile NaHCO₃ solution and 20.0mL of sterile rhamnose solution. Mix thoroughly. Aseptically and anaerobically distribute into sterile screw-capped bottles under 100% N₂. Final pH of the medium should be 6.8.

Use: For the cultivation of *Clostridium methylpentosum*.

Clostridium neopropionicum* Medium*Composition per liter**

KHCO ₃	4.0g
Ethanol	1.0g
NH ₄ Cl	1.0g
NaCl	0.6g
Pancreatic digest of casein	0.5g
Yeast extract	0.5g
KH ₂ PO ₄	0.3g
MgCl ₂ ·6H ₂ O	0.1g
CaCl ₂ ·2H ₂ O	0.08g
Resazurin	1.0mg
Trace elements solution	10.0mL
Vitamin solution	10.0mL
L-Cysteine-HCl·H ₂ O solution	10.0mL
Na ₂ S·9H ₂ O solution	10.0mL

pH 6.8 ± 0.2 at 25°C

Trace Elements Solution:**Composition per liter:**

Nitritotriacetic acid	12.8g
FeCl ₃ ·6H ₂ O	1.35g
NaCl	1.0g
NiCl ₂ ·6H ₂ O	0.12g
MnCl ₂ ·4H ₂ O	0.1g
CaCl ₂ ·2H ₂ O	0.1g
ZnCl ₂	0.1g
Na ₂ SeO ₃ ·5H ₂ O	0.026g
CuCl ₂ ·2H ₂ O	0.025g
CoCl ₂ ·6H ₂ O	0.024g
Na ₂ MoO ₄ ·2H ₂ O	0.024g
H ₃ BO ₃	0.01g

Preparation of Trace Elements Solution: Add nitritotriacetic acid to approximately 500.0mL of distilled/deionized water. Dissolve by adding KOH and adjust pH to 6.5. Add remaining components.

Bring volume to 1.0L with additional distilled/deionized water. Adjust pH to 7.0 with KOH.

Vitamin Solution:**Composition per liter:**

Pyridoxine-HCl	10.0mg
Calcium DL-pantothenate	5.0mg
Lipoic acid	5.0mg
Nicotinic acid	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Riboflavin	5.0mg
Thiamine-HCl	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Sparge with 80% N₂ + 20% CO₂.

L-Cysteine-HCl Solution:**Composition per 10.0mL:**

L-Cysteine-HCl	0.25g
----------------	-------

Preparation of L-Cysteine-HCl Solution: Add L-cysteine-HCl to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 80% N₂ + 20% CO₂ for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O	0.3g
-------------------------------------	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except vitamin solution, L-cysteine-HCl·H₂O solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 960.0mL. Mix thoroughly. Sparge under 80% N₂ + 20% CO₂ for 3–4 min. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 20.0mL of sterile vitamin solution, 10.0mL of sterile L-cysteine-HCl·H₂O solution, and 10.0mL of sterile Na₂S·9H₂O solution. Mix thoroughly. Aseptically and anaerobically distribute into sterile screw-capped bottles under 80% N₂ + 20% CO₂.

Use: For the cultivation and maintenance of *Clostridium neopropionicum*.

Clostridium noterae* Medium*Composition per liter:**

Yeast extract	2.0g
NH ₄ Cl	1.0g
NaCl	0.45g
K ₂ HPO ₄ ·3H ₂ O	0.4g
L-Cysteine-HCl·H ₂ O	0.15g
Na ₂ CO ₃ solution	30.0mL
Trace metals solution	10.0mL
Na ₂ S·9H ₂ O solution	10.0mL

pH 7.9 ± 0.1 at 25°C

Na₂CO₃ Solution:**Composition per 50.0mL:**

Na ₂ CO ₃	5.0g
---------------------------------	------

Preparation of Na₂CO₃ Solution: Add Na₂CO₃ to distilled/deionized water and bring volume to 50.0mL. Autoclave for 15 min at 15 psi pressure–121°C. Use freshly prepared solution.

Trace Metals Solution:

Composition per liter:

Na ₂ EDTA·2H ₂ O	0.5g
CoCl ₂ ·6H ₂ O	0.15g
FeSO ₄ ·7H ₂ O	0.1g
MnCl ₂ ·4H ₂ O	0.1g
ZnCl ₂	0.1g
AlCl ₃ ·6H ₂ O	0.04g
CuCl ₂ ·2H ₂ O	0.02g
NiSO ₄ ·6H ₂ O	0.02g
H ₂ SeO ₃	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g

Preparation of Trace Metals Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.15g
-------------------------------------	-------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Autoclave for 15 min at 15 psi pressure–121°C. Use freshly prepared solution.

Preparation of Medium: Add components, except Na₂CO₃ solution and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0 with 10M NaOH. Gently heat to boiling. Distribute under O₂-free 100% N₂ gas into tubes in 5.0mL volumes. Cap with rubber stoppers. Autoclave for 15 min at 15 psi pressure–121°C. Prior to inoculation, add to each tube 0.15mL of Na₂CO₃ solution and 0.05mL of Na₂S·9H₂O solution. Incubate under 80% H₂ + 20% CO₂ to provide conditions for H₂ fixation.

Use: For the cultivation and maintenance of *Clostridium noterae*.

Clostridium novyi Blood Agar

Composition per 100.0mL:

Agar	2.0g
Glucose	1.0g
Neopeptone	1.0g
Proteolyzed liver	0.5g
Yeast extract	0.5g
Horse blood, defibrinated	10.0mL
Reducing solution	0.75mL
Salts solution	0.5mL

pH 7.6–7.8 at 25°C

Salts Solution:

Composition per 100.0mL:

MgSO ₄ ·7H ₂ O	4.0g
MnSO ₄ ·4H ₂ O	0.2g
HCl	0.05g
FeCl ₃	0.04g

Preparation of Salts Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Reducing Solution:

Composition per 10.0mL:

L-Cysteine·HCl·H ₂ O	0.12g
Dithiothreitol	0.12g
Glutamine	0.06g

Preparation of Reducing Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Adjust pH to 7.6–7.8. Filter sterilize.

Preparation of Medium: Add agar to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Gently heat and bring to boiling. In another flask, add neopeptone, yeast extract, liver extract, and salts solution to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Gently heat until dissolved. Combine the two solutions. Distribute into screw-capped bottles in 18.0mL volumes. Autoclave for 10 min at 10 psi pressure–115°C. Cool to 45°–50°C. Medium may be stored at 4°C at this point. Immediately prior to inoculation, aseptically add 2.0mL of horse blood and 0.15mL of sterile reducing solution to each tube of melted agar at 50°C. Mix thoroughly. Pour the contents of each tube into a sterile Petri dish.

Use: For the cultivation of *Clostridium novyi*.

Clostridium oroticum Medium

Composition per liter:

K ₂ HPO ₄	6.95g
Pancreatic digest of casein	5.0g
Sodium orotate	2.5g
KH ₂ PO ₄	1.36g
Yeast extract	0.5g
Riboflavin	15.0mg

pH 7.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.5. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Clostridium oroticum*.

Clostridium papyrosolvens Medium

Composition per liter:

K ₂ HPO ₄	1.65g
NH ₄ Cl	1.0g
Yeast extract	0.6g
L-Cysteine·HCl	0.5g
Resazurin	1.0mg
Seawater, filtered	200.0mL
Mineral salt solution	150.0mL
Cellobiose solution	50.0mL

pH 7.2 ± 0.2 at 25°C

Mineral Salt Solution:

Composition per liter:

(NH ₄) ₂ SO ₄	6.0g
NaCl	6.0g
MgSO ₄ ·7H ₂ O	1.2g
CaCl ₂ ·2H ₂ O	0.8g

Preparation of Mineral Salt Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Cellobiose Solution:

Composition per 50.0mL:

D-Cellobiose	5.0g
--------------	------

Preparation of Cellobiose Solution: Add cellobiose to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Sparge under 100% N₂ gas for 3 min. Filter sterilize.

Preparation of Medium: Add components, except cellobiose solution, to distilled/deionized water and bring volume to 950.0mL. Mix

thoroughly. Adjust pH to 7.2 with 5N NaOH. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 50.0mL of sterile cellobiose solution. Mix thoroughly. Aseptically and anaerobically distribute into sterile screw-capped bottles under 100% N₂.

Use: For the cultivation and maintenance of *Clostridium papyrosolvens*.

Clostridium papyrosolvens Medium

Composition per liter:

Paper strips, sterile.....	3.0g
K ₂ HPO ₄	1.65g
NH ₄ Cl.....	1.0g
Yeast extract.....	0.6g
L-Cysteine-HCl.....	0.5g
Resazurin.....	1.0mg
Seawater, filtered.....	200.0mL
Mineral salt solution.....	150.0mL

pH 7.2 ± 0.2 at 25°C

Mineral Salt Solution:

Composition per liter:

(NH ₄) ₂ SO ₄	6.0g
NaCl.....	6.0g
MgSO ₄ ·7H ₂ O.....	1.2g
CaCl ₂ ·2H ₂ O.....	0.8g

Preparation of Mineral Salt Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components, except paper strips, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2 with 5N NaOH. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 3.0g of sterile paper strips (filter paper, Kleenex, or lens tissue). Mix thoroughly. Aseptically and anaerobically distribute into sterile screw-capped bottles under 100% N₂.

Use: For the cultivation and maintenance of *Clostridium papyrosolvens*.

Clostridium perfringens Agar, OPSP (Perfringens Agar, OPSP)

Composition per liter:

Pancreatic digest of casein.....	15.0g
Agar.....	10.0g
Liver extract.....	7.0g
Papaic digest of soybean meal.....	5.0g
Yeast extract.....	5.0g
Tris(hydroxymethyl)aminomethane buffer.....	1.5g
Ferric ammonium citrate.....	1.0g
Na ₂ S ₂ O ₅	1.0g
Antibiotic inhibitor.....	10.0mL

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Antibiotic Inhibitor:

Composition per 10.0mL:

Sodium sulfadiazine.....	0.1g
Oleandomycin phosphate.....	0.5mg
Polymyxin B.....	10,000U

Preparation of Antibiotic Inhibitor: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except antibiotic inhibitor, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile antibiotic inhibitor. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the presumptive identification and enumeration of *Clostridium perfringens* in foods.

Clostridium perfringens Sporulation Broth

Composition per liter:

Tryptose.....	15.0g
Na ₂ HPO ₄	11.0g
Starch, soluble.....	3.0g
Yeast extract.....	3.0g
Na-thioglycollate.....	1.0g
MgSO ₄	0.1g

pH 7.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the production of *Clostridium perfringens* spores.

Clostridium perfringens Sporulation HiVeg Broth

Composition per liter:

Plant hydrolysate No. 1.....	15.0g
Na ₂ HPO ₄	11.0g
Starch, soluble.....	3.0g
Yeast extract.....	3.0g
Na-thioglycollate.....	1.0g
MgSO ₄	0.1g

pH 7.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the production of *Clostridium perfringens* spores.

Clostridium pfnennigii Medium

Composition per 1001.0mL:

Solution A.....	890.0mL
Solution B.....	100.0mL
Solution C.....	10.0mL
Solution D.....	1.0mL

pH 7.0–7.2 at 25°C

Solution A:

Composition per 890.0mL:

Sodium vanillate.....	2.0g
Yeast extract.....	2.0g

Resazurin	1.0mg
Rumen fluid, clarified	267.0mL
Mineral solution	50.0mL
Vitamin solution	5.0mL
Trace elements solution SL-10	1.0mL

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 890.0mL. Mix thoroughly. Adjust pH to 6.9. Sparge with 80% N₂ + 20% CO₂ for 20 min. Distribute 8.9mL into anaerobic tubes under 80% N₂ + 20% CO₂. Autoclave under 80% N₂ + 20% CO₂ for 15 min at 15 psi pressure–121°C.

Mineral Solution:

Composition per liter:

KH ₂ PO ₄	10.0g
NaCl	8.0g
NH ₄ Cl	8.0g
MgCl ₂ ·6H ₂ O	6.6g
CaCl ₂ ·2H ₂ O	1.0g

Preparation of Mineral Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Vitamin Solution:

Composition per liter:

Pyridoxine·HCl	6.2mg
Nicotinic acid	2.5mg
<i>p</i> -Aminobenzoic acid	1.25mg
Thiamine·HCl	1.25mg
Pantothenic acid	0.62mg
Biotin	0.25mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Adjust pH to 7.0. Mix thoroughly.

Trace Elements Solution SL-10:

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly.

Solution B:

Composition per 100.0mL:

NaHCO ₃	5.0g
--------------------------	------

Preparation of Solution B: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Sparge with 80% N₂ + 20% CO₂ for 20 min.

Solution C:

Composition per 10.0mL:

L-Cysteine	0.24g
------------------	-------

Preparation of Solution C: Add L-cysteine to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 80% N₂ + 20% CO₂ for 15 min at 15 psi pressure–121°C.

Solution D:

Composition per 1.0mL:

Na ₂ S·9H ₂ O	78.0mg
---	--------

Preparation of Solution D: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 1.0mL. Mix thoroughly. Autoclave under 80% N₂ + 20% CO₂ for 15 min at 15 psi pressure–121°C.

Preparation of Medium: To each tube containing 8.9mL of sterile solution A, add (using a syringe) 1.0mL of sterile solution B, 0.1mL of sterile solution C, and 0.01mL of sterile solution D.

Use: For the cultivation and maintenance of *Clostridium pfennigii*.

Clostridium propionicum Medium

Composition per 1007.5mL:

Yeast extract	4.0g
L-Alanine	3.0g
Peptone	3.0g
L-Cysteine·HCl	0.3g
MgSO ₄ ·7H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.018g
Resazurin	1.0mg
Potassium phosphate buffer solution, 1M, pH 7.1	5.0mL
CaSO ₄ , saturated solution	2.5mL

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Bring pH to 7.1. Sparge with 100% N₂ for 20 min. Distribute into tubes or bottles under 100% N₂. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Clostridium propionicum*.

Clostridium Selective Agar (Clostrisel Agar)

Composition per liter:

Pancreatic digest of casein	17.0g
Agar	14.0g
Glucose	6.0g
Papaic digest of soybean meal	3.0g
NaCl	2.5g
Sodium thioglycolate	1.8g
Sodium formaldehyde sulfoxylate	1.0g
L-Cystine	0.25g
NaN ₃	0.15g
Neomycin sulfate	0.15g

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–118°C. Pour into sterile Petri dishes or leave in tubes.

Caution: Sodium azide is toxic. Azides also react with metals and disposal must be highly diluted.

Use: For the selective isolation of pathogenic *Clostridium* species from specimens containing mixed flora, e.g., from wounds, fecal specimens, soil, and other specimens.

Clostridium sphenoides Medium**Composition per liter:**

Agar	15.0g
Trisodium citrate·2H ₂ O	14.7g
Yeast extract	4.0g
KH ₂ PO ₄	3.4g
K ₂ HPO ₄	2.0g
Peptone	2.0g
NaCl	0.6g
L-Cysteine·HCl	0.3g
(NH ₄) ₂ SO ₄	0.3g
MgSO ₄ ·7H ₂ O	0.2g
CaCl ₂ ·2H ₂ O	0.06g
Resazurin	1.0mg

pH 6.7–7.0 ± 0.2 at 25°C

Preparation of Medium: Add components, except L-cysteine·HCl, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Add L-cysteine·HCl. Distribute anaerobically into tubes in 5.0mL volumes. Autoclave for 20 min at 15 psi pressure–121°C. Cool to 45°–50°C. Inoculate with serial dilution of mud specimens before agar solidifies.

Use: For the isolation of *Clostridium sphenoides* from mud.

Clostridium sticklandii Medium**Composition per liter:**

Yeast extract	5.0g
L-Arginine·HCl	2.0g
L-Lysine·HCl	2.0g
NH ₄ Cl	2.0g
Sodium formate	2.0g
K ₂ HPO ₄	1.75g
MgSO ₄ ·7H ₂ O	0.2g
CaCl ₂ ·2H ₂ O	10.0mg
FeSO ₄ ·7H ₂ O	10.0mg
Na ₂ S·H ₂ O solution	10.0mL

pH 7.0 ± 0.2 at 25°C

Na₂S·9H₂O Solution:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O	0.3g
---	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except Na₂S·H₂O solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 0.1mL of sterile Na₂S·H₂O solution to each 10.0mL of medium.

Use: For the cultivation of *Clostridium sticklandii*.

Clostridium sticklandii Medium**Composition per liter:**

Tryptone	20.0g
Yeast extract	10.0g
K ₂ HPO ₄	1.04g
KH ₂ PO ₄	0.68g
Na ₂ S·9H ₂ O solution	0.15g

pH 7.0 ± 0.2 at 25°C

Na₂S·9H₂O Solution:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O	0.3g
---	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Adjust pH to 7.0. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL of sterile Na₂S·9H₂O solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Clostridium sticklandii*.

Clostridium termitidis Medium**Composition per liter:**

NaCl	1.0g
KCl	0.5g
Yeast extract	0.5g
MgCl ₂ ·6H ₂ O	0.4g
NH ₄ Cl	0.3g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O	0.15g
Resazurin	1.0mg
Trace elements solution SL-10	1.0mL
Cellobiose solution	50.0mL
NaHCO ₃ solution	20.0mL
Na ₂ S·9H ₂ O solution	10.0mL

pH 7.0 ± 0.2 at 25°C

Trace Elements Solution SL-10:**Composition per liter:**

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly.

Cellobiose Solution:**Composition per 50.0mL:**

D-Cellobiose	5.0g
--------------------	------

Preparation of Cellobiose Solution: Add cellobiose to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Sparge under 100% N₂ gas for 3 min. Filter sterilize.

NaHCO₃ Solution:**Composition per 20.0mL:**

NaHCO ₃	4.5g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:**Composition per 10.0mL:**Na₂S·9H₂O 0.3g

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except cellobiose solution, NaHCO₃ solution, and Na₂S·9H₂O solution, and bring volume to 920.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂ until pH reaches below 6.0. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 50.0mL of sterile cellobiose solution, 20.0mL of sterile NaHCO₃ solution, and 10.0mL of sterile Na₂S·9H₂O solution. Mix thoroughly. Aseptically and anaerobically distribute into sterile screw-capped bottles under 80% N₂ + 20% CO₂.

Use: For the cultivation and maintenance of *Clostridium termitidis*.

Clostridium thermoaceticum Medium**(TYE-CO)****(DSMZ Medium 316)****Composition per liter:**

Trypticase™	10.0g
Yeast extract	3.0g
Na ₂ HPO ₄ ·12H ₂ O	2.8g
NH ₄ Cl	1.0g
KH ₂ PO ₄	0.3g
MgCl ₂ ·6H ₂ O	0.2g
FeSO ₄ ·7H ₂ O	1.0mg
Resazurin	1.0mg
Trace elements solution	10.0mL
Na ₂ S·9H ₂ O solution	10.0mL
Vitamin solution	5.0mL

pH 7.0 ± 0.2 at 25°C

Vitamin Solution:**Composition per liter:**

Pyridoxine-HCl	10.0mg
Thiamine-HCl·2H ₂ O	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
D-Ca-pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Trace Elements Solution:**Composition per liter:**

MgSO ₄ ·7H ₂ O	3.0g
Nitrilotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·2H ₂ O	0.5g
CoSO ₄ ·7H ₂ O	0.18g
ZnSO ₄ ·7H ₂ O	0.18g
CaCl ₂ ·2H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g
NiCl ₂ ·6H ₂ O	0.025g
KAl(SO ₄) ₂ ·12H ₂ O	0.02g

H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·4H ₂ O	0.01g
CuSO ₄ ·5H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O	0.3mg

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Na₂S·9H₂O Solution:**Composition per 10.0mL:**Na₂S·9H₂O 0.6g

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Preparation of Medium: Add components, except vitamin solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 985.0mL. Mix thoroughly. Sparge with 100% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C while sparging with 100% CO₂. Aseptically and anaerobically add 10.0mL vitamin solution, and 10.0mL of sterile Na₂S·9H₂O solution. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or flasks.

Use: For the cultivation of *Moorella thermoacetica*=*Clostridium thermoaceticum*.

Clostridium thermoaceticum Medium**(TYE-CO)****Composition per liter:**

Pancreatic digest of casein	10.0g
Yeast extract	3.0g
Na ₂ HPO ₄ ·12H ₂ O	2.8g
FeSO ₄ ·7H ₂ O	1.0g
NH ₄ Cl	1.0g
KH ₂ PO ₄	0.3g
MgCl ₂ ·6H ₂ O	0.2g
Resazurin	1.0mg
Trace elements solution	10.0mL
Na ₂ S·9H ₂ O solution	10.0mL
Vitamin solution	5.0mL

pH 7.0 ± 0.2 at 25°C

Trace Elements Solution:**Composition per liter:**

MgSO ₄ ·7H ₂ O	3.0g
Nitrilotriacetic acid	1.5g
CaCl ₂ ·2H ₂ O	1.0g
NaCl	1.0g
MnSO ₄ ·2H ₂ O	0.5g
CoSO ₄ ·7H ₂ O	0.18g
ZnSO ₄ ·7H ₂ O	0.18g
FeSO ₄ ·7H ₂ O	0.1g
NiCl ₂ ·6H ₂ O	0.025g
KAl(SO ₄) ₂ ·12H ₂ O	0.02g
CuSO ₄ ·5H ₂ O	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O	0.3mg

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to approximately 500.0mL distilled/deionized water. Dissolve by

adding KOH and adjust pH to 6.5. Add remaining components. Bring volume to 1.0L with additional distilled/deionized water. Adjust pH to 7.0 with KOH.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl	10.0mg
Calcium DL-pantothenate	5.0mg
Lipoic acid	5.0mg
Nicotinic acid	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Riboflavin	5.0mg
Thiamine-HCl	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Adjust pH to 7.0. Mix thoroughly.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.6g
---	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Sparge with 100% N₂ for 15–20 min. Before autoclaving, sparge with 100% CO (carbon monoxide). Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 10.0mL of sterile Na₂S·9H₂O solution.

Caution: CO is toxic.

Use: For the cultivation and maintenance of *Clostridium thermoaceticum*.

Clostridium thermoaceticum Medium

Composition per 1010.0mL:

Solution A	100.0mL
Solution B	600.0mL
Solution C	300.0mL
Solution D	10.0mL

pH 6.9 ± 0.2 at 25°C

Solution A:

Composition per 100.0mL:

Glucose	18.0g
---------------	-------

Preparation of Solution A: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂ for 5–10 min. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B:

Composition per 600.0mL:

Pancreatic digest of casein	5.0g
Yeast extract	5.0g
Pyruvic acid	1.8g
(NH ₄) ₂ SO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.25g
Fe(NH ₄) ₂ (SO ₄) ₂ ·6H ₂ O	0.04g
Co(NO ₃) ₂ ·6H ₂ O	0.03g
Na ₂ WO ₄ ·2H ₂ O	3.3mg

Na ₂ MoO ₄ ·2H ₂ O	2.4mg
ZnCl ₂	1.4mg
Resazurin	1.0mg
Na ₂ SeO ₃ ·5H ₂ O	0.3mg
NiCl ₂ ·6H ₂ O	0.2mg

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 600.0mL. Mix thoroughly. Sparge with 100% CO₂ for 5–10 min. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C:

Composition per 300.0mL:

NaHCO ₃	16.8g
K ₂ HPO ₄	7.0g
KH ₂ PO ₄	5.5g

Preparation of Solution C: Add components to distilled/deionized water and bring volume to 300.0mL. Mix thoroughly. Sparge with 100% CO₂ for 5–10 min. Autoclave for 15 min at 15 psi pressure–121°C.

Solution D:

Composition per 10.0mL:

L-Cysteine-HCl solution (5%)	5.0mL
Na ₂ S·9H ₂ O solution (5%)	5.0mL

Preparation of Solution D: Combine 5.0mL of L-cysteine-HCl solution and 5.0mL of Na₂S·9H₂O solution. Mix thoroughly. Sparge with 100% N₂ for 5–10 min. Autoclave for 15 min at 15 psi pressure–121°C.

L-Cysteine-HCl Solution:

Composition per 10.0mL:

L-Cysteine-HCl	0.5g
----------------------	------

Preparation of L-Cysteine-HCl Solution: Add L-cysteine-HCl to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 80% N₂ + 20% CO₂ for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.5g
---	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly.

Preparation of Medium: Aseptically and anaerobically combine 100.0mL of sterile solution A, 600.0mL of sterile solution B, 300.0mL of sterile solution C, and 10.0mL of sterile solution D. Mix thoroughly. Aseptically and anaerobically distribute into tubes or bottles.

Use: For the cultivation and maintenance of *Clostridium thermoaceticum*.

Clostridium thermoaceticum Medium

Composition per liter:

Pancreatic digest of casein	5.0g
Yeast extract	5.0g
(NH ₄) ₂ SO ₄	0.5g
MgSO ₄ ·7H ₂ O	0.1g
Fe(NH ₄) ₂ (SO ₄) ₂	0.04g
Na ₂ MoO ₄ ·2H ₂ O	2.4mg
Resazurin	1.0mg
Phosphate solution	100.0mL
Glucose solution	100.0mL
NaHCO ₃ solution	100.0mL

L-Cysteine-HCl solution.....	10.0mL
Na ₂ S·9H ₂ O solution	10.0mL
pH 6.9 ± 0.2 at 25°C	

Phosphate Solution:**Composition per 100.0mL:**

K ₂ HPO ₄	7.0g
KH ₂ PO ₄	4.5g

Preparation of Phosphate Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Glucose Solution:**Composition per 100.0mL:**

D-Glucose	18.0g
-----------------	-------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

NaHCO₃ Solution:**Composition per 100.0mL:**

NaHCO ₃	10.0g
--------------------------	-------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

L-Cysteine-HCl Solution:**Composition per 10.0mL:**

L-Cysteine-HCl.....	0.3g
---------------------	------

Preparation of L-Cysteine-HCl Solution: Add L-cysteine-HCl to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O.....	0.3g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except phosphate solution, glucose solution, NaHCO₃ solution, L-cysteine-HCl solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 680.0mL. Mix thoroughly. Sparge with 100% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 100.0mL of sterile phosphate solution, 100.0mL of sterile glucose solution, 100.0mL of sterile NaHCO₃ solution, 10.0mL of sterile L-cysteine-HCl solution, and 10.0mL of sterile Na₂S·9H₂O solution. Mix thoroughly. Check that final pH is 6.9.

Use: For the cultivation and maintenance of *Clostridium thermoaceticum*.

***Clostridium thermoaceticum* II Medium (DSMZ Medium 527)**

Composition per 1010mL:

Solution B	600.0mL
Solution C	300.0mL
Solution A	100.0mL
Solution D	10.0mL

pH 6.9 ± 0.2 at 25°C

Solution A:**Composition per 100.0mL:**

Glucose	18.0g
---------------	-------

Preparation of Solution A: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂ gas mixture. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution B:**Composition per 600.0mL:**

Yeast extract.....	5.0g
Tryptone.....	5.0g
Pyruvic acid	1.8g
(NH ₄) ₂ SO ₄	1.0g
MgSO ₄ ·7H ₂ O.....	0.25g
Fe(NH ₄) ₂ (SO ₄) ₂ ·6H ₂ O	0.04g
Co(NO ₃) ₂ ·6H ₂ O	0.03g
Na ₂ WO ₄ ·2H ₂ O	3.3mg
Na ₂ MoO ₄ ·4H ₂ O	2.4mg
ZnCl ₂	1.4mg
Resazurin	1.0mg
Na ₂ SeO ₃ ·5H ₂ O.....	0.3mg
NiCl ₂ ·6H ₂ O.....	0.2mg

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 600.0mL. Mix thoroughly. Sparge with 100% CO₂ gas mixture. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution C:**Composition per 300.0mL:**

NaHCO ₃	16.8g
K ₂ HPO ₄	7.0g
KH ₂ PO ₄	5.5g

Preparation of Solution C: Add components to distilled/deionized water and bring volume to 300.0mL. Mix thoroughly. Sparge with 100% CO₂ gas mixture. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution D:**Composition per 10.0mL:**

Cysteine solution	5.0mL
Na ₂ S·9H ₂ O solution.....	5.0mL

Preparation of Solution D: Combine 5.0mL cysteine solution and 5.0mL Na₂S·9H₂O solution. Mix thoroughly. Sparge with 100% N₂ gas mixture. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Na₂S·9H₂O Solution:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O.....	0.5g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Sparge with N₂.

Cysteine Solution:**Composition per 100.0mL:**

L-Cysteine-HCl·H ₂ O.....	5.0g
--------------------------------------	------

Preparation of Cysteine Solution: Add L-cysteine-HCl·H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂.

Preparation of Medium: Aseptically and anaerobically combine 100.0mL solution A, 600.0mL solution B, 300.0mL solution C, and 10.0mL solution D. Aseptically and anaerobically distribute into sterile tubes or flasks.

Use: For the cultivation of *Moorella thermoacetica*=*Clostridium thermoaceticum*.

Clostridium thermocellum Medium (LMG Medium 42)

Composition per liter:

Agar	30.0g
Cellulose	10.0g
Sodium-beta-glycerophosphate	6.0g
K ₂ HPO ₄	5.5g
Yeast extract.....	4.5g
MgCl ₂ ·6H ₂ O.....	2.6g
KH ₂ PO ₄	1.43g
(NH ₄) ₂ SO ₄	1.3g
CaCl ₂ ·2H ₂ O.....	0.13g
Glutathione.....	0.25g
FeSO ₄ ·7H ₂ O.....	1.1mg
Resazurin	1.0mg

pH 7.1 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L under 95% N₂+ 5% CO₂ gas atmosphere. Mix thoroughly and sparge with 95% N₂+ 5% CO₂ gas. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Clostridium thermocellum*.

Clostridium thermocellum Medium (LMG Medium 42)

Composition per liter:

Agar	30.0g
Sodium-beta-glycerophosphate	6.0g
K ₂ HPO ₄	5.5g
Yeast extract.....	4.5g
MgCl ₂ ·6H ₂ O.....	2.6g
KH ₂ PO ₄	1.43g
(NH ₄) ₂ SO ₄	1.3g
CaCl ₂ ·2H ₂ O.....	0.13g
Glutathione.....	0.25g
FeSO ₄ ·7H ₂ O.....	1.1mg
Resazurin	1.0mg
Cellobiose solution	50.0mL

pH 7.1 ± 0.2 at 25°C

Cellobiose Solution:

Composition per 100.0mL:

Cellobiose	10.0g
------------------	-------

Preparation of Cellobiose Solution: Add cellobiose to 100.0mL of distilled/deionized water. Mix thoroughly. Sparge with 95% N₂+ 5% CO₂ gas. Filter sterilize.

Preparation of Medium: Add components, except cellobiose solution, to 950.0mL distilled/deionized water under 95% N₂+ 5% CO₂ gas atmosphere. Mix thoroughly and sparge with 95% N₂+ 5% CO₂ gas. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 50.0mL sterile cellobiose solution. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Clostridium thermocellum*.

Clostridium thermocellum Medium

Composition per liter:

Filter paper.....	18.75g
Na ₂ HPO ₄ ·12H ₂ O.....	4.2g
Yeast extract.....	2.0g
KH ₂ PO ₄	1.5g
NH ₄ Cl	0.5g
MgCl ₂ ·6H ₂ O	0.18g
Reducing solution	40.0mL
Wolfe's modified mineral elixir	5.0mL
Resazurin (0.1% solution)	1.0mL
Vitamin solution.....	0.5mL

Caution: This medium contains Na₂S, and H₂S production will occur, especially upon prolonged boiling. H₂S is hazardous and preparation of this medium should be done in a chemical fume hood.

Reducing Solution:

Composition per 200.0mL:

L-Cysteine·HCl·H ₂ O	2.5g
Na ₂ S·9H ₂ O.....	2.5g
NaOH (0.2N solution).....	200.0mL

Preparation of Reducing Solution: Gently heat the NaOH solution and bring to boiling. Gas with 95% N₂+ 5% H₂. Cool to room temperature. Add the L-cysteine·HCl·H₂O and Na₂S·9H₂O. Anaerobically distribute into tubes. Cap with rubber stoppers. Autoclave for 15 min at 15 psi pressure–121°C.

Vitamin Solution:

Composition per 500.0mL:

Pyridoxine HCl	0.1g
<i>p</i> -Aminobenzoic acid.....	0.05g
Calcium pantothenate	0.05g
Nicotinic acid.....	0.05g
Thioctic acid	0.05g
Biotin	0.02g
Folic acid	0.02g
Riboflavin	5.0mg
Thiamine·HCl	5.0mg
Vitamin B ₁₂	1.0mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Store solution in the dark at –10°C.

Wolfe's Modified Mineral Elixir:

Composition per liter:

MgSO ₄ ·7H ₂ O	3.0g
Nitrilotriacetic acid	1.5g
NaCl.....	1.0g
MnSO ₄ ·H ₂ O	0.5g
CaCl ₂ , anhydrous.....	0.1g
Co(NO ₃) ₂ ·6H ₂ O	0.1g
FeSO ₄ ·7H ₂ O.....	0.1g
ZnSO ₄ ·7H ₂ O.....	0.1g
AlK(SO ₄) ₂ , anhydrous.....	0.01g
CuSO ₄ ·5H ₂ O.....	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O.....	0.01g
Na ₂ SeO ₃ , anhydrous	1.0mg

Preparation of Wolfe's Modified Mineral Elixir: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L.

Preparation of Medium: Add components, except reducing solution, to distilled/deionized water and bring volume to 1.0L. If medium is to be distributed into tubes, omit bulk filter paper and substitute one Whatman #1 filter paper strip (8mm × 70mm) per tube of broth. Gently heat and bring to boiling under 95% N₂ + 5% H₂. Continue boiling until color changes from blue to pink. Add the reducing solution. The pink color will disappear, indicating that the solution has been reduced. Distribute into tubes or flasks under 95% N₂ + 5% H₂ using anaerobic techniques. If tubes are used, remember to add Whatman #1 filter paper strips prior to the addition of broth. Cap tubes with rubber stoppers. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Clostridium thermocellum*.

Clostridium thermocellum Medium

Composition per liter:

Cellulose	10.0g
H ₂ HPO ₄ ·3H ₂ O	7.2g
Sodium-β-glycerophosphate	6.0g
Yeast extract	4.5g
MgCl ₂ ·6H ₂ O	2.6g
KH ₂ PO ₄	1.43g
(NH ₄) ₂ SO ₄	1.3g
Glutathione	0.25g
CaCl ₂ ·2H ₂ O	0.13g
FeSO ₄ ·7H ₂ O	1.1mg
Resazurin	1.0mg

pH 7.0–7.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0–7.2. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Clostridium thermocellum*.

Clostridium thermocellum Medium

Composition per liter:

H ₂ HPO ₄ ·3H ₂ O	7.2g
Sodium-β-glycerophosphate	6.0g
Cellobiose	5.0g
Yeast extract	4.5g
MgCl ₂ ·6H ₂ O	2.6g
KH ₂ PO ₄	1.43g
(NH ₄) ₂ SO ₄	1.3g
Glutathione	0.25g
CaCl ₂ ·2H ₂ O	0.13g
FeSO ₄ ·7H ₂ O	1.1mg
Resazurin	1.0mg

pH 7.0–7.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0–7.2. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Clostridium thermocellum*.

Clostridium thermocellum Medium

Composition per liter:

Agar	30.0g
Morpholinopropane sulfonic acid	10.0g
Yeast extract	6.0g

Urea	2.0g
KH ₂ PO ₄	1.0g
K ₂ HPO ₄	1.0g
MgCl ₂ ·6H ₂ O	0.5g
CaCl ₂ ·2H ₂ O	0.05g
FeSO ₄ ·7H ₂ O	1.25mg
Resazurin	1.0mg
Glucose solution	50.0mL
L-Cysteine-HCl solution	20.0mL

pH 7.2 ± 0.2 at 25°C

Glucose Solution:

Composition per 50.0mL:

D-Glucose	5.0g
-----------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize. Sparge with 100% N₂ gas. Warm to 50°–55°C.

L-Cysteine-HCl Solution:

Composition per 10.0mL:

L-Cysteine-HCl	0.3g
----------------	------

Preparation of L-Cysteine-HCl Solution: Add L-cysteine-HCl to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize. Sparge with 100% N₂ gas. Warm to 50°–55°C.

Preparation of Medium: Prepare and dispense medium under 100% N₂. Add components, except glucose solution and L-cysteine-HCl solution, to distilled/deionized water and bring volume to 930.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically and anaerobically add 50.0mL of sterile glucose solution and 20.0mL of sterile L-cysteine-HCl solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Clostridium thermocellum*.

Clostridium thermocellum Medium

Composition per liter:

Cellulose	10.0g
K ₂ HPO ₄ ·3H ₂ O	2.9g
Cellobiose	2.0g
Yeast extract	2.0g
KH ₂ PO ₄	1.5g
(NH ₄) ₂ SO ₄	1.3g
MgCl ₂ ·6H ₂ O	1.0g
CaCl ₂	0.15g
FeSO ₄ ·7H ₂ O (5%)	25.0μg
Reductant solution	50.0mL
Resazurin (0.2%)	1.0mL

pH 7.8 ± 0.2 at 25°C

Reductant Solution:

Composition per 50.0mL:

NaHCO ₃	5.0g
L-Cysteine-HCl	0.5g

Preparation of Reductant Solution: Add components to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except reductant solution, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Adjust pH to 7.8. Autoclave for 15 min at 15 psi pressure–

121°C. Aseptically add 50.0mL of sterile reductant solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Clostridium celerecrescens*, *Clostridium papyrosolvans*, *Clostridium stercorarium*, and *Clostridium thermocellum*.

Clostridium thermohydrosulfuricum Medium

Composition per liter:

Sucrose.....	10.0g
Pancreatic digest of casein.....	10.0g
Yeast extract.....	2.0g
FeSO ₄ ·7H ₂ O.....	0.2g
Na ₂ SO ₃	0.2g
Na ₂ S ₂ O ₃ ·5H ₂ O.....	0.08g
Resazurin.....	1.0mg

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂ for 15 min. Autoclave for 30 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Clostridium thermohydrosulfuricum*, *Clostridium thermosaccharolyticum*, *Thermoanaerobacter ethanolicus*, and *Thermoanaerobacter thermohydrosulfuricus*.

Clostridium thermolacticum Medium

Composition per 1020.0mL:

KHCO ₃	4.5g
NaCl.....	2.25g
Sucrose.....	2.0g
Yeast extract.....	2.0g
MgSO ₄ ·7H ₂ O.....	0.5g
NH ₄ Cl.....	0.5g
K ₂ HPO ₄	0.348g
CaCl ₂ ·2H ₂ O.....	0.25g
KH ₂ PO ₄	0.227g
FeSO ₄ ·7H ₂ O.....	2.0mg
Resazurin.....	1.0mg
L-Cysteine·HCl·H ₂ O solution.....	10.0mL
Na ₂ S·9H ₂ O solution.....	10.0mL
Wolfe's vitamin solution.....	10.0mL
Trace elements solution SL-6.....	3.0mL

pH 7.0–7.2 at 25°C

Wolfe's Vitamin Solution:

Composition per liter:

Pyridoxine·HCl.....	10.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Calcium pantothenate.....	5.0mg
Nicotinic acid.....	5.0mg
Riboflavin.....	5.0mg
Thiamine·HCl.....	5.0mg
Thioctic acid.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Cyanocobalamin.....	100.0µg

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Trace Elements Solution SL-6:

Composition per liter:

H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O.....	0.2g

ZnSO ₄ ·7H ₂ O.....	0.1g
MnCl ₂ ·4H ₂ O.....	0.03g
Na ₂ MoO ₄ ·H ₂ O.....	0.03g
NiCl ₂ ·6H ₂ O.....	0.02g
CuCl ₂ ·2H ₂ O.....	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 3.4.

L-Cysteine·HCl·H₂O Solution:

Composition per 10.0mL:

L-Cysteine·HCl·H ₂ O.....	0.3g
--------------------------------------	------

Preparation of L-Cysteine·HCl·H₂O Solution: Add L-cysteine·HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Gas tubes under 100% N₂ and tightly seal. Autoclave for 15 min at 15 psi pressure–121°C. Use freshly prepared solution.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	0.3g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Gas tube under 100% N₂ and tightly seal. Autoclave for 15 min at 15 psi pressure–121°C. Use freshly prepared solution.

Preparation of Medium: Prepare anaerobically under 80% N₂ + 20% CO₂. Add components, except L-cysteine·HCl·H₂O solution and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes using anaerobic techniques. Autoclave for 15 min at 15 psi pressure–121°C. Prior to inoculation of cultures, inject 0.1mL of sterile L-cysteine·HCl·H₂O solution and 0.1mL of sterile Na₂S·9H₂O solution per 10.0mL of medium.

Use: For the cultivation and maintenance of *Clostridium thermolacticum*.

Clostridium thermosuccinogenes Medium

Composition per 1011.0mL:

Inulin.....	5.0g
NaCl.....	1.2g
MgCl ₂ ·6H ₂ O.....	0.4g
KCl.....	0.3g
NH ₄ Cl.....	0.27g
KH ₂ PO ₄	0.21g
CaCl ₂ ·2H ₂ O.....	0.15g
Na ₂ SO ₄	0.1g
Resazurin.....	1.0mg
Na ₂ HPO ₄ solution.....	20.0mL
Vitamin solution.....	10.0mL
Yeast extract solution.....	10.0mL
Casamino acids solution.....	10.0mL
NaHCO ₃ solution.....	10.0mL
Na ₂ S·9H ₂ O solution.....	10.0mL
Trace elements solution SL-10.....	1.0mL

pH 7.0 ± 0.2 at 25°C

Na₂HPO₄ Solution:

Composition per 20.0mL:

Na ₂ HPO ₄	2.66g
--	-------

Preparation of Na₂HPO₄ Solution: Add Na₂HPO₄ to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Vitamin Solution:**Composition per liter:**

Pyridoxine-HCl	10.0mg
Calcium DL-pantothenate	5.0mg
Lipoic acid	5.0mg
Nicotinic acid	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Riboflavin	5.0mg
Thiamine-HCl	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Adjust pH to 7.0. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Yeast Extract Solution:**Composition per 10.0mL:**

Yeast extract	0.03 g
---------------	--------

Preparation of Yeast Extract Solution: Add yeast extract to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C.

Casamino Acids Solution:**Composition per 10.0mL:**

Casamino acids	0.03g
----------------	-------

Preparation of Casamino Acids Solution: Add casamino acids to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C.

NaHCO₃ Solution:**Composition per 10.0mL:**

NaHCO ₃	1.0mg
--------------------	-------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O	0.15mg
-------------------------------------	--------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution SL-10:**Composition per liter:**

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except Na₂HPO₄ solution, vitamin solution, yeast extract solution, casamino acids solution, NaHCO₃ solution, Na₂S·9H₂O solution, and trace elements solution SL-10, to distilled/deionized water and bring volume to 930.0mL. Mix thoroughly. Sparge with 80% N₂ + 100% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 20.0mL of sterile Na₂HPO₄ solution, 10.0mL of sterile vitamin solution, 10.0mL of sterile yeast extract solution, 10.0mL of sterile casamino acids solution, 10.0mL of sterile NaHCO₃ solution, 10.0mL of sterile Na₂S·9H₂O solution, and 1.0mL of sterile trace elements solution SL-10. Aseptically and anaerobically distribute into tubes or bottles.

Use: For the cultivation and maintenance of *Clostridium thermosulfurogenes*.

Clostridium thermosulfurogenes Medium**Composition per 1015.0mL:**

Na ₂ HPO ₄ ·12H ₂ O	5.3g
NH ₄ Cl	1.0g
Yeast extract	1.0g
KH ₂ PO ₄	0.3g
MgCl ₂ ·6H ₂ O	0.2g
FeSO ₄ ·7H ₂ O	1.5mg
Resazurin	1.0mg
Glucose solution	50.0mL
Trace elements solution	10.0mL
Na ₂ S·9H ₂ O solution	10.0mL
Vitamin solution	5.0mL

pH 6.0 ± 0.2 at 25°C

Glucose Solution:**Composition per 50.0mL:**

D-Glucose	5.0g
-----------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution:**Composition per liter:**

Nitrilotriacetic acid	12.5g
NaCl	1.0g
FeCl ₃ ·4H ₂ O	0.2g
MnCl ₂ ·4H ₂ O	0.1g
CaCl ₂ ·2H ₂ O	0.1g
ZnCl ₂	0.02g
CuCl ₂	0.02g
Na ₂ SeO ₃	0.02g
CoCl ₂ ·6H ₂ O	0.017g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L.

Vitamin Solution:**Composition per liter:**

Pyridoxine-HCl	10.0mg
Calcium DL-pantothenate	5.0mg
Lipoic acid	5.0mg
Nicotinic acid	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Riboflavin	5.0mg

Thiamine-HCl	5.0mg
Biotin	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Adjust pH to 7.0. Mix thoroughly. Sparge with 100% N₂.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	0.5g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Adjust pH to 7.0 with 1N HCl before use.

Preparation of Medium: Add components, except glucose solution and Na₂S·9H₂O solution, and bring volume to 940.0mL. Mix thoroughly. Sparge with 80% N₂ + 100% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 50.0mL of sterile glucose solution and 10.0mL of sterile Na₂S·9H₂O solution. Mix thoroughly. Aseptically and anaerobically distribute into tubes or bottles.

Use: For the cultivation and maintenance of *Thermoanaerobacterium thermosulfurigenes*.

Clostridium ultunense Medium (DSMZ Medium 727)

Composition per liter:

Yeast extract.....	10.0g
Peptone.....	10.0g
Lab Lemco powder.....	5.0g
Na ₂ HPO ₄	0.43g
Starch, soluble.....	0.4g
KH ₂ PO ₄	0.4g
Na-acetate.....	0.4g
NH ₄ Cl.....	0.3g
NaCl.....	0.3g
CaCl ₂ ·2H ₂ O.....	0.1g
MgCl ₂ ·6H ₂ O.....	0.1g
Resazurin.....	0.5mg
NaHCO ₃ solution.....	50.0mL
Vitamin solution.....	10.0mL
Na ₂ S·9H ₂ O solution.....	10.0mL
Trace elements solution.....	1.0mL
Selenite-tungstate solution.....	1.0mL

pH 7.0 ± 0.2 at 25°C

Selenite–Tungstate Solution

Composition per liter:

NaOH.....	0.5g
Na ₂ WO ₄ ·2H ₂ O.....	4.0mg
Na ₂ SeO ₃ ·5H ₂ O.....	3.0mg

Preparation of Selenite–Tungstate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	0.3g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly.

Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

NaHCO₃ Solution:

Composition per 100.0mL:

NaHCO ₃	10.0g
--------------------------	-------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl.....	10.0mg
Thiamine-HCl·2H ₂ O.....	5.0mg
Riboflavin.....	5.0mg
Nicotinic acid.....	5.0mg
D-Ca-pantothenate.....	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Lipoic acid.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Trace Elements Solution:

Composition per liter:

FeCl ₂ ·4H ₂ O.....	1.5g
Na ₂ -EDTA.....	0.5g
CoCl ₂ ·6H ₂ O.....	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	36.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O.....	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas atmosphere. Add components, except NaHCO₃ solution, Na₂S·9H₂O solution, vitamin solution, selenite-tungstate solution, and trace elements solution, to distilled/deionized water and bring volume to 928.0mL. Mix thoroughly. Adjust pH to 7.0. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 50.0mL NaHCO₃ solution, 10.0mL Na₂S·9H₂O solution, 10.0mL vitamin solution, 1.0mL selenite–tungstate solution, and 1.0mL trace elements solution. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or bottles.

Use: For the cultivation of *Clostridium ultunense*.

Clostridium vincentii Medium (DSMZ Medium 769)

Composition per liter:

Yeast extract.....	1.0g
Trypticase™.....	0.4g
NH ₄ NO ₃	0.1g

Resazurin	0.5mg
Sea water, natural	300.0mL
NaHCO ₃ solution	20.0mL
Phosphate solution	20.0mL
Lactose solution	20.0mL
Vitamin solution	10.0mL
Na ₂ S·9H ₂ O solution	10.0mL
Cysteine solution	10.0mL

pH 6.5 ± 0.2 at 25°C

Vitamin Solution:**Composition per liter:**

Pyridoxine-HCl	10.0mg
Thiamine-HCl·2H ₂ O	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
D-Ca-pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Cysteine Solution:**Composition per 10.0mL:**

L-Cysteine·HCl·H ₂ O	0.3g
---------------------------------------	------

Preparation of Cysteine Solution: Add L-cysteine·HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Lactose Solution:**Composition per 100.0mL:**

Lactose	10.0g
---------------	-------

Preparation of Lactose Solution: Add lactose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Phosphate Solution:**Composition liter:**

Na ₂ HPO ₄ ·12H ₂ O	43.0g
NaH ₂ PO ₄	5.44g

Preparation of Phosphate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Adjust pH to 6.5. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Na₂S·9H₂O Solution:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O	0.3g
---	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

NaHCO₃ Solution:**Composition per 100.0mL:**

NaHCO ₃	5.0g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas atmosphere. Add components, except NaHCO₃ solution, Na₂S·9H₂O solution, lactose solution, vitamin solution, phosphate solution, and cysteine solution, to distilled/deionized water and bring volume to 910.0mL. Mix thoroughly. Adjust pH to 6.8. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 20.0mL NaHCO₃ solution, 10.0mL Na₂S·9H₂O solution, 20.0mL phosphate solution, 10.0mL vitamin solution, 10.0mL cysteine solution, and 20.0mL lactose solution. Mix thoroughly. Adjust pH to 6.5. Sparge with 80% N₂ + 20% CO₂. Aseptically and anaerobically distribute into sterile tubes or bottles.

Use: For the cultivation of *Clostridium vincentii*.

Clostrisel Agar

See: [Clostridium Selective Agar](#)

CM

See: [Coliform Medium](#)

CM Agar**Composition per liter:**

Agar	20.0g
Polypeptone™	10.0g
Yeast extract	10.0g
NaCl	5.0g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Bacillus subtilis*.

CM-DYA

See: [Cornmeal Agar with Dextrose and Yeast Extract](#)

CM 3 Agar**Composition per liter:**

Agar	15.0g
Cellobiose	6.0g
Sodium citrate	3.0g
K ₂ HPO ₄	2.9g
Yeast extract	2.0g
KH ₂ PO ₄	1.5g
(NH ₄) ₂ SO ₄	1.3g
MgCl ₂ ·6H ₂ O	1.0g
CaCl ₂	0.15g
L-Cysteine·HCl solution	44.0mL
Resazurin solution	2.0mL
FeSO ₄ solution	25.0μL

pH 7.2 ± 0.2 at 25°C

L-Cysteine·HCl Solution:**Composition per 100.0mL:**

L-Cysteine·HCl	2.5g
----------------------	------

Preparation of L-Cysteine-HCl Solution: Add L-cysteine-HCl to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Resazurin Solution:

Composition per 10.0mL:

Resazurin 0.01g

Preparation of Resazurin Solution: Add resazurin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly.

FeSO₄ Solution:

Composition per 10.0mL:

FeSO₄..... 0.5g

Preparation of FeSO₄ Solution: Add FeSO₄ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly.

Preparation of Medium: Add components, except L-cysteine-HCl solution, to distilled/deionized water and bring volume to 956.0mL. Mix thoroughly. Adjust pH to 7.2. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 44.0mL of sterile L-cysteine-HCl solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Note: Cellobiose may be replaced by 5.0g of Avicel (microcrystalline cellulose) or 5.0g of cellulose powder Whatman CF-11.

Use: For the cultivation and maintenance of *Clostridium celerecre-scens*, *Clostridium papyrosolvans*, and *Clostridium thermocellum*.

CM 3 Broth

Composition per liter:

Cellobiose 6.0g
Sodium citrate 3.0g
K₂HPO₄ 2.9g
Yeast extract 2.0g
KH₂PO₄ 1.5g
(NH₄)₂SO₄ 1.3g
MgCl₂·6H₂O 1.0g
CaCl₂ 0.15g
L-Cysteine-HCl solution 22.0mL
Resazurin solution 2.0mL
FeSO₄ solution 25.0μL

pH 7.2 ± 0.2 at 25°C

L-Cysteine-HCl Solution:

Composition per 100.0mL:

L-Cysteine-HCl 2.5g

Preparation of L-Cysteine-HCl Solution: Add L-cysteine-HCl to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Resazurin Solution:

Composition per 10.0mL:

Resazurin 0.01g

Preparation of Resazurin Solution: Add resazurin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly.

FeSO₄ Solution:

Composition per 10.0mL:

FeSO₄..... 0.5g

Preparation of FeSO₄ Solution: Add FeSO₄ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly.

Preparation of Medium: Add components, except L-cysteine-HCl solution, to distilled/deionized water and bring volume to 978.0mL.

Mix thoroughly. Adjust pH to 7.2. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 22.0mL of sterile L-cysteine-HCl solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Note: Cellobiose may be replaced by sterile strips of filter paper.

Use: For the cultivation of *Clostridium celerecre-scens*, *Clostridium papyrosolvans*, and *Clostridium thermocellum*.

CM3 Medium

Composition per liter:

3-(N-Morpholino)propanesulfonic
acid (MOPS) buffer 20.0g
Cellobiose (or Cellulose MN 300) 10.0g
K₂HPO₄ 4.4g
Urea 1.5g
L-Cysteine-HCl·H₂O 1.0g
MgSO₄·7H₂O 0.5g
(NH₄)₂SO₄ 0.4g
CaCl₂·2H₂O 0.05g
FeSO₄·7H₂O 1.0mg

pH 7.1 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Clostridium* species.

CM3 Medium

Composition per 1040.0mL:

K₂HPO₄·3H₂O 2.9g
Yeast extract 2.0g
KH₂PO₄ 1.5g
(NH₄)₂SO₄ 1.3g
FeSO₄·7H₂O 1.25g
CaCl₂·2H₂O 0.75g
L-Cysteine-HCl 0.5g
MgCl₂·6H₂O 0.2g
Resazurin 1.0mg
Cellobiose solution 50.0mL
Na₂CO₃ solution 40.0mL
Trace elements solution SL-10 1.0mL

pH 7.2 ± 0.2 at 25°C

Cellobiose Solution:

Composition per 50.0mL:

D-Cellobiose 6.0g

Preparation of Cellobiose Solution: Add cellobiose to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Sparge under 100% N₂ gas for 3 min. Filter sterilize.

Na₂CO₃ Solution:

Composition per 40.0mL:

Na₂CO₃ 2.0g

Preparation of Na₂CO₃ Solution: Add Na₂CO₃ to distilled/deionized water and bring volume to 40.0mL. Mix thoroughly. Sparge with 100% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution SL-10:

Composition per liter:

FeCl₂·4H₂O 1.5g
CoCl₂·6H₂O 190.0mg

MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	36.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O.....	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly.

Preparation of Medium: Add components, except cellobiose solution and Na₂CO₃ solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.0 with 6N HCl. Sparge with 100% N₂. Anaerobically distribute 10.0mL volumes into screw-capped tubes. Aseptically and anaerobically add 0.4mL of sterile Na₂CO₃ solution to each tube containing 10.0mL of medium and 0.5mL of sterile cellobiose solution to each tube. pH of the medium after the addition of Na₂CO₃ solution should be 7.2.

Use: For the cultivation of *Clostridium aldrichii*, *Clostridium celerecrescens*, *Clostridium cellulolyticum*, *Clostridium lentocellum*, *Clostridium populeti*, and *Clostridium thermopalmarium*.

CM3 Medium

Composition per 1040.0mL:

K ₂ HPO ₄ ·3H ₂ O.....	2.9g
Yeast extract.....	2.0g
KH ₂ PO ₄	1.5g
(NH ₄) ₂ SO ₄	1.3g

Na ₂ S·9H ₂ O solution.....	10.0mL
Trace elements solution SL-10.....	1.0mL

pH 6.0–7.0 at 25°C

Glucose Solution:

Composition per 50.0mL:

D-Glucose.....	6.0g
----------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Sparge under 100% N₂ gas for 3 min. Filter sterilize.

Na₂CO₃ Solution:

Composition per 40.0mL:

Na ₂ CO ₃	2.0g
---------------------------------------	------

Preparation of Na₂CO₃ Solution: Add Na₂CO₃ to distilled/deionized water and bring volume to 40.0mL. Mix thoroughly. Sparge with 100% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	0.5g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution SL-10:

Composition per liter:

FeCl ₂ ·4H ₂ O.....	1.5g
CoCl ₂ ·6H ₂ O.....	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	36.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O.....	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly.

Preparation of Medium: Add components, except glucose solution and Na₂CO₃ solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.0 with 6N HCl. Sparge with 100% N₂. Anaerobically distribute 10.0mL volumes into screw-capped tubes. Aseptically and anaerobically add to each tube containing 10.0mL of medium, 0.4mL of sterile Na₂CO₃ solution, 0.5mL of sterile glucose solution, and 0.5mL of sterile Na₂S·9H₂O solution. After addition of the Na₂CO₃ solution, the pH of the medium should be 6.0–7.0.

Use: For the cultivation and maintenance of *Clostridium aldrichii*, *Clostridium celerecrescens*, *Clostridium cellulolyticum*, *Clostridium lentocellum*, *Clostridium populeti*, and *Clostridium thermopalmarium*.

CM4 Medium

Composition per liter:

Cellobiose.....	6.0g
Yeast extract.....	5.0g
K ₂ HPO ₄	2.9g
KH ₂ PO ₄	1.5g
(NH ₄) ₂ SO ₄	1.3g
NaCl.....	1.0g
MgCl ₂	0.75g
Sodium thioglycolate.....	0.5g
CaCl ₂	0.0132g
Resazurin (1.0% solution).....	0.2mL
FeSO ₄ (1.25% solution).....	0.1mL

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until boiling. Boil until color changes from red to colorless, indicating a reduced state. Cool. Distribute into tubes or flasks under 97% N₂ + 3% H₂. Cap with rubber stoppers. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Clostridium* species and other bacteria that can utilize cellobiose as a carbon source.

CM plus YE Agar, Modified

---	-------

Preparation of Fe²⁺ Solution: Add FeSO₄·7H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.4. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Nocardiosis kunsanensis*.

CMA

See: **Cornmeal Agar**

CMA with Lupine**Composition per liter:**

Agar.....	20.0g
Cornmeal polenta.....	15.0g
Lupine stems.....	variable
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add cornmeal polenta to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 30 min. Filter through Whatman #1 filter paper. Add agar to filtrate. Gently heat and bring to boiling. Distribute 6.0mL volumes into tubes. Cut lupine stems into 8.0cm-long pieces. Add 2–3 lupine stems per tube. Autoclave for 15 min at 15 psi pressure–121°C. Allow tubes to cool in a slanted position.

Use: For the cultivation of *Glomerella cingulata*.

CMA with Sterile Carrot**Composition per liter:**

Agar.....	20.0g
Cornmeal polenta.....	15.0g
Carrot.....	variable
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add cornmeal polenta to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 30 min. Filter through Whatman #1 filter paper. Add agar to filtrate. Gently heat and bring to boiling. Distribute 6.0mL volumes into tubes. Cut carrots into 8.0cm-long pieces. Add 2–3 carrot slices per tube. Autoclave for 15 min at 15 psi pressure–121°C. Allow tubes to cool in a slanted position.

Use: For the cultivation of *Pyrenochaeta fallax*.

CML Medium**(Cooked Meat Liver Medium)****Composition per liter:**

Cooked meat.....	57.0g
Glucose.....	10.0g
Tryptose.....	10.0g
Liver infusion broth.....	10.0mL
pH 6.9 ± 0.2 at 25°C	

Liver Infusion Broth:**Composition per liter:**

Beef liver, infusion from.....	500.0g
Proteose peptone.....	10.0g
NaCl.....	5.0g

Preparation of Liver Infusion Broth: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add cooked meat to distilled/deionized water and bring volume to 1.0L. Chill to 4°C until liquid is clear. Filter through cheesecloth. Add remaining components to filtrate. Distribute into tubes or flasks. Autoclave for 10 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Fusobacterium varium*.

CMRL-1066 Medium with Glutamine, 10X
(Connaught Medical Research Laboratories Medium
with Glutamine, 10X)

Composition per liter:

NaCl	6.8g
NaHCO ₃	2.2g
D-Glucose	1.0g
KCl	0.4g
L-Cysteine·HCl·H ₂ O	0.26g
CaCl ₂ , anhydrous	0.2g
MgSO ₄ ·7H ₂ O	0.2g
NaH ₂ PO ₄ ·H ₂ O	0.14g
L-Glutamine	0.1g
Sodium acetate·3H ₂ O	0.083g
L-Glutamic acid	0.075g
L-Arginine·HCl	0.07g
L-Lysine·HCl	0.07g
L-Leucine	0.06g
Glycine	0.05g
Ascorbic acid	0.05g
L-Proline	0.04g
L-Tyrosine	0.04g
L-Aspartic acid	0.03g
L-Threonine	0.03g
L-Alanine	0.025g
L-Phenylalanine	0.025g
L-Serine	0.025g
L-Valine	0.025g
L-Cystine	0.02g
L-Histidine·HCl·H ₂ O	0.02g
L-Isoleucine	0.02g
Phenol Red	0.02g
L-Methionine	0.015g
Deoxyadenosine	0.01g
Deoxycytidine	0.01g
Deoxyguanosine	0.01g
Glutathione, reduced	0.01g
Thymidine	0.01g
Hydroxy-L-proline	0.01g
L-Tryptophan	0.01g
Nicotinamide adenine dinucleotide	7.0mg
Tween™ 80	5.0mg
Sodium glucuronate·H ₂ O	4.2mg
Coenzyme A	2.5mg
Coccarboxylase	1.0mg
Flavin adenine dinucleotide	1.0mg
Nicotinamide adenine dinucleotide phosphate	1.0mg
Uridine triphosphate	1.0mg
Choline chloride	0.5mg
Cholesterol	0.2mg
5-Methyldeoxycytidine	0.1mg
Inositol	0.05mg
p-Aminobenzoic acid	0.05mg
Niacin	0.025mg
Niacinamide	0.025mg
Pyridoxine	0.025mg
Pyridoxal·HCl	0.025mg
Biotin	0.01mg
D-Calcium pantothenate	0.01mg
Folic acid	0.01mg

Riboflavin	0.01mg
Thiamine·HCl	0.01mg

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostics.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Filter sterilize.

Use: For the cultivation of a wide variety of microorganisms in a chemically defined basal medium.

CMYGSee: **Cornmeal Yeast Glucose Agar**

CN Screen Medium
(*Cryptococcus neoformans*
Screen Medium)

Composition per liter:

Agar	15.0g
K ₂ HPO ₄	4.0g
MgSO ₄ ·7H ₂ O	2.5g
Glucose	1.25g
Asparagine	1.0g
Glutamine	1.0g
Glycine	1.0g
Thiamine·HCl	1.0g
Tryptophan	1.0g
EDTA	0.6g
Biotin	0.51g
Dihydroxyphenylalanine (Dopa)	0.2g
Phenol Red	0.2g

pH 5.5–5.6 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the screening of yeast isolates for the presumptive identification of *Cryptococcus neoformans*. *Cryptococcus neoformans* forms black colonies.

CNS Agar**Composition per liter:**

Agar	15.0g
LiCl	10.0g
Pancreatic digest of gelatin	5.0g
Beef extract	3.0g
K ₂ HPO ₄	2.0g
Yeast extract	2.0g
KH ₂ PO ₄	0.5g
Glucose solution	50.0mL
MgSO ₄ ·7H ₂ O solution	10.0mL
Antibiotic solution	10.0mL
Bravo 500	0.082mL

pH 6.9 ± 0.2 at 25°C

Glucose Solution:**Composition per 50.0mL:**

Glucose	5.0g
---------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize.

MgSO₄·7H₂O Solution:

Composition per 10.0mL:

MgSO₄·7H₂O 0.25g

Preparation of MgSO₄·7H₂O Solution: Add MgSO₄·7H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Antibiotic Solution:

Composition per 10.0mL:

Cycloheximide 0.04g

Polymyxin B sulfate 0.032g

Nalidixic acid 0.025g

Preparation of Antibiotic Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: Add components—except glucose solution, MgSO₄·7H₂O solution, and antibiotic solution—to distilled/deionized water and bring volume to 930.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure—121°C. Cool to 45°–50°C. Aseptically add 50.0mL of sterile glucose solution, 10.0mL of sterile MgSO₄·7H₂O solution, and 10.0mL of sterile antibiotic solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of *Corynebacterium nebraskense*.

Coagulase Agar Base

Composition per liter:

Agar 25.0g

Brain heart infusion 10.5g

Pancreatic digest of casein 10.5g

D-Mannitol 10.0g

Brain heart infusion 5.0g

NaCl 3.5g

Papaic digest of soybean meal 3.5g

Bromcresol Purple 0.02g

Rabbit plasma 100.0mL

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components, except rabbit plasma, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat, while stirring, until boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure—121°C. Cool to 45°–50°C. Add rabbit plasma to a final concentration of 7–15%. Mix thoroughly. Pour into sterile Petri dishes in 18.0mL volume per plate.

Use: For the cultivation and differentiation of *Staphylococcus aureus* from other *Staphylococcus* species based on coagulase production.

Coagulase Mannitol Agar

Composition per liter:

Agar 14.5g

Pancreatic digest of casein 10.5g

D-Mannitol 10.0g

Brain heart infusion 5.0g

NaCl 3.5g

Papaic digest of soybean meal 3.5g

Bromcresol Purple 0.02g

Rabbit plasma with 0.15% EDTA 100.0mL

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components, except rabbit plasma, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring until boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure—121°C. Cool to 45°–50°C. For detection of coagulase activity add rabbit plasma with 0.15% EDTA to a final concentration of 7–15%. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the cultivation and differentiation of *Staphylococcus aureus* from other *Staphylococcus* species based on coagulase production and mannitol fermentation.

Coagulase Mannitol HiVeg Agar Base with Plasma

Composition per liter:

Agar 14.5g

Plant hydrolysate 10.5g

Mannitol 10.0g

Plant special infusion 5.0g

Papaic digest of soybean meal 3.5g

NaCl 3.5g

Bromcresol Purple 0.02g

Rabbit plasma 100.0–150.0mL

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components, except rabbit plasma, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring until boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure—121°C. Cool to 45°–50°C. For detection of coagulase activity add rabbit plasma with 0.15% EDTA to a final concentration of 7–15%. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the cultivation and differentiation of *Staphylococcus aureus* from other *Staphylococcus* species based on coagulase production and mannitol fermentation. For the primary isolation and identification of pathogenic *Staphylococci* from clinical specimens or for classifying pure cultures.

Coagulase Mannitol Broth Base with Plasma

Composition per liter:

Heart muscle, infusion from 375.0g

D-Mannitol 10.0g

Peptic digest of animal tissue 10.0g

NaCl 5.0g

Phenol Red 0.025g

Rabbit plasma, sterile, pretested normal 120.0–150.0mL

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components, except rabbit plasma, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring until boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure—121°C. Cool to 45°–50°C. For

detection of coagulase activity add rabbit plasma with 0.15% EDTA to a final concentration of 12–15%. Mix thoroughly.

Use: For the cultivation and differentiation of *Staphylococcus aureus* from other *Staphylococcus* species based on coagulase production and mannitol fermentation. For the simultaneous detection of coagulase production and mannitol fermentation in the differentiation of *Staphylococci*.

Coagulase Mannitol HiVeg Broth Base with Plasma

Composition per liter:

D-Mannitol	10.0g
Plant infusion	10.0g
Plant peptone.....	10.0g
NaCl	5.0g
Phenol Red.....	0.025g
Rabbit plasma, sterile, pretested normal.....	120.0-150.0mL
pH 7.3 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components, except rabbit plasma, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring until boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. For detection of coagulase activity add rabbit plasma with 0.15% EDTA to a final concentration of 12–15%. Mix thoroughly.

Use: For the cultivation and differentiation of *Staphylococcus aureus* from other *Staphylococcus* species based on coagulase production and mannitol fermentation. For the simultaneous detection of coagulase production and mannitol fermentation in the differentiation of *Staphylococci*.

Coal Medium

Composition per 1011.0mL:

Coal, Pittsburgh seam	10.0g
NaHCO ₃	3.5g
Yeast extract.....	2.0g
NaCl	0.4g
NH ₄ Cl	0.4g
MgCl ₂ ·6H ₂ O.....	0.33g
Na ₂ S·9H ₂ O	0.3g
CaCl ₂ ·2H ₂ O.....	0.05g
Na ₂ SeO ₃ ·5H ₂ O.....	3.0μg
KH ₂ PO ₄	1.0mg
Resazurin	1.0mg
Wolfe's vitamin solution.....	10.0mL
Trace elements solution SL-10	1.0mL
pH 7.3 ± 0.1 at 25°C	

Wolfe's Vitamin Solution:

Composition per liter:

Pyridoxine-HCl	10.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Lipoic acid	5.0mg
Nicotinic acid.....	5.0mg
Riboflavin	5.0mg
Thiamine-HCl	5.0mg
Calcium DL-pantothenate.....	5.0mg
Biotin	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Trace Elements Solution SL-10:

Composition per liter:

FeCl ₂ ·4H ₂ O.....	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂. Add components, except NaHCO₃, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 3 min. Cool to room temperature while sparging with 80% N₂ + 20% CO₂. Add NaHCO₃. Mix thoroughly. Adjust pH to 7.3. Anaerobically distribute 10.0mL volumes into anaerobic tubes. Autoclave for 15 min at 15 psi pressure–121°C. Adjust pH to 7.3.

Use: For the cultivation of unidentified bacterium ATCC 55237.

COBA

(Colistin Oxolinic Acid Blood Agar)

Composition per liter:

Columbia agar base.....	930.0mL
Horse blood, defibrinated, sterile.....	50.0mL
Colistin sulfate solution.....	10.0mL
Oxolinic acid solution.....	10.0mL
pH 7.3 ± 0.2 at 25°C	

Columbia Agar Base:

Composition per 930.0mL:

Agar	13.5g
Pancreatic digest of casein.....	10.0g
Peptic digest of animal tissue	10.0g
NaCl.....	5.0g
Beef extract	3.0g
Yeast extract.....	3.0g
Cornstarch.....	1.0g

Preparation of Columbia Agar Base: Add components to distilled/deionized water and bring volume to 930.0mL. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Colistin Sulfate Solution:

Composition per 10.0mL:

Colistin sulfate	10.0mg
------------------------	--------

Preparation of Colistin Sulfate Solution: Add colistin sulfate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Oxolinic Acid Solution:

Composition per 10.0mL:

Oxolinic acid.....	5.0–10.0mg
--------------------	------------

Preparation of Oxolinic Acid Solution: Add oxolinic acid to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: To 930.0mL of sterile, cooled Columbia agar base, add sterile colistin sulfate, sterile oxolinic acid, and sterile, defibrinated horse blood. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the isolation and cultivation of streptococci in pure culture from mixed flora in clinical specimens.

Colby and Zatman Agar

Composition per liter:

Agar, noble	20.0g
K ₂ HPO ₄	1.2g
KH ₂ PO ₄	0.62g
(NH ₄) ₂ SO ₄	0.5g
MgSO ₄ ·7H ₂ O	0.2g
NaCl	0.1g
CaCl ₂ ·6H ₂ O	0.05g
ZnSO ₄ ·7H ₂ O	70.0μg
H ₃ BO ₃	10.0μg
MnSO ₄ ·5H ₂ O	10.0μg
Na ₂ MoO ₄ ·2H ₂ O	10.0μg
CoCl ₂ ·6H ₂ O	5.0μg
CuSO ₄ ·5H ₂ O	5.0μg
FeCl ₃ ·6H ₂ O	1.0mg
Trimethylamine solution	10.0mL
pH 7.0 ± 0.2 at 25°C	

Trimethylamine Solution

Composition per 10.0mL:

Trimethylamine	1.0g
----------------	------

Preparation of Trimethylamine Solution: Add trimethylamine to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except trimethylamine solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Adjust pH to 7.0. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 10.0mL of sterile trimethylamine solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Aminobacter aminovorans*, *Bacillus* species, *Hyphomicrobium aestuarii*, *Hyphomicrobium facilis*, *Hyphomicrobium* species, *Hyphomicrobium variabile*, *Hyphomicrobium zavarzinii*, *Methylobacterium extorquens*, *Methylobacterium* species, and *Methylophilus methylotrophus*.

Colby and Zatman Medium

Composition per liter:

Agar	15.0g
K ₂ HPO ₄	1.2g
KH ₂ PO ₄	0.62g
(NH ₄) ₂ SO ₄	0.5g
MgSO ₄ ·7H ₂ O	0.2g
NaCl	0.1g
CaCl ₂ ·2H ₂ O	34.0mg
FeCl ₃ ·H ₂ O	1.0mg
Trace elements solution	1.0mL
Trimethylamine,	
10% solution, filter sterilized	10.0mL
pH 7.0 ± 0.2 at 25°C	

Trace Elements Solution:

Composition per liter:

ZnSO ₄ ·7H ₂ O	70.0mg
H ₃ BO ₃	10.0mg
Na ₂ MoO ₄ ·2H ₂ O	10.0mg
MnSO ₄ ·H ₂ O	7.0mg
CoCl ₂ ·H ₂ O	5.0mg
CuSO ₄ ·5H ₂ O	5.0mg

Preparation of Medium: Add components, except trimethylamine solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 10.0mL of sterile trimethylamine solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Aminomonas aminovorans*.

Colby and Zatman Thiamine Medium

Composition per liter:

Agar, noble	20.0g
K ₂ HPO ₄	1.2g
KH ₂ PO ₄	0.62g
(NH ₄) ₂ SO ₄	0.5g
MgSO ₄ ·7H ₂ O	0.2g
NaCl	0.1g
CaCl ₂ ·6H ₂ O	0.05g
FeCl ₃ ·6H ₂ O	1.0mg
ZnSO ₄ ·7H ₂ O	70.0μg
H ₃ BO ₃	10.0μg
MnSO ₄ ·5H ₂ O	10.0μg
Na ₂ MoO ₄ ·2H ₂ O	10.0μg
CoCl ₂ ·6H ₂ O	5.0μg
CuSO ₄ ·5H ₂ O	5.0μg
Thiamine	0.5mg
Trimethylamine solution	10.0mL
pH 7.0 ± 0.2 at 25°C	

Trimethylamine Solution

Composition per 10.0mL:

Trimethylamine	1.0g
----------------	------

Preparation of Trimethylamine Solution: Add trimethylamine to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except trimethylamine solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Adjust pH to 7.0. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 10.0mL of sterile trimethylamine solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Aminobacter aminovorans*, *Bacillus* species, *Hyphomicrobium aestuarii*, *Hyphomicrobium facilis*, *Hyphomicrobium* species, *Hyphomicrobium variabile*, *Hyphomicrobium zavarzinii*, *Methylobacterium extorquens*, *Methylobacterium* species, and *Methylophilus methylotrophus*.

Cold Filterable Tryptone Soya Broth (Cold Filterable TSB) (Irradiated Tryptone Soya Broth)

Composition per liter:

Pancreatic digest of casein	17.0g
Papaic digest of soybean meal	3.0g

NaCl	5.0g
K ₂ HPO ₄	2.5g
Glucose	2.5g
pH 7.3± 0.2 at 25°C	

Source: This medium is available from Oxoid Unipath.

Preparation of Medium: Ready to use as a sterile gamma irradiated solution.

Use: For the cultivation of a wide variety of microorganisms. For microbiological Media Fill Trials (MFT) for the pharmaceutical industry.

Cold Filterable Vegetable Peptone Broth (cfVPB)

Composition per liter:

Vegetable peptone	18.0g
NaCl	5.0g
Yeast extract	3.0g
Glucose	2.5g
K ₂ HPO ₄	2.5g
pH 7.0 ± 0.2 at 25°C	

Source: Available in polyethylene bags from Oxoid Unipath.

Preparation of Medium: Ready to use as a sterile gamma irradiated solution.

Use: For use in process simulations in the pharmaceutical industry, either as a liquid placebo, or as a growth medium for a solid placebo, added downstream of processing.

Coletsos Medium

Composition per 1625mL:

Potato starch	10.0g
Gelatin	4.0g
Asparagine	2.25g
KH ₂ PO ₄	1.5g
Na-glutamate	1.0g
Na-pyruvate	1.0g
Mg-citrate	0.375g
Litmus	0.25g
Malachite green	0.25g
MgSO ₄	0.15g
Activated carbon	0.1g
Oligonucleotide mixture	3.0mg
Egg mixture	625.0mL
Glycerol	7.5mL

Egg Mixture:

Composition per liter:

Whole eggs	18–24
------------------	-------

Preparation of Egg Mixture: Use fresh eggs, less than 1 week old. Scrub the shells with soap. Let stand in a soap solution for 30 min. Rinse in running water. Soak eggs in 70% ethanol for 15 min. Break the eggs into a sterile container. Separate egg whites from egg yolks. Combine 8 parts egg white with 2 parts egg yolk. Homogenize by shaking. Filter through four layers of sterile cheesecloth into a sterile graduated cylinder. Bring volume to 1.0L distilled/deionized water.

Preparation of Medium: Add glycerol to 600.0mL of distilled/deionized water. Mix thoroughly. Add remaining components, except egg mixture. Bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 625.0mL of egg mixture. Mix

thoroughly. Distribute into sterile screw-capped tubes. Place tubes in a slanted position. Inspissate at 85°C (moist heat) for 45 min.

Use: For the cultivation of *Mycobacterium tuberculosis*.

Coletsos Selective Medium

Composition per 1625mL:

Potato starch	10.0g
Gelatin	4.0g
Asparagine	2.25g
KH ₂ PO ₄	1.5g
Na-glutamate	1.0g
Na-pyruvate	1.0g
Mg-citrate	0.375g
Litmus	0.25g
Malachite green	0.25g
MgSO ₄	0.15g
Activated carbon	0.1g
Oligonucleotide mixture	3.0mg
Egg mixture solution	625.0mL
Glycerol	7.5mL
Nalidixic acid solution	1.0mL
Lincomycin solution	1.0mL
Cycloheximide solution	1.0mL

Nalidixic Acid Solution:

Composition per 100.0mL:

Nalidixic acid	0.5g
----------------------	------

Preparation of Nalidixic Acid Solution: Add nalidixic acid to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Cycloheximide Solution:

Composition per 100.0mL:

Cycloheximide	1.5g
Ethanol	40.0mL

Preparation of Cycloheximide Solution: Add cycloheximide to 40.0mL of ethanol. Mix thoroughly. Bring volume to 100.0mL with distilled/deionized water. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Lincomycin Solution:

Composition per 100.0mL:

Lincomycin	0.5g
------------------	------

Preparation of Lioncomycin Solution: Add lincomycin to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Egg Mixture Solution:

Composition per liter:

Whole eggs	18–24
------------------	-------

Preparation of Egg Mixture Solution: Use fresh eggs, less than 1 week old. Scrub the shells with soap. Let stand in a soap solution for 30 min. Rinse in running water. Soak eggs in 70% ethanol for 15 min. Break the eggs into a sterile container. Separate egg whites from egg yolks. Combine 8 parts egg white with 2 parts egg yolk. Homogenize by shaking. Filter through four layers of sterile cheesecloth into a sterile graduated cylinder. Bring volume to 1.0L with distilled/deionized water.

Preparation of Medium: Add glycerol to 600.0mL of distilled/deionized water. Mix thoroughly. Add remaining components, except egg

mixture, lincomycin solution, cycloheximide solution, and nalidixic acid solution. Mix thoroughly. Bring volume to 1.0L. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 625.0mL of egg mixture. Mix thoroughly. Aseptically add 1.0mL cycloheximide solution, 1.0mL lincomycin solution, and 1.0mL nalidixic acid solution. Distribute into sterile screw-capped tubes. Place tubes in a slanted position. Inspissate at 85°C (moist heat) for 45 min.

Use: For the isolation and cultivation of *Mycobacterium tuberculosis*.

Coli ID

Composition per liter:

Proprietary

Source: This medium is available from bioMérieux.

Use: A selective chromogenic medium for the detection and enumeration of *E. coli* at 44°C, and simultaneous enumeration of *E. coli* and other coliforms at 37°C, from food products.

Coliform Agar, Chromocult® (Chromocult Coliform Agar)

Composition per liter:

Agar	10.0g
NaCl	5.0g
Peptone.....	3.0g
Na ₂ HPO ₄	2.7g
NaH ₂ PO ₄	2.2g
Tryptophan	1.0g
Na-pyruvate	1.0g
Chromogenic mixture	0.4g
Tergitol 7	0.15g

pH 7.0 ± 0.2 at 25°C

Source: This medium is available from Merck.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix well and warm gently until dissolved. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes. Some turbidity may occur, but this does not effect the performance.

Use: For the detection of *E. coli* and coliform bacteria in foods. The interaction of selected peptones, pyruvate, sorbitol, and phosphate buffer guarantees rapid colony growth, even for sublethally injured coliforms. The growth of Gram-positive bacteria as well as some Gram-negative bacteria is largely inhibited by the content of Tergitol 7 which has no negative effect on the growth of the coliform bacteria. A combination of two chromogenic substrates allows for the simultaneous detection of total coliforms and *E. coli*. The characteristic enzyme for coliforms, β-D-galactosidase, cleaves the Salmon-GAL substrate and causes a salmon to red color of the coliform colonies. The substrate X-glucuronide is used for the identification of β-D-glucuronidase, which is characteristic for *E. coli*. *E. coli* cleaves both Salmon-GAL and X-glucuronide, so that positive colonies take on a dark-blue to violet color. These are easily distinguished from other coliform colonies which have a salmon to red color. As part of an additional confirmation of *E. coli*, the inclusion of tryptophan improves the indole reaction, thereby increasing detection reliability when it is used in combination with the Salmon-GAL and X-glucuronide reaction.

Coliform Agar ES, Chromocult® (Chromocult Coliform Agar ES) (Chromocult Enhanced Selectivity Agar)

Composition per liter:

Agar	10.0g
MOPS	10.0g
KCl.....	7.5g
Peptone	5.0g
Bile salts.....	1.15g
Na-propionate	0.5g
6-Chloro-3-indoxyl-β-D-galactopyranoside	0.15g
5-Bromo-4-chloro-3-indoxyl-β-D-glucuronic acid	0.1g
Isopropyl-β-D-thiogalactopyranoside	0.1g

pH 7.0 ± 0.2 at 25°C

Source: This medium is available from Merck.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly and heat with frequent agitation until components are completely dissolved (approximately 45 min). Do not autoclave. Cool to 45°–50°C. Pour into sterile Petri dishes. The plates should be clear and colorless.

Use: For the detection of *E. coli* and total coliforms. The combination of suitable peptones and the buffering using MOPS allows rapid growth of coliforms and an optimal transformation of the chromogenic substrates. The amount of bile salts and propionate largely inhibit growth of Gram-positive and Gram-negative accompanying flora. The simultaneous detection of total coliforms and *E. coli* is achieved using the combination of two chromogenic substrates. The substrate Salmon™--β-D-GAL is split by β-D-galactosidase, characteristic for coliforms, resulting in a salmon to red coloration of coliform colonies. The detection of the β-D-glucuronidase, characteristic for *E. coli*, is cleaved via the substrate X-β-D-glucuronide, causing a blue coloration of positive colonies. As *E. coli* splits Salmon™-β-D-GAL as well as X-β-D-glucuronide, the colonies turn to a dark violet color and can be easily differentiated from the other coliforms being salmon-red.

Coliform HiVeg Broth

Composition per liter:

Lactose.....	20.0g
Synthetic detergent	20.0g
Plant peptone No. 3.....	10.0g
Yeast extract.....	6.0g
Sodium lauryl sulfate	1.0g
Bromocresol Purple	0.35g
Synthetic detergent No. III	0.1g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into flasks or tubes. Autoclave for 25 min at 15 psi pressure–121°C.

Use: For the isolation and cultivation of coliform bacteria from cream, yogurt, and raw milk.

Coliform Medium (CM)

Composition per liter:

Bile salts No. 3.....	20.0g
Lactose.....	20.0g
Proteose peptone No. 3	10.0g
Yeast extract.....	6.0g
Sodium lauryl sulfate	1.0g

Sodium deoxycholate.....	0.1g
Bromcresol Purple solution	10.0mL
pH 7.0 ± 0.2 at 25°C	

Bromcresol Purple Solution:**Composition per 100.0mL:**

Bromcresol Purple	0.35g
NaOH (0.1N solution).....	2.0mL

Preparation of Bromcresol Purple Solution: Combine Bromcresol Purple and NaOH solution. Mix thoroughly. Bring volume to 100.0mL with distilled/deionized water. Filter sterilize.

Preparation of Medium: Add components, except Bromcresol Purple solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Add 10.0mL of Bromcresol Purple solution. Mix thoroughly. Adjust pH to 7.0 with 1N HCl. Distribute into flasks in 95.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation and cultivation of coliform microorganisms from cream.

Coliform Medium (CM)

Composition per liter:

Bile salts No. 3.....	20.0g
Lactose	20.0g
Proteose peptone No. 3	10.0g
Yeast extract.....	6.0g
Sodium lauryl sulfate.....	1.0g
Sodium deoxycholate.....	0.1g
Bromcresol Purple solution	10.0mL
pH 6.8 ± 0.2 at 25°C	

Bromcresol Purple Solution:**Composition per 100.0mL:**

Bromcresol Purple	0.35g
NaOH (0.1N solution).....	2.0mL

Preparation of Bromcresol Purple Solution: Combine Bromcresol Purple and NaOH solution. Mix thoroughly. Bring volume to 100.0mL with distilled/deionized water. Filter sterilize.

Preparation of Medium: Add components, except Bromcresol Purple solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Add 10.0mL of Bromcresol Purple solution. Mix thoroughly. Adjust pH to 6.8 with 1N NH₄OH. Distribute into flasks in 95.0mL volumes. Autoclave for 25 min at 15 psi pressure–121°C.

Use: For the isolation and cultivation of coliform microorganisms from yogurt and raw milk.

Coliform Medium, Modified (MCM)

Composition per liter:

Lactose.....	20.0g
Tris(hydroxymethyl)aminomethane buffer.....	12.1g
Proteose peptone No. 3	10.0g
Yeast extract.....	6.0g
Bile salts No. 3.....	1.0g
Sodium lauryl sulfate.....	1.0g
Sodium deoxycholate.....	0.1g
Bromcresol Purple solution	10.0mL
pH 7.0 ± 0.2 at 25°C	

Bromcresol Purple Solution:**Composition per 100.0mL:**

Bromcresol Purple	0.35g
NaOH (0.1N solution).....	2.0mL

Preparation of Bromcresol Purple Solution: Combine Bromcresol Purple and NaOH solution. Mix thoroughly. Bring volume to 100.0mL with distilled/deionized water. Filter sterilize.

Preparation of Medium: Add components, except Bromcresol Purple solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Add 10.0mL of Bromcresol Purple solution. Mix thoroughly. Adjust pH to 7.0 with 1N HCl. Distribute into flasks in 95.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation and cultivation of coliform microorganisms from cream.

Coliform Medium, Modified (MCM)

Composition per liter:

Lactose.....	20.0g
Tris(hydroxymethyl)aminomethane buffer.....	12.1g
Proteose peptone No. 3	10.0g
Yeast extract.....	6.0g
Bile salts No. 3.....	1.0g
Sodium lauryl sulfate.....	1.0g
Sodium deoxycholate.....	0.1g
Bromcresol Purple solution	10.0mL
pH 6.8 ± 0.2 at 25°C	

Bromcresol Purple Solution:**Composition per 100.0mL:**

Bromcresol Purple	0.35g
NaOH (0.1N solution).....	2.0mL

Preparation of Bromcresol Purple Solution: Combine Bromcresol Purple and NaOH solution. Mix thoroughly. Bring volume to 100.0mL with distilled/deionized water. Filter sterilize.

Preparation of Medium: Add components, except Bromcresol Purple solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Add 10.0mL of Bromcresol Purple solution. Mix thoroughly. Adjust pH to 6.8 with 1N NH₄OH. Distribute into flasks in 95.0mL volumes. Autoclave for 25 min at 15 psi pressure–121°C.

Use: For the isolation and cultivation of coliform microorganisms from yogurt.

Coliform PA Broth

Composition per liter:

Casein enzymic hydrolysate	10.0g
Lactose.....	7.5g
Pancreatic digest of gelatin.....	5.0g
Beef extract.....	3.0g
K ₂ HPO ₄	1.375g
KH ₂ PO ₄	1.375g
NaCl.....	2.5g
Sodium lauryl sulphate.....	0.05g
Bromocresol Purple	8.5mg
pH 6.8 ± 0.2 at 25°C	

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 12 min at 15 psi pressure–121°C.

Use: For the determination of presence or absence of coliforms during detection of pollution in treated water from treatment plants or distribution systems.

Collimonas Medium (DSMZ Medium 1035)

Composition per liter:

NaCl	5.6g
Pancreatic digest of casein	1.8g
KH ₂ PO ₄	1.0g
Papaic digest of soybean meal	0.6g
pH 6.5 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.5. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Collimonas* spp.

Colloidal Chitin Agar

Composition per liter:

Agar	20.0g
Chitin, colloidal	4.0g
K ₂ HPO ₄	0.7g
MgSO ₄ ·5H ₂ O	0.5g
KH ₂ PO ₄	0.3g
FeSO ₄ ·7H ₂ O	0.01g
MnCl ₂	1.0mg
ZnSO ₄	1.0mg
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of *Micromonospora* species from water, soil, or sediment. For the germination of spores of *Micromonospora* species.

Colonization Medium

Composition per 700.0mL:

Mannose	1.0g
Pancreatic digest of gelatin	0.2g
Brain heart, solids from infusion	0.08g
Peptic digest of animal tissue	0.08g
NaCl	0.07g
Glucose	0.04g
Na ₂ HPO ₄	0.03g
Bile salts No. 3	0.1g
Dulbecco's phosphate-buffered saline	700.0mL
pH 7.4 ± 0.2 at 25°C	

Dulbecco's Phosphate-Buffered Saline:

Composition per liter:

NaCl	8.0g
Na ₂ HPO ₄ ·7H ₂ O	2.16g
KCl	0.2g
KH ₂ PO ₄	0.2g

CaCl ₂	0.1g
MnCl ₂ ·6H ₂ O	0.1g

Preparation of Dulbecco's Phosphate-Buffered Saline: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Combine components. Mix thoroughly. Filter sterilize. Aseptically distribute into sterile tubes or flasks.

Use: For the differentiation of enterotoxigenic *Escherichia coli* from foods based on the HeLa cell test for colonization.

Colonization Medium with Dulbecco's Phosphate Buffer

Composition per liter:

NaCl	8.0g
Mannose	1.4g
K ₂ HPO ₄	1.15g
Brain heart infusion powder	0.7g
KCl	0.2g
KH ₂ PO ₄	0.2g
Bile salts mixture	0.14g
pH 7.5 ± 0.2 at 25°C	

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Do not autoclave or heat. Aseptically distribute into tubes.

Use: For preparation of the solution of enterotoxigenic *Escherichia coli* used for colonization test in HeLa cell lines.

Columbia Agar

Composition per liter:

Columbia agar base	950.0mL
Sheep blood	50.0mL
pH 7.3 ± 0.2 at 25°C	

Columbia Agar Base:

Composition per liter:

Agar	13.5g
Pancreatic digest of casein	12.0g
NaCl	5.0g
Peptic digest of animal tissue	5.0g
Beef extract	3.0g
Yeast extract	3.0g
Cornstarch	1.0g

Preparation of Columbia Agar Base: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Preparation of Medium: To 950.0mL of cooled, sterile Columbia agar base, aseptically add 50.0mL of sterile, defibrinated sheep blood. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of nonfastidious and fastidious microorganisms from a variety of clinical and nonclinical specimens.

Columbia Blood Agar

Composition per liter:

Columbia blood agar base	950.0mL
Sheep blood	50.0mL
pH 7.3 ± 0.2 at 25°C	

Columbia Blood Agar Base:**Composition per liter:**

Agar	15.0g
Pantone.....	10.0g
Bitone.....	10.0g
NaCl.....	5.0g
Tryptic digest of beef heart.....	3.0g
Cornstarch.....	1.0g

Source: Columbia blood agar base is available as a premixed powder from BD Diagnostic Systems.

Preparation of Columbia Blood Agar Base: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Preparation of Medium: To 950.0mL of cooled, sterile Columbia blood agar base, aseptically add 50.0mL of sterile, defibrinated sheep blood. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: With the addition of blood or other enrichments, used for the isolation and cultivation of fastidious microorganisms.

**Columbia Blood Agar
(DSMZ Medium 693)**

Composition per liter:

Columbia blood agar base.....	950.0mL
Sheep blood.....	50.0mL
pH 7.3 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Oxoid Unipath.

Columbia Blood Agar Base:**Composition per liter:**

Special peptone.....	23.0g
Agar.....	10.0g
NaCl.....	5.0g
Starch.....	1.0g

Preparation of Columbia Blood Agar Base: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Preparation of Medium: To 950.0mL of cooled, sterile Columbia blood agar base, aseptically add 50.0mL of sterile, defibrinated sheep blood. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Corynebacterium* spp., *Actinomyces* spp., *Arcanobacterium* spp., *Streptococcus pneumoniae*, *Lactobacillus iners*, *Isobaculum melis*, *Nocardia paucivorans*, and a variety of fastidious microorganisms.

Columbia Blood Agar Base

Composition per liter:

Agar	15.0g
Pantone.....	10.0g
Bitone.....	10.0g
NaCl.....	5.0g
Tryptic digest of beef heart.....	3.0g
Cornstarch.....	1.0g

Source: Columbia blood agar base is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Balnearia alpica*.

**Columbia Blood Agar Base with 1% Agar, HiVeg
with Blood**

Composition per liter:

Plant special peptone.....	23.3g
Agar.....	10.0g
NaCl.....	5.0g
Corn starch.....	1.0g
Sheep blood, defibrinated.....	50.0mL
pH 7.3 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. For Columbia Blood Agar: Add 5% sterile defibrinated sheep blood to sterile cool base. For Chocolate Agar: Add 10% sterile defibrinated sheep blood to sterile cool base. Heat to 80°C for 10 min with constant agitation. For Selective Medium: Add desired quantity of antimicrobial agent to sterile base. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of fastidious bacteria from a variety of clinical and nonclinical specimens.

Columbia Blood Agar Base, HiVeg with Blood

Composition per liter:

Plant special peptone.....	23.0g
Agar.....	15.0g
NaCl.....	5.0g
Corn starch.....	1.0g
Sheep blood, defibrinated.....	50.0mL
pH 7.3 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. For Columbia Blood Agar: Add 5% sterile defibrinated sheep blood to sterile cool base. For Chocolate Agar: Add 10% sterile defibrinated sheep blood to sterile cool base. Heat to 80°C for 10 min with constant agitation. For Selective Medium: Add desired quantity of antimicrobial agent to sterile base. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of fastidious microorganisms from a variety of clinical and nonclinical specimens.

**Columbia Blood Agar Base with Horse Blood
(LMG Medium 151)**

Composition per liter:

Columbia blood agar base.....	950.0mL
Horse blood.....	50.0mL
pH 7.3 ± 0.2 at 25°C	

Columbia Blood Agar Base:**Composition per liter:**

Special peptone.....	23.0g
Agar.....	10.0g
NaCl.....	5.0g
Starch.....	1.0g

Preparation of Columbia Blood Agar Base: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Preparation of Medium: To 950.0mL of cooled, sterile Columbia blood agar base, aseptically add 50.0mL of sterile, defibrinated horse blood. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Arcanobacterium* spp., *Paenibacillus* spp., *Corynebacterium* spp., *Lactobacillus iners*, *Globicatella sanguinis*, *Gemella morbillorum*, *Enterococcus cecorum*, *Enterococcus columbae*, *Enterococcus parauberis*, *Enterococcus pseudoavium*, *Enterococcus raffinosus*, *Enterococcus saccharolyticus*, and other bacteria.

Columbia Blood Agar Base with Horse Blood (LMG Medium 210)

Composition per liter:

Columbia blood agar base.....	950.0mL
Horse blood.....	50.0mL
pH 7.3 ± 0.2 at 25°C	

Columbia Blood Agar Base:**Composition per liter:**

Agar.....	15.0g
Pancreatic digest of casein.....	10.0g
Proteose peptone No. 3.....	5.0g
Yeast extract.....	5.0g
NaCl.....	5.0g
Beef heart digest.....	3.0g
Corn starch.....	1.0g

Preparation of Columbia Blood Agar Base: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Preparation of Medium: To 950.0mL of cooled, sterile Columbia blood agar base, aseptically add 50.0mL of sterile, defibrinated horse blood. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Actinomyces* spp., *Streptococcus dysgalactiae*, and *Actinobaculum* spp.

Columbia Blood Agar Base with Horse Blood and Charcoal (DSMZ Medium 429a)

Composition per liter:

Columbia blood agar base with charcoal.....	960.0mL
Horse blood.....	40.0mL
pH 7.3 ± 0.2 at 25°C	

Columbia Blood Agar Base with Charcoal:**Composition per liter:**

Agar.....	15.0g
Pancreatic digest of casein.....	10.0g

Proteose peptone No. 3.....	5.0g
Yeast extract.....	5.0g
NaCl.....	5.0g
Beef heart digest.....	3.0g
Charcoal.....	2.0g
Cornstarch.....	1.0g

Preparation of Columbia Blood Agar Base with Charcoal:

Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Preparation of Medium: To 960.0mL of cooled, sterile Columbia blood agar base, aseptically add 40.0mL of sterile, defibrinated horse blood. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Neisseria gonorrhoeae*.

Columbia Blood Agar Base with Rabbit Serum

Composition per 1020.0mL:

Starch, soluble.....	9.0g
Resazurin.....	10.0µg
Columbia blood agar base.....	1.0L
Rabbit serum.....	20.0mL
pH 7.3 ± 0.2 at 25°C	

Columbia Blood Agar Base:**Composition per liter:**

Special peptone.....	23.0g
Agar.....	10.0g
NaCl.....	5.0g
Starch.....	1.0g

Source: Columbia Blood Agar Base is available as a premixed powder from Oxoid Unipath.

Preparation of Columbia Blood Agar Base: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Preparation of Medium: Combine 1.0L of Columbia blood agar base with 9.0g of soluble starch and 10.0µg of resazurin. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 20.0mL of sterile rabbit serum. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Mobiluncus curtisii* and *Mobiluncus mulieris*.

Columbia Broth

Composition per liter:

Bitone.....	10.0g
Pancreatic digest of casein.....	5.0g
Peptic digest of animal tissue.....	5.0g
NaCl.....	5.0g
Tryptic digest of beef heart.....	3.0g
Tris(hydroxymethyl)aminomethane·HCl.....	2.86g
Glucose.....	2.5g
Tris(hydroxymethyl)aminomethane.....	0.83g
Na ₂ CO ₃	0.6g
L-Cysteine·HCl.....	0.1g

MgSO ₄ , anhydrous.....	0.1g
FeSO ₄	0.02g
pH 7.5 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and isolation of fastidious bacteria from clinical specimens or as a general purpose broth.

Columbia Broth

Composition per liter:

Pancreatic digest of casein.....	10.0g
Peptic digest of animal tissue.....	8.0g
NaCl.....	5.0g
Yeast extract.....	5.0g
Tris(hydroxymethyl) aminomethane-HCl buffer.....	2.86g
Glucose.....	2.5g
Tris(hydroxymethyl) aminomethane buffer.....	0.83g
L-Cysteine-HCl·H ₂ O.....	0.1g
MgSO ₄ ·7H ₂ O.....	0.05g
FeSO ₄	0.012g
pH 7.4 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of a wide variety of microorganisms. Used as a general purpose medium.

Columbia Broth Base, HiVeg with Blood

Composition per liter:

Plant peptone No. 5.....	10.0g
Plant special peptone.....	10.0g
NaCl.....	5.0g
Plant infusion.....	3.0g
Tris(hydroxymethyl)aminomethane.....	2.86
Glucose.....	2.5g
Na ₂ CO ₃	0.6g
L-Cystine hydrochloride.....	0.1g
MgSO ₄	0.1g
FeSO ₄	0.02g
Sheep blood, defibrinated.....	50.0mL
pH 7.5 ± 0.2 at 25°C	

Source: This medium, without blood, is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Add blood and/or selective antimicrobics. Mix well.

Use: For the cultivation and isolation of fastidious bacteria from clinical specimens.

Columbia Broth Base, HiVeg with SPS

Composition per liter:

Plant peptone No. 5.....	10.0g
Plant special peptone.....	10.0g
NaCl.....	5.0g
Plant infusion.....	3.0g
Tris (hydroxymethyl) aminomethane.....	2.86
Glucose.....	2.5g
Na ₂ CO ₃	0.6g
L-Cystine hydrochloride.....	0.1g
MgSO ₄	0.1g
FeSO ₄	0.02g
SPS (sodium polystyrene sulfonate).....	0.1mL
pH 7.5 ± 0.2 at 25°C	

Source: This medium, without SPS, is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Mix thoroughly.

Use: For the cultivation and isolation of fastidious bacteria from clinical specimens. For blood cultures, the SPS inhibits lysozyme activity and interferes with phagocytosis and destroys the aminoglycosides.

Columbia CNA Agar

(Columbia Colistin Nalidixic Acid Agar)

Composition per liter:

Columbia blood agar base.....	950.0L
Sheep blood.....	50.0mL
pH 7.3 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Columbia Blood Agar Base:

Composition per liter:

Agar.....	13.5g
Pancreatic digest of casein.....	12.0g
NaCl.....	5.0g
Peptic digest of animal tissue.....	5.0g
Beef extract.....	3.0g
Yeast extract.....	3.0g
Cornstarch.....	1.0g
Nalidixic acid.....	15.0mg
Colistin.....	10.0mg

Preparation of Columbia Blood Agar Base: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Preparation of Medium: To 950.0mL of cooled, sterile Columbia blood agar base, aseptically add 50.0mL of sterile, defibrinated sheep blood. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation, cultivation, and differentiation of Gram-positive cocci from clinical and nonclinical specimens.

Columbia C.N.A. Agar Base with Blood**Composition per liter:**

Peptone, special	23.0g
Agar	15.0g
NaCl	5.0g
Corn starch	1.0g
Sheep blood, defibrinated	50.0mL
pH 7.3 ± 0.2 at 25°C	

Source: This medium, without blood, is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50.0mL of sterile, defibrinated sheep blood to 950.0mL of cooled, sterile agar base. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation, cultivation, and differentiation of Gram-positive cocci from clinical and nonclinical specimens.

Columbia C.N.A. Agar Base with Blood**Composition per liter:**

Biopeptone	20.0g
Agar	15.0g
NaCl	5.0g
Tryptic digest of beef heart	3.0g
Cornstarch	1.0g
Nalidixic acid	0.015g
Colistin sulfate	0.01g
Sheep blood, defibrinated	50.0mL
pH 7.3 ± 0.2 at 25°C	

Source: This medium, without blood, is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50.0mL of sterile, defibrinated sheep blood to 950.0mL of cooled, sterile agar base. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation, cultivation, and differentiation of Gram-positive cocci from clinical and nonclinical specimens.

Columbia C.N.A. Agar Base with 1% Agar and Blood**Composition per liter:**

Biopeptone	20.0g
Agar	10.0g
NaCl	5.0g
Tryptic digest of beef heart	3.0g
Corn starch	1.0g
Nalidixic acid	0.015g
Colistin sulfate	0.01g
Sheep blood, defibrinated	50.0mL
pH 7.3 ± 0.2 at 25°C	

Source: This medium, without blood, is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–

50°C. Aseptically add 50.0mL of sterile, defibrinated sheep blood to 950.0mL of cooled, sterile agar base. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation, cultivation, and differentiation of Gram-positive cocci from clinical and nonclinical specimens.

Columbia CNA Agar, Modified with Sheep Blood**Composition per liter:**

Columbia blood agar base	950.0mL
Sheep blood, defibrinated	50.0mL
pH 7.3 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Columbia Blood Agar Base:**Composition per liter:**

Agar	13.5g
Pancreatic digest of casein	12.0g
NaCl	5.0g
Peptic digest of animal tissue	5.0g
Beef extract	3.0g
Yeast extract	3.0g
Cornstarch	1.0g
Nalidixic acid	5.0mg
Colistin	10.0mg

Preparation of Columbia Blood Agar Base: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Preparation of Medium: To 950.0L of cooled, sterile Columbia blood agar base, aseptically add 50.0mL of sterile, defibrinated sheep blood. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation, cultivation, and differentiation of Gram-positive cocci from clinical and nonclinical materials.

Columbia C.N.A. HiVeg Agar Base with 1% Agar**Composition per liter:**

Plant peptone No. 5	20.0g
Agar	10.0g
NaCl	5.0g
Plant infusion	3.0g
Corn starch	1.0g
Nalidixic acid	0.015g
Colistin sulfate	0.01g
Sheep blood, defibrinated	50.0mL
pH 7.3 ± 0.2 at 25°C	

Source: This medium, without blood, is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50.0mL of sterile, defibrinated sheep blood to 950.0mL of cooled, sterile agar base. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation, cultivation, and differentiation of Gram-positive cocci from clinical and nonclinical specimens.

Columbia C.N.A. HiVeg Agar Base with Blood**Composition per liter:**

Plant peptone No. 5.....	20.0g
Agar.....	15.0g
NaCl.....	5.0g
Plant infusion.....	3.0g
Cornstarch.....	1.0g
Nalidixic acid.....	0.015g
Colistin sulfate.....	0.01g
Sheep blood, defibrinated.....	50.0mL

pH 7.3 ± 0.2 at 25°C

Source: This medium, without blood, is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50.0mL of sterile, defibrinated sheep blood to 950.0mL of cooled, sterile agar base. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation, cultivation, and differentiation of Gram-positive cocci from clinical and nonclinical specimens.

Columbia Colistin Nalidixic Acid AgarSee: **Columbia CNA Agar****Colwellia psychroerythrus Medium****Composition per liter:**

NaCl.....	29.0g
MgCl ₂ ·6H ₂ O.....	8.0g
Pancreatic digest of casein.....	8.0g
KH ₂ PO ₄	5.4g
CaCl ₂ ·6H ₂ O.....	33.0mg
FeCl ₂ ·4H ₂ O.....	2.0mg

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Aminobacter aminovorans*, *Bacillus* species, *Hyphomicrobium aestuarii*, *Hyphomicrobium facilis*, *Hyphomicrobium* species, *Hyphomicrobium variabile*, *Hyphomicrobium zavarzinii*, *Methylobacterium extorquens*, *Methylobacterium* species, and *Methylophilus methylotrophus*.

Complex Medium**Composition per liter:**

NaCl.....	250.0g
MgSO ₄ ·7H ₂ O.....	20.0g
Yeast extract.....	10.0g
Casamino acids.....	7.5g
Trisodium citrate.....	3.0g
KCl.....	2.0g

pH 7.5–7.8 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 5 min at 15 psi pressure–121°C. Filter through Whatman #1 filter paper. Adjust pH of filtrate to 7.4. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation and cultivation of *Actinomadura* species, *Actinopolyspora* species, *Excellispora* species, and *Microspora* species.

Congo Red Acid**Morpholinepropanesulfonic Acid Pigmentation Agar (CRAMP Agar)****Composition per liter:**

Agarose.....	14.0g
Morpholinepropanesulfonic acid.....	8.4g
NaCl.....	2.9g
Casamino acids.....	2.0g
Galactose.....	2.0g
Tricine (<i>n</i> -Tris-hydroxymethyl-methylglycine) buffer.....	1.8g
Na ₂ S ₂ O ₃ ·5H ₂ O.....	0.6g
NH ₄ Cl.....	0.5g
K ₂ HPO ₄	0.24g
MgSO ₄ ·7H ₂ O.....	0.1g
Congo Red.....	5.0mg

pH 5.3 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 5.3. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Yersinia* species with plasmids.

Congo Red Agar**(CR Agar)****Composition per liter:**

GC agar base.....	890.0mL
Hemoglobin solution.....	100.0mL
Supplement solution.....	10.0mL
Congo Red (0.01% solution).....	0.1mL

pH 7.2 ± 0.2 at 25°C

GC Agar Base:**Composition per 890.0mL:**

Agar.....	10.0g
Pancreatic digest of casein.....	7.5g
Peptic digest of animal tissue.....	7.5g
NaCl.....	5.0g
K ₂ HPO ₄	4.0g
Cornstarch.....	1.0g
KH ₂ PO ₄	1.0g

Preparation of GC Agar Base: Add components to distilled/deionized water and bring volume to 890.0mL. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Hemoglobin Solution:**Composition per 100.0mL:**

Hemoglobin.....	2.0g
-----------------	------

Preparation of Hemoglobin Solution: Add hemoglobin to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C.

Congo Red Solution:**Composition per 100.0mL:**

Congo Red.....	0.01g
----------------	-------

Preparation of Congo Red Solution: Add Congo Red to 100.0mL of distilled/deionized water. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Supplement Solution:**Composition per liter:**

Glucose	100.0g
L-Cysteine-HCl	25.9g
L-Glutamine	10.0g
L-Cystine	1.1g
Adenine	1.0g
Nicotinamide adenine dinucleotide	0.25g
Vitamin B ₁₂	0.1g
Thiamine pyrophosphate	0.1g
Guanine-HCl	0.03g
Fe(NO ₃) ₃ ·6H ₂ O	0.02g
<i>p</i> -Aminobenzoic acid	0.013g
Thiamine-HCl	3.0mg

Source: The supplement solution IsoVitaleX[®] enrichment is available from BD Diagnostic Systems. This enrichment may be replaced by supplement VX from BD Diagnostic Systems.

Preparation of Supplement Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: To 890.0mL of sterile, cooled GC agar base aseptically add 100.0mL of sterile, cooled hemoglobin solution, 10.0mL of sterile supplement solution, and 0.1mL of sterile Congo Red solution. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the isolation and differentiation of virulent and avirulent strains of *Shigella*, *Vibrio cholerae*, *Escherichia coli*, and *Neisseria meningitidis*. Used for the detection and differentiation of “iron-responsive” avirulent mutants. Used in the preparation of live vaccines. Used for the differentiation of sensitive *Neisseria gonorrhoeae* (no growth) from other *Neisseria* species (growth) that are resistant to Congo Red.

Congo Red Agar (CR Agar)

Composition per liter:

Soybean-casein digest agar	890.0mL
Hemoglobin solution	100.0mL
Supplement solution	10.0mL
Congo Red (0.01% solution)	0.1mL

pH 7.3 ± 0.2 at 25°C

Soybean-Casein Digest Agar:**Composition per 890.0mL:**

Pancreatic digest of casein	17.0g
Agar	15.0g
NaCl	5.0g
Papaic digest of soybean meal	3.0g
Glucose	2.5g
K ₂ HPO ₄	2.5g

Preparation of Soybean-Casein Digest Agar: Add components to distilled/deionized water and bring volume to 890.0mL. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Hemoglobin Solution:**Composition per 100.0mL:**

Hemoglobin	2.0g
------------------	------

Preparation of Hemoglobin Solution: Add hemoglobin to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C.

Congo Red Solution:**Composition per 100.0mL:**

Congo Red	0.01g
-----------------	-------

Preparation of Congo Red Solution: Add Congo Red to 100.0mL of distilled/deionized water. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Supplement Solution:**Composition per liter:**

Glucose	100.0g
L-Cysteine-HCl	25.9g
L-Glutamine	10.0g
L-Cystine	1.1g
Adenine	1.0g
Nicotinamide adenine dinucleotide	0.25g
Vitamin B ₁₂	0.1g
Thiamine pyrophosphate	0.1g
Guanine-HCl	0.03g
Fe(NO ₃) ₃ ·6H ₂ O	0.02g
<i>p</i> -Aminobenzoic acid	0.013g
Thiamine-HCl	3.0mg

Preparation of Supplement Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Source: The supplement solution IsoVitaleX[®] enrichment is available from BD Diagnostic Systems. This enrichment may be replaced by supplement VX from BD Diagnostic Systems.

Preparation of Medium: To 890.0mL of sterile, cooled soybean-casein digest agar, aseptically add 100.0mL of sterile, cooled hemoglobin solution, 10.0mL of sterile supplement solution, and 0.1mL of sterile Congo Red solution. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the isolation and differentiation of virulent and avirulent strains of *Shigella*, *Vibrio cholerae*, *Escherichia coli*, and *Neisseria meningitidis*. Used for the detection and differentiation of “iron-responsive” avirulent mutants. Used in the preparation of live vaccines. Used for the differentiation of sensitive *Neisseria gonorrhoeae* (no growth) from other *Neisseria* species (growth) that are resistant to Congo Red.

Congo Red BHI Agarose Medium

Composition per liter:

Agarose	15.0g
Pancreatic digest of gelatin	14.5g
Brain heart, solids from infusion	6.0g
Peptic digest of animal tissue	6.0g
NaCl	5.0g
Glucose	3.0g
Na ₂ HPO ₄	2.5g
Congo Red	0.075g

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes in 20.0mL volumes.

Use: For the isolation, cultivation, and detection of virulent strains of *Yersinia enterocolitica*.

**Congo Red BHI Agarose Medium
(CRBHO Medium)
(BAM M41)**

Composition per liter:

Pancreatic digest of gelatin	14.5g
Agarose	12.0g
Brain heart, solids from infusion	6.0g
Peptic digest of animal tissue.....	6.0g
NaCl	5.0g
Glucose	3.0g
Na ₂ HPO ₄	2.5g
MgCl ₂	1.0g
Congo Red solution	20.0mL

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes in 20.0mL volumes.

Congo Red Solution:**Composition per 100.0mL:**

Congo Red	375.0mg
-----------------	---------

Preparation of Congo Red Solution: Add Congo Red to 100.0mL of distilled/deionized water. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Use: For the isolation, cultivation, and detection of virulent strains of *Yersinia enterocolitica*.

**Congo Red Magnesium Oxalate Agar
(CRMOX Agar)**

Composition per liter:

Solution 1	825.0mL
Solution 2	80.0mL
Solution 3	80.0mL
Solution 4	10.0mL
Solution 5	5.0mL

pH 7.3 ± 0.2 at 25°C

Solution 1:**Composition per 825.0mL:**

Pancreatic digest of casein	15.0g
Agar	15.0g
Papaic digest of soybean meal	5.0g
NaCl	5.0g

pH 7.3 ± 0.2 at 25°C

Preparation of Solution 1: Add components to distilled/deionized water and bring volume to 825.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Do not overheat.

Solution 2:**Composition per liter:**

MgCl ₂ ·6H ₂ O.....	50.8g
---	-------

Preparation of Solution 2: Add MgCl₂·6H₂O to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Solution 3:**Composition per liter:**

Sodium oxalate	33.2g
----------------------	-------

Preparation of Solution 3: Add sodium oxalate to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Solution 4:**Composition per 100.0mL:**

D-Galactose	20.0g
-------------------	-------

Preparation of Solution 4: Add D-galactose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Solution 5:**Composition per 10.0mL:**

Congo Red	0.1g
-----------------	------

Preparation of Solution 5: Add Congo Red to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Aseptically combine 80.0mL of sterile solution 2, 80.0mL of sterile solution 3, 10.0mL of sterile solution 4, and 5.0mL of sterile solution 5. Mix thoroughly. Warm to 50°C. Add this mixture to 825.0mL of cooled, sterile solution 1. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the cultivation and identification of pathogenic serotypes of *Yersinia enterocolitica*. For the determination of whether *Yersinia* strains contain the *Yersinia* virulence plasmid.

**Connaught Medical Research
Laboratories Medium with Glutamine, 10X**

See: **CMRL-1066 Medium
with Glutamine, 10X**

Conradi Drigalski Agar

Composition per liter:

Agar	15.0g
Casein	10.0g
Lactose	10.0g
Peptone	10.0g
NaCl	5.0g
Bromcresol Purple	0.03g
Crystal Violet.....	4.0mg

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of Gram-negative enteric bacilli.

Converse Liquid Medium, Levine Modification

Composition per liter:

Ionagar No. 2 or Noble agar	10.0g
Glucose	4.0g
Ammonium acetate.....	1.23g
K ₂ HPO ₄	0.52g
Tamol	0.5g
MgSO ₄ ·7H ₂ O	0.4g
KH ₂ PO ₄	0.4g
NaCl	0.014g
Na ₂ CO ₃	0.012g
CaCl ₂ ·2H ₂ O	0.002g
ZnSO ₄ ·7H ₂ O	0.002g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes in 15.0mL volumes.

Use: For the cultivation and induction of spherules of *Coccidioides immitis*.

Cooke Rose Bengal Agar

Composition per liter:

Agar	20.0g
Glucose	10.0g
Enzymatic hydrolysate of soybean meal	5.0g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.5g
Rose Bengal	35.0mg

pH 6.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation of fungi.

Cooked Meat Liver Medium

See: **CML Medium**

Cooked Meat Medium (LMG Medium 140)

Composition per liter:

Heart muscle	454.0g
Peptone.....	40.0g
Beef extract	10.0g
NaCl	5.0g
Yeast extract.....	5.0g
K ₂ HPO ₄	5.0g
Glucose	2.0g
Resazurin solution.....	4.0mL

pH 7.0 ± 0.2 at 25°C

Resazurin Solution:

Composition per 100.0mL:

Resazurin	0.025g
-----------------	--------

Preparation of Resazurin Solution: Add resazurin to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Finely chop beef heart. Add approximately 1.5g of heart particles to test tubes. Add remaining components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes in 10.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Slowly cool tubes to prevent expulsion of meat particles.

Use: For the cultivation and maintenance of *Peptostreptococcus magnus*.

Cooked Meat Medium

Composition per liter:

Beef heart	454.0g
Proteose peptone	20.0g

NaCl.....	5.0g
Glucose	2.0g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Finely chop beef heart. Add approximately 1.5g of heart particles to test tubes. Add remaining components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes in 10.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Slowly cool tubes to prevent expulsion of meat particles.

Use: For the cultivation and maintenance of anaerobic microorganisms.

Cooked Meat Medium

Composition per liter:

Heart muscle	454.0g
Beef extract.....	10.0g
Peptone	10.0g
NaCl.....	5.0g
Glucose	2.0g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Finely chop beef heart. Add approximately 1.5g of heart particles to test tubes. Add remaining components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes in 10.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Slowly cool tubes to prevent expulsion of meat particles.

Use: For the cultivation and maintenance of aerobic and anaerobic microorganisms. For the cultivation of anaerobes, especially pathogenic clostridia.

Cooked Meat Medium

Composition per liter:

Heart tissue granules.....	98.0g
Peptic digest of animal tissue	20.0g
NaCl.....	5.0g
Glucose	2.0g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add approximately 1.0g of heart tissue granules to test tubes. Add remaining components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes in 10.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Slowly cool tubes to prevent expulsion of meat particles.

Use: For the cultivation of anaerobes, especially pathogenic clostridia.

Cooked Meat Medium with Glucose, Hemin, and Vitamin K

Composition per liter:

Heart tissue granules.....	98.0g
Peptic digest of animal tissue	20.0g
NaCl.....	5.0g

Glucose	5.0g
Yeast extract.....	5.0g
Hemin.....	5.0mg
Vitamin K.....	1.0mg

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add approximately 1.0g of heart tissue granules to test tubes. Add remaining components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes in 10.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Slowly cool tubes to prevent expulsion of meat particles.

Use: For the cultivation of anaerobes, especially pathogenic *Clostridia*.

Cooked Meat Medium with Glucose, Yeast Extract, and Cysteine

Composition per liter:

Heart muscle	454.0g
Glucose	12.0g
Beef extract	10.0g
Peptone.....	10.0g
NaCl	5.0g
K ₂ HPO ₄	5.0g
L-Cysteine-HCl.....	0.5g
Resazurin	1.0mg

pH 7.2 ± 0.2 at 25°C

Source: Cooked meat medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Finely chop beef heart. Add approximately 1.5g of heart particles to test tubes. Add remaining components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes in 10.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Slowly cool tubes to prevent expulsion of meat particles.

Use: For the cultivation and maintenance of *Clostridium sphenoides*.

Cooked Meat Medium with Peptone and Yeast Extract

Composition per liter:

Heart muscle	454.0g
Peptone.....	40.0g
Beef extract	10.0g
NaCl	5.0g
Yeast extract.....	5.0g
Glucose	2.0g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Finely chop beef heart. Add approximately 1.5g of heart particles to test tubes. Add remaining components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes in 10.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Slowly cool tubes to prevent expulsion of meat particles.

Use: For the cultivation and maintenance of *Peptostreptococcus magnus*.

Cooked Meat Medium, Modified

Composition per liter:

Cooked meat medium	66.0g
Solution A.....	1.0L

pH 6.8 ± 0.2 at 25°C

Cooked Meat Medium:

Composition per 481g:

Beef heart.....	454.0g
Proteose peptone.....	20.0g
NaCl.....	5.0g
Glucose	2.0g

Source: Cooked meat medium is available in dehydrated form from BD Diagnostic Systems.

Solution A:

Composition per liter:

Pancreatic digest of casein.....	10.0g
Glucose	2.0g
Soluble starch.....	1.0g
Sodium thioglycolate	1.0g
Neutral Red (1% aqueous).....	5.0mL

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until dissolved.

Preparation of Medium: Add 1.0g of dehydrated cooked meat medium to each of 66 test tubes. Add 15.0mL of solution A to each test tube. Allow meat particles to rehydrate. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of a variety of anaerobic microorganisms.

Cooked Meat Medium, Modified (BAM M43)

Composition per tube:

Cooked meat medium	1.0g
Diluent	1.0L

pH 6.8 ± 0.2 at 25°C

Cooked Meat Medium:

Composition per 481g:

Beef heart.....	454.0g
Proteose peptone.....	20.0g
NaCl.....	5.0g
Glucose	2.0g

Source: Cooked meat medium is available in dehydrated form from BD Diagnostic Systems.

Diluent:

Composition per liter:

Pancreatic digest of casein.....	10.0g
Glucose	2.0g
Soluble starch.....	1.0g
Sodium thioglycolate	1.0g
Neutral Red (1% aqueous).....	5.0mL

Preparation of Diluent: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until dissolved.

Preparation of Medium: Add 1.0g of dehydrated cooked meat medium and 15.0mL diluent to 20 × 150mm test tubes. Let meat particles rehydrate. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C.

Cook's Cytophaga Agar**Composition per liter:**

Agar	10.0g
Pancreatic digest of casein	2.0g
pH 7.3 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Lysobacter antibioticus*, *Lysobacter brunescens*, *Lysobacter enzymogenes*, *Lysobacter gummosus*, and other *Lysobacter* species.

Cook's Cytophaga Agar for Lysobacter**Composition per liter:**

Agar	12.0g
Pancreatic digest of casein	2.0g
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Lysobacter gummosus*.

Coprinus Medium**Composition per 1026.0mL:**

Agar	20.0g
Glucose	20.0g
Asparagine	2.0g
Pancreatic digest of casein	0.75g
Yeast extract	0.75g
Malt extract	0.60g
Salt solution	25.0mL
Thiamine solution	1.0mL
pH 6.8 ± 0.2 at 25°C	

Salt Solution:**Composition per 500.0mL:**

Na ₂ HPO ₄	45.0g
KH ₂ PO ₄	20.0g
Ammonium tartrate	10.0g
Na ₂ SO ₄ ·10H ₂ O	5.6g

Preparation of Salt Solution: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Filter sterilize.

Thiamine Solution:**Composition per 100.0mL:**

Thiamine	10.0mg
----------------	--------

Preparation of Thiamine Solution: Add thiamine to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except salt solution and thiamine solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 25.0mL of sterile salt solution and 1.0mL of sterile thiamine solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Coprinus cinereus*, *Dendrophoma obscurans*, and *Trichophyton violaceum*.

Coprothermobacter proteolyticus Medium**Composition per 1168.1mL:**

Yeast extract	2.0g
Trypticase™	2.0g
NaOH solution	1.0L
Gelatin solution	113.0mL
Na ₂ S solution	22.6mL
Solution A	10.0mL
Mineral salts solution	10.0mL
Solution B	2.0mL
Resazurin solution	0.5mL

NaOH Solution:**Composition per liter:**

NaOH	4.0g
------------	------

Preparation of NaOH Solution: Add NaOH to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Gelatin Solution:**Composition per 100.0mL:**

Gelatin	3.0g
---------------	------

Preparation of Gelatin Solution: Gently heat 100.0mL of distilled/deionized water to 80°C. Sparge with 100% N₂ for 15 min. Add the gelatin. Mix thoroughly. Sparge with 100% N₂ for 10 min. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S Solution:

Na ₂ S	2.5g
Distilled water	100 ml

Preparation of Na₂S Solution: Gently heat 100.0mL of distilled/deionized water to 100°C. Boil for 5 min. Sparge with 100% N₂ for 15 min. Add the Na₂S. Mix thoroughly. Sparge with 100% N₂ for 10 min. Autoclave for 15 min at 15 psi pressure–121°C.

Solution A:**Composition per liter:**

NH ₄ Cl	100.0g
MgCl ₂ ·H ₂ O	100.0g
CaCl ₂ ·2H ₂ O	40.0g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 4 with HCl.

Mineral Salts Solution:**Composition per liter:**

EDTA·2H ₂ O	0.5g
CoCl ₂ ·H ₂ O	0.15g
MnCl ₂ ·4H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g
ZnCl ₂	0.1g
AlCl ₃ ·H ₂ O	40mg
Na ₂ WO ₄ ·2H ₂ O	30mg
CuCl ₂ ·2H ₂ O	20mg
NiSO ₄ ·H ₂ O	20mg
H ₂ SeO ₃	10mg
H ₃ BO ₄	10mg
NaMoO ₄ ·2H ₂ O	10mg

Preparation of Mineral Salts Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 3 with HCl.

Solution B:

Composition per liter:

K₂HPO₄·3H₂O..... 200.0g

Preparation of Solution B: Add K₂HPO₄·3H₂O to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Resazurin Solution:

Composition per 100.0mL:

Resazurin 0.2g

Preparation of Resazurin Solution: Add resazurin to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Sparge 1.0L of NaOH solution with 100% CO₂ for 30 min. Add 2.0g of yeast extract and 2.0g of Trypticase™. Mix thoroughly. Add 10.0mL of solution A, 2.0mL of solution B, 0.5mL of resazurin solution, and 10.0mL of mineral salts solution with pipets which have been flushed a few times with 100% N₂. Mix thoroughly. Anaerobically distribute 9.0mL volumes into anaerobic tubes fitted with butyl rubber stoppers. Autoclave for 15 min at 15 psi pressure–121°C. One hour prior to inoculation, add 1.0mL of sterile gelatin solution and 0.2mL of sterile Na₂S solution to each 9.0mL of medium.

Use: For the cultivation of *Coprothermobacter proteolyticus*.

Corn Meal Agar

Composition per liter:

Corn meal, infusion from..... 50.0g

Agar 15.0g

pH 6.0 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For chlamyospore production by *Candida albicans* and the maintenance of fungal stock cultures.

Corn Meal Agar with Glucose

Composition per liter:

Agar 15.0g

Corn meal, infusion from..... 50.0g

Glucose 2.0g

pH 6.0 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of phytopathological and other fungi.

Corn Meal HiVeg Peptone Yeast Agar

Composition per liter:

Agar 20.0g

Cellulose 20.0g

Glucose 10.0g

Plant peptone 10.0g

Yeast extract..... 4.0g

pH 6.5 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of fungi.

Corn Milk Medium

Composition per liter:

Skim milk..... 20.0g

Agar 15.0g

Yeast extract..... 12.5g

Peptone 10.0g

Beef extract 5.0g

K₂HPO₄..... 5.0g

NaCl..... 5.0g

MgSO₄·7H₂O 1.0g

Corn steep liquor..... 7.0mL

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Bacillus subtilis*.

Corn Oil Medium

Composition per liter:

Agar 20.0g

Glucose 20.0g

Pancreatic digest of casein..... 5.0g

Peptic digest of animal tissue 5.0g

pH 6.8–7.0 at 25°C

Preparation of Medium: Add components, except corn oil, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes. Autoclave for 15 min at 15 psi pressure–121°C. Allow to cool in a slanted position. Add a few drops of sterile corn oil to the surface of the slants.

Use: For the cultivation and maintenance of *Pityrosporum ovale*.

Corn Steep Liquor Medium

Composition per liter:

Glucose 60.0g

Corn steep liquor..... 40.0g

Urea..... 8.0g

KH₂PO₄..... 5.0g

Fumaric acid 1.0g

MgSO₄·7H₂O 0.5g

Hutner's mineral base 20.0mL

pH 7.0 ± 0.2 at 25°C

Hutner's Mineral Base:

Composition per liter:

MgSO₄·7H₂O 29.7g

Nitilotriacetic acid 10.0g

CaCl₂·2H₂O 3.34g

FeSO ₄ ·7H ₂ O.....	99.0mg
(NH ₄) ₂ MoO ₄	9.25mg
Metals “44”.....	50.0mL

Preparation of Hutner’s Mineral Base: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L.

Metals “44”:

Composition per 100.0mL:

ZnSO ₄ ·7H ₂ O.....	1.1g
FeSO ₄ ·7H ₂ O.....	0.5g
EDTA.....	0.25g
MnSO ₄ ·7H ₂ O.....	0.154g
CuSO ₄ ·5H ₂ O.....	0.04g
Co(NO ₃) ₂ ·6H ₂ O.....	0.025g
Na ₂ B ₄ O ₇ ·10H ₂ O.....	0.018g

Preparation of Metals “44”: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Pseudomonas* species.

Corn Steep Starch Nutrient Agar

Composition per liter:

Soluble starch.....	10.0g
Agar.....	7.5g
Pancreatic digest of gelatin.....	2.5g
Beef extract.....	1.5g
Corn steep liquor.....	1.0mL

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Clostridium thermoamylolyticum*.

Cornmeal Agar (ATCC Medium 307)

Composition per liter:

Cornmeal.....	50.0g
Agar.....	7.5g

Preparation of Medium: Add cornmeal to distilled/deionized water and bring volume to 800.0mL. Leave overnight in refrigerator. Heat to 60°C for 1 hr. Bring volume to 1.0L with distilled/deionized water. Add agar. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of numerous fungi.

Cornmeal Agar (CMA)

Composition per liter:

Agar.....	20.0g
Cornmeal polenta.....	15.0g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add cornmeal polenta to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 30 min. Filter through Whatman #1 filter paper. Add agar to filtrate. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 10 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of many filamentous fungi.

Cornmeal Agar

Composition per liter:

Agar.....	15.0g
Cornmeal, solids from infusion.....	2.0g

pH 5.6–6.0 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems and Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of fungi.

Cornmeal Agar with Dextrose

Composition per liter:

Agar.....	15.0g
Cornmeal, solids from infusion.....	2.0g
Glucose.....	2.0g
Tween™ 80.....	1.0g

pH 5.6–6.0 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of phytopathological and other fungi.

Cornmeal Agar with Polysorbate 80

Composition per liter:

Agar.....	15.0g
Cornmeal, solids from infusion.....	2.0g
Tween™ 80.....	1.0g

pH 5.6–6.0 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems and Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of fungi. For the production of chlamydo spores by *Candida albicans* and the cultivation of phytopathological fungi.

Cornmeal Agar with Polysorbate 80 See: Cornmeal Agar

Cornmeal Agar, Quarter-strength (ATCC Medium 2221)

Composition per liter:

Agar	15.0g
Cornmeal infusion.....	250.0mL

pH 5.6–6.0 at 25°C

Cornmeal Infusion:

Composition per liter:

Yellow cornmeal	50.0g
-----------------------	-------

Preparation of Cornmeal Infusion: Add cornmeal to distilled/deionized water and bring volume to 1.0L. Gently heat and bring to boiling. Simmer for 10 minutes. Filter through cheesecloth. Return volume to 1.0 liter.

Preparation of Medium: Add agar to 250.0mL cornmeal infusion and bring volume to 1.0L with distilled/deionized water. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of fungi.

Cornmeal Agar with Soil Extract

Composition per liter:

Cornmeal.....	50.0g
Agar	7.5g
Soil extract.....	50.0mL

Soil Extract:

Composition per 200.0mL:

African Violet soil.....	77.0g
Na ₂ CO ₃	0.2g

Preparation of Soil Extract: Add components to 200.0mL of distilled/deionized water. Mix thoroughly. Autoclave for 60 min at 15 psi pressure–121°C. Filter through paper and reserve filtrate.

Preparation of Medium: Add cornmeal to distilled/deionized water and bring volume to 800.0mL. Leave overnight in refrigerator. Heat to 60°C for 1 hr. Add 50.0mL of soil extract. Bring volume to 1.0L with distilled/deionized water. Add agar. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Helicodendron tubulosum*, *Microsporium distortum*, *Mortierella humilis*, *Mortierella hygrophila*, *Mortierella minutissima*, and *Nigrospora sphaerica*.

Cornmeal Agar with Strep100 and Tet100 (ATCC Medium 2285)

Composition per liter:

Agar	15.0g
Cornmeal, solids from infusion	2.0g
Antibiotic solution	10.0mL

pH 5.6–6.0 at 25°C

Source: This medium without antibiotics is available as a premixed powder from BD Diagnostic Systems and Oxoid Unipath.

Preparation of Medium: Add components except antibiotic solution to 990.0mL distilled/deionized water. Mix thoroughly. Gently heat until boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45–50°C. Aseptically add 10.0mL sterile antibiotic solution. Mix thoroughly. Pour into sterile Petri dishes or leave in tubes.

Antibiotic Solution:

Composition per 10.0mL:

Tetracycline.....	0.1g
Streptomycin sulfate	0.1g

Preparation of Antibiotic Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Use: For the cultivation and maintenance of fungi.

Cornmeal *Phytophthora* Isolation Medium No. 1

Composition per liter:

Agar	15.0g
Cornmeal, solids from infusion	2.0g
Vancomycin	0.2g
Pentachloronitrobenzene (PCNB)	0.1g
Pimaricin.....	0.01g

pH 5.6–6.0 at 25°C

Preparation of Medium: Add components, except pimaricin and vancomycin, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add pimaricin and vancomycin. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the cultivation of *Phytophthora* species.

Cornmeal *Phytophthora* Isolation Medium No. 2

Composition per liter:

Agar	15.0g
Cornmeal, solids from infusion	2.0g
Vancomycin	0.3g
Pentachloronitrobenzene (PCNB)	0.025g
Pimaricin.....	5.0mg

pH 5.6–6.0 at 25°C

Preparation of Medium: Add components, except pimaricin and vancomycin, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add pimaricin and vancomycin. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the cultivation of *Phytophthora* species.

Cornmeal and V8 Juice Agar (ATCC Medium 309)

Composition per liter:

Agar	7.5g
CaCO ₃	3.0g
Cornmeal extract.....	800.0mL
V8 juice.....	200.0mL

pH 5.6–6.0 at 25°C

Cornmeal Extract:

Composition per 800.0mL:

Yellow cornmeal	50.0g
-----------------------	-------

Preparation of Cornmeal Extract: Add 50.0g of yellow cornmeal to 800 ml of water. Leave in 1 hour. Filter out cornmeal through cheesecloth. Bring volume back to 800.0mL.

Preparation of Medium: Combine components. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of fungi.

Cornmeal Yeast Extract Seawater Agar (ATCC Medium 2422)

Composition per liter:

Instant ocean	17.5g
Agar	15.0g
Yeast extract	1.0g
Cornmeal infusion	400.0mL

pH 7.2–7.5 at 25°C

Cornmeal Infusion:

Composition per liter:

Yellow cornmeal	50.0g
-----------------------	-------

Preparation of Cornmeal Infusion: Add cornmeal to distilled/deionized water and bring volume to 1.0L. Gently heat and bring to boiling. Simmer for 10 minutes. Filter through cheesecloth. Return volume to 1.0 liter.

Preparation of Medium: Add instant ocean, agar, and yeast extract to 400.0mL cornmeal infusion and bring volume to 1.0L with distilled/deionized water. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of fungi.

Cornmeal Yeast Glucose Agar (CMYG)

Composition per liter:

Agar	15.0g
Cornmeal, solids from infusion	2.0g
Glucose	2.0g
Yeast extract	1.0g

pH 5.6–6.0 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of numerous filamentous fungi.

Cornstarch Soluble Medium (CSSM)

Composition per liter:

Cornstarch	42.0g
<i>n</i> -Butanol	18.0g
Yeast extract	10.0g
Asparagine·H ₂ O	2.0g
(NH ₄) ₂ SO ₄	2.0g
NaCl	1.0g
KH ₂ PO ₄	0.75g
K ₂ HPO ₄	0.75g
L-Cysteine·HCl·H ₂ O	0.5g
MgSO ₄	0.02g
FeSO ₄ ·7H ₂ O	0.01g
MnSO ₄ ·H ₂ O	0.01g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until boiling. Boil and cool under 80% N₂ + 10% H₂ + 10% CO₂. Distribute anaerobically into tubes under the same gas mixture. Cap with butyl rubber stoppers. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Clostridium thermoamylolyticum*.

Cornstarch Soluble Medium (CSSM)/(ATCC Medium 1500)

Composition per liter:

Cornstarch	42.0g
Yeast extract	10.0g
Asparagine·H ₂ O	2.0g
(NH ₄) ₂ SO ₄	2.0g
NaCl	1.0g
KH ₂ PO ₄	0.75g
K ₂ HPO ₄	0.75g
L-Cysteine·HCl·H ₂ O	0.5g
MgSO ₄	0.02g
FeSO ₄ ·7H ₂ O	0.01g
MnSO ₄ ·H ₂ O	0.01g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until boiling. Boil and cool under 80% N₂ + 10% H₂ + 10% CO₂. Distribute anaerobically into tubes under the same gas mixture. Cap with butyl rubber stoppers. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Clostridium thermoamylolyticum*.

Corynebacterium Agar

Composition per liter:

Agar	15.0g
Beef extract	10.0g
Peptone	10.0g
NaCl	5.0g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Brevibacterium helvolum*, *Brevibacterium linens*, *Brochothrix thermosphacta*, *Cellulomonas cellasea*, *Corynebacterium ammoniagenes*, *Corynebacterium callunae*, *Corynebacterium glutamicum*, other *Corynebacterium* species, *Curtobacterium flaccumfaciens*, *Deinococcus radiodurans*, *Microbacterium laevaniformans*, *Mycobacterium vaccae*, *Rhodococcus equi*, *Rhodococcus fascians*, *Sporolactobacillus inulinus*, and *Streptococcus mutans*.

Corynebacterium Agar

Composition per liter:

Agar	15.0g
Beef extract	10.0g
Peptone	10.0g
NaCl	5.0g
MnSO ₄	10.0mg

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation, maintenance, and sporulation of *Bacillus* species.

Corynebacterium Agar**Composition per liter:**

Agar	15.0g
Tryptic digest of casein	10.0g
Glucose	5.0g
NaCl	5.0g
Yeast extract	5.0g

pH 7.2–7.4 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2–7.4. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of a wide variety of bacteria including *Arthrobacter atrocyaneus*, *Arthrobacter aurescens*, *Arthrobacter citreus*, *Arthrobacter crystallopoietes*, *Arthrobacter globiformis*, *Arthrobacter histidinovorans*, *Arthrobacter ilicis*, *Arthrobacter niconinovorans*, *Arthrobacter nicotianae*, *Arthrobacter oxydans*, *Arthrobacter pascens*, *Arthrobacter polychromogenes*, *Arthrobacter protophormiae*, *Arthrobacter ramosus*, *Arthrobacter* species, *Arthrobacter sulfureus*, *Arthrobacter uratoxydans*, *Arthrobacter ureafaciens*, *Arthrobacter viscosus*, *Aureobacterium barkeri*, *Aureobacterium liquefaciens*, *Aureobacterium saperdae*, *Aureobacterium* species, *Aureobacterium testaceum*, *Brevibacterium acetylicum*, *Brevibacterium casei*, *Brevibacterium epidermidis*, *Brevibacterium iodinum*, *Brevibacterium linens*, *Brevibacterium liquefaciens*, *Brevibacterium oxydans*, *Brevibacterium* species, *Brevibacterium stationis*, *Brochothrix thermosphacta*, *Cellulomonas biazotea*, *Cellulomonas cellasea*, *Cellulomonas cellulans*, *Cellulomonas fimi*, *Cellulomonas flavigena*, *Cellulomonas gelida*, *Cellulomonas turbata*, *Cellulomonas uda*, *Clavibacter michiganensis*, *Clavibacter xyli*, *Corynebacterium ammoniagenes*, *Corynebacterium bovis*, *Corynebacterium callunae*, *Corynebacterium flavescens*, *Corynebacterium glutamicum*, *Corynebacterium hoagii*, *Corynebacterium mycetoides*, *Corynebacterium renale*, *Corynebacterium* species, *Corynebacterium variabilis*, *Corynebacterium vitarumen*, *Curtobacterium albidum*, *Curtobacterium citreum*, *Curtobacterium flaccumfaciens*, *Curtobacterium luteum*, *Curtobacterium pusillum*, *Deinococcus proteolyticus*, *Deinococcus radiodurans*, *Enterococcus casseliflavus*, *Enterococcus faecalis*, *Enterococcus faecium*, *Enterococcus hirae*, *Kurthia gibsonii*, *Kurthia zopfii*, *Lactococcus lactis*, *Microbacterium imperiale*, *Microbacterium lacticum*, *Microbacterium laevaniformans*, *Micrococcus agilis*, *Micrococcus kristinae*, *Micrococcus lylae*, *Micrococcus nishinomiyaensis*, *Micrococcus roseus*, *Micrococcus sedentarius*, *Micrococcus* species, *Micrococcus varians*, *Nocardia corynebacteroides*, *Nocardia* species, *Nocardioides jensenii*, *Nocardioides simplex*, *Planococcus kocurii*, *Rathayibacter rathayi*, *Rhodococcus equi*, *Rhodococcus fascians*, *Staphylococcus arlettae*, *Staphylococcus aureus*, *Staphylococcus auricularis*, *Staphylococcus capitis*, *Staphylococcus caprae*, *Staphylococcus carnosus*, *Staphylococcus caseolyticus*, *Staphylococcus chromogenes*, *Staphylococcus cohnii*, *Staphylococcus epidermidis*, *Staphylococcus equorum*, *Staphylococcus gallinarum*, *Staphylococcus haemolyticus*, *Staphylococcus hominis*, *Staphylococcus hyicus*, *Staphylococcus intermedius*, *Staphylococcus kloosii*, *Staphylococcus lentus*, *Staphylococcus saprophyticus*, *Staphylococcus sciuri*, *Staphylococcus simulans*, *Staphylococcus* species, *Staphylococcus warneri*, *Staphylococcus xylosus*, *Stomatococcus mucilaginosus*, *Streptococcus bovis*, *Streptococcus canis*, *Streptococcus equinus*, *Streptococcus oralis*, *Streptococcus salivarius*, *Streptococcus sanguis*, *Terrabacter tumescens*, and *Tsukamurella paurometabolum*.

Corynebacterium Agar with Blood**Composition per liter:**

Agar	15.0g
Tryptic digest of casein	10.0g
Glucose	5.0g
NaCl	5.0g
Yeast extract	5.0g
Blood, defibrinated	50.0mL

Preparation of Medium: Add components, except defibrinated blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 50.0mL of defibrinated blood. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Brevibacterium incertum*, *Corynebacterium bovis*, *Corynebacterium kutscheri*, *Moraxella bovis*, *Streptococcus acidominimus*, *Streptococcus intestinalis*, *Streptococcus oralis*, and various other *Streptococcus* species.

Corynebacterium Agar with Salt**Composition per liter:**

NaCl	65.0g
Agar	15.0g
Tryptic digest of casein	10.0g
Glucose	5.0g
Yeast extract	5.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Micrococcus halobius*.

Corynebacterium Broth**Composition per liter:**

Tryptic digest of casein	10.0g
Glucose	5.0g
NaCl	5.0g
Yeast extract	5.0g

pH 7.2–7.4 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2–7.4. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Cellulomonas fimi*, *Clavibacter michiganensis*, *Corynebacterium* species, *Enterococcus faecalis*, *Enterococcus hirae*, *Lactococcus lactis*, *Micrococcus kristinae*, *Micrococcus* species, *Micrococcus varians*, *Staphylococcus warneri*, and *Streptococcus salivarius*.

**Corynebacterium diphtheriae
Virulence Test Medium**

See: K-L Virulence Agar

**Corynebacterium Liquid
Enrichment Medium****Composition per 2000.0mL:**

Fosfomycin	0.15g
Glucose 6-phosphate	0.03g
Solution A	985.0mL

Bovine serum	100.0mL
Nystatin solution	1.15mL
L-Cystine (1% solution)	1.0mL
Egg yolk emulsion	10 eggs
pH 7.4 ± 0.2 at 25°C	

Solution A:

Composition per liter:

Meat extract	9.0g
Proteose peptone No. 3	9.0g
NaCl	2.7g
Glucose	1.8g
Na ₂ HPO ₄ ·12H ₂ O	1.8g
K ₂ TeO ₃ (2% solution)	75.0mL
L-Cystine (1% solution)	10.0mL

Caution: Potassium tellurite is toxic.

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 985.0mL. Mix thoroughly. Filter sterilize.

Egg Yolk Emulsion:

Composition:

Chicken egg yolks	9
Whole chicken egg	1

Preparation of Egg Yolk Emulsion: Soak eggs with 1:100 dilution of saturated mercuric chloride solution for 1 min. Crack eggs and separate yolks from whites. Mix egg yolks with 1 chicken egg. Filter sterilize.

Nystatin Solution:

Composition per 10.0mL:

Nystatin	10,000U
----------------	---------

Preparation of Nystatin Solution: Add nystatin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

L-Cystine Solution:

Composition per 10.0mL:

L-Cystine	0.1g
-----------------	------

Preparation of L-Cystine Solution: Add L-cystine to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: To 985.0mL of sterile solution A, aseptically add the remaining components. Mix thoroughly. Aseptically distribute into sterile tubes in 2.0–3.0mL volumes.

Use: For the isolation and cultivation of *Corynebacterium diphtheriae*.

***Corynebacterium* Medium with Blood
(DSMZ Medium 240)**

Composition per liter:

Agar	15.0g
Casein peptone, tryptic digest	10.0g
Yeast extract	5.0g
Glucose	5.0g
NaCl	5.0g
Distilled water	1000.0mL
Sheep or horse blood, defibrinated	50.0mL
pH 7.3 ± 0.2 at 25°C	

Preparation of Medium: Add components, except sheep or horse blood, to distilled/deionized water and bring volume to 950.0mL. Mix

thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile sheep or horse blood. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Streptococcus alactolyticus*, *Corynebacterium* spp., *Desemzia incerta*=*Brevibacterium incertum*, and *Moraxella bovis*.

***Corynebacterium* Medium CII**

Composition per liter:

CaCO ₃	20.0g
Agar	15.0g
Sucrose	10.0g
Yeast extract	4.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Clavibacter michiganensis*.

***Corynebacterium* Medium with Salt
(DSMZ Medium 229)**

Composition per liter:

NaCl	65.0g
Agar	15.0g
Casein peptone, tryptic digest	10.0g
Yeast extract	5.0g
Glucose	5.0g

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Nesterenkonia halobia*=*Micrococcus halobius*.

Costein's LDS Test Medium

Composition per liter:

Meat peptone	4.5g
Papaic digest of soybean meal	2.0g
Yeast extract	3.0g
NaCl	5.0g
D-Glucose	1.0g
L-Lysine monohydrochloride	10.0g
Na ₂ S ₂ O ₃	0.2g
Fe(NH ₄) ₂ (SO ₄) ₂ ·6H ₂ O	0.2g
Bromocresol Purple	0.032
Agar	6.0g

pH 5.6 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes. Overlay with viscous paraffin. Autoclave for 15 min at 15 psi pressure–121°C. Allow tubes to solidify in a vertical position.

Use: For the identification of members of Enterobacteriaceae on the basis of lysine decarboxylase and hydrogen sulfide production.

Cow Manure Agar**Composition per liter:**

Cow manure.....	50.0g
Agar	15.0g

Preparation of Medium: Add cow manure to tap water and bring volume to 1.0L. Gently heat and bring to boiling. Boil for 1 hr. Filter through cheesecloth. Filter through Whatman filter paper. Bring volume to 1.0L with tap water. Add agar. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Streptomyces* species.

CP Medium**Composition per liter:**

Peptone.....	2.5g
Starch	2.0g
NaNO ₃	0.38g
Tris(hydroxymethyl)aminomethane buffer.....	0.25g
K ₂ HPO ₄	0.038g
MgSO ₄ ·7H ₂ O.....	0.038g
CaCl ₂ ·2H ₂ O.....	0.017g
NaCl.....	0.013g
TC vitamins minimal eagle, 100X.....	5.0mL
Solution 1.....	1.0mL
Solution 2.....	1.0mL
Solution 3.....	1.0mL
Solution 4.....	1.0mL
Vitamin B ₁₂ solution.....	0.2mL

pH 8.7 ± 0.2 at 25°C

TC Vitamins Minimal Eagle 100X:**Composition per liter:**

Inositol.....	2.0mg
Choline chloride.....	1.0mg
Folic acid.....	1.0mg
Nicotinamide.....	1.0mg
Calcium pantothenate.....	1.0mg
Pyridoxal.....	1.0mg
Thiamine-HCl.....	1.0mg
Riboflavin.....	0.1mg

Preparation of TC Vitamins Minimal Eagle, 100X: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Solution 1:**Composition per 100.0mL:**

EDTA.....	5.0g
KOH.....	3.1g

Preparation of Solution 1: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Solution 2:**Composition per liter:**

FeSO ₄ ·7H ₂ O.....	4.98g
---	-------

Preparation of Solution 2: Add FeSO₄·7H₂O to distilled/deionized water acidified with 1.0mL of H₂SO₄. Bring volume to 1.0L. Mix thoroughly.

Solution 3:**Composition per 100.0mL:**

H ₃ BO ₃	1.14g
--------------------------------------	-------

Preparation of Solution 3: Add H₃BO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Solution 4:**Composition per 100.0mL:**

ZnSO ₄ ·7H ₂ O.....	0.88g
MnCl ₂ ·4H ₂ O.....	0.144g
MoO ₃	0.071g
CoNO ₃ ·6H ₂ O.....	0.049g
CuSO ₄ ·5H ₂ O.....	0.016g

Preparation of Solution 4: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Vitamin B₁₂ Solution**Composition per 10.0mL:**

Vitamin B ₁₂	10.0mg
-------------------------------	--------

Preparation of Vitamin B₁₂ Solution: Add vitamin B₁₂ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except for vitamin solutions, to distilled/deionized water and bring volume to 995.0mL. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add vitamin solutions. Mix thoroughly.

Use: For the cultivation of *Lysobacter* species.

CP Medium for *Coprothermobacter proteolyticus***Composition per 1010.0mL:**

NaHCO ₃	8.4g
Pancreatic digest of casein.....	2.0g
Yeast extract.....	2.0g
MgCl ₂ ·6H ₂ O.....	1.0g
NH ₄ Cl.....	1.0g
CaCl ₂ ·2H ₂ O.....	0.4g
K ₂ HPO ₄ ·3H ₂ O.....	0.4g
Resazurin.....	0.5mg
Gelatin solution.....	100.0mL
Na ₂ S·9H ₂ O solution.....	10.0mL
Wolfe's mineral solution.....	10.0mL

pH 7.0 ± 0.2 at 25°C

Gelatin Solution:**Composition per 100.0mL:**

Gelatin.....	3.0g
--------------	------

Preparation of Gelatin Solution: Add gelatin to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O.....	0.5g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Before use, neutralize to pH 7.0 with sterile HCl.

Wolfe's Mineral Solution:**Composition per liter:**

MgSO ₄ ·7H ₂ O.....	3.0g
Nitritotriacetic acid.....	1.5g
NaCl.....	1.0g
MnSO ₄ ·2H ₂ O.....	0.5g

CoCl ₂ ·6H ₂ O	0.1g
ZnSO ₄ ·7H ₂ O	0.1g
CaCl ₂ ·2H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g
NiCl ₂ ·6H ₂ O	0.025g
KAl(SO ₄) ₂ ·12H ₂ O	0.02g
CuSO ₄ ·5H ₂ O	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O	0.3mg

Preparation of Wolfe's Mineral Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Adjust pH to 6.8.

Preparation of Medium: Prepare medium anaerobically under 100% CO₂. Add components, except gelatin solution, Na₂S·9H₂O solution, and Wolfe's mineral solution, to distilled/deionized water and bring volume to 880.0mL. Mix thoroughly. Gently heat and bring to boiling. Cool to room temperature while sparging with 100% CO₂. Sparge with 100% CO₂ for 20 min. Adjust pH to 7.0. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 100.0mL of sterile gelatin solution, 10.0mL of sterile Na₂S·9H₂O solution, and 10.0mL of sterile Wolfe's mineral solution to each tube. Mix thoroughly.

Use: For the cultivation of *Coprothermobacter proteolyticus*.

CP Medium for *Thermobacteroides leptospartum*

Composition per 1010.0mL:

NaHCO ₃	8.4g
Pancreatic digest of casein	2.0g
Yeast extract	2.0g
MgCl ₂ ·6H ₂ O	1.0g
NH ₄ Cl	1.0g
CaCl ₂ ·2H ₂ O	0.4g
K ₂ HPO ₄ ·3H ₂ O	0.4g
Resazurin	0.5mg
Glucose solution	100.0mL
Na ₂ S·9H ₂ O solution	10.0mL
Wolfe's mineral solution	10.0mL

pH 7.0 ± 0.2 at 25°C

Glucose Solution:

Composition per 100.0mL:

D-Glucose	5.0g
-----------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.5g
---	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Before use, neutralize to pH 7.0 with sterile HCl.

Wolfe's Mineral Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O	3.0g
Nitrilotriacetic acid	1.5g
NaCl	1.0g

MnSO ₄ ·2H ₂ O	0.5g
CoCl ₂ ·6H ₂ O	0.1g
ZnSO ₄ ·7H ₂ O	0.1g
CaCl ₂ ·2H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g
NiCl ₂ ·6H ₂ O	0.025g
KAl(SO ₄) ₂ ·12H ₂ O	0.02g
CuSO ₄ ·5H ₂ O	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O	0.3mg

Preparation of Wolfe's Mineral Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Adjust pH to 6.8.

Preparation of Medium: Prepare medium anaerobically under 100% CO₂. Add components, except glucose solution, Na₂S·9H₂O solution, and Wolfe's mineral solution, to distilled/deionized water and bring volume to 880.0mL. Mix thoroughly. Gently heat and bring to boiling. Cool to room temperature while sparging with 100% CO₂. Sparge with 100% CO₂ for 20 min. Adjust pH to 7.0. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 100.0mL of sterile glucose solution, 10.0mL of sterile Na₂S·9H₂O solution, and 10.0mL of sterile Wolfe's mineral solution to each tube. Mix thoroughly.

Use: For the cultivation of *Thermobacteroides leptospartum*.

CPC Agar

See: [Cellobiose Polymyxin Colistin Agar](#)

CPC Agar Base

with Cellobiose, Colistin, and Polymyxin B

Composition per liter:

NaCl	20.0g
Agar	15.0g
Cellobiose	15.0g
Peptic digest of animal tissue	10.0g
Beef extract	5.0g
Bromthymol Blue	0.04g
Cresol Red	0.04g
Cellobiose colistin polymyxin B solution	100.0mL

pH 7.6 ± 0.2 at 25°C

Source: This medium, without cellobiose colistin polymyxin B solution, is available as a premixed powder from HiMedia.

Cellobiose Colistin Polymyxin B Solution:

Composition per 100.0mL:

Cellobiose	15.0g
Colistin	1,360,000U
Polymyxin B	100,000U

Preparation of Cellobiose Colistin Polymyxin B Solution:

Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except cellobiose colistin polymyxin B solution, to tap water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 100.0mL of sterile cellobiose colistin polymyxin B solution to 900.0 mL of the cooled agar base. Mix thoroughly. Pour into sterile Petri dishes. Use within 7 days.

Use: For the cultivation and identification of *Vibrio* species from foods.

CPC HiVeg Agar Base with Cellobiose, Colistin, and Polymyxin B

Composition per liter:

NaCl	20.0g
Agar	15.0g
Cellobiose	15.0g
Plant peptone	10.0g
Plant extract	5.0g
Bromthymol Blue	0.04g
Cresol Red	0.04g
Cellobiose colistin polymyxin B solution	100.0mL
pH 7.6 ± 0.2 at 25°C	

Source: This medium, without cellobiose colistin polymyxin B solution, is available as a premixed powder from HiMedia.

Cellobiose Colistin Polymyxin B Solution:

Composition per 100.0mL:

Cellobiose	15.0g
Colistin	1,360,000U
Polymyxin B	100,000U

Preparation of Cellobiose Colistin Polymyxin B Solution:

Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except cellobiose colistin polymyxin B solution, to tap water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 100.0mL of sterile cellobiose colistin polymyxin B solution to 900.0 mL of the cooled agar base. Mix thoroughly. Pour into sterile Petri dishes. Use within 7 days.

Use: For the cultivation and identification of *Vibrio* species from foods.

CPC Medium

Composition per liter:

Sucrose	30.0g
Peptone	2.0g
Casein hydrolysate	1.0g
K ₂ HPO ₄ ·3H ₂ O	1.0g
KCl	0.5g
MgSO ₄ ·7H ₂ O	0.5g
FeSO ₄ ·7H ₂ O	0.1g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Actinoplanes* species.

CR Agar

See: [Congo Red Agar](#)

Craig's Medium

Composition per liter:

Casein acid hydrolysate	30.0g
Yeast extract	4.0g

K ₂ HPO ₄	0.5g
Glucose solution	20.0mL
pH 7.2 ± 0.2 at 25°C	

Source: This medium is available from HiMedia.

Glucose Solution:

Composition per 100.0mL:

Glucose	20.0g
---------------	-------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except glucose solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add glucose solution. Mix thoroughly. Aseptically distribute into sterile tubes.

Use: For the enrichment and cultivation of *Vibrio cholerae* during testing of enterotoxigenicity.

CRAMP Agar

See: [Congo Red Acid Morpholinepropanesulfonic Acid Pigmentation Agar](#)

CRAMP HiVeg Agar Base

Composition per liter:

Agarose	14.0g
Morpholine propane sulfonic acid	8.4g
Tricine	1.8g
NaCl	2.9g
Galactose	2.0g
Plant acid hydrolysate	2.0g
Na ₂ S ₂ O ₃	0.6g
NH ₄ Cl	0.5g
K ₂ HPO ₄	0.24g
MgSO ₄	0.0986g
Congo Red	0.005g

pH 5.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 5.3. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Yersinia* species with plasmids.

CREA

(Creatine Agar)

Composition per liter:

Sucrose	30.0g
Agar	15.0g
Creatine·H ₂ O	3.0g
K ₃ P0 ₄ ·7H ₂ O	1.6g
Bromcresol Purple	50.0mg
Minerals solution	10.0mL
Trace minerals solution	1.0mL

Minerals Solution:**Composition per 100.0mL:**

KCl.....	5.0g
MgSO ₄ ·7H ₂ O.....	5.0g
FeSO ₄ ·7H ₂ O.....	0.1g

Preparation of Minerals Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Trace Minerals Solution:**Composition per 100.0mL:**

ZnSO ₄ ·7H ₂ O.....	1.0g
CuSO ₄ ·5H ₂ O.....	0.5g

Preparation of Trace Minerals Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Penicillium* species.

Creatinine Agar**Composition per liter:**

Agar.....	15.0g
Na ₂ HPO ₄ ·12H ₂ O.....	9.0g
NaCl.....	5.0g

MgSO ₄ ·7H ₂ O.....	0.2g
MnCl ₂ ·4H ₂ O.....	20.0mg
CaCl ₂	1.2mg
Glucose solution.....	100.0mL

Glucose Solution:**Composition per 100.0mL:**

Glucose.....	5.0g
--------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Warm to 50°C.

Preparation of Medium: Add components, except glucose solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 100.0mL of sterile glucose solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Pseudomonas* species and other bacteria that can utilize creatinine.

Creatinine Medium**Composition per liter:**

Creatinine.....	5.0g
Agar.....	2.0g
Fumaric acid.....	2.0g
K ₂ HPO ₄	2.0g
Yeast extract.....	1.0g
Salt solution.....	10.0mL

pH 6.8 ± 0.2 at 25°C

Salt Solution:**Composition per liter:**

MgSO ₄	12.2g
FeSO ₄ ·7H ₂ O.....	2.8g
MnSO ₄ ·H ₂ O.....	1.7g
CaCl ₂ ·2H ₂ O.....	0.76g
NaCl.....	0.6g
Na ₂ MoO ₄ ·2H ₂ O.....	0.1g
ZnSO ₄ ·7H ₂ O.....	0.06g
HCl (0.1N solution).....	1.0L

Preparation of Salt Solution: Dissolve salts in 1.0L of 0.1N HCl solution. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.8 with NaOH or KOH. Gently heat until boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Pseudomonas* species.

**Creatinine Medium
(LMG 107)****Composition per liter:**

Creatinine.....	5.0g
Fumaric acid.....	2.0g
K ₂ HPO ₄	2.0g
Yeast extract.....	1.0g
Salt solution.....	10.0mL

pH 6.8 ± 0.2 at 25°C

Salt Solution:**Composition per liter:**

MgSO ₄ ·7H ₂ O.....	25.0g
FeSO ₄ ·7H ₂ O.....	2.8g
MnSO ₄ ·H ₂ O.....	1.7g
CaCl ₂ ·2H ₂ O.....	0.76g
NaCl.....	0.6g
Na ₂ MoO ₄ ·2H ₂ O.....	0.1g
ZnSO ₄ ·7H ₂ O.....	60.0mg
HCl (0.1M solution).....	1.0L

Preparation of Salt Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Flavobacterium filamentosum*.

Creatinine/NMH Medium**Composition per 1100.0mL:**

Yeast extract.....	5.0g
NaCl.....	1.0g
NaHCO ₃	1.0g
MgSO ₄ ·7H ₂ O.....	0.5g
Na ₂ S·9H ₂ O.....	0.5g
MnCl ₂ ·4H ₂ O.....	0.06g
CaSO ₄ ·2H ₂ O.....	0.05g
FeSO ₄ ·7H ₂ O.....	0.01g
Na ₂ SeO ₃ ·5H ₂ O.....	26.0µg
Vitamin B ₁₂	20.0µg
Resazurin.....	1.0mg

Phosphate solution	100.0mL
Creatinine solution	100.0mL
Trace elements solution SL-4	10.0mL
Vitamin solution	10.0mL
L-Cysteine-HCl solution	10.0mL
Na ₂ S·9H ₂ O solution	10.0mL

pH 7.0 ± 0.2 at 25°C

Phosphate Solution:**Composition per 100.0mL:**

K ₂ HPO ₄	5.33g
KH ₂ PO ₄	2.64g

Preparation of Phosphate Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Creatinine Solution:**Composition per 100.0mL:**

Creatinine	5.5g
------------------	------

Preparation of Creatinine Solution: Add creatinine to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Trace Elements Solution SL-4:**Composition per liter:**

EDTA	0.5g
FeSO ₄ ·7H ₂ O	0.2g
Trace elements solution SL-6	100.0mL

Trace Elements Solution SL-6:**Composition per liter:**

MnCl ₂ ·4H ₂ O	0.5g
H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
Na ₂ MoO ₄ ·2H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Trace Elements Solution SL-4: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Vitamin Solution:**Composition per liter:**

Pyridoxine-HCl	10.0mg
Calcium DL-pantothenate	5.0mg
Lipoic acid	5.0mg
Nicotinic acid	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Riboflavin	5.0mg
Thiamine-HCl	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

L-Cysteine-HCl Solution:**Composition per 10.0mL:**

L-Cysteine-HCl	0.5g
----------------------	------

Preparation of L-Cysteine-HCl Solution: Add L-cysteine-HCl to distilled/deionized water and bring volume to 10.0mL. Mix thorough-

ly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O	0.5g
---	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except creatinine solution, phosphate solution, L-cysteine-HCl solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 880.0mL. Mix thoroughly. Adjust pH to 7.0. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 100.0mL of sterile phosphate solution, 10.0mL of sterile L-cysteine-HCl solution, and 10.0mL of sterile Na₂S·9H₂O solution. Immediately prior to use, aseptically and anaerobically add 100.0mL of sterile creatinine solution. Mix thoroughly. Aseptically and anaerobically distribute into tubes or bottles.

Use: For the cultivation and maintenance of *Clostridium* species.

CreDm1 Medium**Composition per 1002.0mL:**

Solution A	980.0mL
Solution D (Vitamin solution)	10.0mL
Solution E	10.0mL
Solution B (Trace elements solution SL-10)	1.0mL
Solution C (Selenite-tungstate solution)	1.0mL

pH 6.7–6.9 at 25°C

Solution A:**Composition per 980.0mL:**

KH ₂ PO ₄	1.4g
NH ₄ Cl	0.5g
MgCl ₂ ·6H ₂ O	0.2g
CaCl ₂ ·2H ₂ O	0.15g
Yeast extract	50.0mg

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B (Trace Elements Solution SL-10):**Composition per liter:**

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Solution B (Trace Elements Solution SL-10):

Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C (Selenite-Tungstate Solution):**Composition per liter:**

NaOH	0.5g
Na ₂ WO ₄ ·2H ₂ O	4.0mg
Na ₂ SeO ₃ ·5H ₂ O	3.0mg

Preparation of Solution C (Selenite-Tungstate Solution):

Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Solution D (Vitamin Solution):

Composition per liter:

Pyridoxine-HCl	10.0mg
Calcium DL-pantothenate	5.0mg
Lipoic acid	5.0mg
Nicotinic acid	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Riboflavin	5.0mg
Thiamine-HCl	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Solution D (Vitamin Solution): Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Solution E:

Composition per 10.0mL:

Disodium-DL-malate	1.6g
--------------------------	------

Preparation of Solution E: Add disodium-DL-malate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Aseptically combine 980.0mL of sterile solution A with 1.0mL of sterile solution B, 1.0mL of sterile solution C, 10.0mL of sterile solution D, and 10.0mL of sterile solution E, in that order. Mix thoroughly. Adjust pH to 6.7–6.9. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Campylobacter* species.

Crithidia Medium

Composition per liter:

Sucrose	15.0g
Pancreatic digest of casein	6.0g
Yeast extract	1.0g
Liver concentrate	0.1g
Hemin solution	5.0mL

pH 7.8 ± 0.2 at 25°C

Hemin Solution:

Composition per 2.5mL:

Hemin	25.0mg
Triethanolamine (TEA)	2.5mL

Preparation of Hemin Solution: Add hemin to 2.5mL triethanolamine. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.8. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Slight hemin precipitate may occur.

Use: For the cultivation of *Crithidia acanthocephali*, *Crithidia deanei*, *Crithidia fasciculata*, *Crithidia hamosa*, *Crithidia hutneri*, *Crithidia luciliae*, *Crithidia mellificae*, *Crithidia oncopelti*, *Crithidia* species, *Herpetomonas samuelpessoai*, *Leptomonas pyrrocoris*, and *Phytomonas davidi*.

CRMOX Agar

See: [Congo Red-Magnesium Oxalate Agar](#)

Crossley Milk Medium

Composition per liter:

Skim milk powder	100.0g
Peptone	10.0g
Bromocresol Purple	0.1g

pH 5.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add components to a very small volume of distilled/deionized water and mix to a paste. Gradually add more distilled/deionized water and bring volume to 1.0L. Distribute in 10.0mL volumes into tubes. Autoclave for 5 min at 15 psi pressure–121°C.

Use: For the routine examination of canned food samples for anaerobic bacteria.

Cryptoanaerobacter Medium (DSMZ Medium 1022)

Composition per liter:

Solution A	650.0mL
<i>Clostridium sporogenes</i> supernatant	350.0mL

pH 7.5–8.0 at 25°C

Solution A:

Composition per 650.0mL:

Yeast extract	5.0g
NaHCO ₃	4.0g
Casamino acids	1.0g
4-Hydroxybenzoic acid	0.45g
KH ₂ PO ₄	0.4g
NH ₄ Cl	0.4g
Resazurin	0.5mg
Vitamin solution	10.0mL
Magnesium chloride solution	10.0mL
Calcium chloride solution	10.0mL
Trace element solution SL-10	1.0mL
Selenite/tungstate solution	1.0mL

Selenite/Tungstate Solution:

Composition per liter:

NaOH	0.5g
Na ₂ WO ₄ ·2H ₂ O	4.0mg
Na ₂ SeO ₃ ·5H ₂ O	3.0mg

Preparation of Selenite/Tungstate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution SL-10:

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thor-

oughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl.....	10.0mg
Thiamine-HCl·2H ₂ O.....	5.0mg
Riboflavin.....	5.0mg
Nicotinic acid.....	5.0mg
D-Ca-pantothenate.....	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Lipoic acid.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Magnesium Chloride Solution:

Composition per 10.0mL:

MgCl ₂ ·6H ₂ O.....	0.08g
---	-------

Preparation of Magnesium Chloride Solution: Add MgCl₂·6H₂O to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Calcium Chloride Solution:

Composition per 10.0mL:

CaCl ₂ ·2H ₂ O.....	0.06g
---	-------

Preparation of Calcium Chloride Solution: Add CaCl₂·2H₂O to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Solution A: Add components, except bicarbonate, magnesium chloride and calcium chloride solution, to distilled/deionized water and bring volume to 630.0mL. Mix thoroughly. Adjust pH to 7.0–7.5. Gently heat and bring to boiling. Boil for 3 min. Cool while sparging with 80% N₂ + 20% CO₂. Add the solid bicarbonate. Adjust the pH to 7.8. Dispense under 80% N₂ + 20% CO₂ gas atmosphere into anaerobic vials. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anoxically add magnesium chloride and calcium chloride solutions. Adjust final pH of the medium to pH 7.7. Note: It may be necessary to add 10–20 mg sodium dithionite per liter (e.g., from 5% (w/v) solution, freshly prepared under N₂ and filter sterilized), if the solution is not completely reduced after inoculation.

Clostridium sporogenes Supernatant:

Composition per liter:

Yeast extract.....	5.0g
NaHCO ₃	4.0g
Casamino acids.....	1.0g
KH ₂ PO ₄	0.4g
NH ₄ Cl.....	0.4g
Resazurin.....	0.5mg
Vitamin solution.....	10.0mL
Magnesium chloride solution.....	10.0mL
Calcium chloride solution.....	10.0mL
Na ₂ S·9H ₂ O solution.....	10.0mL
Trace element solution SL-10.....	1.0mL
Selenite-tungstate solution.....	1.0mL
<i>Clostridium sporogenes</i>	Variable

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	0.3g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Preparation of *Clostridium sporogenes* Supernatant: Add components, except bicarbonate, Na₂S·9H₂O solution, magnesium chloride and calcium chloride solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Adjust pH to 7.0–7.5. Gently heat and bring to boiling. Boil for 3 min. Cool while sparging with 80% N₂ + 20% CO₂. Add the solid bicarbonate. Adjust the pH to 7.8. Dispense under 80% N₂ + 20% CO₂ gas atmosphere into anaerobic bottles. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anoxically add Na₂S·9H₂O solution, magnesium chloride and calcium chloride solutions. Adjust final pH to pH 7.0. Inoculate with *Clostridium* sp. DSM 754. Incubate for 5 to 8 days at 37°C. Disrupt cells of the grown culture by autoclaving for 20 min at 15 psi pressure–121°C. Centrifuge autoclaved culture at 18,000g for 20 min. Discard cell pellet. Store the supernatant in screw-capped bottles at –20°C. Before use sterilize the supernatant by autoclaving under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature under 100% N₂.

Preparation of Medium: Aseptically and anoxically combine 650.0mL of solution A with 350.0mL of *Clostridium sporogenes* supernatant.

Use: For the cultivation of *Cryptoanaerobacter* spp.

Cryptococcus neoformans Screen Medium

See: [CN Screen Medium](#)

CRYS Medium

Composition per liter:

Stock extract.....	500.0mL
2× PP medium.....	500.0mL

Stock Extract:

Composition per 500.0mL:

Cerophyll.....	5.0g
Brown rice.....	5.0g
Yeast extract.....	5.0g
Dried seaweed.....	5.0g

Preparation of Stock Extract: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 5 min. Filter three times through Whatman #1 filter paper while still hot. Cool to room temperature. Adjust pH to 7.2. Bring volume to 500.0mL with distilled/deionized water. Autoclave for 15 min at 15 psi pressure–121°C.

2× PP Medium:

Composition per 500.0mL:

Proteose peptone.....	10.0g
Pancreatic digest of peptone.....	10.0g
Ribonucleic acid from <i>Torula</i> yeast.....	1.0g
Asolectin.....	0.2g
Artificial seawater.....	167.0mL
Vitamin solution.....	2.0mL

Artificial Seawater:**Composition** per 167.0mL:

Aqua-Marin sea salts 6.95g

Source: Aqua-Marin sea salts are available from Aquatrol, Inc., Anaheim, CA.

Preparation of Artificial Seawater: Add Aqua-Marin sea salts to distilled/deionized water and bring volume to 167.0mL. Mix thoroughly. Filter sterilize.

Vitamin Solution:**Composition** per 100.0mL:

Thiamine-HCl 150.0mg

Calcium D-(+)-pantothenate..... 100.0mg

Folic acid..... 50.0mg

Nicotinamide..... 50.0mg

Pyridoxal-HCl..... 50.0mg

Riboflavin 50.0mg

DL-6-Thioctic acid..... 1.0mg

Biotin solution..... 10.0mL

Biotin Solution:**Composition** per 10.0mL:

Biotin 0.01mg

Preparation of Biotin Solution: Add biotin to 10.0mL of absolute ethanol. Mix thoroughly.

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. For long-term storage, preserve under nitrogen at -20°C .

Preparation of 2× PP Medium: Add asolectin to 200.0mL of distilled/deionized water. Gently heat to 80°C . Mix thoroughly. Add other components, except artificial seawater and vitamin solution, to distilled/deionized water and bring volume to 331.0mL. Mix thoroughly. Adjust pH to 7.2. Autoclave for 15 min at 15 psi pressure– 121°C . Aseptically add 167.0mL of sterile artificial seawater and 2.0mL of sterile vitamin solution. Mix thoroughly.

Preparation of Medium: Aseptically combine 500.0mL of sterile stock extract with 500.0mL of sterile 2× PP medium. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Pseudocohnilembus marinus*.

Crystal Violet Agar**Composition** per liter:

Agar 15.0g

Lactose 10.0g

Proteose peptone 5.0g

Beef extract 3.0g

Crystal Violet 3.3mg

pH 6.8 ± 0.1 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure– 121°C . Pour into sterile Petri dishes or leave in tubes.

Use: For the differentiation of pathogenic staphylococci from non-pathogenic staphylococci. Hemolytic and coagulating strains of *Staphylococcus aureus* appear as purple or yellow colonies. Nonhemolytic and noncoagulating strains of *Staphylococcus* species appear as white colonies.

Crystal Violet Azide Esculin Agar**Composition** per liter:

Agar 15.0g

Glucose 5.0g

NaCl 5.0g

Proteose peptone 5.0g

Pancreatic digest of casein..... 5.0g

Meat extract 3.0g

Esculin 1.0g

NaN_3 1.0g

Crystal Violet..... 0.1g

Bovine blood, citrated..... 100.0mL

pH 7.5 ± 0.2 at 25°C

Caution: Sodium azide is toxic. Azides also react with metals and disposal must be highly diluted.

Preparation of Medium: Add components, except citrated bovine blood, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure– 121°C . Cool to 45° – 50°C . Aseptically add sterile, citrated bovine blood. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Erysipelothrix rhusiopathiae*.

Crystal Violet Esculin Agar**Composition** per liter:

Agar 15.0g

Glucose 5.0g

NaCl 5.0g

Proteose peptone 5.0g

Pancreatic digest of casein..... 5.0g

Meat extract 3.0g

Esculin 1.0g

Crystal Violet..... 2.0mg

Blood, citrated..... 100.0mL

pH 7.5 ± 0.2 at 25°C

Preparation of Medium: Add components, except citrated blood, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure– 121°C . Cool to 45° – 50°C . Aseptically add citrated blood. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Erysipelothrix rhusiopathiae*.

Crystal Violet Lactose Agar**Composition** per liter:

Agar 15.0g

Lactose..... 10.0g

Proteose peptone 5.0g

Beef extract 3.0g

Crystal Violet..... 3.3mg

pH 6.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure– 121°C . Pour into sterile Petri dishes or leave in tubes.

Use: For the differentiation of pure cultures of pathogenic and non-pathogenic staphylococci.

Crystal Violet Lactose Broth

Composition per liter:

Lactose	5.0g
Peptic digest of animal tissue.....	5.0g
K ₂ HPO ₄	5.0g
KH ₂ PO ₄	1.0g
Crystal Violet.....	1.43mg

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the differentiation of pure cultures of pathogenic and non-pathogenic staphylococci.

Crystal Violet Lactose HiVeg Agar

Composition per liter:

Agar	15.0g
Lactose	10.0g
Plant peptone No. 3.....	5.0g
Plant extract	3.0g
Crystal Violet.....	3.3mg

pH 6.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the differentiation of pure cultures of pathogenic and non-pathogenic staphylococci.

Crystal Violet Pectate Medium (CVP Medium)

Composition per liter:

Sodium polypectate.....	9.0g
Agar	2.0g
NaNO ₃	1.0g
NaOH (1N solution).....	4.5mL
CaCl ₂ ·H ₂ O (10% solution).....	3.0mL
Crystal Violet (0.075% solution)	1.0mL
Sodium lauryl sulfate (10% solution).....	0.5mL

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: In a preheated blender, add 500.0mL of boiling distilled/deionized water and the components, except sodium polypectate and sodium lauryl sulfate solution. Blend at high speed for 15 sec. Continue blending at low speed and slowly add 9.0g of sodium polypectate. Pour the incomplete medium into a 2L flask and add 0.5mL of sodium lauryl sulfate solution. Mix thoroughly. Cap flask with an aluminum foil seal rather than cotton. Autoclave for 25 min at 15 psi pressure–121°C. Pour medium quickly into sterile Petri dishes. Allow plates to dry at 25°C for 48 hr before use.

Use: For the cultivation of pectinolytic microorganisms, such as *Erwinia* species, from foods.

Crystal Violet Pectate Medium (CVP Medium)

Composition per liter:

Sodium polypectate	18.0g
Agar	4.0g
NaNO ₃	2.0g
CaCl ₂ ·2H ₂ O	0.6g
NaOH.....	0.36g
Sodium lauryl sulfate	0.1g
Crystal Violet	1.5mg

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of pectinolytic microorganisms, such as *Erwinia* species, from foods.

Crystal Violet Tetrazolium Agar Base

Composition per liter:

Agar	15.0g
Casein enzymatic hydrolysate	5.0g
Yeast extract.....	2.5g
Glucose	1.0g
Crystal Violet.....	1.0mg
2,3,5-Triphenyltetrazolium chloride solution.....	10.0mL

pH 7.0 ± 0.2 at 25°C

Source: This medium, without triphenyltetrazolium chloride solution, is available as a premixed powder from HiMedia.

Caution: Sodium azide is toxic. Azides also react with metals and disposal must be highly diluted.

2,3,5-Triphenyltetrazolium Chloride Solution:

Composition per 10.0mL:

2,3,5-Triphenyltetrazolium chloride.....	0.1g
--	------

Preparation of 2,3,5-Triphenyltetrazolium Chloride Solution: Add 2,3,5-triphenyltetrazolium chloride to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except 2,3,5-triphenyltetrazolium chloride solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 10 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL 2,3,5-triphenyltetrazolium chloride solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the detection of Gram-negative psychrotrophic bacteria causing food spoilage.

Crystal Violet Tetrazolium HiVeg Agar Base

Composition per liter:

Agar	15.0g
Plant hydrolysate	5.0g
Yeast extract.....	2.5g
Glucose	1.0g

Crystal Violet	1.0mg
2,3,5-Triphenyltetrazolium chloride solution	10.0mL
pH 7.0 ± 0.2 at 25°C	

Source: This medium, without triphenyltetrazolium chloride solution, is available as a premixed powder from HiMedia.

Caution: Sodium azide is toxic. Azides also react with metals and disposal must be highly diluted.

2,3,5-Triphenyltetrazolium Chloride Solution:

Composition per 10.0mL:

2,3,5-Triphenyltetrazolium chloride	0.1g
---	------

Preparation of 2,3,5-Triphenyltetrazolium Chloride Solution: Add 2,3,5-triphenyltetrazolium chloride to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except 2,3,5-triphenyltetrazolium chloride solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 10 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL 2,3,5-triphenyltetrazolium chloride solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the detection of Gram-negative psychrotrophic bacteria causing food spoilage.

CS Vitamin B₁₂ Agar

Composition per liter:

Glucose	20.0g
K ₂ SO ₄	20.0g
Agar	15.0g
Sodium acetate	12.0g
Vitamin assay casamino acids	10.0g
Papaic digest of soybean meal	5.0g
Sodium thioglycolate	1.7g
K ₂ HPO ₄	1.0g
KH ₂ PO ₄	1.0g
Ribonucleic acid	1.0g
Sorbitan monooleate complex	1.0g
MgSO ₄ ·7H ₂ O	0.4g
DL-Tryptophan	0.2g
L-Cystine	0.2g
FeSO ₄	0.02g
MgSO ₄ ·7H ₂ O	0.02g
NaCl	0.02g
Adenine sulfate	0.018g
Guanine·HCl	0.012g
Uracil	0.01g
Xanthine	0.01g
Pyridoxal	4.0mg
Pyridoxine	4.0mg
Calcium pantothenate	2.0mg
Niacin	2.0mg
Riboflavin	2.0mg
Thiamine·HCl	2.0mg
Folic acid	1.0mg
Biotin	1.0μg
<i>Lactobacillus leichmannii</i> suspension	1.0mL
pH 6.2 ± 0.1 at 25°C	

Preparation of Medium: Add components, except *Lactobacillus leichmannii* suspension, to distilled/deionized water and bring volume

to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Inoculate medium with 1.0mL of *Lactobacillus leichmannii* suspension. Mix thoroughly. Pour into sterile 150mm Petri dishes in 50.0mL volumes. Allow agar surface to dry before using.

Use: For the microbiological assay of vitamin B₁₂ by the cup plate or disk method using *Lactobacillus leichmannii* as the test microorganism.

CSSM

See: [Cornstarch Soluble Medium](#)

CT Agar

(Caprylate Thallous Agar)

Composition per liter:

Solution A	500.0mL
Solution B	500.0mL
pH 7.2 ± 0.2 at 25°C	

Solution A:

Composition per 500.0mL:

K ₂ HPO ₄	2.61g
KH ₂ PO ₄	0.68g
Thallous sulfate	0.25g
MgSO ₄ ·7H ₂ O	0.12g
CaCl ₂ ·2H ₂ O	0.016g
Trace elements solution	10.0mL
Yeast extract	2.0mL
Caprylic acid	1.1mL

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Adjust pH to 7.2 with NaOH. Autoclave for 20 min at 10 psi pressure–115°C.

Trace Elements Solution:

Composition per liter:

H ₃ PO ₄	1.96g
FeSO ₄ ·7H ₂ O	0.056g
ZnSO ₄ ·4H ₂ O	0.029g
CuSO ₄ ·5H ₂ O	0.025g
MnSO ₄ ·4H ₂ O	0.022g
H ₃ BO ₃	6.2mg
Co(NO ₃) ₂ ·6H ₂ O	3.0mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Store at 4°C.

Solution B:

Composition per liter:

Agar	15.0g
NaCl	7.0g
(NH ₄) ₂ SO ₄	1.0g

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.2. Autoclave for 20 min at 10 psi pressure–115°C.

Preparation of Medium: Aseptically combine 500.0mL of sterile solution A and 500.0mL of sterile solution B. Mix thoroughly. Pour into sterile Petri dishes in 25.0–30.0mL volumes.

Use: For the isolation and cultivation of the *Serratia* species.

CT Agar**Composition per liter:**

Agar	20.0g
Pancreatic digest of casein	20.0g
MgSO ₄ ·7H ₂ O	2.0g
Potassium phosphate buffer (0.02M solution, pH 7.6)	500.0mL
pH 7.6 ± 0.2 at 25°C	

Preparation of Medium: Add agar, pancreatic digest of casein, and MgSO₄·7H₂O to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave agar–pancreatic digest of casein–MgSO₄·7H₂O solution and potassium phosphate buffer solution separately for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically combine the two solutions. Aseptically add sterile components. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of myxobacteria.

CT Broth**Composition per liter:**

Pancreatic digest of casein	20.0g
MgSO ₄ ·7H ₂ O	2.0g
Potassium phosphate buffer (0.02M solution, pH 7.6)	500.0mL
pH 7.6 ± 0.2 at 25°C	

Preparation of Medium: Add pancreatic digest of casein and MgSO₄·7H₂O to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Autoclave pancreatic digest of casein–MgSO₄·7H₂O solution and potassium phosphate buffer solution separately for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically combine the two solutions. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of myxobacteria.

CT Medium**Composition per liter:**

Agar	15.0g
Pancreatic digest of casein	10.0g
Yeast extract	3.5g
MgSO ₄	0.96g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Stigmatella aurantiaca*.

CTA Agar**(Cystine Trypticase™ Agar)****Composition per liter:**

Pancreatic digest of casein	20.0g
Agar	14.0g
NaCl	5.0g
L-Cystine	0.5g
Na ₂ SO ₃	0.5g
Phenol Red	0.017g
pH 7.3 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–118°C. Pour into sterile Petri dishes or leave in tubes. Two drops of sterile rabbit serum added per tube prior to solidification enhances the recovery of *Corynebacterium diphtheriae*.

Use: For the cultivation and maintenance of a variety of fastidious microorganisms, including *Corynebacterium diphtheriae*. For carbohydrate fermentation tests in the differentiation of *Neisseria* species.

CTA Medium**(Cystine Trypticase™ Agar Medium)****(Cystine Tryptic Agar)****Composition per liter:**

Pancreatic digest of casein	20.0g
NaCl	5.0g
Carbohydrate	5.0g
Agar	2.5g
L-Cystine	0.5g
Na ₂ SO ₃	0.5g
Phenol Red	0.017g
pH 7.3 ± 0.2 at 25°C	

Source: The medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.3. Gently heat until boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–118°C. Cool tubes in an upright position. Store at room temperature.

Use: For the cultivation and maintenance of a variety of fastidious microorganisms. For the detection of bacterial motility. Used, with added specific carbohydrate, for fermentation reactions of fastidious microorganisms, especially *Neisseria* species, pneumococci, streptococci, and nonspore-forming anaerobes.

CTA Medium with Yeast Extract and Rabbit Serum**(Cystine Trypticase™ Agar Medium with Yeast Extract and Rabbit Serum)****Composition per liter:**

Yeast extract	50.0g
Pancreatic digest of casein	20.0g
NaCl	5.0g
Carbohydrate	5.0g
Agar	2.5g
L-Cystine	0.5g
Na ₂ SO ₃	0.5g
Phenol Red	0.017g
Rabbit serum	250.0mL
pH 7.3 ± 0.2 at 25°C	

Preparation of Medium: Add components, except rabbit serum, to distilled/deionized water and bring volume to 750.0mL. Mix thoroughly. Adjust pH to 7.3. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–118°C. Cool to 50°C. Aseptically add sterile rabbit serum. Mix thoroughly. Distribute into sterile tubes. Store at room temperature. Do not refrigerate.

Use: For the cultivation and maintenance of fastidious microorganisms, especially mycoplasmas and related microorganisms.

CTLM Medium**Composition per 1100.0mL:**

Beef liver, infusion from.....	125.0g
Tryptose	25.0g
Proteose peptone	2.5g
L-Cysteine-HCl.....	1.75g
Maltose.....	1.25g
NaCl.....	1.25g
Agar	1.15g
L-Ascorbic acid.....	0.25g
NaHCO ₃	0.075g
Horse serum, heat inactivated.....	100.0mL
Ringer's salt solution, 10x.....	75.0mL
pH 6.0 ± 0.2 at 25°C	

Ringer's Salt Solution, 10x:**Composition per 100.0mL:**

NaCl.....	9.0g
KCl.....	0.42g
CaCl ₂	0.24g

Preparation of Ringer's Salt Solution, 10x: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components, except horse serum, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.0. Gently heat and bring to boiling. Autoclave for 25 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 100.0mL of sterile, heat-inactivated horse serum. Mix thoroughly. Aseptically distribute into sterile, screw-capped tubes or flasks.

Use: For the cultivation of *Trichomonas vaginalis*.

CTLM Medium**Composition per 1100.0mL:**

Beef liver, infusion from.....	125.0g
Tryptose	25.0g
Proteose peptone	2.5g
L-Cysteine-HCl.....	1.75g
Maltose.....	1.25g
NaCl.....	1.25g
Agar	1.15g
L-Ascorbic acid.....	0.25g
NaHCO ₃	0.075g
Horse serum, heat inactivated.....	100.0mL
Ringer's salt solution, 10x.....	75.0mL
pH 7.0 ± 0.2 at 25°C	

Ringer's Salt Solution, 10x:**Composition per 100.0mL:**

NaCl.....	9.0g
KCl.....	0.42g
CaCl ₂	0.24g

Preparation of Ringer's Salt Solution, 10x: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components, except horse serum, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Gently heat and bring to boiling. Autoclave for 25 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 100.0mL of sterile, heat-inactivated horse serum. Mix thoroughly. Aseptically distribute into sterile, screw-capped tubes or flasks.

Use: For the cultivation of *Monocercomonas colubrurum*, *Tetratrichomonas gallinarum*, *Tritrichomonas foetus*, and *T. mobilensis*.

CTLM Medium**Composition per 1100.0mL:**

Beef liver, infusion from.....	125.0g
Tryptose	25.0g
Proteose peptone	2.5g
L-Cysteine-HCl.....	1.75g
Maltose	1.25g
NaCl.....	1.25g
Agar	1.15g
L-Ascorbic acid.....	0.25g
NaHCO ₃	0.075g
Horse serum, heat inactivated.....	100.0mL
Ringer's salt solution, 10x.....	75.0mL
pH 7.3 ± 0.2 at 25°C	

Ringer's Salt Solution, 10x:**Composition per 100.0mL:**

NaCl.....	9.0g
KCl.....	0.42g
CaCl ₂	0.24g

Preparation of Ringer's Salt Solution, 10x: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components, except horse serum, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.3. Gently heat and bring to boiling. Autoclave for 25 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 100.0mL of sterile, heat-inactivated horse serum. Mix thoroughly. Aseptically distribute into sterile, screw-capped tubes or flasks.

Use: For the cultivation of *Trichomonas gallinae*.

CTT Medium**Composition per liter:**

Agar	15.0g
Pancreatic digest of casein.....	10.0g
Tris(hydroxymethyl)aminomethane buffer.....	1.21g
Potassium phosphate buffer (1 mM, pH 7.6).....	1.0L
Magnesium sulfate solution.....	10.0mL
pH 7.6 ± 0.2 at 25°C	

Magnesium Sulfate Solution:**Composition per 10.0mL:**

MgSO ₄ ·7H ₂ O.....	2.0g
---	------

Preparation of Magnesium Sulfate Solution: Add MgSO₄·7H₂O to 10.0mL of distilled/deionized water. Mix thoroughly.

Preparation of Medium: Combine components. Mix thoroughly. Adjust pH to 7.6. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of myxobacteria.

**Cultivation Medium for Chlamydiae
(DSMZ Medium 1193)****Composition per 101.0mL:**

IM medium	90.0mL
Fetal bovine serum.....	10.0mL
Amino acids, 100x.....	1.0mL
pH 7.4 ± 0.2 at 25°C	

IM medium:**Composition per 100.0mL:**

Pancreatic digest of gelatin	0.05g
Bile salts No. 3	0.05g
Brain heart, solids from infusion	0.02g
Peptic digest of animal tissue	0.02g
NaCl	0.017g
Glucose	0.01g
Na ₂ HPO ₄	8.0mg
Earle's balanced salts solution	80.0mL
Fetal bovine serum, heat inactivated (2 hr at 55°C)	20.0mL
pH 7.4 ± 0.2 at 25°C	

Earle's Balanced Salts Solution:**Composition per liter:**

NaCl	6.8g
NaHCO ₃	2.2g
Glucose	1.0g
KCl	0.4g
CaCl ₂ ·2H ₂ O	0.265g
MgSO ₄ ·7H ₂ O	0.2g
NaH ₂ PO ₄ ·H ₂ O	0.14g

Preparation of Earle's Balanced Salts Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of IM: Combine components. Mix thoroughly. Filter sterilize. Store at 4°–10°C.

Preparation of Medium: Combine components. Mix thoroughly. Filter sterilize. Store for no longer than 4 weeks at room temperature to facilitate detection of contamination. Prepare a 25 cm² flask and seed with either cells L929 (ACC 2) or HeLa (ACC 57) cells. Incubate at 37°C plus 5% CO₂. When a confluent layer has formed, infection can be carried out. Exchange medium with 6.0mL of IM with the addition of 0.001mg/mL cycloheximide (final concentration) and add 0.5–1.0mL of EB stock solution (thawed quickly to 37°C). Centrifuge for 1 h onto the cell layer at 1600 rpm at 20°C. Incubate at 37°C + 5% CO₂. Control cells daily and look for inclusions. Not all chlamydiae form well-visible inclusions; ultimately, immunofluorescence or *in situ* hybridization techniques are necessary to visualize inclusions.

Use: For the screening for *Chlamydia* using cell line cultures to test for infectivity.

CVA Medium**(Cefoperazone Vancomycin Amphotericin Medium)****Composition per liter:**

Agar	15.0g
Casein peptone	10.0g
Meat peptone	10.0g
NaCl	5.0g
Yeast autolysate	2.0g
Glucose	1.0g
NaHSO ₃	0.1g
Sheep blood, defibrinated	50.0mL
CVA antibiotic solution	10.0mL
pH 7.0 ± 0.2 at 25°C	

CVA Antibiotic Solution:**Composition per 10.0mL:**

Cefoperazone	20.0mg
Vancomycin	10.0mg
Amphotericin B	2.0mg

Preparation of CVA Antibiotic Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except CVA antibiotic solution and sheep blood, to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile CVA antibiotic solution and sterile, defibrinated sheep blood. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the isolation and cultivation of *Campylobacter* species from clinical specimens.

CVP Medium

See: [Crystal Violet Pectate Medium](#)

CY Agar**Composition per liter:**

Agar	15.0g
Pancreatic digest of casein	3.0g
CaCl ₂ ·2H ₂ O	1.0g
Yeast extract	1.0g
Cyanocobalamin	0.5mg
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of myxobacteria.

CYA Agar

See: [Czapek Yeast Autolysate Agar](#)

CYA Agar with Arginine and *p*-Aminobenzoic Acid (ATCC Medium 2033)**Composition per liter:**

Agar	15.0g
Yeast extract	5.0g
NaNO ₃	3.0g
K ₂ HPO ₄	1.0g
KCl	0.5g
MgSO ₄ ·7H ₂ O	0.5g
Arginine	0.2g
FeSO ₄ ·7H ₂ O	0.01g
<i>p</i> -Aminobenzoic acid	1mg
Sucrose solution	100.0mL
pH 7.3 ± 0.2 at 25°C	

Sucrose Solution:**Composition per 100.0mL:**

Sucrose	30.0g
---------------	-------

Preparation of Sucrose Solution: Add sucrose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C.

Preparation of Medium: Add components, except sucrose solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add sterile sucrose solution. Mix thoroughly. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of heat-resistant filamentous fungi (molds) from foods.

CYC Agar

Composition per liter:

Sucrose.....	30.0g
Agar	16.0g
Vitamin assay casamino acids.....	6.0g
NaNO ₃	2.0g
Yeast extract.....	2.0g
Magnesium glycerophosphate	0.5g
KCl.....	0.5g
K ₂ SO ₄	0.35g
FeSO ₄	0.01g

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Pseudonocardia thermophila*, *Saccharomonospora caesia*, *Saccharomonospora viridis*, *Saccharopolyspora hirsuta*, *Saccharopolyspora rectivirgula*, *Streptomyces thermogriseoviolaceus*, *Streptomyces thermohygroscopicus*, *Streptomyces thermovulgaris*, *Thermoactinomyces candidus*, *Thermoactinomyces putidus*, *Thermoactinomyces sacchari*, *Thermoactinomyces thalophilus*, *Thermoactinomyces vulgaris*, and *Thermomonospora fusca*.

CYC Medium

Composition per liter:

Sucrose.....	30.0g
Casamino acids, vitamin free.....	6.0g
NaNO ₃	3.0g
Yeast extract.....	2.0g
K ₂ HPO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.5g
KCl.....	0.5g
FeSO ₄ ·7H ₂ O.....	0.01g
Antibiotic solution	10.0mL

pH 7.2 ± 0.2 at 25°C

Antibiotic Solution:

Composition per 10.0mL:

Cycloheximide.....	0.05g
Novobiocin.....	0.025g

Preparation of Antibiotic Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: Add components, except antibiotic solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile antibiotic solution. Mix thoroughly. Aseptically distribute into sterile tubes.

Use: For the isolation and cultivation of *Thermoactinomyces* species.

CYC Medium, Cross and Attwell Modification (DSMZ Medium 550)

Composition per liter:

Sucrose.....	30.0g
Agar	15.0g
Casamino acids.....	6.1g
NaNO ₃	3.0g
Yeast extract.....	2.0g
K ₂ HPO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.5g
KCl.....	0.5g
Tryptophan.....	0.02g
FeSO ₄ ·7H ₂ O.....	0.01g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Thermomonospora curvata*, *Thermobifida fusca*, *Thermoactinomyces vulgaris*, *Saccharopolyspora thermophila*, and *Thermobifida alba*.

Cyclohexanecarboxylic Acid Agar

Composition per liter:

Agar, noble.....	15.0g
Cyclohexanecarboxylic acid.....	5.0g
(NH ₄) ₂ SO ₄	1.0g
KH ₂ PO ₄	1.0g
K ₂ HPO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.2g
Yeast extract.....	0.1g
FeSO ₄ ·7H ₂ O.....	10.0mg
CaCl ₂ ·2H ₂ O	2.0mg
MnSO ₄ ·4H ₂ O	2.0mg
ZnSO ₄ ·7H ₂ O	2.0mg

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Corynebacterium cyclohexanicum* and *Saccharomyces cerevisiae*.

Cyclohexanecarboxylic Acid Broth

Composition per liter:

Cyclohexanecarboxylic acid.....	5.0g
(NH ₄) ₂ SO ₄	1.0g
KH ₂ PO ₄	1.0g
K ₂ HPO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.2g
Yeast extract.....	0.1g
FeSO ₄ ·7H ₂ O.....	10.0mg
CaCl ₂ ·2H ₂ O	2.0mg
MnSO ₄ ·4H ₂ O	2.0mg
ZnSO ₄ ·7H ₂ O	2.0mg

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Dis-

tribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Corynebacterium cyclohexanicum* and *Saccharomyces cerevisiae*.

Cyclohexanecarboxylic Acid Medium

Composition per liter:

K ₂ HPO ₄	3.5g
Cyclohexanecarboxylic acid.....	2.0g
KH ₂ PO ₄	1.5g
NH ₄ NO ₃	1.0g
MgSO ₄ ·7H ₂ O.....	0.5g
Yeast extract.....	0.1g
CaCl ₂ ·2H ₂ O.....	0.01g
FeCl ₃ ·6H ₂ O.....	0.01g
NaMoO ₄ ·7H ₂ O.....	0.01g
ZnSO ₄ ·7H ₂ O.....	0.01g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Alcaligenes faecalis* and other bacteria that can utilize cyclohexanecarboxylic acid as a carbon source.

Cyclohexanecarboxylic Acid Salts Medium

See: **CHCA Salts Medium**

Cyclohexanone Medium

Composition per liter:

NH ₄ NO ₃	3.0g
K ₂ HPO ₄	0.25g
MgSO ₄ ·7H ₂ O.....	0.2g
CaCl ₂ ·2H ₂ O.....	0.01g
FeCl ₃ ·6H ₂ O.....	1.0mg
Cyclohexanone.....	1.0mL

Preparation of Medium: Add components, except cyclohexanone, to distilled/deionized water and bring volume to 999.0mL. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 20 min at 15 psi pressure–121°C. Filter sterilize cyclohexanone. Aseptically add 1.0mL of cyclohexanone. Mix thoroughly.

Use: For the cultivation and maintenance of *Nocardia* species and other bacteria that can utilize cyclohexanone as a carbon source.

Cycloheximide Agar

See: **Actidione[®] Agar**

Cycloheximide Chloramphenicol Agar

See: **Mycosel[™] Agar**

See: **Mycobiotic Agar**

Cycloserine Cefoxitin Egg Yolk Fructose Agar

Composition per liter:

Proteose peptone No. 2.....	40.0g
Agar.....	25.0g
Fructose.....	6.0g
Na ₂ HPO ₄	5.0g

NaCl.....	2.0g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O.....	0.1g
Egg yolk emulsion.....	100.0mL
Antibiotic solution.....	10.0mL
Neutral Red solution.....	3.0mL
Hemin solution.....	1.0mL

Egg Yolk Emulsion:

Composition:

Chicken egg yolks.....	11
Whole chicken egg.....	1

Preparation of Egg Yolk Emulsion: Soak eggs with 1:100 dilution of saturated mercuric chloride solution for 1 min. Crack eggs. Separate yolks from whites for 11 eggs. Mix egg yolks with 1 chicken egg.

Antibiotic Solution:

Composition per 10.0mL:

Cycloserine.....	0.5g
Cefoxitin.....	0.016g

Preparation of Antibiotic Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Neutral Red Solution:

Composition per 10.0mL:

Neutral Red.....	0.1g
Ethanol.....	10.0mL

Preparation of Neutral Red Solution: Add Neutral Red to 10.0mL of ethanol. Mix thoroughly.

Hemin Solution:

Composition per 100.0mL:

Hemin.....	0.5g
NaOH (1N solution).....	10.0mL

Preparation of Hemin Solution: Add hemin to 10.0mL of 1N NaOH solution. Mix thoroughly. Bring volume to 100.0mL with distilled/deionized water.

Preparation of Medium: Add components, except egg yolk emulsion and antibiotic solution, to distilled/deionized water and bring volume to 890.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile egg yolk emulsion and antibiotic solution. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the selective isolation and cultivation of *Clostridium difficile* from feces.

Cycloserine Cefoxitin Fructose Agar

See: ***Clostridium difficile* Agar**

CYE-ACES Agar

See: **CYE Agar, Buffered**

CYE-ACES Agar (DSMZ Medium 585)

Composition per liter:

Solution A.....	490.0mL
Solution B.....	490.0mL
Solution C.....	10.0mL
Solution D.....	10.0mL

pH 6.9 ± 0.1 at 25°C

Solution A:**Composition** per 490mL:

Yeast extract.....	10.0g
ACES (<i>N</i> -2-acetamido-2-aminoethane-sulfonic acid).....	10.0g
Activated charcoal.....	2.0g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 490.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C.

Solution B:**Composition** per 490mL:

Agar.....	15.0g
-----------	-------

Preparation of Solution B: Add agar to distilled/deionized water and bring volume to 490.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C.

Solution C:**Composition** per 10.0mL:

L-Cysteine·HCl·H ₂ O.....	0.4g
--------------------------------------	------

Preparation of Solution C: Add L-cysteine-HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Solution D:**Composition** per 10.0mL:

Fe ₄ (PO ₄) ₂	0.25g
---	-------

Preparation of Solution D: Add Fe₄(PO₄)₂ to distilled/deionized water and bring volume to 10.0mL. Heat to 50–55°C to dissolve Fe₄(PO₄)₂. Mix thoroughly. Filter sterilize. Store in the dark. Do not use if chemical loses its green color and becomes brown or yellow.

Preparation of Medium: Add 10.0mL solution C and then 10.0mL solution D to 490.0mL solution A. Adjust the pH 6.9 ± 0.05 at 50°C by adding 4.0 to 4.5 mL of sterile 1.0*N* KOH. The pH of the medium is critical. Finally, add 490.0mL solution B. Mix thoroughly. Swirl medium in flask during dispensing to Petri dishes or tubes to keep charcoal suspended. Pour into Petri dishes or aseptically distribute into sterile tubes.

Use: For the cultivation of *Afipia clevelandensis*, *Afipia broomeae*, *Afipia felis*, *Legionella pneumophila*, *Legionella longbeachae*, and *Xylella fastidiosa*.

CYE Agar (Charcoal Yeast Extract Agar)

Composition per liter:

Agar.....	17.0g
Yeast extract.....	10.0g
Charcoal, activated, acid-washed.....	2.0g
L-Cysteine·HCl·H ₂ O solution.....	10.0mL
Fe ₄ (P ₂ O ₇) ₃ solution.....	10.0mL

pH 6.9 ± .05 at 50°C

L-Cysteine·HCl·H₂O Solution:**Composition** per 10.0mL:

L-Cysteine·HCl·H ₂ O.....	0.4g
--------------------------------------	------

Preparation of L-Cysteine·HCl·H₂O solution: Add L-cysteine-HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Fe₄(P₂O₇)₃ Solution:**Composition** per liter:

Fe ₄ (P ₂ O ₇) ₃	0.25g
---	-------

Preparation of Fe₄(P₂O₇)₃ Solution: Add soluble Fe₄(P₂O₇)₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize. The soluble Fe₄(P₂O₇)₃ must be kept dry and in the dark. Do not use if brown or yellow. Prepare solutions freshly. Do not heat over 60°C to dissolve. The mixture dissolves readily in a 50°C water bath.

Preparation of Medium: Add components, except L-cysteine-HCl·H₂O solution and Fe₄(P₂O₇)₃ solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Add 10.0mL of sterile L-cysteine-HCl·H₂O solution and 10.0mL of sterile Fe₄(P₂O₇)₃ solution. Adjust pH to 6.9 at 50°C by adding 4.0–4.5mL of 1.0*N* KOH. This is a critical step. Mix thoroughly. Pour in 20.0mL volumes into sterile Petri dishes. Swirl medium while pouring to keep charcoal in suspension.

Use: For the cultivation and maintenance of *Legionella* species and *Tatlockia micdadei*.

CYE Agar, Buffered (Charcoal Yeast Extract Agar, Buffered)

Composition per liter:

Agar.....	17.0g
ACES buffer (<i>N</i> -2-acetamido-2-aminoethane sulfonic acid).....	10.0g
Yeast extract.....	10.0g
Charcoal, activated, acid-washed.....	2.0g
L-Cysteine·HCl·H ₂ O solution.....	10.0mL
Fe ₄ (P ₂ O ₇) ₃ solution.....	10.0mL

pH 6.9 ± .05 at 50°C

L-Cysteine·HCl·H₂O Solution:**Composition** per 10.0mL:

L-Cysteine·HCl·H ₂ O.....	0.4g
--------------------------------------	------

Preparation of L-Cysteine·HCl·H₂O Solution: Add L-cysteine-HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Fe₄(P₂O₇)₃ Solution:**Composition** per liter:

Fe ₄ (P ₂ O ₇) ₃	0.25g
---	-------

Preparation of Fe₄(P₂O₇)₃ Solution: Add soluble Fe₄(P₂O₇)₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize. The soluble Fe₄(P₂O₇)₃ must be kept dry and in the dark. Do not use if brown or yellow. Prepare solutions freshly. Do not heat over 60°C to dissolve. The mixture dissolves readily in a 50°C water bath.

Preparation of Medium: Add components, except L-cysteine-HCl·H₂O solution and Fe₄(P₂O₇)₃ solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Add 10.0mL of sterile L-cysteine-HCl·H₂O solution and 10.0mL of sterile Fe₄(P₂O₇)₃ solution. Adjust pH to 6.9 at 50°C by adding 4.0–4.5mL of 1.0*N* KOH. This is a critical step. Mix thoroughly. Pour in 20.0mL volumes into sterile Petri dishes. Swirl medium while pouring to keep charcoal in suspension.

Use: For the cultivation and maintenance of *Legionella* species and *Xylella fastidiosa*.

CYE Broth

See: **Casamino Acids Yeast Extract Broth**

CYE DBCM

See: ***Legionella pneumophila* Medium**

Charcoal Yeast Extract Diphasic Blood Culture Medium**CYG Agar**

See: **Casein Yeast Extract Glucose Agar**

CYG Agar**Composition per liter:**

Agar	15.0g
Pancreatic digest of casein	3.0g
CaCl ₂ ·2H ₂ O	1.0g
Yeast extract	1.0g
Cyanocobalamin	0.5mg
Glucose solution	100.0mL

pH 7.2 ± 0.2 at 25°C

Glucose Solution:**Composition per 100.0mL:**

D-Glucose	5.0g
-----------------	------

Preparation of Glucose Solution: Add D-glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Preparation of Medium: Add components, except glucose solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile glucose solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of *Cytophaga* species, *Herpetosiphon* species, *Saprospira* species, and *Flexithrix* species.

Cylindrocladium* Isolation Medium*Composition per liter:**

Agar	20.0g
Glucose	15.0g
KH ₂ PO ₄	1.0g
KNO ₃	0.5g
MgSO ₄ ·7H ₂ O	0.5g
Yeast extract	0.5g
Chloramphenicol solution	10.0mL
Chlortetracycline solution	10.0mL
Thiabendazole solution	10.0mL
Tergitol NPX® (Union Carbide)	1.0mL

Chloramphenicol Solution:**Composition per 10.0mL:**

Chloramphenicol	0.1g
Ethanol (95% solution)	10.0mL

Preparation of Chloramphenicol Solution: Add chloramphenicol to 10.0mL of ethanol. Mix thoroughly. Filter sterilize.

Chlortetracycline Solution:**Composition per 10.0mL:**

Chlortetracycline	0.04g
Ethanol, absolute	5.0mL

Preparation of Chlortetracycline Solution: Add chlortetracycline to 5.0mL of ethanol. Mix thoroughly. Bring volume to 10.0mL with distilled/deionized water. Filter sterilize.

Thiabendazole Solution:**Composition per 10.0mL:**

Thiabendazole	1.0mg
---------------------	-------

Preparation of Thiabendazole Solution: Add thiabendazole to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Filter sterilize tergitol NPX. Add components—except tergitol NPX, thiabendazole solution, chloramphenicol solution, and chlortetracycline solution—to distilled/deionized water and bring volume to 969.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile tergitol NPX, thiabendazole solution, chloramphenicol solution, and chlortetracycline solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of *Cylindrocladium* species.

CYM Agar**Composition per liter:**

Agar	20.0g
Peptone	2.0g
Glucose	2.0g
Yeast extract	2.0g
K ₂ HPO ₄	1.0g
MgSO ₄	0.5g
KH ₂ PO ₄	0.46g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Sordaria brevicollis*.

CYM Medium**Composition per liter:**

Agar	20.0g
Glucose	20.0g
Peptone	2.0g
Yeast extract	2.0g
K ₂ HPO ₄	1.0g
MgSO ₄	0.5g
KH ₂ PO ₄	0.46g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of most *Agaricus* species, *Kretzchmaria clavus*, *Phellinus ignarius*, *Phellinus nigricans*, *Phlebia chrysocrea*, *Phlebia livida*, *Tricholoma bakamatsutake*, *Tricholoma fulvocastaneum*, *Tricholoma matsutake*, and *Tricholoma ponderosum*.

CYS Medium**(DSMZ Medium 1108)****Composition per liter:**

Gelrite	8.0g
NZ Case (Wako pure chemicals, Japan)	3.0g
NaCl	3.0g
Yeast extract	2.0g

Soluble starch	1.0g
MgCl ₂	0.125g
CaCl ₂	0.025g
FeSO ₄ ·7H ₂ O	0.01g
Solution A	0.1mL
Solution B	0.1mL
Solution C	0.1mL
Solution D	0.1mL
Solution E	0.1mL
Solution F	0.1mL
Solution G	0.1mL

pH 7.5 ± 0.2 at 25°C

Solution A:**Composition** per 100.0mL:

Na ₂ MoO ₄ ·4H ₂ O	1.2g
---	------

Preparation of Solution A: Add Na₂MoO₄·4H₂O to 100.0mL of distilled/deionized water. Mix thoroughly.**Solution B:****Composition** per 100.0mL:

VOSO ₄ ·2H ₂ O	0.1mg
--	-------

Preparation of Solution B: Add VOSO₄·2H₂O to 100.0mL of distilled/deionized water. Mix thoroughly.**Solution C:****Composition** per 100.0mL:

MnCl ₂ ·4H ₂ O	0.5g
--	------

Preparation of Solution C: Add MnCl₂·4H₂O to 100.0mL of distilled/deionized water. Mix thoroughly.**Solution D:****Composition** per 100.0mL:

ZnSO ₄ ·7H ₂ O	0.06g
--	-------

Preparation of Solution D: Add ZnSO₄·7H₂O to 100.0mL of distilled/deionized water. Mix thoroughly.**Solution E:****Composition** per 100.0mL:

CuSO ₄ ·5H ₂ O	0.015g
--	--------

Preparation of Solution E: Add CuSO₄·5H₂O to 100.0mL of distilled/deionized water. Mix thoroughly.**Solution F:****Composition** per 100.0mL:

CoCl ₂ ·6H ₂ O	0.8g
--	------

Preparation of Solution F: Add CoCl₂·6H₂O to 100.0mL of distilled/deionized water. Mix thoroughly.**Solution G:****Composition** per 100.0mL:

NiCl ₂ ·6H ₂ O	0.02g
--	-------

Preparation of Solution G: Add NiCl₂·6H₂O to 100.0mL of distilled/deionized water. Mix thoroughly.**Preparation of Medium:** Add components, except solutions A–G, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Adjust pH to 7.5. Individually and in order add solutions A–G. After the addition of each solution mix thoroughly. Bring final volume to 1.0L with distilled/deionized water. Autoclave for 15 min at 15 psi pressure–121°C.**Use:** For the cultivation of *Saccharomyces cerevisiae*.**Cystine Heart Agar****Composition** per liter:

Beef heart, solids from infusion	500.0g
Agar	15.0g
Glucose	10.0g
Proteose peptone	10.0g
NaCl	5.0g
L-Cystine	1.0g
Hemoglobin solution	100.0mL

pH 6.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.**Hemoglobin Solution:****Composition** per 100.0mL:

Hemoglobin	2.0g
------------------	------

Preparation of Hemoglobin Solution: Add hemoglobin to cold distilled/deionized water and bring volume to 100.0mL. Mix thoroughly by shaking for 10–15 min. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–60°C.**Preparation of Medium:** Add components, except hemoglobin solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–60°C. Aseptically add 100.0mL of sterile cooled hemoglobin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.**Use:** For the cultivation and maintenance of *Francisella tularensis* and *Francisella philomiragia*. Without the hemoglobin enrichment, it supports excellent growth of Gram-negative cocci and other pathogenic microorganisms.**Cystine Heart Agar with Rabbit Blood****Composition** per liter:

Beef heart, solids from infusion	500.0g
Agar	15.0g
Glucose	10.0g
Proteose peptone	10.0g
NaCl	5.0g
L-Cystine	1.0g
Rabbit blood, defibrinated	50.0mL

pH 6.8 ± 0.2 at 25°C
