Civil rights, United States: overview

Stephen Eric Bronner

The US civil rights movement (ca. 1954–65) was one of the most significant social and political movements in the history of the American Republic. Over the course of little more than a decade, African Americans from all walks of life, joined by a small but increasing number of whites, mounted a successful challenge to the legal edifice of segregation that had confined blacks socially, politically, and economically to second-class status for the better part of a century. They did so by invoking the foundational principles of the United States – liberty, justice, and equality – and by insisting that the country live up to its own ideals and allow Americans to enjoy

their constitutional rights and privileges without regard to race. This revolution in race relations was conducted largely along principles of non-violence, though violence would be repeatedly used against the movement's activists to try to halt their progress. For these reasons, the American civil rights movement is remembered not only for its transformative impact, but also for reflecting the vitality and constructive possibilities of American democracy.

Black Equality in Slavery and Freedom

The civil rights movement is commonly associated with the developments of the 1950s and 1960s that led to the demise of legal segregation in the United States. However, the struggle for black equality in America predates the arrival of the Pilgrims in 1620. Since the arrival of the first Africans in Virginia in early 1619, blacks have been engaged in a seemingly endless fight to free themselves from the yoke of oppression. While some blacks did succeed in gaining a measure of freedom and equality in the North as well as the South – either through manumission or purchasing their own freedom – the vast majority of the black population in the United States experienced limitations on their freedom ranging from outright slavery to flagrant discrimination and oppression.

The Civil War stands as the dramatic turning point in the black freedom struggle. While many slaves took advantage of the chaos of the war to free themselves from bondage, President Lincoln's issuance of the Emancipation Proclamation on January 1, 1863 tied the cause of Union to the eventual abolition of slavery. However, the proclamation was notably limited in its scope, as it applied only to those slaves in Confederate territories held by the Union armies and excluded slaves in the border states that remained loyal to the Union. Nevertheless, within a year following the surrender of the Confederacy in April 1865, slavery was formally abolished throughout the United States with the adoption of the Thirteenth Amendment to the Constitution, an epochal turning point for African American freedom.

During the Reconstruction Era, further provisions were made for black equality with the passage of the Fourteenth Amendment, which granted citizenship and equal protection of

the laws, the Fifteenth Amendment, which gave black men the right to vote, and numerous supplemental congressional statutes aimed at further securing basic political and civil rights. In the mid-1870s, however, the abandonment of Reconstruction and subsequent restoration of white-supremacist state governments throughout the South, combined with a series of rulings by the Supreme Court during the last quarter of the nineteenth century that severely limited federal provisions for black civil rights, effectively wiped out whatever gains African Americans had made in the aftermath of the Civil War.

Among the most consequential of these was the Court's 1896 ruling in *Plessy v. Ferguson*, which gave sanction to formal segregation when it declared that states were not in violation of the Fourteenth Amendment's equality guarantees if they established separate but equal facilities for members of different races. This decision led to a flurry of state and local legislative action, primarily, though not exclusively, in the South, to segregate whites from non-whites – and especially blacks – in all forms of public accommodations, schools, hospitals, transportation, and even cemeteries. Such laws requiring segregation were popularly referred to as Jim Crow laws. For much of the next 75 years most black Americans in the South were treated as second-class citizens – and oftentimes worse. Nor was this discrimination limited to the South. Although most states and localities in the North and West did not have *de jure* segregation, the reality was that the vast majority of African Americans in these areas experienced *de facto* segregation.

Nevertheless, in the last dark decades of the nineteenth century there remained a persistent undercurrent of struggle and resistance. For instance, in 1890 a short-lived but pioneering black advocacy organization, the National Afro-American League, was established by the journalist and writer T. Thomas Fortune to promote racial solidarity and equality. Better known are the efforts of one of the leading black educators of the period, Booker T. Washington. Although he aroused considerable controversy with his perceived willingness to trade away black aspirations for social and political equality in exchange for economic opportunity, behind the scenes Washington used his prestige and influence to try to pressure Southern officials to ease Jim Crow restrictions on African Americans.

One of those who became most critical of Washington's approach was W. E. B. Du Bois, a fellow black educator, scholar, and activist at Atlanta University. Since the mid-1890s Du Bois had hosted the annual Conference on Negro Problems in Atlanta, and by the first decade of the twentieth century he stood ready to challenge Washington's leadership strategy and, in particular, his public doctrine of racial accommodation. To this end, Du Bois helped launch the Niagara Movement in 1905, with the intent of organizing a vigorous drive for black equality. This initiative paved the way for a bi-racial group of black advocates, led by Du Bois, to establish the National Association for the Advancement of Colored People (NAACP) in 1909. The NAACP would emerge as one of the preeminent organizations for black equality in the twentieth century. For the first decade or so of its existence, Du Bois served as the editor of the official newsletter of the NAACP, *The Crisis*, which made Du Bois the most prominent spokesman of the black community – a position he used to press his belief that African Americans should not have to truckle before whites and that full and immediate equality was their birthright.

Activism on behalf of African Americans was by no means limited to men or native-born Americans. Well before Du Bois and his colleagues created the NAACP, Ida B. Wells-Barnett began to explore the motivations behind the widespread lynching of African Americans in the South in the late nineteenth and early twentieth centuries. Wells-Barnett collected and published her findings in *A Red Record* (1895), which demonstrated that the most commonly cited justification for a lynching – that a black man had raped a white woman – was unfounded in most cases. Rather, lynching victims were perceived to have challenged, wittingly or not, the racial status quo. Wells-Barnett went on to be a leading figure in the National Association of Colored Women, which included among its foundational aims securing political and civil rights for African American women and men.

Another prominent and influential figure from the early twentieth century was Marcus Garvey, an activist and black nationalist who came to the United States from Jamaica in 1916. Through his black nationalist/pan-Africanist organization, the United Negro Improvement Organization, Garvey attracted tens of thousands of loyal followers, with his emphasis on the common

heritage of all black people and racial pride. The popularity of Garvey was without precedent in African American history, and even at the peak of their prominence, future black leaders such as Martin Luther King and Malcolm X were unable to draw a following that was as extensive or loyal as that of Garvey. Indeed, Garvey's ability to galvanize the black masses unsettled contemporaries like Du Bois, who became a fierce critic of Garvey. Yet, however much Garvey may have been criticized, his detractors could not deny his ability to mobilize people who otherwise tended to shun political activism.

Roots of the Movement: World War II Era, 1940–1945

It was upon such foundations that the modern civil rights movement was established. The first stirrings of the movement can be traced to the eve of the United States' entry into World War II. Beginning in 1940, President Franklin Roosevelt had begun to press Congress to increase military preparedness in response to the outbreak of war in Europe. The Selective Service Act, signed by the president in September 1940, left intact the armed forces' policies of segregation, triggering vociferous protests from civil rights organizations as well as from individuals. For the remainder of the war, African Americans would struggle to persuade the government to end its sanction of segregation. Their efforts, however, were largely in vain, as the government insisted it could not run the risk of jeopardizing troop morale by tinkering with the racial status quo.

In early 1941 President Roosevelt committed the United States to being the "arsenal of democracy" and commenced a substantial program of rearmament for purposes of self-defense and to provide war matériel for those fighting against Nazi Germany. As a result, there was a significant increase in industrial production in defense-related industries for the first time since the onset of the Great Depression. However, because many of the major industrial and labor organizations continued to discriminate against African Americans, few blacks had access to these burgeoning economic opportunities. In response, the prominent black labor leader, A. Philip Randolph, head of the Brotherhood of Sleeping Car Porters, proposed a massive march on Washington, DC for the summer of 1941.

Loath to see protests in the nation's capital, President Roosevelt finally agreed to issue Executive Order 8802, which prohibited discriminatory hiring practices in defense-related industries government employment. The order also created a Fair Employment Practices Commission (FEPC), which was charged with the task of investigating allegations of discrimination and advising on corrective action if necessary. However, the FEPC lacked an enforcement clause, severely limiting its ability to curb employment discrimination. Nevertheless, Roosevelt's concession was significant: it marked the first time since the end of Reconstruction that the federal government had taken substantive action on behalf of racial equality. Building on this modest success, Randolph institutionalized his planned march by creating the March on Washington movement with the aim of being able to call thousands of blacks into the streets at a moment's notice to march, picket, boycott, or rally wherever circumstances necessitated such direct action. He also set specific civil rights goals for the movement such as eliminating obstacles to voting, as well as ending segregation in schools, housing, transportation, and other areas. Randolph's actions anticipated by several decades what would emerge as some of the central objectives of the civil rights movement.

Such new stirrings of activism were eclipsed by the Japanese attack at Pearl Harbor and America's entry into World War II. But these grim developments offered new opportunities to link the struggle for black equality with the international struggle in which the United States was now engaged. Just over a month after Pearl Harbor, an African American man was brutally lynched in Sikeston, Missouri. The coincidence of the Japanese attack and the lynching prompted a young black man to write a letter to the editor of the *Pittsburgh Courier*, the city's black newspaper, asking whether it made sense for African Americans to put their lives on the line for a country that refused to treat them fairly. The man went on to urge African Americans to embrace the notion of a double victory: the first standing for victory against the country's enemies abroad; and the second standing for victory against the forces of oppression here at home. The editors at the *Courier* were quick to recognize the potency of this idea and launched the Double V Campaign to promote the spread of democracy abroad and at home. The initiative

proved to be a galvanizing slogan for African Americans through the remainder of the war and inspired continued demands for reform in the postwar era.

Not surprisingly, the new spirit of determination to gain equality reflected by Randolph's movement and the Double V Campaign spread among rank-and-file African Americans, reflected by a significant increase in NAACP membership during the war years. In 1940 the organization listed some 50,000 individuals on its membership rolls; by 1945 that number had swelled to 350,000. Unfortunately, other developments during the period clearly validated the concerns that had prompted the Double V Campaign. As thousands of blacks migrated from the rural South to the industrial North in hopes of finding work, they competed with whites for jobs and housing, heightening racial tensions and leading to scores of violent clashes – the worst of which occurred in Detroit in 1943, where nearly three dozen blacks were killed.

Nevertheless, there were other tangible and intangible developments during World War II critical to the transformation of American attitudes with respect to race relations. In the 1930s and 1940s the racial conscience of America had been pricked by the ugly spectacle of Nazi persecution of German Jews. When the United States went to war against Germany in 1941, criticism of the enemy's explicitly racist ideology forced white Americans to examine their own racial attitudes – particularly when the Nazis' systematic efforts to exterminate European Jews were revealed. As they examined their own attitudes, what increasing numbers of white Americans found, particularly with respect to African Americans, were sentiments uncomfortably similar to the anti-Semitic views rampant in Central Europe.

In response, a growing number of academics and commentators in America called for a shift in racial attitudes among white Americans. One of the first and most influential manifestations of this change came in 1944, when the Swedish economist Gunnar Myrdal published *An American Dilemma*. Myrdal's study was the culmination of six years of work funded by the Carnegie Corporation, which hoped to use his findings to better understand the needs of the African American community and thus target its grants more effectively. Myrdal's inquiries plainly revealed the moral schizoidness of a white America that preached freedom and equality

of opportunity for all, yet practiced systematic racism and discrimination toward blacks. *An American Dilemma* also reflected academe's growing skepticism toward theories of racial superiority. In turn, Myrdal also called into question widely held notions that the socio-economic differences between whites and blacks were a function of racially determined intelligence and abilities. Rather, Myrdal placed blame squarely on the hearts and minds of white Americans as well as the racism and discrimination that permeated the country's social, economic, and political institutions. The explosive conclusions of *An American Dilemma* attracted considerable attention in both academic and popular circles, and the book was serialized in many prominent black newspapers. Given the dissemination of such ideas among elite intellectuals, policymakers, and opinion shapers, as well as among common black folk, it is not surprising that Myrdal's study is frequently credited with helping to shape a new paradigm of thought with regard to race relations in the postwar era.

Nascent Civil Rights Movement, 1946–1954

As World War II drew to a close, the federal government focused its attention on making demobilization and the reversion to a peacetime economy as smooth as possible, but it did not take specific steps to reduce racial tensions. Once again, however, events would force the hand of the federal government. In 1946 there was a fresh outbreak of hostility targeted toward African Americans. Nearly a dozen blacks were lynched, including at least three veterans, and there were numerous other acts of racial violence. In response, President Harry Truman agreed to meet with a group representing the National Emergency Committee Against Mob Violence, formed by Walter White of the NAACP, as well as former First Lady Eleanor Roosevelt. Truman was shocked by the accounts of the vicious attacks and soon thereafter established the President's Committee on Civil Rights, a blue ribbon commission charged with the task of preparing a report that would assess the current status of civil rights and make recommendations to better secure and protect the rights of the people of the United States.

After nearly a year of work, the Truman Committee issued its landmark report, *To Secure These*

Rights. Among other things, the report noted that widespread prejudice and discrimination in such critical fields as education, employment, voting, and housing continued to have a detrimental effect on the daily lives of black Americans. The committee, citing urgent moral, economic, and international needs, recommended concerted federal and state action to combat these problems and, perhaps most significant, explicitly called for an end to formal segregation in all aspects of American society. This marked the first time since the end of Reconstruction that an agency of the federal government had not only called for an end to segregation, but also that it had publicly issued a comprehensive and systematic program of reform designed to ensure that the individual rights of African Americans were protected.

The following year, President Truman demonstrated that the civil rights issue was not just a passing fancy for his administration. First, at the 1948 Democratic National Convention, the president supported the inclusion in the party platform of the most far reaching civil rights plank ever adopted by either of the two major parties – even though this would provoke a troubling and portentous fissure in the party when many Southern Democrats bolted from the convention to form the pro-segregationist States' Rights or "Dixiecrat" Party. Several weeks later, Truman issued an executive order despite the opposition of top military leaders, directing the armed forces to desegregate, handing African Americans a major victory that they had actively pursued for nearly a decade.

Meanwhile, the federal courts had also begun to quietly reshape the civil rights landscape in America. As far back as the 1930s and 1940s, the NAACP, and in particular its Legal Defense and Education Fund, had laid the foundations of its legal challenge to Jim Crow segregation by focusing on the inequalities that the doctrine of separate but equal produced in education. However, rather than challenging the entire practice of school segregation at once, NAACP strategists began their attack at the pinnacle of the educational system – graduate and professional schools – where the numbers of black students were much smaller and where the idea of integration was perceived to be less threatening. The NAACP won its first major victory in this initiative in 1938 when the Supreme Court, in *Missouri ex rel. Gaines v. Canada*, ordered the

University of Missouri to admit a black applicant to its all-white law school because no equal alternative existed for the state's African American population. Ten years later the Court reaffirmed this position in the case of *Sipuel v. Oklahoma State Board of Regents*, stipulating that where educational facilities were not equally available to black students as well as to whites, then blacks must be admitted to the white schools. Finally, in a pair of rulings handed down in 1950 – *Sweatt v. Painter* and *McLaurin v. Oklahoma State Regents for Higher Education* – the Supreme Court held that if a state maintained separate educational facilities for black and white students, those facilities must be equal in both tangible and intangible ways. By so ruling, the Court quashed the notion that storefront professional schools for blacks were somehow equal to the prestigious, tradition-bound, well-established schools to which whites had exclusive access.

Outside the field of education, the Supreme Court also demonstrated an increasingly solicitous attitude toward the rights of African Americans. Beginning in 1941 the Court held, in *US v. Classic*, that Congress had the authority to regulate primary as well as general elections. This cleared the way for the NAACP's challenge to the whites-only primary, a tactic states across the South had increasingly employed as a means of denying the few blacks who had managed to register any meaningful participation in the electoral process. Given that this was the era of the one-party South, a victory in the primary election all but guaranteed victory in the general election. If blacks could be kept out of the primaries, they would have no ability to determine which candidates went on to the general election, where white majorities would always outnumber the black minority.

Civil rights activists had mounted several challenges to this means of exclusion. But for many years the Supreme Court had held that the all-white primary was beyond the reach of the Court because eligibility for participation in the primary election was determined by a private rather than a public or official organization (i.e., the Democratic Party) of the respective states. However, in 1944, expanding on its *Classic* precedent, the Court affirmed the NAACP's challenge to Texas's all-white primary system in *Smith v. Allwright*. The Court held that racially exclusive primaries were not beyond the reach of the judiciary and Congress – not only because

primary elections clearly were integral to the broader electoral process, but also because the extent of state involvement in the regulation of the primaries belied the contention that these were private functions.

In a similar fashion in matters relating to public transportation and housing, the Supreme Court issued rulings in the aftermath of World War II that called into question the legitimacy of segregation. In its 1946 decision *Morgan v. Virginia*, the Court invalidated a Virginia statute that required segregation on interstate passenger carriers, upholding the position of the NAACP that such laws constituted an unlawful infringement on interstate commerce. And in 1948 in the *Restrictive Covenant Cases* the Court upheld the NAACP's challenge to restrictive covenants or deeds which barred people from ownership or occupancy of property based on race or some other arbitrary classification. Although the Court acknowledged such covenants usually took the form of private party agreements, enforcement of such agreements required state action. Thus, the Court proclaimed that while restrictive covenants were not per se unconstitutional, they were judicially unenforceable because such action would violate the equal protection guarantees of the Constitution. What made this case especially significant was that the United States attorney general signed an *amicus curiae* – or friend of the court – brief, formally endorsing this facet of the NAACP's attack on segregation. This marked the first time the federal government had officially backed a position of the NAACP in the nation's highest court.

The NAACP could point to the decade of the 1940s as one where its long and arduous struggle against Jim Crow segregation was at last producing tangible results. Yet its greatest and perhaps most controversial triumph was still to come. By the early 1950s the civil rights organization had launched a group of school desegregation cases that came to be known collectively as *Brown v. Board of Education* (of Topeka, Kansas) – or simply *Brown*. In taking on the *Brown* cases the NAACP had begun what it hoped would be its culminating attack on school segregation. No longer was it content simply to force state and local governments to live up to the idea of separate but equal. The rulings of the courts going back more than a decade had clearly demonstrated that segregation in education invariably resulted in inequality. Now the

NAACP wanted to undertake a frontal assault on segregation, arguing that separate was inherently unequal and therefore unconstitutional. After considerable internal debate during the waning months of the Truman administration, the decision was made that the attorney general should file an *amicus* brief, formally committing the federal government to supporting the NAACP's challenge to segregated schools.

When the Eisenhower administration came into office, it sustained Truman's position in support of the NAACP's suit at the insistence of Attorney General Herbert Brownell. Nevertheless, the Supreme Court proceeded cautiously, well aware that it was highly unusual to consider overturning a well-established precedent, particularly in such a traditionally sensitive area as public education. The Court twice heard arguments in the case: first in late 1952 on the general merits of the case; and then again in 1953 on specific issues pertaining to segregation and the Fourteenth Amendment. Finally, on May 17, 1954, the Court issued its landmark ruling declaring that "in the field of education, separate but equal has no place." However, the Court was unclear just how desegregation should proceed, and thus postponed delivery of its order with respect to dismantling the Jim Crow educational system. Finally, in May 1955, the Court issued what is often referred to as its *Brown II* decision. Deferring to the tradition of local control over educational policy, the Court refused to hand down specific guidelines on how desegregation should unfold. Instead, it simply ordered the lower courts to assume the responsibility for overseeing desegregation plans, stipulating that they should be developed at the local level with "all deliberate speed."

Together, the *Brown* decisions were clearly among the most important judicial findings in the history of the United States. In particular, the initial *Brown* ruling represented a crucial milestone for African Americans, as it dealt a frontal blow to the legitimacy of segregation. Yet the Supreme Court's rulings provoked great controversy, and not just in the South.

Not surprisingly, many white Southerners were embittered by the Court's action. Indeed, they had the explicit support of many of the region's elected officials. This was revealed most famously in 1956 when virtually all of the South's senators and congressmen signed their names to the Southern Manifesto, in which

they repudiated the Court's decisions and committed themselves to resisting any change to the educational status quo. For their part, African Americans were disheartened by the Court's apparent back-tracking in *Brown II* – plainly due in part to the vociferous protests emanating from the South. And local officials, upon whose shoulders the burden of developing desegregation plans fell, found themselves caught between their duty to comply with the decisions of the Court and fealty to their constituents, many of whom were opposed to the ruling.

In time, however, the controversy over the implications of the *Brown* decisions would spread beyond the South, particularly as the courts were forced to resort to more drastic measures to promote desegregation across the country. Indeed, a growing number of legal scholars eventually began to question the quality of the legal reasoning in both parts of the *Brown* decision as well as the efficacy of judicial action as a means of changing the racial status quo.

Aftermath of *Brown*, 1954–1960

For all of its controversy and limitations, *Brown* proved to be a critical catalyst in the struggle for black equality. For this reason, many observers identify the case as the starting point for the civil rights movement. While it would be wrong to suggest that all subsequent milestones in the civil rights movement were a result of *Brown*, many African Americans drew inspiration from the victory and were determined to do their part to contribute to the struggle for black equality. Yet, as would often prove to be the case throughout the civil rights movement, tragedy followed fast on the heels of triumph. In the late summer of 1955, just a few months after the Supreme Court concluded its handling of the *Brown* cases, an African American teenager by the name of Emmett Till was visiting relatives who lived in the heart of the Mississippi Delta. Till had grown up in Chicago and was less accustomed to the Southern custom that strictly forbade a black male from making any sort of overture to a white female. Till was alleged to have either spoken suggestively to or whistled at a white woman in a grocery store. Several days later, the woman's husband, joined by his half-brother, abducted the boy from his relative's house and brutally lynched him. The two men then tied a cotton gin fan to his corpse and threw it into

the nearby Tallahatchie River. Till's badly mutilated body surfaced after a few days.

When Till's body was returned to Chicago for burial, his mother insisted that his casket be opened for the funeral so that all could see Till's grotesquely disfigured face. Her decision to have an open casket would prove to be far more important than she could have imagined. A photographer from *Jet* magazine snapped a picture of Till and soon the horrific image was disseminated around the country and the world, demonstrating for the first time the ability of modern media to project the sheer brutality of the racial oppression in the South. Tragically, the two men charged with Till's murder were summarily acquitted by the all-white male jury. No one was ever brought to justice for the crime, although the acquitted men would later brag about the killing. Nevertheless, the Till lynching and trial sent a chilling reminder to Americans that much work remained to be done in the struggle for black equality.

Later that same year, another watershed event in the early civil rights movement transpired in the neighboring state of Alabama. On December 1, 1955, Rosa Parks, a black seamstress with a long history of challenging Jim Crow ordinances in Montgomery, Alabama, refused to give up her seat on a bus to a white man. Parks was arrested and charged with disorderly conduct. In response, Jo Ann Robinson, the head of the black Women's Political Council in the city, organized what was intended to be a one-day boycott of the city's buses. The response was so overwhelming, however, that Robinson, along with the prominent local union organizer, E. D. Nixon, began to plan for a more extensive boycott. They created the Montgomery Improvement Association (MIA) and drafted the young new pastor of the Dexter Avenue Baptist Church, Martin Luther King, Jr., to assume the presidency of the organization. King was initially hesitant to accept the leadership role because he was busy establishing his new ministry. Once he committed himself to the boycott, however, he quickly put his own imprint on it.

As a theology student, King had become interested in developing links between spiritual values, social justice, and reform. He had been strongly influenced by the writings of the nineteenth-century American transcendentalist, Henry David Thoreau, on civil disobedience; by one of the most important American

proponents of the social gospel movement in the early twentieth-century, Walter Rauschenbusch; and by the writings and actions of Mohandas Gandhi, leader of the non-violent Indian independence movement. King synthesized these influences in formulating his approach to the Montgomery Bus Boycott and insisted that black Montgomerians base their challenge to bus segregation laws on the principle of non-violence.

King was by no means the first civil rights activist to advocate non-violence. Leaders of the Congress of Racial Equality (CORE) such as Bayard Rustin and James Farmer had, in the 1940s, embraced the ideas of Gandhi in their efforts to secure racial justice. In 1947 they launched the ultimately unsuccessful Journey of Reconciliation to test state compliance with the Supreme Court's ban on segregation in interstate transportation handed down the previous year in its *Morgan* ruling. Rustin assisted King as he formulated his strategy in Montgomery, helping to ensure that non-violent civil disobedience would become King's trademark approach to social protest and a seminal part of the struggle for black equality.

After nearly a year, during which blacks maintained virtually a complete boycott of Montgomery's buses, the NAACP joined with the MIA in asking the Supreme Court to invalidate the city's bus segregation laws. The Court complied, ordering that the city's black citizens be allowed to ride the buses as equals. It marked the first time during the modern civil rights era that African Americans in the South had resorted to mass action and dealt a successful blow to segregation. In that regard, the Montgomery Bus Boycott was as psychologically transformative as the *Brown* decision.

Hoping to sustain the momentum created by the success of the Montgomery effort, King and some sixty other black ministers and activists from across the South met in Atlanta in early 1957 and formed the Southern Christian Leadership Conference (SCLC), with the express purpose of using non-violent direct action to eliminate Jim Crow in all its manifestations and to advance the cause of social justice. Led by King, the SCLC would become one of the most visible and influential counterparts to the NAACP, especially in the South, where the older civil rights organization was under strenuous attack from the white establishment.

Developments such as the *Brown* decisions, the lynching of Emmett Till, and the Montgomery Bus Boycott dramatically increased the pressure on the federal government to become more proactive with regard to civil rights. Yet other factors were also forcing the government's hand by the mid-1950s. Against the backdrop of the Cold War, the obvious limits to democracy experienced by black Americans in the South were becoming a growing source of international embarrassment for the United States. This disparity was glaring as the country was engaged in a massive propaganda struggle with the Soviet Union to try to persuade the rest of the world, and especially those people growing increasingly restive under the yoke of colonialism, that the American way of life was superior to that of its communist rivals.

Closer to home, the Republican Party hoped it might be able to lure black voters back into its fold in the 1956 elections by reminding African Americans that it was Democrats – albeit, mainly those in the South – who were the staunchest opponents to any change in the racial status quo. Accordingly, in 1956, the Eisenhower administration submitted to Congress the first civil rights bill since the end of Reconstruction. The legislation proposed modest enhancements to voting rights protections, would create a federal civil rights commission empowered to investigate allegations of civil rights violations, and would expand the executive branch's oversight of civil rights enforcement by establishing a civil rights division in the Justice Department. Segregationists in Congress were aghast at the proposed legislation and, as a result, the bill languished for over a year. It was finally passed in the late summer of 1957, largely due to the efforts of Democratic Senate Majority leader Lyndon Johnson, a Texan with a long history of loyalty to the segregationist cause. However, Johnson was considering a presidential run in 1960 and felt it imperative to establish his civil rights bona fides with Northern voters, especially in the African American community. Although it would be several years before the new civil rights law had any substantive impact, the bill's passage indicated that branches of the federal government other than the judiciary were at last awakening to the civil rights revolution that was beginning to unfold around them.

Before the Eisenhower administration could relish this legislative milestone, however, it faced

what would prove to be its most serious civil rights crisis. Even as Congress was passing civil rights legislation, the city of Little Rock, Arkansas, appeared poised to erupt into a major racial conflagration over a proposal to begin the desegregation of its public schools. Little Rock was the first large school system in the South to implement a desegregation plan, which the school board had carefully drafted through the spring and summer of 1957. The proposal called for a token group of nine black students to attend the all-white Central High School during the 1957–8 academic year. Then, during each subsequent year, a similar token group would integrate successively lower grade levels. The hope of the school board was that by taking this gradualist approach, they could comply with the Supreme Court's *Brown* decision, but also give whites time to adjust to the changes.

The school board's plans went awry, however, when determined segregationists from Little Rock and its environs, backed by scores of others from out of state, convened on the city as the first day of school drew near. Arkansas's governor, Orval Faubus, then interjected himself into the situation. In plain defiance of the federal courts and usurping the authority of local officials, the governor called out the state's National Guard forces and ordered them to prevent the students from entering the school, claiming that he was doing so to preserve the peace and protect property. In turn officials in Little Rock, as well as civil rights leaders across the South, solicited support from the Eisenhower administration. However, Eisenhower was wary of getting involved based on principle, preferring to allow state and local officials to defuse the crisis. Eventually, when progress stalled, Eisenhower agreed to summon Governor Faubus for a meeting, where they struggled awkwardly to resolve the impasse.

After the federal court overseeing the desegregation plan again ordered the students to be admitted and threatened Faubus with a contempt citation, the governor appeared to yield. He indicated he would allow the integration plans to proceed and that the Arkansas National Guard would be used to facilitate rather than prevent the process. But on the day the black students were to re-enter Central High, Faubus apparently had a change of heart. He unexpectedly demobilized the National Guard, leaving the overwhelmed local police with the task of getting

the students past an enormous and angry mob and into the school. They succeeded briefly, but the imminent threat of violence prompted the administration to spirit the students out of the school after just a few hours. In the face of such defiance and potential danger, President Eisenhower reluctantly sent over a thousand federal troops into Little Rock and placed the Arkansas National Guard under federal authority. Only in this manner were the African American students able to gain entry to the school. Federal troops would be required to remain at Central High School for the rest of the year to ensure the safety of the black students. The following summer Faubus ordered all the high schools in Little Rock to be closed to avoid having to comply with desegregation orders, setting an ominous precedent that would be followed elsewhere in the South in the coming years.

Meanwhile, as individual leaders such as Martin Luther King and organizations such as the NAACP were garnering a growing number of headlines, a much more militant group had been hard at work since the mid-1930s developing an alternative vision to the integrationist approach of the mainstream movement. Taking a page from the separatist, nationalist philosophy of Marcus Garvey, the Nation of Islam (NOI) – or Black Muslims as adherents were more commonly known – led by Elijah Muhammad, had developed a small but devoted following in predominantly black neighborhoods such as New York's Harlem, Chicago's South Side, and Boston's Roxbury. The ideology of the NOI blended threads of anti-white, anti-Christian beliefs with a strict moral code that forbade the use of drugs or alcohol, and stressed the importance of education, self-reliance, and above all, racial pride and separatism. It recruited heavily in these long-neglected and largely forgotten neighborhoods where crime, substance abuse, and prostitution ran rampant, and where hope for a better life was virtually non-existent. Like Garvey, the NOI did not believe that African Americans would ever be treated fairly or seen as equals in a white majority society. Thus it pointedly disparaged the integrationist message of mainstream activists and shunned participation in the political process altogether.

In the late 1940s, while serving time in a Massachusetts penitentiary for burglary, Malcolm Little, a street hustler from Roxbury, was converted to the Nation of Islam. Malcolm X, as he

took to calling himself following his release from prison – X symbolizing his lost African name and heritage – totally committed himself to the work of the Black Muslims. He worked tirelessly to recruit new members, raise funds, and build new temples for worship. Elijah Muhammad, impressed with X's organizational and oratorical gifts, made him the chief spokesman of the NOI and, in effect, his right-hand man. By the late 1950s, though almost completely unknown outside the urban black neighborhood, Malcolm X was well on his way to becoming the most prominent Black Muslim in America – a trajectory that would ultimately put him on a collision course with Elijah Muhammad.

Clarkson, Thomas (1760–1846)

Srividhya Swaminathan

Thomas Clarkson was one of only a few men who actively participated in both British campaigns for abolition: abolition of the slave trade and abolition of slavery. Born in Cambridgeshire, Clarkson attended the grammar school where his father was headmaster and later attended St. John's College in Cambridge. Though he was a good student, Clarkson's real academic accomplishment came when he won his second Latin essay prize for his *Essay on the Slavery and Commerce of the Human Species, Particularly the African* (1785). In researching this work, Clarkson studied the writing of earlier anti-slavery writers like Anthony Benezet, and he conceived a genuine horror for the practice of slavery.

After completing his studies at Cambridge, Clarkson moved to London in order to pursue the anti-slavery cause. He became involved with the circle of Quaker abolitionists who had already submitted one petition for abolition of the slave trade in 1783. He also developed a strong friendship with Granville Sharp and through him would later become involved in the Sierra Leone project. The Quaker publisher James Phillips published his translated essay in 1786 and copies were distributed throughout London to sympathetic audiences. In 1787 he made the acquaintance of a dynamic MP named William Wilberforce and enlisted his aid in bringing the idea of abolition before Parliament.

In 1788 Clarkson published *An Essay on the Impolicy of the African Slave Trade*, after which he joined Sharp and the London Quakers to form the Society for the Abolition of the African Slave Trade. In addition to contributing several essays to the cause, Clarkson used his small personal fortune to travel the British Isles (totaling 35,000 miles) and then to France in 1789 in order to gain support for the campaign against the African slave trade.

Clarkson understood the enormous visual potential of his cause, so when he was sent a diagram of a Liverpool slaver called the *Brookes*, he swiftly adapted the diagram for publication. The image of 452 Africans packed into the hold of a slaver drew a great deal of sympathy from

Britons. In 1808 he published *A History of the Rise, Progress, and Accomplishment of the British Slave-Trade*, in which he included a series of drawings depicting slave manacles and implements of torture. Clarkson was also the first to recognize, in print, the death toll of British seamen engaged in the trade – at a far greater rate than any other form of maritime trade.

After both houses of Parliament passed the bill to abolish the trade, Clarkson almost immediately turned his attention to the abolition of slavery. After a brief rest, he returned to campaigning both on behalf of universal abolition of the African slave trade and of slavery. He advocated gradual abolition in order to allow time for slaves and plantation owners to become accustomed to their new status. The anti-slavery cause received a victory regarding gradual abolition in 1833 and then another victory for immediate abolition of slavery throughout British territories in 1838. Even after abolition, Clarkson remained committed to the anti-slavery cause and continued writing to aid American abolitionists. His efforts not only memorialized the struggle to end slavery but also attested to the enormous impact a dedicated and passionate individual can have on a powerful cause.

Class identity and protest

Paul Le Blanc

In seeking to understand the actualities and possibilities of social protest and revolution, scholars and activists have often sought to comprehend what force would be capable of bring-

ing about fundamental social change. This is related to notions of power, exploitation, and oppression in society. Revolutions are generally seen as bringing about, through the active participation of masses of people, the overturn of established ruling groups and the creation of a new political and social order. How people actually see or identify themselves as they engage in social struggles, and the identities they seek to build on or to foster in order to bring about social change, are of central importance for the unfolding of any revolutionary process. The examination of such matters of identity is important for those wishing to understand such processes.

Among the most potent identities in modern revolutionary movements has been that of class. The term “class” has had various meanings, but the modern usage often refers to differences of wealth and power in society. While the notion of class in this sense was highlighted by social theorists of the nineteenth century, most notably by Karl Marx and his co-thinkers, its usage has been traced back to the eighteenth century. Daniel Defoe, commenting on the evolving market economy in Britain, wrote in 1705 that “the dearthness of wages forms our people into more classes than other nations can show.” Referring to similar, though more advanced, developments in 1787, James Madison wrote in *The Federalist* that moneyed and manufacturing interests “grow up of necessity in civilized nations, and divide them into different classes, actuated by different sentiments and views.”

In certain stratified pre-capitalist societies the modern notion of class may be seen as roughly equivalent to the notions of social orders or ranks or estates. As Raymond Williams has noted, however, “the essential history of the introduction of *class*, as a word which would supersede older names for social divisions, relates to the increasing consciousness that social position is made rather than merely inherited.”

Marxist Conceptions and Evolving Realities

The *Communist Manifesto* (1848), by Marx and co-author Frederick Engels, has been seen by many as the primary revolutionary text of modern times, and in it the centrality of class is unmistakable. Since the rise of the civilizations that have post-dated the extended early period of primitive tribal communism, human history

has been “a history of class struggle,” they tell us. The rise of civilization has been dependent upon the technological development and consequent increase in productivity that results in the production of a social-economic surplus which, in turn, makes it possible for the labor of one person to support himself/herself as well as one or more others. This, in turn, makes possible the rise of the social-economic inequality that is essential to the modern concept of class.

Marx and Engels assert that since the rise of civilization there have been two primary classes: (1) the exploited majorities whose labor sustains all of society, and (2) the powerful minorities whose wealth depends on the exploitation of the majority’s labor.

The traditional Marxist schema of successive stages of class society, based on European history, has seen ancient slave-based civilizations (with slaves and slave-owners) superseded by feudal society (with peasant serfs and lords), which in turn has been replaced by capitalism (with the proletariat, or working class, and the bourgeoisie, or capitalist class). Based upon his studies of non-European societies, Marx also advanced the conception of an “Asiatic mode of production.” Recent theorists, such as anthropologist Eric Wolf, suggest the more general notion of a “tributary mode of production,” which they argue can be seen as more adequately describing various socioeconomic realities between the erosion of primitive communal society and capitalism.

Marx and Engels suggested, however, that with the rise of capitalism – an incredibly dynamic system based on the powerful, relentless process of capital accumulation, unlike more static forms of previous class society – a new kind of development has taken place, one involving “simplified class antagonisms.” Commenting on earlier forms, they asserted: “In ancient Rome we have patricians, knights, plebians, slaves; in the Middle Ages, feudal lords, vassals, guildmasters, journeymen, apprentices, serfs; in almost all of these classes, again, subordinate gradations.” Under capitalism, in contrast, “society is more and more splitting up into two great hostile camps, into two great classes directly facing each other: bourgeoisie and proletariat.”

The important 1888 footnote to the *Manifesto* by Engels explains: “By bourgeoisie is meant the class of modern capitalists, owners of the means of social production and employers of wage-

labor. By proletariat, the class of modern wage-laborers who, having no means of production of their own, are reduced to selling their labor-power in order to live.” It is the class struggle between the working class and the capitalist class, according to Marx and Engels, that will define the trajectory of modern society – culminating in a victory of the working-class majority, leading in turn to a revolutionary transition from capitalism to socialism.

Yet in Marx’s own writings one can find greater complexity than this. In an unfinished chapter for the third volume of *Capital*, Marx wrote: “The owners of mere labor-power, the owners of capital, and the landowners, whose respective sources of income are wages, profit, and rent of land, or in other words, wage laborers, capitalists, and landowners, form the three great classes of modern society based on the capitalist mode of production.” He almost immediately added: “intermediate and transitional strata obscure the class boundaries even in this case.” The fact that Marx’s analysis here remained only an initial fragment prevents us from following his thought further. Surveying the vast body of Marx’s writings, Edward Reiss has offered the following compilation of classes under capitalism:

- The big landowners, aristocracy, nobility, can be seen as a residual class from feudalism, increasingly supplanted by the bourgeoisie.
- The bourgeoisie, owners of the factories (means of production), the transport system (means of distribution), and the big shops (means of exchange). Marx distinguishes between industrial capitalists (for example, mill owners) and finance capitalists (the “bankocracy”).
- The petty bourgeoisie: small-scale businesses, shopkeepers, etc. In times of boom, they aspire to the bourgeoisie. In recession, they shift towards the proletariat.
- The proletariat: those who have nothing to sell but their labor-power. The worker “belongs not to this or that capitalist, but to the capitalist class, and it is his business to dispose of himself, that is to find a purchaser within this capitalist class.”
- The lumpen proletariat: “the ‘dangerous class, the social scum, that passively rotting mass thrown off by the lowest layers of the old society.’ This is what is now called the underclass: criminals, beggars, etc.”

Nor is this complete. Missing from the list are the majority of laborers for most of the world (including Europe) when Marx wrote – the peasantry. In the *Communist Manifesto* peasants are lumped together with other social strata destined to pass out of existence: “the lower strata of the middle class – the small trades people, shopkeepers, and retired tradesmen generally, the handicraftsmen and peasants – all these gradually sink into the proletariat.” Yet this is a category deserving greater attention.

As Teodor Shanin (himself operating within a broadly Marxist framework) has insisted, peasants must be seen “as a class, i.e., as a social entity based on a community of economic interests, shaped by conflict with other classes, expressed in typical patterns of cognition and political consciousness and capable of united political action on a national level.” From the standpoint of many social scientists, peasants cannot be equated simply with people who are engaged in agriculture (such as existed among many of the tribes of Native American peoples, or “Indians,” before they were overwhelmed by European and US conquest). Nor are they like small-scale farmers engaged in commercial agriculture, treating their land as small business enterprises producing primarily for the market in order to maximize profits (which would make them “petty bourgeois”). According to Shanin, “the peasantry consists of small agricultural producers who, with the help of simple equipment and the labor of their families, produce mainly for their own consumption and for the fulfillment of obligations of political and economic power” (whether these be feudal lords, powerful monarchies, priestly castes, absolutist states, capitalistic landowners, or merchants or banks). In social organization, culture, and mentality, they are non-capitalist. As Hal Draper has noted, the common English translation of the *Manifesto* that seems to refer pejoratively to “the idiocy of rural life” (*dem Idiotismus des Landleibein*) is better understood as “the seclusion and ignorance of rural life,” referring descriptively to the fact that “the peasant population stood outside modern civilization within a nation.”

This “awkward class” (as Shanin has labeled it) has been the majority of the world’s laborers throughout much of human history. Far from being “petty bourgeois,” it has the potential for being profoundly hostile to capitalist economic development. In fact, Marx and Engels – as

well as Russian revolutionaries associated with the Bolshevik wing of the Marxist movement, and later the Communist International, such as Lenin, Trotsky, and Bukharin – saw the peasants as essential allies of the working class in anti-capitalist struggles in countries with substantial agricultural economies. This conception of worker-peasant alliance, and of peasants as a revolutionary class, was also taken up, often with dramatic emphasis and adaptation, by revolutionaries through Asia, Latin America, and Africa.

The Working Class

The fact remains that the analytical generalization made by the young Marx and Engels in the *Communist Manifesto* has seemingly been borne out over the past century and a half – the peasantry has increasingly given way, on the one hand, to commercial farming interests that are part of the capitalist class (with the smaller farmers being wiped out, more and more, by large-scale “agribusiness”), and on the other hand being absorbed by the working class – either being converted into an agricultural proletariat or being driven into the labor forces of urban areas. A complication in economically “underdeveloped” areas has involved the question of the extent to which ex-peasants become relatively low-pay wage-laborers in industrial/service enterprises and the extent to which they become part of an “informal economy” of part-time workers/part-time petty entrepreneurs. But the decline of the peasantry and growth of the proletariat appears to be a fact of life as capitalism has continued to develop.

In Marxist terms, the working class (or proletariat) is commonly seen as that sector of society that subsists (makes its living) by selling its labor-power (ability to work). Capitalist employers purchase this labor-power as a commodity along with other commodities (raw materials, tools) in order to produce commodities of greater value to sell at a higher price than was originally invested. The wages or salaries paid to the workers allow them to support themselves and their families. But the amount of actual labor squeezed out of the workers necessarily produces more value than the capitalist originally invested – which is the basis both for exploitation and profits. The working class is commonly seen as consisting not only of those workers who are drawn into this relationship, but also of

family members who are dependent on the worker's income, as well as workers not actually working because they are unemployed (including those suffering from long-term structural unemployment) or retired.

The importance of the working class for Marx and Engels seems to consist in a combination of factors:

1. The working class is in the process of becoming the majority class in capitalist society.
2. The working class provides the creative energy, the labor, that is essential for sustaining all of society.
3. The working class is an essential ingredient in the functioning of the capitalist system (through the exploitation of its labor, which is the source of capitalist profits), yet its role transcends the framework of capitalism.
4. Regardless of differences in the conditions of various groups of workers at various times, all workers experience the capitalist labor process as essentially exploitative, degrading, and authoritarian.
5. The relative compactness, socialization, and education of the working class has facilitated efforts to organize it as an effective force for economic, social, and political change (through protest movements, trade unions, political parties, and sometimes revolutionary struggles).
6. The negative impact of capitalism on the working class – an impact which has fluctuated but periodically intensified – creates a class-wide interest to replace capitalism with a less socially destructive, less oppressive, more humane and more democratic economic system.

The orientation implied by this class-struggle perspective of Marxism was powerfully influential in labor movements, social protests, and revolutionary struggles throughout the world, especially from the period of 1850 to 1950. In the second half of the twentieth century, however, a number of complications developed that raised questions about the Marxist orientation to the working class.

Complications, Intermediate Layers, Recomposition

Regarding the anticipated “simplification” of the class structure into a growing confrontation

between shrinking bourgeoisie and swelling proletariat predicted by the *Communist Manifesto*, radical sociologist C. Wright Mills commented, in the early 1960s, that “in the course of capitalism’s history, the class structure has not been simplified . . . into two classes. On the contrary, the opposite trend has been general – and the more ‘advanced’ the capitalism, the more complex and diversified has the stratification become.” In fact, “the wage workers in advanced capitalist countries have leveled off as a proportion of the labor force” and “the intermediary or middle classes have not dwindled away” but have been increased by “salaried professionals, managers, office workers and sales personnel” into a growing non-proletarian stratum, the upper managerial levels of which “have joined the property owners and with them constitute a corporate rich of a sort Marx did not know.”

So committed a Marxist theorist as Ralph Miliband has similarly acknowledged that a substantial segment of this “white collar” sector constitutes an “army of ‘foremen’ and ‘overseers’ of every description” that stands as a genuine “intermediate” layer “quite distinct from the bourgeoisie on the one hand and from the working class on the other.” Yet it can be argued that the central thrust of Mills’s point about a declining proletariat and rising “middle class” has not been borne out as realities continued to evolve. Instead, there seems to have been a “recomposition” rather than a dwindling of the working class. By far the larger segment of the “white collar” work force has, according to perceptive analyst Harry Braverman, been “enlarged into a mass of working-class employment, and in the process divested of all its privileges and intermediate characteristics.” As Miliband’s study of classes under modern capitalism concludes, “the vast aggregate of people in advanced capitalist societies, amounting to something like two-thirds to three-quarters of their population, . . . constitute the working class: industrial workers, clerical, distributive, and service workers, skilled and unskilled, young and old, white and black and brown, men and women.” This includes others not working for wages or salaries – non-employed partners, spouses, family members (some of these future workers), as well as sick, unemployed, and retired workers; he adds that there is also much overlap between the most destitute segments of the working class and the so-called underclass,

which also accounts for a significant percentage of the population.

Past critics of Marx (including Mills) also commented on the relative affluence of substantial working-class sectors in the advanced capitalist countries, which was a striking feature of the decades following World War II, particularly from 1950 to 1980, resulting in an obvious decline in revolutionary inclinations among workers with access to a proliferation of consumer goods.

Yet this was actually reversed with the global expansion of capital (associated with a much-heralded “globalization” and in part fueled by the collapse of communism). While global working-class occupations doubled between 1975 and 1995 to a total of 2.5 billion, the developing technologies and job mobility (in the words of sociologist Ronaldo Munck) impacted quite negatively on “the industrial workers of the old smokestack industries” in the advanced capitalist countries, yielding declining wage levels combined with sweeping neoliberal/neo-conservative cuts in social programs that had been the norm in the earlier post-World War II decades.

The situation at the dawn of the twenty-first century seemed in some ways to reinforce much of the *Communist Manifesto*’s relevance, despite the so-called “long detour” of those previous decades. “Class struggle has certainly changed its format and its modalities since the early days of capitalism but there is nothing to indicate that struggle has vacated the contemporary workplace,” Munck asserts. Some analysts of late twentieth/early twenty-first-century labor have emphasized that the negative impacts of globalization will compel active forces seeking change, within the working-class majority, to look for radical alternatives. “If a convincing, democratic version of socialism as the rule of the working class can be put forth in the context of the real struggles and organizations of the working class,” in the words of veteran analyst Kim Moody, “it has a chance to take on a material force it has lacked for decades.” He added (in 1997): “Perhaps to a greater extent than in most of the twentieth century, the opportunity for this idea and movement to spread globally is also more inherent in today’s capitalist world than at any time in the past seventy years.”

And yet the fact that the working classes of most countries throughout most of the twentieth century had, by and large, not seemed to be in

a position or even a mindset to carry out the kind of proletarian revolution projected by the *Manifesto* gave credence to other critical observations and alternative orientations.

Some social scientists have followed C. Wright Mills in considering contributions of such non-Marxist theorists of the early twentieth century as Max Weber, the century’s foremost sociologist, in exploring the problems that seem to be associated with the Marxist approach. As Lewis Coser observes, “much of Weber’s work . . . can best be understood as a continued interchange with the ideas of Karl Marx.” While agreeing that economically determined classes were essential components of modern capitalist societies, Weber also emphasized the importance of what he labeled “status groups” – or might be termed strong group identities – constituting communities that might be based on lifestyles, a sense of “honor,” social esteem, or prestige. He commented that “class distinctions are linked in the most varied ways with status distinctions,” sometimes crossing class lines, sometimes fragmenting class cohesion. Coser remarks that often status-consciousness is manifest among people “who are fearful of losing their status or who bridle at not having been accorded a status they think is their due.” He has suggested that Weber’s twofold classification of social stratification – based on concepts similar to Marx’s notion of class but also on the notion of status – “lays the groundwork for an understanding of pluralistic forms of social conflict in modern society and helps to explain . . . why Marx’s exclusively class-centered scheme failed to predict correctly the shape of things to come.”

Consciousness and Class

Interesting disputes have arisen among Marxists over the role of consciousness in defining the term “class.” In his magisterial history *The Making of the English Working Class* (1963), E. P. Thompson emphasized that “the notion of class entails the motion of historical relationship” that

happens when some men, as a result of common experiences (inherited or shared), feel and articulate the identity of their interests as between themselves, and as against other men whose interests are different from (and usually opposed to) theirs. The class experience is

largely determined by the productive relations into which men are born – or enter involuntarily. Class-consciousness is the way in which these experiences are handled in cultural terms: embodied in traditions, value-systems, ideas, and institutional forms.

He added:

There is today an ever-present temptation to suppose that class is a thing. This was not Marx's meaning, in his own historical writing, yet the error vitiates much latter-day "Marxist" writing. "It," the working class, is assumed to have a real existence, which can be defined almost mathematically – so many men who stand in a certain relation to the means of production.

Thompson dismissed this as "the crude notion of class."

In his highly acclaimed *Karl Marx's Theory of History* (1978), G. A. Cohen went out of his way to challenge Thompson's comments. He insisted that the appropriate way of understanding the concept "defines class with reference to the position of its members in the economic structure, their effective rights and duties within it. A person's class is established by nothing but his objective place in the network of ownership relations, however difficult it may be to identify such places neatly." He stressed that the person's "consciousness, culture, and politics do not enter the *definition* of his class position. Indeed, these exclusions are required to protect the substantive character of the Marxian thesis that class position strongly conditions consciousness, culture, and politics."

There is, however, a strong tendency within the Marxist tradition inclining in the direction suggested by Thompson. "*A class is born in the class struggle*," argued Ernst Fischer and Franz Marek in their exposition of Marx's thought. "Only through such struggle does it develop into a social and historical force." A key aspect of Marx's conception of class involves its dual character, what might be called an objective dimension and a subjective dimension, the distinction between what he called "a class-in-itself" and "a class-for-itself." The first means the actual role a social grouping plays in the economy and in society, the second means the consciousness members of that group have regarding their common situation, their common

interests and struggles. From this standpoint, Marx scholar David McLellan has stressed that, for Marx, "a class only existed when it was conscious of itself as such, and this always implied common hostility to another social group." He quotes Marx's comments on the French peasantry in *The Eighteenth Brumaire of Louis Bonaparte* (1852):

In so far as millions of families live under economic conditions of existence that separate their mode of life, their interests and their culture from those of the other classes and put them in hostile opposition to the latter, they form a class. In so far as there is merely a local inter-connection among those small-holding peasants and the identity of their interests begets no community, no national bond, and no political organization among them, they do not form a class. They are consequently incapable of enforcing their class interest in their own name.

One could add (as have some critics of Marxism) that in the United States working class, "in the Marxist sense," has ceased to exist because most of its prospective "members" see themselves not as "proletarian" but instead as "middle class" (neither rich nor poor, but in the middle).

In response to this, Cohen points out that Marx himself, in the very same work cited by McLellan, writes that these peasant small-holders "were the most numerous *class* of French society." He comments: "It is precisely because a class need not be conscious of itself that the phrase 'class-in-itself' was introduced." Whether or not one accepts Cohen's lucid reasoning, however, his dispute with Thompson highlights a problematical development that arose during the twentieth century.

There was, in fact, a vibrant correspondence between the perspectives of the *Communist Manifesto's* program for the working class and the actual development of the European labor movement in the late nineteenth century: engage in militant struggles for reforms, build increasingly strong trade unions, build political parties of the working class that would project a socialist future. But there were also countervailing tendencies, as Marx and Engels more than once emphasized.

Others in the Marxist tradition also gave attention to this matter. For example, V. I. Lenin in *What Is To Be Done?* and Rosa Luxemburg

in *The Mass Strike, Trade Union, and Political Party* each stressed a sharp distinction between a narrow “trade union consciousness” and a more expansive class-consciousness as two very different mindsets that could lead workers into either a reconciliation with capitalism or into a revolutionary confrontation with it, and both thinkers during World War I emphasized the negative effects of a form of consciousness that Lenin labeled “social-patriotism” that drew workers to support and even sacrifice their lives to imperialism. Lenin, referring to characterizations by Engels of elements within the late nineteenth-century British working class, advanced a general notion of “labor aristocracy” to define a layer of more privileged workers (generally more highly skilled and more highly paid) inclined to separate themselves from the masses of less fortunate workers and to make their peace with the capitalist system – which could be seen as conceptually similar to Weber’s conception of status.

Georg Lukács contributed substantially to analyses of these and similar matters in his 1923 classic *History and Class Consciousness*, an exposition of Marxism profoundly influenced by the philosopher G. W. H. Hegel, sociologists Georg Simmel and Max Weber, and especially the revolutionary theorizations of Lenin – particularly in the essays “Class Consciousness” and “Reification and the Consciousness of the Proletariat.” The term “false consciousness” gained currency among many Marxists in discussions about how some workers are drawn to outlooks and practices – including racism and various forms of chauvinism, support for conservative or reactionary political figures, selfish materialism or self-destructive behaviors, etc. – that were inconsistent with the insights and the working-class trajectory projected by Marx.

At the same time, a far-reaching critique of Marxism found powerful articulation in the twentieth century, based on the observation – expressed, for example, by sympathetic critic C. Wright Mills – that “wage-workers in advanced capitalism . . . have not become the agency for any revolutionary change of epoch,” but rather “to a very considerable extent they have been incorporated into nationalist capitalism – economically, politically, and psychologically. So incorporated, they constitute within capitalism a dependent rather than an independent variable. The same is true of labor unions and labor parties.” He

acknowledged “basic class conflicts of interest” but insisted “there is little class struggle.” According to Mills, Marx’s analysis captured realities of capitalism as it existed in the Victorian era (1837–1901), but missed crucial developments that became manifest afterward: “We must accuse him of dying, his work unfinished, in 1883.” The thrust of this argument found expression in numerous critiques, at various times, from the 1940s through the 1990s, perhaps most dramatically expressed in André Gorz’s phrase of the 1980s: “Farewell to the Working Class.”

While radical labor analyst Sheila Cohen has similarly noted “the lack of awareness of most workers, most of the time, of their collective class interests,” she has also pointed out that the impact of capitalist exploitation as well as inevitable shifts in the dynamic capitalist economy preclude “uninterrupted acceptance of the status quo.” Time after time, workers have been pushed into struggles – by the very nature of capitalism – that have periodically resulted in the expansion of radicalized class-consciousness.

Identity

To a very large extent in the late twentieth century, however, organized labor did not appear to play the militantly class-struggle role Marxists had expected of it. Labor’s radical left wing dramatically deteriorated in many capitalist countries in the decades following 1950, with a significant radicalizing reversal in the late 1960s giving way to even more dramatic decline in the century’s final decades. This took place even as capitalist reality had increasingly negative impact on various social groups. Commenting that such shifting realities mean that “new identities arise, [and] old ones pass away (at least temporarily),” social theorist Stanley Aronowitz observed that “new social and cultural formations – of nationality, race, gender, and sexuality, among others – have provided new bases of group and individual identities.” In the late twentieth century a specialized concept of identity was developed – particularly by theorists influenced by the philosophical current known as poststructuralism – which focused on the way in which specific groups in society have been culturally identified and/or self-identified, a means for defining relationships with those around them (similarities can be found between this concept and, once again, Weber’s notion of status).

One can begin an understanding of this conception by reflecting on the fact that each of us finds that we are conscious of having many different identities that are important to defining who we are. Among the variety of such identities – some of which seem more vibrant to us than others – are (in no particular order): our place within a particular family; our gender; our race and/or ethnicity; our nationality; our age; our religious orientation; our attitude toward specific political ideas; our sexual orientation and preferences; the foods we like; our musical preferences, the clothes we choose to wear, and other cultural inclinations; our favorite hobbies and pastimes; organizations that we happen to belong to; whether we live in a city, a small town, or a rural area; our income level; our particular economic occupation and skill level within that occupation; and the *socioeconomic class* that we happen to belong to (and our attitude, if any, to what that means).

It can be argued that for most people, there is not a natural inclination to “privilege” the final, italicized identity listed in the previous paragraph. The question can be raised as to why – if the critical points made by C. Wright Mills and others are valid – one’s class identity, particularly working-class identity, should be privileged. Many have argued that if one is concerned with revolutionary protest and change, a very different identity focus is far more relevant.

In the 1960s, for example, some African American radicals critically respectful of the Marxist tradition, yet intimately aware of harsh and complex realities, argued, in the words of James Boggs, that “white workers are by the very nature of US development and history a class above all blacks,” that “the blacks are an underclass which has developed despite the fact that they have been systematically damned by the system,” and that “blacks, and particularly young blacks, are the revolutionary force inside this country, the only social force in irreversible motion.” Some insisted with Harold Cruse that “white capitalist nations, including all the different classes within these nations, from upper bourgeoisie to lower proletariat, have become, in fact, bourgeois and relative middle-class strata vis-à-vis the non-white peoples who have become, in fact, the ‘world proletarians.’” Not long after, certain feminist theorists (most dramatically, Shulamith Firestone in *The Dialectic of Sex*, seeking “to take class analysis one step further to its roots in the biological division of the sexes,”

and Zillah Eisenstein in *Capitalist Patriarchy and the Case for Socialist Feminism* advancing a conceptualization of women as a class) advanced somewhat similar arguments, but in this case “privileging” the female identity, with a primary focus on women’s liberation.

Yet some have questioned the value of elevating any identity to the position of being *the* primary one in the struggle for social change. In the 1980s Ernesto Laclau and Chantal Mouffe generalized and elaborated the theoretical challenge to Marxism’s emphasis on class, drawing on perspectives of French poststructuralists Michel Foucault and Jacques Derrida, and on a specialized reading of Italian revolutionary Marxist Antonio Gramsci. Dismissing “the ontological centrality of the working class” and “the illusory prospects of a perfectly unitary and homogenous collective that will render pointless the moment of politics,” Laclau and Mouffe instead looked to a set of social movements representing various oppressed groups in society that would involve “a plurality of antagonisms and points of rupture.” Alliances among such forces, cohering around a variety of issues, would establish a diverse but hegemonic “collective will” that could bring advances in struggles for gender and racial equality, human rights, economic justice, peace, defense of the environment, etc. The consequent enrichment of democracy would be far more real and meaningful than “the role of Revolution with a capital ‘r,’ as the founding moment in the transition from the one type of society to another.”

Some Marxists have reacted with hostility to such challenges, arguing that “independent” social struggles around black rights and women’s rights – and/or “identity politics” as such – are actually either “bourgeois” or “petty-bourgeois” diversions from the class struggle and divisive of working-class unity. There have been other responses, however, from such diverse figures as Oliver Cox, C. L. R. James, George Breitman, Manning Marable, Lise Vogel, Sheila Rowbotham, and Nancy Holmstrom – all of whom have argued that the liberation struggles of oppressed groups (such as blacks and women) are absolutely essential for social progress and for human liberation, and that independent social movements (controlled by blacks and women, respectively) are indeed needed to advance such struggles. They have also argued, however, that the majority of the people in such mass

movements (regardless of how they consciously identify themselves) happen to be part of the working class, that such struggles are objectively in the interests of the working class as a whole, and that such movements and struggles can play a “vanguard” role in helping to radicalize the working class and lead it forward in the struggle against the capitalist status quo. Yet as historians such as David Roediger have demonstrated with such conceptualizations as “whiteness,” the US working class has in fact been deeply fractured – in its consciousness, culturally and organizationally, by racism, and also by the distorted “maleness” of gender oppression.

Nonetheless, the decisive capacities attributed to the social movements by such theorists as Laclau and Mouffe have been sharply questioned by some analysts. Noting that “new social movements have made significant advances in recent decades and [that] they may reasonably hope to make more in the years to come,” Ralph Miliband emphasized in 1989 that

what they cannot reasonably expect is that societies whose main dynamic is the pursuit of private profit and whose whole mode of being is suffused by deep inequalities of every kind can be made to do away with exploitation, discrimination, violence against vulnerable sections of the population, ecological vandalism, international strife, and all the other evils which have brought new social movements into being.

Adding that “organized labor does have a greater potential strength, cohesion, and capacity to act as a transformative force than any other force in society,” Miliband concluded:

So long as organized labor and its political agencies refuse to fulfill their transformative potential, so long will the existing social order remain safe from revolutionary challenge, whatever feminists, or black people, or gays and lesbians, or environmentalists, or peace activists, or any other group may choose to do, and even though their actions may well produce advances and reforms.

Uneven and Combined Development

The shifting and multi-faceted realities of class and other identities in the dynamic global system of the past three centuries can be seen as a com-

plex manifestation of uneven and combined development, to use a phrase popularized by Leon Trotsky. There have certainly been confusions and complexities in determining the class position of some sectors. As C. Wright Mills and others have noted, although some occupations involve people who are paid for their labor-power (making them working class according to Engels’ 1888 footnote to the *Manifesto*), they play managerial roles enhancing the exploitation of labor, sometimes receive a very high level of financial compensation, and are animated by a kind of consciousness all of which seem to place them much closer to the capitalist class – causing analysts such as Erik Olin Wright to develop conceptualizations of “mixed class locations.”

In many so-called third world countries in Asia, Africa, and Latin America, there are sometimes even greater complexities – often within the same family, even in the same individuals, we find those who may shift back and forth between being a peasant, an agricultural laborer, an urban petty entrepreneur, a beggar, a proletarian (causing some analysts, such as Carlos Vilas, to reach for more ambiguous formulations, such as “the working masses”). As Ronaldo Munck explains, the increasing prevalence of explosive urbanization in “peripheral” or “developing” societies has created what is often referred to as an “informal economy.” He notes: “The urban informal sector (the petty-bourgeois self-employed and the informal proletariat) is seen as a subsidy to capitalist accumulation given its high levels of self-exploitation.”

Harry Braverman’s comments have relevance for such varied examples: “These difficulties arise, in the last analysis, from the fact that classes, the class structure, the social structure as a whole, are not fixed entities but rather ongoing processes, rich in change, transition, variation, and incapable of being encapsulated in formulas, no matter how analytically proper such formulas may be.” This can be said to lend some credence to the comment of Thompson that “class is a relationship, not a thing.” It also corresponds to Ira Katznelson’s warning against seeing *class formation* (corresponding to the class-for-itself notion) simply as the logical outcome of *class structure* (class-in-itself) by maintaining a focus on theoretical formulas while “avoiding a direct engagement with the actual lives of working people.” He summarizes the insights of a number of labor historians:

Working-class formation as a process is not identical from country to country (or from place to place within countries). The histories of national working classes are composed not only of workplace relationships, trade unions, or the visible leadership of workers' movements and organizations. Inherited, pre-industrial, pre-capitalist traditions count. Non-class patterns of social division also affect class formation. Class, society, and politics cannot be conflated; their relationships are contingent. Class dispositions and behaviors are not fixed by interests but shaped by relationships.

Combining insights from the disciplines of political science, sociology, economics, and history, Manning Marable, Immanuel Ness, and Joseph Wilson (in light of the fact that in the United States "people of color" had shifted from minority to near-majority status within the US working class) commented in 2006 that "the relationship between race and labor in America is a perpetually evolving condition that is changed, challenged, modernized, and ultimately revolutionized in light of leadership, historical struggles, social analysis, and not least importantly, mass consciousness and direct action." Each generation in the United States, they emphasized, had faced "epochal labor and civil rights battles," but complex combinations of racial and class differences have created various "rigidly segmented and antagonistic groupings," with a likelihood of "a continuum of progress and reaction in race relations framed around antagonistic labor and race relations." They extrapolated: "This combative tension between race and labor is imbedded in the ever-changing division of labor in the United States and extends across the entire world as race and labor issues have been internationalized, borders having been eviscerated, and global race-dependent economic relations emerge." Factoring-in additional identities of gender, ethnicity, and religion – all of obvious and central importance to world realities at the beginning of the twenty-first century – would naturally bring additional "combative tensions" into relief.

Some scholars have reached for what might be called a conceptual blending of identities relevant to protest and revolution, boldly working toward the unified conceptualization of class, race, and gender, although David Roediger suggests that "discussing the triad of race, class, and gender would be difficult enough, but that is just

the tip of the iceberg." He explains: "Once we acknowledge the class identity of, say, an African American woman worker is influenced by social relationships with, say, Chinese males (and vice versa), we see the practical difficulties associated with treating race, class and gender in what Tera Hunter brilliantly terms their 'simultaneity.'"

Yet in an insightful study of the Nicaraguan Revolution which gives sustained attention to the identities of generation, gender, race, and class, anthropologist Roger Lancaster argues:

The class dimension is privileged, if only circumstantially and politically (not analytically), and by this index: class exploitation necessarily produces an exploiting minority and an exploited majority. The same cannot be said for any other dimensions of oppression. Whether one is seeking to reform or overthrow *any* system of exploitation, the dynamics of class and class resistance remain, in Marx's sense, strategic and paramount.

Even the most penetrating observation, however, can hardly be expected to resolve such matters, given the complexities of social protest and revolutionary change.

Conclusions

"Capitalism is probably the most resilient and hegemonic system of production and distribution ever devised," radical economist Michael Yates has commented, "and its supersession by an egalitarian mode of production is going to take a long time and will involve a variety of tactics." Many will certainly ask if capitalism can in fact be replaced by another social system, although if it is not, this will be the first social system in history that proved to be permanent. Until such revolutionary change is brought about, however, it is likely that questions and debates will continue to arise regarding what social force or forces can bring about that change.

Inherent in capitalism is the fundamental class divide highlighted by Marx and others, but in this most dynamic of economic systems, additional divisions are brought into being, sometimes intensified and sometimes diminished, with the shifting balances and combinations of reality. Such "current realities" unavoidably generate ongoing debates and questions which will, undoubtedly, offer both stimulation and insights for those

who wish to study revolutionary and protest movements of the past. It may also be the case that more profound explorations of the past will offer insights into future possibilities.

Class, poverty, and revolution

Paul Rubinson

Any analysis that examines poverty, class, and inequality faces the challenge of dealing with numerous misconceptions about the poor and working classes. While popular culture conjures up images of tumultuous masses eager to overthrow the oppressive shackles of capitalism, any serious observer quickly finds that poor people have little access to media, so that assumptions and generalizations often speak for them. In politics, conventional wisdom often labels poor people as angry: beneath the surface of poverty churns a volatile mixture of resentment and entitlement, as the poor classes stand ready to unleash their desires through crime, violence, and even revolution. Such an image is a twisted evolution of ancient ideas, as observers since the times of ancient Greece have theorized that economic inequality leads deprived classes to rebel. Most famously in the nineteenth century, Karl Marx posited a formula for revolution, and in the process exhorted the working classes to rebel. Ever since, political leaders and ruling elites have feared the revolutionary power of the underprivileged.

To a great extent, protests and revolutions are rooted in economic factors such as class, poverty, and inequality. Many of the most famous revolutions resulted in the dramatic redistribution of wealth. Upheavals like the French and Russian revolutions drastically overturned existing class hierarchies, while eruptions like the Iranian and Cuban revolutions overthrew colonial exploitation. Even protest movements that do not reach the revolutionary stage often have economic redistribution as a goal, including most labor protests as well as the American civil

rights movement. But grievances of poverty, class, or inequality are not the sole factors behind activism. Indeed, the oppressive nature of poverty and class hierarchy most often prevents activism by the poor rather than encouraging it.

Scholars and activists alike have found that assumptions about the poor are often based on misconceptions, especially the idea that poverty leads to violence and rebellion. Certainly, poverty acts as a significant grievance, but it does not spur collective action on its own. Any social movement requires some semblance of organization and opportunity to be successful. The poor, however, usually lack the resources necessary to organize and mobilize. Furthermore, a movement's success depends upon how other groups in society treat the movement. But other groups, including the middle and upper classes as well as governments, rarely see any need to either support or appease the poor. Further encouraging the image of the poor as inherently violent is the fact that when poor people do protest, they often do resort to disruptive tactics. This tendency springs not from any inherent violent characteristics, however, but because disruptive tactics are frequently the only tactics available to the underprivileged. Of all the obstacles that discourage social movements, poverty and inequality are among the toughest to overcome. Movements based around poverty, class, and inequality have had their moments in history, but scholars today see movements organizing around different issues.

Grievance Theory

During the twentieth century, scholars began to posit theories about the motivations and mechanisms that drive collective action. Scholars first sought to explain large and small-scale collective action by focusing on the aims of protestors. Since movements ostensibly aimed to meet a political or material need through collective action, analysts formulated a theory that explained movements as the result of specific grievances. Later scholars referred to the idea that a grievance inspires a social movement as "grievance theory."

Early proponents of grievance theory include Turner and Killian, and Smelser, who independently described the connections between grievances and collective action. In his *Theory of Collective Behavior*, Smelser theorizes that movements begin when a social strain or deprivation

is combined with new knowledge that conditions should not be as they are. "The history of social movements," he writes, "abounds with agitations on the part of groups who experience a real or apparent loss of wealth, power, or prestige." Smelser also argues that the triggering mechanism is "disharmony" between what is considered normal in society and the "actual social conditions." Often, a change in social conditions makes existing norms offensive. This discrepancy, Smelser argues, creates the basis for a movement.

Scholars have long allowed for a broad definition of grievances, the most common of which include class, poverty, and inequality. Grievance theory thus allows for a straightforward, cause-and-effect analysis of grievances and protest. As an example, grievance theory might explain the bread riots during the French Revolution as the result of a drastic rise in the cost of poor people's staple food and a subsequent decline in their economic standard of living. In more recent times, grievance theory might explain the race riots in US cities during the 1960s as the eruption of the grievances of ghetto-dwelling African Americans who remained poor as white Americans experienced rising prosperity.

From Aristotle to Marx

The grievance theorists formalized an idea that can be traced deep in the roots of Western intellectual thought. As outlined by Aristotle and Karl Marx, grievance theory dominated the study of social movements until the late twentieth century.

Aristotle and Inequality

In his *Politics* the Greek philosopher Aristotle explained revolution by the political context under which it occurs. Living under a democratic government, he argued, makes revolution even more likely because, although those who live under democracy desire equality, democracies often fail to live up to their promise of equality. Aristotle bluntly stated that "In every case, then, it is inequality which causes rebellion." When a democracy's citizens fail to receive what they think is just, they rebel in the name of equality. Aristotle believed that the demand for equality included status and rights, but most often wealth: "For those who aim at equality rebel whenever they think that, although equal, they possess less than those who possess more."

Inherent in Aristotle's ideas is the notion that a people's expectations of equality – and their concurrent willingness to rise up in order to get it – emerge from the basic dilemma of democracy, specifically the promise of equality and the difficulty of achieving it. Over time, however, Aristotle's explanation became obscured. Instead, the poor have become caricatured as prone toward violence and consumed by a sense of entitlement to wealth without work, embodied by the theory of a "culture of poverty." Most scholars, however, have attempted to understand poor people's movements not as the result of an inherent psychological flaw, but, in the spirit of Aristotle, as the product of political structures.

Marx and Class

Like Aristotle, Marx recognized that a society's political context created the conditions in which revolution occurred. But instead of democracy, Marx saw capitalism as the prime mover. Capitalism, Marx argued, pitted classes against each other. Marx further explained the revolutionary and reactionary capacity of distinct socioeconomic classes, indicating that within each class, people share interests and thus contain the capacity either to join together in revolt or to thwart each others' revolutionary goals by siding with reactionary conservatism.

Marx outlined his theory of revolution in the *Communist Manifesto*, written with Frederick Engels. Looking at contemporary European history, Marx and Engels described how capitalism creates conditions ripe for revolutions. By exacerbating the exploitation of the lower classes by the higher classes, capitalism encourages classes to band together and revolt against the upper orders. In the late eighteenth century the bourgeoisie, or middle class, empowered by the economic-productive might of the Industrial Revolution and emboldened by the liberal thought of the French Revolution, began to overthrow the aristocracy and reshape society according to their own interests, "a world after its own image." "The bourgeoisie," Marx and Engels wrote, "cannot exist without constantly revolutionizing the instruments of production, and thereby the relations of production, and with them the whole relations of society." The bourgeoisie constantly fight other classes, including the aristocracy, rival bourgeoisie, and bourgeoisie in other countries. Society, according to Marx and Engels, is essentially a "more or less veiled civil war."

Marx and Engels then explained that the working class – the proletariat – lead an oppressed, deprived life dominated by the bourgeoisie’s crippling capitalist work system. Fundamentally, they argue, capitalism deprives the proletariat of its money, labor, and independence: “Owing to the extensive use of machinery and to division of labor, the work of the proletarians has lost all individual character, and, consequently, all charm for the working man.” Marx anticipated that the proletariat would revolt to redress this grievance: “With its [the proletariat’s] birth begins its struggle with the bourgeoisie.” The proletariat follows the bourgeoisie’s example, and overthrows it – or, as the *Communist Manifesto* states more dramatically, “What the bourgeoisie, therefore, produces, above all, is its own grave diggers.”

Many scholars have applied the Marxist vision of class struggle to revolutions throughout history, using class grievances to explain revolts from the French Revolution to the revolutions of 1848 to workers’ movements across the world. From a Marxist perspective, social conflict is class conflict. Thus, during the French Revolution the bourgeoisie successfully captured control of the French state from the reigning aristocrats. Critical to the bourgeoisie’s success was their alliance with the working class. Emboldened by a run of economic turbulence, the rural poor and the urban poor (the *sans-culottes*) demanded change. But once installed, the bourgeoisie had no desire for further change and abandoned the working class.

The great tide of revolution in 1848 provides further evidence of the connections between class grievances and revolution. Marx’s prediction of proletarian victory seemed about to come true in 1848 when economic depressions across Europe unleashed a wave of working-class insurrections modeled on the French Revolution. As food prices rose, jobs became scarce, and a loss of income ensued. According to Eric Hobsbawm, the leading nineteenth-century Marxist historian, an economic crash collided with the “visible corrosion of the old regimes.” Revolutions of the working poor broke out across Europe in a matter of months. But in nearly every case a reactionary segment of the bourgeoisie sided with their government against the proletariat. This reaction occurred because the bourgeoisie feared true social upheaval, preferring order above all. The bourgeoisie realized it could

get what it wanted without revolution, simply by making some minor concessions to the lower orders (universal suffrage, for example). Instead of completing a revolution, the proletariat was assimilated into the existing political structure.

Nevertheless, the revolts of 1848 left a lasting mark on how people view the lower classes. The continued presence of communists in European politics after 1848 kept the fear of the revolutionary proletariat alive, a fear that manifested itself after the Russian Revolution in 1917, when Vladimir Lenin dedicated the Soviet Union to communist principles. The new nation vowed to support and incite worker revolutions worldwide and, when China (1949) and Cuba (1959) also underwent communist revolutions, western politicians’ nightmares about uprisings of deprived people appeared to be coming true. Of course, the transformation of class from a grievance into an ideology suggests the inability of class to spur revolution on its own. Lenin’s support of a “vanguard” group to ignite the proletariat’s revolutionary power makes further evident the impotence of class as a primal force behind collective action. Decades of rivalry between capitalist and communist nations during the Cold War, however, kept alive western fears of class warfare and insurrection.

Scholars Confront Grievance Theory

Thus one can see the development of the idea that poor people stand poised to take to the streets at a moment’s notice for economic equality. But despite the usefulness of grievance theory, scholars of the late twentieth century began to question the theory’s basic assumptions. Fundamental to the critique of grievance theory is the fact that mobilization is inherently – often prohibitively – difficult. Furthermore, while grievances exist in infinite numbers, insurrections occur relatively rarely.

The poor, overall, are generally not aggressive. Tilly describes how a group’s socioeconomic status dictates whether its mobilization is defensive or offensive in nature. Common sense, Tilly writes, dictates that the rich mobilize defensively to protect their wealth, while poor people mobilize offensively for what they lack. But, Tilly argues, “Common sense is wrong.” Instead, the wealthy classes mobilize to seize new opportunities while the poor cannot afford to. Simply

put, mobilization comes with costs – primarily money and time. While the rich can mobilize and still maintain their standard of living, poor people must meet their needs first; only then can they mobilize. Most often, the struggle to meet daily needs overwhelms any impetus at rebellion or organization.

Tilly goes on to explain that wealthy activists can rely on other groups, such as the government, for support. The poor, however, go it alone, as few groups have any incentive to aid the poor. The poor mobilize only as a last resort, if their meager interests are threatened. But once mobilized, Tilly adds, the poor seek new claims and rights. At the same time, when poor people have more resources than normal, they find mobilization easier – for example, labor strikes are more frequent when wages are high because workers have more resources. The rich, in turn, have been known to mobilize defensively when workers mobilize for economic redistribution.

Plenty of grievance-based movements inspired by class interests have overcome the inherent difficulties of mobilization, from the Paris Commune to countless labor strikes. But if class warfare is constant, as Marx states, one would – following grievance theory – expect protest and revolution to be constant as well. In fact, protest and revolution occur relatively rarely. Likewise, poverty and inequality have persisted across the globe – the gap between the rich and poor widens every day. Were grievance theory true, revolution would rise along with the rate of inequality. But revolt does not occur so consistently. According to Buechler, the most severe grievances are placed on the least powerful people. Rather than seeing grievances as a spur to activism, scholars have recognized that, far from empowering the poor, grievances restrict and oppress those who suffer from them.

In the late 1970s scholars began to critique grievance theory. Starting with the observation that grievances persist, but protest and revolution are rare, scholars decided that grievances are necessary, but not sufficient, to spur collective action. Grievances, scholars found, are rarely concrete: they can be real, imagined, manipulated, coopted, and transformed. Furthermore, grievance theory focused more on the psychology of the individual protestor rather than the social context in which activism occurred. Social movement scholars thus shifted their focus away from grievances and toward mechanisms.

In *Political Process and the Development of Black Insurgency*, McAdam tore down the “Classical Model” of social movements, of which grievance theory was a part. McAdam initially summarizes grievance theory as the idea that structural strain leads to a disruptive psychological state which results in an individual or group engaging in collective behavior. The more severe the strain, according to grievance theory, the more likely it is to lead to a movement. Under this paradigm, strain includes large-scale events like social change, industrialization, and economic upheaval. McAdam next identifies three problems with grievance theory. First, grievance theory makes movements seem as inevitable as “the process by which water boils.” Second, grievance theorists’ concern with the psychological effect of strain on individuals inadvertently portrays activists as disgruntled outcasts. Third, if psychological strain spurs activism, then collective action essentially acts as “therapy” for the activists by relieving their dissonant psychological strain. But, McAdam counters, social movements are political actions, not psychological ones. Grievance theory’s incorrect prediction that societal strain would lead to collective action could be explained by an overemphasis on “factors endemic to the aggrieved population.” McAdam observes that a movement is as much about opponents, allies, and bystanders as it is about the personal motivations of the activists. Finally, McAdam points out that most activists are overwhelmingly “better integrated into their communities than non-participants,” refuting the grievance theory portrait of disgruntled, marginal activists.

McCarthy and Zald also criticize grievance theory’s reliance on social psychology. They argue further that grievances fail to explain how vastly different groups of people come to find common cause when engaging in collective action. Grievance theory, they claim, ignores the viewpoints of actual activists, who emphasize mobilization, tactics, and the structure of society more than specific grievances such as class, poverty, and inequality. Evidence does not support Smelser and Turner and Killian’s arguments that shared grievances and beliefs are preconditions for social movements. Instead, society’s political processes, rather than individual psychological behavior, help social movements happen. After McCarthy and Zald’s critique of grievance theory, social movement scholars

began to focus on “resource mobilization” – the concrete processes in which social movement organizations interact with politics. While it takes collective action more seriously, this focus on mobilization and tactics only reinforces the inherent difficulty faced by movements aimed at redressing the ills of class, poverty, and inequality.

The Poor and Collective Action

When it comes to collective action, the poor have the heaviest grievances, but also face the most imposing barriers. Even so, history contains numerous examples of poor people mobilizing for their own interests. Thus scholars have attempted to understand restraints on social movements by looking at the ways in which the disadvantaged overcome these obstacles. The study of the poor has illuminated their plight as well as advanced knowledge about social movements in general. Scholars have focused on both obstacles to poor people’s protest as well as the instances in which protest succeeds.

Obstacles to Collective Action

A comparison of superficially disparate groups – Iranian migrants and African Americans – reveals the common problems endemic to poor people that inhibit collective action. In both cases each group has numerous grievances, but the prevailing sociopolitical structure inhibits protest.

In the late 1970s the Iranian people began to revolt against the ruling Shah, widely viewed as a puppet of western interests. The Shah was eventually replaced by the Ayatollah Khomeini. Kazemi studied the migrant poor in Iran within this revolutionary environment, an environment one would expect to facilitate collective action by the poor. Before the revolution, migrants from the rural countryside began to migrate to urban areas, finding themselves marginalized as a poor labor force. Rather than acting as a radical force, Kazemi found that the poor generally displayed little involvement in or awareness of politics. Although voluntary organizations and political parties served as sources of politicization in Iran at the time, none of these institutions found the poor a compelling constituency. The poor also lacked access to other traditional sources of politicization, including schools, jobs, and mass media.

Some exceptions existed. Although poor, the male children of the migrant poor generally

exhibited greater politicization and a tendency to engage in protest. Second generation male children, unlike second generation females, had access to schools and were encouraged to experience city life. When politicization did occur among the poor, they generally made modest, apolitical claims about issues such as housing, healthcare, street conditions, and transportation.

Kazemi’s study found that the Iranian bureaucracy never exhibited any responsiveness to or concern for the poor’s demands. Rather than turn frustration into protest, the migrant poor merely withdrew their demands, as they had not been socialized to see protest as useful. Although grievances were high, none of the resources needed for mobilization existed. Without politicization, the poor did not see the government as responsible for alleviating poverty. Instead, the poor blamed themselves for their plight. Lacking leaders and organizations, fearful of government reprisal, and busy trying to make ends meet, the poor remained outside of the protest sector. A poor Iranian squatter, witness to demonstrations against the Shah in 1979, put it succinctly: in order to participate, he said, “you have to have a full stomach.”

Swept up in their own internal migration, begun after the Civil War and boosted by incessant urbanization, millions of African Americans moved from rural to urban areas. But even as late as the 1960s, African Americans remained poor and disfranchised, outside of mainstream society.

Piven explains how the sociopolitical structure stifles activism among poor African Americans. Many scholars assume political influence is available to rich and poor alike, through polls, negotiation, and lobbying. With the promise of “one-person, one-vote,” citizens share equal influence. But, Piven asserts, office holders are subject to influence *besides* the vote, influence that tends to distribute political influence in the same ways that resources are distributed in society. Those without resources thus lack political influence as well; those without power begin to act powerless. Apathy, in Piven’s words, is “motivated inaction,” and after decades of oppression, “People who know they cannot win do not often try.” Traditional methods of collective action therefore do not apply to the poor. Social movement organizations can exert political influence, but poor people do not have the resources necessary to run organizations. And even if they did, an organization’s interests

do not coincide with the poor's. Because they lack jobs, the unemployed have no arena in which to create solidarity. Finally, the middle and upper classes tend to see the poor's interests as divisive or socialist in nature (for example, the so-called Robin Hood school funding programs, named in reference to the legendary figure who stole from the rich to give to the poor). These factors, Piven concludes, have oppressed African Americans and socialized them to see politics and collective action as futile.

Reasons Behind Collective Action

The same studies of Iran's migrant poor and African Americans also illuminate ways in which obstacles to activism can be overcome. Scholars have applied these findings to the study of social movements in general.

As Tilly notes, when the poor find their modest status threatened, they react. In her study, Kazemi found that poor migrants in Iran transformed themselves after becoming the victims of state-sponsored violence, including resettlement or the eradication of settlements. Such experiences made the poor bitter but also politicized them, encouraging them to mobilize against the Shah's government. Meanwhile, various organizations and leaders began to reach out to the poor, including Khomeini, who "linked pauperization of the masses to the wastefulness and corruption of the Shah's monarchy." A cognizance of the government's role in poverty as well as courting by other activists politicized the masses.

In the United States, observers often complain that poor people's activism consists of disruptive tactics – at best civil disobedience, and at worst riots. But, as Piven points out, disruption is their only option at influence. Rather than deny any connection between the poor and violence, scholars have recognized disruption as a legitimate tactic born of necessity and circumstance rather than any inherent tendency within the psyche of the poor.

With *Poor People's Movements* Piven and Cloward composed the most influential study of poor people's activism. Their main argument is that poor movements work when they are spontaneous and disruptive – grassroots manifestations of connected individuals with common purpose – and fail when bureaucratic organizations insinuate themselves into the movement. Piven and Cloward's work flew in the face of established wisdom about social movements, which argued

that mass-member, bureaucratic social movement organizations were essential for effective mobilization (as rooted in Marxist ideas of organization). In theory, the formal organization of an aggrieved population would result in sustained membership and participation, providing disciplined action and resources necessary for success. Piven and Cloward argue that this model has not worked. Organizations, they posit, do not create a movement – rather, they stifle it. When a movement is poised to do something big, they explain, organizations are overly concerned with sustaining *themselves*, rather than the movement (for example, unions collecting dues during a labor strike). "Organizations endure, in short," they write, "by abandoning their oppositional politics."

Piven and Cloward present an in-depth explanation of how poor protest movements successfully arise. Foremost, they state, a movement needs an opportunity in which to arise. In the United States (as in Iran), in the absence of politicization, the poor largely believe that they deserve their plight. Poor protests only occur when the larger society experiences a "major social dislocation," such as an economic upheaval. Because upheaval is rare, protest by the poor is rare. During a dislocation, however, opportunity arises because of concurrent political realignments. For a movement to arise, people must seize the opportunity, and successful mobilization then occurs in three steps: (1) the prevailing system loses legitimacy, (2) people assert their rights, and (3) people believe in their own agency.

Piven and Cloward devote much attention to the disruptive nature of poor protest. The poor do not haphazardly resort to violence because of the danger involved (though protests involving the poor often *turn* violent). Instead, societal institutions shape people and their manner of protest. People stage protests in settings where they can act collectively; jobs where people work collectively (in factories, for example) encourage solidarity. Institutional roles (such as "worker") determine a preferred form of defiance (such as strikes). The unemployed, however, cannot strike since they have no jobs; disfranchised and voiceless, the only way of drawing attention to their cause might be to riot. More conventional methods of collective action aim at halting the ordinary functions of an institution critical to the larger society – for example, a custodial strike or an economic boycott. But the success of disruption depends on others needing the

commodity that disruption withholds. That is, if janitors strike, the toilets overflow, or if customers boycott, a business folds. Since the poor and unemployed rarely have anything anybody wants, such as labor or money, they must turn to disruption.

Although disruption can turn public opinion against a movement, it has its benefits as a tactic. Piven and Cloward note that politicians face particular vulnerability when protest occurs during societal disruptions, since upheaval often results in political realignment. Elites thus find it hard to ignore protest when their constituents' identity is uncertain. Rather than risk alienating a potential constituency, elites sometimes agree to make concessions with protest groups.

Piven and Cloward qualify this by adding that any victories achieved by the poor rarely last for long. Elites often try to coopt the movement by channeling their protest into more legitimate actions (such as when the Johnson administration encouraged activists to take jobs in Great Society programs). The state also creates programs that appear to answer the moral claims of the movement, but really undermine support for the movement, such as the radical pension plan proposed in the 1930s by the Townsend movement, as compared to the moderate reform of the eventual Social Security Act. Furthermore, Piven and Cloward argue, a movement can assist in its own demise. Political concessions mute a movement by transforming protestors into political actors. Furthermore, government response changes the political climate that had allowed protests. If government has responded, however imperfectly, to a movement's demands, once-sympathetic observers may grow weary of protest, making defiance less acceptable. Finally, concessions won are often withdrawn – for example, black suffrage after Reconstruction – though they often remain if deemed compatible with elites' interests. These outcomes, Piven and Cloward argue, become more likely when organizations take over and blunt the effects of disruption. Thus, poor protestors only win what circumstances have deemed it possible to win.

The study of poor people's movements transformed the study of social movements in general. Piven and Cloward's three perceptual shifts necessary to make someone engage in activism (1) question legitimacy of social arrangements, (2) believe that change is possible, and (3) believe that personal activism will make a difference –

have been applied to movements in general, not just poor people's movements. The emphasis on the role of changing beliefs then gave rise to "frame alignment" theory, removing grievances even further from the spotlight.

Changes in Social Movements

As the wave of worldwide activism of the 1960s crested, scholars noted that social movements had changed. Activists at the end of the twentieth century no longer seemed to mobilize around longstanding issues like poverty, class, and inequality in favor of the "new social movements." Buechler explains these new movements as the result of a decline in working-class activism and an increase of activism "rooted in racial and gender identities." The transformation of US society into a post-industrial economy had consequences for social movements, Buechler argues. Under the mass-production factory system of the 1920s–1960s, working-class movements dominated in western nations. The organized labor movement thrived as workers with steady jobs and rising wages bred solidarity and rose above the struggle for daily needs. But deindustrialization undermined working-class movements, leaving little with which to encourage class solidarity. Class, according to Buechler, is now "alloyed" with other identities, especially race, gender, and ethnicity. The new economy has made it increasingly difficult to translate traditional grievances into collective action. For example, the targets of movements have become less palpable. Who, activists wonder, is the proper target of disruption? Corporations, the opaque enablers of unequal wealth, or the state, complicit in encouraging the pernicious effects of capitalism? Such diffusion has encouraged mobilization around new issues.

Conclusion

The study of the poor is fraught with misconceptions. For most of history, analysts have assumed that grievances spur collective action. In recent decades, scholars have increasingly emphasized the interaction of grievances with sociopolitical structures in the formation of movements. The disadvantages of poverty, class, and inequality more often hinder movements than help them, so any analysis that fails to account for the political context and tactics of a movement,

in addition to grievances, is doomed to failure. The study of poor people's movements has influenced the study of all movements in general. And finally, movements based on poverty, class, and inequality are being replaced by "identity" movements.

The future promises that social movements will continue; similarly, all factors indicate that poverty, class, and inequality will persist as issues, as evidenced by the universal living wage movement and concern over fair trade, to offer just two examples. At the same time, if movements increasingly rely on tactics and communication based on new technology, the poor will get left behind. As Tilly describes, the poor's inability to afford new technology – such as cell phones and computers, increasingly relied upon by movements for communication – will only erect new barriers to collective action.

Class struggle

Kunal Chattopadhyay

Class struggle is a concept in socialist analysis, developed in particular by Karl Marx. For Marx, class is closely connected with his concept of the relations of production, the social relations into which humans enter in the process of production, which find legal expression to a large degree either as property relations or as labor relations. In a class society, one dominant group controls the conditions of production, and the classes there are defined in terms of their relationship to the means and the labor of production and to each other. However, Marx's writings also suggest that fully formed classes exist only in what he called the great historical epochs – like slavery, feudalism, and capitalism in Europe. In the period between the decline of one mode of production and the full articulation of the next, what exists is called a transitional society. The class struggle in such a situation actually determines the nature of the next mode of production. Thus, in the period of transition from feudalism to capitalism, the relative powers of nobles, peasants, and bourgeoisie in different countries led to different results, such as agrarian capitalism in England, and the absolutist monarchy in France, to protect the interests of nobles under a changed balance of force, so that it defended the benefits of the late feudal nobility, but deprived the nobles of direct political power.

In capitalism, the principal conflict is between the capitalist class and the working class. The working class includes all those who cannot survive other than through selling their labor power for wages. Capitalists are those who appropriate surplus value from the workers. The members

of each of these classes have shared interests. These collective or class interests are in conflict with the class interests of the members of the opposite class, and result in class struggle.

The very act of production in capitalist society involves the class struggle. Since the capitalist class exploits the working class through appropriation of surplus value, which is the excess value produced by the worker over the equivalent of the wage, there is a constant struggle between the two classes. The capitalist tries to increase the surplus value either by lengthening the working day or by introducing labor-saving devices. Workers would try to maximize wages and benefits and improvements in working conditions.

Though proletarian class struggle is carried out constantly, forms like strikes are relatively extreme manifestations. Less acute forms can be expression of alienation, of lack of interest in work; minor forms of resistance include small-scale sabotage or petty theft. Class struggle at the political plane involves support for socialists, or struggles for democratization and social justice.

Class struggle does not automatically mean struggle to overthrow capitalism. Narrow trade unionism, looking after the interests of one sector, can at times set workers against workers, as in trade union resistance to employment of migrant labor, or trade union support to one's owner in a contest between rival capitalists. But in course of the development of capitalism class struggle becomes more general, with craft unions giving way to broader industrial unions and the formation of proletarian parties. Marx felt that class struggle was built into the structure of capitalism and could only be abolished with social revolutions and the abolition of capitalism, through the establishment of the rule of the working class (the revolutionary dictatorship of the proletariat), and the establishment of a new transition period, from capitalism to communism. Even after revolution, the class struggle would remain, but would be regulated by the superior political power of the working class.

However, Marx was also aware that this two-class model was an abstraction. It is possible to mention other classes and strata, including the *petit bourgeoisie* – people who use their own labor to produce and market commodities and survive; the peasants, numerically the largest exploited class across the globe in Marx's time and for most of the twentieth century as well;

the white collar workers and other staff who also sell their labor power and are technically part of the working class, but due to historical origins, as well as social functions, often feel themselves to be superiors to the working class, and at their upper end (the managers) have ties with the ruling class; the lumpenproletariat, including the unemployed and the criminal elements among the poor. There were also remnants of the older classes, notably the landlords. The most significant was the peasantry.

Arguing that the peasants could support the working class out of self-interest, Trotsky elaborated his theory of permanent revolution, according to which it was possible to achieve a socialist revolution in a relatively backward country if the working class fought determinedly and mobilized the peasants behind them. After revolution, the workers would support the peasants by supplying them with machines, as well as by political means, eventually transforming individual peasants into collective producers. In the Soviet Union, however, what was done was a mockery of this, since a bureaucratic upper layer (Trotsky used the term "caste") carried out forcible and brutal collectivization and forced peasants to produce and supply food at low prices.

Socialist and Marxist feminism have sought to infuse a gender dimension into the concept. In fact, women workers are exploited in specific ways. Capitalism is historically linked with patriarchy, and this means on one hand the use of women's labor as "naturally" cheap (because assumed to be supplementary) and on the other hand the use of women's unpaid labor to reproduce the next generation of the working class. Consequently, the creation of more general class interests actually calls for a specific understanding of women's oppression and its integration into the agenda of class struggle as a central component. In a similar way, racism in the West, or casteism in South Asia, are dimensions of the social conflict that have to be reconfigured into an analysis of contemporary class struggle.

Some modern ideologies, including neo-liberalism and fascism, try to claim that class struggle does not exist or needs to be avoided. In practice, this means attacks on working-class organization and attempts to smash them.

Clayoquot Sound

Irina Ceric

In the summer of 1993, Clayoquot Sound, a mostly wilderness area of ancient temperate rainforest on Vancouver Island in British Columbia (BC), became the site of the largest civil disobedience campaign in Canadian history. Almost 900 people were arrested during four months of protests over the fate of Clayoquot Sound's rare ecology, resulting in a series of mass trials unique in Canadian law (Hatch 1994). Although there had been intermittent protests over logging and other resource development in the area for over two decades, particularly by the Nuu-chah-nulth First Nation and local environmentalists, a decision by the government of BC in April 1993 to allow clearcut logging in 62 percent of Clayoquot Sound catalyzed the rapid emergence of a preservation movement with both domestic and international dimensions.

The local protests were centered on the Clayoquot Peace Camp set up by the Friends of Clayoquot Sound on Canada Day, July 1, 1993, and eventually visited by over 12,000 people (Berman 1994). Operating on the basis of a Peaceful Direct Action Code predicated on Gandhian principles of non-violence and further influenced by emerging eco-feminist thought, the peace camp was the organizing site for the blockades which formed the centerpiece of the civil disobedience campaign. Beginning in early July, hundreds of people physically blocked road access to logging trucks in direct violation of a court injunction obtained by MacMillan Bloedel, the logging company (of which the BC government was a shareholder) holding the cutting license. By the time the peace camp closed in October of 1993, the first of eight mass trials of protesters was already underway (Hatch 1994).

The ongoing significance of this summer of protest lies in its resonance for contemporary social movements. A central challenge of the campaign was the disjuncture between aboriginal and non-native organizers at Clayoquot Sound, a cleavage shaped by a longstanding claim to the territory by the Nuu-chah-nulth, who had never signed a treaty ceding rights to their traditional lands. The Nuu-chah-nulth were not closely involved in the 1993 blockades, and their contentious role in the 1994 interim agreement on standards for harvesting in Clayoquot Sound demonstrates the extent to which land rights and stewardship decisions in Canada may be contested between First Nations and environmentalists, as well as states and the private sector (Ingram 1995). The tensions inherent in these complex relations have manifested in other similar battles over land, resources, and sovereignty throughout Canada, and present a continuing challenge to the development of diverse and inclusive social movements.

The legal framework of the Clayoquot campaign represents a similar touchstone for current environmental movements. Although the use of a common law criminal contempt power hinging on the logging company's injunction was unusual, given the general reliance on ordinary criminal offenses by police and the judicial system, the high number of arrests (300 in one day at the height of the protests) during the campaign and the mass trials which followed may be seen as particular forms of criminalization of dissent. Of the approximately 900 people arrested, about 860 were prosecuted in eight trials and all those prosecuted for criminal contempt were found guilty, with sentences ranging up to 45 days in jail and fines of \$3,000 (Hatch 1994).

The Clayoquot blockades and subsequent trials evoked earlier civil disobedience models in which courtrooms become political forums as well as prefiguring evolving protest tactics. Perhaps the strongest legacy of the 1993 campaign lies in the development of the activist networks, both domestic and international (protests against logging in Clayoquot Sound were held at Canadian consulates in Austria, Germany, England, Australia, and the United States), that would play a key role in the global justice movements of the late 1990s and early 2000s (Ingram 1995).

Cobbett, William (1763–1835)

H. T. Dickinson

William Cobbett was an advocate of parliamentary reform and of England's poor. Born poor himself, he received almost no formal education, but read voraciously and learned to write. In 1783 he joined the British army, rising to the rank of sergeant major. On leaving the army, he wrote *The Soldier's Friend* (1792), a passionate indictment of the pay and treatment of the common soldier. Fearing retribution, he fled first to France and then to the United States, where he lived until 1800. In America Cobbett became a campaigning journalist, often writing as "Peter Porcupine." Faced with prosecution for libel, he returned to England and, from January 1802 until his death, published the weekly *Political Register*, in which he set out his political and social views and serialized most of his more substantial publications.

By 1804 Cobbett was becoming increasingly critical of political corruption and by 1807 was prominent among the London-based radicals who were reviving the campaign for parliamentary reform. *Political Register* became increasingly concerned about the plight of the rural poor and for many years was one of the bestselling radical publications in the country. When the government passed repressive legislation in 1817, Cobbett

again fled to America. While there, he published his *Grammar of the English Language*, which sold well for over a century.

When he returned to England in October 1819, he was soon in dispute with other leading radicals and in severe financial difficulties. His fortunes revived in 1820 when he took up the cause of Queen Caroline, and his writings in her defense proved very popular.

Throughout the 1820s Cobbett was preoccupied with the distressed state of the agricultural workers. Between 1821 and 1826 he traveled across southern England and published his celebrated *Rural Rides* from 1830. Even his bestselling *History of the English Reformation* (1824–7) accused the state of dispossessing the English poor. He often warned of the dangers of an agricultural revolt, and he was charged with inciting such a revolt in 1830–1. He defended himself and was acquitted. Throughout his campaigns for the rural poor he argued that the only solution was radical parliamentary reform. He campaigned vigorously for the Great Reform Act of 1832, even though it was more moderate than he desired. The general election of 1832 saw him elected for the new parliamentary borough of Oldham. In the House of Commons he still championed the cause of the rural poor. His heroic efforts and the enormous sales of his many works did not prevent him, however, from dying bankrupt.

Cocaleros peasant uprising

Dwight R. Hahn

The man proclaimed as Bolivia's first indigenous president, Juan Evo Morales Ayma, won the presidency with a stunning electoral victory in

December of 2005. That victory came on the heels of the two failed and incomplete presidential terms of Gonzalo Sanchez de Lozada and Carlos Mesa Gisbert. The election of December 2005 marked a significant shift in the electoral politics of Bolivia as the parties that had formed the post-1952 National Revolution system lost their hold on significant sectors of the Bolivian electorate and a new political party captured those sectors with a call for “decolonization” and a new nationalism rooted in the indigenous cultures of Bolivia. The social shift revealed by that election had been decades in the making and was mostly brought about by the economic stresses related to the neoliberal economic policies that Bolivia had implemented, beginning with the “shock therapy” treatment prescribed by Decree 21060 of President Victor Paz Estenssoro in 1985. Those stresses, in turn, led to a coalition of various social movements under the banner of a new or reconstructed indigenous identity in opposition to the economic imperialism implicit in the adoption of the “Washington Consensus” and to the cultural imperialism implicit in the Washington effort to eradicate the coca leaf – a sacred symbol of the Andean indigenous population.

Neoliberal policies of the Paz and ensuing administrations opened Bolivian resources to foreign investment and resource extraction. These policies included the privatization of water and the sale of oil and natural gas to foreigners at tax and royalty rates that were perceived by opponents as a giveaway of the Bolivian national patrimony. Further, among the first major enactments of the Paz administration was the closure and privatization of the remaining state-owned tin mines. This meant that in the latter half of the 1980s thousands of former miners along with their families migrated into the tropical valleys of the Andes – especially the Chapare region in the department of Cochabamba – that were already sites for cultivation of the coca leaf. Relative to any other crop that might be realistically grown anywhere in Bolivia, the cultivation of coca was lucrative and therefore very attractive to the unemployed migrants seeking a new source of livelihood.

President Morales and his party, the Movement Toward Socialism (MAS), emerged directly from the resistance activities of the organized *cocaleros* to the US government effort to eradicate the cultivation of coca leaf in

Bolivia. The *cocaleros* presented the coca leaf as a sacred object and, as such, a salient symbol of the Andean indigenous peoples. The coca eradication efforts pushed by the United States in alliance with sometimes reluctant Bolivian political elites allowed the *cocaleros* to portray themselves as defenders of Andean indigenous peoples against the cultural oppression of the US imperialists and the complicit “white” Bolivian elite. The *cocaleros* tapped into a cultural awareness among the majority indigenous population in Bolivia of itself as a survivor of 500 years of colonial (and neocolonial) oppression. Within that context, the image of the coca leaf could be, and quite literally was, raised as a flag representing a new anti-imperialist, indigenous-rooted Bolivian nationalism. Evo Morales, as leader of the coca growers of the Chapare region of Bolivia, was well positioned to launch a new political party that served as an umbrella for various constituencies opposed to the neoliberal policies of the post-1985 period.

Any discussion of coca leaf should be prefaced by the fact that coca has been cultivated for centuries by the Andean indigenous population. As a leaf, chewed or prepared as a tea, it is little more than a stimulant on the order of a cup of coffee. The coca leaf is not a dangerous “drug”; it should not be confused with cocaine, which is derived from the processing of coca. That is, as Kevin Healy (1991) notes, the *cocaleros* are not harvesting a drug in the same way that, say, a marijuana farmer might be considered to be cultivating a drug. The traditional market within Bolivia for coca leaf was the Andean indigenous population itself. Clearly, though, the demand and price for coca leaf increased with the new popularity for the consumption of cocaine in the United States beginning in the 1970s. As such, coca leaf – or, rather, the paste it was refined into by drug traffickers – became a major export for Bolivia in the 1980s.

The Chapare region of Bolivia – one of the major regions for coca cultivation along with the Yungas of La Paz in which coca has been grown – had been a site of government-sponsored resettlement in the 1950s. Farmer *sindicatos* grouped into “federations” formed in the 1960s to organize and represent the growing population of the region. In the early 1980s, as described by Healy, even before the arrival of the former miners, the Chapare region had produced activist federations that aggressively claimed

underutilized private property for their members. In the latter half of the 1980s the original “colonizers” had their ranks supplemented by displaced miners looking for a new way to support their families, and, thus, coca cultivation took on increased economic importance. Further, the newcomers were, because of their history of militant resistance as miners, experienced in the tactics of presenting demands to the state via such tools as road blockades and protest marches. They were also versed in the political rhetoric of a radicalized, anti-imperialist, working-class union movement.

At the same time (the 1980s), the US government was increasing pressure on the Bolivian government to eradicate or, at least, contain coca cultivation as a tactic in the US government’s “War on Drugs.” That policy was bound to fail as any reduction in supply, without a reduction in demand, would of course result in an increase of price and thereby provide an increased incentive to produce. Given that it was a source of livelihood for an increasing population of some 40,000 families in the Chapare region and an additional short-term migrant population from 50,000 to 100,000 from the highlands by 1990, the competition over the construction of coca as a source of livelihood versus source of drug addiction in the United States became an intensive point of political confrontation. Because coca, as a mild stimulant, was in fact something that had been used for medicinal and ritual purposes for centuries, the *cocaleros* were able to present themselves as defenders of Andean indigenous culture. Thus, the struggle of the *cocaleros* for the source of their livelihood became the struggle to defend Andean indigenous culture against imperialism and, as such, a struggle over Bolivian national identity. Within this economic and cultural struggle, Evo Morales rose quickly to the leadership of the *cocalero* organization.

Born in 1959 in Oruro, Morales migrated with his family in 1982 to the Chapare. From his first position as secretary of sports for the local *sindicato* in 1983, Morales became executive secretary of the Tropical Federation in 1988, and was elected to be president of the new umbrella organization, the Coordinating Committee of the Six Federations of Cochabamba, in 1996. Beginning in the late 1980s, the *cocaleros* began an effort to gain representation in the national congress. This effort led, in conjunction with other *campesino* and indigenous groups, to the

founding of the Assembly for the Sovereignty of the Peoples (ASP) in 1995. Unable to register its own party name for the 1995 and 1997 races, it ran its candidates under the name of the United Left Party (IU). Evo Morales won election to the national chamber of deputies in 1997 as a member of this party. In 1999 Morales led a splinter group from the ASP, the Political Instrument for the Sovereignty of the Peoples (IPSP), which formed a political party wing that adopted the name Movement Toward Socialism (MAS). In 2002 Morales entered the race for the presidency as the MAS candidate. In that race he gained 20.94 percent of the total vote, which put him within two percentage points of the first place candidate, Gonzalo Sanchez de Lozada, of the National Revolutionary Movement (MNR), who garnered 21.46 percent.

The roots of the MNR reach back to the 1952 National Revolution in Bolivia. Ousted from control of government in the 1960s by the military, it returned along with other parties of the “system” during the period of democratization beginning in 1982. However, with the return of electoral politics, it became clear that the MNR, along with the other major parties of the Bolivian mainstream, was unable to restore its ability to hold a clientelist lock on major blocs of voters – most significantly, the rural indigenous peasantry. Eduardo Gamarra (2003) describes the MNR as a corporatist party that had tied major post-1952 functional groups to its party structure. That system broke down in the 1980s and 1990s. Further, as Donna Lee Van Cott (2005) mentions, the 1990s saw increases in voter registration and efforts to mobilize more indigenous rural voters for elections and civic participation – efforts supported by all (or most) sides as a way of legitimizing electoral democracy even as neoliberal policies brought about economic hardship. As the MNR lost its grip on the electorate, other “system” parties (such as the National Democratic Action Party and the Movement of the Revolutionary Left Party) were unable to harness the social groups once loyal to the MNR. These other mainstream parties, like the MNR, supported the Washington Consensus and compliance with coca eradication efforts. The one-time parties of the left, unable to hold any significant coherent constituency, had all but disappeared. Miners (those that remained), Aymara and Quechua peasantry as well as urban Aymara (i.e., residents of the

rapidly growing city of El Alto), and the *cocaleros* composed an alliance of voters that were ready to be mobilized in support of a truly oppositional party. Under Morales's leadership, MAS became that party.

In 2003, a year of significant street protests against a tax increase and a natural gas deal that appeared too generous to foreign companies, the administration of Sanchez de Lozada was broken in October. After winning a second, non-consecutive, term only the year before (with an electoral plurality and confirmed by the congress), the president vacated his office, leaving a letter of resignation behind as he took flight to the United States. In the final act that brought down the president, thousands of demonstrators from the largely Aymara city of El Alto – located at the rim of the valley containing the city of La Paz – poured onto the streets in response to the earlier shooting dead of demonstrators. This was followed by scores more casualties as the army sought to clear blockaded roads and contain the crowds of protesters. As reported in various newspaper accounts, residents from El Alto marched down and into the streets of La Paz shouting for the head of the “gringo” – Sanchez de Lozada's nickname resulting from his North American-accented Spanish. In the final days before his resignation, he lost the support of his vice-president and the chief of the armed forces.

Sanchez de Lozada was succeeded, in accordance with the constitution, by the vice-president, Carlos Mesa Gisbert. Mesa sought to appease the protesters by putting the question of how to dispose of Bolivia's gas and oil resources to a referendum. Further, he sought to win back the support of the rural indigenous population by promising to call for the creation of a constituent assembly to institute a new system for representing rural and indigenous groups. Nevertheless, Mesa still acted within the constraints of neoliberal economic policy and he was pressured by the US government to maintain the coca eradication effort. Over the next two years, Mesa came under a barrage of criticism as he tried to strike a compromise with the social movements that opposed the neoliberal economic policies and, from the other side, the pro-neoliberal parties in congress. Perhaps somewhat ironically, Evo Morales and MAS, with the second highest number of total seats in the congress (35 out of 157 total seats), became

key to the support of the Mesa government. Morales, in contrast to Felipe Quispe Huanca and the leader of the labor organization, Jaime Solares, supported the Mesa government up to nearly the middle of 2005. Battered by a protest over water privatization in El Alto in early 2005 (an echo of a major protest of 2000 over the same issue in Cochabamba) and countervailing pressure from elite-organized protesters in the eastern department of Santa Cruz, Mesa had turned back to policies that placated the neoliberal right. In turn, Morales and MAS withdrew their support of the Mesa government. With the return of street protests and the loss of support in congress, Mesa resigned from the presidency in June 2005 and the head of the supreme court, Eduardo Rodríguez Veltze, assumed the presidency as caretaker. New elections for the presidency and congress were set for December 2005.

To the astonishment of nearly all observers, Morales won the December election for the presidency with an outright majority of the vote – 54 percent. No candidate had obtained a majority of the electorate since the return of electoral democracy in 1982. (As such, previous presidents had been determined by the congress.) Further, MAS became the dominant party in the congress with 73 seats of 130 total seats in the Chamber of Deputies and 12 out of 27 seats in the Senate (second to the neoliberal opposition party PODEMOS – Democratic and Social Power Party – which took 13 seats). The stunning electoral results for Morales and MAS were indicative of a major realignment in Bolivian politics. The old-order political elite-maintained electoral dominance through clientelism and compliance of the key social groups – especially the indigenous peasantry – had been turned inside out.

Key to that realignment was the breakdown of the old clientelist party system of the MNR and its replacement by the mobilization capacity of the *sindicato* structures of the *cocalero* and indigenous peasantry organizations. Transcending those factors, however, was the successful assertion of a new Andean indigenous-based Bolivian nationalism honed from within the *cocalero* movement. (To be clear, the history of *indigenismo* stretches back to the beginning of the colonial period – perhaps most famously it was expressed in the rebellion of Túpac Katari in the early 1780s.) Morales, it appears, has taken the most recent wave of indigenous nationalism

from the fields of the coca grower to the Bolivian presidential palace.

The first 18 months of the Morales presidency, as evidenced by the political struggles within and outside of the constituent assembly that was elected with an MAS membership short of the two-thirds necessary to pass planks to the new constitution, have made clear that the creation of the new regime envisioned by the *cocaleros* and indigenous social movements will not be easy. Eduardo Gamarra, in a 2007 paper for the Council on Foreign Relations, “Bolivia on the Brink,” argues that Morales will likely feel forced to resort to a mobilization of his supporters through an increase in the rhetoric of indigenous nationalism. As might be expected, the non-indigenous elites and middle classes of the lowland regions of the north, east, and south of the Bolivian Andes – the so-called “half-moon” of Bolivia – have little interest in sacrificing their economic interest (control of the revenue resulting from the oil and natural gas found in that region) to the new Andean political elite. Neither, for that matter, do they find their identity reflected in that constructed around the ideal of “decolonization” as developed within the political struggle of the *cocalero* movement and used to mobilize national electoral victory for Morales and MAS in 2005.

Cochabamba Water Wars

Luis A. Gómez

Recognized as the twenty-first century’s first anti-globalization victory, Cochabamba Bolivia’s Water War is also considered to be the beginning of a new revolutionary cycle, from 2000 to 2005, in Bolivia. Under the rallying cry “The Water Is Ours” this city’s (and surrounding countryside’s) citizens resisted the privatization of their potable water and basic services, enabled by the Hugo Banzer Suárez administration to Aguas del Tunari, a subsidiary of the Bechtel corporation.

Workers, homemakers, farmers, professionals, coca growers, and other social sectors united under the horizontally structured Coordinadora de Defensa del Agua y de la Vida (Coalition in Defense of Water and Life, or the Coordinadora). Founded on November 12, 1999, the Coordinadora was the political response of people’s frustration with an economic model that after almost 15 years of ransacking their resources and limiting their rights, had just privatized their water.

According to Law 2029 passed on October 29, 1999, all pre-privatization natural water sources and water-related infrastructure and services (including that which was communal and/or cooperative) were at risk of being placed under private control.

Access in Cochabamba was always problematic, and for decades the people had been organizing and using their own resources and technology – without state intervention – to dig their own community wells and construct communal sewage and water distribution systems. Additionally, others felt threatened by the contracts signed between the Banzer government, the mayor of Cochabamba Manfred Reyes Villa, and Bechtel. Many of the farming communities who used traditional water access and irrigation methods were also under Bechtel’s “areas of concession.”

Cochabamba wasn’t the only place handed over to the transnationals. And over the following months, there were blockades and deaths in

Some 20,000 people demonstrate on April 5, 2000 in Cochabamba, Bolivia, in support of a strike against the implementation of user fees for public water supplies. In 2000, the World Bank refused to renew a \$25 million loan unless Bolivia privatized the municipal water supply. (REUTERS/David Mercado)

the western Aymara highland region. However, Bechtel was met with the most resistance, triggered partially by the company's own actions. Not only did Aguas del Tunari attempt to control the streams, wells, and tanks, but also it began charging excessively (rate increases sometimes neared 1000 percent) and cutting off or suspending service for those who couldn't pay their bills.

In response, the Coordinadora combined diverse protest tactics such as road blockades and marches with concrete political questioning. At the same time, its first leaders not only encouraged but insisted on collective decision-making and open, transparent deliberation within the organization. These practices, as factory union leader Oscar Olivera put it, allowed the people to "recuperate their dignity and their voice."

Some of the best examples of this period's rebellious spirit are the Coordinadora's com-

muniqués and manifestos. More than a call to action, these documents became assembly debate guidelines and were clear demonstrations of a new way of doing politics.

On January 10, 2000, just before the first largescale blockade and general strike, the Coordinadora concluded its manifesto with this message: "Rights are not earned by begging. They are won by fighting. No one is going to fight for what is ours. We must therefore fight, or submit to humiliation by those who govern us."

During this time, the Water Warriors began appearing. They were people of all ages and social class who were the first line of defense in the hundreds of barricades during those months. These Warriors were the first to confront the police's tear gas, attack dogs, and bullets. Varying forms of solidarity were manifested.

Friday, February 4 marked the largest and most diverse peaceful march in Cochabamba's history. When the police offensive came, the people held their ground, forcing the government to concede several demands such as an end to rate hikes and the modification of Law 2029.

"The other great accomplishment of this mobilization," read the Coordinadora's comunicado 14,

is that we lost our fear. We left our houses and communities in order to speak to one another, to get to know each other, to learn how once again to trust one another. We took over the streets because they in fact belong to us. And we did it with our own strength. . . . For us – the working people of this city and countryside – this is the real meaning of democracy: we decide and we act, we discuss and we execute. We risk our lives in order to carry out that which we consider just. Democracy is people's sovereignty and that is what we have done.

By the beginning of April, the repression and mobilization reached a climax which the Coordinadora called the Final Battle. From April 4 on, the people fought in the streets, demanding the end to Aguas del Tunari's contract. The government of former-dictator Banzer began losing ground, above all when young Víctor Hugo Daza was killed by an army sniper.

On the afternoon of April 9 – with the city paralyzed and the main plaza inundated with calls for his resignation – President Banzer announced the revocation of Bechtel's contract.

In the days that followed Aguas del Tunari executives fled the city and the people took over the company's installations.

Over the five months of struggle for their water, the people of Cochabamba called into question not only the ownership of the world's most valuable resource, but also conventional forms of political representation, decision-making, and even the state's own structure. All of this would have a determining influence over future mobilizations concerning water in Bolivia and throughout the world.

Cohn-Bendit, Daniel (b. 1945)

James R. McIntyre

Daniel Cohn-Bendit is a journalist, radical politician, and member of the European Parliament who first achieved widespread notice in France in the spring of 1968 when he played a minor role in the massive student demonstrations that rocked Paris and many other French cities in protest against the government of Charles de Gaulle. The son of German Jews who fled to France on the Nazi seizure of power in 1933, he moved back to Germany in 1958 to live with his father. He returned to France in 1966 in order to attend university in Nanterre, a northern suburb of Paris, and by the mid-1960s was an anarchist and a communist. Both his politics and his hair color earned him the nickname “Danny the Red.”

While Cohn-Bendit's role in the 1968 protests was relatively minor, it gained him enough negative attention for authorities and his political rivals to have him sent back to Germany. Once back in Germany, he became involved in radical left-wing politics and is suspected by some to have interacted with terrorists, though evidence on this point is purely circumstantial. It is clear that over the course of the decade, his politics began a slow mellowing process.

The deradicalization of Cohn-Bendit's views is evidenced in the fact that in the later 1970s he joined the German Green Party. Through his involvement with this group, he actively campaigned against nuclear power and the expansion of the Frankfurt airport. In 1989, he became the deputy mayor of Frankfurt. This post became his springboard into European politics, and in 1994 he was elected to the European Parliament. Over the course of the 1990s, he moved to a more centrist political position, though he has remained very independent in his views. This political independent-mindedness has earned him criticism from both the political left and the right at different times in the 1990s and early 2000s. He has been a strong advocate of the European Constitution, advocating that any country that did not ratify the document should continue voting on it until it did so. He currently resides in Frankfurt am Main and serves as the co-president of the European Greens–European Free Alliance in the European Parliament, a post which he has held since 2004.

In addition to his political activities, Cohn-Bendit is a published author. His first work comprised a reflection on the events of spring 1968 entitled *Obsolete Communism: The Left-Wing Alternative*, which he co-authored with his brother, Gabriel Cohn-Bendit. The book is at once critical of Stalinism, the French Communist Party, and the trade unions. Since then, he has authored numerous other books and articles on political topics.

Collins, Michael (1890–1922)

William H. Mulligan, Jr.

Michael Collins was among the most important Irish republican military and political leaders in the struggle to free Ireland from British rule. He played a major part in the creation of both the Irish Republican Army and the Irish Free State.

Collins was born at Woodfield, near Clonakilty, County Cork, Ireland on October 16, 1890. His father died when he was six and Collins was strongly influenced by Denis Lyons, his national school teacher, and James Santry, a local blacksmith, both of whom were active in the Fenian Brotherhood. At the age of 15 he emigrated to London where he worked in the Post Office and as an accounting clerk. During the nine years he lived in London, he was active in the Gaelic Athletic Association, the Gaelic League, and a revolutionary secret society, the Irish Republican Brotherhood (IRB).

In 1916 Collins returned to Ireland to participate in the Easter Rising. He served as a captain at the General Post Office under Joseph Mary Plunkett. Collins seems to have been very much in the realist wing of the movement, and little influenced by the romantic, visionary ideas of Pádraig Pearse. The British government did not see Collins as one of the leaders of the Rising and, after a brief period of imprisonment, he returned to Ireland in December 1916 when many of those involved in the Rising were paroled. While in prison, however, Collins had emerged as a leader of the IRB and as soon as he was back in Ireland he began rebuilding the IRB's organizational structure.

When the IRB gained control of Sinn Féin, a nationalist political party, in 1917, Collins was among its leaders. He was elected to Parliament in December 1918, but he and other Sinn Féin MPs met in Dublin as *Dáil Éireann* (Assembly of Ireland) early in 1919. Collins served as minister for home affairs while retaining his positions as director of operations and intelligence for the Irish Volunteers and member of the supreme council of the IRB. In 1919 he and Harry Boland organized the escape of Eamon de Valera, the highest-ranking survivor of the 1916 Rising, from a British prison. De Valera was elected president of the *Dáil* and soon thereafter

went to the United States to raise money for the Irish cause. Collins' energy and attention to detail, as well as the key positions he retained, put him at the center of events in Ireland.

He moved quickly to create an organization that could challenge British rule in Ireland. This included establishing a financial base for the IRB by means of two bond issues, one domestic and one focused on Irish Americans. He also put together an effective intelligence network, an arms-smuggling operation, and a squad of absolutely loyal associates known as the "twelve apostles" to carry out assassinations. The British government declared the *Dáil* an illegal assembly and increased troop levels in Ireland, reinforced the police, and created an auxiliary force known as the Black and Tans. In 1920 the Irish Volunteers pledged their allegiance to the *Dáil* in large part because Collins held central positions in both organizations.

By the summer of 1920 a full-scale guerrilla war was underway. Known variously as the Anglo-Irish War and the Irish War for Independence, the campaign Collins orchestrated was the prototype for asymmetrical warfare. Collins, more interested in success than in a glorious battle or martyrdom, avoided direct confrontations. He wreaked havoc, utilizing assassinations and flying columns to strike quickly at police stations, army barracks, and other government installations. The British responded with brutal repression and reprisals. World opinion and, more importantly, British public opinion swung behind the Irish effort for self-government. A truce was arranged on July 11, 1921, and a conference to work out a settlement began in London on September 14. Collins and Arthur Griffith led the Irish delegation.

The conference was difficult and filled with extremely contentious issues, not only between the Irish and British representatives, but between two Irish groups as well. De Valera and many in the *Dáil* foresaw Ireland as a republic completely separate from the British crown and incorporating all 32 counties. The Ulster Protestant community was stridently opposed to such a definition or any settlement that included them in a newly constituted Ireland and they had powerful allies in the Westminster Parliament.

Lloyd George, the British prime minister, needed to end the violence or risk losing office. By early December a treaty had been concluded that gave Ireland the same status as Canada and

Australia in the British Commonwealth. Ulster, however, was to be allowed to opt out of the new Irish Free State. Collins saw the treaty as a first step toward complete independence, but de Valera and his allies, understanding that it would lead to Ireland's partition, were unwilling to accept it. The delegates were sent back to renegotiate, but Lloyd George refused. The political situation had shifted in his favor and world opinion seemed to be on the side of the treaty. Collins, as the leader of the military campaign, came to the conclusion that the resources to continue the fight were not sufficient to succeed. He, Griffith, and the other delegates accepted the treaty and signed it. When one of the British delegates remarked that Collins might have signed his political death warrant, Collins replied that he had signed his actual death warrant.

The process of trying to get the treaty ratified by the Dáil brought the conflict between de Valera and Collins to a head. The treaty was ratified by a narrow margin, but de Valera and his supporters withdrew from the Dáil. Collins and the pro-treaty members formed a provisional government in January 1922 with Collins as chairman of the Dáil and minister of finance. He also continued as leader of the Irish Volunteers, now known as the Irish Republican Army (IRA).

In June a general election returned 94 pro-treaty members out of 128 for a new Dáil. The anti-treaty delegates, led by de Valera, refused to take the required oath of allegiance to the king of England, and IRA units began to choose between supporting Collins and the treaty and rejecting the treaty in favor of the Thirty-Two County Republic proclaimed by Pádraig Pearse in 1916. In this division de Valera played a very ambiguous role, never openly endorsing armed resistance to the treaty, but never opposing it. Collins moved quickly in an effort to close the breach between what he saw as comrades-in-arms, but anti-treaty actions against British officials led to pressure on Collins to take firmer action, which precipitated the Irish Civil War.

Collins' native County Cork was one of the most divided areas during the Civil War and it was there that he was killed in an ambush at Beal na Blath on August 22, 1922. He was buried with full honors at Glasnevin Cemetery in Dublin.

Collins' pragmatism brought a measure of success to the long struggle of the Irish people for self-government, but without resolving the

issue surrounding Ulster. He can be seen as the creator of modern asymmetrical warfare and terrorism, although he was prepared to accept far less than 100 percent of the Irish nationalists' demands to end the conflict. He died young, before he could be confronted with the challenge of turning independence into a viable society. He remains a much admired, even romanticized figure in Irish history, particularly when compared with his rival de Valera, who lived to a very old age and struggled with making the vision of an independent Ireland a reality.

A 1996 motion picture, *Michael Collins*, despite minor historical inaccuracies typical of the genre, was described in the *American Historical Review* as "a superior film that presents a legitimate interpretation of Collins's life and times."

Colombia, Afro-Colombian movements and anti-racist protests

Raina Zimmering

The term Afro-Colombians refers to Colombians of African ancestry. Their presence dates back to the first decade of the sixteenth century when Africans were imported to replace the declining indigenous population. Africans worked as slaves in gold mines, in large haciendas, on sugar cane plantations, and on cattle ranches, mainly in the departments of Chocó, Antioquia, Cauca, Valle del Cauca, and Nariño in western Colombia. In eastern Colombia, near the cities of Vélez,

Cúcuta, Socorro, and Tunja, Africans manufactured textiles and worked in emerald mines outside Bogotá, and labored in tobacco and cotton fields as well as in artisan and domestic work. Today Afro-Colombians make up 21 percent (9,154,537) of the population according to the National Administration Department of Statistics (DANE) of 2002. Due to discrimination, only 4.4 million Afro-Colombians actively recognize their ancestry. They are concentrated on the northwest Caribbean coast and the Pacific coast in the department Chocó, in Cali, Cartagena, and Barranquilla. Indeed, Chocó began as a *palenque*, a town founded by escaped slaves known as *cimarrones*. Colombia has the third largest African-descended population in the western hemisphere, following Brazil and the United States.

Afro-Colombians played key roles in the independence struggle against Spain. Three of every five soldiers in Simón Bolívar's army were of African ancestry and participated at all levels of military and political life. Yet, even after emancipation in 1851, African Colombians' lives deteriorated. They were forced to live in jungle areas, where they shared the territory with indigenous communities. Since that time Afro-Colombians have been incorporated into the Colombian nation through systems of racial hierarchies and structural racism that have materially marginalized and legally silenced them.

In 1945 the department of Chocó was created as the first predominantly African political-administrative division. The territory should have given the African-Colombian people territorial identity and some autonomous decision-making power, but it was characterized by a constant pattern of displacement and natural resource exploitation.

In the decade of *La Violencia* (1948–58) displacement intensified; it peaked again in 1988–91, and then increased dramatically after 1996. Afro-Colombians make up 49 percent of the internally displaced population. One million Afro-Colombians (10 percent of their population) are displaced and are increasingly making up the urban poor and rural destitute populations in Colombia, especially in the big cities like Bogotá, Medellín, and Cali. Over 500,000 Afro-Colombians live in Medellín and over 1,000,000 in Bogotá.

Afro-Colombians have precarious claims to property rights, limited incorporation into the

political system, and live under threat of violence and/or dispossession. The Afro-Colombian population has some of the worst social indicators in Colombia, demonstrating extreme disparities between Afro-Colombians and the rest of the population. Their annual per capita income was between US\$500 and \$600, while the national average is \$1,500. Additionally, 74 percent of the Afro-Colombian population made less than minimum wage in 2002. The situation of Afro-Colombians has worsened through macroeconomic plans and the violent conflict between paramilitaries, guerillas, the state army, and drug traffickers.

Another threat to Afro-Colombians is the macroeconomic policy of "opening," which began in 1980. This policy promotes economic investment and development by "opening" the Pacific region to commercial interests and Colombia to the Pacific Rim economy. This resulted in the appearance of multiple extractive industries, Andean colonization to expand the agricultural frontier, state infrastructure development projects, and agro-industrial capitalism of banana and cattle plantations in the north and of African palm and shrimp aquaculture in the south. Between the 1960s and 1990s the development projects included a naval base, the completion of the Pan-American highway, the expansion of the ports of Buenaventura and Tumaco on the Pacific and Turbo on the Caribbean, a planned interoceanic canal to replace the Panama Canal, hydroelectric dams, and large forest and mineral commercial concessions. Afro-Colombians, especially those living on the Pacific coast or in the Andean region, are also heavily affected by the US military aid to the Colombian army that is escalating an already devastating conflict. To protect themselves, local indigenous and Afro-Colombian organizations demanded legal protection of their lands and began to organize social movements in defense of territory and culture. In 1986, they founded the ACIA (Farmers' Association of the Middle Atrato), the best-organized Afro-Colombian community-based organization in the Pacific area.

ACIA was formed through small neighborhood associations and came to claim collective territory in opposition to land and timber concessions in the Middle Atrato. In 1990 at the Meeting in Defense of Our Traditional Territory of the Pacific, ACIA claimed its territorial rights as a minority ethnic group, as part of the patrimony

it has earned historically and through labor, and as a responsibility of state duty. In 1998, ACIA was titled a territory of 695,254 hectares on either side of the Atrato River, as a collective territory for black communities in recognition of their ancestral occupation of the land as an ethnic group. Such ethnic territories are made possible by legislation arising from the new 1991 Colombian Constitution, in particular Law 70. But in 1999, many of the members of ACIA had to seek refuge in urban centers as paramilitary activities imposed control of their territory. This phenomenon is common. Shortly after the collective titles of the black communities of Dos Bocas, La Nueva, Taparal, Clavellino, and Chicao of the Lower Atrato River were issued in 1997, the populations were displaced by the paramilitary. Violence in the Rio Sucio area in 1997 caused over 20,000 people to escape.

In 1998 other displaced communities of the Lower Atrato River sent a petition to the World Bank, which had funded land titling, to form a high-level commission of the International Red Cross, the office of the High Commissioner for Refugees of the United Nations (UNHCR), and delegates from the dioceses of Apartado and Chocó to look into titling and violence. They demanded collective entitlement as part of their proposal for a dignified return to their territories.

In the same year, ACIA, together with other indigenous and Afro-Colombian organizations, proposed the declaration of the department of Chocó as a “Territory of Peace,” calling for armed groups and drug traffickers to leave their region in the Pacific and the Andes. They claim authority within their territories, over people as well as space and activities. The tragic result has been the assassination or displacement of community leaders and political organizers committed both by the FARC (Armed Revolutionary Forces and Popular Liberation Army) and by paramilitary groups, and most recently the displacement of communities from their territories. In 1999 the Afro-Colombian senator from Antioquia, Piedad Córdoba, was kidnapped by the United Self-Defense Forces (AUC) at a hospital in Medellín in reaction to her outspoken stance on human rights violations. Afro-Colombian groups and women’s groups marched in Bogotá in protest of her kidnapping. She was released a few months later but her life remained threatened. The former governor of Chocó, Luis Gilberto

Murillo, who declared the Chocó a neutral zone, was also kidnapped by the paramilitary and his family threatened. He fled into exile to the United States. Marino Córdoba, a community and national-level Afro-Colombian activist from Rio Sucio, one of the areas where immediately after community titling occurred the community was displaced, is also in exile in the United States. He founded the Association of Displaced Afro-Colombians (AFRODES).

Displacement for rural Afro-Colombians has profound effects on communities and individuals. Displacement breaks up social networks and governing forms internal to communities; disturbs economic life and traditional forms of work; breaks up traditional ways of managing nature, using natural resources, and defending ecosystems; and can often also break up families and generational and gender relationships. It also complicates the process of forming political units while setting up a system of constant terror and instability.

Colombia, anti-war movements, 1990–2008

Tathiana Montaña Mestizo

The internal armed conflict in Colombia from 1964 to 2008 has caused more than 100,000 deaths and three to four million displacements. The main issues for the anti-war movement in Colombia have centered around paramilitarism and the US-sponsored military program, the

Colombia Plan, which started in 2000. The government anti-terrorism policy, including the paramilitary groups widely connected with governmental politics, the Colombian army, and transnational companies, produces rising human rights violations, especially in the rural areas. Presented in 2000 to the International Cooperation as a plan with a strong civil focus, the Colombia Plan very quickly turned out to be a mere military-based counterinsurgency program that safeguards the economic interest of multi- and transnational companies.

Colombia's peace movement arose in the mid-1990s, in the middle of the most violent period of the internal armed conflict. After Pablo Escobar was imprisoned in June of 1991, drug trafficking caused more than 4,000 deaths throughout the country between 1991 and 1995. In 1996 a break-in at the military base of Las Delicias in the Putumayo department by FARC-EP (Fuerzas Armadas Revolucionarias de Colombia-Ejército del Pueblo; Revolutionary Armed Forces of Colombia-People's Army) guerillas led to the detention of 60 soldiers, with 28 being killed and 16 injured. After that, rural protests in 1997 mobilized more than 100,000 coca peasants, who showed their non-compliance with the anti-drug policies of the national government articulated with those of the United States.

In 1997 assassinations all over the country by the paramilitary forces left more than 500 people dead. The murders of Jorge Christ Sahiun, Senator of the Republic, and Rodrigo Turbay Cote, Congressional Representative of the Department of Caquetá, were attributed to FARC-EP. Paramilitary groups murdered journalists Gerardo Bedoya Borrero, Alejandro Jaramillo, Jairo Elías Mark, and Francisco Castro. Center for Research and Popular Education (CINEP) investigators Mario Calderon and Elsa Alvarado were also murdered by the paramilitaries. A guerilla attack in the Patascoy municipality of the department of Nariño on December 21, 1997 left 11 soldiers dead, and 18 were retained by FARC-EP.

A number of organizations were created by groups such as indigenous peoples, peasants, women, students, and some union organizers to protest the political regime. The fundamental objective of this collective work was to demand the construction of democratic agendas of social justice, respect for human rights, and a political

negotiation of the armed conflict in Colombia. The basic mechanisms used by the peace movement included social mobilization, for example the "No Mas" (No More) march in October 1998, where more than 12 million people throughout the country protested kidnapping and fought to defend life and liberty. Also important was the construction of civil agendas for peace and agreements around structural issues such as agrarian reform, energy policies, development models, and respect for human rights.

Simultaneously in this period peace talks were being held between the FARC-EP guerillas and the Andrés Pastrana government. A round table of negotiations was installed in San Vicente del Cagúan in January of 1999. But in February 2000 the process ended because the parties of the round tables lacked real political will, especially since a significant part of the government was already negotiating the Colombia Plan, an imperialist project of the United States in the Andean region of Latin America. In this context of war, the peace movement decreased considerably and the negotiation alternative failed.

In July 2002 Álvaro Uribe Vélez was elected president (2002–6). He represented a political current opposed to dialogue and negotiations, joining the United States' "War on Terror." This situation blocked political actions by the peace movement in Colombia. Under Uribe's government program of *seguridad democrática* (democratic security), as it was called, fundamental rights, especially the right to oppose and protest, were severely curtailed.

By the end of 2003 and the beginning of 2004, however, peace initiatives and social organizations revived their spaces of resistance. In September of 2004 in the city of Cali, a huge indigenous rights march was held. Known as the Popular and Indigenous Minga (indigenous mobilization), it included more than 100,000 indigenous peoples, peasants, women, and ordinary citizens. It was a demonstration of the possibilities of resistance and opposition to the government of Uribe Vélez. This allowed for the women's movement to mobilize across the country in 2004 and 2005 to accompany the indigenous communities in Cauca and Chocó, who were demanding justice for crimes against humanity. In January of 2005, social mobilization in Mico Ahumado, a small village in the south of the department of Bolívar, made possible the removal of landmines in a

rural zone. In October, a National Congress of Peace Initiatives brought together more than 1,000 peace initiatives from all over the country and presented a social agenda that included respect for human rights, political negotiation to end the armed conflict, and democracy as a way to achieve justice. The congress reaffirmed the need to maintain resistance and to seek democratic alternatives.

In May of 2006, Uribe Vélez was reelected president (2006–10). Peace and human rights organizations and other democratic sectors opted to support the National Movement of Victims led by Iván Cepeda, the son of Manuel Cepeda Vargas, a member of the Patriotic Union (UP) that had been created in 1985 after dialogues between FARC guerrillas and the Virgilio Barco government. The victims resoundingly reasserted their desire to work together on March 6, 2008 with a national memorial march in which more than one million people participated.

Social mobilizations in 2008 were concentrated against kidnapping and included serious criticisms of the demobilization of the United Self-Defense Forces of Colombia (AUC)/paramilitaries as well as radical questions about drug trafficking and the relationship between paramilitaries and state institutions. With no results in the short and medium terms, there were actually very few expectations of legitimizing the right to opposition in Colombia. Many peace and human rights activists have been threatened, displaced, or disappeared, and many have had to leave the country.

Colombia, armed insurgency, peasant self-defense, and radical popular movements, 1960s–1970s

Hermann Ruiz

The 1960s in Colombia were marked by the aftermath of *La Violencia* (The Violence), a period of violent civil war. From the 1950s, the war saw fascist paramilitary groups on the conservative side and guerrillas and self-defense groups on the liberal side. The confrontation ended in most regions with an accord signed by liberals in which they agreed to share state administration and power by creating the Frente Nacional (National Front, FN, 1958–74). Upper- and middle-class liberals, whose properties were endangered, were no longer interested in the armed conflict after this pact.

Nevertheless, the cause led by the liberals did not take account of the needs of the landless peasants and the agrarian proletariat. Thus, the peasants organized land occupations. They argued that fallow lands should be distributed among landless peasants and that the legitimacy of existing land titles should be questioned. They also called for property rights and freedom of cultivation.

Peasant self-defense was not unknown in Colombia before this point. In the 1930s, peasant organizations had also used this strategy, united with legal actions supported by the Colombian Communist Party (PCC). These groups were known as Guardia Roja (Red Guard), Correo Rojo (Red Mail), Juntas de Colonos (Meetings of Colonies), and Comisión de Litigio (Litigation Commission).

The occupations were sometimes spontaneously organized by peasants and sometimes by the Communist Party. By the end of the 1950s, 16 organized peasant groups had occupied fallow land mainly in Marquetalia, Riochiquito, El Pato, Guayabero, Sumapaz, Viotá, Mote, Tequendama, Ariari, and Vichada. These territories were located in all regions of the country and especially in the Central Andes mountain range. The reaction by the landowners, as in

the 1930s, was to burn the peasants' houses and herd livestock onto their cultivations. At the same time, waste land adapted for agriculture by landless peasants as they escaped from *La Violencia* was also confiscated on the grounds that these lands were private property. These affirmations were supported by corrupt state officials who fraudulently provided titles to these lands. Soon the peasants armed themselves to protect their land and to survive.

As a result of the state's absence in these distant, recently colonized, and occupied areas, peasant organizations supplied services such as resource administration, infrastructure, and justice. Representatives of these organizations met at the first peasant self-defense national congress, which was celebrated in 1961. It was supported by the PCC, which approved the thesis of the "combination of all forms of struggle" that same year.

In the context of violent peasant exile, land occupations, and armed resistance, a new Colombian conflict began in the 1960s. It was launched in 1961 by a famous declaration by conservative senator Álvaro Gómez Hurtado (1919–95) that the peasant occupations were "*repúblicas independientes*" (independent republics). The intention was to legitimize military attacks upon the peasants, under the guise of guaranteeing Colombian state sovereignty. Also in 1961, Colombian president Alberto Lleras (1906–90) instigated a series of measures promoted by the US government that contemplated both development and military support to stop increasing communist influence. Lleras inaugurated his program as part of John F. Kennedy's Latin American agenda, named "Alliance for Progress."

On the one hand, this program included a great deal in the way of developmental assistance. Due to increasing pressure from peasant organizations, the Agrarian Reform Law (Law 135) was approved at the end of 1961. It created the Colombian Agrarian Reform Institute (INCORA) to promote and support peasant enterprises and distribute state land with funds from the Interamerican Development Bank, World Bank, and USAID.

Contrary to the initial optimistic expectations, however, the program failed during the 1960s and 1970s for two main reasons. First, important decisions involving cultivation selection, seed variety, and technical support were made by technicians in a far-off, centralized location.

Thus, those making the important decisions were outside the areas involved and lacked local knowledge of the regions, climates, and agricultural practices. This resulted in the reproduction of the centralized agriculture of the old hacienda system and rising production costs. Second, fallow resources were distributed inefficiently by the state. For several years, these two failings discouraged peasant participation in INCORA. In short, the agrarian reform of this era was only partially implemented and lacked the political backing to effectively redistribute land. As a result, it tended to disarticulate peasant self-organization, delegitimize peasant occupations, and tacitly approve peasant displacement as a method of creating *latifundios* (large, single-family landholdings). A great opportunity to avoid a worse war was wasted.

At the same time, the Lleras government began the counterinsurgency strategy planned by the US for Latin America (Latin America Security Operation, LASO). A product of the Cold War and a result of the fears brought on by the Cuban Revolution, this policy was planned as a means of fighting communist influence throughout the region. The aid, consisting of equipment and strategy support, was materialized in massive attacks on peasants' self-defense territories, a low-intensity war that included selective assassination, and the creation of paramilitary groups.

The first aid-related massive attack was a historical event that opened a definitive guerrilla war. In 1964, the peasant self-defense organization that had occupied Marquetalia and had taken over the administrative functions there in the absence of a legitimate state was attacked in a massive onslaught by the Colombian armed forces. Some of the guerrilla leaders and some so-called bandits who were part of the Marquetalia process resisted the attack and conformed to a doctrine influenced by the PCC: they were called the Frente Sur (Southern Front), and two years later became the Fuerzas Armadas Revolucionarias de Colombia (Revolutionary Armed Forces of Colombia, FARC).

Another process was running simultaneously in the cities. Before the PCC's 1961 approval of the "combination of all forms of struggle" thesis, in 1956 the PCC had followed the line of the 20th Congress of the Soviet Union Communist Party (SUCP) in which democratic and peaceful means of obtaining state popular power were

approved and promoted. Two years later, the FN was established as a pacification measure between liberal and conservative parties by means of an alternation in the executive branch to exclude other forces. The goal was to shut out the Communist Party and popular initiatives by workers, peasants, women, and indigenous peoples.

In 1959 a new movement emerged. It was an urban, radical, communist-inspired guerrilla organization of students, workers, and peasants called *Movimiento Obrero Estudiantil Campesino* (Student, Peasant, and Worker Movement, MOEC). It was the first in a series of new radical movements, mainly composed of urban intellectuals associated with the FN. In 1962 the communist-led *Frente Unido de Acción Revolucionaria* (United Front of Revolutionary Action, FUAR) was founded as the radical fraction of the *Movimiento Revolucionario Liberal* (Revolutionary Liberal Movement, MRL, dissident from the Liberal Party). Other groups emerged: in 1963, the *Fuerzas Armadas de Liberación* (Armed Liberation Forces, FAL); in 1964 the pro-Cuban and Guevarist *Ejército Nacional de Liberación* (National Liberation Army, ELN) and the Maoist *Ejército Popular de Liberación* (Popular Liberation Army, EPL); and in 1965 the *Frente Unido* (United Front), grouping thousands of students, peasants, and workers directly against the FN under the leadership of the legendary priest Camilo Torres (a militant of liberation theology, 1929–66).

The reaction of the Colombian army to these groups, which considered the armed insurgency as a resistance strategy that had a determinant communist revolutionary objective, was severe and quick. Supported by American cooperation in counterinsurgency action, the Colombian army came down hard on these organizations during the 1960s, leaving them almost annihilated.

A new hope of putting an end to the FN through democratic elections surfaced in 1970. General Gustavo Rojas Pinilla (1900–75), who organized a coup d'état in 1953, founded a new political movement: the *Alianza Nacional Popular* (Popular National Alliance, ANAPO). This initiative grouped various popular sectors, including the socialists. However, in a controversial move, Misael Pastrana Borrero (1923–97) was declared the FN candidate, and in 1972 the guerrilla organization *Movimiento 19 de Septiembre* (September 19 Movement, M-19) was created to commemorate the election day and

as a response to the electoral fraud. M-19 called for a continent-wide revolution inspired by its independence heritage and Bolívar's revolutionary legacy, directing its objectives to symbolic actions to gain popular support for concrete state reforms. One of its most memorable actions was the theft of Simón Bolívar's sword on January 17, 1974, which symbolized the retaking of Latin America from US imperialism and its supporters in the Colombian oligarchical government.

President Alfonso López Michelsen (1974–8) initiated a policy of peaceful dialogue with all armed groups. The Colombian army had dealt a tremendous blow to the ELN due to its increasing armed and territorial influence in 1973. Because of its military advantage, the Colombian army was not disposed to talk and these dialogues produced no significant results. The 1980s saw increasing guerrilla presence in the territories and many frustrated attempts at state reform.

Colombia, armed insurgency, peasant self-defense, and radical popular movements, 1970s–1990s

Hermann Ruiz

The 1960s opened a dynamic era of communist-inspired guerilla movements in Colombia. The Colombian army, supported by the United States, reacted quickly and harshly, defeating some of the guerilla groups. Even so, these years saw the birth of the Revolutionary Armed Forces of Colombia (FARC), the National Liberation Army (Ejército de Liberación Nacional, ELN), and the Maoist Popular Army of Liberation (Ejército Popular de Liberación, EPL), the three most influential groups in the 1980s and 1990s. In this climate, the elections of 1970 brought hope for the end of the National Front (Frente Nacional), an agreement between liberals and conservatives to distribute the state administration and jobs in an undemocratic effort to stop the struggles that were known as *La Violencia*. General Alberto Rojas Pinilla (1900–75), who had organized a coup d'état in 1953, founded the Popular National Alliance (Alianza Nacional Popular, ANAPO) to orchestrate the National Front's defeat in elections and usher in real democracy. This initiative brought together various popular sectors, including socialists.

In a controversial outcome, the National Front candidate, Misael Pastrana Borrero (1923–97), was elected. Unhappy with the election results, the socialist faction of ANAPO created the September 19 movement (M-19) in 1972. Inspired by its independence heritage and Simón Bolívar's revolutionary legacy, the M-19 demanded concrete state reforms. It gained the support of the urban masses through such symbolic actions as stealing Bolívar's sword (January 17, 1974) and capturing the Dominican embassy (February 27, 1980) and the Palace of Justice (November 6, 1985). This was the beginning of an urban and political tendency that started to change the insurgency strategy.

The ELN was founded in 1964 by people who came from different groups and organizations,

some of them armed. The central figures had previously traveled to Cuba and were influenced by the Cuban Revolution. After leading guerilla operations for almost a decade, the group suffered a significant blow in 1973 as a result of the Colombian army's Anorí Operation. The political faction inside ELN that supported the tactic of a combination of all forms of struggle subsequently won influence, and the ELN began an armed strategy to influence the municipality's administration.

The development of the Marxist-Leninist Colombian Communist Party (Partido Comunista Colombiano Marxista Leninista, PCC-ML), founded in 1965, supplemented this new tendency. The competing dogmas of intellectual radicals within the group led to party fragmentation from the beginning. Attempting unity, the Movement of Revolutionary Integration-Free Fatherland (MIR-Patria Libre) was created in 1984 and merged with the ELN in 1987 to form the Camilist Union-National Liberation Army (UC-ELN) in honor of the mythical revolutionary priest Camilo Torres. The new group hoped to supplement military actions with political activities and mass organization.

Other new groups also emerged in the 1970s. In 1976 a new urban armed force composed of students and popular activists, the Workers' Self-Defense Group (ADO), was created. In 1978, FARC created its own offensive force, the Popular Army (Ejército Popular, EP), in an effort to obtain state power. At the same time, strikes helped force the government to open new spaces for dialogue. In 1977 and 1982, two huge national strikes erupted as a result of many smaller local ones.

In 1984, the Belisario Betancur government agreed to a truce with the FARC secretariat in pursuance of a series of measures to foster political debate. Toward this effort, a political party, the Patriotic Union (Unión Patriótica, UP), was created in 1985, with FARC, some ELN fronts, and the ADO. The government agreed to guarantee free speech for its leaders and the option to participate in the next elections.

In 1985, the M-19 captured the Palace of Justice to illustrate its anger over unfulfilled agreements and in an attempt to stage a trial of President Betancur. Because of a lack of determination on the part of its executive members, the Colombian army retook the palace, bombing it and entering with tanks. In the process, 43

civilians (including 11 attorneys), 33 guerillas, and 11 soldiers and Security Administration Department (DAS) personnel were killed. Two guerillas and 11 civilians disappeared, and two students were tortured.

This process began simultaneously with the rise of the narcotraffic economy and reinforced the paramilitary strategy of the United States. As a result, a new period of violence began. After 1982, many paramilitary groups and private armies were created, including: Death to Kidnappers (*Muerte a Secuestradores*, MAS); Death Squad (*Escuadrón de la Muerte*); Death to Cattle Robbers (*Muerte a Abigeos*, MAOS); Punish Signatories or Intermediary Swindlers (*Castigo a Firmantes o Intermediarios Estafadores*, CAFIES); Embryo (*El Embrión*); Cleaning of Magdalena Valley (*Prolimpieza del Valle del Magdalena*); Colombian Anti-Communist Movement (*Movimiento Anticomunista Colombiano*); The Crickets (*Los Grillos*); and The Machete Squadron (*El Escuadrón Machete*).

From the beginning of the democratic process instituted by the 1984 peace agreements until 1993, when an international plea denouncing the persecution of UP members was made to the Interamerican Human Rights Court, close to 1,000 party members were assassinated, 123 were disappeared, hundreds more were menaced, and 40 survived attempts against their lives. All of these abuses occurred without serious investigation, and many of them were attributable to the military, paramilitaries, or narcotraffickers closely involved with politicians. By 2005, the number of victims had reached 6,000.

After the 1987 elections, Jaime Pardo Leal (1941–87), the UP presidential candidate, was assassinated. A series of huge protests erupted around the country against his murder and efforts to silence the movement. Because of the lack of security for FARC-related members of the party, it resumed the armed struggle in 1987. In 1990 the new UP presidential candidate, Bernardo Jaramillo Ossa (1956–90), was also murdered. During this bloody period two other political candidates were assassinated – Luis Carlos Galán (1943–89), a liberal leader, and Carlos Pizarro (1951–1990), a former M-19 guerilla leader.

In 1987 the Guerilla Coordination Simón Bolívar (*Coordinadora Guerrillera Simón Bolívar*, CGSB) was founded, composed of the groups that had negotiated the first agreement. This time,

however, they were joined by M-19, the indigenous land rights group Quintín Lame Armed Movement (*Movimiento Armado Quintín Lame*, MAQL), the EPL, and the Maoist Workers' Revolutionary Party (*Partido Revolucionario de los Trabajadores*, PRT). The goal was to force the beginning of negotiations with the Colombian government. Talks eventually took place in Cravo Norte (department of Arauca), Caracas (Venezuela), and Tlaxcala (Mexico) between 1991 and 1992. In both Caracas and Tlaxcala, however, the dialogues failed.

Nevertheless, in 1991 a new political proposal was offered and the National Constitutional Assembly was created. For this process, the M-19 laid down its weapons in order to participate in the Assembly elections, forming a political party, the M-19 Democratic Alliance (*Alianza Democrática M-19*). Composed mainly of M-19 leaders, it was the Assembly's second force in terms of numbers, after the traditional Liberal Party. At the same time, the César Gaviria government launched a neoliberal policy known as *apertura económica* (economic opening) to open the country to new markets. The policy represented an enormous threat to small businesses, workers' rights, and national sovereignty.

The 1990s was a decade of growth for both FARC and ELN. In 1964, FARC had 48 members and in the 1980s, at least 7,800. This figure almost doubled during the decade to 12,500 combatants. In its beginnings, ELN members numbered 76. At the end of the 1980s it had 2,600 members, and in 2000, 4,500. By the end of the 1990s, then, the two groups had a combined membership of approximately 17,000. The groups' funding sources also changed. In the 1960s funding was partly based on the resources provided by socialist countries, especially Cuba and China. In the 1970s and 1980s, however, funding sources diversified to include both licit and illicit activities, such as mining, agriculture, transport, cattle theft, robbery, kidnapping, "taxes" on economic activities, municipality budget appropriation, and taxes on illicit cultivations. These activities provided them with significant economic independency.

From 1964 to 2003, some 89,991 people were killed as part of the unrest. Approximately 3.5 million people were displaced from 1985 to 2004 and their number is still increasing. Between 1977 and 2002, almost 30,000 persons were kidnapped. From 1966 to 2004, close to 8,500 people were

tortured. The brutal paramilitary operation during the 1980s created a complex social control system based on terror produced by extreme violence, the result of which was the silence of the masses. The period saw the consolidation of paramilitary power and US intervention under the Colombia Plan, justified up to the 1980s by fear of the communist menace, in the 1990s by the war on drugs, and after that by the war on terrorism.

Colombia, indigenous mobilization

Tathiana Montaña Mestizo

In Colombia there are approximately 85 indigenous communities who speak 64 different languages with a total population of 800,000 people, or 2 percent of the country's population. Historically, the struggles of indigenous

movements in Colombia have been based on the defense and liberation of “Mother Earth” from aggression by the government, multinational corporations, and mega projects. During the 1970s, the peasants' (*campesino*) movements called upon the indigenous communities to join their struggle for land rights. Though social and political organizational differences led the indigenous communities to form an autonomous and independent movement, they did unite efforts in many struggles.

The first indigenous mobilizations, giving origin to the actual movements, occurred at the beginning of the 1970s, especially in the southern departments of Cauca, Tolima, and Huila. As the movement spread across the country, it gave rise to the creation of indigenous organizations at regional and national levels. The Regional Indigenous Council of Cauca (CRIC) formed in 1971, followed by the National Indigenous Organization of Colombia (ONIC) in 1982. Between 1974 and 1978, the Indigenous Authorities of Colombia (AICO) formed on a national level.

The indigenous movement in Colombia is considered the pioneer of indigenous movements in Latin America. The CRIC supported the consolidation of the National Council of Coordination of Indigenous Nationalities (CONACNIE) in Ecuador in 1980. The organizational process of the indigenous communities of the south of the country arose from a context of adversity as the CRIC was formed in the most conservative and traditionalist departments of Colombia – Cauca and the Valle de Cauca – which also have the most unequal land distribution.

The movements emphasize that Mother Earth is the source of life, that it should be protected, and that it should be understood not only as a factor of production, but also as the origin of all life. They developed civil and political struggle against the large landowners and state institutions through mobilizations, marches, road blocks, and occupations of local institutions. Their goal was land recuperation and community agricultural production as an alternative to the global market. Perhaps the most important outcome was the formation of an ethnic *campesino* identity which linked the *campesino* sector in defense of the earth with the similar agenda of the indigenous communities.

Between the 1970s and 1980s the indigenous agenda broadened. One area of emphasis concentrated on internal work, educating and

propagating indigenous culture and its forms of struggle for the respect of indigenous rights. Another concern was the consolidation of the indigenous groups to gain a space of advocacy as political actors. Finally, a self-defense aspect emerged. Named the Quintín Lame Armed Movement (MAQL), this group took up arms in 1984 with the objective of supporting land recuperation from the large landowners in the south of the country.

Thus during the third ONIC congress in Bogotá in 1990, which also coincided with the convocation of the National Constituent Assembly promoted by many democratic and progressive sectors of the country, the indigenous groups publicly recognized that the country urgently required structural changes to make way for democracy. This resulted in the participation of Lorenzo Muelas, Francisco Rojas Birry, and the Paez indigenous Alfonso Pena Chepe from the recently demobilized indigenous guerilla group MAQL.

The processes of the National Constituent Assembly made visible the situation of the indigenous communities and led to the recognition of their property and traditional territories, as well as their political and administrative autonomy over those territories. It also opened the way for the election of two separate indigenous representatives to the Colombian Senate. But this institutionalization also led to a break in the unity of the indigenous movement as several representatives were proposed without reaching an agreement. Indigenous communities from the Cauca and Andean regions especially competed for leadership. Another group, politically close to the indigenous communities of Antioquia, Chocó, and Risaralda, promoted the creation of the Social Indigenous Alliance (ASI) in 1991 and managed to win a seat in the Senate after earning recognition as a political party. This situation created the first crisis in the movement due to the competing needs of restructuring the traditional indigenous organizations while fostering unity within the movement. This was the purpose of the first ASI assembly: to work toward an indigenous government program that was both pluralistic and inclusive in its democratic framework and able to consolidate a countrywide project with dignity.

During the following years at the National Constituent Assembly, the participation of indigenous movements and parties increased, but the

movement remained represented yet unheard. This is illustrated by the popular election of Floro Tunublá as the governor of Cauca in 2000, whose influence on political decisions was limited. In this context, the armed conflict in the country intensified for several reasons, such as the new war strategy of the state, the United States' intervention in the security of the country, and the "war on drugs." State-tolerated or even organized paramilitaries took up arms to exterminate the peasants and indigenous communities in the highly productive agricultural zones and natural reserves, to then plant coca, African palm, and poppy. As a result, the indigenous movement was persecuted, and the struggle in defense of the earth became related to terrorism and opposition to the state.

The indigenous movement also deals with a number of issues in addition to land reform. Racism and discrimination at the hands of the state are problems faced by indigenous people. Other problems include the right to water as a public good and the privatization process by multinational companies. The movement has also opposed the forestry law, which would further displace peasants, and the signing of the Free Trade Agreement with the United States.

In 2004, rooted in the intensification of the conflict, the indigenous movement of Colombia called for unity among all social sectors of the country, calling upon all indigenous movements and organizations on the continent to participate in a popular indigenous *Minga* – a march for life, justice, happiness, liberty, and autonomy. In September, more than 100,000 indigenous people and supporters from other social organizations came together in Cali, where an Indigenous Popular Mandate was given to the media, national and international organizations of human rights, and governments, especially the Colombian government. The indigenous communities declared a Permanent Indefinite Assembly until threats against life and integrity were overcome. The mobilization showed the existence of a strong indigenous movement as well as the need to maintain the political space and construct more decision-making arenas in which the indigenous population can defend its interests in a democratic framework. The need for this space to defend indigenous interests was shown in 2006 when members of the indigenous community were victims of 279 detentions without due process

and 10,800 death threats. The same year, 5,731 indigenous people were displaced and had to abandon their ancestral territories.

Colombia, labor insurrection and the Socialist Revolutionary Party, 1920s–1930s

Raina Zimmering

Around 1900 Colombia began to industrialize, using compensation payments made by the United States for the separation of Panama. This process engendered huge social struggles as the Colombian economy grew, leading to tension between poor people from rural and urban areas and the oligarchy, which was getting richer and richer. In 1919, there were labor conflicts among urban artisans, textile workers, railroad workers, and petrol workers. In rural areas, the Indian peasant rebellion spread after 1914 under Quintín Lame. Organized labor then struck the capitalist enclaves in oil and bananas after 1925, and a wave of multi-ethnic peasant land takeovers swept across the coffee frontiers.

In 1926, the Revolutionary Socialist Party (PSR) was formed, unifying all these social movements under one banner. The PSR was an example of horizontal organization and managed to transcend the traditional division between

Conservatives and Liberals. The party was centered in communes in villages and little towns. Important leaders such as Thomas Uribe Márquez and María Cano built upon traditions of revolutionary party formation and mass action, leading the PSR in organizing proletarian protests along coffee frontiers and in the multinational export enclaves of the Caribbean.

In 1928, the protest wave culminated with the big month-long strike demanding better working conditions on the plantations of the United Fruit Company near Ciénaga in the department of Magdalena. The strikers demanded written contracts, the elimination of food coupons, eight-hour days, and six-day weeks. The strike turned into the largest labor movement ever witnessed in the country until then. Radical members of the Liberal Party, as well as members of the Socialist and Communist parties, participated. After the announcement of a meeting between a negotiating committee of the company and a reconciliation committee of the government, several hundred striking workers and their families went to the main square in Ciénaga to await the delegation. Instead, the government decided to send an army regiment from Bogotá to end the strike violently. The waiting workers were surprised by the heavily armed military forces that fired upon the masses. The troops set up their machine guns on the roofs of the low buildings at the corners of the main square, closed off the access streets, and after a five-minute warning opened fire into the dense Sunday crowd of workers and their wives and children, in a massacre described by Gabriel García Márquez in his novel *One Hundred Years of Solitude*. The exact number of casualties has never been confirmed, but estimates ranged from 47 to 2,000.

After the massacre, a wave of repression rolled through the whole state. Leaders of the PSR were assassinated and detained. The PSR dissolved and the rest affiliated to the Communist Party of Colombia in 1930. The revolutionary pressure of the Conservative government put the Liberals back in power in the same year. Later the condemnation of the massacre of the bananas workers of Ciénaga was an important theme for the famous Liberal politician Jorge Eliécer Gaitán in his election campaign in the 1940s. The Banana Massacre is one of the main events that preceded the *Bogotazo*, the subsequent era of violence known as *La Violencia*, the guerillas, and the ongoing Colombian armed conflict.

Colombia, Thousand Days' War, 1899–1902

Andrés Bólvoro H.

Throughout the nineteenth century, liberal and conservative forces battled for power in Colombia, waging a number of civil wars in a struggle for control of the political institutions and territorial dominion. Between 1899 and 1902 they engaged in an especially cruel and prolonged conflict which would go down in history as the “Thousand Days’ War.”

In 1886 President Rafael Nuñez implemented a well-known and systematic nationwide project called “The Regeneration,” which benefited the conservatives and was accompanied by the issuing of a new constitution. Conservatism took control of the state, its financial resources, the electoral mechanisms, and the most coveted rural areas. In response to the centralist vision of the conservatives, the liberals were ready to fight for their own political project, “The Restoration,” and a geopolitical restructuring of the Colombian territory based on the principles of a federal system. Fiscal deficit, politically corrupted monopolies, and a socioeconomic crisis coincided in 1898 with a dramatic slump in the price of coffee, which was Colombia’s main export commodity at that time.

In 1898 liberalism was divided into two fronts. The first comprised the “pacifists” who wanted to achieve a peaceful agreement with the gov-

ernment. They proposed legal solutions in the search for constitutional reform, rearrangement of the electoral system, and a more balanced distribution of land and power. The second front included the “warmongers” who concluded that there was no possibility of negotiating with the conservative government. For them the only solution was an effective call to civil war.

Conservative forces were separated into two opposing groups as well – “nationals” and “historicals.” The first group formed part of the hegemonic body that controlled the state administration. The “historicals,” on the other hand, demanded considerable modifications within the Regeneration and agreed with the liberal pacifists in their desire to reach constitutional reform. Manuel Antonio Caro, the president of the Republic between 1894 and 1898, was one of the most radical nationalists, and his steadfast conviction made him embrace power without limits. He rejected any demand from either the liberals or the historicals.

In 1898, when his mandate was coming to an official end, Caro chose Manuel Antonio Sanclemente, an 84-year-old man with health problems, to succeed him as head of state. It was clear that this political move permitted Caro to maintain actual governmental power through the senile figure of his successor. The elections were fraudulent, and Sanclemente won, accompanied by Vice-President Manuel Marroquín. What Caro did not expect was that the second magistrate in charge would promote several constitutional reforms that allowed marginal political actors to gain some power and to participate more actively in electoral contests. Marroquín also supported the abolition of important taxes – especially the ones levied on the export of coffee. As a result he was forced to step down, and Caro resumed control, thanks to his deep experience in political affairs and the opportunities the puppet elected president offered him.

The war could have been prevented if the reforms of Marroquín had been successfully carried out, but they were all suppressed by Caro. Although the liberal leadership consisted mainly of pacifists, the course of events opened the gates to violent tendencies, and the war started on October 18, 1899. The historicals also voiced their dissatisfaction with the government and their firm rejection of the impositions of Caro and Sanclemente to the point that their movement decided to promote a coup on July 31, 1899,

which expelled the nationalists from power and returned the mandate to Marroquín. At the beginning there was an agreement between the historical and the liberal commanders to reject the nationalist hegemony and redefine the positions of power. But what really happened was that the dispute between the two traditional conservative fronts was settled and they joined forces in order to fight against the liberals.

The balance of power was tilted toward the conservatives, because the liberals had not counted on the military superiority of their enemy. The liberal troops did not have the necessary quantity or quality of weaponry at their disposal, although the governments of Venezuela, Ecuador, Honduras, and Nicaragua supported their cause with men and arms. The Thousand Days' War (which extended over the territories of Santander, Tolima, and the north of the country) was especially violent, and its cost in human lives was heavy. The battle of Palonegro, which lasted two weeks, is especially remembered for its cruelty and high death rate: nearly 2,500 soldiers died.

It is also important to analyze the real revolutionary character many chroniclers read into this war. A common opinion is that the liberals were the revolutionary force which fought against the conservative hegemony that used to rule Colombia at the end of the nineteenth century. There are some elements that serve to underpin this thesis, but there are others that argue against it. The liberal leadership was searching for constitutional reforms in order to achieve better conditions in electoral processes, gain the opportunity to occupy the most important bureaucratic positions, and obtain access to economically promising resources and estates. They did not advocate structural changes in Colombian society, nor did they show special concern for the necessities of the Colombian poor and rural inhabitants. This war did not endeavor to implement better conditions for the people: it was a war between two political parties based mainly on bureaucratic and territorial interests, in the middle of a profound socioeconomic crisis.

Nevertheless, it is important to recognize that there was a conspicuous revolutionary seed planted during this war. It determined the methods of fighting and also the strategy used by the liberals. At the end of the nineteenth century Colombia was a land full of *caudillos*, regional chiefs with great powers, extraordinary charisma, and loyal

personal armies under their command. There was in fact a profound atomization of power in the country and this characteristic permeated the war dynamics. Neither the liberals nor the government had a professional, permanent, and well organized army.

Instead, this war was fought by irregular factions, mainly the liberal factions that in fact took the form of a guerilla force. A lot of warriors could read and fiercely interiorized the lessons from the *Manual para el combatiente irregular* (Manual for the Irregular Fighter) – which had been introduced to Colombia by General Avelino Rosas from Cuba where he accompanied the rebels who won independence. This form of guerilla organization offered some potential but also weaknesses. On the one hand, it offered the liberals great opportunities in terms of versatility, mobility and “invisibility” in the enemy's eyes. But on the other, there were also clashes, envy, and struggles for power among the different liberal *caudillos* which hampered every attempt to establish solid unity in command and strategy. There was no strict compliance with discipline and no coherence among the liberal ranks, either, which meant repeated and unfortunate setbacks for their purpose in war.

With big losses on both sides and unbearable battle fatigue, liberal and conservative leaders decided to end the war formally in 1902. Nevertheless some liberal guerilla fighters prolonged the attacks until the next year. One could conclude that the war consolidated the basis for a new territorial structure in Colombia in which control was divided between the old-fashioned political landowners and a new oligarchy that included a good number of military commanders.

Colombia, unions, strikes, and anti-neoliberal opposition, 1990–2005

Hermann Ruiz

After a decade of brutal repression, a peace process with the main guerilla groups in Colombia was reached in 1984, with the government committed to guaranteeing democratic participation. One year later the Unión Patriótica (Patriotic Union, UP) was founded with this purpose. It did not take long to win popular support because its proposals included popular participation in state administration, the right of opposition, popular elections for local administrations, equal access to the media and information, land reform, and subsidies to small agricultural producers.

From the beginning of the UP's activities, persecutions, murders, threats, and many kinds of violent assault against UP members were daily occurrences, entailing no serious investigation. In 1986 the UP presidential candidate Jaime Pardo Leal was murdered. Bernardo Jaramillo Ossa took over the UP leadership in the presidential elections. He was killed in 1989, the same year that the presidential candidate for the Liberal Party, Luis Carlos Galán, who also represented popular causes, was murdered. In 1990, Carlos Pizarro, leader of the Movimiento 19 de Septiembre (September 19 Movement, M-19), an urban guerilla group that had signed a peace agreement and was willing to struggle by democratic means, was killed. In 1993, nearly 1,000 members of the UP were assassinated, and hundreds disappeared. Up to today, 6,000 UP militants have been killed. At the same time, the US counterinsurgency strategy adopted by the Colombian government and the expansion in narcotrafficking have caused a massive increase in paramilitary groups.

Nevertheless, in 1990 one of the most important manifestations of popular will in Colombian history aimed to change the political and economic structure of exclusion through democratic and institutional approaches. Through this movement, students, unions, social movements, new parties, and some ex-guerilla leaders grouped together to formulate the Séptima Papeleta (Seventh Paper) initiative, which included a proposal to carry out

a National Constituent Assembly in the elections for mayors and governors that year. The proposal was adopted, and in 1991 it reformulated the constitution to create more appropriate mechanisms and institutions for promotion and protection of political, economic, and social rights and for what was called "state modernization." This was a manifestation of mobilized citizenship in an atmosphere of violence and persecution that nevertheless fulfilled popular expectations for real change.

At the same time, however, the neoliberal policies of Washington, DC began to take shape. Several state companies were sold or restructured, social security was privatized, and tariffs were diminished. In this climate, unions began a new stage in their fight for workers' rights and, moreover, for economic and political sovereignty. On May 1, 1990 the unions organized a historic national strike in opposition to the César Gaviria (1990–4) government's neoliberal measures and against the economic and political crisis that included widespread corruption, the absence of results in the peace negotiations, the intervention of the International Monetary Fund (IMF), and crippling inflation. The protest had a national spirit beyond the particular interests of the workers.

In 1992, the fragmented union movement created the Confederación General de Trabajadores Democráticos (General Confederation of Democratic Workers, CGTD), in an attempt to unify a significant sector accompanied by the Central Latinoamericana de Trabajadores (Latin American Central of Workers, CLAT) and the World Confederation of Labor (WCL). This unification was preceded by the Central Unitaria de Trabajadores (Unitary Central of Workers, CUT), which was created in 1986 with communist unions, non-confederated unions, the teachers' union (FECODE), the national oil enterprise workers' union (USO), and fractions of the Confederación de Trabajadores de Colombia (Colombian Confederation of Workers, CTC) and of the Unión de Trabajadores de Colombia (Colombian Union of Workers, UTC).

In 1995, the Ernesto Samper (1994–8) government and CUT signed a social pact on productivity, wages, and prices. In the context of sustained inflation, CUT looked to negotiation channels to develop an economic policy geared toward reducing the difference between the increase in wages and the increase in prices and

the implementation of macroeconomic measures for economic fairness. The main articles contained in the pact were unfulfilled, and in 1996 neoliberal measures went ahead. In opposition, workers of ECOPETROL and TELECOM organized one of the most important national strikes in Colombian history in 1997 against privatization of these public companies, interventions by the IMF and World Bank, and ever-rising inflation. The strike was supported by the federated unions (CGTD, CUT, and CTC) and by non-federated syndicalism.

Other large-scale strikes followed. In 1999, CUT, CTC, CGTD, and CPC (the state pensioners' union) organized another national strike, this time to manifest their disapproval of the forthcoming Plan Colombia (Colombia Plan), a program of massive reinforcement of the Colombian army supposedly to fight the "war on drugs," financed mainly by the US. In 2000 a national strike protested against the reform of labor and pension laws, wage decreases, massive dismissals from state institutions, violations of human rights, the exodus of union leaders, foreign debt, and, once again, the Colombia Plan military intervention. That same year, unionism headed by CUT began the process of organizing a new democratic left that grouped together disparate social movements and micropolitical parties, including the Frente Social y Político (Political and Social Front, FSP), which in 2005, after some divisions and alliances, became the most important left party in Colombian history, and the Polo Democrático Alternativo (Alternative Democratic Pole, PDA).

In 2003, the Alvaro Uribe government promoted a referendum to enlarge the presidential functions and to introduce several political reforms. The union movement called a national strike and, due to the demonstrations and the unions' communication strategy, the referendum did not gain enough votes for approval. Instead, the application of neoliberal policies was accelerated by the Uribe administration. In a process of state restructuring, several state institutions and joint ministries were closed and positions within municipalities (regional and local political administration entities inside the Colombian state) were suppressed, resulting in 50,000 job losses, all without union and civic participation or consultation. Following this attack, a national strike was called by the Comando Nacional Unitario (Unitary National

Command) for February 26, 2004. Participating in the strike were CUT, CTC, CGTD, CPC, and non-federated unions. The strike was also a protest against the never-ending tide of neoliberal policies led by the US and manifested in the Free Trade Area of the Americas (FTAA).

To gain support for the FTAA, the US began an atomized strategy, trying to negotiate separately with each of the South and Central American countries to approve bilateral Free Trade Agreements. In 2004, negotiations with Colombia started in Cartagena. Demonstrations at the opening ceremony by union leaders and representatives of the Polo Democrático (Democratic Pole) Party, the Liberal Party, and other social movements were violently suppressed by the police.

The fight to protect labor rights, despite tremendous state oppression, has been a heroic one in Colombia. Indeed, Guy Ryder from the International Trade Union Confederation (ITUC) has described Colombia as "the deadliest country in the world for trade unionists." The best known case of workers' rights violations in Colombia is that of the Sindicato Nacional de Trabajadores de la Industria de Alimentos (National Union of Food Industry Workers, SINALTRAINAL), which represents Coca-Cola and Nestlé workers, among others. Murders of Coca-Cola workers began in 1994. In 2001, lawyers from the International Labor Rights Fund (ILRF) and the United Steel Workers (USW) initiated a legal process in the city of Miami, Florida, to represent Isidoro Gil and five other activists of SINALTRAINAL against Coca-Cola USA, Coca-Cola Colombia, and the bottling plant. The charges involve the company sponsoring paramilitary groups to murder several union members as a mechanism to break the union and to prevent collective negotiation. This case led to the world-renowned Stop Killer Coke movement.

Because of the uninterrupted murders, disappearances, threats against union members, and violations of International Labor Organization (ILO) treaties, and in accordance with accusations made by the federated unions CUT, CGT, and CTC since 1998, the ILO sent a Tripartite Commission to Colombia in 2005 that urged the government once again to protect the rights of union members. In 2006, as a result of the visit, ILO opened a permanent office in Colombia. According to the Escuela Nacional Sindical

(National Unionist School, ENS), between 1991 and 2006 in Colombia there were 2,245 homicides, 3,400 threats, and 138 forced disappearances of union leaders. Amnesty International has said that in more than 90 percent of cases, those responsible have not been brought to justice. Despite the high level of risk, 975 union activities were carried out during that same period, including strikes, stoppages, protests, hunger strikes, occupation of buildings, and other symbolic demonstrations.

Without a doubt, the terror exercised against the union movement has had convenient results for the neoliberal policies promoted by successive governments interested in US economic and military cooperation and for those economic agents who have not allowed the redistribution of wealth in Colombia.

Color revolutions

Donnacha Ó Beacháin and Abel Polese

The term “color revolutions” is used to describe as a single phenomenon a number of non-violent protests that succeeded in overthrowing authoritarian regimes between 1998 and 2005. In each of these protest movements, leaders adopted colored flags to rally under. Geographically, the term has tended to encompass only post-communist countries in Eastern Europe and the former Soviet Union, though there is evidence that similar movements for change have been initiated in the Middle East (Lebanon, 2004) and Asia (Burma, 2007).

Historically, there are many precedents for the color revolution phenomenon in Europe. Protests aimed at advancing peaceful democratic change were regularly registered in Soviet-dominated Eastern Europe. These took the form of anti-state worker revolts (East Germany, 1953; Poland, 1956, 1970) or movements that included national communist leaders who favored weakening domestic authoritarianism and foreign, usually Moscow, domination (Hungary, 1956; Czechoslovakia, 1968).

The Polish *Solidarność* (Solidarity) movement, which grew out of the Gdańsk shipyards, broke new ground in the early 1980s, amassing 10 million members in a show of unity that forced the communist leadership to negotiate and offer reforms. General Jaruzelski's usurpation of the communist leadership in Poland, his introduction of martial law, and suppression of *Solidarność* highlighted the limitations of reform in the late Brezhnev years, but *Solidarność* reemerged to grasp the opportunities presented by Gorbachev's new thinking. Bereft of traditional Soviet military support and free from threats of invasion, the ruling communist regimes in Eastern Europe, one by one, entered into negotiations with democratic mass movements in Poland, Hungary, East Germany, and Czechoslovakia in the autumn of 1989. Though the term was first used exclusively to apply to Czechoslovakia, the changes in Eastern Europe, all characterized by mass mobilization for non-violent regime change, are often described as the “Velvet Revolutions.”

Attempts to emulate these successes in the USSR were met with determined resistance by the Kremlin. Through a number of daring

and pioneering protests (of which the “Singing Revolution” was the most innovative), the Baltic peoples broke new ground in the science of peaceful anti-state protest. The most spectacular demonstration of collective will occurred on August 23, 1989, when two million people linked hands in a continuous chain from Vilnius in Lithuania through Latvia and on to the Estonian capital, Tallinn, in what was known as the “Baltic Chain.” In 1991 a general strike, gathering workers and students in Kiev, Ukraine, led to the resignation of Prime Minister Masol.

The implosion of the USSR was caused by many factors. Baltic mass resistance played a small part, but it left a powerful legacy and model for the peoples of other Soviet (soon to become post-Soviet) republics to follow should the need arise. Though each regime change in the communist empire between 1989 and 1991 included distinct national peculiarities, the number, similarities in technologies and methods employed, and the obvious cooperation between national movements have encouraged a consensus that they should be considered “revolutions” however much at odds this description might be with strict political terminology or historical precedent.

The term “color revolutions” does not refer only to those movements that have achieved a regime change but has also been applied to those attempting it, and in this respect a number of movements throughout Eurasia can be distinguished. First, there are the classic color revolutions such as Slovakia in 1998, Serbia in 2000, Georgia in 2003, Ukraine in 2004, and Kyrgyzstan in 2005 (although this latter is rather a hybrid revolution whose causes remain a main subject of academic debates) in which ruling regimes were peacefully removed with elections providing the catalyst for change. Then there are the failed color revolutions, including Belarus in 2003 and 2006, and Azerbaijan and Kazakhstan in 2005, where opposition movements clearly tried to imitate the tactics of successful color movements but failed to dislodge the ruling regimes. Finally, there are what might be called hybrid color revolutions, those that have still to be conclusively gauged to ascertain the extent they possess the features of color revolutions. These include Uzbekistan in 2005, Nepal in 2006, and Burma in 2007.

The fall of the Berlin Wall in 1989 ushered in a new era in which a number of European coun-

tries left the sphere of influence of the Soviet Union and began a transition that necessitated the introduction of painful economic reforms, democratization, and the rule of law. Whereas the paths of these new democracies have sometimes diverged (in the early years Bulgaria, Romania, and Slovakia were initially less successful in discarding communist legacies than Poland, Hungary, and the Czech Republic), all relatively quickly settled into the large families of the European Union (EU) and NATO.

Among the former Soviet republics, the Baltic States initiated a series of radical economic, social, and political reforms and installed sustainable democracies, while the remainder exerted a moderate authoritarianism, allowing western influence into the country but controlling, and sometimes even exploiting, it to crush domestic opposition.

As the 1990s progressed and a new century dawned, this latter group showed signs of breaking into two clearly identifiable ways of governing. One cluster of countries, having found their feet economically and politically after the free fall of the early transition years, boosted their authoritarian tendencies. These included Belarus, Turkmenistan, Uzbekistan, Kazakhstan, and Putin’s Russia. A second group, namely Georgia, Ukraine, and Kyrgyzstan, retained a moderate form of authoritarian rule while keeping the door open to western influences and permitting some forms of non-state-controlled power to develop.

The basis of the “color revolution” movement is now generally acknowledged to have been established in Slovakia in 1998. The dominant party in the country, the People’s Party – Movement for a Democratic Slovakia, headed by the increasingly authoritarian and isolationist Vladimir Mečiar, risked diverting Slovakia from its pro-EU and pro-NATO path. Parliamentary elections in 1998 were seen as the last chance to regain international credibility. Though political activism in Slovakia was low during the 1990s, the non-governmental organization (NGO) sector had thrived since independence, and in February 1998, 35 NGOs initiated Civic Campaign 98 (Občianska kampaň OK 98) for free and fair elections. The campaign estimated that the current prime minister was highly unpopular but that only a massive turnout would succeed in giving victory to the opposition.

The OK 98 campaign actively sought to mobilize the largely untapped reservoir of youthful opposition to the Mečiar government. In 1994 less than 25 percent of eligible young voters had participated in elections and in 1998 young and first-time voters were a potentially powerful oppositional force. The anti-Mečiar campaign was based on monitoring government activities and the election itself, and an aggressive information campaign. Amongst the activities organized to increase awareness was a 14-day march, live performances, and public meetings. In major cities national artists emphasized the importance of electoral participation and delivered their message at numerous rock concerts organized during the campaign, while an election bus visited 17 cities in September 1998 to promote the value of voting.

As a result of these myriad activities, 84 percent of voters went to the polls (the 1994 elections had seen a 75.65 percent turnout) and Mečiar was replaced by Mikuláš Dzurinda, leader of the Slovak Democratic Coalition (gathering five opposition parties, the Christian Democratic Movement, the Democratic Party, the Democratic Union, the Social Democratic Party of Slovakia, and the Green Party of Slovakia). The country immediately resumed a productive dialogue with the EU and NATO, leading to membership of both organizations in 2004.

Similar modalities were in evidence when, in 2000, Slobodan Milošević, Serbia's dominant political figure since 1989, was ousted from the presidency of the Federal Republic of Yugoslavia (Serbia and Montenegro). Disputed presidential elections held on September 24 provided the immediate catalyst for Milošević's overthrow. Milošević had called the elections after unilaterally altering the constitution in what opponents interpreted as an ill-disguised attempt to strengthen his power base.

Opposition victories in the 1996 municipal elections, which Milošević only recognized after three months of wrangling, had provided anti-Milošević parties access to institutional resources vital to mobilizing the population. For the 2000 election, the opposition rallied behind the popular Vojislav Koštunica and vigilant election monitoring and exit polling suggested that he had taken more than half of the vote in a five-man race. When official results did not tally, 10 days of protests followed. These included a general strike and reached a crescendo on October 5 when

hundreds of thousands of people converged on Belgrade to join existing demonstrations. Activists broke into and occupied the federal parliament and state television station while the police withdrew and the Yugoslav army stayed in barracks. Bowing to the inevitable, Milošević resigned on October 6, and Koštunica was sworn in as president the following day. In December, the party most associated with the demonstrations, the Democratic Opposition of Serbia, received two-thirds of the parliamentary election vote.

Events in Slovakia and Serbia created a precedent for non-violent collective action against post-communist authoritarian regimes. Inspired by the activities of protest movements like OK 98 in Slovakia and OTPOR in Serbia, similar organizations were established elsewhere in the post-socialist sphere. Already basic features were beginning to emerge; an election campaign provided the climax of a campaign born of patient planning and mass mobilization against the state.

The strategy failed to work in Belarus in 2003, but that same year mass protests would play a decisive role in engineering the departure from office of veteran political operator Eduard Shevardnadze from the Georgian presidency. Parliamentary elections on November 2, 2003 provided the initial stimulus and Shevardnadze's attempt to falsify the results united opposition forces capable of bringing tens of thousands of Georgians onto the streets of the capital, Tbilisi.

A similar scenario was visible in Ukraine in November 2004, when electoral fraud ignited calls for mass mobilization and organized strikes throughout the country. As in Georgia, the national capital, in this case Kiev, became the epicenter of opposition protests. Activists occupied the city center and a number of public buildings. A large hardcore of demonstrators put up tents in the freezing Ukrainian winter and lived on the streets until the Supreme Court declared the elections invalid. A re-run saw opposition leading light Viktor Yushchenko emerge triumphant in what was dubbed the Orange Revolution, so-called after the color adopted by the opposition to symbolize change.

Coming so soon after the Rose Revolution in Georgia, on which it was clearly modeled, events in Ukraine sent shock waves throughout the former USSR. No longer could the color revolution phenomenon be dismissed as the isolated

work of passionate ungovernable Georgians living on the periphery of what was the Soviet empire. The sheer size of Ukraine – second only to Russia in terms of population – insured that Yushchenko's victory would send alarm bells ringing in presidential palaces in Russia and Central Asia.

As 2005 beckoned, those eager to identify where the next color revolution would take place cast their gaze toward the small Central Asian republic of Kyrgyzstan where parliamentary elections were due on February 28 and March 13. In the early 1990s, President Akaev, an accidental politician, had basked in western praise for his liberal reforms that set Kyrgyzstan apart from its neighbors. He did little, however, to alleviate the acute poverty that accompanied the collapse of the Soviet state, and his family's wealth, power, and disdain for the law ultimately made him part of the problem in Kyrgyzstan rather than a key to future prosperity. Kyrgyzstan seemed to offer many of the same basic ingredients that had facilitated a color revolution in Georgia and Ukraine; it had enjoyed a relatively liberal political system with independent media outlets and an active network of influential NGOs. In response to the increasingly repressive policies of Akaev, and the fear that the elections would be neither free nor fair, a number of small but vocal organizations emerged, clearly modeled on similar movements in Georgia and Ukraine. A color was selected (pink, though yellow was initially popular) and a flower (the tulip) that would identify Kyrgyzstan as part of the larger color revolution phenomenon.

The election results provoked widespread protests mainly in the south of Kyrgyzstan and, as President Akaev refused to countenance actions that might result in widespread killings, the presidential palace in Bishkek was stormed hours after Akaev and his family had fled the country. The opposition parties, united by little more than a common dislike of Akaev, quickly proclaimed the Tulip Revolution a new epoch in Kyrgyzstan's democratic development, though doubts remained as to whether Akaev's departure had been engineered by the masses or a small mob who effected a coup.

With all eyes on Akaev's unorthodox removal from power, most missed an equally newsworthy story. At exactly the same time as elections were taking place in Kyrgyzstan, a parliamentary contest took place in neighboring Tajikistan. There,

no color revolution occurred. Divided by civil war in the mid-1990s, Tajikistan labored under the iron grip of President Emomali Rahmanov who, though presiding over an economically weak, ethnically divided, and politically dependent state, tolerated little oppositional activity or expressions of dissent. As in Kyrgyzstan, Tajikistan's elections were unfree and unfair (as the Organization for Security and Cooperation in Europe observers dutifully pointed out), but the opposition was sufficiently suppressed, demoralized, and disorganized to pose little threat to a president determined to consolidate his power base. The message for other regional dictators was clear: allowing an independent opposition to develop and prosper, while initially winning plaudits from the West, ultimately led to unceremonial dismissal by the people. The Kazakhstan president ordered the borders with Kyrgyzstan shut, but he knew the virus was more ideological than physical and saw to it that increased pressure was brought to bear on all potential manifestations of opposition in the media, among political parties, and by non-governmental organizations.

It was in Uzbekistan, the most populous of the Central Asian states, that the most spectacular and tragic efforts were made to stem the color revolution virus from infecting the body politic. President Karimov had wasted no time after the Rose and Orange Revolutions in shutting down key internationally funded NGOs and had berated President Akaev for being insufficiently tough with opposition forces. Though opposition parties were outlawed in Uzbekistan and organized resistance to the regime practically nonexistent, Karimov was determined to avoid becoming the next unpopular premier toppled in a color revolution.

Less than two months after the Tulip Revolution, a large crowd gathered in the Fergana city of Andijan to protest against the trial of local Islamic businessmen. Orders were given to disperse the crowd violently, and in the ensuing confrontation an estimated 700 civilians were killed (the government statistics were understandably lower, though their initial estimate of 70 was later bumped up to 166 in response to international incredulity). The Andijan massacre not only killed hundreds of Uzbeks but also shattered the increasingly romantic notions connected with collective protest in the former Soviet Union. Death was now the price of

protest in Uzbekistan and certainly President Karimov felt that he had done his bit to reassert authoritarian power in the region and stem the momentum of the color revolutions. Further attempts to effect color revolutions in post-Soviet republics since the Andijan massacre, for example Azerbaijan and Kazakhstan in 2005 and Belarus in 2006, failed.

Technology of Color Revolutions

Although drawing lessons from previous protests, the color revolution phenomenon has some innovative features that are common to all the campaigns mentioned here. Immediately remarkable is that the majority of mass demonstrations have occurred during the course of an election. Elections are considered propitious occasions to inspire protesters, partially because they sometimes provide a rare opportunity to mobilize and protest with relative impunity as international observers are usually present. Elections provide a chance for a disenchanted population to offer a judgment, and when that right is taken from the electorate through vote rigging or other forms of manipulation, these transgressions can provide further stimuli for action. Another common element has been the total lack, at least in theory, of violent actions initiated by anti-regime agitators. Since the defeat of Slovak leader Vladimir Mečiar in 1998, the number of casualties has been minuscule. Even clashes with the security forces have been limited to those cases in which the authorities decided to disperse protests with force instead of negotiating. An additional element prevalent in the color revolutions has been the use of humor to deliver social or political messages. Ideas have been transmitted through many kinds of art (including eye-catching graffiti), musical performances, comics, stickers, badges, scarves, and gadgets.

The opposition's ability to unite behind a single candidate was a key element in the downfall of unpopular leaders, as it denied the president the opportunity to divide and rule his challengers. Critical to the success of the campaigns was the work of NGOs, and youth movements such as OK 98, OTPOR, Kmara, Pora, and Kel Kel had a particularly influential role. The ability of the opposition, in coordination with NGOs, to mobilize hundreds of thousands of citizens was astonishing. The domestic political environment should also not be underestimated;

millions of citizens were tired of low living standards and corrupt and unreliable politicians, and they took the chance to show their desire to challenge the government.

As getting visible popular support has been crucial for oppositional legitimacy, it has been imperative for the authoritarian regimes to sedate any manifestations of dissent, by co-optation or infiltration, or, if necessary by use of violent force. Central to opposition success has been adequate comprehension that only collective action encompassing different, even competing, anti-regime forces will produce results. Where the opposition was able to stay compact, they succeeded in currying favor with substantial portions of the electorate disaffected with the status quo. In contrast, where a unified opposition proved difficult to negotiate, popular attitudes toward change remained passive, even hostile, as citizens did not know who to trust and were repelled by opposition factionalism and impotence. A divided opposition has also been a much easier target for authoritarian regimes to manipulate and absorb as they eliminated the irreconcilable and rewarded the pliable.

Once the opposition created an organized common front, an additional decisive factor became the interaction of this oppositional alliance with the common people. This has entailed popular activism, often organized or harnessed by influential NGOs. In Georgia, Ukraine, and Kyrgyzstan, there existed a network of NGOs working at the grassroots level and striving to arouse people from their inertia through imaginative slogans and short messages delivered through different channels. The most radical and influential NGOs opted for attractive names in the native language, which were easy to remember and contained a strong message. Prominent examples include OTPOR (Serbian: "Resistance"), Kmara (Georgian: "Enough!"), and Pora (Ukrainian: "It's time!").

The task of opposition groups has been a daunting one. They have been confronted with centralized regimes that usually enjoy dominant or exclusive control of the economy, media, and political power. Moreover, they have sought to mobilize and inject with ardor populations that are largely passive and fatalistic. Popular timidity can be attributed to a number of factors, and though the degree has differed from one state to the next, they can be summarized as media manipulation, fear of authorities, traditional

deference to authority, powerful vested interests supporting the regime, and little historical precedent for democracy or civic action. Thus a main task of the opposition has been to proselytize secretly, organize and activate all elements not indebted to the ruling order, and channel them into a viable alternative. Parallel to these efforts, the opposition movements have sought visible popular support to enhance their legitimacy. In cases of election falsification, when voters demonstrated in sufficiently large numbers that they did not endorse the official figures, the opposition discredited the authorities and revealed the real election winner. For this reason a central role has been given to holding parallel counts and ensuring independent exit polls. The production of completely discordant figures by respected international institutions has provided a solid basis on which to contest flagrant vote rigging.

Another factor common to successful color revolutions has been the ability of the people or opposition leaders to dissuade the state security services from using violence to disperse protesters. In Georgia, protesters entered parliament because the police were not determined to prevent them, and the security apparatus refused to implement Shevardnadze's subsequent state of emergency. In Ukraine and Kyrgyzstan, it was clear from the beginning that the police were not seeking violent confrontation with demonstrators and did not wish to kill or maim. This undoubtedly emboldened those young activists who had taken to the streets.

In authoritarian regimes, information sources are usually state-controlled and censored, thus creating a barrier to effective intersocietal communication and civic awareness. As a result, political messages have to be delivered through non-traditional channels. An election campaign, when external observers devote more attention to the country, often guarantees slightly more channels of overt communication, but one innovation has been the use of humor to discredit the ruling regime. At first glance, the use of humor, satire, and irony against the government is difficult to quantify, but it remains an important method, as in communist times, to register opposition and create an anti-regime solidarity with an intimate audience. Humor succeeded in communicating directly to people, especially when delivered through symbols and memories common to the whole population (like video clips or sketches from old Soviet films) and helped

maintain morale during the darkest moments. Alternative channels of communication included the Internet, especially important during the Ukrainian Orange Revolution, and mobile phones, used extensively by protesters outside the Georgian parliament so that news of developments spread rapidly. These types of communication are less susceptible to state interference and have been employed particularly by the youngest strata of the population.

In terms of human resources and technology, protest strategies have been constantly refined, with movements digesting lessons from previous campaigns in other countries. From OK 98 in Slovakia, but especially after the Bulldozer revolution in Serbia, the number of trainings for activists working in democracy-oriented NGOs substantially increased. Initially, trainings were domestic, based on the ideology and strategies of non-violent protests. In his influential work *Politics of Nonviolent Action* and *The Theory of Power*, Gene Sharp enunciated 198 methods to show non-violent disagreement with a regime or a political decision. In a further development of his thoughts, Sharp issued *From Dictatorship to Democracy*, in which he combined his theoretical assumptions with practical ways of challenging unpopular regimes. The main assumption was that governing authority is based upon popular will, though dictatorial governments might survive through popular acquiescence and political passivity induced by fear of authorities. Once the opposition is able to cut the sources of power from the regime, Sharp argued, it has a good chance of dislodging it. *From Dictatorship to Democracy* was made available on the Internet in a number of languages (Serbian 1999, Ukrainian 2004, Kyrgyz 2005, Russian 2005) and trainings were subsequently organized for NGO activists at both domestic and international levels.

Since the organization and resources required to prosecute a successful color revolution have been formidable, and opposition funds are often meager, questions have been raised regarding the extent of foreign support for opposition forces. Foreign intervention in post-communist countries can be categorized into two ideologically opposed camps. On the one side there has been the "West," broadly defined as the United States, the European Union, and international organizations like the Soros Foundation, while on the other side has stood the former imperial power in the area, Russia, or the "East." Since interest

in the region from both sides is high, both have become increasingly engaged with the political outcome of the protest movements.

The OK 98 campaign did not raise many criticisms, but since the events of October 2000 in Belgrade the West has increasingly been accused of interfering in the domestic politics of post-communist states. The strongest accusations have lambasted western powers for financing anti-government forces in former Soviet countries, and this has led to the shutting down of a number of western-funded NGOs and harsher controls over capital inflows into countries like Russia, Uzbekistan, and Kazakhstan.

Accusations against the West have come from western sources as well. At regular intervals major newspapers have reported unfavorably how US taxpayers' money has been used to finance protests or independent media overseas. Anti-Kremlin accusations in Russia have been more difficult given the level of censorship and the reluctance of the EU and US to confront Moscow directly lest this might exacerbate East-West relations.

Both East and West have invested large amounts of money to back, or countervail, color revolutions. Resources have been pumped into post-communist states by the West through funding of election-monitoring NGOs, civic initiatives, and independent media outlets, while the Kremlin has supported friends of Moscow with favorable economic relations that simultaneously foster dependence, most notably by providing oil and gas at well below market prices.

A particularly important role has been played by the Soros Foundation, an American-based NGO established in 1993 by the billionaire George Soros. Officially known as the Open Society Institute in many post-communist countries, the Soros Foundation has been funding, since its inception, a number of programs targeting civic education and democratic engagement, and has established a university in Budapest to help mold the future elites of post-socialist societies. The European Union remains a relatively minor player though its efforts at promoting democracy in the post-communist space have been considerable, particularly in its immediate neighborhood of Ukraine, Belarus, and Moldova. Its role arouses less suspicion than that of the US and it is viewed as a more disinterested participant in regional politics.

Social Forces in Color Revolutions

Despite the important role played by external actors and political battles between organized elites, the color revolutions have also been symptomatic of important societal forces. Chief among these transformations has been the consolidation of a network of civic NGOs and the mobilization of societal forces for democratic change. In each color revolution scenario, NGOs patiently worked behind the scenes – documenting, informing, organizing – so that by the time mass protests were necessary, they were in a position to advise, coordinate, and provide logistical support for popular demonstrations.

A similar pattern of NGO development was identifiable in the early years of post-communist government. The end of the Cold War facilitated a substantial inflow of western investment and contacts with western organizations. Operating at the bottom of society, many of these new institutions were ignored by the political elites who assumed that they were insufficiently strong to be politically determinative.

While one of the main engines of social change, NGOs are not entirely new to post-communist countries and during the late Soviet period civic activism had already taken root among some sections of the population. The signing of the Final Act of the Conference on Security and Cooperation in Europe (CSCE) in Helsinki in 1975, which obliged its signatories – of which the USSR was one – to respect human rights, prompted some idealists to form Helsinki Watch groups, though most activists were subjected to constant surveillance and harassment by state security forces. A less controversial, though still hazardous, form of civic activism was conducted by diverting political energy into ecological issues. Movements formed to protest against Chernobyl in Ukraine, nuclear testing near Semipalatinsk in Kazakhstan, and phosphorite mines in Estonia facilitated anti-state organization and collaboration with western supporters.

NGOs mushroomed during the 1990s, and civic participation substantially increased. Campaigners from the Soviet-era protests remained active in political or civil initiatives during the chaos of the times, when would-be autocrats were unable to assert state authority. Consequently, democratic ideas often found many adherents, as a section of the people had already developed independent

views and were receptive to external stimulation. In Ukraine one of the conditions of success for the Orange Revolution was the existence of a structure that could coordinate the efforts of a plethora of similarly minded NGOs. This ensured that a clear united message could be articulated and international donors and domestic support could channel their energies effectively so that contested elections could be professionally monitored. A pyramidal organizational structure maximized efficiency, simplified donor funding options, and obviated the danger of scattering the energies of anti-regime forces. However, while the presidents of Ukraine, Georgia, and Kyrgyzstan had allowed powerful NGOs to develop, countries like Turkmenistan, Uzbekistan, and Kazakhstan limited and controlled those forces, and were helped by a lower level of civic participation.

Future of Color Revolutions

Authoritarian regimes have adopted a myriad of repressive countermeasures to stymie color movements. One of the most impressive is the creation of counter-NGOs which endorse the ruling regime and defend state ideology against criticism from independent NGOs ("Putin Youth" in Russia is a good example). A peculiar version of this strategy was implemented in Akaev's Kyrgyzstan when, in response to the establishment of a vibrant youth movement (Kel Kel), which was clearly modeled on Kmara in Georgia and Pora in Ukraine, the state engineered the creation of a clone youth organization, with the same name but completely different (i.e., pro-regime) objectives. The primary aim was to sow confusion in the public mind and to somehow supplant the original movement with the clone organization (which was even given the web address previously owned by the original Kel Kel). These tactics complement a wider strategy of enfeebling NGOs by controlling their funding and activities and restricting their means of communicating anti-state ideas.

Despite numerous obstacles and ever-greater risks, attempts to carry out color revolutions have continued and there is a constant transfer of knowledge between countries. Some activists involved in color revolutions and civic NGOs have been regularly invited to a number of countries to train local leaders on techniques of mass protest.

It seems, however, that after an initial period during which new strategies and technologies caught regimes unprepared, the autocrats have consolidated their positions by adopting a series of countermeasures aimed at quelling movements that seek to mimic methods adopted elsewhere.

Patient organization, strategic thinking, and slow movements forward have been hallmarks of the work conducted by successful protest movements in the post-communist space. Inevitably, the color revolutions have lost much of their gloss amid unfulfilled expectations. The capacity to inspire has not dissipated entirely, however. The creation of an institute to export revolutions in Serbia, the detention of Ukrainian activists in Azerbaijan and Kazakhstan in 2005, and of Georgian activists in Belarus in 2006, and the subsequent mass protest movements employing non-violent methods like those in Nepal in 2006 and Burma in 2007 demonstrate that the color revolution movements active between 1998 and 2005 have provided valuable experience and knowledge that will be used, perhaps in other forms and contexts, for agitation in other parts of the globe.

Columbia University civil rights protests

Nicole Frisone

The Columbia University Crisis of 1968 marked significant changes within the New Left movement and reflected the racial division that had been growing since the early 1960s among left-leaning activists. Columbia students from April 23 to April 30 occupied and “liberated” five buildings on Columbia University’s Morningside Heights campus. Students’ primary demands were to halt Columbia’s construction of a gymnasium in Morningside Park, and to sever the university’s ties with the Institute for Defense Analysis (IDA). Within the initial hours of protest, the Columbia demonstrations became a strictly segregated affair with black students occupying Hamilton Hall while whites occupied Low Library and the subsequently occupied buildings. The student leaders at Columbia consisted primarily of Mark Rudd, from the Columbia chapter of Students for a Democratic Society, and Cicero Wilson, the leader of the Students Afro-American Society.

Tensions at Columbia had been building for over a year prior to the actual demonstration. The university’s expansion policy throughout Morningside Heights and towards Harlem (at the expense of lower-income residents), its failed attempt to generate income through the infamous Columbia filter cigarette, and the presence of CIA and Dow chemical recruiters on campus increased friction between students and the university. The February 1968 Tet offensive exacerbated tension over the Vietnam War, while the April 4 assassination of Martin Luther King, Jr. and rise of the Black Power movement increased racial tensions between the university, students, and the surrounding black community. These factors coalesced to instigate the April 1968 demonstration, through which the students won most of their demands: the university never built the gymnasium and severed all ties with the IDA.

The Columbia students marked a significant change in American New Left activism. Younger students in the Columbia SDS chapters, as well as younger members in other chapters, reflected the growing generation gap between themselves and early 1960s activists such as the founders of SDS. The younger group was increasingly more radical and did not hold to the non-violent practices of their predecessors. A number of students, such as Mark Rudd and Ted Gold among others, went on from Columbia to form the basis for the Weather Underground in August 1968, effectively dividing SDS as an organization and contributing to the disintegration of the New Left as a movement.

Combination Laws and revolutionary trade unionism

Todd Webb

Passed by the British parliament in 1799 and 1800, the Combination Laws were meant to curtail the early trade union movement in England and to stamp out what the government perceived as the danger of lower-class revolution. In the event, these laws had the opposite effect: increasing the danger of subversion in the short term and the level and effectiveness of English trade unionism in the long term.

The Combination Laws of 1799 and 1800 came out of the crisis of legitimacy that shook the

British state during its war against revolutionary France. The war effort was accompanied by episodes of scarcity and popular unrest, a naval mutiny in 1797, a rebellion in Ireland in 1798, and by what the Tory government of William Pitt the Younger believed was a rising tide of pro-Jacobin sentiment across England. Between 1792 and 1800 Pitt's government passed a series of draconian measures in an effort to clamp down on such political radicalism, suspending habeas corpus and severely limiting freedom of speech and association.

The Combination Laws were enacted just as this Reign of Terror, as some historians have called it, was coming to a head. In this context it is readily apparent that the 1799 law was aimed squarely at the lower class. It simplified a series of laws against workers' combinations that stretched back to the 1300s, allowing owners to move quickly against any attempts by their employees to regulate their own pay, hours and quantity of work, or the hiring and firing of personnel. Under the 1799 law workers suspected of forming a union could be brought before one judge, found guilty on the evidence of one witness, and sentenced to up to three months in prison with only limited rights of appeal. This first Combination Law passed easily through parliament, but its provisions sparked protests among workers in most of the major cities in England. In 1800 the Pitt government revisited the Combination Law. It attempted to make the law less blatant in its class antagonism: outlawing combinations among management as well as their employees and permitting binding arbitration over wages. The 1800 law also gave workers a better chance of receiving a fair trial if they were arrested under its provisions. However, trade union activity remained illegal.

In the short term the Combination Laws did not have the effect that William Pitt and his government intended. Immediately after parliament passed the 1799 law, England's trade unions experienced a period of rapid growth. According to E. P. Thompson (1968: 546), the Combination Laws also "jolted the Jacobins and trade unionists into a widespread secret combination, half political, half industrial, in emphasis." This was especially true in the West Riding of Yorkshire in the early 1800s, where irate workers formed a group known as the Black Lamp, administered secret oaths, held clandestine meetings in fields in the middle of the night, and may have aimed

to achieve both industrial and revolutionary goals. Thompson suggests that the Black Lamp had connections to wider efforts to overthrow the government organized by Edward Marcus Despard in England and Robert Emmet in Ireland. However, much of the evidence for this picture of revolutionary trade unionism comes from a government spy who was later discredited for sending alarmist reports to his superiors in London. This has led other historians to question how far English trade unionism was, in fact, a movement with revolutionary, as opposed to strictly industrial, aims.

The Combination Laws also proved a disappointment for both employers and the government over the long term. Most owners found that it was easier either to negotiate with the unofficial, but increasingly effective, combinations that the workers continued to form or, in extreme cases, to charge union members under older and harsher laws. At the same time, the government realized that prohibiting combinations actually increased the likelihood of revolutionary subversion among the lower class, forcing workers to organize in defiance of state authority. These developments explain why the efforts of the ex-tailor and political radical Francis Place to repeal the Combination Laws proved successful between 1814 and 1825. In 1825 trade unions secured permanent legal protection: they were no longer open to prosecution, as long as their demands only included wages and hours of work. Over the following decades Place's successful campaign against the Combination Laws provided the impetus for further union growth among the workers of England.

Commoner, Barry (b. 1917)

Michael Egan

The biologist Barry Commoner was instrumental in the creation of the science information movement, a practice that sought to relay key scientific findings into a vernacular, accessible language so that the public could be involved in science policy decisions that influenced their health and welfare. The science information movement transformed the relationship between science and the public and played a critical role in reshaping American environmentalism after World War II. Commoner's stalwart criticism of industrial production practices also helped to highlight the hazards associated with the petrochemical industry.

Commoner was born May 28, 1917 in Brooklyn, New York to Russian immigrant Jews. He took an early interest in biology and continued his studies at Columbia University. At Columbia in the 1930s, Commoner immersed himself in biology and in radical politics, reading Friedrich Engels and J. D. Bernal. After service in the US Navy during World War II, Commoner took a position in the botany department at Washington University in St. Louis.

Central to Commoner's activism was the belief that citizens needed better access to scientific information and that scientists had a social responsibility to provide it. The danger, as he saw it, was that too often scientific expertise was called upon to make political decisions. While scientists possessed a technical knowledge that was relevant to assessing risks associated with nuclear fallout, they had no special moral authority to determine for the larger public what constituted acceptable levels of risk. Commoner's science information movement was pivotal in distributing the accessible information to a concerned public; in the expanding knowledge society, where access to information was a central form of power, Commoner recognized that access

to scientific information was a critical plank in building a more robust form of citizen activism.

A key example of this form of activism was present in Commoner's efforts to raise awareness about nuclear fallout. As concerns about the potential health hazards of radioactive fallout from aboveground nuclear weapons testing became palpable during the 1950s, Commoner and a small group of St. Louis scientists, doctors, and local activists mobilized to create the Greater St. Louis Committee for Nuclear Information. The Committee's work involved raising awareness of the risks inherent in aboveground nuclear testing, and providing the public with facts they could use in independently evaluating risk. After the 1963 Nuclear Test Ban Treaty, the Committee for Nuclear Information expanded its focus to include myriad environmental concerns, concentrating particularly on the new synthetic products of the petrochemical industry: pesticides, fertilizers, plastics, and so on. The Committee for Nuclear Information became the Committee for Environmental Information, and Commoner also founded the Center for the Biology of Natural Systems, an interdisciplinary research center committed to addressing environmental problems.

By 1970, as a result of his regular public speeches and appearances, Commoner had emerged as one of the leaders of American environmentalism, appearing on the cover of *Time* magazine. His four laws of ecology, published in his book *The Closing Circle* (1971) – everything is connected to everything else; everything must go somewhere; nature knows best; and there is no such thing as a free lunch – became a centerpiece of the growing ecology movement after the first Earth Day (1970). During the 1970s, Commoner continued his environmental activism, drawing environment, energy, and economy together and suggesting their intimate relationship. In 1980, Commoner ran for president of the United States on the Citizens' Party ticket, before retiring from Washington University and moving his Center for the Biology of Natural Systems to Queens College in Flushing, New York. Through the 1980s and 1990s, Commoner turned his attention to urban waste and pollution problems. By the beginning of the new century, Commoner concentrated his efforts on what he interpreted as intrinsic flaws in the established understanding of genetic theory. Throughout his career as a scientist and public intellectual, Commoner stressed

the expert's obligation to his or her society; this notion transformed the practice and politics of post-World War II science.

Communist Manifesto

Helen Bluemel

The *Communist Manifesto*, also published as the *Manifesto of the Communist Party*, was written by Germans Karl Marx (1818–83) and Frederick Engels (1820–95), and was first printed in London in February 1848. In the previous year both were assigned to write a theoretical and practical party program for the League of the Communists. This association was an international, clandestine organization of workers.

This party program was meant to introduce the history, concepts, and plans of communism in a comprehensive manner. Part I, “Bourgeois and Proletariat,” is a historical overview of existing societies up until 1848. By “bourgeoisie,” Marx and Engels meant the social stratum of capitalists, the owners of the means of production (owning machines, factory buildings, and raw materials). The proletarians are the class of wage laborers, who do not own anything apart from the labor of their hands, which they have to sell to secure livelihoods.

The main premise is the notion that “all hitherto history is the history of class struggle.” This means that throughout humankind's development, each society was divided into classes of rulers and ruled (each category consisting of one or more subdivisions). The development from the ancient to feudal to the industrial age is explained in terms of historical materialism. This means a notion of history that bases any developments on the economic situation and the predominant mode of production. Any change in

society is brought about by a modification of the economy.

Marx and Engels describe the developmental tendencies of the industrial age. In its most simple terms, there are only two classes of importance in society, the bourgeoisie and the proletariat, which are involved in a class struggle. All other classes immerse into either of the two. The bourgeoisie is the ruling class, which, in its constant need for new markets for its products, forces all nations into civilization. The industrial era, however, does not only create the bourgeoisie, it also creates the proletariat. This class of workers then becomes aware of its political power through forced assemblage in the capitalist production process. It subsequently overthrows the bourgeoisie in revolution. This progression is inevitable.

Part II of the *Manifesto*, “Proletarians and Communists,” describes the aims of the communists, who perceive themselves as the only valid political representation of the proletarians. It highlights the political organization's revolutionary objectives, mainly the abolition of private property, social conventions, and national borders. Private possessions are to be converted into public ownership; the exploitative structure of the family is to be dissolved into a real community of equals. The notion of nation-states with restrictive borders is already redundant as the exploitation of workers takes the same form everywhere. Once the bourgeoisie is overthrown this common experience unites all workers internationally.

This part also includes a ten-point instruction for revolutionary measures. It identifies a dictatorship of the proletariat as a necessary step temporarily on the path to a truly free communist society.

Part III, “Socialist and Communist Literature,” is a critical review of prevailing socialist ideas and philosophies in Europe. The concluding remark states that all socialism is void and unpractical (utopian) as it falls short of demanding revolutionary change in society and seduces the proletariat to passivity.

The final part, Part IV, “Position of the Communists in Relation to the Various Existing Opposition Parties,” states that communists align themselves with any opposition party that furthers communist aims. This extends to the support of the bourgeoisie in Germany, as this class is revolutionary in the context of the events

of 1848. As the rule of the bourgeoisie is the precursor of proletarian rule, workers are helping historic development by supporting the attainment of bourgeois rule in Germany. It signs off with an open appeal for revolution: "Working men of all countries unite!"

The *Communist Manifesto* constitutes one of the main works of Marxist philosophy. It contains two of Marxism's key concepts: historical materialism and historical determinism. The former means that any change in history is linked to economic circumstances and that the economic circumstances are the basis of everything else in society (such as the state, culture, etc.). The latter means that history is following determined rules, which allow a forecast of the future. This explains the confidence of Marx and Engels in the imminent proletarian revolution.

Communist Party of Australia

Peter Beilharz

Communism in Australia, as elsewhere, is a story that is both global and local; and as elsewhere, it combines exemplary behavior and work in the public sphere with tribalism and the dullness of left orthodoxy.

The history of socialism and radicalism in Australia before communism is rich and diverse, and equally influenced by British and American radical theory and practice and the local inflections of labor radicalism, enthusiastic but often racist. Socialism before communism in Australia is part of a broader new world network and culture. The year 1917 changed all that, though unevenly and slowly. The Communist Party of Australia (CPA) was established in 1920, which meant that it was promptly

Bolshevized under the 21 Conditions of the Comintern. At the same time, Australian communists had to guess and make up their own culture, which remained in many ways continuous with the local past, which into the twentieth century was tough, economic, masculinist, and racially exclusive.

The global experiences of the first half of the twentieth century were powerfully influential in Australia. The first coherent generation could be described as the Depression generation; the next, quickly following, as the generation of the war against fascism. The CPA prospered after the Soviet Union entered World War II. Its membership peaked at 23,000; it had branches in suburbs as well as in the larger cities, and the grinning visage of Marshal Stalin even featured on the cover of the *Women's Weekly*, for communism also exerted some influence on popular or mass culture.

The Cold War ruined the prospects of the CPA, as the polity split by the 1950s between communists and Catholics, whose numbers at this point were still extremely significant in the Australian Labor Party (ALP). The Labor Party split over this issue in 1955, which kept it from power till 1972. The CPA suffered significant exits after Khrushchev's Secret Speech in 1956; as in Britain, their numbers fueled the revival of humanism, for example via the journal *Arena* (b. 1963). The 1960s in Australia were turbulent and heady, and expanded the influence of Marxism and communism apace, at the same time sowing the seeds of later generational divergence. By the 1960s the Communist Party was a potentially explosive combination of old-style laborists and Stalinists and hippies, sexual libertarians, feminists, and Althusserians. This combination could not last. The tensions between the old left and the new left expanded the ranks and influence of the CPA, but also anticipated one cause of its decline. The CPA then split twice, in 1964, when the Maoists departed to form the CPA (ML), and again in 1971, when pro-Soviet members quit to form the Socialist Party of Australia. By the 1970s the CPA was down to 2,000 members. In 1984 the Communist Party was significantly derailed when the majority of the Central Committee in the Victorian branch resigned in order to join the center faction of the newly installed Victorian State Labor Party. The CPA thus began to wind down five years before the collapse of the Soviet Union, with

numerous variations on these themes being played out in different capital cities.

Communism in Australia was always tempted by popular frontism, and often viewed the Labor Party as its main point of reference. Its eventual liquidation follows this logic. Into the 1980s the ALP was pioneering a process that can now, in hindsight, be identified as the formation of New Labour *avant la lettre*. The effect of its younger intellectuals, in league with leading influences in the metalworkers' unions, was significant here. Australian capitalism followed the path of settler capitalist development, where primary export commodities ruled, organized labor was strong, and industrialization lagged, especially by northern standards. Into the 1970s the metalworkers' unions, associated with actors in the CPA and the newly formed Australian Political Economy Movement, argued vigorously for the development of an Alternative Economic Strategy, the core of which would be industry development policy. This was entirely consonant with the maxims of classical Marxism – Australia had a weak economic base, always risked dependency, and needed to export finished secondary commodities rather than raw primary commodities. This left-wing impulse, however, could find no sufficient carrier in the CPA. Its obvious vehicle was rather the Labor Party. These left-wing ideas and intellectuals were rechanneled through the ALP after its election in 1983, but any prospects of left victory were sadly pyrrhic: this was exactly the moment when the latest, most powerful wave of globalization opened, and the idea of following the Swedes, to develop a strong unitary national economic policy, was lost to global development.

As is apparent from this story, the actors in and around the CPA had significant historic and political influence. The cultural influence of the left in Australia was also disproportionate; until recently, the intelligentsia has been powerfully connected to the left. As a 1950s ex-communist then joked, the biggest party in Australia was the party of ex-communists. Writers, artists, and cultural critics were very often associated with the left and with the CPA in particular. The influence of Antonio Gramsci and subsequently of Eurocommunism in Australia were especially apparent in its Melbourne branch from 1968; the influence of Althusser and the revived political economy were especially evident in the journal *Intervention* (b. 1972), generated out of the

Melbourne Left Tendency. Many of Australia's leading critics and historians came out of this milieu. Australian communists had their blind spots, but they were also leading international activists and defenders of human rights, not least those of indigenous peoples. Australian communism, in short, has returned to the mainstream and is now dispersed across Australian culture, which has nevertheless been influenced by these actors, arguments, and traditions in more ways than are transparently evident.

Communist Party, France

R. O'Brian Carter

Although it only took its name in October of the following year, the French Communist Party (PCF, Parti communiste français) was effectively established with the Congress of Tours of December 1920. The Congress had been called to respond to the injunctions issued by the 1919 creation of the Third International (Comintern) in Moscow. Riding the success of his Bolshevik Party in the Russian Revolution of 1917, Vladimir Lenin's "Twenty-One Conditions" demanded, in short, that social revolutionaries everywhere look to Soviet Russia for guidance. Such demands further fractured a heterogeneous yet rich clustering of French socialist movements. Those that accepted the demands joined the PCF. The newspaper *L'Humanité* – created in 1904 by the single most important French socialist leader, Jean Jaurès (1859–1914) – became the PCF mouthpiece.

Marcel Cachin (1869–1958) was its dominant leader in the 1920s. Cachin had taken part in the 1905 foundation of the *Section française de l'Internationale ouvrière* (SFIO), the dominant body within French socialism, but now an organization from which he distanced himself.

The PCF was to suffer from the Red Scare that followed World War I. Although this initial panic dissipated somewhat, the fear of communism, perhaps innate to the advocates of liberal democracy given the radical nature of communist objectives against private property, blew hot and cold from this time forward, defining the parameters within which the PCF would and could work. Moscow-based Bolshevism regarded communist participation in “bourgeois” democracies as a reformist compromise to avoid. Such political participation, they reasoned, only served to allay wholesale revolution. The PCF, however, proved much more flexible in its approach, and Lenin’s understanding of this was implicit. Offering themselves up as candidates, party members, when successful in elections, used the French National Assembly to forward their interests.

Elected PCF members were often reduced to obstructionist tactics, voting in bloc against measures which either did not originate from their ranks or of which they did not approve. In many respects, this was a necessary reaction to the limited number of seats the PCF won. To take the example of the 1924 elections, which installed the *Cartel des Gauches*, a left-of-center coalition, the PCF garnered only 26 seats in a 581-seat Chamber of Deputies, the French lower legislative house. There were no PCF senators. This was a definite improvement over their previous margin, which had rendered only nine deputies, but still paled in comparison to the 104 members the SFIO forwarded in 1924.

The PCF presence was often blatantly adversarial. Through various legal means and devices, they sought to obstruct the day-to-day operation of governance, with filibusters and other time-consuming exploitations of parliamentary procedures. Their presence as deputies and, later, as senators did not lead to any willingness to be appointed as cabinet members. Quite naturally, their “bourgeois” opponents had few qualms about such refusals. They hardly wished to see PCF members serve in ministerial office. Offers of cabinet inclusion were not forthcoming.

PCF membership plummeted from 110,000 in 1921 to 30,000 by 1932. Arrests and the legal

harassment of PCF members were the norm during the latter half of the 1920s. By the early 1930s, PCF strategy revealed a more pronounced willingness to build coalitions. The SFIO was openly courted. A sifting was taking place within PCF leadership. Most significant was the emergence of Maurice Thorez (1900–64), a young man of working-class origins who became organizational secretary at the age of 24, and then secretary general of the Central Committee in 1930. His dominance within the PCF ended only with his death. Another important PCF member, Jacques Duclos (1896–1975), also began to exert his influence at this time. He would become a senator after World War II.

A financial scandal that finally broke in 1934, the Stavisky Affair, implicated several French public officials, if not the credibility of the Third Republic itself. The result was anti-parliamentarian street agitation on the part of right-wing groups, such as the *Croix de Feu* (Cross of Fire) and *Action Française*. This violence galvanized left-wing coalition building. The PCF, the SFIO, and the Radical Socialists joined forces. This “Popular Front” rode electoral success to power in 1936. The PCF nearly doubled its electoral base, rising from 12 seats in the 1932 Chamber of Deputies to 72 seats in that of 1936. The SFIO fared even better, becoming the single largest seated party. Socialist leader Léon Blum (1872–1950) was called upon to form a cabinet. A wave of unsolicited nationwide strikes suddenly gripped the country, breaking the momentum. Workers had interpreted the electoral results as justification for widespread change. Change was indeed afoot. With the country at a standstill, Blum brokered the groundbreaking reforms of the Matignon Agreement, June 7, 1936. This ended the standoff between labor and capital, instituting the 40-hour week and paid vacations, among other items.

International concerns soon overwhelmed the French horizon. The Molotov–Ribbentrop Pact of 1939 sealed a non-aggression agreement between Adolf Hitler’s Nazi Germany and Joseph Stalin’s Soviet Russia. By extension of its close ties to the Soviet Union, a natural result of the “Twenty-One Conditions” accepted in 1920, the PCF found itself in a precarious position. The PCF suffered along with the rest of France when World War II broke out in September 1939, but especially when the Nazis occupied France from 1940 to 1944. Hitler’s 1941 invasion of Russia

rendered the PCF's situation both more and less ambiguous, for only now did party members take up armed resistance. The martial services their Patriotic Militias rendered were greatly rewarded in the immediate postwar world. But the fact that they had waited until Hitler betrayed Stalin to launch such an offensive furthered the belief that the PCF placed Moscow's interests over those of Paris. More incriminating still was the fact that Thorez himself fled to the Soviet Union as early as the 1940 invasion of France.

The postwar success of the PCF was clearly demonstrated in the 1945 Constituent Assembly elections. Garnering 5,024,174 votes, or 25 percent of the national vote, and 159 seats, the PCF was effectively the single largest party in France. Working closely with the SFIO on the drafting of a constitution for the Fourth Republic, a 1946 national referendum rejected their proposal for a more easily dominated unicameral assembly. This rejection was a harbinger.

With the onset of the Cold War in the late 1940s, PCF popularity sank from this 1945 high. The party obtained only 20 percent of the national vote in 1947. Since no political party possessed an absolute majority, coalition building was the key to power brokerage. Taking a rightward shift, the Christian Democrat *Mouvement républicain populaire* (MRP), the Gaullist *Rassemblement du peuple français* (RPF), and even the SFIO worked to exclude the PCF. Changes in electoral laws further obviated and whittled away PCF capabilities. Party membership declined across the 1950s. Yet, the PCF share of the national vote held steady. Only Charles de Gaulle's 1958 assumption of power produced a relative drop in the PCF's share of the tally. Across the 1960s, that percentage hovered once more in the low 20s. But, again, the impact of these percentages was curtailed by electoral laws, which reduced the actual number of resulting seats. Equally if not more important was the reluctance of mainstream parties to work with elected PCF deputies.

If ever an opportunity presented itself for the PCF to eschew its "complicity" in "bourgeois" democracy and turn toward outright revolution, implementing its "dictatorship of the proletariat" – a party plank the PCF did not discard until the 1970s – it was the unforeseen Parisian avalanche of revolts and strikes of May 1968. Its leadership had perhaps resigned itself to a role similar to that of any other political party in participatory democracy. The PCF curiously,

and as much as was possible, halted the revolutionary potential of the moment. Left-wing leadership was clearly held by the SFIO, and it is debatable if it had ever been anything but.

At the 1971 Congress of Epinay, the SFIO was renamed the Socialist Party (PS, *Parti socialiste*). But the renovation went much deeper than any mere name change. Now under the leadership of François Mitterrand (1916–96), the PS signed a unity pact with the PCF in 1972. Mitterrand ascended to the French presidency in 1981, the first time a socialist had ever held that office. Despite the collapse of the unity pact in 1977, the PCF joined in Mitterrand's first government of 1981–4, when Pierre Mauroy was named prime minister. Georges Marchais (1920–97) was an instrumental PCF figure in the 1970s, 1980s, and early 1990s. A metal worker by trade, Marchais joined the party in 1946. He became secretary general in 1972, a position he held until 1994. He co-signed the unity pact of 1972, and was instrumental in its rupture. Consecutively elected as deputy to the National Assembly across this same period, Marchais's 1981 bid for the presidency of the French Fifth Republic, against Mitterrand, garnered nearly 15 percent of the national vote.

Although the decline of the Soviet Union greatly deflated an already decompressed PCF share of the electorate, especially when a post-World War II low of 8.2 percent was reached in 1993, the party clearly impacted twentieth-century French politics. First, from its inception, the PCF represented a force to be reckoned with. Mainstream parties were obliged to either ignore or possibly build coalitions with a PCF contingent that could easily swing a legislative package in the delicate balance of French parliamentary politics. Second, and demonstrating that balance, the success of the Popular Front in the 1930s hinged upon PCF participation, although the SFIO remained dominant. With Léon Blum's Matignon Agreement of 1936, the Popular Front introduced perhaps the most significant French labor reforms of the 1900s. Those initial electoral victories would not have been possible without PCF participation. In many respects, and going further still, the very formation of the Popular Front helped to save French democracy itself. France thus avoided any advent of extreme right-wing power, which was the fate of many European countries in the 1920s and 1930s. Third, the PCF rendered an incalculably valuable

service during the German Occupation of World War II. Whatever their true motives, that is, whether they served Moscow or Paris, they helped to galvanize French resistance. Gratitude for this was displayed in the PCF electoral successes that followed the war.

The post-1945 contributions of the PCF are, finally, more difficult to assess. In many ways they remained that idiosyncratic political force that had to be taken into account on some level. This was especially evident in the 1950s and 1960s, when mainstream parties worked to marginalize the PCF, via electoral laws that made light of representational democracy so as to obviate communist influence. With the events of 1968, remarkably, the PCF acted as a brake and not a catalyst to revolution. Perhaps the party had indeed “normalized,” accustoming itself to a role as oppositional backbenchers. Mitterrand’s presidential victories across the 1980s, like Blum’s Popular Front of the 1930s, demonstrated once again that native French socialism remained ascendant. The PCF, nominally oriented toward Moscow, proved a capable coalition partner, when called upon.

Communist Party, Germany

Ingo Schmidt

The Communist Party of Germany (Kommunistische Partei Deutschlands, KPD) was founded

in the midst of the Revolution of 1918–19, which came at the end of World War I and swept away the German monarchy. Its founding members came from radical currents of the German Social Democratic Party (Sozial-demokratische Partei Deutschlands, SPD) that had opposed the leadership’s class collaboration and support of the war. After the revolutionary wave died down and the Weimar Republic was consolidated, the KPD organized workers and intellectuals who still sought revolutionary change. In its partly self-imposed isolation, the party’s impact on actual politics was rather limited. This lack of leverage became even more apparent during the Great Depression and the subsequent rise of Nazism. Paying an extremely high death toll, the KPD had been the most active organization in the anti-Nazi resistance. After the downfall of the Nazi regime the party was transformed into the ruling party of East Germany’s state socialism and was marginalized in capitalist West Germany. Some of the organizational roots of Germany’s new Left Party, founded in 2007, are in the KPD and its East German successor, the Socialist Unity Party.

Revolutionary Departure (1918–1923)

Opposition to the SPD’s integration into imperial Germany’s World War I efforts led to splits within the party, and the 1917 breakaway of the Independent Social Democratic Party of Germany was the most significant. This party’s common denominator was opposition to the war. Beyond that it hosted very different ideas about socialist change. Inspired by the Russian Revolution of 1917 and the outbreak of the German Revolution of 1918–19, its radical wing, the Spartacist League (Spartakusbund), precipitously decided to forge a revolutionary party with other radical groups that had completely broken away from the two social democratic parties that existed since the 1917 split in Germany. However, when the KPD was founded at the end of December 1918, it was not able to get all radical currents behind its banner. In particular, the Revolutionary Shop Stewards, whose ties with shopfloor workers were closer than those of any other socialist group, decided to remain in the Independent Social Democratic Party.

The KPD was a very small party – in March 1919 membership stood at 100,000 compared to a total of 1,400,000 members of the two social

democratic parties – so it had to decide whether to build a party of cadres or try to attract and mobilize a mass membership. The party was also faced with the question of which role political representation would play in relation to workers' direct action. At the founding party convention an anarchosyndicalist current had the chance to convince a majority of delegates not to participate in the upcoming elections for a national assembly, which would hammer out the constitution of the Weimar Republic. However, hopes that bourgeois revolution could be transformed into a socialist one through insurgency and mass strike were frustrated. The Spartacist Uprising in January 1919, which actually was mostly spontaneous and not initiated by the KPD, was not only crushed by a coalition of monarchist militias and right-wing social democrats, but also proved to be unable to mobilize support beyond a core of dedicated revolutionaries. In the aftermath of this insurgency, the anarchosyndicalist wing of the party was sidelined and eventually formed the 40,000-member-strong Communist Workers' Party of Germany in December.

In March 1920 a right-wing coup d'état against the Weimar Republic was easily defeated by a general strike, which united workers who were affiliated with any, or no, workers' party. Under the influence of this success, about half of the membership of the Independent Social Democratic Party turned left in December 1920 and joined the KPD, which became a member of the Communist International, as well as a mass party of more than 300,000. Party growth, suasion from the Soviet communists, and spreading discontent with economic and political conditions in the new republic encouraged the KPD leadership to prepare for revolutionary uprisings in response to any right-wing attack on the gains workers made after the downfall of German monarchy. As in the case of the spontaneous Spartacist Uprising, a series of local insurgencies in March 1921 did not spark a revolutionary prairie fire. However, runaway inflation, conflict over foreign or domestic control of the Ruhr district's heavy industries, and SPD–KPD coalition governments in the German states of Thuringia and Saxony prompted, under massive pressure from the Soviets, preparations for another insurgency in October 1923.

When party leaders felt that there would be insufficient support from non-communist

workers, they called off the uprising at the very last minute. Only in Hamburg was there a short-lived and isolated revolt. There was controversy and disagreement within the party as to whether last-minute recognition of its isolated position prevented the party from a self-destructive act or whether the KPD leadership betrayed workers and socialism. At certain times, this rift within the KPD would be as acrimonious as the notorious quarrels between social democrats and communists.

Splendid Isolation (1924–1929)

Monetary reform and an influx of foreign, mostly US, capital contributed to the revitalization of the German economy after 1924 and helped to stabilize the Weimar Republic's political system. Prospects for revolutionary change withered away. These developments, along with the KPD's failed vanguardism, led to a collapse of membership and a decline in electoral approval. Membership went down from 300,000 in 1923 to 95,000 in 1924. In two 1924 elections the party's share of the total vote went down from 12.6 percent to 9.0 percent. Unable to develop politics that might have improved the conditions of workers in non-revolutionary times, the KPD fostered revolutionary rhetoric and built a dense network of cultural, educational, and sports organizations, a radical move which offered its members and participants an alternative to, or at least escape from, the disappointments with the Weimar Republic's political and economic system. Since the SPD defended the republic more than any of the bourgeois parties, hostilities, which were running high between the labor movement's radical and moderate wings during the period of revolutionary upheaval, remained strong during the stabilization period of the Weimar Republic. Only on rare occasions, such as the 1926 referendum to expropriate feudal lands, did the KPD and SPD work together, which potentially could have pulled the former out of its isolation and moved the latter away from its association with the bourgeois parties. However, such collaborations were sporadic and short-lived because the SPD's right wing feared that a left turn of the party would undermine its reputation as a state-sustaining party in the eyes of the bourgeoisie.

The KPD came more and more under the influence of the Communist International and the Soviet communists. The latter labeled social

democrats as social fascists and communism's foremost enemy. In turn, such denunciations helped right-wing leaders of the SPD to portray the KPD as an offensive, unreliable, and Moscow-controlled party to its own followers. In this atmosphere, collaboration among both party leadership and the rank-and-file became almost impossible.

Opposition to the KPD's ultra-leftism led to the formation of the Communist Party Opposition in December 1928 after an increasing number of party members were expelled as right-wing deviants. Without effective internal opposition, the KPD moved even further to the left and announced the formation of communist-led unions in December 1929 as an alternative to the already existing unions with their close ties to the SPD. After that, not even unions could serve as a place for exchange between communist and social democratic workers.

The dominant influence of the Soviet communists on the KPD, as well as the marginal role of its oppositional currents and offsprings, can only be understood with a view to the party's social base. When the party was founded, its members reflected the composition of the working class, particularly the relation of skilled to unskilled workers, just as well as the SPD membership did. However, things changed after the KPD lost many of its original members during the stabilization period of the Weimar Republic. Though the party attracted new members, particularly after the onset of the Great Depression and its subsequent mass unemployment and impoverishment, for two reasons no basis for independent working-class politics that would reach out beyond its actual membership could be developed. First, internal debate and decision-making could easily be concentrated in leadership circles because the very high fluctuation of the membership base severely hampered rank-and-file participation. Second, the KPD attracted more and more unemployed workers who felt excluded and alienated from the existing political and economic system, whereas the SPD mostly appealed to workers who still had jobs but were in fear of losing them. No left current was able to develop a strategy that would appeal to unemployed and employed workers alike. During the stabilization period of the Weimar Republic the KPD had moved into a socially, politically, and culturally isolated position that was reminiscent of the SPD's status under the

German monarchy before World War I. Whereas the latter proved to be unable to stop the German ruling class's war effort in 1914, the former had no effective strategy to stop the Nazis' rise to power.

Ineffective Anti-Nazi Resistance (1930–1945)

In the 1930 elections, the first since the outbreak of the Great Depression, the Nazi vote exploded from 2.6 percent in 1928 to 18.3 percent, whereas the SPD decreased from 29.8 percent to 24.5 percent and the KPD moved up from 10.6 percent to 13.1 percent. Although the KPD gains did not even compensate the SPD losses and paled beside the Nazis' success, the party leadership steered its ultra-leftist course. Any increase in electoral approval and membership, the latter being far more significant than the former, was seen as validation of a strategy that attacked social democracy and neglected the Nazis. These policies were guided by the assumption that the crisis of world capitalism would not only radicalize more and more workers but also attract them to the KPD's slogan of building a Soviet Germany after the model of the Soviet Union, whose economic growth and industrialization were presented as viable and attractive alternatives to depression and impoverishment in the West. However, most workers considered Soviet successes as either illusory or disconnected from their own problems.

Last-minute attempts to join forces with the SPD against the Nazis came too late, were poorly prepared, and were hampered by continuing anti-social democratic rhetoric. This gave SPD leaders, who wanted to maintain their party's legal existence through political abstinence, an excuse to turn down KPD proposals for a united front. Under the Nazi regime, which had not met any serious resistance from a divided labor movement while it was striving for power, no meaningful resistance to Nazism could be organized. However, discussion within secret KPD circles as well as among its exiled activists influenced the way the party would try to go after World War II and the downfall of the Third Reich. The general direction tied in with the popular front against Nazism, which was announced at the 1935 congress of the Communist International. With this strategy, the communists had swiftly moved away from

denouncing social democrats as social fascists to an attempted embrace of everybody who had the slightest disagreement with the Nazis. To present itself as a respectable and reliable coalition partner to bourgeois parties and organizations, the KPD was advised to give up socialism as its intermediate goal. Instead of that it should aim at an anti-fascist democracy, which would expropriate only Nazi property and that of their collaborators. Beyond that, private property was considered part of the aspired economic system after Hitler.

Cold War and Beyond (1946–2007)

Although the KPD could not organize effective resistance against the Nazis, its underground activities won the party enormous respect because no other organization had worked so hard against the Nazis or lost as many members in those efforts as the communists. For that reason, the party played a significant role in rebuilding municipal administrations and unions in the short period between the downfall of the Nazi regime and the consolidation of the anti-Hitler coalition's occupying powers. However, the quick collapse of that coalition, along with the onset of the Cold War, buried all chances the KPD might have had to develop working-class politics that would reflect the economic, social, and political conditions in postwar Germany more appropriately than during the Weimar Republic.

In the Soviet occupational zone, after a merger with the SPD whose terms were largely determined by the Soviet communists, the KPD became the Socialist Unity Party, which eventually became the ruling party in the German Democratic Republic. Its lack of domestic legitimacy made the KPD's successor a perfect outpost for Soviet foreign policies during the ups and downs of the Cold War. The same reasons that turned East Germany's wing of the KPD into a ruling party contributed to its marginalization in West Germany. On the one hand the largely uncritical and unopposed support of Soviet policies, particularly in the case of Soviet reparation claims, was self-defeating. On the other hand, anti-Soviet sentiment in the SPD helped to build a far-reaching anti-communist consensus with liberal and conservative forces in West Germany. This consensus led to a KPD ban in 1956. However, by that time the party had already lost most of its members and attracted

only 2.2 percent of the total vote in the 1953 election. In 1968 the party was reestablished under a slightly different name but never played more than a marginal role in West German politics. After German unification in 1990, the Socialist Unity Party, now transformed into the Party of Democratic Socialism, won unexpected electoral approval in East Germany and merged into The Left (Die Linke) with West German SPD dissidents in 2007.

Communist Party NZ and the New Zealand revolutionary left

Leonard H. Lubitz

Radical labor activism in New Zealand can be traced back to the nineteenth century. Various elements, including the Canterbury Working Men's Mutual Protection Society, formed in January 1871 at a gathering of approximately 600 in Christchurch's Cathedral Square to protest the high rate of unemployment, were exasperated by continued immigration into the virtually self-ruled British colony. On March 12, 1872 the society became a branch of Marx and Engels' London-based International Working Men's Association, otherwise known as the First International.

In the immediate years following, this movement failed to develop roots, as a combination of social conditions including an improved economic environment and the advent of a more centrist labor movement alleviated the attraction of a widespread radical movement. An example is the rise of Richard Seddon as leader of the Liberal Party. His political party was influenced by the Fabian Society, a British group that espoused some of Marx's ideas but preferred change through legislation rather than revolution. The Knights of Labour, founded in 1887, was another such progressive organization that was a casualty of the Liberal Party's successful appeal to the working class.

In 1901 the New Zealand Socialist Party was founded based upon some of the teachings of Marx, Engels, and Kautsky. This movement's creation was in part spurred on by the arrival of 200 English of the Clarion Fellowship, who immigrated to New Zealand with the hope of building a collective farming community. By 1916 this and other such groups including the Social Democrat Party amalgamated to become the New Zealand Labour Party. On October 21, 1912 the Petone Marxian Club held its first meeting in the same city where 72 years earlier Samuel Parnell initiated the acceptance by management of the 8-hour workday in New Zealand, a radical notion at the time that would spread as a demand by the working class and eventually become a normalized condition of the workplace. The organizers of the Petone Marxian Club declared that they would meet every Monday evening until the revolution.

Hostilities which would emerge as the War to End All Wars, later known as World War I, brought tremendous restrictions on the activities of leftist activists. Censorship was imposed on all news organs, but socialist and Marxist publications were especially curtailed by the government. In 1918, following the armistice, the New Zealand Marxian Association was formed, followed shortly by the creation of the Communist Party of New Zealand (CPNZ), with which it merged. The CPNZ would quickly include DeLeonites and members of the International Workers of the World (IWW) as well. The IWW would prove itself to be the weakest of these factions in New Zealand's communist movement, contrary to its greater success in Australia.

The core of the CPNZ's membership was in the mining communities of the west coast of the

South Island, a fact attributed to the region's geographic and cultural proximity to Australia. Another center of support was among the seaman and dockworkers of Huntly, located in the western section of the North Island. Factionalism would continue to wrack the CPNZ throughout its history as its various members and leaders pulled in a variety of directions, eventually ranging from pro-Trotsky to pro-Lenin to pro-Mao to pro-Hoxha.

Initially, the CPNZ did not join the Comintern. Therefore, the Communist Party of Australia acted as a liaison between Moscow and New Zealand, and exercised some controlling influence over their smaller sibling-like neighbors. In the ensuing interwar years the CPNZ would find its attempts to influence worker issues eclipsed by factors including the rise of the Labour Party to national prominence, as well as the Pan-Pacific Trade Union, a far less militant organization that wielded a great deal of power in this realm. The signing of the Ribbentrop-Molotov Non-Aggression Pact between Germany and the USSR in 1939 saw the CPNZ demonstrate its militant loyalty to the Comintern. It declared its absolute objection to the war effort. In response, the government banned the party's publication, though membership itself was never outlawed.

When Hitler ordered his troops to attack the USSR, the CPNZ reversed its policy and feverishly supported the need for Allied victory. In the waning years of World War II the CPNZ would see its highest membership, as its numbers rose to 2,000. As the Cold War became a reality, and Soviet troops marched into Hungary, CPNZ membership dwindled to one-fourth of its best days. Later, during the split between the USSR and China, only New Zealand would see its communist party side with Mao, while the balance of the western members of this alliance stood with Moscow. This action would again reveal a split in the leadership of the Communist Party of New Zealand as its pro-Moscow members, including a former chairman, resigned. In the 1980s, with China's movement away from Mao's policies toward Deng Xiaoping's reforms, which he described as "a second revolution," the CPNZ proclaimed itself pro-Albanian until the demise of the Hoxha regime.

The various factions of New Zealand's communist parties include the Revolutionary Workers League (which was formed from the merger of Revolution, a pro-Trotsky group, and the

Anti-Capitalist Alliance, the latter comprised primarily of members of the Workers Party), the Communist Party of Aotearoa (a Maoist offshoot of the CPNZ), Communist Workers' Group of New Zealand/Aotearoa (Leninist-Trotskyist), the Organization for Marxist Unity (Marxist-Leninist), Permanent Revolution Group (Trotskyist), and the Wildcat Anarchist Collective, Workers Charter Movement.

Though the communist organizations in New Zealand never achieved any great political victory, their history has been exemplified by their sporadic successes in organizing workers' strikes and public protests. The most illustrious of events was their active participation in the infamous seamen's strike of 1925. Then, the workers' action began in Great Britain but spread to New Zealand, Australia, and South Africa as those workers began a protest that lasted over three months in an attempt to change labor conditions that included a 10 percent pay cut – made at the behest not of the employers, but of the union leaders (the National Amalgamated Sailors' and Firemen's Union), as well as the horrendous work and living conditions the seamen had to contend with at sea.

More contemporary actions include massive protests in 1981 against the Springbok Tour – a rugby team whose visit was opposed as they hailed from apartheid South Africa. Another more contentious issue is the New Zealand Nuclear-Free Zone Disarmament and Arms Control Act, which established the country as a nuclear free zone. While the Labour Party takes credit for passing this legislation, the various communist parties and groups vigilantly and energetically organized public protests, forces that pressed the parliament to pass this law.

Communist Party of South Africa, 1921–1950

Allison Drew

Launched on July 30, 1921 after almost a year of discussion involving more than ten small socialist groups, the Communist Party of South Africa (Section of the Communist International) used a class analysis that explained racial and national oppression by reference to South African political economy. Its politics can be understood in terms of its changing relationships with the Communist International (Comintern), with the black labor movement and African nationalism, and with other local socialists.

The Communist Party of South Africa (CPSA) in the 1920s

Like communist parties around the world, the CPSA's formation was propelled firstly by the October 1917 Russian Revolution, which seemed to demonstrate the feasibility of the socialist project, and secondly by the March 1919 establishment of the Comintern, which granted recognition to one communist organization in each country. The left groups that did not join the CPSA faded into oblivion. Initially, therefore, the CPSA, overwhelmingly white and comprising approximately 175 members in a country of seven million, enjoyed a virtual monopoly on the left. The absence of a successful socialist revolution in Europe underscored the Soviet achievement and strengthened the increasingly dominant belief that the Bolsheviks had the right answer, a belief buttressed in South Africa by successive waves of immigration from Eastern Europe. Nonetheless, there was considerable disagreement in the early CPSA about the meaning and implications of Bolshevism.

The CPSA faced its first challenge in the 1922 Rand Revolt, an armed uprising in the Witwatersrand industrial hub by white workers, which started as a miners' strike. South Africa's working class was characterized by a deep division between an organized white minority that controlled access to skilled work, and a large but

slowly developing African proletariat, centered on male migrant laborers, that lacked political rights and strong unions. Immigrant white workers brought their union traditions with them, and in the first two decades of the twentieth century they reacted with increasing militancy to capitalist exploitation, state repression, and the threat of replacement by cheap African labor. This culminated in the Rand Revolt, which combined anti-capitalist rhetoric, Afrikaner nationalist sentiment, and demands for the job color bar, and was characterized by a series of pogroms against blacks.

African organizations like the African National Congress (ANC) were hostile to the Rand Revolt, and the CPSA balanced uneasily between its commitment to black rights and its sympathy for the white uprising. With some notable exceptions, like British-born communist Sidney P. Bunting, the Johannesburg CPSA headquarters virtually neglected black workers during the Rand Revolt, a position challenged by its Cape Town branch.

The Rand Revolt was brutally crushed by the state, with radical leaders like Percy Fisher killed, and the white unions were in a state of disarray. However, disaffected white workers helped elect the Pact government in the June 1924 national elections, which consisted of the segregationist South African Labor Party (SALP) and the Afrikaner nationalist National Party. The Pact government implemented preferential “civilized” labor policies for white workers, expanded secondary industry, and took other steps to co-opt white workers.

This challenged the CPSA’s initial focus on white labor and the SALP, and from 1924 the CPSA gave greater attention to the organization and recruitment of black, particularly African, workers, leading to an exodus of many white members. The party hoped to influence the Industrial and Commercial Workers’ Union (ICU) that had been formed in 1919 in Cape Town by Clements Kadalie, and which was rapidly expanding across the country. Aside from its flirtation with the SALP between 1922 and 1924, this was the CPSA’s first attempt at alliance politics. But in December 1926 the ICU expelled communists from its national council, among them Johnny Gomas; other CPSA members in the ICU, like veteran activist T. W. Thibedi, also left.

The CPSA turned its hand directly to the organization of black workers. In 1927 Thibedi became the party’s first African organizer. Thibedi and Ben Weinbren formed a number of

industrial trade unions that became the nucleus of the Federation of Non-European Trade Unions (FNETU) launched in March 1928, which claimed 10,000 members. The party’s paper, *South African Worker*, began publishing African-language pages. That year the party claimed about 1,750 members, including 1,600 Africans. Notable African recruits included Moses Kotane (later party general secretary) and J. B. Marks.

Before the late 1920s the CPSA was relatively autonomous of the Comintern, which paid it little attention. As the Comintern began placing greater emphasis on colonialism and the “Negro question,” it sent the CPSA a draft resolution in September 1927 calling for “an independent Native republic, as a stage towards a workers’ and peasants’ government.” The party’s central executive rejected the idea of a “Native republic” as prioritizing rural struggles and as unduly alienating white workers, thus undermining CPSA’s stress on interracial class unity. Following prolonged and acrimonious discussion and the resolutions of the 1928 Comintern congress, the CPSA (now claiming 3,000 members) adopted the Native republic thesis in January 1929, with a rider promising protection for “national minorities.”

At the same time, the Comintern argued that the crisis of capitalism had reached its “third period,” characterized by imminent collapse and mass immiseration: communist parties had to combat social democratic and reformist policies that diverted the working class and Bolshevized their ranks. The “New Line” of “class against class” politics stressed a rejection of any cooperation with reformism, promoting the ideal Bolshevik as one who gave unquestioned loyalty to the party leadership.

As elsewhere, the CPSA’s growing isolation, and the economic downturn, gave the New Line credibility. In 1929 the National Party came to power again and quickly acted to crush collective black working-class protest. The ICU was, meanwhile, fragmenting, and the ANC moved sharply to the right. The New Line was formally introduced by Douglas Wolton at the CPSA’s ninth annual conference in December 1930. The great majority of first-generation communists were expelled, as were many of the new black recruits, on charges ranging from reformism to chauvinism and corruption. Bunting, ousted in September 1931, bore the brunt of this campaign, characterized by vicious personal attacks

and charges of “Buntingism.” The party’s union base was largely destroyed, with figures like W. H. “Bill” Andrews and Thibedi purged.

Trotskyism

Some of those expelled devoted themselves to union work; others, like Wilfred Harrison, withdrew from active politics. Others, critical of the Comintern’s intervention, came together under the banner of Trotskyism, mainly in Cape Town where the left was fluid and eclectic. A Fabian Society was formed in 1930. The next year saw the launch of the International Socialist Club, which circulated the *Militant*, organ of the Left Opposition in the United States, and set up a study group called the Marxist Educational League. In 1933 Yiddish-speaking communists expelled from a CPSA-linked organization launched a Lenin Club. The following year the Lenin Club was joined by the Marxist Educational League and members of the Independent Labor Party, a breakaway from the SALP.

But the Lenin Club soon split, a trait that typified Trotskyism in South Africa and internationally. One faction called itself the Workers’ Party of South Africa (WPSA), and published the *Spark* from March 1935. The other faction formed the Communist League of South Africa (CLSA), which produced the monthly *Workers’ Voice*. Their differences were theoretical: the WPSA stressed the peasant nature of the population, while the CLSA argued that the processes of proletarianization and urbanization were most important for socialist strategy.

The Johannesburg Trotskyists were more oriented toward union work than their Cape Town counterparts, but their influence was weaker. Fanny Klennerman’s bookshop, Vanguard Books, supplied Trotskyist and other left literature. Thibedi began corresponding with the Left Opposition in the United States, and with Leon Trotsky. In 1932 he formed the Communist League of Africa, unique in that all of its members were African. A few years later the tiny Johannesburg WPSA took tentative steps to organize African mineworkers. However, in the late 1930s, the most significant trade union work on the Rand was not that of organizations but of individuals – the Trotskyist Max Gordon and the expelled communist Gana Makabeni. Both revived and rebuilt the black union movement, which had been decimated by the CPSA’s New Line.

Opposition to the CPSA remained regionally and organizationally fragmented, and the Comintern’s scathing denunciation of Trotsky precluded any possibility of broader socialist unity. The experience of Scottish socialist William Ballinger, appointed advisor to the ICU in 1928, illustrated the virtual impossibility of working alliances on the left in this climate. A member of the Independent Labour Party in Scotland, Ballinger had worked there with local communists. The sectarian politics that consumed South African socialists in the 1930s precluded alliances, and Ballinger’s political allies were liberals.

The Popular Front and the Revived CPSA

In 1934, the Comintern adopted the Popular Front, now stressing the widest possible alliance of working-class and democratic forces to fight fascism, which effectively conceded the failure of the “class against class” policy. That December the National Party and the South African Party formed the Fusion Government, which accelerated the attack on black rights with the 1935 Representation of Natives Bill, and the Native Trust and Land Bill. The first bill curtailed the limited Cape African franchise and advocated a Natives’ Representative Council (NRC) with solely advisory status. The second reasserted the restrictions on African landholding rights codified with the 1913 Land Act.

In December 1935 black leaders came together in the All-African Convention (AAC) to discuss strategies for fighting the bills, but failed to prevent them becoming law in 1936. The CPSA remained plagued by factionalism. To resolve the situation, in March 1936 the Comintern convened a commission in Moscow which led to the ascendancy of Kotane, whose emphasis on building broad alliances dovetailed with the Popular Front strategy. The party managed to regain much of its strength and to win back key members like Andrews. Communists, aligning with the ANC, decided to use the NRC as a platform for propaganda; the Trotskyist factions argued that it should be boycotted, and a “boycottist” principle became a hallmark of local Trotskyism. Mainstream white labor steadfastly refused to support any movement for black rights, and the CPSA was unable to build a Popular Front across the racial divide.

The War Years

World War II intensified the left's polarization. Reflecting its position within the British empire, South Africa declared war against Germany in September 1939. This split the government, as it was opposed by Afrikaner nationalists and the radical right. Initially, both communists and Trotskyists opposed the war. Once the Soviet Union entered the war in June 1941, the CPSA declared its support for the war effort, which brought it new-found legitimacy and enabled it to make appreciable gains among white workers and soldiers.

The CPSA also made major gains in union activity on the Witwatersrand. The war accelerated black urbanization and industrial development, especially on the Witwatersrand. Consumed by the war in Europe, and subsequently dissolved, the Comintern no longer intervened directly in the CPSA. While the CPSA counseled against strike action, it supported the demands of African workers for better pay and working conditions.

By 1940, the Joint Committee of African Trade Unions, organized by the independent anti-war Trotskyist Max Gordon, was the largest African union federation. Gordon was arrested and interned, but the unions continued to thrive. The Council of Non-European Trade Unions (CNETU) was launched in November 1941, and soon claimed 100,000 members. The leadership included socialists of various types. The CPSA's Marks was elected CNETU president and then president of the African Mineworkers' Union (AMWU), the largest CNETU affiliate, and the party became a major force in African politics. It also had some influence in the South African Trades and Labor Council (SATLC), through figures such as Andrews and Ray Alexander Simons.

By contrast, Trotskyism became weaker during the war. Anticipating fascism, the WPSA went underground in 1939, functioning as a secretive discussion group; the minute CLSA collapsed. Cape Town Trotskyists regrouped as the Fourth International Club, later the Fourth International Organization of South Africa (FIOSA), which published the *Workers' Voice*. In Johannesburg the Workers' International League (WIL) was formed in 1943–4; while attempts to unite the FIOSA and the WIL came to nought, the WIL posed an important challenge in the unions to the CPSA.

Alongside the growing union movement were growing popular protests over housing, transport,

and food prices. This put pressure on the CPSA (which was reluctant to jeopardize the war effort), as well as on existing black political organizations, and catalyzed the formation of new organizations. The Non-European Unity Movement (NEUM), to which the ANC affiliated, was launched in 1943; the underground WPSA, of which I. B. Tabata was the best-known member, played a crucial although secret role in this venture. The ANC Youth League was launched the following year. The CPSA engaged in open tactical alliances with the ANC during the 1940s, retaining its own identity.

Although pressures on wages and living conditions mounted during the 1940s, the war's end brought no amelioration. This was brutally signaled by the state's violent response to the African mineworkers' strike of August 1946, which was supported by the CPSA and CNETU. Fifty-two members of the African Mineworkers' Union, CNETU, the ANC, and the CPSA were charged with conspiracy, although the main charges were dropped and the defendants fined. The state then charged eight members of the CPSA central executive committee with sedition in November.

The squashing of the strike reverberated through the union movement and amongst socialists; the tiny WIL, demoralized, collapsed soon after the strike. CNETU was consumed by infighting and suffered a major split, and the SATLC began to fragment from 1947. Repression escalated after the National Party's election on an apartheid platform in May 1948.

The National Party had been elected on a slim electoral majority, and it tested its strength with the introduction of train segregation in the Western Cape. In August 1948 a range of organizations formed the Train Apartheid Resistance Committee. But this foundered, signaling the inability of the left to cooperate and the reluctance of NEUM leaders to undertake mass action. The Fourth International overseas advised the WPSA and the FIOSA to merge, but once again South African Trotskyists were unable to unite, and the FIOSA disbanded.

The CPSA was the only remaining above-ground socialist body, although Trotskyist ideas remained influential amongst Western Cape radicals. Despite the Comintern's disbanding, the CPSA remained steadfastly loyal to the Soviet Union and scathing of Trotskyists. The CPSA's national conference in January 1949 claimed 2,482 members, but only 992 were in good financial standing. Given such weakness, it is perhaps not surprising that

the leadership was unable to decide how to proceed under increasing repression, and made no attempt to set up an underground. In June 1950, the Suppression of Communism Act became law, effectively banning the CPSA and empowering the state to act against a wide range of critics. The CPSA's Central Committee disbanded the party without replacing it, leaving many party members confused and demoralized. It was only in 1953 that a successor, the South African Communist Party, was formed.

Communist Party of the United States of America (CPUSA)

Michael Goldfield

The Communist Party of the United States of America (CPUSA) is undoubtedly the most prominent and popular leftist party in US history. From the early 1930s to the early 1950s, it was an important influence in American society, not only in the labor movement and various protest movements, but also in cultural and artistic life, many state governments, and even for a short time in national politics. On the one hand, it was from the early 1920s to the late 1950s the dominant left-wing group in the United States, highly interracial and ethnically diverse, the most militant and successful of trade union organizers, the foremost fighter for equality for African Americans, women, and other minorities, as well as the leading proponent in the struggle of the unemployed, students, and others – laudatory credentials for many. It would also become the unabashed, uncritical apologist for the brutal crimes of the Stalin regime in the Soviet Union; it was the unrelenting, sometimes repressive, critic of those on the left, whether political opponents, writers, or artists, who did not agree with it completely on the Soviet Union and other matters. And these questions only scratch the surface of the controversies.

The Communist Party was born in 1919, out of the left wing of the Socialist Party (SP), when the entrenched SP leadership refused to allow the left-wing majority to take control democratically of the organization. Losing most of its more dynamic members, refusing to support the 1917 Russian Revolution led by V. I. Lenin and Leon Trotsky and the new Soviet government – both immensely popular with US socialists, intellectuals, and labor activists – and revealing a lack of commitment to democracy in its own organization, the SP virtually died at this time. With over 100,000 members in 1919, the SP had barely 12,000 in 1923. In September of 1919, two communist parties were formed, although they

had few substantive political differences. The largest, the Communist Party of America (CPA), had as its main leader Charles Ruthenberg, a socialist from Cleveland, Ohio, who had successfully led tens of thousands of workers in a May Day demonstration there earlier in the year. The CPA had approximately 24,000 members, the overwhelming majority of whom were non-English-speaking immigrants, most from the former Russian empire.

The other group, the Communist Labor Party (CLP), with approximately 10,000 members, had as its most prominent leader John Reed (the hero of Warren Beatty's film *Reds*), a journalist who observed the 1917 Revolution and wrote a popular book about it, *Ten Days that Shook the World*. While having more English-speaking members, the CLP too was majority non-English-speaking. In September 1920, the CLP and a minority split from the CPA led by Ruthenberg merged to form the United Communist Party (UCP). In 1921, the Communist International (CI) forced the CPA and the UCP to merge. Both parties, however, had only existed semi-legally, since the anti-radical Palmer raids (organized by US Attorney General A. Mitchell Palmer) had begun on January 2, 1920.

The Palmer raids, aimed at undermining widespread radical support in the country, were followed by mass deportations and imprisonment, greatly diminishing the membership of the CP, as well as other radical groups. In December 1921, after the merger of the UCP and the CPA, a legal organization was organized, called the Workers' Party, which recruited many new individuals and groups. In 1925, the underground party emerged and was officially united with the legal party, renaming itself the Workers' (Communist) Party. In 1929, the party changed its title to its present name, the Communist Party USA.

The 1920s were difficult years for all radical groups, and the communists were no exception. Membership stabilized at around 10,000, reaching a low point of around 7,500 in 1930. Nevertheless, the 1920s was a period in which the CP engaged in numerous activities, where its members gained valuable experience, and where the party itself gained the prestige and roots that would allow it to make dramatic gains during the 1930s. Its most important sphere of activity was in the trade union arena. In 1921, the CP recruited William Z. Foster and his associates who led the Trade Union Education League

(TUEL). Foster, who would remain a leader of the CP until he died in the Soviet Union in 1961 at the age of 80, was in 1921 the best-known radical labor leader in the US. In 1919 and 1920, he had led, first, the massive packinghouse workers' organizing campaign, then a national strike of several hundred thousand steel workers. During the 1920s the TUEL gained the support of thousands of local, state, and national union bodies for its three main demands: defense of the Soviet Union, organizing the unorganized into industrial unions, and the formation of a farmer-labor party.

An open communist leadership led the struggle to drive the gangsters out of the fur workers' union, revitalized its organization by the late 1920s, and eventually established the Fur and Leather Workers' Union, whose highly politicized membership stood firm during the McCarthy period, refusing to disavow its elected CP leadership. Communists were also active in the opposition movement in the mine workers' union, and in several other unions. They led a large textile strike in Passaic, New Jersey, in 1926, and another in Gastonia, North Carolina, in 1929. At least as important, they established clandestine organizing committees, in automobile and dozens of other unorganized industries, clandestine of course because that was the only way any union organizers could work and organize without getting fired immediately. The communists, along with other radicals and liberals, were also involved in the key defense cases of the day, the most important of which were those of Tom Mooney and Sacco and Vanzetti. Mooney was a left-wing socialist, falsely accused in 1916 of bombing a World War I preparedness parade, who was eventually pardoned by the governor of California in 1939, while Sacco and Vanzetti were two Italian American anarchists who were executed in 1927 for supposedly committing a bank robbery and double murder.

The CP's activities allowed it to recruit leading radicals from virtually every left-wing milieu. Aside from the Foster group, many prominent Industrial Workers of the World (IWW) members joined the party, including "Big Bill" Haywood, the most prominent IWWer who went into exile in the Soviet Union, Bill Dunne and Vern Smith, and eventually Elizabeth Gurley Flynn, who had been a teenage leader of the famous 1912 Lawrence, Massachusetts, textile strike. The CP recruited several of the small number of black

socialists, most important of whom was Cyril Briggs, the leader of the African Blood Brotherhood, and his colleague Richard Moore. In addition, it recruited important activists from Marcus Garvey's United Negro Improvement Association, including Steve Kingston, Louis Campbell, and William Fitzgerald, who were taken aback at the commitment to black rights by many of the CP's white members. By the 1930s, prominent intellectuals flocked to the CP. Few gravitated toward the SP, for as John Dos Passos explained in 1932, "Becoming a Socialist right now would have just about the same effect on anybody as drinking a bottle of near-beer."

The CP also gained support from and even recruited important SP members, the most prominent of whom was undoubtedly Meta Berger, widow of Victor Berger, former Wisconsin congressman and leader of the SP right wing in 1919 when the split with the CP took place. Another SP activist who was secretly recruited – and would eventually become famous, all the while denying his former CP connections – was future United Auto Workers' President Walter Reuther. None of the attraction of the CP at this time was based on its support for liberal Democratic Party politicians or watered-down politics. The result of the activities of the CP during the 1920s is described by James Cannon, a cohort of Foster's and one of the party's leaders, until his 1928 expulsion for Trotskyism:

This Communist Party held the line of class struggle and revolutionary doctrine in that long, ten-year period of boom, prosperity and conservatism before the crash of 1929. It was in that period – fighting for revolutionary ideas against a conservative environment as we are trying to do today, refusing to compromise the principle of class independence – that the Communist Party gathered and prepared its cadres for the great upsurge of the thirties. (1971: 92)

Despite its reduced membership, the Communist Party entered the 1930s – the period of the greatest radical revival – as the dominating center of American radicalism. It had no serious contenders (Cannon 1971: 93–4). In the fall of 1929, the stock market crashed and the US economy ground to a halt, with many industries, including automobile, mining, and textile, virtually collapsing. Gross business investment dropped from \$16.2 billion in 1929 to \$0.8 billion in

1932. Official jobless estimates went from 492,000 in October of 1929 to over four million in January of 1930. CP mass activity and membership growth both skyrocketed.

The earliest mass activity took place among the unemployed. Protests of the unemployed in the beginning of the Depression were often massive and militant. The largest unemployed organization of the early 1930s was the CP-led Unemployed Councils, concentrated in large cities throughout the country. Also significant were the SP-led Workers' Alliance and A. J. Muste's Conference for Progressive Labor Action-inspired Unemployed Leagues.

Unemployed protests began immediately with the onset of the Depression. On March 6, 1930, well before the impact of the Depression was to be felt on local, state, or national politics, over one million people demonstrated across the country under CP leadership. Concerted unemployed activity seems to have touched virtually every part of the land. The South and the West, as well as the Northeast and Midwest, were all affected. In large cities, including Seattle, Milwaukee, Toledo, Pittsburgh, Baltimore, San Francisco, Minneapolis, Atlanta, and many more, much evidence exists to suggest large-scale unemployed activity and organization. Records show small and medium town activity in such places as Fairmont and Charlestown, West Virginia, Camden, New Jersey, Indianapolis and Terra Haute, Indiana, Lewiston, Maine, Racine, Wisconsin, Warren and Ashtabula, Ohio, and even in small towns in Mississippi.

Some of the activities of the unemployed organizations were large scale. In New York City, for example in late January 1930, 50,000 attended the funeral of a Communist Party activist killed by the police. A similar funeral in Detroit in 1932 for four party activists killed by the police at a protest march on Ford's River Rouge plant was attended by between 20,000 and 40,000 people: above the coffin was a large red banner with Lenin's picture. Perhaps the highpoint of such activity was in Chicago. In one incident in 1931, 500 people in a Chicago Southside African American neighborhood brought back furniture to the home of a recently evicted widow. The police returned, opened fire: three people lay dead. The coffins were viewed, again under an enormous portrait of Lenin. The funeral procession with 60,000 participants and 50,000 cheering onlookers was led by workers carrying communist

banners. Even in cities in the Deep South, including Atlanta, Birmingham, and New Orleans, racially integrated unemployed mobilizations took place. These protests, sometimes making the front page news, more often remaining unpublicized, did not fail to leave deep impressions on people in power, as well as on the more disadvantaged members of the population.

What most distinguished the CP during the 1930s from other radical groups was its position and commitment to the fight against black oppression. No previous largely white US radical group had focused attention on the plight of blacks. It was the CI with its 1928 resolution at its sixth world congress and its subsequent 1930 resolution which placed the "Negro Question" at the center of the CPUSA's work. The CI resolution argued that the roots of African American oppression lay in the historic black homeland of the cotton South. In that region there existed a Negro nation, which might potentially secede to form an independent country. The CI resolution also placed the struggles for racial equality in the North as well as the South at the center of CPUSA strategy.

The CP's efforts in the battle for black liberation even penetrated into its extensive immigrant membership. As Mark Naison notes: "Not only Jews felt moved by the Party's position: Finnish, Polish, Hungarian, Irish, Italian, and Slavic Communists became passionate exponents of the Party's position on the Negro Question" (1983: 43). One result of the CP position was to place special emphasis on organizing African Americans in the South, leading to industrial concentrations in Birmingham and the highly dangerous organizing of black sharecroppers. The CP attention to the South led it to publicize and fight against the lynching of blacks there. In 1931, the CP took the initiative in a case that was to gain it major political leadership among blacks throughout the whole country. This was the case of the Scottsboro boys, nine black youths seized on a freight train in rural Alabama, accused of raping two white girls who had been riding with them.

The CP's most massive successes, however, were undoubtedly within the labor movement, especially the Congress of Industrial Organizations (CIO). Their persistent organizing in workplaces across the country during the 1920s made them the key rank-and-file labor activists in the land. They played leading roles in the early Depression strikes before 1933. They were at

the center of the revolts in mining, auto, steel, electrical, longshore, and dozens of other industries. By the time the CIO was formed in 1935, it was clear to John L. Lewis, the head of the mine workers' union and first president of the CIO, that successful industrial union organization would have to rely on the CP. Communists dominated the early leadership of the unions in electrical (third largest of the CIO unions), farm equipment, fur and leather, metal mining, food and tobacco, maritime, West Coast longshore, transport, government work, office and professional, and a number of smaller unions, including furniture. They were a significant force in the packinghouse workers' union and in auto, and originally led the woodworkers' union. If it were not for their conciliatory tactics toward more conservative CIO leaders, they would have had the early leadership of the auto union and greater influence in steel, oil, and rubber, industries in which they played leading roles in organizing.

In 1947 and 1948, the CP and its allies (including the majority of liberals who supported the CP's popular front policies) came under attack from the government and more conservative political forces. Part of this attack was related to the mobilization by the US ruling class of public opinion against the Soviet Union and in support of various anti-Soviet policies, including the Marshall Plan, aimed at rebuilding Western European economies, and the Truman Doctrine, designed to aid in stopping communist-led insurgencies in Greece and other parts of the world. The CP and its supporters not only opposed these doctrines, they also rallied to support the 1948 Progressive Party candidacy of former FDR vice-president and Truman secretary of commerce Henry Wallace, who opposed the new anti-Soviet foreign policy. Given expectations, Wallace's candidacy flopped, garnering barely over a million votes and having a negligible effect on the outcome of the election.

By 1949 and 1950, ten left-wing unions were expelled from the CIO. Communists were driven from the leadership of the auto workers' union with the ascendancy of the Reuther forces, and also from the NMU (National Maritime Union), the TWU (Transport Workers' Union), and the furniture workers, as top leadership in these latter unions abandoned their close ties to the CP. The electrical workers, food and tobacco workers, and public employee unions were raided and eventually decimated after the purges. In

other left-led unions, including Mine Mill (with the exception of the Birmingham, Alabama region), farm equipment, fur and leather, and the ILWU (International Longshore and Warehouse Union), the unions maintained their support, influence, and numbers intact, while in packinghouse, CP influence remained more or less as before the purges, although the UPWA (United Packinghouse Workers of America) was the one left-wing union that was able to remain within the CIO. In 1949, the top leaders of the CP, along with numerous secondary leaders, were tried under the Smith Act. Many were sent to prison. The CP was most weakened, however, by the 1956 Anti-Stalin speech of Soviet premier and party leader Nikita Khrushchev, delivered secretly at the 20th Congress of the Soviet Union, February 24–5. In this speech, ostensibly directed against the “cult of the individual,” Khrushchev began the process of publicly exposing the crimes, repression, and dictatorial rule under Stalin.

By the time of the political upsurge of the 1960s, the CP was not only small in numbers but politically insignificant. Although some current and a number of former CP members had influence in virtually all the protest movements of the period, the CP itself was considered far too moderate for serious consideration by the more leftist, militant wings of the civil rights movement, the anti-war movement, the women’s movement, and the student movement.

The disputes about the CP legacy are legion. The questions are to a large degree intertwined, so they must be examined as such, not separately, rather as one peels off layers of an onion. In this respect new material from recently opened Soviet archives, along with numerous recent theses, books, and articles, are most helpful. Yet, many of the questions are ones of interpretation. It has been easy, for example, for most conservatives to have “seen through” the communists, since the conservatives held neither black rights nor union organization very highly. Yet, these same conservatives held similar opinions of civil rights activists and student radicals in the 1960s. Likewise, for those horrified by groups thought to be a threat to capitalist property, free enterprise, and the right to get very rich at the expense of others, it was easy to see the CP as illegitimate, just as it had been to similarly evaluate the IWW, the SP, and more recent radical groups. Thus, developing a reasonable set of criteria to evaluate the CP is to a certain

extent itself a matter of one’s political proclivities. Nevertheless, it is important to identify what was distinctive about the CP, which is largely an objective matter. Finally, however, removed from the conflicts, physical battles, arrests, blacklisting, and hounding of an earlier period, it is important for those interested in the success and failures of radical movements to make a relatively detached assessment of what was good and what was bad about the CP.

The vast majority of commentators on the CP share a common belief that the CP grew most and was most successful when it abandoned its revolutionary politics, acted more like liberals, supported the New Deal, Franklin Roosevelt, and other liberal politicians. This view is held by staunch anti-communists like Harvey Klehr, but also by those who approve of the CP, who like the policies of CP leader Earl Browder and the popular front, including Maurice Isserman, Fraser Ottanelli, and Edward Johanningsmeier. These authors tend to think that the CP declined when it abandoned these more liberal policies and became more sectarian.

The CP’s radical and revolutionary image, its uncompromising position in support of African American rights, its appearance as the US representative of the Russian Revolution, attracted those who wanted to fight the system. Thus, unemployed workers, African Americans, students without prospects, displaced intellectuals, and many others flocked to the party. People turned to what they thought was the most radical, militant movement: the communists. It was in this period that it recruited significant numbers of black members, that its working-class cadre became involved in large-scale struggles and demonstrations. Subsequent membership increases, whether from 1936 to 1939 (during the first popular front period) or during World War II, appear quite modest compared to the membership gains in the first half of the 1930s.

Regarding the controversial questions of the CP’s ties to the Soviet Union, it seemed that the CP was merely following a long tradition of working-class internationalism, as advocated by Karl Marx and Friedrich Engels in the *Communist Manifesto*, which called on “Workers of the World” to “Unite.” For some, international ties are themselves suspect, as attacks on world government, the Catholic Church, and advocates of the brotherhood of all humans indicate. The CP was vilified by elites for its strong

support of Spain's democratically elected Loyalist government which faced a fascist-supported insurrection by right-wing General Francisco Franco. Those who volunteered to fight in this noble cause were denounced and ostracized. The CP also defended the Soviet Union against attacks by capitalist countries and criticism by anyone. In return, the CPUSA received broad international support for a number of its campaigns, including the defense of the Scottsboro victims.

There is a further issue of control and subordination from abroad. In this respect, were their foreign ties similar to those of the Catholic Church, Scientologists, and Rev. Sun Myung Moon's Unification Church? Was their subordination voluntary or coerced? How extensive was the international control? Was the CP really mostly the unregistered agent of a foreign power? Were they in essence fifth columnists (like those in Europe who aided the rise of fascism from within) or spies?

There is a long anti-communist strain in the United States which attempts to portray the CP not as a legitimate organization of heretics, but largely as a conspiratorial ring of foreign agents. This tradition, largely discredited in the past, has been revived in recent books by Harvey Klehr, John Haynes, and others. In combing through recently opened Soviet archives, they have uncovered more cases of espionage, and confirmed several of which many had been skeptical – none of which should surprise those of us who believe John Le Carré's view of espionage during the Cold War. In order to buttress their case, the contemporary authors have also included many cases which are largely trivial, as when the editor of the CP paper, the *Daily Worker*, briefed Soviet diplomats about American politics and the intentions of US negotiators. Their view of the CP simply does not accord with the facts. Despite some small number of cases of CP members actually engaged in espionage, and a large amount of secret work by many CP leaders for the CI, the bottom line is well summarized by Bert Cochran, himself a stringent critic of the CP:

The party per se did not engage in espionage. Soviet agents recruited at times among the ranks of members and sympathizers. Once a member was taken in tow, he dropped out of the Party, and dropped his former associations, as

happened to Whittaker Chambers. Soviet espionage crews had to enforce a rigid separation for their own security reasons, even though they had no compunction in subjecting foreign parties to unwarranted risks with such raiding expeditions. (1977: 9)

While CI control of major CPUSA policy was clear, there were many instances where prominent leaders, in particular William Z. Foster, ignored advice and went about their own way. Likewise, instances abound where local communists did what they thought was right, even if it was in opposition to official policy, as with the many CP-led work stoppages during World War II. Nevertheless, these failures to follow CI direction always took place while giving lip service to following official policy. Sometimes CI directives did not work out the way they had intended. Much evidence, for example, abounds that the Duclos letter, written by the leader of the French Communist Party, was meant to warn Browder and change the direction of the CPUSA, not to have him expelled.

During periods of leftism as well as its lengthier periods of reformism, the CP, when it could, was marked by an unprincipled hounding of its opponents. When the SP organized a rally at Madison Square Garden in 1934 to commemorate the large number of Austrian socialists who had been slain in battle against the fascist Engelbert Dolfuss regime, several thousand CPers caused a riot and broke up the event. To their left-wing critics (even if general supporters) they were often ruthless, as when they attempted in 1938 to blacklist among leftists and liberals Edgar Snow's popular *Red Star Over China* because of certain mild, but accurate, criticisms of the CI and Stalin. Snow capitulated and made the necessary changes. And toward the Trotskyists, who they unfairly branded as fascist agents, there was hardly any limit to the degree of lying and brutality in which they were willing to engage. Trotskyism never developed much support around the world, except in a few places including Ceylon (Sri Lanka) and Vietnam, at least in part because of the isolation and attacks engendered by the CPs. Yet Trotskyism represented the conscience of communists worldwide, their most trenchant critics, a reminder of the degree to which they had strayed from their original aims.

Trotsky brilliantly pointed out in advance the bankruptcy of CI sectarian tactics in Germany, in which it dramatically underestimated the Nazi danger. Trotskyists pinpointed problems with the CI policies in Spain and with the popular front. They played the leading role in exposing the political degeneration of the Stalin regime, the Gulags, and the lies of the late 1930s show trials. For these "crimes" they were physically assaulted, murdered, driven out of the labor movement, accused of being police agents, when it was the CP itself that collaborated with the government and supported the 1940 Smith Act prosecution of the leadership of the Trotskyist Socialist Workers' Party and aided the gangster-ridden teamster national leadership in dislodging the Trotskyists from the leadership of their stronghold in Minneapolis Teamster Local 574, one of the most militant and dynamic union organizations to emerge during the 1930s. So when repression finally came down on the CP during the early Cold War period, its ability to generate sympathy from anyone was quite low.

The Communist Party was not by and large an electoral party and should not be evaluated as such. Nevertheless, it did, at its height, have an important electoral impact. In Oregon, Massachusetts, Connecticut, Michigan, and Ohio, it was a significant force in the influential labor party politics there, as well as in later efforts within these state Democratic Parties. It also had substantial influence within the Democratic Parties of California and Wisconsin. In Minnesota, for a time, the CP and its popular front allies controlled the Minnesota Farmer-Labor Party, the dominant political party in the state. In New York State, it had significant control of the American Labor Party, which controlled the swing vote between the Democrats and Republicans in the state. In New York City, it had two communist city councilmen, Benjamin Davis, Jr. and Pete Cacchione, along with other council political supporters. Its support in New York City was significant enough for it to have an alliance with Governor Herbert Lehman, who returned the favor by vetoing a legislature bill that would have banned the CP. It had two firm congressional supporters, Vito Marcantonio from New York and John Bernard from Minnesota, along with a close alliance with Harlem congressman Adam Clayton Powell, Jr.

Among artists, entertainers, and intellectuals its support was widespread, from Hollywood to Doris Lessing, Harold Cruse, José Yglesias, Leonard Bernstein, Richard Wright, Langston Hughes, Ralph Ellison, Theodore Dreiser, Nelson Algren, Upton Sinclair, John Dos Passos, Granville Hicks, Josephine Herbst, Paul Robeson, W. E. B. Du Bois, Peter Seeger, and many more. Among sports figures, it not only obtained support from boxers Joe Louis and Henry Gibson, from Brooklyn Dodger second baseman Jackie Robinson, and from Negro League star Josh Gibson, but had regular sports columns in the *Daily Worker* by New York Yankees third baseman Red Rolfe and Chicago Cubs star Rip Collins. Many prominent African American entertainers and musicians attended or performed at its functions at one time or another. Among them were Lena Horne, Billy Holiday, Ella Fitzgerald, Duke Ellington, Count Basie, Leadbelly, Roy Eldridge, Josh White, Coleman Hawkins, W. C. Handy, Dizzy Gillespie, Miles Davis, Charlie Parker, Chick Webb, Art Tatum, Cab Calloway, Mary Lou Williams, Lionel Hampton, Teddy Wilson, and the list goes on.

This support was based on the work that the CPUSA had accomplished. It organized African Americans, exposed and fought against the many manifestations of white supremacy at a time when it was not popular to do so, and won large numbers of whites to support these struggles. The CP had a large number of talented black leaders and was, by all accounts, racially egalitarian in its own organization. According to enthusiastic reports in the black press, the CP was the main organization that forced these issues into the public consciousness. It and the African American workers whom it often organized were the impetus for making issues of race central to the perspective of the CIO. Finally, it was CP organizers that provided the main shock troops in the organizing of industrial unions. All these good deeds went along with its subordination to the foreign policy dictates of Moscow, its slavish submission on central issues, including its apologies for the crimes of Stalin, and its failure to maintain its original anti-capitalist perspective after the mid-1930s. Thus, the Communist Party of the United States of America provides key lessons for future radical movements of what to do as well as what not to do.

Comte, Auguste (1798–1857)

Marcelline Block

Auguste Comte's place in the history of revolution and protest derives from his extensive contributions to social theory. He has been credited with being the first western sociologist and with coining the term "sociology" in 1838 to refer to the scientific study of society. He formulated and promulgated the philosophical doctrine known as positivism, and initiated the concept of altruism.

Comte was a major influence on nineteenth-century philosophers, historians, and social theorists attempting to create a "science of society," such as John Stuart Mill and Karl Marx. Mill's *Auguste Comte and Positivism* is among the most important expositions of Comte's philosophical ideas.

Comte was born into a Catholic and monarchist family in Montpellier, France, but as a young man he renounced the religious and political views of his upbringing. He attended the Université de Montpellier as well as the prestigious Ecole Polytechnique from 1814 to 1816, but was expelled from the latter during its royalist reorganization. He continued his studies on his own and was influenced by Montesquieu, Adam Smith, and, in particular, Condorcet's *Sketch for a Historical Picture of the Progress of the Human Mind*.

In 1817, Comte became Henri de Saint-Simon's secretary, a partnership that lasted until 1824 when they had a bitter falling out. Comte was unable to find an academic position and supported himself by tutoring. In 1824 Comte entered into a common-law marriage with Caroline Massin. In the 1830s Comte suffered a nervous breakdown, which Massin helped him through, but their unhappy union was dissolved in 1842. In 1844 Comte fell in love with Clothilde de Vaux, and although she died soon thereafter, the relationship affected him deeply and inspired his espousal of a "religion of humanity" based on reason rather than faith.

Following Saint-Simon's example, Comte attempted to establish a scientific methodology for the analysis of human behavior and society. It was Saint-Simon who first used the term "positivism" in his own discussions of scientific method as it relates to philosophical inquiry.

Comte's appropriation and development of positivism gave rise to an important Western European philosophical movement in the second half of the nineteenth and the beginning of the twentieth centuries.

Comte's major work is the six-volume *Cours de philosophie positive* (Course of Positive Philosophy), which was derived from a group of lectures he delivered, starting in 1826, to a private audience of some of the foremost thinkers of the era, including Henri Marie de Blainville, Jean Etienne Esquirol, and Jean Baptiste Joseph de Fourier. The *Cours* outlines the fundamental aspects of Comte's notion of positivism, which he first described in 1822 in his *Plan de travaux scientifiques nécessaires pour réorganiser la société* (Plan of Scientific Studies Necessary for the Reorganization of Society). Comte further expounded upon positivism in the four volumes of his *Système de politique positive* (The System of Positive Polity).

According to Comte, the "law of the three stages" (also known as the "law of three phases") accounts for the way the human mind progresses and seeks understanding of various phenomena, as well as how society evolves. The three stages he identified are the theological (supernatural), the metaphysical (abstract), and the positive (objective). According to Comte, these stages are inevitable and irreversible, and although positive knowledge can be ever more closely approached, it can never be fully obtained. The third stage is the most important, and seekers of knowledge should focus only on phenomena that have an "objective" and "positive" existence. The positive stage is characterized by the development and growth of science, which can predict phenomena so that they can be most effectively utilized.

Late in his life Comte made positivism into a new "religion of humanity" and crowned himself pope. This new religion had its own calendar, the *Calendrier positiviste*, with saints such as Dante, Adam Smith, and Shakespeare, and its own catechism, *Catéchisme positiviste*. In 1856 Comte outlined the religious trinity of the Great Being (humanity), the Great Fetish (the earth), and the Great Way (space) in his final work, *Philosophy of Mathematics*. Whereas Comte's philosophical ideas were highly influential upon political and social theorists and made a lasting impact in numerous areas including economics, evolution, and logic, his religious ideas were not as successful,

although they achieved short-lived popularity. The leading tenet of the religion of positivism was for its adherents to "live for others."

Comte's work is generally recognized as an advance upon the somewhat vague and unsystematic productions of his mentor, Saint-Simon. Comte, however, has been criticized for neglecting the science of psychology, and for making broad, unsupported claims about science, history, and religion. Despite the often-justified criticisms of Comte's work, its substantial impact on the development of the social sciences is undeniable. He helped give birth to a new social science, sociology, which is now among the best established and most rigorous of academic disciplines.

Comunero movement

Rady Roldan-Figueroa

The Comunero movement (*movimiento de las comunidades*), or Comuneros' Revolt was the first and last major uprising against the Hapsburgs in the kingdom of Castile. In 1516 Charles of Ghent became king of Castile and Aragon, as Charles I of Spain. He inherited his Spanish crown after the death of his maternal grandfather, Ferdinand II of Aragon (r. 1479–1516). He arrived in Spain in 1517, but he was not prepared to assume control of his Spanish possessions. Charles was raised in the Netherlands and was surrounded by Flemish advisors. He was ignorant of the customary practices and languages spoken in his new possessions. Elected king of Germany soon after the death of his paternal

grandfather, Maximilian I (r. 1493–1519), Charles made arrangements to relocate his court to Germany, although he was not crowned until October 1520. The prospect of having an absentee king as well as resentment towards his foreign-born attachés fueled popular resentment.

The situation was complicated in April and May 1520 by new financial demands made by Charles on the Castilian Cortes. The Cortes was a medieval system of representation in which free municipalities (*comunidades*) negotiated additional financial subsidies for the crown and participated in deliberations on matters of interest to the realm. In 1520 the Castilian Cortes consisted of around eighteen municipalities. The demand for higher subsidies on the part of Charles was perceived by many of the *procuradores* (delegates) as an affront to the longstanding rights and privileges of the municipalities.

Charles finally left Spain for Germany in May 1520, leaving behind Cardinal Adrian of Utrecht (1459–1523) to deal with the mounting unrest. The revolt centered on the city of Toledo, where the city council under the leadership of the *regidor* Juan de Padilla declared the city independent of the central power. At the height of the conflict, 15 of the free municipalities with delegates in the Cortes had joined the uprising. The initial reaction of Cardinal Adrian was a failure, ending in the burning of the city of Medina del Campo and further consolidation of the anti-Hapsburg forces.

The revolt took organizational form during the month of July 1520. The *comuneros* formed a *Santa Junta* during a meeting in the city of Ávila at the behest of Juan de Padilla. Until this meeting in Ávila the movement had consisted mainly of members of urban patrician families and the lower nobility. However, the demands articulated by the delegates gathered in Ávila introduced a wedge into this feeble coalition. The nobility slowly steered away from the urban elites and returned their support to Charles. Members of the clergy were also prominently involved in the revolt. One of the leading figures of the revolt was the bishop of Zamora, Antonio de Acuña. Contemporary sources report that around three hundred armed friars defended the cause of the *comuneros*.

In spite of their lack of military training the *comuneros* scored some important victories early in the conflict. After receiving the demands of the *Santa Junta*, Charles sought to regain control

of the situation by appointing the admiral of Castile, Fadrique Enríquez, and the *condestable*, Íñigo de Velasco, as co-regents with Cardinal Adrian. But it took some time for royalist forces to gather an army that could halt the uprising. The *comuneros* boasted an army of 15,000 men that included infantry and light artillery. By September 1520 their temporary military advantage allowed the *comuneros* to take control of the city of Tordesillas, where Queen Joanna the Mad resided. They claimed the figure of the emotionally troubled queen for their cause and relocated the *Santa Junta* to Tordesillas.

The royalists then took the offensive. In October and November 1520 the nobility coalesced behind the king and gathered their forces in the city of Medina de Rioseco. On December 4, 1520 the royalists regained control of Tordesillas, which was defended by a small group of clerics loyal to the bishop of Zamora. The leadership of the *Santa Junta* escaped the assault, but it was fraught with strife and dissension. Especially important was the rivalry between Juan de Padilla and the noble Pedro Girón, appointed commander of the *comunero* forces by the *Santa Junta*. Girón deserted the *comuneros*, following the trend established by his fellow nobles who formerly supported the uprising. By February 1521 Padilla had resumed leadership of the *comuneros* alongside Bishop Antonio de Acuña. Padilla's last major victory was the takeover of the village of Torrelobatón, a possession of Admiral Enríquez, on February 28, 1521.

By March and April 1521 fatigue and unrest were rampant among the *comunero* forces, after almost a year of continuous fighting. The royalists kept building momentum and increasing the size of their forces. Finally, the *comuneros* were defeated on April 23 at the Battle of Villalar. The *comuneros* were so exhausted that their rudimentary formations dissolved under the light artillery fire of the royalists. Juan de Padilla and a few other leaders were captured after a Quixotic assault on the royalists in the open battlefield. Padilla was summarily sentenced to death and beheaded the next day.

Padilla's widow, María Pacheco, and Bishop Acuña then took control of Toledo and the revolt continued until February 1522, when the royalists finally took the city. María Pacheco escaped to Portugal where she remained until her death. After a few skirmishes, Antonio de Acuña

succumbed to royalist justice. Emperor Charles V returned to Spain in 1522, where he stayed until 1529 and later retired to the monastery of Yuste in 1557. It was the task of his son Philip II (r. 1556–98) to consolidate the Hapsburg hold on Spain and its possessions.

The historiography of the *comunidades* has been convulsed by the subsequent history of Spain, as liberals and traditionalists have seen fit to interpret the uprising according to their respective ideological interests. Nevertheless, the 1963 work of José Antonio Maravall, *Las comunidades de Castilla* (*The “Comunidades” of Castile*), stands as an important landmark due to the careful attention he gives to the documents and pronouncements of the *Santa Junta* and other contemporary sources. Another important work is Pérez (1977). One of the least studied episodes of the uprising is the revolt led by María Pacheco in Toledo, explored in María Teresa Álvarez’s historical novel *La comunera de Castilla* (2007).

Concordia University student protests

Tom Keefer

Concordia University in Montreal, Quebec, has long been at the forefront of Canadian student

activism. On January 29, 1969, a group of students protesting what they alleged as institutional racism within the university occupied the ninth floor of the Henry F. Hall building until they were dislodged by riot police on February 11. The ensuing confrontation – the most serious student disturbance in Canadian history – saw most of the university’s student records destroyed as the computer lab went up in flames, resulting in the arrest of nearly 100 students. Some 30 years later, student activism at Concordia University was again in the headlines, this time for the prominent activity of anti-globalization and Palestinian solidarity activists.

Coinciding with a new wave of pan-Canadian student activism in the mid- to late 1990s, anti-capitalist activist Rob Green was elected president of the Concordia Student Union (CSU) in April 1999. His presidency ushered in a four-year period of political activity which saw a flurry of Concordia University student activities, many reported on by the mainstream media. From 1999 to 2001, the CSU organized a series of mass mobilizations on campus, including a two-day student strike which succeeded in lowering student fees by \$90 a year. Through the use of student referenda backed up by threats of direct action and protest, campus activists targeted university governance structures and successfully fought to remove corporations such as Sodexho-Marriott and Zoom Media from campus. The CSU also supported a wide variety of activist causes throughout Montreal, including mobilization efforts for the April 2001 protest against the Free Trade Area of the Americas in Quebec City.

With the eruption of the second Palestinian Intifada in September 2000, the large Muslim and Arab student population at Concordia began mobilizing in support of the Palestinian liberation struggle. The group Solidarity for Palestinian Human Rights (SPHR) became a major player on campus through its educational and activist events and formed an alliance with the predominantly white anti-capitalist activists on the CSU executive. As a result of this alliance, both groups were targeted by Zionist groups such as the B’nai Brith’s, which erroneously suggested that SPHR was linked to terrorist groups in the Middle East and that the CSU’s 2001 student agenda book was a “blueprint for Osama bin Laden’s youth program in North America.”

Perhaps the most infamous moment in this cycle of student protest came on September 9,

2002 when over 2,000 pro-Palestinian protesters came out to protest the presence of former Israeli Prime Minister Benjamin Netanyahu on campus. Police used tear gas and pepper spray to try to clear the protesters from the university, but a *mêlée* broke out and Netanyahu was stopped from speaking. Fanned by Zionist organizations and the mainstream media, the backlash from the Netanyahu protests led to the election of a right-wing slate in the March 2003 CSU elections and a decided downturn in campus political activity.

Condorcet, Marquis de (1743–1794)

Robert H. Blackman

Condorcet was known in his own life as a mathematician and political reformer. His lasting fame is as author of *Esquisse d'un tableau historique des progrès de l'esprit humain* (Sketch for a Historical Picture of the Progress of the Human Mind), published in 1795, one of the best expressions of Enlightenment-era optimism. Condorcet felt that by using the mathematics of probability, one could create a science of human behavior much as Newton had made a science of astronomy and physics. Realizing that human behavior was not as susceptible to certainty as

the movements of the planets, Condorcet supported democratic and liberal politics and public education. He defended women's rights and campaigned against slavery. Saint-Simon, Comte, and the nineteenth-century sociologists owed much to Condorcet's work. In the latter half of the twentieth century Condorcet's treatment of voting methods drew scholarly interest.

Condorcet was born into an ancient noble family in Picardy. He showed promise as a mathematician while young and attracted the patronage of Jean Le Ronde d'Alembert, co-editor with Denis Diderot of the *Encyclopedie*. Though Condorcet's family wanted him to become an officer in the king's cavalry, he instead moved to Paris and studied mathematics. In time he became a member of the Academy of Sciences and of the French Academy. He corresponded with Voltaire, knew Franklin and Jefferson, and may have had, through Jefferson, an impact on the American Bill of Rights. He was also close to A. R. J. Turgot, a liberal economic thinker who was controller of finance for Louis XVI between 1774 and 1776. After Turgot's ministry fell, Condorcet remained active in reform efforts and used his position as permanent secretary of the Academy of Sciences to promote the scientific method as a means to solve France's social and fiscal problems.

Condorcet ran for but was not elected to the Estates General of 1789. Active in Parisian politics, he helped found the Society of 1789 and became a member of the Jacobin Club. After Louis XVI attempted to flee Paris in June 1791, Condorcet's politics became increasingly radical. He was elected to the Legislative Assembly in 1791 and supported the Girondins. Following the Revolution of August 10, 1792, Condorcet was elected to the National Convention and largely wrote the new republican constitution. This constitution was set aside in 1793 after the Jacobins came to dominate the Convention. Condorcet denounced the new Jacobin constitution and his arrest was ordered. He went into hiding in Paris, but was captured in March 1794 when he sought refuge outside the city. Tradition has it that he was arrested when he mistakenly ordered a 12-egg omelet. He died in captivity before he could be returned to Paris for trial.

Confederación Nacional del Trabajo (CNT)

Eduardo Romanos

The CNT was an anarchosindicalist trade union in Spain which became a major labor organization and the beacon of international anarchism in the 1930s. It played a significant role during the Spanish Civil War, when its membership reached almost 2 million and engaged in the organization of a social revolution in the form of industrial and agrarian collectivization.

The CNT was founded at a congress organized in Barcelona between October 31 and November 1, 1910 by the Catalanian revolutionary syndicalist federation *Solidaridad Obrera* (Workers' Solidarity). The First Congress, held a year later in Barcelona, added local and provincial (*comarcal*) federations as well as regional confederations, expanding on the earlier idea of setting up national federations organized by craft, which probably indicated the influence of French syndicalist thinking on the need to form industrial unions. Soon after calling for a revolutionary general strike, the CNT was declared illegal, and the headquarters and unions were shut down, thus opening a period of underground activity that was to become normal throughout its history.

The movement did not begin to reconstruct itself until 1915, but a truly national organization had been built by 1918. The massive enrolment of anarchists increased resources and radicalized

This poster for the Confederación Nacional del Trabajo (National Confederation of Labor, CNT) was printed during the Spanish Civil War. As a confederation of Spanish anarchosindicalist labor unions, the CNT played a leading role in the Spanish labor movement. The poster commemorates the day on which the civil war and the ensuing social revolution began. In 1936 the CNT joined with other Republican groups opposed to the Nationalists. (Political Poster Collection, SP 96, Hoover Institution Archives)

the CNT, which was able to mobilize some major protests, especially among peasants in Andalusia and industrial workers in Catalonia. In February 1919 the strike organized in Barcelona in the Anglo-Canadian electricity generating company *La Canadiense* was promptly supported by workers throughout the sector, paralyzing production. In December of the same year the Second Congress claimed to represent almost 800,000 affiliates – the other national trade union, the socialist labor confederation *Unión General de Trabajadores* (UGT), had between 100,000 and 200,000 affiliates at that time. Hence, the previous equilibrium between the predominant trends of revolutionary syndicalism and anarchosindicalism was now tipped towards the latter.

However, the arrest of many leaders and the armed offensive of the employers' federation, including bands of gunmen, against members of the CNT radicalized opposing positions and facilitated internal strife. It was during this confusion that the Zaragoza Conference of 1922 declared that participation in the political process was one of the aims of the organization. Coming after a period of harsh repression, this moderate stance was only an ephemeral afterthought that went little distance towards unifying the CNT. Under the Primo de Rivera dictatorship (1923–30), two groups confronted each other around the ideological definition of the union: on the one side, the more syndicalist-oriented group who wanted a period of recuperation that would allow the confederation to recover from persecution and to be transformed into a powerful bloc defending workers' rights; on the other, the more anarchist, opting to maintain the aim of libertarian communism adopted in 1919 and thus remaining illegal, a position that legitimized outright opposition and ultimately revolutionary insurrection.

In January 1928 Joan Peiró, the general secretary of the National Committee, intervened in the conflict and proposed a parallel structure of unions and revolutionary groups of action. However, pressure from the authorities to accept the official union structures led him to oppose legalization. Peiró and his successor Ángel Pestaña were in contact with other opposition forces in the search for means to overthrow the dictatorship and substitute a federal republic that would grant an amnesty to political prisoners as well as guarantee individual and collective liberties – prerequisites for the envisaged CNT growth. On the other side, anarchists around the Federación Anarquista Ibérica (FAI), a safeguard organization of the anarchist definition of the union set up in 1927, defined both regimes as corrupt and explicitly opted for social revolution destroying bourgeois institutions.

Two months after the advent of the Second Republic in Spain (April 14, 1931), the confederation held the Third Congress in Madrid with 418 delegates representing 511 unions and 535,566 affiliates. The more syndicalist faction achieved resolutions recognizing the new political opportunities for constructive action and the creation of national federations within industry, in an attempt to adapt methods of struggle to the ever-increasing intensification of capitalism.

Nevertheless, the end of the Congress meant a new period of radicalization. The main factors shaping the direction of the CNT during this period were the abuse of coercive means by the authorities in a context paradoxically more open to mobilization; the nature of post-repression dissent to be used by those in favor of revolutionary confrontation with the republic; and, finally, the existence of organizational structures with lots of committees, bureaucracy, and little participation that hindered control of the insurrectionary methods promoted by sectors close to the FAI between 1932 and 1933. All this generated an atmosphere of hostility, on some occasions even of armed hostility, between the anarchists and the republic, where the former saw in the latter a political structure blocking the path to social revolution, and the regime saw the anarchists as enemies.

Internal tension ended with rupture in the summer of 1931, when some moderates signed a manifesto criticizing the idealized and mystifying vision of revolution defended by members of the FAI as well as their intervention as the ideological vanguard of the CNT. The so-called *treintistas*, who were the followers of the thirty (*treinta*) leading anarchist signatories, were expelled from the confederation and they set up a new, parallel trade union, the Federación Sindicalista Libertaria. They were readmitted in the Fourth Congress held in Zaragoza in May 1936 that defined both the possibilist syndicalism and the revolutionary insurrections as tactical errors and established a new way to confront the state in the union with UGT, although the socialist trade union should have previously abandoned parliamentary and political collaboration.

The Spanish Civil War (July 17, 1936–April 1, 1939) represented the apogee of the CNT, but ended in severe and cruel repression. The anarchosyndicalist trade union and the anarchist federation, from then on under the joint title CNT-FAI, controlled different cities and regions after having defeated the military uprising that sparked the war, and promoted industrial and agrarian collectives, especially in Catalonia, eastern Aragon, and Valencia. This form of revolutionary production was based on the “concept of libertarian communism” approved in the Congress in Zaragoza. Aiming to combine Kropotkin's sense of equity and Bakunin's belief in spontaneity, this formula envisaged a free society where “voluntary duty” would guide

collective action towards a federation of workers' unions and free meeting of autonomous communes. However, early problems arose in the making of revolution during wartime. Members of the CNT-FAI joined the Catalonian government on September 26, 1936, and the Republican one a week later. They occupied these posts aiming to avoid "strangling the revolution," but power transformed them into instruments of liberal legalism and curbs on revolution, as Peiró indicated soon after leaving his post as minister of industry.

The famous May Days of 1937, when anarchists and members of the dissident communist party Partido Obrero de Unificación Marxista (Workers' Party of Marxist Unification) (POUM) fought on the streets of Barcelona against Catalan communists and the Republican police, signaled the distance between the leaders and the union rank and file, who accused them of giving in. As a result, a new government was appointed under the parliamentary socialist Juan Negrín and without the participation of the CNT-FAI. After this "civil war within the Civil War," state troops dismantled revolutionary collectivization as well as the local and regional organs of workers' power (e.g., the libertarian-controlled governing Council of Aragon). The new government's decrees militarized the libertarian militia and imposed central control on industry. The military, political, and social force of the CNT declined, along with the FAI and the Federación Ibérica de Juventudes Libertarias (FIJL), which in October 1938 came together to set up the Movimiento Libertario (ML).

With the end of the war the Francoist regime brutally repressed the members of the ML, rendering the member organizations illegal along with *Mujeres Libres*, the female branch of the movement. In addition, the libertarian *ateneos*, which up to this point had constituted a network of cultural and educative centers, were shut down. A new, tragic rupture came in 1945 when the official CNT-in-exile disavowed the decision to join the republican government-in-exile. In 1947 the maximalists in exile underwent a process of radicalization through which they came to define any republic as a mere "transfiguration of the authority principle," proposing traditional isolation from the political "game" and revolutionary insurrection as the sole revolutionary means, and aiming for libertarian communism without transitional stages. This ideological

paralysis was criticized by numerous affiliates, some of whom set up dissident platforms after being expelled, and finally distanced the youth from the trade union.

In Franco's Spain the member organizations of the ML regrouped around the remains of the CNT, which, contrary to the exiled organization, defended the replacement of social revolution with more concrete mobilization principles based on the defense of the personal and public liberties and rights denied by the dictatorship. The clandestine confederation transformed past anarcho-syndicalism into a more politically orientated one, and past revolutionary alliances into new ones with political opposition forces that aimed at national liberation. By opting for the search for diplomatic solutions to Franco, the committees disavowed the armed guerrilla, or at least did not support it. Without any strong support in Spain or abroad, and after the victorious nations of World War II refused to help overthrow the dictator, the organization's own failure to adapt to clandestine structures and recruitment paved the way for repression that finally devastated resources. By 1949 fourteen National Committees had fallen, dragging down regional and local counterparts with them.

From the late 1940s the CNT remained latent, and in the mid-1960s some veterans thought collaboration with dissident *falangistas* could transform the official trade union into an autonomous, independent, and eventually anti-Francoist force. They reformulated anarchosyndicalism into a kind of "humanistic syndicalism," attempting to attract a new generation of workers. Nevertheless, the libertarian youth disapproved of the ideological direction taken by the elders towards moderate positions regarding formal democracy and the state, as well as the radical but obsolete discourse of the official CNT-in-exile. Some tried to convene meetings at which unified criteria would bring together those who had fought in the Civil War and those who had grown up under the influence of the international protest mobilization of 1968, but these failed to yield results.

After Franco's death in 1975 the transition to democracy saw a quick recovery of the CNT's affiliates and unions, especially in Catalonia, but again internal strife defused energies. From 1979, and after other minor splits in the 1990s, the official CNT attracted more orthodox members and became a sort of association focused

on preserving its cultural legacy, while the more reformist elements were forced to change title in 1989, becoming the Confederación General del Trabajo (CGT), which chose to take part in trade union ballots and industrial committees. Both the CNT and the CGT have set up cultural foundations which hold documentary archives and publish texts on the history of anarchism and anarcho-sindicalism in Spain. Another important documentary institution is the International Institute of Social History in Amsterdam, which holds the official archives of the CNT and the FAI during the Spanish Civil War, as well as personal papers given by militants.

Confédération Générale du Travail and Syndicaliste Révolutionnaire

Jean-Philippe Zanco

After the Waldeck-Rousseau Act of March 21, 1884 legalized the *syndicats* (labor unions), a Fédération Nationale des Syndicats (National Federation of Unions) (FNS) was created in Lyon in October 1886, the first to try to unify

the unions in a single movement. It quickly went through internal struggles: laborers, in fact, still lacked a clear ideology. Soon, however, the rise of anarchist ideas smoothed out ideological oppositions. The principle of the general strike, first proposed by the construction workers at the Congress of the FNS in Montluçon (1887), was massively endorsed at the Congress of Nantes (1894). A meeting called by the FNS and its rival the Fédération des Bourses du Travail (the Federation of Labor Exchanges, or FBT, run by the anarchists), about 30 local federations, 10 national professional federations, 20 labor exchanges, and 126 local craft chambers or union branches, met in Limoges on September 23–28, 1895. The Congress decided: “Among the various labor and professional associations of workers and clerks . . . is established a united and collective organization which will be called the Confédération Générale du Travail [CGT].”

But unity was far from absolute, and the first years of the young union were stormy; the FBT and its charismatic leader, Fernand Pelloutier, remained in the light of the CGT and its ephemeral secretaries (four in three years). In 1901 Pelloutier died and some new figures emerged at the CGT, like Emile Pouget and Victor Griffuelhes (secretary general from 1901 to 1909), both anarchists. The FBT soon decayed and the Bourses du Travail finally merged in the CGT, at the Congress of Montpellier (September 1902).

Neither the Congress of Limoges nor the Congress of Montpellier had defined the program of the CGT. From 1902 to 1906 Griffuelhes defined some main points, so as to write down the ideology of the CGT: the blame of capitalism, but also strong opposition to state and to political action (which was leading syndicalism away from Marxism and from parliamentary socialism); definition of specific means of struggle; anti-militarism. As can be read in the CGT’s founding document, the *Charte d’Amiens* (October 1906), the CGT’s syndicalism aimed at a deep transformation of the social order: “On one side, it prepares for complete emancipation, which cannot be realized without the expropriation of the capitalists, and on the other side, it recommends the general strike as a mode of action and it regards that labor unions, from resistance movements they are nowadays, will become in the future production and distribution groups, bases of a social reorganization.”

The first general strike was planned for May 1, 1906, to call for an 8-hour day, but an accident in Courrières on March 10 which killed 1,200 miners rushed the movement: 40,000 miners refused to go back to work, and they rapidly were joined by 200,000 strikers in all industrial branches. For the first time in its history, the CGT, which counted up to 400,000 members, was showing its capacity for actions of broad scope. The government feared a civil war, and the home secretary, Georges Clemenceau, used rough tactics: Griffuelhes was arrested, the army stopped the miners' strike, and minor union officials (clerks, postmen, schoolmasters) were fired. The years 1906–9 can be called the climax of anarchosyndicalism in France, which saw strikes and demonstrations across the country, rebellions in the army, spectacular actions from union workers such as the electricians led by anarchosyndicalist Emile Pataud, who switched off the current in Paris in March 1907, as well as violent government reactions and police brutality. In 1908, 667 workers were wounded, 20 killed, and 392 fired.

Nonetheless, after 1909, the movement declined. With the evolution of labor laws (Workers Pensions Act in 1910), the workers gradually accepted parliamentary rules and got closer to the political parties, particularly the French Communist Party and the SFIO (Section Française de l'Internationale Ouvrière, the French Section of the Workers' International, founded in 1905), while the rate of registrations at the CGT was slowing down. In 1913 the CGT failed to stop the law dictating three years' military service; a few months later, the SFIO won the elections.

The meaning of revolutionary action was becoming confused, and World War I and the Russian Revolution enlarged the fractures. Léon Jouhaux, who had managed the CGT since 1909, joined the Union sacrée supporting the war, but met with internal resistance from some factions which refused to renounce revolution. In 1909 Pierre Monatte published a new journal, *La Vie ouvrière* (*Worker's Life*), hoping to represent the CGT more accurately by showing its syndicalist revolutionary aims. In 1919 he created the *Comités syndicalistes révolutionnaires* (Revolutionary Syndicalist Committees) (CSRs), which would move the dissident militants away from the CGT at the Congress of Tours (1922), founding the Confédération Générale du Travail

Unitaire (Unitary General Confederation of Labor) (CGTU). But the CGTU, soon captured by the Leninists, joined the Red International and submitted to the Communist Party. The anarchists, in a minority, left the movement, and founded in 1924 the Confédération Générale du Travail Syndicaliste Révolutionnaire (Revolutionary Syndicalist General Confederation of Labor) (CGT-SR), led by Pierre Besnard.

The CGT-SR militants never numbered more than a few, but the organization had some influence. They engaged in syndicalist action, especially through the strikes of June 1936, but also in anti-colonialist action, with some limited demonstrations (during the Exposition Coloniale Internationale in 1931 and the centenary of French Algeria in 1930). They were particularly active in the area of Toulouse, where many Spanish workers had taken refuge, some coming from the Confederación Nacional del Trabajo (National Confederation of Labor) (CNT); some French militants went to Spain to fight in the International Brigades. Above all, the CGT-SR had some ideological influence. While the CGT and the CGTU went on to refer to the Charte d'Amiens, the CGT-SR tried to define, in the Charte de Lyon (November 1–2, 1926), some new purposes for syndicalist action, closer to the anarchist ideology, that would directly influence the founders of the CNT in 1946.

Congo armed insurgency, Mobutu decamps

Adebusuyi I. Adeniran

The Democratic Republic of Congo gained full independence from Belgium in June 1960 as the Republic of the Congo. After a series of political upheavals, Colonel Joseph-Désiré Mobutu took control of the country in 1965. He eventually institutionalized a presidential system of government in 1970 when he was old enough to become the nation's president. To further his hold on power, President Mobutu changed the name of the country from Congo to Zaire (*Zadi*, "big water"), and his own name to Mobutu Sese Seko in 1972. Also in 1972, Mobutu's Popular Movement of the Revolution (MPR) became the only legal political party in Zaire.

Upon reelection for a second term of seven years in 1977, President Mobutu provided the platform for tangible sociopolitical reforms, having to contend with two potent revolts from the Shaba region of the country between 1977 and 1978. These uprisings were instigated by the Congolese National Liberation Front (FNLC) from their base in Angola. However, with the support of Morocco and other western allies (France and Belgium), the revolts were successfully crushed. In 1984, "Marshal" Mobutu won another (third) term of seven years as president.

In the context of mounting international condemnation of most of Mobutu's policies, disgruntled soldiers and protesters unleashed havoc on settlements in Zaire in September 1991. Mobutu thereafter agreed to incorporate the opposition into an emergency governmental arrangement. Opposition leader Etienne Tshisekedi of the Democratic Union for Social Progress was appointed prime minister by Mobutu in September 1991. Barely a month later, Mobutu dismissed Tshisekedi over irreconcilable differences. Tshisekedi subsequently set up an alternative opposition government to Mobutu's.

Amidst intensified local and international pressure to relinquish power, Mobutu declared his intention to remain as president after the end of his third term in office in December 1991. In spite of his reluctance, Tshisekedi was

reinstated as prime minister in August 1992. Just two months later, a massive insurrection erupted following Mobutu's disapproval of political restructuring. A makeshift parliament – the High Council of the Republic (HCR) – was established in December 1992. However, Mobutu's failure to recognize the HCR led to the emergence of a parallel government under the HCR's firm grip. A truce was eventually struck between Mobutu and the HCR in June 1994, with Kengo Wa Dondo emerging as the new prime minister.

A conceptual impetus for the intensification of social struggles in the Congo was the massive exodus of well over two million Rwandan nationals (Tutsis), who were escaping genocide at the hands of the Hutu majority into the Congo in 1994. Other factors that contributed to the country's steady drift towards anarchy included the outbreak of the deadly Ebola virus in parts of the country in 1995, and persistent ethnic skirmishes and secessionist agitations. However, when the new Rwandan regime dislodged the Hutu militiamen, an estimated 500,000 refugees moved back to Rwanda in 1996 after two years in exile in Congolese refugee camps.

A rebellion instigated by Tutsi rebels among the Banyamulenge ethnic group of eastern Congo in October 1996 was fiercely resisted by the military on the orders of Mobutu, whose power was already beginning to wane. As a consequence, all Tutsi refugees were forced to vacate their camps and civilians had to flee their homes hurriedly or face the death penalty. This act was to be Mobutu's undoing in his bid to perpetuate himself in power. The Tutsis were bitter at Mobutu's open support for the Rwandan Hutu extremists who were responsible for the genocide in 1994. Another rebellion was to occur among the Banyamulenge at Southern Kivu. In addition, insurrections were being instigated by other disgruntled ethnic groups. Although an interim ceasefire was secured in November 1996, tensions were obviously mounting all over the country. The planned deployment of an international United Nations peacekeeping force in the country was suspended.

With the support of President Yoweri Museveni of Uganda and Rwandan minister of defense Paul Kagame, the Tutsis made a final attempt to oust Mobutu in November 1996, joining forces with locals opposed to a

continuation of Mobutu's despotic rule. In late 1996, an insurgency targeted at ousting Mobutu was launched by Laurent-Désiré Kabila, who led the Alliance of Democratic Forces for the Liberation of Congo (ADFL). By March 1997, the strategic city of Kisangani and many other parts of the Congo were already under the control of the rebels. By April 1997, both Mbuji-Mayi, the country's diamond headquarters, and Lubumbashi, its second largest city, had also fallen to the rebels. All attempts by Mobutu to continue in power – even the imposition of a state of emergency – were futile in the face of the rebels' advance. In April 1997, an interim assembly returned the former prime minister, Tshisekedi, to his post.

These multiple upheavals eventually led to the ousting of Mobutu in 1997 by the rebel forces under the control of Kabila, who seized power and rechristened the country the Democratic Republic of Congo. Despite Mobutu's overthrow, hostilities remained, particularly in the eastern part of the country. Natural resources, especially diamonds, continue to be a source of contention among various countries, private companies, and liberation forces.

Congo, Brazzaville protest and revolt

Ayokunle Olumuyiwa Omobowale

Congo Brazzaville was part of the pre-colonial kingdom of Congo, which came under French rule during colonization. Principally, anti-colonial protests in Congo Brazzaville were centered

on the activities of charismatic leader Andre Matswa and the protests and ideology that followed his incarceration and eventual death.

Andre Matswa and the Pan-African Amicalist Movement

Andre Matswa was born in 1899 and received primary education from a Christian missionary school at Brazzaville. He departed for France in 1921, where he was conscripted to serve in the French army. He was consequently deployed to Morocco where he served as a soldier in the War of the Rif against Moroccan insurgents. It was while serving in Morocco that Matswa developed strong anti-colonial sentiments based on his experience at the war front.

After honorable discharge in 1926, Matswa founded the Association amicable des originaires de l'AEF, also known as the L'Amicale, in Paris with an objective of assisting underprivileged Congolese. The organization was also supported by the French Communist Party and gradually evolved from a humanitarian organization into a nationalist movement, with Matswa calling for reforms and the abrogation of inhumane colonial laws. Within a period of three years, L'Amicale garnered a large membership and spread across France and Africa, with about 13,000 members in French Equatorial Africa alone.

With anti-colonial consciousness growing among the Congolese population and Matswa's increasing popularity, French authorities began to get nervous and arrested Matswa in France in 1928, sentencing him to three years imprisonment in 1929. His incarceration resulted in widespread anti-colonial protests in the Congo among his followers, with local chiefs calling for civil disobedience. The protests were brutally suppressed by French forces, resulting in many deaths. Local chiefs who were arrested were publicly executed at the town square in 1940 on the orders of Felix Eboué, the colonial governor. Other followers were sentenced to manual labor and used in the construction of Congo-Ocean railroad, where tens of thousands died. Matswa, along with some of his lieutenants, served part of his prison term in Chad but managed to escape. He relocated to France and once again joined the army. He was subsequently rearrested and repatriated to the Congo. He was again tried and sentenced to life imprisonment in 1940 and was killed in prison in 1942.

The death of Matswa made him a messianic martyr. His anti-colonial belief system became a radical ideology attracting many converts who carried on his legacy clandestinely. It was utilized most especially to campaign against and resist the conscription of the Congolese into the French military during World War II.

Post-Matswa Protest and Independence

As the country moved towards independence in the 1950s, a young Catholic priest, Abbe Fulbert Youlou, emerged with the ideology of Matswa, gaining prominence as his successor. He formed the Union Democratique Pour la Defence des Interests Africains (UDDIA) in 1956. The UDDIA secured a strong representation in the Congolese parliament from 1956. Youlou eventually became the first president of Congo at independence in 1960.

Congo Crisis, 1960–1965

Ayokunle Olumuyiwa Omobowale

Just like many other countries in Africa, Congo's independence came in 1960. It was a time of joy and high expectations among the citizenry, who felt it to be the dawn of a new era. It was supposed to usher in a period of progress for the Congolese and in particular the military non-commissioned officers and junior civil servants who had hoped for the attainment of senior positions. Indeed, this was part of the campaign promises of the main political parties, particularly Patrice Lumumba. A frontline politician with only primary education, Lumumba,

as leader of the Mouvement National Congolais (MNC), had promised equality with the whites upon independence. After he became prime minister, he faced a number of challenges to keeping his promise.

Calamitous Independence: Mutiny, Secession, and Lumumba's Struggles

Right from the independence ceremony, the conflictual nature of the relationship between the new government led by Lumumba and Belgium played itself out. After Belgian King Baudouin delivered a speech celebrating the achievements of his country in Congo, Lumumba climbed the podium to debunk the king's claims, instead discussing the debilitating effect of colonial rule. This shocked the king and presented Lumumba as an anti-Belgium leader who could not be trusted.

On July 5, 1960, barely five days after independence, Congolese soldiers mutinied against their Belgian officers after the head of the army, General Emile Janssens, reportedly addressed soldiers by informing them that for the army, the status quo would remain, irrespective of independence. Holding to the status quo was not a situation the soldiers could endure, for they had hoped for promotion and improvement in their socioeconomic status with independence. The mutiny started at a military establishment in Thysville and quickly spread to other bases, with disgruntled soldiers attacking their officers and members of the European community, who they perceived as would-be masters unwilling to let go and accept Congolese freedom.

Lumumba's response was the sack of General Janssens on July 6 and an order for the Africanization of the officer corps on July 8. The ensuing pandemonium sent shock waves throughout the Belgian community, who realized they were no longer safe in the hands of erstwhile obedient subjects. Thus, the Europeans embarked on a mass exodus, except in Katanga, the area that accommodated the bulk of Belgian economic investments. The province of Katanga thus largely created a safe haven for the Belgians as they retained their positions in both the military and civil service. Subsequently, Katanga province, under the leadership of Moise Tshombe, declared its secession on July 11, with Tshombe appealing to Belgium for technical and financial

assistance. Of course, Belgium quickly dispatched troops to Katanga to secure its population and economic interests and to prop up the only provincial government whose support it enjoyed.

For Lumumba, the presence of Belgian troops in Katanga indicated a renewed effort at colonization, with the Europeans clearly planning to keep and exploit the resource-rich province, which provided about half of the country's income. Lumumba and Joseph Kasavubu, the president, appealed for the intervention of the United Nations (UN), which on July 14 condemned Belgian intervention in Congo and called for an immediate replacement of its troops with UN forces. On July 15 the first contingent of the United Nations Organization in the Congo (UNOC) troops landed in the Congo, and Belgium withdrew its soldiers from much of the country but retained its strong presence in Katanga, insisting that it was its right to protect its citizens and their interests.

Prime Minister Lumumba seemed to think that UNOC troops were around to subject Katanga to central authority and bring the whole country under its control. UN Secretary General Dag Hammarskjöld soon made him realize that the troops were not there to do his bidding and would not force any province into subjection to central authority. When UNOC troops eventually marched into Katanga on August 12, many Belgian soldiers did not actually leave. They only changed their uniform for that of the former colonial army, while the Belgian-trained Katanga army also remained in force. Hence, Katanga secession was not terminated, while it also continued to enjoy support from the Belgian government and business organizations. In particular, a UN report actually indicated in 1963 that a major Belgian conglomerate, Union Minière, financed the Katanga government to the tune of about \$40,000,000 per year, with the bulk of the funds expended on "hiring mercenaries and equipping them" (Gibbs 2000: 369). With Katanga's secession sustained in spite of the presence of UNOC troops, South Kasai province, which accommodated a major Belgian diamond mining company, also opted to secede in August 1960.

As Lumumba lost grip of the economic nerve centers of Congo and failed to gain UNOC and western support in terms of equipment and personnel to suppress the secession, he opted to seek help from the Soviet Union, the main rival

of the United States and other western powers during the Cold War. Of course, Soviet assistance came in the form of military hardware and personnel. This, however, earned Lumumba the displeasure of the western powers and he was seen as a communist agent in Africa who had to be divested of power. At first, this came via a proclamation of President Kasavubu, who sacked Lumumba on September 5 and replaced him with Senator Joseph Ileo. Lumumba's spirited efforts to ensure a reinstatement seemed to be working, as he successfully defended his decision to employ Soviet assistance before Parliament on September 7. He won the support of Parliament, which also overturned his dismissal. As the ensuing stalemate continued, Lumumba's supporters set up a rival government in Stanleyville in November, with a part of the national army offering its allegiance.

Subsequently, Lumumba tried to move from Leopoldville, where he was protected by UNOC troops, but was captured by the Congolese army in November. On January 17, 1961 Lumumba was murdered under circumstances that were described then as mysterious, but which recently declassified documents show was highly influenced by western powers, who were uncomfortable with Lumumba's association with the communists and his popularity both domestically and internationally.

Post-Lumumba Congo, 1961–1965

The death of Lumumba did not bring an end to the Congo imbroglio. Rather, it caused widespread international and local condemnation. To an extent, the Lumumbists retained their stronghold in Stanleyville, and the UN tried to resolve the conflict by requesting Congolese politicians to return to government and deal with foreign intervention in the country. After numerous negotiations, political leaders in both Leopoldville and Stanleyville formed a coalition government and conceded the position of prime minister to moderate Cyrille Adoula.

The two seceding provinces remained outside the authority of the central government until 1962 and 1963, when South Kasai and Katanga discontinued their secession, and Katanga leader Tshombe went into exile to Spain. However, by 1964, with UNOC troops preparing to withdraw by June 30, the country was again threatened with civil war, as the political leaders in Leopoldville

and Stanleyville took up arms. Tshombe, who had proved his worth as a strong leader with effective military force, was invited from exile to head a new government as prime minister. With the aid of military assistance from the United States and the use of mercenaries, Tshombe once again engaged the Lumumbists and effectively defeated them despite the support they got from African governments.

By 1965 Tshombe, overwhelmed by the victory, sought to occupy the presidential seat Kasavubu was still holding. Kasavubu sacked Tshombe, just as he had sacked Lumumba. This led to the kind of crisis that followed Lumumba's sack. In the midst of this confusion, Colonel Mobutu, the head of the army, staged a coup that brought him to power on November 24, 1965.

Congo, Kinshasa protest and revolt

Ayokunle Olumuyima Omobowale

Congo had been in contact with Europe, especially the Portuguese, as far back as the fifteenth century, but it remained an independent kingdom

until it officially came under French and Belgian rule in 1885. At that point the Congo, which was 80 times the size of Belgium and extended over 9,000,000 square miles, came under the rule of the Belgian king, Leopold II. Christened Congo Free State, the territory was treated as a private estate of the king until it was taken over by the Belgian parliament for direct administration after the atrocities committed by officials of the king, which generated widespread international and domestic criticism. Due to the Belgians' particularly brutal and oppressive rule in the Congo, major popular protest did not emerge until late in the 1950s.

Political Awareness and Agitation for Independence

From the beginning of its colonial administration in the Congo, the Belgian government had a policy that favored the provision of amenities and possible reform of the ways of life of the local population without exposing them to ideas that would encourage agitation for “liberty or self-determination” (Hallet 1974: 454). Thus, though primary and secondary education in the local languages were emphasized, the Congolese were not allowed to proceed to university education in Belgium, where they could have been exposed to liberal thought, until 1952, and independent newspapers were not allowed until 1957. Of course, this meant the Congo could hardly produce qualified personnel to take over from Belgian officials, and pro-independence agitation was uncommon.

Agitation for independence did not commence until 1956. It was pioneered by the Alliance des Ba-Kongo (ABAKO). ABAKO was established in 1951 as a sociocultural organization. It remained largely that until August 1956, when it transformed into a political party and publicly clamored for immediate independence under the leadership of Joseph Kasavubu. Kasavubu's popularity and victory in local elections in 1957 attested to the people's desire for self-determination and independence. Subsequently, a plethora of largely ethnic-based political parties sprang up. Two of the major ones, both founded in October 1958, were the Confederation des Associations Tribales du Katanga (CONAKAT) with Moïse Tshombe as leader and Patrice Lumumba's Mouvement National Congolais (MNC). Of the three main parties only

Lumumba's MNC reflected the form of a national party, as the other two enjoyed popularity more from the political bases of the leaders. Nevertheless, the stage was set for greater political agitation by the Congolese.

Upon returning from the All-African Peoples' Conference held at Accra in December 1958, Lumumba addressed a crowd of faithful in Leopoldville where he declared that independence was the fundamental right of the Congolese and not a mere gift. This declaration attracted a shout of support from the audience, whose mind and consciousness henceforth tuned more progressively towards self-determination and independence. Within two months (December 1958 to January 1959) there were mass protests against the colonial authorities in Congo, as well as international pressure on Belgium. On January 13, 1959 Belgium finally announced its resolve to grant independence.

In the parliamentary election held in May 1960 no party won a clear-cut majority, even though Lumumba's MNC won the highest number of seats in the National Assembly – 33 out of the 137. This lack of an outright winner meant a coalition had to be formed. The ABAKO and the MNC formed a coalition government with Kasavubu as president and Lumumba as prime minister and head of government. Just a week after the government was formed, Belgium formally granted independence to Congo on June 30, 1960.

Post-Independence Anti-Colonial Protest

Unlike other colonial territories in Africa, Congo's major anti-colonial protest actually commenced just five days after independence. It plunged the country into widespread violence, killings, and attempts at secession. Apparently due to the sudden transition which Belgium had to embark on, the option adopted was the quick election of political officials who would take up positions in parliament and government. However, the other major arms of governance, including the military and the public service, remained under the firm control of Belgians.

Out of the 10,000 top positions in the public service, only three were held by Congolese. Likewise, among the country's 25,000 troops, all the 1,000 commissioned officers were Belgians, while all the non-commissioned officers were

Congolese. Aside from their perceived lowly positions in a country they viewed thenceforth as theirs, and from which they should enjoy the "dividends" of independence, their salaries remained low, with little hope of an immediate promotion into the senior officers' cadre. The argument against their promotion was that they did not have the requisite qualifications. This was inevitable, however, given the Belgian educational policy of exclusion. Thus, by independence, Congolese university degree holders numbered about thirty. For this small number of Congolese, the argument was not tenable. They had seen politicians who hitherto shared the same educational and social statuses with them experience upward social mobility as they clinched elective posts.

Thus, on July 5, 1960, after noticing some acts of insubordination among the rank and file, the Belgian head of the Congolese National Army, General Emile Janssens, summoned a meeting of military personnel, during which according to Young (1966: 34) he wrote: "AFTER INDEPENDENCE = BEFORE INDEPENDENCE." Apparently, this was meant to emphasize that command and control in the military had to be upheld in spite of independence. It seemed to have conveyed the meaning of a continuation of colonial rule irrespective of independence to the Congolese non-commissioned officers. Such a continuation would then mean retention of non-commissioned ranks among junior officers. Later that day, soldiers at a military garrison in the capital refused to carry out orders from European officers and arrested them instead. The mutiny subsequently spread to other barracks as the insurrectionary soldiers demanded to be promoted, even as they participated in attacks targeted against Europeans.

On July 6, General Janssens was sacked, then a total Africanization of the officer corps was ordered on July 8 by the Lumumba government. These actions did not bring an immediate peace, however. Ensuing events eventually resulted in attempted secession by Katanga and Kasai provinces, the deployment of Belgians to shore up Katanga's pro-Belgium government, the mass exodus of European civil servants, the deployment of the United Nations' Peacekeeping troops, the sacking of Lumumba on September 5, 1960, and his capture in November 1960 and subsequent killing on January 17, 1961. The conflict continued until 1965.

Congo, protest and uprisings, 1998–2002

Adebusuyi I. Adeniran

With the exit of “Marshal” Mobutu Sese Seko from the presidency of former-Zaire in May 1997, and the immediate ascendancy of the leader of the Alliance of Democratic Forces for the Liberation of Congo (ADFLC), Joseph-Desire Kabila, the social and political instability that marked Congo’s independence era from Belgium in June 1960 persisted even more intensely. Various protests and uprisings in the Congo between 1998 and 2002 have been called the Second Congo War or Africa’s World War. Eight African nations (Angola, Burundi, Chad, Namibia, Rwanda, Sudan, Uganda, and Zimbabwe) were directly involved, with an estimated 30 armed groups at war in the Congo. The number of recorded casualties made the conflict the deadliest global altercation since World War II. Although the conflict officially ended with the signing of the Sun City Agreement in South Africa in April 2002, avoidable cases of malnutrition and disease arising from intermittent clashes have often led to the deaths of hundreds of Congolese daily. The post-Mobutu altercations in the Congo are estimated to have cost well over 5 million human lives.

On August 2, 1998 an insurgency targeted at the overthrow of President Kabila was championed by the Banyamulenge from eastern Congo. From mid-August 1998 the Rally for Congolese Democracy (RCD) emerged as the platform for

advancement of further rebellions. The RCD quickly assumed control of major resources in the eastern region of the Congo, a part of which was occupied by Rwandan forces. President Kabila, reacting to this occupation and having secured the support of Hutu militiamen from eastern Congo, launched a campaign of extermination against the Tutsis.

While Rwanda claimed that portions of eastern Congo “traditionally” belonged to it and justified its involvement in the rebellion, the Congolese alerted citizens to the need to arm themselves “in order to kill the Rwandan Tutsis.” Within a month of its formation, RCD mutineers successfully hijacked a plane and terminated the operation of the crucial Inga hydropower station supplying electricity to the Congo capital city of Kinshasa and port of Matadi, where which food arrived for the city. Also, in the key city of Kisangani, diamond-industry headquarters were captured by the rebels in quick succession. By late August the rebel army had advanced appreciably on Kinshasa.

The increasing likelihood of Kabila’s overthrow kept him clamoring desperately for support from other African countries. Angola, Namibia, and Zimbabwe – member countries of the Southern African Development Community (SADC) – were the first to heed his call. Chad, Libya, and Sudan offered support. In September 1998 Zimbabwean forces assisted in repelling the invasion of Kinshasa by advancing mutineers. Angolan troops were to lay siege to the rebels’ stronghold from northeastern Angola. These counterinsurgencies warded off rebel advances on Kinshasa and granted Kabila’s government interim stability, but failed to end rebel incursions.

The Movement for the Liberation of Congo (MLC) emerged in November 1998 as a new rebel group on the northern flank of the Congo, backed by the Ugandan government. Despite a ceasefire agreed among Angola, Uganda, Rwanda, Namibia, and Zimbabwe at a meeting held at Windhoek, Namibia in January 1999, insurgencies intensified, especially from the RCD members who were conspicuously absent from the meeting. The self-interested concern of non-African countries such as the United States, Canada, and Japan for Congo’s diamond industry also worsened the crisis.

Irreconcilable differences within the RCD led to the disintegration of the group in April 1999, and of course, the proliferation of crises.

Subsequent fights among the rebellious factions for the control of the critical city of Kisangani led to the deaths of many people. Equally, the strategic creation of the Ituri province by President Museveni in Uganda intensified the conflagration.

A ceasefire attempt – the Lusaka Ceasefire Agreement – was facilitated in July 1999 by six of the warring nations: Angola, Congo DR, Uganda, Rwanda, Namibia, and Zimbabwe. While the RCD refused to be a party to the agreement, the MLC eventually gave its consent on August 1, 1999. The United Nations' Security Council immediately deployed essential personnel to help hold the ceasefire. However, by September 1999 all parties to the agreement had begun accusing one another of flagrant contravention of the agreement. It was apparent that fighting would resume at any moment.

More altercations had erupted in early August consequent upon mounting tensions between the Uganda People's Defense Force and the Rwanda Patriotic Army. In November 1999 a massive attack was launched towards Kinshasa by the Rwandan insurgents, quickly repulsed by government forces in collaboration with Ugandan troops. The approval and subsequent deployment of more than five thousand troops by the United Nations on February 24, 2000 could not curtail the fighting between the Ugandan and Rwandan troops on one side, and the rebels and government troops on the other.

In mid-2000 there were several uprisings and offensives, particularly between Rwandan and Ugandan forces in and around Kisangani. On August 9, 2000 the MLC rebels violently repelled an offensive instigated by government troops in the province of Equateur, along the Ubangui River. All efforts to resolve the crisis failed throughout 2000.

On January 16, 2001 President Kabila was shot by an assassin from among his own aides and died two days later after flying to Zimbabwe. The killing was thought to be instigated by disgruntled allies. Laurent Kabila's son, Joseph, was unanimously elected by the Congolese parliament as the next president. In February 2001 the new president and Rwanda president Paul Kagame met in the United States. Thereafter, Ugandan and Rwandan authorities began withdrawing troops from the front line.

The Sun City Agreement put in place in April 2002 provided for a multiparty democracy

in the Congo. Roundly criticized for failing to provide for the amalgamation of various armed groups, the agreement nevertheless facilitated a substantial reduction in armed hostilities. A peace accord – the Pretoria Agreement – was reached between Rwanda and Congo DR in Pretoria, South Africa on July 30, 2002. This settlement led to the withdrawal of Rwandan troops from Congolese soil. On October 21, 2002 the Luanda Agreement reached by Congo DR and Uganda facilitated the withdrawal of Ugandan troops from the Congo.

The Global and All-inclusive Agreement which was projected to result in the formation of a transitional government, and indeed, in general elections within two years of its signing was agreed upon by all parties on December 17, 2002.

Connolly, James (1868–1916)

William H. Mulligan, Jr.

James Connolly was an Irish labor organizer and socialist, and a leader of the 1916 Easter Rising. Connolly was the most ideologically sophisticated of the insurrection's leaders and the most sensitive to the needs and concerns of the Irish working class, which he saw in an international, rather than purely Irish, context.

James Connolly was born in the Cowgate section of Edinburgh, Scotland, on June 5, 1868. His parents had emigrated from County Monaghan, Ireland, to Scotland in the 1850s. He attended St. Patrick's School but left school at an early age to work as a "printer's devil" at one of Edinburgh's newspapers. He joined the British army in 1882 and served in Ireland for most of his seven years in the military, which gave him a close look at how the British domination of Ireland operated

in practice. Connolly was largely self-educated. He read Marx and Engels carefully and used their work as the basis of his own critique of British and Irish society. Connolly blended socialism, Irish nationalism, and Catholicism into his own program for revolutionary change in Ireland.

In 1889 he returned to Scotland, having (as one writer put it) “discharged himself” from the army, and became active in Scottish socialist politics and Keir Hardie’s Independent Labour Party. Like his father and brother, he took a job as a casual laborer, working for the Edinburgh Corporation cleaning manure from the streets. He replaced his older brother as secretary of the Scottish Socialist League in 1895 and moved to Dublin the following year, where he established the Irish Socialist Republican Party (ISRP). The ISRP was never a significant political force in Ireland, but its program represented a major innovation. It pointed toward the creation of an entirely new Ireland, not simply free of British rule but with the Irish people owning the land and the economy of Ireland, and reshaping society to serve the people. In 1898 Connolly also established a newspaper to disseminate his ideas, *The Workers’ Republic*. The ISRP, however, struggled to recruit members and Connolly had difficulty supporting his family.

In 1903 he emigrated to the United States, where he remained active in socialist and radical politics, being a member at various times of the Socialist Labor Party and the Socialist Party, and an organizer for the Industrial Workers of the World. Connolly was a highly effective speaker, as well as a writer, and was much in demand as a lecturer. While in the United States he embraced syndicalism. He published a newspaper, *The Harp*, and founded the Irish Socialist Federation in New York City in 1907.

In 1910 Connolly published one of his major works, *Labour in Irish History*, and returned to Ireland where he became involved in organizing the Irish Transport and General Workers Union with James Larkin. In October 1911 he led the Belfast textile workers strike, in which Catholic and Protestant workers fought side by side. In 1912 he founded the Irish Labour Party and served on its executive board until his execution in 1916. He also organized the Irish Citizen Army to protect workers from reprisals and violence by the Dublin Metropolitan Police during the Dublin General Strike (also known as the Dublin Lock Out) of 1913, and was its com-

mandant. Although the Citizen Army was small, it was disciplined and highly politicized. Connolly did not disband the Citizen Army after the lockout ended but continued to drill it and recruit to it.

He opposed all Irish participation in World War I and the partition of Ireland as part of Home Rule. This, and his leadership of the Citizen Army, brought him into contact with the Irish Volunteers and the faction led by Thomas Clarke and Patrick Pearse that saw the war as an opportunity for Ireland to throw off British rule. He became part of the inner circle that planned the 1916 Rising despite his perception of the other leaders as bourgeois and insufficiently concerned about the economics of Irish independence. Connolly believed in a fundamental reorganization of Irish society to create a workers’ republic. His alliance with the Irish volunteers and Sinn Féin was pragmatic rather than ideological.

Connolly brought a large, working-class constituency to what had been a very middle-class, conservative movement. He overlooked what he saw as the bourgeois shortcomings of his colleagues and they did the same with regard to his socialist views. Connolly thought of himself as Irish throughout his life, despite having lived most of it outside Ireland, and was deeply concerned about the future of the Irish nation. But his sense of class interest, drawn from his wider frame of reference, set him apart from the other leaders of the 1916 Rising and Irish nationalism generally.

During the 1916 Rising, Connolly commanded the Dublin Brigade, which played a central role in the fighting, and was seriously wounded during the fighting. In the aftermath of the defeat, he was held first at Dublin Castle and then at the Royal Hospital Kilmainham rather than in prison due to the severity of his wounds. Despite doctors giving him at most only a day or two to live because gangrene had set in, he was taken by ambulance to Kilmainham Gaol, where he was tied to a chair, propped against a wall, and shot dead by firing squad on May 12, 1916. The vindictiveness of this act, and other similarly outrageous executions, turned worldwide public opinion against the British repression and set the stage for a major resurgence of Irish republican opposition. Connolly was buried with the other executed leaders of the Easter Rising at Arbour Hill in Dublin.

Cooperative Commonwealth

Richard Goff

The era of Civil War and Reconstruction marked a decline in utopian experimentation, but with the Panic of 1873 and the labor upheavals of 1877, a renewed interest in socialist and communal experimentation emerged. Two major works contributed to the cooperative movement in the Gilded Age: Lawrence Gronlund's *Cooperative Commonwealth* (1884) and Edward Bellamy's *Looking Backward* (1888). Gronlund, a Danish immigrant credited with bringing German socialism to the United States, imagined an ideal community where workers control production and the economy is under rational management. Similarly, Bellamy's *Looking Backward* imagined a future where capitalism no longer exists and the United States functions along cooperative lines and in social equality. Following the sale of the book, Bellamy started the magazine the *Nationalist*, which advocated cooperative values and national unity. The book's success led to the establishment of "Nationalist Clubs" throughout the country.

Inspired by these ideas, social reformers and labor leaders attempted to make real the idea of the "cooperative commonwealth." Burnett Haskell, John Redstone, and James Martin, San Francisco labor organizers, set up the most ambitious of these socialist cooperatives. After

a search of the entire Pacific Coast and parts of Mexico, the leaders settled on a tract of land near the Kaweah River in California.

The Kaweah colony attracted a variety of members, including "cranks of many creeds" as well as skilled laborers. Most of the residents were "Nationalists," that is followers of Bellamy. Initially, the community struggled to establish a cohesive organization. The group hoped to make a viable living supplying timber to the growing San Joaquin Valley and members devoted much of their early time constructing a road from the valley to the mountains. The community did not tolerate organized religion, but private religious practice was acceptable. Kaweah organized entertainment and recreational activities and published its own newspaper, *The Commonwealth*.

Internal disputes and external difficulties proved to be problematic for the community. Haskell, a pugnacious and surly leader, alienated community members and outsiders with his authoritarian ways. Also, surrounding timber and rail businesses attacked the community in the press. Ultimately, the United States government withdrew its land grant in order to construct the Sequoia National Park. By 1892 the community had disbanded. Similar cooperative communities were set up in Puget Sound, but by the early 1900s the communities had fragmented and dissolved. With the defeat of the Populists, the emergence of the socialist labor movement, and the advent of Progressive Reform, the idea of the cooperative commonwealth receded.

Cop Watch Los Angeles

Joaquin Cienfuegos

Cop Watch is a North American activist network dedicated to monitoring and documenting police brutality and harassment in various cities. Although the first group to call itself “Copwatch” emerged in Berkeley, California in 1990, the tactic of using citizen patrols to observe the conduct of the police can be traced to the Black Panthers, the Brown Berets, the Los Angeles Chapter of the SNCC (Student Non-Violent Coordinating Committee), and the Deacons for Defense and Justice in the South. The activities of Cop Watch chapters range from photographing, videotaping, and publicizing instances of police abuse and harassment, to holding “Know Your Rights” workshops and other events to arm people with information about their own communities, as well as to develop alternatives to policing and prisons. While some chapters have non-interference policies when it comes to police and are largely focused on the *watching* part, other Cop Watch groups have taken a more militant stance.

Cop Watch LA (CWLA) is one such group that extends its activities beyond passive observation. According to its mission statement:

CWLA is a program dedicated to the struggle that will end police terrorism through collecting information on and observing police activity, by offering support to those caught in the criminal injustice system, fighting for change without a reformist consciousness, and working side-by-side with oppressed communities to create revolutionary alternatives to policing, prisons, and all systems of domination, oppression, and exploitation.

On July 11, 2005 the Los Angeles Police Department murdered 19-month-old Suzie Lopez Pena in Watts, California. At the time the Los Angeles Chapter of the Southern California Anarchist Federation (SCAF-LA) was organizing and holding meetings in South Central Los Angeles at Chuco’s Justice Center, a community center that houses the offices of the Youth Justice Coalition, Critical Resistance, and the October 22nd Coalition to Stop Police Brutality.

In response to the Pena murder and the recent LAPD murders of Devin Brown, Deandre Brunston, and Gonzalo Martinez, SCAF-LA joined the Stop Terrorism and Oppression by the Police Coalition, out of which Cop Watch LA was born.

After SCAF-LA disbanded, the working-class youth-of-color members of SCAF-LA created the Revolutionary Autonomous Communities (RAC), whose aim is to define and organize around principles of autonomy, self-determination, self-organization, mutual aid, revolution, and self-defense. The alliance of RAC and CWLA created a more revolutionary type of police monitoring group because it upheld the idea that the community itself had to take up the tactics and strategy of organizing and defending itself from the occupying force – police and all law enforcement agencies of the state.

Heavily influenced by the Black Panther Party for Self-Defense, the Ejercito Zapatista por Liberacion Nacional (EZLN), the Magonista movement, the Horizontalist movement in Argentina, the *Especifista* anarchist tendency, and other revolutionary indigenous movements throughout the world, RAC and CWLA presented their guidelines, goals, and mission to the community. One of the central organizing principles of CWLA – that members couldn’t patrol in a community they didn’t live in or weren’t invited to by the people who live there – led to CWLA local chapters in South Central Los Angeles and Long Beach, Boyle Heights and East Los Angeles, Watts, Santa Ana, and other parts of the city. They also built alliances and strong communication ties with organizations doing similar work in Los Angeles (e.g., the Los Angeles Community Action Network, the Black Riders Liberation Party, the Youth Justice Coalition, Frente Contra las Redadas), and the Malcolm X Grassroots Movement in New York and the Move Organization in Philadelphia.

CWLA has participated in the defense of the South Central Farm, supported the Cardenas family who filmed their relative being beaten by two Hollywood cops while choking him, observed the police at the May 1, 2007 immigrant rights march (which was brutally attacked by the police), and initiated a learning process to deal with internal conflict by holding talking circles to heal the community while maintaining the struggle.

Cordobazo and Rosariazo Uprising, 1969

Guillermina S. Seri

Cordobazo and Rosariazo were major protests held between May and September 1969 in Argentina against the military dictatorship of Juan Carlos Onganía. Twice that year, on May 21 and September 16 and 17, protesters flooded the streets of Rosario. In Córdoba, the protests resulted in the complete suspension of activities between May 29 and 30. The demonstrations followed a common pattern: initially peaceful marchers in the city's central district were met with violent repression by the police, which then escalated into fires, barricades, and street fighting. For many hours, both Rosario and Córdoba were taken over by tens of thousands of protesters, as the police abandoned their posts. Only through military occupation could the federal government regain control of the cities. Protesters, a mix of industrial workers and university students supported by white-collar workers, middle-class professionals, radicalized Catholic activists, and people from humble neighborhoods, recognized student and anti-bureaucratic labor union leadership. In September, a similar insurrection took place again in Rosario. Cordobazo and Rosariazo were the most salient events in a larger wave of protests and mass

mobilizations that were erupting in cities such as Tucumán, Mendoza, Cipoletti, in the Río Negro province, and Catamarca during the same time.

A context of increasing political and economic exclusion was conducive to these mass protests. General Onganía's Revolución Argentina, originating in a coup d'état against President Illia on June 28, 1966, had shut down republican institutions, outlawed political parties, imposed widespread censorship, and intervened with non-docile labor unions, stripping them of legal status. Right-wing Catholic and neo-corporative principles gave ideological inspiration to the coup. Differently from previous military dictators, Onganía set no timeline for elections, appealing instead to vague economic, social, and political "times" or phases of reconstruction. The regime sought to replace political parties with technocratic and military tutelage of big business and collaborationist unions.

Peronism, by then Argentina's largest political force, had been proscribed by the military Revolución Libertadora that deposed Perón in 1955, forcing its leader Juan Domingo Perón into exile. With Peronism banned, labor unions became the sole channel of expression for millions of Argentines. The Confederación General del Trabajo (Labor General Confederation) (CGT) not only embodied workers' considerable bargaining power but was also referred to as the "spine" of the Peronist movement since the mid-1940s. Besides calling for elections in which peronism was banned, a form of military tutelage of the political system that made for the weak governments of Arturo Frondizi (1958–62) and Arturo Illia (1963–6), hegemonic attempts to *desperonizar* ("de-Peronize") the working class included intervening in unions. After an initially tight intervention in the CGT by the military after 1955, however, persistent popular opposition forced the government to open up some channels for negotiation and the return of labor unions to workers' hands. For the violence of the Revolución Libertadora, which had carried dozens of executions of Peronist leaders and viciously persecuted Peronists, making illegal by decree 4161 even the utterance of words such as "Peronism," "Perón," or "Evita," consolidated brave resistance. Forged through years of political persecution, *resistencia peronista* was a loose and extended grassroots network of underground activism. In its light, a new generation grew familiar with clandestine politics and

In the course of the 1969 Cordobazo labor insurrection in Rosario, Argentina, riot police take up positions near a burned-out train at Granaderos Junction. The army regained control of Rosario on September 17, 1969 on the second day of rioting, touched off by a general strike in support of a walk-out by railway workers. In the mass uprisings, four rail stations, three factories, and dozens of railroad cars, buses, and private vehicles were burned. (© Bettmann/CORBIS)

spontaneous acts of sabotage in factories and railways, or power lines.

Despite tricks and electoral manipulation, military union intermediaries could not impede the election of Peronist delegates across the board. In 1957 a CGT normalizing meeting failed to win the government a non-peronist victory and was declared void. Yet it allowed a group of mostly Peronist unions, 62 Organizaciones Peronistas, to achieve formal recognition and eventually to become a major actor in Argentina's political life.

Perón's exile inspired competition in invoking his name; the consolidation of "bureaucratic" union leaders was eager to negotiate and lobby the existing authorities, frequently disregarding their bases and Perón himself. Augusto T. Vandor, from the Unión Obrera Metalúrgica (UOM), was one such leader. Through the years, Vandor concentrated power by bargaining with all major political groups while disempowering the rank and file. Besides the leading hierarchy of the old CGT represented by Vandor, José Alonso, and others, the normalization of unions made visible a new generation of factory delegates emerging directly from the workplace. This new group, who had gained peer recognition for their ability and consistency to confront managers, kept an inflexible commitment to their bases and to mandates arising from democratic practices. These delegates brought their experience in the *resistencia peronista*, privileging rank-and-file debate

and resolutions through direct democracy, and tacitly accepting the possibility of clandestine actions.

In Córdoba such a militant tradition was favored as the new labor unions organized around the expanding transnational automobile industry. Prefiguring a trend that would develop nationally after 1958 with Frondizi's *Desarrollismo* (developmentalism), both Fiat and Kaiser (IKA) opened car factories between 1954 and 1955. Córdoba's previous industrial tradition, based on aircraft and railway manufacturing, textiles, chemical plants, and surrounding 14,000 industrial firms in 1954, received a boost with the arrival of the transnational car industry. The city became the pivot of the auto industry in Argentina, receiving hundreds of thousands of immigrants. With state support, the management of big factories recognized the right of workers to unionize locally, by plant only. In the case of the workers at Fiat, the strategy gave birth to SITRAC-SITRAM (Sindicato de Trabajadores Concord – Sindicato de Trabajadores Materfer; radical left-wing unions organized in individual factories). Although debilitating in the short run, with the passing of time the decentralization of labor unions would strengthen the new generation of union leaders. In addition, Córdoba's increasing weight favored the growth of autonomous union leadership. Luz y Fuerza, the union of electricity workers, was paradigmatic. The union was tied to a utility company run by the provincial state, and its workers were fully aware of their key role in providing energy for the expansion of Córdoba's industry. Luz y Fuerza had historically enjoyed a considerable degree of autonomy. Different from industrial workers, its affiliates had achieved job stability, which gave them more leverage. Having witnessed the federal government's attempts to direct the construction of a nuclear plant, and concerned about its plans to privatize the provision of electricity, Luz y Fuerza workers were weary of orders coming from Buenos Aires. As were the members of SMATA Córdoba (Sindicato de Mecánicos y Afines del Transporte Automotor; the metal and transportation workers union), who despite their privileged position within Argentina's industrial landscape, had to fight with the union's national headquarters over the control of their financial resources. Hence, claims for autonomy dominated among Córdoba's workers, even in the case of local chapters of

unions with powerful directorates in Buenos Aires such as SMATA or UOM, whose national bureaucracies administered the union's finances and set agreements over salaries. As a result, in Córdoba SMATA eventually developed a tradition of local bargaining.

After 1966, Onganía made an oppressive situation intolerable. Embracing the Cold War struggle against communism, the regime passed the Decree-Law 16970, which introduced the figure of the "subversive," or internal enemy, and authorized war councils to judge civilians. The regime's obsession with communism soon escalated into a witch hunt and a violation of the autonomy of Argentina's cherished university. After the 1918 *Reforma Universitaria* was passed, a student movement became centered in Córdoba, where previously the Argentine academic community had enjoyed self-government, intellectual autonomy, and prestige. As opposed to universities that were only accessible to patrician families, the 1918 *Reforma* brought substantive democratization, with the designation of professors through open, competitive, and transparent selection, and university co-government by delegates of the faculty, students, and graduates. Together with this movement, the Federación Universitaria Argentina (FUA) was born. FUA became the federal coordinator of university student federations, in turn representing student governments from each school across the country. Whereas reformists opened Argentinean universities to the middle class, after 1946 peronism attempted to make them accessible to everyone; however, Perón's relation with the university was ambiguous. On the one hand, during his first presidency (in 1950), he ordered the elimination of fees and made university education free. His initiative was also decisive in laying the foundation for the Universidad Tecnológica Nacional (UTN) in 1952. Yet Perón also frequently hurt the academic community's liberal sensibilities, undermining basic freedoms that are key to intellectual life, such as the possibility to freely express and debate political ideas. Within universities, the anti-liberal core of Peronism generated opposition on both left and right. Many professors were fired and went into exile. Indeed, *universitarios* were among the most salient actors supporting the 1955 Revolución Libertadora military coup that overthrew Perón. Yet it was not simply that the military did not really honor liberal intellectual

traditions, but that they undermined the principles set by the 1918 *Reforma* by authorizing the creation of private universities in Argentina, specifically by passing a law in 1958 that authorized and regulated the creation of the first group of private universities in Argentina.

If the military in 1955 did not respect individual liberties as anti-peronist academics had expected, the Onganía regime openly attacked liberalism. With the belief that public universities were a nest of communist infiltration, the regime intervened and closed schools, carrying out arrests in La Plata, Rosario, Tucumán, Santa Fé, Corrientes, and Chaco. On July 29, 1966 the police violently entered several schools of the University of Buenos Aires. In the episode known as *La Noche de los Bastones Largos* (night of the billy clubs), students and professors were beaten up, part of the facilities were destroyed, and hundreds of scientists and professors were fired or forced into exile.

Throughout Argentina, students decided to resist. Córdoba, especially, had a long tradition of student activism, with a strong presence in two neighborhoods – Alberdi and Clínicas. A student strike was held for more than a month. While assembling in Plaza Colón, on September 7, 1966, Santiago Pampillon, an engineering student, IKA motor worker, and SMATA member, was shot dead by the police, in the first of several similar cold-blooded murders by the regime.

Revolución Argentina's strict measures also reached the economy. As part of a strategy of "rationalization," most sugar mills were closed in the province of Tucumán, while thousands of state employees were fired. Vandor and other CGT leaders announced a *Plan de Acción* in February 1967, but soon abandoned it after new arrests and the regime's threat of more firings and union interventions. The designation of Adalbert Krieger Vasena as minister of economy, in March 1967, marked the government's clear shift toward pro-market policies favorable to corporations but damaging to the middle and working classes. With the choice of Krieger Vasena, the alliance with big businesses and foreign investment displaced Onganía's original Catholic and nationalist allegiances. The regime also tightened up its strategy of "rationalization," eliminating state subsidies, devaluing the currency, and reducing wages and benefits. Applied to railways, "rationalization" brought increasing work hours and a reduction of salaries,

making railway workers the worst paid among state employees. These measures were implemented through military intervention into the rail workers' union and the designation of a colonel as their head.

The increasing duality of Argentinean labor union politics acquired institutional expression a year later, in March 1968, with the split of the CGT into two unions – CGT-Azopardo, led by the group of Vandor and his “participationist” allies; and CGT-Argentinos, led by print worker Raimundo Ongaro, representing militant “anti-bureaucratic” and intransigent unions. CGT-Argentinos drew on the confluence of workers from the tradition of *resistencia peronista*, who objected to *Vandorismo*'s eagerness to negotiate with the military, as well as groups concerned with making union life more democratic. Córdoba's independent secretary general of Luz y Fuerza, Agustín Tosco, and radicalized Peronist Atilio López from UTA (transportation workers), epitomized the project of CGT-Argentinos, and became some of its most important supporters. Tosco, who started his career in a workshop and at 27 was already Córdoba's Luz y Fuerza leader, stood out as an incorruptible democratic man with an iron commitment to the decisions made by the rank and file. Despite not being a Peronist, Tosco was respected and reelected by workers of all political persuasions. During the rest of 1968, despite governmental repression and Perón's order to strengthen traditionalist unions, CGT-Argentinos sponsored strikes such as those of sugar cane workers in Tucumán, and oil and metal workers in the Buenos Aires province. Both the government and companies responded harshly, with suspensions, firings, and arrests.

The first months of 1969 were no better. In addition to 11 percent regional salary reductions in *quitas zonales* (regions where business were permitted to pay workers less than the minimum wage) that were already affecting workers in Córdoba, Mendoza, San Juan, Tucumán, and Santiago del Estero, on May 12 the federal government abolished the “English Saturday” (a curb on Saturday afternoon labor, enacted in the 1930s). Córdoba's metal workers, belonging to the most dynamic sector of the auto industry, decided to go on strike for 48 hours on May 14 and 15. Confronted with violence, the workers defended themselves, forcing the police to fight for hours before regaining control of the situ-

ation. Meanwhile, in Rosario, hundreds of rail car and metal workers were laid off. With flooding affecting the city's poor neighborhoods, Krieger Vasena announced a tariff increase which would further undermine the purchasing power of frozen salaries. UOM Rosario called a 24-hour strike for May 23 – mail, railway, communication, utility workers, and other unions adhered.

The brutality of Onganía's regime precipitated the coming together of workers and university students. Through the years, the working class had gained access to a university education. Not only did Onganía's government attack university autonomy, but it also imposed restrictive admission exams, while at the same time privatizing key services such as the provision of student meals in cafeterias. These policies triggered demonstrations in all major university districts. At the Universidad del Noreste in Corrientes and Resistencia, students protesting the 500 percent increase in meal prices were joined by unions, small businesses, and families. The assassination of medical student Juan José Cabral by the police on May 15 while he was peacefully protesting the increased cost of cafeteria tickets in Corrientes sparked indignation and more protests.

In Rosario, students announced a strike for May 20, followed by professors and staff. On May 17 a meeting at the downtown university's cafeteria to protest the murder of Cabral was followed with the assassination of economics student Adolfo Ramón Bello, shot in the head by a police officer. The crime angered the people from Rosario. CGT-Argentinos declared a “state of alert,” offered students its headquarters, and called a general strike for May 23, while several thousand people attended Bello's funeral. The city delegation of CGT-Azopardo, as well as a number of other labor unions, made public their solidarity with the *universitarios*. Student organizations convoked a “march of silence” for May 21, 1969 to protest the murder of Bello. Academic communities of both state and Catholic universities, high school students and union leaders, business organizations, the press, and people who until then were not politicized, supported the measure. Four thousand people joined students on May 21 in Rosario, in what was the first mass demonstration against Onganía's dictatorship. Anticipating the confluence of workers and students, the regime had declared the city in a state of emergency and sent militarized forces. The protest, a march of silence and sit-in, was

attacked with tear gas and beatings by the police. Protesters responded with stones. To resist the effects of tear gas, they organized bonfires with papers, books, and other objects provided by neighbors from buildings and lawyers from their offices. The character of the event escalated; barricades were built at hundreds of street corners with rocks, pieces of wood, and even buses.

Walking with other demonstrators outside a radio station, Luis Blanco, a 15-year-old high school student and metal worker, was shot in the back and killed by the Rosario police. This new death infuriated the people. Thousands of citizens came in support of protesters. After hours of heated confrontation, police forces abandoned the area. That night, a mix of university students, industrial workers, middle-class state employees, and the poor celebrated in the streets, cheered on from balconies by middle- and upper-middle-class supporters. The federal government declared Rosario a zone of emergency, sent military forces, imposed martial law, and put a general in charge of the city. Despite the military occupation of Rosario, the May 23 strike called by the CGT was massively observed, while 7,000 people attended the funeral of Blanco.

During the preceding weeks, the police had severely repressed student protests in Córdoba, most of which had taken place in the Clínicas neighborhood. Responding to police violence, students occupied the area on May 26. But not even the suspension of activities by the president of the university in support of students sufficed to stop the police repression that followed. While dozens of "Third World Priests," a group that emerged in 1967 advocating commitment to the poor and social reform, voiced their solidarity with popular demands, the national general strike that had been planned for May 30 began in Córdoba a day earlier. After Tosco's initiative, the strike was "active," with attendance at the workplace and mobilization. Thus, in the mid-morning of May 29, thousands of workers from factories such as IKA-Renault, Fiat, and ILASA abandoned their plants, walking in columns several miles downtown, where they were joined by student organizations. Workers from smaller factories and workshops, as well as hundreds of neighbors, spontaneously fused with the crowd.

Police repression started right after the columns entered the central district. In some cases, as happened to the Luz y Fuerza column, protesters

were attacked with tear gas outside their factories. Two concentric circles of police troops and special horse divisions of the federal police were set to prevent demonstrators reaching downtown. But the strategy failed. After being assaulted with tear gas, rubber bullets, clubs, and firearms, the protesters defended themselves with whatever they could find – sticks, fruits, stones, bottles, bricks, and other objects eagerly provided by neighbors.

Near noon, the police shot and killed metal worker Máximo Mena. The news of the death enraged the people. Throughout the city, whether downtown or in neighborhoods such as San Vicente, Talleres, Alberdi, Alto Alberdi, and Clínicas, tens of thousands crowded the streets. A multitude, with no unified affiliation or leadership, took over the city. Barricades and fires consolidated the protesters' positions, which in the early afternoon comprised 150 city center blocks and a few neighborhoods. After several hours of street fighting, the police retreated. In the mid-afternoon the government announced the military occupation of the city and the installation of war councils.

Toward the evening the core of the protest moved to the Clínicas neighborhood, with the presence of Tosco and the coordination of students, workers, and neighbors. In the downtown area, sites symbolically tied to social privilege, corrupt politics, and imperialism were destroyed. The Jockey Club, a car dealership, the Xerox headquarters, and the bus station, then under construction, were all set on fire. A number of police stations were taken over, and a few of them burned, but no cases of looting were reported. During the night, in a city left in the dark, snipers confronted the military forces who had entered the city with tanks and trucks. There were dozens of deaths. The next day, despite the presence of the army, thousands of protesters participated in the scheduled mobilizations. The government set a curfew, and military forces arrested Agustín Tosco, Elpidio Torres, and other leaders, tracking people house by house. A war tribunal sentenced Tosco to eight years in prison.

Different accounts describe the intense preparations preceding the Cordobazo. Despite the regime's repressiveness, a large number of assemblies held in factories, university classrooms, and neighborhoods had organized the protest. With plaza Vélez Sársfield as final announced destination, organizers had planned

secret alternative locations to congregate in case of being stopped by the police. Anticipating confrontations, some metal workers carried bolts, screws, and pieces of metal. The May 29 and 30 mobilizations benefited from the confluence of Córdoba's independent labor unions and university organizations, with the leadership of Tosco, Elpidio Torres from SMATA, Atilio López from UTA, as well as widespread support from Alejo Simó from UOM, other unions, and workers. The Cordobazo exposed how the state strategy of decentralizing unions had backfired, giving rise to a more democratic, autonomous, grassroots, and incorruptible union leadership that proved impossible for the military either to coopt or control in the way they did traditional CGT leaders.

Right after the May protests, Onganía announced Krieger Vasena's resignation. In the following months, the military invoked the beginning of a "Social Time" devoted to addressing issues of equality and income distribution. Yet the regime continued to punish severely the hundreds of thousands of workers who participated in the May protests; this eventually led both CGTs (Argentinos and Azopardo) to call a new national strike for July 1 and 2. On June 30, however, Augusto Vandor was murdered. The government declared a state of siege and rounded up most members of CGT-Argentinos, arresting Raimundo Ongaro and hundreds of others. Railway workers, especially strong in Rosario, saw their organizations taken over by the military, their leaders arrested, and their salaries reduced. In July, more than thirty Third World Priests resigned in dissidence with the Church hierarchy's endorsement of the regime's positions.

On September 7, the third anniversary of the assassination of Santiago Pampillon, Rosario students started a week of protests commemorating students murdered by the police. Unified in Rosario, the CGT launched a strike. On September 8 the local railway union, despite the intervention and the sanctions suffered by more than a hundred thousand workers, began a 72-hour strike protesting the penalties imposed on Mario Horat, a rail worker, for his participation in the May strike. Two days later, while the Buenos Aires federal government sent special police forces, railway unions from the vicinity and white-collar workers joined the strike. In turn, on September 12, the strike extended through-

out Argentina, adopting an "indeterminate" extension. While several factories were taken over by workers in Córdoba, a popular insurrection erupted in Cipoletti. The government mobilized military forces.

Yet on September 15, in Rosario, a unified CGT called a new strike for 38 hours. During the next two days, people again flooded the streets of Rosario's central districts. A mass of approximately 200,000 workers, students, and neighbors resisted the combined attacks of police and military forces, under martial law and a state of emergency. Whereas the mobilizations of May 29–30 in Córdoba were thoroughly planned (at least at the beginning) by labor unions and student organizations, popular insurrections in Rosario seem to have followed a more spontaneous pattern. As before in Córdoba, the protest was suffocated through the occupation of the city by the military, followed by hundreds of arrests and protesters being brought to war councils.

The 1969 popular insurrections, especially Cordobazo and both Rosariazos, corroded Onganía's power and led the military to replace him with Alejandro Agustín Lanusse in June 1970. In all these insurrections, there were protesters bearing guns. Protagonists, scholars, and activists still debate about the exact political significance of Cordobazo and Rosariazo in light of the radicalization, violence, and terror of the 1970s. What nobody can question, however, is the key role played by common people in the events. Unprecedented for their scope in the nation's history, the events of May 1969 in Rosario and Córdoba marked the beginning of a dynamics of rising popular power in Argentina, which would reach its peak in 1973. Yet the ruthless repression in both Rosario and Córdoba also prefigured the practices of state terror with which people's power would be eventually curtailed in the following years.

CORE (Congress of Racial Equality)

Amy Hatmaker

The Congress of Racial Equality (CORE) was one of the first groups that practiced non-violent resistance in the civil rights struggle. Formed in 1942, CORE would be instrumental in the fight to secure desegregation of public spaces.

The idea for CORE was originally conceived by James Farmer, race relations secretary of the Fellowship of Reconciliation (FOR), a Quaker group that denounced all violence. Inspired by Gandhi, Farmer and an interracial group of friends, including Bernice Fisher, James R. Robinson, Joe Guinn, George Houser, and Homer Jack, founded CORE (originally called the Committee on Racial Equality). CORE members instigated sit-ins at segregated restaurants and

entertainment facilities and moved into fringe neighborhoods in mixed groups to battle restrictive access to housing beginning in 1942.

In 1946 the Supreme Court ruled in *Morgan v. Virginia* that segregation of seating in interstate transportation was unconstitutional. CORE and FOR decided to test this case by attempting a Journey of Reconciliation. Mixed groups of blacks and whites would attempt to ride buses through parts of the upper South. In North Carolina, a group of the riders was arrested. The incident brought CORE into the national spotlight. Additionally, it achieved a great measure of success in integrating facilities in the North. Volunteers had kept the organization moving forward; Farmer became the first national director in 1953.

The South became the focus of action for CORE in the 1950s, and it established local chapters in the segregated South. On February 1, 1960, four freshmen from North Carolina AT&T College, inspired by a CORE pamphlet, staged a sit-in protest at a Woolworth store in Greensboro. CORE responded by immediately sending representatives to train the student groups in non-violent protest and offer its support. It was also active in coordinating additional sit-ins throughout the South.

The most noted of CORE activities would begin with the Freedom Rides initiated in May of 1961. Well-trained interracial groups boarded interstate buses in an attempt to desegregate the bus terminals. Anticipating violent reactions, Farmer informed federal officials of the agency's intent prior to departure. Volunteers were arrested and assaulted throughout the South. Despite the continued violence, CORE continued the Freedom Rides and was joined by the Student Non-Violent Coordinating Committee (SNCC).

As the civil rights movement accelerated, CORE stayed actively involved. Members participated in the March on Washington and organized Freedom Summer in 1964 to register black voters. Volunteers, mostly white, agreed to go through the South on this campaign. Near Philadelphia, Mississippi, two white and one black activist were killed. The murders called attention to the growing violence of the civil rights movement, leading to public outcry and pressuring the government to act.

Rising black nationalism resulted in a change in CORE make-up. The more militant Floyd McKissick replaced Farmer as national director

in 1966, and whites in leadership positions were replaced with blacks. McKissick retired in 1968, and the moderate Roy Innis took over. CORE continued fighting against discriminatory causes and is still active on an international level, supporting black economic development and community improvement.

Cornelissen, Christianus Gerardus (1864–1942)

Homme Wedman

Christianus Cornelissen, a leading Dutch organizer and theorist of international revolutionary syndicalism, socialism, and anarchism, was born in Hertogenbosch, the son of a impoverished master carpenter. Aided by a state scholarship, he was educated to become a primary school teacher in Middelburg (1888–91). There, he became involved in the the movement for universal suffrage. While engaged politically in the electoral struggle, he became editor of local socialist periodicals and contributed to the socialist paper *Recht voor Allen*. In January 1892 he became second editor of this paper of the Dutch Social-Democratic Federereration directed by Domela Nieuwenhuis. Cornelissen was a Marxist and in 1892 he published the first Dutch translation of *The Communist Manifesto*.

His interpretation of Marxism was syndicalistic in 1891. In a letter to Nieuwenhuis he stated that because class struggle is economic, the unions must be the troops of the proletariat.

In conflicts within Dutch socialism he backed Nieuwenhuis and vehemently opposed the new parliamentary Dutch Social Democratic Labour Party (1894). In 1893 Cornelissen federated several trade unions in the syndicalist Nationaal Arbeids Secretariaat. At the end of 1897 he resigned his posts when Domela Nieuwenhuis left the Socialist Federation and moved with his followers in the direction of individual anarchism.

Cornelissen had set his hopes on a collaboration between libertarian communists and revolutionary socialists, as stated in *Le Communisme révolutionnaire*, published in 1896 on the eve of the London Congress of the Second International. He was present there, as he had been in Brussels in 1891 and Zürich in 1893.

In 1898 he emigrated to Paris, but kept in contact with social anarchist and syndicalist organizations in the Netherlands. In France, Cornelissen became a contributor to the newspaper of the Confédération Générale du Travail (CGT), *La Voix du Peuple*, and from 1911 to 1918 he wrote for the CGT's daily, *La Bataille Syndicaliste*. In 1900 he published his revolutionary syndicalist program *En marche vers la société nouvelle*. Cornelissen was the organizer of an international syndicalist meeting during the anarchist conference in Amsterdam in 1907. Following the conference, from 1907 to 1914, Cornelissen edited the *Bulletin International du Mouvement Syndicaliste*. The *Bulletin* was the nucleus for the Congress of London in 1913 where the Syndicalist International was created. During World War I he was one of the authors of the pro-Allied manifesto, *La Déclaration des seize*. This undermined his position among anarchists and syndicalists.

After 1918 he concentrated on his work as an economist. He completed the five volumes of his *Traité générale de science économique*. In 1935 appeared *Les Générations nouvelles: essai d'une éthique moderne*, completing Kropotkin's ethical work. Cornelissen died in Domme, France, on January 21, 1942.

Correa, Rafael (b. 1963)

Natalie Mutlak

Rafael Correa, a leftist economist, was elected president of Ecuador in November 2006. Correa, a self-appointed “Christian Socialist,” postulates in line with Hugo Chávez of Venezuela and Evo Morales of Bolivia a twenty-first-century socialism. The first measures of his administration, such as the initiation of a constitutional reform and the rejection of economic control through the IMF, indicate a serious intent to promote political change in Ecuador.

Correa was born on April 6, 1963 in Guayaquil, Ecuador. He studied economics and obtained a PhD at the University of Illinois in 2001. His professional experience ranges from professorship in Ecuadorian and US American universities to acting as CEO of the Inter-American Development Bank in Ecuador. Correa’s political career started in 2005 when he served as Ecuador’s minister of economy under President Alfredo Palacio. His four months in office were characterized by rejection of IMF and World Bank policies. His project to use half of the petroleum benefits, originally intended to pay off the external debt, for social purposes brought the World Bank to withhold a credit. As a consequence, Correa resigned from office.

In 2006 Correa founded the party Alianza PAIS and started his presidential campaign. Promoting sovereignty, regional integration, and a constituent assembly to rewrite Ecuador’s constitution, he won the presidential elections and took office on January 15, 2007. On January 16 a step towards integration of South American economies was made when Ecuador signed an energy agreement with Venezuela to refine Ecuadorian crude oil. The new petro-policy is also shown by the

fact that new contracts will exclusively be closed with state-run petro-companies and in case of dispute, no international tribunal of arbitration will be accepted. Moreover, Correa actively advanced the UNASUR (Union of South American Nations), which is intended to merge MERCOSUR, a regional trade agreement between Brazil, Argentina, Uruguay, and Paraguay founded in 1991, and an Andean Community of Nations. Ecuador also joined the Bank of the South founded in December 2007 as an alternative to the IMF and World Bank.

The new political line enforced since Correa’s presidency also becomes apparent through his clear statements against the neoliberal policies of former Ecuadorian presidents, for example the draft free trade agreement with the United States. Another priority for Correa, who has suggested that at least part of the debt may be illegitimate, is the renegotiation of Ecuador’s foreign debt. With regard to foreign affairs, Correa plans not to renew the contract of the US military base in Manta, Ecuador, which is set to expire in 2009.

Initiated in April 2007, Correa’s biggest project so far has been to convene a Constituent Assembly, which was approved in a subsequent national referendum. In the elections to the Constituent Assembly in October 2007, Correa’s party received almost 70 percent of the vote. The Constituent Assembly started its work to rewrite the constitution in a participatory process in December 2007. Having only been in office one year, under Correa federal social expenditures exceeded expenditures to refund the foreign debt for the first time in the country’s history: governmental welfare doubled, the national minimum wage was increased, and investment in public education and the health system rose considerably.

Corsican independence movement

Justin Corfield

Throughout the history of Corsica there have been a number of attempts to turn the island into an independent country. In ancient times it was settled by Phoenicians, Carthaginians, and Etruscans before being conquered by the Romans in 160 BCE. The collapse of the Western Roman Empire in the fifth century witnessed Corsica attacked by the Goths and Vandals, and later the Arabs.

Gradually, the rise in power of northern Italian city-states led to Pisa and then Genoa exerting sway over Corsica. In 1133 Corsica was divided between the two states, but from 1284 until 1768 Genoa ruled the island. During this period there were constant attempts to create an independent Corsica. One of these was led by Sampiero Corso, "the Fiery" (1498–1567), who had served in the French army and tried to get French support for his plans for the island of his birth. Without help from any other powers, in 1564 he and some supporters landed on the island and attacked the Genoese. They waged a guerrilla war, but three years later Corso was assassinated.

In 1730 a sustained attempt to create an independent Corsica began when some Corsicans refused to pay taxes to the Genoese. This led to what became known as the Corsican Revolution. When Corsican guerrillas defeated the Genoese at the Battle of Calenzana in 1732, the Corsican nationalists realized that victory was possible. Three years later, in the inland city of Corte, they drew up plans to introduce a constitution if their struggle was successful. In 1736 Theodore de Neuhoff (1694–1756), a German aristocrat, landed at Aleria on the east coast of Corsica. Proclaiming

himself Theodore I, King of Corsica, he managed to reinvigorate the Corsican rebel movement. However, in 1738 French help for the Genoese turned the tide against Theodore, who was forced to flee the country.

French forces were pulled out in 1741, but seven years later they were needed again to try to prevent the rebels from taking over. In 1755 Pasquale Paoli (1725–1807), a military commander and Corsican patriot, staged a revolt. Paoli's father, Giacinto Paoli, had previously led Corsican rebels against Genoese control in the 1730s. Paoli accompanied his father into exile in 1739, later serving in the Neapolitan army before returning to Corsica in 1755. Paoli became commander-in-chief of the Corsican nationalist rebels and declared Corsica's independence later that year. He succeeded in driving the Genoese almost completely out of Corsica. From 1755 until the late 1760s Paoli's forces controlled most of Corsica.

During the 14 years of his rule, Paoli, influenced by the French *philosophes* of the Enlightenment, introduced a democratic constitution, moving the capital to Corte, in the geographical center of Corsica. Under the principles of enlightened despotism, Paoli worked to transform Corsica. He established a stronger navy, encouraged mining, and sought to suppress the Corsican practice of vendetta. He also established a university, minted his own coins, and made the Moor's head the emblem of the island. He also established the town of Île Rousse to compete with the port of Calvi, still controlled by the Genoese. Finally, in 1764, Genoa, having lost control of Corsica, decided to allow the French to establish military garrisons at Ajaccio, Bastia, Calvi, and Saint Florent. In 1767 Paoli captured the island of Capraia from the Genoese. Soon, France turned from mediating in the dispute to becoming the occupying power with the Treaty of Compiègne, followed by the Treaty of Versailles in 1768, in which Corsica was sold to France. The French government was determined to end the struggle for independence, and French forces defeated the Corsican nationalists of Paoli at the Battle of Ponte Novo on May 8, 1769, ending Corsica's brief experience of independence. Paoli was forced to flee to England.

Many Corsicans supported the French Revolution and, no doubt, hoped they would achieve some form of autonomy. An amnesty for supporters of Paoli further reinvigorated the nationalist movement, as did Paoli's return. In 1789

he went to Paris under the permission of the Assembly and soon returned to Corsica as lieutenant-general in 1790. Paoli clashed with the excesses of the French Revolution, resulting in the Convention accusing him of treason. In 1793 Paoli summoned a consulta, or assembly, at Corte, with himself as president, and Corsica formally seceded from France. The British realized the strategic importance of Corsica and in 1794 captured Saint Florent, Bastia, and also Calvi – at the latter engagement, the famous British Admiral Horatio Nelson lost an eye. With British naval support, Paoli expelled the French in 1794. He then offered the sovereignty of Corsica to Britain, which sent Sir Gilbert Elliot as a viceroy. Elliot selected Pozzo di Borgo as chief advisor, rather than Paoli, who returned to exile in England. The British abandoned Corsica in 1796, allowing the French to take back the island.

Corsica developed significantly during the nineteenth century and later contributed thousands of men for the French forces on the Western Front in World War I. After the fall of France in 1940 during World War II, Corsica was occupied by Italy in November 1942 and then by Germany in September 1943. Neither army was able to control events on the island, as Free French supporters and others fought the Axis soldiers, earning the name the *maquis*, which was later used for the resistance in mainland France. After World War II, Corsica became a major army base for the war in Algeria, and the French Foreign Legion still maintains large bases on the island.

In modern Corsica there are several movements calling for degrees of autonomy or independence from France. In general, movements advocating autonomy promote the Corsican language, certain national tax exemptions in addition to those already applying to Corsica, and more power to local governments. The French government opposes full independence, but at times has demonstrated sympathy to movements for increased autonomy. Modern polls indicate that the Corsican population, as a whole, also opposes independence while favoring increased autonomy. Some nationalist groups claiming to support Corsican independence have conducted campaigns of violence since the 1970s, including bombings and assassination attempts (usually targeting *pieds-noirs*, non-Corsicans, and officials of the French government).

The peaceful occupation of a *pied-noir* vineyard in Aleria in 1975 was met with overwhelming force from the French government, thereby gaining sympathy for Corsican independence groups. Yet events such as the assassination of prefect Claude Erignac in 1998 have led many to be distrustful of Corsican nationalism. Recent attacks on Muslims have also confirmed this perception. Some clandestine independence groups use extortion and other intimidatory tactics to achieve their goals. Some journalists writing articles critical of such groups have been threatened and prosecution has been made difficult through a pervasive pact of silence among members. Some have suggested that such behavior is rooted in the longstanding cultural traditions of the island, which include banditry in the mountainous interior. Nationalist independence organizations in Corsica have had frequent internal disputes, which have turned violent at times.

In the 1970s violence erupted, and in 1976 there were numerous bomb attacks throughout the island, mainly against buildings and infrastructure rather than people. The Front de Libération Nationale de la Corse (National Front for the Liberation of Corsica) (FLNC) formed in 1976 as a merger of the Ghjustizia Paolina and the Fronte Paesanu Corsu di Liberazione. It is an off-shoot of the political party A Cuncolta Independentista. As a result, the French government was forced to grant many concessions. These included the opening of the University of Corte in 1981, and a separate regional assembly for Corsica in the following year, when Corsica was detached from Provence-Alpes-Côte d'Azur, of which it had been made an administrative part.

During the 1980s the FLNC split to form the Canal Historique (Historical Faction) and the Canal Habituel (Usual Faction). It escalated its bombing campaign during the 1990s, and several people were killed, including some mayors and policemen. In 1998 the prefect, Claude Erignac, was assassinated.

In 2000 Prime Minister Lionel Jospin granted increased autonomy to Corsica in exchange for an end to the violence. The proposed autonomy would have included greater protection for the Corsican language, Corsu. However, Gaullists in the French Assembly opposed the plan, fearing that other regions in France might be inspired to petition for increased autonomy and thus threaten French unity.

Nationalist sentiments still remain strong in Corsica, and many children still learn the Corsican language, which only received official status from the French government in 1974. Most road signs in Corsica are in both Corsican and French, although nationalists often deface the French words. Politically, the *A Cuncolta Indipendentista*, a Corsican nationalist party, has seats in the Corsican Assembly and some support from the Corsican people. However, in a 2003 referendum, Corsican voters narrowly voted against a project that would have granted greater autonomy to the territorial collectivity of Corsica.

COSATU (Congress of South African Trade Unions)

Franco Barchiesi

Origins

The Congress of South African Trade Unions (COSATU) was launched in Durban on November 30, 1985 with approximately 450,000 members in 33 affiliated unions. It is South Africa's largest union federation, with a membership of 1.7 million in 2007 and 21 industrial affiliates.

The birth of COSATU took place in a context of growing black working-class militancy, which, starting in the early 1970s, ended a decade characterized by the repression of anti-apartheid political movements and the decline of labor organizations. The 1973 strikes in the Durban industrial area led to the formation of black workers' unions independent of the racially segregated system of labor representation. Independent unions rapidly spread to the country's main manufacturing concentrations, largely organizing African migrant workers, and by the late 1970s they had started various national federations, most

notably the Federation of South African Trade Unions (FOSATU), launched in 1979.

FOSATU combined a socialist orientation, an analysis of the South African society centered on class exploitation rather than racial oppression, and a focus on workplace organizing. It emphasized non-racialism, industrial unionism, rank-and-file workers' leadership, and political independence from liberation movements like the African National Congress (ANC) and the United Democratic Front (UDF). The government's initial repression of the independent unions was followed by an attempt at reforming the industrial relations system, and the 1979 report of the Wiehahn Commission recognized for the first time collective bargaining rights for African workers.

The state intended to use reforms to contain and defuse independent unionism. Black workers' militancy, however, soared in a context of deepening socioeconomic crisis. In the first half of the 1980s FOSATU unions mobilized beyond the workplace, becoming involved in community alliances and struggles over basic services, a tactic often discussed as "social movement unionism." FOSATU's participation in community politics did not involve, however, direct political affiliations. Conversely, some "community unions" outside FOSATU organized through mass meetings in black townships and politically opposed apartheid. Most community unions endorsed the banned ANC and joined the UDF. Black townships' insurgency and the expansion of independent unions in the mining industry with the launch in 1982 of the non-FOSATU National Union of Mineworkers (NUM) further encouraged black workers' mobilization and led to discussions on merging the country's various union bodies into a larger labor congress.

The unification talks that started in August 1981 eventually led to the birth of COSATU, in which FOSATU and other unions merged, in 1985. The new federation was numerically dominated by the FOSATU tradition – called "workerist" in internal debates – of shopfloor unionism, class-based analysis, and political non-alignment. The NUM and many community unions, which also became part of COSATU, however, maintained a political orientation defined as "populist," prioritizing opposition to racial domination, advocating an alliance with the ANC-led liberation movement, and envisaging a trade union role focused on political change

and democratization, as well as on confronting capitalist exploitation in the workplace.

COSATU and the Fall of Apartheid (1985–1994)

According to Jeremy Baskin's definitive account, the launch of COSATU represented a political and ideological compromise, which allowed the federation to transcend the workerist–populist divide. COSATU retained FOSATU's emphasis on worker control and elected workers' leadership, and adopted the principle of industrial unionism rather than the general unionism approach more popular among "community unions." Departing from FOSATU's tradition, however, the new federation soon abandoned political non-alignment to define itself as a non-racial socialist organization within the broader anti-apartheid movement for democracy and national liberation.

In the atmosphere of repression and recurring states of emergency declared by the government in the second half of the 1980s, COSATU could still operate legally as a union organization. With social movements like the UDF banned or severely disrupted, the union federation played an increasingly political role, becoming an authoritative voice of the domestic opposition to the regime. It also survived governmental intimidation and state-sponsored violence in which COSATU members in Natal and the Transvaal were often attacked by supporters of the right-wing Inkatha Freedom Party (IFP). Eventually COSATU adopted the ANC's political manifesto, the Freedom Charter, at its second national congress in 1987. On May 9, 1990, COSATU and the newly legalized ANC and South African Communist Party (SACP) formally constituted a "tripartite alliance," of which the ANC was recognized as the leading organization. Under alliance arrangements, COSATU representatives participated in the negotiations leading to the 1994 first democratic elections as members of the ANC and the SACP delegations. Since 1994 COSATU candidates have been included in the ANC's election lists.

Even as a member of the alliance, COSATU retained significant autonomous influence in policymaking processes. The federation's mobilization against apartheid repressive labor laws led in September 1990 to an agreement with the government and organized business entrenching the principle of labor's consent for all future changes in industrial relations legislation. Finally,

COSATU's opposition to a new value-added tax in 1991 was decisive for the establishment of a National Economic Forum, which eventually led to the National Economic Development and Labor Council (NEDLAC), founded in 1995 to negotiate socioeconomic policies among representatives of government, business, labor, and community constituencies.

COSATU and Post-Apartheid Democratization (1994–2000s)

COSATU's influence and mobilizing capacity also shaped legislative and constitutional frameworks after the 1994 democratic election of an ANC-led government. The 1995 amendment to the Labor Relations Act supported for the first time the principle of collective bargaining and extended to new categories of workers the right to unionize; the 1996 Constitution recognized the unions' right to strike and organize; new laws were passed to protect basic conditions of employment and advance employment equity.

Under the democratic government, COSATU focused on the protection and expansion of workers' rights while using its newly found institutional influence to push for progressive policies aimed to benefit the most vulnerable sectors of society, including non-union workers and the unemployed. Retaining complete trade union independence or forming a separate working-class party were discarded as options in favor of "strategic unionism," an approach based on engaging the new government through a sustained and autonomous participation in ruling coalitions and public institutions.

COSATU provided a crucial contribution to the framing of the Reconstruction and Development Program (RDP), adopted in 1994 by the ANC as its electoral and policy manifesto. The RDP steered COSATU's socialist orientation in a developmental direction, which combined a mixed economy and a decisive role for the state in linking growth to redistribution, encouraging investment in job-creating sectors, stimulating domestic demand, and regulating private economic activity.

The RDP entered, however, an uneasy relationship with the macroeconomic policy framework the ANC government adopted in 1996, the Growth, Employment, and Redistribution (GEAR) strategy. Due to its praise of private investors' initiative, trade liberalization, public

spending thrift, and fiscal discipline, GEAR was denounced by COSATU as “neoliberal.” The federation mounted against it a vocal and sustained opposition, which often strained its relations with the ruling ANC, even leading a few affiliates to demand the end of the alliance. COSATU’s criticism was particularly aimed at the privatization of state-owned enterprises and municipal utilities, and at policies of industrial restructuring that underpinned vast layoffs and the erosion of established union constituencies.

In fact GEAR, adopted by the government without previous consultation with the unions and the ANC’s alliance partners, showed the limitations of COSATU’s mode of engaging the policy dynamics of the democratic transition. The 1997 report of the federation’s September Commission emphasized the dangers of marginalization labor faced in a context in which economic globalization hampered union organizing, the proliferation of casual and informal occupations created new difficulties for stable unionization, and the ANC was becoming aligned with macroeconomic conservatism. The party was, moreover, seen as increasingly controlled by new layers of black corporate bourgeoisie boosted by the government’s “black economic empowerment” policies.

Dynamics internal to the federation also contributed to the uncertainties it faced. COSATU’s new institutional functions, the professionalization of its officialdom, the weakening of identities rooted in the anti-apartheid struggle, and the growing complexity of collective bargaining carried a risk of bureaucratization. The move of many union officials to ANC and government positions envisaged, moreover, the possibility of labor’s co-option in the patronage networks of the ruling party. Finally, many unions have become powerful economic actors as their growing investment funds largely operate in the private corporate sector, often as partners in downsizing companies. While union members may benefit from the funds’ dividends, the impacts of their activities on COSATU’s stated aims of social transformation and equitable growth are surely more problematic. COSATU’s progressive influence has been much more evident in its ability to shape social policies – for example in relation to social security or access to treatment for the escalating HIV-AIDS epidemics – than in its successes to contest macroeconomic orientations.

The government of Thabo Mbeki, an ardent advocate of GEAR elected president in 1999,

further complicated the relations between COSATU and the ANC, which have since repeatedly approached a breaking point. Particularly militant in their opposition to the government’s policies have been COSATU’s public sector affiliates, whose impressive growth from the mid-1990s to the mid-2000s has largely sustained the federation’s numerical expansion. The public sector strikes of 1999 and 2007 have been among the most militant and prolonged workers’ mobilizations since the end of apartheid. In the 2000s, rising labor conflicts have underscored enduring social inequality, poverty, and mass unemployment despite rapid economic growth. Under general secretary Zwelinzima Vavi, elected in 1999, COSATU has sought to contest power relations inside the ruling party. The federation was especially instrumental in the rank-and-file insurgency that, in December 2007, led to the replacement of Thabo Mbeki by Jacob Zuma as the president of the ANC.

Current Problems and Further Research Directions

COSATU expects from the new ANC leadership radical policy changes toward the “developmental state” approach of the RDP, if not a return to overtly socialist aspirations. Many problems continue, however, to bother the union federation in the second decade of democracy. COSATU’s institutionalization has not enhanced its ability to shape policy outcomes, and does not necessarily address problems experienced by grassroots working-class communities. Persisting high unemployment is accompanied by the informalization and casualization of most jobs created in the wake of economic growth, adversely affecting union identities and solidarity. The federation’s growing dependence on access to ANC leadership circles and networks may further undermine its autonomy and radicalism in confronting economic policies detrimental to the working class.

COSATU’s renewed effort to influence ANC dynamics from within has reduced the importance of internal voices demanding the end of the alliance, but it also questions the unions’ relationships to broad dynamics of social conflict. Since the early 2000s, in fact, community movements have organized in many urban and rural areas to oppose privatization policies and the enforcement of market mechanisms for the provision of basic services. Usually critical of the ANC and directly antagonistic toward the government

and local institutions, left-wing social movements have often been in an uncomfortable relationship with COSATU. Recent research has emphasized the need for COSATU to address current challenges of poverty and labor market inequality with a strategy of social unionism combining struggles over production and reproduction and expanding efforts to organize informal and casual workers. The viability of this approach in South Africa's evolving social conflict scenarios remains a matter of intense activist and scholarly debate.

Costa, Afonso Augusto da (1871–1937)

Sam Hitchmough

A lawyer and politician, Afonso Augusto da Costa was an important political figure in Portugal's revolutionary transition from monarchy to republic. He was leader of the Portuguese Republican Party (PRP), later becoming the Partido Democrático (Democratic Party), and went on to become a prime minister in the Portuguese First Republic.

During the final stages of the monarchy Costa served as republican deputy in the Chamber of Deputies. After the republic was declared he served as justice minister in Terfilo Braga's provisional government (October 1910–September 1911), becoming prime minister and finance minister in 1913 (January 9–February 9, 1914). He held both offices on two subsequent occasions, from November 29, 1915 to March 16, 1916 and from April 25, 1917 to December 8, 1917, as leader of the national unity government, the Sacred Union. An influential and skillful politician, and an effective political organizer, he was idolized by followers as an idealistic radical and despised by opponents who regarded him as a ruthless sectarian dictator.

Costa operated in a highly volatile and unstable context when the young republic of Portugal struggled to forge a new identity, contended with deep divisions among new political factions, and faced uprisings from monarchists seeking to restore the crown. Political instability was further set against the outbreak of World War I, with significant consequences for Portugal, which endured rampant inflation, strikes, and mob violence. Reflecting the political whirlwind, the country experienced 45 governments in a 16-year period (1910–26). Costa is principally known for his secularization of the Catholic Church as the all-encompassing religious force, his radical republicanism, and his unpopular engagement of Portugal in World War I, which ultimately brought his government down.

Costa secularized the state, enacting the separation of church and state in April 1911 through signing laws expelling Jesuits from Portugal, eliminating religious orders, confiscating property, and banning religious instruction in public schools in the belief that the church represented a threat to middle-class radicalism.

After the election for the first president, the PRP fragmented and Costa led one of the three groups that emerged, the Democrats, committed to radical republicanism, gaining power for the first time in early 1913. As a Portuguese political official, and prime minister, Costa gave workers the right to strike, abolished landed titles, and pursued tax and voting reform. He appointed civil service positions on merit, and balanced the national budget in his first year as prime minister, a significant achievement given the era's instability.

Broadly, Costa regarded the onset of World War I in two ways. First, he thought war might

galvanize popular support for his regime and, second, he believed that Portugal needed to act to protect its colonies. He became increasingly concerned that German victory would lead to the loss of Portugal's African colonies of Mozambique and Angola and sent an initial force of some 30,000 to fight with the Allies in both Western Europe and Africa. Portuguese troops experienced significant losses in the pursuit of the country's imperialist and national interests. Costa would go on to head the Portuguese delegation at Versailles.

The effects of war on the home front led to food shortages, debt and inflation, violence, and renewed agitation from monarchists. The war also discredited many radical and republican ideals. Costa's resumption of power in wartime led to his becoming a hugely unpopular figure, plagued by accusations of corruption.

Costa's administration was overthrown by Sidonio Pais's military coup d'état in December 1917 and the establishment of the Estado Nova (New State). Costa left the country to reside in Paris. Pais's subsequent assassination in December 1918 prompted a limited civil war between monarchists and republicans and Costa was asked to return to Portuguese politics by Democrats at various points, particularly after the decline of Antonio da Silva's administration in 1923, but he refused, remaining in Paris until his death in 1937.

Costa Rican Civil War and Uprising, 1948

Jan Ullrich

The Costa Rican Civil War in 1948 and the struggle for political and social reforms in the 1940s are central events in the country's contem-

porary history. In the 44-day armed confrontation between a pro-government workers' militia and the oppositional National Liberation Army, more than 4,000 people lost their lives. The uprising led to the establishment of an interim Junta by José Figueres Ferrer, and the constitutional foundation of the Costa Rican Second Republic.

On March 12, 1948 José Figueres Ferrer, the later founder of the social democratic Partido de Liberación Nacional (PLN), led a rebellion against the government of Teodoro Picado. It was the immediate reaction to a March 1, 1948 congressional decision to annul the presidential elections of February, in which the victory of opposition candidate Otilio Ulate Blanco had been declared by the National Election Tribunal. The Communist Party Vanguardia Popular, which supported the candidacy of Rafael Ángel Calderón Guardia, reacted by organizing workers' militias, blaming the opposition for having manipulated the elections by denying Calderón's supporters access to the polling booths.

While Costa Rican armed forces fell apart and were quickly defeated by the troops of Figueres, the workers' militias occupied San José. After the victory of Figueres in the famous Battle of Tejar, near Cartago, on April 13, both sides agreed to negotiate under mediation of international diplomats. In the Pact of the Mexican Embassy, former elected president Otilio Ulate Blanco agreed to an interim junta with Figueres at its head that would govern the country for 18 months before power would be handed to him. Figueres promised to maintain the legality of the Communist Party and respect the social reforms made under Calderón's government (1940–4).

When Figueres came to power on May 8, 1948, however, he broke the agreements. He outlawed the Communist Party and ejected Calderón's adherents from public institutions. Thousands of communists, unionists, and calderonistas went into exile. Instead of promoting the anti-reform politics of Ulate, Figueres implemented a progressive institutional transformation. He nationalized the banks and abolished the rest of the national army to annihilate them as a political force. In Costa Rica's Second Republic Constitution, written by a national convention, women's right to vote was set up, as well as full rights of citizenship for the Afrocaribbean population. The new Supreme Election Tribunal was founded as an independent institution to

guarantee the convocation of the new legislative Congress and the handing over of executive power to Ulate, who became the first president of the Second Republic in 1949.

The most onerous eruption of political violence of the twentieth century in Costa Rica arose from profound social and economic changes and increasing ideological confrontation. During the nineteenth century Costa Rican political elites, merchants, and affluent coffee producers followed the ideology of progress by liberalizing markets and expanding agricultural exports. With a fall in coffee and banana prices in 1928, Costa Rica was significantly affected by international economic crisis. The most afflicted social groups were urban craft workers and the laborers in the banana plantations on the Caribbean coast. Together, they formed the political basis of the emerging Costa Rican Communist Bloque de Obreros y Campesinos (BOC) founded in 1931.

With the growth of social and political polarization, the ruling Partido Republicano Nacional (PRN) began to orientate toward politics of state regulation and social reforms, nominating the popular Rafael Ángel Calderón Guardia for the presidential elections in 1940. He won 86 percent of the votes. His enthusiasm for the allies in World War II and his Christian-motivated emphasis on the construction of a welfare state led to the division of his party into reformist calderonistas and conservative cortesistas. Hence, former president León Cortés Castro became his rival.

With the division of his political base, Calderón searched for new allies and formed a coalition with BOC, led by Manuel Mora in 1942, to implement an ambitious program of social reforms: the creation of social security, establishment of the labor code, and a chapter in the constitution on social guarantees. BOC was reorganized as the Vanguardia Popular in 1943 and committed itself to a democratic route to socialism; thus, even the reformist archbishop of San José, Víctor Manuel Sanabria, could support the widespread political coalition.

Decreasing export incomes caused by the closed markets in Europe during the war, high inflation, and a political culture of favoritism and patronage by the Calderón regime led to growing opposition from upper- and middle-class sectors of Costa Rican society, which supported the new Democratic Party of Cortés. In the elections of 1944 the candidate of the Partido Republicano Nacional, Teodoro Picado,

won against Cortés but under the suspicion of fraud. The political conflict about the election results strengthened the opposition and weakened the legitimacy of the democratic system. Another opposition group was founded around José Figueres Ferrer, who returned from Mexican exile and began working with the intellectuals Rodrigo Facio Brenes and Carlos Monge Alfaro, from the Center of Studies about National Problems, on the foundation of a new reform-orientated, anti-communist Social Democratic Party. In contrast to the anti-reform party of Cortés, Figueres remained with little electoral support and emphasized a military option to overthrow the patronage-steeped government of Calderón.

During the political and ideological confrontation between 1945 and 1948 the opposition strengthened its agitation against the participation of the communists in the government by creating fear of a rising red totalitarian regime in Costa Rica. The political conflict became violent, and bombs in the largest cities of the country became normal events. For the election of 1948 the opposition nominated the conservative Otilio Ulate Blanco, editor of the newspaper *Diario de Costa Rica*, to oppose a second presidency of Calderón. In the atmosphere of growing political violence both groups were blaming each other for planning the manipulation of the elections. In preparation for a predictable confrontation, Figueres began the training of a rebel army with the support of other Central American exile groups to bring down all dictatorships in the region, committed to the Pact of the Caribbean.

Due to the exceptionally low participation of the rural population in the election, the opposition candidate Ulate was declared the winner by the new National Election Tribunal. The accusations of Calderón supporters that the opposition prevented them from entering the polling booths is supported by historical evidence. Certainly, Figueres' victory was enabled by the lack of awareness among the political elites about his mutinous preparations and hence the initial underestimation of the military capacity of his campaign. While Picado and Ulate were negotiating during the armed confrontation about a political solution of a compromise candidate, they never took seriously the threat posed to them by Figueres. This chapter of political instability in Costa Rica was closed in 1958 when the PLN, under the presidency of Figueres (1953–8),

accepted defeat in elections by the conservative candidate Mario Echandi.

Côte d'Ivoire, post-independence protest

Naminata Diabate

Côte d'Ivoire gained political independence from France, the former colonial power, in 1960. For more than three decades to 1993, the Ivorian nation was ruled by President Félix Houphouët-Boigny, who termed the era “la démocratie à l'ivoirienne” (democracy Ivorian style). Côte d'Ivoire enjoyed political stability and relative socioeconomic prosperity. However, with Houphouët-Boigny's death in 1993, Côte d'Ivoire faced political instability typified by ethnicization of politics, social protests, military coups, and civil conflict with secessionist undertones. The instability was accentuated if not caused by poor economic conditions precipitated by the drop in cocoa and coffee prices on international markets and the imposition of austerity measures by multilateral agencies.

Under Houphouët-Boigny's rule, Côte d'Ivoire experienced its first post-independence violent protests in a series of demonstrations by students,

civil servants, and other segments of organized society from February to April 1990. The demonstrators protested a myriad of policies perpetuated by the government: rising inflation, retrenchment, and the deterioration in the quality of life. The unrest was also caused by privatization of national companies, viewed as instigated by western governments through the International Monetary Fund (IMF). During a protest on April 19, 1990, angry students demonstrated against the lack of transparency in examinations; the flag of the nation's single ruling party, the Côte d'Ivoire Democratic Party (Parti Démocratique de Côte d'Ivoire, PDCI), was torn and burned and anti-Houphouët-Boigny slogans were expressed.

The violent confrontations between police and students were the culmination of a series of protests. On April 6, 1990, Ivorian civil servants, through the general workers' union UGTCI (Union Générale des Travailleurs de Côte d'Ivoire), took to the streets to protest the austerity prescriptions of the structural adjustment programs (SAPs) of the IMF and World Bank which consisted in reducing the civil service and salaries. Unions of university professors and of medical doctors and personnel joined the demonstrations and strikes. These demonstrations revealed latent opposition to single-party rule and the precarious and explosive nature of the country. On March 2, 1990, 6,000 high school students staged an uprising in Cocody, an affluent neighborhood of the capital city Abidjan, which was violently suppressed by state security and military forces, injuring hundreds of students.

The demands of different protesters shifted from social and economic to overtly political demands for the implementation of a democratic system. The change reflected the recommendations of French President François Mitterrand on June 21, 1990, expressed during the historic 16th conference of African and French statesmen in what became known as “le discours de la Baule” (La Baule address). Underground political party leaders such as Laurent Gbagbo of the Ivorian Popular Front (Front Populaire Ivoirien, FPI), created in 1982, and Francis Wodié of the Ivorian Labor Party (Parti Ivoirien des Travailleurs, PIT), founded in April 1990, appeared clandestinely and demanded a return to multiparty democracy. While political parties were to be legalized, the manipulation of ethnic sentiment blocked the development of

ideological discussions and accentuated ethnic divisions, fomenting larger protests.

Under domestic and international pressure, Houphouët-Boigny held general elections in November and December 1990, which he won against Laurent Gbagbo. Eager to redeem his image and legacy, he subsequently appointed Alassane Dramane Ouattara as prime minister. Ouattara was a technocrat and economist who had previously worked for the IMF and Central Bank of West African States (BCEAO). In response to Ouattara's unpopular social and economic measures, leaders such as Gbagbo, René Degni Ségui of the Ivorian Human Rights League (*Ligue Ivoirienne des Droits de l'Homme*, LIDHO), and others organized a historic demonstration on February 18, 1992, which gathered 30,000 supporters of democracy. Several official buildings were ransacked and Gbagbo narrowly escaped death, but was later arrested, charged, and condemned in an infamous trial with 200 other demonstrators.

The protests escalated in number and intensity following the death of Houphouët-Boigny in 1993 and the devaluation of the Ivorian currency, the CFA, in 1994. Amid the opposition, a power struggle emerged between Ouattara and National Assembly President Henri Konan Bédié over the presidential succession. Following Bédié's self-appointment as president of Côte d'Ivoire, Ouattara returned to the IMF to serve as its deputy managing director.

Preparations for the general elections of 1995 exposed hostilities within the PDCI and resulted in the creation of the Republican Rally (*Rassemblement des Républicains*, RDR) in 1994. The RDR dramatically expanded ethnic hostility in Côte d'Ivoire. The erstwhile prime minister, Ouattara, expressed his intention to seek the presidency in Côte d'Ivoire. However, to prevent Ouattara's candidacy, the ruling PDCI party and the National Assembly of Côte d'Ivoire passed an electoral code stipulating that presidential candidates should live in Côte d'Ivoire for five years preceding their candidacy and be born to parents of Ivorian nationality. The opposition saw the laws as retrogressive and reactionary, contending that they were designed to preclude the eligibility of their candidates. Following the ruling party's adamant support of the electoral code that would bar Ouattara, the RDR boycotted the elections. Laurent Gbagbo and his party boycotted the elections as

well to protest against the massive and suspicious mechanisms of widespread vote-catching and the unfair use of national audiovisual media to ensure Bédié's victory. Bédié won the presidency of Côte d'Ivoire in 1995 but was ousted in 1999 in a military coup d'état led by General Robert Guéi.

In addition to the military intervention, Côte d'Ivoire suffered from ethnic conflict and secessionism. Several precipitants explain the outbreak of ethnic conflict: general pauperization, the embezzlement of public funds by ruling officials, and the demonization of opposition parties.

In December 1999, Ivorians expressed their joy at the military coup d'état in which General Robert Guéi overthrew Bédié, ending the PDCI's 30-year rule. Yet in October 2000, to secure his position as president of Côte d'Ivoire, Guéi and his newly created party, the Union for Democracy and Peace in Côte d'Ivoire (*Union pour la Démocratie et la Paix en Côte d'Ivoire*, UDPCI), demonized the RDR and its partisans, disqualifying their candidates from the forthcoming elections. The action culminated in overt violence in October 2000 after rigged presidential elections between long-time political opponents Gbagbo and Guéi. During the counting of ballots that gave the lead to Gbagbo, Guéi proclaimed himself president of Côte d'Ivoire.

On October 23, 2000, Gbagbo called his partisans to contest the results of the elections in the streets. The death toll of the violent confrontations between FPI partisans and state military forces was estimated to be over 50, and hundreds more were injured in the process. Following the clashes, the Supreme Court declared Gbagbo president of Côte d'Ivoire on October 26, 2000. But on that day, the RDR called for a popular revolt against the legitimacy of Gbagbo. Violent clashes between RDR supporters on one hand and state security and military forces and FPI partisans on the other claimed the lives of 57 young men, whose bullet-ridden bodies were discovered in a mass grave in the Abidjan suburb of Yopougon. The number of casualties resulting from the bloody events of October 26, 2000 has not been independently established.

The events of October 2000 left the country in a state of heightened ethnic tension, culminating in a coup d'état on September 19, 2002 that overthrew President Gbagbo. Eight hundred

soldiers simultaneously attacked Abidjan, Bouaké, the second largest city, and the northern city of Korhogo to protest against their planned demobilization in 2003. The Secretary General of the United Nations on Côte d'Ivoire noted that most of those soldiers had been recruited during the military regime of General Guéi. State military forces succeeded in dislodging the insurgents from Abidjan, but failed to do so in Bouaké and Korhogo. The rebel soldiers consolidated their occupation of the northern half of Côte d'Ivoire and framed their motivations for the coup as political and social. A new political movement surfaced on the Ivorian political scene: the Patriotic Movement of Côte d'Ivoire (Mouvement Patriotique de Côte d'Ivoire, MPCCI), led by former student leader Soro Guillaume, which emerged from the rebel-occupied half of the country.

The MPCCI was followed by two other armed groups and political movements: the Ivorian Popular Movement of the Great West (Mouvement Populaire Ivoirien du Grand Ouest, MPIGO) and the Movement for Justice and Peace (Mouvement pour la Justice et la Paix, MPJ) in November 2002. The emergence of these movements and their holds on the west (MPIGO and MPJ) and north (MPCCI) further crystallized the ethnic divisions in Côte d'Ivoire. The MPCCI, MPIGO, and MPJ unanimously contested the legitimacy of Gbagbo's presidency and demanded his resignation as well as the organization of new general elections. The MPCCI demanded a revision of the constitution and an end to the exclusion of northerners from the political life of the country.

Regional and international instruments such as the Economic Community of West African States (ECOWAS) and the former colonial power France took several steps to reach a peaceful solution to the military and civil crises in Côte d'Ivoire. Among multiple peace talks in Lomé, Accra, and Yamoussoukro, the agreements of Linas-Marcoussis (January 15–26, 2003) figure prominently given the unprecedented nature of the street demonstrations they caused in Côte d'Ivoire. At the invitation of France, all participants in the Ivorian conflict convened in France in January 2003. The resolutions of the round table stipulated the creation of a government of reconciliation, the appointment of a prime minister in consultation with opposition parties, and the organization of new, transparent, and

credible presidential elections in 2005. More importantly, the round table made provisions for the Ivorian political class to resolve the root causes of the crises: the question of citizenship, the eligibility of presidential candidates, xenophobia, and the state exclusionary practices against northern Malinkés.

Even though all participants to the round table signed the final document, FPI and its partisans organized unprecedented street demonstrations to protest against the provisions of Linas-Marcoussis. The FPI rejected the admission of rebels into the government of reconciliation, and the Ivorian first lady, indefatigable political activist and member of parliament Simone Ehivet Gbagbo, criticized Ivorian male political leaders on national television for giving in to the neocolonial power in signing the documents. The street demonstrations targeted and attacked French economic and diplomatic interests in Côte d'Ivoire. The radical wing of FPI and former student leader Charles Blé Goudé served as the masterminds behind the demonstrations and articulated the internal political attacks against the FPI as an attempt by France to recolonize Côte d'Ivoire.

Politicians in Côte d'Ivoire are still searching for remedies to the political, social, and ethnic crises that erupted in 1990. The elections scheduled for 2005 failed to take place because of the rebels' hold on the northern half of the country. Even though at the time of writing Côte d'Ivoire has not yet conducted completely transparent and fair elections (presidential elections were announced for November 30, 2008), it has however registered an increased participation of the civil society through demonstration and protest on the political scene.

Côte d'Ivoire, pre-independence protest and liberation

Naminata Diabate

Côte d'Ivoire became a French colony at the end of the nineteenth century through the French decree of March 10, 1893. The country is an arbitrary construction of French colonialism, which lumped together diverse populations living in territories still unknown to the French. The history of protest and resistance in Côte d'Ivoire started with the contact with French colonialists in 1840, and continued throughout the early twentieth century, until independence was achieved in 1960.

Located in the western part of Africa, Côte d'Ivoire is surrounded in the northwest by Mali and Guinea, in the northeast by Burkina Faso, in the southeast by Ghana, and in the southwest by Liberia. The peopling of Côte d'Ivoire coalesced in the fourteenth century, although very little is known about that period. The major migratory movements of people, however, occurred between the fourteenth and eighteen centuries with the decline of the Mali Empire, among other defining historical events.

Initial conflicts involved populations from the south opposing French colonialism, followed by conflict between French colonials and populations of the center. The first recorded act of resistance by the populations of Côte d'Ivoire against French colonials took place in 1849 (five years after a treaty made Côte d'Ivoire a French

protectorate). The 1849 resistance represented the second defeat for French colonials after their aborted expedition in the region of Assinie in 1701–3. The clash between the Abourés of the South and the French resulted in the French bombardment of Yaou. The specific cause of the conflict still remains unknown. A second more violent conflict later opposed the coalition of Abourés and Ebriés against the French in 1853. The Abourés and the Ebriés erected a blockade on the lagoon of Ebrié and took siege of the French Nemours Fort. A battalion from Sénégal crushed the resistance and took control of the lagoon; the lagoon represented a vital route for French commerce with the populations of Côte d'Ivoire. As a warning to the Adioukrous, a neighboring people to the Ebriés, the French built Dabou Fort in 1854.

After the Berlin Conference of 1884–5, also known as the Scramble for Africa, relations between the Ebrié populations and the French colonials remained tense. In 1886 the Ebriés once again protested by closing the Ebrié lagoon to French commerce. The closure of the lagoon was immediately followed by a punitive expedition of French colonials.

Following hostilities between the French colonials and the southern populations, the center populations engaged in a series of revolts against the French. In 1891 the Baoulés (of Tiassalé) killed two French businessmen to protest their suspicious trade practices. The troops sent to punish the murderers were decimated by the Baoulés. In retaliation the French Captain Marchand and his troops overpowered the insurrectionary clan. Invigorated by the success against the Baoulés, Marchand attempted an expansion towards the North, but Samory Touré arrested Marchand on the way. Touré, known as the Black Napoleon of Sudan, was a fierce opponent of French expansion.

From 1891 to 1898 Touré, with his own expansionist aspirations for his Wassoulou Empire, fought against French colonial troops for the control of several regions: Kabassarana, Horodougou, du KénéDougou, Djamala, Djimini, and Tagbana – all regions located in the north of current Côte d'Ivoire. Although Touré succeeded in delaying the French in their conquest of the North of Côte d'Ivoire for years, he was ultimately defeated due to a convergence of circumstances, ranging from the disillusionment of his subjects, to the famine brought about by the war with the French troops. Touré was captured in September 1898 and

died in captivity in 1900. His defeat accelerated the expansion of French colonial rule in Côte d'Ivoire: the French absorbed the Wassoulou Empire into their colonial territories. Soon after, the French colonial troops prevailed in the war of Bouboury in 1890 and the wars of Bonoua in 1894–5.

The French colonial administration was resisted from its inception; however, acts of protest often-times resulted in adverse effects for the local populations, including the imposition of taxes and fines. According to the Ivorian historian Pierre Kipré (2005), the root causes of the protests included a price increase in French manufactured products, the implementation of customs posts by the colonial administration (1889), and the disruption of former trading practices between local populations. For example, the Tepos of the Cavally valley fought against the French from 1893 to 1914 because of imposed customs and fees. The Gouros and Baoulés (of the center) protested against the French because their customs posts undermined the Gouros' and Baoulés' trade with the Malinkés (of the north). In 1902 the Baoulé-Nanafoués protested French rule by destroying a new administration post and killing the head of the post, resulting in the massacre of 20 collaborators. The French administration sent 220 troops in response, only to have them overpowered. As a consequence of the defeat, the colonial administration left the region.

The 1908 appointment of Governor Gabriel Angoulvant inaugurated a new era of crushing local resistance through the use of heavy and sophisticated armaments. From 1908 to 1919 multiple revolts were smothered and heavy human losses resulted. In 1916 historians of Côte d'Ivoire estimated the number of deaths among the indigenous population to be between 225,000 and 260,000 – of a population estimated roughly at 650,000 at the beginning of the century. In addition, 15–45 percent of villages were destroyed between 1900 and 1916.

Eventually armed resistance was replaced with passive resistance, such as rejection of tax payments and colonial education. Ironically, the colonial education, aimed primarily to train locals as a backup to the limited number of French serving in Côte d'Ivoire, would be the very system that created the indigenous elite who demanded decolonization in the years after World War II.

The corollary of both world wars was a shift towards nationalist and pro-independence aspira-

tions, which effectuated several colonial reforms beginning in 1944. The most remarkable of these reforms was the 1956 *la loi cadre* (Overseas Reform Act; French constitutional reform that granted West African colonies semi-autonomous status). The historical factors leading to the independence of Côte d'Ivoire in 1960 include the emergence of a local elite educated both in France and Côte d'Ivoire, massive rural migration, growth of urban centers, the extension of market infrastructure, the formation of ethnic and regional consciousness through clubs and associations, and the return of the *tirailleurs sénégalais* (West African infantrymen recruited in the French army that served as cannon fodder during the two world wars).

Nationalist aspirations led to the creation of regional and transnational organizations, clubs, and trade unions, and their eventual conversion into political parties: PDCI-RDA (Parti Démocratique de Côte D'Ivoire; Ivorian section of the transnational RDA; Rassemblement Démocratique Africain, created in 1946), PPCI (Parti Progressiste de Côte D'Ivoire; Progressive Party of Côte d'Ivoire, formed in 1949), and Le Bloc Démocratique (Democratic Bloc). With the support of the PDCI-RDA, Felix Houphouët-Boigny became the first African to enter the French parliament in 1946, and later held a ministerial portfolio in the French Fifth Republic.

During the legislative and territorial elections of 1946, 1947, and 1951, Côte d'Ivoire experienced a series of protests and incidents among different political parties, as well as between partisans and the French colonial administration. The colonial authority's incarceration of PDCI-RDA members in Grand-Bassam facilitated the participation of Ivorian women in political movements, with the historic women's march to Grand-Bassam to liberate their husbands and brothers. Women such as Anne-Marie Raggi, Marie Gallo, and Margueritte Sackoum later became active members in the quest for independence. In 1957 the PDCI-RDA won 58 out of 60 seats in the election, but remained reluctant to demand independence.

Due to the pressures and the setbacks of the Algerian War (1954–62), French President De Gaulle consented to grant independence to Côte d'Ivoire in July 1960. In August 1960 Houphouët-Boigny declared the independence of Côte d'Ivoire. But as Timothy Weiskel argues in his article "Independence and the *Longue Durée*: The Ivory Coast 'Miracle' Reconsidered" (1988), "the transfer of power is perhaps more accurately understood

as a ‘transfer of powerlessness,’ for independence did little to reverse the trends in these phenomena; indeed, it may have done much to accelerate their crippling evolution.” This “transfer of powerlessness” foreshadowed the series of post-independence protests that nearly undermined the survival of the Ivorian nation.

Counterrecruitment

Benjamin J. Pauli

With the end of conscription in 1973, counterrecruitment replaced draft resistance as a means of opposing war and militarism in the United States by cutting off the supply of military personnel at the source. One of the main tactics of counterrecruiters has been to educate students, parents, and the public at large about the realities of war, the abuses of military recruiters, the truth about military benefits, alternatives to military service, and the unique character of commitment to the military that distinguishes it from other careers.

Counterrecruitment activists have expressed concerns about student privacy, the coercive and deceptive tactics sometimes used by military recruiters, the military’s targeting of students with low socioeconomic status, and the militarization of youth through the Junior Reserve Officers Training Corps (JROTC) program. With the passage of the No Child Left Behind Act of 2002, which requires schools to divulge personal information about students to the military or risk losing federal funding, the movement took on a new salience, carving out a secure place for itself within the anti-war movement. To this end, counterrecruitment organizations have sought, occasionally by taking legal action, “equal access”

to students that allows them to set up tables, distribute leaflets, and make presentations in classrooms on days when military recruiters are active in schools. Counterrecruitment activists have also encouraged students to “opt-out” – to exercise their right to have their personal information withheld from the military. In addition, pressure has been placed on school boards to address growing concerns about military recruitment, including requests that recruiters be banned from school campuses entirely.

Counterrecruitment organizations have generally focused their efforts on local schools, resulting in a widespread but targeted movement with a focus on particular communities and little national coordination. These activists have often, however, linked their activities to broader concerns about national priorities – the vast discrepancy between the amount of resources expended on the military relative to those expended on education, for example – and many counterrecruiters see their actions as part of a wider effort to hinder the government’s ability to wage ongoing and future wars. Groups that have been particularly active within the movement include the American Friends Service Committee, the Central Committee for Conscientious Objectors, the Campus Anti-War Network, Leave My Child Alone, the Coalition against Militarism in Our Schools, Youth against War and Racism, Project YANO, and the National Network Opposing Militarization of Youth. The counterrecruitment message is also spread through the activist punk rock scene, most notably through the music of the band Anti-Flag.

Counterrevolution

Stephen Eric Bronner

Counterrevolution and revolution are both products of modernity. To be sure, the reaction against calls for change, no less than the demand for change, reaches back to the beginnings of political history. But the concept “counterrevolution”

is a product of modernity as surely as the integrated economic, political, and ideological attempt to transform society that is now understood as “revolution.” For a bit more than a hundred years, throughout Europe and beyond, a burgeoning bourgeoisie with coalitional support from other classes began an attack upon the *ancien régime*. Partisans of this undertaking sought to substitute capitalism for feudal social relations, a republic for the monarchical state, and a new secular ideology for religious dogma. With its insistence upon individual enterprise and scientific innovation, the liberal rule of law and the assault upon traditional authority, scientific reason and moral autonomy, the Enlightenment crystallized what became known as the age of democratic revolution.

The crowning achievements of this enterprise were the three great democratic revolutions that occurred in England (1688), the United States (1776), and France (1789). All of them were predicated on the vision of a new constitutional order in which equal citizens of diverse background and different interests might determine their fate together peacefully under the liberal rule of law. Constitutionalism and suffrage rejected – in principle – the idea of individuals living without explicit human rights in a “community” bound together by land and custom. The principle, of course, did not instantly translate into fact; thus, there began the long struggle for suffrage by excluded groups whose most important representatives, from Mary Wollstonecraft to Martin Luther King, Jr., pointed to the contradiction between universal ideals and the prejudiced society that denied them. It only makes sense that the formation of a liberal and secular order should have been welcomed not only by those Jews seeking entry into Gentile society, but – what is so often forgotten – also by those seeking freedom from the theocracy of the provincial ghetto. Eighteenth-century constitutional revolutions tore down the walls of the ghetto, opened society, and – finally – enabled Jews to claim their rights as equal citizens. The failings of these revolutions with respect to implementing equality among citizens, it should be noted, were due less to the inadequacies of their Enlightenment supporters than the unrelenting assault upon their most basic political values by those who would form the counterrevolution.

Counterrevolutionary defenders of “throne and altar” trembled. Edmund Burke warned

against severing the bonds “between the dead, the dying, and the yet unborn”; Gustav le Bon identified democracy with the “mob”; Johann Georg Hamann lauded irrationalism; Joseph de Maistre and other traditionalists decried the new tolerance accorded women and “alien” groups like the Jews. Critics of the new age felt themselves justified by the instability and terror generated through the French Revolution, and the years following the Napoleonic Wars were dominated by attempts to introduce a “restoration” of the past. Authoritarianism blossomed with the sanctification of tradition, established forms of hierarchy, and fear of both the “masses” and the “Other.” Experience, intuition, and especially “myth” were given philosophical primacy over reason. Christianity was resurrected, so to speak, in the assault upon secularism and German nationalists introduced policies based on the “purity of race.” Everything associated with the Enlightenment and the French Revolution, in short, came under suspicion. Stendhal appropriately called the period stretching from 1815 to 1848 a “swamp.” It was, indeed, dominated by the army and the church or, using the title of his most famous novel, “the red and the black.”

Integral nationalism and absolutist understandings of religious faith have always intoxicated the advocates of counterrevolution. Herein lies the basis for their contempt of liberal notions of toleration and individualism as well as what would become socialist ideals of equality and an extended understanding of “rights.” With the attack upon the republican ideal of the citizen came the attack on the rights of the Other. Rejection of all ideas concerning natural rights and human dignity, which the Enlightenment inherited from the Renaissance, enabled counterrevolutionaries to dispense with cosmopolitan values and embrace explicit doctrines justifying racism, sexism, and the like. Tensions between these two outlooks would simmer for the next three decades following the fall of Napoleon in 1815. They exploded with the demands for republics that, especially in France, would prove both “democratic” and committed to the “social” good in the revolutions of 1848.

Liberals in the United States would fuse these two strands of the Enlightenment into a philosophy capable of gripping the masses, first in the form of Progressivism at the beginning of the twentieth century, then in the New Deal

of Franklin Delano Roosevelt, next in the civil rights movement, and the poor people's movement of the 1960s. But the defeat of the revolutions of 1848 by reactionary forces, fighting against republicanism and socialism in the name of values inherited from the Counter-Enlightenment, led continental liberalism to surrender its radical impulse. European liberals wound up exchanging the original cosmopolitanism associated with the Enlightenment for new imperialist aspirations, the old emphasis upon republicanism and civil liberties for support of existing monarchical regimes, and the spirit of social reform for an almost unqualified belief in the market. Thus, in contrast to its Anglo-American variant, continental liberalism ultimately served as little more than the political philosophy of the bourgeois gentleman. Its advocates throughout the second half of the nineteenth century, and well into the twentieth century, would essentially act as brokers between the authoritarian movements of the right and the socialist movements of the left. Until the anti-communist rebellions of 1989, in fact, continental liberal parties were never able to secure a mass base for their worldview – and, even today, they still have their problems. Nevertheless, from 1848 until the present, both political democracy and social equality would serve as targets for the counterrevolution.

This ongoing battle of differing value systems was generated less by some abstract “dialectic” than a concrete and empirical conflict between the partisans of revolution and counterrevolution. That becomes apparent not so much in *The Communist Manifesto*, which can be understood as a testament to the revolutions of 1848, but in the stunning set of historical works that chronicled the events like *Revolution and Counter-Revolution in Germany* by Friedrich Engels and *The Class Struggles in France* as well as the classic *Eighteenth Brumaire of Louis Napoleon* by Karl Marx. Rarely noted is that here, for the first time, a general theory of the counterrevolution is articulated. Marx insisted that the issue is not merely one of reactionary ideas, or the attempt to transfer symbols and myths from an earlier time into the present, but rather a set of ideas directed at the two most progressive ideologies held by the two dominant classes of the modern production process: the liberalism of the revolutionary bourgeoisie and the socialism of the working class.

According to this logic, pre-capitalist values and ideologies should hold a particular affinity for pre-capitalist classes like the aristocracy, petty bourgeoisie (or, in German, the *Mittelstand*), the peasantry, and even the *Lumpenproletariat*, who are rooted in a community bolstered by religious and traditional values. These premodern classes feel themselves threatened by the urban character, the cosmopolitan quality, and the scientific character of the modern production process. Just as they all resent the exploitative hegemony exercised by the bourgeoisie, and they all fear being reduced to an anonymous mass proletariat, they cannot embrace either liberalism or socialism without existentially denying themselves. Marx and Engels maintained that counterrevolution is embraced by the losers or those who feel they might become losers in dealing with the economic, political, and social forces comprising modernity. With its authoritarian nationalism, its preoccupation with prejudice and inequality, counterrevolution thus becomes the underside of the revolutionary struggle for cosmopolitanism, political liberty, and social equality.

Perhaps it was because 1848 solidified the linkage between political democracy and social equality, and because the reaction to these values was so clear cut, that Marx and Engels were able to elucidate their theory of counterrevolution when they did. It would remain a staple for concretely analyzing every form of counterrevolution that has emerged since Napoleon III and Bismarck propagated an even more intensified commitment to integral nationalism and the organic community following the defeat of the international revolutions of 1848. Counterrevolutionary ideas of this sort inspired the rise of anti-Semitic and populist movements in the last decades of the nineteenth century led by Adolf Stoecker, the court chaplain of Kaiser Wilhelm I in Berlin, as well as Austrians like Karl Lueger and Georg Ritter von Schoenerer – both of whom were admired by the young Hitler – who were already successfully employing slogans like “Germany for the Germans” and “From Purity to Unity.”

But nowhere was this more the case than in France during the sensational Dreyfus Affair of the 1890s that surrounded the trumped-up conviction for treason of the only Jew on the General Staff by a military tribunal. Heirs of the Enlightenment and 1789 like Emile Zola and Jean Jaures, the great socialist leader, took up the cause of Captain Alfred Dreyfus and decried

the verdict. But their defense was predicated on placing reason above experience, evidentiary truth above tradition, and a universal sense of justice above the needs of the national "community." Reactionaries analyzed the matter differently. Literary figures like Maurice Barres, crackpot thinkers like Charles Maurras, and journalists like Paul Bourget insisted that bringing universal standards of justice to bear on the case would result in a denigration of the national interest. Equal treatment for a Jew as a "citizen" of France would, they believed, result in further "deracination" of the country and the erosion of its Christian heritage by an elitist group of "intellectuals."

Advocates of the counterrevolution maintained that their rejection of universal "abstractions" like the rule of law and their willingness to privilege intuition over reason allowed them – as against their liberal opponents – to remain "rooted" in their community and stand in a genuine experiential, or "organic," relation to the "people." Little wonder then that the Dreyfus Affair should have solidified the connection between republicans and socialists even as it generated a movement, *Action française*, whose ideology basically anticipated that of fascism.

Movements such as these prevented Enlightenment ideals and proponents of the democratic revolution from achieving ideological hegemony over Europe until after World War II. All of them had their mass base in some combination of pre-capitalist classes and in the least economically advanced areas of the nation. Fascism and Nazism were no different. They, too, were conscious responses to the Enlightenment and its two progressive political offspring, liberalism and socialism. In Germany most of the bourgeoisie identified with an increasingly impotent set of parties embracing a continental variant of liberalism, while the majority of the working class voted until the end for their social democratic parties. All these political organizations supported the Weimar Republic and all were avowed enemies of the Nazis who made war on them in word and deed.

What was true in Germany, moreover, was true for Europe in general. Social democracy maintained the loyalty of the great majority of the working class throughout the twentieth century; it introduced the first democratic parties to Europe; and, still officially clinging to the ideology

of "orthodox Marxism," it served as the mass base for the republics that sprung up all over Europe in the 1920s. Indeed, beginning during the last quarter of the nineteenth century, the European socialist movement shouldered a "dual burden" that involved defending the universal liberal political values inherited from the bourgeoisie while, simultaneously, furthering its own particular economic interests. Or, to put it another way, social democrats attempted to link what today we call "negative liberty" with "positive rights." Thus, it only made sense that the socialist movement should have been the most consistent opponent of totalitarianism.

Fear of communism helped produce the new fascist movements that arose in Italy, Hungary, Germany, Romania, Spain, and elsewhere. But the expression "the extremes meet" (*les extremes se touchent*) is apt with regard to fascism and communism. While the two movements fought bitterly, other than from 1939 to 1941, Mussolini and Hitler privately expressed admiration for Lenin and Stalin. Yet there is much debate concerning whether – or, better, to what extent – communism fits the counterrevolutionary paradigm.

The Bolshevik Revolution of 1917 was clearly committed to furthering social equality, a radical "soviet" version of democracy and an internationalist ideology. With the rise of Stalin, however, meaningful social equality was decimated by terror, iron dictatorship supplanted democracy, and internationalism gave way to the crudest nationalism. It is also the case that the revolution occurred at what Lenin called "the weakest link in the chain," that is to say in the most underdeveloped "capitalist" nation, and that increasing fear of losing the battle for modernity helped propel the most terrible crimes of the communist regime. Thus, there is something legitimate in speaking about "red fascism" and, thus, the "red" counterrevolution.

Both fascism and communism explicitly opposed liberal republicanism. Communism first gained its political identity, in fact, when Lenin sought to differentiate his movement, with its new commitment to a party dictatorship, from social democracy with its republican ideals. By the early 1920s, moreover, the Communist International had already passed resolutions stating its refusal to support parliamentary democracies and Stalin's famous refusal of 1928

to form a common front with the socialists against the Nazis hurt the anti-fascist cause far more than its enemies. With the same venom, movements of the far right despised liberals and social democrats everywhere in Europe. Germany was only the most notorious instance: its fascists condemned the “traitors” – especially the social democrats – who supposedly provided their nation with a “stab in the back” during World War I as well as the “November criminals” who signed the humiliating Treaty of Versailles and brought about the Weimar Republic. Both communism and fascism embraced a military vision of the political party, identified their party with the state, relied upon a “cult of the personality,” and ruled through a mixture of propaganda and terror. Both considered terror a means and an end, ultimately embraced anti-Semitism (though in dramatically varying degrees), and participated in the creation of what has justly been called a “concentration camp universe.”

In the wake of Auschwitz and the Gulag, and the disclaiming of responsibility by the criminals during the Nuremberg Trials, totalitarian ideologies lost their appeal and legitimacy. Liberal ideals and the dignity of the individual were accorded a new standing as calls arose for extending democratic rights to people of color, gays, and women. The civil rights movement led by Dr. Martin Luther King initiated what would become a general challenge to racist, patriarchal, and homophobic prejudices that had become ingrained elements in the mainstream understanding of how society was organized and the character of the national “community.” These concerns blended into a rejection of imperialism and colonialism, which was expressed in the opposition to the Vietnam War in the United States, and a general call to “work through the past” in Europe. Sexual relations became less rigid, new experiences were sought, egalitarian educational experiments were attempted, and a new sympathy emerged for the Other.

But “the sixties” was not merely about “sex, drugs, and rock ‘n’ roll” any more than it was simply about culture and morality. With the “new social movements” in the United States came a slew of new and transformational economic and social programs known as the Great Society and an attack on inequality more expansive even than the New Deal of FDR. In tandem with this

came legislation that enabled people of color to vote, overturned racist electoral laws carried over from the collapse of Reconstruction in the 1870s, and thus produce the most radical extension of the franchise since women won the right to vote in 1919. Finally, with respect to the struggle to end the Vietnam War, there emerged an assault upon the traditional insularity and formation of foreign policy by the political establishment.

In short, “the sixties” shook the economic, political, and social foundations of the United States along with its ability to conduct foreign policy. Conservatives and liberals, too, were outraged. By the middle of the 1970s, the United States was experiencing what President Jimmy Carter called a “malaise.” Respect for traditional values seemed to have plummeted. Business elites claimed that the United States had lost its competitive edge in the world economy. Thinkers like Samuel Huntington insisted that there was too much democracy and it was becoming ever more difficult for governments to rule. With the Iranian Revolution of 1979 led by the Ayatollah Khomeini, moreover, it appeared that the United States had lost its standing in the world. Ronald Reagan was elected president in that same year and the foundations were laid for what – twenty years later – would become known as neo-conservatism: the assault on the cultural legacy of the new social movements, the rollback of the welfare state, the constriction of political democracy, and the reassertion of American military dominance.

Neo-conservatism is more than the ideology of some small yet influential set of government advisors and politicians. It is rather a counter-revolutionary response to what its proponents termed the “adversary culture” of the 1960s. Comprised of reactionary business and intellectual elites threatened by the new global economy, and supported by anti-urban elements disgusted with the decline of tradition and cultural mores, the new movement sought vengeance. Neo-conservatives called for the return of religion, “family values,” and the values of the capitalist entrepreneur. They began an unremitting campaign to redistribute wealth upwards and dismantle the welfare programs associated with the New Deal and the Great Society. With the tragedy of 9/11, moreover, the excuse emerged for the use of “preemptive strikes” and a “war on terror” that

resulted in the ill-fated invasion of Iraq along with a new national security state built on legislation intent upon curbing civil liberties and insulating the executive from accountability either to the public or the other branches of government.

Neo-conservatism is as opposed to the egalitarian, democratic, and cosmopolitan trends of modernity as those Islamic “fundamentalist” forces it is struggling against. But then fanatical and “fundamentalist” elements are evident in all faiths and in what has become a worldwide counterrevolutionary resurgence of religion. All fundamentalists look backward for their inspiration. All of them privilege authority over liberty, unquestioning faith over critical reflection, and the community over the individual. All of them have their problems with the rights of women and gays, abortion and patriarchy, censorship and democracy. Each rejects the separation of church from state and the critique of patriarchal hierarchies. Each insists upon the legitimacy of traditions simply because they exist. Intolerance and dogmatism are built into this mode of thinking if only because discussion is limited by the holy words of an inerrant Bible, an infallible pope, the Islamic Shari’a, or the Jewish Halacha.

Advocates of political democracy and social equality were not for the most part advocates of abolishing religion. Their concern was with curtailing the political ambitions of religious institutions with absolutist claims. Or, to put it a different way, the issue for liberal secularists was less belief than conduct. Both in the Occident and the Orient, whatever the differences of social context, the battle is still over whether a single religion, or a single interpretation of that religion, should dominate public life or, instead, whether every religion should be seen as just another private interest in an open society. Rejecting this latter view is not simply a matter of the church, mosque, and the synagogue acting in accordance with divine law against the incursions of the profane, although it can be turned into that, but of ideological primacy and institutional self-preservation. Thus, the more dramatic the demand for reciprocity, the more fundamental will be the response.

Rabid nationalists, religious fanatics, and bigots inspire the counterrevolution of our time. All of them resist the intrusion of political democracy and social equality into their societies. That is because these values inherited from the Enlightenment threaten their power and a set

of outmoded legitimating traditions that are sanctified simply because they exist. Freedom is never a problem for the powerful. They already possess it. The “problem” arises only when freedom is demanded by the disenfranchised, the exploited, and the excluded. Reactionaries still fear – above all – the emergence of an individual insistent upon respect and equality who is intent upon knowing more, earning more, consuming more, and living life as he or she chooses. The counterrevolution knows its enemy, the same enemy it has always had, namely, the idea that things can be different.

Counterrevolution, France, 1789–1830

Soma Marik

The Aristocratic Counterrevolution

Counterrevolution was an integral part of the French Revolution, as soon as there was a revolution to counter. When the deputies of the Third Estate resolved to establish a Constituent National Assembly, and not to disperse before the creation of a constitution, the king's brother, the Comte d'Artois, organized aristocratic and upper clerical resistance. At the Royal Session of June 23, 1789, the king outlined a program of extremely moderate reforms, such as no taxation without consent, regular meetings of the Estates General, abrogation of binding mandates (so that deputies could take initiatives on their own), individual and press freedom, and a set of legal and fiscal reforms. This was a whittling down of the Comptroller General Necker's proposal. For the next decade, this was as far as the leaders of the counterrevolution were willing to go, while some of their followers thought even this went too far. The queen's party, or the grouping around her and Artois, engineered the removal of Necker when they failed to arrest the Revolution through the Royal Session of June 23. This of course resulted in the uprising that caused the fall of the Bastille.

By the end of May 1789, bishops were meeting regularly in the Church of Notre-Dame in Versailles. Some 40 percent of the nobles, actually residents of Paris, had gone to the provinces to seek election. At least 78 percent of the nobles had been militarily educated or had previously been commissioned officers in the army or navy. Close to two-thirds could trace their lineage back to the sixteenth century. They belonged to the great families of France. A "club" of conservative noblemen, supported by the Comte d'Artois, succeeded in maintaining the intransigence of the great majority of noble deputies. A majority of nobles had refused to join the united Assembly even after the king's request. They unhappily acquiesced to joining the National Assembly only after a warning from the Comte d'Artois that the king's life was in danger and particularly after the mid-July Parisian insurrection. They formed the ultra-right *noir* faction. There

had also emerged a moderate right wing, the "*monarchien*" faction, which did not want a return to the old regime but sought to ensure that ultimate sovereignty should remain in the hands of the king, as a buttress against the dangers of popular violence. Organized as a tightly knit network with a central committee, the *monarchiens* forged a coalition with the extreme right by early September. After the middle of August, they won four successive presidential elections and also dominated the posts of secretaries. The *noirs* formed the Capuchin society in April 1790 and drew up a declaration. Their coordination with the *monarchiens*' Club des Impartiaux showed that the coalition of the two right-wing groups had not broken down. A comparative study between the Capuchins and the Jacobins shows that while over eight out of ten Jacobins were deputies of the Third Estate, more than nine out of ten Capuchins represented the two privileged orders. Revisionist historians (e.g., Schama 1990) have argued that counterrevolution and conspiracy were imaginations by the Jacobins and the revolutionaries in general. But the intransigence of the nobles was the key reason why the French Revolution did not see the development of a concept of a "loyal opposition." By August many more courtiers had left following Artois, who rode out of France on July 17, refusing to tolerate reforms. As the efforts to halt the Revolution's progress foundered, emigration increased in a big way. Committees of the French émigrés were set up in Brussels, Trier, Mainz, Basel, Geneva, and Nice. Artois, more or less rebuffed by Joseph II, moved to Turin, ruled by his father-in-law. There he was joined in November 1790 by Calonne, a former minister who was willing to offer his services.

Moderates and the Counterrevolution

The counterrevolution would have remained a very marginal force, entirely dependent on foreign support had the Revolution not deepened. The fiscal crisis of the state could not be stemmed by the early efforts of Necker, or of the Assembly. At the same time, in August 1789, the so-called voluntary surrender of feudal (or seigneurial) rights was in fact hedged with compensations. Payment of compensations, repayment of state debts, and the running of the state all necessitated money. The solution found was to nationalize church land and issue bonds against

it, named *assignats*. A large part of church property was held, not by the secular clergy but by monasteries. As a result, the lower clergy had not been opposed to many of the steps of the Revolution, including the nationalization of church property. But the nationalization brought into question state responsibility for payment of the clergy, leading to the Civil Constitution of the Clergy (July 1790). Unlike the ordinary priests, the bishops' stipends were dramatically reduced. By redrawing the parish boundaries, the Assembly affected community life, and this, rather than religious doctrine, created popular resistance. The principle of popular sovereignty to the appointment of priests also brought the Assembly into conflict with many clerics. Doyle (1989) sees this constitution as the moment which fatally fractured the Revolution. The Assembly obliterated the monolithism and the church hierarchy of Roman Catholicism. But by applying the practice of "active" citizenship to the choice of clergy, it excluded all women as well as poorer men from the process, and thereby created the possibility of providing a social base to clerical opposition. The Assembly's insistence that the elected clergy should swear an oath of loyalty to the law, the nation, and the king posed the parish priests everywhere with an acute choice of conscience. The oath went against the loyalty to the pope and tradition. Many took the oath in a conditional form. Only a handful of bishops and just about half the parish clergy took the oath. When, in April 1791, the pope, doubly antagonized as the result of the French takeover of the papal enclave of Avignon, condemned the Civil Constitution and the Declaration of Rights as inimical to a Christian way of life, many retracted even this. By mid-1791, the west, southwest, east, and the southern Massif Central had emerged as "refractory" areas.

Factors other than the Civil Constitution were also at work. In December 1789, the Marquis de Favras, who had links with the king's brother, the Comte de Provence, conspired to rescue Louis XVI from Paris with an armed band who would take him to the frontier. Favras was arrested, and hanged as a traitor in February 1790. But not only were open counterrevolutionaries plotting secretly. Mirabeau and Mounier, leading radicals in the early days of the Revolution, either kept secret contacts with the royal family or went into emigration. Catholic conservatism was also driven to the counterrevolution, as when Froment at

Nîmes kept in touch with Artois, and recruited followers who openly wore the Bourbon white cockade and attacked pro-revolution forces. In August, a camp of the National Guard, dominated by leaders of the Nîmes Catholics, met in the northern Gard, at Jales. Treating this as evidence of mass support for counterrevolution, the émigré princes wanted Louis XVI to take over Lyons and stage an uprising through the entire Midi by coordinating the counterrevolutionary forces within and in Switzerland.

This plan collapsed, partly because Louis XVI was not willing, partly because the plan became known in France. But then Louis fled to Varennes, was apprehended, and eventually sent back. Though the moderates tried to pretend that the king had been abducted, he had left behind a strong denunciation of the Revolution. Popular anger at him was silenced for a while by the Champs de Mars massacre (July 1791). But the incident also made it impossible for European powers to argue any longer that the king was giving his free consent to the changes taking place in France. Artois had by this time set up his court in Koblenz, where Provence joined him shortly after the king's abortive flight, and put pressure on European powers.

Their first success came with the Pillnitz declaration (August 27, 1791), issued by Emperor Leopold of Austria and the king of Prussia, which clearly stated that the sovereigns were willing to take action if other émigré princes joined them. The situation of the king of France was portrayed as an object of common interest to all the European sovereigns. In an open letter to Louis XVI, the princes rejected the legitimacy of the constitution, since it was not the work of the Estates General. They also declared illegitimate all the policies of the Assembly. Their program thus appeared to be a flat restoration of the old regime.

The émigrés were trying to organize their own armed forces in the hope that these would serve as adjuncts to invading armies of foreign powers. They also provided encouragement to counterrevolutionaries inside France, like the Marquis de la Rouerie, who represented royalist Bretons. By early 1792, his adherents had a considerable stock of arms.

In 1792 war began. Louis XVI wanted war, hoping that defeat would cause a rollback of the Revolution. Though he had the option of appointing a ministry of his own choice, he appointed a

pro-war Brissotin ministry. Counterrevolutionary threats intensified with the early military defeats of France. The Prussian commander, the Duke of Brunswick, issued a ferocious manifesto, threatening to destroy Paris and execute Parisians as exemplary punishment if Louis and his family were harmed. This was what provoked the insurrection of August 10.

The summer of 1792 also confronted priests with the question of their loyalty. Non-jurors (clergy who had refused to take the oath of allegiance to the constitution) now found that loyalty to the state became a burning issue with war and early defeats. On August 23 the Legislative Assembly required all non-juring clergy to leave the kingdom within seven days. Then on September 2 word reached Paris that the great fortress at Verdun, just 250 kilometers from Paris, and the last obstacle to invading armies, had fallen. This provoked the “September massacres.” The monarchist press had been issuing bloodcurdling threats and publishing lists of patriots who would be executed once victory was won by the right. Plagued by the fear of what might happen to their families in their absence, patriots volunteered for war and demanded stern steps. And so, most of the prisons were broken into, and makeshift tribunals heard the cases of the arrested. Between 1,100 and 1,400 people were executed, though about as many were liberated. In the face of grim threats by the enemy, justice could only be in black and white, felt the people. Andress (2006) has argued that the massacre cannot be separated from the insurrection of August 10. This rising had led to the death of about 600 of the king’s troops, but also of nearly 400 revolutionaries – Parisians and their *fédéré* (provincial) allies. These massacres, moreover, have to be set against counterrevolutionary and royalist violence. The people felt that the execution of a sizable group of identified counterrevolutionaries was the only way they could hope to keep the potential counterrevolutionaries constantly threatening violence at bay. And the rout of émigré counterrevolution came in mid-September, after the battle of Valmy. Apart from one military unit under the Prince de Condé, the rest were eventually disbanded. Then came the trial and execution of Louis XVI. He was clearly guilty of treason, having signed the constitution and then plotted against it.

After the execution of Louis, the Comte de Provence proclaimed Louis’s son as Louis XVII,

and declared himself regent. But only Catherine II of Russia recognized the regency immediately. However, the success of French arms created a realignment of forces and brought Great Britain into the war against France.

Vendée and Federalism

The revolutionaries could not imagine something like a popular base for counterrevolution. So when mass struggles against the Revolution broke out among the peasantry, in the Vendée, or in Brittany, these were ascribed to manipulations by émigré counterrevolution. Studies on popular dimensions of counterrevolution (Le Goff & Sutherland 1983; Pettifre 1988) do not simply relate peasant support to counterrevolution to their attachment to religion, though there were links. The area from which most rebels came was the *bocage*, an area of poor urbanization: 62.8 percent of the rebel army was peasant in composition. But there were also significant portions of artisans and shopkeepers (34.5 percent). Only 20 percent of the volunteers to the military levée of the Revolution in this area came from peasants; 65 percent were artisans and shopkeepers, while 12 percent were bourgeois, a category almost totally absent in the rebel army. This strongly indicates a class conflict behind the ideological conflict. However, ideology also played a role. The Revolution appeared to have been imposed on the peasants by bourgeois administrators. In the Vendée, the Civil Constitution of the Clergy had special significance. The scattered villages had traditionally seen the church as the main area of peasant sociability and the point of self-definition of the rural community. The elimination of many parish churches, viewed as a cost-cutting measure from Paris, was seen as a blow against the rural identity. Moreover, in the Vendée, nearly 90 percent of the priests were non-juring. So the attachment was not so much to the dogmas of Catholic religion as to familiar personnel and a cultural identity.

Peasant hostility occasionally stemmed from the fact that in some areas peasants were often tenants, while legislation and administrative action favored the bourgeois landowner. In Cholet, a major center of the Vendée uprising, peasants got no more than 9 percent of all the land sold. Weavers from Cholet who participated likewise did so partly due to the economic hardships caused by the Revolution. Finally, there is a need to look

at the specific peasant form of religion, rather than dismissing it as superstition, to understand why peasants were so hostile to the religious reforms sought to be imposed by the heirs of the Enlightenment from the various Assemblies of the Revolution.

Ultimately, the civil war in this region was bloody, and victory was followed up by bloody terror. An estimated 200,000 people died on the two sides combined. The immediate spark for the civil war came at the end of February 1793, when the levy for 300,000 men was decreed. On March 14, armed rebels attacked Cholet. A column led by General Marce was defeated. The peasants' aggressive drive was finally thwarted by the successful defense of Nantes in June, against the forces led by Vendean leader Charette. On August 1, 1793, the National Convention voted a ruthless decree declaring total war against the Vendée. It took December to outmaneuver the rebels ruthlessly by General Westermann's army.

Another development was the provincial or federalist revolt, which also became counter-revolutionary. The Girondins opposed the centralizing tendency of the Jacobins (early to mid-1793), even though dictated by military exigencies, because in opposing Parisian radicals, they tried to mobilize support from the regions. In Marseilles, economic dislocations threatened port workers and others, who turned against the hitherto dominant Jacobins and joined forces with the Girondins, supported by the local bourgeoisie. News of the fall of the Marseilles Jacobins sparked off anti-Jacobin unrest elsewhere in France, particularly in the south. Lyons rose in revolt due to economic crisis and the fear that the local Jacobins would use force. The arrest of the Girondin leaders on June 2, 1793, in turn, had an impact on Bordeaux, from which many of them came. Members of the pro-Girondin club Friends of Liberty dominated most of the city's 28 sections. On June 7, a Popular Commission of Public Safety was set up. Marseilles, Lyon, and Bordeaux sought to coordinate their actions. Like the Girondin leaders in Paris, the Girondins in the provinces slid toward counterrevolution, allying with royalists, nobles, and priests. On August 29, the key Mediterranean naval arsenal of Toulon was handed over by its officers to the English navy blockading the coast. Nor was the federalist revolt confined to the south. It also spread in Normandy, based on Caen. At the heart of federalism was the anger of the upper

bourgeoisie, especially those of the commercial towns, at the radical direction the Revolution had taken, the purging of the elected representatives on June 2 being the last straw. The fact that the immediate targets were the Jacobins and local militants reveals the class-based nature of local divisions, though in some cases obscured by lower-class support to the rebels. In the long run, the federalists could not mobilize military forces strong enough to pose a serious threat to the armies of the Revolution.

Counterrevolution also struck into the heart of the Convention, when on June 13 Charlotte Corday stabbed Marat to death. Such incidents convinced the Jacobins that ruthless measures were essential. Fighting the counterrevolution seemed to call for revolutionary terror by the Committee of Public Safety.

Thermidor to Bonaparte

The period of the Reign of Terror saw a determined attempt to stamp out counterrevolution, but increasingly also a narrow coterie rule dominated by Robespierre, which alienated the *sans-culotte* masses, and even many Jacobins. As a result, a reaction set in, and an anti-Robespierre alliance developed. The Committee of General Security, losing power, was upset. Members of the Committee of Public Safety, like Carnot and Lindet, wanted to pull back, and saw in Robespierre a key figure on whom all the blame could be placed. Collot d'Herbois and Billaud Varenne, former radical Jacobins, were afraid that Robespierre was denouncing them for excesses, and turned against him. Other members of the Convention rallied, desiring an end to an emerging "personal dictatorship" of Robespierre, or to the triumvirate of Robespierre, Couthon, and Saint-Just. And so, on Thermidor 9 (July 27, 1794), a concerted attack was launched. An attempt to rally the Paris Commune failed because a recently promulgated ordinance had lowered wages and increased prices, alienating the *sans-culottes*. So Robespierre and his immediate supporters were easily captured and executed. The Terror was over, and bourgeois normalcy needed to be restored. But the effect of the overthrow of Robespierre was to release forces much to the right. *Sans-culotte* radicals like Babeuf imagined that the end of the Terror would mean a restoration of popular freedom, but the bourgeoisie did not want that. A bitter social reaction was unleashed. Active Jacobins and

sans-culottes in Paris were arrested, while Jacobins in the provinces were often assassinated. The *jeunesse dorée* (gilded youth) often wore the royalist white cockade and attacked *sans-culottes*. An attack on the Jacobin club by them on Brumaire 22 (November 12, 1794) was the excuse the Convention used to close down the club. Economic controls, established under the Terror and geared to protect the rights of the poor, were removed. The long-delayed trial of the city council of Nantes, accused of counter-revolution by the representative Carrier, revealed the excesses and abuses of power during the Terror. This was used to create an image of the Terror as a regime of monstrous wickedness. By 1795, the last *sans-culotte* uprisings had been smashed, paving the way for a marked royalist revival.

A more direct royalist counterrevolution was also attempted. Count Puisaye from Brittany arrived in London in September 1794, claiming to speak for 30,000 organized *chouan* guerillas. An émigré contingent landed in France. But by July 1795, General Hoche counterattacked to suppress these forces of *chouans* and the émigrés; 6,000 were imprisoned; 640 émigrés and 108 *chouans* were shot. Another Vendean revolt was similarly tackled, and by 1796 counterrevolutionary leaders like Stofflet and Charette had been caught and executed. By then, following the death of Louis XVII, the Comte de Provence proclaimed himself Louis XVIII, though recognized only by Russia and Sweden.

Meanwhile, a new constitution was drafted by the Thermidorean Convention. Indirect elections by secret ballot were restored, with a taxpayer franchise. Representatives would have to be fairly large owners. Two chambers were created for the legislature: the Council of Five Hundred and the Council of Ancients (250 in number, all aged 40 or above). All of these representatives were to be subject to reelection every three years, with one-third elected each year. No government minister or agent could be a member of the councils. A five-member Directory was set up as the executive authority, to be elected by the Ancients from shortlists proposed by the Five Hundred. Ministers were appointed by the Directory, but were also responsible to the councils. Fearful of a full-blown royalist takeover, the Convention proposed that two-thirds of the first councils would be chosen by the Convention from amongst its own members. The constitution was

approved by a low-voting referendum, but there was widespread opposition to the two-thirds law. This led to a royalist rising on Vendémiaire 13 (October 5, 1795), which was defeated by troops under the command of the young General Bonaparte. Elections showed a royalist trend, though only one-third seats were up. Elections of 1797 returned a further substantial royalist group. When the royalists moved to what seemed a constitutional coup in order to bring back the king, the majority of Directors carried out a military-backed coup to purge the councils. On August 5, 1799, yet another royalist insurrection broke out at Toulouse, with 10,000 men flocking to the Bourbon flag. For a month civil war raged along the upper Garonne.

Abbé Sieyès, one of the Directors, wanted to end the instability of the Directorate by establishing a strong and stable government, with the help of General Bonaparte. In 1799, Bonaparte was already the most important general, with the Treaty of Campo Formio in Italy signed due to his victories over Austria. By playing on the fears of a Terrorist plot, Sieyès, the ex-Terrorist Fouché, and Talleyrand persuaded the councils to meet on Brumaire 18 (November 9, 1799) outside Paris at Saint-Cloud, under the protection of Napoleon's grenadiers. The Council of Five Hundred, however, put up resistance, and Napoleon was attacked both verbally and physically. But his brother Lucien, who was conveniently in the chair, called in the guards. The Five Hundred were driven out, the Directory was dissolved, and full authority was vested in a provisional Consulate of three – Sieyès, Roger-Ducos, and Bonaparte. Three weeks later, a new Cesarist constitution was drafted and offered to the assemblies. The plebiscite was won with over three million votes.

But Napoleon was not willing to be a mute agent for Sieyès and his fellow conspirators. Within a short while, he had consolidated his position. The Napoleonic Consulate, followed by the Napoleonic Empire, seemed the negation of the Revolution. Yet when the Comte de Provence wrote to him, asking him to be the General Monck of the French Revolution, Napoleon categorically told the latter to sacrifice his interests for the interests of France. Moreover, after a failed royalist attempt to assassinate him, Bonaparte had the Duc d'Enghien, son of the Prince de Condé, arrested from Baden (outside his domains) and executed, thus having Bourbon blood on his hands.

Bonapartism nonetheless represented an admixture of revolution and counterrevolution. On one hand, by settling the rights of the peasantry, by finally getting the proposed Civil Code passed, and by trying to get the “natural frontiers” of France accepted, he proved to be, in many ways, the heir to the Revolution. On the other hand, he curbed all democratic efforts, turning them when possible into a plebiscitary model, and repressing them otherwise. When royalists planned to murder him, he used the occasion to purge the Jacobins first. He also cleared away many of the remaining radical legislations. He imposed a centralized administration with departments getting prefects, recalling the pre-Revolution *intendants*. He stabilized the state finances and established the Bank of France, giving an impetus to the bourgeois economy. He pursued a dynastic policy, even though all the way to the end he remained an outsider to the royal and imperial courts of Europe. To revolutionaries in France and elsewhere, on the other hand, he seemed a traitor who had destroyed the principles of the Revolution. Beethoven, who admired the consul as a revolutionary, tore up his dedication of the *Eroica* (Symphony No. 3) when Napoleon was crowned. Yet, as Shelley recognized after the fall of Napoleon, he represented, not the ultimate counterrevolution, but a contradiction. While he was an “unambitious slave” who danced and reveled on the grave of liberty, his defeat brought about, not liberty, but the return of the more eternal foes, “old Custom, legal Crime, / And bloody Faith.”

Bourbon Restoration and Counterrevolution

In 1814, Napoleon Bonaparte was defeated. The forces opposing him had diverse aims, but the purse-strings were held by Castlereagh, the English foreign secretary. While Metternich, the Austrian leader, had offered Napoleon the Frankfurt proposals, whereby France would retain her “natural frontiers” and he would remain emperor, England insisted on pushing the French frontiers back to the 1792 level and defeating Napoleon at any cost to enthrone the pretender, Louis XVIII. Napoleon, finding even his marshals deserting him, surrendered. He had no option, since he himself had derided the people, and could not now bank on popular revolutionary will as France had done during the revolutionary wars. But

Napoleon returned from his island-kingdom of Elba, and tried to win a rapid victory. His defeat meant the final return of Louis XVIII. This time the allies were determined on sterner measures. France’s frontiers were pushed back to the 1790 level, and she was subjected to a military occupation of three to five years and made to pay an indemnity of 700 million francs.

Louis XVIII issued a Charter for his subjects. Despite all wishes of the émigré counterrevolution, there was to be no return to the pre-1789 era. Certain fundamental rights had to be recognized, such as freedom from arbitrary arrest, equality before the law, freedom of conscience, and above all recognition of all property rights including of land acquired during the Revolution. But Louis declared 1814 as the nineteenth year of his reign, thereby symbolically expressing the desire to wipe out the memory of the Revolution. More significantly, the preamble to the constitution stated that the king had given the constitution willingly to his subjects. From this it could be possible to claim later that the king could also take it back at will. A very limited suffrage electorate of about 90,000 was created. The Chamber of Deputies had a very strong right-wing component, led by the Comte d’Artois, who in alliance with the Baron de Vitrolles, Jules de Polignac, and others virtually set up a parallel government. Secret societies supporting the monarchy also became strong, like the Chevaliers de La Foi. For these groups, the Charter was an evil influence. The Second Restoration (after Waterloo) saw the atrocities of a white terror, largely in the south, when supporters of the monarchy murdered many who had supported Napoleon’s return. The domination of the counterrevolutionaries led to the title *Chambre Introuvable* (incomparable chamber) being accorded to the first chamber of deputies of the reign. Even the king had to get rid of it, and manipulated elections to create a more pliant chamber in 1816. Semi-military courts were set up, and civil liberties were mostly suppressed. Education was restored to episcopal control. Though Louis XVIII did not like his brother’s extremist policies, he was unable to ignore his views. The election of Grégoire, a former revolutionary, in 1819, and the assassination of the heir to the throne, the Duc de Berry (son of the Comte d’Artois), in February 1820, caused the king to turn to the extreme right. Freedom of the press and personal freedom were further reduced.

The government of Villele abolished the jury system. As a result of these repressive measures, secret revolutionary societies began to develop. In September 1824 Louis XVIII died, and the Comte d'Artois became king, as Charles X. He immediately tried to increase the powers of the clergy and the nobility, and introduced strong pro-Catholic measures. Compensation was decreed for nobles who had lost their land during the Revolution. In order to get the funds, interest rates on national debt papers were reduced. Ignoring all popular discontent, Charles appointed his friend Polignac as the third of his prime ministers. When liberals wanted him to remove Polignac, he dissolved the Chamber of Deputies and called for new elections, in which liberals won a larger majority. The king reacted by issuing four ordinances on July 26, 1830, canceling freedom of the press, dissolving the newly elected assembly, reducing the electorate to 25,000, and calling for new elections. A liberal revolution was organized in response, led by the paper *Le National*, controlled by Thiers, Mignet, and Carrel, but supported also by more radical masses, who actually threw up the barricades and fought the soldiers. Fearful of the return of republicanism, moderates united to install Louis Philippe, son of Philip "Egalité," Duke of Orleans, as the new king. Though this was by no means the return of revolutionary politics, it did mean the final defeat of counterrevolution, though legitimist pretenders and their supporters continued to play an important role in French politics.

Courbet, Gustave (1819–1877)

Walter R. Herscher

Gustave Courbet was a nineteenth-century French Realist who countered the prevailing method of painting that idealized subjects. Courbet pledged to paint only what he saw. His art was revolutionary in style but not necessarily in political themes. Courbet's controversial paintings gained him notoriety and publicity at a time when conservatives equated Realist painters with political radicals. A general tenet of nineteenth-century painting was that only important events should be painted on large canvases; however, Courbet intentionally painted everyday scenes on them, possibly suggesting that the common people were as important as the upper classes. During the February 1848 revolution that overthrew the July Monarchy, Courbet sketched an image of a man brandishing a rifle on a barricade for publication in a newspaper; however, he refused to fight in the revolution or the June insurrection.

Courbet first received major attention at the 1849 Salon for his painting *After Dinner at Ornans*, a painting portraying rural bourgeoisie ladies not dressed in the expected Parisian bourgeois fashion. Courbet's failure to follow the clothing dictates of Paris and the imperial fashions of Napoléon III was viewed as a political statement.

In the combined 1850–1 Salon he displayed three major paintings: *Funeral at Ornans*, which depicted

a rural funeral attended by the local bourgeoisie; *Peasants of Flagey Returning from the Fair*, which portrayed rural bourgeoisie and included a lowly pig; and *The Stonebreakers*, which aroused the most criticism because it was interpreted as a social comment on the anonymous, repetitive, and miserable nature of lower-class work. Courbet had not intended any socialist revolutionary theme, but accepted the public's conclusion because of the publicity engendered.

Fearing revolt, Paris was injecting revolutionary allegories that probably did not exist into Courbet's paintings. During the period of 1849–54 Courbet purposely submitted paintings to the Salon that would be interpreted as being controversial or subversive in hopes of gaining publicity. In the late 1850s and 1860s he discussed creating obvious anti-establishment paintings; however, he never completed any of these projects, possibly not wanting to sever ties with the government and have his paintings banned.

The 1862 Salon rejected Courbet's painting that showed a group of drunken priests and thus might be attacking the Catholic Church. The government hoped to influence Courbet's painting by naming him a Chevalier of the Legion of Honor in June 1870, an honor which he refused and thereby gained himself further notoriety.

After the Franco-Prussian War broke out, Courbet applauded the overthrow of Napoléon III on September 4, 1870. After being elected president of a commission designed to safeguard cultural artifacts, he soon petitioned for the removal of the Vendôme Column and for the construction of a Peace Monument in its place, arguing that the column was a militaristic memento. He argued against a proposal to raise a new monument to Strasbourg, a city besieged by the Prussians, by melting down a statue of Napoléon. He feared this would increase popular hatred of the Prussians, perpetuate hatred and conservatism, and thus hinder any movement to universal socialism.

During the Prussian siege of Paris, Courbet wrote an open letter thanking Germany for its part in Napoléon III's overthrow. He deplored the siege and argued that the two countries should form a Franco-German federation.

When the Commune took control in 1871, Courbet was elected in April as a member of the new government. On May 16, when the Vendôme Column was pulled down and destroyed, the public blamed Courbet for the act. After the

Versailles government crushed the Commune in May, Courbet was arrested, jailed, and fined. His public career in France was effectively finished, and the 1872 Salon rejected his paintings. In 1873 Courbet was ordered to pay the costs of rebuilding the Vendôme Column. Expecting arrest for inability to pay the debts, he moved to Switzerland. He died on December 31, 1877, after suffering from various diseases.

Coxey's Army and the unemployed movement

Stacy Warner Maddern

By 1894, political demonstrations in the United States were perceived as a threat to American cities. This was largely due to the events that occurred at Chicago's Haymarket Square in 1888. However, this did not dissuade Jacob Coxey and Carl Browne from organizing a "petition in boots" that would serve as a precedent for a new type of national public protest in the United States. The nation was in the grip of a depression much like the Great Depression of the 1930s, and Coxey and his supporters had grown frustrated with government inaction. To alleviate the suffering of the working class, Coxey, a businessman from Ohio, proposed a number of programs that, though popular in the 1930s, were seen as too radical for the 1890s. He wanted the government to create jobs by hiring the unemployed to perform public works, specifically road improvements.

By marching on Washington, "Coxey's Army" hoped to attract considerable attention from both Congress and the press. The march, centered on delivering to Congress Coxey's Good Roads

Bill, was criticized in the press as a hostile measure, “at war with the fundamental principle upon which free institutions rest.” In response, Coxe’s Army held that they were merely meeting their obligation as citizens to improve the country; however, Congress had a different opinion. While the march did gain congressional support in populist Senator William Peffer, who agreed to introduce the bill in the Senate, most mainstream politicians were united in describing Coxe’s demands of assistance for the unemployed as paternalistic.

In preparation, District officials, led by Metro Police Superintendent William Moore, searched for any law that would allow them to control the demonstration. They discovered an 1882 Act that strictly prohibited speeches, parades, and carrying of banners on Capitol grounds, which they used as the legal basis to arrest both Coxe and Browne, sentencing each to serve 20 days in jail.

In the aftermath, a call for hearings on the arrests by another populist senator, William Allen, only fueled senators from the two major parties over the legitimacy of the campaign. In response the House Labor Committee decided to hear testimony on the causes of economic depression, but its motivation seemed rather to create a vehicle by which they could establish that Coxe’s Army did not represent any legitimate group. At the hearings Coxe was given the opportunity to present his bill, which in turn gave Congress its opportunity to scrutinize his cause. While questioning Coxe, Speaker Charles Crisp charged him with not having the “authority . . . to represent the 65,000,000 people of this country,” while reminding him that those who did were “the 356 representatives elected to Congress.”

In their contention over the people’s right “peaceably to assemble, and to petition the government for a redress of grievances,” Coxe’s Army was met with resistance. District officials maintained that the First Amendment did not give all citizens the right to protest on spaces they considered official. While on the surface the march of Coxe’s Army may have seemed a failure, it was not without a lasting impression. As Senator Joseph Hawley predicted, the march set a precedent for protesters to “make pilgrimages . . . to Washington and endeavor to dominate Congress by the physical presence of the people.”

Crazy Horse (1849–1877), Sitting Bull (1831–1890), and Native American resistance at the Battle of Little Bighorn

Stacy Warner Maddern

The significance of the Battle of Little Bighorn lies more in the stand made by two fearless American Indian leaders than in the defeat of General George Armstrong Custer. Both Crazy Horse and Sitting Bull found their peak as revolutionaries on the Little Bighorn River in Montana in the summer of 1876, in a battle that would both add to their legends and seal their fate. The contribution made by Crazy Horse and Sitting Bull to the defense of the American Indian lies not just in this epic battle, but in a fearless commitment to lead their people against an oppressive United States government.

Tashunke Witko (1849–77) or Crazy Horse emerged as a military leader of the Ogeala Sioux tribe while still a young man in his mid-twenties. He was courageous and daring, having mastered the techniques of Indian warfare. Crazy Horse was relentless in his hatred for the white man, clearly opposed to abandoning hunting lands sacred to his people in exchange for a quiet reservation existence.

Tatanka Iyotake (1831–90), known all over the world as Sitting Bull, would become the most revered chief of the Teton or Western Sioux, often referred to as the Sioux of Sioux. As the leader of history’s largest assembly of Plains Warriors, Sitting Bull was a visionary band chief and practicing shaman whose strength lay in a natural ability to plan and organize. Sitting Bull lived his life in the service of loyalty to tribal ideals and exemplified the highest Sioux virtues of courage and generosity.

Tatanka Iyotake, known worldwide as Sitting Bull, became the most revered chief of the Teton or Western Sioux. In the 1850s, as the American frontier began to expand, contact between whites and Indians led to cultural conflicts and increased violence. Treaties were broken as quickly as they were made. Sioux bands in Minnesota began to rise up against the whites, but were overwhelmed and later retreated into the plains where they would join with the Hunkpapas who were the indigenous Sioux of the area. When the United States army showed little distinction in its treatment of these two bands, warfare between the whites and Sioux became a general affair. In 1863 Sitting Bull had his first fights with the US army. In 1864 he participated in the Battle of Killdeer Mountain and the following year tried but failed to overtake Fort Rice. But 1866 would yield the greatest Sioux victory to date with the attack on Fort Phil Kearny, also known as the Fetterman

Fight, for the Army officer, William Judd Fetterman, who led his troops into battle against the Sioux. Crazy Horse was chosen to lead an attack on the woodchoppers as a strategic ploy to draw the soldiers out of the fort, where nearly 600 warriors fell upon them. By the time the battle ended, 100 US troops were dead.

In an effort to quell the tensions and put an end to violent uprisings, the US government negotiated the Treaty of Fort Laramie with the Plains Indians. It was signed in 1868 at Fort Laramie in the Wyoming Territory and guaranteed full ownership of the Black Hills to the Sioux Nation, along with unrestricted land and hunting rights in South Dakota, Wyoming, and Montana. The area known as the Powder River Country was therein established as Indian land and was closed off to all whites.

In 1874 Custer would lead an expedition that included reporters and geologists into the Black Hills of South Dakota where he declared that there was "gold in the grass roots." His claim would encourage an onslaught of prospectors and miners to invade the Black Hills territory, thus violating the terms of the Treaty of Fort Laramie. Any hope of resolving this conflict by peaceful means ended on July 30, 1874 when Horatio Nelson Ross, a member of Custer's expedition, discovered gold in the Black Hills. The timing of Custer's expedition and subsequent invasion of Sioux lands would set off a period of conflict between the US and Plains Indians. Because whites had continually broken treaty agreements in their westward advance, Indian tribes such as the Sioux and Cheyenne decided to retaliate, and the result was what became known as the Black Hills War.

In order to take possession of the Black Hills and subsequently the gold deposits, the US government was again faced with quelling Indian attacks. Its solution was to corral all remaining free Plains Indians and sequester them on reservations. In December of 1875 the commissioner of Indian affairs, following orders from President Ulysses S. Grant, directed all Sioux bands to come onto reservations by the end of January, or be declared hostile.

When certain tribes failed to meet this impossible deadline, General George Crook was ordered to attack their winter settlements. Crazy Horse eluded Crook by leading his people to the Rosebud River to join Sitting Bull's camp in the Valley of Little Bighorn. By the spring

of 1876, 3,000 Teton Sioux and Northern Cheyenne warriors had assembled at Sitting Bull's camp and chosen him as their supreme commander. Sitting Bull, who was scarcely 10 years old when he went on his first buffalo hunt and 14 when he joined his first war party, believed that he had been divinely chosen to lead and protect his people. Sitting Bull was on the warpath with his followers almost continuously in the years after 1866, and although other tribes of the northern Plains increasingly resigned themselves to reservation life, he remained with his people in the buffalo country, uncompromising, and quick to challenge white invaders. Although few whites realized the strength of his army, the efficiency of his fighters was well recognized. The Sioux, said General Frederick W. Benteen, were "good shots, good riders, and the best fighters the sun ever shone on."

Sitting Bull, whose insight and political judgment were as remarkable as his military skill, realized that the Sioux and other Plains tribes were about to face a battle for their very existence. In June of 1876 he vowed to perform the Sun Dance, a ritualistic dance that included elements of self-inflicted torture as a means to symbolize rebirth. Sitting Bull held that the Sun Dance would give him a vision of what lay ahead for his people. He had often performed this dance, the Plains Indians' greatest and most important religious ceremony, and his chest and back were scarred by its torture. His vision from this particular dance revealed many white soldiers falling upside down from the sky and making war upon his people, but the Great Spirit protecting them.

Sitting Bull's vision was quickly fulfilled. On June 16 Crook came to take Crazy Horse. This time Crook had a new strategy that included 15 divisions of cavalry and 5 of infantry, some 1,300 armed men in all. After marching his troops up the Bozeman Trail of the Tongue River, Crook ran headlong into 1,200 Sioux and Cheyenne warriors under Crazy Horse at the Rosebud River. Although tired from the Sun Dance, Sitting Bull was there to urge the Indians on. At the end of an all-day fight, Crook was forced to retreat, with heavy losses.

Despite this victory, Sitting Bull knew that his vision had not yet been fulfilled, for it had shown many white soldiers. One week later, however, on June 25, his vision would be realized when some of Custer's scouts discovered

what they thought was a retreating Indian village along the Little Bighorn River. Custer was confident, especially considering his experience of staging a surprise, early morning attack on the camp of a southern Cheyenne Chief, Black Kettle, just two years earlier when he orchestrated the murder of 103 Indians, most of whom were women, children, and elderly, along the banks of Oklahoma's Washita River. Given this experience he knew that a small village of Plains Indians would scatter if attacked. Because the village was 3 miles long and half a mile wide, Custer estimated its population as not exceeding 1,500 and thus divided his command of 645 soldiers into three columns.

Custer first sent a detachment led by Major Marcus Reno to approach from the southeast of the village. Here Reno would be met by Indians led by Sitting Bull, who would immediately cut down a third of his men. The rest of the detachment would retreat to a nearby ridge, where they were under attack for the next two days.

Custer's counter-attack also failed as he led his men along the bluffs overlooking the Little Big Horn some 4 miles away. There Crazy Horse and his braves concentrated their entire force on Custer and his men. In little more than an hour, the Sioux and Cheyenne had overrun Custer and his 224 men, slaughtering every one. His men were lacking cover, armed with single-shot rifles and in most cases raw and ill-prepared for battle. At battle's end, the losses sustained by Crazy Horse and Sitting Bull were less than a hundred. No trap had been laid for Custer and his forces, and no strategy planned ahead of time. The battle was a sudden defensive action.

After their victory at the Battle of Little Bighorn the Indian bands dispersed. One by one, as more and more soldiers poured into their country, they surrendered. Some ten years later in January of 1877, General Nelson A. Miles, surprising Crazy Horse's winter camp, scattered the Indians without food or adequate clothing on the frozen plains. The following May, Crazy Horse and about 1,000 men, women, and children surrendered to the Sioux chief's old adversary, General Crook, at the Red Cloud agency in Nebraska, but the young warrior could not stand reservation life. Rumors flew that he was plotting escape, and on September 5, 1877, he was placed under arrest. When he realized that he was about to be locked up, Crazy Horse, desperate, drew his knife and tried to cut his

way to freedom. He was bayoneted in the back by a white sentry and died several hours later.

The hostile Sioux and Cheyenne were constantly harassed by troops under Miles in the years after the Battle of Little Bighorn, and in the winter following their great victory, many of Sitting Bull's followers surrendered. Pursued by the army and failing in his attempt to prevent the loss of hunting ground in the Black Hills and Powder River Country, Sitting Bull and his followers escaped to Canada. Across the border, Sitting Bull pleaded with Canadians for a reservation, but without success. US commissioners came to Canada to persuade him to return. Sitting Bull resisted, but when there was nothing left to eat, he led his followers south, and surrendered at Fort Buford, Montana on July 19, 1881. Horses and arms were replenished in exchange for a "pardon" for Sitting Bull's past.

For two years, the Sioux chief was a prisoner of war at Fort Randall. He had become a legend of his own time, and was deluged by fan mail. Lieutenant-Colonel G. P. Ahern, who handled Sitting Bull's letters, described him as "a very remarkable man – such a vivid personality . . . square-shouldered, deep chested, a fine head, and the manner of a man who knew his ground."

Placed on Standing Rock Reservation in 1883, Sitting Bull continued to regard himself as the chief of his people, arousing the animosity and jealousy of other rival chiefs. For a year, he went on tour with Buffalo Bill's wild-west show, but most of the 1880s were spent feuding with Major James McLaughlin. When the Ghost Dance, a religious movement that incorporated numerous American Indian belief systems, hit Dakota reservations in 1890, tensions between McLaughlin and Sitting Bull were accented. The Sioux chief had endorsed – although without enthusiasm – the new movement, and in December of that year had been invited to visit Pine Ridge Agency to "greet the Messiah." McLaughlin and his superiors held that it might be better to arrest Sitting Bull rather than to have him lend his support to the Ghost Dance movement. On December 15 McLaughlin sent a detachment of Indian police to arrest him, and a skirmish unfolded. Even though some of his faithful friends tried to prevent Sitting Bull's seizure, he was killed by Sergeants Red Tomahawk and Bullhead.

Cristero uprising, Mexico, 1928

Raina Zimmering

The Cristero uprising, also known as the Cristero war, or the Cristiada, was a religious armed uprising in Central Mexico from 1926 to 1929. With the Mexican revolutionary Constitution of 1917, all religious communities lost their legal status: Article 3 mandated secular education in schools, Article 5 outlawed monastic religious orders, Article 24 forbade public religious worship outside temples, Article 27 restricted religious organizations' rights to own property, and Article 130 took away the basic civil rights of members of the clergy. President Plutarco Elias Calles adopted equivalent laws. He signed the Law for Reforming the Penal Code, known as the Calles Law. Calles seized church property, expelled all foreign priests, and closed the monasteries, convents, and religious schools. The Catholic Church hierarchy reacted with the closing of churches and schools and an economic boycott, but this had no political effect.

In August 1926 tensions turned into armed conflicts between demonstrators and police.

In Guadalajara (Jalisco), 400 armed Catholics committed suicide after locking themselves in the Church of Our Lady of Guadalupe. In Durango, Trinidad Mora led an uprising, and in southern Guanajuato another rebellion, led by former general Rodolfo Gallegos, took place. The Jalisco region became the main focal point of the rebellion led by 27-year-old René Capistrán Garza, leader of the Mexican Association of Catholic Youth.

The formal rebellion began on January 1, 1927, extending especially to Bajío, Jalisco, and Michoacán. Under the battle cry “Long Live Christ the King! Long Live the Virgin of Guadalupe!” the insurgents conducted a guerrilla war against government troops. Provoked not only by religious motivations but also by frustration over the loss of their land titles, most *Cristeros* came from rural communities that had suffered the government’s land reform since 1920.

On February 23, 1927, the *Cristeros* defeated federal troops for the first time at San Francisco del Rincón (Guanajuato), followed by another victory at San Julián (Jalisco). Father Vega led a raid against a train thought to be carrying a shipment of money. The bishops were expelled from Mexico after Father Vega’s attack on the train, but they continued to try to exert their influence from outside the country. On December 1, 1927, the newly elected president, Alvaro Obregón, was assassinated by a Catholic radical two weeks after his election. All in all, 100,000 people, mainly civilians, were killed in the war.

After a tacit arrangement between the Catholic Church and the Mexican government to retain the pre-1924 conditions, the uprising lost momentum during 1929. The diplomatic intervention of US Ambassador Dwight Whitney also helped to end the uprising. However, the anti-clerical terms in the constitution remained in force. The agreement between church and state (called *Arreglos*) established that the church’s former property remain in the hands of the state, but the church was given control of their institutions. The anti-clerical clauses were attenuated in the constitutional reform of 1988. In 2005, the church in Guadalajara canonized as martyrs 30 priests and laymen killed in the uprising.

Critical Mass

Iain A. Boal and Chris Carlsson

Critical Mass is the name given to the modern phenomenon of self-organized, mass bike rides with a contrarian spirit. The history of cycling *en masse* stretches back to the late nineteenth century. In 1896 thousands of cyclists rode through San Francisco agitating for better roads; in Weimar Germany the workers’ cycling association, Solidarity, was able to mobilize hundreds of thousands of demonstrators on wheels; in the early 1970s the new ecological sensibility prompted large rallies of cyclists with a green agenda in New York, Berlin, and elsewhere. The first Critical Mass ride took place in San Francisco in 1992 with just a few dozen cyclists. Within a year the number had reached a thousand, and since the mid-1990s the monthly “organized coincidence” attracts on occasion over 5,000 self-propelled celebrants – as much street theater as (semi)functional commute. The idea spread rapidly by word of mouth and later through the Internet. Critical Mass rides have been recorded in over 400 cities around the world, including Chicago, São Paulo, Milan, Budapest, Tokyo, Santiago, and Toronto.

Critical Mass can be seen as a new kind of “assertive desertion” by city dwellers attempting to erode the domination of modern life by automobilism and the interlocking interests of big oil, real estate developers, and the immense auto-industrial complex. By taking back the streets – albeit temporarily – in metropolitan centers and by the use of antinomian slogans, chants, and banners (famously, “We Are Not Blocking Traffic, We Are Traffic”), Critical Mass evinces the autonomist, networking style familiar in contemporary anti-systemic struggles, and echoes the direct action road-disrupting tactics that have emerged among Argentinean *piqueteros*, Bolivian *ambulantes*, and movements against neoliberalism worldwide. But there is an evident

particularity to the Bay Area origins of this resurgence of cycling *en masse*, which is infused with the traditions of postwar bohemia, the openair festivities of the counterculture, the horizontalism of anti-nuclear protests, and the satirical disdain for authority that characterizes San Francisco's political culture.

Critical Mass has arguably opened a new kind of political space, less about protest than an alternative vision of city life. However, the ongoing efforts by bureaucrats and police forces to harass and criminalize not only the carnivalesque Critical Mass rides in cities of the North, notably in New York and London, but also the cycle rickshaw pullers and two-wheeled commuters of Delhi and Beijing, suggest that authorities everywhere recognize a deeper threat posed by this mode of mobility in the arteries of capitalist modernity. Critical Mass, by its form, its rhythms, its conviviality and the kinds of encounter engendered, its use of public space, its suspension of the normal rules of circulation, is understood to be more than merely an affront to SUV drivers trapped for a few extra minutes in a traffic jam of their own making.

Although the techniques of automobility and the doctrine of the "freedom of the road" owe much to the bicycle, in the cities of the new millennium (Amsterdam notwithstanding) the decision to be an urban cyclist amounts to an act of refusal, an implicit protest against costly and lethal transit systems built on private cars. Unlike their forerunners in Solidarity and the proletarian cycling clubs of the last century, the enthusiasts of Critical Mass may no longer proclaim, in the words of José Antonio Viera Gallo, that "socialism can only arrive by bicycle" (Illich 1974: 11) – but they insist that urban life of the future will take the bicycle to its heart, or there will be no future.

Critical theory

Stephen Eric Bronner

Critical theory as a philosophical tendency was formed within German culture, but the term was actually coined in the United States. It was in the Institute for Social Research, founded in 1923 in Frankfurt, that the "critical" project took shape. The first director of the institute, Carl Grunberg, and many of its early members – like Henryk Grossman, Fritz Sternberg, and Felix Weill – were primarily interested in the study of political economy, imperialism, and the history of the socialist labor movement. Max Horkheimer, who took over as the new director in 1930, changed this orientation. Seminars of an interdisciplinary sort were organized among the members of his "inner circle" and, ultimately, they would produce the major works of "critical theory" normally associated with the "Frankfurt School" after the institute moved to Columbia University in 1934 following the Nazi seizure of power. That circle was comprised of Leo Lowenthal – an expert in literary criticism – who joined the institute in 1926; and Theodor W. Adorno – who was considered valuable for his knowledge of music – and who began his collaboration with the institute in 1928, but only became an official member ten years later. Then there was Erich Fromm, a gifted psychologist, who started his nine-year collaboration in 1930; Herbert Marcuse, a philosopher and former student of Martin Heidegger, who joined in 1933; and Walter Benjamin, the most unique of these thinkers, who never officially was a member at all.

Walter Benjamin was completely unknown in the United States until the preeminent political theorist Hannah Arendt edited a collection of his essays, *Illuminations* (1969). He thereafter became celebrated as an iconoclastic thinker involved with investigating and meshing traditions as diverse as Jewish Messianism, the Baroque, Modernism, and Marxism. With the new popularity of the radically subjective postmodern movement during

the 1980s, however, his fame reached extraordinary proportions: a library of secondary works has appeared and almost every volume of Benjamin's *Selected Writings* has become an academic best-seller. His critique of progress and optimistic illusions, his attempt to reconstruct theory through the assimilation of seemingly mutually exclusive traditions, his skepticism concerning traditional foundations and universal claims, and his preoccupation with subjectivity, produced a transformation of the entire critical project. Benjamin's work spoke directly to many on the left who, following the collapse of the social and cultural movements associated with the 1960s, felt they were living in an age of "ruins." Above all, however, his inability to decide whether to emigrate to Israel or the United States and his subsequent tragic death in 1940, while attempting to flee the Nazi invasion of France, put a particularly dramatic stamp on his life and the experience of exile.

Exile marked the work of the institute. Horkheimer, in fact, only coined the term "critical theory" in 1937, after having fled to the United States. His seminal essay on the subject, "Traditional and Critical Theory," treated it as an approach qualitatively different from "vulgar" materialism – that is to say positivism or behaviorism – and metaphysical idealism. Following the approach developed in the classic works of unorthodox "western Marxists" like *Marxism and Philosophy* by Karl Korsch and *History and Class Consciousness* by Georg Lukács, Horkheimer insisted that critical theory should be understood neither as a philosophical system nor a fixed set of proscriptions. He instead viewed it as a method of liberation, a cluster of themes or concerns that would express an explicit interest in the abolition of social injustice and the psychological, cultural, and political reasons why the international proletarian revolution failed following the events of 1917 in Russia. With the publication of "Authority and the Family" (1934), for example, Horkheimer sought to analyze how a patriarchal familial structure inhibited the development of revolutionary consciousness among workers. "The Jews and Europe" (1938) insisted that confronting bigotry called for confronting economic exploitation; or, as Horkheimer put the matter in his essay, "he who wishes to speak of anti-Semitism must also speak of capitalism." Works like these set the stage for a new mode of "dialectical" thinking – a version

of Marxism – that went beyond the economic interests of classes and elites as well as the institutional dynamics of the state.

Reactionary sexual mores, mass culture, the division of labor, and the need to grasp the universal through the particular would prove essential themes for the institute. Deeper issues mired in the anthropology of human existence also became matters of concern for critical theory. Indeed, the need for a response to them turned critical theory into an ongoing threat to the stultifying dogma and collectivism of "actually existing socialism." In the spirit of Marxism, critical theory leveled an attack on all ideological and institutional forms of oppression, including those justified by Marxism itself. Critical theory was – from the first – intended to foster critical reflection, a capacity for fantasy, and new forms of political action in an increasingly bureaucratized world.

Most members of the institute remained suspicious of the different ways in which supposedly neutral formulations of science veiled repressive social interests. That is why they employed a methodological approach indebted to both the "critique of ideology" (*Ideologiekritik*) that derived from German idealism and the sociology of knowledge whose actual source is Marx. Ideals of freedom and liberation thus provided the basis for the social critique of the existing order. In the United States, however, the character of this engagement changed dramatically from that of the early days. The most compelling reasons were connected with the failure of the proletarian revolution, the increasingly stark reality of totalitarianism, and the looming shadow of McCarthyism.

Major scholars associated with the institute – albeit often at the fringes – added much to an understanding of the ideological forces behind the new totalitarian phenomenon and its structure. Its emergence in Germany was analyzed in diverse works of an interdisciplinary character. *Escape from Freedom* (1941) by Erich Fromm, which proved enormously popular, analyzed the psychological appeal of Nazi totalitarianism. Siegfried Kracauer, who was close to Adorno and Benjamin, offered what became a classic examination of German film in the Weimar Republic entitled *From Caligari to Hitler* (1947). In a more social scientific vein, Otto Kirchheimer contributed *Political Justice* (1961) and Franz Neumann *Behemoth* (1942), the first

significant work that analyzed the structure of the Nazi state. Horkheimer himself edited a five-volume work, *Studies in Prejudice* (1949), for the American Jewish Committee, while Adorno led a team of researchers in producing the classic *The Authoritarian Personality* (1950). In the context of the United States, both looking backward to the 1930s and forward to McCarthyism, it is also useful to consider *Prophets of Deceit: A Study of the Techniques of the American Agitator* (1948) by Leo Lowenthal and Norbert Guterman, as well as Lowenthal's work on American anti-Semitism, *Images of Prejudice* (1945).

Following the Hitler-Stalin Pact that unleashed World War II, the proletarian revolution ceased to serve as the ultimate aim of the critical enterprise. The working class lost its standing as "the revolutionary subject" of history and the Frankfurt School no longer saw its interests as sufficient for generating a critique of the status quo. A new phase in the development of critical theory began with the completion of *Dialectic of Enlightenment* (1944), including a sensational last chapter "Elements of Anti-Semitism," in 1947. Horkheimer and Adorno, its authors, called into question the old belief in progress, science, and the benefits of modernity. They insisted that by privileging mathematical reason, the Enlightenment not only assaulted reactionary forms of religious dogma, but also, whether intentionally or unintentionally, the more progressive normative ways of thinking. Scientific rationality divorced from ethical concerns was indeed seen as culminating in the number tattooed on the arm of the concentration camp inmate.

Dialectic of Enlightenment offers less the vision of a better world emerging from the Enlightenment than one increasingly defined by the "commodity form" and bureaucratic rationality, in which the individual is stripped of conscience and spontaneity. Stalinism on the left, Nazism on the right, and an increasingly bureaucratic and robotic mass society emerging in the United States: mass society, the horror of war, and – perhaps above all – the concentration camp universe inspired this book. The new reality demanded a significant revision in the more traditional understandings of critical and radical theory.

Communism had turned into a nightmare, Nazism was even worse, social democracy had been integrated into the status quo, and liberalism – with its emphasis upon the abstract individual

of the social contract – had seemingly become anachronistic. For Horkheimer and Adorno, the possibility of revolutionary transformation faded in the face of an apparently seamless bureaucratic order buttressed by the "culture industry" intent on eliminating subjectivity and any genuinely critical opposition to the status quo. This development is what required a rethinking of the usually positive view that progressives had traditionally accorded the Enlightenment. Not the *philosophe* or the political critic but the bohemian intellectual, who challenged society in its entirety, was seen as embodying whatever emancipatory hope existed for the future. Thus, for the proponents of critical theory, it had become necessary to supplement the dialectical framework of Hegel and Marx with the more modernist and subjectivist tenets of Schopenhauer and Nietzsche in combating the collectivist strains within advanced industrial society.

To put it another way, it was now incumbent upon a genuinely critical theory to draw the consequences of the ways in which civilization in general, and modernity in particular, were flawed from the beginning. The critical theory of society would thus require a more directly anthropological form of inquiry. According to Horkheimer and Adorno, indeed, it was now necessary to highlight not the needs of some class-bound and collectivist "revolutionary subject" like the proletariat, but the ways in which individual subjectivity might resist the conformity generated by an increasingly administered and culturally barbaric universe. Political resistance thus made way for a philosophico-aesthetic assertion of subjectivity in *Negative Dialectics* (1966) and *Aesthetic Theory* (1970), two monumental works by Theodor Adorno, while Max Horkheimer emphasized a philosophico-religious understanding of resistance in *The Longing for the Totally Other* (1970).

Theodor Adorno was probably the most talented proponent of this new turn in critical theory. His interests extended from musicology and literary analysis to sociology, meta-psychology, and philosophy. The only real disciple of Benjamin, the inventor of "negative dialectics," Adorno's work shows a rare standard of intellectual brilliance, including extraordinary studies on modern music, a masterpiece that transformed aesthetic theory, and *Minima Moralia: Reflections of a Damaged Life* (1947). Adorno's work exemplifies

the abstruse style that has become identified with the Frankfurt School.

The heritage of dialectical philosophy surely had an impact on its formation, and the use of complex concepts employed often demanded a complex articulation. Especially in the ideologically charged context of the war and its aftermath, however, members of the institute also self-consciously employed an "Aesopian" form of writing. As exiles living in the United States, they sought to hide their indebtedness to Marx by substituting the highly abstract language of Hegel. But there is something else that needs to be taken seriously when thinking about the style of Adorno and Horkheimer. Their famous analysis of the culture industry developed in *Dialectic of Enlightenment*, written while they were living in Los Angeles, implied that popularity would necessarily "neutralize" whatever critical or emancipatory messages a work might retain. Nevertheless, there was nothing ambivalent about the willingness of Erich Fromm – or Herbert Marcuse – to engage the public in a radical fashion.

Fromm was surely the most lucid stylist to emerge from the institute. He was also the most popular and, arguably, the most loyal to its original purpose insofar as he always sought to link theory with the practical demands of social change and individual transformation. Fromm grew up orthodox and he studied with some of the leading rabbis in Europe. His dissertation dealt with the Jewish Diaspora and another of his early works with the Sabbath. The psychoanalytic institute he founded in Berlin with his first wife, Frieda Reichmann, soon became known as the Torah-peutikum. His interest in the psychological appeal and ethical impulse provided by religion, indeed, never fully disappeared.

Erich Fromm was initially one of the most influential members of the institute and a close friend of Horkheimer. His concern was with how psychological attitudes mediated the relation between the individual and society. Even during the 1920s he was intent upon linking Freud with Marx. For this reason, when Adorno first insisted on developing an anthropological critique of civilization from the standpoint of Freud's instinct theory, he clashed with Fromm. The dazzling newcomer won the battle. Fromm divorced himself from the institute by 1940 and he proceeded to write a number of bestsellers, including *Escape from Freedom*. Quickly enough,

his former colleagues condemned him for the "superficial" quality of his writings even while his influence soared among left-wing intellectuals and a broader public from the 1950s to the 1970s.

As for Herbert Marcuse, while in the United States he not only worked with the Office of Strategic Services as an expert on West European politics, but also wrote papers on totalitarianism and, in 1958, published a highly respected study entitled *Soviet Marxism*. In spite of his penchant for utopian thought, so prominent in *Eros and Civilization* (1955), Marcuse also remained faithful to the original practical impulse of critical theory. His most influential work, *One-Dimensional Man* (1964), actually anticipated the seminal role of the new social movements and a radical cultural politics in responding to the bureaucracy, commodification, and conformism of advanced industrial society. Pessimism concerning the future of a society in which all radical alternatives were being absorbed, and all ideological contradictions were being flattened out, combined with a utopian vision built upon the radical humanism of the young Marx, the "play" principle of Schiller, and the meta-psychology of Freud. This tension, indeed, permeated all of Marcuse's writings.

The popularity of Fromm and Marcuse in the United States contrasted strikingly with a virtually total ignorance of the work produced by the rest of the Frankfurt School. The legend that critical theory inspired the movement of the 1960s is, certainly in America, misleading; its major works were translated only in the 1970s. During that decade journals like *Telos* and *New German Critique* helped in publicizing its ideas and the works of its most important representatives. In Europe, however, the influence of the Frankfurt School on the partisans of 1968 was strong. Its emphasis upon alienation, the domination of nature, the regressive components of progress, the mutability of human nature, and the stultifying effects of the culture industry and advanced industrial society made the enterprise relevant for young intellectuals who had come of age through "the movement" of the 1960s.

Max Horkheimer and Theodor Adorno, however, were appalled by what they had helped inspire. Following their return to Germany, the former became rector and the latter, somewhat later, a dean at the University of Frankfurt. It is somewhat ironic that these new stalwarts of the establishment should have anticipated the

movement's concern with a "cultural revolution" and the transformation of everyday life demanded by so many of their students. These themes were as real for many activists of the 1960s, both in Europe and the United States, as the quest for racial justice and the anti-imperialist opposition to the Vietnam War. Nevertheless, these themes lost their salience in the general malaise that followed the collapse of the movement and the emergence of a neo-conservative assault upon what has been called the "adversary culture."

A new set of academic radicals embraced instead the "deconstructive" and radically subjectivist elements in the thinking of the Frankfurt School in general and in the work of Adorno and Benjamin in particular, with their emphasis upon the fragmentary character of reality, the illusion of progress, and the need to substitute experimental cultural for political resistance. All this fit the time in which radicalism retreated from the streets into the university. Critical theory of this new "deconstructive" or "poststructuralist" sort invaded the most prestigious journals and disciplines, ranging from anthropology and film to religion, linguistics, and political science. Elements of it have, indeed, become features of the very society that the Frankfurt School ostensibly wished to challenge.

But if it is to remain relevant, especially in the United States, critical theory must begin taming its metaphysical excesses, mitigating its subjectivism, and affirming its repressed political character. These concerns inform much of the work undertaken by Jürgen Habermas, the brilliant student of Horkheimer and Adorno, who came to maturity in the aftermath of World War II. Of particular interest, in this vein, is his *Philosophical Discourse of Modernity: Twelve Lectures* (1985). Habermas was never in exile: he experienced the impact of totalitarianism directly in his youth and it left him with a profound respect for the liberal political legacy, the "public sphere," and the repressed possibilities of "communicative action." Habermas has also gained a large academic following in the United States. Nevertheless, his work provides an important beginning for resurrecting the critical undertaking.

Cromwell, Oliver (1599–1658)

Annette Richardson

Oliver Cromwell was a Puritan member of parliament and leader of the forces that overthrew the monarchy during the English Civil War. Following the king's execution, Cromwell became Lord Protector of England from 1652 until his death in 1658.

Oliver Cromwell was born on April 25, 1599 in Huntingdon, Cambridgeshire to Robert and Catherine Cromwell. He attended the Puritan-oriented Sidney Sussex College, Cambridge, but did not obtain a degree, for he was called home following his father's death. Cromwell married Elizabeth Bourchier in 1620 and had nine children. After struggling financially, he became wealthy in 1636 by inheriting his uncle's sizable estate and two positions as tax collector at Holy Trinity and St. Mary's parishes. In 1628 he was elected to parliament for Cambridge City and soon gained notoriety for his radicalism. Following numerous disputes over authority, King Charles I dissolved parliament in March 1629, and Cromwell suffered a nervous breakdown in 1630, emerging from it with a strong Puritan radicalism.

The long-term causes for the English Civil War were political, economic, and religious. The short-term cause was King Charles I's recall of parliament in April 1640, after an 11-year hiatus, to raise taxes to fight the Scots, who vigorously opposed the Anglican High Church policies imposed by Archbishop of Canterbury William Laud. Members of parliament saw their chance for retribution against the king's abuse of power.

Cromwell is depicted leading a charge after being wounded in his right arm at the Battle of Marston Moor, July 2, 1644. Cromwell is a controversial figure, admired as a hero of liberty by some and decried as a dictator by others. His particularly bloody Irish campaign from 1649 to 1650 made him a hated figure in Ireland. From Illustrations of English and Scottish History, Volume 1, engraving by Abraham Cooper. (Private Collection, Ken Welsh/ The Bridgeman Art Library)

The “Long Parliament” was convened in November 1640. Members of parliament were not seeking a revolution, but rather a king who reigned with parliament’s consent. Charles I, however, believed in the divine right of kings and unsuccessfully tried to have five members of parliament arrested on August 22, 1642. Religious differences divided the Parliamentarians and Civil War began in August 1642. Cromwell zealously supported parliament, strongly opposing the Anglican High Church and the restrictions it placed on non-followers and radical Puritans like himself. He believed in liberty of conscience and tolerance in religious observance.

Armed conflict emerged between the Royalists (or Cavaliers) supporting Charles I, particularly popular in Wales and the West Country, and the Parliamentarians (or Roundheads), who received support in London, the Midlands, and the Southeast. Cromwell quickly realized the Parliamentarians lacked a strong organized army. At age 43 he had neither military training nor experience, but soon found he was an innate soldier with natural leadership qualities. He trained his cavalry forces rigidly and his troops, mostly farmers, carried body armor, a pistol, and a sword. Cromwell insisted the Parliamentarian New Model Army had adequate supplies and were paid monthly through a levy on farmers under parliament’s control. The New Model Army soon excelled among the armies on the European continent.

Cromwell was appointed Lieutenant General in June 1644, and the Parliamentarians won the decisive Battle of Marston Moor on July 2, 1644, thereafter controlling northern England. Marston Moor established Cromwell’s military reputation. Cromwell was exempted from the Self Denying Ordinance, which denied members of parliament command in the army or navy in 1645 and repeatedly had his 40-day commissions renewed. The three largest parliamentary armies were united, and Cromwell became temporary commander. The New Model Army decisively won the Battle of Naseby, Northampton on June 14, 1645 against Charles I’s nephew, Prince Rupert of the Palatinate. The Royalists were never able to recuperate. Charles I surrendered at Oxford and was made a prisoner of parliament until his escape on November 11, 1647.

In 1647 Cromwell, who had become more radical, sided with the Parliamentarians against Charles I, who urged the Scots to rise against the Parliamentarians. In December 1647 Thomas Pride, establishing what became known as the Rump Parliament, removed the majority of Royalists from parliament and retained those loyal to the radicals. Cromwell was lieutenant-general and commander-in-chief of the New Model Army when the Second Civil War began in May 1648. Cromwell soundly defeated the Royalists at Preston in August 1648.

Following the Second Civil War, Cromwell’s role in the trial and execution of Charles I was paramount. Cromwell had hoped unsuccessfully for an abdication and that one of Charles I’s sons would take the throne. After being found guilty at a trial for treason against the nation, with a parliamentary vote of 59 to 1, Charles was beheaded at the Palace of Whitehall in London on January 30, 1649. A Commonwealth of England was declared with a council of state.

In 1649 Cromwell soundly defeated parliament’s enemies in Ireland when he and his 12,000 men besieged Drogheda, near Dublin, in September 1649, massacring 3,000 people in revenge for the killing of Protestants in Ulster during the 1641 Irish Rebellion. Some 2,000 Irish people were then mercilessly murdered at Wexford in October, and Cromwell banned Catholicism in Ireland. He confiscated 40 percent of the Catholic-owned land, redistributing it to Englishmen through the Act of Settlement of Ireland of 1652. He then invaded Scotland in 1650, shortly after 20-year-old Charles, eldest son of Charles I, was

proclaimed king of Scotland. Cromwell defeated Charles at Dunbar and at Worcester, forcing the prince to flee to the European mainland.

The disparate interest groups no longer had a common enemy once Charles I was removed. Consequently, Cromwell lost the unanimous support he had enjoyed. The Rump Parliament and the 41-member council of state had stagnated. Cromwell dissolved it in April 1653 by military force. He then summoned the Nominated Parliament of some 140 persons (also known as the Barebones Parliament) that sat from July to December 1653.

Cromwell was appointed Lord Protector in December 1653, refusing to take the title of king. As Lord Protector he was served by a council of state and parliament. England was accorded a written constitution known as the Instrument of Government. In 1657 Cromwell's powers were redefined with the Humble Petition and Advice, which gave him more power than Charles I ever enjoyed. While Lord Protector, Cromwell practiced intolerance toward the Church of England and the Roman Catholic Church. However, recognizing Jewish contributions to the economic success of Holland, Cromwell encouraged the return of Jews to England.

Cromwell died on September 3, 1658 of malarial fever and was initially buried in Westminster Abbey. Cromwell's son Richard succeeded him briefly until he was forced to resign in 1659. The following year, parliament recalled Charles II as king, ending the period known as the Interregnum. In 1661, after the Restoration, Cromwell's body was exhumed and suffered a posthumous execution. His body was mutilated and his severed head was displayed on a pike outside Westminster Abbey until 1685. Cromwell's head was eventually buried in the grounds of Sidney Sussex College in Cambridge.

Cuauhtémoc (1502–1525)

Leticia Pacheco Espejel

Cuauhtémoc was the son of Ahuizol and an unknown mother. When Ahuizol died in 1502, Cuauhtémoc's mother oversaw his education until he entered Calmécac, the school of the nobles, at the age of 15. At Calmécac he was educated in military matters and religion under strict discipline in order to prepare him for assuming power as governor of Tenochtitlán.

As governor in 1520, Cuauhtémoc had to defend himself and his people against the Spaniards, who had been welcomed by Moctezuma that same year. In accordance with the prophecies, Moctezuma insisted on awaiting the arrival of Quetzalcóatl, the plumed snake. As he hoped to face Quetzalcóatl, Moctezuma and his men handed over the city to Hernán Cortés without any resistance. The Spaniards arrested Moctezuma and set Tenochtitlán ablaze, destroying the idols and pillaging the temples. Cuauhtémoc was left to lead the defense of Tenochtitlán, and his strong resistance against the domination of the Spaniards made history.

When Cortés returned to Cempoála in 1520 he sent Pánfilo der Narváez to confront Cuauhtémoc's troops. Realizing he was facing inevitable disaster, he pressed the imprisoned Moctezuma to go to Cuauhtémoc and his allies to order them to divest themselves of arms. All attempts to stop the rebellion were, however, futile. Finally, Cortés decided to leave Tenochtitlán for Tlaxcala. During the night of June 30, 1520, he was defeated at Popotla, together with a small group of Tlaxcaltecas who fought with him. This incident has become known as the sad night. Cortés, however, succeeded in arriving at Tlaxcala, where he found shelter. In the meantime, Moctezuma had died in Tenochtitlán and was replaced by Cuitláhuac, whose rule was cut short by an epidemic of smallpox, a disease that was completely unknown in the region before the arrival of the Spaniards.

On November 25, 1520, Cuauhtémoc decided to prepare for the Spaniards' possible return. Consequently, he reorganized the army and worked to gain the loyalty of prisoners by reducing the tributes they had to pay during war. One year later Cortés came back to Tenochtitlán with a heavily armed and well-trained army

composed of Tlaxcaltecas, indigenous enemies of the Mexicas, who succeeded in conquering Tenochtitlán after fighting against Cuauhtémoc and his army for 75–80 days.

On August 13, 1521, Cuauhtémoc was arrested and tortured in Tlatelolco. Cortés wanted to find Moctezuma's treasure and ordered Cuauhtémoc's feet to be set on fire. The location of the treasure had always been a matter of discussion, and it is still unknown whether it ever existed or is just a myth. But there is no doubt that Cuauhtémoc survived these tortures, mainly due to the discipline and training he had received at Calmécac.

In 1524 Cortés learned that one of his captains, Christobal de Olid, who had remained in Honduras, was conspiring against him, together with Diego de Velazques, to conquer the south of the new continent and take possession of the region's wealth. Cortés decided to hunt down de Olid and take him prisoner. The year-long expedition to Honduras included not only Spaniards but also Mexicas, with Cuauhtémoc among them, since his diplomacy was needed to prevent conflicts with other tribes on the way to Honduras. Nevertheless, Cortés was consumed by fear that Cuauhtémoc would kill him and resume power in Tenochtitlán and other capitals before they found de Olid. Thus, on February 28, 1525, in Campeche, Cortés ordered the death by strangulation of Cuauhtémoc and his presumed accomplices.

Cuba, anti-racist movement and the Partido Independiente de Color

Aline Helg

Cuba's Partido Independiente de Color (Independent Party of Color, 1908–12) stands out as

the first black political party in the western hemisphere. Formed by Afro-Cuban veterans of Cuba's war of independence to struggle for full racial integration in the republic, it rapidly gained thousands of supporters, threatening the white-dominated two-party political system. As a result, Cuban Congress outlawed the black party in 1910 and, as its members protested to regain legality in 1912, the Cuban army launched the racist massacre of 1912 that left thousands of Afro-Cubans dead and put an end to the party.

The Partido Independiente de Color continued a long tradition of anti-racist struggles in Cuba, linked to the rapid development of racial slavery after 1770, in a hemispheric context of rising abolitionism and equal rights. As shown by the 1812 Aponte rebellion and the 1844 Conspiracy of La Escalera, numerous Afro-Cubans then formed associations and planned rebellions against slavery and Spanish colonialism that united the free and the enslaved, mulattos and blacks, the Cuban and the African born.

Following the terrible repression of La Escalera, many Afro-Cubans joined Cuba's first independence war initiated by planters in the eastern province of Oriente in 1868. Free blacks and mulattos as well as fugitive slaves rapidly made up the majority of the patriot troops, some of them, such as mulatto leader Antonio Maceo, becoming outstanding leaders and pressuring for abolition as much as for independence. After the failure of the Ten Year War in 1878, many slaves and free persons of color continued the struggle against slavery and racial inequality using legal means such as the purchase of freedom and lawsuits. Although Spain finally abolished slavery in 1886, Cuban society remained deeply divided along racial lines, with no public policy helping the former slaves. Thus, Afro-Cubans renewed their struggle for equal rights and against racial segregation, taking some cases up to the Royal Supreme Court in Madrid. The Directorio Central de Sociedades de la Raza de Color, under mulatto journalist Juan Gualberto Gómez, guided the movement. In addition, Gómez and others published newspapers that challenged racism.

When Cuban insurgents launched a new War for Independence in 1895, the rebellion fully succeeded only in Oriente, the region with a significant population of African descent and a tradition of struggle against Spain. Again, blacks joined the insurgency *en masse* from its

beginning, galvanized by the leadership of Maceo and attracted by José Martí's anti-racist social agenda. In the process, many of them increased their expectations regarding their position once independence would be achieved, despite the fact that, not surprisingly, racism did not vanish from social relations among rebels. After Maceo's death in late 1896, Afro-Cuban officers were increasingly marginalized. The US 1898 military intervention and occupation until 1902 further discriminated against Afro-Cubans, who kept a low profile while expecting better times after independence.

By then, Afro-Cubans made up approximately one-third of Cuba's population. The first Cuban government of the Moderate Tomás Estrada Palma, from 1902 to 1906, continued to show prejudice against them in public employment and the armed forces. As under Spain, entertainment, transportation, hotels, restaurants, prisons, and hospitals were segregated. Although blacks and mulattos had access to public elementary schools, most secondary schools were private and refused students of color, making their entrance to the university exceptional. The Spanish criminal code, which considered African ancestry as an aggravating circumstance, remained in force. Although a small lower-middle class of skilled people of color subsisted, particularly in some manual trades or as musicians and artists, distinguished professions, such as lawyer or medical doctor, counted hardly any Afro-Cuban practitioner. Positions in commerce generally remained in the hands of Spaniards. Conversely, black and mulatto men were overrepresented in subordinate occupations, such as day laborer and servant, in construction, and in the seasonal work of cane cutting. In the countryside, fewer Afro-Cuban peasants were able to own or rent land than whites. Afro-Cuban women dominated female wage labor, because the survival of many Afro-Cuban families depended on women's work (Fuente 2001: 116).

To make things worse, at a time when social Darwinism and pseudoscientific racism were almost hegemonic, the Estrada Palma government decided to subsidize Spanish immigration in order to whiten the Cuban population. This policy brought tens of thousands of young Spanish men into Cuba, who pushed black and mulatto men further on the sidelines of the labor market. Moreover, the government launched a campaign of repression against Afro-Cuban

religions (*santería* and *palo monte*) under the label of witchcraft and cannibalism, which promoted the fearful stereotype of the African sorcerer. Simultaneously, it declared that the 1901 Cuban Constitution, by declaring all Cubans equal and granting universal male suffrage, had solved the "racial question." Thus, if Afro-Cubans were still marginalized it was due to their lack of "merits." Some black politicians, such as Rafael Serra, began to criticize state policies and racism in their newspapers (Helg 1995: 103–37).

In 1906 the Moderate Party attempted to remain in power unconstitutionally through violence and fraud. In protest, the Liberals launched the August Revolution, which rapidly rallied 25,000 followers, mostly veterans and Afro-Cubans, organized in a Constitutional Army. This rebellion prompted the second US military occupation (1906–9), during which every faction lobbied in order to secure power after the US withdrawal.

Increasingly frustrated since 1898, many Afro-Cubans then began to protest by issuing pamphlets, forming "committees of veterans of color," and publicly demonstrating. They claimed that, because they had been overrepresented in the independence wars and had died for the nation's freedom in much larger numbers than whites, they could no longer accept discrimination in the republic they had largely contributed to create. Moreover, it was intolerable for them to see white Cubans who had not taken part in the liberation struggle or, worse, Spanish immigrants, take most jobs. In 1908, in the midst of this wave of anti-racist protest, a group of Afro-Cuban veterans, led by Liberal contractor Evaristo Estenoz and Moderate veterinarian Pedro Ivonnet, founded the Partido Independiente de Color (Helg 1995: 142–7).

Despite its name, the Partido Independiente de Color sought, through the election of its candidates in democratic elections, the integration of Afro-Cubans in society and their participation in government "in order to be well governed." Its political program addressed only a few issues directly related to race: it demanded an end to segregation and racial discrimination, equal access for Afro-Cubans to positions in public service and the diplomatic corps, and an end to the ban on "non-white" immigration. Most of the other demands aimed at improving the conditions of the popular classes regardless of race: increasing compulsory free education from eight to

fourteen years; free technical, secondary, and university education; state control of private schools; abolition of the death penalty; reform of the judicial and penitentiary systems; the eight-hour work day; priority for Cubans in employment; and the distribution of national lands to Cubans. As *Previsión*, the party's newspaper, summarized, "Our motto for the time being is 'Cuba for the Cubans,' our profession of faith, state liberalism" (Portuondo 2002: 37–52).

After the end of the second US occupation in 1909, the Liberals gained power, with their white leader José Miguel Gómez as Cuba's new president, raising the expectations of social policies and a share in public jobs among the Afro-Cuban followers of the August Revolution. The Partido Independiente de Color formed committees throughout the island and saw its membership grow accordingly. By early 1910 it claimed a total of 60,000 members, among whom were 15,000 veterans, no doubt inflated figures as they would have constituted 44 percent of all Afro-Cuban voters. Nevertheless, historical research has shown that the party then counted between 10,000 and 20,000 supporters, blacks and mulattos alike and mostly from the peasantry and the working class – an impressive score for an organization in existence less than two years (Fernández Robaina 1990: 96–100; Helg 1995: 155–7). This success immediately worried the leaders of Cuba's main political parties, above all the Liberal Party of President Gómez, which had a large Afro-Cuban constituency. By early 1910, a year of congressional elections in which control of the black vote was crucial, Liberal and Moderate bosses moved from mockery to false accusations and repression. The Independent leaders themselves contributed to the escalation by mixing conciliatory messages to the political establishment with inflammatory calls to their supporters to respond with violence to racist provocations. In February 1910 *Previsión* was seized and Estenoz sentenced to prison but quickly released. Simultaneously, the Liberals proposed an amendment to the electoral law, astutely presented by the only senator who was Afro-Cuban, banning the Partido Independiente de Color on the grounds that, in representing only the interests of the Afro-Cubans, it discriminated against whites and thus violated the equality guaranteed by the Constitution.

In order to secure the approval of this amendment, the Liberals spread the rumor that the

Independientes were plotting a conspiracy to massacre whites and transform Cuba into a black republic, like Haïti. Hundreds of Afro-Cubans, among them the leaders of the Partido Independiente de Color, were arrested and jailed across the island, and 220 of them transferred to the central prison in Havana. When alleged conspirators filled the prisons, the Cuban Congress approved the amendment banning the Partido Independiente de Color. Although the defendants won a verdict of not guilty in late 1910, they could not erase from public opinion the false accusations launched against them. And their party was now illegal. Discouraged and impoverished after months in custody, some Independientes gave up their membership. A majority, nevertheless, decided to mobilize for the relegalization of their party in view of the November 1912 general elections. They attempted to negotiate a compromise with President Gómez, to gain the support of the Moderates, and even to obtain US assistance, but with no avail (Helg 1995: 164–91).

Finally, on May 20, 1912, the Partido Independiente de Color launched an armed protest in Oriente so that the president would pressure Congress to relegalize their party. In Cuba under the Platt Amendment, the *protesta armada*, or show of force, had been used as a political tactic by several interest groups. In effect, by providing the ground for a US intervention to protect foreign life and property, armed demonstrations usually attracted the attention of the US State Department and forced the Cuban government to make concessions (Pérez 1986: 97, 147). However, despite their experience of racist repression in 1910, the Independientes did not anticipate that, in their case, such a tactic would prompt a racist massacre.

Indeed, the Cuban political elite immediately branded the protest as a "race war" launched by the Partido Independiente de Color against the island's whites. Instead of negotiating, President Gómez sent the army and the rural guard as well as hundreds of white volunteers to exterminate the Independientes in the name of civilization. The United States disembarked 450 Marines to protect US-owned plantations. The Cuban Congress suspended constitutional guarantees. Although the Independientes had not committed any violence, the army and the volunteers began massive killings on May 26. With the party members escaping to Oriente's mountains, they increasingly gunned or chopped down

Afro-Cuban peasant women, men, and children. In addition, racist propaganda reached the extremes of virulence and scale, with the theme of the defense of white civilization against black or African barbarism dominating the press. The misrepresentation of the armed protest as a race war allowed for the indiscriminate use of racist and dehumanizing stereotypes, such as those of the bloodthirsty black beast, the black rapist of white women, and the black fanatic sorcerer. The slaughter lasted two months. The exact number of Afro-Cuban dead will never be known: over 2,000 according to the army, 5,000 in the eyes of an Independiente survivor, and 6,000 in those of a US observer. Among them were Estenoz and Ivonnet, captured and shot at point-blank range, their corpses then publicly displayed. Repression was not limited to Oriente, but spread to the whole island. Everywhere, men of African origin became suspects as a result of the conversion of the armed protest into a race war. Many were arrested, others lost their jobs, some died victims of white posses or riots. Most foreign witnesses supported the killings, except the French consul in Santiago de Cuba who lamented “the St Bartholomew’s Day Massacre of black people” in Cuba and was expelled for his criticism. In Congress the few Afro-Cuban representatives who expressed concern were accused of complicity with the Independientes and rapidly silenced. Some social essayists celebrated the slaughter as the triumph of white Cubans over an inferior race doomed to vanish (Helg 1995: 194–248).

Indeed, the massacre of 1912 signified the end of the Partido Independiente de Color and dealt a long-lasting blow to Afro-Cubans, who subsequently struggled within existing political parties and labor unions rather than in their own organizations.

After Portuondo’s study in 1950, as Fidel Castro’s Revolution claimed that socialism and the end of US imperialism had brought “the definitive solution to the black problem in Cuba” (Serviat 1986), the Partido Independiente de Color attracted only a few historians who neglected the development of the party in 1910–12 and tended to present it as group of disgruntled middle-class veterans. They also ignored the tragic racist massacre of 1912, minimized under the name of “the little war of 1912,” because it questioned Cuban racial democracy. Since 1990, in line with new interest in Afro-Latin America,

historians have begun to stress the rapid growth of the party and the political significance of its socioeconomic agenda, as well as the magnitude of the 1912 wave of anti-black violence. More recently, some studies have examined the process in regions other than Oriente. The party and the massacre have also become the focus of unprecedented historical interest in Cuba itself.

Cuba, general strikes under Batista regime, 1952–1958

Mike Gonzalez

Fulgencio Batista, who led the sergeants’ revolt of 1933, had become the dominant presence in Cuban political life by the following year. He was not himself elected to office until 1940, but

he largely controlled and shaped events in the intervening years through others. Thus he supported the government of Guiteras and Grau San Martín which took power (so to speak) in September 1933 with the express intention of realizing the radical demands of the movements of that year. Batista's sights were set on a future relationship with the United States, which was resolutely opposed to the Guiteras–Grau coalition – though the US ambassador had been happy enough to sit on his hands while Machado fell. Batista knew that his project would not prosper while the radicals were in power, so he engineered the situation to have them replaced by Colonel Mendieta, head of the right-wing Unión Nacionalista (Nationalist Union).

Guiteras called for a general strike in defense of the short-lived administration, but there was virtually no response. On January 18, Mendieta was installed in the presidency; Batista for his part had survived his first general strike and could now conduct Cuban affairs from behind a throne whose occupant was entirely beholden to him. The four months of a populist government had given Batista the time to assert his power within the army and to forge an alliance with the US embassy. The abrogation of the Platt Amendment in May 1934 won Mendieta popular support, though the US refused (and still refuses) to surrender their base at Guantánamo.

“In spite of Batista's coup, however, the country was still in revolutionary mood” in 1934 (Gott 2004: 142). Guiteras, its most visible and radical representative, resumed the activities he had been involved in before his brief sojourn in government. *Joven Cuba* returned to the methods of the Directorio, of urban guerilla war and direct action. In March 1935 Guiteras called another general strike. This time a more confident Batista and Mendieta launched a wave of repression, making unions illegal, closing the university, and persecuting the political opposition. It was as if Cuba had returned to the days of Machado. Guiteras, meanwhile, prepared to leave Cuba and instal himself in Mexico, where he would train with others for a future guerilla war. But he was murdered in Matanzas in May 1935, and it would be over 20 years before his plans found another interpreter.

Mendieta fell, to be replaced by new politicians from Batista's stable, but in reality the ex-sergeant's grip was tightening. As the political atmosphere eased, Grau San Martín returned with

a new party, the Auténticos; and the Communist Party reemerged under a new name. It must have seemed at first surprising that the communists should seek alliance with Batista, who had so obviously concentrated power in his own hands and repressed workers' organizations shortly before. But there were two sets of factors at work. First, the communists would have no truck with the nationalist Auténticos, after the recent experience of 1933, but were anxious to gain a political foothold. Second, the international policies of the Comintern, the Communist International, had turned away from the sectarian isolation of the early 1930s towards a policy of seeking alliances with other forces. Batista represented those forces, and the Communist Party was happy enough to support him in exchange for legalization, the publication of their own party newspaper, *Hoy*, and eventually – and crucially – control of the newly formed National Workers' Confederation (*Confederación de Trabajadores de Cuba, CTC*).

The unprincipled alliance between the communists and Batista appalled the nationalists and radicals of the movements of 1933, and it would shape the relationship between these political forces throughout the subsequent decades, into and beyond the 1959 revolution. For Batista the purposes of the alliance were clear. In the aftermath of the ferocious repression following the 1935 general strike, and having broken both the trade unions and the left, Batista now moved to reconstruct, from above, a new consensus firmly under his control. The radical nationalists were a spent force after failing in their insurrectionary ambitions, the Cuban ruling classes had exhausted their available representatives and for the moment had no political alternative to offer, and the communists had already placed themselves under his control for entirely opportunistic reasons. Batista could thus move to represent himself as a leader seeking consensus and reconciliation on the model of the New Deal.

The 1940 Constitution was the expression of the new circumstances, and a skillful instrument with which to reinforce and confirm Batista's hegemony. It is a progressive document, providing for a limited working day, pensions and paid holidays, laying the basis for a welfare state, guaranteeing the freedom of association and extending the right to vote to women and all adults over the age of 20. Later movements

would continually refer back to the 1940 Constitution as a democratic point of reference. When Batista attained the presidency in 1940, therefore, it was as a defender of the Constitution and a consensual democrat.

Sugar production and prices rose continuously through the period of World War II, guaranteeing the resources to enable Batista to fulfill his promises to the working-class movement – and ensuring the continuing support of a communist party which was also its beneficiary. But the benefits were not equally distributed and the period also saw a series of strikes, in the sugar industry and on the railways for example, which defied the government and challenged its communist minister of labor. Within the trade unions too there was sustained resistance to communist domination, from the Trotskyist and anarchist left on the one hand, and from the nationalists on the other; they would often find common cause in grassroots trade union committees and local organizations (Tennant 2000).

Batista's expectation that his candidate would, as usual, be elected to the presidency in 1944 was frustrated when Grau San Martín was returned with a sweeping majority, evidence that the spirit of 1933 had not entirely disappeared and that Batista did not hold absolute sway over Cuban political life. The Cuban communists (PSP) were quick to establish new alliances with Grau. Once in power, however, Grau's administration did not differ from the previous regime, continuing both its policies and its corrupt systems of patronage and reward. This prepared the way for his successor, Carlos Prío Socarrás, whose four-year term (1944–8) was characterized by extravagant corruption and the continuation of the often violent repression of the communists in the trade union movement which he had initiated as Grau's minister of labor.

The general disillusionment with Grau and the *Auténticos* was expressed in the popularity of one of the few nationalist political leaders not begrimed by corruption – Eduardo Chibás. His suicide in August 1951 removed the most plausible candidate for the 1952 elections from the scene, leaving Grau as the only available alternative. But in the event, Batista – calculating that he might lose again – took power in a coup which enjoyed fairly wide popular support. After all, he was removing the corrupt and brutal Prío, and he still benefited from an association in the public mind with the progressive Constitution of

1940. Public support, however, was short-lived, as it very quickly became clear that Batista did not represent any real break with the past.

The radical nationalists, the inheritors of Guiteras, moved once again to the center of political opposition. The failed attack on the Moncada barracks in July 1953, led by Fidel Castro, was a sign of things to come. Batista's response to a mounting movement of resistance – embracing armed actions in both the city (including an attempt to assassinate him) and the country, growing working-class activity, and discontent within the armed forces which exploded in the revolt beginning in Cienfuegos in 1957 – was repression. By early 1958 the combination of government corruption, rising prices and repression provoked widespread resentment, culminating in a call for civic resistance issued by the Cuban bishops. From the mountains, and in response to the increasingly radical mood, Fidel Castro issued his "Manifiesto for a total war against tyranny" which included a call for a general strike in early April.

In the event, the strike was a failure. The 26th of July Movement, while it enjoyed support in the cities, had only recently set up its own workers' organization (the FON) and could not claim to have roots within the working-class movement. The Communist Party, by contrast, for all its chequered history, was still strongly based in the trade unions, and still extremely suspicious of Castro movements and all the other radical nationalist groups with which its relationship had been historically so ambivalent and difficult. It was certainly unwilling to allow the 26th of July Movement to take control over the trade unions, and therefore did not support the April strike call. And the movement's members, for their part, were equally hostile to the Communist Party, as Guevara noted with some perplexity.

In a sense this was a general strike based not on mass action from below but on a call from above. While Frank País and the other members of the urban wing of Castro's movement had worked hard, they were essentially subordinate to the demands of the guerillas in the mountains, and it was the mountains that determined the rhythm of events. The failure of the general strike, and the death of País, consolidated that division and that hierarchy. In the few months that remained to Batista, as his support both internal and external began to ebb away, the Communist

Party moved to support Castro's rebel army. The historical suspicions between Castro, the inheritor of the radical nationalism of the 1930s, and the communists remained, however, until their fusion under Castro's control in 1961.

Cuba, struggle for independence from Spain, 1868–1898

Diana Espirito Santo

Ten Years' War of 1868–1878: Context, Revolution, and Aftermath

Cuba's first war of independence from Spain, known as the Ten Years' War, lasted from 1868 to 1878, and is understood by historians largely in the context of the Creole islanders' concerns with slavery and the viability of the island's continuity as an economic and social system. For the sugar and coffee plantation elites, slavery constituted the primary vehicle for the production of wealth, but was also to be the system that provoked its eventual crisis and ultimate downfall.

For the first half of the nineteenth century, the educated Cuban Creole elite pursued fervent opposition to independence, but by the 1860s this sentiment began to shift, as Cuba's own social and economic conditions also dramatically changed. Spain was under pressure by British abolitionist policies from the beginning of the century, but not completely acquiesced in practice, despite

the enactment in 1845 of the Law of Abolition and Repression of the Slave Trade in Madrid. Between 1821 and 1831 it is estimated that 60,000 slaves landed in Cuba, while between 1830 and 1850 the average is thought to have been 10,000 a year. Illicit trade was difficult to control, and the colonial authorities could not risk alienating their Creole support base by pursuing its perpetrators or consumers. But the conditions of the treaty did mean that the acquisition of slaves became a more risky, and most importantly, costly business. Slave mortality was appallingly high, and plantation owners were faced with new slave health and maintenance expenses, in part due to Spain's increasing compliance with British decrees. Plantations in the Oriente, the eastern provinces, were particularly ill-equipped technologically, but lacked the funds to purchase more slaves, and in the 1860s revolution, independence, and slave emancipation were less a threat than for those in the west, who sought to continue the system. It was no coincidence that the war began in the east. In 1860, for instance, the 284 sugar mills of the Oriente yielded a meager 9 percent of Cuba's total sugar produce; by scholarly accounts, two thirds of the sugar mills were obsolete for the era, powered by oxen and 20 percent were in the west of the island.

Several factors must be considered as significant sociopolitical backdrops to the Cuban rebellion. One of these was the failure on the part of Spain to appease the Reformers, whose interest was in some form of controlled abolition, or indeed in delaying the end of slavery until owners could be indemnified when it was no longer economically justifiable. Instead, the colonial authorities manipulated Cuban fears that the US planned to annex the island owing to increased economic and cultural influence. They argued if Spanish authority were challenged, slaves would be freed immediately, likely without indemnification.

This placed the elites in a difficult position. But it was clear to most Creoles during the late 1860s that Spain would not manage to hold out much longer against British abolitionist pressures. Slavery in Cuba was coming to an end swiftly. Moreover, the economic crisis that befell planters in the 1850s served to highlight the redundancy of slave labor, for as sugar and coffee farms declined in staggering numbers, so did the need for the enslaved. That European and Chinese mass immigration to the colony ensured

an alternative labor source just added leverage to an already changing labor system. Rising interest rates and soaring debt in the 1860s meant that many previously prosperous slave owners were no longer the proprietors of their own farms or sugar mills, but the *peninsulares* themselves; many were resentful. The final outcome of the American Civil War simply confirmed the inevitable annihilation of this system, adding to it the realization that annexation was not a possible way out after all, unless it came with abolition itself.

Another factor was the instability of Spanish politics, the climate generated by its colonial wars elsewhere, and subsequent reaffirmation of Madrid's conservative policies towards Cuba at a politically crucial moment. In 1865, hoping to avert revolution, the Reformists lobbied for key measures coinciding fortuitously with the rise of a new liberal government in the peninsula, including Cuban political representation in the Spanish parliament, judicial equality with *peninsulares*, and suppression of the slave trade. A Junta de Informacion was organized to provide representation for Cuban Creoles. But with the fall of the O'Donnell ministry in Spain by 1868 these appeals were ignored. General Lersundi introduced a host of repressive measures wreaking havoc on the Cuban populace, including arrests and the closure of the opposition press. The rebels began to conspire with greater determination, gathering in the Masonic lodges of the eastern provinces of Bayamo, Holguin, and Santiago de Cuba. While no unanimous decision was reached within the conspirator camp regarding the fate of slavery, it was Lersundi's aggressive anti-reactionary tactics that ultimately forced them out of hiding and into action.

October 10, 1868 saw the proclamation of Cuban independence, and with it, the establishment of a provisional government, led by the rebels. The revolution began as an act of defiance by the sugar planter and independence leader Carlos Manuel Cespedes – the “Grito de Yara” – at his plantation, the Demajagua, a debt-ridden *ingenio* in Bayamo whose economic obsolescence was a symbol of the precariousness of Cuban society. Cespedes first freed all his slaves and then proceeded to rally them into his newly founded rebel army. His proclamation called for a free Cuba, the end of Spanish institutions, and most importantly the abolition of slavery, which he

saw as incompatible with true freedom. He was named president of the new republic, and the Dominican General Maximo Gomez was appointed as leader of the rebel military forces. In turn, Spain's General Blas Villate and Brigadier Valierano Weyler were charged with crushing the rebellion.

During the first two years of revolution the rebels expanded their support base across the Oriente, into Camaguey and Las Villas. By the early 1870s, historians note, the movement was 40,000-strong throughout Cuba, including members of all social classes and races. Antonio Maceo, the visionary and charismatic mulatto commander, was seen by many to epitomize this new movement. From elite beginnings, the rebellion was transformed into a nationalist struggle. But the fact was that the rebels were still divided on slavery and bringing it to an end. Cespedes was ambiguous on slavery from the start, recognizing that the rebels seeking independence relied on financial and social support of the wealthy planters in the west, many supporting independence without abolition. Getting to the west, however, was to be problematic for the rebels, as the Spanish authorities dug a large trench through Camaguey to prevent access.

Meanwhile, fierce resistance to the rebellion was mounting through “volunteer brigades,” pro-Spanish loyalists and ex-soldiers, described by the historian Hugh Thomas as “middle-class mobs of young men” who would pose just as much a problem for the rebels as they would for the new, more moderate general brought in to replace Lersundi – Domingo Dulce. The *voluntarios* instilled a reign of terror and social upheaval where, together with the colonial commanders, they employed a strategy of mobilizing and evacuating the rural population so as to prevent their complicity with the rebellion. As the war progressed and little was achieved on either side, however, a greater schism in the rebels' leadership and strategy became obvious. Cespedes was removed from office (and later killed by the Spanish in 1874) and replaced by Tomas Estrada Palma, whose government seemed largely to comprise conservative landowners. Gomez and Maceo's primary war device, consisting of setting fire to plantations and freeing slaves, came to be seen as radical and even threatening to these conservatives, who would now settle for reformation rather than independence at great cost.

In 1877 General Arsenio Martínez Campos arrived in Spain with the intention of ending the costly war through force, negotiation, or both. He brought with him military reinforcements and the promise of administrative and political reforms. Amnesty was granted immediately to all those surrendering, and freedom given to the black men participating in the separatist or loyalist armies. Gómez and Maceo refused to surrender, publicly denouncing these terms, as did the more intransigent separatists, but morale was low. A peace agreement was drawn up at Zanjón in February of 1878, proposing a truce. General Maceo mounted one last campaign, known as the Protest of Baragua, renewing the conflict for a further ten weeks. Confined to the eastern interior, and weakened by desertion and death, armed protesters finally agreed to peace with Spain and went into exile. General Calixto García's uprising in the summer of 1879, known as La Guerra Chiquita, ended in failure.

Second War of Independence and the Seed of US Occupation, 1895–1898

The Ten Years' War left thousands of Cuban and Spanish dead and the country in a state of destitution. The world sugar price crisis of the 1880s aggravated this situation for planters, and coffee production spiraled down dramatically. As the plantation aristocracies vanished, North American economic and infrastructural influence in Cuba increased. The US found a way into the Cuban market through generous trade agreements and industrial investment. The sugar mills of many small planters were assimilated with or dependent on the larger *cafetales*, plantations that benefited from American-led railway expansions. Productivity increased substantially. By 1894 official Cuban exports accounted for three quarters of all South and Central American exports to the United States, and Cuban imports from the US more than half of all Latin American imports from the US. A consequence of this was that Cubans were becoming less reliant on Spain for food or machinery. The McKinley Act of 1890 ended US import duties on Cuban sugar and molasses, although it was to be replaced in 1894 by the Wilson tariff, which imposed stiffer duties. While the United States may have been reticent to intervene in the Ten Years' War over the issue of slavery, it now seemed to be closing

in on the Cuban opportunity. When in 1895 the economy showed to be declining further, in part due to severe Spanish tariffs, many Cubans again saw annexation as a viable course of action.

The Guerra Grande of 1895 must be seen in an entirely different light to that of 1868. Cuba's national character was steadily transforming, not least due to decades of powerful European and Asian immigration, as well as a new generation of Spanish settlers, ex-soldiers and civilians alike, who sought to redefine their identity on the island. A working-class movement was born. The racial composition of Cuban society was also modified. General Martínez Campos, now prime minister of Spain, provided a legal framework in 1880 for the gradual abolition of slavery, but decreed that a system of eight years of *patronato*, apprenticeship, was to be implemented as a necessary transition to full emancipation. Those in patronage were quick to demand freedom, however, and they got it, in 1886, two years ahead of Martínez Campos' schedule. By this time fewer than 30,000 slaves were compulsory laborers, and most others integrated into the Cuban labor market, even if they continued under harsh economic and social oppression.

On the eve of the revolution, Spain once more failed to appease Cuban moderates. The Liberal Autonomist Party, created in 1878, was increasingly frustrated by the empire's failure to deliver on its promises, particularly those relating to political representation, which they felt swindled on. The historian Fernando Portuondo argues that while Cuban representation was conceded at Court, the voting system in Cuba was inherently rigged in order to favor peninsular interests, and this did not go unnoticed. From New York City, Cuban exiles began skillfully to plan another insurrection. They found a leader and strategist in the young poet and revolutionary José Martí. Martí sought refuge in the US following the first war, and, like many others, saw the Pact of Zanjón as a temporary truce: the war, for him, began in 1868. In 1892 he created the institutional means to prepare for this new stage in the fight for independence – the Revolutionary Cuban Party – an institution used as a liaison with rebels, intellectuals, and supporters to ensure its popular success. Moreno Fraguinals argues that one of Spain's political weaknesses at this time was to underestimate the military potential of the black-Creole sectors of Cuban society. Moreover, it would turn out to be another costly mistake to

have relied on the stability of the PLA's intelligentsia and the numeric superiority of Spanish white man over the Cuban white man. In the end the campaigns of those in exile, led by Martí, would succeed in attracting just this much-needed black-Creole population, and through this, succeed in converting the revolution into a nationalist struggle.

In 1892 Martí sought out Maximo Gomez as military leader. By February 1895, with the Cuban economy in disarray and spreading political discontent, the war finally broke out for a *Cuba Libre*. Martí, Gomez, and Maceo and his brother Jose, among other important rebels, landed in Cuba shortly afterwards, leaving Tomas Estrada Palma to gather public support and funding in the United States. In March, Martí and Gomez issued a manifesto pledging a "civilized" war, which they would see through into the creation of a free and just nation. The Spanish quickly retaliated to the immediate uprisings and within a short time arrested several rebel commanders in the west. In May, Martí was killed in Bayamo by the Spanish, in what constituted a serious blow to revolutionary morale. At the end of 1896 it was Antonio Maceo's fateful turn. Nonetheless, the movement retained strong support from virtually all sectors of Cuban society: unemployed skilled workers, poor farmers, foreign workers, free slaves, destitute peasants, and indigent black and white Cubans. Thousands of Cubans throughout Cuba and those living abroad joined the rebellion supported by hosts, caregivers, messengers, and intelligence gatherers.

Reports of Spanish atrocities soon filed into the American media. General Weyler's cruel method of relocating and interning much of the peasant population so as to isolate the rebels effectively led to the creation of disease-infested concentration camps, where many thousands perished. Weyler destroyed anyone and anything that could help the insurrectionists. In turn, Gomez and Maceo waged an aggressive war against the economic infrastructure of the country; more specifically, against the large plantation owners who refused to cooperate with the liberation cause. The war became a class battle aimed at the local puppets of colonialism. The economy came to a standstill as the rebels torched the bourgeoisie's sugar mills and plantations and the Spanish razed the peasants' villages and plundered their food supplies. But the rebels avoided direct confrontation and succeeded.

Before its end, the war devastated the island, leading to scarcity of food and basic goods, spiraling inflation, increased repression, and a large segment of the upper classes left the island in the wake of the collapse of sugar production. The Spanish forces were unable to confine the rebel armies to the east, and could not expel them from the west. In a protracted impasse in the war, the insurrection was costing the Spanish more than men and money as the political credibility of the peninsular government was declining among propertied Creoles, now petitioning the United States for help. Fearing US intervention, by 1897 Spain sought to negotiate with the rebel leaders, proposing limited autonomy and self-government with the empire, an offer rejected by the Cubans, who also declined to pay \$200 million for their independence. The US government pressed Spain for a settlement, but an end did not occur until February 1898 when the battleship USS *Maine* inexplicably exploded in Havana harbor, killing 260 men. The American public blamed the Spanish, who in turn accused the Americans of opportunistic self-sabotage. Nonetheless, President William McKinley requested permission from Congress to intervene militarily under the condition that the US forfeit any intention of exercising sovereignty in Cuba, formalized in the Teller Amendment.

The US government did not recognize the accomplishments of the Cubans rebels themselves, and considered them unfit to self-govern. While the Cuban delegation persuaded the US to intervene in the war, and some rebel leaders collaborated with this effort through surrendering arms, in 1898 those fighting on the ground in Cuba were excluded from the peace talks with Spain at the Paris Treaty. This exclusion was deliberate and symbolic, as they were deprived of their successes and subsequently left without a political voice. The Cuban-Spanish war was then historically reconstituted as the Spanish-American war, setting the stage for the US occupation of Cuba in 1899.

Cuba, transition to socialism and government

Peter Roman

The Cuban Revolution triumphed in January 1959. From that point in time until the Organs of People's Power (Organos del Poder Popular, OPP) were established with the passage of the 1976 Constitution, Cuba experimented with a series of provisional governments. The Cuban Constitution was not a radical break in the political course of the Cuban Revolution, but a formalization, revitalization, and strengthening of past practices, with a new emphasis on decentralization and defining the roles of the Cuban Communist Party (Partido Comunista de Cuba, PCC) and the government.

Fidel Castro Ruz (b. 1926) and his adherents encountered an institutional vacuum when they defeated the Batista regime in 1959. Nothing in the political and governmental spheres remained undenigrated. The need for quick action to make profound changes, in the face of internal and external threats, made representative government untenable for the leaders of the revolution.

Laws were enacted by decree. A type of direct democracy developed where citizen political participation was defined as mobilization in support of carrying out government policies.

The first attempt at local government, the Coordination, Operation, and Inspection Boards (Juntas de Coordinación, Ejecución e Inspección, JUCEI), was comprised of representatives of political and mass organizations, and lasted from 1961 to 1965. These boards proved to be ineffective as they lacked structure, and were replaced by Local Power (Poder Local), whose objective was to systematize and increase citizen input and participation in local affairs. Delegates, who were unpaid volunteers, were nominated and elected by voters from neighborhoods and work centers, by a show of hands, without interference from the PCC. Every municipality had ten delegates, and the president was elected by the local nucleus of the PCC. Anticipating the Local Organs of People's Power (Organos Locales del Poder Popular, OLPP), delegates met every six months with constituents to report their activities and hear citizen suggestions and complaints (*planteamientos*). Local Power's National Coordinating Board lacked legislative power, which remained with the cabinet.

Local Power lasted in name until the passage of the 1976 Constitution, but in fact had ceased to function effectively by 1970, as the country became totally absorbed with the effort to achieve a 10-million ton sugar harvest. Elections and meetings with constituents were abandoned.

With the failure to achieve the 10 million-ton goal, along with the economic and political disruptions and distortions that resulted, the Cuban leadership went through a period of self-examination. Excessive bureaucratic centralization, lack of adequate channels for citizen input, lack of effective local control and administration, high absenteeism, and the excessive involvement of the PCC in government affairs were among the problems identified.

The unions and mass organizations had been weakened, including the Federation of Cuban Workers (Central de Trabajadores de Cuba, CTC), the Federation of Cuban Women (Federación de Mujeres Cubanas, FMC), the Committees for the Defense of the Revolution (Comités de la Defensa de la Revolución, CDR), and the National Association of Small Farmers (Asociación Nacional de Agricultores Pequeños, ANAP). All were revitalized and strengthened

as part of the transition process from 1970 to 1976 leading to the OPP.

In 1974 a pilot project for the OPP was initiated in the municipality of Cárdenas in Matanzas province, and subsequently applied to the whole province of Matanzas. The basic characteristics of what was to become the OLPP were present regarding elections, the role of the PCC, and the *mandat impératif* (instructed delegate model). In February 1975 a constitutional commission submitted a draft constitution which included the OPP. It was discussed throughout the country in unions, mass organizations, work places, high schools, and university student groups, resulting in changes.

The First Party Congress approved the new constitution in December 1975, and 95 percent of the Cuban voters approved it in a referendum held in February 1976. On October 10, 1976 elections for municipal assembly delegates were held. The municipal assemblies then met and elected provincial assembly delegates and National Assembly deputies. The National Assembly was constituted on December 2, 1976.

Cuban post-revolutionary protests

Mike Gonzalez

The Cuban Revolution of 1959 removed a corrupt and increasingly violent dictatorship and set out a program for social transformation and economic development that would favor the working poor of Cuba. While this won the support of that majority, there were clearly those for whom this change was unacceptable. The Batista regime of 1952–8 was notorious for its corruption, disregard for democratic institu-

tions, and close relationship (at least until its final months) with the United States. Initial resistance to the Cuban Revolution came therefore from those who had benefited under Batista. There were those immediately responsible for maintaining the previous regime – the secret police, the torturers, the representatives of US-based organized crime who controlled much of the tourist industry. And there was a broader layer, particularly among the professional classes, who feared the loss of their privileged social position – lawyers, doctors, those in the financial sector, and so on. Privilege in Cuba was also associated with racial stratification and the domination of white Cubans over those with darker skin. Beyond Cuba, initial reactions to the Cuban Revolution were mixed; ironically, the CIA was among those US institutions advocating a rapprochement with Fidel Castro in the early months (Szulc 1986: 336; Farber 2006: 76). But by the time Castro arrived in the US in April 1959, it was clear that the Eisenhower administration, and its successors, would adopt a relentlessly aggressive stand towards the revolution.

The first months of the Cuban Revolution created some confusion as to the intentions of the new regime. The first president of post-Batista Cuba, Manuel Urrutia, was a respected high court judge, and many members of the government he presided over belonged to the old bourgeoisie; Castro limited his own role to that of head of the army. The agrarian reform of May 1959, while it did initiate land redistribution, was relatively mild and did not affect US interests in a major way. The nationalization of electricity and telephone services, however, directly attacked their American owners.

It was quickly clear, in any event, that for reasons as much ideological as economic, the most intransigent conservatives would dominate US policy towards Cuba. This expressed itself in an economic boycott imposed officially in early 1960 but effective from mid-1959. This was reinforced when the Cuban government responded to the boycott by signing a trade agreement with the Soviet Union which would now purchase Cuban sugar in exchange for Eastern European consumer goods.

The attack on Cuba moved into the political arena, as preparations for direct military aggression began with the complicity of the Kennedy administration. There was a large Cuban community in Miami (as well as others in New York

and elsewhere), some but by no means all of whom were certainly hostile to the Cuban Revolution – after all, historically much of the financial support for José Martí's revolutionary project had come from Cuban workers in Miami and Castro had been well received on a speaking tour there in 1956. Undoubtedly the connections with organized crime that fueled and financed much of Cuba's tourist industry came through Miami – and it is well established that the Cuban lobby had considerable influence over a number of right-wing US politicians. It was logical, therefore, that those fleeing the revolution should have gone to Miami and swollen the ranks of the right, and that the forces opposed to the revolution should set up their camp 90 miles away from the Cuban coast. They were, for the most part, people who had been complicit in the previous regime's repression – and some of their fellows had been executed in the early months of 1959.

In 1960 the Cuban population of Miami dramatically expanded with the arrival of half a million Cubans, mainly from the professional and business classes. By the second year of the revolution the pace of change was quickening, with further expropriations and nationalizations, and new literacy and health programs. At the same time, the role of the communists – and thus the political character of the revolution – was becoming more clearly defined. Castro had also invited opponents of the revolution to leave. Many of the exiles then added their weight to the Miami opposition.

The April 1961 Bay of Pigs invasion, organized and financed by the US government, made it abundantly clear that reconciliation with the US was impossible and that the relationship with the Soviets would henceforth be determinant. The consequences of that strategic shift would become clear with the October Missile Crisis of 1962, when Cuba became a very junior partner in a major Cold War confrontation. Within Cuba itself, by contrast, the sudden severance of the historic relationship with the US caused severe problems. By late 1961 rationing was imposed to address serious shortages, particularly of food. Ernesto Ché Guevara, the Argentine revolutionist, in particular argued forcefully that diversification of the economy and the development of alternatives to sugar, on which the economy depended, would be crucial in guaranteeing Cuban independence.

The Soviet advisors, who were increasingly influential, through the Communist Party, took a different view, emphasizing efficiency and profitability as the criteria for making economic judgments. This also had ideological consequences; Guevara argued for a “new man” for whom moral rather than material incentives would be significant. The alternative of efficient profitable enterprises also implied tight labor discipline.

Each of these separate developments produced resistances. In 1960–1 the Castro regime took an increasingly hard line on cultural questions, as exemplified in the closure of the Monday cultural supplement of the newspaper *Revolución* after the presentation of a half-hour documentary about Havana called *PM*. Castro's declaration that within the revolution everything would be tolerated, but outside it nothing, sounded at first like a promise of creative freedom, but proved to be something quite different as the decade unfolded. The 1971 Cultural Congress set out precise requirements for what would be acceptable in art, rather than simply recommending support for the revolution, recalling the imposition of a “socialist realist” orthodoxy in the Soviet Union some ten years after the revolution. The public disparagement of poet Heberto Padilla and playwright Anton Arrufat a year earlier confirmed that state policy was hardening towards the arts.

Writers and artists were at times critical of what they considered an authoritarian character of the new state, but criticism was often veiled or oblique. Early collaborators, like Carlos Franqui (previously editor of *Revolución*), became fierce critics of the state. Other writers, who had been prominent in the pre-revolutionary period, maintained a judicious silence, while a new artistic establishment based in the Casa de las Américas developed and established cultural policies then represented at the 1971 Congress. The most shocking critique of those policies and the limitations on artistic freedom which some considered they represented came from the writer Guillermo Cabrera Infante, who became Fidel Castro's most forthright critic, and Reynaldo Arenas, a gay writer whose autobiography, *Before Night Falls*, exposed growing opposition among artists and an emergent gay protest movement against the Cuban state.

Caught between the ever deepening hostility of the United States and the control of Cuban

society by a small ruling group around Fidel, public demonstrations of discontent were rare and were rapidly contained when they did occur. Very few Cubans in the early twenty-first century will have wished for the return of Cuba as it was before the revolution – most of those who had benefited from the old order had left – but the US siege now meant that some critical expressions were defined as counterrevolutionary. Thus protest is limited, largely individual, and clandestine. The jailing of old guard communists like Anibal Escalante or pre-revolutionary members of the July 26th movement like Huber Matos were largely internal conflicts within the controlling group. Yet by the end of the 1960s there were widespread reports of sabotage in workplaces, slow working, and absenteeism which can be taken as a sign of growing discontent. New draconian laws on absenteeism and the creation of a category of advanced workers who were the beneficiaries of certain privileges in pay and conditions pointed to tensions within the working class and a negative reaction to the increasing emphasis on labor discipline, particularly the individual work record that each worker had to carry.

Social provisions in Cuba – education and health for example – maintained a high standard, but beyond the basic necessities consumer goods and other services were hard to obtain. Yet it was clear that a certain privileged layer in Cuban society did have easier access to them – another source of discontent.

The Cuban involvement in Africa has been and remains a matter of debate; there seems to be agreement that the Cuban presence in the Horn of Africa arose from Soviet bloc priorities, but that the Cuban role in Angola in holding off South African attacks was an act of solidarity. What is certainly true is that Cuba paid a heavy price for its involvement through the 1970s and 1980s, with 2,300 dead, but, equally significantly, a high number of war wounded, many of whom returned traumatized and alienated. Their anger may also have been fueled by the corruption that came with foreign involvement (Eckstein 1994: 202), that was destructive to the socialist experiment, and crushed by the government, most dramatically illustrated by the summary execution of Cuban war hero General Ochoa in 1989 for his involvement in illegal trading on a massive scale. The speed with which judgment was passed and executed suggested that the government wanted

to prevent any growth in corruption and black market trading among Cubans with foreign connections. Later desertions by significant figures who proved to have bank accounts outside Cuba demonstrated the government's determination to crack down on corruption.

As in the US and Western Europe, a gay rights movement materialized in the 1960s to demand an end to discrimination and expand democratic expression. Early in the 1960s gay people, together with anti-revolutionary dissenters, were sent to UMAPs, military reeducation centers which were prisons by any other name. But homophobia was a societal issue, as dramatically illustrated with the onset of the HIV-AIDS crisis, when in the early 1980s medical research had not yet understood its course and communicative transmission. The Cuban response was considered draconian by many in the gay rights movement and beyond. People with AIDS, among whom many were not gay, were placed in medical quarantine centers. Beyond individual expressions of resentment, the high rate of suicides to which Arenas points, it is difficult to identify specific protests, aside from US gay rights opposition, perhaps due to lack of publicity.

The Mariel boatlift of 1981 illustrated a level of economic difficulty and social restlessness in Cuban society and the use of the method of exile to channel discontent. As is the case with other Caribbean states, a regular traffic of small boats and improvised craft is common across the extremely dangerous Straits of Florida by many in the region anxious to leave for the more prosperous US. Some are fleeing persecution; many are drawn by economic and financial assistance such as welfare, education, and employment, and the attraction of a hope of a life in wealth, rarely fulfilled even in the US, but understandable among Cubans, given the level of political and commercial propaganda reaching the island through the US government and Cuban-American opponents of the government. Some may indeed belong to the criminal classes that Castro suggests are the bulk of those who leave. Lynn Geldof's (1991) interviews with Cubans suggest that many of those leaving are a representative sample of Cuban society and not the *escoria* (the scum of the earth) that official demonstrations regularly denounce.

That 80,000 people chose the difficult and often dangerous route to Florida, and the social opprobrium and denunciation which were the

lot of anyone who applied to leave, suggests that their unhappiness was profound. The US government policy providing special treatment for Cuban refugees certainly encourages migration north. While Haitian and other Caribbean refugees fleeing oppression have been imprisoned and summarily returned, Cubans leaving for any reason are welcomed by the US government.

One of the main sources of protest has become extremely clear since the end of the Soviet Union and the consequent period of austerity in Cuba (known as the “special period in time of peace”). The internal differentiation that already existed in Cuba, and which itself provoked protests and complaint, was exacerbated to an enormous degree by the growth of tourism in the 1990s. There were always special shops where Cubans with access to dollars could buy goods unavailable to the general populace. The isolation caused by the US economic blockade forced Cuba to expand all sources of foreign exchange to address public needs. Tourism offered the opportunity for Cubans unable to travel to the capitalist West, and much of the former Soviet world, to service the tourist sector in exchange for dollars which they could then spend at the dollar shops; social tensions have been intensified through creating a new layer of people with money and goods, as manifested in the Cuban convertible currency, which could be exchanged with international currencies. For the majority of Cubans, life was austere; health and education were good and universally available and basic needs were met. But beyond that there was little for Cubans earning their wages in non-convertible pesos to look forward to.

This exploded in 1993 when public protests in Havana were harshly put down by the Rapid Response Brigades of the state. These have frequently been in action to disperse demonstrations. In more recent years a number of western human rights groups and campaigners operating within Cuba have been suppressed. There are probably some 300–400 political prisoners in Cuba, some of them religious, others campaigners for human rights and freedom of expression. The Cuban government claims the number of political prisoners to be in the low 200 range, mainly those alleged to have received support from the CIA. Ironically, in National Assembly, popular religious leaders have been elected and are not members of the Cuban Communist Party.

There are many more political prisoners in other Latin American states of course, but Cuba is the only one that describes itself as socialist, which should suggest a different attitude to dissent and public debate. There is a difference, of course, between those enemies of the Cuban Revolution who have unceasingly looked for ways to destroy the process; they will rightly receive the full weight of judicial sanction. But the government also is challenged by more justifiable opposition to the regime on political grounds, or on the basis of a call for artistic freedom or liberty of expression, though at times manipulated by the US. The government responds to any challenge to the small group who have held power since the revolution without western-oriented democratic elections that it is a concession to imperialism and the counterrevolution, a concern to many foreign critics. Paradoxically, the National Art Museum in Havana reflects a wide range of art, including religious art, art depicting homosexuality, and art by expatriots that was considered counter-revolutionary in an earlier period.

That the proximity to the United States and its consumer society creates, especially among younger generations, a sense of privation and alienation is certainly one element in their discontent. It has expressed itself, for example, in an enthusiasm for the heavy metal and rap music of which the cultural arbiters of the regime deeply disapprove, although this too is changing.

Were there to exist a genuine transparency in political life and an opportunity for all Cubans, this might offer a different means of resolving the deeper disquiets, though the US blockade and threat of invasion has always created the basis for rallying around nationalist interests first. Fidel Castro has relinquished power to his brother Raúl and there is strong evidence to suggest that Cuba will open itself to the market to make consumer goods available to its citizens. Cuba does engage in joint ventures with private corporations in Europe, Asia, and Latin America, especially in the hotel, tourist, energy, and other sectors. The challenge for the Cuban government is advancing democracy and the provision of affordable goods on the island at a time when they are unaffordable to many. It is a tacit acknowledgment that in the post-Soviet era, maintaining equality is a challenge for a Cuban society that remains socialist and has faced a five-decade blockade. In

the post-Soviet era, the Cubans have contended with growing inequality, potentially producing increased and perhaps more radical expressions of protest.

Cuban Revolution, 1953–1959

Mike Gonzalez

In one sense, the Cuban Revolution is an event – the moment (on January 1, 1959) at which Fulgencio Batista, Cuba’s dictatorial ruler, fled the country and a column of bearded young guerilla fighters took power in the capital, Havana. Yet a revolution is more than a seizure of power. It is that process, through time, in the course of which power is transferred from one social class to another. And that process is a continuum whose history begins with the stirring of new social forces and the earliest and perhaps unsuccessful challenges to the structures of the existing society.

First Steps to Revolution

The origins of the Cuban Revolution lie in the colonial past. While most of Latin America registered its struggle for political independence from imperial Spain (and Portugal) in the period 1810–25, Cuba remained a Spanish colony until 1898, the last on the American continent. The second independence war (1895–8) broke the chains; the “hour of the furnaces” announced by its main political leader, José Martí, finally came. Yet victory was snatched from Cuba’s

independence fighters by a northern neighbor in full process of expansion, and anxious to establish a bridgehead across the Caribbean to mount a vigil on the southern continent. The United States was also interested in a Cuban sugar industry in which it had invested quite heavily in the wake of the American Civil War.

For succeeding generations of Cuban revolutionary nationalists, Martí was the reference point, both as a thinker and a political leader. Yet his early death at the very beginning of the Second War of Independence was somehow significant. The process of Cuban independence would be effectively blocked with US intervention and the Platt Amendment, which in real terms exchanged one colonial master for another.

Thus the movement for Cuban national emancipation became necessarily a struggle against US influence and control.

The great movement of 1933 should be seen as the next chapter in the development of the Cuban revolution, signaling as it did a new phase in the struggle for independence. More importantly, the movement defined itself in terms of working-class organization and a socialist tradition, creating soviet-style brief duration in recognition of the Russian Revolution of 1917. If the outcome of 1933 was the establishment of a briefly more progressive government, it also brought onto the stage of Cuban history Fulgencio Batista, whose political trajectory would define the reintegration of Cuba into the economic and political ambit of the United States. The hour of the furnaces, it seemed, was yet to come.

The components of the Cuban Revolution, its chief actors and impulses, had their roots in these two defining moments. The betrayals of the Auténticos, the party of Grau San Martín, produced a new nationalist current – the Ortodoxos – making constant reference to the tradition of Martí. The Directorio Revolucionario, for its part, saw its origins in the movement of 1933 and the influence of Antonio Guiteras, its leader killed during that year. Their political philosophy emphasized direct and violent action against a repressive state. It was they who launched the abortive invasion of the Dominican Republic in 1947, with which Fidel Castro became involved. And it was they who in 1957 made the failed attempt on the life of Batista, during which their leader, José Antonio Echeverría, was killed.

The revolutionaries of 1933 were predominantly nationalists, whose more radical student

wing found expression in the Directorio. But the resistance to the Machado dictatorship of that year embraced a general strike as well as militant occupations by trade unionists, many of whom were influenced by the recently formed (1925) Communist Party. Yet the international line of the Communist International, then entering its sectarian “third period,” influenced the Cuban communists in their turn and generated a suspicion and distance between the two wings of the movement which would have a major influence on subsequent political developments and on the political character of the Cuban Revolution.

By 1935 Batista and his “sergeant’s movement” had come to control national political life and the Communist Party, in the spirit of Moscow’s shifting line, now moved into a phase of collaboration with him. For the radicals of 1933 this and the subsequent deals between the communists and Batista were a clear betrayal of the spirit of the resistance. The generation of Fidel Castro therefore grew up with a suspicion of the communist tradition and imbued with a politics of revolutionary nationalism. Post-Machado Cuba was permeated by corruption and the high ideals of 1933 all too easily became the legitimizing discourse of political gangsterism, particularly in the universities. The revolutionary idealism of Martí remained a reference point, however, for a new generation of radical nationalists that included Fidel Castro, who began to see new hope in the organization set up by Eddy Chibás, the Ortodoxos, with the explicit purpose of rescuing the nationalist tradition.

The Parliamentary Road Abandoned

Chibás’s suicide (if that is what it was) and Batista’s assumption of power by coup d’état in 1952 in advance of a general election determined once and for all the direction the revolution would take. The militant nationalism of the Directorio would command the process, though it would be Castro’s own movement that would assume leadership of it. Though the two groups were, and remained, rivals for that leadership, they shared their political roots in the struggles of 1933. The significance of that point of origin is in who was seen as the subject of revolution. The discredited Communist Party had little political influence on the revolutionaries. “This populist tradition approached the social question

from the perspective of a nationalism that, in the spirit of Martí, aspired to have broad popular appeal among those lacking advantages and privileges rather than to develop a class-based point of departure” (Farber 2006: 39).

Elements of the Ortodoxo youth and others then began to organize for armed action against Batista’s dictatorship. Castro himself claims that he was the only professional revolutionary present, and although he subsequently claimed to have considered the possibility of Communist Party membership, others who were involved deny that socialism was a topic of discussion at the time (Szulc 1986: 227).

The group began to prepare for an assault on the Moncada barracks in Santiago. On July 24, 1953, 162 people assembled at a rented farm at Siboney. In the early morning of July 26 the majority moved toward Moncada with a small group of just over 20 mounting a diversionary attack at Bayamo to the west (Skierka 2004: 34–5). There were over 700 troops present that Sunday morning, but the prize was the arsenal. Castro clearly anticipated that the army would be unprepared, given that it was carnival; in fact, they were met with relentless gunfire, and the defeat was compounded by the disarray of the revolutionaries themselves, many of whom were unable even to enter the barracks: 19 soldiers died, just under half that number of guerillas. But most of the rebels were captured, Castro himself escaping to the hills where he was caught and arrested a few days later.

Batista’s response to the raid was characteristically brutal; he ordered the torture and execution of just over 60 of the guerillas. In September that year Fidel Castro, with 28 others, was put on trial. His speech at the trial became a manifesto for the Cuban Revolution. “History will absolve me,” the final ringing phrase of his two-hour defense, set out a program for an independent Cuba. It attacked corruption and argued for the reinstatement of the liberal Constitution of 1940; it promised title to small farmers and nationalization of the large foreign-owned estates together with benefits to workers in externally controlled industry. In addition it proposed the nationalization of public utilities, a reduction in rents, and improvements in education.

It would be the first of several manifestos setting out the policy directions of a new government. What was clear in each, however, was the emphasis on Cuban independence and honest

government, and while there was no explicit anti-imperialist content, the emphasis on creating relationships with democratic forces in the Americas was easily understood as a reference to the role and influence of the United States (Gott 2004: 150). Castro was sentenced to 15 years on the Isle of Pines.

It was clear that the rebels spoke to a general dissatisfaction with Batista that would grow rapidly in the years that followed. The appalling treatment of the prisoners in the aftermath of Moncada generated popular revulsion. More importantly, perhaps, Batista's arrival in power coincided with the beginning of a slowdown in the Cuban economy. The postwar years had been a boom time for sugar, still Cuba's main product, with the international market price reaching its peak in 1952. Thereafter prices began to fall with immediate impact; unemployment rose in a sector already characterized by a seasonal labor market and per capita income fell. For the unionized working class, Batista's coup did not bring a direct attack on the union rights enshrined in the Cuban Constitution. Instead, Batista corrupted labor leaders and undermined labor rights in smaller, more subtle ways; between 1952 and 1955, real wages declined and labor's share of national income fell from 70.5 percent to 66.4 percent (Farber 2006: 30). At the same time, Batista implemented measures to encourage foreign investment as well as a series of programs of public works which did little to reactivate the economy but provided ample opportunities for corruption. What growth there was occurred in those industries (mining, tourism, public utilities) that attracted foreign capital – but unemployment remained high (at over 16 percent), repression fierce, and corruption the oil that kept government's wheels turning.

Ironically, Batista held presidential elections in 1954, which as the sole candidate he naturally won. He then declared an amnesty of which the two Castro brothers were beneficiaries. Both Fidel and Raúl went to Mexico, both the nearest point to Cuba and a traditional center for exiled Cuban politicians, along with Miami where most of Batista's more conservative opponents were to be found.

The *Granma* Years

The Amnesty Law of July 1955 was a victory for the protest movement despite Batista's intention

that it be seen as an act of personal generosity. In March the offer of an amnesty conditional upon an undertaking not to launch an armed insurrection was angrily rejected by Fidel in an article published in a mass circulation daily. Demonstrations and protests followed and the prisoners were released without conditions. Six weeks later, Fidel left for Mexico promising to return to continue the struggle. He left behind an organization that would be named within weeks as the 26th of July Movement, in commemoration of the Moncada attack.

Fidel's intentions were clear – to prepare a new armed insurrection, in the belief that the actions of the revolutionaries would spark mass resistance. It was an excessively optimistic assessment, though the discontents in Batista's Cuba were increasing by the day. In fact, the movement against the dictatorship was developing on a number of fronts within the island; the Directorio Revolucionario was active in the cities as well as among students, and there was significant trade union activity particularly among the sugar workers. Supporters of the 26th of July Movement and the Directorio as well as other militants and socialists were actively engaged in the workers' movement and within the armed forces, as the failed military risings of 1957 and the general strikes of 1957 and 1958 would show. The Communist Party, on the other hand, while dominant within the trade unions, was extremely suspicious of the radical nationalists.

Thus the political divisions and tensions that arose out of the experience of 1933 continued to be reflected in the different political currents that shaped political events in Cuba in the mid-1950s. The history of those struggles has to some extent been rewritten since the 1959 revolution, and their contribution underestimated (Sweig 2002).

In Mexico meanwhile, Fidel Castro was actively organizing his armed incursion into Cuba, and preparing his small guerilla force; at the same time he was, as always, tirelessly building political alliances, sometimes in order to accumulate forces, sometimes in order to neutralize potential rivals. But it was his meeting with a young Ernesto Guevara which may in the end prove to have been the most significant event in his Mexican period. The two men were drawn to each other immediately, sharing a political vision and a conception of revolution as guerilla warfare; together they trained with the Spanish Civil

War veteran Alberto Bayo at a newly acquired farm at Chalco in Mexico. The date for the return was set for December 1956; the motor vessel *Granma*, bought with money collected by the supporters of the previous president, Prío Socarrás, was to carry 82 guerrillas to Cuba.

The decision to sail in late November 1956 was not universally supported. A delegate from the Cuban Communist Party was sent to Mexico to argue for delay. And the 26th of July Movement's most talented internal leader, Frank País, spent several days in often heated argument with Fidel over the date of return. Fidel was adamant, however; in a speech in New York in October 1955, he had made his famous announcement that "in 1956 we will be free or we will be martyrs" (Szulc 1986: 263), and that had now become the test of his credibility. That was his reply to Frank País's doubts about the readiness of the urban and rural movements, and it was the explanation he gave to the communist representative who argued that the general conditions were not right. Castro was also aware of the Directorio's disposition to launch provocative armed actions, and the threat that that might pose to his leadership of the revolution.

There was no doubt about the rising level of opposition to Batista, nor of the impact of his economic policies on the working class, the poor, and indeed the middle classes. What was in question in these discussions was the level of organizational preparedness of the revolutionary forces, and above all their capacity to coordinate actions. For País that was still in doubt; for Castro, however, delay would have called his leadership into question; he was rarely swayed by arguments about objective conditions, and in any event his assessment was clearly that the potential for a general rising against Batista was considerable. Thus he sent the message to the Movement's organizers in Cuba to prepare for the landing of the *Granma* on November 30.

The journey was terrible; rough seas and the inexperience of those aboard the overcrowded motor yacht meant that they arrived at the appointed spot nearly three days late, on December 3. Celia Sánchez, who had been designated to receive them, left the agreed spot before their arrival. The guerrilla progress had been followed, however, and they were met by Batista's troops. In the firefight that followed only 19 survived from the original 82 who had boarded the *Granma*. The Castro brothers and

Che Guevara were among those who escaped, although they were separated for the next few days. It was an inauspicious beginning to the guerilla war.

For several days Castro and two companions lay prone in a sugar cane field with "two men and two rifles" while Batista's troops pursued them relentlessly. Three days after the landing Che Guevara was wounded in a very one-sided encounter at Alegría del Pío. But eventually both groups reached the dense vegetation of the Sierra Maestra where they established their first camp and made contact again with the Movement members in the city. December and January were months of constant movement through the mountains in anticipation of the addition of new recruits. While the area had a long history of confrontations between local poor peasants and the stewards acting on behalf of wealthy absentee landlords, this had been expressed rather in local banditry than in political organization. Some of these "primitive rebels" were prepared to join the rebel army, but they would just as easily abandon their posts or sell information to the other side. It was an issue that concerned Che Guevara, whose response was to insist on a fierce and unforgiving discipline. Che himself "was now at *war*, trying to create a revolution, the result of a conscious leap of faith" (Anderson 1997: 233). Fidel too, even in the face of his tenuous and uncertain relationship with the local *guajiro* peasants and the low level of the guerrillas' military preparedness, was characteristically assertive and optimistic about the prospects for revolution.

His optimism was not necessarily shared by the members of the National Directorate of the 26th of July Movement who gathered at Castro's mountain camp late in February 1937. The group included Frank País, Armando Hart, Celia Sánchez, and Haydée Santamaría; they were "mostly upper-middle-class urbanites" (Anderson 1997: 234), who since the *Granma* landing had been actively involved in sabotage and protest operations in Santiago and Havana in particular, since they were operating underground. But the 26th of July Movement was not the only group working actively against Batista. The Directorio, for example, which had also expressed its disagreement with Castro's plans during the previous year, and which would itself later establish small armed encampments elsewhere in Cuba (in the Sierra de Escambray

and Cristal, for example), was allied to Castro's group but was also competing with it. In March 150 members of the Directorio launched a daring but ultimately catastrophic assassination attempt against Batista in the presidential palace. The attack was a failure and many of the attackers died. The charismatic and influential leader of the group, José Antonio Echeverría, was also killed in a separate attack.

The first official battle of the revolutionary war, at La Plata in mid-January 1957, was brief and successful; sufficient weapons were captured for all the fighters and two soldiers were killed and five wounded. Two weeks later, a surprise attack by Batista's newly acquired bombers almost eliminated the guerillas and for several days the rebels fled from Batista's troops in the worst of conditions. When they arrived at Epifanio Díaz's farm on February 16 for the meeting with the Directorate, they were hungry and exhausted; there were 18 in the party.

Batista had already declared Castro and most of his guerilla force dead, killed by his troops. Things at this point were not going well. The tide turned, however, with the arrival of *New York Times* correspondent Herbert Matthews. Fidel deftly worked to give the impression that his force was larger than its 18 actual fighters and that its level of military preparedness was also markedly higher than it actually was. Castro was acutely aware, now as always, of the value of publicity; in this case its impact was incalculable. Matthews, an experienced and able journalist, was convinced by what he saw and his enthusiastic report. "Fidel Castro, the rebel leader of Cuba's youth, is alive and fighting hard and successfully in the rugged almost impenetrable vastness of the Sierra Maestra," he wrote (Szulc 1986: 324). The publication of his report also coincided with the lifting of censorship, so that it was reproduced in a number of national newspapers, as well as the 26th of July Movement's own newspaper, *Revolución*. Castro was manifestly alive and his profile high. Within the radical nationalist ambit, this clearly posed a challenge to the Directorio and others; the March attack can only be understood against that background, although it is likely that other factions, in particular those exiled Cuban politicians resident in the US, actively encouraged the Directorio.

After the attack on Batista Castro launched a withering attack on what he called "terrorist methods," calling instead on all those wanted

to fight Batista to join the rebel army in the Sierra Maestra. The Communist Party (PSP), for its part, was equally dismissive of the Directorio and of Castro, arguing that this was not the moment for the "popular insurrection" that Castro had called for in his Sierra Maestra Declaration of February but rather a time to press for democratic elections (Szulc 1986: 328). Their view of Castro had clearly changed little over the years.

The battle of Uvero in May 1957 cost the lives of eight guerillas and was hard fought. Nevertheless it served as an affirmation of Castro's military presence at a time when debates were emerging within the 26th of July Movement itself, voiced in particular by the talented young Santiago organizer, Frank País. The question was essentially one of leadership, not simply in terms of personnel but more significantly regarding the political direction of the revolution. After the February meeting in the mountains, Castro launched a Manifesto to the Cuban People, essentially a call for action against Batista rather than a strategic document. In May and June, he was actively in contact with other actors in the Cuban political theater, including the CIA, though he never actually met their people. More importantly, in drafting his Sierra Maestra Declaration, he had turned to moderate opponents of Batista to produce a policy for the formation of a "national united front."

The background to these negotiations was the increasingly repressive response of Batista to both the guerillas and the movement of urban resistance, to the extent that even Earl T. Smith, the American ambassador and a vocal supporter of the regime, was moved to protest at his suppression of popular disturbances in Santiago.

Smith was also disturbed, however, by what he believed was a softening of US policy on the anti-Batista movement in the wake of the Matthews article. And there were many signs of deepening and expanding resistance. Although the rebel army was effectively pinned down for several months between February and June, in the cities other expressions of protest were emerging. In the armed forces a layer of young officers were preparing a full-scale rising across the island, while survivors of the March attack by the Directorio had moved into the Sierra de Cristal to create a focus for armed resistance. The urban 26th of July Movement, led by Frank País, had responsibility for continuing direct action, but also for supplying the guerillas and building an alternative

labor front. To País, as well as other Movement leaders recently released from jail, this would only be possible through a broad front which embraced other elements of the opposition. At the same time, he proposed a reorganization of the Movement's leadership that would clearly subordinate the mountains to the broader, urban political leadership. At the heart of this discussion was the conception of the revolution itself, as the act of a mass movement and a working class taking center stage, or alternatively as a seizure of power by a rebel army.

Frank País was murdered on July 30, shortly after Castro had published the Sierra Maestra Declaration, a manifesto that was in some ways a reply to País's concerns and his declared intention to draw up a manifesto for the movement without Castro's initial approval. The concern over Fidel's desire for uncontested leadership embraced a number of the other Movement leaders too, for it would undoubtedly shape a post-Batista society as much as it would determine the course of the revolutionary war.

The End of the Beginning

On September 5, military rebels seized the naval base at Cienfuegos; this was intended to coincide with similar attacks in Havana and Santiago. But these did not take place and the fire power of the Batista regime soon brought the rebellion to an end. The repression was bloody – some 300 of the 400 people involved were murdered then or later. The rising had involved conspirators from a number of organizations, including the 26th of July Movement; while Castro knew of the conspiracy and supported it, he was wary of any attempt to create an alternative military government out of the rebellion. The failure of the movement, however, created new tensions within the 26th of July Movement and seemed to tip the balance back toward the Sierra. Just five days after the rebellion, the ambush at Pino del Agua announced the continuing presence of the rebel army.

Batista's response to the Cienfuegos rebellion, and his brutal repression, renewed popular hostility and alienated even further his erstwhile supporters in Washington (much to Ambassador Smith's disgust); even the Catholic Church made its protests heard. Politically, the pressure was mounting for the creation of some kind of united front, which was effectively built with ele-

ments of the bourgeois opposition and expressed in the Miami Pact. Although it had been supported by elements of the 26th of July Movement, the Pact delivered the leadership of the movement against Batista into the hands of the old moderate politicians. To Fidel this was wholly unacceptable, especially since it gave no role in a future Cuban state to Fidel or the rebel army; encouraged by Che Guevara, he denounced the Pact.

In the Sierra the rebels now controlled some 2,000 square kilometers, though their numbers had not risen above 300. The decision to consolidate the guerilla presence and to treat the area as a liberated zone clearly had an exemplary purpose. The first revolutionary agrarian reform law redistributed livestock from the big farms among the small peasants. At the same time, a first revolutionary legal code was drafted for the region and a training school under Che's direction was inaugurated at his camp at Minas del Frío. This coincided too with a new attack on the lumber camp at Pino del Agua in Oriente province, a direct challenge to Batista's continuing repression and state of emergency in the province which had been at the center of the Civic Resistance Movement. Che described this as "the rediscovery by the Cuban peasant of his own happiness, within the liberated zones" (Anderson 1997: 299), given his new self-confidence and self-awareness. Yet at the same time, Che and others were keenly aware of the lack of political education among the recruits. His words, however, reflect more directly the perception of the revolution as essentially directed from the countryside and based on the rural poor, a theme often reiterated by Castro. The revolutionaries, then, were the rebel army supported by the peasant masses; the structures of the revolutionary war were in essence organs of command. It was a very different conception from that of the urban cadres of the 26th of July Movement, and very different too from the ideas of the Communist Party, however distant those may have been from their practice.

The tensions persisted. By late 1957 the Directorio had established its armed camps in the Escambray mountains and the political arguments between the distinct currents within the 26th of July Movement were becoming increasingly clear. Yet revulsion against Batista's regime was also growing, so much so that in March 1958 the Cuban bishops proposed the

formation of a national front of opposition. Living standards were falling and by now the US government was expressing growing unease with Batista's response to the opposition. Against that background Fidel Castro launched his "Total War Manifesto" and agreed to the call for a general strike across the island in April 1958.

The April general strike was a failure for many reasons; the organization on the ground was poorly coordinated, the response from the mass movement was very limited, and the working-class movement remained marginal to the actions. The 26th of July Movement had established its own workers' organization, but its longstanding hostility to the Communist Party-led national unions meant that the strike was neither organized nor agreed with them. And the Communist Party itself, even though it had a representative permanently based with Castro in the Sierra, distanced itself from the action. Perhaps the population was also affected by the visible and overwhelming military preparations being made by the state in anticipation of the strike, and in response to the multiple acts of sabotage that had taken place in the weeks before. Most importantly, a general strike is mass action by an organized class; it cannot be launched by decree or declaration from above.

The political impact of April was to shift the political balance definitively toward Fidel Castro. While it was clear that Batista was preparing a major assault on the guerrillas, and pursuing his persecution of the resistance in the cities, the key political decisions were being made at a meeting of the National Directorate in the Sierra on May 1. The urban leadership was dismissed after bitter criticism from both Che and Fidel, accusing them of political sectarianism, particularly toward the Communist Party, which had begun to express cautious support for the rebels. The new National Directorate was headed by Castro and based in the Sierra. In Guevara's words, "The guerilla conception would emerge triumphant from that meeting. Fidel's standing and authority were consolidated" (Anderson 1997: 319).

Batista too saw the failure of the general strike as an opportunity to reinforce his authority by force. Late in May, Batista launched what was to prove his final military offensive against the guerilla army; 10,000 men were mobilized for an operation called "fin de Fidel" (the end of Fidel). Castro had 321 men at his disposal, plus

the 150 or so who had opened a second front under Raúl in the Sierra de Cristal in March.

The territory under rebel control was actually no more than a few square miles – the distance between Fidel's headquarters at Las Mercedes and Che's command at Minas del Frio a few kilometers. Batista's tactics were to surround the rebels and squeeze them in a tightening noose. Fidel and Che were both privately concerned as to their ability to survive the assault. The one advantage they had was their knowledge of the geography of the area, where woods and ravines made Batista's tactics far more difficult than they may have appeared on paper. Over the next three months, as the assault continued, the rebels were able to isolate and then expel several of Batista's units. There were casualties on both sides, but by late July it seemed that the rebels were holding out, and that the failure to defeat them was beginning to have serious consequences for the Cuban state. Batista's men were increasingly demoralized by the failure to gain the advantage, and the United States, although continuing to supply him with arms, were becoming seriously concerned at the unpopularity of Batista's corrupt and incompetent regime.

On July 20, Castro broadcast his "Unity Manifesto" on Radio Rebelde; the manifesto was signed by eight organizations including the Directorio and the 26th of July Movement at a meeting in Caracas, the Venezuelan capital. The notable absence from the list of signatories was the Cuban Communist Party, and this despite the fact that a leading member of the party, Carlos Rafael Rodríguez, was with Castro in the Sierra Maestra at the time, a sign of the rapprochement that was developing between Castro and the PSP. The Manifesto presented a full program of democratic and constitutional rights, proposed the formation of a provisional government under Castro's nominee Manuel Urrutia, and called on the United States to suspend all aid to the dictatorship. The absence of the communists has been explained in various ways (Szulc 1986: 359–60); it is possible that it was a condition for the broad agreement achieved in Caracas, or that the communists themselves were still reluctant to identify too closely with a movement they had quite recently denounced as "adventurist." A third explanation might point to Fidel's skillful moves to both win the support of the communists and at the same time keep them well away from control of the process. In the event, all

parties to the Pact recognized Fidel as the supreme commander of the Rebel Army.

Batista's forces withdrew on August 7, 1958. Three weeks later, Che embarked on his painfully slow expedition to the center of the island, the Escambray mountains, to establish a third revolutionary column to reinforce Camilo Cienfuegos's already active guerilla front. There was another purpose to his move, other than opening a further front to divide and demoralize the enemy. There were a number of other armed groups in the region, organized by the Directorio and by the PSP; it was urgent to unite them under the command of the 26th of July Movement, using Che's undeniable authority as a lever. This enabled the rebels to cut the island in two and to mount a further series of attacks on army positions. Castro, meanwhile, issued the first Revolutionary Agrarian Reform Law in October; it was significantly more moderate than Che Guevara's vision of what should be done, limiting itself to allowing small farmers and tenants to buy their own land but making no reference to the large landholdings. Che at the time was privately discussing a much more radical redistribution of land (Anderson 1997: 347–8). In November, as the Batista regime slowly collapsed, elections were held; they were laughably rigged and their results largely ignored.

The final push came at Santa Clara on December 28 and 29, when Che's column held off Batista's attempt at a final assault. Late on December 31, Batista abandoned his party guests and fled to the arms of his fellow dictator Trujillo in the Dominican Republic. On January 1, 1959, the columns of *barbudos* (the men with beards), led by Camilo Cienfuegos, entered Havana to popular acclaim. Che Guevara had entered the city earlier, under cover of night, to prepare to organize revolutionary justice and oversee the security of the new regime. Castro himself moved quickly to Santiago, in the east of the island, which on the following day was proclaimed capital of the revolution.

Year One of the Revolution

“The struggle against Batista had a denouement that neither the United States nor the rebels had anticipated: the complete collapse of the dictatorship, the Cuban armed forces and consequently the key structures of the Cuban state” (Farber 2006: 75). There are other explanations for the

victory which center on the military achievements of the Rebel Army, which were significant of course. The reality, nonetheless, is that the rebel forces numbered between 2,000 and 3,000 in the days before the victory; six months earlier they had probably been little more than 500 strong, while Batista had 10,000 troops at his disposal for his May offensive. The revolutionary victory can only have been the result of a combination of circumstances, key among them the collapse of the regime and the extreme unpopularity of Batista among every class of Cuban society and the consequent support for the rebel forces. The general strike that accompanied the victory celebrations was the clearest expression of that popularity, but no one could claim that it was a factor in the collapse of Batista, though it certainly demonstrated the fact that the Communist Party (the dominant force within the trade unions) had now decided to throw its weight fully behind Castro.

Perhaps the unsung heroes of the revolutionary overthrow of Batista were the urban movements, not just the 26th of July but also the Directorio, anarchist groups, and others who had contributed significantly to the instability of the regime through constant acts of attrition and sabotage (Dolgov 1976; Sweig 2002). In the end, the roll call of the dead contained a far greater number of urban resisters than rebel fighters. Politically, however, the dominance of Fidel Castro and the guerilla fighters in the aftermath of Batista's fall was incontestable. Their level of organization and their internal discipline was unmatched, and Castro's hegemony in the political arena was evidenced in the Caracas Pact. The emphasis on agrarian reform (Che had said that the guerillas were fundamentally rural revolutionaries) as a key topic, the promise in Fidel's first victory speech in Santiago that “for the first time the republic will be free” (from imperialist control), and the swift assertion of the political dominance of the 26th of July Movement left little doubt as to where the political leadership in the new state would come from. The attempt by the Directorio to hold on to its arms and occupy the presidential palace was brief and unsuccessful. And Che Guevara's administration of revolutionary justice in the early days confirmed the dominance of “fidelismo.”

The swift executions of the hated torturers and satraps of the Batista regime were extremely popular. So too were the rapid nationalizations

of the US-owned electricity and telephone companies, whose charges had risen constantly in the previous two years with Batista's approval. The announcement of the literacy campaign resonated particularly with a rural population whose levels of illiteracy were around 44 percent (the national average was around 28 percent). These were the same social sectors that would benefit directly from the continuation of the agrarian reform program first announced from the Sierra Maestra in mid-1958.

The political shape of the new state lay without question in Fidel's hands. The old structures had virtually collapsed, and the remnants of Batista's regime who had tried to plan for the period after the dictatorship had failed. An attempted military coup late in 1958 collapsed, and the strategies pursued by the bourgeois opposition to impose their own provisional government did not prosper; instead they were forced to accept Castro's presidential nominee, the high court judge Manuel Urrutia. The only serious organized political force in Cuba, the Communist Party, had lost credibility in the previous decades and had remained hesitant about its support for the 26th of July Movement until a very late stage. While it was now clearly working with Castro, it was at a disadvantage in the early stages, and would be reminded several times in the future where power really lay (for example with the arrest of Anibal Escalante and the "micro-faction" in 1960). The urban section of the 26th of July Movement, for its part, was now definitively marginalized; and while one of its members, David Salvador, was nominated to lead the new Cuban Labor Federation (the CTC), he was replaced at its first congress at the end of the year by a communist.

Year One of the Revolution, therefore, witnessed the creation of a new state built on the command model of the Rebel Army. The imagery of the new Cuba – the beards and olive green uniforms, the central symbolic significance of Che Guevara – reaffirmed its structures of authority. The new institutions were headed by guerilla commanders, and the mass organizations were shaped and controlled from the state.

The huge rallies at which Castro and others spoke were indisputable evidence of the popularity of the revolution, but not of its democratic character. Indeed, strikes were discouraged and spontaneous land seizures sternly rebuked; part

of the criticism of the revolution by the French agronomist René Dumont stemmed from his belief that the reform was too highly directed and insufficiently democratic.

In April 1959 Castro visited the United States, where he was very publicly cold-shouldered by Eisenhower. In the last year of Batista's regime there had been a clear split within the US administration over how to respond to his imminent fall, with the CIA curiously enough taking a more pragmatic position in regard to Castro. But by early 1959, it was the extreme conservative wing that dominated US government thinking, fueled by the conviction that Castro was "run" by the Communist Party combined with his refusal to relinquish power in any shape or form to the old political class. While Che and Raúl Castro expressed some concern that Fidel was courting the old Cuban bourgeoisie or seeking allies in Washington, it was Washington itself that closed that door, despite appeals from a number of US liberals not to sever relations with the new regime. The nationalizations of US utility companies followed a month later, as did the first agrarian reform. From then on US hostility toward the Cuban Revolution was, and remains, implacable.

The political shifts within the revolution became more marked as Year One drew to its end. Several members of the urban wing of the 26th of July Movement were removed from their posts and replaced by others more sympathetic to the developing relationship between Fidel and the Communist Party. Huber Matos, who had fought beside Fidel, was sentenced to 20 years' imprisonment for betraying the revolution. At the same time, and in parallel, Cuba's relationship with the Soviet bloc was beginning to take shape. A visit by Vice-Premier Mikoyan in January 1960 was followed by the first Cuban–Soviet trade agreement in February. The blockade imposed by a US regime convinced that it could destroy the Cuban economy by refusing to continue to buy the bulk of its sugar crop had now determined the future direction of the Cuban Revolution. Its survival was now dependent on a new unequal trade relationship, this time with the Soviets. One effect was to slow down economic diversification and the industrial development that had recently begun. Indeed in these first years, the central debate within the revolution centered on how Cuba could escape from

monoculture and dependency on sugar. But it remained unresolved.

The Cuban Revolution brought important improvements in the lives of the Cuban majority, especially in the areas of health and education. It replaced a deeply unpopular, brutal, and subservient regime. But it remained a revolutionary process controlled and dominated from above by those who had commanded the brief guerilla war; many of the problems it would later face stemmed from the lack of genuine grassroots democracy. Sadly, the debate on this issue, which is crucial to any political strategy that describes itself as socialist, was always subsumed into a simpler issue of anti-imperialism. In 1960, Cuba's political and professional classes abandoned the island for Miami; internal dissent became increasingly difficult, which also meant that the real difficulties and contradictions within the regime remained unexplored.

Cuban revolutionary government

Peter Roman

Cuba's system of representative government, the Organs of People's Power (Organos del Poder Popular, OPP), established in the 1976 Constitution, includes the Local Organs of People's Power (Organos Locales del Poder Popular, OLPP), consisting of 169 municipal assemblies and the nine provincial assemblies, and the National Assembly (Asamblea Nacional del Poder Popular, ANPP), which alone has legislative powers. Cuban representative government operates on the basis of consultation, oversight, conflict resolution, and consensus building.

Background

The theoretical and historical background of the “socialist representative government” derives from theories based on the convergence of civil and political societies, and the instructed delegate model (*mandat impératif*) found in Rousseau, Marx, Engels, Lenin, and Hans Kelsen; as well as the historical precedents set by the 1871 Paris Commune, the soviets of 1905 and 1917, the first constitution of the Soviet Union, and the Soviet Union in the post-Stalin era. Among the themes which influenced socialist practice in general, and Cuban socialism in particular, were the following: economic and political equality, unity and consensus (general will) above partial and private interests, close identification of constituents with their elected representatives who are legally bound to follow constituents' mandates, non-professional politicians, a unitary form of government, and the need to overthrow the old order.

The instructed delegate model has been applied during popular movements and government uprisings, beginning with the Jacobean Revolutionary Commune in Paris in 1792. Marx identified this and other of the above mentioned traits as characterizing the 1871 Paris Commune, and the presence of these traits in the 1905 and 1917 soviets in Russia led to their inclusion in the first constitution of the Soviet Union. Lenin identified the Paris Commune as the model for working-class government as embodied in the soviets. Historical advances are not created in a

vacuum or invented on the spot, but based on concrete models which are then altered and improved. The immediate precedent for the Cuban system of representative government was the Soviet Union in the 1970s, but the Cubans introduced important changes. In Cuba the Communist Party (Partido Comunista de Cuba, PCC) does not choose candidates for any of the People's Power assemblies. Its representatives do not preside over the assemblies at any level. With regard to the National Assembly the PCC has no legislative prerogative. By law the elections for the municipal assembly must be competitive.

Elections

In no governmental elections in Cuba does money play a role in determining who will be the candidates and who will win the elections. Voting is by secret ballot and is voluntary. No penalties are placed on those who do not vote. The PCC does not participate in candidate selection, which is a change from the practice in the former Soviet Union.

Elections for the municipal assembly delegates are competitive and are held every two and a half years. They represent electoral districts (*circunscripciones*) of approximately 1,500 voters within municipalities. By law there must be between two and eight candidates for each *circunscripción*. Also differentiated from the Soviet model, delegates must reside within their *circunscripciones*. Candidates are chosen at neighborhood meetings within the *circunscripciones*. A temporary president and secretary are elected by those present to conduct the meeting. Individuals, not parties or organizations, propose candidates, who are then selected by a show of hands. Electoral campaigns consist mainly of posting candidates' biographies in neighborhood offices and store windows. Most constituents personally know or are familiar with the candidates. To be elected a candidate must win a majority of the votes cast. If no candidate wins a majority a runoff election is held between the top two. There are no term limits.

The 609 National Assembly deputies and the provincial assembly delegates in the nine provinces serve five-year terms without term limits and are nominated and elected together during the same electoral process. The elections are not competitive. Similar to other aspects of how the ANPP operates, consultation and consensus

underlie the process of candidate selection. Candidates are proposed by plenary sessions of official mass and student organizations and unions held at the municipal, provincial and national levels: the Federation of Cuban Workers (Central de Trabajadores de Cuba, CTC), the Committees for the Defense of the Revolution (Comités de la Defensa de la Revolución, CDR), the Federation of Cuban Women (Federación de Mujeres Cubanas, FMC), the National Association of Small Farmers (Asociación Nacional de Agricultores Pequeños, ANAP), the Federation of University Students (Federación de Estudiantes Universitarios, FEU), and the Federation of High School Students (Federación de Estudiantes de Estudios Medios, FEEM). Individual citizens, non-governmental organizations (NGOs), the PCC, and the Union of Young Communists (Unión de Jóvenes Comunistas, UJC) cannot propose candidates.

From these proposals, candidacy commissions at the national, provincial and municipal levels – composed of representatives chosen by the mass organizations and presided over by a CTC representative, again without representation from the PCC or UJC – compile lists of candidates. The candidacy commissions select candidates through a process of consultation with professional groups such as lawyers, doctors, teachers and economists, work centers, mass organizations (on the neighborhood as well as municipal level), and individual municipal delegates, and then make up preliminary lists which they take back to these groups and delegates for comments and opinions.

Municipal delegates may also be elected as National Assembly deputies or provincial assembly delegates, and constitute up to 50 percent of the deputies and delegates in these bodies (they are referred to as *de base*), a unique characteristic creating conditions for close contact and connection with the population. They are also represented on the Council of State. The other deputies are referred to as *directos*, and they encompass the country and provincial leadership as well as those selected to ensure representation from various sectors of society (women, youth, religious leaders, workers, doctors, farmers, athletes, teachers, soldiers, retired people). A provincial delegate may also be a deputy. The candidates representing leadership ranks are chosen by the national and provincial candidacy commissions. The municipal candidacy commissions

choose the *de base* candidates and most of the other *directos* candidates in consultation with the provincial candidacy commissions.

ANPP deputies and provincial delegates are elected by voters who reside in municipalities. Large municipalities are divided into districts within which voters elect their representatives. Deputies and delegates represent municipalities, but do not have to reside in the municipalities they represent. Many are national figures and reside in Havana but are elected by municipalities in other provinces. If all deputies and delegates who reside in Havana had to represent only Havana, there would not be enough National Assembly seats from the municipalities within the City of Havana to accommodate all of the national leadership, especially since the *de base* deputies from Havana do have residency requirements, and therefore must live in the city.

In the final list of all the candidates from a municipality, presented by the municipal candidacy commission to the municipal assembly for approval, the number of candidates is equal to the number of seats to be filled. Municipal delegates may raise objections to a particular candidate, and, if that candidate is voted down, then a substitute candidate is presented to the municipal assembly by the candidacy commission.

The electoral campaigns consist of candidates traveling in groups to neighborhoods and work centers. During the encounters constituents ask the candidates questions and one candidate speaks extolling the virtues of all the candidates and urging everyone to vote for the entire slate (*voto unido*), which is possible by checking the slate box at the top of the ballot. National Assembly President Alarcón explained the system of the *voto unido* and the non-competitive elections as essential to assure that the candidates who are also municipal delegates, and thus unknown outside of their *circunscripciones*, have a chance to be elected. A candidate in Cuba must win a majority of the votes cast to be elected.

The municipal assembly leadership consists of the president and vice-president, who are elected by the delegates and must be municipal assembly delegates. The municipal candidacy commission selects two candidates presented for approval to the municipal assembly delegates. In the subsequent secret election, the candidate with the highest vote total is elected assembly president, and the other is elected vice-president. The assembly secretary, who does not need to

be a delegate, is proposed by the president and ratified by the delegates. Candidates for provincial assembly president and vice-president are selected by the provincial candidacy commission and elected by the provincial assembly delegates. The national candidacy commission, after consultation with all the deputies, selects the assembly leadership and the membership of the Council of State, all ratified by the ANPP deputies.

The Local Organs of People's Power

The OLPP consist of the 169 municipal assemblies and 14 provincial assemblies. While not possessing legislative powers, according to articles 102 and 103 of the 1992 Cuban Constitution, "they are invested with the highest authority for the exercise of their state functions within their respective boundaries. To this effect they govern all that is under their jurisdiction and the law."

The municipality is depicted as "a surface area that is determined by necessary economic and social relations of the population, and with the capacity to satisfy the minimum local needs."

The municipal assembly analyzes, discusses, supervises, monitors, inspects, and controls the social, economic, judicial, and political affairs of the municipality. It ratifies administrators for locally run entities and enterprises, such as stores and polyclinics, and local judges, and approves candidates for National Assembly deputies and provincial assembly delegates. It monitors the performance of the provincial and national level enterprises within its territory; and it participates in formulating the municipal budget and plan. It attempts to resolve problems and crises occurring within its jurisdiction; and it assists and monitors the performance of municipal assembly delegates. It meets in regular sessions approximately four times a year.

The municipal government is characterized by (1) representation of the population by municipal assembly delegates who are socially and economically indistinguishable from the electorate; (2) an electorate that closely identifies with, and has personal contact with, its municipal delegates; (3) municipal delegates who are directly accountable to their constituents, their main functions being to resolve community problems and to serve as a conduit for constituents' concerns; and (4) an important role for the electorate through its elected representatives

in forming, determining, developing, and monitoring municipal, provincial, and national economic plans and budgets, and in checking all economic activity located in the municipality.

Municipal assembly delegates attend assembly sessions, participate in assembly commissions, and attend to the needs and concerns expressed by their constituents in biannual accountability sessions and weekly office hours. In the tradition of the Paris Commune, and the Soviet model, except for assembly officers, municipal assembly delegates are not professional politicians – they receive no salary for their work as municipal delegates and continue to work and be paid in their work centers (the same is true for provincial assembly delegates and National Assembly deputies). Following Marx's theory, the purpose is to avoid forming a caste separated from the rest of the population.

At a regular session of the municipal assembly of Playa (a municipality within the City of Havana), held in 2001, the following topics were discussed: street lighting, public health services, mobilizations to eradicate mosquitoes, cultural activities, and resolving citizen complaints (including an analysis of the recent round of accountability sessions held by delegates with their constituents). Next came reports by the Science and Environmental Commission, the Tourism and Industry Commission (dollar stores), and the Health and Hygiene Commission (garbage collection).

The administrative councils attached to municipal assemblies, according to the Cuban Constitution, "direct the economic, production and service entities locally subordinated to them." In contrast to the oversight function of the municipal assembly delegates, members of the administrative council, who usually are not delegates, are in charge of managing specific areas, such as education, commerce, production, and public health, under the purview of the assembly. Members of the administrative council are proposed by the president and ratified by the assembly delegates. The municipal assembly president, vice-president, and secretary are also members of the administrative councils.

The people's councils (*consejos populares*) are groupings of a minimum of five delegates (up to 15 in urban areas) from contiguous *circumscripciones*, together with representatives from mass organizations, government agencies, and economic entities located within the council's

territory. The council's officers must be assembly delegates and are elected by the delegates in the council. Council presidents and vice-presidents are assembly professionals, and their constant presence at the neighborhood level strengthens the role of the assembly and the delegates. The people's councils support the activities of the delegates, especially regarding resolving citizen *planteamientos*, mobilize the population to solve local problems, monitor economic activities as well as public health and education, and provide on-the-spot vigilance to control fraud and crime. They are consulted during the selection process for candidates for provincial assembly delegates and National Assembly deputies.

The following points were included in the resolution entitled "the responsibilities and work of municipal assembly delegates" passed by the National Assembly commission on OLPP in 1999: transmit to the municipal assembly the needs, difficulties, and concerns of the constituents; inform constituents regarding policies of the municipal assembly; find solutions with the participation of the constituents; hold biannual accountability sessions with constituents; inform and work with the municipal assembly to resolve constituents' *planteamientos*; meet periodically with representatives of the PCC, mass organizations, and professional groups; look after the unemployed, elderly, single mothers, other vulnerable groups, families in need, criminals, prostitutes, and those involved in negative conduct; make rounds within the electoral district, visit homes, work centers, and organizations, conversing with workers, students, neighbors, and retired people; participate in the people's councils; participate in municipal assembly sessions and commissions; oversee production and service centers; participate in the municipal assembly decisions controlling violations regarding the distributions of construction materials, telephones, housing, building lots, consumer products, and the right to eat in certain restaurants.

Most delegates are strongly representative of their constituencies. Residents usually know who their delegates are, and many are personally acquainted with them. At any moment, citizens discuss problems with their delegates, whether in chance encounters in the street or by going to the delegates' homes. In the tradition of the *mandat impératif* delegates hold accountability sessions with constituents twice a year in designated areas within the *circumscripciones*. The sessions include

reports on the activities of the assemblies, people's councils, delegates, and the neighborhood police. Delegates respond to *planteamientos* raised during the previous sessions, and hear new *planteamientos*. These usually concern neighborhood problems such as public health, transportation, quality and availability of bread and other food, housing, and sanitation. During the period between sessions delegates must seek to resolve citizen *planteamientos*. Delegates also hold weekly office hours to meet with constituents regarding issues of a more individual nature.

Delegates are members of assembly commissions that oversee areas such as public health, education, commerce, budget, and production. Commissions investigate, conduct on-site inspections, hold public hearings, and write reports.

There are nine provinces in Cuba, including the City of Havana province. The provincial assembly oversees economic enterprises and social entities under provincial control, and monitors those under national control located in its territory. It formulates provincial economic budgets and plans, and assists, coordinates and monitors the municipal assemblies located in the province. It holds four regular sessions per year. The president, vice-president, and secretary belong to the assembly's administrative council, whose membership includes those in charge of specific areas under provincial control, but are not required to be provincial assembly delegates.

Besides attending assembly sessions, most delegates also serve on assembly commissions which monitor provincial enterprises and entities under their purview. They also work with corresponding municipal assembly commissions. For example, the commission on the OLPP assists the municipal assemblies to resolve those citizen *planteamientos* whose solution can be found at the provincial level.

The National Assembly

The Cuban Constitution defines the ANPP as the "supreme organ of state power." Only the National Assembly has prerogative to pass laws and amend the constitution. This includes approving the economic plan and budget each year. It also oversees all national government ministries and agencies. It meets in regular plenary sessions twice a year for approximately two days each time. Extraordinary sessions may be called at any time. Most of the work is done

by the Assembly commissions between sessions. The Council of State stands in for the National Assembly between sessions.

There are ten permanent commissions with about 25 deputies on each: Constitutional and Judicial Affairs; Productive Activities; Local Organs of People's Power; Education, Culture, Science and Technology; Economic Affairs; Health, Sports and Environment; National Defense; Services; Youth, Child Care and Women's Rights; and Foreign Relations. During the year the commissions (and sub-commissions) hold meetings, usually with high government officials present, draft legislation, review pending legislation, carry out inspections, do studies, respond to citizen complaints, conduct public hearings, and periodically report to the National Assembly plenary regarding their audits of government organs and ministries. Not all deputies are members of commissions (for example, those in national leadership positions are usually excluded). The commissions meet prior to each regular session of the National Assembly, followed by two days during which ministers report to the deputies regarding the activities of their ministries, and then are subject to questions posed by the deputies.

Legislative initiative is held, according to Article 88 of the Cuban Constitution, by deputies, the Council of State, the Council of Ministers, National Assembly commissions, the CTC and other mass organizations, the People's Supreme Court, the Attorney General, and by petition of at least 10,000 citizens who are eligible to vote. The PCC does not have the right to propose laws, although resolutions passed at party congresses have served as the basis for future legislation. In some cases the National Assembly conducts public opinion surveys to determine public attitudes towards the need and premises of proposed legislation. In cases when it has been determined that the public was opposed or not ready, new legislation has been held up. After the first version is written, the process of consultation and revision is directed by the relevant Assembly commission, together with the Constitutional and Juridical Affairs Commission, whose role is to check its legality and constitutionality. For example, the trajectory for the proposed law on the environment was directed by the Health, Sports and Environment Commission; the bills on foreign investments and on taxes were led by the Economic Affairs Commission.

Whatever its origin, proposed legislation goes through a lengthy process of preparation: public opinion consultation in Havana and in all the provinces with government officials, experts, the PCC and UJC, mass organizations, the CTC, student organizations, citizens who would be affected, deputies, and other National Assembly commissions. Based on these consultations, extensive changes are incorporated and the bill usually goes through many drafts. A bill will not be presented before the National Assembly until consensus has been reached. Failing this, it will either be withdrawn or sent out for more consultations to iron out the differences. Once it is presented to the National Assembly plenary it is subject to extensive floor debates where important changes are made. After a law is passed, the Council of Ministers draws up regulations for implementing the new law, which are approved by the Council of State.

The proposed legislation on agricultural cooperatives was subject to extensive consultations with deputies in the provinces. However, consensus had not been reached by December 2001 when it was scheduled to be presented to the National Assembly plenary session. Areas of disagreement included housing, distribution of profits, and relations with the state. The differences were ironed out and consensus was reached after it was debated in the provinces with cooperative farmers and ANPP deputies. It was then debated and passed by the National Assembly in November 2002.

The Communist Party

Probably the greatest difference between the OPP and the soviets in the former Soviet Union is the role of the Communist Party, which in the Soviet Union was not separated from the government. It picked the candidates, and party officials assumed leadership roles in the soviets. The party also dominated the legislative process. In Cuba there is more of a separation between the PCC and the OPP. The PCC is not an electoral party and does not select candidates. It does step in if there are procedural irregularities in the nomination and election processes. The OPP leadership cadre has always been close to 100 percent party members. Since 2002 around 95 percent of ANPP deputies have been party members (prior to 1993 it was always 100 percent), and about 70 percent of municipal assembly delegates.

However, it would be very difficult to tell the difference between a deputy or delegate who is a party member and one who is not, and the party does not tell the elected representatives how to vote. Especially in the municipal assembly nomination process, where a high percentage of those nominated by their neighbors are party militants, there is no pressure by the PCC or others to pick them. It is not a legislative party, but is consulted regarding proposed bills, and party resolutions have served as bases for future legislation.

This is not to deny the leadership role of the PCC. This becomes slightly confusing, because the national government leadership and the party leadership are practically identical. The president of the ANPP also sits on the Political Bureau of the PCC, and the first secretary of the PCC heads the Council of State and the Council of Ministers. Thus, at the highest levels it becomes artificial to distinguish between the two. However, as discussed above, taken as a whole, in practice the OPP are clearly demarcated and distinguished from the PCC.

Cuffe, Paul (1759–1817)

Beverly Tomek

Paul Cuffe, a wealthy black Quaker entrepreneur, shipowner, and captain from Westport, Massachusetts, was born to an African father and a Native American mother. He became one of the most successful blacks in the United States, owning with his family and other business partners at least two ships, a shipyard, a 200-acre farm, a windmill, and a gristmill. He began his struggle for civil rights in 1777, when he pointed to the hypocrisy of the American colonists calling for “no taxation without representation” even while they taxed blacks yet denied them the right to vote. He was also known for his efforts at black education, but is best remembered for his involvement with African colonization through the British venture at Sierra Leone.

British abolitionists had played a role in the colony from the beginning, helping to recruit settlers and offering advice to the colonial government. In 1807 some of these same philanthropists who had fought to end the slave trade had founded the African Institution. Through this society they hoped to carry on the philanthropic aspect by overseeing settlers’ morals, protecting them from African and European dishonesty, and using the colony to combat the slave trade. Familiar with Cuffe’s reputation, they desperately wanted his support. Sierra Leone needed settlers with important agricultural and mechanical skills, and the directors of the Institution wanted free blacks to fill these roles. Not only did Cuffe fit the description, they also hoped he could recruit more men like himself.

Cuffe’s vision for Sierra Leone included economic development that would replace the slave trade while also providing a civilizing force and leading Africans to a respectable position in the Atlantic World. American blacks would emigrate temporarily and help Africans build the necessary agricultural and economic infrastructures. Opposed to mass exodus, Cuffe hoped that carefully selected African Americans would go and set an example which would encourage “Sobriety and industry” while introducing legitimate commerce. Since the Institution’s directors had sought his input and assistance, Cuffe assumed that blacks would enjoy equal leadership and trade opportunities in the colony, and he dreamed of creating an exchange network

between the United States, Africa, and England in which legitimate trade goods would replace slaves. Though deeply connected with the Quakers, Cuffe’s first goal was to promote commerce.

Success in Sierra Leone, Cuffe believed, would lead to equality at home. The quality of the settlers would determine success or failure, so Cuffe screened applicants very carefully, worrying that until blacks showed their capabilities, even the most talented and industrious African Americans would face white prejudice. Thriving black businesses and effective self-government would challenge stereotypes, and once whites saw that blacks were equally qualified in these areas, white Americans would accept the idea of a biracial society.

A crucial part of Cuffe’s plan for transatlantic trade and racial uplift involved a network of black and white philanthropists and leaders on three continents working together to make the colony successful. In 1810 the English government granted him a six-month trading license to carry goods between England and the colony, and in 1812 he founded the Friendly Society of Sierra Leone, a mutual aid society which sought to protect the interests of black merchants. Finally, he worked to establish a network of African Institution auxiliary societies in Philadelphia, New York, and Boston to draw in the support of African American leaders.

Cuffe sought, but never got, support from the US Congress for his venture, and enthusiasm for his endeavor began to wane among blacks by 1816. At that point, white colonizationists began to offer Cuffe their support for what they mistakenly viewed as an effort to introduce Christianity to Africa. Cuffe remained certain that black achievement in the US and Africa would end slavery by awakening whites to black equality, but white interest offered him hope for interracial cooperation.

Cuffe began to understand the limitations of black leadership opportunity once he saw that white settlers, though less than 1 percent of the population, controlled 60 percent of the property. Furthermore, white merchants sought to restrict black business efforts by dictating trade terms. Disheartened that European interference and greed jeopardized the experiment and hampered black independence, he continued to work through the Friendly Society to help black settlers. Despite his efforts, tension between the black quest for independence and white leadership

was never resolved. The African Institution began to ignore Cuffe's civilizing mission once it became apparent that he had goals of his own and could not simply be manipulated and used as a tool of white propaganda.

By the summer of 1816, slave revolts and the brutal tactics whites used to suppress them began to convince Cuffe of the merits of mass migration as a necessary corollary to emancipation. In communication with men who would soon form the American Colonization Society, he had arrived at the sad conclusion that American slaves faced death or perpetual servitude on the one hand, and freedom qualified by racial separation on the other.

Curaçao, 1969 uprising

Michael Orlando Sharpe

The events sparking the May 30, 1969 uprising known in Papiamentu as the "trinta di mei," in Willemstad, the capital of Curaçao, Netherlands Antilles, resulted from a labor dispute between workers and management couched within a racialized class hierarchy, with remnants that persist today. The uprising, causing loss of life, injuries, and millions of dollars in property damage, was a manifestation of the May Movement that crystallized in 1969 through mobilizing striking workers. The May Movement was led by Wilson "Papa" Godett and Amador Nita of the Frente Obrero Liberashon (FOL). The Curaçao uprising and threat of a general strike caused the government to resign and call new elections, and marked a significant transition from a mostly non-black minority ruling elite to a majority black populist politics.

Curaçao, the largest island and administrative capital of the Netherlands Antilles, composed of five islands in the Caribbean, is located 35 miles north of Venezuela, with a population of about 130,600 in 2005. The Netherlands Antilles began as a Dutch colony in 1634 under the government authority of the West India Company, and Curaçao was initially a center of trade and commerce used as a transshipment point and depot for African slaves bound for the Caribbean and the Americas. Curaçao has long been plagued by the unresolved issues of colonialism and slavery that continued into the twentieth century through racial segregation and class segmentation.

A Shell oil refinery was opened on the island in the early twentieth century due to its proximity to Venezuelan petroleum reserves and its perception as a safe harbor due to its legal ties to the Netherlands. The oil refinery subsequently became the largest employer on the island. The 1954 Charter of the Kingdom of the Netherlands officially ended formal colonial relations, granting Curaçao status as an equal and semi-autonomous partner, with the Dutch remaining responsible for defense and foreign affairs. But after the 1954 Charter was implemented, the Curaçao economy experienced a period of declining oil revenues and increasing unemployment, particularly among the black majority, who comprised the majority of all workers. Curaçao remained dominated by a white Protestant Democratic Party that was perceived by the majority of workers as semi-authoritarian. Popular dissent among the black majority culminated in the May 30, 1969 Curaçao uprising, and military intervention by the Netherlands under the Charter.

The Curaçao uprising was the culmination of a labor dispute between the Curaçao Federation of Workers (CFW) and Werkspoor Caribbean (WESCAR), the primary contractor of Royal Dutch Shell. The CFW sought a wage agreement similar to that negotiated for Shell employees by the Petroleum Workers' Federation of Curaçao. Failing to reach an agreement, on May 9, 1969, CFW workers went on strike against WESCAR. They were joined in a sympathy strike against Shell by the Petroleum Workers' Federation of Curaçao, other unions, and even Shell's own employees. Wilson "Papa" Godett, a popular unionist, and several other leaders organized a gathering and a march of thousands of workers

and sympathizers from Shell headquarters to Fort Amsterdam, the seat of government. The protesters called for the resignation of the government, which they saw as siding with Shell against workers. As the march proceeded, the police intervened and Godett was shot and wounded. The crowd then broke into smaller groups and spread through downtown, setting fire to buildings, overturning cars, breaking windows, and looting stores. On May 30, the government imposed a curfew for the weekend and on June 1 the Dutch military arrived in Curaçao from the Netherlands to assist the police.

Although the Black Power movement retained influence, the Antillean government report concerning the causes of the uprising suggests that although the labor dispute with WESCAR and Shell was the immediate cause of the rebellion, the upheaval had to be understood within the larger context of several preceding labor disputes and underlying disparities in society such as wage differentials, structural unemployment, inadequate social provisions, dissatisfaction among young intellectuals, poor police work, and the premature involvement of the Dutch military. While some historians view the Curaçao uprising as a labor revolt, most consider it also a revolt against racism and oppression. The 1969 uprising culminated in the transition to majority black rule on the islands. However, the Netherlands Antilles, which include the islands of Curaçao, Bonaire, Saba, Sint Eustatius, and Sint Maarten, remain a dependency under Dutch control.

Cyprus, protest and revolt

Anastasia Yiangou

The main form of protest in Cyprus during modern times was the national anti-colonial struggle (1955–9) led by the National Organization of Cypriot Fighters (Ethniki Organosi Kiprion Agoniston, EOKA). The leading figures of this national movement were a former colonel of the Greek army, Georgios Grivas (of Cypriot descent), serving as its military leader, and Archbishop Makarios III, who held political responsibility. The movement was entrenched in the concept of *Enosis* (union with Greece), supported by Greek Cypriots. The strategic considerations of the powers involved and safeguarding the Turkish Cypriot minority's interests (18 percent of the total population as opposed to 78 percent Greek Cypriots; the remaining 4 percent were Armenians, Maronites, and Latins) significantly influenced the future of the Cyprus question during the 1950s and eventually led to the formation of a self-standing, independent Cypriot state in 1960. In 2004, Cyprus became a member of the European Union (EU).

The *Enosis* movement was essentially related to the Orthodox Church of Cyprus (autonomous since AD 488). The role of the archbishop as leader of the nation (*Ethnarch*) was shaped by the various occupations that the island had suffered over many decades. During the Ottoman years, the *millet* system had allowed for the archbishop to be the civil as well as religious leader of his community. The hanging of Archbishop Kyprianos on July 9, 1821, along with many other members of the island's Greek Christian intelligentsia and clergy on the pretext of an intention to join the revolution then sweeping other Greek lands in the Ottoman empire, gave the archbishop's role an iconic significance for Greek Cypriots which continued to evolve during British rule. Alongside *Enosis*, the issue of the tribute was a long-simmering cause of resentment

toward the British. This concerned a sum of £92,000 that was agreed under the Cyprus Convention of 1878 to be paid annually to the Porte. This amount never went to the sultan because his government had defaulted on servicing the 1855 Crimean War loan. The money was instead siphoned off by the British to their own bondholders. Cypriots therefore found themselves paying a debt with which they had no connection and which further impoverished the state of their economy.

The question of *Enosis* arose even at the outset of the British occupation of the island in July 1878. According to Cypriot folk tradition, the first high commissioner to be appointed in Cyprus, Sir Garnet Wolseley, was welcomed by the bishop of Kitium with a direct plea to Britain to cede Cyprus to Greece. During the early years of British rule, the movement existed in a comparatively quieter form than its later incarnation. Furthermore, the occupation of Egypt in 1882 undermined the strategic utility of the island for the British, leaving open the prospect of handing Cyprus back to Turkey. However, the violence of the Ottoman Hamidian regime against British forces in Crete in 1898, and the distressed state of affairs in Macedonia after 1900, left no room for such an alternative.

In 1912, against the background of the Turkish–Italian war, the first disturbances between Greek and Turkish Cypriots in Nicosia and Limassol took place, resulting in five deaths and several casualties. The entry of Turkey in World War I on November 5, 1914 on the side of Germany automatically led to the cancellation of the Cyprus Convention of 1878 and to the formal annexation of the island by Britain. Turkish Cypriots did not protest this development; instead, they clung as tightly as possible to their new status as British subjects. On the other hand, the inherent Greek Cypriot belief that Britain would eventually repeat the example of the cession of the Ionian Islands in Greece in 1868 now became more forceful. In 1915, Britain offered Cyprus to Greece in exchange for the latter's entry in the war on the Allied side. Fearing that such a development would risk all that Greece had gained during the Balkan Wars (1912–13), the short-lived government of Premier Alexandros Zaimis sought to keep a neutral stance and consequently refused the offer.

At the end of the war, a Greek Cypriot delegation joined the Paris Peace Conference in order

to promote – unsuccessfully – their national demands. The fate of Cyprus was sealed during the Lausanne Treaty of 1923, according to which Turkey recognized the abrogation of its rights on the island, and in 1925 Cyprus was officially declared a Crown Colony. Nevertheless, it was during the 1920s that the *Enosis* movement acquired a more dynamic presence under the leadership of the Orthodox Church. Continuous disappointments combined with the realization that, after the catastrophe of the Asia Minor campaign in 1922, the Greek governments were in no position to assist in that cause enforced a notion that in their quest for *Enosis*, Cypriots were on their own. Indeed, the foundation of a National Council in 1921 was initiated for that reason.

Friction between Cypriots and the government was also discernible in the field of education. Traditionally, Greek Cypriot education had been under church control. A 1929 Educational Bill transferred control over the appointment, promotion, and discipline of elementary teachers to government authority. Although the tribute was finally abolished in 1927, the imposition of stringent economic measures and the general context of world economic crisis in the late 1920s only made the situation worse. All these factors led to the first form of open protest against the British.

The disturbances of 1931 constitute a turning point in the history of modern Cyprus. It is now generally accepted that the disturbances were spontaneous and by no means preplanned. Two organizations led by nationalists – the National Organization of Cyprus (Ethniki Organosis Kiprou, EOK) and the National Radical Union of Cyprus (Ethniki Rizospastiki Enosis Kiprou, EREK) – brought to a head the general discontent prevailing on the island. The introduction of a new custom tariff was the starting point of a series of events that led to widespread riots. The bishop of Kitium, Nicodemos Mylonas, proclaimed disobedience to British rule and resigned from the Legislative Council, to be followed by the remaining Greek Cypriot members. On October 20, in Limassol, the bishop declared the union of Cyprus with Greece, and on the following day disturbances broke out in Nicosia during which Government House was burned down. British troops and warships came from Egypt and Malta, soldiers were summoned from the Troodos mountains, and air reinforcements were deployed to quickly suppress the turmoil.

There were seven Greek Cypriot fatalities and many casualties.

The consequences of this first open protest against British rule on the island were long term. The British, seizing a long-awaited opportunity, pointed to the Orthodox Church as the main instigator of the riots. Ten Greek Cypriots were immediately deported, among them the bishops of Kitium and Kyrenia. The colonial authorities also deported two leading communists. The Communist Party of Cyprus was founded in 1926 but initially failed to gain support within the essentially conservative Greek Cypriot society. During the first days of the October events, the communist leadership of Cyprus refused to take part in the upheavals, condemning them as expressions of the church and bourgeois class and therefore opposed to the interests of the working class. Nevertheless, criticism from Comintern prompted the Communist Party to alter its position and join the outcry. While its leaders were deported, the party was also proscribed in 1933. Further consequences for Cypriot life included the abolition of the Legislative Council (introduced in 1882) and strict censorship of the press. Authority was vested in the governor, who governed with Orders in Council assisted by an Executive Council, consisting of four nominated members and three non-official members nominated by the governor. In 1933 an Advisory Council was also introduced. Elections were canceled and municipal and local authorities were henceforth appointed by the governor. Additionally, a series of laws was implemented that seriously undermined the liberty of Cypriots. All in all, during the 1930s an authoritarian regime was established on the island, described by British officials as one of "benevolent autocracy."

Nevertheless, the *Enosis* movement managed to survive underground, surfacing with all its former vigor during World War II, particularly after Greece's entry in October 1940. Cyprus's overwhelming contribution during the war heightened Cypriot expectations for post-war *Enosis*. On April 14, 1941, a party of the left, the Progressive Party of Working People (Anorthotikon Komma Ergazomenou Laou, AKEL), was formed and by the late 1940s would take the lead in *Enosis* politics.

The end of the war nevertheless unveiled new strategic pressures regarding the British position in the Middle East in general, and in Cyprus in particular. The British retreat from

India and Palestine in 1947–8 signaled a gradual elevation of Cyprus's importance as a base. In Cyprus, these years also witnessed an intense confrontation between the local right and left – largely influenced by the civil war on the Greek mainland – that led ultimately to the failure of the Consultative Assembly between November 1947 and August 1948. At this juncture Makarios, later archbishop, was called back from Boston where he was studying to assume duties as the bishop of Kitium. He took over the leadership of the *Enosis* campaign as organized by the church. A plebiscite on January 15, 1950 showed that 95.7 percent of voters opted for the exercise of their right to self-determination. On October 18, 1950, Makarios was elected archbishop. In 1954, the Greek government of General Papagos internationalized the question by taking it to the United Nations for the first time. Nevertheless, the British were adamant in ruling out any discussion on the island's sovereignty. A statement made on July 28, 1954 by colonial official Henry Hopkinson that Cyprus could "never" expect to be fully independent, accompanied by "anti-secession" warnings back in Nicosia, demonstrated their intentions even more clearly. It was at this stage that colonial deliberations on the deportation of Archbishop Makarios started to emerge.

The origins of the rebellion in Cyprus are crucial to this account. As exemplified by the history of the *Enosis* movement on the island, the conflict was triggered by a long-standing confrontation between the colonial government and Greek Cypriots. By closely following the narrative of Greek Cypriot national expectations and their continual disappointment, it is easier to understand the depths of polarization and "the crisis of mistrust" between the British and Greek Cypriots in 1955. The anti-colonial mood prevailing in other parts of the empire also assisted that outcome. It may be argued that the onset of violence in Cyprus was always a possibility, since colonial fears concerning this eventuality had often been expressed from the early years of British rule.

April 1, 1955 signaled the beginning of the Cypriot national movement under EOKA that aimed primarily at the union of Cyprus with Greece. At the outset of the struggle, the strategic aim of the movement was to demonstrate the Cypriot longing for freedom and thereby exert pressure on Britain to abandon its intransigent policy regarding the political future of the

island. Despite the fact that EOKA had no more than 300 armed fighters, its military success was eventually ensured by the support it received from the overwhelming majority of Greek Cypriots. Indeed, while the movement was eulogized by the church and espoused by the Cypriot right, its anti-colonial appeal also won over the support of Greek Cypriots belonging to a wider social spectrum, making the struggle of EOKA a genuinely mass movement. The leadership of AKEL denounced the onset of violence and this remained a source of friction between the party and the organization, though it was not openly expressed until 1958.

EOKA operated at multiple levels. For example, there were guerilla groups in the mountains and sabotage groups in the towns. The role of students and of youth in general in assisting the struggle was of crucial importance. The youth were organized under the ANE (Alkimos Neolea EOKA, Vigor Youth of EOKA) and were responsible for many tasks, including the formation of sabotage groups and organizing demonstrations.

The political responsibility of the organization was vested in the Political Committee of Cypriot Struggle (Politiki Epitropi Kipriakou Agonos, PEKA), whose members were responsible for hiding guerillas, watching important governmental institutions, and organizing passive resistance – a very important means of protest which enforced Greek Cypriot solidarity, especially during the critical year of 1958. In general the EOKA struggle was not a continuous armed conflict – it could not have been because of the island's geography – but a mixture of armed actions and popular protest which made British rule in the island impossible and often embarrassing. EOKA would also declare truces when important diplomatic developments took place to facilitate their implementation – in all, four truces were declared during 1955–9. This tactic also provided EOKA with the opportunity to reorganize.

The appointment of Field Marshal Sir John Harding as the new governor of the island in October 1955 emphasized the urgency of the situation. Harding was given extensive powers in relation to security. The police – which EOKA had managed to infiltrate by creating a small but highly effective network of police informers – were reorganized and an auxiliary police force consisting of Turkish Cypriots was formed. This step created extensive mistrust and suspicion

between the two communities. On November 26, 1955, a state of emergency was declared and in December AKEL was proscribed.

From October 1955 to February 1956, Harding and Makarios were engaged in a series of meetings which, despite offering the potential for a settlement, nevertheless ended in failure. The British deported Makarios and three other prominent persons of the Ethnarchy, hoping to exert pressure on the Greek Cypriot side. At this point the struggle was assisted by popular protests and demonstrations not only in Cyprus, but also in Greece. The British authorities reacted by adopting a string of severely repressive measures such as collective punishments, curfews, house searches, and the creation of military camps where Greek Cypriot suspects were held and often brutally treated. It was also during 1956, on May 10, that the first EOKA fighters were hanged (Andreas Demetriou aged 22 and Michail Karaolis aged 23), arousing bitter criticism of British methods in dealing with the crisis. In total nine members of EOKA were hanged during 1955–9.

By the end of the year the Suez crisis had made the Turkish position in the Middle East significantly more important for British interests. A new British statement made on December 19, 1956 by the secretary of state for the colonies, Lennox Boyd, on the lines of “double self-determination,” introduced the possibility of *partition* for the first time. These developments encouraged both Turkey and the Turkish Cypriot minority to demand greater constitutional concessions. In March 1957, while Makarios was allowed to return from exile, though only to establish himself in Athens, Turkish Cypriot municipal councilors asked for separate municipalities. When the British refused, they resigned *en masse*. The proposition of a new plan by the new governor, Sir Hugh Foot, excluding the unilateral imposition of double self-determination angered the Turkish Cypriot community. In January 1958 Turkish Cypriots rioted against the British police, and in the following June–July attacks by the Turkish Resistance Organization (Turk Mukavemet Teskilati, TMT) – a paramilitary Turkish Cypriot organization formed to counteract EOKA – were extended against Greek Cypriots, making the situation extremely critical.

In the diplomatic field, the prospect of partition and the unilateral implementation of the

Macmillan plan as presented on June 19, 1958 made both Makarios and the Greek government more eager to seek urgently some kind of settlement. On the other hand, new regional developments also made Turkey willing to accept a compromise. The result was the Zurich (February 5–11, 1959)–London (February 17–19, 1959) agreements. The Greek Cypriot side abandoned the concept of *Enosis* and agreed to the formation of an independent Cyprus. The constitution nevertheless proved to be extremely complicated and inflexible as it was designed according to the international milieu rather than the needs of Cypriots.

The EOKA revolt constitutes the last “national” Greek Cypriot struggle. From a military point of view, EOKA was successful since the British forces failed to bring about its dissolution. EOKA further succeeded in acting as a lever of pressure in getting Britain engaged in negotiations. Greek Cypriots, however, miscalculated the Turkish Cypriot factor by believing that Turkish Cypriots would not oppose the development of open violence for the cause of *Enosis*. Still, this miscalculation was understandable. Until the onset of the conflict, Turkish Cypriots had shown no signs of developed nationalism as compared to their Greek Cypriot counterparts. It has also been argued that Greek Cypriots did not seize the opportunity to end the conflict with a favorable compromise. The Makarios–Harding talks have been described as a missed opportunity when, for the one and only time, the British negotiated exclusively with Greek Cypriots. The Greek Cypriot side believed that the decline of Western European authority in the Mediterranean and the Middle East facilitated such an outcome in their own case. However, it was because Britain had lost its other territories that it was particularly determined to hold on to Cyprus. When Archbishop Makarios finally decided to compromise in 1958, regional developments had largely influenced the fate of Cyprus. By then, Turkey and Turkish Cypriots were an inseparable part of the puzzle. Consequently, *Enosis* had to be sacrificed to avoid partition. Still, the outcome of the agreements was the formation – however complex in its synthesis – of a self-standing Cypriot state in which Cypriots had for the first time the ability to run their own affairs. Archbishop Makarios was elected as the first president of Cyprus on December 13, 1959.

The infant republic nevertheless soon faced fresh challenges. In late November 1963, Makarios promoted a constitutional revision which caused a major crisis. On the night of December 21, 1963, an incident in Nicosia between Greek Cypriot police officers and Turkish Cypriots signaled the beginning of bicomunal disturbances. Turkish representatives withdrew from their posts and Turkish Cypriots regrouped in consolidated enclaves. It was at this time that the “Green Line” was established in Nicosia. Additionally, in 1964, United Nations peace forces (UNFICYP) arrived on the island and plans for a Turkish invasion that year were averted after intervention by the United States. The colonels’ coup of April 21, 1967 in Greece significantly influenced future developments in Cyprus. Grivas’s unsuccessful operation against the Turkish Cypriot village of Kofinou on November 15, 1967 gave Ankara the opportunity to press the situation to its own advantage. Greek troops were therefore forced to withdraw from the island – this, however, excluded the Greek Force of Cyprus (Elliniki Dinami Kiprou, ELDIK). In the meantime, Makarios faced increasing opposition from intransigent *Enosis*ists. An underground organization, the National Front (Ethnikon Metopon), appeared in March 1969 accusing Makarios of betraying *Enosis*. On March 8, 1970, an unsuccessful effort to assassinate Archbishop Makarios took place. A few days later, the former minister of the interior and defense, Polikarpos Georkadjis, was found dead; he was thus considered by many as the instigator of the plot against the archbishop. In 1971, Grivas – who had been expelled from the island in 1967 – returned in secret and organized EOKA-B, bringing further turbulence to Greek Cypriot politics. Meanwhile, the Greek colonels’ regime in Athens ostensibly supported Makarios but in reality promoted opposition against him. Consequently, on October 7, 1973, a new effort to kill Makarios took place, but again without success.

The new dictatorial regime of Dimitrios Ioannides (established November 25, 1973) contained the seeds of the Cypriot tragedy. The death of Grivas in January 1974 left the leadership of EOKA-B in the hands of members who were under the influence of the Greek dictators. On July 15, 1974, a coup to overthrow Makarios – clearly designed by the Greek junta – took place. The officers of ELDIK and the National Guard initially met with some resistance from Makarios’s

supporters – especially the Presidential Guard. The archbishop managed to escape to Paphos, where he called on Greek Cypriots to resist. But any form of resistance was bound to be futile since a new government had already been established under Nicos Sampson. From the British base at Akrotiri, Makarios flew to Malta and then to London. He finally arrived in New York on July 18, 1974 and spoke out against the policy of the Athens' regime at the Security Council of the United Nations. Turkey, meanwhile, had already decided to seize a long-awaited opportunity. Its role as one of the three guarantor powers, as dictated by the agreements of 1960, and the claim to protect the Turkish Cypriot minority provided the pretext to intervene. The Turkish invasion of Cyprus took place in two phases (July 20–2 and August 14–16, 1974) and occupied 37 percent of the island, violating the human rights of thousands of people who died, went missing, or were expelled from their homes. These critical Cypriot developments led to the collapse of the dictatorial regime in Greece and on July 24, democracy returned to its birthplace. In Cyprus, Sampson resigned on July 23, 1974 and was replaced by Glafkos Klerides until the return of Makarios in December 1974, who resumed his duties as president of Cyprus until his death on August 3, 1977. Despite the international criticism the Turkish invasion received, negotiations for a just settlement have since remained unsuccessful.

The invasion naturally had negative repercussions for many aspects of Greek Cypriot life. Nevertheless, the measures adopted in the island during 1975–86 (the Emergency Action Plan) resulted in an economic upsurge which has often been described as an “economic miracle.” On the political scene, especially after 1980, the island witnessed a political bipolarity between the right and the left. Indeed, while AKEL demonstrated open sympathy for the Soviet Union, it still managed to influence a large percentage of Greek Cypriot society, partly due to the fact that despite its progressive rhetoric, it acted with a cautious, moderate, and flexible approach. On April 24, 2004, the proposition of the Anan Plan was rejected by Greek Cypriots and on May 1, Cyprus joined the European Union. Finally, in February 2008, the first AKEL president was elected and fresh efforts for a just solution emerged.

Czechoslovakia, resistance to Soviet political and economic rule

Michael Rossi

General resistance to both the Soviet-supported Czechoslovak Communist Party and communism as a form of government in Czechoslovakia was noticeably different from the organized protests and everyday forms of passive resistance in Poland, Hungary, and East Germany. This can be attributed to a number of factors present as early as 1946. First, Czechoslovakia enjoyed relative political freedom for a few years following the end of World War II. Unlike most states of Central and Eastern Europe, Czechoslovakia did not fall under the direct control of Moscow until 1948. Second, Czechoslovakia was one of the few countries in the immediate postwar period in which communists secured a sizable percentage of votes in the free elections of May 1946, winning 38 percent of the national vote and 40 percent in the Czech lands.

The party's initial leverage stemmed from its association with prewar socialist parties that had

formed governing coalitions with other parties, as well as its critical role in resistance movements during the war. In this regard, the communist monopoly over political and economic life in Czechoslovakia was less an outright Soviet takeover than a grafting of existing, politically legitimate institutions into the larger Soviet communist network (Suda 1989: 178–201). Consequently, Czechoslovakia retained a government that reflected a national character and degree of support by the working class far greater than that of other Soviet satellite states in the region.

Third, resistance throughout the communist period in Czechoslovakia began, and largely remained, within intellectual circles. There were no mass demonstrations of workers like those organized by Solidarity in Poland. Nor was there anything resembling the spontaneous uprisings and establishment of workers' councils in Hungary of 1956. The primary challengers to the communist power monopoly in Czechoslovakia were writers, teachers, filmmakers, and philosophers. The now familiar term Velvet Revolution that is used to describe the relatively peaceful dismantling of the communist regime in 1989 is a testament to the understanding that political dissidence and ultimate state transition was an elite-driven enterprise.

The one notable example of workers' protests occurred relatively early in Czechoslovakia's communist history. In response to the "currency reform" of May 31, 1953, which effectively cut industrial wages by 12 percent, about 20,000 workers staged mass demonstrations at the Škoda plant in Plzeň, a major industrial center in western Bohemia. The following day thousands of workers marched on the city hall carrying portraits of prewar presidents Edvard Beneš and Tomáš Masaryk. These demonstrations were largely confined to one city and the protests quickly fizzled out.

The most significant resistance in communist Czechoslovakia occurred between January and August 1968, in the events leading up to and surrounding the brief period of political and economic liberalization popularly known as the Prague Spring. By the mid-1960s Czechoslovakia had still not undergone the de-Stalinization reforms seen in Poland and Hungary. Stalinist elites were indeed put on trial, some were even imprisoned, but nearly all were quickly released and rehabilitated into political life – in many

instances by the same politicians, judges, and prosecutors that had indicted them in the first place. There was an official denunciation of the regime's criminal past during the 1950s, but political and economic reforms did not occur until 1963 when economic stagnation reached a degree that even hardliners could not ignore.

The first signs of liberalization occurred in 1963 with a writers' conference in Liblice devoted to the works of Franz Kafka. Previously, Kafka's writings had been taboo not only because he was a Prague Jew who wrote in German – a reminder of prewar cosmopolitan Bohemia – but also because many of his writings had focused on the absurdity of totalitarian rule. The authorization to discuss Kafka opened public discussion to include other forbidden writers, and even murdered leaders anathematized by the state. Official criticism of the Stalinist period provided a framework within which people could speak freely about the past without overtly challenging the party's control over social life.

The next few years also witnessed a series of films that used criticism of the Stalinist period as a veiled attack on current party leadership. Jiří Menzel's *Closely Observed Trains* (1968) questioned the official narrative that wartime anti-Nazi resistance was actively tied to Marxist ideology. Ludvík Vaculík's semi-autobiographical *The Axe* (1966) juxtaposed his own apathy and disillusionment with communist ideals with his father's deeply held belief in communism. In 1967 Ladislav Mňačko issued a strong critique of then Czech President Antonín Novotný and the party *nomenklatura* in his novel *The Taste for Power*. Milan Kundera published *The Joke*, an autobiographical novel of the Stalinist generation in Czechoslovakia, the same year. By the Fourth Czechoslovak Writers' Conference in 1967, writers, poets, and playwrights, including Václav Havel, openly criticized the current communist leadership in Prague for the perceived material and moral devastation wrought since 1948. They called for a return of the literary and cultural heritage of Czechoslovakia, and for the country to resume its rightful place in the center of a free Europe (Judt 2005; Golan 1973).

During this period of literary and artistic renaissance the Central Committee of the Czechoslovak Communist Party elected Alexander Dubček, a Slovak, as First Secretary on January 5, 1968 in response to growing pressure for

reform and modernization. Dubček immediately relaxed enforcement of state censorship and initiated a purge of old Stalinist hardliners such as Novotný. The Central Committee adopted the so-called Action Program calling for equal status and federated autonomy for Slovakia, and “democratization” of the political and economic system. The Action Plan, widely known as “Socialism with a human face,” called, for gradual facilitation of a pluralist political system over a ten-year period of transition. These events, along with the growing sense of literary and cultural freedoms, laid the foundation for what became one of the most liberalizing periods of any socialist country within the Soviet sphere.

The Prague Spring was characterized by the official abolishment of all forms of censorship and a degree of free expression not seen since before 1948. Government elites like Dubček sought a balance between genuine political rights and civil liberties and one-party socialism, while intellectual elites looked to redefine the role of the Communist Party, give renewed attention to Slovak grievances, and restructure the socialist system to better meet the needs and interests of Czechoslovakia as a federal state in Central Europe. While “Socialism with a human face” never fully succeeded in achieving the status of Tito’s “Third Way” socialism in Yugoslavia, the proposed reforms and the philosophical support they received from Czechoslovakia’s academic and artistic elite inspired like-minded groups in neighboring communist countries, raising alarms within the Kremlin.

The course of events that characterized the rise, popularity, and eventual suppression of the Prague Spring can largely be attributed to the personality and strategic choices of Dubček. First, Dubček was widely accepted by both state and society as a proponent of reform and modernization. As such, the Czechoslovak Communist Party had gained considerable popularity and legitimacy by the citizenry, and this acceptance gave Dubček the understanding that all reform was being done through official party channels.

Second, because Dubček was a committed and lifelong communist, he believed he could convince skeptical observers in Moscow that ongoing liberalizations and reforms in Prague were nothing to fear, but rather something to embrace and support. For him and his supporters, the party was the only appropriate and legit-

imate vehicle for change if the socialist system was to be preserved. Unlike their Hungarian counterparts of 1956 who made a clear break from the Warsaw Pact in a declaration of Hungary’s neutrality, Czechoslovak officials were committed to remaining firmly allied with Moscow; as long as this alliance was not jeopardized, it was assumed the Soviet Union would accept such internal changes.

Third and finally, Dubček’s pragmatic model of reform was, ironically, the greatest threat to Soviet control for its potential to motivate neighboring states to pursue like-minded policies. Hardline leaders in neighboring states had every reason to fear their own power bases being threatened, and petitioned Moscow to reign in Prague.

Caught between the increasing demands for further political freedoms through an uncensored press at home, and the growing warnings from Moscow and other capitals to contain perceived counterrevolutionary activities, Dubček had little choice but to continue emphasizing that the party had everything under control, and that it was strengthening popular support by channeling public demands through party organs. Unconvinced, Soviet Premier Leonid Brezhnev ordered 500,000 Warsaw Pact troops from Poland, Hungary, Bulgaria, East Germany, and the Soviet Union to enter Czechoslovakia on August 21, 1968.

The invasion and suppression of the Dubček government was quick and relatively unopposed despite numerous street protests in Prague and other Czech cities. Dubček and his colleagues were summarily arrested and flown to Moscow where they were forced to sign a document renouncing large parts of their program and accepting Soviet occupation. A period of “normalization” as it was termed by Soviet officials began almost immediately. State-controlled censorship was reinstated and the Action Plan nullified. One provision, however, the federalization of the country into Czech and Slovak parts, was retained. This was less due to addressing Slovak minority grievances than it was exploiting expected ethnic differences and further isolation of the reform-oriented Czechs. Dubček was allowed to remain in power and continued to be a symbol of national pride.

Passive resistance continued sporadically in the form of short-lived workers’ councils within the industrial towns of Bohemia and Moravia.

The self-immolation of Jan Palach, a 20-year-old student at Charles University, on the steps of the National Museum in Prague on January 19, 1969 was the most notable protest against the Soviet invasion and its aftermath. His funeral one week later became a date of national mourning as his death symbolized the death of democratic freedoms in Czechoslovakia. The following month, Jan Zajíc, another student, burned himself to death in the same place.

Dubček was finally removed from power on April 17, 1969 following a pro-democracy demonstration in the wake of Czechoslovakia's victory over the Soviet Union in an ice-hockey match. Over the next two years the Czechoslovak Communist Party was purged of nearly all reformists, 90 percent of whom were Czech. The journalists, playwrights, artists, writers, and professors who formed the intellectual core of the Prague Spring were also purged from their jobs, or forced to sign statements renouncing their actions. However, despite Moscow's apparently decisive victory, the suppression of the Prague Spring laid bare the sobering realities that communism could not be reformed, and that its power ultimately rested on the whims of the Politburo in Moscow and not on popular consent. Never again would there be an attempt to reform socialism through established party channels. As Judt aptly notes, communism's carcass might have been carried away in 1989, but its soul and vitality died 20 years earlier in Prague (Judt 2005: 447; Mlynár 1980).

Open resistance in post-1968 Czechoslovakia was almost non-existent until the emergence of Charter 77 in January 1977. Established by 1968 reformers and dissidents from several smaller organizations, the Charter served as a symbolic focus for a "second" culture and an alternative to official state information organs. Persistent threats of arrest for participating in its activities limited the Charter's influence to small groups of academics: little more than 2,000 in a country of 15 million. Moreover, unlike the cross-class alliances formed in Poland during the late 1970s and early 1980s, the Charter's membership did not pose a direct threat to the state until 1989.

Throughout most of 1989, sporadic demonstrations took place on the streets of Prague, the most notable a commemoration of the 20th anniversary of Palach's suicide, which led to the arrest of 14 members of Charter 77, including Václav Havel. On November 17, 1989 a state-

approved student march through Prague to commemorate the 50th anniversary of a Czech student's death at the hands of the Nazis turned into an anti-communist rally. The resulting suppression of the rally, and the isolation and beating of dozens of students, galvanized the larger Prague student body to organize rallies and protests – this time directly geared against the state.

Within a week of the November 17 demonstration the ensuing protests compelled the entire Czechoslovak Presidium to resign, ending its two decades of control over the country's social and political life. On November 19 Václav Havel, who had been under house arrest in rural Bohemia, returned to Prague and, with colleagues from Charter 77, formed Občanské Fórum (Civic Forum). Within days, spurred by the events on the streets and the rapid crumbling of the government, the Civic Forum evolved from an informal academic discussion group into a virtual shadow government. One of its first official proclamations demanded the resignation of those responsible for the "normalization" period following the 1968 Soviet invasion.

On November 24 party leaders resigned *en masse*. Two days later, Havel addressed a crowd of 250,000 in Wenceslas Square, sharing a platform with Alexander Dubček. The Communist Assembly elected Havel president on December 28 and on New Year's Day Havel ordered the amnesty of 16,000 political prisoners. The secret police was disbanded the following day. Roughly within one and a half months, communist Czechoslovakia ceased to exist.

D

Dada

Stacy Warner Maddern

Coinciding with the outbreak of World War I, Dada was originally perceived as a protest against bourgeois nationalism and colonialism in Europe and North America. Dadaists accused the interests of these groups of fueling the war through their influence on cultural and intellectual conformity. Dada, in its essence, was a form of artistic expression that sought to exist outside of those barriers. As artists, Dadaists sought to reject reason and logic and embrace irrationality and chaos. This was in direct protest to the natural order of capitalist societies which they considered representative of bourgeois culture and repression.

In French, Dada is a child's phrase that means "hobby-horse" and was adopted because of its more common usage in French nomenclature to mean "it's my hobby." The precursor of the movement was a 1913 creation by Marcel Duchamp known as the "Bicycle Wheel," consisting of a wheel mounted on the seat of a stool. By 1915, Duchamp was impacting artistic circles with his conception of "ready-mades," found objects that he presented as art, the most known of which was a urinal that he called *The Fountain*. Duchamp's "ready-mades" offered the least amount of interaction between artist and art, an extreme form of minimalism in artistic expression.

In the early twentieth century the movement flourished primarily in Zurich, New York City, Berlin, Cologne, Paris, and Hanover. In 1916, the name was adopted at Hugo Ball's Cabaret (Café) Voltaire, in Zurich by a group of young artists opposed to the war. The group included Jean Arp, Richard Hülsenbeck, Tristan Tzara, Marcel Janco, and Emmy Hennings. At this meeting a paper knife was inserted into a French-German dictionary and pointed to the word Dada. The

word was seized upon by the group as appropriate because of their anti-aesthetic creations and protest activities, representative of their disgust for bourgeois values and despair over World War I.

In their response to the violence and trauma of World War I, Dadaists developed shock tactics of their own by scoffing at the conventions of artistic media. They expanded the limits of traditional art by using fragments of modern life including newspapers, magazines, ticket stubs, mechanical parts, food wrappers, pipes, advertisements, and light bulbs in their work. Dadaists were known for their performances, publicity stunts, and efforts to manipulate mass media. Their vision stood on the foundations of altering highbrow perceptions of art by blurring the boundaries between it and life.

Critics of the movement deemed Dada as "anti-art," a term that Dadaists embraced because it separated them from the masses. Dadaists turned away from the conventional understandings of art because of its illusionary tactics, something they considered to be manipulative. Art, they believed, was not intended as an escape, but rather as a reminder of life, a reminder of the daily activities, experiences, and obstacles everyone had to live through. They were not afraid to emulate violence and chaos as a means of illustrating the hypocrisies of contemporary life.

Dadaists made ordinary things beautiful by calling them art. In doing so, they drew attention to the very fabric of life that was at times avoided or taken for granted. Their art form was revolutionary in that it did not attempt to manipulate but simply to recognize what is truly authentic and as such beautiful. As the Dadaist Hugo Ball wrote, "For us, art is not an end in itself . . . but it is an opportunity for the true perception and criticism of the times we live in."

Dahomey Women's Army

Nada Halloway

War is generally seen as a masculine activity, and the historical assumption has been that women could not mentally endure the front lines of battle. However, the women of Dahomey have proven this assumption untrue for centuries. The "Amazons" of Dahomey – they were given this name by western observers who thought they resembled the Amazons of ancient Greece – began as bodyguards in the royal palace but evolved into a fighting unit in the late 1800s. The king trusted these women because they came from non-Dahomean slaves who had no ties to any groups in any of the surrounding areas. In 1850, King Gezo changed the selection process by conscripting Dahomean women into the ranks. In 1840, they fought alongside the Dahomean male soldiers and gained notoriety for fierceness in battle. They did not flinch against Abeokuta's advancing army, even when their male counterparts fled the battlefield. Similarly, as France fought to colonize their nation during the Franco-Dahomean War (1892–4), they took on the French army and the French, even with superior weaponry and the support of the Foreign Legion, suffered many casualties.

The history of the warrior women of Dahomey has been largely ignored because of the notion that war is primarily a masculine activity but also because it serves to delineate the spaces that men and women occupy. To ignore the role of women in warfare is to guarantee the continuation of the idea that women can only occupy the domestic sphere. War solidifies the roles that women assume in societies and as such, naturalizes certain privileges for one group while disenfranchising another.

Dalit liberation struggles

Debi Chatterjee

Caste, Untouchability, and Indian Society

Hindu society is marked by caste stratification. Etymologically, the term caste derives from the Portuguese word *casta*, which means "breed" or "race." Originating probably as four *varnas* (divisions based on social functions), the Brahmins (priests and scholars specializing on scriptures), Kshatriyas (warriors), Vaishyas (merchants), and Sudras (laborers serving the above three), today some 3,000 social groups claim caste status. G. S. Ghurye (1993) identified six outstanding features of caste-ruled Hindu society, namely, segmental division of society, hierarchy, restrictions on feeding and social intercourse, civil and religious disabilities and privileges of the different sections, lack of unrestricted choice of occupation, and restrictions on marriage. Central to caste ideology has been the notion of "purity" and "pollution" of the castes.

The practice of untouchability remains integral to the caste order. Persons belonging to the castes lowest in terms of the hierarchy and considered as the most polluting are stigmatized as untouchables. Untouchable castes have been variously referred to as *panchamas*, *antyajas*, *atishudras*, *avarna*, depressed classes, Harijans, scheduled castes, and Dalits. In 2001, they comprised around 16 percent of India's population: 36 percent are workers, amongst whom 48 percent are agricultural laborers. Many are engaged in traditional occupations such as flaying and scavenging.

India's constitution guarantees equality to its citizens, and the practice of untouchability, constitutionally speaking, stands abolished. Nonetheless, the practice is still widespread in different parts of the country. Amongst the untouchable castes, illiteracy and poverty are much greater than amongst the general population. They are victims

of social exclusion and marginalization, despite the government's professed concerns for formulation of policies for their inclusion.

Early Anti-Caste Struggles

History abounds with tales of these people's struggles. Dalit struggles for social justice are almost as old as the caste system itself. The early struggles were largely articulated in terms of religious discourse and debates, challenging the basics of the Brahminical order and positing more democratic and egalitarian alternatives. Indian historicity has been depicted by the well-known historian Romila Thapar (1989) as characterized by Brahmin–Sramana (ascetics belonging to non-Brahminical sects) contestation. Shah (1980) broadly classifies the Dalit movements into reformative and alternative movements, the former seeking to reform the caste system in order to solve the untouchability problem, the latter attempting to create an alternative socio-cultural structure.

In the nineteenth century, western education, Christian proselytizing, and technological changes acted as catalysts in inspiring a variety of reform movements in different parts of India. Several organizations like the Paramhansa Sabha, Prarthana Samaj, Brahmo Samaj, and Arya Samaj questioned the prejudices and ignorance of orthodox Hindus without questioning the religious roots of the caste structure. Moreover, they were not movements by the Dalits, nor were they strictly speaking for the Dalits.

Protesting the exclusion perpetrated by the Brahminical tradition, many low-caste groups have developed their own alternative religious space within the Hindu fold. Such religious tradition tends to reveal an admixture of elements of orthodox Hinduism and survivals of animism and nature worship. From ancient times till today in villages across the length and breadth of the country, such folk expression of protest articulated in their own language and in their own style is manifested widely in the worshipping of village deities. Before the village gods all are equal, there being no caste discrimination or untouchability, with priests too coming from low-caste categories. In Bengal, the worship of the goddess of serpents, Manasa Devi, throughout the monsoon month of Sravan (July–August) or the boat-worshipping by the untouchable Chandals in what is called the *Chandal Kudni* are but two examples.

In efforts to liberate themselves from the humiliation of Brahminical oppression, oppressed caste groups have undertaken attempts at what Srinivas (1966) refers to as “Sanskritization.” By this process, low-caste Hindus attempt to change their customs, rituals, ideology, and way of life in the direction of high castes. It may be noted that Sanskritization aims at an upward mobility in terms of the caste hierarchy, but does not challenge the hierarchy *per se*.

Jyotirao Govindrao Phule

Born to a low-caste Kshatriya Mali, Kunbi sub-caste family in the Satara district of Maharashtra in 1827, Jyotirao Phule pioneered the non-Brahmin movement in Maharashtra. Rejecting and scathingly critical of the Brahminical scriptures and the caste system, Phule held them responsible for the ideological suppression and poverty of the low castes. He founded the Satyasodhak Samaj in Maharashtra in 1873 to combat Brahminism and the sanctity of the *Vedas* (the earliest texts of the Aryans, designated as the most authentic expressions of Hinduism from the nineteenth century). His emphasis was on education and organization aimed at countering the Brahminical ideology. He had close links with the Paramhansa Sabha, but was extremely critical of both the Brahmo Samaj and Prarthana Samaj. Over the years he wrote several books and monographs to highlight his views. These included *Brahmanance Kasab* (Priestcraft Exposed) and *Shetkarayacha Aasud* (Cultivator's Whipcord). In 1871, he started the paper *Dinabandhu*.

After Phule's death in 1889, the center of the non-Brahmin movement shifted from Pune to Kolhapur, with Sahu Maharaj (1884–1922) as an active sponsor. Phule is considered to be the first modern spokesman of the oppressed castes to have emerged from amongst their ranks. His opposition to Brahminism was uncompromising. His establishment of the first school for untouchables and for women significantly contributed toward generating low-caste consciousness and mobility. A perfect product of that consciousness was B. R. Ambedkar.

Narayana Guru

In Kerala, the Ezhavas, who were amongst the most backward and oppressed section of the Hindu population, comprising in 1891 some

16.20 percent of the region's population, were the first to lead bitter struggles for social emancipation, later emulated by other low castes including the Pulayas. Narayana, who was later to become Sri Narayana Guru, was born in an Ezhava middle-class agricultural family in Chempazhanthi near Trivandrum in 1855. A believer in the Adwaita (Monistic) philosophy and a follower of Swami Vivekananda, Sri Narayana Guru concentrated on setting up temples for the low-caste Ezhavas. The first such temple dedicated to Lord Siva (one of the three most important Hindu deities) was set up in 1887 at Aruvipuram; since it was consecrated by a member of the untouchable community, it came as a direct challenge to the Brahminical order. After this initial success he set up several other temples, and over time emerged as a popular leader of the poor low castes in the region. In 1898–9 Narayana Guru registered a *Yogam* (association) to manage the affairs of the temples. In 1903 at a special session of the *Yogam* it was decided to transform it into the Sri Narayana Guru Dharma Paripalana Yogam (SNDP), with the aim and object of developing spiritual and secular education and helping in the economic advancement of the Ezhavas. It is not surprising that as the temple-entry movement gained momentum, Sri Narayana Guru emerged as one of its earliest pioneers. He was both a spiritual leader and a social reformer. As a result of the Narayana Guru movement, the Ezhavas developed a sense of their own worth. They were transformed from passive underlings into a community which, after the nineteenth century, took the lead in various radical movements for the emancipation of the downtrodden. The SNDP movement had an overall liberating influence on Kerala's society of the period. Its success, moral and social legitimacy, and principles of equity, some of which were rooted in or sanctioned by Narayana Guru's teachings, were carried over to the field of radical politics and contributed to the process of radicalization of politics in the region.

Motua Movement

Amongst the low-caste people of Bengal, including the Namasudras, Poundras, Goalas, Malos, and Muchis, the Motua movement became extremely popular around the middle of the nineteenth century. Its main base was amongst the Namasudras. Initially launched by Harichand

Thakur, who was born to a Namasudra family of Faridpur in 1812, the movement was expanded and popularized by his son Guruchand Thakur, who led the movement after his father's death in 1878. Apparently the movement was of a religious nature, organized around the name of "Hari" (one of the three most important Hindu deities) with an emphasis on collective singing and dancing of the devotees in a demonstration of spiritual ecstasy. However, beyond that religiosity, the thrust of the movement was secular: its primary targets were to establish ways and means of attaining perfect peace of mind within the parameters of family life and to eradicate social inequality and ensure uplift of the downtrodden. In 1881, at the initiative of Guruchand Thakur, the first Namasudra Mahasammelan (Congress) was held at Dattadanga at Khulna, attended by an estimated 5,000 devotees. In his presidential address he emphasized education, decency of behavior, cleanliness, health, and strength of character as prerequisites for advancement. Guruchand can justly be described as the father of the Namasudra renaissance. He took the initiative in establishing educational institutions for the weaker castes and provided overall leadership to the Namasudra movement in changing their earlier derogatory nomenclature of Chandal to Namasudra. (The traditional term Chandal is historically a pejorative term, often referring to people who dealt with dead bodies. Thus, any action extending even to the lowliest is designated as *achandal*, "up to the Chandal.") Replacing this term by a relatively neutral one was itself a battle for cultural rights.

E. V. Ramasami

E. V. Ramasami, better known as EVR or Periyar (The Great One), was born in Erode in southern India in 1879. EVR held the Brahmins and their Sanskritic culture to be responsible for the social, economic, political, and cultural backwardness of the non-Brahmins in Tamilnadu. As such, he sought to smash the edifice of that culture and root it out lock, stock, and barrel, replacing indignity with dignity and inequality with egalitarianism. EVR structured his alternative in terms of the Self-Respect movement. He raised the slogan of *Cuya Mariyadai* (Self-Respect). The Tamil weekly, *Kudi Arasu*, became the principal organ of the movement. EVR's passionate speeches delivered in simple,

straightforward fashion succeeded in drawing a sizable following for the Self-Respect movement. The first Self-Respect conference was held at Chengalpattu in 1929.

Some of the most sustained struggles that came to be launched by EVR and the Self-Respect movement were in relation to temple entry, access to public spaces and institutions, gender equality, abolition of untouchability, Brahminism, caste, and religion. EVR was extremely outspoken in his atheistic beliefs. He strongly expressed his rejection of the idea of God, as well as idol worship, and used sharp language and agitational methods for expressing that opposition. Periyar's and the Self-Respecter's views on religion revolved around critiques of the Brahmin priest and Brahminism, the scriptures, religion as a worldview, religious practices, festivals, and rituals.

Bhimrao Ramji Ambedkar

With Ambedkar, the greatest leader of the untouchables that modern India has produced to date, the protest against caste, casteism, and the Brahminical order reached its peak. Religious and social struggles of the early phase were followed by the articulation of Dalit demands in terms of the modern language of politics under the able leadership of Ambedkar from the first half of the twentieth century. Through a sustained process of political mobilization on the one hand and hard political bargaining on the other, Ambedkar succeeded in establishing the untouchables as scheduled castes and as a politically relevant category both to themselves and to others, thus bringing the untouchables from invisibility to visibility, from silence to articulated protest. By the early twentieth century, armed with his intellectual sophistry and personal sense of pain, Ambedkar became the most formidable critic and opponent of the caste order on India's national scene, articulating the demands of the untouchables and carrying the message of their agony to the highest corridors of power.

Ambedkar was simultaneously a leader of the Mahars, a spokesman of the untouchables, and a statesman of national stature. Born in 1891 in a Mahar family as the fourteenth offspring of a Kabir-panthi (a sect following Kabir, a fifteenth-century preacher of syncretism and social equality) father, Subedar (sergeant) Ramji Sakpal, and mother Bhimabai at the Military Headquarters of War near Indore, Ambedkar experienced from

childhood much of the social ostracism that goes with low birth in a Hindu family. However, financial assistance from Maharaja Sayajirao of Baroda enabled him to undertake higher studies abroad. He obtained a DSc and in 1923 was called to the Bar.

His ideas developed as a clear synthesis of western liberal thinking on the one hand and Indian philosophical inquiries on the other, rendering his understanding of Indian society much more than merely superficial. His in-depth knowledge of Hindu philosophy, accumulated over years starting from his daily childhood routine of compulsory recitation of the Hindu scriptures and exposure to the light of Kabir and Buddha's dicta, revealed to him the many and diverse facets of Indian society. Impressed by western intellectual stalwarts like John Dewey, Edwin Robert Anderson Seligman, Edwin Cannan, John Maynard Keynes, Bertrand Russell, and others, western liberal thought seemed to hold out to him the panacea for the ills of his own caste-ridden society, of which he himself was so much a victim. With a combination of both theoretical exposition and sociopolitical activism, Ambedkar devoted his energies throughout his life to the goal of social justice.

Ambedkar's maiden entry into India's political scene came about in 1919 as he testified before the Franchise Committee, better known as the Southborough Committee. There he described the untouchables as slaves, dehumanized and socialized never to complain. He demanded their special representation, since he felt that untouchability constituted a definite set of interests which the untouchable alone could speak for.

Dr. Ambedkar's able leadership was reflected in his presentations before the Simon Commission (1928), at the Round Table Conferences (1930–2), and in the Constituent Assembly debates where he was the chairman of the Drafting Committee. At every level he did his utmost to ensure that the depressed classes were guaranteed certain minimum safeguards that he felt were essential for their security under the new constitutional system, since on transfer of power, authority would almost certainly go to the upper castes, who would be ill disposed toward the depressed classes. Amongst the safeguards, Ambedkar had demanded the introduction of a system of separate electorates for the depressed classes, a demand he had strongly asserted at the Round Table Conferences and which had generated perhaps

the bitterest conflicts between Ambedkar and Mohandas Karamchand Gandhi, as evidenced by the latter's launching of his much publicized fast to death. By the early 1930s Ambedkar had lost all faith in Gandhi and the Indian National Congress's likelihood of standing up for the depressed classes against the caste system. While his own performance won him widespread acclaim as an astute statesman and leader of the untouchables, Gandhi's opposition to the demand for separate electorates for the untouchables and his threatened fast to death drove a permanent wedge between Ambedkar and the Congress.

Over the years, Ambedkar developed an elaborate theoretical critique of the caste system alongside his activism. He wrote extensively on the roots of the caste system, Hinduism *per se*, the ill effects of the caste order, the minority question, the vision of a caste-free society, contemporary politics, the role of the Indian National Congress, issues arising in the context of constitution-making, and much more. One of Ambedkar's most lucid critiques of the caste system came in his booklet on *Annihilation of Caste*. It was originally written as the presidential address for a meeting of the Jat-Pat-Todak Mandal of Lahore in 1936, but he was not permitted to deliver the address because of its rather too radical tone.

In his efforts at politically organizing the untouchables, Ambedkar set up first the Independent Labour Party (1936), later the Scheduled Castes' Federation (1942), and finally visualized the formation of the Republican Party in 1956. In the initial years as he critiqued Hinduism, Ambedkar had hoped to reform the religion rather than to reject it. But gradually he equated Hinduism with Brahminism and with social exploitation in its most prevalent and dominant form in India. At every depressed classes conference since the Mahad Conference in 1927, resolutions renouncing Hinduism were passed. At the Jalgaon Conference in May 1929, a resolution was passed calling upon members of the scheduled castes to embrace any religion other than Hinduism. In 1935, at the Yeola Conference, Ambedkar's theoretical rejection of Hinduism was firmly established as he declared that he would not die a Hindu.

Believing in the importance of religion *per se*, Ambedkar could not opt for an atheistic solution as the obvious corollary to the rejection of Hinduism. Hence came the question of con-

version to some other religion. For a time Ambedkar seems to have contemplated choosing between Islam, Sikhism, or Christianity. Finally, he chose Buddhism. The background and his reasons for doing so are explicitly laid bare in his magnum opus, *The Buddha and His Dhamma*. Accompanied by thousands of followers, Ambedkar embraced Buddhism shortly before his death in 1956.

From early times, conversion has been one of the strategies adopted by Dalits in seeking to counter their humiliation. Such religious challenge to Hindu Brahminism has largely come from Islam and Christianity, both these institutionalized religions having made an early entry into the region. Contrary to Brahminical Hinduism, neither religion believed in hereditary stratification. Thus, to Hindus who craved for social transformation and for those who wished to shake off their caste burden, either of these religions appeared to offer an attractive alternative.

Moreover, the symbiotic existence of Hindus, Muslims, and Christians necessitated by historical and socioeconomic conditions led to the emergence of several syncretic religious denominations based on the preaching of persons such as Kabir, Nanak, Chaitanya, and others who were proponents of social equality in the eyes of God, thereby challenging the social basis of Brahminism. Conversions to these religions too were forthcoming.

Post-Ambedkarite Political Strategies of the Dalits

In the early 1970s, the Dalit Panthers emerged in Maharashtra as part of the countrywide wave of radical politics. Established as a political organization in 1972, ideologically the Panthers leaned on Ambedkar's thought, relied on urban youth and students, and spoke of revolution. They sought to wage a grand war against the *varna-jati* system (from the Middle Ages the *varna* was replaced by a multiple occupation-linked caste system, or the *jati* system). With the birth of the Dalit Panthers there came about a major paradigm shift in the hitherto structured language of Dalit politics.

The earliest Ambedkarite party, envisaged by Ambedkar himself, to make its presence felt in post-independence politics was the Republican Party. It has remained largely confined to western India, with only pockets of influence elsewhere.

In fact, repeated splits badly affected the party.

The Bahujan Samaj Party (BSP), another important Ambedkarite party, was established in 1984. In the mid-1980s, during the early years of its formation, the social base of the BSP was narrow and confined to the upwardly mobile and educated, mainly government employees, but by the 1990s it had broadened to include poorer sections of the community. The party was established by Kanshi Ram, a well-educated Ramdasi (low-caste) Punjabi who had formerly been a high-level government servant. He envisaged a two-stage transformation of society. First, political power was to be captured from the Brahmins. Later, the movement would penetrate deeper into society and transform it. But how this would be done remained unexplained. As it stands now, capturing political power appears to be the agenda of the day and, like other political parties treading the constitutional path, its attention appears confined to the maneuvers of electoral politics under the leadership of Kumari Mayawati, the Dalit successor of Kanshi Ram.

Dalit Liberation Struggles in a Globalizing World

Globalization has placed the Dalit population in India under a dual pressure. On the one hand, the age-old pressure of Brahminical societal structuring persists unabated. On the other hand, there is the pressure from the new wave of imperialism which capitalism in the present world is generating in the name of "globalization." In the Dalits, imperialism has found a ready source of cheap labor and in their common property resources a mine of wealth ready for extraction. Against the backdrop of globalization, efforts are being made by the Dalits to bring new issues into focus in the course of their struggles, to develop new tools and techniques of protest to supplement existing ones, and to explore new support bases in combating their marginality. In terms of issues, Dalit struggles prior to the 1990s largely concentrated on the implementation of reservations in education and jobs in the public sector. In the post-1990s, in the realities of a shrinking public sector and expanding private sector, private sector reservation demands have increasingly come into the limelight, alongside the earlier articulated demands.

Major developments in the field of Dalit liberation struggles after the 1990s have involved

setting up a National Campaign on Dalit Human Rights (NCDHR). NCDHR was launched in India in December 1998 to act as a non-political secular forum comprising Dalit scholars and activists. Its purpose is to promote solidarity, cooperation, and collective action at the national level for the promotion of Dalit human rights. The move came against the backdrop of worldwide activities centering around the completion of 50 years of the Universal Declaration of Human Rights. It has brought together Dalit activists from different states and union territories in India and abroad, thereby playing an important role in mobilizing opinion on the Dalit question in connection with the Durban Conference on Racism (2001), the Asian Social Forum meeting at Hyderabad (2003), and the World Social Forum at Bombay (2004).

Up to the 1990s Dalits living outside India had demonstrated little interest in matters regarding the struggles of their communities in India. However, the scenario changed significantly from the 1990s, with the Dalit diaspora taking an active interest in the articulation of demands for Dalit human rights. From the late 1990s Dalit Solidarity Networks (DSN) were set up in different countries to carry forward the struggle for Dalit human rights, bringing within their folds individuals as well as groups. The DSN organized seminars and workshops, undertook signature campaigns, submitted petitions, put up websites, and linked up with international human rights organizations like Amnesty International and Human Rights Watch. In March 2000, the International Dalit Solidarity Network was established for the networking of national solidarity networks, groups from affected countries, and international bodies concerned about caste discrimination. From 1998 onwards several Dalit conferences were organized in different countries. The First World Dalit Convention, organized by the Dalit International Organization and sponsored by the Indian Progressive Front (Malaysia), was held in Kuala Lumpur. In 2000, the International Conference on Dalit Human Rights was organized by the Voice of Dalits International (VODI) in association with the Dalit Solidarity Network in London. In 2003 an International Dalit Conference was held in Vancouver. In Kathmandu in 2004, the International Dalit Solidarity Network and the Dalit NGO Federation of Nepal organized an International

Consultation on Caste-Based Discrimination entitled *Establishing Dalit Rights in the Contemporary World: The Role of Governments, the United Nations and the Private Sector*.

Given the importance attached by the government of India to international approval, one strand of Dalit strategy has been to raise the issue of Dalit human rights in diverse international fora. From the 1990s the Dalit struggle moved to the international arena. The caste question was discussed for the first time at the World Conference on Human Rights in Vienna in 1993. Thereafter, it was raised at the World Summit on Social Development held at Copenhagen in 1995. A detailed critical examination of the system by the UN took place in 1996. Thereafter, the debate continued in different treaty-based bodies. An important effort was made to bring the issue of violation of Dalits' human rights onto the agenda of the UN at the Durban Conference on Racism in 2001. At the Durban conference, Dalit groups from across the world mobilized support from several international human rights organizations and fought a tough battle for the inclusion of caste in the official charter on race as a form of descent-based discrimination. They lost the battle, but they did succeed in drawing worldwide attention to the plight of the Dalits.

In December 2002, the United Nations Committee on the Elimination of Racial Discrimination, in concluding its discussions on descent-based discrimination, strongly condemned caste practices as violations of the International Convention on Elimination of All Forms of Racial Discrimination. In April 2005, the UN Commission on Human Rights adopted by consensus a decision to appoint two special rapporteurs to tackle the entrenched problem of caste-based discrimination. The Commission was endorsing an earlier decision taken by its Sub-Commission on the Promotion and Protection of Human Rights to conduct a comprehensive analysis of the problem and find solutions for its eradication.

Weaknesses remain in the Dalit liberation struggles, due to differences in perspectives, targets, strategies, leadership, and coordination. At the grassroots level, struggles are still largely focused on questions of untouchability, identity, reservations, education, land rights, displacement, and citizenship rights (where relevant). In the course of such struggles, what appears to be in focus is a fragmented rights approach rather

than a holistic human rights perspective. This is the general observable pattern so far as the functioning of the Dalit political parties, pressure lobbies, and Ambedkarite movements is concerned.

Dalit women have been particularly vulnerable, yet over the years their vulnerability has remained less noticed and less protested. Even as Dalit women have since the 1990s begun contesting their marginality and Dalit feminism has entered the academic discourse, their concerns hardly figure in the mainstream of Dalit struggles. The most marginalized amongst the Dalits are perhaps the teeming numbers of child laborers, the vast majority of whom are drawn from these communities. Even as illiteracy and school dropout statistics draw attention, the plight of these children hardly figures in terms of either the traditional rights perspective or the more contemporary Dalit human rights discourse. Such child labor is rampant in carpet weaving, firework and match manufacture, *bidi*-making (hand-rolled indigenous smoking material), glass and bangle manufacture, construction work, and rag-picking, not to mention child prostitution. Yet, on the agenda of Dalit liberation struggles, the question of Dalit child rights remains neglected to say the least.

Despite these limitations, a small but highly articulate Dalit elite, conscious of its rights, began to emerge in India from the first half of the twentieth century – thanks to Ambedkar's persistent efforts. Independence and subsequent legal, administrative, and political developments all acted as boosters in their own way. Today, it is this Dalit elite that has come forth to assert that Dalit rights are human rights. Internationalization of the Dalit issue, agitation by the Dalit diaspora, and emphasis on collective identity as projected through the National Campaign on Dalit Human Rights and the Solidarity Networks add new dimensions to the ongoing Dalit struggles.

Dange, S. A. (1899–1991)

Shatarupa Sen Gupta

Born in Nasik, Maharashtra, and inspired by the extremist ideas of Tilak, Shripat Amrit Dange's political career began when he was expelled from Bombay University for revolutionary activities. He participated in Gandhi's non-cooperation movement, but the Russian Revolution (1917) moved him towards Marxism. Dange's pamphlet, *Gandhi Versus Lenin* (1921), was much appreciated by M. N. Roy and the Communist International. Also impressed was R. B. Lotvala, a Bombay flour-mill owner, who financed Dange's study of Marxism and also helped him build a library of Marxist literature. By 1922 he had started publishing the *Socialist*, the first Marxist English weekly in India.

In 1924 Dange, along with Muzaffar Ahmed, Shaikat Usmani, and Nalini Gupta, was convicted for a four-year term in the notorious Kanpur Bolshevik Conspiracy Case. From jail they assisted the Conference at Kanpur (December 1925) in forming the Communist Party of India (CPI). After his release Dange immediately began mobilizing the Bombay textile workers through the Girni Kamgar Union as the general secretary, and embarked on a four and half year-long strike

in 1928. Dange edited the official organ of this union, *Krant*.

On March 20, 1929 Dange and 32 others were arrested in the Meerut Conspiracy Case on charges of establishing a branch of Comintern in India. They decided to use their trial as a platform to expose the nature of British imperialism; however, Dange did not sign the common text because it was influenced by the sectarianism of the Sixth Congress of the Comintern, and had rejected the civil disobedience movement – Dange held it important for the working class to give critical support to such a mass struggle. He was released in 1935. On October 2, 1939 Dange organized a one-day protest strike of the Bombay textile workers against World War II. Two more strikes followed in March 1940, for which he was arrested and released in 1943 when he was elected to the central committee of the CPI. In 1944 he became the chairman of the All India Trade Unions Congress.

In the period 1946–51 the CPI saw repeated changes in line, including two left lines, an insurrectionist line led by B. T. Ranadive, and a Chinese-style or Andhra line led by C. Rajeswara Rao. Dange was arrested after the illegalization of the CPI and remained in jail until 1950, when he was elected to the Politburo and opposed the advocates of the Andhra line. In the 1950s he was a leader of the struggle to form a unified Marathi-speaking province. In the 1957 elections he was returned to parliament with the biggest vote in India from a constituency in Bombay.

The Sino-Indian border dispute of the 1960s drove a wedge within the CPI. Dange held China responsible for the border incident and took a nationalist position, whereas many other leaders took a pro-Chinese position and condemned the Nehru regime. This, along with the debate on the nature of the Indian state and correct assessment of the Congress, led to a split in 1964, and formation of the Communist Party of India (Marxist). Dange remained with the CPI and advocated supporting the Congress.

In 1975 Dange supported the state of emergency declared by the Congress government, for which he was severely criticized. Later in the 11th Party Congress the majority of the CPI under the leadership of Chandra Rajeswara Rao opted for left democratic unity, which reduced Dange's group to a minority. In 1980 he was expelled from the National Council of the CPI. He then formed the All India Communist

Party, which soon merged with another small faction, the Indian Communist Party, to form the United Communist Party of India. Dange died on May 22, 1991.

Danton, Georges Jacques (1759–1794)

Junko Takeda

Georges Jacques Danton was a lawyer, a gifted orator, and an influential revolutionary leader during the French Revolution. He was a controversial figure, both revered as a charismatic statesman by his supporters and despised as a corrupt politician by those who opposed him.

Danton was born in 1759 in Arcis-sur-Aube, near Troyes, and followed his father into the legal profession. After studying at Troyes and Reims, he married Gabrielle Charpentier, the daughter of a restaurant owner, and bought the office of *avocat* (lawyer) in the Conseil du Roi in 1774. Through his legal connections he made the acquaintance of another lawyer, the young Camille Desmoulins, who would rise to prominence as a fellow Jacobin and ally throughout the French Revolution. Although he was neither a deputy to the Estates General nor the National Assembly, Danton demonstrated his early enthusiasm for the French Revolution by joining the *Garde Bourgeoise* (Civic Guard) in his Parisian district, where his skill as an orator won him a significant following. In May 1790 he founded the Cordeliers Club, a political organization that would become a center of revolutionary radicalism.

Danton was a principal organizer of the Tuileries uprising of August 10, 1792 that overthrew the monarchy, and his political influence increased significantly thereafter. The following month, when militant bands of Parisian *sans-culottes* invaded the prisons and slaughtered many prisoners, Danton defended their actions

– known to history as the notorious September Massacres – as justified in the context of the military emergency menacing revolutionary Paris. Many of the slain prisoners were belligerent counterrevolutionaries who posed a genuine threat, but many more were undoubtedly innocent of any counterrevolutionary intent.

Subsequently, Danton was elected minister of justice, and then was elected to the National Convention. He was among the majority of Convention delegates who voted for the execution of the king in January 1793. The following April he helped form the Revolutionary Tribunal and was one of the founding members of the first Committee of Public Safety.

Despite his radicalism, which led him to join Robespierre and Marat in the Montagnard faction of the Convention to defeat the moderate Girondins, by the summer of 1793 Danton had begun to differentiate himself from the most radical of the Jacobins, increasingly advocating conciliatory measures in an effort to rein in the Revolution's excesses. He supported the reduction of emergency revolutionary measures, and critiqued Robespierre's growing hold over the Committee of Public Safety. The rift between Robespierre and Danton became even more apparent in debates regarding the continuation of the Terror. Danton and his close comrade Camille Desmoulins used the *Vieux Cordelier* newspaper to express their growing opposition to the left-wing *Enragé* and *Hebertiste* factions.

Robespierre's rise to power in 1793 and 1794 heralded Danton's downfall. Robespierre progressively eliminated his enemies as he successfully steered the revolutionary government between the extremist factions and the moderate "Indulgents," led by Danton. After the Committee of Public Safety, with Danton's collaboration, eliminated the *Hebertistes* and *Enragés*, Robespierre turned on Danton and the Indulgents. Two weeks after the fall of the left-wingers, on March 30, 1794, Danton and Desmoulins were accused of plotting a conspiracy against the Revolution and sentenced to death. After prophetically proclaiming that Robespierre would soon follow him to the grave, and uttering his famed final words to the executioner, "Don't forget to show my head to the people; it's well worth seeing," Danton was guillotined on April 5, 1794.

Daquilema, Fernando (d. 1872) and the 1871 Uprising, Ecuador

Natalie Mutlak

Fernando Daquilema, a peasant from Cacha, Ecuador, led an indigenous uprising in December 1871 that is considered to be one of the most important in nineteenth-century Ecuador. The uprising expressed indigenous resistance against Ecuadorian nation-state building and was caused by high church taxes and forced labor for national roadworks.

Daquilema was an Indian living in the community of Yaruquies, in the province of Chimborazo, Ecuador. Personal data such as his date of birth are sparse and difficult to confirm. The uprising he led occurred during the presidency of Gabriel García Moreno (1859–65 and 1869–75), whose political project was the introduction of Ecuador to the international capitalist system and the integration of the country through the construction of national roads connecting coast and highlands.

In this context, two mechanisms were of special significance. On one hand, the payment of the “tithe” was established in 1866. Under this system, the tenth part of harvest and cattle had to be paid to the church. Tithe collectors were usually part of the local oligarchy, who often abused their power by multiplying the tax. On the other hand, the “law of subsidiary work for national roadworks,” passed on August, 3, 1869, particularly affected indigenous people by creating a system of forced labor. Both mechanisms provoked demographic decline and impoverishment and were met with strong indigenous

resistance. The community of Yaruquies, where the 1871 uprising was launched, was one of the hardest hit.

On December 12, 1871, the tithe collector Rudecindo Rivera was stopped and killed by a crowd of indigenous people when he was leaving Yaruquies. Approximately 3,000 insurgents gathered the same night and named Daquilema, who had been one of the leaders of the incident, king of Cacha. The next morning the crowd unsuccessfully attacked the community of Yaruquies. After this defeat, 20,000 people attacked the communities of Gajabamba and then Punin, where the indigenous peoples took over the town until the troops of Riobamba intervened. Communities from Cuenca, Ecuador in the south up to Pasto, Colombia in the north joined the uprising, so that President Moreno was forced to declare a state of emergency on December 21, 1871 and send in armed government forces. On December 23, the insurgents pleaded for a general reprieve, and Daquilema surrendered a few days later. Daquilema’s trial opened on March, 23, 1872, and he was sentenced to death and executed on April, 8 1872.

As a consequence of the uprising, the tithe decree was reformed and its abuse was prohibited. Acts of indigenous resistance in the province of Chimborazo were numerous, but the revolt led by Daquilema is a particularly essential part of the collective memory. During the 1990 national uprising in Ecuador, reference was made to Daquilema as part of the history of indigenous struggle against the dominant culture.

Davis, Angela (b. 1944)

Yusuf Nuruddin

Angela Davis is a political activist and Marxist philosopher. In 1970 this African American

woman, a unique product of varied experiences – the Jim Crow South, left-leaning activist parents, an elite and international education, a faculty appointment at UCLA, membership in the Communist Party of America (CPUSA), and solidarity with the black liberation movement – became a celebrated political prisoner and an internationally recognized revolutionary and symbol of black resistance.

Davis was born and raised in the racially segregated city of Birmingham, Alabama. Her parents were college graduates and educators. Her mother was an elementary school teacher; her father, initially a high school history teacher, eventually left the low-paying field of education to become a small businessman and became the proprietor of a service station in the black section of Birmingham. From an early age, Davis was acutely aware of, and often subjected to, the indignities, hostilities, and terror of segregation. Violence was not uncommon; her family's modest middle-class dwelling was at the very edge of a contested residential demarcation line separating black and white neighborhoods. The continuing black influx which traversed that line of demarcation was met by white flight and armed resistance. The tense area became known as Dynamite Hill, so frequent were the bombings to frighten away encroaching blacks who purchased property on the white side of the street.

Davis's parents were politically active, left-leaning opponents of segregation, with membership in the National Association for the Advancement of Colored People (NAACP) and friends in the CPUSA. As educators and activists they provided a culturally enriched and politically conscious environment, using their left social network to ensure that Davis would receive a first-class education. Through the auspices of a Quaker-administrated experimental program seeking to integrate black Southern students into white Northern prep schools, Davis spent her high school years at Elizabeth Irwin, a private K thru 12 school located in Greenwich Village in New York City and staffed by radical teachers who had been blacklisted by the public school system. In the classroom she was introduced to the *Communist Manifesto*, which had a striking impact upon her. As she warmed to this philosophy, classmates invited her to join Advance, a Marxist-Leninist youth organization affiliated with the CPUSA, which met at the home of Herbert Aptheker. Her young comrades

in Advance included the sons and daughters of several prominent Communist Party leaders.

Davis spent her undergraduate years at Brandeis University in Waltham, MA. As one of the few black students at the Jewish-sponsored university, Davis deeply appreciated the rare occasions on campus when guest speakers such as James Baldwin and Malcolm X addressed the black experience. Davis forged friendships with international students, including people of color, and deepened her internationalism through travel throughout Europe during summers and a junior year spent studying abroad in France. It was at Brandeis that Davis first came under the influence of the Frankfurt School philosopher, Herbert Marcuse. When Marcuse accepted an appointment at the University of California at San Diego, Davis followed him there to pursue graduate studies. Before doing so, she traveled to Germany where she spent two years studying under Theodore Adorno and other Frankfurt School philosophers.

While completing her doctorate, Davis traveled to Cuba to witness socialism firsthand and participate in productive labor in the sugar cane fields. In California her commitment to the black liberation movement deepened as she allied herself with the Student Non-Violent Coordinating Committee (SNCC), the Black Panther Party, and the Che-Lumumba Club, a black cell of the Communist Party. She first drew national attention in 1969 as a new yet embattled faculty appointee in the philosophy department at UCLA. Her radical political activism was controversial and drew the ire – and hate mail – of many conservatives who sought to fire her. When her contract was not renewed, Davis waged a fierce struggle to defend herself against political repression. Her enemies included Governor Ronald Reagan who vowed, upon her initial dismissal, that she would never work in the California university system again.

While fighting for her own rights, Davis continued to be drawn into political campaigns to aid other blacks facing racial injustice. One such prominent campaign was that of the Soledad Brothers. During a prison yard melee between black and white inmates in Soledad Prison, a marksman guard in the tower took careful aim and killed three black prisoners. In retaliation for the murder of the three black inmates, a guard was killed by a group of black inmates during a second Soledad prison rebellion. George Jackson,

John Cluchette, and Fleeta Drumgo, three vocal and politically militant inmates, were singled out because of their radical politics and framed for the prison guard's murder, though there was no evidence connecting them to the crime. Davis became increasingly involved with the community campaign to exonerate the Soledad Brothers – Jackson, Cluchette, and Drumgo – shrewdly using the publicity of her own struggle with the University of California to draw attention to the case, meeting with members of their families, and eventually meeting the Soledad Brothers in person. This meeting was eventful because Jackson and Davis were emotionally attracted to one another and the relationship between the two deepened through prison visits and an exchange of letters. Initially framed for a \$70 gas station holdup, Jackson spent over a decade in the penitentiary. Davis worked closely with George Jackson's younger brother, Jonathan Jackson, to free the Soledad Brothers and to publish the ten-years' worth of voluminous correspondence between the Jackson brothers, which documented their increasing political radicalization.

On August 7, 1970 Jonathan Jackson smuggled a carbine rifle into a Marin County Courthouse during the trial of three San Quentin prisoners, Ruchell Magee, James McClain, and William Christmas, freeing the prisoners and taking the trial judge and prosecuting attorney as hostages as the four demanded freedom for the Soledad Brothers and for all political prisoners. Officers fired upon their escape vehicle, and the aborted Marin County Courthouse revolt resulted in the deaths of Jonathan Jackson, McClain, Christmas, and trial judge Harold Haley, and the paralysis of the prosecuting attorney Gary Thomas. As a result of these events Angela Davis was catapulted to worldwide fame. She was implicated in the Marin County Courthouse plot because a shotgun used in the revolt was registered to her. She became the subject of a nationwide manhunt as one of the FBI's Ten Most-Wanted criminals, an underground fugitive, and upon her capture, a feted political prisoner. The Free Angela Davis campaign engendered enthusiastic mass support from both the white left, the general African American community, socialist countries, and the broad international community. Students in particular were drawn to her cause and media attention – both sympathetic and hostile – was riveted upon her. A *Newsweek* cover story

with the photograph of a manacled but proud and unbowed Davis was simply captioned “Angela Davis: Black Revolutionary” – a phrase which summarized her living legend, a legend which invoked awe and fear in some but awe, respect, and admiration in others. In June 1972 an all-white jury acquitted Davis of all charges.

After her acquittal, Davis continued her political activism. She was the founder of the National Alliance Against Racist and Political Repression. She ran as vice presidential candidate on the Communist Party ticket in 1980 and 1984, but broke with the party in 1991 to help found the Committees of Correspondence for Democracy and Socialism. Incarcerated over a year herself as she awaited trial, Davis has become an advocate not for “prison reform” but for the abolition of the entire prison-industrial complex. She is also a vigorous opponent of the death penalty and a member of the Advisory Board of the Prison Activist Resource Center. Davis is an ardent supporter of women's rights and a critic of the masculinist and misogynist tendencies in the black liberation movement. She spoke out against the chauvinist implications of the Million Man March and continues to lecture nationally and is author of several books. The focus of much of her work is on the nexus of race, class, and gender. Despite Ronald Reagan's vows, Angela Davis currently holds the Presidential Chair Professorship in the department of history and consciousness at the University of California at Santa Cruz, where she is also director of the feminist studies department.

Davitt, Michael (1846–1906)

William H. Mulligan, Jr.

Michael Davitt was a revolutionary and politician active in several Irish nationalist organizations. He first joined the Fenian movement – the Irish Republican Brotherhood (IRB) – but was expelled after announcing his commitment to achieve Irish independence through means other than physical force. Davitt then joined with Charles Stewart Parnell to create the Land League of Ireland, and continued throughout his career to advocate Irish land reform.

Davitt was born March 25, 1846 at Straide, County Mayo, Ireland. In 1852 his family was evicted from their land and settled in Haslingden, Lancashire, England. Davitt went to work at an early age in a local cotton mill. When he was 11 he lost his right arm in an industrial accident. He was able to attend school for a few years before going to work for a printer in 1861.

Soon after joining the Fenians in 1865 Davitt rose to the leadership of his circle. During an attempted uprising in 1867 he led a contingent in an attempt to seize a large cache of weapons at Chester Castle in the northwest of England. The attack failed, but Davitt and his men managed to avoid capture. For several years he was organizing secretary for the IRB in England and Scotland, during which time he worked as a traveling firearms salesman. In 1870 Davitt was convicted of felony treason and sentenced to 15 years in prison, but – through the efforts of Isaac Butt and the Amnesty Association – he was freed after 7 years.

His first publication was a pamphlet describing prison conditions and his own mistreatment. While in prison, Davitt began to rethink his political principles, eventually rejecting the Fenians' reliance on secret organization and the use of physical force to gain Irish independence. Instead, he began to favor an approach that sought change through aggressive advocacy and constitutional means. Davitt also came to see agrarian reform as central to the solution of Ireland's political problems.

Davitt's family had emigrated to the United States, and in 1878 he traveled there to visit them. While in the United States he met reformer Henry George, and the two men found a great

deal of ideological common ground. Before returning to Ireland, Davitt made a major speech in Boston in which he outlined his ideas about Ireland's future, discussing both agrarian reform and independence, and how they should be sought.

Shortly after his return, the supreme council of the IRB rejected Davitt's new approach, reaffirming its commitment to physical force and its focus on independence rather than a wider range of reforms. Davitt returned to his native Mayo and began recruiting support for his ideas. By August 1879 he had organized the Land League of Mayo, and a few months later, the Land League of Ireland, in alliance with Charles Stewart Parnell. When Davitt worked openly to elect Parnell and his allies in the 1880 election, the supreme council of the IRB expelled him, thus officially ending his ties to the Fenian movement.

Davitt's alliance with Parnell was pragmatic. The two men differed in temperament and tactical approach, and their goals and priorities were not the same. When Parnell was arrested in October 1881 and incarcerated in Kilmainham Gaol, he reached an agreement on land issues with the government, "the Treaty of Kilmainham," that led to his release on May 2, 1882. But four days later the Phoenix Park murders (the assassination of two high-ranking government officials in Dublin by Fenians) brought the entire reform movement under heavy attack. Davitt did not support the Treaty of Kilmainham, but in the interests of solidarity he kept his differences with Parnell private. Toward the end of the decade, however, the two men parted ways once and for all when Parnell's personal life erupted in a controversy (the Kitty O'Shea scandal) that ended his political career, and Davitt was among his harshest critics.

Parnell's fall brought reform efforts in Ireland to a temporary halt. Davitt went on a lecture tour to Australia in 1895 and while abroad was elected to Parliament. On previous occasions he had been disqualified after being elected, but this time he was allowed to take his seat. In 1898 he collaborated with William O'Brien to form the United Irish League, which brought the Parnellite and anti-Parnellite factions of the reform movement together.

Like many Irish nationalists, Davitt supported the Boers during their war against British domination. He resigned from Parliament in 1899 and worked unsuccessfully at organizing European

support for the Boers. Meanwhile, he continued to be a forceful advocate of land reform in Ireland. He opposed both the Dunraven Conference report on the Land Question in 1903 and the resulting Wyndham Land Purchase Act, which he perceived as major steps backward because their terms undid much of the work of the Land League and its successor organizations.

Throughout his political career Davitt supported himself working as a journalist. He regularly refused a salary or gifts from supporters. He married Mary Yore of Michigan in 1886 and they had six children. In 1906, shortly after helping the Labour Party in an election, Davitt became ill and died on May 31. He was buried in his native Straide, County Mayo.

Day, Dorothy (1897–1980)

Benjamin J. Pauli

As a writer, activist, and matriarch of the Catholic Worker movement, Dorothy Day helped to redefine the way Catholic religious teaching related to social engagement. Day was born in Brooklyn in 1897 but spent the bulk of her formative years in Chicago, where exposure to urban poverty initiated what would become a lifelong concern with social ills. When she first came into contact with radicalism as a student at the University of Illinois, the groundwork of righteous indignation that had been laid during her explorations of Chicago's slums was channeled into political activism. She joined the Socialist

Party and began working for the Socialist newspaper the *Call* in 1916 upon moving to New York City. This was the first of several newspaper positions, and her journalism brought her into contact with protests, marches, and meetings, as well as the crowd of bohemian leftist intellectuals that became her chosen coterie.

Day was about to undergo a religious transformation, however, which would put this period of her life – which included multiple partners, a divorce, and an abortion – in a significantly different perspective. While Day had felt a vague spirituality all her life, as a young woman she had been hostile toward religion on account of its role in fostering complacency and conservatism. Yet her interest in Catholicism grew during these years, and was bolstered by the birth of her daughter in 1927, whom she promptly baptized a Catholic. Day's conversion followed shortly thereafter, resulting in the alienation of her radical friends and the end of her common-law marriage to the father of her child. It was, at first, not at all obvious to Day that she would be able to harmonize her new-found faith with the radical social and political ideas that had stayed with her since her college years, and she suffered debilitating internal conflict for the next five years as she struggled to reconcile these priorities. In December 1932, her prayers were answered in the person of Peter Maurin, a French peasant who cheerfully combined Old World Catholic faith with a radical social program. The paper they started the following year, the *Catholic Worker*, represented the inception of the movement that would claim the rest of her life.

Day was at the forefront of all of the Catholic Worker movement's activities during her lifetime, and she edited the New York *Catholic Worker* until 1940, thereafter contributing as a reporter and columnist. While she tended to characterize her role as the logistical facilitator of the agenda originally laid down by Maurin, the spiritual authority she wielded within the movement ensured that her perspectives and priorities remained dominant. In relation to the theological teaching and hierarchy of the church, she would consistently display both the meekness of a guest in an adopted spiritual community and the deference of a sinner atoning for past transgressions. As a result, her social radicalism was paradoxically mixed with a theological conservatism that often set her at odds with other members of the movement, especially as the *Catholic Worker* carved out

a place for itself within the intensifying current of activism in the 1960s.

Though Day's staunch commitment to pacifism, moral integrity, and humble service up to the day of her death in 1980 cemented her standing as a source of inspiration for untold activists, her reputation was further bolstered in 2000 when she was designated a Servant of God.

De Silva, Colvin Reginald (1907–1989)

Charles Wesley Ervin

Born in Randombe, a village near Balapitiya, Ceylon, Colvin de Silva was a leading political activist, labor leader, Trotskyist theoretician, and popular orator in Sri Lanka. He went to England to pursue higher studies and was the youngest student ever to receive a doctorate from London University. While active in the Ceylon Students' Association in London, he met pro-communist students and was recruited by the young communist firebrand, Philip Gunawardena, to a circle of Trotskyists in London.

Returning to Ceylon, de Silva joined the South Colombo Youth League, affiliated to the All-Ceylon Youth Congress. With Gunawardena he led a successful strike at the Wellawatte Spinning and Weaving Mills, providing the Marxist group with its first trade union base. In December 1935 he participated in the founding conference of the Lanka Sama Samaja Party (LSSP), serving as the party's president for the next four years. He used his legal skills to combat colonial repression, notably the attempt to deport a young Australian party sympathizer, Mark Bracegirdle,

for the shooting of a Tamil worker during a strike on the Mooloya Estate in 1940.

On June 17, 1940 the colonial government, rattled by LSSP's anti-war and labor agitation, banned the party, jailing de Silva and three party leaders. In April 1942 the imprisoned Trotskyists escaped and fled to India. In Bombay, de Silva actively participated in the historic Quit India revolt as an activist of the newly formed Bolshevik Leninist Party of India (BLPI), the Indo-Ceylonese section of the Fourth International. Colvin escaped police raids in July 1943, and with several other Ceylonese fugitives relocated to Calcutta, where a BLPI branch was functioning clandestinely. During this period de Silva was BLPI secretary and a leading theoretician of the party. Using the pen names "C. R. Govindan" and "Lily Roy," he wrote pamphlets such as *The Dissolution of the Comintern* (1944) and *First Round of European Socialist Revolution* (1945). He also maintained contact with the international leadership of the Fourth International, an international Trotskyist organization in opposition to the Soviets and mainstream socialist parties.

In 1947 de Silva was elected to Ceylon's first parliament. When the British exited in 1948, de Silva developed the thesis that independence was "fake," a shift from direct to indirect rule. He became a principal LSSP leader after ending a divisive split. De Silva planned the August 1953 mass one-day *hartal* (general shutdown), led by the LSSP and left parties, forcing the government to restore rice subsidies.

Philip Gunawardena formed a rival party after leaving the LSSP, and in 1950 joined a liberal coalition government. When this government proposed making Sinhala the official state language, de Silva eloquently demanded in parliament for Sinhala–Tamil parity, warning of the dangers if the Tamil were relegated to second-class status: "Two languages: one nation. One language: two nations."

From 1960 to 1962, N. M. Perera, the popular LSSP leader, urged his party members to abandon their purist Trotskyism and engage in coalition politics, a position de Silva opposed. But by 1964 a majority of the LSSP supported Perera on this issue and the party formed a coalition government with the Sri Lanka Freedom Party. Colvin de Silva refused to accept a portfolio in the coalition government, but did not join a new ultra-left faction that split with the party. In 1970 de Silva became the minister of plantation

industries and constitutional affairs in Sirimavo Bandaranaike's coalition government. He helped draft the new republican constitution of Sri Lanka and did not oppose state repression of the Janatha Vimukthi Peramuna (People's Liberation Front) uprising in 1971, led by the radical Sinhalese nationalist youth group. In 1982 de Silva ran for president on the LSSP ticket, receiving only 1 percent of the vote.

De Valera, Eamon (1882–1975)

William H. Mulligan, Jr.

Eamon de Valera, the highest-ranking survivor of the 1916 Easter Rising in Ireland, played a leading role in Irish political life from 1916 through 1959. More than any other figure, he shaped

De Valera was arrested in 1916 for his involvement in the Irish Easter Rising. He was tried and sentenced to death, but the sentence was quickly commuted, mainly because of the fact that de Valera was born in America. A year later an amnesty was passed and de Valera and the others arrested in connection with the Easter Rising were freed. (Irish Embassy, Paris, France, Archives Charmet/The Bridgeman Art Library)

the nature of independent Ireland's social and economic life.

Eamon de Valera was born in New York City on October 14, 1882. His father, Juan Vivion de Valera, of Spanish ancestry, played little if any role in his life. His mother, Kate Coll, sent him home to Ireland in 1885 where he was raised by an uncle in Bruree, County Limerick. Little is known with certainty about his brief time in New York, his father, or his parents' exact relationship. During his political career much innuendo and speculation circulated about his early life – little of which was based on documented facts – and that has continued after his death as historians assess his life and contribution to Ireland.

De Valera was educated at the Bruree National School and then, as a scholarship student, first at Blackrock College and then at University College Dublin. He taught mathematics at a number of schools in Dublin and then at Carysfort College, Blackrock, a training school for female National School teachers. An attempt to obtain a professorship in mathematics at the National University of Ireland was unsuccessful. In 1908 he joined the Gaelic League, where he met his future wife, Sinéad, a National School and Irish language teacher, whom he married in 1910.

In 1913 de Valera joined the Irish Volunteers, which had been organized to counter paramilitary organizations in Northern Ireland that were opposed to Home Rule. He also joined the Irish Republican Brotherhood (IRB). The IRB was a secret society that was opposed by the hierarchy of the Catholic Church, of which de Valera was a devout member throughout his life. This is but one of a number of enigmas concerning de Valera and his actions during a long career in public life.

During the 1916 Easter Rising de Valera commanded the defense of the southeastern approaches to Dublin. There was heavy fighting in the area he commanded, but he was not directly involved. After the failure of the rising, he was among the leaders sentenced to death by a British military tribunal. A public outcry against the executions, however, resulted in his sentence being commuted to life in prison. He was the highest-ranking participant in the rising to survive. By June 1917 he had been released from prison as the British government sought to gain peace in Ireland and support there and in the United States for its war effort. Passage of a law to conscript Irish youth into the British

army generated strong opposition in Ireland. A sharp increase in nationalist sentiment led to the election of 73 Sinn Féin (Ourselves Alone) candidates, including de Valera, who won seats in Parliament in the 1918 general election.

In January 1919 the successful Sinn Féin candidates, rather than taking their parliamentary seats in London, met in Dublin and constituted themselves as Dáil Éireann (Irish Parliament), and elected de Valera its president. He soon left Ireland for the United States, seeking financial and political support for the nascent republic. Arthur Griffith, the founder of Sinn Féin, replaced him as president. His trip to the United States was a mixed success. He raised a substantial amount of money, but did not obtain US government recognition of the Irish Republic and had a number of conflicts with Irish American leaders, especially Judge Daniel Cohalan of New York. When he returned to Ireland the guerrilla war for Irish independence was well underway and Michael Collins had emerged as the principal Irish republican leader. However, de Valera, due to his connection to 1916, resumed the presidency of the Dáil.

In the aftermath of the Versailles Peace Conference and its rhetoric about the self-determination of nations, world opinion and British public opinion supported the Irish in their war for independence. Although he initially discussed terms of a settlement with British Prime Minister David Lloyd George, after the truce of July 11, 1921, and after the Dáil rejected the first version, de Valera sent a delegation to London headed by Collins and Griffith to resolve remaining disagreements and complete the negotiations. He opposed the final treaty, which gave Ireland dominion status within the British Commonwealth, without clearly stating an alternative to acceptance and addressing the consequences of rejection. A major obstacle for de Valera was an oath of allegiance to the British monarch as head of state that the treaty required of members of the Dáil.

When the Dáil approved the revised treaty he led his faction out in protest. He allowed himself to be named president of the putative Irish republic founded by the 1916 Easter Rising, which he and other opponents of the treaty claimed it dishonored. This split led to the Irish Civil War. His position in that conflict, however, remains very ambiguous. He appears to have been more of a figurehead with the title of president

than the actual anti-treaty leader, having lost effective control to Liam Lynch, among others. Former comrades-in-arms during the War for Independence waged a brief but very violent struggle for control of the new Saorstát Éireann (Irish Free State). Atrocities on both sides weakened the fledgling state and undermined its legitimacy. After Lynch's death in April 1923, de Valera regained control and quickly sought a cease-fire from the Free State government led by William Cosgrave. When he failed to get one, he unilaterally declared the war over. He was imprisoned by the Free State government, but elected to the Dáil while still in Kilmainham Gaol. He again refused to take the oath, as did his supporters, and they were denied their seats. His purpose was, and remains, unclear.

His leadership of Sinn Féin was challenged at its 1926 Ard Fheis (annual convention) and he lost his position as president of the alternative Irish Republic. He quickly formed a new political party, Fianna Fáil (Soldiers of Ireland). In 1927 the Dáil passed a law requiring candidates to agree to take the oath before running for office. Faced with political irrelevance, he and his followers took the oath he had resisted for so long and took their seats in Dáil Éireann. Fianna Fáil won the general election in 1932 and de Valera became president of the executive council of the Irish Free State. He would be the central figure in Irish political life until 1959, and then served as president of Ireland under the 1937 Constitution, which he wrote, from 1959 to 1973.

As soon as he gained power, he began dismantling the apparatus of the Free State's dominion status under the Treaty of 1921. In 1937 the new Constitution he wrote severed all ties to Great Britain, asserted Irish sovereignty over all 32 counties, and expressed Ireland's intention to become economically self-sufficient. The constitution also reflected de Valera's social conservatism, especially in its recognition of the Roman Catholic Church's "special place" in Irish society.

During World War II, known in Ireland as the Emergency, de Valera declared the nation neutral rather than allying it with Britain, the "ancient enemy." In large part this was a pragmatic recognition of the after-effects of the Irish Civil War. Ireland was far from completely neutral, however, and in fact favored the Allies against the Central Powers in many ways. De Valera sparked controversy by signing the

condolence book at the German embassy after Hitler's death. His explanation that neutrality required it because he had signed the condolence book at the United States' embassy after Roosevelt's death is consistent with the literalism inherent in his long opposition to an oath of loyalty to the British king (although most people viewed the oath as meaningless).

While not among the top leaders of the 1916 Easter Rising, de Valera was the person most responsible for implementing its vision of an independent Ireland. The principal leaders had been executed, and neither of his two main rivals, Griffith and Collins, survived the Civil War. William Cosgrave, head of government from 1922 to 1932, had to first deal with the Civil War that de Valera's intransigence triggered, and then to establish a government for a new state whose legitimacy was questioned, all the while burdened by the ambiguity that de Valera's conduct imposed on Irish political life.

De Valera's Ireland was socially conservative – largely deferring to the Roman Catholic hierarchy on social questions, most famously on the issue of healthcare for women and children – and committed to ineffective economic policies promoting self-sufficiency. Under de Valera, Ireland remained a poor country characterized by large-scale emigration of its youth. He spoke on many occasions of the spiritual nature of the Irish people, whom he presented as uninterested in materialism. Characteristic of his influence was the remarkable fact that television did not arrive in Ireland until after his retirement from active politics.

De Valera died in 1975 and is buried in Dublin's Glasnevin cemetery in a simple grave, neither in the Republican Plot nor in an elaborate site like those of O'Connell, Parnell, and Collins.

Debord, Guy (1931–1994) and the spectacle

Dimitrios K. Dalakoglou

Guy Ernest Debord was a self-described filmmaker, agitator, activist, author, artist, and the most famous member of avant-garde movements Lettrism International and Situationist International (SI). Together with the rest of the Situationists, he was involved in – and to a certain degree influenced – the May 1968 rebellion in France. In theoretical terms he was part of the poststructuralist Marxist trend of the 1960s and was engaged in an aesthetic-oriented direct action activism until the early 1970s, when he abandoned such activities “for the construction of situations.” Debord co-edited the journal *Internationale Situationiste*, to which he contributed eight articles, and is the author of numerous pamphlets, books, and articles written between 1952 and 1994. His most famous and comprehensive book is *The Society of the Spectacle* (1967), upon which his 1973 film of the same title is based.

The Society of the Spectacle was published in French in November 1967, and in English in 1970. The book is divided into nine parts and includes 221 theses (indicated by the symbol #). Its layout, in combination with the lack of page numbers, provides a dynamic “manifesto” style.

The book is illustrated with *détournements*: images “hijacked” from other sources, transformed from their original meaning and rerouted to facilitate situationist political purposes. This was also the technique of situationist filmmaking. Generally, Situationists suggested the “hijacking” of preexisting dominant discourses in an attempt to subvert and reclaim them. Examples include the rewording of preexisting texts, film scenes with replaced dialogue, or popular political and commercial images subverted into ironic collages. Such visual *détournements* were part of a broader political SI agenda.

The Society of the Spectacle was critically based on political philosophy such as works by Hegel, Georg Lukács, and especially Marx and Engels. It was also influenced by the writings of anarchists such as Mikhail Bakunin and Max Stirner, socialist thinkers such as Charles Fourier, Rosa Luxemburg, Bruno Rizzi, Eduard Bernstein, and Anton Pannekoek, historians such as Lewis Mumford and Daniel Boorstin, and other thinkers such as William Whyte, Sigmund Freud, and Søren Kierkegaard.

According to Marx's theory of commodity fetishism, social relationships amongst people and the relationship between the producer and his/her own product are masked within the market economy. The social relationships of capitalism alienate individuals from other people, their own labor and production, and from their own everyday experience. Capitalism of *both* types (Debord considered socialist countries to be under a "bureaucratic capitalism"), but especially modern market capitalism, reduced commodities and consumption to the most significant elements of society. This commodity-centered system of reference was causing a more advanced alienation.

The society of the spectacle is a stage of modern capitalist society which emerges with the broader usage of technology, especially that of mass media and the moving image. In the society of the spectacle, sight and visual representations dominate everyday experience. Debord argued that in an earlier stage of the economy's domination over society, "being" was degraded into "having," while during a subsequent stage "being" is further degraded from "having" into "appearing." Commodities, which were once actual material objects, are gradually being replaced by visual representations, images. For example, people consume not the actual commodity but its branding, which is a fundamentally visual element. However, the alienating properties of the system remain, hence this consumption of commodities-images mediates the latest type of human alienation.

The spectacle becomes the major system of reference, colonizes everyday life, and attributes to people the role of image-consumers and thus of passive spectators, not that of active agents. Consequently, people are transformed into spectators of their own lives. Control of these visual representations, for example within television,

is monopolized by a dominant system which empowers and maintains the reproduction of the sovereign sociopolitical and cultural regime. Within this system of powerful but controlled representations, authentic situations are being created anew in a sphere of visual representations; thus, a non-real perception of everyday life, space, time, and history dominates the human experience. Debord argued that appropriate revolutionary praxis should be an aesthetic image-centered one that uses the "spectacular" mechanisms of the dominant regime. This is the essential Situationist principle of the construction of situations: a direct action where people create the situations of their own experiences and do not accept the representations-situations constructed by others within the spectacle.

Besides the concept of the "spectacle" *per se*, the book also emphasizes the themes of aesthetics, consumption, social class, space, time, city, media, art, and culture. In 1988 Debord published *Comments on The Society of the Spectacle*, which was a retrospective added to the 1967 book. There he defended his theses against various critiques and claimed that the contemporary society was/is an advanced phase of the society of the spectacle, where resistance and change were/are even more difficult than in the 1960s.

Debord was a notoriously contradictory figure. Henri Lefebvre, who was involved with the Situationists before coming into conflict with Debord, was subsequently concerned with what he thought to be Debord's over-critical attitude, especially against other contemporary Marxists. He also claimed that Debord had created tensions as a result of his often authoritarian stance within the Situationist International. Debord's work has been criticized for what was considered an unnecessarily affected style of prose, while some authors doubt its originality. Nonetheless, Guy Debord remains one of the most significant radical authors of the 1960s who represents the great paradigmatic shift in the political discourse.

In 1994 Debord shot himself dead. The theoretical legacy of his spectacle theory today is well established in the critical analysis of modernity, media, and visual and material culture within academic discourses. More important, however, are his political propositions, which inspire and remain relevant within contemporary radical activism around the world.

Debs, Eugene (1855–1926)

Stacy Warner Maddern

Few individuals have ever conformed to the tradition of American radicalism quite like Eugene V. Debs. Both politician and agitator, Debs led the Socialist Party in America from its inception in 1901 to his death in 1926. From 1900 to 1920 he conducted five presidential campaigns as the socialist candidate, polling nearly 6 percent of the national vote in 1912. Born in 1855 at Terre Haute, Indiana, Debs dropped out of high school at age 14 and became a painter for the railways. By 1870 he was working as a fireman on the railroad and attending night classes at a local business college. It was on the railroads that Debs would first be exposed to organized labor as a member of the Brotherhood of Locomotive Firemen, an organization that would later name him "grand secretary" in 1875.

In 1893 Debs helped found the American Railway Union (ARU), organizing all ranks of railroad workers together. Organized in Chicago, the ARU was the first industrial union in the

United States, and Debs' experience with the group helped lead him to cooperative socialism. It also led him to jail for the first time as a result of the 1894 Pullman Strike. Reacting to a 28 percent wage decrease, 4,000 Pullman Palace Car Company workers took to a wildcat strike throughout Illinois on May 11, shutting down the railways west of Chicago. Many of these workers were members of the ARU, who under Debs wanted a peaceful, non-violent strike. The solution was an organized boycott by union members of running trains containing Pullman cars. However, when the Pullman Company brought in strike-breakers, violence erupted and US marshalls were brought in to end the strike. For his involvement Debs was sent to jail for "obstructing the mails" and contempt of court, but he refused to believe that the strike had not been a success.

The Pullman Strike had given the federal government an opportunity to break the unions, and for the ARU the results were devastating. Its reign as a union was over and its members black-listed. Debs, however, held the strike as a success since strikers had held strong together for a common cause, buckling only by the hand of the state. He emerged from jail a more committed socialist since the Pullman Strike had convinced him that capital had no interest in negotiating with labor but was intent on crushing it. Herein he attacked the capitalist structure with a vigor that would last the remainder of his life.

In 1898 Debs helped form the Social Democratic Party, and in 1900 ran as its first presidential candidate. In 1901 he helped found the Socialist Party of America and in 1904 ran as its presidential candidate, quadrupling his vote from 1900 and assuming his role as the evangelist of socialism. Central to the socialist mission was the labor question, and Debs believed the most efficient way of communicating their doctrine was through the labor unions. He lent his name and support to the Industrial Workers of the World (IWW) in 1905 but later allowed his membership to lapse due to the group's use of violence. His serious distaste for violence had only increased since the Pullman Strike, and he insisted that revolution could be reached by peaceful means. His firm commitment to political action was far too astute to subscribe to any beliefs that would destroy the party's hopes of political success. He rejected any Bolshevik or Marxist doctrine that cited the use of violence or bloodshed as necessary.

Debs appealed to the common, uneducated people working in factories, digging mines, or tilling soil for their livelihood. He reached out to blacks as well as whites. He believed that if blacks were allowed equal opportunities, they would no longer be compelled to work for lower wages. Only through socialism could the African American free himself from bondage. He sought to create a utopia in which all men were legally and intrinsically equal.

On June 16, 1918 Debs gave an anti-war speech in Canton, Ohio protesting America's involvement in World War I. The speech led to his arrest for violating the Espionage Act, which was used to prosecute radicals everywhere. Convicted in federal court and sentenced to 10 years in prison and disenfranchisement for life, Debs lost his citizenship.

In what was perceived by many as a feeble attempt to rally the Socialist Party, Debs was nominated for president for the last time in 1920. Conducting a prison campaign, Debs received 913,664 votes, 3.4 percent of the national vote, and the highest number for a Socialist Party presidential candidate in the US. The following year newly elected President Warren G. Harding commuted his sentence to time served and released him from prison on Christmas Day, 1921.

In his final years Debs continued to give speeches and wrote several articles to rally the socialist cause. In 1924 he was nominated for the Nobel Peace Prize by Finnish communist Karl H. Wiik, who claimed that Debs had worked "actively for peace during World War I, mainly because he considered the war to be in the interest of capitalism." By 1926, largely due to prison confinement, his health had deteriorated, causing him to enter the Lindlaur sanitarium just outside of Chicago, where he died at the age of 70.

Decembrists to the Rise of Russian Marxism

Lars T. Lih

The Russian revolutionary tradition of the nineteenth century was always heavily influenced by western models, coupled with a deep awareness of the need for modifications in order to fit local conditions. The model that eventually won out was European social democracy, particularly as exemplified by the German Social Democratic Party (SPD). By 1900 the centrality of the SPD model was accepted by both Russian socialist parties, that is, not only the Russian Worker Social Democratic Party (RWSDP) but also the Party of Socialist Revolutionaries (PSR), the party that claimed a direct lineage to the early Russian revolutionary tradition.

The story of the Russian revolutionary tradition is thus in large part the rise to dominance of the social democratic model. This model can be defined as follows: a nationwide party that uses constitutionally guaranteed political freedom in order to assert leadership over the class struggle of the workers, to conduct wide-scale agitation for socialism, and to use opportunities for non-revolutionary political action as a means of preparing for a revolutionary takeover of state power by the workers. At the heart of the social democratic model is Marx's idea of the world-historical mission of the proletariat to introduce socialism. This core idea took on institutional embodiment through decades of political innovation by social democratic activists.

Many obstacles stood in the way of the acceptance of the model by Russian revolutionaries. First of all, the social democratic model implied acceptance of capitalism as the dominant economic mode of production. For many years, Russian revolutionaries demanded that the Russian revolution avoid capitalism by ushering in an immediate transition to socialism. The social base for this revolutionary transition was supposed to be the peasantry and its communal traditions. The revolutionary transition was visualized in different ways. Some, such as Mikhail Bakunin,

looked for widespread local riots (*bunt*), followed by a collapse of the state and its replacement by a free federation of communes. The utter unreality of this scenario was quickly detected by revolutionaries such as Pëtr Tkachev, who called for a dictatorship by an advanced minority that would guide the transition to socialism. Tkachev's highly undemocratic scenario was rejected by the People's Will Party (*Narodnaja volja*), who called for a democratically elected constitutional convention which (so it was fervently assumed) would establish a socialist regime.

An essential precondition for the social democratic model was political freedom, that is, constitutionally guaranteed right to free speech, assembly, and the like. But not only was there no political freedom in Russia, the Russian revolutionaries of the 1860s and 1870s did not want it. Political freedom, the goal of the scorned liberals, would serve only to consolidate middle-class rule and befuddle the masses. At best, freedom of speech was an irrelevant luxury for the largely illiterate peasantry.

The demand for immediate socialism and the fear of a liberal constitution were two sides of the same coin. One prominent spokesman for Russian socialism, Pëtr Lavrov, wrote in the 1870s against mere "political revolution" that would install "nothing but liberal checks and guarantees . . . The revolution we look for must be popular [*narodnyi*] and social; it must be directed not only against the government, and its aim must be not only to deposit the power in some other hands, but it must at once overthrow the economic foundations of the present social order" (Miliukov 1962: 289). The logic of this position was summed up in the slogan "now or never" – that is, if we don't have a socialist revolution soon, capitalist development will lead to bourgeois class dominance and perversion of the proto-socialist consciousness of the peasantry. But as time went on and the "now" receded into the past, the revolutionaries' own logic led either to the despair of "never" or to a second look at the social democratic model.

Starting with People's Will in the late 1870s, the Russian revolutionaries accepted more and more wholeheartedly political freedom as an immediate goal for Russia in order to apply the social democratic model. One of the "populist" revolutionaries of the 1870s, Stepniak (Stepan Kravchinsky), wrote in 1890 that "we acknowledge without equivocation that, as regards the

political question . . . our program is precisely that of the advanced section of Russian liberals." Political freedom was now an acceptable, even a necessary, goal because "if we look at the West, we see clearly to what brilliant results our comrades have attained by using those weapons of propaganda and agitation which constitutional freedom has placed in their hands . . . The German Socialist Party, which has astonished the world with its titanic growth, presents the most brilliant example of political discretion and self-control" (Miliukov 1962: 235–6).

The SPD model was thus accepted as a goal that determined the content of the upcoming political revolution – namely, the replacement of tsarist absolutism with political freedom. But the revolutionaries still assumed that the tsarist repression meant that direct application of the SPD model was impossible. In the same 1890 article in which he endorsed the SPD model, Stepniak argued that the anti-tsarist revolution required "not only popular insurrections, but military plots, nocturnal attacks upon the palace, bombs and dynamite" (Miliukov 1962: 235). Thus terrorism remained an acceptable and even mandatory means for achieving the political preconditions of the SPD model. This insistence on terrorism was not incompatible with acceptance of the SPD model – in fact, as we shall see, the adoption of terrorism in the late 1870s was an important step toward accepting the necessity of a strictly political revolution. The Russian revolutionaries felt that terror was justified by tsarist repression. They therefore decisively rejected anarchistic "propaganda by deed" in constitutional countries. When the American President James Garfield was assassinated by Charles Guiteau in 1881, the People's Will Party – fresh from their own assassination of the Russian tsar – issued a protest "against such violent acts as the assault of Guiteau [i]n a country where the liberty of the individual makes an honest struggle of opinions possible" (Miliukov 1962: 304).

One final stumbling block to the acceptance of the social democratic model was its seemingly exclusive focus on the industrial working class. This exclusivity was obviously inappropriate to Russia where both the radical intelligentsia and the peasantry had indispensable roles to play in any successful revolution. Ways had to be worked out to adjust the Marxist insistence on the centrality of the workers with Russian class realities.

The first serious manifestation of the revolutionary spirit in Russia was the attempted coup in December 1825 by high-born officers who tried to take advantage of the interregnum after the death of Alexander I and before the accession of his brother Nicolas I. The so-called Decembrists were strongly influenced by the intellectual currents from the West that they had experienced during the Napoleonic War. The plotters had no social base of any kind and were easily crushed.

The revolutionary spirit began to revive with “the people of the forties” such as Aleksandr Herzen and Mikhail Bakunin. These men came from the gentry, were strongly influenced by the most advanced currents of radical western opinion, and eventually ended up in permanent exile. Herzen started off with the same observation about the European revolution of 1848 as Marx: the workers were not a serious force for socialism so long as they accepted the leadership of radical middle-class democrats. As opposed to Marx, Herzen proceeded to write off the possibility of European socialist revolution and turned to Russia, where (in an entirely bookish way) he discovered the socialist potential of the peasant commune.

Meanwhile, a cohort of revolutionary thinkers had come to prominence in Russia itself: the “people of the sixties,” such as Nikolai Chernyshevsky, Nikolai Dobroliubov, and Dmitri Pisarev. These men continued the amalgamation of advanced western ideas with theories about Russian uniqueness. Chernyshevsky’s famous novel *What Is to Be Done?* (1863) not only popularized the projects of western “utopian socialism” but painted a portrait of the dedicated revolutionary that was lastingly influential.

From the 1820s to the 1840s there was a steady democratization of the revolutionary cohort, from high-born officers to the wider gentry to *raznochintsy* (literally, “men of mixed [that is, low] ranks”) such as the priest’s son Chernyshevsky. Nevertheless, the Russian revolutionary tradition was still confined almost exclusively to talk among the educated classes. There were notions of assassinating the tsar and other repressive figures, linking this to the idea of sparking upsurges especially among the vast rural masses. But the only assassination carried out by Russian revolutionaries was of a fellow revolutionary. This was the notorious Nechaev affair of 1869, in which a key follower of Bakunin – Sergei Nechaev – had a dissident member of a conspir-

atorial group in Petersburg killed for challenging his leadership.

Of course, at this time (the 1860s) the western Marxist tradition was itself mainly talk and the SPD model was still only in an embryonic stage. The idea that the workers themselves would organize on a mass scale in order to introduce socialism via political power was still barely understood by most western socialists and revolutionaries. Marx’s economic writings were already highly influential in Russia, but they were used to reject the desirability of anything like the SPD model. Marx’s analysis of the relentless logic of capitalist development confirmed the “now or never” strategy of strangling capitalism in its cradle.

The prehistory of Russian socialism came to an end with the remarkable “to the people” movement of 1874. In an almost spontaneous way, thousands of young intellectuals went out to the village to make contact with the people: to learn about them and to stir them up to revolution. This experiment ran up against the incomprehension of the peasantry and was quickly destroyed by police repression. Yet for all its ridiculousness and extravagant features, the episode started a search for viable revolutionary political institutions that would combine the revolutionary energies of the intelligentsia and of the people – a search that went through many painful false starts but persevered throughout the rest of the century.

The “to the people” episode taught the revolutionaries that propagating the revolutionary message required careful attention to the actual outlook of the people. For this reason, the revolutionaries now called themselves *narodniki* or populists (from *narod*, the people). Strictly speaking, the term “populist” applies only to the stage in Russian revolutionary development from the “to the people” movement in 1874 to the rise of People’s Will in 1879–81. Perhaps paradoxically, this “populist” stage marks an important step in the evolution toward the SPD model, since the revolutionaries now seriously set themselves the task of propagandizing the potentially revolutionary class.

The practical experience of this stage led the Russian “populists” to an appreciation of two factors: first, tsarist police repression would cripple any attempt at large-scale agitation, and second, urban workers were a more easily available and more receptive audience than the scattered peasants. Both factors led to a greater

stress on the need for political freedom, especially since the workers themselves insisted on it in their own programs.

In turn, the goal of political freedom led to the adoption of terror as a method. Since a mass movement was not yet possible, a “handful of daring people” (the self-description of the terrorists) would force the autocratic government to make the necessary concessions. Not terrorism per se but rather the acceptance of political freedom as an interim goal was rejected by other “populists” as heretical. The resulting dispute led to the disintegration of the previous “populist” organization Land and Liberty (*Zemlia i volia*) and its *de facto* replacement by People’s Will in 1879. In 1881 People’s Will carried out the assassination of the tsar Alexander II: a triumph of terror that resounded throughout Europe. But this triumph also exposed the unrealism of many other fundamental assumptions of People’s Will about the shakiness and lack of social roots of the tsarist government. The “handful of daring people” was also not as elusive as they thought, but their execution did give them long-lasting heroic martyr status.

In the 1880s the Russian revolutionary tradition seemed at a dead end. There was little revolutionary ferment either among the intellectuals, the workers, or the peasants. Terrorism still seemed both necessary (even the newly-fledged Russian Social Democrats led by Georgii Plekhanov still allowed a role for terror) and ineffective. The only notable assassination plot of the decade was in 1887, when a small group of students, outraged by government repression of even the most innocent student organizations, improvised a plan to kill the tsar. The plot was exposed before any action was taken. One of the leaders of this group – which called itself the Terrorist Fraction of People’s Will – was Aleksandr Ulyanov, Lenin’s older brother. Ulyanov and others were hanged.

And yet energy continued to be put into both institutional innovation and theoretical reflection. Institutional innovation revealed itself in the patient attempt by isolated activists in various towns to create underground organizations that would square the circle of maintaining links with wide layers of the workers and eluding police repression. The stage reached in theory is shown by the 1887 manifesto of the Terrorist Fraction, penned by Aleksandr Ulyanov. Here we see almost a complete acceptance of the logic of

the SPD model, including a primary focus on the workers instead of the peasants. Nevertheless terrorism was still seen as the primary weapon of the anti-tsarist revolution.

Meanwhile, major new developments at the beginning of the 1890s prepared the ground for the final acceptance of the SPD model. Abroad, the SPD attained new heights of prestige when the stubborn loyalty of its worker constituents forced the mighty German government to repeal Bismarck’s anti-socialist laws (1890). In 1892 a concise and highly influential exposition of the SPD model, *The Erfurt Program*, was penned by the young Karl Kautsky. Kautsky’s version of the model was particularly Russia-friendly, since it stressed just those themes that made most sense to Russian revolutionary activists: the primordial importance of political freedom and the proletariat’s role as leader of the whole people. Kautsky’s *Erfurt Program* had a long-lasting influence on Russian social democracy that far outweighed any book by a Russian author.

In Russia itself the famine of 1891, coupled with what was seen as the government’s bungled response, marked the beginning of a new era of dissatisfaction and unrest throughout society. The famine also brought home to public opinion that Russia was now in a stage of irreversible capitalist development. In 1896 worker strikes in Petersburg amazed public opinion by their militancy, discipline, and relatively successful outcome (the government promulgated legislation limiting working hours). For advocates of the SPD model, these strikes were a stunning confirmation of their wager on the existence of a genuine worker movement.

The early Russian social democrats in the 1880s and 1890s had shown that a version of the SPD model could be applied even in tsarist Russia. But even many of the social democrats accepted the idea that the SPD model was revolutionary only in regard to achieving socialism, but not political freedom. They therefore saw their own task as carrying out propaganda for socialism and leading the economic struggle, rather than overthrowing the tsar. Only after an internal struggle within social democracy did the idea win out that the most urgent goal for the movement was the political revolution.

By the beginning of the new century, Russia had two socialist and revolutionary political parties, each based squarely on the SPD model (as shown by their membership in the Second

International). By the time of the second congress of the RWSDP in 1903, those currents within the party who had wagered on the political militancy of the workers – figures such as Plekhanov and Pavel Axelrod in the older generation, Lenin and Iulii Martov in the younger generation – had assumed leadership. Their basic strategy can be summed up as follows: let us build an underground party as much like the SPD as possible, so that we can overthrow the tsar and build a party even more like the SPD.

The Party of Socialist Revolutionaries that took shape around 1900 is often called “neo-populist,” but it could equally well be called eclectic or non-dogmatic social democracy. The SRs had learned from the Russian social democrats that an underground organization with a mass base was possible. This underground of a new type meant that terrorism was no longer the only conceivable effective weapon against tsarism – but paradoxically, it also gave the terror tactic a new lease on life. Theorists of the party such as Victor Chernov justified terror as an effective complement to the mass movement – and indeed, a series of high-profile assassinations right after the turn of the century did help spark off the 1905 revolution. In doctrinal terms, the SRs focused less exclusively on the workers than did the social democrats. The contrast between the parties was greater in doctrine than in practice, since each concentrated on the urban workers, welcomed intelligentsia support, and responded as best they could to growing peasant militancy.

Deleuze, Gilles (1925–1995), Guattari, Félix (1930–1992), and the global justice movement

Simon Tormey

Gilles Deleuze and Félix Guattari were French thinkers whose work, though once obscure, has come to be regarded as an important resource for the development of the theory and practice of the global justice movement (GJM), particularly the libertarian, horizontal, disaffiliated part of it. While their work is dense and difficult to digest for those uninitiated in the arcane world of contemporary French theory, many of the concepts they developed in their joint work have nonetheless passed into the lexicon of the GJM. These include most notably the concepts of the “rhizome,” “minoritarianism,” “deterritorialization,” “multiplicity,” and “nomadic” thought and practice. Deleuzo-Guattarian themes have been picked up by a range of contemporary authors and activists, most notably Michael Hardt and Antonio Negri, whose joint works *Empire* (2001) and *Multitude* (2004) are replete with terms borrowed from Deleuze and Guattari. The latter’s work has informed the development of a variety of heterodox leftist currents, including primitivism (Feral Faun, John Zerzan), immediatism (Hakim Bey), insurrectionary anarchism (Alfredo Bonanno), and postanarchism (Todd May, Saul Newman) – all of which have adherents in the GJM.

Deleuze and Guattari were very different characters with very different training. Deleuze built his reputation as an iconoclastic academic philosopher in the 1950s and 1960s producing a stream of highly original readings of various

thinkers within and beyond the philosophical canon (Hume, Spinoza, Nietzsche, Bacon, Proust, and Sacher-Masoch), as well as a number of keynote works, most notably *Difference and Repetition* (1994) and *Logic of Sense* (1990). Guattari was a trained psychoanalyst as well as a political activist, helping to set up the Clinique de la Borde at Courcheverny, which was to become a center of the French anti-psychiatry movement. He wrote many original shorter pieces examining the nature of subjectivity, group psychology, and the possibility for non-hierarchical or “transversal” social transformation, drawing heavily on the work of Jean-Paul Sartre in particular: *Molecular Revolution* (1994); *Soft Subversions* (1996).

These two intellectuals came together in the aftermath of the Paris uprising of 1968 to produce a series of contentious, provocative, and imaginative works, the best known of which is the two-volume *Capitalism and Schizophrenia* written in the 1970s. The *Anti-Oedipus* (1984) offered a critique of mainstream and heterodox Freudian theory. The second volume *A Thousand Plateaus* (1988) develops a critique of statism, using data gathered from every avenue of human enquiry from anthropology to musical composition. Other works followed, including most notably, *Kafka: Towards a Minor Literature* (1986) and *What is Philosophy?* (1994), their last joint work before the death of Guattari in 1992. Deleuze committed suicide in 1995 after a long illness.

Transcendence/Immanence – Verticals/Horizontalis

Given the enormous volume of materials, commentators have in general fought shy of trying to condense their work into a number of key points or arguments. It is certainly true that their work defies compression or easy summary. On the other hand, as far as activists are concerned there are certain concepts that resonate through their work. In terms of a uniting theme, what stands out is what may be called a critique of “transcendence,” in turn contrasted with what they term “immanence.”

Transcendence here equates to the idea that any given aspect of life is governed by some form of ordering principle. Thinking about social life, this might be in terms of a belief in God, or the necessity for the market, or class struggle,

or natural law. Such themes operate in political and social thought as anchor points that offer a certain basis from which to criticize the past and present, and offer recipes for future happiness.

As the term transcendence implies, these notions are seen by those advocating them as immune to challenge and thus enjoy what they term “royal” status. They are unquestionable and thus offer the basis for certainty, authority, and sovereignty over an area of human activity, whether that be art, literary theory, or political governance. *Anti-Oedipus* offers a critique of the domination of one such position, namely Freudian and post-Freudian theory and its obsession with the Oedipal triangle between Mother, Father, and Child. *A Thousand Plateaus* offers an analysis of the manner by which royal science operates more generally to “striate” or “overcode” fields of human activity so as to make them conform to an overarching principle. It demonstrates how space that would previously have been “smooth” or open is conquered by a governing logic, which organizes everything within.

Thus, in their terms, the past should be read less as the history of class struggles (Marx) than of progressive “territorializations” and “deterritorializations,” as one principle or logic supplants another. On the other hand, Marx’s description of the force of the market unleashed under mercantilism demonstrates how this works very clearly. Feudalism, a logic of kingship underwritten by religious conviction, is progressively swept away by the force of mercantilism which implants a new logic: that of the market and “value.” Deterritorialization is, as they put it, immediately followed by reterritorialization by capitalism.

Mention of Marx illustrates both what is common in Deleuze and Guattari to Marx’s enterprise and also what is different, giving a sense of their importance for today’s social movements. A key point is the relationship between ideas and the economy, and by extension between governing principles and governing imperatives brought about by changes in production. It is noticeable that for Deleuze and Guattari, states and statism do arise as a result of economic necessity but are better understood as the response of given groups and societies to the uncertainty of “nomadism,” a form of life

that resists implantation, territorialization, and certainty of tenure. Nomadism is from this point of view the “outside” of *any* settled system and is implicitly a threat to it. This is why in Deleuze and Guattari’s terms any kind of individual or collective behavior that “escapes” social regulations or norms is opposed by “sedentary” authority, sometimes violently so. Nomadic groups (barbarians, gypsies, Hells Angels, skater gangs, “anti-social” street kids) thus appear as “war machines” to the sedentary majority whose existence threatens the status quo.

The “nomadic war machine” (NWM) is a key motif in *A Thousand Plateaus*, serving to inspire the idea that there are forms of interaction that escape “royal” ways and which can be regarded figuratively as “immanent” and unmediated by force of law. The NWM in turn illustrates in organizational terms the nature and form of *rhizomatic* thought and action, also a key term in Deleuze and Guattari’s lexicon. By contrast with arborescent or tree-like structures, rhizomes spread “underground.” They shoot out roots in a random tangle, as opposed to being connected to a single “trunk” that provides shape and sustenance for all the constituent branches. Now while Deleuze and Guattari use the concepts of rhizome and arborescence to explore all manner of phenomena, social theorists have been quick to seize on the distinction as a way of exploring the different dynamics of social movements and the different trajectories that movements can take in terms of both of their internal dynamic and in terms of the potential they offer as prefigurative agents of social transformation.

Towards a Minor (Global) Politics?

Deleuze and Guattari’s analysis maps onto current debates about whether the GJM is horizontal, immanent, nomadic, and anti-statist, or conversely whether it is (or should be) vertical, that is organized by reference to an overarching program or ideology with leaders and led. It also maps onto the debate concerning what the end or goal of the GJM is. Anti-Leninists such as John Holloway stress that the point is not to “take power,” which is the goal of traditional revolutionary activity, but to develop forms of “anti-power” that diffuse vertical structures while enabling groups and communities to empower themselves.

In truth this is a rather simplistic rendering of what is a very complex analysis, and what is left out is almost as important as what is left in. In particular, the analysis presented in *A Thousand Plateaus* suggests an end to governance as such, along with all forms of fixed and known identities of the kind associated with concepts such as “nation” and “community.” The underlying concern, inherited from Deleuze’s suspicion towards all forms of “identity,” is the preservation and enhancement of “difference” and “singularity.” This in turn explains the preoccupation in their joint work with the concept of the “minority” and “minoritarian.” Social organization is on their terms a process of integrating singularities into larger “aggregates” and ultimately into the “majority.”

It is not for nothing that the discourse of politics rotates around the needs, wants, and desires of “the majority” and even more so “the people.” The majority stands for what we should want, and – by extension – for what others want us to want. So the figure of the majority is not, as they make clear, a numerical concept, so much as an impositional one: “the majority” is a figure constructed to discipline that which threatens social order, which in turn may be the vast majority in numerical terms. So when in *A Thousand Plateaus* Deleuze and Guattari refer to the proletariat as bearing the “power of the minority,” it is from the point of view of emphasizing that the proletariat is less a concrete identity, so much as a project or “becoming” that confronts and overturns the majority which might itself be proletarian.

Thus there is a process of submission in political discourses, a setting to one side of what the singular wants or needs in favor of forms of consumption, behavior, and action that sustain the social. In Deleuze and Guattari’s terms such an operation represents the channeling and repressing of desire into socially acceptable forms of behavior that is deeply corrosive of singularity. A genuinely revolutionary politics dedicated to unleashing the creativity of singularities confronts “majoritarianism” in all its forms. A “minor” politics value the different, the idiosyncratic, the abnormal, and disruptive, as opposed to forms of thought and action that conform to the majority – or rather what is constructed as in the needs or interests of the majority by dominant powers. However, this is

never regarded as a “micro-political” gesture of non-conformity and resistance by individuals.

In their work and particularly in the work of Guattari the task is posed as one of combining micro-politics with macro-politics and vice versa. Thus the question of the form of organization that brings together these aspects is absolutely central and helps explain Guattari’s interest in the idea of the “crystallization” of political action in what he terms “transversal” forms of organization, by which he meant forms of political collectivity that are reflexive, responsive, and transparent to participating individuals and groups (*Molecular Revolution*). Here of course is the suspicion of orthodox communist politics with their vanguards, central committees, and divisions of labor designed to foster fealty to the party line. Here too the seed of an interest in contemporary forms of politics that appeared to break from this tradition, such as the Brazilian Workers’ Party (Partido dos Trabalhadores), which – as he read it – sought to generate active alliances and affinities under a “party” umbrella while recognizing the need to cherish and preserve difference and differences (*The Party Without Bosses*).

Minoritarian Contemporary Activism

Again, the concept of minoritarian resistance is one that resonates with contemporary activism and with the efforts of theorists such as Hardt and Negri to make sense of recent developments. Thus the latter’s account of the centrality of “refusal,” exodus, and escape from Empire is one that echoes Deleuze and Guattari’s rejection of the methods and arguments of “official” politics in favor of forms of activity that query the logic of majoritarianism. Of course, this can sound like a defense of “lifestyle” politics with its accent on “dropping out” and engaging in ineffectual or mild forms of resistance that leave systems of oppression untouched. In reality a minor politics is *itself* implicitly critical of lifestyle politics, and is closer in this regard to the situationist intolerance with forms of behavior that remain firmly within the “spectacle.” Wearing a Che Guevara T-shirt is not a “minor” gesture given the mass production of such items; nor is spending the summer moving around highly profitable rock festivals. Minor means challenging the majority,

and this can include “petty resistances” of the kind routinely termed “anti-social behavior,” “lack of cooperation,” “slacking,” “idleness,” and so on. It also includes artistic creation written off as “vulgar,” “in bad taste,” “dangerous,” “upsetting,” and so forth. More generally it is an attempt to shrug off the imperative lurking in society to behave “normally,” “properly,” and cooperatively and to do what one is told.

On the other hand, what should not be lost sight of is that minoritarian resistance means joining with others in *collective* acts of defiance and resistance that challenge embedded power so that refusal and exodus develop into forms of interaction that challenge the governing logic of the system. However, it is resistance without threatening to erect a new order or implant a new “royal science” that merely repeats the exclusions and oppressions being challenged.

Again, this suggests an affinity between the idea of minoritarian resistance and a range of contemporary initiatives. Chief among these would be the Zapatista insurgency, which self-consciously rejected traditional revolutionary rhetoric in favor of practices of immanent self-constitution, dialogical practices of “govern-obeying,” and the safeguarding of an autonomous zone or “smooth space” beyond the striated world of Mexican deferral forces. Also the social forums, for all their faults and exclusions, can be regarded as developments of a “minor” kind, particularly when they are accompanied – as they often are – with autonomous initiatives and spaces. The Charter of the World Social Forum (WSF) has an almost explicitly Deleuzo-Guattarian agenda of preserving an “open meeting place” of a “non-party” kind that does not seek power or forms of representation of existing social struggles.

The stress on collective agency as articulated in the idea of the NWM is underpinned by the idea of the agent as a “multiplicity” and ultimately as a “multitude” – a collection of singular agents united in their desire to negate the existing order. This is a “molecular” or “micro” politics that nonetheless as Deleuze and Guattari argue has a “macro-political” aspect. The NWM, for example, is a crystallization of singularities, but it is still a crystallization that can create and achieve larger ambitions. Its effectiveness and energy derive from this sense of shared undertaking or purpose, but also from the shared sense of the contingency and temporary nature of any alliance.

Collective action is action for some particular purpose or end, whether it be unblocking desire or generating forms of living together that do not create some artificial “community” of permanent interests. But the terms and conditions of this multiplicity are immanent – not transcendent. No one speaks for those within such a collectivity.

It has no interests, needs, or presence that can be represented or made present except by those who themselves compose the collective.

So in summary Deleuze and Guattari are not anarchists, nor for that matter are they any other kind of “ist.” They do not, that is, counterpose one image of society to another; they have no answers and no overall perspective that they propose as “true” in some relative or absolute sense – merely concepts that “resonate” as tools of analysis – or not. This, it would seem, is the attractiveness of their work for a generation of activists wearied by the sectarianism of their forebears. Deleuze and Guattari steer clear of labels, pigeonholing, and the “carving of the field” in the manner of today’s firebrand theorists such as Slavoj Žižek and Ernesto Laclau. It is a politics that in their terms “stutters,” offering little in the way of certainty, but a great deal in the way of a suggestive repertoire of concepts and ideas that “resonate” with at least one part of today’s movement of movements.

Demerara Slave Rebellion, 1823

Thomas Muhr

The Demerara Slave Rebellion was one of several revolts that erupted in the Caribbean in the first decades of the nineteenth century. Founded as a Dutch colony in 1746, Demerara stretched for about 25 miles along the Caribbean coast east of the Demerara River (the “East Coast”), between the colonies of Berbice to the east and Essequibo to the west. The three colonies changed hands several times between the Dutch, French, and English, and all three became British in 1814. At the time of the rising, about 75,000 slaves lived in Demerara-Essequibo, which were under a single Court of Policy. The colonies became Guyana’s three provinces of the same names, and Demerara accommodates today’s capital, Georgetown.

The Demerara rising was inextricably related to the abolitionist movement and the respective discussions in the British parliament, as well as to the work of the evangelical missionaries from the London Missionary Society (LMS) in the colonies: Reverend John Wray, who set up the Demerara mission station at Plantation Le Resouvenir in 1808, and his successor Reverend John Smith, an abolitionist from a modest lower-class family who arrived in Demerara in 1817. Their arrival complicated a tense situation, as Demerara society was already undergoing changes from within, reflected in increasing confrontations between slaves and whites. Smith’s services became very popular with the slaves, whom he also taught literacy. Tensions grew between planters and missionaries, whose evangelical rhetoric of “equality” and “universal brotherhood” came to be viewed as subverting the social order, which in turn increased the slaves’ determination to attend church. Nevertheless, Christianity, as Daly (1975) remarks, had not only a “revolutionary” but also a “stabilizing and conservative” effect in the colony, as was certainly the official mission of the LMS.

A combination of the missionaries’ discourses, landing sailors that mixed with the slaves, and house slaves overhearing discussions in the homes, created the rumor among the slaves that England had abolished slavery and that the local masters were denying them their rights.

The “new laws” approved in London, however, were merely new standards in the treatment of slaves. The rumors were further nourished by Governor Murray not publicly announcing the new guidelines, probably in fear of resistance on part of the planters.

The rising started in the evening of Monday, August 18, 1823. Under the leadership of Jack Gladstone, it spread from Plantation Success to about 60 plantations (out of 71) on the East Coast. A second principal insurgent was Jack’s father Quamina Gladstone, who was the chief deacon at Smith’s Bethel Chapel on Plantation Le Resouvenir. Under the influence of the Christian faith, the rebels did not seem inclined to commit acts of violence against the whites. Rather, they seized arms and confined managers and overseers in the slave stocks for the night with the intention to send them to Georgetown the next morning to fetch the “New Law.” However, a house slave, Joseph Simpson (or Packard), in loyalty to his master, had betrayed the plot in the morning of that same day. When the governor and soldiers arrived at Le Resouvenir to negotiate, the slaves insisted on their “rights” to equality and freedom and, outnumbered, governor and troops withdrew, and the rebels resumed action.

Despite some minor incidents of violence, the uprising proceeded in a disciplined way as planned, with murder, large-scale looting, and destruction being largely absent. The few deaths among the whites were the result of fighting related to resistance. Daly (1975: 165) suggests that the resistance resembled more a “strike” than an outright rebellion and, as can be concluded, the slaves paid a high price for their leniency with their oppressors: martial law was declared, and the resistance was brutally suppressed within a few days to keep it from spreading to the other colonies. The punishment that followed was extremely harsh: between August 22 and 27, over 200 insurgents were killed on the spot and over 30 became victims of indiscriminate and ritualized summary executions, partly after mock trials.

Jack and Quamina Gladstone and some other ringleaders fled, but were caught within the following 2–3 weeks. At his arrest, Quamina was shot by Indians as a runaway. Some accounts state that Jack Gladstone was hanged, but others say he was banished to Saint Lucia, presumably to prevent him from turning into a hero after

execution. Smith was blamed for instigating the rebellion and was condemned to death, but he died in prison before the expected reprieve arrived from England.

When compared with the Berbice great slave rising of 1763–4, during which the slaves controlled almost the whole of Berbice for nearly a year, the Demerara rebellion appears almost insignificant. However, with 10,000–12,000 slaves involved, it was one of the greatest slave uprisings in the history of the New World. At least equally important is the impact the rebellion had on the emancipatory cause generally and on the portrayal of slaves as subjects. While explanations for the abolition of slavery comprise the interrelated dimensions of the economic (capitalist), political, social, and ethical-humanitarian, the historical role of slave agency has often been downplayed, ignored, or even perceived as a mere nuisance to the emancipation cause in the respective literature, as well as by the conservative abolitionist movement at the time. The Demerara Rebellion, however, demonstrates the mutual reinforcement of slave agency and the British abolitionist movement. In fact, rebellious activity appears to have shifted abolitionists’ conservative policy to the left as well as given it a significant boost.

Democracy Wall movement, 1979

J. Megan Greene

When, in 1976, Mao Zedong, leader of the Chinese Communist Party (CCP) and head of the People’s Republic of China, died, an era of radical revolutionary activity that had affected virtually the entire population of China came

to a close. Mao's death brought to an end the Great Proletarian Cultural Revolution (1966–76) and the subsequent arrest of the Gang of Four (leaders of the Cultural Revolution) signaled that the Chinese political sphere was opening up to a greater diversity of perspectives than had been possible under Chairman Mao's leadership. The Cultural Revolution, although in many respects anarchic, provided the CCP with an opportunity to achieve a high degree of control over the public expression of ideas about China's political, economic, and social sphere. As its leaders were condemned and its victims rehabilitated in the years immediately following Mao's death, many intellectuals were emboldened to express their views once again. The Democracy Wall movement of 1979 was the boldest manifestation of this process.

New CCP policies in conjunction with an atmosphere of open criticism of past actions of party leaders were encouraging to intellectuals who, in spite of having suffered decades of repression for expressing ideas contrary to those of the party, nonetheless began to speak out again in 1978 and 1979. In 1978 China's Premier, Deng Xiaoping, opened the door to reform by calling upon the nation to follow a new path, one that veered significantly from the course that had been laid out by Mao Zedong. Deng sought to implement a more rational and less politicized approach to nation-building that focused on economic development above all. Deng's new policy, known as the Four Modernizations, called for the state-led modernization of industry, agriculture, science and technology, and national defense. China's new ten-year plan of the same year made clear that scientific inquiry would be an important foundation for this development and that the party would thenceforth embrace a policy of letting 100 flowers bloom and 1,000 schools of thought contend, a policy with which the CCP had briefly experimented in 1956, but that had ended in a political repression of critics of party policy, many of whom were intellectuals. Whereas in 1956 Mao had not initially constrained the type of criticism that would be welcome, this time around the party made it clear that any free expression of ideas had to conform to socialist ideals.

Deng's new policies, though clearly signaling that the focus of intellectual activity should be the question of how to foster economic develop-

ment, nonetheless encouraged Chinese intellectuals, who had been victimized and silenced by Maoist policies from 1957 on, to convene in small groups and talk through their own ideas for China's way forward. Throughout late 1978 and the spring of 1979 there was an outpouring of new magazines, study groups, essays, and poems, many of which were dedicated to exploring the question of why China had not developed more quickly. For many, however, the answer lay in the tendency toward authoritarianism of China's leadership. The best environment for national development, they concluded, would be a democracy.

In part because publication materials were scarce, much of the written work of these intellectuals was written in big character posters and posted on public notice boards and walls in Beijing. The main such wall, located in central Beijing near Tiananmen Square, became a particularly popular venue for the posting of works advocating democracy, and thus became known as Democracy Wall. By late 1978, Democracy Wall was attracting large crowds who were organizing public discussions on the rehabilitation of purged party leaders and criticism of Mao Zedong and the Gang of Four. Much of this early discussion was, in fact, useful to Deng Xiaoping, because it demonstrated that there was broad mass support for precisely the sorts of reforms that he was attempting to push the party leadership into enacting. By early December of 1978, however, the tone of the discussion had begun to shift as new posters were put up that were more directly critical of the current government and that called in a more overt way for political change.

The author of some of the most scathing attacks on Deng Xiaoping's government was Wei Jingsheng, a former Red Guard who was employed as an electrician at the Beijing Zoo. On December 5 Wei posted an essay that chastised Deng for failing to reform the political system, and called upon him to implement a fifth modernization by allowing China to democratize. Wei's essay attracted a great deal of attention, and the activity surrounding Democracy Wall increased as a consequence.

At roughly the same time activists including Wei began to produce several new, mimeographed journals that they sold to the crowds of students, workers, and low-level bureaucrats who were drawn to Democracy Wall. These journals, known by their publishers as "people's

publications,” included such titles as *April Fifth Forum*, *Beijing Spring*, *Enlightenment*, and *People’s Voice*. In all, 55 such journals were published in Beijing by Democracy Wall activists during the fall of 1978 and the spring of 1979. Inspired by the activities in Beijing, other democracy walls spontaneously came into being in other cities as well, and numerous other publications associated with the movement also sprang up.

Although most of these activists saw themselves as working not against the state, but with it, or at least with a reform minded faction within it, by the late autumn of 1978 even Deng Xiaoping’s reformist faction no longer saw any advantage to tolerating these activities. The government began discouraging demonstrations and large gatherings, used work units, neighborhood groups, and family members to pressure participants to cease their activities, and posted plain clothes policemen at the wall to keep records on activists. Over the course of the spring of 1979 numerous activists were arrested, including, in late March, Wei Jingsheng and the rest of the staff of his publication *Explorations*, as well as the publishers of many other journals. Many of these activists were later sentenced to lengthy prison terms for their outspokenness. By December 1979 Democracy Wall itself had been relocated to Moon Altar Park, some distance from the center of Beijing, and the original Democracy Wall had been shut down.

Deng Xiaoping (1904–1997)

Leonard H. Lubitz

Born in Sichuan, Deng Xiaoping was the son of a rural sheriff. At the age of 15, upon graduation from preparatory school, he traveled to France where approximately 1,500 young Chinese were participating in a program known as *Qingong jianxue* (diligent work, thrifty study). It was in these ranks that Deng became a student of Marxism along with older classmates including

Zhou Enlai and Zhou Shiyan, while supporting themselves by laboring in manual positions including at the Schneider-Creusot armaments factory, the Hutchinson rubber goods factory, and restaurant kitchens.

After several years of studies in rudimentary French, Deng abandoned his formal studies in order to focus on his activities as a member of the Communist Youth League of Europe. He achieved both success and notoriety as a leader while working for the journal *The Red Light* under its founder and editor, Zhou Enlai. However, in January 1926, with a police raid impending due to the expected violence rising between two communist factions in Paris, Deng and 20 of his comrades left by night for Moscow. In the Soviet capital, Deng would receive practical training in areas of revolution.

In 1929, after returning to China, Deng helped lead the ill-fated Baise Uprising against the Kuomintang. In the ensuing Long March he would rise to the rank of Secretary General of the Central Committee of the Communist Party of China, bringing him inside the inner circle of Mao Zedong. During the struggles both against the occupying Japanese military and the Kuomintang, Deng served at the forefront of various battles in both political and military capacities. After the formation of the People’s Republic of China, he was appointed Secretary General of the Communist Party. In 1956 Deng was designated as one of Mao’s 12 deputy premiers. The anti-rightists purge of that decade saw Deng overseeing the roundup of approximately half a million Chinese citizens accused of being ideological enemies of the regime.

Though Deng was initially supportive of Mao’s Great Leap Forward, its failure prompted him to support reforms, as he famously declared in 1961 that “It doesn’t matter whether the cat is black or white, as long as it catches mice.” In 1967 Deng was publicly prosecuted and declared “a capitalist roader,” “a Fascist,” and “a traitor” by cadres of the Red Guards. He and his wife were sentenced to two years under house arrest followed by internal exile in southern China, where they were forced to work as laborers in a factory.

In 1973, with changes in the political climate, Mao summoned Deng back to Beijing and restored him to the post of deputy premier. His integral connection to Zhou’s Four Modernizations marked Deng’s vision of a reformed system in China where practicality trumped strict

ideology. His demonstration of such independence was answered by his being attacked by Jiang Qing and the Gang of Four, resulting in his being purged again. The death of Mao in 1976 was followed by both the public trial of the Gang of Four as well as the reestablishment of Deng as a power within Beijing. In time, he would consolidate his power within the government. Though he allowed others to assume the titles of president, Deng retained the official position of chairman of the Communist Party's Central Military Commission, which gave him control of the People's Liberation Army.

Deng's reforms of Mao's rigid centralized systems brought about extraordinary changes in China, ranging from the allowance of family farms to the eventual establishment of private businesses and investments. He saw this not as a rejection of the Communist Party's ideology but rather as he foresaw in the Four Modernizations, his country needed "socialism with Chinese characteristics" in order to become a modern state. "By following the concept of 'one country, two systems,' you don't swallow me up nor I you," Deng proclaimed, explaining his unique approach.

In 1989 Deng relinquished his official title, ironically only maintaining the single position of chairman of the Chinese Bridge Association, but his supremacy over the government of the People's Republic of China was unquestioned by the president, the premier, and the National People's Congress. Deng's reforms led to an economic revolution, with the rapid acceleration of foreign trade as well as the creation of special economic zones where foreign investment was encouraged. Political activism also followed, exemplified by the Tiananmen Square protests of June 1989. Conservative elements in the government responded by violently breaking up these demonstrations and purging sympathetic government officials, including Zhao Ziyang, general secretary of the Communist Party.

In the spring of 1992, seeing the central government's movement toward more traditional policies, Deng actively traveled throughout southern China. Visiting cities and sites that profited from his reform policies, he gave public speeches endorsing the furtherance of his market strategy. President Jiang Zemin, among the many in Beijing who were attempting to slow the massive wave of change that Deng had inspired, reversed his resistance and came openly to sup-

port them in the following spring, thus cementing his own position as heir apparent to what some have dubbed Deng "the last emperor." In the Chinese government's official obituary, this tour of southern China was described as having "profoundly answered many key questions for understanding, which had been perplexing and binding people's minds for a long time, especially the questions concerning the relationship between socialism and market economy."

Denmark, insurrection and revolt

J. Laurence Hare

The history of protest in Denmark has largely been characterized by moderation and compromise, which has allowed the country to remain among the most stable nation-states in Europe. The desire for reform, however, has been a common theme in the country's rural sector, where Danish farmers have long struggled for greater independence, both from the landed elite and the state. More revolutionary impulses, however, have resulted from the gradual transformation of Denmark from a multinational dynastic empire to a more modest modern nation. While mostly peaceful, this process was occasionally marked by tensions in some border regions that in turn disrupted the tenor of domestic politics.

Illustration of the fleet of Christian II off Stockholm Castle in 1521. Under King Christian II (1481–1559), the execution of prominent Swedes during the Stockholm Bloodbath of 1520 contributed to the outbreak of insurrection within Denmark. In the face of open revolt, the king was forced into exile in the Netherlands until he was imprisoned by his successor, King Fredrik I, in 1532. (Royal Danish Naval Museum)

Denmark reached its largest territorial extent during the period of the Kalmar Union, which from 1397 brought Norway and much of Sweden under the control of the Danish monarchy. The Union produced much conflict between Danes and Swedes, particularly during the reign of Christian II (1481–1559), who earned notoriety for executing 82 leading Swedes during the so-called Stockholm Bloodbath of 1520. The massacre intensified the revolt and contributed to the outbreak of insurrection within Denmark, where Jutland nobles took advantage of the weak position of the king. Christian was unable to defeat the rebels and was ultimately forced from the throne by his uncle, who became King Frederik I (1471–1533). The victory temporarily secured the position of the landed nobility but in the long term worsened conditions for Danish peasants and set the stage for later protests.

The conflict also coincided with the Protestant Reformation in Denmark, which brought confession into the complex matrix of royal

power and popular revolt. Until his death in 1533, Frederik I attempted to preserve order by maintaining a neutral policy, but he faced a sharp challenge once again from Christian II, who supported the Catholic Church and used the religious question to make a new bid for the throne. In 1532 Christian II was captured in Norway and imprisoned, but he nevertheless received a great deal of support from the peasantry, which longed for relief from frequent land seizures and oppressive feudal obligations. In North Jutland the renowned peasant leader Skipper Klement (1485–1536) led an uprising near Aalborg that blended anti-elite and anti-Catholic sentiments. When Christian III (1503–59) ascended the throne in 1536 he declared Lutheranism the official faith of the realm, but nevertheless took the side of the hereditary nobility, suppressed the revolt, and executed Skipper Klement.

The wars within Scandinavia during the sixteenth and seventeenth centuries reduced Denmark to a Composite State (*Helstat*) made

up of Norway and the southern duchies of Schleswig and Holstein. The position of the king, however, was strengthened at the expense of the hereditary nobility, and the emergence of absolute monarchy in 1665 fostered a cohort of new nobles who used archaic feudal traditions to maximize profit, which worsened the condition of the peasantry and encouraged further acts of resistance. As Lorenzen-Schmidt (1995) has shown, the uneven course of manorial development on the western coasts of Denmark and Schleswig-Holstein made this region a center of nationwide resistance to the expansion of noble estates. Acts of violence, however, declined during the same period in favor of legal protests and petitions to the king, which proved effective in checking manorial power.

Concern for the plight of farmers was also a feature of the Danish Enlightenment, which united humanitarian concerns with a rational view of feudal obligations as unfit for the changing needs of the Danish economy. In 1786 the government established a commission that ended the practice of the *stavnsbånd*, which bound peasants to the land in the interests of prospective military service. At the same time, a number of large landowners abandoned labor requirements in favor of monetary rents, allowing many farmers to purchase the lands on which they worked. As a result, more than half of Danish farmers had achieved independent status by the beginning of the nineteenth century. Agrarian interests subsequently became a feature of the nineteenth-century liberal movement, as independent farmers and the urban middle class continued to find common cause on issues such as conscription reform.

The process of agricultural reform was exemplary of a reformist attitude that dominated Danish politics in the late eighteenth century. As a result, the impact of the French Revolution was modest in Denmark, and the relationship between the monarchy and liberals fairly harmonious in the early 1790s. At first, Danes enjoyed a reasonably free press, which allowed them space to reflect upon the ramifications of the French Revolution for Denmark. Most maintained a discreet balance between the desire for civil liberties and the utility of absolute monarchy. It was thus possible, for example, for writers such as N. D. Riegel (1755–1802) to call for a parliamentary body (*Rigsdag*) to advise the monarch. Only after the execution of Louis XVI

in 1793 did the government grow more conservative, leading it to banish the famed writer Peter Andreas Heiberg (1758–1841) in 1799 for allegedly spreading Jacobinism and calling for a republic.

The conservative turn in Danish politics, however, did not temper the growth of the liberal movement. The greater challenge lay with the emergence of national-liberalism in Schleswig-Holstein after the Napoleonic Wars. Denmark's decision to side with Napoleon not only cost the country its Norwegian territory, but alienated its German-speaking population in Holstein and southern Schleswig. The growing divisions between Danish and German liberals worsened in 1830, following Uwe Jens Lornsen's (1793–1838) call for a constitution granting Schleswig-Holstein autonomy within the *Helstat*. Danish liberals such as Christian Flor (1792–1875) and Christian Paulsen (1798–1854) grew concerned that Lornsen's agitation would isolate Danes living in the duchies, and they began seeking reforms protecting the language and culture of the Danish majority in northern Schleswig.

In an attempt at compromise the Danish government created four estate assemblies (*Stænderforsamlingen*), including one for each of the duchies. A third met in Viborg to represent Jutland, while a fourth in Roskilde represented the Danish Islands, Iceland, and the Faroe Islands. By the early 1840s the two assemblies in the duchies deteriorated into sites of contest between Germans and Danes. The increasingly intransigent positions of both sides had a profound influence on the liberal movement in Copenhagen, where the more radical Orla Lehmann (1810–70) took the lead of the National Liberal Party by supporting the so-called Eiderdane position, which called for Denmark to annex Schleswig to the Eider River and thus separate the majority Danish region from Holstein.

The crisis finally erupted into revolution in 1848. On March 21 a delegation from Kiel demanded a common constitution for Schleswig and Holstein, which prompted Orla Lehmann to lead a delegation of Danish national-liberals from the Casino Theater in Copenhagen to petition the king for a constitutional monarchy. King Frederik VII (1808–63) had already agreed in principle to a constitution as early as January, so the course of revolution proceeded without bloodshed in the capital. The king's decision,

however, to create a Cabinet with Eiderdane ministers angered Schleswig-Holsteiners and led them to declare independence. In the resulting war (1848–51) the Danes managed to suppress the uprising.

Denmark did not retain Schleswig-Holstein for long. In 1864 Prussia and Austria invaded and seized Schleswig-Holstein on the pretext of a succession crisis following the death of Frederik VII in 1863. The resulting victory left Prussia with a sizable Danish minority in northern Schleswig. By the terms of the 1867 Treaty of Prague, the Prussians pledged to guarantee a final border settlement based on popular plebiscite. After the unification of Germany in 1871, however, the German government pursued a policy of integration by mandating German as the language of both administration and education. The Danes initially responded with strident political protest. During the 1870s, for example, Nicolai Ahlman (1809–90) and Hans Andersen Krüger (1816–81), who represented the region in the Prussian Landtag, led a protest in which Danes refused to swear the oath to the Prussian king without the fulfillment of the promise made in the Treaty of Prague. By the time of Krüger's death in 1881, however, many Danes recognized that direct opposition was doomed to failure and instead worked to preserve Danish language and culture in the province. The Danish minority was thus split between those favoring hardline protests and those emphasizing compromise.

For Denmark itself, the defeat in the 1864 war led to the fall of the National Liberals and the introduction of a much less democratic constitution in 1866. It eliminated secret ballots for elections to the lower house of the Rigsdag (*Folketing*), and favored landed elites in the upper house (*Landting*). These electoral changes occurred alongside the most explosive phase of Danish industrial development and the emergence of an urban labor movement. Socialist ideology thus took hold in Copenhagen in 1871, as part of a protest against worker disenfranchisement. Its leading figure was Louis Pio (1841–94), who in the early 1870s circulated the pamphlet series *Socialistiske Blade* to promote striking tactics. Although Pio's movement made only modest gains, the conservative government reacted strongly, jailing Pio and his associates Harald Brix (1814–81) and Poul Getleff (1842–1928),

and dismantling the International Workers' Association of Denmark in 1873. For the next few years the labor movement lacked an ideological center and leadership fell to the more moderate Copenhagen trade unions.

Louis Pio's return from prison in 1875 led to a struggle between moderate and radical elements of the socialist movement. In Pio's absence, Danish socialists had been closely affiliated with the German Social Democratic Party, which introduced Lassallean influences into the movement. While the extent of Lassallean influence in the Copenhagen unions remains a matter of dispute, the movement nevertheless became less receptive to Pio's more radical, Marxist perspective. The issue was temporarily resolved when Pio immigrated to the United States under pressure from the government in 1877, leaving the moderate leadership to establish a new political organization known as the Social Democratic Confederation.

A more serious crisis erupted in the late 1880s over a proposed political alliance with the left-wing agrarian *Venstre* party. Opposition to the 1866 constitution produced fears of insurrection in Copenhagen and a failed assassination attempt on Prime Minister J. B. S. Estrup (1825–1913) in 1885. In the face of a heavy-handed government response, social democrats such as Peter Knudsen (1848–1910) favored a parliamentary struggle in the *Folketing*. More revolutionary minded members, led by Gerson Trier (1851–1918) and Nicolaj Petersen (1854–1916), rejected the notion as a compromise with bourgeois interests and a violation of socialist principles. In 1889 Trier and Petersen began publishing their own journal, *The Worker (Arbejderen)*, in which they criticized social democratic leaders. As a result, leading social democrats voted to force the editors of *Arbejderen* from the party. Knudsen and his colleagues faced harsh criticism from international socialist parties, but the alliance nevertheless helped them make impressive showings in the parliamentary elections of 1890.

The growing space for cooperation permitted the Danish left to maintain a reformist stance even as the growing trade unions came into increasing conflict with employers in the 1890s. Both sides formed cooperative associations after 1895 (*Arbejdsgiverforeningen* and *Det Samvirkende Fagforbund*, respectively), which served to increase the scope and intensity of labor disputes,

but ultimately provided a means of resolving them peacefully. In 1899 a massive strike led to a lockout of 40,000 workers for a period of almost five months that crippled the economy and finally encouraged both sides to accept state intervention. The result was the September Agreement, which legitimized the unions nationwide and laid down rules regulating relations between workers and employers.

The left-wing political alliance came to power in 1901 and set about creating a more democratic constitution, which was completed in 1915. In 1903, however, the alliance fractured over the question of military expenditures, with the *Venstre* delegate Viggo Hørup creating the anti-militarist Radical Party. The social democrats also faced new stirrings of radicalism from 1903 to 1920, as young socialists increasingly identified with the goals of the Radical Party, and a segment of urban workers gravitated towards syndicalism as an expression of dissatisfaction with the limits of their moderate parliamentary leaders in the economically troubled first quarter of the twentieth century. The syndicalists reached their greatest strength during World War I, when rising unemployment and an unpopular government policy of conciliation towards the Germans brought a minority coalition of Social Democrats and Radicals into power in 1918, but also increased worker sympathies for the communist revolutions in Germany and Russia.

Such tensions nearly sparked revolution during the Easter Crisis of 1920, which had its roots in the question of North Schleswig. The Allied victory allowed the Danes to hold a plebiscite in the region, but a political impasse in Copenhagen over the future shape of the German-Danish border led King Christian X (1870–1947) on March 29, 1920 to dismiss the government of Prime Minister Carl Theodor Zahle (1866–1946) and replace it with a caretaker government – a move that the Social Democrats and Radicals viewed as unconstitutional. The Social Democrats and the syndicalists began preparing for a general strike. On March 30 the syndicalists gathered 100,000 protesters for a demonstration in Fælled Park, but their participation in the strike ultimately depleted their resources and revealed their relative weakness. Thereafter, the king achieved a compromise with the leading political parties, and the crisis ended with only sporadic violence.

Two decades later, Danes from across the political spectrum found themselves cooperating in resistance to the German occupation during World War II. As in World War I, a government policy of neutrality and conciliation did not reflect the widespread anti-German mood of the Danish public. While such a philosophy helped Denmark maintain a high degree of autonomy under German rule, it left Danes torn over how to respond to the occupation. The split has survived in wartime historiography, which criticizes on the one hand the alleged collaboration of the government of Erik Scavenius (1877–1962) and celebrates on the other Danish solidarity against the occupation. In the latter narrative, historians have highlighted mass demonstrations such as the *Alsang* gatherings, in which tens of thousands of Danes managed to circumvent bans on public protests by gathering to sing patriotic songs at appointed times. Other tactics included strikes, which grew increasingly organized by the summer of 1943. In response, the Germans imposed much tighter restrictions in August, which forced the resistance movement underground. Yet the new regime proved unable to stop the Danes from evacuating nearly all of the country's 7,000 Jews to Sweden in October 1943. According to Andersen (2003), the action required a great deal of planning and organization and marked a moment of unity among the resistance factions. As the war progressed the Danish resistance, aided by the British, carried out sabotage and attacks on Danish collaborators. The Germans, in turn, assassinated prominent protest leaders, including the outspoken playwright Kai Munk (1898–1944). Violence, however, remained low in Denmark compared to the rest of occupied Europe, and the Danes managed to use strike tactics effectively until the end of the war.

The most significant period of protest in the postwar period occurred in response to the international student movements during the late 1960s. In the latter half of the twentieth century Danish protests followed a political turn to the right, the weakening of the Social Democratic Party, and a severe economic downturn. Students protested not only the conditions at Denmark's universities, but also revived the country's deep-rooted anti-militarism, founding the Never Again War (*Aldrig mere Krig*) movement and pushing for the liberalization of the country's

policies toward conscientious objectors. The academic protests also took aim at the chronic housing shortage in Copenhagen. Indeed, these two motives came together in 1971, when youth squatters transformed an abandoned military base in the Christianshavn section of Copenhagen into the autonomous “Freetown of Christiania.” The settlers of Christiania later influenced the BZ squatter movement of the 1980s. While the Christianites succeeded by adhering to non-violence, the BZ squatters drew a harsher police response through their greater propensity for violent action, which produced the Ryesgade revolt in September 1986 and the Youth House (*Ungdomshuset*) riots of 2007.

In the early twenty-first century protests have largely centered on Denmark’s relationship with its growing immigrant population. In September 2005 the conservative newspaper *Jyllands-Posten* caused a controversy by publishing 12 cartoons depicting the prophet Muhammed, which many Muslims found offensive. Muslims in Denmark responded with limited protests against the newspaper and its cultural editor, Flemming Rose. Rose defended his decision to publish the cartoons by claiming that it was itself a protest against acts of self-censorship related to Islam. Following the initial controversy, Abu Laban and Raed Hlayhel, the leaders of the outcry against the cartoons, sought the attention of the international Muslim community, which generated a more vociferous reaction in early 2006. In February 2008 the foiling of an alleged assassination plot against the cartoonist Kurt Westergaard prompted newspapers across Europe to reprint the cartoons, which reignited international outrage and sparked a terrorist attack against the Danish embassy in Islamabad, Pakistan on June 2, 2008.

Despard, Colonel Edward Marcus (1751–1803) and the Despard Conspiracy

Clifford D. Conner

Edward Marcus Despard was hanged in 1803 for plotting to assassinate George III of England. He was an Irishman and he was a revolutionary, but was he an Irish revolutionary? The answer is not as obvious as it might seem.

The public record of his life would indicate that he had little interest in Ireland. He was born into a well-to-do Irish Protestant family, but left Ireland in his early teens to join the English army and rapidly rose to the rank of colonel. He fought for England against Spain in Central America side by side with his close comrade-

in-arms Horatio Nelson. Despard then served as the first colonial administrator of what was to become British Honduras and later Belize. When he left the tropics he returned not to Ireland but to London, where he did indeed gain notoriety in the late eighteenth century as a revolutionary, but in affiliation with the United Englishmen, not the United Irishmen.

It would appear, then, that Colonel Despard should be remembered as an English revolutionary – an “English Jacobin” – rather than an Irish rebel. Appearances are often deceptive in the shadowy world of revolutionary politics, however, as Despard’s career magnificently illustrates. A careful examination of the secret files compiled by the English and Irish governments’ political police reveals that Despard’s primary loyalty was to the cause of Irish separation from England, that his role in the United Englishmen was as a high-level agent of the United Irishmen, that he served as a liaison between the United Irish Society and the French government in secret negotiations to bring about a French invasion to liberate Ireland, and that he was deeply involved in the international conspiracy that culminated in Emmett’s rebellion of 1803.

Despard in Central America

Despard’s earlier career as soldier and colonial administrator was not unrelated to his revolutionary activities in England. For one thing, English newspapers had portrayed him as a war hero, giving him instant leadership credentials among disaffected and radicalizing Londoners.

The military campaigns led by young Despard and Horatio Nelson in Central America contributed to shaping the destiny of that region. In 1782 a defeat inflicted by Despard on Spanish forces at Black River on the Mosquito Shore gave Britain a colonial foothold in Central America that endured until 1881. Despard was appointed the first official British superintendent of the Bay of Honduras Settlement in 1784, a post he held until 1790. More than seven decades later the Settlement would be formally colonized and renamed British Honduras; it would become Belize upon gaining independence in 1981.

But his tenure as superintendent was marred by disputes between elite and plebeian settlers. Despard’s attempt to redress injustices perpetrated by corrupt elite settlers angered the latter,

who vilified Despard and, through the intercession of their powerful merchant friends in London, managed to have him dismissed from his post. Despard returned to London and spent years petitioning the authorities for vindication, but his entreaties were ignored. The frustration of his attempts to further the cause of social justice in Central America undoubtedly fueled his radicalization.

Colonel Despard and the Historians

Despard’s tragic end was the main reason he came to be remembered as “the unfortunate Colonel Despard.” He was arrested, tried, and convicted on charges of high treason and was hanged in London, together with six plebeian co-conspirators, on February 21, 1803. But his historical reputation has also been unfortunate. For more than a century and a half following his execution, historians tended to dismiss Despard as of marginal interest – as a small-time revolutionary or a lunatic conspirator. When mentioned at all, he was portrayed as the leader of a quixotic putsch against an invincible British government.

In 1963, however, E. P. Thompson brought a fresh perspective to the Despard story in his classic *The Making of the English Working Class*, in which he concluded that the “Despard affair must be seen as an incident of real significance in British political history.” In light of Thompson’s seminal insight, other authors have perceived in the Despard conspiracy the seeds of the earliest trade unions, the revolutionary Chartist movement, and working-class socialism. The key to understanding Despard’s activities, however, was provided by Marianne Elliott, who uncovered his connections with the Irish and French revolutionary movements in the late 1790s.

In the waning years of the eighteenth century, intense governmental repression (“Pitt’s reign of terror”) had intimidated most prominent radical reformers in England into silence, but a deep social polarization was still evident. Food riots in the cities, rural uprisings, and the proliferation of secret workers’ societies were all manifestations of the ongoing warfare between the upper and lower classes.

In the context of war with revolutionary France and massive rebellion in Ireland, the British government felt particularly threatened

by dissension in its military forces. A series of naval mutinies at Portsmouth, Plymouth, and the Nore jolted the British fleets in 1797; another occurred at Bantry Bay late in 1801. Official apprehension over Despard's activities arose most of all from the fear that he was utilizing his prestige as a high-ranking military officer to create an organized movement of rank-and-file soldiers, who were no less receptive to democratic agitation than were the sailors.

Although Despard no doubt felt morally justified in considering his loyalty to the British crown superseded by a higher loyalty to the cause of Irish freedom, the laws of England did not recognize that option. In the context of British legality, Despard's conspiratorial activities on behalf of the United Irish Society certainly constituted treason. In spite of his extreme caution in avoiding the commission of overt illegal acts that could be attributed to him, he was eventually caught in a compromising situation in the company of others who had been less cautious.

The ministry, however, felt unsure of its ability to win a conviction against Despard merely on the grounds of his having participated in a treasonous conspiracy, so it concocted a false case accusing him of fomenting a lurid plot to overthrow the British monarchy and assassinate the reigning monarch, George III. The evidence suggests that such a plot really existed, but the government's own intelligence sources reveal that Despard's only connection with it was his effort to dissuade its authors from carrying it out. By selectively presenting evidence and manipulating the selection of jurors, government prosecutors succeeded in convicting him. The celebrated Lord Nelson testified as a character witness on Despard's behalf, but to no avail.

The co-conspirators who joined Colonel Despard on the scaffold were carpenters, shoemakers, and laborers. To many of his peers his most incomprehensible offense was not treason to king or country, but to class. In their eyes Despard was a "gentleman" who inexplicably chose to consort with the "rabble." His social standing with the upper classes was not enhanced by the fact that his beloved wife Catherine, whom he had met in Jamaica, was of African descent.

Colonel Despard could have defended himself in court and perhaps saved his life if he had been willing to betray the United Irishmen's plans for an uprising, but he maintained his silence and went to his death in heroic fashion. The

courage he exhibited during his trial and execution should qualify him for the pantheon of Irish martyrs of his generation.

Dessalines, Jean-Jacques (1758–1806)

Stewart R. King

Jean-Jacques Dessalines was probably born a slave on the Cormier plantation in Grande-Rivière du Nord in the Northern Province of what is now Haiti. Haiti, then called Saint-Domingue, was the Saudi Arabia of its day; the wealthiest place in the world. The wealth of sugar, coffee, indigo, and cotton was produced by half a million slaves laboring under the direction of about 50,000 free people, half of whom were white and half of African ancestry. Jean-Jacques worked as a field hand and foreman on a large white-owned plantation as a young man, and then at the age of 30 was sold to a free black man

named Dessalines. Dessalines the master was apparently a small-scale planter with a dozen or so slaves, and Jean-Jacques, who took his last name as was customary for slaves, was a *commandeur*, or leading slave on his farm. In 1791 the Haitian Revolution broke out and Jean-Jacques left his master to join the rebels.

At first he served under Jean-François, one of the early leaders of the rebel slaves in the Northern Province. Jean-François' forces based themselves in the Spanish colony (today's Dominican Republic) and the leaders held Spanish officers' commissions. There, Jean-Jacques Dessalines became the chief lieutenant of Toussaint Louverture, the most professional and charismatic of the rebel leaders. The slave rebels said they were fighting for the legitimate kings of France and Spain against the French Revolution, and they spread the story that the king had been trying to end slavery, or at least improve conditions for slaves, but had been prevented by the planters and the revolutionaries. However, when the French revolutionary government finally abolished slavery in 1794, Dessalines, along with Toussaint Louverture and several of the other rebel slave leaders changed sides.

Together, Toussaint, Dessalines, and the other black leaders drove the Spanish and English invaders from the colony and defeated a variety of counterrevolutionary movements, uniting the colony under their rule in 1799. Dessalines took a leading role in many of these campaigns, especially what was called the War of the Knives in the Southern Province in 1799 against the forces of the mixed-race General Rigaud. Dessalines was accused of having carried out several massacres of Rigaud's supporters during this campaign. Toussaint wanted to recreate the colony's wealthy plantations without slavery. Former slaves were required to serve on their plantations or in the military, and the government regulated their treatment and wages. The former slaves resisted and the colony's armed forces were faced with many uprisings. Once again, Dessalines took a leading role in crushing these uprisings and forcing the former slaves back to the plantations. The system was beginning to produce results in the form of rising production when the French government, under Napoleon, invaded the colony with thousands of soldiers.

Jean-Jacques Dessalines and Toussaint Louverture and their supporters fought bitterly.

Dessalines and the other commanders loyal to Toussaint carried out many massacres of white civilians and prisoners during this struggle, blaming the white colonists for encouraging Napoleon to attack the colony. Dessalines' forces were besieged at La Crête à Pierrot near Petite-Rivière de l'Artibonite in March 1802, where they managed to kill hundreds of French soldiers in a desperate struggle.

After the French captured La Crête à Pierrot, Dessalines and Toussaint continued the struggle for a few months but finally gave in and signed a ceasefire with the French expedition in May. Toussaint was arrested shortly thereafter, despite the promised amnesty, and shipped to France, where he died in prison. Dessalines was confirmed as a general by the French and assigned to keep the West and South Provinces in submission. He fought for the French as he had for Toussaint, destroying rebel encampments and harrying runaway workers back to their plantations. However, he kept the stocks of weapons and ammunition he captured, distributing them in hidden depots around the country.

When disease began to ravage the French expeditionary force, and especially when war broke out again between Britain and France, cutting the French supply line, Dessalines began to think again about rebellion against the French. He switched sides in October 1802. He waged a quick and brutal campaign to bring the various rebel factions under his control, destroying those rebel groups that would not acknowledge his leadership. Then he turned on the French. At the same time, the French were experiencing a leadership crisis as their original commander, Charles Leclerc, Napoleon's brother-in-law, died in November 1802 and was replaced by the brutal Donatien de Rochambeau. Rochambeau fought a war of extermination against the Haitian rebels, killing almost every black he captured regardless of age, sex, or connection with the resistance. In addition, it was clear by this time that the expedition had come with secret orders to wipe out the black ruling class and restore slavery. All these factors made it much easier for Dessalines to argue that the alternative to unity was genocide.

Dessalines' forces swept the western part of the island clear of French garrisons in a campaign that took about one year. The final battle was fought at Vertières, just outside the walls of Cap

Français, on November 1, 1803. On January 1, 1804 Dessalines proclaimed Haiti's independence in a declaration written, as his secretary famously put it, "with a bayonet as a pen, the blood of a white man as the ink, and his skull as the inkwell." Most whites fled the colony with the defeated French soldiers, and Dessalines massacred the remainder, sparing only a few of whom he said "li neg," which can mean either "he is black" or "he is a man" (the word *neg* in Haitian Kweyol is derived from the French *nègre* or "negro" but means just "man" or "person" in Kweyol).

As Jacques I, emperor of the newly independent nation, Dessalines tried to implement Toussaint's policy of forcing the former slaves to work on the plantations, but was mostly unsuccessful. He controlled foreign trade with great care, trying to develop trade with the United States and Britain. Toussaint had had good relations with the United States under President John Adams of Massachusetts, but by the time Dessalines came to power the American president was the southerner Thomas Jefferson, who had offered supplies to General Rochambeau. The attempt to develop good relations with the United States was unsuccessful and Haiti was isolated internationally. Dessalines' officers finally rebelled against him in 1806, killing him at the northern gate of Port-au-Prince.

Dessalines was reviled by the Haitian ruling class after his death but has remained a heroic figure to ordinary people. Haiti's national anthem, the *Dessaliniene*, is named after him. The principal avenue of Port-au-Prince bears his name. Populist politicians and rebels, including most notably François Duvalier, "Papa Doc," have claimed to be inspired by his example of unbending devotion to national independence and freedom and equality for black people.

Deutscher, Isaac (1907–1967)

Kunal Chattopadhyay

Isaac Deutscher, a Polish Jew, was a leading leftist critic of the Soviet Union under Stalinism. At the age of 16 he attracted attention as a poet. In 1926 he joined the underground Polish Communist Party and soon became the editor of its press. His 1933 essay on fascism, urging the relevance of a united front, caused his expulsion, as the line of the Comintern was to call social democrats fascists. From then, he was part of the international Trotskyist movement. According to his own testimony, he was the main author of the argument against founding the Fourth International in 1938.

In 1939, when Hitler invaded Poland, Deutscher was in England, where he joined for a brief while the Trotskyist Revolutionary Workers' League. In the same period he learned English, which became his chief language of writing thereafter.

Deutscher wrote a series of extremely influential books and essays. His *Stalin: A Political Biography* (1949) presented Stalin as a socialist, however brutal, and argued that in whatever distorted manner, socialism was being built in the USSR. The book appeared as a sophisticated left-wing rebuttal of Cold War hysteria. It made Deutscher a leading left-wing interpreter of the Russian Revolution. His *Russia After Stalin* (1953) foresaw a period of thaw and argued that reform from above alone could be the future for socialism and democracy in the USSR. This attitude led him to characterize the Hungarian Revolution of 1956 as counter-revolution trying to put the clock back.

Deutscher's greatest work was his 3-volume biography of Trotsky. Having been given access to the closed section of the Trotsky Archives in Harvard, he had access to a mass of material. The biography was successful in refuting the slanders spread about Trotsky by Stalinism. But the third volume reflected Deutscher's differences with Trotsky, so that Trotsky's party-building work was given much less importance than his literary work.

Deutscher became a popular figure on the left with the new wave of radicalization in the 1960s. In 1965 he took part in a "teach-in" in the University of California, Berkeley. His 1967 G. M. Trevelyan Memorial Lectures at Cambridge

University (*The Unfinished Revolution: Russia 1917–1967*) highlighted the achievements and shortcomings of Soviet society, and reposed his faith in a peaceful development towards socialist democracy, through the agency of the CPSU, and due to objective changes like industrialization and the spread of education. Deutscher died on August 19, 1967.

Di Vittorio, Giuseppe (1892–1957)

Maurizio Antonioli

Giuseppe Di Vittorio was among the most influential union leaders in modern Italian labor history, leading the Confederazione Generale Italiana dei Lavoratori (CGIL) in its refounding after Fascism. Born in Cerignola, a rural town in Apulia on August 11, 1892 to a family of peasant workers, after his father's death Di Vittorio was forced to leave school and work as a day laborer. He joined the May 1904 general strike, an event during which five workers were killed by troops in Cerignola.

Di Vittorio was strongly influenced by the growth of peasants' organizations and the spread of socialist ideas, giving rise to his participation in the local young socialist organization in Cerignola. He was radicalized by affiliating with the national Federazione Giovanile Socialista (Federation of Young Socialists), an organization led by syndicalists in opposition to the official

Socialist Party Youth Federation. In 1912 Di Vittorio joined the newly founded USI, a nationwide union led by syndicalists, serving on its central committee. He was appointed secretary to the syndicalist Chamber of Labor in Minervino Murge, and was instrumental to the dissemination of radical syndicalist ideas, organizations, and actions throughout Apulia. In 1914 after Red Week, Di Vittorio fled to Lugano in Switzerland, returning to Italy after the amnesty to serve as a soldier in May 1915 after Italy joined World War I. Wounded in combat, Di Vittorio, considered a “dangerous subversive,” was imprisoned in Libya.

Released after World War I, in 1919 he was appointed secretary to the Cerignola Chamber of Labor, affiliated with the USI. He was arrested in April 1921 as an organizer of the “anti-fascist strike” in Apulia against Fascist violence. He ran as a candidate for the Socialist Party in the May 21 general election and was elected as deputy and released from prison. He served as a secretary to the Bari Chamber of Labor of the USI, a period where he moved closer to the new Communist Party, advocating the merger of the USI and the socialist-influenced CGdL union federations. His election as deputy and support for the International of Red Unions in Moscow put him in opposition with the leadership of the mainly anarchist USI. In May 1922 Di Vittorio broke with USI, but continued organizing a united resistance to Fascism with socialists, communists, anarchists, and revolutionary syndicalists. Upon Mussolini's rise to power in 1922, Di Vittorio was banished from Apulia and moved to Rome, joining the Socialist Party and Third Internationalist faction advocating merger with the Communist Party, which he joined in 1924. Following a suggestion from communist philosopher Antonio Gramsci, Di Vittorio founded and became secretary of the Associazione per la Difesa dei Contadini (Association for the Defense of Peasants). He was arrested in October 1925 and fled to France on his release. In 1927 the Tribunale Speciale condemned Di Vittorio *in absentia* to 15 years imprisonment.

Di Vittorio was recruited by the Central Committee of the Communist Party, and from 1928 to 1930 lived in Moscow as the Italian representative of the Peasants' International. Upon his return to Paris Di Vittorio joined the Executive of the Communist Party to lead the underground communist-influenced CGdL. Di

Vittorio traveled to Spain in 1936 in the wake of the revolution and was an organizer of the international brigades and a political commissar of the XI Brigade during the civil war. The following year he returned to Paris and edited *La voce degli italiani*, the organ of anti-Fascist Italian émigrés in France. Arrested by the Gestapo in German-occupied France in 1941, Di Vittorio was taken to Italy to serve a five-year sentence on Ventotente Island. Released in August 1943 after the fall of Mussolini, he went underground in German-occupied Rome, where, with socialist union leader Buozzi and Catholic Achille Grandi, paved the way for the foundation of the united Confederazione Generale Italiana dei Lavoratori (CGIL), foreseen in the “pact for union unity” made public as soon as Rome was liberated in June 1944.

The CGIL was the first unified general union in Italian labor history. Di Vittorio was appointed general secretary, along with Grandi and socialist Oreste Lizzadri. The unitarian stance of Di Vittorio would be frustrated by the split of Christian democratic union members into the Confederazione Italiana Sindacati dei Lavoratori (CISL) and republican and social democrat union members into the Unione Italiana del Lavoro (UIL) after 1948.

Giuseppe Di Vittorio was elected to the Constituent Assembly in 1946 and as senator in 1948 (joining as deputy in the second legislature, 1953–7). In 1949 he was elected president of the Federazione Sindacale Mondiale (World Federation of Trade Unions), the labor federation of the Soviet Third International. In the same year Di Vittorio proposed at the CGIL Congress in Genoa the Piano del Lavoro (Labor Plan), a program of economic policies to be negotiated with government. At the Naples Congress in 1952 he proposed a *Statuto dei diritti dei lavoratori*, designating worker rights that greatly influenced union policies for decades.

Giuseppe Di Vittorio was on the whole critical of the Soviet repression of Hungary in 1956, but never broke with the PCI. His fame, authoritative personality, and consensus among Italian workers allowed him to stand firmly even against communist secretary Palmiro Togliatti, never giving up the hope for unity of all workers in a united general union. On November 3, 1957, after a union meeting, Di Vittorio died of a heart attack in Lecco.

Díaz Soto y Gama, Antonio (1880–1967)

Vittorio Sergi

Antonio Díaz Soto y Gama was a journalist, politician, and agrarian leader. He was an active member of the radical opposition to the government of General Porfirio Díaz during the Mexican Revolution. After the civil war he followed the trajectory of the ruling classes from populism to more conservative and anti-communist positions.

He was born January 23, 1880, in San Luis Potosí into an educated middle-class family. When he was 19 he was a member of the anti-clerical Jacobin Club Liberal Ponciano Arriaga, along with brothers Ricardo and Julio Flores Magón, Juan Sarabia, and Camilo Arriaga. The militant attitude of this club generated many more clubs in various states of Mexico. Club Liberal Ponciano Arriaga participated in the founding congress of the Liberal Mexican Party (PLM), which can be considered as the starting point of an organized political opposition to the government of Porfirio Díaz.

In 1903 Díaz Soto y Gama fled Mexico to avoid arrest and settled in Texas. After coming to an agreement with Díaz not to criticize the government in public, he returned in the spring of 1904 to help his financially struggling father. When Díaz died, Díaz Soto y Gama returned to political life in opposition to Francisco Madero.

In 1912, influenced by the Catalan anarchist Francisco Moncaleano, he became one of the

founders of the radical labor organization Casa del Obrero Mundial in Mexico City. He fled Mexico City in 1914 to avoid arrest by the government of Victoriano Huerta, which had removed Madero from power in a military coup. From then until mid-1919, Díaz Soto y Gama served as a colonel with Emiliano Zapata and his peasant army, which was based in Morelos until Zapata's assassination in 1919.

On June 13, 1920, Díaz Soto y Gama, together with Rodrigo Gómez and Felipe Santibañez, founded the National Agrarian Party (PNA), whose main political aim was to achieve land reform by reformist means in support of the Obregón government. In the same year, Díaz Soto y Gama won election to the Chamber of Deputies. On May 1, 1923, he led the first National Agrarian Congress, during which he promoted land reform as part of the Christian social doctrine and defended the right of peasants to carry arms in self-defense. In 1929, he and the majority of the party refused to support Plutarco Elías Calles and to merge their party into the new National Revolutionary Party (PNR).

Having been forced violently to abandon his party and the Chamber of Deputies, Díaz Soto y Gama distanced himself from the militant and libertarian attitudes of the previous years and continued his activities as a journalist and professor. His influence was crucial in the foundation of the conservative National Action Party (PAN) in 1939. After World War II, he became an influential conservative and anti-communist intellectual. He died in Mexico City on March 14, 1967.

Dictatorship of the proletariat

Soma Marik

The concept of the dictatorship of the proletariat (DOP) has occupied for a century a central position in discussions of Marx's theory of politics. The writings of Marx and Engels during the revolution of 1848 show that they considered the democratic movement to be formed by workers, petty bourgeoisie, and peasants, and desired energetic use of force to ensure the triumph of these classes, a political strategy they sometimes described as "dictatorship," referring to use of force, not rule. Eventually, the concept of permanent revolution indicated that if the proletariat was to be the leading class in winning the battle of democracy, then in essence the rule established would be the rule of the proletariat. So, by 1850, Marx started using the term dictatorship of the proletariat to designate the rule of the working class. His writings about the DOP contrasted bourgeois class rule (dictatorship of the bourgeoisie) with working-class rule. As Marx described in a passage discussing the condition of the peasantry: "Only the fall of Capital can raise the peasant; only an anti-capitalist, a proletarian government can break his economic misery, his social degradation. The *constitutional republic* is the dictatorship of his united exploiters; the *social democratic republic*, the *Red republic* is the dictatorship of his allies" (Marx and Engels 1978: 122).

In 1852 Marx's friend Joseph Weydemeyer published an article in the *New York Turn-Zeitung* entitled "Dictatorship of the Proletariat." Partly responding to that article, Marx wrote him a letter commenting that class struggle necessarily leads to the DOP, and that the DOP only constitutes the transition to the abolition of all classes and a classless society. This point was reaffirmed in Marx's critical comments on the draft program of the German Workers' Party in 1876. There he wrote that the political transition period corresponding to the revolutionary transformation of capitalist society into communist society "can be nothing but the *revolutionary dictatorship of the proletariat*" (Marx and Engels 1989: 95). This statement rejects the liberal argument about democracy as a form that superseded all class content.

This opens Marx to the charge that he was actually an advocate of authoritarianism, a charge made believable by twentieth-century dictators in the name of the proletariat from Stalin onwards. But Marx and Engels were committed to democracy in the DOP. Most categorically, Engels endorsed the Paris Commune as an instance of the dictatorship, in his 1891 preface (Marx and Engels 1977: 189) to Marx's *The Civil War in France* (Marx and Engels 1986). Scholars like Avineri (1977) have claimed that Marx did not consider the commune to be a working-class affair. But a speech of Marx in late September 1871 to celebrate the seventh anniversary of the International Workingmen's Association shows, as reported by a newspaper, that he described the Commune as the conquest of the political power of the working classes, and went on to argue that before one could move from that to a classless society, a proletarian "dictature" would become necessary and the first condition of that was a proletarian army. In the aftermath of the Commune, the lesson was driven home forcefully that when basic property rights were under threat, the bourgeoisie would not go by democratic rules but would use utmost force. That was why working-class rule could only be secured, under all circumstances, by a working class that was armed.

The brutal crushing of the Commune made it clear to Marx that the first condition of the rule of the proletariat had to be the creation of a proletarian army. He made it quite clear that unless the working class provided the core of the personnel for the coercive apparatus, simply having workers in ministerial positions would not mean having the rule of the proletariat. In addition, from the experience of the Commune, Marx and Engels drew the conclusion that the form of working-class democracy would be distinct from the form of bourgeois democracy, a conclusion Draper (1988) does not accept.

If the proletariat, in order to rule, had to represent its interests as the general interests of society, then its interests had to be sufficiently broadly defined to incorporate the essential interests of the other major oppressed classes and social groups. So the DOP had to mean majority rule. Marx's analysis of the Paris Commune highlighted some of its basic features: a workers' army, a democratically elected regime where executive and legislative functions were combined, so that the executive did not remain outside popular control;

abolition of the political functions of the police and the subordination of the police to the elected representatives; the right of the electors to recall their delegate at any time; and finally, pay for elected representatives at rates similar to what working people received.

The term DOP has been controversial. In Germany, opponents of the Social Democrats accused them of desiring dictatorship, a charge to which right-wing socialists responded by saying the term had been Marx's alone, and the party had not accepted it. But in the Russian Social Democratic movement the term was adopted as part of the party programme in 1903. Discussing the possibility of permanent revolution, Trotsky talked about transforming temporary workers' hegemony into lasting socialist dictatorship, suggesting a continuing link between the dictatorship and the transition to communism.

A major revival of the term came in 1917, when Lenin wrote *The State and Revolution*. This book was a major effort at actually explaining what Marx and Engels had said about the DOP, and in it, Lenin linked the Commune to the Soviets, as class self-organizations that had developed in Russia in 1905 and again in 1917. It is also worth noting that the entire book is silent about the role of the vanguard party.

However, the concept changed in the course of the murderous civil war waged by internal and international counter-revolution from 1918 to 1921. Steps made necessary by the exigencies of the war, such as bans on parties that were supporting the White Guards in the civil war, bans on newspapers supporting the counter-revolution, tremendous centralization of administration and production, destruction of the autonomy of the soviets and trade unions, the creation of special apparatus of repression under emergencies, like the Extraordinary Commission for Combating Counterrevolution (Cheka), began to be justified as examples of what the DOP should be. The major Marxist critique of this came from Rosa Luxemburg. By 1921 all opposition parties were banned, as were factions inside the Communist Party. The party came to be identified with the class because of its historic origins, rather than its present position, where a layer of bureaucrats was beginning to exert influence and use brutal repression to retain bureaucratic privileges, justifying its actions in the name of waging class struggle under the DOP.

In the 1930s Trotsky admitted that the ban on opposition parties and on factions in the party had been a wrong step (Trotsky 1987). Subsequently, sections of the Trotskyist movement put forward a more rounded concept of the DOP, including on one hand a reaffirmation of the idea that there can be no simple democratic transition from capitalism to communism, without a forcible rupture with the bourgeois state; and on the other hand, the extension of both representative and direct democracy, and the recognition of civil liberties for all those who do not wage armed struggle against the DOP (Desai 1990).

Diderot, Denis (1713–1784)

Yves Laberge

Denis Diderot, a central figure of the great ideological revolution known as the Enlightenment, was a French author, philosopher, critic, and encyclopedist. As a radical freethinker, he was often embroiled in controversy. He is remembered above all for his pioneering attempt to synthesize all knowledge currently available in the eighteenth

century: the *Encyclopédie ou Dictionnaire raisonné des sciences, des arts et des métiers* (co-edited with Jean D’Alembert). Among some 200 contributors to the *Encyclopédie* were the most important *philosophes* of the Enlightenment: Condorcet, Montesquieu, Rousseau, and Voltaire. The *Encyclopédie* was published between 1751 and 1772, but some of its 28 volumes and supplements were condemned as impious, or for propagating unorthodox ideas, by Pope Clément XIII and the French *Conseil d’état* in 1759, after which the royal privilege was withdrawn and subsequent volumes were relatively ignored by contemporaries.

Diderot was born to a bourgeois family in Champagne in 1713. Frustrated by the slow pace of his studies, Diderot briefly joined his father’s cutlery business, but after only a few days he decided to become an Abbé. He inherited his uncle’s position as canon at the local church when he was 15 years old. However, the cathedral chapter, objecting to such a young man assuming the position, blocked the appointment, so Diderot left for Paris to resume his studies. Frequently strapped for money, he performed a variety of jobs to survive.

In 1732 he earned a masters of arts in philosophy and embarked on the study of law. In 1734, however, he decided to become a writer, which angered his father, who promptly disowned him. Diderot’s father also objected to his marriage to Antoinette Champion in 1743 because she was of low social status, poorly educated, lacked a dowry, and was four years older than Diderot. It did not prove to be a happy marriage, but it produced three children, only one of whom, a daughter named Angelique, survived to adulthood.

Diderot often had problems with censorship, since his writings were considered subversive and anti-clerical. His *Pensées philosophiques*, published anonymously in 1746, was condemned by the Parlement of Paris due to its criticism of Catholicism. After the publication of *Lettre sur les aveugles à l’usage de ceux qui voient* in 1749, in which he expressed skepticism about the Catholic Church and the monarchy, Diderot was imprisoned for three months. The main point of *Lettre sur les aveugles* was to show how ideas are dependent on the five senses, and it examined how the human intellect is affected by the loss of one of the senses. What was most striking to Diderot’s contemporaries, however, was the book’s relativism with respect to the concept

of God. Also of interest to historians of ideas is that *Lettre sur les aveugles* presented, although in undeveloped form, a pre-Darwinian version of the theory of variation and natural selection.

Diderot's foremost accomplishment was the creation of the *Encyclopédie*, the central literary work of the Enlightenment. He convinced a publisher, Le Breton, to sponsor the project, which entailed collecting all of the new ideas of all active writers in an attempt to centralize the immense amount of scattered knowledge that the Enlightenment was producing. Capital was raised, government permission for the project was secured, and the first volume appeared in 1751.

Not surprisingly, the innovative *Encyclopédie* met with opposition. The ecclesiastical party opposed it, perceiving that the work promoted philosophies contrary to Church doctrine. Important members of the aristocracy also opposed its advocacy of ideas that they felt threatened the social status quo, such as religious tolerance, freedom of thought, and democratic doctrines. Consequently, in 1759, the *Encyclopédie* was formally suppressed. D'Alembert and other *philosophes* withdrew from the project, leaving Diderot with the arduous task of clandestinely completing the work almost singlehandedly. He wrote several hundred articles and saw the project through to completion, with its final volume appearing in 1772.

Meanwhile, Diderot was also a prolific playwright, novelist, and theoretician. His *Lettre sur le commerce de la librairie* (1763) is seen as a manifesto for the freedom of the press and a plea against censorship. He wrote it as a letter to the chief of police in Paris after being shocked to find that some of the articles in the *Encyclopédie* had been secretly edited and fundamentally altered by his publisher in order to avoid troubles with censorship and the authorities.

Diderot's novel *La Religieuse* (1758) was a satirical story of a young woman who becomes a nun because her parents want to earn the rent given to nuns' families. But when she later tries to leave the convent, explaining that she had been forced into it by her parents, she is foiled by the lack of all logic and common sense on the part of the officialdom she must confront. Diderot's enduring power to stir controversy was demonstrated in 1966 when, more than two centuries after it was written, that novel was made into a feature film. After a scandalous première at the Cannes Film Festival, the film was banned in

France for a year before finally being released, restricted to "mature audiences."

Diderot's work did not acquire him great wealth. He never secured any of the prominent posts frequently given to men of letters, nor was he awarded membership in the Académie Française. He even had to sell his library in order to provide his daughter's dowry. His international renown had become such, however, that an "enlightened" monarch, Catherine II of Russia, purchased his collection and commissioned him to retain the books in Paris and serve as her salaried librarian. After his death the books were shipped to Russia where they were placed in the National Library.

Diderot died in Paris in 1784. Some of his most radical works, containing, for example, harsh critiques of slavery and colonialism, had been suppressed during his lifetime but were published posthumously. His reputation as one of the revolutionary thinkers who, together with Voltaire and Rousseau, most inspired the Enlightenment is richly deserved.

Dimitrov, Georgi (1882–1949)

Liliana Deyanova

Georgi Dimitrov was a Bulgarian activist in the international communist movement, a trade union leader, professional revolutionary, secretary general of the Comintern (Communist International), and prime minister of Bulgaria from late

1946 to his death in 1949. Dimitrov's diary, from 1933 to 1949, held secret in Bulgarian Communist Party archives until its publication in 1997, catalyzed questions on the contradictory and contested history of communism and the clash of two opposing types of memory. Some view Dimitrov as an iconic figure who unrelentingly opposed fascism and advanced the Bulgarian and Slavic working class as well as socialist internationalism. Detractors view Dimitrov as a pawn of the Soviet Union and Stalin.

Born in the Bulgarian village of Kovachevtsi, Dimitrov was forced to leave school at age 12 to support his family. As a compositor, Dimitrov joined the Union of Printing Workers, and in 1902, he joined the Bulgarian Workers' Social Democratic Party. After the party split in 1903, Dimitrov joined the Bulgarian Communist Party fraction that joined the Third Communist International in 1919.

Dimitrov was a labor activist. In 1906 he led a miners' strike in Pernik, and from 1909 joined the Central Committee of the party and became secretary of the Trade Union Federation. Elected to the National Assembly in 1913, Dimitrov remained a member of parliament until 1923, organizing anti-war protests and, as a union leader, seeking to coordinate the activities of Balkan trade unions. Dimitrov met Lenin and contributed to the constitution of the Red International of Labor Unions (the Profintern).

From 1920 on, Dimitrov was a delegate at Comintern congresses in Moscow, and advanced to the position of secretary general of the Comintern at the 7th Congress in 1935, a post he held until the organization's dissolution in 1943.

Dimitrov was an organizer of the September uprising of 1923 (an event that divides Bulgarians, being interpreted either as "the first anti-fascist uprising in the world" or as "a communist crime"). After the uprising's failure, Dimitrov fled to Vienna and organized the leading body in exile of the Bulgarian Workers' Party, presiding over the West European Bureau of the Comintern, an "auxiliary" body (or "secret apparatus") that moved to Berlin in 1929. On March 3, 1933, Dimitrov was arrested for alleged complicity in setting the Reichstag fire.

The Reichstag fire trial, held in Leipzig, evoked mass protest movements and consolidated anti-fascist forces. The Committee for Aiding the Struggles Against Hitler's Fascism alleged that the fire was organized by the Nazis themselves.

In his speech before the court, Dimitrov stressed the valuable documentary support produced by the Committee as the source of his self-defense. Dimitrov was released from prison for lack of proof, left for Moscow, and was granted Soviet citizenship on February 15, 1934.

Dimitrov's battle for a new Comintern – the anti-fascist People's Front – culminated in his report to the 7th Congress. The "popular front" strategy broke with the long-held view among Bolsheviks that social democratic parties were fascists in holding that class was not essential to all popular struggles. The position, supported by Léon Blum, socialist prime minister of France, was condemned by Trotskyists as "shameful theories of social harmony."

In World War II, Comintern activities were aligned with Soviet foreign policy, during a time when Dimitrov was organizing the Bulgarian anti-fascist movement and helping to form the Fatherland Front, a leftist coalition that took power on September 9, 1944. Depending on political perspective, the events are seen either as a "popular uprising" or as "a coup with the help of the Soviet Army which had occupied the country." Dimitrov returned to Bulgaria in November 1945, and a year later was elected prime minister, in a government that was increasingly dominated by communists. He also became secretary general of the Bulgarian Workers' (Communist) Party. While historians are divided on Dimitrov's legacy, it is clear that his policies increased Bulgaria's dependency on Soviet support.

As prime minister, Dimitrov advanced the notion of creating a South Slav (Balkan) Federation, and sought to advance the idea of "people's democracy" as a path to communism, challenging the universal Soviet model of the "dictatorship of the proletariat." The Fatherland Front as a system of multiparty rule from September 1944 concentrated power in the hands of the communists, ultimately merging operations with the state.

Dimitrov died in the government sanatorium near Moscow. His body was returned to Bulgaria and placed on display in a mausoleum until August 1999.

Directory, France, 1795–1799

Eric F. Johnson

The Directory was the executive branch of the government of France between November 2, 1795 and November 10, 1799. It was formed after the fall of Robespierre and the National Convention, and was overthrown by Napoleon Bonaparte. The period of its existence was a transitional one, and the Directory reflected the contradictory nature of the era. Although bearing the authority of one of history's most inspiring social transformations, its rule was characterized by bureaucratic maneuvering and the petty politics of narrow self-interest.

In retrospect it is evident that Robespierre's fall marked the beginning of the end of the French Revolution, but that was not apparent to those who lived through the experience. The Thermidorians who overthrew Robespierre masked their profoundly conservative aims, for a time, with revolutionary rhetoric, and when their actions revealed their fundamentally counter-revolutionary nature, it sparked a political resurgence of radical Jacobinism. Furthermore, the Conspiracy of Equals led by "Gracchus" Babeuf showed that the flame of the Revolution had not been completely extinguished in the era of the Directory.

The Directory coexisted with a legislative branch of government. The legislature was bicameral, with a Council of Five Hundred (the

"lower" house) and a 250-member Council of Elders (the "upper" house). Members of the Council of Five Hundred had to be at least 30 years of age, and the Council of Elders had a minimum age requirement of 40. The legislature was elected indirectly and the universal suffrage of the previous constitution was abandoned. One-third of the membership was renewed each year. The Elders had a suspensory veto, but could not initiate legislation. The five Directors of the executive branch were chosen by the Elders from a list created by the Council of Five Hundred. The Directors were assisted in their duties by ministers for the various departments of state, and they had no role in legislation or taxation. One Director was renewed each year.

From the onset, the Directory faced many challenges. The new constitution did little to resolve the political and social problems that had arisen during the Reign of Terror, and many of the deputies from the politically compromised National Convention sat in the new legislature. A major counterrevolutionary revolt in the Vendée, which had begun in 1793, had not been suppressed, and the state faced a fiscal crisis. Although the war with Austria and Prussia had subsided, the government was reluctant to demobilize the army and release such a large number of unemployed veterans into the general population. Continuing the war in Europe was thus seen by some as a condition of political survival.

The Directory fell as a result of the machinations of the Abbé Sieyès, one of the Directors in 1799 who had risen to national prominence ten years earlier as author of a seminal political tract, *What Is the Third Estate?* A new war coalition consisting of England, Russia, Turkey, Naples, and Austria had formed against France, and domestic stability had become tenuous. Sieyès sought to use the situation to consolidate his own power by replacing his colleagues in the Directory with men he could control, and by enlisting the support of a popular general, Napoleon Bonaparte. Sieyès organized a coup d'état that occurred on the French Revolutionary calendar's date of Eighteenth Brumaire (November 9, 1799), but Bonaparte double-crossed him. Rather than consolidating Sieyès' power within the Directory, Bonaparte abolished the Directory altogether and replaced it with a three-man Consulate, naming himself as First Consul. Sieyès remained briefly as one of the two junior consuls, but Bonaparte had in

effect set the stage for his own rise to absolute power.

Although the Directory is remembered more for venality and corruption than for effective governance, historians have credited it with some limited accomplishments. The Vendée region was finally pacified during its tenure, and France's armies achieved a number of successes on the battlefield, conquering parts of northern Italy and the Austrian Netherlands. On the domestic front, the Directory granted freedom of worship, which partly resolved the religious issues that had plagued the First Republic. Despite its brief existence, it was the longest-lasting government France had experienced since the beginning of the Revolution.

Diriangén (1496 or 1497–1530s)

Kerstin Ewald

As a cacique, or ruler, of the native Chorotega group, Diriangén opposed Spanish conqueror Gil González Dávila from 1523 to 1529 and is a symbol of Nicaraguan indigenous resistance. He is celebrated in the song “Nicaragua, Nicaragüita” composed by C. M. Godoy, often mentioned as the secret national anthem of Nicaragua.

When Dávila started to explore the region of Gran Nicoya (modern Nicaragua) in 1522 or 1523, he found a populated territory that was divided into provinces known as *cacicazgos*. The single *cacicazgo* showed a quite complex society with a remarkable stratification of the population regarding access to power and property. By

the time the Spanish arrived, power had been centralized and there were constant wars and competition between the regional *cacicazgos*.

Diriangén was a cacique of the Chorotegas ethnicity, which originated in today's Mexico. It is assumed that he was taught his people's history by his mother, as was typical in Chorotega culture. As a very young man he was instructed in the art of warfare and was admired by his enemies, the Maribios, the Miskitos, the Matagalpas, and the Nahuas. He fought and won many fierce battles with the Nahuas, who gave him the name Diriangén, or “Master of the Dirianes, people from the mountains.”

Dávila arrived in Gran Nicoya in search of gold, precious stones, and other riches, as well as an intercontinental passage between the Pacific and the Atlantic Ocean. He was forced to retreat on his first attempts in the face of resistance from the caciques Diriangén and Tenderi (cacique of the Nindirí). After this conflict, Diriangén gave the Spanish a strong impression of his importance when he paraded with a delegation to salute the Spanish conquerors. He appeared in the middle of a magnificent adorned entourage of 500 young warriors carrying one or two (ocellated) turkeys each, ten flagbearers with white flags, flautists, and 17 beautiful women covered with little plates of gold and wearing golden hatchets. They presented the Spanish with golden hatchets and other gifts. At the same time the Chorotegas wanted to find out who the bearded men were and what they wanted. Before Diriangén's delegation retired for deliberation, he announced that he and his people would agree to be baptized, and that they would return three days later.

Instead, on Saturday April 17, Diriangén confronted Dávila with 3,000 warriors, forcing the Spanish to a temporary retreat. This was the beginning of a merciless fight, in which other indigenous groups later became involved, and which lasted from 1524 to 1545. The army of Diriangén, which was estimated at its peak to include 70,000 men, was finally beaten by the Spanish supposedly near the hill of Apastepe, in today's department of Chinandega. Diriangén died shortly after his defeat in 1529.

Disobbedienti/Tute Bianche

Dario Azzellini

The Disobbedienti were a group in Italy who had their greatest visibility around the G8 (most industrialized nations) summit in Genoa in 2001. The movement understood itself as explicitly extra-parliamentary and basis-democratic. The Disobbedienti, who were strongly rooted in the counter-globalization movement, regarded themselves as anti-capitalist and anti-racist, as well as a transformatory and revolutionary current. At the same time, they regarded a redefinition of many of the left's categories and forms of struggle as necessary for today's social reality.

Their roots lie in the Italian Marxist tradition of Operaismo – or post-Operaismo – which turned traditional Marxism on its head, arguing workers not to be merely passive, reactive victims of capitalist development, but a powerful social force whose struggles drive it forward. They propagated first of all “civil” and then “social disobedience” as a form of action, and drew heavily upon the philosophy of Zapatismo propagated by the Zapatista (EZLN) rebels in Chiapas, Mexico. Their immediate predecessors, up until the summit in Genoa, were the Tute Bianche (White Overall) movement. Ya Basta, a network set up in 1996 to support the Zapatistas and spread the struggle against neoliberalism, played an important role within both Tute Bianche and the Disobbedienti. Antonio Negri and Michael Hardt's concept of the multitude, analyses of post-Fordism, and various conceptions of what Michael Foucault and Hardt and Negri have variously described as “biopolitics” had a strong influence upon the Tute Bianche and Dis-

obbedienti. However, neither the Disobbedienti nor their predecessors ever had a program or a clear, concrete structure. They rejected the mechanisms of representative democracy and practiced direct democracy. Instead of representatives, they had spokespeople. The best-known Tute Bianche/Disobbedienti spokesperson was Luca Casarini from Padua. During the G8 in Genoa, he was also the spokesperson of the Genoa Social Forum. It was argued by some on the left, however, that the absence of clear structures has also led to spokespeople emerging from informal hierarchies rather than a democratic process. The Disobbedienti were a form of movement-network with common thematic foci and a generally shared political practice. As such, however, these theoretical points of reference cannot entirely be generalized to all component parts of the movement.

The first time white overalls were used was in Milan on September 10, 1994, during a demonstration against the eviction of the squatted social center, Leoncavallo, after the city's mayor had proclaimed that the squatters would become ghosts in the streets. With white overalls, the demonstration sought to evoke a ghostly image. It ended in clashes with the police. From this moment, the reoccupied Leoncavallo social center used the White Overalls as their own stewards on demonstrations.

White Overalls to Make the Invisible Visible

In 1997 and 1998 the white overalls began to be theorized as a symbol for the removal of rights, as well as precarious working and living conditions. In Rome, Milan, Bologna, and north-eastern Italy (Padua and Venice, for example), the overalls were worn during actions against temporary employment agencies. Activists from various squatted social centers in Rome used them during public actions in busses and metros, distributing fake tickets demanding free transport for the unemployed, precariously employed, migrants, and everyone without a regular or sufficient income. The social centers were among those who signed the Declaration of Milan, which put the struggle against precariousness and for a basic income at the center of public agitation.

The white overalls were intended to “make the invisible visible.” In other words, through mass

action, all of those rendered invisible by society – those without work, without legal documents, without citizenship, without rights, without a secure income, without social security and so on – should be made visible again.

The choice of the color white was also connected to an analysis of the changes in the system of production ushered in by the move from Fordism to post-Fordism. In the 1960s and 1970s, during the highpoint of Fordism (in other words, mass production on conveyor belts with an advanced division of labor), the unskilled mass worker, with his blue overalls, was formative of many protests and movements in Italy. With the shift to a system of production where the fixed location of the factory lost its centrality, the atomization of the mass worker was no more. Production began to be organized in more flexible networks, assuming a great variety of social and legal forms of labor, and with atypical and self-employment growing. In the process, living and working realities experienced a broad differentiation and the factory lost its privileged role as the central location of conflict and struggles. White – physically, the sum of all colors – serves to represent the diversity of realities of work and life in society, which became the new center of the world of work and the place in which struggles were to be developed.

The actions of Tute Bianche were geared toward achieving media coverage, which they certainly achieved. The particular forms of action and often-risky modes of protest (e.g., occupying cranes) attracted much attention. The Tute Bianche appeared in live television broadcasts, on stage in theaters and at concerts, or at other events that attracted the media, in order to highlight grievances, declare solidarity, or announce new struggles. Alongside the demand for a basic income and actions for the free use of city infrastructure, migration, the right to existence of the Zapatista communities in Mexico, and the right to free education were central issues. The openness of the actions gave individuals the opportunity – be it just for one demonstration – to join the movement.

A major campaign and many of the actions developed by Tute Bianche were directed against immigration detention centers. For example, hundreds of Tute Bianche succeeded, on January 19, 2000, in breaking through lines of police in front of the Via Correlli detention center in Milan, following a demonstration of

10,000 people. The victory was in no sense military. They were armed only with inflated truck innertubes, helmets, and foam cushioning under their overalls, allowing them to push the police to the side. Because of the large media presence, a visit to the detention center accompanied by journalists was able to be negotiated with the police. Only a few days later, the minister of the interior had to close the detention center on the basis of its catastrophic hygiene and health conditions and the disregard for basic human rights that had been revealed.

Defensive-Offensive Strategy and Its Widening Out

The defensive-offensive strategy developed in the course of actions was called “civil disobedience” by the Tute Bianche. In contrast to traditional civil disobedience, they claimed the right to self-defense. As such, they defended themselves from attacks by police with foam, shields, inflated innertubes, helmets, arm and shin pads, gloves, gas masks, and gas-goggles. This practice did not produce a simulation of war, but rather highlighted the political dimension of the conflict and its radical nature. It was immanently political in the sense that conflict with the security forces was desired, yet the protection allowed for the minimization of fear and injury, and it kept the group together. In general, the protection that would be used was announced in advance so as to remove the discourse of danger. The right to rebellion was deployed against the right of the dominant as a means of justifying the protective measures being used. Because attack and direct violence against the police were not part of the practice of the Tute Bianche (although defense against attack was often branded as such), it was often difficult for the police and politicians to legitimize a repressive approach to the Tute Bianche, who had broad support.

Their practice was described by the movement as “Conflict and Consensus.” The constitution of conflict, or rather, the making visible of already existing conflict, was central. At the same time, the construction of consensus among all those taking part as to the form of the conflict was never to be forgotten, so that possibilities for participation and the size of the mobilization could grow.

The strategy of self-defense on demonstrations became evermore refined, with the introduction

of Plexiglas shields and other fantastical armaments. In the process the boundaries for possible action were expanded, pushing illegality into legality – or at least generating their own legitimacy, while reducing support for their opponents. At the same time, there was an attempt to minimize the entering of a military logic of conflict, which is unwinnable against the superiority of the repressive state apparatus.

Alongside those already described, the best-known actions of the Tute Bianche were the attempted storming of a NATO airport in Aviano, Italy, during the Kosovo war (April 1999) and a demonstration in Bologna against a neo-Nazi meeting, which was successfully disrupted (May 2000). In their early years at least, the group was able to achieve a number of concrete (rather than simply symbolic) goals. Following demonstrations and confrontations with the police against genetically modified food, in Genoa from May 24–26, 2000, the Italian government declared a moratorium on GM food.

The Tute Bianche/Disobbedienti traveled in relatively large groups throughout Europe and the rest of the world to take part in demonstrations and protests. Particular attention was won in Prague during the protests against the International Monetary Fund (IMF) and World Bank in September 2000, where as a well-protected and well-organized phalanx, they tried to break through the lines of police. In March and April 2001, more than 100 Tute Bianche accompanied the Zapatista march from Chiapas through Mexico to the capital, which simultaneously involved breaking the ban on political activity by foreign nationals in Mexico. Due to the relative isolation of the Tute Bianche in the whole demonstration, as well as the lack of communication, the mission was criticized both in Mexico and within the Tute Bianche themselves. Hundreds of activists from Italy have consistently taken part in anti-racist activities and summit protests in Europe and, in 2002, organized a peace convoy in Israel/Palestine.

The practice and the approach of the Tute Bianche/Disobbedienti have spread to many other countries. Across Europe and also in the USA, groups have made concrete reference to them. In Finland, Sweden, Norway, Spain, Germany, Slovenia, Greece, and other countries, the concept of civil and social disobedience has been adopted and similar forms of action experimented with.

From Civil to Social Disobedience

During the mobilization against the G8 summit in July 2001, the Tute Bianche took part in the broad Genoa Social Forum (GSF) coalition where they worked together with the entire spectrum of left-wing counter-globalization organizations and movements. The goal of the strategy was to avoid a split between the protesters and at the same time widen the acceptance of forms of action within the coalition. The Tute Bianche distanced itself from direct attacks on people, while the coalition spoke out for an acceptance of self-defense in the event of attacks by the police, where the use of material barricades was explicitly condoned. The Tute Bianche decided to restrict their own actions to the wall around the “Red Zone” (the exclusion zone surrounding the summit) in order to communicate a politically directed offensive course of action to a broad audience and not to endanger the coalition. The decision to renounce direct attacks, however, remained a strategy.

Around the G8, many other groups and networks joined together with the Tute Bianche for a common action. Among these were already existing anti-globalization networks from southern Italy (such as Sud Ribelle), diverse groups and social centers from throughout Italy who had not previously belonged to the Tute Bianche, and the *Giovani Comunisti/e* (Young Communists, GC), the youth organization of the Refounded Communist Party (Partito della Rifondazione Comunista, PRC). A number of those belonging to GC had already taken part in the Tute Bianche, but with the G8 in Genoa, GC as such attached itself to the Disobbedienti. This was largely a consequence of the fact that, between 2001 and the end of 2003, the PRC, which was politically directed towards the social movements, opened itself to them and primarily agitated on the streets. In some regions, however, such as Italy’s northeast and in Bologna, there was far stronger cooperation with the left-oriented Green Party.

In light of their great popularity, the Tute Bianche decided to take off their white overalls so as not to appear as a kind of uniformed army. They did not want to be seen as an avant-garde in relation to the rest of the demonstration – for whom there were not enough overalls – but rather to dissolve themselves within the “multi-

tude,” rejecting the name Tute Bianche and adopting that of the Disobbedienti.

The “attack” on the G8’s sealed-off Red Zone was comprehensively prepared, yet the demonstration of over 10,000 people was attacked by the police and Carabinieri (military police) with huge amounts of teargas, batons, and stones for hours. Firearms were also used. A youth named Carlo Giuliani was killed by a shot to the head from a Carabinieri. In light of the massive attack by the police, the demonstrators began to actively resist. The Tute Bianche’s concept for action was aborted. While on the one hand Genoa illustrated a new breadth and quality to the movement, on the other it showed a massive engagement by different levels of the population and professions in the service of the movement. The Disobbedienti began, on this basis, to propagate a move from “civil” to “social disobedience.”

Radicalization of the Movement and Its End

The period from 2001 to 2003 was one in which social struggles were broadened and radicalized in Italy. Alongside the Disobbedienti, reformist left and trade union movements developed forms of mass protest. The cooperation between the Disobbedienti and GC and parts of PRC gave the movement a massive boost. The results of the participation was not just visible in a quantitative sense, but also in a financial one, in that GC and PRC possessed considerable financial means which they partly made available for the Disobbedienti. For example, the *Global* magazine, which came from Disobbedienti’s area of the movement, was financed this way. It was published in Italian, with a Portuguese-language version for the World Social Forum in Brazil. By means of this the attempt was made to set up a radical left-wing magazine available at mainstream newsagents.

Alongside a range of local radio stations (best-known of which was Radio Sherwood from the area around Padua) which were part of the Disobbedienti movement, they also experimented with direct TV broadcasting via satellite from various events and demonstrations under the label Global TV. A satellite frequency was rented, for example, for three days during the first European Social Forum (ESF) in Florence in November 2002. Programs were broadcast via

satellite and partly re-broadcast by local and regional stations. The high costs were largely carried by the PRC.

The focus of the mobilizations and protests of the Disobbedienti were, among others, temporary employment agencies, detention centers, the wars in Afghanistan and Iraq, various summits, intellectual property, and the TAV high-speed train in Piedmont. In addition, the Disobbedienti strengthened their roots and mobilizations within a local context. Among the most spectacular of the Disobbedienti’s actions was the partial dismantling of a detention center for illegalized migrants in Bologna on January 25, 2002. Around 100 Disobbedienti stormed the building site which was to become the detention center and dismantled everything removable, causing estimated damage of 300,000 Euros and delaying the opening of the center by four months. On April 16, 2002 the Disobbedienti took part in a general strike called for by the general association of trade unions against the relaxing of employment rights. They supported the strike with their own actions, occupations, and blockades and the demand for “Equal Rights for Everyone.” The strike sought to become “social disobedience” which reached beyond the workplace and spread throughout the whole of society. In February 2003, as part of a broad coalition, the Disobbedienti organized a demonstration in Rome with over 2 million participants. At the same time, they developed numerous forms of direct action against the war in Iraq, like the blockading of railway lines and docks to prevent the transportation of weapons to Iraq.

The unity of the Disobbedienti movement continued until October 2003. In view of the forthcoming election, as the PRC reconcentrated upon participation in a center-left coalition to replace the Berlusconi government, the relationship between the Disobbedienti and PRC/GC changed. The financing for *Global* magazine and Global TV projects was withdrawn. During the preparation of a demonstration against the EU summit in Rome in October 2003, a conflict developed between the GC and the members of Disobbedienti who came from the Tute Bianche. Each accused one another of not sticking to prior agreements. At the same time, there was growing unease on the part of PRC, who were preparing to take power, in relation to the growing radical nature of the movement.

There were more frequent confrontations with the police at demonstrations, with direct action taken against banks, transnational corporations, and other symbols of globalized capitalism, as well as a number of “reappropriations” in big book stores and supermarkets.

The leader of the PRC, Fausto Bertinotti, demanded that the movement distance itself from all forms of violence, making a large number of accusations against the Disobbedienti and the movement. In January 2004 the PRC organized a large gathering on non-violence, marking a further break with the Disobbedienti. At the same time, the PRC offered a number of well-known Disobbedienti spokespeople the opportunity to stand as PRC candidates in the European Union parliamentary elections. The Disobbedienti collapsed. Some groups and individuals left GC for the movement, while some of the movement joined the party. Several social centers in Milan, including the well-known Leoncavallo, moved over to Rifondazione. Several individuals who had been Disobbedienti spokespeople or activists decided to run as electoral candidates, breaking with the Disobbedienti, while many groups and individuals completely withdrew in disappointment. The former Disobbedienti from northeast Italy, a few groups from Rome, Emilia Romagna, Naples, Bologna, and the area around Turin, organized themselves within the “Global Network.”

Beyond the conflicts described, the end of this most vital period of movement is attributable to the fact that the whole of the parliamentary left in Italy, as well as the network of civil organizations heavily connected to them, which for many years constituted an important part of social mobilizations, have concentrated once more on parliamentary politics.

Dix, Dorothea (1802–1887)

Le'Ann L. Solmonson

Dorothea Dix is considered to be one of the most influential reformists of the nineteenth century, yet she is also one of the most unrecognized. Dix devoted a significant portion of her adult life to advocating for those who were unable to speak up for themselves. Her persistence resulted in successful advances in the treatment of prisoners, the indigent, and the mentally ill.

There are conflicting reports of Dix's childhood and early adult life. This is most likely a result of her reluctance to discuss the events of her harsh early years. Her father was an alcoholic and her mother suffered from depression. This left Dix to take care of the household and her two younger brothers.

In 1841 Dix volunteered to teach a Sunday School class for a group of female inmates in a Cambridge, Massachusetts jail and was appalled at the conditions she discovered there. Inmates were all housed together, regardless of the reason for their incarceration. Criminals, indigents, the mentally retarded, and the mentally ill were living in filthy, unsanitary conditions. Upon inquiry as to why there was no heat, the jailors told Dix that the insane did not feel cold or heat. Dix successfully advocated in the court system for more humane conditions in the Cambridge jail.

This experience prompted Dix to begin an investigation of other jails, prisons, and almshouses in the state. She traveled throughout the state and wrote extensive reports that documented the horrific conditions in which people were housed. These memorials were so detailed and infused with reprimands of administrators who had allowed such human indignity to exist that they immediately garnered a significant amount of attention. She used her memorials as evidence to present to the Massachusetts legislature and was responsible for legislation that funded an expansion of the Worcester State Hospital

in order to provide facilities and treatment for the mentally ill.

Dix went on to use the same advocacy tactics to enact reform in every state east of the Mississippi River and was instrumental in the establishment of 32 hospitals, 15 schools for the mentally retarded, and a school for the blind. With the success of her efforts, Dix was motivated to lobby for the designation of 5 million acres of land to be set aside in order to provide for the care of the mentally ill. This was the first attempt to involve the national government in the care and treatment of those who were unable to provide for their own care. She was successful in getting the legislation passed through the House and Senate in 1854, but President Franklin Pierce vetoed the bill.

Dix's tireless efforts took a toll on her health, so she went to Europe to recuperate. In the two years that she spent in Europe, she traveled to 13 countries and successfully enacted reform similar to her work in the United States. She returned to the United States as the Civil War broke out and accepted a position as the Superintendent of Union Army Nurses. In this role she advocated for a woman's ability to provide medical care during war conditions, the welfare of nurses, abstinence from alcohol by on-duty physicians, and sanitary conditions in medical areas.

Djilas, Milovan (1911–1995)

Boris Kanzleiter

Milovan Djilas was one of the leading communist partisan commanders who led the successful

anti-fascist People's Liberation War against the German and Italian occupation of Yugoslavia during World War II. He was also the internationally best-known Yugoslav dissident after World War II and a notable theorist and author.

Djilas was born in the village of Podbisce in the Kingdom of Montenegro, which joined Yugoslavia after World War I. In his youth he became involved in political struggle. A student of Belgrade University, he joined the illegal Communist Party of Yugoslavia (CPY) in 1932. He was imprisoned for his political activities from 1933 to 1936. In 1938 he was elected to the Central Committee of the CPY. Two years later he was appointed a member of the Politburo, the highest leadership organ of the clandestine party.

World War II was a decisive period in Djilas' life. Following the occupation of Yugoslavia in April 1941 by the Wehrmacht, the CPY started a campaign of armed resistance. Djilas was first sent into his native Montenegro to organize the partisan struggle against the occupying Italian forces in the summer of 1941. Later in the same year he joined the head of CPY Josip Broz Tito in the partisan stronghold of Uzice in Western Serbia. Djilas started to work for the paper *Borba* (Struggle), the CPY's main propaganda organ.

After World War II Djilas was one of the most popular leaders of the CPY. In 1948 he was sent by Tito as an emissary to meet Stalin and symbolically break with the subservient relationship of the Yugoslav Communist Party to the Soviet Communist Party. In the aftermath he became one of the most outspoken critics of Stalin within the CPY. In 1950 he was one of the architects of the development of workers' self-management in Yugoslavia, a form of control originating in nineteenth-century Spain and continuing into the Spanish Revolution of 1936. Workers self-management was the foundation of Yugoslavia's "third way" socialism that was independent of the Soviet Union.

Djilas was considered one of Tito's eventual successors. In January 1954, however, a new chapter in his life began when he was expelled from all government and party positions, due to his growing criticism of the elitist behavior of the new communist power group in Yugoslavia. In a series of articles in *Borba* he demanded more democracy within the party and generally the country, attacking the arrogance of leading

functionaries. In the coming years Djilas elaborated his critique. In 1957 he published his best-known book, *The New Class: An Analysis of the Communist System*, in which he argued that communism in Eastern Europe was not as democratic a system as it pretended to be. He accused the communist functionaries of having established a new class of privileged party bureaucrats who enjoyed material benefits from their positions. During the Cold War Djilas' writings were published in the West and often used for anti-communist purposes. However, Djilas defined himself as a "democratic socialist" and never regretted his role in the partisan movement.

The price Djilas had to pay for his outspokenness was political isolation in Yugoslavia. He was arrested for the first time in January 1955 and stayed in prison until 1961. After his release he published his work *Conversations with Stalin* (1962) and was imprisoned once again, until the end of 1966. He was released after the Yugoslav communists adopted a liberal reform program in the mid-1960s. In 1968 Djilas supported student protests in Belgrade. During the 1970s and 1980s his flat in the center of Belgrade was frequented by political dissidents. In the beginning of the 1990s he opposed the breakup of Yugoslavia and nationalism. Djilas remained politically active until his death in 1995. Besides his political analyses and autobiographical writings he also published works of fiction.

Dominican Republic, protest and resistance to US imperialism, 1916–1962

María Ximena Alvarez Martínez

The history of the Dominican Republic's protest movements in the first half of the twentieth century can be divided between those that followed the US military occupation, which lasted from 1916 to 1924, and those associated with Trujillo's dictatorship, from 1930 to 1961.

The US Marines invasion of the island in 1916 followed years of intervention. In 1907, the Dominican–American Convention established the United States' control over the country's financial affairs and gave the US the right to intervene in Dominican political life whenever it deemed it necessary. The military occupation was carried out in the pretext of restoring political order, providing an incentive to economic growth, and protecting the lives and property of US citizens. With the resignation of President Juan Isidro Jimenes, his successor Francisco Henríquez Carvajal was forced to negotiate with the US over the dissolution of the Dominican armed forces and their transformation into a constabulary organized and directed by US citizens. The elimination of the Dominican armed forces elicited strong protest, led by the secretary of the army, Desiderio Arias. Arias and his supporters confronted the Marines between May and July of 1916 in Puerto Plata and Mao, but were quickly defeated and forced into exile.

One of the first measures of the military occupation, declared on November 26, 1916, was the disarmament of the population with the intention of suppressing the rebellions that had been organized in rural and urban areas. One of the first resistance movements of any significance arose in La Barranquita, where 45 Dominican soldiers faced 600 Marines. Given the obvious military disadvantage, this revolt was easily defeated, but such was not the case in other provinces, including El Seibo and San Pedro de Macorís. The armed resistance of the peasants, disdainfully termed *Gavilleros* (rural bandits), put up a hard fight from 1916. Its main leaders were former soldiers such as Vicente Evangelista Chacha

Goicochea, Ramón Natera, and Martín Peguero. Their knowledge of the geographical area and experience with firearms, as well as the support of the region's people, forced the US to redouble its military efforts to defeat them. A request was made by the military governor Thomas Snowden to increase the Marine presence from 1,998 to 2,900, claiming that the actions of the guerillas threatened the lives of the US soldiers and that the entire Dominican territory had to be covered with troops.

The disintegration of the guerillas in 1922 was caused by different factors. The new military governor, Rear Admiral Samuel S. Robinson, arrived in 1921 and implemented a forceful anti-guerilla offensive. He also promised amnesty for all the rebels, as well as gradual evacuation of the territories.

Urban nationalist movements played a crucial role in opposing the US military occupation. One of these was the Patriotic Ladies' Committee (Junta Patriótica de Damas), founded in March of 1920 to oppose the military occupation. This organization as well as other social movements gathered together to protest in June of 1920 during Patriotic Week. The Patriotic Ladies' Committee handed out hundreds of Dominican flags as a symbol of the national struggle, gathered resources to promote propaganda against the occupation in other countries, and sent a letter to the US Senate signed by hundreds of women demanding the evacuation of all US troops. Middle-class intellectuals also came together to oppose the occupation, forming the Dominican Nationalist Union (UND), which included among its leaders Américo Lugo, Fabio Fiallo, Federico García Godoy, Enrique Henríquez, and the history teacher Fidel Ferrer. Because of press censorship and repression, UND representatives took their campaign to other Latin American countries as well as Europe and the US, where they held talks to describe the country's situation, denouncing the abuses of the US army against the Dominican population and trying to obtain international solidarity.

Opposition to the occupation was also visible in artistic and musical circles, as writers, singers, and authors appealed through their work to the people's sense of nationalism. The merengue became the rhythm of the resistance, and later would be used by Trujillo as a propaganda mechanism for his dictatorial regime.

The propaganda within and outside the country, along with the armed resistance, led to the removal of the troops in 1924. Another important factor was the change of leadership in the United States. The new president, Warren G. Harding, was a critic of Wilson's intervention policy in Latin America. He proposed a removal plan calling for the gradual withdrawal of the Marines, new elections under the supervision of the military government, and the continuation in the country of US officials. The proposal was opposed by nationalist organizations, which demanded the total evacuation of the territory. The Hughes-Peynado plan was then proposed in September of 1922 guaranteeing that the Marines would leave the country permanently and that a provisional government would be created.

One consequence of the US occupation, and an element of its continuity, was the dictatorship of General Rafael Leónidas Trujillo, who had been trained by the Americans. After his military coup in 1930, he resorted to cruel means to repress opposition, and thousands of Dominicans lost their lives, were arrested, or went into exile. He was also responsible for the genocide of 18,000 Haitian immigrants in the so-called "Parsley Massacre" of 1937.

Since the nineteenth century, Haitians had lived on Dominican land on the border between the two countries. The purpose of the massacre ordered by the central government was to "solve" the border conflict by exterminating the Haitians. Since they spoke French, it was easier to single them out because they were unable to pronounce the "r" of *perejil*, which means "parsley" in Spanish. Those who mispronounced the word were brutally killed with machetes and knives.

Control over the country's sources of wealth and the corruption of Trujillo's regime made him the richest man in the country; by the end of his life in 1961, he controlled 80 percent of the country's industrial production, employing 45 percent of the active population. Despite the harsh repression of the regime, the resistance grew stronger, not only within the country but outside as well.

On several occasions, many of those who had gone into exile gathered to organize invasions to liberate the country and overthrow the tyrant, but their attempts failed for many reasons. The first was organized from Cuba in the 1930s and was aborted by General Fulgencio Batista, the new

strong man of the Cuban government. In 1947 another attempt, the Cayo Confite Invasion, was made from Cuba with the approval of Cuban President Ramón Grau San Martín and the rich Dominican landowner Juan Rodríguez. The expedition members had the support of Cubans, including the young Fidel Castro, and people from Nicaragua and Honduras, who were also in exile. Their hope was to overthrow their own countries' dictatorships after succeeding in the Dominican Republic. However, their plans were detected by Trujillo, and the Cuban army's chief, Genoveno Pérez Dámera, captured the expedition members. Another failed expedition, also organized by Juan Rodríguez, took place in 1949 from Guatemala with the support of President Juan José de Arévalo. Despite being able to get into the country through the Bay of Luperón, which gave the expedition its name, it failed for different reasons, including lack of coordination and bad luck. One of the hydroplanes had to land in Costa Rica instead of the Dominican Republic because of a storm. The other group landed in Cozumel and was caught by the Mexican military authorities. The last invasion attempts by exiles were made at the end of the 1950s.

One of the first underground movements within the country's borders was the plot of Santiago, organized by young people between 1931 and 1934 with the goal of overthrowing and killing Trujillo to facilitate the establishment of a democratic government. The assassination attempt was planned for March 30, 1934, when the dictator would be in Santiago celebrating Commemoration Day. The assassination did not take place, and in the following weeks a campaign of agitation was brutally suppressed by the government. Several members of the rebel group were tortured and killed; others went into exile and were accused of treason, such as Juan Isidro Jimenes Grullón, Daniel Ariza, and Ramón Vila Piola.

Several workers' strikes took place in the 1940s, such as those in the sugar cane fields of La Romana and San Pedro de Macoris in 1942. The strikes spread to the industrial sector with calls for improved wages. The government's response was to ban strikes. With the First Workers' Congress in September 1946, the persecution of workers and political opposition began.

After the defeat of internal and external opposition in the 1940s, the 1950s was a relatively peaceful decade for the regime. In 1957 the

Military Intelligence Service (SIM) was created and became an even more effective means of repressing and controlling the frightened population. The success of the Cuban Revolution against Batista's dictatorship in 1959 had consequences for Trujillo's regime. On one hand, the anti-Trujillo movements in exile were given a purpose to continue their struggle, and on the other, the US modified its foreign policy toward the Trujillo dictatorship. Fear of the rise of a new revolution on Dominican territory, inspired by the one in Sierra Maestra, led to further tensions between Trujillo's regime and the United States government and caused a rupture in their relations in 1960. US President Dwight D. Eisenhower then began to support and finance opposition movements of the regime.

One of the anti-Trujillo movements that went into exile was the Dominican Patriotic Union in Venezuela. Its members went to Cuba to reorganize after the flight of Batista and created the Dominican Liberation Movement (MLD). They made arrangements for new invasions: Constanza, Maimón, and Estero Hondo on June 14 and 19, 1959. Trujillo knew about the plans and prepared a counterattack. Justifying his declaration of a state of emergency, he announced that the country was under threat of a Cuban communist invasion. All 191 members of the expedition were brutally defeated and tortured, and all but six were killed.

Their heroic efforts encouraged resistance within the country and led to the underground Movement of June 14. This movement was created in January of 1960 by young Dominicans in memory of the heroes defeated during the expedition of June 14, 1959. The mission was to continue the ideals of the MLD and the leaders of the 1959 expedition, and also to overthrow Trujillo's regime. Among the movement's leaders were Manuel A. Tavárez Justo, Juan Miguel Román, and Minerva Mirabal. Once the movement became public, new waves of bloody repression took place all across the country. However, mass arrests and killings could not hide the obvious weakening of the regime.

The November 1960 assassination of sisters Minerva, Patria, and María Mirabal, who were prominent in the June 14 movement, gained national and international attention. These women's stories appealed to the population, and they were thought of as heroes for the cause of Dominican freedom. Opposition grew among

other sectors of the population and new underground circles were created.

In addition, sanctions were brought against the dictator by the Organization of American States (OEA) for his attempt to assassinate Venezuela's president Rómulo Betancourt in 1960. Betancourt supported the anti-Trujillo group exiled in Venezuela and in 1959 had proposed the expulsion of all dictators before the OEA. Because of this, in June of 1960 a plan was hatched by the Dominican government to assassinate him; in spite of all the precautions taken, however, the attempt did not succeed and Betancourt survived. The *Dominican Voice*, the official radio and television of the regime, joyfully announced the death of the president, revealing Trujillo's implication in the planning of the bombing.

Plans to bring Trujillo to justice also emerged within his regime. One example was the Sergeants' Conspiracy of September 1959. In this attempt, sergeants of the Dominican military aviation made plans to assassinate Trujillo but were detected by the regime's intelligence service. The conspirators were brutally killed. After so many frustrated attempts, Trujillo was finally killed on May 30, 1961, bringing an end to the dictatorship.

Dominican Republic, protests, 1844–1915

Leticia Pacheco Espejel

On February 28, 1844, the independence of the ancient Spanish island of Santo Domingo (now the Dominican Republic) from Haiti was pro-

claimed. It came about as a result of protests by three important independence movements of the nineteenth century. One was the Trinitario movement, which can be attributed to Juan Pablo Duarte and consisted mainly of liberal party supporters of European origin. The second movement was headed by the Society of the Rights of Man and the Citizen, founded by opposition groups from the west of the country, who contested the government of Jean-Pierre Boyer. Its manifesto included a public call for rebellion, independence from Haiti, and a demand for constitutional reform. The third independence movement, led by Buenaventura Báez, emanated from a conservative group that wanted independence from Haiti, but as the protectorate of a foreign power. The Declaration of Independence also ended slavery in the Dominican Republic.

Santana, Báez, and the Annexation

The supporters of a protectorate did not agree with the Declaration of Independence. They wanted separation from Haiti and the Dominican Republic as an English, French, or US protectorate. Pedro Santana was the protagonist of this movement. In 1844 he was declared president of the Dominican Republic for two consecutive periods of four years each, which were characterized as the era of the dictatorship of Santana. During this time, an autonomous military committee was created to ensure public security. Military passports were issued, without which no citizen was allowed to circulate within the country. Any Dominican citizen or stranger who protested against the government had his or her goods seized, and those found guilty of such activity were banished.

The two presidential periods of Santana and Buenaventura Báez were accompanied by several armed insurrections against their politics and the disastrous economic situation. In 1855, a protest against Santana emerged from the army. The takeover attempt failed, however, and the group was arrested. Santana established the Military Commission, which was authorized to carry out the death penalty on any military personnel who acted against the government. Later, this measure was extended to all citizens.

The movements supporting independence achieved a revision of the 1844 Constitution in 1857. However, it was Santana himself who

revised 72 constitutional articles, provoking protests by the independence movements. They founded the newspaper *El Porvenir*, which became the voice of the opposition.

On March 18, 1861, the Dominican Republic was officially annexed by the Spanish crown after secret negotiations between Santana and Queen Isabel II. In the region of Moca opponents carried out an armed insurrection, which was suppressed after intense fighting and the protagonists arrested. In May 1861, opposition generals Francisco del Rosario Sanchez and José María Cabral, together with 500 soldiers, entered the city of Santo Domingo to confront the Spaniards. They were arrested and most were sentenced to death and shot. In remembrance, July 4, 1861 became the day of the Martyrs of Cercado.

The War of Restoration

Disagreement with the politics of the Spanish crown extended to various sectors of society, such as the church. Taxes on goods were raised to 4 percent. In February 1863, various insurrections against the Spanish crown and in favor of the restoration of the republic took place. The first, led by Cayetano Velásquez and Manuel Chiquito, occurred in Neyba. At the same time in the northwest province of Sabaneta, the mayor declared the annexation void and the people supported him. After that, rebels took the province of Guayubin.

Another insurrection occurred in the province of Santiago. A commission headed by Ramón Almonte published a document declaring that the municipal council of Santiago should be free of the Spanish crown, followed by a request to all to fight for the independence of the country. The Spanish army suppressed this movement, establishing a state of siege, and the leaders were arrested and killed.

With arms from Haiti and support from the United States, the Restoration movement triumphed in the provinces of Guayubin, Sabaneta, Las Matas, Guayacanes, and Santiago, where it was decided to constitute a government that would organize all the opposing powers from there. On September 14, 1863, the act of independence had been composed and a restoration government declared, with Antonio Salcedo as its president and Benigno Filomeno de Rojas as its vice-president. The restoration government passed a death sentence on General Santana.

Santana and the Spanish army fought the movement in a battle that lasted for months and exhausted both armies. Santana eventually died of fever on June 14, 1864.

The Second Republic

Between 1865 and 1915, the Dominican Republic was politically unstable. The members of General Báez's Partido Rojo (Red Party), who controlled the northwest and the south of the country, installed a junta in government in 1867. In January 1868, the opposition had split. One group was headed by José María Cabral, who went into exile in 1868. Another group was the liberal Partido Azul (Blue Party) of General Luperón, formed by tobacco planters and merchants of Cibao and Puerto Plata. They opposed the politics of General Báez, who continued to seek annexation by a foreign power. General Báez's conservative Partido Rojo was formed of mahogany-exporting interests and cattle-ranching *latifundistas* (large landowners).

The parties signed an agreement in 1869 in San Marcos to bring to an end the permanent struggle among them, agreeing upon the return of General Cabral from his Haitian exile. Báez supporter General Antonio Pimentel continued to defend the border in the north, while General Luperón concentrated on Cibao and on the population on the coast. They all opposed the annexation plans of General Báez, who had already begun to negotiate with the United States about annexing the republic.

The unrest continued. After a short period in government by General Ignacio María González (1876), General Buenaventura Báez returned to power. Under his government (1876–8) the opposition suffered persecution and murder but managed to take the provinces of Cibo and Santiago. In response to the civil disorder, General Báez stepped up the repression and declared a country-wide state of siege. He was forced to leave the country in 1878, however, and the opposition retook the country's principal cities. Between 1889 and 1892, six important insurrections against the dictatorial government of Ulises Heureaux took place – in Santiago under Francisco Gómez, in Dajabón under Pablo Reyes, and in Montecristi and La Vega under General Perico Lozada.

In 1903, the presidency was assumed by General Alejandro Woss y Gil. At the same

time, a new Unionist movement emerged. Woss y Gil felt obliged to accept a protocol signed with the United States under the previous government of Juan Isidro Jimenes, which gave the United States the right to rent the bay of Samaná for use as a naval base. Unionist troops besieged the city and Woss y Gil capitulated on November 24, 1903.

The new president, Manuel Altagracia Cáceres, concentrated on breaking down public insurrections by ordering the relocation of rebellious citizens, the destruction of their cultivated fields, and the slaughter of their cattle. This undoubtedly caused a serious decline in the opposition's political activities. It also led to a crackdown on the press and a worsening economic situation.

Problems were exacerbated after an agreement with the United States in May 1907. In January 1905, the United States had assumed administration of the Dominican Republic's customs. Under the terms of this agreement, a Receiver-General, appointed by the US President, kept 55 percent of total revenues to pay off foreign claimants, while remitting 45 percent to the Dominican government. In 1907, this agreement was converted into a treaty, transferring control over customs receivership to the US Bureau of Insular Affairs. One of the most effective stipulations of the convention was a \$20 million loan, for which the Dominican Republic had to pay 50 percent of its national income to a bank in New York. Many farmers were displaced so that their land could be handed out to foreign investors, and discord arose among influential groups, who provoked serious uprisings in the north of the country. By 1909 the unrest had extended to ministers, who resigned their functions. On November 19, 1911, Cáceres was ambushed by the insurrectionists.

In 1914, a year after the United States had helped José Bordas Valdez to assume the presidency, the Valdez government lost control of the principal cities in the country. This unstable situation, together with Bordas's inability to handle the conflict, forced the United States to publish a declaration in which it ordered the insurrectionists to lay down their arms and establish a government by elections under the supervision of the United States. The US also forced Bordas to resign from office. Ramón Báez, the son of Buenaventura Báez, was nominated as the internal successor. Elections were won in October 1914 by Isidro Jimenes, who had

already been president from 1886 to 1889, but he failed to bring stability to the country. As a result, the United States installed a military dictatorship, which lasted from 1916 until 1924.

Dominican Republic, resistance to military and US invasion, 1963–1965

Fernando Artavia Araya

On May 30, 1961, after 30 years of one of the cruelest dictatorships in Latin American history, Rafael Leónidas Trujillo was murdered. But even if the *caudillo* had died, his heritage, *trujillismo*, was carried on by family members and his closest friends, especially Joaquín Balaguer, whom Trujillo himself had led to the president's chair. Pressured by opposition from the National Civic Union (NCU) and the 14 of June Movement, Balaguer agreed to form a provisional government, the Council of State, led by him but with the presence of the private sector, the Catholic Church, and the two surviving assassins of Trujillo – Luis Amiana Tió and Antonio Imbert Barrera.

The seven-member council had legislative and government powers and was in charge of calling for democratic elections. Nonetheless, old trujillist sectors were unwilling to share power, and in January 1962, they led a coup against the newly founded council, headed by General Echevarría. After popular mobilizations and pressure from the John F. Kennedy administration, the main authors of the coup were arrested and forced into exile. A second Council of State was constituted, this time led by Rafael F. Bonnelly.

In an atmosphere ripe with anti-communist persecution and accusations, the new council

called for elections in December 1962. Juan Bosch, leader of the Dominican Revolutionary Party (PRD), returned after 25 years of exile and won the presidential elections with 648,000 out of roughly one million votes, beating his closest competitor, Viriato Fiallo of the NCU, by a two-to-one margin. The PRD also won 22 out of 27 seats in the senate and 48 out of 74 seats in the parliament. On February 27, 1963, Bosch assumed his role as constitutionally elected president. From the beginning he knew that his government needed a legal instrument to promote his reformist program and solve the main economic and social problems of the Dominican Republic.

In April 1963, the National Assembly approved a new constitution, which later became the *leitmotiv* for the Constitutionalist movement. The new constitution was highly progressive by Dominican standards. It settled a whole set of liberal political rights and guarantees to promote social justice in the fields of education, health, work, land, and housing. Some of the articles affected important oligarchic and US interests like the prohibition of large landholdings, the impossibility for non-Dominicans to own national land, the prohibition of monopolies, and idea of nationalization of the mines. Bosch also took some unforgivable decisions that irritated the trujillist sectors and their American partners. For example, the government did not accept some contracts with American companies and established a new tax for already overpriced sugar, with proceeds destined to build public housing.

The trujillist groups rejected the new constitution as subversive, and the US Department of State accused Bosch of favoring the infiltration of communist elements and ideas into the country. The main fear of the US government was to have “another Cuba.” And so, after only seven months of democratic government, on September 25, 1963, a group of officers from the Dominican army headed by General Wessin y Wessin led a coup against Bosch. The coup leaders immediately declared Bosch’s 1963 Constitution “nonexistent,” promised to hold free elections, and formed a new provisional government known as the Triumvirate.

The Triumvirate was originally formed by three civilians (Manuel Tavares Espaillat, Ramón Tapia Espinal, and Emilio de los Santos), but ended with only two. The Triumvirate government was characterized by corruption, adminis-

trative incompetence, and political intolerance behind an anti-communist discourse. The 14 of June Movement, a leftist group inspired by the Cuban Revolution, started an armed guerilla struggle in the mountains, but it was soon controlled by the army. Even though the rebels had surrendered and the government promised to respect their lives, their leader, Manuel Aurelio Tavárez Justo, and 15 other members were shot in December 1963. After this event, Emilio de los Santos stepped down as head of the Triumvirate and was substituted by Donald Reid Cabral. In the midst of a serious economic recession, general discontent was exacerbated. Reid Cabral implemented International Monetary Fund (IMF)-supported economic austerity measures, which were opposed by large sectors of the Dominican population.

The Triumvirate government was rejected not only by the left but also by liberal and moderate political sectors. Members of the Social Christian Party and even Joaquín Balaguer tried to establish an alliance with Bosch’s PRD against the Triumvirate, whose initial intentions were to govern until the political situation had stabilized and then call for presidential elections, but which was announcing in 1964 that the scheduled elections would be postponed until September 1965. Few Dominicans believed that the Triumvirate would ever allow democratic elections.

In an effort to reduce the military budget, Reid Cabral cut fringe benefits to officers and shut down smuggling rings. Many officers, already disappointed after the coup, felt threatened by these moves and began devising coup plots to remove Reid Cabral and his illegitimate government. Headed by Colonel Rafael Tomás Fernández and Captain Mario Peña Taveras, young army officers arrested General Marcos Rivera Cuesta, beginning a revolt against the army and the Triumvirate government on April 24, 1965. The PRD, the 14 of June Movement, the Popular Dominican Movement, and many other groups opposing the Triumvirate supported the coup. The so-called Constitutionalist movement had begun.

The Constitutionlists, led by Colonel Francisco Alberto Caamaño Deñó, fought for the eventual return of the elected president, Juan Bosch, and the restoration of parliament and the 1963 Constitution. In the next few days Constitutionlists took control of Santo Domingo, the capital city. Defeating the Loyalist forces,

they besieged the Police Palace and captured Fort Ozama and the National Palace, where they announced their support of José Molina Ureña as the new provisional president.

The country divided into two opposing forces and the threat of a cruel civil war appeared very real since the Constitutionals had provided arms to civilians. The Loyalists, headed by De los Santos and General Wessin y Wessin, ordered Dominican air force F-51 planes to strafe the presidential palace; then they left the San Isidro base to cross the key Duarte Bridge and advanced into the city to take part in what became the bloodiest battle in Dominican history. Shocked by the deteriorating situation and afraid of a “communist takeover,” the Loyalists asked for assistance from US troops.

On April 28, 1965, the first American troops arrived on Haina Beach. Within ten days, the US military buildup reached 23,000 men. The belligerent superiority of the invading troops changed the course of events, which until that moment had been favorable to the popular Constitutionalist insurrection. On April 30, John B. Martin arrived in Santo Domingo, sent by President Lyndon Johnson to establish contact with both sides of the conflict and look for an agreement. The negotiations did not end well, and Martin declared in a press conference that the popular revolt was being controlled by communist elements.

Once the Marines and 82nd Airborne paratroopers were in place, the Marines moved out from around the hotel areas and took control of 9 square miles in the western part of Santo Domingo to set up the Organization of American States (OAS)-sanctioned International Security Zone (ISZ), a perimeter that ran along the ocean from near the Hotel Embajador and into the old part of the city. Finally, the US forces established a corridor that stretched across the city, which served to isolate the Constitutionals and “quarantine” the rebels so that the revolt would not spread. Thus at the beginning of May 1963, Santo Domingo was completely divided, not only by a security corridor but also between two different groups and governments that opposed each other: the Constitutionals headed by Colonel Caamaño, who had just been elected by the 1963 parliament as the new president, and the Loyalists with their five-member junta headed by General Antonio Imbert, with whom Caamaño refused to negotiate.

Meanwhile, the OAS sanctioned a US resolution to constitute an “international peace force” that would restore order in the Dominican Republic. Many critics arose against the OAS, which was seen as an instrument of American interventionism. Given the difficult situation into which the invading troops had pushed the Constitutionals, Colonel Caamaño appealed to the Security Council of the United Nations. General Secretary U-Thant sent a special commission to the island. In addition, US President Lyndon Johnson sent another commission, whose specific duty was to find a solution to the Dominican crisis while also keeping at bay the feared “communist threat.” This new commission made progress in negotiations, but when everything seemed to be going well and the Constitutionals had accepted rich landlord and Bosch’s former agriculture minister Antonio Guzmán as the new provisional president, General Imbert and the Loyalists balked at the so-called “Guzman formula.”

While the different parties searched for a political solution, violence in the city escalated, although a ceasefire had been agreed upon. At the end of June 1965, a new three-person mission created by the OAS, known as the “Ad Hoc Committee” (AHC) with representatives from the United States, Brazil, and El Salvador, was able to iron out a lasting agreement between the two sides. Colonel Caamaño and the Constitutionals had five demands: reinstatement of the 1963 Constitution, restoration of the 1963 Congress, continuation of Constitutionalist forces in the military, formation of a democratic government, and the immediate withdrawal of the US and OAS troops. By contrast, General Imbert demanded that his government be recognized as the only legitimate government and for it to remain in power even in any future transitional period. Under pressure from the US representatives, General Imbert had to cede his claims.

On August 31, an Act of Reconciliation was signed by the Constitutionals and the military, which signed on behalf of the Loyalist side after Imbert had resigned the day before. The agreement drafted by the AHC set out the specifics of the transitional government, the key element of which was the naming of Dr. Héctor García Godoy as provisional president. García Godoy had served as foreign minister under Bosch and as vice-president of Balaguer’s Reformist Party.

The Act also established a general amnesty, measures to release political prisoners, guarantees of civil liberties, and military reform, and stipulated that elections of local and national leaders were to be held six to nine months after the establishment of the provisional government.

García Godoy took over as head of the provisional government on September 3, 1965. After a turbulent period in which troops loyal to Wessin y Wessin armed with tanks tried to kill Constitutionalist leaders meeting in the Hotel Matum in Santiago, presidential elections took place in June 1966. The Reformist Party's Balaguer won with 57 percent of the vote, and the PRD's Bosch came in second with 39 percent. Because the Johnson administration had provided secret funds to the Balaguer campaign, many saw this as a fraudulent election. Bosch called for a "constructive opposition" and went back into exile. So began the 12-year regime of Balaguer.

Douglass, Frederick (1817–1895)

Yvonne D. Sims

Frederick Douglass, former slave, prominent abolitionist, and one of the first black intellectuals of the nineteenth century, was born in Talbot County, Maryland. His autobiography is one of the most important historical references pertaining to the impact of slavery on both African Americans and the political, social, and cultural arenas in America. Three crucial moments define Douglass's impact on American culture: his beginnings as a slave and the

recounting of his experiences in *Narrative of the Life of Frederick Douglass, An American Slave, Written by Himself*; his work in the abolitionist movement; and his emergence as one of the most prominent voices articulating the black experience in slavery.

When describing his early years in bondage, Douglass recounts the lack of an identity, common during slavery: "I have no accurate knowledge of my age, never having seen any authentic record containing it. . . . My mother was named Harriet Bailey. . . . My father was a white man. He was admitted to be such by all I ever heard speak of my parentage" (Douglass 2001: 13). He carefully records his experiences and encounters with brutal slave masters, from witnessing the graphic beating of his Aunt Hester when he was a very young child to other equally powerful incidents that shaped Douglass and further underscored his desire to escape and become part of the abolitionist movement. At one point in the narrative, Douglass describes how his grandmother nursed many children over the course of her long life, and when she was no longer deemed useful on the plantation, she was removed to live out her final years in the woods alone. Like an artist painting on canvas, Douglass draws many examples to illustrate the degradation of humanity in his autobiography. Two examples that serve as the impetus needed to escape center on how he learned to read and write and his final physical battle with a vicious slave-breaker.

Douglass learned to read and write from the wife of one of his masters. She taught him the alphabet before her husband discovered what she was doing and ordered her to stop. This increased his curiosity and, through bartering with indigent servants he met on various errand runs, he completed his quest for literacy. In gaining knowledge, Douglass came fully to understand his plight as a slave, and this gave him "a view of my wretched condition, without the remedy" (Douglass 2001: 35).

The second incident that cemented Douglass's destiny involved Mr. Covey, a person to whom many slaveholders sent their slaves when they were disorderly. After several disagreements with his master, Douglass was sent to Covey to be taught a lesson. After a particularly brutal beating that resulted in Douglass imploring his master to help him, he took matters into his own hands. In a fight that lasted "for nearly two

hours . . . Covey at length let me go, puffing and blowing at a great rate.” Proudly, he added that Covey got the “worse end of the bargain; for he had drawn no blood from me, but I had from him.” The battle led Douglass to a “revived . . . sense of my own manhood” and left him determined to gain his freedom (Douglass 2001: 54).

Four years later Douglass escaped to New York and then moved on to New Bedford where he married a freed slave named Anna Murray. Upon settling in New Bedford, he changed his name from Frederick Augustus Washington Bailey to Frederick Douglass and commenced a new life. The second phase of Douglass’s life began with an introduction to an anti-abolitionist paper entitled *The Liberator* published by William Lloyd Garrison. Reading this paper spurred Douglass to become actively involved in the abolitionist movement, and here he found an outlet for his voice.

Douglass had a long association with William Lloyd Garrison, traveling extensively abroad to give lectures on the inhumanity of a system that oppressed other human beings. While Garrison wrote about the atrocities of slavery, Douglass provided audiences with a *face* of slavery. After the publication of his autobiography, his career and personal life came full circle. By this time, Douglass had been married for many years, had children, and had traveled the country giving moving accounts of the racial injustice he had encountered. Additionally, he joined forces with another black abolitionist, Martin R. Delany, to found the newspaper entitled the *North Star* as a voice for African Americans. This paper was a symbol to black people of what could be done in the way of self-improvement and achievement, and to white people of the wealth of talent and ability blacks had to offer the national culture if freed. Douglass earned such a formidable presence in public discourse concerning slavery, the treatment of black Americans, and the failure of the government to properly address continued racial injustices that he commanded an audience with President Lincoln.

On February 20, 1895, Frederick Douglass died. He lived to see the debate on slavery become international in scope, a civil war that divided national discourse on states’ rights, and the ultimate abolition of slavery. At the time of his death, Douglass had established himself as one of the prominent black intelligentsia. Today, much attention is centered on his autobiography

as one of the first extensive narratives written by a former slave that encapsulates the struggles of slaves. However, Douglass was also one of the first African American intellectuals to devote his entire public and private persona to eradicating racial inequities, beginning with slavery and continuing after the emancipation proclamation. He also participated in the struggle for women’s rights in the United States.

Dreyfus Affair

Andrew J. Waskey

Captain Alfred Dreyfus was a French artillery officer who, in the 1890s, was the victim of anti-Semitism on the part of the French general staff. The case sparked a political scandal, known as the Dreyfus Affair, that caused bitter divisions in France for decades. The affair first brought to light a putrid and malodorous underside of French society that sought to base the honor of its military forces on an explicit and notorious act of injustice. At the same time, it gave rise to one of history’s most influential protest movements in defense of the principles of human rights.

Alfred Dreyfus was born at Mulhouse, Alsace, on October 19, 1859, into a wealthy Jewish textile-manufacturing family. By the early 1890s he had become an artillery officer seconded to the War Office in Paris, where he lived in a prosperous home with his wife and children.

In 1894 the French counterintelligence service discovered in the trash from the German embassy in Paris a list of secret French artillery documents that someone had given to the Germans. The discovery led to a search for the spy. Dreyfus became a target of the investigation because he was an artillery officer on the French general staff and because he was Jewish. An examination of his finances and a search for a possible mistress yielded nothing. Nor was there anything to connect him with the recovered list, because it was not written in his hand.

Nevertheless, on October 15, 1894, Dreyfus was arrested on suspicion of spying. He refused to confess or to commit suicide. After a secret court martial that violated French legal procedures and used documents later found to have been forged by counterintelligence agent Major Hubert Joseph Henry, Dreyfus was convicted and sentenced to life imprisonment on Devil's Island.

Dreyfus's family and friends began a campaign to win his freedom. Many prominent people rallied to Dreyfus's cause and before long France was divided into Dreyfusards and anti-Dreyfusards. The Dreyfusards argued that Dreyfus was innocent and that he should be exonerated. The anti-Dreyfusards argued that his conviction must stand because the honor of the French army depended upon it. The intense dispute revealed deep social fractures in French society and its institutions.

In 1896 Lieutenant Colonel Georges Picquart, then head of the counterintelligence service, obtained new documents from the German embassy that convinced him Dreyfus was innocent. When he reported his discovery to his superiors he was ordered to keep silent. The new documents, which matched the original list of secret artillery documents, were found to be in the handwriting of Major C. F. Esterhazy, an officer with uncertain credentials and a lackluster career stained by personal debauchery. For talking to Dreyfus's lawyers, Picquart was posted to a dangerous Tunisian frontier region and Esterhazy was protected by officers on the French general staff.

Dreyfus's lawyers were unable to effectively challenge the military's actions or its cover-up. Ultimately Dreyfus's wife appealed to Emile Zola, whose fame as a contemporary French social critic made him a powerful voice for Dreyfus. Zola wrote an open letter, *J'accuse*, which was to become one of the most renowned

of all protest statements. Published on January 13, 1898, it accused the War Office of criminality in convicting an innocent man because of anti-Semitic prejudice. Charges were brought against Zola for libel. The trial gave him an opportunity to retry the Dreyfus case in a public forum. However, judicial manipulation by the military led to Zola being convicted, and provided no relief for Dreyfus who was languishing on Devil's Island.

Rather than go to prison, Zola fled to England where he was hailed by public opinion and sympathetically ignored by the officials. He continued his campaign to win release for Dreyfus. The case only began to move in Dreyfus's favor, however, after Major Henry confessed to having forged a document that would make Dreyfus look guilty, and then committed suicide.

On the basis of Henry's confession and other evidence, Dreyfus was given a new military trial by a court in Rennes in 1899. The anti-Semitism in the French army was so pervasive that the bitter feelings surrounding Dreyfus's trial continued unabated. During the trial, testimony favorable to Dreyfus was barred. He was once again found guilty and sentenced to ten years in prison. However, the president of France, Emile Loubet, pardoned Dreyfus after he had served only ten days. In 1906 a civilian appeals court found Dreyfus innocent and reversed the original verdict.

Dreyfus returned to the army. In World War I he commanded one of the forts defending Paris. In 1918 he was promoted to lieutenant colonel and enrolled in the Legion of Honor. He died on July 12, 1935, in Paris. Meanwhile, the poisonous after-effects of the Dreyfus Affair continued to linger in France. The same social forces that supported the victimization of Dreyfus manifested themselves as a base for Nazi collaborationism during World War II, and then later encouraged the French military's extensive use of torture to repress Algerian freedom fighters.

Du Bois, W. E. B. (1868–1963)

Michael Zeitler

Sociologist, historian, philosopher, educator, novelist, critic, editor, civil rights activist, and organizer for over half a century, William Edward Burghardt Du Bois was among the most powerful voices in the international struggle for freedom, social justice, and equality. As a scholar, Du Bois challenged the accepted historical accounts of the Atlantic slave trade and Reconstruction and was the first to apply modern sociological theory to the problems of urban African Americans. As an educator, he advocated what would later become black and African studies. As a critic, editor, and novelist, he helped to define a black aesthetic and usher in the Harlem Renaissance. As an activist and organizer, he played a key role in the Niagara Movement, which in 1909 led to the founding of the National Association for the Advancement of Colored People (NAACP). As editor of the NAACP's journal, *The Crisis*, for a quarter of a century, he used that venue to speak out against lynching, discrimination, and segregation in the United States and western colonialism in Africa, Asia, and the Americas. Disillusioned with the prospect of achieving full racial equality in the United States, Du Bois became a naturalized citizen of Ghana before his death in 1963, at the age of 95.

Du Bois was born in Great Barrington, Massachusetts, on February 23, 1868. He faced relatively little discrimination in his youth, graduating with honors from the local high school and earning a modest scholarship to Fisk University in Nashville, Tennessee. His experiences at Fisk had a life-altering impact on the young scholar. It was at Fisk, while teaching each summer in the segregated schoolrooms of rural Tennessee, that Du Bois first encountered the resilient strength of Southern black culture; he also witnessed first-hand the harsh racial realities of post-Reconstruction America against which he was to struggle for the rest of his life. Upon graduation from Fisk in 1888, Du Bois con-

tinued his studies at Harvard University (where he studied under William James, George Santayana, and Josiah Royce) and the University of Berlin, earning a doctorate in history from Harvard in 1895 with his dissertation "The Suppression of the African Slave Trade to the United States."

After two years teaching at Wilberforce University in Ohio, Du Bois spent the next 13 years pioneering the sociological study of the African American community, first at the University of Pennsylvania, then at Atlanta University. His efforts resulted in the 1899 publication of *The Philadelphia Negro*, in addition to a series of groundbreaking academic conferences and journal articles on the condition of black America, its family structures, economic and employment status, patterns of urbanization and migration, religion, and cultural institutions.

His experiences living in segregated turn-of-the-century Atlanta, in an era of increased lynching and anti-black terrorism, convinced Du Bois to move beyond scholarly research and analysis to direct, confrontational political advocacy. To do so meant challenging the most powerful black leader of his generation, Booker T. Washington, founder of the Tuskegee Institute in Alabama. Washington had argued in his 1895 Atlanta Exposition speech that black people must expediently postpone the pursuit of political power, insistence on their civil rights, and access to the nation's centers of higher learning, concentrating, instead, on personal thrift and industrial skill training. For Du Bois, this was exactly the unthreatening message whites wanted to hear. Instead, he advocated for increased educational and political opportunities of a "Talented Tenth" vanguard that could effectively wage the battle for economic and political justice. His response initiated a lengthy personal and political conflict with Washington that would lead in 1903 to the publication of his most famous work, *The Souls of Black Folk*, and indirectly, in 1909, to the formation of the NAACP.

David Levering Lewis, in his 1993 biography of Du Bois, underscores the influence of *The Souls of Black Folk* in redefining black identity, declaring its publication "one of those events epochally dividing history into a before and after" (1993: 277). Part sociological study and part lyrical autobiography, *Souls* prophetically proclaims "the problem of the Twentieth Century is the problem of the color line." Politically, Du Bois thus contextualizes the domestic struggle for

civil rights within the framework of both a pan-African ideology and the nascent worldwide anti-colonialism movement. Psychologically, through his conceptualization of “double consciousness,” a “two-ness, an American, a Negro; two souls, two thoughts, two unreconciled strivings; two warring ideals in one dark body, whose dogged strength alone keeps it from being torn asunder,” Du Bois empowers black subjectivity as an agent capable of transforming America and the world. The black man, Du Bois writes, “would not Africanize America, for America has too much to teach the world and Africa. He would not bleach his Negro soul in a flood of white Americanism, for he knows that Negro blood has a message for the world.”

By 1905, his uncompromising opposition to racial injustice in the face of Washington’s overly accommodating and conservative leadership impelled Du Bois to oppose Washington’s “present methods of strangling honest criticism” and call instead for an “organized determination and aggressive action on the part of men who believe in Negro freedom and growth” (Lewis 1993: 316). Twenty-nine activists answered the call in Buffalo, New York, and the Niagara Movement was born. Their “Declaration of Principles,” largely written by Du Bois, emphasized civil liberties for all Americans, women’s suffrage, and equal economic, housing, and educational opportunities. In 1909, the members of the Niagara Movement merged with liberal white supporters to form the NAACP.

As director of publications and research and editor of the NAACP monthly journal, *The Crisis*, Du Bois became the new organization’s chief spokesman, a position he would hold for the next 24 years. Largely independent of the NAACP’s board of directors, Du Bois set a militant, combative tone for *The Crisis*, attacking all forms of social injustice – from lynching and the rise of the Ku Klux Klan to voting rights and Jim Crow segregation – while educating its readers on cultural currents, the arts, pan-African ideology, and African history. Although controversial and often at odds with the NAACP leadership, Du Bois made *The Crisis* the nation’s most influential African American journal. From a monthly readership of several thousand in 1911, circulation grew to over 100,000 by 1919.

Although Washington died in 1915, Du Bois and the NAACP soon had another rival for African American political leadership. By 1920,

Marcus Garvey’s Universal Negro Improvement Association (UNIA), with its emphasis on race pride, African repatriation, and self-reliance, had successfully acquired a wide variety of businesses, including real estate, grocery stores, hotels, laundries, and the Black Star steamship line, whose goal was to connect people of African descent throughout the world. The UNIA soon had 1,100 branches in 40 countries. Although the Du Bois–Garvey conflict is often seen as integrationist vs. separatist, the two leaders in fact agreed on the essential importance of black economic nationalism and an international commitment to pan-African principles. Nevertheless, Du Bois personally distrusted and publicly attacked Garvey’s grandiose economic and repatriation schemes, his association with the Klan, his critique of the NAACP’s “mulatto” leadership, and his belief in black racial purity.

As editor of *The Crisis*, Du Bois was also an important influence on the writers of the Harlem Renaissance, helping to launch the careers of Zora Neale Hurston, Countee Cullen, Langston Hughes, and Jessie Fauset. Yet excited as he was about the emergence of this new intellectual vanguard, Du Bois expressed concern that their agenda was more cultural than explicitly political, that it was too dependent on white patronage and readership, too reinforcing of white racial stereotypes. “I do not care for any art that is not used for propaganda,” he wrote in “Criteria of Negro Art.” Years later, he would argue that the Harlem Renaissance had “never taken real and lasting root” because it was largely addressed to white America (Lewis 2000: 314).

By the 1930s, Du Bois was increasingly disillusioned with the NAACP’s integrationist tactics. Positively impressed during his 1927 visit to the Soviet Union, and putting aside his distrust of the American labor movement’s historical racism, Du Bois’s *Crisis* editorials began to focus as much on class and economics as on race. The growing worldwide economic depression of the 1930s only further convinced him of the necessity of envisioning change through a Marxist lens. In 1934, Du Bois resigned his editorial control of *The Crisis* to return to Atlanta University as Chairman of the Department of Sociology, a position he held until 1944. While at Atlanta, he published his groundbreaking study *Black Reconstruction in America, 1860–1880* (1935), challenging the conventional accounts

of Reconstruction as a monumental failure and instead giving agency to the courageous struggle of the freed ex-slaves to make America a true democracy. He also published *Dusk of Dawn: An Autobiography of a Concept of Race* (1940), in which he traced the evolution of his ideas on race, democracy, and social justice in their full international context.

After World War II, Du Bois's growing radicalism amid the anti-communist political climate of the Cold War isolated him more and more from the mainstream of American civil rights activism and forced his retirement from Atlanta University. Nevertheless, in spite of his advancing age, Du Bois continued his attacks on imperialism, especially in Africa. As an associate consultant to the American delegation at the founding of the United Nations in 1945, he argued for the rights of colonized peoples in the postwar era and against their continued subjugation by the imperial powers that dominated the UN conference. That same year, the fifth Pan-African Congress meeting in Manchester, England, with Kwame Nkrumah, Jomo Kenyatta, and George Padmore in attendance, elected Du Bois as its president. In 1951, at the height of the McCarthy era, he was indicted by the United States government under the Foreign Agents Registration Act for his work as Chairman of the Peace Information Center. Although tried and acquitted, he was stripped of his passport and barred from foreign travel until 1958. During 1958–60, Du Bois traveled widely, visiting the Soviet Union, China, and Africa, and, in 1960, attending his friend Kwame Nkrumah's inauguration as the first president of an independent Ghana. The next year, at Nkrumah's invitation, Du Bois left the United States for Ghana to begin work on his planned multi-volume *Encyclopaedia Africana*. On his departure, he joined the Communist Party. In 1963, he renounced his American citizenship and became a Ghanaian citizen. He died in Accra on August 26, 1963 at the age of 95, as thousands gathered in Washington, DC for what would be the largest march for civil rights in American history.

Dubček, Alexander (1921–1992)

Joseph C. Santora

Alexander Dubček, a one-time member of the Czechoslovakian Communist Party, was a reformer who served as prime minister of the country in 1968. Born in 1921, Dubček became a member of the Communist Party of Slovakia in the late 1930s. By 1955, he was a member of the Central Committee, attended Moscow Political College, and graduated in 1958. In 1960 he moved to Prague from Bratislava, and was appointed secretary of the Czechoslovak Central Committee. Two years later, in 1962, he was chosen to serve on the party presidium. Shortly thereafter, he was appointed to the highest post in the Slovak Communist Party.

Dubček and democratic reform seemed synonymous. As leader of the Slovak Party, he negotiated a deal with Slovak writers and intellectuals that granted them greater freedom of expression, embraced new economic theories, and expressed his vocal criticism of the administration and policies of Antonín Novotný, a hardline party boss and president of Czechoslovakia. Sporting the theme of nationalism for Slovakia, Dubček galvanized dissidents and the intelligentsia, who wanted more freedom from their repressed status. Their alliance forced Novotný's resignation in January 1968, and Dubček was voted to serve as his replacement as party secretary of the Czechoslovak Communist Party.

As the Communist Party leader of Czechoslovakia, Dubček took several bold and unprecedented actions by instituting a series of sweeping political reforms to inaugurate a period of

liberalization, which Dubček called “socialism with a human face.” In what was known as the Prague Spring, censorship was abolished and citizens were granted the right to criticize their government. Due to Soviet hegemony over Eastern Europe, the political reforms initiated in March came to an end in August 1968. On August 21, Leonid Brezhnev, general secretary of the Communist Party of the USSR, sent Soviet troops and the Soviet Union’s Warsaw Pact allies to Czechoslovakia. The aim of the bloodless military invasion was to abolish the political reforms and other liberal gains made during the Prague Spring and to restore a doctrinaire state loyal to the USSR. Dubček and other reformers were taken to Moscow and compelled to yield to the demands of the Kremlin. Several days later, on August 27, Dubček returned to Prague as party secretary. Nine months later, in April 1969, he lost this position to Gustav Husak and was appointed ambassador to Turkey, serving in that capacity until 1970. Shortly thereafter, he was ejected from the Communist Party and went into exile in Slovakia, where he worked in a lumberyard as a clerk.

Some 19 years later, in 1989, he resurfaced in Prague to support the activities of dissident writer Václav Havel and the so-called Velvet Revolution, initiating the shift of Czechoslovakia from eastern domination to a western market economy and military occupation. In December 1989, the ever-popular Dubček was elected chairman of the newly formed administration as speaker of the federal parliament, continuing to serve as a link between the government and reforms enacted during the Prague Spring some 21 years earlier. He held this position until 1992, when he became president of the Slovak Social Democratic Party (SSDS). He continued in that post until his death on November 7, 1992, caused by injuries sustained in a car accident. Dubček died two months prior to Czechoslovakia’s split into two separate countries, the Czech Republic and Slovakia, on January 1, 1993.

Dublin General Strike, 1913

Claire Fitzpatrick

The Dublin Lock Out, or General Strike, of 1913 has been described as one of the most important events in both Irish and British labor history. Lasting six months, it was a battle between labor and all the forces of the state of such a scale that it looked like the significant issue of the twentieth century would involve not the national question, but the relationship between capital and labor. It occurred at a critical juncture in development of the national question and has been seen in retrospect as a dress rehearsal for Easter 1916.

Dire economic and social conditions which produced abject poverty and febrile industrial activity form the backdrop. Trade unionist activist James Larkin established the Irish Transport General Workers Union in 1909 to organize Dublin’s unskilled workers. With James Connolly, Larkin aimed to use the syndicalist idea of one big union and tactics of mass sympathetic action. While Larkin had some success, he amassed many enemies from employers and nationalists who argued his activity detracted from the national struggle. His efforts to organize Dublin tramworkers faced opposition from William Martin Murphy who controlled the Dublin Tramway Company. A former Home Rule MP, Murphy refused to recognize the union. His subsequent sacking of unionized members led to strike action. This was accompanied by violent confrontations between police and strikers. Murphy had been given assurances of help from government, and the Royal Irish Constabulary attacked trams and ransacked homes. The lockout which followed ended in defeat for the union. Although it provided financial assistance, the British Trades Union Congress refused to sanction sympathetic strike action at a critical point in the struggle.

Much work on 1913 has focused on Larkin and Connolly and placed events in the context of Ireland’s national struggle. O’Connor (2002) has shown the national question was a labor one.

Larkin identified the ITGWU with the Irish-Ireland movement, and the establishment of the Irish Citizens Army formed a link between 1913 and 1916. The events of 1913 also revealed the structural weakness of labor in Ireland as the ITUC played no part in the struggle.

Others have addressed the nature of the industrial action. Newsinger (2004) sees 1913 as part of the first wave of Irish syndicalism and Larkin (1989) argues conditions were ripe for syndicalism to flourish but suggests that it was adapted to conditions. Placing it within an international context, Brown (in Nevin 2006) claims it does not fit into the wave of syndicalist agitation but is symptomatic of a trend of workers responding to charismatic figures. He sees 1913 as part of a more widespread conflict of old-new values of the prewar world.

Dunayevskaya, Raya (1910–1987)

Jim H. Han

Raya Dunayevskaya devoted her life to the philosophical study of Karl Marx and others, including G. W. F. Hegel, Rosa Luxemburg, and Mao Zedong. Commonly described as a Marxist humanist, she was one of the most consistent twentieth-century interpreters of Marxism and her work was quite influential in numerous major protest and social movements. Her life centered on philosophy and revolution.

In the 1930s, Dunayevskaya was Trotsky's secretary during his exile in Mexico. During that time, along with C. L. R. James, a Marxist philosopher from Trinidad, she led the Johnson-Forest Tendency, which redefined the Soviet

Union as a form of capitalism run by the state. She perceived Stalinist Russia as a subverted form of the communist revolution in which the mode of production was owned not by the people but by the Communist Party. In contrast to Marxism as “a theory of liberation,” she argued that “Russian Communism . . . is the practice of enslavement” (1956). She founded the News and Letters Committees and continued to publish her ideas through its newspaper, *News & Letters* (currently online at www.newsandletters.org).

In *Marxism and Freedom* (1958), she expounded the genesis and history of Marx's philosophy that emerged from Hegel's dialectic. She outlined Marxism as a force of political movement formulated by Marx and further developed by Leon Trotsky. Vladimir Ilyich Lenin modified it into a bureaucratic system. Marx's dream of “total revolution” of a workers' state with equality of labor was “totally perverted” by Stalin, who formed a totalitarian state governed by the Communist Party. Her critique of these later manifestations of Marxism focused on the question of how the revolution, as envisioned by Marx, could be sustained.

Dunayevskaya's thought and practice were instrumental in a number of major protest movements, including the US civil rights movement, women's liberation, and youth revolts of the twentieth century. In *Marxism and Freedom*, she praised the Montgomery bus boycott as “a spontaneous movement kept within the hands of the Blacks.” Her most systematic work, *Philosophy and Revolution* (1973), included an analysis of the Cuban Revolution of the 1950s and the youth revolts of the 1960s. In *Women's Liberation* (1985), the third of her “trilogy of revolution,” she described the manner in which the miners' wives of West Virginia organized anti-automation strikes in 1949–50. In this book and other writings, she called attention to “the woman dimension,” characterizing women not merely in the role of support but as the formative forces of revolution. In *Rosa Luxemburg* (1982), she observed that the historic nature of the women's liberation movement of the 1960s arose from left-wing philosophy. She cautioned against the women's movement shying away from Marx's philosophy for the reason of gender.

Dunbar, Andrew (1879–1964)

Lucien van der Walt

Andrew B. Dunbar was a South African trade union leader and syndicalist in the early twentieth century. Born in Scotland in 1879, and trained as a blacksmith, Dunbar arrived in South Africa in 1906, where he worked on the Natal railways. A giant of a man, with strongly held views, Dunbar first gained prominence for his role in leading a strike by 2,500 railway workers: the strike was defeated after two weeks, and Dunbar was dismissed. Moving to Johannesburg, he worked on the tramways, was briefly involved in the South African Labor Party (SALP), joined the Johannesburg Socialist Society, and moved to a revolutionary syndicalist position along the lines of the Industrial Workers of the World (IWW). In June 1910, with the help of fellow tramway worker Thomas Glynn, Dunbar managed to take control of the newly formed Industrial Workers’ Union, sponsored by the Witwatersrand Trades and Labor Council, and transform it into a local IWW. The local IWW was prominent in leading two strikes

on the tramways in 1911, and subsequently spread to Durban and Pretoria, but in 1912 Dunbar was ousted from his position as IWW general secretary by his rival, Archie Crawford, a state socialist, and expelled; the union collapsed the following year.

Dunbar remained active in socialist circles and was a founder member of the revolutionary syndicalist International Socialist League formed in 1915, where he maintained a strictly anti-parliamentarian position. He was active in establishing the revolutionary syndicalist Industrial Workers of Africa, the first union for African workers in British southern Africa, in 1917. In 1919 Dunbar helped form a Johannesburg branch of the Industrial Socialist League (a separate revolutionary syndicalist group based in the Cape) and was expelled from the International Socialist League.

Moves to form a local communist party gathered speed in 1920 and 1921: Dunbar headed the faction that wanted a syndicalist party, and in October 1920 the Industrial Socialist League became Africa’s first communist party, on a largely revolutionary syndicalist platform, with Dunbar as general secretary. The syndicalist Communist Party subsequently emerged as the official Communist Party of South Africa (CPSA), formed in 1921, and Dunbar remained a prominent CPSA figure until 1928, heading a revolutionary syndicalist faction with links to the Sylvia Pankhurst group in England. In 1928 the CPSA adopted a two-stage “Native Republic” strategy under Communist International pressure; this was followed by a series of purges in the “New Line” period. Dunbar did not agree with the Native Republic thesis, arguing that One Big Union could simultaneously defeat capitalism and national oppression, and was forced out of the CPSA, and subsequently abandoned public political work. He faded from union and socialist work in subsequent years.

Durrani empire, popular protests, 1747–1823

Yury V. Bosin

The Durrani empire emerged in 1747 as fundamentally a military confederation of Pashtun ethnic groups in the Central Asian region of modern-day Afghanistan, India, and Pakistan. While not a centralized state, at its peak of expansion the Durrani empire covered an area of 780,000 square miles (2,000,000 square kilometers). The empire stretched from Afghanistan across Pakistan to within 60 miles of Delhi. As a privileged ethnicity, the Pashtun dominated the royal court, bureaucracy, and army and gained most of the perquisites of the confederation. As the Durrani empire expanded its military reach, non-Pashtun nationalities were overpowered and suppressed by the Pashtun. Those who were not members of the dominant Pashtun were subjected to higher taxation and forced into compulsory military duty, while the local land and water resources of many were expropriated by the colonial empire. Swelling tensions between newcomers and the indigenous non-Pashtun population sparked open clashes and revolts against the colonial empire.

The massive Baluch Rebellion of 1758 in the region is a notable example of uprisings during the Durrani empire. Due to the overwhelming military and economic power of the empire, the insurrection was crushed, with military forces laying siege to the Baluch center of Kalat for 40 days before the protests were quelled and an agreement was achieved between the warring parties that was highly favorable to the Pashtun.

So too, in the 1780s, Southern Turkestan was a highly explosive part of the Durrani empire. Home to the autonomous Tajik, Turkmen, and Uzbek, the region became a center of resistance to Durrani military, political, and economic hegemony. The emir of Bukhara challenged the Durrani empire for control over the region and rallied local partisans living in communities in Central Asia to defy efforts to comply with

the demands of the Pashtun. This resistance continued through 1789, when the Durrani ruler Timur Shah succeeded in suppressing the rebellion and establishing control in Southern Turkestan.

However, while the Durrani leaders, known as shahs, were continuously striving to control and restrain the non-Pashtun, these efforts were complicated by internecine conflict among the Pashtun, as various regions sought autonomy from the empire, especially when they perceived the central power to be overly domineering. Support for the Durrani empire was only achieved when regional Pashtun perceived the central government as a beneficial source of economic and military protection. However, when the Durrani sought local tribute, some sought regional autonomy. Some of the largest uprisings occurred in 1801 when the Ghilzai rebelled against Shah Mahmud. The uprisings were a first sign of growing ethnic separatism which, accompanied by non-Pashtun movements, undermined the Durrani empire and led to its disintegration in 1823.

Durruti, Buenaventura (1896–1936)

Jeff Shantz

Born in León in northwestern Spain to a poor family, Buenaventura Durruti emerged as one of the most prominent anarchist militants in Spain

prior to and during the Spanish Revolution. In death he would become a symbol of commitment to anarchist principles in opposition to compromise and reformism.

Durruti stressed libertarian communist principles as an organizational priority, advocating the development of cores of dedicated anarchists within a revolutionary movement, even if their numbers were small, rather than a mass movement of workers only minimally influenced or committed to anarchist ideals. This position has influenced generations of anarchocommunists, including present-day advocates of platformist anarchism and *especificismo*.

Durruti was a leading militant within the Federación Anarquista Ibérica (FAI), a semi-secret organization of anarchocommunists within the anarcho-syndicalist Confederación Nacional del Trabajo (CNT). The FAI formed on affinity group structure consisting of small nuclei of about a dozen friends who met to develop theoretical and tactical positions to maintain and pursue anarchist principles. The FAI is credited as highly influential in developing the CNT as a revolutionary organization.

Durruti was a fierce advocate of direct action protest tactics and understood the violence of popular insurrections as a necessary element of the radical overthrow of capitalist and centralized state regimes. As an active participant in anarchist militias he asserted that the creation of a new world required the violent destruction of the old world and defense of the new. A skilled militia member, Durruti organized nearly 4,000 armed anarchists, the celebrated Durruti Column, in a series of successful battles against Franco's forces. He included what some anarchists criticized as terrorism within his definition of direct action. Expropriations at gunpoint were routine practice for Durruti and his comrades. During the Spanish Civil War Durruti defended the execution of rapacious landowners and capitalist managers, bank robberies, and other forms of armed struggle in which he himself engaged.

In the face of opposition from the Generalidad, the semi-autonomous government of Catalonia, Durruti proposed that unified armed militias of the CNT-FAI fight against fascism and in defense of Barcelona. Ultimately, FAI anarchists were attacked and arrested by the Generalidad police.

Following the Spanish Revolution of July 19, 1936, Durruti was killed in action at the Madrid

front on November 20, 1936. A number of his supporters formed the Friends of Durruti, presenting a unified militant opposition to the CNT's disastrous association in the provisional Republican Government and upholding anarchist principles in the battle against fascism.

Dutch Caribbean, protest and revolution, 1815–2000

Gert J. Oostindie

From the mid-seventeenth century, the Dutch Caribbean (which initially consisted of Suriname and the adjacent colonies of Berbice, Demerara, and Essequibo, as well as six tiny islands in the Caribbean Sea) was the site of major revolts against colonial repression and slavery. During the Napoleonic Wars, the British captured the Dutch colonies, later ceding Suriname and the Antillean Islands while retaining Berbice, Demerara, and Essequibo (contemporary Guyana). After 1815 protest was more muted, but by the late 1800s resistance grew more militant and involved anti-colonial and anti-imperialist revolts as well as labor riots and political demonstrations. Because of the violent reaction by the Dutch state to these manifestations, contemporary cultural opposition to Dutch “recolonization” has become the dominant form of resistance, rather than the militant pro-independence or revolutionary movements of the late twentieth century.

Rebellion against Colonial Rule and Slavery

In the early period, the Dutch Guianas were plantation economies while the Antilles mainly served as commercial centers; the Dutch Carib-

bean was an unsought-for home for overwhelming first- or later-generation African majorities. As colonization, marginalization of the Amerindian inhabitants, and particularly African slavery characterized these territories, structural violence was a fact of life. This resulted in early fighting with Amerindians, massive marronage, and guerilla warfare in Suriname, and major slave revolts in Berbice (1763) and Curaçao (1750, 1795, 1800), all of which brought colonial rule, and with it slavery itself, to the brink of collapse. But in the end, and in spite of massive African American majorities everywhere, colonial rule was always restored.

In comparison, the period from 1815 to the final emancipation of slavery was calm. Incidental slave protest continued, as did marronage, strikes, and upheavals on individual plantations, and even major arson in Paramaribo, the capital of Suriname, but no massive revolts were recorded. One part of the explanation for this lies with continued colonial repression. But this was nothing new and had not been able to prevent serious revolts in preceding centuries.

The abolition of the slave trade, imposed by the British in 1807, was linked to amelioration policies, increase of manumission rates, Christianization, and finally emancipation in 1863. This is particularly relevant to Suriname, the most populous Dutch Caribbean colony. The abolition of the slave trade implied progressive creolization of the enslaved population. While first-generation Africans were regarded as more prone to overt rebellion, enslaved Creoles developed a variety of modes of resistance within the system, negotiating better treatment and some economic and social autonomy at the margins of their plantation routines. While escape to the interior had not been completely severed, the number of run-aways diminished; the Maroon communities in the interior were acknowledged but also pacified by peace treaties.

Slave communities had long since developed African American cultures, with Creole languages (Sranantongo in Suriname; Papiamentu in Curaçao, the major Antillean Island), oral and musical traditions, as well as other cultural forms. These slave cultures may be understood as both adoptive strategies and modes of resistance. Their revolutionary potential was most likely affected by concerted colonial policies aiming at Christianization. Conversion of the African Americans was explicitly seen as a vehicle not only to

eradicate “African superstitions,” but also as a package deal of the true faith with a commitment to a strong work ethic and compliance with the given social order.

This nominally encompassing Christianization of the great majority of the Dutch Caribbean colonies seems to have had the desired effects. Even after the ending of slavery in the British and French Caribbean (1834, 1848), the enslaved populations in the Dutch Caribbean did not engage in massive revolt to hasten their own emancipation, which came only in 1863. In Suriname freedom was postponed by ten years through the establishment of an “apprenticeship” period. One exception to this is the island of St. Martin, split into a French and a Dutch part. When the slaves in the Dutch section learned that slavery had been abolished in the French division, they themselves refused to be treated like slaves any more. Their owners in the end had to recognize this *de facto* early emancipation.

The post-emancipation development of the territories was highly divergent. In order to support the plantation sector of the economy, the Dutch government organized indentured labor migrations from British India and Java to Suriname. From the late nineteenth century, the economy moved away from a plantation economy, witnessed the emergence of a peasant agriculture as well as large-scale rice production, the emergence of a bauxite industry, and, post-World War II, a rapidly growing services sector and inflated public sector. Full sovereignty came in 1975, and entailed massive migration to the Netherlands and continued dependence on the former metropolis – this time also because of remittances from the Surinamese community, which in the first decade of the twenty-first century numbered some 335,000 against 475,000 in the young republic itself.

Postcolonial Resistance and Revolution

There has been a long series of labor conflicts from 1863 to the present. Few of these had long-term political consequences. Occasional militant protest countered by aggressive colonial repression effectively silenced these movements. All through the period of indenture, there were often violent labor disputes, which sometimes involved killings and colonial retaliation. The

most dramatic such conflict occurred at the Mariënborg plantation in 1902, and was suppressed at the cost of over 20 casualties, mainly Hindustani.

Widespread urban labor unrest in the 1920s and early 1930s culminated in the riots around Anton de Kom, an Afro-Surinamese militant with communist connections and a strong anti-colonial ideology, who returned from the Netherlands to his native Suriname in 1933. Accused of conspiracy, de Kom was detained in Paramaribo. In the ensuing riots, two people were killed. De Kom was subsequently expelled from the colony and returned to the Netherlands, where he would continue his engagement with international anti-imperialism and write his seminal anti-colonial book, *Wij slaven van Suriname* (We Slaves of Suriname, 1934). Having joined the Dutch resistance during the Nazi occupation, he was arrested and deported, and finally died in a German concentration camp. Anton de Kom became the key symbol of Surinamese nationalism.

World War II brought a preemptive allied intervention, local resistance to the authoritarian Dutch governor, the internment of suspected locals (Germans as well as possible anti-colonial colonial subjects), and the emergence of a proto-nationalist movement. After the war, a new postcolonial status was negotiated in which, according to the 1954 *Statuut* (Charter), Suriname attained an autonomous position in a semi-federal tripartite kingdom, the other members being the still dominant Netherlands and the Netherlands Antilles. In 1975 Suriname opted for full sovereignty, a move applauded and facilitated with substantial development aid by the Dutch and accompanied by an exodus to the Netherlands.

After 1954 and particularly after 1975, Suriname witnessed some violent episodes. These were less of an anti-colonial nature, involving domestic conflicts and, post-independence, bloodshed. Labor riots in the early 1970s led to the fall of the serving cabinet, new elections, and eventually to the first ever pro-independence coalition. Its early 1974 decision to accomplish independence by the end of the next year sparked demonstrations, occasional riots, and arson. Of more lasting significance, independence would trigger an exodus. In all of this, ethnic division was inescapable and left the republic with a bitter legacy: the Hindustani population and its leadership had strongly opposed independence.

After less than five years of independence, a self-proclaimed “revolutionary” military coup led by Sergeant Desi Bouterse initiated the most violent period in the country’s post-slavery history. The coup itself involved some bloodshed, but escalated with the December killings of 1982, in which the regime, now flirting with radical left regimes in the Caribbean (Cuba, Grenada), summarily executed some 15 of its political opponents, hence breaking the myth of *sviti Sranan*, and instilling widespread fear in the population. Armed resistance to the military involved, once more, the Maroon communities. In the next years the military grip on the country hardened, leading to the most violent excess in Suriname’s history, the 1986 attack by the military on the Maroon village of Moiwana, killing possibly 50 civilians and wounding many more.

A return to democracy was negotiated in 1987 and, after a brief second military intervention, consolidated in 1990. The corrupting legacy of this seminal period is not so easily shed and in spite of consistent demonstrations and lawsuits, the leaders responsible for “revolutionary” violence had not been detained by 2008.

After emancipation, all six Antillean islands experienced economic and demographic stagnation well into the twentieth century. A turnabout was accomplished with the establishment of oil refineries in the late 1920s in Aruba and Curaçao, and postwar with the emergence of mass tourism. Industrialization, followed by tourism, triggered large-scale migrations from elsewhere in the region. From the 1980s onwards, massive migration to the Netherlands followed suit: at the end of the first decade of the twenty-first century, 280,000 Antilleans live on the islands, while 130,000 live in the Netherlands. The Antilles also subscribed to the 1954 *Statuut*, but in contrast to Suriname, refused to comply with Dutch encouragement to attain full sovereignty. The major constitutional change of the last decades has been the progressive dismantlement of the Antilles-of-six.

Twentieth-Century Labor Struggles

There have been many strikes over the century, the Curaçao harbor strike of 1922 possibly being the first modern industrial one. One exceptional case occurred during World War II, under Dutch rule backed up by Allied military support and accompanied by the same detention policies as enacted in Suriname. A strike of Chinese laborers

in Curaçao was brutally suppressed, killing 15 – an excess not seriously accounted for by the authorities until the present, and nonexistent in local nationalist narratives.

The most violent episode in the post-1954 period of restricted autonomy occurred with the May 30, 1969 revolt. Spurred by a labor conflict in the oil industry, a massive demonstration soon included protest against the dominant local political parties and resentment over race issues, resulting in the burning of sections of the inner city of Willemstad. The local government demanded and received Dutch military assistance to quell the riots. The next day, order was restored at the cost of two casualties, and the old center was ruined.

“May 1969” is a central trope in the Curaçaoan narrative of the nation. Its leadership did think of itself as revolutionary, but its objectives were mainly directed to local issues. Indeed, the revolt did spark Afro-Curaçaoan emancipation. Ironically, while the Curaçao uprising brought about a Dutch resolve to withdraw from the Caribbean at short notice, and indeed did help accomplish the independence of Suriname, the Antilles have remained firmly within the Dutch fold – plebiscites and opinion polls demonstrate that only tiny majorities opt for independence.

In fact, the majority of political demonstrations and occasional strikes of the past decades did not call for sovereignty, but rather for the dismantlement of the Antilles-of-six and the establishment of separate bilateral relations with the Netherlands. The first such series of political manifestations originated in Aruba in the 1970s. After Aruba’s hard-won independent status, St. Martin followed with the same manifestations and demands in the 1990s, and was eventually successful.

Since the late 1990s, the Netherlands has not withdrawn from the last remnants of empire, opting for strong reengagement instead. The reassertion of Dutch control has elicited protests against “recolonization,” but without violent protest or the reemergence of a strong pro-independence movement. Cultural resistance to “Dutchification” remains in place, though. Thus Antilleans continue to speak Papiamentu or Creole English as their first language, with no intention whatsoever to make Dutch the vernacular on the islands.

Dutch Revolt, 1568–1648

Michael F. Gretz

The Dutch Revolt, also known in the Netherlands as the Eighty Years’ War, was one of the most important moments of protest and rebellion of the early modern era. In the late sixteenth century, motivated by religion, economics, and nationalist sentiment, the Dutch began a long period of armed revolt against the domination of the Spanish Hapsburg empire. The Netherlands, a relatively small country, had emerged from the feudal era under the control of the

During the Dutch War of Independence against the Spanish in 1566, Calvinists throughout the Netherlands stormed Catholic churches and desecrated other religious buildings, protesting against what they deemed the worship of idols. (akg-images)

Hapsburg empire. However, the nature of Dutch society was rapidly changing as urban areas in the Netherlands began to dominate trade in the emerging Atlantic and global economy of the early modern period. Moreover, many parts of the Netherlands, particularly in the north, had converted to Calvinism, which produced much conflict with the Catholic Hapsburg authorities.

In 1566, the first salvos of the revolt were launched, beginning a war that would last for most of the next six decades. The Dutch Revolt was marked by the development of total warfare, in which the civilian population on both sides was heavily targeted. Eventually, the Dutch Revolt was integrated into a wider pan-European war, the Thirty Years' War (1618–48), the resolution of which most historians recognize as the origin of the modern nation-state system. Moreover, as part of the Dutch Revolt, Dutch intellectuals authored some key texts of liberal political theory, many of which would influence the later American and French revolutions. The Dutch Revolt led to the emergence of an independent, predominantly Protestant, republic in the north – the United Provinces of the Netherlands – while the south (modern-day Belgium) remained under Hapsburg control. The emergence of a self-governed republic was an important moment in the development of the modern democratic state even if the United Provinces remained heavily influenced by the aristocracy. The formation of the United Provinces was an important moment in consolidating the Dutch merchant class that was rapidly expanding its dominance of international trade and finance during this period. As such, the Dutch Revolt was also a key moment in the development of international capitalism.

The territory of the Netherlands was united by the Burgundians in the fourteenth and fifteenth centuries. When Charles the Bold, Duke of Burgundy, died in battle in 1477, the Netherlands rebelled against his daughter, Mary, who had inherited the territory. This revolt was animated by growing distrust of the Burgundian efforts to centralize political power at the expense of the various provinces and growing resentment over the use of French as the language of government in the northern regions rather than the native Dutch. As a result of this revolt, Mary was obliged to issue charters to various provinces curbing the central ruler's ability to levy taxes and impose other requirements without provincial permission.

Following Mary's death in 1482, her husband, Maximilian of Hapsburg, ruled the Netherlands as a regent for their son, Phillip I. During this early Hapsburg period, hostilities expanded in the region. A revolt in the towns of Ghent and Bruges, joined by the provinces of Brabant and Holland, devastated the Hapsburg Netherlands and Maximilian had to request that his father, Holy Roman Emperor Frederick II, send German troops to crush the rebels. Sporadic resistance to Hapsburg rule continued, especially in northern Netherlands, with the provinces of Gelderland, Groningen, and Friesland effectively resisting Phillip I's subsequent attempts to reintegrate them into the Hapsburg fold.

When Charles V became the Hapsburg Holy Roman Emperor in 1515, restlessness prevailed in the Netherlands, with the province of Utrecht joining the insurgency against the Hapsburgs and their allies in Holland. In 1516, Charles V also inherited the Spanish throne, making him the ruler of vast territories stretching from the Iberian Peninsula to the Hapsburg's ancestral territory in Austria, the Netherlands, and much of the newly discovered Americas. With a vast territory to rule, Charles V left the administration of the Netherlands to surrogates. However, in 1531, Charles V returned to Brussels, seeking to implement a series of administrative reforms to bring greater governmental centralization to the Netherlands.

Still, no event affected the Netherlands as deeply during this period as the Protestant Reformation. When the German priest Martin Luther nailed his 95 Theses to the door of the Wittenberg Castle Church protesting what he considered the growing decadence of the Catholic Church, he sparked the social, political, and religious movement known as the Protestant Reformation. Across the continent, but particularly in the north, many Europeans of all social classes took Luther's criticism of the Catholic Church seriously, seeking to develop a new interpretation of the Bible conceptualizing the believer's personal relationship with God outside of the church hierarchy and bureaucracy. Luther's actions led directly to the outbreak of a long period of Wars of Religion throughout Europe, centered in the German territories of the Hapsburg Holy Roman Empire.

By the middle of the sixteenth century, Protestantism, particularly Calvinism, gained a strong foothold throughout much of the Netherlands,

sharpening the sporadic rebellion of the Dutch against its Hapsburg rulers. The Netherlands had already become one of Europe's most prosperous, urban, and literate regions. The theology of Calvinism, based on earning God's favor through good works in this world, appealed to the rising commercial classes in the Netherlands. Accepting Protestantism challenged Hapsburg authority to tax the profits of the Dutch merchant class's enterprise.

The religious, economic, and political developments in the Netherlands under Charles V contributed to a growing Dutch national identity and alienation from Hapsburg authority. However, with nearly the entire continent embroiled in turmoil, much of Charles V's focus remained elsewhere. Not until 1566, after Charles passed his crown to his son, Phillip II of Spain, who retained title to the Netherlands, did open revolt break out.

The revolt began when Calvinists, angered by an incident outside the Antwerp Cathedral, stormed Catholic churches across the Netherlands and destroyed icons of Catholic saints. Phillip II responded by sending an imperial army under the Duke of Alba to crush the revolt. In 1567, Alba led his army into Brussels and began a harsh campaign against Protestants and those accused of harboring Protestant sympathies. In a special court, Alba presided over a series of trials that resulted in the executions of thousands, including the Counts of Egmont and Horne, accused of being too tolerant of Protestants.

However, William I of Orange, the Stadholder of Holland, Zeeland, and Utrecht in the northern Netherlands, escaped Alba's wrath by fleeing to Protestant-controlled territories in Germany. In 1568, William I returned to the Netherlands to drive Alba out. William's campaign was initially successful. However, once the Spanish defeated the Turks, with whom they were also at war, they were able to send additional troops to crush the rebellion in the Netherlands.

Following the arrival of Spanish reinforcements, Alba was able to reconquer much of the lost territory, and the rebellion largely subsided. However, William of Orange remained at large and Alba's decision to impose a new tax in 1572 angered both Dutch Protestants and Catholics, sparking renewed fighting. In that same year, Dutch rebels captured the port of Brill and support for the rebellion grew in the northern regions.

In 1573, failing to suppress the revolt, Alba was replaced; but attempts by his successors to broker a peace failed. In 1576, with the Spanish monarchy unable to pay its troops, Spanish garrisons in the Netherlands mutinied and began pillaging Dutch cities. In 1576, the various provinces of the Netherlands negotiated the so-called Pacification of Ghent, aimed at quelling the internal unrest, establishing religious toleration, and pressuring the Spanish to retreat.

However, many Dutch Calvinists did not respect the treaty, angering Dutch Catholics. In 1579, the largely Catholic southern provinces unified in the Union of Atrecht (Arras), professing loyalty to the Spanish crown. William of Orange responded by unifying the northern provinces in the Union of Utrecht, marking the definitive division of the Netherlands into an increasingly Protestant and rebellious north, and a predominantly Catholic and loyalist south.

In the north, having repudiated the Spanish throne, the States General, the legislative body in which formal sovereignty now rested, looked for another royal power to assume sovereignty of the land. However, after Queen Elizabeth I of England declined and the French Duke of Anjou proved too unpopular, the States General decided to rule the now *de facto* independent northern Netherlands as a republic, under the name United Provinces of the Netherlands.

However, the Spanish did not recognize this independence and sent a new army under the Duke of Parma to recapture the United Provinces. Parma's expedition was marked by heavy violence against the Dutch population, and he was successful in recapturing the provinces of Flanders and Brabant and a good deal of the northeastern part of the country. In 1584, William of Orange was assassinated by a Spanish sympathizer, dealing the insurgency an important psychological blow. However, leadership of the revolt soon passed to William of Orange's son, Maurice of Nassau. During the next two decades, Maurice led the rebels to a series of victories, pushing the borders of the United Provinces close to those of the present-day Netherlands. While the fighting was often severe and civilians were often targeted, the main provinces on the coast, Holland and Zeeland, were generally spared the worst of the fighting, allowing the Dutch Golden Age of global trade and commerce to take hold. In 1600, the Dutch, under Maurice of Nassau, made one last attempt to break Spanish control of the south. At

the battle of Nieuwpoort, Maurice's armies were victorious, but ultimately unable to reconquer the south, sealing the future division of the country along the line that separates the modern-day Netherlands from Belgium.

In 1609, the Dutch and Spanish signed a 12-year truce during which hostilities were limited. Dutch society grew increasingly prosperous as merchants developed their fleet and Amsterdam became a financial capital of Europe. However, antagonism among the leadership of Dutch Calvinist factions expanded in hostility, reaching a crescendo in 1617, when Maurice of Nassau had Johan van Oldenbarnevelt, a republican leader, arrested and executed for treason.

In 1618, the Thirty Years' War began in the Holy Roman Empire, growing into a European-wide conflict pitting the Hapsburgs against its rebellious Protestant provinces, Denmark, Sweden, and eventually Catholic France. In 1622, with the expiration of the 12 years' truce between Spain and the United Provinces, the Netherlands once again became a center of warfare. The Spanish attacked the country and captured the city of Breda. However, the situation reversed in favor of the Dutch, with Frederick Henry of Orange capturing Maastricht in 1632, and the Dutch navy defeating the Spanish fleet in 1639.

In 1648, the Eighty Years' War finally ended with the treaty of Munster, with the Spanish officially recognizing the independence of the United Provinces. The treaty was part of the larger series of peace negotiations that brought the wider Thirty Years' War to a conclusion. The Eighty Years' War, or the Dutch Revolt, is remembered for both its ferocity and duration, but also for its results. Civilians were frequently targeted by both sides, in what many historians regard as one of the first modern, or total, wars. While classical infantry, cavalry, and naval battles between professional armies were crucial in the war, Dutch rebels often engaged in guerilla insurgencies where combatants blended into the civilian population.

The Eighty Years' War paved the way for the emergence of an independent territorial state, governed not by hereditary monarchy but by a council of mostly bourgeois or merchant citizens. While the governmental structure of the United Provinces was complex, and the old military nobility retained an important role, the Eighty Years' War posed the question of sovereignty and political legitimacy in a particularly modern

way that anticipated the great upheavals of the American and French revolutions of the following century. The Eighty Years' War, and later, to a broader extent, the Thirty Years' War, marked the decline of the medieval phenomenon of overlapping sovereignty where several leaders and institutions claimed legitimate sovereign power over the same territory. The Dutch Revolt also denoted the rise of the modern international system, in which clearly defined, territorially bounded nation-states compete for strategic position in an international system.

The rise of the merchant class, already in progress by the early sixteenth century, was accelerated by the outbreak of the Dutch Revolt, and was a vital historic factor in the development of global capitalism. The Dutch mercantile and colonial expansion of the period was critical to the development of both international trade and global finance.

Dutschke, Rudi (1940–1979)

Carrie Collenberg

Rudi Dutschke was the most prominent activist of the left-wing student movement of West

Germany in the 1960s and 1970s. His ideas inspired both violent and non-violent groups of the movement and he supported the newly developing Green Party.

Born on March 7, 1940 in Schönefeld, Brandenburg, Alfred Willi Rudi Dutschke became critical of East German socialism early on and his refusal to participate in compulsory military service made him a dissident. On August 10, 1961, three days before the Berlin Wall went up, he fled to West Berlin where he studied sociology at the Free University.

In West Berlin, Dutschke established his reputation as a shrewd and charismatic anti-authoritarian and anti-fascist socialist revolutionary interested in international politics. In 1964 he helped found the West Berlin cell of Subversive Aktion (SA) and in 1965 its members joined the Socialist German Student Union (SDS) and Dutschke was elected to the board. Amid increasing national and international tension, Dutschke mobilized the SDS and established the Extra-Parliamentary Opposition (APO). Dutschke's ideas for revolution were inspired by critical theorists and the history of socialist revolutions but were firmly grounded in Christianity and not utopian. He called on people to begin the process or "long march" to provoke and subvert the system from within in order to promote reform and democracy.

After a demonstration on June 2, 1967, when student protestor Benno Ohnesorg was shot by police officer Karl-Heinz Kurras, Dutschke led mass demonstrations against the Axel Springer publishing house and organized the International Vietnam Congress. As the chief agitator of the student movement, the media and author-

ities considered him a threat to the existing order and called on the public to stop Dutschke and the new left. The media campaign inspired Josef Bachmann's attempted assassination of Dutschke on April 11, 1968, an event that prompted mass demonstrations in Germany and abroad and can be understood as a turning point towards more violence and government suppression.

After Dutschke recovered he moved to Great Britain and then to Denmark. In 1973 he received his doctorate from the Free University of Berlin. Afterwards, he became politically active in West Germany, again with speeches on human rights, publications in left-wing newspapers, demonstrations against nuclear power, and a critique of Soviet communism. Promoting the Green Party platform, he inspired many student activists to join. He died in 1979 from a seizure resulting from the attempted assassination. He was married to American-born Gretchen Klotz Dutschke and they had three children, Hosea-Ché (1968), Polly-Nicole (1969), and Rudi-Marek Dutschke (1980).

E

Earth First!

Derek Wall

During the 1990s British environmental activists used direct action in an attempt to halt road construction. A loose network of radical environmentalists, Earth First! (EF!) was central to the anti-roads campaign. Originally founded in the United States, Earth First! projected a philosophy of deep ecology combined with direct action using the slogan “No compromise in defense of Mother Earth.” Particularly in the 1980s when it was first established, Earth First! often advocated ecologically motivated sabotage, including the highly controversial tactic of tree spiking (Lee 1995). In Britain it was far less interested in projecting a philosophy and focused instead simply on the need to use direct action, based usually on mass mobilization, to tackle environmental and other ills (Wall 1999).

Protest against road building predates the upsurge of activity in the 1990s. During the early 1970s, Homes not Roads campaigned against motorway construction in London by squatting buildings and running anti-road candidates for the Greater London Assembly (Charlesworth 1984). A variety of local conservation societies and environmental groups have opposed and continue to oppose road construction on environmental grounds. Since the 1990s concern over climate change has fed into the sentiments of anti-roads protesters. Militant non-violent direct action surged in the 1990s both because of the inspiration of Earth First! and because of an upsurge in road construction by Prime Minister John Major’s government.

Birth of Earth First! UK

While there had been several abortive attempts to create an Earth First! movement in the UK modeled on the US movement, two Hastings-

based students, Jason Torrence and Jake Burbidge, set up an Earth First! group in 1991. Their first action was a blockade of the Dungeness nuclear power station in Kent. Torrence and Burbidge were able to tap into local peace networks to carry out the action. George Marshall, a British activist, who had been involved with the Australian rainforest movement, joined them in the early 1990s. Earth First! focused its early efforts on rainforest protest, attempting to block the import of rainforest timber. In 1992 an action at Liverpool docks attracted over 200 activists, including members of the Green Student Network. Another early Earth First! action saw the occupation of a timber depot outside Oxford by several hundred activists

Torrence and Burbidge had been active in Greenpeace, the Green Party, and Friends of the Earth, but had become disillusioned with all three and wanted to create a more participatory and direct-action oriented movement. They quickly recruited activists from these groups, the Green Student Network, the peace movement, and the animal rights movement. In 1992 US activists toured Britain to pick up new recruits, creating an Earth First! roadshow.

Earth First! in the UK has never had a formal membership. It remains an almost invisible network with little or no national organization. Although local groups continue to exist, there is no established constitution or set pattern. Earth First! has two enduring features, the Earth First! Action Update, a newsletter which contains details of direct action, and a national Summer Gathering. Earth First! spends little time debating philosophy or constructing a formal ideology. Its key feature is direct action together with organizational informality. It has been and remains part of a wider network of green activism.

During its early years some attempts were made to formalize the network and an often-divisive debate continued between advocates of non-violent mass action and those who supported

ecologically motivated sabotage. During the Earth First! gathering in Sussex in 1991, more militant activists sympathetic to Earth First! (US), anarchism, and the animal rights movement came up with the name Earth Liberation Front. Acts of ecologically motivated sabotage have been carried out under this banner. Earth First! (UK) does not condone or condemn criminal damage.

Anti-car actions became important with the creation of an Armageddon campaign and the first “reclaim the streets” action, which saw the blocking of Waterloo Bridge in London. After being contacted by activists at Twyford Down, Earth First!ers became involved in the campaign to prevent the M3 from cutting through downland near the city of Winchester. The Twyford Down campaigners had been active for several decades fighting the motorway through the planning process. Prior to the arrival of Earth First!ers, both Friends of the Earth and new age travelers had camped on Twyford Down in protest at the motorway.

Earth First!’s involvement helped accelerate the creation of dozens of anti-road camps across Britain. In East London the M11 campaign saw an impressive urban occupation of Claremont Road, and despite defeat, activists created Reclaim the Streets, which carried out an increasingly ambitious series of road occupations. One street party in 1996 saw 7,000 participants occupy the M41 motorway in west London (Wall 1999: 87). In Scotland, protest against an urban motorway in Glasgow brought in socialists and community activists who had previously fought against Prime Minister Margaret Thatcher’s poll tax. Major road protests continued in Preston.

Earth First! activists have also been involved in anti-GM (genetically modified food) protests, against peat digging, in defense of migrants and asylum seekers, and against war. The group was centrally involved in the 2007 Climate Camp, which was created to resist the expansion of Heathrow Airport and to protest against the contribution of flying to climate change. It has strongly influenced the wider Green movement, the Green Party, environmental non-government organizations (NGOs), socialists, and anarchists in the UK. Its emphasis on direct action encouraged the Green Party to renew its own commitment to non-violent direct action, with party members supporting anti-roads protest. Friends of the Earth, partly due to the influence of EF!, became more committed to social justice issues

and urban ecology under director Charles Secrett (Wall 1999: 90). Greenpeace created a network for its previously passive members to contribute to direct action, and this wing was headed for a time by Earth First! co-founder Jason Torrence. Socialist and anarchist groups including the Scottish Socialist Party were encouraged to become more conscious of ecological issues by the creation of Earth First! and the wider roads movement.

Earth First! remains both an unusually loose and invisible social movement network and one which is of enduring importance. Roads protest using non-violent direct action has become less frequent since the 1990s. Although the protest movement can only be said to have directly prevented the construction of two road projects – the Thames Crossing and a bypass near Guildford – it contributed to the cancellation of new construction projects in the 1990s. Earth First! and the British anti-roads movement is an interesting example of a protest mobilization organized on highly informal and temporary lines, one that largely rejected the production of a detailed philosophy or political program but focused instead on activism.

East Anglian Wheat County Riots, 1816

Carl J. Griffin

Starting in mid-April 1816 the so-called Bread or Blood riots represented the first of a series of three English rural collective disturbances in the period of the post-Napoleonic Wars depression. Unlike the 1822 East Anglian laborers’ protests

or the Swing Riots of 1830, the events of 1816 were remarkable for their heterogeneous set of causes, protest techniques, and activists. Here field and fen workers, petty landowners and small farmers, workers in the decaying local textile industries, artisans, and urban tradesmen united. The protests of 1816 effectively combined both traditional market town-based food rioting and anti-enclosure riots with more novel attacks on industrial and agricultural machinery.

The initial protests occurred simultaneously and quite unconnectedly on April 17 at Mile End Heath in Essex, where threshing tackle was destroyed, and at Gedding in Suffolk, where threshing machines and the mole ploughs used to create field drainage on the heavy lands of Essex and Suffolk were destroyed. Whereas the Essex protest apparently inspired no further protests, the Gedding disturbances were instrumental in motivating machine-breaking at neighboring Rattlesden and riots for higher wages at nearby Wattisham and Hitcham. Notwithstanding a proclamation issued by the magistrates at the Bury Quarter Sessions, this localized intensification acted as the trigger for more widespread and, in terms of techniques, diffuse protests. A series of incendiary fires in north Essex and south Suffolk and machine-breaking at Stoke-by-Clare were followed by a shift to demonstrations in the market towns of East Anglia. Initially, these urban protests were self-contained. On May 7 a mob of 100 attacked a flour mill at Needham Market but were persuaded to disperse after having only broken a few windows. Similarly, at Swaffham Bulbeck in Cambridgeshire an attempt by 50 men to force an increase in their wages occurred in local isolation.

The next series of protests was both more persistent and determined. The attack on spinning jennies on May 15 represented the culmination of two days of "riotous assemblies" in the streets of Bury. On the following day, protestors took to the streets of both Norwich and Brandon. Both places witnessed something akin to traditional food riots, though "country people" were heavily involved at the latter and made further demands relating to poor law allowances. Indeed, whereas at Norwich military intervention ultimately diffused the protestors, at Brandon their demands – infamously expressed through a banner baring the slogan "Bread or Blood in Brandon this day" – were acceded to at a series of meetings between the principal inhabitants

of the town and a delegation of the protestors. From Brandon protests spread over the Norfolk border to the villages of Hockwold-cum-Wilton, Mundford, Feltwell, and Southery.

Through the physical movement of protestors, the movement then diffused into the fenlands and to the towns of Downham Market (May 20), Littleport (May 22), and Ely (May 23). At Littleport attacks on property and thefts from food sellers reached new heights. According to a brief prepared for the Treasury Solicitor, some 73 offenses were committed that day. The same group then marched to Ely where, on May 23 and 24, the protests assumed an even greater intensity with much property destroyed and several acts of violence committed.

This was, though, both the peak and the nadir of the 1816 protests. Troops were stationed throughout Norfolk and Suffolk, yet several other protests occurred, most notably at Upwell and Outwell near Downham, at Ramsey in Huntingdonshire, in the vicinity of Sporle to the northeast of Downham, and in the vicinity of Sible Hedingham in Essex. But these were isolated incidents and soon fizzled out. To reinforce the deterrent though, a Special Commission of Assize was held to try the Littleport and Ely protestors. The trials opened on June 17 and closed four days later, with 24 men sentenced to death. Nineteen of these men were reprieved, nine of whom were subsequently transported. The five who were not reprieved were executed on June 28. Two men, tried at the Norwich Assizes, were also executed on August 31 for their part in the Downham riots.

In total, eight men lost their lives for attempting to escape their custody – including Thomas Sindall who was shot in the head by a Dragoon at Littleport – while a total of 14 men were transported to Australia for their involvement at Downham, Littleport, and Ely. Despite this heavy toll, at no point did the protestors' calls ever exceed very modest demands, a feature of both the later 1822 protests and Swing. That neither the 1822 protests nor Swing so strongly embraced urban workers and traditional eighteenth-century forms of collective protest is indicative of the fact that 1816 represented a genuine pivot in the make-up of the repertoire of rural resistance.

East Timor, anti-colonial struggle, 1974 to independence

Henri Myrntinen

Located at the eastern end of the Lesser Sunda island chain of the Indonesian Archipelago and occupying half of the island of Timor, East Timor has been marginalized and occupied for most of its recent history. Notwithstanding intermittent revolts against the Portuguese colonial presence, the largest, the Manufahi War of 1910–13, and the Viqueque Revolt in 1959, Portuguese Timor, unlike Portugal's African colonies, had no systematic or sustained opposition movement to the 450 years of Portuguese rule. The Carnation Revolution of April 25, 1974 and subsequent decolonization process started by the Armed Forces Movement (Movimento das Forças Armadas) (MFA) thrust East Timorese society into an unexpected era of insurrection against occupation.

In the 1970s a majority in the new Portuguese leadership and a majority of the tiny educated elite of East Timor, which soon formed the nascent political leadership, were disinclined to grant or demand full independence for the territory. Many in the left-leaning MFA government supported integrating East Timor with Indonesia, while a significant share of the East Timorese political elite supported some form of continued federation with Portugal. In the aftermath of the Portuguese military coup of April 1974 known as the Carnation Revolution, several new political parties emerged in East Timor, notably Fretilin (Frente Revolucionária de Timor Leste Independente), UDT (União Democrática Timorense), and Apodeti (Associação Popular Democrática Timorense). Of the new political parties, Fretilin, originally named the ASDT (Associação Social Democrática Timorense), emerged as most radical, calling for far-reaching social, economic, and political changes. After initially supporting a loose federation with Portugal, Fretilin began demanding full independence for East Timor.

While embracing “the universal doctrines of socialism,” Fretilin was more nationalist than a socialist or Marxist movement. Fretilin was influenced by the independence movements in the other Portuguese colonies of Angola, Guinea-Bissau, and Mozambique and the writings of Amílcar Cabral and Samora Machel and other leaders. Also, the handful of East Timorese students permitted to study in Portugal brought Maoist and Marxist-Leninist influences to Fretilin. A further source of political inspiration was Paulo Freire, the Brazilian exponent of popular education.

Key among Fretilin's own political concepts was “*maubere*-ism,” derived from a pejorative term used by Portuguese colonial officials and more “cosmopolitan” *asimilados* to denote backward peasants. Fretilin reclaimed this term in its grassroots mobilization campaigns to signify, according to José Ramos-Horta, “a philosophy which seeks to consider how to get the common people to be literate and free from poverty and other social injustices.” Unlike other political parties, Fretilin sought to build its support network outside of the narrow social and political elite by engaging directly with peasant communities rather than relying on traditional patron-client networks. As a part of its agricultural program, Fretilin established model cooperatives and literacy programs in the countryside by its Revolutionary Brigades.

The key people involved in formulating the economic and agricultural policies of Fretilin at the time were the charismatic leaders Vicente Sa'he and Nicolau Lobato. In addition to directly engaging peasant communities, Fretilin sought to politicize women, who were traditionally marginalized in society. Rosa Muki Bonaparte, the first East Timorese woman to study abroad, became a member of the Central Committee of Fretilin and the driving force behind the party's women's organization OPMT. Crucially, in terms of future events, Fretilin was also active in mobilizing East Timorese serving in the Portuguese armed forces.

The UDT, representing mostly the land-owning as well as *mestiço*- and *asimilado*-oligarchy and the economic elite, was more conservative than Fretilin and strongly in favor of maintaining a link to Portugal through a political union. The third influential party after the Portuguese Carnation Revolution of 1974 was Apodeti, also among the smallest. Apodeti was practically the only

political movement calling for integration of the former colony with neighboring Indonesia, later facilitating efforts to legitimize the Indonesian invasion.

Coup Attempt and Civil War

Convinced that Fretilin's increasingly left-wing rhetoric would prompt Indonesian invasion, the UDT launched a coup attempt on August 11, 1975, leading to civil war. Fretilin benefited from its effort to build broad political support in the countryside and among Timorese soldiers in the Portuguese armed forces. In reaction to the coup, Fretilin formed the Falintil (*Forças Armadas de Libertação Nacional de Timor Leste*) as the armed wing of the party, relying heavily on Portuguese-trained Timorese ex-soldiers and weaponry. In the civil war precipitated by the attempted coup, several hundred were killed and seeds were sown for future internecine conflicts. The civil war also prompted the Portuguese administrators and troops remaining on the island of Atauro off the coast of Dili, East Timor's capital, later to be repatriated to Portugal.

Independence Declaration and Indonesian Invasion

Following their defeat, the leadership of the UDT, the pro-Indonesian Apodeti, and minor parties retreated to Indonesian West Timor, where they signed the Indonesian-orchestrated Balibo Accord which "requested" Indonesian intervention in the territory. Indonesia, ruled by the pro-western military dictator Suharto, had already engaged in low-level incursions and destabilization measures in East Timor for several months, including killing five western journalists in Balibo by Indonesian Special Forces and Timorese proxies in October 1975.

Fearing an impending Indonesian invasion, the Fretilin government unilaterally announced the independence of the Democratic Republic of Timor Leste on November 28, 1975, with Francisco Xavier do Amaral as president. Ten days later, Indonesia responded in an all-out military invasion. Apprehensive of a left-leaning government in East Timor but reluctant to immediately antagonize his western backers, Suharto waited for a state visit by US President Gerald Ford to receive approval for the invasion. The invasion was launched within hours of the

departure of the US delegation from Jakarta, Indonesia's capital.

In response to the initial Indonesian assault on Dili, the East Timorese military response was more intense than Indonesian forces expected. The Indonesian armed forces also immediately began massacring civilians, targeting especially members of the Chinese minority and other suspected "communists," in what was essentially a replay of the anti-PKI communist massacres in Indonesia in 1965–6. Within the first few days of the invasion several thousand civilians were killed, among them high-ranking members of Fretilin, including Rosa Muki Bonaparte.

Indonesian armed forces progressed relatively slowly into the territory, but by 1978 most Timorese armed resistance, along with the majority of its population, was confined to the mountain range of Mount Matebian in the east of the country. After relentless airborne and naval bombardment and ground operations, the Indonesian armed forces defeated the East Timorese military resistance and killed the nominal president of the territory, Nicolau Lobato, in a fire-fight on December 31, 1978, and several months later, Vicente Sa'he.

During the first years of the independence war, much of the East Timorese population remained in areas controlled by the Fretilin/Falintil, where as far as possible political and social reforms aimed at reorganizing the old feudal and patriarchal models of society and improving the position of women were carried out. This initial period also saw several purges within the Fretilin movement, including the ouster of the first president, do Amaral, who was seeking ceasefire negotiations with the Indonesian government.

Occupation and Consolidation

Following the end of the last major battles around Mount Matebian, the Indonesian armed forces relocated a majority of East Timorese into "strategic hamlets" while the remaining several hundred Falintil guerrillas slowly regrouped and recuperated from their losses. Though small in number, until 1999 the Falintil force sustained a low-intensity guerrilla war and the Indonesian forces responded with a counterinsurgency campaign, often drawing on "lessons learned" in similar efforts in Latin America and Southeast Asia. In total an estimated 100,000 to 200,000 East Timorese lost their lives in the

independence struggle, the vast majority civilians. The Indonesian military losses in the East Timorese expedition are estimated at approximately 2,000.

As the Falintil insurgency continued, the independence movement added a “civilian front” and a “diplomatic front” to Falintil’s military campaign. The clandestine civilian support network supplied the guerrillas with arms, ammunition, food, and medicine, and served as messengers and intelligence gatherers. Furthermore, they organized demonstrations for independence in East Timor and around Indonesia, often liaising with Indonesian pro-democracy activists. Outside Indonesia, East Timorese in exile, most prominently José Ramos-Horta, maintained diplomatic pressure on Indonesia and kept the struggle on the international agenda. The advantage the East Timorese had over other similar cases of “post-colonial colonialism” was that Portugal had not officially decolonized the territory, leaving East Timor *de jure* as a non-self-governed territory under Portuguese stewardship although it was *de facto* under Indonesian occupation. The efforts outside of East Timor were supported to a large extent by Portugal’s former African colonies and a small but vociferous international solidarity campaign.

Internationally, the almost-forgotten conflict in East Timor gained unexpected prominence on November 12, 1991 when Indonesian military forces opened fire on a funeral procession in the Santa Cruz cemetery in Dili, killing an estimated 250 to 400 civilians. Unlike previous massacres, the carnage was caught on film by foreign journalists, leading to an international outcry among the solidarity movement, and even Suharto’s western backers. The awarding of José Ramos-Horta and Bishop Belo with the Nobel Prize in 1996 cast further light on the East Timorese struggle for independence.

Meanwhile, from the late 1980s to early 1990s, political alignments in occupied East Timor broadened the movement. In 1988 Falintil commander Xanana Gusmão ended Fretilin’s quasi-monopoly on the East Timorese independence cause by forming the CNRM (Conselho Nacional da Resistência Maubere), an umbrella organization unifying the UDT and other East Timorese political parties to mend the rifts of the 1975 civil war. In 1998 the CNRM was renamed the CNRT (Conselho Nacional da Resistência Timorese), as the term “maubere” was seen by

the other political parties as too closely linked with Fretilin’s left-leaning politics.

Within Indonesia, East Timorese activists, especially students, formed alliances with Indonesian pro-democracy and human rights groups, as well as with Acehnese and West Papuan independence activists.

Referendum and Aftermath

With international public pressure growing on the Indonesian government, internal pressures against the Suharto dictatorship were also mounting, especially in the wake of the Asian financial crisis of 1997. Student protests forced Suharto to resign in 1998, and in a surprise, his successor B. J. Habibie announced plans for a UN-organized referendum to give the East Timorese a chance to determine their future status, choosing between full independence and special autonomy inside Indonesia. In the run-up to the August 30, 1999 referendum, the Indonesian armed forces, now in charge of providing security for the vote, established militia groups to act as their proxies. The nominally East Timorese militia groups were armed, trained, and in part directed by the Indonesian military and police, who were supported by the Indonesian government. The militias initiated a violent campaign of intimidation against independence supporters, including several massacres of civilians.

In spite of the intimidation, 78.5 percent of the East Timorese cast their vote for independence. Following announcement of the election results, renewed militia violence and destruction followed immediately as the retreating Indonesian security forces and militia proxies killed approximately 1,500 civilians. The systematic armed assault displaced 250,000 to 300,000 East Timorese civilians to West Timor and other parts of Indonesia and destroyed about 80 percent of the territory’s infrastructure.

United Nations Administration and Independence

The international outcry over the rampage by the Indonesian armed forces forced the government in Jakarta to accept deployment of an international peacekeeping force (INTERFET) in the territory. In addition, the United Nations gained control over the administration of East Timor by form-

ing the United Nations Transitional Administration in East Timor (UNTAET). Though not without its critics inside and outside of East Timor, UNTAET established basic administrative structures for the country for transfer to the independent Democratic Republic of Timor Leste on May 20, 2002, under Prime Minister Mari Alkatiri and a Fretilin-led government.

Easter Rising and the Irish Civil War

William H. Mulligan, Jr.

The Easter Rising in 1916 began a period of conflict and turmoil in Ireland that did not end until 1923, and even then it was not clear for some time that active conflict had ended. The period encompasses the Easter Rising and its immediate aftermath as well as the Irish War for Independence and the Irish Civil War – three discrete, if closely connected, historical events.

The roots of the Easter Rising may be said to reach back to the arrival of the Normans in

Ireland in 1169. In a real sense, the 1916 Rising and subsequent events are results of the centuries-long domination of the English over Ireland that began when the Normans landed. Pádraig Pearse and other leaders of the Rising certainly saw it that way. More immediately, the complex maneuvering surrounding the Third Home Rule Bill, and the Home Rule issue itself, created the environment for the 1916 Rising.

The reunification of the Irish Parliamentary Party under John Redmond and Redmond’s alliance with Michael Davitt in 1900 gave the supporters of a constitutional approach to Irish independence the upper hand. When the closeness of the 1910 British general election gave them the balance of power in Parliament, they extracted the Third Home Rule Bill in 1912 as the price of their support of the government. Prior to 1909, the House of Lords, strongly opposed to Home Rule for Ireland, would have been able to block Home Rule. But due to constitutional changes unrelated to Irish issues, the Lords were only able to delay legislation that they had objected to for two years. Ireland would have Home Rule in 1914; the century-long struggle to repeal the Act of Union forcing Ireland into Great Britain had succeeded, it seemed. Irish politics entered an unknown landscape.

In 1912 Home Rule, while broadly popular, was a middle position. On both sides of the middle there were significant minorities that were not prepared to compromise. The Protestants of Ulster, especially the Presbyterians, opposed Home Rule and had relied on the House of Lords to block it, thus preserving their privileged position. Now, however, they saw that a different strategy and new tactics were necessary. On the other side, a sizable number of nationalists saw Home Rule as an unacceptable substitute for full independence. They, too, faced a major change in the political environment.

As events moved forward, the situation became more, rather than less, complicated. In Ulster, opponents of Home Rule began organizing armed resistance. The Ulster Unionist Covenant circulated in 1912, and an armed Unionist volunteer force was established in 1913. Led by Sir Edward Carson (later Baron Carson of Duncairn) and James Craig (later Viscount Craigavon of Stormont), Protestant opponents of Home Rule in Ulster organized political and military opposition. In the south, the Irish Volunteers organized as a counterforce. They were joined by the Irish

Citizen Army, which James Connolly had organized to protect strikers in the Dublin Transit Strike of 1913.

It was widely known in 1914 that Unionist forces were smuggling large quantities of weapons into Ireland at Larne, but no government action was taken to stop it. The most dramatic event of the Tory Rebellion was the Curragh Mutiny of March 1914. The Curragh, in County Kildare, was a major British military post. More than sixty officers, including a brigadier general, announced that they would resign rather than obey orders to enforce Home Rule in Ulster. While the minister for war and Field Marshall Sir Henry Wilson, chief of the imperial staff, were forced to resign, it was clear that the British army in Ireland could not be counted on to enforce Home Rule. This raised serious concerns among supporters of Home Rule. It also strengthened the conviction among nationalists who saw physical force as the only means of gaining Irish freedom that Britain would never voluntarily grant Ireland even limited independence.

When World War I broke out the issue of whether to press forward with Home Rule during wartime arose. John Redmond, leader of the Irish Party at Westminster, agreed to defer Home Rule until after the war and encouraged Irishmen to enlist in the British army. His rationale was that by sharing in the hardships of the war the Irish could begin to break down the divisions between Catholics and Protestants. In Ulster, opponents of Home Rule continued to arm and drill and enlisted in the British army in large numbers, forming entire regiments.

Meanwhile, planning began within the leadership of the Irish Republican Brotherhood (IRB) to use the war as an opportunity to strike for Irish freedom. Sir Roger Casement, a member of the Anglo-Irish elite who had embraced the cause of Irish nationalism, went to Germany to obtain arms and financial support for a rising. The IRB's American arm also raised substantial funds. The plan began to miscarry, however, and it became clear there was little realistic chance of success. The arms shipment from Germany was intercepted and both Casement and Austin Stack, a key IRB leader in County Kerry, were arrested. Eoin MacNeil, commander-in-chief of the Irish Volunteers, tried to stop the plan, but he had lost effective control to a faction led by Pádraig Pearse that was determined to rise in revolt.

Pearse's nationalism was rooted in a deeply romantic vision of the Irish nation and he saw martyrdom as no less valuable in the long term than a successful rising. Working around MacNeil and others within the IRB who preferred to wait for a more auspicious time, Pearse and his faction, with 1,200 men, seized the General Post Office (GPO) on Sackville Street in Dublin while other IRB units took a number of key positions in the city.

On Easter Monday, April 24, 1916, Pearse read the proclamation of the Irish Republic signed by himself and the other leaders – Thomas Clarke, Sean Mac Diarmada, Eamonn Ceant, Thomas MacDonagh, Joseph Mary Plunkett, and James Connolly. Supporting actions took place in Wexford, Galway, and elsewhere in County Dublin, but a planned action in Cork never materialized. The focus was on Dublin and the GPO throughout the rising.

The British responded quickly and with substantial force, including artillery. The fighting, especially the artillery, was concentrated around the GPO in the heart of Dublin and tremendous damage was done to the area. British troops quickly surrounded the GPO, which they shelled heavily and set afire. A women's brigade aided the insurgents by moving supplies into the GPO under fire during the siege. Countess Markievicz (born Constance Gore-Booth) was the rebels' second in command during the fighting at Stephens Green. The failure of the country generally to rise in support, civilian casualties resulting from the heavy use of artillery, and the fierce fighting in the streets led Pearse to surrender on April 29. Civilians had borne the brunt of the casualties (230 killed), with the British losing 132 troops. The rebels suffered 64 fatalities.

At the time of their surrender, the rebels were reviled and unpopular throughout Ireland. The crowds in Dublin hooted them and pelted them with refuse and offal as they were led out of the GPO. Newspaper editorials denounced them as misguided. Irishmen, Protestant and Catholic, were risking their lives fighting on the Continent; civilians had been killed and injured; the cause was futile – editorial writers found little if anything to say in their defense. The rising seemed as complete a failure as was possible. Not only had the Irish people not risen in support, they now denounced those who had as fools.

And then the British military, under General Sir John Maxwell, snatched defeat from the jaws

of victory. Military tribunals quickly convened and sentenced 90 people to death. Executions began without opportunity for appeal. Pádraig Pearse was among the first to die and his brother Willie was executed soon after. Joseph Mary Plunkett was allowed to marry and spend the night with his new wife (with the cell door open and guards outside), and then was shot at dawn. James Connolly, severely wounded in the fighting, was taken from the hospital to Kilmainham Gaol, tied to a chair, and shot dead. Francis Sheehy Skeffington, a well-known pacifist, was summarily executed in an army barracks. Public opinion in Ireland changed quickly and decisively. The “fools” had been transformed into martyrs for Ireland, new victims of the continuing brutality of British rule. World opinion followed shortly, repulsed by the disproportionate British response and the wrenching stories of the Pearse brothers, Plunkett, and Sheehy Skeffington, among others. Finally, British public opinion changed as well, unwilling to further condone what their government had done.

Herbert Asquith, the prime minister, assigned David Lloyd George to pacify the situation in Ireland. In separate meetings, Lloyd George offered Redmond immediate Home Rule for Ireland with Ulster only temporarily excluded, while assuring Carson that partition would be permanent. This, he hoped, would buy peace in Ireland for the duration of the war. Redmond, however, learned of the deception and went public, sparking a new wave of public outrage. To calm the new situation the government released most of those imprisoned or interned following the 1916 Rising. The latter returned to a very different Ireland. Lloyd George’s duplicity following Maxwell’s harsh response to the rising had all but destroyed Redmond, the Irish Party, and those who wanted to avoid violence to gain Irish freedom.

In 1917 the Irish Volunteers gained control of Sinn Féin and used it to oppose Redmond and the remnants of the Irish Party in Westminster at the polls. They quickly won six by-elections and then refused to take the oath of allegiance to the king. They also actively opposed British efforts to recruit troops in Ireland. In April 1917 the United States entered the war and put pressure on Lloyd George, now prime minister, to address the demands of Ireland. He offered Redmond immediate Home Rule without six Ulster counties, an offer Redmond could not

accept. To do so would completely destroy any chance for a peaceful resolution of the situation as well as his role in Irish political life. Ulster Unionists Carson and Craig rejected Redmond’s counter-offer. In a final effort to find a peaceful solution to the crisis Redmond suggested an Irish Convention to work out a solution to the impasse.

The Convention convened in July 1917 and met until April 1918. Sinn Féin, the political face of the Irish Volunteers, refused to attend, and the Ulster Unionists blocked every effort to develop a compromise. Only the Protestant representatives who were not Unionists seemed willing to work with Redmond to find middle ground. Neither group had much of a constituency. Redmond accepted their plan: Home Rule with control of customs, excise, and the military remaining with Westminster. He was quickly even further isolated as Irish nationalists and the Catholic bishops rejected the plan, as, of course, did the Ulster Unionists. The Irish Party at Westminster was an empty shell. Redmond’s death in March 1918 ended any hope, however faint, of a peaceful, political solution.

In April 1918 the British Parliament authorized conscription to begin in Ireland. The remnants of the Irish Party withdrew from Westminster in protest and allied with Sinn Féin. The Irish trade unions and the Catholic bishops, not natural allies, joined in opposing conscription. In response, the government arrested and interned members of Sinn Féin and shut down newspapers that opposed conscription. However – and it is a very important fact – no one in Ireland was conscripted into the British army.

In December 1918 Lloyd George faced a general election, the first since the Representation of the People Act of the same year had tripled the number of eligible voters in Ireland. The results revealed that a dramatic shift in Irish opinion had taken place. Sinn Féin won 73 of 81 seats outside the six counties of Ulster. The Irish Party won six of the others. Only two, those from Trinity College, bastion of the Protestant elite, went to Unionists. Most of the 24 seats representing the six counties of Ulster went to Unionist candidates. In East Mayo the leader of the Irish Party, John Dillon, went head-to-head with Sinn Féin leader Eamon de Valera. Despite being in prison in England (or perhaps aided by his prisoner status) de Valera won two-thirds of the votes. The political landscape of

Ireland had changed dramatically in a very short time.

The Sinn Féin MPs refused to take either the oath of allegiance or their seats in Westminster. Instead, they met in Dublin and constituted themselves as Dáil Eireann, an Irish parliament. They began immediately to act as a government, electing Sinn Féin founder Arthur Griffith president, issuing bonds, and establishing arbitration courts, industrial dispute boards, and a land bank. The Dáil sent a delegation to the Versailles peace conference to present their case to the world, but Lloyd George blocked the Irish delegation from being received and heard. That was the end of efforts to achieve Irish self-rule peacefully.

Dáil Eireann continued to act as an independent Irish government. In February 1919 Michael Collins, who had emerged as a leading figure in the Dáil, and Harry Boland orchestrated de Valera's escape from prison in England. De Valera was immediately elected president of the Dáil and left for the United States to raise money. Collins emerged as the leader of Irish efforts toward independence in Ireland.

Collins was head of the Irish Republican Brotherhood, adjutant general of the Irish Volunteers (now renamed the Irish Republican Army (IRA)), and minister of finance in the Dáil. He successfully resisted efforts to bring the Irish Volunteers under the control of Cathal Brugha, the Dáil's minister of defense.

Collins' multiple positions made him a central figure; his great personal charisma made him the dominant personality in the movement for Irish independence. He was a very pragmatic revolutionary, with no romantic, idealized view of Ireland or Irishness as Pádraig Pearse had. He was committed to success by whatever means necessary rather than to making a heroic statement through martyrdom. In 1919 he began to implement his plan, the prototype of modern asymmetrical warfare. The IRA did not attack British military forces directly or allow itself to be drawn into traditional battles. Flying columns ambushed British convoys and raided police stations, barracks, and other outposts of British authority. They would strike and be gone before a large force could deploy against them. Collins' inner circle, known as the Twelve Apostles, assassinated spies and informers, whose treachery had undermined previous Irish efforts to overthrow British domination. They also targeted individual soldiers and members of the

Royal Irish Constabulary (RIC), which prompted many resignations from the RIC as service became increasingly dangerous. The IRA and the Dáil's alternative government came to control large areas of Ireland. It waged a brutal assault on anyone who supported or abetted continued British domination of Ireland.

The British responded in kind. Unemployed World War I veterans were recruited into auxiliary units of the RIC. Known as the Black and Tans – in part due to the color of their uniforms and in part as a reference to a breed of dog known by that name – these irregular troops engaged in a campaign of brutality that included torture and murder of people in custody. Towns were burned and looted in reprisal for IRA activities and part of the city of Cork was destroyed. World opinion rallied in support of Ireland as a small nation standing up to a powerful oppressor. Within Britain, the use of torture and reprisal killings shocked popular sentiment, and within the emergent British Commonwealth increasing pressure was brought against the use of such tactics, especially from Australia, where there was a significant Irish element in the population.

In 1920 Lloyd George offered Home Rule along identical lines of the offer he had made to Redmond in 1916: one parliament for the six counties in Ulster and a second parliament for the rest of Ireland. Ulster accepted the proposal – Craig characterized it as “a Protestant parliament for a Protestant people.” The Dáil rejected Lloyd George's offer, however, and after a general election in 1921 the winning candidates again refused to sit in the Westminster Parliament. The conflict resumed, with the added element of hunger strikes by those interned by the British government. The death of Terence MacSwiney, Lord Mayor of Cork, after a 74-day hunger strike in October 1920 led to a surge in world and British public opinion against British activities in Ireland. On July 11, 1921 the British government and the Irish Republican Army agreed to a truce. Lloyd George and de Valera met to work out an end to the fighting.

Lloyd George made an initial offer and never moved from it. He offered Ireland Dominion status with permanent partition of the six Ulster counties. The size of the Irish army was limited and Britain would keep air and naval bases in Ireland as well as the right to recruit there for its military. Finally, Ireland would assist in the

payment of Britain's debt from the world war. De Valera rejected the terms offered, but presented it to the Dáil, which also rejected it as humiliating to Ireland.

In October 1921 a second peace conference began in London. De Valera chose not to attend, but sent an Irish delegation headed by Arthur Griffith and Michael Collins. Lloyd George was still unwilling to negotiate the major issues, so only minor changes were made. One involved the wording of the oath of allegiance to the king and another established a boundary commission to work out the final border between Ireland and Northern Ireland. The delegation returned to Dublin at the beginning of December and the Dáil again rejected the treaty. The delegates were instructed to obtain "external associate" status for Ireland that would separate the nation from the British crown.

The period of calm during the negotiations had reduced world and British pressure on Lloyd George, who refused to discuss any further changes and threatened to resume the war if the treaty was not accepted. On December 6, 1921 the two delegations signed.

In January the Dáil debated the treaty. De Valera remained opposed and led the opposition; Collins led the supporters of the treaty. De Valera and his allies considered the treaty, which maintained a relationship between Ireland and Britain, to be a betrayal of the Republic proclaimed in 1916. Collins conceded that the treaty was imperfect and did not provide full independence. He argued, however, that it offered more than Home Rule and provided the framework to work toward full freedom and complete independence. What he did not say was that he believed the military conflict could not be sustained long enough to defeat Britain. The Dáil ratified the treaty by a close vote, 64 to 57. De Valera immediately resigned as president and led the opponents of the treaty out of the Dáil. Griffith was elected president in his place and within days the British began turning over government offices to the new provisional government established by the treaty. The Dáil and the provisional government coexisted, but there was a deep split dividing those who had fought for Ireland's independence.

As British troops withdrew from Ireland, local IRA units moved in and occupied the barracks without any central direction. Their loyalty was an open question, but the provisional

government had no force of its own and no time to develop one. Would the various units support the treaty and the provisional government, or would they side with de Valera and the anti-treaty forces? Collins had a strong following among the IRA rank and file, but influential local leaders – and the IRA was a very decentralized organization – opposed the treaty. Liam Lynch, Ernie O'Malley, and Sean Moylan led roughly half of the IRA, mainly from the south and west. They were opposed to the treaty and supported de Valera as president of the Republic. Pearse had proclaimed in 1916. They saw the Dáil and those who supported the treaty as traitors. The remainder of the IRA followed Collins and supported the treaty. Collins appointed Richard Mulcahy as commander of what was to become the Free State Army.

Collins was not anxious to force armed conflict, seeing the situation as a difference of opinion among former comrades-in-arms. Localized conflict occurred as local IRA units occupied abandoned British barracks. Tensions rose substantially when anti-treaty forces occupied the Four Courts in Dublin on April 14, 1922. Collins still hoped to avoid large-scale violence and an armed stand-off kept tensions high in Dublin and elsewhere. The rapidity of the British withdrawal made it necessary for the provisional government to take over a wide range of governmental functions while developing a plan for a permanent government and simultaneously dealing with the potentially violent split over the treaty.

On June 22 Field Marshall Sir Henry Wilson, former chief of the imperial staff, was assassinated in London. Wilson was serving as military advisor to the Northern Irish Parliament. Earlier, he had been a covert supporter of the Curragh mutineers. While his killers were caught, it remains unclear who ordered his assassination. Many suspect it was Collins, but Lloyd George publicly blamed the anti-treaty faction and demanded Collins move against them – or else the British army would. Collins was in a difficult position. If he allowed the British army to move against the anti-treaty forces at the Four Courts his government would lose all public support, a full-blown civil war would be all but certain, and a renewal of warfare between Britain and Ireland would threaten all that had been gained. Nevertheless, with artillery borrowed from the British army, Collins forced the

anti-treaty forces in the Four Courts and other public buildings in Dublin to surrender. The shelling destroyed the Four Courts, along with a large body of Irish historical records. As Collins had feared, a full-scale guerilla war began almost immediately. Men and women who had fought side by side since 1916 now turned on one another. Liam Lynch emerged as the military leader of the anti-treaty forces; Cathal Brugha, Austin Stack, and the Countess Markievicz, leaders in the 1916 Rising, now played prominent roles on the anti-treaty side. The titular leader of the anti-treaty forces was Eamon de Valera, but he did not play a prominent or visible part during the guerilla war.

Collins still saw the conflict as one between former allies and was conciliatory for the most part toward those captured. Lynch, for example, was released after he was captured at the Four Courts on his promise to work to end the violence. On August 12 Arthur Griffith, president of the Dáil, died of a cerebral hemorrhage. Collins then became the political as well as the military leader of the new government. Ten days later Collins was killed in an ambush at Beal na Blath in County Cork, not far from his birthplace. William Cosgrave became president and Richard Mulcahy minister of defense.

Cosgrave took a very different approach to the conflict than Collins had. He saw it as a showdown between law and anarchy and prosecuted the war aggressively. He obtained emergency powers from the Dáil that established military courts to try those captured. Some 12,000 people were interned without trial and 77 were executed, including a number of heroes of the War for Independence. The execution of Erskine Childers, a leader on the anti-treaty side, led to the assassination of government minister Kevin O'Higgins' father in retaliation, setting in motion a series of atrocities, including the large number of executions by the government. On April 10, 1923 Liam Lynch was killed in a skirmish in County Tipperary.

Following Lynch's death, de Valera emerged and offered a ceasefire that the government refused. On April 30 Frank Aiken, Lynch's successor as IRA chief of staff, ordered a ceasefire, and he and de Valera declared a unilateral end to the fighting on May 24. Many of the anti-treaty troops went to the United States or underground in Ireland because of the uncertainty surrounding the end of the Civil War.

De Valera was briefly imprisoned in Kilmainham Gaol, the same jail in which the British had held him on several occasions. Cosgrave's government continued to function. It organized itself as Cumann na nGaedheal (in 1933 renamed Fine Gael). The anti-treaty forces' political party continued as Sinn Féin; although they contested elections, they refused to take the oath required of members of the Dáil and were somewhat marginalized politically. On December 7, 1922 the Irish Free State (Saorstát Éireann) formally replaced the provisional government.

Cosgrave established an effective, efficient government despite uncertainties as to what course the anti-treaty forces might take. Civilian control of the military was established during a mutiny among army officers sparked by a great reduction in the size of the army. In 1926 de Valera split with Sinn Féin and he organized a new party, Fianna Fáil, bringing him and a large part of the anti-treaty faction into politics. In 1932 Fianna Fáil won the largest number of seats in the Dáil and formed a government with the support of the Labour Party. Cosgrave transferred power to de Valera smoothly and without incident.

Eastman, Max (1883–1969)

Jill Silos

Max Eastman was a prolific American writer, collaborating on several radical journals and

publishing several books throughout the first half of the twentieth century. Radicalized from an early age, Eastman was a supporter of Trotsky until the 1940s when he went on to disavow communism and support Joseph McCarthy.

Max Eastman was born in upstate New York on January 4, 1883. His mother, an influential female minister, shaped his belief in individual liberty. Eastman attended Williams College and then studied for a doctorate under the tutelage of John Dewey at Columbia University. With his impressive literary and oratorical skills, Eastman was respected as a critical journalist and soon became popular within the rebellious culture of Greenwich Village.

Feminism was among the first of Eastman's radical commitments. He founded the Men's League for Women's Suffrage in 1909, arguing that "the question of sex equality, the economic, social, political independence of woman stands by itself, parallel and equal in importance to any other question of the day." His belief in free love and criticism of middle-class values were equally important to his support of feminism and he also attacked the sanctity of marriage, birth control restrictions, and rigid divorce laws.

In 1912 Eastman brought his interest in socialism to *The Masses*, a foundering journal of radical politics and arts. He resurrected the dying journal and edited it as a cooperative of artists and writers. His tenure there led to the emergence of the magazine as the preeminent creative outlet for the leading intellectuals of the era. *The Masses* soon began to side with more radical socialists, such as the Industrial Workers of the World (IWW) labor union, and openly opposed America's entry into World War I.

This opposition ushered in the most dramatic era of Eastman's life. In 1918 the US government charged Eastman and other contributors to *The Masses* under the Espionage Act and forced the magazine to close. Thereafter, he left for Russia to witness the results of socialist revolution. He was disillusioned by the struggle for power that ensued following Lenin's death, and his concern for democratic individualism led him to condemn the incipient totalitarianism of the emergent Stalinist regime in his controversial book, *Since Lenin Died* (1924).

When he returned to the United States, he published many books and articles, especially focusing on the failure of Marxism. In the 1950s he also notoriously defended McCarthyism and

wrote many anti-communist articles for popular magazines, including *Readers' Digest* and *National Review*. Though by the time he died in 1969 Eastman was regarded as a turncoat to the radical cause, his works demonstrate his unwavering interest in individual liberty and exemplify the most divergent aspects of American intellectual life in the twentieth century.

Eco-anarchism

Uri Gordon

Environmental direct action has been a major site for the revival of anarchist political culture since the 1970s. In tandem, a diverse body of eco-anarchist thought has emerged in response to the environmental crisis.

In Germany and France, mobilizations against nuclear energy in the 1970s provided the major vehicle of continuity for the radical surge of 1968, and formed a laboratory for direct action tactics and autonomous organization. In the United States, anti-nuclear campaigns turned toward direct action in 1976 with the Clamshell Alliance's occupations of the planned site of the Seabrook reactor in New Hampshire. The occupation inspired similar direct action groups

nationwide, including the Abalone Alliance in California, where anarchist eco-feminists including Starhawk (Miriam Simos, b. 1951) had a prominent role in imbuing its political culture with direct democracy, non-violence, and an earth-based spirituality.

Eco-feminism was also influential in the European and American anti-militarist movements of the 1980s (at Greenham Common, Seneca Falls, Pantex), where connections were made between a militarized culture, poverty, and environmental destruction as manifestations of patriarchal contempt for life. Ecological, feminist anti-militarism expressed an anarchist critique of domination as such, stressing an inexorable connection between the domination of nature and domination of humans (with patriarchy as the prototype of both).

Throughout the 1990s, a new cycle of environmental direct action emerged with distinctly anarchist cultures, including British and Israeli anti-roads movements, North American forest defense campaigns, and, to some extent, the animal liberation movement. The Earth First! network (especially in Europe) is broadly considered to be anarchist, as are the action-banners Earth Liberation Front and Animal Liberation Front.

Eco-anarchism as a body of writing represents diverse engagements with the connection between environmental crisis, capitalism, hierarchy, and the ideology of economic growth and technological progress – stressing the social critiques deemphasized in the holistic, consciousness-transformational message of deep ecology. At the same time, the anarchist emphasis on decentralization and worker/community ownership strongly coheres with the requirements of a low-throughput economy, leading to visions of communistic localism and bio-regionalism.

Murray Bookchin was among the first to address environmental problems in decentralist anti-capitalist terms. His dialectical and evolutionary theory of social ecology argued that humans belong to a natural continuum but that their second, sociocultural nature has been disfigured by the rise of hierarchy – initially from gerontocracy in stateless societies. Bookchin's vituperative claims to theoretical exclusivity and his promotion of electoral democracy, however, drew harsh criticism from anarchists.

Since the mid-1980s, a major current of eco-anarchist expression has been anarchoprimitivism. First articulated in the Detroit magazine

Fifth Estate, the current was developed by authors including Fredy Perlman, John Zerzan, and David Watson and in publications such as *Green Anarchy* (US) and *Green Anarchist* (UK). Strongly antagonistic to industrial society, technology, and modernity, primitivist critiques reject civilization as essentially hierarchical, posit hunter-gatherer communities as sites of primitive anarchy, and promote a reconnection to the wild as part of anarchist revolutionary struggles.

Ecological protest movements

Paul Rubinson

Observers and activists often describe environmentalism as the world's largest social movement. Part of the movement's popularity comes from its fairly mainstream goals, as politicians and voters alike easily approve of the notion of keeping the planet sustainable for future generations. At the same time, much support for environmentalism takes the form of vague statements of principle, with little actual restriction of industrial and public destruction of the environment and its ecosystems. Typically, mainstream environmentalists in the West push for legislation protecting certain areas and species, incremental measures that seem small compared to the ecological crisis that confronts the planet.

A different segment of protesters put the environment at the direct center of human concerns. Adherents of the environmental justice movement (EJM) see the state of the environment as central to human well-being, as important as civil rights or equal protection under the law. Meanwhile, on the fringes of the environmental movement are those activists who see humans as responsible for the ecological crisis that threatens the well-being of humans, animals, and plant life on earth. These protesters embrace radical activism to overthrow human exploitation of the planet. Both approaches have redefined the environment as central to human existence, rather than merely one issue among many. But they differ in one essential manner: the environmental justice movement sees the positive and negative aspects of the environment as being distributed unequally according to variables of race and class and seeks to redress this imbalance. The ecological resistance movement, in contrast, believes that humans have no right to distribute the environment at all, and has taken it upon itself to usurp humans from their dominant position over nature.

The environmental justice movement offers the notion that the environment is inextricably connected to human rights and social justice. Such a view results from the fact that the worst forms of pollution, such as toxic waste and proximity to pesticides, is suffered overwhelmingly by the poor, the disadvantaged, and the disenfranchised, as well as racial and ethnic minorities. Meanwhile, the wealthy classes benefit from this environmental degradation of poor classes and regions; as an example, scholars have described how expressways run through poor neighborhoods in order to transport goods to the wealthy.

The first North American protest to express this critique occurred during the 1970s in the state of New York. The working-class residents of Love Canal began to suffer illnesses, and soon discovered that their homes and schools had been built upon the site of a chemical plant and dump, resulting in the seepage of toxic and chemical waste into the community's land. Love Canal residents made the point that their community had been targeted because of its socio-economic status. In seeking redress for the damage done to them, the protesters revealed that in the United States, sites of toxic chemical disposal were chosen based on an anticipated lack of local resistance rather than on scientific factors.

In recent years, the United States has continued to see an increasing alliance between civil and human rights activists with environmentalists. Central to the EJM are legislation and lawsuits that allow citizens to reap the benefits of nature, as well as avoid the toxic byproducts of industrialization, regardless of socioeconomic status. The EJM credo has declared "the right of all people to share equally in the benefits bestowed by a healthy environment."

Such an approach has spread to encompass a variety of activists and protests. Scholars have seen the 1994 protests by Zapatistas in Chiapas, Mexico, against the North American Free Trade Agreement (NAFTA), which favored agribusiness over small farmers, as part of the EJM. In addition, the claims of "environmental racism" against Royal/Dutch Shell on behalf of the Ogoni people in Nigeria have emphasized the international reach of the EJM. The Ogoni, a minority population in Nigeria, disproportionately suffered the harmful effects of more than 4,000 oil spills that occurred in the Niger Delta between 1961 and 2001. Royal/Dutch Shell and other oil companies, in collusion with the Nigerian government, profited from this environmental devastation, while the Ogoni land and people received none of the economic benefits of the region's oil reserves. Ogoni activist Ken Saro-Wiwa mobilized local protest against the disregard of the Ogoni people, drawing the attention of the United Nations and several non-governmental organizations (NGOs), but in 1995 Saro-Wiwa was hanged for treason by the Nigerian government.

The plight of the Ogoni people reveals how much is at stake in conflicts over the environment. As the environment continues to decline, the instances of social conflict will undoubtedly increase. While much of this conflict might take the form of nation-state contests over environmental resources, movements in defense of the environment have also pushed the boundaries of environmental dissent.

Many of these environmental uprisings have drawn upon anti-colonial, anti-nuclear, feminist, Marxist, and anarchic thought, though new ideologies have been formulated as well, primarily the radical ecological ideas of deep ecology, social ecology, and ecofeminism. Deep ecology interprets the ecological crisis as the outcome of the anthropocentric humanism characteristic of modern ideologies, political-economic systems,

and religions. Furthermore, the establishment of technological control over nature has proceeded in step with control of humans, resulting in the degradation of both nature and humanity. Social ecology similarly explains the ecological crisis as the inevitable result of "authoritarian social structures" present in both socialism and capitalism. In this mindset, the destruction and plunder of nature for profit reflect and encourage the larger social structures that promote the oppression of humans for profit. Likewise, ecofeminists see the ecological crisis as the outcome of the dominating patriarchy of western society, which has created a system that suppresses humanity's and nature's fulfillment.

Although the EJM recognizes the environment as a tool in social and economic oppression, it falls short of the goals of the ecological resistance movement. In the view of these activists, even an equitable sharing of the benefits of nature does nothing to improve the imbalance between human beings and the environment. Thus ecological protesters have embraced combative measures to overturn human domination of the planet.

The groups Earth First!, the Earth Liberation Front, and the Animal Liberation Front have sought to live out the ideology of deep ecology. Earth First! was founded in 1980 by a small band of Americans determined to halt the exploitation and destruction of nature by the industrial West. Inspired by the writer and eco-sabotage pioneer Edward Abbey, the anti-Vietnam War movement, and the Black Power movement's spirit of resistance, Earth First!'s initial protest occurred in March 1981 at Glen Canyon Dam in Arizona. There, Earth First!ers unfurled a 100-meter plastic sheet crafted to make the dam appear cracked. Earth First! efforts soon transcended this initial symbolic act, as the protesters unleashed a broad civil disobedience campaign. In a variety of locales, Earth First!ers set up blockades of logging roads, chained themselves to logging machinery, and engaged in "tree sits" to prevent the felling of trees. Their most notorious form of protest was "ecotage," essentially the sabotage of construction equipment, but explained by radical environmentalists as "ecological warfare against those who would destroy wilderness areas."

Early Earth First! efforts concentrated on activism designed to save rainforest ecosystems.

Boycotts, such as those against Burger King and other fast-food corporations accused of transforming rainforests into cattle grazing land, protested the destruction of rainforests and attempted to force industrialists into submission. Meanwhile, other Earth First! activists pulled up survey stakes, put sugar in construction vehicle gas tanks, and embedded spikes in trees to destroy saws and deter logging in a practice known as "tree spiking."

The goal of such protest was to make the destruction of the environment unprofitable. Like other civil disobedience campaigns, Earth First! hoped that the combination of lawsuits, public demonstrations, and non-violent resistance would drive oppressors of the environment out of business. But Earth First! also embraced a new way of life, in tune with nature but removed from typical western conceptions of nature and humanity. One member declared: "I am the rainforest, recently emerged into consciousness, defending myself." Inherent in Earth First!'s approach was the notion that non-human life is valuable, completely apart from its usefulness to humans. Humans consequently are no more valuable than other species. The ecocentric approach of deep ecology mandated that ecosystems should flourish, and that humans should not stop this flourishing but should restore nature where possible. Because religions and governments encouraged anthropocentrism, breaking the law in defense of earth was deemed acceptable to members of Earth First!

Earth First! spread to the United Kingdom in 1991, where early protests took the form of attempts to block the docking of shipments of rainforest timber. In the mid-1990s Earth First!'s British activists began an anti-roads campaign to demonstrate the environmental and social costs of increasing traffic. Earth First!ers pointed out that automobiles contributed to the greenhouse effect that threatened the future of human civilization, while the Gulf War, waged to protect western access to oil, provided evidence that only violence could sustain the automobile lifestyle. Twyford Down, in Hampshire, England, proposed as a route for the M3 motorway, served as the initial site of protest for the anti-roads campaign. In 1992 activists attempted to establish permanent anti-road protest camps at Twyford Down, though they were eventually destroyed and their residents forcibly evicted. But the anti-roads campaign sparked a similar

movement in Ireland, while Earth First! also spread to Canada, Germany, and Mexico. In Australia, Earth Firsters blockaded dam construction sites in 1982 by burying activists up to their necks in dirt roads used to transport construction equipment.

The Earth Liberation Front (ELF) and the Animal Liberation Front (ALF) have taken the defense of earth to even greater extremes. Scholars have described the ELF as a radical spinoff of Earth First! that has adopted a “by any means necessary” approach to environmentalism. Since the late 1970s these activists have engaged in criminal acts and violence to defend the environment and animals from destruction caused by humans. The ELF has primarily targeted property that either harms the environment itself or houses those that plot the destruction of nature. Meanwhile, the ALF has undertaken the harassment of workers whose employees do harm to animals, including subjecting the employees of one pharmaceutical company that tests on animals to death threats, vandalizing of homes, beatings, and even the throwing of acid.

Some of the ELF’s more notable acts include the destruction of power lines feeding Arizona ski resorts in 1987, and the severing of power lines to uranium mines in 1988. One scholar has estimated that between 1997 and 2006, ELF caused \$100 million in property damage. In 2001 the ELF and the ALF conducted a joint vandalizing of Bank of New York buildings and automated teller machines as retaliation for the bank’s connections to an animal-testing pharmaceutical company. ALF members have also resorted to arson to destroy the offices and experiments of biological engineers; in 2003 the group destroyed a condominium complex under construction in San Diego, causing \$50 million in damage.

These most radical of groups appear to vacillate between advocating the equal treatment of all forms of life on earth and punishing humans for their callous treatment of nature. One official with the People for the Ethical Treatment of Animals has declared that “humans have grown like a cancer. We’re the biggest blight on the face of the earth.” Observers and mainstream environmentalists have made the claim that these radical activists devalue human life. The ideology of deep ecology sits at the heart of these movements, and thus emphasizes the inherent value of non-humans, as well as the

concurrent devaluing of humans. But description of their efforts as “terrorism” is simply inaccurate since they overwhelmingly commit crimes against property and rarely against people. Defining their efforts as “eco-terrorism” has, however, resulted in a heavy crackdown against such groups that has drastically curtailed their efforts, especially in the years since September 11, 2001.

Scholars have argued that radical activist groups such as the ALF, the ELF, and Earth First! have made the efforts and demands of Greenpeace and other more mainstream environmentalists seem more moderate. As a consequence, the goals and results of environmentalism will drift slowly to the left. Such an outcome is indeed a positive result, but these activists have also made it clear that when the future of the earth was uncertain, not everyone stood idly by.

Ecuador, indigenous and popular struggles

Marc Becker

Indigenous organizations in Ecuador have long provided the foundation for popular struggles in the twentieth century and a model to the rest of Latin America for organizing social movements. In the 1920s Jesús Gualavisi, a leader in the municipality of Cayambe, led a community protest against a neighboring hacienda that expropriated their lands. Gualavisi searched for urban allies to support his fight, and attended the founding of the Ecuadorian Socialist Party in the capital city of Quito in May 1926. Subsequently, urban socialists and communists became strong supporters of rural indigenous struggles.

In 1930 indigenous workers on the Pesillo hacienda in Cayambe went on strike for higher wages and improved working conditions. For the next several decades, Pesillo became a zone of fierce indigenous protest. Dolores Cacuango, one of the strike leaders, became known as a leading Ecuadorian indigenous rights activist. In February 1931 Cayambe activists organized a national conference for peasant and indigenous rights. The specter of thousands of marginalized people congregating to fight for their rights unsettled the government, which quickly sent police to end the protest. The indigenous movements have promoted their cause with help from educated urban communists, publishing a newsletter called *Ñucanchic Allpa* (Our Land) that appeared occasionally from the 1930s to the 1960s.

On May 28, 1944 (“May Glorious Revolution”) a mass uprising overthrew an unpopular government. Taking advantage of this political opening, Gualavisi and Cacuango founded the Ecuadorian Federation of Indians (FEI). For the next several decades the FEI led struggles for agrarian reform and greater political representation for indigenous peoples.

The triumph of the Cuban Revolution in 1959 led to a dramatic increase in political mobilization for social change. Popular pressure finally forced elites in 1964 to implement modest land reforms to undercut calls for more radical changes. Concurrently, progressive sectors of the Catholic Church organized alternatives to the communist-affiliated FEI. The first such local organization was the Salesian-affiliated Shuar Federation that

subsequently provided important leadership to national indigenous struggles.

In 1968 a conservative Catholic labor union founded the National Federation of Peasant Organizations (FENOC) with the goal of assisting hacienda workers in their transition to a new land tenure system following the country’s agrarian reform program. Although initially organized as a bulwark against the leftist FEI, rural activists quickly gained control of FENOC, converting the organization into a force for revolutionary change. In the 1980s and 1990s the federation explicitly incorporated indigenous peoples and Afro-Ecuadorans into its mission, changing its name to the National Federation of Indigenous, Peasant, and Black Organizations (FENOCIN).

Struggles within the Catholic Church for control of FENOC led progressives to found an alternative, more “ethnic” organization named Ecuaurunari, from a Kichwa phrase “Ecuador Runacunapac Riccharimui,” meaning “awakening of indigenous peoples.” Similar to FENOC, Ecuaurunari was quickly radicalized as indigenous activists gained control over the organization.

Parallel to FENOC and Ecuaurunari located in the Andes highlands, Catholic missionaries formed ethnic organizations in the eastern Amazon basin. Most significant were the Federation of Indigenous Organizations of Napo (FOIN) and the Organization of Indigenous Peoples of Pastaza (OPIP). Together with the Shuar Federation, in 1980 these local organizations founded the Confederation of Indigenous Nationalities of the Ecuadorian Amazon (CONFENIAE). CONFENIAE and Ecuaurunari quickly joined forces into the National Coordinating Council of Indigenous Nationalities of Ecuador (CONACNIE). In 1986 this body was reconstituted as the Confederation of Indigenous Nationalities of Ecuador (CONAIE). The new organization’s goal was to combine all indigenous peoples from throughout the country into one large pan-Indian movement dedicated to defending indigenous concerns and agitating for social, political, and educational reforms.

In the 1980s evangelical Christians founded the Ecuadorian Federation of Evangelical Indians (FEINE) with its base in Chimborzo as an alternative to the more “leftist” FENOCIN and more “Catholic” CONAIE. Sometimes these organizations, along with FEI, now only a shadow of its former self, coordinated protest

actions and at other times desperately competed for the allegiance of the same people.

In June 1990 CONAIE led a powerful indigenous uprising that shook the country's white elite power base. It placed CONAIE firmly on the map of social movements, providing a model for how civil society should organize itself. The June uprising introduced a remarkable decade of intense and greatly heightened indigenous activism. In 1992 OPIP led a march from the Amazon to the capital city of Quito to demand land titles and the definition of Ecuador as a plurinational state. Two years later, indigenous activists took to the streets in a Mobilization for Life in protest of a new agrarian law. In 1995 diverse sectors of civil society formed the indigenous-oriented political movement Pachakutik to compete for political office. In 1997 and again in 2000, indigenous activists played key roles in ousting presidents who had implemented unpopular neoliberal measures.

Ecuador, left and popular movements, 1940s to present

Marc Becker

Ecuador's political left is a broad front of progressive organizations that has experienced brief moments of success, most notably the "Glorious May Revolution" of 1944 unifying workers, students, peasants, indigenous peoples, women, and junior military personnel into a broad

movement. However, with internal divisions, government repression, and a failure to offset the strong military, Ecuador's left historically failed to consolidate opposition to the conservative state. The left has also succumbed to the appeal of populist movements using progressive rhetoric, but once in power defending the country's oligarchic upper class.

Ecuador's political left represents multiple historic movements of utopian socialism, radical liberalism, anarchism, revolutionary Marxism, and an indigenous tradition of millenarian struggles. In May 1925 these currents converged in the founding of the Ecuadorian Socialist Party (PSE). With the establishment of the Third or Communist International (Comintern) the party became the Ecuadorian Communist Party (PCE), and the left alliance fractured.

Another group of socialist soldiers formed the Ecuadorian Revolutionary Socialist Vanguard (VSRE), which gained strength in the 1940s. These three parties sometimes collaborated in popular fronts, and at different historic periods clashed. The PSE was the most successful of the three groups in elections, becoming in the 1930s the third significant political force in the country behind the liberals and conservatives. The PSE was instrumental in drafting social legislation, yet remained largely an urban middle-class party with most members belonging to professional classes. The political base of the communists, a smaller party, has been among the laboring classes and in indigenous communities.

Ecuador's limited industrial base hindered the development of strong labor unions based in manufacturing. Instead, in the late nineteenth century, artisans in the urban centers of Guayaquil and Quito organized mutual-aid societies. Many early working-class organizations were affiliated with the Catholic Church and a conservative political party that emphasized issues of individual morality rather than structural issues of class struggle. National Worker Congresses in 1909 and 1920, and the 1938 founding of the Ecuadorian Confederation of Catholic Workers (CEDOC), followed traditional patterns of mutual aid and individual organization. In the early twentieth century, anarchists organized strikes that culminated in a 1922 general strike in Guayaquil that the military brutally suppressed.

On May 28, 1944 a broad array of workers, students, peasants, indigenous peoples, women, and lower-ranking military personnel unified

in a broad front, known as the Glorious May Revolution. The unification of movements created euphoric optimism and seemed to signal the emergence of new social relations and the end of exclusionary state structures. Popular movements created the leftist Ecuadorian Confederation of Workers (CTE) that became a dominant force for labor rights. Socialists and communists dominated a Constituent Assembly and wrote the most progressive constitution in Ecuador's history. The perennial populist military caudillo José María Velasco Ibarra transformed the wave of discontent to power, and once elected, excluded leftists from power and abrogated the progressive constitution.

The 1959 Cuban Revolution triggered an intensification of activism in Ecuador. At the same time, the Ecuadorian left splintered into pro-Soviet, pro-Chinese, and pro-Cuban camps. In 1963 a radical pro-Cuba wing split with the PSE to form the Revolutionary Socialist Party of Ecuador (PSRE). Under military governments in the 1960s and 1970s, the PSRE faced severe repression. In 1964 Maoists formed the Ecuadorian Marxist Leninist Communist Party (PCMLE). The PCMLE operated largely as an illegal and clandestine party, but in 1977 formed the Popular Democratic Movement (MPD) as a legal electoral front. The MPD secured significant support from among university students and school teachers, and controlled the powerful National Educators' Union (UNE). In the 1970s and 1980s additional smaller leftist groupings emerged, including the Trotskyist Revolutionary Workers Movement (MRT) and the Left Revolutionary Movement (MIR). When Ecuador returned to civilian government in 1979, many of these groups unified their electoral efforts within the Broad Left Front (FADI).

In the 1960s, in the context of the Cold War, the United States helped establish the Ecuadorian Confederation of Free Trade Union Organizations (CEOSL) as a bulwark against leftist movements. In the 1970s both CEDOC and CEOSL moved leftward and joined the socialist CTE in an umbrella Workers' United Front (FUT), taking a leading role in organizing general strikes. In the 1990s indigenous movements more commonly organized street protests that led to the removal of several unpopular presidents.

Guerilla movements in Ecuador have not flourished and have been quickly crushed by the military. In 1962 the Revolutionary Union

of Ecuadorian Youth (URJE) organized guerilla cells, but the government quickly overpowered the group. Following the 1963 Ecuadorian coup, a small and disorganized guerilla group comprised mostly of students formed near Santo Domingo de los Colorados on the western slopes of the Andes and was quickly defeated by the military. In the 1980s two guerilla groups emerged, Alfaro Lives, Dammit! (AVC) and the Free Homeland Montoneros (MPL). As with 1960s movements, the new organizations were dominated by urban student leaders and others breaking from legal leftist parties. Another small and marginal group called Red Sun emerged in 1992 with close ties to Peru's Shining Path guerillas, apparently as a radical break from the PCMLE.

Ecuador, popular and indigenous uprisings under the Correa government

Marc Becker

When Rafael Vicente Correa Delgado assumed the presidency of Ecuador on January 15, 2007, he became the eighth president of the small South American country in ten years. He campaigned on the promise of calling a constituent assembly

to write a new and more inclusive constitution. This would be Ecuador's twentieth constitution since becoming an independent republic in 1830, replacing the current constitution that was only drafted a decade earlier in 1998. Social movements repeatedly called for a new constitution in order to remake the country's social, political, and economic landscape.

Observers questioned whether Correa could complete his four-year term, especially since no government had survived a full term in more than a decade. Three of those presidents had been removed through massive street protests. The young and charismatic economist and college professor first gained national attention during a short stint as finance minister under his predecessor, President Alfredo Palacio. Correa has a PhD in economics from the University of Illinois at Urbana-Champaign and wrote a dissertation attacking the Washington Consensus of neoliberal free-market reform, dominated by US imperialism. As minister, he advocated poverty reduction programs and closer relations with Hugo Chavez's left-populist government in Venezuela. When after four months Correa resigned under pressure from the United States, he enjoyed the highest approval ratings of any official in the administration.

Once out of Palacio's government, Correa was commonly put forward as a prospective candidate in the 2006 presidential elections. Correa ran on a nationalistic economic platform, criticizing foreign oil corporations for extracting the majority of petroleum rents from Ecuador, and condemned neoliberal economic policies, including free trade agreements with the US.

Correa's candidacy raised questions among social movement activists on who to support for president. Particularly for the strong and well-organized indigenous movements instrumental in toppling presidents over the previous decade, Correa was a controversial and divisive choice. A devout Catholic, he worked for a year in a Salesian Catholic mission in Zumbahua, Cotopaxi, and spoke the indigenous Kichwa language. But he was not an indigenous, nor was he involved in organizing indigenous movements. In particular, the indigenous political party Pachakutik mistrusted Correa and others outside of their movement. In 2003 indigenous activists allied with the populist presidency of Lucio Gutiérrez who, once elected to office, neglected his former allies in favor of the elite. Even more

damaging, he divided the indigenous networks through providing patronage to supporters, deeply dividing indigenous movements in Ecuador. Activists feared that Correa would have a similar impact.

Leading up to the 2006 elections, Correa and Pachakutik discussed forming an alliance. Some observers dreamed of a shared ticket between Correa and Luis Macas, a celebrated indigenous leader. Indigenous activists wanted an indigenous president, but Correa refused to consider running as vice president. While activists questioned whether Correa was ideologically committed to Pachakutik's center-left agenda, he was elected with the indigenous organization's support. He promised supporters a radical restructuring of government as a solution to problems of social exclusion and economic injustice. Even militant indigenous activists cheered Correa's victory, embracing his triumph as a blow against neoliberalism and hoping that it would create a stronger democracy.

Correa's first act as president was an executive decree calling for a referendum on whether to convene a constituent assembly to write a new constitution. Even though three-fourths of the population favored a new constitution, changing government structures went against the institutional interests of the established political parties. To gain congressional approval for a constituent assembly, he engaged in delicate negotiations with the same political parties in Congress he had denounced as part of the corrupt political establishment.

Correa won an April 15, 2007 referendum to hold an assembly by an overwhelming margin, with more than 80 percent of the electorate approving the measure. The referendum won in great measure due to the support of indigenous popular movements. In September 30, 2007 elections for assembly seats, Correa consolidated control by winning a majority of seats in the assembly, assuring meaningful changes in a new constitution. While the victories were major personal triumphs for Correa, social movements were marginalized from the formal political changes sweeping the country. From the perspective of social movements, the consolidation of power in the hands of a strong and seemingly egotistical executive meant that they would lose space to press their own agendas.

The constituent assembly began its work on drafting the country's twentieth constitution

on November 29, 2007. The assembly had six months to draft the constitution, with a possibility of extending its mandate by two more months. The new constitution would be submitted to a public referendum. If approved, Correa would call for congressional and presidential elections under the new constitution.

In tune with the goals of the executive branch, one of the constituent assembly's first acts was to declare the national congress, commonly perceived as being corrupt and inefficient, as in indefinite recess until the new constitution was drafted. The assembly then assumed full legislative powers. The traditional political parties controlling the congress complained that their concerns would be marginalized in the new assembly, and denounced the move as unconstitutional. The assembly asserted that it acted within its mandate, and represented the popular sovereignty of the Ecuadorian people.

The constituent assembly provided a critical juncture for indigenous activists longing for a constituent assembly to create a more inclusionary and participatory political system. Since a 1990 indigenous uprising, activists complained that the current constitution benefitted the dominant sectors of society to the exclusion of the popular majority. A primary and constant demand was to rewrite the first article of Ecuador's constitution to declare the "plurinational" nature of the country, recognizing 14 indigenous nationalities and acknowledging that their systems of life, education, and economy were uniquely different from the dominant white society. As a nationality, indigenous peoples would have their own territory, language, history, and culture. Correa had a historic opportunity to decolonize the country's political structures.

Despite his leftist credentials and broad popular support, some social movement activists were concerned that the young charismatic Correa was occupying spaces that they had previously held. This was a citizens' revolution, Correa declared, not one built by social movements. His "citizen's revolution" marginalized social movements that for the past two decades led powerful protests against neoliberal economic policies. Organized social movements often took more radical positions than Correa.

Activists found themselves walking a fine line between defending the assembly from conservative attacks and pressing it to take more radical positions. Returning to their traditional tactics,

indigenous movements mobilized their bases in street demonstrations to defend the assembly while at the same time pushing for greater recognition of their needs.

Ecuador, protest and revolution

Bruce E. Stewart

South America's second smallest republic, Ecuador has a rich, but also troubled history. Regionalism, racism, and economic dependency have plagued the country, often sparking political and social upheaval. Throughout the nineteenth century, most protest movements pitted the elite, whose economic and political power had been solidified in the wars for independence, against one another. Meanwhile, Ecuadorian Indians remained largely barred from the political process, forced to pay tribute to the central government and labor on haciendas or in mines. During the twentieth century, however, the indigenous population mobilized by creating grassroots organizations that promoted not only socioeconomic rights, but also Indian self-determination and cultural recuperation. At the turn of the twenty-first century, these new Indian organizations played an important role in shaping national electoral politics and forcing the government to acquiesce to some of their demands.

Ecuadorian Independence from Spain (1809–1822)

In 1532 Spanish conquistadors under the command of Sebastián de Benalcázar conquered Ecuador, defeating Inca Emperor Atahualpa and his army at the Battle of Cajamarca. For the next two and a half centuries Ecuador's development resembled that of any other Spanish American colony. The Crown quickly established a colonial system with a small Hispanic elite and a large Indian underclass. Native-born Spaniards who had migrated to Ecuador, or *peninsulares*, and *criollos*, those of Spanish descent who were born in the New World, became the region's elite, occupying large tracts of fertile land and monopolizing high offices in the ecclesiastical and civil bureaucracies. Colonial Ecuadorians of Spanish and Indian heritage, or *mestizos*, comprised a second social group that often occupied artisan and service positions. At the bottom of the socioeconomic ladder were Indians and slaves, both of whom labored in the mines and estates (or haciendas) of the elite. Indians, considered by many Spanish migrants as mendacious and indolent, were forced to pay a tribute to the Crown in exchange for protection and religious instruction.

Although local Indian uprisings occurred during the colonial period, conflicts between *peninsulares* and *criollos* set the stage for Ecuadorian independence from Spain in 1822. As early as 1544 the *criollo* elite had launched an uprising in Quito, located in the Sierra, demanding that Spanish-born authorities continue to permit the hereditary transfer of haciendas. Resentment among *criollos* toward *peninsulares* increased during the next two centuries, culminating in a successful but short-lived coup against Spanish-born authorities in Quito in 1809. Since the late 1700s the *criollo* elite in Quito had been experiencing economic decline, largely due to the collapse of the textile industry. To make matters worse, the Crown, in 1785, had initiated fiscal reforms aimed at collecting back-taxes. Faced with increased taxation and declining textile productivity, *criollo* elites also protested *peninsulares'* disproportional share of power in the Catholic Church. On August 10, 1809 a group of *criollo* estate owners ousted the *peninsulares* and seized control of Quito. Unable to gain the support of elites elsewhere in Ecuador, however, the Quito patriots remained in power for less than a year.

The first Ecuadorian city to achieve independence from Spain was Guayaquil. Located on the coast, Guayaquil emerged as the colony's leading commercial center by the early 1800s. Unlike Quito, it had witnessed an economic boom, benefiting from the expansion of cacao production in the coastal region. In 1809 *criollos* there remained hesitant to support the Quito Revolt, largely because the Crown had removed restrictions on the export of cacao from the city. But economic and political forces soon encouraged many Guayaquil *criollos* to want independence. By the late 1810s Guayaquil confronted economic stagnation as a result of declining cacao exports. Protesting Spanish laws that inhibited free trade, many *criollos* from the port city began to favor independence. Moreover, Spanish authorities, confronting revolutionaries elsewhere in South America, lacked the ability successfully to quell any uprising in Guayaquil. Aided by Antonio José de Sucre, a lieutenant fighting for republican forces under Simón Bolívar in neighboring Venezuela, *criollos*, wanting free trade and more opportunities for economic advancement, declared Guayaquil's independence from Spain on October 9, 1820. A year later, Quito and other regions in Ecuador followed suit. After the defeat of royalist forces in the Battle of Pichincha in 1822, the liberated colony entered Bolívar's Gran Colombia, a republic consisting of present-day Ecuador, Panama, Colombia, and Venezuela.

Bolívarian Struggle for Autonomy (1822–1830)

Ecuador remained part of the Republic of Gran Colombia for eight tumultuous years. From the beginning, many Ecuadorian patriots protested Bolívar's confederation, arguing that it was another form of despotism. As one Quito *criollo* complained shortly after the city officially joined Gran Colombia on May 29, 1822: "The last day of despotism, and the first of the same." Events over the next eight years would heighten autonomists' fear of Bolívarian despotism. Confronting uprisings in Venezuela in 1828, Bolívar attempted to implement a new constitution that would have made him president for life and increased the powers of the central government. When constitutional delegates from Ecuador, Venezuela, and Colombia rejected the plan on August 27, Bolívar declared himself dictator, thereby intensifying dissident feelings throughout the confederation.

Economic forces also encouraged Ecuadorians to desire independence from the Republic of Gran Colombia. In Guayaquil *criollos* protested a 30 percent tax levied on cacao exports to finance Bolívar's campaigns against the Spanish in Bolivia and Peru during the mid-1820s. Elsewhere in Ecuador, elites resented "outsiders" holding most of the top government and military positions. To make matters worse, Ecuador paid a disproportionate 21.5 percent share of the confederation's war debt. Fear of despotism, discontent over high taxation, and resentment over "foreign" rule, along with Venezuela's withdrawal from Gran Colombia in 1829, combined to force Ecuadorian elites to declare independence on May 13, 1830.

For the indigenous population of Ecuador, however, "independence" was a cruel misnomer. As Osvaldo Hurtado explained in *Political Power in Ecuador*, "The only truly liberated group was the ruling class, composed of Ecuadorians of Spanish origin, either of pure or mixed blood." Indians remained at the bottom of society, viewed by elites as racially inferior and forced to pay tribute to the central government. When Juan José Flores, a Venezuelan-born general who had supported Ecuador's break with Gran Colombia, became the republic's first president in 1830, he wrote a constitution that assured power to a small group of landowners. The constitution, for instance, excluded men with property worth less than 300 pesos from casting ballots, while forbidding women from voting and holding office. Congressmen also had to own property worth at least 4,000 pesos. Ecuador's government remained in the hands of the wealthy few.

Political Polarization and the Liberal Anti-Clerical Movement (1845–1920)

Following the overthrow of Flores in 1845, Ecuador witnessed a period of political unrest and economic recession. Between 1845 and 1860 the country had ten governments and three constitutions. Regionalism played an important role in hindering a sense of national unity. Elites from Quito and Guayaquil, having little economic incentive to cooperate with the national government, battled one another for political supremacy. Moreover, the country remained in debt, largely due to the high cost of maintaining its military. According to Allen Gerlach in *Indians, Oil, and Politics*, military expenditures "took over a huge

portion of the budget, consuming 200,000 of the 387,973 pesos expended in 1831, and 530,007 of the 847,657 pesos spent in 1843." Ecuador's political and economic problems would abate, however, when Gabriel García Moreno assumed power in 1861.

Born in 1821 in Guayaquil, García Moreno was the son of an unsuccessful businessman. In 1844 he received a doctorate of law and shortly thereafter married into one of the wealthiest families in Quito. As editor of several small political periodicals during the 1850s, García Moreno emerged as an outspoken proponent of conservatism, calling for centralized government and opposing the liberal policies of presidents José María Urbina (1851–6) and Francisco Robles (1856–9). In September 1860 García Moreno, under the direction of former president Flores, launched a coup that ousted Robles from the presidency. The following year he was elected president, ushering in the beginning of the García Age (1860–75).

From the outset García Moreno attempted to modernize the nation, initiating a program of infrastructural development, expanding educational facilities, and issuing the country's first national currency. He also sought to unify Ecuador, which remained divided along ethnic, geographic, and class lines. Although often turning to authoritarianism, García Moreno relied heavily upon Catholicism to promote order and a sense of national identity. Catholicism, he believed, provided Ecuadorians with a unifying set of values. According to David W. Schodt in *Ecuador: An Andean Enigma*, "pragmatic concerns" also encouraged García Moreno to ally with the Catholic Church. "As a civilian president," Schodt explained, García Moreno "needed to establish a base of political support outside the armed forces." The 1861 constitution, written under García Moreno's guidance, established Catholicism as the state-sanctioned religion. The following year, he willingly conceded more control to the Vatican, and in 1869 endorsed a constitutional amendment that granted citizenship to only those who practiced Catholicism.

Following García Moreno's assassination in 1875, three formal political parties emerged in Ecuador. Founded in 1878, the Liberal Party rejected García conservatism, demanding freedom of the press, condemning centralism, and, above all, calling for the end of the theocratic state and clericalism. Liberals would garner widespread

support in Guayaquil and other coastal towns that were becoming more linked with the world market and capitalism, largely due to a boom in cacao exports during the late nineteenth century. In Quito and elsewhere in the Sierra, Conservatives gained popularity. Founded in 1883, the Conservative Party wanted to increase the Catholic Church's influence in secular affairs. In 1888 Cuenca conservatives opposed to García Moreno's authoritarianism and intolerance, formed the Progresista Party. Because of its centralist ideology, the Progresista Party often received support from both moderate Conservatives and Liberals. During the late 1880s and early 1890s these three organizations competed for national supremacy. At first, the Progresistas gained the upper hand with the election of its presidential candidate, Luis Cordero, in 1892. Cordero, however, quickly lost the support of liberals in 1892 when, hoping to pacify the clergy, he announced that the church would always take precedence over the state. Conservatives and Liberals momentarily united against the president, forcing Cordero to resign in 1894. Although Vicente Lucio Salazar replaced Cordero, Conservatives would remain in power for less than a year. By 1895 the party had lost its hegemony in the Sierra region, thereby opening the way for liberals on the coast to assume political power. These liberals would be led by Eloy Alfaro, known as the Old Battler.

Born in the coastal province of Manabí in 1842, Alfaro was the son of a Spanish merchant. At an early age he became an opponent of the Garcian administration, leading uprisings against the federal government in 1865 and 1871. During the early 1870s Alfaro lived in Panama, where he became a successful businessman and married into a wealthy family. In 1884 Alfaro, by now the leader of a radical faction within the Liberal Party, once again launched a failed uprising against the Conservative-led national government. Forced into exile, he traveled extensively throughout Latin America during the early 1890s, winning recognition as one of the region's foremost proponents of liberalism. When Liberals launched a coup against the Salazar administration in 1895, Alfaro emerged as the group's most qualified (and popular) leader, having military experience and the support of Guayaquil elites.

Following the overthrow of Salazar in 1895, Alfaro became president of Ecuador. He quickly set out to modernize the country, expanding educational facilities, building roads, and com-

pleting the Guayaquil–Quito Railway. Alfaro also attempted to weaken the Catholic Church, whose close relationship with previous administrations had sparked the so-called liberal anti-clerical movement of the early 1890s. The constitution of 1897, written under the guidance of Alfaro, declared religious freedom, eliminated clerical participation on the council of state, and prohibited the establishment of new Catholic religious orders. However, this constitution, as Osvaldo Hurtado has explained, was also moderate, retaining “Catholicism as the official religion and ordering the state to protect and guarantee respect for the national faith.” Liberal principles were more firmly defined in the constitution of 1906. “The new document eliminated the classical declaration concerning Catholicism as the state religion; guaranteed free public education; declared the separation of church and state; and forbade the election of clerics to the legislature.” Under the leadership of Alfaro and his successors, the Liberal Party would retain its hegemony in Ecuador until the 1920s, when a series of economic crises led to political realignment.

Rise of Campesinismo (1920–1964)

Throughout the nineteenth century most protest movements in Ecuador pitted elites against one another. Indigenous peoples, denouncing poor working conditions, the loss of land, sexual abuse, and high tribute payments, sometimes staged local revolts against landlords, but these uprisings were isolated and quickly suppressed by white authorities. In 1872, for instance, Fernando Daquilema, after leading a failed indigenous revolt in Chimborazo province, was captured and executed. Moreover, geography and cultural differences conspired to prevent indigenous communities from forging a common identity. Although able to preserve their culture, the indigenous population remained at the mercy of the elite, whose economic and political power had been solidified in the wars for independence and the liberal anti-clerical movement. During the twentieth century, however, the indigenous peoples of Ecuador would unite and force the national government to acquiesce to some of their demands.

During the 1920s Indians, most of whom labored as tenant farmers on haciendas, forged a common class-based identity as peasants, or campesinos, thereby downplaying their ethnic differences. Aided by leftist activists from the

urban middle class, indigenous farmers and workers formed campesino organizations, which advocated for land reform, higher wages, and better working conditions. Ecuador's first major labor uprising occurred in Tungurahua province in 1923, when hundreds of campesinos went on strike for a wage increase. Three years later, Indians seized control of a hacienda in Cayambe in the northern Pichincha province, insisting that they were the rightful heirs to the land. This revolt helped to spark the founding of the Partido Socialista Ecuatoriano (PSE), an organization that further promoted class-based identities among the Indian populace. As Amalia Pallares has explained in *From Peasant Struggles to Indian Resistance*, "The 1940s and 1950s witnessed greater institutionalization of indigenous resistance, from local cooperatives and unions to the Federación Ecuatoriana de Indios (FEI), founded by the Communist Party." On December 16, 1961 the FEI, with the support of other leftist groups, organized a massive indigenous march on Quito, demanding land reform. Three years later, campesinos once again seized control of a hacienda in Cayambe.

From Campesinismo to Indianismo (1964–1986)

Confronting Indian discontent and wanting to modernize the rural countryside, the national government enacted agrarian reform legislation in 1964 and 1973. These laws, which abolished the *huasipungo* and attempted to expropriate unproductive haciendas, quickly changed the relationship between the state and indigenous communities. Through land reform, the national government, for the first time, became a permanent and direct presence in the lives of Indians. It created offices such as the ministry of agriculture that helped indigenous communities to gain hands-on expertise in rural policy development and knowledge of the national government's functions. These newly acquired skills proved beneficial for future activists attempting to form grassroots Indian organizations. Agrarian reform legislation also led to the migration of indigenous workers to urban areas. Hoping to avoid expropriation, hacienda owners had evicted *huasipungos* or tenant farmers, many of whom moved to towns. There, these Indian newcomers, perceived by the predominantly mestizo population as inferior, were excluded from employment

opportunities. Faced with racial discrimination, indigenous workers began to organize, forging a common identity that stressed Indian/mestizo differences over class polarities.

External forces further encouraged Indians to mobilize politically during the 1970s. Beginning in the 1950s, the decline of banana prices and discovery of vast amounts of crude oil forced Ecuador to become dependent on oil exports for its economic survival. Unlike the earlier cacao and banana booms, the petroleum surge impacted the Oriente, a region in the Amazon rain forest where its indigenous inhabitants, called the Huaorani, had lived relatively undisturbed. Aided by the Ecuadorian government, foreign companies began to drill for oil in the Oriente, forcing the Huaorani and other indigenous groups off their ancestral lands. Moreover, increased colonization from the highlands led to deforestation. In response, the Shuar, an indigenous group residing in the Oriente, organized the Federation of Shuar Centers in 1964. This federation, which worked to protect native lands from oil developers and colonists, soon served as a model for future indigenous organizations.

The 1970s witnessed the founding of several grassroots Indian confederations. In the Quichua highlands of Ecuador, indigenous activists organized the Ecuador Indians Awaken (ECUARUNARI) in 1972. Eight years later, several nationalities of Oriente Indians formed the Confederation of the Indigenous Nationalities of the Ecuadorian Amazon (CONFENIAE). Shortly thereafter, Indians on the coast organized the Coordinator of Indigenous Organizations of the Coast of Ecuador (COICE). In 1986 these three groups allied to form the Confederation of Indigenous Nations of Ecuador (CONAIE), which would quickly become Ecuador's most important indigenous organization, uniting Indians from all three parts of the country.

Unlike campesinismo organizations, CONAIE and its predecessors unified under the banner of indianismo, an ideology that celebrates Indian culture. Largely the result of economic forces and government programs that heightened tensions between Indians and mestizos during the 1960s and 1970s, indianismo stresses racial polarities over class differences. Thus, CONAIE and other indigenous groups demand not only socioeconomic rights, but also Indian self-determination and a multicultural state. These organizations, according to Amalia Pallares, assign "Indian" as

a positive value, “a source of pride and a basis for political mobilization.” Moreover, in contrast to campesinismo unions, CONAIE and other indianista organizations were not founded by the left. Supported by non-governmental organizations (NGOs), environmental groups, and human rights activists, they were the product of grassroots Indian activism. Indianista groups also benefited from the 1979 constitution, which allowed illiterates to vote, thereby expanding citizenship to many Indian peasants who had previously been excluded. After centuries of neglect and abuse, this new cross-ethnic and cross-regional movement, led by CONAIE, promised to give the indigenous people of Ecuador a political voice.

Economic Decline and Its Consequences (1986–1996)

While Indians were forming protest organizations during the 1980s, the Ecuadorian economy plunged into a recession. Throughout its history Ecuador has always remained highly dependent on exports, making its economy prone to volatility associated with price changes in the international market. During the late nineteenth century cacao exports helped Guayaquil and other coastal towns to achieve prosperity. By the 1920s, however, the price of cacao plunged, sending the country into a depression and ending the Liberal Party’s political hegemony. The economy rebounded in the 1940s when the United Fruit Company, owned by US investors, began planting bananas in Ecuador. Between 1947 and 1957 Ecuador’s economy grew at an average annual rate of 5.3 percent. The banana boom proved short-lived. By the late 1950s the price of bananas on the world market had stabilized, making it difficult for the Ecuadorian economy to sustain economic growth.

Ecuador was saved once again in the 1960s, when oil investors discovered vast amounts of crude in the Oriente. In June 1972 the national government completed the 312-mile-long Trans-Ecuadorian Pipeline (SOTE), ushering in the beginnings of the oil boom. The following year Ecuador joined the Organization of Petroleum Exporting Countries (OPEC) and shortly thereafter benefited from the cartel’s successful attempt to raise the price of crude by reducing oil exports to non-OPEC nations. In 1972, for instance, the cost of one barrel of Ecuadorian crude was \$2.50. In 1980 the price per barrel reached its

apex at \$35.26. Subsequently, the country experienced a decade-long period of economic growth, its rate doubling that of the 1960s. As Allen Gerlach has explained, “In the 1970s, Ecuador’s economic output rose from \$4,347 million to \$10,155 million, a stupendous 233 percent increase when compared in constant 1990 dollars adjusted for inflation.”

Military authorities, who controlled the Ecuadorian government during the 1970s, believed that this oil bonanza would last forever. Hoping to stimulate the economy, they lowered taxes and financed several modernization programs. Manufacturing operatives quickly mushroomed around Guayaquil, Quito, and other cities. In fact, industry expanded at an average rate of 10.5 percent during the 1970s and, according to Allen Gerlach, “by 1980, accounted for 19 percent of the gross national product.” Thousands of public service jobs were also created, encouraging migration to urban centers and providing middle-class Ecuadorians with more economic opportunities. Meanwhile, the public and private sector began to borrow heavily from foreign banks.

During the mid-1980s, however, oil prices plunged, sending the economy into a recession. Whereas in 1980 the cost per barrel of Ecuadorian crude was \$35.26, it had dropped to \$12.70 in 1986. Interest rates soared, making it more difficult for the public and private sector to pay back foreign loans. Meanwhile, technological changes and globalization heightened worldwide competition and hampered the growth of new businesses in Ecuador. Purchasing power fell 29 percent between 1980 and 1985, and a further 8 percent annually from 1986 to 1990. To make matters worse, the price of consumer goods rose 63.4 percent during the late 1980s. The result was increased poverty. In 1975, for instance, 47 percent of Ecuador’s population lived in poverty. Twelve years later, that number had reached 57 percent. At the same time, however, wealth became more concentrated. “In 1988,” according to Allen Gerlach, “the wealthiest 10 percent of the Ecuadorian population had 47 percent of the income.” Six years later, they had 54.7 percent.

As poverty increased, the economy declined, services waned, and social unrest in Ecuador multiplied, culminating in the June 1990 *Levantamiento Indígena* (Indian uprising). The *Levantamiento*, which would become the largest indigenous uprising in twentieth-century

Ecuador, was sparked by events in the Oriente. During the late 1980s Ecuadorian President Rodrigo Borja, hoping to stabilize the economy, allowed foreign companies to drill in 3.5 million acres in the Amazon, which was the homeland of the Huaorani. Outraged, the Huaorani staged a march on Quito, backed by environmental groups and NGOs. CONAIE also supported the demonstration, sending thousands of its members to Quito on June 4, 5, and 6. There they descended on El Arbolito Park, peacefully captured Santo Domingo Church, and blocked the Pan American Highway, an important transportation artery linking the northern parts of the Sierra with those in the south. CONAIE leaders then presented 16 demands, including an end to the exploitation of indigenous Ecuadorians, the resolution of land disputes, a decrease in the cost of living, and Indian self-determination. The uprising ended on June 6 when the federal government agreed to meet with national indigenous leaders.

The June 1990 Levantamiento Indígena propelled CONAIE to the forefront of the Indian movement. According to James Petras and Henry Veltmeyer in *Social Movements and State Power*, CONAIE, with its 16 demands, succeeded in joining the “two discrete dimensions of the movement, namely the ‘land question’ and the struggle for cultural and political unity.” The majority of Ecuadorian Indians, facing economic, political, and racial discrimination, embraced CONAIE, and for good reason. The organization had forced the government to address (if not resolve) some major land conflicts and inequalities in local power relations. This was a significant gain. Nonetheless, the war was far from over. Although changing the political discourse, CONAIE and other indigenous organizations had failed to defeat racism, poverty, and political neglect.

Following the 1990 uprising, Ecuadorian Indians staged several non-violent demonstrations. On Columbus Day, 1992, 20,000 Indians descended once again on Quito, demanding that the federal government prohibit oil companies from intruding into the lands of the Huaorani. Led by the Organization of Indigenous Peoples of Pastaza (OPIP), an Amazonian member of CONAIE, this demonstration forced the federal government to give 138 indigenous communities over 2.75 million acres of land. Two years later CONAIE mobilized against President Durant

Ballén’s proposal to amend a law that permitted the sale of unused and communal Indian land. Although the demonstration forced Ballén to backtrack on the legislation, which had been pushed through Congress without input from indigenous farmers, violence erupted as police clubbed and tear-gassed protestors marching on the streets of Quito.

The year 1996 marked another momentous event in the history of the Indian movement. In January CONAIE, along with environmental, human rights, and other social groups, joined an independent multi-ethnic alliance, the Movement of Plurinational Unity – Pachakutik (MUPP). Before, indigenous activists had operated through the party structure of the Ecuadorian left, cooperating with socialist and communist organizations. MUPP, however, would run its own candidates for office, thereby ending the indigenous movement’s reliance on the left. Although not formally allied with CONAIE, MUPP also embraced indianismo, advocating for Indian self-determination, socio-economic rights, and a multinational state. In 1996 it captured eight of the 82 congressional seats. At the local level, MUPP was even more successful, winning seven of every ten races it entered that year. With its growing popularity among Indians and several non-indigenous groups, MUPP quickly emerged as the most successful movement-based party in the Andean region.

Economic Decline, Dollarization, and Political Unrest (1996–Present)

During the 1990s Ecuador continued to experience economic decline. Oil export prices once again dropped, making it difficult for the federal government to pay back foreign creditors. A series of droughts, earthquakes, and volcanic eruptions further disrupted economic activity. Meanwhile, party fragmentation inhibited the government’s ability to pass emergency legislation. Politicians from Quito and Guayaquil, for instance, remained hesitant to enact tax reform and other measures to stabilize the economy, fearing it would disturb regional balance. Banks also teetered on collapse as depositors began withdrawing their money. In late 1998, as Paul Beckerman has explained in *Crisis and Dollarization in Ecuador*, the government tried to stabilize the banking crisis “by fully guaranteeing all bank

deposits, and then, in March 1999, by freezing deposits," but to no avail. To make matters worse, the International Monetary Fund (IMF) withheld a "crucial loan to support the balance of payments," thereby forcing the World Bank and Inter-American Development Bank (IDB) to postpone lending money to Ecuador. As a result, the country was on "the verge of hyperinflation in late 1999 with the price level increasing at a rate of near 30 percent per month." The national currency, the sucre, was in a free fall, losing two-thirds of its US-dollar value in 1999 alone.

The economic recession, along with President Jamil Mahuad's response to it, triggered a wave of indigenous and non-indigenous uprisings in 1999. Opposing a tax increase in fuel and electricity prices and the freezing of bank accounts, bus and taxi drivers, with the help of thousands of Indians, erected roadblocks in the country's major cities in March. Ending on July 14, when Mahuad agreed to reduce gas prices, this demonstration resulted in 578 arrests and three deaths. Meanwhile, indigenous workers staged a nationwide strike. CONAIE once again emerged as the movement's leading organization, demanding Mahuad's resignation and advocating for a more progressive tax system. In response, Mahuad, on January 9, 2000, announced that Ecuador would adopt the US dollar. Dollarization, he argued, would allow Ecuadorians to protect themselves by converting their sucre incomes to stable US dollars. Public response to dollarization was favorable. A poll taken on January 10 showed that 59 percent of the public favored adopting the US dollar. That same day the Central Bank of Ecuador approved the plan, and Mahuad was expected to present it to Congress on January 21.

Nonetheless, CONAIE and other indigenous groups continued to denounce Mahuad, fearing that dollarization would further reduce the wages and incomes of the majority population. On January 11 CONAIE's Parliament of the People convened in Quito, where its delegates demanded Mahuad's resignation. Four days later an estimated 20,000 Indians, led by CONAIE president Antonio Vargas, converged on Quito. The situation further deteriorated for Mahuad on January 17, when employees from the state oil company, Petroecuador, went on strike. To make matters worse, Colonel Lucio Gutiérrez and other junior officers in the military, wanting more pay and disillusioned with Mahuad's peace concessions to Peru in 1998, forged a secret

alliance with CONAIE and other indigenous activists.

In the early hours of January 20, Indian protestors surrounded the Supreme Court and National Congress in Quito. "At about 9:45 am," according to Allen Gerlach, "troops guarding the buildings mistakenly welcomed three buses filled with junior officers and their men from the Military Polytechnic School. However, the captains and lieutenants of the 195-man group used the buses to open a passageway in the circles of police and soldiers surrounding Congress." Protestors quickly filled the gap, rushing into Congress and taking control of the legislature. The next day, on January 21, the Mahuad regime was overthrown, replaced by a three-member Junta of National Salvation that included Gutiérrez, Vargas, and Carlos Solórzano, a former Supreme Court president from Guayaquil. This junta, however, lasted for only 24 hours before Vice President Gustavo Noboa, backed by the US government, the Organization of American States (OAS), Ecuador's elite, and several indigenous groups, assumed the presidency. The Noboa regime, seeing no alternative, quickly approved dollarization, making Ecuador the first country to adopt the US dollar in the twenty-first century.

Although not resulting in a revolutionary change in government, the January 21 uprising boosted the political power of the Indian movement. In the May 2000 elections MUPP emerged as Ecuador's most powerful new electoral force, winning over 12 percent of the nation's mayoralties and five of the 22 prefectures. In 2002 MUPP also allied with Gutiérrez's January 21 Patriotic Society Party (PSP). Running for president that year, Gutiérrez won 55 percent of the popular vote, ousting Noboa from office. CONAIE, MUPP, and urban-based leftist groups celebrated Gutiérrez's election as a victory for the majority Indian population. But enthusiasm for Gutiérrez quickly waned. He angered indigenous and leftist groups by supporting the IMF and the privatization of key public enterprises such as oil production. Feeling betrayed and unable to implement alternative politics, CONAIE and MUPP denounced the president, while left-wing supporters joined the Social Christian Party.

As demonstrations against the regime intensified in Quito, Gutiérrez, on April 15, 2005, declared a state of emergency and revoked the newly appointed Supreme Court of Justice,

whom he claimed was biased in favor of the Social Christian Party. Five days later the Congress of Ecuador, claiming that he had abused his constitutional power, voted 60–2 to remove Gutiérrez from office. After traveling to the United States, Brazil, and other Latin American countries, Gutiérrez returned to Ecuador on October 15, claiming that he was still the country's legitimate president. Authorities quickly arrested him on charges of attempting to subvert internal security. On March 3, 2006 the government dropped these charges and released Gutiérrez from jail. Upon his release, Gutiérrez vowed that he would run for president in the October 2006 elections.

Edict of Nantes

Michel De Waele

The Edict of Nantes, dated April 30, 1598, was the legislative act that marked the end of the Wars of Religion that had rocked France since 1562. Often portrayed as an act of religious tolerance – perhaps even a first step in the development of modern human rights legislation – its reach was in fact much more limited, as it was aimed only at ensuring civil peace across the kingdom. The act's guarantee of a certain level of freedom to Protestants was motivated by hopes that they would ultimately return to the Catholic faith. It was, therefore, an act of concord aimed at ultimately uniting the French under the same religion, rather than an act of genuine tolerance.

The monarch who promulgated the Edict had himself traversed the path from Protestant to Catholic. As Henry of Navarre, he had been a political and military leader of the Huguenot (Protestant) party during the Wars of Religion. But when France's Catholic king, Henri III, was assassinated on August 1, 1589, the legal heir to the crown happened to be none other than Henry of Navarre, who then became King Henri IV. As a Protestant monarch of a Catholic country, he found himself in an extremely complicated situation. In fact, he found himself obliged to fight to assert his kingship, as a resurgent Catholic League, with Spanish backing, attempted militarily to block his accession. In the ensuing civil warfare Henri IV's forces were able to take control of most of France, but Paris remained beyond his grasp. As a supremely pragmatic politician, however, Henri disarmed his enemies in July 1593 by announcing his conversion to Catholicism. The famous phrase attributed to him – “Paris is worth a mass” – is probably apocryphal, but it beautifully expresses the essence of his political maneuver. The Catholic cities, including Paris, then recognized him as their king.

The Huguenots of France, of course, were shocked by Henri's abjuration of Protestantism, but he took steps to retain their loyalty. He guaranteed the right of Calvinists to practice

their religion in the cities that were loyal to him at the time of his conversion, agreed to ensure that their ministers were properly financed, and permitted their colleges to be opened. These *ad hoc* measures failed to reassure the Huguenots of their place in French society, however, so in 1598 Henri IV concluded a formal agreement between himself and his Protestant subjects.

The Edict of Nantes officially granted freedom of conscience to the Huguenots, as well as the freedom to practice their religion in the cities they controlled as of August 1597. It also guaranteed Protestants the right to hold political office, and it established special courts charged with settling differences that could arise between Catholics and Protestants. At the same time, the Edict reaffirmed Catholicism as the established religion of France. Those parts of the Edict were sufficiently uncontroversial to be ratified by the kingdom's principal judicial court, the Parlement of Paris.

Other parts, however, which Henri did not believe the Parlement would ratify, provided for the financing of Protestant churches and granted the Huguenots the right to fortify their cities. Those provisions would only remain in force during the course of Henri IV's lifetime. When he was assassinated in 1610, the social peace that the Edict had brought about was once again shattered and fighting began anew. The Huguenots were defeated by Louis XIII, and the peace of Alais in 1629 stripped them of their military and financial independence, while recognizing their right to practice their religion where it was already established. They ultimately lost that right in 1685 when Louis XIV officially revoked the Edict of Nantes (on the false premise that most Huguenots had already converted to Catholicism, and that therefore the Edict was no longer necessary). An upsurge of persecution followed, prompting large numbers of French Protestants to emigrate to England, Holland, Germany, and North America. They did not recover their rights until 1787, at which point the French Revolution was already on the horizon.

Egypt and Arab socialism

Steven Isaac

It is a commonplace of studies that compare Baath socialism with Nasser's version of Arab socialism to state that Baathism was more idealistic, and Nasser more pragmatic. The claim is hard to dispute. Gamal Abdel Nasser (1918–1970) emerged to power precipitously, and like the Baath, moved from opposition rhetoric to creative policymaking while simultaneously discovering Arab socialism's meaning to himself and his base. The first, hesitant decisions of the Free Officers movement seemed in fact inclined to conciliate western and capitalist interests. In part thanks to Egypt's tradition of centralized control, Nasser and his associates were able actually to implement socialist programs (and amend them if needed) that were impossible in the more fractious political landscapes of Syria and Iraq. Developments in Egypt were further influenced by Nasser's charisma, which could smooth over the ideological potholes that often occupied a theorist like Michel Aflaq, founder of the Baathist movement.

During and just after World War II, quasi-independent/quasi-colonized Egypt was a buffet of discontented groups with agendas ranging from preserving the British presence and the inept rule of King Farouk to the compromises of the dominant Wafd political party, as well as rival groups unhappy with the major trio above. Resentment against the king and Wafd party derived from their inability genuinely to free Egypt from British control; the chief groups seeking to unseat the status quo were the Muslim Brotherhood, emphasizing a theocratic revival of Egypt, the communists, who viewed class struggle and closer ties to Moscow as a means to removing British imperialism, and the Free Officers, who began less with an agenda and more with conviction that they were the vanguard of suppressed popular energies. When this hoped-for resurgence did not materialize, Nasser and the Free Officers reinvented themselves as caretakers of a revolution still in incubation. Arab socialism thus became a sort of midwife to a promised improvement in the lives of all Egyptians, and by extension, all Arabs.

The Free Officers, during their clandestine period, were marked by a high degree of

organization and careful secrecy. It is thus difficult to describe the movement's origins with precision: Anwar Sadat claimed in his memoirs to have started the group at the onset of World War II, while Nasser's own writings do not make his involvement at that time clear. Perhaps by the war's end, and most certainly by the time of Egypt's defeats in 1948 against Israel, Nasser moved to a central leadership position, being one of two men on the central committee aware of the full extent of the movement's membership and activities. The Officers were organized in cells of five members, with each member therein seeking to form another cell. A combination of "secrecy and widespread links" thus mitigated infiltration by Farouk's informers and secret police while spreading the Free Officers' influence across the armed forces. One estimate places the active membership at perhaps 1,000 by the time of their successful coup; another posits only 300 truly active plotters. By contrast, the Muslim Brotherhood counted 500,000 Egyptian members.

Early in 1952, the Free Officers tried assassination as a tool, but that particular attempt on a general failed; Nasser later wrote of relief that such methods were abandoned under his direction, but his qualms appear odd in light of later, forceful methods to retain power. In the meantime, feelers were kept open to the Muslim Brotherhood through Sadat's connections, but no real link was ever truly envisaged. On the other hand, a group with fascist sympathies during World War II, Young Egypt, renamed itself after the war the Islamic Socialist Party, and its activism gained support in the armed forces, trade unions, and among student groups. The communists, though, were never really an option for combined efforts since the Free Officers feared tethering to a Soviet agenda, and seeking to retain Arab socialist theory, Nasser refused to operate on a supposition of necessary class conflict.

On the night of July 22, 1952, the Free Officers staged their coup, striking ahead of even their own projected timetable. Events in January, especially "Black Saturday," when Cairo erupted in anti-British violence that the king's government did not even try to suppress to avoid showing powerlessness, led Nasser and his coterie to recognize a window of opportunity. As their plans solidified, the Free Officers, mostly young, and at the rank of colonel or below, brought General Muhammad Naguib into their plans as a popular public figure. In the summer, the group finally

picked August 5 as their target date, but Nasser pushed things forward after learning that their plans had become known to Farouk.

In a nearly bloodless series of maneuvers, the Free Officers and their troops arrested most senior officers and seized key military installations and critical civil institutions, including the telephone exchange and radio stations. Farouk called for international help to end the takeover, but the British and US governments both demurred, and the king was forced to abdicate. Some Free Officers advocated a quick trial and execution of Farouk, but Nasser espoused his exile. The latter route was chosen and proved a public relations bonanza as Farouk's playboy decline gave the new rulers plenty of camera-fodder to justify the coup.

Once in power, the Free Officers declared their intention to remove the corruption embarrassing Egypt socially and militarily, and then to return the reins of power. Naguib in repeated announcements stated the Officers' allegiance to the right or the left. Various spokesmen of the Free Officers declared: "We have fixed a date of six months ahead for returning to our barracks, after having restored to our country the right to dispose of itself as it will." This may well have been the intent of the Free Officers, especially as seen by Naguib; the former prime minister Ali Maher was invited to oversee the civil administration in the meantime.

Nasser later wrote in *The Philosophy of the Revolution* that the events of July 22-3 were more than a coup: the aim was "to liberate the slaves, namely the people, and put them, in place of their masters, in the government of the country." Although his vision was grander than Naguib's, he also originally saw his role as transitional. "I believed that the whole nation was waiting and watching, before July 23, to see the first sparks fly," he said in his apology. "I believed, no less firmly, that our own part, which was to command, would be played out in a few hours, after which the majestic masses would join in the hallowed march towards the same great end. . . . But it turned out quite otherwise. . . . Crowds without end were flocking around. But how different was the reality from our illusions! The masses were divided and disordered."

Perhaps this disillusionment was real, and thus explains the firmer line that the Free Officers took with the different actors in Egypt's political

arena. A call went out for Egypt's political parties to purge "corrupt" elements, but generated little change. In August, workers in Alexandria's textile factories revolted in the name of "the people's revolution," only to see a brutal crackdown that alienated the political left and the Muslim Brotherhood, which declared the Qur'an to be Egypt's only legitimate constitution, a position Nasser never accepted. Ali Maher was dismissed and a Revolutionary Command Council (RCC) established among the Free Officers' leadership to oversee the interim. But a sign of future directions came with the September 1952 land reform law, limiting landed property of individual Egyptians to 200 *feddans* (just over 200 acres). The Free Officers' long-announced opposition to "feudalism" and this law struck hard at the largest landowners, although they were compensated. More importantly, the law established the *bona fides* of the Free Officers with rank-and-file Egyptian peasants and the urban working class. In reality, the rural middle class benefited most, since many moved into local leadership.

From the coup until April 1954, the Free Officers were struggling over their future direction within the context of a personal and ideological struggle between Nasser and Naguib. One key issue was whether Free Officers, operating through the RCC, would relinquish power. The related, and more deep-seated, issue was whether the coup was a constitutional restructuring and entailed a return to parliamentary rule after "reforms," or instead a revolution intended to reshape Egyptian politics and life. Nasser, as he came to the fore, was of the latter camp. With the masses remaining demobilized as he had expected, Nasser saw the need of further leadership, not of retirement back to the barracks. As he later explained, "in this region, where we live, an important drama is to be played which awaits its hero. I know not why, but it seems to me that this role cries continually throughout the vast region around us, to be filled by a valiant soul." As with others in a messianic role, Nasser viewed his mission as servant, first to fulfill the potential of Egypt, and then to fulfill that of Arabs. He mapped out the stepping stones in a program to eventually guide the world toward social and spiritual betterment. Naguib followed the early pronouncements of the Free Officers more to the letter with the goal of establishing a parliamentary republic.

Naguib appeared to win the contest in February 1954 by proposing to resign as president in a maneuver forcing Nasser's hand; the general's popularity ensured his comeback, and Nasser had to promise to disband the RCC soon and hold long-promised elections. By April, however, Nasser reestablished his position by turning the trade unions against Naguib and gaining the support of the domestic security apparatus. He had also resigned the post of prime minister in March, leaving the appearance that Naguib was in charge. These actions permitted Nasser within weeks to build his own power base while creating an image of a devolving revolution that would soon permit the old political order to return to business as usual.

By April, Nasser could move with army support, returning to the premiership and purging the cabinet of Naguib's supporters. Naguib retained the presidency as a figurehead, a post which he relinquished seven months later under further pressure. Promised elections were suspended indefinitely, and even the RCC eventually was disbanded as Nasser's capacity to communicate his vision to Egyptians gave him unprecedented popularity. Such too was his charisma that the repressive measures taken in the name of internal security rarely managed to raise noticeable discontent. The greatest potential opposition, the Muslim Brotherhood, was driven underground after one of its members tried to assassinate Nasser in October 1954, its leadership being either jailed or executed.

No small part of Nasser's domestic popularity rested on his ability to appear to the "man on the streets" of Cairo as an international actor to be reckoned with. By June of 1954 he had gotten Britain to agree to a closure of its Suez Canal military bases within 20 months. Even though the British maintained the right to return in case of invasion, Nasser presented the treaty as an anti-imperialist victory, providing momentum to appear a leading player while attending the April 1955 meeting of non-aligned states in Bandung, Indonesia. In September 1955 he signed the "Czech" arms deal, purchasing \$200 million in weapons from the Soviet Union, angering western nations who had crafted the Baghdad Pact to contain the USSR. For Nasser, the arms deal was regional, not international, enabling him to gain more popularity through tougher stances *vis-à-vis* Israel.

The Suez Crisis of 1956 cemented Nasser's position and his evolving synthesis of Arab nationalism and social justice. As part of a program to give Egypt's economy and agricultural needs an internal boost, Nasser quickly moved the long-proposed Aswan High Dam to a priority. When western financing for the project failed to materialize, Nasser seized and nationalized the Suez Canal on July 26, 1956, intending that the profits would go to the Aswan project rather than British and French shareholders. A reaction from Britain and France was doubtless anticipated, but probably not the actual response of a three-way attack by the two western powers and Israel. France, however, sought to stymie Nasser's support for the National Liberation Front (FLN) in Algeria, and was among Israel's largest military suppliers. Israel struck on October 29 and France and Britain began landing troops under the clauses of the 1954 treaty.

The British and French gave Egypt an ultimatum to withdraw from the Canal Zone in the name of international stability. Nasser boldly refused, and although Egypt's armed forces suffered heavy short-term losses, the resistance made him a *force majeure* in Egypt and the wider Arab world after the Soviet Union and US both intervened to stop Anglo-French-Israeli collusion. Henceforth, Nasser was the face of Arab nationalism, leaving him unassailable within Egypt and resented in neighboring capitals.

The Suez Crisis and Aswan moved Nasser's economic policies further toward a socialist model. The operation alone of the two structures, and the coordination needed for the dam's construction and financing, entailed the state's entry into more economic sectors. In the fallout from the 1956 crisis, the state gained control over many businesses sequestered from French and British control, including the local banking interests of giants like Barclays and Crédit Lyonnais. The constitution, finally promulgated in 1956, stated that the government would strive for social justice, in part by establishing old-age pensions, socialized health care, and working to raise living standards. Private enterprise retained safeguards, but it was clear Nasser preferred public control where possible to forestall exploitation. In 1960, Nasser's protégé Aziz Sidqi produced Egypt's first (but only) Five-Year Plan. In other contexts, nationalization served other purposes than restoring national dignity or redistributing wealth: the state eventually took over cinemas, and

in 1960, most Egyptian newspapers and publishing houses were nationalized.

The real advent of Arab socialism under Nasser came in July 1961, described as the real July Revolution, unlike its 1952 forebear. For the three preceding years, Egypt joined with Syria as the United Arab Republic (UAR), and scholars are divided as to whether the Baath deserve credit for the July laws. Certainly, as described above, Nasser's new push for Arab socialism further alienated conservative elements in Syria, leading to the September coup in Damascus splitting the UAR. The 1952 expropriations compensated landowners for their losses, but not the 1961 seizures, where at least 167 "reactionary capitalists" were arrested while over 300 new industries came under state control. Most government nationalization occurred in major industries, such as textiles, tobacco, pharmaceuticals, shipping, and insurance. Those industries not under direct state control came under intense regulation. The most vivid program was income redistribution: annual salaries were supposed to be capped henceforth at £E5,000 (roughly US\$11,500), and anything over £E10,000 had a tax rate of 90 percent. Individual landholdings were further reduced from 200 to 100 *feddans*. Peasants needing loans were to receive them free of interest. Subsidies were enacted to reduce the cost of basic necessities, and to cut rents, fares, and educational expenses. Nasser, echoing a long tradition in Egypt's intellectual circles, declared that socialism should not entail class conflict, but rather the effort to obviate such division. The National Charter of 1962 enshrined many of these principles.

The immediate effect of this socialist turn was to break the power of the traditional large landowners and much of the bourgeoisie; the long-term results were harder to gauge. Industrial workers did see some improvement, helped in part by the new minimum wage (which was always too low), but more so by safety nets like health care and disability insurance. Some peasants became landowners, but had difficulty making payments for their new property. Public education, perhaps the greatest barometer of change, expanded rapidly in the 1960s. Many more Egyptians attended schools, quickly outgrowing the facilities' and teaching staff's capabilities. As a result, overall educational standards began to decline. In 1962, Nasser guaranteed government jobs to all university graduates, a policy which swelled

the bureaucracy. At first, with so many new state-controlled industries, people were needed, but in time, applicants outstripped the need. Salaries then fell, as did productivity, as many government employees moonlighted.

One summation of Nasser's policies sees his socialism less as a coherent program than a series of measures to eliminate the last bastions of old authorities. Nasser's was undeniably an evolving policy, meeting his criterion of finding a socialism for Arab needs, not the programmatic socialism birthed in the specific industrial conditions of Europe. Nasser wanted the revolution's social and economic policies to propel Egypt forward as a model for all Arabs. Before the 1967 war with Israel and ensuing defeat, his policies appeared to be working. The conservative monarchies of Jordan and Saudi Arabia feared his influence, while no political upset occurred in the Middle East (witness Iraq, Syria, and Yemen) without looking to Egypt for support or inspiration. Arab socialism, as authored by Nasser, defined not only Egyptian society but that of its kindred states as well.

The 1967 debacle rewrote these dynamics. Nasser was treasured by Egyptians, but criticism of the regime, if not of the leader himself, was rife through 1968. Some criticism was blunted by directing it toward shadowy "centers of power" which, it was claimed, were enfeebling the revolution. Nasser's charisma served to keep his policies alive, but after his death in 1970, the real verdict was perhaps delivered by his successor and fellow Free Officer Anwar Sadat. He turned Egypt back toward a private enterprise orientation with his *infitah* or "open-door" rapprochement with the western powers' economies. Egypt assumed some of the trappings of a pluralistic, capitalistic economy, but centralized control and a police apparatus showed continuity with Nasser's days.

Egypt, Peasant Rebellion of 1824

Nicole B. Hansen

The Peasant Rebellion of 1824 in Egypt has been little studied and seriously muddled by authors and scholars who have engaged in plagiarism, fabrication, and confusion of individuals, events, and dates.

Many scholars who wrote about the rebellion relied heavily on the "eyewitness" account of James St. John (1845). However, St. John did not even visit Egypt until nearly a decade after the events took place and it is clear that he simply plagiarized the work of British traveler John Madox (1834), embellishing it with a lot of color and dramatic touches. This makes it an unreliable secondhand version that should not be used as a source. On the other hand, Madox's account, penned in 1824 while he was staying in the village of Qurna as the events transpired, is a daily journal of what he witnessed himself or heard about directly from participants and provides an excellent source of information about what really happened.

Several scholars have also believed there were two different revolts led by two different men named Ahmed, one in 1822–3 and another in 1824 (Lawson 1981: 144–5; Sayyid-Marsot 1984: 133). The 1822–3 date of the revolt is taken from the work of Ali Mubarak (1886–9: 14–86), who wrote of a revolt taking place in AH 1238 (corresponding to 1822–3). However, his description of the revolt is so close to that of Madox that it seems highly probable that the two revolts are one.

Mubarak's work has many obvious inaccuracies, especially regarding numbers (Baer 1969: 240–2), and he most likely simply got the date wrong.

Madox first became aware of a disturbance on March 14, 1824. The man who led the rebellion was of unclear origins. He is known from the various sources by a number of names: Ahmed the Vizier (Madox 1834), Ahmed the Prophet (Madox 1834; Mubarak 1886–9), Ahmed the Moroccan (Mengin & Jomard 1839: 5; Driault 1930: 13), and Ahmed son of Idris (Mengin & Jomard 1839: 5; Weygand 1936: 143). It was said by some that he came from the village of Hijaza (to the north of Luxor), the Hijaz in Arabia, or from Mecca (Madox 1834). According to Mubarak (1886–9), he was from Upper Egypt but escaped to the Hijaz at the end of the uprising, never to be heard from again.

Ahmed had organized 300–400 men from al-Ba'irat and led them in an attack on Gamola, a village to the north, in order to attack the new district administrator stationed there. (Except where indicated, the following account comes from Madox 1834). The men were soon joined by residents of Luxor and Karnak on the other side of the river and their numbers reputedly swelled to 3,000 by March 17. However, they were met by 200–300 government troops sent from Gamola and Qena in the north. These troops were ordered to destroy al-Ba'irat. However, the rebellion grew, as the government troops suddenly withdrew, with villagers from Qurna and Armant joining the rebels. Local estimates of the number of insurgents place them anywhere between 7,000 and 19,000 men.

A harsh fight took place at Gamola on the night of March 19. In the following weeks battles took place further south at Esna, where the rebels were met by four battalions of 800 men each from the First Regiment (Weygand 1936: 143). Word reached Madox on March 29 that the battles waged there killed hundreds of rebels. In one battle the French officers of the Egyptian army tricked the rebels and their cavalry into meeting their infantry on an island in the Nile. Using European battle tactics previously unknown in Egypt, the Egyptian army was successful.

More villages were sacked by government troops, including Armant, where the leader of the rebellion, Ahmed, had been staying, on the evening of April 2. The field of battle moved further north to Qena. Here, on April 4, French and Piedmontese officers used another ruse to

decimate the rebels, killing more than 500 in short order. This battle also seems to have been referred to in Mubarak's (1886–9) account.

Many of the insurgents took refuge in the mountains. The government made them an offer on April 7: come down from the mountains, return to your villages peacefully, and you will not be harmed. The government representative delivering the message was accompanied by a rebel sheikh from Armant who had surrendered to the government. The intended recipients of this offer were having none of it; they promptly bastinadoed both men. The government ratcheted up its demands two days later, threatening to set all the villages on fire if they did not cooperate. While a new battle broke out in Girga, the government switched its strategy to offering a bounty to Bedouin mercenaries to capture the rebels. Large numbers were rounded up and they began to be executed by gun and sword on April 20.

Madox departed from Luxor on May 4, and his detailed account of events also ends then. At the time of the revolt, Bernardino Drovetti, the consul-general for France in Egypt, was residing in Alexandria. Word of the revolt reached him, and he relayed this information back to his superior in France, the minister of foreign affairs Chateaubriand, in three letters dated April 10, April 17, and May 16 (Driault 1930: 13–14, 17).

According to Drovetti, Egypt's ruler Muhammad 'Ali did not feel the events in Upper Egypt were a serious threat when the two men met on April 15. The ruler had received word that his troops had killed thousands of peasants, which troubled him some, but he was buoyed by reports that his troops had remained faithful to him, even though they too largely consisted of peasants (Driault 1930: 14). However, the truth was that 700 troops from the First Regiment deserted the first night and the 5th battalion and its escort that had been left behind in Aswan revolted. A French military instructor quickly brought the battalion back in line and after a fierce fight the escort allegedly submitted. The battalion rejoined the remainder of the regiment in Esna, where they had been brought back to discipline. However, two battalions of the Sixth Regiment had to be brought in as well (Clot-Bey 1840; Weygand 1936: 143–4). At the end of April, revenge was extracted on the deserters when Tartar cavalry were brought in, killing

all but 60 of them, who were taken alive (Madox 1834).

We learn from Drovetti's correspondence of May 16 that the troubles had not died down completely. The Ababda and Bisharin tribes of the Eastern Desert had taken advantage of the chaos resulting from the insurrection to break a treaty they had made with Muhammad 'Ali (Driault 1930: 13). According to the British consul-general in Egypt, Henry Salt, it was not until June 10 that the revolt was completely put down and the First Regiment could continue on its mission to the Sudan (Baer 1969: 98n12).

It is not clear what actually prompted the revolt and what the rebels hoped to achieve. Lawson argued that the revolts were by craftsmen resentful of supervisors and merchants. However, his arguments are based on twisting St. John's imaginary account to read things that support his view, even though those things are absent in both St. John's and Madox's versions. He suggested that the plotters of the rebellion wished to attack "European trading representatives operating within the region" (Lawson 1981: 145). In fact, there was no mention of any such trading representatives and all Europeans in the area mentioned in Madox's account were either travelers or antiquities collectors and dealers, both groups of people whose presence was beginning to contribute to the local economy. Ahmed also made a special effort to reach out to the foreigners in Luxor, letting them know he had no intention of attacking them (Madox 1834). Nonetheless, rumors did reach the traveler Westcar at Kalabsha to the south that foreigners were being slaughtered by the rebels (Manley & Ree 2002: 221).

The contemporary sources give little firm indication as to what truly motivated so many people to revolt against the government. Unhappiness with taxes is one possible motive. Madox himself made allusion to the role resistance to paying taxes played in the revolt. In an effort to stop the peasants of Gurna, the traditional arch-enemies of al-Ba'irat, from joining the rebels, the government exempted them from the taxes for the year on March 17. Nevertheless, emboldened by the retreat of the troops that night, they decided to join in the rebellion the next day. Mubarak's account (1886–9) detailed how Ahmed encouraged his followers to plunder and ransack government storehouses, possibly suggesting economic motives. Mengin (Mengin &

Jomard 1839: 5–6) suggested that Ahmed was a Moroccan who felt the customs duties imposed on him at Quseir on his arrival in Egypt from Mecca were too high. However, this would have been of no consequence to his followers, and in fact Mengin suggests the peasants were inspired to revolt due to their unwillingness to be conscripted into Muhammad 'Ali's new army, a suggestion seconded by Clot-Bey (1840).

Ahmed's own followers regarded him as a prophet. Ahmed told them he had orders from God and the Ottoman sultan to dethrone Egypt's ruler, Muhammad 'Ali (Madox 1834). Mubarak (1886–9) said that he called himself al-Mahdi, a redeemer that is prophesized by some Muslims to appear to restore righteousness in the world before the Day of Judgment. According to Drovetti, Ahmed intended to end the vexations that Muhammad 'Ali had brought to them, along with the western-inspired innovations he is well known for having introduced into Egypt contrary to the rules of Islam (Driault 1930: 13).

Moreover, Ahmed was reputed to have supernatural powers. It was said that he once took a small amount of bread, and upon dividing it it became more than enough to satisfy the hunger of his followers, and at one point he allegedly blessed a small quantity of gunpowder and it became a much larger amount. If he was fired upon, it was said he would not be harmed (Madox 1834). It is possible that the popularity of the revolt may have been due largely to his charismatic appeal among the populace who believed him to be genuine. Indeed, he was but one of several men who claimed to be the Mahdi during the nineteenth century in Egypt and the Sudan (Berque 1972: 137–8).

Egypt, Revolution of 1952

Emin Poljarevic

The Egyptian Revolution of 1952 was staged during the night of July 22 to the 23, 1952. This bloodless overthrow of the Egyptian government and King Farouk marked the end of direct British influence in state affairs and the beginning of a new era in Egyptian history. Colonel Gamal Abdel Nasser (1918–70), the leader of the “Free Officers,” justified the army’s overthrow of civilian government by referring to the Urabi revolution that took place 70 years earlier. The revolution of 1919 was another episode in Egyptian history that greatly changed the course of history leading up to the 1952 revolution. Other significant historical elements include the continuous opposition to British influence, the volatility of liberal politics, the growth of national mass movements, the deteriorated economic situation, and the king’s continuous involvement in affairs of the government.

Abdel Nasser initially referred to the Urabi revolution of 1881–2, through which the increasingly dissatisfied segment of Egyptian low-ranking officers of *fellahin* (peasant) origin voiced a desire for change of the discriminatory restrictions which

prevented indigenous soldiers from advancing to higher ranks. On September 8, 1881 a military demonstration in front of the royal palace sparked the revolution that lasted a little over a year. The Egyptian army Colonel Ahmad Urabi (1841–1911), together with several of his officer colleagues, organized a revolt against *Khedive* (Lord) Tawfiq’s authority. Tawfiq was a monarchic heir of Muhammad ‘Ali, a cohort of the Turco-Circassian monopoly on military and political leadership, and through whom the British and French held *de facto* control of Egypt’s finances and state affairs. The revolt soon developed into popular protests and displays of discontent under the slogan “Egypt for the Egyptians.” After a series of violent clashes with the *Khedive* government, the Urabi revolution exploded in June of 1882. A violent riot in Alexandria caused nearly 200 deaths and ended all political negotiations between the contending parties. This resulted in British military aid to Tawfiq’s weak authority. On September 13 the British launched an outright attack, killing the majority of the Urabi troops and forcing their leaders to surrender. Despite its failure, the Urabi revolution has ever since represented an unsettling precedent for later popular movements.

Three decades later, nationalist movements had grown stronger, British authority had weakened, and the economic situation had deteriorated in an already fragile system. Encouraged by these conditions, Sa’d Zaghloul (1859–1927), a former minister of education and a charismatic nationalist leader, formed a delegation (*Wafd*) which, in November 1918, demanded full Egyptian independence. The British Foreign Office in London declared the *Wafd* a threat to Egypt’s stability and exiled its leadership to Malta. This decision sparked the second Egyptian revolution, that of 1919. The revolution started as a series of strikes in March among Egyptian workers, and culminated in an outburst of popular protests in the wake of the news of the exile of the *Wafd* leadership. Zaghloul was allowed back to Egypt soon thereafter, followed by an enthusiastic public reception. The British leadership, realizing they had lost popular support, decided to start negotiations for Egyptian independence. The country declared its independence as a constitutional monarchy on February 28, 1922, with King Fuad I (1869–1936) as its head of state.

The period from 1922 to 1952 can be characterized as a liberal era, both politically and

economically. While Egypt was officially an independent state, the British encroached upon this independence primarily through the relationship with the king. Continuous political pressure from the British leadership compelled the *Wafd* government to formalize their relationship. The outcome was called the Anglo-Egyptian Treaty of 1936 which, among other things, allowed for soldiers from indigenous and non-aristocratic families to be admitted to the Military Academy. This would later prove critical in bringing about the Free Officers' revolution.

Several other elements are also important to keep in mind. During the 1940s liberal politics were on the decline and several national movements garnered massive support, thus weakening the political monopoly of the *Wafd*. This was mainly due to the lack of political responsiveness of the political elites. The deteriorated economic situation, due to the Great Depression and World War II, continued to aggravate the masses, who in turn responded with numerous demonstrations and strikes. Moreover, unambiguous British involvement in Egyptian affairs and Britain's role in the creation of the State of Israel gave more fervor to the nationalists, who opposed all foreign involvement and the occupation of Palestine. Egyptian troops, together with other Arab armies, engaged with Jewish troops in Palestine in 1949, whereupon they suffered a crushing defeat.

The unstable political situation of 1944 to 1950 resulted in the rotation of no less than eight minority governments. This political turbulence and the popular movements' inability to take power demonstrated the volatile and fragile nature of the Egyptian political system. Tired of the political precariousness, the public once again overwhelmingly voted for the *Wafd* in the election of January 1950; both the rural middle class and urban elites wanted stability. However, the *Wafd* soon lost all popular support for two main reasons: the *Wafd* leadership's forceful purge of political opponents and their alliance allied with the unpopular king (who was seen as a puppet of the British). In December 1951 mass demonstrations in Cairo and Alexandria turned into violent riots throughout the country. The protests grew and finally coalesced on January 26, 1952, commonly known as Black Saturday, when downtown Cairo was set on fire, killing over thirty people and injuring hundreds. Rioting against the

state authorities and symbols of western presence continued throughout the first half of 1952.

At the same time, the Egyptian army, incensed by defeat in Palestine, underwent a fundamental reorganization to render it more effective. Army officers indignantly recalled their failure, which they attributed to the political leadership and the king's incompetence. In mid-1949 the young and charismatic Colonel Nasser organized a covert 11-man assembly named the Free Officers. Initially, the assembly was formed in order to protect the interests of the army, but later it would overthrow the *Wafd* government. Some historical accounts suggest that the group organized as an informal fraternity as early as 1941, consisting of low-level officers who later formed the nucleus of the Free Officers. All of the core members of the leadership were sons either of middle-class notables or *fellahin* entering the Military Academy in either 1938 or 1939. Major Abdel Hakim Amer, Wing Commander Abdel Latif Al Baghdadi, Major Kamal Ad Deen Husein, Squadron Leader Ibrahim, Major Khaled Muhieddin, Lieutenant Colonel Zakariyya Muhieddin, Lieutenant Gamal Abdel Nasser, Lieutenant Colonel Anwar Sadat, Wing Commander Gamal Salem, Major Salah Salem, and Lieutenant Colonel Husein Shafer, the original members of the group, all shared similar family backgrounds and experiences within the military system. In late 1949 Major General Muhammad Naguib (1901–84), a senior officer and a celebrated hero of the Palestine war, joined the organization and became an invaluable asset which added to the group's authority and weight among the members of the army. The Free Officers were an amalgamated group due to their longlasting ties and friendships, and thus they remained independent from any particular ideological affiliation or particular leader outside their narrow circle.

Constitutionally, the army was directly placed under the king, who traditionally enjoyed wide support among military officers. However, a series of royal blunders during the Palestine war and the increased politicization of the young officers undermined their respect for the crown. Aware of their intentions, King Farouk attempted to retain control over the army through involvement in the elections of the Army Officers Club leadership between December 1951 and January 1952. The king was always careful to observe the elections and assure the army's loyalty by selecting royal-friendly officers for the army leadership;

however, this time the Free Officers made an organized effort to put forward their independent candidates. Farouk's attempts to obstruct the unfavorable outcome failed and the Free Officers won five seats in the leadership; they also succeeded in appointing Major General Naguib as the leader of the Club. This episode further distanced the palace from the army leadership, causing irreparable damage to the relationship.

The political situation deteriorated rapidly. In October 1951 the *Wafî* government's unilateral cancellation of the 1936 Anglo-Egyptian Treaty caused a massive strike in the Suez Canal Company where nearly 100,000 Egyptian workers walked out from their jobs. Shortly thereafter, the police recruits and guerilla squadrons formed by the popular movements fought the British troops for nearly three months. The Free Officers decided not to engage in the conflict, thus retaining a good relationship with the British.

It was in March 1952 that The Free Officers first became serious contenders for political power. After realizing that no other non-parliamentary organization had any chance of leading the country and declaring the incompetence of the senior leadership, the Officers declared their participation in the contest for political power. The Officers did not have a clear political or ideological agenda. They viewed their actions to be in accordance with their sense of duty towards the Egyptian nation. When the news of a premeditated coup d'état reached King Farouk, he immediately ordered the disbandment of the governing board of the Officers Club. Fearing punitive measures, the Officers reacted instantly.

During the night of July 22 the culmination of a nearly three-decade long reorientation of the army and the political system resulted in an overthrow of the corrupt *ancien régime* and abolishment of the monarchy. The Officers supported by loyal troops occupied the Army Headquarters in Cairo and, on July 23 at 7 a.m., Lieutenant Colonel Anwar Sadat (1918–81), who would later become the third president of Egypt, proclaimed via national radio that the revolution had started, and that the government had been dissolved. The Egyptian public filled the streets rejoicing with the news. The leadership of the mass movement already held close ties with the Officers and subsequently supported the coup, all in the hope of political gains; however, the initially friendly relationship would soon turn

into political antagonism and persecution. The Officers assembled some trusted political actors from the old *Wafî* regime in order to form a civil government which would run the affairs of the state. They selected Ali Mahir (1882–1960), a former prime minister and a political veteran, to head the new government, while the Officers maintained real political power through the newly formed Revolutionary Command Council (RCC).

On July 26 King Farouk abdicated and sailed to Italy on the same yacht that his grandfather *Khedive* Isma'il used 73 years earlier for the same reason. Immediately after the overthrow, the RCC appointed a trusted and popular army officer and popular hero of the 1948 Palestine war, senior Major General Naguib, as the president and commander in chief. With this act, the loyalty of the army was secured. Soon after the inauguration, the RCC-selected government started negotiating with the British authorities on both the Sudan and the Suez Canal. Domestically, one of the first policies to be implemented was an agrarian reform through which the RCC attempted to gain the people's support, avert counterrevolutionary activities, and demonstrate its political capacity. Later, due to a political disagreement between the RCC and Prime Minister Mahir, the latter resigned in September. The Officers replaced him with General Naguib, who thereafter headed the government and the army.

Soon the Officers purged the old "wafdist" elite and "royalist" elements within the system. In January 1953 the RCC cancelled the constitution and declared all political parties illegal. On June 18 the Officers proclaimed Egypt a republic and appointed Prime Minister Naguib as its first president. Abdel Nasser, minister of the interior and vice prime minister, also became the leader of the RCC. However, seven months later, mounting differences between Naguib and Abdel Nasser culminated in the former's house arrest and the latter's ascension, initially to the post of prime minister and later as the second president.

In October 1954 Abdel Nasser signed a treaty with the British in which British troops were obliged to evacuate the Suez Canal zone in 20 months. In 1956 Nasser decided to nationalize all foreign assets in the country, including the Suez Canal Company. In October a tripartite invasion by Britain, France, and Israel followed this decision. Despite military defeat, Abdel Nasser

succeeded in winning the diplomatic victory and subsequent withdrawal of foreign troops in December, thanks to the diplomatic intervention of the Soviet Union and the USA. The Egyptian masses hoped that political stability, as well as economic and agrarian reform, would transform old social structures and provide a means of societal development. The achievements of the revolution of 1952 continue to be historically disputed.

Eighteenth Brumaire

Annette Richardson

The Eighteenth Brumaire of Napoleon Bonaparte was a coup d'état that overthrew the five-man governing council, the Directory, in France on November 9, 1799, and replaced it with a three-man Consulate, of which Bonaparte was First Consul. Eighteenth Brumaire was the date on the French Revolutionary calendar on which the incident occurred.

The corrupt and unpopular Directory had governed France since 1795. One of the five Directors, the cunning Abbé Sieyès, planned and organized the coup of Eighteenth Brumaire, ostensibly to prevent a restoration of radical Jacobin influence and power. Sieyès' real objective, however – having already gained effective control of the Directory, the executive branch of government – was to minimize or eliminate the annoying interference of the legislative bodies (the Council of Elders and the Council

of Five Hundred). Sieyès looked to the young General Napoleon Bonaparte, who had bedazzled the French with his military skills, as the perfect man to do his bidding. He was unaware that Bonaparte had ambitions of his own and intended to overthrow the Directory, accomplishing a coup within the coup.

On Eighteenth Brumaire, Year VIII of the Revolution (November 9, 1799), Bonaparte barged into the room in the palace of Saint-Cloud where the Council of Elders was meeting and was initially met with heckling. Addressing the Council, he decried their earlier violations of the Constitution and demanded a new Constitution. The Council was intimidated into agreeing. Bonaparte then moved on to the nearby Orangerie, where the Council of Five Hundred was meeting, with Bonaparte's brother Lucien in the chair. The hostility of the delegates was so palpable that Bonaparte panicked and left the room. Lucien Bonaparte, however, mobilized the armed guards outside, telling them that weapons were being drawn inside the meeting. The guards entered and forced the "violent" Council members into the courtyard at bayonet point.

Meanwhile, three of the five Directors – Pierre Roger Ducos, Paul Barras, and Sieyès – resigned, but the two Jacobin-oriented Directors, Louis Jérôme Gohier and Jean François August Moulin, refused to resign. Moulin escaped, and Gohier was captured and imprisoned. The Councils were disbanded and the Directory was dissolved. Bonaparte recognized a great opportunity for advancement and took advantage of it.

Twenty-five members of each of the two disbanded councils created a new rump council that immediately adjourned itself. Bonaparte, Sieyès, and Ducos were named as provisional Consuls with ten-year appointments. The new Constitution gave Bonaparte, as First Consul, the balance of power over the other two Consuls. Bonaparte held responsibility for legislation, war and peace declarations, and official appointments. The other two Consuls could only consult and advise. In other words, no real restrictions were placed on Bonaparte's ability to rule by decree as a military dictator. The Eighteenth Brumaire was the first step in his rise to absolute political power.

An echo of the Eighteenth Brumaire occurred more than a half-century later, in 1851, when a nephew of Napoleon's, Louis Bonaparte, staged another military coup in France to overthrow

a constitutional regime and seize dictatorial powers. Karl Marx, in a famous pamphlet entitled *The Eighteenth Brumaire of Louis Bonaparte*, compared the two events by remarking that if history repeats itself, it does so “the first time as tragedy, the second time as farce.”

Eisenstein, Sergei (1898–1948)

Gal Kirn

Sergei Eisenstein was a revolutionary Soviet film director and revolutionary filmmaker born in 1898 to a well-off family. Eisenstein’s father, Mikhail Osipovich Eisenstein, was an architect of Jewish descent, who converted to Orthodox Christianity. His mother, Julia Ivanovna Konetskaya, the daughter of a wealthy contractor, came from a Russian Orthodox Christian family. In 1915 Sergei started studying engineering. His studies were interrupted in 1917 when he was drafted into the army and left for the front. There he started drawing caricatures, costumes, and gestures for *commedia dell’arte*.

There is little record of how Eisenstein was affected by the events of October 1917; however, in the spring of 1918 he volunteered for the Red Army, whereas his father joined the Whites and subsequently immigrated to Germany. While in the military, Eisenstein again managed to combine his service as a technician with study of theater, philosophy, psychology, and linguistics. He staged and performed in several productions, but most importantly he wrote texts for the “agitation train,” where his future cameraman Edouard Tisse worked and Dziga Vertov edited material. In the same year he became a head of

the mise-en-scene in the Proletkult Theater in Moscow.

In 1923 he directed a sketch of Sergei Tretyakov, *Gas Mask*, that was staged in the gas factory. In the same year, Eisenstein’s first short film *Diary of Gloumov* debuted, with another film projected the same year. American films had already used the montage technique, but it was with Soviet cineastes that this invention was discovered theoretically and recognized as a constitutive procedure which transformed film into a specific expressive medium. In addition to film practice, Eisenstein’s influence reached the realm of film theory, and was first elaborated in *Montage of Attractions*.

Within the montage technique, arbitrarily chosen images, independent from the action, are presented in a non-chronological sequence in order to create the maximum psychological impact. The famous example from *Strike* (1924) recounts the repression of a strike by the soldiers of the tsar. Eisenstein juxtaposed shots of workers being mowed down by machine guns with shots of cattle being butchered in a slaughterhouse. These juxtaposed fragments were then reconstructed by the viewer, who saw the relationship between the cattle and the workers. Eisenstein’s mastery of the montage, the close-up, and film technique in general still echoes in the famous Odessa Staircase sequence in *Battleship Potemkin* (1925).

Eisenstein focused his attention on film’s impact on the viewer as evidenced by his famous tractor metaphor, in which film plows over the psyche of the spectator from a given class position. Here, there are two theoretical emphases. On the one hand, Eisenstein focused on the psyche of the spectator and its theoretical linkages to Pavlovian reflexology; on the other hand, his film engagement cannot be understood without attention to class position. His reference to dialectical materialism is continual and can be located in the axiom “art is struggle.” Thus, his main emphasis is on film as not merely a representation, but rather a transformation of the content via montage that ultimately transforms the spectator’s relation to the content. Eisenstein’s revolutionary position within film theory/practice is characterized by this point, whereas the old aesthetical/philosophical distinction between form and content is suspended. Further, for Eisenstein, the hero in his film was not the individual, but the mass. These important

contributions had immense effects on twentieth-century film as a whole.

Indeed, Eisenstein's avant-garde genius first encountered problems with Stalin. For the tenth jubilee of the October Revolution he was commissioned to direct the film *October*, but its screening had to be postponed to 1928 in order for Eisenstein to delete images of Trotsky. With the film *General Line* (1929) he was attacked in critiques of the film's formalism. Soon new aesthetic principles of socialist realism were introduced into all the arts, while the avant-garde movement started to fade under the pressure of bureaucratic interventions and repression. In that time Eisenstein traveled across Europe and to the US, where he held film lectures at various universities. In the US he undertook a film project called *Que Viva México!* that remained unfinished thanks to the economic crisis and political problems at that time. With his return to the USSR he started to work on more monumental films that centered on important historical figures in Russian history, such as *Alexander Nevski* (1938) and *Ivan the Terrible* (1945). This reorientation can surely be attributed to Stalinist pressures.

Ejército de Liberación Nacional, Colombia

Dario Azzellini

The Ejército de Liberación Nacional (ELN) is a Marxist guerilla group founded in 1964 as a military-political organization. It has been strongly influenced by the Cuban Revolution, Che Guevara, and liberation theology and was founded to use revolutionary violence to seize power. It later changed to a vision in which

power seizure is not a simple takeover but the result of a revolutionary process of construction of alternatives and attacks on the existing order. The ELN is the second largest Colombian guerilla group after the Fuerzas Armadas Revolucionarias de Colombia, or Revolutionary Armed Forces of Colombia (FARC). Government sources estimate its membership since the beginning of the 1990s as constantly around 5,000. The ELN does not offer numbers and its structure, with a strong focus on political work, makes it difficult to count its membership.

The ELN's founding nucleus came from a Colombian student delegation of leftist youth organizations which traveled to Cuba in 1962. While in Cuba, some decided to pick up the armed struggle for a socialist revolution in Colombia, and seven undertook military training. Among them were Fabio Vásquez Castaño, who was elected leader of the new Liberation Brigade, and José Antonio Galán. Back in Colombia at the end of 1963 the group established urban and rural structures. The main focuses were in the Department of Santander, an important petrol region with a strong rebellious tradition. Local peasants, former liberal guerillas, joined the ELN, bringing their weapons with them.

The era between 1963 and 1966 was marked by a strong rise of mass movements in Colombia. Strikes paralyzed the country and a radical student movement emerged. A main grassroots force behind the mobilizations was the United Front (FU) led by charismatic priest Camilo Torres Restrepo. Urban ELN militants were active in workers' unions and student organizations and set up urban units executing military operations. The first was a bomb attack on June 4, 1964, even before the first official appearance as ELN.

The creation of the first rural guerilla column of 17 people on July 4, 1964 is considered the ELN's birth. After a two-week march, on January 7, 1965 the column took the small town Simacota, killing four policemen and two soldiers. The ELN declared the beginning of a revolutionary war. The event had great repercussions. During the following months the ELN carried out bombings and attacks on police and army forces while gathering funds and arms. The discourse of the ELN was directed against social injustice and the oligarchy, had elements of nationalism, and was strongly anti-imperialist. It connected somehow to the radical liberal discourse.

Camilo Torres' FU started supporting the ELN's urban structures. On October 1, 1965 he joined the ELN column as combatant and was killed in his first battle on February 15, 1966. Torres claimed the compatibility of Marxism and Christianity and strongly influenced the ELN and revolutionary Christians in Latin America. Because of Torres, priests, monks, and nuns provided important support for the ELN. Among others, the Spanish priests Manuel Pérez and Domingo Laín Sáenz joined the ELN in 1969. Pérez became the ELN's highest military commander and died February 14, 1998 of terminal hepatitis C. Laín died in 1974 in combat.

The ELN faced a number of problems. For one, Fabio Vázquez's central role in the ELN's construction led to an authoritarian leadership. Moreover, the ELN insisted that a prolonged guerilla war would lead to an uprising. Also, the militarist idea of revolution did not offer movements any space to insert their struggles. So the ELN did not profit much from its popularity. Nevertheless, between 1969 and 1972 the ELN expanded its military presence and could appropriate sufficient military and economic resources. But it also suffered serious setbacks and political deviations, leading to a severe crisis in the 1970s. In June 1972 during an army attack 210 urban militants were arrested.

In October 1973 the army carried out Operation Anorí to wipe out the ELN, and 33,000 soldiers, with air support and US military advisors, were deployed to a region of Antioquia where an ELN column had been very active in 1972–3 and had grown to 110 guerillas. The army spread terror among the rural population. The ELN engaged in 39 battles, killing 178 troops and losing 27 guerillas in combat and more to arrests and desertions. Only a few managed to escape the surrounding army.

On November 15, 1973 the second in command, Ricardo Lara Parada, started collaborating with the police, causing more arrests. The persecution led many militants to give up, and most ELN structures were dismantled. Of 250 guerillas in rural columns, only 70 were left. Remaining urban structures were isolated with no contacts between them or with rural columns. The only survivor of the leadership was Fabio Vazquez. He started reconnecting militants and called for a National Assembly in July 1974. He turned the assembly into a series of trials against those supposedly responsible for the

crisis, leading to six executions. He left Colombia in August 1974 to seek support in Cuba. The ELN initiated a self-critical debate in which Vazquez' historical contribution and his recent political deviations were recognized. He was expelled from the leadership and no longer authorized to speak for the ELN. He lives now as a professor in Cuba.

The organization was reconstructed under Nicolás Rodríguez Bautista, the highest military commander today. It recommenced military operations at the beginning of 1975, and new structures were built mainly in urban areas with workers and unions, leading in 1976 to the birth of Independent Class Syndicalism (SIC), the ELN Collectives of Unions Work, and the Workers' Commandos. In October 1976 the ELN split in two but reunited in March 1979. At the first ELN National Reunion – December 1977 to March 1978 – the whole leadership was renounced. A group of urban activists seized provisional leadership and started a demobilization, which was stopped by the commanders. At that point the rural structures had just 36 guerillas left.

At the end of 1978 the ELN started to expand again. The historical project was revalidated, work was reorganized in areas, and direct work with communities began. This methodology was borrowed from liberation theology, which showed important results with the creation of the Front Domingo Laín and the Front Capitán Parmeño, based on peasant movements. A rotating provisional national leadership was installed, which consolidated the work but failed in centralizing structures and organizing an urgently needed larger reunion. In August 1982 a new national leadership was installed with equal representation of all fronts. A National Reunion in September 1983 was attended by several hundred ELN militants. Here a new revolutionary program which gave more importance to social struggles was launched, and a nine-member collective leadership was chosen, headed by Manuel Pérez. A period of rapid growth followed. When the guerillas M-19, EPL, and FARC signed ceasefire agreements with the government in 1984, the ELN opposed it.

In February 1985 ELN and the smaller Revolutionary Workers' Party (PRT) and MIR-Patria Libre built the Trilateral, but it was dissolved in May 1985 in favor of the National Guerilla Coordination (CNG) with M-19,

EPL, and Quintín Lame. MIR-PL merged with the ELN in June 1987, forming the Camilista Union-ELN (UCELN). The unification evidenced the opening up of the previously rather sectarian ELN. In September 1987 the CGN groups and the FARC founded the Guerilla Coordination Simón Bolívar (CGSB), which was made up of FARC, UCELN, and EPL. It advocated global peace negotiations, including popular organizations and international observation. After a powerful guerilla campaign, President César Gaviria and the CGSB held talks with no result (1991 and 1992). In October 1993 the CGSB was dissolved by the FARC.

From 1986 to 1993 the ELN experienced its strongest growth. It set up new guerilla units, mobile columns, and urban militias, extended its presence to almost all national territory, and modernized its arms. In August 1991 hundreds of mainly urban militants and one guerilla front formed the Current of Socialist Renewal (CRS) and disarmed in 1994. In 1993 the Guevarist Revolutionary Army (ERG) split off, and in 1996 part of one guerilla front built the People's Revolutionary Army (ERP), which demobilized in 2007.

The ELN directed its main efforts from 1986 to support movements, local forms of self-government, and collective economy and property. At its first regular National Assembly in January 1986 it approved the prolonged people's war as a military strategy, recognizing a rural guerilla group alone could not provoke an insurrection and that they had to combine rural and urban military activities. It entered a new phase of revolutionary war by creating five War Fronts and First Army units. The people's war was also fought on a political ground. Therefore, the ELN decided to support the construction of forms of people's power, gaining autonomy and transforming themselves during the revolutionary process into alternatives to existing institutions and practices. As further democratization in 1989, a new collective national leadership of 17 members, six as a central command, was elected. Manuel Pérez was named highest military commander and Nicolás Rodríguez Bautista second. For the first time, negotiations were discussed as a tactical element.

The ELN refuses any links with narcotraffic and is mainly financed by imposing so-called war taxes on entrepreneurs and transnational companies, kidnapping wealthy Colombians, and

trading some natural resources (mainly gold) of regions under its control. As a mechanism of pressure on corporations and to protest the sellout of national resources, the ELN started in the 1980s with attacks on energy infrastructure, especially oil pipelines. These have been criticized for their environmental impact and risks for the population. The ELN reduced the attacks drastically after 80 civilians were killed by accident on October 18, 1998, when the ELN blew up an oil pipeline in Antioquia, causing fire in a nearby town. In 1995 the ELN agreed to stick to all the recommendations of Amnesty International concerning warfare in Colombia, but it is still accused of human rights violations.

In 1996 the ELN Congress reconfirmed the prolonged people's war and validity of Marxism-Leninism, declaring a classless society as its goal. But the construction of a new society with a renewed socialist, human, popular, and democratic orientation was not to be postponed until after revolutionary war and had to take place inside existing institutions and as alternative to them. The ELN started to influence regional elections by forcing candidates to accomplish their programs and handle public finances transparently. Direct references to Christian Marxism disappeared, and the name UCELN changed back to ELN.

The ELN started its tactical handling of talks with the government in mid-1997. The ELN's central proposals in talks up to now are agreements for the "humanization of war" and a National Convention with participation of all popular sectors to define necessary changes in Colombia and build a base for future negotiations. On July 12–15, 1998 the ELN met with civil organizations in Mainz, Germany to prepare a possible convention. The national convention was accepted by several governments, but no government stuck to the agreements, insisting on the ELN's demobilization.

On April 12, 1999 the ELN sought to pressure the government by hijacking a regular Avianca flight with 46 passengers. On May 30 it kidnapped 170 people, mainly of regional oligarchic families, during a church service near Cali. All were liberated in the following months. Talks were resumed after an ELN offensive in April 2000, and in January 2001 a pre-agreement accepting demilitarization of three municipalities for the convention was signed. But paramilitary mobilization supported by the army made it

impossible. During talks in January 2002 in Cuba the government agreed to stop destroying supposed Coca cultivation, while the ELN agreed to stop attacks on energy infrastructure. Shortly after, the agreement was suspended by both. After three years of refusal, the ELN started exploratory talks with the government of Álvaro Uribe in December 2005 in Cuba, but nothing came of it.

The FARC criticized the ELN's participation in talks. Their relationship has been complicated because of their different political backgrounds, strategies, and practices. In some regions they join forces in combat, and in 2003, after the FARC and ELN leadership met for talks, they even launched a huge joint military campaign against paramilitaries. But in other regions they are in armed confrontation, for example in Arauca, near the Venezuelan border, where they have been engaged in a war against each other since 2006, when the FARC started to dispute the ELN's historical influence in the region.

In 2002 the ELN had 90 urban and rural fronts and companies. By 2004 it had lost much of its urban work through killings, arrests, and even military attacks and air strikes, such as the 2001 attack upon the Comuna XIII, a shantytown of Medellín which had a strong presence of ELN militias. In rural zones the army strategy is combined with paramilitaries conducting brutal massacres and terror against the population, affecting especially ELN zones, in which up to 40 percent of the population have been displaced. Nevertheless this did not seriously weaken ELN's combatant force, which in 2006 still had nearly 90 guerilla fronts.

The mainly US-financed rearming of the army, known as Plan Colombia, and the intensified war carried out by President Álvaro Uribe (2002) transferred offensive capacity from the guerillas to government troops. Many analysts agree that it is more a tactical withdrawal than a military defeat. A far more important problem centers on the great difficulties of rural and urban political work due to widespread repression.

The ELN has been declared "defeated" or "ready to be absorbed by the FARC" by analysts and governments since 1965. But ideological compromise and the capacity for autonomous operations by many ELN militants and structures make the ELN's disintegration improbable. Much more than a guerilla group, the ELN is a mixture of armed and political movement.

Its Fourth Congress in July 2006 described the organization's situation as strengthened and unified. It reaffirmed the search for a political solution, but also to continue armed struggle until political, social, cultural, and economic transformation is accomplished.

El Argentinazo, December 19 and 20, 2001

Marina Sitrin

The popular rebellion that began in Argentina on December 19 and 20, 2001, often referred to as the "19th and 20th," was a break in Argentine history. It was a moment when millions spontaneously took to the streets across Argentina and, without leaders or hierarchical orders, forced the government to resign. Through continuous mobilizations, the people proceeded to expel four more governments in less than two weeks. The initial catalyst of the mobilizations was the government's freeze on personal bank accounts

and the conversion of currency, once pegged to the dollar, into a financial asset that would be held by the banks and used to secure payments to foreign investors, but could not be accessed by those who had deposited the money.

Though this move on the part of the government instigated the popular unrest, public contempt for Argentine economic policy was longstanding. The government of Argentina had taken out huge loans with the International Monetary Fund (IMF) in the 1990s, and in the late 1990s began to repay these loans through privatization and severe austerity measures. Thousands of people were laid off, wages and pensions were cut, and social services degraded. These measures emanated from the IMF as part of the contract for yet another multibillion dollar loan. As with most of Latin America – and the world – the results were disastrous for the majority of people. Working and middle-class Argentines experienced no direct relief from the new loans. By 2001, industrial production had fallen by over 25 percent, the official poverty level grew to 44 percent, and the unofficial level of poverty was substantially higher. For many Argentines the popular rebellion was no surprise.

The rebellion of the 19th and 20th was one of direct democracy combined with direct action. The popular rebellion began with just a sound – the sound of someone banging a pot. That sound became many sounds as neighbors joined in one after another. These sounds were followed by bodies, and the bodies began to move together – without a single direction, but together. Eventually, in each neighborhood, the movement of bodies merged into the main streets and then into the main plaza. Once in the plaza they made their collective voice heard, not through speeches or party placards but with simple words in unison: “*Que se Vayan Todos*” (“They All Must Go”).

There are countless beautiful and powerful descriptions of these days and weeks in the street. Ezequiel, a participant in the soon-to-be created neighborhood assembly of Cid Campeador, described them as euphoric, despite the dangers and difficulties of the situation. With so many people out in the streets, there was a sense of satisfaction in ordinary Argentines taking the popular response to the crisis into their own hands.

Still, the national government quickly responded by declaring a state of emergency, ordering citizens to stay at home and attempting

to disperse the people in the street. In response to this repression by the state, which killed dozens and wounded many hundreds of others, hundreds of thousands poured onto the streets of Buenos Aires. Paula, a participant in the neighborhood assemblies as well as in feminist collectives, recalled that the events of *el Argentinazo* emboldened her with the courage to face repressive police forces who were attacking the Mothers of the Plaza de Mayo. Though protesters had been killed only the night before, she felt she needed to be there to face the police in solidarity with the Mothers.

Many refer to these moments and days as a rupture with the past, a break from the deeply instilled fear and silence that was a legacy of the brutal Argentinian dictatorship that tortured and disappeared over 30,000 people. Carina, a participant in the *cacerolazo* (a form of protest in which participants bang on pots, pans, or other utensils) and subsequent organizing, described an unlikely but pleasing sense of solidarity that resulted from joining in with others in the *cacerolazo*. For her, banging pots and pans with neighbors, with whom she generally rarely spoke, or with the local butcher or pharmacist, symbolized a reaffirmation of a sense of kinship that she thought she had lost. For many, what was gained on the 19th and 20th was community.

Neighborhood Assemblies

The popular rebellion was comprised of workers and the unemployed, the middle class, and those recently declassed. It was a rebellion without leadership, either from established parties or from a newly emerged elite. Its strength was measured in the fall of five consecutive national governments in two weeks. It precipitated the birth of hundreds of neighborhood assemblies involving many tens of thousands of active participants.

People in the neighborhood assemblies at first met in order to try to discover new ways to support one another and new ways to meet their basic necessities. Many explain the organization of the first assemblies as an encountering, or a sort of finding, of one another. People were in the streets, they began talking to one another, and they saw the need to gather. Then they gathered, street corner by street corner, park by park. In many cases someone would write on a wall or street, “Neighbors, let’s meet Tuesday at 9 p.m.,” and an assembly would begin. At its peak, there

were over 200 neighborhood assemblies with between 200 and 300 people considering themselves participants of each.

Each neighborhood assembly worked on a variety of projects, from facilitating barter networks, creating popular kitchens, planting organic gardens, and sometimes taking over abandoned buildings (including the highly symbolic takeover of abandoned banks) and creating community centers in their place. These occupied spaces housed any number of things, including kitchens, print shops, day cares, after-school programs, computers with free Internet access, and even one small movie theater.

Something common among almost all neighborhood assemblies was participants' ability to relate to one another within the assembly. As with the popular rebellion, the assemblies were not organized with a political party or on the premise that a few people would be responsible for organizing them. The desire and reality was that people together would organize for themselves. Assemblies were forums for the face-to-face interactions where neighbors got to know one another and made decisions about what they would do in their neighborhood.

After a time people began to call this new social relationship *horizontalidad*. *Horizontalidad* is a word that has come to embody the new social arrangements and principles of organization in many of the new movements in Argentina, from the neighborhood assemblies to the recuperated workplaces and *piquetero* groups. As its name suggests, it implies a flat plane upon which to communicate and organize. It entails the use of direct democracy and involves, or at least intentionally strives toward, non-hierarchical and anti-authoritarian creation rather than reaction. It is a break with vertical ways of organizing and relating. *Horizontalidad* has often been translated as horizontalism or horizontality, but most accurate is *horizontalidad*. New social and political relationships often require new language, especially when the language that exists does not have an accurate way of reflecting new experiences. *Horizontalidad* is one such case. It is not so much a thing as "horizontality" might imply, but rather a process; it reflects new relationships as well as the desire for new organizational models. Emilio, a participant in the movements in Argentina, has called *horizontalidad* a "tool and a goal." Another participant, Paula, described the importance of *horizontalidad* as a medium

for changing subjectivities, "based on the acceptance of 'the other' . . . in a democratic context." According to Paula, *horizontalidad*, as a way of doing politics, requires "an emancipatory base." Even if the assemblies were to disappear, they would leave behind a legacy of a fundamental shift in subjectivity resulting from the empowerment experienced by virtue of ridding one's self of notions concerning the limitations of political action. In a society that champions individuality and denigrates the possibilities of collectivity, such a faith in the potential of collective action is quite a profound and important change.

The Assemblies Change Form

The years after the rebellion witnessed a significant decrease in the organization of, and participation in, neighborhood assemblies. Many dozens are still active, but this is a significant decrease from the hundreds that emerged in the months after the rebellion. Many explanations exist for this, from the intrusion of leftist political parties to a lack of concreteness in activity and interference from the state.

After the first months of self-organizing, a number of political parties saw an opportunity for recruitment and domination. Party members entered the assemblies and attempted to dominate them. When domination was impossible, as it almost always was, they often initiated what some refer to as disruption campaigns, causing many frustrated participants to leave assemblies.

Many of the assemblies lacked concrete projects and ended up talking a great deal more than doing. While one of the lasting aspects of the assembly movement is the effect the process had on participants' sense of self, community, and collectivity (a process also referred to as the creation of new subjectivities), without concrete projects to ground the assemblies, many people drifted away. Of the assemblies that continue to exist, almost all are involved in many neighborhood-based projects, and some continue to function in occupied buildings, such as banks, that are used as community centers.

The neighborhood assemblies became one of the focal points of the government's attempts to regain control of society. These efforts generally involved, on one hand, overt and covert repression, and on the other, attempts to regain legitimacy. One type of attempt that was made, which sometimes succeeded, was the offering

of services, goods, and sometimes even physical space for the neighborhood assemblies. Most assemblies self-organized all of their popular kitchens and projects, including the occupation of buildings, for the use of the community. The government saw this as an opening for the attainment of potential credibility, and began to offer assemblies boxes of food, and even buildings in which they could hold the assemblies. These offers were sometimes debated for months in the various assemblies, and created huge distractions from the projects that were already underway.

Many participants in the neighborhood assemblies foresaw a decline in participation in the assemblies, and even felt it would not be that significant a loss. They explained this by saying that something had changed in them as people and how they relate to one another, and that this change would not go away even if the structures of organization changed. They focused instead on the importance of changing subjectivities and the creation of new social relationships. They felt that once they had changed how they related to one another as people, the assemblies had fulfilled their role. This change would then infuse new organizations and activities.

Ellis, Daniel Edward "Daan" (1904–1963)

Wessel P. Visser

Ellis was born in 1904 in Swellendam in the Cape, South Africa, and completed his high school education in Ladysmith, Natal. He obtained a teacher's diploma at the Paarl Teachers' College, and was a teacher for a number of years. From

1930 he farmed in the district of Calvinia, and moved to the Witwatersrand in 1938 to begin work in the Nigel and Marievale goldmines on the east Witwatersrand. In 1943 Ellis was elected as a National Party (NP) city councilor of Nigel, serving in that capacity until 1949. He also served as mayor from 1945 to 1946. In addition, he was a member of the Hospital Board of Nigel, and chairman of the executive of the NP's Nigel division.

There was, from the 1930s, an ongoing struggle between Afrikaner nationalists and supporters of Charles Harris for control of the South African Mineworkers' Union (SAMWU). There was widespread dissatisfaction in the SAMWU over the autocracy and corruption of the Harris administration, as well as its failure to defend wages or challenge the Chamber of Mines. This struggle continued after Harris was assassinated in 1939 and replaced by Bertie Broderick, and it was only in November 1948 – six months after the NP won the general elections and installed apartheid – that the nationalist *Hervormingsorganisasie* (Reformers' Organization) managed to secure control.

Ellis was the Reformers' candidate in SAMWU, and became the union's general secretary. The union, one of the most important in the country, promoted the strict enforcement of job color bars, support for the NP and anti-communism, and established a press in 1950 to produce not only its own *Die Mynwerker* (The Mine Worker), but also *Die Bouwerker* (The Building Worker) and *Die Klerewerkeersnuus* (The Garment Workers' News). The labor movement was in a state of flux by this time, and the South African Trades and Labor Council (SATLC) split into three. In 1957 Ellis became the president of the new South African Confederation of Labor (SACL), the pro-apartheid union federation formed by the SATLC right wing.

During Ellis's 15-year tenure, SAMWU enjoyed one of its politically stable and influential periods. As a former Reformer and member of the ruling NP, Ellis had unrivaled and unprecedented access to ministerial and prime ministerial offices to promote the interests of white workers on the mines. Whereas Harris and Broderick had largely ignored the concerns of union members around health, Ellis managed to improve the functioning of the Medical Silicosis Bureau, and have the Silicosis Act (1956) revised. He had a friendly working relationship with Dr. A. J. R. van Rhyen, minister

of mining and health, and SAMWU, in general, had a very close relationship with the NP government.

However, as had been the case with his predecessors, Ellis's tenure was marred by controversy. While hailed as one of the greatest heroes of SAMWU, he probably endured more vilification, smear campaigns, investigations, motions of no-confidence, and lawsuits than any other general secretary in the history of the union. Like Harris, his administration was dogged by allegations of corruption.

Soon after his appointment, rumors of gross misconduct surfaced in connection with the purchase of Transafrika House as SAMWU head office. Ellis was accused of paying too much for the building, benefiting thereby Dr. F. J. Kritzing, a controversial Johannesburg estate agent, through an exorbitant commission. In exchange, it was alleged, Ellis had received shares in a liquor store owned by Kritzing.

The findings of the unofficial SAMWU, and official government, commissions of inquiry were inconclusive, but relations between Ellis and Dr. Albert Hertzog, the original driving force behind the Reformers, soured. Subsequently, Paul Visser, the SAMWU president, initiated a private law suit against Ellis in 1953 for fraud and falsehood in connection with the Transafrika House purchase. Ellis was found guilty of fraud, and sentenced to 18 months in jail, but an appeal against the sentence succeeded on a technical point.

Towards the end of his tenure, dissatisfaction within SAMWU ranks with Ellis's management style and managerial abilities came to a head. He was accused of dictatorial behavior and there were allegations of alcohol abuse. Eventually, the union executive convinced him to resign rather than face summary dismissal. Ellis, a heavy smoker, died on July 8, 1963 at the age of 59, due to pneumonia.

Emmet, Robert (1778–1803) and Emmet's Rebellion

Karen Sonnelitter

Robert Emmet was born in Dublin in 1778, into a family that was a solid pillar of the Dublin elite. Young Robert grew up surrounded by leaders of the United Irishmen, including his older brother, Thomas Addis Emmet. Theobald Wolfe Tone was a regular visitor to the Emmet home. Not surprisingly, Robert was attracted to their revolutionary republican politics. He entered Trinity College in 1793 and while there became secretary to one of four United Irish societies at the college. In the aftermath of the failed 1798 Rebellion the college purged republican sympathizers and he was expelled. Meanwhile, his brother, deeply implicated in the uprising, had fled to France to escape prosecution. After the 1798 defeat the younger Emmet became involved in the dangerous and highly conspiratorial work of reorganizing the United Irish Society. He helped to devise a secretive military structure that would provide the basis for a renewed attempt at insurrection in 1803.

In 1802 Robert Emmet joined his brother in France, and together with other United Irish representatives they approached Napoleon Bonaparte to request military support for another

Irish challenge to British rule. Those negotiations failed and Robert returned home determined to launch a new rebellion with or without French assistance. He and his comrades began to manufacture weapons and explosives at various sites around Dublin; their headquarters were at Butterfield Lane, south of the city. The rebels planned to seize the main government buildings in Dublin and from there to mobilize the surrounding counties. They would depend upon seasoned local United Irish leaders who had escaped to Dublin after 1798 to bring out their home counties. Emmet and his associates bought houses at strategic locations in Dublin and stockpiled them with weapons, hidden behind false walls. They were able successfully to conceal the plot from authorities, but an accident upset their plans. An explosion at one of the Dublin depots raised the authorities' suspicions and caused the conspirators to move forward the date that had been set for the rising.

The insurrection was launched on July 23, 1803, when the rebels attacked Dublin Castle from their depot on Thomas Street. They failed to capture the castle and in the confusion the rebellion transformed into a riot. Emmet abandoned his plans and fled to the hills of Wicklow. However, he was captured in Dublin on August 25 when he returned to the city to see Sarah Curran, the daughter of a family friend with whom he was romantically involved. Sarah's father, Philpot Curran, was a prominent radical barrister who had defended many other United Irishmen, but he refused to defend Emmet after learning of the tryst with his daughter.

Emmet was tried and convicted on September 19 and executed the next day by hanging and beheading. In practical terms, Emmet's Rebellion can only be described as a debacle, but Irish nationalists count it among the most revered episodes in their chronicles of heroism, patriotism, and martyrdom. Robert Emmet himself is best remembered for his moving speech from the dock, no definitive version of which exists, but he certainly uttered some version of a now-famous line: "Let no man write my epitaph. . . . When my country takes her place among the nations of the earth, then shall my character be vindicated, then may my epitaph be written."

His brother, Thomas Addis Emmet, later left France and emigrated to the United States, where he became attorney general of the state of New York.

Enclosure movement, protests against

Brian Unger

Enclosure in England (ca. 1750–1860) was a parliamentary system of property redistribution whereby common lands for farming, grazing, and hunting, freely enjoyed by small tenant farmers, peasant villagers, cottagers, and farm laborers since the middle ages, were measured, surveyed, and privatized, with ownership largely reassigned to the landed gentry and aristocracy who controlled the machinery of government. "Enclosure" refers specifically to a closing-off of rural lands with fences, ditching, and other techniques, accompanied by extremely punitive new laws for trespassing, poaching, and hunting. The grand estates and farms of the aristocracy were often clearly demarcated with fences and walls, but ownership of millions of acres of English land formerly held in common for the people, and managed under a complex and customary scheme of public use applied over centuries, was transferred to the politically powerful landed classes. Enclosure changed the entire socioeconomic fabric of wide swaths of rural England and Scotland. What had been an ample inventory of open fields, forests, and fens available to the peasantry for growing food and raising livestock since medieval times were now severely narrowed and, in large sections of the rural countryside, eliminated altogether.

In all, during this time nearly 4,000 Acts of Parliament transferred more than 6 million acres of land – one-fourth of all of England's tillable acreage – to the politically dominant classes. Landlords then destroyed cottages to force farm workers into urban migration, turning

commoners into laborers. Of the relatively few middle-class peasant farmers who were able to retain land in the redistribution process, even fewer could sustain the subsequent legal, financial, and material infrastructure costs incurred by privatization, such as lawyer fees, surveyor fees, and fencing. Many smallholders sold cheap or were bought out for a pittance at foreclosure auctions as the large landowners built parliamentary suffrage on the backs of the weak. Tens of thousands of English families lost their economic independence and were forced to work on the great estates for subsistence wages, or to migrate to distant urban slums to earn a living in the booming factories of the Industrial Revolution.

In earlier times the English crown intervened when aristocratic pressure threatened the rights of the peasantry; however, a deeply reactionary mode to revolutionary developments in France, the labor violence among the peasantry, and intellectual unrest in London made it easier for the aristocracy to convince Parliament that the centuries-old social contract with the rural peasantry was no longer economically viable. They argued that Britain's old commons farming structure had depressed agricultural productivity and driven up agricultural wages to unsustainable levels. Parliament was in the pocket of the aristocracy, and the crown would not intervene again.

It was difficult for rural villagers to maintain the energy and resources for an effective protest movement when the implementation of many enclosures crept along over a period of decades, not months. There was no visible threat to their livelihood for years at a stretch, as it was not unusual for a bill to take from 5 to 17 years before enclosure was actually implemented. For a class of individuals tied to a grueling work schedule and isolated from natural allies in London, under-educated and unsophisticated, ultimate political defeat was all but inevitable.

Even so, opposition was so deep and abiding that people's anger was strong enough to drive them to attack their own country's soldiers. The numbers are telling – 300 rioters had to be dispersed at the Willbarston, Northamptonshire enclosure riots of 1799. They tore down fences and burned ricks of hay. By 1830 the pro-labor, anti-threshing machine Swing riots were widespread throughout south and east England, the result of the progressive impoverishment and dispossession of the agricultural workforce. Parliamentary enclosure had eradicated subsist-

ence farming in the commons that sustained poor farm families with food and fuel through the direst economic times. Thousands of agricultural laborers became dependent for the first time on whatever cash wages the local lords were willing to remit. Many opted for indentured servitude in the United States, or for factory wage conditions in Liverpool or Manchester. While farm income had been tolerable during the Napoleonic wars, peace in 1815 brought plunging grain prices and an oversupply of labor. The most marginal peasants were frequently the angriest and most violent because they had the most to lose when grazing, hunting, and poaching rights and the gathering of food and fuel on the commons was curtailed.

Without a strategic alliance with the middling, landowning peasants one rung up the class ladder – smallholders, small owners, the “middle peasantry” – those least able to resist the gentry and prevail in a pitched political battle – the landless workers – were doomed to defeat. The landed farmer's economic interest was anathema to the cottager and poor worker, and thus no powerful political front was set against the aristocracy and their corrupt parliament in London. This intra-class dialectic was driven by the market forces unleashed by agrarian capitalism. Only a peasantry with control over key resources could have secured any meaningful political leverage in this scenario.

Engels, Friedrich (1820–1895)

Heidi M. Rimke

Friedrich Engels was a nineteenth-century revolutionary who, along with collaborator Karl Marx, articulated the theory of communism in their 1848 work, *The Communist Manifesto*. To Engels, the capitalist system needed to be overturned by a revolution from the proletariat, which would subsequently establish a classless society, thereby ending exploitation and misery.

Engels was born in 1820 in Barmen-Elberfeld, in the Rhine province of Prussia (now Germany), the eldest son of a prosperous textile family. He was raised in a pious Protestant environment both at home and in school, but he rejected religion as a teenager. In 1838, without finishing school, Engels was sent to Bremen for business training as an unsalaried clerk. From 1841 to 1842 he served in the Household Artillery of the Prussian army and attended lectures at the University of Berlin. Engels joined a group of young Hegelian radicals called “The Free,” where he first met Karl Marx. He became involved in radical journalism, and wrote belles-lettres, philosophy, and politics under the *nom-de-plume* of Oswald.

At the age of 22 he left Germany to take a management position at his father’s cotton factory in Manchester, England, where he learned about laissez-faire economics. Witnessing the rampant poverty and misery of the workers prompted Engels to produce *The Condition of the Working Class in England* (1845). In 1845 he met Mary Barnes, a factory worker involved in organizing the English workers’ movement. From her, Engels learned about the necessity of class solidarity and the growing working-class movement. Engels also joined the Chartist movement, published in the Owenite paper *The New Moral World*, and wrote *Outlines of a Critique of Political Economy*.

While visiting Paris in 1844 Engels re-encountered Karl Marx, starting their life-long friendship, scholarly collaborations, and political activities. He spent 1845–50 in France, Belgium, and Germany organizing underground revolutionary groups such as the secret German Communist League, which worked out the main principles of socialism and the revolutionary program of the working class. Thus emerged

The Communist Manifesto, the classical treatise on communism, which argues that the state acts as an executive committee of the ruling class, serving the interests of the bourgeoisie at the expense of the proletariat, and that all recorded history hitherto had been a history of class struggle.

Engels’ view on the history and nature of the state is expounded in *The Origin of the Family, Private Property and the State* (1884). This text is based on Henry Lewis Morgan’s *Ancient Society* (1877) and on Marx’s notes, comments, and criticisms. It substitutes the classical anthropological theory of evolution with the science of historical materialism, demonstrating that class interests lie at the foundation of the patriarchal family and the institution of private property, which are central to capitalist social relations.

In 1849 Engels took an active role in the republican insurrection in Baden, Germany. After 1850 his hope for an immediate proletarian revolution waned, and he reluctantly returned to England in order to work and provide an income, which served to sustain Marx and his family while the latter researched and wrote the first of four volumes of *Capital*. Engels retired in 1869 and devoted the remainder of his life to research, writing, and practical revolutionary activity. As he became more prosperous, he provided Marx with an annuity, allowing him to live in some comfort during his later years.

With Marx, he formed the Communist Correspondence Committee, which served as a model for the future International Association. Engels was a member of the General Council of the First International, and also played an important role in the establishment of the Second International. During this period he developed the philosophy and sociology of scientific socialism and communist theory.

Engels rejected the traditional model of the nuclear family and lived in a common law relationship that bore no children. However, he did assume responsibility for a child Karl Marx secretly fathered with a family servant. After Marx’s death in 1883, Engels set out to complete several of his unfinished projects that kept him researching and writing until his death in London in 1895.

The consequences of Engels’ revolutionary struggles, his disillusionment with bourgeois democracy, and his insistence on the necessity of a proletarian dictatorship, convinced him that only the overthrow of industrial capitalism could

result in a truly human and classless society where exploitation and oppression would be eradicated for the good of all.

Other important works of Engels include *Principles of Communism* (1847), *Socialism: Utopian and Scientific* (1877), *Anti-Durhing* (1878), and *Dialectics of Nature* (1883).

English Reformation

Jason Jewell

The English Reformation is a process or period sometimes difficult to define. All scholars agree that the Church of England's break with Rome under King Henry VIII is part of the story, but there is disagreement over where the process ends. Is it with the Elizabethan settlement of the late 1550s, the ultimate failure of Puritan government in 1660, or the moral reforms of the Methodists in the eighteenth century? The most sound of the historical accounts follow the traditional dating found in authors such as Elton (1977) and Dickens (1964). According to this understanding, the story of the Reformation begins with the growth of Protestant influence in England in the 1520s and ends with the settlement reached in the early reign of Elizabeth I, consisting chiefly of the Act of Uniformity, the Act of Supremacy, and the Thirty-Nine Articles.

Background

Conventional popular religion in England in the early sixteenth century differed little from that

of the High Middle Ages, with its emphasis on devout observances as meritorious acts and its stress on saints, relics, and pilgrimages. The Church of England's bishops were mostly lawyers rather than theologians and not the best candidates for spiritual leadership. Much of the church's wealth was concentrated in its well-endowed monastic houses which contained 10,000–15,000 clergy in total. The parish clergy were less well off and often worked in the fields to support themselves, although they were entitled to the tithes of their neighbors. Despite the apparent sincerity of the majority of the clergy, some notorious and highly publicized abuses of authority and ostentatious displays of wealth had given rise to a popular anti-clerical sentiment in many areas.

The fourteenth-century theologian John Wycliffe (d. 1384) had anticipated many key Protestant beliefs in his teachings – acceptance of the Bible as the only sure source of doctrine, placing of the Bible into the hands of the common people, rejection of transubstantiation, advocacy of clerical marriage, denunciation of monasticism, faith in the capacity of the civil magistrate to reform the church – but his spiritual descendants, the Lollards, remained a tiny heretical minority into the sixteenth century. In the 1520s, as Lutheran ideas began to filter into England from the Continent, particularly through Tyndale's English translation of the New Testament (1526), areas with Lollard influence showed particular receptivity to Protestant teachings. The English church condemned Luther's teachings; his books were publicly burned, and Henry VIII himself published a refutation of his thought that earned him the pope's gratitude and the title "Defender of the Faith." A few suffered burning at the stake in the 1520s and early 1530s for their support of Lutheran doctrine, but the English population in general was not especially attracted to Protestant teaching.

What proved more dangerous to the settled order was Henry VIII's incessant search for a divorce from Queen Catherine of Aragon from at least 1527. Catherine was past the age of childbearing by the mid-1520s, and the only surviving child from her union with Henry was a daughter, Mary. For Henry's sole heir to be female was, "given patriarchal and feudal concepts of competence and authority, a national nightmare" (Haigh 1993: 89). With the Wars of the

Roses still in living memory, Henry believed it essential to have an undisputed male heir to avoid a potential civil war. This desire coincided with his infatuation with Anne Boleyn, a young lady-in-waiting at the court, and he determined to divorce Catherine in order to marry Anne. From the spring of 1527 until the summer of 1530, Henry and his agents pursued various strategies to secure a dispensation for an annulment or divorce from Pope Clement VII. These efforts failed, primarily because Holy Emperor Charles V, who also happened to be Catherine's nephew, was putting tremendous political pressure on Clement, and Clement could not afford to alienate him.

Henrician Reformation

Henry and his advisors, the most important of whom were lawyer Thomas Cromwell and clergyman Thomas Cranmer, concluded that the only way to secure the divorce was to establish royal control over the English church and ensure the case was decided there rather than in Rome. Lawyers in Henry's pay had developed a theory that the English church historically was an independent jurisdiction over which the English king had sovereignty; they compiled for Henry the *Collectanea satis copiosa*, a collection of documents and precedents supporting this claim, by the fall of 1530. On the basis of this argument Henry proceeded to charge the entire English clergy with *praemunire*, or appealing to an authority outside the realm for resolution of an issue over which the crown had jurisdiction. Negotiations ensued, at the end of which the English clergy acknowledged Henry to be head of the English church in the "Submission of the Clergy" of May 15, 1532.

Over the next two years the parliament then in session (known to history as the Reformation Parliament) passed several laws formalizing the English church's break with Rome. The Act for Submission of the Clergy gave the aforementioned "Submission" the force of statute; the Act in Restraint of Appeals prohibited appeals to any jurisdiction outside England in any case involving matrimony, tithes, or testaments; the Act in Restraint of Annates forbade the English church from sending payments to Rome and gave the crown authority over appointment of bishops; the Act of Supremacy declared the English king to be the only head of the English church; and

the Succession Act vested succession to the crown in the children of Henry and Anne, who secretly married in January 1533, months before Cranmer, now Archbishop of Canterbury, formally annulled the marriage with Catherine. In passing this legislation Henry and Cromwell, now Henry's chief minister, were able to manipulate popular anti-clerical sentiment in the House of Commons despite the overall religious conservatism of the English populace. The same was true in the later 1530s when Cromwell succeeded in pushing through legislation to suppress England's monastic establishments (the Dissolution of the Monasteries), although this process sparked a major uprising, the Pilgrimage of Grace, in northern England.

The legal separation from Rome by itself did little to change the doctrine and practice of the English church, but Cromwell, Cranmer, and some of Henry's allies in the process sympathized with some Protestant positions, and in the 1530s they formulated official church positions that moved away from Roman Catholicism. The Ten Articles, published in 1536, mentioned only three sacraments (baptism, the Eucharist, and penance) instead of the traditional seven. Cromwell also banned some traditional holy days and saints' days and made moderate injunctions against pilgrimages and images in churches. Most importantly, Cromwell sponsored the first complete English translation of the Bible, performed by Miles Coverdale and published in 1535. A revised "Great Bible," also by Coverdale and published with a famous preface by Cranmer in its second edition, appeared in 1539. The English Bible, along with the reduction in power and wealth of the clergy, was the most revolutionary development of the English Reformation in the 1530s.

The 1540s was a period of reaction, ushered in by Cromwell's fall from favor and execution. The backtracking toward traditional orthodoxy began in 1539 with the passage of the Act of the Six Articles, which reaffirmed the doctrine of transubstantiation and the requirement of clerical celibacy, as well as making heresy a felony. The traditional Catholic mass was upheld. Henry also took steps to restrict the availability of the English Bible to subjects of noble birth. When Henry died in 1547 the English church's doctrine was essentially Roman, with the exception that he, not the pope, was its head.

Edwardian Reformation

Henry's immediate successor was Edward VI (r. 1547–53), his son by his third wife, Jane Seymour. Edward, who had been raised a Protestant, was only 9 years old at his accession; his mother's brother, Edward Seymour, now Duke of Somerset, headed the regency government. After some initial hesitation Somerset used his broad powers to alter the ceremony and appearance of the English church in a Protestant direction – more specifically, in a Calvinistic or Zwinglian direction as opposed to a Lutheran one. Indeed, Calvin himself corresponded with both Edward and Somerset, offering advice on reforms. Somerset repealed the Six Articles and restrictions on dissemination and reading of the Bible. The injunctions against images from the 1530s were renewed and more tightly enforced, leading to the removal of stained glass, statues, roods, church plate, and shrines from many churches. Clergy were allowed to marry and some traditional practices were abolished. The Chantries Act of 1547 transferred much of the church's endowment to the crown.

Scholars disagree on how the English people viewed these reforms outside of London, where they were clearly welcomed. Dickens (1964: 211) argues, for example, that the English people by and large had ceased to believe in the efficacy of masses for the dead, and that therefore there was no major protest against the abolition of chantries; however, he does concede that the pace of the reforms outpaced public opinion. Duffy (2005) contends that the reforms were a major blow to the communal fabric of English life and that they deprived towns and villages of important social services; localities passively resisted the reforms until royal visitors required action.

Whatever the case, there is no question that Somerset's next major reform, the introduction of an English liturgy in 1549, provoked serious resistance. The Book of Common Prayer is without question one of the greatest legacies of the English Reformation. Its first incarnation, compiled by Thomas Cranmer, was conservative, with many ambiguous phrases that could be interpreted in both a Protestant and a Roman Catholic sense. It retained a formula for (voluntary) confession, as well as ceremonies for confirmation and last rites. The visual aspects of public worship remained unchanged. Even

Bishop Stephen Gardiner, one of the chief opponents of Protestant reform in England, agreed to use the book. Nevertheless, its introduction led to a major uprising in Cornwall and Devon known as the Western Rebellion (1549).

Somerset's poor handling of the Western Rebellion and another revolt in East Anglia the same year led to his downfall; the leader of the group that ousted him, John Dudley, Earl of Warwick (later the first Duke of Northumberland), took his place. Northumberland was not a sincere Protestant himself, but he allowed further changes in religion to satisfy the Protestant constituency that put him into power. Cranmer and the continental reformer Martin Bucer made extensive revisions to the Book of Common Prayer and issued a second edition of it in 1552. This version made significant visual changes to the worship service. Ministers now wore simpler vestments and faced the congregation during the consecration of the bread and wine in the Eucharist, the altar (now a "communion table") moved from the east end of the church to the center, and group confession replaced individual confession. Under Cranmer's direction the English church also issued in 1553 the Forty-Two Articles, a summary of key doctrines that was completely Protestant in character. However, Cranmer's revision of canon law, the *Reformatio Legum Ecclesiasticarum*, was never ratified by parliament, which in all probability had no wish to see a revitalized canon law compete with the new secular supremacy in the legal system.

Marian Restoration

The religious pendulum in England swung back the other way when Mary Tudor, the daughter of Henry VIII and Katherine of Aragon, ascended to the throne two weeks after Edward's death in July 1553, following Northumberland's abortive attempt to have Lady Jane Grey proclaimed queen. Throughout the 1530s and 1540s Mary had remained a devout Roman Catholic, and restoring Catholicism in England was her foremost concern. She refused to call herself head of the English church, but she used that power to sack Protestant bishops such as Miles Coverdale and Nicholas Ridley and to eject continental reformers such as Martin Bucer from England. She attempted to restore Catho-

licism in the first parliament she summoned, but although it was willing to retreat on the Protestant reforms of Edward's reign, for the most part it refused to repeal the Reformation Parliament's legislation of the 1530s.

Mary's efforts were rejuvenated in the aftermath of Wyatt's Rebellion (1554), which aimed to prevent Mary's marriage to Philip Habsburg, the crown prince of Spain, Europe's most powerful and staunchly Roman Catholic country. The rebels probably had religious as well as nationalistic motives, and the parliament elected after the uprising's failure reflected a conservative religious backlash against Protestantism. It approved, on Mary's request, a return to communion with Rome, but it refused to restore church lands taken by the crown in the 1530s and 1540s. It repealed the major legislation of the Reformation Parliament and revived the act for the prosecution of heretics, which had been repealed under Somerset.

Mary proceeded to enforce the heresy legislation vigorously, and over the next few years 287 Protestants were burned at the stake in the so-called "fires of Smithfield." Most of the victims were from the Southeast of England, the country's most heavily Protestant region; among them were Protestant bishops Nicholas Ridley, Hugh Latimer, and Thomas Cranmer. These executions earned the queen the epithet "Bloody Mary" among Protestants, 800 of whom fled England for the Continent in the mid-1550s, going to areas friendly to Protestants such as the Netherlands, Switzerland, and the northern German states. These "Marian exiles" included John Knox, who studied in Geneva with John Calvin and later led the Protestant Reformation in Scotland. Another exile, John Foxe, began work on the immensely influential *Foxe's Book of Martyrs* during this period, completing the book during Elizabeth I's reign.

Elizabethan Settlement

Although the overwhelming majority of English subjects conformed to the Roman Catholic faith after 1554, Protestantism survived in England into the late 1550s, primarily in the form of underground congregations. Many who would not risk secret meetings still refused to attend Mass. Particularly in London and the Southeast, there remained a favorable attitude towards Reformed ideas and sympathy for the victims of Mary's

persecutions. When Mary died childless in 1558 (followed in death less than 12 hours later by her chief clerical ally, Cardinal Reginald Pole), her half-sister Elizabeth Tudor, the daughter of Henry VIII and Anne Boleyn, became queen.

Elizabeth's personal religious views in some areas remain murky. While she clearly favored traditional visual aspects of English worship such as candles and the crucifix, she frowned on some Roman Catholic practices such as the raising of the chalice during the Mass. It may be reasonably assumed that she favored a conservative Protestantism personally, for in working as she did to separate the English church from Rome once more she sacrificed certain advantages that would have accrued from continued union, such as an alliance with Spain and a papal declaration of her legitimacy, the latter of which would have nullified the claims to the throne of Mary, Queen of Scots, Elizabeth's closest relative and a staunch Roman Catholic.

The alterations to the English church over the next two years were intended to comprehend the largest number of English subjects (and their consciences) possible within a framework conducive to state stability. The Marian exiles dominated her early appointments to vacant sees, soon bringing a rough parity between reformers and traditionalists. Elizabeth's first parliament consisted of roughly equal contingents of devout Catholics, committed Protestants, and flexible members comfortable with the Henrician settlement of 25 years earlier. After lengthy debate in the spring of 1559, parliament passed a new Act of Uniformity which reinstated a revised Book of Common Prayer in which the Protestant language of Cranmer's 1552 edition was muted to the extent that many Catholics could worship with it in good conscience. The monarch was now the "Supreme Governor" of the church, a less controversial title than "Supreme Head." The same year parliament passed a new Act of Supremacy, which essentially repealed all the Marian religious legislation and reinstated the legislation of the Reformation Parliament. Elizabeth imposed an oath of allegiance to the act on all clerical officeholders. The vast majority of parish priests and other lower clergy accepted it, but all 16 Catholic bishops rejected it; Elizabeth quickly purged all but one of them. A further concession to Protestantism

was the reinstatement of clerical marriage, which Elizabeth disliked but reluctantly allowed.

The only major element of the Elizabethan settlement to follow was the reissuing in 1563 of Cranmer's articles of faith. Elizabeth reduced their number from 42 to 39 and issued them on her own authority. The Thirty-Nine Articles remain to this day, along with the Book of Common Prayer, the foundational statements of Anglican doctrine and practice.

The English Church from the 1560s was thus conservatively Protestant, attempting to chart a *via media* between Roman Catholicism and the Protestantism of Geneva. It was no longer an independent force, having come firmly under the control of the state. The overwhelming majority of the English population conformed to the settlement, with the exception of a small minority of committed Roman Catholics and a handful of radical Protestants. However, the settlement was precarious; tensions between those satisfied with the status quo and the Puritans, who wanted further reforms at the earliest possible date, soon arose, not to be resolved until the following century.

English Revolution, 17th century

R. Scott Spurlock

The English Revolution refers to events in England between 1640 and 1660, which are now more generally referred to in their wider British and Irish context as the Wars of the Three Kingdoms. Any discussion of this period must look beyond the borders of England. Although pressures began to build in England from the inception of Charles I's reign in 1625, the trigger enabling a revolution to take place occurred in Scotland in 1638, while the 1641 Rising in Ireland had significant repercussions as well. Moreover, the turbulent period cannot be removed from its wider European context, and as such the English civil wars represent the last and greatest of Europe's wars of religion. For this reason the English Revolution can only be understood in the context of polity, nationalism, and religious confessional identities within the three kingdoms and the wider European context.

In the engraving for the title page of his pamphlet, The World Turn'd Upside Down: A Brief Description of the Ridiculous Fashions of These Distracted Times (1647), as well as the writing within, John Taylor (1580–1653), an apologist for the crown, uses nonsense to depict the cultural and political shifts of the English Revolution. (British Library, London, UK / The Bridgeman Art Library)

Personal Rule of Charles I

The actual outbreak of civil unrest came at a rather surprising time. While population growth, rising inflation, unemployment, and a shortage of available land caused significant concerns from the 1590s through the 1620s, a greater sense of stability came to the fore in the 1630s. This coincided with a belief in both the state Episcopal Church and Puritanism that regulating social practice and enforcing godly society were imperative, although the former advocated traditional festivities and practices, the latter austere Calvinism.

Against this yearning for stability Charles I appeared to make marked departures from his predecessors with innovations in the established religion. During an 11-year personal rule later termed by his opponents the Eleven Years' Tyranny (1629–40) he refused to call a parliament, imposed taxes without the traditional parliamentary channels (in particular Ship Money), and suppressed protest. The show trials of John Elphinstone, Lord Balmerino, in Scotland (1635) and of John Hamden in England (1636) demonstrated a willingness to use high-handed tactics and an interpretation of absolute monarchy which departed significantly from the reigns of both his father and Elizabeth I.

Trouble initially broke out in the form of riots when Charles introduced a new book of prayer in Scotland in 1637 as an attempt to bring worship in the Kirk closer in line with the Episcopal Church in England. Scotland's general assembly and parliament rejected the move as an encroachment on the rights of Scotland's state church. In response, Scotland produced the National Covenant (1638) which pledged to defend the king, Presbyterian religion, and Scotland's sovereignty.

Two brief conflicts ensued in 1639 and 1640 known as the Bishops' Wars. Scottish armies, composed primarily of Scots mercenaries returning from Swedish service, confronted English armies assembled by Charles in the absence of an English parliament. Scotland's superior forces in 1639 and 1640 forced quick capitulations by the king, but in 1640 Scottish forces had already pushed south and occupied most of Northern England, including London's primary source of coal, Newcastle-upon-Tyne. At the conclusion of the second Bishops' War Scotland demanded that reparations for the cost of their "defensive"

campaign be guaranteed by an English parliament. This served as the major turning point in English politics. In order to settle affairs with the Scots, Charles had to call his second parliament in 1640. The king had summoned a parliament in April to raise funds for an invasion of Scotland, but dissolved it only a month later. Having witnessed the plight of their predecessors, the second parliament, called in 1640, refused to sit unless given the right to convene until they chose to close their business. Charles had little choice but to acquiesce to their demand.

The Long Parliament quickly became a forum for voicing unrest. In its first month a petition appeared to remove Episcopacy "root and branch," while proceedings began for the impeachment of Strafford, former lord deputy of Ireland, and William Laud, the archbishop of Canterbury. By late 1641 tensions between parliament and the king began to come to a head with parliament passing a list of grievances against the monarch in the form of the Grand Remonstrance. In February 1642 parliament passed the Triennial Act which demanded that the monarch call a parliament at least every three years. By July anti-Episcopal fervor saw the inquisitorial Star Chamber abolished. After a failed attempt by the king in January 1642 to arrest five leading MPs, Charles fled the capital and by June began to raise an army. On August 22, 1642 the king raised the royal standard in Nottingham and declared war against the parliament.

A number of factors contributed to the formation of party lines and individual allegiances, including legal, constitutional, and religious issues. In general, however, those who supported the king upheld the established Church of England and the divine right of monarchy and became known as Cavaliers, while those adhering to the parliamentary cause, known as Roundheads, sought greater liberties and further reformation. Many remained neutral, often for local reasons.

By 1645 large portions of the population yearned for peace and cared little who won. Clubmen Associations formed that year in Shropshire, Worcestershire, Herefordshire, Wiltshire, Dorset, Somerset, Hampshire, Berkshire, Sussex, and South Wales in order to force parliamentary and royalist armies out of their communities in an effort to protect their homes and livelihoods. These associations comprised farmers and craftsmen and excluded any who had

ties to the main warring factions. For those who did take up arms against the king at the beginning of the first civil war, the motivation was not anti-monarchical. Generally it was held that the king was acting out of line with the established traditions of monarchy or that he had fallen under evil influences. Thus military action sought to protect the king from his previous excesses or from dark influences (most likely Catholic) which deluded him.

Civil Wars

After a series of indecisive altercations, including the first battle of the war (Edgehill, October 23, 1642), the king's forces gained the upper hand. Failing military endeavors and a treaty between the king and Irish Catholic Confederates, which exacerbated fears of a Catholic plot (already rife as Charles' funding for the war overwhelmingly originated in Madrid and Rome), forced parliament to seek help from Scotland. Rather than enter into a civil league, the Scots held out for a covenant which promised the establishment of a uniform Protestant church in government and worship throughout the three kingdoms after the war. The Scots assumed this would be Presbyterianism and thus the signing of the Solemn League and Covenant in 1643 ensured Scottish intervention in English politics for the rest of the decade. The entrance of the Scots (although of little significance in the field) marked the turning point of the war. Royalist forces suffered major defeats at Marston Moor (July 2, 1644) and at the Battle of Naseby (June 14, 1645). In May 1646 Charles surrendered to the Scots at Newark before being handed over to the English parliament in June.

In the wake of the first civil war disparities in parliament's cause began to appear between those who desired a moderate settlement (a degree of religious toleration, but overall a maintenance of the status quo) and those who wanted further radical reforms. Presbyterians who favored a moderate settlement dominated in parliament, while the army contained a heterogeneous mix of sects and factions. These factions within the army became discontented with the leniency of parliament's negotiations with the king. Early in 1647 the growing unrest prompted parliament to make plans for drastically reducing the size of the army. Fueled by discontent, mounting arrears in pay, and parliament's call for the army to disband,

the army seized the king in June and began to negotiate with him directly. By October restlessness within the army, stirred up by elected "agitators," prompted internal discourse about the desired settlement. The Putney Debates, as they have become known, provided the malcontent elements in the army an opportunity to advocate fundamental constitutional changes.

Primary among these voices were the Levelers. They argued for the dissolution of both the monarchy and the House of Lords and called for them to be replaced by biennial parliaments elected by a much broader electorate with every Englishman getting one vote. Colonel Thomas Rainsborough represented the highest ranking Leveler, while Oliver Cromwell and Henry Ireton argued for a moderate settlement based on Ireton's *Heads of the Proposals*. This called for increased powers for parliament to make state, army, and naval appointments; parliament's right to set its own date for adjourning; reduced power for bishops; the Book of Common Prayer to be made optional; and a 5-year moratorium on Royalists holding offices or serving in parliament. Having reached an impasse, Cromwell suspended the debates in November, but those still dissatisfied arranged a series of subsequent meetings. On November 15, 1647 one such meeting nearly erupted into a mutiny at Corn-bush Field. The bulk of the army, loyal to Cromwell, put down the potential rebellion and the radical elements began to be closely watched. What tensions were forming in the army quickly melted into the background by the end of the month as Charles I escaped from his imprisonment, and, with Scottish intervention, a second civil war broke out.

Failing to see the fruition of a Presbyterian Church settlement in England, some prominent Scots entered into an Engagement with Charles in the closing weeks of 1647. They pledged military support for the king in a second civil war on the condition that he implement a 3-year trial period of Presbyterianism in England. Scottish forces entered England in July 1648, but parliament defeated the Royalist forces at Preston on August 19, and by August 22 the war was essentially over. Charles sought protection from the Scots army, but they ransomed the king to parliament for the sum of £400,000.

In the wake of their victory over the Royalists the army purged parliament of over 140 MPs, including its Presbyterian members, on

December 6, 1648, leaving behind those deemed most godly and in line with the army's aims. The purged "Rump Parliament" proceeded to appoint a commission for trying the king. Charles I was found guilty of treason against the people of England for having caused so much innocent blood to be shed and was beheaded on January 30, 1649.

After abolishing the House of Lords and monarchy, the Rump Parliament declared England to be a Commonwealth. This outcome was by no means a foregone conclusion at the outset of the first civil war. In fact, regicide probably did not enter into the wider collective discourse of the New Model Army until the Putney Debates in October 1647.

The Commonwealth

The death of Charles I did not bring about order; instead, it increased the difficulty of establishing a settled government. For those involved in the burgeoning Commonwealth, events were interpreted in terms of Providence or God's divinely revealed will. The overwhelming belief guiding most of the Rump Parliament and the army was that a new era of human history was unfolding before them. However, different groups interpreted the intended ends differently. For some, the progression and way forward were rooted deeply in democratic principles. The Levelers, not necessarily as motivated by religion as many of their fellows, sought the removal of monarchy and the House of Lords to be replaced by a House of Commons selected by a much expanded electorate. For others, like Gerrard Winstanley and the Diggers, the fall of monarchy represented an opportunity to remodel the wider social order. They established communitarian settlements on common lands in Surrey, Kent, Northamptonshire, Hertfordshire, Middlesex, Bedfordshire, Leicestershire, Gloucestershire, and Buckinghamshire between 1649 and 1651. The Diggers, so called for their cultivation of the land, denounced private landownership as a "Norman" innovation and grew crops, corporately sharing them equally among members. Based on Acts 2:44–45 they advocated fundamental social reconstruction and sought radical class transformation. Hence they termed themselves the "Real Levelers." Fifth Monarchists represented an even more radical position, in terms of national politics, based

on the apocalyptic biblical books of Revelation and Daniel. They believed Christ's kingdom would imminently be established as the fifth great empire of human history (Babylon, Persia, Greece, and Rome). In order to facilitate the coming of the new kingdom the ungodly should be purged from positions of trust and replaced by "saints." This apocalyptic vision meant any settlement short of establishing Christ's kingdom on earth risked divine retribution. Yet despite these radical elements in the army, the bulk of those who fought for the parliament were either Independents or English Presbyterians who certainly did not set out to undermine the whole established social order of England or to bring about the apocalypse.

The purge of parliament in December 1649 brought about a military settlement. This worked initially as the newly established Commonwealth's immediate aims required putting down the rebellion in Ireland where the Irish Catholic Confederacy, under the leadership of a papal nuncio, continued to uphold the Stuart cause, and in dealing with Scotland, which declared Charles II the lawful king of all three nations on February 5, 1650. The fall of Limerick in October 1651 marked the end of any significant resistance in Ireland, while the crushing defeats of the Scots at Dunbar (September 3, 1650) and Worcester (September 3, 1651) marked the success of the Commonwealth's invasion of Scotland.

As a war machine the Commonwealth was successful in incorporating Ireland and Scotland, but the real challenge came in peace. Separate councils were established for the governance of Scotland and Ireland, but they never received adequate powers to function efficiently. Moreover they became equally susceptible to the internal rivalries within the administration. Radical elements, such as those mentioned above, were discontented with the stagnancy of the Commonwealth's political aims. In April 1653 Cromwell dissolved the Rump Parliament for failing to make progress in the establishment of a settled government, particularly in relation to religious reforms and the implementation of toleration for radical sects. It was replaced by an equally unproductive Nominated Assembly on July 4, 1653, comprising individuals put forward for their godly reputations.

The importance of Cromwell as a moderating force between government and the army became increasingly clear throughout 1653 and

on December 16 he became Lord Protector. His role provided the strong leadership necessary for the stability of the regime but at the same time became a divisive factor for the support base in the army. Radical sects, particularly the Fifth Monarchists, saw his assumption of the title as paramount to the restoration of the monarchy. They heralded the Protectorate as contrary to their earlier cries of “No king but Christ.” Several aborted coups were attempted by the Fifth Monarchists, which not only cast a shadow on them but also on the Baptists with whom many were associated. The Baptists came to be viewed as liabilities in Ireland and Scotland, where Cromwell ordered the Scottish council to bar Baptists from officeholding, practicing law, or teaching school.

Cromwell’s personal influence played a large role in fostering the smooth running of the Protectoral government, and his death on September 3, 1658 returned the nation to turmoil. After his son Richard’s brief stint as Protector Major-General, George Monck, commander of the army in Scotland, marched south in early December 1659 to oppose Major-General John Lambert and the army dominated by radicals in England. On December 26, 1659 the Rump Parliament was recalled after a week of England having no functioning government, and Charles II was declared king on May 14, 1660, bringing the English Revolution to a close.

Historiography has debated whether the period represents a bourgeois revolution, a coalescence of provincial revolts, or a short-term governmental breakdown. The great irony is that those radical groups which were fundamental to the overthrow of Charles I and the establishment of the Commonwealth became a liability to the Protectorate and ultimately brought about its downfall. The religious fervor that fueled the English Revolution left a very bad taste after Restoration. As a result, according to John Morrill (1993), England’s wars of religion resulted in the birth of a modern secular state.

English Revolution, radical sects

Soma Marik

Even after the victory of the New Model Army in the English Civil War (1642–6), radicalism continued to flourish. The demand for democracy arose substantially out of the struggle for religious freedom, but in 1646–9 it took on a firm secular political color. A number of important groups played a role in the radical movement.

Levelers

By 1647 army and civilian democrats, called Levelers by their opponents, had fused, and a democratic political movement was born. Principal civilian leaders were John Lilburne, William Walwyn, Richard Overton, and John Wildman. The movement they developed emerged out of popular struggles, forming the left wing of the supporters of parliament, with Walwyn’s *England’s Lamentable Slaveries* (October 1645) stating the case for sovereignty of the people. The London poor, as well as small owners in the counties, contributed to the growth of this party. Small property owners, who formed a part of the army, were similarly influenced by Leveler ideas.

The significant feature of the army Leveler movement was that it replaced hierarchical considerations of leaders and led by an associative model. The emergence of the elected spokesmen

came from the cavalry troops first but then spread to the foot soldiers. The Councils of War called by General Sir Thomas Fairfax fostered the habits of dialogue and debate, and the gathered congregations engendered a sense of solidarity among the soldiers. With the coming of peace in 1646, the army became the most democratic political public sphere in England. Long unpaid arrears, fear of prosecution for acts committed during the First Civil War (soldiers had been arrested even in 1645–6 for speaking out against the king), and their resistance to army transportation to Ireland to embark in a war of reconquest radicalized the soldiers. Thus the army was transformed from parliamentary instrument to revolutionary subject.

In addition to the military aspect, the Leveller movement spread among the general population. Several thousand people signed the “Large Petition,” which outlined the Leveller program by raising a series of reform demands to the House of Commons. The Commons rejected the petition and arrested the presenters, including Lilburne and Overton. The soldiers expressed solidarity with Lilburne and Overton and started electing representatives called Agitators, who pushed for political rights while working to block parliamentary efforts to disband the army.

On June 4, 1647, Cornet George Joyce’s forces removed King Charles from parliamentary custody to army custody. In this charged situation, in a general meeting near Newmarket, the army hooted their more conservative officers off, and forced the writing of *A Solemn Engagement of the Army*, which called for the creation of an Army General Council by adding two junior officers and two other ranks from each regiment to the Council of War. The army pledged not to disband or divide until all its demands had been met.

On October 20, Oliver Cromwell defended the monarchical system in the House of Commons following the republican Henry Marten’s proposal that all relations with the king be severed. Lilburne suggested firmer action. *The Case of the Armie Truly Stated*, a soldiers’ pamphlet, claimed that in the new democratic army, all, regardless of rank, had just one voice and vote. It demanded a constitutional law, unalterable by parliaments. Then the Leveller constitutional proposal, *Agreement of the People*, was presented to the Council of the Army at Putney on October 29, 1647. General Henry Ireton challenged the Levelers on behalf

of the high-ranking officers, or Grandees. He was willing to accept that certain civil rights should be given to all, but unwilling to grant political rights, such as the right to vote or be elected. For the Levelers, defense of the person, not the property of the rich, was paramount. Agitators sought the franchise for all but servants and beggars. The *Agreement* was to be submitted to the army for approval in a general rendezvous, but the council, pressured by Fairfax, passed a series of resolutions effectively nullifying the previous resolutions and suspended itself.

The Agitators agreed to the disbanding, probably hoping to go back to their regiments, present further arguments, and further consolidate their gains. Meanwhile the king escaped, so most regiments were pulled by the call to discipline. However, regiments led by Robert Lilburne and Colonel Thomas Harrison rebelled. Copies of the *Agreement* were distributed and an attempt was made to resist Fairfax, but Cromwell and Fairfax succeeded in bringing the rebel regiments back under control. The hope of using the army to establish democracy was defeated, even though this was perhaps not immediately clear. In order to regain full command, the generals agreed to general amnesty and to having no more negotiations with the king. But the military hierarchy was restored.

The civilians went back to mass petitioning, constructing the world’s first modern democratic party, with a central leadership, a dues-paying membership, a countrywide network of branches, and a newspaper, *The Moderate*. Pamphlets by different Leveller groups as well as essays in the newspaper show the existence of a social orientation going beyond just the demand for democracy. A Petition of January 1648 endorsed the position of the first *Agreement* and called for election not only of members of parliament (MPs) but also of magistrates and other officials, as well as annual parliaments. The Levelers drew up a Petition in September during the Second Civil War in 1648. Demanding the punishment of the king, along with a political settlement, the Petition received over 40,000 signatures in a few days. The army’s march on London ended with the occupation of Westminster and Whitehall in December 1648.

Once the monarchy and House of Lords were abolished and the English republic established, Cromwell and his fellow Grandees, who carried out the military coup d’état, negotiated with the

Levelers for a revised version of the *Agreement of the People*. Two versions were produced – the Leveler version and the officers’ version. The Leveler version restricted votes to ratepayers and householders – their maximum compromise. The officers’ version also extended the vote, but to a lesser extent, and promised religious toleration. On January 20, 1649, the officers’ version was presented to parliament for its consideration and approval. Lilburne wanted this draft constitution to be ratified by the people, not by parliament. In any case, parliament did not move promptly to consider it. Yet the officers kept quiet. This suggests that the new regime was not really interested in implementing these constitutional proposals. Discontent reappeared among the rank-and-file of the army, and the Levelers revived. Lilburne returned to active politics, suspecting that Cromwell was trying to set up a military dictatorship. Troops were forbidden to petition, and several were court-martialed. In response, Levelers issued pamphlets attacking the new regime.

Meanwhile the Levelers had suffered a major blow with the death of Thomas Rainborough at the hands of royalists in October 1648, for he was the one officer with standing and ability to rival Cromwell. In March 1649, when their campaign was renewed, pamphlets like *The Hunting of the Foxes* by Overton and *The Second Part of Englands New-Chaines Discovered* by Lilburne, hit hard. Lilburne, Walwyn, and Overton were arrested and put on trial.

By this point, a fundamental difference existed between those revolutionaries who wanted a strong government to defend gains already made and the far left, both among the civilians and the soldiers, who wanted to deepen the revolution. Their demands included land reform, negation of enclosures, greater civil rights, concern for the poor, democratization, and decentralization of public authority. Some Levelers, notably Walwyn, were absolutely committed to peaceful means. Yet the militants, especially in the army, were planning armed revolts.

There was a series of mutinies in the army in March–April 1649. The Burford Mutiny (May 1649) was caused by the decision to send the army to Ireland to reconquer it. Troops elected agitators in defiance of a prohibition on so doing and rebelled. Several hundred were captured, and three were executed in sight of their comrades. Corporal William Thompson led another rising

that met a similar fate at Banbury. Thompson escaped to Northampton and took the town over for nearly two days. Eventually, he was hunted down and clubbed to death. The trial of the civilian Levelers opened in September 1649. Though the London jury found them not guilty, the Leveler party was broken through repression.

The Fifth Monarchists

The defeat of Leveler democracy with its commitment to social justice, secularism, and civil rights meant a collapse of hopes among the toiling people of winning by secular political struggles. Religious idiom and aspirations permeated further activism. In this climate, a semi-religious, semi-political movement, the Fifth Monarchists, arose between 1649 and 1660–1. The “Fifth Monarchy” or the “Fifth Kingdom” is a biblical reference, with the claim that after four earthly monarchies the Fifth Kingdom would be the Kingdom of God. Millenarist views were strong in the Commonwealth, and the Fifth Monarchy men wanted the rule of a religious community of saints. Their membership can be divided broadly into two groups – those who relied on the power of prayer and by setting an example for others to follow, and those who argued for change through force and political action.

Many Fifth Monarchist ideas were socialist in nature. Mary Cary, a Fifth Monarchist woman, in her description of New Jerusalem, pictured it as a commonwealth of small producers and tradesmen, with moderate labor and no taxes. She wanted the abolition of tithes, the nurturing of voluntary religion, the simplification of law codes, decentralization and local government autonomy, and poor relief by the state rather than the parish. Peter Chamberlain, who would become a Fifth Monarchist, said in 1649 that estates should be confiscated to pay the army, relieve the poor, and develop trades and schools.

The movement itself emerged in 1651, when a group of radical independent and Baptist preachers and military men, including Thomas Brookes, Christopher Feake, William Greenhill, Thomas Harrison, Henry Jesse, Hanserd Knollys, and John Simpson, began meeting and discussing a Godly Reformation of England. They called for a government encouraging the election of the Godly, but their definition avoided narrow sectarianism, excluding only communists, Ranters, and polygamists. Preaching in separate churches,

their radical doctrine emphasized preparation for the Second Kingdom, reform of the government for Christ's rule, replacement of greed and power by brotherly love, abolition of tithes and taxes, care for the poor, the release of debtors from prison, and payment of salaries due the New Model Army.

In April 1653, Cromwell called the Nominated Assembly (Barebone's Parliament), having 139 persons nominated by different congregations and selected by the Army Council. There were at least 12 Fifth Monarchists in the parliament. But in December this parliament was dissolved by the moderates while the more radical were at prayer. Within three days the Army Council adopted a written constitution, the Instrument of Government, that led to a new parliament, making Cromwell Lord Protector. Feake and Vavasour Powell attacked Cromwell. The duo was soon arrested, but Fifth Monarchist preaching continued. In January 1657, Feake, released from prison, addressed a meeting in extremely militant tones.

Militancy also grew under the leadership of men like Thomas Venner. He was associated with Praisegod Barebone (after whom Barebone's Parliament has often been named). By 1656, he was minister to a growing London congregation with Fifth Monarchist leanings. During 1656–7, Venner and members of his congregation were making plans to overthrow the Cromwell government. *A Standard Set Up* written by Venner's son-in-law outlined their aims. It was distributed by many followers, including a considerable number of women, who were quite prominent in all currents within this movement. In this manifesto, Venner proposed to abolish tithes, the excise, the standing army, arbitrary imprisonment, and impressments of soldiers. He also wanted to replace insecure tenure by copyhold and abolish legal privilege based on class or status. In April 1657, he organized a revolt, hoping to establish a regime much more oriented to the common people, one that would take a stance for deepening the revolution through widening its social base, by bringing the poorer people into the body of citizens, and by extending radical land reforms. Before the plan could be put into action, however, many individuals were arrested by the government but not put on trial. Venner and two of his associates were confined in the Tower of London on Cromwell's order until 1659.

The death of Cromwell and the unsettled conditions of 1658–60 saw new attempts at electing

Agitators in the army, and the revival of many of the radical sects' projects. Fifth Monarchists continued their radical activities through this period until the Stuart restoration. Major General Harrison, the first of those executed as regicides, was hanged, drawn, and quartered. In 1661, Venner led a second attempt at revolt. In *A Door of Hope*, the 1661 uprising's manifesto, the Fifth Monarchists combined millenarian theology with a call for a saintly republic and a call to arms. After throwing London into panic, though only a small number had actually participated in the rising, the rebels were vanquished by the London trained bands. Venner and Roger Hodgkin were hanged, drawn, and quartered in Swan Alley, and hung in pieces on the city gates and London Bridge. Many suspected radical Fifth Monarchist leaders were imprisoned for long durations by the crown.

The Diggers

The Diggers were socially the most radical wing of the radical sects, being clear-cut communists. The movement emerged in 1648–50 and can be located in three kinds of time – long term, middle term and short term (Holstun 2000). The first was a product of the fundamental transformation of early modern English agriculture from semi-feudal to capitalist through enclosures, which involved the large-scale transformation of common property into absolute private property controlled by big landowners. The medium-term cycle was a period of bad harvests that deepened the crisis of the poor. Finally, the short-term crisis was the execution of the king, followed by first rising hopes, then oppression and fear of betrayal – a prescription for a revolutionary situation. For some of the English poor, the revolution meant the removal not only of the king, but also of the lords of the land, the class-biased courts, and the tithe-collecting church. Attacks on enclosures occurred in 26 counties. The Digger movement's struggle against capitalist "improvement" did not lead to a slide-back to a romanticized past, but to an egalitarian future.

Gerrard Winstanley, the key Digger leader and theorist, had a millenarist idea of the Second Coming of Christ, which implied the rising of Christ in all men and women. In this case, salvation had no meaning outside nature itself. As God is Reason, understanding the natural processes rationally, that is, materialistically, is the

ultimate conclusion that may be derived from Winstanley's *The New Law of Righteousness* (1649). Here Reason and Righteousness were shown as completely manifest in the common ownership of the earth, and evil and covetousness had their beginning in private property.

On April 1, 1649, Winstanley and the Leveller William Everard led a group of activists in taking up a piece of land in St. George's Hill, in the county of Surrey, to cultivate it in common. They would call themselves "True Levelers," and would be called Diggers. Despite repeated harassments and fines by local landowners, the Digger colony grew, moving from St. George's Hill to nearby Cobham Heath, presumably in the hope of being left alone. By December 1649, Fairfax was pressured by Francis Drake (lord of the manor at St. George's Hill and a member of parliament purged by Colonel Pride) and Parson Platt (lord of the manor at Cobham) to call in his troops, and although by and large they did not intervene physically, their presence emboldened the locals to destroy houses and corn and harass the Diggers. Even so, by early April 1650, the colony at Cobham could boast of 11 acres planted, six or seven houses built, and the beginnings of a national Digger network. By the end of that month, however, the colony was destroyed irrevocably, but not before Diggers had appeared in a number of other places, like Northamptonshire, Kent, Buckinghamshire, Hertfordshire, Middlesex, and Leicestershire.

Without a clear political strategy for revolution this group eschewed physical force, yet they still threatened the landed ruling class because they inserted local knowledge into a national revolutionary project of coordinating disaffected tenants and wage-laborers, army members, and even university students. They forged links among the large number of Digger communities and sought to transform production relations at the local level, calling for a radical reordering of society. Winstanley, for example, developed a natural rights theory, calling for association and resistance to tyrannical power. At the same time, the Digger utopia was neither a reactionary call to turn back time nor an anti-urbanist attitude. Their conception of the future society was striking for the combination of support for Baconian attitudes to science tempered by the integration of science and artisanry. In the pamphlet *Fire in the Bush* (1650), Winstanley argued that the English people demanded freedom of the

commons in return for the support they had given to parliament. No real freedom could be enjoyed as long as land was appropriated privately. To make this statement, Winstanley tried to call in enough tenants to leave the land of the landlords, in effect calling for an agrarian general strike.

The Ranters

The Ranters movement emerged after the collapse of hopes of Leveller democracy, though many of the principal ideas were present from an earlier period. Forming part of the extreme left of the revolution, Ranters at the same time represented the least organized of the radical sects.

Ranter activity centered primarily on London, but did manage to spread throughout England. Ranters have been characterized as being quasi-millennial in outlook. At the same time, their belief that God existed only in material objects and humans led them simultaneously to pantheism and plebeian materialism. Since God existed in everyone, the poorest and the richest were equals. For them, God was the great Leveller.

Ranter ideology goes back to Joachim of Fiore's doctrine of the three ages – the age of the Father, the age of the Son, and the age of the Spirit, when God would fully reveal himself (the concept of the Everlasting Gospel). Whatever the "indwelling spirit" directed to do was justifiable to a Ranter. Humans were free of sin and the law if only they believed themselves to be (antinomianism). The excesses of the Ranters became the subject of several pamphlets and newspaper reports from 1650 onwards, prompting a wave of moral panic amongst clergymen, magistrates, and MPs. Ranters were frequently accused of sexual immorality and associated with nudity.

Parliament feared the group's potential power. Many leading Ranters, such as Lawrence Clarkson, Joseph Salmon, and Jacob Bauthumley, had been soldiers in the New Model Army. Abiezer Coppe had been an army chaplain. They all shared a sense of disillusionment at the betrayal of the Levelers' political and social aims. The publication of the works of Clarkson and Coppe in 1649–50 sent a stir throughout the parliament. The potential rise of a Ranter antinomian movement clearly frightened many members. The Adultery Act of May 10, 1650 and the Blasphemy Act of August 9, 1650 were directed against the Ranters and any who held their views. The most infamous Ranters were arrested and brought to

trial. Jacob Bauthumley was bored through the tongue as punishment for writing a blasphemous book; Clarkson, Salmon, and Coppe wrote recantations and were released after short spells in prison. Not very numerous, the Ranters did not really represent a revolutionary threat, but the existence of a kind of diffused anarchist current testifies to radical conceptions among the urban working people. The savage persecution of the movement reflects the deep hostility to their views on the part of the gentry and bourgeoisie.

Quakers

The first Quakers (Society of Friends) had close connections with the earlier radical movements. Like the Levelers, most of them came from the class of petty traders and handicraftsmen, although the movement made more headway among the peasantry than the Levelers had. Over half the early Quaker leaders were directly connected with the land, and throughout the century the movement remained strong in the rural districts of the north and west. At least 90 of them served the New Model Army and some had played an active part in the political events of 1647–53.

The north of England had been a royalist stronghold, brought under military control, and Quakers entered the area in 1651–3 as a wing of the government party. But while the authorities wanted to use the Quakers as lesser evils, the latter made sharp attacks on tithes and sanctities of ecclesiastical buildings. In 1654, George Fox was arrested on suspicion of plotting against the government. But it was not Cromwell so much as the parliament of the Protectorate that was hostile to the Quakers.

The Quakers stood aloof from the Fifth Monarchist rising, but this did not mean they were as opposed to war then as later. Following the epistle of St. James, Quakers held that warfare arose from the lusts of men, and they looked forward to a time when war and the need for coercion would cease to exist. But, at the same time, they recognized the necessity for a just state founded upon equal respect for men's persons and estates, in a "fallen" world. Moreover, in the Commonwealth period, the Quakers consistently upheld the justice of the parliamentary cause in the Civil Wars and warned the Protectorate that if it ruled tyrannically, it too might be brought down. It was the recognition of the

class positions of the Grandees, and not their pacifism, that explains why so many Quakers found it difficult to remain in the army. The earliest Quaker declarations were in favor of annual parliaments, much in the style of Levelers. Some of their early writings also criticized plural voting, the class-based nature of justice, and limitations of the franchise.

The Quaker attack on tithes was an attack on the concept of the state-church. But in the context of the backlash since Burford, it represented a bid to draw away from the imposition of the rulers rather than an attempt to democratize the entire state. The conditions for a mass popular movement no longer existed, with the yeomen and the artisans defeated, and a modern working class yet to develop. Quaker stress on toleration reflected this condition. However, they were not passive bystanders in the political struggle. In the five years of the Protectorate alone, nearly 2,000 Friends suffered imprisonment, and 21 of them died in jail.

The most important leaders of the Quakers included George Fox and James Nayler. With Fox getting full control of the movement later on, he rewrote its early history and relegated Nayler to the footnotes. But the incident which brought most hostility to the Quakers was Nayler's riding into Bristol in 1656 on a donkey with women strewing palms before him, in imitation of the entrance of Jesus into Jerusalem. For this he was tried by parliament, illegally, and punished savagely. Parliament's concern stemmed from the fact that the movement had swept rapidly over the southern counties, and was recruiting former Levelers and Ranters. Above all, conservatives wanted to end toleration, so they tried to put the whole Quaker movement on trial. Nayler's case also pushed a sizable part of the Quakers in the direction of discipline and order, enabling George Fox to establish full hegemony.

Since Quakers drew much of their early adherents from a Ranter milieu, disciplining them was a difficult but necessary task. This meant that the absolute individualism of the appeal to Christ within everyone had to be curbed. Splits occurred, as with the Proud Quakers, who showed clear ranting tendencies, using profane language. After the Restoration, John Perrot led another tendency, denounced by Fox, as preaching the principles of the old Ranters. The Ranters were ready to compromise, to recant, and yet retain their old opinion, whereas the Quaker principle

of truth led them to bear witness in public, and in that sense made them less dangerous.

Like all the radical sects, Quakers had a considerable number of women followers. The Quaker women had their own meetings. They not only preached, they also stood up in orthodox churches to challenge male ministers, consequently suffering punishment. The most well known of the early Quaker women was Margaret Fell, who married Fox after the death of her husband. In 1659, the Quaker women submitted to the parliament a 70-page petition, calling for the abolition of tithes, signed by 7,000 women. This document started with an affirmation of their power as women. Many Quaker women went on tours, like the Quaker men, taking their vision to distant parts, often beyond England.

The Restoration tried repressing the Quakers through the Quaker Act of 1662 and the Conventicle Act of 1664. Many migrated to the New World, and Pennsylvania became a Quaker colony (well known, among other things, for an honestly kept treaty with the Native Americans). The overthrow of James II in 1688 brought toleration, while Fox's disciplining turned Quakers into a much more respectable community, decent, sober, hard-working, bourgeois in character, but bereft of their early radicalism.

English Revolution, women and

Soma Marik

In 1640–1, England was shaking as the old order collapsed. With the destruction of the instruments of royal absolutist control, there came a freeing of the mind. Even though in origin parliament's struggle against King Charles had been a struggle by the elite, common people took part as time went on, and many of these were women, who saw in the war primarily injuries, the loss of close male relatives, and the difficulties in keeping the family fed while the men were at war.

Yet, by the end of the war, some women began to see opportunity. The collapse of the old order and breaking down of censorship and elite control led to the emergence of radical voices, including those of a significant number of women of all sorts. A flood of pamphlets appeared in an age hostile to manifestations of women's rights. Though only 11 percent of women of all classes were reportedly literate, women too took part in the pamphlet wars.

Women also played roles in the larger struggle for freedom of the press. Between 1640 and 1660, the total number of publications exceeded the total printed in England in the previous 150 years, and 34 printers were women who provided access to publication for female writers. Out of 650 Quaker authors, 82 were women, writing 220 tracts out of 3,853, with Margaret Fell contributing about 50. The parliamentary newspaper *A Perfect Diurnall*, with a circulation of 3,000, seems to have employed a woman reporter.

The trial and execution of King Charles I, on January 30, 1649, prompted some of these women to speak out. At the time of the trial, Lady Anne Fairfax denounced the Lord President John Bradshaw for claiming that the trial was conducted in the name of the people of England. Mary Pope, a moderate Puritan and a propertied businesswoman, believed in the necessity of curbing the king and his "wicked counsellors," but she spoke out against the bloodshed.

A few women, like the Fifth Monarchist prophet Mary Cary, wrote in support of the regicide. In her *A New and More Exact Mappe or Description of New Jerusalems Glory and The Little Horns Doom and Downfall* (1651), she assumed that the death of Charles Stuart was a sign of the Last

Days and the coming of Christ, paving the way for a world that would be much better for all the oppressed, including women. No person would be homeless, hungry, or unemployed. No infant or young child would die – a thing that all mothers, but particularly mothers of lower-class background, wanted desperately. In 1653, she wrote further pamphlets urging the abolition of tithes, liberty of conscience, reform of universities, poor relief, equal justice for poor and rich, and a wage limit for government employees.

At the same time, some religious dissident groups were founded or co-founded by women. Katherine Chidley, a remarkable woman who played many roles, was a key figure in the founding of the church at Bury St. Edmunds. The Bedford church was created by a group that included four men and five women. Women and the lower classes dominated the Fifth Monarchist congregations, who believed in the imminent coming of the Kingdom of Jesus. In 1648, Mary Cary declared herself a Protestant preacher. In *A New and More Exact Mappe* she assured her readers that a time was coming when not only university-educated men but also women, even servants and handmaids, would prophesy.

This open questioning of class and gender structures of power asserted that salvation through divine light and mercy had been distributed equally to all. Many radicals, including the Quakers, believed that after the preacher had spoken, all participants had the right to ask questions and to debate. Thomas Edwards, a conservative Presbyterian who has left for posterity an account of heresies of the age in his book *Gangraena* (1646), expressed horror at the view that women were within their rights to preach. A female preacher named “Mrs. Attaway” appears quite a few times in his rather vicious writings. She not only preached, she also left her husband for another man named William Jenny. Her argument, as of many women of the radical sects, was that unequal marriages were anti-Christian yokes, and a wife could leave an un-Christian husband.

Behind the religious formulations, there was a clear struggle for the retention of control over women’s sexuality, and an equally determined struggle by women to use the rupture in social control mechanisms generally to overthrow centuries of patriarchal domination and regain sexual freedom. In this short period, when the oppressed sex found a voice, they seemed to have challenged both private property and family strongly.

Katherine Chidley asserted in 1641 that a husband had no more right to control his wife’s conscience than a magistrate had the right to control his. The Quakers believed that marriage required no religious ceremony, and wives were not required to make a promise to obey husbands, since man and wife were as equals in the new life as they had been before the Fall. George Fox, the Quaker leader, on marrying wealthy Margaret Fell, engaged not to interfere with her estate.

Women joined sects, including the Ranters, for whom freedom of choice also meant there was no “sin” in having sexual relations outside marriage. But in an age when abstinence was the sole safeguard against unwanted pregnancy, such freedom was freedom for men only. However, Ranter ideology also replaced church marriages by unions between two consenting adults.

There was also a political element to women’s protest. On January 30, 1642, several hundred women submitted a petition to parliament seeking relief and forced the body to give them a hearing. So far women’s exchanges with the parliament had been amicable. But the outbreak of the civil war changed that. Women did not often fight directly in battles. For most women, war meant acute violence, tending the injured, losing near ones, coping with fragmented families and looting by the victorious side, rising taxes and rising prices. The feelings generated by these experiences were probably the ones that led women to come out demanding peace and an end to the civil war in 1643. Lamenting their dead and imprisoned husbands, they rejected bland assurances and turned violent. In January 1642, for two hours they held the doors and the staircase, allowing MPs to go neither in nor out. Eventually, Waller’s horsemen charged them, beating them up with swords, leading to the death of at least one woman. The unprecedented act of women organizing a public demonstration in their own name and making political their class- and gender-linked demands was made possible only by the revolution. Also, repeatedly in the revolutionary decades, women fought against tithes, demanded equal right of inheritance, price reduction, an end to enclosures, and the abolition of imprisonment for debt default. Time and again, women took to the streets to demand the release of political prisoners.

The most sustained political activism came from Leveler women. Between 1646 and 1653, Leveler women appeared repeatedly on the political

scene along with men – collecting signatures for mass petitions of women, taking deputations to parliament, participating in demonstrations. On April 29, 1649, the funeral of the military Leveler leader Robert Lockier was turned into a political demonstration by large numbers of women wearing sea-green dresses and green and black ribbons. Similarly, around 10,000 women signed the petition of April 23 to April 25, drawn up to demand the release of Leveler leaders. The government responded by telling the women that they possessed no political sense of their own, and the government had already answered their husbands. Reacting sharply, a petition of May 5, drafted by either Katherine Chidley or Elizabeth Lilburne, stated that since women as well as men had an interest in Christ and his redeeming powers, they were worthy to petition and represent their grievances to the House of Commons. They asserted an equal interest with the men to the liberties enshrined in the Petition of Rights and affirmed that while staunch democrats like Lilburne, Overton, and others were incarcerated, they would not just go back to their pots and pans. Despite seemingly accepting the gender division of labor, the women's demonstrations broke the masculine norm of politics.

These women had earned their political experience at immense personal cost. For their leaders, like Elizabeth Lilburne or Mary Overton, personal life was wholly sacrificed, even though, unlike the men, they were also compelled to look after the domestic situation and count up the costs of repeated police raids, seizure of property, and the death of children. Elizabeth had fought for John Lilburne's freedom, both from the royalists (1645) and from the parliament (1647 and 1648), even in an advanced stage of pregnancy. Similarly, Mary Overton had to face armed soldiers breaking in and arresting her husband, seizing their printing press, and subsequently arresting her. For rejecting the authority of the House of Lords, she was removed to Maiden Lane prison with her 6-month-old baby. From there she was removed to Bridewell by jailers and servants, after she had refused to go on her own. This torture on her in the prison revealed what awaited women who had the courage to defy the state machine.

It was the distillation of such bitter experiences that came out in the angry riposte of Elizabeth Lilburne. The anger is all the more pronounced because they felt that after all their sacrifices, the

new incumbents in power were setting up a fresh despotism. And within this general struggle for civil liberties the gendered arguments and notions of equality came out repeatedly. The voiceless condition of women is openly challenged, not by demanding the vote, but in the name of Christianity. Despite this, they found less than full equality even within the movement of which they were such eloquent defenders. Even at the most radical phase of the revolution, women's voting rights did not figure in the debates on universal suffrage at Putney Church in October–November 1647.

The women's struggles began over practical and general democratic issues, and insofar as they did not ever demand the franchise for themselves, it might be argued that they possessed no feminist consciousness. However, they pushed their way into the wholly male preserve of politics. When a member of parliament said that it was strange that women were petitioning, the reply was that it was strange that parliament would cut off the head of the king, yet that had been done. They displayed considerable anti-patriarchal radicalism in refusing to accept that an answer given to their husbands included them, asserting that wives had the right to act independently of husbands. In 1653, when the movement was already waning, they adopted a less militant argument, saying that since not all of them were wives, they needed a separate hearing.

Quaker women presented their own challenges. Quaker women were at one with the Leveler women over the question of abolition of tithes. In 1659, they submitted a 70-page petition, signed by 7,000 women, to the parliament. This document started with an affirmation of their power as women. The Quaker movement had a considerable number of women and accepted women's meetings. In the first generation especially, women not only preached but stood up in church and challenged ordained ministers, facing magistrates and punishments with great courage. Indeed, in the broader English society, women breaking the boundaries set forth by patriarchy were likely to face three charges – of being a whore, being a scold, and being a witch. Scolds were severely punished. And since Quakers were outspoken, there were attempts to punish them repeatedly as scolds. This involved public humiliation and torture. Quaker women not only took pride in the punishment but also remained unrepentant. Many were also accused of being

witches, and between 1645 and 1647, some 200 witches were hanged or burned.

The triumph of Cromwell and the defeat of Leveler democracy ultimately meant an end to radical aspirations for women. A military dictatorship enforced bourgeois transformation from above but ignored claims to rights made by the lower orders. After the restoration of the monarchy in 1660, they tried to return to underground plotting. Ursula Adman was arrested in 1669 for holding Fifth Monarchist meetings in her house. Quakers were persecuted after the Fifth Monarchist uprising. For the moment, most women's voices were silenced. But some still sought to continue the struggle.

Enlightenment, France, 18th century

William E. Burns

Ideas associated with the eighteenth-century Enlightenment – secularism and anti-clericalism, turning a skeptical eye toward tradition and custom in favor of the application of reason and expertise to public affairs, and, to a lesser extent, democracy – have played a prominent role in the history of revolutions and popular movements

both in the eighteenth century and later. This was not the intention of many of the European Enlightenment philosophers themselves, who benefited from the existing political and social system and wished to see it reformed, not overthrown.

Enlightenment philosophers, or *philosophes*, had diverse political views. Political reforms that found broad support included religious tolerance and the abolition of laws that infringed on personal liberty for religious reasons. *Philosophes* also usually favored a more equitable legal system, the abolition of “unreasonable” privileges, the creation of a freer economic market, a reorientation of monarchical culture toward care for the people rather than military glory or conspicuous piety, and the abolition of slavery.

The voluminous French *Encyclopédie*, published from 1751 to 1772, was the most characteristic work of the Enlightenment and set forth many of its principles. Conceived by its editors, the French *philosophes* Denis Diderot and Jean Le Rond d'Alembert, not as a mere reference book but as a major contribution to the progress of human society, it propounded a universal mission of Enlightenment to a predominantly French audience. The contributors, who included virtually all of the major intellectual figures of the day, were of varying political and religious opinions – some were quite conservative – but the dominant voice of the *Encyclopédie* was opposed to the existing order in church and state. In religion it was anti-clerical, strongly in favor of religious toleration, and in places anti-Christian, deistic, and even atheistic. In politics it supported the idea that governments and rulers should be evaluated by the degree to which they provide a better life for their people. Although some monarchs were praised, they were usually not praised for their victories in battle or their religious devotion, but for justice and concern for their subjects. Aristocrats were frequently contrasted unfavorably with the common people, as in the entry entitled “People.” Even cross-references were used to make political points – at the end of a short article on France which emphasized the country's flaws, readers were directed to articles on “Taxes” and “Toleration,” suggesting that high taxes and lack of religious toleration were harming the country.

Enlightenment Anti-Clericalism

The enlightened *philosophes* did not initiate anti-clericalism, which had a long history in Europe.

However, they elevated dislike and distrust of religious institutions into a political program. (Although the *philosophes* had some harsh words for priests and clerics, Enlightenment anticlericalism's chief targets were institutions, not individuals. Many *philosophes* themselves were Catholic priests or Protestant ministers.) Anticlericalism had revolutionary implications, given the strong and deep alliance between political and religious authority in eighteenth-century Europe and its colonies.

The ways in which the institutional power of churches, both Catholic and Protestant, made itself felt in people's lives and offended *philosophes* were legion, and extended from the cradle to the grave. Kings and other rulers claimed to derive their power from God, and all states were allied with official or "established" churches, although there was great variation in the amount of toleration different governments allowed to religious dissenters. Even in an "Enlightened" and tolerant country like England, which many *philosophes* admired for allowing different religious bodies to operate freely, political power was reserved for members of the Church of England. Churches dominated education throughout Europe, and many believed they filled students' minds with superstition rather than useful knowledge (although several French *philosophes*, including the arch-anticlerical Voltaire, benefited from the excellent schools run by the Jesuit order).

Marriage remained under the control of state churches, as did many other aspects of sexual life. For Continental European writers whose works even marginally challenged religion, censorship was a constant nuisance, and sometimes a great deal more than a nuisance. For taxpaying *philosophes*, Church tax exemptions were difficult to justify. Many *philosophes* were dramatists or lovers of the theater, and religious opposition to the drama prevented theaters from being established in some places. In Catholic countries actors had to be stigmatized even posthumously by being buried in unconsecrated ground. After struggling with clerical power all of his life, a *philosophe* could find even his deathbed was not safe from well-meaning Christians, clerical or lay, pressuring him for a last-minute repentance.

Religious toleration was central to the Enlightenment program. The killing or jailing of people for their religious views, whether in wars of religion or in persecution of dissidents, was

universally reprobated by Enlightenment thinkers. *Philosophes* attacked religious intolerance not only as an immoral assault on the freedom of the individual, but as socially and economically unproductive. Tolerant societies like Britain and the Dutch Republic, they pointed out, were also more prosperous, and France had never recovered from the loss of Protestant skilled workers and entrepreneurs following the Revocation of the Edict of Nantes in 1685.

By the time of the Enlightenment, large-scale religious violence was less of a problem than everyday discrimination throughout most of Europe. The last major European religious war was the Thirty Years War from 1618 to 1648, and violent persecutions were waning, although the brutal suppression of Protestantism in France was still in living memory in the first half of the eighteenth century. But despite the rise of *de facto* toleration in many countries and *de jure* in a few, no European state before the French Revolution renounced its alliance with a church or went beyond toleration to institute full religious equality.

In addition to intolerance and discrimination, many other aspects of clerical power, such as censorship, the repression of sexuality, and hostility to the theater, were targets of Enlightened wrath. Clerical control over sexuality in eighteenth-century Europe was not just a matter of ideology but was also institutional – church courts exerted authority over many sexual matters, such as marriage and "illicit" sex. Rejecting the traditional Christian suspicion of sex, Enlightenment thought challenged the prevailing sexual order in its secularity and emphasis on the positive aspects of sex.

Philosophes thought sexual and family life should be regulated, not by the precepts of the Bible or the Church, but by the laws of nature. Medicine and science were often invoked in place of religion as the proper guides in sexual matters. Sexual desire was treated as a natural phenomenon, and sex, particularly procreative sex, was innately praiseworthy. Refraining from sex was "unnatural," not spiritual. The hordes of celibate Catholic monks, nuns, and priests contributed to the crisis of underpopulation which many *philosophes* saw afflicting Europe. Celibates, male or female, were parasites on society in their refusal to participate in the creation of the next generation. To challenge wrong-headed ideas about sex, sexual matters had to

be openly discussed, but the writings of many Enlightenment philosophers were sometimes censored for their sexual content. (The ultimate extension of this was the euphemism by which pornographic works were called “philosophical books.”)

Male *philosophes* were more in agreement with religious authorities in their shared support for male domination and emphasis on procreation in marriage, but even in these areas the Enlightenment at least found new ways to express and uphold old ideas. *Philosophes* did not root male dominance in divine law but in the “naturally” different functions of the sexes. Woman’s natural function was domestic, as a wife and mother, while man’s was public. Sexual desire was as natural and praiseworthy for women as it was for men, particularly since sex led to motherhood, but though many male Enlightenment thinkers had affairs with married women and showed some sympathy for women trapped in unhappy marriages, few questioned the double standard – the idea that oaths of marital fidelity are more binding on women.

The cultural control exerted by Christian churches can be seen in their suppression of the theater in some areas – *philosophes* were involved in campaigns to establish theaters in the Calvinist strongholds of Edinburgh and Geneva – and the institutional censorship that prevented anti-clerical and anti-Christian ideas from open publication. The Catholic Church maintained an Index of Forbidden Books, which Catholics were supposedly allowed neither to read nor to own without permission of Church authorities. Although a few countries, like Britain, had abolished the most blatant forms of censorship, publishers of anti-Christian works were still vulnerable to attack under blasphemy laws.

The Attack on Christianity

Many Enlightened thinkers went beyond criticizing the actions of churches to challenging the philosophical basis of religion itself, particularly those religions they were most familiar with, Christianity and Judaism. The exact meaning of Voltaire’s famous slogan *écrasez l’infâme* or “crush the evil” is still debated, but it is most likely that the evil was Christianity. The radical phases of the Enlightenment represented the first open attack on the premises and institutions

of Christianity to emerge within a Christian culture. Unlike Martin Luther and his sixteenth-century contemporaries, the radical *philosophes* had come not to reform Christianity but to destroy it, whether they were Deists like Voltaire who believed in God but not revealed religion, or atheists like the baron d’Holbach who denied the existence of God.

Their attack was informed by a belief in science and the progress of knowledge. The Bible, they thought, was the superstitious work of ancient savages, far inferior to modern writings as well as to the works of the pagan Greeks and Romans. *Philosophes* emphasized the cruelty and barbarism of the tales of the Hebrew Bible – the Christian Old Testament – sometimes extending their condemnation of the barbarian Jews of antiquity to Europe’s contemporary Jewish population. However, the attack on the Old Testament was directed at Christians even more than religious Jews. Rather than being a source of morality, *philosophes* argued, traditional Christianity was its greatest enemy, substituting hatred of those of a different religion for the social bonds that should tie communities together, and through its encouragement of asceticism and celibacy, “unnaturally” depriving people of sexual pleasure and diminishing a kingdom’s natural rate of population increase.

Given the ideological role of Christianity in European regimes, monarchical or republican, the radical *philosophes’* attack on it was revolutionary in itself. If Christianity was not the foundation of modern regimes, then they had to seek support elsewhere, and justify themselves on the grounds of the good they did the people in this world. However, the Enlightenment critique of Christianity was limited by the Christian religious commitments of some *philosophes*, particularly in England, and by concerns of maintaining public order. Many anti-religious works were elitist, not intended to influence behavior beyond the literate upper and middle classes. No one expected ordinary workers and peasants to abandon Christianity. Some irreligious Enlightenment philosophers even explicitly endorsed religion as a way to regulate the behavior of the lower classes or women. They idealized purportedly nonreligious civilizations such as contemporary China or ancient Greece and Rome, whose governing elites did not share in the superstition of the people while not attempting to suppress it.

“Reason” and the Attack on Custom, Tradition, and Privilege

Eighteenth-century Europe was a complex structure of groups and classes claiming privileges on the basis of custom and tradition. The nobility possessed an enormous variety of social and legal privileges on the European continent, and even the vaunted British parliament was elected on a crazy quilt of franchises based on historic traditions rather than on abstract political logic. *Philosophes*, many of middle-class origin, attacked local traditions and privileges in the name of the universal values of reason and justice.

Aristocrats had many tax exemptions and formal and informal privileges in law. Vast areas of employment in the military, the church, and state administration were reserved for aristocratic men even in such “enlightened” states as Prussia. Although several *philosophes* themselves were members of the noble class, they pointed out the fundamental irrationality of a system whereby essential responsibilities were distributed on the basis of birth rather than ability. *Philosophes* also sometimes satirized aristocrats as know-nothings, as in Voltaire’s novel *Candide*.

Many *philosophes* supported radical reform of the judicial system, which in addition to upholding aristocratic privilege in many European states still admitted – and in some cases, relied on – evidence obtained by torture. *Philosophes*, including Montesquieu, Voltaire, and the Italian criminologist Cesare Beccaria, pressed – with some success – for the abolition of torture and moderation in the use of the death penalty. The protracted nature of legal proceedings was another favorite target. Many French *philosophes*, including Voltaire, attacked France’s hereditary magistrate class for being more concerned with its own privileges than with the administration of justice.

Despite their skepticism over the ability of the judiciary to produce justice, *philosophes* still preferred due process of law to arbitrary actions, such as the French king’s power arbitrarily to imprison subjects through *lettres de cachet*. Persons living under such arbitrary rule, whether or not they were personally affected by it, could not be free. Like their contemporaries, the thinkers of the Enlightenment employed a broader definition of “slavery” than that of chattel slavery. It was routine to refer to all that lived under arbitrary and despotic regimes as

slaves. Slavery in this general sense was the condition of most people, both in the eighteenth century and throughout history.

In the realm of economics, *philosophes* usually favored freedom and the abolition of those monopolies and privileges characteristic of early modern capitalism. The classic work of free-market economics, Adam Smith’s *The Wealth of Nations* (1776), argued that greater economic freedom would lead to more prosperity. The French school of economists known as the physiocrats also supported the removal of restrictions on trade. France at this time did not only present barriers to foreign trade, but even to domestic trade between different regions.

The most obvious example of entrenched traditional privilege, of course, was monarchy itself. *Philosophes* were split on their opinion. Given the omnipresence of monarchy, and the ineffectuality of Europe’s few remaining republics, it often seemed pragmatically best to accept kingship as an institution and work with monarchical reformers like Catherine the Great of Russia or Leopold of Tuscany. Monarchy was conceived of by reformers as the calling of an individual to work for the good of the people. However, there was also a strong republican strain in the Enlightenment, particularly conspicuous in the work of Rousseau. The ancient republics of Greece and Rome were admired, and the decline of the Roman republic in favor of the Empire was widely viewed as a political tragedy. The success of the American Revolution and the ability of the Americans to form a politically stable republic covering a large territory increased awareness of alternatives to monarchy in the late Enlightenment.

Enlightenment and Abolition

The *philosophes* participated in the creation of an ideological opposition to chattel slavery in the eighteenth century. Attacks on the misery of slaves and the hypocrisy and cruelty of those who exploited them or defended slavery were commonplaces of Enlightenment rhetoric from as early as 1721, when the French lawyer and *philosophe* Montesquieu published his *Persian Letters*. Some articles in the *Encyclopédie* denounced contemporary slavery, although others accepted it as a fact of life. *Philosophes* combined horror at slavery’s cruelty with the assertion that it violated the natural and inalienable rights which

slaves, like all human beings, possessed – the same rights that would be asserted in classic Enlightenment-influenced political documents, such as the American Declaration of Independence and the French Declaration of the Rights of Man. However, the *philosophes* of Europe never campaigned against slavery as vigorously as they did against evils which struck them as closer to home, such as religious intolerance or judicial torture. The American *philosophe* Benjamin Franklin, toward the end of his life, was an exception. Another American exception, in a different way, was Thomas Jefferson, who combined sympathy for the Enlightenment with owning slaves.

Although *philosophes* frequently attacked the enslavement of Africans in the Atlantic trade, denunciation of slavery was not always correlated with egalitarian ideas about race. The Scottish philosopher David Hume, among others, combined opposition to slavery with extreme views on black intellectual inferiority, comparing blacks who had acquired proficiency in European intellectual disciplines to trained parrots. Consistent with secularity, Enlightenment racists avoided biblical justifications for slavery or belief in black inferiority in favor of “scientific racism.” Thomas Jefferson’s assertion of black racial inferiority in *Notes on Virginia* (1785) rested wholly on secular, scientific arguments rather than appeals to biblical authority. Hume and other late eighteenth-century *philosophes* (particularly in Scotland) also laid greater emphasis on the pragmatic than the moral argument against slavery, claiming that it was economically harmful and that slave societies would not be as wealthy or productive as ones based on free labor. In *The Wealth of Nations* Adam Smith argued that slavery was a bad bargain for masters, as free labor, requiring less supervision, was ultimately cheaper.

Democratic Elements of Enlightened Thought

The Enlightenment as a whole did not look favorably on democracy. The uneducated masses could not be trusted with control of the state, particularly as they were under the influence of Christian churches. However, some Enlightenment thinkers, particularly Jean-Jacques Rousseau, had a more favorable impression of democracy, and many were willing to use democratic argu-

ments in their struggle against the traditional order.

Rousseau’s *The Social Contract* (1762) and some other Enlightenment books and pamphlets endorsed a democratic theory of authority that had revolutionary implications. *The Social Contract* dealt a blow at the hierarchically stratified class society of eighteenth-century Europe simply by explaining how people could live in society in an equal way. Rousseau argued that society is founded on an implicit contract between equal individuals, not between the people and a sovereign as earlier contractarian theorists such as Thomas Hobbes and John Locke had argued. The ideal society he presents is based on equality of rights among its citizens (although Rousseau strongly distinguished between the rights and functions of men and women) and obedience to what he defined as “the general will,” which is not always the will of the majority. Jean Meslier was another who distrusted the authoritarian monarchies of eighteenth-century Europe. His famous statement “Let us strangle the last king with the guts of the last priest” would be quoted many times by revolutionaries and atheists (and incorrectly attributed to Diderot).

The potential alliance of Enlightened ideas and democratic politics was first made clear in the class struggles of the independent republic of Geneva, which attracted the attention of Rousseau, a Genevan himself, and Voltaire. As in many of the republics of early modern Europe, political participation in Geneva was reserved to a hereditary class. A small minority of Citizens and Burghers monopolized the right to vote, an even smaller hereditary minority of Citizens monopolized political office, and in practice the town was dominated by a small oligarchy of allied and intermarried Citizen families. Voltaire and Rousseau were initially involved in Genevan politics on behalf of the Citizens and Burghers excluded from power by the oligarchy, and Rousseau’s *Social Contract* was banned by the Genevan oligarchs. Voltaire eventually took the side of the third group in Genevan politics, the vast and unenfranchised majority of the population known as Natives, and in doing so suggested that the broad range of men, at least in a Protestant city like Geneva, could be entrusted with the right to participate in politics. Although the class struggle in Geneva was eventually resolved in 1770 by a compromise between the oligarchs and the remaining Citizens and

Burgers against the Natives, the Genevan events pointed the way to more successful democratic revolutions in America and France.

Enlightenment Philosophers, Political Reform, and Revolution

Enlightenment philosophers endorsed different methods for achieving reforms depending on their political context. In the early eighteenth century, Enlightenment philosophers in the Anglo-American world usually supported reformism, working through the existing institutions of the British Parliament, although they recognized that the eighteenth-century British parliamentary system was itself a product of the Revolution of 1688.

Most continental European states lacked an equivalent of the British Parliament. Continental *philosophes* often put their faith in a strong, reforming monarch. Many French *philosophes*, including Voltaire, were believers in the *thèse royale* in French history, which emphasized the power of the monarch over other institutions and interests. Voltaire hoped that the monarchy could reform France against the entrenched interest of the nobility, the corporations, and above all the Church. (Others, such as Montesquieu, a hereditary magistrate himself, were more wary of monarchical power and hoped that other institutions like the Church and magistracy could be a check on it.) However, France, the center of the Enlightenment on the European continent, never had such a monarch in the eighteenth century. The minister Turgot attempted to put some Enlightened reforms, such as freer trade, into practice, but failed as a politician and was soon driven from office. “Enlightened despots” in other parts of Europe, including Frederick II of Prussia, Joseph II of Austria, and Catherine II of Russia, all received adulation from some Enlightenment philosophers, despite their incomplete adherence to the Enlightened program.

The position of Enlightenment philosophers toward the revolutionary alternative to a reforming monarch, minister, or parliament was fundamentally pragmatic, evaluating revolutions and movements on a case-by-case basis. The most extreme conservative position, denying the legitimacy of revolution under any circumstance, was not defended by *philosophes*, particularly since it was associated with conservative

churchmen. Nearly all endorsed the limited English revolution of 1688, which French “anglophiles” such as Voltaire and Montesquieu believed had helped usher in an age of personal liberty and freedom of expression and conscience in Britain. John Locke, whose *Two Treatises on Government* (1689) was commonly believed to be a theoretical justification of the Revolution of 1688, was widely admired as a political philosopher for deriving power from consent, rather than from the authority given by God. However, *philosophes* did not value revolution for its own sake nor did they believe it preferable to other methods of bringing about social change. They often condemned revolutionary movements, particularly when revolutions seemed to be driven by traditionalism and religion, like Pugachev’s rebellion in Russia. Other eighteenth-century revolutions, however, won Enlightened approbation.

The Enlightenment and the American Revolution

The paradigmatic “Enlightened revolution” was the American Revolution. Intellectually, the American revolutionaries were particularly influenced by Locke, the Scottish Enlightenment, and Montesquieu. The revolution was greeted with enthusiasm in Enlightened circles in France, an enthusiasm reinforced by the reputation of the rebellious colonists’ ambassador to France, Benjamin Franklin. Franklin already had a greater standing in Europe than any other American, and leading *philosophes* such as Voltaire accepted him as one of themselves.

American propagandists had begun their advocacy of the colonists’ cause by arguing in terms of the rights they were guaranteed under the “British constitution,” but the development of the Revolution in the direction of independence from Britain led to Enlightenment-influenced arguments about universal rights. The Declaration of Independence made universal statements about equality and rights that drew from the Deistic strain of the Enlightenment, referring to God by the non-Christian title of “Creator.”

As architects of a new form of government, the American founders drew on the Enlightenment belief in overcoming superstition and ignorance through reason and virtue. The influence of the Enlightenment on the American *naissance* can be particularly seen in the provisions of the

Constitution and Bill of Rights, which forbade religious tests for political participation at the federal level, ensured religious toleration, and proclaimed that America would not have a national established church. Although the new American society was far from egalitarian, it lacked the hereditary aristocracy and structure of inherited privilege characteristic of European states. The idea of the separation of powers and checks and balances in the American Constitution drew heavily from Montesquieu's *The Spirit of the Laws*, which had a particularly pronounced influence on the Federalist Papers.

The Enlightenment and the French Revolution

The relationship of the Enlightenment to the French Revolution is among the most vigorously disputed historical questions. Much of the Enlightenment program was put into place by the royal government either in the years preceding the Revolution or early in the Revolution itself. Enlightened reforms in the last days of the monarchy included toleration for French Protestants, greater freedom of the press, and moves to relax restrictions on internal trade.

The French Revolution, particularly in its radical Jacobin phase, carried Enlightenment ideas to a pitch that would in some ways never be matched – and most likely would have been viewed with skepticism by the *philosophes* themselves. The Declaration of the Rights of Man drew heavily on the Enlightenment in its universalism and for such specific ideas as “opening careers to talent,” religious toleration, and secularism. The remaining legal disabilities of Protestants and Jews were lifted and *lettres de cachet* abolished. Marriage was secularized, and divorce, forbidden by the Catholic Church, was legalized. Voltaire, and even more so Rousseau, were venerated by the revolutionaries. The privileges of the nobility and corporations were abolished. As the Revolution grew more radical, the old fantasy of the destruction of Christianity was for the first time made the goal of an official policy with “dechristianization” and the creation of new cults such as that of the Supreme Being and the goddess of reason. Monarchy was abolished in favor of an increasingly democratic republic, and slavery was also abolished.

The French revolutionaries made a far more thorough-going assault on tradition in the name

of reason than the Americans had ever considered. Weights, measures, and even the passage of time were rationalized with the creation of the metric system and a short-lived attempt to impose a decimal system of time reckoning. Space was rationalized, with the abolition of the historic provinces, with their different histories, traditions, and privileges, in favor of the new *départements*, made as geographically similar as possible and lacking any separate institutional history.

However, the French Revolution was also in part a revolution against the Enlightenment, against the privileged position of Enlightenment philosophers and institutions. Elitist institutions such as the French Academy, the Royal Academy of Sciences, and even the Freemasons were abolished as “aristocratic.” The revolutionaries did something that the Old Regime had never done, which was to persecute a major Enlightenment *philosophe*, the Marquis de Condorcet, to the point of death.

The Enlightenment's Legacy of Reform and Revolution

The political legacy of the Enlightenment, particularly in France, was shaped by the reception of the French Revolution. Enlightenment secularism and rejection of tradition were associated with the legacy of the Revolution, despite the historical fact that the *philosophes* had foreseen peaceable reform through rational dialogue rather than violent confrontation. The link between the Enlightenment and the French Revolution was also drawn in a negative sense, by the opponents of both. This connection was made by Edmund Burke's *Reflections on the Revolution in France* (1790). Burke, a sympathizer with the Enlightenment in its British version, linked the Revolution to the irresponsibility of French Enlightenment intellectuals, “the political men of letters,” and the folly of Enlightenment attacks on tradition and established institutions. Even in America, the reaction to the French Revolution led to the expression of hostility to many leaders of the Enlightenment, particularly those associated with the attack on Christianity.

The success of the American and French revolutions, and the conservative reaction to them in Britain itself, helped radicalize much of the British Enlightenment, particularly in England. The American revolutionaries' rejection

of the vaunted British constitution helped shatter political complacency. There was a new awareness of the constitution's potential for corruption and tyranny. The French Revolution showed the potential for revolutionary change, even in a reactionary monarchy, and inspired some, including the Enlightened Dissenting Protestant ministers Joseph Priestley and Richard Price, to suspect that the Second Coming was at hand. (The combination of millenarian and Enlightened ideas was not unusual in England.) Priestley, Price, and their fellow Enlightened Dissenters rejected the many ways in which they were discriminated against in favor of Anglicans. They increasingly linked equality for Dissenters with parliamentary reform. The association between the Enlightenment and revolutionary or reformist movements led to the conservative reaction against the French Revolution in Britain also becoming a reaction against the Enlightenment. Mob violence and increasing repression forced Priestley into exile in the United States. A massive "English Jacobin" movement inspired by Thomas Paine was unable to accomplish a genuine social revolution in Britain, but Enlightened intellectuals like William Godwin called for revolutionary changes along French lines and even beyond. Godwin called for the abolition, rather than the reform, of established institutions in the name of a social order of perfect rationality.

In the nineteenth and twentieth centuries Enlightenment revolutionary concepts merged into broader revolutionary and progressive traditions. Religious toleration and the "career open to talent" were shibboleths of nineteenth-century liberalism. Religious "freethinking," a common characteristic of many reformers and revolutionaries in the nineteenth century, drew on the Enlightenment critique of religious authority and Christianity. Enlightenment materialism, social science, and "political economy" were constituent elements of Marxism. Distinctively Enlightenment inspiration can be discerned in a variety of revolutionary movements and regimes. Militant secularism has been found not only in Marxist revolutionary societies like the USSR and the People's Republic of China, but in non-Marxist states ranging from Kemal Atatürk's "revolution from above" in the Turkish Republic, to the "Cristero wars" of early twentieth-century Mexico, and in revolutionary cultural movements like China's May 4th movement. Rationaliza-

tion and standardization are also Enlightenment bequests to the revolutionary tradition.

Enriquillo and the Taíno revolt (1519–1533)

Viviana Uriona

Enriquillo was also known as Chieftain Guarocuya. His father died in a Spanish raid against a peaceful protest by indigenous people in Jaragua, Santo Domingo, ordered by Governor Nicolás de Ovando in 1503 while the Indians were celebrating a peace agreement. The orphan was raised in a monastery in Santo Domingo, where he was given the name of Enrico. One of his mentors was Bartolomé de Las Casas. Enriquillo rebelled against the Spaniards from 1519 to 1533.

Enriquillo, born approximately in the year 1496, was heir to the Nitainato of Bahoruco, one of the five major kingdoms that existed on the island at the time of Columbus's arrival. The friars taught him to read and write and to use grammar. He spoke good Spanish. According to the custom of the spiritual monastery, Enriquillo married his cousin, Taina Mencía. She was the daughter of Princess Higuemota, daughter of Queen Anacaona and Cacique Caonabo. The Taíno people, native to Hispaniola Island, were abused as slaves on sugar plantations beginning soon after the arrival of Christopher Columbus.

In 1519, Enriquillo became tired of the system of slavery and the injustice toward his people. In addition, a dispute over whether their "owner" abused Mencía escalated, and the couple decided to leave in rebellion for the rugged mountains of Bahoruco. In the first half of the sixteenth century several revolts took place, the most famous one in 1522. Enriquillo (Guarocuya) remained at war against the Spaniards on either side of the mountains of Bahoruco, jumping the estates of the settlers, capturing their weapons, and repelling their attacks.

After fighting for 14 years, he signed a peace agreement with the envoy of the king of Spain, General Francisco Barrionuevo, in 1533. The agreement called for freedom and a free territory for the Taíno people, the elimination of the *encomienda* system, and non-payment of taxes to the crown. Cacique Enriquillo settled in the area of Yucateque von Boya, known today as the province of Monte Plata. The indiscriminate killing and mistreatment of Indians by the Spaniards, as well as diseases brought from Europe and the agreement signed with the indigenous Taínos, forced the settlers to "import" and enslave people from Africa to continue with the construction of the colony. It is alleged that the cacique died from tuberculosis in 1533 at about the age of 40. The tribe became extinct because of epidemics and diseases introduced at the end of the sixteenth century.

Environmental protest, United States, 19th century

John Robert Henris

During much of the nineteenth century, rural communities resisted new emerging discourses of wilderness, conservation, and preservation enacted upon them by corporate, municipal, state, or federal authority, as well as by intellectuals and other elites. Such protest to changing perceptions and management of the environment manifested itself most ubiquitously in the form of resistance to conservation law through legal challenges or by more subversive means like trespass, poaching, and timber theft. Less commonly, municipal, corporate, state, or federal challenges to traditional use of natural resources among local communities manifested itself in more violent interactions including sabotage, rioting, assault, arson, and even murder. Nineteenth-century environmental protest dealt less with ecological degradation, though there was protest against such instances, and more commonly with questions concerning which individuals or entities had the right to incorporate natural resources, manage, or limit access to nature.

An emerging consciousness of a conservation ethic among farmers, intellectuals, sportsmen, and business elites emanated from transformative social, agro-ecological, and economic change in New England and neighboring states between 1820 and 1860. Soil exhaustion, industrial growth, and urban expansion, particularly in New England, led to a growing awareness that nature's bounty was finite and natural resources would need to be conserved or managed. The emerging conservation ethic thought this could only be done through scientific management and, consequently, that local communities were incapable of managing their own interactions with nature or conserving natural resources for the common good. Similarly, a growing sense of nationalism agitated cultural exploration for a singularly American expression of identity rivaling the long histories

of European nations. Consequently, Americans began to perceive the wilderness areas as natural monuments rivaling the historic architectural accomplishments of Europe. Tragically, this emerging discourse of wilderness created perceptions among elites of nature as untouched by human interaction regardless of the fact that all such landscapes had been managed by Native Americans or communities of European heritage under traditional subsistence regimes or ideals of common right for generations. An emerging conservation ideology that marginalized pre-existing communities and their traditional interactions with nature led to various forms of protest among local communities from New England to the Pacific Northwest between 1830 and 1900.

During the 1830s, rural landowners challenged municipal authority to control natural resources as New York City sought clean water through the construction of the Croton reservoir and aqueduct system north of the city. Although only a handful of Westchester farmers' lands were directly affected by the Croton water project, a number of residents resisted selling their lands, petitioned Albany for redress, or threatened legal action. Though anxiety in Westchester never culminated in more visible signs of protest, there was, nevertheless, a burgeoning conservation ethic over what entities would control water inherent in the reluctance of residents to embrace the Croton project. In challenging, even tentatively, the municipal authority of New York City to incorporate water at the expense of local communities, Westchester residents were invariably grappling with issues of sustainability. The incorporation of water for industrial and urban use brought more pronounced forms of protest against the commodification of nature in nineteenth-century New England.

In New England, protest over the incorporation of water rights at the expense of traditional local ideals of common use became particularly virulent between 1830 and 1850. The incorporation of water under the Waltham-Lowell system for the running of textile mills fomented resistance among rural communities and farmers in the Merrimack Valley and Winnepesaukee Lakes region of New Hampshire. Like the Croton project in neighboring New York, rural residents in New Hampshire became increasingly hostile toward the incorporation of water, a natural resource they perceived as being harnessed

for the economic benefit of Massachusetts textile mills at the expense of their own common right. Unlike the Croton project, however, the Waltham-Lowell system created much more substantive environmental and ecological disruptions as well.

Water control infrastructure, most notably dams, damaged fish habitat, disrupted traditional waterborne routes of transportation or commerce, and, most significantly, resulted in the flooding of farmers' fields. Of all these offenses, the raising and lowering of water levels, and corresponding submerging of neighboring hay fields, elicited the most virulent protest. During the first half of the nineteenth century, natural river hay still provided the agricultural foundation for yeoman farming, and the potential destruction of such mowing fields brought increasing resistance to the water companies. Although instances of legal action and isolated occurrences of vandalism abounded in the 1830s and 1840s, increasing tensions between corporate water monopolies and rural communities culminated in protest in September of 1859 when local residents attempted to destroy the dam at Lake Village, New Hampshire. Such militant forms of protest were fairly isolated; however, they were indicative of increasing conflict over the gradual erosion of common right and challenged whether outside authority had the right to control or monopolize natural resources like water in nineteenth-century New England.

During the second half of the nineteenth century, competing ideologies of conservation and preservation increasingly found common ground in constructing legal boundaries constraining how local rural communities used nature as well as physical boundaries, of which the creation of state forest reserves and national parks became the principal enduring manifestations. Particularly in northern New England, new fish and game laws came into being and were meant to reign in perceived environmental depredations by local communities while encouraging the development of sport fishing, hunting, and tourism for outside elites. One fundamental enduring belief of nineteenth-century conservationists and preservationists was that locals, be they farmers, trappers, woodsmen, Hispanic ranchers, or Native Americans, were incapable of managing nature in their own communities. Local communities for their part viewed the proliferation of game and fish laws and the creation of forest

preserves and national parks as an assault upon traditional subsistence practices or communal ideals of common right. In the Northeast, resentment became outright protest during the formation of the Adirondack Forest Preserve during the last quarter of the nineteenth century.

Initially organized in 1885, Adirondack attained new status as a state park in 1892, subsequently leading to a number of oppressive conservation laws restricting the use of timber, fish, and game located on public lands. As in northern New England, local residents thought outside legislation of lands traditionally managed by common right to be an impediment to traditional subsistence activities and engaged in forms of protest, most notably poaching and timber theft. Trespass became an increasingly common form of protest, as private parks owned by wealthy outsiders sprung up in the Adirondacks, limiting traditional public access to game and fishing locales. In 1899, arson became an expression of protest against conservation laws limiting local access to game, timber, or the right to burn fallow agricultural fields for the coming planting season. Such spectacular displays of protest against those who had the authority to manage nature or infringe upon communal ideals of common right continued into the first decade of the twentieth century. Local protest to conservation laws limiting access to nature was by no means unique to Adirondack Park. Similar cycles of trespass, timber theft, and poaching challenged outside authority by communities that found themselves enclosed within the boundaries of the Superior National Forest during the first decade of the twentieth century.

Just as the incorporation of water in New England for industrial usage inundated river meadows and upset traditional agro-ecological cycles for many New England farmers living along the Merrimack River, the incorporation of forests in the Pacific Northwest upset traditional Native American subsistence patterns. During the second half of the nineteenth century the Sinkyone people of Northern California resisted the incorporation of redwood forests by private lumber companies. The destruction of traditional means of subsistence in the forests and the fouling of salmon runs forced the Sinkyone to raid the neighboring cattle herds of European settlers to compensate for the destruction visited upon their streams and forests by large-scale lumbering. Similarly, the rapid spread of mining in

California following the discovery of gold in 1849 led to widespread ecological damage in the following decades. Objection to such rampant environmental degradation in the form of injunctions against the disposal of mining debris in streams came only in 1884, when the accumulation of mine tailings and eroded topsoil washed downstream into San Francisco Bay and threatened to impair navigation.

West of San Francisco, and decades before Yosemite National Park became renowned for its early twentieth-century conflict between John Muir and Gifford Pinchot concerning the Hetch Hetchy Dam, indigenous people protested ecological change and infringement upon their perceptions of common right in the 1880s. Citing instances of destruction of roots, berries, and nuts by cattle and horses brought within park boundaries, the Yosemite people contended they could not subsist themselves as outsiders invariably destroyed the foundations of traditional food-gathering regimes. In the late 1880s the Yosemite petitioned Congress addressing such concerns; however, depredations continued and Yosemite became a National Park in 1890. After 1890, the Yosemite people continued to resist the incorporation of their lands, under the guise of the conservation movement, by illegally hunting deer in the Merced and Tuolumne watersheds within park boundaries. Under federal authority park officials vigorously resisted challenges to their management of wilderness by bringing in the US cavalry to police park boundaries and protect game. Despite such measures, park officials complained of rampant poaching by the Yosemite people as late as 1897.

Of all the parks and reserves created by nineteenth-century state or federal legislation, the incorporation of Yellowstone National Park in 1872 created the most varied protest from a culturally diverse group of rural communities challenged by outside regulation of nature within its boundaries. Native Americans, townspeople, ranchers, and frontiersmen all felt traditional subsistence practices or common right to natural resources were challenged by the increasingly militant enforcement of park game and timber laws. Despite increased enforcement of game and timber laws, with the assistance of US cavalry, Native American groups continued to exert their traditional hunting rights within the park's boundaries, at least seasonally, into the 1890s. On more than one occasion, such challenges to

federal authority over who controlled nature led to potential conflict, and settlers killed several members of a Bannock hunting party attempting to exert their traditional hunting rights in July of 1895 near Jackson Hole, Wyoming.

In the last decade of the nineteenth century, settlers residing in new communities surrounding Yellowstone National Park increasingly found their traditional perceptions of common right and access to nature within park boundaries challenged by federal authority as well. Like the Native American communities they displaced, local townspeople, frontiersmen, trappers, and hunters challenged park laws by means of poaching, timber theft, and occasional instances of violent confrontation with park officials. By the final decade of the nineteenth century, Yellowstone National Park became the principal expression of conservation ideology. As a park founded upon the emerging discourse of wilderness, there was no place for human activity within park boundaries, except of course for tourism, an activity that favored upper-class elites at the expense of local communities and Native Americans. Furthermore, park policies designed to limit access to nature confirmed another fundamental tenet of nineteenth-century conservation ideology, namely that local communities were inherently incapable of managing nature and, in fact, posed a threat to the preservation of wilderness as well as the management and conservation of natural resources. As in other regions of the United States, marginalized communities responded to the loss of traditional conceptions of common right with what can only be construed as a particularly local form of environmental protest toward nineteenth-century conservation ideology.

EPL Maoist guerilla movement

Raina Zimmering

The Popular Army of Liberation (EPL) was formed by a group of students in 1967 as an armed branch of the Marxist-Leninist Communist Party of Colombia (PCC-ML). A Maoist splinter group of the Communist Party of Colombia, it was born out of the differences between the pro-Soviet and the pro-China groups. Espousing a Maoist political ideology, it endorsed the concept of a prolonged popular war, with the aim of disposing of the Colombian government and erecting a socialist state.

The first operations of EPL, including sabotage and armed actions, took place in the region of Córdoba and the Caribbean coast at the end of the 1960s. At the International Conference of Marxist and Leninist Parties in 1975, the EPL followed the line of the Labour Party of Albania. Internal dissent and the death of some of its key leaders during the 1970s weakened the EPL's operational capabilities. In 1979, continuing dissent within the EPL led to the formation of the Pedro León Arboleda Movement, a splinter group named for an EPL leader slain in 1975. This group remained active as an independent organization into the 1980s. In 1984 the EPL, along with the guerrillas FARC-EP and M-19, signed the "Acuerdo de Uribe" under President Belisario Betancur. Nevertheless, all attempts at legal organization were destroyed in the brutal war waged by the army and paramilitary groups formed by right-wing sectors of the government and major political parties, parts of the army, drug traffickers, and large landowners. Among the victims was EPL leader Ernesto Rojas, killed in 1986.

In response the guerilla groups decided, in association with the Ejército de Liberación Nacional (ELN) and some smaller groups, to build the Simón Bolívar Guerilla Coordination (CGSB) group and reinforce the armed struggle. In 1987 the EPL had 3,500 militants and four military fronts. Its principal area of operations was in the rural regions of the departments of Antioquia, Córdoba, and Risaralda. It also maintained urban support networks in big cities.

In 1991 President César Gaviera concluded a peace agreement with the EPL, who demobil-

ized 2,000 armed and unarmed members. They founded the Esperanza, Paz y Libertad (Hope, Peace, and Liberty) party and some EPL leaders became members of parliament. Some of the EPL's demobilizing members joined the DAS Rural (Rural Administrative Security Department) and paramilitary groups that were responsible for a series of homicides against the civil population and members of the Communist Party and the Unión Patriótica (UP), especially in Urabá in the province of Antioquia. The splinter group Dissident Line (Línea Disidente) declined the agreement and continued the armed struggle. The leader of the EPL, Francisco Caraballo, was detained in 1994 and condemned to 29 years in detention. At the age of 71 and in poor health, he was released in April 2008.

The EPL declined in numbers and presence. It faced attacks by the military and paramilitary as well as the FARC. In 2008, the number of EPL armed troops was probably lower than 300.

EPR (Ejército Popular Revolucionario)

Sophie Sarah Esch

The Popular Revolutionary Army (Ejército Popular Revolucionario, EPR) is a Marxist-

Leninist guerilla force operating in various federal states of Mexico, predominantly in the marginalized south and center. Since its appearance in 1996, the EPR has drawn attention with coordinated, violent attacks on state officials and institutions, the latest reportedly in July and September 2007, when pipelines of the national oil company PEMEX were blown up. Scholarly interest in the EPR has remained very low, however, and the EPR has been viewed with mistrust even by leftist sectors of Mexican society.

The EPR: Emergence and Development

The EPR made its first public appearance on June 28, 1996 at the commemoration of the Aguas Blancas massacre in the state of Guerrero, Mexico. During the ceremony, which mourned 17 peasants killed a year earlier by the police, uniformed, hooded women and men with assault rifles appeared, read a manifesto in Spanish and Nahuatl, and fired 17 shots into the air for the murdered peasants.

The EPR was subsequently dismissed as a “pantomime” across the board, and then perplexed the public with simultaneous attacks in several states on August 28 and 29, 1996, which left over 15 people (mainly soldiers and policemen) dead. Their armory and strikes in various provinces at once changed the public's conception of the EPR, and the government responded with a massive deployment of troops and roadblocks, as well as with the intimidation, torture, and detention of supposed EPR members or sympathizers.

In the following years the EPR continued to engage in a few armed encounters with the military, and various splinter groups emerged. The Revolutionary Army of the Insurgent People (ERPI), which concentrates its activities on the rural regions of Guerrero, appeared in 1998, the Popular Villista Revolutionary Army (EVRP) in 1999, and the Revolutionary Armed Forces of the People (FARP) in 2000.

In 2006 the EPR was alleged to have been involved in the Oaxaca conflict, which the Popular Assembly of the Peoples of Oaxaca (APPO) denies. Nevertheless, on May 25, 2007, two EPR members disappeared in Oaxaca City: Gabriel Alberto Cruz Sánchez (also called Raymundo Rivera Bravo) and Edmundo Reyes

Amaya. The EPR is convinced that they were abducted by federal and Oaxaca state security forces and has demanded ever since that they be returned alive. On July 5 and 10, 2007, PEMEX pipelines exploded in the states of Guanajuato and Querétaro, and then on September 10, 2007 in Veracruz and Tlaxcala, attacks for all of which the EPR claimed responsibility, demanding the return of their disappeared. The explosions caused considerable economic damage, as over 2,000 businesses were left without oil and gas supplies. Meanwhile, the government of President Calderón denied that there were any forced disappearances under its administration. However, since April 2008, the EPR and the government have been considering negotiations and in June 2008 a mediating commission started work (Fazio 2008; Montemayor 2007).

No reliable current information can be found about the possible social basis of groups of the EPR (the rural Loxicha region in Oaxaca and the Huasteca region in the states of Hidalgo and Veracruz are mentioned sometimes; Guerrero used to be mentioned before the ERPI emerged), nor about its current number of members. In 1996 the EPR proclaimed that it financed itself through kidnappings and bank robberies, a practice which it asserts to have abolished since 2000 (Bruhn 1999: 32; Gil Olmos 2008).

EPR's Origins and Political Scope

In its *Aguas Blancas Manifiesto* (1996), the EPR declared that the political and social situation in Mexico had not changed since Genaro Vázquez and Lucio Cabañas had taken up arms in the 1960s in Guerrero. It called for the overthrow of the “anti-democratic government,” claiming the armed fight to be a “legitimate and necessary resource” against the “institutionalized violence” of the Mexican state. Concerning its origins, the EPR related that it “emerged from the sadness of orphans and widows, from the absence of loved ones who have disappeared, from the pain of the tortured” as well as “from the social situation which kills daily through repression, misery, hunger, and illness.” According to the EPR and its political arm, the Popular Revolutionary Democratic Party (PDPR), the group emerged from two organizations dating back to the 1960s: the Revolutionary Clandestine Workers’ Party–People’s Union (PROCUP) and parts of Lucio Cabañas’s Party of the Poor (PDLP).

On its webpage the EPR–PDPR explains that its historical objectives are to take over political power and to establish a dictatorship of the proletariat. Although the EPR intends to overthrow the government, it often refers to elections and voting – this simultaneity of armed and unarmed action has caused confusion about its political program. The EPR tried to reach out to the public by means of a webpage and a smoother, less radical discourse, including poems. However, according to Bruhn (1999: 29–31), it is due to the EPR’s poor understanding of the media and its frequent resort to violent action that it has failed to gain either greater media coverage or public moral or material support.

The EPR and EZLN

The EPR has never managed to attain broad public support, as the Zapatista Army of National Liberation (Ejército Zapatista de Liberación Nacional, EZLN) was able to do at certain times. In 1996 the EPR offered its support for the EZLN, which the EZLN resolutely rejected. The Zapatistas disapproved of the EPR’s presence in Chiapas and its emergence during a delicate phase of peace talks between the EZLN and the Zedillo government. In a communiqué addressed to the EPR on August 29, 1996, Subcomandante Marcos declared that the EZLN was not going to fall into the trap of being divided into a “good” and “bad” guerilla, but stated that the EZLN was struggling for democracy, liberty, and justice, not, as the EPR was, for power. In all the years of their existence, the EPR and the EZLN, to a large degree, have remained aloof from each other.

Equiano, Olaudah (1745–1797)

Srividhya Swaminathan

The publication of *The Interesting Narrative of the Life of Olaudah Equiano, or Gustavus Vassa, the African* in 1789 created an instant sensation in London and contributed significantly to the movement to abolish the British slave trade. Though not the first of its kind, the narrative of Equiano’s experiences of being captured and sold into slavery, along with the eloquence of the expression, provided definitive proof of the intellectual capacity of the African. Equiano embarked on an extensive book tour throughout the British Isles that both established his personal fortune and brought awareness of the movement to abolish the slave trade to the remote parts of the kingdom.

According to his narrative, Equiano spent the early part of his life in Guinea in an area he called the “Eboe.” At the age of 11, he and his sister were captured and sold into slavery. The harrowing description of the march to the coast and the middle passage aimed “to excite . . . a sense of compassion for the miseries which the slave trade has entailed” (Equiano 2003) and

This 2007 British postage stamp attests to the importance of Olaudah Equiano in the history of anti-slavery protest. Thanks to the efforts of men like Equiano, Anthony Benezet, Thomas Clarkson, and William Wilberforce, the slave trade was abolished in Britain in 1807. (Stamp designs © Royal Mail Group Ltd. Reproduced by kind permission of Royal Mail Group Ltd. All rights reserved)

may or may not have been true. Recent scholarship has called into question the validity of Equiano’s recounting of his African childhood based on a baptismal record and a naval roll muster that state his place of birth as Carolina (Carretta 2005). The details he recounts could have been garnered from his own participation in the slave trade and from conversations he would have had with other slaves coming from Africa.

Regardless of this early uncertainty, readers in the eighteenth century and today cannot contest the validity of his experience with slavery. Equiano’s horror at plantation slavery and the cruel instruments used to “muzzle” slaves provides a strong counterpoint to the idyllic childhood he describes. He was sold to a Lieutenant Michael Pascal who renamed him Gustavus Vassa, a tongue-in-cheek moniker first belonging to a Swedish king who liberated his people from the oppression of the Danes. During the seven years of service to Pascal, Equiano witnessed

many naval engagements in the Seven Years' War, learned to read and write, and converted to Christianity, which he thought the only positive event in his experience with slavery. He believed his loyal service to Pascal would be rewarded with manumission; instead, he was seized and put on a West India trader and eventually sold to the Quaker merchant Robert King. Through his own canny business sense, Equiano was able to parley his trading voyages for King into a profitable side venture that netted him enough money to buy his own freedom. In 1766, as a free-man, Equiano journeyed to London to try and establish himself in a trade. Over the next 20 years he had several positions in London and continually returned to the sea, which enabled him to make important contacts with abolitionists in England and the United States. Equiano's experiences with slaving made him acutely conscious of the position of both the enslaved and the black poor in London. He made the acquaintance of Granville Sharp and became involved in the Sierra Leone scheme intended to repatriate London's poor blacks to territory in Africa. Unfortunately, poor management and unscrupulous investors doomed the scheme to failure and Equiano became one of its most vocal critics. Next, he focused his energies on critiquing the slave trade, calling on his past experience as a slave and as a sailor on a slaving vessel. His autobiography became a staple of abolitionist propaganda in England and the United States and remains an important exemplar of the African slave narrative.

Escuela Moderna movement (The Modern School)

Stephen Leberstein

Model schools for working-class children, embodying principles of rationalism, co-education, and “moral” upbringing, were an important project of the anarchist and anarchosyndicalist movement in the two decades leading up to World War I. At the time secular public education was not yet secure in much of Western Europe, and many on the left saw public schools as training grounds for nationalism and the barracks. The model schools would demonstrate the superiority of a “rational” education, provide a much-needed resource for working-class families, and produce “new people,” the cadres of a future libertarian society.

One of the first such model schools was La Escuela Moderna, or the Modern School, which opened its doors in Barcelona, Spain in 1901. Its founder, Francisco Ferrer y Guardia (1859–1909), was a libertarian who lived in exile most of his adult life in Paris. Implicated in a republican plot in 1886, Ferrer fled Catalonia for France and soon became involved with free thinkers and such working-class radicals as Charles Malato, Sébastien Faure, Jean Grave, and others. Though he participated in the 1896 London Congress of the Second International as a delegate of the Parti ouvrier français, he sided with anarchists in decisive votes.

The idea for the model school grew out of the anarchist ferment of the 1890s. In 1897, Jean Grave, editor of the anarchist weekly *Les Temps nouveaux*, organized a committee to raise funds for a model school embodying libertarian principles. Soon thereafter, the Ligue d'enseignement libertain, or the Libertarian Education League, was created specifically to found such a school. Two of Ferrer's collaborators, Manuel Degalvès and Emile Janvion, explained the school's philosophy as the opposite of that of the state schools, which offered “the ultimate training for servility.” An anarchist school, organized around rationalist principles, would teach the example of the oppressed struggling for their freedom (Degalvès & Janvion 1897: 1–2).

Ferrer, who earned his living in Paris as a teacher and tutor of Spanish, came into a small

fortune when one of his wealthy students died suddenly in 1901. He lost no time in returning to Barcelona and organizing the school, which opened its doors in October 1901 to welcome 12 girls and 18 boys in its first class. As Ferrer later explained, “the most promising form of revolutionary action consist[s] in giving the oppressed, the disinherited, and all who are conscious of a demand for justice, as much truth as they can receive, trusting that it will direct their energies in the great work of regenerating society” (Ferrer 1913: 20).

When one of the school’s workers was arrested in a plot to assassinate the Spanish prime minister in 1906, the authorities closed the school temporarily. By that time, La Escuela Moderna had enrolled only about 300 pupils. But if Ferrer’s anarchist colleagues were right, 147 similar “rational” schools had opened in the Spanish provinces by 1905, and Barcelona alone in 1908 counted ten such schools with 1,000 pupils. Similar model schools were operating by that time in France and elsewhere, notably Sébastien Faure’s La Ruche at Rambouillet near Paris.

Whether or not the Modern Schools actually threatened the Spanish state, the authorities believed that they did, as their anarchist proponents claimed. Following the call-up of reservists to suppress a Riff rebellion in Morocco in July 1909, Barcelona workers soon revolted and a full-scale insurrection resulted. Government troops fought to suppress the uprising during the “Tragic Week,” the last week of July 1909.

Although Ferrer was abroad most of the spring and returned to Barcelona in June only to care for a dying relative, and in fact stayed at his farm well outside the capital during the insurrection, he was nevertheless arrested on charges of instigating the events there. Clerical authorities pressed the military to make an example of him, and he was court-martialed, summarily convicted, and sentenced to death in August. In October 1909 he was executed by firing squad at Montjuich Prison overlooking Barcelona.

Ferrer’s execution made him a martyr throughout the West. Major demonstrations against the Spanish government broke out in European capitals as well as in New York. The Paris police estimated that more than 100,000 demonstrators besieged the Spanish embassy and a number of fatalities were reported.

Modern Schools based on Ferrer’s Barcelona experiment sprung up in other countries in the

wake of his execution. The Ligue internationale pour l’éducation rationnelle de l’enfance (International League for the Rational Education of Children) had already been established in 1908 to promote Modern School methods. A Francisco Ferrer School opened on St. Mark’s Place in New York City in summer 1910, and after several moves finally settled in Stelton, New Jersey, where it survived as a school and anarchist colony until 1958 (Boyeson n.d.; Zigrosser 1918). In 1910 Emma Goldman and Alexander Berkman founded a Francisco Ferrer Association to promote the movement of Modern Schools. The one in New York was a gathering place for Goldman, Berkman, Elizabeth Gurley Flynn, Upton Sinclair, and artists such as George Bellows, John Sloan among other Ash Can School artists, as well as Man Ray and other Bohemian artists, writers, and followers. About 20 other Modern Schools and related anarchist colonies were scattered around the US, in California, Utah, Michigan, New York, and elsewhere (Avrich 1980/2005).

Estates General, France

Mark Anthony Phelps

The Estates General was a French parliamentary body created in 1302 that served primarily

to approve royal taxation. It was composed of representatives from three elements of society, the clergy (the First Estate), the nobility (the Second Estate), and the rest of society (the Third Estate). Prior to 1789, the last Estates General was called in 1614.

The financial crisis facing France in 1789 was enormous. Interest on loans to cover the expenses of the Seven Years War and the War of the Austrian Succession was still being paid, and then there were yet more loans as France financed the Americans in their War of Independence. An estimated 50 percent or more of the government's budget was devoted to paying war debt. A disastrous harvest in 1788 further reduced royal income and led to widespread unrest among the people. After failing to win approval from the elite for taxation upon their wealth in the course of meetings of the Assemblies of Notables in February 1787 and November 1788, Louis XVI called for convening the Estates General. The conventions that met to choose representatives to the Estates General were also permitted to submit lists of grievances, the *cahiers de doléances*, which the king pledged to address in his perceived political role as the father of the nation.

The official opening of the Estates General was on May 5, 1789. The total number of representatives was 1,139, with 291 belonging to the First Estate, 270 to the Second, and 578 to the Third. During the course of the conventions, the *cahiers* drawn up by the regional committees called for serious changes. Most significant were nearly universal demands for creating a constitutional monarchy to replace France's absolute monarchy. The Enlightenment ideas of Locke, Montesquieu, and Rousseau permeated the suggested solutions to problems.

In the conventions, representatives of all three Estates, spurred on to some extent by riots triggered by food shortages in 1788, agreed to a reduction of the king's powers, but the extent of proposed limitations of royal power varied considerably. Initially, many of the more liberal ideas were espoused by aristocratic delegates. As the food-shortage riots spread, however, some of the aristocrats began to fear that the violence would affect all members of their class, causing them to strengthen their allegiance to the king. The First Estate, the clergy, was the least cohesive of the orders, because there was a large social

gap separating the wealthy high-level members of the church hierarchy from the impoverished parish priests. The members of the Third Estate comprised a wide variety of backgrounds and interests, but most were aware that they could seize this moment to erase the privileges of the other two Estates and bring social justice to the members of their class. In some exceptional cases, members of the first two orders were elected as representatives of the Third Estate, most notably the clergyman Sieyès and the nobleman Mirabeau.

A sense of destiny expressed itself in a flood of literature produced between the calling of the Estates General and its actual opening, as authors attempted to influence public opinion and the opinion of the representatives with regard to a wide variety of political ideals and practical needs. Because it was an institution rarely called, the protocol of the Estates General was not solidly established. Traditionally, the members had voted by Estate, meaning that there were three votes, with the First and Second Estates combining to trump the vote of the Third. Debate prior to the convention centered upon the possibility of a one-vote-per-delegate system, thus giving the Third Estate a weight in the assembly more commensurate with the numbers of people it represented.

After enduring ceremonial slights at the opening of the Estates General, the Third Estate's delegates declared that they would not be credentialed (meaning the Estates General was not in session) until the other two Estates agreed to allow each individual one vote. Because the three orders were meeting separately, the Estates General was in limbo.

Meanwhile, agitation in Paris for the cause of the Third Estate grew, thanks in great part to Mirabeau's widely circulated daily reports. On June 17 the Third Estate, with some representatives from the impoverished segment of the politically fragmented Second Estate, met and voted to establish themselves as an independent body of the true representatives of the nation. (It would later name itself the National Assembly.) A separation of powers had been declared, as a legislative body came into existence.

Three days later delegates to the Third Estate, finding themselves locked out of their meeting place, assumed that it was an attempt

by the king to silence them. They went to a nearby tennis court and swore an oath to the people alone, and swore not to adjourn until a new national constitution had been created. This event, enshrined in the annals of French national tradition as the Tennis Court Oath, is, together with the storming of the Bastille, one of the great symbolic acts that initiated the French Revolution.

The stalemate was soon broken, as the Third Estate delegates were joined by most of the clerical delegates as well as some of the more liberal of the aristocratic delegates. The full Estates General met on June 23 and began to formulate the legal basis of a new state. The production of a new constitution, together with the Declaration of the Rights of Man and the Citizen, remade French society into one without class distinctions sanctioned by law, and a society in which law stemming from the will of the people was equally supreme over all its inhabitants.

Rather than solving the short-term financial crisis for which it was called, the representatives of the three Estates tackled, and began the process of resolving, an age-old social, legal, and political problem. A constitutional monarchy representing a classless population replaced institutions rooted in medieval privilege and responsibility. But the Revolution had only begun to unfold.

ETA Liberation Front (*Euzkadi ta Askatasuna*) and Basque nationalism

Andrew Dowling

The lands that form the Basque territory, known in the Basque language as Euskal Herria, have been, since the 1950s, the location of Europe's longest lasting violent conflict. In spite of periodic ceasefires, the radical Basque organization Euzkadi ta Askatasuna, more widely known as ETA, is Europe's last active home-grown terrorist organization. For its supporters, ETA is the latest in a long line of expressions of resistance to centralizing and homogenizing trends that have been led by Madrid. The historically formed discourse of resistance that prevails within the Basque nationalist movement evokes an ancient culture that has been preserved through the ages, citing the apparent failure of Roman, Visigoth, Arab, and other invaders to overcome them. The Basque people speak a language that is non-Indo European and are almost certainly the longest continuously remaining linguistic community on European soil. By the early modern period, the territory had come to form part of both the French and Spanish states, though the Basques managed to maintain a relative autonomy until the nineteenth century, though concomitant developments brought about by modernity became a major challenge. Basque alienation from Spanish liberalism, with its increasing centralizing trends, was expressed through support for the ultra-conservative and Catholic movement known as Carlism. Basque Carlism fought in two Spanish civil wars in the nineteenth century and their ultimate defeat in 1876 led to the abolition of the historic local rights and charters of the Basques, recognized by successive Spanish kings, known as the *fueros*. The abolition of these *fueros* would remain a major grievance in the twenty-first century as they are considered to be the early political expression of Basque autonomy.

The emergence of heavy industry in the Basque Country in the late 1870s, centered around iron, steel, and ship-building, led to large-scale Spanish-speaking immigration and the formation of a Basque nationalist movement.

This movement appealed to small farmers and urban middle-class sectors who felt that industrialization and immigration were direct challenges to their way of life. The Partido Nacionalista Vasco, the PNV, was formed in 1894, and combined hostility to Spanish immigrants with the defense of Basque identity and Catholicism. The PNV slowly expanded in influence in the following decades. Moderate and pro-independence wings also emerged in the party and hostility towards Spanish immigrants became less pronounced within the PNV by the time of the Second Spanish Republic in the 1930s. Though remaining conservative and Catholic, Basque nationalism sided with the secular Spanish Republic (1931–9) as it promised autonomy to Basque territory. This was finally achieved in October 1936, with the Spanish Civil War (1936–9) already underway. However, the territory of Navarre narrowly rejected joining this Basque autonomy, where Basque nationalism remained weak and loyalty to Carlism found its last redoubt. This fracture in what Basque nationalists saw as the national homeland would continue throughout the twentieth century and beyond.

The defeat of the Spanish Republic in the Spanish Civil War and the victory of ultra-right wing Spanish nationalism led by General Franco would see an attempt to eliminate Basque cultural and linguistic identity. For the Basque populace, this represented a cultural genocide. The Franco regime prohibited all public manifestations of Basque culture, including the language, and proscribed all Basque organizations, whether trade unions, party political or cultural. The Basque Country, like the rest of Spain, was subject to a ruthless repression in the 1940s. The longevity of the Franco dictatorship (1939–75) had a profound effect on Basque nationalism, in particular with the PNV unable to mount a major challenge. Driven underground or working in exile, oppositional activists in the Basque Country had little real effect until the 1950s. In 1952 a grouping of middle-class nationalist students, without adult experience of the Civil War, founded a clandestine cultural organization called EKIN. EKIN briefly formed part of the PNV's youth section called EGI, but in 1959 EKIN split with the PNV and formed a new organization, Euzkadi ta Askatasuna (ETA), meaning "Basque Homeland and Freedom." In its early years, ETA simply continued the cultural work of EKIN. However, an ever-growing anxiety at

the continued repression of Basque identity saw its rapid radicalization as the 1960s progressed. ETA became the inheritors of pre-Civil War radical nationalism, including groupings from the 1920s such as Aberri and Jagi-Jagi. In its earliest stages, a strong Catholic and anti-communist component was found in ETA and it was not until 1962 and the organization's first assembly that a shift to the left could be discerned.

Between 1900 and 1975 a tripling of the Basque population took place and this demographic change directly impacted on the politics of the country. The late 1950s and the 1960s saw profound transformations in the economy of the Basque Country and led to a new wave of Spanish-speaking immigration. This renewed pattern of immigration led to an intensification of social conflict, as the newly arrived workers often faced appalling living and working conditions. A growing discontent led to increased strike activity and one of the largest major strikes which took place in the post-1939 period in the Basque Country was that of 1963. The first group of ETA leaders came from within the Basque urban middle classes and remained ambivalent towards this Spanish immigration, fearing a further dilution of Basque identity. However, it was this second wave of industrialization, and the emergence of new clandestine organizations representing organized labor, that produced a new sociology of opposition. Francoist repression led to a commonality of experience among Spanish workers and rural and urban Basques. ETA would be transformed by these developments, both strategically and ideologically. From the late 1960s until the late 1970s, the Basque Country became the terrain of opposition to the dictatorship. At certain points in these years, half of all labor protest throughout Spain was Basque in origin.

As ETA evolved and grew over the course of the 1960s, the organization became increasingly influenced by the international discourse of protest that emerged from Algeria to Cuba. The organization argued that the Basque Country was an occupied country and that Spain was the colonial power and that a strategy of revolutionary war should be adopted. For many, the response of the Franco regime confirmed this "colonial" analysis. The Franco regime was a highly effective though unintended promoter of Basque nationalism. In 1965, in ETA's Fourth Assembly, it declared itself to be socialist, and a

movement of “revolutionary nationalism.” ETA became increasingly subject to ideological dispute over the relationship between laborism, Third Worldism, and nationalism. The wider European context and the ever growing prominence of Vietnam saw increasingly fractious conflict over revolutionary socialism and nationalism, while others argued that a Third Worldist anti-colonial position could be not be applied to an industrialized country in Western Europe. These theoretical disputes often overlapped with the question of the use of armed struggle. Advocates of the prioritizing of class struggle usually gave greater importance to non-military, political programs. Those who advocated these “political” strategies would ultimately leave the organization, and ETA became more ideologically rigid and uncompromising. As would be repeated throughout ETA’s history, moderate voices left or were expelled and advocates of armed struggle emerged strengthened.

It would not be until the early 1970s that ETA would embark on a full-scale strategy of urban and rural guerrilla warfare against the dictatorship. The 1960s saw the organization adopt an incremental use of violent acts until ETA became fully committed to armed struggle against the regime. ETA’s first major use of violent direct action was in 1961 when it derailed a train carrying Francoist veterans of the Spanish Civil War. This event and the regime response to what it termed an act of sacrilege would see the organization increasingly use direct action against the Spanish police and military, termed the “forces of occupation.” The Franco regime’s disproportionate repressive response to ETA actions, with widespread arrests and often savage police brutality against those arrested, became an effective recruiting sergeant for the organization. ETA equally thrived on a culture of martyrdom and the dictatorship continued to be willing to provide Basque nationalist martyrs until its very end. Though not yet engaged in guerilla war, ETA increasingly engaged in bombings of symbolic targets, from Francoist monuments to buildings seen to represent regime dominance. Once violence as strategy was adopted, ETA would go on to kill over 800 people, mostly police and military figures, though since the 1990s, ETA’s range of “legitimate” targets expanded considerably. Significantly, 80 percent of ETA’s victims took place after the death of Franco in 1975.

ETA’s first killing was not premeditated. Rather, an attempted arrest of a leading ETA activist, Txabi Etxebarrieta, in June 1968 led to the shooting dead of a Spanish police officer. The ETA member himself was later shot by police and he became ETA’s first martyr. A before and after in the trajectory of ETA had begun. Thus ETA began to apply the “action-reaction-action” formula, inspired from other colonial struggles, in which it was argued that provocative assaults on state representatives of coercion would cause the Franco regime to increase repression. This increased repression would in turn create a new spiral which would ultimately cause a mass uprising of both workers and nationalists in the Basque Country. The organization, which had been preparing for some time a military escalation in the conflict, put into practice this strategy in a carefully planned operation in August 1968 when it shot dead a senior police chief in San Sebastian, a figure widely believed to be closely implicated in the use of torture on Basque suspects. This killing led parts of the Basque Country being declared in a state of emergency and there were hundreds of arrests, a by-product being a further growth in the organization. The turn to armed struggle also led to renewed internal debate in ETA’s leadership over future strategy and whether the organization should continue with violence. This heightened already existing factionalism in the organization around the axes of labor and nationalism. A wave of arrests of ETA members in 1969 only accentuated these disputes. The vehemence of the Francoist response where even the small numbers of liberties permitted under the dictatorship were suspended only aided the growth of the organization. ETA increasingly attained both national and international prominence as the symbol of opposition to the Franco regime.

The Burgos trial of December 1970, in which 16 leading ETA activists were charged with murder and sedition, brought opprobrium on the dictatorship, as international attention revealed how the event bore all the hallmarks of a show trial. The Franco regime, unusually, was forced to respond to the international protest and the six death sentences meted out were commuted. ETA scored an important propaganda victory, though regime leniency was not repeated. ETA’s most dramatic moment came with its assassination in December 1973 of Franco’s chosen successor and prime minister, Admiral Luis

Carrero Blanco. ETA not only demonstrated great organizational capacity but shook the Franco regime to its core.

While ETA escalated its violence, the organization remained subject to fissiparous tendencies. For periods in the 1970s, two and at times three organizations used the ETA name. By the early 1970s all ETA factions were firmly wedded to versions of socialism, and dispute within the organization centered on the relationship between political activity and the military wing. This mostly tactical division led in October 1974 to the largest split in ETA's history and to the formation of two organizations, ETA-Militar and ETA Político-Militar, the latter initially being the much larger organization. Police, military, and security service frustration at ETA's continued activity led to increased shoot-to-kill policies and rogue elements within the security services assassinating ETA members as the action-reaction-action spiral reached new heights. What became known as the dirty war continued into democracy and had long-lasting implications for the continuation of ETA's campaign of violence. The final year of the Franco regime saw a renewed spiral of violence and ever-fiercer repression, culminating in September 1975 with the execution of two ETA members, and three from another violent group, which produced massive protests outside Spanish embassies throughout Europe. In what has been termed the agony of Francoism, all was testament to the isolation and widespread revulsion at the dictatorship.

In the post-1975 period, as Spain moved from dictatorial regime to liberal democracy, ETA's violence escalated. The Basque Country remained the location of major contestation with ever-increasing numbers of strikes. In March 1976 police shot dead five workers in Vitoria, which led to a one-day general strike. This was followed by the biggest strike ever seen in the Basque Country in September 1976. The years 1977-8 saw the largest cycle of violence since the Civil War. While Spain was engaged in the construction of a new democratic polity, ETA violence reached ever greater heights, with police and the military barely subject to democratic control. Extra-judicial killings of protesters and suspected ETA members enabled ETA to argue that nothing had changed in its fundamentals and that Spain continued to be the source of Basque oppression. Strikes, protests, and ETA attacks dramatically increased in this spiral. The ever-

powerful Spanish military, whose self-image was that of the guardians of Spanish national unity, became subject to more numerous attacks. Furthermore, Basque alienation during the Spanish transition went beyond ETA supporters, with the referendum on the new Spanish Constitution of 1978 not being supported by a revived PNV that advocated abstention. While electoral politics and amnesties for political prisoners seemed to satisfy the wider Spanish opposition in the transition years, the Basque Country remained beyond pacification.

Between 1975 and 1980, 38 people were killed by police and mercenaries. In these years the Basque Country was the most violent territory in Western Europe after Northern Ireland. ETA's continued violence against the security forces post-Franco caused the threat of military coups to loom large and threatened the consolidation of the democratic system in Spain. Provocative killings by ETA of senior military figures culminated in the coup attempt against Spanish democracy in February 1981. In January 1979 over 3,000 extra police had been sent to Basque territory as the situation continued to spiral out of control. The following year was the most violent yet, with ETA killing over 90 and the organization also demonstrating a higher level of technical competence as a smaller number of military actions were carried out than in previous years. The wider deterioration was made worse by the growing economic crisis that hit Basque territory as deindustrialization and rocketing unemployment, including very high youth unemployment, accentuated social conflict. While both ETA organizations continued with their violence, ETA Político-Militar experienced increasing political pressure from its own political organization to abandon the armed struggle. This led to a rupture in the organization with many members joining ETA-Militar, which by this period had become known simply as ETA. Shortly afterwards, ETA Político-Militar abandoned armed struggle and gradually incorporated itself into the mainstream political system.

The Partido Nacionalista Vasco had reemerged post-Franco as the dominant political force and came to dominate Basque autonomous institutions. The restoration of a Basque autonomous parliament in 1979 did little to stem the tide of violence and was a further demonstration that the Basque political situation was more fraught than anywhere else in Spain. The question of

Navarre and its exclusion from the process was a major source of grievance in radical nationalist sectors. Ill-treatment and torture of detainees has been a continuing feature in the Basque landscape and Amnesty International has repeatedly condemned these practices. Since the early 1980s the Basque Country has experienced low-intensity conflict, with ETA unable to demonstrate militarily the capacity it showed between 1977 and 1980. Rather, ETA extended its range of targets to non-military sectors, including the regular assassination of drug dealers. The organization also targeted a nuclear power station in Basque territory, which led to its closure in the summer of 1982. By the 1990s, political representatives of both major Spanish parties, the PSOE and the PP, were also increasingly killed. While a markedly smaller organization, ETA and the Basque question remained a constant feature for Spanish governments of all hues in the post-Franco era.

In the autumn of 1982 the landslide victory of the PSOE seemed to offer a brief opportunity for peace. However, failure to end ETA's campaign led to a renewal in the dirty war under the socialists between 1983 and 1986, with the emergence of the shadowy GAL organization, which killed 27 suspected members of the organization and others which bore no relation to it. Once again, the Spanish state seemed to confirm the worst fears of important sectors of Basque society. Though significantly reduced, a hardened and battle-scarred ETA remained. As a consequence of its reduced military capacity, ETA increasingly came to use car bombs from the mid-1980s, often leading to civilian casualties through garbled or unheeded warnings. A turning point in this campaign was the Hipercor bombing in Barcelona which killed 21 civilians, the largest number of such deaths the organization has ever caused. The Spanish tourist industry has also been repeatedly attacked. The increasing number of attacks outside of the Basque Country proper was part of a deliberate strategy to take the war to "the enemy," as well as a belief that violence in Basque territory had less media impact.

ETA's post-1980 peak in killing was in 1991 when it killed 45. Since then, rocked by ever more frequent arrests of members and its leadership, in most years ETA has been unable to reach double figures in terms of those it has killed. However, ETA, through the assassination of

soft targets such as politicians, has remained a central actor in the politics of Spain. Its base of support has also markedly declined, though a significant sector of Basque society of between 10–15 percent is prepared to support political organizations which justify the armed struggle. Radical sectors in Basque society have also taken the struggle into the street, in what is known as *kale borroka*, in part inspired by the Intifada. As peace negotiations faltered in the 1990s, Spanish judicial authorities extended their prosecutions to radical political sectors and have closed newspapers, cultural organizations, and any believed to be part of the "ETA world." This process culminated in the banning of political organizations that do not explicitly condemn violence. In 2002 the main radical Basque political party, Batasuna, was proscribed. These proscriptions, arrests, and imprisonments have partly contributed to the continuation of ETA in the first decade of the twenty-first century, with radical Basque political culture feeling itself to be under assault. The status of Basque prisoners has been an ongoing source of grievance. In mid-2008 there were over 700 ETA prisoners in Spanish jails and Spain's policy of dispersing prisoners throughout the country and not allowing them to serve their sentences in Basque territory has been a continued source of discontent to wide sectors of Basque society.

Since the death of Franco in 1975, attempts to bring an end to the violence have been made. Phases of informal negotiations led by the UCD, the PNV, and the PSOE have failed due to the unbridgeable gap between the demands of ETA on the question of Basque self-determination and the unwillingness of Madrid to countenance such measures. ETA first declared a short ceasefire in January 1989, which permitted negotiations in Algeria with representatives of the Spanish government. The failure of this process led to the ceasefire being broken three months later. In part influenced by the Irish peace process of the early 1990s and the position of the IRA, ETA declared an end to military hostilities in September 1998. This led to negotiations with representatives of the conservative Spanish government in May 1999. However, positions on both sides remained beyond compromise and ETA returned to violence in November of the same year. ETA then embarked on its biggest offensive for ten years and between January 2000 and August 2002 it killed over forty individuals,

including politicians. ETA subsequently suffered a series of arrests of major figures within the organization and was seriously weakened. Furthermore, in the post-9/11 period, ETA increasingly resorted to non-fatal attacks: fatalities caused by the organization since 2002 amount to a total of 12. In an increasingly unpropitious climate for political violence, ETA declared a “permanent ceasefire” in March 2006 and began negotiations anew with the socialist government. However, the continued arrests of Basque activists during this period led ETA to explode its biggest ever bomb at Madrid airport in late December 2006. In spite of two civilian deaths as a direct result of this action, the organization declared its ceasefire to be in place and for a short period negotiations resumed with Spanish government representatives. In early June 2007 ETA announced its ceasefire was over and that its campaign of violence would resume “on all fronts.”

Ethiopia, Revolution of 1974

Aaron Tesfaye

Ethiopia is an ancient polity. The modern Ethiopian state, unlike most African states, is an indigenous institution that goes back centuries. This institution, after emerging in the highlands of Axum, disintegrated into a dark-age period (1769–1855) known as *Zemene Mesafint*, or the era

of the Princes. In the late nineteenth century, efforts to reconstruct the state were made by a series of emperors, Tewodros I, Yohannes IV, and Menelik II, culminating in the modern state and consolidation of power under Emperor Haile Selassie (1930–74), who was overthrown during the Ethiopian Revolution (1974–7). However, state power was usurped by the military, which allied itself with the Soviet Union and ruled Ethiopia with an iron fist (1977–91). This regime did not solve Ethiopia’s multifaceted economic, national, and regional problems but exacerbated them. In 1991, the Ethiopian People’s Democratic Revolutionary Front (EPDRF), an umbrella group composed of many nationalities, and its ally, the Eritrean People’s Liberation Front (EPLF), defeated the regime. Eritrea subsequently declared its independence in 1993, and in 1995 the EPDRF established in Ethiopia a federal form of governance based on ethnicity.

The modern nation-state of Ethiopia was partly realized by Emperor Menelik (1889–1913) at substantial cost to the inhabitants of contemporary Ethiopia. This included the colonization of Eritrea by the Italians in around 1882 and subsequent forays into the empire, as well as the conquest or reconquest of the southern and western parts of the country. The penetration of state power into the conquered regions was facilitated by three instruments. The first was the *rist*, a lineage system of land ownership that allowed highland Abyssinian soldiers to settle on land grants. The second was the Amharic language, *Lisane Negus* (the king’s language), which was adopted by indigenous peoples because it afforded protection in claiming rights that others enjoyed in core areas. The third was Christianity, which was spread throughout the country by the Coptic Church, which ministered to the needs of the settlers and converted the indigenous peoples. In the nineteenth century, with the introduction of firearms, the balance of forces favored Menelik, who emerged victorious and proceeded to assimilate various cultural groups – often by force or through intermarriage – creating in the process a multi-ethnic nation. Menelik was the architect of the centralized Ethiopian state. He ended the tradition of roving capitals favored by past emperors and founded a center in Addis Ababa. To consolidate state power, a strong monarchical administrative system was created by the appointment of governors who were mostly, but not always, highland Shoan Amhara. Thus,

by the time Emperor Haile Selassie arrived on the scene, cultural categories had gelled, more or less, and the empire had been centralized.

The *Ancien Régime* and Modernity

Normative scholarship on state–society relations in Ethiopia during the *ancien régime* of Haile Selassie has tended to inflate the monarch at the expense of the people of Ethiopia, depicting him at the center attempting to modernize an ancient society. This fusion of the monarch with the state has made objective distinctions difficult. Yet discrimination is important because it contributes to our understanding of state power and its relationship to the ancient class system and, by extension, to the Ethiopian Revolution of 1974–7. In Ethiopia, the major contradiction in state–society relations arose because of the grafting of a relatively advanced modernizing political structure – a modern state, a standing army, a uniform fiscal and tax system that laid the groundwork for the rationalization of the economy, the setting up of similar administrative and judicial practices throughout the country – upon an ancient class system with a backward economy. Thus while Ethiopia, under Emperor Haile Selassie, did not exactly resemble the absolutist states of Europe during their transition from feudalism to capitalism, the state grew under the shadow and influence of imperialism and shared broad contours with its European counterparts. This contradiction between old society and new state and the insertion into a global economy were to prove fatal to the *ancien régime*.

The foundation of Haile Selassie's political power was the ancient Ethiopian class system, which was rural and based on the Ethiopian aristocracy and landed gentry. However, this foundation, although firm, was by no means solid and varied over time as hereditary rulers in various regions overtly or covertly contested the emperor's rule. Therefore, soon after his coronation, in 1930, the monarch began to consolidate state power by strengthening central rule and expanding an independent source of revenue, which was achieved through the 1931 Ethiopian Constitution that provided the legal and ideological framework for countering several centrifugal regional forces. The constitution aimed at eliminating the personal power base of the nobles by tightening the legal reins on hereditary rule. It provided a statutory basis for what was

to become a *de facto* situation: all power emanated from the center in the form of temporary and revocable delegation.

Thus the constitution served to facilitate increased centralization of political power. In addition, Haile Selassie implemented and effectively established the beginnings of a modern bureaucracy with the division of the country into 32 *ghizats*, or provinces. Although the emperor's political and economic policy was interrupted by the Italian occupation of Ethiopia (1935–41), it was to prove somewhat beneficial to the state as it weakened regional bosses and laid the groundwork for communication and transport between the regions and the outside world. In turn, this link of the ancient polity with the global economy in the postwar years had two consequences. First, as a result of the Addis–Djibouti railway, built in the 1920s, the highland region experienced a boom in development at the expense of other regions and ethnic groups. Second, whereas connection with the world economy helped to modernize the state apparatus and had an influence on social formation – i.e., the evolution of a nascent bourgeoisie – regional disparities in endowments began to emerge, exacerbated by the discrimination of the state against some regions leading to constant strife and to open peasant revolts.

The Empire Strikes Back

The postwar years in Ethiopia were marked by resistance to central authority. Taking advantage of the fact that the state was in transition, several regional groups, particularly the Tigrayans in 1943, rebelled against centralism, but unrest was also acute in Bale Harar and Sidamo. The grievances of Tigray had a long precedent: it was not only a center of the ancient Abyssinian kingdom of Axum, but was also, early in its modern history, an important region. Ever since 1889, the relationship between the state and Tigray had been antagonistic, with the former attempting social control and the latter seeking autonomy. The outcome of this strong opposition to the state under Haile Selassie was the Woyane Rebellion of 1943, led by the Tigrayan aristocracy, which was crushed by a coalition of the central government and British forces. The Tigray and other revolts of the period resulted from the abuse of state power by the central authority: most regions were ruled by loyal appointees, mainly

though not always outsiders, who could be counted on to bring law and order and collect taxes. In 1955, the Ethiopian constitution was revised. It proclaimed several civil rights, instituted elections, established a parliament, and made other reforms. But the constitution had no teeth. It was hobbled by several procedures and appeared to preserve the initiative and absolute authority of the emperor. It is conceivable that the constitution was prepared to ameliorate the coming federalism with Eritrea. But the arrangement was doomed from the start because of a mismatch between the emperor's plans for a unitary Ethiopia and Eritrean ambitions for independence, which began in 1961.

During this period the province of Gojjam also rebelled against central authority. The rebellion has roots in the postwar years when the province was rocked by agitation because of its marginalization. Gojjam had a strong group identity, partly formed through its contribution of strong resistance leaders during the Italian–Ethiopian War. But the spark igniting the rebellion was the 1968 Agriculture Income Tax, whose collection was implemented ruthlessly. Also during this period, Oromo nationalism was on the rise. The Oromo, among the largest ethnic groups in the country, populated a large region in Ethiopia producing most of the nation's commercial crops and containing most of its industrial establishments. At the turn of the century, traditional Oromo leaders held power under the highland Abyssinian system of indirect rule. Some had become able Ethiopian generals under Menelik, helping expand the empire. Eventual intermarriage between prominent Oromo families and the Abyssinian aristocracy and royalty began a trend toward assimilation among the leaders. However, for the majority of the Oromo, the situation was different. Land belonging to peasants and pastoralists was appropriated by political elites. As a result, the Oromo were relegated to positions as wage earners in the industrial belt of the highlands. In addition, Oromo representation in educational establishments was minimal and upward mobility was curtailed. Thus proletarianization and discrimination contributed to class as well as ethnic consciousness among the Oromo, leading to nationalism and the emergence of the Oromo Liberation Front (OLF).

In 1963 the southern region of Bale too was in open rebellion. This region, ethnically composed of Somali and Oromo, is mostly Muslim,

bordering on Somalia and the contested region of the Ogaden. The inhabitants of this region felt discriminated against due to land grabs by the highland nobility that were condoned by the state. The rise of towns and commercial farming removed peasants from their plots and displaced pastoralists and livestock along the Awash River. The Bale revolt soon connected to Somali irredentism and the Ogaden question. It progressed through a myriad of intricate ethnic alliances and long periods of unrest in the 1970s, until it was finally quelled by the state through a combination of co-optation and force.

The Ethiopian Revolution: An Urban Breakthrough

The Ethiopian Revolution of 1974 was essentially an urban breakthrough and a reaction by the masses to the ancient class system. The nascent Ethiopian bourgeoisie, which had attempted to take up commercial agriculture, and the peasantry did not prove to be a force for change. The task was undertaken by the urban petty bourgeoisie and the rising militancy of the working classes. In the mid-1960s students at Haile Selassie I University formed the most radicalized sector of society in Ethiopia. While the class background of students is by and large difficult to determine, it is safe to say that they came mostly from the Ethiopian petty bourgeoisie, that is, from urban families – traders, clerks, policemen, or low-level government employees. Previous generations of university students were for the most part reactionary. Their room and board was paid for by the state, and upon graduation they were guaranteed job security as the economy could still absorb them. While some from this generation supported the brief 1961 palace coup by the imperial bodyguards against the emperor, they were for the most part reformist. But the new generation were firebrands. They were highly conscious of the conditions of the masses and were connected with the anti-colonial and anti-imperialist struggles of African, Latin American, and Asian peoples. They were in solidarity with radical African students who had come from the colonies and were attending classes at the university – some under Haile Selassie scholarships. They were well versed in the works of Marx, Lenin, Mao, Fanon, and Guevara. They formed a university-wide student union, then a national union of university students.

On several occasions in the late 1960s they organized student marches with the slogan "Land to the Tiller," leading to pitched battles with the police, arrests, and at times outright murder of student leaders. After the "Christmas Massacre" when the imperial army stormed the university and killed many, some student leaders were forced into exile while others went underground. The movement reorganized itself and waited for a *causa belli*, which arrived in the form of high oil prices. Externally, the OPEC (Organization of Petroleum-Exporting Countries) oil crisis of the early 1970s raised gasoline prices in urban centers in Ethiopia and precipitated strikes by Addis Ababa taxi drivers. The discontent spread to involve students, trade unionists, and the military. Internally, the realities of the great famine of 1973 were exposed. The government's inability to cope with the famine and its attempt to hide the truth sealed the crown's fate. However, even before the oil crisis and the famine, discontent among the urban middle class and petty bourgeoisie was rife, particularly among the latter, as it could no longer be absorbed into the backward economy. In 1973 the beleaguered crown announced the formation of a caretaker government, led by Prime Minister Aklilu Habte Wolde. This quickly gave way to another government led by Endalkachew Makonen, who resigned in August 1974. In September of the same year the military, as the only well-organized force in the nation, calling itself the Provisional Military Administrative Council (PMAC), ascended to power and arrested the emperor, who was later to die in prison in mysterious circumstances.

The Ethiopian Revolution was swift and, at the same time, a slow process. It was swift in that the mass uprising caught out the *ancien régime*, the military, and the various clandestine revolutionary organizations such as the Ethiopian People's Revolutionary Party (EPRP) and the All-Ethiopian Socialist Movement (MEISON, its Amharic acronym). At the same time, the revolution took a long time: although it erupted in 1974, the actual seizure of power by the military did not occur until about 1977. The creeping coup to dispose of Haile Selassie went through a series of alliances with a variety of civilian revolutionary organizations, resulting in subterfuge and competition for power. The revolution began in 1974 with a series of mutinies by the military stationed at Nagale in the south, and

later by other military divisions in Eritrea and elsewhere with demands for salary increases. The military were joined by teachers and students, who went on strike demanding higher pay, land reform, and the scrapping of the World Bank-inspired structural adjustment program of Ethiopia's education system. This was soon followed by demonstrations by urban Muslims to demand their democratic rights, including the right to own land. But the final straw was the strike called by the Confederation of Ethiopian Labor Unions (CELU), which threw the country into turmoil.

The Ethiopian Revolution can be divided into three broad periods: a period of euphoria and populism; a period of political confrontations and struggle for power; and a period of consolidation and institutionalization of power.

The First Period (1974–1975)

The first period of the revolution (1974–5) was populist, characterized by euphoria. The PMAC courted the general public by touting *Ethiopia Tikdem* (Ethiopia First) and *Hibbretesebawint*, described as involving selflessness, a degree of equality, and the supremacy of the common good. The PMAC also announced that it was committed to Ethiopian territorial integrity. Thus, soon after assuming power, the PMAC stepped up the war in Eritrea under the slogan of Ethiopian unity. During this period the PMAC arrested, prosecuted, and executed leading members of the nobility and the bourgeoisie, numbering between 22 and 24 persons. While the Ethiopian left, including the EPRP and MEISON, welcomed the demise of the *ancien régime*, it split over whether to support the military as a progressive force that would deepen the march to socialism, or to oppose it as a reactionary force and an enemy of the Ethiopian masses.

The PMAC soon announced its National Campaign for Development through Cooperation (*Zamacha*), which involved some 60,000 university and other students being sent to the rural areas of Ethiopia to spread the objectives of the revolution. In March 1975, the PMAC proclaimed the long-awaited program of land reform. Henceforth all rural land was nationalized by the state, and the size of landholdings and their use were set by guidelines. Tenancy and wage labor, except on state farms, were abolished. Thus in one stroke the PMAC destroyed the power base of the feudal landowning classes. One aspect of land reform was the creation of

peasant associations, which were each allotted holdings of between 200 and 500 hectares. But there was no vanguard party to lead the way and state capacity to implement the reform was absent. The PMAC had inherited Haile Selassie's bureaucracy and there was much foot dragging. In some rural areas, conservative and cautious Ethiopian peasants did not know what to make of the *Zamacha* students, who were attempting to organize them according to Marxist and Maoist theories.

The Second Period (1975–1977)

The second period (1975–7) was characterized by political confrontations and struggles for power. In this period the country descended into total chaos. The military regime, now calling itself the Derg (Committee), was threatened both by internal forces – the Ethiopian Democratic Union (EDU), adherents of the *ancien régime*, mostly in rural areas, the EPRP and MEISON, and the Eritrean liberation fronts – and by external enemies. Somalia, which had invaded Ethiopia, fought for its own survival. Ultimately the military regime, with Cuban and Soviet assistance, emerged victorious from the Ogaden War with Somalia and ruthlessly quelled the rebellion in Eritrea. But victory came at a tremendous cost, and there was a deep rupture in state–society relations. In this crucial period the course of future events was determined. The urban left, mainly the EPRP and MEISON, entered into a protracted struggle for power. The EPRP held the view that only a vanguard party could deepen the Ethiopian Revolution and that the military was by nature a reactionary force. It began to infiltrate the *Zamacha* organization, CELU, and the Provisional Office of Mass Organizational Affairs (POMOA), established by the military in 1976 to spread its ideology. MEISON, on the other hand, held the view that the military could be used as a vehicle to further the revolution and began to critically support it. The debate between the EPRP and MEISON was carried on in their official newspapers and pamphlets and revealed key fundamental differences in their definitions of democracy and the way to achieve socialism.

In February 1975, the Derg announced the nationalization of the nation's industries and appointed military participation in management, declaring a wage freeze in order to fight inflation and finance regional wars. In this process it

neglected the interests of the CELU, which went on strike to demand higher wages and democratic rights. The Derg's response was vicious: union leaders were killed or imprisoned, the organization was dismantled, and a parallel organization, the All-Ethiopian Trade Union (AETU), was created. But radicals who had infiltrated the CELU struck back, assassinating AETU's leaders in protest against the military's policy. The radical intelligentsia were becoming a major thorn in the side of the new regime.

Late in 1975, faced with tremendous problems in implementing the land reform, the Derg issued additional directives on the legal standing of peasant associations, their duties and responsibilities, and the establishment of future agricultural cooperatives. This was quickly followed by the nationalization of urban land and an estimated half a million urban houses and apartments, with the establishment of *Kebelles* or urban dwellers' associations. These urban and rural organizations were to serve as organs of state power and used to increase the capacity of the state to penetrate and control Ethiopian society. In addition, the nationalization of urban land and rental houses was designed to eliminate the opposition, mainly the landed element, gain legitimacy, consolidate power, and placate and win the support of the politically active population in the urban areas.

During this period the Derg, wedged between powerful left organizations, the EPRP and MEISON, had no choice but to abandon its reformist agenda and commit itself, at least in theory, to socialist ideology. It announced a Program of National Democratic Revolution (NDR), which outlined the path to socialist transformation. Radicals from the Yekatit 66 ideological school and POMOA as well as the Politburo, which included the left, had been established as an advisory political body to formulate and flesh out the vision of the revolution. The NDR pointed to the primacy of class struggle. It extolled the masses, and their allies the military and the progressive petty bourgeoisie. The military thus sidelined the left and foisted on the ancient polity a Soviet-style scientific socialism as a panacea for what ailed the nation. But there was no official vanguard party to implement the NDR and competition to influence its direction led to bitter ideological strife within the Politburo between the EPRP and MEISON.

Popular conceptions of the EPRP and MEISON saw the former as Maoist, mainly composed of Ethiopians educated in the US, while the latter was seen as pro-Moscow and mostly educated in Europe. There may be some truth in that, at least as far as ideology is concerned. The major differences were that the EPRP wanted an immediate revolution based on people's democracy, while MEISON advocated a guided revolution – critically by supporting the military – as the masses lacked the organizational and political sophistication to consolidate it. In other words, MEISON believed it could transform the military regime into a progressive force, deepen the revolution, and eventually persuade the men in uniform to return to their barracks, leaving Ethiopia under civilian control. This was to prove a costly mistake. Other minor left organizations during this period were the Waz (Labor) League, Revolutionary Struggle for the Ethiopian Masses (ECHAAT), and Abiyot Seded (Revolutionary Flame), the last-named organization established by the head of PMAC, Colonel Mengistu Haile Mariam.

It became clear that the EPRP and MEISON were not on the same wavelength regarding the trajectory of the revolution and open warfare soon broke out between them. MEISON allied with the military and began systematically to purge EPRP members from POMOA, bureaucratic organizations, and labor unions and to kill its top leaders. The EPRP responded in kind, assassinating MEISON leaders and even ambushing, without success, the leader of the Derg. In turn, the military launched what it called the “Red Terror.” The EPRP, with most of its leadership murdered or arrested and its membership decimated, abandoned Addis Ababa and most urban areas and found refuge in the mountains of northern Ethiopia. After defeating the EPRP, the military turned ferociously on its erstwhile ally, MEISON, wiping it out within a few months because it feared its growing influence. Thus in one year, 1976–7, an entire generation of educated Ethiopians was annihilated. In the same period the Derg allied itself with the Soviet Union and entered an alliance with the German Democratic Republic (GDR).

The Third Period (1978–1989)

The third period (1978–89) was a time of consolidation and institutionalization of power. The military became the supreme authority in the

land. It adopted Marxism-Leninism as a guiding principle under the leadership of Colonel Mengistu Haile Mariam and established the People's Democratic Republic of Ethiopia (PDRE). In 1987, under Soviet advice, the government began to organize for the establishment of a civilian vanguard party. Soon a commission was established, with Colonel Mengistu as its head. It included members of the Waz League, Abiyot Seded, and others, and began to call itself the Union of Marxist-Leninist Organizations. After a year's work, in 1979 the commission announced the formation of the Party of the Working People of Ethiopia (COPWE). Colonel Mengistu Haile Mariam became the party's secretary general, president of the nation, and head of the military. The party was envisioned to guide and deepen the revolution, to oversee the transition of Ethiopia from a backwater of feudalism to a socialist African nation.

After the military created the party and consolidated power, decision-making was centralized in order to transform the country into a socialist state. The first of these linkages were the urban dwellers' associations (*Kebeles*), the All-Ethiopia Peasant Associations (AEPA), and producers' cooperatives. The urban dwellers' associations, a variant of local self-administration, were designed to manage urban dwellings and the AEPA to implement land reforms. These entities provided a direct link between the center and local areas. A centralized party apparatus emanated from the center and spread to the village level, maintaining coercive control over the population. It was used to control production as well as restrict political freedoms, movement, and access to resources. The Derg also created the Revolutionary Ethiopia Women's Association (REWA) and the Revolutionary Ethiopia Youth Association (REYA), mobilizing the majority of Ethiopia's population. Indeed, by the time it had consolidated power, the Derg had created a complex set of institutions. The problem, however, was that these imposing political structures were not buttressed by a correspondingly strong economic foundation able to counter fierce opposition by the Eritrean, and later the Tigrayan and Oromo, liberation fronts.

Renewed Ethnic and Regional Nationalisms

In short, the increased monopoly of state power and the selective political representation based

solely on ideology shut out a variety of groups. In addition, the pan-Ethiopian ideology of the regime was not accepted by Eritrea, which was seeking independence, and it came into conflict with other group nationalisms that were in formation. The dominant ones were those espoused by the Tigray, the Oromo, and the Afar. Group nationalisms were strengthened by brutal state repression. Although the regime adopted the Soviet model of the state, it did not adhere to the principle of self-determination for Ethiopia's ethnic regions. During the heyday of Ethiopian Marxism, the Derg established the Institute of Nationalities, which was entrusted with the responsibility of formulating administrative structures that would fit the country's nationality configuration. The institute was created because a critical bone of contention among the left was the "national question." The issue had its genesis among intellectuals at Addis Ababa University and abroad in the early 1960s and had produced factions and cleavages around its application in Ethiopia. Many groups accepted the Marxist, or rather Leninist, interpretation of self-determination of nations up to and including session of Ethiopian nationalities. During those heady years, the acceptance of such a principle was considered a measure of one's progressive convictions, and the question of whether nationalities could be answered by the guarantee of individual democratic rights was not even entertained. This strict line prohibited good faith negotiations on matters that concerned all Ethiopians. In any case, the recommendation of the institute was that administrative divisions based on ethnic groups would not serve the objectives of administrative efficiency and economic development. Thus the new 1987 Constitution of Ethiopia created 22 administrative and five autonomous regions. This new constitution, while affirming the principles of equality of nationalities under a unitary state, foreclosed the right of secession. However, this official decision did not prevent any regional or ethnic group in Ethiopia from defining itself as a nation.

The most important regional movement was that of Eritrea. The Eritrean independence movement started under Haile Selassie, with Eritrea claiming to be an independent country based on historical grounds. In the 1960s Eritrean resistance to the central government produced two groups: the Eritrean Liberation Front (ELF) and the Eritrean People's Liberation Front (EPLF).

The factional struggle between the two fronts was long and bitter, involving many issues and lasting for years until the EPLF emerged in the 1970s as the most important and formidable movement. Its source of strength lay in its organizational skills, discipline, and self-reliance. It was able to offer stiff resistance to the military regime and to overcome two huge campaigns, directed by Soviet and Cuban advisors, launched to destroy it. The stalemate between Eritrea and the central power was broken when the Tigray region entered the war.

Tigray was a quiet region in the early 1970s, until its educated youth began to organize in order to resist the central government. The region, under both the *ancien régime* and military rule, was simply a forgotten zone. It was famine-prone due to thousands of years of agricultural practices that degraded the ecology. It had little industry even by Ethiopian standards, and no investments to speak of. It was an impoverished region, so Tigrayans migrated to other places in search of livelihood. This combination of famine and poverty, together with the imposition of the Amharic language, gradually led to simmering resentment. Tigrayans felt it curtailed their ability to attend the university, while those at the top of their profession felt pessimistic about their prospects in the service of the state, since most of the senior officials were from Shoa. Thus, when political upheaval overthrew the old regime, in 1974–5, Tigrayan nationalists were already laying the foundations for a regional movement, later known as the Tigray People's Liberation Front (TPLF). It clashed with the remnants of the EPRP Army in Tigray. There were ideological differences between the two organizations. EPRP saw the problem of Ethiopian society as one of class rule, while the TPLF viewed the issue as one of antagonistic national sentiments that had submerged class consciousness. Thus the TPLF drove the EPRP out of Tigray in order to prove to Tigrayan peasants that it was a creditable force. But most importantly, it was TPLF military solidarity with the Eritrean liberation fronts that sealed the fate of the Derg at the center.

Meanwhile, in the south and west of the country, Oromo nationalism was stirring forcefully once again, organized by the Oromo Liberation Front (OLF). The OLF viewed the Oromo issue as a colonial question. The group's objective was to gain an independent state. How-

ever, Oromo lived dispersed throughout most regions of the country, and a unified resistance to authoritarian rule was to prove elusive for some time. This dispersal of the Oromo population was to pose problems for the OLF in widening its base. In 1977, for example, it attempted to reach out to the Oromo of Bale and Harar. This effort was complicated by the fact that the region was claimed by the Western Somali Liberation Front and the Somali Abo Liberation Front. The OLF was more successful in other areas, however, particularly in Wollega. In 1978 it opened offices in Khartoum, making direct contact with the Eritreans. But the OLF's efforts to rally urban Oromo to its avowed goal of an independent Oromo state were hampered by the considerable extent to which the urban Oromo had integrated into the national economy.

In the case of Eritrea, lowland Muslims who hailed from Karen and Sahel sowed the seeds for the independence movement in the late 1950s. These groups had been emasculated politically and had no economic stake in the Ethiopian state. Because of increased repression by the state, the movement was later able to attract highland Christians, among whom were workers, soldiers, and students. Moreover, in later years, increased nationalism and tenacity coupled with demographic concentration seem to have prevented state consolidation. Various military governors sent from Addis Ababa administered Eritrea, but only tenuously.

Tigray, too, shared a peculiar history of nationalism along with a deep memory of the failed Woyane Rebellion of 1943. Moreover, its close proximity to Eritrea not only made it a target, but also led to increased solidarity with Eritrea. In time, the TPLF created an umbrella organization, the Ethiopian People's Democratic Revolutionary Front (EPDRF), which was mainly composed of the Ethiopian People's Democratic Forces (EPDM) operating in Gondar and Wollo and included the Oromo People's Democratic Organization (OPDO) and the Afar Liberation Front (ALF). Eventually, the EPDRF managed to defeat the military regime in Addis Ababa. The decline and collapse of the state at the hands of regional forces may be explained as follows. First, the state's abysmal record on human rights had alienated it from the population, fundamentally weakening it. Second, although the regime had built structures for consolidating political power, these structures rested on a

fragile economic base. The result was economic crisis brought on by the colossal cost of war and the regime's economic policy of villagization, which undermined agricultural production. This policy led to the famine of 1984–5 and was used in the north as an instrument of counterinsurgency. Third, the results of the land reform were mixed as the peasantry ended up by paying various taxes and fees to state functionaries and organizations. Fourth, a crisis occurred within the regime, as evidenced by the aborted coup of 1989. The crisis was partly created by increased conscription and mobilization into the military, as well as by the tenacity of the Eritrean, Tigrayan, and Oromo groups and the resultant military defeats. Finally, international alliances crumbled. The demise of the Soviet Union and Eastern Europe, which had supported the regime ideologically and militarily, bankrupted the regime's legitimacy.

In May 1991, the combined forces of the EPDRF and the EPLF overthrew the government of the People's Republic of Ethiopia. The EPLF immediately established a provisional government in Eritrea, ending decades of incorporation of Eritrea into Ethiopia. In July 1991, 28 political organizations plus a representative of Addis Ababa University met in Addis Ababa to draft a new national charter. Marxist and other groups mostly opposed to the EPDRF's leadership role were excluded. These were the EPRP, MEISON, and the Coalition of Democratic Ethiopian Forces (CODEF). MEISON was excluded because it was allied to the former military regime and did not recognize the legitimacy of the Eritrean liberation fronts, while CODEF was sidelined because its leadership had served in the military regime, espoused a unitary state, and rejected the transitional process. The National Period Charter that came out of the national conference emphasized ethnic group rights and ushered in two types of nationalism: ethnic and pan-Ethiopian. The first was the assertion of ethnic rights and nationalism based on cultural manifestations, while the second was that of the older Ethiopian identity adhered to by various groups.

The National Period Charter founded the transitional government, which was made up of a president, a prime minister, and an ethnically mixed 87-member Council of Representatives, the supreme legislative and executive authority during the interim period. The TPLF, which helped found the EPDRF, and its two

partners, the OPDO and EPDM, took 32 of the 87 seats. The OLF, which later withdrew, took 12 seats. The ALF, the Islamic Front for the Liberation of Oromo, and the Workers' Representatives received three seats each, while three pan-Ethiopian groups and many other smaller ethnic groups received one seat each. The Charter legalized self-determination for all of Ethiopia's ethnic communities and the preservation of national identities within a federated format and established national/regional self-government. Further legislation set up 14 regions. Five of the regions subsequently merged to become the Southern Region, thus creating ten regions for the country in all. Those self-governing regions, including the chartered cities, were vested with powers over all matters except defense, foreign affairs, economic policy, granting citizenship, declaring a state of emergency, printing currency, and overseeing major development projects and infrastructure. The regions constitute 56 zones and 676 districts or *woredas*.

The second reordering of state-society relations was the change from a command economy to a market economy. The transitional government adopted a new economic policy aimed at liberalizing all sectors and passed a new law on investment. Exceptions were areas exclusively under central control, such as defense industries, banking and insurance, and import-export trade in selected products. The investment law provided considerable opportunities and privileges for foreign investors, including repatriation of profits. In order to stimulate investment the government also passed a new labor law, which would take into account the interests of private investors as well as workers. It confirmed the right of employers and employees to engage in collective bargaining and set out provisions for the settlement of disputes.

A major highlight of Ethiopia's transitional process was the making of a new constitution. The Council of Representatives was mandated to constitute the Constitutional Commission, whose duty was to draw up a draft constitution. The commission submitted the draft to the Council of Representatives for adoption and eventually discussion by the people. The draft was presented to the Constituent Assembly and elected pursuant to the final draft for adoption. According to the Charter, elections for the National Assembly, to which the transitional government was to hand over power, had to be held within two

years. In practice it took longer as national elections occurred in June 1995. The drafting of the federal constitution was a protracted process that took three years. It reflected cleavages among pan-Ethiopian and ethnic nationalists as well as Marxists within the commission. In the end, the commission prepared an "Issue Paper" for national debate containing several precepts of constitutional government, including the right of nations to self-determination, which according to the transitional government was approved by the majority of people. In 1994-5, the draft constitution was approved by the Council of Representatives and, after modification, was adopted by a newly elected Constituent Assembly, paving the way for the formation of the Federal Democratic Republic of Ethiopia.

Conclusion

The relationship between state and society in Ethiopia has undergone three transformations, from the imperial era to military rule to the beginning of a democratic state. Each stage has involved unique state-society struggles. However, all three stages share a basic common denominator: an attempt to solve the crisis in state-society relations. The basis of political power under the *ancien régime* was rural and political power was centralized. A half-hearted imperial attempt at decentralization and, later, representative government failed, ushering in an urban breakthrough that became known as the Ethiopian Revolution. The regime that followed proved to be even more authoritarian and sought to solve the crisis by greater centralization, which led to increased societal resistance. Both regimes dealt with societal problems through centralization and undemocratic rule. They shared a pan-Ethiopian conception of the state and failed to address regional aspirations.

The new state leaders of the transition undertook to solve the state-society crisis through democratization, or territorial decentralization. The original objective of the TPLF was secession from Ethiopia and independence for Tigray. Later, the TPLF proclaimed its intention to remain within a democratic, pluralistic, decentralized Ethiopian state if such an objective could be attained. The TPLF formed a political organization, the Marxist-Leninist League of Tigray, in the hope of forming alliances with

other ethnic and regional groups. This strategy eventually culminated in the formation of the EPRDF, which claimed it represented rural interests and was organized on the basis of ethnic group nationalism. It sought autonomy or territorial decentralization that would allow ethnic groups to choose how they were governed and represented. The EPRDF thought to resolve the crisis by decreasing the power of the Shoan Amahars at the center, increasing that of other ethnic groups in the periphery, and bringing them into a transitional government.

This overview of the road to transformation in Ethiopia has demonstrated the following. First, the transition from the emperorship of Menelik II to the later period of consolidated centralized rule under Haile Selassie may be characterized as a transition from patrimonial to bureaucratic autocracy. In other words, the modern political history of Ethiopia is the story of a transition from a decentralized form of patrimonial rule to bureaucratic centralism, with Emperor Haile Selassie at the center. This bureaucratic centralism was followed by the military regime, which monopolized political power through a tightly centralized party apparatus and instituted authoritarian rule. However, this brutal military rule under the guise of Marxism-Leninism did not sit well with Eritrea, which was already in full revolt under the *ancien régime*, and other strong ethnic groups who sought either independence or autonomy. The EPRDF, which defeated the military regime with the active support of the Eritrean liberation fronts, reordered society based on ethnic federalism and territorial decentralization. Thus the Ethiopian experience is like that of other African states that gained independence and proceeded to consolidate and centralize power under undemocratic regimes. One reason for centralization in other African countries is the inheritance of authoritarian state colonial structures. Many countries attempted to decentralize power, but this objective has proven elusive. Ethiopian centralizing and autocratic regimes have failed to solve the problems of its society. The EPRDF in Ethiopia decentralized the government by creating federal structures based on ethnicity. The issue of federalism in Africa is a thorny one. By and large, except for Nigeria and the confederation of Tanganyika and Zanzibar, federalism has not worked in Africa because most nations have not developed strong middle classes that submerge ethnicity in a

federal compact. Nigerian federalism is sustained partly by increasing the number of states, in order to give smaller ethnic groups a voice in the center, and partly by oil wealth. In most of Africa the preference for a centralized unitary state soon after independence has been due to national integration and economic development. The Ethiopian experiment is unique because it seems to have gone in the other direction: that is, territorial decentralization based on ethnicity, albeit under tight fiscal control at the center. Whether such an arrangement will hold – increasingly under conditions of scarcity and environmental degradation – and augur peace and development is a challenge for all Ethiopians.

Ethnic and nationalist revolts in the Hapsburg Empire, 1500–1848

Matthew McMurray

The Hapsburg Empire emerging in 1526 with the acceptance of Hapsburg rule by the Bohemian and Hungarian estates and by the Croatian estates the following year was a collection of territories formed in a piecemeal fashion rather than as an integrated state. At no time in its nearly 400-year history was this far-flung Empire united ethnically, culturally, economically, or linguistically. The Empire was the only multinational state in the early modern era and by far the most diverse. None of the ethnic groups represented a majority and some territories had nearly a half-dozen languages. Although unifying forces existed throughout this period, such as the military, the Church, and the bureaucracy, the forces of disintegration were stronger. One of the most powerful of these was ethnic jealousy, a constant theme in the history of the Empire. Bohemians' efforts to throw off German domination in the eighteenth century and Hungarian attempts to make Magyar the official language of the territories in the Danube Basin in the nineteenth century are only two of the dozens of examples that might be cited. Another was economic conflict between the various parts of the Empire, such as the efforts of both Croatia and Hungary to obtain access to the Adriatic.

The heart of the Empire was the House of Austria. The Austrians and the Magyars of Hungary were the Empire's two privileged ethnic groups. Thanks largely to their military victories over the Turks in the early modern era the Austrians became the more powerful of the two. The Austro-Hungarian relationship was a strained one and they went to war several

times in this period. In 1703 Prince Franciscus Rakoczi attempted to end Hapsburg domination in Hungary by the sword. Both guarded their privileges jealously and ruthlessly. For example, Vienna insisted that Austrian officers lead the Hungarian military and in the nineteenth century the Magyars attempted to wipe out the language of the Croats, one of the Slav peoples they dominated. The Hungarians, the most feudalized of all of the Danubian states, had already proven themselves incapable of achieving this at the Battle of Mohacs (1526), in which they suffered a devastating defeat at the hands of the Turks.

Although the Empire boasted pockets of industrialism such as Cisleithanian Austria and Bohemia, agriculture was by far the major industry. The southern and eastern sections of the Empire were economically and culturally backward – illiteracy was widespread, transport was poor, and there was only a small middle class. These factors served as a disincentive for the Hapsburgs to promote more equitable social and economic policies. In addition, Christianity taught the Slavs to accept their station and expect a better existence in the next life. As Enlightenment ideas gradually spread to the Empire in the eighteenth and nineteenth centuries, an increasing number of peasants questioned basic assumptions about their society, economy, government, and faith. For instance, *laissez-faire* and, later, socialism taught them to question feudalist traditions. Economic growth in the Empire rose rapidly in the nineteenth century and led not only to a growth in the exchange of goods, but also in ideas. As the Slavs became better informed about conditions in other lands, more became convinced that sweeping social, political, and economic changes were necessary.

The rise of vernacular languages beginning in the sixteenth century, a source of pride to the intelligentsia and common folk alike, also fueled nationalism. Johann Gottfried Herder (1744–1803), a German philosopher and theologian, taught that language was a glue that held nationalities together. Conflicts between peoples were natural because each had their own unique language. The Slavs, he asserted, had a bright future. In 1840 the Magyars, fearing that they would be overwhelmed by the more populous Slavs in their own territories, made Latin the official language in Hungary.

Another centrifugal force was the Reformation. With the rise of Protestantism, wars would

now be fought not only between differing nationalities but different religions. Emperor Ferdinand II's successful military campaign in the 1620s against Bohemian Protestants is a case in point. Although the Empire remained devoted to Catholicism during the Reformation, Protestant sects flourished in Bohemia, Transylvania, and other areas.

Romanticism, which flourished in the late eighteenth and early nineteenth centuries, also energized nationalist movements with its celebration of heroism, emotion, and the irrational. Artists such as Mickiewicz in Poland and Novalis in Germany urged men to live passionately and freely; restrictive laws and customs diminished man's powers, while freedom and liberty were ennobling. The Hapsburgs had no answer for these forces of dissolution, could offer no unifying force to counter-balance them. One of the pivotal questions with which Hapsburg rulers wrestled was should the Empire be centralized or federalized. A compromise between these two forces offered the only real solution to the ethnic conflict that threatened to tear the Empire apart, as R. W. Seton-Watson and other scholars have noted. Although many short-term compromises were found, such as the decision of Croatian nobles to surrender some of their political power to the Magyars in 1790, a permanent solution was never discovered.

Under Empress Maria Theresa (1740–80) and to a greater extent her son and co-regent Joseph II (1780–90), the forces of centralization grew. Joseph II, who was given to impractical schemes, was primarily concerned with improving the lives of his subjects. He seized Church lands, eliminated some of the privileges the Catholic Church enjoyed, cut labor obligations for some serfs, attempted to make German the official language of the Empire, and eased restrictions on non-Christians. His ambitious but short-lived programs raised ordinary citizens' expectations for themselves and their society. But when conservatives such as Prince Klaus von Metternich (1773–1859), who dominated Empire politics from the early to mid-nineteenth century, overturned these programs in the first decades of the century, there was widespread discontent and frustration, particularly among the lower and middle classes. Frustrated by the high-handed policies of the Austrians, Pan-Slavist and Magyar nationalists became more

influential, especially after they recognized that if the Slavs became unified they would prevent Hungary from dominating the Balkans, one of the Magyar's prime goals. Metternich sought to weaken the South Slavs before they grew stronger.

Nationalist pamphlets and newspapers enjoyed a wide audience in the South Slav states in the nineteenth century. For instance, an anti-Magyar pamphlet by the Croatian Antony Vakanovic entitled *Sollen wir Magyarren weren?* (Are We to Become Magyars?) (1832) was banned by the Hungarian authorities after three editions. At the Diet of 1847–8, Kossuth refused to recognize the Croatian language. The South Slavs, he asserted, must learn Magyar. For many years the Magyars had attempted to buy off discontented nationalist leaders with offices and titles. The effort failed. Istvan Szechenyi (1791–1860) was a prominent Hungarian nationalist and member of the Hungarian Diet in the 1820s. In a series of books he outlined the leading problems that plagued his country, such as the lack of credit available to farmers – the majority of the population – and offered solutions to them. Like many prominent Magyars, he admired Austria and insisted that a partnership with Austria served Hungary's interests more than an independent state. Unlike Kossuth, he fought for the rights of non-Magyar peoples.

Industrialization was another disintegrating factor. Although its effects were weaker and did not take full effect until the second half of the nineteenth century, by the middle part of the century it had already helped push the Empire from a paternalistic, Austrian-dominated Empire to a more fluid, urbanized, and heterogeneous one. Its effects were most pronounced in Bohemia and Silesia. Ethnic and nationalist rivalries came to a head in the 1840s. In 1846 peasants revolted in Galicia. Two years later revolutions broke out across Europe. Vienna, the Austrian capital, was the site of one of the largest revolutions. Many Czechs, disgusted that they still did not enjoy the same political rights as the Austrians and Magyars, played a major role in the disorder. In March Metternich was forced to resign and fled to England. He returned several years later after conservatives regained power. In May Slavs from across the Empire met in Vienna. The Slav Congress demanded that the Empire become a federation of nationalities and that Slavs be granted the same political rights as Austrians

and Magyars. Although this demand was not accepted, *robot*, a feudal obligation which required serfs to work at various times of the year for their masters, was rescinded.

The revolutions of 1848 did not solve the deep-rooted problems that had led to them in the first place. Ethnic jealousies, competing languages, and economic rivalries would continue to plague the Empire until its dissolution at the end of World War I.

Eureka Stockade

Anne Beggs-Sunter

Ballarat, in the British colony of Victoria, Australia, burst into life as an instant city in 1851, following the discovery of gold. Adventurous men and women from all over the world descended on Ballarat in the 1850s, feverishly attacking the sticky clay at Golden Point. The diggers followed the gold underground, along the course of the ancient rivers, buried by the volcanic eruptions of Mounts Warrenheip and Buninyong. On the flat, 30,000 diggers collected into small cooperatives of “mates” and desperately searched for their personal Eldorado.

From the first discoveries in 1851, relations between the miners and the police sent to administer the goldfields were uneasy. The government attempted to collect a monthly license fee for the right to search for gold, but the tax conferred no rights, and licenses were inspected at the point of a bayonet. The more outspoken miners, schooled in the ways of the 1848 revolutions in Europe, led a movement to protest against the gold license. The cry of “No taxation without representation” was raised, echoing the rhetoric of the American Revolution and the Chartist movement for democratic rights in Britain. At Bendigo in the winter of 1853 protesting diggers wore red ribbons, refused to pay their licenses, and collected a monster petition which was presented to the governor, seeking immediate reform of government administration, the right to vote for the unrepresented diggers, and land reform. The petition contained 23,000 signatures collected throughout the Victorian goldfields and was couched in Chartist terms. The governor and his advisors made some slight concessions, but the central grievances remained a festering sore on the diggings.

In November 1854 the diggers at Ballarat established a Chartist-inspired organization, the Ballarat Reform League, whose secretary was the Welsh lawyer John Basson Humffray. The League called a series of mass meetings on Bakery Hill, where it raised a new flag of the Southern Cross, featuring five white stars on a blue background, a potent symbol of independence from British authority. It proved a precursor for republican movements in Australia. The diggers swore an oath by the flag “to fight to defend our rights and liberties” and they sent a charter of demands for political rights to the governor. The charter contained five of the six basic Chartist demands – full and fair parliamentary representation, manhood suffrage, no property qualifications for members of parliament, payment of members of parliament, and short-term parliaments. Its immediate demands were abolition of the Gold Commission system of administration and abolition of the license tax. It began with the words “That it is the inalienable right of every citizen to have a choice in the laws he is called on to obey, and that taxation without representation is tyranny.” These were direct echoes of the American Declaration of Independence and the charter contained a strong threat if its demands were not won: “the Reform League will endeavour to supersede such Royal prerogative by asserting that of the people,

which is the most royal of all prerogatives, as the people are the only legitimate source of all political power.” The governor angrily rejected the demands of the diggers. Many defiantly burnt their gold licenses and marched away to the Eureka lead (where the diggers had been mining) to form a defensive stockade and plan their next steps toward gaining political representation.

The multicultural nature of the protest was evident – at least 17 nationalities were represented – and a Declaration of Independence was drafted and recited to the defenders, who approved it with a cheer. On Saturday, December 2 there were an estimated 1,500 men behind the stockade, and military discipline had been enforced. A contingent of Californians were well armed, while the large number of Irish set a blacksmith to making pikes, the traditional Irish weapon of revolution. The British governor, Sir Charles Hotham, feared he was facing republican revolution. He conferred with his commandant at Ballarat and ordered the police force and two regiments of the British army to attack the protesting diggers.

The attack was carefully planned and secretly executed. A force of 276 soldiers and mounted police marched under the cover of darkness to surround the diggers’ stockade before dawn on Sunday, December 3, 1854. Many of the diggers had left the stockade during the night, preparing to “keep holy the Sabbath” by attending morning church services. Only about 150 men were left asleep within the stockade, and the well-armed Californians had departed either to cut off cannons being sent from the coast, or else were warned by their consul to keep out of the protest.

The government caused blood to flow as first the diggers, then innocent bystanders, were mown down by the trained soldiers and a disorderly mounted police force. At least 22 stockaders were killed, and five soldiers died. Unofficial estimates put the death toll higher, and many were injured, including the leader Peter Lalor (1827–89), who lost his arm in the battle. The battle was over in 20 minutes, with 113 rebels rounded up and taken prisoner. Martial law was declared, and rewards offered for the capture of Peter Lalor and other leaders of the rebellion; but within days public meetings in all the towns of the colony came out in support of the stockaders, and in criticism of the government.

In early 1855 thirteen stockaders stood trial for the capital offense of treason. By that time

the popular imagination of Melbourne had been gripped by the diggers’ cause. The best lawyers in Melbourne gave their services to defend the prisoners, and no jury would convict these men who were now vaunted as heroes.

Within weeks of its occurrence, Eureka had begun to take on legendary status. It began to be incorporated into the national myth of democracy, equality, and mateship. At a practical level, a series of reforms introduced in 1855 gave the diggers representation in parliament, abolished the hated gold license, introduced the Miners’ Right which carried the right to mine in any part of the colony, to vote for parliament, and the right to occupy a small portion of land and build a home; a new and completely democratic system of administering the goldfields was introduced. In a crowning victory, Peter Lalor and J. B. Humffray, the diggers’ champions, were elected to parliament.

The British government very successfully defused the revolutionary situation, so much so that Ballarat soon became a loyal stronghold of the Empire. By the time of the Federation of the Australian colonies in 1901, the city viewed itself as boasting the best of British and the best of Australian traditions.

The memory of Eureka was for many years a troublesome one, best forgotten. It took 30 years for a monument to be erected on the site of the stockade, and it was reticent in its recollection – a simple stone plinth surrounded by four cannons, the unlikely and inappropriate gift of the Victorian government. The Eureka flag was lost from public memory too, until it was acquired by the Ballarat Fine Art Gallery in 1895. But the legend took root in oral tradition. Radical nationalists of the 1880s took up the tradition and related it publicly through the poems, stories, and illustrations of journals like the *Bulletin* and the *Boomerang*.

At different times, to support different causes, men and women chose symbols from Eureka to illustrate their ideological cause. The flag became a metaphor for radical action – used by nationalists wanting to exclude Asian races, trade unionists wanting to defeat capitalists, civil libertarians opposing military conscription, republicans wanting to remove the queen as head of state. All have found some spiritual nourishment in the “Stockade everlasting.”

Eurocommunism

Mauro Stampacchia

In the 1970s the communist parties of Italy, Spain, and France seemed to shift toward a looser relation with the Communist Party of the USSR and to differentiate their political strategies from the model offered by Soviet communism. They united their efforts in trying to develop a common strategy and a polarization in the international communist movement, and to balance Soviet influence and elaborate political strategies that would be more suitable to European countries. All this fell within the formula of “Eurocommunism.”

In the aftermath of the Russian Revolution and the foundation of the Soviet-dominated Third International, some European Marxists, including Rosa Luxemburg, foresaw the risk that the Russian model of a proletarian state could unbalance the rising communist movement. Antonio Gramsci’s prison writings drew a distinctive line between the societies of Western and Eastern Europe. After World War II the USSR heavily influenced Eastern European socialist countries, and the invasion by Soviet troops of Hungary in 1956 and Czechoslovakia in 1968 was seen as a means of hindering any evolution of the two countries away from strict, USSR-style communism.

Fierce criticism of Soviet politics was also voiced by growing new left movements, from the viewpoint of workers’ control over the state and the economy. The Italian Communist Party under Togliatti formulated the idea of a “national road to socialism,” but maintained strong links with the Communist Party of Moscow. So did most European communist parties. The path toward national autonomy was therefore not easy to practice. The new party secretary, Enrico Berlinguer, seemed to take a more autonomous stance. In 1974 he organized the first Conference

of Western Communist Parties in Brussels, which was followed by meetings between Berlinguer and the Spanish party secretary Carrillo in July 1975, and with French party secretary Marchais in November the same year. The formula of “Eurocommunism” was then used in the International Communist Conference in Berlin in 1976. Berlinguer was extremely careful not to present the new formula as an internal split of the international communist movement, only as a set of common political principles and a common political agenda for the Western European communist parties. Eurocommunism was not, in this context, a form of outward criticism of Soviet communism, but Soviet leaders regarded it as a threat to their control over the international communist movement and as an incentive if not a help to Russian and Eastern European dissidents.

Eurocommunism suffered from this fact and it also proved to be difficult to find a common platform among the three communist parties. French and Italian parties had a strong hold on their electorate, but the former did not share the growing commitment of the Italian party to the European integration process. The Spanish Communist Party seemed to share Berlinguer’s views but it did not have a similar presence in the Spanish electorate and had to face the difficult political transition from the Franco regime to a full democracy. Dissidents in Eastern Europe looked with great interest to Eurocommunism and this made it even more mandatory for the Soviet leadership to oppose it. In the international relations arena, Eurocommunism was not judged positively by US foreign policy: Kissinger, who loosely favored western communist parties’ quest for autonomy from Moscow, strongly opposed communists in government leadership (in Italy, for example) as a threat to NATO and to the balance of power between the US and USSR.

Despite this, Eurocommunism declined due to internal weakness rather than as a result of external causes. The French party soon changed its position and returned to supporting Soviet policies, approving the Afghanistan invasion and also encountering a severe decline in the polls. The Spanish party had to face the split of a pro-Soviet faction and a strong internal clash that ejected Carrillo from office. Only the Italian party under Berlinguer, back in opposition after 1979, took a now lonely stance for

Eurocommunism, condemning the Afghanistan invasion, the repression of dissidents in Poland and Jaruzelski's coup, and calling for a "third way" distinguished from both Soviet socialism and the social democratic variety. The shift of the center of communism from Eastern to Western Europe did not occur.

The problem posed by Eurocommunism remains. Western Europe was the birthplace of labor and socialist movements throughout the nineteenth and twentieth centuries which shaped political systems and determined welfare policies in the old continent. The fall of Soviet communism now puts the problem in a significantly different context. The process of European integration, while creating a new and assertive actor in world politics, has not so far been influenced by socially oriented policies. This could lead to the growth of a new European left in the political arena of the European Union.

EuroMayDay

Alex Foti

Emerging out of the "anti-globalization" movement, EuroMayDay is a transnational protest event held since 2005 on May 1 in a dozen or more European cities, including Berlin, Paris, Hamburg, Helsinki, Seville-Málaga, Vienna, Naples, Maribor, Copenhagen, and Liège. It is also a cross-European network for social agitation and labor organizing among workers to fight for economic redistribution and free movement of people across borders. It was born with the

Middlesex Declaration of October 2004, when labor and media collectives from several European countries gathered in London at Beyond ESF, an autonomous event coinciding with the European Social Forum (ESF). It sought to give rise to a unified May Day of precarious and migrant workers. Since 2005 the EuroMayDay network has held political assemblies in Berlin, Paris, Hamburg, and Milan.

The whole process originated in 2001 out of Milan, where the activists and "subverters" of ChainWorkers, supported by Milanese and Roman squats (*centri sociali*), made an action pact with CUB (Confederazione Unitaria di Base, or the Unitary Rank-and-File Confederation), a militant union, to create a May Day parade that would give voice and visibility to temporary workers, part-timers, freelancers, and other service laborers belonging to the "precarious generation." They meant to reclaim the international holiday of workers by bringing it back to its anarchosyndicalist roots, considering that the end of the Cold War had diminished the relevance and appeal of social democratic and communist celebrations. In the following years, local strikes by supermarket cashiers, call center operators, airport workers, journalists, and other job categories started to gravitate around Milan's MayDay network. Since 2001, attendance at the parade has grown from a few thousand to about 100,000, dwarfing the morning's official demonstration held by mainstream unions. In 2004 a twin MayDay Parade was simultaneously held in Milan and Barcelona, thanks to the alliance forged between the YoMango media and action collective, ChainWorkers, and the Parisian coordination of *Intermittents* (the French term for stage hands and cultural workers with temporary contracts).

EuroMayDay mobilizes against the welfare and labor (counter) reforms of neoliberalism, resists corporate abuse and state authoritarianism, and formulates strategies of liberation from oppressive work and living conditions, grouped under the concept of "precarity." In France, Italy, and Spain, EuroMayDay's initial area of diffusion, *précarité*, *precarietà* or *precariedad* are familiar terms to refer to the spreading condition of being subjected to temporary, flexible, contingent, casual, intermittent work arrangements, leading to income insecurity and social uncertainty.

By the autumn of 2004, San Precario was on the verge of making wide sections of the Italian

movement coalesce around the struggle against precarity, from communists to autonomists and anarchists. But at the Milan MayDay of 2005, scuffles broke out between competing factions during and after the parade, and the national MayDay network suffered a setback from which it has yet to recover. A positive note was instead struck in the spring of 2006, in conjunction with the successful upheaval of French students and unions against *Contrat Première Embauche* (First Employment Contract), a piece of legislation proposed by the government that would have institutionalized juvenile precarity. On Good Friday, the EuroMayDay process was launched in Brussels, as a few hundred activists from Belgium, France, Italy, Germany and pink samba bands dressed as Easter bunnies raided the offices and defaced the buildings of pro-business lobbies in the European Quarter, while shouting: “No borders, no precarity: fuck the new inequality!” In June 2007 in Rostock, Germany, and ahead of the G8 Summit in nearby Heiligendamm, hundreds of caped and masked “precarious superheroes,” from Germany and other EU countries, marched behind a pink EuroMayDay banner expressing their collective will to “Make the G8 Precarious.”

Indeed, EuroMayDay has been a vector of media and visual experimentation, as shown by its colorful posters and online “net parades,” or the creation of the popular icon of San Precario, patron saint of the “fexploited.” EuroMayDay plays with radical iconography and propaganda by echoing the tactics of the Industrial Workers of the World (IWW, also known as “Wobblies”) in pre-1917 America, and embodying the revolutionary spirit of the carnivalesque first described by Michael Bakhtin. Much like the gay pride demonstrations or the love parade, MayDay parades have been free and queer, scandalous and energizing.

The EuroMayDay has tried to create a European public space from below. It has attempted to distill a common political platform and articulate the concept of precarity across diverse national contexts, varying in radical political cultures and in standards of welfare provision and union protection, as well as in the engagement with European integration. In fact, a few nodes in the network question the viability or desirability of an explicitly European political dimension and prefer to simply refer to “MayDay,” without the *Euro-* prefix.

European revolutions of 1848

Richard Schaefer

Discontent over economic issues and calls for political reform boiled over in a series of revolutions that swept across most of Europe in 1848. Though rooted in very different national contexts, the revolutions were a pan-European movement that effectively toppled the repressive political order laid down by the Congress of Vienna in 1815. The failure of so many of the revolutionaries’ immediate objectives, and the reassertion of dynastic authority, should not obscure the significance of these revolutions for European society. Ending the last remnants of feudalism across central Europe, the revolutions promoted nationalism, reinforced class divisions, and both inspired and frightened Europeans with the potential of mass politics. It is in this context that the *Communist Manifesto* can be read as a programmatic text and not an objective description of events. It is also in this context that nationalism emerged post-1848 as the single strongest and broadest ideological force for shaping the European future.

Triggered by bad harvests and food shortages in 1845 and 1846, scattered riots broke out in

many regions in 1846 and 1847. Aggravating existing tensions over customary land-use and other issues, the agricultural crisis was compounded by a financial slump and contracting international markets. In combination, these factors had an especially powerful effect on artisans and craft workers, two groups already struggling to accommodate the new demands of industrial production, and in turn these groups made up the largest number of revolutionaries. Another large share of revolutionaries came from the professional middle classes, partisans of the “movement,” who felt their expertise justified them in calling on dynastic rulers to yield power in the name of change. Motivated by diverse ideologies, these men shared a faith in politics that was perhaps naively out of step with workers’ demands, but which profoundly shaped both the idealistic tenor of their reform efforts and the pessimistic frustration that accompanied their eventual failure.

The 1848 revolutions began in January when uprisings forced the King of Naples and Grand Duke of Tuscany to grant constitutions. In France a simmering conflict over whether to extend the franchise turned into a crisis on February 22, when the government forbade a meeting dedicated to reform issues. When angry workingmen protested the decision, authorities responded with force and the situation escalated. Barricades soon filled the streets and on February 24, King Louis Philippe fled to England, ceding power to a provisional government headed by Alexandre Auguste Ledru-Rollin, Alphonse de Lamartine, Louis Blanc, and others. Committed to the republican cause, the government made plans for elections based on universal manhood suffrage. Inspired by the popular call for a constitutional guarantee of the “right to work,” and conscious of its debt to the working classes, the government also responded to the plight of workers by creating a program of “national workshops” for the unemployed.

The birth of the second republic in France on April 23 had a galvanizing effect across Europe. For some, the apparent continuity with earlier revolutionary ideals lent events an almost romantic halo, while others were deeply frightened by the prospect of reliving the excesses of the French Revolution. As news of the French revolt spread, uprisings broke out in the Austrian empire, northern Italy, and Prussia. On March 3 Louis Kossuth made a passionate plea for

constitutional reform in the Hungarian general assembly that inspired liberals throughout Europe. On March 13 Viennese students began a series of violent protests that led to Metternich’s resignation and a set of political reforms that included a new constitution and universal male suffrage. The Habsburgs’ readiness to capitulate mirrored a widespread mood of resignation to the forces of change among European monarchs, but also stemmed from the fact that their position was complicated by growing nationalism throughout their realm.

Kossuth’s plea aimed at liberal reform but also roused nationalists throughout the multi-ethnic empire during this “springtime of the peoples.” Nationalism redounded against Hungarian unity itself when the Croats, led by Joseph Jellačić, challenged Magyar rule. It also marred the Congress of Slavs, organized on June 2 to discuss the possibility of a Slav federation within the Empire. Conceived as an alternative to German and Magyar political dominance, Austro-Slavism was promoted by Czechs who tended to overshadow smaller Slav minorities.

Turmoil in the Austrian Empire fueled Italian nationalism, as Italians vied to seize the moment and eject the Austrians from northern Italy. When the Austrians were ejected by rebel forces from Milan and the Venetians declared a republic on March 22, the Piedmontese King Charles Albert, a recent convert to the liberal cause, lent his support to the struggle by declaring war on Austria. The Piedmontese were joined by passionate volunteers from across the peninsula as well as by troops from Naples and from the Papal States in what many Italians felt was a liberation struggle. Having initiated a series of reforms since his election in 1846, Pope Pius IX was even seen by some as a viable candidate for presiding over a united Italy. This hope vanished, however, when he issued an allocution against the war on April 19. The pope’s reluctance to support war against the Catholic Habsburgs cost him his temporal power when citizens of the Papal States rose up and supported the creation of a republic under Mazzini in February 1849.

In the German territories, fear of the spreading revolutionary movement, combined with no clear support from either the Austrians or the Prussians, led many princes to capitulate before the outbreak of serious violence. In some southern German states earlier reforms had already led

to the creation of constitutional monarchies. In Bavaria revolutionary fervor provided an outlet for criticism of the king's affair with Lola Montez as much as for criticism of government policy. In Prussia King Frederick William IV sought to stem the tide of revolution by political compromise, but events had their own momentum. His efforts to appease his critics notwithstanding, Berlin erupted in violence on March 18 as citizens and soldiers clashed in the streets. When mounting casualties forced the king to withdraw his troops on the next day, a humbled Frederick William was forced to view the victims of the uprising wearing the liberal colors. Though hardly converted to the cause, the Prussian king thus became the *de facto* champion of liberal reform and German national unity. Seizing the moment, nationalists from across the German territories assembled at St. Paul's Church in Frankfurt to lay the foundation for German unification.

Throughout the summer of 1848, as new liberal governments labored over constitutions and other reforms, popular support for their initiatives ebbed and a distinct radicalization among workers led to new violence. Once again, events in France set the tone for similar patterns across Europe. Elections on April 23 returned a majority of moderate republican deputies to the legislature. Fearful both of radicals in Paris and the peasantry, who were angry over the new tax levied to support the national workshops, the government placed a high priority on maintaining public order, often exaggerating real threats. Afraid of the crowds flocking to the national workshops in Paris, and increasingly convinced that the program was an inefficient solution to the employment problem, the government announced plans to close the workshops on June 20. When workers' protests against the plan spiraled out of control, Paris erupted in violence. The fighting known as the June days lasted between June 22 and 26 and cost upwards of 1,500 lives. Brutal reprisals against rebels after their surrender led to a further 3,000 deaths and underscored the deeper class hatred accompanying the violence. The election of Louis Napoleon, nephew of the former emperor, on December 10 signaled the beginning of a steady conservative reversal of the revolution until the dissolution of the republic and a return to empire in 1852.

Similar reversals occurred everywhere throughout Europe. In the Austrian Empire, as the

newly elected national assembly worked at sweeping away the last remnants of feudalism, military successes against the Piedmontese and a show of force on the last day of the Slav Congress signaled that the forces of reaction were regaining strength. In Vienna threats to cancel a program similar to the French national workshops met with stiff resistance, as did the emperor's decision to support the Croats against the Hungarians. After months of sometimes intense fighting, rebellious Vienna was subdued by a combined Austrian-Croat army. The abdication of Emperor Ferdinand in favor of his nephew Franz Joseph on December 2 effectively annulled many previous reforms. His accession to the throne also angered the Hungarians and sparked the Austro-Hungarian War, a war that was only concluded when the emperor enlisted the aid of Russian reinforcements in the summer of 1849.

Beginning in the spring of 1849, Italians seeking to unify the peninsula suffered a series of crushing setbacks. In March General Radetsky's victory over the Piedmontese forced Charles Albert to abdicate in favor of his more conciliatory son, Victor Emmanuel II, and Austrian support for Duke Leopold crushed the Tuscan republic in July. In the Papal States, Pius IX was restored to power by the French army in the early summer of 1849. The ordeal cemented his commitment to fighting "modern," liberal tendencies throughout the remainder of his life, and placed Rome squarely in the way of Italian nationalist aspirations. Louis Napoleon's intercession on behalf of the pope helped win him favor from Catholic supporters and began a decades-long policy of French support of an embattled pope.

In the German territories the alliance between workers and middle-class reformers deteriorated throughout the summer months. Anxious to remove economic restrictions, liberals could not abide the working-class desire to seek job security through a restoration of the guilds. This alienated the two classes and proved fertile ground for aristocratic landowners to frame their conservatism in a way that was appealing to workers seeking security. Drawing courage from the Habsburg victory over the Viennese rebels in autumn 1848, Frederick William IV approved the occupation of Berlin by troops in November, and the removal of parliament to Brandenburg where it was dissolved on December 1. In

Frankfurt delegates to the all-German parliament were frustrated in their efforts to forge national unity by the lukewarm support of territorial monarchs, and by their inability to contain the restiveness of the crowds, whose growing nationalism threatened to overwhelm the assembly's mandate. When, after much debate, the assembly decided in favor of a "small Germany" led by the Prussian king, they were thwarted when Frederick William IV refused.

European Union summit protests, Gothenburg, 2001

Tadzio Müller

In the alter-globalization movement, *Göteborgskeravallerna*, the riots that erupted around the EU summit in Gothenburg, Sweden, in June 2001, are mostly remembered as part of a canon of protests that defined the movement's heroic phase in the global North: Seattle, Prague, Quebec City, Gothenburg, Genoa. And yet the events in Gothenburg, usually overshadowed by the far bigger and more explosive protests that rocked Genoa only six weeks later, were important in their own right. Some 50,000 people took part in a number of demonstrations, workshops, parties, and indeed riots, facing around 2,500

police officers. Three demonstrators were shot with live ammunition, one critically, and over 1,000 demonstrators were arrested, with many receiving prison sentences on average 12 times longer than precedent would have dictated. As significant as the figures were in the context of Swedish politics, it was ultimately not for mere strength in numbers that the protests in Gothenburg would be remembered, but rather for their political impacts: they shook Swedish society to the core, thus revealing the political power of militant protest in the alter-globalization movement.

The "End of History" in Sweden

Because of the amount of publicity they generate, summit protests have been credited with playing a part in ending the "end of history," that is, the triumphant phase of the neoliberal project whose beginning coincided with the fall of the Eastern bloc. Such a view of summit protests understands them as taking place in a global space, as having global histories and global effects. While this is certainly the case to some extent, research on transnational social movements and the experience of summit protests affirm that such events are also very strongly determined by the national political culture within which they occur: much as Paris 1968 was a world-historical event that could not be understood outside of the wider crisis of Fordism, it would also have been unimaginable outside of the specifically French revolutionary tradition and what Zolberg in *Moments of Madness* (1972), his seminal study of ruptural politics, described as "the dullness of routinized Gaullism."

In order then to understand the political history of the Gothenburg riots they need to be located in the peculiarities of Swedish political culture, and the particular shape that the neoliberal offensive took there. In Sweden, history can be said to have ended in 1992, in what was, true to the country's political culture, very much a consensual affair between the relevant social elites. Since the 1930s, Swedish political culture had been shaped by the hegemony of social democracy, a hegemony that extended into all spheres of life, and was represented as a conflict-free social totality known as "the people's home" (*folkhemmet*). It was largely on the basis of this social democratic common sense – and partly due to its geographical proximity to the Soviet

Union – that Sweden was very late in joining the European Union, which was rejected by many Swedes as a transmission belt for neoliberal social and economic policies.

As more and more countries fell to the neoliberal offensive that had begun in 1979, Swedish social democracy remained (relatively) firm until a currency crisis hit the country in 1992, when speculators attacked the Swedish Krona, forcing the central bank to raise interest rates overnight to a stunning 500 percent, in turn inducing a deep recession. In the aftermath of the crisis the major parties met and agreed to restructure the “Swedish model” along neoliberal lines. In 1994 the government succeeded in cajoling the country into voting to join the EU, although strong popular suspicion remained against such a move. However, in the absence of obvious histories of resistance as well as politically relevant bearers of such a critique, this suspicion remained politically unorganized, and the neoliberal project marched along more or less unchallenged.

And then the end of history ended – somewhere else. In a story that has by now achieved almost canonical status in progressive circles, the first organized political force to challenge the neoliberal project emerged with the Zapatista National Liberation Army deep in the jungles of Southern Mexico in 1994. And yet, like the “old mole” invoked by Karl Marx in *The Eighteenth Brumaire of Louis Bonaparte* (1852) to describe the circulation of social struggles, it took this challenger another five years to burrow its way into the global North, where it raised its head in the “J18” (June 18, 1999) riots that shook the City of London financial center, to emerge finally into the global spotlight in the alter-globalization movement’s “coming out party” at the protests against the World Trade Organization’s ministerial summit in Seattle in November 1999.

Thus began the time when, at least, but not only, in the global North, every major transnational summit became the target of demonstrations organized by a movement that saw its diversity – from global social democrat to libertarian anti-capitalist – as a strength rather than a weakness. When the Swedish EU presidency in the first half of 2001 announced that one of the main themes of its concluding summit in Gothenburg in June would be the Union’s eastward enlargement, the preconditions for a successful and powerful counter-summit event

seemed to be given. First, after years of political quiescence in the face of the neoliberal advance, a transnational movement had emerged to challenge it, and – not only, but partly due to the actions of this movement – in early 2001, neoliberalism indeed seemed to be on the defensive. Second, the country could relatively easily be mobilized to support resistance against the European project, which had always been viewed critically, while at the same time expressing a fundamentally social democratic critique of the social democratic government. Third, in March 2001 US President George W. Bush had announced that his first state visit to Europe would be to Sweden on the eve of the EU summit, allowing the mobilization for the counter-summit to capitalize on widespread anti-American sentiment as well as a more specific dislike of the president.

Goteborgshändelserna: The Events of Gothenburg

The two main networks organizing the protest events were the Network Gothenburg 2001 (*Nätverket Göteborg 2001*) and the larger, and politically more diverse Gothenburg Action (*Göteborgsaktionen*), which were joined by a number of smaller networks and freestanding organizations and groups that together organized a complex choreography of protest that was to stretch over three days. For Thursday, June 14, an anti-Bush demonstration was planned to coincide with Bush’s arrival in Gothenburg. On Friday the 15th, the day on which the actual summit was to start, groups and networks belonging to the more radical wing of the alter-globalization movement were planning a raft of actions intended to disturb the smooth functioning of the summit – some, like the White Overalls (*Vita Overallerna*), were indeed planning to “storm” the convention center grounds in which the summit was to be held. More moderate groups like ATTAC, originally French but by then a global social democratic network advocating, among other proposals, a tax on transnational financial speculation, had organized the Free Forum (*Fritt Forum*), a space for lectures, workshops, and discussions. Finally, Saturday the 16th was to see a massive concluding demonstration for which all organizations and networks were mobilizing. On the other side, the Gothenburg police force under the command of

Håkan Jaldung had drawn together some 2,500 police officers from all over the country to protect the summit, making this one of the largest police actions in Swedish history, while the US secret service had in advance dispatched officers to work with the Swedish police to ensure the safety of their president.

In the event, things turned out differently than most participating actors had anticipated. On Thursday morning the police surrounded the school that many out-of-town activists were using as sleeping space and convergence center with a ring of sand-filled containers, thus triggering the first bout of rioting in the afternoon, as activists tried to come to their surrounded comrades' assistance. Around 6:00 p.m., some 12–15,000 people gathered for an anti-Bush demonstration, while at the same time the police stormed the school, arresting nearly all of the remaining 500 or so activists still inside. As the riots continued throughout the evening, the police continued their strategy of destroying activists' channels of communication, when, about 2 hours after they had managed finally to occupy all of Hvitfeldtska high school, they stormed the supposedly secret *sambandscentralen* (communications headquarters) set up by some activists in a flat in downtown Gothenburg to coordinate actions throughout the summit.

Having thus suffered a major defeat on Thursday, activists met again on Friday morning, as the summit began in the nearby convention center, at a legal anti-summit rally in downtown Gothenburg organized by *Göteborgsaktionerna*. At 10:30 a.m. an illegal "anti-capitalist march" began to move from the rally toward the conference center. Soon afterward fights between police and protesters broke out close to the barriers, after the police tried and failed to separate the militant "black bloc" from the rest of the march. The march broke up, and the police chased groups of protesters onto Gothenburg's main shopping street Avenyn, where some of them began smashing windows and burning barricades. Later, the tabloid *Expressen* reflected on this event as activists having "raped" Gothenburg.

At 6:00 p.m., 15–16,000 people gathered on downtown Järntorget square for a demonstration, arranged by *Nätverket Göteborg*, under the slogan "Sweden out of the EU – No to the EMU." The demonstration passed without incident. Two hours later, the radical network Reclaim the City organized a party on another

square in downtown Vasaplatsen. Fascists attempted to provoke fights, and the police surrounded the dancing crowd. Around 9:00 p.m., fights broke out between youth and police. For the first time in the history of the alter-globalization movement in the global North, and for the first time in Sweden since 1931, live ammunition was used against protesters, with three being injured, one almost fatally.

On the second and final day of the summit, people gathered for the concluding demonstration, organized by *Göteborgsaktionerna* under the slogans "No to the militarization of the EU – No to racism and the development of 'fortress Europe' – No to the constitutionalization of neoliberal policies in the EU – The environment and the public sector are not for sale." Estimates as to the number of participants vary from 9,000 to 20,000. The demonstration was peaceful.

At about 7:00 p.m., people gathered in downtown Gothenburg for a spontaneous protest against police violence. The police surrounded the demonstrators and anyone else who happened to be on the square, keeping them there until midnight and detaining many. During this time the national SWAT team stormed Schillerska high school (another sleeping space for activists) with automatic weapons, ostensibly searching for an armed German terrorist who was purported to have sworn revenge against the police. Seventy-eight activists were forced to lie on the cold, wet school yard for hours. The "German terrorist" was never found.

Aftermath

Riotous politics have been described as "moments of excess" by the Free Association (2004), or as "moments of madness" by Zolberg (1972). If the latter description is accurate, then the Gothenburg riots were, for standards prevailing in Sweden at the time, full-fledged insanity, transforming not only the individuals involved in the events, but shaking to the core the very foundations of Swedish social democracy. Gothenburg changed the way Swedish society understood itself: before, in the words of Anders Svensson, a local organizer of the protests, the hegemonic mainstream of Swedish society liked to represent itself as a consensual "people's home" "where people never quarrel, never engage in violence and never, never demonstrate." This narrative now had to be rewritten. After

Gothenburg, many writers – from the daily press to academics, from the governmental Committee for Psychological Defense to novelists – pointed out that the country was not “itself” anymore, that the dominant representation of a society at peace with itself had been ruptured by the events of Gothenburg, that Gothenburg constituted a national trauma.

Had it been only for the riots, *Göteborgshändelserna* might not have had this much of an impact. The mainstream of Swedish society might have been able to content itself with the idea that the riots were merely the work of hooligans, drunkards, and foreigners belonging to the “traveling anarchist circus” that parts of the alter-globalization movement were being represented as at the time. However, in the months following the riots, media images began to emerge that proved that the police, who had shot and nearly killed a demonstrator, had not acted in self-defense. The High Court then ruled that it was the actions of the police on Thursday that triggered the riots, and the local police commander was indicted for violations of demonstrators’ basic rights. Indeed, in the legal aftermath of the riots, more and more evidence emerged of wrongdoing on the part of the Swedish police, and questions arose about the degree of influence that the US secret service had on the strategy of the Swedish police. With all of that it became clear that Sweden had lost some of its innocence. Sweden, like all other societies, was beset by internal conflicts that at times could turn violent, and the state, so often seen as the benevolent father in the “people’s home,” was capable of doing wrong.

To be sure, the riots in Gothenburg were events whose impact was also felt outside of Sweden. A few weeks afterwards, a conference of European interior ministers met to draw lessons from the policing of Gothenburg, lessons that were then applied to great effect by the Italian police at the 2001 G8 summit in Genoa. In that sense, Gothenburg can be seen as a trial run for the attack on the social body of the movement that was executed in Genoa. It has also become an important reference point for activists in the alter-globalization movement in Scandinavia and beyond (though primarily in Northern Europe), where it has become part of a chain of events that is invoked to refer to the heroic phase of the movement. Nonetheless, the riots had their main impacts in Sweden, where they can

be said to have contributed, like all the major summit protests, to the end of the end of history, not only that neoliberal end of history declared with much fanfare by Francis Fukuyama in 1989, but also the much more subtle end of history imposed by the corporatist hegemony of Swedish social democracy.

Evers, Medgar (1925–1963)

Thomas Edge

Medgar Wiley Evers typified the black grassroots leadership that made the civil rights movement of the 1950s and 1960s possible. He was born on July 2, 1925, in Decatur, Mississippi. In 1943, Evers dropped out of high school and, lying about his age, joined his older brother Charles in the United States Army. After serving a tour in Europe, he returned to Mississippi, finished high school, and enrolled in Alcorn College. Evers faced harsh opposition when he attempted to vote on his twenty-first birthday; he and his brother were met with armed resistance at the courthouse. This episode, along with his experiences in college, strengthened Evers’s desire to challenge Mississippi’s segregated society.

Evers married Myrlie Beasley, an Alcorn student, on Christmas Eve, 1951. The following year, Evers completed his work at Alcorn College and became an insurance salesman. He was also a founding member of the Regional Council of Negro Leadership (RCNL), a local civil rights organization that challenged segregation and voter disenfranchisement in Mississippi. Evers briefly contemplated whether such non-violent tactics could work in his home state and considered armed resistance modeled on the Mau Mau in Kenya. He decided to pursue a non-violent solution to Mississippi's racial problems, but he also upheld the idea of self-defense and prepared for the possibility of violence against himself and his family.

In 1954, Evers applied to the University of Mississippi Law School, unsuccessfully attempting to become the first black student to matriculate there. Nonplussed, Evers became more active in the National Association for the Advancement of Colored People (NAACP), serving as the group's first field secretary for the state of Mississippi, beginning in 1954. The following year, Evers helped make the murder of 14-year-old Emmett Till a national *cause célèbre*. Between 1955 and 1963, Evers developed a growing national reputation for his investigations of racial violence, his work to expose the physical and economic threats to members of the Mississippi NAACP, and his role in securing the admission of James Meredith to the University of Mississippi in 1962.

This increased visibility brought several attempts on his life in 1963, including the firebombing of his home on May 28. In the early morning of June 12, 1963, Evers was shot and killed in his driveway by a white supremacist, Byron De La Beckwith. He was buried in Arlington National Cemetery with full military honors and posthumously received the Spingarn Medal, the NAACP's highest honor. His assassin was tried twice in 1964; both trials ended with deadlocked juries. Beckwith was retried in the 1990s and found guilty of murder on February 5, 1994.

Ezeiza Protest and Massacre, 1973

Alejandro Horowicz

The Ezeiza Protest and Massacre occurred on June 20, 1973, when Argentine anti-communist terrorist snipers attacked a crowd of over 2 million people who had assembled near the Buenos Aires airport as Juan Perón returned from nearly two decades in exile in Spain. The attacks, according to official figures, resulted in 13 deaths and more than 300 wounded, but those who were present at the massacre and prominent newspaper sources claim that the number was much higher. The event marked the bloody and tragic downturn of Juan Perón's politically bifurcated but devoted party (comprised largely of an unlikely alliance of leftist and right-wing Peronistas), as well as the beginning of what became known as Argentina's Dirty War.

The snipers who committed the atrocity belonged to a right-wing terrorist group called the Triple A, which stood for the Argentine Anti-communist Alliance, of which José López Rega, Juan Perón's personal secretary, was a founder. The Triple A snipers, standing alongside members of various ultra-right wing associations on a tribune prepared for Juan Perón, fired into the predominantly left-wing crowd assembled to celebrate Perón's return. Among those present, and of course targeted by the Triple A, were members of the Montoneros, a left-wing Peronist guerilla group, and the Peronist Youth. The attack was intended to facilitate the removal of President Héctor Cámpora, a center-left Peronist deemed a threat to the right-wing Peronist groups; during his time in power large numbers of workers' struggles, strikes, and factory occupations had moved public opinion in the workers' favor and resulted in some granting of workers' demands. Less than one month after the massacre, Cámpora resigned and Perón once again took power.

The leadership of the movement that congregated in the woods surrounding the Ezeiza

airport remains in dispute. The events in Ezeiza staged a confrontation between the weakened, bureaucratic trade-unionist Peronism – captured by TV cameras in the official platform through the images of older men wearing dark glasses and combat firearms, shouting vociferously into the crowd – and a new, protean third Peronism that was maturing in 1973. Disastrous leadership errors produced a disastrous outcome for the popular movement. The Montonero movement envisioned June 20 as a celebration previously denied to them by the repressive Lanusse regime; they had envisioned a jubilee day instead of a decisive moment of confrontation.

In the months leading up to the Ezeiza Massacre, several intertwining events and political influences gave rise to this political situation. First, President General Lanusse failed to unify growing opposition to Juan Perón, losing the opportunity to coordinate efforts to prevent his return from exile. Second, General Domingo Perón realigned his own political forces with the goal of displacing Lanusse from presidential power with the return of Juan Perón, setting into motion potentially destructive political forces. Through supplanting Lanusse, and orchestrating the electoral victory of the pro-Peronist FREJULI coalition on March 11, 1973, the third factor not only slowed progress in developing a unified political opposition to the growing presence of the Argentine military, but also strengthened the power of advocates of government repression over the radicalizing working class. The night after Peronist President Héctor J. Cámpora assumed office, on May 25 a popular mobilization demonstrated the influence of the leftist Movement Peronista Montonero, which advocated a populist government oriented toward the working class. Cámpora's government, pressured by popular forces, was compelled to release political prisoners incarcerated in Villa Devoto before Congress could pass an amnesty law.

Finally, in a single movement, that night, all militants were set free, followed by a rushed agreement of the new parliament. The political repression under Lanusse further intensified political dissent. The Montonero movement and those on the political left who considered a Peronist victory as the basis for expanded working-class power were extraordinarily disappointed with the emergence of a new regime with a sharply expanded military that was wielded against supporters of democracy and equality. At no time in

modern Argentinean history prior to 1973 had popular forces achieved so great an influence over society.

The true question was if a popular mobilization of proportions never seen before in Argentine history could break the narrow limits of the political proscription set by the 1955 Argentinean *Revolución Libertadora*, or whether the masses would be pushed out of the scene of history, reducing the confrontation to formal political machinations inside the walls of Congress. It is a matter of deciding whether Perón would access the presidency through a victorious political revolution, overcoming democratically insufficient elections, or if he would distance himself from the dynamics of political and social struggles to avoid collective antagonism.

Perón believed in his chances to reconstitute the kind of authoritarian power that he knew well, through which he had governed Argentina during his first two terms from 1946 to 1955. That was also the view of President Lanusse, as well as the anti-Peronist military. Otherwise, he would have to become the bourgeois leader of radically mobilized popular sectors of Argentine society.

The spontaneous dynamics of the movement in support of socialism and popular democracy, triggered by the logic of previous confrontations, pushed for a radical path. Montoneros supported that dynamic without taking into account the repressive character of Perón's leadership and the despotic character of the political and military coterie seeking to reestablish that leadership. Therefore, the Montoneros failed to recognize that spontaneous popular mobilization could single-handedly resolve the crisis. While Perón was prohibited from running for office on March 11, 1973, the election of Héctor Cámpora, his putative leftist surrogate, emboldened popular forces to mobilize for greater democratic rights. When Juan Perón returned from 18 years of exile in Spain on June 20, 1973, the Montoneros renounced Argentina's political leadership without explicitly demanding their resignation. From their perspective, Perón himself would honor the (radical) project through supporting Cámpora. For Montoneros, the project was still "*Cámpora al gobierno, Perón al Poder*" (Cámpora to the government, Perón to power), the political slogan of the March 1973 electoral campaign. The Montoneros seemed to suggest "Perón to the government, the masses to power." But they

did not recognize the constellation of political opposition to the socialist left that was willing to prevent the rise of a democratic Argentina.

The logic of a disarmed, peaceful mobilization demanded the absence of an armed antagonistic opponent. Their physical coincidence in the woods of Ezeiza on June 20 could only mean violent confrontation. The failure to anticipate these political-military dimensions meant that Montenoros could not comprehend the scope of opposition. The result was massacre and disappearances by the grouping of antagonistic Peronist factions.

Only by acknowledging the proscriptive character of the March 11, 2003 elections and upholding the democratic right of the majority to designate candidates of their choice, only breaking Lanusse's proscription of not allowing Perón to run and promoting a superior political solution – Perón emerging as president by direct popular mobilization – could the spontaneous dynamics of the popular movement have established adequate political limits between those representing the second and third Peronism.

The government unavoidably fell on March 11; the only question was whether the new regime would serve as a step in the revolutionary rise

of the masses or represent the unsurpassable limit. It was not just a question of defending an abstract "Socialist Motherland," but of reorganizing to assure effective popular sovereignty and a democratic form of revolutionary socialism. The permanent struggle for direct democracy reorganized the highly popular field from the inside; the nature of the new government was determined by the political machinations within its organization. No one considered that June 20, 1973 would represent the foundation of historical defeat through the massacre in the woods near Ezeiza Airport.

F

Fahd, Yusuf Salman Yusuf (1901–1949)

Johan Franzén

Fahd, whose real name was Yusuf Salman Yusuf, led the Iraqi Communist Party (ICP) from 1941 until his death in 1949. Fahd devoted his life to the Iraqi national movement and has generally been credited with transforming the ICP from a small party of urban intellectuals in the beginning of the 1940s to a well-oiled oppositional party. He was born in Baghdad on June 19, 1901, but when he was 7 years old, the family moved to Basra. He enrolled at the American Mission School at al-'Ashshar at age 13, but was unable to finish because his father became ill and was unable to pay his tuition. Fahd then had to take up employment to support the family, working as a clerk with the British occupational forces at Basra.

After the 1920 revolt against the British, Fahd began to feel a sense of nationalism. In 1927, Fahd met Pyotr Vasili, an Assyrian from Tiflis (Tbilisi) in Georgia, who two years earlier secretly entered Iraq to travel around the country spreading revolutionary ideas. Vasili was also an undercover emissary for the Communist International (Comintern). The meeting proved decisive in Fahd's life. Soon after he traveled to Khuzestan, Kuwait, Syria, and Palestine. In June 1930, he returned to Iraq after hearing that an Anglo-Iraqi Treaty was to be signed, and a year later he became involved in strikes protesting new municipal taxes that resulted from the treaty.

Simultaneously, communist ideas had been spreading in Baghdad and through the independent south. By November 1933, after Ja'far Abu al-Timman and his al-Hizb al-Watani (National Party) decided to withdraw from public life, the communists, who had used his party as a legal vehicle for their ideas, were suddenly without

a platform. From 1933 to 1935 a current of Iraqi communism in Baghdad and the south produced the Iraqi Communist Party.

In February 1935, Fahd left for the Soviet Union to receive training in revolutionary theory and practice at the Communist University of the Toilers of the East (KUTV) in Moscow. Little is known about his time in the Soviet Union, which lasted until the summer of 1937. However, there is some speculation that before returning to Iraq at the end of January 1938, Fahd may have served as an emissary for the Comintern in Western Europe.

When he returned to Iraq, Fahd found the new Communist Party in a shambles, ruined by an extensive police operation. The party had been taken over by 'Abdullah Mas'ud. Fahd and Mas'ud differed in opinion as to how the party should be run. In 1941, Mas'ud was arrested and the leadership fell to Fahd. From 1941 to 1946, Fahd transformed the small party of bickering intellectuals into a party with a mass base. Under Fahd's leadership the party began leading peasant rebellions, workers' strikes, and popular demonstrations. It soon became the most significant political force in the country.

On January 18, 1947, Fahd was arrested and sentenced to death. The sentence was later commuted to life imprisonment, but authorities learned that Fahd was controlling the ICP from prison. He was again sentenced to death on February 10, 1949. This time the sentence was carried out. Fahd and his close associates were hanged in public squares in Baghdad four days later.

Faiz Ahmed Faiz (1911–1984)

Farooq Sulehria

Faiz Ahmed Faiz is to Pakistan what Pablo Neruda is to Chile. Considered one of the greatest Urdu-language poets, Faiz Ahmed Faiz was an avowed Marxist, trade unionist, journalist, and thinker. He never held formal membership in the Communist Party of Pakistan (CPP), yet he played an active role in the Progressive Writers Movement, the Progressive Papers Limited, and the Pakistan Trade Union Federation, and was incarcerated for his alleged role in the Rawalpindi Conspiracy Case.

Faiz was born on February 13, 1911 in the village Kala Qadir, in the district of Sialkot in the Punjab. He was educated at Murray College, Sialkot, and Government College, Lahore, receiving his master's degree in English literature from Government College in 1932, and a master's degree in Arabic from Oriental College, Lahore the next year. He took up a job at Muhammedan Anglo Oriental College, Amritsar in 1935 and moved to Hailey College of Commerce in 1940. A year later he married British-born Alys George, who was also a poet and human rights activist. In 1942 their first daughter Salima was born, and in 1945 their other daughter Moneeza. During this time Faiz became active in the Progressive Writers Movement, which was founded in 1936.

As Moscow supported the Allies during World War II, the Communist Party of India also extended cooperation to British rule. Faiz joined the army as a captain in 1942, and worked in the Department of Public Relations. He was subsequently promoted to the rank of colonel. In 1947 he moved to Lahore and took over as the editor of the *Pakistan Times*, a periodical that would play an important role in agitating for the independence of India-Pakistan. Later, he became chief editor for *Imroz* and *Lail-o-Nehar*, and worked in this capacity until 1958.

Faiz was elected vice president of the Pakistan Trade Union Movement in 1951, and was president of the Postal Employees Union. He was

also on the Labor Advisory Committee of the Punjab provincial government from 1947 until 1951, when he was arrested in connection with Rawalpindi Conspiracy Case and sentenced to four years imprisonment. It was during this time that Faiz wrote some of his most famous poetry. When the first military dictatorship was imposed in 1958, he was again arrested and imprisoned for several months. On his release he was appointed secretary of the Pakistan Arts Council. In 1962 Faiz went to Moscow to receive the Lenin Peace Prize. In 1964 he joined a private college as the principal and stayed in Karachi until 1972 working with the college and the Karachi Arts Council.

During the 1971 Indo-Pakistani War, controversy over his anti-war poems such as "The Festival of Bloodshed" and "The Dust of Hatred in My Eyes" forced him to go into hiding. When Zulfikar Ali Bhutto of the Pakistan Peoples Party took over as the first elected prime minister, he invited Faiz to join his government. Faiz became an advisor on cultural affairs and founded the Pakistan National Council of Arts and Folk Arts (renamed as National Institute of Folk Heritage). In 1977, when military forces removed Bhutto and a new dictatorship was imposed, Faiz went into exile in Beirut and became the editor of the Afro-Asian literary quarterly *Lotus*. Faiz ended his exile and returned to Lahore in 1984, and died the same year on November 19.

His poetry collections were published as collected works, first in London as *Saarey Sukhan Hamare* (1982) and later in Lahore as *Nuskha Haiye Wafa* (1984). His prose writing includes *Meezan* (literary essays), *Saleebain Mere Dareeche Main* (letters), *Muta e Loh-o-Qalam* (editorials), *Mah-o-saal-e-Ashnai* (travelogue), *Safarnama Cuba* (Cuban travelogue), and *Culture and Identity* (posthumous compilation of his English-language selected writings). Faiz's lyrical poems of love and revolution have been translated into many languages and have been performed by renowned singers. Playing his songs and reciting his poems at political, cultural, and trade union meetings is part of the political culture in Pakistan. Faiz's verses are part and parcel of political literature, from journalistic pieces to leaflets and posters.

Fanelli, Giuseppe (1826–1877)

Niall Whelehan

Giuseppe Fanelli was an Italian revolutionary born in Naples. He is best remembered for introducing Mikhail Bakunin's anarchistic ideas to Spain in 1868. His life was one of constant revolutionary agitation that passed through nationalist, republican, and anarchist stages.

Fanelli's revolutionary career began with membership of Mazzini's *Young Italy* and involvement in the 1848 revolutions, when he fought in the Milan insurrection. After the defeat of the 1849 Roman Republic, he became friends with fellow Neapolitan Carlo Pisacane, who proved to be an important influence on Fanelli's ideological development. In 1857 they collaborated on the ill-fated expedition to Sapri. Convinced that a social, as well as national, revolution was necessary to liberate Italy, Pisacane sought to provoke an uprising in the *Mezzogiorno* by providing a revolutionary "spark" that would ignite popular unrest. Fanelli, Pisacane, and a small group of poorly armed volunteers landed at Sapri, Campania but failed to stir up revolt. Fanelli escaped only with difficulty while Pisacane, along with several of the volunteers, died at the scene. However, this episode did not dampen Fanelli's commitment to revolutionary action: three years later he was again involved in an attempt to stir revolt, this time with Garibaldi and the Thousand in Sicily. In 1863 he fought with nationalist insurgents in Poland against the Tsar.

Fanelli was a mason and collaborated with Mazzini but their relationship soon became strained due to the arrival of Bakunin in Italy in 1864. Fanelli found that he shared the Russian's ideas on revolutionary action and the social question, and sympathized with his internationalism. The men became firm friends. By the late 1860s Fanelli had become estranged from

Mazzini and displayed increasingly anarchistic leanings; nonetheless, his ideological position remained ambiguous. Fanelli sat as a deputy for Monopoli, Puglia in the Italian parliament from 1865 to 1874, and fought with Garibaldi in the Austrian War of 1866 and again during the following year.

The failure to capture Rome in 1867 concluded Fanelli's faith in national revolution. He became a key figure in a new libertarian movement and agitated through the *Alleanza della Democrazia Socialista*, which embraced Bakunin's collectivism over communism, spontaneous organization, and demanded the abolition of the state. In keeping with the organization's internationalism, it was decided to send an agent to Spain in order to capitalize on Isabel II's fall from power. In November 1868 Fanelli arrived in Spain and began the work of organizing sections of the IWA along Bakuninist lines. Despite the presence of Marx's agent Lafargue in Spain at the time, Fanelli's trip was successful and he undoubtedly played a crucial role in the birth of Spanish anarchism.

Although often in the shadow of Bakunin, Fanelli's activities were instrumental to the emergence of Italian anarchism. Carlo Cafiero, who had been Engels' agent in Italy, became an anarchist in large part due to his conversations with Fanelli. The *Federazione Operaia Napoletana*, organized by Fanelli, introduced a new generation of radicals, among them Cafiero, Errico Malatesta, and Carmelo Palladino, to anarchism, while his presence was an inspiration to the 1874 anarchist uprising. His life provided a bridge between the Risorgimento idealism of Pisacane and the anarchism of the IWA, while his belief that revolution should destroy and not seize power has always remained a central tenet of both Italian and Spanish anarchism.

Fanon, Frantz (1925–1961)

Rhayn Garrick Jooste

Frantz Fanon was a radical psychologist and revolutionary writer whose books exposed European imperialism, elucidated the psychopathology of colonization, and influenced radical social movements throughout the world from the 1960s on. He advocated for decolonization, Pan-African unity, and revolutionary transformation of colonial societies. In his most popular and influential book, *The Wretched of the Earth*, Fanon famously argued that “Violence is a cleansing force. It frees the native from his inferiority complex and from his despair and inaction; it makes him fearless and restores his self-respect.”

Fanon was born in Martinique, a French colony in the Caribbean, in 1925. Although he was the fifth of eight children born to a lower-middle-class family, he was able to attend the Lycée Schoelcher, a prestigious high school that was at the same time typical of the colonial school system: students were taught European values at odds with the social reality of Martinique, which entailed a colonial class structure based on a hierarchy of skin color. At the Lycée, Fanon was a student of Aimé Césaire (1913–2008), architect of the concept of Négritude (black consciousness), which he would later in life reject due to its non-economic analysis of the social position of blacks and its acquiescence to colonial repression: the idea that it was possible to be black and proud in the social structure of the day, as opposed to the idea that revolution was necessary to free blacks from colonial repression.

During World War II, Martinique was occupied by pro-Nazi Vichy French naval troops. Angered by the racist abuse of the Martiniquan people at the hands of the troops, Fanon escaped to join the Free French Forces (French soldiers who continued to fight the Axis Powers after the fall of France to the Nazis), and eventually volunteered to fight for the Allied Powers in Europe.

In 1946 Fanon took advantage of a veteran’s scholarship and decided to study psychiatry in Lyons, where he was further exposed to the institutional racism of French society, as well

as white elitism. These experiences influenced *Peau noire, masques blancs* (1952; *Black Skin, White Masks*), in which he drew upon phenomenology, Négritude, psychiatry, and his own disorienting experiences as a French black man to explore the modern experience of living within society, yet on its fringes; it is an idiosyncratic work that combines biography and philosophy, functioning as both an analysis and a manifesto.

In 1953 Fanon accepted a *médecin-chef* post at Blida-Joinville Hospital in Algiers where he desegregated the wards and co-authored six papers that outlined a more humanistic approach to psychiatric medicine – an outlook that significantly changed with his experiences in the French–Algerian War (1954–62). Although a champion of the Algerian cause at the onset of the war, Fanon formally resigned from the Blida-Joinville Hospital in 1956 to fully devote himself to the Front de Libération Nationale (FLN). Before his departure from the hospital, Fanon trained FLN *guerilleros* in battlefield medicine, as well as psychological defense against torture. Drawing upon his experiences in World War II and at the Blida-Joinville Hospital, Fanon helped victims and torturers alike; his notes on these cases are invaluable for understanding the effect of war on the human psyche. Soon after his resignation, Fanon was forced into exile in Tunisia, where he worked more openly with the FLN and published several articles on the FLN for various newspapers and journals. In Tunisia, he continued to work as a psychiatrist and lecturer, as well as contributing to the FLN paper *El Moudjahid*. Fanon became the chief theoretician for the struggle after publishing his damning account, *L’An V de la révolution algérienne* (1959; *Year 5 of the Algerian Revolution*), a study of the Algerian revolution, including his thoughts on nationalism, which he articulated as a will to be Algerian, not just a birthright. The book was banned in France and Fanon became the target of various assassination attempts, one of which left him permanently injured. Despite this, he championed the Pan-African revolutionary cause at conferences and in papers, becoming the Algerian ambassador to Ghana and using his position to support the FLN.

During his time in Ghana, Fanon developed leukemia. Even though his health was failing he set about writing his most publicized work, *Les*

Damnés de la Terre (1961; *The Wretched of the Earth*), an iconic indictment of colonialism that influenced revolutionaries as diverse as Steve Biko (1946–77) and Che Guevara (1928–67). Using a Marxist framework, *The Wretched of the Earth* meditates on the power of colonized peoples living on the margins of industrial society to make a revolution, and, more controversially, discusses the importance of violence in achieving liberation – as expounded by Jean-Paul Sartre (1905–80) in the book’s introduction. Fanon died of double pneumonia on December 6, 1961. His body was returned, not to Martinique, but to Algeria, where he was buried with full honors.

Farabundo Martí National Liberation Front (FMLN)

Joaquín M. Chávez

The Farabundo Martí National Liberation Front (FMLN) was founded in October 1980 by the Farabundo Martí Popular Liberation Forces (FPL–Farabundo Martí), the People’s Revolutionary Army (ERP), the National Resistance (RN), the Central American Revolutionary Workers Party (PRTC), and the Communist Party of El Salvador (PCS). Between 1980 and 1991 the FMLN fought a revolutionary war against counterinsurgent regimes firmly backed

by two consecutive US administrations under Ronald Reagan. On January 16, 1992 the FMLN and the government of Alfredo F. Cristiani, a leader of the right-wing party ARENA, signed a peace accord that put an end to the civil war. As a result of the peace process the FMLN became a legal political party in 1993 and remains to this day the main opposition party in El Salvador.

The FMLN is named after Agustín Farabundo Martí (1893–1932), a leading founder of the Salvadoran Communist Party, who in 1932 was a strategist in a mass peasant insurgency. The Salvadoran military captured and executed Martí in January 1932 as it crushed the rebellion, popularly known as *La Matanza* (the Massacre). An estimated 30,000 Salvadoran peasants, primarily of indigenous descent, were massacred by government forces in retribution for the uprising.

The historical roots of the Salvadoran civil war can be traced to four decades of oligarchic-military rule (1932–79) and to the abysmal social inequalities that characterized Salvadoran society at this time. The immediate causes of the conflict are often linked to the escalating levels of state repression and electoral frauds perpetrated by the military dictatorship during the presidential elections of 1972 and 1977, which mobilized and united a wide array of social and political forces, including large segments of the Catholic Church that formed the Democratic Revolutionary Front (FDR) in 1980. The FDR was the main political ally of the FMLN during the civil war. The FDR-FMLN alliance formulated a joint political program that embodied the political and diplomatic representation of the Salvadoran revolution.

In the 1960s the Salvadoran left made several fleeting attempts to initiate armed struggle against the military-oligarchic regimes headed by the Party of National Conciliation (PCN). The PCS created the United Front of Revolutionary Action (FUAR) between 1961 and 1963, a militant semi-clandestine organization, in the aftermath of a massacre perpetrated by the National Guard in downtown San Salvador on January 25, 1961 during the coup that overthrew the Civic-Military Junta that ousted dictator José María Lemus in October 1960. In the late 1960s university students also formed a short-lived armed organization named *Acción Revolucionaria Salvadoreña* (Salvadoran Revolutionary Action) (ARS). However, the direct predecessors of the FMLN were the FPL–Farabundo Martí, founded in 1970 by

a dissident faction of the PCS led by Salvador Cayetano Carpio and university intellectuals; and the ERP, formed in 1972 by youth from the Christian Democrat Party, members of the Juventud Comunista (Young Communists), members of a left university student organization known as El Grupo (the Group). A splinter group of the ERP founded the RN in 1975 after a militaristic faction of the ERP assassinated Salvadoran poet Roque Dalton in May of that same year. The PRTC was formed in 1976 by ex-members of the initial nuclei of the ERP that constituted the Organización Revolucionaria de los Trabajadores (Revolutionary Workers' Organization) (ORT) between 1973 and 1974 and members of unions influenced by the PCS. The PCS pursued reformist politics during most of the 1970s by participating in electoral processes through its legal front the Unión Democrática Nacionalista (Democratic Nationalist Union) (UDN), which along with the Christian Democrat Party (PDC) and the National Revolutionary Movement (MNR), a social democrat party, formed the National Opposition Union (UNO) in 1972. UNO was the only coalition of communists, Christian democrats, and social democrats that emerged during the Cold War years in Latin America which actually won two consecutive presidential elections (in 1972 and 1977). The PCS withdrew from electoral politics and engaged in armed struggle after the government of Arturo A. Molina rigged the presidential election of 1977 and massacred UNO supporters in downtown San Salvador on February 28, 1977.

University students and former members of the PCS and the PDC made up most of the initial cadre of the Salvadoran guerillas in the early 1970s. However, during the 1970s the politico-military organizations gained substantial support among peasants, high school and university students, teachers, workers, and other marginalized urban sectors. A new approach on the role of religion and politics adopted by the politico-military organizations, particularly by the FPL and the ERP, allowed the confluence between the new armed left and sectors of the Catholic Church influenced by liberation theology. During the 1970s, potent social organizations influenced by the politico-military organizations emerged in El Salvador to pose an unprecedented challenge to the Salvadoran regime. The United Popular Action Front (FAPU) was founded in 1974 under the influence of the RN; the Popular Revolu-

tionary Bloc (BPR) was formed in 1975 by FPL sympathizers; the ERP formed the February 28 Popular Leagues in 1977; and the PRTC founded the Popular Liberation Movement (MLP) in 1979. The PCS transformed its electoral party, the UDN, into a mass popular organization in the late 1970s.

The Salvadoran left remained acutely divided during most of the 1970s. Political, ideological, strategic, and tactical differences were often aired in heated debates among leaders and activists of the popular organizations in the city and the countryside. While the ERP and the RN advocated an insurrectionary strategy, the FPL formulated a Vietnamese-inspired prolonged people's war strategy, and the PRTC articulated a Central American revolutionary strategy. Politico-military organizations were also critical of the PCS's continued adherence to reformism and electoral politics in the 1970s. In turn, the PCS deemed the politico-military organizations' strategies and tactics an expression of leftist petit-bourgeois extremism.

The left sought to unify its strategy and program between 1979 and 1980 to gain coherence and strength in view of the rapid pace of political events both in El Salvador and in the region. In July 1979 the Sandinista National Liberation Front (FSLN) ousted dictator Anastasio Somoza Debayle in Nicaragua and formed a revolutionary government. In October 1979 a group of reformist military known as the Military Youth staged a coup against President Carlos H. Romero with the tacit support of the Jimmy Carter administration and formed a short-lived Junta, in a last-ditch attempt to avert revolution in El Salvador. The left response to the coup was non-consensual. While progressive Christian Democrats and social democrats joined the Junta, the ERP launched a failed insurrection in San Salvador and the FPL denounced the coup as an imperialist plot to contain revolution. Within months, right-wing military displaced the reformist members of the Junta and intensified state terror as the security forces, the army, and state agents operating as death squads massacred approximately 30,000 civilians, purported members or supporters of the left, between 1979 and 1983. *The Truth Commission Report for El Salvador* signals that 75 percent of reported human rights violations perpetrated during the Salvadoran conflict actually occurred between 1980 and 1984. In this political climate

top commanders of the politico-military organizations created the Unified Revolutionary Directorate (DRU) on May 22, 1980, which was the immediate precursor of the FMLN. In January 1980 the left social movements funded the Revolutionary Coordination of the Masses (CRM). The CRM joined a large coalition named Democratic Front (FD) founded in April 1980, by the MNR, the Popular Social Christian Movement (MPSC), a splinter faction of the PDC, professionals and technicians, small business organizations, six unions and union federations, and a student association, the University of El Salvador, with the Central American University (UCA) and the Catholic Church as observers. The alliance between the CRM and the FD constituted the FDR.

The FDR-FMLN's first political program was the Democratic Revolutionary Government (GDR) platform. The GDR advocated full respect for human rights, prosecutions against state agents responsible for human rights violations, and the creation of a new popular army with the participation of patriotic military. It also proposed agrarian and urban reform, nationalization of the banking system and foreign trade, tax reform, and a host of measures to redistribute wealth. The GDR platform also included measures to reduce unemployment and promote major reforms in housing, health, education, and culture.

In the early 1980s the FMLN formed a guerilla army made up of regular guerilla battalions, guerilla columns, and militias. FMLN forces operated under a single strategic command, the General Command of the FMLN. In January 1981 the FMLN launched its first strategic offensive of the war that included coordinated attacks on army barracks and the occupation of major cities. Between 1981 and 1983 the FMLN formed large military units, notably the Rafael Arce Zablah Brigade (BRAZ), the Felipe Peña Mendoza Brigade, the Rafael Aguiñada Carranza Battalion, the Luiz Díaz Detachment, and several battalions of the Armed Forces of the National Resistance (FARN). At this time, FMLN forces overran numerous army and security force garrisons across the country and consolidated rearguards in rural areas in the departments of Santa Ana, San Salvador, Chalatenango, Cabañas, Cuscatlán, San Vicente, Usulután, Morazán, San Miguel, and La Unión. Between 1984 and 1988 FMLN guerillas operated in small self-sufficient units to counter the intensification of air war

and the increasing mobility of the SAF. This strategic and tactical adjustment also allowed the expansion of the FMLN's political organization in the countryside.

The FMLN-FDR consistently advocated for a negotiated political solution to the civil war. The FMLN-FDR's Politico-Diplomatic Commission articulated the movement's foreign policy throughout the 1980s and coordinated FMLN-FDR representations in Europe, Latin America, the US, Canada, and elsewhere. The FMLN-FDR produced ten proposals to reach a negotiated solution to the conflict, which were plainly rejected by the military-Christian Democrat government headed by José Napoleón Duarte and by the Reagan administration. Notwithstanding, the Duarte government and the FMLN-FDR conducted a series of meetings in 1984 and 1987 with the mediation of the Salvadoran Catholic Church, which failed to reach a negotiated solution to the war.

Latin American and European governments actively promoted a negotiated settlement to the Central American crisis throughout the 1980s. In August 1981 the governments of Mexico and France first recognized the FDR-FMLN alliance as a legitimate political representative of the Salvadoran people and called for a negotiated settlement of the civil war. After 1981 the FDR-FMLN received official and unofficial recognition from numerous governments, political parties, social movements, and international organizations, including the United Nations, as a legitimate counterpart in the Salvadoran conflict. In 1983 Mexico, Venezuela, Panama, and Colombia promoted a regional negotiated settlement to the Central American crisis through a joint politico-diplomatic initiative known as Contadora. Between 1983 and 1987 Contadora produced several proposals to halt foreign intervention and militarization and to reach a comprehensive political solution to the conflicts in the region.

Drawing on the legacy of Contadora, the Central American Presidents signed the Esquipulas II accord or "The Procedure to Establish a Firm and Lasting Peace in Central America" in 1987. President Oscar Arias from Costa Rica is generally credited as the initiator of the Esquipulas II process, which set in motion the pacification of the region. Esquipulas II called for democratization and national dialogue to bring about ceasefires and free and fair elections in Nicaragua,

Guatemala, and El Salvador. It also called on insurgents to lay down arms and to join existing legal frameworks without considering the actual political demands of the revolutionary movements in Guatemala and El Salvador.

In the late 1980s the FMLN gradually modified its initial revolutionary program and accepted the basic principles of liberal democracy. A meeting of the General Command of the FMLN held in May 1988 started a major political-ideological transformation, which resulted in the formulation of a new FMLN doctrine called the Democratic Revolution. The FMLN's revolutionary ideology was reshaped by the dynamics of the negotiation to end the conflict, the electoral participation of its former FDR allies, which formed the Democratic Convergence (CD) in 1987, and by the collapse of the socialist bloc. The program of the democratic revolution contained in different FMLN documents, particularly in the September 4, 1990 *Proclama del FMLN a la Nación* (Manifesto of the FMLN to the Nation), stated the FMLN's willingness to participate in elections, to accept liberal democracy and the market economy, and to end the confrontation with the US government.

The Cristiani government and the FMLN agreed to reinstate negotiation with UN mediation in 1989. Alfredo Cristiani, who was elected president in March 1989, was the first leader of the Salvadoran right who formally called for dialogue and negotiation with the FMLN. Representatives of the Cristiani government and the FMLN first met in Mexico in September 1989 and Costa Rica in October 1989 to discuss possible UN or OAS mediation in the Salvadoran conflict. Notwithstanding, the FMLN closed down the dialogue with Cristiani and launched a major military offensive in November 1989 in response to a surge in death squad attacks against social activists and opposition leaders, particularly the bombing of the headquarters of the National Federation of Unions of the Salvadoran Workers (FENASTRAS) on October 31. During the November offensive the FMLN occupied major cities, including large segments of San Salvador, and attacked military garrisons throughout the country. Although the FMLN offensive failed to unleash a popular insurrection in San Salvador, largely due to massive aerial attacks against highly populated areas by the Salvadoran air force, it persuaded all actors involved in the Salvadoran conflict of the non-

viability of a military solution and the need to engage in serious negotiation. In December 1989 the FMLN and the Cristiani government formally requested the participation of the secretary general of the UN, Javier Pérez de Cuellar, in a definitive negotiation to end the war. The negotiation between the FMLN and the Cristiani government under the auspices of the UN focused on issues of demilitarization and democratization of society. During the two-year negotiation the parties reached the following partial agreements:

- The Geneva accord (April 1990) established the character and purpose of the negotiation. The purpose of the negotiation was to “end the armed conflict by political means as speedily as possible, promote the democratization of the country, guarantee unrestricted respect of human rights, and reunify Salvadoran society.”
- The Caracas accord (May 1990) set the agenda and the calendar for negotiations.
- The San José I accord (July 1990) was on the protection of human rights and the establishment of a UN human rights mission in El Salvador prior to the end of the conflict.
- The Mexico accord (April 1991) was on demilitarization and constitutional reforms.
- The New York accord (September 1991) was on the integration of FMLN combatants into the National Civilian Police, the formation of the National Commission for the Consolidation of Peace (COPAZ), a body in charge of monitoring the implementation of the accords, and a “compressed negotiation” to deal with the remaining themes of the negotiation.
- The New York accord Act I (December 1991) was on the cessation of the armed conflict.
- The New York accord Act II (January 1992) announced the finalization of the negotiation agenda, the signing of the official peace accords that same month, and the start of the definitive ceasefire on February 1, 1992.

The peace accords signed in Mexico City on January 16, 1992 aimed at the demilitarization and democratization of Salvadoran society and did not address structural reform of the economy. The peace agreements comprised the following themes: military reform; the creation of a new public security sector; judicial reform; electoral

reform; socioeconomic measures, including a land transfer program and a national reconstruction plan; the political participation of the FMLN; and the cessation of the armed conflict. The FMLN guerrilla army, officially named the National Army for Democracy, was demobilized in 1992 while the government simultaneously demobilized the old security forces and paramilitary forces, reduced the army from 65,000 to 12,000, purged human rights violators from the ranks of the military, and started the implementation of the political reforms. The FMLN transformed into a legal political party in 1993 and participated for the first time in national elections in 1994.

The success of the FMLN insurgency was dependent on its efficacy in bringing together factions into a unified organization. However, internecine conflict caused the various groups to take independent action. By 1994 the factions split to form the coalition Partido Demócrata (PD) – a party that disbanded and realigned with the FMLN in 1995. While the FMLN remains a viable party of leftist political forces, internal conflicts triggered yet another split in 2005 with the formation of the Democratic Revolutionary Front (FDR). While the FMLN has gained control of the legislative assembly since the end of the civil war, the party has failed to win political power in presidential elections.

FARC (Revolutionary Armed Forces and Popular Liberation Army)

Raina Zimmering

FARC, or FARC-EP (Fuerzas Armadas Revolucionarias de Colombia-Ejército del Pueblo; Revolutionary Armed Forces of Colombia-People's Army), is a Colombian Marxist-Leninist guerrilla group which has been working since 1964 to construct a socialist society through armed struggle against the Colombian government. It is Latin America's oldest, largest, and best-equipped guerrilla organization. The main ideological differences between FARC and the National Liberation Army (Ejército de Liberación Nacional, ELN), the other major Colombian guerrilla group, are that while FARC has a traditional understanding of taking power and of organizational hegemony and structure, the ELN is more orientated toward people's power and movements. Because of the focus on forceful direct action, 31 states in the world have declared FARC a terrorist organization.

FARC emerged during the period of *La Violencia* that followed the assassination of the charismatic liberal presidential candidate Jorge Eliécer Gaitán in 1948. The period from 1948 to 1963 was marked by violent conflict between the Liberals and Conservatives and between the economic and political elites and the masses. During the violent battles between militias, Liberal and Communist Party followers and independent peasants formed autonomous and independent communities with local self-administration in the border regions south of Bogotá. In the context of attacks by the army, large landowners, and paramilitary groups against these autonomous communities, the first guerrilla organizations were formed.

After the Liberal and Conservative parties joined to create a power bloc known as the National Front in 1957, the guerrillas and autonomous communities took over the role of the opposition. They began by creating a "Southern Bloc" (*Bloque Sur*) in 1964 after the massacre that occurred in Marquetalia in the province of Huila, during which an army of 16,000 soldiers under the direction of US military advisors

fought against 42 peasants, destroying the whole community and displacing the population. The self-defense movement that began as the "Southern Bloc" turned into FARC in 1966. FARC's most famous founder, and its leader until his death in March 2008, was Pedro Antonio Marín, known as Manuel Marulanda or Tirofino (also known as Tirofijo, "sureshot"). In 1982, under the influence of the Nicaraguan Revolution, FARC renamed itself as FARC-EP.

FARC differs from other guerilla organizations in Latin America in that it was founded not to take over state power, but as a self-defense organization. Until the collapse of the socialist countries after 1990, FARC was politically oriented toward Moscow and the Colombian Communist Party and worked to undermine the position of the United States in Colombia. To achieve this aim, it relied upon a combination of military force and parliamentary and governmental negotiations. FARC's long-term goal is the construction of socialism once the appropriate conditions have been achieved.

The organization's structure consists of fronts, each with 60 to 300 militants and covering certain political and military aspects. The fronts have companies with military duties. At the beginning of the 1990s, FARC had 65 different structures. The General Secretary is the highest structure and consists of seven members. After Marulanda's death, Alonso Cano assumed the leadership.

In 1984 FARC, the Maoist Popular Army of Liberation (EPL), and M-19 initiated talks with the government of Belisario Betancur, while the ELN refused to take part in negotiations. FARC and activists in the Communist Party then founded the Patriotic Union (UP) in 1985 to fight for agrarian reform, the annihilation of the national security doctrine, and fundamental democratization. At a time when social movements were proliferating all over the country in the 1980s, UP's presidential candidate, Jaime Pardo Leal, was ranked third in the presidential elections of 1986.

In parallel with its official policy of reconciliation, the Colombian oligarchy engaged in a low-intensity war of systematic extermination of social movements, demobilized guerillas, and the UP, using paramilitary groups and death squads against them. When negotiations with all guerillas failed, new guerilla organizations appeared and FARC resumed armed struggle as the only alternative. In 1987 it joined the National Guerilla Coordination, which consisted mostly of

the M-19, the EPL, and the ELN, and the organization was renamed the Guerilla Coordination Simón Bolívar (CGSB).

The main support for the paramilitaries came from the army, especially Army Intelligence Corps B-2 and the Battalion of Intelligence and Counterintelligence (BINCI, also referred to as the Charry Solano battalion), as well as from the Medellín Cartel, large land and cattle owners, transnational companies, and local politicians. The paramilitaries assassinated 5,000 demobilized guerillas and UP members, including almost all UP functionaries and elected representatives, among them Pardo Leal and Bernardo Jaramillo, the UP's presidential candidates in 1991.

After the Colombian army launched a major offensive known as "Destructor I" against FARC's General Secretary in December 1990, the General Secretary split into various groups and undertook its own major offensive in February 1991, even entering the suburbs of Bogotá, principally in Ciudad Bolívar, where guerilla militias patrolled. FARC also moved its headquarters nearer to Bogotá.

With the taking of the Venezuelan embassy in April 1991, the CGSB (at that time made up of FARC, ELN, and a part of the EPL that had not demobilized) forced the beginning of negotiations with the Colombian government, which took place in Cravo Norte (Dep. Arauca), Caracas (Venezuela), and Tlaxcala (Mexico) between 1991 and 1992. The negotiations led only to vague declarations, since the government sought the complete disarming of the guerillas while the CGSB wanted to find a solution to the social causes of the conflict without demobilizing. In 1993 FARC proposed its "Platform for a Government of Reconstruction and National Reconciliation" as a political solution to the conflict, advocating the abolition of the national security doctrine, an independent judiciary not under government control, a development plan to ensure the protection of national industries, new negotiations with transnational companies concerning the exploration of natural resources, and the rejection of any military solution to the drug problem.

The 1990s represented a period of growth for the guerillas. FARC's military strength was undeniable when it attacked the Colombian military camp in Las Delicias north of the Brazilian border in 1996, inflicting a heavy defeat on the army: the camp was totally destroyed, 70 army personnel were killed, and 70 more captured. The

operation caused a deep political crisis in the Colombian government under President Ernesto Samper. In 1997 FARC managed to force the government to create a demilitarized zone that was used to hand over the prisoners to the International Red Cross.

Other important military operations in the 1990s included the destruction of the army's communication point at Patascoy, the military base of Pavarondo in Urabá, and the elite units near El Billar. FARC took the cities of Miraflores, La Uribe, and Mitú and captured more than 300 soldiers. Strategically, this meant a transformation to a policy of mobile warfare with artillery and troop concentrations like a regular army. In many regions of Colombia, FARC was a political power. More political appreciation for FARC came through the high-level talks between the Conservative candidate Andrés Pastrana Arango and the FARC leaders during the 1998 presidential elections, which aroused popular hopes for peace. FARC affirmed that it intended to transform itself into a political party at some later date, but also declared the possibility of an armed overthrow. At that time FARC included 15,000 to 20,000 combatants, 40 percent of whom were women.

After FARC lost the support of socialist countries after 1990, it had to reorganize its financial base. Its main sources of revenue came from abductions, taxes on coca cultivation, and appropriation of the public budget. In 1998 it carried out more than 2,500 abductions. In the regions it holds, FARC taxes coca cultivation, regulates the market, and protects the coca-producing peasants against the spraying of their fields by the military. The practice of kidnapping and imposing taxes on coca plantations has led to FARC being condemned for human rights violations. It has also been criticized by the revolutionary left for several of its operations. One of the most questionable occurred in March 1999 when a FARC column executed three US Indian rights activists who were falsely accused of being CIA spies.

After the collapse of the peace talks between Pastrana's government and FARC in May 2002, President Álvaro Uribe Velez, elected in August 2002, pursued a strategy of wholesale military attacks against important strategic regions held by FARC. The Plan Colombia and the Policy of National Security financed by the United States to the tune of more than US\$9 billion gave the Colombian army a vast military supremacy,

which it used in massive air attacks against whole regions. FARC turned back to a strategy of guerilla warfare, operating once more in smaller units. In 2003, FARC conducted several violent attacks, including the car bombing of a famous club in Bogotá that killed more than 30 people and wounded another 160.

The Uribe government focused its attention on the military defeat of the guerillas, a policy that has been heavily criticized given the violations of human rights it has led to, and also because a military solution to the conflict is considered impossible by most experts. In March 2008, the Colombian army attacked a FARC camp in neighboring Ecuador with rockets, bombs, and troops. After the bombing Colombian military units entered Ecuadorian territory and assassinated all identified survivors. The attack aimed to kill Raúl Reyes, the FARC leader with responsibility for external relations who was also the contact person for the French and Venezuelan governments in negotiations for the release of hostages. The attack provoked a deep crisis in relations between Colombia and its neighbors, while Colombia's disrespect for international laws was condemned by all Latin American countries.

One month before Reyes was killed, Venezuelan President Hugo Chávez had achieved the unconditional release of four FARC hostages. FARC agreed with the Colombian government on a humanitarian exchange of 57 hostages in exchange for 500 FARC members imprisoned in Colombia as a first step to national reconciliation.

Farm Labor Organizing Committee

Cyrus Ernesto Zirakzadeh

Among the many farm-worker organizations that appeared in the wake of the achievements of the United Farm Workers (UFW), the Farm Labor Organizing Committee (FLOC) stands out because of its remarkable longevity and effectiveness. Founded in 1967, the FLOC attempted to organize migrant farm workers in the Midwest. Farms in Ohio, Indiana, and Michigan relied on seasonal farmhands to harvest crops that then were purchased by large processing companies, such as Heinz USA, Vlasic Foods, and the Campbell Soup Company. Most farmhands were Mexican Americans and legal Mexican immigrants who over a year traveled from southern states, especially Florida and Texas, to the Midwest and then back to the South. In the 1980s government investigators in the Midwest reported that migrant farm workers were often housed in rooms without heating and indoor plumbing, and were provided with water contaminated by pesticide runoff.

The FLOC, at first adopting extra-strike tactics pioneered by the UFW, attempted to impose economic pressure on growers through consumer boycotts of growers' produce. The peculiar difficulty the Midwest laborers faced was that growers could not sign contracts for better pay and improved working conditions without incurring wrath from the large processors, who viewed unionization as a blight on productivity. The big processors, citing the danger of unpredictable crop deliveries, refused to sign purchasing contracts with local farms that negotiated with labor unions. The corporations also ordered contracted farmers to mechanize production immediately in order to minimize their reliance on disruptive human beings.

To offset the power of the corporations, the FLOC modified the UFW's standard boycott strategy. The FLOC asked powerful religious and civic organizations, such as the National Conference of Catholic Charities and the American Friends Service Committee, to denounce the

behavior of the processors and to refuse to purchase the processors' products at institutions, such as hospitals and schools, which the religious and civic groups financed. Fears of negative publicity, such as the 1985 press release by the Ohio Catholic Bishops endorsing the FLOC, compelled the processors to allow local growers to sign contracts with the FLOC, with the processors being involved as third parties.

The FLOC's three-party agreements (between the corporate processors, the mid-sized farmers, and the farm laborers) were relatively unique in US farm politics. The agreements may have promoted a modicum of social harmony in the rural Midwest, as independent farmers (in exchange for stable crop contracts from processors) have improved housing, raised wages, and established grievance procedures. In turn, the FLOC has sided with the farmers during the three-way negotiations with processors over the terms of crop purchases. As is true with any union arrangement, the amount of good will and honesty in the negotiation and enforcement of contracts varies from year to year and from locale to locale. Nonetheless, during the last two decades of the twentieth century, the FLOC was arguably the most effective of all farm-worker organizations in defending the interests of migrant laborers.

Fascism, protest and revolution

Jeff Rutherford

In a speech given on October 25, 1932, the Italian dictator Benito Mussolini, leader of the first fascist state in Europe, proclaimed "the present century is the century of authority, a century of the Right, a Fascist century" (Mazower 1998:

16). With some seventy years of hindsight, this assertion seems merely another example of Mussolini's bombastic rhetoric. To the dictator's contemporaries, however, such pronouncements appeared as statements of truth. Europe, wracked by the material and psychological damage of World War I and the crippling effects of the Great Depression, experienced a fundamental transformation of its political and social landscape during the interwar years. In response to both the failure of liberal democracy to manage effectively the crises of the postwar period and to the rise of communism in the form of the Soviet Union, a third political force arose: fascism.

Declared a "Third Way" between liberalism and socialism by its supporters, fascism was a mass political movement, headed by a strong, charismatic leader, which forcefully advocated violence both to purify its own nation and to claim an empire in the wider world. At its core was an emphasis on integral nationalism: everyone deemed by the state to be either culturally or racially valuable needed to be remolded into individuals who served the collective good of the nation. Those deemed to threaten or harm the community in any way faced banishment or even physical liquidation.

In their attempt to create a "new man," fascists wanted to break down the barriers separating the public from the private, creating a "total" sphere of activism. This alternative program of modernity promised to solve the crises that troubled Europe in the interwar period. By the early 1930s, unabashedly fascist governments ruled in Rome and Berlin while fascist parties sprang up in numerous other European countries, ranging from Iceland to Spain, Romania, France, Great Britain, and Hungary, in hopes of emulating the German and Italian fascists. The diplomatic and military triumphs of the fascist powers, in particular those of Germany, during the late 1930s and early 1940s, seemed to confirm that fascism was indeed the wave of the future.

The strains of war tore apart Fascist Italy and the regime's claim to have implemented a thoroughgoing fascist revolution proved illusory. In the case of Germany, however, the Nazi variant of fascism acted as a much more cohesive force for the German people and provided the necessary motivation to fight to the end. In the end, the eventual triumph of the Western Allies and Soviet Russia exposed

Nazism as a morally bankrupt system predicated on authoritarianism, terror, and genocide. While neo-fascists occasionally emerged in postwar politics, fascism no longer inflamed the passions of Europeans: as a mobilizing ideology, it was a spent force.

During the 1920s and 1930s fascist parties functioned as catch-all organizations, appealing to those disaffected liberals, workers, peasants, and members of the nobility who viewed post-World War I society as a bewildering and alien place. In this respect fascism followed in a long line of European protest movements. Fascism had another side, however, which proved attractive to those who found bourgeois society fundamentally unfit to solve the various crises of modernity plaguing Europe. This revolutionary aspect of fascism promised more radical solutions to these problems and it was this facet of the fascist paradigm that provided the movement with such destructive force during World War II.

Fascism as Protest and Revolution

The Europe that emerged from World War I was in many respects unrecognizable from the continent that entered the conflict. The three venerable monarchies that had dominated Central and Eastern Europe in the form of the German, Austro-Hungarian, and Russian empires had vanished. Carved out of these multinational states were numerous smaller countries, which, while created on the basis of the dominant national group, still contained significant numbers of ethnic minorities. The Russian Empire was succeeded by the Soviet Union, an initially loose confederation of national states headed by the Bolshevik regime. In a dramatic reversal of thousands of years of European history, the Bolsheviks proclaimed their state to be governed not by the traditional ruling classes of the nobility and the bourgeoisie, but rather by the dictatorship of the proletariat. Seizing power in a *coup d'état* in October 1917 and securing their victory in a bloody four-year civil war, the Bolshevik call for world revolution shook a war-weary Europe to the bones. Bolshevik regimes in Hungary and Munich, despite being short-lived and bloodily repressed, further fueled the fear of the Red Specter.

The dread of a Red Europe manifested itself closer to home as the previously ghettoized socialist parties of pre-1914 Europe now became

important blocs in both the newly established democratic republics of Central and Eastern Europe and in the more stable countries of Western Europe. These parties, while never publicly renouncing their desire for the overthrow of the capitalist system, nevertheless viewed their survival as tied to that of their republic's success, a view shared by much of the general population. Many citizens opposed these parties, both due to their fear of creeping "Bolshevization" as well as due to the association in popular opinion between the socialist parties and defeat in the world war.

World War I's legacy also lingered in the economic sphere. Prior to the war, the primary economic trend in Europe centered on laissez-faire capitalism. States generally allowed business and industry to develop without governmental interference, though some governments, such as the German and Russian, were more intimately involved in the creation of industrial power and commercial wealth. The strains of World War I changed this. Private industry proved unable to produce the necessary material of modern warfare and states became extremely interventionist in determining production schedules, regulating labor relations, and providing for the welfare of their citizens. With the conclusion of the war, states attempted to return to the prewar style of hands-off economic policymaking. In war-ravaged Europe, however, this was no longer possible, neither from a purely economic standpoint nor from the point of view of the common citizen.

Individuals who survived the Great War found many aspects of postwar Europe mystifying. In addition to the numerous political and economic changes caused by the war, the social sphere had also been revolutionized. The gender balance had been decisively altered by fighting. To replace the millions of men who left the factories and fields for the front, women were increasingly drawn into the labor force. As the home fronts became increasingly female, women began exercising their new-found power, whether it was in leading bread riots in Berlin and Petrograd or in challenging the moral standards accepted by polite society. The latter phenomenon only increased in the postwar years, as the millions of dead and mutilated war veterans led to further blurring of gender roles; amputees and shell-shocked men no longer seemed to possess masculine strength that formed the basis of male identity.

All of these changes were grouped under the overarching term "Versailles System." Named after the peace treaty which ended the war between the Western Allies and Germany, the Versailles System included the creation of new national states at the expense of the former monarchies, the establishment of democratic republics with socialist parties enjoying a special prominence, the return to economic laissez faire and a general hands-off attitude to society, tolerance and protection of ethnic minorities, and the social emancipation of women. Tied together by various treaties, economic reparation plans, and the League of Nations, it was this system that engendered the birth of fascism.

Liberalism was linked to the Versailles System and, as such, drew the ire of fascist parties. Fascists viewed liberalism as a tired, worn-out doctrine more suited to the nineteenth century than to dealing with the crises of modernity facing postwar Europe. The enormous sacrifices made by soldiers, workers, and ordinary citizens during the war led these same people to now believe that they had earned the right to participate much more directly in the affairs of their state.

Filled with anger and scorn for the older bourgeois and noble politicians who had sent them to fight and die for no apparent reason, this front-generation believed that their time had now arrived: the bourgeois top-hat of privilege was to be swept aside by the steel helmet of the trenches. This found expression in the various paramilitary units that roamed the streets and the countryside, terrorizing the fascists' anointed enemies. The *squadristi* and the *Sturm Abteilung* (or SA) functioned as the strong-arms of the Italian National Fascist Party (PNF) and the National Socialist German Worker's Party (NSDAP), respectively, brawling with political opponents and generally acting as a disruptive force in the affairs of the state. The younger generation, full of vigor and willing and able for action, constituted the primary support for fascist parties, especially in the years before these parties participated in government.

Such generational thinking also pervaded foreign affairs. London and Paris symbolized the rule of the older liberal ideas. As the British and French states emerged as the prime beneficiaries of the postwar settlement in both political and economic terms, they quickly became the targets of fascist parties. The prevailing liberal view of war

as embodied in the League of Nations Charter also struck fascists as promoting the British and French agenda. For many liberal statesmen, World War I was indeed the war to end all wars. Such a view was reinforced by the 1925 Locarno Treaty, which guaranteed the borders of Western Europe, and the 1928 Briand-Kellogg Pact, which renounced war as a possibility to solving international problems.

Though some liberals and many conservatives in Europe did view war as a possibility to revise the peace treaties in their favor, only the fascist parties elevated war to a necessity. The fascists deemed war absolutely imperative for the younger, more vital fascist states to carve out their own empire at the expense of the decadent liberal powers; war was viewed as the necessary lubricant for the wheels of history.

This glorification of violence also found an expression in domestic affairs. Violence was considered not only acceptable but also necessary in purging the national community of outsiders looking to infiltrate it. While the desire for action and camaraderie found numerous adherents in those who had experienced the trenches themselves, it also appealed to those age groups who believed they had “missed out” on joining the fighting due to their young age. This celebration of violence also attracted a not insignificant number of intellectuals who viewed modern war as the proving ground for the “new man.” Here, amid the carnage caused by industrial warfare, a steeled, iron-willed killing machine arose from the trenches, ready to remake bourgeois society.

If violence constituted one major characteristic of fascism, radical nationalism formed a second pillar of the ideology. Here again the results of the war played a decisive role in the formation of fascist thinking. The fact that fascism was most successful in countries that had either lost the war, such as Germany, Austria, and Hungary, or who felt cheated out of their rightful spoils by the British and French, most notably Italy, is certainly of prime importance in explaining the rise of fascism. While nationalists of all political hues, from liberals to conservatives, struggled against the loss of national power in these countries, fascism raised the nation to a much higher pinnacle than any of their political competitors. The nation, much as class operated for the political left, was the prism through which fascists viewed their surroundings. Worshipping at the altar of nationalism, fascists

attempted to construct a new strong state, or in the case of Germany, a racial community, along strict ethnic lines that discarded previous “liberal” notions of individualism, parliamentary procedure, and laissez-faire economics.

In its attempt to create an idealized national community, fascists first needed to purify their states. Anyone deemed an outsider, either ethnically, culturally, or politically, was deemed superfluous and even dangerous to the nation. Here the different cultural and historical trajectories of nations played a major role in the development of the various fascist movements. In general, the “enemy” or “outsider” provided all fascist movements with a bogeyman whose defeat demanded the continual mobilization of the state and its citizens.

In Italy, race was less important than politics, at least up until the invasion of Ethiopia, when the racial superiority of the new Roman Empire was emphasized. Communists and social democrats were the general targets of harassment, beatings, and even death within Fascist Italy. For the National Socialists in Germany, race and politics were frequently intertwined, especially since Bolshevism was equated with Jewry. This more radical variant of fascism called for the purification of Germany by eliminating both the dangerous and lesser foreign “races” in Germany as well as those of the “Aryan race” who were physically or mentally handicapped, who failed to conform to the parameters of the new society, or who actively opposed the fascist state.

In Eastern Europe religion played a much greater role, as highlighted by the Romanian Legion of the Archangel Michael, which integrated the Romanian Orthodox Church into its worldview, and the Croatian Ustaši movement, which paraded its Catholicism against the dominant Orthodox Serbian population in the Yugoslav state. For both of these movements, religion formed the basis of their Manichean outlook and permeated their policies up through World War II.

Individualism was a central component of liberalism: the individual had a value unto himself and his rights were inviolable with the backing of law. Fascism, however, viewed individualism as a threat to the collective nation. Individuals needed to be shorn of the selfishness inherent in the liberal-democratic state and remolded into subjects who viewed their service to the collective as their highest priority. The

law, which formed the basis of liberal bourgeois states, necessitated reformulation so that it emphasized the duties, not the rights, of individuals to the nation. Complementing the sculpting of the “new man” (a topic which will be further addressed below), fascists offered an alternative political system to the democratic republic.

Parliamentary government appeared to fascists as symptomatic of the ills of decadent liberalism. In their view, special interest parties engaged in political horse-trading, concerned only with representing their narrow constituencies at the expense of the nation. The multiplicity of parties led to political deadlock and further aggravated the social and economic ills of postwar Europe. In place of what they believed to be an outmoded system, fascists offered the rule of one man supported by a mass party. Such a formulation greatly differed from traditional liberal practice, in which local notables comprised the basis of the party. Mobilizing the masses struck such men as irresponsible and dangerous. The fascists, however, viewed the masses as necessary to implementing their plans of national renewal. Acting as the spokesman for the “General Will” of the population, the leader (or the Führer or Duce) was simultaneously empowered to govern on behalf of his subjects. This organic connection between ruler and ruled clearly distinguished fascism from its liberal and conservative competitors, if not quite so clearly from Stalin’s Soviet regime. The development of this leadership cult proved an important component of fascism.

Laissez-faire capitalism also struck fascists as completely incapable of dealing with the staggering problems facing postwar Europe. The evils of “plutocratic” and “financier” capitalism thus figured prominently in fascist propaganda. Not only did such a system leave the majority of a nation’s citizens at the mercy of a small caste of financier capitalists, the fascists also believed it generated the class divisions that plagued Europe. These allegedly artificial divisions within society worked against the fascist ideal of unifying the national community.

Fascist economic thinking centered on the withdrawal from the world economy and the creation of an autarchic nation, invulnerable to the whims of the markets and the “plutocrats,” usually identified as Jews, who controlled them. How this was to be achieved, however,

was extremely unclear and, outside of the Italian and British variants, no specific programs were offered. In Italy, the fascist government, building on developments of World War I, attempted to organize its economic system around corporatism, a hierarchical organization of business interests and workers that harkened back to the medieval guilds and their alleged social peace. Under Mussolini, however, the state maintained ultimate control. Sir Oswald Mosley, leader of the British Union of Fascists, developed an even more elaborate economic plan based on corporatism; for this former rising star in the Labour Party, fascism offered the best possibility to salvage the British economy during the Great Depression. These ideas reflected a much more interventionist impulse on the part of fascist movements as opposed to traditional liberal and conservative practices when it came to economic matters.

Scorn for liberalism only increased with the ascension of socialist parties into ruling coalitions following the war. Fascists viewed liberals as too weak and effete to prevent the left from gaining power. This development proved especially abhorrent to fascist parties for several reasons. First, the Marxist view of societies divided by class directly opposed the core fascist goal of unifying the nation along ethnic lines. Policies enacted by leftist parties were seen as favoring one class and therefore harming the nation. Second, the existence of the Communist International, or Comintern, meant that workers’ loyalties were frequently drawn towards an international organization as opposed to their own nation. Third, fascists believed that the leveling inherent in Marxism would produce materialistic drones in which the individual’s will and creativity were completely extinguished. With such human material, the fascist “new man” could never be created.

The final piece of postwar society which engendered fascist protest was the explosive social change taking place within Europe. Of these, fascists believed that the emancipated woman was certainly the most dangerous and troubling. This struck them as merely another example of individualism run amuck. Fascist ideology held that “maternity is the patriotism of women” and those women who placed work above family were sacrificing the needs of the nation in favor of their own selfishness. The three “Ks” of *Kinder, Küche, und Kirche* (children, kitchen, and church) summed up the Nazi attitude towards women and their proper roles in society.

The postwar world, based on liberal principles but heavily influenced by the political left, formed the laboratory in which fascism emerged. A generation reared in war detested the weakness of traditional liberal leaders, whose political education during the nineteenth century left them unable to deal with the various crises facing postwar Europe. In political, economic, social, and cultural affairs, the fascists offered different, more interventionist answers that, while borrowing elements from both the liberal and Marxist positions, diametrically opposed both of these ideologies. In this regard, fascism certainly fits the description of an “anti” party that defined itself by what it was against instead of what it was for. This, however, fails to deal with the revolutionary aspect of fascism, an important ingredient in its political success.

While many aspects of fascist ideology, especially in the social sphere, were reactionary, it also contained a revolutionary streak that attempted to redraw the boundaries between the public and the private, between the state and the individual. It was this revolutionary aspect of fascism that differentiated Fascist Italy and Nazi Germany from reactionary regimes such as Horthy’s Hungary and Franco’s Spain. Though this idea of a totalitarian society was first publicly discussed in Fascist Italy, the increasingly powerful and interventionist state found its most radical fascist development in Nazi Germany, where the regime became heavily involved in determining the most basic of all individual rights: the right to live.

The term “totalitarianism” has come under fire both for its partisan use during the Cold War and for the near impossibility of any government, no matter how repressive, in maintaining total control over society. It does retain validity, however, in describing the goals of fascist regimes. These governments, a fusion of authoritarianism and mass mobilization only possible during the modern age, attempted to rally their citizens and make them participants in a scripted celebration of the nation.

By consistently hammering their message home through propaganda events, including such massive spectacles as the Nuremberg Party Rallies in Germany and the anniversary celebrations of the March on Rome in Italy, as well as through the much more ubiquitous media of poster and pamphlet, fascism tried to create a “new man” who thought and acted “fascist” at

all times. One prominent Italian fascist summarized this as follows: “one cannot be a Fascist in politics . . . and non-Fascist in school, non-Fascist in the family circle, non-Fascist in the workshop.” Hitler declared that “in the struggle for self-preservation which the German people are waging, there are no longer any aspects of life which are non-political” (Mazower 1998: 16, 35). Ferenc Szálasi, leader of the Hungarian Arrow Cross fascist movement, declared that “all aspects of social life [would be] subordinated to the government . . . an active, and brutally realistic statism” (Mann 2004: 246). Fascism called for the subjugation of all aspects of life under the political sphere. As will be discussed below, the state used considerable resources to re-sculpt the hearts and minds of its citizens in this revolutionary attempt to form the “new man.” It also provided other, more tangible benefits to those who belonged to the ethnic community.

Since the fascists envisioned the integration of the various social classes and strata into an inviolable national whole, it only stood to reason that they attempted to develop an advanced welfare system to both protect and preserve the “racial power” of their communities. This complemented the individual’s duty to maintain his or her racial purity in order to propagate the race and therefore strengthen the nation. The efforts of the state and the individual thus worked together towards the fascist utopia of national regeneration or, with a slightly different emphasis in the German case, the construction of the “racial state.”

The flip side of this improved system of state care, however, was that those who the regime identified as unworthy of assistance or dangerous to the community were treated in an increasingly barbaric manner. While this was much more muted in Fascist Italy until the outbreak of war – though Slovenians living in the areas bordering Yugoslavia were victims of forced Italianization policies – such thinking became increasingly prominent in Germany following Hitler’s appointment as Reich Chancellor in January 1933. While political opponents were immediately rounded-up and imprisoned in the Third Reich, racial “enemies” such as Jews and Sinti and Roma, as well as the sick and social outsiders (designated as “asocials”), received the full brunt of the Nazi assault against alleged threats to the health of the national community.

Fascism in Practice: Fascist Italy and Nazi Germany

Fascism was a European-wide movement during the interwar period. Only in the case of Italy and Germany, however, did fascist regimes come to power before the outbreak of war. Once the Axis powers had established control over Europe, several client regimes also seized power, notably the Ustaši movement in Croatia, as well as the Arrow Cross Movement in Hungary. However, it was Germany and Italy, where fascist parties ruled for 12 and 21 years, respectively, that saw the fullest attempts to construct the totalizing, fascist state.

Despite the stubborn staying power of myths that have surrounded the Fascist March on Rome in October 1922, Mussolini and his men never seized power; the former was offered the position of prime minister by King Victor Emmanuel III in his hopes of creating some sort of government with actual support as well as avoiding an armed confrontation with the fascist militia, the Blackshirts. While this constituted a dramatic victory for the Fascist Party, the role of the king highlighted the compromise accepted by Mussolini. Instead of seizing power unilaterally and being able to unleash his revolution without outside interference, Mussolini was forced to work within the framework of a monarchy. Attempts to limit the throne's power in political life continued throughout the regime's existence, and despite the progressive increase in his own power, Mussolini ultimately remained responsible to King Victor Emmanuel III.

The sharing of power with the king highlighted the limits placed on Mussolini's power. In addition to the throne, a monarchist-leaning army, influential industrialists and, most importantly, the Catholic Church, all jockeyed for power with Mussolini and his party. These powerful interests, all possessing different ideas concerning Italy's future, forced the Italian Fascist Party to scale back its revolutionary ideas. Italian social conditions, however, played the dominant role in determining the final outcome of the fascist revolution.

Mussolini came to power in a country that lagged far behind the traditional European Great Powers in terms of literacy, industrialization, and integration. In 1931 some 21 percent of the Italian population was illiterate; 20 years later, 18 percent of the population still had not

completed elementary school. Approximately half of the population was still engaged in agricultural labor during the late 1930s, as opposed to 26 percent for Germany in 1939. The lack of an industrial workforce was reflected in Italy's paltry industrial production. The historian Macgregor Knox, in his work *Hitler's Italian Allies* (2000), has calculated that in terms of industrial potential in 1938, Italy rated far and away last in a comparison of the European Great Powers, the United States, the Soviet Union, and Japan. These two problems were further aggravated by the geographical split of northern and southern Italy. While northern Italy possessed a similar industrial and social make-up to that of the more modern states of Europe, southern Italy, as epitomized by Sicily where illiteracy reached 40 percent in 1931, remained mired in pre-modern times. Southern Italy's resistance to modernity was typified by the importance of the family unit and the parochialism engendered by this outlook. These were problems that Hitler did not face in his attempt to remake German society. Such obstacles frustrated the fascist revolution in its Italian context.

The first three years of Mussolini's rule were a period of transition, in which he governed squarely within the context of the traditional Italian ruling classes. The elections of 1924 returned a solid Fascist majority, seemingly assuring Mussolini's political power. The murder of Giacomo Matteotti, a leading socialist member of parliament, later that year, however, led to a serious crisis within the regime. It was widely assumed that Mussolini was involved in planning the murder and it seemed that the king would force him to resign. Instead, Mussolini took the opportunity provided by the chaos surrounding the Matteotti Affair to steadily consolidate political power. Parliament was shorn of its political power and, in 1926, all political parties, save the PNF, were banned. A Fascist Party Grand Council was created to coordinate the political and legislative actions of the regime. While this amounted to an accumulation of fascist power at the commanding heights of government, the lower levels remained wedded to their traditional practices; both the civil service and judiciary generally retained their personnel and functions. And, of course, the king still retained ultimate power. Within the realm of politics, Mussolini's desired revolution was stillborn.

Frustrated in creating a purely Fascist political state, Mussolini and his party turned their efforts to producing the “new man” through other means. This centered on the promulgation of fascism as a civic religion. Recognizing the importance of the visual in twentieth-century mass politics, the regime utilized parades, symbols, and a “liturgy” of the movement, in an attempt to spread the fascist myth. This mythology incorporated elements of imperial Roman history, a celebration of the cult of the war dead and, finally and most importantly, the cult of the Duce. These elements were interwoven and diffused through newspapers, theater productions, and children’s textbooks as the regime tried to transform Italian society.

Mass organizations were also established as means to fascistize the state’s population. Youth organizations such as the pre-1937 ONB (Opera Nazionale Balilla) and the post-1937 GIL (Gioventù Italiana del Littorio) were designed to indoctrinate the young and mold them into committed fascists. The largest of the Fascist mass associations, boasting 5 million members in 1940, was the Fascist leisure organization, the OND (Opera Nazionale Dopolavro). Focusing on sports and recreation, this organization proved most successful in breaking down class barriers, as some 40 percent of the industrial working class had joined by 1939.

Women were also encouraged by the regime to join such associations, where they were subjected to the government’s message that the ideal woman was a mother, who utilized her reproductive capacity to better the nation. Unlike their Nazi contemporaries, however, the Italian Fascist state never resorted to eugenics; their view of women fit neatly into the European-wide conservative view of women. Fascism wanted to remove women from employment where they threatened both the male worker’s job and his masculinity. In practice, though, legislation was directed more at maintaining women’s subordinate role in society to men and tying them to the home than in creating a fascist “new woman.”

While Fascists believed that the emancipated woman of the postwar period threatened the social order, in their view workers constituted the gravest threat to the organic community. Consequently, the regime took several steps to develop the corporatist state and harmonize class divisions. By 1926, all socialist and Catholic trade unions had been banned and all workers

were organized under the Fascist Trade Unions. This was complemented by the Rocco Law of the same year which banned both strikes and lock-outs. Six corporations of employers and workers were established, with the state acting as arbitrator between the two sides. While theoretically integrated into the nation, the reality of corporatism proved far different from its theoretical side.

In summing up the development of the corporatist state, one Italian fascist with radical tendencies noted that “the government had handed over the working masses to the business world” (cited in Bosworth 2005). Such a statement is supported by the government’s sanction of three separate waves of wage cuts between 1927 and 1934, as well as the dramatic growth in unemployment in major industrial areas from the mid-1930s on. The regime itself frequently ignored the union leadership, preferring to negotiate directly with heads of major enterprises themselves. The lowering of workers’ standards of living also made it nearly impossible for large numbers of laborers to participate in various activities offered by the OND; food came before leisure.

Similar problems plagued the other Fascist mass organizations. The OND, for example, was singularly ineffective in making any headway in southern Italy. Here the concept of free time was completely alien to peasants stuck in the rhythms of agricultural work. Attempts to transform Italian youth into Fascist youth were also recognized as a failure by the authorities as the family’s central importance in everyday life could not be overcome. All of these organizations ran up against the previously discussed structural problems in Italian society, as well as the inability of the Fascist regime to eliminate all other poles of power within Italy. The survival of the monarchy, the relative independence of the bureaucracy and military and, most importantly, the accommodation reached with the Catholic Church with the signing of the Concordat in February 1929, all provided the Italian population with other institutions that demanded their loyalty. By the mid-1930s it was clear to Mussolini and others that the attempt to create “new man” had failed.

While Fascism never reached its goal of completely mobilizing the Italian population, Nazi Germany came much closer to creating a *Volksgemeinschaft* (racial community) that looked aggressively to recreate its racist utopia throughout

broad swathes of Eastern Europe and the Soviet Union. This process started almost immediately following the appointment of Hitler as Chancellor on January 30, 1933. While Hitler and the Nazi Party constituted part of a rightist coalition Cabinet, only three of the twelve ministers were Nazis, and the NSDAP did not possess a majority in the German parliament, the Reichstag; in this regard, Hitler and the Nazi Party entered into a similar governing position as Mussolini and the Fascist Party. In Germany, however, the dual processes of *Gleichschaltung*, or coordination, and exclusion were carried out in a much more thorough and systematic manner.

A mere four days after assuming power, the Nazi assault on communism began in earnest. A decree which rolled back the freedom of the press and outlawed any public meetings that posed a threat to public order was enacted. Three weeks later, the infamous Reichstag fire took place. Set by a young Dutch communist, Hitler utilized the opportunity to have the Decree for the Protection of People and State issued. This severely curtailed civil rights and gave the federal government power to intervene in state government affairs when necessary; in effect, this allowed for the paramilitary SA units to declare open war on the political left. The most important piece of legislation passed by the German parliament was the Enabling Act of March 23, which gave Hitler the power to rule without consent of the Reichstag for four years. This effectively made Hitler dictator and opened the door for the construction of the one-party state.

Over the course of the next few months, all other political parties, including the National Socialists' coalition partners, were banned, independent trade unions were dismantled and subsumed under a Nazi-led German Labor Front, and Nazi leaders were appointed to head the individual state governments. The entire police apparatus was subordinated to the SS, the elite Nazi organization dedicated to racial "purity," and charged with maintaining discipline on the domestic front. Following the death of the Reich President Paul von Hindenburg in August 1934, Hitler combined the offices of President and Chancellor into that of Führer and Reich Chancellor. Unlike Mussolini and the PNF, Hitler and the NSDAP had eliminated all political competitors and established a one-party dictatorial state. This *Gleichschaltung* of the

political sphere was complemented by an attempt to politicize the private sphere as well.

The numerous groups and clubs that dotted German society also fell under Nazi control. Professions, such as doctors, teachers, lawyers, and dentists, for example, were all placed under National Socialist umbrella organizations. Private sporting clubs as well as choral societies also fell victim to *Gleichschaltung*. Youth groups were forced either to disband or to join the party's official Hitler Youth organization. Of course, those whose political views opposed the Nazis were unable to join these organizations and many of the more prominent of these individuals found themselves in the various concentration camps that dotted the German Reich. Within the first five years of their rule, the National Socialist Party had made strikingly successful interventions into German society in their bid to create a centrally controlled and unified society.

Nazi treatment of the German working class highlights both the regime's desire to integrate workers into the racial community as well as the inconsistencies inherent in National Socialist ideology. The dissolution of all independent trade unions and the arrests and murders of the unions' leadership certainly illustrated the NSDAP's revulsion towards organized labor. The fact that the regime nearly always supported management's policies led to depressed wages, another indication that fascism was certainly amenable to capitalism. On the other hand, the Nazi government celebrated workers for being workers; this certainly was a change from all previous Reich governments. Manual labor was recognized as producing not only invaluable industrial materials but also steeled men who neatly fit into Nazi propaganda. The German Labor Front, while not particularly effective in representing workers' interests in the factories, did provide new-found leisure activities through programs such as *Kraft durch Freude* (Strength through Joy). This vacation program allowed workers to sail through Norwegian fjords on cruise ships or to hike through the Black Forest. While only low numbers of workers participated in the more exotic trips, the program did work to highlight the regime's attempts to integrate the laboring classes.

Paralleling this attempt to bring the German nation together under Nazi rule was a simultaneous effort to purge German society of those elements considered alien or threatening. While

political opponents such as social democrats and communists were the first to feel the wrath of the fascist state, Jews, Sinti and Roma, and those termed "asocials" by the regime were targeted in a much more systematic manner. Though SA men beat and killed Jews and burned Jewish homes, synagogues, and businesses throughout the 1930s, these random occurrences (with the notable exception of the "Night of Broken Glass") paled in comparison to the government's actions. Beginning in April 1933 the regime launched a legal assault designed to repeal all advances made by Jews since their emancipation in the mid-nineteenth century: in other words, they wanted to make them into non-citizens. By 1938, Jews had been dismissed from the civil service sector; excluded from the armed forces; disenfranchised; forbidden from working for the state as teachers, professors, or physicians; denied civil rights; and prohibited from marrying "Aryans."

The "Aryanization" of Jewish owned businesses also acted to strip German Jews of their identity. Stores, hotels, and enterprises owned by Jews were forcibly sold to "racially pure" Germans for pennies on the dollar. In Hamburg, for example, a minimum of 625 Jewish-owned businesses were Aryanized in 1938–9; the actual number is probably closer to 1,000. Not only did such actions contribute to the social death of Jews in Germany; they also created groups of Germans who, reaping the benefits of Aryanization, found themselves welded to the regime that provided them with such an opportunity. These laws were mirrored by more banal measures that forbade Jews from flying the national flag or using the "German greeting." Jews were also forced to use the compulsory names of Sara or Israel in addition to having their passports and other official documents stamped with a "J." The social ramifications of these laws struck right at the identity of German Jewry; while they might still consider themselves German, it was clear the state did not. At this point, the regime still favored an attempt to force its Jewish population into emigration.

A much deadlier solution for purifying the "Aryan" section of the German population, however, emerged. Fearful that the mentally and physically handicapped would not only exhaust the state's welfare resources but also produce more "damaged genetic material," the regime authorized a program of euthanasia for

those it deemed "unworthy of life." By September 1, 1941, over 70,000 people had been murdered in the name of the national community. This was complemented by a forced sterilization program that aimed to halt the reproduction of those individuals the regime viewed as harming Germany's "racial stock": the "feeble-minded," "schizophrenics," "alcoholics," and "disorderly." These terms were haphazardly used to diagnose anyone whose behavior differed from the moral norms set by the regime or who opposed the Nazi government in some way. Between 1934 and the outbreak of war, some 320,000 people were forcibly sterilized, the overwhelming majority of whom were women.

Sterilization constituted the most drastic action undertaken by the state within a larger set of eugenic policies directed towards women. In order to produce a healthy "racial collective," the regime focused on women and their reproductive ability. Not only were those "racially fit" women rewarded, both financially and in terms of other symbolic rewards, for the number of children they reared, they were encouraged to lead lives of moral rectitude and raise their children in a proper manner. Divorce was also placed within a context of racial policy. Those marriages that the state deemed unable to produce children were annulled, as "dead marriages" made no contribution to the community. As these policies made clear, the household was considered the natural environment for women; while menial, unskilled labor was permitted, skilled, industrial labor, even in a period of labor shortage, remained strikingly low.

The strengthening of the "racial collective" also informed Nazi foreign policy during the 1930s. It focused on returning Germans who, due to the Treaty of Versailles, were now living outside of the Reich. Early diplomatic triumphs, such as the remilitarization of the Rhineland in March 1936 and *Anschluss*, or union, with Austria in March 1938, provided Germany not only with strategic and economic benefits, but also brought Germans home to the Reich. The next diplomatic crisis facing Europe concerned the status of ethnic Germans living in the Sudetenland, a border province within the newly created Czechoslovakian state. Following the successful absorption of this area into the Greater German Reich, brokered at the infamous Munich conference in September 1938, Hitler then turned his eyes

to the former German areas that now constituted parts of western Poland. It was this diplomatic crisis that sparked the onset of war. While it would surely be negligent to ignore the multitude of other considerations that went into these maneuvers save the nationalism angle, the latter did play a large role in Hitler's thinking and would continue to do so to an even greater extent during the war itself.

Fascism and War

The social imperialism practiced by both Fascist Italy and Nazi Germany significantly differed from that of their nineteenth-century predecessors. Instead of embarking on wars of aggression in hopes of shoring up the existing social order, both Mussolini and Hitler hoped to create fundamentally new societies through the war itself. Here again, however, significant differences arose in the success of the two fascist powers in achieving their goal. Mussolini's Italy ultimately failed the acid test of war while Hitler's Germany nearly fulfilled its goals. The horrifying cost of this endeavor, however, ensured that fascism's ultimate failure left it a ruined and discredited ideology.

For Mussolini, war would be the medium to salvage his stalled revolution. In the midst of Italy's intervention in the Spanish Civil War, he announced to his foreign minister that "when Spain is over, I'll think of something else: the character of the Italians must be created through battle" (Knox: 2000a). The first inklings of the savage nature of fascist war took place in Italy's North African colony of Libya. Here, in what the historian Richard Bosworth in his study *Mussolini* (2000) has termed a "policy of utter brutality," the Italian military, under orders from Rome, initiated a policy of what later commentators have termed ethnic cleansing, driving some 100,000 native inhabitants into a series of concentrations camps, where hunger and sickness frequently finished the army's work. Though perhaps closer to traditional European colonial practices than Nazi-style imperialism, Fascist Italy's pacification of Libya certainly pointed in the direction of their future Axis allies' ruthless behavior.

The first outright aggression undertaken by Italy was the invasion of Ethiopia in October 1935. While this war was couched within the context of revenge for the humiliating Italian defeat at Adua in 1896, it also looked ahead as the

first step in the reconstitution of the Roman Empire. Again, Mussolini demanded a brutal conduct of war, ordering villages burned and ten Ethiopians shot for every one Italian death. The Italian military utilized poison gas and aerial bombings to destroy the extremely primitive Ethiopian armed forces.

The international reaction to the invasion caused a twofold effect. First, it led to an increased support from the Italian people for the fascist project as they rallied around Italy's new-found power on the international scene. Second, the strains between Britain and France, on the one hand, and Italy, on the other, greatly increased, and Italy found itself moving closer to the orbit of Nazi Germany. While Italy made a sizeable intervention in the Spanish Civil War, sending some 50,000 "volunteers" to assist the Spanish rebels, neither this war nor the earlier colonial adventures were on a grand enough scale to initiate the revolution Mussolini so desperately desired. The victories in Africa were undertaken by relatively small numbers of men under the auspices of the conservative army.

Unlike Hitler, who was able progressively to Nazify the German army as the war progressed, Mussolini failed to rid himself of the monarchist and frequently incompetent officer corps that dominated the Italian military. The professional value of such men was highlighted by the disastrous defeat suffered by the Italian troops in Spain at Guadalajara in March 1937. Not only did this conflict end up costing the Italians dearly in men and weaponry, it also led to an outbreak of anti-fascist jubilation in Italy following news of the defeat. The limitations of the army, reinforced by the failure of industry to provide adequate weaponry both qualitatively and quantitatively, ensured that the Italian war effort had reached its peak of success in the conquest of Ethiopia. Instead of forging a new fascist man, war only highlighted the incomplete nature of Mussolini's revolution.

War also served to radicalize Italian racial policy. The conquest of colonies in Africa increased contact between Italian soldiers and administrators and black Africans, with the latter providing the foil for the superiority of the conquering Italians. Fraternalization between soldiers and native Ethiopians, however, was prevalent enough for Mussolini to complain of Italian "racial immaturity" and subsequently force through legislation in 1937 banning sexual

relations between whites and blacks. Racial laws were introduced in Italy itself in 1938. These called for the removal of Jews from the teaching profession and the army as well as instituting a ban on marriage between Jews and Christians. While the legislation was repugnant in and of itself, its focus on religion as opposed to the alleged race of Jews differentiated it from the Nazi's more radical variant. Such legislation fit into a more general pattern of European anti-Semitism during the late 1930s; it also offered the regime an internal bogeyman with which to mobilize the population, something desperately needed by a "revolutionary" regime that had already been in power for 16 years.

Mussolini's dream to make the Mediterranean Sea into an "Italian Lake" was shattered by a series of successive defeats in 1940 and 1941. Hanging on to his German ally's coattails, Mussolini declared war against France when it appeared the French were on the verge of collapse. The Italian army, however, failed to dislodge its French opponent from the border and it received only minimal gains from the war. This was followed by the astonishingly inept handling of the Western Desert Campaign in North Africa. Here some 130,000 Italian and Libyan soldiers were taken prisoner by a British force that never numbered more than 35,000 men and suffered fewer than 2,000 casualties during the ten-week campaign. Only a shifting of British forces to Greece saved the complete collapse of Italian North Africa. The final humiliation suffered by the Italian military occurred during the invasion of Greece. Greek troops not only halted the Italian advance, but then began their own counter-attack, pushing Italian forces back across the border in some areas. Quick action by German troops rectified the situation here as they later did in North Africa as well. By the summer of 1941, Fascist Italy had devolved into a mere supplicant to Nazi Germany, forever ceding its initial position as the dominant fascist state.

The changing tides of war, culminating with the Allied invasions of Sicily and mainland Italy in August and September 1943, respectively, led to the overthrow of Mussolini, his subsequent arrest, and an armistice with the Western Allies. Though the Duce was freed by the Germans and later headed the short-lived Salò Republic in northern Italy, this was merely a puppet government, propped up by the Germans. The Fascist revolution proved abortive in Italy. Mussolini,

recognizing that the party was unable to remold Italians into Fascists, attempted to jump-start the process through war. Obstacles that existed in the prewar period, however, were only exacerbated during the war. These ranged from the military's stubborn conservatism to working-class resistance, typified by the great Turin strikes of March 1943. A regime publicly dedicated to improving the lot of ordinary Italians as it drove them towards a brighter, Fascist future appeared utterly bankrupt when the rations it provided its own people were only equivalent to those available in German-occupied Poland. Two decades of Fascist rule in Italy had failed to transform society, and war only emphasized the enormous gap between Fascist promises and the everyday reality of its practices. A regime that emphasized the importance of violence and war had no chance of survival when its own military performance was so execrable.

Hitler, on the other hand, had managed to revolutionize the German people in a way that led to success in the nation's war effort. The war initiated by the Third Reich in September 1939 against Poland quickly illustrated that the victory sought by Nazi Germany was far different from the type that had eluded its imperial predecessor some 25 years before. The military conquest of Poland was followed by an attempt to remake that society under Nazi auspices. SS murder squads followed the German army into Poland, eliminating the Polish intelligentsia, army officers and Catholic priests. Jews were also murdered, though this was not as of yet part of a systematic program of extermination. Whole sections of Poland were emptied of Poles in order to make room for the ethnic Germans "returning" to their homeland from their scattered communities throughout Eastern Europe. Many of these Germans had lived for generations in foreign countries and had only very distant ties to the Reich. In the eyes of the Nazi leadership, however, they constituted better material for the new racial community than did physically handicapped German children. The national idea at the heart of fascism only radicalized during the war.

War also radicalized the violence inherent in fascism, especially following the German invasion of the Soviet Union in June 1941. Stigmatized as the fount of the murderous "Judeo-bolshevism" that threatened western civilization, the Soviet Union was victim to a war of unimaginable

cruelty and barbarism that eventually culminated in genocide. Not only was the Red Army to be eliminated, but the Soviet Union as a state was to disappear and its population was to be decimated by some 30 million souls, primarily through starvation, with the survivors reduced to a slave caste. Both ideological and rational grounds for the invasion tied into the fascist mindset that developed during the 1920s and 1930s.

For the Third Reich, and Hitler in particular, Bolshevism constituted the strongest threat to the fascist *imperium*. Liberalism had already been swept away in most of Central and Eastern Europe before the war and, in the case of Western Europe, by the German army. Soviet-style Bolshevism, however, offered an alternative modernity to that espoused by Hitler and Mussolini. Its eradication would not only eliminate the international communist movement that tore at every state's national fabric, but it would also leave no alternative to a Nazi-dominated Europe. On the more tangible level of everyday life, the immense resources of the Soviet Union, especially foodstuffs, could be used to maintain the relatively high standards of living of the German home front. This classic case of imperialist aggression was undertaken in part to ensure that the valuable "racial material" in Germany continued to thrive despite being mired in a war.

While the occupied territories of the Soviet Union constituted the most striking case of naked exploitation undertaken by the Third Reich, the remainder of occupied Europe also fell prey to Hitler's New Order. Unlike the liberal vision of Europe which foresaw a collection of states cooperating with one another through institutions such as the League of Nations and benefiting from free trade, the Nazi vision of Europe saw a hierarchical arrangement with the racially superior German nation on top and lesser states following their political masters in Berlin.

The Reich also desired an economic system that responded to its needs; the subordinate countries would work to follow the German plan. Such practices led to the whole French locomotive industry, as well as nearly its entire machine tool industry, producing for the German war economy in 1942. A few weeks after the Nazi conquest of Greece in the spring of 1941, a German economic official reported that "the entire output of Greek mines of pyrites, iron ore, chrome, nickel, magnesite, manganese, bauxite and gold

was obtained for Germany on a long-term basis" (Mazower 1993: 24). Poland sent some 1.3 million workers to the Reich, in addition to producing large amounts of ammunition for the German army. These, of course, are only a few examples of exploitive economic plans drawn up by the Nazi regime; such practices were standard throughout occupied Europe.

These rapacious economic policies were complemented by callous and even genocidal policies toward the people of the occupied territories. Starvation led to millions of deaths throughout Europe as the German occupying authorities were much more concerned with supplying the "racially superior" German population at the expense of the "inferior races" of Eastern and Southeastern Europe. During the winter of 1941–2, some 300,000 Greek citizens died from a famine induced by German economic programs. At the same time, the Ukrainian city of Kiev suffered some 100,000 civilian deaths from starvation. In terms of numbers, these cases pale before the city of Leningrad. Hitler and the German high command decided that feeding the Soviet metropolis following its capture would only take food away from the German home front. Consequently, it was decided to blockade the city and let starvation bring it to its knees. In scenes of desperation and horror not witnessed in Europe since the Thirty Years War, between 1 and 1.3 million inhabitants of the city starved to death. Even those nations which the Germans believed had strong "racial stock" such as the Netherlands were subjected to starvation as the "Hunger Winter" of 1944–5 claimed 16,000 Dutch lives. The food needed to sustain these people was ruthlessly extracted from the occupied territories and shipped back to the Reich: the occupied population was sacrificed at the altar of German nationalism.

German policy towards the Jews became the most radicalized aspect of fascist ideology. While prewar measures were designed to socially ostracize the German Jewish population and force them to immigrate, the invasion of the Soviet Union opened a new and much deadlier chapter in Nazi practice. After preliminary plans to deport Jews under German control to Madagascar or Siberia came to naught, Nazi Germany implemented a policy of extermination. SS murder squads, as in Poland, followed the advancing German army during the Soviet campaign. This time, however, all male Jews were

targeted for liquidation. Sometime in the fall of 1941, this murder campaign was expanded to include all Jews, regardless of age or sex. These executions reached staggering heights, as in Riga in November and December where 27,800 Jews were killed and at Babi Yar where 34,000 Jews were shot in the span of a few days in early September. Such shootings, however, proved both damaging to the men who carried them out as well as an uneconomical way of liquidating the enormous numbers of Jews now under Nazi control and the regime looked for a new way of “purifying” Europe.

The search for a more economic and rational manner of carrying out the murder of all European Jewry culminated in the construction of extermination camps. While some of the camps were also utilized as labor camps, most notably at the Auschwitz-Birkenau complex, the primary function of these camps was to kill people deemed threats by the Nazi regime as quickly and efficiently as possible. Even when the military situation turned against the Third Reich and resources were desperately needed to staunch Allied and Soviet offensives, the Holocaust, or murder of the Jews, continued to receive high priority from the Nazi government. Just as the National Socialist movement had “purified” Germany of Jews, it now attempted to do so for the entire European continent under its control. In the eyes of the more ideologically committed members of the regime, the changing fortunes of war only illustrated the Jews’ insidious power and this demanded increased efforts to purge them from Europe. The fascist fixation on purity, in this case racial, led to approximately six million men, women and children being murdered, merely on the basis of their perceived status as outsiders.

Through this process of war, subjugation and murder, the Nazi regime was able to build upon its pre-war efforts to re-mold German society. Constantly exposed to the regime’s messages concerning threats to the purity of the German race, the population increasingly accepted such statements as truth. What Claudia Koonz (2003) has termed the Nazi Conscience in her study of the same title led the German people to accept Nazi messages about the collective health of the nation. The onset of war only inflamed this racial mission, especially after the swift and relatively painless victories in Western Europe reinforced notions of German superiority.

The war with the Soviet Union, however, played the decisive role in the refashioning of German society. Eighteen million men served within the Wehrmacht’s ranks during the war and the overwhelming majority of them fought in the East. The ruthless war called for by the Reich leadership allowed these men a wide degree of latitude in their behavior. The violence so celebrated in fascist thought was not only encouraged but demanded and millions of soldiers suddenly found themselves elevated from their prewar status of clerks and laborers to positions of absolute power over their subject populations.

Soldiers’ motivations and actions reveal the dual nature of the Nazi revolution: while many soldiers believed that they were fighting for a more egalitarian and just state at home, their behavior in the field ensured that the Soviet population realized that they were being reduced to mere helots. The need for administrators of all sorts throughout occupied Europe, but especially in Eastern Europe and the Soviet Union, led to a new imperial class, at once technocratic and racist, convinced of their mission in draining the occupied territories of everything possible to support the Reich’s war effort. The importation of slave labor into Germany acted as a social glue between the regime and the working class. No longer the lowest social group within German society, workers now possessed increased clout and authority in the workplace as they played the part of the racially superior German lording over their “inferior” workers. This was the alternative modernity offered by fascist Germany to Europe.

Conclusion

The collapse of fascism as a viable political ideology was even more stunning than its meteoric rise. Fascism failed on two important counts. First, the most radical variant of fascism, Nazism, painfully demonstrated the impossibility of fascism solving the problems of modernity for Europe as a whole. Based on a radical nationalism that while inclusive towards the nation’s ethnic majority, turned violently exclusionary against those deemed outsiders, fascism inevitably led to the triumph of the one strongest state. During World War II, this state was the German Reich. Mazower (1998) has summed up Europe’s situation under German occupation: “against the liberal defense of individual liberties the

Nazis counterposed the racial welfare of the collectivity; against liberalism's doctrine of the formal equality of states it offered Darwinian struggle and rule by racial superiors; against free trade it proposed the coordination of Europe's economies as a single unit under German leadership." Such a program had little appeal for other nationalities, even for those individuals who sympathized with the fascist program. The callous and exploitive policies of the German occupation generated a ubiquitous resistance throughout occupied Europe during the war, thus exposing any claims that the fascist idea had solved the problems associated with modernity on an international level.

Second, fascism as an ideology demanded the continual mobilization of a state's population in the service of the nation and its revolution. This rallying of the nation was usually directed at some "enemy," be it internal or external. In the case of National Socialist Germany, the racist basis of Nazi ideology provided the German population with a myriad of foes, with the most insidious being the "Jew," that threatened the "racial purity" of the Reich. Such racism acted as cohesive ideological glue, bonding the German people and regime together, and, once this was wedded to the violence inherent in fascist thought, it provided the necessary impetus for Nazi leadership to wage a long, brutal war of annihilation against the Soviet Union as well as fight desperate, rearguard battles in Italy and Northwest Europe against the advancing Allies. Even if the Germans had emerged victorious from the war, however, it would have eventually run out of enemies; would the population continue to live under such a repressive regime when there was no one left to fight?

Italian Fascism, on the other hand, failed to unite its subject population with the Fascist Party in any meaningful way. Once the political left was subjugated, Fascism groped about for new ways of mobilizing Italian society. The racist legislation of 1938 should be viewed as a futile attempt to provide a new enemy for public consumption. Colonial forays temporarily provided the basis for such support, but humiliating military failures in Spain, North Africa, and the Balkans not only displayed the gaping chasm between Fascist ideology and reality in Italy, but also led to diminishing support for the regime by a war-weary population. While war acted as stimulant for Nazi Germany, for Italy, it merely

emphasized the hollowness of Fascist claims of greatness. Military debacle effectively ended the increasingly fossilized Fascist regime much the same way that the final Allied victory, and the subsequent revelations of the brutalities engendered by the fascist idea, ensured its consignment to the dustbin of history.

Father Rapp (1757–1847) and Harmony

Richard Goff

Like many utopian communities in the New World, the Rappite Harmony settlements (Harmony, New Harmony, and Economy) trace their origins to eighteenth-century European religious conflicts. Similar to the Puritans of England, German Pietism sought to reform the Lutheran Church, emphasizing personal piety and the virtue of actively living a Christian life. Father George Rapp, a journeyman weaver and radical, broke with the Lutheran Church in 1785 and established his own congregation of approximately 4,000 followers. Rapp's congregation grew rapidly in the late 1700s, his followers peaking at 10,000 in 1800. Fearful of persecution, Rapp traveled to America in 1803 to seek a location where his congregation could settle and live along his principles.

Like many religious separatists, Rapp was heavily influenced by apostolic teachings and Christian communal practice. In addition to holding property in common, Rappites believed sex to be sinful and members were required to practice abstinence. For Rapp, celibacy and communism would allow members to achieve perfection in preparation for Christ's reign. The members adopted a simple style of dress and all

shared the labor tasks necessary for the community. This almost monastic lifestyle proved to be a relatively durable system.

Rapp established the first Harmony community in Butler County, Pennsylvania, 30 miles north of Pittsburgh in 1805. Similar to the Shakers, the Harmonists interacted with the surrounding communities through trade and tourism. The initial group of 500 quickly established farms, homes, and basic industry along communal lines. The town grew slowly, but by 1814 it had become relatively prosperous with several mills, a brewery, and a wool manufacturing facility. Rapp served as the organizational head of the community and was an active and relatively authoritarian leader. As the community grew and geographical problems became more severe, Rapp decided to move the community in 1814.

Establishing New Harmony near the Wabash River in Indiana, the community quickly carved a new village out of the wilderness. New Harmony became extremely prosperous by the early 1820s, allowing Harmonists to make numerous material improvements to the community, constructing schools and libraries that far exceeded those of surrounding settlements. In 1824 Rapp decided to sell New Harmony to utopian socialist Robert Owen. A curious decision given the community's success, Rapp cited scriptural justifications for the move; however, the wilderness had begun to take its toll, both physically and spiritually, on the community, and Rapp feared losing control. In 1825 the community reestablished itself in Economy, Pennsylvania, near their original home and the bustling market of Pittsburgh. Problems developed as some members were not happy with the new articles of association and others began to question the need for abstinence. As dissent grew, Rapp became more authoritarian, producing a schism in 1832. After Rapp's death in 1834, the remaining community of 288 continued to function, with leadership passing to several of Rapp's closest friends and relatives. The community continued to prosper economically but shrink demographically, ultimately producing a power struggle between the remaining members over the financial assets. It formally dissolved in 1905.

Although Harmony was not democratic and largely hinged on the dynamic spiritual leadership of Father Rapp and his adopted son

Friederich, its ability to survive and prosper without private property inspired utopian socialists like Robert Owen and Frances Wright to try similar experiments, along secular lines. Additionally, Rapp's contribution was not simply to prove that a planned community could survive, it could prosper. Rapp's emphasis on education and culture demonstrated that it was possible to have a community that was not simply economically viable, but also made life worth living.

Fawkes, Guy (1570–1606) and the Gunpowder Plot

Christian A. Griggs

Guy Fawkes was a key member of a radical group of English Roman Catholics who attempted to kill King James I in what became known as the Gunpowder Plot. Though the plot failed, it led to further decline in the status of Catholics in England and fed Protestant belief that God was protecting the country.

Fawkes was born in York to Protestant parents but converted to Catholicism while still in school, likely due to the influence of his stepfather and

schoolmates. While in his early twenties, Fawkes went abroad to fight with the Spanish army in the Netherlands. Allowed to practice his religion freely, he gained a reputation as a devout Catholic and an able soldier. He visited Spain during these years and asked for Spanish military intervention to assist the suffering Catholics in England. When such aid was not forthcoming, Fawkes returned to England and learned of a plot developed by English Catholics to establish their religion in the country.

In May 1604 Fawkes and others met in London with Robert Catesby, who had developed the plan now known as the Gunpowder Plot. The plot aimed to blow up the Houses of Parliament, killing the king and members of Parliament, thereby destroying the existing government and allowing it to be replaced with a Catholic regime. Fawkes offered his assistance and became a central figure in the preparations. By late fall 1605 the conspirators had built a stock of 36 barrels of gunpowder in a cellar beneath the House of Lords, all hidden by firewood. On the night of November 4, Fawkes was left alone in the cellar to ignite the gunpowder when Parliament convened the next day. Word of a possible attack

Guy Fawkes (1570–1606) was an English footsoldier who gained notoriety for his involvement in the Gunpowder Plot of 1605. The Gunpowder Plot was an attempt by a group of English Roman Catholic revolutionaries to kill King James I by blowing up the House of Lords in Westminster Palace on November 6, 1605. After the plot had been revealed and the conspirators were sentenced to be hanged, drawn, and quartered, Fawkes escaped his fate by jumping from the scaffold and breaking his neck. (Getty Images)

had reached the royal court, however, and King James I ordered the area searched, which led to the discovery of Fawkes and the gunpowder. Fawkes was arrested and refused to provide details of the plot, until convinced to do so by torture.

With the plot foiled and his fellow conspirators either killed or captured, Fawkes awaited trial. He was found guilty of treason and executed on January 30, 1606. Parliament passed an act declaring November 5 a day of public thanksgiving, which has become known as Guy Fawkes' Night or Bonfire Night. The celebration of this night involves burning an effigy, typically of Fawkes, to commemorate God's deliverance of England from the Catholics. The vaults under the House of Lords are still searched before the opening of Parliament.

Federación Anarquista Ibérica (FAI)

Eduardo Romanos

The FAI was a clandestine organization of Spanish and Portuguese anarchists, mostly affiliated with the Spanish anarcho-sindicalist trade union, the Confederación Nacional del Trabajo (CNT). The FAI became very active in the 1930s in Spain, first organizing revolutionary insurrections against the Second Republic and then during the Spanish Civil War.

The FAI was founded at a conference in Valencia on July 25–26, 1927 by the National Federation of Anarchist Groups of Spain, which had been set up four years previously in Barcelona. First, the National Federation, and later the FAI, tried to force the CNT to adopt an anarchist orientation, which under the Primo de Rivera dictatorship (1923–30) meant remaining illegal and subject to persecution. This bond, where the

anarchist organization was an ideological safeguard for the union, was known as the *trabazón* (“connection” or “link”) and aimed at transforming the CNT into a powerful and revolutionary anarchist working-class movement in Spain, after the expulsion of communists and the more reformist members from the ranks. The main theorists of this organizational principle were Emilio López Arango and Diego Abad de Santillán. The latter would later be general secretary of the FAI in 1935.

The idea of founding an anarchist organization on the Iberian Peninsula had been previously expressed at a congress in Marseille in May 1926. Those in favor consisted of the Federation of Spanish-Speaking Anarchists in France, where numerous refugees had gathered, as well as the Regional Federation of Anarchist Groups of Catalonia who voiced their support at a meeting in Barcelona in March 1927. The subsequent Valencia Conference brought the Spanish Federation, the French refugees, and the União Anarquista Portuguesa into the FAI, defined the relationship with the CNT under the *trabazón* principle, and called for a campaign of agitation that could spark off popular dissent and ultimately lead to social revolution.

Nevertheless, until the mid-1930s the FAI existed as little more than a vague network of anarchist *grupos de afinidad* or “affinity groups.” This traditional form of anarchist organization – very active in underground activities – usually consisted of five to ten members connected by personal relationships and a strong commitment to the same ideological principles. Within the FAI the affinity groups organized themselves territorially in local or *comarcal* federations. Their committees were in contact with regional bodies, which in turn were in contact with the top-level peninsular committee. One of the most important affinity groups was *Los Solidarios*, set up in the early 1920s by Buenaventura Durruti, Francisco Ascaso, and other notorious anarchists. During the Barcelona “Years of Lead” these “kings of the working-class gun,” as Juan Garcia Oliver later called his cohort, organized sabotage, robberies to fund workers’ strikes, and attempts on employers’ and officials’ lives, as well as taking part in the foundation of the National Federation that preceded the FAI. After being exiled in Argentina, Cuba, and France, Durruti and Ascaso were charged along with Gregorio Jover with trying to kill King Alfonso XII and

General Primo de Rivera in 1926 in Paris. Thanks to an impressive international campaign of solidarity, they were freed and went to Belgium. They returned to Spain with the advent of the Second Republic (April 14, 1931) and immediately adopted a belligerent position towards the government. The group did not officially become part of the FAI until 1933, changing its name to *Nosotros* ("We"), although it had always been a *de facto* member.

During the Second Republic these and other elements within the FAI gained an increasing influence over the CNT. This was achieved through the monopolization of the defense committees set up jointly by the two organizations and the control exerted over the so-called Pro-prisoner Committees in support of jailed anarchists and anarchosyndicalists. Solidarity campaigns were followed by active agitation against the government. This approach clashed with more syndicalist-oriented groups within the CNT, who envisaged a period of recovery and growth after the progressive decline suffered under the Primo de Rivera dictatorship. However, internal strife soon ended when the moderates were expelled and members of the FAI began occupying top-level posts in the CNT's committees and journals.

Between 1932 and 1933 the FAI promoted a series of armed insurrections against the Republic in Catalonia, Aragon, La Rioja, and Andalusia in what García Oliver termed "revolutionary gymnastics." According to historian Chris Ealham (2005), "as far as the FAI insurrectionists were concerned, even if these armed exercises did not provide the spark to ignite a revolutionary fire, they would at least force the authorities to rely on increasingly repressive measures and thereby impede the institutionalization of the proletariat within the Republic." The insurrections usually began with attacks on *guardia civil* (rural police) barracks, followed by the burning of the official registers of the village, the proclamation of libertarian communism, the appointment of administrative and defense committees, and the abolition of currency. These actions invariably resulted in the failure of insurrection to proliferate across the country, the arrival of state police reinforcements, and the flight or repression of the more ardent anarchists. This cycle of mobilization and repression exhausted the FAI and eroded trust in the revolutionary spontaneity of its sympathizers, which partly explained

its absence in the October 1934 insurrection in Asturias, a movement led by the socialists.

In the beginning of 1936, 496 groups gathered at a general meeting of the FAI in Madrid. The previous meeting organized in the same city in October 1933 in an atmosphere of insurrection had 1,201. In May 1936 the CNT held its Fourth Congress in Saragossa and dismissed both the FAI's insurrectionary tactics and the possibilist syndicalism supported by moderate groups within the union. Just two months later, the two organizations, now under the joint title CNT-FAI, found themselves in control of different cities and regions after having defeated the military uprising that sparked the Spanish Civil War (July 17, 1936–April 1, 1939). With the collapse of the state, they succeeded in enacting a program of libertarian communism in the form of industrial and agrarian collectives in the rearguard, especially in Catalonia, eastern Aragon, and Valencia. In the first months of the revolution, political violence was partly executed by armed squads that launched repressive raids on right-wingers. This violence was neither the work of anarchists alone, nor entirely supported from above. Well-known libertarian figures (e.g., Joan Peiró) soon condemned and struggled to limit the extent of these events.

Breaking with the anti-parliamentary tradition, members of the CNT-FAI joined the Catalan and the Republican governments in the autumn of 1936, thus opening a deep rift with the rank and file. Disunity spread after the famous May Days of 1937, when the rank and file accused the leaders of giving in during the riots and skirmishes on the streets of Barcelona that pitched the CNT-FAI and the members of the dissident communist party Partido Obrero de Unificación Marxista (Workers' Party of Marxist Unification) (POUM) against Catalan communists and the Republican police. As a result, a new government was appointed under the parliamentary socialist Juan Negrín without the participation of the CNT-FAI. The new government's decrees dismantled revolutionary collectivization and the local organs of workers' power while militarizing the libertarian militias and imposing central control on industry. The general meeting organized in Valencia in July 1937 by the FAI abandoned the traditional organizational framework of affinity groups in favor of a "new and more efficient" federal structure. Participation in state institutions was also ratified at the

meeting. Amid these contradictions the FAI went into a decline, both in terms of resources and influence, as did the entire *Movimiento Libertario* (ML), set up in October 1938 with the CNT and the anarchist youth organization *Federación Ibérica de Juventudes Libertarias* (FIJL).

Soon after the end of the war the Francoist police concluded a period of harsh repression against the members and organizations of the ML that broke up the FAI in all its practical forms. In the early postwar period some calls for reformulating the anarchist federation into a libertarian political party that could act as a substitute for the union in political alliances against Franco were rejected. The organization-in-exile maintained an extremist discourse that diffused second-generation affiliation. The papers of the FAI Peninsular secretariat from the Spanish Civil War are kept in the International Institute of Social History in Amsterdam, where they join those of the CNT and of the *Oficinas de Propaganda Exterior* set up by the two organizations during the Civil War.

Federation of Salvadoran Workers (FENASTRAS)

Edward T. Brett

The National Trade Union Federation of Salvadoran Workers (FENASTRAS), El Salvador's largest industrial trade union confederation, was founded in 1974 to bring unity to the nation's trade union movement and thereby strengthen it. It consisted of 16 trade unions with a combined membership of 25,000. It was affiliated with the International Trade Union Confederation and its main headquarters were located in San Salvador, just two blocks from the command center of the National Police.

Accused by Salvadoran and US authorities of being a front organization for the FMLN (Farabundo Martí National Liberation Front), several of its leaders as well as its headquarters were under constant surveillance. Its members were continually harassed and threatened by Salvadoran security forces. Minor acts of harassment, however, escalated into more serious violence in 1989. On February 22 and September 5, bombs were thrown at the union's headquarters, but they did not result in any loss of life. On October 31, however, FENASTRAS members were not so lucky. On that day a bomb, which had been placed by a door near the building's lunchroom, exploded at approximately 12:30, when the lunchroom was full of workers. Nine unionists were killed and about forty wounded. Febe Elizabeth Velásquez, the general secretary of FENASTRAS and El Salvador's most important labor figure, was among the dead. The day before, FMLN operatives had carried out an assault on a meeting of the joint staff of the Salvadoran military, and it seems that the October 31 bombing was in retaliation.

The attack on the FENASTRAS headquarters had important ramifications in that it convinced FMLN leaders to break off peace negotiations with the Salvadoran government and instead go forward with a major offensive that had been in the planning stage for over two years.

Fell, Margaret (1614–1702)

Amy Linch

Margaret Fell was the co-founder, with George Fox, of the Religious Society of Friends, or Quakers. She was also an early preacher, organizer, and political advocate for the movement. Quakers believed that direct experience of Christ was available to all people without mediation by church officials or ceremony. Due to their rejection of any established creed, along with their emphasis on spiritual equality among people and their refusal to observe rituals that sustained the rigid social class hierarchy in seventeenth-century England, the Friends were widely regarded as subversive to both church and state. Margaret Fell shepherded the early movement through periods of intense persecution and was a major force behind its later institutionalization. In her writings and political intercession on the behalf of her co-religionists she fought for freedom of conscience, the right of assembly, and women's right to public ministry.

Margaret Fell was by birth and marriage a member of the landed gentry. Her husband, Thomas Fell, was a prominent judge and politician whose family had achieved gentry status through the redistribution of monastic lands during the Henrician Reformation. Their home became the administrative center of early Quakerism when Margaret was persuaded of the truth of George Fox's teachings while he was still an itinerant preacher. Margaret maintained correspondence between Fox and traveling missionaries, provided a safe haven for Friends fleeing persecution, and communicated with those who were in prison. She used her wealth and social status to petition Charles II for intercession on the behalf of imprisoned Quakers and establish a charitable fund to aid traveling missionaries and their families. Her husband also used his position to afford legal protection to Quakers until his death in 1658.

In 1664 Margaret Fell was arrested and sentenced to life in prison. She was also forced to forfeit her property for holding meetings in her home and refusing to take an oath of allegiance to the king. From prison she wrote and published religious pamphlets, most notably *Womens Speaking Justified*, a scripturally based polemic defending women's ministry. While most justifications of women's public voice in the mid-seventeenth century were based on the notion that women could transcend their gender through communion with the divine, Fell argued that women were not only spiritually equal to men but also uniquely suited to public ministry by virtue of their gender. She combined specific examples of female leaders in the Bible with scriptural passages that affirm women's equal responsibility for their own salvation and that of their communities.

Margaret married George Fox after she was released from prison in 1668 through the intercession of Charles II. She returned to her home, which had been granted to her son, the sole member of the family who was not a Quaker. Soon after her return she was arrested again and spent a year in prison for violation of the Conventicle Act, which forbade religious gatherings of more than five people outside of the Anglican Church. Fell, like many Quakers, supported the restoration monarchy and regarded Cromwell's government as having betrayed its ideals for worldly power. She advocated secular obedience among Friends but cautioned that people were ultimately bound to obey God rather than man where the two laws were in conflict.

Feminist performance

Magda Romanska

Starting in the 1960s, feminist performance artists began “defining their own roles, their own genitals, their own eroticism, and their own rules” (Juno 1991: 74). Because it combines visual imagery with the spoken word, theater offers a unique opportunity to deconstruct both the language and the visual codes of patriarchal tradition. Experimenting with nudity and obscenity as a way of dislocating the patriarchal discourse, female performance artists turned to their own bodies to search for “a symbolic reclamation of woman’s subjectivity through the body” (Dolan 1987: 159).

Women have done this in a number of ways. In 1968 in a performance called “Touch Cinema,” Valie Export put her breasts in a cardboard box and enticed street-fair passersby to touch them while simultaneously staring into her eyes. In 1973 in a show called *Erosion*, Export rolled her naked body over broken glass in order, as she said, “to change the male gaze. The man sees you naked . . . yet he cannot see you the way he *wants* to see a naked female body” (Juno 1991: 189–90). In 1976 Ulrike Rosenbach recreated Botticelli’s classic *The Birth of Venus*. In her own *Reflections on the Birth of Venus*, Rosenbach “placed herself in front of the figure of Venus as a slide of Botticelli’s masterpiece was projected life-size onto a wall. Turning in place, Rosenbach absorbed the identity of this female archetype (when the black half of her body-suit faced the audience) and projected it (when the white half faced the audience)” (O’Dell 1998: 96–7).

In the early to mid-1980s, a second wave of feminist performance artists continued struggling with the same issues their predecessors had. Within the context of the growing porn business (and the slowdown in women’s economic and social advancements during the Reagan years), female performance artists were caught between the real (the economic) and representational (the aesthetic) of the sex industry and the new erotic gaze that it launched. The most interesting performer to emerge from this climate was a former porn star, Annie Sprinkle, noted for a 1985 solo routine that she called *Post-Porn Modernism*, a show-within-a-show of Richard Schechner’s *Prometheus Project*. In an attempt, as Sprinkle put
