In Colombia, the punk movement sprung from the cities of Medellín and Bogotá, where rapid industrialization had taken hold, leaving the urban youth alienated from political, economic, and social decisions that were shaping the city around them. In the 1980s, urban youth in Colombia forged bonds of solidarity and mutual aid through the punk scene, and in the late 1980s split into various factions in response to the rise of narcotrafficking. Some Colombian punks and red skins eventually joined the Unión Patriótica (a leftist political party founded by the FARC [Revolutionary Armed Forces]), with which the band *Disolución Moral* was affiliated.

Punk in Mexico has existed since at least the early 1970s, initially imported from other countries, but eventually taking on its own forms of expression. Although there had long been currents of anarchism and anti-authoritarianism within Mexican punk, the 1994 Zapatista uprising had the profound effect of politicizing a broad swath of punks, linking their identity to Spanish-language and Latin American cultures of resistance. Bands such as *Massacre 68* (México, DF) and *Disolucion Social* (Monterrey) were influential, and bands such as *Fallas del Sistema* (Guadalajara) and *Desobediencia Civil* (México, DF) continue to connect the punk scene to social movements such as the Zapatistas, as well as anarchist and autonomous movements throughout Mexico.

In the United States Latinos and Latinas had long been involved in the punk scene. However, the Zapatista uprising as well as US immigration raids in Latin American communities increased government repression of immigrant communities in general, and feelings of invisibility within a largely white-defined punk subculture led to an explosion of political Latino punk bands that

began singing about these issues in the early 1990s. The most prominent scenes were in Los Angeles, Chicago, and New York City, where there are large Latino communities, but scenes sprung up all over the country from Florida, Texas, and New Mexico to Minneapolis.

Anarchism was strongly influential in many of these scenes, much of the influence coming from Mexico and South America. Bands like Los Crudos (Chicago), Huasipungo (New York City), Subsistencia (Los Angeles), Ricanstruction (New York), and Aztlan Underground (Los Angeles) have had a tremendous influence on young people, especially indigenous youth in the US. In spite of some linguistic and cultural similarities, however, the ethnic composition of Spanish-speaking punk scenes in the US (as well as immigrant generational differences) has defined the politics, local struggles, and character of various scenes. Migra punk, Chicano punk, and Afro punk are notable strands subsumed under the Latino punk label.

Lautaro (d. 1557)

Mauricio González Arenas

Lautaro was a Mapuche leader who fought against the Spaniards between 1553 and 1557. According to the most accepted historical tradition, Lautaro was born in the Araucanía, between the Carampangue and Tirúa rivers around the year 1535. In approximately 1550 he was imprisoned by the Spanish conqueror Pedro de Valdivia, who sentenced him to serving in the stables.

While with the Spanish, Lautaro learned a great deal about his captors' cultural and military habits. He studied their use of the horse, their use of weapons, their strategies, and their methods of combat. Later, towards the end of 1553, Lautaro fled from the Spaniards to return to the Araucanía and take part in the great revolt his people were preparing against the invaders. As a result of his natural ability and the military knowledge he acquired during his captivity, Lautaro quickly rose to be the leader of the rebellion.

Lautaro's military career began with a great victory. On December 25, 1553, in the Battle of Tucapel, he defeated and killed Pedro de Valdivia, the founder of Santiago, together with 60 Spanish soldiers who were accompanying him. In February 1554 he defeated Francisco de Villagra, successor to Valdivia, in the Battle of Mariñeñu. This victory allowed him to devastate the city of Concepción. Lautaro's victories continued. In 1555 he defeated and drove back the Spanish regiment that tried to repopulate Concepción. At the beginning of 1556 he initiated the most ambitious of his operations: to destroy Santiago. In three occasions the Mapuche commander advanced on the capital of the Spanish colony. Finally, after several indecisive battles, he was killed on April 29, 1557 in the Battle of Peteroa, on the banks of the River Mataquito. When he died he was about 22 years old.

Since 1810 Lautaro has been held up as a symbol of freedom and patriotism by the Spanish-American colonies fighting for liberation from Spain. Today, Lautaro's epic story constitutes one of the principal phases of the struggle of the Mapuche people – a continuing struggle to regain the political and territorial autonomy they enjoyed for almost 250 years, thanks to the prowess of Lautaro and his successors.

This image of the Mapuche warrior Lautaro is accompanied by text that reads: "this Indian killed the people who were with Villagrán, governor of Valdivia. This is the dress of war of the Indians – part of it made in ram cowskin." Before the arrival of the Spanish in the sixteenth century, northern Chile was ruled by Incas, while the indigenous Araucanians or Mapuches inhabited central and southern Chile. (South American Pictures)

Le Duan (1908–1986)

Justin Corfield

Le Duan was a founding member of the Indo-chinese Communist Party in 1930, and took over from Ho Chi Minh as the first secretary of the Vietnamese Communist Party in 1960. He became general secretary in 1976, a position he retained until his death 10 years later.

Le Duan was born on April 7, 1908 in Quang Tri Province (now Binh Tri Thien Province) in central Vietnam. His father was a railway clerk. Le Duan joined the Revolutionary Youth League of Ho Chi Minh in 1928. He helped found the Indochina Communist Party (ICP) two years later. In 1931 he was arrested by the French colonial authorities for seditious activities and spent five years in prison. On his release he rose rapidly in the ranks of the ICP, and in 1939 was appointed as a member of the Communist Party's Central Committee. In 1940 Le Duan was arrested again by the French and spent the rest of World War II in a French prison on Poulo Condore.

In March 1945, with the Japanese *coup de force*, Le Duan was released and served under Hô Chi Minh in Hanoi. He was not happy with the Geneva Agreements which left the south of Vietnam in the hands of the pro-western Republic of Vietnam, and he was appointed to organize the South Vietnamese Communists, becoming secretary of the party's main bureau in the South, the Central Office for South Vietnam (COSVN). He became active in the Vietnamese Communist Party, arguing against the partition of the country and clashing with party ideologue Truong Chinh, who felt that more effort should be put into mobilizing the southern Communists.

In 1957 Le Duan was recalled to Hanoi to become a member of the Politburo and effectively serve as first secretary of the Vietnam Workers' Party, a position which was formalized on September 10, 1960 with the demotion of Truong Chinh, who had held that role until 1956. However, Le Duan and Truong Chinh were reconciled and together sought to steer the Vietnamese revolutionary movement on a neutral course during the Sino-Soviet dispute. In 1962 Le Duan was in charge of overseeing the creation of the People's Revolutionary Party which became a major factor in the subsequent

proclamation of the National Front for the Liberation of South Vietnam. Eventually, in 1975 Le Duan led the party towards a closer relationship with the Soviet Union and into a bitter dispute with China.

With the formal reunification of North Vietnam and South Vietnam on December 20, 1976, Le Duan became general secretary of the Communist Party and led the country through the confrontation with the Khmer Rouge in Cambodia, the Vietnamese invasion of Cambodia in December 1978, and the subsequent Vietnamese occupation of Cambodia. This led to the Chinese invasion of Vietnam, and Vietnam tying itself ever closer to the Soviet Union, becoming a member of the Council for Mutual Economic Assistance. In 1979 Le Duan was awarded the Lenin Peace Prize. Le Duan tried to promote economic reform, but there was mounting criticism of him as being one of the “old men” running the country along more hard-line old-fashioned lines, with reformers wanting somebody who was more pragmatic. During continued rumors of his impending retirement, Le Duan, who was also sometimes called Le Dung or *anh Ba* (“Third Brother”), died on July 10, 1986 in Hanoi, to be succeeded briefly by Truong Chinh.

League of Revolutionary Black Workers

*Michael Goldfield and
Mike Hamlin*

The League of Revolutionary Black Workers (1967–71) organized and mobilized a movement of hundreds of in-plant caucuses of African American workers, one of the most significant cutting-edge militant worker actions of the

1960s and 1970s in the United States. The League (LRBW) was part of the worldwide struggle of radical, Marxist-oriented autoworkers, including those in France (culminating in the 1968 French general strike), Italy (centered at Fiat), and in South Africa, among many other locations. The LRBW was also a revolutionary, black nationalist movement in the US, influencing the course of civil rights struggles, labor struggles, and politics in general. Like other such movements throughout US history, the LRBW has been either omitted or marginalized in most historical accounts, accounts which tend to eliminate the real impact of revolutionary groups and working-class militancy on US society.

The Congress of Industrial Organizations (CIO) labor federation, even during its heyday in the 1930s and 1940s, had a mixed record on defending and fighting for the interests of its black members. This situation worsened as left-led unions (which tended to be far more interested in such issues) were expelled and driven out from the CIO from 1949 to 1950. As major US unions consolidated a business union direction, they all but abandoned the fight for the equality of their black members. This was especially true in the auto and steel industries. In auto, where Walter Reuther – whose caucus took control of the United Auto Workers (UAW) from the left in 1947 – enjoyed an undeserved reputation for civil rights activism, black workers remained consigned to the worst jobs and virtually excluded from the skilled trades (Goldfield 1993, 1997). The contrast between lofty democratic rhetoric and the tight, bureaucratic, undemocratic control that Reuther’s UAW all-white leadership maintained in the union was vivid. Even more stark perhaps was the discrimination black workers faced in the auto plants. By the 1960s African Americans represented 25 percent of all US employees in the Big Three US auto firms (General Motors, Ford, and Chrysler). While Reuther displayed a sympathetic public posture toward racial equality, evinced through marching in 1960s civil rights demonstrations, black workers in the UAW union faced significant discrimination.

In the long history of radical, militant struggle in the black community, the 1950s and 1960s were notable for the emergence of a variety of groups, including the Republic of New Africa, the Revolutionary Action Movement, Uhuru, the Deacons for Self-Defense, and in particular

Robert Williams' radical, armed, self-defense oriented National Association for the Advancement of Colored People (NAACP) chapter in Monroe, North Carolina. The chapter, of which Williams was leader, was comprised of many army veterans, protected the local black community against assaults by the Ku Klux Klan. Anxious that Williams was too radical, the NAACP expelled him from the organization in 1959. The reemergence of the civil rights movement in the South during the 1950s and early 1960s gave a renewed stimulus to in-plant activities by African American youth. First, of course, was the Montgomery bus boycott, led by Martin Luther King, Jr. from 1955 to 1956. But perhaps the signal events that inspired young radical black youth in the North were the lunch counter sit-ins of Southern black college students, beginning in February 1960 in Greensboro, North Carolina, eventually involving as many as 50,000 students, spreading to over 100 cities throughout the South (Bloom 1987; Carson 1981).

Since the emergence of the automobile production industry, Detroit had been the auto capital of the world, remaining so into the 1960s. Yet the Big Three had also decentralized production to other locations, with many aging plants still located in the Detroit area. These dilapidated workplaces turned out vehicles under unsafe conditions, intense work pressure, and with racially stratified jobs. In addition, many of these plants had become majority black, with all-white, generally racist, supervision. Detroit was also a city where black radicalism had never been extinguished, with various brands of radical nationalism, and an especially vibrant Marxist tradition, which included communists, Socialist Workers Party members, and followers of C. L. R. James, all with roots in key workplaces.

In 1967 the largest urban riot (referred to by many radicals as a rebellion) took place in Detroit. In response to this event a core group of young African American radicals began publishing the *Inner City Voice* (ICV) newspaper. By the next year, one of their members, John Watson, was elected the editor of Wayne State University's daily newspaper *The South End*. The newspaper, staffed largely by both black and white leftists, became a vehicle for organizing black workers throughout the Detroit area. The masthead was changed to

read, "One class conscious worker is worth 100 students."

In 1967 and 1968 there were a series of wildcat strikes at Chrysler's Dodge Main Hamtramck plant, leading to the founding of DRUM (Dodge Revolutionary Union Movement) by several of the leaders of the ICV group working in the plant. The plant had almost 10,000 workers, almost two-thirds African American. The leader of the group was General Baker. DRUM developed a weekly newsletter, whose description of in-plant conditions, racial discrimination, and exposés of the union had an electrifying impact in the plant. DRUM not only led job actions around in-plant conditions, recruited large numbers of members in the plant, and participated in union elections. It also organized a boycott of two taverns near the plant, frequented by black workers, but which refused to hire any blacks. The boycott was overwhelmingly successful. The example of DRUM led to the formation of RUMs at workplaces all around the Detroit area, including ELRUM (Eldon Ave Drum and Axle), FRUM (Ford), and UPRUM (United Parcel). DRUM also stimulated the galvanizing of already-existing black caucuses around the country, and the creation of new ones.

The leaders of DRUM and the ICV group decided to consolidate these in-plant groups into the explicitly Marxist-Leninist League of Revolutionary Black Workers. The League's impact was far reaching. LRBW activities also influenced many white workers and activists. In conjunction with Detroit Newsreel, the LRBW produced a film, *Finally Got the News*, which was shown around the country. Along with numerous articles about the LRBW in left-wing and "movement" papers, the LRBW had a tremendous influence on the New Left, encouraging large numbers of black student groups to move from cultural nationalism to Marxism.

The impact of the LRBW on US companies and workplaces is more complex but somewhat astounding. Particularly in workplaces with significant numbers of non-white workers, black foreman and middle management were recruited in large numbers. By the mid-1970s, skilled trades jobs in auto and other industries began to open up to blacks. Upgrading of black workers – unevenly, to be sure – began occurring in select venues. These trends, so prolific today, are largely an indirect consequence of the LRBW and its activities.

The League of Revolutionary Black Workers placed its struggle and agenda in the context of a worldwide struggle of working-class people against the international capitalist system. This perspective is presented in many of its writings, as well as *Finally Got the News*. By the early 1970s the LRBW had endured many splits and ceased to exist as an organization. Yet, for a number of years, its impact on workplace radicalism and militancy was large. Like the Industrial Workers of the World, its legacy is a beacon for those seeking successful models of radical, transformative struggle.

Lebanese insurrection of 1958

Kristian Patrick Alexander

The Lebanese crisis of 1958 is widely viewed as an ideological struggle causing polarization between Lebanese nationalism and growing pan-Arabism. President Gamal Abdel Nasser of Egypt became the symbol of pan-Arabism after the 1956 Suez Crisis and the 1958 merger of Egypt with Syria to form the United Arab Republic. He had a great influence on Lebanese Muslims, while Christians were set on maintaining the country's autonomy and cooperation

with the West. The conflict also demonstrated the fragility of the National Pact of 1943, an unwritten agreement between the two most prominent Christian and Muslim leaders, Khuri and Sulh. The National Pact was based on the basic principle that Lebanon was to be a completely independent state, specifying that the Christian community would cease to closely identify with the West and, in return, the Muslim community would give up its desire to merge with any Arab state. The 1958 conflict between Christians and Muslims in Lebanon reinforced the notion that sectarian affiliation was politically significant, thereby hindering the development of an overarching national identity.

One of the most important internal causes of the 1958 crisis was the perception of discrimination and dissatisfaction. Many Muslims felt that the Christians predominated in senior government positions even though the Muslims were more populous. Corruption was another aspect of Lebanese politics that made politics a highly personal affair. In seeking to dominate the Muslim community, President Camille Chamoun routinely changed prime ministers and played Sunni politicians against each other in order to weaken the political strength of his Maronite rivals. By doing so, he positioned himself closer to the West and played right into Lebanese Christian sentiments that generally feared a greater Arab nationalist influence pulling Lebanon into a pan-Arab Muslim union. By accepting the Eisenhower Doctrine in 1957, the Lebanese government committed itself to defending Middle Eastern countries against communist aggression. Strategic goals such as military containment of Soviet interests in the Middle East, preservation of transportation and communications routes, securing a peaceful and stable atmosphere in the region following the creation of Israel, and the growing dependence of the western world on Arab oil constituted the main themes in US diplomacy in the region. The Cold War transformed the region into a proxy battlefield for superpower rivalry. Although Christians generally supported the government's position toward the Eisenhower Doctrine, Muslims were opposed to this move. To many, President Chamoun was attempting to force out some of Lebanon's most influential leaders, both Christians and Muslims.

In the early phases of mobilization, the opposition had no intention of resorting to political violence, nor did it call for the resignation of

Chamoun. General strikes and peaceful demonstrations were quite common. After the parliamentary elections yielded results that confirmed the primacy of the government and severely weakened the strength of the opposition, outcries of foul play and vote tampering surfaced. Armed clashes between bands and security forces became daily occurrences. The ensuing patterns of violence took on the form of strikes, demonstrations, riots, subversive acts of sabotage, terrorism, and political assassinations. Lebanon also witnessed episodes and subversive actions attributed to political dissident groups, particularly Palestinians, Syrians, Egyptians, and other political refugees. In response to increasing occurrences of disorder, the government initiated repressive measures to curb infiltration and control for acts of sabotage. A new national guard was put in charge of monitoring sensitive installations as well as the porous Lebanese–Syrian border. A number of decrees were enacted by the government to suppress the freedom of the press and the mobilization of dissent.

This led to increased sectarian-based polarization on foreign policy issues amongst Lebanese and an anti-Chamoun coalition known as the United National Front (UNF). The opposition demanded Chamoun's early resignation since he failed to clarify his position on the reelection issue. Chamoun's six-year term would expire in September 1958, but there were heightened speculations that he intended to remain in the presidency beyond the end of his constitutional term. The opposition was led by Lebanese Muslims and Druzes, Kamal Jumblatt, Saeb Salam, Rashid Karami, and Ahmad el-Ass'ad, as well as a number of Maronites critical of Chamoun. A divided rebel leadership which was unsuccessful in setting up a unified command finally failed in its quest to topple Chamoun. While the call for an armed struggle was made primarily by dissatisfied political elites demanding little more than the resignation of President Chamoun, the revolt ended in the restoration of the status quo.

What triggered the insurgency was the assassination of Nassib al-Matni on May 8, 1958, an independent Maronite journalist who had been critical of the regime. Although never fully proven, leaders of the UNF accused Chamoun's henchmen of this crime. The spark that touched off and fostered organized manifestations of collective violence elsewhere in the country ignited

in Tripoli on May 10 when internal security forces clashed with demonstrators, killing ten and wounding more than 60 people. Leaders of the opposition openly called for an armed struggle. Chamoun had no choice but to fall back on the gendarmerie, which was poorly equipped and factionally splintered. As a last resort he solicited the aid of the Kataib Party and the Syrian Socialist National Party (PPS), thereby increasing the already hostile sectarian character of the conflict. President Chamoun ordered General Fuad Chehab to intervene and crush the revolt, but the army commander refused, believing that it would lead to mutiny and disintegration along sectarian lines.

Chamoun had repeatedly accused the insurgents of accepting aid from Syria, which had received arms from the Soviet Union, so he appealed to the United States to militarily intervene. Following the violent overthrow of the pro-western government of Iraq on July 14, the Eisenhower administration dispatched American forces to Lebanon to secure political stability, after having received a request for such assistance from the Chamoun-led government. The US intervention ultimately led not to Chamoun's survival but to his replacement by the commander of the Lebanese army, General Fouad Shehab. The US intervention in 1958 was bloodless, short, and successful. It was the fear of international communism, masquerading as Arab nationalism, that alarmed Washington. The US administration was concerned that unless it demonstrated a firm commitment to defending Lebanon's pro-western orientation, US credibility would be questioned by its Arab allies and non-Arab countries. Military action was viewed as an important means of sending a deterrent signal to anti-western forces in the Middle East and elsewhere. Another concern driving Washington was that the Iraqi Revolution could have spillover effects on other friendly oil-producing states in the Persian Gulf area, endangering the access of the precious oilfields.

The insurrections of 1958 were exemplified by a bewildering array of factions and shifting alliances and motives. Predominantly nonsectarian in nature at the outset, involving issues of presidential succession, constitutional amendments, foreign policy, and political grievances, the spontaneous uprisings degenerated into confessional hostility. The violence and destruction resulted in the loss of some 3,000 lives but

did not fundamentally restructure society or its political system.

Lebanon, civil war, 1975–1990

Kristian Patrick Alexander

The Lebanese Civil War went through various phases (approximately nine) of shifting alliances and changing issues. Two broad coalitions – the Lebanese Front and the Lebanese National Movement – opposed each other during the initial phase. The Lebanese Front was made up of mainly Christian Maronite groups, such as the Tigers of Camille Chamoun and Pierre Gemayel's Phalangist Party. The Phalange or Lebanese Kataeb Social Democratic Party was established in 1936 by Pierre Gemayel, a Maronite Christian, who very much symbolized the pro-western stance and anti-pan-Arab sentiments. Its goal was to drive out the Palestinians and maintain political dominance over the state. The Lebanese National Movement blended various parties ranging from centrist to extreme left, comprised of Kamal Jumblatt's PSP (Parti Socialiste Populaire), the Lebanese Communist Party, the Syrian National Social Party, the

Murabitun (Sunni Nationalist Party), and later the Palestine Liberation Organization (PLO).

Their broad objective was to support the Palestinian cause and reallocate constitutional power. In 1975 a fishermen's strike in Saida was the precipitating episode of hostilities. Struggling fishermen in Sidon called for peaceful demonstrations to oppose the licensing of a large Kuwaiti enterprise that would mechanize Lebanon's fishing industry. The fishermen were immediately threatened by the prospect of monopolistic incursion by foreign capitalists. The demonstrations evolved into a riot that ended the life of Marouf Saad, Sidon's most popular leader. After subsequent confrontations between government troops and protestors reawakened communal hostility, the Muslim establishment, with its Palestinian allies, denounced such acts as shameful abuses of power of Maronite supremacy and accused the government of failing to protect defenseless villagers from Israeli raids. However, the Maronites not only denounced the opposition for undermining sovereignty, but also warned Palestinians not to meddle in Lebanon's domestic affairs.

The Sidon disturbances had hardly been contained before Pierre Gemayel, leader of the Christian Maronite party Kataeb, was shot at by unidentified assailants. Four men, including two of Gemayel's personal bodyguards, were killed. Later that same day a bus with 28 passengers, mostly Palestinian commandos returning to a refugee camp, had lost its way through the Christian quarter. Outraged Christian militias perceived this as another confrontation and ambushed the bus and killed all of its passengers. This was followed by more attacks both from Kataib forces, situated in the Christian quarters of Ashrafieh, and the Palestinians in the outlying refugee camps in Tel-al-Zatar. The situation only grew worse as bomb explosions, vandalism, robberies, and abductions became daily events. Gangs of local thugs rose to assert control over urban quarters and remote regions. This was a direct challenge to state authority and traditional Lebanese bosses.

The unequal sectarian distribution of power and Christian-Maronite unwillingness to concede any of their status quo are often cited as primary causes of the Civil War. However, the Lebanese political system is confessional by nature, based on a National Pact that was drawn up in 1943. The pact assigned political power and representation

on a proportional basis to the major religious communities, of which the Christian Maronites constituted a little more than half of the population, followed by the Sunnis, Shi'ites, and Druze. By means of this census the Christian Maronites were given the office of the presidency, followed by the Sunnis awarded with the position of prime minister, and the Druzes and Shi'ites were awarded minor posts. Over the years demographic changes allowed the Shi'ites to emerge as the most prominent community. However, it never translated into political capital or into quantitative preponderance in the civil service. After Christian leaders vehemently opposed holding a new population census, state institutions were depicted as serving the interests of certain segments (i.e., the Christians and particularly the Maronites, as well as the exclusive elite) while ignoring the needs of the majority (namely, the Muslims, especially the Shi'ites, and other have-nots).

Another factor that contributed to the Civil War was the presence of a strong Palestinian community that used Lebanese territory as a battleground for armed resistance against Israel. The PLO had found sanctuary in Lebanon after its expulsion from Jordan in 1971. The paralysis of the Lebanese state enabled the PLO to carve out a "state within a state" and use Lebanese territory as a launching pad for attacks on Israel. The PLO had succeeded in bringing about the Cairo agreement that legalized their armed presence in camps in southern Beirut. The influx of several thousand Palestinians disrupted the already shaky confessional balance and polarized the nation between those who supported the Palestinian cause and those who did not. The PLO was forcefully evicted from Lebanon after an Israeli invasion in 1982. Soon after, Maronite forces under the supervision of the Israeli military massacred innocent Palestinian refugees at Sabra and Shatila refugee camps.

An additional cause was growing socioeconomic cleavages coupled with sectarian rifts which led to sectarian mobilization and sectarian agitation, ultimately causing violent outbursts. Lebanon's wealth was unequally distributed, much of it concentrated in the hands of a small, predominantly Christian elite in the capital of Beirut. The unequal distribution of wealth contributed significantly to the outbreak of civil strife and the subsequent devastation of the economy. An essential element that characterizes the

Lebanese political structure is the importance of sectarian leaders. The Zaim or traditional power-brokers provide services and favors to their respective clients in exchange for loyalty and power that eventually lead to meeting particularistic rather than national needs. This has led various Lebanese political bosses to maintain a quasi-autonomous base of power and effectively curb all national attempts to assert control. Scores of militias led to a privatization of security, since the crumbling state's institutions could no longer guarantee the safety of citizens. Drawing on feelings of fear and insecurity, militia leaders effectively employed ethnic symbols, as well as threats and intimidation, to mobilize their respective constituents and provide security in homogeneous and defensible cantons. Militia leaders and agencies provided access to amenities, vital resources, information, smuggled goods, black markets, and other venues for empowerment and enhanced status. The burgeoning and informal parallel war economy, with its extortionist and protection rackets, meant that warlords and war profiteers were reluctant to give up their lifeline of power and privilege. Foreign remittances also poured in large reserves to bolster and sustain the war efforts of their respective communities.

Finally, it is widely acknowledged that various external actors interfered in Lebanese politics, either militarily or by using client militias to further their interests. Lebanon's immediate neighbors (Israel, Syria, the PLO), more remote players in the Middle East (Egypt, Libya, Iraq, Saudi Arabia, Iran, and the Arab League), and international powers and organizations (the United States, the USSR, France, and the UN) have all had an impact on the outcome and evolution of the Lebanese Civil War. For instance, on August 25, 1982, US marines had landed in Beirut as part of a multinational peacekeeping force that was aimed at maintaining the ceasefire during the PLO evacuation from Lebanon, which was the result of the Israeli incursion into Lebanon. The Reagan administration sought to counter Soviet influence, apparent through its Syrian proxy. The marines were prematurely withdrawn after the majority of the PLO evacuated.

The PLO would later redeploy on September 29, 1982. On September 14, 1983, Christian president-elect Bashir Gemayel was killed by a bomb, upon which retreating Israeli forces reentered West Beirut and assisted Phalange militias

in their attacks on two Palestinian refugee camps, Sabra and Shatila, in which an estimated 800 to 2,000 men, women, and children were killed. This would bring back US troops to provide logistical support to the Lebanese army. However, US troops were increasingly perceived as overtly supporting Israel's objectives to the detriment of Muslim and Druze factions. This ultimately triggered a violent reprisal from Islamic Jihad, a radical Shi'ite group closely linked, if not directly controlled by, Hezbollah. Hezbollah had emerged as a significant actor in the wake of the Lebanese Civil War. In the absence of a functioning central government, material and ideological support provided by Iran would allow for a massive Israeli invasion of Lebanon which would eventually radicalize many Shiites.

The Lebanese conflict resulted in tremendous loss of life, displacement, emigration, and physical damage. According to most statistics, 144,240 persons died in the conflict and 197,506 were wounded. Close to a third of Lebanon's pre-war population of 3.1 million left the country, including an estimated 200,000 professionals. About 790,000 persons had to leave their homes and the estimated costs of damage to property reached \$25 billion. The Civil War was officially declared over with the signing of the Taif Accords on October 22, 1989. Under the auspices of a tripartite committee of Arab League states (Algeria, Saudi Arabia, Morocco), 62 parliamentary representatives unanimously agreed a plan of reforms that would reduce the powers of the Maronite presidency and increase the influence of a Sunni prime minister and a Shi'ite president of the National Assembly.

Unlike other proposals aimed at ending the war, the Taif Accords were drafted and approved by the bulk of surviving Lebanese legislators. Sixty-two MPs, half of them Muslims, the other half Christians, were involved in the process, providing Taif with a unique political legitimacy. Parliamentarians from both sides, with the exception of Hezbollah, supported the agreement. The peace treaty was brokered by the Arab League and heavily supported by Syria. Several favorable circumstances led to the inception of the Taif Accords. For one, the peace treaty became largely possible due to the relaxation of tension at both the international and regional levels. After the downfall of communism, the United States ceased to perceive the Lebanese conflict

through the prism of its confrontation with the Soviet Union. It became more willing to concede to Syria in Lebanon and less supportive of Israeli interventionist policies. At the domestic level, the economic situation was rapidly deteriorating, increasingly jeopardizing the welfare of all sectors of society.

Lebanon, 19th-century revolts

Kristian Patrick Alexander

Throughout the nineteenth century, Lebanon experienced various uprisings resulting from a variety of grievances that were provoked by specific issues like taxation, land tenancy, conscription, and disarmament. In all cases these uprisings were reactions to attempts by the successive Ottoman pashas to impose tight controls on Mount Lebanon, and an enfeebled feudal aristocracy trying to preserve its eroding power and privilege. These uprisings were also an expression of an emancipated peasantry and clergy who were articulating a new spirit of collective consciousness. Prior to the uprising of 1820 the then Ottoman-appointed pashlik of Sidon imposed himself as ruthless ruler over various provinces by expropriating most of the land to his profit and by demanding excessive custom duties, thereby diminishing the modest economic prosperity the mountainous area had to offer.

This incensed the peasantry and with the backing of the Maronite clergy they staged what became known as the *ammīyyah* uprisings. It is vital to highlight the role of the clergy in the mobilization of peasants because, at the turn of the century, a more reform-minded clergy would emerge and become more economically independent of the notables. Monastic organizations were increasingly more active in industrial crafts such as wine, spirits, bookkeeping, and printing. Most of their growing influence can be attributed to their virtual monopolization of the school system and the printing press. The education and training provided by many of the clergy-run schools were central to the individuals, both lay and cleric, in the political and cultural awakening of Lebanon.

In protest against the outrageous taxation schemes that were being imposed, the majority of Maronite peasants adopted a specific communal consciousness that articulated a dislodged sense of personal allegiance toward their feudal lords but also an increased sense of autonomy and independence from Ottoman control. In various, largely spontaneous uprisings that erupted, many peasants and their leaders were killed, and although the overall revolts failed, the beliefs and institutions of the feudal society had for the first time been seriously challenged. The Maronite clergy had provided the intellectual and ideological justifications for the organization of the uprisings, but most had been limited to mainly Maronite-ruled areas of Mount Lebanon.

The uprisings of 1840 were triggered by the growing disenchantment with the measures of conscription, *corvée*, and taxation. Ibrahim Pasha had introduced even harsher measures by levying the poll tax for seven years in advance. However, conscription was by far the most feared since one out of three males was forcefully recruited. That meant prolonged absences from a village or town as well as a drain on the economic resources of Mount Lebanon. In order to avoid this fate, many sought immunity in baptism or conversion or even emigration. In some instances, smaller insurrections paved the way to what was to come. In 1838 Ibrahim Pasha had requested the conscription of 1,600 Druze, which sparked a major insurrection of Hawran. In response to this episode Ibrahim Pasha turned to 4,000 Christian mountaineers to assist in the suppression of the Druze rebels. As a reward for their loyalty the Maronites were permitted to

retain their arms and exempted from additional tax increases. This incident broke the long tradition of peaceful coexistence that had been in place between the various communities.

Going against his initial promise, the ruling pasha reversed his decision and insisted on disarming all Christian communities in Mount Lebanon. Christians, Sunni Muslims, and Druze temporarily suspended their differences and acted collectively to resist such conscription campaigns. The village of Dayr al-Qamar became the focal point for the covertly formed committees that were organized to allocate funds and arms. French King Louis Philippe dispatched his nephew, the Comte d'Onfroi, to assist the insurgents. Although he supplied them with ammunition and logistical support, the 10,000 insurgent fighters were no match for the 42,000 forces that Amir Bashir and the Egyptian pasha were able to mobilize. Soon thereafter, however, British forces, eager to expel the Egyptians from Syria, launched a massive naval and military campaign that led to the defeat and withdrawal of Egyptian forces from Syria. This was an example of western powers intervening in Syria to protect and promote the interest of their own protégé.

Subsequently, a scheme for partitioning Mount Lebanon into a northern district under a Christian *qa'immaqam* (sub-governor) and a southern district under a Druze *qa'immaqam* was introduced. Each was to rule over his co-religionists while being responsible to the local Ottoman governor located in Beirut. The partition of Lebanon into two separate provinces proved to be a mistake. The religious composition of the two districts was far from homogeneous, which created a problem of how to administer the mixed districts. The Ottomans decided not to thoroughly reorganize Mount Lebanon and the growing disparities between the religious communities intensified due to the external imposition.

Mount Lebanon also experienced an inevitable transition from a subsistence agricultural economy to one based on cash crops. The silk trade especially became a lucrative trade that benefited European traders but had detrimental effects on the local cottage manufacturers. Lebanon's economy was becoming increasingly affected by the growing dependence of the Lebanese economy on European production and trade. The new trading patterns deprived a large portion of rural society of its traditional sources of livelihood and rendered the economy

sensitive to external circumstances. Due to increases in Ottoman taxation on silk cocoons, many feudal families were adversely affected and passed on their increasing expenses to forced exaction from their peasants.

The aforementioned clergy incited the peasants to protest. After the notables declined to grant the peasants any concessions, a more confrontational stance was taken. Under the leadership of Tanyus Shahin of Rayfun, the movement of peasants and clergy escalated its concessions and raised its demands to entail: (1) full equality of status between the sheikhs and peasants; (2) an end to the exaction of dues and imposition of forced labor; and (3) the abolition of taxes on land already sold by the sheikhs to peasants. The riots took on a more hostile dimension and manifested themselves through episodes of evictions of local notables as well as the confiscation of property. In 1859 the peasant insurrections took on the form of social revolution, especially in the Christian districts. Druze sheikhs became weary of the peasant movements in their districts but managed to deflect the grievances and discontent of their own peasants by provoking sectarian rivalry. The two communities clashed, but surprisingly the estimated 50,000-man force succumbed to the numerically inferior 12,000 Druze forces. The Druze forces were better organized, disciplined, and fought more fiercely, while the Christians suffered from a leadership that was severely divided.

A comprehensive settlement followed, negotiated between European powers (France, Britain, Austria, and Prussia) and the Ottoman administration. An arrangement was reached whereby a governor of Lebanon, who was to be an Ottoman Christian, usually from some other part of the empire, would rule Mount Lebanon, assisted by an administrative council of 12 members from various religious communities in Lebanon. This led to a period of long peace under the system of *mutasarrifiyya* (autonomous Ottoman province).

All three uprisings were originally sparked by a sense of collective consciousness and concern for public welfare, only to be deflected by traditional leaders and external actors into confessional confrontation, indicating the importance of primordial loyalties and the inviolable attachments of faith, creed, and community. The three insurrections exhibited a high degree of mobilization. According to most accounts the first

protest movement consisted of 6,000 insurgents, reaching 20,000 by the time the 1840 uprisings occurred. Most uprisings initially used rallies, gatherings, petitions, and mass agitations as a means of protest. Only after these strategies proved unsuccessful were more contentious ones employed. In all of the insurgencies discussed above, organizational and ideological leadership was assumed by Maronite clerics to some degree, and peasants almost always received direct or moral support from external powers or Ottoman authorities that were interested in manipulating the uprisings for their own benefits.

Leeward Islands, labor protests

Glen Richards

Situated in the northeastern arc of the Caribbean archipelago, the Leeward Islands consist of Anguilla, Antigua, Barbuda, Montserrat, Nevis and St. Christopher or St. Kitts, the British Leeward Islands, the British Virgin Islands, and the Dutch islands of St. Bartholomew, St. Eustatius, and St. Maarten. First occupied by the Taino and Carib aboriginal inhabitants, the islands were claimed for Spain by Christopher Columbus on his second voyage in 1493, but actual conquest by Europeans did not occur until the seventeenth century when they were seized by the English, Dutch, and, briefly, in the case of St. Kitts, the French. By the late seventeenth century the Dutch islands had become

trading posts, while the British islands had evolved as plantation colonies which produced first tobacco and, later, highly profitable sugar, utilizing imported African slaves as the main form of labor.

The abolition of slavery in the British Leeward Islands in 1834 by an act of the British parliament ushered in a new phase of free labor and opened the way for sometimes violent, at times organized, labor protests by the black workers of these territories. That year witnessed the first major labor disturbances in the island grouping. The Emancipation Act had provided for adult agricultural ex-slaves to serve six years of apprenticeship during which they would be compelled to continue working without pay on the estates for 40.5 hours each week. While the planter legislature of Antigua and Barbuda agreed to bypass this element of the act and move to "full freedom," in the belief that there would be no shortage of labor on their estates, the legislatures of Montserrat, Nevis and St. Kitts decided to enforce the system of apprenticeship. The ex-slaves on most estates in Montserrat refused to work and threatened violence against the planters, many of whom fled the estates to take refuge in the capital town. A state of emergency was declared by the colonial authorities and troops were dispatched around the island to restore peace. In St. Kitts, the ex-slaves organized a general strike, many of them taking their work tools to their estate manager's house and tossing them on the ground. After the declaration of martial law by the colonial government, a significant number deserted the estates, withdrawing into the central mountain range of the island, and, under the leadership of a known maroon, "Marcus of the Woods," resisted the military effort to force them back to the estates. The arrival of a military regiment aboard a British warship helped to break the resistance and end the strike.

The sugar islands of the British Leeward Islands were small both in size and population. The white planter population owned most of the arable land in these islands, leaving the landless ex-slaves dependent on the planters for a livelihood. Many of the free population of coloreds were small estate owners, professionals, or small businessmen and petty traders. Political life in these islands was dominated by the planters because suffrage and representation were restricted by strict property qualifications. In Montserrat,

for example, in 1837, out of a population of 7,119, only 144 persons were eligible to vote.

Planters' control of the economy and domination of the legislature placed the sugar planters and merchants in a position to unilaterally dictate terms and conditions of work. While bypassing the system of apprenticeship, the sugar planters in Antigua pushed through the legislature the Labor Contract Act which stipulated that industrial disputes should be adjudicated by a justice of the peace and that industrial indiscipline by workers, including absence from work without reasonable cause, would be treated as a criminal offense punishable by one month's imprisonment with hard labor. In 1849, the Masters and Servants Act, passed by the legislature in St. Kitts and Nevis to regulate industrial relations in that island, sought to secure continuous labor by placing all workers under a general contract of employment and making breach of contract an offense punishable by a fine not exceeding 50 shillings or one month's imprisonment. Under the act, industrial disputes were adjudicated by local magistrates. With the judiciary in the Leeward Islands being drawn almost exclusively from members of the white planter class, the industrial command of the planters remained paramount. The punishment for industrial infractions was often severe and, in Antigua, the whip and treadmill remained in use on estates until the late nineteenth century.

Labor protest in the post-emancipation period took varying forms, depending on the prevailing geographical or economic conditions in the islands, and it was often indirect. Where unoccupied land was available, many workers chose to withdraw entirely from estate labor and establish independent peasantries. The hilly terrain of Montserrat made sugar cultivation difficult, and as the sugar industry declined, more estates were abandoned or divided up and sold in small lots to laborers. The number of peasant cultivators in that island rose from approximately 400 in 1862 to 1,200 by 1897. In Nevis, where sugar cultivation had to contend with rocky soil, the number of smallholders, owning lots that seldom exceeded two acres in size, rose from 800 in 1863 to 2,135 by 1876. Even in Antigua, where sugar cultivation was more successful but had to contend periodically with drought conditions, workers were able to purchase land and create independent villages, reducing their dependence

upon the estate owners. By 1842, there were 27 independent villages in the island with approximately 1,600 residents. In St. Kitts, where sugar cultivation benefited from fertile soil and adequate rainfall, the planters owned most accessible land and refused to sell. Laborers there remained dependent on the planters, living in houses rented from the estates.

Another form of labor protest open to most workers was emigration abroad in search of better-paying work opportunities. Large-scale emigration began with the end of slavery and apprenticeship. Between 1839 and 1846, the number of male and female laborers migrating from the Leeward Islands to higher-paying jobs in the Trinidadian sugar industry totaled 5,993. Migration became even more extensive in the early twentieth century as new employment opportunities appeared in Cuba, the Dominican Republic, and Puerto Rico, with the influx of American capital into the sugar industries of these territories. High emigration rates were particularly notable in the islands where the sugar industry survived, and in 1925 there were 2,138 emigrants from Antigua while the number of emigrants from St. Kitts-Nevis in 1929 rose as high as 4,685. In Antigua, the population fell from 31,394 inhabitants in 1911 to 28,864 by 1921, while that of St. Kitts-Nevis fell from 26,283 to 22,415 over the same period.

Conflict between workers and employers did break out in direct confrontation, especially in Antigua and St. Kitts, the islands where the sugar industry survived longest. Open protests by workers took place on both an individual and collective basis, but the gross inequality of power relations in these plantation societies made protests by individuals exceedingly rare. Burning of sugar cane fields by disgruntled workers was the main form of individual protest. Canes, after they are burnt, quickly lose their sucrose content and go sour if not cut. The setting of cane fires was anonymous and easy, and it was difficult to apprehend the perpetrator. Individual workers who had a dispute with the estate management could easily resort to cane fires and would very probably be employed to cut the fired cane by the planters, who had little choice. Cane burning was also employed on a wide scale during collective labor protests in a clearly planned and organized manner and was generally directed against the most recalcitrant planters.

Workers enjoyed greater security and had a better chance of success when protest was collective. After the 1834 mass protests by the ex-slaves of St. Kitts and Montserrat, directed against the introduction of the apprenticeship system, three island-wide mass protests by workers in the Leeward Islands occurred, in 1896, 1918, and 1935. These protests exhibited certain common characteristics. First, they were limited to those islands where the sugar industry had survived intact and where agricultural workers dependent upon estate employment made up the bulk of the labor force. The 1896 mass protests took place in St. Kitts and Nevis, the 1918 protest in Antigua, and the 1935 protest in St. Kitts alone. They were spontaneous, initiated by the workers themselves, and they were organized around their specific grievances. The main cause, in each instance, was either a unilateral reduction in wages by employers or the imposition of changes in the production process that threatened to bring about reductions in wages. These protests generally had a central starting point but spread around the island and drew in the majority of the working population. In most cases, the workers who initiated the protest action actively encouraged other workers to join the protest, which took the form of general strikes, widespread burning of sugar canes on the estate, mass public demonstrations, and riots in the capital town.

The three mass protests revealed a number of things about the industrial relations system of the post-emancipation Leeward Islands. First, they show that race played a leading role. The mass labor protests also clearly illustrate the limits of spontaneity. The outcome was unpredictable, and the absence of strict discipline meant that mass protest generally deteriorated into violent riots, which usually made the employers and the colonial authorities less inclined to make concessions. Indeed, riotous demonstrations played to the racial prejudices of white employers and colonial officials who then felt compelled to teach the black workers a lesson.

The limits of spontaneity ultimately encouraged the rise of organized labor which allowed workers the benefit of collective action along with a peaceful, and often successful, avenue to pursue their labor grievances. Several factors encouraged the slow emergence of trade unions and working-class organizations in the second decade of the twentieth century. Large-scale

emigration by workers in search of employment in the Spanish-speaking Caribbean had altered the industrial balance of power between workers and employers in favor of the former. The shortage of labor gave workers in the Leewards a greater sense of security and encouraged a greater readiness to join labor organizations. Returning migrants, especially from Cuba, brought with them firsthand experiences of unionization by anarcho-syndicalist and communist agitators, and this strengthened the predisposition to join unions. The presence in the Leewards of Garveyite agitators (supporters of the ideas of Marcus Garvey), many of whom were returning migrants from America, established the ideological conditions for the rise of an organized labor movement.

The Ulotrichian Universal Union (UUU), established in Antigua in 1916, and the Universal Benevolent Association (UBA), founded in St. Kitts in May 1917, were the two main labor organizations in the Leewards during this period. The founders of these labor organizations all came from the black lower middle class of small businessmen and artisans and were all Garveyites. Both organizations claimed an extensive membership. The UUU reported a membership of 4,174 in 1917, over a third of the island's labor force of 12,253, while the UBA, registering 1,500 members in the same year, also had an extensive influence over the St. Kitts labor force, which numbered 7,908 in 1921.

The sustained and open animosity directed by the colonial authorities and the sugar planters against the early labor movement of the Leewards eventually discouraged working-class support. In St. Kitts in 1916, at the urging of that island's planters, a Trade and Labor Union (Prohibition) Ordinance was passed, which made attempts to form a trade union a criminal offense punishable by six months' imprisonment. Sugar planters in both islands refused to recognize and negotiate with the leaders of the UUU and UBA and, after 1920, wage increases became harder to achieve. Workers increasingly turned to the easier and more rewarding alternative of migration as the influence of the organized labor movement declined.

When organized labor revived in the Leewards in the 1930s, a new set of leaders emerged at the forefront. The new leaders came from the colored middle class of small estate owners and merchants. Most of them had become involved in the middle-class agitation for constitutional and

tax reform that arose in the English-speaking Caribbean in the 1920s. In their drive for popular support for these political goals, their public appeals were increasingly directed to the skilled and better-paid sections of the working class, and they assumed a greater concern for working-class issues. Unlike the World War I period, the 1930s leadership focused on industrial and constitutional matters, and racial and class issues played no role in their agitation.

The constitutional changes introduced in the Leewards in 1936, with the introduction of direct elections for a minority of the seats in the legislature, facilitated improvements in labor conditions. In Antigua, the island-wide campaign conducted by the labor leaders secured the election of Reginald Stevens, a colored jeweler, to the island legislature. The two candidates put forward by the Workers' League in the St. Kitts election, Thomas Manchester, a colored businessman, and his cousin, Edgar Challenger, also won their seats. The series of labor disturbances in the English-speaking Caribbean during the late 1930s, commencing with the 1935 labor protests in St. Kitts, persuaded the British Colonial Office to introduce reforms in labor legislation.

The repeal of the Masters and Servants Act in 1938 and the passage of the Leeward Islands Trade Union Act, legalizing and providing protection to trade unions and their members, transformed industrial conditions in the colony. In January 1939, the Antigua Trades and Labor Union was formed with Reginald Stevens as president. The following year, the St. Kitts Trades and Labor Union was formed with Edgar Challenger as president. With the formation and legal registration of these trade unions, workers and planters were now placed on a new footing of industrial equality and, from 1940, in both Antigua and St. Kitts, almost annual strikes at the commencement of the sugar crop ended in increased wages and the granting of an annual bonus to workers. The power of arbitrary dismissal by the plantation management and the practice of criminal prosecution for absence from work became things of the past.

The newly formed trade unions provided the organizational base for the nationalist campaigns for self-government and, later, independence that emerged in the 1940s and, by the end of the decade, the industrial unions of the Leewards were indistinguishable from nationalist political

parties. This political development was associated with a change in the leadership of the labor movement as the colored leaders of the 1930s were replaced by black working-class leadership. In Antigua, V. C. Bird was elected to replace Stevens as president of the union in 1943, while Robert Bradshaw, a mechanic at the central sugar factory, took over the presidency of the St. Kitts union in the following year. Both men cemented their leadership of the labor movement when they were elected to the legislature in 1946. Even in Montserrat, despite the increasingly peasant composition of its labor force, this political process was evident. With the encouragement and assistance of V. C. Bird of Antigua, the Montserrat Trades and Labor Union was formed in 1946 under the leadership of Robert Griffith, a lay Methodist preacher and, since 1943, a member of the legislature.

The joining of the trade union movement with the nationalist movement meant that, when internal self-government was granted in Antigua and St. Kitts in 1956, the labor leaders became the heads of government, with Bird and Bradshaw taking the position of chief minister, and later premier, in their respective islands. When internal self-government was introduced in Montserrat in 1961, the new chief minister was William Bramble who had supplanted Robert Griffith as president of the Montserrat trade union.

In the period of self-government and, subsequently, independence, most of the immediate goals of the labor movement were achieved. Workers received job protection, social benefits including accident insurance, social security and pension benefits, workplace representation, the prompt settlement of industrial disputes, and, most of all, higher wages. In keeping with their nationalist agendas, the labor governments in Antigua and St. Kitts-Nevis both nationalized their island's sugar industries in 1967 and 1975/1976 respectively. The rule of the planter class had ended and workers in these industries now negotiated with governments that were dominated by the labor movement.

The rise of labor-led governments in the Leeward Islands since the 1950s has proved a mixed blessing for the working class of these islands. The individual worker has benefited from a vast improvement in labor conditions and regular wage increases, along with a host of other social advances including the provision of free primary and secondary education for

their children and access to modern health care. The growth of the civil service, with significant expansion in the educational and health sectors, combined with the nationalization of the sugar industry, has left the government in Antigua and St. Kitts-Nevis as the single largest employer. The discharge of their governmental duties, particularly the expansion of the island economies and opportunities for employment, means that the maintenance of industrial peace, an increase in labor productivity, and the creation of suitable conditions for overseas investors to invest, have become the primary objective of these labor governments. The achievement of these objectives has fostered the need to impose limits on industrial disputes and strikes and encouraged the labor governments to adopt wage restraint policies. The growing dependence on tourism, especially since the abandonment of sugar production in both Antigua and St. Kitts, has placed the labor governments in the contradictory role of the representatives of labor, on the one hand, and promoters of the interests of foreign employers in tourism or assembly plant manufacturing, and employers in their own right, on the other.

In their role as government ministers, labor leaders have concluded that the sectional interests of the labor movement must be sacrificed to the national interest. In a situation where political leaders are often trade union leaders or where trade union leaders are selected on the basis of their loyalty to the political leadership, the trade unions have become junior partners in the labor movement and their interests are increasingly marginalized.

Even so, labor protest has brought about significant and lasting changes in industrial conditions and in the industrial relations process in the Leeward Islands. The absolute power of management, particularly their arbitrary power of dismissal, has been brought decisively to an end. Racism no longer has an influence in industrial relations and evidence of racism is a sure way for a manager to lose his managerial position. There have been significant changes, but the political role of labor has imposed increasing limitations on the rights of individual workers. However, the militancy with which workers continue to defend their rights imposes strict limits on how far labor governments may go to contain them.

Lemba, Sebastian (d. 1547)

Frank I. Müller

Sebastian Lemba was a Maroon leader in the first Spanish colony of Hispaniola, the island that from the nineteenth century on would be divided between the independent states of Haiti and Santo Domingo. With a force of approximately 150 fighters, Lemba raided nearby villages and plantations. Troubling the exploitative slavery system, the rebels faced permanent expeditions of colonial forces which in September 1547 finally captured and killed the leader. Yet the Spanish crown never managed to raze the whole community of insurgent Maroons.

The long history of American maronnage began on Hispaniola. Governor Nicolás de Ovando first noted the danger of “runaways” in 1503, and at that point began sending “Maroon expeditions” into the dense vegetation of the island’s hinterland to retrieve slaveowners’ “property.” Lemba’s predecessor, Enrique, began the indigenous wars of resistance in 1519, gathering a large

following of African slaves. Of Central African heritage, Lemba was the first insurgent leader who was not born on the island when he took over Enrique’s position in 1542. His guerilla-like tactics included dispersing into smaller groups and attacking rural settlements.

During his most successful raid, Lemba raided the Bahoruco valley, captured a local blacksmith, and took possession of the settlement’s metals. In addition to adding to his fame, this success was of practical use, for it provided knowledge and material needed for his guerilla war. For three years Lemba reigned over the Bahoruco valley, causing fear among local planters who wrote desperate letters to the Spanish crown demanding support against the rebels.

Although the date and exact place of Lemba’s birth are unknown, he presumably originated from the Congo, as his name has various cultural associations with this Central African region. With regard to ethnicity, Lemba’s insurgency is related to the demographic change the island and the Caribbean were undergoing in the first half of the sixteenth century. Due to the rapid genocide of the indigenous people and the substitution of their workforce by African slaves, a shift of the ethnic configuration in the Maroon camps led to the growing presence of Central and West Africans. Despite the escapes, the colonists kept demanding more slaves to be imported from Africa, and by 1542 the 1,200 white owners commanded 25,000–30,000 black slaves, while 2,000–3,000 mostly black Maroons were spread over the island.

Hispaniola’s rebel society was fragmented. Not all the leaders wanted to keep up resistance. In fact, several Maroon communities did not secure an alternative to the dominant power relations but instead joined the slave-trading business. Diego de Campo, a Maroon leader for three years, surrendered to the Spaniards and cooperated with them in capturing runaways. Others signed peace accords that protected them from attack by the Spaniards. In return, they handed over captured slaves and were rewarded with an amount of money that depended on the amount of time the slave had been gone.

Besides those Maroon camps that actually strengthened the system their members had once escaped from, secrecy provided space for a community network below the surface, encompassing the practice of the Vodou religion, knowledge based on oral history, and trade

among the groups and with the rival colonial powers, France, Portugal, and Britain. The chances of surviving secretly in the rural area depended not only on skillfully performed warfare but also on the ability to engage in agriculture, trade, and negotiation. The networks of rebel societies and their pragmatic contacts with different colonial powers allowed for the communities of both Lemba and his successors to escape the chains of slavery, creating a space of resistance that crossed the conventional borders of nation-bound colonies.

Lempira (d. 1537)

Viviana Uriona

The name Lempira means “Lord of the Mountains.” He was the Lenca chief of Coquin, then called “Gracias a Dios” in Honduras. This region was inhabited by many different indigenous tribes who spoke many different languages. The Mayas were the most developed among them. After the collapse of their culture, other groups came to settle in this region, including groups related to the Toltecs and Aztecs of Mexico, the Chibchas of Colombia, and even tribes from the southwestern United States. Another population, the Lencas, lived in the western-central part of Honduras. The groups in this region had conflicts but kept trade relationships with each other and even with groups in Panama and Mexico. The aborigines were descendants of these tribes and of the Mayas. They are well known for fighting against the Spanish conquerors, and Lempira is known for struggling for freedom and autonomy for the native people in Central America.

When the Spanish conquerors arrived in March of 1524 in the region formerly inhabited

by the Mayas, they met several warring Indian tribes, such as the Lenca, Pipil, Chorotega, Jicaques, and Paya. At first, the Spaniards did not find much resistance among the indigenous groups because they were involved in fights among themselves. By October 1537, however, more than 200 indigenous tribes unified to fight against the increasing Spanish invasion. Lempira led this rebellion, which the Spanish leaders Hernán Cortés and Pedro de Alvarado tried to crush. With a force of 2,000 friendly natives, Lempira tried to attack Alvarado in the fort of Cerquín and near Gracias a Dios, but he failed. After that, Lempira set out to annihilate the invaders, initiating open war against them.

Governor Montejo ordered Captain Alonso de Cáceres to attack Lempira’s stronghold, but he was unsuccessful. Lempira organized a general mobilization. Comayagua was set on fire, and the Spanish inhabitants had to escape and take shelter in Gracias, which was also threatened by the tribes around it. San Pedro de Puerto Caballos and Trujillo were besieged, and the Spanish had to struggle to keep their position. Montejo tried to get help from Santiago de los Caballeros in Guatemala, San Salvador, San Miguel, and even Spain. Alonso de Cáceres invited the chief to a peace conference; when Lempira expressed his will to continue the war, he was shot in the head by a hidden marksman. Lempira fell from the high cliffs and after his death his 30,000 warriors either fled or surrendered.

The conquerors were mostly interested in the precious metals of the region. The wars, slavery in the mines and elsewhere, and the new European diseases killed over 1.2 million people. In 1778 only about 88,000 Indians remained in their country, and they had to work in the mines and for the colonists.

Lenin, Vladimir Ilyich (1870–1924)

Paul Le Blanc

Vladimir Ilyich Ulyanov was born on April 22, 1870 (April 10, according to the Old Style calendar then used in Russia) in Simbursk (later renamed Ulyanovsk), a provincial town on the Volga River. He was the third of six children in what was at first a relatively happy family. His father, Ilya Nikolaevich Ulyanov, was a respected director of public schools. His mother, Maria Alexandrovna Blank, was the daughter of a physician and taught her children a love of reading and music. His father died in 1886, and in 1887 his beloved older brother, Alexander, was arrested and hanged for involvement in an unsuccessful plot by revolutionary university students to assassinate Tsar Alexander III.

At the end of 1887, Lenin himself was briefly arrested for involvement in a peaceful demonstration against the oppressive tsarist regime and for membership in a radical political group. A brilliant student, he had just entered the University of Kazan, but his involvement in protest activities resulted in his immediate expulsion and banishment to a small village near Kazan, where he lived under police surveillance. In 1888 he was permitted to return to Kazan, but he was denied entry to any university and therefore embarked on his own rigorous course of study. In 1891 he passed law examinations at the University of St. Petersburg. Lenin worked as a lawyer for only a few months before becoming a full-time revolutionary.

The Making of a Revolutionary

At the time when Lenin became a revolutionary, impoverished peasants made up about 90 percent of Russia's population. An expanding class of wage-workers and their families, created through the country's substantial industrial growth in the late nineteenth century, made up another 7 percent. There was also a small "middle-class" layer of professionals and well-to-do businessmen (the bourgeoisie), and at the very top, powerful landed aristocracy capped by an absolute monarchy. The country was characterized by a complete absence of democracy, limits on freedom of expression, the persecution of all

This image of Vladimir Lenin is from a 1967 Soviet propaganda poster bearing the legend "Lenin Lived, Lenin is Alive, Lenin Will Live" by Victor Ivanov. A man of revolutionary-democratic inclinations, he rejected efforts by others to create a personality cult around him. After his death, his popularity (in Russia and internationally) was used by propagandists to legitimate the bureaucratic dictatorship within the USSR. (Time & Life Pictures/Getty Images)

religious minorities outside the official Russian Orthodox Church, severe limitations on the rights of women, and oppression of more than 100 national minorities that inhabited the Russian empire – a notorious "prison-house of nations." Such conditions generated many revolutionary currents.

Lenin was deeply influenced by earlier nineteenth-century Russian revolutionaries, especially the writer Nikolai G. Chernyshevsky, as well as by the underground revolutionary populist movement known as the People's Will (*Narodnaya Volya*). This current was made up of idealistic activists who specialized in clandestine methods and sought to organize a peasant-based revolution and to establish a socialist society that would be based largely on the traditional commune, sometimes known as "the mir," that had existed in peasant villages throughout Russia. Lenin drew

upon this tradition, especially in his underground organizational concepts, but he was most profoundly attracted to the Western European working-class orientation developed by Karl Marx and Friedrich Engels in such works as the *Communist Manifesto*, *Capital*, and *Socialism: Utopian and Scientific*. This orientation had been most forcefully injected into the Russian revolutionary movement by Georgi Plekhanov. Lenin became an influential voice among Russian Marxists, through his study *The Development of Capitalism in Russia* (1897) and many other works.

The Marxists argued that Russia was undergoing a capitalist transformation, that industrialization was creating a factory-based proletariat, and that this working class would become the most effective force in the struggle to overthrow tsarism. Instead of engaging in terrorist activities such as assassinations against the tsar and his officials, as the People's Will had done, the Marxists argued that the working class should build trade unions to fight for better working conditions and living standards, should organize mass demonstrations to pressure for broader democratic and social reforms, and should organize their own political party to lead the struggle for a democratic revolution. Such a revolution would clear the way for the economic and political development of Russia (presumably through a capitalist economy and democratic republic). Then, when the working class became the majority, the process would culminate in a second revolution with a socialist character. The workers would take control of the economy and run it for the benefit of all. The Marxists believed that workers in other countries should and would be moving in a similar direction.

The Rise of Bolshevism

In 1898, the Marxists organized the Russian Social Democratic Labor Party (RSDLP) to advance their orientation. Later, in 1901–2, the Populists organized the competing Socialist Revolutionary (SR) Party. Both parties joined the international federation known as the Socialist (or Second) International. Lenin aimed many polemics against the SRs, but soon he also developed serious disagreements with others in the RSDLP. In the pages of the newspaper *Iskra* (“The Spark”), Lenin, Plekhanov, Julius Martov, and others criticized the so-called Economists,

who urged that workers should concentrate only on economic issues at the workplace and that leadership of the democratic struggle should be left in the hands of pro-capitalist liberals. Lenin and the other “Iskraists” argued in favor of building a strong centralized party that would draw the various layers of the working class into a broad economic and political struggle to oppose all forms of oppression, overthrow tsarism, and advance the workers’ interests.

Lenin popularized these ideas in *What Is To Be Done?*, published in 1902. The “Iskraists” won the day at the second congress of the RSDLP, held in Brussels and London in 1903. But before the congress was over they themselves had split into two organized factions – the Bolsheviks (from the Russian *bolshe*, meaning “more,” since they had gained a plurality of votes) and the Mensheviks (from the Russian word *menshe*, meaning “less”). This split was analyzed in Lenin’s *One Step Forward, Two Steps Back* (1904). The Bolsheviks, led by Lenin, insisted on a more disciplined party than favored by the Mensheviks, who became associated with Martov and Plekhanov. In addition, the Mensheviks favored a coalition between workers and capitalists to overthrow tsarism, whereas Lenin (for example, in his 1905 polemic *Two Tactics of the Social Democracy in the Democratic Revolution*) insisted that a worker–peasant alliance, and the subsequent creation of a “democratic dictatorship of the proletariat and the peasantry,” would be necessary to achieve a genuinely democratic revolution in Russia.

In this period Lenin maintained a precarious existence in the revolutionary underground (where he married one of his closest comrades, Nadezhda Krupskaya, in 1898), in prison and Siberian exile, and in frugal circumstances as an exile outside Russia. He lived in Munich from 1900 to 1902, in London from 1902 to 1903, and in Geneva from 1903 to 1905. Lenin and Krupskaya played an essential role in coordinating the work of the underground Bolshevik organization of the RSDLP, also facilitating the production and distribution of such revolutionary newspapers as *Vperyod* (“Forward”) and *Proletarii* (“The Proletarian”).

From the 1905 Revolution to 1914

In 1905 a revolutionary upsurge sparked by a spontaneous uprising among the workers, after the

tsar's troops fired on a peaceful demonstration in St. Petersburg, and fueled by hundreds of strikes and peasant insurgencies forced the tsarist regime to grant a number of important reforms, including greater political liberties and the creation of a weak parliamentary body called the Duma.

Although Lenin at first rejected participation in the Duma (he changed his position in 1906), he supported participation in the soviets (councils) of workers' deputies, spontaneously formed democratic bodies arising in workplaces and workers' communities which had directed revolutionary activities. He also strongly favored opening up the RSDLP, especially its Bolshevik wing, to a dramatic influx of radicalizing workers. The political gap between Bolsheviks and Mensheviks narrowed, and the membership of the RSDLP soared. One left-wing Menshevik, Leon Trotsky, head of the St. Petersburg soviet, even advanced (in articles written from 1904 through 1906) the idea of *permanent revolution* – that is, the concept that the democratic revolution would lead to workers taking political power with support from the peasants, initiating a transitional period to socialism, with the Russian revolution helping to generate workers' revolutions in more advanced industrial countries. While Lenin did not fully accept this notion at the time, it was later reflected in his perspectives for the 1917 revolution.

In late 1905 and throughout 1906, however, the forces of tsarist conservatism were able to stem the revolutionary tide and rescind many of the reforms granted earlier. Revolutionaries were once again forced underground or into exile, and many left-wing intellectuals became demoralized.

Differences between the Bolsheviks and the Mensheviks once again sharpened, yet Lenin also found himself in conflict with a group of Bolsheviks led by Alexander A. Bogdanov. These “ultra-left” Bolsheviks denigrated trade union work and other reform activities (to which they counterposed “armed struggle”), and also questioned the wisdom of the Bolsheviks' running in elections and participating in the Duma. Lenin insisted that involvement in the Duma gave revolutionary socialists a powerful tool for legal agitation and education and that reform struggles enabled the working-class movement to grow in experience and political effectiveness. He wrote a philosophical work, *Materialism and Empirio-Criticism* (1909), arguing against what he saw as

serious philosophical revisions of Marxism being advanced by Bogdanov and others. At the same time, he was conducting a fierce struggle against the “Liquidators,” an influential current among the Mensheviks that wanted to replace all revolutionary underground organizational forms with strictly legal and reform-minded structures. Lenin was also sharply critical of “conciliators,” such as Trotsky and even some in the Bolsheviks' ranks, who attempted to maintain RSDLP unity. He had concluded that a cohesive and disciplined organization, based on a revolutionary Marxist program combining both legal and underground activity, could not be created by seeking compromises with socialists having a variety of orientations.

In 1912 Lenin and those who agreed with him definitively split with all other currents in the RSDLP and established their own distinct Bolshevik party. The new Bolshevik RSDLP published the newspaper *Pravda* (“Truth”). They had not only a coherent strategic orientation but, above all, a clear program, highlighted by three demands: for an eight-hour workday, beneficial to the workers; for land reform, beneficial to the peasants; and for a democratic constituent assembly. These three demands were used to dramatize the need for a worker-peasant alliance in the democratic revolution. The Bolsheviks also had a serious and disciplined organizational structure that integrated legal reform efforts with revolutionary work. Between 1912 and 1914, Lenin's Bolsheviks outstripped all other currents in the Russian revolutionary movement, enjoying predominance among the organized workers.

Bolshevik successes coincided with a new wave of radicalization among the dramatically growing Russian working class. Government violence against striking workers in the Lena goldfields in 1912, combined with population growth in the country's industrial centers marked by intensive exploitation of workers, generated considerable ferment and growing protests. By 1914 some observers concluded that Russia was on the verge of another revolutionary outbreak.

Imperialist World War

This militant upswing was checked, however, by the eruption of World War I, which was used by the tsarist authorities to suppress all dissent. The socialist movement split into “patriotic” and

anti-war fragments, not only in Russia but in all countries involved in the conflict. In Russia only the more moderate “patriotic” socialists were able to operate openly, thus managing to eclipse the now repressed Bolsheviks in the labor movement.

Lenin had moved to Krakow, in Austrian Poland, in 1912. After the outbreak of war in 1914 he was deported to Switzerland. Lenin, like many Marxists, had expected the outbreak of war. However, he was deeply shocked by the capitulation of the Second International’s mass parties before the “patriotic” demands of their respective ruling classes – in particular that of the German Socialist Party (SPD), which he had previously considered the very model of an orthodox Marxist party in a more or less democratic parliamentary system. With the exception of Rosa Luxemburg, Karl Liebknecht, and a few others, the bulk of the SPD leaders either endorsed German war aims or refrained from opposing the war effort. Lenin, along with Luxemburg and others on the revolutionary left, saw imperialism – the aggressive economic expansionism of the various “Great Powers” – as the underlying cause of the ensuing slaughter. He was outraged that workers of the rival countries were being encouraged to kill each other in this conflict, and he never forgave Karl Kautsky, the German symbol of “orthodox Marxism,” for rationalizing the betrayal of working-class internationalism.

In the period from 1914 to 1917 Lenin concentrated on efforts to build a revolutionary socialist opposition to the war. He joined with various anti-war socialist currents at the Zimmerwald and Kienthal conferences in criticizing the failure of the Second International to remain true to its uncompromisingly anti-war statements, and he called for a new, revolutionary Third International. He also produced a study that explored the economic roots of World War I, *Imperialism, the Highest Stage of Capitalism* (1916). In addition, he developed a critical analysis of nationalism, distinguishing between the nationalism of advanced and oppressive capitalist “Great Powers” (which revolutionaries should not support) and the nationalism (which revolutionaries should support) of peoples oppressed and exploited by the “Great Powers.”

Lenin at this time also took issue with those non-Bolshevik revolutionaries, notably Luxemburg and Trotsky, whose policies were, in fact,

closest to his own. Rejecting the emphasis of Luxemburg (in the “Junius Pamphlet”) and Trotsky (in *War and the International*) on calling for immediate peace and advocating a “Socialist United States of Europe,” he advanced the most intransigent possible slogan: “Turn the Imperialist War into a Civil War.” Though only his closest associates, such as Gregori Zinoviev, accepted this slogan, it was very important to Lenin because it would make impossible any compromise with “centrist” Social Democrats such as Kautsky and (in France) Jean Longuet, who by 1916 had retreated from their initial pro-war posture yet were quite unwilling to make a clear break with the pro-war majorities of their parties. Only by splitting revolutionary socialists away from such compromisers would it be possible, he believed, to provide leadership to war-weary masses for a genuine socialist transformation.

Fall of Tsarism and Rise of “Dual Power”

Within Russia, a growing disillusionment with the war generated a new upsurge of radicalism among the workers and peasants. A spontaneous uprising initiated by women workers on International Women’s Day in Petrograd (as St. Petersburg had been renamed in 1914) in March 1917 turned into a successful revolution when the Russian army – largely “peasants in uniform” – joined with the insurgent workers and turned against the tsarist government. A situation of “dual power” arose as the powers of the state were assumed by democratically elected councils (soviets) of workers’ and soldiers’ deputies and also by a pro-capitalist Provisional Government set up by politicians in the Duma. Many SRs and Mensheviks, and even some Bolsheviks, supported the Provisional Government. Lenin returned from exile in April 1917 to challenge this widespread orientation.

Immediately after the overthrow of the tsarist regime, Lenin had desperately sought to find ways to return to Russia. He was refused permission to travel by way of Great Britain and France, since the governments of those countries saw him as a threat to Russia’s continued participation in the war. However, the German government – for similar reasons – allowed Lenin and all other Russian exiles to travel through Germany. Later, those hostile to Lenin were to use this (and

also funds from Germany allegedly secured by the Bolsheviks) in order to slander him as a “German agent.”

Upon his arrival in Petrograd, Lenin pointed out that the Provisional Government was unable to end Russian involvement in the war, could not guarantee that the workers in the cities would have enough to eat, and was unprepared to break up the nobility’s large estates to give land to the peasants. Therefore, he argued, workers and revolutionaries should give no support to the Provisional Government. Instead they should demand “all power to the soviets” and insist on “peace, bread, and land.” The democratic revolution had to grow over into a working-class revolution supported by the peasantry. This development would stimulate the war-weary and radicalizing workers of such countries as Germany, Austria-Hungary, and France to join their Russian comrades in socialist revolution.

These “April Theses” shocked most of Russia’s socialists, including many leading Bolsheviks, but quickly won over the rank-and-file of his party, as well as such former opponents as Trotsky. By July 1917 the Bolsheviks were in the lead of a militant mass demonstration against the Provisional Government, which was now headed by Alexander Kerensky, a moderate socialist. The demonstration erupted in violence, leading to repression by the Provisional Government. Many Bolsheviks (including the prestigious new recruit Trotsky) were arrested, and Lenin fled across the border to Finland. There he began writing his classic Marxist study *The State and Revolution*, which presented a libertarian and democratic vision of working-class revolution and the socialist future. Before he could complete this study, events had evolved to the point where Lenin found it possible to issue a practical appeal to the Bolshevik Central Committee for a revolutionary seizure of power.

Counterrevolutionary opponents played a key role in bringing about this turn in events. In September 1917 General Lavr Kornilov mounted a right-wing military coup designed to oust both the Provisional Government and the soviets. The Provisional Government freed all revolutionary militants from prison and gave them arms. Bolsheviks joined with Mensheviks, SRs, anarchists, and others to defend the revolution. Kornilov was defeated, his troops melting away under the influence of revolutionary agitators.

Bolshevik Revolution and Russian Civil War

From hiding, Lenin urgently insisted to his comrades that the Bolsheviks launch an uprising to establish soviet power. Two of his own close followers, Gregori Zinoviev and Lev Kamenev, argued against so audacious a move, but they found themselves overwhelmed by revolutionary enthusiasm not only within the party but among growing sectors of the working class and peasantry. A split in the SRs resulted in a substantial left-wing faction that supported the Bolshevik demands. The soviets themselves – led once again, as in 1905, by Trotsky – now adopted the position of “all power to the soviets” and organized a Military Revolutionary Committee under Trotsky’s direction, which prepared an insurrection to overthrow the Provisional Government.

The stirring but relatively bloodless October Revolution in Russia, which was actually carried out on November 7, 1917 (according to the modern calendar), was seen as a beacon of hope by the discontented throughout the world. One of the central developments of the twentieth century, it led to the formation of the Union of Soviet Socialist Republics (USSR) and to the rise of modern communism.

Lenin was the leader of the first Soviet government, the Council of People’s Commissars (Sovnarkom), which consisted of a coalition of Bolsheviks (who soon renamed their organization the Communist Party) and left SRs. The new regime entered into peace negotiations with Germany to secure Russia’s withdrawal from World War I. The German government made harsh demands for territorial and financial concessions as a precondition for a peace settlement. Many revolutionaries, including the left SRs and even a left communist faction in Lenin’s own party, opposed the concessions and called for a revolutionary war against German imperialism.

Trotsky, who as leader of the Russian negotiating team at Brest-Litovsk had used the peace talks to expose German imperialist war aims and to appeal to the German masses “over the heads” of their government, took an intermediary position, hoping that German military action against the infant Soviet republic would be blocked by mutinies and strikes by the German working class. Trotsky advocated refusal either to sign the Germans’ Brest-Litovsk *diktat* or to resume the war with a virtually nonexistent

Russian army. This compromise position was initially adopted by the Soviet government, but the hoped-for mass strikes and mutinies failed to materialize, and, when the German military launched a devastating offensive, Trotsky withdrew his “neither war nor peace” proposal and sided with Lenin.

Against angry opposition among many Bolsheviks and most left SRs, Lenin insisted on Russia’s need for peace and narrowly won acceptance of what were now even stiffer German demands, resulting in the Treaty of Brest-Litovsk (March 3, 1918). The left SRs withdrew from the government and assumed a stance of violent opposition. The right SRs and even some Mensheviks were openly hostile as well. Pro-capitalist and pro-tsarist forces committed themselves to the overthrow of the new regime, as did a number of foreign governments, notably those of Great Britain, France, the United States, and Japan. In all, 14 foreign countries intervened with military forces and aided counterrevolutionary Russian forces in an escalating, brutal civil war. Masses of workers and peasants joined the new Red Army to defend the gains of the revolution. Their efforts were hampered by economic collapse – hastened by premature nationalizations – and also by the inexperience and inevitable mistakes of the new government.

In 1918 some SRs carried out assassination attempts in which Lenin was badly wounded and other prominent Bolsheviks were killed. In response, a Red Terror of arrests and executions was launched against all perceived “enemies of the revolution” by the Cheka (special security forces), set up on Lenin’s initiative and directed by Felix Dzerzhinsky. Early in 1918 the Sovnarkom had dissolved what it felt to be an unrepresentative constituent assembly on the grounds that this institution had been superseded by a more thoroughgoing soviet democracy. By 1919, however, this democracy had largely evaporated. As a result of communist repression of opposing left-wing parties and the relative disintegration of the working class as a political force (because the economy itself had largely disintegrated), the soviets were transformed into hollow shells that would rubber-stamp the decisions of the Sovnarkom and the Communist Party.

Brutal communist policies were deepened in response to the murderous campaigns of anti-communist counterrevolutionaries (often known

as “the Whites” as opposed to the left-wing “Reds”). Increasingly under the leadership of reactionary and pro-tsarist army officers, the Whites often combined anti-communism with anti-democratic, anti-working class, anti-peasant, and anti-Semitic violence. Nonetheless, the Whites were given substantial material support from foreign governments hoping to put an end to what was a “bad example” to their own working classes.

Lenin and the Russian communists were convinced that the spread of socialist revolution to other countries was essential for the final victory of their own revolution. In 1919 they organized the first congress of the Communist International (the Third International), initiating the formation of communist parties in countries throughout the world. Concerned that these new parties might fall prey to “ultra-left” errors (such as attempting to seize power without majority working-class support or refusing to fight for “mere” reforms), Lenin wrote *“Left-Wing” Communism: An Infantile Disorder* in 1920. At the second and third congresses of the Communist International he argued in favor of the “united front” tactic, whereby communists would join forces with more moderate socialists to protect and advance workers’ rights against capitalist and reactionary attacks. (This would also win support, among growing numbers of workers, for the communists who would prove to be the most effective fighters for the workers’ interests.) Lenin never gave up on the belief that the future of the new Soviet republic could be secured only through the spread of working-class revolution to other countries, but he never lived to see his hopes realized.

From “War Communism” to New Economic Policy

During the Russian Civil War, in Lenin’s opinion, he and his comrades had made terrible mistakes. In pushing back the foreign invaders, for example, the Red Army – with Lenin’s support but over the objections of Red Army commander Trotsky – invaded Poland in hopes of generating a revolutionary uprising among the Polish workers and peasants. Instead, a fierce counter-attack drove the Russian forces from Polish soil.

Some of the greatest mistakes involved the implementation of what was called “war communism.” Sweeping nationalizations of industry formally placed the economy in the hands

of the inexperienced state, and attempts at strict centralized planning introduced authoritarian and bureaucratic elements into the economy. Efforts were also made to pit “poor peasants” against allegedly “rich peasants” in order to establish state controls over agriculture. Such policies resulted in red tape, bottlenecks and shortages, and growing discontent among the workers and bitterness among the peasants.

These policies were even theorized by some as providing a positive “shortcut” to the ideal communist society of the future (which Marx had insisted could be achieved only after an extended period of high economic productivity, abundance, and genuinely democratic social control of the means of production). In fact, the policies of war communism could reasonably be justified only as desperate emergency measures in the face of civil war and invasion. By 1921, the experience of war communism had generated peasant revolts and an uprising of workers and sailors at the previously pro-Bolshevik Kronstadt naval base outside of Petrograd.

Lenin now led the way in adopting more realistic policies that had been urged by some communists, including Trotsky. In 1921 the New Economic Policy (NEP) was established to allow small-scale capitalist production in the countryside and the reintroduction of market mechanisms into the economy as a whole. One Bolshevik theorist, Nikolai Bukharin, became closely identified in later years with the preservation of the NEP reforms. Such changes, together with the end of the civil war and foreign intervention, led to improvements in the economy and to the possibility of implementing important health, education, and social welfare policies beneficial to millions of people in the battered Soviet republic.

Yet at the same time, the Communist Party under Lenin also took measures to strengthen its monopoly of political power and even, as an emergency measure, to curtail democracy within the party itself, for the first time banning factions. In particular, a workers’ opposition headed by union leader Alexander Shlyapnikov and feminist intellectual Alexandra Kollontai – calling for greater working-class control over the state apparatus and economy – was prevented from expressing its views. These measures established precedents and the framework for the development of a permanently narrow and repressive dictatorship.

Lenin’s Final Defeat and Legacy

Lenin grew increasingly alarmed that the Soviet republic was becoming “bureaucratically degenerated,” as he put it. Suffering from a stroke in May 1922, he recovered sufficiently in autumn to return to work, only to be felled by a second stroke in December. Throughout this period and into the early months of 1923 he focused attention on ways of overcoming the bureaucratic tyranny that was gripping the Communist Party and the Soviet government and of strengthening controls by workers and peasants over the state apparatus.

Lenin opposed the inclination of some party leaders to adopt repressive policies toward non-Russian nationalities. Chief among these particular leaders was Joseph Stalin, who became the party’s general secretary in 1922. Also, while Lenin had seen the concept of *democratic centralism* as involving “freedom of discussion, unity in action,” Stalin and others who were now in charge of the party apparatus distorted the concept – so that a bureaucratic “centralism” crowded out inner-party democracy – to inhibit questioning of and suppress opposition to their own policies.

Lenin sought an alliance with Trotsky to fight for his positions in the party, and he broke decisively with Stalin, whom he identified as being in the forefront of the trends he was opposing. In his last testament he urged that Stalin be removed from his positions of party leadership. But a third stroke in March 1923 completely incapacitated him. At his country home in the village of Gorki, outside Moscow, he suffered a last, fatal stroke on January 21, 1924. After an elaborate state funeral, Lenin’s embalmed body was placed in a mausoleum in Moscow’s Red Square.

He was mourned by millions in the Soviet Union and by communists and other revolutionaries throughout the world, but much of Lenin’s work was undone by (yet bombastically identified with) the later policies of the Stalin regime. Even in his lifetime, what he viewed as the “dictatorship of the proletariat” – political rule by the working class – had, under difficult conditions, degenerated into a one-party dictatorship. But after his death it evolved into a ruthless bureaucratic tyranny which defended above all else the material and other privileges of the bureaucratic rulers.

Those who had been closest to Lenin found their authority eliminated by Stalin's political machine, and most of them were eventually killed in the purges during the 1930s, when many hundreds of thousands of real and imagined dissidents among the communists and others were destroyed. Alternatives to this Stalinist version of "Leninism" were put forward, particularly by Trotsky and by Bukharin. But throughout the Communist International and the world communist movement, Stalin's orientation dominated. Even when Stalin was denounced in 1956 by later communist leaders, the bureaucratic system and undemocratic methods with which he was associated remained in place.

With the collapse of the Soviet Union in 1991, questions arose about how much influence Lenin would continue to have as a symbol and as a theorist. Lenin concerned himself with many dimensions of political theory, but his distinctive contribution involved the conceptualization and organization of a party that proved capable of carrying out a socialist revolution in Russia in 1917. Even for many of his most severe critics, Lenin's political integrity and personal selflessness are beyond dispute, as is his place in history as one of the greatest revolutionary leaders of the twentieth century. What is hotly contested across the political spectrum, however, is his relevance for the future – which is, of course, related to how we are to interpret his life and thought and actions.

Leninist philosophy

Paul Le Blanc

As with many key words, the term "Leninism" has come to have dramatically different meanings. Associated with the ideas and political efforts of Vladimir Ilyich Lenin, for many it became associated with the ideology dominated and largely shaped after his death by Joseph Stalin.

The Leninism of Stalin

After the Russian Revolution that Lenin led in 1917, and the earliest years of the embattled Soviet republic under Lenin's leadership, Stalin became an increasingly powerful figure in the organizational apparatus of the ruling Russian Communist Party. As Lenin succumbed to fatal illness in 1923–4, Stalin began to assume ever-greater control in the Communist Party and Soviet state, justifying his actions and policies – culminating by the 1930s in the most brutal of dictatorships – under the banner of what he called Leninism.

Although Lenin had been one of the earliest opponents of Stalin's consolidation of power, his authority in the new Soviet republic, the Russian Communist Party, and the world revolutionary movement made it essential for Stalin to formally embrace the label of Leninism, a term that came into existence only after 1917. (Lenin

himself referred to his ideas with other labels – Marxist, socialist, communist, etc.) While in the early-to-mid-1920s different Russian communist leaders more closely associated with Lenin – Gregory Zinoviev, Lev Kamenev, Nikolai Bukharin, Leon Trotsky – advanced differing perspectives on what might be summed up with the term Leninism, only Stalin’s was permitted to exist in the Soviet Union after the triumph of his dictatorship, which physically eliminated these rivals and millions more.

Because the Communist Party of the Soviet Union dominated the world communist movement, the Stalinist version of Leninism became established in communist parties throughout the world over the next several decades. Many would-be revolutionaries throughout the world, attracted to the example and glowing promise represented by Russia’s 1917 Revolution, embraced and absorbed Stalin’s conceptions as those of Lenin. The ideas associated with this particular ideology – often dubbed Marxism-Leninism – tended to combine an often stultifying and rigid set of dogmas with an amazingly opportunistic flexibility. The oppressiveness of capitalism and its inevitable replacement by communism had been scientifically explained by Karl Marx – and Lenin scientifically applied Marxism to the age of capitalist imperialism and communist revolution in the twentieth century, according to Stalin. The transition was to be brought about by the toiling masses; workers allied with peasants, led by the highly centralized and hierarchical revolutionary vanguard party of Lenin – the Communist Party. This vanguard party would lead the revolutionary overthrow of capitalism, and then establish its own firm but benevolent dictatorship (the dictatorship of the proletariat). This dictatorship would oversee the transformation of society and humanity – leading to a utopia of freedom and abundance for all. Until the achievement of that final result, it would be necessary to fight against the many, many enemies of the working class and of communism. (Some of the most dangerous enemies were those calling themselves socialists or even communists but hostile to the leadership of Comrade Stalin.) Sometimes it would be necessary to make alliances with certain capitalist and imperialist enemies, or even to prevent the spread of revolutions, in order to thwart even greater enemies and dangers. The world was a complicated place – but the toiling masses,

fortunately, could rely on the leadership of its vanguard party, which had absorbed the scientific understanding and wisdom flowing in a direct line from Karl Marx and Frederick Engels, down to Lenin, down to Stalin.

Other Perspectives on Leninism

The Stalinist conception of Leninism also profoundly influenced much non-communist scholarship. In many cases – particularly during the Cold War – hostility to any serious challenge to the capitalist order strengthened the tendency among some scholars and journalists to accept the equating of Lenin with Stalin. The qualities of this Leninism were deeply authoritarian, elitist, cynical, manipulative, and ultimately murderous. As one of the most influential proponents of this view, embittered ex-communist Bertram D. Wolfe, once put it, Lenin was the “architect of totalitarianism.”

A minority current among non-communist scholars and intellectuals challenged this conception. “The theory of the vanguard party, of the one-party state, is not (repeat not) the central doctrine of Leninism,” in the words of the idiosyncratic historian and social critic C. L. R. James (1992). “It is not the central doctrine, it is not even a special doctrine. It is not and it never was.” He added: “Bolshevism, Leninism, did have central doctrines. One was theoretical, the inevitable collapse of capitalism into barbarism. Another was social, that on account of its place in history, its training and its numbers, only the working class could prevent this degradation and reconstruct society. Political action consisted in organizing a party to carry out these aims.”

Over the years, other controversies emerged among scholars as to how best understand Leninism. Alfred G. Meyer produced an influential study of Leninism in the 1950s embracing much of the Cold War anti-communist perspective but insisting that there was a fundamental difference between these perspectives and those of Karl Marx. Later influential studies by Neil Harding insisted that Lenin’s perspectives were organically connected to, and consistent with, the outlook of Marx and other Russian Marxists who later came into conflict with his Bolshevik orientation. An important work by Marcel Liebman emphasized that Lenin’s ideas evolved over time, under the impact of events, and

contained different elements – some highly democratic, some authoritarian – that were brought to the fore by specific circumstances. Paul Le Blanc produced a study arguing that the essential ideas of Lenin could best be understood as being part of an organic and coherent “revolutionary Marxist” totality – one that included not only Karl Marx and Frederick Engels, but also Rosa Luxemburg, Leon Trotsky, and Antonio Gramsci.

The Leninism of Lenin

From his earliest writings, Lenin’s starting point is a belief in the necessary interconnection of socialist ideas with the working class and labor movement. The working class cannot adequately defend its actual interests and overcome its oppression, in his view, without embracing the goal of socialism – an economic system in which the economy is socially owned and democratically controlled in order to meet the needs of all people. Inseparable from this is a basic understanding of the working class as it is, which involves a grasp of the diversity and unevenness of working-class experience and consciousness.

This calls for the development of a practical revolutionary approach seeking to connect, in serious ways, with the various sectors and layers of the working class. It involves the understanding that different approaches and goals are required to reach and engage one or another worker, or group or sector or layer of workers. This means thoughtfully utilizing various forms of educational and agitational literature, and developing different kinds of speeches and discussions, in order to connect the varieties of working-class experience, and, most important, to help initiate or support various kinds of practical struggles. The more “advanced” or vanguard layers of the working class must be rallied not to narrow and limited goals (in the spirit of “economism” and “pure and simple trade unionism”), but to an expansive sense of solidarity and common cause which has the potential for drawing the class as a whole into the struggle for its collective interests.

This fundamental orientation is the basis for most of what Lenin has to say. More than one commentator has remarked on the practical seriousness and relative lack of dogmatism in the way Lenin utilized Marxist theory to deal with a variety of issues. This came through in many different ways – such as his understanding of the

necessity for socialist and working-class support for struggles of all who suffer oppression, and in his way of integrating reform struggles with revolutionary strategy. We see it in his insistence on the necessity of working-class political independence, and on the need for working-class supremacy (or hegemony) if democratic and reform struggles are to triumph.

It came through, also, in his approach to social alliances (such as the worker-peasant alliance) as a key aspect of the revolutionary struggle, and in his development of the united front tactic, in which diverse political forces can work together for common goals, without revolutionary organizations undermining their ability to pose effective alternatives to the capitalist status quo. We can see it in his analyses of capitalist development, and of imperialism and of nationalism. It shines forth in his vibrantly revolutionary internationalist orientation that embraces the laborers and oppressed peoples of the entire world.

The dynamism of Lenin’s thought is also evident in his remarkable conception of the manner in which democratic struggles flow into socialist revolution. Another theoretical contribution involves his analysis of the nature of the state in history and class society, and in his conceptualization of triumphant working-class struggles generating a deepening and expanding democracy that would ultimately cause the state to wither away. Interwoven with the analyses and theorizations about the oppressions of today, and about a possible future of the free and the equal, we find a tough-minded practical orientation of struggle involving strategy, tactics, education, slogans, and – of course – organization.

In the devastating years of 1918–22, after Lenin’s party came to power, and marked by economic blockade and collapse, foreign invasion, and brutal civil war, Lenin’s thinking came to include new elements. These include an authoritarian strain inconsistent with the revolutionary-democratic orientation that had been more characteristic of him throughout most of his life. Some have insisted that even then his hopes, goals, and sensibilities remained profoundly democratic, and that this is reflected in much that he wrote, said, and did in his final years. Others insist that there were profoundly undemocratic elements in his organizational perspectives – and that this fatal flaw helped to set the stage for the Stalinist dictatorship that followed the revolutionary victory. This common yet controversial

assertion requires a more careful look at the organizational principles that many agree are at the heart of what we can call Leninism.

Leninist Conception of Organization

Lenin's organizational perspectives for a revolutionary working-class party (discussed at length and with extensive documentation in Le Blanc 1993) could be summarized in the following eight points:

- 1 The workers' party must, first of all, be based on a revolutionary Marxist program and must exist to apply that program to reality in a way that will advance the struggle for socialism.
- 2 The members of that party must be activists who agree with the basic program, who are collectively developing and implementing the program, and who collectively control the organization as a whole.
- 3 To the extent that it is possible (given tsarist repression, for example), the party should function openly and democratically, with the elective principle operating from top to bottom.
- 4 The highest decision-making body of the party is the party congress or convention, made up of delegates democratically elected by each party unit. The congress should meet at least every two years and should be preceded by a full discussion (in written discussion bulletins and in special meetings) throughout the party on all questions that party members deem important.
- 5 Between congresses, a central committee – elected by and answerable to the congress – should ensure the cohesion and coordinate the work of the party on the basis of the party program and the decisions of the congress. It may set up subordinate, interim bodies (such as a political committee and organization bureau) to help oversee the weekly and even daily functioning of the organization. These leadership bodies have the responsibility to keep all local units and the membership informed of all party experiences, activities, and decisions; members and local units also have the responsibility to keep the leadership informed of their experiences and activities.

- 6 It is assumed that within the general framework of the revolutionary program there will be shades of difference on various programmatic, tactical, and practical questions. These should be openly discussed and debated, particularly before party congresses. Depending on time, place, and circumstance, such differences can be aired publicly. All members should be encouraged to participate in this discussion process and should have an opportunity to make their views known to the party as a whole. Groupings will sometimes form around one or another viewpoint or even around a full-fledged platform that certain members believe the party should adopt. This provides a basis for ongoing political clarity and programmatic development that are essential to the party's health and growth.
- 7 All questions should be decided on the basis of democratic vote (majority rule), after which the minority is expected to function loyally in the party, and particularly to avoid undermining the specific actions decided on. The organization as a whole learns through the success, partial success, or failure of policies that are adopted and tested in practice.
- 8 Local units of the party must operate within the framework of the party program and of the decisions of the party as a whole, but within that framework they must operate under the autonomous and democratic control of the local membership.

Conclusion

It is likely that both scholarly and political controversies will surround the term "Leninism" for some time to come. This suggests that, in the world as it still exists in the early twenty-first century, there is much in this disputed term that continues to resonate with intellectuals, workers, and peasants. It is also likely that additional scholarship and future political developments could well generate different understandings and different versions of something called Leninism. What seems certain is that some of these would not be recognized by Lenin himself as actually reflecting his own ideas.

Lesbian, gay, transsexual, bisexual movements

Barry D. Adam

Sexual themes intersect with social movement organizations on various fronts. Women’s movements, for example, have had profound influence on the development of sexuality, especially through activism around reproductive rights, gender relations, contraception, and abortion. Conservative and fundamentalist movements seek to confine sexuality to traditional social arrangements, or to restrict it to idealized visions of life as it never really was. But perhaps the central nexus between social movements and sexuality occurs among people who have organized around the implications of sexual difference. Here the focus is primarily on gay and lesbian movements, and the many subsequent related identities (bisexual, transgendered, queer, and so on) that have emerged with them.

The development of any social movement presupposes a constituency with a sufficient sense of commonality and shared grievances for mobilization to occur. People need to have social connections with each other, a sense of distinctiveness from those around them, and some degree of shared folklore and mutual communication. In the case of gay and lesbian movements, this requires a willingness to stand up for those one is attracted to, loves (or aspires to love), and prefers to live with, and therein lies a great deal of research, debate, and ongoing contention. From historical and cross-cultural viewpoints, these conditions turn out to be relatively unusual. Sexuality is most often lodged in overarching kin, gender, and age hierarchies that sort women and men into social categories that prescribe the kinds of social and sexual relations they “ought” to have with each other.

Same-sex relationships have been treated in a great many ways around the world, ranging from prohibition to valorization as ennobling and virtuous. For the most part, they have been made to fit into prevailing ideas of kinship and shaped into a few major patterns typically defined by gender or life stage. In the first instance, gender fluidity, gender mixing, or gender migration appears to be possible for some men and a few women. In these societies, homosexual relations are part of a larger pattern where men and women take up some or most of the social roles and symbols typical of the other gender, and enter into marital relations with other people with conventional gender attributes. In the second, hierarchical, military, age-graded, and mentor–acolyte relationships organize same-sex relationships between men. In these and other patterns of same-sex connection, the idea of a “homosexual” people has limited resonance.

The gay, lesbian, bisexual, and transgendered (LGBT) identities that have become familiar in the twentieth and twenty-first centuries have lengthy roots in the particular mix of social conditions and cultural traditions that characterize western societies. Western sexual identities owe a good deal to the historical separation of work from household and kinship that allowed for greater personal preference and independent households to characterize new relationships between individuals. They are influenced by Judeo-Christian traditions that sought to discipline sexualities over the centuries. And they are shaped by the emergence of meeting places upon which

social networks formed, and enclaves of like-minded people came to develop a sense of collective commonality. This is a historical process that continues today in the multiplication of identities, subcultures, and deconstructive tensions, but also in the global reach of networks and communication that connects once disparate sets of people.

Emergence of a Movement

The formal organization of homosexual people into a social movement entity dates from the founding of the Scientific-Humanitarian Committee in 1897 in Berlin (Adam 1995). From 1897 until 1933, Germany generated a wealth of gay and lesbian groups that flourished until the Nazi takeover that virtually obliterated sexual-identity groups, along with a vast range of other increasingly visible, “modern” identity groups from Jews to socialists. The Scientific-Humanitarian Committee, led by Magnus Hirschfeld, aligned itself with the forces of modernism – science, tolerance, and social democracy – in an attempt to carve out a safe space for gay and lesbian existence against an entrenched establishment of aristocracy, church, and authoritarianism.

It flourished in a context of a wide variety of social reform movements that were seeking political, social, and personal change in German society of the day. In the short-lived German Revolution of November 1918, when the German state suffered defeat at the end of World War I, it joined with the popular mobilization for a democratic future. In the interwar Weimar Republic, the Scientific-Humanitarian Committee joined with the Eigene (a men’s organization organized around a mentor–acolyte vision of male bonding) and the German Friendship Association (a widely popular set of social clubs for gay men and lesbians) to form a united front for legal reform. In 1921, it organized a World League for Sexual Reform, drawing together gay groups that had sprung up in neighboring countries along with other organizations interested in the liberalization of family law. It also organized a scholarly Institute for Sex Research that became a world center for research and counseling. All of this came to a sudden end in 1933 through police suppression with the ascent of the Nazis to power. Many gay men and some lesbians, including movements’ leaders, went into hiding, fled into exile, were

interned in concentration camps, or died in the Holocaust (Grau & Schoppmann 1995).

Postwar Reemergence

The homophobic intensity of the warring regimes of Nazism, Stalinism, and liberal democracies in the mid-twentieth century separates the first wave of gay movement formation from its re-founding and rebuilding in the 1950s and 1960s. The early postwar period was characterized by widespread criminalization of homosexual relations, active state persecution, and ideological vilification from churches and professionals. In this chilly social climate emerged small and cautious gay and lesbian organizations that ultimately succeeded in carving out space for LGBT existence and in chipping away at the edifice of homophobic exclusion (D’Emilio 1983).

In 1946, the Amsterdam Cultuur-en-Ontspannings Centrum (COC) revived itself, followed by pioneering organizations in Copenhagen, Oslo, and Stockholm. In the midst of McCarthyism, when gay people came to be among those named as enemies of the state by the House Un-American Activities Committee of the United States Senate, the Mattachine Society came into existence to defend gay men from state predation. Mattachine chapters gradually organized in major cities across the United States in the 1950s and 1960s. A specifically lesbian group, Daughters of Bilitis, came about in San Francisco in 1955. Similar organizations began to appear in West Berlin, Hamburg, Paris, and London. These *homophile* groups were typically small and low-profile, and faced tremendous odds in countries that subjected gay, lesbian, bisexual, and transgendered people to police suppression, psychiatric confinement, and sometimes prison. While they came to be viewed in retrospect as timid and assimilationist in their pleas for acceptance and respectability, their members showed immense courage and often suffered overt discrimination and persecution to accomplish what they did. Ultimately, they opened the way for the more open and militant movements of the 1970s.

Gay Liberation/Lesbian Feminism

It is not until the late 1960s and early 1970s that gay and lesbian mobilization took a new, more militant turn in the context of the rising social

ferment of the new left, fueled especially by the African American civil rights and the anti-Vietnam war movements in the United States and by student movements in Europe and Latin America. The new left created new political opportunities by making social change appear within reach, and it circulated new discourses of entitlement and democratic participation in its assertion that traditionally marginalized or excluded people had the right to social inclusion, and to have their voices heard. In gay and lesbian history, this shift in thinking and strategy is symbolically marked by the Stonewall Rebellion, a 1969 confrontation with police that happened in New York, but Stonewall is but one marker of a larger refusal of LGBT people in advanced, industrial societies to limit themselves to the pathological realms of sin, sickness, or crime assigned to them by heterosexist institutions (Altman 1971; Duberman 1993).

Gay liberation and lesbian feminism dreamed of new worlds freed of patriarchy and homophobia, and challenged the churches, courts, and psychiatrists who tried to confine them. Gay liberation did not so much think about homosexuality as the trait of a beleaguered minority than as a potential in everyone that had been repressed by state, church, and family. Lesbian feminism conceived of itself as the ultimate form of women's solidarity now capable of challenging the subordination of all women. Within a few years of Stonewall, this new generation of gay and lesbian organizations had swept through campuses and communities across Western Europe, North America, Australia, and New Zealand, as well as a few capitals in Latin America.

Within a decade, the exuberance and utopianism of gay liberation and lesbian feminism were faced with a new right in government, which was allied especially in the United States with a Christian right intent on reasserting moral regulation. Evangelical Protestants succeeded in the late 1970s in striking down a series of municipal human rights laws that banned discrimination on the basis of sexual orientation. The Reagan administration, and succeeding Republican presidents, increasingly populated the courts with conservative judges who slowed or blocked equal rights for LGBT people in the 1980s and 1990s. Then in 1995 starting in Utah, a "defense of marriage" panic swept across the

United States resulting over the decade in 40 of the 50 states and the national government passing legislation (in some instances entrenching it in their constitutions) to ban same-sex marriages (Adam 2003). The United Kingdom's right-wing Thatcher government passed Clause 28, a measure which forbade "teaching . . . the acceptability of homosexuality as a pretended family relationship," and police forces in Canada and Australia felt emboldened by the prevailing public climate to recommence raids on gay gathering places.

Movement Multiplication and Diversification

In the ensuing decades since Stonewall, there has been a prolific multiplication and diversification of LGBT organizations in the workplace, religion, recreation, politics, ethnic cultures, and disability and taste-based affinity groups. LGBT groups typically employ the forms and rhetoric of the local political culture (Adam et al. 1999). In a few instances where national federations are widely accepted as a legitimate organizational form, LGBT groups participate in a leading formal organization, but in many other societies the proliferation of disparate LGBT groups challenges any organization that purports to represent itself as the leading or national voice of LGBT people as a whole.

LGBT organizations tend to see-saw between solidarity-building and identity-affirming trends on one hand, and deconstructive and queer tendencies on the other (Gamson 1998). Deconstructive trends flow from several sources: some prefer an assimilationist approach that deemphasizes difference and accentuates commonality with heterosexual people, some have sought to build alliances among sexual dissidents of all kinds, and others believe that the differences among LGBT peoples outweigh any overall commonality. At the same time, there is now a historically unprecedented infrastructure of culture producers, voluntary associations, legal arrangements, and commercial ventures that reproduce LGBT sites, networks, and points of view. These tensions are shared as well in LGBT studies where, on the one hand, LGBT-affirmative scholarship documents the development of communities and innovations, recovering and calling into being histories and literatures, and reproducing a sense of commonality and identity.

On the other hand are the deconstructive, queer theories calling attention to essentializing and minoritizing tendencies that perhaps unwittingly construct LGBT people as a distinct quasi-ethnic group separating LGBT experiences – including homoerotic experiences – from cross-cutting connections over a sexual orientation “divide” that need not be.

These many social movement organizations embrace a sizable array of objectives and aspirations. On the political front in the advanced industrial nations, LGBT movement groups have typically taken up a demand for inclusion, seeking to realize the citizenship and political rhetoric of their national contexts. For jurisdictions with sodomy laws, decriminalization has often been the focal point of the first forms of gay mobilization. With decriminalization, movements often pursue equality rights seeking laws to curb discrimination in employment, housing, education, public services, censorship and media representation, policing, and personal security (Rimmerman et al. 2000).

Same-sex relationship recognition has often proven to be the next great hurdle to be overcome through the courts and legislatures. Nevertheless, civil rights make up but one facet of organizational work. Equality rights have an inherent limitation: they beg the question “Equal with whom?” and implicitly content themselves with accessing and fitting into preexisting heterosexual arrangements and institutions. Implicit in LGBT movements are larger issues of sexual politics, for example, sexual and relational freedom that exceeds the family forms presumed by law and conventional morality, including assisted reproduction, child-rearing, and multi-partner families (Adam 2004).

LGBT movements raise major questions on a variety of fronts. These include the legitimate sphere of state regulation, personal and bodily autonomy, gender expression, and the right to live with and love persons of one’s choice. They pose social challenges in seeking not just enclave or ghetto status but full civil participation. They open up new ways of living, challenging conventional gender, patriarchal power, and family arrangements (Weeks et al. 2001) and deeply alarming fundamentalists of various religious stripes. They also face questions concerning their place in a globalizing world. Corporate colonization of gay scenes produces hyperconsumerist images of how to be gay, valorizes particular

“looks” and lifestyles, and purveys these images in an increasingly global way. At the same time, international organizations such as the International Lesbian and Gay Association and the International Gay and Lesbian Human Rights Commission seek to protect LGBT people from persecution around the world, using an Amnesty International model, and thereby necessarily asserting the legitimacy of a universal standard of a right to life and liberty as sexual beings.

LGBT organizations are now emerging in more and more countries of Asia, Africa, and Latin America, often grounded in traditions and contexts divergent from Europe, North America, and Australia. AIDS has proven a catalyst in many places for new organizations dedicated to mounting an HIV-prevention response for men who have sex with men, a population often neglected by official, state-sponsored AIDS commissions (Altman 2000). These grassroots AIDS organizations often draw on and speak to homosexually oriented people and provide a platform for and conduit to LGBT networks abroad.

Transgendered concerns are increasingly embraced by movements that have shifted from “gay and lesbian” to LGBT, as transgendered people face violence and repression from police and in the street. Transgendered people, whether transsexual, intersexed, gender-mixed, gender-defying, or queer, have been evolving new perspectives and mobilizing to challenge gender rigidity in many societies (Currah et al. 2006).

LGBT movements, then, have been increasingly proliferating and decentralizing into the twenty-first century. The single city or nationwide organization, encompassing all LGBT interests and demands, has become less and less common, replaced by the multiplication of LGBT caucuses and interest groups formed inside (or alongside): neighborhoods, political parties, labor unions, professional associations, small business federations, religious and ethno-cultural groups, youth and student movements, seniors groups, recreation and sports leagues, health and social service organizations, radio and television stations, theater, music, and the arts. LGBT movement groups have been coming about in more and more locations.

While some groups succeeded in organizing in Eastern Europe even before the fall of the Soviet state socialist system, a new wave of LGBT groups has sprung up since. New frontiers in the

twenty-first century include struggling LGBT and HIV prevention groups oriented toward men who have sex with men in African countries notable for government-sponsored homophobic rhetoric, state repression, and sodomy laws typically left over from colonial times. Another new frontier is in Islamic nations with emerging groups in Turkey, Lebanon, Indonesia, and Morocco sometimes having to take on a semi-clandestine form. Overall, LGBT movements have been succeeding in bringing their communities into full participation in civil society while changing the institutional structures of family, kinship, and personal solidarity around them.

Lesbian, gay, transsexual, bisexual movements, Australia

Graham Willett

Gay and lesbian politics came late to Australia. An effort in 1958 to establish an organization based on London's Homosexual Law Reform Society failed utterly. But a decade later, a flurry of independent efforts showed that the time had, at last, come. In Canberra, a small group of academics and journalists set up the Homosexual Law Reform Society. In Melbourne, half a dozen lesbians founded a branch of the Daughters of Bilitis as a social and political organization. But the real breakthrough came in 1970 in Sydney with the foundation of the Campaign Against Moral Persecution (CAMP, an acronym chosen because it was the word most homosexuals in Australia used to name themselves at that time).

The group had its origins in the deeper transformations that Australia was undergoing at the time. On the one hand, the emergence of a current within mainstream politics committed to the modernization and liberalization of national life meant that homosexuality was able to find a place on an agenda that looked to reform laws and attitudes around social issues ranging from abortion and Aboriginal affairs to welfare. In this context, it was inevitable that the criminalization of sexual acts between men would come under question. The other development, much less visible at the time, was the construction of a "scene" as it called itself – a subculture of pubs and cafés, private parties, and organized social groups in which camp women and men could meet and socialize.

When John Ware and Christabel Poll were interviewed in a national newspaper in September 1970, discussing the organization that they had set up, the effect was electrifying. Gay people willing to have their names and photographs published were unheard of, and merely by coming out these two and their organization became the focus of intense media interest. All over the country, newspapers, television shows, and radio programs reported the group's existence and activities. More importantly, they received hundreds of letters from homosexuals keen to join in their efforts. Within a year, CAMP had 1,500 members, with branches in all state capital cities

and at most universities. The organization aimed to bring together homosexual women and men around both social and political activities. Branches rented club rooms and members formed themselves into committees to take on the many forms of discrimination that camps suffered. Although the founders had imagined that it might be years before their group would follow the American example and take to the streets, in fact the first demo was held in Sydney within six months of the group's appearance. Protest, reasoned argument, education, lobbying – no method of tackling discrimination was overlooked.

Modernizing liberalism and the scene were not the only forces at work in the early 1970s, however. The anti-war movement provided inspiration, a model, and training for more radical efforts at social change. The United States had become a beacon for activists, and it is no surprise that in 1972, gay liberation ideas arrived in Australia. Here was a politics that embraced struggle, defiance, militancy; that argued for the revolutionary overthrow of sex and gender roles as a means to the liberation, not of gay people alone, but of all human beings. Gay liberation saw itself as fighting in solidarity with all the oppressed and exploited. Gay liberationists also drew on the politics of the counterculture. Consciousness raising and living differently (dressing in defiance of gender norms, sharing collectivist households, rejecting monogamy, and so on) were central to activists' political practice. Inspiring though it was, this politics made great demands upon people and the organizations were wracked with debates and splits. Radicalesbians separated themselves off from their brothers, either to work alone or with other women; some men worked to develop a politics that put women and the gender revolution first, around the slogan of "effeminism." Most of these groupings were short-lived but they had a lasting impact on those involved and on the broader left milieu in which they worked.

After 1973, gay and lesbian activism became less visible and it has been assumed that the movement went into decline. In fact, it makes more sense to see it as having changed tactics in response to a new political climate. The action group came into being. Less all-encompassing than organizations like CAMP, the action groups tended to focus on particular tasks, or issues, or constituencies. Religious and ethnic groups struck out on their own: the Gay Teachers and

Students Group worked in the teacher unions and published *Young Gay and Proud* for gay and lesbian youth; law reformers lobbied state legislators and opinion-makers and ran candidates in state and federal elections; others produced newsletters or radio programs or theatrical performances.

The effect of all this activity is clearer in retrospect than it was at the time. Homosexuality was decriminalized, beginning with South Australia in 1972 (and then again, to get it right, in 1975), and then in each of the states and territories, culminating in the bitterly fought-for reform in Tasmania in 1997 – one of the most important and successful campaigns in Australian political history. Over time, age of consent laws were amended, discrimination outlawed, same-sex relationships recognized. All of these reforms took place at the state level rather than the federal, and occurred in their own way and at their own pace. But the trajectory toward equality was clear. Today, except for the refusal of the federal government to legislate for same-sex marriage, gay people in Australia have achieved genuine equality before the law.

Public attitudes changed as well. As early as 1974 a majority of Australians were in favor of decriminalization of male homosexual acts (up from 22 percent seven years before), beginning a shift toward social acceptance and/or tolerance that has continued without serious interruption. The force behind this change was the tactic of coming out. Starting with the activists of the early 1970s, hundreds of thousands of people have come out to family, friends, workmates, driving home the point that we are everywhere, that we are just like everybody else, and that discrimination and prejudice are unfair. It was not the revolutionary transformation that the liberationists had hoped for, but it was a dramatic shift in Australian social life that has changed the lives of gay people – and indeed all Australians – for the better.

Coming out as a mass phenomenon rested in turn on the development of gay pride: a refusal of the idea that homosexuals were mad or bad or sad; an insistence that we deserved to be treated like everybody else. The clearest evidence of the development of this mindset came in 1978 with a series of police attacks on the gay community in Sydney. The first Mardi Gras, intended as a day of international gay solidarity against the rise of the right in the US, turned into a riot when the police arbitrarily withdrew the parade's

permit and arrested 53 people in the ensuing *mêlée*. Over the next six months there were more protests and more arrests. To the amazement of movement people, their activities were supported by the scene (both bar-goers and bar owners), which had displayed indifference, even hostility, to the politicians for most of the previous decade. Beneath the surface, it now seemed clear: the idea that gay people had the right to be treated fairly had taken root. The activists adapted with startling speed to connect themselves to this new constituency. As Johnston (1999) has pointed out, talk of “oppression,” “liberation,” and the “movement” was replaced by “discrimination,” “rights,” and the “community.” This fusion of activists and the scene into a community laid the foundations for lesbian and gay politics for the following quarter century. Mardi Gras continued as an annual event, becoming more and more theatrical and celebratory, though always with a political element to it. In the mid-1980s, lesbians and gay men started to work together again in ways that they had not done for a long time, around common goals, on the basis of a politics of “coalition” within the community. This was a model of attachment taken up by bisexuals, transgender people, and most recently intersex activists.

The community’s greatest achievement was perhaps its contribution to the containment of the threat of AIDS. Observing the US, activists, especially around the press, knew about AIDS well before it became a mainstream political and medical issue in 1984. Supported by a Labor Party government that was committed to cooperative forms of issue management, activists were able to deliver the behavioral change that AIDS prevention needed. Gay men adopted safe-sex practices because they were advised to by their own, accepting their advice in a way they would never have done from politicians or doctors.

In return, the government supported community-based AIDS organizations, funding through and therefore at arm’s distance remarkably explicit campaigns in which, as one activist said, “an arse was an arse and a fuck was a fuck.” The visuals were even more provocative – and effective. Infection rates peaked in 1982–3 and dropped sharply thereafter. Australia’s campaign against AIDS has been widely hailed as one of the most effective in the world, and it stands as a tribute to the politics that lesbians and gay men have constructed and nurtured over the past 40 years.

Lesbian, gay, transsexual, bisexual movements, Canada

Gary Kinsman

Indigenous peoples in what is now Canada lived under gender and sexual codes unfamiliar to European colonizing powers. Their social organization included three or four different groupings, most commonly the male, the female, and the male-female, or “two spirited” person, who had characteristics of both sexes. Under this system, women often held important forms of political and social power, and there was widespread acceptance of same-sex eroticism. Through missionary work and state repression, however, these norms were replaced with what became a normalized male-dominated heterosexuality. These earlier practices of eroticism and gender diversity are now being reclaimed through the organizing efforts of two-spirited people of the First Nations and the resistance of queer people.

Collective forms of resistance to heterosexual hegemony emerged in the 1950s and 1960s, an unlikely time. In 1958 a national security campaign against lesbians and gay men had them classified as “national security risks” supposedly suffering from a “character weakness” that made them vulnerable to “blackmail” by “enemy agents.”

This led to hundreds of gay men and lesbians being purged from the public service and the military. Even so, Jim Egan, influenced by early homophile organizing in the United States, became Canada's first visible gay activist during this period. After he spoke out a series of homophile groups across the Canadian state began to emerge. The longest lasting was the Association for Social Knowledge (ASK) in Vancouver. ASK organized educational, social, and lobbying efforts throughout most of the 1960s. As more visible queer networks emerged in the 1960s some participants engaged in forms of resistance to the national security campaigns, not only refusing to give the names of other queer people to the RCMP (Canadian security police), but also exposing the security operatives. These practices of resistance obstructed the national security campaigns. Then, in the context of broader social changes, discussions in church and legal circles, and legal decisions, a limited decriminalization of homosexual acts between two consenting adults in "private" took place in Canada in 1969. At the same time, however, sexual policing in "public" escalated.

In the early 1970s gay liberation, influenced by the radical politics of the 1960s social movements, had an influence as gay activist groups were set up across English-Canada and Quebec. These groups saw themselves as part of a broader radical movement and organized actions to support various movements, including contingents in anti-Vietnam War demonstrations. Within these groups, lesbians, increasingly influenced by feminism, encountered sexism from gay men and set up their own lesbian groups, leading to the emergence of an autonomous lesbian feminist movement. Out of these early radical groups emerged a rights movement struggling against discrimination and for human rights protection for lesbians, gays, and bisexuals. Gay and lesbian organizing in the 1970s, targeting the national security campaigns against queers as central sites of discrimination, came under the surveillance of the Royal Canadian Mounted Police, with agents doing surveillance at events ranging from the first cross-country demonstration on Parliament Hill in 1971, to the demonstrations against anti-gay campaigner Anita Bryant, to lesbians in Wages for Housework.

The organization of the 1976 Olympics in Montreal led to a major clean-up campaign against lesbians and gays in Montreal and

Ottawa, including major raids on gay and lesbian establishments. This sparked the formation of the Comité homosexual anti-repression in Montreal and a demonstration of 300 in June 1976. The police also began to use the "indecent act" subsection of the bawdy house legislation against gay bars and baths. In response to the 1977 raid on the Truax bar in Montreal, more than 2,000 gays, lesbians, and supporters closed down a major downtown street in protest. Combined with lobbying efforts, this led to Quebec becoming the first province to amend human rights legislation to include protection on the basis of sexual orientation.

The organization of an anti-gay and anti-feminist right wing in the US spilled across the border into Canada in the late 1970s, brought by Anita Bryant, who was involved in campaigns to repeal basic human rights protection for gay men and lesbians in the United States. In response, lesbian and gay activists formed coalitions to organize against the right wing and against Bryant's visits. The largest of these protests was in Toronto in early 1978 when more than 1,000 people marched in protest up Yonge Street. This also led to the formation of groups like Gay Liberation Against the Right Everywhere and Lesbians Against the Right.

Escalating sexual policing led to the massive bath raids in Toronto in the late 1970s and early 1980s and similar police operations in other cities. Using the bawdy house legislation in February 1981, more than 300 men were arrested in raids on four of Toronto's gay bath houses. This sexual policing set off some of the most profound queer protests and organizing seen across North America with the organizing of the Right to Privacy Committee (RTPC) as a defense organization for those arrested. Following the 81 raids, more than 1,000 people attended RTPC meetings and demonstrations of 3,000–4,000 people took over central downtown streets. Activists were joined by thousands of people from the bars and streets and other community networks who had not been previously involved in the movement, facilitating the expansion of queer community formation. Allies were gained in other communities also under police attack. As a result of this mass and sustained composition of struggle, most of the charges laid were dropped and the police were pushed back. While the RTPC used the liberal notion of the right to privacy against the police raids, it transformed this notion in a more

collective and social fashion to defend the social and erotic spaces men who have sex with other men had established.

By the early 1980s AIDS was having an impact. During the early years of state neglect, most of the support, education, and anti-discrimination work was undertaken by community based groups emerging out of gay and lesbian communities. By the later 1980s a new treatment-based activism emerged out of the contradiction between knowledge that there were treatments that could allow people living with AIDS and HIV to live longer and the denial of these treatments by governments and drug companies. In the US this new AIDS activism was associated with ACT UP (AIDS Coalition to Unleash Power) groups, and in Canada through groups like AIDS ACTION NOW! in Toronto. Through direct action protests, including the smuggling of treatments into Canada, much greater access to these treatments was opened up, allowing more people to survive. This AIDS activism, in turn, facilitated the emergence of Queer Nation organizing against anti-queer violence and the lack of queer visibility in the early 1990s.

The implementation of the equality rights section of the Charter of Rights in 1985 constituted a shift in state legal formation, creating an easier terrain for lesbian and gay rights legal struggles. Combined with movement activism, and the expansion of gay and lesbian community formation, this created the basis for human rights protection, ending official practices of exclusion from the military, and the establishment of spousal and family recognition rights. Eventually, legal challenges led to the establishment of the right to same-sex marriage in 2005. In a number of areas formal legal equality was established with heterosexuals. At the same time, since heterosexuality remains the normalized sexuality, major substantive inequalities remain, and hatred, prejudice, and violence against queers continue. Forms of sexual censorship and sexual policing also continue, and the new youth pornography law was used to target hustlers who sold sexual services to men.

The mass struggles of the 1970s and the 1980s, involving many working-class queers, ironically created the basis for the emergence of a new openly gay or queer professional-managerial stratum who could speak "for" the community and manage its relations with ruling agencies. This has led the new middle-class elite to argue for integration into existing social forms of spousal,

familial, and marriage relations and a consumer-based capitalist society. As a result the more radical dimensions of queer organizing, including sexual politics, have been eclipsed, and queers living in poverty, queer street youth, queers of color, working-class queer people, many transsexuals, and other groups find themselves excluded from new definitions of "gay" and "queer." Many radical queer activists are involved in social struggles today, but for many the gay/queer movements are so accommodated with the existing social order that they are active instead as queer activists in anti-poverty, global justice, and other movements.

Lesbian, gay, transsexual, bisexual movements, Germany

Christopher Young

The history of the gay rights movement in Germany can be traced to the mid-eighteenth century reign of Frederick the Great. In the century that followed, the movement was characterized by legal maneuvering, scientific theorization, and varied literary exploits. As the German nation was born out of the Prussian states in the 1870s, these modes of activism continued to grow and were gradually joined by more organized approaches

that were enabled by communal identification and the dialogue that had been developing for over 100 years. Despite facing death and persecution during Hitler's Third Reich, the gay rights movement managed to reappear and continually reinvent itself throughout the second half of the twentieth century and into the present day.

Historical, Legal, and Literary Foundations of the Gay Rights Movement

During the Enlightenment, although sodomy remained illegal in some parts of Germany, a gradual separation between law and morality appeared, reflected in new understandings of criminal processes and acceptable punishable offenses. Philosophers such as Cesare Beccaria (1738–94) succeeded in moving sodomy and homosexuality from a crime punishable by death to a mere infraction of socially acceptable behavior. This in turn enabled a gay community with increased self-awareness to emerge.

Frederick the Great (1712–1786)

Enlightenment theories greatly affected the personal, political, and legal development of Frederick the Great, a homosexual who ruled Prussia for over forty years in the mid-to-late eighteenth century. Contemporary sources describe Frederick the Great as an effeminate boy who displayed homosexual tendencies from a young age and who was later connected intimately with a number of men. When he came to power in 1740 Frederick brought with him the memory of a childhood and adolescence that were defined by the tension that his homosexuality and fondness for French Enlightenment thought created with his father's restrictive approach to governing. This tension challenged Frederick drastically to change the state's attitude toward homosexuality and sodomy, not only through attempts at legal change, but also through personal decrees and opinions that would mark him as one of the earliest defenders of homosexuals. Voltaire relates one particular instance during his time as the philosopher in residence in Prussia when Frederick overturned the death sentence of a sodomite, claiming that "in his states he granted freedom of conscience and of cock." This move served not only as a reaffirmation of the changes to criminalization that the Enlightenment created within modern-day Germany, but also as a rebuttal to the legislature and courts that

continued to support such severe punishments for what was now seen as a moral infraction.

Frederick's reign was peppered with instances such as these, gradual movements toward legalized change that took their shape in "committees of leading jurists" appointed by Frederick "to reform the [sodomy] laws." Although in 1988 German historian James Steakley confirmed that the new code drafted by these committees "reduced the punishment for sodomy from burning to imprisonment for a year or more, whipping, and banishment," Frederick's death in 1786 brought an unfulfilling end to the groundbreaking exploits of these committees – death was no longer a punishment, but sodomy and homosexuality remained criminal acts in the German state. Although his attempts at making sodomy a legally sanctioned act were not wholly realized, Frederick the Great is significant in the picture he offers of an evolving gay sensibility and movement in Prussia.

Paragraphs 143 and 175

Despite the late eighteenth-century changes to the Prussian penal code that removed death as a punishment for homosexuality, the law retained Paragraph 143: "Unnatural fornication, whether between persons of the male sex or of humans with beasts, is punished with imprisonment of six months to four years, with the further punishment of a prompt loss of civil rights" (Ulrichs 1994). Although Otto von Bismarck led an investigation into the legitimacy of criminalized homosexuality in 1869, his revisions to the penal code of the North German Confederation continued to punish homosexuality as the previous Prussian codes had. It was a move that would have far-reaching implications as the criminal code of the North German Confederation became the criminal code for the entire German Empire which was united under Wilhelm I in 1871, paving the road for nearly a century of legalized persecution in Germany under Paragraph 175.

Karl Heinrich Ulrichs (1825–1895)

Karl Heinrich Ulrichs was, by all modern accounts, recognized as the first open homosexual of his time. His coming out had remarkable consequences, as it led him to develop and write his theory on homosexuality in texts that would inspire and articulate the first gay rights movement of the modern world.

Ulrichs came to Berlin in the mid-1850s after resigning his post in the local government due

to threats of exposure as a sexual deviant. It was at a meeting of the Free German Foundation for Science, Art, and General Culture that Ulrichs first acknowledged his homosexual desire while presenting a paper concerning same-sex attraction. In 1862 Ulrichs affirmed and defended his homosexuality in a series of letters to his family. In his writing, Ulrichs did not use the problematic “sodomite” in his explanation of homosexuality, but instead, realizing the need to redefine those with a same-sex disposition, labeled them according to a heritage rather than the biblical term of an illegal act: Uranian (Uranism for homosexuality) – a name rooted in Plato’s discussion of Eros and the love of men in *Symposium*. With a single neologism, Ulrichs founded a new understanding of justice that would inspire his contemporaries and future generations of “Urnings.”

In 1864 and 1865 Ulrichs released a series of five pamphlets entitled *Research on the Riddle of Man-Manly Love* under the pseudonym Numa Numantius. Ulrichs expanded on legal approaches to Uranism, scientific theory surrounding “manmanly desire,” and related issues of biblical persecution and Greco-Roman praise for same-sex love. Although the initial publications faced censorship and harsh reception in most of Germany, Ulrichs was undeterred and continued to write, even dropping the pseudonym in 1868 and publicly revealing himself as a crusader of the German gay rights movement. The political climate in the German states was becoming more hostile during the time of Ulrichs’ rapid rise to notoriety, specifically as Prussia defeated Austria in 1866 during the Six Weeks War, leading to the annexation of Hanover. For Ulrichs, the possibility of German unification under a strong and anti-homosexual Prussia seemed to be becoming a reality; he was imprisoned for a short time because of his writing and upon his release began working more specifically to convince the Prussian lawmaking bodies to overturn Paragraph 143, the law criminalizing sodomy. Ulrichs brought a proposal in favor of decriminalization before the Congress of German Jurists in 1865. While this initial attempt did not even garner Ulrichs a place on the docket, his second attempt in 1867 proved more successful, at least initially. Ulrichs attempted to speak for decriminalization before the Congress, but found himself shouted down before he was able to explain his planned proposal. Undeterred, Ulrichs turned to working with the committee that was responsible

for outlining the laws of the newly formed North German Confederation, a partially unified German nation consisting of Prussia and the recently annexed northern territories. Ulrichs’ attempts were supported by a growing number of academics and medical professionals who were also calling for a society-wide ideological readjustment and sweeping legal changes to accompany it. The committee eventually concluded that their moral obligation was to continue criminalizing sodomy, a defeating blow for Ulrichs, his supporters, and the fragile gay rights movement.

Ulrichs wrote very little after Paragraph 175 was added to the German penal code. While he may not have brought an end to the legal persecution of homosexuality, his work in creating the very notion of homosexuality as a natural orientation consequentially amalgamated a community of men with Uranian identities; it is this communal identification that stands as the cornerstone of the gay rights movement in Germany.

Stefan George (1868–1933)

The work of Ulrichs was not lost on his literary contemporaries who closely identified with Uranism; in fact, the Wilhelmine era gave rise to a number of authors who wrote in support of same-sex desire. The defining player in this epoch of literary creation was Stefan George, a vaguely closeted homosexual and poet who combined his same-sex desire and adept writing skills to produce stunning poetry that gave voice to the emotions surrounding the gay rights movement.

Stefan George relied heavily on symbolism and offered a unique glance at the emergence of the homosexual individual during the Wilhelmine era through the expression of disguised homoerotic desire in his poetry. Published in 1897, *Das Jahr der Seele* (*The Year of the Soul*) ends with the protagonist waiting in a deep sleep, a metaphor that when considered within the symbolism of the overall work alludes to an atmosphere of continued silence surrounding homosexuality where the only free world is one of self-creation. Despite the impossibility of communal identification that *Das Jahr der Seele* seems to allude to, George himself turned to the actual creation of a community where the deep bond between men could be fully appreciated and explored. The George-Circle was a group of loyal male followers drawn from writers who contributed to George’s journal, *Blätter für die Kunst* (*Pages for Art*). Within the Circle, George was revered and surrounded by literary companions who were

enthralled by his work; it is the same unfulfilled desire for creation visible in *Das Jahr der Seele* that prompted George to form his Circle of followers as a means of exercising control over his world and the people in it.

George's attempt to build a community of like-minded thinkers and writers and his proactive attempts to create in a society of restriction are best interpreted as signaling a developing communal homosexual awareness. The single greatest change seen in the discourse on homosexuality from the Wilhelmine period to the dawning of the Weimar Republic in 1918 was the replacement of individual voices with organized, activist groups; this shift lent validity and strength to a discussion that had long been reliant on brave individuals setting out on their own. It was because of men like Ulrichs and George that such a shift was able to take place, and it was their ideals and beliefs that most influenced the sexual scientists and thinkers who would come to define the gay rights movement in the years surrounding the establishment of the Weimar Republic: Magnus Hirschfeld (1868–1935) and Adolf Brand (1874–1945).

From Empire to Republic

The historical importance of the life and work of Hirschfeld and Brand is twofold: while both directly shaped the homosexual culture and community that came to define Weimar Berlin, their work also reveals a great deal about how societal constructions of homosexuality were developing both positively and negatively, and how diametrically opposed self-understandings of homosexuality were beginning to appear. Additionally, it was the work of sexologists like Hirschfeld that can be partially credited with the appearance during this era of a discourse on lesbianism – the overlooked branch of the women's movement that would find a likely ally in the growing debate on homosexuality in both political and literary spectrums.

Science in the Gay Rights Movement

Although Sigmund Freud is often closely connected with issues of sexuality, he focused his work in the scientific understanding of human sexuality and adopted a heteronormative understanding as the basis of his theory. While Freud's work was science for the sake of science, Magnus Hirschfeld modeled his life and work upon the motto "through science to justice" (Bauer 2002).

Hirschfeld's work was intrinsically tied to an understanding of individuals and of society that would bring justice to homosexuals. Hirschfeld confirmed himself as a major player in the gay rights movement from his earliest writings where he explained the biological basis for the existence of homosexuality; it was this earliest publication, *Sappho und Sokrates* (*Sappho and Sokrates*), which marked the beginning of the first organized homosexual emancipation movement in the history of the modern world. Hirschfeld founded the Wissenschaftlich-humanitären Komitees (WhK, Scientific Humanitarian Committee) in 1897 with two primary initiatives in mind: the education of all people as to the biological nature of homosexuality and the campaign for the abolishment of Paragraph 175 on those biological grounds. While Hirschfeld faced difficulties because of the religious arguments of many moral purity organizations, he found a great deal of support for the many petitions against Paragraph 175 that he proposed. In 1919 his research and writing led him to open the Institut für Sexualwissenschaft (Institute of Sexology) in Berlin as a center for sexuality-centric intellectual gatherings.

Not all gay rights activists of the day agreed with Hirschfeld's scientific approach to the issue of homosexuality. Adolf Brand subscribed to a defense of homosexuality that was centered in the cultural value offered by homoeroticism and connected it to influential ancient cultures, a belief that inspired one of the first journals focused on homosexual life and culture, *Der Eigene*. While Hirschfeld contributed greatly to the gay rights movement in Germany, his theories did sometimes construe homosexuality as a natural disorder, rather than purely natural – something Brand was able to avoid with his approach. Brand's understanding of homosexuality and his approach to gay rights activism was connected to a more progressive and positive homosexual self-image. In an attempt to procure funding and support Brand formed the Gemeinschaft der Eigenen (GdE, Community of the Special) in 1903; in contrast to the circle that surrounded Stefan George, Brand and his followers formed an open community, published, held public lectures, and served as an overt and activist response to the medicalization of homosexuality.

Birth of the Lesbian Movement

The role of women in the homosexual emancipation movement was nearly non-existent through

the beginning of the twentieth century. It was the protection offered by biological arguments in support of homosexuality which led many lesbians to begin understanding the similarities between the women's movement and the gay rights movement. At a 1904 meeting of the WhK, Anna Rüling spoke on lesbian rights. As the title of Rüling's speech, *Welches Interesse hat die Frauenbewegung an der Lösung des homosexuellen Problems?* (What Interest Does the Women's Movement Have in Solving the Homosexual Problem?) suggests, the main focus of her argument was to connect the women's movement and the homosexual emancipation movement in an attempt to prove the benefits of such a relationship not only for the movements themselves, but for women like her who stood outside of both. In boldly stating that "homosexuality is an obvious and natural bridge between man and woman" (Rüling 2006: 28), Rüling underscored what the crux of her argument focused on: understanding the ways that homosexuality, specifically lesbianism, allowed for a varied and more progressive understanding of gender roles and in turn allowed for more succinct progress towards liberation for all.

German literature at the turn of the twentieth century gave birth to works that explored female relationships, lesbianism, and the women's rights movement as well. Aimée Duc's *Sind es Frauen? Roman über das dritte Geschlecht* (*Are These Women? Novel about the Third Sex*) was published in 1901. Again, much like Rüling, who had chosen to address lesbianism in light of the women's movement, rather than focusing intensely on the supposed masculinity or deformity of lesbians, Duc's novel focused on intelligent and independent women who freed themselves from societal and male-dominated constraints and, by extension, were able to embrace their friendship and homoerotic desire for one another in a positive manner.

Gay Weimar Berlin

The epicenter of gay culture in the 1920s and early 1930s was unquestionably Berlin. The rapid growth of a homosexual community during the years of the Weimar Republic signaled the culmination of the centuries-old struggle for visibility and emancipation in Germany. Berlin became the gay capital upon the Kaiser's downfall in 1919 when the promise of a democratic

constitution destroyed the moralistic restraints that had been holding Berliners back during the German Empire. Paragraph 175 remained in place, but the empirical rule and lack of a democratic voice within Germany had become a thing of the past. A generation disillusioned by a world war and a growing economic depression took stock and began to focus on entrenched human rights instead of expected moral codes; as is to be expected, the homosexual emancipation movement grew stronger than ever.

The homosexual emancipation movement thrived in Berlin. Hirschfeld's institute was operating successfully, had amassed the largest collection of research on sexuality in the world, and continued to serve as a resource for homosexuals and as a place of education for those still opposed to homosexual rights. Hirschfeld also joined forces with other activist groups, including the Bund für Menschenrecht (Association for Human Rights) which emerged from so-called Friendship Associations and claimed nearly 50,000 members by 1929. The homosexual population of Berlin in 1930 was calculated at 350,000 and the city also played host to an overwhelming number of homosexual locales, over 100 by 1933. It was Berlin and its revolutionary attitudes that created arguably the most active homosexual community to have existed in the modern world at that time.

Homosexuality in the Nazi Era

With economic depression and a fractured citizenship, Adolf Hitler and his National Socialist Party were easily able to win the 1932 election and form the Third Reich. The election, the depression, and Paragraph 175's continued existence spelled disaster for the homosexual communities that had taken root in Berlin and throughout Germany in the previous decades.

When Hitler came to power, the gay rights movement and the organizations most closely associated with it were forced to dissolve themselves or face elimination at the hands of the Nazi Party. Hirschfeld disbanded the WhK in 1933 and Brand followed suit by dismantling both the GdE and his numerous publications in the same year. The presence of Ernst Röhm, a homosexual and the leader of Hitler's Sturmabteilung (SA, Storm Troopers) from 1931 to 1934, led many falsely to believe that homosexuality would not be strongly punished by the Nazi Party.

With the destruction of Hirschfeld's institute and the burning of his library's collection in May 1934, along with Hitler's execution of Ernst Röhm and most of the SA in late June of that same year during the Night of the Long Knives, Hitler intended to punish homosexuality harshly, among other stated opponents of the government.

With the alteration of Paragraph 175 in 1935, the Nazis established new punishments for homosexuals – ten years' imprisonment and a loss of civil rights – and laid the groundwork for their internment in concentration camps. While some gay locales managed to remain open longer than others, most were shut down by Nazi officials by the time alterations were made to Paragraph 175. Within the Gestapo the Reichzentrale zur Bekämpfung der Homosexualität und Abtreibung (Central Office for the Combat of Homosexuality and Abortion) was established to seek out and punish homosexuals. By 1942 the homosexual emancipation movement, only ten years earlier stronger than ever, had vanished as homosexuals in concentration camps were facing medical experimentation, forced labor, and death.

Rebuilding in the Midst of Division

The division of Germany into Allied and Soviet sectors following World War II established the boundaries of East and West Germany, boundaries that were literally and metaphorically erected with the Berlin Wall in 1961. From that point on, contact between the Federal Republic of Germany (West Germany) and the German Democratic Republic (GDR, East Germany) was minimal. Both sides faced continued problems with Paragraph 175, which although eventually nullified, led to continuing legal issues surrounding the age of consent for homosexuals; on the whole, however, the gay rights movements within East and West Germany took two very different courses.

East Germany

Despite arguments from Rudolf Klimmer, a physician who, with his *Vereinigung der Verfolgten des Naziregimes (Coalition of the Nazi Regime's Persecuted)*, called for the repeal of Paragraph 175, the GDR adopted the 1935 version of the anti-sodomy law in an attempt to retain homosexual punishment, but separate it from its Nazi legacy. The 1935 version of Paragraph 175 remained in

effect until debates on whether homosexuality was actually a destructive force to the socialist state led to an end of enforcement in the late 1950s and finally the removal of the law in 1968. It was a small victory for the gay rights movement in East Germany because the GDR continued to ban all homosexual groups and publications, creating a homosexual community that existed only behind closed doors. Because of the restrictions placed on the gay rights movement by the GDR, there was very little gay rights activism visible during the Cold War in East Germany. Groups such as the Homosexuelleninitiative Berlin (HIB, Homosexual Initiative of Berlin) were able to organize and gather in private for social purposes and educational discussions. The ingenuity of these early groups was furthered by homosexuals who turned to the Protestant churches during the 1980s. Because of the connections between the church and socialism, sociopolitical issues and the people affected by those issues was left up to the church. By utilizing this loophole in the socialist system, gays in Leipzig and Berlin created so-called Arbeitskreise (Working Circles) that enabled them to assemble, publish, and sustain an emancipation movement within Protestant churches that would have otherwise been absent within the GDR.

West Germany

In the years following World War II, West Germany's gay rights movement in many ways picked up where it left off. Throughout the major cities, gay locales reappeared, as did more fervent calls for the abolition of Paragraph 175. The Homophilenbewegung (Homophiles movement) became one of the most influential movements of the 1950s and 1960s after they helped reincarnate the WhK. The group was largely responsible for influencing the 1969 decision to decriminalize consensual sexual relations between same-sex partners over the age of 21 in West Germany. Their work brought lawyers, academics, and activists together and helped move the focus of West Germany's homosexual emancipation movement beyond Paragraph 175 to the securing of constitutional protection for homosexuals.

Some of the largest movements in the 1970s were organized by radical students and groups such as the Homosexuellen Aktion Westberlin (HAW, Homosexual Campaign West Berlin), which was representative of the radicalism

that defined the 1970s throughout the western world. Groups that focused more intently on the working-class gay rights movement like Homosexuellen Arbeiter Aktion Westberlin (HAAW, Homosexual Worker's Campaign West Berlin) also appeared during this time. Soon, most cities played host to gay bookstores, homosexual publications prospered, and politically charged mass gatherings, like the first Christopher Street Day parade in Berlin in 1979, began to take place. But, as in the United States, the fervent student movements eventually faded and the birth of the 1980s brought an end to what were the most radically active and legally successful decades of gay rights activism in German history.

Reunification

While the AIDS epidemic created cause for further activism in the 1980s, the movements of the 1960s and 1970s appear to mark the last chapters of gay rights activism as it had been known in Germany. Since reunification, Germany's gay population has been quite integrated within the whole of Germany society, though admittedly the political, religious, and social attitudes of cities such as Berlin or Cologne vary greatly from those of most rural towns. Homophobia and anti-gay sentiments undoubtedly still remain, but homosexuals are no longer invisible beings and they enjoy a great deal of constitutionally protected freedom. Although full adoption and marriage rights have still not been granted within Germany, civil unions and stepchild adoptions are protected; additionally, Germany was one of the earliest countries to protect against discrimination on the basis of sexual identity within its constitution.

Lesbian, gay, transsexual, bisexual movements, United States

Tristan Cabello

The lesbian, gay, transsexual, bisexual (LGBT) movement in the United States encompasses several lesbian, gay, bisexual, and transgender social organizations that took shape in the mid-twentieth century. The Mattachine Society, the Daughters of Bilitis, the Gay Liberation Front, and Queer Nation were chronologically the most influential of these organizations.

The Mattachine Society

Founded in 1950 by eight gay men in Los Angeles, the Mattachine Society aimed to organize gay political liberation. The society arranged discussion groups for gay men to talk about their experiences and to share referrals for legal

services and psychological counseling. The group also lobbied extensively for the repeal of sodomy laws and other laws that were seen as discriminatory toward gay people. Mattachine groups started to spread across the United States in the 1950s, when the society started sponsoring social events and editing publications, such as the *Mattachine Review* and *ONE Magazine*.

Most Mattachine leaders were influenced by communist ideals and based their organization on the “cell structure” of the Communist Party USA. During the Red Scare, several members were placed under scrutiny by the federal government. Many founding members soon stepped down as conservative delegates challenged the group’s goals, including the idea that gay people were a legitimate minority group. The original founders resigned in 1953, and more conservative elements began to restructure the organization.

From that moment on, the Mattachine Society advocated accommodation and sought the support of the psychiatric profession, which they believed held the keys to reform. Following the Stonewall Riots of 1969, freshman activists began to view the organization as too traditional. Attendance at the discussion groups declined in the early 1970s and many local chapters folded quickly afterwards.

The Daughters of Bilitis

Founded by eight lesbians in 1955 in San Francisco, the Daughters of Bilitis is considered the first lesbian rights organization in the United States. The group was first conceived as a social club providing a venue for same-sex dancing. The most influential founding members, among them Phyllis Lyon and Del Martin, advised conformity to the straight mainstream, making the Daughters of Bilitis a rather conservative gay society by today’s standards. In the late 1950s, after allying itself with the Mattachine Society and *One Magazine*, the organization became more politically focused, hosting public forums on homosexuality, offering support to isolated lesbians, and participating in research activities. The organization collected some of the first statistical data on lesbians in the United States through their magazine *The Ladder*.

In the 1960s, the organization underwent a radical political shift under the direction of

Members of the Gay Liberation Front (GLF) picket Time, Inc. in New York, protesting the October 31, 1969 Time Magazine issue titled “The Homosexual in America.” The New York City GLF was the first gay liberation group to be formed, coming into being shortly after the Stonewall Riots of June 1969. (Courtesy of Diana Davies Photographs, Manuscripts and Archives Division, The New York Public Library, Astor, Lenox and Tilden Foundations)

Barbara Gittings, editor of *The Ladder* from 1963 to 1966. Because *The Ladder* was the principal means of communication between leaders of the Daughters of Bilitis and its local chapters, the position of editor was very powerful. Barbara Gitting changed the editorial focus of the magazine, emphasizing the importance for lesbians to be more visible and political. In 1968, feminist activist Barbara Grier, new editor of *The Ladder*, dropped the word “lesbian” from the subheading “A Lesbian Review” to attract feminist readers. Barbara Grier doubled the size of the magazine and devoted much space to feminist ideals. Many members, discontent with the shift from lesbian rights to women’s rights, left the group. After the group disbanded in 1970, Barbara Grier was convinced that *The Ladder* could run independently, but failed to obtain funds, subscriptions, and advertisement funds to keep the magazine in publication. *The Ladder* ceased its run in 1972 due to financial difficulties.

Student Activism

In 1967, Stephan Donaldson, a Columbia University student, was forced by his school to move out of his residence hall after his roommates complained about his homosexual tendencies. In response to this discriminatory action, Donaldson founded the Student Homophile League, which

was the first student gay rights organization in the United States. Student Homophile League branches were subsequently created at Cornell University and New York University in 1968 and at the Massachusetts Institute of Technology in the spring of 1969. By 1971, more than 175 colleges and universities had LGBT student organizations.

These organizations provided support for homosexual students, edited gay rights literature, held dances, and sponsored lectures about homosexuality. Members in GLF-type groups were generally visible and political on campuses. Many of them were involved with other militant groups such as the Black Power movement and the anti-war movement. They saw gay rights as part of a larger movement to transform society. These new LGBT activists were often committed to radical social change: their own liberation was tied to the liberation of all oppressed peoples.

Despite the fact that most of these groups supported women's liberation, many of them were dominated by men. In fact, activities were aimed at the needs of gay men, even to the point of excluding the needs of lesbians and bisexual women. By 1971, lesbians and bisexual women on campuses started to hold their own dances and social activities, and eventually created their own groups.

Gay Liberation Front

In 1969, after the police raided the Stonewall Inn, a popular gay bar in New York City, the gay community rioted in protest against the abusive tactics of the police. A call for "Gay Power" was issued by many riot participants who distributed leaflets containing an appeal for an organized response. Within weeks of these events, gay and lesbian activists around the country formed the Gay Liberation Front (GLF). The GLF defined itself as a "revolutionary organization" that hoped to transform society by dismantling social institutions such as marriage and the traditional family unit. The group spread rapidly across the United States, Canada, the United Kingdom, and the rest of Western Europe.

The Gay Liberation Front did not limit its political actions to gay causes. Many GLF members protested with the Black Panthers, feminist groups, and anti-Vietnam War activists.

Many GLF lesbians enriched the movement with the principles of radical feminism, allowing GLF activists to argue that the institution of heterosexual families necessitated discrimination against homosexuals: homosexuality was therefore a form of political resistance. GLF activists were extremely visible in demonstrations, speeches, confrontations, organized marches, sit-ins, street theater, meetings, books, films, and "zaps" designed to disrupt events promoting homophobic values. They also engaged in the technique of "outing."

Though the GLF disbanded in 1972, its activists kept working on political issues. The GLF influenced gay activism throughout the late 1980s and early 1990s, especially when ACT UP and Queer Nation were formed to fight homophobia. Many of the leaders of these two groups had been active in the GLF.

Transgender Activism

Transsexual activism first emerged in San Francisco in 1966, when transgender prostitutes in the Tenderloin rioted at a local cafeteria against police harassment. After the riot, transsexuals formed COG (Conversion Our Goal) in 1967, which later became the Transsexual Counseling Unit. This group was funded by a wealthy female-to-male transsexual named Reed Erickson, and corresponded with transsexuals across the nation thanks to the involvement of *Queens Magazine*, edited by famous drag activist Lee Brewster.

In the late 1960s, transgender activism joined the gay liberation movement. Transgender "street queens" played a major role in the Stonewall Riots, and Silvia Rivera, a transgender woman, was an early member of the Gay Liberation Front and Gay Activists Alliance. With Marsha P. Johnson, she founded STAR (Street Transvestite Action Revolutionaries) in 1970. The first transgender community-based organization, the Labyrinth Foundation Counseling Service, opened in the late 1960s and was founded by Mario Martino.

In California, leading transsexual figure Angela Douglas founded TAO (Transsexual/Transvestite Action Organization) in 1970, which published the *Moonshadow* and *Mirage* newsletters. In 1972, TAO moved to Miami, where it became the first international transgender community organization.

Queer Nation

Queer Nation was launched in New York in 1990 when 60 queers gathered at the Lesbian, Gay, Bisexual and Transgender Community Services Center in New York's Greenwich Village to create an organization with the dual purpose of eliminating homophobia and increasing the visibility of gays. Within a week, several chapters were created across the US, from San Francisco to Boston.

Queer Nation influenced American sexual politics dramatically: the acceptability of gay representations in popular mass culture in the early 1990s can be dated to the creation of the organization. Queer Nation reclaimed the word "queer," which had previously only been used in the pejorative sense. While the group's use of the word in their name was first considered shocking, the reclamation was successful, as can be seen by the use of "queer" in the titles of mainstream television programs such as *Queer Eye for the Straight Guy* and *Queer as Folk*.

Not depending on any structure or leadership, the organization relied mainly on community meetings to plan cleverly named political actions, the most famous of which were "LABIA" (Lesbians and Bisexuals in Action) and "SHOP" (Suburban Homosexual Outreach Project). However, the organization preferred short-term visible actions, such as same-sex kiss-ins at shopping malls. Queer Nation regularly outed public figures. Queer Nation's political philosophy was summed up by its slogan: "We're queer, we're here, get used to it!"

Lesotho, popular protest and resistance

Balam Nyeko

From the moment of European intervention during the late nineteenth century through the colonial period up to contemporary times, Lesotho (formerly Basutoland), a tiny southern African kingdom completely surrounded by the modern state of South Africa, has experienced popular resistance of one kind or another. While the earlier phase of this resistance tended to be spearheaded by Basotho chiefs wishing to protest the erosion of power by colonial rule, the later period was marked by growing popular, frequently spontaneous, action by the general population.

The Kingdom

The Lesotho kingdom was formed in 1818 as a comparatively decentralized entity by King Moshoeshoe I. The existence of the *pitso*, an assembly of chiefs and commoners, allowed fairly open and frank discussion of issues of major policy. The kingdom was considered among the most highly democratic in southern African precolonial societies, providing a forum for the Basotho people.

The kingdom had a tradition of meetings where commoners articulated grievances against rulers. Typically, the authorities did not engage in severe retribution in response to open criticism of the authorities at the *pitso*. On the contrary, anyone asking "awkward" questions of the chiefs usually received the admiration of the audience, though occasionally at "the displeasure of the chiefs" (Gill 1993: 49). This culture of vigorous public debate runs throughout the modern history of Lesotho.

Popular resistance took diverse forms. In 1868, following ongoing clashes with and loss of land to the Afrikaners of the Orange Free State, the country became the British protectorate of Basutoland. It was annexed to the Cape Colony in 1871, and in 1879 Chief Moorosi spearheaded a revolt, leading to his death and civil war. British attempts to disarm Africans led to the uprising called the "Gun War" of 1880–1, directed against disarmament and incorporation into the Cape Colony, which threatened Basotho economic

independence, customs, and practices. In 1884, Basutoland was transferred back to crown control, under indirect rule.

The Protectorate

The early twentieth century saw the formation of the first overtly anti-colonial protest organization by the Basotho, whose major concern was to ameliorate colonialism's social and economic inequality.

The Basutoland Progressive Association (BPA) was launched at Teyateyaneng in northern Basutoland in 1907 by commoner Basotho citizens educated by the Protestant Church. BPA's founding president, Reverend Cranmer Sebeta, was superseded by Simon Phamotse, a Mosotho educated both in South Africa and Lesotho. BPA members desired improved treatment of the Africans from the colonial state and improved agricultural facilities, trade and employment opportunities, and educational and health services. While grievances arose from the patently inferior position of the African population, mostly peasants, they were initially articulated and presented to the authorities by the newly educated elite, primarily men and women from mission stations, primary schools, the ancillary clerical staff of the colonial administration, and emerging trading centers.

The small educated elite's commitment to Basotho commoners was vitiated by their friendly disposition toward the colonial state, despite some criticism. As Rugege (1993: 172) points out, the Association "never seriously questioned the legitimacy of British rule in Lesotho." Neither could it claim to speak on behalf of the majority of the Basotho population, concerned as it was with the claims to privileges of the "educated" elite, the "Black Englishmen." The BPA couched criticism of the British colonial government in politely worded petitions and achieved no substantial concessions as a protest organization, preoccupied mainly with its campaign seeking recognition by the colonial state rather than the representation of the interests of ordinary Basotho.

In 1919, the Lekhotla la Bafo (The Council of Commons, LLB) was founded in Mapoteng by two largely self-educated brothers, Maphutseng and Josiel Lefela. The organization presented a marked contrast to the BPA. From the outset, the Basotho commoners' organization first and

foremost represented peasant grievances against colonialism and traditional authorities. LLB was concerned with countering chiefly abuse of power and ensuring representation of commoners in the Basutoland National Council (BNC), a body constituted by the British colonial administration in the early twentieth century. The BNC ostensibly permitted the Basotho to express views to their governors, but in practice it was a vehicle for advancing chiefly and colonial interests.

The LLB was not merely content to dispatch delegations to discuss multifarious grievances with colonial authorities, it was also prepared to use other avenues for protest. Unlike the BPA, the LLB organized boycotts and strikes and published fairly radical articles in the local newspaper, *Naled ea Lesotho*. With a substantially larger following than the BPA, the LLB represented a far wider area of the country, including the poor, landless, and migrant laborers.

Apart from its campaign for inclusion, as representatives of ordinary Basotho in the BNC, the LLB was also concerned with the chiefs' exploitation of *matsema* (traditional work parties) of commoners' labor in the cultivation of personal gardens. In the precolonial period, this practice was regulated to benefit the wider population: the produce from fields was shared and *matsema* restricted to specifically identified gardens. In the early twentieth century, chiefs began to take advantage of *matsema* to cultivate and harvest comparatively large personal fields, selling the produce for profit. The LLB strongly criticized chiefs for abusing the institution (Edgar n.d.; Nyeko 2001).

Similarly, the LLB bitterly attacked the excesses of the British colonial state, missionaries, and European traders. It accused the colonial administration of providing Basotho with inferior education and introducing unpopular measures such as compulsory cattle dipping to eradicate disease (Nyeko 2001). The LLB also claimed that British officials worked to advance the South African government's interests in the country, while missionaries were severely criticized for undermining Basotho culture and "spirit of independence." As Mekenye (1996: 310) writes, missionaries were, in the organization's view, guilty of encouraging Basotho to embrace European culture and "to become involved in commodity production . . . and [in] consuming European goods." All this, the organization

argued, only made the country more vulnerable to imperialism and capitalism. Among other factors, the LLB persistently condemned the missionaries in Lesotho for contributing to breakaway churches, led by Africans rather than Europeans, in Southern Africa (Nyeko 2001: 144).

The LLB was pivotal in resisting the future of the British High Commission territories of Bechuanaland, Basutoland, and Swaziland. At the formation of the Union of South Africa in 1910, the future of these British territories was unresolved, though the new Union government expected eventual incorporation, a position Africans in the territories strongly opposed. In Lesotho, the LLB advanced the campaign to resist incorporation. Protests supplemented equally stiff opposition by the BNC and BPA. The LLB, however, went further and enlisted the support of Sobhuza II, the Swazi king, directly appealing for his support to form a common forum, The Association of Protectorates, with African leaders from all three protectorates during the 1920s and 1930s. This campaign was pursued on the basis of deep disapproval of the discriminatory policies of the Union of South Africa, such as Prime Minister J. B. M. Hertzog's Native Bills of 1936.

The broad outlook of the LLB was further reflected through its determination to forge ties with organizations outside Basutoland that also opposed imperialism and wanted to improve the life of the ordinary people. LLB established a friendly relationship with the Communist Party of South Africa (CPSA), which agreed to publish several LLB articles in its papers. The CPSA hoped that the LLB might join its Federation of Non-European Trade Unions (FNETU).

A critical factor in developing cross-border political networks was that many Basotho were employed in South Africa as migrant miners and farm workers. By 1920, the High Commission territories provided around 13 percent of the African mine labor force of South Africa, with the Basotho were well known as mine workers. Despite stringent restrictions by the colonial state, the LLB thrived throughout the 1930s and 1940s, successfully laying the foundation for the subsequent anti-colonial political struggle of the 1950s and 1960s.

If the first anti-colonial protests advanced the particular interests of the educated elite and were symptomatic of the "proto-nationalist"

sentiment of the Basotho, an overtly nationalist movement for independence subsequently broke out from the 1950s. In this later phase, Basotho politicians and followers displayed remarkable awareness of the importance of the pan-African context of Lesotho's own politics.

The key political organizations in the anti-colonial protests in this era included the comparatively militant and Protestant-based Basutoland Congress Party (BCP), the Roman Catholic-dominated Basutoland National Party (BNP), the Marematlou Freedom Party (MFP), and the small but ideologically important Communist Party of Lesotho (CPL), linked to the CPSA and its successor, the South African Communist Party (SACP).

The BCP may be seen as the direct successor of the BPA and the LLB (Nyeko 2001: 154). In subsequent years it was characterized by the militant Africanist tendencies associated with its leader Ntsu Mokhehle, who began his political activism in South Africa as a member of the African National Congress (ANC) Youth League, meeting South African contemporaries including Nelson Mandela, Robert Sobukwe, and Anton Lembede. The BCP was closely associated with the Pan-Africanist Congress of Azania (PAC), an exclusivist African group that broke from the ANC in 1959, citing undue white, Indian, and Communist influence. Potlako Leballo, a key PAC leader, was a founder of the BCP.

The BNP was founded mainly as a result of disillusionment among conservative Roman Catholic Basotho with BCP's militancy and Pan-Africanist perspective. Although no organization gained the status of a mass political organization, all attempted with varying degrees of success to articulate the interests of both the urban and rural poor of Lesotho. To that extent, they successfully channeled Basotho anti-colonial sentiment.

Independence and After

The BNC requested the right to legislate its own affairs, leading to a new constitution in 1959 providing the first elected legislature in 1965, followed by general elections on the basis of universal suffrage. The BNP won 31 and the BCP 25 of the 65 seats. Following Lesotho's formal political independence in September 1966 as a constitutional monarchy, the country continued the

tradition of political protest over social and economic demands.

When results from the first post-independence elections in 1970 indicated BNP's defeat, Chief Leabua Jonathan, the kingdom's first prime minister, nullified the elections and overturned the constitution. The BCP embarked on a series of pro-democracy and anti-dictatorship campaigns. In 1974, the BCP launched an unsuccessful uprising, sending cadres for military training at PAC camps. In 1979, BCP began a guerilla war via the Lesotho Liberation Army. In 1986, partly in response to political instability under the Leabua government, a military junta led by Major General J. M. Lekhanya took executive power, ruling in conjunction with Moshoeshe II (Pule 2001).

The junta faced vigorous resistance, and popular demands for restoration of democratic rule in Lesotho continued. In 1990, Moshoeshe, stripped by the junta of his powers, left into exile. Leabua purged his government and announced plans to restore multiparty democracy, but in 1991 he was ousted in an army mutiny. In 1993, a new constitution was established, severely circumscribing the king's powers, and the BCP won every seat in the elections that year.

While military rule was ended, political stability was not restored, as the army, police, and prison services mutinied. In 1994, King Letsie III dissolved parliament, an unpopular action which led to a palace coup and mass protest forcing the reinstatement of the BCP government within a month. In the following years, mass strikes occurred, and the police mutinied in 1997.

In 1997, the Lesotho Congress for Democracy (LCD) broke away from BCP and formed a new government. The LCD swept the polls in 1998, but allegations of severe irregularities led to major protests. The Southern African Development Community (SADC) investigated, found no evidence of foul play, but opposition protests continued, escalating into unprecedented insurrections in August 1998, followed by an army mutiny in September.

In September 1998, South Africa intervened in Lesotho, at the invitation of the LCD government, provoking Basotho commoners into violent and widespread resistance against the invading forces and the incumbent Basotho authorities. The intervention and uprising led to large-scale destruction of the capital, Maseru,

urban centers such as Mafeteng, and smaller towns. An interim political authority revised the constitution, adding measures for proportional representation and expanding representation of opposition parties in the 2002 elections, although the LCD remained the ruling party.

In addition to political protest, however, Sotho popular resistance in the modern era was often concerned with socioeconomic grievances, as witnessed by a series of events during and since the 1990s. Over the years, Chinese presence in Lesotho has grown substantially as more investors have arrived from mainland China and Taiwan to establish textile factories, becoming Lesotho's biggest employers. Foreign-controlled factories led to the rise of strong anti-Chinese resentment, particularly as Chinese expanded into retail, even in the remotest parts of the country. In 1991, tensions against Chinese traders in Maseru and other major towns led to serious popular unrest. Protest and uprisings against Chinese businesses broke out in Maseru in November 2007, a culmination of a long-held opposition to foreign domination of the country's businesses, coinciding with China's growing economic influence in Africa.

Basotho's resentment of foreign domination was also evident in the displacement of communities in the farming area in the construction of the Mohale Dam in the late 1980s and early 1990s through the Lesotho Highlands Water Project (LHWP). As with similar projects in Southern Africa, LHWP is orientated toward serving South Africa. The popular understanding had been that displaced communities would be compensated fairly. Thousands of protesters demonstrated at Mohale, Katse, and Muela Dams in November 2001 against the LHWP's failure to compensate them adequately or fulfill promises of "development" in the region. Peasants complained that they were completely ignored and benefits were not shared between South Africa, Lesotho, the company responsible for the construction, and ordinary Basotho residents. The Basotho had resorted to their well-established and long-cherished tradition of openly expressing grievances and fearless protest when they are treated unfairly.

Li Lisan (1899–1967)

Alexander V. Pantsov

Li Lisan, whose real name was Li Longzhi, was among the most important leaders of the Chinese Communist Party (CCP) in its early years. Li was born in Liling County, Hunan, to the family of an intellectual. After completing his secondary education, in 1919 he sailed from China to France to participate in a work-study program. He was arrested in France in 1920 and deported to China. He joined the Chinese Communist Party in 1921 and in 1922 was a leader of the famous Anyuan miners' strike. In 1923 he was appointed secretary of the Wuhan Regional CCP Committee. The following year he became secretary of the Labor Commission of the Shanghai Regional CCP Committee, and in 1925 he headed the Shanghai Trade Union Council.

In December 1925 Li arrived in Moscow for the first time to attend the Fourth Congress of the Profintern (the “Red International of Labor Unions”) and the Sixth Enlarged Executive Committee of the Comintern (ECCI) Plenum. He reported to the plenum on the labor movement in China. In the spring of 1926 he returned to China and served as one of the top leaders of the Chinese labor movement. In 1927 he was promoted to become head of the Party’s Central Committee (CCP CC) Workers Department. In May 1927 he was elected a member of the CCP CC Politburo. After the Communist defeat by Chiang Kai-Shek’s Guomindang (Nationalist Party) forces in 1927, Li was appointed secretary of the Guangdong Provincial CCP Committee.

In June 1928 Li returned to Moscow to attend the Sixth Congress of the CCP. The following month he was elected an alternate member of the CCP CC Politburo, and became head of the CC Propaganda Department. He went back to China that summer, and through September 1930 was the *de facto* leader of the CCP CC. After the Communist armies suffered serious defeats in June–September 1930 due to their following the Comintern’s tactical course, the ECCI made Li Lisan a scapegoat by blaming him for creating the ultra-leftist “Li Lisan line,” which had called for a countrywide uprising. However, in September 1930 ECCI envoys Qu Qiubai and Zhou Enlai put together a compromise at the CCP CC Third Plenum: Li was criticized, but at the same time promoted to full membership on the Politburo. Due to the ECCI’s lack of confidence in him, however, Li was summoned to Moscow. Shortly thereafter, in the reorganization of the CCP leadership carried out by the new ECCI proconsul Pavel Mif, Li was ejected from the CCP CC Politburo.

Upon his arrival in Moscow Li participated in the discussion organized by the ECCI Presidium on the Li Lisan line, admitted his “mistakes,” and was sent to work at various industrial plants in the Soviet Union. In March–April 1931 he attended the ECCI Eleventh Plenum as a “guest.” On August 5, 1931 he entered the Russian sector of the International Lenin School (MLSh), where he would study until December 1, 1932. In 1932 he became a member of the CCP delegation to the ECCI and representative of the All-China Federation of Labor General Council to the Profintern. While in Moscow he married

a Russian woman, Elizaveta Pavlovna Kishkina. In August–September 1932 he attended the Twelfth Plenum of the ECCI. In 1934–5 he worked as a liaison between the ECCI and the CCP CC in Alma-Ata, Kazakhstan. In July–August 1935 he attended the Seventh World Congress of the Comintern with full voting rights. In the fall of 1935 he became head of the Chinese Department of the Publishing House of Foreign Workers in the USSR, run by the Comintern. Shortly afterwards he was appointed editor-in-chief of the Comintern Chinese newspaper *Jiuguo shibao* (National Salvation).

However, by 1937 Li had once again fallen into deep disfavor. In February 1938 he was expelled from the CCP, accused of being a Japanese spy, and arrested by Stalin's secret police, the NKVD. On November 4, 1939 he was released and restored to his position in the Chinese Department of the former Comintern Worker's Publishing house (meanwhile renamed the Foreign Language Publishing house). In April 1945, on Mao Zedong's proposal, Li was reelected *in absentia* to membership on the CCP CC. He returned to China early in 1946 and served as a member of the CCP CC Northeast Bureau and concurrent head of the CC Urban Work Department during the civil war of 1946–9. After the Communist victory in 1949 he served in succession as deputy chairman of the General Council of the All-China Federation of Labor, minister of labor, and secretary of the CCP CC North China Bureau. At the Eighth Party Congress in September 1956 he was reelected to membership on the CCP CC.

During the Cultural Revolution Li was severely criticized (as a "Soviet agent") and beaten by *zaofans* (members of an ultra-radical Red Guard faction). Spiritually broken, he apparently committed suicide in Beijing on June 22 1967 by taking a large dose of sleeping pills. The actual circumstances surrounding his death, however, are obscure.

Liberia, protest and revolution in the modern era

Michael O. N. Kunnuji

The uprisings that rocked the Republic of Liberia beginning in the last quarter of the twentieth century constitute a resounding case in point in studies of protest and revolution. Although it is easy to call attention to the proximate contributory factors in explaining the origin of what some have described as a complex political emergency in Liberia, the uprisings have their roots in the very foundation of the republic. The composition of the population of modern-day Liberia is not unconnected with the transatlantic slave trade and its abolition, which resulted in the settlement of freed repatriated African slaves from the Americas – Americo-Liberians – beginning on January 7, 1822. However, there are about 16 major indigenous ethnic groups in the area known as the Republic of Liberia.

The Americo-Liberians, having had a hazy idea of sovereign statehood in America, declared a republic with a constitution fashioned after that of the US in 1847. Yet full citizenship rights were not accorded the indigenous population. Indigenous people had no voting rights and the state apparatus was little more than a tool for plundering and legitimizing control over state resources. The Americo-Liberians were the lords, while the indigenous people were the slaves, in reality if not in name. The life of conspicuous consumption lived by the Americo-Liberians attests to this. The founding of the True Whig Party of Americo-Liberian elites in 1870 and its ascension to power led to the repression of all forms of dissent with the apparatus of state machinery of force.

The repressive rule of the Americo-Liberians continued unabated for a century and a decade as the indigenous people grew increasingly dissatisfied. Their dissatisfaction was in need of an outlet, and it found one in the first major uprising in the republic – the military coup of 1980, which resulted in the end of Americo-Liberian domination of the indigenous people. On the death of William V. S. Tubman, an Americo-Liberian who had served as president from 1944 to 1971, William Tolbert, his deputy,

took over. Riots broke out in April 1979, compelling Tolbert, a rather liberal leader, to apply force to maintain order. Opposition leaders were arrested and were to be tried. Tolbert's administrative schedules were, however, truncated by the military coup of 1980, and Tolbert himself was killed afterwards.

Master Sergeant Samuel Doe, the new military head, knew very little about governance and the functioning of state. As military head of state, Doe ruled from 1980 with the support of his Krahn kinsmen. They suppressed a 1985 attempted coup by Quinwonkpa, of Gio origin, and Doe extended the franchise to the indigenous people, winning the presidential election through fraud that year. There was, therefore, a good recipe for cataclysm: a state whose withering apparatuses were being replaced by kinsmen; a state without a functioning social contract; a people without a tradition of democracy and accountability; factionalism among the indigenous peoples; and a brutal ruler.

Violent protests were brewing. In an event that marked the beginning of war on December 24, 1989, a small rebel army of exiles led by Charles Taylor (an ex-minister of Doe) sneaked into Liberia from Côte d'Ivoire. By June 1990, the group – the National Patriotic Front of Liberia (NPFL) – had risen to over 5,000 men from about 100 some six months earlier; nine months later, it had risen to about 10,000 men. NPFL was advancing steadily, capturing territories. All Doe could do was attack Gios and Manos, who were seen as the enemies. Taylor's NPFL retaliated by attacking Krahns and Madingos. Both sides brutally killed unarmed citizens as the violence escalated.

The Economic Community of West African States (ECOWAS) sent in a Ceasefire Monitoring Group (ECOMOG) to separate the warring factions and stop the bloodshed. Boas (2001: 710) has shown that the decision was not entirely altruistic. He says that, as Doe's failure to hold on to power was imminent, "Ibrahim Babangida was alarmed by the spectre of a civilian uprising overthrowing a military government." To make matters worse, other factions were emerging and Taylor's NPFL split, with the faction led by Yeduo Johnson advancing ahead of Taylor into the capital, Monrovia, to occupy part of it. Samuel Doe, perceiving that the end had come, chose to meet ECOMOG representatives to facilitate negotiations among the warring

parties but was encountered by Johnson's soldiers, who captured, tortured, and killed him. Then began the tussle between Johnson and Taylor. Taylor carved for himself a territory called "Greater Liberia," with its capital in Gbarnga, while other warlords also captured counties and plundered them. Brutality spread throughout the rural parts of the state, but ECOMOG worked hard to keep the warring factions out of the state capital, Monrovia. Eventually, however, ECOMOG became just one of the warring factions.

Access to state resources through looting contributed to the lengthening of the war by making it possible for the factions to purchase weapons and ammunitions, and by giving the warlords a taste of the great wealth they stood to control if they won the war. In explicit terms, Ross (2004) has shown how resources could lengthen a war. Liberia's timber, diamonds, iron ore, palm oil, cocoa, coffee, marijuana, rubber, and gold played this role perfectly.

While this unpleasant scenario played itself out, an Interim Government of National Unity headed by Amos Sawyer was installed by ECOMOG on April 20, 1991, yet the state could not recover from its collapse. The interim government was weak and ineffective. United Nations agencies, the European Union, and non-government organizations took over the provision of services. The stalemate prolonged the war and triggered a war in Sierra Leone and other nearby states. The Liberian war, therefore, fueled and was fueled by uprisings in Sierra Leone, Guinea, and Côte d'Ivoire.

The revolution spread in other ways as well. As warlords became *lords* with access to state resources, they would relinquish that status only for higher status, which they were not guaranteed in the new order. Therefore, nominally independent surrogate factions were formed, which were at liberty to continue to plunder because they never signed the peace pacts. Other factors helped keep the war going as well, such as the readiness of the warring parties to continue fighting and the absence of capable and committed third-party arbitrators.

A number of attempts were made to stop the fighting. In 1994, the first Liberian National Transitional Government was installed with warlords as members. This was to be replaced by the Second Transitional Government in August 1996. The disarmament plan was far from being successful, partly because, as Sesay (1996: 406)

puts it, for many the gun had become their “credit card.” With the war in Liberia becoming a regional embarrassment, General Sanni Abacha, the Nigerian military ruler whose human rights abuses had attracted sanctions from western powers, saw an opportunity to launder his image by bringing the war in Liberia to an end. Abacha reinforced ECOMOG and elections were held in 1997. Relative calm prevailed from 1997 to 2000, yet human rights abuses continued. The secret elimination of Samuel Dokie, an opposition leader, and his family attests to this. The Abuja agreement by which ECOMOG would monitor the restructuring of the armed forces was reneged on by Taylor, whose NPFL literally metamorphosed into the National Police Force and other state apparatuses of force. Once again, the opportunity to establish a modern political culture was squandered, and Taylor joined the list of political actors validating the hypothesis that today’s obsessive freedom fighter is tomorrow’s tyrant.

Taylor’s excesses were challenged first by Liberians United for Reconstruction and Democracy (LURD), and then by the Movement for Democracy in Liberia (MODEL). By May 2003, only about a third of the country was under Taylor’s control. After several pleas, Taylor agreed to step down, and on June 17, 2003, a ceasefire agreement was signed. Nigeria, having recorded great losses in terms of lives (at least 1,000 men) and resources, reluctantly redeployed peacekeepers under the aegis of the ECOWAS Military Operation in Liberia (ECOMIL). In August 2003, Taylor accepted exile in Nigeria, and a new Interim Government headed by Gyude Bryant was inaugurated on October 14, 2003. The elections that followed saw the victory of Ellen Johnson-Sirleaf, who is faced with the challenge of reconstructing the Liberian state and uprooting the “seeds of hatred [which] were planted into the Liberian society from the outset” (Boas 2001: 702).

Liebkecht, Karl (1871–1919)

Michael F. Gretz

Karl Liebkecht was a German revolutionary leader, Marxist theoretician, and a main protagonist of the failed Spartacist uprising that followed Germany’s defeat in World War I. Remembered as one of the founders of German communism, he was a main figure of the post-World War I European revolutionary movement, using his oratorical skills and ability to motivate the masses to a level unsurpassed by any other communist leader outside of Russia at the time.

Liebkecht was born on August 13, 1871 in Leipzig. His father, Wilhelm, was a prominent figure in the German socialist movement and a close colleague of Marx and Engels. Wilhelm played a key role in the rise of the German Social Democratic Party (SPD) during the latter half of the nineteenth century, which saw it grow to become one of Germany’s largest political parties, and in 1890 became editor of the SPD’s party newspaper, *Vörrwarts* (Forward). During this same year, Liebkecht completed his law studies and became more involved in the political work of the SPD. In 1903, he directed the legal defense of *Vörrwarts*, and later served as the chief defense attorney for the SPD in several anti-socialist trials. During this time, Liebkecht developed his skills as a public orator, often addressing audiences of thousands about the issues at stake in the trials.

In 1906, Liebknecht gave one of his most famous speeches, later published as *Militarismus und Antimilitarismus (Militarism and Anti-Militarism)*. In his speech, Liebknecht used Marxist theory to present a scathing criticism of the development of militarism, connecting it to colonial expansion and the ruling class's need to confront the growing working-class political movement. As a result of this speech, Liebknecht was charged with treason and sentenced to two years' imprisonment, and the pamphlet was banned. During his incarceration, he wrote *Studies in the Dynamic Laws of Social Development*.

Once released from prison, Liebknecht quickly returned to political activity and legal work in defense of fellow socialists. In 1912, he was elected to the Reichstag as a deputy for the SPD. When World War I broke out in 1914, despite deep reservations about supporting what he considered to be an imperialist war, he accepted party discipline, and along with all other SPD deputies voted to support the German government's war effort. However, by the end of the year, he was the only SPD deputy to vote against giving the government further war credits.

Liebknecht avoided expulsion from the SPD for his defiance of party discipline, but as the war progressed he became increasingly critical of his fellow socialists' support of the war. In 1916, Liebknecht, along with Rosa Luxemburg and other left-wing socialists, formed a new organization called Spartakusbund that openly called for the overthrow of the German Kaiser's government and an end to the war. In that same year, Liebknecht, along with Luxemburg and other Spartacists, was imprisoned once again. As the Spartakusbund moved closer to communist positions, the gap between them and the SPD grew wider. In 1918, with the war going badly for Germany, social unrest spread across the country as workers, soldiers, and sailors began to strike, many forming their own local councils that, as in Russia, challenged the authority of the central government.

In October 1918, Germany was forced to seek an armistice with the Allied Powers, and Kaiser Wilhelm II abdicated. Liebknecht and Luxemburg were released from prison in the political amnesty that followed and immediately returned to their political activities with the Spartakusbund, which officially became the Communist Party of Germany (KPD) in December 1918. In that same month, with Germany in

the midst of a massive social movement growing more and more radical each day, Chancellor Max von Baden resigned and turned power over to the SPD. Faced with the growing radicalism of the working class, and the threat that the communists would try to establish a Soviet republic in Germany, the SPD government made a secret agreement with the army's General Staff to suppress the Berlin workers' and soldiers' councils. During the repression that followed, Liebknecht and Luxemburg were arrested on January 15, 1919. While the precise details remain unclear, as they were being transported to prison, both were assassinated by troops ostensibly under the command of the SPD.

Ligas Camponesas

Henrique Tahan Novaes

The Peasant Leagues (Ligas Camponesas) that appeared in 1955 are organizations that have come to symbolize the struggle for land reform in Brazil. Before the coup of 1964, Pernambuco, a state in Brazil's northeast, witnessed a process of modernization in the countryside that expelled small property owners and tenants from their subsistence cultures, seizing the land they once used and employing it in the single-crop cultivation of sugar cane, a product which has been cultivated in Brazil for more than four centuries.

In 1955 the Farming and Stock-Raising Society of Planters of Pernambuco (SAPP) emerged, later taking the name of the Peasant League of Galiléia. The SAPP was a fundraising civil society

of mutual assistance, which had as its initial goals the founding of a primary school and the purchase of small wooden coffins for the children of the region, who were dying in frightening numbers. It also wanted to acquire seeds, insecticides, agricultural tools, and governmental and technical assistance, and to create a cooperative involving 140 families and approximately 1,000 people. The sugar mill owner himself was summoned as the honorary president, but feared that such a role would brand him a “communist,” so he ordered the extinction of the SAPP. The peasants resisted, and the owner threatened them with eviction. José Francisco de Souza and Zezé dos Prazeres, an ex-militant of the PCB (Brazilian Communist Party) and one of the founders of the league, were subjected to threatening calls from the police department, the prosecuting attorney, the mayor, and the judge.

The peasants knew that Francisco Julião, as deputy at the Legislative Assembly of Pernambuco, had been defending rural workers and they looked to him to help raise the flag of radical land reform. They formed a movement that had national dimensions and international repercussions. In 1963 there were hundreds of leagues throughout the country, with more than 500,000 members in 16 Brazilian states, the main ones appearing in Pernambuco and Paraíba. The council of the State of Pernambuco alone coordinated 27 leagues with 120,000 affiliates.

With the appearance of the Peasant Leagues, the conservative wing of the Catholic Church and the labor ministry soon positioned themselves in the debate, helping to create conservative syndicates to fight them. In 1964, Brazil faced a military coup which brought back the old order, leading to the persecution of the Peasant Leagues.

Lilburne, John (1615–1657)

Soma Marik

John Lilburne, a Protestant dissenter and leader of the Levelers, was born in Sunderland to a noble family. After studying the Bible, Foxe’s *Book of Martyrs*, and the writings of the Puritan divines, he met the Puritan physician John Bastwick, who, with William Prynne and Henry Burton, was persecuted by Archbishop Laud of Canterbury in a famous case in 1637 for their anti-Episcopal positions. Involved in the printing and distribution of unlicensed Puritan books and pamphlets, Lilburne was arrested in December 1637 and brought before the Court of Star Chamber where he was sentenced to a £500 fine, whipping through the streets from prison to the pillory, punishment in the pillory, and imprisonment until he conformed. Instead of breaking down, he spoke out and distributed pamphlets concealed in his clothes, even as he was bleeding from the whipping. This courageous gesture won him the epithet “Free-Born John,” as well as further imprisonment.

Lilburne was finally released in November 1640, after a forceful intervention by Oliver Cromwell. On May 4, 1641 the House of Commons described his imprisonment as illegal, cruel, and tyrannical, and promised him compensation. In this period he married Elizabeth Dewell, who would be his staunch ally until his death.

Championing the Parliamentary Cause and Civil Liberties

During the English Civil War Lilburne joined the infantry as captain and fought at the battles of Edgehill and Brentford (November 12, 1642). At Brentford he evacuated the Parliamentary artillery but was captured. As the first ranking Parliamentary army officer captured, the Royalists planned to try him for high treason, but his wife petitioned Parliament, and the House of Commons adopted a resolution threatening to kill Royalist prisoners in retaliation. Eventually freed through an exchange of prisoners in May 1643, Lilburne became a lieutenant-colonel in the Earl of Manchester’s army with Cromwell’s support. He fought at the crucial battle of Marston Moor (July 2, 1644), when the North of England fell to

Parliament. Shortly after this he secured the surrender of the Royalist Tickhill Castle without a single death on his side. But when Parliament agreed to the Solemn League and Covenant, seeking to impose a uniform church, Lilburne resigned his commission.

Lilburne's commitment to the rights of the individual, particularly freedom of conscience, as well as to the rights of the socially weaker sections, brought him into confrontation with the conservative Presbyterian majority in Parliament. In *A Copie of a Letter to Mr. William Prynne* (January, 1645) Lilburne condemned persecution of people for differences in matters of conscience. Prynne and his supporters responded by a serious attack, resulting in his arrest and confinement in Newgate prison where he wrote *England's Birth-right Justified Against All Usurpations Whether Regal or Parliamentary*. In this work he used political texts and relied upon the concept of the Norman Yoke, or the idea that there had been an age-old freedom of the Anglo-Saxons, embodied in the sovereignty of the popular assembly, which had been destroyed by the Norman conquerors.

Released in November 1645, Lilburne was again sent to Newgate prison in June 1646 for denying the right of the House of Lords to judge and sentence commoners in criminal cases. His *The Freemans Freedom Vindicated* (June 1646) argued that the source of all authority is the voluntary agreement of sovereign individuals by terms set forth in the social contract, and that consequently popular power was inalienable. The House of Lords ordered the public burning of the pamphlet, and imposed a fine of £2,000 and imprisonment on Lilburne.

The Leveler Movement

Lilburne soon developed a following. William Walwyn defended him in *A Pearle in a Dounghill*, and Richard Overton wrote *A Remonstrance of many Thousand Citizens of England to their owne House of Commons* to articulate the constitutional principles of a democratic republican form of government. Overton and his family soon joined Lilburne in jail, followed in early 1647 by Elizabeth Lilburne. The spring of 1647 found a full-fledged democratic agitation, given the title "Leveler" by its opponents, though Lilburne always rejected the term as he was not in favor of economic egalitarianism.

Leveler proposals, which he had a big hand in formulating, included freedom of religion and press, no judgment touching life or liberty without trial by jury, no military conscription of conscientious objectors, abolition of capital punishment except for murder, and abolition of imprisonment for debt. His core demand for a new form of government, answerable to the people, became a focal point in the formation of the movement, which was the result of an alliance between the civilian democrats and democratic forces within the New Model Army, created by often lower-class volunteers. Reform of the franchise also became a key issue to these forces.

After a failed semi-insurrection at Corkbush Field, the civilian Levelers built up their party organization and launched a regular paper, *The Moderate*. Despite being repeatedly imprisoned, Lilburne conducted much of the agitation. He drafted most of a petition planned for January 1648, demanded reform of law and judiciary, a social fund to look to the needs of the poor, a progressive property tax, and the introduction of universal suffrage and a more equitable distribution of electoral constituencies. Parliament condemned him to strict isolation in the Tower, but he declared Parliament's warrant illegal and appeared before the House of Commons to urge soldiers to preserve, rather than destroy, liberties.

Released during the Second Civil War which began after Charles I fled captivity (November 11, 1647), Lilburne argued that unless a constitution was granted first, the trial of the king might lead to a tyranny by the senior army officers, or "Grandeeds." When Lilburne and his friends accepted a compromise, agreeing to drop the demand for manhood suffrage for an expanded but still limited suffrage, they found Cromwell's allies passing on the agreed text to the Officers' Council for amendment. Lilburne, offered a place on the court to try Charles, refused and labeled the trial unrestricted tyranny by the Grandeeds. His pamphlet *Englands New Chains Discovered* (February 26, 1649) described the rule of the Rump Parliament and the army officers as the vilest and basest bondage ever in England. This was followed by several protest pamphlets, particularly *The Second Part of Englands New Chains Discovered*, authored by Lilburne, Overton, and Prince. As a result, they, along with Walwyn, were arrested. All four challenged the legality of their arrests and of

the authority of the recently created Council of State. They were refused bail and sent to the Tower to await trial. While there they worked on a new draft of the *Agreement of the People*, omitting some of the concessions made earlier for the sake of a compromise with the Grandees. Meanwhile, three military Leveller mutinies, in London, Burford, and Banbury, were defeated in April and May 1649. With this ended the Leveller challenge.

Lilburne and the Protectorate

Lilburne's trial began on October 25, 1649. With his life at stake he spent two days browbeating his judges and eventually secured from the jury a verdict of Not Guilty. Bonfires were lit all over London in jubilation. But the Leveller party was finished.

Finally compensated for his imprisonment and injuries during the monarchy, he used the money to buy a house and begin practice as a legal consultant. This involved him in a serious case against Sir Arthur Haselrig, an MP who was using questionable means to amass money. Since many Parliamentarians used similar means, Parliament unsurprisingly claimed Lilburne was wrong and fined him £7,000, sentenced him to perpetual banishment, and threatened him with death if he did not leave England within 30 days. Despite attempts to detain him in England to ensure his execution, he managed to get on board a ship to Holland, but English Royalists in Amsterdam detested him, and he felt threatened. In 1653, after Cromwell dissolved the Rump Parliament, Lilburne returned to England, arguing that the dissolution of the Rump Parliament nullified its order concerning him. He was arrested and put on trial, but masses packed the courtroom. After another brilliant display of legal and political acumen, he secured a Not Guilty verdict from the jury on August 20, but was kept in prison. He converted to the Quaker faith, and after being temporarily released to rejoin his family, he died on August 29, 1657, at the age of 42.

Lin Biao (1907–1971)

Paul Le Blanc

Lin Biao or Lin Piao was, along with Zhu De and Peng Dehuai, one of the foremost military leaders in the Chinese communist movement in the 1930s and 1940s. A prominent figure in the People's Republic of China after the revolutionary victory, and leader of the People's Liberation Army throughout the 1960s, he was for a time closely aligned with Mao Zedong and was a central figure in launching the Great Proletariat Cultural Revolution (1966–76). He seems to have broken with Mao in 1971, however, and died under mysterious circumstances in that year.

He was born with the name Lin Yurong and was the son of a factory owner. His father is said to have been ruined due to "extortionate taxation," but Lin was able to graduate from prep school and enter Whampoa Military Academy. There he trained under Nationalist Party (Guomindang) leader Chiang Kai-shek, graduating with distinction into a post in the Nationalist Army. Serving as a captain in the Great Northern Expedition that broke the power of China's war lords, he had risen to the rank of colonel by 1927. When the Nationalists turned against their Chinese communist allies, however, Lin joined the latter.

Lin made central contributions in the rise and the victories of the Chinese Red Army forces in the 1930s, commanding the First Field Army and – particularly with Peng Dehuai – playing a decisive role in military operations during the Long March of 1935, the desperate and costly retreat from the Nationalist military onslaught that brought Chinese communist forces to a much-needed North China sanctuary in Yanan (Yan'an). There he headed the influential Red Academy. He played a key role both in the fighting against Nationalist forces and the military invasion of Imperial Japan.

During World War II, Chinese communists and Nationalists were uneasy allies in the conflict against Japan, but soon after the war's end, conflict

between the two again erupted. Lin's role was especially important – he commanded the forces that conquered Manchuria and swept through Northern China. An initial defeat at the hands of Chiang Kai-shek's forces caused him to abandon the cities and shift to greater reliance on guerilla warfare through which, in winning peasant support in the countryside, he was able to entrap the core of Chiang's forces. This set the stage for the final battles of China's civil war, in which the Nationalists were driven from China's mainland, with the establishment of the People's Republic of China in 1949.

In the period of the 1950s, Lin's position in the military and party establishment was less central than it would become in 1959, when defense minister and People's Liberation Army chief Peng Dehuai sharply challenged the authority and policies of Mao Zedong. Lin stepped forward as Mao's most loyal ally, replacing Peng as the top military figure in the People's Republic of China. In the 1960s Lin oversaw the intensification of Maoist indoctrination of People's Liberation Army forces – developing what became the internationally famous “little red book” of *Quotations from Chairman Mao*, containing short excerpts from Mao's writings that many millions were to study and even memorize. He helped to initiate the Great Proletarian Cultural Revolution, designed to mobilize popular sentiment and action that would overwhelm and destroy opponents of Mao's policies in the Chinese Communist Party and to “put politics in command” in the form of Mao Zedong Thought.

In Lin's 1965 speech entitled “Long Live the Victory of the People's War!” he projected a global conflict, led by the People's Republic of China, in which the “rural” continents of Asia, Africa, and Latin America would surround and overwhelm the imperialist “cities” of the United States and Europe – just as his own forces had done when defeating Chiang Kai-shek's Nationalists in the late 1940s. Because the aging Mao had, in the midst of the Cultural Revolution, declared that Lin would be his successor, this perspective had special weight among revolutionaries throughout the world.

In 1971, however, Lin suddenly disappeared from view. In the following year it was announced that he and a clique of others were traitors who had planned a military coup to overthrow Mao, that when their plot was discovered they sought to flee in a plane to the Soviet Union, and that

their plane had crashed. The apparent issue that divided the two involved the decision by Mao to establish friendly relations with the United States (according to the old global vision of Mao and Lin, the fount of global imperialism) while deepening the hostility of a foreign policy that had already become quite antagonistic to the so-called “social-imperialist” Soviet Union. The specifics of the political break and Lin's death remain unclear.

Lincoln, Abraham (1809–1865) and African Americans

Orville Vernon Burton and Beatrice Burton

In 1863, after his first meeting with Abraham Lincoln, the African American activist Frederick Douglass described the president as “the first great man that I talked with in the United States freely, who in no single instance reminded me of the difference between himself and myself, of the difference of color.” Years later, at the 1876 dedication of an emancipation monument in Washington, DC, Douglass spoke of Lincoln as “a white man” who “shared the prejudices common to his countrymen toward the colored race.” He continued, “[White men] are the children of Abraham Lincoln. We are at best only his stepchildren; children by adoption, children by forces of circumstances and necessity.” Still, even in this speech, which is often cited by

This souvenir print (artist unknown) of Abraham Lincoln's Emancipation Proclamation was issued to commemorate his January 1, 1863 Act that freed the slaves in the rebellious states. Though the Proclamation left slavery intact in states loyal to the union, it marked a milestone in both the struggle for black freedom and the American Civil War by spreading hope throughout the African American community and opening the way for the enlistment of black troops. (Private Collection, Peter Newark American Pictures/The Bridgeman Art Library)

those who tar Lincoln with racism, Douglass was using a nineteenth-century rhetorical device. The second half of the speech praised Lincoln as the liberator of enslaved people. Later, in 1883, Douglass again referred to Lincoln as “the greatest statesman that ever presided over the destinies of this Republic.” He was “the one man of all the millions of our countrymen to whom we are more indebted . . . than to any other.” Douglass’s conflicting descriptions of Lincoln provide a succinct summation of African Americans’ changing relationship with Lincoln, but Lincoln’s views of African Americans also evolved and changed over the course of his political career.

When Lincoln entered politics he soon became a local stalwart, promoting Whig principles and contesting state offices. In 1836, announcing his candidacy for reelection to the Illinois General

Assembly, Lincoln explained to the *Sangamo Journal* that his belief in “sharing the privileges of the government” focused his political conduct. With social responsibilities went political rights, he declared, a sentiment derived as surely from the common sense of frontier life as from the philosophy of classical Athens. “Consequently I go for admitting all whites to the right of suffrage, who pay taxes or bear arms (by no means excluding females).” Lincoln’s views here suggest the limits racial prejudice imposed. His restricting the extension of voting rights to whites alone reflected the cultural prejudices of his day. Yet his belief in freedom led him eventually to deny the equation of voting rights with property holding. Just as the Whig desired to rise to a station of independence and honor by his won labors, Lincoln would not – indeed, with any honesty, could not – withhold that opportunity from others. Whether races were socially equal was not the issue for Lincoln; what he came to insist upon was a new understanding of liberty: equal opportunity in the race of life. Lincoln’s belief in equal opportunity would continue to evolve until he was ready to assert the then-astonishing claim that race was politically inconsequential, that African Americans were citizens and entitled to the suffrage and equal protection under law.

Although he adhered to the racist prejudices of the time, Lincoln’s anti-slavery commitment became evident early in his political life. Elected to the Illinois legislature in 1836, the freshman representative from Sangamon County demonstrated courage on the anti-slavery issue. Against the majority vote of 77, he was one of only six who opposed a set of resolutions that disapproved of abolition societies and that declared “the right of property in slaves is sacred to the slaveholding States by the Federal Constitution.” Objecting, Lincoln and Dan Stone, another member of the Sangamon legislative delegation, admitted that “The congress of the United States has no power, under the constitution, to interfere with the institution of slavery in the different States.” And they acknowledged that “the promulgation of abolition doctrines tends rather to increase than to abate its evils.” Nevertheless, they wanted to go on record that “the institution of slavery is founded on both injustice and bad policy.” Although Lincoln was no stranger to racial prejudice, he embraced the Golden Rule of labor’s uplift: “Let those who want slavery be the

slaves.” Put another way, he said, “As I would not be a slave, so I would not be a master.”

Still, anti-slavery never meant pro-abolitionism. Lincoln never joined an abolitionist society, and he apparently had no objection to the Illinois state law that barred free African Americans from settling there and that specified that blacks could neither hold property nor wield the franchise. Indeed, in 1858, when Lincoln debated Stephen Douglas during an election for the US Senate, Lincoln defended himself against Douglas’s charge that he was in favor of racial equality. He drew cheers from the white crowd with his unequivocal stand: “I will say then that I am not nor ever have been in favor of bringing about in any way the social and political equality of the white and black races.” Getting very specific, he said, “I am not nor ever have been in favor of making voters or jurors of negroes, nor of qualifying them to hold office, nor to intermarry with white people.” Lincoln readily admitted that “I, as well as Judge Douglas, am in favor of the race to which I belong having the superior position.”

Much of Lincoln’s growth in his perceptions of African Americans occurred while he was president, and much should be attributed to his relationship with Frederick Douglass, as well as a number of other prominent free African American leaders he met while president. Douglass and Lincoln found they had much in common, one escaping from slavery in Maryland and the other rising from poverty in Kentucky. Lincoln relied on Douglass’s council regarding issues such as the use of African American troops to fight in the Civil War, and at Douglass’s urging, Lincoln worked to secure equal pay for these soldiers. As Lincoln’s relationship with Douglass evolved – he often referred to Douglass as “my friend” – so did his views of African Americans.

Lincoln’s second inaugural was a prayer of confession for the nation. He talked about expiation of the national sin of slavery. If God willed that war continue, he allowed, “until all the wealth piled by the bondsman’s two hundred and fifty years of unrequited toil shall be sunk, and until every drop of blood drawn with the lash shall be paid by another drawn with the sword, as was said three thousand years ago, so still it must be said ‘the judgments of the Lord are true and righteous altogether.’” The Civil War, Lincoln reckoned, was America’s time on the cross, poor atonement for so vast a sin.

Looking toward Reconstruction, Lincoln hoped that the states would “confer the elective franchise upon the colored man.” He announced to others, “I would myself prefer that it were now conferred on the very intelligent, and on those who serve our cause as soldiers.” This was indeed a far cry from Lincoln’s earlier objections to franchising African Americans, showing how his views evolved and expanded through his career as he pondered questions of liberty and freedom and became acquainted with African Americans such as Frederick Douglass. On April 11, 1865 Lincoln spoke from the White House Balcony and John Wilkes Booth understood where Lincoln was leading the country. He informed his companion, “That means nigger citizenship. Now, by God, I’ll put him through. That is the last speech he will ever make.” Booth was not crazy; he interpreted Lincoln correctly. Just as he had prepared the country for emancipation, he was now preparing them for black citizenship. Lincoln continued to learn and grow all his life, especially on race relations.

Liu Shaoqi (1898–1969)

Alexander V. Pantsov

Liu Shaoqi was among the best known of the Chinese revolutionary leaders, perhaps second only to Mao Zedong. At the height of his career, in the 1950s and into the 1960s, Liu was designated

by Mao to be his successor as China's undisputed leader. But during the Cultural Revolution that began in 1966 Liu fell from grace and, as Mao's chief factional opponent, became the target of one of history's greatest campaigns of vilification. Reviled as a morally corrupt counterrevolutionary traitor, Liu was stripped of power, imprisoned, and died in disgrace.

Liu Shaoqi, whose real name was Liu Shaoxuan, was born in Ningxiang County, Hunan Province, on November 24, 1898. He studied at Changsha high school, and took part in the May 4th movement in 1919, a sustained anti-imperialist mass mobilization that aimed at combating Japan's occupation of Chinese territories and the West's collusion with that occupation. It also opposed the reactionary Beijing warlord regime that had failed to resist Japan's encroachments. Initiated in Beijing, the May 4th movement soon spread among hundreds of thousands of young patriots throughout the country.

In 1920 Liu arrived in Shanghai where he enrolled in the Communist School of Foreign Languages that trained Chinese youth to study in Soviet Russia. In 1921 he was a member of the first group of Chinese communist youth who went to Moscow on a seven-month study-abroad course at the Communist University of the Toilers of the East (KUTV). In the summer of 1922 he returned to China and worked in the Secretariat of the All-China Labor Union, and served as one of the leaders of the labor movement in Shanghai and Hunan. In May 1925 he was elected deputy chairman of the Executive Committee of the newly organized All-China Federation of Labor (ACFL). In 1926 he was appointed head of the Executive Committee of the Hubei Provincial Federation of Labor. At the Fifth Congress of the Chinese Communist Party (CCP) in May 1927 he was elected a full member of the party's Central Committee (CCP CC).

After the Communist defeat by Chiang Kai-Shek's Guomindang (Nationalist Party) forces in 1927, he worked in the Shunzhi (now Hebei) Provincial CCP Committee. He was elected *in absentia* to membership on the CCP Central Control Commission in July 1928 at the Sixth Congress of the CCP (held in Moscow). In July 1929 he was appointed secretary of the Manchurian Provincial CCP Committee. He returned to Shanghai in the summer of 1930 and

shortly thereafter was dispatched to Moscow as a leader of a delegation of more than twenty Chinese workers to attend the Fifth Congress of the Profintern (the "Red International of Labor Unions"). At the congress he was in a minority that opposed a draft resolution proposed by the Soviet Communist Party delegation on the "red" opposition within the "yellow" (non-communist) trade union movement. At the congress he was elected to the Profintern Executive Committee. He remained in Moscow after the congress as a leading CCP representative to the Profintern. In January 1931 at the Fourth Plenum of the CCP CC he was coopted *in absentia* to the CCP CC and became an alternate member of the Politburo. In March–April 1931 he attended the Eleventh Plenum of the Executive Committee of the Comintern (ECCI) and participated in the discussion of Dmitrii Manuilsky's report on ECCI activity.

In the fall of 1931 Liu Shaoqi returned to China and assumed the post of head of the Workers and Peasants' Department of the CCP CC, and served as secretary of the CCP faction in the ACFL, and as a member of the Central Soviet government. In the winter of 1932 he was transferred to the Central Soviet region and became chairman of the ACFL Executive Committee and secretary of the Fujian Provincial CCP Committee. In February 1934 he was elected a member of the Second Central Executive Committee (CEC) of the Chinese Soviet republic. He took part in the Long March in 1934–5. In the spring of 1936 he was appointed secretary of the CCP CC Northern Bureau, and in October 1938 became secretary of the CCP CC Central Plains Bureau. In April 1939 Liu was appointed secretary of the CCP CC Labor Movement Department. In January 1941 he became political commissar of the New 4th Army and secretary of the CCP CC Central China Bureau. Two years later, in 1943, he was appointed secretary of the CCP CC Secretariat and deputy chairman of the Revolutionary Military Council. At the Seventh Congress of the CCP in June 1945 he was elected a CCP CC Politburo member. During the civil war in the spring of 1947 he became secretary of the CCP CC Working Committee.

After the Communist takeover in 1949 Liu Shaoqi became deputy chairman of the Central People's Government. In 1954 he was elected chairman of the Standing Committee of the

National People's Congress (NPC). In September 1956 he was elected deputy chairman of the CCP CC and stood first in line as Mao Zedong's putative successor. From 1959 on he was the chairman (president) of the People's Republic of China. During the Cultural Revolution, however, he lost a factional battle with Mao Zedong. As a result, in 1968 Liu Shaoqi was relieved of all his posts, purged from the CCP, publicly reviled, and banished to Henan Province. He died in disgrace in prison in Kaifeng on November 12, 1969, but was posthumously rehabilitated on February 29, 1980.

Locke, John (1632–1704)

Amy Hatmaker

John Locke challenged prevailing perceptions about government, human reasoning, religious toleration, and education. His influence can be seen in the theories of the Enlightenment and in the American Revolution.

Locke was born August 29, 1632 in Wrington, a village in Somerset. His father was a Puritan lawyer who served as a captain on the side of parliament when the English Civil War broke out. The patronage of his father's commander allowed Locke to attend school at Westminster in London. In 1652 he went to Christ Church, Oxford. Locke received his bachelor's degree in February 1656 and decided to pursue further studies in medicine. He was inducted into the Royal Society in 1668.

During his medical studies, Locke made the acquaintance of Lord Ashley (later Lord

Shaftesbury). Locke moved to London to be Ashley's personal physician in 1667, but he also served as his secretary and researcher. While part of Ashley's staff, Locke became Secretary of the Board of Trade and Plantations, and Secretary to the Lord Proprietors of the Carolinas. Shaftesbury left the government in 1674, at which time Locke returned to Oxford to receive his bachelor's degree in medicine. Locke spent some time in France, returning to England when Shaftesbury had a brief return to government. When Shaftesbury was implicated in a plot for armed insurrection, Locke also came under suspicion. He fled England and lived in exile in Holland until the Glorious Revolution, at which point he accompanied Princess Mary to England. He became Commissioner of the Board of Trade and Plantations and took up residence at Oates in Essex, the home of Sir Francis and Lady Masham. Locke retired from the Board of Trade in 1670 and died at Oates in 1704.

Locke published a number of letters during the course of his career, many of which were extremely controversial at the time. Two of his important works, *An Essay Concerning Human Reasoning* and *Epistola de Tolerantia* (*Letter on Tolerance*), were published while he was in exile in Holland. In *An Essay Concerning Human Reasoning*, Locke sought to understand and explain the process of gaining knowledge and the extent of human reasoning. His theories discuss how simple ideas are combined with experience to make complex ideas. In the process of working through his theories, Locke deals with a number of areas – mathematics, science, and belief in God. All of these would be instrumental in the philosophical debates of the Enlightenment. His *Letter on Tolerance* argues for toleration for other religions because he held that a church was a “free and voluntary society” formed for the purpose of worship based on faith, something he felt could never lie within government jurisdiction.

The most influential of Locke's works, *Two Treatises on Civil Government*, were written in 1679 and 1680; however, he did not publish the works until 1690 because they were so radical in nature. Locke disputed the absolute right of monarchy, arguing instead that the right to govern was provided by social contract. Locke believed, like Hobbes, that man lived in a state of nature, and that man's ability to reason made him capable of discerning the laws of nature.

He believed that the laws of nature guarantee man certain rights – life, health, liberty, and possession – which no government had the right to violate. Men formed governments as a social contract in order to protect these rights, creating laws and legislative positions to enforce them. Should those who govern violate the contract, the governed had every right to terminate the contract.

In other words, he sanctioned revolution as a safeguard against tyranny, but also as a means to protect property. Locke's *Treatises* would become the basis for representative governments. Especially in the US, they also encouraged a focus on property ownership as a means test for who could participate in such governments.

London Corresponding Society

Michael T. Davis

The London Corresponding Society (LCS) was a political reform society founded by Thomas Hardy, a shoemaker, in January 1792 and in existence until 1799. The LCS advocated a reformist agenda, although at times its membership overlapped with shadowy revolutionary groups like the United Englishmen.

The intellectual inspiration for the LCS came through Hardy's reading in 1791 of publications from the 1780s issued by the Society for Constitutional Information. Inspired by these political texts, Hardy gained enthusiasm for establishing a political reform organization from the excitement generated in the wake of the French

Revolution and the publication of Thomas Paine's *Rights of Man*.

Built upon these solid foundations, the LCS had a modest beginning. The first meeting at the Bell tavern in Exeter Street, London, was attended by only nine men, but the Society grew rapidly in the subsequent months. Nine divisions had been established by May 1792, each comprising a minimum of 30 members, and while exact membership numbers cannot be accurately determined, contemporary estimates ranged up to 80,000 members at the Society's height. However, such estimates seem unrealistic; perhaps more accurate is a peak membership of around 5,000 recruits, while at its lowest point in mid-1794 the LCS counted some 241 paying members.

Most of the Society's members remain unknown, but some were men of social prominence. The Society attracted liberal-minded men with good educational backgrounds, including physicians and lawyers. Even Basil William Douglas, Lord Daer (1763–94) was an early member of the LCS. However, the LCS was fundamentally conceived as a working-class organization. Although there was a certain reluctance to allow those members of a higher class to dominate the Society, such men brought not only a degree of respectability to the LCS but also a sense of leadership and legitimacy. Nevertheless, the vast majority of members were artisans and skilled laborers. The low weekly membership fee of 1d. reflects this vocational profile of the group, and its political agenda was firmly targeted at the desires of the lower orders of society who did not have the right to vote.

Parliamentary reform, including annual parliaments and an extension of the suffrage for adult males, was the principal aim of the LCS and the principal method for achieving this goal was through education. The numerous booksellers and printers who joined the LCS became a strategic advantage in promoting the Society's moral force campaign. They produced inexpensive political pamphlets that advocated reform and distanced the Society, at least publicly, from revolutionary efforts. Some 80 pamphlets and broadsides were produced by the LCS between 1792 and 1798, as well as two periodicals, *The Politician* and the *Moral and Political Magazine*.

Despite this emphasis on education and moral force, the LCS was feared as a group of illiterate blackguards, who were intent on killing the

king and raising a revolution. It was a caricature of LCS members that was immensely potent in the uncertain atmosphere of the 1790s, and certainly there were some members of the Society who advocated physical force activism. Thomas Spence, who in the early nineteenth century came to lead an ultra-radical sect and was a prominent member of the LCS during the 1790s, was involved in a shadowy society known as the Lambeth Loyal Association. The membership of this association overlapped with the LCS and, while it paraded as a loyalist association, it was drilling its members for what seemed to be revolutionary intentions. Similarly, in the late 1790s, prominent members of the LCS were also engaged in the activities of the United Englishmen, who had active cells throughout London.

While these revolutionary elements existed among the members of the LCS, it is important to distinguish between the agendas of individual members and the official policy of the LCS. Indeed, recent scholarship has emphasized the importance of non-violence in the LCS mantra and demonstrates how notions of civility were critical to the Society's ability to operate in public for an extended period during the 1790s. Nevertheless, loyalists and government officials were alarmed by the LCS. A network of spies and informers was used to infiltrate the Society, and it was their evidence that largely provided the case on which the government conducted the treason trials of 1794. Leading members of the LCS and other reform societies in the metropolis were indicted for high treason in May 1794, but after three unsuccessful attempts to gain a conviction the remaining suspects were released. While no proof of insurrectionary plots could be determined, the LCS was still seen by many contemporaries as a threat to social and political stability after the treason trials.

However, the trials had dampened the enthusiasm of a significant portion of London's reformers. While the Society's membership grew during 1795, the repressive Two Acts of that year caused the Society's leaders to consider the prospects of pursuing a physical force approach. As the strategic plan of the LCS showed signs of changing, disharmony entered the Society. Splinter groups began forming and the LCS began to lose some of its momentum. A further blow to the Society's fortunes came in 1796 when financial troubles began affecting operations. The LCS was no longer as robust as it was in the

early 1790s, and when key players were arrested in April 1798 the Society's fate was all but sealed. The LCS formally ceased to exist on July 12, 1799 when legislation was passed that outlawed the Society and other radical societies by name.

London, Jack (1876–1916)

Jonah Raskin

Emma Goldman, the Russian-born American anarchist, spoke for a generation of readers when she described Jack London as “the only revolutionary writer in America.” Many of London's literary contemporaries, like Upton Sinclair, attacked social ills, but they often fixed on reform. London, by contrast, brazenly called for revolution. A writer with a global consciousness, he denounced war and greed in *The War of the Classes* (1905) and *Revolution* (1910). At the peak of his career, he supported the abortive 1905 Russian Revolution and, in a lecture to college students, he endorsed industrial sabotage in America. More than Goldman, and perhaps more than Eugene Debs, he Americanized socialism by writing in a colloquial style and drawing on his own life, even while mythologizing himself as larger-than-life proletarian.

Born an illegitimate child to an impoverished San Francisco family, he worked in factories as a boy – a searing experience that fueled surrealistic short stories like “The Apostate.” In 1894, he traveled across the country as a hobo, served time in prison for vagrancy, and wrote about it in *The Road*. In 1896, he joined the Socialist Labor Party, and in 1901, he changed his affiliation to the Socialist Party of America, flirted briefly with electoral politics, ran for public office as a socialist, and served as the poster boy for the cause of revolution.

London, however, was an odd, eccentric radical, torn apart by contradictions. The author of tales of adventure and romance, renowned for *The Call of the Wild* (1903) and *White Fang* (1906), he was wealthy, world famous, and a convert to the fledgling Hollywood film industry. He owned a vast estate in northern California and promulgated racist ideas in essays like “The Yellow Peril.” Drawn to Nietzsche and Darwin as much as to Marx – and later to Freud and Jung – he believed in the survival of the fittest and the Superman, inhabited a world of dreams, and embraced the unconscious, even as he defended the Industrial Workers of the World (IWW) and advocated the general strike.

Roundly denounced for its gloomy prediction for the twentieth century when first published, his most trenchant political novel, *The Iron Heel* (1908), depicts a dictatorship that quashes human rights and civil liberties and controls news and information. Only with the coming of fascism in Europe did radicals, including George Orwell and Leon Trotsky, come to admire its prescience, and, in the 1930s, London was dubbed the father of working-class literature in the United States. During the last phase of his life, he farmed organically and became an avid environmentalist. An alcoholic, even while he endorsed Prohibition, he died at the age of 40, leaving a tangled cultural legacy that influenced writers as diverse as Ernest Hemingway, Sinclair Lewis, Jack Kerouac, and Norman Mailer.

Lorenzo Zelaya Popular Revolutionary Forces

Edward T. Brett

Lorenzo Zelaya was the president and driving force of the radical peasant organization, the National Federation of Honduran Peasants (FENACH). He was killed along with six of his comrades by the Honduran military in 1965.

Following World War II, increased global demand and therefore higher prices for Honduran agricultural products spurred wealthy landowners to expand their land holdings. This, along with a sharp growth in the rural population, caused land scarcity for the first time in Honduran history. This shortage was further compounded after the Honduran General Strike of 1954, when US fruit companies began to replace workers on their banana plantations with labor saving technology, thereby reducing their work force by over 50 percent. The unemployed had no recourse but to turn to farming for survival, even though land was unavailable to them.

Encouraged by President Ramón Villeda Morales' proposal and eventual passage in 1962 of an Agrarian Reform Law, Lorenzo Zelaya and other members of the Honduran Communist Party joined forces with evicted farmers to form the National Federation of Honduran Peasants in October 1961. Organizing in the banana-growing region of the north coast, FENACH soon had about 15,000 members. Fearing the growing influence of communism among the peasant class, the Villeda government, with help from the American Institute for Free Labor Development (AIFLD), created a more conservative rival union, the National Association of Honduran Peasants (ANACH), in September 1962.

Following a coup in October 1963, the new military government of Colonel Oswaldo López Arellano initiated a wave of repression that devastated FENACH. The federation's offices

were ransacked and records and property were destroyed. Its members were harassed and some were jailed. Faced with such a situation, Zelaya retreated to the countryside with several other FENACH leaders, where they attempted to form an armed guerrilla movement. On April 29, 1965, 25 soldiers under the command of Lt. Carlos Aguilar surprised Zelaya and six of his associates – Rufino López, Hermelindo Villalobos, Benito Díez, Achilles and José María Izaguirre, and Cartagena Zelaya – while they were having breakfast and killed them. A former member of the revolutionary group, Inestrosa Acquilino, had informed the soldiers of their whereabouts.

With the effective destruction of FENACH, many of its former members joined ANACH, thereby moving the organization further to the left and making it the largest and most important Honduran peasant organization. In 1967 ANACH affiliated with the Confederation of Honduran Workers, which by the 1990s had a membership of about 160,000.

In 1981 a small number of Honduran Maoist communists formed a revolutionary group, which they named the Lorenzo Zelaya Popular Revolutionary Forces (FPRLZ). Using kidnappings, bombings, and other acts of violence, they hoped to attract support among the rural population and eventually spearhead a popular uprising, as the Sandinistas had done in Nicaragua. They were unable to achieve their goals, however, and consequently played a minor role at best in Honduran sociopolitical developments in the 1980s.

Lovett, William (1800–1877)

Paul A. Pickering

William Lovett was born in Penzance, Cornwall. His father, a sailor, drowned before William was born, and his Methodist mother ensured a strict

religious upbringing and a rudimentary education for her son. At age 21 Lovett removed to London to find work as a cabinet maker and soon began attending evening classes at the Mechanics Institute. This experience sparked a lifelong commitment to the promotion of education as a tool for social advancement. Here he also met supporters of radical reform in matters of church and state and became a strident advocate of civil and religious liberty. He was also introduced to the cooperative ideas of Robert Owen and became an active member of the London Co-operative Trading Association. Subsequently, Lovett worked in the Association's store and in 1828 became secretary of the British Association for the Promotion of Co-operative Knowledge.

In 1831 Lovett gained notoriety by refusing to serve in the London Militia. In response to the punitive seizure of his goods, Lovett established the Anti-Militia Association. Under the banner "No Vote, No Musket," he forced the authorities to abandon the idea of selecting the militia by lot. Following his victory, Lovett threw his weight behind the campaign for parliamentary reform which he believed was the key to a better future for working people. He joined the National Union of the Working Classes that was actively involved in the campaign for universal manhood suffrage. He also became a member of the Owenite Grand National Consolidated Trades Union.

In 1836 Lovett joined other prominent London radical artisans to establish the London Working Men's Association. As secretary of this small but influential organization, Lovett drew up the document known as the People's Charter, which codified the radical agenda. As the campaign for reform gained pace, Lovett played an increasingly prominent part and was elected secretary of the National Convention of the Industrious Classes early in 1839. A prominent role in what was intended to be an alternative to the national parliament meant that Lovett was never far from the headlines or from controversy within and beyond the movement. In August 1839 Lovett was arrested for seditious libel following a speech in Birmingham. Found guilty, he was sentenced to 12 months in Warwick Gaol.

In prison, Lovett and a fellow Chartist inmate, John Collins, penned *Chartism, a New Organisation of the People*, a comprehensive outline of a system of national education. Following his release Lovett was feted as a political martyr and

his plan was initially well received. Soon, however, Lovett's promotion of education was condemned as a distraction and left him marginalized in the movement he had helped establish. Undeterred, he founded the National Association for Promoting the Political and Social Improvement of the People, but this merely exacerbated the divisions in the ranks and increased his isolation and effectively ended his public career. Lovett devoted the rest of his life to the development of working-class education and foreign affairs. In 1876 he wrote the autobiographical *Life and Struggles*. He continued to operate a bookshop but died in extreme poverty in August 1877.

Lowell Female Labor Reform Association

Anne F. Mattina

The Lowell Female Labor Reform Association (LFLRA, 1845–7) is counted among the earliest organized efforts by American women to enact social change. In response to oppressive working conditions worsened by the Panic of 1837, many operatives in the country's premier industrial city sought redress through organization and petition, primarily aimed at enacting a state law mandating a ten-hour workday. In December 1844, five operatives met to discuss the situation at Anti-Slavery Hall and the LFLRA emerged. Sarah Bagley, a native of New Hampshire and a veteran operative, served as president. By January 1846, the group claimed 600 members.

The LFLRA affiliated with the New England Workingmen's Association (NEWA) and dedicated itself to advocacy of the ten-hour workday. The members of the LFLRA were active in all efforts of the NEWA, while simultaneously organizing other female associations throughout New England. Under the aegis of the LFLRA, Bagley started the Industrial Reform Lyceum

to provide a public forum separate from the existing corporation-sponsored platforms.

The operatives' primary argument focused on the need for time to hone their physical, spiritual, intellectual, and moral development, which typical workdays of 11–13 hours precluded. An excerpt from the association's constitution demonstrates the influence of perfectionism prevalent among social reform advocates of the era: "Our merciful Father in his infinite wisdom surely has not bestowed all his blessings, both mental and moral, on a few, on whom also he has showered all of pecuniary gifts. No! to us all has he given minds capable of eternal progression and improvement! It now only remains for us to throw off the shackles which are binding us in ignorance and servitude and which prevent us from rising to that scale of being for which God designed us!" The document also reveals a nascent class consciousness, which became more pronounced as the organization developed.

Bagley also served on the NEWA's publications committee and contributed frequently to the "female department" of its newspaper, *The Voice of Industry*. Eventually, the LFLRA purchased *The Voice* outright and used its pages to publicize its views, providing one of the earliest examples of female editorial control in American history. The women published a series of "Factory Tracts," written to provide a more accurate picture of working conditions than that being propagated by mill owners.

LFLRA members were instrumental in a petition drive for a ten-hour law. Gathering thousands of signatures, the women forwarded their demands to the Massachusetts legislature. Bagley, along with several other female and male workers, testified before a Special Committee formed to investigate labor conditions by the Massachusetts House, to little avail. Mill owners wielded significant influence amongst legislators, and the committee was convinced that the workers could "count on the benevolent paternalism of the mill owners for protection" (Foner 1977:164) The Massachusetts House dismissed the women's petitions. Bagley and others then decided to work toward unseating the state representative from Lowell, whom they believed betrayed their cause. They were successful, and he lost his next election campaign.

Fired by a new editor at *The Voice*, Bagley left Lowell in 1846. Much of the spirit of the LFLRA went with her. She moved to Springfield,

Massachusetts, taking a position as the first female telegraph operator in the United States. She returned to Lowell briefly in 1847 and continued individual activism around the issues of health care, prison reform, and women's rights for the remainder of her life.

The LFLRA reformed as the Lowell Female Industrial Reform and Mutual Aid Society in 1847, with the purpose of providing aid and comfort to sick members. It would be several more decades before women mill workers organized again in Lowell. Massachusetts enacted the ten-hour workday in 1874.

Lu Xun (1881–1936)

Michael J. Thompson

The Chinese writer Lu Xun (born Zhou Shuren; Lu Xun was his pen name) is a central figure not only in the history of modern Chinese literature, but also in the political and cultural identity of the revolutionary period in China during the first half of the twentieth century. His literary work is characterized by an insistence on the need for cultural transformation in China, one which provides a rational humanist confrontation with the traditions and customs of what he viewed as China's backward society. He set himself to transform the cultural and spiritual values of Chinese society through the power of literature

and saw that literature had the ability to play a revolutionary role in China through its capacity for questioning commonplace traditions and customs.

Born in Zhejiang province to a highly educated family in 1881, Lu Xun's childhood and adolescence shaped his later work and political importance. He was able to witness the decline of the Qing dynasty and the feudal ways of life that had characterized China for centuries. His early education began in the late 1890s at the Jiangnan Naval Academy and the School of Mines and Railways at the Jiangnan Military Academy. At these institutions, Lu Xun was introduced to western scientific learning and western languages, but it was a more personal event that truly began to shape his education and lead to his later literary and political concerns. During his adolescence, his father died of tuberculosis. Lu Xun was persuaded from this experience to study medicine but also to distrust traditional Chinese medicine, something that he saw as a cause of his father's death. This would lead to a general theme in Lu Xun's writings: the critique of traditional Chinese society required, in his view, a transformation of consciousness. The perceived backwardness of Chinese culture and society had to be changed through a revolution of the sensibilities of people.

In 1902 Lu Xun won a Qing scholarship to study medicine in Japan, and spent two years studying Japanese before entering the Sendai Medical School in 1904. His studies there lasted only until 1906 when he abruptly left Japan. Lu Xun himself says in his preface to his first collection of short stories, *Call to Arms* (1923), that he left after seeing a photograph of an alleged Chinese spy being executed by decapitation by the Japanese. What struck Lu Xun was how the other Chinese in the photograph seemed to have no feeling toward the event: "Physically, they were as strong and healthy as anyone could ask, but their expressions revealed all too clearly that spiritually they were calloused and numb." From this point on, Lu made the decision to attempt to transform the souls of the Chinese. Literature, he felt, was the most potent way to accomplish this.

His first published story appeared in May 1918. "A Madman's Diary" is a splendid example of Lu Xun's ability to use literature to force a critical examination of China's feudal society. In it, the narrator is tortured by the fact that

rituals existed in Chinese culture of eating men's flesh. The narrator becomes mad as he tries to cope with the revelation that he stems from a race of men that eat other men: "How can a man like myself, after four thousand years of man-eating history – even though I knew nothing about it at first – ever hope to face real men?" The story continues and we realize that it is not only the paranoia stemming from the realization of Chinese cannibalism that bothers the author; others around him begin to treat him strangely because, as he writes, "everything requires careful consideration if one is to understand it." The critical faculties of the narrator are placed at odds with the custom-bound people with whom he interacts. This becomes one of the most salient themes in his writing: the confrontation with what he characterizes as an irrational, unenlightened society and cultural norms. Literature becomes, for Lu Xun, a crucial component to any kind of social revolution.

Subsequently, Lu Xun continued to publish stories such as "Medicine" and "The True Story of Ah Q" and prose poems of particular sensitivity and beauty such as "The Beggars" and "Snow." His essays are also telling of his influence on intellectual life during the May 4 period, itself a period of revolutionary activity in China. The push toward modernity in China during this period was strong, and Lu Xun saw his role as advocating a form of literature that would itself inspire critical consciousness and a new cultural sensibility. In 1917, he began to contribute to an influential new journal being published out of Beijing University called *Xin qingnian* (New Youth).

Lu Xun emphasized that literary and cultural production had a responsibility to face the actual existing conditions within society as opposed to an aesthetic escape from that reality. In his essay "Literature and Revolution," he makes this clear: "[T]ranscending the present is a form of escapism. And this is the path they are bound to take, consciously or otherwise, if they lack the courage to look reality in the face yet insist on styling themselves revolutionaries." Even though this was the case, he was equally emphatic that politics precedes art; that literature itself lacks the ability to change reality. In his essay "Some Thoughts on Our New Literature," he argues: "All literature is shaped by its surroundings and, though devotees of art like to claim that literature can sway the course of world affairs,

the truth is that politics comes first, and art changes accordingly."

Despite his radical leanings, Lu Xun's connection with the Chinese Communist Party was complex. He never joined the party but like many intellectuals who had seen the initial 1911 revolution and republic turn corrupt, he increasingly saw that radical political measures needed to be taken for there to be true change in China. In this spirit, he was instrumental in bringing many fellow intellectuals of his time to the party, despite his noncommittal politics. At the same time, Lu Xun's personality and intellectual character were cosmopolitan in nature, rather than nationalistic. Indeed, he was active in debates, lectures, and open discussions, and had an active public intellectual life – something which would have eventually been suppressed after the Communist Revolution of 1949. His intellectual spirit was one of a liberal intellectual ethic of openness, but he also saw that this ethic alone would not be sufficient to confront the feudal nature of Chinese society – hence his support of the communists.

Lu Xun's legacy in China is still as one of the forerunners of the Communist Revolution, having been, in Mao Zedong's words, "the chief commander of China's cultural revolution." He is also seen as China's greatest modern writer, having influenced many generations of writers in the tradition of social criticism through literature. Indeed, even in the late twentieth century, writers and filmmakers were working within the genre of the literary/artistic confrontation with what they see as China's power structures and irrational forms of custom. It is perhaps one of the most important legacies that Lu Xun could have left: the persistence of an Enlightenment position within the Chinese political and cultural context.

Luddism and machine breaking

Immanuel Ness

The Luddites were secret associations of industrial workers who participated in mass uprisings against the introduction of new machinery in Britain from about 1810 to 1818. The movement began in Scotland in 1810 and quickly spread throughout England, reaching its maximum extent in 1815. The primary means of resistance was the destruction of machinery, above all by handloom weavers who saw the new power looms as a grave threat to their livelihood because they were devaluing their labor and would eventually displace them entirely. The movement took its name from messages sent in the name of a fictional General Ned Ludd to the textile manufacturers, warning them to remove their mechanized looms or suffer the consequences.

The Industrial Revolution in England brought about rapid gains in steam and other industrial technology, disrupting almost 500 years of relative labor peace. Laws dating from 1350 regulating working conditions for apprentices had remained in effect through the early 1800s, when they were increasingly considered a nuisance to an emergent class of capitalist manufacturers in the textile industries, who believed an unrestricted labor market was essential to their pursuit of profits.

The origins of Luddism can be seen in the laws, beginning in 1769, that the English Parliament passed to protect machines against abuse from workers while at the same time prohibiting workers from forming labor unions. When the Combination Acts of 1799 and 1800 banned unionization, worker organizations went underground. Unable to defend their interests collectively through legal organization, the clandestine workers' societies engaged in direct action.

Many Luddite actions were small nocturnal raids, but some, especially at the height of the movement, involved thousands of workers in daylight attacks on power-loom mills. In 1812, in the wake of powerful workers' insurrections that 12,000 troops of the British army struggled to contain, and the destruction of machinery in towns throughout northern England, Parliament enacted a law that imposed the death penalty for any worker found to be actively engaged

The Luddites began an organized social movement of British textile artisans in the early nineteenth century, protesting the introduction of new production methods ushered in by the Industrial Revolution through destroying the machines that were to replace them. This 1812 portrait shows machine-wreckers attacking machinery in a textile factory. (Mary Evans Picture Library/Tom Morgan)

in machine breaking. In January 1813 eighteen men who were identified as Luddite leaders were hanged in the town of York. Many others accused of participation in the secret societies were punished through deportation to Australian penal colonies. The movement briefly continued to spread, but eventually the repression would succeed in defeating and destroying it. The social problems that produced it continued to exist, however, so other forms of worker resistance and organization arose to take its place.

The word "Luddite" has taken on a negative connotation and is today used primarily to signify irrational opposition to new technology. But the original followers of General Ludd were far from irrational in their actions. While it is certainly true that in the long run the new technology of the Industrial Revolution would lead to a rise in the standard of living of the population in general, it is no less true that the early nineteenth-century textile workers were severely victimized by the process. E. P. Thompson, in his seminal *The Making of the English Working Class*, convincingly argued that the Luddites' actions were not aimed against new technology *per se*, but against the emergent laissez-faire economic system that was impoverishing them while enriching the factory owners. He identified the Luddites as an essential link in the chain

of historical continuity of the revolutionary workers movement in Britain, connecting the English Jacobins who preceded them with the Chartists who followed.

Luddite riots in Nottingham

Adrian Randall

The Luddites occupy a unique place in history, having, despite defeat, bequeathed their name to all future opponents of new technologies. Yet the original “Luddites,” the framework knitters of the east Midlands, fit the stereotype less well than those who followed them, for the “engines of mischief” which threatened the knitters’ trade in 1811–12, the “wide frames,” had long been used to make lace cloth. The problem was the innovation of using cloth made from such frames to manufacture stockings from pieces sewn up with a seam, “cut-ups,” rather than producing them “full-wrought” in tubular form on the more complex stocking frame. This change, in a background of rapidly rising food costs, growing anger at falling piece rates, and the accelerating use of “illegal” apprentices, led to violent protests.

In early 1811, knitters in the village of Arnold broke into workshops and disabled frames making cut-ups. With no concessions forthcoming, country knitters held a large demonstration in Nottingham. This passed peacefully but later 50 frames were smashed at Arnold. In the following weeks more frames were destroyed in the nearby villages and towns. Hosiers responded with immediate concessions and peace was restored.

In the autumn, however, trade worsened and wide frame production increased. In November major disorders proliferated, with frames smashed at Arnold, Bulwell, Baswell, and Sutton-in-Ashfield. The government, assuming orchestrated conspiracy, rushed troops to the county and virtual martial law was imposed. This failed to deter attacks. Small bands of well-drilled, self-styled Luddites, operating mainly at night, continued to destroy both frames and property of obnoxious hosiers, even in Nottingham itself. Direct action was supplemented by direct appeals to public opinion as Ned Lud posed as the champion of customary rights. Such propaganda proved potent. Even though large rewards were offered, no Luddite was impeached. Meanwhile, amid the disorders, knitters continued, unsuccessfully, to seek a negotiated settlement with the “honest” hosiers.

Thoroughly alarmed by the local authorities’ failure to suppress the disturbances, the government rushed through the Frame Breakers’ Bill, rendering machine breaking a capital offense. The act, ineffectual *per se*, but backed by an ever-increasing military presence, persuaded the Luddites to return to more peaceful forms of action. A United Committee was quickly established to petition parliament to regulate the trade and over 10,000 signatures were quickly solicited, but the bill was easily defeated. Thereafter protest abated, only to flare up again on a smaller scale in December 1812, September 1814, and June 1816.

Lugo, Fernando (b. 1951)

Stefan Thimmel

On April 20, 2008 Fernando Armindo Lugo Méndez, an explicit exponent of Latin American liberation theology, was elected president of

the Republic of Paraguay. Lugo was born on May 30, 1951 and as a member of the Steyler Missionaries (the Catholic fraternity active in Paraguay since 1910) worked until 2005 in the Department of San Pedro. From 1994 he was bishop of the Central-Paraguayan diocese, one of the poorest and most conflict-ridden in the country.

As a candidate of the Patriotic Alliance for Change (*Alianza Patriótica por el Cambio – APC*), which is composed of nine political parties and approximately 20 social movements of indigenous people, small farmers, trade unionists, and women, he was elected with 41 percent of the vote. The center-left alliance, from Christian Democrats up to communists (it can be compared with the *Frente Amplio*, the Broad Front in Uruguay), displaced the conservative Colorado Party, which ruled the country for 61 years, including the 35-year military dictatorship of the German-descended General Alfredo Stroessner, which began in 1954.

Lugo, whose parents suffered under Stroessner's terror regime and whose three brothers were tortured several times, is known in Paraguay as the bishop of the poor. He was given this nickname by his mentor, the Ecuadorian liberation theologian Leonidas Proaño, with whom he worked from 1977 to 1982, until he returned to his home country. Immediately upon his return, however, he was expelled and exiled to Rome, where he studied sociology at the Gregorian University. In 1991, two years after the collapse of Alfredo Stroessner's regime, he returned to Paraguay.

He hoped to help Paraguay break out of its isolation. His agenda included house building, land reform, the introduction of a general public health system, education reform, and investment in infrastructure. Because the Colorado Party still holds 43 of the 80 seats in the Paraguayan parliament, however, he depends on the support of dissident Colorado parliamentarians. Furthermore, he faces power struggles among the members of his heterogeneous coalition.

Land and agrarian reform have priority for President Lugo, who assumed power on August 15, 2008. In Paraguay only 5 percent of the population owns 90 percent of the agricultural land. As a consequence, the huge majority of the population did not see any benefits from a recent boom in agro-business (mainly because

of the highly increased demand for soya cultivated in Paraguay). Lugo's predecessor, Nicanor Duarte Frutos of the Colorado Party, failed to address this unjust distribution. As a result, more than 35 percent of the Paraguayan population has made no economic progress in the last ten years, and more than a million people have emigrated.

Another main focus of Lugo is the struggle against corruption. Paraguay is considered one of the most corrupt states in the world, and Lugo, who describes himself as an "outsider without party membership," hopes to change that. When Duarte tried to modify the constitution to enable his reelection, Lugo affiliated himself with the protest movement, resigned as a bishop, and asked the Vatican in December 2006 for laymanship. Although this was denied by the congregation of the Catholic bishops, he was released from his duties and rights. Lugo considers himself a center politician. While defending private property and seeking foreign investment, he is also looking for a political approach with his Latin American colleagues Evo Morales and Hugo Chávez. He is also integrating religion as a new element into the squad of center-left presidents and women presidents in South America.

Lukács, Georg (1885–1971)

Christina Gerhardt

Georg Lukács was a Marxist critic and philosopher. Born into a wealthy assimilated Jewish family in Budapest, he studied in Budapest, Berlin, and Heidelberg. In 1918, at the end of World War I and the Austro-Hungarian Empire, he joined the Hungarian Communist Party

and in 1919 served as minister of culture and education in the short-lived Hungarian Soviet Republic under the leadership of Béla Kun. Afterwards, Lukács fled to and lived in Vienna, and then Berlin. When Hitler seized power, Lukács left for Moscow, returning to Hungary in 1945. Following Lukács's participation in the revolutionary communist government of Imre Nagy in 1956, when Lukács served as the minister of culture, he was sent into exile in Bucharest and placed under house arrest. In 1957, after practicing self-criticism, he was allowed to return to Hungary where he remained until his death in 1971.

Lukács's writings encompass literary criticism and political theory. His methodology – which combines Marxian political and economic theory, neo-Kantian and Hegelian philosophy with literary analysis – established Marxist cultural studies and had a lasting impact, informing, for example, the Frankfurt School. His central works include *The Theory of the Novel* (1916), *History and Class Consciousness* (1923), and *Studies of European Realism* (1948).

Lukács's work generally sought to bring literature and politics together. In 1902, as a young student at Budapest University, he began writing theater reviews and co-founded the Thalia Theater (1903–4), which brought theater to working-class and rural audiences. It performed plays by Henrik Ibsen, August Strindberg, and Gerhart Hauptmann, which often thematized social alienation. A year prior, he had joined the Revolutionary Students of Budapest, which was organized by Ervin Szabó, who introduced Lukács to the writings of Georges Sorel. Subsequently, Lukács studied in Berlin and in Heidelberg with the neo-Kantian sociologists Georg Simmel and Max Weber. Beyond Simmel and Weber, his work of this period – *Soul and Form* (1910) and *The Theory of the Novel* (1916) – shows the influences of Kant, Hegel, and Dilthey.

During World War I Lukács returned to Budapest and formed an intellectual circle frequently called the Lukács circle, which included Béla Balázs, Béla Bartók, Karl Mannheim, and Karl Polyani. In 1918 Lukács joined the Communist Party and participated in Béla Kun's revolutionary communist government. His subsequent writings are much more overtly Marxist and political, as evidenced by *History and Class Consciousness* (1923). As a result of arguments

put forth in *History and Class Consciousness* and some earlier essays, the Third International forced Lukács to perform a self-critique in 1924. *History and Class Consciousness* considers the writings and theories of Rosa Luxemburg and Lenin, orthodox Marxism, the class consciousness of the proletariat, and the problem of organization. In the chapter “Reification and the Consciousness of the Proletariat” Lukács underscored not only that reification is a central dimension of social relation but also that it produces a reification of consciousness. That is, since society and social relations are reified, they construct a “false consciousness.” And because bourgeois interests structure society, they prevent the proletariat's consciousness from recognizing its own interests. In these ways, well before the rediscovery of Marx's *Economic and Philosophical Manuscripts of 1844*, which argued similar points and which Lukács read in the original in Moscow in 1930, Lukács had – via Hegel – made not only alienation and reification but also the dialectic central categories of his critique.

Lukács's response to the Third International, that is, his willingness to perform self-critique, contrasts sharply with that of Karl Korsch, also an early Marxist scholar, who was critiqued by the Third International the same year. Korsch refused to change his position and stepped out of the Communist Party, while Lukács adapted. His later work, subsequent to *History and Class Consciousness*, shows a more materialist approach and Lukács later argued that *History and Class Consciousness* was too idealist and not materialist enough. Subsequent to the self-critique, Lukács's work frequently theorizes realism; for example, *Balzac and French Realism* (1945), *Goethe and His Time* (1947), *Russian Realism in World Literature* (1949), and *The Historical Novel* (1955). Whether or not Lukács adopted a Stalinist position is debated in Lukács scholarship (e.g., by Lucien Goldmann, Eric Hobsbawm, Fredric Jameson, George Lichtheim). Regardless, his role in establishing Marxism was pivotal, influencing later Marxist thinkers. His arguments would reappear and be developed further in the writings of the Frankfurt School, which drew strongly on Lukács's early writings. Max Horkheimer, Theodor W. Adorno, Walter Benjamin, and Herbert Marcuse, for example, all analyzed the relationship between the capitalist mode of production, the culture industry, and human relations.

Lumumba, Patrice (1925–1961)

Ayokunle Olumuyiwa Omobowale

Born in Wembonya village in Katoko-Kombe District of Sankuru, in the Province of Kasai, Patrice Lumumba received primary education in a Catholic school until the age of 14, when he opted for Protestant education against his father's wishes. Under Protestant tutelage, Lumumba was introduced to European liberal and socialist ideas, including the works of Sartre and Karl Marx, which may have influenced his political thought.

Lumumba began his career as a clerk in Kindu and later joined the postal service in Stanleyville (now Kisangani). His political career gradually began at Stanleyville when he founded the Post Office Workers' Society and became general secretary of the Association of Native Public Servants. After serving a one-year jail term on trumped-up embezzlement charges, he moved to Leopoldville (now Kinshasa) where he worked successfully as a manager in a brewing company. It was in Leopoldville that he came to national prominence as a nationalist in 1956, calling for immediate independence for the Congo.

Pre-Independence Political Activism

Following Joseph Kasavubu's pioneering efforts in 1956 in calling for independence on the platform of his Alliance des Ba-Kongo (ABAKO), in August 1958 Lumumba founded and led the Mouvement National Congolais (MNC) to work for immediate independence. Of all the major parties in the Congo at this period, only Lumumba's MNC had a nationalist outlook, as the other parties were largely ethnically based. Lumumba's nationalist perspective must have given him an advantage over Kasavubu, since he enjoyed greater support.

Returning from the All-African Peoples' Conference at Accra in December 1958, where he met and interacted with Ghana's Kwame Nkrumah, Lumumba addressed a crowd of supporters, declaring that independence and freedom were the inalienable rights of every human being and not the mere gift of colonial masters. This declaration attracted cries of support from the audience. The Congo was subsequently engulfed in waves of anti-colonial and interparty violence, which led to much loss of life, especially among the locals. Lumumba was accused of complicity in the violent protests and arrested, even though he had declared his party's intention to seek independence through peaceful means. He was, however, released by the colonial government to participate in the Belgian-organized deliberations for Congolese independence in Brussels in 1959. Lumumba, along with other nationalists, played a vital role in ensuring immediate independence from Belgium.

In the parliamentary election held in May 1960, Lumumba's MNC won the highest number of seats – 33 out of 137. However, since his party had not won a clear-cut majority, it had to form a coalition government with ABAKO. Kasavubu became president and Lumumba clinched the position of prime minister and head of government. Independence was finally granted on June 30, 1960, when Lumumba countered King Baudouin's eulogy of Belgian colonization by presenting it as inhumane and exploitative, to the bewilderment of the apparently embarrassed king. Right from the first day of independence, this singular act earned Lumumba the status of an anti-Belgium radical leader.

After helping secure independence from Belgium for the Republic of the Congo in 1960, Patrice Lumumba became the country's first prime minister. Months later he was assassinated in suspicious circumstances suggesting Belgian and US government involvement. Here women in Accra, Ghana, mourn Lumumba's death during a parade in his honor on February 19, 1961. (Getty Images)

Post-Independence and Assassination

Just five days after independence, the Congo was engulfed in anti-colonial protests, the complicated ramifications of which would eventually lead to Lumumba's death. Belgium had purposely granted a quick independence to the Congo, without putting in place the necessary measures to assimilate the Congolese into the senior cadre of the military and the civil service. Thus, with only about 30 Congolese university graduates, the country inevitably lacked the requisite qualified personnel to assume senior positions. It was rather a deliberate attempt to accentuate post-independence colonialism. If politicians required no higher qualification to attain political positions, then Congolese in the military and civil service should have the same privilege extended to them. The gravity of their dissatisfaction can be seen in a tract from non-commissioned army officers:

Mr. Lumumba judges us incapable of taking the place of the white officers. Dear Lumumba, friend of the Europeans, we guarantee you the infernal ruin of your powers as long as you insult us as ignorant and incapable of taking the place of your white brothers. (Cited in Young 1966: 35)

Indeed, this anti-colonialist feeling had begun to permeate the hearts and minds of Congolese non-commissioned officers. Having noticed a degree of indiscipline among the rank-and-file, the Belgian head of the Congolese army, General Emile Janssens, summoned a meeting of military personnel on July 5, 1960, apparently indicating the maintenance of the status quo in military command and control, irrespective of political independence. For the African officers, this was not just an admonition to abide by military codes. It was rather an indication of continued dominance by the Belgians.

That evening, Congolese non-commissioned officers mutinied, arrested their officers, and even attacked Europeans in different parts of the country. Lumumba's response was to order the sacking of General Janssens on July 6 and an immediate Africanization of the officers' cadre by July 8. As pandemonium spread throughout the country, especially among Europeans who were suddenly exposed to attacks from locals, the European community experienced a mass exodus from the Congo, while the pro-Belgium government of Katanga Province led by Moïse Tshombe declared its secession from the Congo on July 11. Belgium subsequently deployed troops to protect its citizens and support the Katanga government, where it had vast investments.

Lumumba protested against Belgian action by making a formal report to the United Nations, in which Belgian troop deployment was described as an act of aggression. Indeed, the UN passed a resolution condemning Belgian action on July 14, deploying its own troops to replace Belgian soldiers on July 15. Whereas Lumumba had requested, and indeed expected, that the UN troops would assist in subduing the secessionist province under central authority, the UN secretary general Dag Hammarskjöld was of the opinion that UN troops were there to keep the peace and not to fight for Lumumba. Such was the situation until August 1960, when the South Kasai Province, where Belgium also had commercial interests, seceded. Thenceforth, Lumumba decided to turn to the Soviet Union, which duly provided military hardware and personnel.

Opting for the Soviet Union presented Lumumba to the western powers as a communist apologist in Africa. In a move which Gibbs (2000) indicated may have been influenced by western governments, Lumumba was sacked under questionable circumstances by President

Kasavubu on September 5. Though Lumumba fought frantically and secured parliament's support on September 7, he was captured by a section of Congolese soldiers in November when he tried to escape to Stanleyville, where his supporters had set up a rival government. Lumumba remained in the custody of his captors until January 17, 1961, when he was murdered. Newly declassified official documents reveal the possible complicity of western governments.

Luther, Martin (1483–1546)

Nora Martin Peterson

Martin Luther is one of the most important figures in the Protestant Reformation. Today it is believed that Luther's writings, ranging in scope from theological tracts, sermons, and commentaries to translations and polemics, account for approximately 20 percent of all literature printed in Germany between 1500 and 1530. The implications of his split from the Roman Catholic Church triggered the Peasants' Revolution of 1524–5 and paved the way for the Protestant Reformation. His complete translation of the Bible into German (1534) provided access

to scripture, which he believed was vital to a personal understanding of God. The standards he set by selecting each word carefully from a vast mix of Germanic dialects often lend him the title of "father of the German language."

It all began in a moment of fear when, one tempestuous night, Luther vowed to become a monk if God would spare him from the wrath of the storm. He survived, and in 1505 joined an Augustinian monastery in Erfurt. His intense interest in scholarship and theological doctrine paved the way for a doctorate in theology in Wittenberg in 1512, after which he became increasingly concerned with what he perceived to be injustices within the Roman Catholic Church. In 1517 Luther nailed his 95 Theses (which stated as many reasons why the practice of selling indulgences should be discontinued) to the castle door in Wittenberg, creating an overnight sensation and sharpening the already tense atmosphere between him and Catholic leaders. By 1520 it was clear that there would be no chance of reconciliation with the Church. He had by this point outlined much of his own doctrine and believed that the reigning ecclesiastical leadership had become "religious nihilists and that the pope himself was the anti-Christ" (Gritsch 1972: 42).

Luther's doctrine contained three main departures from Catholic beliefs. His *priesthood of all believers* holds that every baptized Christian is a priest, bishop, and pope in his/her own right, thus erecting a much more egalitarian structure than the rigid hierarchy of the Catholic Church. He also did away with many of the Catholic sacraments, which he insisted were not founded in scripture, leaving only baptism and the eucharist (as described in *On the Babylonian Captivity of the Church*, 1520). Advancing his belief in the importance of an individual relationship with God, free from structural obligations and what he believed to be unnecessary ritual, Luther published his principle of *sola fides*, or justification by faith alone (in *On the Freedom of a Christian*, 1520). He argued that good works were not necessary for Christian salvation – faith alone would make a person righteous in God's eyes. Luther's demolition of traditional institutions and doctrines turned him into a household name almost overnight, and the fact that he published and preached largely in German made his ideas accessible to the uneducated German public of the lower classes.

Wider das Papstum zu Rom vom Teuffel gestiftt/ Mart. Luther D.

Wittenberg/1545.
durch Hans Lufft.

On Halloween in 1517, Martin Luther nailed his “95 Theses of Contention” to the church door at Wittenberg, thereby announcing his distaste for the corrupt Roman Catholic practice of indulgences. This woodcut is from the title page of his 1545 anti-papal tract, *Pope at the Gates of Hell*. (*The Granger Collection, New York*)

When the peasants of Swabia collectively published their *Twelve Articles* (1525) – a list of complaints, based on scriptural quotation, against the princes and lords – Luther replied with his *Admonition to Peace; A Reply to the Twelve Articles of the Peasants of Swabia* in 1525. Here, he rebuked both sides: the peasants for taking scripture out of its intended context (17), and the princes and lords for their life of luxury and extravagance at the expense of the “poor common people, [who] cannot bear it any longer” (19). By warning both parties that God “hates both tyrants and rebels” (40–1), Luther pleaded for a peaceful resolution of an increasingly tense situation. The coming rebellion, during which Luther felt his words and beliefs were being misused by both parties, forced the theologian to face “the relationship between personal faith and socio-political evil” (Gritsch 1972: 49).

As the conflict sharpened, Luther increasingly despaired that his words were being taken

out of context by both sides (Sessions 1972: 30). Nevertheless, he was forced by his religious and political prominence to take a stand amidst the increasing violence. In *A Sincere Admonition by Martin Luther to all Christians to Guard against Insurrection and Rebellion* (1522), Luther tried again to state his beliefs about authority. He believed that because the natural state of man is Hobbesian and unruly, temporal authority and government are necessary in order to prevent utter chaos. However, Luther underscored the fact that no temporal authority could affect the inner, godly man, which should ever be fixed on scripture and God.

He urged the people not to side with rulers who follow papal authority and enforce Catholic doctrines; however, instead of following his advice in their hearts, the common people of Germany followed Luther’s advice literally and explosively. Luther, appalled that his writing had triggered the opposite effect than the one he had sought, harshly spoke out again, this time firmly coming down against the rebels: “The rulers, therefore, ought to shake these people up until they keep their mouths shut and realize that the rulers are serious . . . You have to answer people like that with a fist, until the sweat drips off their noses” (*An Open Letter on the Harsh Book against the Peasants*, 1525). The rebellion was brutally suppressed by the princes and lords, but the rhetoric of both sides of the conflict would continue to sharpen and revolve around religious doctrine until its culmination in the Thirty Years’ War.

Luther himself continued writing throughout the rest of his lifetime, but died in 1546 embittered by the split he had witnessed in the German people. He had not foreseen that his own deep religious beliefs, which he expressed so enigmatically in his texts, would not be followed with the same godly intentions as he himself sought.

Reception of Luther has varied as much as the interpretation of his written word did in his own lifetime. Heinrich Heine (1797–1856) lauded Luther’s intellectual clash with the Catholic Church as a pivotal moment in the creation of a positive national identity (*Romantische Schule*, 1836). Friedrich Nietzsche (1844–1900), while conceding Luther’s contributions to the development of a national German language, accused Luther of being the “single greatest force that ruined Europe’s most important chance of

throwing off the Christian yoke it had borne for over a thousand years . . . he blocked the way to the Übermensch for over a century” (Bluhm 1956: 82–3), and claimed that Luther’s entire principle of *sola fides* was merely a cloak to justify Luther’s own unbridled emotions (79).

Luxembourg, protest and revolution

Adam Reinherz

The long tradition of revolt and protest in Luxembourg extends from the country’s domination by the Spanish Hapsburgs (1556–1684), France (1684–97), Spain (1697–1714), Austria (1714–95), and France again in 1795 during the French revolutionary wars. Under French rule Luxembourg was divided and a Constitution of the Directory was imposed, in addition to a modern state bureaucracy. Finally in 1798, after conscription laws required Luxembourgers to enter the French army, they revolted. Because the rebellion was led by Luxembourg’s lower class, it was referred to as “the peasants war,” or “the war of the cudgels” (*Klöppelkrieg*). Luxembourgian peasants courageously resisted their adversaries, but, without sufficient arms, military expertise,

or the support of the upper class and noble Luxembourgers, they were easily defeated. In response, France executed all those peasants who had participated in the revolt.

In 1815, after the fall of Napoleon I, Luxembourg became the independent Grand Duchy of Luxembourg, with William I of the Netherlands serving as grand duke. In 1830, after long suffering the heavy tax burdens of William I, Luxembourg allied with Belgium in revolt against the Netherlands. This would eventually lead to the First Treaty of London in 1839, granting Belgium independence, and severing western and eastern Luxembourg, allowing for increased autonomy. In 1867, the Second Treaty of London granted Luxembourg full independence and neutrality.

As an independent nation, economic conditions declined as farmers suffered from famine and poor harvests, and laborers were unable to find jobs. Additionally, the working classes were heavily taxed and voting rights were granted only to the wealthy. Because of these conditions Luxembourg experienced rapid emigration between 1841 and 1891, with approximately 72,000 leaving for the United States and France. However, by the end of the nineteenth century, the Luxembourg economy was booming after the discovery of iron ore deposits in the southwest. By converting iron into steel, Luxembourg became a major force within the global steel industry.

In 1914, despite being independent and neutral, Luxembourg was invaded and occupied by Germany. Marie Adélaïde, grand duchess of Luxembourg, and Paul Eyschen, prime minister of Luxembourg, met *Oberst* Richard Karl von Tessmar, the German commander, on the Adolphe bridge in Luxembourg City to protest against the invasion, but eventually accepted the German terms. Because Germany permitted Adélaïde and her government to remain in office, France accused the grand duchess of collaboration. This was followed by further unrest when, despite the war, iron production decreased. By the fall of 1916, the iron and steel industries had begun to unionize, which subsequently led to the election of three independents as representative government deputies. In their opposition to the National Union Government formed during the German occupation, Luxembourgers were distrustful of the government as a means for social change. The German commander, von Tessmar, attempted to quell the

beginnings of unrest by issuing death threats against any individual who committed an act of violence. Luxembourg workers, mostly miners, reacted by coming out on strike. Because Germany desperately relied upon Luxembourgian iron, von Tessmar met the strikers with force. Though failing to implement his death threat, he arrested strike leaders and sentenced them to ten years' imprisonment.

As the armistice in 1918 approached, rebellion swept through Luxembourg as communist revolutionaries established committees throughout the duchy, declaring a new government on November 9, 1918. By November 12, socialists and liberals, united against the grand duchess, appealed for her abdication. Adélaïde turned to the French for assistance, but they refused, maintaining that she had collaborated with Germany. On January 9, 1919, a portion of the Luxembourg army revolted and proclaimed itself the army of a new republic, but France intervened, crushing the insurgents. After much consultation with Prime Minister Karl, Adélaïde abdicated in favor of her sister Charlotte on January 14, which allowed for a 1919 referendum reinforcing Luxembourg's desire to remain independent and to retain Charlotte as the grand duchess. Charlotte continued to serve as a strong, respected leader of Luxembourg for the next four decades.

During the 1930s, Luxembourg was heavily influenced by European left- and right-wing politics. In an effort to quell the communist unrest occurring in the industrial areas, Luxembourg continually turned to Nazi Germany and maintained a friendly relationship. This brought about much criticism from the international community. The Communist Party of Luxembourg was later subjected to *Maulkuerfgesetz* or the "muzzle" law; however, the law was turned down in a 1937 referendum. While combating the communist ideals espoused by the industrial communities, Luxembourg appeased the leaders of Nazi Germany.

On May 10, 1940, Germany again invaded and occupied Luxembourg, but this time the grand duchess and her government refused to cooperate, and later went into exile in London. From London, Grand Duchess Charlotte attempted to inspire her people with regular radio broadcasts. This was countered by a German propaganda campaign, spread throughout Luxembourg, to convince its inhabitants of their membership in

the Third Reich. A peaceful resistance to this campaign, led by several underground movements, included the refusal to speak German and an insistence on claiming to be citizens of Luxembourg in all attempts by Germany to collect census data.

Regardless, in August 1942, Luxembourg was incorporated into the Third Reich, resulting in 13,000 Luxembourgian males having to report for German military service. Twenty-one strikers opposed to German conscription were executed and hundreds more were sent to concentration camps. However, several resistance groups were successful in hiding many conscripted Luxembourgians, and a small group of volunteers fought alongside the Allies during the Normandy invasion that liberated occupied France.

Luxemburg, Rosa (1870–1919)

Paul Le Blanc

Rosa Luxemburg was born in a Poland divided under German and Russian domination, and she played a role in the revolutionary movement of each country. Her influence has been global, however, since her contributions place her within the very heart of the Marxist tradition.

Part of a cultured and well-to-do family in Warsaw, Luxemburg was an exceptionally bright child who was encouraged to pursue an education in Poland and then at the University of Zurich in Switzerland, where she received a doctorate in economics with a dissertation on "The Economic Development of Poland." She became active in the revolutionary socialist movement while still in her teens, soon rising into the leadership circle of the Social Democratic Party of the Kingdom of Poland, a militant group whose anti-nationalist orientation caused

it to be outpaced by other currents emphasizing the cause of Polish independence. Luxemburg's working-class internationalism, however, caused her to move into Germany in order to play a more substantial role in the massive and influential German Social Democratic Party (SPD). Luxemburg soon occupied a place in the revolutionary wing of the socialist movement, gaining considerable respect and also attracting considerable hostility.

Quality of Marxism

Among Luxemburg's best-known early writings are her polemic *Reform or Revolution?* (1899) and her more reflective "Stagnation and Progress of Marxism" (1903), both of which give a sense of the quality of her Marxism. The first involves a debate with a prominent SPD theoretician, Eduard Bernstein. The revolutionary approach of Karl Marx, according to Bernstein, was no longer relevant to modern capitalism and new German realities – particularly as the trade unions, and reform efforts within the German parliament, both associated with the practice of the SPD, promised (he felt) the piecemeal elimination of various oppressive aspects of capitalism and a gradual evolution to socialism. This approach was consistent with the actual practice of the SPD, he argued, not the commitment to the old notion that the working class should take political power in order to inaugurate the socialist transformation. This was related, in Bernstein's view, to a natural tendency in capitalist development for the economy to become socially organized and therefore to evolve in a socialist direction.

Luxemburg sharply challenged this view. She scoffed at Bernstein's method of "weighing minutely the good and bad sides of social reform and social revolution . . . in the same manner in which cinnamon or pepper is weighed out." This method of analysis, in which one could select methods of historical development "out of pleasure from the historical counter of history, just as one chooses hot or cold sausages," constituted the abandonment of "dialectics and . . . the materialist conception of history" that had guided Marx for an inferior method leading in the opposite direction – pushing "the labor movement into bourgeois paths" and "paralyz[ing] completely the proletarian class struggle." Following this method, the SPD program would become "not

Rosa Luxemburg (1870–1919) is shown speaking at the International Socialist Congress in Stuttgart, Germany, August 1907. Luxemburg, a leading socialist intellectual and activist, became one of the founders of the Communist Party of Germany in 1914 and a leading voice among left-wing revolutionaries during the German Revolution. (akg-images)

the realization of socialism, but the reform of capitalism." The very nature of capitalism – at the heart of the functioning of the capitalist economy – involved maximizing profits for the capitalist minority through a relentless exploitation of the working-class majority. It is true, she noted, that under capitalism "production takes on a progressively increasing social character," but the capitalist form of this "social character" – including the rise and incredible expansion of powerful economic corporations – would mean that "capitalist antagonisms, capitalist exploitation, the oppression of labor-power, are augmented to the extreme."

Luxemburg insisted Marx's insight that "capitalism, as a result of its own inner contradictions, moves toward a point when it will be unbalanced, when it will simply become impossible," remained as valid as ever. This would cause capitalism's defenders to resist and push back both social reforms and the increasingly "inconvenient" democratic forms that had been conceded in the face of previous revolutionary struggles. She was quite critical of the undemocratic limitations of Germany's parliamentary system – hobbled by the power of monarchy, aristocracy, and big business – and she dismissed Bernstein's notion that this "poultry-yard of bourgeois parliamentarism" could be utilized "to realize the most formidable social transformation of history, the passage from capitalism to socialism." It would become necessary for the workers to push past these limitations, in the direction of genuine "rule by the people" (that is, to political rule by the working class). "In a word, democracy is indispensable not because it renders superfluous the

conquest of political power by the proletariat, but because it renders this conquest both necessary and possible.”

Arguing that the socialist movement must fight for “the union of the broad popular masses with an aim reaching beyond the existing social order, the union of the daily struggle with the great world transformation” from capitalism to socialism, Luxemburg saw revolutionary Marxism as the most effective means for helping the labor movement to avoid two negative extremes – “abandoning the mass character of the [SPD] or abandoning its final aim [and] falling into bourgeois reformism.”

On the other hand, Luxemburg warned that, to a large extent, what passed for “Marxism” in the mass socialist movement was far more limited and dogmatic than the far more complex and nuanced body of thought of Marx – “his detailed and comprehensive analysis of capitalist economy, and . . . his method of historical research with its immeasurable field of application.” She argued that much of this had gone beyond the initial practical needs of the working-class movement, and that “it is not true, as far as the practical struggle is concerned, Marx is out of date, that we have superseded Marx. On the contrary, it is because we have not yet learned to make adequate use of the most important mental weapons in the Marxist arsenal,” because the labor movement had not felt “the urgent need of them in the earlier stages of our struggle.”

Luxemburg’s belief was that developments of the new twentieth century would create such an “urgent need,” and that rather than allowing the limited “orthodox Marxism” to coexist with the reformist practice hailed by Bernstein, the SPD and the world socialist movement would need to be revitalized with the more profoundly revolutionary orientation represented by Marx’s actual perspectives. At the same time, the spread of the critical Marxist approach – what she termed as “the Marxist method of research [being] socialized” – would help theorists and activists in the workers’ movement to come to grips with the new developments confronting them, with innovative analyses, strategies, and tactics.

Analyses of Capitalism and Imperialism

Applying the dialectical approach to her economic studies, Luxemburg understood capitalism as

an expansive system driven by the dynamic of accumulation. Capital in the form of money is invested in *capital* in the form of raw materials and tools and labor-power, which is transformed – by the squeezing of actual labor out of the labor-power of the workers – into *capital* in the form of the commodities thereby produced, whose increased value is realized through the sale of the commodities for more money than was originally invested, which is the *increased capital* out of which the capitalist extracts his profits, only to be driven to invest more capital for the purpose of achieving ever greater capital accumulation.

Luxemburg’s analysis of the capital accumulation process involves a complex critique of the second volume of Marx’s *Capital*. As part of her resolution of what she considers to be an underdeveloped and incomplete aspect of Marx’s analysis of how surplus value is realized, she focuses on the global dynamics of the capitalist system and argues that imperialism is at the heart of capitalist development.

In her classic *The Accumulation of Capital* (1913) she offers an incisive economic analysis of imperialism. There are several distinctive features of Luxemburg’s theory of imperialism that set it off from that of other leading Marxists. She makes a great deal of the coexistence in the world of different cultures, different types of society, and different modes of production (i.e., different economic systems). Historically, the dominant form of economy worldwide was the communal hunting and gathering mode of production, which was succeeded in many areas by a more or less communistic agricultural form of economy which she characterized as a primitive “peasant economy.” This was succeeded in some areas by non-egalitarian societies dominated by militarily powerful elites, constituting modes of production that she labeled “slave economy” and “feudalism.” Sometimes coexisting with these, sometimes superseding them, was a “simple commodity production” in which artisans and farmers, for example, would produce commodities for the market in order to trade or sell for the purpose of acquiring other commodities that they might need or want. This simple commodity mode of production is different from the capitalist mode of production, which is driven by the already-described capital accumulation process, overseen by an increasingly wealthy and powerful capitalist minority.

Three features especially differentiate the analysis in *The Accumulation of Capital* from the perspectives of other prominent Marxists.

(1) Luxemburg advances a controversial conceptualization of imperialism's relationship to the exploitation of the working class in the advanced capitalist countries. Because workers receive less value than what they create, they are unable to purchase and consume all that is produced. This underconsumption means that capitalists must expand into non-capitalist areas, seeking markets as well as raw materials and investment opportunities (particularly new sources of labor) outside of the capitalist economic sphere.

(2) Another distinctive quality of her conceptualization of imperialism is that it is not restricted to "the highest stage" or "latest stage" of capitalism. Rather, imperialism is something that one finds at the earliest beginnings of capitalism – in the period of what Marx calls "primitive capitalist accumulation" – and which continues non-stop, with increasing and overwhelming reach and velocity, down to the present. Or as she puts it, "capitalism in its full maturity also depends in all respects on non-capitalist strata and social organizations existing side by side with it," and "since the accumulation of capital becomes impossible in all points without non-capitalist surroundings, we cannot gain a true picture of it by assuming the exclusive and absolute domination of the capitalist mode of production."

(3) Another special feature of Luxemburg's contribution is her anthropological sensitivity to the impact of capitalist expansion on the rich variety of the world's peoples and cultures. The survey of capitalist expansionism's impact in her *Accumulation of Capital* includes such examples as: the destruction of the English peasants and artisans; the destruction of the Native American peoples (the so-called Indians); the enslavement of African peoples by the European powers; the ruination of small farmers in the Midwestern and Western regions of the United States; the onslaught of French colonialism in Algeria; the onslaught of British colonialism in India; British incursions into China, with special reference to the Opium wars; the onslaught of British colonialism in South Africa (with lengthy reference to the three-way struggle of black African peoples, the Dutch Boers, and the British).

No less dramatic is Luxemburg's perception of the economic role of militarism in the globalization of the market economy. "Militarism

fulfills a quite definite function in the history of capital, accompanying as it does every historical phase of accumulation," she commented, noting that it was decisive in subordinating portions of the world to exploitation by capitalist enterprise. It played an increasingly explosive role in rivalry between competing imperialist powers. More than this, military spending "is in itself a province of accumulation," making the modern state a primary "buyer for the mass of products containing the capitalized surplus value," although in fact, in the form of taxes, "the workers foot the bill."

Revolutionary Strategy and Organization

Luxemburg was profoundly critical of conservative developments in the SPD. An increasingly powerful tendency inside the party and trade union leadership was quietly moving along the reformist path outlined by Bernstein. This path, she prophetically insisted, would not lead gradually to socialism at all, but to the gradual accommodation and subjugation of the socialist movement to the authoritarian proclivities, the brutal realities, and the violent dynamics of the capitalist system.

Luxemburg's revolutionary orientation resonated throughout much of the German labor movement. There were, however, powerful trade union leaders who despised her. They were insulted by her comment, in *Mass Strike, Political Party, and Trade Unions* (1906), that trade union struggles can only be like the labor of Sisyphus (rolling the boulder up a hill, only to have capitalist dynamics push the gains back down again), and that only socialism will secure permanent gains for the working class. Of course, she added that it is *necessary* for trade unions to wage that struggle in order to defend and improve the workers' conditions in the here-and-now. But this did not make up for her barbed observation that "the specialization of professional activity as trade union leaders, as well as the naturally restricted horizon which is bound up with disconnected economic struggles in a peaceful period, leads only too easily, among trade union officials, to bureaucratism and a certain narrowness of outlook."

As Luxemburg explained it, the workings and contradictions of capitalism can sometimes result in what she called a "violent and sudden jerk which disturbs the momentary equilibrium

of everyday social life,” aggravating “deep-seated, long-suppressed resentment” among workers and other social layers, resulting in an explosive and spontaneous reaction on a mass scale – in the form of strikes spreading through an industry and sometimes involving many, most, or all occupations and workplaces in one or more regions. Such mass strikes can go far beyond economic issues, sometimes involving whole communities in mass demonstrations and street battles, and are the means by which workers seek to “grasp at new political rights and attempt to defend existing ones.” Once such strikes begin, there can occur tremendous solidarity, discipline, and effective organization. But they have an elemental quality which defies any notion of revolutionary blueprints being drawn up in advance.

Luxemburg believed that what she defined as “the most enlightened, most class-conscious vanguard of the proletariat” – among whom she included the SPD in Germany, along with organized socialist parties of other lands – should play an active role not only when such explosions occur, but also beforehand in helping to educate and organize more and more workers in preparation for such developments, which would enable socialist parties to assume leadership of the whole movement. She did not think such upsurges would necessarily result in socialist revolution, but she believed that they would become “the starting point of a feverish work of organization” that would embrace more of the working class, enabling it to fight for reforms in a manner that would help prepare it for the revolutionary struggle. “From the whirlwind and the storm, out of the fire and glow of the mass strike and the street fighting rise again, like Venus from the foam, fresh, young, powerful, buoyant trade unions.” Some segments of the working class cannot be unionized through “the form of quiet, systematic, partial trade union struggles,” she noted, and her words drive home the point that “a powerful and reckless fighting action of the proletariat, born of a revolutionary situation, must surely react upon the deeper-lying layers and ultimately draw all those into a general economic struggle who, in normal times, stand aside from the daily trade union fight.”

Luxemburg taught that in order to remain true to its democratic and socialist principles, and in order to defend the material interests of the workers and the oppressed, the socialist workers’ movement – even while fighting for necessary

and life-giving partial reforms – would sometimes find itself in uncompromising confrontation with the capitalist power structure. What she and her revolutionary-minded comrades found, however, is that the increasingly bureaucratized structure of their own socialist workers’ movement was becoming an obstacle to the internal democracy of the movement. The increasingly bureaucratic-conservative leadership of the trade unions and party more and more sought to contain radicalizing impulses of the working-class membership, to limit the ability of people such as Luxemburg to present a revolutionary socialist perspective, to deflect upsurges in the class struggle into safely moderate channels. She also gave great weight to so-called “extra-parliamentary” social struggles, and to a dynamic interplay between existing organizations and spontaneous mass action. She put it this way in her later comments in the wake of Russia’s 1917 Revolution:

As bred-in-the-bone disciples of parliamentary cretinism, these German social democrats have sought to apply to revolutions the homemade wisdom of the parliamentary nursery: in order to carry anything, you must first have a majority. The same, they say, applies to the revolution: first let’s become a “majority.” The true dialectic of revolutions, however, stands this wisdom on its head: not through a majority to revolutionary tactics, but through revolutionary tactics to a majority – that is the way the road runs. Only a party which knows how to lead, that is, to advance things, wins support in stormy times.

For Luxemburg there was a consistency between this revolutionary-democratic strategic perspective and her revolutionary-democratic vision of socialism. Here is how she put it:

Bourgeois class rule has no need of the political training and education of the entire mass of the people, at least not beyond certain narrow limits. But for the proletarian dictatorship that is the life element, the very air without which it is not able to exist. . . . Only experience is capable of correcting and opening new ways. Only unobstructed, effervescent life falls into a thousand new forms and improvisations, brings to light creative force, itself corrects all mistaken attempts. . . . The whole mass of the people must take part. . . . Socialism in life demands a complete spiritual transformation in the masses degraded by centuries of class rule.

Social instincts in place of egotistical ones, mass initiative in place of inertia, idealism which conquers all suffering. . . . The only way to a rebirth is the school of public life itself, the most unlimited, the broadest democracy and public opinion.

While she was fully supportive of the revolutionary example of Lenin, Trotsky, and the Bolsheviks in their triumphant Russian insurgency of 1917, however, there were other aspects of the example they were setting to which she responded more critically.

Democracy and Freedom

In Luxemburg's view, the socialist movement had proved to be the most consistent force for democracy in the world. More than this, she viewed socialism quite simply as an expanded, deepened, authentic democracy – genuine rule by the people in both the political and economic life of society. Her notion of a workers' state (what has sometimes been called "dictatorship of the proletariat") had nothing to do with a one-party dictatorship ruling in the name of the people. Rather, it meant what Marx and Engels said in the *Communist Manifesto* when they spoke of the working class winning the battle of democracy, what Lenin meant in *The State and Revolution* when he spoke of a thoroughgoing political rule by the working class. This was in contrast to the authoritarian political forms that began to develop all too soon in the wake of the 1917 Russian Revolution.

Luxemburg was an early critic of this development, challenging Lenin and the Bolsheviks – whom she held in high esteem – to pull back from their expansive justifications for the undemocratic emergency measures that were adopted in the face of both internal counterrevolutionary assaults and a global capitalist counteroffensive. "Freedom only for the supporters of the government, only for the members of one party – however numerous they may be – is no freedom at all," she insisted. "Freedom is always and exclusively freedom for the one who thinks differently." In her prophetic warning she elaborated:

Without general elections, without unrestricted freedom of press and assembly, without a free struggle of opinion, life dies out in every public institution, becomes a mere semblance of life,

in which only the bureaucracy remains as the active element. Public life gradually falls asleep, a few dozen party leaders of inexhaustible energy and boundless experience direct and rule. Among them, in reality only a dozen outstanding heads do the leading and an elite of the working class is invited from time to time to meetings where they are to applaud the speeches of the leaders, and to approve proposed resolutions unanimously – at bottom, then, a clique affair – a dictatorship, to be sure, not the dictatorship of the proletariat, however, but only the dictatorship of a handful of politicians.

The best way to help overcome such developments, Luxemburg was convinced, was to spread the revolution to more advanced capitalist countries such as Germany, helping to establish a genuine workers' democracy on an increasingly global scale. Her efforts were tragically unsuccessful, however, and her vision of socialism was overwhelmed by the forces to which she had devoted her life to overcoming. In her classic *The Crisis in the German Social Democracy*, also known as "The Junius Pamphlet" (1916), she had written that humanity stood at a crossroads – either moving forward to socialism or a downward slide into barbarism, "either the triumph of imperialism and the destruction of all culture, and, as in ancient Rome, depopulation, desolation, degeneration, a vast cemetery, or the victory of socialism, that is, the conscious struggle of the international proletariat, against its methods, against war."

Life and Death

Luxemburg was a theorist, writer, and educator in the socialist movement, teaching at the prestigious school of the SPD, writing articles for its press, and giving innumerable speeches. But she was also an organizer and activist, imprisoned more than once – by Russian authorities in the wake of the 1905 revolutionary upsurge, and by German authorities for her uncompromising opposition to World War I. Expelled from the SPD, along with others, she helped to form the Spartakusbund (the Spartacus League, named after the rebellious leader of Roman slaves), which rallied revolutionary socialists – workers as well as intellectuals – to do what the SPD had ceased to do: oppose war, imperialism, and capitalism. Along with Karl Liebknecht, she was the foremost leader of this current, which

also included Franz Mehring, Clara Zetkin, Leo Jogiches, Paul Levi, and others. Shortly before her death, she helped to merge this current with others to found the German Communist Party.

The disastrous conditions created by World War I, and defeat of Germany, caused the German monarchy to collapse, amid an upwelling of revolutionary sentiment among German workers. Luxemburg was especially critical of secret deals made between SPD moderates and the German military to draw this energy into “safe” channels of a new Weimar Republic, which would allow for democratic reforms within a capitalist framework but also allow the old ruling classes to maintain their privileges.

In January 1919, against Luxemburg’s warnings, revolutionary euphoria led some of her comrades, led by Liebknecht, into an ultra-left collision with a better-organized, better-armed, powerful enemy. In the wake of the revolt’s suppression, paramilitary groups (which consisted largely of future Nazis) organized under the name of the Freikorps and – under the pretext of defending the Weimar Republic – systematically rounded up and murdered left-wing “troublemakers.” Luxemburg and Liebknecht were among the victims of these death squads.

M

M-19 of Colombia

Raina Zimmering

The Movimiento 19 de Abril (Movement 19 April) was a left-wing urban guerilla movement which converted to a political party in 1991. The ex-FARC member Jaime Bateman founded the movement after the fraudulent presidential elections of April 19, 1970.

M-19 differs from the Revolutionary Armed Forces of Colombia (FARC) and Army of National Liberation (ELN) in its urban orientation. M-19's aim was to transform Colombian society based on principles of justice, egalitarianism, and self-determination through a Latin American Revolution rejecting Soviet, Chinese, or Albanian models of socialism at the time. M-19's ideology was inspired by other South American urban guerrillas, such as the Tupamaros in Uruguay and the Montoneros in Argentina.

M-19 tactics attracted public and media attention through highly symbolic actions such as the robbery of the sword of Simón Bolívar from a museum in 1974, commandeering milk transportation and deviating the route to the slums of Bogotá, and the armed robbery of the largest army depot in Bogotá in 1978, seizing 5,000 weapons.

In 1980 M-19 occupied the Dominican embassy in Bogotá taking hostage 14 diplomats, including a US official. The hostages were peacefully released after tense negotiations with President Julio César Turbay Ayala, and M-19 members were allowed to leave the country for exile to Cuba. Later, some returned and reactivated M-19. In 1985 M-19 was the largest guerrilla group in Colombia after FARC, with an active membership estimated at between 1,500 and 2,000.

In 1985 the most spectacular action of M-19 was the siege of the Palace of Justice in Bogotá by 35 armed rebel commandos, taking hostage some 300 lawyers, judges, and Supreme Court

magistrates to initiate legal action forcing the president to comply with the peace agreement. Refusing to negotiate with M-19, the Colombian army totally destroyed the palace building with tanks. More than 100 people were killed, among them Supreme Court magistrates and M-19 members and commanders. The archive of the Supreme Court also was destroyed in a fire. Some analysts assume that drug lords and politicians may have masterminded the operation to destroy incriminating documents of the ties between the state and drug cartels. After failure of the attempt to capture the city of Cali in 1985, M-19 lost political influence.

In 1988 M-19 disarmed and handed over weapons, received pardons, and negotiated with the government to transform into a political party. In 1990 M-19 presidential candidate and former guerrilla commander Carlos Pizarro Leongómez was murdered while aboard an airline flight. Antonio Navarro Wolff replaced Pizarro as party leader and presidential candidate. Despite the violence, M-19 founded the Party of Alianza Democrática M-19 (Democratic Alliance M-19), becoming the third strongest political force after the liberal and conservative parties in the Colombian parliament. Its candidates performed well in local elections. M-19 actively participated in framing Colombia's new constitution of 1991, replacing the 1886 constitution. Antonio Navarro was one of three co-presidents of the Constituent Assembly and later ministry of health in President Gaviera's government.

In the late 1990s, following a relatively short period of strong popular support, M-19 as a political organization lost support and power in Colombian society, though former members retained some influence in the new Independent Democratic Pole coalition.

Machado, popular Cuban anti-government struggle, 1930s

Mike Gonzalez

It is customary to set the origins of the Cuban Revolution in the failed assault on the Moncada barracks led by Fidel Castro on July 26, 1953. In reality this was the second assault on the armaments stores of the Cuban state. The first, which also failed, was led by Antonio Guiteras in the early 1930s and formed part of a mounting resistance to the dictatorship of Gerardo Machado. That movement of opposition to his authoritarian rule culminated in 1933 with a series of strikes and political struggles that marked Cuba's subsequent history to a profound degree; the legacy of 1933, both positive and negative, shaped the ideological and organizational environment out of which the revolutionaries of 1959 would emerge. Yet that connection has been largely unacknowledged.

It may be argued that Cuba's fight for independence was only won with the revolution of 1959. While the rest of Latin America established varying degrees of *political* independence during the first three decades of the nineteenth century, Cuba remained as Spain's last transatlantic colony. The link was only finally broken after two lengthy and costly independence wars, between 1868–78 and 1895–8. Yet the victory of 1898

was pyrrhic. Even as the Cuban fighters were driving back the Spanish armies in their war for independence, the arrival of troops from the United States signified a redefinition of the conflict, now baptized the Spanish–American War. The victory proved indeed to favor North America rather than the Cubans, providing increased access to the island's sugar production and increasing Cuba's dependence on the manufactures from the burgeoning industries of the north. This dependence, both economic and political, was reinforced by the Platt Amendment to the Cuban Constitution, "one of the defining documents of the imperial era" (Gott 2004: 110), which gave the US control over Cuban public finances and foreign policy and allowed it the exclusive right to establish military bases on the island. The republic formally declared the following year was bound hand and foot at birth. It was also a republic which had imported the racism of the controlling power, reinforcing the bigotry of Cuba's own ruling class. There is a terrible irony in the hopes of those who formed the Independent Party of Color in 1912 that a US intervention would introduce more liberal attitudes. The black rebellion of that year ended in a massacre of thousands conducted by both Cuban and US troops!

The years that followed established a pattern of political succession rooted in fraud and corruption and overshadowed always by the dominance of US interests. Mario Menocal, whose presidencies (1913–21) reflected his lucrative connections with the Cuban American Sugar Foundation, faced a series of armed rebellions by Liberals defrauded in presidential elections. Gerardo Machado, presidential candidate in 1924, continued the pattern; he had run the electricity company in Santa Clara, a subsidiary of General Electric, and was a faithful friend of US interests. The Cuba over which he took stewardship, however, was in a deep crisis when the world sugar price fell dramatically in 1921 after the boom year of 1920, called the "Dance of the Millions." The result was the collapse of the banking system and a series of bankruptcies which concentrated even more resources in the hands of US capital that bought over the repossessed lands. Machado's response to rising protests was repression and violence, and an extension of his presidential period, by a further six years, to 1934. At the same time, in an attempt to address the deepening economic crisis in the wake of the

Crash of 1929, he initiated huge public works projects to take up some of the unemployment among seasonal workers.

His corrupt and authoritarian regime merited little criticism from Washington, but it generated deepening hostility and resistance across the board. The opposition parties, while not offering any strategic alternatives, fought for access to the system in a series of rebellions; many of those parties represented the leaders of the independence movement who had been excluded from corridors of power. And there were new, more modernizing forces within the armed forces who would gather later around Fulgencio Batista. In every instance, Machado's response was repressive, generating new sections of resistance. Among students, for example, who were largely middle class, military intervention produced radical reactions; the Directorio Estudiantil Revolucionario, led by Antonio Guiteras, was one such product, becoming more radical after a ban placed upon it in 1927. It would continue to play a key role in Cuban political life until the revolution of 1959.

The largely anarchist-influenced trade union movement formed its first national organization, the National Confederation of Cuban Workers (CNOC) in 1925. Its leader, Alfredo Lopez, was later arrested and thrown into a shark-infested sea by the dictator who then made the CNOC as well as the Communist Party illegal. In the same year, the first cell of the Cuban Communist Party was formed, led by the brilliant young student leader Julio Antonio Mella. Mella would undoubtedly have come to prominence in the Latin American revolutionary movement had he not been murdered in Mexico City by Machado's agents in 1929.

Machado's harsh response to dissidence ensured that tensions would grow – and all the more so with the impact of the 1929 Crash. Its repercussions would clearly fall particularly forcefully on an economy dependent on a single export crop for its foreign earnings together with a tourist sector tied, like its sugar exports, to the United States.

In the trade unions, anarchism still had a considerable influence, while elsewhere in the resistance varieties of nationalism and anti-imperialism prevailed. In 1931, the Communist Party took control of the national confederation CNOC by bureaucratic maneuver, leaving the anarchist-dominated Havana Workers' Federation

(Federación Obrera de la Habana, FOH) to absorb the non-communist forces. The Federation's strength lay with the traditional unions, like the bakers and the tobacco workers. The role played by the Communist Party in this period is complex and its repercussions in 1933 would resonate through the following decades. Shaped by the "Third Period" line of the Communist International, with its insistence on a "class against class" policy hostile to collaboration with non-communist forces, the Communist Party held itself in isolation from the growing protest movements, which were heterogeneous in both social content and ideology.

Events reached the point of explosion in 1933. By May of that year it would be right to describe the Cuban situation as one of political crisis. While opposition activity was largely forbidden and savagely repressed, the result was in some ways to deepen the conflict even further. The more radical nationalist organizations, under conditions of clandestinity, moved toward armed actions, sabotage, and violent confrontations in the street. Important sectors of workers were also moving to direct action, most significantly the sugar workers, as more than a quarter of the workforce lost their jobs in the wake of the 1929 Crash with the collapse of sugar production (from \$200 million to \$40 million between 1929 and 1932; Gott 2004: 134). In July, bus drivers in Havana struck over tax increases and were met with brutal repression. Other groups of workers then came out in sympathy, adding their own protests over price increases and rising unemployment. By August, Cuba was in the grip of a general strike that embraced printworkers, dockers, tram drivers, and many others, and which was run by a strike committee representative of the different groups of workers. Yet the Communist Party at this critical moment chose to make a temporary alliance with Machado and collaborate with him in the attempt to break the strike. It made little difference.

By August it seemed that Cuba was on the edge of insurrection. Soviets were formed across the island, factories were taken over – the US Foreign Policy Association estimated the number at 36 (Gott 2004: 136) – and the movement was now so generalized as to make it impossible for Machado to crush it. He turned to the United States, in the customary way, for support; but Sumner Welles, by then US ambassador in Havana, held his counsel and made no move to

mobilize American troops on the island. It was Machado's downfall, and he left on August 12. The US's favored replacement, Carlos Maria de Céspedes, took over the presidency on the same day – but his government was to last only three weeks. Supported by the most right wing of nationalist forces, but enjoying Washington's approval, Céspedes could do nothing to control the situation. Machado's police wisely disappeared after his downfall, but many were lynched and others killed in the chaos that ensued. Only a government that could claim to represent the movement that had brought the dictator down could hope to give it direction.

The catalyst was a rebellion at the Camp Columbia base on September 4 led by a group of sergeants; most prominent among them was an army clerk called Fulgencio Batista. The sergeants' manifesto echoed the demands of the Directorio in particular, for an end to corruption, the promulgation of a democratic constitution that would be observed, respect for property, and the creation of a new, modern Cuba. The Directorio then lent its support and a new, more radical government was formed under the presidency of the liberal doctor Ramón Grau San Martín. Antonio Guiteras, the leader of the most radical section of the Directorio, joined the government as minister of the interior and the armed forces. In its few months of existence, the government passed a series of far-reaching measures, nationalizing two US-owned mills, refusing to service foreign loans, introducing women's suffrage, and strengthening the rights of labor. At the same time, its populism led it to pass legislation expelling immigrant laborers from Haiti and Jamaica.

Batista, while allowing the assumption that he was wholly behind the new government he had sponsored, was in fact playing an extremely clever hand. His people were executing army officers who had served Machado and replacing them with his own nominees. At the same time he was in regular conversation with US ambassador Sumner Welles. The Communist Party, for its part, withheld support for the Grau-Guiteras government and continued to organize strikes against it. Batista, meanwhile, was clearly planning its demise. It came after only four months, in January 1934, when Batista acted to bring down the government he had briefly supported and place his own people in the presidency instead. From then on Batista was the arbiter of Cuban

politics, playing the political forces against each other while reimposing the effective rule of the army. At the same time he supported progressive social legislation while dealing harshly with dissent.

It was at this time that the Communist Party changed its position completely, in response to international rather than Cuban developments, and entered into an alliance with Batista in exchange for their control and leadership of the newly formed national trade union, the CTC. Guiteras and those around him, by contrast, launched armed resistance to Batista, though without success, and Guiteras himself was killed in mid-1935, after forming his own revolutionary nationalist organization, Joven Cuba (Gott 2004: 143). Resistance on other fronts, in the working-class movement in particular, continued throughout 1934.

In 1940 Batista finally had himself elected rather than his allies, and in that year he oversaw the passing of a new and radically democratic constitution. And probably as a gesture of support, the US withdrew the hated Platt Amendment. The Batista era had begun.

What was the legacy of 1933? It was a revolutionary situation in which, for a brief period, a real potential lay with a mass movement in permanent confrontation with government. But that resistance was never tied to a clear strategy nor to any single organization, reflecting instead the diversity of Cuban political thinking. That lack of clear leadership was exploited with great skill by Batista, who played both sides against the middle, winning a progressive reputation while diverting the revolutionary impulse in a liberal democratic direction. The Directorio would continue to be a force in Cuban politics, though the loss of an authoritative political figure like Guiteras affected it as deeply as the murder of Mella did the Communist Party, which might not have followed Moscow quite so slavishly. The opportunism of the Communist Party, for its part, formed a hostile attitude toward socialist ideas on the part of those who, like Fidel Castro, saw themselves as inheritors of a nationalism that stretched from José Martí to Joven Cuba. And Batista's shadow, together with that of the American eagle, would continue to fall over Cuba for more than 20 years.

Machel, Samora (1933–1986)

Justin Corfield

Samora Machel was the main Mozambican nationalist leader during the 1970s. He took over after the assassination of Eduardo Mondlane, becoming the first president of Mozambique in 1975, and remaining in office until his death in 1986.

Samora Moises Machel was born on September 29, 1933 at Xilembene (or Chilembene), Gaza Province, Portuguese East Africa (as Mozambique was then referred to internationally), his family having strong military traditions – his great-grandparents and his grandparents fought the Portuguese. He attended a Roman Catholic mission school and then went on to study nursing at the township of Xai-Xai, and then to Lourenço Marques (modern-day Maputo), where he became a medic. In the meantime, during the 1950s his parents had their farmland confiscated and given to Portuguese settlers. As a result, some of the family had to go to work in South African mines; one of Machel’s brothers was killed in a mining accident there.

It was not long before Machel began to get angry about why black nurses were paid less than white nurses while they did the same work, and he soon became attracted to Marxism. In 1963 Machel left Mozambique to work in Dar-es-Salaam, and then joined the Mozambican nationalist movement, the Mozambican Liberation Front (Frente de Libertação de Moçambique, FRELIMO), which had been formed the previous year. He was sent to Algeria to be trained

in guerilla warfare, and on his return to Tanzania he joined the revolutionary army. Machel became the commander of the FRELIMO revolutionary army, which launched the first guerilla attack on the Portuguese, and subsequently took over a part of Niassa Province in the north of Mozambique. Following the assassination of Filipe Magaia (1937–66), Machel took over Magaia’s position as secretary of defense of FRELIMO, becoming a member of their Central Committee. He sought to turn the “armed struggle” into a revolution, and from this new position he was able to reorganize the People’s Forces for the Liberation of Mozambique (Fôrças Popular de Libertação de Moçambique, FPLM), and was elected to the Triumvirato, the group that shared the top executive positions.

When Eduardo Mondlane was assassinated in 1969, Machel succeeded him as president of FRELIMO. In May 1970, after a bitter power struggle within the Central Committee, Machel took over control of all the revolutionary forces, continuing the war against the Portuguese. It finally ended in 1975 when the Portuguese left and Mozambique became independent, ending ten years of bitter conflict. Samora Machel was elected president of Mozambique on June 25, 1975, and soon began the work of rebuilding the country after years of war, and many centuries of neglect by the Portuguese. Being a Marxist-Leninist, Machel introduced a socialist plan for the country which made enormous strides in health care and education. However, his nationalization of Portuguese plantations and property caused many of the Portuguese to flee the country, some destroying their machinery and equipment before they left. It also pushed Mozambique more directly into the Soviet orbit, for better or worse. Machel was awarded the Lenin Peace Prize for 1975–6.

Nationalization and Soviet influence caused consternation in neighboring Rhodesia, where Ian Smith was at war with African nationalists, and in South Africa, which viewed with concern African National Congress (ANC) bases being established in Mozambique. With many of these nationalists using Mozambique as a base for their attacks on Rhodesia and South Africa, Machel’s newfound enemies put together the Mozambican National Resistance (Resistencia Nacional Moçambicana, RENAMO), which led to a civil war in Mozambique, and the disintegration of the Mozambican economy. With the

end of the Rhodesian government of Ian Smith, Machel finally decided to sign the Nkomati Accord with South Africa, by which he would cease supporting the ANC, and the South Africans would stop supporting RENAMO. Machel then became more pragmatic in his foreign policy, accepting economic and military aid from Portugal, Britain, France, and West Germany.

On October 19, 1986, while flying back from a mini-summit conference on Southern Africa held in Lusaka, Zambia, Machel's plane crashed in South Africa and everyone aboard was killed. The Margo Commission of Inquiry which investigated the air crash concluded that there was no sabotage, but the Soviet delegation to the Commission dissented. It has long been alleged that the navigation system of Machel's plane was interfered with by South African intelligence, but no concrete evidence of this has been found, although it seems highly likely that this did take place.

Samora Machel has been commemorated in Mozambique with many streets renamed after him, including the road from the old Portuguese fort in Maputo to the Independence Square. He has also appeared on a number of Mozambican postage stamps, including one series in 1976 on the first anniversary of independence, and in 1988 on the second anniversary of his death.

Mackandal, François (d. 1758)

Frank I. Müller

François Mackandal, deported from Guinea to Saint Domingue by the French, lived as a fugi-

tive slave, or Maroon, in the mountains of Haiti. During nightly Voodoo ceremonies he preached death to white colonizers, plotting mass poisoning against them, networked among slaves, and taught them forms of resistance. Caught by the colonists, he was publicly burned in Cap-Français (now Cap-Haitien) in March 1758.

A one-armed rebel who spoke Arabic and professed Islam, Mackandal considered himself an intermediary between the slaves and Voodoo *loas* (spirits), who showed him the way to revolution. He built a secret Maroon camp in the middle of the mountains, supporting it by trading small goods for arms with the Spaniards. A charismatic leader, he convinced his followers that he was immortal and could predict the future.

Maroon camps such as Mackandal's allowed slaves not only to escape but also to reclaim possession of their own bodies. They also provided space to overcome the economic shortages caused by leaving behind the scarce conditions on the plantations and gave collective power to the Maroons. Practicing Voodoo, performing transgression to the spirits of African ancestors, and dancing and playing drums also became important sources of collective strength and resistance. Secret communities grew all over the island and became cells for rebel networking. They facilitated a then unthinkable uprising of blacks and provided a space that was inaccessible to whites. Gaining significant political influence through their interconnection of spiritual and political liberation, the Maroon camps contributed to a continuity of resistance from the first days of slavery in the Caribbean.

Mackandal also employed poisoning as a means of resistance. Indeed, the most striking joint action he organized was the poisoning of the fresh water of every house in the provincial capital of Limbé in 1757. With their bodies weakened, whites became easy victims to the murdering insurgents. In return, whenever a rebel was caught, he was immediately hanged or burned. Mackandal himself met that fate.

During his six years of Maroon leadership Mackandal is said to have killed 6,000 people, black and white. He tolerated no sympathy for the oppressors, and condemned individual social advancement as achieved by a rising class of so-called mixed-race "mulattos." Instead, he

demanded unrestrained loyalty, convinced that only absolute unity of all non-whites could turn power over to the black people.

Mackay, John Henry (1864–1933)

Larry W. Heiman

John Henry Mackay was a Scottish-German author chiefly known in his lifetime for his propagandistic writings on individualist anarchism and his influential biography of German philosopher Max Stirner, which introduced Stirner's philosophy of egoism outside Germany. Today, he may be best known for his poems set to music by Richard Strauss and his series of books written to attain understanding and acceptance of homosexual love.

Mackay was in his early twenties when his first poems and short stories were published. In 1888 *Sturm*, his volume of revolutionary verse, appeared. It sold well and earned him notoriety as "the first singer of Anarchy" (Mackay 1999: 2). Around this time he came under the influence of American publisher Benjamin Tucker and German philosopher Max Stirner, both proponents of individualist anarchism. Tucker had begun to publish *Libertas*, a German edition of his anarchist journal *Liberty*, and would become Mackay's American publisher. In addition, Mackay read Max Stirner's *Der Einzige und sein Eigentum* (*The Ego and Its Own*), which would transform his earlier ideas on anarchism and lead to his 1898 study of Stirner.

After living in London from 1887 to 1888, Mackay moved to Switzerland, where he wrote *Die Anarchisten* (*The Anarchists*). While capitalizing on his first-hand observations of London's social movement, radical clubs, and extreme

poverty, Mackay employed fictional narrative techniques to argue the superiority of individualist anarchism over its communistic form. Its publication in 1891 made him famous in Germany and secured his reputation as an anarchic theorist.

After the success of these overtly political works, Mackay turned his writing efforts to those of a more personal nature. In 1906 the first book in his series *Die Bücher der namenlosen Liebe* (*Books of the Nameless Love*), written under the pseudonym of Sagitta, was issued. Using various literary genres, Mackay hoped through art to achieve respect and understanding of homosexual love and more specifically that practiced by Mackay, the love of men for adolescent boys. Disappointed by the lack of interest generated by these works, he decided he needed to reach a larger audience and in 1908 wrote and distributed the pamphlet *Gehoe! – Nur einen Augenblick!* (*Listen! – If Only For a Moment!*), which argued for acceptance of pederastic love. Mackay's publisher Bernhard Zack was prosecuted for publication of these works and convicted of publishing immoral literature. Mackay covered the costs of the prosecution, but his identity as the author remained unknown.

Die Freiheitsucher (*The Freedomseeker*) appeared in 1921 as a companion volume to *Die Anarchisten*. Mackay considered it a major work, but it generated little attention. In his last years Mackay devoted time to getting his earlier successes reissued.

Madagascar, protests and revolts, 19th and 20th centuries

Luke Freeman

Popular resistance to state authority in Madagascar during the nineteenth and twentieth centuries had two primary causes. First, the majority rural population had frequently been exploited by successive regimes whilst receiving few benefits in return. Second, the significant political and cultural influence of Europeans had fueled a recurrent nationalist sentiment calling for independence and a reassertion of “traditional” Malagasy authority and values.

Such values were at the heart of the women’s protest triggered in May 1822 when King Radama I, under the influence of British Protestant missionaries, had his long hair cut short and styled in European military fashion. He ordered the same for his soldiers. This was seen by the women, who traditionally were responsible for grooming and plaiting their husband’s hair, as a way of sidelining female influence and as an affront to ancestral authority. Radama’s troops surrounded the protestors, killed their leaders, and forced the remaining supporters to witness the devouring of the corpses by dogs.

In 1835 Queen Ranavalona I expelled the missionaries. They returned after her death, and European influence increased. Radama II abandoned the ancestral rituals of circumcision and the royal bath. This action, coupled with the growing poverty of the rural population as the Merina Empire degenerated, triggered the episode of resistance known as the Ramanenjana. This took the form of a contagious spirit possession causing people to dance until they dropped, to show revulsion at all things European and Christian, and even to attack missionaries. A huge procession of the possessed marched on Antananarivo bearing the imaginary baggage of Queen Ranavalona above their heads ready to reinstall her in the royal palace and to reinstate traditional authority.

In 1895 Madagascar succumbed to French military power and became a French protectorate administered by the Merina government. Traditionalists were wary of the collaboration of the government with a new foreign power. The government was unpopular due to the exaction

of forced labor from the rural population, many of whom were disaffected veterans of the Franco-Merina wars. This mixture of economic and ideological discontent led to the Menalamba uprising of 1895–1897 in the area around Antananarivo.

The uprising started on November 22, 1895. The date is significant as it was that of the ritual of the royal bath, the annual sanction of the monarch’s ancestral authority. Coalescing around the ancestral talismans suppressed by the royal family at the time of its conversion to Christianity, the rebels destroyed 750 churches and killed foreign missionaries and Malagasy proselytes. The revolt was violently suppressed by the French military. It is estimated that about 3,000 Malagasy died as a result of the uprising.

The French colonial government was the first in Madagascar’s history to establish control over the whole island. The most significant challenge to its domination was the revolt of 1947 in the fertile east of the island, where most colonial agricultural concessions were situated. The origins of the revolt lay in the oppressive wartime taxation and conscription for the war. The revolt was coordinated by young nationalist extremists and included many war veterans. However, as the rebels had no foreign support they had little military hardware and some only carried spears. They relied heavily on the mystical protection of traditional healers and diviners. The rebels killed white planters, burned their plantations, and destroyed public and mission buildings.

The colonial government made arbitrary arrests, detained suspects without trial, and executed the rebel chiefs by firing squad. Many refugees fled to the forest where thousands died from exposure and hunger, by far the greatest cause of death. It is estimated that 90,000 people died, including 550 French. The tensions and bitterness that remained in the revolt’s aftermath delayed independence significantly.

Madagascar achieved independence in 1960 but by the early 1970s there was growing popular dissatisfaction, especially in Antananarivo, at the continued presence and influence of French nationals in the administration. This led to a series of strikes in 1972, orchestrated largely by students seeking educational reform. The government arrested and deported 400 of the student leaders to a penal colony. There followed large-scale demonstrations in the capital involving a loose coalition of students, unemployed urban youth,

and laborers. The town hall was burned to the ground and security forces fired on the demonstrators, killing about 40. The events led to the demise of President Tsiranana and the First Republic, and the removal of French technicians from political, administrative, educational, and military posts.

Over six months in 1991 the “Living Forces” (*Hery Velona*) coalition instigated a long series of non-violent protests against President Ratsiraka’s socialist policies and the dire economic situation. Strikes spread throughout the civil service and commercial sector, and up to 100,000 protestors took to the capital’s streets, daily. On August 10, a peaceful march on the president’s palace was repulsed by gunfire from the presidential guard and helicopters dropping stun grenades. At least 100 protestors were killed. This cost Ratsiraka both popular and international support. Strikes continued until the army threatened intervention whereupon fresh talks led to the sidelining of Ratsiraka and a new constitution.

Madera Uprising, Chihuahua, 1965

Benjamín Anaya González

September 23, 1965 marks an important date in the rise of guerilla movements in Mexico. On that day, Arturo Gámiz García and Pablo Gómez Ramírez, original members of the Mexican

General Union of Farmers and Peasants (Unión General de Obreros y Campesinos de México, UGOCM), launched an assault against the military facilities of Madera City, a large village located on the shores of the Sierra Tarahumara in the northern Mexican state of Chihuahua. The attack, carried out in the early morning, was the first guerilla operation of the 1960s. The Mexican government responded with repression, with the support of the CIA, during the so-called “Dirty War.”

The assault was part of a resistance movement that had emerged in Chihuahua, the largest state in Mexico, against the exploitation of the pine woods. The movement was led by farmers, peasants, and professors of the UGOCM, who demanded economic justice, equality, and an end to exploitation and repression. The Vallina family, which had amassed large landholdings after taking land from the Tarahumara Indian tribes, led the drive to prosecute UGOCM leaders, with the support of the government. Professors Gámiz and Gómez, as well as other members of the organization, such as the brothers Salomón and Salvador Gaytán, had tried to negotiate, preparing the First Sierra Encounter in October 1963. They also called for a Second Encounter in February 1965 to resist the repression of the federal regime as well as the local government, headed by General Praxedes Giner Durán. In resolutions prepared for that encounter and published during the early months of 1963, leaders analyzed issues such as imperialism, capitalism, colonialism, and Institutional Revolutionary Party (PRI) dictatorship. Their diplomatic efforts met with little success, however, and established the basis of what they called “the only way to continue” – through armed struggle.

In the September assault, 20 guerillas fought against 120 trained army soldiers. When they took the headquarters that morning, eight guerillas were killed. After the attack, the other members were prosecuted and jailed.

Madero, Francisco (1873–1913)

Felipe Arturo Ávila-Espinosa

Francisco I. Madero was a member of one of the most affluent families in northern Mexico in the early twentieth century. He is known, through his writings and political action, as an originator of the Mexican Revolution. Madero was born on the estate of El Rosario, Coahuila, on October 30, 1873. His family belonged to the rural Mexican aristocracy, with business holdings in agriculture, commerce, and industry throughout the northeast. He was educated in the United States and Europe.

In 1904 Madero decided to enter politics in his native Coahuila, unsuccessfully supporting local political opponents of the government of Porfirio Díaz. Politically he was a liberal, but his main motivation was not necessarily humanitarianism. Indeed, it was fear of a true social revolution that led him to call for concessions to peasants and workers. Such concessions, he hoped, would stem the growth of radicalism and reverberations for social transformation and create enough contentment among the laboring classes of Mexico to foster order and stability. When Díaz refused to heed his warnings, Madero became convinced of the necessity to organize a national opposition party. In 1908 he wrote *The Presidential Succession in Mexico*, a book that harshly criticized the Díaz government and introduced the Antirreeleccionista National Party. That party, in turn, nominated him as its candidate for the presidential election of 1910. In the 1910 election, the Madero campaign succeeded in attracting major sectors of the middle classes and workers in the country's main cities and urban centers. However, Díaz had Madero imprisoned and managed to win reelection. Followers of Madero contested the elections and handed over evidence of the irregularities, without success. Against this background, Madero escaped from prison and fled to San Antonio, Texas, from where he decided to lead an insur-

rection to overthrow the government of Díaz on November 20, 1910.

The insurrection did not proceed as Madero had planned, however. Instead of a movement of urban middle classes, the struggle became the very radical working-class-based rebellion he had feared all along, growing rapidly and spectacularly well beyond his means to control it, both geographically and ideologically. The rebellion indeed achieved the objective of overthrowing Díaz's government in May 1911, however, and Madero served as president of Mexico from then to 1913, when he was executed by the Porfirista military and the Mexican Revolution entered its most radical and militant phase.

Madres de la Plaza de Mayo

Stella Grenat

The Madres de la Plaza de Mayo (Mothers of the May Square) is one of the principal human rights organizations created during Argentina's long years under military dictatorship, which

began in 1976. Thousands of people “disappeared” during those years, leaving mothers of the disappeared to wander through the corridors of the Department of Justice, police departments, and churches in search of their children. On April 30, 1977, 14 mothers who had searched in vain for their children or for information concerning their children’s whereabouts gathered in the square, located in front of the government house in Buenos Aires, to wait for the highest authority of state, Lieutenant General Jorge Rafael Videla. This action, initiated by Azucena Villaflor, was an attempt to hold the government responsible for their children’s disappearances.

At the time of this first march, the country was under a state of siege, and gatherings of three or more people had been banned. The police who patrolled the square ordered the mothers to keep walking and to do so in pairs. This is how the Madres started their walks around the pyramid in the center of the Plaza de Mayo, the first action of its kind. The Madres took on a historically important role in their efforts to rescue or locate their children, who had resisted the regime between 1969 and 1976. In order to recognize one another, the Madres wore white headscarves; even today, the symbol of a white kerchief represents them, and at 3.30 p.m. every Thursday, the Madres de la Plaza de Mayo still march around the square.

On December 10, 1977, Azucena Villaflor, María Ponce de Bianco, and Esther Ballestrino de Careaga, three of the founding mothers of the movement, were kidnapped. In spite of this, the Madres continued growing in numbers; they even created groups in the interior of the country, far from the capital. Between 1977 and 1978, their struggle received international attention as they traveled abroad to communicate what was happening in Argentina under the dictatorship and to help bring about its end, obtaining the support of Amnesty International. In 1980, they acquired a headquarters for their movement.

Beginning December 10, 1981, a new form of struggle was implemented: the Marches of Resistance. On that day, 150 mothers remained for 24 hours in the square; the following day, relatives, friends, human rights organizations, and Nobel Peace Prize winner Adolfo Pérez Esquivel joined the marches. They publicly blamed *de facto* president Lieutenant General Roberto Viola for the disappearances.

The Marches of Resistance continued during the democratic period, which began in 1983.

Hebe de Bonafini (b. 1928), a founder of the Mothers of the Plaza de Mayo group whose children disappeared during the Argentinian dirty war of the 1970s, leads one of the marches in Buenos Aires' Plaza de Mayo in December 1979. Bonafini is associated with the more radical factions within the group, publicly identifying as a revolutionary and with radical social justice movements in Argentina such as the piqueteros. (Eduardo di Baia/AP/PA Photos)

In this context, and largely in response to the Madres organization’s persistent demands for “truth, justice, and punishment,” the elected president Raúl Alfonsín proposed the creation of the National Commission on the Disappearance of Persons (CONADEP). This commission established the “theory of the two demons,” which became the official explanation for the social processes experienced in 1970s Argentina. According to this theory, both the military government and the guerrillas were guilty. Implicitly, this theory ended up blaming the victims themselves for their disappearance. For this reason, the Mothers did not support CONADEP.

In 1985, the military juntas were brought to trial. Generals Jorge Rafael Videla and Roberto Eduardo Viola, Admirals Emilio Eduardo Massera and Armando Lambruschini, and Brigadier Orlando Ramón Agosti were found guilty. In 1986, a sector of the Madres organization from the city of La Plata split due to political differences, particularly in relation to laws that granted pensions for the families of disappeared persons and established economic compensation for the relatives of victims. The organization was divided between the founders’ line, which accepted the legislation, thus showing solidarity with then President Alfonsín, and the group led by Hebe de Bonafini, which took a more radical approach and was more concerned with wider social issues and struggles.

The latter group was strengthened when Alfonsín enacted the laws of Punto Final (Full Stop) and the Ley de Obediencia Debida (Law of Due Obedience) between 1986 and 1987. These laws restricted judicial action against military personnel and officers who were responsible for the actions of the junta during the dictatorship. Such impunity was reinforced when President Carlos Menem acquitted military officials who had been convicted of such crimes against humanity in the past.

In 2005 President Néstor Kirchner repealed the two laws and the faction of the Madres organization led by Hebe de Bonafini was said to become “pro-government,” merging with the founders and their kin organization, the Grandmothers of the Plaza de Mayo. As a result of this merger, and the belief that they no longer faced an enemy government, on January 16, 2006, the Madres held their last March of Resistance. This move was highly criticized by left-wing associations and parties who had supported Bonafini and her organization.

Mafia, organized crime, and social protest

Paolo Pezzino

Some social scientists and historians who have studied the activity of the Mafia have shown

it to be not simply organized crime, but rather a collective social behavior that, while deviant to state laws, nonetheless responds to cultural honor and community social codes. Indeed, historian Eric Hobsbawm has depicted the Mafia as a primitive form of social protest. This image of the Mafia, widely reflected in the mass media, has no foundation in reality. Historical research has demonstrated, on the contrary, that the role of the code of honor has been, and still is, that of a compact among a violent elite against the external world. In the context of Mafia action, the honor of the *Mafioso* and *omertà* (conspiracy of silence) appears not as widespread subculture, but rather as a set of behaviors forcefully commanded by the violent elite, in a game in which *Mafiosi* and ruling classes both manipulate cultural codes to gain social and political dominance.

The origin of the Sicilian Mafia has not yet been completely elucidated by historical research. Criminal associations can be traced to the period before unification, although they were not named Mafia, a term that took hold only in the first years after unification. Judicial chronicles recount the existence in villages of strange groups of persons, organized along sectarian lines, that profited from the corruption and inefficiency of the Bourbon state by creating some sort of territorial domination. Under state officers' protection, they devoted themselves to larceny or to the commerce of stolen livestock, presenting themselves as defenders of social order and offering themselves to proprietors as agents to ransom loot from robberies they themselves had committed. In the insurgencies of mid-nineteenth-century Sicily, armed squads organized around leaders and took part in the uprisings, offering support to those making the best offer.

The origins of the Mafia can be traced back to armed squads, capable of enforcing violence, which used their strength and powers of intimidation not only in illegal affairs, but also for the purpose of enrichment and social ascent, by controlling crucial aspects of society, such as the local economy and public order. They are violent elites that occupy public spaces and powers in contrast to the lawful powers of the state. In order for this to happen, certain conditions are necessary. First is a modern state that is weak to the point of being unable to exercise sovereignty or maintain a monopoly on physical violence. Second is an economy freed by feudal restraints,

based on private property and the market, in a society undergoing rapid transformation, with broken traditional social balances but with no new emerging classes strong enough to exercise social control (by force or by consensus) on the downtrodden classes. Finally, there must be a situation that does not offer a chance for those who are stricken by the effects of economic crisis to avoid the worsening of economic conditions by migrating or starting new activities, but that, on the other hand, presents wide opportunities for resolute men who are able to move on illegal grounds.

The use of violence in mid-nineteenth-century Sicily has three fundamental aspects. To landowners and the aristocracy it was a factor of prestige and defense of their propriety. To the middle classes it was a resource to support processes of social advancement on a local basis. To some others, from the lower classes, it could represent an alternative – mostly the only alternative – to poverty, and conversely a chance to get rich. Extra-institutional violence proved then to be essential to the accumulation of profits and political resources.

Certain personal qualities lead those who can use violence to act upon their abilities. Such personal qualities can include courage, non-conformism, a cruel nature, and some “entrepreneurial” qualities. These qualities do not coincide with social classes: both violent actors and their victims often belong to the same social groups. For example, peasants suffer abuse from *Mafiosi* of the same social class, while some landowners can acquire Mafia protection and others pay ransoms.

In such conditions, the notion of legality remains abstract, and private violence finds no constraint in the lawful state authority. It then follows that the foundation of social relations in such a situation is violence. Mafia is therefore a real criminal power, based from the beginning on secret societies that participate in multiple illegal activities. It is prone to exercise sovereignty functions normally reserved for state authorities on a given territory, by levying some sort of taxation on legal economic activities and by producing some sort of normative system that foresees violent sanctions for those who prove deviant to it.

Magón, Ricardo Flores (1874–1922) and the Magonistas

Jens Kastner

Magonism designates a social movement as well as a certain school of libertarian theory, named after the Mexican anarchist Ricardo Flores Magón. The organizational core of Magonism was the Partido Liberal de México (Liberal Party of Mexico, PLM), founded in the US on September 5, 1905 in St. Louis, Missouri. Although the Magonists took their public discourse from liberalism, the group embraced an anarchist political philosophy and strategy. The Magonists were one of the most influential radical currents during the Mexican Revolution (1910–21).

Ricardo Flores Magón was born in San Antonio Eloxochitlán on September 16, 1874 in Oaxaca, Mexico. If the area from which he came was not the center of his activities, it nonetheless played a role in forming his thoughts and actions. The democratic, non-hierarchic organizational forms of political and everyday life in Oaxaca's indigenous communities exerted an enormous influence on Magón's ideas and philosophy. Moreover, his work and political activism were influenced by the works of the nineteenth-century anarchists Pierre-Joseph Proudhon, Peter Kropotkin, and Mikhail Bakunin as well as by anarchist contemporaries such as Errico Malatesta, Florencio Bazona, Emma Goldman, and Elisée Reclus. These anarchist influences were crucial for the transformation of Magón's

political thinking from radical reformism into revolutionary anarchism.

Most studies of Flores Magón's life connect it directly to his political goals and the movement named after him. In speaking about Magón, then, it is hard to avoid speaking about Magonism. The phases of his life seem to coincide with those of the movement. Scholars have divided Magonist history into three primary periods: (1) 1904–6, when the movement constituted itself; (2) 1906–8, when the movement expanded and engaged in rebellions and uprisings; and (3) 1910–13 and the onset of the Mexican Revolution. In the first phase, when the PLM was founded, the Magonist movement fought for a socially conscious state that would intervene to improve the living conditions of workers and peasants and facilitate their exercise of constitutional rights. After 1904, Flores Magón spent most of his time in the US, much of it in a series of prisons.

The second phase, comprising the years from 1906 to 1908, saw the movement grow and instigate several uprisings, both near the US border and in southern Mexican states such as Veracruz. Both authors consider this period the peak of the movement. Organized in five sections all over Mexico, the Magonist guerilla groups initiated various uprisings in an attempt to spark a general insurgency against the Mexican dictator Porfirio Díaz. Also during this time, the radicalization from liberalism to anarchism was accomplished. Magonists were also involved in various strike activities of the workers' movement.

The third phase begins with the Mexican Revolution 1910/1911 and ends with Magón's death on November 21, 1922 at the US Federal Penitentiary in Leavenworth, Kansas. In 1918, he had been sentenced to prison for violating the Espionage Act of 1917 ("obstructing the war effort"). Trejo (2006) points out the specific importance of Magonism's role during the first years (1910–13) of the Mexican Revolution. The slogan "Tierra y Libertad" ("Land and Freedom"), later adopted by Emiliano Zapata, first appeared in the Magonist newspaper *Regeneración* (Regeneration). In 1911, the Mexican state Baja California was temporarily under Magonist control.

Unlike liberals, the Magonists opposed private property and their fight was explicitly anti-capitalist. Unlike other anarchists, they focused on the question of land. The rural situation in Mexico was considered the key problem to be

addressed by revolutionary action, as expropriation seemed an adequate anti-capitalist measure, and peasant and indigenous organizational forms were regarded as more democratic than state institutions. Another difference from other anarchist currents, according to Trejo, was that the Magonists put their claim of "libertarian transnationalism" into effective practice. They built extensive contacts with socialists and anarchists in the US, where the PLM's headquarters were based until 1911, and the Industrial Workers of the World (IWW) and the PLM supported each other in their particular battles.

Over the entire period, the social composition of the Magonist movement was rather heterogeneous, consisting of Mexican and American workers, peasants, indigenous people, and intellectuals. From 1913 on, the Magonist movement faltered. On one hand, the Magonists were suppressed even by the first revolutionary government under the liberal Francisco Madero. On the other, they refused to enter alliances with other radicals. Thus, Trejo contends that it is a misjudgment to classify Pancho Villa, the leader of the revolutionary northern army (División del Norte), as a "keeper of bourgeois interests." The Magonists also declined due to divisions and internecine conflict within the movement.

Even if the original Magonist movement failed, Magón's philosophy has to this day been an important component of the revolutionary history of Mexico. Today, several initiatives and activist groups, indigenous and rural as well as urban, are influenced by Flores Magón's ideas and practice their politics under his name. For instance, one of the autonomous regions controlled by the Zapatista Liberation Army (Ejército Zapatista de Liberación Nacional, EZLN) in the state of Chiapas is called Ricardo Flores Magón. In the state of Oaxaca, organizations such as the Indigenous Organization for Human Rights in Oaxaca (Organización Indígena para los Derechos Humanos en Oaxaca, OIDHO) and the Popular Indigenous Council of Oaxaca-Ricardo Flores Magón (Consejo Indígena Popular de Oaxaca-Ricardo Flores Magón, CIPO-RFM) make reference to Magonist concepts. Also explicitly Magonist is the anarchist magazine *Autonomía: Periódico de Pensamiento y Crítica Anarquista*, published in Mexico City.

Mahdist Revolt

Andrew J. Waskey

The Mahdist Revolt is also known as the Mahdist War, the Anglo-Sudan War, the Sudanese Mahdist Revolt or, by the British, as the Sudan Campaign. For the Mahdists, it was a war to free Sudan from Turkish, Egyptian, and ultimately British control. The war began in the 1880s as the British Empire was nearing its zenith. In 1882 the British intervened in Egypt to suppress the Urabi (Arabi) Revolt (1879–82). British intervention in Egypt meant that it also assumed some of the military and governing problems of Egypt, including its problems in Sudan.

In the 1870s a Sudanese Sufi cleric, Muhammad Ahmad (Muhammad Ahmad ibn as-Sayyid Abd Allah, 1844–85), began to preach a message of spiritual renewal and liberation against Egyptian rule. He had been born on Dirar Island in the Nile River, which is off shore from the city of Dongola (Dunqulah). Dongola was the capital of the northern area of the Sudan. Moving to Khartoum, Muhammad Ahmad entered a course of religious training. He also studied Sufi teachings under Shaykh Muhammad ash-Sharif who was the leader of the Sammaniyya brotherhood. He soon was hailed as a very well trained Sufi. In 1871 Muhammad Ahmad moved to Aba Island on the White Nile south of Khartoum where he developed a reputation as a devoted Islamic teacher and as a spiritual mystic. He urged

his hearers to devote themselves to a strict following of the Koran, from which any departure would be understood as apostasy. Between 1871 and 1881 Muhammad Ahmad traveled widely in northern Sudan. During his travels he was joined by Abdallahi ibn Muhammad, who was a member of the Baqqara tribe of southern Darfur. His travels gave him an understanding that the people of the region hated the Ottoman Turks for their moral laxity. They also were filled with eschatological expectations for the Mahdi.

In Muslim eschatology (doctrine of the end of times) the final Day of Judgment at the end of history will be preceded by the arrival of the Mahdi who will restore righteousness to the world so that a perfect world society will come into being, and in 1881 Muhammad Ahmad assumed this role. He returned to Aba Island, declaring himself to be the al-Mahadi al-Muntazar, “the Expected One.” His declaration was seen as a necessary apocalyptic step that would prepare the way for the return of the Prophet Isa and whose return signals the end of times.

Raouf Pasha, the Sudanese governor, sent a force of two companies of troops with one machine gun to seize the Mahdi as an apostate teacher of false doctrines. They took a steam boat up the White Nile to Abba. One company disembarked and advanced on Aba Island, while the other company moved upstream until it could disembark and advance on the village from the opposite direction. Both companies arrived at the village in an uncoordinated attack in which they slaughtered one another in a crossfire. The Mahdi’s few troops were soon able to isolate and destroy the separated companies by turns. The Mahdi then declared a jihad against Egyptian rule.

The Mahdi’s army was composed of Sudanese tribesmen including the Hadendoa Beja, Arab Baggara tribe and their subjects the Fur tribesmen from Darfur. His religio-political goal was to establish an Islamic theocracy that would be pure. However, his ultimate goal was to eventually create a universal Islamic state.

A long march through the Kurdufan region gained a large number of recruits. Many Sudanese tribal leaders rallied to his cause, as did the slave traders. His party was called the Ansar (“Helpers”), which was the name originally given to Mohammed’s supporters at Medina. They were called Dervishes in the West because

The late nineteenth century saw a number of colonial wars, such as the Mahdist Revolt in Sudan. Resentful of Egyptian rule, the Sudanese rebelled under the leadership of Muhammad Ahmad, a self-proclaimed Islamic redeemer or Mahdi. In 1898, the British sent an Anglo-Egyptian army to subdue the rebels. Though greatly outnumbered, the British used modern weaponry to defeat the Mahdists under Khalifa Abdullah ibn Muhammad in the Battle of Omdurman on September 2. Painting by R. Caton Woodville. (Getty Images)

they were ascetic Sufi mystics whose zeal was enflamed by Sufi practices.

On November 5, 1883 the Dervishes destroyed an Egyptian army of 4,000 men commanded by retired British Colonel William Hicks (1830–83) near Al-Ubayyid (El Obeid) armed only with spears. Hicks Pasha commanded about 7,000 men, most of whom were Egyptians or Sudanese. Their training was unable to beat back the 40,000 Dervishes commanded by the Mahdi. With the captured weapons the Mahdists laid siege to al-Ubayyid, which Hicks' army had been sent to relieve. It surrendered after four months and was to serve as the Mahdi headquarters for the next ten years. The victory opened the way for the capture of the Darfur region which had been defended by Rudolf Carl von Slatin.

With the western half of Sudan in Mahdi hands, other Sudanese tribes began to act. The defeat of Hicks Pasha had persuaded most Sudanese that Muhammad Ahmad was indeed the Mahdi. In the vast area east of the Nile to the Red Sea the Hadendoa of the Beja people ("Fuzzy-Wuzzies") were led by Osman Digna against an Egyptian force commanded by Colonel Valentine Baker (1827–87). Baker left Suakin, a port on the Red Sea, for the more southern port of Trinkitat from which he marched inland to relieve Tokar. At the Battle of El Tib, February 4, 1884, Digna's Dervishes struck. The Egyptian troops

in Baker's command fled in terror, only to be slaughtered. The Europeans and some native contingents were able to fight their way back to Trinkitat, where Baker was met by Colonel Gerald Graham who was in command of 4,000 British troops. Graham set out for Tokar only to be attacked by the Dervishes at El Teb on February 29, 1884. During the ensuing battle, a mistake by the Black Watch led to a broken square that almost gave the Mahdi force a victory, but the battle ended with Digna's forces driven from the field.

The high point of the Mahdi's campaign was the taking of Khartoum. When Khartoum fell on January 25, 1885 General Charles George Gordon, the governor for the Egyptians, was speared to death by the Mahdists. British forces were slow in being authorized to go to Gordon's rescue because British Prime Minister William Gladstone (1809–98) was opposed to intervention in Sudan. He saw the situation as one in which the Sudanese people were struggling to be free and therefore not one that justified conquest. A relief column commanded by Sir Garnet Wolseley arrived two days after Gordon's death to find it was too late. The British and Egyptians soon withdrew from Sudan, leaving it in the Mahdi's control.

Despite his victories Muhammad Ahmad died of disease on June 22, 1885. He was succeeded by Khalifa Abdullah ibn Muhammad, a member of the Ta'aisha Baqqara tribe in Darfur. A Muslim preacher like Muhammad Ahmad, he had fought at El Obeid and had directed the siege of Khartoum. He set about organizing the new Mahdist state (Mahdiyyah).

In 1891 Father Joseph Ohrwalder escaped Mahdi captivity in Sudan. His story and that of Rudolf von Slatin, who escaped Mahdi captivity in 1895, provided intelligence on the situation in Sudan. Their respective books on the Mahdist State influenced public opinion to support a military return to Sudan, and on March 12, 1898 Major General Horatio Herbert Kitchener (1850–1916) was given command of an Anglo-Egyptian force with orders to pacify the Sudan. His force of 8,200 British and 17,600 Egyptian soldiers was armed with Maxim machine-gun artillery and was accompanied by a flotilla of gunboats. The Mahdist army, numbering 60,000, was poorly armed. Kitchener moved slowly up the Nile, building a railroad to Wadi Halfa in Sudan in order to supply his army. On June 7,

1896 his army destroyed the Mahdi garrison at Ferkeh. Two years later, on April 8, 1898, Kitchener defeated the Mahdi army at the Battle of Atbara, and fought the Battle of Omdurman on September 2, 1898. Here, the Mahdi army launched an attack only to be destroyed by machine gun and repeating rifle fire. Khalifa Abdullah fled into southern Sudan with Kitchener's forces in pursuit. On November 24, 1899 Kitchener's forces defeated Abdullah's army at the Battle of Umm Diwaykarat. Abdullah's 10,000 remaining fighters were killed during the battle, which ended the Mahdist state and the Mahdi Revolt.

Maitan, Livio (1923–2004)

Antonio Moscato

Livio Maitan was the foremost leader of the Italian Trotskyite movement. Born in Venice in 1923, Maitan took part in the resistance movement during Nazi occupation of Italy, and was soon after a leader of the youth movement of the Socialist Party. By 1947 he was active in the Fourth International, holding leadership positions from 1951 until his death in September 2004; his militancy throughout was well documented. As a militant and a theorist he closely followed Italian and European events, but was also interested in the revolutionary processes of Latin America, gaining allegations of *guevarismo* from the more dogmatic components of Trotskyism. He later joined the Partito della Rifondazione

Comunista (PRC; Communist Refoundation Party), where he also held positions of national leadership. Beginning in 2001, Maitan was an active and critical participant in Italy's anti-globalization movement. His perennial militancy drew him into political and economic analysis, to which he devoted articles, essays, and books. He covered social classes in Italy and other countries with regard to world economic crises, the history of the Italian Communist Party, the political heritage of Gramsci, and the Chinese Cultural Revolution to name a few. Maitan edited and translated many of Trotsky's (1879–1940) works into Italian, and some of Ernest Mandel's (1923–95) as well, and was a close collaborator of the latter. In later years, while still active in politics, he wrote his memoirs, and a history of the Fourth International.

Both as a political leader and a theorist Maitan had a style of great rigor, never affected by dogmatism. He was, in the more than six decades of his political activity, keen to debate and open to dialogue with positions different from his own.

Makhno, Nestor (1889–1935)

Paul Le Blanc

Nestor Makhno was one of the most heroic and, for a time, one of the most successful anarchist

figures in Russia and internationally. He led the most powerful anarchist movement during the Russian Revolution and Civil War, sometimes allied with the Bolsheviks, sometimes warring against them.

Makhno was born in the province of Ekaterinoslav, in the large Ukrainian village of Guliai-Polya, the youngest of five sons. His father, a poor peasant, died when Makhno was barely 10 months old, leaving an impoverished widow to ensure her family's survival. By the age of 7, the young Makhno began to labor as an agricultural worker, which over the next several years was mixed in with a partial education acquired in a village school, culminating in employment as a foundry worker. At the age of 17 he was drawn into the revolutionary ferment and uprisings that swept through the Russian empire in 1905. While he connected with a number of different revolutionary currents active in that period, he soon committed himself, body and soul, to a vibrant group of anarchocommunists. By 1908 he was arrested and imprisoned by the authorities for his subversive activities.

A central influence in Makhno's intellectual growth and political development was Peter Arshinov, a working-class intellectual and organizer, whom he met in prison. Arshinov was a metal worker who had been a Bolshevik until 1906, when he converted to the doctrines of "anarchist-communism." He modestly minimized his own role in describing the young anarchist's prison experience: "Although prison life was without hope and very difficult for him to bear, Makhno used it to educate himself. He showed great perseverance, and learned grammar, mathematics, literature, the history of culture and political economy. In fact, prison was the sole school in which Makhno acquired that historical and political knowledge which was a great help to him in his subsequent revolutionary activity." Arshinov adds: "Life, action, deeds were the other schools in which he learned to know and understand men and social events."

Freed from prison by Russia's February/March 1917 Revolution that overthrew tsarism, Makhno (with Arshinov by his side) hurried back to his native village, where he threw himself into organizing among the peasants – both as a revolutionary propagandist and as "a man of action." By October 1917 he was the president of the leading revolutionary bodies in his village and region: the Regional Peasants' Union, the

Agricultural Commission, the Union of Metal and Carpentry Workers, and finally the Peasants and Workers Soviet (democratic council) of Guliai-Polya. As was the case with many anarchists (and other radicalized currents in the workers' movement), Makhno was a partisan of the October/November 1917 Revolution led by Lenin's Bolsheviks. He continued to provide revolutionary leadership in his area – which was soon overrun in 1918, however, by anti-revolutionary forces from Imperial Germany. This was part of an even broader counterrevolutionary effort by many capitalist countries, in some case opponents to each other in World War I but unified in their hatred of the radicalized 1917 Revolution. In addition, there were internal forces aligned with the landowning gentry, capitalists, monarchists, and others (the so-called "White" forces) violently hostile to the Revolution. In the early stages of leading a dogged resistance to the onslaught, Makhno went to Moscow to consult anarchist militants as well as representatives of the new communist regime.

Inspired by the venerable old anarchist philosopher Peter Kropotkin, his discussions with anarchist comrades nonetheless resulted in no palpable assistance. The new communist regime seemed to have more to offer. Makhno's account of his frank discussions with Lenin suggest that the two men developed a grudging respect for each other – he quotes the communist leader as saying: "You, comrade, I regard as a man with a feeling for the realities and requirements of our times. If only a third of the anarchists in Russia were like you, we communists would be ready to work with them under certain conditions and work in concert with the interests of free organization of the producers."

While the revolutionary regime gave Makhno some initial assistance, he soon moved into angry opposition in the face of efforts to tighten state controls and ensure Communist Party predominance amidst the swirl of foreign invasions and the Civil War, not to mention repressive policies toward peasants (grain requisitions and so on) in the face of a collapsing economy. Denouncing "the Bolshevik leaders' shameful betrayal of the ideas of the October Revolution," leading to "dark days filled with bloody horrors," Makhno, Arshinov, and their comrades organized a network of anarchist-influenced peasant communes in the areas of the Ukraine under their control, defending this with their own military

force (sometimes amounting to 50,000 combatants) that carried out highly effective guerilla warfare against the Red Army, as well as against the Whites.

Makhno's efforts were legendary – although marked at times by the tragic brutality that on all sides characterized the Civil War period. He proved to be a charismatic leader who achieved a mass following, “an anarchist Robin Hood,” in the words of anarchist historian George Woodcock. This was marred by the fact that sometimes “under the influence of alcohol, Makhno became irresponsible in his actions” (according to the anarchist Voline), with “personal caprice, often supported by violence.” Then the “dictatorial antics of a warrior chief” would displace his more usual “calm reflection, perspicacity, personal dignity, and self-control in his attitude to others and to the cause.” Nonetheless, in the shifting alliances among the adventurers, bandits, semi-bandits, peasant rebels, and others who took up arms against the Bolshevik regime, Makhno stands out as being free from the corruption, the reactionary attitudes (not least of which was a virulent anti-Semitism), and the lack of liberatory vision that characterized so many of the others. For a time, he proved incredibly effective in his two-sided conflict with the Reds and the Whites.

“But ultimately,” notes historian Arno Mayer, “precisely because he exulted in the not inconsiderable support of the ambient peasantry, Makhno was blind to his weakness: lacking an overall strategic military and political vision, he remained, above all, fatally isolated.” The outstanding scholar of Russian anarchism, Paul Avrich, concurs: “He never understood the complexities of an urban economy, nor did he care to understand them. He detested the ‘poison’ of the cities and cherished the natural simplicity of the peasant environment into which he had been born.” Woodcock adds that although “the Makhnovists captured a number of fairly large towns in the Dneiper valley, they never really faced the problem of organized industry and never gained the loyalties of more than a few urban workers.” Mayer concludes that it was never clear “how he proposed to fit his anarchist peasant republic of participatory democracy into either a nascent peasant post-tsarist Russia or an at best embryonically independent Ukraine.”

As soon as the various counterrevolutionary White armies were decisively defeated by the Red Army, Makhno's forces were isolated and

crushed – facilitated by the Bolshevik government's dramatic pro-peasant measures in the New Economic Policy. Avrich comments that some of the Russian anarchists “grudgingly admitted the truth” of a thoughtful critique by Bolshevik Karl Radek, “that romanticism and their instinctive hostility towards organization prevented them from facing the realities of contemporary industrial society, with its expanding population and its intricate division of labor, and doomed them to failure and defeat.”

In an effort to break free of this problem while in Parisian exile during the 1920s, Makhno, along with the ex-Bolshevik worker Arshinov, argued for the development of a highly organized anarchist party that would struggle for “workers' democracy.” Makhno asserted that “the absence of a great specifically anarchist organization, capable of marshaling its resources against the revolution's enemies, left it powerless to assume any organizational role.” Exasperated by an anarchism “walled up inside the parameters of a marginal thinking to which only a few tiny groups operating in isolation subscribe,” Makhno advanced a devastating critique on why the Russian anarchists – who had played a not insignificant role in the events of 1917 – had been utterly defeated:

Had anarchists been closely connected in organizational terms and had they in their actions abided strictly by a well-defined discipline, they would never have suffered such a rout. But, because the anarchists “of all persuasions and tendencies” did not represent (not even in their specific groups) a homogeneous collective with a well-defined policy of action, for that very reason, these anarchists were unable to withstand the political and strategic scrutiny imposed upon them. Disorganization reduced them to impotence.

Latter-day scholar Anthony D'Agostino tells us that both “called for unified command and discipline in anarchist ranks, denouncing the study-circle character of the activity of city anarchists,” although “Makhno only dimly perceived what Arshinov had been driven to accept: that anarchism basing itself on the idea of class struggle already has a strong impetus in the direction of Marxism.” Arshinov finally decided to embrace communism and returned to the USSR in 1931 – but although “he made

reconciliation with the 1917 Lenin,” he tragically “returned not to Lenin’s Russia but to Stalin’s.” Makhno didn’t follow him, and died of tuberculosis in 1935. Arshinov died in Stalin’s purges not long after.

Malatesta, Errico (1853–1932)

Carl Levy

Errico Malatesta was the leading Italian anarchist from the 1890s to the 1930s, with a career that encapsulated the movement’s greatest period of influence and spanned the Risorgimento, Liberal Italy, and Fascism. He lived between the era of Bakunin and Mussolini and knew them both. His unique theoretical position and his frenetic activism coincided with and helped shape anarchism from the last quarter of the nineteenth century until the 1930s. For much of his life he was in exile and in this respect he is a prime exemplar of the nomadic anarchist and syndicalist movements, which emerged in an era of globalization before World War I. Although Malatesta was a key figure in the First Inter-

national in Italy in the 1870s and early 1880s, his sojourns in Italy between 1885 and 1919 were sporadic if inevitably dramatic. The government of the day was terrified by his presence during the popular *Fasci Siciliani* movement (1893–4), the risings of 1897–8, *La Settimana Rossa* (Red Week) of 1914, and the *Biennio Rosso* (Red Biennium) of 1919–20. As a longtime exile in the capital of the capitalist world, London, for almost thirty years between the 1880s and 1919, Malatesta mixed with a cross-section of Europe’s exiled radicals and with the local progressive and radical intelligentsia and representatives of the parties of the left and trade union movement. Malatesta also spent considerable time in the Levant, the Balkans, Spain, Argentina, the USA, Cuba, Switzerland, and France. His influence on the Italian anarchist movement, even from exile, is a case study in transnational networking. Anarchist intellectuals Francesco Saverio Merlino (1856–1930), Pietro Gori (1865–1911), and Luigi Fabbri (1877–1935), as well as a larger group of artisans and exiles circulating between Italy and the diaspora, helped Malatesta retain a considerable influence within the anarchist movement as well as an immense, latent popularity within the Italian left generally and “subversive” political culture in particular (e.g., in Tuscany, Emilia-Romagna, Liguria, and Rome). Malatesta’s importance to the history of revolution can be found in his practice and equally in his revision of anarchist theory.

Political Practice

Errico Malatesta was born in Santa Maria Capua Vetere near Naples into a middle-class family. As a teenager he was engaged in Mazzinian politics, and like his fellow young Mazzinians he joined the Bakuninist First International in the wake of the Paris Commune and Giuseppe Mazzini’s (1805–72) disavowal of its politics. Although he became an atheist and anarchist, Malatesta always retained something of the ethical religiosity of the Italian republican movement. For the rest of his life he would duel with the Italian republicans, although he indeed was not adverse to forming tactical alliances with them, since they shared the mutual aim of eliminating the monarchy, as was revealed during the Red Week of 1914, when anarchists, socialists, syndicalists, and republicans formed an alliance in opposition to the Savoy monarchy and the army. Although

Malatesta was a medical student at the University of Naples, he dropped out and trained as an electrician and gas-fitter; between stints as editor of anarchist newspapers, he practiced these trades in Italy and in exile. Like the Russian *Narodniks*, Malatesta believed that middle-class revolutionaries had to “go to the people” and opposed a division of labor that deepened the rift between hand and brain workers. Even as an old man in Rome, in the 1920s, he practiced his trade, albeit shadowed and harassed by Fascist policemen.

In the 1870s anarchism (or Internationalism) was the largest movement on the extreme left in Italy, but by the 1880s it was outlawed and marginalized. In the 1870s, following the examples of Carlo Pisacane (1818–57) and Giuseppe Garibaldi (1807–82), the Internationalists initiated uprisings in 1874 and 1877 to stimulate a social revolution. Social radicalism in the early years of modern Italy was founded not so much upon industrial disputes, as upon the conflict between civil society and the centralizing state. Malatesta and Carlo Cafiero (1846–92) imagined the revolution as a “social *Risorgimento*” or as a form of “propaganda by the deed,” which only later was transformed by anarchists into meaning lone assassinations or acts of terrorism. But this strategy failed. By the 1880s the anarchists became increasingly marginalized as parliamentary socialism grew in popularity and former comrades (Andrea Costa, 1851–1910) joined its ranks, with the Partito Socialista Italiano (Italian Socialist Party) founded in 1892. Thus between the 1880s and the turn of the century Malatesta developed a two-pronged strategy which remained constant throughout his political career. He realized that anarchism would remain a minority current on the Italian left, but the aim of the anarchists was to prod the socialists into insurrection and remain the conscience of the revolution during socialist reconstruction. He defined himself as an anarchist-socialist and later as an anarchocommunist organizer. He advocated an anarchist “party” or national organization; attempts at this failed in the 1890s, but 1919 saw the birth of the *Unione Anarchico Italiano* (Italian Anarchist Union) (UAI). This gave the anarchists a national presence during the two red years (1919–20). The UAI advocated anti-electoralism, direct action, and anarchocommunism. Nonetheless, Malatesta was not a sectarian and endorsed the concept of “anarchism without adjectives.” Malatesta hoped that the

socialists would permit the anarchists the liberty to experiment within post-revolutionary society, and during his brief stays in Italy in 1897–8 and 1913–14 he promoted united fronts for joint action with socialists and republicans; when liberties were threatened, he even promoted broader fronts against reactionary policies that included radical liberals in 1898, or dissidents on the right like the poet and novelist Gabriele D’Annunzio (1863–1938) against the rising power of Fascism in 1921–2. Indeed, in 1920 Malatesta entered into negotiation with social nationalists and interventionists (supporters of Italy’s entry into World War I) around D’Annunzio about a possible revolutionary March on Rome some twenty months before Mussolini’s in 1922. The return of Malatesta in late 1919 from exile in London sparked efforts by rank and file socialists to form united fronts, and through the charismatic moment created by his arrival (despite Malatesta’s detestation of the hero worship accompanying his triumphal tour of the peninsula), Malatesta’s efforts seemed to bear fruit; the daily newspaper that he edited in Milan, *Umanità nova*, briefly surpassed the readership of the socialist *Avanti!* As an insurrectionist, he called the bluff of the maximalist socialists who were not prepared to leave the constitutional framework even if they spoke of forming Soviets in Italy. At the same time, Malatesta warned the anarchists and the left against the politics of Leninism, which he characterized as a monopolistic Jacobin power politics which would devour its enemies and then its Bolshevik children.

Malatesta was one of the first anarchists to stress a syndicalist strategy, anticipating the better-known French movement and its leaders and theorists by a decade. His proto-syndicalist strategy was shaped by practical organizing in Florence between 1882 and 1885 and his sojourn in Argentina (1885–9), as well as being an enthralled eyewitness of the massive dockers’ strike in London (the New Unionism). The 1890s was a turning point for Malatesta. He resolutely opposed terrorism and anti-organizational theories based on spontaneity, affinity groups, and a determinist form of Kropotkinite anarchocommunism, later epitomized by his rival, Luigi Galleani (1861–1931). While he risked his life to denounce the terrorist bombers of the 1890s, his position on political assassination was far more complex, and he endorsed a form of tyrannicide,

especially in his responses to the assassination of the Italian king Umberto (1844–1900) or his later involvement in and/or support for anarchist attempts on Mussolini's life in the 1920s and 1930s.

In the 1890s Malatesta transferred the example of the New Unionism to Italy. He introduced the concepts of *ca'canny* (a work slowdown), the boycott, the sympathy strike, and the general trade union to anarchists and others in his newspaper he established in Ancona (1897–8). And from his exile in London he “converted” French anarchists to the syndicalist path. Emile Pouget (1860–1931) and Fernand Pelloutier (1867–1901) were two of his “students.” When politics in Italy and Europe liberalized after the turn of the century, the anarchists in Italy and elsewhere (for example, France and Spain) found institutional cover and fertile territory for their ideas within the buoyant international syndicalist movement. However, Malatesta sought to keep anarchism autonomous from syndicalism. Syndicalism was a tactic, but he did not believe it to be an end in itself, since it focused solely on the working class.

It should also be recalled that Malatesta was also concerned with the countryside. *Fra Contadini* (*A Talk Between Two Peasants*), first published in 1884, was translated into 11 languages. He did not promote the forced socialization of the land but plumped for the route of voluntary cooperation with anarchocommunism as the final goal, and thus he disagreed with the Italian socialists' policy of socialization of the land, which drove the sharecroppers and small farmers of the Po Valley into the hands of the Fascists in 1921–2.

Although he took several trips abroad, from 1919 Malatesta settled permanently in Italy, first briefly in Milan and then from 1921 (after his release from ten months of pre-trial imprisonment) in Rome. With the establishment of the Mussolini dictatorship in 1926, Malatesta was placed under a species of house arrest, because he was far too famous to imprison and his deportation, Mussolini feared, would only stimulate the overseas anti-Fascist opposition. In his last legal journal published in Rome (1924–6), Malatesta pondered the collapse of Liberal Italy. He argued bitterly against the Soviet model and claimed that his earlier prophecies had come true. He also denounced the hyper-organizationalist Platformist current around

the exiled Ukrainian anarchist, Nestor Makhno (1888–1934). Malatesta lived long enough to see the establishment of the Second Republic in Spain and was hopeful about the future of anarchism in its last remaining heartland, but at the end of his life he even questioned the first principles of anarchism without ever abandoning it for the ethical socialism earlier embraced by Merlino. The conundrum posed by the use of violence (for he remained convinced of the need for a violent revolution) and the authoritarian nature of violence itself, which he had denounced in his criticisms of the terrorists in the 1890s, returned in the 1920s and 1930s, but was never resolved.

Theoretical Work

Malatesta never published any self-contained volumes containing his theoretical thought. His work is scattered in his various newspapers, pamphlets, and interviews. As one of the last great theoreticians of classical anarchism (1860s to 1930s), his most important contributions were fourfold.

First were his sharp criticisms of Peter Kropotkin's form of anarchocommunism. The two men had both been exiles in antebellum London, but became enemies after Kropotkin endorsed the Allied side when war broke out in 1914; Malatesta remained neutral, advocating a social revolution to end the carnage. However, he had long been unhappy with Kropotkin's form of optimistic and deterministic anarchocommunism, which in a certain sense mirrored the positivist and determinist Marxism of the Second International. Unlike Kropotkin, who believed the basis of anarchism could be found in the superiority of mutual aid found in nature and human society, Malatesta detached human politics, political science, and sociology from biological analogies. Anarchism was not scientific; it was a form of human politics which involved will and carefully thought out programs. Thus, two of his most famous newspapers or journals were entitled *Volontà* (*Will*, 1913–15) and *Pensiero e Volontà* (*Thought and Will*, 1924–6). Malatesta wanted anarchism to be viable in the modern industrial city and therefore felt that Kropotkin's spontaneism, reinforced by his biological determinism, made light of the complex problems of keeping a modern industrial city alive in the wake of a revolution: thus, he criticized the cult of the

general strike, since a city would starve within a few days and the solidarity of the strikers would fragment. Instead, through organization, one could merely replace the authoritarian varieties for increasingly anti-statist and consensual forms of organization. Malatesta encouraged the factory occupiers in 1920 to restart the economy along libertarian socialist lines.

Secondly, Malatesta anticipated Robert Michels' (1876–1936) critique of the bureaucratization of radical organizations such as socialist parties and radical trade unions. Malatesta was wary of an uncritical form of syndicalism because for him the natural tendency for revolutionary trade union leadership was towards oligarchy and deradicalization. Thus he felt that anarchist trade unionists should act as radicalizing agents within whatever type of trade union they found themselves.

Thirdly, Malatesta criticized the emergent welfare state he witnessed in Britain before 1914 because he felt the pensions and social insurance system divided the established working class from the unskilled working class, and thus, borrowing a phrase from the unlikely personage of Hilaire Belloc (1870–1953), created a “Servile State,” thus anticipating a panoply of sociology theories about deradicalization that found favor in the last quarter of the twentieth century.

Fourthly, by the 1880s Malatesta and Francesco Saverio Merlino realized that their own doctrines were too immersed in the sociology of Marx, and thus, in Merlino's monographs and Malatesta's pamphlets and newspaper articles, using telling Italian examples, they argued that bureaucracy and the state could have an independent effect on the economic structure of society.

While insurrectional anarchism faded after 1945, Malatesta bequeathed to post-1945 anarchist theory an open-ended and non-scientific approach which appealed to both “reformist” anarchists such as Colin Ward (1924–) and to critical academics in the humanities and social sciences.

Malato, Charles (1857–1938)

Constance Bantman

Charles Malato was one of the best-known publicists of pre-World War I anarchism. He left an important legacy as an anarchist essayist (*Philosophie de l'anarchie*), a newspaper editor (*La Révolution Cosmopolite, Le Tocsin*), a journalist (*Les Temps nouveaux, L'Intransigeant . . .*), and a chronicler of the movement in its heyday (*De la Commune à l'anarchie, Les Joyeusetés de l'exil*). He was also an activist who was involved in protest campaigns and possibly a few revolutionary “interventions.” The son of a Sicilian who had fought in the 1848 Italian revolution and the Commune, Malato experienced exile at an early age, following his parents in Caledonia where his father was deported.

Malato returned to France in 1881 and in 1886 he founded *La Révolution cosmopolite*, a revolutionary paper that was not decidedly anarchist, although Malato did become an anarchist in the following years. In 1890 he was included in the sentence against the anarchist paper *L'Attaque*, of which he was a contributor; he spent 15 months in prison and an expulsion order was passed against him. In 1892 he was in London, along with hundreds of French and Italian anarchists seeking to escape repression in their own countries. He lived in Hampstead, acted as a go-between linking the French, Italian, and

British militants, but also frequented well-to-do circles, working as the private secretary of the controversial exile Henri Rochefort, and even publishing an article praising the French anarchist terrorists in the renowned *Fortnightly Review*. He also edited *Le Tocsin* (1892–4), an irregular publication which condemned anarchist terrorism and adopted an early pro-union stance. His London years are recounted in *Les Joyeusetés de l'exil*, which he published in 1897. On his return to France he was active in the dominant trends of the movement, taking part in the defense of Dreyfus and supporting syndicalism. He staged a fictional general strike in his novel *La Grande grève*. In 1905 he found himself at the centre of *l'affaire de la rue de Rohan*, and was accused of having taken part in the attempted assassination of the king of Spain during his visit to France. He received support from prestigious personalities and was eventually acquitted. In 1914 he defended interventionism, and in 1916 he signed the *Manifeste des Seize*, a call to arms whereby some of the leading anarchists renounced their earlier pacifism. After a brief exile in Britain, he returned to France, hoping to be sent to the front as he had requested. However, he was only given administrative functions. After the war he became a corrector in the Chambres des Députés but still contributed to various anarchist papers.

Malawi national liberation

Eliakim Sibanda

Historically, Malawi's population was centered in the fertile southern highlands and a thin belt along the shores of Lake Nyasa in Africa. In the nine-

teenth and twentieth centuries a smaller number and percentage of Europeans colonized the land than in nearby colonies. The 1945 census found that 99.7 percent of the 2 million residents of Malawi were African.

Like most African colonies, Nyasaland (now Malawi) was created by the late nineteenth-century European Scramble for Africa, which divided the continent among the leading European imperialist powers. The British-owned African Lakes Company secured concessions by 1891, when the Britain declared the British Central Africa Protectorate (the Nyasaland Protectorate from 1907). From 1893 to 1907 the British South Africa Company controlled neighboring Northern and Southern Rhodesia (now Zimbabwe and Zambia), which then reverted to British control.

Lacking mineral and other resources, Malawi attracted few white settlers, unlike Southern Rhodesia; mining, the mainstay of neighboring colonies, was not established. Besides missionaries, Europeans living in Nyasaland were primarily commercial farmers, concentrated in the fertile Shire Highlands. The spread of commercial farming spurred African population movements into the Highlands as wage labor expanded.

Livingstonia

The Livingstonia Mission established on Lake Nyasa in 1875 could trace its inspiration to missionary and explorer David Livingstone, with religious affiliation to the Free Church of Scotland. The mission provided medical services and education to African populations, at first primarily to the Ngoni. Over time Livingstonia became a source of new African elites, though students were increasingly unhappy with the mission's strict rules prohibiting beer-drinking, polygamy, and dancing, and the institution of a fee structure.

By 1880 the Livingstonia mission group was joined by three other missions in the Nyasaland area. Apart from acting as focal points for African community formation, the missions attracted lay people from Europe who, along with fulfilling their pious duties to the mission or, even more so, after they had left the missions, started plantations in the Nyasaland area. Much of this plantation land was acquired in the period before and during Nyasaland's transition into a protectorate.

The Shire Highlands, in the southeastern part of Malawi, were the most important sector of the economy. During the colonial period the region produced tobacco and cotton, cash crops grown mostly by smallholders, while African subsistence farmers raised sorghum, maize, rice, millet, and cassava. European cash crops replaced a more balanced, diversified, and complex traditional agrarian and exchange system.

When the British and Portuguese were vying for the territory in the late nineteenth century, the missions and European planters established a British footprint in the region. Immediately following Britain's declaration of control, a series of colonial conflicts broke out with Africans, many of whom lived around European missions. Apart from their commercial and nationalist efforts, the missions were charged with religious conversion. Europeans hoped that religious conversion would turn Africans into good British colonial citizens. But the religious meanings of European or US denominations were reinterpreted and redeployed by Africans. Religion served as an organizational force replacing traditional local organization that was breaking down. John Chilembwe's uprising in 1915 flowed at least partly from the organizational base formed by his Providence Industrial Mission.

Plantations

The plantation culture in Nyasaland expanded demand for and exploitation of African labor. Traders seeking labor in the Lakeshore and Upper Highlands regions of the protectorate returned with workers recruited for plantations. As local labor became scarce, white commercial farmers sent labor-recruiting teams into Portuguese-ruled Mozambique, and operated the *thangata* system of labor control, a form of bonded labor, to control workers from the Mulanje District in Mozambique. However, persistent labor shortages led European farmers to rent land to Africans through tenant farming.

After 1897 and 1904, the protectorate government directly encouraged Africans to work in plantations, but government involvement was quickly discouraged by the British Colonial Office. As the African economy expanded, plantations competed for labor with nearby British colonies, particularly South Africa, which frequently recruited directly from Nyasaland. Through 1910, plantation laborers were paid with bartered goods

such as cloth, blankets, farm implements, and other goods. As independent African farming increased, plantation owners reverted to recruiting migrants and even children. Labor reports from the 1920s demonstrate that children were employed as laborers on Nyasaland plantations, comprising 20–25 percent of the labor force.

Labor Conflict

The British viewed the protectorate for its suitability for large-scale commercial agriculture, beginning with cotton in the late nineteenth and early twentieth centuries, tobacco before World War I, and then tea in the 1930s. In the early twentieth century, plantation owners were placed in competition with the transport industry, which used the protectorate to move goods or material from Central Africa to the East. Missionaries supported creation of a rail system, ostensibly for humanitarian reasons, rather than freeing up labor for their own needs. In 1908 the initial section of the railroad was completed.

At the turn of the century the colonial government sought to establish provisions to sell European-owned land lying idle back to Africans. The Land Ordinance (Native Locations) No. 5 of 1904 provision would have changed the system in Nyasaland from one of labor coercion to rent coercion, leaving at least the possibility for Africans to recover their land. But while the ordinance was passed, no action was taken and in 1928 it was repealed. European landowners held the line against the ordinance, far more interested in African labor than rent.

If the laws covering tenancy were stagnant, the situation in Nyasaland was not: between 1902 and 1909 the African population in the Shire Highlands increased from 95,000 to 210,000. The perpetuation of land insecurity contributed to the Chilembwe Rebellion against plantation owners in 1915. Following the rebellion, colonial authorities introduced indirect rule, elevating the position of compliant traditional chiefs over the emergent African business class. In response to this exclusion and the tenancy issue, mission-educated African teachers, civil servants, ministers of religion, businessmen, and farmers, as well as a few revolutionary chiefs, banded together in Native Associations from 1912 onwards to resist settler rule.

By 1926, 115,703 Africans, or about 10 percent of the protectorate's population, lived on private

estates. The plantation system disrupted African life at the most basic level. Courts considered whether or not men could bring wives to their homes or whether women could bring home husbands, typical in a matrilineal society. In a 1932 ruling, the court decided that landowners had primacy over traditional marriages. In the 1940s planters still argued that privately held estates, with Africans as tenants, were most suitable for all. The general manager of the British Central African Company argued that planters could best ensure both care of the land and Africans living on it: "We are definitely of the opinion that if the natives of this country are left to their own devices they will starve themselves in a few years."

By 1954 land acquisition reduced the percentage of estate land in Nyasaland to 3.7 percent of the total. Part of the incentive for this more egalitarian approach to land tenure was the emergence of the Central African Federation in 1953. In the 1950s and early 1960s land distribution was central to the future of the federation, and by 1962, when Hastings Banda assumed leadership, labor coercion on plantations was abolished.

Early Resistance

Africans opposed intrusive inroads into their lives, strenuously resisting white settlers and European missionaries. Most notable was the Yao and Ngoni resistance to British rule. Through documenting the Yao and Ngoni, the writer Sir Harry Johnstone helped shape British views toward the Malawian population. As adherents to Islam, Johnstone viewed the Yao migrants of the Southern Lake of Malawi as undemocratic, rude, uncooperative, and uncivilized exploiters of the Manganga people who lived in the region. He also saw the Ngoni as warlike and ferocious. Johnstone's characterizations encouraged the British colonial power to set out to suppress both the Yao and Ngoni people. Even the Livingstonia Mission was uncomfortable with the Ngoni, dissuading British colonialists from attacking them in fear that the resistance would be fierce and successful.

Despite these efforts to divide and rule the local African population through depicting the Yao and Ngoni as preying on fellow Manganga and Chewa people, Africans of all backgrounds continued to resist British settlers and missionaries.

From the late nineteenth century on, Africans in Malawi opposed missionaries, the colonial government, European plantations, and political, socioeconomic, and cultural intrusion.

A colonial hut tax, the rise of an African peasantry, and the large and growing network of mission stations and schools restructured the largely agrarian Nyasaland social system. Many Nyasas, educated and unskilled, sought work in the southern colonies. Land concessions to whites, the impact of the spread of African cash-cropping, and an influx of African immigrants into the Highlands in search of jobs and land, as well as pervasive racial discrimination, set the scene for the conflicts and struggles of the colonial period.

Independent Christianity and John Chilembwe

A key figure was John Chilembwe, who waged an uprising concurrent with millennial movements. In the period from 1909 to 1914, Africans in the region were becoming more alienated from western rule and churches, and sought return to traditional remedies or to follow the millennial theories of semi-independent African churches. In the early twentieth century, Africans educated in the mission culture were frustrated with European-dominated society.

As much as religion organized Africans during the Chilembwe rebellion, it also blunted unity. African groups in the region were pulled in different directions by foreign-imposed religious differences, whether Catholicism, Protestantism, or Islam. While a military failure, Chilembwe's rising drew Africans from a range of ethnic backgrounds in a common struggle, presaging the later history of African nationalism and foreshadowing decolonization. The rising was not a spontaneous action or millenarian movement, or an uncontrolled burst of anger, but a complex response led by Chilembwe, a western-educated African influenced by radical Christianity and abolitionism.

Early Nationalist Currents

Even before World War I, numbers of educated Africans – many employed as clerks, teachers, and businessmen – began to organize lobby groups and welfare associations to advance their economic and political concerns. Some were inspired by Chilembwe; all were responding to a colonial

situation that promised a new world but blocked entry to the African elite who desired it most. Early organizations often took an ethnic and elitist form, but many of the issues they raised were of general interest to the African majority.

The first modern nationalist movement, the Nyasaland African Congress (NAC), was formed in 1944. Frederick Sangala, a government clerk, advocated a united African party to promote African self-improvement and elimination of racial discrimination. His views were supported by NAC president Levi Mumba, a graduate of the Livingstonia Institute who advocated direct political representation for Africans. Like Chilembwe, Mumba drew on Christianity to make claims for African rights, but he was skeptical of western individualism, which he believed was divisive and at odds with African values. In 1949 political reforms provided limited African representation in the political system without fundamentally changing colonial relations. Theoretically open to all Africans, NAC was mainly a party of educated men and their wives. Matters began changing as efforts toward amalgamation of Nyasaland and Rhodesia moved forward. In part due to pressure from white settlers in southern Africa, Britain set out to establish the Central African Federation in 1953.

The moves toward Federation, seen as an attempt to entrench white authority, provided an important stimulus to African nationalism in all three colonies. Federation was seen in the two northern territories as leading to an extension of Southern Rhodesian-style white supremacy. NAC believed Africans in Southern Rhodesia lacked any political rights or educational opportunities, and feared amalgamation would place Nyasaland under direct settler control; Africans would also lose access to Nyasaland's remarkably advanced training and education system, and with this, lose privileges NAC leaders considered vital to their political project.

The Federation question therefore sparked agitation and resistance from NAC, which was transformed, for a time, into a mass nationalist movement. By 1953 NAC claimed a paid-up membership of 5,000, with a diverse social base. The organization resisted Federation through strikes, boycotts, and withholding taxes. In neighboring Northern Rhodesia, a similar campaign was waged by the Northern Rhodesian Congress (NRC).

In this unsettled atmosphere, Hastings Banda first came to prominence. The son of farmers in the Kasungu district of Nyasaland, Banda worked in South Africa in the 1910s, before studying medicine in the US and earning a medical degree in Britain. From abroad, Banda opposed Federation and supported NAC, strenuously seeking to convince its leadership to enlist African chiefs in the anti-Federation campaign.

Federation and After

On April 9, 1953 the predominantly white Southern Rhodesian electorate voted in favor of Federation, and this was followed by approval from the Nyasaland and Northern Rhodesian legislative councils. A petition against Federation, supported by a large majority of Africans in Nyasaland, including many chiefs, was ignored. On August 1, 1953 the Central African Federation was officially declared: a white-dominated self-governing crown realm with its own parliament and prime minister, it nonetheless provided for expanded African political representation.

The failure to stop Federation demoralized African nationalists in Nyasaland and Northern Rhodesia, including Banda, and NAC membership fell by 90 percent. NAC was divided and weakened by its failure to stop Federation. NAC president Ralph Chinyama resigned and was replaced by Wellington Manoah Chirwa, a moderate, who, with Clement Kumbikano, elected to represent NAC as a federal minister. By the end of 1954 the number of federal seats available to NAC increased to five, and two more posts were filled by younger, more militant graduates of Fort Hare University in South Africa and Makerere University in the Uganda Protectorate: Henry Blasius Masauko Chipembere and Murray William Kanyama Chiume. Banda remained abroad, now based in the Gold Coast.

In November 1956 Chipembere wrote to Banda, requesting his to return to Nyasaland, and supporting his efforts to oust Chirwa. Banda was cautious at first, but returned in 1958, after decades abroad. On Sunday, July 6, Banda arrived in Nyasaland, hailed by a large gathering that came to greet him. In August 1958 Banda was elected NAC president and began touring Nyasaland, speaking to large gatherings throughout the country. As Banda's support grew, opposition also increased from the colonial administration and the settlers. After a racial clash, the Settlers'

Nyasaland Association threatened to take matters into its own hands. The Federation government's response – that the event was isolated and required no further action – angered settlers. Tensions escalated and police intervened against protestors. Banda was banned from Rhodesia.

An emergency NAC conference gave Banda a vote of confidence and sanctioned a strategy of non-cooperation, civil disobedience, and sabotage. The times were tense and volatile, and the administration unable to address the multitude of protests and demonstrations, a number of which were violent, including racial clashes. As in 1915, settlers and the government considered force as the best means of managing the tense coexistence of Africans and the relatively small white population. While the government was filled with anxiety, rumors of a violent African rising spread; Africans were moving rapidly towards unity. Eventually, a state of emergency was declared in March 1959 under the moniker Operation Sunrise. Banda was jailed, and after uprisings broke out, troops were deployed, killing some fifty people. By June, around 1,000 NAC supporters were jailed and the party proscribed.

In September 1959 NAC was replaced by the Malawi Congress Party (MCP). Organized by Orton Chirwa and Aleke Banda, it boasted a membership of over a thousand within two short weeks. The British government, anxious to resolve the situation, tacitly approved the MCP launch and helped organize Banda's release in Zomba, the then-capital, on April 1, 1960. Banda stepped into the leadership of a well-organized movement with an effective propaganda mouthpiece, the weekly *Malawi News*. He was elected life-president of the MCP, after Chirwa and Aleke Banda ceded the presidency. Banda quickly moved to consolidate power in the party, which grew soon to 250,000 members; his increasingly authoritarian style, and tendency to promote a personality cult, were already evident.

Malaysia, protest and revolt

Collin Rajasingham Abraham

Malaysia is a multicultural society that was born in the throes of protest, largely influenced by British colonialism. The historical effect of British colonialism on Malaysia brought into sharper focus the fusion of protest and revolution into the body of social theory. Because colonial intervention, since its very inception in 1874, was accompanied by decades of both political and military anti-colonial struggles, it engendered a substantial ability to resist colonial domination through protest, ultimately leading to revolution. Indeed, such was the ferocity of the protests and uprisings that the colonial government did not enjoy a continuous period of peace for more than six months during its entire rule, up to the granting of political independence in 1957.

Located at the confluence of the main trade routes from the West, Southwest Asia, and East Asia, Malaysia was the center of trade and commerce of seafaring nations, especially prior to the initial advent of European mercantile capitalism. The country's location resulted in a range of economic and political forces converging in the town of Malacca, creating a vast transient population made up of an estimated 90 different ethnic groups. The resulting pattern of inter- and intra-ethnic relationships led to cultural assimilation that evolved into a new community known as Baba Chinese (the offspring of indigenous Malays and Chinese residents.)

In 1824, after the signing of the Anglo-Dutch Treaty, the British government obtained sole and exclusive overall jurisdiction to enter into mutually acceptable treaty obligations with the Malay States, while at the same time allowing the nominal exercise of sovereignty of the local rulers. The practical application of contemporary ideals by the new colonial power became essential to the political economy in Malaysia. The demands of the industrial revolution, especially for the vital raw materials of rubber and tin, as well as the successful emergence of portfolio investment capital, radically undermined the existing local feudal-type subsistence economy. The importance and need for "good government" and law and order was paramount if British

political and economic interests were to be protected and sustained toward revenue generation and profit maximization.

Accordingly, because what was at stake was literally the transformation of villages and towns through the creation of modern institutions, the colonial government more or less issued a blank check to encourage foreign capital investment. But in practice such investment radically disrupted the feudal-type subsistence economy and especially the social structure of the indigenous people. This development crucially undermined the historical and traditional basis of interpersonal relationships and mutual responsibilities from being status-oriented to contractual-based relationships. The further maturing of the capitalist market economy through technology driven modernization, and transnational economic integration with the intervention of multinational corporations, resulted in a dependent political economy where local political and economic institutions were suppressed and became mere appendages as satellites to the colonial metropolis.

The new economic and political developments that accompanied modernization did not benefit all segments of society. Indeed, apart from the more urbanized areas centered around towns and cities that were linked to the cash nexus of the colonial economy, vast sectors of the rural economy relied almost entirely on the subsistence mode of production. Therefore, an economic dichotomy came into existence where the modern sector depended on the export of tin and rubber whereas the indigenous economy depended on agriculture. Largely, Chinese and Indian immigrants made up the workforce of tin and rubber industries, leaving the indigenous Malays confined to the subsistence sector. This factor would lead the indigenous population to resent the loss of their political sovereignty to the British as well as their economic opportunities to those imported workers.

Accordingly, a militant revolution and more widespread local resistance ensued, not only against colonial domination itself, but also, and more importantly, between the local ruling class that espoused a society based on the perpetuation of dominant vested interests, and a subject class seeking free association within democratic institutions. This ruling-class dominance was a formidable repressive force because it was in cahoots with the colonial power and took on an identity of its own, giving rise to unique patterns

of resistance against progressive social change. These developments played a pivotal role in the evolution and transformation of the entire societal structure and ushered in profound changes in inter- and intra-ethnic and race perceptions. The intertwining of these perceptions occurred, in turn, within the polarization of ethnicity and race within the class structure.

The roots of protest and revolution in Malaysia, then, can be traced to the juxtaposition of ethnic and social variables as they became intertwined with political considerations. The British literally "inherited" a society that was ready-made for ethnic division. Such divisions were further exacerbated by overlapping geopolitical factors, such as enclaves of different groups living separately in settlements, mixing only for ad hoc domestic and social purposes, but never mingling. Eventually, Malayan society would evolve around "closed" institutions that were initially highly stratified and repressive in nature, both internally and externally.

Profound transformations of these rigid institutions gradually galvanized groups to seek more flexible arrangements that in turn made demands on the colonial social structure that were inimical to the status quo and sowed the seeds for organized protest and revolution. Such protests among the different ethnic and social class groups began mainly because their specific economic interests overlapped with their identities, so that the colonial power in fact managed successfully to suppress protests through the policy of divide and rule. This happened as a reaction when the protest movements gradually evolved and expanded their scope to include more than one economic activity and on a pan-Malayan basis, so that membership became multi-ethnic and interclass in composition. This development saw protest movements being propelled into new social formations in the political arena with the emphasis now on the ideology of anti-colonialism.

In the twentieth century the British government continued its policy of indirect rule and in doing so failed to shape a constitutional ideology in Malaysia. Instead, it continued on a path that regarded the Malays as amiable but unsophisticated and rather lazy. While the British utilized them as good soldiers during World War I, in the end they deemed them incapable of self-government. As for the Chinese, the British held them as a formidable ally and foe, considering

them both clever and dangerous. In the 1920s and 1930s, with political events in China coming to a climax, the Chinese Nationalist Party and the Communist Party of China began to build their own rival clandestine organizations in Malaya. This development led to constant conflicts in the Chinese towns which further led the British to believe that there would never be any form of solidarity among such a disparate array of different races.

By the end of World War II the British government would find itself in near financial ruin as it became tied to the United States for basic support for its ailing economy. Nowhere was this scenario felt more clearly than in Malaya. Because the revenue earnings from tin and rubber exceeded that of all other colonies put together throughout the entire British Empire, the colonial government treated Malaya as the "jewel in the crown" for sustaining the British economy with the latter's essential export-driven economy. It was consequently imperative to consolidate military and political power to ensure that the revenue-earning capacity of the colony was not disrupted, and toward this end various repressive measures against local movements were adopted, such as toward trade unions where industrial strike action was damaging vital exports. In response, these movements themselves were forced to adopt militant strategies to fight back and achieve their objectives that ultimately resulted in having to fight for political independence itself. Certain other movements, such as political parties of the left, also gradually came under the influence of the ideologically committed leadership of the Malayan Communist Party. For the first time, the negative implications for the political economy became evident when a nationwide work protest *hartal* (total work stoppage) was successfully carried out that included Singapore, creating alarm in the colonial government because it established the link between the working classes and the peasantry. A final total rejection of constitutional plans for reforms in the form of a comprehensive "Peoples' Constitution" by the colonial government set the stage for the demand for outright political independence among all protest groups, including those that espoused a militant revolution.

In the light of widespread industrial unrest, and the accompanying retaliation against the provisions for colonial law and order, the government

declared a state of emergency, which in effect meant rule by the military forces, including that under the Anglo-Malayan Defense Treaty, as well as local police forces. The rationale claimed by the British was that the Malayan Communist Party had initiated complete disruption of the economy, resulting in the breakdown of law and order in an attempt to take over the government and establish a communist state. In this connection it was also submitted that the political parties of the left were legitimate targets to maintain law and order, and accordingly the British implemented widespread repressive measures, many of which violated basic human rights.

The strategy of utilizing the massive propaganda machine was intended to demolish the popular nationalist demands for constitutional reforms, leading to a popularly elected democratic and independent government. These measures, both external and internal, did in fact achieve the objective of crushing the protest and revolutionary movements in Malaysia. The central theme that runs through Malaysian protest is a "top-bottom" scenario of society, where decisions involving power and its implementation were essentially the domain and monopoly of the traditional, political, bureaucratic, and social elite groups of the main ethnic and racial communities in the country. These elite formations were the direct legacy of colonialism that would later be inherited by the government of independent Malaya and Malaysia. After independence these elite groups continued to be intertwined in the structure of the post-colonial power status quo as they further consolidated and entrenched the unequal distributive system.

Throughout its colonial domination over Malaysia the British Empire never had more than a few months of breathing space without protests being mounted against it. Protests were a natural outgrowth of the situation in which political power was devolved to a consortium of local elitist groups, within a race-based political system, anxious to protect and perpetuate their colonial interests. Despite the seeming diversity of the groups involved in the movements for political independence (Malay nationalists, trade unions, Malay left, Islamic radical parties, the MDU, and the Malayan Communist Party), however, there was absolute unanimity in the struggle for freedom in the context of national unity and national integration.

On April 1, 1946, one year after the conclusion of World War II, Britain relinquished its power over Malaya, and a Malayan Union was formed without the inclusion of Singapore, which remained a crown colony. However, local Malays opposed the union because it had loose citizenship requirements and it reduced the Malayan power to rule. After a great amount of pressure was exerted, the Union was later replaced by the Federation of Malaya on January 31, 1948. Formally, the Federation gained independence on August 31, 1957 and later consolidated with other Malayan states, including Singapore, on September 16, 1963. It was then renamed Malaysia.

Malcolm X (1925–1965)

Thomas Edge

One of the most controversial figures of the American civil rights movement, Malcolm X (El-Hajj Malik El-Shabazz) was an outspoken critic of racism in the United States and throughout the world during the 1950s and 1960s. His uncompromising stands on the fate of non-white people across the world, combined with his withering critiques of the mainstream civil rights movement, made him a polarizing figure in the black freedom struggle.

Malcolm X was born Malcolm Little on May 19, 1925 in Omaha, Nebraska. His parents, Earl and Louisa Little, were members of Marcus Garvey's Universal Negro Improvement

Association (UNIA). Their political beliefs faced violent resistance in Nebraska, forcing the family to move to Milwaukee and, ultimately, Lansing, Michigan. In Lansing, the family's home was burned down in November 1929; less than two years later, Earl Little was killed by a street car under suspicious circumstances. The subsequent financial strain on the family eventually drove Louisa Little to a mental institution. Malcolm briefly stayed with a white foster family before settling with his half-sister, Ella Collins, in Boston in 1941. By his eighteenth birthday, he moved to Harlem and began working as a railway porter and waiter, later committing petty crimes, running numbers, and selling drugs. In 1946, he was found guilty of larceny in Boston and sentenced to eight to ten years in Charlestown State Prison.

While in prison, Malcolm's brother, Reginald, introduced him to the teachings of Elijah Muhammad and the Nation of Islam (NOI) in 1948. The religious conversion had a profound effect on Malcolm's life and conduct. He became a voracious reader and an acclaimed debater within the prison. On August 7, 1952, Malcolm gained early release from prison and moved to Detroit to live with his brother Wilfred. Soon, Malcolm began attending meetings of the NOI. His intelligence attracted the attention of Elijah Muhammad, who brought him to Chicago to train him as a minister. For the remainder of the decade, Malcolm became the NOI's best organizer, establishing dozens of new temples and revitalizing others. He was rewarded in 1954 with the most important ministry in the NOI: New York's Temple No. 7. His fiery oratory also gained the attention of journalists, particularly after the 1959 airing of a CBS documentary about the NOI, "The Hate That Hate Produced." Although he was always careful to acknowledge the teachings of Elijah Muhammad, Malcolm became the public face of the group by the end of the decade.

Malcolm's political message during the 1950s and early 1960s combined the racial teachings of the NOI with a pan-African call for unity among the victims of white racism. He used the NOI's unorthodox version of Sunni Islam to promote ideas of racial pride among African Americans, by both pointing to the accomplishments of Africans in the past and assailing the negative effects of racism on the black community. While Malcolm emphasized the impact

As a one-time member of the Nation of Islam, Malcolm X (1925–65) represents to many the more radical element in the US civil rights movement. After leaving the Nation of Islam in 1964, he made a pilgrimage to Mecca and became a Sunni Muslim. While in Mecca that April he met with Prince Faisal al-Saud (1906–75), who later became the king of Saudi Arabia. (Getty Images)

of racism and subsequent need for an independent black nation, he also tried to convince his black audiences that they had the power to change their own lives, particularly through the power of Allah. His rejection of white religion and culture contributed to a searing historical analysis of European colonizers and the United States, one which placed racism at the center of their dealings with Africa, Asia, and Latin America while emphasizing its intentional and essential nature. Racism, Malcolm argued, was not an exception to the otherwise democratic natures of western nations. Rather, it was essential to understanding their identity, evolution, and success over the preceding centuries. Malcolm believed that people of color had to understand this key point to appreciate the evils perpetrated by white nations and to begin the process of spiritual, mental, and political emancipation.

This internationalist approach to race relations manifested itself in a number of concrete ways during the late 1950s and early 1960s, including a July 1959 trip to Egypt, Sudan, Nigeria, and Ghana on behalf of Elijah Muhammad, and a 1960 meeting with Fidel Castro in New York. Not only was Malcolm becoming the face of the NOI within the United States, but more people around the world began to acknowledge Malcolm as a major leader within the African American community.

As Malcolm's fame increased, so too did his frustration with the NOI's rejection of political

involvement. Malcolm relished the opportunities to debate mainstream civil rights leaders in public meetings, writings, and radio and television broadcasts. Publicly, Malcolm questioned the wisdom of seeking integration with white "devils," the use of non-violence as a successful tactic, and the likelihood of any constructive change in an inherently racist society. Privately, however, he felt vulnerable to criticisms that he had never participated in a single demonstration in the South, nor had he faced violent demonstrators in his public life. For all his talk of creating a *black nation*, Malcolm thought that the NOI's proscription on political activities separated him from the very community he wanted to lead.

By the end of 1963, several factors combined to push Malcolm from the NOI and Elijah Muhammad. Within the Nation, resentment toward Malcolm's growing reputation led to rumors that he was trying to oust Elijah Muhammad as leader of the group. From Malcolm's perspective, he became increasingly aware of Muhammad's own personal failings, including his refusal to support a number of children he fathered by young women he employed. These tensions came to a head in the aftermath of the assassination of President John F. Kennedy. Malcolm publicly insisted that Kennedy's death represented the logical culmination of American violence at home and abroad, or "the chickens coming home to roost." Muhammad immediately suspended Malcolm for 90 days. As Malcolm came to realize that the NOI would never reinstate him, he announced his final break with the group on March 8, 1964. Within days, he organized Muslim Mosque, Inc., to serve as his organization base of operations and to begin his conversion to Sunni Islam. Just five weeks after his break with the NOI, Malcolm left New York for Mecca to complete the *hajj*, or holy pilgrimage.

Malcolm's trip to Mecca and travels in Africa in 1964 ushered in a new period of contemplation and political change. He still insisted upon the dominance of racism in the West's dealing with the non-white world and continued to harbor a distrust of whites as a group. But he was willing to acknowledge that sympathetic whites could contribute to the freedom movement, particularly by working within their own communities to change attitudes. Moreover, the presence of white Muslims in Mecca opened Malcolm's mind to the possibility that Islam could unite

all people, not just people of color, in its calls for universal brotherhood.

Upon returning home, he announced the formation of a new group, the Organization of Afro-American Unity (OAAU), in hopes of recruiting a larger secular following. It took a decidedly black nationalist approach, emphasizing black economic, political, and cultural development and the creation of race-based institutions. Just weeks after starting this project, Malcolm once again left for Africa on July 7. During his four months abroad, he addressed the second annual conference of the Organization of African Unity (OAU) and attempted to garner support for bringing human rights charges against the United States before the United Nations.

The last few months of Malcolm's life were marked by internal and external turmoil. He continued to make tentative overtures to the mainstream civil rights movement, including a speech in Selma, Alabama in February 1965 at the invitation of the Congress of Racial Equality (CORE) and the Student Non-Violent Coordinating Committee (SNCC). His conflicts with the NOI also continued, particularly when the Nation attempted to evict Malcolm from his home. On February 14, 1965, Malcolm's home was firebombed. One week later, on February 21, 1965, Malcolm was assassinated during an address at the Audubon Ballroom in Harlem by three members of the NOI. He was survived by his wife, Betty Shabazz, and their four children; later that year, Betty gave birth to twin girls. The posthumous publication of *The Autobiography of Malcolm X* (written with Alex Haley) in 1965, combined with the rise of black nationalism in the second half of the 1960s, helped cement Malcolm's legacy as a voice for radical change in the African American community.

Mali, protests and uprisings, 1850s–2005

Jean-Jacques N. Sène

Mali has long been a crossroads for the Arab peoples of North Africa and for black peoples living south of the Sahara and has seen a number of protests and revolutions. It was the seat of major medieval empires. In the seventh and eighth centuries the kingdom of Ghana rose to prominence through the commerce of gold, salt, and slaves. In the thirteenth century the empire of Mali, at its zenith in the thirteenth and fourteenth centuries, was erected on the ruins of Ghana, which eventually collapsed and gave way to the empire of Gao in the sixteenth century.

Between 1852 and 1864, Tukulër (a branch of the Peulhs) warrior El Hadj Oumar Tall conquered most of the territory of Mali by launching his Jihad. The French subsequently pushed him out from his fortified camp near the city of Kayes in 1864 to establish the bases of the new colony of Upper Senegal. From there they engineered the occupation of today's Mali and Niger in 1857. They also captured Medina, a slave trading city, and erected a fort there. French conquest and domination was hastened with the creation of the colony of Upper Senegal-Niger in 1904 in the framework of the *Afrique Occidentale Française* (AOF, French territories of West Africa) and the amputation of the territory of Upper Volta to create the French Soudan (today's Mali). The construction of the Dakar-Niger railroad followed in 1923.

Between 1913 and 1916 the French faced the revolt of the Bobo in the South and the Touareg in the North in reaction to the "excesses of the colonial administration." Following the collapse of the federalist project with Senegal, Modibo Keita became the first president, adopted a one-party state socialist doctrine, and distanced himself from France and other francophone countries of the sub-region by rejecting the CFA franc and adopting his own currency. To guarantee state

solvency, the influence of the USSR in Mali between 1963 and 1990 was all-pervasive.

When a young lieutenant named Moussa Troaré staged a military coup that toppled Modibo Keita in 1968, he first enjoyed widespread popularity, promoted foreign investments, and integrated the zone franc; but on the political front he remained strictly hostile to democratization and quickly dented the faith of the Malians in his administration's ability to reform the country. Worker and student protests were systematically met with police brutality until the regime was swept away in March 1991 by the coalition of students, labor unions, women's organizations, human rights groups, journalists, and a multitude of other civil society groups. When the troops of Moussa Traoré fired on defenseless protesters in Bamako, killing 106 and wounding 708, during the People's Revolution, uncompromising defiance to the regime led to his arrest.

A first attempt at the "pacification of the Touareg" – the National Pact signed in Algiers – had failed in 1992, under transitional president Amadou Toumani Touré, who had himself been a general under President Moussa Troaré's dictatorial regime (1968–91). In 1990 the Touareg had taken up arms against the military dictatorship responsible for embezzling thousands of tons of international food assistance that could have alleviated the plight of the nomadic light-skinned warrior tribes of Northern Mali, Southeastern Algeria, and Northwestern Niger who were competing for scarce resources against their black Songhai agro-pastoralist neighbors after the extended periods of drought that had decimated their cattle.

On March 27, 1996, in the historic city of Timbuktu, the Touareg rebels of Northern Mali laid down their arms in the presence of the country's president, Alpha Oumar Konare and Ghanaian head of state Capt. Jerry Rawlings, then also acting as the executive chairman of the Economic Community of West African States (ECOWAS). This event came as a direct consequence of the system of multi-party democracy adopted in 1991, and was lauded as a victory for Malian civil society. Against a backdrop of restored social stability and sustainable peace, Mali has been able to honor most of its agreement package with the World Bank and the International Monetary Fund ("Easement for Poverty Reduction and Growth") negotiated in 1999. However, more than 70 percent of the Malian population

still lives in poverty, and economic diversification from gold, cotton, and cattle breeding remain the only revenue-generating exports.

Although social science has established that there is a positive relationship between democracy and economic development, democracy can prosper in the absence of wealth. Mali, one of the world's poorest countries, has remained democratic since its first multi-party elections in 1992, but over the past years, political success has been continuously blemished by poor economic performance. The popular politician without a party, Amadou Toumani Touré, affectionately called "A-T-T" by his compatriots, became president in 2002 while the defeated incumbent was elected president of the prestigious African Union Commission. The country also registered a diplomatic success in the year 2003 with the liberation of 14 European hostages held in Kidal (southern Sahara) by the Muslim GSPC (Salafist Group for Combat and Predication) rebel group. The onslaught of Malian migrants from Côte d'Ivoire fleeing the civil war caused a significant reduction in financial transfers across the border and a critical drop in revenues from national activities transiting through the port of Abidjan.

Malta, protest and revolution

Emanuel Buttigieg

The history of protest and revolt in Malta is complex and intriguing, particularly given its small size (the surface area of Malta is only 122 square

miles). Such a varied history is the result of a particular interaction between geography and the actions of people. The Maltese Islands lie right in the center of the Mediterranean Sea, 37 miles to the south of Sicily and 217 miles north of Libya. The major island, Malta, gives its name to the whole of the archipelago, and the word *Malta* is used interchangeably with the phrase *Maltese Islands*. The second island, Gozo, is about a third the size of Malta, and the third island, Comino, is miniscule and practically uninhabited. Though Malta lacks any natural resources, its position at the crossroads of the Mediterranean has always made it the object of interest of the powers that vied for control of this sea.

The Hospitaller Era

Up to 1530 the history of Malta was tied to the history of Sicily. Whoever ruled the biggest island in the Mediterranean generally also ruled Malta. In this way, Sicily and Malta passed through a sequence of Phoenician, Roman, Byzantine, Muslim, Norman, Hohenstaufen, Angevin, and Aragonese administrations, all of which left a deep impact on the ethnic and cultural heritage of these islands. In 1530, through a grant made by Charles V of the Holy Roman Empire, Malta passed under the control of the military-religious Order of Saint John the Baptist of Jerusalem, whose members were also known as the Hospitallers. This order originated in the Holy Land in the eleventh century as an organization dedicated to the care of the poor and sick pilgrims who arrived from Europe. Gradually, it acquired a military character and alongside the Knights Templar it actively participated in the defense of Jerusalem to prevent it from reverting to Muslim control. When the whole of the Holy Land was lost during the late thirteenth century, the Hospitallers moved first to Cyprus and then to Rhodes, from where they maintained their incessant warfare against Islam, and in particular against the Ottoman Empire. It took all the might that Suleiman the Magnificent could muster to dislodge the Hospitallers from Rhodes in 1523.

The Hospitallers then used Malta as their headquarters from 1530 to 1798. This was a golden age for Malta, during which there was an open exchange of people, money, and ideas, making its harbor cities among the most cosmopolitan in the Mediterranean. Politically, the

islands were independent of Sicily, although the economic, social, and religious ties remained strong.

When the Hospitallers first arrived in Malta, the only maritime settlement was Birgu, which was protected by a small castle. The Hospitallers established themselves in Birgu and by the time of the 1565 Ottoman siege they had developed another city, Senglea, next to Birgu and built a fortress at the harbor's entrance. Immediately after the 1565 siege, in which the Hospitallers were victorious, the city of Valletta was developed over the years, and the rest of the harbor was built up and transformed. The presence of the rich, famous, and multi-ethnic Order of Saint John in Malta spearheaded dramatic economic, social, and cultural changes, which by 1798 had transformed Malta from an underdeveloped peripheral entity of the Sicilian crown into a significant Mediterranean maritime power.

Malta in early modern times was the site of some of the most varied and engaging acts of protest and revolt. From the 1540s to the 1580s Protestant doctrines made their way into Malta and established a following among the urban educated Maltese and among some of the Hospitallers. The establishment of the Roman Inquisition in Malta until 1798 clamped down this trickle of religious protest. Nonetheless, people, both high and low, often swerved from the official religious establishment to follow their own beliefs.

Throughout this period, clashes within the Order of Saint John were common. However, an internal revolt in 1580–2 threatened to break the order apart. The spark was the decision in 1580 by the Grand Master Jean Levesque de La Cassiere to expel all prostitutes from Valletta, to the great indignation of many Hospitallers (who were religious knights bound by the vows of chastity, poverty, and obedience). A group of rebellious Hospitallers held a council in which they deposed the Grand Master and elected the Hospitaller Romegas as lieutenant of the order. La Cassiere, escorted by jeering Hospitallers and prostitutes, was removed from his palace to the fortress of Saint Angelo for safekeeping.

La Cassiere still held the loyalty of many Hospitallers, who offered their arms to restore his power. However, fearing a fratricidal bloodbath, La Cassiere refused such assistance and instead relied upon the pope (the ultimate head of the

Order) to restore his power. The pope summoned both La Cassiere and Romegas to Rome, where he restored La Cassiere to his authority and reprimanded Romegas and the other conspirators. Though the overt cause of this revolt was the expulsion of prostitutes, there were deeper motives. The old age and excellent state of health of Grand Master La Cassiere constituted a significant obstacle to the aims and aspirations of some of the conspirators. Eager for office and power, some of the members of the Order desired to rid themselves of La Cassiere to advance their own careers. Even Romegas was in fact manipulated and used by others to obtain their ends. Both La Cassiere and Romegas died while still in Rome, which allowed the Order to start afresh.

The 1630s were a turbulent period. The Order's plans to extend Maltese fortifications necessitated increases in taxes. These taxes were to be levied on everyone, including traditionally exempt clerical estates. Malta was seething with unrest. Father Filippo Borg, a spokesperson against the violation of the rights of the Maltese by the Order and an admirer of Callus, is representative of the sentiments of the age. In the mid-1630s he established a chapter of canons for his parish of Birkirkara, a subtle move pregnant with political meaning that aroused the anger of the Grand Master. In 1636 the clerical establishment in Malta filed a protest in Rome against the new taxes. In 1637 an attempt to collect these taxes met violent resistance in the villages. In 1638 a memorial was presented to the king of Spain in the name of the Maltese inhabitants, in which the Grand Master was accused of misgovernment. In the end, the original tax proposal was amended to one that was less onerous and more acceptable to all parties.

In 1639 it was the Hospitallers' turn, particularly the younger ones, to revolt against Grand Master Jean Paul Lascaris Castellar's injunctions against balls and masquerades during Carnival. These restrictive measures were deemed a result of Jesuit influence over the Grand Master. A number of Hospitallers mocked the Jesuits, and when Lascaris arrested them, a revolt broke out in which the Jesuits' college was attacked and they were temporarily forced to leave the island.

Various forms of protests and revolts also characterized the eighteenth century. These included the spread of the Church-condemned

Masonic lodges among the Maltese elites and some Hospitallers, subtle criticisms embedded in the printed material of the age, and revolts or attempted revolts.

An infamous attempt at revolt was that of the slaves in 1749. Slavery was common throughout the Mediterranean, with Christians and Muslims preying on each other's shipping and lands. In 1749 the Muslim slaves in Malta prepared to murder the Grand Master and take over the island through an ingenious plan, which included a Muslim navy ready to invade at the appropriate time. However, their plans were foiled when a Christian Jew, Giuseppe Cohen, overheard them and reported everything to Grand Master Manoel Pinto de Fonseca. The Grand Master had all the conspirators punished and gave Cohen a reward.

As for the people of Malta, their champions at the end of the eighteenth century were the priest Gaetano Mannarino and the scholar Michele Antonio Vassalli. In 1775 Father Mannarino, together with other priests and lay people, led a revolt against the Order in which they managed to take control of two fortresses inside Valletta and raise a flag bearing the image of Malta's patron saint, St. Paul. Their grievances concerned taxation levels, the high price of basic foodstuffs, and disrespect for the rights of the Maltese. Despite initial success, the show of popular support that Father Mannarino had hoped for did not materialize, and the Hospitallers soon overpowered them. The rebels were punished, and Father Mannarino languished in prison until the French freed him after conquering Malta. Vassalli, an intellectual and patriot, was one of the first advocates of the use of Maltese as the national language. He also put forward proposals for an extensive system of primary education and for structural reforms in the way the Order functioned. In 1797 he was involved in a failed conspiracy against the Order, found guilty, and sent to prison until, like Father Mannarino, the French liberated him.

French Rule

The Hospitallers' rule in Malta reached an abrupt end on June 9, 1798 when the French force that had been assembled to attack Egypt appeared off the shores of Malta. Three days later, due to carefully constructed plans and Maltese collaborators, Napoleon Bonaparte was master of

the islands, and the Hospitallers had to leave in a hurried and humiliating manner. Napoleon stayed in Malta briefly, during which he overhauled the administrative system of the islands and introduced the revolutionary principles of republican France.

The rapid pace with which the political and economic structures of Malta were changed, and the attack on the Maltese way of life, particularly the looting of churches and disregard for the population's Catholic faith, led to an outbreak of a major and widespread revolt on September 2, 1798. Signs of restlessness had been evident almost from the very start of French rule, when, as had happened during the times of the Hospitallers, placards, papers, and graffiti appeared on the walls of Valletta criticizing the French. One such placard, pinned to the very Tree of Liberty which had been used by the French to commemorate the fall of the Bastille, read, "Tree without fruit, cap without head, little time is left for you to reign." This warning proved to be an omen. By September 3, 1798 the French had lost control of the entire island, except for the fortified harbor cities to which they retired for protection. On the top of the walls of the old capital city of Mdina, from where the Maltese insurrection had begun, a white and red Maltese flag was raised in place of the French tricolor.

The Maltese in the countryside organized themselves in a representative national assembly and sought international aid to effectively blockade and defeat the French. The national assembly sought and gained the protection of the pro-British king, Ferdinand IV of Naples and Sicily, as well as the assistance of British Admiral Lord Horatio Nelson. Underground contacts between the Maltese outside and inside French occupied cities were maintained, and under the leadership of the priest Mikiel Scerri, a detailed conspiracy was prepared by which the French would have been ousted from the cities as well. However, the conspiracy was foiled by the French, Father Scerri and the other rebels were apprehended, and some, including Father Scerri, were executed in January 1799. Despite the failure of this revolt, Father Scerri and his contemporaries captured the imagination and gratitude of subsequent generations of Maltese, and gained for themselves a place among the heroes of Malta. Two months before this episode, the island of Gozo had been liberated from its French garrison through British assistance. By

September 1799 the French had to capitulate, thereby ending French rule.

British Rule

In turn, this ushered in 164 years of British colonialism (1800–1964). Again, this was a period of dramatic social, economic, and cultural change, during which Malta's remaining links with Sicily were severed and various forms of protest and revolt followed each other with rapidity.

The British forces in Malta had negotiated the terms of the capitulation of the French and the signatories to it were the French and the British. Maltese leaders were left out. Despite the protests of the Maltese elected leaders at being excluded, their voices were hardly heard in the international situation of 1800 to 1815, dominated as it was by the British-French struggle for power. Slowly, Malta slid to the status of a British fortress colony, recognized as such by the 1815 Treaty of Vienna. Nevertheless, the Maltese were not silent, presenting a "Declaration of Rights of the Inhabitants of the Islands of Malta and Gozo" to the British government. This declaration, an eloquent synthesis of the right of self-determination of peoples, stands as a monument to the high values and aspirations of the Maltese at the turn of the nineteenth century. It did not stop the British government from treating Malta like a conquered territory, but it harbored the seed of Maltese aspirations.

The Maltese British colonial experience was characterized by an incessant struggle for the attainment of a constitution and representative government. The local elites used their culture as a shield to withstand the Anglicization of Maltese society. Gradually, a new pro-British elite arose that espoused the use of the English language as the medium of modernity against Italian, which was the language of the past. In the midst of this cultural nationalist battle, which is generally known as the Language Question, the Maltese vernacular gradually grew in importance and recognition to find its niche as the national language of Malta. It was along these linguistic lines that Maltese political parties emerged and developed from the 1880s. The British, having observed the insurrection against the French, learnt an important lesson: if they were to control Malta effectively, they had to respect the Catholic establishment therein. Though the lower

clergy always remained diffident of the British because of their Anglican religion, the upper ranks were generally supportive of the British, and under British rule the Maltese Church increased in power and status like never before.

In broad terms, protest and revolt occurred in British Malta within this setting. In this struggle for Maltese rights, many leaders came to the fore. In the 1830s Giorgio Mitrovich voiced the wish of the Maltese for a free press and an elected assembly. Freedom of the press was gained in 1839, and from then onward Maltese journalism flourished as a source through which the protests of the Maltese could be vindicated. Throughout much of the nineteenth century a particular impetus for the development of the press originated in the flow of political exiles to Malta from Italy, as that country was caught in the turmoil of the unification struggle.

The 1880s and 1890s were particularly tense, as the Language Question reached an acute peak, and as a new complicating factor, the Marriage Question, entered the scene. This latter issue concerned the validity of interfaith marriages in Malta, and British attempts to introduce civil marriage. Similar to the situation at the time of the French, an attempted transformation of Maltese society from the outside was not welcomed. The dominant Maltese politicians of the time were Sigismondo Savona, Fortunato Mizzi, and Gerald Strickland. Savona, pro-British, and Mizzi, pro-Italian, temporarily joined forces against Strickland, who, being half-British and half-Maltese, embodied the idea of British colonialism as a progressive force.

Massive anti-British demonstrations occurred in the early 1890s, and on May 6, 1891 blood was spilled when demonstrators clashed with police. Though no one was killed, many were injured. The *Sei Maggio*, as this event came to be known, further crystallized Maltese resistance to Britain and to Strickland's Anglicizing policies. The union between Savona and Mizzi, however, soon gave way and they went their separate ways in opposing British rule. Around this time, a new name came to the fore, Manwel Dimech. He equated the use of the Maltese language with nationalism, attacked British colonialism, espoused Maltese independence and the rights of women, criticized the Catholic Church for keeping the masses in subservience, and began to muster a following among the working classes. However, with World War I looming, the British could not allow

such sedition to continue in a fortress colony like Malta. The British exiled Dimech, already excommunicated by the Church, to Egypt, where he died. For long an unsung hero, modern scholars have rehabilitated Dimech's character and role in Malta's nationalistic movement.

Maltese political leaders continued in their protests to gain responsible government. In 1918 they appealed to US President Woodrow Wilson's "Fourteen Points" in support of their demands. The war's end meant a reduction of British military expenditure, which led to a rise in unemployment. Coupled with the high prices of basic foodstuffs, the discontent of the political classes merged with that of the masses. University students were the first to take to the streets of Valletta in protest. On June 7, 1919, while Maltese politicians gathered to discuss what their next move should be, a popular revolt broke out in Valletta. Millers, bakers, Union Jacks, and pro-British institutions and individuals came under attack. British troops had to be called in to restore order, as the Maltese police refrained from controlling their co-nationals. Soldiers opened fire and over the course of two days at least six people were killed and dozens more wounded. This event, the *Sette Giugno*, sealed in blood the aspirations of Maltese nationalism and it led in 1921 to the granting of a constitution under which elected Maltese politicians were responsible for the internal affairs of Malta.

During the interwar period, Malta was self-governing. Elections were held regularly, even though the franchise was still a limited one. However, by 1932 this constitution had collapsed. Its demise was caused by the persistence of the Language Question, an open conflict between Strickland's Constitutional Party and the nascent Labor Party on the one hand, and the Catholic Church on the other, and the increasingly tense international situation, where the rise of Fascism in Italy was becoming more and more threatening to the British presence in Malta and the Mediterranean. With the outbreak of World War II a number of Maltese considered pro-Italian (and therefore, in those circumstances, seen as pro-Fascist) were exiled to Uganda.

During World War II many Maltese served in the British armed forces and Malta itself had to suffer incessant bombardments, making it the single most bombarded place throughout the

whole war, in terms of bomb tonnage dropped. After the war ended, Britain was exhausted and its place as a major world power had slipped into the hands of the United States and Soviet Union. The process of decolonization began with the granting of independence to India in 1947.

Independence

Similar to Britain, the Labor Party in Malta emerged as the dominant force in postwar politics. The heritage from which the Labor Party rose was a pro-British one. The rising star within the Labor Party was Dominic Mintoff, who, after his party had won a landslide victory in the 1947 general election, ended up splitting the party in a power struggle with the leader, Paul Boffa. Whereas the Nationalist Party, led by Nerik Mizzi (son of Fortunato Mizzi), came to advocate independence from Britain, the Labor Party under Mintoff advocated a policy of Integration, making Malta an integral part of the United Kingdom. It was on this Integration platform that Mintoff won the 1955 election. However, when this scheme had collapsed three years later, popular revolts once again swept across Malta.

The split within the Labor Party and its clash with the Church assured that the Nationalist Party would return to office. Under the leadership of Prime Minister George Borg Olivier, Malta became independent on September 21, 1964. This created a new set of logistics within which the people of Malta had to work and strive to secure their well-being and prosperity. The mid-1970s to mid-1980s were characterized by widespread protests against the increasingly despotic Mintoff (who returned to office in 1971). At a time when the credentials of Maltese democracy were in the balance, popular agitation and political acumen assured a mostly peaceful transition of power from the Labor Party to the Nationalist Party. The major question of the 1990s concerned whether or not Malta should join the European Union, the governing Nationalist Party being in favor and the opposition Labor Party being against. This question seeped into every level of Maltese society and stirred deep and sincere passions that saw some of the biggest demonstrations ever recorded. By means of a referendum and a general election, most voted for membership in the European Union on May 1, 2004.

Mandel, Ernest (1923–1995)

David Michael Smith

Born in Belgium, Ernest Mandel became a revolutionary Marxist as a teenager during World War II and participated in the resistance to the Nazi occupation. In the decades following the end of the war Mandel became one of the most prominent intellectual and political leaders of contemporary Trotskyism. The publication of

Marxist Economic Theory (1968), *Late Capitalism* (1975), and *Long Waves of Capitalist Development* (1980) established his reputation as one of the world's foremost Marxist economists. In addition, Mandel developed a powerful critique of reformist strategies for socialism and defended the revolutionary Marxist political aims of smashing the capitalist state and creating a dictatorship of the proletariat in *From Stalinism to Eurocommunism* (1978), *Revolutionary Marxism Today* (1979), and *Power and Money* (1992). Mandel's theoretical contributions and polemics on the question of socialist transformation in the advanced capitalist societies arguably constitute the most compelling defense of the Marxist case for revolution to appear in the past half-century.

Throughout his career Mandel harshly criticized the authoritarianism, bureaucracy, and repression that had come to be associated with Marxist-Leninist regimes. But while Mandel considered existing workers' states to be deformed, he nonetheless recognized many of their economic and social achievements, and he argued that the promise of socialism would be redeemed by the workers of the world through the retrieval and renewal of the main principles of revolutionary Marxism.

Mandel acknowledged that Lenin's and Trotsky's support for the banning of other political parties and intra-party factions in 1920–1 contributed to the growing bureaucratic degeneration of the first workers' state. But Mandel argued that this momentous mistake must be analyzed in the context of the extraordinary economic and social crisis faced by the communists in the wake of the civil war. Mandel pointed out that Lenin himself came to recognize the growing problems of bureaucracy before his death in 1924. And Mandel emphasized that by the mid-1930s Trotsky had significantly modified his earlier views, embracing not only the exercise of power by workers' councils but also the imperative need for political pluralism and the defense of civic freedoms in socialist society. For Mandel, the historical experiences of twentieth-century communist regimes point to the need for revolutionary movements to reclaim workers' democracy as the heart of the socialist project – but not to any justification for abandoning a revolutionary strategy for fundamental social change.

Mandel energetically defended smashing the capitalist state as an indispensable strategic objective of a revolutionary workers' movement.

Like Marx, Engels, and Lenin, Mandel conceived of the dismantling of the various structures and institutions of the capitalist state as a profoundly and genuinely democratic process involving the masses of workers – and an essential prerequisite for socialist advance. And Mandel contended that not even the capture of parliament by a socialist party or coalition would eliminate the imperative need for the masses of workers to undertake extra-constitutional and insurrectionary actions in their workplaces, in their communities, and in the struggle for state power.

Mandel rejected the view that widespread violence or political repression are inevitable outcomes of revolutions, and he insisted that the defining feature of workers' revolutions in the advanced capitalist countries would be the destruction of the old class power and the creation of a new one – that of the working class. But Mandel argued that the political empowerment of the working class would require the abolition of the bureaucratic, military, police, and judicial institutions of the capitalist state. He emphasized that the most fundamental question in a revolution is which class possesses the general means of coercion, the monopoly of armed force. Mandel believed that the dynamic of class struggle in revolutionary situations will almost inevitably lead to counterrevolutionary violence, and he emphasized the need for the working class to be able to defend itself by armed force and deprive its class enemy of its capacity to do the same. In the tradition of revolutionary Marxism, Mandel believed that when the monopoly of armed force passes from the capitalist state to the new organs of workers' power, the working class will have conquered state power.

Throughout his career Mandel argued that the new workers' state must be a dictatorship of the proletariat. The dictatorship of the proletariat would involve a genuinely revolutionary form of democracy in which the masses of people directly participate in the governance of their workplaces, communities, and societies and develop new forms of delegation and representation to facilitate regional, national, and international cooperation and coordination. Mandel emphasized that the dictatorship of the proletariat is not a dictatorship in the usual sense of the term and argued that proletarian dictatorship should consolidate and deepen all democratic freedoms. Mandel explicitly acknowledged that even bourgeois parties and their supporters should be free

to organize and agitate freely, so long as they do not attempt to use violence to restore capitalist property relations. Nonetheless, the capacity of the working class to effectively use the general means of coercion to defend the process of socialist transformation would be an essential feature of the dictatorship of the proletariat.

Mandel's case for socialist revolution in the advanced capitalist countries has a great deal to be said for it. Mandel effectively retrieved and illuminated the radical democratic content of the revolutionary Marxist commitments to smashing the capitalist state and creating the dictatorship. In so doing, Mandel articulated a strategy for socialist transformation that would be both unabashedly revolutionary and unmistakably democratic. For many contemporary Marxists and revolutionary socialists, a strategy informed by Mandel's insistence on the centrality of workers' councils and extra-constitutional political action against capital and its state offers far greater chances of success than a strategy which confines workers' struggles within existing constitutional limits.

Mandela, Nelson (b. 1918)

Luli Callinicos

Nelson Mandela has become the icon of South Africa's successful transition to a political democracy. A leading figure in the African National Congress (ANC), imprisoned for a quarter of a century on Robben Island, and the first president of a democratic South Africa beginning in 1994, Mandela has become the symbol and its lodestar of the struggle against apartheid.

Nelson Rolihlahla Mandela was born in 1918 in the small village of Mvezo in Thembuland to the local chief, Gadla Henry Mphakanyiswa, and his third wife, Nonqaphi Nosekeni Nkedama. The kingdom had been annexed by the British within living memory, 40 years earlier, after a century of struggle to defend the land against British settlers. The child was named Rolihlala – “pulling the branch of a tree,” a metaphor for disturbing the established order. The name was significant; Gadla lost his position and the government stipend that went with it when he refused to account to the local British magistrate for his ruling in a dispute in Mvezo over cattle. He was pointedly demonstrating that his accountability lay not with the colonial administration but elsewhere – according to an African maxim, “a chief is a chief by the people.”

The family was obliged to leave Mvezo. They moved to the district of Qunu, the home of Rolihlahla's mother. The boy took on herding duties at a young age: cattle were central to the economy of the homestead, and children were active contributors. During the long hours in the *veld*, the boys whiled away their time with stick-fighting. In these contests of strength, endurance, dexterity, and tactical sense, Mandela recalled, years later, that he absorbed values vital to the resolution of the struggles that lay ahead. “I learned that to humiliate another person is to make him suffer an unnecessarily cruel fate. Even as a boy, I defeated my opponents without dishonoring them.”

Nosekeni, his mother, was a Christian, and she and her husband agreed that their children should attend the local Methodist school, a wattle-and-daub hut. It was there that the child was given a new name, and a colonial identity. The boy's teacher, Miss Mdingane, selected for him an upright English name, and so the child came to be known as Nelson, after the great British naval hero.

Within a few years, Gadla died of tuberculosis. He had been a valued counselor to the regent Jogintaba of the Thembu, and after his death the regent adopted his mentor's youngest son, Rolihlahla. The child had to leave his mother and his extended family and live at the “Great Place” – the royal court. This also left a profound imprint: looking back, while acknowledging its gender exclusiveness, Mandela remembered the regent's council meetings as a place where “everyone was heard: chief and subject, warrior

After 50 years of struggle against apartheid in South Africa, and nearly 20 years in prison for fighting to end racial oppression, Nelson Mandela was elected president of South Africa in 1994, a year after being awarded the Nobel Peace Prize. Here he is pictured with F. W. de Klerk saluting the crowds in Pretoria on his inauguration day. (Photo © Juda Ngwenya/REUTERS)

and medicine man, shopkeeper and farmer, landowner and laborer . . . democracy in its purest form.” He was struck by the councilors’ “freedom to criticize the regent” – “wise men who retained the knowledge of tribal history and custom” – and by the regent’s duty to listen carefully, not speaking until the end, summing up what had been said, and suggesting a consensus for all the diverse opinions. The regent became for Mandela an exemplar – a man of insight, dignity, integrity, and compassion, committed to genuine consensus, yet ultimately not afraid to lead.

Mandela was sent to a Methodist missionary school, Clarkebury, as befitted a child of distinguished lineage, together with the son of the regent, Justice. It was here he first encountered whites, and was introduced to Christianity and western education. In later years, he was to put the accouterments of the ruling class to good use in the service of his people. Like so many other young men, Mandela had to master literature and math, and tussle with an alien moral code imposed by missionary teachers. In the process, he was learning to negotiate the relationship

between tradition and modernity. To please his benefactor, he worked conscientiously and made good progress at school, graduating to an even more prestigious school, Healdtown. Here too, while appreciating the skills that he learned and the widening of his world beyond Thembuland, he was later to believe that his education had “often required subservience” and a negation of his own traditions.

Like Oliver Tambo – the ANC leader who would become his close friend and comrade – Mandela studied at the black Fort Hare University. His social and intellectual horizons rapidly expanded. He met young black people from many parts of South and Southern Africa, and began to develop an awareness of black society beyond the traditional and ethnic horizons of his youth. He began to rethink the regent’s plan for him to become a counselor to King Sabata, at the time still a child. Elected as a student leader, he clashed openly with authority. In his final year, he decided along with his peers to boycott university procedures in protest against the poor food meted out in the residences. The authorities gave him an ultimatum to abide by the rules or leave.

He left, and returned home. The regent was outraged and decided that the young men needed to grow up, arranging marriages for both Justice and Nelson. But the two men had absorbed the western idea of having control over one’s individual fate. They helped themselves to one of the regent’s cows, sold it, and with the proceeds made their way to Johannesburg – the city of gold and destination.

Johannesburg in the 1940s was a symbol of modernity, menacing traffic, and high-rise parallel buildings. It was an urban life that challenged the manhood and dignity of young blacks, whether educated or laborers. Retracing the footsteps of the two newcomers to the city, a hidden history emerges – the third-class train ride and the segregated railway station; the mine compound, each room housing scores of black laborers in cement barracks while white miners enjoyed family homes; downtown black Johannesburg and the bustling Diagonal Street of many colors, scents, and sounds; the mines and their compounds, where he and Justice first found work; crowded black townships with their dirt roads, modest homes, and backyard shacks. There was no escaping the association of technological advancement with white culture yet the

landscape announced a white-dominated and bigoted society, racially unequal in economic and social conditions. The message was clear: black men and women were in town simply to serve the needs of the white population. Whether laborer, teacher, court interpreter, or nurse, the wages of black people scarcely varied – they were one-tenth or less of what most white workers and employees earned.

Into this world Mandela had thrown his lot, for Justice was persuaded to return home and face his destiny. He eventually found a tiny room in Alexandra Township, some 10 kilometers from the city center. With very little money, he would walk there and back. He had met an impressive estate agent, Walter Sisulu, a man without much formal education but far ahead of the university-educated tiny elite in both life experience and maturity. It was Sisulu who introduced Mandela to a widening circle of remarkable people managing to rise above the system of racial oppression, and thinking about social change and how best to achieve it for black communities. One of these was Oliver Tambo, a mathematics and physics master at the prestigious St. Peter's College in Johannesburg, also expelled from Fort Hare on a point of principle during his year of training for a teachers' diploma. Mandela also met the president of the ANC, the renowned Dr. Xuma (who had also attended Clarkebury).

With Sisulu, Tambo, and others, Mandela began to seriously discuss how the ANC – a respected movement founded in 1912 to unite and advance all African ethnic groups – could again take up the leadership of the struggle. The three friends – along with the brilliant and fiery articulated clerk and fellow Fort Hare graduate A. P. Mda and Anton Lembede – started the Youth League as a “ginger group” to stimulate the almost moribund ANC. The group attended the ANC Congress in 1944 and formed the ANC's Youth League. Its guiding ideology was then resolute Africanism, rejecting “exotic revolutionary doctrines” like Marxism (a European import whose basic notion of class struggle did not, they agreed, address race struggles and was therefore irrelevant). They were, however, interested in learning from the strategies and tactics of other organizations, including strikes, boycotts, and civil disobedience, and developed a Programme of Action that advocated a shift away from the ANC's stress on petitions to the

authorities to mass-based protest campaigns and actions.

The racially exclusive elections of 1948 heralded the victory by a slim majority of the National Party on a platform of apartheid. Building on the policies of the earlier colonial era, the apartheid regime launched a barrage of discriminatory new legislation tightening up segregation and enforcing the racial order. The internal passport system, or pass laws controlling the movement of black labor, was tightened; black workers were officially excluded from skilled jobs, oscillating migrant labor was encouraged (with families left in the rural areas); and in the city too, other daily hardships of blacks increased dramatically.

Encouraged and assisted by Sisulu, Mandela (studying at the white University of the Witwatersrand) found work as a legal clerk for a sympathetic lawyer, Lazar Sidelsky. Later he was articulated, and eventually qualified as an attorney. His intention was to use his legal training as a weapon to defend his people. He set up a law firm and was joined by Tambo, who had in the meantime also qualified as an attorney. From the start, their chambers were crowded with men and women in deep trouble, desperately seeking help from black lawyers who, it seemed, were better able to understand their predicament – facing evictions as a result of racial zoning, arrest under the pass laws (later extended to African women), endless petty discrimination, school segregation, and arrest for any number of regulations while they were going about their daily business. Convicted offenders faced the prospect of being sent to work under harsh conditions on white-owned farms. Soon, the partners had to engage clerks to assist them, and their courtroom battles often included instances of blatant racism by the magistrates against the attorneys themselves.

In the meantime, the ANC had adopted the Youth League's Programme of Action in 1949. The ANC embarked on a Defiance Campaign in 1952, in collaboration with members of the Indian Congress such as Maulvi Cachalia, Nana Sita, and Dr. G. M. Naicker. The campaign was a turning point in many ways. For the first time, the ANC worked in a multiracial alliance, and Mandela and Tambo were impressed with the non-racial, personal commitment displayed by communists. These Youth League leaders were now finding themselves in more responsible, national positions and exposed to a wider world.

Sisulu had been elected national secretary of the ANC, Tambo was the Youth League vice-president, while Mandela replaced the banned J. B. Marks as provincial president of the ANC in the old Transvaal and was also national president of the Youth League.

Mandela became “volunteer-in-chief” in the Defiance Campaign, traveling across the country urging people to defy “Six Unjust Laws”: separate and unequal public amenities, pass laws, disenfranchisement, and the Bantu Authorities Act that divided the country into tribal enclaves and left 87 percent of the land under white control. “Defiers” joined up and, moving in groups, embarked on acts of civil disobedience: they sat on whites-only park benches and entered stations or post offices through the whites-only entrances; white defiers walked into black townships; thousands were arrested, clogging up the prisons.

The apartheid government reacted with increasing repression. Following a riot, 20 African and Indian leaders, including Mandela, were arrested and convicted under the Suppression of Communism Act, and sentenced to nine months’ hard labor. This was followed by a barrage of banning orders – the “banned” were forbidden to attend “social gatherings” (defined as more than two people), make speeches, or be members of a political party. “I was made by the law a criminal,” commented Mandela, “not because of what I had done, but because of what I stood for, because of what I thought, because of my conscience.” His banning order forced him to withdraw overtly from the ANC, but he continued behind the scenes to participate in the planning of the campaigns that followed. The regime meanwhile intensified its program of implementing its apartheid design. In 1953 a Bantu Education Bill was introduced and eventually passed. Its purpose was to provide separate and inferior schools and curricula in the townships for black children, forbidding the churches or independent organizations to participate in black education.

What emerged was the Freedom Charter, a document which was to define the identity of the ANC. In his trial in 1962, Mandela called it “the most important political document published by the ANC. . . . It declares that South Africa belongs to all who live in it and that only a democratic state based on the will of the people can secure to all their birthright.” The Freedom Charter was formally adopted after it

was presented to the Congress of the People in 1955 in Kliptown, Soweto. The ANC now led a multiclass and multiracial alliance consisting of the Congress of South African Trade Unions (COSATU), the South African Indian Congress, the Colored People’s Congress, and the small white Congress of Democrats – the “Congress Alliance.”

In December 1956, Mandela, like Tambo, Sisulu, and communist leader Joe Slovo, was one of 156 men and women arrested and charged with high treason. He remained one of the accused after charges were withdrawn against 97 of the accused one year later. The treason trial dragged on until 1961, when all were acquitted. By then, momentous events had occurred. Sixty-seven people were shot outside the Sharpeville police station during a peaceful protest organized by a new breakaway movement opposed to the Freedom Charter – the Pan-Africanist Congress (PAC). Led by Robert Sobukwe, the PAC was hostile to communists, whites, and Indians and took its stand on the Africanism of the early Youth League. The massacre – followed by a second at Langa – resulted in the banning of the ANC and PAC, and the declaration of a state of emergency. Thousands of opponents were locked up without trial for five months, including Mandela. When they were released, most were banned or banished to remote rural areas, or served with house arrests.

The ANC was now an underground organization. Tambo was sent into exile to become the ANC’s international diplomat, while Mandela took up the baton internally. It was he who initiated a call for an “All-in African Conference.” The aim was to unite the oppressed and find a way forward. In March 1961, an audience of 1,400 people gathered in a small township in Pietermaritzburg, Natal. Giving the security police the slip, Mandela made a surprise appearance. After his speech to the assembly, he proposed a resolution to call for a national convention of all adult men and women, irrespective of race, color, or creed. A National Action Council was formed, and Mandela was elected its secretary.

In this capacity, Mandela called for a three-day stayaway at the end of May, to coincide with the white Republic Day celebrations. He had developed masterful public relations – he would telephone editors of the white newspapers to make public announcements from call boxes. Jittery, the government responded by mobilizing citizen forces and commando units in a huge military

operation. Police patrolled the township streets and helicopters hovered above. Black workers were warned that if they stayed away from work they would be fired and forced out of the towns. The white newspapers, the Liberal Party, and the PAC opposed the stayaway.

The general strike was by no means a failure: in Johannesburg and Port Elizabeth (the most politicized cities of South Africa) the majority of workers responded to the call; however, the ANC and the underground South African Communist Party (SACP) leadership came to a consensus that any further strikes would inevitably lead to massive clampdowns and violence. A decision was taken to opt for armed struggle. The proposal was nothing new, and had been discussed in 1958 as a possible option when peaceful tactics were exhausted.

At its inception, the newly formed *Umkhonto we Sizwe* (the “Spear of the Nation,” or MK) abjured the taking of life and opted for symbolic targets – the sabotage of sites and equipment accompanied by a call for economic sanctions. In short, MK was conceived as a weapon of “armed propaganda.” It was multiracial in composition, and its leaders included senior ANC and SACP figures. On December 16, 1961, Mandela, as supreme commander of MK, publicly announced its formation. “One of the lessons I learned from the failed Western Areas anti-removal campaign was that it is the oppressor who defines the nature of the struggle; in the end, we would have no alternative but to resort to armed struggle.”

Mandela was fast becoming an international figure. The BBC was excited to be able to report a telephone conversation with the elusive “Black Pimpernel.” In 1961, Mandela gave his first television interview to ITN – it was to be his last for 30 years. Early in 1962, Mandela left South Africa illegally. His purpose was to raise support for MK amongst the newly independent African states, and explain to the external wing of the ANC the decision to take up arms. With Tambo, he toured African countries and received some military training. Shortly after his return, on his way home after reporting to Chief Luthuli, president of the ANC and 1961 Nobel Peace Prize winner, Mandela was apprehended and put on trial. He was charged with incitement and leaving the country illegally.

On the first day of the trial, he stunned the court and the audience by exchanging his

customary three-piece suits for a traditional leopard-skin *kaross*. “I was a black African walking into a white man’s court. I was literally carrying on my back the history, culture and heritage of my people. That day, I felt myself to be the embodiment of African nationalism.” In court, his wife Winnie Madikizela Mandela and friend Albertina Sisulu also arrived wearing traditional dress. It was a clear statement of the nationalist nature of the accused’s revolutionary intent. At the start of the trial, Mandela, conducting his own defense, began by challenging the right of a white magistrate and prosecutor to judge the right of a black man to resist racial oppression and exploitation. At the end of the trial, found guilty of the charges, Mandela gave what was supposed to be a plea in mitigation but amounted to a political testament. In particular, he recalled, with the pain and nostalgia of a world that had been cruelly smashed, the functioning homestead economies, the importance of humanism (*ubuntu*) in social relations, the perceived collective values and the participatory democracy of precolonial South African societies. He was given the heaviest sentence yet for a political offense – five years’ hard labor without parole.

Less than two years later, the remaining underground leadership of MK was uncovered in a hideout on a small farm outside Johannesburg. The 1963 arrests netted most of the MK high command, and Mandela was among those charged with 222 acts of sabotage and conspiracy to facilitate a violent revolution. The charge carried with it a death sentence and reverberated worldwide. Mandela’s statement, when it came, was directed as much to South Africans and the international community as to the court. In the context of a world deeply embroiled in the Cold War, Mandela explained why the ANC, a national organization, had so readily worked in alliance with communists. At the end of his four-hour testimony, he put down his papers and faced the judge. He spoke from memory:

During my lifetime I have dedicated myself to this struggle of the African people. I have fought against white domination, and I have fought against black domination. I have cherished the ideal of a democratic and free society in which all persons live together in harmony and with equal opportunities. It is an ideal which I hope to live for and to achieve. But if needs be, it is an ideal for which I am prepared to die.

The accused were surprised and delighted to receive a sentence not of death, but rather life with no parole. The next morning, all (except Denis Goldberg, the only remaining white accused, who was incarcerated in Pretoria) were flown to Robben Island to begin their sentence. Desmond Tutu was to write that “People might think that twenty-seven years in goal was an utter waste, but I beg to differ. That time was actually crucial in the evolution of a moral giant.” Mandela would spend a further quarter of a century in prison. Fortunate not to be separated, the Rivonia leaders formed a group and began the long process of negotiating with their jailers the terms of life in prison. Their strategy combined an uncompromising insistence on dignity with a willingness to respect their jailers as human beings. Their consistent and focused resistance eventually paid off: some of the more brutal warders were phased out, and the prisoners won small victories that made life more bearable and dignified. Mandela later recalled that his anger lasted for 14 years, which coincided with the most vicious years on Robben Island. After that, he began to reflect and develop a more creative, problem-solving approach.

The leadership continued to build the ANC within South Africa as much as possible. They were also able to find ways of communicating (albeit unevenly) with the exile movement headed by Tambo. As the years went by, thousands more political prisoners joined them: they brought with them news of the escalating conflict and the increasing use of violence and torture to contain the liberation movements, and they were in turn exposed on the Island to the elder “statesmen” of the movement, men of increasingly legendary stature. After the Soweto uprising of 1976, militant young people began to arrive and challenged the quiet diplomacy of their parents’ generation. As prisoners served their terms, they left with formal distance-learning qualifications, as well as in-house courses on political education. Many were released, only to take up the struggle again underground or in exile, where thousands of political refugees ended up in the ANC’s camps.

The apartheid regime also recognized that Mandela was the indisputable ANC leader – in style, confidence, and shrewdness – and realized the political risk of his dying in prison. Following a brief stint in a hospital on the mainland, Mandela was not returned to Robben

Island but sent to Pollsmoor Prison, outside Cape Town. It seemed clear to Mandela that this was a ploy to isolate him in the hopes of influencing him; however, a plan had slowly been developing in Mandela’s mind: his years in prison gave him time to reflect on the fears and anxieties of the whites that helped underpin apartheid. In the mid-1980s, he decided to take upon himself the responsibility and the risk of opening communications with P. W. Botha, prime minister and president of South Africa. This would help open the negotiations that would eventually end apartheid.

Mandela overcame the suspicions of those militants who feared that in his long incarceration he had succumbed to “the enemy.” Such qualms had to be seen in the context of escalation of resistance and violent reaction in the townships. However, Tambo – who managed to stay in contact with Mandela – ascertained Mandela’s strategic thinking, and endorsed it as part of a multiple strategy that did not exclude armed propaganda, mass mobilization, international pressure, and other options. This allayed the fears of many ANC supporters. Finally, in February 1990, in the context of the collapse of the Soviet Union, the ANC, the PAC, and the SACP were unbanned.

A week later, Mandela was released. From his first speech as a free man, Mandela’s message was clear: the new South Africa was to be democratic and inclusive of all races. This won over many doubters and he swiftly became an international icon, fêted internationally on his world tours. Yet the country continued to teeter on the edge of civil war. A “third force,” aided by sections of the army and police, was apparently provoking violence, and Mandela accused then-president de Klerk of failing to stop the massacres that were taking place in the townships. Negotiations took place, yet hovered on a knife-edge.

The crisis point came when the widely popular MK commander and secretary of the SACP, Chris Hani, was assassinated outside his home. It was Mandela’s national appeal on television that prevented a bloody uprising, and a renewed determination to push for general elections. A year later, the Mandela-led ANC was able to pull off peaceful elections.

The ANC came to power with over a 60 percent majority. Only too aware of the tragic history of the lurch toward violence following independence in other African countries in the

1960s, the Mandela presidency was accompanied by careful reassurance to the white civil service that their jobs would be protected and that reconciliation would prevail. At the same time, the Truth and Reconciliation Commission was appointed in an attempt to heal the traumas of the past. Amnesty was granted, provided that former perpetrators revealed the full truth. A surprising number of witnesses who bared their harrowing experiences to the world forgave their tormentors.

The achievement of the Mandela presidency, often through his personal charisma, was to mobilize many South Africans across class and color. His persuasion of big business to buy in to the new democracy through individual investments in schools, clinics, and other developmental and social projects, and his enthusiastic endorsement of the white-dominated Springbok rugby team during the 1995 World Cup, are but two examples. In 1996, South Africa's constitution was finally hammered out, a remarkably enlightened document that bore the influence of the Freedom Charter and was a testament to the consensus skills of Mandela and the ANC tradition.

With regard to the economy, the Mandela government began with a Reconstruction and Development Policy (RDP), largely crafted by the ANC's alliance partner, the Congress of South African Trade Unions (COSATU), and influenced by Keynesian ideas. Every government department was to cooperate with a special RDP Ministry to promote redress, economic transformation, and delivery of services. Indeed, the first term of the ANC government delivered 700,000 houses, clean water to millions, clinics, schools, and recreational facilities.

But with the growing grip of neoliberalism in the post-Cold War world, and feeling the generational gap in his understanding of contemporary complexities, Mandela was persuaded by younger economists to stress international investment and liberalization: the Growth, Employment, and Redistribution (GEAR) policy was introduced, and Mandela championed it in the face of trade union opposition. However, GEAR's "trickle-down" approach and privatization policies arguably exacerbated unemployment and the pressures on working-class blacks. Some have also commented that the Mandela presidency failed to recognize and respond adequately to the growing threat of HIV and AIDS. Amongst blacks, too, there was an increasing feeling that whites had got

off too lightly, although the rising crime rate, both in white middle-class suburbs and in the black townships, took their toll.

In 1997 Mandela announced his decision to retire after only one term of office as president of South Africa. This set a new example in the history of liberation leaders in Africa. In his farewell to the ANC Congress, he reaffirmed his commitment to democracy, and promised to speak out as a loyal and ordinary member of the ANC. He was replaced by Thabo Mbeki in 1999, who continued the GEAR policy, stressed "Black Economic Empowerment" to build a black middle class, and centralized state power. Mandela kept his promise and became an outspoken moral symbol. He continued to work for broad, rather than narrow, ownership of South Africa's negotiated revolution; through his Children's Fund he continued to sensitize society to the needs of children and also spoke up against the silence of key ANC figures regarding the scourge of HIV and AIDS. Internationally too, he was free to speak his mind, and was scathing of President Bush when the US invaded Iraq in 2003.

Mandela became an international icon and inspiration in his lifetime. To what extent did he and the ANC achieve a revolution? Mandela himself admitted, on his release, that liberation had come in a drastically circumscribed new world order: "We are living in a world in which the project of revolutionary transformation has become a much more difficult one." His project focused not so much on the socialist class struggle that challenged many revolutionaries of the twentieth century, but on a lifelong commitment to nation-building. During his political journey, Mandela's concept of "the nation" had grown: it had traversed Thembuland, moved beyond the vision of the unity of Africans, beyond all the oppressed, beyond the multiracial democrats, to the vision of a nation of all South Africans in all their diversity. Syncretizing the values and cultures to which he was exposed, and drawing from them what was most relevant for his purpose, with the support of the ANC leadership and millions in the liberation movement, he was able to turn an aggressively racial regime into an open democracy. With the employment of his native *ubuntu*, he was able to minimize violence. Furthermore, freedom for South Africa also released the entire Southern African region from the grip of the apartheid regime.

Walter Sisulu, Mandela's close comrade and mentor, called the ANC's victory in South Africa's first democratic elections the "greatest" revolution of the twentieth century, because its democracy was inclusive and rehabilitative rather than punitive. Mandela's humanist response to racism, the scourge of the twentieth century, liberated racists as well as the oppressed. Mandela was indeed a nationalist and a revolutionary. Above all, in the five years of his presidency, he showed the world an *African* example of how a political revolution might be achieved. But it is an incomplete revolution. The equally vital task of economic and social transformation has been left to the twenty-first century and to future generations to tackle.

Manifesto, II

Valentino Parlato

Il Manifesto is a daily newspaper published in Rome. Defining itself as a "communist daily," it is an independent left-wing newspaper. This makes it an anomaly, in the sense that it is neither the organ of any political organization nor does it have any strict political affiliation.

The first issue of *Il Manifesto*, under the editorship of Luigi Pintor, was published on April 28, 1971, but its origins can be traced back to June 23, 1969. At that time, the first issue of a monthly periodical under the same name came out under the editorship of Rossana Rossanda and Lucio Magri, with the support of a small number of members of the Italian Communist Party (among them Pintor, Aldo Natoli, Eliseo Milani,

Luciana Castellina, Massimo Caprara, Ninetta Zandegiacomi, Mario Catalano, Filippo Maone, and Valentino Parlato). The periodical criticized the Italian Communist Party (PCI) for its subalternity to the USSR, for the lack of internal democracy, and for its shifting to the right. It explicitly condemned the Russian intervention in Prague. An internal debate quickly arose inside the PCI, and the Manifesto group ran unsuccessfully in the 1972 general elections. The Manifesto group and a group of left-wing socialists then merged into the short-lived Partito d'Unità Proletaria (PdUP).

The original Manifesto group eventually split, and the newspaper gained full autonomy as a communist daily. It is now in its 38th year and sells around 30,000 copies every day.

Manley, Michael (1924–1997)

Cheryl L. A. King

Michael Manley was a labor organizer, founder of the Jamaican anti-colonial movement, and prime minister dedicated to fighting poverty by ending western political and economic imperialism and leading the country toward democratic socialism. His dedication to a new economic path for Jamaica influenced a generation of advocates for equality and independence in the Caribbean and throughout the world from the 1960s to the 1990s.

Michael Norman Manley was born on December 10, 1924, the second son of Norman

Washington Manley, founder of the People's National Party (PNP) and chief minister of Jamaica from 1955 to 1962, and Edna Swithenback Manley, a prominent artist and sculptor. Thus, when Michael entered the political arena, his name had a rich history and legacy.

Manley attended high school at Jamaica College in Kingston, Jamaica. After high school he became a journalist, writing for *Public Opinion*, a weekly newspaper. In 1943, while attending McGill University in Montreal, Canada, Manley volunteered for the Royal Canadian Air Force. He then traveled to England, graduating from the London School of Economics, where he studied economics under Harold Laski, a leading British political theorist and chairman of the Labour Party from 1945 to 1946. For a while afterwards he worked for the British Broadcasting Corporation (BBC) in London.

Manley returned to Jamaica in 1951 and became active in the trade union movement. He worked as an associate editor of *Public Opinion* until being offered a position with the National Workers' Union (NWU) in 1953. As a union negotiator, Manley gained a keen perspective on Jamaica's working class that would benefit his future political endeavors. Reluctantly, in 1962 he accepted an appointment, by way of his father, to the Jamaican Senate. In 1967, on his own accord, he was elected vice-president of the PNP as well as representative of Central Kingston. When his father retired from active politics, Michael Manley was elected leader of the PNP on February 9, 1969. His trade union experience instilled a deep understanding of the poverty so many Jamaicans faced, and he devoted himself to advancing the condition of life for peasants and workers.

Relying on his trade union experience, Manley maintained a relationship with the country's poor black majority that would help in returning the PNP to prominence. In 1972, he ran on a platform of "better must come," giving "power to the people" and leading "a government of truth." The PNP regained the majority in parliament, and Manley was named prime minister. He then announced at the 36th annual PNP Conference that Jamaica would be converting to a socialist form of government. This revelation came as no surprise to party insiders who for years had become acquainted with Norman Manley's interest in the British Labour Party.

In the process of instituting his new government, Manley reinstated a number of civil liberties, abolished bans on left-wing publications, and authorized passports for a number of citizens who had long been denied them. Diplomatically, Manley developed close relationships with other socialist leaders including Julius Nyerere of Tanzania, Olof Palme of Sweden, Pierre Trudeau of Canada, and Fidel Castro of Cuba. In particular, Manley's relationship with Castro strengthened ties between the two islands, separated only by 90 miles, but it also weakened diplomacy with the United States. In 1979, Manley, who attributed most of Jamaica's problems to colonialism, involved Jamaica in a non-aligned movement with the Soviet Union and other socialist countries with the intent of fighting imperialism.

On the domestic front, Manley faced a number of challenges. He began by tackling laws such as the 1838 Master and Servants Law, a remnant of the post-slavery period of apprenticeship and British imperialism. He also implemented laws, such as one to guarantee the right of illegitimate children to inheritance. He was also insistent that Jamaica should be in control of its own economy and natural resources such as bauxite, upon which he placed a levy to benefit the country and protect the natural resource from US exploitation. His aim was to uplift the downtrodden in the society specifically through education, land reform, jobs, housing, and other social programs despite the adverse effect of the 1973 oil crisis that was crippling the economies of many nations, including Jamaica. His Facilities for Titles Law provided small farmers an opportunity to obtain financing, and he established a Small Business Loan Board to do the same for small businesses. Under his program, investment in agriculture grew as production accelerated.

The largest obstacle to his reform agenda was the existing political structure, one that had been recently dominated by the Jamaican Labor Party (JLP), which had significant ties to the business elite. His attempt to make the PNP a coalition with the poor, starving, and homeless was in direct contrast to a section of the capitalist class the party needed to get elected. In his attempt to stabilize the economy, Manley called for the nationalization of various industries and began to expand programs in both health and education. Key products were suddenly maintained by strict price controls, while consumers

were subsidized for others. These crash programs provided work for those on the lower rungs of the economic ladder, and adult literacy programs, in particular, had a direct impact on the future of Jamaica. The positive impact of the beneficiaries of these programs would be clearly observed in the long run. In the short run, however, they were costly and bankrupting the country.

Manley was reelected prime minister in 1976 and served in that capacity continuously until 1980 when the PNP was voted out of office. Shortly after his reelection, he argued that a coalition of both internal and external forces was attempting to destabilize the PNP's ability to govern. From within Jamaica, the bauxite industry suffered due to the levy and began cutting back production, which drastically added to unemployment. Additionally, the United States began to apply pressure on the PNP because the bauxite levy was affecting several US corporations. Other unsubstantiated claims suggest that a small detachment of US Central Intelligence Agency (CIA) operatives maintained a campaign that added to the undermining of the PNP.

As a result of these factors, Manley was faced with a dismal and dire economy as declining exports, along with a lack of foreign exchange investment, affected tourism and unemployment rates rose to 30–40 percent. There was now an urgent need to seek aid from international bodies, specifically the International Monetary Fund (IMF). However, negotiations with the IMF failed when Manley refused to accept several stringent market-oriented measures demanded by the IMF. As such, the standard of living grew worse with unemployment rates, crime, and the food shortage increasing. Manley's "democratic socialism" fell under heavy scrutiny, and political violence developed.

In 1980, the JLP won a landslide victory and Edward Seaga was named prime minister and minister of finance. Seaga pursued a conservative economic program that included significant aid from the United States and the IMF. In October 1981, Jamaica broke off diplomatic relations with Cuba, and two years later, Seaga joined the military effort to aid a US-led invasion of Grenada. By 1983, however, as the JLP began to fail repeated IMF performance tests, Seaga's popularity diminished. In response, the JLP called for new elections but failed to implement a recent reform that required them

to update voter registration lists. Manley and the PNP, even though leading in most major polls, called for a full boycott of the election, thus creating a one-party state and handing all parliamentary seats and power over to the JLP. The move was significant in that Manley placed process over political gain. His dedication to egalitarianism put forth that reform must benefit all sectors of society and not the privileged classes.

After his reelection, Seaga implemented further IMF measures that would only push the economy into negative growth for the next two years. In May 1986, Seaga would turn away from the IMF, but the damage had already been done. In 1989, the PNP regained power and Manley returned as prime minister. This time he projected a more friendly US policy and softened his socialist stance. With Ronald Reagan as US president and Margaret Thatcher as prime minister of Britain, the global picture had changed as the tone of international policy was now reflective of their conservative politics. Three years later, citing illness, Michael Manley resigned his post.

Manley was an anti-colonial, nationalist, and egalitarian leader. His conception of the state was as an agent of change to serve the people as a method of reform and social transformation. For the most part, Michael Manley should be remembered as a leader who attempted to modify the political climate in Jamaica to break the imperialist legacy and redistribute wealth fairly among all segments of society. In his commitment to the poor and working classes, Manley was a representative voice against the interests of international capitalism. He died on March 6, 1997.

Mao Zedong (1893–1976)

Vera Leigh Fennell

There has never been a more appropriate illustration of the old Chinese curse “may you live in interesting times” than the life and times of Mao Zedong (Mao Tsetung). Coming of age during the first part of the twentieth century, he spent the rest of the century ensuring that others would live through similarly interesting times. He was an educator, a poet, a journalist, a military strategist, a political theorist, a revolutionary, and the official and spiritual leader of the largest communist nation the world has ever seen. He helped to found the Communist Party of China (CPC) and reinterpreted Marxism-Leninism by theorizing the revolutionary potential of rural farmers. His insight made China a beacon of revolution and made “Mao Tsetung Thought” its revolutionary polestar for communist and nationalist revolutionaries in the Third World and beyond. Movements such as the Black Panther Party of the United States, the Shining Path (Sendero Luminoso) of Peru, and the Communist Party of Nepal, as well as communist party organizations in India, the Philippines, and around the world were Maoist in their organization, strategy, and revolutionary ideology.

Mao’s life could be viewed as a classic tale of a poor boy born at the right time in the right place who by his own determination and good luck rose to great heights as a great ruler of a great nation. By the time of his death in 1976, Mao Zedong had spent more than a quarter of a century ruling one quarter of humankind. Yet, five years after his death, the CPC’s official assessment of his leadership was that he had been 70 percent correct and 30 percent wrong. Since then, scholars have debated which events or policies comprise the 70 percent and which comprise the 30 percent.

Early Life

Mao Zedong was born on December 26, 1893 as the eldest son in a farming family in Shaoshan, Hunan Province in a county where 75 percent of the residents shared the same surname, “Mao.” At the time of his birth, Mao’s family’s fortune was improving. His grandfather had been forced

This Chinese propaganda poster from 1949 was intended to unify Chinese people from the rivers and mountains under Mao Zedong. The establishment of the People’s Republic of China in 1949 came after nearly two decades of civil and international war. Mao, who served as leader of the Chinese Communist Party until his death in 1976, largely depended on the peasantry to realize his ideal of socialist revolution through class struggle. (The Art Archive / William Sewell)

to sell off some of the family land and his son, Mao’s father, Mao Jensheng (1870–1920), had to leave home at 16, joining the army to pay off additional family debts. He returned to Shaoshan, lived frugally, saved carefully, and made a small fortune trading hogs and grain. After he had accumulated enough wealth, he was able to buy back the family land that his father had sold.

Mao Jensheng married Wen Chu-mei (1867–1919), a devout Buddhist from the nearby village of Tangchiato. The couple had three sons – Mao Zedong (1893–1976), Mao Tsemin (1895–1943), and Mao Tsetan (1905–35). They also adopted a girl, Mao Tsehong (d. 1930).

Mao Zedong’s warm relationship with his illiterate mother has been viewed as crucial to the formation of some of his radical social ideas, but it was his conflict-ridden relationship with his

father that ignited his radical behavior. He entered the local village school at the age of eight, but his father pulled him out of the school at age 13 and married him to Yang Tsuihua, who was 19. Mao Jensheng ordered his son to return to farming, and the younger Mao worked in the fields by day and did the farm accounts by night. By all accounts, he rejected the marriage; they never lived together.

Frustrated by his father's demands for his labor, Mao Zedong ran away in 1909 and went to live with his maternal uncle in a neighboring county. The uncle enrolled him in the Tongshan Higher Primary School. Mao was older than his classmates and was ridiculed for his unkempt appearance, ragged clothes, and "country-bumpkin" ways. Yet he excelled at school, learning about the world outside of Hunan Province. Like many young soon-to-become radicals of his day, the 1905 victory of Japan over Russia, the greatest naval force of the day, excited him. The defeat of a powerful white imperialist European nation by an Asian nation encouraged ideas of nationalism among many young men and women all over Asia.

When Mao entered First Provincial Normal School of Hunan in 1913 he structured his life around education. He read newspapers, Chinese literature, ethics, history, and geography. He raised questions in class in a Socratic manner and frequently engaged in heated political discussions. His passion for education, confrontation, and reform found expression in journalism.

May 4 Era Journalist

During the May 4 era, journalism was a means of political agitation. When the Allies negotiated the end of World War I, China was forced to sign a treaty that handed sovereignty over Shandong Province to Japan. Chinese students and intellectuals felt betrayed by Western nations. They had believed American President Woodrow Wilson's "Fourteen Points" speech, where he supported national sovereignty for all nations. The Versailles Peace Treaty showed Chinese intellectuals that the bourgeois capitalist nations would act as Karl Marx had predicted.

China's own republican revolution was not going well. The uprising in Wuhan in 1911 inaugurated a representative republican government that Yuan Shikai, former general of the Ch'ing imperial army, was to immediately high-

jack. Because Yuan controlled an army and the revolutionaries, led by the founder of the Nationalist Party (KMT or GMD), Sun Yatsen, did not, Yuan was able to get himself appointed president of the Republic, replacing Sun. Over time, he dissolved the national and provincial representative assemblies and reorganized the provincial-level governments, replacing civilian with local military control. His carefully orchestrated national representative assembly unanimously endorsed a return to the monarchical system, with Yuan as emperor. By late 1915 China's period of representative republican government was over.

These betrayals, along with the successful Bolshevik Revolution of 1917 in Russia, turned China's future leaders towards socialism and Marxism. To spread the Marxist call to action, two Beijing University professors, Chen Duxiu (Chen Tu-hsiu) and Li Dazhao (Li Ta-chao) wrote and edited a radical magazine, *New Youth*. They proselytized Marxism and advocated a new cultural movement to revitalize China and save it from civilization extinction. Mao, who had worked as a clerk in the library of Beijing University, began reading *New Youth* and began to write and edit other local New Culture Movement journals. He became the editor of the *Hsiang River Review*, and wrote for *Women's Bell*, a journal that criticized the status of women in China. When a young Hunanese girl committed suicide rather than submit to an arranged marriage, Mao penned a series of articles about her death. They saw Miss Zhao's suicide as resulting from China's shameful social system that negated individual will. The series drew him attention within radical circles.

After starting the New People's Study Society, Mao became the principal of Lin Changsha Primary School in September 1920 and by October had organized the Socialist Youth League chapter there. That winter, he married Yang Kaihui, the daughter of his influential Ethics professor, Yang Chang-chi. In 1921 Chen Duxiu and Li Dazhao called a meeting in Shanghai to organize a Chinese Communist Party. Mao Zedong, who had founded the Hunan Provincial branch of the party and a Socialist Youth League, attended the First Party Congress in Shanghai in July 1921. At this early stage, the CPC was directly controlled by the Communist Party of Russia.

First United Front

In 1923, following the directive of the Russian Politburo, the CPC joined military General Chiang Kai-shek and his bourgeois-democratic party, the KMT, to form a united front against Japan and the other colonial powers. Their Russian Comintern advisors urged them to join as individuals, forming a “bloc within.” After China had been reunified, this bloc within would discard the KMT. Mao was among the first CPC members to join the KMT. By the first half of 1924 he was the top ranking Communist Party member in the Nationalist Party’s Executive Bureau, and by 1925 he was the chief editor of the KMT paper, *Political Week*.

He returned to his native Shaoshan in 1924–5, in time to witness a peasant demonstration protesting the May 30 Incident. He was impressed that Chinese peasants could be motivated to engage in such demonstrations. Later, he became an active rural organizer. Mao held several fact-finding meetings in small villages and towns across Hunan in 1927. He realized that the revolutionary potential of the peasantry was greater than that of the comparatively small number of China’s industrial proletariat. He hoped that his report, “An Investigation of the Peasant Movement in Hunan, March 1927,” would quell resistance to peasant activism within the Party. However, Chiang Kai-shek’s White Terror distracted Mao from promoting peasant-led rebellion. On April 12, 1927 the KMT, with the assistance of Shanghai’s Green Gang, launched a systematic round-up and execution of the KMT left, including communists, communist sympathizers, suspected communist sympathizers, labor union activists, and feminists, including Xiang Jingyu, former head of the Communist Women’s Bureau. This slaughter ended any pretense of a “united front.”

Autumn Harvest Uprising

The Comintern advisors ordered a series of armed urban uprisings. Mao, still in Hunan, organized a small peasant army on September 7 and staged the Autumn Harvest uprising to combat both the KMT and the peasants’ main oppressors, the landlords. It was the CPC’s first organized armed uprising and it was a dismal failure. His peasant forces were defeated and Mao had to retreat to the Jinggang Mountains in Jiangxi Province.

There, in full retreat, isolated from the KMT forces, the decimated CPC and their Comintern advisors, Mao organized the first Chinese communist-controlled base area, or soviet, the Jiangxi Soviet. This brief period of relative stability, 1931–4, permitted Mao and his followers to develop guerrilla war tactics and the basic structure of political administration. When the CPC Central Committee was finally forced to leave Shanghai and relocate the Soviet, the party’s link to the urban proletariat and the Soviet advisers broke. As a result, the CPC had to develop its own strategies for expanding and controlling its base area. Most importantly, the party’s military and political strategy was being shaped by one man – Mao Zedong.

The Long March

Chiang Kai-shek launched encirclement campaigns in 1930 in order to eliminate the communists in their rural soviets. Some of these campaigns were more effective than others; the KMT was hardly more unified than the CCP and it relied on various local warlords who often did not obey instructions. Mao’s defensive strategy of mobile guerrilla warfare was successful in the first three encirclement campaigns but nearly led to the annihilation of the party in the fourth. Chiang’s fifth encirclement campaign relied on the construction of blockhouses in a diminishing circle around the Soviet. A gap in the placement of the blockhouses in the south and west allowed the remaining CPC forces to escape, fighting the KMT soldiers as they retreated. This was the beginning of one of the most important events in CPC historiography – the Long March. Beginning in October, 1934, nearly 100,000 men and 35 women walked out of Jiangxi Province and into Hunan. From there, Mao broke the Red Army into smaller groups who walked through Guizhou, Sichuan, Gansu, towards Shaanxi in northern China. When the Red Army arrived in Zhunyi, Guizhou in 1935, it had walked over 8,000 miles (12,500 kilometers) in 370 days.

In March, 1935 the procession stopped near the town of Zhunyi (Tsunyi). For 12 days they rested, recruited new members, and held an expanded meeting of the Politburo. During this meeting Mao was named chairman of the Revolutionary Military Council and member of the Politburo Standing Committee. He emerged from the Zhunyi meeting as the “chairman” of the CPC.

The March continued into Shaanxi Province and ended at a small communist base area near the city of Yanan (Yan'an). Only 10 percent of the original communist forces had survived. Mao lost his youngest brother, Tsetan, and his sister-in-law. His two children by his second wife, who was pregnant but nevertheless participated in the March, were too young to make the trek and were left with peasant families. Mao never saw them again.

The Yanan Way

It was during the Yanan Period (1936–45) that Mao developed an ideology expressed through procedures and institutions that came to characterize “Mao Zedong Thought.” His interpretation of socialist government was expressed through schools, a military academy, healthcare facilities, study groups, and social clubs. A small-scale campaign of land redistribution was begun. New CPC recruits were integrated into the organization through a process of “rectification” (*zhengfeng*) and the “mass line” (“from the masses, to the masses”) was developed. These procedures and others, such as mass mobilization through the creation of organizations geared towards specific identity groups such as women and youths, enabled the party and the masses to work as a unified entity towards common goals.

A second united front (1936–41) was also developed during this period. What motivated either party to unite after the KMT's White Terror? Chiang Kai-shek was forced into it by his own troops, who kidnapped him on a December 4, 1936 trip to Xi'an. After intense negotiations he was released, having pledged to end his attacks on the communists and to fight the invading Japanese. For the CPC, participation in a second united front was an act of self-preservation. Despite the protection offered by the remote location of their soviet, there was no guarantee that the party could survive Chiang's planned sixth encirclement campaign. The Red Army was renamed the Eighth Route Army, signaling that it was now a part of the KMT military structure, and many of the CPC's socialist agenda items, like the confiscation of land from the local landlords, were modified.

Civil War Resumes

The Japanese surrender in 1945 ended another round of united front activity and the civil war

between the CPC and the KMT resumed with renewed vigor. The KMT, with American financial and tactical support, moved most of its troops to northern China and in 1947 captured Yanan. However, it lost several important battles. One of the most important battles lost was not a military one; civil war era inflation in China was very bad, especially in the urban areas that had been the source of KMT support. Financial speculation and other kinds of government corruption within the ruling KMT did nothing to enhance its reputation.

Meanwhile, the communist forces gained control over Manchuria from Japan and most of northeastern China to the Yangtze River. By April 23, 1949 the CPC had forced the KMT to abandon its capital, Nanjing, and move southward to Guangdong Province. The next day, the CPC captured Nanjing and, within a month, Shanghai. On October 1, 1949 the forces of the Communist Party of China, under the leadership of Mao Zedong, drove into the renamed capital city, Beijing, without having to fire a shot. The civil war was over and the People's Republic of China (PRC) was proclaimed in a massive rally in Tiananmen Square.

Foundation of the People's Republic of China

The CPC had to establish a stable Marxist-Leninist political, economic, and social system. Victory had come so quickly that Mao knew he had not yet won the hearts and minds of the Chinese people. They had to repair infrastructure, promote industry, and curtail inflation. Land reform was implemented. In order to spread Mao's interpretation of Marxism-Leninism and to establish a governmental structure that implemented the principles of a “people's democratic dictatorship” they established a state structure of dual rule whereby the governmental hierarchy was paralleled and interwoven with the hierarchical party structure. Government's role was to enact CPC policies. This was facilitated by overlapping memberships. For example, Mao was the chairman of the CPC's Politburo's Standing Committee, the highest party organization, the head of state of the People's Republic of China, and chairman of the Military Commission.

The media promoted the official and therefore the only acceptable interpretation of news and

events. The CPC promoted the correct interpretation of events by controlling the major channels of media/propaganda, including newspapers, film, and radio broadcasts.

Mao Zedong Thought and Mass Mobilization Campaigns

For Mao, the media were essential for the ideologically driven mass mobilization campaigns that enabled the CPC to accomplish its goals using limited material resources coupled with inexhaustible human enthusiasm and labor. In hindsight, perhaps, Mao's campaigns constitute the officially designated "30 percent" mistaken judgments. In the Maoist era, the CPC conducted the following campaigns:

- The Three-Antis/Five-Antis Campaign, initiated 1951–2.
- The Hundred Flowers Campaign, initiated 1956.
- The Anti-Rightist Campaign, initiated 1957.
- The Great Leap Forward, initiated 1958 (leading to the Three Years of Natural Disasters).
- The Great Sparrow Campaign, part of the Great Leap Forward.
- The Socialist Education Movement, initiated 1963.
- The Learn From Comrade Lei Feng Campaign, initiated 1963.
- The Destruction of the Four Olds Campaign, initiated 1964.
- The Great Proletarian Cultural Revolution, initiated 1966.
- The Criticize Lin, Criticize Confucius Campaign, initiated 1973.
- "Let a hundred flowers bloom . . ."

By 1955, the people expressed some resistance to the process of mass collectivization of agriculture, handicrafts, and private business. To Mao, it seemed as if the spirit of revolution within the masses and the party was waning. To correct this, Mao inaugurated a campaign of rectification. His speech "On the Correct Handling of Contradictions Among the Masses" enlisted the Chinese people, especially the intellectuals, to criticize the party. He urged them to "let a hundred flowers bloom; let a hundred schools of thought contend." Mao believed that criticism of the party would strengthen socialism.

Initially, the response was mild, but then a torrent of criticism ensued. University students began to put up "big character posters" that were highly critical of the party; a Democracy Wall sprang up near the campus of Beijing University. Vigorous criticism of the party began to appear in magazine articles and in letters sent to the editor of the CPC flagship newspaper, *The People's Daily*. Peasants complained about collectivization. In the "workers' state" of Chinese socialism, workers complained about the wage system.

In light of Khrushchev's denunciation of Stalin and the Hungarian Revolution of late 1956, Mao decided that the Hundred Flowers Campaign (*Baihua Qifang*) was out of control. In mid-1957 an amended version of the speech was published. The new sections called for limits on "antagonistic contradictions." This began the Anti-Rightist Campaign (*Fanyoupai Yundong*) that targeted those who had spoken out. It labeled somewhere between three and eight hundred thousand "rightists" who were "reformed" either through jail, prison labor, or banishment to the countryside. Some student leaders who had staged a demonstration in Wuhan were executed.

Great Leap Forward

The roots of the next campaign, the Great Leap Forward (Dayuejin, 1958–61) lay in the Anti-Rightist Campaign. Many of those within and outside the party who opposed the Leap were labeled rightists. Also, the push to decentralize during the Hundred Flowers era had been infused with the same Maoist ideological fervor that fueled the Leap Forward. The campaign was an attack on Soviet-style Leninist bureaucracy and the large integrated industrial production facilities it fostered. As a result, economic growth was to accelerate with decentralization at the grassroots level. This would allow a bold leap – a great leap – to a fully communistic society.

Ideological enthusiasm rather than technological innovation was used to jump start Marxist stages of economic development. In the rural areas, collectives were organized into larger communes. Economic decision-making was decentralized and old technologies were combined with advanced technologies, the so-called "walking on two legs." Material incentives and monetary rewards for labor were replaced by ideological commitment.

During the early phase of the Leap, economic productivity was high, still propelled by pre-Leap productivity. The state-owned industrial sector absorbed 30 million new workers and farm labor was redirected toward industrial production, including the “backyard furnaces” that produced rudimentary and unusable steel. Eventually, however, the displacement of manpower from agriculture to the industrialized production of unusable goods began to affect the economy and society. By 1960 China faced a major famine. The inland provinces were the most severely affected, with 6 percent of Anhui’s population dying from hunger. It has been estimated that by 1961, 25–30 million additional deaths were caused by the Great Leap Forward famine. Malnutrition and food shortages caused a precipitous decline in birth rates. By the end of 1962 the Great Leap Forward, driven by Mao’s ideological fervor, had produced the largest famine of the century.

Great Proletarian Cultural Revolution

Although Mao Zedong was still popular with the masses, many within the party blamed him for the failure of the Leap. He was forced to resign as head of state but remained party chairman. Three moderates – Liu Shaoqi, Zhou Enlai, and Deng Xiaoping – were appointed to run the country. They slowly disengaged from Mao’s policies and by 1962 recentralized economic control. Food and other goods were rationed, free markets were reopened in the rural areas, and crisis control policies were established. When relations with the Soviet Union were severed in 1963, Mao and the party placed some of the blame for shortages of food and materials on the Soviet’s withdrawal of assistance. Yet, as Mao’s power within the party shrank, his influence outside the party grew.

An important aspect of Mao’s growing popularity was a compilation of his sayings bound in a small red-covered book. *The Little Red Book* of Mao’s quotations was a bestseller and, along with the small metal Mao badge, became a symbol of revolutionary purity and loyalty. A cult of Mao was being developed and it only needed to be deployed for some useful purpose. That purpose was the Great Proletarian Cultural Revolution (*Wuchan jieji Wenhua Dageming*). This campaign defies simple explanation. It

began innocuously enough with a newspaper criticism, but it rapidly escalated into a chaotic and disruptive mass mobilization instigated by Mao that unleashed widespread violence throughout China. Commonly, it is believed to have lasted ten years, 1966–76, the year of Mao’s death. But the period of wild, random violence perpetrated by Red Guard youths ended in 1969 when the People’s Liberation Army (PLA) invaded the sites of this violence, especially college campuses. There are some scholars who believe it was a manifestation of an inter-party power struggle between the hard-line socialist ideologues led by Mao and his fourth wife and former Shanghai actress, Jiang Qing (Ch’iang Ching) against the moderate faction led by Chou and Deng. Some say it was an attempted military takeover and trace its start to Defense Minister Lin Biao’s speech in September 1965. Some say it was the natural outcome of the identity labels used during other mass mobilization campaigns; it may have been a combination of all these things.

It certainly was a revolution against culture; “traditional” or Confucian Chinese culture was deemed “feudal” and, along with “bourgeois” Western culture, was taken as a sign of traitorous beliefs. Those who had been considered “experts” on these subjects were publically humiliated – “struggled against” – in massive public rallies led by overly zealous, teenaged Red Guards. But Mao’s real target of the Cultural Revolution was the party itself. He personally called on young people to demonstrate their loyalty to him by attacking any established authority, especially party members, teachers, and bosses. These factions used the “struggle session” to compete with other groups to see which was the most loyal to Mao’s *Little Red Book* vision. They attacked the “four olds” – old ideas, old culture, old habits, and old customs. They were encouraged to travel all over China to spread this revolution. Their unrestrained behavior coupled with unchecked authority led to widespread uncontrolled intimidation and violence at the hands of these youths, both male and female.

Within the party, the CR Small Group, consisting of Mao’s wife, Jiang Qing, Wang Hongwen, Yao Wen yuan, and Zhanghe Chungqiao, seemed to be winning the inter-party struggle against the moderate wing until the violence was deemed out of control. Mao then allowed the PLA invasion of campuses that

ended much of the violence. By 1970 a rebuilding process had begun.

Mao's health was deteriorating. He had not attended public rallies since 1967. By the early 1970s his lucid moments were sporadic. On July 28, 1976 a major earthquake hit northeast China, near Beijing-Tianjin, and was taken by the people as an omen. On September 9, 1976 Mao Zedong died of a heart attack. He was 82. His body was immediately embalmed and placed in a crystal sarcophagus for a grand state funeral. As the people of China passed the sarcophagus, tears streaming down their faces, saying goodbye to the one man who had ruled their country since its inception, they must have thought about the "interesting times" through which they had lived.

Almost immediately after Mao's death, the CPC began to reverse his influence. One month after his death, Jiang Qing and her three associates, Wang Hongwen, Yao Wenyuan, and Zhange Chungqiao, were arrested and charged as the Gang of Four for the excesses of the Cultural Revolution. They were put on trial in 1981 and convicted of anti-party activities. Jiang and Zhange were sentenced to death; that sentence was later commuted to life imprisonment. Wang was sentenced to life imprisonment and Yao to 20 years imprisonment. Mao's chosen successor, Hua Guofeng, was stripped of his posts by the moderates, led by Deng Xiaoping.

Maori indigenous resistance

Vincent O'Malley

The indigenous people of New Zealand had no collective term to describe themselves prior to the colonization of their country. "Maori" at first meant simply "human," but later came to refer to "normal" or "ordinary" people, as opposed to the altogether different European peoples encountered from the seventeenth century onwards. Although many Maori communities welcomed contact with the outside world, significant land loss, combined with their own political marginalization in the wake of formal British annexation in 1840, gave rise to a number of significant resistance movements. Some of these movements remain in existence today in different forms and continue to provide leadership in response to ongoing challenges.

Dutch explorer Abel Tasman's fleeting encounter with Maori in 1642 ended in bloodshed in consequence of cross-cultural misunderstandings, and it was a further 127 years before the next Europeans ventured toward the shores of New Zealand. Further conflict sometimes ensued during the visits of James Cook and other explorers after 1769. Contact with outsiders nevertheless became a regular feature from this time onwards, increasing the likelihood of eventual colonization.

By the early decades of the nineteenth century small numbers of whalers, traders, escaped convicts from Australia, and missionaries had established a permanent presence in parts of coastal New Zealand. They remained, for the most

Two of New Zealand's major protest movements centered on indigenous rights and environmental protection. On May 5, 2004, these movements converged as Maori activist Tame Iti, Maori elders, and over 10,000 Maori demonstrators in Wellington protested against proposed seabed and foreshore legislation. New Zealand police responded with anti-terrorist raids, arresting Tame Iti and about 14 others, mostly environmental activists, across the North Island on October 15, 2007. (AFP/Getty Images)

part, under the control of local tribes and their chiefs. An increase in the number of European residents by the 1830s, and Imperial government concern lest “lawless” conduct on the part of some of the settlers should provoke serious unrest among Maori, resulted in increasing British interest in the affairs of New Zealand.

This British concern, combined with other factors such as the influence of the humanitarian movement upon Colonial Office policy, prompted the decision by 1839 to seek formal annexation of the country. Yet the Treaty of Waitangi, signed by more than 500 *rangatira* (chiefs) between February 6, 1840 and September of the same year, while ceding full sovereignty to the British according to its English translation, at the same time guaranteed *tinu rangatiratanga* (“fully chiefly authority”) over their lands and affairs in the Maori-language agreement assented to by all but a handful of the chiefs. One northern *rangatira* famously stated during a signing ceremony in May 1840 that “the shadow of the land” had been handed to Queen Victoria, and “the substance has remained with us” (Ward 1968: 49). Less than a year later he revealed his fears that the substance had indeed been lost, leaving Maori with a mere shadow.

Despite such anxieties, the writ of English law was largely confined to European settlements for a considerable time, and settlers and government

officials were required to tread warily in districts still under Maori control. The consequences were sometimes fatal when they failed to do so. In 1843 an unauthorized survey of disputed lands in the Wairau district ended in a battle in which 22 Europeans and four Maori were killed. In the Bay of Islands district meanwhile, local *rangatira* Hone Heke felled the British flagstaff at Russell four times between July 1844 and March 1845, the fourth occasion marking the start of the Northern War between Heke’s followers and Imperial troops and their Maori allies. The war ended inconclusively and further campaigns were subsequently waged in the Cook Strait region.

A new constitution for the colony issued in 1852 marked the beginning of a rapid deterioration in race relations. It granted self-government to the settlers but effectively excluded all but a tiny number of Maori from voting for or participating in the new parliament as a result of a property qualification based on European-style land tenure. Influential *rangatira* pleaded with the government for the right to manage their own affairs to be recognized, but the new parliament remained more concerned with advancing settler interests through acquiring Maori lands and promoting their “assimilation” into colonial society.

Land purchasing had for most of the period since 1840 remained the exclusive right of the crown. By the 1850s increasing concern over the consequences of selling land, including the loss of control over those districts alienated, led to greater Maori resistance to sales. This in turn prompted government land buyers to resort to more underhand purchase tactics, including transactions completed secretly or with only minority support from the owners.

Maori responded to these developments in a number of ways. Older-style mechanisms of communal control known as *runanga* (tribal assemblies) were strengthened and revived in many districts alongside committees (*komiti*) based on similar principles in an effort to continue to manage affairs on a tribal basis. Meanwhile, a number of mainly central North Island tribes promoted the notion of electing a Maori king to hold their lands and serve as a symbol of strength. In 1858 the senior Waikato chief Potatau Te Wherowhero was chosen as the first king. Potatau and his chief strategist Wiremu Tamihana Tarapipipi both made it clear that they did not see the Kingitanga (King movement)

as in any way incompatible with continuing deference to the British monarch as the ultimate protector of all of the people of New Zealand or as any obstacle to ongoing cooperation with the European authorities.

Government officials chose to view the Kingitanga quite differently, however, branding it as a treasonable “land league” and a direct challenge to British sovereignty. Given this stance, most observers believed it merely a matter of time before a showdown followed. In March 1860 the government’s efforts to push through a land purchase at Waitara with only minority support from the owners prompted the start of the first Taranaki War between local tribes and Imperial troops. A truce was agreed in March 1861, but not before Kingitanga reinforcements had arrived to assist the defenders of the land. Further fighting broke out in Taranaki two years later, though the main focus of attention had shifted elsewhere by this time.

In July 1863, perhaps the most dramatic event in New Zealand race relations history, the Waikato War, commenced as Imperial troops were sent to crush the heartland of the King movement. By the end of the conflict in 1864, the Kingitanga was left seriously weakened, and much of the district had been devastated. It had not been destroyed as hoped for, however, and its leaders instead retreated south, establishing an autonomous “King Country” which remained closed to Europeans until the 1880s. The Kingitanga itself remains in existence today and continues to provide a potent rallying point for Maori from many parts of New Zealand.

The confiscation of vast tracts of land from those Maori deemed (often without due legal inquiry) to have been “rebels” followed soon after, much of it also indiscriminately taking in areas belonging to Maori who had remained neutral or even served as “loyalists.” Policies such as these provoked further resistance, and smaller conflicts continued to be fought through until 1872. Many of these later wars involved Maori who had turned to new indigenous faiths drawing in part on Christianity, such as Pai Marire (Good and Peaceful) and the Ringatu (Upraised Hand) religion founded by Turanga military leader and prophet Te Kooti Arikirangi Te Turuki. Adherents of some of these movements were commonly deemed “fanatical” in the eyes of many Europeans, lending a harsher and more racially tinged edge to some of these later conflicts.

Increasing government control over formerly autonomous Maori districts enabled the implementation of new proposals to renew the process of land acquisition. A Native Land Court had been established by 1864 and crown preemption replaced by a free market for settlers in Maori lands. Custom dictated that lands were managed collectively by the tribe and their chiefs, but this so-called “bestly communism” was perceived as an obstacle to land alienation and assimilation. Individuals were instead enabled to sell their interests without reference to other tribal members, and land selling was further encouraged by a costly, protracted, and European-controlled process for deciding ownership.

Many Maori quickly realized the potentially calamitous consequences of such a system for their own social order. They responded, as before the wars, through reconfiguring existing bodies such as *runanga* and *komiti* to meet the new challenge, through countless petitions and appeals to parliament, and (with a handful of Maori seats established in 1867, in part because the newly individualized land titles would otherwise have entitled them to vote in European electorates for the first time) through bills introduced by their own members of the general assembly.

Such measures were in most cases largely unsuccessful. Governments periodically sought to co-opt intended mechanisms of self-government as instruments of indirect rule, notably through an official but shortlived *runanga* system established in 1861 and a similar measure introduced in 1883. The ulterior motives underlying these schemes, and the unwillingness to grant real powers to Maori to manage their own affairs, saw initial support for them quickly fade as many tribes realized the limitations involved.

Although many efforts to secure greater rights were organized along tribal lines, at the same time there was increasing recognition and acceptance of the need for Maori to cooperate more broadly around common grievances. A Repudiation movement first established in the Hawkes Bay district in the early 1870s to challenge fraudulent land purchases attracted support from a number of other centers and hosted a number of largely attended meetings. Elsewhere, unofficial Maori “parliaments” were convened.

While the work of the Land Court was widely condemned at such gatherings, the legacy of land confiscations arising from the New Zealand Wars of the 1860s also attracted attention. In

the Taranaki district local prophet Te Whiti-o-Rongomai, who is today sometimes described as New Zealand's equivalent to Martin Luther King, Jr. or Mahatma Gandhi, had led a long-running campaign of passive resistance, pulling out surveyors' pegs and ploughing confiscated land. His semi-autonomous settlement at Parihaka was brutally invaded in November 1881, its inhabitants dispersed, and Te Whiti and other leaders imprisoned for a lengthy period without trial.

These actions outraged Maori the length of the country, and in 1882 and again in 1884 the first two of several deputations of chiefs left New Zealand intent on presenting their many grievances under the Treaty of Waitangi direct to the British monarch. They were invariably referred back to the New Zealand government for a response to their concerns. That was precisely the same government which had ignored their repeated pleas for the Land Court to be abolished and for Maori to be allowed to control their own affairs, however, and in the light of this more direct action was taken. In 1892 an annual gathering known as the Maori Parliament was convened for the first time under the banner of the Kotahitanga (Unity) movement. For more than a decade it continued to meet and to press the government for official recognition. The King movement also established a *Kauhanganui*, or King's council, with its own constitution and cabinet in the 1890s.

Faced with these pressures, in 1900 the government introduced a number of shortlived reforms in an effort to defuse growing Maori unrest. A small but influential group of moderate and well-educated reformers dubbed the Young Maori Party were also important advocates in improving the often dire socioeconomic circumstances of many Maori by the early twentieth century, though it was not until after the election of New Zealand's first Labour government in 1935 that significant improvements began to be made. Labour had come to power partly on the back of an alliance with a more radical Maori movement and religion founded by Tahupotiki Wiremu Ratana in 1918. He attracted support from the poor and dispossessed and embraced an increasingly political focus from the mid-1920s, especially with his central demand that the Treaty of Waitangi be at last fully honored and upheld.

More than a century of heavy land loss had left many Maori with nowhere to go but to the cities and towns. This they did in large numbers

from World War II onwards and by the 1970s a new generation of urban, youthful, and often highly educated Maori activists had emerged to continue the struggle. One such radical organization, *Nga Tamatoa* (Young Warriors), was consciously modeled on the Black Panthers and took its inspiration from the civil rights movement in the United States.

More conservative elders sometimes opposed the confrontational tactics of groups such as *Nga Tamatoa*, which included increasingly large and sometimes violent gatherings of protestors at Waitangi each anniversary of the first signing of the Treaty of Waitangi on February 6, 1840. But they often could not disagree with the cause, and in 1975 more than 30,000 Maori, including young and old, conservative and radical, marched the length of the North Island to the steps of Parliament Buildings in Wellington to demand that not one more acre of Maori land be lost. Three years later a 506-day occupation of disputed lands at Bastion Point, close to downtown Auckland, was ended only when more than 600 police and army troops forcibly evicted the protestors from the site. The land was eventually restored to Maori, along with a golf course at Raglan which had also been the scene of a high-profile occupation.

The establishment of a Waitangi Tribunal in 1975 charged with investigating Maori grievances, and its empowerment ten years later to inquire into historical Maori claims relating to events as far back as 1840, helped to gradually defuse increasingly tense race relations. However, flash points remain. In 2004 a further *hiko* (march) to Wellington prompted by government proposals to nationalize the foreshore and seabed, thus preventing pending native title claims, attracted massive Maori support and attention, and led to the formation of a breakaway Maori Party which drew significant support away from the then governing Labour Party. The focus on settling historical Maori land claims has also diverted attention away from the question of future constitutional arrangements under the treaty. It is likely that such matters will become an increasing focus of activity and debate in the years ahead.

Mapuche Indian resistance

Héctor Guerra Hernández and Raúl Ortíz Contreras

The process of integration of Mapuche territories to the administration of the Chilean state was known as the "Pacification of the Araucanía." It consisted of the effective military and, in many cases, violent occupation of the territories where different indigenous Mapuche groups resided during the colonial period and the beginning of the republic. The Mapuche were either completely erased from the map or deported. The republic sought to abolish the Mapuche people's autonomy, political integrity, territorial lands, and identity. Many were forced to live on reservations.

This decline radically transformed the social and territorial organization of the Mapuche and led to a diminished cultural subsistence. They were "integrated" into the Chilean system of jurisprudence and had no political and social autonomy. Between 1884 and 1927, 2,961 "titles of merced" (land grants) were delivered for 526,285 hectares of land (representing only 10 percent of the territories occupied before they were seized), of which approximately 85,000 Mapuche were the beneficiaries. The "titles of merced" provided territorial collective rights for the use of the land to the leaders of huge

families (*lonko*). Nevertheless, the replacement commissions granted the task of calculating the territories did not consider that the extensive Mapuche families were organized along smaller territorial units (*lof*) that did respond to the internal logic of conventional social organization, but with minor territorial units.

During the twentieth century, the Mapuche population expanded extensively. The Mapuche population had grown from 200,000 to 700,000. This population growth contributed to a severe shortage of land, as the land grants were too small and insufficient to provide for the basic necessities of life for the following generations. Instead of gaining more land, the 200,000 of the 526,285 hectares assigned to the Mapuche by the republic were expropriated by application of the indigenous laws dividing their communities from 1930 to 1990. The Mapuche were turned into day laborers in small agricultural villages, or formed part of a cheap manual labor force in Chile's flourishing towns and cities. According to Saavedra (2005), the expropriation of land and entry into the labor force transformed the Mapuche from a self-sufficient rural population into a part of Chile's urban working class and poor.

These structural consequences of land expropriation and proletarianization frame the demands and goals of the Mapuche organizations that emerged in the late twentieth century. Historically, the Mapuche communities were situated in the context of single communities. Drawn off their land and dispersed throughout Chile, the Mapuche have initiated a process of "unification" of their demands, linking local demands for land to a broader dimension aiming for autonomy, self-determination, and recovery of traditional territories.

Recent Mapuche demands include legally defined "indigenous land": formal recognition from the Chilean nation-state of identifiable Mapuche with specific land claims within the national territory. In some cases the struggles saw the use of violence by the Chilean state as well as by the Mapuche. Formerly isolated demands of rural Mapuche communities and urban organizations of the twentieth century have in the twenty-first century consolidated into demands that question the legitimacy of the traditional Chilean state.

In 2006 Mapuche intellectuals published a book, *¡Escucha, Winka! Cuatro Ensayos de Historia Nacional Mapuche* (Listen, Wink! Four Trials

of Mapuche National History), considered by many as a declaration of principles for contemporary Mapuche movements. The book defines autonomy as the aspiration to recover a sovereignty “suspended” with the invasion and conquest of the Chilean and Argentine states. For the Mapuche, autonomy represents self-government and self-determination. The declaration of these native intellectuals is solidifying a pan-Mapuche identity that is exceedingly important in consolidating political organizations. Unlike other periods in Chilean history, for the first time in the early twenty-first century, diverse Mapuche demands have unified in a shared aspiration for autonomy.

Marat, Jean-Paul (1743–1793)

Junko Takeda

Jean-Paul Marat was the most influential of the radical journalists of the French Revolution.

Before the Revolution he had been a member of the medical profession and had gained a reputation as a maverick scientist for his experiments with heat, light, and electricity and his critique of Newtonian physics. When the political challenge to the monarchy arose in the late 1780s, however, he immediately abandoned his scientific pursuits and threw himself wholeheartedly into agitating on behalf of the interests of the Parisian *sans-culottes*. His historical significance has been disputed by biographers and historians, with some dismissing him as an accidental figure on the stage of history and others portraying him as second only to Robespierre in his influence on the earth-shaking events of the Revolution.

Marat was born on May 24, 1743, the eldest son of Jean Mara of Sardinia and Louise Cabrol, the daughter of a French Huguenot wigmaker, in the Swiss village of Boudry near Neuchâtel. In his early years, Marat studied medicine and philosophy in Toulouse, Bordeaux, and Paris, and eventually established himself as a practicing physician in London. He attracted a socially prominent clientele; by 1765 he had begun to rub elbows with distinguished members of the Royal Society of London and the Academies of Berlin, St. Petersburg, and Stockholm.

In 1773 Marat attempted to participate in the discourse of the Enlightenment by publishing a massive treatise entitled *Philosophical Essay on Man*, which drew the attention – and ire – of Voltaire, who savagely criticized it. In 1774 he turned his literary talents to political issues with a polemical work in English against tyrannical government, *Chains of Slavery*, which had been inspired by the democratic agitation of John Wilkes. There is evident continuity between the political arguments he introduced in that book and those he developed as a revolutionary journalist 15 years later. One of Marat’s biographers, Jean Massin, described *Chains of Slavery* as “the first modern treatise on insurrection.”

In 1776 Marat returned to Paris and, armed with an MD degree from St. Andrew’s University, Scotland, resumed his medical practice. In 1777, the Comte d’Artois, brother of King Louis XVI, offered Marat the post of physician to his *Garde de Corps* (bodyguards), a position he held until 1783. At the same time, he continued his private practice and his patients included a number of well-connected members of the nobility. When Marat then decided to make a thoroughgoing career change from physician to

physicist, his aristocratic contacts provided patronage for his scientific endeavors.

Although historians of science have generally not found Marat's voluminous writings on optics, electricity, and heat to be of lasting value, he was without question a legitimate scientist in the eyes of most of his contemporaries. His *Découvertes de M. Marat sur le feu, l'électricité et la lumière* gained him both positive and negative attention from the Parisian Academy of Sciences. In 1788 he published his French translation of Isaac Newton's *Opticks*, which has remained in print for more than two centuries. That same year his last scientific work, *Mémoires Académiques, ou nouvelles découvertes sur la lumière*, was published. Then the political rumblings announcing the coming of the Revolution prompted a final career change.

When Louis XVI's government called for an Estates General in 1788 to address the nation's financial crisis, Marat wrote *Offrande à la Patrie*, condemning France's finance ministers as traitors. That was the first of a large number of widely read revolutionary pamphlets that flowed from his pen. After the great insurrection of July 14, 1789, which brought a constitutional monarchy and an elected legislature into being, Marat began to publish a periodical, the *Publiciste parisien*. Later renamed *L'Ami du peuple* (the People's Friend), this journal became one of the most important propagators of revolutionary activism in Paris. Characterized by inflammatory denunciations of the Constituent Assembly, which Marat believed had only further empowered the monarchy to dominate the people, *L'Ami du peuple* called upon citizens to resist the despotic intrigues of rulers and public officials, and to maintain constant vigilance in defense of their liberty.

Marat's astute analysis of the political scene (aided by the input of a large number of well-placed informants) allowed him to predict events with uncanny accuracy and won him renown as "the prophet Marat." But always a thorn in the side of the authorities, he was frequently outlawed and forced into hiding. He disappeared from view for several months at the end of 1791 and the beginning of 1792, and may have been in exile in England. Meanwhile, he had won the affection of a young female admirer, Simone Evrard, who was to become his companion for the rest of his life and an ardent defender of his memory for decades after his death.

Marat resurfaced in Paris in March 1792 and began publishing *L'Ami du peuple* anew in April. He had become closely affiliated with the Cordeliers club, a political group whose best-known leader was Georges Jacques Danton. As the Revolution deepened and the Parisian population became ever more radicalized, Marat, it seemed, was always a step ahead of the radicalization. In early May the Legislative Assembly condemned *L'Ami du peuple* as incendiary and decreed Marat's arrest, sending him once again into hiding. Nonetheless, he was able to continue publishing his periodical, albeit with great difficulty, and his continuous agitation was a major stimulus of another powerful insurrection. On August 10, 1792, a massive uprising of the Parisian people resulted in the demise of the constitutional monarchy and the rise of the first French Republic. A new representative body, the National Convention, replaced the discredited Legislative Assembly.

The triumph of August 10 allowed Marat at last to emerge from clandestinity and to function in the open as an important political leader. The Paris Commune (city government) not only allowed him to publish his journal, it provided him the presses on which to print it. In September he ran for election to the National Convention as "the People's friend," gained the support of Robespierre, and won a seat. Although he continued to write and publish *L'Ami du peuple*, his primary focus shifted to the parliamentary arena, where he played a prominent role in the trial that condemned former King Louis XVI to death, led the successful attack against the moderate Girondin faction, and helped bring the Committee of Public Safety into being, paving the way for Robespierre's rise to power.

Marat's revolutionary career reached its zenith with another great transformative insurrection in Paris on May 31–June 2, 1793, in which he personally played a major organizational role. It represented the climax of the Revolution, ushering in the radical Jacobin Republic, which consolidated the basic gains of the Revolution and made them irreversible.

The day after the insurrection, June 3, Marat officially resigned his seat in the Convention and retired from direct political activity. He was physically incapacitated by a terrible inflammation of the skin, a condition that caused him to spend most of his time in a bathtub in order to soothe the itching. He continued to receive

visitors while immersed in his tub; on July 13 a young woman named Charlotte Corday posed as a supporter and asked to see him. Actually a fanatical partisan of the Girondin faction who perceived Marat as the devil incarnate, she plunged a dagger into his heart and killed him. His status as prophet was thus reinforced; his frequent prediction that he would be assassinated had come to pass. Corday was arrested and guillotined four days later, and the Girondins, suspected of complicity, paid a heavy price for her act. Three months later 21 of their top leaders were tried and executed.

Marat's assassination was immortalized in a famous painting by Jacques Louis David. His funeral brought hundreds of thousands of Parisians into the streets in a massive outpouring of grief. A few months later, however, after the fall of Robespierre and the end of the Jacobin Republic, the remnants of the Girondins returned to power and soon thereafter began to create an interpretation of Marat as a bloodthirsty monster. Although that view has continued to be propagated by conservative historians, thoughtful observers have been able to discern a more positive legacy. Marat's intervention at key points in the unfolding of the French Revolution was arguably crucial to its success. To the extent that this is so, Marat was the equal of any of history's most effective revolutionary leaders.

Marcos, Subcomandante (b. ?)

Raina Zimmering

Subcommander Marcos is the spokesman and commander of the Zapatista Army of National Liberation (Ejército Zapatista de Liberación Nacional, EZLN). He is also a representative of the Indigenous Clandestine Revolutionary Committee – General Headquarters (CCRI-CG) of the Zapatistas. In public he always appears with a mask to avoid identification, a pipe, an old kerchief, and two watches. All these symbols refer to the EZLN and the uprising on January 1, 1994 for democratization, liberty, and equality against hundreds of years of oppression of indigenous people as well as against the North American Free Trade Agreement (NAFTA). The mask symbolizes indigenous people made invisible by repression.

In keeping with the mask, Marcos's very identity is shrouded in mystery. The name Marcos is a pseudonym and is the name of a friend killed during a confrontation with the Mexican army. According to official governmental sources, Subcomandante Marcos's real name is Rafael Sebastián Guillén Vicente, and he comes from the city of Tampico in the Mexican state of Tamaulipas. Sebastián Guillén was born in Mexico to Spanish immigrants. He was exposed to liberation theology while a student at the Jesuit high school, Instituto Cultural, in Tampico. He graduated from Metropolitan Autonomous University (UAM) and received a master's degree in philosophy at the National Autonomous University of Mexico (UNAM). He then returned to UAM as a professor. In the 1980s he joined the guerilla group National Liberation Front (FLN) and went to the Chiapas jungle, where he developed strong contacts with the indigenous communities. The FLN later became the EZLN.

Marcos plays a key role in the Zapatista movement as a talented writer and speaker, communicating with the public through histories and stories that include a mix of Mayan legends, Shakespeare, modern performance, pop culture, and figures created by himself, such as Old Antonio, Little Tonita, and the Beetle Durito. He uses slogans like “To command while obeying,” “Everything for everyone, and nothing for our-

Subcomandante Marcos, the self-proclaimed spokesman of the Zapatista National Liberation Army (EZLN), attends the National Indigenous Forum in San Cristobal de las Casas, Chiapas, on January 9, 1996. The indigenous representatives at the forum agreed to press the Mexican government for autonomous territory and a new national constitution. Two years earlier, on January 1, 1994, the EZLN began a popular armed struggle for indigenous rights and opposition to free-market-driven globalization. (AFP/Getty Images)

selves,” and “Asking, we walk.” Through this cultural syncretism and absurdism in his communications and letters, Marcos has gained a wide public and attracted huge sympathy in Mexico, Latin America, and the world, especially among young people. In some places he has achieved the status of a pop star.

Marcuse, Herbert (1898–1979)

John Bokina

Herbert Marcuse was a political philosopher, member of the Frankfurt School, whose works were very influential during the period of New

Left activism. He was born in Berlin to an assimilated Jewish family. He served briefly in the German army during World War I. At the same time he began his doctoral studies at the University of Berlin. His early political experiences date from these years. He was a member of the majority faction of the German Social Democratic Party (SPD) between 1917 and 1919. He resigned to protest the SPD’s complicity in the deaths of Rosa Luxemburg and Karl Liebknecht. After the war he participated in the Berlin Revolutionary Soldiers’ Council, but quit when he detected Russian influence in it. With his resignation from the SPD and departure from the Council, Marcuse ended his only organized political affiliations.

In 1919 Marcuse resumed his studies in German literature, philosophy, and political economy at the University of Freiburg, earning his doctorate with a dissertation on “Der deutsche Künstlerroman” (the German artist-novel). After a period of working in a Berlin publishing company, he returned to Freiburg in 1928 to work as a philosophical assistant to Martin Heidegger. The Nazi accession to power blocked his promotion to a German university professorship. In 1933 he became a member of the Frankfurt Institute for Social Research at the Institute’s Geneva branch. The following year he emigrated to the United States and continued his work with the Institute at Columbia University in New York.

Between 1942 and 1950, Marcuse was a research analyst for the US government, first in the Office of War Information, then in the Office of Strategic Services, finally in the State Department. He held research fellowships at Columbia and Harvard following his government employment. In 1963–4 he was a visiting professor of history at Yale. Marcuse’s first permanent academic position was at Brandeis University, where, between 1954 and 1965, he was professor of politics and philosophy and chairman of the graduate program in the history of ideas. At the same time he held an appointment at the Ecole Pratique des Hautes Etudes in Paris (1959, 1961–2). After his retirement from Brandeis he was professor of philosophy at the University of California, San Diego. He was awarded an honorary professorship at the Free University in Berlin in 1966. Marcuse attained his greatest fame during the period of New Left activism. From the mid-1960s until his death, he was both

an advocate and critic of New Left theories and practices. He died in Starnberg, West Germany.

Marcuse's first published philosophical works dated to the period of his association with Heidegger. During this period Marcuse made the first attempt to synthesize Marxism with existential philosophy. In a number of essays and the book that was intended to be his professorial habilitation (translated into English as *Hegel's Ontology and the Theory of Historicity*, 1987), Marcuse tried to resolve what he called "the fundamental predicament of Marxism" by fusing Marxism with elements of Heidegger's phenomenological method and existential ontology. Marcuse believed that contemporary Marxist theory was caught between the vulgar economic determinism of orthodox dialectical materialism and the overly idealistic alternative of Kantian Marxism.

When he joined the Institute for Social Research, Marcuse gave up his individual effort to reformulate Marxism and participated in the collective effort to develop a "critical theory of society." His primary task at the Institute was the philosophical articulation of the fundamental principles of this critical theory. His essay on "Philosophy and Critical Theory" defined critical theory as a fusion of Marxist social theory and idealist (primarily Hegelian) philosophy, while it hinted at the Freudian component that would be central to his later work. His book *Reason and Revolution* (1941) culminated Marcuse's efforts in this period. One of the central themes of this work was the refutation of the view prevalent in England and the United States that Hegel's glorification of the Germanic state was realized in the Nazi state. Marcuse instead emphasized the contrast between Hegelian rationalism and Nazi irrationalism. The true contemporary heir to Hegel, in Marcuse's view, was not Nazism but Marxist social theory.

When Marcuse resumed his academic career in 1950, one of the thrusts of his work was the analysis of the ideological obstacles to revolution. His book on *Soviet Marxism* (1955) traced the Soviet transformation of Marxist social theory from a form of critical thinking designed to guide revolutionary political practice into a fixed universal system that arrests and codifies Marxism as an ideological prop to the existing status quo. His controversial 1965 essay, "Repressive Tolerance," analyzed the degeneration of the liberal idea of tolerance. Historically, the demand for

tolerance was a partisan demand for the toleration of certain progressive but outlawed ideas. Contemporary tolerance had become an apparently indifferent, but actually repressive, acceptance of all ideas – social and antisocial, true and false. The masterpiece of this ideological criticism was *One-Dimensional Man* (1964), Marcuse's most famous work. Here Marcuse described the smooth and comfortable totalitarianism of advanced industrial societies. A one-dimensional society had little need for the coercive apparatus of the traditional authoritarian state. The development of the welfare and warfare state, the mass media, and modern technology has engendered a mass conformity and suppressed the development of genuine alternatives to the status quo. In *One-Dimensional Man* Marcuse duly noted the possibility of revolution, but it was the ideological, political, and technological obstacles to revolution that were emphasized.

If Marcuse's criticism of ideology emphasized the obstacles to revolution, the Freudian thrust of his postwar work raised the stakes involved in revolution. The object of a true revolution is human freedom and happiness, and the realization of this freedom and happiness required much more than the capture of political power and the socialization of the means of production. *Eros and Civilization* (1955) offered Marcuse's synthesis of Marx and Freud. With Freud, Marcuse argued that some "basic repression" of the instincts was necessary to maintain the "reality principle" of any society. But Marcuse introduced a historical dimension to repression. Stratified, competitive, economically exploitative industrial societies – whether capitalist or socialist – imposed an additional "surplus repression" upon the instincts in order to maintain their particularly onerous form of the reality principle, which Marcuse called the "performance principle." True revolutionary emancipation, therefore, went beyond political and economic change to include the social, sensuous, and sexual emancipation of the instincts that would occur with the elimination of surplus-repression.

Marcuse's critique of advanced industrial society and his vision of human emancipation exerted some influence on the protean movement of dissent associated with the label "New Left." The New Left was opposed by the old socialist and communist lefts and disavowed by most established intellectuals, including some of Marcuse's former colleagues at the Institute for Social

Research. But in *An Essay on Liberation* (1969) and *Counterrevolution and Revolt* (1972) Marcuse took a more favorable view. He never minimized the power of the forces opposed to revolutionary change, nor did he uncritically endorse the New Left in all its tactics and objectives. But Marcuse was attentive to the spark of genuine human emancipation in this movement, which threatened, for a moment, the stability of the most advanced industrial societies. Marcuse's last works explored the theme of art and revolution. Marcuse argued that art, more than any other dimension of human culture, preserved an image of human emancipation and happiness. His last book, *The Aesthetic Dimension* (1978), combatted the orthodox Marxist tendency to trivialize art by reducing it to the status of a mere ideological reflection of social classes.

Marianne, French revolutionary icon

Walter R. Herscher

Since the French Revolution of 1789, Marianne has been the name of a symbolic female in a red cap representing the liberty of the French nation. Historically, rightist governments have tended to deemphasize Marianne, while leftist governments have given her more prominence. Today's version depicts a youthful female wearing a red cap, sometimes with a tricolor sash or clothing.

Borrowing from ancient Roman iconography, *Liberty* was depicted during the French Revolution allegorically as a female, usually wearing or carrying a red Phrygian cap. The inclusion of this cap has various possible origins. One is the common belief that freed slaves during Roman times wore the Phrygian cap, thus symbolizing *Liberty*. Another connects it to the 1675 Peasant Revolt in Brittany, also called the Revolt of the Red Bonnets because a red cap was the traditional headgear of Breton farmers.

After abolishing the monarchy in 1792, the new Republic needed an official image. Formerly, the state had been identified with the ruling monarch's image, but the Republic was an abstract personification. A prominent republican clergyman, Abbé Gregoire, proposed that the state seal display the image of France as a woman dressed in Greco-Roman style, standing, and with "her right hand holding a pike surmounted by a Phrygian cap or cap of Liberty." The name Marianne seems to have first been attached to the symbol in a patriotic song, "Marianne's Recovery," written in 1792 by Guillaume Lavabre. Marianne was a popular girl's name among the peasantry of the area where Lavabre wrote his song. Supporters of the Republic favored the name because of its

non-aristocratic origins, but monarchists mocked its peasant associations.

When Napoleon Bonaparte overthrew the First Republic and reintroduced personal rule, representations of *Liberty* were replaced by his image. After Bonaparte's defeat, the Restoration monarchs similarly opposed personifications of *Liberty* and had their own images represent the state. The July Revolution of 1830 temporarily brought Marianne back into official favor. To gain acceptance as the new monarch, Louis-Philippe sought to appeal to diverse political groups, including Bonapartists, monarchists, and republicans. To mollify the latter, he created public works and festivities commemorating the July Revolution. It was in that revolutionary year that Eugene Delacroix produced the most famous painting of Marianne, *Liberty Leading the People*, showing her leading the charge across the barricades wearing the red Phrygian cap. But before long Marianne was again phased out as fearful politicians began to play down revolutionary symbolism. Louis-Philippe's government purchased Delacroix's painting and kept it under wraps for the duration of his tenure – a testimony to Marianne's ability to arouse passions.

A new revolution in 1848 brought the Second Republic into being and once again restored Marianne to her former position of honor. Delacroix's painting was taken from the storehouse and put back on public display, but the Second Republic also gave Marianne a makeover: she now sometimes wore a crown of laurels with a star instead of the red cap.

As the Republic's president, Louis-Napoleon, began the drive to personal power that would end with his coronation as Napoleon III, Emperor of France, liberal and radical republicans alike looked to Marianne for inspiration. Their very different depictions of her, however, reflected their differing political values. The liberals preferred Marianne to be serene, motionless, with orderly hair and her bosom covered, more mature or maternal, and without the Phrygian cap. More revolutionary minded republicans wanted their Marianne displaying vehemence, always standing or advancing, having her hair floating free, displaying an uncovered bosom, youthful, and of course wearing her red cap.

It was in 1871, with the temporary triumph of the Paris Commune, that the most revolutionary Marianne of all made her appearance. She was portrayed partially nude, with a red cap and red

clothing, and carrying the red flag of international revolution instead of the French tricolor. After the fall of the Commune, the government of the Third Republic viewed Marianne somewhat suspiciously, but her image nevertheless became commonplace and was displayed on everyday objects. The Republic's partisans portrayed her as young and attractive while its opponents depicted her as repulsive.

Following the German invasion in 1940, the Nazi collaborationists of the Vichy government banned representations of Marianne, but after France's liberation the public again embraced her. During debate over the creation of the Fifth Republic, both sides associated themselves with Marianne. As president, Charles DeGaulle altered Marianne's image to a young girl dependent upon him.

In 1969 a bust of Marianne was modeled after the famous actress Brigitte Bardot. Later revelations of Bardot's strong right-wing political leanings led many to feel that her identification with Marianne was inappropriate. Since then, various celebrities have been portrayed as the "new Marianne." Many have posed as Marianne for publicity, caricatured her, or used her image commercially. Although not an official national emblem, Marianne remains a popular symbol and appears on government stamps, currency, and logos, while busts of Marianne are displayed in every town hall in France.

Mariátegui, José Carlos (1894–1930)

César Germana

José Carlos Mariátegui, a self-educated journalist born into poverty and raised by a single mother, was the first Peruvian thinker to conceive of the modernization of Peru as a process of socialist democracy. The uniqueness of his political proposal can only be understood by taking into account that his work was the result of an encounter between western culture, particularly Marxism, and Andean culture. In his work Mariátegui emphasized the political importance of the Andean Indian community, or *ayllu*, for any future socialist project in Peru.

Socialism was the basis of Mariátegui's thought as well as his political activity. Structured simultaneously as a class project and an intellectual project, Mariátegui's concerns encompassed a broad range of activities and interests: a careful monitoring of what he called the "contemporary scene," thorough investigation of the problems of Peruvian society, cultural criticism, political activism, and union organizing. His most important legacy to Peruvian and Latin American left-wing politics was his interest in expanding working-class concerns to include both intellectuals and the peasantry, which was central to the political and intellectual renewal of socialism in Peru and Latin America in general.

Mariátegui's lifelong pursuit of this socialist project can be considered in three stages.

The first stage covers the period of his life from 1914, when he started his career as a newspaper journalist, to his 1919 departure for Europe. In the first period, his interest and approach to socialism were galvanized both by the workers' first general strike in the history of Peru (demanding an eight-hour workday) and by the university students' movement (demanding the reform of the archaic and elitist university regime dominant at the time). Mariátegui's more militant political stance was also informed by the Indian peasant uprisings against land encroachment by expanding estates – rural movements that he compared to a seismic movement shaking the country's structures of social and political domination. Moving away from his early focus on literature, Mariátegui and another journalist founded the newspaper *La Razón* to support these

unprecedented social movements that, as a "fierce storm surge" in Mariátegui's words, marked the end of two decades of political stability under an oligarchic "aristocratic republic."

At that time, however, José Carlos Mariátegui's socialism was not accurately defined. It was rather an anti-establishment state of mind shared with other intellectuals of his generation. Mariátegui saw the oligarchic system as the root of Peru's social injustice. Against what he described as the "Creole politicking" of Peru's dominant classes, he saw socialism as the only possibility of democratizing the state and building an order of freedom and social equality.

In August 1919, the newly installed government of Augusto Leguía closed down *La Razón*. A few months later, Mariátegui left for Europe, marking the second phase of his socialist development. After brief stopovers in Panama and New York, he arrived in France. During his stay in Paris he became acquainted with Henri Barbuse and Romain Rolland – editors of the influential left-wing journal *Clarté*. In late 1919 he embarked for Italy, where he remained until the end of 1922. There he was married, as he recalled years later, to "a woman and some ideas." It was in Italy that he started his Marxist education, immersed in the intense political and cultural debates of the Italian Marxist left, shaped by the internal struggles in the Socialist Party, and inspired by the workers' mobilizations and factory occupations in Italy's northern industrial cities. It was in Italy that Mariátegui, together with a group of Peruvian friends, decided to start openly pursuing socialist activism in Peru. Before his return to Lima in March 1923 he also visited Germany, Austria, Hungary, and Czechoslovakia. Later in his life he remarked that "My articles of that time point out the moments in my socialist evolution." Indeed, the articles written in Italy between May 2, 1920 and April 23, 1922 showed a new perspective of analysis focusing on class struggle.

The third phase encompassed the years from his return to Peru in 1923 to his untimely death in April 1930. During this time, Mariátegui was absorbed with the question of how to give life to a "Peruvian socialism," a project that he conceived as grounded in Marxism but at the same time free of Eurocentrism. His theoretical work and his political activity were aimed at solving the problem of how to carry out the socialist revolution in a country where the development of capitalism

was emerging, and where peasants – subjected to pre-capitalist forms of exploitation – constituted the overwhelming majority of the population.

Upon his return from Europe, Mariátegui's main concern was the consideration of the global world crisis and its impact on Peruvian workers. His reflections on the world situation were presented in conferences at the Popular University and in articles for the weekly *Varietades*, some of which were published in 1925 under the title *La escena contemporánea*. In 1924 Mariátegui suffered a leg amputation which bound him to a wheelchair for the rest of his life. At the time of his return, the worker and students' movement had experienced significant progress since its beginnings at the end of the previous decade. A crucial institution bridging these two social and political sectors was the Popular University, which was organized by the recently created Student Federation with the purpose of contributing to the intellectual formation of the working class. Mariátegui's conferences marked the beginning of his socialist proselytism among the working class, as well as his ongoing debate about the anarchosyndicalist tendency dominant at the time among Lima's workers.

By 1925, Mariátegui's main focus was directed toward the study of Peruvian problems (although he never abandoned his interest in the international situation). From September 11, 1925 until May 19, 1929, he contributed a number of essays to the magazine *Mundia*, examining the nature of Peruvian capitalism as the complex articulation between three different – and contradictory – modes of production (capitalism, feudalism, and “indigenous communism”). Unlike the European historical trajectory of capitalism – born from the evolution of feudalism to mercantilism – Mariátegui suggested that the existence in Peru of forms of collective social and economic organization among indigenous communities offered the country the possibility of a different trajectory toward socialism.

In September 1926, Mariátegui launched the journal *Amauta* as an expression of the “new generation” forged in the anti-oligarchic and democratic struggles of the previous two decades. *Amauta* was a literary and critical journal which carried articles analyzing Peruvian society and history, as well as fiction, poetry, and criticism. In addition to providing a forum for discussion of the latest European philosophy, art, and political theory, *Amauta* was one of the first

publications to focus on the problems of Peru's Indian majority. Conceived as a collective effort, *Amauta* served as a vehicle of expression for a new intellectual and political generation, and as a space to gather Peruvian intellectuals to face the challenges posed by the dominant western culture. The debates between Mariátegui and Haya de la Torre that marked the split between the emerging socialist current and the radical nationalism represented by the latter were published in *Amauta* as well. Mariátegui also contributed to further cultural and political debates with the publication of the biweekly magazine *Labor*, conceived as a political and union forum.

Mariátegui's final years were also the years of his greatest political activity, both theoretical and practical. In September 1928, Mariátegui and a small group of socialists – among them labor and peasant organizers – laid the groundwork for what would be Peru's Socialist Party. A few weeks later on October 7, the Socialist Party was officially constituted as a “peasant and working-class party.” He prepared two books during this time, *Ideología y política en el Perú* and *Defensa del marxismo*, and prepared documents for the first meetings sponsored by the Third International in Latin America: the Montevideo (Uruguay) First Labor Conference and the Buenos Aires (Argentina) First Latin American Communist Conference. In September 1928 Mariátegui laid the organizational foundations of the Peruvian Socialist Party, and during 1929 played a central role in the formation of the General Workers' Confederation of Peru (CGTP). He also published a collection of essays in 1928 called *Siete Ensayos de interpretación de la realidad peruana* (Seven Essays on Peruvian Reality), in which he emphasized the political importance of the Andean Indian community, or *ayllu*, for the creation of socialism in Peru. In the last year of his life, through his debate, an eventual break with Haya, and his polemic with functionaries of the Latin American Secretariat of the Third International, Mariátegui laid the theoretical groundwork for his perspective on socialism in Peru that he defined as an “Indo-American socialism.” For Mariátegui, a class alternative was the only effective solution to Latin America's national problem, entailing the simultaneous elimination of imperialist domination and oppression of the Indian majorities, exercised through a ruling-class monopoly on the land. His

death at the early age of 36, however, prevented him from giving this concept a precise shape.

Within a few weeks of his death, a decision was made by the Latin American Secretariat of the Third International, with the support of a group of Peruvian militants, to transform the Socialist Party into the Communist Party of Peru. Eudocio Ravines, a young Peruvian student educated in Moscow, was appointed as its general secretary. Following directives from the Comintern, Ravines was charged with purging Mariátegui's ideas from the party's ideology because of an alleged "populism" at odds with the ultra-leftist orientation of the international communist movement at that particular stage of the Stalinist era.

Marighella, Carlos (1911–1969) and the Brazilian urban guerilla movement

Henrique Tahan Novaes

Brazilian communist militant Carlos Marighella was born in Salvador, Bahia. The son of a poor family, he dedicated his life to working-class causes. During his youth, he protested against racism at school and was arrested and tortured after sending an offensive poem to the government. At 18 he entered the Polytechnic School of Bahia to study civil engineering, but abandoned his studies. A few years later he moved to Rio de Janeiro, becoming a member of the Communist

Party (PCB) in 1932. Four years later he was arrested again and tortured for 23 days by Brazilian police, remaining in prison for a whole year. Marighella then moved to São Paulo, where he began to act on two major fronts: reorganizing the revolutionary communists, hardly affected by repression, and the combat against terror imposed by the dictatorship of Getúlio Vargas. In 1939 he returned to prison and remained there for six years. Even under brutal torture he refused to give information to the police. In prison he dedicated his revolutionary energy to the political education of other prisoners.

Freed in April 1945, he engaged in the redemocratization process of the country, which included the legalization of the PCB. Getúlio Vargas's government was deposed and general elections were called. Marighella was elected deputy in Bahia and allowed to participate in the elaboration of a new constitution (1946). He was considered one of the most combative members of the Brazilian parliament, always defending workers' aspirations, denouncing imperialism, and fighting the terrible living conditions of Brazilian people. This short period of legal activity ended when President Dutra suppressed communists' political rights in 1948.

In the 1950s, a period of important popular struggles, Marighella participated actively in many ways. He defended the state oil monopoly under the slogan "the oil is ours," and fought against sending Brazilian soldiers to Korea. He also criticized the internationalization of the Brazilian economy and began to consider the plight of agrarian laborers. He was sent to China and the Soviet Union, and in later years visited Cuba. During these visits, he examined the victorious revolutionary experiences of those countries. He began to consider guerilla actions and participated in some expropriations. In 1962, he warned of the imminence of a military coup.

Supported by the US government, the coup took place in April 1964. Marighella was pursued and found by the regime's political police. He resisted and was arrested after a shooting and a fight. His resistance became a political act that had national repercussions. A solidarity movement formed, forcing the military to accept a *habeas corpus* solicitation to free him. From this moment on, Marighella intensified his struggle against military rule. The government suppressed the unions and suspended the constitutional guarantees of its citizens.

In this context of state terrorism and violence, differences between Marighella and the PCB intensified. He criticized the party leaders' immobilism and bureaucracy, comparing himself to Fidel Castro and Che Guevara. In December 1966 he left the PCB. Maintaining his disposition to fight with the masses for revolution, he founded the National Liberation Alliance (ALN) with Câmara Ferreira, with the objective of organizing the armed struggle against the Brazilian dictatorship. He believed only force could defeat it. Throughout 1968 and 1969, he organized several urban guerilla operations in order to raise money for revolutionary activities.

As the guerilla activities grew, Marighella drew considerable attention from the authorities and became public enemy number one of the regime. On the night of November 4, 1969, he was surprised by a political police ambush on Casa Branca Street in São Paulo. He was assassinated and buried as a homeless vagrant. His organization, the ALN, survived until 1974. Marighella's intellectual legacy includes the founding of the ALN as well as his "Urban Guerilla Manual," which explains everything a guerilla should know: how to act as an urban guerilla, how to survive, which books to read, what technical preparation is necessary, how to get funds, which places to attack, and how to resist military dictatorship. This book marked revolutionary movements through the 1960s and 1970s, and Marighella's works were translated into several languages.

Maripe, Knight (1927–2006)

Geoffrey Barei

Born in April 1927 at Mapoka village in the North East District of Bechuanaland (now Botswana), Knight Maripe started his education at the local community primary school before proceeding to the Dombodema Mission School in Plumtree District of Southern Rhodesia (now Zimbabwe). In 1946 he finished standard six at Tonota, in the Central District of Bechuanaland, and then went on to the Ohlange Institute in Natal Province, South Africa, where he matriculated in 1951. Ohlange Institute was established by the mission school-educated John L. Dube after his return from America in 1899. Dube was one of the founders of South Africa's African National Congress (ANC). Ohlange's aim was to provide African youths with training in practical skills so that they could be of service to their own communities.

After matriculation Maripe found employment as a clerk in the African Department of Rhodesia Railways, subsequently joining the Bulawayo-based Rhodesian Railways African Workers Union (RAWU). RAWU operated in both Northern and Southern Rhodesia and had a combined membership of 22,000. Maripe moved quickly up the RAWU ladder, being appointed first organizing secretary, then assistant secretary general, then full secretary general. In 1956 Maripe organized a successful railway strike, bringing the railway system in both Rhodesias to a complete halt. The strike was reported to have been 100 percent effective in Bulawayo and 90 percent successful in the North Rhodesian towns of Ndola, Broken Hill, and Livingstone. As a result, the colonial government detained Maripe and other members of RAWU's leadership.

Maripe became active in African nationalist politics in Southern Rhodesia, and together with other colleagues created the All-African Convention in 1952. A precursor to this organization was the Industrial and Commercial Workers' Union (ICU), later RICU, which had been brought from South Africa. However, the ICU was torn apart by petty differences among its leaders. The All-African Convention was yet another attempt at unity and progress, but it too

was shortlived as the leadership became constantly embroiled in squabbles.

Maripe kept in touch with political developments back home in Bechuanaland. A mid-year 1957 Federal Intelligence report revealed that earlier that year Maripe and his friend Joshua Nkomo had crossed into Bechuanaland, went to Serowe, and discussed with Seretse Khama the possibility of forming a Bechuanaland Congress that would advocate the liberation of the territory. Nkomo was a Zimbabwean nationalist of Ndebele origin. He had joined trade union politics in the late 1940s while working for the Rhodesia Railways. Nkomo and Maripe met in 1954, when the former was elected RAWU's secretary general and Maripe deputized for him. In 1957, when Southern Rhodesia's nationalists decided to form a more representative organization called the Southern Rhodesia African National Congress (SRANC), they elected Nkomo as president.

In July 1954 Southern Rhodesia's trade unions moved a step forward as they were amalgamated into the giant Southern Rhodesia Trade Union Congress (SRTUC). Maripe was elected interim president. In February 1959, deteriorating political and economic conditions in Southern Rhodesia led the colonial regime there to declare a state of emergency and to arrest and detain hundreds of members and officials of the SRANC. The organization was subsequently banned. During the chaos, the SRTUC leadership was also arrested. The arrests were justified by the regime under the Unlawful Organization Act, the Preventive Detention Act, and the Public Order Amendment, which empowered it with wide powers "to maintain law and order."

Maripe's name was conspicuously missing from the detention list. His being left at liberty can be explained by his strong popularity, since the settler government feared that thousands of railworkers in Northern and Southern Rhodesia would go on the rampage if he were arrested. But it was not total victory for Maripe. He was placed in a situation akin to solitary confinement, as all his other colleagues were put behind bars and he was unable to organize with anyone. A feeling of helplessness came over him and he resigned as both secretary general of RAWU and president of the SRTUC.

Deprived of his union base, Maripe ventured into a new challenge, joining the influential newspaper group African Newspapers based in Salisbury (now Harare). He was appointed

chief industrial correspondent, wrote for the *African Daily News* as chief political reporter, and edited the *Bantu Mirror*, which was run by African Newspapers but circulated mainly in Matebeleland.

In 1961, the SRTUC had affiliated to the International Confederation of Free Trade Unions (ICFTU) and received significant funding. In early 1962 ICFTU officials from Brussels visited Southern Rhodesia. Maripe seized the opportunity, struck a deal, and was made the Southern Africa representative of the organization, based in Basutoland (now Lesotho). In April 1963, Maripe was recalled to the ICFTU headquarters in Brussels where he worked for some years.

In 1965, on the eve of Bechuanaland's independence from Britain, fellow-countrymen urged Maripe to return home as the newly independent country needed skilled manpower. Accordingly, in April 1968, he arrived back in Botswana. To his disappointment, there was no job for him in the country. Despondent, he flew back to Europe at the end of 1969.

It was after this second arrival in Europe that his life took a major academic turn. Using his meager resources, in 1970 he enrolled for a two-year diploma in industrial relations at Ruskin College, Oxford University, then at the University of Bath, graduating with a diploma in development economics in 1973. From Bath, his quest for education led him to the University of Sussex where, in December 1974, he graduated with a master's degree in labor studies (industrial relations). He remained at Sussex and went on to earn a DPhil in labor studies in early 1977.

Later that year, Maripe decided to go back home. This time he found employment with the Debswana Diamond Company as an industrial relations manager at its Orapa plant. He was mainly required to create "a tolerable work situation and to produce an industrial relations program within which the trade union and the management could work amicably." However, he was dismissed from the job in November 1979. Though the reasons for his dismissal are unclear, it seems that Maripe did not see eye to eye with the management of the company and was accused of siding with the workers in any dispute, despite being part of the management team. For instance, Maripe always argued that if workers were found to be at fault, the case against them had to be proven beyond doubt. This approach earned Maripe many enemies.

Maripe then entered active party politics, joining the opposition Botswana People's Party (BPP) and being appointed its political advisor. At the party's annual conference in Mahalapye, on July 11, 1982, he was elected its president. From 1984 onwards Maripe represented the party in various constituencies, but with little success. Overall, Maripe never made any significant impact on Botswana's political landscape and under his leadership the BPP witnessed a rapid decline in its following. Prompted by both old age and his party's ailing fortunes, Maripe quit active politics after the 1999 general elections and retired to his home at Nlapkwane, where he died in 2006.

Marks, J. B. (1903–1972)

Nicole Ulrich

John Beaver Marks was born on March 21, 1903 in Ventersdorp, a small town in Western Transvaal, South Africa. He was the seventh child of an interracial family, his father an African worker on the South African Railways, his mother a white laundress and midwife. In 1919, Marks studied at the Kilnerton Teachers' Training College in Pretoria, becoming part of the small, educated, black elite. His affinities lay, however, with the working class, and in the 1920s he was involved in the Industrial and Commercial Workers' Union (ICU) and the Communist Party of South Africa (CPSA). Largely due to his

father's influence, Marks also joined the African National Congress (ANC), the main African nationalist grouping.

In 1931, Marks was barred from teaching because of his political activity, and he dedicated himself to the CPSA. He traveled to Moscow to further his political education, and was elected to the Central Committee of the CPSA in 1932. Marks was a supporter of the "Native Republic" thesis, which stipulated that communists must first struggle for a deracialized capitalist South Africa, with socialism relegated to a later stage. Actively involved in attempts to bolshevize the CPSA, Marks was also part of a communist bloc in the ANC in the late 1930s. Despite opposition from more conservative members, Marks and other communists eventually occupied leading posts in the organization, which they sought to radicalize and revive. Marks became the ANC's Transvaal president, and later treasurer general.

In the 1940s, Marks became more actively involved in trade union affairs. In 1942, he was elected president of the Council of Non-European Trade Unions (CNETU), and soon afterwards, president of the African Mineworkers' Union (AMWU), CNETU's largest affiliate. In 1946, Marks led a major African mineworkers' strike: although 60,000 workers came out, the strike was crushed, and Marks and other CPSA leaders, like W. H. Andrews, were arrested for sedition. The defeat of the strike was followed by splits in CNETU and the decline of the AMWU.

In 1948, the National Party came to power on a platform of racial apartheid and Afrikaner nationalism, ushering in a new era of repression. The CPSA was banned, and numerous left-wing activists were driven from the unions by banning orders. Marks was subjected to frequent bans and restrictions on his activities and movements. However, he continued his activism in the ANC, and was involved with the underground South African Communist Party (SACP), formed in 1953.

The ANC was declared an illegal organization in 1960, and began to establish an underground network, including an armed group with the SACP called *Umkhonto we Sizwe* ("Spear of the Nation") and foreign missions. In 1963, Marks was instructed by the National Executive Committee of the ANC to join the headquarters of the External Mission in Tanzania. He suffered

a stroke in 1971, received treatment in a sanatorium in Moscow, and died on August 1, 1972.

Mármol, Miguel (1905–1993)

Kerstin Ewald

Miguel Mármol co-founded the Communist Party of El Salvador in 1930. As a member of the party's Central Committee, he experienced the 1932 uprising of El Salvador's masses against the dictatorship of Maximiliano Hernández Martínez and later analyzed the critical role of the Communist Party during the insurrection process. Like thousands of other insurgents and communists, he was arrested and brought before a firing squad. He survived the execution and escaped with serious injuries. This incident and his untiring revolutionary work earned Mármol an almost legendary reputation within the Latin American left. This position was consolidated by Salvadoran poet Roque Dalton's book about Mármol and by Uruguayan historian Eduardo

Galeano, who raised him to the status of metaphoric symbol for Latin America's fate.

Mármol and his two sisters were brought up by their mother, Santos Mármol, in Ilopango, near the capital of El Salvador. Because of the family's precarious situation, he worked as an assistant at the local National Guard office. The National Guard was El Salvador's military police, and it became increasingly involved in human rights violations in the name of oligarchic regimes. Mármol's work acquainted him with the torture chambers in his country, and he was shocked by the cruelty he witnessed there.

Mármol left his work with the police and became apprenticed as a shoemaker in a workshop in El Salvador, where his master introduced him to political literature and gave him information about the Russian Revolution. Around 1920, Mármol began trade union organizing, beginning with the shoemakers. His efforts led to the founding of the Regional Workers' Federation of El Salvador (FRTS). This federation, which at one time numbered 75,000 members, initially had strong anarchosindicalist tendencies, while Mármol and those around him leaned strongly toward communist positions. Within the FRTS, Mármol started to organize fishermen, workers, small farmers, women with small businesses, and local youth. With the aim of unifying democratic forces and fighting poverty, the federation's organizational work included popular education, a popular savings bank, credits to small businesses, cultural events, and welfare measures.

In 1930, Mármol joined a group of 30 individuals, mostly craftsmen, at a remote beach on Lake Ilopango to found the Communist Party of El Salvador, serving as organization secretary of the Central Committee. A crucial item in the party's program was the preparation of a civil-democratic revolution in order to promote industrialization and rural development, basic steps that were considered requirements for a communist revolution.

Mármol represented El Salvador at the conference of the Profintern, the Red International of Labor Unions, in Moscow in 1930. On this trip he had the opportunity to experience the achievements of the Russian Revolution at first hand and became somewhat disillusioned with the country's level of development. Upon his return to El Salvador, however, he presented open-minded reports to the organized workers, who

were on the verge of an uprising. Burdened by the world economic crises that depressed the poor majority, and exposed to legal uncertainty and military brutality, the people of El Salvador witnessed the overthrow of the government of the popular president, Arturo Araujo, by a coup d'état led by Maximiliano Hernández Martínez in December 1931.

News of the uprising that ensued in January 1932 caught the Salvadoran Communist Party unprepared. Having decided to take part in the presidential elections, the Communist Party had begun its campaign. When the population started to revolt in some parts of the country, the party leadership was convinced that the time was not yet ripe for a revolution. Its first reaction was to send in party officials to calm the situation. Accordingly, Mármol was delegated to Ahuachapan, where parts of the local population had occupied the local base of the security forces. Following party orders, Mármol tried to pacify the population, arguing in favor of a general strike.

After the electoral fraud and the failure of attempted negotiations with Martínez, the uprisings continued. The Communist Party took charge of the insurrection and started to prepare for an offensive. The date chosen for concerted action was twice postponed, giving the government of Martínez the opportunity to arrest prominent party leaders, including Farabundo Martí. Nevertheless, in some parts of the country, the people carried out operations according to plan, mostly without firearms, with no means of transport or communication, and with no plan for an orderly withdrawal.

Mármol was caught by the National Guard before he could return to Ilopango. He was sentenced to death but survived the execution due to the firing squad's inaccuracy. While Mármol managed to escape into hiding and recover from his injuries, throughout the country there was wholesale persecution and killing of those who had taken part or were suspected of taking part in the rebellion. The number massacred during the 14 years of the Martínez dictatorship is estimated at over 30,000. All popular organizational structures were destroyed. Hiding in the eastern part of El Salvador, Mármol managed to contact other survivors of the uprising and build up a clandestine cell of the Communist Party. Growing in self-confidence, he began taking steps toward a new popular movement.

Mármol spent the years between 1934 and 1936 imprisoned in solitary confinement. After his release he found himself the object of resentment of several members of the Communist Party's new Central Committee, who suspected him of cooperating with the security forces. During this period the party leadership disagreed over strategy, and Mármol returned to his labor organizing efforts, founding the National Alliance of Shoemakers and the National Union of Workers (UNT). Remaining a loyal member of the Communist Party, he followed the instructions of party leaders and went into exile in Guatemala, where he worked as a lecturer for activists in the Claridad School and again engaged in organizing workers. He remained in Guatemala until 1954, when the overthrow of President Arbenz put an end to the country's Democratic Spring.

Mármol was detained again by the Salvadoran authorities in 1968. At age 76, he was refused as a combatant in the Farabundo Martí National Liberation Front (FMLN) during El Salvador's guerilla war (1980–92). He went into exile in Cuba, returning in 1992 when the FMLN left the mountains to demobilize and sign the peace agreement. He died the following year.

Martí, Farabundo (1893–1932)

Tobias Lambert

Agustín Farabundo Martí was a communist leader and social protester in El Salvador. Today he is one of the most popular icons

among the Salvadoran left. While studying political science and law at the University of El Salvador, he participated in a student protest against the government of Jorge Meléndez in February 1920. Meléndez was one of the presidents during the so-called Meléndez–Quiñónez dynasty, which governed the country between 1913 and 1927. Police suppressed the protest violently and arrested 20 students, including Martí, who was deported to Guatemala. There he abandoned his studies and began work, obtaining jobs in breweries and also working as a bricklayer, a day laborer in the countryside, and a private teacher. When German coffee planters accused him of being an agitator, Martí went to Mexico, returning to Guatemala in 1923. Two years later he co-founded the Central American Communist Party, which continued until 1927.

In 1925, like many revolutionaries during this time, Martí was deported from Guatemala back to El Salvador. There, President Alfonso Quiñónez Molina banished him from the country and sent him to Nicaragua, but a few days later Martí returned to El Salvador clandestinely. He joined the Regional Federation of Salvadoran Workers (*Federación Regional de Trabajadores Salvadoreños*, FRTS), a huge Salvadoran labor union founded in 1924. Between 1925 and 1928 in particular he worked intensively inside the FRTS, earning a reputation as a powerful agitator and promoter, although he preferred to convince people in personal conversations since he was not a good speaker.

In 1927, Pio Romero Bosque became president of El Salvador, after the Meléndez–Quiñónez dynasty had ruled the country for 14 years. The new government initially brought a limited democratic opening. Under pressure from the FRTS, it decreed some moderate labor laws. Meanwhile, the organized peasant (*campesino*) movement expanded significantly.

In March 1928 Martí traveled to New York where he visited the Anti-Imperialist League of the Americas. He was arrested when police raided the office of the organization during his visit. Following this incident he returned to El Salvador. In June 1928 he traveled to Nicaragua to join the partisan army of Augusto César Sandino, who was fighting against the US occupation. Martí joined the armed combat and soon became Sandino's private secretary. In October 1929, however, he split from Sandino after traveling with him to Mexico to seek sup-

port for the Nicaraguan cause. Later he declared that in his view Sandino was neither an anti-imperialist nor a communist.

In 1930 Martí was expelled from Mexico and returned to El Salvador. There he worked as a representative of International Red Aid (*Socorro Rojo Internacional*), which supported communist prisoners and was connected to the Communist International. In March 1930 he co-founded the Communist Party of El Salvador (PCS). The period was characterized by a deteriorating economic and social situation, caused by the plummeting price of coffee, the country's principal export, and by the Great Depression, which had begun in October 1929. There were a growing number of worker protests, to which the government responded with repression, imprisonment, and prohibition of communist agitation and propaganda, decreed in August and October 1930. The protests were led by the PCS and the FRTS.

Martí soon became the central figure in the popular struggle in El Salvador. In December 1930, just before the presidential elections, he was arrested. While in prison he went on hunger strike and was once more banished. He left the country on a merchant ship destined for San Pedro, California, but returned on the same ship to El Salvador, where the authorities refused him entry. Finally he went to Nicaragua and reentered El Salvador on February 20. In the meantime, Arturo Araujo of the Labor Party (*Partido Laborista*) had won the elections.

The worker protests and repression by the police continued without respite. Martí was arrested several times for "communist agitation" and "defamation of the president." Nationwide meetings of solidarity were held in aid of Martí. Once again he went on hunger strike. After 27 days, parliament granted him an amnesty. In September 1931, however, Martí was arrested again, this time for protesting the killing of 15 workers. President Arturo Araujo made an attempt to include Martí in his government, but Martí refused and was sent to Guatemala again, returning a few days later.

On December 2, 1931, Araujo was overthrown by a military coup. The former vice-president, General Maximiliano Hernández Martínez, became president, ruling the country until 1944. In January 1932, regional and parliamentary elections were held. The Communist Party participated, although the elections took place in a

climate of repression and fraud. After the failure of talks between the central committee of the CPS and General Martínez about ending the repression, the party decided to launch an uprising against the military dictatorship. Martí was to assume the military command, but on January 19, police entered the insurgents' hiding place, arresting Martí and student activists Alfonso Luna and Mario Zapata and confiscating material that proved the group's intention to revolt. On January 20 the government imposed a state of emergency. Nevertheless, two days later the uprising began with thousands of indigenous people and *campesinos*, mostly armed with machetes, occupying several cities in the western parts of El Salvador.

The military put down the rebellion within three days and killed up to 30,000 people. Martí, Luna, and Zapata were executed on February 1 for "insurgency and rebellion." Martí is the most important reference point for the Salvadoran left today. The Farabundo Martí National Liberation Front (FMLN), which was a revolutionary guerilla group during the Salvadoran Civil War and now is one of the two principal political parties in El Salvador, was named after him.

Martí, José (1853–1895) and the Partido Revolucionario Cubano

Edward T. Brett

José Julián Martí y Pérez is considered the father of Cuban independence, but he was much more. He was a philosopher, statesman, poet,

essayist, orator, journalist, advocate of racial and class equality, and revolutionary. Martí was born in Havana, Cuba, on January 28, 1853. His father, Mariano Martí Navarro, was a native of Spain and his mother, Leonor Pérez Cabrera, was from the Canary Islands. He was the oldest of eight children and the only boy. The family was poor, and Martí was only able to attend high school due to the support of Rafael María Mendive, an enlightened thinker and school teacher whose views did much to influence Martí's early political and moral development.

In early 1869, a year after the first Cuban war for independence (the Ten Years' War) commenced, the 15-year-old anti-colonialist Martí began a newspaper, *La Patria Libre* (The Free Fatherland), and wrote his first notable poem, "10 de octubre." His short-lived newspaper was terminated, however, when the Spanish authorities closed his school in March and arrested him in October because he had authored a letter denouncing a fellow student who had pro-Spanish proclivities. Despite his youth, he was sentenced to six years of hard labor in a rock quarry. In early 1870, however, his sentence was commuted and he was exiled to Spain, where he soon penned his "El presidio político en Cuba" (Political Imprisonment in Cuba), a scathing indictment of the harsh treatment of prisoners in his homeland by Spanish colonial authorities.

He attended the universities of Madrid and Saragossa and, after graduating with a Bachelor of Arts degree and a licentiate in law, he secretly returned to Cuba, where he spent two months in 1877 and about a year in 1878–9. Aside from this short time, he spent the rest of his life, prior to his last month in 1895, in exile. Although he taught for a short time in Guatemala and worked as a journalist in Mexico and Venezuela, he spent nearly all of his years in exile in the United States.

Immediately after his arrival in New York City in January 1880, Martí joined the Cuban Revolutionary Committee and quickly rose to prominence as the Cuba Libre movement's most sophisticated thinker and foremost propagandist. Realizing that the previous revolutionary wars in Cuba had failed due to lack of preparation, unity, and proper political organization, he worked tirelessly to address these problems. He argued that independence was only one part of a larger process, one in which all Cubans, black and white, rich and poor, must strive together

to eradicate socioeconomic injustice. The future Cuba must not only be independent, he noted, but free of racial and class inequality and oppression. He also warned his fellow Cuban patriots to be weary of offers of help from the United States, contending that the real aim of North Americans was eventual annexation and economic dominance of the Caribbean island. Indeed, he argued that this was why Cuban separatists must be unified, well prepared, and well organized before embarking on another war for independence. A quick, decisive victory was essential, because a prolonged struggle would provide the United States with an excuse to intervene and mediate a solution that in the long run would make Cuba subservient to US imperial interests.

In 1892 Martí formed the Cuban Revolutionary Party (Partido Revolucionario Cubano, PRC) in an attempt to bring all dissident Cubans together so that they could work in harmony for a free, independent Cuban republic. On March 25, 1895, Martí, together with General Máximo Gómez y Báez, issued the Manifesto of Montecristi, which declared Cuban independence, the termination of all racially distinctive laws, and war with those who resisted independence. Seventeen days later he and General Gómez, along with a small revolutionary force, landed in Cuba. Just before they sailed, however, US authorities confiscated the boats and weapons that Martí had secretly assembled in Fernandina, Florida. This proved disastrous for Martí in that it forced him to defer to the autocratic-minded Cuban generals who had already been fighting the Spanish in Cuba.

Martí was killed on May 19, 1895 at the Battle of Dos Ríos. The war continued for three years after his death, but revolutionary leaders for the most part ignored his political ideals. It was not until the 1920s and 1930s that Cuban nationalists resurrected his memory and his philosophical and moral concepts became a model for a new generation of Cubans, who sought to bring about a more just society.

Martí is universally recognized as one of the greatest Latin American literary talents of the nineteenth century. An astute observer of the complexities and contradictions of US society as well as of the injustices of Spanish colonialism, he wrote countless essays on these and other topics for over 20 Spanish American periodicals. In 1889 he published a magazine for children,

Edad de Oro (Golden Age), which was widely read. *Ismaelillo* (1882), a collection of poems written for his son, and *Versos sencillos* (1891) are his best-known poetic works. After his death, several verses of the latter collection were combined with music from a traditional Cuban folk melody. Called *Guantanamera*, it has become one of Cuba's most loved folksongs. His style has influenced many Spanish American poets, including Rubén Darío and Gabriela Mistral, and many scholars consider him the father of literary modernism.

Martov, Julius (1873–1923)

Pavla Vesela

In their biography of Martov, historians Savelev and Tiutiukin (2006) argued that “Martov had in his own way become a symbol of protest against social injustice, political falsehood, and demagoguery, the personification of a splendid dream of a world without violence and war.” Martov, who entertained himself as a boy by imagining a utopian city called Prilichensk, became the leader of the Mensheviks, the non-Leninist faction of the Russian Social Democratic Labor Party (RSDLP). Martov's Marxism was generally marked by internationalism, moderation, and revolutionary pacifism.

Julius Martov was born Yuly Osipovich Tserdobaum on November 24, 1873 in Constantinople into a prosperous Jewish family. Although the Tserdobaums observed few Jewish customs and their children grew up in a materialistic environment, they nevertheless suffered from anti-Semitism. As a student of St. Petersburg University, Martov joined the Narodniki,

a populist organization, but his attachment was short-lived. At 19, he turned to Marxism, resulting soon after in his first arrest and exile in Vilno, where he continued to read and edit Marxist literature. He became a member of the Bund, a Jewish socialist group, and distributed propaganda among workers calling for a Jewish working-class party.

On returning to St. Petersburg in 1895, Martov became internationalist in outlook, which became a dominant characteristic of his Marxism throughout his life. He was among the founding members of the Union of Struggle for the Emancipation of the Working Class, for which he was again arrested and sent into exile in Siberia. After returning in 1900, Martov joined with Vladimir Lenin and other Marxists, including Vera Zasulich, Pavel Akselrod, and Georgi Plekhanov, working for the Marxist newspaper *Iskra*, first from Russia and later from Munich, while in exile. His exceptional journalistic ability proved vital for the newspaper: between the years 1900 and 1903 he published 49 articles, including topics on the peasant question, the struggle against liberalism, economism, and nationalism.

In 1902, however, internal disputes among Marxists began, culminating at the Second Party Congress of RSDLP in 1903. Lenin's proposal for a party of professional revolutionaries and effort to assume editorial control over *Iskra* eventually split the party into the Bolshevik and the Menshevik factions. Martov became the leader of the Mensheviks. Besides calling for a party open to the masses and modeled on its western counterparts, such as the German Democratic Socialist Party, the Mensheviks generally defended gradual and moderate rather than revolutionary transition to socialism, including continuing with the essential stage of capitalism.

Although the Mensheviks and the Bolsheviks cooperated somewhat after the 1903 Congress and they converged in numerous points of analysis of contemporary society, after the October Revolution in 1917 the Mensheviks were gradually more marginalized and suppressed. Martov, who was reelected to the Central Executive Committee of the Soviets of Workers' and Soldiers' Deputies (CEC), took a position in the Moscow Soviet, and supported the Soviet government against the Civil War (1918–22), but he continued to publish articles critical of the Bolsheviks in the Menshevik press. Eventually, he

was arrested by the Cheka (the political police) in 1918, and in 1920 went into exile. From Berlin, he published over 80 articles for RSDLP's Delegation Abroad's official periodical, *The Socialist Courier*. Until his death, Martov continued to defend the Mensheviks in the Soviet Union and criticized what he saw as the authoritarian measures of the Bolsheviks, considering the October Revolution a Bonapartist perversion. He died in 1923.

Marx, Eleanor (1855–1898)

Marcelline Block

Jenny Julia Eleanor Marx, the sixth and last child of Karl Marx and Jenny Von Westphalen, was born in London. She formed a close bond with her father early on and shared his love for literature and fascination for drama. Karl Marx felt a kindred spirit to his gifted daughter and stated: "Tussy is me" (Florence 1975: 11).

Eleanor Marx made many literary as well as political contributions of her own. Her lifelong love of literature led her to translate into English such masterpieces as Ibsen's *The Doll's House*, *The Wild Duck*, and *Lady of the Sea* and Flaubert's *Madame Bovary*. She also edited Friedrich Engels's *Revolution and Counterrevolution* and edited and translated several of her father's works, such as *Value, Price, and Profit: Addressed to Working Men; Revolution and Counter-Revolution, or, Germany in 1848*; and *The Eastern Question, A Reprint of Letters Written 1853–1856 Dealing with the Events of the Crimean War*. After her father's death in 1883 she was responsible for

editing, translating, and publishing his unfinished manuscripts, as well as *Das Kapital*.

Her own works include *The Factory Hell* (1885), *The Woman Question* (1886), *Shelley's Socialism: Two Lectures* (1888), and *The Working-Class Movement in America* (1888), all of which were co-written with her common-law husband, Edward Aveling, and *The Working-Class Movement in England*. She also contributed many articles to *Justice*, the political journal edited by H. H. Champion, and *Commonweal*, the Socialist League's newspaper.

Marx was politically active from an early age. Before age 16, she began traveling with her father as his secretary to numerous socialist conferences, which led her to a lifelong involvement in political activism. She joined the Social Democratic Federation (SDF) in 1884 but left it soon after to found the rival Socialist League, but she rejoined the SDF in 1897. In 1885 she helped organize the International Socialist Congress in Paris. In England, she was active in the Women's Trade Union League and was a supporter of strikes such as the Bryant and May strike of 1888, the London Dock Strike, and Silvertown Strike of Rubber Workers in 1889. She organized the Women's Branch of the National Union of Gasworkers and General Labourers and attended the Second International as a British delegate.

Although Marx led a rewarding intellectual and exciting professional life, making many contributions to the causes for which she was politically active, on the personal front she experienced tragic events. First, when her father opposed her engagement at age 17 to the French activist and writer Lissagaray, who was twice her age, she faced a crisis of loyalty (Evans 1982: xviii). Eleanor also suffered from anorexia throughout her life, particularly during her mother's terminal illness in 1881. Finally, in 1884, she learned that Edward Aveling had secretly married an actress while he was living with her as her common-law husband. It is believed that this latest humiliation was the trigger that led her to commit suicide by ingesting prussic acid, not unlike Madame Bovary. Her friends and relatives blamed Aveling for her death, but he escaped punishment and enjoyed her inheritance for the six months he survived her.

Marx, Karl (1818–1883)

Paul Le Blanc

Karl Heinrich Marx, generally acknowledged as a giant in the realms of social science and philosophy, and as an outstanding revolutionary of the nineteenth century, is perhaps the foremost representative of modern socialism.

Early Years

Marx was born in the city of Trier, Prussia, in what was later part of Germany. He was the third of nine children (although five of these siblings died at relatively early ages). Marx's parents were Jewish, but his father, deeply influenced by the Enlightenment and liberal ideas, formally converted to Protestantism in 1816–17 in order to find greater success in his law practice. The family was relatively well-to-do, making it possible to send young Karl to secondary school and then to the University of Berlin.

Marx proved to be an exceptional student, particularly interested in philosophy, and he was drawn to political currents that were critical of the Prussian monarchy and the traditional power structures of old Europe. Some among these currents were especially attracted to radical interpretations of Georg Wilhelm Friedrich Hegel (1770–1831), whose comprehensive and dialectical approach to philosophy embraced, somewhat covertly, conceptions of freedom and transformation associated with the French Revolution. Those who sought to draw out and develop the radical implications of Hegel's philosophy

Considered by both supporters and opponents as one of the most significant philosophers of the modern era, Karl Marx (1818–83) was a social, political, and economic theorist who helped found scientific socialism, or communism. Marx sought to organize an international movement for social transformation toward equality. He co-authored the Communist Manifesto with Friedrich Engels and is author of the seminal historical critique of the modern economy, *Das Kapital*. This photo was taken in 1860. (Getty Images)

became known as the “Young Hegelians” or “Left-Hegelians,” a current that included David Strauss (who developed a secularized account of the historical Jesus), Bruno Bauer (who developed an outlook of radical atheism), Ludwig Feuerbach (who sought to go beyond abstract philosophy toward a materialistic humanism), Arnold Ruge (who pushed in the direction of liberal democracy), and Moses Hess (who reached toward the social equality of communism). In the thick of all this was Marx himself, along with a soon-to-be close friend, Friedrich Engels, and other young academic radicals of the 1830s and early 1840s. Hegel’s dialectics – seeing reality as an ever-developing totality of dynamic inter-

connections – have been labeled “the algebra of revolution.” Marx made intensive use of this philosophical orientation in the development of his own revolutionary perspectives.

A number of factors encouraged Marx’s radicalism. Upon graduating in 1841, he found that an academic career was closed to him thanks to conservative domination over Prussian intellectual life. At the beginning of 1842, however, he had assumed the editorship of a new liberal opposition newspaper, the *Rheinische Zeitung* (Rhineland Times), which quickly ran into trouble with the Prussian censors and after a year was closed down.

It was not only negative experiences with the Prussian authorities that drove Marx in a more radical direction, however. There had long been left-wing influences – including Ludwig von Westphalen, an influential neighbor and Marx’s future father-in-law who, although a nobleman, was a vocal admirer of French utopian socialist Claude-Henri de Saint-Simon. Even more important was Marx’s journalistic work, through which he became convinced of his own limited understanding of social problems and economic realities – sending him into intensive studies (dramatically reflected in his unpublished *Economic and Philosophic Manuscripts of 1844*) that culminated in an uncompromising belief in the need for democratic and working-class revolutions that would replace capitalism with socialism.

In this period Marx married a longtime sweetheart, Jenny von Westphalen (1814–81), herself a highly cultured woman with revolutionary inclinations. Thanks to their dangerous left-wing commitments, the couple would suffer through many years of relative poverty, with two sons, Edgar and Guido, and a daughter, Franziska, dying during their most difficult years of exile in the 1850s – although three remarkable daughters, Jenny, Laura, and the vibrant Eleanor, grew up and followed in their parents’ radical footsteps. Some years later, it was discovered by Eleanor that there had also been an “illegitimate” child (Frederick) from a union between Marx and family friend and housekeeper Hélène Demuth.

In the mid-1840s Marx also began what would be a lifelong intellectual partnership with Friedrich Engels (1820–95), whose intellectual and political development had already brought him into radical working-class and socialist circles. The two comrades created an intellectual synthesis, blending classical German philosophy,

the classical political economy predominant in Britain (through the works of Adam Smith, David Ricardo, and others), and French political thought associated with the Enlightenment and the French Revolution. One could trace within it elements associated with Romanticism as well, and the powerful impact of the Industrial Revolution and the conceptualizations of utopian socialists like Saint-Simon, Robert Owen, and Charles Fourier, as well as the experience and theorizations of early working-class movements in Europe and North America (early trade union formations, the British Chartists, embryonic workers' parties of the United States, left-wing educational and discussion groups among European artisans). The resulting approach developed by Marx and Engels has helped to shape almost all subsequent realms of human inquiry – ranging from philosophy and literature to the natural sciences, but particularly the social sciences: history, economics, sociology, anthropology, political science.

Historical Materialism and Class Struggle

The development of Marx's distinctive views of history and social development can be traced in a rich array of letters and unpublished manuscripts, but also in a number of major works that were published in his lifetime.

Among the earliest of these was *The Poverty of Philosophy* (1847), a critique of the theorizing offered in anarchist Pierre Joseph Proudhon's writings, which Marx considered to contain badly flawed ways of looking at how social change can be brought about. Defining society as “the product of men's reciprocal action,” Marx insisted that it would be a mistake to follow Proudhon in the simple belief that “men are free to choose this or that form of society for themselves.” He argued that elemental, material aspects of reality would naturally block certain possibilities and generate others. On the other hand, embedded in the very structure of capitalist society, Marx argued, is a force that has the capacity to be a revolutionary class – the proletariat or working class, which is necessarily exploited and oppressed by the capitalist class, or bourgeoisie. “An oppressed class is the vital condition for every society founded on the antagonism of classes,” and “of all the instruments of production, the greatest productive power is the revolutionary

class itself.” Against the view that the working class coming to power could bring about a new despotism, Marx noted that “the condition for the emancipation of the working class is the abolition of every class,” that “the working class, in the course of its development, will substitute for the old civil society an association which will exclude classes and their antagonism, and there will be no more political power properly so-called, since political power is precisely the official expression of antagonism in civil society.”

In the wake of the failed revolutionary upsurges of 1848, when in France a new despotism was established by an adventurer who proclaimed himself Napoleon III, Marx sought to explain events in *The Eighteenth Brumaire of Louis Bonaparte* (1852). Here he emphasized: “Men make their own history, but not of their own free will; not under circumstances they themselves have chosen but under the given and inherited circumstances with which they are directly confronted.” He sought to show how substantial obstacles could prevent the realization of the popularly desired “social republic” of the laboring classes, that “proletarian revolutions . . . , such as those of the nineteenth century, constantly engage in self-criticism, and in repeated interruptions of their own course.” Time after time, experiencing serious reverses after seeming victories, “they shrink back again and again before the indeterminate immensity of their own goals, until the situation is created in which any retreat is impossible” and revolution becomes, at last, an absolute necessity.

In his first sustained economic analysis of capitalism, *Contribution to the Critique of Political Economy* (1859), Marx wrote:

In the social production of their life men enter into definite relations that are indispensable and independent of their will, relations of production which correspond to a definite stage of development of their material productive forces. The sum total of these relations of production constitutes the economic structure of society, the real foundation, on which rises a legal and political superstructure and to which correspond definite forms of social consciousness. The mode of production of material life conditions the social, political and intellectual life process in general. It is not the consciousness of men that determines their being, but, on the contrary, their social being that determines their consciousness. At

a certain stage of their development, material productive forces of society come in conflict with the existing relations of production, or – what is but a legal expression for the same thing – with the property relations within which they have been at work hitherto. From forms of development of the productive forces these relations turn into their fetters. Then begins an epoch of social revolution. With the change of the economic foundation the entire immense superstructure is more or less rapidly transformed.

The development of industrial capitalism, according to Marx, was creating the necessary preconditions for the working-class revolution that would be capable of bringing about socialism or communism (for Marx the terms were synonymous). As in all previous forms of class society, Marx explained in *Capital*, capitalism required a large class of laborers whose labor could produce not only enough to keep them alive, but also a surplus that could be taken over for the benefit of a minority class of exploiters. “If the worker needs to use all his time to produce the necessary means of subsistence for himself and his family, he has no time left in which to perform unpaid labor for other people,” he wrote. “Unless labor has attained a certain level of productivity, the worker will have no such free time at his disposal, and without superfluous time there can be no surplus labor, hence no capitalists, as also no slave-owners, no feudal barons, in a word no class of large-scale landed proprietors.”

The advance of technology (tools and productive knowledge) was essential for economic and therefore historical development. A characteristic of capitalism that made it distinct from the ancient slave civilizations and feudalism was that its internal dynamics had generated a profound and ongoing Industrial Revolution that qualitatively increased economic productivity (more products being produced with less labor), making it possible to establish a socialist or communist society in which a decent life and a high level of free development would become possible for all. The situation of the modern working class, Marx was convinced, would push it in the direction of struggling for such a society of the free and the equal.

In an 1852 letter, Marx wrote that “no credit is due to me for discovering the existence of classes in modern society nor yet the struggle between them,” since historians and economists

before him had already “described the historical development of this class struggle and . . . [the] economic anatomy of the classes.” He felt that his own contribution could be summarized by three points: “(1) that the existence of classes is only bound up with *particular, historic phases in the development of production*; (2) that the class struggle necessarily leads to the *dictatorship of the proletariat*; (3) that this dictatorship itself only constitutes the transition to the *abolition of all classes* and to a classless society.”

Although contributing to considerable confusion among latter-day academics and some would-be followers, careful scholars have demonstrated that the term “dictatorship of the proletariat” was – for Marx and others of his time – synonymous with the conception of “political rule by the working class,” consistent not with any conception of small-group despotism but with the notion of working-class democracy.

The mode of analysis that sees historical development as explicable through the examination of the interplay of forces of production and relations of production, of economic and technological development with the development of and struggle between classes, has been labeled *the materialist conception of history*, a more succinct term being *historical materialism*.

Capital

In his massive and complex masterwork *Capital* (1867), Marx describes capitalism as *a system of generalized commodity production*, that is, a system in which the production of commodities (and the transformation of more and more aspects of life into commodities) becomes increasingly dominant in society’s economic life. He begins with an intensive analysis of what a commodity is. Although it must have some use for people in society, what makes something a commodity is the fact that it is produced for the purpose of exchange (for trade, to sell). What determines its exchange-value is the mystery that Marx seeks to unravel. In modern capitalism, the means of exchange – money – establishes the cost of one commodity or another. So why do certain commodities (say, pairs of shoes) have one price, and other commodities (say, loaves of bread) have another price?

In the capitalist mode of production, the modern-day capitalist is the individual who invests money-capital into productive capital

(various commodities that constitute the means of production, raw materials and tools, plus the labor-power of workers) for the purpose of producing commodity-capital that can be sold for a larger amount of money-capital than that with which he started. This increase in capital (or capital accumulation) is the source of the capitalist's profits – and it is the need to maximize these capitalist profits that causes the mighty capitalist economy to function. But what is it in the capitalist production process that increases the value of capital?

In the analytical explorations in *Capital*, Marx distinguishes between what workers do with what capitalists do in regard to money and commodities. The worker needs money to buy such commodities as food, clothing, and shelter. The worker normally has no way of getting money except by selling the one commodity that she or he owns, the ability to work (labor-power). If M stands for *money* and C stands for *commodities*, the worker provides the commodity of labor-power to secure money in order to buy commodities, represented by the formula C-M-C. In contrast, the capitalist invests money into commodities which yield money that is increased (M'), which is represented by the formula M-C-M'. According to Marx, there is an invisible link between the formulas representing what the worker and the capitalist do.

Adapting the *labor theory of value* developed by Adam Smith and others, Marx asserts that the value of any commodity is determined by the amount of labor (or, more precisely, socially necessary labor) that it contains. Shoes have a different value than bread, for example, because each contains different proportions of labor. The value of the worker's special commodity, labor-power (the ability to work), is determined by the amount of labor it ultimately takes to provide such things as food, clothing, or shelter that were required to produce and maintain the worker's ability to work. This is, roughly speaking, what the capitalist pays the worker in the form of wages.

Marx then goes on to emphasize that there is a difference between *labor-power* (the ability to work) and the *actual labor* that is squeezed out of this ability to work. The worker sells his or her ability to work for a specific length of time (for example, ten hours a day, six days a week). What the capitalist pays for is the ability to work, but what he actually gets is the actual labor. In a certain amount of time (say five or six

hours) enough commodities are produced whose money equivalent is the same as the worker's wage for that day – and these things Marx calls “necessary labor time” and “necessary labor.” But since the worker has sold *the ability to work for the entire workday*, the capitalist is able to keep the worker laboring for an additional four or five hours, for a period of “surplus labor time” amounting to unpaid labor, or what Marx labels “surplus labor.” The value produced to cover the wages of the worker is “necessary value,” but the additional value produced is *surplus-value*, which is the source of capitalist profits and the key to the capitalist accumulation process.

In order to advance the process of capital accumulation, capitalists increasingly strive to increase productivity through advancing technology and through drawing more and more workers into a cooperative production process. “The driving motive and determining purpose of capitalist production is the self-valorization of capital to the greatest possible extent, i.e. the greatest possible production of surplus-value, hence the greatest possible exploitation of labor-power by the capitalist,” Marx notes. “As the number of the cooperating workers increases, so too does their resistance to the domination of capital, and, necessarily, the pressure put on by capital to overcome this resistance.”

While Marx demonstrates considerable confidence in the ability of capitalists to find various ways to maintain and intensify their domination over an extended period of time, he explores in the pages of *Capital* an accumulation of complications and contradictions which will, in his opinion, ensure the eventual end of capitalism. The growing productivity and centralization of the capitalist economy, and the growing concentration of ownership, wealth, and power in the hands of fewer powerful enterprises, creates a situation for the capitalists that is guaranteed to whirl out of control:

other developments take place on an ever-increasing scale, such as the growth of the cooperative form of the labor process, the conscious technical application of science, the planned exploitation of the soil, the transformation of the means of labor into forms in which they can only be used in common, the economizing of all means of production by their use as the means of production of combined, socialized labor, the entanglement of all peoples

in the net of the world market, and, with this, the growth of the international character of the capitalist regime. Along with the constant decrease in the number of capitalist magnates, who usurp and monopolize all the advantages of this process of transformation, the mass of misery, oppression, slavery, degradation and exploitation grows; but with this there also grows the revolt of the working class, a class constantly increasing in numbers, and trained, united and organized by the very mechanism of the capitalist process of production. The monopoly of capital becomes a fetter upon the mode of production which has flourished alongside and under it. The centralization of the means of production and the socialization of labor reach a point at which they become incompatible with their capitalist integument [covering]. This integument is burst asunder. The knell of capitalist private property sounds. The expropriators are expropriated.

Marx comments that the creation of “capitalist private property” was “naturally an incomparably more protracted, violent and difficult process than the transformation of capitalist private property, which in fact already rests on the carrying on of production by society, into social property.” The earlier form of expropriation carried out under capitalism “was a matter of the expropriation of the mass of people by a few usurpers,” while with the coming of socialism through a working-class revolution “we have the expropriation of a few usurpers by the mass of the people.”

From Communist League to International Workingmen’s Association

Much scholarship has concentrated on critical or appreciative expositions of Marx’s theories, minimizing, belittling, or ignoring the practical political work on which much of his life was actually focused. Central to Marx’s outlook was the insistence that a positive future for the working class and the relevance of the socialist movement were each dependent upon their coming together. This caused him to become committed to the development of working-class organizations and struggles.

In the mid-1840s, he and Engels became immersed in a network of communist-orientated political groups that became known as Com-

munist Committees of Correspondence which in 1847 were invited to merge with a larger revolutionary group, the League of the Just, into a newly established Communist League. The League of the Just had been a secret conspiratorial society, influenced by radical social and political ideas in the decades following the French Revolution, with a base among artisans and craftsmen of various European countries who, under the impact of industrial capitalism, found themselves being transformed into wage-workers. The Communist League, in part because of the insistence of Marx and Engels, became a democratic organization that openly sought to advance the struggles of the working class. In contrast to some figures in this milieu, such as the fiery artisan-intellectual Wilhelm Weitling, they insisted that the strategy and tactics of the workers’ movement must go beyond radical-utopian rhetoric and instead be grounded in an understanding of actual social-economic forces and possibilities.

The membership of the Communist League – whose views were converging with the analytical, strategic, and tactical orientation that Marx and Engels had been developing – commissioned the two to write a *Manifesto of the Communist Party* (1848) for the purpose of publicly explaining the outlook and purposes of the organization. With dramatic prose and concise formulations, the *Manifesto* outlined a materialist conception of European history, a sweeping and incisive critique of capitalism against which was posed the vision of a communist future: “In place of the old bourgeois society, with its classes and class antagonisms, we shall have an association, in which the free development of each is the condition for the free development of all.”

The *Manifesto* also offered a summary of early working-class struggles and a practical program for the working class involving the development of trade unions, the struggle for social and democratic reforms, and the development of a labor party that would help lead the working class to “win the battle of democracy,” taking political power and initiating a transition from capitalism to socialism. Marx and Engels described communists as participating fully in such developments, constituting “practically, the most advanced and resolute section of the working-class parties of every country, that section which pushes forward all others; on the other hand theoretically, they have over the great mass of the proletariat the advantage of clearly understanding the line

of march, the conditions, and the ultimate general results of the proletarian movement.”

The *Manifesto* appeared as the revolutionary upsurge of 1848 swept through Europe. Marx and Engels saw the German revolutionary movement as a democratic upsurge to sweep away monarchs and aristocracies, bringing into being a unified, modern republic animated by the ideal of “rule by the people.” Within this they hoped to rally a broadly democratic left wing that would push the upsurge beyond the compromises with the old order that some liberals were reaching for, and to crystallize an even more radical working-class socialist current that would be prepared to push for “rule by the people” over not only society’s political life but also its economic life. In the swirl of events, Marx became the editor-in-chief of the influential left-liberal democratic daily *Neue Rheinische Zeitung*, which had a readership of 6,000.

At the same time, the Communist League was dissolved, its members becoming absorbed into broader and looser formations and activities. Marx initially favored this dissolution, but as events unfolded to block the more revolutionary developments he had anticipated, he concluded this had been a mistake. The moderation of the liberals (frightened by the radical possibilities of revolutionary mass action) helped to demobilize the upsurge and enabled the forces of the old order to reestablish their firm hold on political power. In the *Neue Rheinische Zeitung*, Marx serialized lectures he had given to the German Workers’ Educational Association, which later became the pamphlet *Wage-Labor and Capital* – an early analysis of how capitalists exploit workers, and how workers must organize to bring an end to the wage slavery. By the summer of 1849, the revolutionary forces had been utterly defeated, Marx’s vibrantly revolutionary newspaper was suppressed by the Prussian authorities, and he was forced into exile along with many other revolutionaries.

In exile, Marx and his comrades reorganized the Communist League, and in a March 1850 *Address of the Central Committee to the Communist League* he and Engels developed what amounted to a self-criticism of aspects of their own activity during 1848. “The relationship of the revolutionary workers’ party to the petty-bourgeois democrats is this: it cooperates with them against the party which they aim to overthrow; it opposes them wherever they wish to secure their own

position.” These “petty-bourgeois democrats” had favored the creation of a democratic republic but not radical social change – “far from wanting to transform the whole of society in the interests of the revolutionary proletarians, [they] only aspire to a change in social conditions which will make the existing society as tolerable and comfortable for themselves as possible.” An open-ended unity with such forces would mean that “the proletariat would lose all its hard-won independent position and be reduced once more to a mere appendage of official bourgeois democracy.” From this Marx and Engels developed an orientation of working-class political independence and internationalism that would have far-reaching consequences:

While the democratic petty bourgeois want to bring the revolution to an end as quickly as possible, achieving at most the aims already mentioned, it is our interest and our task to make the revolution permanent until all the more or less propertied classes have been driven from their ruling positions, until the association of proletarians has progressed sufficiently far – not only in one country but in all the leading countries of the world – that competition between proletarians of these countries ceases and at least the decisive forces of production are concentrated in the hands of the workers.

In order to advance along this path, “the workers, and above all the [Communist] League, must work for the creation of an independent organization of the workers’ party, both secret and open,” providing contexts in which “the position and interests of the proletariat can be discussed free from bourgeois influence.” They must be prepared to form a united front with pro-capitalist liberal democrats in the struggle to overturn monarchy and establish a democratic republic, but must become an independent force to struggle for the interests of the working class and push forward to a socialist future.

The exiles of the failed 1848 revolution, Communist League members no less than others, found themselves in an increasingly demoralized situation. Some refused to accept defeat and prepared for an anticipated “new wave” of revolution, others drifted away from revolutionary politics, and many sank into nostalgic inertia and “tempest in a teapot” quarrels. By 1852, Marx and Engels helped to dissolve the disunited and

increasingly dysfunctional League, glad to extricate themselves from the unproductive morass of exile politics. At the same time, they continued the work of political, social, and economic analysis and workers' education, maintaining contacts with various currents in the workers' movement with an eye to the future.

By the early 1860s, the brilliant but vain Ferdinand Lassalle, a comrade from 1848, was leading an incredibly successful political campaign to extend voting rights to German workers and to form a mass working-class party. Lassalle thought highly of Marx, and the possibility of Marx playing a major role in the workers' movement and political life inside Germany seemed to open up. Yet irreconcilable political differences soon caused a break. Lassalle dismissed the value of trade unionism (due, in part, to his belief that an "iron law of wages" prevented gains being made through such means) in favor of an exclusively electoral orientation, and – with a state-orientated view of how socialism could be brought about – was inclined to make covert deals (against bourgeois liberals) with Prussia's militantly conservative leading statesman, Otto von Bismarck.

The fundamental perspectives Marx had developed and given expression to for two decades, however, soon flourished in a promising new context in the years 1864–72, during which he helped to found and lead the International Workingmen's Association (IWA, later remembered as the First International). The IWA was an important federation of working-class organizations from a number of European countries, the United States of America, and parts of South America, including representatives of trade unions, educational and activist associations, cooperatives, and embryonic parties. Although there were various currents of reformist, socialist, and anarchist thought among its several thousand members, Marx's influence was undeniable. In his "Inaugural Address of the International Workingmen's Association" (1864), he offered a seemingly moderate articulation of the profoundly revolutionary ideas that had been presented in the *Communist Manifesto*. The IWA's Provisional Rules, which Marx also authored, begins with the Marxist clarion call: "The emancipation of the working classes must be conquered by the working classes themselves."

In another important presentation to the IWA, which became the popular pamphlet *Value, Price*

and Profit (1865), Marx laid out some of the basic ideas in his soon-to-be-published *Capital*, with which he argued (contrary to the so-called "iron law of wages") that trade union activity was worthwhile because, despite the limits imposed on it by capitalism, such struggles at the workplace for higher pay and better conditions could force the establishment of a higher standard of living (and therefore place a higher "value" on the sale of labor-power). IWA delegates discussed and adopted a number of important and educational resolutions on: the value of trade unions, the need for various reforms (having to do with ending child labor, establishing women's rights, and limiting the workday), the importance of political independence for the working class, the need for democratic rights for all, the necessity of international solidarity and cooperation among workers, the need for an independent foreign policy of the working class, and the logic of pushing beyond the exploitative wages-system.

The First International also took often influential positions on various issues in world politics: favoring Polish independence, supporting Irish Home Rule, favoring the anti-slavery cause and the preservation of the United States during the American Civil War (1861–5), and opposing the Franco-Prussian War (1870–1). In the aftermath of the Franco-Prussian War, which resulted in a French defeat and the abandonment of the capital city by the provisional government that succeeded the regime of Napoleon III, the working people of Paris rose up and established their own revolutionary government, which came to be known as the Paris Commune. Within three months it was drowned in blood by French troops, with the collusion of Bismarck's Prussian forces. Marx led the IWA in defending the Commune, with eloquent addresses that became the pamphlet *The Civil War in France* (1871).

Marx's detailed comments on the Paris Commune are generally seen as adding an important new dimension to his political thought. There was nothing new in his assertion that "the proletarians of Paris have an absolute right to render themselves masters of their own destinies by seizing upon the governmental power," but a new quality is added when he insists that "the working class cannot simply lay hold of the ready-made state machinery" that had been developed by previous ruling classes. His enthusiastic exposition of the radically democratic

features of this revolutionary “workers’ state” – and his suggestion that with the progressive evaporation of the state’s apparatus of repression and the expansion of increasingly direct forms of democratic functioning, the state would (and should) begin to “wither away” – deepened the radicalism associated with Marx’s views of the state.

In the aftermath of the Paris Commune’s defeat, the IWA fell apart. In the face of fierce governmental repression, especially in France but also in other parts of Europe, some of the more moderate trade unionists and labor activists backed away from the organization. In addition, there was an effort under the influence of Mikhail Bakunin to replace anarchist perspectives for those represented by Marx. The anarchists were inclined to shrug off trade union and reform struggles, advance an anti-statism that opposed even the notion of a revolutionary workers’ state, and – despite an expansive posture of radical egalitarianism – to utilize conspiratorial methods both inside and outside of the IWA. To block what they saw as Bakunin’s destructive manipulations and debilitating in-fighting, Marx and those around him transferred the central offices and leadership of the IWA to the United States in 1872, where the remnants of the organization finally passed away in 1876, becoming absorbed into what was then a growing socialist labor movement in that country.

Final Decade and Aftermath

There has been scholarly debate about the nature and quality of Marx’s political and scholarly work in his final decade. Some picture him as being ravaged by debilitating illness, the shell of what he once was, frustrated and unproductive. Others argue that previously unpublished but now-available materials show a still profound and keen intellect continuing to develop important insights and make major breakthroughs.

Among the better known of his later public contributions was *The Critique of the Gotha Program* (1875), raising sharp criticisms of the political program of the newly formed German Social Democratic Party, formed through a merger of Lassalle’s party and one led by two of his followers, August Bebel and Wilhelm Liebknecht. In Marx’s view, the proposed program for the new mass workers’ organization contained too much of the late Lassalle’s reformist

and statist theorizations. Restating some of the basics of his own orientation, Marx added a new notion – that the communist society emerging from the future working-class revolution would initially reflect substantial residues of capitalism and class society, and only after the passage of considerable time would a higher form of communist society (more naturally egalitarian, more free, stateless) come into being. (In *The State and Revolution* [1917], Lenin was to repeat this formulation, calling the first phase “socialism” and labeling as “communism” the projected higher phase.)

In examining realities in the United States in the wake of the 1877 labor uprising, in writing critical notes on Bakunin’s *Statism and Anarchy*, in corresponding with Russian scholars and revolutionaries, we find a lively intelligence extending the theoretical breadth of his “scientific socialism.” Of special interest was the seeming revision of the previously expressed notion that a socialist revolution would have to occur first in the more advanced capitalist countries, articulated in the 1882 preface to the Russian edition of the *Communist Manifesto*:

The *Communist Manifesto* had as its object the proclamation of the inevitably impending dissolution of modern bourgeois property. But in Russia we find, face to face with the rapidly developing capitalist swindle and bourgeois landed property, just beginning to develop, more than half the land owned in common by the peasants. Now the question is: can the Russian *obshchina* [peasant communes], though greatly undermined, yet a form of primeval common ownership of land, pass directly to the higher form of communist common ownership? Or on the contrary, must it first pass through the same process of dissolution such as constitutes the historical evolution of the West?

The only answer to that possible today is this: If the Russian Revolution becomes a signal for a proletarian revolution in the West, so that both complement each other, the present Russian common ownership of land may serve as the starting point for a communist development.

As recent scholars have shown, these reflections on Russian realities were simply the tip of the iceberg, below which one can find immense quantities of serious scholarship (which included learning the Russian language!), correspondence with Russian activists and intellectuals, and

innovative analysis. Overlapping with this were immense efforts to study, synthesize, and develop insights from the new field of anthropology – exploring varieties of non-capitalist development in different parts of the world and reaching for a deeper understanding regarding the evolution of the family, private property, and the state.

When Marx died, Engels commented that “in every field which Marx investigated . . . he made independent discoveries.” His two most important contributions, in Engels’s opinion, involved the *materialist conception of history* and the theory of *surplus-value*:

Just as Darwin discovered the law of development of organic nature, so Marx discovered the law of development of human history: the simple fact, hitherto concealed by an overgrowth of ideology, that mankind must first of all eat, drink, have shelter and clothing, before it can pursue politics, science, art, religion, etc.; that therefore the production of the immediate material means of subsistence and consequently the degree of economic development attained by a given people or during a given epoch form the foundation upon which the state institutions, the legal conceptions, art, and even the ideas on religion, of the people concerned have been evolved, and in the light of which they must, therefore, be explained, instead of *vice versa*, as had hitherto been the case. . . . Marx also discovered the special law of motion governing the present-day capitalist mode of production and the bourgeois society that this mode of production has created. The discovery of surplus-value suddenly threw light on the problem, in trying to solve which all previous investigations, of both bourgeois economists and socialist critics, had been groping in the dark.

Engels emphasized, at the same time, that “Marx was before all else a revolutionist. His real mission in life was to contribute, in one way or another, to the overthrow of capitalist society and of the state institutions which it had brought into being, to contribute to the liberation of the modern proletariat.” Marx’s friend emphasized that “fighting was his element. And he fought with a passion, a tenacity and a success such as few could rival.”

One complication in evaluating Marx’s theoretical legacy has been the fact that most of his writings – including important works giving insight into various dimensions of his thought

– were unpublished for many years and have until recently remained unavailable to would-be Marxists. Among the posthumously published works, in addition to an incredibly extensive and rich correspondence, were the last two volumes of *Capital* (edited by Engels) plus *Theories of Surplus-Value* (edited by Karl Kautsky), and various preparatory economic notebooks known as the *Grundrisse*. In addition, there were the *Economic and Philosophic Manuscripts*, *The German Ideology*, the recently available anthropological studies contained in the *Ethnological Notebooks*, and more.

In considering his practical political activity over the years (which involved fierce controversies with other radicals and revolutionaries, such as Proudhon, Weitling, Lassalle, Bakunin), Marx’s detractors and even some of his partisans have often missed a key aspect of what he had been doing. They tend to depict a tactless, impatient, argumentative neurotic with an inflated ego colliding time after time with those he sees as potential rivals, inevitably initiating squabbles in organizations he became involved in, lining up and manipulating various pals, hurling polemics and mobilizing cliques that were “full of sound and fury, signifying nothing.”

What more careful scholars (Riazanov, Löwy, Draper, Hunt, Nimtz) have been able to highlight is a much more consistent, coherent, principled mode of operation on the part of Marx and Engels and a numerically fluctuating current of co-thinkers gathered around them over a period of time (sometimes having characteristics of “a party”). There is a striking correspondence between analysis, strategy, tactics. Essential to the approach of Marx and his comrades was the dynamic fusion of several elements: the working class, democracy, socialism, and a scientific approach (i.e., grounding political action in an understanding of economics, sociology, political science, and history). What Marx and Engels and their various comrades hoped to accomplish was related to how they functioned, and they were able to have a profound impact in the broader organizations and movements of which they were part. Such efforts contributed to the later crystallization of socialist workers’ parties in a number of countries.

Essential in the thrust of working-class democracy in the nineteenth century were the intellectual and practical-political labors of Marx and Engels in the Communist League, in the 1848

upsurge, during the quiescent interlude that followed, and then in the years of the First International and the Paris Commune. The serious-minded political work (not just theorizing) of Marx and Engels for 20 years before the First International's founding in 1864 was essential in enabling them to play a central role in its development. Nor can one afford to underestimate the crucial importance of the First International in the larger political developments of the 1860s and 1870s, and particularly in the development of the labor movements of Europe and North America.

Throughout Europe in the 1880s and 1890s, mass socialist labor movements arose, influenced by the ideas which Marx and Engels developed and espoused, and those movements formed a Socialist International (the Second International) in 1889, which was disrupted by World War I (1914–18) and split by the Russian Revolution of 1917, but which continues to exist. Also influenced by Marx's ideas was a Third International, the Communist International (1919–43) formed under the leadership of V. I. Lenin and Leon Trotsky, although soon dominated and ultimately dissolved by the regime of Joseph Stalin. A much smaller Fourth International was established in 1938 by co-thinkers of Trotsky. Different varieties of "Marxism" collided within, between, and around each of these influential formations.

In these contexts, and beyond them as well, there have been fierce controversies over what Marx "really meant," what he actually said, and what remains relevant in his outlook. Nonetheless, his ideas and analytical approach have had a powerful impact on the intellectual life of modern times, even among those who reject "Marxism." Reacting against would-be followers whom he viewed as overly rigid and simplistic, Marx himself quipped: "As for me, I am not a Marxist." The fact remains that for well over a century, Marx's thought and example have been seriously studied by those wishing to understand and to help make revolutions.

Marxism

Paul Le Blanc

Marxism is a body of thought and a practical approach to reality based on contributions of two revolutionaries, Karl Marx (1818–1883)

and Friedrich Engels (1820–1895), who were intent on developing what they called “scientific socialism.” This orientation was denounced as “Marxism” by its critics, but this would-be negative label was, after Marx’s death, embraced by those who sought to follow in his footsteps. A variety of interpretations and new – sometimes sharply divergent – paths of thought and action became associated with this “Marxism.” Some scholars have emphasized differences between the ideas Marx and the ideas of others (including his intellectual partner Engels) who have claimed to speak in his name. At the same time, it can be argued that a distinctive orientation emanating from Marx became the core around which a coherent political orientation evolved, contributed to by a number of revolutionaries, which can be termed “revolutionary Marxism.”

The Scope of Marxism

Germans by birth, Marx’s and Engels’s interests, knowledge, and commitments (and eventually their influence) were global. Alert to how the Industrial Revolution was transforming human cultures and civilization, they were also intimately involved with democratic and working-class movements struggling (as the young Marx once put it in 1843) for the “overthrow [of] all conditions in which man is a degraded, enslaved, neglected, contemptible being,” to create a better future (as the two men stated in the 1848 *Communist Manifesto*) in which “the free development of each will be the condition for the free development of all.”

Marx and Engels created a dynamic intellectual synthesis which blended classical German philosophy, classical political economy predominant in Britain, and French political thought associated with the Enlightenment and the French Revolution. It was a synthesis that has impacted on almost all realms of human inquiry – ranging from philosophy and literature to the natural sciences, but especially the social sciences: history, economics, sociology, anthropology, political science. The five component parts of Marxism are:

1. A *philosophical orientation* that can be termed *dialectical* (seeing reality as a complex, evolving totality of interconnected and often contradictory components), *materialist* (the notion that people’s “ideas, views, and conceptions” or their “consciousness, change

with every change in the conditions of . . . material existence, in . . . social relations, and in . . . social life”), and *humanistic* (seeing “human nature” as a blend of needing and reaching for self-determination, or freedom, community, and creative labor).

2. A *theory of history* which sees human society evolving through economic stages, in most cases – whether under slavery, feudalism, or capitalism – involving powerful minorities becoming wealthy by exploiting the laboring majorities, a view giving special attention to the importance of technology, productivity, and class struggle.
3. An *analysis of capitalism* (a system of minority, or “private,” ownership and control of the economy, utilized to maximize profits for the minority while enmeshing more and more aspects of life in generalized commodity production) which sees incredible economic progress inseparably intermixed with a dehumanizing economic despotism, with contradictory dynamics that are amazingly creative and destructive, but which make possible a new and better society and a social force – the working class (whose labor is the basis for the creation of all wealth) – that might be capable of overcoming the problems inherent in capitalism.
4. A *political program for the working class* that calls for this increasingly majority-class (those dependent on the sale of labor-power in order to make a living) to join together in inclusive and socially conscious trade unions, struggle for social reforms to improve living conditions, to build independent labor parties and take political power.
5. A *vision of a socialist future* in which the economy is socially owned, democratically controlled, and utilized to meet the basic needs of all people and to facilitate the free development of each individual.

Ultimately, variants of this orientation struck root in every continent inhabited by human beings. Many millions of people consciously embraced aspects of Marxism and identified with its goal of a better future. It became a powerful force among those engaged in protests and revolutionary struggles from the late nineteenth century to the dawn of the twenty-first. Twentieth-century revolutions claiming to establish “Marxist states” became associated with new variations

of tyranny and failed to endure, leading to widespread disillusionment with and rejection of Marxist perspectives. Many adherents of revolutionary Marxism have argued, however, that such disasters have been rooted not in the realization but in the *betrayal* of Marx's orientation.

The Revolutionary Orientation

For Marx and others sharing his orientation, revolutionary change is not only desirable but – given the nature of capitalism – is both possible and necessary. This is so in various ways. The advance of technology and productivity – thanks to the dynamics of capitalist development – has drawn the different regions of our planet together and created a sufficient degree of social wealth, or economic surplus, to make possible a decent, creative, free existence and meaningful self-development for each and every person. Yet the dynamics of capitalist development (the relentless “accumulation process” involving the investment of money-capital into production capital to create commodities to sell for ever-larger quantities of money-capital) are so destructive of human freedom and dignity that it is necessary to move to a different form of economic life – a socialist society in which the conditions and resources necessary for sustaining human life would be under the collective control of humanity.

The natural trend of capitalist development, Marx noted, has been creating a working-class majority in more and more sectors of the world, and the nature of the working class also makes a socialist future both possible and necessary: *possible* because this majority class, essential to the functioning of capitalism, has the potential power to lay hold of the technology and resources of the economy to bring about a socialist future; *necessary* because the economic democracy of socialism is required to ensure the dignity, the freedom, and the survival of the working-class majority. Otherwise, he argued, the tendencies inherent in capitalism – subordinating all aspects of human culture, social reality, and the natural environment to the drive to maximize capitalist profits – would, even while creating material possibilities for a better world, result in a long-run decline in the quality of life, punctuated by periodic catastrophes.

The contradiction between the ever-increasing *social organization* of the economy with the

private ownership of the economy into relatively fewer and fewer hands inevitably generates conditions for revolution. Such conditions involve various problems (economic downturns and depressions, intensifying alienation, bad working conditions and living conditions) and opportunities (the increase of productivity and social wealth, the enhancement of communication and transportation systems, the drawing together of more and more people into a cooperative and interdependent labor force, the spread of education) that will radicalize increasing numbers of people who are part of the working class, as well as others who are not.

“The proletarian movement is the self-conscious, independent movement of the immense majority, in the interests of the immense majority,” Marx and Engels wrote in the *Communist Manifesto*. Unlike any previous revolutionary upheaval, the working class's coming to power would naturally culminate in majority rule. For Marx socialism and democracy are inseparable: his definition of socialism involves social ownership and democratic control over the technology and resources on which human life depends, creating a “free association of the producers.” Marx and Engels say in the *Manifesto* that the working class must “win the battle of democracy” in order to take control of the economy. Both believed it would be possible to win a working-class majority to this perspective if revolutionaries develop a clear understanding of capitalist reality (which creates the possibility and necessity for socialism) and help others – especially among the growing working class – to understand that reality.

But both Marx and Engels also insisted that an essential part of this process of creating a socialist majority among the working class will involve helping to mobilize the workers themselves around serious struggles to improve the condition of the working class (a better economic situation, an expansion of democratic rights). Not only would this result in life-giving improvements for the workers, but it would also give them a sense of their power and their ability to bring about change, and their organizational and class-struggle experience would enable them to struggle more effectively in the future.

This would be necessary because the natural dynamics of capitalism will work ultimately to erode any gains the workers are able to win. Such erosion can be blocked, ultimately, only by

moving beyond capitalism to the economic democracy of socialism. In the struggles of today, it is necessary to educate more and more workers about the requirements of the future. In multiple ways, the struggle for reforms in the here and now must be linked to the struggle for revolutionary change.

In order to advance its interests, then, the working class must organize itself not only as an economic movement but also as a political movement, and it must be politically independent from the capitalists and other upper-class elements organized in various liberal, conservative, and hybrid political parties. The workers must utilize their trade unions, reform organizations, and political party to struggle not only for immediate reforms but also for political power. When they are able to win political power (which will have to be organized in more radically democratic structures than those developed by the capitalist politicians), this will constitute a working-class revolution, and they should use this revolutionary power to begin the transition from a capitalist to a socialist economy. As part of this entire process, Marx and Engels assert in various writings, the workers must ally themselves with all laboring people (especially farmers and peasants), and with all of the oppressed, whose liberation must be part of the working-class political program.

Because capitalism is a global system, the struggle of the working class for a better life and for socialism must be global, and the development of socialism can only be accomplished on a global scale. The global and exploitative expansiveness inherent in capitalism is laid out clearly in the *Communist Manifesto*, which advances a thoroughgoing revolutionary internationalism which suggests that workers of all countries will have to unite in a multifaceted international movement to bring such a future into being.

There is also the matter of organization, Marx and Engels emphasized in the *Communist Manifesto*. Communists represent the most advanced and resolute section of the working-class movement seeking to push forward all the others – because they are the most theoretically clear element within the working class, with a definite understanding of “the line of march, the conditions, and the ultimate general results of the proletarian movement.” There is a need for democratic, cohesive, effective organizations of working-class activists to play this role. There

are radical insights and militant upsurges that animate the working class in its struggles – but much serious work needs to be done to help draw together and deepen such insights into consistent class consciousness, and to sustain and broaden such upsurges into consistent class struggle that can lead to socialism.

Reformism and Bureaucracy

Marxism, as it evolved from 1848 through the last half of the nineteenth century, was inseparable from the working-class movement that was developing throughout Europe and North America (with early or embryonic beginnings on other continents as well). The first organized current associated with Marx’s perspectives was the Communist League, made up primarily of radicalized artisans, craftsmen, and laborers in Western Europe, which passed out of existence after the defeated revolutionary upsurge of 1848. Marx and Engels continued to develop their thinking, however, while continuing to interact with small groups of left-wing workers, and when the substantial International Workingmen’s Association (a federation of workers’ organizations in Europe and the Americas, later known as the First International) came into existence in 1864, Marx played a central and influential role in its leadership.

What would later become essentials of Marxist economic, social, and political perspectives first found widespread expression in the International’s deliberations and resolutions. Later scholars have noted that this influence played a significant role in struggles to build the labor movement and to democratize European political life. (Consequently, a synonym for the word “socialist” in the late nineteenth and early twentieth centuries came to be the term “social democrat.”) In the wake of the defeated working-class uprising, the Paris Commune, in 1871, the First International went out of existence due to widespread governmental repression throughout Europe and also to a flare-up of internal differences among the International’s varieties of socialists, anarchists, and trade union moderates.

In the 1870s and 1880s, however, trade union and political movements influenced by Marxist ideas slowly built up impressive organizations throughout much of Europe, culminating in the formation in 1889 of the Socialist International. The largest and most influential party in this

Second International was the German Social Democratic Party (SPD), led by August Bebel and Wilhelm Liebknecht. Although presumably adhering to a particularly “orthodox” interpretation of Marxism, the evolving political practice of the SPD soon posed a sharp challenge to traditional Marxist assumptions.

Marx had believed that the reform struggles of the labor movement would pave the way for the workers to make a revolution (perhaps peaceful, but probably having to face and overcome violent reaction from the capitalists) – a dramatic power shift in which the working class would take control of a radically democratized governmental apparatus which would be utilized to bring about a transition from capitalism to socialism. But the relative prosperity of advanced industrial capitalist economies such as that existing in Germany (buttressed by the global economic expansionism known as “imperialism”) dovetailed with successful reform struggles to significantly improve the living conditions of sections of the working class. At the same time, the trade union organizations and the apparatus of the SPD that helped bring about such reforms became stronger, with established structures and growing full-time staff (that is, a bureaucracy) distinct from the mass of the rank-and-file working-class membership. Increasingly influential elements in this organizational apparatus were inclined to “move beyond” what they saw as outmoded revolutionary elements in the Marxist outlook.

The SPD’s leading intellectuals – Eduard Bernstein and Karl Kautsky – soon came to represent what seemed to be the primary divergent perspectives in the movement. Bernstein argued that perspectives of revolutionary socialism should be replaced by those of evolutionary socialism, that an accumulation of reforms would be sufficient to gradually eliminate what was wrong with capitalism, that outworn Marxist theory should be revised to match the reformist policies that actually represented what the SPD was doing. Kautsky’s “orthodox” view – challenging Bernstein’s “revisionism” – was that SPD policies were indeed basically sound, but that Marxist theory was also basically sound and in no need of such fundamental revision. He argued that capitalist crises of the future would necessitate the socialist revolution for which current SPD practice was preparing the workers.

A far sharper critique of Bernstein’s “revisionism” – but also of the SPD’s increasingly

reformist orientation – was advanced from the revolutionary wing of the party by Rosa Luxemburg. Her importance as a leading Marxist intellectual was highly unusual. The position of women in the socialist movement of the time tended to be more advanced than was true in the larger society, but the relatively limited female role in the movement reflected the traditionally subordinate status of women. Karl Marx’s own daughter Eleanor had played an important role in the British labor and socialist movements in the 1890s, and Rosa’s own good friend Clara Zetkin was prominent in the women’s organizations of the German social democracy (as was Alexandra Kollontai in the Russian movement). Luxemburg’s stature as an economist and political theorist, and as a spokesperson, caused her to stand out – as did her remarkably bold and vibrant qualities of thought and expression.

Luxemburg insisted that there was no possibility, through the reformist gradualism advocated by Bernstein, of seriously advancing the interests of the working class and of achieving socialism. The very nature of capitalism would prevent the permanent consolidation of working-class gains and painless evolution to socialism which he envisioned. But for her, far more than for Kautsky, this critique of reformist theory had dramatic implications for the reformist practice of the SPD, which she saw as adapting far too much to the myopic bureaucratic conservatism of trade union and party leaders, threatening to entangle the workers’ movement in the capitalist status quo.

Luxemburg – along with Kautsky and Bernstein – was part of an impressive layer of intellectuals drawn to Marxism: her SPD comrade Franz Mehring, the brilliant French historian and reformer Jean Jaurès, the “Austro-Marxist” theorist on the national question Otto Bauer, Italy’s leading Hegelian philosopher Antonio Labriola, the acerbic social and cultural critic of Russia, Georgi Plekhanov, and his countryman David Riazanov, who became perhaps the foremost Marx scholar of the epoch. At the same time, she was in the front rank of Marxists who advanced and deepened Marxist theoretical perspectives under the impact of modern imperialism – other important representatives being Rudolf Hilferding, Nikolai Bukharin, Vladimir Ilyich Lenin, and Herman Gorter.

Luxemburg viewed the social democratic movement as gathering together “the most

enlightened, most class-conscious vanguard of the proletariat” (as she put it in her classic essay *Mass Strike, Trade Union, and Political Party*). At the same time, especially based on her experience in the Eastern European revolutionary upsurges of 1905, she insisted on a decisive interplay between the organizations of the social democracy on the one hand and periodic and relatively spontaneous mass actions (what she termed “the mass strike”) on the other:

It suddenly opens new and wide perspectives of the revolution when it appears to have already carried in a narrow pass and where it is impossible for anyone to reckon upon it with any degree of certainty. It flows now like a broad billow over the whole kingdom, and now divides into a gigantic network of narrow streams; now it bubbles forth from under the ground like a fresh spring and now is completely lost under the earth. Political and economic strikes, mass strikes and partial strikes, demonstrative strikes and fighting strikes, general strikes of individual branches of industry and general strikes in individual towns, peaceful wage struggles and street massacres, barricade fighting – all these run through each other, run side by side, cross one another, flow in and over one another – it is a ceaselessly moving, changing sea of phenomena.

This collided, she found, with the natural inclinations of many trade union leaders who were immersed in “bureaucratism and a certain narrowness of outlook,” and of “socialist parliamentarians” who had “the decisive word alike in theory and practice . . . frittering away the energies of the labor movement. . . . What passed officially for Marxism became a cloak for all possible kinds of opportunism, for persistent shirking of the revolutionary class struggle, for every conceivable half measure.” Dominated by this orientation, she lamented, the bureaucratized labor and socialist movements “were condemned to pine away within the framework of capitalist society.”

The same kinds of issues – the dilemmas of bureaucracy, elitism, and revolutionary consciousness or lack thereof – were taken up in various ways by prominent academics who were sociologists and political theorists outside of the socialist movement – such as Max Weber, Robert Michels, Werner Sombart, Gaetano Mosca, Vilfredo Pareto, and Georges Sorel. Much innovation and insight in the academic “social

sciences” of the late nineteenth and earlier twentieth centuries developed in symbiotic and competitive relationship with Marxism, though in most cases the academic political scientists, sociologists, and economists were quite unsympathetic to the revolutionary perspectives of a Marx or Luxemburg.

Even while giving lip-service to Marxist “orthodoxy,” the increasingly dominant bureaucratic and reformist elements within the parties affiliated with the Second International sought to marginalize the influence of revolutionaries such as Luxemburg, as well as the more militant and radicalized layers of the working class. This trend toward deradicalization facilitated their efforts to make deals with pro-capitalist and conservative forces in government and society for the purpose of achieving various reforms. With the imperialist explosion of World War I (1914–18), the majority leaderships of most of these parties – rather than adhering to the injunction of the *Communist Manifesto*, “workers of all countries unite” – rallied their mass memberships in support of the war effort of their different countries. Those remaining true to revolutionary socialist perspectives opposed the war, saying that this murderous conflict was for the benefit of capitalists and at the expense of the working class. The price Luxemburg paid for taking such a stand was imprisonment for the war’s duration (and being murdered in its aftermath).

From Socialism to Communism

Throughout the nineteenth century, the words “socialism” and “communism” had meant more or less the same thing. Marx and Engels called their 1848 pamphlet the *Communist Manifesto* in order to distinguish their ideas from those of other socialist currents, but later Engels wrote another bestselling pamphlet, *Socialism: Utopian and Scientific*, in which he referred to himself and Marx as socialists. Because working-class socialists influenced by Marx saw an intimate connection between socialism and democracy, as we have seen, the terms “socialist” and “social democrat” also became synonyms. But the shock of the Socialist International collapsing under the influence of imperialist war caused revolutionaries to make increasingly sharp distinctions between themselves and those entangled with reformism.

When revolutionary socialists in the Russian empire, following V. I. Lenin and Leon Trotsky,

led a workers' and peasants' revolution that established a workers' republic in 1917, they called on socialists and workers around the world to follow their example. Because the words "social democrat" and even "socialist" had been tainted by the reformists and supporters of the war, the revolutionaries of Russia decided to call themselves communists, and labeled the Third International which they formed in 1919, with the goal of developing effective revolutionary parties throughout the world, the Communist International.

While many scholars have insisted on a dichotomy between the politics of Marx and Lenin, others have argued that Lenin's orientation was firmly grounded in the perspectives of Marx. This can be seen, they assert, in his understanding of the necessary interconnection of socialist theory and practice with the working-class and labor movement, his belief in the necessity of working-class independence and hegemony in political and social struggles, and his commitment to integrating reform struggles with revolutionary strategy.

Lenin also had a clear grasp of the unevenness of working-class experience and consciousness, and he sought the development of a practical revolutionary approach to this reality through inculcating among more and more workers an understanding of the necessity for socialist and working-class support for struggles of all who suffer oppression. Related to this, he developed a coherent conception of organization, the building of *the revolutionary party*, that is practical, democratic, and revolutionary – consistent with the perspectives we have noted in the *Communist Manifesto*, but also designed to avoid the deradicalizing developments that had afflicted many parties of the Second International. He called for an organizational approach "to facilitate the political development and the political organization of the working class" in a manner that would "ensure that these demands for partial concessions are raised to the state of a systematic, implacable struggle of a revolutionary, working-class party, against the [tsarist] autocracy" as well as "against the whole of capitalist society." Lenin insisted that "we must train people who will devote the whole of their lives, not only spare evenings, to the revolution; we must build up an organization large enough to permit the introduction of a strict division of labor in the various forms of our work."

The "Leninism" of Lenin also involved a remarkable understanding of the manner in which democratic struggles flow into socialist revolution. "Basing ourselves on democracy as it already exists, exposing its incompleteness under capitalism," he explained in 1915, "we advocate the overthrow of capitalism, expropriation of the bourgeoisie as a necessary basis both for the abolition of the poverty of the masses and for a complete and manifold realization of all democratic forms."

Related to this revolutionary-democratic approach to revolutionary strategy, especially in such a predominantly peasant country as Russia, was Lenin's insistence on the development of a *worker-peasant alliance*. "To avoid finding itself with its hands tied in the struggle against the inconsistent bourgeois democracy, the proletariat must be class-conscious and strong enough to rouse the peasantry to revolutionary consciousness, guide its assault, and thereby independently pursue the line of consistent proletarian democratism," he had written amid the revolutionary upsurge of 1905. "Only the proletariat can be a consistent fighter for democracy. It can become a victorious fighter for democracy only if the peasant masses join the struggle."

As early as 1905 he was also an articulate partisan of what would later be called the *united front* tactic – which would involve "the preservation of complete independence by each separate party on points of principle and organization" in the context of "a fighting unity of these parties" in favor of democratic demands, as well as specific social and economic reforms, or even overthrow of the oppressive Russian monarchy. Lenin believed that through the united front the most revolutionary of the parties (his own) would be able to prove its superiority and ultimately win majority support for a revolutionary socialist strategy. For this reason he warned: "We must be very careful, in making these endeavors, not to spoil things by vainly trying to lump together heterogeneous elements. We shall inevitably have to . . . march separately, but we . . . can strike together more than once and particularly now," that is, when there are compelling common goals.

Central in the Leninist perspective, as it crystallized amid the fires of World War I, was an *analysis of imperialism*. Lenin argued that as capitalism evolved into its modern imperialist phase it became transformed, that while "commodity

production still ‘reigns’ and continues to be regarded as the basis of economic life, it has in reality been undermined and the bulk of the profits go to the ‘geniuses’ of financial manipulation.” He perceived that “the 20th century marks the turning point from the old capitalism to the new, from the domination of capital in general to the domination of finance capital.” Under the old capitalism the export of goods was typical, while under the new capitalism the more important dynamic is the export of capital. The logic of the capital accumulation process led him to conclude that “surplus capital will be utilized not for the purpose of raising the standard of living of the masses in a given country, for this would mean a decline of profits for the capitalists, but for the purpose of increasing profits by exporting capital to the backward countries.” In his view, “in these backward countries profits are unusually high, for capital is scarce, the price of land is relatively low, wages are low, raw materials are cheap.” He perceived “diverse forms of dependent countries which, politically, are formally independent but, in fact, are enmeshed in the net of financial and diplomatic dependence.” This involved “not only agrarian territories, but even the most highly industrialized regions . . . because (1) the fact that the world is already partitioned obliges those contemplating a redivision to reach out for every kind of territory, and (2) an essential feature of imperialism is the rivalry between several great powers in the striving for hegemony.”

This view of the imperialist evolution of capitalism shaped Lenin’s understanding of “*the national question*.” A traditional Marxist view had been that nationalism was a progressive force that had challenged feudal traditions and monarchist empires with a vision of the self-determination of a people over the land in which they lived. But the more industrialized capitalist economies of some nations, advanced by powerful military establishments, were now dominating and exploiting the peoples of other regions, rationalized by a new form of nationalism used to mobilize popular support for imperialism. Lenin believed that “imperialism is the period of an increasing oppression of the nations of the whole world by a handful of ‘great’ nations,” and emphasized the need for socialists to oppose the nationalism of “oppressor nations” and to support the nationalism – the right of self-

determination – of “oppressed nations.” He also believed that such national liberation struggles would be a key in advancing the struggle for socialism worldwide.

Lenin advanced a vibrantly *revolutionary internationalist approach* that stressed the necessity of workers and oppressed peoples of all lands making common cause. He noted that the conditions generated by World War I had “brought the whole of humanity to an impasse, and faced it with the dilemma of either permitting the extermination of more millions of lives and the complete extinction of European civilization, or handing over power to the revolutionary proletariat and achieving the socialist revolution in civilized countries.” More than this, he insisted on the need for a “union between revolutionary proletarians of the capitalist, advanced countries, and the revolutionary masses of colonial countries.” This meant the need for revolutionary forces of various countries to strengthen each other in the face of global capitalist power, but it meant something more. Capitalism as a global system must be replaced by an international socialist order – a “live-and-let-live” coexistence on the same planet of the imperialist system and socialist democracies would be impossible.

In 1920 Lenin rejoiced that the Communist International “unites white, yellow, and black-skinned working people in brotherhood.” He insisted: “World imperialism shall fall when the revolutionary onslaught of the exploited and oppressed workers in each country . . . merges with the revolutionary onslaught of hundreds of millions of people who have hitherto stood beyond the pale of history, and have been regarded merely as the object of history.” More than this, Lenin’s revolutionary internationalism involved the mutual strengthening – shared experiences and insights that would become part of the revolutionary arsenal of ideas – of revolutionary forces in each country. Victories in one sector of the world would, not only theoretically but materially, make possible victories in other parts of the world. The Russian Revolution pointed the way for the workers and oppressed of all countries, Lenin believed, but at the same time he noted that the Soviet republic was “a besieged fortress waiting for the other detachments of the world revolution to come to our relief.”

Next to Lenin, Leon Trotsky was undoubtedly the outstanding theoretician and leader in Russia’s

early communist movement. After 1917, his approach more or less coincided with that of Lenin, although his *theory of permanent revolution* – emphasizing the democratic revolution flowing into the workers (supported by the peasantry) taking political power, and then initiating a socialist transition within the context of the process of international socialist revolution – anticipated important aspects of Lenin’s later thinking. Nikolai Bukharin was also an extremely important early communist theorist whose innovative work on the questions of the state and revolution and on imperialism had influenced Lenin’s evolving outlook, and who was, in turn, profoundly influenced by – and sought to further develop (or, according to some critics, develop too far) – Lenin’s views on the worker–peasant alliance in the period after the revolution.

In the period of the incredibly violent civil war and foreign intervention engulfing the early Soviet republic immediately after the 1917 Revolution, the communist regime under Lenin and Trotsky adopted extremely brutal and authoritarian emergency measures that were inconsistent with the democratic values that had, until then, been central to the Marxist movement. While Marx and Engels had sometimes used the term “dictatorship of the proletariat” to mean *political rule by the working class* (or workers’ democracy), the term was now redefined to justify a political dictatorship by the Communist Party. Rosa Luxemburg sharply challenged this development shortly before she died in an abortive workers’ uprising in Germany. “Freedom only for the supporters of the government, only for the members of one party – however numerous they may be – is no freedom at all,” she insisted. “Freedom is always and exclusively freedom for the one who thinks differently.” Luxemburg’s elaboration proved prophetic: “Without general elections, without unrestricted freedom of press and assembly, without a free struggle of opinion, life dies out in every public institution, becomes a mere semblance of life, in which only the bureaucracy remains as the active element.” While some of the Russian communists may have seen the dictatorship as a temporary necessity, it helped pave the way for what many would experience as a bureaucratic tyranny.

The Communist International (or Comintern) has often been criticized as introducing

grotesque and authoritarian distortions into the early communist movement, but it is also the case that this Third International drew together an impressive number of talented theorists and activists. In the documents of the Communist International from 1919 through 1924 one finds an incredibly rich pooling of experience, analyses, and insights – almost breathtaking in their historical and geographical sweep, and impressive in their great attention to detail. Some became focal points of fierce factional polemics, as was the case with the luminous Hungarian philosopher-activist Georg Lukács, whose *History and Class Consciousness* (1923) provided groundbreaking Hegelian interpretations of Marxism that advanced and profoundly deepened Leninist perspectives. Less controversial yet perhaps even more radically innovative were the contributions of Italian communist leader Antonio Gramsci, whose Hegelian Leninism – drawing as well from the Renaissance theorizations of Nicolò Machiavelli – blended notions of a revolutionary vanguard party with richly cultural conceptions of “organic intellectuals” arising from and linked to the working class, and also a fertile conception of protracted contests for cultural and social-political *hegemony* (or supremacy) between advanced layers of contending classes.

Stalinism

Increasingly, however, the Marxism of the communist movement became flattened into crassly manipulated dogmas promulgated under the bureaucratic dictatorship that became consolidated in the Union of Soviet Socialist Republics (USSR) under the leadership of Joseph Stalin, who quietly but relentlessly had accumulated considerable authority within the Russian Communist Party and government. During his last fatal illness in 1922–3, Lenin waged a struggle from his sickbed, enlisting the support of Trotsky, against Stalin’s authoritarian policies and excessive power. Yet other key communist leaders initially distrusted the brilliant and popular but arrogant Trotsky and preferred the seemingly more easy-going Stalin. After Lenin’s death, they discovered that Stalin’s control of the party’s and government’s bureaucratic apparatus allowed him to sweep aside their perspectives. Some belatedly joined with Trotsky in an ill-fated effort to overcome bureaucratic corruption

and maintain a revolutionary-internationalist orientation of the Communist International. Others who rallied around Bukharin later met with even less success in preventing the consolidation of Stalin's power and perspectives. By the early 1930s, all oppositions had been savagely repressed by the bureaucratic apparatus under Stalin's leadership, which now demanded absolute loyalty and adherence to its particular brand of grotesquely distorted Marxism. Millions of revolutionary-minded activists throughout the world, identifying with the achievements of the Russian Revolution, assumed that the perspectives of the Stalin regime were consistent with those of Lenin and Marx. In fact, this proved to be one of the greatest illusions of the twentieth century.

Contrary to the orientation of both Marx and Lenin, Stalin claimed that it was possible to build socialism in a single country – the economically backward USSR – and was inclined to manipulate the Comintern and communist parties of various countries in order to advance the narrow national interests of this “socialist motherland.” He also concluded that it would be necessary to initiate a brutal “revolution from above” in the USSR through the forced collectivization of land and rapid industrialization policies. Carried out from 1929 through the early 1930s, this involved extreme repression and violence against masses of peasants and workers who resisted the exploitative effects of his new policies. Many were killed, with many more arrested and sent to forced-labor camps. While the communist apparatus under Stalin tightened its control over the intellectual and cultural life of the country, some Communist Party members began to question Stalin's policies – and the repression intensified. A number of leading communists were arrested and subjected to a variety of pressures and tortures. Some made fantastic public confessions and asked to be shot. Thousands of other communists were arrested and executed, and many more (including friends and families) were sent to forced-labor camps. Millions of people were destroyed.

Stalin's grand claim about creating “socialism in a single country” had a powerful appeal beyond the USSR. Especially with the onset of the Great Depression, the increasing belligerence of Mussolini in Italy, and the rise of Hitler in Germany, idealistic workers and intellectuals throughout the world looked to the communist revolutionary process in the USSR as an

alternative to capitalism and a bulwark against fascism and Nazism. In 1935 the Communist International's spokesman, Georgi Dimitrov, was declaring that all communists should work to create a “Popular Front” of communist parties and socialist parties with liberal pro-capitalist parties. These were supposed to establish governments that would maintain both capitalism and political democracy, implement social reforms, and maintain a foreign policy friendly to the USSR and dedicated to “collective security” against the fascist powers. Popular Front governments were established in France and Spain, and US communists even claimed that Franklin D. Roosevelt's New Deal policies represented a Popular Front of sorts. On the other hand, during the Spanish Civil War (1936–9) when anarchists and revolutionary socialists sought to go beyond Popular Front limitations, Stalinist forces there repressed them with extreme violence so as not to frighten off hoped-for capitalist allies.

In 1939, after these hoped-for allies had failed to materialize, Stalin's government sought and secured a non-aggression pact with Nazi Germany, which freed Hitler to launch an assault on Poland, initiating World War II (1939–45). When Hitler's armies invaded the USSR in 1941, however, Stalin led his country and the world communist movement into a far-reaching alliance with “democratic capitalist” governments, and he once again became the personification of “progressive” anti-fascism in his own land and throughout the world. The defeat of German forces on the Eastern Front by the Soviet Red Army, and the prominent role of communists in the anti-fascist resistance movements of many countries, gave the Stalinist version of “Marxism” – diluted and distorted as it was – a new credibility for many.

At the conclusion of World War II, however, tensions inevitably emerged between the USSR and its wartime capitalist allies, leading to the Cold War confrontation that would last over more than four decades. In the early years of that confrontation, Stalin saw successful communist-led revolutions in several countries, and he oversaw the establishment of communist dictatorships, subordinate to the USSR, throughout Eastern Europe. The bureaucratic tyranny associated with these dictatorships, and their eventual collapse under Stalin's successors, brought considerable discredit not only to Stalinism but also to

the Leninism and Marxism of which it had claimed to be the only true representative. That this claim was false, and that Stalinism was, on innumerable points, incompatible with fundamental components of Marxism, were facts generally obscured by Cold War anti-communist propaganda and by the later conservative triumphalism that accompanied the much heralded “collapse of communism.”

Variants of Marxism

Throughout Asia, Africa, and Latin America, variants of Marxism arose which added new elements to this already incredibly diverse tradition. Stalinist influences were sometimes not enough to obliterate the revolutionary nationalism that animated the Chinese perspectives of Mao Zedong or the Vietnamese perspectives of Hồ Chí Minh, although in each case there was the challenge of explicitly anti-Stalinist variants of Marxism – for example, by Chen Duxiu in China and Tha Thu Thau in Vietnam. The Communist International attracted the creative minds of M. N. Roy of India and Tan Malaka of Indonesia, just as Stalinism repelled them – but powerful currents of Marxism (in many cases not free from the hold of Stalinism) became important realities in the various regions of Asia. Marxism’s impact among African revolutionaries was advanced by such figures as George Padmore, C. L. R. James, Kwame Nkrumah, and Amílcar Cabral, and also by the influential South African Communist Party. The expansive and critical intelligence of Peruvian intellectual José Carlos Mariátegui, together with the early communist perspectives of El Salvador’s Agustín Farabundo Martí and Cuba’s Julio Antonio Mella, established a revolutionary Marxism in Latin America which was felt among several generations of Latin American intellectuals, activists, and revolutionaries – not to mention the efforts of Fidel Castro and Che Guevara in 1950s and 1960s Cuba, the Sandinistas of Nicaragua, and the FMLN of El Salvador in the 1970s and 1980s, or the Zapatistas of Chiapas and the Bolivarian movement of Hugo Chávez in Venezuela.

European Marxism found creative reflection among theorists of the so-called “Frankfurt School” (for example, Theodor Adorno, Max Horkheimer, Walter Benjamin, Herbert Marcuse, Erich Fromm), as well as among such philo-

sophical leading lights as Ernst Bloch, Henri Lefebvre, Jean-Paul Sartre, and Louis Althusser. Prominent historians of the French Revolution have also powerfully intersected with Marxism, as can be seen in the contributions of such figures as Albert Mathiez, Georges Lefebvre, Albert Soboul, and Daniel Guérin. A distinguished configuration of influential British Marxists has included such historians as Eric Hobsbawm, Christopher Hill, Victor G. Kiernan, Edward P. Thompson, and George Rudé, as well as cultural critic Raymond Williams, political scientist Ralph Miliband, and anthropologist Peter Worsley. An innovative wave of feminist theorists – such as Selma James, Juliet Mitchell, Sheila Rowbotham (and such US figures as Eleanor Leacock, Karen Sacks/Brodin, Nancy Holmstrom) – have also interacted with the Marxist tradition. Of particular note in the evolution of European Marxism, and its sometime interplay with various other Marxist traditions, has been the British journal *New Left Review*. More recent and quite substantial has been another British journal, *Historical Materialism*.

In the United States, of special importance has been the independent socialist magazine *Monthly Review*, founded by economist Paul Sweezy and labor educator Leo Huberman, which has been closely associated with a number of others contributing to Marxist thought – including Harry Magdoff and Paul Baran (both making important contributions to the study of imperialism), and an innovative theorist of the capitalist labor process, Harry Braverman. In later years the *Monthly Review* tradition was continued under the guidance of John Bellamy Foster, Michael Yates, and others. Urgent environmental concerns became a focal point for the journal *Nature, Capitalism, and Socialism* associated with such analysts as James O’Connor and Joel Kovel. Other Marxist journals of note in the United States have been *Science and Society*, published since the 1930s, and newer publications such as *Socialism and Democracy* and *Rethinking Marxism*.

A common observation in the late twentieth century was that, to a large extent in the more developed capitalist countries of Europe and the United States, Marxism had become disassociated from the mass working-class movements out of which it had arisen. The practical revolutionary orientation of its founders and prominent early adherents (Luxemburg, Lenin,

Trotsky, Gramsci) had been set aside in favor of a more intellectualized orientation that had no significant social base and no immediate practical application.

Perhaps those most consistently committed to retaining and reviving such “revolutionary Marxism” have been activists associated with the Trotskyist tradition. Among these have been figures in the various sections of the Fourth International that Trotsky and his co-thinkers established in 1938 – among the better known being US labor radical James P. Cannon, Belgian economist and political theorist Ernest Mandel, and the Italian activist-intellectual Livio Maitan. Two outstanding historians from this tradition who ended up without formal affiliation were Isaac Deutscher and Pierre Broué. Among those building influential radical organizations in Britain (and engaging in significant literary efforts) were Tony Cliff of the Socialist Workers’ Party and Ted Grant, long associated with the Militant Tendency. One of the most renowned US Marx scholars of the late twentieth century, Hal Draper, also came out of the Trotskyist tradition and continued to adhere to many of its perspectives until his death; Draper became especially well known for his notion of “two souls of socialism” – a positive revolutionary-democratic *socialism from below* represented by such people as Marx, Engels, Luxemburg, Lenin, and Trotsky, and a negative authoritarian-elitist *socialism from above* represented, in different ways to be sure, by such figures as Eduard Bernstein, anarchists Pierre-Joseph Proudhon and Mikhail Bakunin, and of course Joseph Stalin. Taking more distance from major aspects of the Trotskyist tradition (dismissing the relevance of Lenin’s revolutionary party and Trotsky’s theory of permanent revolution), and giving considerably more weight to the dialectical philosophy of Hegel, were C. L. R. James and Raya Dunayevskaya.

Among self-described Marxists over the past half-century there have been sharp differences on the question of the extent to which Marxism and socialism are consistent with libertarian or authoritarian tendencies. Related to this, there have been differences regarding the question of organization: should one build a revolutionary vanguard party (and if so, how democratic?); or a mass reformist party; or no party at all (perhaps trusting the spontaneous “self-activity” of the workers)? Also related to this, there have been

differences on how to analyze so-called “post-capitalist” societies: are they some variant of socialism (perhaps “state-socialism”), or degenerated/deformed workers’ states, or bureaucratic-collectivist, or state-capitalist?

There have been differences on how to understand imperialism (or even whether imperialism still exists), and how to understand globalization (or whether “globalization” is real or just another name for old-time imperialism). There have been differences on the relationship of reform and revolution – whether it is acceptable to struggle for mere reforms, whether there is a need for revolution, and whether revolution (if desirable) is still possible in today’s world. There have been differences on the validity of Marx’s theory of value, on the relationship of Marx to Hegel, and on the compatibility of Marxism with other intellectual currents (pragmatism, structuralism, Freudianism, religion). There have been differences regarding whether the working class in advanced capitalist countries continues to be a potentially revolutionary force (or whether it is shrinking or passing out of existence altogether), and differences regarding the obviously related question about how one should define the working class.

There have been differences on how to relate to peasants, students, oppressed minorities, and social movements (feminist, gay rights, environmentalist, anti-racist, anti-war, global justice) – whether these are diversions away from the working class, or whether they should become replacements for the working class, or whether they should be seen as allies of or integral sectors of the working class.

Regardless of future clarifications and revitalizations, as global capitalism continues to exist, the influence of the incredibly comprehensive body of thought that it brought into existence – Marxism – is also likely to persist. Whether a *revolutionary* Marxism will be capable of becoming the dynamic world-historical force it once was remains to be seen. What is certain is that efforts to examine and comprehend protests and revolutions in the history of modern times will necessarily make reference to this powerful and (perhaps inherently) contradictory tradition.

Masaryk, Tomas (1850–1937)

Michael Rossi

Dr. Tomas Garrigue Masaryk was the first president of the newly established Czechoslovak state between 1918 and 1935. A distinguished academic, having served as professor in the School of Philosophy at the University of Prague since 1882, and leader of the resistance to Austrian rule during World War I, Masaryk's appointment as president was well received by both Czech and European intellectual circles. He is credited with establishing Czechoslovakia and keeping it firmly within the democratic political realm until the outbreak of World War II.

Masaryk's philosophical commitments were rooted in the works of Plato, Hume, and Comte. His first serious study, the subject of his thesis at Vienna University, focused on the Platonic

nature of the soul. Here, Masaryk was interested in examining a theoretical synthesis between moral and religious ideals and everyday practical activity. In the same spirit, he regarded the vocation of politics as an activity directed by ideals but nevertheless rooted in firm scientific understanding. Philosophy was thus a practical instruction for men's behavior, and not merely an academic discipline. The search for balance between religion and practicality deepened throughout his life, and undoubtedly influenced his abandonment of his original Catholic faith for more secular forms of Protestantism.

His doctoral thesis "Suicide as a Social Mass Movement" is widely regarded as the key to Masaryk's philosophical personality (Kovtun 1990: 4). He saw the suicidal tendency as a symptom of the disintegration of the worldview represented by Catholicism before rationalism and individualism had undermined its spiritual supremacy. In order to restore the purpose of life, congruency between modern man and a modern faith must be established. The humanistic teachings of Jesus Christ without the anachronistic mythology could be the basis of this renewal.

A year after his appointment at Prague University, Masaryk founded the journal *Athenaeum*, which was devoted to examining Czech culture and science. With several colleagues, he published a series of articles challenging the authenticity of two Czech manuscripts supposedly originating during the Middle Ages. He demonstrated that they actually dated to the first period of the Czech nationalist movement, and had been deliberately constructed to give the illusion of a distinct Czech culture extending back to the tenth century. In addition, he served as the appeal lawyer in the much publicized Hilsner trials, a series of anti-Semitic trials following an accusation of blood libel against Leopold Hilsner, a Bohemian Jew.

Masaryk served in the Austro-Hungarian parliament from 1891 to 1893 as a member of the Young Czech Party, and again between 1907 and 1914 in the Realist Party, or Czech Progressive Party. During World War I he fled to England under suspicion of treason and began to work for the creation of an independent Czechoslovak state. By 1916, convinced that the Hapsburg Empire must be dissolved, he began petitioning officials in London, Paris, and Washington for Czechoslovakia's independence. With the end of the war and the fall of the Hapsburg monarchy in 1918, Masaryk was recognized as head of a

provisional Czechoslovak government. He was formally elected its first president in 1920.

As president, Masaryk channeled his beliefs in modernization, rationality, and individualism through democratic practice. He faced considerable challenges in maintaining democratic rule given the multi-ethnic character of the new state – comprised of Czechs, Slovaks, Germans, and Hungarians – and developments in Central Europe towards the end of the 1920s and early 1930s. He served as president until 1935, resigning due to bad health. He died two years later on September 14, 1937. His successor, Edvard Beneš, largely continued Masaryk's policies until the Nazi invasion in 1938.

Masaryk's legacy was invoked during the first organized Czech resistance to Soviet control in the Plzeň demonstrations in 1953. Workers carried portraits of both him and Beneš in their rallies. His works were officially banned by the communists after 1948, but served as a critical component of freethinking during the Prague Spring, and within *Samizdat* publications following the Soviet invasion. In 1980 a renewed interest in Masaryk's works led to the publication of a 750-page *Samizdat* anthology of his essays and documents under the editorship of three former 1968 reformers.

Masses, The

Jon Bekken

Although published only from January 1911 through December 1917, *The Masses* was perhaps the American left's best-loved magazine, pub-

lishing some of the age's leading artists and writers. In an era when the American socialist press included hundreds of daily and weekly papers, published in the dozens of languages spoken by a largely immigrant working class, *The Masses* and the more agitational *International Socialist Review* were the party's most prominent magazines until they were suppressed during World War I.

After a modest beginning as an earnest exponent of an evolutionary road to socialism, *The Masses* was re-launched in 1912 with Max Eastman as editor and a core of artists and writers who ran the magazine as a cooperative. They proudly proclaimed it "A Revolutionary and not a Reform Magazine; a Magazine with a Sense of Humor and no Respect for the Respectable." The reborn *Masses* embodied a fusion of avant-garde artistic and literary sensibilities with a more radical but eclectic socialist approach. The magazine was lively and irreverent, illustrated by some of the leading artists of the day and publishing contributions by radical labor leaders and other activists, side by side with prominent writers such as Sherwood Anderson, Floyd Dell, John Reed, Carl Sandburg, and Mary Heaton Vorse. Many made their living in the commercial press, while contributing their more controversial material to *The Masses* for free. The heady editorial brew that resulted attracted a wide array of artists, bohemians, and social reformers. Indeed, the magazine relied on contributions from wealthy sympathizers to cover deficits resulting from a lack of advertising. Those sympathizers also aided *The Masses* in its many legal battles.

The Masses was suppressed in 1917 when the post office refused to deliver issues containing anti-war cartoons and commentary, and then revoked its mailing permit. The editors and selected contributors were twice tried on espionage charges, but the government could not secure a conviction. Max Eastman revived the magazine as *The Liberator*, but with the fracturing of the socialist movement and the rise of the Palmer Raids, its moment had passed. During its six-year run, *The Liberator* was a more staid, traditional political magazine. Several contributors launched *New Masses* in 1926, but as the magazine moved closer to the Communist Party, many of its liveliest contributors drifted away. It ended publication in the 1940s as *Masses and Mainstream* – a Popular Front organ.

Mau Mau Rebellion, 1952–1959

Mary Ciambaka Mwiandi and George Gona

Colonization of Kenya began with Britain's declaration of Uganda and the whole region down to the Indian Ocean as its protectorate in 1895. In the same year, with the approval of the British Cabinet, the construction of the Uganda railway began. British Empire in East Africa was opened to colonial domination with the building of what Colonial Secretary Winston Churchill described as the "political" railway, the symbol of imperial achievement and its intentions to stay (Tvedt 2004).

However, the real thrust of colonization of Kenya started in 1902 when Sir Charles Eliot, the first commissioner of the British East Africa Protectorate (as Kenya was called until 1920), surveyed the territory and its people and saw economic potential. To harness this potential, he invited his countrymen to come to settle in the country, which in 1915 was declared a "White man's country," a dream which was shattered by the Mau Mau rebellion, fifty years later. Their aims were to struggle for the return of all alienated land from the agrarian and pastoral communities by the Europeans – the Empire builders, commercial companies, and settlers. Mau Mau was a revolutionary and military response to imperial incursions, aggression, land expropriation, the exploitation of African natural and human resources, the degradation of African culture, and taxation.

Origin of Mau Mau

Between 1946 and 1952 Africans in Kenya had come to believe that their political, social,

and economic aspirations could only be attained through armed action. These sentiments were translated into the creation of a movement which later came to be called Mau Mau. Following the unrest among the Kikuyu labor tenants on white settlers' farms in 1948, colonial government became alarmed and responded by restricting Africans from all forms of organized meetings. The very words "Mau Mau" conjure up memories of something evil lurking in history's dark shadows. Mau Mau was the great horror story of Britain's Empire in the 1950s. The battle to defeat the revolt in Kenya was presented as a war between savagery and civilization, a rebellion made by men who could not cope with modernity, who reached back into a wicked, tribal past in an effort to stop the wheel of progress from turning. To some, it was impulsive savagery that was greater than anything the civilized world had encountered in two centuries. Soon, wonderful descriptions of Kenya's White highlands gave way to be the land of savages and the uncouth.

The rebellion was occasioned by the frustration, resentment, and mounting anger of Africans over the occupation and control of large tracts of land by a few Europeans. This occupation had started in the early 1900s and accelerated after the two world wars when retired British soldiers were rewarded with land. The African soldiers who had retired from the two wars were never given land for their services. The pressure on land grew fast as the population increased and political awareness spread among the Africans. In addition, long before Mau Mau, men and women protested against colonial laws such as unfair labor practices, taxation, lack of adequate education, and exclusion from politics.

On the face of it, armed rebellion seemed an unnecessary gamble in the endgame of Empire. Kenya's explosion into struggle came just as the old European empires were running out of steam. By the time of the emergency the once-mighty imperial power was contracting. In the East, Britain had already given up India and Pakistan. In Malaysia, independence was granted in 1952. The rising tide of nationalism could not be stopped. This was the new order of the postwar world. Like many resistance movements of the time, Mau Mau was part of this general wave of change sweeping across colonized areas.

Mau Mau drew its strength in the early stages from a series of political and religious awakenings

After years of imperialist rule, Africans in Kenya, led primarily by the Kikuyu, rose against the British in the Mau Mau Rebellion (1952–9), during which 11,000 Africans were killed, 80,000 members of the Kikuyu were detained in camps, and 2,000 Africans lost their lives supporting the British. While the rebellion itself failed, it ultimately encouraged Kenyan independence. In this April 1, 1954 photo, former Mau Mau leaders are protected by the British after joining forces with them in Operation Anvil to inform on suspected Mau Maus. (Time & Life Pictures/Getty Images)

such as the adaptation of traditional Kikuyu oath-taking and patriotic songs. Oath-taking was not only a unifying factor but also emphasized the use of force in achieving its ends. While the colonial government, and certainly the local settlers, viewed oath-taking as the barbaric mumbo-jumbo of the Kikuyu, the practice had logic and purpose. It was the rational response of a rural people seeking to understand the enormous socioeconomic and political changes taking place around them, while attempting to respond collectively to new and unjust realities.

On the eve of the Mau Mau rebellion, hundreds of thousands of Kikuyu took an oath of unity, pledging their lives for Mau Mau and its demand for land and freedom. The call by Mau Mau for land and freedom was clearly understood by the British as loss of "their" land and an end to their stay in Kenya. But for those Kikuyu who pledged themselves to Mau Mau, the meaning of land and freedom was less defined and much

more complex than merely throwing off the British yoke and reclaiming the land of their ancestors. In part, the specific meaning of Mau Mau tended to reflect the age, gender, and birthplace of the oath-taker. For some of them, land and freedom meant a rejection of the colonially appointed chiefs and their policies of self-aggrandizement. For the younger generation among men, it was a demand for a return of the frontier, where they could once again earn their adulthood, often with the help of an elder Kikuyu patron. For some Kikuyu women, land and freedom represented an end to the back-breaking terracing projects and other forms of forced communal labor imposed by colonialism. For others, the slogan represented a future hope of finding farms in the overcrowded reserves that were large enough to feed their children. It was as much the ambiguity as the specifics of Mau Mau's demand for land and freedom that made it so appealing to the Kikuyu masses and such a powerful and difficult movement for the British to suppress.

For Mau Mau followers, those who betrayed their movement had to be eliminated. This included not just the loyalists but also the small minority of devout Kikuyu Christians who were neither Mau Mau nor loyalist, and who suffered persecutions from both opposing factions. The local Christian missionaries fought endlessly with the colonial government to expand the official definition of loyalism, claiming that their Christian flock comprised the most loyal and western-learning Kikuyu in the colony. Their efforts did not yield much. Throughout the war these missionaries played a pivotal role, as many witnessed the atrocities that unfolded in the detention camps and barbed-wire villages. While they succeeded in "rescuing" a few missionary loyalist families from the camps, a majority of the Kikuyu were incarcerated.

There are many voices of Mau Mau – the literate, the heroic, the professional. All these voices lay claim to the Mau Mau story. However, there is no doubt about who led the forces of struggle in the forest: Dedan Kimathi, Stanley Mathenge, and Waruhiu Itote are the acclaimed generals of Mau Mau. But the stories of the subalterns of the movement – the food carriers, the couriers, the recruiting sergeants and oath administrators, the treasurers and fund-raisers, the assassins and enforcers, and the ordinary foot soldiers in the forest – are yet to be told.

Mau Mau Rebellion

Mau Mau was therefore a culmination of a myriad of local struggles over the years following World War II. It was not until October 1952 that the war properly began. The sudden turn of events was prompted by the murder of Senior Chief Waruhiu. Increasing unrest forced the governor to declare a state of emergency. Following from this, British troops were airlifted into the colony as reinforcements. With the ban on the Kenya African Union (KAU) and other political parties in 1953, Mau Mau rebellion gained more support from the masses. The rebellion lasted for over seven years and was a force whose strength was based less on military might and more on people's aspirations to regain stolen land and win political and economic freedom and human dignity.

Much of the struggle tore through the African communities themselves as an internecine war waged between rebels and so-called loyalists – Africans who took the side of the government and opposed Mau Mau. This was partly brought about by the deliberate policy of the British to cultivate an African opposition by arming vigilantes, styled as Home Guards, to protect villages from attack and to assist the police and military in operations against the Mau Mau fighters. But the opponents of Mau Mau were also those who did not share the values of the rebels, who rejected violence and armed struggle as a way forward, and who questioned the moral basis of the claims made by the rebels to rights in land and access to property. As the conflict wore on, these divisions made it appear more and more like a civil war. Among these groups were the staunch Christians of all denominations who felt that oath-taking and the killing of royalists was against their Christian ethics.

The colonial state and the British government marshaled their forces to counter the Mau Mau rebellion. The declaration of Emergency in October 1952 was aimed at crippling Mau Mau. Part of the effort to hobble the solidarity of the struggle was the banning of all African political parties by the government. The official explanation given for this drastic measure was to ensure the security of Her Majesty's subjects (British) living in Kenya Colony. The chain of privileges enjoyed by the white settlers (particularly cheap labor offered by the "natives") was now under serious threat. This, according to the

white settlers, amounted to a blatant challenge by uneducated natives to the sacrosanct white settlement on the Kenya Highlands. Mau Mau had to be nipped in the bud.

During the rebellion, state execution increasingly became a potent weapon, quite in contrast to its sparing use by the colonialists hitherto. In the Mau Mau emergency, Kenya's hanging judges were kept busy. Between April 1953 and December 1956 the Special Emergency Assize Courts tried a total of 2,609 Kikuyu on capital charges relating to Mau Mau offenses in 1,211 trials. In all, over the course of the emergency, 1,090 Kikuyu would go to the gallows for Mau Mau crimes. In no other place, and at no other time in the history of British imperialism, was state execution used on such a scale as this. This was more than double the number of executions carried out against convicted terrorists in Algeria, and many more than in all other British colonial emergencies of the postwar period – in Palestine, Malaya, Cyprus, and Aden.

Operation Jock Scott was the code name for the assault directed at Jomo Kenyatta and 180 other identified leaders of Mau Mau. In the early morning of October 21, 1952, scores of Kenyan policemen, white and black, zealously carried out their arrest orders, rousing suspected Mau Mau protagonists like Kenyatta, Paul Ngei, Fred Kubai, and Bildad Kaggia, handcuffing them, and hauling them off to Nairobi police station. Mass arrests were carried out between September 1952 and March 1953, followed by Operation Anvil of 1954, which saw men, especially from Kikuyu, Embu, and Meru, arrested and sent to concentration camps. Operation Anvil's aim was to deprive the Mau Mau of forces and hideouts, of all moral, political, and material support. Also, between 1953 and 1955, Kikuyu, Embu, and Meru communities were forced to dig trenches measuring 10–15 feet deep and 15–16 feet wide around Mt Kenya to starve Mau Mau fighters.

The colonial government was not deterred by the killings by Mau Mau. It went ahead with prosecuting Kenyatta and five of his so-called deputies: Bildad Kaggia, Fred Kubai, Paul Ngei, Achieng' Oneko, and Kungu Karumba. Kenyatta and his group were sentenced to seven years in prison with hard labor, followed by a lifetime of restriction. In other words, they were to live in isolation for the rest of their lives.

Mau Mau did not collapse with the arrest of such prominent national leaders, but instead turned more violent as the movement's leadership passed into the hands of younger men and women who had for months pushed Kenyatta and others to adopt a more radical, revolutionary course. Colonial authorities had managed to remove the one person who had been tenuously keeping the young militants in check; in fact, Mau Mau only gained strength when Kenyatta the heroic Kikuyu leader also became, literally overnight, Kenyatta the martyr. Although his political leanings were more moderate than the majority of Mau Mau, Kenyatta became a potent and unifying political symbol. Fighting continued without him. Outside of the forest, Mau Mau adherents, many of them women, organized an intricate, passive-wing operation that would provide intelligence, weapons, food, and other supplies to the forest fighters. It was the size of this passive wing that reflected the grassroots depth of the movement. Mau Mau became one of the first armed struggles of the twentieth century where superior western firepower was overcome, at least initially. The British were scared stiff of the Mau Mau due to their knowledge of the difficult forest terrain and their hit-and-run tactics.

Conclusion

Mau Mau was anti-oppression and anti-exploitation. The military superiority of the colonial government and the support it obtained from loyalists and over 20,000 Home Guards was able to defeat the Mau Mau militarily, but the Mau Mau did not lose the war. Its success can be located in the manner in which the British began politically and economically to plan for Kenyans subsequent to its end. In the final analysis, Mau Mau shattered European dreams of creating "white man's country." Mau Mau succeeded too in destroying "settlerdom" and European landlordism with far-reaching political consequences and economic ramifications.

Maurín, Joaquín (1896–1973)

Andrew Durgan

Joaquín Maurín, along with his friend and fellow POUM leader Andreu Nin, was one of the outstanding Marxists in Spain in the years leading up to the Civil War. Maurín was born in the village of Bonansa in the Aragonese Pyrenees in 1896. Trained as a teacher, like many of his contemporaries, he sympathized with working-class republicanism and advanced pedagogic methods. Radicalized by the Russian Revolution he joined the CNT and became one of the union's leaders in the city of Lleida where he lived and worked. Such was his impact on the small local workers' movement that his anarchist rivals would later refer to Lleida as Mauringrad.

Maurín was one of the leading figures in the pro-Bolshevik revolutionary syndicalists inside the CNT and edited this tendency's press: *Lucha Social* (1919–22) and *La Batalla* (1922–4). In 1921 he attended the founding congress in Moscow of

the Red International of Labor Unions (RILU) as part of a CNT delegation which acted as a bridge between the syndicalists and communists present. Meanwhile the anarchist majority among the CNT's activists, alarmed by reports of the Bolsheviks' persecution of the libertarian movement in Russia, managed to get the union to disaffiliate from both the CI and RILU in 1922.

Maurín's evolution towards communism was slow; initially he was more influenced by Georges Sorel than Lenin. With the rupture of the CNT with the CI, Maurín's faction moved closer to the Communist Party (PCE) and participated with it in organizing in 1922 the *Comités Sindicalistas Revolucionarios* which defended the RILU's program inside the unions. In 1924 Maurín's group finally joined the party, forming its Catalan Federation. Maurín's relatively late evolution towards communism and the specific origins of the Catalan communist-syndicalists meant he never totally integrated into the PCE. Imprisoned for two years by the Primo de Rivera dictatorship (1923–30), he went into exile in Paris in 1927. Here he married Jeanne Souvarine, sister of the leading French dissident communist Boris Souvarine.

Although remaining formally part of the PCE leadership and working for *Izvestia*, Maurín criticized the party's sectarianism, bureaucratic methods, and characterization of the forthcoming revolution in Spain. Expelled from the PCE in July 1930, Maurín was followed by most of the Catalan Federation's membership eight months later into a new dissident communist organization, the *Bloque Obrero y Campesino* (Workers' and Peasants' Bloc) (BOC). As leader of the new party he proved a brilliant propagandist, orator, and organizer. Apart from editing its press and writing various agitational pamphlets, his more substantial writings showed his growing ability as a relatively original Marxist thinker. In particular, *La revolución española* (1931) and *Hacia la segunda revolución* (1935) developed his view of the historical development of Spain and the nature of its emerging revolutionary movement. Maurín's conception of the democratic, soon socialist-democratic, revolution centered on Spain's socioeconomic backwardness and need to "complete the tasks" of the bourgeois revolution. However, given the political weakness of the bourgeoisie and the petty bourgeoisie, this revolution could only take place under proletarian leadership, in alliance with the peasantry and

national liberation movements, and would move directly to the socialist stage. The years leading up to the Civil War seemed to confirm Maurín's thesis: the ineptness of middle-class republicanism, the reactionary intransigence of the ruling oligarchy, and the radicalization of the workers' movement opened the way to war and revolution.

Maurín's break with orthodox communism and his critique of Stalinism, combined with events inside Spain, led in September 1935 to the fusion of the BOC with the Trotskyists in the Partido Obrero de Unificación Marxista (POUM). Although never becoming a Trotskyist himself, Maurín sympathized with the former Bolshevik leader and his ideas. As the POUM's general secretary and its only parliamentary representative after the elections of February 1936, Maurín's status as a national political figure grew. In the weeks leading up to the Civil War he was virtually a lone voice in parliament warning about the threat of military-inspired fascism and the need to counter this with working-class revolution.

Trapped in Galicia at the outbreak of the Civil War in July 1936, Maurín spent the next ten years in jail. A series of interventions on his behalf, most notably by his cousin who was head of Franco's army chaplains, eventually saved Maurín from execution. He was released in 1946. The trauma of his years in prison, under constant threat of death, and his absence during the long-awaited revolution and its subsequent defeat understandably had a profound effect on Maurín. Rather than lead the POUM in exile in France, in 1947 he immigrated to New York to be with his wife and family. For most of the rest of his life he worked for a Spanish-speaking news agency which he set up and intervened little in politics. Letters to former comrades, before his death in 1973, clearly showed his evolution towards social democracy and militant anti-communism.

May Day

Chris John Agee

May Day is International Workers' Day. In what has become a major event celebrated on May 1 of every year in many countries, May Day draws millions of people around the globe to rally for workers' rights. While May 1 protests originally grew out of the late nineteenth-century American labor movement, festivities spawned around the world and have, at times, included spectacular marches accompanied with cheering crowds, triumphant music, colorful banners, and large placards. Throughout the twentieth century, the event also served as a forum for protests against war and imperialist policies and often culminated in rallies calling for social justice. Despite efforts to undermine the meaning surrounding the event by business, capitalist classes, and conservative governments, May Day festivities and protests continue to be held in countries around the world.

Originally the date of pagan festivals praising spring and the onset of summer, May 1 is marked with bonfires in Ireland and Scotland on Beltane (Bealtaine) or, as it is referred to in Northern Europe, *Walpurgisnacht*. Other cultures, such as in Egypt and India, celebrate early May with fertility festivals. In medieval England, people danced around maypoles decorated with greenery and flowers.

Notwithstanding the traditional festivals, the birth of the modern May Day celebration can be traced back to the late nineteenth-century labor struggles in the United States for the eight-hour workday. Demanding a reduction from long work shifts, nearly 350,000 workers in over 1,000 factories nationwide rallied and struck on May 1, 1886 under the banner "eight hours for work, eight hours for rest, and eight hours for what we will." The original campaign was organized by an alliance of the fledgling American Federation of Labor (AFL), local

assemblies of the Knights of Labor, and various US tendencies within the anarchist and socialist movements. In what became a defining moment in the history of the American labor movement, factory workers, artisans, merchants, and immigrants in cities and towns across the country, from Boston to Milwaukee, from New York City to Pittsburgh, from Cincinnati to Chicago, united together to demand worker rights and dignity through nationally coordinated mass marches, rallies, and strikes.

Samuel Gompers, the president of the American Federation of Labor, proclaimed that the protests beginning on May 1, 1886 would be “forever remembered as a second Declaration of Independence.” It was, however, the ensuing events that became engrained in the annals of history when, after several days of successful events, key leaders of the May Day actions were arrested and executed as a result of the Haymarket tragedy. Over the course of the three-day general strike in Chicago, Illinois, police fatally shot four strikers at the McCormick Harvesting Machine Co. plant. The next day, on May 4, toward the end of what was a peaceful rally in Chicago’s Haymarket Square, police closed in on the remaining participants. An assailant threw a bomb into the police, killing one officer instantly and wounding dozens. The police then opened fire, killing and wounding many, including some from their own ranks. Of the hundreds arrested in the aftermath, eight were selected for and put through what became one of the greatest show trials in world history. Despite overwhelming evidence proving their innocence in the Haymarket events, four of the strike leaders were hanged for their political beliefs. Within seven years, the Illinois governor issued an official apology and pardoned all eight. While the remaining incarcerated leaders were freed, the martyrs of the Haymarket tragedy remain seared in the minds of labor activists into the twenty-first century.

Consequently, May Day has become the international celebration of workers’ movements in many countries throughout the world. Since its founding, May Day has been celebrated under varying political and historical circumstances: during both World War I and II, it served as a call for peace; during the Great Depression, it served as a call for social security and increased wages; during the Cold War, May Day became a major state holiday in the Soviet Union and

other communist countries; and during the 1960s, it served as a renewed call for the working class to unite for peace and justice. In Spain, as in many countries, protesters rally on May Day against the presence of US bases in their country; in France, as in other countries, demonstrators rally against far-right candidates; in Cuba, as in other socialist countries, hundreds of thousands pour into the streets of Havana and other cities to march for international peace and worker solidarity.

Despite the fact that May Day protests received their inspiration from the American labor movement, countless attempts were made to undermine the celebration in the United States. The US Congress, for example, designated May 1 as Loyalty Day in 1958. Attempts to hold rallies in New York City’s Union Square on May Day were often derailed by so-called patriotic programs organized by local business associations: they had been granted permits to hold their own event on precisely the same day and location. Moreover, in what some believe is an effort to isolate American workers from their counterparts in the rest of the world and detract from the spirit, meaning, and ideas surrounding May Day, Labor Day in the United States is celebrated on the first Monday in September.

In spite of these efforts, a resurgence of May Day protests has proliferated throughout the United States. In recent years, widespread pro-immigrant rallies, strikes, and consumer boycotts highlight the need for comprehensive immigration reform: namely, policies that address the harsh living and working conditions 12 million undocumented immigrants face in the United States. On May Day 2006, 1.5 million foreign and US-born workers marched and demonstrated for human rights for immigrants in major cities throughout the country, including Los Angeles, where an estimated one million held a rally at the city hall.

May Day 2008, was particularly historic for the US labor movement: for the first time in 70 years, a major US trade union led marches and a systemwide strike on May Day. The International Longshore and Warehouse Union led a work stoppage at all 29 West Coast ports. It demanded an end to the disastrous and debilitating US wars in Iraq and Afghanistan. Over 25,000 dock workers closed ports from Seattle to San Diego. They were joined by May Day protesters throughout the United States, in cities

including Chicago, Los Angeles, New York City, Philadelphia, and San Francisco and in countries around the world including Iraq, Japan, Germany, Indonesia, and Sweden, to name a few. Indeed, May Day continues to serve in varying degrees as a major annual event to mark the struggle for workers' rights, international working-class solidarity, peace, and global justice.

May 1968 French uprisings

Tariq Ali

A storm swept the world in 1968. It started in Vietnam, then blew across Asia, crossing the sea and the mountains to Europe and beyond. A brutal war waged by the US against a poor Southeast Asian country was seen every night on television. The cumulative impact of watching the bombs drop, villages on fire, and a country being doused with napalm and Agent Orange trig-

gered a wave of global revolts not seen on such a scale before or since.

If the Vietnamese were defeating the world's most powerful state, surely the people, too, could defeat their own rulers – that was the dominant mood among the more radical of the 60s generation.

In February 1968, the Vietnamese communists launched the famous Tet offensive, attacking US troops in every major South Vietnamese city. The grand finale was the sight of Vietnamese guerillas occupying the US embassy in Saigon (Hô Chi Minh City) and raising their flag from its roof. It was undoubtedly a suicide mission, but incredibly courageous. The impact was immediate. For the first time a majority of US citizens realized that the war was unwinnable. The poorer among them brought Vietnam home that same summer in a revolt against poverty and discrimination as black ghettos exploded in every major US city, with returned black GIs playing a prominent role in the upheaval.

The single spark set the world alight. In March 1968, students at Nanterre University in France came out on to the streets and the March 22 movement was born, with two Daniels (Cohn-Bendit and Bensaid, Nanterre students then, and both still involved in green or leftist politics) challenging the French lion: Charles de Gaulle, the aloof, monarchical president of the Fifth Republic who, in a puerile outburst, would later describe as *chie-en-lit*, or shit in the bed, the events in France that came close to toppling him. The students began by demanding university reforms and moved on to revolution.

That same month in London, a demonstration against the Vietnam War marched to the US embassy in Grosvenor Square. It turned violent. Like the Vietnamese, the demonstrators wanted to occupy the embassy, but mounted police were deployed to protect the citadel. Clashes occurred and US Senator Eugene McCarthy, watching the images, demanded an end to a war that had led, among other things, to the US embassy in London being constantly besieged. Compared with the ferment elsewhere, Britain was a side-show. University occupations and riots in Grosvenor Square did not pose any real threat to the Labour government, which backed the US but refused to send troops to Vietnam.

In France, the existentialist philosopher Jean-Paul Sartre was at the peak of his influence. Contrary to Stalinist apologists, he argued that

The year 1968 saw student protests across the world, most notably in France, where student agitation and a general strike of ten million workers led to the collapse of Charles de Gaulle's conservative government, ushering in an era of equality, sexual liberation, and human rights. Here students take to the streets of Paris to protest the Vietnam War and the closing of French universities. One such clash resulted in the injury of 72 policemen and an undetermined number of students, 600 of whom were arrested. (Photo © Bruno Barbey/Magnum Photos)

there was no reason to prepare for happiness tomorrow at the price of injustice, oppression, or misery today. What was required was improvement now.

By May, the Nanterre students' uprising had spread to Paris and to the trade unions. Students were preparing the first issue of *The Black Dwarf* as the French capital erupted on May 10. Jean-Jacques Lebel, a tear-gassed Paris correspondent, was ringing in reports every few hours. He reported: "A well-known French football commentator is sent to the Latin Quarter to cover the night's events and reported, 'Now the CRS [riot police] are charging, they're storming the barricade – oh my God! There's a battle raging. The students are counter-attacking, you can hear the noise – the CRS are retreating. Now they're regrouping, getting ready to charge again. The inhabitants are throwing things from their windows at the CRS – oh! The police are retaliating, shooting grenades into the windows of apartments . . .' The producer interrupted: 'This can't be true, the CRS don't do things like that!' 'I'm telling you what I'm seeing . . .' His voice goes dead. They have cut him off."

The police failed to take back the Latin Quarter, now renamed the Heroic Vietnam Quarter. Three days later a million people occupied the streets of Paris, demanding an end to the rotteness of the state and plastering the

walls with slogans: "Defend the Collective Imagination," "Beneath the Cobblestones the Beach," "Commodities Are the Opium of the People, Revolution is the Ecstasy of History." Eric Hobsbawm wrote in *The Black Dwarf*: "What France proves is when someone demonstrates that people are not powerless, they may begin to act again." One student had been planning to head for Paris before he received a late-night phone call. A posh voice said, "You don't know who I am, but do not leave the country till your five years here are up. They won't let you back." In those days, citizenship for Commonwealth citizens was automatic after five years. The student would not complete his five years until October 1968. Already Labour cabinet ministers had been discussing in public whether or not he could be deported. Friendly lawyers confirmed he should not leave the country. Clive Goodwin, the publisher of *The Black Dwarf*, vetoed the trip and went off himself.

A year later students went to help Alain Krivine, one of the leaders of the May 1968 revolt, in his presidential campaign as a candidate for the Ligue Communiste Révolutionnaire. The French police surrounded the plane as it touched down at Orly airport. An immigrant student was served an order banning him from France which stayed in force until François Mitterrand's election many years later.

The revolution did not happen, but France was shaken by the events. De Gaulle, with a sense of history, considered a coup d'état: in early June, he flew from a military base to Baden-Baden, where French troops were stationed, to ask whether they would support him if Paris fell to the revolutionaries. They agreed but demanded rehabilitation for the ultra-right generals whom De Gaulle had fired because they opposed pulling out of Algeria. The deal was done. Yet De Gaulle slapped down his interior minister for suggesting that Sartre be arrested: "You cannot imprison Voltaire," he ruled.

The French example did spread, worrying bureaucrats in Moscow as much as the ruling elites in the West. An unruly and undisciplined people had to be brought to heel. Robert Escarpit, a *Le Monde* correspondent, wrote on July 23 1968: "A Frenchman travelling abroad feels himself treated a bit like a convalescent from a pernicious fever. And how did the rash of barricades break out? What was the temperature at five o'clock in the evening of May 29? Is the Gaullist

medicine really getting to the roots of the disease? Are there dangers of a relapse? . . . But there is one question that is hardly ever asked, perhaps because they are afraid to hear the answer. But at heart everyone would like to know, hopefully or fearfully, whether the sickness is infectious.”

The movement was infectious. In Prague, communist reformers – many of them heroes of the anti-fascist resistance during the World War II – called for “socialism with a human face.” The aim of Alexander Dubček and his supporters was to democratize political life in Czechoslovakia. It was the first step toward a socialist democracy and was seen as such in Moscow and Washington. On August 21, the Russians sent in the tanks and crushed the reform movement.

In every West European capital there were protests. The tabloid press in Britain was constantly attacking leftists as “agents of Moscow” and was genuinely taken aback when the same student activists involved in the protests marched to the Soviet embassy, denouncing the invasion in strong language and burning effigies of the bloated Soviet leader, Leonid Brezhnev. Alexander Solzhenitsyn later remarked that the Soviet invasion of Czechoslovakia had been the last straw for him. Now he realized that the system could never be reformed from within but would have to be overthrown. He was not alone. The Moscow bureaucrats had sealed their own fate.

In Mexico, students took over universities, demanding an end to oppression and one-party rule. The army was sent in to occupy the universities and did so for many months, making it the best-educated army in the world. On October 2 – with the eyes of the world on Mexico City ten days before the Olympic Games were due to begin there – thousands of students poured on to the streets to demonstrate. A massacre began at sunset. Troops opened fire on the crowd listening to speeches in one of the city’s main squares – dozens were killed and hundreds more injured.

In November 1968 Pakistan erupted. Students took on the corrupt and decaying military dictatorship backed by the US. They were joined by workers, lawyers, white-collar employees, prostitutes, and other social layers, and despite the severe repression (hundreds were killed), the struggle increased in intensity and, the following year, toppled Field Marshal Ayub Khan.

In February 1969, the mood of that country was joyous. A very different atmosphere prevailed in Pakistan than in Europe. There, power did not

seem so remote. The victory over Ayub Khan led to the first general election in the country’s history. The Bengali nationalists in East Pakistan won a majority that the elite and key politicians refused to accept. Civil war led to Indian military intervention and that ended the old Pakistan. Bangladesh was the result of a bloody caesarean.

The glorious decade (1965–75), of which the year 1968 was only the high point, consisted of three concurrent narratives. Politics dominated, but there were two others that left a deeper imprint – sexual liberation and a hedonistic entrepreneurship from below. There was cause to be grateful for the latter. For instance, publications like *The Black Dwarf* were consistently and severely short-funded. Sympathizers and supporters began to fund such projects themselves, a response to the utter frustrations they experienced, either toward the repressive political figures clamping down on various movements, or toward an unjust capitalist system in general.

In some ways, the 1960s were a reaction to the 1950s and the intensity of the Cold War. In the US, the McCarthyite witch-hunts had created havoc in the 1950s, but now blacklisted writers could work again; in Russia, hundreds of political prisoners were released, the gulags were closed down, and the crimes of Stalin were denounced by Khrushchev as Eastern Europe trembled with excitement and hopes of rapid reform. They hoped in vain.

The spirit of renewal infected the realm of culture as well: Solzhenitsyn’s first novel was serialized in the official literary magazine *Novy Mir*, and a new cinema took over most of Europe. In Spain and Portugal, ruled at the time by NATO’s favorite fascists, Franco and Salazar, censorship persisted, but in Britain D. H. Lawrence’s *Lady Chatterley’s Lover*, written in 1928, was published for the first time in 1960. The book, in its complete form, sold two million copies.

Following Simone de Beauvoir’s pioneering work in *The Second Sex* (1949), Juliet Mitchell fired off a new salvo in December 1966. Her lengthy essay, “Women: The Longest Revolution,” appeared in the *New Left Review* and became an immediate point of reference, summarizing the problems faced by women: “In advanced industrial society, women’s work is only marginal to the total economy . . . women are offered a universe of their own: the family. Like woman herself, the family appears as a natural

object, but it is actually a cultural creation. . . . Both can be exalted, paradoxically, as ideals. The ‘true’ woman and ‘true’ family are images of peace and plenty: in actuality they may both be sites of violence and despair.”

In September 1968, US feminists disrupted the Miss America competition in Atlantic City, an attack that served as a warning shot in a women’s liberation movement that would change women’s lives by demanding recognition, independence, and an equal voice in a male-dominated world. The cover of the January 1969 issue of *Black Dwarf* dedicated the year to women. Inside was Sheila Rowbotham’s spirited feminist call to arms.

There also existed the famed pleasure principle. That the 1960s were hedonistic is indisputable, but they were different from the corporatized version of today. At the time they marked a break with the hypocritical puritanism of the 1940s and 1950s, when censors prohibited married couples being shown on screen sharing a bed and pajamas were compulsory. Historically, radical upheavals have always challenged social restrictions.

Homosexuality in Britain was decriminalized only in 1967. Gay liberation movements erupted with activists demanding an end to all homophobic legislation and Gay Pride marches were launched, inspired by the African American struggles for equal rights and black pride. All the movements learned from each other. The advances of the civil rights, women’s, and gay movements, now taken for granted, had to be fought for on the streets against enemies who were fighting the “war on horror.”

Forty Years Later

A decade before the French Revolution, the philosopher Voltaire remarked that “History is the lies we agree on.” Afterwards there was little agreement on anything. The debate on 1968 was revived by Nicolas Sarkozy, boasting that his victory in France’s 2007 presidential elections was the final nail in the 1968 coffin. The philosopher Alain Badiou’s tart response was to compare the new president of the republic to the Bourbons of 1815 and Marshal Pétain during the war. They, too, had talked about nails and coffins. In the same way, Sarkozy declared, “May 1968 imposed intellectual and moral relativism on us all. The heirs of May ’68 imposed

the idea that there was no longer any difference between good and evil, truth and falsehood, beauty and ugliness. The heritage of May 1968 introduced cynicism into society and politics.”

Sarkozy even blamed the legacy of May 1968 for greedy and seedy business practices. According to him, the May 1968 attack on ethical standards helped to “weaken the morality of capitalism, to prepare the ground for the unscrupulous capitalism of golden parachutes for rogue bosses.” But who can connect the 60s generation to corporate corruption: Enron, Conrad Black, the subprime mortgage crisis, Northern Rock, corrupt politicians, deregulation, the dictatorship of the “free market,” a culture strangled by brazen opportunism?

Some may wonder whether the dreams and hopes of 1968 were but idle fantasies, or if a cruel historical trajectory aborted an emergent new era. Revolutionaries – utopian anarchists, Fidelistas, Trotskyists of all sorts, Maoists of every stripe – wanted the whole forest. Liberals and social democrats were fixated on individual trees. The forest, they warned us, was a distraction, far too vast and impossible to define, whereas a tree was a piece of wood that could be identified, improved, and crafted into a chair or a table. Now the tree, too, has gone.

“You’re like fish that only see the bait, never the line,” the revolutionaries would challenge in return. For revolutionaries believed that people should not be measured by material possessions but by their ability to transform the lives of others – the poor and underprivileged; that the economy needed to be reorganized in the interests of the many, not the few; and that socialism without democracy could never work. Above all, the challengers believed in freedom of speech.

Much of this seems utopian now and some, for whom 1968 wasn’t radical enough at the time, have embraced the present and now regard any form of socialism as the serpent that tempted Eve in paradise.

The collapse of “communism” in 1989 created the basis for a new social agreement, the Washington Consensus, whereby deregulation and the entry of private capital into hitherto hallowed domains of public provision would become the norm everywhere, making traditional social democracy redundant and threatening the democratic process itself.

Some, who once dreamed of a better future, have simply given up. Others espouse a bitter

maxim: unless you relearn you won't earn. The French intelligentsia, which had from the Enlightenment onwards made Paris the political workshop of the world, has retreated on every front. Renegades occupy posts in every Western European government defending exploitation, wars, state terror, and neocolonial occupations; others now retired from the academy specialize in producing reactionary dross on the Internet, displaying the same zeal with which they once excoriated factional rivals on the far left. This, too, is nothing new.

Mayekiso, Moses (b. 1948)

Nicole Ulrich

Moses Mayekiso (Moses Jongizizwe Mayekiso, Moss Mayekiso) was born on October 21, 1948 in Askeaton, Cala District, Transkei, South Africa. He was the eldest of 12 children. His father, Betwell Mayekiso, worked as a migrant miner, and later as a general laborer. His mother, Nokudama Mayekiso, ran the household in her husband's absence. Mayekiso left school early to find work, and in 1973 made his way to Alexandra

Township, Johannesburg. After three years of working as a general laborer for a number of construction companies, Mayekiso eventually secured a job at the Toyota factory, where he joined the Metal Allied Workers' Union (MAWU), linked to the Trade Union Advisory Coordinating Council, and later the Federation of South African Unions (FOSATU), formed in 1979.

Mayekiso played an active part in building the young union, and was elected shop steward. Along with other MAWU shop stewards, Mayekiso was dismissed in 1979 after the union led a series of strikes for recognition. Mayekiso continued his trade union activities by volunteering at the union. He was employed as an organizer for the eastern Witwatersrand, and in 1981 he became branch secretary of MAWU's Transvaal Region.

The eastern Witwatersrand was a hotbed of African worker militancy during the early 1980s. Mayekiso was not only involved in the strike waves that engulfed the metal industry, he also assisted with the establishment of FOSATU shop stewards' councils. These united workers from different factories and industries, and provided a forum for mobilizing around workplace and community issues. Mayekiso played a leading role in the 1984 stayaway organized by FOSATU, for which he was briefly detained, and participated in the unity talks that led to the formation of the Congress of South African Trade Unions (COSATU) in December 1985.

In early 1986 Mayekiso was elected general secretary of MAWU. His interest in union affairs remained firm, but, with the upsurge in political resistance, Mayekiso argued for greater worker participation in community issues and struggles. Mayekiso was elected chairperson of the Alexander Action Committee (AAC), which was formed in February 1986 during a bloody battle between township residents and police that lasted for six days. The AAC was instrumental in organizing residents on a democratic basis and calling for rent and consumer boycotts. In June 1986 Mayekiso and four other AAC leaders (including his brother, Mzwanele Mayekiso) were arrested and charged with treason. The National Union of Metal Workers (NUMSA), which amalgamated MAWU and other metal unions in COSATU in 1987, participated in an international campaign for Mayekiso's release and elected him as secretary general in absentia. He was eventually acquitted in April 1988.

Mayekiso became a leading member of the South African Communist Party (SACP), and continued with his community activism. In 1990, he was elected a member of the Civic Associations of the Southern Transvaal (CAST) and became president of the South African National Civic Organization (SANCO) in 1992. Following the first democratic election in 1994, Mayekiso became a member of parliament for the African National Congress (ANC), but resigned two years later and became involved in business. He is now the chief executive officer of SANCO Holdings.

Mazumdar, Charu (1918–1972)

Shatarupa Sen Gupta

Charu Mazumdar joined the Communist Party of India (CPI) in 1941 and participated in the *Tebhaga* Movement of 1946 (demanding two-thirds of the crop for sharecroppers). This movement, led by the CPI-dominated Kisan Sabhas (peasants' association) in rural Bengal, petered out after independence under massive

repression. The lessons of *Tebhaga* led Mazumdar to conclude that the peasants had to be equipped to face armed state repression. During the Sino-Indian border dispute of 1962, Mazumdar was arrested for raising pro-Chinese slogans and holding the Nehru government responsible for the dispute.

By 1964 the CPI had transformed substantially from Stalinism to social democracy, abandoning all pretence to a revolution. This led to the split of 1964, whereby the Stalinists and Maoists in the CPI walked out of the Tenali Convention and formed the Communist Party of India (Marxist) (CPI (M)). Mazumdar joined the new party in the hope that the CPI (M) would finally launch a class struggle.

In 1967 India was preparing for the fourth general elections in which both of the communist parties participated. Mazumdar did not approve of CPI (M)'s participation. As is evidenced by his article "Eight Documents," written between 1965 and 1967, he aimed at a struggle against revisionism, pushing for peasant uprisings and formation of a genuine revolutionary party which would engage in guerrilla warfare and follow the Chinese model of area-based seizures of power. Nonetheless, the elections generated non-Congress governments in eight provinces, and in West Bengal the CPI (M) formed a 14-party coalition with a medley of political parties.

During early 1967 the Darjeeling district committee of the CPI (M), of which Mazumdar was a member, provided leadership to the peasants and *adivasis* (tribals) in an anti-landowners movement (usually known as the Naxalbari movement, from its place of origin, and from which the Maoists have been called Naxalites), which was brutally subdued by the state police along with certain paramilitary forces. This outbreak was hailed by the Communist Party of China as the "spring thunder over India." The CPI (M), which had earlier promised to support any people's movement, condoned the state terror and dismissed its dissident Darjeeling committee. This paved the way for the formation of the All India Coordination Committee of Communist Revolutionaries (AICCCR) in May 1968 by the Maoist dissidents of CPI (M). Within it, Mazumdar ignored proletarian class struggles, stressing only peasant armed struggles for seizure of state power. This led to the exclusion of the Andhra group led by T. Nagi Reddy. On April 22, 1969 AICCCR formed the

Communist Party of India (Marxist-Leninist) (CPI (ML)) as the principal Maoist party in India. Mazumdar was elected the general secretary of the party in its first congress in 1970.

By this time the Naxalite movement had spread from the rural to the urban centers of West Bengal, resulting in a wave of state repression whereby many Maoists were eliminated in cold blood. Mazumdar was one of the key accused, and on July 16, 1972 he was arrested by the Calcutta police. After remaining in police custody for 12 days, he died on July 28, 1972.

Mazzini, Giuseppe (1805–1872)

Elvio Ciferri

The most influential theorist and political leader of the Italian democratic Risorgimento, Giuseppe Mazzini was born in Genoa on June 22, 1805, of Giacomo, professor in the faculty of medicine, and Maria Drago, a strong influential personality who advocated Jansenism, a Catholic fundamentalist perspective counter to the Reformation. In 1827 Mazzini earned a degree in law and literature where he developed a strong criticism of the European Restoration and the view that Italy, separated by territorial divisions, should be free from foreign domination. Mazzini joined Carboneria, a secret society formed in the early nineteenth century that advocated unification of Italy through revolt and insurrection.

From 1828 Mazzini pursued journalism in the *Indicatore Genovese*, and conspiratorial activities, although growing increasingly critical of Carboneria. Mazzini suffered a first incarceration in Savona, and having to choose between confinement and exile, preferred to go to

Marseille, where he devoted himself to full-time militancy. He founded Giovane Italia (Young Italy), an entirely reshaped political association freed from the sectarian attitudes of Carboneria and fostering a program that focused on the creation of a new Italian state that would reunite the whole nation and be independent, republican, and affirmative of liberty. Mazzini, in his political writings strongly influenced by Romanticism and often worded in semi-mystical formulas, stressed the importance of individual and civic virtues, of faith in what he thought to be the “mission” of Italy, that is to pave the way to “progress” for all mankind. He borrowed from Philippe Buonarroti to argue in favor of unity versus federalism that in Mazzini’s view would only enhance the local privileges of reactionary aristocracies, and from Sismondi to extol the Italian republican traditions.

Mazzini also stressed the importance of guerrilla warfare and the role of “dictatorship” (ancient Rome-style), a temporary, provisional government that would give way, after the revolution, to a national council, a representative chamber. Previous failures of revolution in Italy were to be blamed on the elites, not on the people, so far not invested with any political role. On the contrary, the people (the multitudes) were the main actors of political and social change, and Italian revolutionaries should therefore go deeply into social issues, not just for the sake of social justice in itself but with the aim of uniting the people in the struggle for independence and a republic. Mazzini criticized Buonarroti’s “communism” and never supported any agrarian law that would redistribute land to form a class of independent peasants. Giovane Italia was nevertheless the first modern political party in Italian history and its program was explicitly democratic, fostering a republic.

The Giovane Italia movement spread in Italy and even to France. The first insurrectional attempts in Genoa (1833) and in Savoia (1834) failed. In self-exile in Switzerland, Mazzini created in Berne (1834) Giovane Europa (Young Europe), the first transnational European democratic party, articulating with Swiss, German, and Polish branches. This alarmed governments and Mazzini was expelled from Switzerland in early 1837, when he settled in London. The reorganization of Giovane Italia to which he devoted himself in 1840 stressed the importance of

popular elements, as Mazzini stated that so far *Giovane Italia* had acted “on behalf of people, not with the people.” In this new attitude Mazzini may have been influenced by the Chartist movement. The Italian revolution was now to be political and social at the same time. For a few years, newspapers like *Apostolato Popolare* and educational institutions promoted Mazzini’s ideas. The Italian Workers’ Association founded by Mazzini may well be the first example of a working-class movement in Italian history.

The European and Italian events of 1848 determined a whole new phase in Mazzini’s political project. The Risorgimento fostered more moderate orientations under Sardinian King Carlo Alberto in Piedmont, Gioberti’s liberal Catholic projects, or newly elected Pope Pius IX. Mazzini put aside his republican projects and stressed national unity and harmony among all factions of the Risorgimento, hoping that the new moderates would be, if not curbed, at least ignored by popular pressure in the events to follow. After Milan’s Cinque Giornate insurrection in March 1848 he could return to Italy, but was frustrated by the annexation of Lombardy by the Piedmont kingdom and decided again to act freely as an advocate of republic against monarchy in *Italia del Popolo*, which campaigned for a constituent assembly on a national basis and favored, when Piedmontese troops were defeated by Austria, a “people’s war.” In March 1849, after a brief stay in a Tuscany freed from the Grand Duke, he was in Rome, where he led the revolutionary Triumvirate of the short-lived Roman Republic that proclaimed a democratic constitution. After the city fell to French troops, Mazzini fled into exile. In 1850 he created the European Democratic Central Committee to continue in the footsteps of *Giovane Europa*. The 1853 insurrection failures in Milan and the disruption of the Pisacane 1857 expedition in Sapri were setbacks to Mazzini’s efforts, but he continued to operate as if Italian popular revolution was at hand. He founded a party that by its very name was intended for action, the Partito d’azione, and he formulated a more detailed program centered on social issues. Cooperatives and workers’ associations, eventually supported by state funds, would cancel class divisions and create a new social figure, the “producers,” neither capitalists nor workers, rewarded according to their contribution to social production.

The prime minister of Piedmont, Cavour, was, with the support of moderate Società Nazionale, working for an alliance with the new French emperor, Napoleon Bonaparte III, to undermine Austrian domination of the Peninsula, and Mazzini was highly critical of the “imperialistic” stance of France. When the 1859 war broke out, Mazzini kept himself idle, but when the Villafranca armistice was signed, he saw that a popular war, based on the insurrections in central Italy and on the upheaval of southern Italy, could give new momentum to his actions. The Mille expedition of Garibaldi’s volunteers to Sicily and then to mainland southern Italy was an example of people’s war, but Cavour outplayed it by sending Piedmontese troops to central Italy, annexed with a popular vote, and then to meet Garibaldi just north of Naples, so stopping his expedition. The 1861 Unification was under moderate hegemony, and coincided with the extension of the Piedmontese kingdom to Italy, completed with the conquest of Rome in 1870 when France was under Prussian troops. Mazzini had created a new organization for the liberation of Rome, the Universal Republican Alliance, but his insurrectional plans, however, were again unsuccessful and he was arrested in Palermo and jailed in Gaeta. A republic and a democracy were still out of reach. Released in October, he stayed briefly in Switzerland before going to London.

Mazzini’s attention turned then to workers’ classes. Under his initiative, the first workers’ societies were founded for the purpose of guardianship of workers and progress of the nation. In contact with the Internationalists, his last battles, however, were to safeguard the integrity of the workers’ movement against anarchism and socialism. In 1871 he promoted the Pact of Brotherhood of Workers Societies. Early in 1872 Mazzini arrived in Pisa. In the Italy now unified and free from Austrian domination but still under a monarch, Mazzini, certainly one of the makers of the Italian nation, had to live clandestinely. He died on March 10, 1872. After his death he turned into a political symbol of the democratic and republican ascendancy, inspiring the Republican Party and many non-socialist radicals to come. The house in Pisa where he lived his last days as a guest of the Rosselli family has been transformed into a cultural institution (*Domus Mazziniana*) dedicated to his name and memory.

Mboya, Tom (1930–1969) and the Kenya labor movement

Andrew Kūru Gichuru

Tom Odhiambo Mboya was Kenya's consummate politician. First as a labor leader, then as a member of the legislative council, and finally as the minister for economic planning and development, Mboya was a diligent advocate for the rights of the Kenyan people in pre- and post-colonial Kenya.

Mboya was born on August 15, 1930 on a sisal estate called Kilima Mbogo (mountain of buffaloes) a few miles east from Thika. In accordance with Luo custom, he was named Odhiambo to signify the time of his birth ("evening"), and his last name, Mboya, was a traditional family name from his mother's family. Though both his parents were illiterate, his father, a farmhand, had realized the importance of education and was determined to give his children what he never had. He also viewed their education as an investment in his own future.

Like most children in colonial Kenya, Mboya began his education at a mission school where the main curriculum consisted of prayer recitals and catechism. When he reached the age of 9, his father sent him to another mission school in Kabaa, Kamba District, run by Irish fathers, where he could learn to read and write. He stayed with the school catechist who was from the

Kamba tribe and imbibed their customs and learned the language. Once finished, he went to St. Mary's mission school at Yala, in Central Nyanza, where he was an average student, preferring singing and debating to the more rigorous subjects. He became an altar boy, joined the church choir, and considered the priesthood, only to abandon the idea later when he became weary of the Church's complicit attitude with the colonialists. He successfully passed the African secondary school certificate but was unable to pursue further education as his father could not afford it.

As was the norm then, Mboya applied to the teacher training college but opted to train as a sanitary inspector at the Royal Sanitary Institute, which paid its students an allowance. The institute was later moved to the Jeanes School, approximately 8 miles from Nairobi. In just a few months, Mboya was elected president of the student council, took part in the debating society, and even started for the school's soccer team. He later joined the Nairobi city council as a sanitary inspector in 1951, where he was elected secretary of the Nairobi African Local Government Servants' Association (NALGSA) and also encountered racism.

Under the tutelage of a European inspector, Mboya was often told to remain in the car while the former went inside to inspect various premises. Angered by this, Mboya complained vehemently, bringing the relationship to an end. On other occasions he was thrown out of European premises because he was black. As secretary of NALGSA, Mboya encountered a litany of grievances that ranged from unpaid wages to wrongly calculated housing allowances. Mboya observed that the grievances were a result of deteriorating relationships between workers and their European supervisors. The situation was further exacerbated because there was no existing mechanism for the city council workers to address their grievances.

Mboya worked diligently, frequently complaining to department heads while encouraging more city council employees to join the staff association. He would raise the membership from 450 to 1,300 members. But Mboya had also realized that the organization was limited in its ability to effect change. Some of its limitations were that it was restricted to individual companies or public bodies, had no paid employees, possessed little legal immunity, and had no right to strike or raise money, which effectively denied it any

negotiating power. Mboya then proposed that NALGSA adopt a new constitution which increased its power and registered it with the Trade Union Ordinance. Such a move was much to the chagrin of the colonial government, whose attitude toward unions was that they instigated riots and were hotbeds for communism. In an attempt to pacify unionism in Kenya, the Registrar of Trade Unions would place prospective unions on probation for registration, and if they violated their own rules, would immediately cancel their registration. Yet Mboya's activities had not gone unnoticed by his supervisors, who immediately made known their displeasure with his labor and political activities. Rather than be dismissed, Mboya opted to resign to become a full-time unpaid labor organizer.

Mboya had also been busy consolidating another union, the Kenya Local Government Workers' Union (KLGWU), which was to be a nationwide union. Its formation was greatly hampered by the state of emergency in October 1952, when many of its members were subjected to movement restrictions because they were suspected of being Mau Mau adherents. However, the union endured and was soon affiliated with the Kenya Federation of Registered Trade Unions (KFRTU). Mboya was elected general secretary of the KFRTU after its leader, Aggrey Minya, was suspended and dismissed.

Because Kenya's only political party, the Kenya African Union (KAU), had been banned in June 1953, the union movement took on greater significance as it became the *de facto* political organization agitating for African rights. With a steady stream of complaints, Mboya found himself entering the political arena as he denounced the color bar, the White Highlands Order, and the Lyttelton Constitution. He refused to denounce the Mau Mau, arguing that it was a direct result of European transgressions toward Africans. Mboya continued to build KFRTU by strengthening its relationship with the International Confederation of Free Trade Unions (ICFTU). Through the ICFTU, Mboya was able to accurately recount to the British press what was going on in Kenya to counter the colonial government's anti-Mau Mau message.

The union's biggest test crystallized through the Mombasa dock strike of 1955. The workers had unsuccessfully demanded an increase in wages and the dismissal of certain supervisors. Upon his arrival, Mboya observed that the

situation was quickly spiraling out of control with the ouster of the dock workers' union leaders and the presence of the General Service Unit, with the army expected the next day. Mboya was able to convince the men to go back to work while he addressed their grievances through a tribunal set up by the Trade Disputes Arbitration Ordinance, the first of its kind. The KFRTU was able to get the workers a 33 percent increase, extra payment for handling "dirty" cargo, and improved leave conditions for regular employees. The successful resolution of the Mombasa strike thrust Mboya into the political spotlight.

After pursuing further studies at Oxford's Ruskin College and a fundraising trip to the United States, Mboya returned to Kenya to find that the colonial government had allowed Africans back into local politics, but only at the district level. Mboya ran for the Nairobi constituency against Argwings-Kodhek, Muchohi Gikonyo, and J. M. Musyoka, all of whom he beat to win the seat. Other notable winners were Oginga Odinga, Ronald Ngala, and Lawrence Oguda. Calling themselves the African Elected Members' Organization (AEMO), they quickly rejected the Lyttelton Constitution, called for the abolition of the White Highlands and an end to school segregation, and demanded universal adult suffrage. Though each of these proposals was defeated, Mboya assiduously continued to agitate for Kenya's independence through various political parties, including the People's Convention Party (PCP), the Kenyan Independent Movement (KIM), and eventually the Kenya African National Union (KANU).

With Jomo Kenyatta's release from detention and subsequent assumption to KANU's presidency, Mboya was named minister for labor. In a classic case of "poacher turned gamekeeper," Mboya found himself on the other side of the tracks as his appointment to office was a time of great labor unrest in Kenya. Many of the unions had become radically militant as they sought to address their grievances through strikes. Such actions, he worried, would greatly circumvent the country's economic progress, and he began to understand why the government had remained a staunch advocate against unions. Mboya resisted pressure to ban or nationalize unions and instead opted to scalpel his way through their many issues, eventually regaining control by the end of the year. This only served to increase his stature,

both at home and abroad, as the consummate politician. Mboya continued to be prominent in Kenyan politics, holding office as minister for justice and constitutional affairs and finally as the minister for economic planning and development until his assassination on July 5, 1969.

With his death, Kenya and Africa lost one of its best statesmen. What made Mboya unique was that his appeal cut across tribal lines. Because of his upbringing and his work as a labor organizer, Mboya adroitly avoided tribal politics and that made him a more effective politician. While many politicians would use political office to amass personal wealth, Mboya remained oblivious to the tentacles of corruption, dedicating his efforts to the social, economic, and political upliftment of Africans. Amongst his notable achievements were his appointment as chairman of the All-African Peoples' Conference at the age of 28, initiating the student airlifts that were responsible for sending many Kenyan students with full scholarships to study in the United States, and an honorary doctorate from Howard University.

Meilidao protests, 1979

J. Megan Greene

On December 10, 1979, International Human Rights Day, pro-democracy activists attempted but failed to hold a rally in Kaohsiung in southern Taiwan. The political authorities had denied the protesters a permit and stationed riot police in the park in which the protest was to have occurred. When the demonstrators decided to go ahead with the protest in spite of their not unexpected failure to get a permit, they were beaten and arrested by riot police, and the event never took place in the way in which it had originally been planned. The state's violent reaction to the protesters, however, stimulated a much greater

wave of support and pro-democracy activity than a peaceful and state-sanctioned protest might have done. The organizers of the event were the editors of *Meilidao* (Formosa) magazine, which had been published since August 1979 by a group of non-Guomindang (GMD) politicians. The event, therefore, has come to be known by two names, the Meilidao protests and the Kaohsiung incident, and it marked the beginning of Taiwan's pro-democracy movement of the late 1970s and 1980s.

At the end of World War II, Taiwan, which had been a Japanese colony since 1895, was returned to China, and specifically to the government of the GMD, which had governed China, or at least large parts of it, since 1927. Relations between the GMD and the Taiwanese people had rapidly deteriorated, and following the February 28 incident of 1947, the governor-general of Taiwan had declared martial law. When the GMD's national government was compelled by the Chinese Communist Party to retreat from mainland China to Taiwan in 1949, it continued to govern using martial law and forbade the creation of any political parties, strictly controlled all media including the press, and censored all other sorts of publications. The GMD responded to the one brief flurry of pro-democracy activism that occurred in the 1960s, the Free China movement, with the arrest of several high-profile leaders of the movement. This episode was sufficient to remind Taiwan's public, who had already seen ample evidence of the GMD's authoritarian tendencies during the "white terror" that followed the 2-28 incident, that they were better off keeping out of politics unless their sympathies lay with the GMD. Through repressive strategies that were backed up by martial law, therefore, the GMD effectively limited political activities that it did not sanction in the decades following 1947.

By the mid-1970s, however, several changes had occurred that subtly shifted the political climate even though martial law remained in effect and the state continued to arrest and imprison its critics. In the first place, in keeping with its expressed intention of teaching the Chinese people how to operate in a democracy by allowing themselves to participate in local self-government, the GMD had allowed village, town, county, and even some provincial-level elections in Taiwan. Although the only legal political party was the GMD, non-party candidates

were permitted to run as independents. By the 1970s these candidates became increasingly well-organized and were known as “dangwai” or “outside the government” candidates. Dangwai, in essence, became a code name for an opposition party, although candidates were not supposed to be organized in that way.

Second, Taiwan’s political situation underwent a number of shifts in the 1970s. In 1971 the United Nations (UN) decided to switch recognition from the Republic of China (Taiwan) to the People’s Republic of China (PRC), and as a consequence Taiwan lost its UN seat. Over the course of the next decade, many major states chose to pursue a similar strategy of recognizing the PRC, but the most devastating such switch to Taiwan was the United States’ decision in 1978 to follow suit. Third, in 1975 Jiang Jieshi (Chiang K’ai-shek) died, and by that time the GMD itself had begun to absorb increasing numbers of Taiwan-born members, so that the face of the party, and to a lesser extent its priorities, were beginning to shift. These changes were sufficient to create a climate in which more Taiwanese were emboldened to protest, but the response of the GMD was nonetheless just as harsh as it might have been at any time since 1947.

Matters came to a head in the late 1970s, during which time electoral politics began to heat up, and Dangwai candidates began making exceptionally good showings in some local elections. One incident in particular showed that the Taiwanese electorate was beginning to expect a greater voice than it had previously had. In November 1977 supporters of Xu Xinliang (Hsu Hsin-liang) alleged electoral fraud on the part of the GMD in the Taoyuan (T’ao-yuan) County Magistrate’s election. In response, a massive protest erupted of roughly 10,000 people who, among other things, set fire to a police station. Stimulated by this spontaneous show of resistance to the GMD, political activists started up several new journals (though the government generally shut them down fairly rapidly) that called for democratization and criticized GMD rule. Among these journals, *Meilidao* was perhaps the most radical, and it rapidly took on the character of an actual political party rather than a mere magazine as it opened branch offices in cities around Taiwan. The GMD’s reaction included not only the violent suppression of the planned protest, but also the closure of the journal and the arrest and imprisonment of its organizers. In spite of their

long prison sentences, however, the organizers, who included Xu Xinliang, ultimately became important leaders of the opposition movement as it developed more fully in the late 1980s and after the lifting of martial law in 1987. The Meilidao protest and the events that surrounded it marked the beginning of the organized democracy movement in Taiwan, and although it ended in failure, it became an important motivational symbol for democracy activists in the 1980s and beyond, who regularly referred to the event as evidence of both GMD repression and the existence of a wave of support for democratization.

Mein Kampf

John M. Cox

Known to history for his unprecedented crimes against humanity during World War II, Adolf Hitler (1889–1945) first came to the attention of the German public as a rabble-rousing leader of a small far-right group in Munich in the early 1920s. Hitler joined the German Workers’ Party in 1919, quickly became its central leader, and led his group (renamed the National Socialist German Workers’ Party, or Nazi Party) in the Munich “Beerhall Putsch,” an unsuccessful attempt to overthrow the German government in November 1923. After the suppression of the putsch, Hitler was convicted of high treason but served a mere 13 months in prison because of the leniency of the sympathetic local courts.

The future dictator used his comfortable tenure in Landsberg prison to compose his semi-autobiographical manifesto, *Mein Kampf* (My Struggle), first published in two volumes in 1925 and 1926. Hitler’s book – his only completed work, although an unpublished sequel would surface after his death – offers great insight into his political goals and general attitude toward the world. Reflecting its author’s frame of mind, *Mein Kampf* is unsystematic, repetitious, virulently

racist, and violent in its imagery. Yet the book is consistent in its central themes and arguments: racial struggle at the center of human history; Germany's need to conquer *Lebensraum* (living space) to the east; the identification of Judaism with Bolshevism, and his desire to eliminate both. Hitler would maintain the rigid beliefs articulated in *Mein Kampf*, with no fundamental changes, until the end of his life.

The book's success followed that of the Nazi Party, which emerged from the obscure margins of Germany's far right to achieve electoral successes at the beginning of the 1930s. *Mein Kampf* sold only a few thousand copies a year through the late 1920s, but by 1932 reached annual sales of 80,000. After taking power in 1933, the Nazis heavily promoted the book and subsidized its sales. The German state itself bought many copies, and gave them, for example, to couples on their wedding day. With this assistance, *Mein Kampf* sold approximately ten million copies by 1945, when the Nazi regime collapsed and Hitler committed suicide.

Although banned in Germany, Austria, and some other European countries, Hitler's magnum opus continues to be published and sold in many countries. *Mein Kampf* exerts some influence on neo-Nazi and other anti-Semites, and sells several thousand copies a year worldwide. An unknown number of those sold, however, are for scholarly purposes, as the book retains some value for researchers and historians of Hitler and Nazism.

Menchú, Rigoberta (b. 1959)

Dima Zito

Rigoberta Menchú Tum is a Guatemalan Maya human rights activist and recipient of

the 1992 Nobel Peace Prize. As a member of the indigenous population, whose 22 ethnic groups constitute 65 percent of the total population of Guatemala, she grew up in conditions of poverty and exploitation, witnessing human rights violations committed by the Guatemalan armed forces during the civil war (1960–96). The US-backed Guatemalan military regimes followed a scorched earth policy to fight the left-wing guerilla movements. This included massacres, torture, and the “disappearing” of opponents. At least 200,000 Guatemalans were killed, most of whom were members of the indigenous population.

Still very young, Menchú started to campaign for indigenous rights, and in 1979 she became an activist in the Committee for Campesino Unity (CUC). In 1980 her father and 37 activists were killed by the Guatemalan army when a delegation of CUC members occupied the Spanish embassy to seek political support. Her mother and other members of her family were tortured and killed by government forces. In 1981 Menchú had to flee to Mexico. In exile she continued her political activities and took part in the foundation of the United Representation of the Guatemalan Opposition (RUOG), of which she became a leading member.

Menchú gained international recognition as a representative of indigenous culture and resistance with her biography, *I, Rigoberta Menchú*, in 1983. The book was later the subject of controversy; Menchú was accused of having changed and exaggerated facts in accordance with the publicity needs of the left-wing movement.

Menchú's engagement for human rights was internationally recognized with the UNESCO Prize for Education for Peace in 1990 and the Nobel Peace Prize in 1992. She was the youngest person ever to receive this distinction. She returned to Guatemala and was actively involved with signing the peace accords between the Guatemalan guerillas (URNG) and the Guatemalan government in 1996. Since then she has been UNESCO Goodwill Ambassador for the Promotion of Culture of Peace and the Protection of Rights of Indigenous People. Menchú was the presidential candidate for the indigenous political party Encuentro por Guatemala in the 1997 Guatemalan elections but received only 3 percent of the vote. She is founder and president of the Rigoberta Menchú Foundation and has received more than 30

honorary doctorates from various universities in different countries. In cooperation with a Mexican pharmaceutical company, she opened a chain of pharmacies, “Farmacias Similares,” in Guatemala, offering low-cost generic medicines and medical consultation.

As the persons responsible for crimes committed by the army during the civil war remained unpunished in Guatemala, in 1999 Menchú, together with human rights organizations, brought an action before a Spanish court. (Spanish courts can prosecute crimes against humanity and genocide in other countries.) In 2006 Spain requested the extradition of seven former members of the Guatemalan government, including ex-president Efraín Rios Montt.

Mendes, Chico (1944–1988) and Amazonian rainforest protest and resistance

Michael Lömy

The Amazonian rainforest is a decisive component of the earth’s ecological equilibrium; not only is it the largest existing compound of biodiversity, but it is also a key factor in the absorption of CO₂, slowing down the process of climate change. The resistance of indigenous and peasant communities against its destruction has therefore a vital importance for humanity as a whole.

During the last years of the military dictatorship in Brazil, there began to appear a movement of protest against the local and multinational capitalist forces of agrobusiness interested in

destroying the rainforest: cattle ranchers, soy planters, wood-merchants, and various other *latifundistas* (owners of large estates) who wanted to either raze or burn the trees and expel the people. The first protesters were peasants who made their living from the small-scale extraction of natural products.

The most important of these movements was the Alliance of the People of the Forest, founded in 1986 by a socialist trade unionist, Chico Mendes. Born in 1944 in the town of Xapuri, in the Amazonian area, Francisco Alves Mendes Filho worked as a *seringueiro* (rubber tapper). He was educated by the Christian Base Communities, eventually becoming a socialist, and in 1975 founded a union of rural workers in Xapuri with his comrade Wilson Pinheiro.

Very quickly the union initiated a new form of struggle: non-violent resistance without precedent in the world, the so-called *empates* (physical blockades). Hundreds of *seringueiros*, along with women and children from the community, would join hands and confront, without weapons, the bulldozers of the landowners attempting to bring down the forest. Sometimes the peasants were defeated, but often they were able to stop tractors, bulldozers, or electric chainsaws attempting to destroy the trees. Occasionally they would even win the support of the workers on the job. They struggled against a powerful enemy, which had its political arm – the Democratic Rural Union; an armed mercenary force – *pistoleiros* (paid killers); and the complicity of local police, courts, and local governments. Wilson Pinheiro was killed soon after the struggle began, and Chico Mendes received his first death threats.

In 1985, with the end of the dictatorship, the latex collectors were able to organize the National Council of *Seringueiros*, which received support from the Catholic Land Pastoral, the Workers’ Party (PT), as well as from the newly formed Landless Peasant Movement (MST).

The next step was decisive. The resistance of the *seringueiros* and other peasants who lived from the extraction of natural products from the rainforest (chestnuts, babaçu nuts, and so on) joined with other groups: landless peasants and, most importantly, indigenous communities who have lived in the forest for centuries, together founding the Alliance of the Peoples of the Forest. For the first time, peasants and indigenous peoples, who often fought each other in the past, united their forces against a common

Environmental protection has been a major concern in the Amazon for the past few decades as indigenous peoples assert their rights over tribal lands, often coming into conflict with large corporations. One such clash brought Ecuadorian Indians into conflict with Chevron-Exxon. Carrying signs that say “Exxon Never Again,” the Ecuadorians appealed to the Superior Court of Justice in Lago Agrio, Ecuador, on October 21, 2003, hoping to force the company to clean up contamination left behind as a result of oil drilling. (REUTERS/Lou Dematteis)

enemy: the *latifundium*, rural capitalism, and agrobusiness – the destroyers of the Amazonian rainforest. Chico Mendes gave a speech celebrating this alliance: “Never more will one of our comrades spill the blood of the other, together we can defend nature, which is our home, the place where we learned to live, to raise our children, and to develop our capacities, in harmony with nature, with the environment and all the living beings who inhabit the forest.”

The Alliance proposed a sort of agrarian reform adapted to the conditions of the Amazonian rainforest, with both an ecological and socialist character: the land would become public property, while the peasants and indigenous communities would have free use of it.

In 1987, some US ecological organizations invited Chico Mendes to come as a witness before a meeting of the Inter-American Development Bank. In the name of the Alliance, Mendes denounced the projects financed by the international banks, which resulted in the destruction of sections of the Amazonian rainforest. In June 1987, Mendes was awarded the United Nations Global 500 Award, which made him an international name. The Alliance’s struggle became a symbol of the planetary mobilization to save the world’s last great rainforest.

In 1988 the National Conference of the CUT, the Brazilian Workers’ Trade Union Confedera-

tion, approved a thesis presented by Chico Mendes in the name of the National Council of *Seringueiros*, under the title “Defense of Nature and of the Forest Peoples.” Its main demand was both ecological and social:

... or the immediate expropriation of the *seringais* (latex plantations) in conflict, which should be given to the peasant communities who live from the extraction; this way nature and the culture of the rainforest peoples will not be aggressed, and a sustainable use of the natural resources will be possible, thanks to technologies developed over centuries by the people who live from the extraction of natural products from the Amazonian forest.

The Alliance of the Peoples of the Forest won two important victories at this time: (1) the establishment of the first protected rainforest areas reserved for extraction activities (*reservas extrativistas*) in the State of Acre (Amazone); and (2) the expropriation of a *seringal* (latex plantation) belonging to the *latifundista* Darly Alves da Silva, near Xapuri.

For the rural oligarchy, which had for centuries been accustomed to depose – with complete impunity – such “troublemakers” (i.e., those who dared to organize rural laborers to fight against the *latifundium*), this was unbearable. In December 1988, Chico Mendes was assassinated by a killer paid by the Alves da Silva landowners.

After Chico Mendes’s murder, the Alliance of the Peoples of the Forest continued its struggle, and is still in existence several decades later. Even if it has not been able to stop the disastrous process of destruction, it set an example by its capacity to combine social and ecological resistance, peasant and indigenous struggles, and the survival of humble local populations in the world’s largest and most species-rich tropical forest.

Meredith, James (b. 1933)

Angela D. Dillard

While not technically a member of any organization aligned with the post-World War II civil rights *movement*, James Meredith secured a significant victory for the civil rights *cause* when he became the first African American to openly enroll at the University of Mississippi on October 1, 1962. He was born on June 25, 1933 in Kosciusko, Mississippi, where he spent most of his youth before joining the Air Force in 1950. Military service in both the US and Japan within the newly desegregated armed forces was a formative experience for the aspiring, and always contrarian, activist. Before his honorable discharge, he had already begun to dream of launching a war against white supremacy in Mississippi.

Meredith's admission to the University of Mississippi was the result of over 16 months of legal maneuvering that pitted Constance Motley and other NAACP lawyers against the chancellor and administration of "Ole Miss," along with Mississippi Governor Ross Barnett and members of the anti-desegregation White Citizens' Council. Meredith's case also touched off a fierce political battle between Barnett and the Kennedy administration, forcing the latter to commit some 20,000 troops to defend Meredith and ensure his registration, which finally occurred after an evening of rioting on the university's campus. As Meredith entered the old Greek revival-style Lyceum Building that housed the Registrar's Office, tear gas still hung in the air; two men were dead, 28 federal marshals had been shot, 160 were injured.

After graduating in 1963, Meredith toured Nigeria and other African countries before accepting a scholarship to attend Columbia University's Law School. Unexpectedly, he returned to the South in 1966 to begin a 213-mile "Walk Against Fear," from Memphis to Jackson, Mississippi, to inspire blacks to overcome their fears and register to vote. Shot and badly wounded on the second day out, Meredith's individualistic crusade was transformed into "The Meredith March" as the entire apparatus of an increasingly fragmented civil rights movement converged to continue his walk. As the last of the era's civil

rights marches, it is remembered primarily as the venue for the articulation of "Black Power" as a new movement slogan.

This was not what Meredith had intended, and his relationship with the movement continued to deteriorate, especially after his 1967 decision to run against Congressman Adam Clayton Powell at the behest of the Republican Party. Meredith was literally hounded out of the race by Powell's supporters. He returned to Mississippi in the 1970s and continued his drift toward the political right. By 1989 he had joined the staff of conservative North Carolina Senator Jesse Helms. In 1991 he stunned even Helms by campaigning for ex-Klansman David Duke during Duke's run for governor of Louisiana. Still a major icon of the civil rights movement, Meredith now aligns himself with the movement against affirmative action, "forced" busing, and welfare rights.

Mexican Revolution of 1910–1921

Lars Stubbe

When Francisco Indalecio Madero (1990: 242) wrote in 1908 that after 32 years of Porfirio Díaz's iron rule "we do reject absolutely . . . that it may be suitable for this regime to be prolonged," this was to mark the beginning of a long-drawn-out phase of armed social struggles lasting until 1920 and making its impact well into the second half of the twentieth century. Its complex nature not only derived from the disunity in the subaltern classes and hence their lack of a clear revolutionary goal. It was also the result of a vacuum in leadership by the ruling classes, who lacked coherence in the decision about which future mode of accumulation to adopt following the elimination of the close-meshed web of repression during the Díaz years. Furthermore, it proved an expression of Mexico's contradictory entry into the world market and its future role

as an economy dependent on providing cheap raw materials and labor.

Positivist Prelude to the Revolution: The Porfirian Age

With the exception of the years 1880–4, Díaz ruled from 1876 until he stepped down in 1911 and went into exile. Díaz is credited with having created the conditions for the state's financial stability and strengthened its infrastructure, particularly the extension of the railway. Mexico's entrance into the realm of nineteenth-century imperialism is marked by impressive figures. Between 1876 and 1910 the population nearly doubled to roughly 15 million people, production of raw materials for export, such as sisal and rubber, rose by ten times, and the exploitation of silver rose by four times, although its contribution to the foreign trade balances slowly gave way to products generated by the new direct foreign investments (industrial metals, textiles). Most decisive for both the continuous prizing up of the country for capitalist relations and an enhanced communication between the distant regions was the construction of the railway. While by 1880 there were still only 1,000 kilometers of rail, by 1908 the country counted nearly 20,000 kilometers.

This enormous economic upsurge would not have been possible without foreign investments and bonds, which flowed steadily after Díaz recognized and renegotiated the payments of foreign debts in the 1880s. Of fundamental importance in this enterprise were the Científicos, a group of intellectuals who converged around a positivist, evolutionary, and organicist ideology largely inspired by an adapted version of Auguste Comte's positivist ideology and centering around the idea that progress is only possible in a strictly ordered society.

Despite considerable regional differences in living and working conditions and variegated types of surplus extraction, the economic upsurge was only feasible through the expropriation of lands for the creation of large haciendas. This went hand in hand with the development of an agrarian proletariat. Indeed, over 90 percent of the communal villages were divested of their land, and farm workers faced an enormous drop in the value of their daily wages between 1876 and 1910. The other corollary of this development was the creation of an urban proletariat which by 1910

had come to make up 16 percent of the overall workforce. The price to be paid for entry in the world market was the dispossession of communal lands of indigenous communities and the proletarianization of labor.

By strengthening an already existing tendency of monopolization of political power through local *jefes políticos* (political bosses), which held contending interests in check, Díaz had even estranged groups that were sympathetic to his general idea of a prosperous Mexico. A group of intellectuals then sowed the seeds of revolution. Madero, for instance, came from a wealthy northern family of the landed elite. The “Jacobin wing” of the revolution's precursors was formed by the anarchist Partido Liberal Mexicano, founded in 1905 by Ricardo Flores Magón and others. The lack of political democracy began to disturb even members of his own class, and Díaz, who had originally come to power with an anti-reelectionist stance, promised to step down after the 1910 elections, bringing things to a boil by creating uncertainty about Mexico's future and opening up spaces for political contenders. Likewise, the mobilization of the working class had increased, as shown by the miners' strike in Cananea (Sonora, 1906) and the textile workers' strike in Río Blanco (Veracruz, 1907), both crushed by the Porfirist forces. The political mobilizations were enhanced by the growing failure of Díaz's and the Científicos' economic precepts, which put a high pressure on workers and peasants and even affected members of the middle class.

The Revolution

Without a political solution to the impending problems and in the face of economic crisis, which to a large degree stemmed from Mexico's dependence on the world market and its foreign investments and loans, the disillusioned members of the middle and upper classes could no longer be co-opted. Hence, the opportunity to oust Porfirio Díaz was taken up by Madero.

In his Plan de San Luis Potosí he had called for an insurrection to take place on November 20, 1910, as an immediate reaction to his imprisonment upon winning the elections, which Díaz fraudulently claimed for himself. While the urban uprisings following Madero's call were quashed by Díaz's troops, the same was not the case with the rural rebellions. Here, motivation, experience,

After the assassination of Francisco Madero, often regarded as the martyr of the Mexican Revolution, Venustiano Carranza and General Alvaro Obregón attempted to overthrow Victoriano Huerta. Obregón later coordinated a large faction of indigenous peoples in the armed struggle, including Yaqui Indians, seen here being transported in box cars after enlisting in the Mexican army. (Courtesy of the Library of Congress)

and political outlook differed substantially from that of urban labor. Two quite different groups acquired lasting importance: the Ejército del Sur (Army of the South) under the leadership of Emiliano Zapata and the quickly growing División del Norte (Northern Division) led by Francisco “Pancho” Villa. Emiliano Zapata had just been voted as leader in the village Anenecuilco in the southern state of Morelos at a crucial time when the enclosures of the hacienda owners not only encroached on long-standing indigenous communities but also threatened to annihilate them. Capitalist development in the north had already created a hacienda system with many foreigners directly investing into a profitable agrarian extraction structure rendered more profitable with the advent of the railway. However, the actual peons, through a system of *tiendas de raya* (company stores), still lived in a specific kind of bondage and were less inclined to direct themselves against their masters. Hence, it was mainly the free villagers, consisting of a mixture of military colonists who had fought the Apache, indigenous people, some of whom held land titles since colonial times, and squatters, who all suffered from the attacks on their lands, who later filled the ranks of Villa’s army.

Outbreak to 1914

Madero’s upheaval received its main support in the countryside of Chihuahua where Pascual

Orozco and Villa soon became the military leaders. Even though the army, the *rurales* (rural police), and the local police were numerically stronger, they were unable to contain the spreading revolt. The United States, whose territory offered the revolutionaries a base for retreat and organizing supplies, became first officially engaged when it sent military units to its southern border and warships to Mexican ports. When the Treaty of Ciudad Juárez was signed on May 21, 1911, it was the end for Díaz, who soon left Mexico for exile in France.

Despite the overthrow, much remained the same under the interim government of León de la Barra, who sought to disarm the rebels. Likewise, Madero did not intend to realize the agrarian reform he had promised in his Plan de San Luis Potosí other than through parliamentary means. This brought him immediately into contradiction with Zapata, who by then had gathered many armed peasants. The Zapatistas insisted on an immediate solution to the land question and thus the talks with Madero faltered. As a response to Madero’s election for president in October 1911, Zapata and Otilio E. Montañón wrote the Plan de Ayala. In it, they demanded that all confiscated lands be devolved to former proprietors and that a third of all hacienda lands be compensated for and given to the landless population for the creation of *ejidos* (communal lands) and individual lots.

The Zapatista upheaval and an armed insurrection by Pascual Orozco in March 1912 in the north showed the fragility of the Madero regime. He likewise was unable to control the differences in his own political ranks. On February 9, 1913, Generals Bernardo Reyes and Félix Díaz staged a coup, initiating the *decena trágica* (ten tragic days) and claiming many lives. General Victoriano Huerta, who commanded the troops loyal to Madero, soon conspired with the insurrectionary Díaz and received support from US ambassador Henry Lane Wilson to oust the president on February 18, 1913, after which he was murdered. Thus ended a brief period of upheaval in which Madero’s aim was to depose an undemocratic ruler and establish democratic reforms without endangering the order necessary for stable capitalist development. However, the critical situation on both sides of the class divide had made it clear that competing elite interests and the attempt to create a full-blown social revolution of the dispossessed were here to stay.

His successor Huerta was supported by the old conservative elite and seemed to be able to reestablish order through his open usurpation of power. The US did not recognize the new regime and likewise the states of Coahuila and Sonora defied it. Despite Madero's death, the opposition to this kind of ruthless neo-Porfirist rule did not subside. It was the governor of Coahuila, Venustiano Carranza, who organized the resistance to restore the constitutionalist order and claimed leadership of the Constitutionalist Army in his Plan de Guadalupe, signed on March 26, 1913. But his organizational drive for the "Revolution of the North" constituted only one of three elements in the insurrectionary movement against Huerta in the states of Sonora and Chihuahua and the Northeast (Coahuila, Nuevo León, Tamaulipas). Apart from the Army of the Northeast, headed by General Pablo González, and the Army of the Northwest, headed by Alvaro Obregón, Villa led his troops under the denomination *División del Norte*. His subordination to Obregón's command showed Carranza's distrust, which later produced political differences that led to an armed encounter. In line with the more developed form of capitalism in the north, the social composition of these troops was more heterogeneous than that of Zapata's troops in the south. The political goals of the Sonorans, as Obregón and the other military leaders and future presidents Adolfo de la Huerta and Plutarco Elías Calles would be called from the 1920s onwards, were much more conservative and sought not to disrupt the social order through immediate land reform.

Huerta's dissolution of Congress in October 1913, and his subsequent fake elections, not only fueled the inner opposition but made him also increasingly unreliable as guarantor of order and stability in the eyes of US President Woodrow Wilson's administration. Thus, in February 1914, the US lifted an arms embargo and in April US Marines occupied the port city of Veracruz. While this action made even people critical of Huerta rally around him, his lack of internal support and the weakness of the 100,000-man army led to his steady downfall. The *División del Norte*, which by then counted 50,000, including the female *soldaderas* (largely responsible for reproductive labor), and the Constitutionalist troops gained ground in the north, while the Zapatistas took important towns of the state of Guerrero. Far from reestablishing some kind of

neo-Porfirist rule, Huerta's coup had made evident the existing rift within Mexico's upper class and ushered in a series of factional struggles. When Huerta abdicated on July 14, 1914, this opened up the chance for the Villistas and the Zapatistas to explore the ins and outs of a possible revolutionary solution in favor of the peasants.

The Convention of Aguascalientes: An Impossible Opportunity

By the middle of August 1914 the successful Obregón and Carranza had installed themselves in Mexico City. Various immediate encounters between the Zapatistas and representatives of the Constitutionlists confirmed Carranza's negative position on the question of the distribution of lands. He opposed redistributive land reform on the basis that private property could not be taken from those who already owned it, and since the state did not own the land it thus could not give it away. This stand showed clearly the political, cultural, and class divide separating Carranza's intention from the Zapatistas' quest for justice as represented in their Plan de Ayala. With no prospect of negotiations on their terms, the Zapatistas began to implement an agrarian reform within their territories, and by March 1915 Zapata could declare the agrarian matter resolved.

However, things were not much easier in relation to Villa's forces. After the military victory, the northern coalition broke up as Carranza considered that he no longer needed them. However, given the strength and inner organization of Villa's troops, Carranza could not simply risk an all-out attack. Through Obregón, who served as intermediary for Carranza, but who also followed his own plans of creating a political base for himself within Mexico's petty bourgeoisie, a convention was negotiated which was to be held in a neutral place.

In October 1914 the Convention of Aguascalientes came together. Out of the different factions represented, Obregón's was the largest, and when he later aligned himself openly with Carranza, this proved to be decisive. The number of delegates clearly favored Carranza's faction. The deliberations of the convention were mainly centered around conflicting demands from either Villa or Carranza for the other to step down and go into exile. This stalemate and the impending confrontation which, for a lack of military strength, he would have lost, made Carranza leave Mexico

City and ultimately look for refuge in the port of Veracruz, where the US forces withdrew after a seven-month occupation. The most significant decision taken during the convention was the acceptance, at least in principle, of some of the crucial paragraphs on agrarian reform as laid down in the Plan de Ayala. For the first time after the demise of Díaz, a *de facto* governing body had adopted some of the pivotal demands which fueled this revolution.

With Carranza's retreat to Veracruz, Villa and Zapata could enter the now vacant seat of power. It was Villa's and Zapata's joint occupation of Mexico City, following their Pacto de Xochimilco on December 4, 1914, that was to mark the height of the peasant armies' strength. Yet they still had serious limitations regarding the creation of national political power and a centralized army. The peasant armies thus handed over control of the everyday operations of the state to the majority faction of the Conventionists which, however, would not undertake any effective measures to put the peasants' demands into practice. When on January 15, 1915 some Conventionist generals decided to side with Obregón, it meant the end of Villa's and Zapata's chances of realizing the demands of the peasant war. Nevertheless their occupation of Mexico City constituted the pivotal point of the revolution, as after this episode not even the Constitutionalist forces could fall short of demands promising to pacify peasants' and workers' petitions. Hence, despite their political limitations, the legacy of the insurrectionary peasants was to be felt in the struggles of the following years.

Los Batallones Rojos: Mexican Labor's Pact with Carranza

Mexican labor's history only dated back to the early 1870s, when mutualist organizations formed the Gran Círculo de Obreros de México in the wake of the Paris Commune. On the eve of the revolution, the overall population numbered 15 million people, of which the rural population made up 11 million and the workers – artisan labor still outnumbered industrial labor – numbered only slightly more than half a million, concentrated in a few urban areas. The combined system of repression and benevolent support of those organizations restricting themselves to mutualist and educational approaches under Díaz made the growth of independent unionism difficult and led to a lack of struggle experience

necessary for an autonomous participation in the revolution. After 1900, influence was exerted through contacts of railway workers with their fellows from the Industrial Workers of the World (IWW). The Magonistas had some influence in the struggles of Cananea and Río Blanco and their journal *Regeneración* (1900–18) was the most enduring expression of this tendency. Nevertheless, they were unable to create a durable and ideologically steadfast political faction within the working class.

In line with his semi-rural, lower-middle-class Sonoran background, Obregón sensed the need to incorporate a growing section of the population and thus broaden the social base of the Constitutionlists. Instrumental in this was the Mexico City-based Casa del Obrero Mundial, founded in 1912. In a first move to secure labor's support against the agrarian forces, Obregón had handed its members a locale in September 1914. Despite outward anarchosindicalist appearances of many of its members, this allegiance was deepened when individual leaders, such as the electrical workers' leader Luis N. Morones, were given partial management roles to subdue labor strife. As they rejected the Zapatistas' peasant Catholicism and considered Villa a villain, it comes as no surprise that the majority of the Casa members should vote for armed support of the Constitutionalist forces, giving rise to the Pact of Veracruz signed on February 17, 1915. Obregón's tactics had paid out even though it is disputed whether the six Batallones Rojos (Red Battalions) formed thereupon with several thousand armed men were decisive for the course of the revolution in military terms.

The Revolution's Thermidor: The Civil War and the Victory of the Constitutionlists

Prior to this treaty, Obregón's forces had reoccupied Mexico City by the end of January 1915, forcing the Zapatistas to completely evacuate the Federal State of Mexico by July. To improve popular support, Carranza's Plan de Guadalupe now incorporated the demand for an agrarian reform from above. Contrary to the Plan de Ayala, this plan foresaw bureaucratic decisions based on official land titles. A guarantee that restitutions during war times could also be undertaken by authorized militaries served as a means of appropriation of lands in the hands of many of the Constitutionalist leaders, who were to

constitute the new post-revolutionary bourgeoisie. After having secured the assistance of the Batallones Rojos, Obregón took on Villa's forces against which he dealt decisive blows in the battles of Celaya in April 1915. By the end of that year, Villa's 50,000-strong forces were decimated to a few hundred men and despite a resurgence in the latter part of 1916 and 1917, following his attack on the US on January 18, 1916, he would never regain his old fighting strength and was assassinated in 1923. The three-day general strike against the deteriorating living conditions in July 1916 served as a pretext to dissolve the Casa del Obrero Mundial, which by then had served its duty in the eyes of Carranza.

When Zapata withdrew to Morelos, Carranza was free to pursue his politics. From November 30, 1916 to January 31, 1917, the Constitutionalist Convention was held in Querétaro. Several issues stand out in the constitution that was to replace the liberal constitution of 1857: agrarian reform, labor rights, the use of the subsoil, and church–state relations. Contrary to many criticisms of the constitution as full of socialist inclinations, the strength given to the state to intervene in land and labor conflicts was precisely meant as an instrument to curb unrest through state mediation in either of the productive sectors.

Carranza was elected president in March 1917. The closure of the Casa had made new forms of organizing necessary, and in May 1918 the Confederación Regional Obrera Mexicana (CROM) was formed with Luis Morones as one of its outstanding leaders. The politics of the CROM, which included a radical language and forceful mobilizations yet also a preparedness to negotiate with the government, imprinted an indelible mark on the labor movement in the decades to come.

While Carranza was unable to see the advantage of labor's integration, it was President Obregón (1920–4) who paved the way for labor's growth and recognition. Likewise, Carranza's agrarian policies were much more reminiscent of the interests of the class of hacienda owners, and he did undertake steps to curb the efforts to distribute *ejido* lands.

Carranza's last move before he was ousted from office in a coup staged by Adolfo de la Huerta was to have Emiliano Zapata murdered in an ambush on April 10, 1919. Tensions between Carranza and Obregón intensified when the latter nomin-

ated himself for the presidential elections. Together with Obregón and Plutarco Elías Calles, Adolfo de la Huerta, deposed as governor of Sonora by Carranza, led a coup against the president, who was assassinated during his flight on May 21, 1920. After Adolfo de la Huerta's interim presidency for six months, Obregón was elected president in September of that same year.

Economy of the Revolution

Contrary to traditional assumptions about life under revolutionary conditions, the economy did not only present wreckage and pillage. There is no doubt that the one million dead and 300,000 refugees fleeing to the US were a strong burden for the post-revolutionary economy. Yet, the most drastic consequences were shouldered by the peasants working in the subsistence economy. By 1940, more than three-fifths of Mexico's farm and ranch land was still consolidated in large private holdings of 1,000 or more hectares. Two-fifths of the land remained in very large estates of 10,000 or more hectares.

Judged by the number of *sociedades anónimas* (corporations) and business associations, there can likewise be no talk of a breakdown of established forms of capitalist reproduction. As regards the value of investments up until 1930, both American and British ownership increased and despite an aggregate decrease during the Depression, American capital was able to increase its part of the cake proportionally. Neither was there a break in the dependence on the world markets: foreign trade continuously made up roughly 20 percent of the GDP with dependence on the US economy averaging around 70–80 percent.

Rather than a sharp break with prior feudal structures, Mexican capitalism, then, presented strong features of continuity. Instead of being the origin of growth as many post-revolutionary economists would have it, the Mexican economy recovered to continue its way along the course of integration into the capitalist world market adopted from the 1870s onwards. Comparable to other Latin American countries, the Mexican bourgeoisie struggled with its own constitution between popular demands and the intricacies and imponderabilities of the world market. The entry of Mexican capitalists into this contradictory realm came in the guise of a revolution, but their staying power was dependent upon the degree to which they were able to stabilize their hold over the production of exchange value.

Revolutionary Nationalism as a new Mode of Accumulation (1920–1940)

While the coup by de la Huerta marked the last successful military uprising, there is good reason to include the period up to 1940 as part of the revolutionary era. By 1920 the revolution was over, and even though Obregón ushered in a new phase of revolutionary nationalism, a new mode of accumulation was not successfully installed until two constitutional provisions, namely the distribution of *ejidos*, or communal lands, and the nationalization of oil, were set into practice under Lázaro Cárdenas, the last of the revolutionary generals. Revolutionary nationalism restored the law and order of Porfirian times by making social concessions and facilitating political integration of peasant and working classes.

As an ideological founding document, the Constitution of 1917 is of some importance. While important rights for the subalterns were codified in the articles on agrarian reform and labor rights, other fields of contention were opened with internal and external enemies. As a response to the liberalism of the Díaz era, the Catholic Church undertook an intense campaign of proselytism. The new provisions of the 1917 Constitution allowed the state to rule over the number of priests in one state, and the education system became completely secularized. This outright rejection of public influences of Catholicism led to the guerilla-style Cristero rebellion (1926–9), the sequels of which continued well into the 1930s.

The constitutional regulations concerning the use of the subsoil were to lead to strong confrontations with the imperialists' interest in the extraction of oil. Oil production had risen substantially throughout the revolution, with US and British capitals competing strongest. When a general oil workers' strike broke out in May 1937, President Cárdenas (1934–40) sided with the workers and nationalized the oil industry in March 1938 in a move to both integrate the growing workers' power in a revolutionary nationalist form of regulation and ward off undue foreign companies' claims undermining the state's authority. In this he was able to fall back on the Partido Nacional Revolucionario, founded in 1929. Renamed Partido de la Revolución Mexicana (PRM) in 1938 and Partido Revolucionario Institucional (PRI) in 1946, this group played a key role in deciding whether to

comply with or stifle specific demands. In line with the Keynesian precepts gradually adopted from the 1930s onwards, the Mexican bourgeoisie had finally encountered its form of capitalist accumulation.

Symbolically, this meant the creation of a revolutionary family which could only be left at the price of suppression or, at times, even death as the student movement in 1968 had to discover. It was their upheaval, crushed in the Tlatelolco massacre in 1968, that brought the crisis-ridden character of this mode of accumulation back into public conscience.

The Mexican Revolution: The Subaltern's Emergency Brake?

Precisely 100 years before Madero's insurrection against Díaz, the *criollo* priest Miguel Hidalgo y Costilla led tens of thousands of peasants in a four-month crusade on Mexico City to fight Spanish rule and social injustices, which shows the longevity of the agrarian question in Mexican insurrectionist movements. The reasons for their existence persisted even after the creation of the *ejidos* under Cárdenas, to which attest the many rural armed movements in twentieth-century Mexico. Thus, while the written Zapatista program may not have been as radical as others, its praxis during their revolution from below surely was. The democratically organized agrarian community constituted the radical base of the armed Zapatistas taking over the hacienda lands. The backbone of its political organization was the *municipio libre*, the free municipality. Their autonomy and material independence based on their local production were to secure a political independence from the institutions of the federal state. Their failure to forge enduring alliances with other factions was as much due to a lack in strength and resources as it was to a lack in vision. The Zapatistas took pains to ensure that the military would not subdue the civil character of their rebellion and emphasized the necessity of a democratic people's army. By organizing the Consultation Center for Propaganda and Revolutionary Unification (Centro de Consulta para la Propaganda y la Unificación Revolucionaria), they even set up a political body, a party with grassroots democratic aspirations responsible for establishing communication channels between the army and the local population. Despite the defeat of the

revolution from below, the historical Zapatista experience shows that the yearning for justice, democracy, autonomy, and its aspiration to a life beyond capitalism and the state lingers on.

Mexico, armed political movements, 1960s–present

Bill Weinberg

The emergence of armed revolutionary movements in Mexico in the 1960s has its roots in the erosion of the agrarian reform program, a critical gain of the 1910–21 Revolution. As early as the 1940s, the ruling party (in 1946 dubbed the Institutional Revolutionary Party, or PRI) tilted to the right after land was massively redistributed under President Lázaro Cárdenas (1934–40). Strains emerged in the corporatist system which delivered peasant votes and loyalties in exchange for access to land, water, and credit. Corrupt bureaucrats and political bosses began taking over redistributed lands, known as *ejidos*, leading some among the disenfranchised to break with the system and revive the agrarian revolutionary legacy of Emiliano Zapata (1879–1919). In the 1960s, these rebels were linked to the general revolutionary effervescence of the era, making common cause with radical students. These movements went into retreat with the repressive “dirty war” of the late 1960s and 1970s, but reemerged powerfully with the neoliberal reforms of the 1990s, which represented a far more profound threat to the *ejidos* and a virtual end to the corporatist state.

The link between the new armed movements and the original Zapatistas was Rubén Jaramillo (1898–1962), who had been a captain in Zapata’s

Liberator Army of the South at the age of 15. By the 1940s, he was once again organizing strikes and land occupations against the Morelos sugar barons. In 1943, the Morelos state government ordered Jaramillo's arrest, and he fled to the hills with a group of comrades to launch the first guerilla insurgency of the post-revolutionary era. Jaramillo and his band succeeded in briefly taking his hometown of Tlaquiltenango before they accepted an amnesty offer in June 1944. But when his gubernatorial bid was stolen by evident fraud the next year, and protests were met with repression, he returned to arms. After months of eluding government troops in the Sierra Ajusco, Jaramillo accepted another amnesty in 1958. With the election of Adolfo López Mateos that year, there was a slight tilt back to the left – in part, a result of the *campesino* upsurge in Morelos.

The year 1960 saw Jaramillo again leading land occupations in Morelos. New federal irrigation projects made dry rocky lands which had been parceled out as *ejidos* suddenly desirable, leading to a wave of evictions, effected through terror or fraud. Thousands of *campesinos* led by Jaramillo began “squatting” their alienated lands. On May 23, 1962, Jaramillo, his wife, and three sons were killed in a raid on his home in Tlaquiltenango by federal soldiers and police.

Before the decade was out, radical *campesinos* in Guerrero's mountains, just to the south, would pick up the torch. Lucio Cabañas Barrientos (1938–74) was a rural schoolteacher and veteran of the National Liberation Movement (MLN), founded by Cárdenas in 1961 to pressure the PRI back to the left. A year after returning to his hometown of Atoyac de Alvarez to teach, he was transferred out by the Guerrero state government to put an end to his organizing of popular peasant assemblies. On May 13, 1967, a demonstration in Atoyac demanding his reinstatement was fired upon by the federal police. Some protesters returned fire, leaving seven villagers and two police dead. Cabañas fled to the mountains, where he organized his Armed Commandos of Guerrero. In a string of executions and kidnappings, the Armed Commandos took revenge on the federal police, local political bosses, and army officers.

The following year, after being liberated by supporters from his Iguala prison cell, another radical schoolteacher, Genaro Vázquez Rojas (1933–72), launched a loosely allied insurgency. As a young militant of the Popular Socialist Party,

Vázquez had interviewed Rubén Jaramillo for the Cuernavaca paper *¡Presente!*. He began organizing *campesinos* in Guerrero in 1960 when, on December 30, one march was fired on by the state police in Chilpancingo, leaving several dead. Dozens more were killed when police opened fire on a march almost exactly two years later in Iguala. After this, his Guerreran Civil Association was outlawed and its leaders imprisoned. Upon his escape, Vázquez reassembled it underground as the National Revolutionary Civic Association (ACNR), and took up arms.

The year 1968 also saw Cabañas's Armed Commandos joined by a Campesino Justice Brigade – conceived as, respectively, the military and judicial wings of a new clandestine vanguard, the Party of the Poor (PDLP). Rumors that the PDLP received aid from Cuba are denied by Jorge Castañeda, who maintains Havana kept a fastidious distance from the revolutionaries so as to remain in the good graces of the left-tilting PRI; however, Donald Hodges (1995) asserts that some radical students who joined the PDLP guerillas received training in North Korea.

The PRI's gubernatorial candidate Rubén Figueroa Figueroa, heir to a dynasty of rightist *caudillos* who had resisted the Zapatista advance into Guerrero during the Revolution, was kidnapped by the Armed Commandos in May 1974. As a dangerous campaign stunt, Figueroa, then a federal senator, went into the mountains uninvited to negotiate an end to the insurgency. Cabañas seized him to demand liberation of political prisoners. In September, he was freed in an army raid – but Cabañas escaped. Two months later, following a military occupation of the Sierra del Sur, with *campesinos* bribed and tortured to betray Cabañas, the whereabouts of his hideout was revealed. Cabañas met his death in the resultant shootout. Rubén Figueroa Figueroa became governor.

The PDLP was shortly crushed. The ACNR declined after the 1972 death of Genaro Vázquez in a car accident – possibly while fleeing the authorities. But their insurgencies served as a crucible for numerous small guerilla efforts which remained active throughout the 1970s. One PDLP veteran, Carmelo Cortés, brought the struggle to the cities under the banner of the Revolutionary Armed Forces (FAR). In September 1975, days after a Cuernavaca bank heist, Cortés was killed in a gun battle with the police in Mexico City.

Florencio “El Güero” Medrano took the struggle back to the heartland of Zapata. An admirer of Mao Zedong, in 1969 the young militant was invited to China to witness life on the agricultural collectives. Near Temixco, Morelos, he established a commune dubbed Colonia Rubén Jaramillo, conceived as a staging ground for a prolonged people’s war. The Armed Forces of Colonia Rubén Jaramillo launched attacks in the surrounding countryside and deep in the Sierra del Sur. In October 1978, Medrano was mortally wounded in a gunfight with the army in Oaxaca.

Another effort was the Forces of National Liberation (FLN) in Chiapas, a national guerilla group that sent cells all over Mexico, including the jungles of Chiapas, to organize the kernel of what would become the Zapatista National Liberation Army (EZLN), the most significant of the new armed movements to emerge in the 1990s.

The Sierra Tarahumara of Chihuahua, at the far northern end of Mexico’s mountain spine, was also a crucible of the 1960s guerilla movement – and can claim a lineage to the new rebels of the 1990s. The schoolteacher Arturo Gámiz witnessed a contest for disputed lands grow increasingly violent at Madera, in the Sierra’s northern foothills, not 300 kilometers south of the US border. In early 1964, after two *campesinos* were murdered on the orders of the big landholder, Gámiz organized armed raids onto the disputed property. On September 23, he launched an audacious if suicidal attack on the Madera army barracks. The attack left six soldiers and eight guerillas dead – including Gámiz. But survivors regrouped in the Sierra and kept the insurgency alive for another four years. The group, formerly the Armed Commandos of Chihuahua, became the September 23 Movement.

The name was resurrected in 1969 as the September 23 Communist League, which succeeded the Madera veterans and sought to unite Mexico’s emerging guerilla factions. Their Chihuahua cadre established contacts with radical *campesinos* throughout the mountains of Mexico and with the urban campus movement. Some joined the Guerrero insurgency of Cabañas and Vázquez. Others formed the early Chiapas FLN guerilla effort. One veteran of the September 23 Movement was apparently among a group of 12 militants who entered the Chiapas rainforest in 1983, deeming the region ripe for

revolution. This old veteran was gunned down at a police stop in Ocosingo, and one of his comrades, who stuck it out in the jungle to build the rebel army, adopted his code name: Marcos.

Subcomandante Marcos was catapulted to fame when he led the EZLN’s armed uprising of New Year’s Day, 1994 – the day NAFTA (North American Free Trade Agreement) took effect. The EZLN’s statements called the treaty a “death sentence” for Mexico’s indigenous peoples, and made clear that President Carlos Salinas’s 1993 constitutional reform in preparation for the trade agreement – declaring the agrarian reform over and allowing the privatization of *ejidos* and other communal lands – was critical in the decision to launch an armed struggle. Emerging from the lowland Lacandon Selva, the masked Maya footsoldiers of the EZLN occupied four towns in the Chiapas Highlands: San Cristóbal de Las Casas, Altamirano, Las Margaritas, and Ocosingo – where a battle was fought with the state police. Absalon Castellanos, a hated former governor, was seized from his ranch and charged with crimes against the *campesinos* and Indians.

Indiscriminate army attacks on the Maya villages of Chiapas sparked a national outrage. On January 12, a massive march was held in Mexico City in protest of the repression. The government declared a ceasefire, and the rebels retreated back to the Selva. Marcos’s poetic communiqués kept them in the media spotlight.

A dialogue process began in March, brokered by the local Catholic diocese – and continued in fits and starts for two years. The government was barred by the congressionally approved terms of the dialogue from attacking the Zapatistas – which meant they had been effectively granted a zone of control in the Selva, as well as enclaves in the Highlands. This zone shrunk and fragmented as the army took a February 1995 breakdown in the dialogue as opportunity for an offensive, and as paramilitary groups effected evictions.

It became clear that indigenous identity was central to these new Zapatistas, and Marcos was ostensibly answerable to a Revolutionary Indigenous Clandestine Committee, which in turn consulted with the base communities before issuing orders to the army of an estimated 12,000. When the EZLN finally sat down with federal legislators at the Highland village of San Andrés Larrainzar to hash out a proposed

constitutional reform in April 1995, indigenous autonomy was the first item on their agenda. The EZLN agreed to lay down arms if this first reform package, the San Andrés Accords, was accepted. But President Ernesto Zedillo refused to sign them in early 1996, and the stalemate continued; meanwhile, the paramilitary backlash against the Zapatistas gained ground, leaving some 10,000 rebel supporters displaced, especially in the north of the state, and culminating in the massacre of 45 unarmed Maya peasants at the Highland hamlet of Acteal in December 1997.

It was another massacre which led to the emergence of a guerilla army in Guerrero. Guerrero's governor in 1995 was Rubén Figueroa Alcocer, son of Figueroa Figueroa. It was his state police that were responsible for the massacre of 17 peasant activists at Aguas Blancas on June 28 of that year. On the one-year anniversary of the massacre, a commemoration ceremony was held at the site – where masked men and women with AK-47s emerged from the brush, took over the stage, and read a manifesto in Spanish and Nahuatl. The Popular Revolutionary Army (EPR) had announced its presence to the world. A series of EPR ambushes of army and police patrols in Guerrero followed.

The government claimed the EPR was controlled by the Clandestine Revolutionary Workers' Party-Union of the People (PROCUP), a deep-underground remnant of the 1970s guerilla movement. PROCUP was purported by many in the civil left to be a "pseudo-revolutionary" group, heavily infiltrated, if not controlled, by government agents. The government, in turn, blamed PROCUP for the 1994 kidnapping of banking magnate Alfredo Harp Helú, who netted his captors a \$30 million ransom.

PROCUP could claim a lineage back to Lucio Cabañas. In 1975, David Cabañas, Lucio's brother, founded the Union of the People as a successor to Lucio's Party of the Poor (PDLP). While a hardcore few nurtured the PDLP in the mountains of Guerrero, the Union of the People merged with various Maoist factions, expanded its name to PROCUP, and became an urban cell.

PROCUP outlived the various revolutionary efforts of the 1970s – but most of its exploits were against enemies on the left. In 1984, PROCUP kidnapped Mexican Communist Party leader Arnaldo Martínez Verdugo. In 1990, PROCUP killed two security guards at the Mexico City offices of the leftist daily *La Jornada*, which had

recently criticized the group. David Cabañas and Felipe Martínez Soriano, former rector of the Autonomous University of Oaxaca, were arrested in the investigation of the incident. Martínez denied any link to PROCUP – but his release was secured later that year when PROCUP kidnapped a German consular official. Martínez was arrested again two years later, following a wave of bomb attacks on US-owned business outlets in Mexico City, including Citibank, IBM, and McDonald's.

In January 1994, with the EZLN engaging government troops in Chiapas, a car bomb exploded in Mexico City's University Plaza, and power lines were bombed elsewhere in the country. PROCUP subsequently took responsibility for them, and the EZLN disavowed "any relationship or link" with PROCUP.

While initially dismissed by left opposition leader Cuauhtémoc Cárdenas as a "grotesque pantomime," the EPR dramatically demonstrated its power on the night of August 28, 1996 with coordinated attacks on military and police targets in five southern and central states, leaving 13 dead.

In April 1998, a Popular Revolutionary Democratic Party (PDPR) pronounced itself as General Command of the EPR via communiqués sent to Mexico's newspapers. But by then the movement was beginning to fracture. When a June 1998 army raid on a schoolhouse in the Guerrero mountain pueblo of El Charco left 11 dead, a breakaway faction calling itself the Revolutionary Army of the Insurgent People (ERPI) came forward to claim the fallen. The ERPI's communiqués accused the EPR leadership of being undemocratic. In 1999, two supposed leaders of ERPI, Jacobo Silva ("Comandante Antonio") and Gloria Arenas ("Col. Aurora"), were arrested. They remain imprisoned, and have spent much time on hunger strike behind bars.

Attacks in the Sierra del Sur subsequently declined, but a profusion of small armed groups, which functioned more as peasant self-defense militias than as insurgents, continued to announce their existence through communiqués. An urban group, the Revolutionary Armed Forces of the People (FARP), carried out simultaneous bombings at Mexico City banks in August 2001 (claiming no casualties). Four men accused of being FARP's leaders were arrested shortly after, two of whom remain in jail today.

The guerilla movement began to reemerge with the contested presidential elections and the civil struggle in Oaxaca in 2006. In early November, when federal police were putting down the Oaxaca protests, bombs exploded at three high-profile targets in Mexico City: the national headquarters of the PRI, the Federal Electoral Tribunal, which had ruled in favor of conservative candidate Felipe Calderón, and a branch of a Canadian bank. There was property damage but no casualties. A communiqué jointly signed by five small armed groups – led by the Democratic Revolutionary Tendency–Army of the People (TDR-EP) – claimed responsibility, and warned the government against using the attacks “as a pretext to . . . continue repressing the civil, peaceful organizations and movements.”

The EPR dramatically reappeared in July 2007, bombing pipelines of the state oil monopoly Pemex in Veracruz. Communiqués said this was to press for the release of two of its leaders, Edmundo Reyes Amaya and Alberto Cruz Sanchez, who were “disappeared” in Oaxaca that May. President Calderón subsequently announced a decision to open dialogue with the EPR, and established a commission to establish contact with the guerillas.

A group of ex-guerillas from the now-dissolved PROCUP, reorganized as the above-ground Democratic Popular Left (IDP) led by David Cabañas and Italo Ricardo Díaz, charged in a July 2007 statement that the government of Calderón sought to “open a new chapter in the dirty war” that gripped Mexico in the 1970s.

The EZLN has meanwhile continued to pursue civil initiatives – without surrendering its arms. The San Andrés Accords were stripped of binding measures on indigenous control of lands by Congress after President Vicente Fox finally signed them following his 2000 election, and the EZLN does not consider the new version legitimate. It continues to build its autonomous system of self-government in the territories it still controls in Chiapas. The Zapatista movement remains cohesive, despite continued, if reduced, paramilitary pressure and violent factionalism among Chiapas peasant organizations. The government is seeking to clear Zapatista settlements from the Selva on the grounds that they are illegally within the borders of the Montes Azules Biosphere Reserve.

During the 2006 presidential campaign, the EZLN sent Marcos and other leaders on a

national tour of the country, dubbed the “Other Campaign,” in a bid to unite Mexico’s popular movements. The ERPI and other armed groups publicly supported the Other Campaign, and pledged to observe a truce during its progress – pointing to the potential for dialogue and convergence between Mexico’s civil movements and armed organizations.

Mexico, indigenous and peasant struggles, 1980s–present

Bill Weinberg

The decline of Mexico’s populist and corporatist system in the period of neoliberal reform beginning in the early 1980s saw a deepening of poverty in marginal rural areas. This immiseration led to a revival of *campesino* struggles,

especially in the impoverished and heavily indigenous south. The new movements often represented a convergence of traditional peasant demands over land rights and farm support, with demands for indigenous cultural autonomy. They also saw a tension between reformist and electoral strategies versus revolutionary imperatives. In the case of Chiapas, and then of those in the Sierra del Sur of Guerrero and Oaxaca states, the resurgence of *campesino* militancy actually led to the emergence of armed revolutionary movements which persist today.

In the 1970s Mexico's ruling Institutional Revolutionary Party (PRI) engaged in both Third Worldist posturing and a grisly "dirty war" against radical student and peasant organizations. In the 1980s, with these movements in retreat, the party tilted sharply to the right. Miguel de la Madrid, Mexico's first US-educated president, launched a far-reaching process of neoliberal reform upon taking power in 1982. By the time Carlos Salinas took power in 1988, free trade orthodoxy reigned. The number of Mexican millionaires rose impressively, while a 1990 World Bank study found that 41 million (nearly half) of the population lived in poverty, 17 million in extreme poverty. In the southern states of Guerrero, Oaxaca, and Chiapas, 80 percent of the population was without access to potable water.

An early model of the new movements was the Worker-Campesino-Student Coalition of the Isthmus (COCEI), which emerged from the struggle of Zapotec smallholders to keep their lands at Juchitán, in Oaxaca's Isthmus of Tehuantepec. COCEI was born in 1973, staging land occupations, blockading highways, and demanding municipal autonomy. Protests and actions were modeled on traditional fiestas and ceremonial processions; banners were written in Zapotec. In 1981 COCEI won the Juchitán government in alliance with the Communist Party. This government was impeached, however, in August 1983, following violence (reportedly sparked by PRI provocateurs). COCEI called the impeachment illegal and was forcibly evicted from the *cabecera* (municipal palace) that December by the army. The group resumed power in 1986, eventually worked out a coalition with the PRI, and in 1989 returned to power outright. COCEI boasted that "Juchitán is to the Mexican government what Central America is to the White House."

The 1988 presidential race further radicalized the reemergent *campesino* movements. Cuauhtémoc Cárdenas, former Michoacán governor and son of the revered 1930s populist president Lázaro Cárdenas, broke with the PRI and ran as the candidate of a National Democratic Front (FDN), which briefly unified the left parties. After the revelations of "cybernetic fraud" during the count, a wave of angry protests swept the country, especially Michoacán. Followers proclaimed they were ready for a general strike to defend his victory, but Cárdenas refused the offer. This stolen election marked the first emergence of a serious electoral opposition on the left. Many of the parties which had come together in the FDN coalesced permanently as the Party of the Democratic Revolution (PRD). In Michoacán and Guerrero, PRD militants blocked roads, seized town halls, and organized parallel municipal governments in protest of fraudulent elections.

But land rights continued to be the central demand, as agribusiness and timber interests encroached onto *campesino* territories. This was especially an issue in marginal forested areas where *campesinos* had been pushed, but never had their new lands titled. One particularly successful case of resistance was in Jalisco's Sierra de Manantlan, where Nahuatl communities organized against the timber operations denuding the mountains and illegally logging *ejidal* lands. *Campesinos* repeatedly blockaded logging roads until the government finally declared the sierra a protected area in 1987. Similar struggles were waged from the Sierra Tarahumara in Chihuahua, to the Chimalapas region in the Isthmus of Tehuantepec.

Nowhere was this dynamic of insurgency more advanced than in the Lacandon Selva, the lowland rainforest of southern Chiapas state, along the Guatemalan border. By the late 1970s militantly independent *campesino* organizations took hold as an alternative to the PRI-controlled National Campesino Confederation (CNC) in many of the Maya villages of Chiapas – and especially in the Selva, where the CNC had little presence to begin with.

The Independent Central of Rural Workers and Campesinos (CIOAC), with a support base in the Highland village of Simojovel, was linked to the Mexican Communist Party (and successor organizations after the party's 1983 disbanding). Others, such as the Emiliano Zapata Campesino

Organization (OCEZ), were rooted in community kinship networks, maintaining autonomy from any national structures as a matter of principle. The Tzotzil Maya village of Venustiano Carranza in the Highlands was by the early 1980s the scene of frequent violence between OCEZ militants and CNC *pistoleros*. In response to the rise of militant *campesino* activity, the cattle oligarchy began forming paramilitary groups known as White Guards. By 1986 Amnesty International was documenting “disappearances” and torture in Chiapas.

Cadres from radical left groups, including some from the Mexican north, provided some of the initial impetus for this organizing in Chiapas, traditionally under a closed and isolated oligarchic system, which even the post-revolutionary reforms of the 1930s had failed to break up. Maoists who rejected the Communist Party as too detached and statist found a foothold in the Selva, especially the group Política Popular. But many PP organizers found themselves assuming leadership in the Rural Associations of Collective Interest (ARICs), which began as a government development program. Ironically, these Maoists became the more reformist, with a program of pressuring the government for credit and higher crop prices, not land redistribution. They began to risk reincorporation into the “pseudo-left” outer ring of the PRI machine.

Both repression and the threat of cooptation moved some groups in the Selva, where the security forces had little presence, in a revolutionary direction. The Emiliano Zapata National Independent Campesino Alliance (ANCIEZ) was one of the key groups that joined to form the Zapatista National Liberation Army (EZLN), which dramatically took up arms in Chiapas on January 1, 1994. The emergence of the new Zapatistas provided a further impetus to the radicalization of *campesino* struggles. In Chiapas groups such as the OCEZ seized land from *caciques* (PRI political bosses) and ranchers, while indigenous councils seized the *cabaceras* or, in more remote areas, declared new “autonomous municipalities” loyal to the Zapatistas. In either case local self-government in indigenous languages, according to indigenous traditions, was established. In the agreement the Mexican government reached with the EZLN later that year, *campesino* communities were allowed to maintain control of lands occupied since the

uprising, which meant that agrarian reform was back on, at least in Chiapas. Moreover, this was agrarian reform from below, as carried out by the original Zapatistas in the Mexican Revolution, not at the hands of the bureaucratic state. Many of these lands would be retaken by ranchers or PRI-loyal peasants in the subsequent years of paramilitary backlash, but many remain effectively redistributed.

The reverberations of the Zapatista revolt were felt beyond Chiapas. In Tabasco, the oil heartland on the Gulf Coast just to Chiapas’ north, Chontal Maya peasants and fishermen launched blockades of the oil wells to demand restitution for the despoilment of their lands. The town of Tepoztlan in Morelos, the heartland of the original Zapatistas in the Mexican Revolution, just south of Mexico City, was the scene of a popular uprising in 1995 when real estate developers tried to grab village lands for a golf course and computer center. The Nahuatl townspeople seized the *cabecera*, kicked out the PRI councilors who had approved the land sale, and set up a “popular” government that persisted for two years until the developers pulled out and new elections were held.

But it was the Sierra del Sur – the mountain range spanning the states of Guerrero and Oaxaca – that followed Chiapas most rapidly towards a revolutionary situation. The Campesino Organization of the Sierra del Sur (OCSS) emerged in Guerrero’s mountains with demands for credit, fertilizers, and pesticides but, facing government repression of its protests and catalyzed by the events in Chiapas, moved to a more oppositional stance. On June 28, 1995 a truckload of OCSS militants on their way to a protest demanding the return of one of their comrades who had disappeared was stopped by a force of some 300 Guerrero state police at a place called Aguas Blancas in Coyuca de Benitez municipality. The police opened fire, leaving 17 dead. Angry *campesinos* gathered around the coffins of their slain comrades in the Coyuca *zócalo* the next day, demanding justice. PRD militants seized Coyuca’s municipal palace and the PRI authorities fled.

The Aguas Blancas massacre turned into a major scandal when a cover-up was revealed. Guerrero’s Governor Rubén Figueroa first displayed a police video of the massacre, which made it seem as if the OCSS militants had been armed and engaged in a firefight with the police. The

OCSS insisted the *campesinos* were armed only with their machetes. In August 1995 Mexico's National Human Rights Commission (CNDH) accused Guerrero state officials of hiding, altering, and manufacturing evidence in the massacre. The videotape had been manipulated and edited; guns photographed in the hands of some of the dead victims were "almost certainly" planted after the shooting. At least one and probably three of the victims were killed at close range, execution style. A special prosecutor imprisoned 28 police officers and seven high-level state officials. The controversy prompted Figueroa to step down in March 1996. He was exonerated of all crimes despite being determined responsible for "grave human rights violations" by the federal Supreme Court of Justice.

A dirty war was starting to unfold again in Guerrero. The month of the Aguas Blancas massacre had also seen the murder of three militants of the Guerrero Council of the 500 Years of Indigenous Resistance Campaign in the divided village of Tlacoachistlahuaca. The PRD claimed that 84 party followers were murdered in Guerrero during Figueroa's term. Contested municipal elections divided village after village in the Sierra del Sur. In November 1995 Mixtec and Amuzgo militants of the 500 Years of Resistance Council occupied Tlacoachistlahuaca's *cabecera*, vowing to block the elections due to PRI bosses buying the vote with "gifts" of alcohol, tortilla meal, and fertilizer. The local PRD agreed that no clean elections were possible and actually joined with the Indigenous Resistance Council in demanding a municipal government based on indigenous traditions, with no political parties – a system known locally as *usos y costumbres*.

In January 1996 the OCSS held a meeting of *campesino* groups in Acapulco to form a Broad Front for the Creation of a National Liberation Movement (FAC-MLN). This was an answer to the EZLN's call for the forging of such a movement to unite common but still-isolated struggles. Over 200 organizations were represented, including the 500 Years of Resistance Council, the OCEZ, the National Indigenous Congress, and the Zapatistas' own civilian wing, the Zapatista National Liberation Front (FZLN). There were representatives from the Tepoztlán struggle in Morelos and from urban groups such as the Francisco Villa Patriotic Front, Mexico City's largest slum organizing

committee. In May the FAC-MLN coordinated occupations of the municipal palaces in the Guerrero villages of Ahuacutzingo, Coyuca de Benitez, and Copanatoyac, where the municipal president was held to press demands on land claims, and the state government sent officials to negotiate his release. FAC-MLN, however, failed to ally with either the EZLN or FZLN. Many influential FAC-MLN militants were critical of Zapatista willingness to talk with the government.

In June, at a one-year anniversary commemoration of the Aguas Blancas massacre held at the site of the killings, the Popular Revolutionary Army (EPR) emerged from the hills and took over the stage, announcing the arrival of a second armed peasant movement in southern Mexico. Over the next several months, as the EPR launched repeated ambushes on security forces, the level of militarization in the Sierra del Sur predictably escalated. Guerrilla collaboration became an expedient charge against unarmed civil activists. In May 1999 Rodolfo Montiel and Teodoro Cabrera, two leaders of the Campesino Environmentalist Organization of the Sierra of Petatlan and Coyuca de Catalan (OCESP) who had blockaded local timber operations, were arrested on drug and weapons charges. The men denied any involvement in armed activity. After a campaign on their behalf the CNDH concluded that the military illegally detained Montiel and Cabrera, and extracted their "confessions" through torture. In 2001 Montiel and Cabrera were released on "humanitarian grounds" by President Vicente Fox; however, it took the October 2001 murder of the men's attorney, Digna Ochoa, to prompt Fox's action. Authorities ruled Ochoa's death was likely a suicide, but Amnesty International protested "myriad deficiencies" in the investigation. Meanwhile, other OCESP leaders have since been arrested on similar charges and remain behind bars.

In Chiapas the toll on civil movements was even greater. On December 22, 1997 a PRI-linked paramilitary group massacred 45 unarmed Tzotzil Maya peasants at the hamlet of Acteal in Chenalhó municipality. The victims were members of Las Abejas (The Bees), a Maya Catholic pacifist group sympathetic to the Zapatistas' demands for indigenous autonomy and land reform, but committed to principles of non-violence. In 2007 courts would finally sentence 34 men to 26 years each for the killings, but Las Abejas

maintains that the true masterminds are protected by the government and still at large.

While ties between PRI paramilitaries and the security forces have perhaps weakened since the one-party state was broken up in 2000, violent factionalism in the Lacandon Selva continues to claim lives. The ARICs split into pro-PRI, EZLN-sympathist, and neutral tendencies, and a profusion of paramilitary groups have emerged as PRI-loyal jungle settlements have armed against the Zapatistas. The attack that left four Zapatista sympathizers dead at the settlement of Viejo Velasco in November 2006 shows the potential for a return to the level of violence seen in Chiapas in the late 1990s.

Another significant *campesino* struggle since the fall of the one-party state is that at San Salvador Atenco, a Nahuatl village in Mexico state which, in September 2002, declared itself a rebel “autonomous municipality” to resist plans by federal authorities to expropriate village lands for a new Mexico City airport. In May 2006 Atenco was assaulted by state riot police, who beat and arrested dozens, sparking a new human rights scandal. In January 2004 Morelos state police occupied the village of Tlalnepantla with similar violence after residents had declared an “autonomous municipality” following a disputed election.

But the Oaxaca rebellion of 2006 most clearly showed the continuing power of the indigenous and *campesino* movements. The Oaxaca crisis began when the state’s school teachers went on strike that May, demanding bigger budgets for schools in poor rural parts of the state. When the PRI’s Governor Ulises Ruiz refused to meet their demands, the teachers launched a sit-in at Oaxaca City’s *zócalo*, which swelled to a tent city of several thousand. In a pre-dawn raid on June 14, state police attacked the encampment, but the teachers and their supporters beat back the police and re-took the square. The demand now became for the ouster of Ruiz, who the strikers claimed was fraudulently elected. A coalition of civil organizations congealed around the Popular Assembly of the People of Oaxaca (APPO) and seized control of the Oaxaca City center. Ruiz and his bureaucracy had to retreat to hotels on the outskirts.

Over the following weeks, small civil rebellions took place in indigenous towns and villages throughout the mountains of Oaxaca, and “autonomous municipalities” loyal to APPO were declared. The COCEI in Juchitán also

joined with the APPO. A true system of parallel power emerged in Oaxaca before the movement was broken by a federal police force sent by Fox, in one of his last acts as president that November – with at least six killed, some 150 arrested, and others “disappeared.” Ironically, the Oaxaca repression came precisely as Mexico’s former president Luis Echeverría was formally charged with genocide for overseeing the dirty war against leftist dissidents a generation earlier.

Mexico, labor movement and protests, 1980–2005

Dan La Botz

Mexican working people participated in significant social movements in the tumultuous transition period between 1980 and 2005. The context for these movements was a profound change in politics, in the economy, in the structure of social classes, and in the character of social movements themselves. The central issue throughout this era was the struggle over democracy, but also important were fights to stop the privatization of nationalized industry and movements for a living wage. The period opened with a reorientation of the Institutional Revolutionary Party (PRI) away from a nationalist political economy and toward open markets and free trade, and

reached a turning point in 2000 with the election to the presidency of Vicente Fox of the conservative National Action Party (PAN), ending the PRI's 75-year dominance.

The Massacre of 1968: The Opening of the Crisis

The crisis of Mexico's old corporatist order opened with the student democracy movement of 1968 and the police and army massacre that year of hundreds of student activists. Those events polarized Mexican society, producing a new left that broke with the Mexican Revolution's state party and the dominant nationalist ideology. The Mexican new left, variously influenced by Eurocommunism, inspired by Trotskyism or Maoism, or modeling itself after Fidel Castro and Che Guevara, emulating the armed revolutionary tradition of the Mexican Revolution, became active in all varieties of students', poor peoples', peasants', and workers' movements. Some new leftists joined the armed rural and urban guerilla movements, while others participated in the workers' insurgency or in myriad peasant movements. Some joined with electrical workers leader Rafael Galván in the radical nationalist Democratic Tendency (TD) and the National Front of Popular Action (FNAP). Yet others joined the more ideological leftist political parties.

In 1977 the Mexican government, in order to create an escape valve for discontent, effectively legalized the Mexican Communist Party (PCM) and other leftist parties. By the early 1980s Mexican politics had become more competitive as the PRI was challenged by the PAN on the right and three small parties on the left. The communists merged with other small groups to create the Unified Socialist Party of Mexico (PSUM) in 1981. Heberto Castillo played the leading role in founding the nationalist Mexican Workers' Party (PMT) in 1974. And, in 1976, the Trotskyists merged to create the Revolutionary Workers' Party (PRT), which ran Rosario Ibarra de Piedra as the first woman candidate for president in 1982. The PAN, adopting non-violent, confrontational tactics such as blocking the northern border, grew more rapidly than the left-wing parties, and the political system tilted to the right.

Left activists – particularly radical nationalists, Maoists, and Trotskyists – strove to combine

the many scattered movements into a force that could challenge the PRI and the Mexican state, not only politically but also economically and socially. While the far left led these broad working-class movements from below, eventually culminating in a national strike wave, the more moderate PSUM, influenced by Eurocommunism, looked toward politics as its favored sphere of activity.

During the period between the early 1970s and 1983, the far left succeeded in pulling together diverse forces of workers, peasants, students, the urban poor, and women's groups into a series of united fronts that challenged government policy. The most important were the National Front of Popular Action (1976), the National Front against Repression (1979), the National Front for the Liberation and the Rights of Women, the National Front in Defense of Wages and Against Deprivation and Austerity (1982), and the National Committee in Defense of the Popular Economy (1982), which came together to form the National Worker Peasant Popular Assembly (ANOCPE, 1983).

Even more important was the creation of three national coordinating committees. First, the National Coordinating Committee Plan de Ayala (1979), taking its name from Emiliano Zapata's plan of 1911, coordinated a large part of the independent peasant movement. Second, the National Coordinating Committee of the Urban Popular Movement brought together substantial sections of poor peoples' movements in the cities. Third, the National Coordinating Committee of Education Workers led the very large and important opposition in the National Union of Education Workers (SNTE), the Mexican teachers' union.

The PRI leadership, coming under the domination of the so-called technocrats, began to adopt measures that came into conflict with the PRI's Confederation of Mexican Workers (CTM). This created an opening for the left just as high levels of inflation pushed workers and unions to demand price controls and wage increases. All of these pressures pushed the CTM leadership, the country's largest federation by far, to give the legally required strike notifications (*emplazamientos a huelga*) at tens of thousands of plants. The CTM and independent unions led a series of movements that culminated in May of 1983 in the largest strike wave in Mexican history. The movement peaked

in October 1983 when the ANOCP called a National Civic Work Stoppage. The May Day march of 1984, accompanied by a militant independent group that tossed Molotov cocktails at the Palace of Fine Arts, signaled the end of this period of labor militancy and opened a period of disarray in the labor movement and the left.

The Debt Crisis of 1982

The debt crisis of 1982 was the crucial turning point in both the economics and politics of Mexico in this period. During this period Mexico experienced falling oil prices, high interest rates, increased inflation, and an overvalued peso; these led to capital flight and the virtual disappearance of Mexico's international reserves. The government, which had already devalued the peso in 1980, did so three more times in 1982. Mexico defaulted on its debt and was forced by the New York banks and international financial institutions to accept structural adjustments. The Mexican debt crisis signaled a sea change in the politics of the PRI which, under President Miguel de la Madrid, abandoned economic nationalism in favor of neoliberalism. The technocrats took control of the party, turning it in the direction of open markets and free trade.

The Earthquake of 1985: The Rise of Civil Society

The September 19, 1985 earthquake in Mexico City marked an important shift in the character of the social movements in Mexico. While the government hesitated to act, throughout the city groups of citizens, often led by leftists, stepped forward to organize the rescue of victims. Among those hard hit by the earthquake were the women garment workers of the San Antonio Abad district who, with the aid of feminists, leftists, and the independent Authentic Labor Front, succeeded in the rare feat of winning a charter for the September 19 Garment Workers' Union.

Throughout the 1980s, civil society and its new movements changed the character of the labor movement and the left. Women played a leading role in the Urban Popular Movement (MUP), and middle-class women became involved in the feminist movement, one part of which – the Women of Union Action – oriented toward working women and the unions. An environmental movement developed to fight the

building of a nuclear reactor at Laguna Verde. Indigenous people organized to demand their rights in many areas. Middle-class professionals organized around issues of electoral reform. Taken together, these movements constituted civil society, a broad movement of the left for democracy and social justice.

The new activism was reflected in the growth of a new student movement. Students struck the National Autonomous University of Mexico in the fall of 1986 and the winter of 1987, creating a University Student Council (CEU) to negotiate with the rector and mobilize as many as 250,000 students and supporters in mass rallies. The 1986–7 student strikes produced a new layer of social movement activists.

The Election of 1988

In October 1987, Cuauhtémoc Cárdenas led his Democratic Current out of the PRI and announced his candidacy for president. Within a few months he had brought together various parties and other political formations to create the National Democratic Front (FDN) as his campaign organization and proto-party. Disoriented since 1983, much of the left supported Cárdenas, and many organizations joined the FDN, including the Mexican Socialist Party, the latest avatar of the communists. Within the FDN the Movement Toward Socialism (MAS), founded by Adolfo Gilly and others, became the locus of a kind of far left regrouping.

While the official labor unions backed the PRI's candidate, Carlos Salinas de Gortari, Cárdenas's 1988 presidential campaign won support from millions of peasants, workers, and public employees. Many authorities believe that Cárdenas won the election of 1988, but the PRI government decided that Salinas had. Cárdenas, saying he feared a bloodbath, hesitated to mobilize his followers to stop Salinas from taking office. Nevertheless, the Cárdenas campaign led to the foundation of the Party of the Democratic Revolution (PRD), into which the PMS, the former communists, dissolved their organization.

As president, Salinas carried out a virtual reversal of the Mexican Revolution of 1910–40. He modified Article 27 of the Constitution, permitting sale of the land of the *ejidos*. He privatized 1,000 state companies, including Telmex, the state phone company, the National Railroads, and the Cananea copper mine. To carry

out these measures he launched a series of brutal attacks on the labor movement, including armed attacks on the offices of the Petroleum Workers' Union (STPRM) and the military occupation of Cananea in order to keep the Mineworkers' Union (SNTMMRM) from acting to prevent the sale of the mine. Throughout his presidency from 1988 to 1994, Salinas led an aggressive offensive against labor unions, both official and independent.

The Mexican economy was transformed during the presidencies of de la Madrid and Salinas as they privatized industries and opened the country to foreign investment, developments which weakened and disarticulated the labor and peasant movements. In 1964 Mexico and the United States had established the *maquiladora* zone on the US–Mexico border; after 1975 this export processing zone grew rapidly until by the 1980s it had hundreds of thousands of workers. After a flurry of strikes in the *maquilas* in the 1970s, the government undertook to prevent unionization, except in some areas by loyal CTM unions. Workers in various plants along the border attempted to democratize those unions or organize independent unions, or to carry out strikes against their employers, but all such efforts were crushed by the employers, the official unions, and the labor authorities.

Beginning in the 1980s, Mexico experienced deindustrialization in other areas, as older industrial plants closed. Symbolic of this era was the closing of Fundidora de Monterrey, the steel mill founded in 1900. The steel workers demonstrated in the nude, but the symbolism of their nakedness in the face of the power of capital won them nothing. A new northern industrial zone developed along a line running approximately from San Luis Potosí to Guadalajara. New investors, Mexican and foreign, built in these greenfield areas and often escaped the labor unions or negotiated sweetheart deals with them. In 1986 Mexico joined the General Agreement on Tariffs and Trade (GATT) and in 1994 the Organization for Economic Cooperation and Development (OECD). That same year Mexico, Canada, and the United States implemented the North American Free Trade Agreement (NAFTA). NAFTA opened Mexico to the duty-free importation of corn and other agricultural products which by the 1990s had ruined hundreds of thousands of Mexican farmers and peasants.

Zapatistas and Chiapas Uprising of 1994

On January 1, 1994, the day that the NAFTA agreement was to go into effect, an armed guerilla group called the Zapatista Army of National Liberation (EZLN) launched an uprising in Chiapas, attacking several towns and the city of San Cristóbal de las Casas. The former urban guerillas at the head of an army of displaced peasants and Mayan Indians announced that they would march to Mexico City to stop NAFTA, to overthrow the government of Carlos Salinas, and to call a constituent assembly to write a new constitution. Salinas called out the army to crush the guerillas, but throughout the country civil society protested against military repression and demanded a non-violent solution. While most Mexicans objected to the armed uprising as much as the army's intervention, they believed that the Indians' and peasants' needs must be attended to.

On the eve of the 1994 election, it seemed that three forces existed that might come together to defeat the PRI: the Zapatistas in Chiapas, the civil society movement, and the left-of-center PRD. Subcommandante Marcos, leader of the EZLN, spurned Cárdenas of the PRD, and the left divided between intransigents and accommodationists. In the election, however, Ernesto Zedillo of the PRI won, Diego Fernández de Cevallos of the PAN came in second, and Cárdenas of the PRD came in third with only 16 percent of the vote. Taking office on December 1, Zedillo immediately took economic steps that provoked the country's worst economic crisis since the great depression. El Barzón, a debtors' movement, emerged as one of the most popular and militant organizations of the late 1990s.

Zedillo negotiated the San Andrés Larrainzar Accords with the Zapatistas in February 1996 but failed to have the Congress ratify the agreement's provision. So the Zapatistas, while refraining from the use of arms, did not lay them down and remained in a state of rebellion. Another guerilla group, the People's Revolutionary Army (ERP), also emerged in the 1990s and engaged in kidnapping, assassinations, and bombings.

The Labor Movement Reorganizes: Founding of the UNT, 1997

With the rise of the technocrats in the PRI and the changes in the economy, the Congress of

Labor (CT), the umbrella organization of official unions dominated by the CTM, went into crisis. In November 1997, the Telephone Workers' Union (STRM), the National Union of Social Security Workers (SNTSS), and six other unions left the CT and, joined by independent unions such as the Union of Workers of the National Autonomous University of Mexico (STUNAM) and the Authentic Labor Front (FAT), created a new labor federation, the National Union of Workers (UNT). At about the same time the Mexican Union of Electrical Workers (SME) brought together a number of popular organizations to create the Mexican Union Front (FSM), largely dedicated to defending the nationalized electrical power industry and the petroleum industry. While UNT and the FSM were left of center, some unions moved to the right. In December 2005, the million-member Mexican Teachers' Union (SNTE), headed by Elba Esther Gordillo, led a breakaway of 21 out of 30 unions from the Federation of Unions of Workers at the Service of the State (FSTSE), and formed the Democratic Federation of Unions of Public Servants (FEDESSP). Gordillo's FEDESSP demonstrated a willingness to find a *modus vivendi* with the PAN.

While the unions disintegrated and then reorganized, they also declined. During the period from 1984 to 2000, Mexico's labor union density (the percentage of workers in labor unions) declined in the formal sector from 30 to 20 percent. Many unions in Mexico, however, were "ghost unions" created by management with "protection contracts" that defended the employers against real worker organizations. Some authorities believe that 80 percent of all labor union agreements may be "protection contracts." The decline of real union power during the period under consideration was therefore even more dramatic than the figures on labor union density would indicate.

In 2000 the Mexican people elected the PAN's Vicente Fox, a former Coca-Cola executive, shoe manufacturer, and rancher, to the presidency. Many left, right, and center cast ballots for Fox, desiring to break the power of the PRI and hoping that Fox would bring democracy to Mexico. Fox soon disappointed many by adopting an archly conservative political agenda. He also reached out to the PRI's CT and the CTM, creating a PAN alliance with the old PRI unions.

Faced with this challenge, the UNT called for the founding of a broad front to oppose the Fox agenda. In 2002 the UNT founded the Union, Peasant, Social, Indigenous, and Popular Front (FSCISP), made up of El Barzón (the debtors' union), the Permanent Agrarian Congress (CAP), the Countryside Can Stand No More (El Campo no Aguanta Más), and the Movement for National Unity in the Fight against Neoliberalism, as well as many other smaller unions, farmers' and peasants' organizations, and urban social movements. The FSCISP not only opposed Fox and his political agenda, it also called for a struggle against neoliberalism and its effects, attacked NAFTA, criticized the World Trade Organization (WTO), and opposed the US war in Iraq. While not a member, the FSM also worked to build the coalition. The organization of the FSCISP, with its hundreds of member organizations, provided the labor movement with a broader base and a more powerful instrument with which to challenge Fox. Still, unlike the coalitions of the early 1980s which dared to take the offensive, this was fundamentally a defensive front.

This period culminated in 2006 in three dramatic upheavals, one local, one national, and one international. The election campaign of 2006 was a battle principally between Felipe Calderón of the PAN and Andrés Manuel López Obrador of the PRD. López Obrador, the former mayor of Mexico City, proved to be a charismatic populist and won a following among the nation's working people. President Fox and the PAN attempted to block López Obrador's candidacy on a legal technicality and then engaged in illegal campaigning. When the votes were counted in July 2006 the election authorities announced that Calderón had won. Many believed that the election had been stolen. In protest, López Obrador organized massive demonstrations of hundreds of thousands of his supporters and a weeks-long sit-in by tens of thousands, blocking the major boulevards of the city. Finally, López Obrador, on November 20, with perhaps a million demonstrators in the national plaza, proclaimed himself the legitimate president and head of the legitimate government.

Felipe Calderón took office as the official head of state on December 1. While for a short period it appeared as if Mexico might have two rival presidents, this was not dual power, and López Obrador was not prepared to rule the country. His legitimate government became a permanent

opposition, a peripatetic shadow government traveling the country to organize against Calderón's conservative agenda, above all to oppose the privatization of the petroleum industry.

At almost the same time in the capital of the southern state of Oaxaca, a massive popular protest arose against Ulises Ruíz Ortiz, the PRI governor of the state. The conflict began with a strike by Local 22 of the teachers' union who as usual occupied the city's plaza. When Ruíz ordered the police to attack the teachers and their families engaged in their *planton* (sit-in), the majority of the city's population rallied in their defense. Scores of local groups came together to create the Popular Assembly of the Peoples of Oaxaca (APPO), which organized a kind of civic uprising, briefly controlling the city and dubbed by some the "Commune of Oaxaca." APPO also took over several radio and TV stations, broadcasting its views to the city's population. Small neo-Stalinist parties played a role in the leadership of APPO, though the movement was quite broad. Ruíz's police and death squads continued to attack Local 22 and APPO and their captured radio stations, kidnapping, torturing, and killing from June to November when President Fox sent in federal police who drove APPO from the plaza, arrested and jailed several APPO leaders, and crushed the movement. Altogether more than 20 were killed and Ruíz continued in office as governor. Still, Local 22 and the APPO survived the attacks and regrouped; they had been defeated, not obliterated.

Finally, by 2006 approximately 10 percent of all Mexicans, unable to find work in their own country, had migrated to live and work in the United States. In April and May of 2006, millions of immigrants in the United States demonstrated for immigrant rights and immigration law reform, the largest contingents being Latinos, and the largest among them Mexicans. Led by Mexican radio announcers in Chicago and Los Angeles, by home-town organizations from Michoacan and Zacatecas, by Mexican Catholic congregations and soccer teams, millions of Mexican immigrants participated in what were the largest political demonstrations in the history of the United States with the slogans "We are workers not criminals" and "No human being is illegal." Many workers participating in May Day celebrations in Mexico carried placards or chanted slogans in solidarity with their kinsmen demonstrating in the United States.

Mexico, railway workers' struggle, 1957–1960

Vittorio Sergi

The movement of the railway workers from 1957 to 1960 marked an important rupture in the corporative economic and political system of post-revolutionary Mexico. In the first two years of struggle the workers won significant wage increases and political autonomy within the Mexican railway workers' trade union (STFRM). Because of the rise of international anti-communist politics and its strong political influence on the

rest of Mexican society, the movement faced increasing state repression that cut off the independent leadership and discarded its demands in 1959.

During the presidency of Adolfo Ruiz Cortinez (1953–8), the Mexican peso suffered a significant devaluation in 1954 that caused widespread discontent, especially among farmers and industrial workers. In 1957 the railway workers started a protest with the objective of increasing their wages. In this process they articulated the need for an independent trade union leadership and soon began to fight against the management, which was strongly connected with the political leadership of the Revolutionary Institutional Party (PRI) and the Revolutionary Central of Mexican Workers (CROM) trade union. The method of co-optation and control from the state of the trade union was called *charrismo* and meant the use of both corruption and open repression. Several dissident sections of the STRFM all over Mexico organized on May 2, 1958 the General Commission for the Rise of Salaries. Their demands were presented in the document called “Plan del Sureste” on June 12. The workers asked for 350 pesos more a month to regain what they had lost with the rising inflation. Facing the opposition of the management, the federal government, and the formal leader of STRFM, Ortega Hernandez, the dissident trade unionists decided to start an escalating strike. The first strike started on June 26, lasting two hours, and then was followed by another day of four hours on strike and six hours the next day.

On June 28 in Mexico City police attacked a demonstration of striking workers from the electrical company trade union, students, teachers, and workers of the telephone service. Railway workers Rafael Alday Sotelo and Andrés Montaña Hernández were killed by the police. The all-day strike continued from June 29 to 30, putting the railway and logistic system of Mexico into chaos. Because federal political elections were scheduled for July 4, the government pushed the management to negotiate and finally to agree with the strikers on a salary increase of 215 pesos a month.

In the federal elections of July 4, Adolfo López Mateos (1958–64) came to power, and on July 12 the Sixth Extraordinary General Union Convention met and chose Demetrio Vallejo to the position of general secretary of the National Railroad Council, breaking with the

governmental control over the trade union. Vallejo (1912–85), a worker from Oaxaca who led the protest of the dissident sections of the union, was elected an independent representative of the executive general committee by the majority of local sections. He was a former member of the Mexican Communist Party (PCM), from which he was expelled in 1946, and was one of the founders of the Mexican Worker–Peasant Party (POCM). Both the secretary of labor and the company for which the workers operated refused to accept Vallejo in the position. The ministry of the interior demanded that the previous leader be reinstated, effectively overruling the convention vote. In defiance of the ruling, the workers called again for a strike on July 31, 1958.

The strike lasted two hours and was supported by the electrical workers' union (SME) and members of the national teachers' union (SNTE). The government responded by repressing the strikes, and on August 3, 1958, police were sent in to seize the railroad workers' union halls in Mexico City, arresting the dissident members. On August 4 a new demonstration was attacked, resulting in heavy standoffs. Four protesters were killed. The army occupied the telegraph building, which was also on strike. The management tried to break up the workers' commissions with partial concessions, but they refused. On August 6, 1958, the government agreed to hold new elections for the position of general secretary. On August 27, about 60,000 workers cast votes, with the final result of 59,749 votes for Vallejo and 9 votes for the government candidate Samuel Ortega.

A major mobilization for the new collective contract followed this success, but the government was not likely to make more concessions. Vallejo went on to present a plan to assist the railroad's financial standing. The plan consisted of raising rates and terminating subsidies given to US mining and metal companies. It was believed these changes would permit the railroad to recover money to raise wages for its workers and provide better working conditions. The plan was refused. A general national strike was then planned for February 25.

After increasing repression from the government of Adolfo Lopez Mateos, the strikers took a step back and started to negotiate. One month later, receiving no satisfaction of their demands, workers stuck all over Mexico. The strike was again declared illegal by the federal tribunal of

labor, and on March 28, 1959, the army took over the trade union offices and the whole railway infrastructure, causing heavy standoffs with the protesters. The strike and the blockades continued spontaneously until April 12. On April 15, the government confirmed the imposition of the new official trade union leaders, and more than 3,000 workers were arrested and 500 sentenced to several years' imprisonment. Vallejo was sentenced to 16 years in jail. A communist trade union leader, Román Guerra Montemayor, was killed by the police in Monterrey and on May 17, 1960, Valentín Campa, leader of POCM, was arrested as well. Although the movement was broken up, it was considered in the coming years as the starting point of autonomous industrial trade unionism in Mexico.

Mexico, worker struggles and labor unions, 1950s–1970s

Dan La Botz

The major Mexican worker struggles of the 1950s to the 1970s grew out of the political economic system that had been established in Mexico in the post-revolutionary period. The Mexican ruling party, the Institutional Revolutionary Party (PRI), had by 1950 through a combination of political maneuvers, payoffs, gangsterism, and police and military action succeeded in taking control of virtually the entire organized labor movement.

The Confederation of Mexican Workers (CTM) and the other major labor federations and industrial unions had all affiliated with the PRI. In return for getting out the vote for the ruling party and supporting its policies, union officials became PRI leaders who were rewarded with political positions as governors, congressmen, and senators. Workers, when they were hired, automatically became members of the appropriate union and members of the PRI, and they were mobilized by the union to attend party demonstrations and to vote.

The PRI and the CTM dominated the Federal and Local Boards of Conciliation and Arbitration (JFCA, JLCA), in which they often collaborated with the employers. The secretary of labor policed the labor movement by denying registration (*registros*) to unions or refusing to recognize their elected officers (*toma de nota*), or refusing to grant them the right to negotiate union contracts (*titularidad*). Workers who challenged the official unions could be expelled as disloyal members under the exclusion clause (*la cláusula de exclusión*). Strikes were frequently declared illegal (*inexistente*) and broken by employers, the union apparatus, or the police. This system of state-party control of labor unions largely determined the nature of major union struggles, that is, they tended to grow into head-on confrontations with the state-party system.

During this period Mexico had a mixed economy with a large state-owned sector of over 1,000 firms, many of them in heavy industry. Among the state-owned firms (*paraestatales*) were oil, steel, electric power generation, railroads, and telephone. The Mexican state corporations and corporations owned by Mexicans or foreign investors in Mexico all predicated their investment, production policies, and profits on the state's ability to discipline labor in order to prevent strikes and to keep wages low, but to permit growth of state and employer benefit programs such as housing, government food stores, and government social security (health and pension). Mexican workers then found that the state-party was often simultaneously their employer, their union, their political party, their landlord, their health and pension plan, and their neighborhood grocery.

Given this context, Mexican workers often found that if they wanted to improve their work situations or reform the system, they came into conflict with their employer, their union

officials, and the ruling political party. There were during these years three periods of major workers' struggles: the teachers and railroad workers' strikes of the late 1950s; the workers' insurgency of the late 1960s and early 1970s centered in the auto, auto parts, and telephone industries; and the electrical workers' movement of the mid-1970s. Despite what were sometimes massive, heroic, and powerful movements, none of these succeeded, largely because of government repression and political maneuvers.

Mexican Teachers and Railroad Workers in the 1950s

The principal economic reason for the teachers' and railroad workers' strikes was the stagnation of wages. In both cases, the economic issues quickly also became issues of union democracy and both affected other unions.

The teachers' movement for higher wages began in 1956 in Local 9 in Mexico City. Leaders included a charismatic young teacher named Othón Salazar, a former Communist Youth member, and J. Encarnación Pérez Rivera, a member of the Mexican Communist Party's (PCM) political committee. In 1957 they organized the Teachers' Revolutionary Movement (MRM) and in December called for a 40 percent wage increase. The MRM, with broad support from parents, struck the elementary schools repeatedly between April and May and on June 2 the government conceded the wage increase. On September 6, 1958, however, Salazar and Pérez Rivera were arrested and charged with sedition (*disolución social*). The Mexican Teachers' Union (SNTE) leadership cleverly held elections in Local 9 while the two dissidents were jailed. When Adolfo López Mateos became president on December 1, 1958, the release of the dissident teachers was arranged, though the government insisted that it did not concede their innocence. The teachers' movement subsided.

In 1958 Demetrio Vallejo, a member of the Mexican Workers' and Peasants' Party (PO-CM), emerged as a leader in Local 13 of the Mexican Railroad Workers' Union (STFRM). Vallejo, representing Local 13 and six other locals, called for a wage increase and began a series of escalating strikes on June 26, 1958. President Ruíz Cortines intervened, granting workers a large wage increase. The STFRM convention then elected Vallejo general secretary, but the secretary

of labor refused to recognize the new leadership. The union struck to force recognition of its executive board. On August 3, the Mexican government mobilized police and soldiers to seize the railroad workers' union halls throughout the country. The union responded by a general strike by 100,000 workers, paralyzing the national railroad system. The government then agreed to a new union election and Vallejo again won election to the office of general secretary.

The union struck the National Railroad on February 25, but the government labor board immediately declared the strike illegal. President López Mateos then intervened, agreeing to the union's demand for a pay increase, and it seemed the crisis had passed. It had not. Vallejo called for a general strike over issues at the smaller railroads. The strike began on March 25, 1959, the beginning of Holy Week, and the government responded with the militarization of the railroads (*requisita*). The police and army also took over union halls, killing several workers, and within a few days the strike was broken. The company fired at least 9,000 workers. The government arrested thousands, and about 500 workers were tried. Several leaders received sentences of 11 years, while Vallejo was sentenced to 16 years. The government restored a loyal leadership to power in the union. The railroad workers' movement was broken, the left suffered a serious defeat, and the workers' movement was relatively quiet for a decade.

The Workers' Insurgency

A new generation of activists appeared in the late 1960s. The student demonstrations of August 1968 and the Tlatelolco Massacre of October 1968, where police killed hundreds of students, polarized the country. Radicalism and militancy spread to the workers' movement.

The workers' insurgency (*Insurgencia Obrera*) refers to a wave of localized union activism in Mexico in the late 1960s and early 1970s. While this movement, sometimes led by Maoists and Trotskyists, existed in mines, steel mills, and other industries, the insurgency was particularly notable in the auto parts plants and in the Mexican Telephone Company (Telmex). The Authentic Labor Front (FAT), a Catholic union federation inspired by the theology of liberation, and Independent Worker Unity (UOI), a leftist union led by a radical lawyer, both led militant

strikes in auto and auto parts plants. Both were involved in strikes in the early 1970s at Nissan and Volkswagen, while the FAT led a long militant strike at Spicer. In Telmex, it was Francisco Hernández Juárez who organized an important strike in 1975 and then led a movement for a better contract in 1976. Creating the Democratic Committee of Telephone Workers, he won election to general secretary in 1976, by 86 to 10 percent. Mexican President Luis Echeverría succeeded in co-opting the UOI and Hernández Juárez, though the FAT remained independent.

The Democratic Tendency

Rafael Galván, the left-wing leader of the electrical workers' union STERM, joined in 1966 with the CTM and other state-dominated unions to create the Congress of Labor (CT). However, he soon found himself at odds with CTM leader Fidel Velázquez, who supported a rival electrical workers' union, SNE. Soon the two unions came into conflict and Velázquez expelled Galván's STERM from the CT. President Echeverría intervened in the union conflict to force a merger of Galván's STERM and the SNE, creating a union called SUTERM, headed by Francisco Pérez Ríos, a *charro* loyal to Velázquez. In response, Galván organized the Democratic Tendency (TD), a movement within the SUTERM but with other labor allies, and published the Declaration of Guadalajara, a call for a democratic union movement and social reform to fight for the original goals of the Mexican Revolution. He also organized the National Front of Popular Action (FNAP) with the participation of 300 unions, peasant organizations, poor peoples' groups, and students. When on July 16, 1976 Galván called a strike against the Federal Electrical Commission (CFE), the government responded by sending in army units supplemented by hired gangsters to break the strike. Thousands of workers were fired and replaced by scabs.

Michel, Louise (1830–1905)

Gabriel Kuhn

Louise Michel was an unapologetic anarchist agitator and internationalist heroine. Throughout her 74 years, Michel was a fearless warrior and leader of the Paris Commune, a loud voice on behalf of workers, an incorrigible prisoner and defendant (many times over), a libertarian educator, a nemesis of imperialism, and a champion of social revolution. Her poetry and letters (published posthumously), as well as odes and essays written in her honor, are a testament to the profound impact she had on the movements she was a part of.

Michel was born in the village of Vroncourt, in northeastern France. She was the daughter of Marie-Anne Michel, an unmarried maid in the house of a wealthy landowner. There is some speculation as to the identity of Michel's father, but evidence seems to point to Laurent, son of Marie-Anne's employers. Tension between Louise and Laurent's wife apparently drove her out of the house and to the university where she studied to be a teacher. Thereafter, Michel experimented with avant-garde education methods highly critical of prevailing methods in small intimate settings until, in 1865, she moved to Paris to open her own school. Although Michel had a propensity for justice and compassion from an early age, it was the struggle for the French Republic of the 1870s that radicalized her.

In Paris, Michel came into contact with revolutionary thinkers, artists, and activists who further informed her radical politics. She was involved with public demonstrations, protests, and petitions against the French empire at first, quickly moving on to more militant actions against the conservative French Government of National Defense. Michel was active both as a medic and as an armed militant in Montmartre. She belonged to the most radical factions of the people's battalions and became known as one of the Commune's most resolute defenders.

Louise Michel (1830–1905) was a French revolutionary, teacher, lifelong labor activist, and leader in the Paris Commune of 1871. Following the defeat of the Commune, Michel was deported to New Caledonia, a French penal colony. In exile, she supported the education and anti-colonial struggle of the indigenous Kanak population. (Roger Viollet/Getty Images)

Within the Commune, Michel organized women's groups, daycare for children, and even organized sex workers to work as medics – a move considered quite radical, even by the standards of some of her fellow (male) communards.

After the fall of the Commune and the execution of many of her comrades, including her close ally Théophile Ferré, Michel was imprisoned and finally deported to New Caledonia, a French penal colony at the time. During the voyage to the overseas territory, Michel befriended Nathalie Lemel, who was also deported for her involvement in the Commune. Michel's increased interest in and subsequent lifelong dedication to anarchism is commonly attributed to this acquaintance.

During her seven years in New Caledonia, Michel – unlike most deported communards –

actively sought contact with the Kanaks (the local Melanesian population), started educational projects in their communities, and supported the independence struggle. Michel is still considered a popular anti-colonial hero in New Caledonia, which remains a French colony (or “overseas territory”) as of 2008.

After amnesty for the communards was granted in 1880, Michel returned to France and continued her revolutionary activity. In 1883, she reportedly refused to display the red flag at a political demonstration in order to distance herself from what she considered to be authoritarian socialists, choosing to display a black flag instead. The incident is often cited as the origin of the black flag as an anarchist symbol.

Over the following years, Michel was imprisoned several times. From 1883 to 1886, she served a three-year sentence for her involvement in a demonstration of unemployed workers that resulted in the looting of some bakeries. Michel's contempt for authority is evidenced by her statement to the court during her sentencing: “When we are told that we are enemies of the republic, we have only one answer: We found it upon 35,000 of our corpses . . . that is how we defended the republic.” This type of impassioned harangue against the court and other state officials was typical of Michel from the time of the Paris Commune, and throughout the rest of her life.

From 1890 on, she spent extended periods of time in England where she was mainly involved in alternative education projects. In France, she remained a tireless agitator and traveled the country as a speaker. During a speaking tour in January 1905, Michel died of pneumonia. Her funeral in Paris drew a crowd of over 100,000. The most popular amongst Michel's numerous writings – which include poetry, fiction, and political commentary – became her *Mémoires* (1886).

Michnik, Adam (b. 1946)

Amy Linch

Adam Michnik was one of the most charismatic and influential figures in the democratic opposition to state socialism in Poland. His intellectual activism and organizational talent were critical to the success of the *Solidarność* (Solidarity) movement. Through the influence of Jacek Kuroń he became an outspoken critic of the gap between ideology and practice under the communist regime before he had even finished high school. While a student at Warsaw University he worked with a group of nonconformist intellectuals to foster political engagement among students, encouraging them to challenge authority and interrogate the ideological verities espoused by the Communist Party. His role in the student protests of March 1968 led to one of several prison terms he served over more than two decades of activism, and permanent expulsion from university. During the 1970s he was an active member of the Workers' Defense Committee (Komitet Obrony Robotników, KOR) and a lecturer for the Flying University. He became an advisor to Lech Wałęsa and the Solidarity movement, and participated in the round table negotiations that ended the Communist Party's dominance of political life in Poland.

Like many student leaders of 1968, Michnik was the child of communist intellectuals. His father was a revolutionary activist before the war and served as the first secretary of the Communist Party of Western Ukraine. His mother, an author of children's books, was also a loyal communist. As a child Michnik was a member of a Walterite scouting troop led by Jacek Kuroń, which sought to transmit the values that informed the communist revolution to subsequent generations. The experience cultivated in him a commitment to social justice and an understanding of socialism as the practical manifestation of equality and freedom that informed his lifelong activism. As a secondary school student in 1961, Michnik was a founding member of the Club of Seekers after Contradictions (*Klub Poszukiwaczy Sprzeczności*), which read and analyzed leftist works. Later that year he was introduced to the Club of the Crooked Circle, a discussion group of prominent Warsaw artists

and intellectuals, of which Kuroń was also a member. His made his debut as a formidable voice of opposition in a speech about school reform – at the age of 15. He was expelled from school for “illegal activities” but continued to attend the club's meetings until it was banned by the communist authorities the following year.

Michnik entered the history department at Warsaw University in 1964 where he continued to participate in debates about communist ideology, despite the increasing government suppression of discussion clubs. He was suspended for distributing Kuroń and Modzelewski's 1964 “Open Letter to the Party,” and again in 1966 for organizing discussion groups with philosopher and historian Leszek Kołakowski, who had earned the party's censure for advocating a humanist interpretation of Marx and criticizing party leaders. Michnik's writing was banned from publication by the Communist Party in 1965, prompting him to begin using a pseudonym, a practice he would continue throughout his life.

During 1968 he was one of the most visible organizers of student demonstrations against the government's termination of the enormously popular production of Mickiewicz's classical drama *Dziady* (*Forefathers*). In the anti-Semitic charged crackdown on student resistance that followed the March events of 1968, Michnik was expelled from the university, arrested, and sentenced to three years in prison. He was granted amnesty a year later but barred from finishing his degree until the mid-1970s. After he was released from prison he worked as a welder in the Rosa Luxemburg Light Bulb factory before becoming personal secretary to the experimental poet Antoni Słonimski.

Michnik's writings during the 1970s laid the intellectual foundations for what would later become the Solidarity movement. His 1976 essay, “The New Evolutionism,” drew upon the lessons of 1956 and 1968 to articulate a strategy and justification for political opposition. Both the Revisionists of the 1960s, who sought national reform within Marxist ideology, and the Neopositivists of the previous generation, who saw the USSR as an inescapable reality but rejected Marxism and socialism, had failed because they relied upon change from the top. These strategies ultimately affirmed the power of the state and promoted complicity between reformers and their oppressor. In the 1960s and 1970s, Michnik argued, social conflict had grown more

pronounced, and open conflict required clear allegiances. Under such conditions one must clearly state whose side one is on – that of those being beaten up or that of those doing the beating. Non-violence, furthermore, was an effective strategy only where clear boundaries delineated the scope of governmental power. The first task of the opposition under totalitarian rule was to practically establish a distinction between the society and the state. Social solidarity was a means of generating power by establishing such distinctions and undermining the government as the fundamental point of reference (Michnik 1985: 142).

The society rather than the state was the target for a program of reform. People could exert pressure on the state by acting independently in society and taking responsibility for their own actions. Michnik argued that pressure from the working class was essential to the development of a democratic political culture. The secular intelligentsia and the Catholic Church furthermore had reason to overcome their historical animosity and combine forces in resisting authoritarian rule by defending human freedom and dignity and creating space for independent expression. The pursuit of truth within civil society was a powerful transformative tool: “In searching for truth, or to quote Lech Kolakowski, ‘by living in dignity,’ opposition intellectuals are striving not so much for a better tomorrow as for a better today. Every act of defiance helps us to build the framework of democratic socialism, which should not be merely or primarily a legal institutional structure but a real day to day communality of free people” (1985: 148).

The Workers’ Defense Committee (KOR), formed to help the workers and their families who were victimized by the authorities for their participation in the 1976 strikes, was a practical manifestation of the societal self-determination Michnik recommended in his essay. During the first few months of the organization’s existence Michnik was a spokesperson for KOR, generating international support for the initiative during an eight-month stay in Paris. He became an active participant in its day-to-day fundraising, organizing, publishing, and distribution of information and legal advice to workers upon his return to Poland in the spring of 1977. In anticipation of the Solidarity movement a few years later, KOR actualized the ideals of self-management, tolerance, and pluralism that

Michnik argued were the essence of a democratic society. An independent public life would not be delivered to society by the state but created by people acting in solidarity.

When General Jaruzelski imposed martial law in 1981, Michnik was arrested and held without charges for three years for refusing to sign an oath of loyalty and go into exile. He went on a hunger strike while incarcerated to insist that he be designated a political prisoner. He was granted amnesty in 1984, and arrested again in 1985 for organizing a strike in the Gdańsk shipyard. He was again sentenced to a three-year prison term, of which he served one year before being granted amnesty. During his periods of freedom in the 1980s he continued to advocate democracy and promote civil society. While in prison he wrote numerous essays and open letters, many of which were smuggled out and circulated in the underground.

In 1989 Michnik participated in the round table negotiations between representatives of the communist regime and the Solidarity movement. When Solidarity was re-legalized that April, Michnik became the editor-in-chief of *Gazeta Wyborcza* (Electoral Gazette), the first independent opposition paper in the Soviet bloc, which he established in conjunction with Helena Luczywo. He was elected to parliament in the first free elections (1989–91), but did not pursue political office after serving one term. In 2008 Michnik continues to be one of Poland’s leading journalists and public intellectuals.

Micronesia, nationalist and labor protests

Justin Corfield

The imperial powers have used the islands of Micronesia for military bases since the nineteenth century and for nuclear testing since the World War II era. Naturally, the indigenous residents of these islands have often protested such use of their homeland.

Guam

The first contact Guam had with Europeans occurred in 1521 when Ferdinand Magellan landed there. In 1565 the Spanish officially claimed the island and used Guam as a base for ships plying the Pacific. In 1668 the Spanish tried systematically to colonize the island, establishing a Jesuit mission, but this effort met resistance. By 1690 the indigenous Chamorro population had fallen – mainly through disease rather than fighting – from 100,000 to 5,000. With Spanish and Filipinos settling on the island, the population balance changed forever.

Since then, Guam has been ruled by several imperial powers. In 1898 with the outbreak of the Spanish-American War, the United States took Guam. During World War II the Japanese took over, but after the war the US seized about a third of the island, and, in spite of considerable opposition from some of the Guamanians, created large military bases, which were important in the Korean and Vietnam Wars. Although the initial protests failed to prevent the establishment of the bases, legal battles continued, with the US losing a lawsuit in 1986 and being forced to pay compensation to the dispossessed landowners. This landmark judgment had many repercussions, the most important of which was that the protest movement moved from the streets to the

courts. In February 1994 the US government promised to close down large parts of its naval base and return much of the land to the original landowners.

Marshall Islands

The Marshall Islands in the Pacific were ruled by Germany until World War I, when they were taken over by Japan and ruled under a mandate from the League of Nations. After World War II the US navy took control of them, with the United States controlling them as a United Nations Trust Territory from 1947. Between 1946 and 1958 the United States used the Marshall Islands for nuclear tests at Bikini Atoll and at Eniwetak.

The first major political protest in the Marshall Islands took place in 1982, when over 1,000 landowners who had been dispossessed from Kwahjalein Atoll took part in Operation Homecoming, fighting for four months against missile testing on their atoll. This led to other protest groups campaigning against US nuclear tests, although the Marshallese held back from introducing an anti-nuclear constitution as was the case in nearby Palau.

There were a number of protests against the use of the Marshall Islands for US nuclear tests, but there was little publicity for these until 1985 when the Greenpeace ship *Rainbow Warrior* sailed to Rongelap Atoll to help relocate some of the people away from the nuclear waste. There was a large protest in 1996 when the people from Bikini Atoll commemorated the 50th anniversary of their forced evacuation so that the US could conduct nuclear tests. They had been moved to Rongerik Atoll where many fell ill from eating poisonous fish, while others nearly starved from food shortages. Following protests later that same year, and reports by German scientists hired by the people from Bikini Atoll, much of the residual nuclear radiation in the lagoon was removed to allow the people to return. This successful protest was followed by another by the people of Eniwetak Atoll who had been exiled for 33 years. The Nuclear Claims Tribunal awarded \$578 million in compensation to these people and another \$73 million to the people of Rongelap Atoll, where people had been exposed to radiation some 20 times the rate that the US government had previously claimed.

Federated States of Micronesia

There has been little political ferment in the Federated States of Micronesia, which has a population of 108,143 (2003 estimate) from nine Micronesian and Polynesian ethnic groups. There were strikes in the early 1970s by teachers and cannery workers, with strikes by government employees banned by law.

Commonwealth of the Northern Marianas

The Northern Marianas covers 14 islands in Micronesia that were first settled in about 1500 BCE by the Chamorro people and “discovered” by Ferdinand Magellan in 1521, with the Spanish establishing a Jesuit mission on the islands in 1668. The Jesuits were not welcomed, and there were a number of attacks on them and their encampment by the Chamorros. As a result, by the 1680s, the Spanish had to put a small army garrison on the island. There was a dramatic change in Spanish policies in the 1690s when the Spanish decided to establish “reductions” and rounded up the Chamorros to work in colonial plantations on the island of Guam. There were a few sporadic attacks on the Spanish, with many Chamorro on the island of Rota managing to hide from the Spanish. It also left many of the islands unpopulated.

Plantations remained successful in this area. Though Germany bought the Northern Marianas from the Spanish in 1899, being interested in developing the copra industry, the Japanese returned to sugar cultivation when they took over at the start of World War I. This move was financially successful, and by the 1930s some 60 percent of all Japanese revenue from Micronesia came from the sugar industry. It was also a period when a number of Japanese settled at Saipan. By World War II there were 45,000 Japanese and other migrants and only 5,000 Micronesians.

After World War II the Northern Marianas were administered by the United States as a Trust Territory. In 1948 half of Saipan was turned into a secret US military base in spite of protests by some of the Micronesians who lived on the island. Others saw the building of the base as helpful to the economy. In July 1975 the people of the Northern Marianas voted in a referendum to withdraw from the Trust

Territory and become a US Commonwealth. This took effect in January 1978 and in November 1986 a new constitution ensured that the people of the Northern Marianas became US citizens.

Palau

In April 1978 the Congress of Micronesia, the legislature for the islands which included Palau, agreed on the Statement of Agreed Principles for Free Association, giving the United States control over security and defense. On January 7, 1981 Palau approved its own constitution, which explicitly prohibited the introduction of nuclear weaponry into Palau’s territory and restricted the ability of the US to acquire land for military purposes. However, on August 26, 1982 the governments of Palau and the United States signed the Compact of Free Association, which gave the United States the right to station its military in Palau, including nuclear weapons, in return for internal sovereignty and economic aid. Most of the political protests in Palau since then have been over this Compact of Free Association and its clear conflict with the provisions of the constitution of Palau.

A referendum to amend the constitution of Palau to allow for the approval of the Compact of Free Association required a majority of 75 percent. There have been many referenda held since 1983, with the government of President Haruo Remilik claiming that a simple majority should be sufficient to ratify the compact, but this was rejected by the Palau Supreme Court. Again in a referendum held in February 1990, there was not enough of a majority to alter the constitution to ratify the compact, with the US maintaining its United Nations trusteeship. On November 4, 1992 the people of Palau elected a new government and accepted a proposal to allow the constitution to be changed by a simple majority. After various legal challenges, on November 9, 1993 the electorate voted in favor of the Compact of Free Association by a majority of 5,193 to 2,415 (68 percent majority). Palau then became independent on October 1, 1994, and in December 1994 it became the 185th member of the United Nations. Most of the protest movements that surrounded the Compact of Free Association have now finished, although there are some moves to end it when it expires in 2009.

Migration struggles and the global justice movement

Manuela Bojadžijev

“Autonomy of migration” names a concept whose methodology enables a series of questions to be asked about the relationship between migration and capitalism, opening the horizon for a range of political perspectives on migration struggles taking place around the world and in the context of the alter-globalization movement. The persistence of movements of migration in the face of the militarization of borders and an elaborate, if not always coherent, migration regime in the United States and Europe constitutes a component within the analysis, to the extent that it focuses on the agency of migrants. The concept opens up the possibility to question the contemporary formation of capitalist socialization and its imperial, postcolonial, and, therefore, global foundations.

The term autonomy of migration had, for a long time, a hidden presence in an interview with the French political economist Yann Moulier Boutang, published in Italian in 1992 and later translated into German. Through the concept, he spoke first and foremost of the “subjective factor” that had long been suppressed in many

theoretical and political analyses and public debates about migration. Moulier Boutang insisted that the experts and agencies that concentrated on immigration failed to notice the autonomy of migration and instead attributed it to economic policy, insisting it was a matter of administrative regulation. As a result, “the objectivity of politics and economic policy in particular are grotesquely overestimated, and it is forgotten that there is a momentum to emigration.” He concluded that “One can confront emigration by means of repression, ‘demanding’ the return of immigrants, but one cannot open up and block the flows according to programming and estimation.”

Although a broad academic debate, which even extended into official policy analyses for American and European migration management, this theory recognizes that migrants do not simply constitute a disposable quantity which can be turned on and off through economic policy; the discourse of the autonomy of migration has long had, and continues to have, the function of transforming the perspective *on* migration into the perspective *of* migration. What Moulier Boutang and others after him have drawn attention to is that migrants do not passively follow investments of capital, but rather there is a co-determination between the two processes. The consequence of migration not being reducible to the mobility of labor-power is manifested in the correlation between governance and migration policies, both of which are directed toward the entire population rather than simply the administration of migration movements. On this point, the concept follows Michel Foucault’s considerations on biopolitics. In terms of the political dimension of the concept, this means that the right to work always needs to be connected to the right to life.

The appearance of the term fulfilled the historically and politically necessary role of allowing migration to be rethought. Migration – according to the theory – opens a field of social and political conflict, although the resultant social antagonism, rather than becoming a challenge requiring theoretical and analytic reflection, is often blamed upon the migrants. A view of migrants emerges like a picture puzzle, sometimes regarded as villains (as they are thought by the right), and sometimes as victims (as in the left-wing and liberal-left tradition). The concept of the autonomy of migration unseats this image,

which has appeared in numerous different forms and had historically proven itself resistant.

Migration never occurs in the same way more than once; it has numerous causes and rarely only takes place in one direction. It is not the project of individuals, but rather a process which rests upon transnational networks and a global movement. To name it a social or political movement, as some approaches to the autonomy of migration suggest, challenges us to question our understanding of the political. To adopt the perspective of migration means rethinking the limits to national organization, whether that be in the form of national migration policies or the work of national trade unions, as well as reconsidering conceptions of local and global, tight disciplinary boundaries, and most of all, the absurd idea that without migration, the national society would – or could – exist as a space free from antagonism.

The Relation between Movement and Organization

The European alter-globalization movement – and two groups in Germany, Kanak Attak and Keim mensch ist illegal (No one is illegal), in particular – took up the term toward the mid-to late 1990s in their work on the politics of migration and anti-racism. Later, the concept was picked up on the European level by the No Borders and Frassanito networks, where it was discussed and elaborated, becoming established in numerous European countries. Following the logic that migration cannot be dealt with as something reducible to its relevance to domestic politics, migration struggles have begun to be addressed within the Social Forum process. At the first European Social Forum, in Florence in November 2001, the Italian movements – which had already dedicated the opening demonstration of the protests against the G8 summit in Genoa to the issue – made migration a central topic. In 2004, migration became, for the first time, an explicit theme at the World Social Forum (WSF) in Mumbai, India. In the meantime, the 2005 WSF in Porto Alegre, Brazil, and a follow-up event the following year in Madrid, Spain, created the World Social Forum on Migration.

At the latter, around 1,000 participants from 84 countries gathered, adopting the Rivas Declaration (Rivas is a location near Madrid). At the meeting, numerous analyses were devel-

oped, ranging from the critique of border policies to the identification of new forms of discrimination against migrants. Demands were levied, ranging from the legalization of those without documentation, to the defense of the right to asylum, to demands for nation-states to sign the International Convention on the Protection of the Rights of All Migrant Workers and Their Families. The gathering announced as its goal the development of a World Charter for Immigrants and committed itself to global days of action and the organization of a thematic focus on migration at the WSF in Nairobi, Kenya, in 2007.

The international theoretical debates within the alter-globalization movement resonated with theoretical approaches to slavery, waged-labor, and the *lumpenproletariat*, as well as numerous feminist, migration theory, and postcolonial contributions, alongside artistic and cinematic productions. Through their “situated knowledge” (Donna Haraway), each of these approaches produced a discreet understanding of what can be understood as *autonomy* in the context of migration and addressed the tension generated by the question of the relation between movement (in its material conditions as well as its consequences) and organization (with its ideological aspects).

Political and cultural networks, historically, have always been established in migration. They precede both political organizations and theoretical conceptualizations. They are repeatedly faced by great challenges, with which every cross-border organization is confronted: the difficulty of translation, both in terms of its “simple” linguistic sense and in relation to political concepts, contexts, and theories. Other challenges include the conception and the (limits of) transferability of forms of political organization and communication, as well as human movement over borders in conditions of restrictive immigration laws. The struggles of migration include conflicts around the conditions *of* migration, as well as the conditions *in* migration. In some cases, even the struggles include advocating conditions that bring an end to migration (i.e., that either render it unnecessary in the first place or successfully end the process of settlement).

Theoretical Ambivalences

The concept of the autonomy of migration, which is fundamentally influenced by autonomous

Marxism, is without a doubt contested. The approach is criticized as creating difficulties in recognizing migrants as the victims of the international division of labor, from relations of exploitation, colonialism and postcolonialism, from war, gender relations, racism, and from American or European regimes of migration management.

On the conceptual level as well, the term is in need of clarification. As with many terms, both its strengths and its weaknesses lie in the fact that it remains ambivalent, always running up against its limits. With the autonomy of migration, this ambivalence results from three elements that do not all have the same meaning. For one, the concept presents the obstinacy of the migration process as a social phenomenon resulting from an irreducible multiplicity of individual acts. To a certain extent, processes of migration can have intended consequences; but there is also a series of unintended consequences for the societies being emigrated from and immigrated to. Because the subjective dimension is obscured in these unintended instances, however, arguments have been made that they do not, therefore, reflect an autonomy. The concept of the autonomy of migration connects to the persistence of movements of migration and to the impulse toward mobility within social networks. In the process of migration, migrants unseat existing forms of sociality. However, there is a dialectic to every aspect of the autonomy of migration. For example, mobility is the source of exploitation, insofar as capitalism relies on the mobility of labor power; while at the same time, mobility constitutes the ability to flee from relations of exploitation and oppression. The perspective of the autonomy of migration is about the materiality and the resistance of the governed. Migration is neither free from existing forms of socialization, nor does it allow itself to be entirely channeled.

This point touches upon a further methodological aspect as to whether migration even exists as an object of scientific scrutiny, or whether extremely heterogeneous phenomena are brought into a unity for disciplinary or political motivations. In particular situations, for example, there is a point where migration dissolves itself into something else (the refugee becomes a migrant worker who becomes the object of integration policy and so on). An example of this could be the ways in which discussions around urban

uprisings, which take place in Great Britain or the French *banlieues* with a certain regularity, have debated whether the rebellious youth should be regarded as migrants or as more generally deprived or marginalized.

In a second sense, autonomy can be understood as the practice of resistance by migrants who refuse, who unseat social relations, break with convention, flee, take off, leave, modify, communicate, transfer, and perhaps even genuinely take part in forms of collective resistance. This aspect relates to both the conditions *of* migration and the conditions *in* migration, and sometimes even the conditions to end their status of migration altogether. The issue here is a political question of the relation between movement and organization. Or, in terms of methodology: there is the need for a more precise differentiation between struggle and non-struggle, and moreover the form of the struggles of migration. Here, the central question is whether flight from particular circumstances can also be recognized as creating something positive, or rather, being something constitutive.

Thirdly, migration can be seen as an autonomous interrelation, as a network of reciprocal aid within families, clans, or city districts – with all the ambivalence that such a situation brings with it. Autonomy arises in social conflicts, in the new forms of cooperation and communication they produce, in the constitution of new lives. Processes of migration generate new forms of sociality. They can lead to particular structures within households, political organizations, and modes of economic production, ranging from precarious working conditions to capitalist enterprises. Social networks can cultivate closed communities with recognizable identities. This has to do with the inevitable coexistence of different autonomies and the necessity for political dialogue. Autonomy and heteronomy are as such never isolated from one another. And not infrequently, autonomy is presumed in a situation which ultimately leads to its destruction. Taking all three standpoints into consideration, what Louis Althusser would call an “over-determination” can be postulated in relation to migration; in other words, an irreducible complexity of the social totality, which neither has one cause nor only one meaning.

Migration, precisely because of these all-encompassing and over-determined aspects, forces us to consider society in its global dimension.

The concept of the autonomy of migration focuses on the conditions of movements of migration; not *for* migrants as such, but rather to take up the challenge presented by the struggles of migration as they transgress numerous boundaries in search of a better life. Migration, seen from this perspective, is an ephemeral component of every society – both internally and externally, simultaneously. It remains in the status of *l'avenir* (the future) and repeatedly involves the momentous promise, “*to come.*” As John Berger and Jean Mohr wrote in their book *A Seventh Man*, migration is immortal: “So far as the economy of the metropolitan country is concerned, migrant workers are immortal: immortal because continually interchangeable. They are not born: they are not brought up: they do not age: they do not get tired: they do not die” (1975: 64).

Milosz, Czeslaw (1911–2004)

Colleen K. McQuillen

Upon receiving the Nobel Prize for literature in 1980 Czeslaw Milosz became a public icon, gaining a wide readership in the West and in Poland where his poetry had been banned from publication for thirty years. The award came two years after Karol Wojtyła was elected Pope John Paul II, and only one month after Solidarity emerged as the first non-communist trade union in Poland and as a force in opposition politics headed by Lech Walesa. This historical coincidence magnified Poland’s visibility in the world and amplified Milosz’s reputation as a political dissident, a reputation rooted in his exile (1951–81) from communist Poland.

Prior to seeking political asylum in France, Milosz demonstrated his strong sense of moral and historical responsibility by participating in the Resistance against Nazi occupation of Poland during World War II. Out of this experience arose his anthology of anti-Nazi poetry, *The Invincible Song* (1942), which circulated underground.

Milosz was a political and aesthetic philosopher, essayist, and poet who examined humankind’s historical condition through the lens of moral responsibility. Milosz’s poetry from his university years (such as his first volume, *Poem on Frozen Time*, 1933) reflects his association with the Zagary (retrospectively called the Catastrophists), a group of poets that expressed apocalyptic anxiety and foreboding of the horrors that would sweep Europe. In contrast, Milosz’s postwar poetry is more hopeful in its exploration of universal questions. It displays the poet’s wonderment and his deep appreciation for natural beauty.

Milosz’s poem “You who have wronged” (1950) is immortalized on a monument to the shipyard workers killed in a 1970 protest in Gdansk. The monument, built by the Solidarity Union, bears the lines: “Do not feel safe. The poet remembers. You can kill one, but another is born. The words are written down, the deed, the date.” These lines reveal the poet’s sense of power and duty as a witness of history. Milosz’s expository *Captive Mind* (1953) likewise expresses his social engagement by examining the various responses of intellectuals living under a totalitarian regime.

While Milosz considered himself a Polish poet because he wrote in Polish, he was born in Szetejnie, Lithuania (then part of the Republic of Poland), and earned a law degree in 1934 from Stefan Batory University in Vilnius. Because he believed that language shaped thought, he composed verse in Polish throughout his life even though he lived in the United States from 1960 to 2000. Milosz spent the first 18 of those years as a professor of Slavic literatures at the University of California at Berkeley. In 2000 he returned to Poland, settling in Krakow, where he spent the remainder of his life.

Ming Rebellions, 1600s

Justin Corfield

After the Manchus defeated the Ming Dynasty and took control of China in 1644, some Ming loyalists fled to safety in southern China where several groups held out for many years, becoming known as the Southern Ming. The Southern Ming rebellions started soon after the overthrow of the Ming Dynasty by the Manchus, which essentially took place in 1644.

The first of the rebellions which became known as the Southern Ming revolts was led by Chu Yu-sung, better known as the Prince of Fu. Like all the main claimants of the Southern Ming, he was descended from Emperor Wan-li (r. 1573–1620). Chu Yu-sung assumed the imperial title Emperor Hung-kuang and reigned in Nanjing for a year. When news reached Nanjing that the Manchus had captured Beijing in 1644, it was initially uncertain whether Chu Ch'ang-fang, the Prince of Lu, or Chu Yu-sung should be proclaimed the next emperor. With the Ming military in Nanjing supporting him, Chu Yu-sung became the choice of the court and on June 19, 1644 he was proclaimed emperor.

The new emperor, Hung-kuang, decided that his first move would be to send emissaries to the Manchus, thanking them for defeating the warlord Li Tzu-cheng, and also to get a report about the actual situation in Beijing. The emissaries offered the Manchus much gold and silver, and also an annual subsidy of 100,000 silver taels a year if the Manchus would retire to behind the Great Wall, leaving the Ming to reclaim the Forbidden City. However Dogon, the Manchu regent, rejected this entirely and countered that he would not invade the South if Hung-kuang would recognize the Manchus as overlords. The Ming claimant rejected this, and war became inevitable.

The fighting began badly for the Southern Ming. Hung-kuang concentrated his forces far too much, leaving the provinces of Anhwei and Kiangsu unprotected. This allowed the Manchus under the command of another member of their new imperial family, Dodo, to seize the city of Yangchow and then pursue the forces of Hung-kuang to Wuhu, Anhwei. Nanjing was taken by the Manchus and Hung-kuang captured and held as a prisoner by one of his own generals, who then handed him over to the Manchus. Hung-kuang was then taken to Beijing where he died in captivity in the following year, 1646.

The defeat and capture of Hung-kuang left the Southern Ming forces to rally around Chu Yu-chien, a distant cousin. He was a descendant of Chu Ching, who was the first prince of Tang, and the 23rd son of Emperor Hung-wu, making him a relatively remote claimant to the throne, but nevertheless one with a genuine imperial ancestry. Born in 1602, he had grown up on his family estates in Honan, spending some time in prison with his father – his father having been involved in a minor dynastic problem resulting in his jailing. In 1632 Chu Yu-chien had become the 9th Prince of Tang, and two years later he was nearly involved in his first military operation when he wanted to use 3,000 men from a local militia against bandits. However the Ming court refused to allow this as they feared that such a large force could be used against them. As it turned out, in 1636 when Beijing was under attack, Chu Yu-chien led a number of soldiers who went to defend the city. They were not needed, and Chu Yu-chien was not thanked but instead, with the Ming suspecting that the action was possibly an attempted rebellion, they reduced Chu Yu-chien to the rank of a commoner.

Following the capture of the city of Nanjing by the Manchus on June 8, 1645, Chu Yu-chien moved to Hankow where he tried to establish a new Ming court. However, this did not last long and the Manchus were able to capture Hankow. This forced Chu Yu-chien to flee again, this time to Foochow. There he was appointed "administrator of the realm," the title devised as Hung-kuang had just been captured.

When it became clear that Hung-kuang could no longer serve as a rallying force against the Manchus, on August 18, 1645 Chu Yu-chien was proclaimed Emperor Lung-wu and his brother, who then succeeded to the title of Prince of Lu, became the "administrator of the realm." Together, the brothers tried to make a stand against the Manchus by gaining the support of the remnants of the army of Li Tzu-cheng whose forces had been driven south by the Manchus. Interestingly, this was the same Li Tzu-cheng to whom the leader of the first of the Southern Ming rebellions had congratulated the Manchus for defeating. However, with them supporting this new rebellion, Lung-wu did make a spirited resistance and even issued a number of copper coins with his name on them. He tried to hold out against the Manchus, but his forces were always militarily much weaker than those of his opponents. The Manchus captured Foochow and then pursued Lung-wu's forces which fled, with Lung-wu himself being captured and then killed. He was always a keen reader and writer and his baggage train, when he was finally captured and killed, included a significant library.

The Southern Ming then chose to rally around Chu I-hai, the Prince of Lu who assumed the title of Regent Lu and "administrator of the realm." He was descended, through ten generations, from the first Ming emperor, becoming the 13th Prince of Lu after his brother committed suicide when the Manchus captured Yenchow. This new rebellion tried to hold out against the Manchus for as long as possible, with Chu I-hai even being invited to run the Ming court at Chekiang, although he declined to become an emperor. He saw his first task as being to rally all the forces who were loyal to the Ming. This was difficult as, in defeat, they were scattered throughout remote parts of southern China. He had tried to reach reconciliation with the court of Lung-wu at Foochow before the latter was killed, but this attempt had failed. Also, early in

his regency, he had relied too heavily on General Fang Kuo-an who retreated, allowing the Manchus to cross the Chientang River which had provided a natural defense for the Southern Ming. His distrust of Fang was later to be proved correct because Fang surrendered his forces to the Manchus.

After Lung-wu was killed, Chu I-hai realized that a direct military confrontation with the Manchus was not going to be a good strategic move. Instead, he decided to retreat and concentrate his depleted forces in Fujian province, moving his capital to a small town called Minan. From there he thought he would be safe from the Manchus. However, they quickly attacked the town and Chu I-hai fled with his increasingly dwindling band of retainers. They took refuge on boats, and as a result their headquarters were known as the Water Palace. He then took up residence at Chusan, and in 1653 he renounced his title of "administrator of the realm," supporting the claim of Chu Yu-lang.

The next Ming claimant to the imperial throne was Chu Yu-lang, a first cousin of Chu Yu-sung, and grandson of the Emperor Wan-li. He had been involved in some of the political intrigue and machinations that had fragmented the Ming in the early 1640s, and in 1646 was made the Prince of Kuei. When Lung-wu was captured by the Manchus, Chu Yu-lang took on the symbolic mantle of being "head" of the Ming imperial family. However, he had been forced to be on the run for a long period as the Southern Ming faced military defeat after defeat. He was cornered in Kueilin on April 18, 1647, but managed to escape to Hunan. The forces which he left behind were able to defend the city, using cannons provided by the Portuguese, and this managed to turn the tide of the battle in their favor and resulted in the Manchus losing their first battle against the Southern Ming. It also allowed the Ming to regroup their forces and recover some parts of the Southwest of China.

In 1650 the Manchus launched a large attack on the Southern Ming and succeeded in capturing a large number of cities and towns in February of that year. On November 24, 1650 the Manchus finally managed to capture Guangzhou and on April 5, 1651 they also took Wuzhou. This left Chu Yu-lang, who by now had been proclaimed the Emperor Yung-li, in retreat, waging a defensive war against the Manchus, before having to turn to guerilla tactics. This group of

Southern Ming finally were forced to retreat into northern Burma.

Yung-li was finally betrayed while at Ava, and taken as a prisoner to Yunnanfu on April 30, 1662. There he was held for several days and then was strangled with a bowstring. His mother and his main wife were also said to have been killed in the same manner. Although this meant that the last of the Ming claimants was now dead, the coastal raider Cheng Ch'eng-kung, better known as Koxinga, and his family held out on Taiwan Island until 1683. Many Chinese in Southeast Asia also continued their loyalty to the Ming Dynasty for many centuries; after the success of the Taipings in the 1850s, some adherents harked back to the period of the Southern Ming.

Several historians have tried to postulate why the Southern Ming were able to hold out for so long. This seems to have been largely because of the rapid collapse of authority throughout southern China, and the Manchus suddenly finding themselves in control of so much of China. It also owes much to the manner in which the Ming had ruled the country. One historian, Lynn Struve, saw the fact that the rebellions had lasted for so long as largely in response to the genuine pride many people had in the Ming institutions of government and that they had managed to rule successfully for three centuries, maintaining a Han Chinese court after the period of Mongol rule, and prior to the long period of Manchu rule. Thus the Ming Dynasty had represented a period of Chinese rule over China, and this in turn led many Chinese to support the various rebellions even though several of them seemed to have little hope of success.

Mirabeau, Comte de (1749–1791)

Junko Takeda

Honoré Gabriel Riqueti, Comte de Mirabeau, was an influential revolutionary during the early stages of the French Revolution. Although an aristocrat, Mirabeau sided with the bourgeoisie and common people against the French monarchy and the system of privileges that characterized French society during the old regime.

Mirabeau was born in Bignon on March 9, 1749. After receiving a military education in Paris, he joined the cavalry. His life prior to the French Revolution, however, was characterized by amorous escapades, exile, and debauchery. Mirabeau's father carried on a very public quarrel with his son and, armed with *lettres de cachet* from the king, had him jailed on numerous occasions in an effort to curb his libertinism. Nonetheless, even the younger Mirabeau's 1772 marriage to an heiress failed to end his waywardness. Extramarital affairs and the subsequent desertion of his wife prompted him to go into exile in Switzerland; in May 1777, he was imprisoned and sentenced to death. The sentence was overturned in 1782, but further misadventures forced him into a period of exile in England and Holland, where he spent time mingling in literary and political circles, and writing several pamphlets denouncing the abusive practices of the French monarchy.

In 1788, Louis XVI called the Estates General (a body of delegates from the three estates, or orders, of French society: nobility, clergy, and commoners) to resolve mounting financial and political crises plaguing France. Mirabeau's reputation as a dissident writer and effective orator prompted his election as a delegate for the Third Estate in his district of Aix-en-Provence.

When the delegates gathered in Versailles in the summer of 1789, a deadlock occurred over two related issues: whether to convene jointly as a whole group or separately by orders, and whether to vote by "order" or "head." Because the allied first two orders, the nobility and clergy, outnumbered the commoners of the Third Estate two to one, the delegates of the Third Estate knew that voting by order would effectively disenfranchise them. Maintaining that the Third Estate represented more than 90 percent of the

population, bore the brunt of France's financial burdens, paid most of its taxes, and were its most productive citizens, Mirabeau and the Abbé Sieyès declared that the Third Estate *was* the nation. They led the Third Estate's delegates in deciding to call themselves the National Assembly and to withdraw from the Estates General.

When they found themselves locked out of their meeting room in Versailles, the delegates of the National Assembly gathered in a nearby tennis court. Upon the king's order to disband, Mirabeau famously retorted that the delegates would scatter only "by the force of bayonets." On June 20, 1789, the National Assembly took what has become known as the Tennis Court Oath, swearing to remain in session until a new French constitution was drafted. Soon after, the king made a political retreat and ordered the delegates of the first two orders to join the National Assembly.

Despite his radical stance in the first weeks of the Revolution, Mirabeau envisaged the creation of a constitutional monarchy not unlike that of Great Britain. In the long months during which the new constitution and the Declaration of Rights of Man and the Citizen were drafted, Mirabeau worked tirelessly to promote the king's executive powers, including his right to veto the Assembly's legislation and to declare war.

Mirabeau hoped his efforts on behalf of the monarchy would win him the office of prime minister, but that was denied him by a motion in November 1789 that excluded members of the Assembly from the cabinet. Despite that setback, Mirabeau went on to play a prominent role in the founding of the National Guard, and in the ongoing struggle over the relationship between the Catholic Church and the new nation. Those debates culminated in the Civil Constitution of the Clergy, which weakened the pope's hold over the French clergy, made clergymen civil servants of the nation, and nationalized church land.

Mirabeau's attachment to the monarchy led him to enter into clandestine relations with the court, and in May 1790 the king began secretly paying him for advice on political matters. As the Revolution radicalized, Mirabeau's moderate leanings and closeness to the court brought him under increasing criticism. His last major political role in the Revolution was as president of the National Assembly, which he held from January 30, 1791. Plagued by failing health,

often attributed to his overindulgent youth, Mirabeau died on April 2, 1791. He was honored with burial at the Pantheon, but his remains were removed and his memory disgraced when documentary evidence proved he had secretly been in the pay of the royal regime.

Modernismo

Roxanne Schroeder-Arce

Modernismo is a Spanish-language literary movement which spanned the late nineteenth to early twentieth centuries and transformed poetic expression by opponents of despotism and colonialism. Originated by Nicaraguan poet Rubén Darío, the movement stemmed from a desire to break away from the conservative structures and literary influences of the French Symbolists, the Parnassians, and even the Catholic Church, and advanced an idea of poetry rooted in the material world. The poets who formed part of the Modernismo movement in Spain and Latin America opposed autocratic rule and advocated liberal political ideals. In Latin America, José Martí, the late nineteenth-century Cuban revolutionary leader, was among the first leading Modernismo poets, whose ideas of freedom and justice are clearly found in his writings.

The term "modernista" relates mostly to Spanish and Latin American poetry and prose authors whose work can be characterized by the use of free verse, metaphor, and imagery. The Modernismo movement freed authors, as they began to write with more liberty in style and content. Speaking of one of Darío's first works, *Azul* (Blue), George W. Umphrey explains: "we

find flexibility, delicacy, fine shading, clarity and precision of expression; rhythmical flow of language, absence of provincialism and of all local color, characteristic of the prose Modernistas.”

Beyond its literary evolutions, Modernismo offered great promise for social and political change. Guillermo Díaz-Plaja (1965) states that Modernismo works offered “more than a subject-matter of swans and of princesses.” One of the most radical of the Modernismo movement was Argentinean poet Leopoldo Lugones, who has been referred to as anarchist, socialist, and fascist.

Although the Modernismo movement ended in the early twentieth century, its influences can be recognized in Latin American poetry and prose far beyond that time. Gwen Kirkpatrick (1989) views Modernismo as having evolved into a wide variety of genres and experimental methods that are a valuable contribution to modern poetry. While Modernismo is most widely recognized in the literary context, the term has also been used to refer to Latin American visual art. Jacqueline Barnitz (2001) uses the term as a form of symbolism and implies that the label can also refer to a Spanish and Latin American form.

Mondlane, Eduardo Chivambo (1920–1969)

Justin Corfield

The “father of the Mozambican nationalist struggle,” Eduardo Mondlane gave up an academic

career in the United States to help with the formation of the Mozambican Liberation Front (Frente de Libertação de Moçambique, FRELIMO), but was assassinated as the nationalist war in Mozambique intensified.

Eduardo Chivambo Mondlane was born on June 20, 1920, the fourth of 16 sons of a chief-tain of the Tsonga tribe in Portuguese East Africa. Mondlane worked as a shepherd looking after the family cattle and other livestock until about the age of 10 or 12, and attended a few local primary schools. He then went to a Swiss Presbyterian missionary school, where he quickly gained the attention of a Swiss missionary. Mondlane was not allowed to attend secondary school in Mozambique, so the missionary and his family sent him to a church school at Lemana, Transvaal, South Africa, where he excelled academically. He attended the Jan Hofmeyer School of Social Work for a year, and four years later gained a scholarship to study at Witwatersrand University, Johannesburg in 1948. With apartheid measures brought into force, however, Mondlane was dismissed from its student body for being a “foreign national” after a year, and was forced to return to Lourenço Marques, the capital of Portuguese East Africa.

Back in Lourenço Marques, Mondlane was arrested and questioned over his political activities in South Africa, but released soon afterwards. He was then awarded a scholarship from the Phelps-Stokes Fund of New York to study in the United States; however, he decided to study at Lisbon University in Portugal, where he met with Agostinho Neto (1922–79) and other Portuguese African student activists. Mondlane was unnerved by the level of police surveillance in Lisbon and the discrimination against African students, and finally decided to take up the offer from the Phelps-Stokes Fund to go to the United States. In 1951 Mondlane, aged 31, enrolled at Oberlin College in Oberlin, Ohio (United States), where three years later he graduated with a degree in anthropology and sociology. While there he became keenly interested in basketball and football, and attended conservatory concerts. He then moved to Northwestern University in Evanston, Illinois, where he completed his MA in sociology. He continued his studies there, and during this period married Janet Rae Johnson, an American from Indiana, with whom he eventually had three children. After leaving Northwestern University, Mondlane spent

a year researching at Harvard University, where he completed his doctorate.

In 1957 Mondlane was appointed as a research officer in the Trusteeship Department of the United Nations, which allowed him to visit many parts of Africa to research the social and political changes in trust territories. When he visited Mozambique in 1961, he was greeted by thousands of Mozambicans who saw him as a possible leader of the nationalist movement; however, as UN officials were not allowed to engage in political activity, he resigned his position with the UN and accepted a position at Syracuse University in New York, where he helped with the development of their East African Studies Program. Mondlane admired the passive resistance of Mahatma Gandhi and Martin Luther King, but realized that the only way the Portuguese would leave Mozambique would be through armed struggle.

In 1962, Mondlane was elected the first president of FRELIMO with the initial goal of uniting small nationalist groups. Some were worried about Mondlane's time in the United States, but others saw his political background as an asset that challenged the traditionalists who relied on tribal loyalties. In the following year he established a FRELIMO office in Dar-es-Salaam, Tanzania, and resigned from his professorship at Syracuse University. Mondlane used his contacts in academia to garner support from the English-speaking world and wrote extensively on the Mozambican nationalist movement. Gaining assistance from some western sources as well as the Soviet Union, Mondlane started to wage a guerilla war against the Portuguese.

In 1968 FRELIMO managed to hold its Second Congress in a liberated area of Mozambique, and Mondlane was reelected as its president. The following year, Portuguese agents from Gladio, a secret NATO operation, mailed Mondlane a parcel bomb, disguised as a book, which was sent to the FRELIMO secretariat in Dar-es-Salaam. Mondlane was killed in the resulting explosion on February 3, 1969. A state funeral was organized in Tanzania by Julius Nyerere, a longtime supporter of FRELIMO. Mondlane was replaced as commander of FRELIMO by Samora Machel. Mozambique achieved independence in 1975, and soon after the University of Lourenço Marques was renamed the Eduardo Mondlane University, to honor Mondlane's commitment to the nationalist cause.

Mondragón Collective

Heather Squire

The Mondragón Cooperative Corporation (MCC) is the largest worker-owned and controlled cooperative in the world, and the seventh largest corporation in Spain. Originally started as a 24-member worker-owned and controlled factory in the Basque region of Spain, MCC has grown to encompass more than 80,000 workers in 86 cooperatives throughout the country, 44 educational institutions, various consumer, service, and agricultural cooperatives, and a credit union, with well over a billion dollars in assets. The profitability, growth, and innovative management style of the MCC has drawn researchers from both the business and social science fields. At the same time, students of anarchism, mutualism, and workplace democracy continue to be impressed by it, albeit critically, as what Benello (1996) calls “an example of liberatory organization which, like its predecessors in the Spanish Civil War, has achieved success on a scale unequaled in any other part of the world.”

MCC was founded by José María Arizmendiarieta, a young Catholic priest who came to Mondragón, a city in the Guipuzkoa province near Bilbao, Spain, in 1941 to support young parishioners suffering from the social and economic consequences of the Spanish Civil War (1936–9). In 1943, Father Arizmendiarieta started the Professional School (later called Mondragón Unibersitatea), the first graduates of which went on to form Talleres Ulgor (now called Fagor Electrodomésticos), a small worker-

owned factory. Over the next 15 years, Talleres Ulgor grew and more cooperatives were developed by graduates of the Professional School, who were educated in both technical skills and the values of solidarity and communitarianism (rooted in a progressive Catholicism). In 1959, Father Arizmendiarieta proposed creating a financial institution to fund and research the creation of new cooperatives; this became the credit union Caja Laboral Popular (CLP), which also functioned as the central node of all of the cooperatives. By the end of 1970, nearly 9,000 people were employed by Ulgor and the associated/spin-off cooperatives, several of which merged to form more sustainable cooperatives (such as the Eroski grocery store). Lagun-Aro was also created to guarantee members social security benefits in this early stage.

The first-degree (manufacturing and industrial) and second-degree (services) cooperatives continued to diversify and grow, finally coming together as the legal entity of MCC in the 1980s. While their organizational model has shifted toward what the MCC considers “a more business-like and less sociological approach,” they have maintained their commitment to ten basic principles: open membership, democratic organization, worker sovereignty, instrumental or subordinate nature of capital, participation in management, wage solidarity, cooperation between cooperatives, social transformation, universal nature, and education. Additionally, MCC members are paid through a system of internal accounting (through the CLP) whereby 70 percent of the profit brought in by a particular cooperative is distributed to individual accounts, and the remaining 30 percent goes into a common capital account for expansion, as well as to the community; a 1 to 6 wage differential was set between the highest- and lowest-paid workers; and each new member is obligated to pay a \$3,000 membership fee and remain on probation for their first year (to develop technical as well as management skills). Today the MCC continues to spread member cooperatives throughout Spain, as well as to other parts of the world, opening an average of four new cooperatives a year at a higher level of productivity than most capitalist factories, and creating thousands of new jobs.

In spite of its commitment to the sovereignty of labor and economic success, the MCC has been criticized on a number of points. As Cheney (2002) argues, high rates of growth, bureau-

cratization, and innovation at MCC have undermined some of its democratic underpinnings and replaced it with a technocratic system of management similar to that of a capitalist corporation. More pointedly, Kasmir (1996) contends that the MCC is conspicuously capitalistic, using a cooperative management model to undermine labor unions and working-class solidarity. Other critiques include its focus on export-oriented production, lack of commitment to exporting its cooperative system among the overseas factories it creates, the increase in wage differential (from 1 to 3 initially to 1 to 6 currently), and the lack of bottom-up participation in the election of the top management. While these criticisms may be valid, it has been argued that these features and pragmatic shifts of the MCC were the reason for its spectacular growth, and not its commitment to communitarianism or democracy – which are viewed as aged byproducts of Arizmendiarieta’s egalitarian Catholic ethos.

Montesquieu, Baron de (1689–1755)

Yves Laberge

Charles-Louis de Secondat, Baron de La Brède et de Montesquieu was a prolific French author whose writings helped to spark the great

ideological revolution known as the French Enlightenment. Montesquieu's fame as a *philosophe* rests above all on two important books, *Lettres persanes* (*Persian Letters*, 1721) and *De L'esprit des lois* (*The Spirit of the Laws*, 1748). The latter is recognized as one of the most influential works of modern political thought for having articulated the theory of separation of governmental powers.

Montesquieu was born into a wealthy family of wine producers at the Château de la Brède, not far from Bordeaux, in 1689. After studying at the Catholic College of Juilly, he married Jeanne de Latrigue, a Calvinist. Shortly thereafter, he inherited a fortune upon the death of his uncle, together with the title Baron de Montesquieu and Président à Mortier in the Parliament of Bordeaux.

Montesquieu achieved literary success with his *Persian Letters*, a satire based on the invented correspondence of two Persian observers commenting on the absurdities of everyday life in France in the early eighteenth century. Those observations, purportedly from an external perspective, were in fact a subtle critique of the Catholic religion and the French monarchy, among other things. Following the publication of *Persian Letters* in 1721, he wrote *Considerations on the Causes of the Grandeur and Decadence of the Romans* (1734). In the interim, in 1728, his status as a man of letters was confirmed by membership in the Académie française.

Montesquieu's *The Spirit of the Laws* was originally published anonymously after 15 years of research, traveling, and writing. Although it met with great opposition in France from both supporters and opponents of the Old Regime, *Spirit of the Laws* received high praise elsewhere in Europe, particularly in England. Montesquieu promoted a natural religion without any church. Consequently, the Catholic Church placed the book, along with many of Montesquieu's other works, on its Index of Forbidden Books.

Montesquieu participated in the great literary project of the Enlightenment, the *Encyclopédie* edited by Denis Diderot and Jean d'Alembert, by contributing its entry on Taste. His political writings were informed by extensive travels throughout Europe, which took him to Hungary, Austria, Italy, and England. During his later years he was plagued by poor eyesight, eventually becoming blind. He died from a fever in 1755.

Montesquieu believed that the best form of government was a monarchy based on the British

model. Although he would never have thought of himself as a political revolutionary in any sense, Montesquieu's political views in fact contained revolutionary implications, because in France the transition to constitutional monarchy "on the British model" would require a profound social upheaval.

Montesquieu's legacy is enduring. His political ideas influenced the American Revolution as the source from which the framers of the US Constitution derived the division of government into three separate branches. *The Spirit of the Laws* continues to be studied in political science and history of law courses, and numerous twentieth-century authors, from sociologist Raymond Aron to philosopher Louis Althusser, expressed their admiration for his writings. Emile Durkheim credited Montesquieu (along with Jean-Jacques Rousseau) with being the founder of sociology.

Montessori, Maria (1870–1952)

Suzanne Stewart-Steinberg

In the late nineteenth century Maria Montessori was one of Italy's foremost feminist activists and theorists. She became an international celebrity after 1907 when she opened her first "Children's Home" in Rome and subsequently developed her "scientific pedagogy" for the instruction of children between the ages of 3 and 6. This revolutionary pedagogical method was spelled out systematically in 1909 in her *Method* and was predicated on the idea that 3-year-old working-class children not only could but indeed did – under the dictate of an inner compulsion –

become literate and calculating or computing subjects, capable of taking on the requirements and demands of modern, urban culture. Children arrived to this position with the aid of Montessori's didactic apparatus with remarkable speed. Montessori referred to this learning experience as an "explosion," a choice of language that links her to avant-garde circles in Rome, including the futurists.

Up until she became immersed in the struggle for a reformed pedagogy, Montessori tirelessly fought for Italian women's right to vote (something not granted them until 1948) and to gain access to institutions of higher learning. She herself was the second woman to earn a medical degree in 1896, with a specialization in psychiatry. Montessori's feminism distinguished itself by its particular blend of scientific knowledge and social philanthropy. Her "practical feminism" or "philanthropy as politics" gave rise to a movement in Italy that combined the scientific training of women with well-entrenched Catholic activity in the social sphere. For Montessori, women's organizations were to valorize positively traditional feminine characteristics; they were to involve themselves in matters of education, hygiene, and the moralization of the family. It was on the basis of such a platform that Montessori represented the cause of women both in Italy and abroad.

While Montessori herself would eventually refocus her efforts in the direction of educational reforms for handicapped and then all elementary school children, her impact on Italian feminism was profound, to the extent that it updated Catholicism for modern life and helped the Church to return as a major political player through its alignment with women's social activism.

Moplah Revolts

Kunal Chattopadhyay

The Moplahs or Mappilas are located in Malabar, the northern part of present-day Kerala. Their ancestry is often traced to Arabs and converts to Islam among natives of Malabar. Islam came to this region through trade and pilgrimage, and was well established by the ninth century. Nineteenth-century British colonial rule identified them as "fanatics." Moplahs formed a major portion of the *Kudiyyan* (landless farmer) population in Ernaad and Walluvanad *taluks* (an administrative unit beneath a district) where the landlords were mainly upper-caste Hindus.

The British conquest of Malabar in 1792 was followed by a land settlement whereby one category of superior right holders, the *jenmis*, were recognized as absolute proprietors in land. This worked to the advantage of Brahmanas and Nayars, and against the interests of the Moplahs. As soon as the *jenmis*, backed by the police, the law courts, and revenue officials, tightened their grip on the subordinate classes, the Moplah peasantry in turn started rebelling (from 1836), with a religious dimension. Sometimes attacks on the *jenmi* or his officials would be accompanied by the burning or defilement of temples: 22 similar risings continued until 1854. The revolt of 1849 included grievances about how the government had encroached on *waqf* (Islamic tax-free) land as well.

The *Thangals* (Moplah priests), invested with powers to protect the collective interests of the community, sought to increase the number of Moplahs through proselytization, as a means of self-defense. This was particularly effective among the Hindu slave caste, the *Cherumars*, who were shown a life of upward mobility. Forms of resistance included the dropping of deferential forms of speaking, refusal to eat the left-over food of the Hindu upper castes, and refusal to work on Fridays (the Muslim weekly day of prayer).

In 1875 the government of Madras appointed William Logan to inquire into land rights. Logan's massive work shows that of 2,200 petitions, 1,876 came from Ernaad, Walluvanad, Palghat, and Ponnai; 2,608 of the 4,021 petitioners were Moplahs. His plea for tenurial security not only of the intermediate *kanamdars* but also those below them led to piecemeal legislation providing

compensation for eviction. No comprehensive tenancy legislation was passed until 1929.

In 1896 a large-scale Moplah peasant uprising occurred when a band of about twenty Moplahs attacked and killed Hindu landlords, looted their houses, forcibly converted Hindus to Islam, and burned temples. They took their last stand in a captured temple, where they fought to the death.

With further pressure on land, through evictions, rack-renting, excessive lease renewal fees, and poor compensation between 1910 and 1921, a tenancy agitation developed in the second decade of the twentieth century. This was followed by the *Khilafat* movement in 1920–1 demanding restoration of the powers of the *Khalifa*. The joint Congress-Khilafat movement attracted a large number of Moplahs. One of the main leaders of the Khilafat agitation in Malabar was Ali Musaliar, who preached “*Khilafat*, tenancy, and *Smaraj*” as the solution for the problems of the Moplah peasantry. There were also more militant leaders, like Kunju Muhammad Haji, who had been implicated in a number of earlier conflicts. After the revolt broke out, Congress-Khilafat leaders K. P. Kesava Menon, K. Madhavan Nair, E. Moidu Moulavi, and Muhammad Abdul Rahman Sahib visited Pookotoor and Thirurangadi. On February 16, 1921 British police arrested Yakoob Hassan, Madhavan Nair, Gopala Menon, and Moitheen Koya, and clamped a curfew on Walluvanad and Ernaad *taluks*, leaving the campaign in the hands of local militant leaders.

In August 1921 a full-scale rebellion broke out when police surrounded Mamparam mosque and houses of many Khilafat workers, raided the mosque and Khilafat committee office, and arrested three people. The initial hostility of the Moplahs was clearly directed at the police and the government, along with the *jennis*. Railway and telegraph lines were cut; post offices, banks, and police stations were either looted or burned. Initially, the aim was to establish a stronghold and demolish all symbols of British rule. By the end of August the interior of southern Malabar, excepting Palghat, was under the control of the rebels. A pitched battle was fought at Pookotoor on August 26, with over 250 rebels dying. There were attempts by leaders like Ali Musaliar to control instances of murder and loot. Musaliar surrendered on September 3, but the rebellion could not be stamped out till the end of 1921. More than 1,000 Moplahs were killed and more

than 14,000 were arrested during the revolt. Musaliar himself was subsequently hanged. A particularly notorious incident occurred on November 17, 1921, when around 200 prisoners were packed into a wagon that started from Tirur for Coimbatore. Prisoners began to suffocate and cry out even before the train started, and at Podanur, 64 of them were found dead, while more died soon after.

A degree of religious frenzy characterized the later part of the uprising, and what had been a peasant struggle against exploiters displayed anti-Hindu tendencies. But the first case of forcible conversion occurred on September 10, weeks after the rising, and the total number of conversions was not over 900. This number was small in comparison to the size of the Hindu population in the areas controlled by the rebels. Agrarian discontent and religious expression cannot be fully separated in the history of the revolt. Militant Islamic egalitarianism created Moplah solidarity, but at the same time it also created the potential for occasional anti-Hindu expressions.

Moraes, Irineu Luís de (1912–1994)

Lalo Watanabe Minto

Brazilian communist Irineu Luís de Moraes, better known as “Índio,” was one of the most

important militants of São Paulo's interior. His life was dedicated to organizing and defending the rural population. In the 1930s he joined the Brazilian Communist Party (PCB) and years later moved to Ribeirão Preto in order to establish the PCB in that region. In 1945 he organized the Peasant League of Dumont, the first in Brazil. At the end of the 1940s he had his first experience of armed struggle in the north of Paraná. Irineu sometimes disagreed with the direction taken by the PCB, complaining of its inadequate support of the agrarian question and its "distance" from people.

After the 1964 coup, Irineu was arrested many times. In 1969, while participating in Marighella's National Liberation Alliance, he was tortured almost to the point of death and abandoned in a train. Later, he was condemned to two years in prison. Liberated in 1974, he returned to PCB activities, finally leaving the party in 1986. The following year he entered the Workers' Party, and then the Communist Party of Brazil (PCdoB), which was a splinter group from the PCB.

Morais, Clodomir de (b. 1928)

Lalo Watanabe Minto

Brazilian communist militant Clodomir Santos de Moraes was born in Bahia. Throughout the 1950s and 1960s he was an important Peasant Leagues' leader and a Brazilian Communist Party (PCB) militant. In 1955, he was elected deputy in Pernambuco. As a member of a group that defended the centrality of the agrarian question, Moraes was expelled from the PCB

in 1962. His position in favor of armed struggle also led him to a rupture with Francisco Julião in 1962.

In 1963 Moraes supported the Leagues' transformation into an effective political organization that was able to oppose the reformist PCB. This took place in January 1964, but a military dictatorship obstructed its continuation. Moraes was arrested and tortured, and his political rights were suppressed. Years later he became UN counselor for Latin America on agrarian reform subjects, directing many projects for the International Labor Organization (ILO), the Food and Agriculture Organization (FAO), and the United Nations Conference on Trade and Development (UNCTAD). He was also a consultant for technical missions in several continents.

Morais earned his PhD at the University of Rostock (Germany) and wrote more than 20 books. His text on organization theory has been published in more than 300 editions in 43 countries, and his method of mass capacitation has influenced important movements such as the Brazilian Landless Workers' Movement (MST).

Morales, Evo (b. 1959)

Thomas Purcell

In Juan Evo Morales Ayma, a football-addicted Aymara Indian, the spirit of Che Guevara lives on. "Evo," as he is popularly known by his followers, embodies the fusion of ethnic and leftist politics. Born in 1959 near the tin-mining city of Oruro, high in the Bolivian Altiplano, Evo was one of seven siblings, but as is common among poor indigenous families, four died within a year of birth. Despite working from a very early age, Evo managed to get a formal education, organize football teams, and play the trumpet in the Royal Imperial Band, leaving school at the age of 17 to complete military service. In the wake of

widespread mine closures, economic depression, and the terrible drought on the Altiplano in 1980, Morales's family followed many in the migration to the more fertile Chapare lowlands. Here they became farmers, mainly of the coca leaf.

In 1981, after the brutal burning alive of a coca farmer, Evo declared "to fight tirelessly for the respect of human rights . . . for the free cultivation of the coca leaf . . . for the dignity of Bolivians and for our freedom" (Morales 2006). In this same year, under the umbrella of the *cocaleros'* (coca leaf growers') struggle, his political journey began. First he was secretary of sports in the coca union of San Francisco; then, in 1985, he was named general secretary of his union and in 1988 became executive secretary of the Tropical Federation (Federación del Tropic). During this time he experienced persecution, torture, and jail, coming close to death in 1989 after a severe beating from the UMOPAR (Rural Mobile Police Patrol Units) forces.

In 1995 Morales helped found the Political Tool for the Sovereignty of the Common People (IPSP), and in 1996 he was made president of the Coordinating Committee of the Six Federations of the Tropics of Cochabamba. Running in coalition with the United Left (IU), he was elected to the Bolivian Congress in 1997, receiving 70 percent of the vote from the provinces of Chapare and Carrasco de Cochabamba. In 1999, the IPSP transformed into the MAS (Movement Toward Socialism), achieving legal status in order to compete in local elections, eventually providing its new leader, Morales, the route to national politics.

Despite, or perhaps because of, his expulsion from Congress in 2002 (because he spoke outwardly against the US "war on drugs" and continued to support the coca farmers' right to self-defense, through force if necessary), MAS received 21 percent of the national presidential vote, becoming the biggest opposition party with clear majorities in indigenous strongholds. The wave of popular struggle against the government's energy policies culminated in the premature resignation of Sanchez de Lozada in 2005. This opened the door to the radical indigenous leader, and under the slogan "We are the People, We are MAS," Morales won the presidency with 53.7 percent of the vote. He has pursued policies of "no to the eradication of coca and yes to the nationalization of hydrocarbons."

However, in the context of imperialist pressures and heightened social tensions, the story of Bolivia's first indigenous president is far from over.

Morant Bay Rebellion: overview and assessment

Smithin Wilmot

The Morant Bay Rebellion of 1865 in Jamaica represented a clash between a decaying white plantocracy and the black freed people who were assertive of their new rights and opportunities in the post-slavery period from 1838. By 1865, several of black people's expectations and initiatives had been frustrated and undermined by strong continuities between the period of enslavement and the decades after emancipation. Whites maintained their near monopoly of the island's economic resources and dominated local political arrangements. Furthermore, the "aristocracy" of white skin buttressed their social privileges and the first generation of black adults in freedom was returned to dependence on the plantation and to a standard of living that was not far removed from their experiences of enslavement.

Nonetheless, the formal end of slavery was an event of major importance to the 311,070 enslaved people in Jamaica since it removed the most horrendous abuses of slavery and opened up the possibility of constructing new lives beyond the boundaries of exploitative plantation labor. For the first time in Jamaica's history, the mass of the people of African descent could attempt to direct their own life and to make choices that suited them.

The former enslaved in Jamaica responded in a variety of ways. In the first decade of freedom they constructed new settlements beyond the plantations, as well as churches and schools, often in partnership with the evangelical missionaries. These new communities and institutions revolved around the freed people's appetite for the acquisition of land, which was one of the most important badges of freedom as it facilitated varying degrees of autonomy and choice that were at the heart of their new status as free citizens. Also, since the island's politics was governed by a property franchise, land formed the basis of social power and influence, and the few freedmen who acquired land of sufficient value to qualify for the property franchise enthusiastically embraced this privilege of participating in politics, which was another important emblem of their newly acquired freedom.

For the majority of the freed people who lacked the means to buy land, the plantations remained their main source of livelihood. The new class of Jamaican workers were acutely conscious of their new status and their labor power and therefore demanded qualitative changes in their day-to-day work lives. They expected a new order of labor relations characterized by freedom of movement, just and equitable wages, and flexible labor arrangements, including undisturbed access to estate cottages and provision grounds (small plots for growing food) that they had used during their enslavement. Importantly, the freed women, who at emancipation made up the majority of field laborers in Jamaica, also expected to devote more of their time to their families and to involve themselves in provision growing and marketing, choosing to sell their labor to the plantations only when it suited their families' interests.

However, by the 1850s, the initial period of optimism among the former enslaved had significantly diminished. Deaths from cholera and smallpox in 1851 and 1852, respectively, left several families destitute. Moreover, the plantations, already in decline before emancipation because of high costs and outdated methods, were further undermined by Britain's new free trade policies that led to the closure of several estates, depressing wages and depriving laborers of steady employment. Despite the growing pool of landless and dependent laborers, the planters successfully expanded immigration schemes that were subsidized from the public purse, so much so that by the 1860s the planter class had largely

restored the command over labor it had initially lost after emancipation. The hardships of the people increased further in the first half of the 1860s, when the prices of imported staples soared during the American Civil War and protracted droughts followed by floods undercut local food production, increasing the state of desperation among the majority of people who were poor. As the social and economic crisis deepened, the local white and colored (of mixed European and African ancestry) political elite were more preoccupied with feuding over office and status than with providing relief for the poor, and the British governor, Edward Eyre, was as incompetent and inept as he was uncaring and insensitive to the people's sufferings.

Against this island-wide background of protracted hardships, over 400 men and women, freed people and their descendants, in the parish of St. Thomas-in-the-East, confronted by the partisan and oppressive administration of justice, exploitative working conditions, low and irregular wages, simmering disputes over access and ownership of lands, and the curtailment of their political rights, rebelled at Morant Bay on October 11, 1865. The leader of the rebellion was Paul Bogle, who was born into slavery in Jamaica sometime between 1815 and 1820. He, along with other black artisans and small farmers in the 1840s, had settled the hilly area in St. Thomas-in-the-East known as Stony Gut, bordering Spring Garden and Middleton sugar estates and about three miles from Morant Bay, the capital town of the parish.

Literate and articulate, Paul Bogle occupied an important position among the freed people in St. Thomas-in-the-East for he was among the less than 1 percent of the population in the parish who qualified for the restrictive male property franchise. In hotly contested elections for the island's Assembly in 1860, 1862, and 1863, Bogle supported George William Gordon, a radical free colored who battled against the political hegemony of the deeply entrenched plantocracy in the parish. Indeed, by 1862, Bogle emerged as one of the chief political organizers for Gordon, and it was largely because of Bogle's mobilization of the small freeholders of Stony Gut and other post-slavery settlements in the parish that in 1863 Gordon won seats to the Jamaica Assembly in Spanish Town and to the Vestry, the unit of local government that was dominated by the local white and magistracy

and which was meeting in Morant Bay on the day of the rebellion. Paul Bogle remained steadfast in his support of Gordon, despite the political machinations of the planters in the parish and of Governor Eyre, whom Gordon frequently castigated for his incompetence and his neglect of the people's pleas for help as their hardships and destitution increased. Indeed, in early 1865, the relationship between the politically embattled Gordon and Paul Bogle was further cemented when Bogle was ordained a deacon by Gordon in the mainly black Native Baptist Church, which had a more radical agenda on social issues than the European-directed religious groups in the island.

In the two months leading up to the Morant Bay Rebellion in 1865, Bogle had organized meetings of laborers and small farmers, men and women, through the network of Native Baptist chapels and meeting houses in St. Thomas-in-the-East. At these gatherings two burning issues that affected the former enslaved population were highlighted: access to land, which would have provided autonomy from the estates that paid low and irregular wages, and the chronic injustice in the lower courts, where magistrates discriminated against the blacks. In August 1865, Paul Bogle addressed a public meeting in Morant Bay organized by Gordon as one of a series of meetings that were held throughout the island to underscore the people's social and economic hardships and the denial of their political rights. Further, the meetings also protested against the insensitivity of the callous political administration, which blamed the people's poverty on their supposed indolence and mocked their requests for access to unused lands held by the crown. Indeed, when Paul Bogle led a deputation of small farmers from the Morant Bay meeting to Spanish Town, the island's political capital, a distance of nearly 40 miles, to present their grievances, Governor Eyre refused to meet them.

Shortly afterwards, in September 1865, the planters in St. Thomas-in-the-East secured the transfer from the parish of Thomas Witter Jackson, a colored magistrate, whose presence on the bench had mitigated the partisan administration of the law by magistrates who were planters. When on October 7, 1865 Lewis Miller, Paul Bogle's cousin and co-religionist, was brought before the court in Morant Bay for trespassing on property he thought he owned, Bogle led his followers into Morant Bay in a show

of solidarity for Miller. Before Miller's case was tried, Bogle and others prevented the police from arresting another man whose comments against the ruling of the magistrates in another case had interrupted the court.

Arising from that incident, the police went to Stony Gut on October 9 with a warrant for Bogle's arrest, but they were resisted by his supporters who had gathered there to protect him. On October 11, Paul Bogle led over 400 men and women into Morant Bay, where they clashed with the militia who were guarding the courthouse where the magistrates were meeting. Eight of Bogle's followers were shot by the militia, who then took refuge in the courthouse. Bogle ordered the building to be set on fire to flush out the militia and magistrates: 18 were killed, including Baron Maximilian von Ketelholdt, the chief magistrate of the parish, George William Gordon's implacable political opponent and a personal friend of Governor Eyre.

Governor Eyre proclaimed martial law and the rebellion was swiftly and brutally suppressed. Over 400 were hanged, including Bogle and several of his close associates, as well as Gordon who, despite any dispassionate evidence linking him with either the planning or execution of the rebellion, was accused by Governor Eyre of promoting political discord in St. Thomas-in-the-East. Accordingly, Eyre arranged for Gordon's arrest in Kingston, which was outside the area of martial law, and transported him to Morant Bay, where he was summarily tried, found guilty of high treason, and hanged on October 23, 1865. Martial law continued until November 13, 1865, by which time several hundreds were indiscriminately whipped and many villages were burned, driving home Eyre's intent to intimidate the blacks against any future attempt to raise their hands against white authority.

Significantly, in the wake of the rebellion, the majority of the Jamaican Assembly, panicked by paranoid fears of an island-wide rebellion, voted to surrender Jamaica's 200-year-old constitution, which had a modicum of representation, thereby opening the way for the introduction of crown colony government in 1866 with its authoritarian political arrangements. Essentially, the new constitution slammed the door on the small openings in representative politics which freed men like Paul Bogle had created, thereby buttressing the white planters' social and economic

influence against further inroads that emancipation had wrought.

Moravian Brothers

Rady Roldan-Figueroa

The Moravians can be traced back to the United Brethren (*Unitas Fratrum*), a branch of the fifteenth-century followers of John Huss. After the death of the Bohemian reformer on July 6, 1415, the Hussites divided into two main factions. The aristocratic Utraquists had their seat in

Prague. They derived their name from the practice of serving communion in both bread and wine (*sub utraque specie*). The radical and more democratic faction was known as the Taborites. Although these factions were divided by bitter strife, they formed a common military front under the leadership of John Zizka.

In 1433 the Council of Basel granted the main claims of the Utraquists, effectively breaking apart the fragile Hussite alliance. The next year the Taborites were devastated by the Utraquists at the battle of Lipan. The United Brethren emerged in part from the ashes of the Taborites. Yet they represented a combination that included Utraquist and even Waldensian elements. They took their inspiration from the New Testament and the writings of Peter Chelcický, especially his *Net of the Faith* (1440). Their main aspiration was to emulate early Christian egalitarianism. They also discarded the violence of the Taborites and they themselves were pacifistic.

In 1627, during the course of the Thirty Years' War, large numbers of United Brethren were forced to leave Bohemia or face recatholicization. John Amos Comenius was the leading figure of the movement during this time of trouble. Comenius lived in exile for most of his life after 1628. He became an important reformer in the area of education and the last presiding bishop of the United Brethren. In 1648 the Peace of Westphalia brought the institutional apparatus of the Bohemian United Brethren to its demise, although their faith remained vibrant. By the eighteenth century the explosion of Lutheran Pietism made the German lands a fertile ground for the reemergence of the United Brethren. In 1722 a group of Brethren settled in the lands of Count Nikolaus Luwig von Zinzendorf in Saxony. There they founded a village called Herrnhut, "the Watch of the Lord."

Under the leadership of David Nitschmann, who in 1735 became the first bishop of the Renewed Moravian Church, Herrnhut became the center of a significant missionary movement. Inspired on the heritage of figures like Comenius, the Moravians opened schools where possible throughout Europe, spreading in this way the primitive values and ideas of the Bohemian United Brethren. Prominent anarchist figures were inspired if not directly touched by the Moravians: Kropotkin admired the United Brethren, Leo Tolstoy read the writings of Chelcický, and Jacques Elisée Reclus attended a Moravian school.

Moro national liberation

Herbert Docena

Moro nationalism refers to the ideology or sentiment held by people who self-consciously and deliberately identify themselves as “Moros” as opposed to “Filipinos,” believe in and appeal to a history and culture distinct from that of the rest of the Philippines, and consequently demand independence or greater autonomy from the Philippine state.

“Moro” identity was initially articulated by and designated for Muslims, who currently make up about 4 percent of the Philippine population, most of them in what is now the southwestern Philippines. Coming from three major and ten minor ethnolinguistic groups, they invoke Islam as the unifying collective marker to distinguish themselves from “Filipinos,” where a majority of the population is Christian.

Moro nationalism has been embraced and advanced by a people who believe themselves to have been illegally and unjustly incorporated into what became the Philippines without their consent, whose lands and resources have been encroached upon and exploited by migrants, multinational corporations, and other outsiders as sponsored or allowed by the Philippine state, whose culture and traditions have been threatened by this state’s assimilationist and centralizing policies, and who have become marginalized and dispossessed minorities within the Philippines and within the territory they consider to be their homeland.

The Colonial Legacy

Prior to the formation and consolidation of the Philippines, the area that would eventually encom-

pass its territory included various communities and settlements of diverse cultures and social and political organizations that were culturally and economically part of precolonial Southeast Asia (Abinales & Amoroso 2005). Among these were the sultanates in Mindanao and the Sulu archipelago whose peoples, as in other areas elsewhere in the region, had earlier been converted to Islam.

When the Spanish colonizers arrived in the sixteenth century, they managed to consolidate their rule and convert locals to Christianity only in the northern and central parts of what would become the Philippines. For more than 300 years, the communities in the southern areas successfully managed to fend off the Spanish, maintain their sovereignty, their cultural and religious practices, and their control over their lands and resources (Majul 1999; Abinales & Amoroso 2005). Moro nationalists appeal to their history and see their modern struggle for independence as a continuation of this resistance and as proof of their historic difference from the Christianized Filipinos from the north. It has been argued, however, that those who fought the Spanish in various instances during that period did not as of yet conceive of themselves as belonging to one collective political entity. Though most professed Islam, the Muslims at that time were divided by ethnolinguistic and political divisions and were oftentimes in bitter internecine conflict (McKenna 2000). A “Moro nation” had not yet emerged.

It was only at the twilight of Spanish colonization in the late nineteenth century that the Spanish managed to make inroads into the unpacified areas in the south. By the time Filipino revolutionaries in the north were on the verge of expelling them, however, the Spanish still did not exercise as much sovereignty in the south as they had in the north. Despite this, when the Spanish sold the Philippines to the United States for \$20 million in 1897, they also handed over control over the southern areas to the Americans. Filipinos, having just declared independence from Spain and formed a republic, resisted the new colonizers but were vanquished. Had Filipino revolutionaries and Muslims agreed to form a common front against Spain and the Americans – as had in fact been proposed by the former but rejected by Muslim leaders (Majul 1999) – and had they succeeded in defeating the colonizers, the Filipinos and

the Muslims could conceivably have come to an arrangement different from that ultimately decided by the new colonizers.

After pacifying the country, the Americans proceeded to establish a colonial state, administered with Filipinos in powerful but subordinate roles. For a time, the Americans governed the Muslims separately from those in the north; some even entertained the idea of separating the provinces inhabited by Muslims from the rest of the colony. American settlers who had begun cultivating land in these areas supported such separation in the belief that the south should be “white man’s country” (Abinales 2000). Colonial rulers encouraged the development of a collective Muslim identity and it was in this effort, it has been argued, that the beginnings of a Moro nationalism that transcended ethno-linguistic barriers first took root (McKenna 2000). Filipinos in power, however, insisted on integrating the Muslims within the Philippines (Abinales 2000).

Muslims, for their part, resisted the Americans sporadically if fiercely; hobbled and internally divided under occupation, Muslim leaders eventually came to an accommodation with American rule. Encouraged by the Americans’ apparent openness to the idea of separation and increasingly self-conscious of the pan-Muslim identity that the Americans themselves inculcated, Muslims accepted the new order on the assurance – or in the hope – that the Americans would not force them to be part of a new Philippine state to which they promised to give independence (Abinales 2000). In various instances, some Muslim leaders reiterated their demand to have their own state, or else to be part of US territory rather than of the Philippines (Che Man 1990). They were rejected. As Americans and Filipinos decided their fate, the Muslims were not included in the discussion and decision-making (Abinales 2000). Ultimately, the Americans, with the approval of Filipinos and a few Muslim leaders in power, decided to include the Muslims and their territories in the newly independent Philippine state that came into being in 1946.

Dispossession

Claiming all unregistered lands as subject to the ownership and control of the state, the Philippine government continued the process started during colonization of parcelling out

lands in the south to foreign and Filipino-owned corporations as well as to migrants from the north. As much as 90 percent of all lands in the south, considered “ancestral domains” by Muslims and other indigenous people who lived in the area, was considered “public” and, therefore, up to the state to allocate as it deemed fit (Che Man 1990; May 1992; Tan 1995; Abinales 2000; Ahmad 2000a; Gutierrez & Borras 2004).

By that time, the Filipino elites who dominated the state, many of them coming from powerful landed families, were facing growing unrest from landless peasants in the north. An uprising fueled by rural misery and discontent was gaining strength, posing the most serious internal challenge to the political order. Faced with this explosive situation, the Philippine government accelerated resettlement initiatives and enacted laws that offered land in the south to settlers as well as to northern and foreign business interests. Seen not only as a solution to the problem of landlessness in the north, the resettlement programs were also conceived as a way to “civilize” the Muslims and the indigenous people in the south (May 1992).

Tens of thousands of poor, landless, mostly Christian families took the offer, driven less by government prodding than by desperation. The middle classes and bureaucrats looking for opportunities also joined. So did wealthy elites and capitalists, lured by the untapped agricultural, timber, and mining wealth (Tan 1995; Gutierrez & Borras 2004). By the early 1960s, as many as 3,200 migrants were arriving in Mindanao each week, dramatically shifting the demographic balance. In Koronadal Valley, one area that saw the biggest influx of migrants, to cite an example, the Christian population rose from 18 in 1939 to 30,000 in 1960 (May 1992). It was the largest movement of people in Philippine history, believed to be the most important social change in the country after the war (Abinales 2000).

In the ensuing competition for limited land, the laws that were supposed to govern the registration of lands worked against the Muslims. Imposed by the north and implemented by bureaucrats from the north, they served as instruments to perpetrate and legitimize what a 1963 Philippine Senate report described as “landgrabbing” (Tan 1995). Under one law, for example, settlers were allowed to apply for

up to 24 hectares of land while non-Christians could apply for only 10. In other instances, settlers were reserved 16 hectares, while the locals were given only 8 (Tan 1995; Gutierrez & Borrás 2004). Huge tracts of lands had earlier during American colonization been given to corporations and individuals for plantations of export crops such as pineapple, rubber, and coconut, for logging, and for mining; more were awarded after independence (Che Man 1990).

Uninformed of the intricacies of the laws issued by the north, impeded by the tedious bureaucratic procedures, unable to pay fees, or in defiance of what could have been seen as foreign, illegitimate edicts from an unrecognized authority, Muslims were, for their part, unable or unwilling to register for land. When land disputes arose, bureaucrats in many cases were at best unresponsive to the Muslims or were inclined to rule in favor of settlers. The best lands often ended up in the hands of Christian settlers (McKenna 2000: 117); Muslim plots were small (Che Man 1990). By 1972, it is estimated that only 30 percent of the Muslims had land registered in their name, reduced to 17 percent by 1982 (Tan 1995). But it was not the landless settlers who took most of the lands: like the Muslims and the indigenous people, many Christian settlers remained poor and landless (Tadem 1992; Ahmad 2000a; Abinales 2000). By the late 1980s, it was the export-oriented plantations, multinational corporations, and logging concessionaires that controlled more than half of Mindanao's lands (cited in Collier 1992). Lands owned by wealthy families became the basis for the rise of new, powerful political families.

While the opening of the south provided a safety valve that undermined the burgeoning communist movement (Abinales 2000), allowed the landowning elites in the north to hold on to their lands, and opened up economic opportunities for capitalists, the Muslims and the indigenous people were not only dispossessed of their ancestral domain, they also became a minority in what they considered their homeland (Gutierrez & Borrás 2004). In 1918, Muslims accounted for 49 percent of the population in Mindanao. By 1970, they stood at only 19 percent of the count (Tan 1995). That they have become a minority in their own claimed homeland has been described as a kind of "low-intensity ethnic cleansing" (Gutierrez 2000).

Marginalization

Relative to its land area and population, a disproportionate portion of the income and wealth derived from natural resources contributing to the Philippine economy came from the south: At one point, it was estimated that Mindanao provided half of the resources being exported by the country, with 14 out of the top 20 dollar-earning commodities coming from the region. Coconut products, for example, were at one point the Philippines' most important export commodity; half of the total land area planted to them were to be found in Mindanao. Over half of commercial forest lands from which timber, another important commodity, comes, were likewise in the region. The seas in the south accounted for an estimated half of the country's total commercial catch. As much as 90 percent of total fruit exports were also from the south (Tadem 1992; Tan 1995; Ahmad 2000a).

As shown by economic and social indicators that have consistently rated the provinces in the south, especially those where Muslims account for the majority, as among the poorest and most miserable, the wealth from the extracted resources did not accrue to the Muslims (Tadem 1992). Profits from businesses in the region flowed back to capitalists from outside; what Muslims as well as Christian settlers earned came from compensation for their labor (Tan 1995). At the same time, with the commons such as the lands as well as the seas increasingly enclosed, Muslims and others lost access to resources for their subsistence. A 1985 study showed that the incidence of poverty was higher in the south than the national average (Tadem 1992). Recent measures show not only that Muslims are among the poorest in the country, they also have the shortest life expectancy, the lowest adult literacy rates, and the least access to education, health, electricity, transportation, water, and sanitation (Gutierrez & Borrás 2004).

In its effort to construct a Filipino nation, the Philippine state, with the help of Filipino nationalists, implemented policies that were seen as undermining Muslim cultural values, institutions, and practices (Brown 1988). A national language, based on one of the languages in the north, was officially adopted and used as the medium of instruction in public schools all over the country, including in the Muslim regions. The educational system was thought of as having

been designed to bring children away from Islam (Majul 1985). Under a political system which formally adopted secularism, or the separation of religion from the state, Christian missionaries were allowed to establish schools and churches in the south but the state itself did not deliberately set out to convert Muslims. Official Philippine history and discourse were seen as prioritizing those of the north while marginalizing that of Muslims. Northern Filipino revolutionaries, for instance, were glorified in the official version of the Filipino struggle against Spanish and American colonialism, even as the Moros' protracted and mostly successful resistance went unrecognized. Though the Philippines itself officially invoked communal differences as an intrinsic part of Filipino nationhood (Abinales 2000) and its policies affected all the ethnolinguistic groups, and even though the state's cultural policies were arguably less aggressive and assimilationist than those adopted by other states, Muslims perceived themselves as being culturally under siege.

Armed Resistance

While Muslim grievances had been welling up for some time, it was not until the late 1960s that Moro nationalism, as a self-conscious collective identity with a mass constituency, emerged and armed resistance against the state began.

By then, land disputes in the fast-filling frontier were escalating (Abinales & Amoroso 2005). Christian gangs attacked and killed Muslim farmers and set their homes on fire in various incidents. Muslims struck back. The clashes were perceived as ethnic conflicts and consequently heightened communal divisions. A review of the cases of violence, however, showed that they were mostly class-based: between ordinary Christian settlers and Muslim elites, ordinary Muslims against Christian elites, or elites of either religion set upon each other (McKenna 2000). The Philippine military and police as well as politicians from among the settlers, however, were perceived as being on the side of the Christians and were accused of organizing gangs and militias that committed atrocities against Muslims (Che Man 1990; May 1992; Ahmad 2000b).

In this period, a new generation of young educated Muslims had begun articulating ideas of Moro nationhood and self-determination.

Immersed in Manila, where nationalism and left-wing ideas were by then becoming more and more influential, or in Cairo, where Arab nationalism, communism, and Islamism competed for influence, the young Moros put forth radical proposals departing from those advocated by traditional Muslim elites: neither compromise with the Philippine state nor a return to the old aristocratic sultanates. Castigating the traditional elites for their cooperation with the Philippine state, this new generation of self-professed Moros gained growing influence and an expanding following (Gutierrez 2000).

It happened that around this time as well, attempts by the Philippine state to centralize power reached their apogee in the dictatorship of President Ferdinand Marcos. In seeking to concentrate power in the state, Marcos's authoritarianism undermined the traditional Muslim elites and local strongmen on whom the state had relied to control the south. Having come to an accommodation with the state in exchange for the political and economic benefits their status within it accorded them, these elites' and strongmen's authority was undermined and, consequently, their capacity to keep the lid on Muslim discontent weakened. Cut off from their sources of power, with their standing in Muslim communities contested by the new activists, but still seeking to employ the threat of secession to extract leverage from the state, some of the traditional elites turned against the state (Abinales 2000; McKenna 2000).

Together, the new generation of politicized Moros along with sections of the old elite began organizing new political formations and organizations calling for a Moro republic independent from the Philippines. In 1972, the Moro National Liberation Front (MNLF) was formed. Sparked by a series of atrocities against Muslims, Marcos's declaration of martial law, and the government's attempt to confiscate arms, armed resistance against the Philippines erupted.

At that time, Marcos's authoritarian government was flush with increasing amounts of military assistance from the United States, given in exchange for Marcos's assurance to keep important US military bases in the country. Facing the most serious military challenge to the state since the Huks in the 1950s, Marcos unleashed the full force of the Philippine military against the Moros. The Moros, for their part, took arms and received training and political

support from Libya, Malaysia, and other Muslim-majority countries. Though motivated by various grievances – the idea of Moro nationhood just one of them (McKenna 2000) – Muslims universally supported and fought on the side of the Moro nationalists (Ahmad 2000a). Though loose, disorganized, and with no combat experience, the MNLF managed to unify Moros and to mobilize up to 30,000 fighters under its banner (Che Man 1990; McKenna 2000).

At the height of the war from 1972 to 1976, an estimated 10,000 to 60,000 were killed. Between 200,000 to as many as a million were displaced (May 1992; Mercado 1992; Abinales & Amoroso 2005). In the end, it was a stalemate. Both sides were pressured by the mediating party, the Organization of Islamic Countries, to reach a negotiated solution to the war: the MNLF gave up its demand for its own independent state while Marcos agreed, on paper, to grant autonomy to the Moros on his terms (Noble 1980).

In the first of similar failed agreements in the future, Marcos would interpret and implement the agreement on his own terms without giving meaningful autonomy to the Moros, while the MNLF would subsequently denounce the agreement. Fighting resumed after 1977, punctuated by various rounds of negotiations and the signing of more peace agreements that would likewise subsequently collapse. The intensity of the fighting during the 1970s, however, has not to date been matched. Since then, the Moro movement has evolved.

The Politics of Independence

Moro nationalism was conceived as an anti-colonial struggle against what was perceived as an illegitimate and oppressive authority. Like many anti-colonial struggles however, the Moro movements, at the outset, were also internally divided primarily along class and ideological lines. It was along these lines that they split and fragmented after the war, shattering the united front that for a time allowed the Muslims to fight the Philippine military to a stalemate and force the Philippine government to the negotiating table.

On one side were the founding stalwarts of the MNLF whose politics was of a secular, if left-leaning, nationalism characteristic of many national liberation movements that swept the world after World War II. The aim behind the

struggle for a Moro nation, the MNLF's manifesto stated, was the establishment of a "democratic system of government which shall never allow or tolerate any form of exploitation and oppression of any human being by another or of one nation by another" (quoted in Che Man 1990).

One of the founders of the MNLF and its eventual figurehead, Nur Misuari, did not come from the traditional or wealthy Muslim families and was reported to have once been a member of a group linked with the Communist Party of the Philippines. Misuari was, in fact, subsequently accused by one of his rivals, eventual Moro Islamic Liberation Front (MILF) founder Hashim Salamat, of moving the MNLF toward "Marxist-Maoist orientations" (Che Man 1990). This was denied by Misuari's followers and the MNLF was said to hold the view that communism was antithetical to Islam, a cornerstone of Moro nationalism (Noble 1980; Che Man 1990). Not until 1982 would an openly leftist organization be formed: the Moro Revolutionary Organization, which was allied with the Communist Party of the Philippines but which affirmed the Moros' option to secede from the Philippine state (Che Man 1990). For either ideological or practical reasons, the MNLF's model was said to have been that of "Libyan socialism" (Tan 1995), whose proponent, Muammar al-Qaddafi, also happened to be the most powerful foreign patron of the Moros. Reflecting its orientation and contradictions, the MNLF was also supported by the Arab socialist regime of Syria but also by the shah of Iran (Che Man 1990).

As with many national liberation movements, the MNLF has had to struggle with the need to bring together the broadest possible unity among members believed to be part of the "nation" while dealing with the competing class interests and uneven power relations among them. At first, in fact, some of the key leaders of the MNLF sought to distance the movement from the traditional elites who were perceived to have betrayed their cause in collaborating with the Philippine state for their own interests. Left out in the cold by Marcos, some of these elites joined the movement with the aim of controlling and moving it away from its demands for a transformation of Moro society.

Should the war be won, these traditional elites could expect to be the new elites of a newly independent nation, replacing the Filipino elites from the north. Even if it didn't, the threat of

secession was a powerful leverage to demand more power from the center. The MNLF welcomed some of them into the movement and made use of the economic and political power they offered. But as the war drew to a stalemate, they were also among the first to split from the movement, founding their own rival and more conservative organizations. Enticed by Marcos's offers of powerful and lucrative government posts and repelled by Misuari's left-leaning rhetoric, virtually all of the traditional elites had walked away from the movement by 1980 (Che Man 1990; McKenna 2000).

Another group that broke away from the MNLF were the religious and conservative Moros who were opposed not only to Misuari's allegedly leftist inclinations but to his secularism as well. As in other political movements in Muslim countries, one source of enduring cleavage that has gained more salience among the Moro movements through the years has been the question of the role of Islam. The Moro nationalist movements have commonly appealed to Islam as a defining identity, mobilizing ideology, and source of legitimation (Che Man 1990; Mercado 1992). Indeed, it is Islam that binds the various ethnolinguistic groups that are considered as belonging to the Moro nation (Gutierrez 2000). But while the MNLF manifesto stated its commitment to the "preservation and growth of Islamic culture among our people," it did not call for the establishment of an Islamic state nor was its vision of a new nation based on Islamic theology. Founded in 1984 by Salamat and his allies in order to move the Moro movement toward a more Islamic, less secular, more conservative orientation (Che Man 1990), the MILF has since grown to be the most powerful armed resistance group in Mindanao (Liow 2006).

Though the MILF is evidently more religious in its rhetoric than the MNLF, whether it is determined to establish an "Islamic state" is unclear, its position on this question has been inconsistent, and its specific vision of the shape this Islamic state would take remains vague (Abinales & Amoroso 2005). It is believed that the MILF's ideologues have not as of yet thought through the specific contours of their post-independence state and the MILF's former leader himself has signified that the question can be decided on later (Liow 2006). Even among MILF's rank-and-file fighters and high-ranking officials, there are questions as to what extent

the official religious views of the leadership are shared; many see their struggle less as a war for an Islamic state than as a war for national liberation (Vitug & Gloria, 2000; Wright-Neville 2004).

Rather than a pan-Islamist movement, the MILF remains primarily a nationalist movement concerned with gaining its own independent state, or else more political autonomy from the Philippines. Like the MNLF, the MILF accepts the compatibility of Islam with the existence of the nation-state system, contrary to the view of other Islamists advocating a global pan-Islamic movement. Unlike the Abu Sayyaf, which also initially emerged as a breakaway group from the MNLF after it signed a peace agreement with the government, or the Jemaah Islamiyah, an organization thought to have members in various parts of Southeast Asia, the MILF's agenda does not go beyond the Moros' relations with the Philippine state (Liow 2006).

Weaknesses

Over 30 years since its emergence, Moro nationalism has so far failed to achieve its stated goal of securing an independent state or greater autonomy for Moros.

Once vowing never to "agree to any form of settlement short of . . . total freedom and independence," the MNLF has entered into a series of peace agreements with the government. All of them have so far collapsed. The Philippine government had consistently refused to enter the notion of seeing its territory reduced. Their own power threatened, politicians and powerful Filipino political families from among the settlers in Mindanao had opposed and diluted measures aimed at giving more political power to Moros.

As the plebiscites creating the autonomous regions for the Moros reflected the demographic changes caused by migration, the territory that was eventually allocated for Moro autonomous rule turned out to be smaller than what had been demanded. Of the autonomy that was granted, Muslims were given only curtailed powers over resources, revenues, or legislation. With the limited power they were permitted and their decision to enter into alliances with traditional Filipino politicians, the Moro leadership's record in office had been blotted by accusations of inefficiency, patronage, and corruption. Despite the peace agreements and the arrangements

they put in place, Moros remain among the poorest in the Philippines and continue to be dispossessed of land and resources. The once universal support for the MNLF had dwindled and had given way to widespread disillusionment and disenchantment.

The MILF had likewise entered into protracted negotiations with the government. But the talks have so far foundered on the question of Moro control over their claimed ancestral domain and its resources. Even if a peace agreement is eventually concluded, there is no assurance that it will not meet the same fate as those with the MNLF. The Abu Sanyaf, for its part, has not only dissolved into factions – with some identified more with criminality and banditry than with secessionism – all of which remain small, isolated, and with little popular support. Meanwhile, southern Mindanao remains among the most militarized places in the country, with on-and-off but frequent military operations against Moro rebels and fighters and numerous abuses against civilians.

Apart from class, ideological, as well as ethnolinguistic cleavages which have made the Moro movement vulnerable to the Philippine government's divide-and-rule strategies, other factors may account for its failure to achieve its goals.

Part of the explanation has to be accounted for by the Moros' dependence on external assistance for material and political support. Assistance from Libya, Malaysia, and others was driven by their own geopolitical and internal domestic interests and these did not always necessarily converge with those of the Moros. Once Libya and Malaysia reached an accommodation with the Philippine government, Moros found that they had little choice but to follow their patron's demands. When Malaysia decided to stop giving sanctuary to Moros and to cut off arms supplies to the Moro fighters, the Moros' military capacity weakened. But because the Moro leaders prioritized mobilizing external support – with the Moro leadership more often abroad than at home during the fighting – alternative sources of support could not be mobilized internally.

Perhaps a more fundamental weakness speaks to the limits of identity politics in struggles for self-determination. As proven by divisions among the groups and classes designated as comprising the Moro nation, collective Moro identity as a bond for collective action has proven to be tenuous (Abinales 2000). At the same time, it has

proven to be a vulnerable basis for articulating grievances and demanding change. Faced with demands for greater recognition of Moro cultural and religious practices, the Philippine state has often readily consented to giving such concessions even as it held off giving in to more fundamental demands for greater control over lands and resources. This allowed the Philippine state to project itself as a benevolent authority that was able to attend to the needs of all Filipinos regardless of their religion and ethnicity even as it perpetuated the economic marginalization of Muslims. Marcos, for example, ordered the building of more mosques, declared Muslim holidays as legal holidays, established Islamic cultural institutions, codified Muslim laws, allowed the use of Arabic for teaching, and so on (Che Man 1990). And yet, it was telling that the autonomy agreement that temporarily put an end to the fighting in 1977 singled out control over Mindanao's mines and mineral resources as among those powers not to be given to the Moro autonomous government.

The Moros had also found that collective identity and the notion of a shared and distinct history are not something that they alone could invoke. Moro identity has had to face and respond to the sharpening of the collective identities of other peoples living within the area claimed by the Moros as their homeland. Starting in the mid-1970s, the non-Muslim and non-Christian indigenous people in Mindanao also began asserting their own identity and claims. Some organized their own resistance groups to protect themselves from the onslaught of migration or to fight for the restoration of their ancestral lands (May 1992; Rodil 1992). In some areas, their claims to their own ancestral domains conflict with those of the Moros. With new generations from settler families being born in Mindanao, another identity – a "Mindanaoan" collective embracing those who claim to have roots in the region, including the descendants of those who migrated from elsewhere – has also recently emerged. Invoking this new identity, some have, like the Moros, also called for independence or for their own state in a federal system. Apart from these, there has been a rise in so-called "tri-people" movements that seek to bring together people with different identities – Moros, indigenous peoples, and Christian settlers – on socioeconomic and political issues, as well as on the question of self-determination.

These other identities and their corresponding political projects have challenged the Moros' claim to a nation founded on a "Moro" identity. In the process, the construction of such an identity has been evolving. For some, this identity is defined by but not limited to Islam; in other words, it appears to be more of a cultural than an exclusively religious identity. Reflecting this, the MNLF has since indicated that the term "Moro" also includes Christians and other non-Muslim indigenous people who inhabit the territory they claim as their homeland and who choose to be part of the Moro nation (Gutierrez 2000). Though the MILF has also taken this position, it is unclear whether non-Muslims would be given rights over lands they consider their ancestral domains (Liow 2006).

Prospects

Despite its failure to achieve its objectives, Moro nationalism remains resonant. In fact, as a reference for an identity, "Moro" has gained more traction through the years: more people now identify themselves as "Moros," in addition to or in place of "Filipino" than in the past (Wadi 2006). Helped in no small measure by continuing military offensives and abuses against Moros and by their relative misery compared to others, support for the goals of Moro nationalism remains widespread. Its armed component significantly degraded and assistance from external supporters diminished, the Moro movements, particularly that of the MILF, have since shifted to mass mobilization and building institutions in an attempt to consolidate and expand their internal sources of power.

In spite of its failure, Moro nationalism's achievements in bringing attention to the Moros' marginalization and in mobilizing Moros to attempt to change their condition and status cannot be underestimated. But while the Moro nationalist movements, as anti-colonial struggles, have challenged the Moros' relations with the Philippine state, whether they would eventually lead to the transformation of Moro society is another question altogether.

At the outset, the Moro vision for a new nation did not advance specific plans for overturning the concentration of wealth and power within Moro society. While Misuari and Salamat had both advocated the abolition of precolonial traditional institutions and structures, they have

since implicitly accepted and retained their existence (McKenna 2000). Neither the MNLF nor the MILF have had concrete proposals on whether and how to allocate lands claimed as the Muslims' ancestral domain or how to distribute the gains from their natural resources. The land issue was neither raised nor resolved during the MNLF's peace negotiations with the government (Gutierrez & Borrás 2004). Even when they assumed limited power as part of the autonomous government established as a result of the peace agreements, addressing issues of social justice was not among the priorities. In fact, Misuari and the MNLF leadership later chose to join a coalition led by the conservative Philippine ruling party that included among its ranks many Filipino elites and politicians opposed to progressive reforms. That the new Moro elites had only set out to replace the Filipino elites in oppressing Muslims – that they are more "counter-elites" than "revolutionaries" – has been a standing apprehension.

So far, Moro nationalists have only sought to prove that the emancipation of Moros within Moro society is not possible within the context of Moro subordination within the Philippines. That independence or autonomy could subsequently lead to Moro emancipation within Moro society remains, depending on where one stands, both a threat and a promise.

Morocco, protests, 1600s–1990s

Justin Corfield

At the time of the fall of Granada, the Wattasid dynasty that controlled northern Morocco saw its power challenged by the Portuguese who had taken the port of Ceuta in 1415, and were capturing other ports along Morocco's coast, such as Ksar-es-Seghir, which they held from 1458 until 1550. Portuguese power continued to grow, capturing Tangier in 1471 and the Atlantic port city of Asilah (or Arzila), both major strongholds in Morocco. In 1478 the Portuguese sacked the city of Casablanca, building a new city on the same site a hundred years later, calling it Casabranca; and nine years later they established a castle at Larache but only managed to hold it for one year. They also managed to take Mogador (modern-day Essaouira), where the Portuguese fort was built in 1506; the ports of Safi which was captured in 1508, Mazagan (modern-day El Jadida) which was taken in 1513; and Agadir, captured in 1515, in which year they also attacked Marrakesh but failed to take the city.

The loss to Morocco of so many of its ports was not only humiliating but caused a massive fall in the revenue of the Wattasid dynasty, which was overthrown in 1554 by a rival group of Berbers, with the Saadi dynasty coming to power. Their power base was in the south of Morocco, which they had controlled since 1509. They also claimed descent from Fatima Zahra, the daughter of the

Prophet Mohammad, and Ali ibn Abi Talib, her husband – their son, the Prophet's grandson, being al-Hasan bin Ali, resulting in the dynasty being known as Hasanis.

The Saadi dynasty was able to rally the Berbers and use them to resist the Portuguese better than their predecessors. They started attacking isolated Portuguese bases and in 1541 were able to take back both Agadir and Mogador, and forced the Portuguese to abandon the port of Safi. The Portuguese attacked again and retook Agadir, and then reinforced the city of Asilah, which served as their military headquarters for the region. In 1578 King Dom Sebastian of Portugal landed his large expeditionary force at Asilah and from there struck out to attack the Moroccans at Fès (Fez). In many ways the young King Sebastian wanted to become one of the leading warriors for Christian Europe in the same way as Don John of Austria had become famous around Europe after defeating the Turkish navy at Lepanto in 1571.

The military and political aims of the Portuguese were to seize Fès and to depose the sultan, Abdel Malik, and replace him with Mulai Mohammed, the former ruler of Fès, who became a claimant to the Moroccan throne. His force never reached Fès, but met 8 miles north of Ksar-el-Kebir where the 20,000-strong Portuguese force, which included English artillerymen, and also allies of Mulai Mohammed, faced 50,000 Moroccans under Abdel Malik. The battle, which became known as the Battle of the Three Kings, took place on August 5, 1578, and resulted in a crushing defeat for the Portuguese, who were overwhelmed by the Moroccan infantry, many recruited from families originally from Andalusia, and also the cavalry, which included horsemen from the Middle Atlas. Sebastian, Mulai Mohammed, and Abdel Malik were all killed in the battle. For Morocco, it led to Ahmed el Mansour ascending the throne. For the Portuguese, Sebastian had no children, so the throne passed to his great-uncle Henry. He was a cardinal and also had no children. This meant that when he died, King Philip II of Spain inherited the Portuguese throne. Philip was keener to expand his realms in the New World, and the Moroccans took advantage of this to attack the Portuguese and Spanish. The Moroccans recaptured Asilah in 1589 and used Mazagan as their main trading base to refit ships heading towards Asia. The Portuguese kept this until it was taken

by siege in 1769. Ceuta and Melilla were to be taken over by the Spanish and remain with them to the present day.

Ahmed el Mansour, "The Victorious," reigned from 1578 until 1603. He managed to expand the Kingdom of Morocco until it controlled some of the goldfields in West Africa, and was able to model his kingdom on that of the Ottoman emperors. Loyalty to the dynasty was more important than religious persuasion and Ahmed el Mansour included in his army many Christians, as did the Ottomans. The El Badia Palace in Marrakech was another of Ahmed el Mansour's achievements.

In 1603 Ahmed el Mansour died, beginning a bitter succession war that destroyed much of the country and suppressed the sultans of the Saadi dynasty, who spent most of their reigns in their palaces in Marrakech, unable to exercise any real power. From 1627 until 1666 there was a short-lived Republic of Bou Regreg which operated from the cities of Rabat and Salé. The assassination of the last Hasani Sharif who ruled as sultan of Morocco, in 1653, led to a renewed power struggle that saw Mohammad al-Sharif taking control of much of the country. He had been sultan of Sijilmasa until 1646, when he was expelled from there, and as sultan of Rafilalt gradually emerged as the major power in the country. In 1659 his son, styled Mohammad II, took control of Morocco, founding the Alaouite dynasty. However, he died soon afterwards and his brother al-Rashid was proclaimed the sultan of Morocco in Fès on October 22, 1664 and established a dynasty which lasts to the present day. In 1672 al-Rashid's brother or half-brother, Mulay Ismail al-Samin, the viceroy of Fès, became sultan of Morocco and reigned until 1727. During the period of his rule Morocco went through a new era of prosperity.

Mulay Ismail al-Samin restored the power and prestige of the Moroccan monarchy. He managed to eject the Portuguese from most of their forts – Portugal having broken from Spain in 1640–1. The English, who had taken over Tangier in 1661 – it was part of the dowry of the Portuguese princess, Catherine of Braganza, when she married the British king, Charles II – were forced to evacuate the city in 1686. Mulay Ismail also drove back the power of the Ottomans in the east, back to the modern-day border between Morocco and Algeria. He also led his forces against rebellious mountain tribes. Many of the Moroccan

castles were refortified, and new bridges were built and towns founded. Mulay Ismail also cracked down on many cults which operated in Morocco, spending money on approved mosques and shrines.

One of Mulay Ismail's most lasting legacies was the move from the existing capitals of Fès and Marrakech to Meknes, where he built a large palace to base his enormous army. It maintained law and order throughout the country, with stories about the place being safe for travelers. Mulay Ismail is also credited with building up one of the largest harems in modern history. In 1703 one account stated that he had 525 sons and 342 daughters, with another noting that he had 40 sons born during four months of 1704. By 1721 some authorities claim that he had fathered 700 sons, and the last child, acknowledged by the baby's mother as being a son of Mulay Ismail, was born 18 months after the death of the king in 1727. This led to much rivalry in court, with palace intrigue being reported on a daily basis.

Largely on account of his enormous family, when Mulay Ismail died in 1727 the country was torn apart by civil strife. There had been revolts during his lifetime, with one son, Mulay Abd al-Malik, being beheaded in 1696 for plotting against his father. In total seven of his sons served as kings, with one of them, Mulay abd Allah, reigning as king on four separate occasions. His son Sidi Mohammed succeeded him, reigning from 1757 until 1790. He ruled wisely and led his forces to victory against the Portuguese, who were finally ejected from the port of Mazagan. Sidi Mohammed concentrated on establishing an important trading base at Mogador, rebuilding the finances of the kingdom. His main efforts were spent in trying to prevent European powers from becoming too strong in the country. This he achieved largely by playing them off against each other, and preventing access to him by any one power.

However, when Sidi Mohammed died, his eldest son Mulay al-Yazid only ruled for two years. Mulay al-Yazid was killed in battle in 1792, and was succeeded by his half-brother Mulay Hisham, whose reign saw a continued civil war, ending with Mulay Suleiman ascending the throne in 1796. He restored law and order throughout the country and reigned until 1822. Mulay Suleiman tried to isolate Morocco from European powers and was frightened by the power unleashed by the French Revolution. He

imposed an import duty of 50 percent and banned exports. When he was offered the Spanish bases of Ceuta and Melilla he refused when it meant that he would have to recognize Joseph Bonaparte as king of Spain.

Confining all European consuls to Tangier, Mulay Suleiman established a system which was to continue for much of the nineteenth century. While Europeans were able to get into some Moroccan ports, Tangier became the center of European influence, and as a result the sultans never returned to their palaces in that city, with the royal representative there, Si Mohammed Torres, doing his utmost to delay any approaches to the Moroccan sultan. During this time the sultans moved court between Fès, Meknes, Rabat, and Marrakech.

The French were the first European power since the Portuguese to be eager to seize Morocco. They had had great success in Algeria and modern-day Tunisia, and sought to replicate this in Morocco. The French destroyed a Moroccan army at the Battle of Isly, near Oujda, on August 14, 1844, and bombarded Tangier and Mogador. Some tribes sensed that the sultan, Mulay abd al-Rahman, nephew of Mulay Sulaiman, was powerless, and they rose up in revolt. The sultan realized that he had little hope of defeating the French in battle and decided that his best form of resistance was to encourage jealousy among the other European powers. This worked to a certain extent, but in 1856 the Treaty of Tangier removed all restrictions on trade, except for the sultan's monopoly over the buying and selling of tobacco and firearms. A flat 10 percent rate of customs duty was also introduced, as were consular courts which existed to try foreigners and people under foreign protection. The initial aim of the latter was to help middlemen working for European powers, to prevent them being attacked in time of crisis. However, it led to open abuses, with some European consuls selling "protection." Many European consuls started charging local businessmen and farmers in exchange for offering protection. The Portuguese and Brazilian ministers were the most notorious in terms of selling protection and this abuse by consuls quickly led to protests from the Moroccans. The Moroccan court lost much-needed revenue as those under foreign protection were exempted from paying taxes. Some also flouted Moroccan laws. However, the Moroccan court was helpless. It had

formed into factions, with some supporting one or other European power, and others urging for a total break with the Europeans and Americans.

In October 1859 Spain declared war on Morocco in a dispute over the borders of the Ceuta enclave, with tribesmen protesting the encroachment of the Spanish into their lives. Spanish soldiers captured Tetuan in February 1860, and after British mediation, peace was agreed in return for an expansion of the enclave, and also the payment of a massive indemnity of 100 million pesetas by the Moroccans to the Spanish, draining the Moroccan treasury. Spain was also able to take over land on the Atlantic coast which became the Ifni enclave, ceded on April 26, 1860. As the Spanish wanted payment before they handed back Tetuan, they negotiated a loan with the British who, in return for lending the money, insisted that the customs revenue of the Kingdom of Morocco be controlled by them and Spain.

Over the next forty years there was a massive increase in the number of Europeans and Americans who, by 1900, numbered 10,000. Soon they controlled almost every port in the country, although most of the population remained in Tangier and Casablanca. Sultan Mulay Hassan (r. 1873–94) started to introduce modernizations to try to rebuild the finances of the kingdom and prevent runaway inflation. His reform program ran into protests from conservatives who did not like the idea of students being sent to European universities to study western ideas on medicine, engineering, and military science. He also tried to stabilize the currency, and at the Conference of Madrid in 1880 he tried to limit the influence of foreign consuls giving protection. Most of the American and European countries did not respect the new regulations he had introduced.

With the European powers vying for influence in Morocco, it was only the intense rivalry of these powers that stopped any single country annexing Morocco. The French certainly wanted to take over the kingdom, as they had done in neighboring Algeria. However, the Spanish were nervous at having France in control of the other side of the Straits of Gibraltar. The British were worried about the influence of both the French and the Spanish, and the main Italian aim became getting the other powers to recognize their claim to Libya.

All this infighting, as well as the lack of power of the sultans, led to the gradual collapse of the

central administration, with tribal chiefs taking over sections of the country, especially in the High Atlas Mountains, a problem that was to hamper the French and Spanish only after they had taken control of Morocco. In 1902 an English missionary, David Cooper, was murdered in Fès. In one of the most celebrated incidents, in 1904 an American millionaire, Ion Perdicaris, was kidnapped near Tangier, leading to the United States sending in its navy.

In 1904 Sultan Abdul Aziz borrowed 50 million francs from a consortium of French banks, and they imposed strict conditions that allowed the French greater access to the country. In 1905 nine Europeans were murdered in Casablanca and in the following year, at the Conference of Algeciras, the Moroccans were forced to make further concessions, with the French able to seize more of the oases along the western border with Algeria. Many of the Moroccans did not like these developments and in 1907 some Europeans in Marrakech and Casablanca were lynched by city mobs. The French immediately landed soldiers to protect their citizens, and in the fighting which followed, neither side took prisoners.

At this juncture the Germans tried to intervene and used protests against one of their companies as an opportunity to send a warship to Agadir in July 1911. In what became known as the Agadir Incident, the Germans eventually climbed down, anxious to avoid a war with France which they were to welcome three years later. The French and the Spanish then forced the sultan of Morocco to sign the Treaty of Fès on March 30, 1912. This divided Morocco between the two European powers. The French ended up with all the major ports, with the Spanish left with the northern coast of Morocco, centered on Tetuan, some desert south of the Draa Valley – what was going to become known as the Spanish Sahara – and also the enclave of Ifni. Legally, the enclaves of Ceuta and Melilla remained parts of Spain, as did Cape Juby (which was later sold to the sultan of Morocco) and Ifni (which was held until 1969).

The Treaty of Fès was heavily opposed by many Moroccans who rose up and in Fès some eighty Europeans were lynched, with anti-French nationalists seizing control of some of the city. Tribal leaders in southern Morocco raised an army estimated at 12,000 to oppose the French, but the French were easily able to overcome this, and by September 1912 had occupied

Marrakech. The French also used the Glaoui brothers, former court officials, to arm a local militia and take control of most of the rest of the country. The outbreak of World War I prevented the French sending in any more soldiers.

The most sustained attempt to eject the French from Morocco during the 1920s was the Rif Rebellion, which saw tribesmen led by Abdel Krim resisting both the French and Spanish forces. Initially, the European powers did not take the rebellion seriously. It started with tribesmen contesting Spanish control over Melilla and quickly spread. On July 22, 1921 the whole nature of the war changed when the Rif were able to defeat a Spanish army at the Battle of Annual. At this point the Spanish, and also the French, decided that they would need to launch larger and better-equipped expeditions against the Rif. Eventually, large numbers of French and Spanish soldiers were deployed to Morocco where, in combined operations, they were able to drive back the Rif. Marshal Pétain controlled many of the French forces, which included large numbers of French Foreign Legionnaires. On the Spanish side, the Spanish army and the Spanish Foreign Legion fought under General Manuel Silvestre, with Lieutenant Francisco Franco distinguishing himself at a number of engagements and leading the Spanish Foreign Legion.

The war saw the Spanish use chemical weapons against the Rif, with neither side taking prisoners. The ferocity of the Spanish Foreign Legion and the better discipline of the French eventually proved too much for the Rif, but it was not until 1936 that the Rif Rebellion ended. Later that year the Spanish bases in Morocco were to be used as a launching pad for the Spanish Nationalists in the Spanish Civil War.

The French exploited the great agricultural and mineral wealth of Morocco, with French banks involved in financing the public works programs which saw the infrastructure of the country vastly improved. Railways, roads, ports, and dams were built, as were hospitals and schools, although many of the latter catered largely for the growing European population. In terms of land ownership the French and French companies owned much of the fertile land in Morocco. The numbers grew so much that by 1951 there were 325,000 Europeans in Morocco, of which 5,000 served as a ruling minority, with 80,000 being poor.

The fall of France in 1940 led to the installation of a pro-German Vichy regime in southern

France and also in many colonial possessions, including Morocco. In Morocco, with its large Jewish population, Sultan Mohammad V protected all of them from persecution. Many of them had been among the court's most loyal subjects for centuries, and there had always been a significant Jewish presence at the Moroccan court.

In November 1942 the British–American landings known as Operation Torch led to the Allies taking control of Morocco, which was then placed in the hands of the Free French government-in-exile of Charles de Gaulle. At the Casablanca Conference in January 1943, Franklin Roosevelt expressed his views in support of Moroccan independence after World War II to Sultan Mohammad V. Large numbers of Moroccan soldiers served with the Free French and participated in the storming of the monastery at Monte Cassino in Italy, and also the breaking of the Gustav Line in central Italy.

After World War II the French were clearly not going to grant independence to Morocco, and the Spanish were also keen on retaining control over their zones and enclaves. The Moroccans urged for independence, starting protests around the Istaqlal nationalist movement. The French responded by arresting hundreds of nationalists in January 1952. In 1953, with Mohammad V so clearly supporting the moves for independence in Morocco, the French deposed him and put his father's first cousin, Muhammed Ben Aarafa, on the throne. Mohammad was exiled to Madagascar where he continued to agitate for independence. In 1954 war broke out in Algeria as Algerian nationalists started fighting the French, and in the summer of 1955 widespread civil disobedience protests took place all over Morocco urging for the return of the sultan and the ejection of the French.

The French finally decided to leave Morocco, and also Tunisia, and focus their attention on Algeria. The Spanish also agreed to end their occupation of the Spanish zone, but decided to hold on to the Spanish Sahara, and also their enclaves of Ceuta, Melilla, and Ifni. The international authorities who had maintained the city of Tangier as an international settlement since 1923 also agreed to give that up, and in November 1955 Mohammad V returned to Morocco where he received a tumultuous welcome. On March 2, 1956 Morocco gained its independence from France, and on April 7, from Spain.

Although Mohammad V had determined that the monarchy should remain in control of Morocco, Istaqlal, the only national political party in the country, which had taken such a prominent role in pushing for independence, tried to resist. Things came to a head when Mohammad V insisted that the monarchy, and not the Cabinet, should control the army and the ministry of the interior. The result was that in 1959 a left-wing faction of Istaqlal broke away and under the leadership of a nationalist firebrand, Ben Barka, they formed the National Union of Popular Forces (UNFP), which gained support from some of the trade union movement to form an alliance with the Moroccan Workers' Union (UMT), the main labor union. While the king had the support of the Berbers, Istaqlal started to gain support in the cities. As a result, the *Mouvement Populaire* was established to rally support for the monarchy.

At this juncture there was a rebellion in the Rif, and with tribal chiefs in the Sahara and Middle Atlas challenging central control, the royal army was placed under the leadership of Crown Prince Hassan, and campaigned with great success. On February 26, 1961 King Mohammad V died and Hassan II became king. He immediately distanced himself from the UNFP and formed a coalition government with members drawn from the *Mouvement Populaire* and Istaqlal. On December 7, 1962 a referendum was held and Morocco's first democratic constitution was approved by a very large majority (3,733,816 to 113,199 votes). The constitution was promulgated on December 14, 1962. King Hassan II then reshuffled his Cabinet on January 4, 1963, sacking the members of Istaqlal from his government, and then went to the polls.

On May 17, 1963 the first parliamentary elections were held in Morocco, with the *Mouvement Populaire* obtaining strong support from Marrakech, the Berber hinterland, and the area along the border with Algeria. Istaqlal won support in the old cities and wealthy farming areas such as Doukkala, Tadia, and the Rharb, while the UNFP gained its support from Casablanca, Agadir, and Rabat. Municipal and communal elections were held on June 28, and elections for the House of Councillors (the Upper House) were held on October 4.

With the UNFP supporting the socialist and republican policies of Egypt and Algeria, after the royalists won a victory in the local elections

in July 1963 – amid allegations of rigging – the king arrested some 130 UNFP leaders and they were charged with treason. There had been border incidents from July until October 1962, and in October 1963 war broke out between Morocco and Algeria. Ben Barka, in exile in France, urged the Moroccan soldiers to mutiny. There was consternation in Morocco and he disappeared soon afterwards. Two French officers were later sent to prison for their role in his kidnapping, and several Moroccans were accused of his murder.

King Hassan II proclaimed a new constitution in August 1970 – it had been approved in a referendum on July 24 boycotted by Istaqlal and the UNFP. The constitution increased royal power and influence over parliament. Although there were protests organized by Istaqlal, in July 1971 there was the first of two coup attempts, with some of the military launching an attack on the king. It began with 1,400 cadets under the command of Colonel Abadou moving from Fès to Rabat. They attacked the king while he was holding a party at Skhirat, with guests attending an informal function which included most of the civil and military leaders in the country, as well as the foreign diplomatic corps and Habib Bourguiba Jr, the son of the president of Tunisia. When the shooting started, General Mohammed Oufkir persuaded the king to retire to a room in the royal palace and General Medbouh, a close advisor of the king, left the royal party to treat with the rebels. He was shot dead by accident – it subsequently became clear that he was one of the rebels – and soon afterwards Colonel Abadou and many of the other rebels withdrew, trying to take power in Rabat. The rebellion, without its leader, was quickly crushed and four generals, all of whom had served in the French army in World War II and in Indochina, five colonels, and a major were court martialled, found guilty, and executed. General Oufkir was immediately appointed as the minister of defense.

Although the coup was widely covered by the press, the truth about who was behind the July 1971 attack was not revealed until the following year, when there was another coup attempt. This took place on August 16, when the personal aircraft of King Hassan was flying back from Barcelona to Rabat. Crossing the Moroccan coast at Tetuan, four Moroccan air force fighters intercepted his plane and opened fire. Two of the three engines of the royal jet were damaged, and

the pilot sent out deliberately false broadcasts that the king had been killed. This persuaded the fighters to call off the attack. When the king's plane landed, the fighters attacked Rabat Airport after realizing they had been fooled and had lost their main attempt to kill the king. Jet fighters then attacked the royal palace where the king had sought refuge. One of the pilots, with his plane running out of fuel, parachuted into the sea, where he was captured, and two others escaped to Gibraltar by helicopter, and were quickly deported to Morocco in spite of there being no extradition treaty between the British and Morocco.

Rapid investigations by an enraged King Hassan led to the discovery that General Mohammed Oufkir, the minister of the interior, had been behind the 1971 assassination attempt and was heavily involved in the new coup attempt. It appeared that Oufkir had gone to the airport's control tower to call on the fighters to continue their attack on the king. The revelation of Oufkir's involvement surprised many observers, as the general was close to the king and had been the man accused by a French court of the abduction and murder of Ben Barka seven years earlier. Oufkir himself had been responsible for cracking down on protestors and enforcing royal power in the country.

Oufkir's family were thrown into prison and only emerged in 1991, with his daughter Malika writing *La Prisonnière* about her experiences. Although she suggests that her father wanted to introduce a more liberal government to Morocco, given his previous record most commentators suggest that General Oufkir wanted to preside over a military dictatorship. On the day after the air attack, the Moroccan government announced that Oufkir had committed suicide "out of shame," although it was later revealed that he was shot dead, possibly by the king, angered that one of his former closest confidants had turned against him.

In March 1973 some armed men crossed the Algerian–Moroccan border with the hope of inspiring a left-wing insurrection against King Hassan. This failed disastrously when nobody rose up to support them. Some of the insurgents were captured and put on trial.

Moroccan soldiers fought on the Golan front in the Yom Kippur War of 1973, and also fought in Zaire on the side of the dictator Mobutu Sese Seko, who later fled to Morocco when he was driven from the country.

In November 1975 King Hassan launched a nationalist movement which became known as the Green March. Gambling on Spanish uncertainty following the death of General Franco in November 1975, Hassan sent 350,000 civilians into the Spanish Sahara to wrest control from Spain. Ifni had already been returned to Morocco on June 30, 1969. The Spanish Sahara had been an economic liability to Spain for many years, and the Spanish did not resist. However, the annexation of the Spanish Sahara by Morocco was not unopposed. Some of the tribal groups in the Sahara formed the Polisario Front (Popular Front for the Liberation of Saguia el-Hamra and Río de Oro), a political movement that gained support from Algeria, Mauritania, and Libya and started what became known as the Saharan War.

Morocco responded by building up garrisons in the region between 1981 and 1987. Using massive sand walls, regularly patrolled by the Moroccan military, they were able to prevent the Polisario guerillas from infiltrating into the former Spanish Sahara. In 1989, under the auspices of the United Nations, King Hassan met the leaders of the Polisario Front in Marrakech for talks, and three years later the "foreign minister" of the Polisario government-in-exile defected to Morocco.

The cost of the Saharan War – about \$1 billion a year – strained the Moroccan budget. However, King Hassan had gained much popularity. The first major protests of the late 1970s were not against him but followed the arrival of the shah of Iran at Marrakech on January 22, 1979. This led to teachers and students, who saw the shah as representing dictatorship, marching in the streets alongside Islamic fundamentalists who supported the new regime in Iran. After a month in Morocco, King Hassan had to ask the shah to leave, and the demonstrations quickly died down.

In June 1981 Morocco had to call on the International Monetary Fund (IMF) for money to bail out a faltering economy. The IMF insisted that in return for their loans, state subsidies had to end. Protests erupted against the austerity measures, with demonstrations in some Moroccan cities turning into insurrections, leading to confrontations with riot police.

Although the royalists won the June 1983 local government elections, the subsequent parliamentary elections were cancelled by the king who, in October 1983, assumed emergency powers.

He formed a Cabinet from a broad coalition, dividing his opponents. However, with the economy suffering badly, another IMF loan was sought, and this led to the Moroccan government having to drive through a harder austerity plan. Rioting became worse but ended with the arrest of leading dissidents.

In the summer of 1984 the Moroccan government held fresh parliamentary elections, with a turnout of 67.4 percent. A moderate government took office soon afterwards. By this time the tourism industry was flourishing on the basis of cheap flights from Europe. The economy stabilized and in 1989 the Maghrebi Union Treaty was signed which saw a strong alliance between Morocco, Algeria, Libya, Mauritania, and Tunisia.

In August 1990, with the outbreak of the Gulf War following the Iraqi invasion of Kuwait, King Hassan initially promised soldiers to the Allied side, but massive protests throughout Morocco – some of the largest in favor of Saddam Hussein in the entire Arab world – led to the Moroccan government deciding later to call back their 13,000 soldiers. In 1991 Amnesty International published a report highlighting 350 political prisoners in the country, although noting considerable improvements in human rights since the 1960s. Parliamentary elections were held on November 14, 1997 with a relatively high turnout, in spite of Islamist groups urging for a boycott of the polls. In a significant move, on July 14, 1999 the Moroccan army joined the Bastille Day Parade in Paris, an event previously unimaginable.

The death of King Hassan on July 23, 1999 led to his only son becoming King Mohammed VI. The new government was even more openly pro-western. It also made moves towards loosening its control over the country. Parliamentary elections were held on September 27, 2002. Bombings in Casablanca on May 16, 2003 led to the deaths of 45 people, 12 of whom were the bombers. Mohammed VI's firm stance after the bombing gained him much support from the people, and he continued with his reforms.

On September 8, 2006, when the next elections were held, there were blatant irregularities and subsequently 67 people (including some parliamentarians) were arrested for electoral fraud, a move unprecedented in Moroccan politics. The Moroccan parliament has been involved in debating the abolition of capital punishment.

Although engaging more closely with the West, Morocco is however still angered by the Spanish continuing to hold on to Ceuta and Melilla, with nationalists regularly demonstrating over these enclaves.

Morones, Luis Napoleon (1890–1946)

Leticia Pacheco Espejel

Luis Napoleon Morones was born in Tlapán, a section of Mexico City. In Mexico City he worked at the Telephone Company of Mexico (now Telmex – Telefonos de México), where he remained until he became involved in politics in 1923. Unlike most anarchosyndicalists, who focused on direct action, Morones put his faith in the reform process.

Morones played an important role in Mexico's labor movement. In 1918 he helped found the

Regional Mexican Workers' Confederation (Confederación Regional Obrera Mexicana, CROM), which was the first Mexican confederation of workers. This group later became the Confederation of Mexican Workers (Confederación de Trabajadores Mexicanos, CTM). In 1919, Morones's participation in the creation of the Panamerican Federation of Labor (PFL) was fundamental. The PFL foundation had an enormous influence on the American Federation of Labor (AFL) in the US, and Morones was in contact with the AFL during his visits to Laredo in 1918. The presidency of the PFL was occupied by the North American Samuel Gompers, who was a member and founder of the AFL. This situation was heavily criticized by Mexican politicians, who considered it an intrusion by the United States into internal affairs. Morones was also founder and an active member of the Casa del Obrero Mundial. In 1922 he founded the workers' newspaper, *El Sol*.

Morones was known for his reform ideas, which were related to the constitutional ideas of Mexican President Venustiano Carranza, who defended the Constitution of 1917. This constitution contained labor provisions such as the right to strike and the eight-hour workday. Morones remained true to Carranzismo throughout the presidency, which lasted from 1917 to 1920.

When Carranza was murdered by party followers of Alvaro Obregón in 1921, Morones, who was minister of defense, joined Obregón, who served as president of Mexico from 1920 to 1924. Morones became head of industrial plants of the ministry of defense and mines. Under Obregón's successor, Plutarco Elías Calles, he became minister of industry and commerce. After Lázaro Cárdenas assumed the presidency in 1934, Morones, along with Calles's other supporters, known as "Callistas," were exiled to the United States.

In 1937 Morones returned to Mexico and resumed his activity with the CROM. He died in Mexico City in 1964.

Morris, William (1834–1896)

Jason M. Kelly

William Morris was a writer, designer, and political activist. One of the early exponents of the aesthetic approach, later known as the Arts and Crafts movement, his intellectual breadth was seemingly boundless. His father, William Morris (1797–1847), was a speculative investor, and his success provided the young William with a luxurious childhood and a financially secure life dominated by the romantic medievalism of the age. He devoured the works of Sir Walter Scott and even had his own suit of armor. His fascination with medieval literature and history fed his imagination, and probably contributed to his embrace of the Oxford Movement, which dominated the teaching at Marlborough College, his school between 1848 and 1851.

The Oxford Movement was a high-church movement that criticized the secularism of nineteenth-century Anglicanism. It emphasized the continuities between Roman Catholicism and the Church of England, both theologically and liturgically, and attempted to steer the church towards its origins. He entered Exeter College, Oxford in 1853, hoping to join the clergy and continue the reform of the Church of England begun by the founders of the Oxford Movement.

At Oxford, Morris found a friend in Ned Jones (later Edward Burne-Jones), who was also drawn to Anglo-Catholicism and shared his desire for the transformation of Victorian society. It was through the writing of John Ruskin that Morris and Burne-Jones found their model for reform. Morris, already disaffected with the art of industrial Britain, read Ruskin's *Stones of Venice* (1851–3) soon after it was published, taking note of Ruskin's observation that the Industrial Revolution had sapped British workers of their creative energy. Not only were their labor and social conditions atrocious, but repetitive and mindless factory work had robbed them of their humanity. Ruskin argued that while labor was a necessary element of life, the manufacture of goods need not be oppressive.

After taking his degree at Oxford, Morris devoted himself to the arts, joining his friend Burne-Jones in London, where they associated themselves with the Pre-Raphaelites. Under the influence of Dante Gabriel Rossetti, they committed themselves to painting, even as Morris experimented in the fields of poetry and the decorative arts. Through Rossetti, Morris met Jane Burden, whom he married in 1859. After that, he began a new phase in his life as the patron-employer to the Pre-Raphaelites and the nascent Arts and Crafts movement.

In 1859–60 he worked with his friend Philip Webb to design the medievalist Red House in Kent. Unwilling to furnish it with products of modern industry, he called upon his friends to design the furnishings. This was the germ of Morris, Marshall, Faulkner, & Co., founded in 1861. “The Firm,” as Morris called it, was devoted to traditional craft techniques and the gothic revival. Products ranged from stained glass to tapestries to pottery to bookbinding. Traveling to the Continent and studying books and manuscripts in libraries, Morris experimented and rediscovered numerous preindustrial manufacturing techniques. In effect, he took Ruskin’s criticism and applied it in practice.

Morris’s success in the decorative arts was coupled with success in literary endeavors. Between 1868 and 1870 he published his poetic masterpiece, *The Earthly Paradise*, to positive reviews. Around the same time, however, Jane and Rossetti began a love affair to Morris’s stoic, but melancholic chagrin. Morris, who believed that the marriage contract should not limit natural affection, tolerated their relationship and even leased Kelmscott Manor with Rossetti, leaving Jane, their children, and Rossetti to live together for extended periods of time. Tensions between Rossetti and Morris heightened in the mid-1870s, in part due to Rossetti’s laudanum addiction and increasingly prickly personality. Morris cut his ties to Rossetti in 1877.

In 1876 William Morris began the public, political phase of his career. Angered by British policy in the Balkans, he joined the Eastern Question Association, publishing a number of newspaper articles and organizing protests. In 1877 he formed the Society for the Protection of Ancient Buildings, or “Anti-Scrape.” Founded on principles developed from Ruskin, the organization attempted to prevent the “restoration” of architectural antiquities in Britain. By 1879 he

became treasurer to the working-class National Liberal League. But it was in 1883 that his belief in the improvement of working-class conditions found him a member of the Democratic Federation (later the Social Democratic Federation). Marxist in inspiration, it became the most prominent voice for socialism in Britain between 1881 and 1884.

Marx’s involvement in the SDF was short-lived. He and nine other members of the Executive Council resigned in late 1884, due partly to Henry Mayers Hyndman’s “arbitrary rule” of the SDF, and founded the Socialist League. The manifesto of the new organization was profoundly anti-capitalist and internationalist. Joined by Edward Aveling, Eleanor Marx-Aveling, Andreas Scheu, and a number of other prominent socialists, the group never consolidated into a unified body. Morris was part of a faction that denounced parliamentary compromise, but, on the other hand, he denounced the random violence of the anarchists in the League.

During the late 1880s Morris became more convinced of the imminence of an international revolution. He edited the League’s journal, *The Commonweal*, and spoke at protests throughout Britain. An economic crisis in Britain had led to increased interest in socialism by the British working class, and the events of Bloody Sunday 1887 proved the intransigence of the Liberal government. Nevertheless, the influence of anarchists within the League, such as Peter Kropotkin, defections to the SDF, and the growth of Fabianism suggested to Morris that the socialist revolution would be a more protracted endeavor than he had initially imagined. By 1890 the League finally split, and Morris joined the newly founded Hammersmith Socialist League.

The last years of Morris’s life saw a continued interest in socialist politics, and in 1890 he published one of his most important literary works in serial. *News from Nowhere* was a utopian fantasy set in the future that outlined a socialist, agricultural society in which labor was edified through meaningful work. In it Morris answered objections to the practicalities of socialism and rejected the technological society outlined in Edward Bellamy’s *Looking Backward* (1889). Additionally, Morris began taking a more active role in the various arts and crafts societies and guilds, including the Arts and Crafts Exhibition Society and the Art Workers’ Guild. His final endeavor was the foundation of the Kelmscott

Press, devoted to hand printing. He published the famed Kelmscott Chaucer, illustrated by Burne-Jones, as well as a printing of John Ruskin's "Nature of the Gothic."

Moscow fire and protest, 1547

Yury V. Bosin

A major protest broke out against Ivan IV following a large fire that engulfed the city of Moscow over two days in June 1547, killing 4,000 people and displacing many residents. Rumor spread among the urban dwellers that the Glinskiy family, a noble clan in the tsar's entourage, was responsible for setting the fire. Some 42 years earlier, in 1505, Anna Glinskaya, Ivan IV's grandmother, whom many thought had the capacity to transform herself into a bird, was strangled for witchcraft. According to popular mythology, Muscovites believed that on June 21 Anna metamorphosed into a bird, spilling blood that set the city alight. This deep-seated superstition fueled popular protests for the execution of Glinskiy family members.

On June 28, in a failed effort to calm the discontent, the Glinskiy family invited protesters to a liturgical mass at the Assumption Cathedral on the Kremlin grounds, the site of the imperial compound. The tactic failed just as the uprising was reaching its climax: the masses sacked Glinskiy mansions, killing members of the family.

On June 29, insurgents rushed to the Sparrow Hills on the outskirts of Moscow, where 17-year-old Tsar Ivan had gone to escape the fire. The view of a huge crowd scared Ivan, who was forced to give generous promises to pacify the protesters. The riot lost momentum and ended in early July. Intimidated by the scope of the rebellion, Ivan instituted government reforms to reduce the influence of noble families and established a special council, known as "Izbrannaya Rada," to permit representatives of the lower classes to advise the tsar on political and economic issues.

Mossadegh, Mohammad (1881–1967)

Nandini Bhattacharya

Mohammad Mossadegh, an Iranian nationalist, democrat, socialist, and leader of foreign imperialism, was born in Tehran. His father was the finance minister under the Qajar king, Naser al-Din, and his mother was a granddaughter of Crown Prince Abbas Mirza. His marriage to a Qajar princess strengthened the linkage with the royal family. Before entering politics Mossadegh, who received higher education in Paris and Switzerland in law and economics, taught at the Political Science Institute of Tehran. In fact he was the first Iranian to have a law degree. His exposure to Europe had its influence in the making of his liberal political outlook.

Though elected to the first *Majlis* (parliament) in 1906 as a representative for Isfahan in central Iran, Mossadegh refused to accept it as he was too young. Between 1917 and 1923 he served as minister of finance, governor of Azerbaijan, and finally as minister of foreign affairs. When reelected to the *Majlis* as a representative for Tehran in 1923, Mossadegh voted against the selection of the prime minister, Reza Khan, as the new Shah of Persia. But by 1926 Reza Khan took the crown for himself

as His Imperial Majesty Reza Shah Pahlavi after deposing the royal Qajar dynasty. In 1925 Mossadegh retired from politics into private life in disgust and despair.

During World War II, Iran seemed to have evolved towards a parliamentary system. Reza's son Mohammad Reza Pahlavi was made a limited monarch in a constitutional regime. In 1944, following Reza Khan's abdication, Mossadegh returned to public life, regaining a seat in the *Majlis* as the first deputy for Tehran. He established the *Jebhe-ye Melli* (National Front), a loose coalition of diverse groups ranging from the secular nationalists or even ultra-nationalists, to the Tudeh Party (Communist Party of Iran), to religious and Islamic fundamentalist groups. As a prominent advocate of Iranian nationalism this party sought to establish democracy and eliminate foreign presence in Iranian politics, especially the Anglo-Iranian Oil Company's (AIOC) operations in Iran.

During the phase of oil politics in Iran Mossadegh acquired remarkable prominence in the public sphere. His opposition to foreign interference and his demand for nationalization of the oil industries became the rallying point for nationalist propaganda. It was during this glorious moment of nationalization of the oil industries that Mossadegh was regarded as a national hero and was duly made prime minister when the Shah had to respond to popular demand. But this was also the beginning of his downfall, as his nationalism reached a level of frenzy and crossed all limits of pragmatism. He could not provide practical viability to his policy of oil nationalization. Sensing the difficulties of a worsening political and economic climate, he asked the Shah to grant him emergency powers. The Shah refused, and Mossadegh announced his resignation.

Ahmad Qavam, the new prime minister, announced his intention to resume negotiations with the British to end the oil dispute. This blatant reversal of Mossadegh's plans sparked massive public outrage across categories from communists to radical Muslims. Frightened by the unrest, the Shah dismissed Qavam and reappointed Mossadegh, granting him the full control of the military he had previously demanded.

Mossadegh and oil nationalization were widely popular until his landslide victory in 1953, while the British were widely hated. His attempt to

Mohammad Mossadegh, the popular Iranian prime minister from 1951 to 1953, enters the court at Saltana Tabad military prison, Iran, November 8, 1953. In the wake of his efforts to nationalize the Iranian oil industry, Mossadegh was removed from power in a coup d'état sponsored by the British and United States governments. (STR/AP/PA Photos)

uphold a nationalist regime against western imperialism without the use of political Islam marked a unique era in Iranian history. But his oil politics also entangled Iran in the Cold War when a Soviet connection was cultivated through the Tudeh Party. During post-nationalization Anglo-US powers were preparing for a coup by means of the CIA, constructing an anti-Mossadegh combination that included monarchists, military leaders, and rich Iranians to put pressure on his National Front. They also circulated false propaganda against Mossadegh, who began to lose his composure and started to move against parliamentary politics, which so far had provided the backbone to his political career. This great liberal leader now organized a national referendum to win approval for the dissolution of parliament. This marked a major shift in his principles. Moreover, Mossadegh's popularity was eroding as promised reforms failed to materialize and his policy of collective farming was a disaster. The British boycott

of Iranian oil was damaging to the interests of the propertied class and the anti-Mossadegh propaganda was gaining ground, with the fear of communist influence implying Soviet linkage.

Ultimately, the combination of royalist conservative factions including landowners, clerics, and merchants, and the pro-Shah army, made the foreign-aided coup a success on August 15, 1953. On August 19 a direct attack on Mossadegh's residence led to his arrest, military trial, and imprisonment for three years. He was replaced as prime minister by pro-US General Zahedi. Mossadegh was kept under house arrest at his estate of Ahmad Abad near Tehran until his death on August 5, 1967.

Mother Jones (1837–1930)

Elliott Gorn

Mother Jones was one of the most famous women in America during the early years of the twentieth century, although by the early twenty-first century she is nearly forgotten. "Pray for the dead, and fight like hell for the living," she used to tell her audiences, and her fiery words inspired thousands of men and women to join unions and the Socialist Party. Her friend Upton Sinclair described her in a lightly fictionalized account about the struggle to organize the Colorado coalfields in 1913:

There broke out a storm of applause which swelled into a tumult as a little woman came forward on the platform. She was wrinkled and old, dressed in black, looking like somebody's

grandmother; she was in truth the grandmother of hundreds of thousands of miners . . . Hearing her speak, you discovered the secret of her influence over these polyglot hordes. She had force, she had wit, above all she had the fire of indignation – she was the walking wrath of God. . . . Asked for where she lived while testifying before a congressional committee, she declared "my address is like my shoes, it follows me wherever I go." (Sinclair 1976: 88–90)

And it was literally true; for 25 years, in her sixties, seventies, and into her eighties, Mother Jones traveled all over the United States, organizing workers and a range of trades and beating the drum for the socialists.

Mother Jones was born Mary Harris in Cork, Ireland, in 1837 (though around the turn of the century she began to exaggerate her age, heightening her venerability). As a child, she witnessed the horrors of the potato famine, and her family came to North America as a result of the Great Hunger. They settled in Toronto, Canada, where Mary's father was a laborer on the railroads. Mary attended Toronto's Catholic schools, and by the time she was a young adult she had acquired a dressmaker's skills, but she also trained to be a teacher. She left home for Monroe, Michigan, where she taught in a convent school, then she stayed briefly in Chicago before settling in Memphis, Tennessee in 1861. There she taught school but soon married a skilled tradesman, an iron-molder named George Jones. They weathered the American Civil War, and by 1867 had four children. A yellow fever epidemic in the fall of 1867 took the lives of George and all four children. Totally bereft, Mary Jones returned to Chicago and took up her old dressmaking trade.

She was all but invisible to the public for the next 30 years. We know that the Chicago Fire of 1871 burned out her small dressmaking business. Her autobiography claims that she was active in the 1877 Railroad Strike, and in the Haymarket uprising of 1886, but at most she was a bit player. She became visible – and then only locally – with the march of Coxey's Army for jobs in 1894, and then in organizing Pennsylvania's anthracite fields by the fledgling United Mine Workers (UMW) as the nineteenth century waned. But suddenly, around 1900, Mary Jones burst on the scene in the persona of "Mother Jones." Exactly how she came up with the moniker is unclear.

After 1900, however, she signed her letters that way, union leaders, governors, presidents, and captains of industry addressed her as mother, and especially her admirers knew her by that name. As an elderly working-class woman, Mary Jones had neither voice nor influence, but as Mother Jones, she claimed the mantle of sacred motherhood, which empowered her to make claims for the family of labor.

Over the course of 25 years, from the end of the nineteenth century through the early 1920s, she organized coal miners in Appalachia, the Middle West, and the Rocky Mountains, brought new recruits to the Socialist Party, orchestrated a dramatic strike of mill children from Philadelphia to President Theodore Roosevelt's summer home on Long Island, became one of the founders of the Industrial Workers of the World (IWW), aided the radical Western Federation of Miners, and raised money for Mexican revolutionaries living in exile in the United States. Her greatest victories came in coal country.

On the eve of World War I, three-quarters of a million men mined coal, and the UMW had become by far America's largest and most successful industrial union. Much of the credit goes to Mother Jones, the UMW's most successful organizer. She walked the Rockies and the Appalachians, organizing the men, facing down armed guards, and surviving repeated imprisonments; she even organized miners' wives into "mop and broom brigades" that walked the picket lines and confronted scabs. After many spectacular, bloody battles which she helped lead in West Virginia, Colorado, and the Midwestern states, hundreds of thousands of miners had joined the union and received higher pay and safer working conditions than ever before.

True, she lost as many battles as she won. Her stance against women voting (she mostly considered politics to be a distraction from labor organizing) seems terribly backward today. Though she usually viewed unions as inclusive of all workers, she occasionally backslid into the racism and nativism of her day. But she accomplished much, and she did it by creating and performing her role. By becoming Mother Jones, she constructed an amazing life of courage and commitment, one that metaphorically rejected capitalist individualism for the family of labor. The union was a culture, a way of life, one that rejected America's worship of individualism

and embraced instead the community of labor. Above all, she gave working people hope and told them that their aspirations for change were in the best traditions of patriotism and religion. With her black dresses and white hair, Mother Jones tailored her appearance to match every sentimental cliché about womanhood. Then behind her genteel cover she made galvanizing, profane, electric speeches. Women – especially old women – were not supposed to have opinions about politics and economics; they were too delicate for controversy. Yet there she was, haranguing workers, berating politicians, attacking the "pirates" and the "plutocrats," and telling women to take to the streets, all under the cover of sacred motherhood. And that was her real legacy – out of nothing but courage, passion, and commitment, she created a unique voice, a prophetic voice, and raised it in the cause of renewing America's democratic promise.

Motsoaledi, Elias (1924–1994)

Lucien van der Walt

Elias Motsoaledi was born in Sekhukhuneland, South Africa, in 1924, the third of eight children. Coming to Johannesburg for work at 17, Motsoaledi worked in a leather factory from 1943, joined the Communist Party of South Africa (CPSA) in 1945, the African National Congress (ANC) in 1948, and the Leather Workers' Union in 1949, and was fired for his union work. The ANC, the country's main African nationalist organization, was adopting an increasingly

confrontational position and developing into a mass-based party, and Motsoaledi was one of several CPSA members elected to its Transvaal executive. He was involved in the Council of Non-European Trade Unions (CNETU): formed in 1941 with 100,000 members, CNETU was led by CPSA activists and reached perhaps 150,000 members by the close of World War II (Alexander 2000). CNETU split in 1947 in the wake of the failed general strike launched by its affiliate, the African Mineworkers' Union, but played an important role in the national day of protest against the Suppression of Communism Act in 1950. Motsoaledi was elected CNETU chairman in 1953. The CPSA meanwhile dissolved, and was replaced by the underground South African Communist Party (SACP) in 1953.

The 1950s saw the "Congress Alliance" – ANC, the Colored People's Congress, the (white) Congress of Democrats, and the Indian National Congress – organize civil disobedience campaigns, including the Defiance Campaign of 1952, in which Motsoaledi was active. The 1950s also saw substantial realignments in the local labor movement. In 1955, the remaining CNETU unions and the left-wing faction of the South African Trades and Labor Council, which had been splintering from 1947, formed the South African Congress of Trade Unions (SACTU) in 1955. SACTU started with 31 affiliates and 32,000 members (Lambert 1988). Motsoaledi was a key figure in the federation, which had close links to the Congress Alliance and promoted interracial unionism, organized general strikes in 1957 and 1958, and claimed 53,000 members by 1961.

The 1950s were characterized by growing repression, and Motsoaledi was among those affected. He was banned from holding union office in terms of the Suppression of Communism Act, and detained during the large-scale arrests of the state of emergency declared in the aftermath of the Sharpeville Massacre of March 21, 1960, and imprisoned for four months. The ANC was declared an unlawful organization and banned in April, SACTU playing a key role in organizing a general strike in protest. In June 1961, the ANC and the SACP shifted from their previous emphasis on non-violence and organized an armed group, *Umkhonto we Sizwe* ("Spear of the Nation"), which undertook various acts of sabotage from December onwards. SACTU was

not banned, but the climate of repression and the growing involvement of key SACTU figures like Motsoaledi in *Umkhonto we Sizwe* contributed to its virtual collapse inside the country by the mid-1960s. Motsoaledi was detained in 1963 under new 90-day detention laws, and was sentenced to life imprisonment at the 1963–4 Rivonia trial for his underground activities. When the ANC was legalized in 1990, Motsoaledi was elected to its national executive in 1991, having served 26 years on the Robben Island prison. He died in 1994.

Movement of Recuperated Factories, Argentina

Peter Ranis

Contemporary Argentine factory and enterprise worker cooperatives were essentially born in the runup to and the massive popular societal demonstrations of December 2001. They owe much of their momentum to the social and economic crisis that offered little alternative to laborers and employees but unemployment and poverty. Factory and enterprise bankruptcies and employer abandonment of places of work forced the laborers and employees to seek redress of their grievances. One of the measures to which they turned, inspired by two non-governmental organizations (NGOs), was the formation of worker cooperatives, which are sanctioned by historical Argentine law. Forming cooperatives became only the first step in the

often long legal, community, and political struggles that gave the workers temporary rights to reenter the factories and enterprises and initiate or continue production and services.

The Argentine worker-occupied and managed factories and enterprises represent a novel on-the-ground departure among social movements that have the authenticity to flourish, embedded as they are in the survival responses of laborers and employees and the moral authority of maintaining national production through working-class employment. The 1990s, under the Carlos Menem presidency, had dramatically accentuated the devastating deindustrialization in Argentina that began during the military regime of 1976–83. Within the first several years of his government, the country sold at bargain-basement prices the national enterprises of petroleum, gas, electricity, railways, hydroelectric dams, banks, the subway system, maritime and airline fleets, the most traveled commuter highways, and radio and television stations. The demise of industrialization had a nefarious impact on domestic enterprises with a concomitant increase of unemployment, poverty, and inequality symptomatic of a dual society. The partial financial default of Argentina in 2001 sharpened these conditions. The collapse of peso convertibility severely affected smaller firms with higher levels of indebtedness, those that produced for the domestic market but often depended upon imported raw materials and supplies for their production.

During the Argentine recession of 1998–2002, the societal indicators hit rock bottom. Poverty and unemployment soared to unparalleled historical proportions, reaching three-fifths of the population as poor or indigent and a third without full-time employment. The crisis accentuated preexisting patterns and behavior among the owners of small- and medium-sized Argentine industrial firms and commercial establishments. The worker-occupied factories and enterprises did not proliferate in a vacuum. They are a direct result of the Menem governmental policies that allowed workers to be fired and laid off, with limited severance packages, if management could prove to the Ministry of Labor that the firm's viability was endangered. In essence Argentine labor flexibilization laws allowed the owners of these firms to reconfigure the workplace to enhance productivity and to restructure their workforce based on market rationales. These policies combined with the recession that began

in 1998 and the default crisis of 2001 created a miasma in the world of work.

Many of these firms started procedures that would end in default to their creditors and outright declarations of bankruptcy. Invariably, in the cases in which workers chose to occupy their factories and enterprises, there was overriding evidence that the industrial recession was often fraudulently used by the owners to decapitalize their firms, attain millions of dollars in government credits for non-production-related financial speculation, and, ultimately, to deprive the workers of their earned wages as they broke the labor contracts and often simply walked away from the factory or enterprise. As a response to these conditions, a portion of the Argentine workers seized on the methodology of taking control of factories and enterprises that were being decapitalized by their owners and/or were in various stages of debtor insolvency or outright bankruptcy. Worker-occupied factory and enterprise cooperatives became a clear alternative to unemployment and poverty.

In the wake of these abhorrent conditions, two Argentine NGOs were founded which attempted to organize and motivate workers to take over their factories and enterprises and then use legal strategies, political pressure, and moral suasion to maintain control over their means of production and provision of services. The *Movimiento Nacional de Empresas Recuperadas* (MNER) was founded in 2002 and the *Movimiento Nacional de Fábricas Recuperadas por los Trabajadores* (MNFRT) was founded in 2003. Though their strategies and tactics differed considerably, their goals were similar: to create a belt of worker-producer cooperatives throughout the country. The MNER, the MNFRT, and various other independent social movement organizations continue to create and sustain worker cooperatives as a model for achieving worker employment and avoiding poverty. The MNER has more national entities while also being heavily represented in the capital city of Buenos Aires. The MNFRT is more ensconced in Greater Buenos Aires, which includes the surrounding industrial suburbs in the Province of Buenos Aires.

According to the Argentine Ministry of Labor there were 213 recuperated factories and enterprises employing approximately 10,000 workers; 65 percent of these worker-owned and managed enterprises were situated in the Province of

Buenos Aires, the capital city of Buenos Aires, and the Province of Santa Fe. The areas of cooperative production were very broad and extended to all sectors of the economy. The five most heavily represented industrial areas consisted of metal parts factories, food processing plants, construction sites, slaughterhouses and meat processing plants, and textile industries. Among the cooperatives devoted to services, there are hotels, health clinics, schools, supermarkets, publishers, transportation services, restaurants, and bakeries. The majority are small-scale enterprises consisting of less than 50 workers, though there are many significant exceptions. Women make up 25 percent of the workforce in these recuperated enterprises. Almost three-fifths of these worker enterprises were founded during the immediate crisis years of 2002–4, but they continue to grow significantly through 2008.

Moreover, the recuperated factory and enterprise movement has served to stimulate a general explosion of worker-producer cooperatives throughout Argentina in the twenty-first century. Forming cooperatives remains a viable alternative for the Argentine working class despite the macroeconomy's turnaround. Even the positive growth rates since 2003, averaging 8 percent, have not impacted on 80 percent of the Argentine population. In 2007, the top 10 percent of income earners still earned 30 times the bottom 10 percent, earning 35.2 percent of national income while the bottom 10 percent earn but 1.2 percent. The Gini index of inequality has climbed in Argentina from 0.36 in 1974 to 0.49 in 2007. Data in March 2008 from INAES (Instituto Nacional de Asociativismo y Economía Social) indicate that there are close to 23,000 cooperatives, of which over 50 percent are worker-managed producer cooperatives, as opposed to more traditional cooperatives found in the housing, agriculture, consumer, credit, and public service areas. These cooperatives, by and large, are formed by unemployed workers who take over abandoned buildings and public spaces, form cooperatives, and then initiate negotiations with municipal governments to grant them minimal funding to sustain them in the early stages of production. These cooperatives are found in every venue of economic activity but particularly in areas that serve immediate community needs such as in construction, food processing, restaurants, and bakeries.

In visits to 17 recuperated factories and enterprises and in interviews with several of the leaders of the cooperative movements between 2004 and 2007, it became clear that they have much in common in their critiques of the neoliberal economy and irresponsibility of both the corporations and the Argentine government. They recognize the conundrum of a surplus-labor economy and an increasingly competitive international environment that puts major downsizing and race-to-the-bottom pressure particularly on small- and medium-sized capitalist enterprises. But while the MNER made the connections between the United States Treasury, the World Bank, and the International Monetary Fund as the originating source of the austere, corporate-driven Argentine national economic policy, the MNFRT and others take a more task-oriented, case-by-case approach that applies various legal and self-help measures to initiate the enterprise-recuperating process.

The experiences of the recuperated enterprises, whether relatively large factories and enterprises such as Fasinpat/ex-Zanón, Yaguané, Vieytes/ex-Ghelco, IMPA, Renacer/ex-Aurora, 18 de Diciembre/ex-Brukman, Hotel Bauen or the thousands of small community-based cooperatives that sprung up after the crisis of 2001, have almost all demonstrated a visible and meaningful change in their understanding of human capital, approaches to productivity, redemocratization of the workplace, greater equity among the workforce, and sensitivity and responsibility to the surrounding community. In fact, it has been where conflict with the former owner was greatest and the antagonism deepest that the cooperatives demonstrate the strongest sense of collective commitment and solidarity after the initial events. Worker-managed enterprises end the super-exploitation of the workforce and workers share in the good times as well as the economic downturns in equal measure. And in most cases when there are cooperative salary differentials based on seniority and/or worker specialization capacities, the differences are greatly attenuated compared to capitalist firms. Though they obviously need to respond to market signals and requisites, they depart from typical capitalist firms by the absence of former owners and managers. Within these parameters the worker-controlled and worker-managed cooperatives symbolize a different work culture that represents a subversive challenge to normal

capital-worker relationships and have helped considerably to demystify the supposedly central role of the capitalist.

Thus far it is mainly the Fasinpat ex-Zanón ceramic worker cooperative in the city of Neuquén, a large, productive, and efficiently run factory with its committed trade union and coherent leftist leadership, that has helped frame this debate. The Zanón workers have fully taken the maximal step to commit the material, societal, and cultural resources of that factory on behalf of the disadvantaged working class of the province and city of Neuquén. The Zanón workers have extended their economic argument to social and political issues and, by way of theorized and intellectual pedagogy, have established positive relationships with the provincial public school teachers, the students and faculty of Comahue University, public employees, nurses, and the *piquetero* movement (unemployed workers who have used road stoppages/pickets to make their case). The Zanón workers argue that it is state power and responsibility that is required to turn the tide against the capitalist class. Individual worker cooperatives can only be a means of highlighting that essentialist struggle. Zanón workers want to use the recuperated factories as a wedge to develop a larger social movement. They are battling “not just to be another factory but to be a vanguard of social change against the capitalist system.”

The Argentine cooperatives have ensconced themselves into the capitalist system without capitalists and without managers – no mean achievement and in itself a major and considerable critique of capitalism and its originating and guiding principle. The cooperative workers’ product no longer belongs to the capitalist but to the productive workforce itself. They no longer simply sell their labor power but they now also appropriate their own capacities on their own behalf, although they are still beholden to the tyranny of the marketplace itself. They are now subject not to the rule of their former capitalist owner but to the rules of the capitalist system at large.

Wages are no longer tied to the capitalist truism that they are merely based on a minor subtraction from profits. Rather, wages belong to a complicated mixed system subtracted from the surplus achieved and coordinated with fairness and solidarity among all workers. And what is more, the decisions are made collectively by

regularly held worker assemblies. Working thus collectively, workers do enhance their labor power and productivity. Cooperatives control the levels of exploitation allowed in achieving this enhanced productivity by undermining the separated individual ethic of the capitalist enterprise. Through combining and cooperating, workers mitigate the separation and competition inherent in a capitalist-run firm.

Cooperative experiences contain the seeds of rebellion. However, they remain just that without a massive working-class support belt derived from workers’ autonomous rights as a class. Workers must insist upon their claims that they, as laborers and employees, should control and manage the major productive enterprises of the economic system. They must come to believe this and feel it in their bones that this is their right. And here the recuperated enterprises and cooperatives can provide workers with positive experiences and a sense of entitlement.

Movimento Sem Terra (MST)

Zulma Amador

The agrarian question in Brazil became a social and political problem in the middle of the twentieth century. Two important factors helped to make this question visible: the revitalization of the Peasant Leagues (Ligas Camponesas) in the northeast in the 1950s, and several conflicts between the indigenous people and the tenant farmers in the Amazon region in the 1960s. These events marked contemporary Brazilian history. They disrupted four centuries of the peasantry's oppression and silence. First, the historical make-up of the country and the distribution of land had become an urgent national issue on the social and political agenda. Second, the movements forced the state to recognize and deal with these social and agrarian demands.

Background to Brazilian Land Issues

In the colonial period, the Portuguese crown divided the country into 12 *capitanias*, state land given to relatives or loyal families. These families divided thousands of hectares of land among other families of the same type, and so on. This was the foundation of the social and economic organization based on the system of land possession that characterized the colonial and post-colonial periods of Brazilian history. The sugar cane plantation owners (*senhores de engenho*) and the military elite, called *coronéis*, became the new economic elite. The possession of large extensions of land (*latifúndio*) became the basis for social and economic organization.

The agrarian question is a residual issue of slavery in Brazil and an expression of the contradiction of capitalism. This contradiction involves the question of private property and the problem of land distribution. During the colonial period the peon was characterized by work, con-

ditioned by and excluded from possession of private property. The industrialization process and the social inequality of the twentieth century made the complex agrarian issue in Brazil visible. It was in this historical context that the agrarian movement in Brazil emerged.

Agrarian reform is one of the most important questions in contemporary Brazilian history and is characterized by a long process of confrontations. Brazil experienced a number of political initiatives addressing land reform in the eighteenth and nineteenth centuries, but the most important agrarian movement confronting this social problem occurred in the twentieth century with the Peasant Leagues in the northeast.

Peasant Leagues (1954–1964)

The Peasant Leagues (Ligas Camponesas) constituted the most important social and agrarian movement in Brazil in the middle of the twentieth century. They were organizations of peasants and rural workers in the northeast of Brazil, which had been a sugar cane plantation region since the colonial period and had remained one of the poorest regions in the country.

Between 1940 and 1950 the Brazilian Communist Party (PCB) organized the Peasant Leagues around the country. Workers' associations (*sindicatos*) were legal and experienced relative freedom during that period, but rural workers' associations suffered restrictions, since governments were hand in glove with landholders. However, civil law allowed free associations, and the PCB used that liberty to organize rural workers between 1945 and 1947 into hundreds of Peasant Leagues. The PCB logic was to attract votes and elect municipal and state representatives. As the PCB centralized the peasant movement, the Leagues became dependent for their organization on the party structure, following the party tactic of accumulating forces for a proletarian movement. Rural workers, small land tenants, and farmers constituted the membership of the rural organizations.

In 1947 the PCB lost its legal status as a political party. The Peasant Leagues were dispersed and their leaders were persecuted or assassinated, although a few clandestine groups managed to resist. The historical memory of this first series of rebellions continued in other parts of Brazil and had repercussions for the peasant movement in the following years, encouraging

the Porecatu guerilla movement in 1950 in São Paulo, the Dona Naca revolt in Maranhão in 1951, the free territory of Formoso, established by peasants and farmers in Goiás, and the First Northeastern Congress of Rural Workers (I Congresso Nordestino de Trabalhadores Agrícolas) in 1954 in Limoeiro, Pernambuco. The Congress represented the peasants' legal effort to reconstitute their association, but it was violently suppressed.

Between 1948 and 1954, the peasants experimented with various ways of acting and mobilizing. A few leagues resisted repression and continued to use the name "league," for example the Peasant League of Iputinga, headed by José dos Prazeres. A charismatic leader who contributed to the rural workers' mobilization in Pernambuco, he played an important role in establishing contacts between different ideological forces, local governments, and politicians. The most important effort was the foundation of the Rural Society of Planters and Cattle Breeders of Pernambuco (SAAP), which merged with peasants from the sugar mills of Galiléia. Oscar Beltrão, owner of the Galiléia property, was chosen to lead the group, but he declined and helped the police to persecute the peasants and rural workers. So the SAAP and Prazeres began to seek intellectual and political support for the Leagues in Recife. Prazeres had sympathy from urban politicians, as well as from representatives of different political parties, who gave political and public support by visiting the core leaders of the movement, helping to calm violent repression and thus expanding interest in the peasants' movement to the urban sector.

These leaders later formed the Regional Council of Peasant Leagues (CRLC), which played a crucial role in the modern Brazilian agrarian movement. In the beginning, the CRLC strategy was to build a peasant organization with a regional structure and obtain regional federation status and the support of progressive urban sectors whose leaders had upheld the peasants' rights to seize and defend land. Prazeres was fundamental in the elaboration of the Leagues' strategies and methodology. Liberal intellectuals and politicians who were friends of the peasant movement joined the CRLC, including militants of the PCB, Brazilian Labor Party (PTB), and the Brazilian Socialist Party (PSB). Between 1956 and 1964, under the governments of Juscelino Kubitschek and João Goulart, democratic protection for

organizing helped to expand and institutionalize the Leagues.

Between 1954 and 1964 peasants and rural workers, together with intellectuals, Catholics, and politicians, organized several demonstrations in Recife, the capital of Pernambuco. They occupied plantations and confronted landlords to demand the distribution of land for the people who worked it. Over a period of ten years this local/regional agrarian movement had had a national impact and become the reference point for subsequent popular social and agrarian movements in Brazil. The famous slogan of the Leagues was "agrarian reform by law or by force." PSB member Francisco Julião served as honorary president of the Peasant Leagues until 1964, when a military regime came to power and national protection was ended. Under the military repression, all the League leaders were persecuted or assassinated, and Julião was exiled to Mexico.

The Landless Movement

The Peasant Leagues became part of the historical memory of the agrarian movement in Brazil, serving as inspiration for a movement that emerged in the south in the 1970s and 1980s. Political and historical conditions in the south of Brazil, where political persecution existed but was not as harsh as in the northeast, made it possible to integrate several agrarian movements.

One of the most important ideological sources of the agrarian movement was religious. Ecclesial base communities (CEBs) became promoters of social conscience and social change. The CEBs based their reflections about poverty and social conditions on the Second Vatican Council (Concilio Vaticano II) and on the Bishops' Conferences that took place in Medellín, Colombia in 1968.

The Pastoral Land Commission (Comissão Pastoral da Terra, CPT), created in Goiânia in 1975, worked to create social consciousness among popular sectors. The CPT started in the north and central west with bishops from the Amazonian region and later expanded around the country. Its ecumenical perspective encouraged its growth and the reconciliation of different religious beliefs. This perspective is characterized by seeking social justice and combining faith and politics to liberate the poor.

In the 1980s, many social movements and forces reacted against the military regime and the structure of social domination characterized

by *coronelismo*. In this national political context, the Landless Movement (Movimento dos Trabalhadores Rurais Sem Terra, MST) emerged as a rural movement to fight for agrarian reform between 1979 and 1984. Mobilizations of rural workers increased in several regions of the country, and hundreds of hectares of farm land were occupied.

In 1984 the MST was officially created at the First National Encounter of Landless Rural Workers in Cascavel, Paraná. The meeting institutionalized the movement and defined both its political and general tactics. The general tactic was a familiar one – land occupations by parents, children, and the elderly. The general objective was the struggle for agrarian reform and in favor of a society without exploitation.

Within the social and cultural diversity of the movement it was possible to unify social demands for agrarian reform. One unifying event was the expulsion of settlers by Kaingang indigenous in the Nonoai reservoir, which was originally Kaingang land, in May 1978. This “reconquest” was preceded by a number of occupations of Macali and Brilhante *fazendas* (landholdings) in Ronda Alta and the Sarandi reservoir. The occupations of huge extensions of land began in 1979, but the first organized visible occupation was in 1981. It is remembered as the Encruzilhada Natalito in Rio Grande do Sul. It lasted for one year and marked the foundation of MST as a social movement with its own political identity.

Simultaneously, there was a series of events related to the occupation of landholdings in Paraná, São Paulo, and Santa Catarina, as well as the creation of several organizations and associations, some with the help of CPT. These events found themselves in concert in their search for justice and agrarian reform. In this context the MST expanded, not as a unique agrarian movement but as a large part of that effort.

From 1984 to the present, the MST has evolved into a broad movement. In 1988 the MST reaffirmed its autonomy from other agrarian movements and organizations, defining its symbols, flag, and anthem. It also created an organizational structure and adopted a national direction with various sectors, including education, health, human rights, and production. This structure spread gradually to regions, states, and micro regions. Each sector has two representatives, one woman and one man. The MST’s main leader since its foundation is João Pedro Stedile.

At the present, the MST has representation in every state apart from Amazonas and Acre. According to its Fifth National Congress in June 2007, the MST has 17,500 militants. The movement organizes familiar occupations in non-productive landholdings, builds settlements, and negotiates with the Brazilian government to legalize settlements through the National Institute of Colonization and Agrarian Reform (INCRA). The occupation of land is usually a conflictive process. MST settlements are culturally, socially, and ethnically diverse, and not all militants come from agrarian movements.

Over the last two decades the movement has seen the development of a political-pedagogical project (*projeto político pedagógico*), which orients all development and educational projects. The aim is to develop a critical consciousness and reflection on the sociohistorical context and meaning of the struggle for land and agrarian reform. “Transform transforming” is the pedagogical principle of the movement, so every meeting, political action, or social organization of settlements is seen as a learning process. In January 2005 the MST opened the Florestan Fernandes National School in Guararema, São Paulo. The school is used to train MST militants and other popular social movements from Brazil and other countries.

Currently, the MST is considered the largest organized popular social movement in Brazil. In 24 years it has spread throughout almost the entire country, consolidated its organizational structure, and created a newspaper (*Jornal Sem Terra*) and magazine (*Revista Sem Terra*). MST has relationships with other social popular movements in the country and around the world and is part of Via Campesina, an international network that brings together millions of peasants. It is also seeking Latin American integration through the Bolivarian Alternative for the Americas (ALBA) and has militants studying in Cuba and Venezuela as a part of solidarity agreements.

In 2002, the MST, along with organizations such as the Workers’ Central Union (Central Única dos Trabalhadores, CUT), CPT, and other left-wing parties, expressed support for Luiz Inácio Lula da Silva, the Workers’ Party (Partido dos Trabalhadores, PT) presidential candidate. One of Lula’s campaign promises was agrarian reform, so his election, and reelection for the 2007–11 term, represented a victory for

the popular Brazilian classes and the defeat of the elites. However, that victory was not enough to generate significant changes in the agrarian reform and agricultural model. On the contrary, the MST and peasant organizations currently face national policies that promote agro-industrial business, and agrarian reform has not progressed.

Mozambique, worker protests

Beata Mtyingizana

Twentieth-century colonial and post-colonial regimes in Mozambique (formerly Portuguese East Africa) have been characterized by authoritarian labor relations that denied ordinary Africans the very modernity and progress they held out. Colonial labor, characterized not just by racially discriminatory laws, but also coercion, forced labor, and paternalism, left a deep imprint on the post-independence Marxist regime, hampering the rise of an independent labor movement before the liberalization of the 1990s. The roots of this striking continuity between Portuguese colonialism and radical nationalism can be argued to lie deep in the period of mercantilism dating back to the seventeenth century.

From the *Prazos* to the Modern Period

Despite Portugal's early explorations in southern Africa, it failed to establish a modernizing

colonial presence in East Africa before the late nineteenth century. Initial contacts at Delagoa Bay and along the Zambezi centered on trade, including slaving. There was very limited control over territory, and African intermediaries and allies were critical to the success of the colonial enterprise. A critical breakthrough was the agreement of the Monomatapa kingdom to pledge vassalage to the Portuguese throne in the mid-seventeenth century. The crown was then able to make semi-feudal land grants (*prazos*) to European lease holders (*prazeros*). The *prazeros* were meant to defend Portuguese interests, exercise judicial authority, and administer estates based on slavery and vassalage. Lacking military and other support from Portugal, the *prazeros* were generally autonomous and dependent on alliances with African and Indian notables, including marriage. By the late nineteenth century the *prazeros* were typically of mixed descent, heavily involved in African cultural practices and society, in control of personal armies, heavily involved in the slave trade, and locked in fierce combat with one another. The more powerful the *prazeros*, the more slaves they needed for their estates: slave raids were commonplace, and slavery relied heavily on violence.

The *prazos*, like other estates based on unfree labor, were characterized by intermittent revolts, but labor resistance was largely informal, involving desertion and sabotage and so forth: this is a history that is not, unfortunately, well documented. However, it is clear that the *prazos* were locked into pre-capitalist modes of labor control that were unable to develop into modes suitable for capital accumulation. The *prazos* resisted modernizing initiatives by Portugal, and were indifferent to capitalist enterprise. Portugal's inability to control the *prazeros* was embarrassing, and it came under great pressure for the continued existence of slavery. Ironically, perhaps, the *prazeros* offered the fiercest military resistance to Portugal's attempts at extending direct control over the East African interior in the wake of the Berlin Conference of 1885, and growing British claims.

Backward Portugal was unable to modernize Portuguese East Africa even after reconquering the interior, and established, instead, four chartered land companies. These operated plantations and paid rent to the authorities; in return, they were meant to provide infrastructure. Portugal abolished the slave trade in 1832 and enacted the

Native Labor Code in 1878, which was meant to allow African workers more rights by enabling them to choose their employment. Very little infrastructure was actually constructed by the chartered companies, and very little capital was invested. Moreover, the chartered companies demonstrated continuities with the old *prazos*, including coerced labor. The Niassa Company in northern Mozambique used forced labor, withheld food from offenders, and even executed workers. The Mozambique Company punished workers who sought employment elsewhere with sentences of forced unpaid labor.

Colonial Modernity and Labor Resistance

Under the António Enes regime which came to power in the 1890s there was a concerted effort to modernize the Portuguese colonies. Enes wanted a profitable colonial project through the systematic use of native labor. He sought foreign direct investment and missionary aid. Hostile to rival centers of power like the chartered companies, the centralized labor administration promulgated the revised *Regulamento do trabalho indigena*, or Native Labor Code: this effectively obliged all Africans to enter wage labor in order to become civilized Portuguese subjects. Africans deemed adequately assimilated to Portuguese culture – the *assimilado* elite – were exempted from the provisions of the *indigenato* code, including conscription into forced labor (*shibalo*). Coerced labor remained common, although overt slavery was removed.

At the same time, the limited amount of investment and the precarious financial position of the colonial state ensured that developments in neighboring South Africa, which had been industrializing rapidly since the 1880s, were critical. In the regional economic context Mozambique became embedded as a supplier of labor, and by the 1920s supplied nearly half of the African mine labor force in South Africa. Along with the rise of capitalism in Southern Rhodesia (now Zimbabwe), this created opportunities for evading and sabotaging the *indigenato*, and desertion from labor contracts. The colonial administration inherited a situation where there was already extensive movement of labor, over which it never managed to establish real control. Mozambicans were already migrating for work before Portugal exerted its authority. Migration

was more than escape: it was often a rational if risky strategy, with calculated desertions to the relatively better conditions in Lourenço Marques used as a means of avoiding conscription for cotton production, and as a stepping stone to work in South Africa or Southern Rhodesia. Migration or desertion were silent, often unorganized resistance strategies that employers often struggled to detect or suppress.

Lourenço Marques (now Maputo) was another destination providing better conditions than the agricultural sector: the economic hub of Mozambique, it grew rapidly as an important port complex, largely as a result of a railway connection from 1895 to South Africa's Witwatersrand region, as well as substantial South African investments in shipping and handling, utilities, and in financial services. The city's population grew rapidly, and there was a substantial degree of European immigration: the urban African population was certainly not less than 10,000 by 1915; the white population of the whole country was perhaps 15,000 a decade later. South African capital was displaced from the port and rail complex by the colonial government from 1910 onwards.

White immigrants formed the first trade unions in the territory in Lourenço Marques from 1905. These retained some links to Portuguese socialism and anarchosyndicalism, but in practice were often indifferent to African workers and overwhelmingly white in membership. The Port and Railway Employees Association, the most important union, led a strike wave from 1917 to 1921 in the face of increasing repression that escalated into martial law. A number of Africans joined the strikes, but were routinely marginalized in the settlements that took place. By 1925 the Port and Railway Employees Association had recovered and launched a large railway strike: this was broken when the railways were militarized, with strikers evicted from their homes, hundreds fired, and leaders deported. This shocked all workers in the city, white and black alike, effectively ending labor action until 1932, when a strike by electricity workers and railway workers was crushed in a similar way; unionism was thereafter defeated for the remainder of the colonial period.

The unions were lambasted by the *assimilado* intellectual Joao Dos Santos, who advocated interracial labor unity and African rights. Born in Mozambique, he formed the Liga Africana in

Lisbon and established the newspaper *O Africano* in Lourenço Marques. With the help of his brother, José, he edited and directed the successor paper *O Brado Africano*, an organ of the Grêmio Africano circle. Notwithstanding their base in the small *assimilado* and mulatto middle class, the papers criticized the *indiginato* as discriminatory, humiliating, and flawed, and as a barrier to true civilization, and provided extensive and supportive coverage of both African and white worker grievances, struggles, and demands. The circle never recovered from the death of João Albasini, nor did African workers manage to unionize at this time despite the abortive formation of the União Africano (African Union).

The António de Oliveira Salazar fascist dictatorship started in 1926 and later consolidated into the *Estado Novo* (new state) in 1930. It attempted to increase metropolitan control of the colonies (now deemed provinces). Unions were dismantled and replaced by state-run sindicatos, restricted to whites and *assimilados*; and strikes were prohibited. Resistance to growing pressures for Africans to assimilate provoked, on the contrary, a nationalist affirmation of Africanness among both workers and the elite. Nationalism, influenced to some extent by Marxism-Leninism and the Portuguese Communist Party, increasingly provided the core of African resistance, with a number of groups coming together to form the Mozambican Liberation Front (Frente de Libertação de Moçambique) (FRELIMO) in 1962.

Post-Independence Labor Regime

FRELIMO waged a largely successful armed struggle and formed the first independence government in 1974. Its struggle had been primarily rural, labor was not represented in party structures, and the legacy of the *Estado Novo* and the weakness of the colonial economy meant there was no powerful working-class movement to shape the post-colonial regime. FRELIMO adopted Marxism-Leninism as a modernizing ideology, stressed nation-building, and viewed democratic politics as an impediment to development. FRELIMO set up Grupos Dinamizadores-GDs (“dynamizing groups”), committees of eight to ten people in villages, urban neighborhoods, and workplaces: initially, GDs were to prevent sabotage, but their role

became workplace management and control over labor. In GD-run enterprises, workers were organized into production councils from 1976 (called unions from 1984), which focused on combating “indiscipline” and raising productivity. The objective of these structures was to ensure the working class acted in support of the state’s development effort.

Thus, the Organization of the Mozambican Workers (OTM) provided FRELIMO with a transmission belt for party-state control and was the only “union” organization permitted during the one-party years. It had no autonomy, strikes were banned, wage increases were restricted (prices were not), and ever-greater demands were made on wage earners and peasants. Unlike Zambia and Zimbabwe, where the official unions were able to establish some autonomy from the state, the OTM was firmly subordinated.

Pluralist Labor Regime

In 1984 Mozambique joined the International Monetary Fund (IMF) and World Bank, and in 1987 the first *Programma de Reabilitação Económica* (economic readjustment program) (PRE) was introduced. This marked a clear shift towards a deregulation of the economy and increasing reliance on an open market. There were large-scale retrenchments and the membership of the OTM’s 14 affiliates fell from 300,000 members in the early 1980s to 90,000 in 2003. Mozambique today has one of the weakest and most unpoliticized labor movements, and is among the most flexible labor markets in Southern Africa, with widespread casualization and poverty.

Mozambique suffered two major wars: against colonialism in 1964–74 and civil war in 1976–92. Hostilities between FRELIMO and the Mozambican National Resistance (Resistencia Nacional Moçambicana) (RENAMO) ended in 1992, leading to the first democratic elections in 1994, when FRELIMO won 53 percent of the vote and RENAMO 34 percent. As part of the political liberalization the OTM was declared independent of FRELIMO in 1990, but remains centralized, with most top positions in the organization’s hierarchy occupied by FRELIMO loyalists, and for years it remained suspicious of workers’ direct action. This situation contributed to the breakaway of unions representing workers in the hotel and tourism sector, construction

and mining, and transport in 1992. These formed the alliance called the Free and Independent Trade Unions (Sindicatos Livres e Independentes) (SLIM), which was legally constituted in 1997 into a union federation called the National Federation of Free and Independent Trade Unions of Mozambique (Confederação Nacional do Sindicatos Independentes e Livres de Moçambique) (CONSILMO). CONSILMO criticized the OTM for remaining too close to the ruling party and for being “a top-down federation” (Webster & Mosoetsa 2001), and aimed to establish a more democratic and effective labor movement based on autonomy. Nonetheless, the OTM remains the largest federation. Of the 20 unions that exist in Mozambique, 14 are OTM and four CONSILMO, with two others independent. In response to the pressing demands for workers’ protection, the OTM sought to create a platform of joint union action through the creation of a Forum for Union Coordination (Fórum de Concertação Sindical) (FCS) in 1995. It also sought to coordinate and assist the activities of its affiliates, to represent the affiliates in tripartite forums, and to participate in policy formulation.

Today, the differences in OTM and CONSILMO seem slim; not only are both represented in the tripartite Consultative Labor Commission (Comissão Consultiva Do Trabalho) (CCT), but they also meet beforehand in a lengthy joint strategy session. They also share a lack of capacity in collective bargaining and in bargaining over policies, notwithstanding support and aid from unions abroad. Links with labor in Southern Africa and South Africa in particular have also become increasingly significant, and the OTM is part of the Southern African Trade Union Coordinating Council (SATUCC) launched in 1983. The OTM is affiliated to this council and is also a member of the International Confederation of Free Trade Unions (ICFTU). Grassroots links were established between metal workers in MOZAL and their counterparts at Hillside Aluminum in Richards Bay, South Africa after a lengthy strike at MOZAL in 2000. The strikers wanted to be paid in US dollars at South African wages.

Mpho, Motsamai (b. 1921)

Wazha Gilbert Morapedi

Motsamai Mpho, a key nationalist figure and champion of social justice, was born to a Bayei peasant family on February 3, 1921, in Maun, northwestern Bechuanaland (now Botswana). The Bayei were a non-Setswana-speaking ethnic group, subordinate to the Batswana majority, themselves dominated by the traditional nobility, the *dikgosi*, or chiefs. At the time of Mpho's birth, Bechuanaland was a British protectorate, based on indirect rule with a colonial administration that was dominated by the small white population.

Although he was from a minor tribe, Mpho was well educated by the standards of Bechuanaland. He attended primary school in Maun, and proceeded to Tiger Kloof, Vryburg, in South Africa,

where he matriculated in 1944. He returned to Bechuanaland that year, and was offered a job as telegraph operator. Instead he took a job at Crown Mines at Johannesburg in South Africa in 1948, as secretary to the Reverend Anderson, his former schoolmaster, who was now employed as a welfare officer at the mine.

Mpho also worked with the Reverend Arthur Blaxall, secretary of the South African Council of Churches. Blaxall was an advocate of the non-racial and democratic ideals of the African National Congress (ANC), and this introduced Mpho to the local African nationalist movement, which he joined in 1952. The ANC's ideals resonated with Mpho, and he was active in the Congress movement's campaigns against apartheid in the 1950s. The ANC was head of the Congress Alliance, which was formed in 1952 and comprised the ANC, the South African Indian Congress (SAIC), the Colored People's Congress, the white Congress of Democrats, and the South African Congress of Trade Unions (SACTU).

Increasingly radicalized, Mpho was active in forming and activating ANC branches in the African townships of the western Transvaal, and became secretary of the ANC's Roodepoort branch in 1953. He also served as organizing secretary of the Consultative Committee of the Congress of the Peoples of the West Rand, which was linked to the ANC. He also worked as a freelance writer and journalist, contributing articles to newspapers such as *The Hobbies* and the *New Age*, edited by ANC figures as well as by members of the underground South African Communist Party (SACP), like Ruth First.

In 1954, the Congress Alliance developed the Freedom Charter and renewed its campaign of civil disobedience and labor action. Mpho contributed significantly to the Freedom Charter, which became the ANC's most important document, articulating the goals and aspirations of the South African democrats. In 1955, Mpho participated in defying the Group Areas Act which demarcated areas according to race. Such campaigns were followed by massive police crackdowns on ANC activists, including Mpho.

Mpho was also strongly opposed to British colonialism in his homeland, and was one of the leaders of the Bechuanaland Protectorate National Assembly in Johannesburg, which organized Batswana migrants. His politics led him to be branded as a "communist," as did

his encounters with figures like First and Joe Slovo. After the Sharpeville and Langa massacres of 1960, Mpho was amongst the ANC activists and leaders, among them Nelson Mandela, who were arrested. He was charged with treason and detained for five months. He was then discharged and deported on April 19, 1960. He married Onalepelo Macheng, a Motswana ANC activist who lived with her uncle in South Africa, in 1960.

Mpho's political experience in South Africa would prove invaluable in his activities against British colonialism in his homeland. He settled in Palapye, and together with Kgalemang Motsete formed the radical Botswana People's Party (BPP), the first mass-based political movement in Bechuanaland. The aims of this party, which Mpho served as secretary-general, were independence and democracy. Many members, including Mpho, adored Kwame Nkrumah's pan-Africanism, but Mpho himself was closer to the South African ANC's non-racialism than the racial nationalism of its rival, the breakaway Pan-Africanist Congress (PAC).

Using his experience from South Africa, Mpho campaigned vigorously to raise consciousness among the Batswana about their rights, and was continually under surveillance by the Special Branch. The BPP campaigned against the lack of economic development in Bechuanaland, white domination of land in areas like the northeast, and racial discrimination.

The BPP was hostile to the *dikgosi*, critical of Britain's constitutional reforms in the colony, and wanted immediate independence based on adult suffrage. Mpho himself particularly stressed the importance of ethnic equality amongst Africans. The BPP also influenced the Botswana Trade Union Congress (BTUC) in the early 1960s. The BTUC worked closely with the BPP in political rallies, and demanded the unity of all workers, irrespective of color, ethnicity, or creed, in line with ANC and SACTU policies.

Mpho had become a member of the World Peace Council (WPC) in 1955, campaigning for peace and human rights even beyond Africa, and became Bechuanaland's goodwill ambassador to the WPC. He accommodated South African refugees fleeing apartheid in 1962, and was their staunch spokesman.

The BPP split in 1962 and Mpho was expelled from the party. The split was linked to allegations of financial mismanagement and personal

rivalries in the leadership. Mpho then formed the BPP No. 2, subsequently the Botswana Independence Party (BIP). This party's platform did not differ from that of the BPP, since the split was not caused by ideological differences. When Bechuanaland became independent Botswana in 1966, the Botswana Democratic Party (BDP) of Seretse Khama won 28 seats, and the BPP three; the BIP did not win a single seat. However, Mpho became an opposition member of parliament in 1969, when the BIP won the Ngami constituency.

In parliament, Mpho continued fighting for democracy and civil rights. In 1982 he received the Presidential Order for Meritorious Service, Botswana's highest honor for meritorious service to the country. He strove continually to unite opposition parties, and in 1999 the BIP joined forces with the Botswana Freedom Party. He also campaigned against the corruption that was rampant in some institutions. While Mpho is now advanced in age, he remains a staunch advocate of the rights of the downtrodden in Botswana and elsewhere.

MPLA (Movimento Popular de Libertação de Angola)

Madalina Florescu

The Popular Movement for the Liberation of Angola (Movimento Popular de Libertação de

Angola, MPLA) was created in 1956 in Luanda by a group of *mestiços* and Catholic intellectuals who claimed responsibility for the attacks of February 4, 1961, on the prisons in Luanda. Other versions of its history deny that in 1961 the MPLA existed as a movement capable of organizing such action, insisting the MPLA was created in 1962 by Agostinho Neto in Leopoldville. In December 1962 the MPLA acquired its first political structure at a party conference in Leopoldville, creating a political and military committee and a steering committee and nominating Neto as leader. One year later, at the United Nations General Assembly in New York, where Holden Roberto represented the National Front for the Liberation of Angola (FNLA), Jose Edoardo dos Santos declared the MPLA "the only authentic Angolan movement."

In the 1960s decolonization did not mean the same thing to all African nationalist movements. The two dominant ideological trends were represented by the Casablanca group (with Algeria) and by the Monrovia group (with Congo-Leopoldville). Algeria gave preference to the MPLA, while the government in Congo-Leopoldville gave preferential support to the Union of Angolan Peoples (União dos Povos de Angola, UPA) (later FNLA). In 1963 the two trends were brought together in the Organization of the African Union (OAU), and the various Angolan parties in Leopoldville joined to form the government in exile (GRAE) which the OAU recognized as the exclusively legitimate representative of the anti-colonial Angolan nationalist struggle. The MPLA did not become part of the GRAE, and the OAU did not recognize the MPLA because it lacked adequate military power for an anti-colonial campaign.

At the time the MPLA did not yet have a clear political identity. While the faction of the leadership that was favorable to joining GRAE followed the line of the French communists, Neto sought to broaden the range of potential sources of financial, military, and diplomatic aid by not adopting an ideological line. Although the leaders of the three main nationalist movements were all the product of a combination of Portuguese colonial policy and Protestant missionary education, the project of a common nationalist front failed because of the division between Catholic and Protestant missionaries' approach to evangelization, which enforced a town/rural divide and a divide between the

old Europeanized elite ("Old Creoles" or "Afro-Portuguese") and the new African elite. These tensions played out within the MPLA, where those of Protestant origin who joined the MPLA always maintained strong ties to their churches, unlike the Catholics who joined the MPLA as a rejection of their Catholicism.

The repercussions of the divisions concerning the alliance with GRAE led to high-level defections within the party. The president of Congo-Brazzaville received Neto, Roberto, and the leaders of four Bakongo groups at a round table he organized after the OUA had recognized GRAE. Upon his return to Leopoldville, Neto declared he had formed an alliance with Bakongo parties and the FDLA (Democratic Front for the Liberation of Angola), and that the MPLA was in a stronger position to negotiate its adherence to GRAE. Viriato da Cruz "dismissed" the FDLA and founded his own MPLA group with a Sovereign General Assembly. The two groups accused one another of factionalism (Neto) and of contracting secret alliances with Portuguese businessmen (da Cruz).

In June and July 1963, when a commission of OAU met in Leopoldville to reconcile the Angolan nationalist movements, Neto and da Cruz presented their request for admission separately as representatives of FDLA and the "Provisional Executive Committee" respectively. Failing to present their request as a unified MPLA, and failing to bring evidence of solid military activity, both requests were rejected. On the basis of military activity, the OAU recognized the FNLA as the exclusively legitimate representative of Angolan nationalism and recipient of military aid. To contemporary observers, the OAU decision had annihilated the MPLA.

When Cruz's MPLA was later admitted to the ranks of the FNLA, Neto's faction was forced to close its offices in Kinshasa. Neto sought refuge in Brazzaville, whose new government was an ideological ally. In Brazzaville, the MPLA was resuscitated, adopting the Marxist-Leninist ideology of its host. In exchange, it received military equipment and bases and access to Angolan territory through the Cabinda enclave. Its new military status further changed its relationship to the OAU, which not only recognized the MPLA but allocated to it one-third of its resources. In 1964 Mario d'Andrade returned to form part of the leadership, and Neto's group avenged the "treason" of Viriato's adherence to

the FNLA/GRAE by arresting and executing two of its leading figures during a transit through Brazzaville. Viriato da Cruz would never recover from this episode, retiring from political life.

With support from the USSR and Cuba, Neto's MPLA was the sole representative of Angolan nationalism at the Tricontinental Conference in Havana in 1966. The MPLA also strengthened its contacts with PAIGC (African Party for the Independence of Guinea and Cape Verde) and Frelimo, and extended its guerilla warfare from the Dembos forests of Cabinda to the eastern front along the border with Zambia, and increasingly the nationalist movement acquired a tripartite ethnic basis.

In 1972 the MPLA entered a new phase of internal conflict, aggravated by the 1974 coup in Lisbon. A faction based in Brazzaville issued a manifesto, the *Revolta Activa*, calling for a party congress to resolve the question of leadership. By then, the revenues of Cabindan oil had become a major stake in the struggle for control of the Angolan state. The second national conference of the MPLA was held in a military camp outside Lusaka, with 165 delegates for the "present leadership" (Neto), 165 for the *Revolta do Leste* (Chipenda), and 70 for the *Revolta Activa* (Mario d'Andrade). Neto walked away, rejecting what he called a "negation of the spirit of unity."

Under the pressure of African presidents (Nyerere, Ngouabi, Kaunda, Mobutu), the representatives of the factions met again in Brazzaville to recognize Neto as the president of a unified MPLA for the benefit of a population that was in acute need of leadership. D'Andrade and Chipenda were nominated vice-presidents, and the central committee was reorganized by quotas: 16 "present leadership," 13 *Revolta do Leste*, 10 *Revolta Activa*. Each faction had three representatives elected from the central committee on a nine-member political bureau. Daniel Chipenda, however, defected to establish his own faction of a Tchokwe MPLA in Kinshasa and assume a pro-rural development and traditional rule of the land political agenda. But in October 1974 Lisbon signed a ceasefire with Neto, thus recognizing his faction as the exclusive legitimate MPLA. In November 1974 the MPLA opened its office in Luanda, with the help of financial support and military equipment from the Soviet Union. Neto regained control of the eastern front where the soldiers who had remained faithful to his leadership were renamed the Popular Armed

Forces for the Liberation of Angola (Forças Armadas Popular para Libertação de Angola, FAPLA). Subsequently a conference was held in the Moxico bush at which the MPLA was restructured, with the election of a 35-member central committee headed by a ten-member political bureau. Jose Edoardo dos Santos was one of the members as the head of the MPLA's office in Brazzaville. The elected members were *mestiços*, assimilados, or Mbundu.

The new Portuguese government granted independence to all its African colonies and in January 1975 the leaders of the three Angolan nationalist movements met in Alvor under Portuguese supervision to sign the Agreement of Independence. The three movements would share power in a government of transition until November 11, the date chosen for the elections. The nationalist movements, however, had already decided not to compromise on national unification and demilitarization. The ethnic transformation of the conflict that followed was rooted in the mass displacements effected under the economic policies of the Estado Novo which had generated "ethnic cleavages."

Some authors argue that the mass return from Kinshasa of the Bakongo of the 1961 exodus was "one of the most fundamental changes to postcolonial Angola." For others, the most important agent of the post-independence changes was the Cuban intervention. The role of the Cubans was decisive in determining the power structures of the post-independence state by giving Neto privileged control over the internal divisions of the MPLA, while Soviet delivery of military equipment enabled the MPLA to arm the civilian population as early as 1974. The transformation of the colonial state into a strong presidential system was mediated by a regime of terror.

After independence, the MPLA was again internally divided by competition for the leadership. In 1975 a new police force was set up (a FAPLA-directed militia) and two autonomous committees were dissolved and their leaders jailed. A new body of laws further enforced MPLA control of the labor force by preventing strikes and the formation of autonomous groups through such means as the Labour Discipline Law and the Economic Sabotage Law of 1976. The 1976 elections revealed very weak popular support for Neto's MPLA, while a new dissident faction led by Nito Alves had gained strong support

within the *musseques* as well as among high ranking party members. Its attempted coup was violently repressed. At the first party congress held in December 1977, the MPLA established a one-party state, officially adopted Marxist-Leninism as its ideology, and was renamed MPLA-Partido do Trabalho. The chairman of the party was also head of state, and a central committee of 90 members, headed by a political bureau of ten members, constituted the organs of the government. A resolution was also adopted to secure the party's power by preventing any form of legal political opposition. The ministry of defense had "the task of inquiring into the moral and political conduct of those who are accused of deviations in line and destructive propaganda, and the measures which are judged necessary be taken against them" (ARC 1977/78: B 500). A party policy of "zero tolerance" was applied to both internal and external opponents.

In 1979 Jose Edoardo Dos Santos succeeded Agostinho Neto and pursued a politics of enforcement of the presidential power. In 1982 the central committee granted the president "special powers" and another decree in 1983 empowered the president to appoint regional military councils. Further, in 1984 the Defence and Security Council, chaired by the president, became the effective executive organ of power. Shortly before the second party congress, held in December 1985, Dos Santos replaced Neto's nomenclature with his own. The new president also secured his personal power as head of Sonangol, which was created in 1976 as the unique concessionaire for oil production. In 1978 the state was declared by law the sole owner of the oil reserves of the country, and the first reform for the liberalization of the market in 1987 did not affect the ownership of Sonangol, which remained a state-owned company, while the state was increasingly controlled by a system of patronage.

In 1987, the MPLA officially shifted from a state-controlled to a liberal market economy. But throughout the 1980s the MPLA played the "socialist" card in the political sphere and the "capitalist" card in the economic sphere. In the 1980s, while the MPLA was not recognized by the US government, the US company Gulf Oil was the main producer of oil in Angola and a principal source of foreign exchange. Further, while the US supplied arms to the National Union for the Total Independence of Angola (UNITA), Cuban troops that supported the MPLA also

defended the Gulf Oil Company against UNITA. And in 1993, when UNITA took control of the port of Soyo which gives access to the offshore oil fields, the MPLA hired the services of Executive Outcomes, a South African private military company which had worked for UNITA. The aura of legitimacy gained on the international scene with the battle of Cuito Cuanavale in 1988, where revolutionary socialism (Cuban troops) defeated apartheid (South African troops), secured the MPLA international recognition throughout the various agreements signed with UNITA during the resource wars of the 1990s.

The Bicesse Accords in 1991 established that the contending nationalist movements would disarm and compete politically at democratic elections to be held in 1992. But this clause contrasted with the 1976 resolution on "popular power," according to which elections would not be held without previously eliminating any possible form of both internal and external dissidence. The departure of the Cuban troops (1991) was compensated for by new private security forces, including the Policia de Intervenção Rapida, popularly known as "ninjas," who were employed to carry out the "cleansing" of UNITA supporters.

Between 1975 and 2002 the MPLA controlled the most profitable economic sector which accounted for 80 percent of total export earnings. But between 1990 and 1996, while the household expenditure of the top wealthiest families increased from 9 to 27 times that of the poorest, government expenditure on public services was halved; expenditure on defense and public order accounted for 39 percent of total government expenditure between 1996 and 1998, and unclassified expenditure tripled (from 12.7 percent in 1997, to 42.3 percent in 2000).

The signature of the Memorandum of Luena with UNITA in 2002 legitimized the MPLA as the democratically elected government of 1992.

MRTA (Movimiento Revolucionario Túpac Amaru)

Robin Stock

The Túpac Amaru Revolutionary Movement (Movimiento Revolucionario Túpac Amaru) (MRTA) is a guerrilla movement in Peru. After playing a central role in the internal armed conflict in the 1980s and 1990s, and aiming to overthrow the government in order to establish Marxist-Leninist socialism, today the MRTA is no longer militarily active.

The MRTA was founded on March 1, 1982 as a product of the unification of the left-wing parties Movement of the Revolutionary Left (Movimiento de Izquierda Revolucionaria – El Militante) (MIR EL) and the Revolutionary Socialist Party (Partido Socialista Revolucionario – Marxista Leninista) (PSR ML). The name Túpac Amaru Revolutionary Movement refers to the indigenous leader Túpac Amaru II who led an indigenous uprising against the Spanish forces in Cusco (Peru) in 1780, who himself adopted the name from Túpac Amaru, one of the last Incas to fight against the Spanish conquerors in the mid-sixteenth century.

Just two years after democracy was reestablished after a 12-year military government, the MRTA refused to follow the democratic path to obtain its goals. The aims of the group were

to take over power in Peru by force in order to fight against imperialism and capitalism and to install a socialist system based on popular power. Following a Marxist-Leninist ideology, the MRTA was inspired by Latin American strategies of guerrilla warfare based on the experience of the Cuban Revolution in 1959, the development of revolutionary movements in Central America, and the success of the Sandinista Revolution in Nicaragua in 1979. Despite being a clandestine guerrilla group, the MRTA preserved close links to civil organizations and political parties from the left (for example, the United Left – Izquierda Unideal) (IU) in order to find political ways to obtain its aims and gain influence on other parts of the left.

The first actions carried out by the MRTA under the command of its secretary general Victor Polay Campos were several robberies in order to obtain weapons and money for its struggle. In 1982 and 1983 the group gained public attention by forcibly taking over several cities in the department of San Martín. In 1984 the MRTA launched bomb attacks against government authorities and infrastructure as well as against buildings and persons they considered to be part of the imperialist and capitalist system. While these actions were first focused on the urban areas, especially the Peruvian capital Lima, later they expanded into the rural areas of the country. From 1984 the MRTA was recognized as one more actor in the armed conflict between the Peruvian government, paramilitary groups called Rondas Campesinas, and the Maoist guerrilla group Shining Path (Sendero Luminoso) (SL). While the MRTA and SL were both founded at the beginning of the 1980s, and both wished to overthrow the government in order to install a socialist state, the MRTA disassociated itself from the SL and even engaged in combat with the Maoist group whose ideology, structure, and strategies it rejected. In April 1985 the MRTA announced a truce after the candidate of the left Alan García won the presidency. But hope for the beginning of a political dialogue was disappointed, and in May 1986 the MRTA restarted its attacks. In 1987 the MRTA was involved in several kidnappings in order to free its prisoners and receive ransom.

The MRTA is believed to have had several hundred active members at its height, mainly recruited from the indigenous population. At

the end of the 1980s and beginning of the 1990s the MRTA suffered many casualties and arrests in fights with government troops, and in February 1989 Secretary General Victor Polay was imprisoned but freed again by a spectacular liberation in July 1990. After Polay was arrested again in 1992, Néstor Cerpa Cartolini took over the command of the MRTA.

In April 1990 Alberto Fujimori won the presidency and began a strong offensive against the guerrilla groups. Committing enormous human rights violations, he was successful in stemming the activities of the MRTA and SL. At the beginning of the 1990s the international and domestic conditions for the MRTA grew worse. At the same time, internal conflicts led to the split-off of the MIR from the MRTA. Many members had been captured already, and an amnesty program by the Fujimori government resulted in a further decimation of the MRTA. The already weak group launched one last spectacular operation that attained international recognition. On December 17, 1996 a group of 14 MRTA members under the command of Néstor Cerpa Cartolini attacked the Japanese embassy in Lima and took all 483 guests as hostages. The aim was to extort the government to release all MRTA prisoners, especially their leader Victor Polay. The taking of hostages lasted 126 days and was finally ended by Peruvian special military forces on April 22, freeing the remaining 71 hostages but killing all 14 MRTA fighters. This defeat marked the beginning of the end of the MRTA.

While the MRTA was considered a terrorist organization by the Peruvian state and by the government of the United States, its political aims were supported by several leftist groups around the world. The Truth and Reconciliation Commission (Comisión de la Verdad y Reconciliación) installed to investigate crimes during the internal conflict in the 1980s and 1990s concluded in its final report in 2003 that the MRTA was responsible for about 1.5 percent of the nearly 70,000 victims in the conflict, while the Shining Path was held responsible for about 50 percent and the military 28 percent.

Mugabe, Robert (b. 1924)

Eliakim M. Sibanda

Born in 1924 at Kutama Mission in Zvimba Reserve, west of the Rhodesian capital of Salisbury (Harare), Robert Mugabe spent his formative years under the tutelage of an Irish Jesuit, Father Jerome O'Hea, founder of a teacher training center and hospital at the mission. Mugabe graduated from Kutama with a teaching diploma in 1945, and in 1951 earned a Bachelor of Arts from the University of Fort Hare in South Africa. In 1958, while at Takoradi Teacher Training College in Ghana, Mugabe was a witness to that country's independence from Britain. Under Kwame Nkrumah's leadership, Ghana was an exemplar of radical African nationalism, anti-colonialism, and liberation. Ghana reinforced Mugabe's view that liberation for Africa under Marxist principles was a necessity, and he emerged as a leading nationalist figure on his return to Rhodesia in 1960.

In 1960, Mugabe was elected publicity secretary of the National Democratic Party (NDP) under party president Joshua Nkomo. After Nkomo agreed to the constitution of 1961, which fell short of gaining majority rule for the NDP, Mugabe was approached by party executives concerning his interest in forming an alternative party. While nothing materialized, Mugabe soon after became more vocal and militant in opposition to British rule.

In 1961, the Rhodesian government banned the NDP for violence and destruction of property against the white settlers. Undeterred, Nkomo formed the Zimbabwe African People's Union (ZAPU), a militant anti-colonial party, to fight for national liberation. After ZAPU was banned in

September 1962, it organized a guerilla warfare campaign against the white-dominated Rhodesian government, and was later forced underground. Mugabe and others separated from Nkomo and ZAPU, forming the Zimbabwe African National Union (ZANU) in 1963, intermittently leading to suspicions, hostilities, and clashes, and strengthening the Rhodesian government's white-dominated government, which banned both parties in 1964.

In the same year Mugabe was arrested for "subversive speech" and sent to prison in Salisbury along with all other nationalist leaders. There Mugabe taught classes to other nationalists and earned three degrees in law and economics by correspondence from London. While still in prison, Mugabe was elected as the new leader of ZANU, replacing Ndabaningi Sithole, who was also imprisoned.

In 1976, Mugabe left Rhodesia for neighboring Mozambique, leading a guerilla force against Ian Smith's British-Rhodesian forces. After three years of intense warfare, Britain, under pressure from the international community, decided that white rule must end, leading to the September 1979 Lancaster House Conference in London to end the insurgency and create an independent Zimbabwe.

After a ceasefire was agreed, negotiations attended by Smith, Mugabe, Nkomo, and others began at Lancaster House. At the meeting agreements were made for a new constitution for the Republic of Zimbabwe, with elections to be held in February 1980. During the negotiations Mugabe conceded 20 seats in the new parliament for whites and a ten-year moratorium on constitutional amendments. After the agreement was struck, Mugabe returned to Zimbabwe a hero and gained enormous popular support.

During his election campaign Mugabe promised gradual rather than revolutionary change, speaking of equality and humanitarianism for all Zimbabwe, as whites were planning to leave en masse. Although Mugabe was by self-definition a Roman Catholic, he considered himself a Marxist-Leninist and ZANU received the full support of Moscow. In the end ZANU won a decisive majority over ZAPU in the elections, with Mugabe emerging as prime minister. Through democratic elections, Mugabe became the first African leader of Zimbabwe in nearly 100 years.

Mugabe gained the initial respect of the country's white population when he appeared

on television as articulate, thoughtful, and willing to compromise, maintaining that "there is no intention on our part to use our majority to victimize the minority; we will ensure there is a place for everyone in this country. . . . Let us deepen our sense of belonging and engender a common interest that knows no race, color or creed."

Shortly after taking power and making promises of reconciliation and democracy, Mugabe exercised a forceful authoritarian rule enacted through his great distrust of opposition. He sought to incorporate ZAPU into the ZANU government, giving Nkomo a number of cabinet positions. However, in 1983, Mugabe ousted Nkomo from his cabinet, triggering bitter infighting. In 1987, a peace accord was negotiated that merged ZAPU and the Zimbabwe African National Union-Patriotic Front (ZANU-PF). In the same process the position of prime minister was abolished and Mugabe took the new office of president with Nkomo as vice-president.

Throughout the 1990s Mugabe emerged as a more outspoken nationalist, charging the 75,000 white Zimbabweans who were a dominant economic influence as the main reason for the country's collapse during that decade. In turn, the white population accused Mugabe of racism. As HIV/AIDS reached crisis proportions in Zimbabwe, Mugabe initiated a moral campaign against homosexuality, making "unnatural sex acts" illegal and punishable with imprisonment. Mugabe was also harshly criticized himself for intervening in the Second Congo War in 1998 when he sent 6,000 troops to assist those of Laurent Kabila against troops from Uganda and Rwanda. The Congo invasion was regarded by many as a wasteful colonial-style intervention and later prompted the International Monetary Fund (IMF) to cancel Zimbabwe's relief funding, further eroding the economy.

By 2008, the ZANU-PF has come to dominate what some consider a one-party state by holding 147 of the country's 150 parliamentary seats. Discontent grows in Zimbabwe over the failing economy as inflation and unemployment soar to record levels and Mugabe's promise to hand over to blacks large tracts of fertile, white-owned land remained unresolved. In 2008, Mugabe lost elections to Movement for Democratic Change (MDC) leader Morgan Tsvangirai (who was a leader in the labor movement) by 43 percent to 48 percent. But because neither candidate had

obtained the necessary 50 percent majority vote, a run-off election was held. The MDC later suggested that the official results had been rigged to force a run-off vote, claiming their returns suggested Tsvangirai had received 50.3 percent of the vote. The run-off election eventually secured a victory for Mugabe by a margin of 56.2 percent to 41.9 percent.

In the wake of the 2008 elections, violent protests broke out throughout Zimbabwe against Mugabe's reelection to the presidency. The results led to international condemnation.

Muhammad 'Ali (1769–1849)

Andrew J. Waskey

Muhammad 'Ali Pasha (Mehmet Ali) was born in Kavala, a fishing village on the Macedonia coast. Probably of Albanian ethnic origin, he was reared by the governor of Kavala after his father Ibrahim Agha died. He entered the Greek tobacco trade, which taught him the importance of commerce for financing the development of an army and a political system. His growing success opened the way for him to marry one of the daughters of the governor. She eventually became the mother of five of his 95 children.

In 1798 Muhammad 'Ali joined an Ottoman expeditionary force that sailed to Egypt. Its mission was to drive the French out of Egypt and return control to the Ottoman Sultan. As a young officer he fought against the French

and British. The French withdrew from Egypt in 1801, creating a power vacuum. Muhammad 'Ali exploited the situation as an opportunity to gain control of Egypt. In the chaos he used the Albanian forces under his command to take control. His success was rewarded in 1805 by the Ottoman Sultan with the titles of *wali* (viceroy) in Egypt, with the rank of Pasha (ruler).

During the eighteenth century Egypt had become a poor and neglected province of the Ottoman Empire. Muhammad 'Ali's mission was to turn it into the most powerful province in the Ottoman Empire with a strength that would allow it to be independent in all but name. To accomplish his goal he developed the Egyptian army and used it with ruthless cunning to destroy the power of the Mameluks, hereditary warrior slaves that had ruled Egypt for centuries. In 1811 he invited several hundred Mameluk Beys to a dinner where they were surrounded and slaughtered. The survivors fled up the Nile to Dongola in the northern Sudan where they established themselves as slave traders. With the Mameluks out of the way, Muhammad 'Ali took over their farm lands. He then began a series of reforms aimed at making Egypt powerful and prosperous. He abolished the Mameluk system of tax-farming, replacing it with direct payment of taxes to the state. He instituted a new land survey so that taxes could be more efficiently collected. The reforms in taxation and other areas were aimed at increasing the tax revenues of the Egyptian state. One primary use of the tax spending was to increase the strength of the Egyptian army. Agricultural reforms were introduced so that irrigation was improved. Long fiber cotton from the Sudan was introduced into Egypt where it became an important cash crop. Tobacco and indigo were also introduced as cash crops to supplement the traditional wheat crop. With stable tax revenues Muhammad 'Ali developed a reformed and salaried civil service. He promoted new industry and improved the agricultural system, the irrigation system, and the administrative system in order to strengthen his position within Egypt.

In 1818 Muhammad 'Ali was ordered by the Sultan in Constantinople to destroy the Wahhabi movement in Arabia. He retook Mecca and Medina from the Wahhabi and razed the Al-Saudi capital of Diriyah. The victory opened the way

for Egyptian merchants to develop trade with Arabia and from Red Sea ports to India and beyond.

In 1821 Muhammad ‘Ali conquered the northern river provinces of Sudan. His goal was to gain control of the slave trade and Sudanese gold. The slaves were often bought as warriors to be trained for the army. He destroyed the remnants of the Mameluks at Dongola and began to introduce agricultural improvements in the Sudan. The invasion was to have long-term consequences for the Sudan and Egypt.

Muhammad ‘Ali fought against the Greeks in their War of Independence, but his fleet was destroyed at the Battle of Navarino, on October 20, 1827. He then fought two wars against Sultan Mahmud II (1831–3 and 1838–41). He defeated an Ottoman army at the Battle of Nezib (June 24, 1839); however, the European powers stopped his expansion, keeping him from making Egypt into an independent country.

In 1841 Muhammad ‘Ali’s family became an Egyptian dynasty, lasting until King Farouk was dethroned and exiled in July 1952. Muhammad ‘Ali died on August 2, 1849 at Alexandria.

Muir, Thomas (1765–1799)

Michael T. Davis

Thomas Muir was a Scottish political reformer and one of the first political transportees to Australia. He was born in Glasgow on August 24, 1765, the son of a Presbyterian grocer and hop merchant. Muir was well educated, beginning his adult education at Glasgow University before completing his studies in law at Edinburgh University. He was admitted to the Faculty of

Advocates on November 24, 1787 and embarked on a moderately successful career as a legal practitioner. However, following the outbreak of the French Revolution, Muir’s attention was diverted by radical politics. By 1792, he was a leading protagonist in the Scottish democratic movement and a driving force behind the establishment of the Association of the Friends of the People in Edinburgh, a reform society whose membership comprised mainly liberal-minded middle-class men and artisans. Muir was soon in the center of Scottish reform activity, promoting the radical cause throughout Scotland and forming links with the United Irishmen.

At a convention of delegates from Scottish reform societies held in Edinburgh in December 1792, Muir was responsible for reading an address from the United Irishmen. Although the address advocated moderate political reform, alarmed authorities saw it as much more inflammatory, and Muir was arrested on charges of sedition on January 2, 1793. He was released on bail and subsequently went to France where he fraternized with local expatriates and Girondin politicians. When France declared war on Britain in early February 1793, Muir was unable to leave the country without a passport and consequently missed his trial scheduled for that month. He was outlawed, but it appears that Muir had no intention of returning to Britain. He boarded an American ship bound for Baltimore, but when the ship arrived in Belfast in July 1793, Muir disembarked and proceeded to Dublin where he was greeted by United Irish activists. However, by the end of the month, Muir had returned to Scotland and was quickly taken into custody.

Muir was tried for the outstanding charges of sedition on August 30, 1793 before the High Court of Justiciary where the so-called “hanging judge,” Lord Braxfield, dominated proceedings. Muir defended himself before a biased court and a jury empanelled with known loyalists from the Goldsmiths’ Hall Association. He was found guilty on August 31, 1793 and was sentenced to 14 years’ transportation. He was subsequently imprisoned in Edinburgh for three months, before spending time on a prison hulk on the Thames. On May 2, 1794, along with three radical compeers, Maurice Margarot, Thomas Fyshe Palmer, and William Skirving (a group later known as the Scottish Martyrs), Muir was transported to Botany Bay.

Muir arrived in Australia after an eventful voyage that involved accusations of an attempted mutiny involving members of the Scottish Martyrs. In Australia, Muir was permitted to purchase a small farm but soon he was plotting his escape. In February 1796, he was smuggled out of the colony on an American trading ship, which sailed to Nootka Sound. After making his way to Havana via California and Mexico, Muir boarded a Spanish ship to Cadiz in March 1797. One month later, off the coast of Cadiz, the Spanish ship was attacked by British naval forces and, in the ensuing battle, Muir lost an eye. He was detained by Spanish authorities as a British prisoner of war, despite being wounded while on board a Spanish ship. However, in September 1797, he was released after diplomatic efforts by the French.

In November and December 1797, when Muir arrived in France, he was warmly welcomed. Despite failing health, Muir remained politically active and was moving in circles of United Irishmen domiciled in Paris. The last few months of his life remain obscure. He died in Chantilly on January 26, 1799, and while the location of his grave remains unknown, his memory is enshrined in the obelisks erected in the Old Calton cemetery in Edinburgh and Nunhead cemetery in London that were erected in the nineteenth century to commemorate the Scottish Martyrs.

Mujeres Libres

Charlie Geoghegan-Clements

Mujeres Libres (Free Women) was an anarchist organization dedicated to the education and greater participation of women in the Spanish Revolution of 1936. The group was founded in Madrid in September 1936 by Lucía Sánchez Saornil, Mercedes Comaposada, and Amparo Poch y Gascón in response to the way in which many women during the Spanish Revolution felt relegated to the sidelines by mainstream anarchist groups. At the time of the group's peak activity in August 1937 there were approximately 30,000 members throughout Spain.

During the revolution women enjoyed many advantages they had not previously known. They had more access to factory jobs and were more able to leave the home as unions attempted to increase employment. Where previously men were paid a far greater wage, agricultural collectives in some areas began paying men and women the same rate. Nevertheless, women were left with the burden of the household and raising of small children and were thus unable to go to union meetings and organize.

In 1935 the Grupo Cultural Feminino CNT was founded within the larger anarchist union CNT (Confederación Nacional del Trabajo). This early group focused its activity on working for a larger role for women within the existing anarchist movement. Some members of Grupo Cultural Feminino CNT soon realized, however, that the Spanish anarchist movement was less willing than desired to include women. Thus they founded the Mujeres Libres in the belief that women's participation in the revolution should stem from their own experiences and that being in control of their own work was more powerful than a union apparatus behind them.

The fundamental philosophy of the Mujeres Libres was the idea of a double struggle. They saw the liberation of women and social revolution as being of equal importance and thus believed that they should be fought for at the same time. To this end, they used the anarchist idea that the means of revolutionary activity contribute to the form of the ends, in this case, post-revolutionary society. It followed, for the Mujeres Libres, that women's liberation must, thus, be an intrinsic part of that revolution itself.

This poster from the Spanish Civil War represents the anarchist women's organization Mujeres Libres, which fought with the Confederación Nacional del Trabajo (CNT) labor union and other leftist organizations to empower working-class women. During the Spanish Revolution and civil war, the struggle for women's liberation emerged as an integral component in the contest for the broader goals of freedom, liberty, and social transformation.

They refused to be absorbed by the male-dominated anarchist groups in Spain, and they further refused to identify with feminism, as they associated it with the bourgeois goals of equality with men in an already flawed society.

The group pursued a two-pronged strategy of "captacion" or participation and "capacitacion" or preparation. In participation with the revolution the women of the Mujeres Libres sent food to the militias throughout the nation, set up kitchens to feed the poor, and helped to collectivize farms in Aragon and Catalonia. Women were also the organizers of hospitals and medical care for the anarchist militias. They set up a school for nurses and emergency medical clinics along the front. In Barcelona the Mujeres Libres ran a hospital which provided birth and post-birth

care for anarchist and poor women in addition to classes on women's healthcare in general. One project which the group never completed due to the failure of the revolution was the *Liberatorios de Prostitucion*, which attempted to provide housing for former prostitutes.

The second prong of the Mujeres Libres activity, *capacitacion*, consisted largely in education and consciousness raising. The women organized shooting ranges and held gun classes for women joining the militias. They had technical classes, traveling libraries, apprenticeship programs with radical unions, literacy programs, and classes in basic education, contemporary issues, and politics. During December of 1938 at the Casa de la Dona school in Barcelona there were between 600 and 800 women attending classes organized by the Mujeres Libres every day.

Another of the major areas of work within the Mujeres Libres was its journal, *Mujeres Libres*, the first issue of which was published on May 2, 1936. At its outset the journal did not overtly declare itself as anarchist for fear of alienating women who were not in the movement. While many men ignored the journal, there were many who offered to help with distribution and articles, but this was refused because the women felt it more apt to have all the content be by women. In the journal women reported on their daily activities, such as union caucuses or daily life, as well as more typical cultural articles on daily goings on and movie reviews.

In 1937 the Mujeres Libres called their first national conference in Valencia and at it the group decided to adopt a federal structure. They also sent observers to the CNT and other unions to attempt greater communication within the movement. Many men remained highly skeptical, though the CNT did allow the women of the Mujeres Libres to participate in union apprenticeship programs and to speak at CNT controlled factories.

In the end, as with all aspects of the anti-fascist Spanish Revolution, the Mujeres Libres lost momentum as the republican government, composed largely of CNT leadership, focused on forming a popular front which excluded the Mujeres Libres and which aimed only at replacing the fascist leaders rather than continuing the revolution they began. Though the revolution was betrayed by its supposed leadership, Spanish society was changed by the Mujeres Libres and their work.

Multitude

Michael Hardt and Paolo Virno

Multitude describes an internally heterogeneous social subject that is capable of political action. The term has been used since the 1990s to refer to the new conditions and strategies of political organizing and political action, particularly those involved in the global justice movements.

The concept "multitude" should be understood first in contrast to the more familiar concept of "the people" insofar as the people refers to a unitary representation of the population. "The people," of course, is not an empirical category and it is not a natural or spontaneous formation. "The people" is constructed through a hegemonic operation to represent a heterogeneous population as one. As a unity, "the people" is capable of sovereignty insofar as the theory of sovereignty is based on the premise that only the one can decide. All sovereign subjects – including the people, the party, and the state – exercise a monopoly of decision-making. The unity and sovereignty of the people, therefore, links it fundamentally to the politics of the party and the state.

The multitude, in contrast, is and remains internally plural. The multitude resists the political operations of representation and hegemony that would reduce its multiplicity to unity and render its heterogeneity homogeneous. This means that the multitude does not and cannot exercise sovereignty. The political effect of the multitude instead is a disaggregation of sovereignty, posing an obstacle to any monopoly of political decision-making. The multitude is thus fundamentally antagonistic to the party-form and state-form insofar as they are conceived

in terms of sovereignty, that is, a monopoly of decision-making. Posing the multitude against sovereignty, however, does not imply that the multitude is incapable of decision-making; rather, it marks an opposition to any monopoly in that realm. The concept of the multitude is based instead on the premise that not only the one but also the many can make political decisions.

Once the multitude has been contrasted conceptually from the people, then, it should also be distinguished from a series of other concepts that traditionally designate social multiplicities, such as the crowd, the mob, and the masses. These social multiplicities are fundamentally passive, not in the sense that their activities do not have effects, but rather insofar as they are incapable of making political decisions. To say that the crowd, the mob, and the masses are passive means that they are susceptible to manipulation and, even, that they must be led. Multitude, in contrast, since it has the power to make decisions, is capable of autonomous political action.

These two conceptual distinctions, then, give a preliminary definition of the multitude. On one side, the contrast with the people emphasizes its internal multiplicity. On the other side, the contrast with the crowd, the mob, and the masses emphasizes its capacity for autonomous political action and decision-making.

Many contemporary authors working on the theory of the multitude draw inspiration, particularly regarding these conceptual distinctions, from use of the term in seventeenth-century European political thought. The Dutch philosopher Baruch Spinoza's work provides the most fully developed theory of the multitude in this period (Negri 1993). The term multitude is also widespread in seventeenth-century English political thought, although its usage there is by no means uniform. Among many English revolutionary writers multitude "had almost a technical meaning when used to refer to those, without distinction of rank, who had originally gathered together to form a body politic" (Wooten 1986: 273). The mixing of different social ranks in the multitude make it resistant to being represented as a unity and charged with sovereignty. "The people," in contrast, primarily refers to those with sufficient property to elect members of parliament, and thus indicates explicitly those of a relatively uniform social rank. This social context that links the unity of the people to social rank helps us understand

why reactionary philosophers of the period, such as Robert Filmer and Thomas Hobbes, express such fear and hatred of the multitude (Hobbes 1949: Chap. 12, Sec. 8). For them, the multitude not only poses a threat to order and sovereignty but also imperils the privileges of rank and property.

Contemporary Conditions of the Multitude

Recent social and economic transformations contribute to the possibility of a politics of the multitude. The essential characteristics are the heterogeneity of social subjectivities and the widespread social circuits of cooperation and communication that provide the bases for collective decision-making. These characteristics are most easily recognizable through an analysis of the contemporary composition of the working class. The working class today, in other words, bears the traits of a multitude, not a people.

Under the contemporary economic conditions of post-Fordism, the working class is radically heterogeneous and cannot be represented in unitary form. In the previous period, during the era of Fordism, the industrial working class played a hegemonic position in capitalist production as well in the dominant streams of socialist and communist politics. This hegemony was not quantitative (the majority of workers have never been located in the factories), but qualitative. The qualities of industrial production, including its mechanical methods, its technical organization, and the temporalities of its working day, were progressively imposed over other sectors of production and over society as a whole. During this period industrial labor was able – to greater or lesser degrees in different national contexts – to serve as a unitary representation of labor as a whole. The Fordist working class, in other words, could at some times and in some places function as a people.

In the contemporary post-Fordist economy, industrial production no longer occupies a hegemonic position. This does not mean, of course, that there are no more factory workers or even that their numbers have decreased globally. (Their quantity has probably increased as factories have gradually been shifted from the dominant to the subordinated parts of the world.) In post-Fordism instead the hegemonic position is tending to be taken by immaterial forms of pro-

duction, that is, cognitive, linguistic, problem-solving, and affective activities, the products of which are at least in part immaterial, such as ideas, information, images, knowledges, affects, and the like. This notion of immaterial production thus includes a variety of sectors of labor, from software designers, advertisers, and educators to healthcare workers, caregivers, call center workers, and service industry workers.

One should note, first of all, that this configuration of labor is radically heterogeneous. No single figure can subsume all the others to represent the subject of labor, as the industrial worker did at times in the previous period. In post-Fordist conditions, the subject of labor, if it still makes sense to use such a term, is a plural multitude.

Secondly, the qualities and capacities implied by these forms of immaterial production are different than those generally involved in industrial production. These newly hegemonic forms of production are largely *performative*. This means, on the one hand, that their activity, for its fulfillment, does not require being objectified in a material object and, on the other, that their accomplishment does require the presence of others. Like speech acts, in other words, the performance of these kinds of production has immaterial (but nonetheless very real) effects as long as they are conducted in the appropriate social context. Language capacities and linguistic performance thus increasingly not only are central in laboring activities but also serve as a general model for understanding the nature of contemporary production whether language is involved or not. The production of affects, ideas, codes, and the like must be performed in the presence of, or, at least, in conversation with, others.

This immaterial production, of course, is no less exploitative than work in the Fordist factory. In certain respects, in fact, its forms of exploitation might be thought to be worse. There is something horrible about our capacities to produce affects, our linguistic abilities, and our power to communicate with others commanded at work and reduced to waged labor.

We should also recognize, however, the great potential contained in these forms of production. Insofar as it is performed in the presence of or in conversation with others, immaterial labor carries immediately a potential for political action. What it produces ultimately is social

relationships, circuits of communication, and modes of social cooperation. This type of productive activity, in other words, can function as training in collective decision-making. Such capacities are often impeded, redirected, or suppressed at work, but they are nonetheless present in the performances of post-Fordist production and thus can potentially serve as the basis for the political activity of the multitude.

The heterogeneity of the multitude and its political capacities should not be thought of only in economic terms. Other axes of social difference, including race, gender, and sexuality, define the internal plurality of the multitude. Multitude, with respect to all of these axes, indicates that social difference does not have to be reduced to unity in order for political action to be possible.

The term multitude has been used recently, for example, by a group of scholars in Bolivia to describe the powerful social movements that erupted in 2000 and led to the election of Evo Morales in 2005. The movements, in particular the so-called water wars centered in Cochabamba in 2000 and the war of gas in El Alto in 2003, were characterized by plurality along at least two axes. On the one hand was the heterogeneity of labor engaged in struggle. Whereas from the 1950s to the 1980s Bolivian miners had been able to provide a unitary representation of the working class, with the destruction of the great mines there is now no one form of production that is able to represent the others. A process of “reproletarianization” in Bolivia has resulted in a wide heterogeneity of labor, from agricultural work to small industry and service sector jobs. On the other hand, the movements also involved a wide racial heterogeneity. Non-indigenous social groups participated with indigenous groups, and in Bolivia there is a wide plurality of indigenous groups, Aymara and Quechua the most populous among them. Calling the organization of these movements a multitude, then, refers to both the economic and the racial heterogeneity of those involved. Indeed, one cannot say that the struggles were only about economic or racial issues: they were aimed at both at once and along each axis there was a multitude (Gutiérrez et al. 2000).

Ambivalence and Organization

Contemporary social conditions and the conditions of post-Fordism do not immediately lead

to a project of liberation. On the one hand, the heterogeneous singularities of the social field do not spontaneously articulate to form a political subjectivity capable of political action and decision-making. And, on the other hand, there is no guarantee that such political activity will be anti-systemic or revolutionary. The capacities for cooperation embedded in cognitive-linguistic labor, affective labor, and the other forms of immaterial production provide the means for both capitalist domination and liberation from capital. Contemporary conditions are, in this sense, profoundly ambivalent and thus require a project of political organization.

Current theories of the multitude divide into two rhetorical strategies for marking this ambivalence. One strategy identifies multitude with this ambivalent contemporary condition and thus insists on the negative as well as the positive poles or faces of the multitude. The negative multitude manifests servile and self-destructive tendencies, in which social singularities not only remain separate but also conflict antagonistically with each other. There are elements of this negative multitude in all contemporary political actions, even the most liberatory ones. To pull the multitude to its positive pole requires a process of political organization that is able to articulate the singularities in a common project and orient them toward their own liberation (Virno 2004).

A second rhetorical strategy reserves the term multitude for the positive pole and emphasizes in that way that the multitude does not arise spontaneously from the contemporary conditions. The multitude, then, according to this version, does not yet exist. What do exist are the sufficient conditions for a political project to bring the multitude into being (Hardt & Negri 2004). What both rhetorical strategies emphasize, then, are the insufficiency of spontaneity and the need for political organization of the multitude.

What form of political organization is adequate to the multitude remains an open question. Such an organizational project would have to articulate social subjectivities of various kinds in a common project without reducing their multiplicity to a unity. It would also have to activate and develop their capacities for collective self-determination and decision-making. Such organization, finally, would have to guarantee the continuity of the political project over time. Many contemporary social movements, particularly those associated with the global justice

movement and the social forums, constitute experiments aimed at addressing the questions of multitude organization. Their methods include network forms of organization, horizontal structures, and practices of autonomy.

Munda, Birsa (ca. 1872–1900)

Debi Chatterjee

Birsa was the leader of the Munda Rebellion, one of the significant tribal movements waged against colonial rule in India. Different estimates place his year of birth between 1872 and 1876. As for his birthplace, the claims lean toward Ulihatu in Ranchi District and Bamba in Singuri, adjacent to Chalkad. Study at missionary schools made Birsa receptive to Christianity.

Birsa rose from the lowest ranks to mobilize his people against appropriation of their lands, destruction of their economy, and onslaught on their culture by outsiders. His struggle was for land, forest resources, and identity. He led the Munda community in the Chhotanagpur region in an armed struggle against the exploiting classes and the British colonial rulers, giving a call for *Ulgulan* (revolt). The uprising aimed at non-payment of taxes to the *zamindars* (landlords), assertion of the Munda's rights as the real pro-

prietors of the soil, and reestablishment of the Munda's traditional rights in respect of the jungles. The movement sought to expel the middlemen and intermediaries, the *Dikus* (non-tribal landowners), and the *Sahebs* (British), and establish Birsa *Raj* (rule) in the region. In 1899 and 1890, over 300 Mundas, under his inspiration, attacked the Khunti police station, killing a constable and setting houses on fire. In the police action that followed, more than 200 Mundas were killed. Birsa was arrested later on February 3, 1900. On June 9, 1900, he died in Ranchi jail under mysterious circumstances, raising speculations about his having been killed by the British authorities.

Birsa and his followers held secret meetings, composed prayers, and practiced rituals aiming to destroy their enemies and the British Raj. To enhance the strength of the people, Birsa emphasized the need for a total reconstruction of tribal life. He urged his men to worship one god, whom he called *Sing Bonga*. His projected religion was, at the same time, a mixture of Hindu and Christian faiths and a challenge to them. He forbade the worship of spirits and idols, developed a code of morals opposing polygamy, deception, theft, and drunkenness, and emphasized cleanliness, wearing of the sacred thread, sacred paste, and wooden sandals. Birsa, the "healer," "preacher," and a "prophet," was able to mobilize a large following amongst the Mundas, drawing both men and women into the struggle. They called him *Birsa Bhagwan* (God) or *Dharti Abba* (Father of the Earth). The Chhotanagpur Tenancy Act of 1908, which provided for certain concessions for the tribal communities of the region, is seen as an important outcome of the Birsa movement.

Munday, Jack (b. 1929)

Verity Burgmann

Jack Munday, environmentalist and trade union activist, achieved prominence as principal leader of the green bans movement in Sydney from 1971 to 1974. Munday has remained a public figure, identified with working-class action in defense of the environment and progressive social movements. His dream is to achieve a socialist and sustainable society “with a human face, an ecological heart and an egalitarian body” (Munday 1981: 148).

Reared in North Queensland, Munday moved to Sydney in 1951 to play rugby league and, as a manual worker, became a trade union activist. He joined the Communist Party of Australia (CPA) in 1955, was elected president of its Sydney District Committee in 1966, and remained a member until it disbanded in 1989. In 1957 he joined the New South Wales Builders’ Laborers’ Federation (NSWBLF) and was important in the rank-and-file movement to remove its corrupt, conservative leadership. In 1968 he became acting secretary and was elected secretary in 1970. His organizational reforms included limited tenure of office for union officials. He adopted a militant approach to industrial relations and supported moves toward workers’ control. He encouraged the NSWBLF’s other radical positions: against racism and the Vietnam War, and support for women’s rights, Aboriginal land rights, and homosexual liberation.

During Munday’s secretaryship, the union became especially famous for its refusal to demolish significant buildings or to build on natural reserves. As public spokesperson for this controversial movement, Munday asserted the builders laborers’ right to insist their labor be used only in socially useful and ecologically responsible ways. Residents and radicals enthusiastically supported the bans; the media, politicians, and business interests berated the NSWBLF and Munday in particular.

Munday did not seek reelection in 1973 and returned briefly to work as a builder’s laborer. He has continued to forge links between environmentalists and working-class activists. He argues that working-class power is necessary to achieve environmental objectives; and success in these objectives is especially important to the working class, which suffers disproportionately

from ecological problems. He points out that the fight for a decent environment creates employment opportunities, despite media and corporate propaganda that it increases unemployment.

A regular speaker on public platforms, his official positions have included membership of the National Council of the Australian Conservation Foundation (1973–93) and Chair of the Historic Houses Trust of New South Wales (1996–2001). He has been awarded honorary doctorates from the University of New South Wales and University of Western Sydney and an honorary Master’s of Environment from the University of Sydney. In 2000 he was made an Officer in the Order of Australia for service to Australia’s natural and urban heritage. In recent years he has supported anti-corporate globalization campaigns. In 2007, a street in the historic Rocks area of Sydney was renamed Jack Munday Place, in recognition of his leadership of the movement that prevented its destruction – and that of many other parts of Sydney.

Müntzer, Thomas (ca. 1489–1525)

Helen Bluemel

Thomas Müntzer was a revolutionary theologian, reformer, and peasant leader. He was born in Stolberg, central Germany, and began his theological studies in Leipzig in 1506. In 1513 he became a collaborator, or an assistant spiritual teacher. Around 1513 or 1514 he was ordained a priest and took office in Braunschweig. He became a member of an anti-clerical and mystic circle that aimed for a spiritual, moral, and social renewal of the church. Thus, Müntzer’s reformist direction

became discernible years before he was introduced to Martin Luther's ideas.

Around 1517–18 Müntzer left Braunschweig for Wittenberg, where he met Luther and both men discovered their mutual desire for reformation of the Christian church. After further theological studies, Müntzer assumed a ministry in Zwickau in 1520. There he was confronted with the consequences of a growing social divide which had left a large part of Zwickau's citizens impoverished. Therefore, a social element became part of Müntzer's developing theological theories. His sermons began to include direct anti-clerical elements, as it was his belief that God was to be experienced internally (God speaking directly to the believer), not externally (indirectly through reading of the Bible or the preachings of a learned class of clergyman).

When these controversial views resulted in unrest, Müntzer was forced to leave Zwickau. He turned to Prague where he laid out his theological theses in the *Prague Manifesto* in November 1521. In this manifesto he called for a new church, as the old one had been made "a whore by the adultery of the clergy" (quoted in Matheson 1988). He also declared that the dead letter of scripture would not lead to God. This denunciation of the Bible marked the break between his and Luther's ideas of reformation; indeed, Luther was to become a strong critic of Müntzer and would later speak out against him.

In Prague itself the manifesto was ill-received, and Müntzer was forced to leave the city shortly after. A period of wandering followed, which eventually saw him take up office in Allstedt in 1523. Here he revolutionized the liturgy by introducing services and church songs in the German language, a clear break with the Catholic Latin tradition.

Müntzer's views of the ruling classes and wider society were laid out in his *Sermon to the Princes* in 1524. Müntzer argued that all rulers were given their powers by God to act in the interest of believers (for Müntzer, the common people) against non-believers. Those rulers who did not fulfill this duty were to be struck down by God. This conviction went against Luther's opinion that the spiritual and the secular spheres of life (i.e., the church and the crown) should be viewed as separate. For Müntzer, a reformation of the church went hand in hand with a reformation of society as a whole. It was for this purpose that he founded the Eternal League in

1525 – a military alliance to strike down all that was ungodly, bringing down the mighty to render power to the common people. With this league he joined the peasants in Frankenhausen and fought alongside them in the Peasants' War that had by then engulfed South Germany. His troops were defeated and he was captured and executed in May 1525.

Müntzer's ideas and the man himself received varying and sometimes conflicting interpretations. Whereas modern socialism views him as a social revolutionary, others see him as a mere spiritual enthusiast or even a fanatic. Müntzer's life and beliefs contained both aspects – the desire for spiritual as well as social reform. He believed that the inner spiritual revolution could not happen without the outer societal revolution.

Muralista movement

Leonel Sagahón Campero

Mexican muralism is an artistic movement that spans the first half of the twentieth century. It is characterized by the decoration of the walls of public buildings with figurative and realist paintings that have a social and ideological content and marked didactic intentions. According to the principle that art would act as an educational medium to teach the "people" and thus strengthen national identity whilst complying with the ideals of the revolution, the movement began during the post-revolutionary period and successfully constructed the nationalist image with which Mexico embraced modernity. Thus, with art sponsored by the state, at the time considered revolutionary, the movement exalted the nation's indigenous origins and illustrated the epic events of national history while proclaiming

the continuation of the ideals of the Mexican Revolution under Marxist ideology, an ideology which nevertheless formed no part of the revolution, or the resulting state.

The artistic nationalism that emerged, according to Octavio Paz, “from the cosmopolitanism of the twentieth century” and distinguishes the Mexican school of painting marks the beginning of “modern art in Mexico, and even, as a movement, the American Continent” (Paz 1987: 21, 24). Its principal figures are David Alfaro Siqueiros (1896–1974), Diego Rivera (1886–1957), and José Clemente Orozco (1883–1949), though other important muralists participated, such as Roberto Montenegro, Carlos Mérida, Fernando Leal, Ángel Zárraga, Jean Charlot, Xavier Guerrero, Amado de la Cueva, Desiderio Hernández, Fermín Revueltas, and Pedro Nel, along with Juan O’Gorman and Rufino Tamayo, though the latter kept a distance between himself and the movement.

Historically, the movement began during the 1920s, after the Mexican Revolution (1910–1921), though its roots were formed at the turn of the century when the country began to question not only its sociopolitical structures (inequality, misery, and the dictatorship of Porfirio Díaz), but also its philosophical view (pertaining to identity) and aesthetics (with regard to the social function of art, the sources of national inspiration, and its forms and expressions).

The direct pictorial antecedent of the movement had a temporal phase prior to the outbreak of the revolution, following the centenary independence festivities celebrated, paradoxically, with a grand exhibition of Spanish painting, provoking strong protests by Mexican artists and sculptors. The protest culminated in an exhibition of works by Mexican artists financed by the Secretaría de Instrucción Pública (Education Ministry), leading to the formation of a group named Centro Artístico which proposed painting murals on the amphitheater of the Preparatoria Nacional (National Preparatory School); however, the outbreak of the revolution delayed the project.

Furthermore, Mexican art of the period was nourished by a series of phenomena, both external and internal. First of all, artists such as Rivera and Siqueiros spent lengthy periods in Europe exposed to “classical art” (including medieval and Renaissance Italian frescoes), post-impressionism, expressionism, fauvism, and

Emerging after the 1910–21 Revolution, the Muralista movement preserved the scenes of the revolution and everyday life in Mexico before the Spanish conquest. Through the movement, artists like Diego Rivera, José Clemente Orozco, and David Alfaro Siqueiros played an important role in preserving Mexican political and social history. Here Rivera works on one of his murals on December 31, 1944. (Time & Life Pictures/Getty Images)

the vanguardists, whose turmoil inspired them. Then, on their return home, they were exposed to a series of thematic rescues of the “Mexican tradition” and indigenous custom. The exaltation of the popular engravings of José Guadalupe Posada, the development of the drawing technique of Adolfo Best Maugard, which some considered might lead to the rebirth of indigenous art, and the paintings of Francisco Goitia with scenes of Mexican landscapes are, to name but a few, characteristic phenomena of the Mexican school of painting of which the muralist movement is a visible result.

Formally, the year 1922 may be considered the starting point of the movement currently denominated as muralism. Following the “triumph” of the revolution, José Vasconcelos (1882–1959), named as education minister, invited Mexican artists, as part of a new cultural policy of the state, to decorate the walls of public buildings with the aim of constructing a national art that would propose “the creation of the character of an indigenous Hispano American culture.”

This initial moment, or initial muralism, was characterized by the plurality of the tendencies that converged in the reevaluation of the culture of traditional Mexican arts. Traditional images were painted, including carnivals and scenes from everyday life, in a style which many identified with religious frescoes.

The second muralism can be traced back to 1923, after these artists congregated in the *Sindicato de Trabajadores Técnicos Pintores y Escultores* (Technical Painters and Sculptors' Union), a group which denoted their political, Marxist-based intentions. The principal activist within the movement was Siqueiros, who drew up its manifesto, the *Social, Political, and Aesthetic Declaration*, which not only stated the political intentions of painting ("to socialize artistic expression"), but also reaffirmed Mexican identity within art, based on the idea of the Mexican race, in particular the indigenous aspect, from which the artists rescued a supposed artistic tradition that served as a beginning. The document also repudiated easel painting and "all art from the ultra-intellectual circles," considered as aristocratic, and glorified "the expression of Monumental Art, because it is public property" (Tibol 1969: 270).

Not all the muralist artists created political art based on the Marxist doctrine; some merely utilized the imagery of nativism. That said, with regard to Orozco, Rivera, and Siqueiros, Marxism certainly had a fundamental role which aesthetically led them along the path to realism and to a clearly figurative style, expressed on the walls of public buildings and some private locations (such as hotels or museums) in a highly personalized manner.

Music and protest, Latin America

*Paula Rodrigues Pontes and
Diogo L. Pinheiro*

From the mid-1950s to the mid-1970s much of Latin America was marked by intense political and social instability. This instability had a profound impact on the arts and culture of the region, and nowhere was this impact more visible than in the music composed at the time.

Just like many western nations, Latin America witnessed a boom in the number and popularity of singer-songwriters who emphasized political themes in their songs. It is possible to distinguish between two parallel but distinct types of Latin American protest songs: the more explicitly left-wing *Nueva Canción* or New Song movement, with its emphasis on traditional folk musical elements, and the more countercultural form of protest song, with its criticism aimed more directly at the traditional conservative moral values of the elites of the region.

The *Nueva Canción* movement was a pan-Latin movement that coupled a strong emphasis on a common Latin identity with a critique of North American imperialism and the dominance of its pop music over the local mass media. This is a reflection of the political turmoil of the time, inspired by the Cuban Revolution and US support for the Bay of Pigs invasion, the 1964 intervention in the Dominican Republic, and the 1964 military coup in Brazil. Musically, *Nueva Canción* mixed local folk elements with more traditional commercial music. The adoption of folk elements symbolized both a form of regional pride and an affirmation of solidarity with the poorest segments of society, while the commercial element reflected the middle-class background of most of its composers. A number of different factors contributed to the popularity of *Nueva Canción* in Latin America: the emergence and popularity of the Festival; the growth in the number of students in universities; and, perhaps more importantly, legislation passed by a significant number of nations in the region establishing that a certain percentage of airtime of all radio stations should be reserved for nationally produced songs.

Despite these similar sources of inspiration, significant differences between each nation's

movements remain. Not only were these movements influenced by different folk traditions, but they also developed under very different political situations and institutional arrangements. In Argentina, the Nuevo Cancionero movement was influenced by the immensely popular Perón government, while musically it was inspired by the Argentinian *milongas*, *zambas*, and the *chacarera*. In Brazil, the Música Popular Brasileira musicians faced repression from the military dictatorship established in 1964, while being heavily influenced by the Samba and the Bossa Nova. In Chile, the Nueva Canción reacted to very different situations in a short span of time – frustration with the Populist government of Eduardo Frei, close ties and affiliation with Allende's Unidad Popular, and the violent repression following the 1973 CIA-backed coup and ensuing dictatorship. Musically, it was heavily influenced by the music of the Amerindians of the Andean Altiplano, such as the Cueca and the Huapango. The Cuban Nueva Trova received the official support of the Castro government. These significant differences require that individual attention be paid to each case.

It is important to note that Nueva Canción was not the only form of protest song to emerge out of Latin America during the period discussed here. In some nations, more notably Brazil, a more countercultural form of protest song, one with less emphasis on traditional left-wing themes and more on a critique of traditional mores and culture, also became popular during the 1960s and 1970s.

Argentina

The main Argentinian protest singer-songwriters were the hugely influential Atahualpa Yupanqui (1908–92) and the members of Movimiento del Nuevo Cancionero, the local version of Nueva Canción, founded by Armando Tejada Gómez (1929–92) and Mercedes Sosa (b. 1935), among others. In what has become a recurring theme in Latin American culture, these singer-songwriters looked to the culture and music of the impoverished Amerindian peoples as the source of a true Latin identity. In the case of Argentina, its main influences were the *zamba*, a sort of folk dance music with a 6/8 beat that is similar to the Chilean *Cueca*, and the *milonga*, a musical style that is generally considered to be the precursor to the tango with certain African elements. Politically, its common theme was a strong

empathy with the poorer segments of society, although some significant differences remained, especially with regards to the relationship with the popular Perón governments. Even though Perón's governments were not strictly, or even mainly, left wing, his nationalism and strong support among the working class led some of the members of the Nuevo Cancionero movement to support him, despite his persecution of communists.

One of the people persecuted by Perón was Atahualpa Yupanqui. Born Héctor Roberto Chavero Haram in 1908, he is generally considered the most influential Argentinian folk singer of the twentieth century. In his formative years, Yupanqui traveled through the Altiplanos of Argentina extensively, studying its folklore and culture. In the process, he adopted his stage name of Atahualpa Yupanqui in homage to two Inca kings. These travels also inspired him to join the Communist Party and participate in 1931 in a failed communist uprising. He was imprisoned and his work was censored numerous times, especially during the first Perón government. It was only after his break with the Communist Party in 1952 that he was able to replicate domestically the success he had achieved in his several tours of Europe. In the 1960s, his work became the source of inspiration of several Nuevo Cancionero musicians, who were fond of the folk element of his compositions. He passed away in 1992, after having penned seven books and numerous songs.

The Movimiento del Nuevo Cancionero was founded in 1963 in a manifesto signed by a number of notable folk musicians. In this manifesto, these singer-songwriters explicitly recognized Atahualpa Yupanqui as an important predecessor. It also claimed that the true national identity of the Argentinian people could be found in the cultural expression of the folk songs of the Amerindian populations. Very popular during the late 1960s and early 1970s, most of the members of this movement were exiled following the 1976 military coup. Only after the return to democracy in 1983 did most of its members return to Argentina, where they remained politically active, strongly opposing the economic liberalization of the 1990s.

Brazil

Protest song in Brazil has a distinct history. Both the inspirations for and the origins of the

protest singer-songwriters were different from those of the rest of the continent. Musically, the main source of inspiration was the African-derived rhythms of Brazil, mainly the Samba.

Politically, most of the singer-songwriters were college-educated middle-class students who were reacting to the growing polarization of Brazilian politics, particularly in light of the failed coup attempt of 1961 and the successful one in 1964. Several of these musicians saw the arts, especially music, as a means of communication that had the potential to transform people's consciousness of their situation in society, and therefore saw these arts as a way of transforming society itself. This can be seen in several concerts like "Opinião," theater plays like "Roda Viva," and especially the activities of the Centro Popular de Cultura (Popular Center of Culture) created by the National Students' Union. Also important at this juncture were the festivals created by the expanding television stations, which served as one of the main ways that protest songs reached the public.

Protest song in Brazil was at its most popular and influential from the start of the military dictatorship in 1964 until the sanctioning of Institutional Act number 5 in 1968, which strengthened the repressive apparatus of the federal government, outlawing most forms of protest and driving most socially conscious musicians into exile. The fact that protest songs in Brazil developed under a dictatorship explains some of the key differences between Brazil and other nations. The dictatorship prevented singer-songwriters from writing the sort of manifesto that marked the style in other nations, and it also meant that politically charged songs had to be disguised, usually as love songs, instead of being more openly political, as was the case in the rest of Latin America.

Although Brazil never had an organized version of the Nueva Canción movement, several musicians were deeply influenced by it. The two most notable examples are Chico Buarque (b. 1944) and Geraldo Vandré (b. 1935). Chico Buarque is one of the most influential artists of the Música Popular Brasileira (Popular Brazilian Music). A singer-songwriter, writer, author of many plays, and one-time member of the Communist Party of Brazil, Buarque first gained national popularity in 1966 with the song "A Banda," a song of protest disguised as a song about a quotidian event, the passage of a march-

ing band through a city. Several of his compositions of the time followed a similar pattern of using popular rhythms such as the Samba to convey thinly veiled criticisms of the dictatorship disguised as songs about more mundane events. Also a prolific playwright, one of his plays, "Roda Viva," generated much controversy at the time, to the point where reactionaries that supported the dictatorship invaded the theater to attack the performers.

With the recrudescence of state repression in 1968, Buarque went to Italy, where he lived for a few years. Geraldo Vandré was also persecuted by the dictatorship. Not as prolific an artist as Buarque, his 1968 song "Pra Não Dizer que Não Falei de Flores" became an instant hymn against the dictatorship, and it was soon censored and Vandré exiled. Unlike Buarque, Vandré never wrote about political themes after his persecution.

If protest song did not constitute itself as an organized movement in Brazil, a number of more countercultural artists formed a musical movement called Tropicália. Among these artists were Caetano Veloso (b. 1942) and Gilberto Gil (b. 1942). Although some of its songs were political in nature, the movement itself was a critique of traditional Brazilian culture. Its use of electric guitars and incorporation of rock-and-roll led to tensions with both the conservative support base of the dictatorship and the more radical militants of the Brazilian left wing. Nevertheless, Tropicália has remained an influential cultural presence that has transposed national boundaries, with notable artists such as David Byrne and Beck releasing modern versions of some of the movement's compositions.

Chile

Nowhere else on the continent was the Nueva Canción movement more popular than in Chile. The existence of laws that established that a significant portion of the music played on the radio should be of national origin, coupled with increasing urbanization and unemployment, made Chile a fertile ground for the emergence of socially conscious singer-songwriters such as Víctor Jara (1932–73) and Violeta Parra (1917–67). The musical style of these singer-songwriters became known as Nueva Canción after the Primer Festival de la Nueva Canción Chilena (First Festival of the New Chilean Song) organized by the Universidad Católica de Chile in 1969.

They were at the height of their popularity from the period that immediately preceded the election of Salvador Allende until the 1973 CIA-backed military coup, when most singer-songwriters associated with this style were either driven into exile or arrested and murdered for their close association with Allende's Unidad Popular party.

The founding figure of the movement was Violeta Parra, who infused the traditional music of the Andean Amerindians, such as the Huapango and the Cueca, with political messages. But her influence went far beyond her own unique compositions and her involvement with the Chilean Socialist Party. She, along with her children, Ángel and Isabel Parra, helped organize many of the institutions and places that became central for the movement. In 1964, Ángel and Isabel created the first *Peña*, a coffeehouse where folk musicians could play their own compositions. Their place, la Peña de los Parra, ended up becoming a model widely followed in Chile, reaching its apex during the Allende government, with hundreds of *Peñas* actively disseminating protest songs. They also founded La Carpa de la Reina (The Queen's Tent) in 1965, a large folk music center installed in a big circus tent in the suburbs of Santiago which gave many of the later Nueva Canción singers a place to start their careers. Violeta Parra committed suicide in 1967, but her children continued her work throughout the years. And it was from these organizations founded by the Parras that Chile's best-known protest singer, Víctor Jara, emerged.

Víctor Jara was born in 1932 to a family of poor peasants. He spent much of his youth in a seminary and later on in the army. Deeply influenced by Yupanqui and Violeta Parra, Jara started his career in music in the 1950s singing with the folk group Cuncumen. In the beginning of his artistic career he dedicated himself to folk theater, receiving a degree in acting and directing from the Universidad de Chile. For the following years, he became director of a number of plays and taught at the university level. It was after 1966 that he decided to dedicate himself to music more fully. That year he became musical director of the folk music group Quilapayún, and it was also around this time that he started to perform solo at la Peña de los Parra. He won the Primer Festival de la Nueva Canción Chilena with the song "Plegaria a un Labrador."

Politically, his career reflects the changes that happened to the protest songs under other governments. Early in 1969 he started to actively campaign for Allende's Unidad Popular coalition.

With Allende's election, Jara, like many others of his generation, went on to become a part of the administration. Jara accepted the role of cultural ambassador for the Chilean government, composing songs for the Chilean national ballet and teaching at the Universidad Técnica del Estado. When the military took power in 1973, Jara was arrested and taken to the Santiago Stadium, where he was tortured and killed. A similar fate was reserved for many of the Nueva Canción musicians. Those who were not immediately arrested were forced into exile, such as the groups Inti-Illimani and Quilapayún. Besides persecuting most of the protest song performers, the Pinochet regime placed strict restrictions on what type of music could be played, going so far as to outlaw folk musical instruments, like the *quena*, that were associated with progressive musicians.

Despite the brutality of the Pinochet regime, a few more oblique forms of protest song were eventually created. The most significant of these was the Canto Nuevo movement, which pushed the boundaries of what was allowed under Pinochet.

Cuba

Protest song in Cuba developed under conditions that were very distinct from the rest of the continent. The most significant of these differences was the official support of the communist government for protest musicians, to the point where it organized the First Protest Song Meeting in 1967, which was attended by many of the musicians that later on would help spread the Nueva Canción movement throughout the region. Cuba's own version of Nueva Canción was called Nueva Trova, in reference to the importance of the *trova* and the troubadours for Cuban music. While musically diverse, the Nueva Trova included many traditional elements of Cuban music, including the *son* and the *rumba*. These musical styles were coupled with revolutionary lyrics. Because of this, musicians associated with this style received generous support from official institutions, such as the Casa de Cultura and the Instituto Cubano del Arte e Industria

Cinematográficos. Some of the more notable Nueva Trova musicians include Silvio Rodríguez (b. 1946) and Pablo Milanés (b. 1943). The trajectory of Rodríguez is exemplary in that it shows the strong connections between Nueva Trova and the Cuban government. He started playing guitar while in the Cuban army, and through the Casa de Cultura achieved national recognition. Currently, he is a member of the Cuban parliament and still enjoys great prestige within the Cuban government.

Protest Songs in Other Nations

Other nations also had protest song movements, although generally not as popular as the cases outlined above. The Uruguayan Daniel Viglietti (b. 1939), the American Roy Brown (b. 1950), the Puerto Rican Antonio Caban Vale (b. 1942), and the Spanish Joan Manuel Serrat are all examples of musicians from other nations who had close contact with the Nueva Canción movement.

Music, songs, and protest, France

Yves Laberge

Because of a long tradition, French music remains exceptionally rich and diversified. Until recently, popular refrains from the era of the French Revolution, like the joyful song “Ah! Ça ira, ça ira, ça ira” (“It’ll be okay, be okay, be okay”),

containing the lyrics “The aristocrats, we’ll hang them!,” were taught in French schools and sometimes adapted to new situations and contemporary conflicts. Even the French national anthem *La Marseillaise*, which means “The Woman from Marseilles,” refers to the elimination of tyrants by the people, united against a common enemy: the foreign oppressor. It was first composed in 1792 in Strasbourg as a war song against the Austrian army by an officer from Alsace, Claude Joseph Rouget de Lisle (1760–1836). It became the official French national anthem on July 14, 1795, but was banned a few years later, until being rehabilitated in 1830. Nowadays *La Marseillaise* is famous: even the Beatles quoted its opening in the famous introduction to their song “All You Need Is Love” in 1967.

Themes of protest and revolution have frequently been present in various French songs, and French culture has remained open to all kinds of musical influences. Jazz and blues artists have always had a privileged reception in Europe. For instance, African American artists like Louis Armstrong and Miles Davies suffered discrimination in their own country, having to live in specific hotels even in the 1940s and 1950s, but were often surprised to be treated as “normal” people while touring in France, Denmark, and Sweden.

Songs from the 1940s, 1950s, and 1960s

One major influence in French popular music is jazz. During the 1940s, many French artists and orchestras created songs in French based on a swing or bebop rhythm. The jazz influence was banned (like most of American culture) during the Nazi occupation of France, and some French jazz lovers were given the insulting nickname “Zazous” (in imitation of jazz singers’ scat). The jazz influence was even more popular in France during the 1950s, with contributions by novelist and songwriter Boris Vian (1920–59), who as a trumpet player and singer recorded many subversive songs while working for Philips Records in Paris. His most famous composition was “Le Déserteur” (1954), a powerful anti-war song in which a man writes to the president to explain that he refuses to go to war; finally, he says that if soldiers want to force him to go to fight, they will have to shoot him. Released during France’s

conflict in Indochina (later to be called Vietnam), the song referred to soldiers as victims, losing their wives and souls on the front line. It was banned for a time on French radio because it was considered an insult to the French army.

Vian created many more anti-war songs, such as "Le Petit Commerce" (1955), in which a merchant explains how he made a fortune by selling arms and tanks but lost all his friends who were sent to war. In another parodic song, "La Java des bombes atomiques," he tells the story of an inventor who wants to show his new A-bomb to all the presidents of the world, brings them together for a secret meeting, then throws a small A-bomb among them. Boris Vian composed dozens of subversive songs that were mostly sung by other artists after his untimely death in 1959, for example Philippe Clay's song "Je n'peux pas m'empêcher," about a man who, whenever he sees a police officer, cannot help but imagine him at the morgue.

Another fine composer and guitar player, Georges Brassens, composed ironic songs that questioned moral attitudes to marriage and sex ("Le pornographe," "La femme d'Hector," "Fernande"). An intense composer born in Brussels who lived in France for most of his career, Jacques Brel sang many ballads attacking the bourgeoisie. In "Ces gens-là" he describes hypocritical bourgeois people who think they are right because they count their profits and pray. In a waltz entitled "Les Bourgeois," which seems like a farce, Brel compares the bourgeoisie to pigs, who grow uglier as they grow old.

Among many memorable protest songs from the 1960s is Jean Ferrat's sad song entitled "Pauvre Boris" (1966), which refers to the life of songwriter Boris Vian. Defining himself as a communist, Ferrat created other songs about solidarity like "Potemkine," "Camarade," and "La montagne," in which he contrasted the beauty of nature to inhuman cities and suburbs.

By the late 1960s Jacques Dutronc, a young singer and sometime actor, wrote a number of fine comic songs with Jacques Lanzmann, some of which were suspicious of the French government and consumer society. In "On nous cache tout, on nous dit rien," he questions the political system, raising untold mysteries evoked in the newspapers. In another song, "L'opportuniste" (1968), a man proudly explains his secret for being successful: he always chooses the side of the winner.

An Exceptional Figure: Léo Ferré

One of the best exponents of French protest songs in the twentieth century was singer-composer Léo Ferré (1916–93). Defining himself as an anarchist, Ferré began by writing light songs or adapting poems by Rutebeuf, Verlaine, Rimbaud, Baudelaire, and Apollinaire. In the late 1950s some of his songs became disrespectful, like "Chanson vulgaire (T'as voté)," in which he included anarchist slogans about the uselessness of voting: "if you voted, it's because you thought you had some choice, so don't complain." In his antimilitary song "Regardez-les" (1961), Ferré dares to mock soldiers, using a rhythm based on a military march, at a time when France was actually fighting in Algeria. In 1962 Ferré wrote a controversial song about the president of France, Charles de Gaulle, entitled "Mon général," in which he protests against the French army's use of torture in Algeria during the civil war. Many other subversive songs were released during the decade, like "Merde à Vauban," "Madame la misère," "La révolution," and "Le conditionnel de variétés" (in which Ferré argues that revolution is just a variety of politics).

In 1964 Ferré released a provocative song with a Spanish title, "Franco, la muerte," in which he attacks the president of Spain, General Francisco Franco (1892–1975), accusing him of eliminating his opponents, killing the soul of Spain, and representing the opposite of poet Federico García Lorca. Ferré wrote another song against Franco, entitled "L'Espoir" (1974), in reference to the 1937 book and film of the same title about the Spanish Civil War, both by André Malraux. In that song, backed by a symphonic orchestra, Ferré explains that hope is like an arm in the womb of future mothers in Spain, who are waiting for political change while listening to the lyrical music of Manuel De Falla.

In 1967 Ferré attacked a powerful symbol with his song "La Marseillaise." This had nothing to do with the French national anthem since the lyrics referred to a whore from Marseilles. After the May 1968 revolts in France, Ferré wrote a few violent songs related to rebellion, including "L'Été 68," which refers to the 1789 Revolution and quotes the "Ah! Ça ira, ça ira, ça ira" chorus, and "Comme une fille."

During the 1970s Ferré wrote more intense lyrics, in songs which often had a rich orchestral accompaniment. In the nihilistic song "Il n'y a

plus rien” (1973), which lasts almost 20 minutes, Ferré criticizes the political system in which he lives and creates many political slogans inspired by anarchist thought, for instance that disorder is like order, without being controlled by power. In the same year Ferré recorded “L’Oppression,” which described hands that do good and evil, and can only be stopped by oppression. Since 1970 Ferré’s albums have often paid tribute to anarchy: *Amour et Anarchie* (1970) or *Ni Dieu ni Maître* (1965, 1969, and 1974). Almost a theoretician of anarchy with a strong capacity for inventing effective formulas, Ferré once declared (in his song called “Preface”) that in the school of poetry, students do not learn, they fight.

Although a talented singer and accomplished musician, Ferré was sometimes criticized for his lifestyle, driving a luxurious sports car and living in a large estate in Tuscany. However, he remains the most prolific French songwriter and the most coherent in terms of protest and rebellion, recording more than 20 albums.

The 1970s to the Present

Various French artists released protest songs in the 1970s. Among them was a fine composer, Georges Moustaki, who might be compared to Hughes Aufray. Moustaki wrote the French lyrics for a tribute to Sacco and Vanzetti that was included in the Giuliano Montaldo film soundtrack under the title “Here’s To You” (in French: “Marche de Sacco et Vanzetti,” 1971). The young Moustaki also wrote songs for Edith Piaf, releasing some of the first ecological songs (“Il y avait un jardin”).

From the 1980s a popular singer and one-time supporter of the French Socialist Party, Renaud Séchan, used Parisian argot to criticize French society from a leftist perspective. Among the many protest songs he wrote is his 1985 song “Miss Maggie,” which attacked British Prime Minister Margaret Thatcher. Sung in French, this ode explained that no woman could ever like war, encourage violence in sports, or be macho, except “Madame Thatcher.” In early 2006 Renaud released another song about a politician, entitled “Elle est facho” (“She’s a fascist”), in which he describes a young right-wing woman voting for the conservative but popular French minister Nicolas Sarkozy, who was to win the French presidential elections in 2007.

Other less memorable songs about protest and rebellion were released in the 1980s and later, but none had the quintessential artistic quality of works by Boris Vian and Léo Ferré.

Mussolini, Benito (1883–1945)

Paolo Nello

Benito Mussolini was the founder and leader of Italian fascism, a right-wing populist current in opposition to the growing tide of working-class organization and efforts to build a more just society. Mussolini, who aligned with the German Nazis, was defeated by the Italian partisan resistance, many seeking to establish a democratic and socialist state at the end of World War II.

Mussolini ruled Italy from October 1922 until World War II. He was born near Forlì on July 29, 1883. His father was a socialist blacksmith and his mother a Catholic elementary school teacher. He was named Benito after the Mexican revolutionary Juárez, and Amilcare and Andrea after the Italian socialists Cipriani and Costa. Like his father, he grew up an atheist with strong anti-clerical and anti-religious feelings. He was a difficult, undisciplined, and violent student. Though he trained to become an elementary school and French teacher, he preferred politics and journalism.

To avoid military service, in 1902 he emigrated to Switzerland, where he lived until 1904, experiencing intense socialist activity and collaborating with Angelica Balabanoff. His revolutionary socialism was based on the idea that “force is the only midwife of history.” Influenced by Louis Auguste Blanqui (1805–81), Max Stirner (1806–56), and Friedrich Nietzsche (1844–1900) rather than by Karl Marx (1818–83), Mussolini believed that history was modeled

by the violent action of “heroic elites” and “supermen.” The conquest of power was therefore the only way to prove socialist superiority.

In Switzerland Mussolini was arrested as a subversive and for loitering, and in Italy he was sentenced to jail for deserting. Thanks to an amnesty, in 1904 he returned to Italy and served as a conscript. After teaching for a while, in 1909 he became the secretary of the socialist trade unions in Trento. Arrested and expelled by the Austrian authorities, he went back to Forlì where he soon took the lead of the local socialists with his violent opposition to the war for the conquest of Libya. In July 1912 Mussolini was elected to the national directorate of the Italian Socialist Party (PSI), and in November he became the director of the PSI's official newspaper, *Avanti!* (Forward!), and moved to Milan.

Mussolini battled for an intransigent program of no compromise with the bourgeoisie and criticized the socialist trade unions for concentrating on economic issues which removed the Italian proletariat from the target of revolution. He strongly opposed parliamentary democracy and reformist socialists who were ready to cooperate with “bourgeois” progressive parties. After World War I began, Mussolini changed his mind about his previous anti-militarism and internationalism, adopting a “national-revolutionary” line.

Soon war veterans replaced the proletariat in Mussolini's revolutionary plans. Fascism was founded in Milan on March 23, 1919, combining a small group of war veterans (Mussolini himself was a demobilized army sergeant), futurists, and revolutionary interventionists, and adopting a radical, syndicalist political program considered “national-Bolshevik” by conservatives. This kind of fascism did not go very far: in spite of significant anti-socialist squad actions in the first year of the Biennio Rosso, Mussolini collected fewer than 5,000 votes in the political elections of November 1919. He therefore reoriented fascism from the left to the right, seeking the support of the nationalist middle classes who disliked both liberals and socialists. This strategy was successful. The regular use of violence by the action squads, the support of the agrarians, and the frequent, if not systematic, connivance of the authorities were all decisive in destroying socialist, communist, and anarchist organizations and in giving fascism full control. In May 1921, Mussolini and a further 35 fascists were elected MPs in a coalition list. Immediately after, how-

ever, Mussolini switched to the left again and in August 1921 signed a “Pacification Pact” with the PSI. In October 1922 Mussolini organized the March on Rome, mobilizing for the conquest of power.

King Victor Emmanuel III appointed him prime minister in an effort to avoid civil war. Many influential people suggested the king use Mussolini to normalize, or constitutionalize, fascism, and Mussolini, “the Duce,” formed a coalition government with liberals, democrats, and Catholics, which was approved by parliament. As radical fascism refused to be normalized and required a “second wave” to establish a dictatorship, Mussolini could not fulfill his promises to the king and hoped to give his government stability through electoral reform. In April 1924 Mussolini's coalition of fascists, nationalists, liberals, and democrats obtained nearly 65 percent of the vote, but the murder of the social democratic leader Matteotti by a fascist squad in June increased instability. In the following months Mussolini seriously risked falling from power, but on January 3, 1925, he was pushed by the radicals of his party to give the speech that is conventionally considered the beginning of his dictatorship, though this in fact was established between 1925 and 1927. In this period the Duce underwent four assassination attempts, one of which was nearly successful.

Mussolini accused the anti-fascists of terrorism and built up a police state, which succeeded in preventing or repressing any anti-fascist initiative. Many anti-fascists were exiled, confined, imprisoned, or deprived of Italian citizenship. Some of them, like Antonio Gramsci, died in jail. Compared with the regimes of Stalin or Hitler, however, Mussolini's dictatorship was much milder: in practice, between 1927 and 1943, fewer than 5,000 sentences were passed by the Special Tribunal for the Defense of the State, with “only” 42 death penalties. Unlike Stalin and Hitler, Mussolini wanted the Fascist Party to be fully subordinate to the state, but like them he wanted it to become an army of obedient believers with no possibility of free debate and political initiative. All fascists who did not accept this line were expelled or marginalized, and Mussolini took his revenge for all his previous troubles with the radicals.

In February 1929 Mussolini signed the Lateran Pacts with the Vatican, regulating the position of the Catholic Church in Italy. The Duce did

not forget his anti-clericalism, and tensions with Pope Pius XI continued, especially because Catholic Action was the only non-fascist mass movement remaining in Italy. But Mussolini knew the strength of Catholicism in Italy and appreciated the consent of Italian Catholics to his dictatorship. He therefore engaged in some battles to maintain positions, but never thought of adopting anti-Catholic policies like those of Hitler, not to mention Stalin's systematic persecution of religions.

In 1929 Mussolini's dictatorship was fully stabilized and most Italians supported it or got used to it. The Duce, however, wanted fascism to survive him and lead to permanent changes. For this purpose he needed "new men," able to "believe, obey, and fight." Fascism had to become an organized cult, a secular religion, with its own system of myths, symbols, and liturgies. A school of fascist mysticism was established in Milan, with fascist youth organizations playing an important strategic role. The Vatican did not like this "pagan statolatry" but avoided any official condemnation of fascism in order to preserve Catholic Action, which was crucial for the church's influence on Italian society and prevented the "integral fascistization" of Italian youth, and of Italians in general.

When the Great Depression hit, Mussolini blamed individualism and materialism for the decadence and economic fall of Europe and wanted to replace them with nationalism, imperialism, and the Roman ideal of a sober rural life, all spent in service of the mother country. Mussolini saw corporations as bureaucratic obstacles to production, but his policies of ruralization proved unrealistic, as it was impossible to limit industrialization and urbanization and prevent people moving from the south to the richer north. Convinced that a declining birth rate would be fatal to any nation, he also promoted a "demographic battle," but without results.

As it proved difficult to implement totalitarianism by domestic policies, Mussolini relied increasingly on foreign policy. The conquest of Ethiopia in 1936, the pro-Franco intervention in the Spanish Civil War, and the alliance with Hitler were all meant to be "revolutionary" moves toward totalitarianism rather than simply imperialism. The anti-bourgeois campaign and the anti-Semitic laws of 1938 had the same aim. When Mussolini intervened in World War II, in June 1940, he thought that Germany was going

to win and that he could exploit its victory with just 1,000 deaths. However, he was again thinking of a revolutionary war for a more fascist and totalitarian Italy. His regime collapsed, however, on July 1943, after the Allies' invasion of Sicily.

Arrested by the king, Mussolini was liberated by the Germans and ended his career as the head of the Italian Social Republic (RSI), a satellite state of Hitler, mainly operating against the resistance movement. In February 1944 his government approved a bill to "socialize" firms, introducing workers' councils and profit-sharing, but the initiative had no effect as it was opposed both by the Germans and the industrialists. Arrested by an Italian resistance unit after the collapse of the RSI, Mussolini was executed in the area of Lake Como on April 28, 1945.

Mzingeli, Charles (1905–1980)

Timothy Scarnecchia

Charles Mzingeli was a leading labor activist and organizer in present-day Zimbabwe. Born in 1905, Mzingeli spent his childhood living on a Catholic Mission near Plumtree, Southern Rhodesia. His father had been a military leader under the famous Ndebele leader, Lobengula, whose men fought the Europeans after finding out they had deceived him in the treaties they had him sign. After the defeat of the Ndebele by the British South Africa Company forces, Mzingeli's father moved onto mission land and raised his children as Catholics. Mzingeli started primary school late, and spent one year studying in South Africa before returning home because of poor health. He ran away from his parents'

home at the age of 14 and went to work on the railroads as a young apprentice. He would later move to Bulawayo, Southern Rhodesia's second largest city, where he came under the political influence of Clement Kadali's Industrial and Commercial Workers' Union (ICU). Mzingeli was trained as an ICU organizer, and in 1929 he was sent to Harare Township, Salisbury, as the ICU's organizing secretary.

Mzingeli had some initial success with the ICU in the early 1930s, but the depression and police surveillance and harassment made organizing difficult. In addition, the great cultural and economic differences in the township, between long-term residents with families and the majority of relatively short-term single men, made organizing even more arduous. The ICU eventually faded in Harare Township, but Mzingeli continued to remain active in township affairs. He tried a number of different businesses, including playing the guitar at dances he arranged and running a restaurant for Africans in Salisbury's Pioneer Street, but these ventures met with difficulties from the police and his business partners.

It was during World War II that Mzingeli began to reorganize an African political movement. Mzingeli joined the European Southern Rhodesian Labor Party (SRLP) and managed to form his own African Headquarters Branch of the SRLP, which he ran out of his grocery store in Harare Township. Between 1941 and 1946, Mzingeli wrote numerous letters asking the British parliament to use its veto powers over legislation affecting Africans in Southern Rhodesia. These efforts were in vain, although he did manage to develop links to organizations in the United Kingdom that would prove useful in later years.

After the 1945 African railway workers' strike, Mzingeli reconstituted the ICU as the Reformed ICU (RICU). RICU became the main community political organization in Harare Township for the next ten years, and while it was not strictly a trade union, Mzingeli incorporated a wide range of community and workplace issues into RICU campaigns. In the early 1950s, Mzingeli and RICU carried out successful protests and civil disobedience against the Southern Rhodesian state's attempts to further segregate and regulate the movement of township residents. Its defense of township women's rights to the urban areas brought particular

success to RICU, with a membership of over 7,000 in the early 1950s.

Mzingeli was a prolific and talented writer, and by all accounts a witty and effective speaker. He used his knowledge of township life and his own experiences growing up to make a populist claim to leadership. He also used the small room adjacent to his grocery store as an office and political library for young township students. George Nyandoro, in particular, would read the literature on politics from South Africa and Great Britain, and Mzingeli would mentor young leaders particularly by way of example. On the other hand, there were limits to his cooperative spirit. He was in constant competition with more educated African leaders, particularly those of the Southern Rhodesian African National Congress, whom he portrayed as out of touch with the realities of working-class people. Mzingeli also jealously guarded his leadership role, often lashing out in the press against younger men who attempted to start any new political organization in Salisbury. His intransigence often stood in the way of national unity, as on a number of occasions he campaigned against national-level political organizations.

During the mid-1950s a younger generation of leaders, including George Nyandoro and James Chikerema, began to publicly criticize Mzingeli's lack of cooperation and started to take over RICU meetings. Mzingeli remained opposed to the new generation of nationalists, joining the European United Federal Party to campaign against them. At one point in the early 1960s he suggested in the press that should these young men ever become leaders, they would change their tune from "one man, one vote" to "one vote, for one man, forever."

N

Nagy, Imre (1896–1957)

Annette Richardson

Imre Nagy was prime minister during the Hungarian Uprising in 1956. He favored the “New Course” calling for gradual reforms to Communist Hungary, which put him in confrontation with the leadership of the Soviet Union and led to his execution.

Nagy was born in Kaposvar, Hungary on June 7, 1896 into a poor peasant family. During his teenage years he was a locksmith’s apprentice, later becoming a soldier in the Austro-Hungarian Army. Nagy was captured in 1915 by the Bolsheviks and became a prisoner of war in Siberia. He then fought in the Soviet Union’s Red Army and became a communist. He studied agriculture at the Moscow Institute. After World War I he returned to Hungary and briefly served in Bela Kun’s government. In 1929 he returned to the Soviet Union where he worked in the Hungarian agricultural research section of the Comintern. He also became a secret agent for the Soviets.

Nagy returned to Hungary in 1944 and stopped security work shortly thereafter. He became minister of agriculture and excelled in his work on peasants. Due to the strong influence of Soviet deputy premier Matyas Rakosi, Nagy was prime minister from 1953 to 1955. Nagy favored a New Course, a more liberal type of communism that would reform Hungary. He slowed Hungary’s fast-paced industrialization, decreased police powers, allowed public control over the media, encouraged open discussion on state issues, let peasants leave Soviet-style collective farms, and discussed holding free elections. Nagy essentially wished to improve the economic situation and raise the standard of living. The Soviets forced Nagy’s resignation on April 18, 1955 on the grounds of his “rightist deviation.” He also lost his Communist Party membership.

In February 1956 Soviet leader Nikita Khrushchev denounced Joseph Stalin in a speech to the 20th Communist Party Congress, causing the de-Stalinization process across Soviet-sphere countries. The Hungarian Uprising began on October 23 when the Technical University’s students and members from various social institutions, eventually totaling 100,000 people, demonstrated against the Soviet Union’s policies. The protestors called for true socialism and demanded that the Soviets leave Hungary. Soviet tanks fired upon protestors in Parliament Square. To appease the situation, the Hungarian Communist Party installed Nagy as prime minister the same day. He believed the Soviets when they told him they would not crush the uprising.

Nagy revoked the one-party political system and allowed former political parties to regroup. He allowed trade councils and national councils to form. Nagy negotiated Soviet troop withdrawal from Hungary. On October 30 he amnestied all the political prisoners in Hungarian jails who had objected to Soviet authoritarianism. Stalin’s victims received reburials. Following the discovery of Soviet deception, Nagy withdrew from the Warsaw Pact on October 31. On November 3 Nagy publicly stated that he would form a coalition government. He asked the United Nations and the major western powers to recognize Hungary’s neutrality. However, the West was involved in the Suez Crisis and refused to intervene in affairs of nations that were not allies. In response to the numerous developments aiming at multi-party democracy, the Presidium of the Soviet Party in Moscow took a strong stance against Hungary, perceiving it as a challenge to the power of the Soviet Communist Party in Eastern Europe. On November 4 Khrushchev sent the Red Army into Hungary with 6,000 tanks to crush the uprising. Some 20,000 Hungarians died, while the Soviets lost 2,500 men.

Nagy refused to support the new government under Janos Kadar, who followed Soviet orders.

Nagy, along with other prominent dissenters, took refuge in the Yugoslav Embassy. He was arrested on November 22 while under a safe passage agreement guaranteed by Kadar. The Soviets took him to Romania and in June 1957 he was returned to face a secret trial that found him guilty. He was hanged. Nagy was buried in the Municipal Cemetery outside of Budapest. He was rehabilitated after the fall of the Soviet Union in 1989 and reburied by anti-communist Hungarians.

Naidu, Sarojini (1879–1949)

Soma Marik

Sarojini Naidu was born in Hyderabad City on February 13, 1879. Her father, Aghorenath Chattopadhyay, was an eminent educationalist and scientist, and her mother, Varada Sundari Devi, was involved in women's education. Her brother Virendranath Chattopadhyay was a revolutionary nationalist who became a communist and died during the Moscow purges. Sarojini went to school in Hyderabad, and after matriculation studied at King's College, London, and Girton, Cambridge. But she fell ill and returned to India in 1898. In the same year she married Dr. Muthyala Govindarajulu Naidu. At that time this was very unusual, since it meant an intercommunity as well as intercaste marriage (the Chattopadhyays were Bengali Brahmins, while Naidu was a non-Brahmin from Andhra Pradesh).

In 1904, Naidu attended a session of the Indian National Congress for the first time. In the Congress she was attracted chiefly to Gopal Krishna Gokhale, the moderate leader. An advocate

of women's rights without distinction of community, Naidu moved an amendment in the Indian Social Conference in Calcutta in 1906, calling for changing the word "Hindu" to "Indian" with reference to female education.

In 1917, Sarojini joined the Women's Indian Association, launched by Margaret Cousins and Annie Besant. Cousins mooted the idea of sending a women's deputation to Edwin Montagu, the British secretary of state for India. Eventually, a delegation of 14 women, led by Naidu, met Montagu on December 19, 1917, demanding votes for Indian women on equal terms with men, and also supporting the scheme for reform drawn up by the Congress and the Muslim League, which had demanded separate electorates, representative government, and dominion status. In 1918 she was instrumental in having a resolution passed supporting women's suffrage at the special Congress Session in Bombay. In 1919, she went to England to give evidence before a Joint Parliamentary Committee, where she put the case for women's suffrage. Also in 1919, she became a campaigner for women's *satyagraha* (literally desire for truth, in effect a program of peaceful violation of laws, mass courting of arrests, occasional shutting down of industries, shops, and markets, and spectacular demonstrations or rallies), traveling all over India to propagate the cause.

Sarojini Naidu's public lectures and her consistent campaign of women's rights brought many other women into politics. A strong advocate of Hindu-Muslim unity, Sarojini used her lectures and other meetings to make demonstrative gestures, such as calling on Rani Narendra Nath and Lady Zulfikar Ali to join hands, an event that left a deep impression on the minds of observers. Her championing of Hindu-Muslim unity was also reflected in her biographical appreciation of Muslim League leader M. A. Jinnah, which she wrote in 1918.

In 1925, Naidu was elected president of the Indian National Congress. As its first woman president, Sarojini thanked the Congress but also called for the formation of women's sections. During 1926–7, in fact, many women's conferences were held. In October 1926, the All India Women's Conference (AIWC) was formed, holding its first meeting in January 1927; however, it represented a more conservative wing of nationalism, oriented to reformist activity. Naidu herself, though very active in the AIWC,

represented a more militant current by that time. One dimension of the AIWC activities was the passing of the Child Marriage Restraint Act of 1929.

In 1930, Sarojini took an active part in the civil disobedience movement. No woman had been included by Gandhi in his chosen list of 71 marchers. The Congress Committee also decided to exclude women from the salt *satyagraha* as a whole. Kamaladevi Chattopadhyay, a Gandhian and relative of Sarojini, met Gandhi on his way to Dandi and asked him to make a special appeal to women to join the movement. This she took to the Congress Committee, which then withdrew its veto on women's participation. On the last day of the salt march, Sarojini Naidu joined it at Dandi, and was the first woman to be arrested in the salt *satyagraha*. Thousands of women all over India joined in. In May, after the arrest of Gandhi, she led a massive salt-raid in Dharasana, which was met with unusual ferocity by police. The impact of the mass participation of women in the nationalist movement was also to transform the AIWC, which in the past had elected upper-class women as presidents. In 1931, Naidu was elected AIWC president. In the same year, she participated in the Round Table Conference, where she opposed reservation of seats for women, arguing that women wanted equality, not protection.

Naidu was arrested several times for her participation in the freedom movement, in 1930–1, and again afterwards. In 1942, she was arrested after the Quit India resolution. In 1945–7, she campaigned across the country as a Congress leader. In March 1947, she presided over the Asian Relations Conference, held in Delhi. In independent India, she was the governor of Uttar Pradesh, the largest province, till her death on March 2, 1949.

Apart from her political work, Naidu was a well-known poet, friendly with W. B. Yeats and Rabindranath Tagore, earning the title "Nightingale of India." Her first book of poems, *The Golden Threshold*, was published in 1905. This was followed in 1912 by *The Bird of Time*, and in 1917 by *The Broken Wing*. Though a passionate campaigner for women's equality, she rejected the term feminist applied to herself. Her public role challenged politics as a male bastion. But she remained within the framework which held that domestic duties belonged to women.

Namibia, struggle for independence

Tilman Dederling

The dispossession and disempowerment of indigenous people in South West Africa/Namibia spans a century of colonial rule, extending from the heyday of the imperialist scramble for Africa in the 1880s to the period of superpower proxy wars in southern Africa in the late twentieth century. Namibia was the last colony on the continent to gain national independence in 1990. The colonial history of Namibia is marked by some of the worst excesses which European colonialism and racism inflicted on Africans, ranging from genocide to systematic discrimination under apartheid. The final collapse of colonial rule was not only the result of the global power shifts which impacted on the region in the last decades of the twentieth century. Throughout the different phases of colonial rule, from the German period (1884–1915) to the South African occupation (1915–90), indigenous resistance to colonial domination covered a wide range of options, ranging from local rebellions and various acts of non-compliance and protest to the organized diplomatic and military struggle for national self-determination.

German Colonial Period

For most of the nineteenth century the arid and agriculturally unsuitable regions of southern and central Namibia were the untamed hinterland of colonial South Africa. The territory north of the lower Orange River, which was thinly populated mainly by transhumant Nama (Khoekhoe)

hunterpastoralists ("Hottentots" in colonial usage), was unattractive for white settlers from South Africa. During the first half of the nineteenth century marginalized bands of acculturated Cape Khoekhoe, so-called Oorlam, moved away from the advancing colonial frontier in South Africa and settled among the Nama. The Oorlam had come into contact with Christianity, acquired the colonial vernacular, Cape Dutch, and they possessed firearms and ox-wagons. Their new cultural and technological skills and their close ties with the Cape economy facilitated their thrust into the interior. Pushing the raiding, trading, and hunting frontier northwards, they founded Windhoek, which later became the capital of the German colony. The economic base of Oorlam power increasingly centered on the extraction of cattle from the Herero pastoralists, who occupied the central parts of Namibia. The Afrikaner Oorlam dominated a network of alliances among both Nama and Herero which was geared towards exporting large herds of cattle to the Cape. The supremacy of the Afrikaner Oorlam was broken as a result of violent conflict between the southerners and the Herero in the 1860s. Consequently, the Herero enjoyed a much stronger position as intermediaries in the trade which connected the Cape and the far north of Namibia. In the late nineteenth century powerful Herero chieftaincies emerged which assembled their followers near major settlements, such as Okahandja, Omaruru, and Otjimbingwe, which later became important population and administration centers during the German period.

The Nama and Herero communities historically dominated smaller population groups in southern and central Namibia. The Nama-speaking Berg Damara practiced hunting and gathering but also were involved in cultivation and pastoralism. They lived dispersed in subordinate positions among both Nama and Herero; in the 1860s the Herero controlled the supply of Berg Damara migrant laborers to the Cape via Walvis Bay. The small bands of San hunter-gatherers (Bushmen) roamed on the northeastern and northern margins of the country; some of them hunted and herded cattle for the Herero and the Ovambo. The so-called Basters assumed a special position in the relations among the different groups. These colored pastoralists had fled from frontier warfare in the Northern Cape to settle with their missionary at Rehoboth,

south of Windhoek, in 1870. In order to safeguard their precarious position among the feuding Nama and Herero they later aligned themselves with the Germans, to whom they provided military aid against the indigenous population.

Apart from experiencing the effects of the expanding economic frontier, indigenous ideas and customs were also gradually transformed through the encounter with Christianity. The Nama were in close contact with European missionaries from various mission societies from the beginning of the nineteenth century. In 1842 the Rhenish Mission Society began to establish stations in the central regions of Namibia. The economic and cultural aspects of mission Christianity made a lasting impact, especially on the loosely structured Nama and Oorlam groups; many accepted baptism and adopted European names and other insignia of acculturation. The Herero proved to be more resilient to the evangelical message; many chiefs and commoners feared its disruptive effects on traditional authority and social structures. Apart from offering spiritual support, mission stations became hubs of economic subsistence where impoverished hunters and pastoralists could temporarily obtain goods and shelter. Mission schools were important centers of education and cultural change for children and adults. Like Africans in other parts of the continent, indigenous Namibians developed their own interpretations of Christian ideas and later used them to articulate resistance to colonial rule.

North of the so-called police zone of the southern and central regions, which the Germans declared to be open for white settlers, lay the dwellings of the different agro-pastoralist Ovambo groups. It was not before the advent of the South African occupation in 1915 that Ovamboland was more effectively penetrated by colonial rule.

The German Empire annexed the territory between the Orange and Kunene rivers in 1884 under the pretext of protecting the interests of a merchant who had coaxed Namibian chiefs into signing dubious concessions. The whole of German South West Africa comprised 835,100 square kilometers, which was one-and-a-half times the size of Germany. Initially, the German presence in Namibia was negligible, consisting of only three German officials. Their promises of support for the Herero against the Nama and Oorlam raiders induced the Herero chief,

Maharero, to sign a "protection treaty" with the Germans. In the face of continuing attacks, however, the Herero chief expelled the ineffective representatives of German colonial aspirations. He also sternly reprimanded the Rhenish missionaries because they had connived with the Germans. Herero opposition to the German presence wavered, however, when a small force of 23 German soldiers, who had been sent to the territory in 1889, succeeded in disrupting the trade in firearms with the Herero. The arms embargo exposed the different Herero polities to the ferocious attacks of the Nama and Oorlam. Consequently, the lapsed treaty between the Germans and the Herero was reactivated in 1890.

One of the most determined opponents of the German intruders was Hendrik Witbooi. The charismatic leader of the Witbooi Oorlam had been educated by missionaries. Before the arrival of the Germans, the hardened guerrilla fighter had begun to aspire to a hegemonic position in the raiding-trading network which was the hallmark of Nama-Herero relations. In the 1880s Hendrik Witbooi donned the mantle of a Christian prophet, taking his men on the "holy mission" of shifting the Witbooi base from Gibeon in the south closer to the Herero in central Namibia. In 1885 the Witbooi chief almost succeeded in establishing a formal alliance with Maharero. After the sudden eruption of skirmishes between the two parties, however, the Herero chief signed the treaty with the imperial commissioner, Heinrich Göring (the father of the Nazi air marshal Hermann Göring). When his dreams of securing a supreme position by diplomacy were shattered, Witbooi relocated to Hornkrans, west of Rehoboth, to continue his attacks on the Herero.

Witbooi was one of the few indigenous leaders who tenaciously refused to accept any agreement with the Germans. In contrast to other chiefs he foresaw that the German presence would result in unprecedented and disastrous consequences for the self-determination of all indigenous groups in Namibia. The Germans perceived Hendrik Witbooi as the main obstacle to consolidating their tenuous grip on their colony. A military attack on Hornkrans in 1893 left many women and children dead, but failed to put a stop to Witbooi's independence. In 1894, however, the new colonial administrator, Theodor Leutwein, succeeded in defeating the Witboois. Consequently, the chief grudgingly

and pragmatically accepted his cooptation as a military ally of the Germans, which allowed him to safeguard a considerable degree of influence among his people.

Exploiting internal divisions among the Herero, Leutwein militarily supported Samuel Maharero's bid for paramount power, although Herero tradition did not automatically entitle Samuel to succeed his father Maharero. Samuel Maharero collaborated with the Germans in order to consolidate his own disputed position among the Herero. Conversely, his dependence on Leutwein frequently compelled him to throw his weight behind German policies. This provided Leutwein with many opportunities to interfere in internal squabbles and to grind away at African independence. Leutwein's intercessions aimed at depriving the Herero of their economic resources – land and livestock – in order to undermine traditional means of assembling followers and consolidating chiefly authority. Thus, Leutwein not only disrupted indigenous mechanisms of decision-making, but he also used his campaigns of "pacification" to change the demarcations of Herero territory for distribution among the growing numbers of German settlers.

South West Africa was the only German colony that, to an extent, matched popular perceptions of a settler colony which supposedly offered "living space" for the surplus population of the motherland. The number of white farms increased from about 500 in 1907 to about 1,300 in 1913. It was the mining sector, however, which increasingly gained economic importance. The exploitation of copper from 1907 and especially the discovery of diamonds in 1908 marginalized the agricultural sector. Until the end of German colonial rule in Namibia, two thirds of colonial revenue was generated by the export of diamonds. The German administration tried to resolve the resultant labor shortage by importing thousands of colored and black workers from the Cape who often toiled under harsh conditions. According to colonial estimates, by the turn of the nineteenth century a minority of 4,682 whites faced 15,000–20,000 Nama and Oorlam, 3,000–4,000 Rehoboth Basters, 70,000–80,000 Herero, 40,000 Berg Damara and San, and 90,000–100,000 Ovambo in the yet-unexplored far north. The German colonizers were incapable as yet, however, to subjugate effectively the African population

and they had to rely on a combination of force, persuasion, and economic attrition to consolidate their rule. The anti-colonial war from 1904 to 1907 ushered in a new and more intense phase of colonial oppression.

On January 12, 1904 the Herero rebelled against German colonial rule. After the Germans defeated the bulk of the Herero forces in August 1904, the Nama also opened armed hostilities against the colonizers in October 1904. This colonial war escalated into a genocidal campaign which resulted in the killing of thousands of Africans. These staggering human losses were not only the consequence of German military action, but also the outcome of herding survivors into concentration camps where many of them succumbed to the appalling conditions. The first genocide of the twentieth century was accompanied by other patterns of mass violence as they would become characteristic of the "age of extremes." In the aftermath of the war the Germans employed harsh measures with a view to obliterating the socioeconomic independence and cultural identity of the disempowered indigenous population, ranging from deportations of groups of people and forced labor to the use of identification tags on prisoners and "scientific" research conducted on severed heads and other body parts of Africans.

There were short-term reasons for the eruption of violence, such as the devastating consequences of the *rinderpest*, which ravaged southern Africa in the 1890s. Soon after the disease broke out among the Herero herds in central Namibia in 1897, two thirds of the cattle were wiped out, leaving many communities destitute. These losses seriously damaged the economic structures and the cultural matrix of the pastoralist Herero society and made it more vulnerable to further colonial interference. The colonial pressure on indigenous resources of land and livestock, increasing interference of the colonial state in Herero politics and chiefly authority, and the rising debts which many Herero accumulated with European traders contributed to an explosive situation. The outburst of open hostilities in 1904 manifested the exacerbation of the socioeconomic tensions and political struggles which marked the relations between the Germans and the indigenous population.

During the initial phase of the war the Herero attacked farms in the Okahandja district, which was occupied by a small contingent of German

soldiers. The killing of more than 100 German civilians and soldiers during the first phase of the war sent shockwaves through the colony and the German Empire. In contrast to contemporary depictions of savage hordes that indiscriminately slaughtered whites, the Herero made a deliberate effort to spare the lives of women, children, missionaries, and non-Germans, presumably in order to preempt the military involvement of British and Afrikaner residents in the colony. For a short period the African insurgents put some of the most important settlements under siege. The German settlers fled to the safety of military forts and other fortified structures. The Herero quickly adapted to German tactics and avoided being drawn into open battles where they could be exposed to the firepower of the German soldiers. An overall strategy, however, seemed to be lacking.

The German *Schutztruppe* (protection troops), which initially consisted of about 800 soldiers apart from small numbers of indigenous auxiliaries such as the Witboois and the Rehoboth Basters, was continuously reinforced. By March 1904, 1,567 soldiers, 100 horses, six machine guns and ten pieces of light artillery had been shipped to Namibia. When the Germans officially announced the end of the war in 1907 they had transferred a total of about 14,000 soldiers to the colony.

Leutwein intended to force the Herero to acknowledge defeat by military and diplomatic means in order to avert an economically disastrous loss of Herero livestock and labor. When the bulk of the Herero under Samuel Maharero withdrew with their families and their herds to the Waterberg area, 280 kilometers north of the capital Windhoek, Leutwein believed that his opportunity had arrived to push the insurgents into a final battle. In June 1904, however, he was replaced by General Lothar von Trotha, who had gained a reputation for employing harsh methods in the Wahehe Uprising in German East Africa (1894–7) and in the Chinese Boxer Rebellion (1900). Under Trotha's command the military campaign turned into a deliberate attempt at killing as many Africans as possible. He conceptualized the battle which developed at the Waterberg in August 1904 as the final swoop to encircle and to annihilate the Herero. After having received more reinforcements from Germany, he threw 4,000 soldiers, 10,000 horses and oxen, 36 pieces of artillery, and 14 machine

guns into the battle. On the side of the Herero there were an estimated 6,000 warriors with their women, children, and livestock. The Herero began to flee in panic towards the weakest section in the imperfectly drawn ring of encirclement and pushed into the so-called Sandveld (sand field) of the Omaheke desert. The battle at the Waterberg ended with the final military defeat of the Herero. Chased by German patrols, they now tried to cross the Omaheke desert for the safety of British Bechuanaland but large numbers of them perished. Trotha ordered that survivors be prevented from returning from the desert. His infamous Herero Proclamation of October 4, 1904 announced that the Herero had to leave German territory, or all of them would either be shot or driven back into the desert.

The ensuing debates in the German leadership about the appropriate measures against the Herero took place against a background of mounting criticism of Trotha's methods among officers and Rhenish missionaries. Moreover, indigenous armed resistance escalated. Although Witbooi had fulfilled his military obligations to the Germans until the battle at the Waterberg, settler opinion clamored for his elimination. The final straw was the appearance of an itinerant colored Christian prophet, Shepherd Stuurman, from the Cape Colony, whose millenarian message of the impending end of white rule seemed to push the Witbooi chief over the edge. The Germans were compelled to assemble thousands of soldiers against an enemy who was merely a few hundred strong, to the point that officials in South Africa speculated whether the Germans were in reality plotting against the British Empire. Eventually, in December 1904, Trotha was ordered to rescind his Herero Proclamation and to stop the indiscriminate killing. While military raids on the dispersed Herero continued, the Rhenish missionaries made concerted efforts from November 1905 to channel Herero survivors to collection camps first and then to concentration camps – a designation borrowed from the British camps for Afrikaner and African civilians during the South African War – from where Herero prisoners were distributed as workers on the railway and among white settlers. By April 1905 about 6,000 Herero were placed in concentration camps. About a year later their numbers had risen to 17,000. Only about a third of these prisoners were males. Before these

camps were officially closed in August 1906 several thousands of insufficiently fed and clothed Herero had died of diseases and malnutrition. Sexual exploitation of the female prisoners in the camps was rife, to the extent that the military worried about the massive spread of sexually transmitted infections among the *Schutztruppe*. The Africans who were imprisoned near Swakopmund and Lüderitzbucht could not withstand the cold and wet coastal climate. The missionaries reported that in Swakopmund alone 729 prisoners out of 2,000 died within a period of six months. Conservative calculations suggest that at least one third of the Herero people did not survive the war; others present figures of up to 80 percent.

On October 29, 1905 Hendrik Witbooi died of his wounds after a skirmish with German soldiers, but pockets of indigenous resistance remained. Another important military leader was Jacob Marengo (Morenga/Marinka). He was of mixed Nama-Herero descent and assembled an ethnically diverse fighting force of several hundred men, who troubled the Germans by conducting guerrilla raids in the southeast of the colony. After being temporarily detained in the Cape Colony, Marengo resumed the armed struggle until he was killed by the Cape police on British territory on September 20, 1907. The chief of the Fransman Nama, Simon Kooper, escaped with a small band of followers to British Bechuanaland where he eked out a living on the border of the Kalahari. The Germans were so worried about his activities that they covertly paid him a pension until his death in 1913.

When the Nama guerrillas capitulated many of them were transferred to Shark Island at Lüderitz and other camps where they shared the fate of the Herero prisoners. Some of the Witboois were deported to the German colonies of Togo and Cameroon – more deportations to German Samoa were discussed – until their high death rates required colonial officials to repatriate them. By March 1907 the Germans counted 450 survivors out of a total of 2,000 Nama prisoners on Shark Island. The German census after the war stated there were only 15,130 Herero left out of a total of 80,000, and 9,781 Nama out of an original population of 20,000.

The harsh measures which the Germans implemented after 1907 in order to contain the socioeconomic and political self-determination of Africans reflected an almost totalitarian vision

of colonial domination. Africans were legally barred from owning cattle, and their mobility was rigidly restricted in order to keep them subservient as cheap laborers. Africans did not cease, however, actively to resist colonial oppression. Since the Germans proved to be logistically unable to monitor the movement of indigenous people across the vast expanses of the insufficiently policed territory, many Africans exploited niches in the colonial economy and worked towards the reconstruction of their livelihood. Herero herders gradually recouped cattle by working for colonial farmers, who were forced by the scarcity of laborers to offer Africans better working conditions than those prescribed by the colonial administration.

South African Occupation until World War II

In 1915 South African military forces invaded and conquered the German colony on behalf of the British Empire. Until Namibia gained national independence in 1990, South Africa pursued various strategies in order to incorporate the territory. While the peace negotiations in Paris were still in progress, the South African government felt the need for gaining approval of the occupation of the former German colony from the international community. The Imperial Blue Book of 1918 compiled a list of settler atrocities in order to discredit German methods and to prove that the new administration was in line with the Covenant of the League of Nations. About half of the German settler population was repatriated after the war. Africans obtained vague promises of having their land restored. Once mandatory powers had been transferred to the Union in 1920, however, the appearance of liberal methods was replaced by a more robust approach to establishing control of the indigenous population. A government-appointed land commission recommended in June 1921 that existing reserves were not only to be preserved but that new ones must be established. The administrative structure was centralized in order to control the reserves more efficiently under a chief native commissioner, who was to be recognized by Africans as their chief. The commission also recommended a more efficient use of previously established German practices, such as strict pass laws and written labor contracts. A strong segregationist component was reflected in the

commission's proposal that African reserves should be located as far away as possible from white settlement areas. The treaties between Africans and the former German colonial rulers were acknowledged by the Union and used to demarcate the land rights of specific groups, such as the Bondelswarts, the Berseba people, and the Berg Damara community at Okombahe. The Union administration was unwilling, however, to fulfill any indigenous expectations regarding the restoration of land that had been lost as a consequence of German intrusion. The consolidation of South African rule necessitated a rapprochement of all white groups. At the request of the rehabilitated German settlers the Blue Book was officially withdrawn by 1926 and remaining copies were destroyed.

The extent of some of the native reserves may have looked impressive in reports to the League of Nations, but the scarce distribution of water and grazing resources, especially in arid southern Namibia, made for a different picture on the ground. About half of the territory was reserved for 3,000 white settlers; a quarter of Namibia, much of it unsuitable for farming, was demarcated for about 200,000 Africans. Limiting stock numbers became an essential tool in the control of indigenous Namibians. Apart from managing an arid environment which did not allow for huge carrying capacity in terms of livestock breeding, such constraints did not only prevent economic independence but also stunted the social and cultural life of African herding societies. Many indigenous Namibians were evicted from white-owned land and were barred from entering the undersized reserves. A series of repressive laws constrained mobility and created harsh labor conditions, leaving the options of illegally squatting on white farms or entering the labor market. Africans did not obtain citizenship; they were treated as stateless subjects who were nominally under the protection of the mandatory power.

A postwar recession combined with severe drought and other natural disasters in the 1920s. The mining of diamonds and other minerals dropped, and markets for agricultural produce shrank in the 1920s and early 1930s. Despite these negative economic trends the Union administration encouraged an increasing number of white settlers from South Africa to apply for land grants and financial aid. Pretoria regarded Namibia as a welcome outlet for "surplus" migration of impoverished whites from South

Africa. Pursuing the incorporation of the mandated territory into South Africa, the Union government integrated Namibia into the Southern African Customs Union and into its network of railways and harbors. During the interwar years the remote northern parts of Namibia, which the Germans had never penetrated but where about half of the Namibian population lived, gained significance as a reservoir of migrant labor. This trend had already started in the German era. Despite the increasing intervention of the colonial state, however, the agro-pastoralist Ovambo, unless forced through droughts and famines, were reluctant to leave their homeland in substantial numbers before the early 1940s. The South African occupation exerted increasing pressure on the Ovambo headmen to pry males away from the traditional socioeconomic context in order to employ them predominantly in the mines during the peak periods of mining profitability, but also on the railways and in public construction. On the eve of World War II, however, agricultural exports began to recover to the extent that they constituted almost 80 percent of total exports. This reversal of the economic dominance of mining versus agriculture also resulted in a shift of the flow of migrant laborers from the mines to farms, a trend which started to reverse again from the late 1940s.

The South African occupation was followed by several strikes, especially among mine workers. This period also saw several instances of armed resistance to the new white rulers. In the northern region of the territory the chief of the agro-pastoralist Ovambo, Mandume, successfully defended his realm against an invading Portuguese army which tried to explore opportunities in the face of the impending end of German colonialism in Namibia. In 1917 Mandume was killed in an uprising against the South Africans. After his death he acquired mythical status as an anti-colonial hero fighting against several white powers.

Once the Union administration began to tighten its grip on local communities, other instances of open defiance followed. In 1922 the Bondelswart Nama in the south rose again against colonial rule. Among their grievances was the introduction of a dog tax, which the Nama saw as an attack on their hunting rights, and concerns about the restrictive land policies of the new administration. Unrest was also fomented by the reappearance of Abraham Morris, a renowned

guerrilla leader, who had a record of fighting against the German colonizers and who had previously assisted the South African invasion troops. The assimilation of Namibia by South Africa had a negative effect on the tactics of resistance fighters because, in contrast to their military strategy during the period of German colonial rule, the Bondelswart fighters could no longer withdraw across the colonial Cape boundary in order to seek refuge in foreign territory. Armed conflict came to an end after a week of bloody fighting during which the South Africans used aircraft to bomb the Bondelswarts. Because of South West Africa's status as a mandate territory, however, the killing of about 100 Africans reverberated not only in southern Africa but also in the international arena.

The prime minister of the Union of South Africa, J. C. Smuts, initially viewed the Bondelswart Rebellion as an internal affair. Responding to pervasive white fears of a general indigenous uprising, he was concerned to suppress it before it spilled over into the Union. Spokesmen of the black opposition in South Africa also reminded him of the international dimension of the uprising. The leader of the colored African Peoples Organization at the Cape, Dr. Abdullah Abdurahman, took up the cudgels on behalf of the Bondelswarts and threatened to appeal directly to Geneva. Such protests from coloreds or Africans could not jeopardise the Union's status of a mandatory power. They had the potential, however, of tainting Smuts's projected image of South Africa as an important member of the new world order which was capable of handling its "backward" population groups in a civilized manner. In retrospect, the Bondelswart Rebellion may be seen as the first instance of indigenous resistance in South West Africa which attracted the attention of international critics of South African rule in Namibia. This incident foreshadowed the disputes which the South African presence in Namibia generated at the United Nations after World War II.

African defiance in the aftermath of World War I was not confined to the rural areas, where the vast majority of the population continued to live. The South African Industrial and Commercial Workers Union (ICU) established a branch at Lüderitz in 1920. This harbor town was the center of the diamond mining and fishing industry. Colored South Africans such as Jimmy

La Guma were prominent in organizing workers' resistance. La Guma had moved to German South West Africa as one of the so-called Cape Boys who labored under harsh conditions. In 1918 he organized a strike at the Pomona diamond mine. He became the assistant general secretary of the ICU in Cape Town in the 1920s. The union focused on wage issues and working conditions, but this organization, like a couple of others which mainly voiced the grievances of a small colored section of the working population with a South African background, seems to have expired after a few years.

In the aftermath of World War I global avenues opened up which facilitated communication among dependent peoples and which spurred the emergence of Black Nationalism in its various guises. The early 1920s saw the arrival of Marcus Garvey's Universal Negro Improvement Association (UNIA). The nucleus of the Lüderitz branch was formed by people of West African and Caribbean origin. At the Paris Peace Conference, Garvey (and his rival W. E. B. Du Bois of the National Association for the Advancement of Colored People) had unsuccessfully tried to present ideas for integrating the former German colonies into an internationalized zone under independent black tutelage. In 1918 Garvey demanded self-determination for all Africans at a mass meeting in Harlem, including the restoration of land rights for black South Africans. Rumors of Garvey and his Black Star Line seem to have reached South African shores by 1920. After the Bondelswart Rebellion had been crushed in 1922, the flamboyant leader of the UNIA announced that he would send black fighter pilots to South West Africa, thus connecting the idea of black empowerment with a potent contemporary symbol of technological modernity. In the same year rumors circulated in the territory that disaffected Africans were secretly meeting with African Americans in Namibia to prepare for the impending struggle with the whites. These ideas linked up with an older history of connections between black South Africans and African Americans which extended back into the nineteenth century. The UNIA slogan "Africa for the Africans," with its millenarian connotations, not only reverberated among black people but also intensified white paranoia in the 1920s. Settler confidence was severely shaken by the apparent accumulation of African resistance which always seemed to hold the potential of escalating into a more centralized

uprising. Africans openly showed their defiance by carrying UNIA badges and by appearing armed and on horseback in the streets of Windhoek. Members of the Herero elite, such as Hosea Kutako, became temporarily involved with UNIA, and there was considerable overlap between leading ICU and UNIA members. The organization extended its reach to the rural areas, where rumors of the impending landing of African American auxiliaries acquired millenarian significance among the Herero. When the anticipated fleet of Garvey's ships did not appear at Lüderitz, this accelerated the demise of a movement which had already been eroded by internal tension between the predominantly urban and foreign elite on the one hand and the indigenous Namibian proselytes on the other. By 1923 the influence of the Garveyite movement started to wane.

The year 1923 also saw the burial of the former chief of the Herero, Samuel Maharero, in Okahandja with the permission of the South African authorities. After his flight from German South West Africa he had been living in exile in South Africa and in the Bechuanaland Protectorate. For the Herero, Maharero's funeral was the largest sociopolitical event since the Herero-German war. The Herero used the funeral to lay claims to the recovery of their ancestral lands and to reoccupy public space where the reconstruction of Herero identity could unfold with pomp and circumstance. Significantly, Maharero's coffin was escorted by Herero *Truppspieler* (troop players), who were clad in German-style uniforms and reenacted an indigenous version of Prussian military drill. The emergence of a Herero organization in the aftermath of the genocide, whose members emulated German militaristic manners and addressed each other with German-sounding titles, baffled contemporary observers and generated much debate among academics. Beyond the emphasis on military symbolism, however, the *otrupa* (troops) or *otjiserandu* (Red Band or Red Flag Organization) provided a section of the dispossessed Herero pastoralists with an organizational framework for articulating their grievances. The members of the organization reshaped symbols and practices from the pre-colonial Herero culture to position themselves against the colonial state but without provoking the authorities through open defiance. Participation in this movement also provided a platform for expressing dissent with traditional leaders,

whose incorporation into South African indirect rule as members of advisory councils and reserve boards sometimes clashed with the more millenarian expectations of the *otjiserandu* rank and file. Initially derided as a childish imitation of European symbols of power, the South African administration observed the activities of the *Truppspieler* with a great deal of anxiety. In the 1930s similar activities were also reported from Ovamboland.

The Rehoboth Rebellion of 1925 showed again that African resistance in the period after World War I possessed an international dimension which complicated South African policies in Namibia. The so-called Rehoboth Basters, colored descendants of mainly indigenous Khoekhoe and Dutch settlers at the Cape, had played a special role in the Namibian network of political relations since they immigrated to South West Africa in the nineteenth century. Partly in acknowledgment of their "racially" mixed heritage, the Germans had rewarded them with special concessions for their military collaboration against other indigenous groups. Despite their privileged position, however, the Rehoboth people could not prevent the increasing encroachment on their land during the German period. When South African troops invaded the colony in 1915 the Germans responded harshly to the refusal of the community to guard South African prisoners of war, and some Basters were killed in the ensuing clash. The South African administration made vague promises of honoring the special political status and the land rights of the increasingly impoverished Rehoboth community, which fostered hopes of preserving an ambiguous position of political semi-independence. These uncertain conditions facilitated the existence of a substantial presence of African rent-paying tenants from other population groups, for the most part Herero, in the Rehoboth area. In 1925, 2,500 Africans shared the Rehoboth territory with 3,500 Basters, apart from a small minority of white farmers. The Union administration had banned squatting in Namibia with the aim of mobilizing African labor for the colonial economy. Because of the special status of the Rehoboth reserve these African tenants could evade repressive colonial laws which restricted indigenous access to land. The administration was extremely worried that the uncontrolled cohabitation of different African communities in the Rehoboth area could encourage indigenous resistance. Official reports frequently com-

plained about African "insolence." In 1923 the Union signed a treaty with the Rehoboth Council which intended to bring African tenants in the Rehoboth *Gebied* (territory) more firmly under the control of the colonial state. This agreement triggered an open split within the community which was divided by class differences and by opposing views on political strategy in dealing with the colonial administration. These internal conflicts led to the emergence of a rebel council which had, at least initially, the backing of a majority of the inhabitants. In open defiance of the Union administration, the so-called New Council explored various strategies of non-cooperation which escalated into an open confrontation with the South Africans in April 1925.

The South African administration had noted with great concern that members of the Rehoboth New Council had begun to petition not only the prime minister, Barry Hertzog, but also the League of Nations in Geneva from June 1924. The statutes of the Permanent Mandates Commissions prohibited direct correspondence between petitioners in the mandate territories and the League of Nations, but the communication between Rehoboth and Geneva was reluctantly tolerated by Pretoria in order to avoid censure from the international body. Hertzog and his National Party had remained remarkably silent at the time of the brutal suppression of the Bondelswart Rebellion, but now he was concerned not to repeat the mistake of his predecessor, Smuts, and infuriate the League of Nations and the world public by the mass killing of Africans. The colonial state displayed a massive show of force, which included demonstration flights of three airplanes. After the Rehoboth Rebellion was terminated without bloodshed in April 1925, the Union administration was able to remove the Herero tenants from the Rehoboth reserve, which resulted in serious financial losses for the Rehoboth community.

Petitions from the Rehoboth community continued to reach Geneva until the 1930s. As late as 1961 one of the signatories of the submissions made to Geneva in the 1920s and 1930s continued to send complaints about the South African occupants to the chairman of the United Nations, Dag Hammarskjöld, in New York.

Since the South Africans had defeated armed resistance under Mandume, they had continuously undermined the authority of traditional leaders and increasingly coopted Ovambo chiefs into an economic system which was geared

towards procuring migrant laborers. When the South African authorities had aircraft circling over Rehoboth to intimidate the community into submission in 1925, they used the opportunity to stage a similar display of their military might in Ovamboland. In 1932 a substantial military expedition, including aircraft and armored cars, deposed the chief of the Uukwambi, Ipumbu ya Tshilongo, whose aggressive conduct towards his own subjects had earned him the enmity of the Finnish missionaries and provided the Native Commissioner with a pretext for getting rid of an unruly headman.

End of World War II and Independence

The dissolution of the League of Nations and the founding of its successor, the United Nations (UN), after World War II encouraged the South Africans to pursue their goal of incorporation more actively, demanding the discontinuation of trusteeship. In 1946 the South West African Legislative Assembly recommended the formal incorporation of the territory into the Union of South Africa. In response to growing international pressure the ruling National Party in South Africa issued the South West Africa Affairs Amendment Act in 1949, which gave the white minority representation in the South African parliament. The strong opposition against incorporation, however, which evolved among the UN delegates and in Namibia, as reflected by the petitioning campaign which the Reverend Michael Scott conducted on behalf of the Herero until the 1950s, indicated that the end of World War II heralded a new phase in the history of the resistance to colonial rule in Namibia. In contrast to previous protest and rebellion, which struggled to transcend local boundaries and parochial concerns, the period after World War II marked a gradual process of more efficient amalgamation of the various anti-colonial forces in the territory. The Cold War and decolonization also provided the Namibian independence movement with new sources of financial, diplomatic, and military support from the new independent states in Africa and from the communist bloc.

An increasingly isolated apartheid South Africa refused to accept international status of Namibia under the tutelage of the UN, although the case was presented to the International

Court of Justice in 1949, 1955, and 1956. In 1966 the United Nations General Assembly (UNGA) declared that South Africa had lost its status as a mandatory power in Namibia. More UN resolutions followed which confirmed that South Africa's occupation of the territory and the implementation of apartheid laws were illegal, such as the balkanization of the territory into ethnically segregated "Bantustans." Petitioning the UN and conducting international diplomatic campaigns became a major focus of the activities of the Namibian independence movement.

The increasing demand for labor in the growing areas of mining and the fishing industry and the dependence of white commercial farmers on cheap labor intensified the migrant labor system and thus sharpened its concomitant negative effects on socioeconomic conditions among Africans. Conversely, the breaking up of traditional socioeconomic and cultural constraints in conjunction with the process of intensified urbanization and modernization contributed to the emergence of new political networks among Namibian workers and intellectuals. The shared experience of exploitation and poverty in Namibian towns created a heightened sense of political awareness among Africans from different backgrounds and it provided new incentives for political mobilization. The late 1940s also saw an intensified drive by South African trade union activists to organize workers in Namibia. Ray Alexander Simons of the Food and Canning Workers Union extended union activities from the South African west coast into the fishing industries at Lüderitz and Walvis Bay until the apartheid government stepped up its persecution of the opposition under the banner of anti-communism and temporarily silenced organized labor in Namibia. Despite these setbacks, however, the ongoing contacts between Namibians and members of the South African opposition were instrumental in giving rise to a more centralized nationalist movement. Various South African trade unions and opposition groups extended their struggle against apartheid by petitioning the UN in order to protest against the incorporation of Namibia.

South West Africa People's Organization

The South West Africa People's Organization (SWAPO) was formed in the 1950s and 1960s

as an anti-colonial liberation and independence movement under the leadership of Sam Nujoma and nationalist leaders seeking the end of South African occupation. SWAPO's leadership in exile successfully established linkages with international organizations and formed a global solidarity movement for decolonization of the territory. Under the leadership of Nujoma the organization built a strong internal and external network of supporters for SWAPO's independence struggle.

By 1966 SWAPO initiated a guerrilla war through the People's Liberation Army of Namibia (PLAN) to liberate the territory that did not engage in mass confrontation, and by the late 1970s established the organization as the most legitimate liberation group of the people in Southwest Africa. The political activities included mass meetings, boycotts of elections, and strikes in key mines, the port city of Walvis Bay, and beyond.

In 1978 the PLAN armed force directly engaged South African troops who were stationed on the northern border to combat the Angolan MPLA government and Cuban auxiliaries. After more than ten years, on March 21, 1990, Namibia was granted independence, and a SWAPO government took power with Sam Nujoma the first president of the new state.

Post-Independence

Until 1990 the history of the struggle of Namibians against colonial rule was described by scholars, activists, and politicians within a generally accepted discourse of national liberation and national unity. The South African apartheid regime stood for brutal oppression of human rights, which seemed to make critical questions about the liberation movement's democratic credentials and moral legitimacy irrelevant or even counterproductive. However, Namibia after independence has not been exempt from critical scrutiny.

Independent Namibia depends on the South African economy in terms of trade ties and financial links. Subject to contractions in the various industrial and commercial sectors, unemployment is relatively high. After independence, experts warned that small domestic markets, limited employment opportunities in the commercial agricultural sector, and the prospect of exhausted mineral deposits contributed to

Independence Day, March 21, 1990 was a milestone in the resistance struggle for Namibian autonomy from South African rule. W. de Klerk visits Nujoma during the independence ceremony. (AFP/Getty Images)

a declining GNP. By 1997 unemployment was estimated to affect between 30 and 40 percent of the population. Mining constitutes the largest share of the national revenue, and the tourism industry has grown to become a major pillar of the economy. The majority of the population is still engaged in the different agricultural sectors. Some experts have bemoaned the slow progress of land reform in order to redress the imbalances of a highly unequal system of landownership, with 4,500 commercial farmers occupying 43 percent of agricultural land. Government policies have largely focused on attracting foreign investment and on stimulating the private sector. While there have been indicators of economic growth after independence, trade unions and critical observers articulated at an early stage their concerns about the disparities in post-colonial Namibian society. Similar to Namibia's neighbor South Africa, critics have condemned crime, unemployment, unequal access to social services, and the advantages enjoyed by a privileged new elite.

The history of the armed struggle was not only marked by determined resistance to colonial oppression, but also by a lack of democratic transparency and procedure, which the leadership justified on the grounds of strategic and military pragmatism. This created obstacles for the transition from a militant liberation movement to a democratic state bureaucracy. Traditions

of authoritarian decision-making, as they are common in military structures, grate with the exigencies of a transparent modern democracy.

SWAPO's brutal treatment of hundreds of its own detainees during the struggle era, who were accused of spying for South Africa, attracted a lot of international attention. Nujoma's successful bid for a change of the constitution to allow him a third term as president in 1999, and his subsequent maneuvers to install a specially selected successor, Hifikepunye Pohamba, in 2005 also made him the target of critics who accused him of following in the footsteps of other authoritarian African statesmen. Other comments made by Nujoma in public, for example derogatory remarks about homosexuals, or threats of a Zimbabwe-style land reform, have also been criticized. The recent attempt made by the Herero to sue Berlin for reparations for the genocide during the German colonial period has resuscitated academic debates and political polemics about the Namibian colonial past and the dark side of German history. Discussing the refusal of the Namibian government to support these claims, some argue that the Ovambo-dominated SWAPO government faces problems in establishing a historical continuity between the colonial mass murder of the Nama and Herero on the one hand and the SWAPO-led resistance against the South African occupation on the other. The history of indigenous anti-colonial resistance unfolded in such a diversified manner that all contemporary attempts to construct a homogenized national identity based on a common struggle for independence are fraught with difficulties.

NAP (*Nuclei Armati Proletari*)

Emilio Quadrelli

In the late 1960s, European mass social movements had achieved a remarkable moral victory over the ruling state and corporate establishment through street demonstrations, strikes and factory seizures, student occupations, and random dissent. To a large extent, resistance to state

policies of repression against workers and students was through civil disobedience and protest within the confines of the rule of law.

While the social movements had shaken society in Italy, Germany, and throughout Europe and achieved modest reforms, the more extensive goals of reforming or transforming the state and corporate apparatus did not come to fruition. Concomitantly, the institutional left parties and unions that putatively represented the working class remained stodgy bureaucratic organizations, frequently incapable of transforming their bureaucracies into mass-based militant organizations.

As the left moved closer to the political establishment and accepted major compromises with the capitalist states, the despondent social movements in Italy and elsewhere broke with the establishment to form independent revolutionary organizations, seeking to radicalize the organizations representing workers or to build their own institutions of class solidarity. In the 1970s, in the wake of continued state violence, the political landscape in Italy shifted dramatically with the emergence of a radical left committed to social transformation as militant new organizations formed to advance the interests of workers through armed struggle and urban guerilla warfare against government and corporate officials and installations.

The *Nuclei Armati Proletari* (NAP), a Marxist guerilla organization, was among the most notable and strikingly unique of the new organizations, in part due to its strategic effort to organize among unemployed workers and prisoners. NAP's goal was to generate an armed communist revolution in Italy through recruiting members in prisons and among the unemployed. Originally, many of NAP's members came from the Lotta Continua movement, an extraparliamentary group that sought to develop a strong base in the prison system. In 1970, Lotta Continua created the Prisons Commission, and the following year its daily newspaper began running stories on prison-related issues in the specific column "The Damned of the Earth." A group called the Red Panthers represented the backbone of Lotta Continua's Prisons Commission, later evolving into the NAP.

By 1974, NAP established a mass base through organizing Italian prisoners through kidnapping and forms of direct action. NAP's boldest actions occurred in May 1975 when members of the organization kidnapped a judge and detailed prison guards in an attempted

prison break. On May 6, 1975 in Rome, NAP kidnapped Judge Giuseppe di Gennaro, director of Office No. 10 of the senior management of the national prisons department in the ministry of justice. Three days later, Giorgio Panizzari, Pietro Sofia, and Martino Zicchitella, all activists in the organization, unsuccessfully tried to escape from the Viterbo Prison through taking prison guards hostage. During negotiations for the release of the guards, the three prisoners claimed responsibility for the judge's kidnapping, with a photo showing his detention in a "people's prison." On May 10, after negotiators guaranteed the prisoners' personal safety, and after obtaining an assurance that their message defending the conditions and rights of prisoners would be disseminated, the three NAP members surrendered and released the hostages. The next day, Judge Di Gennaro was also released.

In 1976, an intense confrontation with the Red Brigades (*Brigate Rosse*) led the two organizations to agree to operational unity, and that spring they attacked the barracks and vehicles of the Carabinieri (military police). On April 22, a mixed commando carried out an assault at the headquarters of the district's inspectorate of Milan's prisons department. In December 1977, Pasquale Abatangelo, Domenico Delli Veneri, and Giorgio Panizzari, three NAP militants, drafted a document in the Asinara Special Prison evaluating the experience of NAP, concluding that the organization did not have the resources to operate as a coordinating arm for small collective direct actions in the face of growing state military repression, and decided to join the Red Brigades directly. This choice was shared by the rest of the organization, with the sole exception of the very early activists. After 1977, NAP ceased to exist as an independent organization, but its legacy of organizing unemployed workers and prisoners represents a striking example of the shift to political militancy and a genuine effort to build a mass base from among the most oppressed classes in society.

Napper Tandy, James (1737?–1803)

Karen Sonnelitter

James Napper Tandy gained fame as a flamboyant radical during the era of the United Irishmen and the Great Rebellion of 1798. He was born in the late 1730s – the exact year is unknown – into a Protestant family in Dublin; his father was an ironmonger. In adulthood Napper Tandy at first made his living as a land agent and rent collector.

He joined the Corporation of Dublin and gained popularity for his denunciation of municipal corruption. He was an early recruit to the Dublin Volunteers, a branch of the extragovernmental military movement inspired by the American Revolution that exerted armed pressure on the Irish government to make political concessions. He was an active opponent of Poynings' Law and the Declaratory Act, both of which limited the autonomy of the Irish parliament. As a popular advocate of parliamentary reform, he became widely admired for his opposition to aristocratic dominance of the Irish parliament.

Napper Tandy enthusiastically greeted the French Revolution. While he did not play a part in the formation of the Society of United Irishmen, he did join the organization soon after its formation, becoming the first secretary of its Dublin branch. His outspokenness made him a target of government repression, forcing him into exile. He joined Wolfe Tone in Philadelphia in 1795, and then traveled on to France. When the Great Rebellion erupted in 1798, the French government gave him a ship, arms, and ammunition to lead a small expeditionary force to join the rebels in Ireland. It arrived too late, however, to influence the outcome of the Rebellion. His ship was eventually captured and he was handed over to British custody. When tried for high treason in 1800, he was at first acquitted on a technicality, but a subsequent

trial ended in a conviction and a death sentence, which was afterward commuted to banishment to France. He died in Bordeaux in 1803.

Historians have frequently dismissed Napper Tandy as merely a “colorful” radical, and less charitably as a drunkard and blabbermouth (terrible traits, obviously, for anyone engaged in revolutionary endeavors that demand secrecy). But assessing the value of a revolutionary’s contribution to history is complicated by the fact that controversy “goes with the territory,” and biased characterizations by political opponents often unfairly distort the record of their activities. Was Napper Tandy a competent leader who advanced the cause of Irish independence, or was he more blarney than substance? It would seem in retrospect that his achievements as a United Irishman were fairly meager, and that he did not play a central role in the Rebellion or in events leading up to it. Nonetheless, there is no indication that he was not sincere in his revolutionary convictions, and his enduring popularity – evidenced by the many Irish pubs, both in Ireland and the United States, that today bear his name – testifies to his prominence as a tribune of the oppressed in Ireland in the era of the Great Rebellion.

Narayan, Jayaprakash (1902–1979)

Debi Chatterjee

Jayaprakash Narayan was born on October 11, 1902 in a middle-caste Hindu family in Sitabdiara, a village in Balia District of Uttar Pradesh. He refused to attend a British-style college in protest

against the Rowlatt Act and the Jallianwala Bagh massacre, and in response to the call issued by the nationalists to quit state institutions, he left college. In October 1920 Jayaprakash married Prabhavati Devi, a freedom fighter in her own right. Two years later, he went to the United States and studied political science and economics at the universities of California, Iowa, Wisconsin, and Ohio State.

On his return to India in 1929, Jayaprakash joined the Indian National Congress and became its secretary. Though an ardent follower of Gandhi, he was unwilling to remain confined to the non-violent path. More profound was the impact of Marxism, though Jayaprakash did not accept the Soviet model of regimentation. In protesting British policies during World War II he led massive strikes which sometimes turned violent. He felt that the Congress’s policies were inadequate in addressing the needs of the oppressed masses. In 1934, he took the initiative of forming a socialist group in the Congress. His book, *Why Socialism* (1936), was a scathing criticism of Gandhi and a plea for socialism. Later, in 1948, he led this group out of the Congress and named it the Socialist Party of India. In 1954, he spoke of the limitations of parliamentary democracy in India and joined Vinoba Bhave’s *Bhoodan* movement, a movement for voluntary distribution of land to *Harijans* (untouchables). He decided to renounce electoral politics and pursue *Lokniti* (polity of the people) instead of *Rajniti* (polity of the state).

Although seriously ill, Jayaprakash returned to politics in 1974 to oppose the regime of Indira Gandhi. He led massive movements against governmental corruption in Bihar and stood up for the protection of civil rights. To stem the opposition, Indira Gandhi announced a national emergency and ordered the arrest of a large number of opposition leaders and activists. Jayaprakash was arrested and imprisoned for a short duration. He remained the uniting force behind the Janata Party and led the opposition in bringing down the government of Indira Gandhi in the 1977 elections.

His ideal of *Sampoorna Kranti* (total and permanent revolution) aimed at motivating people to radical reforms and at weeding out various social evils, including corruption, dowry, caste distinctions, untouchability, and communalism. He also argued for “partyless democracy” and greater decentralization of power.

Jayaprakash died on October 8, 1979. He was posthumously given the Bharat Ratna award in 1998 for his invaluable contribution to the freedom struggle and upliftment of the poor and downtrodden.

Nasir, Hassan (1928–1960)

Farooq Sulehria

Hassan Nasir is an icon of the student movement in Pakistan who is remembered for his struggle, sacrifice, and bravery. Born on August 2, 1928, Hassan Nasir hailed from Hyderabad, a princely state during the British *raj* (rule). His well-off family was famous for its commitment to nationalist politics. After his Senior Cambridge at Grammar School, he moved to Aligarh, a famous seat of learning for the Muslim elite during those days. As Hassan began college in Aligarh, India was rocked with mutinies, strikes, and student unrest. Hassan participated in the student movement launched for the release of Indian National Army (INA) leaders, but it was the communist-led revolutionary peasant uprising in Hyderabad state in 1947 that radicalized him. He joined the communist movement and moved to Pakistan in December 1947. The left-wing People's Publishing House in Karachi became his abode and he dedicated himself to organizing the workers in unions. Nasir gained attention and established himself as a student leader when he played a key role in founding

the All Pakistan Students Organization. In 1951 he was arrested in connection with the Rawalpindi Conspiracy Case, launched by the Pakistan government in order to suppress the emerging Communist Party, and was released in 1952. His release proved short-lived, as he was arrested again in 1954 and was exiled. He returned to Hyderabad, and in 1956 he moved to Pakistan yet again, becoming the National Awami Party's (NAP) office secretary in Karachi. It is suspected that he was also the general secretary of the illegal Communist Party. As the military imposed its first dictatorship in 1958, Hassan went into hiding, and the government announced a reward for his arrest. It is likely that one of his close associates betrayed him, leading to his arrest in 1960. He was sent to Lahore Fort where he was tortured to death and his body hastily buried by the authorities.

Nasrallah, Sayed Hassan (b. 1960)

Andrew J. Waskey

Hassan Nasrallah is the current secretary general of Hezbollah, a Lebanese political party. Hezbollah's members are Shi'a Muslims. Its defining philosophy is Shi'a theology as applied to current political conditions.

Nasrallah was born in Lebanon, in the East Beirut neighborhood of Bourj Hammoud on August 31, 1960, the ninth of ten children. Prior to Hassan's birth, his father Abdul Karim worked as a vegetable peddler in Jabal Amel in southern Lebanon near the city of Tyre. Neither

Karim nor his family was especially religious; however, Hassan showed an early interest in religion. He first attended Al-Najah School but later transferred to a public school in the East Beirut neighborhood of Sin el-Fil.

The violence of the civil war in Lebanon in 1975 forced Hassan's family to flee to their ancestral home in Bassouriyeh. While Hassan was finishing his secondary education in Tyre he joined the Amal movement, which had been founded in 1975 as the militia wing of the Movement of the Disinherited founded in 1974 by Musa al-Sadr. The Amal movement's goals were to win greater respect for the Shi'a of Lebanon and greater resources for the large displaced Shi'a population living in southern Lebanon. The ultimate objective was to gain control of southern Lebanon for the Shi'as. With the aid of the Syrian government, the movement grew in popular strength.

In the late 1970s Nasrallah attended a theological school in Baalbek, a Beqaa Valley town. The curriculum of the school was heavily influenced by the teachings of Ayatollah Mohammad Baqir al-Sadr, founder of the Dawa movement in Najaf, Iraq, in the 1960s, where Nasrallah studied theology for a short while before he and a large number of other Lebanese Shi'a were expelled by Saddam Hussein. Upon returning to Lebanon, Nasrallah began teaching at a school run by Amal's leader, Abbas al-Musawi. He was soon inducted into the Amal movement's inner circle.

After the 1982 occupation of southern Lebanon by the Israeli army, Nasrallah joined Hezbollah, a group founded by Iranian Shi'a agents operating in Lebanon. His preaching skills attracted the attention of other Lebanese Shi'as, who joined Hezbollah as well. Followers of the Ayatollah Sayyid Ruhollah Mussaui Khomeini (1902–89), they were seeking to establish a Shi'a theocracy in Lebanon.

In 1987 Nasrallah went to Qom in Iran to study theology for nearly three years. In 1991 Musawi was chosen to be the secretary general of Hezbollah. Later that year he and his family were killed by the Israelis, and Nasrallah became the secretary general of Hezbollah. In 1989 he denounced the Taif Agreement, which based Lebanese parliamentary representation on the old demographic numbers of Christians and Muslims.

Nasrallah was active with Hezbollah throughout the 1990s and 2000s. In the late 1990s, the Israelis had to fight an ongoing battle with Hezbollah. They ended their occupation of southern Lebanon in 2000, hailed in the Arab world as Nasrallah's victory. It also raised the level of respect of many in Lebanon for Nasrallah as a liberator. In 2004 Nasrallah played a major role in exchanging prisoners between Israel and Hezbollah. Hundreds of Lebanese and Palestinians were exchanged for the Israelis they held. Also exchanged was Nasrallah's son's body. In 2006 an agreement was reached with the Lebanese Christian organization, the Free Patriotic Movement, led by Michel Aoun, who was the former premier of Lebanon. The ten-point compact included an agreement to pardon and return members of the South Lebanon Army in exchange for which the Free Patriotic Movement agreed to work for parliamentary reforms that would lead to representation on the basis of one-man-one-vote instead of representation on the basis of the demographics of Christians, Muslims, and Druze in Lebanon. Aoun claimed that the agreement meant that the political process was disarming Hezbollah without the losses a war would entail. Critics claimed that it gave legitimacy to the Shi'a with little in exchange.

As the leader of Hezbollah, Nasrallah remained a highly visible spokesman, especially during the 2006 Lebanon War (August 14–September 6), called the Second Lebanon War by the Israelis and the July War by the Lebanese, which ended in a stalemate.

Nasser, Gamal Abdel (1918–1970)

Andrew Kurt

Colonel Nasser was a leader in the Egyptian Revolution of 1952 which ended British imperial dominance and the Egyptian monarchy. As Egypt's president for 14 years, he was a proponent of Arab socialism and pan-Arabism. While his economic program is viewed as a mixed success for Egypt, and his military record against Israel was one of failure and disappointment, he was the foremost Arab leader of his day. The secular political order he instituted continues today in Egypt and has been copied in other Arab nations.

From a poor family, Nasser rose through the army. Egypt was technically independent from Britain since 1922, but in fact remained a quasi-colonial state. Throughout the 1940s the monarchical government's corruption and weakness became a source of profound dissatisfaction in Egypt.

In 1949 Nasser helped to found the Free Officers movement. In July 1952 it spearheaded a revolution which forced King Faruq to abdicate, abolished parliament, then established a republic in 1953. General Muhammad Neguib became the first president. But as the true head of the Free Officers, Nasser became prime minister briefly in 1954. Elected as president in 1956, he was also head of the Revolutionary Command Council. Nasser later wrote of his leadership in the coup in a book entitled *The Philosophy of the Revolution* (1959): "I always imagine that in this region in which we live there is a role wandering aimlessly about in search of an actor to play it."

The officers' coup also ended British imperialism in Egypt, when two years later Britain evacuated the Suez Canal. In 1956, after the United States refused Nasser's request for arms, his decision to turn instead to the Soviet Union and to nationalize the Suez Canal Company – in majority British control since 1869 – led to the so-called Suez Crisis. In the end Nasser stood up to invasion by British, French, and Israeli forces, who abandoned the mission to take back the Canal. This anti-imperialist stance quickly led to a heroic reputation, not only in Egypt but in the wider Arab world as well. The influence of

Gamal Abdel Nasser (1918–70) was a leader in the Egyptian Officers' Revolution that deposed King Farouk I in 1952 and went on to become the nation's second president in 1956. As a pan-Arabist, Nasser led the United Arab Republic, which unified Egypt and Syria. This August 1, 1956 photo was taken as the Egyptian president returned from Alexandria after announcing his takeover of the Suez Canal Company. (Getty Images)

Nasser's example was soon apparent, as Jordan's King Hussein dismissed the British officer in command of his army, then in 1958 officers in Iraq's army led a coup which took down the Hashemite monarchy installed and propped up by Britain.

Nasser was not against Islam, but Egypt now pursued a secularist, modernist program. As part of his authoritarian approach, he established control of mosques and religious organizations. He championed a secular nationalism steered in the direction of state-run socialism. The economic foundation of the old landowning elite was broken as his government increasingly limited landholdings. Banks were nationalized and industry promoted. The Aswan High Dam (opened in 1964) expanded agricultural development significantly.

Nasser established the Arab Socialist Union as the single political party which, though bereft of real power, permitted new forms of political participation. He was originally tolerant of the Muslim Brotherhood, an Islamist society that played a major role against British presence in Egypt and in the coup. But in 1954 he attempted to remove the political threat it posed by banning it and waging a bloody campaign against its members. Nasser allegedly made false accusations against the Brotherhood, a group popular among many Egyptians, including army

officers. Brutal reprisals continued later as it became more militant.

Egypt's example and encouragement of African and Arab independence from the West came to be known as Nasserism. Also in favor of Arab unity and Palestinian victory against Israel, Nasserism possessed considerable strength. Nasserist movements continued in the Arab world even after the humiliating defeat by Israel in the 1967 War; in Libya Nasserists staged a successful coup in 1969. Nasser stood almost alone in his ability to win pan-Arab approval. Yet he was unable to achieve lasting political union, and economic crisis in Egypt starting in 1965 dampened the assessment of his economic program. As Nasser became increasingly distrustful of opponents, he increased surveillance and control by police and the secret service, and did not resolve the tension of secular dictatorship versus a semi-democratic Islamism. Despite these difficulties in governing the country, Nasser remained enormously popular among Egyptians. Several millions attended his funeral procession in 1970. He was succeeded by Vice-President Anwar al-Sadat, a member of the Free Officers' revolution.

Nat Turner Rebellion

Anthony E. Kaye

Nat Turner led the last of the great slave rebellions in the United States. In the dark of a summer morning in 1831, he set out with just six comrades. As they marched across Southampton

County, Virginia, their ranks grew to about sixty, and an equal number of white people lay dead. The revolt was swiftly crushed but shook slavery in Virginia to its foundations.

Although Turner is often remembered as a hero, his relations with slave contemporaries were fraught. Born on October 2, 1800, he changed hands among four different owners and lived on three different farms, all within a few miles in Southampton. Family, fellow slaves, and many white people believed him to be bright beyond his years. A seemingly preternatural ability to recount events before his birth convinced some that God communicated through him. Turner was ambivalent about such attentions and withdrew from other slaves to cultivate a persona of mystery and evangelical piety. He could often be seen in prayer, even in the field, and he engaged in exercises of self-restraint, such as fasting, showing himself unmoved by petty temptations such as alcohol and theft.

When Turner was in his twenties a series of mass revivals, known as the Second Great Awakening, swept the South. An egalitarian theology stressed direct contact with God and that he was no respecter of persons, high or low. Turner contemplated passages of scripture and began to converse directly with God. "The Spirit," as he called God, told Turner, "Seek ye the kingdom of Heaven and all things shall be added unto you."

Around 1822 Turner began to intimate to other slaves "something was about to happen" to fulfill some "great purpose" the Spirit had in store for him. But after a run-in with an overseer, Turner ran away for 30 days, only to return quoting an admonition from the Spirit: "For he who knoweth his Master's will, and doeth it not, shall be beaten with many stripes, and thus have I chastened you." Many slaves in Turner's neighborhood assumed he had run away for good, as his father had years before, and were disappointed by what sounded suspiciously like a pro-slavery catechism when he returned.

At the nadir of his neighborhood stature in 1825, Turner had his most striking revelations yet: a battle in the sky between black spirits and white spirits, a prophetic vision complete with streams of blood and peals of thunder. When he saw drops of blood fall upon a corn field he was plowing, Turner shared the vision with whites and blacks, but few were impressed. When he waded into a creek with one new disciple, an alcoholic

former overseer, the Spirit baptized them, but onlookers merely “reviled us.”

Turner’s rise and fall reflected the social complexity of the neighborhood terrain. Slave neighborhoods, recent research suggests, were the primary arena of slave society, where slaves worked, socialized, formed families, praised God, and struggled against slaveholders. The tensions of the neighborhood worked to Turner’s advantage to an extent. To be sure, his rebellion suffered from lack of planning. It is not clear he formulated any plans beyond taking the county seat of Southampton, where he mistakenly believed a large cache of arms could be had. Yet he kept his plans largely to himself, relying only upon a select number of confidants from his own neighborhood. Conspiracies organized by Gabriel, a slave artisan, in 1800 and another by Denmark Vesey in 1822 were discovered before they came off after months of extensive recruiting in Richmond and Charleston, respectively, and rural hinterlands. According to Turner, however, when he was at last ready to act, the people “in whom I had the greatest confidence” numbered just six nearby friends. Hark Travis lived on Joseph Travis’s place with Turner; Will Francis, Henry Porter, and the other three men who set out with them all lived on farms nearby.

The insurrection also played out on a neighborhood grid. On Sunday afternoon, August 21, Turner and his six neighbors met at Cabin Pond on a farm adjoining the Travis’s and steeled themselves with a feast of roast pig and drams of brandy. In the dark hours of the morning on the 22nd, they sneaked into the Travis house quietly, where Turner’s comrades insisted he draw first blood. In the Travis’s bedroom he landed only a glancing blow with his axe, and Will Francis swiftly disposed of the Travis family. After leaving the house, it dawned on the rebels they had left behind an infant in the family, and Porter and Francis returned to kill the child. The rebels proceeded apace through the neighborhood, striking at one farm after the next, killing whites and picking up recruits. The insurgents numbered 15 by the time they reached the Turner home, one of Nat Turner’s former owners; the dead numbered 15 by the time they left Whitehead’s.

Turner evinced some ambivalence about the bloody business of the rebellion. Not only did he hesitate to make a death strike back at the Travis’s, he killed only one person during the

entire rebellion, a daughter in the Whitehead family. As Turner rode to rejoin his forces at the Francis place, he had a curiously difficult time catching up and only rejoined them several farms further on.

Turner issued new orders for the new terrain outside the neighborhood. Until this point, the rebels had persisted in their advance by stealth. Now, he ordered them to burst onto farms at a crescendo, “to carry terror and devastation wherever we went.” As the rebels proceeded east toward the county seat of Jerusalem, the force grew to 50 or 60 men from different neighborhoods, and its cohesion began to unravel. When they reached the Parker farm 3 miles from town, a debate broke out. Turner wanted to go to Jerusalem directly, but the majority wanted to recruit in the Parker quarters. While they went recruiting, he stayed behind at the gate with a half-dozen men.

Meanwhile, white men were massing in overwhelming numbers. Over the course of that day and the next, over 850 militiamen from Southampton and adjoining Isle of Wright County mustered against the revolt – a massive force, given the rebels’ maximum strength of 60. A contingent of 18 caught up with the rebels at Parker’s gate, their first skirmish with militia. Half a dozen rebels were wounded, many dispersed, and 20 rode on with Turner to approach Jerusalem from the south but were met by militia again at Cypress Bridge over Nottoway River. Turner assumed the men who had fled “would make back to their old neighborhood,” and resolved to regroup there and enlist new recruits for another march on Jerusalem.

Turner’s path back to Cabin Pond was circuitous, as his retreat was deflected by militia enveloping the insurgents. Along the way, Turner’s ranks were growing again, to about forty when they rested for the night in woods on the edge of a farm, but dropping to 20 after another attack. He backtracked in hopes of gaining more new recruits, but to no avail. Gunfire greeted him on one estate, and he arrived at the next with just two men. He instructed them to reconnoiter with the neighbors he had set out with back at Cabin Pond. Turner arrived there Tuesday night, August 23 alone, waited until the following evening, and then secreted himself in a hovel under a pile of fence rails. For ten weeks Turner remained at large. White people speculated he was far off, 180 miles west on the road

to Ohio, east in the Dismal Swamp, but he hid in his neighborhood for the duration.

In the meantime, militia suppressed the rebellion in operations partly military, partly vengeance. They took prisoners and shot down bystanders and rebels alike. Among Turner's neighbors, the militia took Hark Travis into custody and killed Henry Porter, who was beheaded. The militia killed far more men – 120, by one conservative estimate – than those participating in the revolt. The violence became so indiscriminate a newspaper editor condemned it as “hardly inferior in barbarity to the atrocities of the insurgents.”

Turner was captured at gunpoint by a lone white man on October 30. He entered Jerusalem in chains, under a small guard, through a phalanx of hostile white people. Awaiting trial, he told his story in his cell during three days of interviews with a lawyer representing Hark Travis, Thomas Gray. His pamphlet, *The Confessions of Nat Turner*, sold as many as 50,000 copies and remains the best single source testimony on the revolt.

Turner was among the last of the 50 accused rebels tried between August 31 and November 21 in the Southampton Court of Oyer and Terminer. Authorities used the trials to demonstrate they had regained control of the county as well as bring rebels to account. The court, the standing venue for trials of capital cases against slaves, made a show of according defendants due process provided for slaves by law, which included a right to counsel. The court dismissed charges or returned verdicts of not guilty in 13 cases, but found 30 men guilty and condemned 19 to hang, including Turner. His trial lasted one day, presided over by ten justices of the peace instead of the usual complement of five, attended by an unusually large guard to deter agitated citizens from seizing him. The court found Turner guilty and valued him at \$375 for the purposes of compensating his owners for executing their slave. As many as 200 people died in the rebellion and its aftermath, 60 killed by the rebels, the lion's share by the militia.

In the state legislature, Turner's revolt provoked a wide-ranging debate about the future of slavery in 1832. One measure came within 15 votes of abolishing slavery. In the end, arguments that slavery was an economic necessity carried the day, and Virginia passed new laws requiring slaves to receive religious instruction solely from their owners and prohibiting all black

people, bond or free, from preaching. Free black people lost the right to trial by jury, and as many as 300 agreed to migrate to Liberia under the auspices of the American Colonization Society. Lawmakers in Alabama, Mississippi, and Louisiana passed legislation against imports of slaves in the aftermath of the revolt, although the measures were quickly repealed and easily evaded in the interim.

National Guard, Montmartre, 1871

Pamela J. Stewart

The association between the National Guard of Paris and the area of the city known as Montmartre did not become distinct or linked with revolution until 1871. The Marquis de Lafayette created the National Guard of Paris, a militia made up of Parisian middle-class (bourgeois) men, and served as its commander from 1781 to 1791. By 1848, its members supplied some of the leaders of the insurrection known as the June Days, encouraging Emperor Louis-Napoleon III to disband the National Guard in 1852.

In 1860, historically independent Montmartre, a village formerly outside the boundaries of Paris, officially became part of the city. Montmartre's population grew with the migration of workers from the city's center, pushed out with the emperor's reconfiguration of the city. The Franco-Prussian War of 1870–1 and its siege of Paris called for the reestablishment of the National Guard, its members then called *fédérés*, and Montmartre's enlistments came from the working classes. During the war, as Paris endured siege, starvation, and bombardment for more

than four months, government leaders and many bourgeoisie fled Paris. This exodus, and the draw of National Guard pay, meant that the popular classes of men and women remained to defend Paris and increasingly filled the ranks of the Guard, altering its composition to one leaning toward revolutionary change.

The Franco-Prussian War ended in defeat for France in January 1871, and the following month brought both municipal and national elections. Parisians, believing themselves to have been underrepresented in the national political picture, resented having to pay France's reparations to Germany despite their valiant defense of the city during the siege. In addition, new laws made rents and other debts, put on hold during the siege, due within the month, moving tens of thousands of Paris artisans and shopkeepers toward bankruptcy. As a result, workers, their allies, and National Guard troops, who remained armed after the war, increasingly agitated against the republican government. On March 15, members of the National Guard voted for their own municipal representatives, creating an elected body in opposition to the national government. Early on March 18, troops representing the republic entered Paris, attempting to seize cannons stored in Montmartre that had been paid for by Parisians during the siege.

By the end of the day, two generals lay dead and the national troops had retreated, leaving the National Guard and its elected committee to oversee the city and direct new municipal elections that created the revolutionary Paris Commune. The National Guard, now made up almost exclusively of workers and other non-bourgeois men and women, resisted France's army at the ramparts and barricades in and around the city. Women enlisted in medical and supply-line positions (*ambulancières* and *cantinières*) and received equal pay with male Guards. Many women also armed themselves, despite official disapproval of the Commune leadership, defending barricades within the city, firing artillery from the city's gates, and engaging in hand-to-hand combat.

The final demise of the Commune occurred during May 21–8, 1871, what came to be known as the Bloody Week, in which troops of the republic killed 20,000 to 30,000 women, men, and children. In the Commune's aftermath, Parisian men and women in the possession of National Guard uniforms were subject to arrest, military

trial, prison, deportation, or even summary execution. After the Commune, the National Guard fell into official disrepute and disuse.

National Organization for Women (NOW)

Cayo Gamber

Founded in Washington, DC in 1966, the National Organization for Women (NOW) is one of the best-known feminist organizations in the United States. The organization was founded by 28 women and men who attended the Third National Conference of the Commission on the Status of Women. With 300 members and an annual budget of \$1,500, its primary mission was “to take action to bring women into full participation in the mainstream of American society now, exercising all the privileges and responsibilities thereof in truly equal partnership with men.”

A primarily liberal feminist organization, NOW seeks to enact incremental change through legislative and governmental channels. While, on the national level, NOW would be characterized as liberal feminist, many of the state and local chapters would be characterized by radical feminists' decidedly vocal, non-hierarchical, grassroots activism. Over the years, NOW has focused on reproductive rights, civil rights, environmental law, disability rights, age discrimination, affirmative action, and judicial nominations. During that time, among the organization's many accomplishments, NOW took on the newspaper industry

by forcing them to stop sex-segregated “Help Wanted” ads (i.e., Help Wanted Male and Help Wanted Female), challenged the lifting-limits of 30+ pounds that prevented women from taking many higher-paying jobs, helped create shelters for battered women, founded rape-crisis centers, claimed women’s rights to the night and the streets in “Take Back the Night” actions, won the right for young girls to compete in sports and to have access to sports scholarships, endorsed the Equal Rights Amendment, and promoted the passage of Title IX laws. In spite of such successes, during its formative years NOW was criticized for catering to white, middle-aged, heterosexual, middle-class, educated women. In addition, during those years the organization was criticized for widespread homophobia. In the early 1970s the organization finally addressed lesbian rights by issuing a resolution declaring that lesbians were doubly oppressed, both as homosexuals and as women.

Even though today an increasing number of women claim they support feminism, in 2002 NOW’s entire budget had dropped from over \$12 million to approximately \$4 million. Currently, 500,000 members strong, this membership-based voluntary association maintains its role in the feminist movement.

Native American protest, 20th century

Steven E. Silvern

Native Americans form distinct political and cultural communities within the United States. Sometimes referred to as “nations within a nation,” native homelands or reservations are

semi-autonomous territorial enclaves located inside the United States. Today, many Native Americans have left reservations, living in nearby towns and large urban centers throughout the United States. Both on and off the reservation, Native Americans struggle to preserve their cultural identity and heritage, develop reservation economies, and maintain their semi-autonomous sovereign political status. These struggles are set against an American society that historically has sought to eliminate native peoples as distinct political, cultural, and geographic communities. History shows us that Native Americans have engaged in armed resistance, protest occupations, demonstrations, legal activism, and political lobbying to avert the loss of land and natural resources, resist displacement from their homelands, and prevent the erosion of native cultures through government-sponsored programs of reeducation and assimilation.

Native American struggles for sovereignty and self-determination have changed over time and involved different forms of resistance, political activism, and political protest. Native protest movements have developed at different spatial scales – from the local to the national. They have emerged in specific reservation communities and sought to address the needs and demands of specific communities. There has also developed a national, supra-tribal protest and activist movement that has brought attention to the common needs, grievances, and demands

Throughout the 1960s and 1970s the American Indian Movement (AIM) protested the treatment of Native Americans in the United States. On July 17, 1978 in Washington, DC, members of AIM march at the Capitol on the last leg of their five-month cross-country walk to protest a wave of anti-Indian legislation passed in the US Congress. The march began on February 11 on Alcatraz Island off San Francisco, California. (© Bettmann/CORBIS)

of native peoples all across the United States. Today, native political activism and protest activities exist at both local and national scales.

Background of Twentieth-Century Protest

The dawn of the modern native protest movement may be traced to tribal-based political protests in the 1950s that focused on the protection of reservation lands and the restoration of treaty rights. During the 1950s the Hohenosaunee (Iroquois) of New York protested government waterway, dam, and reservoir projects that would result in the loss of portions of their upstate New York reservations. The Tuscarora, for example, resisted the construction of a reservoir on their reservation, blocking land surveyors from entering their lands and pulling out surveyors' stakes marking the boundaries of Tuscarora lands targeted for condemnation.

In the early 1960s, tribes in the Pacific Northwest and the Great Lakes challenged state government efforts to restrict and prevent off-reservation hunting and fishing. Tribes claimed they had reserved the right to hunt and fish off-reservation in nineteenth-century treaties in which they had ceded most of their homelands to the United States government. In the Pacific Northwest, protests challenging the authority of Washington State to prevent off-reservation fishing were organized by local tribes with the assistance of the Survival of American Indians Association and the National Indian Youth Council (NIYC). These protests took the form of marches and demonstrations at the Washington state capital in Olympia. They also organized protests at boat landings along rivers that were called "fish-ins" and were modeled after the "sit-ins" of the African American civil rights movement. Tribes in the region received support from nationally known figures such as Marlon Brando and Dick Gregory. The presence of these entertainers brought national media attention to tribal claims and grievances. These organized protests were accompanied by tribal legal activism in which tribes filed successful law suits in the federal courts for protection of their off-reservation hunting and fishing treaty rights.

Rise of the Red Power Movement

The reservation-based and local-scale protests of the Iroquois and the "fish-ins" of the Pacific

Northwest set the stage for the rise of what would become a highly visible, national-scale native protest movement in the late 1960s known as the Red Power movement. The rise of the Red Power movement must be understood within the larger context of the rise of other social and protest movements during the 1960s and changes internal to native communities during the same time period. The 1960s was a decade that witnessed the rise of political activism and social movements that employed protest, demonstration, and protest marches as well as more conventional political tactics. Native communities, leaders, and political activists were influenced by the political activism and protest of the civil rights movement, Vietnam War protest movements, and the Chicano/Chicana movement. The protests and political activism of these movements set the external social context for the rise of native political activism.

Native political activism, however, must also be seen as arising from a unique set of internal circumstances. Native goals and tactics, while set in the context of 1960s social movements, reflect the specific historical experience of native peoples within the United States. Unlike other minority groups, native communities have a sovereign political status that is reflected in the history of the treaty-based relationship with the United States. They have reservation homelands and are self-governing. In the 1950s the United States put in place a policy called Termination that sought to eliminate these homelands and the tribes' political status. Termination, viewed as a threat to the very existence of tribes, stimulated the formation of a number of reservation-based anti-Termination political groups and intertribal activist organizations.

At the same time, reservations lacked economic development and native communities suffered from high rates of poverty. Along with Termination, the government instituted a program of relocating native people to urban centers in an effort to eliminate reservations and assimilate native people. As on the reservations, in the cities native people suffered from lack of economic opportunity and experienced continued poverty and discrimination. In many cities, intertribal community support organizations formed to provide support to urban Indians. These urban community centers would become places for native peoples from different tribes to meet, talk, and discuss how to solve the social problems

confronting all native peoples. Many who met in the urban centers were in college or were college-educated and brought with them ideas and the energy to develop an Indian political movement. Thus it was especially in urban centers and on college campuses that the more activist and militant Red Power movement emerged.

Alcatraz and the Rise of a Red Power Movement

All that remained for the development and spread of a visible and national-scale Native American protest movement to arise was a catalyst. It came on November 1969 with the native protest occupation of Alcatraz Island. Located in San Francisco Bay, Alcatraz Island was the site of a federal prison until it was closed in 1963. In 1964 and 1969 Indians from the San Francisco Bay area briefly occupied the island. They claimed it under the terms of the 1868 Treaty of Fort Laramie with the Sioux. The first occupiers wanted to use the island as an Indian university. Their brief occupations failed to establish a permanent Indian use for the island.

On November 20, 1969, a group of about 89 Indians, calling themselves Indians of All Tribes, occupied the island. The occupiers, many of whom were students, claimed they wanted to use Alcatraz as a center of Indian and environmental studies. The occupation, which lasted for 19 months, ended on June 11, 1971, when federal agents peacefully removed the remaining 15 Indian occupiers. The Indian and environmental centers were never built. But, the occupation of Alcatraz was significant for both the non-Indian public and for native people across the United States. For the non-Indian world, the occupation drew national media attention for the first time to the social and economic conditions of native peoples in cities and on the reservations.

The occupation of Alcatraz inspired native people throughout the United States to become politically active and to take pride in their culture. Alcatraz stimulated protest occupations, marches, and demonstrations across the United States. This “Red Power” protest movement, as Indian political activism between 1969 and 1980 came to be called, sought to gain public and government attention to the history of cultural repression and the social and economic injustice that native peoples experienced in the United States. The goals of the protest movement may be summarized as:

- to promote Indian self-determination and sovereignty;
- to end poverty on Indian reservations and urban centers;
- to end discrimination against Indian people;
- to preserve Indian identity and culture and promote ethnic pride;
- to challenge negative and stereotypical images of Indians;
- to restore land and draw attention to land claims;
- to honor, protect, and restore treaty rights.

Indian political activists learned from Alcatraz that visibility and media attention were key to gaining the public’s and government’s attention. Thus, the tactics of the Red Power movement involved protests, marches, demonstrations, and property takeovers of highly visible and symbolic locations, including government offices, military bases, national park sites, and national monuments. Between 1969 and 1978 native peoples were involved in over 70 property protest occupations of variable duration. Some of the protest occupation sites include: Fort Lewis, Fort Lawton, a US Coast Guard station in Milwaukee, and other US government military installations. Government buildings, such as the regional headquarters of the Bureau of Indian Affairs in Cleveland and Denver, were the targets of protests and demonstrations during this period. Protesters established “protest camps” at Mt. Rushmore and Badlands National Monument. Plans were made, but never successfully implemented, to occupy Ellis Island.

For some tribal activists, well-organized demonstrations and marches coupled with political lobbying were essential ingredients in their political strategies during the 1970s. One example of this is the Wisconsin Menominee’s successful effort to repeal the federal government’s termination of their status as a recognized tribe in 1961. Upset with the failure of Termination to improve the life of the tribe and the loss of reservation lands, tribal members in Milwaukee and Chicago organized Determination of Right and Unity for Menominee Shareholders (DRUMS). DRUMS organized numerous demonstrations, including a 150-mile march of several hundred tribal members to the state capital in Madison to gain public support for repeal of termination. DRUMS also extensively lobbied Congress and the Nixon administration to repeal the Termination Bill.

In 1973, Congress restored the Menominee to tribal status by passing the Menominee Restoration Bill.

The American Indian Movement (AIM)

Instrumental to many of these protest occupations, marches, and demonstrations was the American Indian Movement or AIM. AIM was created in Minneapolis in 1968 by Ojibwe Indians, including Dennis Banks and Clyde Bellecourt, in response to discrimination against Indians and police harassment of Indians in Minneapolis. AIM initially provided social services, health care, and housing assistance to Minneapolis's native community. It also established a street patrol that sought to reduce the arrest and police abuse of Indians living in the Twin Cities.

After Alcatraz, local AIM chapters sprung up around the country. Working with urban Indian centers and Indian social and family networks, AIM organized many protests and protest occupations throughout the country. Its leaders were skilled in gaining media attention to publicize treaty rights, discrimination, and the poor economic conditions of urban and reservation Indian communities. Initially, these protests were short-term and non-violent. For example, in one its first national protests, AIM along with members of 25 tribes occupied a replica of the *Mayflower* and poured sand over Plymouth Rock on Thanksgiving Day in 1970. Later actions and protests organized by AIM during the 1970s would be more militant and violent in nature.

Perhaps one of the most famous and symbolic of the protests organized by Indian political activists was the 1972 Trail of Broken Treaties. This protest, organized by AIM, began as a caravan of Indian protesters in Seattle and San Francisco that wound its way across the country, stopping at reservations and in cities on its way to Washington, DC. Meeting in St. Paul, Minnesota, protest leaders held a series of meetings and wrote a "Twenty Points" position paper they would present to the federal government on arrival in Washington in early November prior to the presidential elections. The Twenty Points communiqué emphasized that treaty rights and sovereignty were fundamental to the Indian relationship with the federal government. Among its demands, the Twenty Points called for the

restoration of treaty making, creation of a commission to review treaties and treaty violations by the federal government, the abolition of the Bureau of Indian Affairs (BIA), and the repeal of Termination legislation.

Upon arrival in Washington, DC in early November 1972, several hundred protesters peacefully entered the BIA building to negotiate the terms of their demonstration and present their Twenty Points program. When promised meetings with government officials and accommodations did not materialize, and when government security guards tried to forcibly remove them from the building, Indian protesters forced the guards out and barricaded all entrances into the building. A small number of protesters were clubbed by guards. With riot police surrounding the building, many protesters believed they were going to be attacked and could die in the building. The protesters renamed the occupied BIA building the "Native American Embassy." Angry and scared, they destroyed office furniture, broke windows, and plastered graffiti on walls. Many BIA files and Indian artifacts were removed from the building and made their way back to reservations. The occupation was widely covered by the media. While the media labeled the protesters "militants" and "activists," the unplanned occupation gained national attention for the protesters' grievances and the Twenty Points program. With federal marshals and riot police surrounding the building, a negotiated agreement peacefully ended the occupation after one week. Federal officials promised not to pursue criminal charges, provided funds to transport Indians home, and promised to form a group or commission to study the Twenty Points.

After 1972, AIM shifted much of its confrontational political activism and strategy from large-scale symbolic protest actions to reservation-based protest and activism that emphasized treaty rights, land claims, protecting Indian civil rights, reducing Indian poverty, and eliminating corruption in tribal government. Protests and political activism became more inward-directed, revealing divisions within native communities, and they became more violent in nature. Perhaps the most famous of AIM's reservation-based political actions is the 1973 violent standoff between AIM, the Pine Ridge tribal government, and the FBI known as Wounded Knee II.

Wounded Knee began as a local confrontation between traditionalists and tribal government

on the Pine Ridge Indian Reservation in South Dakota. The traditionalists (Oglala Sioux Civil Rights Organization) objected to the corruption and nepotism of Dick Wilson, the elected tribal chairman. Wilson organized a paramilitary group, called the Guardians of the Oglala Nation (GOONs), to intimidate and harass his political opposition. Efforts to impeach Wilson failed and Wilson instituted a ban on all political meetings and organizing on the reservation. The traditionalists then invited AIM to the reservation to help them negotiate with Wilson. When these efforts failed, 250 AIM members and the traditionalists planned a press conference in the village of Wounded Knee, site of the 1890 massacre of Lakotas at the hands of the US 7th Cavalry. Their goal was to use this symbolic site to draw attention to the political corruption and abuses of the tribal government. An armed standoff ensued between AIM and the traditionalists and the GOONs who had set up roadblocks around Wounded Knee to prevent the press conference. BIA police and the FBI responded and sought to remove AIM from Wounded Knee.

The standoff and siege of Wounded Knee lasted for 71 days. The area around the village became a zone of armed engagement between the two camps, with roadblocks manned by the GOONs and federal law enforcement intended to keep out AIM supporters and supplies of food, medicine, and weapons. Negotiations ended the siege and occupation on May 7, 1973. In the end, two people were killed, 12 wounded, and 1,200 arrested.

Although the siege of Wounded Knee did not substantially change politics on the Pine Ridge Reservation, it did stimulate similar protest occupations by reservation groups protesting tribal government corruption and seeking to bring public attention to treaty rights violations and poor socioeconomic conditions on reservations. In May 1974, a group of armed Mohawks occupied an abandoned girls' camp on Moss Lake in the Adirondacks of New York State. Calling their encampment Ganienkeh, they claimed the land had been illegally taken from their ancestors. In 1975, a group of armed Menominee, calling themselves the Menominee Warrior Society, occupied a Catholic novitiate near their northeastern Wisconsin reservation for five weeks. Similarly, AIM members occupied a Fairchild semi-conductor assembly plant on the Navajo Reservation for eight days in 1975,

protesting low pay, sexual harassment, and the layoff of Navajo workers at the plant.

The last large-scale political demonstration of the Red Power era occurred in July 1978 with the Longest Walk. Unlike the armed occupations that followed Wounded Knee, the Longest Walk was organized as a spiritual and peaceful event. Symbolizing the forced removal of Indians from their homelands, the Longest Walk began in San Francisco and ended with a demonstration by several thousand Indians and non-Indians on the National Mall in Washington, DC. Like other Red Power protests, the Longest Walk was designed to attract the public's attention to the problems that Indian communities continued to experience. It was also intended as a challenge to a growing anti-Indian backlash movement in Congress and legislation that AIM and other Indian leaders viewed as a threat to treaty rights and tribal self-government.

Following Wounded Knee, the United States government actively sought to repress and neutralize AIM and the Red Power movement. The leadership of AIM became the target of extensive federal, state, and local enforcement investigation, harassment, and arrest. Faced with indictment, arrest, and court battles, AIM members were left with little time, energy, or financial resources to organize protests and demonstrations. In addition to government repression, AIM suffered from internal divisions and a resulting decline in its organizational capacities. In the early 1990s, AIM would split into the National American Indian Movement and the International Confederation of Autonomous Chapters of the American Indian Movement.

Native American Protest and Activism Today

Native American political activism and direct or overt protests did not, however, disappear. While the political tactic of seizing and occupying politically and symbolically significant government property came to an end, local AIM chapters continue to organize political demonstrations and activities in cities and reservation communities. The locus of Indian political and protest activity became centered in specific Indian communities. Reservation activists and elected tribal government leaders became more active in the mainstream political process. This involved lobbying state and federal legislatures about the

needs of reservation communities. Many tribes pursued legal action and sought legal solutions to the problems of treaty rights, land claims, protecting the environment, and promoting political self-determination and economic development. Tribal legal activism resulted in a number of significant legal decisions which recognized longstanding tribal land claims and treaty rights. Today, two broad areas of concern dominate Native American political activism and protest across the United States – cultural issues such as discrimination and the persistence of racial stereotypes, and environmental protection and environmental justice.

Cultural Respect and Identity Politics

One of the concerns of the Red Power movement during the 1970s and 1980s that continues to be a focus of protest and political activism today is anti-Indianism: prejudice, racism, and discrimination against native peoples. While a great deal of contemporary protest and activism against anti-Indianism is local or reservation based, two protests in particular have gained national attention as expressions of the desire of American Indians for greater cultural respect. These are native-organized protests and demonstrations against Columbus Day and Thanksgiving.

In the late 1980s and early 1990s AIM and Native American activists across the country organized protests and demonstrations designed to disrupt celebrations in 1992 of the 500th anniversary of Columbus's "discovery" of America. One of the first modern protests against the celebration of Columbus Day occurred in Denver, Colorado in 1989. Colorado was one of the first states to make Columbus Day a state holiday in 1905 and Denver's annual Columbus Day parade became a focal site of Indian protest. In 1989, AIM activist Russell Means and about 150 protesters gathered at the statue of Columbus in Denver's Civic Center Park to protest the celebration of Columbus as a hero and discoverer of America. They poured animal blood and parts and pieces of plastic Indian dolls over the statue. Columbus should not be celebrated, they said, because he was a slave trader and a murderer who was comparable to Hitler. They called for the end of Columbus Day as an official state holiday, an end to the Columbus Day parade, and the removal of the statue to Columbus in the Civic Center Park.

Protests of Columbus and Columbus Day were widespread throughout American cities in 1991 and 1992. For example, protests and demonstrations occurred in Syracuse, San Francisco, Alcatraz Island, Berkeley, Los Angeles, Boston, Seattle, Portland, Oregon, Columbus, Ohio, and Chicago. As in Denver, the protesters' goal was to disrupt the celebration of Columbus and challenge the mythology of Columbus as a heroic figure in American and world history. He was not, they argued, a great discoverer but a colonialist who brought disease, death, and genocide to the Americas.

By all accounts, the protest and opposition of native peoples to the celebration of Columbus was successful. Unlike 1892, when Columbus was celebrated in a monumental fashion as a hero who discovered America at the World's Columbian Exposition in Chicago, the commemorations of the 1992 Columbian Quincentenary were muted and more subdued than the 1992 celebration planners had originally hoped. Some signs of native success in transforming Columbus Day include South Dakota's changing Columbus Day to Native American Day in 1990 and Berkeley's renaming their Columbus Day to Indigenous Peoples' Day. Other signs of the impact of the protests in changing the interpretation of Columbus include the recognition in textbooks and the media that Columbus initiated a complex "encounter" or "contact" between Europe and indigenous peoples that had a tremendous negative impact on native lives and cultures.

Protests and demonstrations of the celebration of Columbus Day continued in many American cities after the 1992 Columbian Quincentenary. Denver, Colorado has remained the focal point of demonstrations by the American Indian Movement of Colorado (AIM-Colorado) and the Transform Columbus Day Alliance (TCDA). TCDA is an international coalition of progressive groups opposed to the celebration of Columbus. Between 1992 and 2000 the Columbus Day parade in Denver was cancelled by its organizers in response to the protests of AIM-Colorado and its supporters. The parade was resumed in 2001. AIM-Colorado and TCDA organized rallies, marches, and brief blockades of the parade route from 2004 to the present. For example, in 2004, approximately 600 protesters blocked the parade route. In 2007, more than 500 protesters blocked the parade route. Fake blood and parts of baby

dolls were poured on the street and police arrested 83 protesters for illegally blocking the parade route. AIM-Colorado and TCDA organized their own counterparade and rally called the All Nations/Four Directions March. The goal of the rally and march is not only to protest Columbus Day, but also to offer a way to celebrate the diversity and multiculturalism of the United States. AIM-Colorado and TCDA have offered to end their protests if the city agreed to end the Columbus Day parade and initiate changes in the city's school curriculum that would offer an American Indian perspective on Columbus. The city refused.

The first protest by Native Americans of Thanksgiving Day in Plymouth, Massachusetts, the site of the first Pilgrim Thanksgiving, occurred in 1970. The protest was organized after Frank James, a Wampanoag Indian, was not allowed to give a speech critical of the oppression and mistreatment of American Indians in American history at an annual Thanksgiving dinner in Plymouth. Organizers of the event asked him to edit his speech to make it less critical of the historical mistreatment of American Indians. James refused and instead, accompanied by members of the Massachusetts Wampanoag Indians and members of the American Indian Movement, led a protest of Thanksgiving on Cole's Hill overlooking Plymouth Rock. Speaking near a statue of Massasoit, a Wampanoag Indian leader at the time of the first Thanksgiving, James and AIM leader Russell Means were critical of what they called the mythology of Thanksgiving. James declared that Indians had only suffered since the arrival of the Pilgrims and that Thanksgiving was not a day to be thankful and happy for. Following speeches on Cole's Hill, James and the Indian protesters proceeded to bury Plymouth Rock with sand and briefly boarded a nearby replica of the *Mayflower*.

Since 1970, Indians and non-Indian supporters have gathered on Cole's Hill in Plymouth on Thanksgiving Day to commemorate what they call a "National Day of Mourning." Protesters gather at Cole's Hill and parade through the center of Plymouth to bring public attention to the lack of historical truth in the Thanksgiving story and the continuing discrimination of American Indians. According to the United American Indians of New England (UAIN), the organizer of the event, the Day of Mourning is dedicated

to "mourning our ancestors and the genocide of our peoples and the theft of our lands."

While most of the Day of Mourning protests have been peaceful, the 1997 protest resulted in a clash between police and demonstrators. Police tried to stop a protest march through the town because protesters did not have a proper permit. They arrested 25 of the protesters but dropped the charges and negotiated a settlement after protesters accused the police of racism, brutality, and excessive use of force. All charges against the protesters were dropped and the town agreed to allow future protest marches without a permit. The town also agreed to pay UAIN \$135,000. Part of the funds would pay the protesters' legal fees and go into a fund for promoting American Indian history. Fifteen thousand dollars were used to create two plaques. One plaque, located near the town post office, is dedicated to the memory of Metacombet or King Philip and describes his resistance to English colonialism. The second plaque is located on Cole's Hill and explains the purpose and meaning of the Day of Mourning.

American Indian Environmental Activism

The environment is a critical issue for most American Indian communities. Indian reservations are small islands within the larger territory of the United States. Reservations are threatened by industrial development, resource extraction, and a range of environmental hazards from toxic waste to air and water pollution. Many reservations contain natural resources such as oil, coal, minerals, water, and forests that are of interest to multinational corporations and developers. Access to natural resources and maintaining a clean environment are critical for the health of Indian communities, for economic development, and for the exercise of religious and spiritual practices. Indian communities have engaged in environmental activism and political struggle against federal and state governments and corporations in efforts to protect their environment and ensure community survival. Most Indian environmental activism is local and grassroots in nature and often involves coalitions with non-native environmental groups. A national and international umbrella organization, the Indigenous Environmental Network, formed to assist communities in local environmental struggles.

One local struggle occurred on the Akwesasne Mohawk Reserve. Home to 8,000 Mohawk Indians,

this 25-square-mile reservation is located along the St. Lawrence River and straddles the international border between the US and Canada. Traditionally, the Mohawk relied upon the river for clean water and fish for food. In the last 100 years, the region around Akwesasne has experienced extensive industrial development. Aluminum and other metal manufacturing has released toxic chemicals such as fluoride and heavy metals into the river, contaminating the water and fish and animal species that live in or near it. General Motors, located adjacent to the reservation, produced polychlorinated biphenyls (PCBs) and stored them in lagoons and storage pits on their property. PCBs were banned in 1978 and are known to cause various medical disorders and cancer in humans. PCBs from the GM site have made their way into the ecosystem and have been found in fish, plants, and people in this region. The United States Environmental Protection Agency (EPA) fined GM for illegal dumping of PCBs and the site was placed on the EPA's Superfund Site list. GM has resisted cleaning up the site because of the high cost associated with proper cleanup and disposal of PCBs.

Mohawk mothers, concerned with the potential impact of PCBs on their children, began the Mother's Milk Project in 1985. They initiated an epidemiological study that found that Mohawk women who ate fish from the St. Lawrence River had high concentrations of PCBs in their breast milk. In 1987, the Akwesasne Task Force on the Environment, a community-based grassroots organization, was formed. With the evidence collected by the Mother's Milk Project, the Task Force and Mohawk tribal governments continue to pressure the EPA to force GM to clean up PCB contamination on its factory site. By the summer of 2007, GM had capped a contaminated landfill, dredged and removed PCB-contaminated sediments from the St. Lawrence River, and removed PCB-contaminated sludge from on-site lagoons.

The Northern Cheyenne Indian Reservation, located in southeastern Montana, was the site of a similar struggle. It is situated in the Powder River coal basin, an area of rich, low-sulfur coal beds that are accessible through strip mining. In the 1970s the BIA negotiated coal-mining leases for the tribe with mining companies. The royalties for the coal were fixed and priced well below the market value of the coal at the time.

No environmental safeguards were included on the leases. The tribal government fought against the leases to end what they considered the threat to their community from coal development. Through legal research of the leases they discovered a large number of violations of federal leasing rules. Gail Small, a Northern Cheyenne environmental activist, helped to lead the tribe's fight against the leases, founding Native Action, a reservation-based non-profit dedicated to preserving the environment and culture of the Northern Cheyenne. They won the first stage of the "Coal Wars" when Congress voided all the leases in 1988, but the fight continues as the threat of development still looms.

The current threat to the Northern Cheyenne is from the proposed development of coal-bed methane gas (natural gas) mining in the Tongue River Valley adjacent to the reservation. One development plan could result in an estimated 75,000 methane gas wells. Mining companies drill down into a coal seam releasing coal-bed methane water and coal-bed methane gas. The methane or natural gas is piped off for use in homes and power plants. The water, which is highly saline, is waste water and is dumped into nearby rivers and streams. The discharge of this water results in a drop in groundwater and may lead to the loss of reservation wells. In 2002 the State of Montana sold coal-bed methane leases to the Fidelity Exploration and Production Co. In 2003, the Northern Cheyenne, Native Action, and the Northern Plains Resource Council legally challenged the adequacy of an environmental impact study for coal-bed methane production in the lease area. In September 2007, a federal appeals court ruled in favor of the tribe and its allies. The court limited future exploration and development until the federal government addressed the shortcomings of its original environmental impact assessment.

In addition to using the legal arena and legal activism to protect the reservation environment from coal-bed methane mining, the tribe is using cultural-based arguments. According to Gail Small, pumping water out of ground to extract natural gas will harm the spirits that inhabit the springs and streams where the Northern Cheyenne worship. She has argued that the pollution caused by such mining will result in the genocide of her people. "We'll have a wasteland here. That's what's at stake here. Where will the Cheyenne go?"

The Ojibwe continue to face similar challenges. In 1975 the Exxon Corporation discovered a large zinc-copper ore body near the town of Crandon in northeastern Wisconsin. The ore body is 1 mile upstream from the Mole Lake Ojibwe Reservation, 5 miles from the Forest County Potawatomi Reservation, and around 40 miles upstream (on the Wolf River) from the Menominee Indian Reservation. Exxon abandoned its plans to develop a mine in 1986 due to low metal prices, but with Rio Algom as a partner, Exxon returned in 1993 and initiated the permit application process for the "Crandon Mine" with the Wisconsin Department of Natural Resources. Toxic mine waste from the proposed Crandon Mine would threaten the Mole Lake's wild rice lake. Wild rice and the lake are a central part of the Mole Lake tribe's economy, culture, and religion. Air and water pollution from the Crandon Mine might also affect the other tribes in the area. The Mole Lake tribe joined forces with three other tribes (Forest County Potawatomi, Menominee, Stockbridge-Munsee) to form the Nii Win Intertribal Council to coordinate the tribes' resistance to the proposed Crandon Mine. The Council hired lawyers and technical experts to assist with their challenge to the mine-permitting process.

The tribes worked with the Wolf Watershed Educational Project, an educational outreach group, to educate non-Indians about the environmental threats posed by the mine. Representatives from the tribes went on anti-mining speaking tours around the state. This outreach effort was crucial in persuading fishing groups and sportsmen's clubs to join the anti-mining effort and work with the tribes to lobby the state legislature to pass a mining moratorium bill in 1998. The legislation required that any proposed new mine in the state must show an example of a safe metallic sulfide mine that had operated for ten years and then closed for ten years with no acid mine pollution elsewhere in North America. In addition to speaking tours, the tribes organized a number of protest marches and demonstrations against the mine in the state capital in Madison, at the company's headquarters in Rhinelander, and at the entrance to the mine site in Crandon.

The mine property was purchased by Billiton in 2000. In 2003 Billiton sold the mine to the Northern Wisconsin Resource Group. With the mining moratorium in place and mounting

opposition and protest of the mine, the Group saw little prospect of developing the mine and negotiated a sale with the Mole Lake Ojibwe and Forest County Potawatomi. In October 2003 the Forest County Potawatomi and the Mole Lake Ojibwe jointly purchased the 5,939-acre mine site for 16.5 million dollars. The tribes have vowed never to construct a mine on the site.

While much American Indian environmental activism is grassroots and local in nature, there is networking, sharing of information and expertise, and sharing of support between different communities.

The Indigenous Environmental Network (IEN) is one of the few umbrella organizations that serves to facilitate this sharing of information, expertise, and support between communities. IEN was formed on the Navajo Indian Reservation in 1990. Its principal goal is to educate and empower indigenous peoples to help them develop strategies for environmental protection. It also seeks to support and promote environmentally sustainable economies and lifestyles and to protect indigenous religious rights and spiritual beliefs since they are intertwined with the environment. IEN hosts an annual conference that is usually located in an indigenous community and that focuses on the environmental issue confronting that community. For example, in 2002, the IEN conference was held at Mole Lake and focused on the impact of mining on indigenous peoples in North America. Today, IEN is involved in the following indigenous environmental campaigns that are designed to promote and enhance the capacity of native communities to protect their environments: youth leadership training program, toxics and environmental health, resistance to unsustainable mining, renewable energy, climate justice, water protection, biodiversity, protection of indigenous traditional knowledge from biopiracy, food security, and a sustainable communities initiative.

Consequences of American Indian Protest and Political Activism

American Indian political activism and protest movements resulted in a number of significant changes. Since the late 1960s federal Indian policy shifted from terminating Indian tribes to supporting self-determination, self-governance, and sovereignty. Today, the federal and many state governments work with tribes on a

government-to-government basis. This means that tribes manage and run many programs that were once administered and controlled by the federal government. It also means that the tribes are consulted about legislation and programs that may affect reservations lands and tribal members. Significant tensions and conflict remain, but tribal governments have been significantly empowered and become more self-governing since the rise of the Red Power movement.

Perceptions of Indians and understanding of Indian history have also been transformed since the rise of Indian political activism. Indian protests of Columbus and Thanksgiving, for example, have changed the way in which many non-Indians think about Indian identity and culture. Indian history and perspectives are given more attention in many textbooks and schools. While much work remains to dispel caricatures and stereotypes of Indians, American society is much more sensitive and accepting of Indian culture and religious practices than in the past.

Native peoples have been successful in organizing to protect their lands and environments. American Indian environmental activists have been successful in forming coalitions with non-Indians to prevent environmentally harmful economic development. Indian tribes are pursuing culturally appropriate economic development that will also preserve the environmental quality and health of their reservations. They serve as a model for other communities seeking to achieve sustainable economic development.

While American Indian protest and political activism brought Indian social, environmental, and economic problems to the attention of the public and government officials, it also led to significant cultural and social changes within native communities. The Red Power movement and American Indian political activism helped to stimulate cultural renewal and a cultural renaissance in native communities. Activists challenged the negative images of the Indian as a devalued, helpless, and powerless victim. Instead they projected a positive image of the Indians as active and having a valued cultural heritage. Activists thus helped to promote ethnic, cultural, and community pride. Individual Indians, in urban and rural settings, reconnected with tribal traditions and heritage and became more willing to self-identify as American Indian. The Red Power movement stimulated the expansion, diversity, and vitality of cultural expression and

cultural forms in native communities. This is reflected in the increase in native newspapers, radio shows, popular music, arts and crafts, native-written and directed films, art, fiction and poetry, non-fiction, and powwows. These different forms of cultural expression include traditional and popular culture forms and in many cases represent syncretism of the modern and traditional. Finally, one cannot imagine the construction of the National Museum of the American Indian on the mall in Washington, DC without the rise of Red Power and Indian political activism. The museum is a symbol of recent native cultural renewal and pride and the larger society's acceptance of and respect for American Indians.

Naxalite movement, 1967–1972

Shatarupa Sen Gupta

The Naxalite movement loosely refers to a series of tribal and peasant uprisings based on which Maoism in India took on an organized shape in the late 1960s and early 1970s, with a sizeable following among urban youths. The name is derived from Naxalbari in the Darjeeling district of North Bengal, where an uprising was considered to mark the beginning of a revolution.

Historical Background

Despite much talk of socialism and development, by the early 1960s the project of Indian nationalism failed to live up to its pre-Independence promises, with ambitious Five Year Plans not bearing fruit, and unemployment growing. Industrial growth was threatened by economic crises and a devaluation of the currency. Educated youth were victims of a dwindling job market. The education system neither had social relevance nor job potential. Nehru's death initiated an era of uncertainty, as the rhetoric of nation-building started unraveling, and the hegemony of the Congress Party was challenged. In rural India land reforms had been minimal because liberal capitalism was in alliance with landlordism. Poverty among the rural masses was marked. There emerged a vast difference between the fortunes of the few big landlords and large numbers of small peasants, sharecroppers, and agricultural laborers.

A specific factor was the evolution of the Communist Party of India (CPI) between the late 1940s and the early 1960s. At Independence

Guntoor, India, October 11, 2004: Supporters of the Communist Party of India–Marxist Leninist (People's War) wait for the start of a public meeting in Guthikonda. Three days after this meeting, the party merged with the Maoist Communist Center of India to form the Communist Party of India (Maoist). Although numbers are difficult to verify, the military wing of the combined parties comprises between 10,000 and 20,000 armed guerrillas. (AFP/Getty Images)

the CPI had three currents. P. C. Joshi was a supporter of cooperation with the progressive national bourgeoisie. B. T. Ranadive, taking his cue from the Soviet Communist Party, advocated a rapid transition to an armed insurrection. And in Andhra, in the Telengana region, armed struggle had been going on against the ruling prince of what was then the princely state of Hyderabad, the *Nizam* (ruler), and local communists like C. Rajeswara Rao (later CPI general secretary), T. Nagi Reddy, C. P. Reddy, and others were supporters of a Maoist-style agrarian revolution and “people’s war.” By 1951 the Ranadive line had been discredited and the Andhra communists forced to call off their struggles after the incorporation of Hyderabad into India and Soviet pressure to adopt a line of peaceful revolution. But in Andhra, Maoism remained a strong current.

Between 1951 and 1964 the CPI evolved in a social democratic direction. Work in a democratic environment, coupled with the strategy of two-stage revolution (the idea of collaboration with a “progressive” bourgeoisie in the first stage), required searching for bourgeois allies in the electoral arena. The election and subsequent dismissal of a communist government in Kerala brought about an intensification of the search for allies. It also meant a debate over whether to support Indian foreign policy, once Prime Minister Nehru distanced himself from the US. The process of de-Stalinization added to confusions,

as those who wanted a lesser Stalinist party also tended to be reformist, while radicals tended to support the Chinese Communist Party (CPC). Over the Sino-Indian dispute, the radicals accused the Nehru government, while the moderates sought to differentiate between Nehru and “reactionaries in the government.” Party resolutions show attempts to paper over internal differences rather than principled positions. Radicals grew increasingly impatient and felt that in all these ways a deep degeneration was occurring in the party.

Finally, the Stalinist wing of the leadership, along with Maoist militants, calling for a program of People’s Democratic Revolution, split from the parent body in the Tenali Convention and formed the Communist Party of India (Marxist) – the CPI(M) – in April 1964. In the formative period, mass arrests of left-wing activists enabled moderates like E. M. S. Namboodiripad and Jyoti Basu to steer party policy carefully in the direction of electoralism. The radicals within the CPI(M) therefore felt a need to continue and deepen the ideological struggle. Nagi Reddy, Chandra Pulla Reddy, and others had a majority in the Andhra State Committee and in a majority of District Committees. Kanu Sanyal in north Bengal, or the *Chinta* group in south Bengal (Amulya Sen, Kanai Chatterjee, and Sujit Ghosh), tried discussing alternative lines. Charu Mazumdar, a peasant leader with experience of the *tebhaga* (two third shares) movement of 1946–7, was influenced by Lin Biao’s “Long Live the Victory of People’s War.” He argued that Mao Zedong’s thought was Marxism for the present and that India was in a potentially revolutionary situation that could be realized through area-based seizure of power via guerrilla strategies.

Ideological Struggle within the CPI(M)

In 1966–7 many mass struggles developed, including (notably in Calcutta) a Food Movement, a mass students’ agitation demanding the inclusion of Marxism in their syllabus, and a growing campaign of solidarity with the people of Vietnam. The Great Proletarian Cultural Revolution of China, which began in 1966, further influenced the radicals, who felt that the CPI(M) was paying lip-service to revolution. Mazumdar in his “Sixth Document” (eight of his early essays have been compiled as “Eight

Documents”) urged the establishment of a genuine revolutionary party through struggle against revisionism.

Around the same time in north Bengal the tea garden workers’ general strike to demand a rise in their wages was supported by the *adivasi* (tribal) peasants of Naxalbari area under the leadership of Kanu Sanyal and Munshi Tudu. However, the police with the help of the CPI(M) and Gorkha League leaders pacified it, leading to an unconditional withdrawal of the movement.

In 1967 the fourth general elections were held amid anti-Congress sentiment and in eight out of sixteen provinces non-Congress ministries were formed. In West Bengal and Kerala the CPI(M) became partners in United Front (UF) governments. Identifying the CPI(M) as a revolutionary party, the rulers wanted to get rid of governments where it was present. The radicals within the CPI(M) wanted to boycott elections, and the leaders averted the boycott by using demagogic rhetoric about how this would be the last election. Charu Mazumdar’s “Seventh Document” advocated the building of liberated zones through armed struggle, and denounced the CPI(M)’s call for an alternative non-Congress government. Generally, the party’s entry into governments led radicals to question the split of 1964, arguing that the split had been merely organizational and not ideological.

Spring Thunder Over India

In early 1967 a mass peasant revolt, targeting *jotedars* (the dominant rural class in West Bengal), broke out in Naxalbari under the leadership of the radicals in the Darjeeling committee of the CPI(M). By May 1967 they had established substantial control in parts of the Naxalbari, Kharibari, and the Phansidewa Police Stations. Initially, the radicals saw this as a revolutionary form of peasant struggle. But *People’s Daily* of China called the outbreak spring thunder over India, and argued that Mao’s line was applicable for India. This strengthened the hand of Mazumdar, who saw this as a vindication of his line.

By July 12, 1967, using paramilitary forces, murdering and arresting at random, the state had brought the rebel areas back under control. Subsequently, leaders like Kanu Sanyal and Jangal Santhal were arrested. But the movement put the CPI(M) between the militancy of the

party left wing and the conservative UF partners. They had finally to assert their true allegiance. Desperately seeking to avert the dissolution of the government, the CPI(M) denounced the peasant struggles and decided to disband its dissident Darjeeling District Committee. Reacting to this open betrayal of the cause of Maoist revolution, the radicals formed the All India Coordination Committee of Revolutionaries (AICCR), bringing together revolutionaries from Tamil Nadu, Kerala, Uttar Pradesh, Bihar, Karnataka, Orissa, and West Bengal for a common plan of action on November 13, 1967. *Deshabrat* (Committed to the Nation), a Bengali weekly, *Liberation*, a monthly journal in English, and *Lokyudh* (People's War) a Hindi weekly were assigned the job of dissemination of their ideas. Meanwhile, the Congress engineered defections from the UF, but no stable alternative was possible. The province came under central rule for some time, followed by elections in 1969 that saw a triumphant return of the UF, with the CPI(M) as the largest partner.

Formation of the CPI(ML)

By 1968 the split within the CPI(M) had become irrevocable. The Burdwan Plenum of the party saw the last battle. The Central Committee Draft presented in this Plenum tried a balancing trick between expressing solidarity with the CPC and differing with its interpretation of US–Soviet collaboration. Apart from this, organizational manipulations were attempted so as to avoid state-level discussions and rejection of the Draft by the radicals in many states. Nonetheless the Draft was discarded by Jammu and Kashmir, while alternative drafts were presented by Nagi Reddy, C. P. Reddy, and Kolla Venkiah of Andhra, as well as by some Bengal delegates. This section of the delegates, led by Nagi Reddy of Andhra and Saraf of Jammu and Kashmir, walked out when the central leadership rejected alternative drafts. They subsequently attended the All India Coordination Committee of Revolutionaries meeting in May 1968. Here also they differed with Bengal radicals over tactics. The Andhra leaders believed that a revolution in India was only possible when the different exploited classes and strata could be simultaneously mobilized. Charu Mazumdar and his supporters stressed a purely rural armed struggle, aiming at seizing state power without the active

participation of the urban proletariat. Later, the AICCR renamed itself as the All India Coordination Committee of Communist Revolutionaries (AICCCR), while one Andhra group under Nagi Reddy formed the Andhra Pradesh Revolutionary Communist Committee (APRCC) and the *Dakshin Desh* group under Kanai Chatterjee and Amulya Sen formed the Maoist Communist Centre (MCC) in October 1969.

On April 22, 1969, the birth anniversary of Lenin, the AICCCR formed the Communist Party of India Marxist-Leninist [CPI(ML)]. The formal announcement came on May 1 in Kolkata. Charu Mazumdar's article "Why Must We Form the Party Now?" in *Liberation* explained that a revolution could not develop if dependent only on local initiatives and thus an all-India party was needed which would overthrow US and Soviet imperialist exploitation. The party program identified these two, along with the "comprador bourgeoisie" and the "semi-feudal" landlords in India, as the enemies to be overthrown. There was much uncertainty regarding tactics and strategy. A central assumption was that the masses were poised for revolution and only a reformist leadership was holding them back. Charu Mazumdar called for the annihilation of class enemies as the means to create liberated zones, and this soon became the dominant line. By 1969 guerrilla zones had been formed at Debra-Gopiballavpur in West Bengal, Musal in Bihar, Lakhimpur Kheri in Uttar Pradesh, and Srikakulam in Andhra Pradesh, which had been a venue of *Girijan* tribal unrest since 1959 owing to their continual displacement by moneylenders and merchants. Amid this growing turbulence and state repression the first Congress of the party was held in 1970 in which Mazumdar was elected as its general secretary.

Rise and Fall of Guerrilla Tactics

The CPI(ML) was opposed to trade union work, work in mass organizations, and mass movements generally, assuming that these shifted attention away from the real revolutionary struggle. It sought to build a party of professional revolutionaries, mainly in fact urban student-youth who were to provide leadership to the peasants. "Work in the cities" essentially meant recruiting for revolutionary work in rural areas. This revolutionary work was to proceed by stages from resistance against eviction by sharecroppers,

forcible occupation of the landowners' crops and land, and finally elimination of class enemies through guerrilla struggle. Mazumdar warned that guerrilla struggle would in turn unleash the state's repression and thus the armed squads should be ready to tackle the police force as well as landowners. While the proclaimed goal was the seizure of political power, they had totally underestimated the military as well as political powers of the Indian state and the Indian ruling class. Moreover, the rapid transition to the annihilation of class enemies led to many unnecessary killings, rendering the movement unpopular to many. The areas where party work received greatest support were among ethnic minorities, whom the process of "development" had bypassed and indeed evicted from their traditional ways of living. But the party, fixated on its "Chinese path," was unable to grasp the complexity of caste, tribal, and other dimensions of class society in India.

A large number of women came into the movement. Initially, women found relatively little difficulty in streaming in, for the belief that the Indian revolution was going to occur by 1975 (Mazumdar's prediction) stiffened their resolve. But when the party turned to guerrilla warfare, women found work difficult. A few, like Jayasree Rana and Krishna, did take part in such work. Women then became couriers, provided shelters, and reverted to traditional "feminine" roles. Some middle-class women also took part in productive work in small towns in a bid to identify themselves with toiling people. The party did not organize women separately, and though formally women had equality, in fact there was negligible representation of women in the upper echelons of the party.

By 1970 the movement had spread to Uttar Pradesh, Bihar, and the Terai region, though its effect was felt most severely in West Bengal and Andhra. In West Bengal, notably Calcutta, Maoism took a strongly radical petty bourgeois orientation, with the elimination of real or supposed class enemies, including heads of educational institutions, businessmen, petty officials, lower-rung policemen, and all those whom they perceived as representatives of an imperialist-dominated order. They also started defacing pictures and sculptures of nationalist leaders and historical figures considered "compradors." Mazumdar did not wholly approve of this, but refrained from expressing disapproval as he

felt that it would enhance the movement. Saroj Dutta, another important leader, strongly welcomed many of these tactics.

Meanwhile, the state had launched its counter-offensive. Paramilitary forces in Srikakulam attacked Girijan villages and arrested many tribals. Their leaders, Vempatapu Satyanarayana and Adibatla Kailasam, were killed in police firing, and strategic hamlets (emulating the US in Vietnam) were established and autonomous tribal settlements were wiped out.

In Kerala the first uprising occurred in 1968 when a few communist revolutionaries under the leadership of Varghese attacked a police camp at Pulpally, killing two police officials. The Kerala government – much like the UF in West Bengal – had set the police upon the farmers when they began resisting the government's attempts at evicting them. Nonetheless the revolutionaries were arrested and among them was K. Ajitha, the daughter of the leading communist revolutionaries Kunnikal Narayanan and Mandakini Narayanan. Here also the movement petered out with the death of Varghese in a police "encounter" in 1970.

In West Bengal the army was deployed to enclose Naxalite strongholds and eliminate the leaders. This led to a diffusion of the movement and many tribal revolutionary followers were sent to jail. Meanwhile, the office of Deshabrati Prakashan, which published *Liberation* and its sister journals, was attacked and the CPI(ML) was forced underground. Many revolutionaries lost their lives to wanton police firing and torture, often passed off as "encounters." By 1970 the second UF ministry in West Bengal had fallen again and the central government took charge of the administration and invoked the anti-terrorist laws of the colonial period, as well as new laws to violate all civil liberties and murder and arrest Naxalites with impunity. The CPI(ML) retaliated with increased violence against police officials, which in turn led to more killings.

Violence marked the elections of 1971 in West Bengal. The CPI(ML) called for a boycott of elections and threatened violence. The Congress took advantage of the CPI(M) and CPI(ML) rivalry to settle its own scores and pass off election-related crimes as that of the CPI(ML). Around this time the Naxalites had begun failing in the rural areas and moved their base to the cities, where they carried on their policy of annihilation of class enemies. But far greater

violence was inflicted on them. On August 12–13, 1971 the Cossipore–Baranagore area in the northern outskirts of Kolkata was cordoned off by armed killers of anti-Maoist parties, who hunted down and murdered well over a hundred young Maoists. In prisons, too, mass killings of Maoists were carried out. The party was dealt another blow when the CPC distanced itself from the CPI(ML), with reservations about Mazumdar's line of annihilation. Sourin Bose, the CPI(ML) envoy, returned from China with a report that the CPC had opined that since conditions in each country varied, there could be no globally applicable strategy of revolution. They criticized the CPI(ML)'s policy of subduing the urban resistance to the rural struggles, and questioned the practice of hailing Mao Zedong as the leader of Indian revolutionaries. The top echelon must have felt that the CPC's exuberance of 1967 at the time of Naxalbari was rhetorical, not genuinely revolutionary internationalist.

By the end of 1971 Nagi Reddy, Rabi Das of Orissa, S. N. Singh of Bihar, and S. K. Misra of Uttar Pradesh opposed Mazumdar's annihilation line as they felt it lacked popular support and also doubted whether the time for armed revolution had in reality arrived. The Bangladesh struggle for liberation also created rifts, with Mazumdar supporting the liberation struggle, and some erstwhile lieutenants taking their cue from the CPC and supporting the Pakistani regime of Yahya Khan. Internal relations in the party degenerated, with comrades on opposite sides being labeled "agents" and "deviationists." Several Central Committee members were arrested and some murdered. The final blow came with Mazumdar's arrest and death in prison in July 1972, raising suspicions about how he was treated in police custody. With this, the first phase of the CPI(ML), or the Naxalite movement proper, came to an end. By 1973 most of the revolutionaries were in jail and the movement had been reduced to a mere shadow of itself.

Nechaev, Sergei (1847–1882)

Jeff Shantz

Sergei Gennadiyevich Nechaev stands as an influential Russian anarchist who was controversial, and repudiated by many. Born under conditions of extreme poverty in Ivanovo, Russia in 1847, as a young adult Nechaev moved to Moscow, where he emerged in anarchist circles as a radical with charismatic appeal. For a short time, Russian anarchist leader Mikhail Bakunin found Nechaev's fervor, energy, and revolutionary zeal appealing. More nihilist than anarchist, Nechaev's most influential work is his notorious pamphlet of 1869, the *Catechism of a Revolutionary*, a primer on political violence and assassination.

The *Catechism* justifies every act, no matter how heinous, that might contribute to the realization of revolution. The pamphlet implores all revolutionaries to abandon established societal norms and devote themselves entirely to a cold passion for pitiless destruction. For Nechaev, the revolutionary must abandon sentiments, attachments, and associations marking their lives in mainstream society, allowing no other concern to surpass revolution in importance. For Nechaev, making the revolution was "the work of extermination," suggesting that lists of candidates to be targeted be drawn up. The *Catechism* takes the time to detail some of the means by which such work might be undertaken, including poison, the knife, and the rope. The revolution "sanctifies everything alike" and even fellow revolutionaries are to be regarded as merely "revolutionary capital."

Nechaev's writings were used to discredit anarchist ideas and to brand anarchism as a

terrorist ideology. Concomitantly, his works allowed some to justify personal acts of violence as contributions to the cause of anarchist revolution. Though Nechaev's subsequent influence on anarchists is minimal, with some disavowing his perspectives and connection to anarchism, he remains historically noteworthy in comprehending the bitterness and resentment among the vast Russian peasantry and nascent working class toward the violent and intransigent Russian tsarist government. While anarchists had disdain for Nechaev, his work had admirers among revolutionary organizations throughout the world well into the twentieth century. His call for revolutionary self-sacrifice and a vanguard of secret societies gained traction among Russian revolutionaries and his readers include some members of the Black Panther Party in the US.

Arrested in 1872 in Zurich and transferred to Russia, Nechaev was sentenced to 20 years in the Peter and Paul Fortress in St. Petersburg. He died in 1882, having refused to cooperate with authorities despite being subjected to torture. Though many consider Nechaev through the prism of violence, one can also view the use of terrorism as the only source of transformation. As the confrontational tactics of the peasant Narodnik movement failed to end the tsarist state, activists within the movement known as Land and Freedom (*Zemlya I Volya*) began to advocate violent means for overthrowing the system.

Negri, Antonio (b. 1933)

Timothy S. Murphy

Antonio Negri has been a prominent and controversial political philosopher and activist, as well as a cultural critic, for over 40 years. Born

August 1, 1933 in Padua, Italy, the younger son of a militant communist couple, he excelled in school, completing his doctorate and earning an academic post in “state doctrine” (equivalent to the Anglo-American field of philosophy of law) at the University of Padua by age 25. Along the way he studied philosophy in the UK, France, and Germany, lived on a kibbutz in Israel for a year, and became politically active in the Catholic Youth Action movement and the Italian Socialist Party (PSI). His doctoral thesis became his first book, *Stato e diritto nel giovane Hegel* (State and Right in the Young Hegel) (1958); this was soon followed by other works on German philosophy and social theory. Negri's overall project in these early works up to and including *Political Descartes* (1970) was to demonstrate how the disciplines of philosophy, law, and social science had legitimated the capitalist state from the seventeenth to the twentieth centuries.

At the same time that Negri was building his scholarly reputation, he was also becoming involved in politics outside the university. In the early 1960s he left the PSI to work directly with factory militants in the Italian chemical industry near Venice, while at the same time helping to establish the pioneering “workerist” journal *Quaderni Rossi* (Red Notebooks). Workerism (*operaismo*) is the most important strain of Italian Marxism aside from Gramsci's legacy, and its originality is found in its demonstration that working-class resistance to control drives capitalist development. In 1969 Negri helped to found the militant group *Potere Operaio* (Workers' Power), which challenged the largely Stalinist Italian Communist Party (PCI) and the reformist unions by demanding worker control of production and a “social wage” unconnected to labor time. It was one of the first manifestations of the Italian militant counterculture, which was to play a major role in Italian social life for the next decade. *Potop*, as it was widely known, dissolved in 1973 to make way for the more broadly based movement *Autonomia Operaia* (Workers' Autonomy), which struggled to incorporate unemployed, feminist, queer, immigrant, and other new social movements into the workerist framework; much of Negri's writing and activism during the 1970s was collaborative and centered on the search for an organizational form that would adequately reflect the subjective complexity and self-determination of the new

movements. His 1979 book *Marx Beyond Marx* provided a theoretical rationale for his focus on the constitutive role of militant subjectivity in revolutionary struggle.

As an indirect result of the success of the Italian radical movements in challenging the political status quo, in 1979 Negri was arrested on unfounded, politically motivated charges of kidnapping, assassination, and insurrection, and imprisoned for almost four years before his trial began. He wrote several books while in prison, including an important study of Spinoza, *The Savage Anomaly* (1981). As his trial commenced in the summer of 1983, on charges unrelated to those that originally justified his arrest, he was elected to parliament and freed, but he soon sought asylum in France when the legislature voted to strip him of his immunity. He remained in France for 14 years without being offered citizenship, earning a precarious living as an instructor at the University of Paris and as a sociological researcher for the French government; during that period he became involved in the intellectual circle around Gilles Deleuze and Félix Guattari and wrote more than a dozen books, including a major study of the western revolutionary tradition, *Insurgencies* (1992).

While in Paris Negri began to collaborate with American Michael Hardt; their partnership has produced three books, including the influential critique of globalization *Empire* (2000) and its sequel *Multitude* (2004). Their suggestion that the new global order is characterized by a decentered, supranational structure of power that can only be contested by similarly decentered, non-national resistance movements has been both lauded and condemned by critics spanning the entire political spectrum. In 1997 Negri voluntarily returned to Italy to serve his remaining prison sentence; in 2003 he was released, moved back to Venice, and began to travel the world to investigate and encourage militant social movements engaged in the struggle over globalization.

Négritude movement

Jennifer Westmoreland Bouchard

In the 1930s, Aimé Césaire, Léopold Sédar Senghor, Léon Damas, Gilbert Gratiant, Léonard Sainville, and Paulette and Jane Nardal – seven young intellectuals from various parts of the Francophone world – met as students at the Sorbonne in Paris. They founded a student journal, *L'Étudiant noir*, that served as a forum for writings on anti-colonialism and a new form of identity politics based on a common “African” or “black” experience. The articles in *L'Étudiant noir* served as a foundation for the early conceptualization of Négritude. Though Césaire, Senghor, and Damas are typically credited as “*les trois pères*” (“the three fathers”) of Négritude, it is important to note that the writings of all of the aforementioned scholars helped to shape one of the largest anti-colonial literary and artistic movements of the twentieth century.

Négritude is based on the notion that locating a sense of solidarity in a common black diasporic identity is necessary in order to overcome the social and political rhetoric of French colonial racism and domination. More specifically, the Négritude movement is characterized by Marxist ideals, a denunciation of European colonial rhetoric and practice, and a valorization of African history, traditions, and beliefs. Césaire started to conceptualize the language of

Négritude in a short work entitled “Négreries,” published in a 1935 issue of *L’Étudiant noir*. Here, he appropriates the offensive and pejorative French term *nègre* and infuses it with a positive connotation. The actual term *négritude* was used for the first time in print in Césaire’s poem, *Cahier d’un retour au pays natal* (*Notebook of a Return to My Native Land*), in 1939.

Négritude quickly became a diasporic movement, reciprocally communicating with African, black liberation, and anti-colonial movements throughout the world. There are clear thematic and stylistic affiliations between the authors of Négritude and the writers of the Harlem Renaissance, particularly Langston Hughes and Richard Wright. In addition, the Negrismo movement in the Spanish-speaking Caribbean was in many ways united with the goals of Négritude. Another source of inspiration for the Négritude writers came from Haiti. Referring to the revolt led by Toussaint Louverture in 1790 and other revolutionary activity on the island, Aimé Césaire wrote of Haiti as the place where the principles of Négritude appeared for the first time.

From an aesthetic perspective, European and South American manifestations of the surrealist movement provided inspiration to the writers and artists of the Négritude movement. In particular, Martinican Négritude writers including Aimé Césaire, Suzanne Césaire, and René Ménil eventually turned to the use of surrealist techniques as a highly political and revolutionary way in which to critique the “rationality” of European culture. They formed the *Tropiques* journal in the early 1940s, which featured their work along with that of André Breton, Lucie Thésée, and Aristide Maugée. During this time, Aimé Césaire also collaborated with Cuban surrealist painter Wifredo Lam.

In 1948, Jean-Paul Sartre analyzed Négritude in his essay “Orphée noir” (“Black Orpheus”), which served as the introduction to a volume of Francophone poetry called *Anthologie de la nouvelle poésie nègre et malgache de langue française* (*Anthology of New Black and Malgasy Poetry in the French Language*), compiled by Senghor. Sartre characterizes Négritude as the opposite of colonial racism in a Hegelian dialectic. According to him, Négritude promoted an “anti-racist racism” that was essential for the ultimate goal of racial unity.

Négritude ideology was eventually split between Césaire and Senghorian interpretations. Césaire viewed the unification of diasporic, black communities as an ongoing phenomenon that began with the African slave trade and the various political systems created by European colonial practice. Therefore, Césaire’s interpretation of Négritude offers a useful model for a constantly evolving process of black liberation that can be applied in a multiplicity of contexts. Conversely, Senghor espoused a more essentialist conceptualization of Négritude that eventually limited the movement’s growth, acceptance, and applicability. Beginning in the 1940s and throughout his political career, Senghor argued for the existence of a fundamental and unchanging core to black existence and identity.

In the 1960s, Négritude philosophy was criticized by many black writers and politicians as being insufficiently militant for the grand task of decolonization at hand and too essentialist to stand the test of time. Along these lines, South African poet and political activist Keorapetse Kgotsile argued that the movement relied too much on a white aesthetic to celebrate blackness, and was unable to put forth a new kind of black perception that would free black intellectuals and artists from white conceptual paradigms. Despite multiple criticisms, the ideals of the Négritude movement have continued to serve as a foundation for liberation and revolutionary movements throughout the twentieth and early twenty-first centuries.

Nehru, Jawaharlal (1889–1964)

Kunal Chattopadhyay

Jawaharlal Nehru was an influential nationalist political leader during the freedom movement, who subsequently became the first prime minister of India. Often called Pandit Nehru or *chacha* (uncle) Nehru, he was also a writer whose historical writings influenced nationalist ideology.

Jawaharlal was born in Allahabad and was the son of a wealthy barrister and nationalist leader, Motilal Nehru. The Nehru family was of Kashmiri Hindu (also called Pandit) Brahmin origin. Motilal brought up his children in a very westernized manner. Jawaharlal was educated at Harrow and Trinity College, Cambridge, then admitted to the bar through the Middle Temple in London, becoming a barrister, and he practiced law for a few years in India. He was attracted to democratic and socialist ideas from an early age, unlike his father's very moderate

constitutionalism within the colonial framework. He combined the attitudes of a young socialite with a potential for radicalism, being active in Indian student politics in the UK.

On his return to India he married Kamala Kaul, also of Kashmiri origin, on February 8, 1916, when he was 27 and his bride 16. They had only one child, a daughter who was named Indira (born 1917) and who would be the recipient of a series of letters collected as *Glimpses of World History*. Attracted to the Home Rule movement during World War I, Nehru was increasingly disillusioned with the westernized and liberal-colonial position of the moderate-dominated Congress. In the late 1910s and early 1920s his wanderings took him among the peasants of United Provinces, whose movements made him aware of the vast potential for mass struggles in India beyond the horizons of the Congress.

Young Leader

It was due to his own observations about the peasantry, along with a sense of his own limitations, that Nehru was attracted to Gandhi's leadership. As a modernist himself, Nehru never entirely accepted Gandhi's philosophy. At the same time, he had seen the appeal of Gandhi to the Indian peasantry, and recognized a power that he himself lacked. Gandhi, also trained originally as a lawyer, had practiced in South Africa before returning to India. In India he had organized a number of local struggles – against indigo cultivation by peasants at Champaran in Bihar, that of peasants in Kheda against oppressive revenue policies, and that of mill workers in Ahmedabad. Gandhi's strategy involved what he called *satyagraha* (desire for truth), involving mass civil disobedience with complete non-violence and a readiness to accept any punishment meted out for the violation of an unjust law. Gandhi's strategy cut through the dilemma of Indian nationalism, moving from moderate politics of meetings, petitions, and speeches in powerless legislative assemblies on one hand, and minority violence and extremism on the other. He had a strategy that could involve the masses, yet keep them strictly bound to the leadership. This made it possible for him to garner bourgeois support to his movement and at the same time organize huge peasant masses. His simple clothes and his habit of traveling third class in trains made him a mass

leader with a national appeal, surpassing anyone else in India. Having met Gandhi and learned of his ideas, Nehru would assist him during the Champaran agitation.

Following Gandhi's example, Nehru and his family abandoned their western-style clothes, possessions, and wealthy lifestyle. Wearing *khadi* (homespun) clothes, Nehru emerged as a young and dynamic supporter of Gandhi. Under Gandhi's influence he studied the Bhagavad Gita and practiced yoga. He would increasingly look to Gandhi for advice and guidance in his personal life, and would develop a strange relationship according to which, even though he would often differ with Gandhi's political positions, till the moment of transfer of power, he would always surrender to Gandhi when they differed.

From the time of the Rowlatt Satyagraha, launched to protest the imposition of draconian anti-civil liberties laws, Nehru traveled across India, speaking against the colonial government and addressing India's youth. He was fully secular, and strongly advocated Hindu-Muslim unity. He supported the Khilafat movement (a pan-Islamic movement which was anti-imperialist in nature) and advocated the eradication of untouchability, poverty, ignorance, and unemployment. Nehru's work in the rural areas, as well as in urban activities, soon made him one of the most influential younger leaders, especially across what was coming to be called the Hindi belt of United Provinces (after independence, Uttar Pradesh or Northern Province), Bihar, and the Central Provinces. During the Non-Cooperation movement of 1921 he grew in stature, especially after many of the more senior leaders were arrested. He himself was also to be arrested and kept imprisoned for many months, as were his mother and his wife.

When, on February 4, 1922, peasants angered by their terrible repression attacked the Chauri Chaura police station and killed 22 policemen by burning them to death, Gandhi called off the movement unilaterally. Many nationalists found this an excessive reaction, as well as high-handed behavior. Many Muslim nationalists in the Khilafat movement in particular felt let down because they had not been consulted. Nehru remained loyal to Gandhi and supported him publicly. In the aftermath there was a debate inside the Congress over strategy. Though Jawaharlal, unlike his father Motilal, was not an advocate of entering the slightly enlarged

legislative councils under the system known as dyarchy, he did take part in local body elections, becoming, in 1924, the mayor of the Allahabad municipal corporation for two years. Like C. R. Das and Subhas Bose in Calcutta, Nehru launched schemes to promote education and sanitation, expand water and electricity supplies, and reduce unemployment. Achieving some success, Nehru was dissatisfied and angered by the obstruction of British officials and the corruption of civil servants. He resigned from his position within two years.

Early in his marriage there had been a gulf between the westernized Jawaharlal and the traditionalist Kamala, compounded by the political activism of the Nehrus, father and son. Kamala had to balance domestic work with travels with her husband, addressing public meetings and seeking to support nationalist activities in her hometown. In the late 1920s the gulf between the two disappeared. In 1926 Nehru took her and Indira abroad so that she could receive medical care. The family traveled and lived in England, Switzerland, France, and Germany. Continuing his political work, Nehru was to get in touch with diverse socialist currents, and to attend the Congress Against Imperialism organized by Willy Munzenberg, and was associated with the League Against Imperialism. He was also to visit the Soviet Union, and was impressed with the idea of a planned economy, but not with the increasingly authoritarian political system developing there.

Rise to National Leadership

In the 1920s Nehru was elected president of the All India Trade Union Congress. He and Subhas Chandra Bose were the two noted rising young left leaders in the Congress. They were both in favor of complete independence, a demand that was passed by the 1927 session of the Congress at Madras. In 1928 Jawaharlal criticized the Nehru report, prepared under the stewardship of his father Motilal, which had asked for dominion status. During the Calcutta Congress of 1928 Gandhi opposed the snap resolution of 1927, and managed to have his way. The Nehru report, which was both a step back from full independence and included important concessions to Hindu communalists and a rebuff to liberal Muslims like Jinnah who were opposing the Muslim minority communalists, was

approved subject to the condition that if the British did not grant dominion status by the end of 1929, the Congress would be free to commence civil disobedience and *purna swaraj* (total independence). Bose's amendment calling for immediate reiteration of the complete independence objective was backed by Jawaharlal, Satyamurti of Tamilnadu, a large number of Bengal delegates, and two communists from Bombay, Nimbkar and Joglekar, but defeated by 1,350 votes to 973.

The failure of talks with the British caused the December 1929 Lahore session of the Congress to be held in an atmosphere charged with nationalist, anti-imperialist passions. Jawaharlal Nehru was elected president, the first of four times he would be elected in pre-independence India. The election of Nehru was part of Gandhi's strategy. A majority of provincial Congress committees had wanted Gandhi, and Vallabhbhai Patel had received more support than Nehru. Gandhi accepted that Nehru was a radical, but urged his election on the grounds that "steam becomes a mighty power only when it allows itself to be imprisoned." In other words, Gandhi wanted to tap the radical charisma of Nehru, but also to control it by organizational means. Even Nehru was reluctant, but the choice of Nehru was an indication that – albeit at a pace dictated by Gandhi – the movement was still peaking. Viceroy Irwin made an offer in October 1929, promising a Round Table Conference after the publication of the Simon Commission Report. Gandhi, Motilal, and Madan Mohan Malaviya joined the Liberals in accepting the offer, subject to certain preconditions. Bose refused to sign, but Jawaharlal first signed and then developed hesitations. Negotiations soon broke down.

The Lahore Congress heard the first of Jawaharlal Nehru's stirring presidential addresses, boldly presenting a radical, internationalist, and republican perspective. He attacked Gandhi's pet trusteeship theory, according to which owners of factories were merely trustees. But control remained with Gandhi. Though Nehru as well as Bose had envisaged a civil disobedience that would have culminated in general strikes, the Congress left details of the program in the hands of Gandhi. Bose's proposals for immediate non-payment of taxes were voted down, and the door was left open for future negotiations. But after all this, when on December 31, 1929 the Congress adopted the resolution of *purna swaraj*, and hoisted the tricolor to the slogan, not only

of *Bande mataram*, but also *Inquilab Zindabad* (long live the revolution), the freedom movement did take a step forward. It was resolved that January 26, 1930 would be celebrated as Independence Day, with the hoisting of the tricolor everywhere.

With the launching of the civil disobedience movement, focusing on the violation of the salt tax, Nehru traveled across much of the country, campaigning for mass participation in the agitations. Despite his father's death in 1931, he continued to take a vigorous part in the struggles. He was arrested in April 1930, released in October, then rearrested. In the course of the struggle he led an agrarian movement in UP, and was arrested and sentenced to two and a half years imprisonment. He was arrested once again in 1934 and sentenced for two years. On being released in 1935 he left for Germany, where Kamala Nehru was ailing. Kamala died in 1938. In this period, he also met the Communist International leader Dimitrov, who discussed with him the proposed Popular Front line that Dimitrov was shortly to unveil at the Seventh Congress of the Communist International.

Nehru's Leftism and the Bourgeoisie

In 1936 Nehru was again elected Congress president. He presided over its Lucknow session. His Lucknow Congress and Faizpur (1937) Congress speeches were extremely radical, marking the most leftward position in his life. In his speech at Lucknow he declared that his goal was socialism, stressing that by this he meant scientific socialism. This considerably upset the right wing of the party. It upset even more large sections of the Indian bourgeoisie, some of whom started proposing that they should move away from the Congress and give support to a much more openly capitalist party. It required the shrewdest of them, G. D. Birla, to explain that it was not fitting that those who had property should be seen as defenders of a system of property. He wanted to let Gandhi do the work of opposing Nehru. Nehru, for his part, despite theoretical or ideological reservations, at crucial junctures always deferred to Gandhi. As a result, though his talk about scientific socialism electrified the left and shocked the right, it did not go beyond talking. When mildly Marxist elements in the Congress who were critical of the Soviet Union, such as

Jay Prakash Narayan, Narendra Dev, and others, took the initiative in launching the Congress Socialist Party, they had hopes that Nehru would side with them and give them a national leadership. Nehru stood aside. While they had the satisfaction of passing a resolution proclaiming socialism as the model for the future, in practical terms, in 1937, the Congress decided to go in for Assembly elections under the new constitution. Nehru was reelected the following year and oversaw the Congress national campaign for the 1937 elections. It was a case of the left shouldering the brunt of the campaigning, but the right setting the agenda in putting up candidates, as well as deciding policy inside the governments, for in several provinces Congress-led governments were formed. Although he did not contest elections himself, Nehru was seen by the national media as the leader of the Congress.

In 1938, still on a left-wing wave, Subhas Chandra Bose was elected president. One of his achievements was to initiate discussions on planning for future Indian development, leading, after independence, to the concept of the Five Year Plans and the Planning Commission. But in 1939, when Subhas was reelected with left support, but against Gandhi's wishes, most members of the Congress Working Committee resigned. Astonishingly, so did Nehru. The right, seizing the moment at the Tripuri Congress session, adopted a resolution confirming Congress adherence to Gandhi's politics and insisted that Bose must select his leading team in accordance with Gandhi's wishes. Nehru and the Congress socialists kept quiet against this onslaught. An embittered Bose resigned a little later. He was hounded out of the Congress within months. Nehru took a very hostile stance towards him.

War and the Quit India Struggle

At the outbreak of World War II the British entered India on the Allied side without any reference to the wishes of the Indian people. Indian capitalists were relatively willing to enter the war. By 1942 Indian banking capital had outstripped British banking capital, excluding the imperial bank. Public opinion was otherwise not pro-war. All elected congressmen resigned from their offices. But while Bose thought in terms of the transitional policy of seeking help from the enemies of the British, Nehru, like other sections of the left, like the Communist

Party of India (CPI), was in a dilemma. Especially after Hitler invaded the Soviet Union, he saw the war as one between progress and reaction. Unlike the CPI, he did not call for supporting the British openly, but he was uncomfortable with the idea of India being at the mercy of a two-pronged German and Japanese attack. Along with Maulana Azad, Chakravarti Rajagopalachari, and others he called on the British to make a commitment to granting full independence after the war, and a national government now, in return for Indian support. Gandhi, by contrast, argued that Japan was less likely to invade India if Britain no longer remained in India. This of course showed Gandhi's lack of understanding of imperialism, but it also showed his practical opposition to British rule.

The man in charge of Britain at this point was Winston Churchill, the most aggressively imperialist prime minister for some time. So the desultory negotiations collapsed, and the Congress began heated debates on the nature of resistance to the British. Nehru was initially opposed to Gandhi. In the first years of war the CPI had called for a struggle, while Gandhi had only sanctioned an "individual *satyagraha*," so moderate in form that it put no pressure and carried out no mobilization. In 1942 the CPI called it a People's War and urged support to the Allies to defend the USSR. After intensive debates and heated discussions, the Congress leaders called for the British to quit India. Though the resolution of 8 August said that otherwise the British could face mass rebellion, once again the final decision was in Gandhi's hands, and his subsequent letter to the viceroy showed he might have used the resolution as a bargaining counter. Instead, the British swooped on the Congress leadership and arrested them. Despite his hesitations, Nehru had gone along with Gandhi and campaigned for the struggle. He was arrested along with other Congress leaders on August 9, 1942, and kept incarcerated till June 1945. His daughter Indira and her husband Feroze Gandhi would also be imprisoned for a few months. Nehru's first grandson, Rajiv, was born in 1944.

Towards Transfer of Power

Nehru and his colleagues had been released just as the British government sent a Cabinet Mission for negotiations. Nehru was elected Congress president and became one of the key negotiators.

The elections to the Constituent Assembly came up as transfer of power was mooted. The Constituent Assembly was elected indirectly by the members of the provincial legislative assemblies. The Congress secured an overwhelming majority in the general seats, while the Muslim League managed to sweep almost all the seats reserved for Muslims. The Congress had a majority of 69 percent. There were also members from smaller parties like the Scheduled Caste Federation, the CPI, and the Unionist Party of Punjab. Nehru headed an interim government, which had limited power. Muhammad Ali Jinnah, demanding the independent Muslim state of Pakistan, launched communal violence. Hindu communalists hit back. By giving up the earlier demand for a Constituent Assembly elected by universal adult suffrage, Nehru and the Congress had hobbled themselves, and now they had to accept Muslim League claims that it represented India's Muslims, though this claim was never proved in a democratic election. So India was to receive freedom with Partition, on August 15, 1947. Nehru became the first prime minister of independent India.

Prime Minister

This period was marked by intense communal violence that swept across the Punjab, Delhi, and Bengal. Weak government led to a steady escalation of violence by Hindu and Sikh communalists, as well as Muslim communalists. The Hindu Mahasabha and the Rashtriya Swayamsevak Sangh were openly fighting for a very authoritarian form of government to pursue their Hindu chauvinist agenda. What halted them was the shock produced by the murder of Gandhi. It was only then that Nehru and his home minister Sardar Patel acted to ban the RSS, arrest a large number of its cadres, and for a time halt communalism.

There was an evident contest for power and influence between the more left-leaning Nehru and the more conservative Patel. It was also a tussle over policy and strategy. Nehru ignored Patel in his policy towards Kashmir. The King of Kashmir was compelled to sign an instrument of accession with India when Pakistan sent its army, dressed as volunteer forces, to Kashmir. Indian help came, but with Kashmir joining India. However, Nehru promised a referendum to finalize the issue, which never materialized.

The India-Pakistan war was ended by UN intervention and the creation of a ceasefire line that has become the *de facto* border. Patel objected to Nehru sidelining home ministry officials in the Kashmir and Hyderabad policy. In Hyderabad the Nizam was trying to create an independent state. Patel was however not to get Gandhi's support either, for Gandhi's last hunger strike was over a number of issues, including the demand that India should not renege on the promise of transferring funds to Pakistan. Nehru felt offended by Patel's decision-making regarding the states' integration without consulting either him or the Cabinet.

Gandhi was assassinated on January 30, 1948. Nehru and Patel put up a show of unity in that difficult moment. The media accused Patel's home ministry of failing to protect Gandhi. He offered to resign, but Nehru turned it down. At the same time, their differences persisted. When China claimed Tibet in 1950, Patel wanted Nehru's intervention, but Nehru refused. Nehru was repeatedly defeated by Patel, whose grip on the organization remained, and who ensured that Nehru's choices did not get into the position of Congress president. After the death of Patel, however, Nehru was able to defeat the right wing and take control of the organization.

Economic Policies

Nehru took over the Bombay Plan, also called the Tata-Birla Plan after the two leading capitalists who were its initiators. While in recent years his policy has been attacked as socialist, the reality is different. The Industrial Policy Resolution of 1948 suggested that core sectors would be under state control. This corresponded to the needs of the Indian bourgeoisie. They did not have the massive capital needed for building up infrastructure, power, and heavy industry. These also created jobs and therefore kept a sizable part of the population satisfied. At the same time, by talking about Five Year Plans and the "socialistic pattern of economy," Nehru also stole the thunder of the left, which was important in view of the fact that despite a phase of banning in independent India, the Communist Party had emerged as the second biggest party, with a significant presence in parliament. Increasing business and income taxes, Nehru looked for a mixed economy, where the state sector would develop strategic industries such as mining, electricity, and

heavy industries. It was also to provide major services, creating a welfare state. Land reform, the essential precondition for the mass of rural people, was left in the hands of provincial governments, and it was only in provinces where the left had a strong presence that any radical land reform was considered. Nehru's own drive was in the direction of gigantic mega-projects. He pioneered the building of mega-hydroelectric power projects such as the Bhakra-Nangal Dam, and patronised Homi Bhaba's search for nuclear power. Birla later said he liked Nehru's socialism. This was quite understandable, for by 1958 four families, including the Birlas, controlled companies worth one quarter of India's stock market.

For most of Nehru's term as prime minister, India would continue to face serious food shortages despite progress and increases in agricultural production. This resulted in a renewal of the imperialist stranglehold. In particular, much of India's agricultural policy was guided by World Bank-IMF advice along with direct inputs from US imperialist institutions like the Rockefeller Foundation. While there was a degree of economic growth, poverty and chronic unemployment continued. As a result, even though Nehru's personal popularity remained high, the Congress started losing elections and seats. The first communist government was formed in Kerala in 1957, though Nehru, with advice from his daughter Indira, who was functioning as his political secretary, had it dismissed using the powers given to the president and the provincial governor.

Education and Social Reform

Nehru was a very strong advocate of education for the youth of the country, and this was reflected in strong state intervention in education. His government was responsible for the establishment of many institutions, including the prestigious Indian Institutes of Technology, the All India Institute of Medical Sciences, and the Indian Institutes of Management. Nehru was committed to the eradication of illiteracy, but unlike post-revolutionary societies, in India this effort was undertaken essentially in a bureaucratic manner and was not very successful. The same was true of efforts like food and milk distribution for children.

One area where some social legislation was carried out was in women's rights. The antiquated

and highly discriminatory Hindu laws were for the first time modified during Nehru's tenure as prime minister, though much of the credit goes to Dr. B. R. Ambedkar, for some time the law minister. The oppression of former untouchables was tackled by legally abolishing untouchability and by reserving educational seats and jobs in educational institutions and government for Scheduled Castes and Scheduled Tribes. Nehru also supported secularism, and repeatedly warned against the dangers of ultra-right Hinduism as the main form in which fascism was likely to come to India.

Nehru and Indian Foreign Policy

Nehru's foreign policy combined a defense of Indian national interests with left-wing rhetoric. On the issue of Kashmir the rhetoric was to create a problem for the Indian acquisition of Kashmir. Kashmiris were at that time probably more willing to be with India than with Pakistan, but given the option, they would have chosen independence. Nehru's promise of a plebiscite was never carried out. This made Kashmir an issue Pakistan could internationalize at will, and this dictated many aspects of his policy.

Realizing that India's best interests were served by allying with neither of the two Cold War power blocs, Nehru was one of the architects of the "Bandung Spirit" and then the Non-Aligned Movement. Its anti-imperialist rhetoric enabled India to benefit considerably from Soviet patronage, without foreclosing US aid in food, agriculture research, and other matters. He recognized the People's Republic of China and hoped to act as a bridge between the hostile camps. However, some of his actions were bitterly condemned by the West; for example, his condemnation of the Anglo-French-Israeli War against Egypt in 1956 was not balanced by condemnation of the Soviet invasion of Hungary. Suspicion and distrust cooled relations between India and the US, which suspected Nehru of tacitly supporting the Soviet Union. Nonetheless, India also allowed the CIA to use India as a base to train anti-communist Tibetan guerrillas in 1956.

Nehru's greatest failure was his China policy, due to the extreme instability as well as military and political weaknesses. On one hand, he had proclaimed that India and China were like brothers (*Hindi-Chini bhai bhai*). On the other hand, he did not take peaceful steps to resolve the major

border disputes with China. These had been created because the British had made border agreements with Tibet, but China had never accepted these since China considered Tibet to be a part of China. India and China grew increasingly tense over this issue, especially after Nehru gave political asylum to the Dalai Lama. Moreover, in 1961, emboldened by his Goa success, Nehru started developing a “forward” policy in the China border, getting military units to set up camps even beyond the McMahon line decided upon by Tibet and the English. These provocations caused the Chinese to retaliate, in what was officially not a war, since neither side formally declared war and neither side used the air force, but which resulted in the annihilation of the Indian 4th Division and the Chinese incursion up to Tejpur, after which they unilaterally withdrew to the positions they claimed as theirs. Nehru’s minister V. K. Krishna Menon had to resign, and Nehru also faced much criticism.

Final Years

In 1957 and 1962 Nehru had led the Congress to election victories, but the opposition parties were gaining. In 1951 the communists and their allies had 23 seats, the socialists and the KMPP, who soon merged, had 21 between them, and the Hindu right wing had 7, apart from other parties. In 1957 the Hindu right had 5 seats, the socialists 19, and the CPI and its allies 33 seats. In 1962 the Congress vote fell to 44.72 percent, though it still won 361 out of 545 seats, down from 364 out of 489 in 1951. This time too the CPI and its allies won 33 seats, the fragmented socialists 18 seats, the Hindu right 17 seats, the liberal right Swatantra Party 18 seats, and the Republican Party, a dalit, Ambedkarite party, 10 seats.

Nehru’s health was steadily declining. He had a prolonged illness, recovering in Kashmir. Returning to Delhi, he suffered a stroke and died early on May 27, 1964.

Legacy

Nehru was an able and modernist bourgeois leader. Strongly committed to secularism and progress, he was able to give the post-independence development of India a considerable personal imprint, so that this model of growth is often called the Nehruvian model. Given his back-

ground in the national movement, he was also genuinely concerned about a measure of social justice, as long as the basic structures of capitalism were not overturned. That is why welfare policies comprised a considerable aspect of government work, as well as rhetoric.

Nehru has been a repeated target of Hindutva fundamentalists and fascists for his alleged appeasement of Muslims. What this means is that in a post-Partition, post-riot India, he refused to impose a Hinduized common code on Muslims. The right-wing parties have also criticized his foreign policy as hypocritical, as it was a closet communist act. In fact, his foreign policy well served Indian capitalism. It enabled India to maintain a neutral image and gain a position among third world states. It also enabled India to develop its own military and nuclear policies. There is an ambiguous line but not an absolute opposition between Nehru’s declaration of atoms for peace and the eventual testing of nuclear weapons, first under his daughter Indira and later under the Bharatiya Janata Party, a Hindu right party.

Nehru’s greatest achievement, however, can only be seen in a comparative perspective. If he is blamed for much of the legacy of early independent India, he must also be praised for certain positive developments. If leaderships matter in history, then the fact that India retains a measure of democracy, a measure even of the right to protest against state violence when it occurs in Kashmir or the Northeast, it is partly due to the leadership provided by Nehru, in contradistinction to the authoritarianism of Pakistan and other former colonies.

Neoliberalism and protest

Heather Squire

Neoliberalism refers to an economic model, a political methodology, and a socio-ethical ideology that came to dominate capitalist market relations beginning in the 1970s. It is predicated on the neoclassical economic belief that the market is best regulated by itself, and that government intervention into national economies should be discouraged, save for the protection of property rights, the facilitation of capital flows, and the creation of new markets. Harvey (2005) argues that neoliberalism is a “*political project to re-establish the conditions for capital accumulation and to restore the power of economic elites.*” Normative usage of the term neoliberal tends toward the pejorative, and it is thus rarely used in a self-referential way to affirm one’s support for ostensibly neoliberal policies.

While neoliberalism finds its theoretical roots in the eighteenth-century writings of liberal theorists such as John Locke and Adam Smith, the twentieth-century economists Friedrich August von Hayek (1899–1992) and his protégé Milton Friedman (1912–2006) are considered to be the progenitors of neoliberalism as an ideology and practice. In 1944, von Hayek wrote *The Road to Serfdom*, which argued that collectivism (which he saw as inherent in the Keynesian economic policies popular at the time) and socialism would ultimately lead to tyranny and fascism by crushing individual liberty and dismantling the free market. In 1947, von Hayek and a few philosophical peers from the academic and business world formed the Mont Pelerin Society to advocate for the “central values of civilization” as they called them in their founding statement: human dignity and freedom.

These ideas mostly festered in academia and well-funded think tanks, especially at the University of Chicago and the Institute for Economic Affairs in London, until the early 1970s when the “Keynesian compromise” between labor and capital began to break down. After the Great Depression, the economic policies of John Maynard Keynes (1883–1946) gained popularity among many western governments, who opted for intervention to mitigate the booms and busts of capitalism and for a redistribution of productivity

gains from owners to workers. Massive military spending by some countries, first for World War II and later for the Cold War, allowed for full employment and some gains for the working class; however, countries that could not (or were discouraged from) deficit-funding their military (such as Japan, West Germany, and the Asian “tigers”) instead invested in their manufacturing sectors and experienced high rates of economic growth as their export markets began to expand across the globe – such trade-related economic growth did not go unnoticed by the ruling class of Keynesian states, who were feeling increasingly constrained by demand-side economic policies and increased working-class power at home.

The stagflation of the 1970s, when slow economic growth was accompanied by high prices (sometimes called the “crisis of capitalism”), was spawned in part by Keynesian economic policies and the 1973 OPEC oil crisis (which raised oil prices all over the world). Chiapello and Boltanski (2006) argue that a “disruption of production by workers in industrialized nations” during the 1960s led to an increase in spending on management (to police such insurrections) that far outpaced economic growth. Whatever the complex of causes of the economic slowdown of the 1970s were, neoliberalism as a theory consolidated at this time and gained respectability as a way to deal with the stagflation, respond to rapidly increasing world trade, and as a means to reign in working-class concessions that had been won over the previous four decades.

The first experiment in neoliberal development is usually considered to be the economic reforms imposed two years after the 1973 coup in Chile that deposed the democratically elected Salvador Allende and installed the dictator Augusto Pinochet. The coup was supported by domestic as well as US business elites, the CIA, and Henry Kissinger (the US secretary of state at the time). From 1975 to 1978, the “Chicago Boys” (Chilean technocrats educated in free-market economics at the University of Chicago) were at the forefront of implementing neoliberal reforms to meet International Monetary Fund (IMF) conditions for receiving a loan. Placed at the helm of the economy by Pinochet, the Chicago Boys proceeded to annul all nationalizations that occurred under Allende (except for copper), open up natural resources (oceans, forests, and farms) to exploitation, eliminate all protectionism, and adopt policies that were

favorable to free trade. This worked in tandem with Pinochet's brutal repression of the working class and the left, whose leaders were tortured and who were dispossessed of any collective bargaining power via a "flexible" labor system.

Nepal, Maoists' rise

Sushovan Dhar

The Communist Party of Nepal, founded in 1949, won four seats in the first elections in Nepal in 1959 and was the foundation of the Maoist movement in the country. Until the adoption in 1990 of a new constitution guaranteeing a multiparty system, most communist politicians had been in exile or operated underground. As part of an effort to form a multiparty opposition, known as Jan Andolan (People's Movement), some communist factions unified under the Communist Party of Nepal (United Marxist Leninist) (CPN-UML).

In April 1990, collective action for the restoration of democracy shook Nepal. Tens of thousands of Nepalese marched on the royal palace in Kathmandu, demonstrating against

King Birendra, who was traditionally revered as an incarnation of the Hindu god Vishnu. Various communist parties formed a United Left Front and cooperated with the Nepali Congress Party (NCP). From this united front emerged the Communist Party of Nepal in 1991, through the merger of the Communist Party of Nepal (Marxist) and the Communist Party of Nepal (Marxist Leninist).

Though police and army fired on the crowds and killed many demonstrators, the militant protest compelled the king to scrap the *panchayat* system (non-party assemblies), lift the ban on political parties, and form an interim government under the premiership of oppositionist NCP leader Krishna Prasad Bhattarai, thereby paving the way for a constitutional monarchy.

The interim government was directed to conduct free and fair elections within a stipulated period under a new constitution that was framed by an independent constitutional commission appointed by the Council of Ministers – the Constitution Recommendation Commission. Although the constitution was proclaimed from the throne, it had been developed, unlike previous constitutional edicts, through a consultative process in which the interim Council of Ministers served as a legislature. Nepal's human rights record – poor before the pro-democracy movement's success – also improved, since the new constitution guaranteed basic rights and Nepal signed various human rights treaties and understandings.

After the constitution of 1991, a new phase of parliamentary politics and unstable coalition governments was unleashed. Parties were often personality based, and, apart from the communists, mostly elitist. Social policies were minimally articulated. In 1991 the NCP won a narrow majority under Prime Minister Girija Prasad Koirala. The communists grew in strength, and the president of the Nepali Congress and interim prime minister, K. P. Bhattarai, was defeated in the elections by CPN-UML leader Madan Bhandari. In 1992, the NCP won the local elections.

Maoist Shift to Guerilla Struggle

Pushpa Kamal Dahal, the leader of the Communist Party of Nepal (Mashal), an organization popularly known in Nepal as Prachanda, was fundamentally opposed to parliamentary politics. In coalition with several left-wing political groups, Prachanda founded the United People's

Front (SJM) in early 1991. The SJM was active in Nepal's parliamentary system, and in 1991 was the third-largest party in the Nepalese House of Representatives. By 1993, however, the SJM began to splinter, and in 1995 Prachanda left the SJM to form the Communist Party of Nepal (Maoist) (CPN-M), which remained firmly opposed to electoral and parliamentary politics and initiated plans for guerilla warfare against the governing monarchy.

In 1993, CPN-UML leader Madan Bhandari was killed in a mysterious car crash and violent demonstrations followed, aiming at the overthrow of Koirala's government. Koirala resigned in 1994 and called for new elections after losing a parliamentary vote when 36 Nepali Congress members abstained. Elections in November resulted in a hung parliament and a minority CPN-UML (the single largest party) government. In 1995, a parliamentary vote of no confidence replaced it with a coalition government formed by the Nepali Congress, Rashtriya Praja Party (RPP), and Sadhvabana (representing the national minority Madhesi population). However, Prachanda and other communist organizations rejected this arrangement, turning their attention to mass struggles and guerilla warfare. It was in this context that the CPN-M was formed in 1995.

In September 1995, the Central Committee of the CPN-M asserted the centrality of a protracted people's war against the state to free the country of the repressive monarchy and drastically improve living standards among Nepal's workers and peasants. The Maoists' strategy was to encircle the capital of Kathmandu from the countryside and wage a people's war and revolution to transform the society.

Baburam Bhattarai, a prominent leader of the CPN-M, subsequently called on the Nepalese coalition government of Prime Minister Sher Bahadur Deuba (a member of the NCP) to respond to 40 demands or face a people's insurrection. The primary CPN-M demand was Nepalese abrogation of the 1950 Peace and Friendship Treaty between India and Nepal and the Mahakali River treaties with India which provided for the sharing of water on the western frontier. The CPN-M also called on the Nepalese government to cancel work permits for foreign (Indian) workers in Nepal; end royal privileges; draft a new constitution through a Constituent Assembly; nationalize the property of "comprador and bureaucratic capitalists";

declare Nepal a secular nation; provide villages with roads, drinking water, and electricity; and guarantee freedom of speech and publication.

The ultimatum called on the Nepal government to initiate positive steps toward fulfilling these demands by February 17, 1996. However, when the government failed to respond to the 40-point plan, on 13 February, four days before the deadline, Maoists struck in six districts, initiating a nationwide uprising that led to the Nepal People's War.

Nepal, people's war and Maoists

Sushovan Dhar

The Maoist strategy of a people's war in Nepal combined guerilla attacks and negotiations. During nationwide Maoist attacks in July 2001, over 60 police personnel, specifically in the Banke and Rolpa districts of West Nepal, were killed, injured, or abducted, eventually forcing the resignation of Prime Minister Koirala. The newly appointed prime minister, Sher Bahadur Deuba, called upon the Maoists on July 25, 2001 to end violence and negotiate an end to their six-year insurgency.

The Maoists (known as Prachanda) responded by announcing a four-month ceasefire and negotiations. On November 25, 2001, the Maoists broke the ceasefire, striking Surkhet

Airport and nine other points, including police outposts and district development offices in Dhankuta, Shankhuwasabha, Chitwan, and Khotang districts. Dismayed by three rounds of fruitless peace talks with the government, the Maoists declared a central People's Revolutionary Government, with Baburam Bhattarai as chief convener of the parallel government, and a network of village governments in more than 40 districts throughout the country. The following day, the government responded by declaring an emergency, blaming Maoists for the crisis. By late 2001, the Maoist insurgency had spread to nearly all of Nepal's 75 districts.

In a bid to strengthen control of Western Nepal, on February 17, 2002 Maoists attacked Mangalsen, the district headquarters of the remote hill district of Achham (northwest of Kathmandu), and an airstrip in nearby Sanfebagar at about midnight, killing more than 120 people including police officers, soldiers, and local government officials. The rebels also mounted attacks on government buildings, a military barracks, and an armory.

After the royal takeover of October 4, 2002, the Maoists opened the way to a dialogue with the state, suggesting a round table of all political forces, including the king and security forces, and the formation of an all-party interim government with general elections for a Constituent Assembly to draw up a new constitution. The next ceasefire of January, 29, 2003 was short-lived, collapsing on August 27, 2003. The Maoists' strategy was to alternate armed revolutionary struggle with a willingness to talk, thereby exposing government negotiation efforts as a sham.

The government's encouragement to landlords to unleash anti-peasant squads to fight the rebels further intensified class polarization in the countryside, which in the long run helped the Maoists' cause. In March 2004, the declaration of 17 days' economic embargo in Chitwan, Nawalparasi, Rupandehi, Palpa, Syanja, Kaski, Tananun, Parwat, Lamjung, Gorkha, Gulmi, Myagdi, and Manang districts brought life to a standstill. The same month witnessed one of the most massive offensives against security forces since the insurgency was launched in 1996, with an overnight attack on the district headquarters of Myagdi district at Beni that inflicted heavy casualties. A month later, civil servants and security personnel captured by the Maoists during the Beni attack were released.

The Maoist rebels also attacked joint security forces in Bhojpur, resulting in heavy casualties on both sides. On February 1, 2005, the king dismissed the government and declared a state of emergency, seizing power and effectively suspending all civil liberties. Immediately thereafter, an anti-Maoist rampage in Kapilavastu district, assisted by police personnel, resulted in the displacement of 20,000 to 30,000 people to the Indian border.

Meanwhile, differences in the Communist Party of Nepal (Maoist) (CPN-M) leadership caused it to take action against Baburam Bhattarai, Dinanath Sharma, Mani Thapa, Hisila Yam, and Devendra Poudel on March 1, 2005. Bhattarai was reinstated in July after months of suspension caused by major differences in outlook. In the meantime, the CPN-M organized elections for local bodies in ten districts of Western Nepal described as their "special zone." The Maoists had called on mainstream political parties to take part in the elections. However, none of them participated in the elections in a formal way. From September 2005, the CPN-M declared a four-month unilateral ceasefire.

New Course and a Strategy

February 2006 marked a shift in CPN-M politics when Prachanda stated it was willing to accept the results of the election of the Constituent Assembly and the Seven Parties Alliance (SPA), with CPN-M signing a memorandum of understanding in March. After the CPN-M's declaration of a three-month unilateral ceasefire in April, peace talks between the government and Maoists took place on May 26, with the signing of a 25-point Code of Conduct governing the ceasefire and emphasizing the commitment to hold Constituent Assembly elections. On June 15, 2006, the government and the Maoist rebels reached a four-point agreement to hold a summit talk between Prime Minister Koirala and Prachanda, to form a truce-monitoring team (Ceasefire Code of Conduct National Monitoring Committee), to request the UN to assist the truce-monitoring team and to monitor human rights, and to hold further talks in the presence of observers.

After agreeing to manage weapons under the joint surveillance of their respective commanders, the government of Nepal and CPN-M signed the historic Comprehensive Peace Accord (CPA)

on November 21, 2006, declaring a formal end to the ten-year insurgency. The main features of the ten-point CPA are the formal termination of the people's war, the abrogation of the king's political rights, and the nationalization of the king's property under public trusts. The SPA and the CPN-M agreed to promulgate an interim constitution and create an interim parliament of 330 members, with the Maoists obtaining 73 seats. Following this, Prachanda announced the dissolution of the parallel governments set up during the insurgency, signifying the end of the people's war in Nepal.

Maoist Electoral Triumph

The Maoists emerged as the single largest party (220 seats out of 601) when elections to the Constituent Assembly were finally held on April 10, 2008, while the Nepali Congress Party (NCP) got 110 seats and the Communist Party of Nepal (United Marxist Leninist) (CPN-UML) 103. The CPN-UML originally seemed to have a bright future, with considerable support among the working class. But it was compromised by forming a government under the world's virtually last semi-feudal monarchy and forging opportunistic coalitions for power, which assisted in the process of betraying its promising revolutionary development.

The CPN-M, by contrast, rejected the hobbled parliamentary system of the 1990s. By making the demand for a Constituent Assembly its central slogan, and by linking this to popular socioeconomic concerns, including treaty revisions with India, highlighting the national minority Madhesis' lack of equal rights, and agrarian reform, it pushed forward its revolutionary development. The increased representation of women is also a consequence of Maoist demands, and the CPN-M leader, Comrade Parvati, has written an important essay stressing the need to integrate an agenda for women's liberation with the revolutionary program.

Electoral triumph, however, put the CPN-M in a difficult situation. It called upon the king to step down, in conformity with its stand, but it was clear that it would have to collaborate with other parties in the Constituent Assembly, both to run the country and to adopt a constitution.

There are difficult socioeconomic problems to address as well. A fresh convert to the ideology of the free market, the Nepalese government

had dedicated itself to creating wealth in urban areas. Trying to boost private investment in Kathmandu, it neglected agriculture, on which over 80 percent of the population depended for a living. Not surprisingly, absolute poverty continued to increase in the late 1990s, while Kathmandu Valley benefited from the growth in the tourist, garment, and carpet industries. Millions of Nepalese have swelled the armies of cheap labor that drive the global economy, serving in Indian brothels, Thai and Malaysian sweatshops, and, most recently, the war zones of Iraq. In 2002, Dalits (low-caste marginal members of Hindu society) had an annual per capita income of only \$40, compared to a national average of \$210, and fewer than 10 percent of Dalits were literate. These social and economic exclusions were addressed only so far by the CPN-M.

In a small state surrounded by China and India, any government would face the reality of economic construction. According to Stalinist theory, the CPN-M is accomplishing a bourgeois democratic revolution. But if the government tries to push class struggle forward, it would face resistance from its bourgeois and social democratic partners, as well as foreign pressure and limits on capital investment. Baburam Bhattarai's statement welcoming foreign capital could be interpreted in this way. At the same time, in a different interview, Bhattarai has explained that his party is well aware that Nepal was to have a non-socialist transitional government, including members from opposition classes. One section of the party would strictly avoid government participation, seeking to mobilize the masses, leaving open the option between deepening the revolution and co-optation of the revolutionary party.

Nepal, protest movements, 19th and 20th centuries

Sushovan Dhar

Rule of the *Ranas*

The Himalayan kingdom of Nepal emerged from the *Gorkha* state, founded in 1559 by King Dravya Shah. Prithvi Narayan Shah (reigned 1743–75) conquered the valley and created a single autocratic state.

In 1845, Fateh Jang Chautaria became prime minister. Following a massacre in the palace armory, he launched a purge, killing off many aristocratic rivals and initiating a century-long dictatorship of the royal family. He repressed the entire nation, leaving the society utterly primitive through maintaining the semi-feudal economy, while eliminating the factional fighting at court and introducing innovations into the bureaucracy and the judiciary.

In return for supporting the British during the Indian revolt of 1857 the royal family received staunch colonial patronage. In 1858 King Surendra sought to advance an invincible image through bequeathing to himself the honorific title of *Rana*, denoting martial glory, used by Rajput princes in northern India. He then became Jang Bahadur *Rana*, and all subsequent prime ministers of his family added the designation "Jang Bahadur *Rana*," in his honor, and their line became known as the house of the *Ranas*. Generally, *Rana* rule insulated Nepal from changes elsewhere, stripped the monarchy of

any real power, and maintained a late medieval administrative framework. Nepalese support for British imperialism in World War I brought an annual payment of one million Indian rupees, and a Treaty of Perpetual Peace and Friendship was signed in 1923. With modifications, this has governed relations between Nepal and India even since India became independent.

After World War I, several small political initiatives were undertaken by progressive Nepalese. In 1935, the Praja Parishad (People's Council) was formed by exiles in India as the first Nepalese political party, through establishing cells inside Nepal. In Bihar the party published a periodical, *Janata* (The People), advocating a multi-caste, democratic government and the overthrow of the *Ranas*. The *Rana* police managed to infiltrate the organization and arrested 500 people in Kathmandu. Four leaders, including Sukra Raj Shastri and Gangalal Shrestha, were executed (they were still commemorated as martyrs in 1991), and others received long prison terms, but the survivors escaped to India to carry on political agitation.

In Benaras in October 1946, a group of Nepalese exiles formed the *Akhil Bharatiya Nepali Rashtriya Congress* (All-India Nepali National Congress). During its council in Calcutta in January 1947, the new organization dropped its "All-India" prefix and merged with two other groups, the *Nepali Sangh* (Nepalese Society) of Benaras and the Gorkha Congress of Calcutta, which had closer connections with lower-class *Ranas* (children of concubines and low-caste wives, having lesser social status and a lower administrative-economic position). The Nepali National Congress (Nepali Rashtriya Congress, NNC) was officially dedicated to the peaceful ousting of the *Rana* dictatorship and the establishment of "democratic socialism." One of its first mass actions was participation in a labor strike in the jute mills of Biratnagar in the Tarai. B. P. Koirala (1914–82), an early leader of the NNC influenced first by Gandhi and then by the Congress Socialist Party in India, promoted non-violent confrontation through general strikes, using force as the last resort. He advocated a constitutional monarchy as a transitional political form in Nepal.

The strong-willed, conservative Juddha Shamsheer resigned as prime minister in November 1945, succeeded by Padma Shamsheer. In early 1948, despite severely repressing the Biratnagar

strike, Padma Shamsher was forced to make political concessions and, beset by opposition, he resigned.

The King Returns

The Nepal Democratic Congress (Nepal Prajatantrik Congress), formed in 1948, advocated the overthrow of the *Ranas* by any means, including armed insurrection. B. P. Koirala and others were arrested in October 1948. The NNC absorbed the Nepal Democratic Congress in March 1950 and was renamed the Nepali Congress Party (NCP), with a program including armed struggle. As armed attacks by 300 members of the NCP's Mukti Sena (Liberation Army) initiated an anti-*Rana* revolution in Nepal, King Tribhuvan (reigned 1911–55) escaped from the palace and appealed for asylum in the Indian embassy in Kathmandu, on November 6, 1950. Negotiations between India and the *Ranas* led to a proclamation on January 8, 1951 by *Rana* Mohan Shamsher, promising to restore the king, amnesty for all political prisoners, and elections based on adult suffrage by 1952. The interim constitution of March 1951 established a separate judicial branch, transferred all executive powers back to the king (including supreme command of the armed forces, and power to appoint government officials and manage finances), called for a welfare state, set forth a bill of rights, and started procedures for the formation of *panchayats* (local-level assemblies). But the king was opposed to functioning under the new constitution. Successfully maneuvering between democratic popular aspirations, the elitist Nepali Congress, and the *Ranas*, the king was able to push out the NCP as well as the *Ranas* by November 1951. The king engaged in military suppression, including police armed fire on a student demonstration, killing one student.

Among the parties operating in the early 1950s, the NCP was the most influential, claiming to stand for the democratic will of the people, but often led by elitists. The Communist Party of Nepal, established in 1949 in Calcutta, refused to participate in the "bourgeois" system. In the Kathmandu valley, other leaders excluded from power reconstituted the Praja Parishad. Opponents of the "anti-democratic" and pro-India character of the Nepali Congress leadership broke away to form a revitalized Nepali National Congress. The period between November 1951

and February 1959 was marked by a succession of short-lived governments, while the king postponed the formation of any constituent assembly in order to ascertain the popular will. The faction of the NCP led by B. P. Koirala had no chance of forming a government.

King Mahendra, son of King Tribhuvan, reigned from 1955 to 1972, with immense opposition to political parties. In 1959, Mahendra presented a new constitution, with plans for elections. In the first national elections in the country's history, the Nepali Congress won 74 out of 109 seats. B. P. Koirala became the prime minister. The new constitution included two legislative houses: a Maha Sabha (upper house) of 36 members, half of them elected by the lower house and the rest nominated by the king; and a Pratinidhi Sabha (lower house) of 109 members, all elected through adult suffrage. The leader of the majority party in the lower house would become prime minister, governing with a cabinet of ministers. The king could act without consulting the prime minister, and could even dismiss him. The king also had control over the army and foreign affairs and could suspend all or part of the constitution.

The Koirala government abolished *birta* tenure (tax-free landholding of the aristocracy) in October 1959 and the autonomy of the western hills principalities. In 1960 the government revised a crucial Trade and Transit Treaty with India and also negotiated another agreement on the Gandak River Project, guaranteeing territorial jurisdiction and free provision of water to Nepal. The government also planned a relatively populist Second Plan (1962–65). The king publicly opposed democracy in principle and upheld his supposed divine rights. Backed by the army, the aristocracy, and conservative landowning groups, on December 15, 1960, he imposed emergency powers to dismiss the cabinet and arrest its leaders, including B. P. Koirala, who spent eight years in prison and another eight years in exile.

On December 26, 1961, King Mahendra appointed a council of five ministers to help him run the administration, and several weeks later political parties were declared illegal. The NCP leadership called for struggle against the new order and formed alliances with other parties, including former critics, the Gorkha Parishad (Gorkha Council) and the United Democratic Party. In late 1961, violent actions, organized by the Nepali Congress in exile, erupted along the Indian border.

On December 16, 1962, a new constitution created a four-tier *panchayat* system, with 4,000 village assemblies, then *zilla* (district) assemblies, town assemblies, zonal assemblies, and a Rashtriya (National) Panchayat, in Kathmandu, without political parties. The Rashtriya Panchayat, consisting of about 90 members, could not criticize the royal government, debate the principles of party-less democracy, introduce budgetary bills without royal approval, or enact bills without the king's approval. The army, judiciary, and the Public Service Commission were controlled by the king, who could amend the constitution at any time. Over a ten-year period, the king restored the absolutist monarchy of Prithvi Narayan Shah.

Elections to the Rashtriya Panchayat in March and April 1963 brought a large number of members formerly associated with the Nepali Congress to power. However, a conciliatory NCP leadership began announcing its faith in democratic ideals under the king's leadership. In 1968, as a three-way split developed in the NCP, the king began releasing political prisoners, including B. P. Koirala on October 30.

Some land reforms were carried out, mainly at the cost of the *Ranas*. A new legal code promulgated in 1963 replaced the Muluki Ain (Law of the Land) of 1854. The new code proclaimed legal equality of all persons, abolishing caste-based legal discrimination as well as formal gender inequality.

King Birendra and the *Panchayat Raj* (Rule)

King Birendra succeeded Mahendra in 1972. Students at Tribhuvan University called an indefinite strike in August supporting a ten-point charter of demands. That month, 100 armed men attacked an eastern Tarai village, killing a constable in a revolutionary act supposedly linked to B. P. Koirala. In June 1973, terrorists hijacked a Royal Nepal Airlines airplane to India, escaping with 30 million Indian rupees, and in 1974, armed attacks and assassination attempts continued.

On December 30, 1976, Koirala and his associate, Ganeshman Singh, were arrested on returning to Kathmandu. After considerable public agitation, Koirala was released in June 1977, due to ill health. Student protests continued through 1977 and 1978 against the *panchayat* system and for human rights.

In a national referendum on maintaining the *panchayat* system, held in May 1979, King Birendra won 54.7 percent of the 4.8 million votes cast. But realizing that popular opposition was strong, the king accepted the principle of freedom of speech and political activity, forming an 11-member Constitution Reforms Commission. The constitution was amended to establish direct elections to the Rashtriya Panchayat. In elections held on May 9, 1981, all political parties refused to participate, aside from pro-Moscow factions of the Communist Party of Nepal and a "Group of 38" from the Nepali Congress. Fifty-two percent of voters turned out, choosing 111 representatives to the Rashtriya Panchayat. Surya Bahadur Thapa was made prime minister.

In 1983, a serious food crisis and charges of corruption caused the fall of Surya Bahadur Thapa's government. Lokendra Bahadur Chand and Thapa led rival factions. The second general election to the Rashtriya Panchayat in 1986 was boycotted by most parties, including the Nepali Congress, though communists and several small parties participated. With a 60 percent voter turnout Marich Man Singh Shrestha became prime minister, with 60 percent support in the *panchayat*.

From 1987–8 to 1988–9, economic growth fell substantially from 9.7 percent to 1.5 percent, sparking mass unrest. Indian economic pressures causing a decline in Nepalese exports were a major factor in this economic downturn, and popular anger was directed at both India and the monarchy. In September 1988 the NCP organized a National Awakening Week during which 3,500 party members committed non-violent civil disobedience. Anti-India student demonstrations began to assume anti-government tones, and all campuses in Kathmandu closed for two months. The stage was set for the upsurge of the 1990s.

Neruda, Pablo (1904–1973)

Heather Squire

Pablo Neruda was a Chilean poet, activist, communist, and diplomat. His poetry – which has sold millions of volumes in many languages and earned him the 1971 Nobel Prize in Literature – took on many forms and subjects, but became patently more political in the 1930s as a result of his encounters with radical leftists during the Spanish Civil War. Neruda's provocative and passionate verses have inspired resistance and love, supported struggles against capitalism and for justice, and elucidated the suffering and oppression of poor people throughout the world.

Neruda was born in Parral, Chile to a railway worker father and a teacher mother. His mother died soon after his birth and he and his father went to live in Temuco, where he met his mentor and friend, Gabriela Mistral (who would become the 1945 Nobel Laureate for Literature). Neruda published his first work at the age of 13, and would publish his best-known work by the time he was 20 – *Veinte poemas de amor y una canción desesperada* (“Twenty Poems of Love and a Song of Despair”). He traveled a great deal throughout the following years, eventually ending up in Spain in the early 1930s. As Spain descended into civil war, Neruda became politicized, thanks in no small part to his radical friends, as well as his horror at the execution of one of them – Federico García Lorca – by Franco loyalists. He would consider himself a communist for the rest of his life.

Neruda returned to Chile in 1943 and soon after visited Peru, recording his thoughts and observations in *Alturas de Macchu Picchu* (“The Heights of Macchu Picchu”), a 12-volume collection of poems which celebrated the achievements of the Incas, while condemning the slavery and suffering that made these achievements possible. It is considered to be his preeminent work

of political poetry. In 1945 he became active in the Chilean Communist Party, serving as a senator and then campaign manager for González Videla, who eventually betrayed the party. Neruda went into exile after he denounced Videla, and did not return until 1952, at the request of Salvador Allende and the Chilean Socialist Party to support their campaign for presidency (Neruda was a very popular and explicitly left-leaning literary figure by this time). Allende did not win the 1952 election, but would eventually triumph in 1970.

On September 11, 1973, a coup d'état led by the Chilean military would depose Allende and install General Augusto Pinochet, signaling the beginning of almost 20 years of political repression, human rights violations, a massive privatization of state industries, and a rollback of the existing social safety net. Suffering from terminal cancer, Neruda died of heart failure just 12 days after the coup. Neruda's funeral, although heavily policed, became the first major public protest against the Pinochet regime; thousands of people openly defied the imposed curfew and prohibition of public mourning. Because of his political and cultural influence, Neruda's poetry was banned in Chile until 1990.

Netherlands, protests, 1650–1800

Michael F. Gretz

Following the successful Dutch Revolt against Spain, the United Provinces of the Golden Age

in the Netherlands continued. However, tension between the rising merchant class, whose political power was embodied by the States General, and the old military nobility, symbolized by the House of Orange, persisted and formed the basis for most of the unrest and protest from 1650 to 1800. While internal political and social conflict was far from absent, the Netherlands did not experience another major rebellion in the period from the 1650s to the 1740s. The foremost rebellion was the Patriot Revolt led by enlightened professional classes seeking to end the domination of the House of Orange. The Netherlands, like much of Western Europe, was influenced by the Enlightenment, the French Revolution, and Napoleonic wars.

In 1747 William III of Orange captured the office of Stadholder, using the position to curb States General power. Most of William III's actions were supported by the popular classes, who perceived the States General as an oppressive power ruling in the interest of the propertied classes. The Orangists held power until the early 1780s, when the Patriot Revolt broke out to challenge the power of the Stadholder. The Patriot Revolt was led predominantly by members of the urban professional classes, who used democratic political theory influenced by the Enlightenment and the American Revolution to call for popular control of government. The Patriots organized local militias and seized control of municipal councils in many cities across the Netherlands. Their stated goals were to restore the liberties of the Dutch people lost as a result of Habsburg domination, and in this they saw themselves as continuing the unfinished work of the revolt against Spain two centuries earlier.

Despite early success, the Patriot Revolt was eventually defeated by an Orangist counter-revolution, and the leaders of the revolt fled into exile, mostly to France, where they joined the tide of democratic agitation in that country. When democratic revolution broke out in France in 1789, many Dutch Patriot exiles witnessed it firsthand, and many joined the French armies that carried their revolution across their borders in the 1790s.

In 1795 the French revolutionary armies reached the Netherlands, rekindling the Patriot fervor of the previous decade. Helped to power by the French, a new Dutch Revolution established the Batavian Republic in 1795. Although the new

republic functioned essentially as a satellite of revolutionary France, it implemented a series of internal political reforms, centralizing the government, abolishing privileges of the provinces, and curtailing the authority of organized religion. The Dutch Batavian Republic realized its ambitious goals without the level of violence and repression that took place in revolutionary France. The Batavian Republic was an important ally of France in its struggle with Britain and the other monarchical powers of Europe. In 1799 British and Russian troops invaded the Netherlands, but were resisted by the Dutch population and eventually defeated by the French army.

When Napoleon Bonaparte seized power in France, he initially respected the Batavian Republic's independence. However, repeated Dutch violations of his continental policy banning British imports to the European mainland led Napoleon to install his brother, Louis Bonaparte, king of Holland in 1806, marking the end of the Dutch Republic after more than two centuries of survival. Following Napoleon's defeat at Waterloo, the victorious powers, meeting at the Congress of Vienna, established the Kingdom of the United Netherlands, remaining in place as a constitutional monarchy with limited powers, under the House of Orange-Nassau.

The Patriot Revolt and the Batavian Republic are generally regarded by historians as part of the wider democratic revolutionary wave of the late eighteenth century primarily influenced by the intellectual developments of the Enlightenment. Some historians regard the Batavian Republic as an artifact of French influence; however, the Patriot Revolt, preceding the French events of 1789, demonstrates the specifically Dutch aspect of this broader European and Atlantic movement.

Netherlands, protests, 1800–2000

Michael F. Gretz

The Netherlands escaped most of the social upheavals that devastated much of Europe during the nineteenth century. The revolutionary wave of 1848, even though it came as close as Belgium, did not extensively disrupt the Kingdom of the Netherlands. Similarly, during the Paris Commune in 1871, Dutch cities remained relatively quiet, due in part to the substantial revolutionary process the country had endured centuries earlier. The republican form of government was already in place in the Netherlands, well before most other European countries. Moreover, while industrial development proceeded apace throughout much of Western Europe, the Dutch economy, predicated for centuries on commerce and finance, was slow to adopt manufacturing.

It was not until the late nineteenth and early twentieth centuries that industrial class conflict broke out in the Netherlands, albeit in the form of strike activity rather than efforts to overthrow the state. The Dutch workers' movement, like those in less industrially developed nations, was originally dominated by anarchism rather than the Marxist socialism taking hold in Germany, and to an extent in France and Belgium. Nevertheless, a fledgling socialist movement emerged in the late nineteenth century rooted in the Socialist Democratic Workers' Party (SDAP), which formed an important part of the wider European socialist movement before and after World War I.

When Dutch railway workers engaged in a wildcat strike against harsh working conditions in 1903, the Dutch socialist movement produced a frenzy of theoretical work to try to understand the cause of the events. A more radical wing of the socialist party developed, centered on a current known as the *Tribunisten*, after the

title of the faction's newspaper. The *Tribunisten*, particularly the astronomer Anton Pannekoek, were active in the political and theoretical debates within European social democracy before World War I. Pannekoek, like German left-wing socialist Rosa Luxemburg, argued that the development of industrial capitalism created a mass working class, and the tactics of its struggle against capitalism could no longer be confined to the arena of bourgeois parliaments. Pannekoek, like Luxemburg, championed the mass strike like those sweeping the Netherlands in 1903, and the mass worker insurrections during the Russian Revolution of 1905–7.

Even before the onset of World War I the *Tribunisten* broke with the reformist SDAP, creating its own Social Democratic Party (SDP). The SDP was active in opposing the decision of most European socialist parties to support their governments when World War I finally broke out in 1914. However, the Netherlands did not engage in hostilities during the war, and the intensity of working-class militancy experienced in Russia and Germany did not materialize to the same degree.

Still, in November 1918, a year after the Russian Revolution and with Germany in social chaos, the Dutch working class gained militancy and some workers and soldiers formed the same type of workers' councils that had been the hallmark of the Russian and German revolutions. Nevertheless, the SDAP, with which most Dutch workers sympathized, was opposed to a revolution and worked behind the scenes to calm the tensions and diffuse working-class anger. Despite the inability of the Dutch working class to launch a revolt, the country's communists were among Europe's most radical movements. The main figures behind the *Tribunisten* – Pannekoek, Henrietta Roland-Holst, and Herman Gorter – were central in founding the new Communist Party of Holland (CPH), later the Communist Party of the Netherlands (CPN).

Lenin and the Bolsheviks recognized the CPN as one of the more serious communist parties in Western Europe. When the Communist International was founded in 1919 as an international organization dedicated to spreading the Russian Revolution across the world, the decision was made to locate its Western European branch in Amsterdam. Although the Communist International quickly abandoned the idea of an Amsterdam Bureau, during its brief existence it

was a central element in the controversy that sprang up in the international communist movement regarding the phenomenon of “left-wing communism.” The Dutch communists were central figures in a movement within the Communist International that argued that in Western Europe the revolution would proceed along a different path than it had in Russia. Because the Western European working class, unlike in Russia, had been exposed to decades of parliamentary democracy, communists would have to fight a more patient battle than had been necessary in Russia in order to raise workers’ class consciousness to the point of launching a revolution. They argued that revolutionaries in Western Europe would have to fight first against the cultural and psychological attachment the workers had to democracy in order to make them understand the necessity of revolution. Therefore, the left-wing communists shunned participation in parliaments and the trade unions. This earned them Lenin’s ire in his 1920 pamphlet *Left-Wing Communism: An Infantile Disorder*, where he lambasted them as failing to understand the basic essentials of communist revolution.

During the interwar period the Netherlands remained mostly calm, although a small left-wing communist movement continued, which rivaled both the socialists and the official Communist Party. Building on the left-wing communists’ aversion to trade unionism, the “council communists” sought to create a new workers’ movement centered on the working-class’s ability to form workers’ councils in times of intense conflict. The council communists perceived the workers’ councils as an alternative to the party hierarchy of the official communist movement and the class collaborationism of the Socialist Party. Following Hitler’s rise to power in Germany in 1933, the Dutch Council Communist movement was strengthened by the arrival of like-minded dissident communists fleeing Nazi repression.

When World War II broke out in Europe in 1939 the Netherlands initially remained neutral. However, the Nazi Blitzkrieg overran the country in 1940 and the Dutch experienced most of the remainder of the war as an occupied nation. Individual acts of resistance to the Nazis were numerous, and the Dutch had an exceptional record of resisting Nazi anti-Semitism. The Netherlands had long been an important destination for European Jews fleeing persecution elsewhere, and while sympathy for the Nazis

was not absent, many Dutch engaged in heroic individual actions to help hide their Jewish fellow citizens from Nazi authorities.

In perhaps the most dramatic expression of the Dutch resistance to Nazism, in 1941 a protest movement led by students angered by the persecution of the nation’s Jews engulfed many Dutch cities. Before long, the student protest movement had become a massive strike that also spread to most of the major cities in the nation. While rejection of anti-Semitism was an important impulse to the strike, the Dutch workers were also protesting against the harsh wartime labor conditions and the deportation of Dutch workers to Germany. Despite the breadth of the strike, the German army was able to regain control of the situation with severe repression, resulting in the deaths of many workers. While the CPN was instrumental in initiating the strike, it spread with a rapidity few expected, and the remaining left-wing communist groups also sought intense resistance against the Nazis.

Following World War II, the Netherlands, like much of the rest of Europe, was in desperate shape. Food rationing was common in the immediate postwar years. However, spurred on by massive aid under the Marshall Plan of the United States, the Netherlands quickly recovered, and entered a period of great prosperity and national renewal. Massive social changes consumed the nation, with women gaining a more equitable role in social life, and education becoming increasingly available to the children of the working class.

In the 1950s and 1960s a consumer society was taking shape that challenged traditional social mores, and posed the possibility of a life of self-definition and self-exploration. During this period a youth-based social movement developed known as the Provos that challenged traditional morality and advocated a communal, yet hedonistic, society in which individuals could experience the fullness of their human potential. The Provo movement advocated for such things as looser drug laws, a liberalization of sexual morality, and greater respect for the environment. In many ways the spirit of the Provos, although initially regarded with skepticism by mainstream Dutch society, was slowly integrated into Dutch culture, evidenced today by the nation’s progressive social mores and generally libertarian culture.

During this same period the Netherlands, like most other European nations, experienced a severe

labor shortage and began to encourage immigration, mostly from Muslim countries in Africa and the Middle East. Immigration from parts of the former Dutch colonial empire also increased, making the Netherlands a multi-ethnic society in the latter part of the twentieth century. The growing diversity of the Netherlands has led to strong tensions in Dutch society in the twenty-first century, with some politicians arguing that immigration should be curtailed, and the Dutch Muslim population closely watched with increasing fears of terrorism following the September 11, 2001 terrorist attacks on the United States. Others who oppose immigration and the Muslim presence in the Netherlands have claimed that many Muslim immigrants do not share the same progressive values that define Dutch society, and that they are too prone to violence against women and homophobic acts.

Tensions over Muslim immigration to the Netherlands have come to a head in recent years, with two notorious acts of violence. First, in 2002, the openly homosexual politician Pim Fortuyn, who was harshly critical of Muslims and argued in favor of curtailing immigration, was assassinated by a Dutch activist for animal rights who claimed he was acting on behalf of Dutch Muslims. Then, in 2004, filmmaker Theo Van Gogh was killed by a Dutch Muslim angered over a film he had produced that was perceived as anti-Muslim. This murder led to a series of protests in many Dutch cities and Muslim religious sites were vandalized.

Social and political tensions regarding the status of the Dutch Muslim population continue, as evidenced by the 2006 decision of the Dutch immigration minister Rita Verdonk to strip Ayann Hirsi Ali, a Somali immigrant and member of the Dutch parliament, and herself a strong critic of Muslim misogyny, of her citizenship due to an inaccuracy in her asylum petition.

Today, the Netherlands is still overall one of the world's most open and tolerant societies. However, the recent social and political tension regarding the status of immigrants, many of Muslim origin, threatens realignment in Dutch politics, with the possibility that a more organized and politically active right-wing anti-immigrant movement could develop.

Neto, Agostinho (1922–1979)

Justin Corfield

António Agostinho Neto was an Angolan nationalist leader who fought against Portuguese colonialism and became the first president of the People's Republic of Angola on November 11, 1975. He was born on September 17, 1922, in the village of Kaxikane, Icolo e Bengo, some 40 miles southeast of Luanda, the capital of the Portuguese colony of Angola. His father was a Methodist minister, and his mother was a teacher. He studied at Salvador Correia High School, and from 1944 to 1947 he worked in the Luanda Public Health Service. During this time he befriended Reverend Ralph Dodge, an American Methodist bishop. Through Dodge he gained a scholarship to the University of Coimbra in Portugal to study medicine, and later transferred to Lisbon University Medical School.

Neto became an *assimilado* – that is, one of the tiny minority of colonial Africans and mulattos who were granted Portuguese citizenship on the basis of having been assimilated into Portuguese culture. Even so, he became interested in politics, gaining recognition as a notable nationalist poet and advocate of separatism. His poetry rapidly gained him the attention of writers and literary figures around the world. His first poems were published in book form in *Quatro*

Poemas (Four Poems), published in 1961, followed by *Con Occhi Aschiutti* (With Dry Eyes) and *Sagrada Esperanza* (Sacred Hope), published in 1974.

Because of Neto's nationalistic political activities, he was arrested in 1951 by the police of the Estado Novo regime and sentenced to three months in Caxias prison. This led to protests from prominent figures like Jean-Paul Sartre, François Mauriac, Diego Rivera, and others. In 1955 he was arrested again and was sentenced to two years in prison, but was released a year later following more international protests. He was also suspended from his studies until 1957, delaying the completion of his medical degree until 1958. In the following year Neto returned to Angola as a doctor but continued to take part in nationalist politics. He was arrested on June 8, 1960, despite local protests, and held in Cape Verde and later Lisbon.

Released, Neto was rearrested in the following year and held at Aljube prison, then put under house arrest. The Portuguese again succumbed to international protests for his release, but decided not to let him leave Portugal. With the aid of members of the Portuguese Communist Party he escaped via Morocco, eventually returning to Angola and being elected president of the Popular Liberation Movement of Angola (Movimento Popular de Libertação de Angola, MPLA) in 1962. The MPLA had been formed in 1956 from a merger of the Angolan Communist Party and Party of the United Struggle for Africans in Angola (PLUA).

From 1960, the MPLA organized an insurgency against Portuguese rule. Neto, a Marxist, gained support from the Soviet Union and helped ensure that the MPLA emerged as the main national liberation party. It captured Luanda from the forces of Holden Roberto's National Front for the Liberation of Angola (Frente Nacional de Libertação de Angola, FNLA) and Jonas Savimbi's National Union for the Total Independence of Angola (União Nacional para a Independência Total de Angola, UNITA). The collapse of the Estado Novo in 1974 saw Portuguese colonialism in Africa draw to an end. Power in Angola was to be handed to a transitional coalition government, including the three main independence forces, but the coalition collapsed.

With Cuban and Soviet military aid, Neto was proclaimed the first president of the People's

Republic of Angola on November 11, 1975; a large part of the Portuguese population fled, as did UNITA and FNLA supporters. The MPLA secured control of other major urban centers for a time too. Neto was awarded the Lenin Peace Prize for 1975–6, and the MPLA was declared Marxist-Leninist. However, Neto's continued refusal to compromise with the FNLA and UNITA prolonged the civil war in independent Angola that was fed by Cold War rivalries and South African actions. In spite of the immense mineral wealth of Angola, the country remained poor and heavily divided.

Neto, suffering from cancer of the pancreas, went to Moscow for medical treatment and died on September 10, 1979. His body was embalmed by the team who worked on Lenin's body, but in 1991, in accordance with the wishes of Neto's widow, it was finally buried. Neto's birthday is a public holiday celebrated as National Heroes Day in Angola, and the main university is named after him.

New Australia movement

Anne Whitehead

In 1893 approximately 500 white Australians, rebelling against perceived inequalities and injustice in the system at home, set off for South America with their ideological leader, an English journalist William Lane (1861–1917), to attempt to live out his vision of a socialist utopia in the Paraguayan wilderness. The Australian poet Henry Lawson, tempted to go with them, wrote that it was “the hope of something better than the present or the past” that would “save us in the end” (*New Australia Journal*, March 1894). But the settlers

soon divided into two rival camps and the scheme ultimately failed, as had been predicted back in Australia. The second commune, Colonia Cosme, actually persisted for 16 years along broad socialist principles, although it fell dismally short in terms of gender equality, while the notion of racial equality was never contemplated and actively opposed. Today, a few thousand descendants of that socialist experiment still live in Paraguay; a few were even candidates for the Colorado Party of the infamous right-wing dictatorship of General Alfredo Stroessner (1954–89).

The plan was put into action on July 16, 1893, two years after the collapse of a bitter five-month-long shearers' strike in the northern colony of Queensland. William Lane and the first shipload of 220 emigrants set sail from Sydney Harbor, hundreds of people lining the foreshores to see them off, with well-wishers bobbing on the waves in launches and dinghies. Government authorities condemned the venture and the press generally mocked it. The Sydney *Bulletin* described it as "one of the most feather-headed expeditions ever conceived since Ponce de León started out to find the Fountain of Eternal Youth, or Sir Galahad pursued the Holy Grail." A second batch of 199 emigrants left in December of that year, and was followed by other groups making their independent way to Paraguay, in the heartland of the South American continent.

It was considered baffling, even then, that over 500 people should leave Australia in the 1890s, a time when the continent's enormous agricultural potential was being recognized and exploited, the first Labor Party members were being elected to colonial parliaments and modest social reforms effected, and political theorists from Europe were arriving to study a system where ordinary working people had the chance to reach the top politically and economically – a system that some described as a "social laboratory" for the world. It was seen as absurd, outrageous, that the deserters were leaving for a tiny, war-ravaged land, where revolutions and dictatorships were endemic, social reforms virtually unknown, the climate inhospitable, amenities of life few, transport difficult, and the language incomprehensible to the newcomers.

But they went, principally because of the vision of that one man, William Lane: slight, bespectacled, prematurely balding, and physically unprepossessing with a crippled left foot, but with an electrifying ability to compel listeners and enthuse

people to his cause. The immediate impetus for the expedition was the decisive crushing of the 1891 shearers' strike, which meant workers were ready to listen, but the records show that Lane had entertained a dream of establishing a commune in South America – specifically Argentina – for at least two years before that.

Lane was born in Bristol, England, the eldest son of a mother from Gloucestershire and an Irish Protestant father, a landscape gardener whose alcoholism impoverished the family. Young William was only 16 when, after the death of his mother, he left to try his luck in Canada and the United States, where he lived and worked – as a printer, compositor, and journalist – for eight years (1877–85). Here his political ideas were formed. He arrived in time to experience the controversy of the Great Railway Strike of 1877 in the US and the violence of its suppression. He joined the Order of the Knights of Labor in Detroit and absorbed the movement's principles on cooperative institutions and, nominally, on gender equality. He read Henry George's *Progress and Poverty* (1879) and took in the arguments for a "single tax" and the notion that, once freed from the tyranny of privilege and the stranglehold of poverty, humankind could become a creative force. But, most significantly, in the 1880s the US for a century had experienced the greatest flourishing of communitarian experiment the world had ever seen; there were literally hundreds of communal ventures, both religious and secular – Fourierists, Rappites, socialist Owenites, Icarians, Ruskinites, Oneidans, Amanans, Shakers, and Mormons – with scores more communities being implemented during Lane's eight years' residence. Some were set up with nostalgia for a pre-industrial past, others with millenarian expectations – a sense that the world was being reshaped in preparation for an apocalyptic future in which humankind would discover its true destiny. Lane was undoubtedly influenced by this ferment of ideas and the optimistic and abundant literature of nineteenth-century utopianism, shaping his dream of taking part in a community someday, somewhere, to be defined by his own developing ideas.

By 1885 William Lane was disillusioned with America, with the imbalance of wealth, economic turbulence, and bitter tensions between the haves and have-nots. With rapid urbanization and new technological advancements, white Americans resented the disappearance of accessible cheap

land, the influx of blacks from the South, and shiploads of immigrants from southeastern Europe. Lane ceased to believe he was in the land of “the brave and the free” and left for another, which he thought still could be. In 1885 he traveled to Australia with his American wife Anne (*née* Macquire) and younger brother John, who later recalled William talking on shipboard about his utopian dream: “whenever my brother organized his colony we were to throw in our lot with it and him.” William took in his luggage Adam Smith’s *Wealth of Nations*, Henry George’s *Progress and Poverty*, Ricardo’s *Principles*, and Gronlund’s *Co-operative Commonwealth*. It is recorded that he also carried Marx’s *Das Kapital*, but if so it was the German edition and there is no evidence Lane could read in that language. Undoubtedly Lane later attempted *Capital* after it was published in English translation in 1887, but he decided “to the everyday man, Marx is unreadable.” While he certainly viewed himself as no “everyday man” and became familiar with Marx and Engels’s *Communist Manifesto*, the term “communism” for Lane always harked back to a romantic view of the secular socialism of the Knights of Labor and the intentional communities he had admired in the United States.

The Lanes arrived in Brisbane, capital of the northern colony of Queensland, in late 1885 and William was soon famous for his fiery, eloquent journalism. In 1890 he became editor of the colony’s first labor movement newspaper, the *Worker*, and offered his readership of shearers, shedhands, drovers, and fencers his ideas on socialism and the rights of trade unionists.

Lane came to idealize the independence and toughness of the Australian Bushmen – he sought to mythologize them, just as the gauchos of Argentina were being mythologized – but he deplored the harsh conditions in which the men lived and labored. After a financial crash in 1890, employers sought to reduce their wages and conditions even further and to bring in non-union labor. At the commencement of the 1891 shearing season, union shearers and shedhands went on strike. Lane supported their cause in passionate editorials – and he in turn became known as the “Bushman’s hero.” In Central Queensland 10,000 men held out in makeshift strike camps for almost five months, with government forces ranged against them with Gatling guns and Nordenfeld field pieces. The situation

was explosive. Newspapers in southern colonies sent “war correspondents” and it has been argued that Australia came as close as it has ever been to civil war.

At last in May 1891 the union shearers capitulated – because of hunger, exhaustion, and the privations for their families – in the face of the overwhelming firepower of the Queensland government. But with the strike over, hundreds of men found they were on employers’ blacklists and unable to obtain work. It was then that they listened to William Lane, who had rekindled his dream of founding in South America *The Workingman’s Paradise*, the title of a polemical novel he was then writing for recruiting purposes and to raise funds for imprisoned strike leaders.

“Come out from this hateful life,” Lane called to them, promising instead a life of mateship, sharing, and equality. “The first duty of each to be the well-being of all and the sole duty of all to be the well-being of each.” The New Australia Cooperative Settlement Association was formed and over 2,000 prospective colonists signed up in 1892, 600 of them subscribing the required £60, for most of them all their life savings. The women, denied the franchise in Australia, were promised: “The Association maintains for women absolute equality with man, and regards marriage as inviolable. Both married and single women vote and share equally with men” (Lane 1892). Single women of good character between 18 and 25 years of age were offered membership free of charge. When £30,000 was collected the ship the *Royal Tar* was purchased. Lane’s ambition was grandiloquent. Their own ship was needed to carry the thousands who would soon join them. He did not plan to create a mere village in the backwoods but a functioning model of socialism that would be a vanguard for working-class people in all lands. “We will write the history of humanity,” he was fond of saying, “on the rocks of the Andes.”

His reference to the Andes, rather far from swampy Paraguay, indicates Lane’s preferred initial location for his utopian enterprise. The majority of men among his intending colonists were sheepworkers, and he knew that the plains of Patagonia were being opened up for extensive sheep farming by English landowners and Scottish crofters, thereby providing a bulwark against Chile’s plans to expand eastwards. He was convinced the Argentine government would be eager to offer the Australians a large tract of land

in the south and leave them to run it according to their own laws. In 1891 he dispatched three of his lieutenants to formally submit this request and to prospect for suitable land. As it turned out, the government of Carlos Pellegrini left the prospectors in no doubt that any sheep farming land in the south was available only at market price and strictly subject to Argentina's laws. However, the prospectors *were* authorized, as a strategy against Chile, to select from public lands in the provinces of Río Negro, Chubut, and Neuquén. The Australians envied the Welsh their farming success in the Chubut, but found all the fertile land in this region occupied.

In July 1892 they hired horses and gloomily set off further west, targeting for investigation land on the southern shore of Lake Nahuel Huapi near the Chilean border. But they despaired of the desert landscape they passed through, and, after riding over 622 miles (1,000 kilometers) across difficult terrain, they gave up and turned back. The land they had rejected and never saw, with its alpine meadows and forests of cypress, cedar, and beech bordering the lake, was some of the finest on the continent, today the ski and boating resort of San Carlos de Bariloche.

The prospectors were about to return, dejected, to Australia when they received a promising invitation from the government of land-locked Paraguay. They traveled north to Asunción and were overwhelmed to find government ministers only too anxious to accommodate them. They were offered soft green pasture land, watered by streams and interspersed with pockets of rainforest with massive trees and ferns, among which flittered hummingbirds and butterflies. After their 90 days in the arid wastes of the south, they felt they had stepped into a Garden of Eden. On January 19, 1893, Lane received a cablegram: "Found splendid land in Paraguay."

Paraguay welcomed the colonists, offering them a generous land grant of 187,000 hectares or 463,000 acres, because it was still recovering from the devastation of its population just 20 years before. During the War of the Triple Alliance (1865–70), still the bloodiest in Latin America's history, the fiercely patriotic Paraguayans, driven by the Napoleonic fantasies of their military dictator, Francisco Solano López, battled the combined armies of Argentina, Brazil, and Uruguay. At the end of the five-year war the country's destruction was almost total. Paraguay had lost a staggering 90 percent of its male popu-

lation. Sir Richard Burton wrote that the world had rarely seen such a tragedy, "this unflinching struggle maintained for so long a period against overwhelming odds, and to the very verge of racial annihilation" (Burton 1870). Starving women and children begged for food as they struggled to cultivate land. It became a country of widows, old men, and orphans. For at least two generations, the women of Paraguay resigned themselves to be laborers and share the few men polygamously, while the church looked the other way. The country desperately needed new immigrants and fresh bloodstock.

But the Paraguay government was unaware that its generosity was to be betrayed. All intending Australian colonists were required to sign pledges not only to observe teetotalism, but "the Color Line." Fraternization with Paraguayans was forbidden. Lane's concept of social justice was exclusively for Europeans.

Despite Australian press derision and bureaucratic obstruction, on July 16, 1893 the *Royal Tar* – a 598-ton barque-rigged sailing ship just 31 feet wide and 171 feet long – was ready and the first batch of 220 colonists set sail. There were 46 bachelors who were mainly bushworkers, 37 married couples, and 93 children; but except for a nurse and a few adolescent girls traveling with their families, Lane had excluded single women until the settlement was established. The pioneers voyaged across the Pacific, perilously around Cape Horn (passing whales spouting, icebergs in the distance), then sailed up the South American continent's east coast and at Montevideo transhipped to a river boat. Another journey 1,000 miles (1,600 kilometers) upriver brought them to Paraguay's capital Asunción, then a steam train ride into the heartland of the country, and finally a trek in covered wagons into the dense rainforest to reach the site of their land grant, 109 miles (176 kilometers) southeast of the capital. Colonia Nueva Australia was founded by the pioneers on September 28, 1893 in torrential rain. One of Lane's first actions was to evict over 1,000 Guaraní Indians living on the site, their traditional land. The Indians were described as "squatters" and told to move. Reluctantly, as the colonists had government authorization, they submitted.

At Nueva Australia there was to be no racial mixing, "the Color Line" was to be rigidly observed, with everyone signing the pledge: "We refuse to mix with colored races; we want our children to be as white as we are, capable of

upholding our principles and understanding our ideals." The country was peopled mainly by women, famed for their attractiveness, and the Australian colony was predominantly single men, young and virile. It was all testing the faith rather too sternly.

But William Lane had high hopes of a recruiting drive for women in Australia and Great Britain. A few British families and bachelors actually made the journey to join the movement, but the Anglo single women stayed away in proverbial droves. Most Australian socialist women, like the majority of their male colleagues, believed that the battle against capitalism needed to be fought at home and nothing could be achieved by running away.

At Nueva Australia the bachelors were not able to drown their frustrations in alcohol, having all signed the other pledge to teetotalism. Before long three men broke loose, went into the nearby village, took some wine with the priest and flirted with some local women. When they returned to the colony, Lane insisted on the expulsion of the three for "persistent violation of the clause relating to liquor drinking." The men were forthwith expelled, with Paraguayan soldiers summoned to see them off the land; this resulted in uproar, many resentful colonists siding with the dissidents.

It was all a recipe for disaster. The factional intrigues at Nueva Australia escalated into ructions, fistfights, more expulsions, and desertions. Despite dire warnings sent back to friends and relatives in Australia advising intending colonists to abandon plans to make the trip, the next batch of 200 departed from the southern city of Adelaide in December. They arrived to a scene of chaos, finding many of their comrades besieging the British consulate in Asunción, unsuccessfully pleading for assistance with passages back to Australia. Some of the stranded men went to Patagonia to earn their way home as sheep shearers.

In April 1894, just seven months after the arrival in Paraguay, there was a split at the colony. William Lane and 63 faithful followers walked out and, thanks to the indulgent Paraguayan government, were able to form a second commune, Colonia Cosme, 45 miles (72 kilometers) to the southeast, near the village of Caazapá, but in an unpromising location, a fork between two rivers which tended to flood. Lane called it "a quiet, safe start on bedrock."

And yet intending colonists continued to arrive at Nueva Australia, making their way independently: the feminist and labor organizer Rose Summerfield, her husband Jack Cadogan, and trade union official Gilbert Casey and two family groups from England, the Kennedys and the Smiths. But in 1899 the Nueva Australia colony reverted to separate title and private enterprise, although holding together in a loose cooperative described as an "Industrial Co-Partnership." Most of the communards departed, and those who remained divided the lush land between them. Today a few of their descendants are wealthy cattle *estancieros*.

But at the second settlement of Colonia Cosme, the 64 "true believers" were determined to hold to the original aims – except for the ideal of gender equality, which was preemptorily abandoned in Cosme's new charter. Patriarchy prevailed, meshing comfortably with the wider culture where *machismo* was entrenched. The men cleared the forest (known as *monte* in Paraguay) and put up mud and sapling huts with thatched grass roofs. They cleaned and stumped the land and planted vegetables and saw most of them fail. For the first year they were obliged to buy a supply of beans and maize, supplemented for protein by the occasional monkey, but they were often stalked by the prospect of starvation. Gradually, however, some of their crops, those suited to the climate, came good, and batches of like-minded optimists made independent journeys from Australia to join them. One of these was the 30-year-old school teacher Mary Cameron; she married one of the colonists and later became famous in Australia as the long-lived poet and social justice activist Dame Mary Gilmore (1865–1962).

The Cosme colonists needed commercial industries for economic survival and focused on a sugar cane crop and timber from their forests. A sawpit was constructed, then a barn and a sugar cane crusher with railway tracks laid to trolley the crop in from the fields; but with both industries they were thwarted by the distance from the market in Asunción and the tendency of the surrounding rivers to flood and isolate them.

Nevertheless, they were upheld by a strong community spirit, huddling together on logs as dusk fell for readings from "Cosme Evening Notes" and from Shakespeare, Tennyson, and Robert Burns. They had a library of 600 volumes and the thatch-roofed dining hall for games

of draughts and dominoes, Spanish lessons, lectures on poetry, and debates on Marxism, Darwin's *Origin of the Species*, "The New Woman," and "The Perfectibility of Man." The hall, illuminated by flickering oil lamps, was the location for dances long into the night, couples whirling to the Schottische, the Caledonian, and the Lancers, the women with fireflies sparkling in their hair, a Paraguayan custom they adopted. They gathered in the large wooden barn for singalong corn-husking sessions and the whole community for dramatic productions and "black-face" minstrel shows. Occasional cricket matches were also held against a scratch team, the Englishmen of Paraguay – but never against their rivals at Nueva Australia, with whom relations continued to be acrimonious.

The colonists communicated with other like-minded secular socialist communities in the Americas, including the Ruskin Colony of Tennessee (later of Georgia), founded almost at the same time as Nueva Australia by a similarly charismatic leader, Julius A. Wayland; they also kept in touch with Topolobampo, a cooperative settlement established in Mexico in 1886 by some 400 Americans and Canadians. It was a depressing omen when Topolobampo collapsed ignominiously a decade after its inception.

Increasingly there were community disputes at Cosme, often concerning new recruits from Britain, most of whom soon left. More and more, Lane's abrasive personality and inflexible approach to community affairs were resented. When two men were expelled in May 1898 for betraying the communal spirit by independently raising two piglets and having a private barbecue with friends, 40 colonists resigned in outrage. One of them complained that Lane was "a knave seized with the madness of ambition, overpowered with a sense of the divinity of himself and his mission, and for that he will barter truth, justice and the whole world plus the handful of bigots he terms the faithful." Lane by then was exhausted by illness, disillusionment, and stress. He blamed the failure of his dream on the inadequacy of the human material with which he had tried to implement it. "The devil of the Labour movement," he wrote, "is having to work with dirty tools." Finally in August 1899, Lane and his family departed from Cosme, without the benefit of a farewell social. It was a muted, bleak scene as their cart trundled out of the village, the site of the great communist city he would never build. He settled in New Zealand where he

became a journalist, then editor, of a conservative newspaper, the *New Zealand Herald*. He became notorious for his right-wing, rabidly imperialist editorials. But he also spent much of his remaining life attempting to repay debts to followers in Australia who had lost their life savings in support of his dream. One of them wrote with sorrow: "He is still incorruptible, disinterested in motive, and unswerving in pursuit of what he conceives to be the truth; but the mental outlook has narrowed, something of bitterness has entered in his soul." When Lane died in August 1917 a former supporter lamented: "Billy Lane is dead – dear old Billy Lane. And he died in the camp of the enemy!"

However, Colonia Cosme continued to operate on broad socialist principles for another decade, so surviving 16 years from its inception. (This can be contrasted with the six years – 1839–45 – that Queenwood lasted, the officially endorsed community of the much better known Owenite socialist movement in England.) Finally, in 1909, the Cosme land was carved up into private title and the assets divided, with considerable wrangling and two sets of lawyers for the nine remaining families.

The Sydney *Bulletin* in 1893 had predicted: "There will be a few hundred people digging and fencing in a dreary hopeless fashion out in the great loneliness, and living on woe and unsalable vegetables and dreams of home." By the end this was perilously close to the truth. But it did not end in some terrible immolation. It simply dwindled away. For years the Cosme colonists had tried to hold together, they worked hard, they did not drink, they rarely philandered, and they were fanatics for education. But the ideology underpinning their movement – mainly the ideology of their leader – had been white supremacist and male chauvinist. The future for the remaining colonists' children was to make an accommodation with the wider community of Paraguay.

That first-born colony generation was torn in a sense of identity. They were all accustomed to communicating in Spanish and in the Guaraní language spoken by almost everyone in the country, but some still confessed to preferring "a chat in English." They had lived in Paraguay all their lives, but used antiquated Australian expressions such as "tucker" and "smoko," recited the nineteenth-century poetry of Henry Lawson, and regularly enjoyed "damper" (the unleavened bread of the Australian bush) with their afternoon tea. None of that first generation had any

memory of Australia. Bill Wood, or “Don Guillermo,” the eldest of the Wood brothers, known as the last “Patriarch of Cosme,” was 6 months old when his family left Sydney. His seven siblings were all born in Paraguay. But they admitted to not feeling completely Paraguayan and quoted their mother, who said she had been “beached on a foreign shore by William Lane’s dream.” They themselves felt they had suffered from a scrappy education. As a toddler Bill had sat in on Mary Gilmore’s classes, and they all remembered William Lane’s brother John as a good teacher, but after that they had a succession of English instructors sent up by the bishop of the Falkland Islands, each of whom “took fright” and only stayed a few months.

When World War I broke out in 1914, Paraguay was not involved, but 16 young men from Cosme and Nueva Australia enlisted in the British army. They were defending the empire – all the “pink bits” of the map – they had learned about at school. Some of them fought against the Turks at Gallipoli and met Australians in great numbers for the first time. But although at the end of the war they were offered repatriation and free passages to Australia or Britain, they all chose to return to Paraguay. And at last, in 1926, a rigid colony restriction was broken at Cosme with the first marriage to a Paraguayan. Other mixed marriages soon followed.

In 1932 Paraguay became engaged in its own terrible conflict using modern weaponry, the Chaco War against Bolivia. The issue was the arid land of the Chaco dividing the two countries, which Bolivia had claimed since colonial days, but also crucially it was about the oil deposits suspected beneath. The three-year war offered the tragic spectacle of two poor and largely Indian-populated republics striving to exterminate one another. Five young men from Colonia Cosme and ten from the former colony of Nueva Australia volunteered or were conscripted to defend their country. Paraguay was awarded the bulk of the disputed territory in the peace treaty of 1938. No oil in viable quantities was ever found in the wastelands where almost 100,000 soldiers had died. Six were colony descendants who had made the ultimate commitment to Paraguay.

From 1954 to 1989 the Australian colony descendants lived under the brutal regime of General Alfredo Stroessner. In a grim irony in the early 1980s, the site of Lane’s original colony, Nueva Australia, was renamed Distrito Hugo Stroessner in honor of the dictator’s

Bavarian father, with a Mussolini-style heroic concrete monument to him in the village park. A tiny bronze plaque in the corner mentioned “*los Colonos Precursores*,” the colonial precursors who arrived in 1893, but omitted to mention they were socialist Australians. In the old colony cemetery, the headstones of the pioneers were smashed, almost all the inscriptions obliterated.

Just 45 miles (72 kilometers) away – but almost a day’s travel along rutted roads by four-wheel drive – is the site of the remote rival settlement of Colonia Cosme. This poor and infinitely beautiful village is still laid out with wide red-dirt avenues according to William Lane’s vision for a great communist city. Many of the houses are traditional mud and thatch, sheltered by blue gums and white cedars planted by the colonists. A cement-block police station occupies the site of the old social hall, where colonists once danced to fiddle and accordion with oil lamps in brackets along the walls.

A historic function in Asunción in July 1993 celebrated the centenary of the Australian colonists arriving in Paraguay, hosted by the Australian embassy based in Buenos Aires. Some 200 descendants of the two rival colonies of Nueva Australia and Colonia Cosme came together as a group for the first time in 100 years. They were only a fraction of the few thousand Paraguayans with Australian blood in their veins, but they were the ones acknowledging a connection and an interest in the land of their forebears.

They encompassed the political spectrum and every contradiction. Some were redheaded and freckled, in appearance classic Irish Australian, but spoke no English. Others, with coppery Hispanic complexions, were devoted followers of English cricket. They ranged from people still eking out a near subsistence living at Cosme, to one of the wealthiest businessmen in Paraguay; from cattlemen on *estancias* out in the Chaco to a real estate agent in Australia and a writer of comic books with an audience of millions in Spain and Latin America. Not all of them were celebrating the 1989 coup in which General Stroessner fled to Brazil. But one descendant, Enrique Wood, had been arrested by Stroessner’s secret police three times, once merely for wearing a blue shirt, the color of the opposition Liberales Party. He said he was proud to call himself a socialist, but not at all proud to be descended from such a racist colony as William Lane’s. Also present at the gathering was Roger Cadogan, who continues

the work of his father Leon Cadogan, an internationally respected anthropologist, who placed himself at great personal risk by speaking out against the Stroessner regime's complicity "in the enslavement and genocide of the Guyaki forest Indians," as officially reported to the United Nations in 1974 (Arens 1976).

One of the descendants said of his forebears: "They ended up in Paraguay because they were a romantic bunch of lunatics. Their downfall was a lack of reality . . . but from the failure and the waste they survived. . . . If those old boys were in Australia today, they'd be asking for a republic. I know they marched off and left the country, but their fight wasn't with Australia – it was with the regime of the time" (Whitehead 1997: 549).

New Caledonia, protest and revolt

Justin Corfield

Since annexation by France in 1853, New Caledonia, an island chain in Melanesia, east of Australia, has experienced a tumultuous history of protest and rebellion rooted in the struggle for indigenous rights and the French use of the island to exile prisoners for punishment to a penal colony. Situated in the Pacific Ocean, New Caledonia was formally annexed by the French on September 24, 1853, with France eager to take the islands before the British. In 1862, after nine years of the island being controlled by commandants, the French appointed their first governor, Charles Guillain, but New Caledonia remained under military control for the rest of the nineteenth century.

English and French explorers had visited the island since Captain Cook landed there in 1774. He had discovered an island which he named the Isle of Pines (Île des Pins), where he found enough pine to replace some of the worn timbers on his ship, the *Resolution*. The French under the Comte de la Pérouse arrived in the late 1780s, as did more British and American whalers, and then French and British missionaries. The Melanesian society that they found was tribal, with chiefs holding islands, and some local conflicts.

The French decided to use New Caledonia as a penal colony and in May 1864 shipped the first group of convicts from France, via the Cape of Good Hope, to Port-de-France (modern-day Nouméa). These convicts were kept on Île Nou, in Nouméa's harbor, and they were used to work on the building of many of the public buildings in Nouméa, as well as St. Joseph's Cathedral, and many roads on the island of Grande Terre, the main island in New Caledonia. The French also established another penal colony at Camp Brun for those considered most threatening to the regime.

In 1871 large numbers of political prisoners were exiled to New Caledonia following the ending of the Paris Commune. A total of 4,300 Communards, as they were known, found themselves in the Pacific, most on the Île des Pins, with most active insurrectionists taken to the Ducos Peninsula, near Nouméa. The initial plan involved deporting the entire population of the

Île des Pins, but Queen Hortense, leader of the local Kunies, refused to force her people from their island. Eventually, a compromise was reached whereby the locals would leave the western part of the island of the convict settlement. The Communards deported to the Île des Pins included Henri de Rochefort, who had been a radical parliamentary leader and newspaper editor; and Louise Michel, nicknamed the Red Virgin during the Paris Commune. Henri de Rochefort managed to escape from Ducos and reach Australia on March 19, 1874, whereupon he went to the United States and Britain to campaign for the release of fellow Communards. Many of the intellectuals deported to the Île des Pins died in despair and some committed suicide. They were buried in a cemetery, Cimetière des Déportés, near Kuto Bay, where there are no carved headstones, as none of those who died wanted any religious symbolism on their graves. A general amnesty for the Communards was granted in 1879 and Michel remained in Nouméa, where she worked alongside the local Kanak population against the French colonial rule.

Another group of political prisoners taken to the Île des Pins were Berbers who had staged a revolt against French rule in Algeria in 1871. Many died, but some survived their 50-year sentences to return to North Africa in their old age, and others settled in New Caledonia. Convicts continued to be sent to New Caledonia until 1897, by which time some 21,000 male and female convicts had been taken there.

Some freed convicts sympathized with the Kanak population, making common cause for those dispossessed when nickel was found in New Caledonia. The first governor, Charles Guillain, seized Kanak lands which he then sold to French settlers, dismissing Kanak chiefs and setting the scene for rising discontent. A Kanak revolt started on June 25, 1878. Kanaks attacked French settlers and their families, killing about 120 of them – men, women, and children – on the first two days. The revolt lasted for seven months and 200 French and 1,200 Kanaks were killed. The rebel leader Chief Atai was killed and some 800 of his surviving supporters were deported to Iles Belep of the Île des Pins. The French authorities then set about trying to destroy whatever power the Kanak still possessed, forcing some into reservations which they could only leave with police permission. Indeed,

a reward of 10 francs was offered for anybody who found a “native in an irregular situation.” The number of Kanaks fell from 42,500 in 1887 to 28,000 in 1901.

When Paul Feillet became governor on June 10, 1894 the French started a program of encouraging migrants from France to settle in New Caledonia, giving them between 15 to 25 hectares, on which they had to grow at least 5 hectares of coffee. Convicts initially provided free labor, but after 1897 this had to be replaced by Kanaks, and also indentured laborers from the Netherlands East Indies, Vietnam, and even Japan.

During World War I, some 5,500 Caldoche (settlers) and Kanaks formed the French Pacific Battalion, serving in North Africa, Italy, and in parts of France, with a quarter dying, including 372 Kanaks. In 1917 Chief Noël staged a revolt in the Koné-Hienghène part of northern Grande Terre. This time the French were better prepared and only 11 French and 200 Kanaks died. In 1923 the teaching of French in schools became compulsory, and the economy of the island started to stagnate.

With the Fall of France in June 1940, most of the French in New Caledonia offered their support to the London-based Free French government of Charles de Gaulle, but the French administration supported Vichy. It was ousted with the help of an Australian cruiser, HMAS *Adelaide*, with Henri Sautot becoming the French Resident Commissioner. Consequently, the US set up a large military base on Grande Terre with 40,000 Americans and some New Zealanders posted there. There were also some connections between wartime New Caledonia and Australian radicals, with left-wing journalist Wilfred Burchett writing about the colonial presence in the Pacific in *Pacific Treasure Island – New Caledonia* (1941). The Kanak nationalists often highlighted the US presence as one that eroded the power of the French settlers and helped the French government give the Kanaks French citizenship. At the same time the Japanese workers were deported, and most Indonesian and Vietnamese workers went home.

The Kanaks formed their first political movement, the Union Calédonienne (UC), in 1953 with support from white small landowners, some missionaries and trade unionists. The leader was Maurice Lenormand, who had stayed in New Caledonia after being sent as a French soldier

20 years earlier. When elections were held for the Territorial Assembly, the UC won 25 seats, with 9 held by Kanaks. Roch Pidjot, one of those who won a seat, was later to become the first Kanak elected to the French National Assembly.

The rise in nickel production in the 1950s and 1960s brought migrants from the New Hebrides (modern-day Vanuatu) and the Kanaks lost more land as Tahitians and migrants from the Wallis and Futuna Islands came to New Caledonia. In 1969 Nidoish Naisseline, a student who had returned from attending university in France, formed the Foulards Rouges (Red Berets), and in 1975 the Caledonian Multi-Racial Union (UMNC) demanded full independence. They changed their name in 1977 to the Front Uni de Libération Kanak (FULK), allying to the Parti de Libération Kanak (PALIKA) and intensifying demands for independence. Five pro-independence parties formed a political alliance in June 1979 with the Front Indépendantiste. In the run-up to the 1981 French presidential elections there was tension in New Caledonia, with a Nouméa newspaper, *Nouvelles Calédonniennes*, publishing on November 27, 1980, and again on January 15, 1981, claims that the French had supported the separatist movement on nearby New Hebrides (Vanuatu). In February 1981 former Australian prime minister Gough Whitlam urged for the United Nations to move on New Caledonia to ensure that it could gain independence.

In May 1981, following François Mitterrand's election as the first socialist president of the Fifth Republic, his party offered self-determination if elected, but the Kanaks were to be disappointed. The Caldoches had supported the Rassemblement pour Calédonie dans la République (RPCR), founded in 1977, which was allied to the RPR in France of Jacques Chirac, and led by Jacques Lafleur, a millionaire mining magnate. As protests started, on September 19, 1981 Pierre Declercq, the UC general secretary, was assassinated, and two years later two riot police were killed. This led to a series of massive protests, reaching a peak on November 11, when some 25,000 protesters urged "peace and fraternity" in a large show of unity against violence in Nouméa, paving the way for round-table talks. On June 18, 1982 the Front Indépendantiste won a majority in the new government council.

In 1984 the French government raised their Lemoine Plan offering five years of internal autonomy with a vote on self-determination in

1989. Upset at the delay in the referendum, Kanak separatist groups merged to form the Front de Libération Nationale Kanak et Socialiste (FLNKS). In the elections held in 1984, answering a boycott from the FLNKS, only half the electorate cast their votes (as against 75 percent in the previous election). The FLNKS then set up their Provisional Government of Kanaky, with Jean-Marie Tjibaou, the president of the UC, as the president. Ten days later, on December 5, some settlers attacked a group of Kanaks, killing ten, including two of Tjibaou's brothers, with the island seeming to be heading for civil war.

Edgard Pisani, the Special High Commissioner of New Caledonia, on January 7, 1985, outlined a new French plan which would have a referendum on July 1, 1985 offering a choice between independence (which would be granted on January 1, 1986) and self-government in association with France. The Kanaks were angered that the voters would only have to fulfill a three years' residency before being able to vote. The settlers were keen on any French citizen, including those who had arrived up to two months earlier, should also be allowed to vote. Violence then rocked New Caledonia with a seven-year-old Caldoche boy shot dead by Kanaks, and then Eloi Machoro, one of the radical FLNKS leaders, being killed by paramilitary gunmen after he had taken control of the nickel-mining town of Thio. Riots immediately broke out throughout New Caledonia, with the French sending paratroopers from metropolitan France and maintaining a state of emergency for six months, the first time these laws were invoked since the end of French Algeria in 1961. Bomb attacks resulted in an immediate downturn in tourism, and the French had to accommodate more of the demands of the Kanaks. Pitted against them, Jacques Chirac and French National Front leader Jean Marie Le Pen both flew to New Caledonia to lead the campaign against the new plan of French Prime Minister Laurent Fabius which would introduce land reforms and four regional councils. The FLNKS won control of three of the councils, with the RPCR winning in Nouméa.

In May 1986 the RPR won the French parliamentary elections and Jacques Chirac became prime minister. He supported the RPCR but allowed a referendum on independence to be held in late 1987. One of the demands of the FLNKS was to reduce the electorate to those who were

born in New Caledonia and who had one parent also born there. If this was not granted, they threatened to boycott the referendum. However, pro-independence supporters split, with one of them, Yann Uregei, going to Libya to attend a conference on liberation movements. With the United Nations putting on pressure for a move to independence and placing New Caledonia on the “list of non-self-governing territories,” the referendum was held on September 13, 1987, boycotted by the Kanaks, resulting in a vote of 98 percent against independence. However, with the trial of the people charged with the murder of the ten Kanaks in 1984, the leader of the FLNKS, Yeiwene Yeiwene, was arrested but quickly released.

Jacques Chirac offered the Pons Plan in January 1987 with an election to be held for the four regional councils to coincide with the French parliamentary elections on April 24, 1988. The boundaries were redrawn with the result that it seemed likely that the Kanaks would lose one of the councils to the settlers. Just before the election itself, some militant Kanaks on Ouvéa killed four policemen and captured a number of others who were taken to a cave where they were held for several days. Three days before the election, Chirac sent in commandoes who freed the captive police and killed 19 Kanaks, in a move to prove his toughness to the French public. The French rejected this, electing the socialists, and the new prime minister, Michel Rocard, introduced the Matignon Accords with FLNKS leader Jean-Marie Tjibaou and the RPCR leader Jacques Lafleur signing an agreement whereby the FLNKS accepted that independence would be delayed, but the RPCR came to admit the inevitability of independence.

On May 4, 1989, while Jean-Marie Tjibaou and Yeiwene Yeiwene were on Ouvéa to attend a tribal gathering at the end of the period of mourning for the 19 Kanaks killed there three years earlier, the two pro-independence leaders were both assassinated by radical Kanaks who felt that the Matignon Accords had sold out the independence cause.

The French response was to plough more money into the New Caledonia economy and there has been a promise of a referendum after 2014. In 1990 the leader of the RPCR, Jacques Lafleur, sold his mining company, the Société Minière du Sud-Pacifique, to the Kanak govern-

ment of the northern part of New Caledonia. With better relations with Australia, restrictions on the importation of Australian goods were lifted in January 1992, and two years later there were industrial protests and strikes as the lower nickel price started to affect the economy of New Caledonia. However, the nickel price rose in 1995, and even though Jacques Chirac was elected president in 1995, he promised to implement the Matignon Accords – Lafleur supporting the presidential candidacy of Edouard Balladur.

The elections of July 1995 saw a decline in support of both FLNKS and the RPCR, the latter losing votes to the Nouvelle Calédonie Pour Tous (NCPT) led by Didier Leroux, a businessman involved in importing pharmaceutical products. Leroux quickly built up a support base around Nouméa, reducing the RPCR to 22 of the 54 seats in the legislature, with FLNKS having 12 seats, and its allies another 7. Pressure built up on the FLNKS not to compromise in negotiations with the Chirac government, with the Nouméa Accord being supported by a referendum on November 8, 1998. This allowed for an independence referendum in between 15 and 20 years, but increasing the amount of autonomy in New Caledonia.

As a result of the Nouméa Accord, executive power was exercised by the head of government of New Caledonia, a territorial congress was established, and a concept of New Caledonian “citizenship” was introduced with only these “citizens” being able to vote in elections. This saw Jean Lèques become the first president of New Caledonia, succeeded by Pierre Frogier on April 5, 2001. Elections for the territorial congress were held on May 9, 2004, which saw the RPCR gain 24.5 percent of the vote, with 16 seats, and the Avenir Ensemble (Future Together) with 22.8 percent, also with 16 seats. The FLNKS gained 13.7 percent, winning 8 seats, and the Union Calédonienne with 11.9 percent, won 7 seats. The far-right Front National won 7.5 percent, with 4 seats, and the last three seats went to three minor parties. Currently New Caledonia, with a population of 210,798 (2003 estimate), has a unique status between that of an independent country and an overseas part of France.

New Harmony

Richard Goff

In 1825 British utopian socialist Robert Owen announced, “I am come to this country [the United States] to introduce an entire new system of society; to change it from an ignorant, selfish system to an enlightened social system.” While these words seem unlikely to come from a wealthy Welsh industrialist, few individuals are so closely associated with early socialist experimentation than Owen. Born to a family of modest means during the revolutionary turmoil of the 1770s, Owen quickly moved up through the economic ranks of industrial Manchester. After acquiring the New Lanark Mills in the early 1800s, Owen began construction of a model industrial town for the express purpose of bettering the poor and working classes.

Growing up during the Age of Democratic Revolution and being an active participant in the English Industrial Revolution clearly left an impression on Owen. Manchester was a lively city full of liberal debate and Owen was intrigued by classical liberalism and, in particular, the utilitarianism of Jeremy Bentham. As a factory manager and owner, Owen viewed the new industrial economy as pregnant with new social possibilities and as an arena for social experimentation.

It was during this time that Owen solidified his belief that human vices were largely environmental and that the gulf between workers and elites could be closed through social planning. His first attempt to test this theory was at his

New Lanark factory. Along with his business partners, Quaker philanthropist William Allen and Jeremy Bentham, Owen limited child labor in his mills, improved housing for his workers, and supplied them with cheap coal during the winter. He also provided money for medical care and devised innovative education techniques that encouraged active learning for the workers' children. Owen's benevolent capitalism seemed to yield results and Owen published his conclusions in his *Report to the County of Lanark* (1820). Moving beyond a simple paternalistic approach, Owen argued for the correctness of the labor theory of value and that workers are entitled to their fair share of that value. Owen considered planned cooperative communities, based on egalitarian principles, to be the only solution to the immorality and inequality of society.

Owen's conclusions inspired him to advocate more aggressive and innovative community building. Owen lacked the funds to construct a community in England, but fate intervened in 1824 when Richard Flower of George Rapp's Harmony community offered to sell him the cooperative. Owen agreed, dubbed the village “New Harmony,” and officially opened the community in 1825.

As fortuitous as the situation seemed, New Harmony was beset by problems from its beginning. Owen had issued a relatively open invitation to all who were interested in creating a society of equals; however, the heterogeneous crew of farmers, drifters, workers, adventurers, and idealists that responded was not easily led. Owen presented the motley group with a vaguely worded constitution that provided for free medical care, education, and housing, but still allowed individuals to keep their own property. Labor and profits would be divided equally with the expectation that over time a collective society would evolve. Although the idea was attractive, the plan was quite nebulous and conflicts emerged among the recruits.

Even with New Harmony's difficulties, similar communities, based on Owenite principles, dotted the American landscape in the late 1820s. The most ambitious of these was the Nashoba community started by Frances Wright. Wright believed that socialist communities could solve the problem of slavery by providing slaves an opportunity to work for themselves, thus acquiring the skills necessary for freedom. By 1828, however, the interracial community was in

crisis. Charged with advocating “free love” and miscegenation and suffering economic difficulties, Wright emancipated the slaves and dissolved the community in 1830.

Owen’s New Harmony suffered a similar fate due to the general lack of planning. Production was erratic and uneven. Some industries were overstaffed and others barely functioning. Housing was not adequate for the over 800 members, several hundred more than the Rappite population. Although equality of the sexes was an important feature of the community, the underrepresentation of women generated problems in allocating domestic labor. Religion was also a major area of conflict. Although Owen supported religious freedom, he also supported the right to criticize religious doctrine, which many members found problematic. Although cultural and intellectual life were relatively vibrant, community morale continued to decline over 1826. By 1827 the original optimism of Owen and the New Harmony community had been replaced by a dire realization that their experiment was failing. In May Owen decided to quit the community, liquidating its assets and selling off the property.

By 1830 all 19 Owenite communities had collapsed. Although it would be easy to label the Owenite experiment as a failure, Owen’s influence continued to be felt throughout the nineteenth century. A second wave of experimental communities (Icaria and Brisbane’s phalanxes) emerged in the United States, Canada, and England in the 1840s. Although none of them survived the nineteenth century, the communities did implement many of Owen’s innovative educational methods, fostered individual development and intellectual freedom, practiced sexual equality, and offered rationalist critiques of organized religion.

Arguably, the failed utopian experiments radicalized Owen and many participants, prompting them to work closely with the nascent labor movement. Owen supported the Grand National Consolidated Trade Union and formed the Association of All Classes and All Nations in the 1830s. Owen also worked with labor organizations for the 8-hour day. His son, Robert Dale Owen, remained in the United States and became a labor leader and abolitionist. Also, Fanny Wright, sponsor of the Nashoba Owenite community, became increasingly involved in the labor movement, a supporter of the Working-

men’s Party of New York, and a proto-feminist. Although frustrated with the failure of these communities and many of his political campaigns, Robert Owen continued to work for his “new moral world” until his death in 1858.

New Jewel movement

Immanuel Ness

The New Jewel movement (New Joint Endeavor for Welfare, Education, and Liberation), or NJM, was a liberation movement that staged a revolution in the 1970s in Grenada, a small island-nation located in the far south of the Windward Island chain of the Caribbean Sea. The vast majority of Grenada’s population in the 1970s, especially former slaves of African heritage, endured widespread poverty and scarcity of basic living necessities. In the 1970s the NJM transformed into a political party with a platform of nationalization of the island’s major infrastructure, redistributing land to peasants, and to recover a greater share of revenues derived from the tourism industry, which was providing a growing share of the national gross domestic product.

As a founder of the New Jewel movement, Maurice Bishop was a charismatic leader and dynamic orator who rallied the masses to support land reform and generating economic resources in the island-nation, which was dependent on the export of cloves as a cash crop. In 1974, following 300 years of colonization, Grenada gained

independence from Britain at the same time as the NJM was gaining wider support among the working class and peasants through Bishop's comprehensive plan to transform the country. However, Sir Eric Matthew Gairy, Grenada's first prime minister, engaged in political repression and violence against his radical opponents to undermine growing labor and peasant unrest on the island. Gairy formed an infamous internal security force known as the Mongoose Gang to kill workers and political opponents of the government. Bishop's own father, Rupert, was among those murdered by the paramilitary organization. In the country's formative years of independence the Gairy government was charged with massive electoral fraud to prevent the NJM from taking power.

In 1979 tens of thousands of the island's small population of about 100,000 were mobilizing against Gairy's failure to improve living conditions. To counteract the protests, Gairy mobilized the Mongoose Gang to kill the NJM leaders. NJM discovered the plot timed during Prime Minister Gairy's visit to the United Nations in New York. To prevent bloodshed the NJM seized government power with the support of the majority of the country's population. Upon taking leadership, Bishop reaffirmed the party's commitment to democracy and egalitarianism. He promised elections without fraud, protection of political and religious freedoms, and that the people's revolution was "for work, for food, for decent housing, and health services" for all Grenadian people.

The NJM leaders sought to create a democratic society with greater equality through land reform and redistribution of wealth. As the Cold War was coming to an end, and neoliberal policies expanding in the US, UK, China, and a growing number of other countries, popular support for socialism in Grenada propelled Bishop and the NJM to power. Once in power the NJM sought to align with socialist forces such as Cuba, which provided vital foreign technological and economic assistance, and the Soviet Union. In the 1980s Bishop's political support expanded dramatically among the island's working class and poor population, as economic reforms were implemented by Bishop and the NJM government.

As a poor economy with few natural resources and isolated by the United States, Bishop turned to Cuba to provide medical assistance and help

in advancing the nation's economy through promoting tourism and trade. To expand Grenada's economic base, Cuba began assisting in building an airport capable of accommodating large commercial aircraft for foreign travel and tourism, while providing foreign funding through trade. While the airport included an airstrip that could accommodate military aircraft, as is the case in virtually any modern airport, Grenada did not possess military aircraft that may be used for aggression against any regional state, and surely did not pose a threat to US interests in the region. Some worried that Cuban military aircraft could use Grenada as a regional base. But Bishop and the New Jewel government denied that the airport would be used for military purposes.

Grenada never posed a military threat to US hegemony in the Caribbean, but the NJM was considered a thorn in the side of the US, especially as the country drew closer to Cuba for medical, educational, and military assistance. In 1981, in the wake of the election of the right-wing Republican Ronald Reagan as president of the US, steadfast critics committed to overthrowing Bishop and the NJM were appointed to key posts in the US State Department.

Indeed, historians have found documentary evidence that the Central Intelligence Agency (CIA) of the US orchestrated a political crisis in Grenada in 1982 and 1983, staging a coup d'état against Bishop by arming military supporters of Bishop's former law partner, Bernard Coard, who was also former deputy prime minister. On October 13, 1983 Coard seized power and six days later mass demonstrations against the military coup fomented a national crisis. Bishop was placed under house arrest and the Grenadian army seized control of the major military and communications installations. However, popular support for Bishop broke into mass demonstrations and overwhelmed the military government, setting Bishop free on September 16. Three days later the military overpowered the masses that were protecting Bishop and the NJM and executed the former leaders without trial.

Newport Rising, Wales, 1839

Christopher Frank

An unsuccessful Chartist revolt, the Newport rising of 1839 was the last large-scale armed action of citizens against the state in mainland Britain. It occurred during the evening and morning of November 3–4, 1839, when approximately 5,000 miners and ironworkers from communities throughout southwest Wales descended upon the town of Newport. On arrival, the rebels, many of whom were armed, surrounded 30 soldiers who had positioned themselves and their Chartist prisoners inside the Westgate hotel. A brief gun battle ensued, killing 22 Chartists, wounding 50, and dispersing the rest. After the rising, over 200 participants were arrested. Most were soon released or convicted on minor charges, but 21 were charged with treason. The three principal leaders, John Frost, Zephania Williams, and William Jones, were convicted and sentenced to death. The sentences were later commuted to transportation. The nature and intent of the Newport rising are shrouded in mystery and have been the subject of debate, but the current historical consensus suggests that the rising was not a protest or demonstration, but a planned insurrection, and one that might have had loose ties with similar plots for rebellion that were developing in other parts of the country.

The Newport rising has both a national and a local context. On July 12, 1839 the Chartist National Convention presented its first petition to Parliament, containing nearly 1.3 million signatures, only to have it rejected by a vote of 235 to 46. The Convention spent the remainder of the summer attempting to find an appropriate

response. By the time the National Convention dissolved in failure in September 1839, many of the most important national Chartist leaders were in jail or awaiting trial, and the initiative had passed to local leaders and advocates of “physical force” Chartism.

The coalfields of southern Wales were characterized by bitter and highly polarized class relations. English or Anglicized coal and ironmasters exercised considerable economic and political power over an isolated and largely Welsh-speaking workforce. Wild economic fluctuations, dangerous work, payment of wages in truck at company-owned stores, and aggressive employer union-busting efforts all contributed to hostile industrial relations and strikes that sometimes resulted in military intervention. Polarized class relations and geographical isolation resulted in a high degree of class solidarity. In addition to widespread membership in friendly societies, mutual assistance clubs, nascent unions, and dissenting chapels, the working class in South Wales also had strong traditions of secret organizing and action. The Chartist movement in South Wales generally, and the Newport rising in particular, was built upon the foundations of these working-class grievances and traditions of secret organizing and action.

Chartism developed a large following in southwest Wales, as demonstrated by the rapid establishment of over fifty active lodges in Glamorgan and Monmouthshire, representing 25,000 committed Chartists. Thousands of Welsh men and women attended public meetings to sign the Chartist petition and hear speeches by popular “missionaries” such as Henry Vincent, who expressed openness to any means for acquiring the Charter and defended the right to resist oppression by taking up arms.

A number of factors came together in the autumn of 1839 to push Welsh Chartists in a more radical direction. These included the arrest of Vincent and other Chartist leaders and reports of their treatment in prison. The rejection of the Chartist petition, the failure of the National Convention, and the growing repression by local authorities against Chartist activity and public meetings also contributed to disillusionment with petitioning and the mass platform. These factors combined with the realities of economic, cultural, and social polarization and traditions of secret organizing to produce the conditions for rebellion.

In southwest Wales during the fall of 1839 preparations for the rising were undertaken in great secrecy, a fact which has since hindered historians' ability to fully uncover the origins of the rebellion. Since early 1839, Chartist men had been organizing themselves into small "classes" under the leadership of "captains," and by autumn the pace of this organizing had increased noticeably. By mid-October Welsh Chartists had clearly begun preparations for some type of rising, recruiting ironworkers and miners, purchasing guns, constructing homemade pikes, and holding secret meetings. Increasingly, information about the continually evolving strategy was restricted to a small number of delegates, and precautions such as oaths of secrecy, passwords, and intimidation were taken to prevent discovery by authorities. Many Chartists prepared for a rising without fully knowing the plan, only that Frost had promised it would result in obtaining the Charter in under three weeks. There is some evidence of communications between the Welsh leaders of the rebellion and northern Chartists, and that a successful rising at Newport was to be the signal for other insurrections in Newcastle and the West Riding of Yorkshire. Active preparations for such a rising were being made in Yorkshire, and abortive risings did take place in Sheffield, Dewsbury, and Bradford in January of 1840.

On the evening of November 3, 1839 Chartists converged upon their meeting places and marched through a rainy night in different columns led by Frost, Williams, and Jones toward Newport. Six hundred marchers were armed with guns, and hundreds more carried pikes and knives. The weather caused delays that prevented the Chartists from entering Newport until 9 a.m. on the morning of November 4, by which time the mayor of Newport had had time to swear in special constables, and the soldiers had been given the opportunity to reposition themselves and their prisoners in the hotel. The result was a defeat of the rebels by a small force of disciplined government troops.

At the subsequent trial of the Chartist prisoners, legal counsel of the defendants attempted to downplay the seriousness of the event, referring to it as a "riot" or even a demonstration that went wrong. The silence of many participants, the questionable testimony of state witnesses, and the desire of an embarrassed government to deflect attention away from its lack of preparedness, all over time caused the

seriousness of this rising to be under-appreciated. Most historians now agree, however, that the events of November 3–4, 1839 had insurrectionary intent.

Far from killing Chartism, the failed rising injected new life into the movement, as efforts to raise money for Frost's defense, and later to win him a pardon, became uniting rallying cries for Chartists during the 1840s. For many, however, the event did cause a shift in the movement's direction. Some Chartists interpreted the failed rising as a lesson in the great power of the state and the impossibility of successful rebellion, and therefore redirected their energies toward "moral force" initiatives, such as the National Charter Association, renewed petitioning, "New Move" Chartism, and the Complete Suffrage Union. The state, as well as local authorities, encouraged such notions through propaganda and by the acceleration of a number of reforms already well underway, such as the introduction of local police forces and the strategic deployment of troops. The British government, however, also responded with strategic concessions throughout the 1840s, such as investigations into social and working conditions in Wales, and national reforms like the Ten Hours Act, and the relaxation of the Poor Law's most hated provisions. Although radicalism and industrial action continued to thrive in Wales, Chartism never again achieved the same level of participation, energy, intensity, and optimism that it had in 1839.

Ngo Dinh Nhu (1910–1963)

Justin Corfield

The younger brother of Ngo Dinh Diem, the president of South Vietnam from 1955 to 1963, Ngo Dinh Nhu was his brother's closest

confidant, serving as minister of the interior until they were both assassinated in 1963. Ngo Dinh Nhu was born in 1910, in Hue. His father, Ngo Dinh Kha, was an important figure at the Vietnamese Imperial Court. Nhu, the fourth of the six Ngo Dinh brothers, was educated in France where he attended university and became interested in the French philosopher Emmanuel Mounier (1905–50), who had developed his own political concept of “personalism,” which would later become the state ideology of South Vietnam – although some of Mounier’s adherents were to decry any connection between the French philosopher and the concept of personalism in Vietnam. On his return to Vietnam, Nhu became active as an organizer of the Vietnamese Federation of Christian Workers, the Catholic labor union movement.

With the rise to power of Ngo Dinh Diem in 1955, Nhu became the driving force behind the new government, managing to engineer the sacking of General Nguyen Van Hinh as commander of the South Vietnamese Army. Nhu, as minister of the interior, also helped establish the Personalist Labor Party, the Can Lao Nhan Vi – a secret party which was closely organized along the cell structure design of the Communist Party, its bitter enemy. Nhu was also the man most closely associated with the Strategic Hamlets program, designed to isolate villagers from the communist guerillas and bolster support for the government. He was also said to have been behind the parcel bomb assassination attempt on Prince Norodom Sihanouk in Cambodia in 1959.

Wielding enormous power in South Vietnam, Nhu and his wife, known as Madame Nhu, became the most stalwart defenders of the government. However, this also made Nhu unpopular, not only in parts of Vietnam, especially among the Buddhists, but also with Americans, who saw him as a malign influence on his older brother. Nhu believed his government had to be tough with the communists, but he also sent out feelers to them in mid-1963, a move which caused consternation in the US administration.

On September 2, 1963, in a high-profile television interview by Walter Cronkite, US President John F. Kennedy urged Diem to have his brother sacked, but Diem declined, and the American government then signaled that they would support a coup d’état to bring about the overthrow of the brothers. It took place on November 1, 1963, with Diem and Nhu managing to escape the soldiers who captured the Gia

Dinh Palace, which was serving as the presidential palace. The two brothers spent the night in Cholon and then went to the Cha Tam Chinese Roman Catholic Church in Cholon, where they attended mass and then handed themselves over to the coup leaders, who bundled them into the back of an armored car and killed them both. Although the coup leaders claimed that Diem and Nhu had committed suicide, both were buried in the main Roman Catholic cemetery, showing that this was widely disbelieved.

Nicaraguan Revolution, 1970s–1980s

Robert Sierakowski

The Sandinistas of the Nicaraguan Revolution of 1979 stand out in Latin American history as the only successful guerilla movement of the numerous revolutionary organizations that formed in the wake of the Cuban Revolution. To understand both the roots and outcomes of the revolutionary struggle to overthrow the Somoza dictatorship, it is necessary to understand Nicaragua’s political and economic development, as well as its long history of relations with the United States.

Emerging as a relative backwater of the Spanish Empire, for much of the post-Independence nineteenth century Nicaragua was torn by warfare between two elite factions: the Liberals and Conservatives. Nicaragua’s strategic location as a transit point between the Atlantic and Pacific would soon draw the imperial gaze of the United States. In 1855 North American adventurer William Walker (1824–60), who was brought to fight by the Liberals, promptly declared himself president of Nicaragua, legalized slavery, and had his government duly recognized by the United States. Though Walker was soon forced out of power by a combined

Liberal-Conservative force, the attention of the United States would not fade. In the second half of the century coffee emerged as the country's main export crop, leading to an expansion of capitalism and dependence on the international economy. When the government of José Santos Zelaya (1853–1919) considered the development of an inter-oceanic passage to compete with the Panama Canal, the US backed an armed conspiracy that overthrew his government in 1909.

In 1912 a contingent of US Marine Corps arrived in Nicaragua to maintain the more pliable Conservatives in power. Aside for a nine-month hiatus, the Marines would remain in Nicaragua until 1933. This period saw the development of an armed guerilla insurgency led by Augusto César Sandino (1895–1934) fighting against “Yankee imperialism” and its local quislings. To combat Sandino, the Marine Corps developed the National Guard of Nicaragua, a supposedly “apolitical” military body that would rise above the divisive and violent regional struggles of the nineteenth and early twentieth centuries.

When the Marines departed Nicaragua they left the better part of the country's armament and coercive power of the state in the hands of one man – Anastasio Somoza García (1896–1956), their hand-picked director of the National Guard. Using force to become president in 1936, Somoza ruled for the coming two decades, with the Guard and the US support serving as the dual bulwarks of his power. In Somoza the US found a loyal anti-communist ally who would maintain order over his local fiefdom, or as President Franklin Roosevelt is said to have put it, “Somoza is a son-of-a-bitch, but he's *our* son-of-a-bitch.” Through outright corruption as well as manipulation of the state apparatus, the dictator accrued the largest fortune in the country, including dozens of coffee farms, as well as major interests in mining, beef, dairy products, cement, textiles, and sugarcane. When Somoza García was gunned down in 1956 by the young poet Rigoberto López Pérez (1929–56), he would be followed in the presidency by his sons Luis and Anastasio Somoza Debayle. While Luis was known as something of a reformist, Anastasio the West Point graduate would prove to be more willing to use military violence and state terror to maintain power.

Structuralist theorists of revolution have attempted to identify the regime type that is

most susceptible to revolutions, referring to these systems as “neo-patrimonial” or “sultanistic.” The Somoza regime, with the rule of a single family for half a century, accruing vast personal wealth while personally controlling the means of coercion, closely approximates an ideal case. At the same time, for much of the family's tenure they could count on the support – at times tacit, at times explicit – of much of the Nicaraguan ruling class, as they carried out capitalist development policies which greatly benefited these groups. The Conservative “oligarchy” of elite families maintained a certain “gentlemen's agreement”-style antagonism towards the dictator, periodically cutting power-sharing agreements in order to assure their quota of the spoils.

During the entire Somoza period, Nicaragua was linked into the international division of labor following the path of exporting primary products such as coffee, cotton, beef, and bananas. Each successive wave of export crop expansion, particularly cotton production in the 1950s and 1960s, would create increasing pressure for land. Though Nicaragua possesses a relative abundance of land in comparison to neighboring countries, small farmers were compressed into progressively smaller holdings as cash crops expanded during the Somoza period. For instance, between 1963 and 1971 the share of the national land in the hands of small farmers decreased from 3.6 to 2.2 percent. Amid the economic modernization and export bonanza of the Somoza period, much of the population was left marginalized, with incredibly high rates of malnutrition, illiteracy, and infant mortality found in both the countryside and the expanding urban slums.

Search for a Revolutionary Strategy

The Somozas' rule never went completely unchallenged by the Nicaraguan people, with “revolutionary” movements abounding among the opposition from the initial rise of the regime. After the death of Somoza García, this only increased. During the first years of the presidency of Luis Somoza, there were numerous coup d'état attempts, as well as armed invasions from Honduras to topple the regime. They were largely formulated within the National Guard itself or the traditional Liberal and Conservative opposition parties. With neither a broader vision of social change nor organic links to Nicaragua's

impoverished majority, this armed opposition appeared to be simply another faction of elite power usurpers. The Cuban Revolution of 1959 would shake this status quo as it sent Latin American political perceptions into a tailspin. In Cuba, a leftist guerilla army that developed outside of the traditional party structures had overthrown the US-backed dictator Batista (1901–73) through rural warfare, and had begun carrying out social reforms for the poor. FSLN (Sandinista National Liberation Front) founder Tomás Borge (b. 1930) later remarked that the Cuban example meant the “the lifting of innumerable curtains, a flash of light that shone beyond the simple and boring dogmas of the time.” That two more unsuccessful invasion attempts took place in Nicaragua in 1959 suggests that the paradigm shift implied by Cuba had yet to completely set in. At the end of July the National Guard attacked unarmed protesters in the university city of León, killing four students and two spectators, igniting further anger against the regime.

After the martyrdom of these students, universities would increasingly reemerge as centers of regime opposition and the source of the most radical propositions. The initial formulation of that which would become the FSLN was conceived in 1961 by young student activists and members of the Socialist Party of Nicaragua (the local Soviet-backed communist party) who felt stifled by the reformist approach of their party. Carlos Fonseca Amador (1936–76), Tomás Borge Martínez, and Silvio Mayorga felt that armed struggle would be the only manner to topple the entrenched Somoza regime. In addition to this initial nucleus, various student and youth organizations of Marxist, Liberal, and Conservative backgrounds would come to serve as feeder organizations for the rank and file of the FSLN, which only took that name in 1962 or 1963.

The Sandinistas’ ideological framework drew upon Marxism in their understanding of class struggle and exploitation, as well as the specific example of Cuba as a model for action. They demanded an end to the dictatorship, the redistribution of land and wealth, and the promotion of healthcare, education, and housing for all Nicaraguans. Given the United States’ historical role in Nicaragua, and its contemporary support for the Somoza dictatorship, their demands for social revolution had a particularly nationalist and anti-imperialist tone. Most novel to their

approach was the reappropriation of the mythic figure of Sandino as a “proletarian guerilla,” largely the work of Fonseca, who insisted on the necessity to include the historical figure in the organization’s name. In this way, the naming process generated the illusion of a historical sequence of resistance to foreign influence and social inequality running from the anti-imperialist movement of Sandino to the contemporary Marxist-led struggle. As FSLN leader Humberto Ortega (b. 1947) later declared, “through his struggle and his action, Sandino created the theory, and it is that which we have taken up.”

In the 1960s the Sandinistas would alternate between underground urban political organizing and a number of halting attempts at a rural guerilla insurgency, remaining largely unknown by most Nicaraguans. Receiving guidance from Colonel Santos López, who had fought with Sandino as a youth, they attempted to recreate their hero’s approach in the Ríos Coco y Bocay region in 1962. Yet they found little reception from the peasants and, hungry and sick, were crushed by the National Guard. The surviving members of the FSLN returned to the urban sphere to continue work with nascent labor unions and a coalition known as the Republican Mobilization, which served as a front for the Communist Party. During this period, the United States was pushing Latin America governments through the Alliance for Progress to carry out programs to lessen poverty and political authoritarianism in order to prevent “other Cubas.” Yet this reformist opening was short-lived. When the traditional elite opposition parties appeared headed for victory in the presidential election against Anastasio Somoza Debayle in 1967, the regime responded with violence. An opposition march in downtown Managua in January was fired upon by the National Guard, leaving hundreds of unarmed civilians dead and wounded, and exposing for many the regime’s truly militaristic nature below the veneer of compromise. Likewise, when peasant unions were formed, particularly in the cotton regions of Chinandega, deaths and disappearances of activists suggested the government’s willingness to use state terror to quiet all threats to the status quo.

The Sandinistas returned to the mountains of northern Nicaragua in 1967, and in Pancasán established a guerrilla *foco* along the lines established by “Che” Guevara (1928–67), under the

belief that a handful of committed revolutionaries deposited in a rural area could single-handedly spark a revolution through military actions. Though the Pancasán *foco* was able to generate greater support from the local peasant population, it was still unable to match the National Guard's firepower and FSLN leaders Silvio Mayora and Rigoberto Cruz were killed. After much debate, the Sandinistas decided to abandon the purely military strategy, switching instead to a joint political-military strategy that would combine mass mobilization with armed actions. Many of the FSLN cadres returned to the cities in order to work in what was later known as "the silent accumulation of forces."

Tectonic Shifts

On December 23, 1972 a devastating earthquake rocked Managua, leaving over 10,000 people dead, flattening the city center, and prompting an outward exodus of refugees. It was claimed that millions of dollars of foreign aid money was pocketed by Somoza Debayle while the people of Managua were left in utter penury. Likewise, the reconstruction process provided an opportunity for Somoza's personal businesses to corner the market on real estate and expand into the realm of finance capital long controlled by the traditional elite. Wealthy opponents, feeling themselves boxed out of their fair share of the spoils, began withdrawing their support from the regime, and even actively supporting opposition movements. Some of the more socially conscious of the elite opponents would form the Democratic Union of Liberation (UDEL), led by Pedro Joaquín Chamorro (1924–78), the editor of *La Prensa*, the main opposition newspaper. This new grouping united bourgeois and middle-class parties, trade unions, and the Communist Party. They demanded the exit of Somoza and the institution of a modern capitalist state which would serve some welfare functions, hoping to preempt a radical revolution along the lines promoted by the Sandinistas.

The years prior to the traumatic earthquake also witnessed new cultural developments which would have long-term effects on Nicaragua. The Catholic Church had historically played a conservative role, bolstering the power of the wealthy and consecrating the reigning forms of oppression. Following the Second Vatican Council of the early 1960s with its reordering of church

priorities, however, some Latin American bishops began moving in a more progressive direction. At the 1968 regional conference at Medellín, the church agreed to begin promoting a "preferential option for the poor" and with an emphasis liberation theology, a rereading of the Bible that emphasized the links between poverty, oppression, and the teachings of Jesus Christ. Rather than simply aspiring towards personal salvation, liberation theology called on women and men to create the kingdom of God in their own lives and societies. In organizational terms this meant the promotion of grassroots Ecclesiastical Base Communities (CEBs) which brought lay parishioners together to read the Bible and interpret their own lives. It has been argued that many of these religious base communities would be drawn into the revolutionary struggle, particularly following the regime's response to the earthquake and its intense use of violence in the 1970s.

Another major turning point in the Sandinista struggle came with the December 27, 1974 takeover of the Managua house of Somoza ally José María "Chema" Castillo while a party was being held in honor of the US ambassador. Though the ambassador had left before the guerilla commandos arrived, the FSLN held many important regime figures hostage and negotiated their release directly with a shocked Anastasio Somoza Debayle. The detained Somocistas were exchanged for US\$5 million, the freedom of imprisoned Sandinistas (including future president Daniel Ortega), and the public broadcast of a revolutionary manifesto. This dramatic and audacious attack catapulted the FSLN to a prominent position in the debate over the future direction of the country. Following this major blow against the image of regime invulnerability, Somoza declared a state of siege and with complete press censorship began exacting his revenge. The National Guard carried out a major "scorched earth" campaign against the peasantry of the isolated regions in which the guerillas were operating, using bombs and napalm to destroy peasants' homes and fields and leaving an estimated thousands dead. The 33 months of the state of siege would also witness the killing of students, labor unionists, and religious activists.

Pressed deeper underground in the battle against Somoza, the Sandinistas split into three distinct factions, divided over both the analysis of the revolutionary situation and the strategy for

opposing the regime. The Prolonged Popular War tendency, led by Tomás Borge, Bayardo Arce, and Henry Ruiz, supported the development of a wide-based rural insurgency based in the peasantry which would surround the cities and bring down the regime, closely modeled on the Chinese and Vietnamese examples. A second group was known as the Proletarian Tendency, led by Jaime Wheelock, Luis Carrión, and Carlos Núñez, which argued that urban mass organization and labor unions should be emphasized as the central axis of the revolutionary movement. The final faction, known as the *Terceristas* or the Insurrectional Tendency, was led by brothers Daniel and Humberto Ortega, as well as Victor Tirado. They suggested that both rural and urban modes of resistance were needed, as well as the creation of a broad-based national coalition – including sectors of the business class opposed to Somoza – to build support for a mass insurrection. When Sandinista founder Carlos Fonseca returned to Nicaragua in 1975, he attempted to bring the various tendencies together before heading back to the mountains to participate in the guerilla struggle. He and two other Sandinistas died at the hands of the National Guard in an ambush in Zinica, Matagalpa. The death of the FSLN founder on November 8, 1976 was greeted with much elation by Somoza.

Insurrectionary Cycle

Since its foundation in 1936 the dictatorship had been largely maintained in power through the support of the United States. Throughout the 1970s, US aid for the Nicaraguan government had been climbing ever higher in support of elaborate carrot-and-stick counterinsurgency programs. The arrival of Jimmy Carter to the United States presidency in 1976 meant a new foreign policy vis-à-vis foreign regimes, based squarely upon universal concepts of human rights, rather than anti-communism and pro-American stances. Carter attempted to link respect for the human rights of the population to American aid, making the Somoza regime a test case due to its use of state terror. Between 1977 and 1978, economic assistance for the Nicaraguan government fell 75 percent and military aid precipitously dropped 43 percent.

When the state of seige declared following the hostage-taking was lifted, a flurry of opposition

activity began to take shape. The dictator's longtime opponent, Pedro Joaquín Chamorro, published a backlog of exposés in *La Prensa* regarding the human rights violations in the countryside and the regime's corrupt behavior following the earthquake. Hoping to catalyze this widespread disdain in a revolutionary direction, the *Tercerista* faction of the FSLN launched attacks on various National Guard barracks throughout the country in October 1977. Though the insurgents were overpowered, it marked the launch of an insurrectionary cycle which would continue until the dictator was overthrown. At the same time, a circle of prominent middle- and upper-class FSLN allies – including writers, intellectuals, clergy, and businessmen – known as the Group of Twelve began agitating against the regime and denouncing its violence.

In January 1978 Pedro Joaquín Chamorro was assassinated on his way to the newspaper in downtown Managua. With the major opposition figure of the upper class murdered, the business elite of Nicaragua carried out a national strike calling for Somoza's exit. A month later, youth in the indigenous *barrio* of Monimbó in the city of Masaya – catching even the FSLN off guard – spontaneously rebelled. With burning tires and cobblestone barricades, young people hurled homemade contact bombs and Molotov cocktails against Somoza's National Guard.

In May the two leading upper- and middle-class opposition nuclei, the Group of Twelve, the UDEL, and others united to form the Broad Opposition Front (FAO) calling for a negotiated exit for the dictator. This was the method preferred by the United States, which hoped to isolate the leftists and maintain the status quo while pressuring Somoza to leave. After two fruitless months, the Group of Twelve left this group to form the United People's Movement (MPU) with the various FSLN mass organizations in demanding Somoza's exit. On August 22 a commando team of 25 Sandinistas, led by Edén Pastora (b. 1937) and Dora María Téllez (b. 1947), posed as an elite National Guard battalion and infiltrated the National Palace while the Congress was in session. The 2,000 captured government employees, including many important regime figures, such as the dictator's brother-in-law, were exchanged for 70 imprisoned Sandinistas and safe passage to Panama. The roads to the airport were lined with cheering supporters.

The following month, the FSLN prompted mass rebellions in five major cities, temporarily overpowering the National Guard. “We went with the September insurrection because of the political situation that existed, in order not to let the people be massacred,” FSLN strategist Humberto Ortega recalled. “Because the people, just as they had done in Monimbó, were rising up alone.” In the cities, Civil Defense Committees were formed to organize barricades and the distribution of ammunition, supplies, and food within the “liberated” urban spaces. The military reconquered the urban zones one by one, carrying out mass executions of suspected supporters. Many young people initiated into armed struggle during the September insurrection ballooned the membership of the guerilla fronts, which became true armies virtually overnight.

It is important to note that much of the impetus of the insurrection came not from the long-organized guerilla cadres but young men and boys (*los muchachos*) who spontaneously threw themselves into pitched street battles with government troops. According to sociologist Carlos Vilas’ investigations, those that died fighting the regime were overwhelmingly male and between age 15 and 24. A relatively small number were members of the industrial “proletariat” and even less were “peasants” – the two social groups on whose behalf the Sandinistas led the revolution. While a large number were high school and university students – the social base of FSLN cadres and the source of the leadership – many were what Vilas calls “urban tradespeople,” including artisans and unsalaried workers in the informal economy.

As it increasingly appeared that the government’s collapse would leave a power vacuum into which the leftists would step, the United States continued pushing for what would be denounced as *Somocismo sin Somoza*, grasping for a negotiated exit which would leave the essential structures of the regime – particularly the National Guard – in place while pressuring the most odious figure to leave the scene. Negotiations between the Somoza and the FAO, mediated by the the US, Guatemalan, and Dominican ambassadors, in October failed completely. When in January 1979 the United States proposed the idea of an Organization of American States peacekeeping force to enter Nicaragua, only Somoza’s delegate voted in favor. Backing the Sandinistas were regional govern-

ments such as Costa Rica, Panama, Cuba, and Venezuela, which were eager for the dictator to leave and the bloodshed to end.

As the revolutionary energy reached its zenith, many moderate opposition groups united with the MPU to form the Patriotic National Front in February 1979. In March the various FSLN tendencies formally reunited forming the National Directorate made up of nine members drawn from each of the three tendencies. In April another insurrection exploded in the city of Estelí which drew an incredibly violent response from the regime, and unleashed a bombing campaign from the air against innocent civilians. From May to June the guerilla armies marched onward in collaboration with urban insurrections. When a national strike was called by Nicaraguan capitalists, the dictator promptly bombed his business competitors’ factories. As city after city fell to the FSLN guerillas and mass insurrection arrived for the first time in Managua itself, Somoza finally relinquished control. When he boarded a plane to Miami on July 17, approximately 50,000 Nicaraguans had died in the bloodshed of the civil war. Given the personal control exercised by Somoza over the National Guard, his exit led the remaining military power to fall like a house of cards. On July 19 the Sandinista forces commandeered tanks, trucks, and jeeps poured into the capital, where an enormous celebration rally was held in the Plaza de la República.

Revolution in Power

Officially in control of the government was the Junta of the National Government of Reconstruction, a body that included Daniel Ortega, representing the FSLN; Sergio Ramírez and Moisés Hassan, former members of the Group of Twelve and the MPU; and, representing the private sector, *La Prensa* owner Violeta Barrios de Chamorro, the widow of Pedro Joaquin Chamorro, and Alfonso Robles, a prominent businessman and Somoza opponent. The various Junta members had agreed upon a common agenda including political pluralism and the avoidance of a one-party state, a mixed economy combining private business and public enterprise, and non-alignment in international relations, steering a middle course between the Cold War opponents. Indeed, the leadership headed in September to Washington, DC, where the

olive-green uniformed Sandinistas exchanged hugs with President Carter and received pledges of aid and support. In reality, power was concentrated in the hands of the National Directorate, “the supreme body of the Revolution,” run by the nine Sandinista *comandantes* from the various tendencies. Barrios de Chamorro and Robles would leave the Junta after a frustrating period of disagreement, as the secretly Sandinista Hassan and Ramírez consistently voted with Ortega. Likewise, the Council of State, a corporative semi-legislative body founded in May 1980, was heavily stacked in favor of the FSLN-affiliated organizations, alienating participation by non-Sandinista parties and organizations.

In the economic sphere the new government announced far-reaching goals of redistributing wealth and promoting independent economic development. The properties of Somoza and his allies were taken into state control by some of the first decrees, forming the People’s Property Area. Though these properties accounted for nearly 20 percent of the arable land, as well as numerous important businesses, most of the economy would remain in private hands. Even at the height of government control, only 40 percent of industry, 30 percent internal commerce and 23 percent of agricultural production was in state hands. The new government began promoting private economic reactivation with low-interest loans and other subsidies. Though they nationalized the banking system and foreign trade, Sandinistas never developed a completely socialized economy. In addition, the dictatorship had bequeathed an onerous \$1.6 billion foreign debt which they decided to continue paying off in order to maintain creditworthiness on the international market. At the same time, the new National Institute of Agrarian Reform began distributing the nationalized holdings to cooperatives and state farms, cutting large private farms from 52 percent to 26 percent of the total while redistributing the 2.7 million acres of land seized from the administration. Credit for small farmers increased 400 percent in these years and state farms provided their workers with health clinics, daycare, schools, and subsidized stores. With increasing demands, a 1981 Agrarian Reform decree allowed all idle, abandoned, or poorly managed land to be expropriated by the government.

In addition to these economic changes, the Sandinistas began carrying out social reforms

in favor of the majority of poor Nicaraguans left out of the progress. The Somoza years had left Nicaragua with more than half of the population unable to read and write. Using FSLN founder Carlos Fonseca’s advice to “also teach them to read” as a slogan, much of the country mobilized in 1980 around the National Literacy Crusade with the goal of reducing these outrageous levels of illiteracy. The normal school year was postponed and 60,000 students were trained and traveled to live in the countryside to teach basic literacy for nearly five months. Another 25,000 worked in the poor barrios of the cities, where many adults remained functionally illiterate. The massive voluntary participation that the National Literacy Crusade received was only possible in the atmosphere of elation and euphoria following Somoza’s fall. In addition to the educational accomplishments, the literacy campaign served a dual political function for the new government. On the one hand, the program’s pedagogy was built around revolutionary political themes, causing some to denounce it as political indoctrination. On the other hand, by living in rural communities, the literacy brigades were brought face to face with the realities of Nicaraguan poverty and social exclusion. Many of those who participated were permanently politicized by their experience in the campaign. Directed by Jesuit priest and Sandinista Fernando Cardenal, the campaign reduced illiteracy from approximately 50 to 13 percent and received wide international acclaim, including a prestigious United Nations Educational, Scientific, and Cultural Organization award for single best program of 1980. Building upon the success of the literacy campaign was a burst of cultural awakening, as books, magazines, and newspapers became widely read and debated. National dance, music, and handicrafts were revived and heavily promoted by the government, while poetry and art workshops were held throughout the country.

In addition, the Sandinistas built on the Cuban model for public health, another area in which pre-revolutionary Nicaragua was highly deficient. The Somoza era had bequeathed high levels of malnutrition and death of children by curable disease, while the rich received quality care in private hospitals. With the unification of the national health system, hospitals were built, doctors were trained, and clinics spread to distant corners of the republic that had never

before been given attention. In addition, the FSLN placed a major focus on primary health-care and preventative medicine. Popular Health Days followed the model of the literacy campaigns, mobilizing volunteer health brigades to carry out vaccinations and raise awareness. Diseases such as polio, measles, diphtheria, tetanus, and whooping cough, which had previously plagued the population, were brought down precipitously or eliminated. As a result, national averages of infant mortality dropped as life expectancy increased. In 1981 the United Nations Children's Fund noted that the health programs of Nicaragua represented a model for the developing world. Like the literacy crusade, it was not massive injections of aid money that began solving these social problems, but political will and the energy of mass mobilization.

US Intervention

If a fortuitous series of circumstances allowed the revolutionaries to come to power, an entirely different panorama would face the new government with the 1980 election of Ronald Reagan as president of the United States. Reagan's worldview was one of a dichotomous struggle against the Soviet Union's "evil empire," and he developed a strong antipathy to the Sandinistas. The Reagan administration announced a laundry list of distinct reasons for their subversion of the Nicaraguan Revolution, including its military build-up, "totalitarianism," "human rights violations," and support for leftist guerillas in El Salvador. In retrospect, the decision to intervene seemed to be based on the threat to regional hegemony that the "threat of a good example" represented. To many Nicaraguans, Reagan's attempt to destroy the Sandinista Revolution was simply the modern extension of policies that extended from William Walker through the US occupation of 1912–33 and the half century of Somoza dominance.

As the Central Intelligence Agency (CIA) had previously done in Guatemala in 1954 and Chile in 1970–3, various means were used to prevent the possibility of a genuine revolution. Militarily, it began arming and training former National Guard members, known as counterrevolutionaries or the *Contras*, to carry out guerilla attacks and massacres from Honduras on "soft targets," such as agricultural cooperatives, health clinics, and schools. As the deaths mounted, continued and sporadic military conflict began spiraling into

a new civil war, the direct hands of the CIA behind the *Contras* became increasingly apparent. US support for these groups, widely considered "terrorists," would bring a great deal of condemnation. It was the October 1983 mining of the harbor of Corinto by CIA agents that led the International Court of Justice to condemn the United States for acts of aggression and terrorism.

In 1981 the Reagan administration cut off all economic support and aid that had previously gone to Nicaragua and attempted to prevent the FSLN from receiving international development loans. In 1985 Reagan went one step further and declared a total trade embargo against Nicaragua, depriving the country of its traditional export markets and sources for many of its inputs and replacement parts. As a result of these continued acts of aggression by the United States, Nicaragua moved closer into the sphere of Cuba, the Soviet Union, and the communist bloc countries which provided economic support and trade.

Elite Domestic Opposition

In addition, the Sandinistas were resisted by powerful local opponents. Given the Sandinistas' socialist orientation and Marxist origins, it is perhaps not surprising that relations with the private sector turned acrimonious quickly. Sandinistan attempts to structure investment priorities, control prices, and redistribute wealth were greeted with widespread disapproval. The nationalization of a number of firms announced on the first anniversary of the Revolution sparked a wave of opposition by Nicaraguan capitalists, grouped in the Superior Council of Private Enterprise (COSEP). In addition, antipathy to FSLN economic policy led many to decapitalize, scale back production, and invest abroad. Voicing elite opposition to the Sandinista regime was *La Prensa*, the same major newspaper that had opposed Somoza, with headlines screaming of communism, totalitarianism, and shortages of goods. Denunciations of the *Contras* and the US aggression did not figure prominently in their coverage, and it was later revealed that the paper itself formed a part of the CIA strategy to destabilize the regime.

In addition to the economic elite, the Catholic Church quickly became a most outspoken opponent. Archbishop Miguel Obando y Bravo attempted to bring the grassroots activism of the liberation theologians that had been so

instrumental in the revolutionary movement back under control of the church hierarchy. This was a local articulation of an international campaign against liberation theology led by Pope John Paul II. The FSLN was considered communist and atheist, though many Sandinistas had come to social activism by way of their Christian faith. The participation of Jesuit priest Miguel D'Escoto as foreign minister, as well as the brothers Fernando and Ernesto Cardenal (a Jesuit father and Trappist monk, respectively) in cabinet-level positions, particularly rankled church authorities. Highly political interpretations of the Bible became anathema to the church leadership, which supported the reassertion of a more traditional order. The church-Sandinista conflict reached its zenith when Pope John Paul II visited Managua in 1983 and made strong statements in favor of the hierarchy and refused to denounce the United States for the attacks of the *contras*. In response, Sandinista crowds began chanting over the pope's speech, disrupting and angering the pontiff. Relations would remain tense for the rest of the decade.

Campefino and Indigenous Opposition

The peasants or *campesinos* of the country's agricultural frontier and the indigenous people of the Atlantic coast also came to oppose the Sandinistas. These groups had largely been left alone during the Somoza regime and participated very little in the struggle to overthrow the dictatorship. The FSLN Agrarian Reform, with its emphasis on the promotion of state farms and agricultural cooperatives, angered many peasants who dreamed of being able to own a piece of land. The state monopolization of the distribution system and price-setting infuriated *campesinos* who demanded the right sell to whoever they wanted at the best price they could receive. This general discontent allowed the CIA-backed *Contra* guerrillas to develop networks of rural collaboration and recruitment in their war. The mistreatment of local populations by the Sandinista Popular Army, now carrying out a counterinsurgency campaign against the *Contras*, also alienated many peasants.

A similar instance of alienation occurred in Nicaragua's isolated and culturally distinct Atlantic coast, despite the intention of the Sandinistas to respect cultural and ethnic diversity. The region was inhabited by six different ethnic groups:

Spanish-speaking Mestizos, Miskito Indians, Creoles (Afro-Caribbean population), Mayanga Indians (previously known as Sumu), Garifunas (Central American Maroons), and Rama Indians. Throughout history, the ethnic hierarchy of the Atlantic coast was fluid. The Sandinistas were unable to deal with the resultant interethnic domination and tension. Among the mistakes made by the Sandinistas from the beginning was their intent to distribute collective land titles. To many Miskito Indians this was seen as robbery because they didn't feel that the Sandinistas had the authority to distribute their land. Another mistake the Sandinistas made was not considering the indigenous languages or Creole English within their alphabetization campaign on the Atlantic coast, instead carrying out the campaign in Spanish (as on the Pacific coast).

While the smallest least-powerful ethnic groups in the hierarchy supported the Sandinistas, their relationship with the Miskito and others became more and more strained. The indigenous – but mainly Miskito – organization MISURASATA (Miskito, Sumo, and Rama All Together) radicalized its demands, and in February 1981 the Sandinistas detained 33 members of the leadership of MISURASATA, accusing them of “separatism.” All but one were released two weeks later. Most of them fled to Honduras and started to build an indigenous *Contra*. After the first major Miskito *Contra* military offensive, which began in November 1981, the Nicaraguan government ordered the forced relocation of the Miskito border population: 8,500 were relocated to a new settlement, while 10,000 fled to Honduras. While fighting the *Contras*, abusive Sandinista treatment of indigenous Miskitos left many dead, especially between 1981 and 1982.

In Honduras an indigenous *Contra* under the leadership of Steadmen Fagoth, named MISURA, was built and integrated into the FDN *Contra*. It split in 1982 when a faction under the leadership of Brooklyn Rivera accused Fagoth of crimes against civilians and criticized their alliance with the most right wing of former Somoza followers. A rival indigenous *contra* organization (MISURASATA) emerged, and joined the more moderate *Contra* Revolutionary Democratic Alliance (ARDE) in Costa Rica. The CIA intervened, directly offering arms to the Miskitos and pushing them to go to war.

In the Southern Atlantic coast the FSLN did not recognize the organization of the Creole population, the Southern Indigenous Creole

Community (SICC), since it was openly against the Sandinista government. After huge protests in Bluefields in late September and early October 1980 against the “Cuban presence” (mainly doctors and teachers), the FSLN engaged in a process of dialogue and managed to slowly dissipate tensions. Nevertheless, the majority of the Creole population remained apathetic towards the Sandinista revolution, as well as towards the Contras.

The Sandinista politics towards the Atlantic coast changed from 1983 on, as noticed positively by many human rights organizations. The FSLN declared various amnesties for Miskito prisoners, and after the elections in 1984 the resettled Miskitos were allowed to decide if they wanted to return to their communities – most of them did by 1985. In 1987 an an Autonomy for the Atlantic Coast provision was introduced into the new constitution, effectively signaling an end to the Miskito Contra.

As the decade stretched on, FSLN policy began shifting dramatically in certain ways. Rather than denouncing all of the private sector, they began more intensely emphasizing collaboration with the “patriotic producers” or “national bourgeoisie” – those businesspeople willing to work with the regime. In relation to the Atlantic coast, the Sandinistas began voicing support for a form of autonomy and self-governance for the region that would be enshrined in the new 1987 constitution. Most dramatically, the entire Agrarian Reform plan, with its cooperatives and state farms, would be shelved due to military expediency. A new strategy of direct titling of small farms to individual *campesinos* was launched in 1984, with the hopes of pacifying rebellious regions. Regardless, US funding of opposition – political and military – continued throughout the 1980s.

Sandinista Democracy

The Sandinista promise of a socialist government with an emphasis on democracy provoked great hopes among the international left, which had grown disillusioned with the authoritarianism of the various “revolutionary” regimes which had seemingly transposed the Soviet dictatorship into new contexts. Although having great reverence for the Cuban experience, the FSLN hoped to avoid its undemocratic errors and isolation. In 1984 the Sandinistas made good on their promise for democratic elections. These multi-

party elections were accepted as relatively free and fair by multiple international electoral observers, though the United States called them a “farce”. With the last-minute exit of the main opposition candidate, Sandinistas Daniel Ortega and Sergio Ramírez won an overwhelming landslide victory with 65 percent of the vote. An increasing degree of institution-building followed with the writing of a new constitution in 1985 and 1986 by the elected National Assembly. The final document attempted to combine the civil and political rights of the western democracies with the guaranteed social rights and commitment to equality of the Eastern European constitutions.

Rather than merely the habitual exercise of elections, the FSLN promised to promote a grassroots democracy in which average citizens could participate constantly in the decisions that affected their daily lives. Mass organizations were to engage the population, including the Sandinista Worker Federation (CST), the Association of Rural Workers (ATC), the National Union of Farmers and Ranchers (UNAG), and the Luisa Amanda Espinoza National Women’s Association (AMNLAE.) In theory, these organizations were to allow these important sectors of national life to receive direct representation and voices for the first time. The largest of these mass organizations were the Sandinista Defense Committees (CDS), which had formed out of the insurrection itself. These block committees were founded throughout the country, where they played a key role in mobilizing the population for education, health, housing, and cultural projects. They also distributed scarce resources directly to the population and established popular militias which greatly reduced crime and prevented acts of sabotage.

At the same time, these mass organizations quickly developed a reputation as “conveyor belts” for the top-down decisions of the Sandinista Party, which was recognized as the “vanguard of the Revolution.” Indeed, an early revolutionary slogan was “National Directorate, give us your orders!” Thus emerged a strange situation in which groups that “represented” women or workers were expected to steer clear of divisive issues like feminism or the struggle for better wages. This verticalism was accentuated by US aggression. Many CDS block committees gained great notoriety for “spying” on communities and generally behaving in an authoritarian and arbitrary manner towards neighbors. Providing

an opportunity for poor and marginalized Nicaraguans to participate for the first time ever in the day-to-day management of society was an accomplishment of the revolutionary mass organizations. In the end, however, the inherent tension between centralized decision-making and the dream of a self-managing society meant the latter could not materialize.

Continuing Civil War

Despite democratic elections, US opposition continued unabated. As the Contras mobilized increasing numbers of *campesinos* to participate in their armies, their ability to effect damage to the country and economy increased. Opposition figures that had once participated in the government, like Alfonso Robles and Arturo Cruz, were recruited to provide a civilian face to the armed insurgency. As a result of the war, nearly 30,000 people were killed and 180,000 displaced from their homes. Farming in the north was greatly disrupted, infrastructure destroyed, and an estimated \$50 million lost each year. As a result of both the war and Sandinista mismanagement, shortages of basic goods were common and many items of daily consumption were rationed. With the *La Prensa* accused of endorsing the Contra forces, the Sandinistas shut down the newspaper, silencing the main voice of opposition to the FSLN in the country.

To continue isolating the Contras and defend the Revolution, the Sandinistas constructed an incredibly expensive and large military force, allocating 62 percent of its budget to defense, starving the coffers for health and education programs. To supply the 40,000 soldiers necessary to meet the American challenge, the FSLN instituted a highly unpopular military draft known as Patriotic Military Service. While the wealthy were able to send their children abroad to escape the draft, the burden fell overwhelmingly upon the children of peasants and the urban poor.

In the United States the violence in Nicaragua provoked a great deal of debate and Congress passed an amendment forbidding lethal aid to the Contras. When an American mercenary plane was shot down over Nicaraguan airspace while delivering aid to the Contras, investigations began into the role of the White House in secret supply networks. Though funding to the Contras

was restored by Congress in 1986, the crimes committed during the interim became the subject of the so-called Iran–Contra scandal. It was revealed that members of the Reagan administration, particularly Oliver North of the National Security Council, had funneled money to the Contras, earned through secret weapons sales to Iran. Though Reagan and Vice President George H. W. Bush avoided any punishment, the irony of selling weapons to a regime denounced by the US as “terrorist” to fund armed groups widely considered “terrorists” was lost on few.

With the Reagan administration’s policy of getting the Sandinistas to “cry uncle” universally repudiated, a pathway to a negotiated solution was opened by the Latin American governments known as the Contadora Group, which linked solutions to the various conflicts of Central America, including Nicaragua, El Salvador, and Guatemala. Building upon these efforts, further negotiations between the Central American heads of state led to the 1987 Esquipulas Accords, in which they collectively resolved to promote national reconciliation, demobilize “irregular armed forces,” and transition to elected systems of governance. Though his negotiation plan was opposed by the US, Costa Rican President Oscar Arias received the Nobel Peace Prize for his efforts. In Nicaragua this diplomatic process bore fruits: *La Prensa* was permitted to begin publishing again while negotiations were opened between the Nicaraguan government and the Contras. The Sapoa ceasefire agreement of 1988 and other agreements would be signed between the Nicaraguan government and the Contras, providing a blanket amnesty for the insurgents, the demobilization of their forces, and guarantees for land and economic opportunities to ease their transition into civilian life.

Revolution’s Defeat and Its Legacies

With the actual threat of the Contras brought to a conclusion, the peace treaties did not represent a panacea for the Revolution. The war, embargo, mismanagement of state enterprises, and conflict with the private sector had left the country in a difficult position. Galloping inflation soared to 30,000 percent, setting records even in a region known for high levels of inflation. With the economy in shambles and poverty increasing, the

Sandinistas embraced a version of the neoliberal policies being forced upon countries throughout the region by the International Monetary Fund. These austerity programs, including a devaluation of the *córdoba*, layoffs, and cutbacks in credit fell hardest upon the poorest among the population.

In the wake of the fall of the Berlin Wall, the FSLN agreed to hold multiparty elections to once again ratify the popular support for the Revolution, with Daniel Ortega again as their candidate. Running against him was Violeta Barrios de Chamorro, *La Prensa* owner, with the backing of 14 political parties from across the political spectrum. Assuring a united front against the Sandinistas, the US government was acting through the National Endowment for Democracy to fund and organize the electoral campaign against the Sandinistas. It was later revealed that the US gave millions of dollars in both covert and public aid to the National Opposition Union (UNO) coalition. An ultimatum was laid by the superpower before the Nicaraguan people: if the Sandinistas were voted out, funding for the Contras would end and the embargo would end. The invasion of nearby Panama by the United States in 1989 increased this threatening atmosphere. When the vote was held (February 1990), Nicaraguan voters voted the Sandinistas out of office and ended what had been 11 years of high hopes and difficulties; Chamorro received 55 percent of the vote to Ortega's 40 percent. With tears in his eyes, Ortega accepted the results of the elections and insisted on cooperation as the way to preserve democracy through the transition.

Many of the social gains of the Sandinista Revolution in the spheres of health, education, housing, and culture were rolled back over the course of the next two decades of neoliberal economic policy. Poverty, inequality, and migration grew. Perhaps the greatest irony of the Sandinista Revolution is that its greatest achievements were not among the FSLN's goals. The Sandinistas changed the agrarian structure of the country – not into modern state farms as the Sandinistas dreamed – but into a society of small producers, greatly decreasing the land held by vast estates. Also, by overthrowing a dictatorship, developing democratic institutions, and handing over power following defeat at the ballot box, the Sandinistas in many ways carried out an effective “bourgeois democratic revolution.” The suc-

cessors of the Sandinistas' mass organizations, now freed from their fetters as mere subsidiaries of the FSLN, have developed into vibrant independent community groups and national organizations. Neighborhood councils, feminist organizations, and indigenous communities have played a role in constructing a new civil society. Finally, a discourse of human rights and an understanding of the inequalities and injustice of society filtered throughout the popular consciousness, where they remain until this day.

Nietzsche, Friedrich (1844–1900)

Stacy Warner Maddern

Born in 1844 in the small town of Ruecken, Prussia, Friedrich Nietzsche would challenge the normative forces of morality in the dawn of the twentieth century. Through his thesis on the death of God, Nietzsche sought to identify the complicity between morality and Christianity that perpetuated the denial of life. As a child, Nietzsche's life would be altered, at the age of 4, by the death of his father, who had been a Lutheran minister. The event seemed to spark what would later result in his questioning the existence of God, initiating an important philosophical anti-religious current in the nineteenth century that burnished the value of individual rights.

At 15, Nietzsche entered Schulpforta, a Lutheran boarding school, where he prepared for university studies. After graduation he attended the University of Bonn in 1864 as a theology and philology student. At Bonn, Nietzsche indulged in a more hedonistic lifestyle and it is believed he contracted syphilis there. After growing tired of such endeavors he left Bonn for the University of Leipzig, fixing all his attention exclusively on philology – a discipline which then centered upon the interpretation of classical and biblical texts. As a student of philology, Nietzsche attended lectures by Otto Jahn (1813–69) and Friedrich Wilhelm Ritschl (1806–76). In 1865, at the age of 21, Nietzsche discovered Arthur Schopenhauer's *The World as Will and Representation* (1818) in a local bookstore. Schopenhauer's work fed his yearning for philosophical inquiry and quickly immersed him into the metaphysics of nihilism.

In 1868, after a brief stint of military service, Nietzsche returned to the University of Leipzig, where his talent and published writings in philology earned him a doctorate degree, without having to write a dissertation, and also a professorship at the age of 24 in classical philology at the University of Basel. At Basel he would befriend composer Richard Wagner (1813–83), with whom he shared an enthusiasm for Schopenhauer. Nietzsche, who had been composing piano, choral, and orchestral music since he was a teenager, admired Wagner's musical genius. At 27,

he authored his first book, *The Birth of Tragedy* (1872), which he would later claim was a product of the impact of Schopenhauer and was inspired by the music of Wagner. While it was hailed by intellectuals, most classic philologists panned it for lacking a “scientific” premise.

During his time of residency at Basel, Nietzsche expounded upon his frustration with contemporary German culture by completing a series of studies. *Unfashionable Observations* (1873–6) was an examination of David Strauss, a historian of religion and a cultural critic, in which he raised issues concerning the social value of historiography, marking Schopenhauer and Wagner as the standards for new developing ideas. In 1879, at 34, while he was a respected professor at Basel, Nietzsche's health was deteriorating. Suffering from prolonged migraine headaches, eyesight problems, and vomiting, he resigned from the university.

From 1880 to 1889, Nietzsche maintained a wandering existence, never residing in any place longer than a few months at a time. These years would produce his primary works, including *Daybreak* (1881), *The Gay Science* (1882/1887), *Thus Spoke Zarathustra* (1883–5), *Beyond Good and Evil* (1886), and *On the Genealogy of Morals* (1887). In 1888, he would complete *The Case of Wagner* (May–August 1888), *Twilight of the Idols* (August–September 1888), *The Antichrist* (September 1888), *Ecce Homo* (October–November 1888), and *Nietzsche Contra Wagner* (December 1888). It was through these works that Nietzsche's fascination with individualism began to develop. In particular, *On the Genealogy of Morals* accuses the ideals of traditional Christian morality of being mired in self-deception because of its practice of turning an “evil eye” toward the natural inclinations of humanity. As such he goes on to qualify priests as essentially weak people who advise and counsel weaker people as a means of gaining power for themselves. Because of such developments in Christian faith, Nietzsche concluded that the individual had no alternative than to fall back on himself. Herein, the danger of Christian morality, according to Nietzsche, was the disparity that it eventually enforced on individuals, causing them to embrace a nihilistic dilemma on the meaning of life.

Nietzsche attempted to identify the devastating effects that could be wrought by Christian morality in nineteenth- and twentieth-century Europe. He utilized his own personal prophet in

Thus Spoke Zarathustra to express the coming of a new age, one that would exist on the premise of creativity and a culture of truthfulness. In such an age he creates *Übermensch*, an overman who has mastered individualism and sets this as the ultimate goal of man. The particular point he makes is not the goal of man at the end of life, but the realization that life is a journey placing the realization of the self above all else. With *Übermensch*, Nietzsche identifies a fundamental component of human nature as the reliance on expression through self-enhancement. It becomes the essential meaning of life to experience, and for every single individual that experience is different. By this, Nietzsche seemingly rejects the virtues contained in mass values and mass movements.

In 1889, Nietzsche had a mental breakdown, most likely the result of his early contraction of syphilis, leaving him an invalid for the rest of his life. After being hospitalized for a brief time in Basel, he spent most of 1889 in a sanatorium in Jena until his mother was able to take him back to Naumburg in 1890. After his mother's death in 1897, his sister Elisabeth assumed responsibility for Nietzsche's welfare. In Weimar she rented a small cottage, which later became known as the Villa Silberblick, where she attempted to promote her brother's writings. On August 25, 1900, Nietzsche died shortly before his fifty-sixth birthday of an apparent stroke.

During his lifetime Nietzsche's work went apparently unnoticed; however, he never doubted that it would have a lasting cultural effect. In large part the responsibility for this lay upon his sister, Elisabeth, who as a dedicated Nazi tried to unleash his work as a treatise in support of Hitler, which ultimately led to the interpretation of Nietzsche as an anti-Semite. In reality Nietzsche became one of the first philosophers to declare war on a long-standard western tradition relating to the fundamental principles of morality. He also called into question the logical standards underlying European reason, which would have a great impact on philosophical intellectuals in the later half of the twentieth century. As the twentieth century progressed, his thinking would provide inspiration to avant-garde artists teetering on the periphery of conventionalism. Nietzsche's practice of seeking explanations for accepted morality in contrast to acceptance of animal instinct is believed to have been crucial in Sigmund Freud's development of psychoanalysis.

It was not until the 1960s in France that Nietzsche began to appeal to writers and artists through his declaration of "God is dead." It was through his own emphasis upon power as the most relevant explanation for people's actions that Nietzsche's thought began to inspire new mechanisms for challenging the establishment and launching new methods of effective social critique. At the heart of his work lies a premise that the goal of life should be to find oneself and that knowledge and strength are much greater virtues than humility and submission.

Niger Delta, protest movements

Adebusuyi I. Adeniran

The Niger Delta – the heart of Nigeria's oil economy – is traditionally composed of six states (Akwa Ibom, Bayelsa, Cross-River, Edo, Delta, and Rivers) comprising the South-South geopolitical zone of Nigeria. In 2000 three other oil

producing states of Abia, Imo, and Ondo were to be included as members of the newly established Niger Delta Development Commission (NDDC). Paradoxically, however, with the region accounting for nearly 90 percent of Nigeria's gross export earnings, it is the least developed in Nigeria. Environmental degradation, air pollution, and general deprivation are highly prevalent.

Agitation for social justice has been always quite potent since oil exploration began in the region in 1956, but contemporary clamor for local resource control began taking militant undertones in the early 1990s, with pockets of social action – protests, demonstrations, and intermittent disruption of oil production – throughout the region. Due to the flagrant ineptitude of Nigerian ruling aristocrats, these hitherto non-violent displays of discontent metamorphosed into an armed struggle between Niger Delta militants and the Nigerian federal state. Indeed, militancy in the Niger Delta region has remained the greatest threat to the continued existence of Nigeria as a unified nation.

In the 1990s, after nearly fifty years of oil exploration, Nigeria, especially the oil producing region of Niger Delta, had not modernized its economy, and the region has fallen deeper into poverty. In spite of the wealth brought about by the oil deposits, the majority of residents in the Niger Delta had become poorer over time, abandoning traditional agricultural endeavors mainly as a consequence of destruction of the ecosystem by oil spills and related social incongruence without corresponding compensation. The Niger Delta, with an annual population expansion of 3 percent, accounts for an estimated 25 percent of Nigeria's more than 140 million inhabitants. In the two decades from the late 1980s to early 2000s, conspicuous changes have occurred in the social and economic structures of the region without necessary accompanying opportunities for the citizenry.

Protest Movements and Social Unrest

Commencing from the early 1990s, various groups began to emerge protesting the injustice meted out to the Niger Deltans by the Nigerian state and their foreign oil partners. In 1992 the Movement for the Survival of the Ogoni People (MOSOP) came into being basically as the platform for projecting to the entire world the agonies of the minorities of the Niger Delta region. Playwright

and social activist Ken Saro-Wiwa became MOSOP leader. The Nigerian government and Shell Oil Company were its chief targets. The antagonism between MOSOP and Shell (ably represented by the Nigerian military) took a violent turn in December 1992. MOSOP was "pushed" to issue a timeframe within which all the oil companies operating on Ogoniland (Shell, Chevron, and the Nigerian National Petroleum Corporation) had to remit an estimated \$10 billion in compensation for the unbridled exploitation of their resources and environment. MOSOP promised large-scale social unrest if its demand was not met. The federal government reacted by prohibiting public protests and moved to criminalize "insubordination" of any kind in the process of oil production within the region. This act led to a series of intermittent violent clashes between MOSOP and government forces. An escalation of these conflictual exchanges took place on May 21, 1994 with the entrance of Nigerian military personnel into most Ogoni settlements. Four factional MOSOP leaders were murdered, ostensibly by the military. However, Saro-Wiwa, who was outside Ogoniland at the time of the killings, was declared wanted for complicity. He was subsequently arrested and found guilty of murder by a tribunal put in place by the military government. He was eventually executed by hanging with eight other Ogoni rights activists (the Ogoni 9) in 1995. Meanwhile, by the end of the siege in June 1994, well over 2,000 people had lost their lives and an estimated 120,000 internal refugees had been created.

In 1998 the Ijaw Youths Council (IYC) was formed with the sole aim of agitating for indigenous people's rights. The Ijaw people are the largest ethnic group in the region. The bid by the IYC in December 1998 to launch its Operation Climate Change in reaction to the activities of the oil companies operating all over the region was met with stiff resistance from about 20,000 Nigerian military personnel. Consequently, hundreds of IYC members and sympathizers went on violent protests all over Bayelsa state. Scores of protesters were maimed, while tens were caged. Another protest organized for the release of the arrested IYC members turned bloodier with the killing of more protesters by government troops. The Nigerian military government declared a state of emergency throughout Bayelsa state. The period of the curfew was marked with massive looting, beating, rape, and undocumented killings.

Two Ijaw settlements – Ikiyan and Opia in Delta state – came under severe attack on January 4, 1999 for what the military authorities termed anti-state propaganda by the IYC. Scores of indigenes, including the Ikiyan traditional ruler, were maimed, while many remained missing months after the siege ceased. Entire communities were set ablaze by the military forces. Regardless of this state ruthlessness, IYC's Operation Climate Change campaign persisted, as could be seen in the disruption to oil production and distribution for much of 1999. Consequently, the new “democratic” government ordered the invasion of Odi in Bayelsa state where almost 3,000 inhabitants were massacred.

Rise of Militarized Struggle

Persistent environmental degradation and unbridled social injustice have provided the impetus for continued militarization of the region, as seen in the activities of various environmental rights groups and the military. The emergence of both the Niger Delta People's Volunteer Force (NDPVF) led by Mujahid Dokubo-Asari and the Niger Delta Vigilante (NDV) in 2003 sent an array of small militant groups into oblivion in the region. The primary goal of the groups, which operate from the regional creeks that are extremely difficult for the Nigerian military to access, was to assume the control of oil resources within the region. Both the NDPVF and NDV do this by the illegal tapping of oil pipelines, that is, “bunkering,” and the intermittent destruction of oil facilities. Although the government criminalized the activities of these militant groups, they in turn claim to be taking what rightfully belongs to them. The ensuing altercation climaxed on September 25, 2004 when Dokubo-Asari declared a total war on the Nigerian government and the foreign oil corporations (oil installations were flagrantly vandalized) in reaction to the envisaged extermination agenda of the federal government directed at the Niger Deltans. Eventually, Dokubo-Asari was arrested and convicted of treason.

The existence of the Movement for the Emancipation of the Niger Delta (MEND) was acknowledged in April 2006 when it publicly claimed responsibility for the bombing of an oil facility. MEND thereafter called for the immediate release of the imprisoned NDPVF leader and other Niger Delta emancipation advocates,

and warned all foreign oil companies to leave with immediate effect. The group emphasized that “the Nigerian government cannot protect your workers or assets . . . our aim is to totally destroy the capacity of the Nigerian government to export oil.” Various intense altercations between the government and MEND have resulted in the loss of numerous lives on both sides over the years.

The activities of these militant self-determination groups have clearly turned out to be the greatest challenge to the existence of Nigeria as a unified state. In June 2008 Nigerian-born United Nations Under-Secretary General Ibrahim Gambari was rejected as the head of the proposed Niger Delta summit. His rejection was a popular means for Nigerians to let the government know what they thought of its insensitivity towards the Niger Deltans. The kidnapping of key state functionaries and their families and foreign oil workers have continued unabated.

Nigeria, 1993 political and electoral protest and conflict

Olayinka Akanle

Nigeria is the most populous nation in Africa. Endowed with human and natural resources, it is also the continent's oldest federal polity and has great ethnic, religious, class, and linguistic diversity. Nigeria experienced one of the most popular pro-democracy revolts in the history of contemporary African governance following the annulment of the free and fair presidential

elections of June 12, 1993, which were presumed to have been won by Chief Moshood Kashimawo Olawale Abiola.

Prior to the June 12 elections, Nigeria had spent 24 of the 33 years since its independence under repressive military regimes. During that period, human rights violations, corruption, unemployment, and poverty were widespread. Popular yearnings for democracy were audibly expressed, both nationally and internationally. It was in this context that the military government of General Ibrahim Badamosi Babangida (1985–93) initiated a transition to civilian rule.

General Babangida's commitment to democratic transition was initially perceived as genuine and encouraged policy dialogue between the military and influential civilian political and economic elites, including Abiola. After the investment of a great deal of money, manpower, and time in the democratic process, the elections were brought abruptly to an end when results showed Abiola leading in almost all the states of the federation. The 1993 election was noteworthy in Nigeria's political history as strong ethnic and religious sentiments were replaced by support for Abiola, the popular candidate, who was emerging as the clear winner.

In annulling the election, a systematic process was followed by Babangida and the military junta culminating in the hurried promulgation of decrees to incapacitate and prevent revolts and possibly legalize the military's suspension of the elections. Decree 39 of 1993 (Basic Constitutional and Traditional Provisions) repealed the constitution, Decree 40 of 1993 amended the transition program, and Decree 41 completely annulled the election on June 23. Unlike previous electoral crises, for example Operation Wetie of 1965 in southwestern Nigeria, which was sparked by ethnic divisions, the 1993 electoral protests and violence were spontaneous, coordinated, and widely supported by progressives.

Against the backdrop of poverty, wide class divisions, hopelessness, and a repressive military dictatorship, Abiola represented the popular expectations of the masses, especially among the poor, in part due to his philanthropy prior to entering politics. His effort to appeal to the poor was encapsulated in his election slogan, "Hope 93," which became a popular catchphrase in Nigeria. Abiola sought to bridge class differences, end national divisions, and engender hope for a more affluent future. When

the elections were annulled, scores of people marched on the streets of Nigeria's major cities in revolt. Babangida was subsequently forced to step down and hand over power to Chief Earnest Shonekan as interim president. Shonekan was subsequently overthrown in November 1993 by General Abacha, then minister of defense.

One year after the elections, on June 12, 1994, Abiola declared himself president based on a popular mandate, but was arrested and detained on June 23, leading to an outbreak of protest, violence, loss of life, and general turmoil. Official estimates place the number of deaths in the hundreds, but unofficial counts are significantly higher, as the period almost led to a second Nigerian civil war. However, opposition from the media and political activists was galvanized and resources were devoted to ousting the military from power. The National Democratic Coalition (NADECO) and Campaign for Democracy (CD) led the call for a return to civilian rule.

Rallies and demonstrations were consistently organized while international media houses were established as a window on the international community. The efficacy of these "pro-democracy activists," as they came to be known, was deemed such that the military junta, through the State Security Service (SSS) and other government agencies, resorted to closing down media houses such as the *Concord* newspaper, which belonged to Abiola, and to arrest, detain, maim, and assassinate its opponents. These atrocities forced many prominent political activists into exile. In July 1994, a national strike by the National Petroleum and Natural Gas Workers union (NUPENG), under the leadership of Frank Kokori, brought the protest to a new climax as fuel deliveries were suspended, facilitating the democracy movement's ability to coordinate protests and demonstrate solidarity against the military government.

As the operating base of Abiola and the focal point of Nigeria's political economy, Lagos was the epicenter of the protest. Similar protests were witnessed in Ibadan, reflecting Ibadan's distinguished legacy of popular resistance to illegitimate regimes with its historical origins in the Yoruba Mekunnu and the Agbekoya movements. The electoral protests and subsequent labor strikes are considered largely responsible for returning democracy to Nigeria.

The sustained momentum of national and international pro-democracy groups maintained pressure on General Abacha until his death on

June 8, 1998, after which General Abdusalam Abubakar handed over power to a democratically elected government on May, 29, 1999, fulfilling popular aspirations.

Nigeria, protest and revolution, 20th century

Ayokunle Olumuyima Omobowale

Militant Protests in Colonial Nigeria

Like most societies under European occupation, Nigeria has experienced violent protests and revolts from the colonial to post-independence era. The history of the colonization of Nigeria is marked by a history of militant conflict and European occupation and subjugation that precluded the capture and surrender of some local authorities, including the Sokoto Caliphate, the Ijebu, and Benin Kingdom.

The system of indirect rule introduced by the colonial regime following the defeat of local rulers served European interests, ensuring social order through administration by regional officials. The first major protest against this system was the Aba Women's Revolt of October 1929, in which some 10,000 women rebelled against the

plan of British officials to tax women directly, independently of men. The women attacked native courts, warrant officers, and European factories. The British colonial authority decided to quell the revolt by force, causing the death of dozens of protesters. Though the revolt was suppressed, the imperial government abolished plans for the Warrant Chief System that would have taxed women (van Allen 1972).

The Aba Women's Revolt bore the characteristics of economic and political protest from citizens, but ethnic and communal disturbances have also been a common feature in Nigeria during the twentieth century. The first major upheaval was the October 1945 Hausa-Ibo Riot in Jos, a tin-mining production hub in central Nigeria. The inter-ethnic insurrection lasted for two days, with many civilians injured, property destroyed, and two deaths. About seven years later, in May 1953 in Kano, another clash broke out between Hausas and Ibos, leading again to the destruction of life and property (Plotnicov 1971). These two ethnic/religious riots apparently formed the foundation for violent clashes which shook Nigeria for the next fifty years.

Protest in Post-Colonial Nigeria

Nigeria's post-independence period started with mutual suspicion between its three regions, with the southern regions of the West and East suspecting and trying to resist the dominance of the predominantly Hausa-Fulani North. The political terrain remained that of acrimonious relations between the three regions until 1966, when more than 30,000 southerners (mostly Ibos) were massacred in Kano, a large city in northern Nigeria. Fearing their safety could no longer be assured, the Ibos subsequently migrated *en masse* to the eastern region. The decision of the Ibos to secede and form the sovereign state of Biafra, with Colonel (General in Biafran Army) Ojukwu as the head of state, resulted in a civil war from 1967 to 1970 with about 2 million casualties. The secession struggle was defeated by Nigerian federal forces, while the military head of state, General Gowon, extended an olive branch with a program of reintegration, reconciliation, and reconstruction. This attempt at reintegration and building trust in the Nigerian federation has not yielded the expected result. The country has failed to achieve national unity due to incessant ethnic/religious resentment

and insurrection. Hence, in December 1980, a religious uprising led by Mallam Muhammed Marwa left 4,177 civilians dead alongside 100 policemen and 35 military officers (Aluko 1985). Subsequently, in March 1987, a conflict among Christians and Muslims at the Kafanchan College of Education also spread to other towns in the north-central region, including Zaria, Kaduna, Katsina, and Funtua, leading to even more deaths (Ibrahim 1989). In February 2000, as the Northern states introduced the Shar'ia traditional Muslim legal system, an attempt by about 2,000 Christians peacefully to protest the law in Kaduna resulted in yet another bloody clash in which many were killed, leading to reprisal killings in other parts of the country. Aside from these prominent communal uprisings, other ethnic conflicts worthy of mention include the Tiv-Junkun, Aguleri-Umuleri, and Ife-Modakeke conflicts.

Nevertheless, upheavals in post-colonial Nigeria also occur in civil society beyond the confines of ethnic/religious conflict. There have been popular revolts against government policies. Thus, for example, in September 1969 the Agbekoya Parapo (Farmers Resist Suffering Society) revolted against the imposition of an £8 per farmer tax rate, among other grievances against the system of trade, intensifying as the state responded to dissent with mass arrests. Though the ensuing conflict resulted in the death of government officials and farmers, the farmers were able to force the government to a compromise (Adeniran 1974).

Likewise, following General Babangida Regime's decision to introduce the neoliberal International Monetary Fund Structural Adjustment Program in 1986, the attendant deplorable socioeconomic condition led to widespread revolt organized and led by university students in April and May 1988 and May 1989. The government initially responded with the closure of universities and proscription of the National Association of Nigerian Students (NANS). However, the government eventually implemented a SAP relief package, which was meant to alleviate the effect of the structural adjustment plan, though not nearly enough to reverse the rising poverty and socioeconomic hardship among peasants and workers (Shettima 1993).

Furthermore, following the cancellation of the June 12, 1993 presidential election, of which Chief M. K. O. Abiola was the presumptive winner, the nation was thrown into another

round of crises in which lives and property were destroyed. Whereas General Babangida eventually handed over power to an interim government led by Chief Shonekan, the government lasted for just about 90 days, toppled by General Abacha. When Abacha decided to hold on to power, the opposition formed the National Democratic Coalition (NADECO) in May 1994, which organized protests against the Abacha government, which nonetheless remained in power until his sudden demise on June 8, 1998, thus paving the way for a transition to democratic governance.

Since the 1990s, the Niger Delta region of Nigeria has attained a higher degree of socioeconomic class consciousness against injustice and environmental degradation brought about by oil exploration by large foreign multinational companies. The 1990 uprisings occurred in reaction to the Abacha government's policies directed against Ken Saro-Wiwa, the leader of the Ogoni people, who protested his arrest and execution in November 1995. Saro-Wiwa's execution by the Nigerian military government did not crush the Niger Delta revolt, but had the reverse effect of expanding social protest. By the early twentieth century the Niger Delta was replete with myriad militant groups, including the Movement for the Emancipation of the Niger Delta (MEND), the Niger Delta People's Volunteer Force (NDPVF), and the Niger Delta Vigilante Force (NDVF), among many others, some of whom have taken up arms against the Nigerian state.

The resistance to government and military repression and growing class and regional inequality in Nigeria has expanded in the early twenty-first century. In 2004 and 2005 the Peace and Development Project (2006) reported and reviewed over 400 violent conflicts throughout Nigeria, most caused by injustice and inequality.

Nigeria, separatist agitation, contemporary

Adebusuyi I. Adeniran

Nigeria gained independence from British colonial domination on October 1, 1960 as a fusion of well over 250 ethnic nationalities. Intense competition for political power among postcolonial leaders has given rise to stiff divisions and suspicion among various nationalities, ethnic groups, and, indeed, religious associations within the country. By 1967, the bid to declare a state of Biafra by the Igbo secessionists of Eastern Nigeria had led to the outbreak of a fatal civil war, which lasted until 1970 and claimed an estimated three million lives.

All along the evolutionary path of contemporary Nigerian society, secessionist agitations have been largely restricted to the southern bloc of the country. In the southwest, the Oodua People's Congress (OPC) emerged and has been holding sway as a reactionary movement against the perceived political injustice being meted out to the rest of the country by the northern oligarchy. The group's assertion is typified by the unjust annulment of the presidential election of June 12, 1993 (won by Chief Moshood Abiola – a southerner) by General Ibrahim Babangida – a northerner.

In the southeast, the Movement for the Actualization of the Sovereign State of Biafra (MASSOB) emerged in response to the contemporary alienation of the Igbo people in the political permutations of Nigeria. It promptly resuscitated previous platforms within which the

Biafran secessionist struggle was pursued against the Nigerian state in late 1960. Also in the south, cogent self-determination groups have emerged seeking full control of the region's resources – which provide nearly 90 percent of the country's gross national income. Prominent among such ethnic militias are the Niger Delta People's Volunteer Force (NDPVF), the Niger Delta Vigilante (NDV), the Ijaw Youths' Council (IYC), the Movement for the Emancipation of the Niger Delta (MEND), and Egbesu Boys of Africa (EBA). However, a major defining characteristic of contemporary separatist agitation in Nigeria has been the marginalization of the southern parts of the country by the northern Hausa-Fulani oligarchy.

Primarily, the emergence of secessionist ethnic militias in the country has reflected the inability of the ruling class to ensure equitable distribution of social resources, that is, political power and economic opportunities, among the country's regions. The origin of the OPC dates back to 1994 when a group of Yoruba elites decided to form a grassroots organization that would serve as a platform for charting a new existence for the region outside the Nigerian project. In the view of its founding president, Dr. Fredrick Fasehun, the OPC was established to “defend the right of every Yoruba person on earth.” The more militant faction of the group has engaged the Nigerian police and military in a running battle over the years. Such clashes have resulted in the loss of more men and military hardware on the side of the government forces. In July 2008, a violent clash between the OPC and Hausa settlers at Sagamu, Ogun state, resulted in the death of over 50 people. A retaliatory ambush against Yorubas in Kano, Kano state, led to over 100 people being maimed. Bloody altercations were thereafter reported between members of the OPC and the police in Ilesha, Osun state, and Ajegunle, Lagos state, where nearly 30 lives were lost.

MASSOB appears to be the most vocal ethnic separatist group within the southeast region. The group is in favor of a separate state of Biafra for the Igbo ethnic group; indeed, its leader – Chief Ralph Nwazurike (now imprisoned) – made an unsuccessful attempt to declare a state of Biafra on May 27, 2002. The movement recently designed a separatist flag and a “national” symbol for the proposed Biafran state, while promising to launch its own “national” radio broadcasting

station. Intermittent clashes between MASSOB and government forces have often resulted in the loss of several lives on both sides.

Militant groups of Ijaw descent (the largest ethnic group in the south-south geopolitical zone) have often been the most prominent of all campaigners for self-determination within the Niger Delta region. In December 1998, the All-Ijaw Youths' Conference ended in the creation of the IYC and the release of the Kaiama Declaration of self-determination. As the IYC was preparing to launch its Operation Climate Change campaign in December 1998, the Nigerian military deployed two warships and nearly 15,000 troops in the region. Subsequently, hundreds of IYC members and sympathizers staged a demonstration in Bayelsa state protesting the high level of military occupation of the zone. About ten protesters were killed by troops, while others were imprisoned. A follow-up protest to call for the release of those arrested after the previous demonstration resulted in more injuries to protesters.

The federal government eventually declared a state of emergency in parts of the state. At various military road blocks, residents were mercilessly beaten, raped, and maimed. Soldiers guarding an oil facility at Escravos proceeded to invade both Ikiyan and Opia (Ijaw villages) in Delta state, killing several inhabitants and setting the communities ablaze. In spite of this intimidation, Operation Climate Change went ahead with disruptions to Nigerian oil production for the better part of 1999. Pipeline valves were turned off intermittently throughout Ijaw territory.

The massacre at Odi, Bayelsa state, where over 2,500 people were killed, has remained the hallmark of the unending altercation between the Ijaw nation and the Nigerian government. MEND claimed responsibility for the bombing, which took place at an oil facility located within the region in April 2006. It emphasized that foreign interests would continue to be targets of attack if the region's resources continued to be exploited. Since its inception, the group has carried out a series of disruptions to oil production relatively unhindered. Its actions include pipeline vandalization and the kidnapping of foreign oil workers. The government has reacted by jailing MEND members, including its leader, but the attacks have continued.

With the emergence in 2003 of such massive militant groups as the NDPVF, led by Mujahid Dokubo-Asari, and the NDV, led by Ateke Tom,

the context and nature of self-determination struggles within the region have been considerably altered. Previously, all such struggles were concentrated on Warri, Delta state. Related conflicts are now synonymous with Port Harcourt, Rivers state, and its suburbs. The primary goal of both groups, which operate from the extremely inaccessible regional creeks, is to assume control of oil resources within the region as an independent nation. Both the NDPVF and the NDV execute their agenda through the illegal tapping of oil pipelines, that is, "bunkering," and the intermittent destruction of oil facilities. Although the government has criminalized the activities of these militant groups, they have been prompt in claiming to take what rightfully belongs to them. Hostilities reached a climax on September 25, 2004 when Dokubo-Asari declared total war on the Nigerian government and the foreign oil corporations in reaction to the envisaged agenda of extermination of federal government directed at the Niger Deltans. Eventually, Dokubo-Asari was arrested and convicted for treason by the government. He was, however, released in early 2008.

The activities and goals of the EBA have remained similar in scope and context to those of other self-determination groups within the Niger Delta region. The EBA represents the militant wing of the Ijaw Youth Movement, which has resisted the exploitation of the region's oil resources by the Nigerian state and oil multinationals. In its dream of actualizing an independent nation, the group has often carried out attacks on crucial oil installations and police stations and has kidnapped oil workers within the region.

Nin, Andreu (1892–1937)

Andrew Durgan

Andreu Nin was one of the many founders of the Communist movement who would later rebel against the strictures of a degenerated revolution. Although best known as a victim of Stalinism after his murder during the Spanish Civil War (1936–9), Nin stands out in his own right as a Marxist revolutionary activist and theoretician in the prewar epoch.

Nin was born in the Catalan town of El Vendrell in 1892, where as a teenager he became active in left nationalist and republican politics. He showed at a very young age his ability as a political commentator, publishing regularly in the local and Catalan liberal press. In 1911 he joined the *Unió Federal Nacionalista Republicana*, becoming a leader of its youth wing. Trained as a teacher, he proved to be a talented pedagogue, writing and lecturing on the latest developments in the field. In 1913 he joined the Socialist Party in Barcelona. His defense of Catalan national rights led him into conflict with the party leaders' centralism. His interest in social issues pulled him further to the left. Radicalized by the Russian Revolution and the postwar strike wave in Catalonia, he joined the CNT in 1918. At the CNT's legendary Madrid Congress in December 1919 he announced he had left the Socialist Party and defended the union's affiliation to the new Communist International. Nin was soon one of the leading pro-Bolshevik syndicalists inside the CNT. With more experienced syndicalists victims of the employer-backed gunmen of the *Sindicatos Libres*, younger militants took over the leadership of the CNT, Nin becoming its national secretary in 1921. In July he traveled to Moscow as part of the CNT delegation to the founding Congress of the Red International of Labor Unions (RILU). Unable to return to Spain, where he was unjustly accused of being involved in the assassination of Prime Minister Eduardo Dato, Nin returned to Moscow to work for the RILU. As assistant general secretary of the RILU he was heavily involved with the day-to-day running of the International and traveled to France, Holland, and Italy as its representative. Nin also joined the CPSU and was elected to the Moscow Soviet, but

by 1927 he fell into disgrace having sided with Trotsky. He was one of the last oppositionists to speak in public in the USSR when he addressed the RILU Congress in March 1928. Nin lived in Moscow under house arrest until 1930, when he was allowed to return to Barcelona with his Russian wife, Olga Taréeva, and their two daughters.

A talented linguist, Nin survived economically by translating Russian classics, many for the first time, into Castilian and Catalan. He became leader of the Spanish Trotskyist organization the *Izquierda Comunista de España* (Communist Left) (ICE). Nin was one of a group of outstanding propagandists in the ICE, and wrote extensively on the political situation in Spain, and the strategy and tactics of the workers' movement. His writings on fascism and on the national question stood out. In Moscow in 1923 he had written one of the first Marxist analyses of fascism, expanded later in his book *Las dictaduras de nuestro tiempo* (1930). His *Los movimientos de emancipación nacional* (1935) is an eloquent popularization of the Leninist position on the national question.

Nin's independent mind soon led him into conflict with Trotsky. The refusal of the ICE to "enter" the Socialist Party in 1934, its fusion with the *Bloque Obrero y Campesino* (Workers' and Peasants' Bloc) in 1935, and the signing by the unified party (POUM) of the Popular Front pact in January 1936 led the international Trotskyist movement to break with Nin and his comrades. The foundation of the POUM gave Nin the possibility of playing a more significant role inside Spanish labor politics. Nin was editor of the party's theoretical journal, *Nueva Era*, and in May 1936 was elected general secretary of its trade union federation, the *Federación Obrera de Unidad Sindical*.

With the outbreak of Civil War and revolution in July 1936, and in the absence of his friend Joaquín Maurín, Nin became the principal leader of the POUM. His speeches and writings during his brief time at the center of the revolutionary maelstrom posed more clearly than most the dilemmas facing the insurgent masses. For Nin and the POUM, the war and revolution were inseparable, but victory for both needed the construction of a new revolutionary state. With the CNT's refusal to take power, the POUM felt obliged in September 1936 to follow the anarchosyndicalists into the newly reorganized

Catalan government (*Generalitat*) and Nin became minister of justice. Nin introduced sweeping reforms in the field of civil rights and established a system of Popular Tribunals that put an end to arbitrary repression in the rearward. In mid-December 1936 Nin was ejected from the *Generalitat* at the behest of the Soviet consulate.

The Stalinist campaign of slander against the POUM singled out Nin as a direct “agent of Hitler.” When the party was made illegal in June 1937, Nin was abducted and taken to a secret prison in Alcalá de Henares where he was murdered by Soviet agents once it became clear he would not confess to being a fascist agent. A clumsy attempt to fake Nin’s rescue by German Nazis convinced few outside Communist ranks. Nin’s refusal to “confess” and the international scandal that his murder provoked saved the rest of the POUM leadership from a similar fate.

Nkrumah, Kwame (1909–1972)

Olusanya Olumide

Kwame Nkrumah was a nationalist, African socialist leader, and anti-imperialist president of Ghana. He was among the most influential,

charismatic, and controversial leaders of newly independent sub-Saharan Africa from the mid-1950s to the mid-1970s.

Kwame Nkrumah was born on September 21, 1909 in Nkroful, a fishing village in the British colony of Gold Coast, his father a blacksmith and his mother a retail trader. Nkrumah attended a Roman Catholic elementary school and Achimota College, where he graduated in 1930, after which he taught for some years in elementary schools before traveling abroad for further studies.

Early exposure to politics motivated and sparked his quest for further studies. He went to the United States in 1935 and enrolled at Lincoln and Pennsylvania universities where he obtained degrees in sociology, theology, philosophy, and education. He worked briefly as an instructor and teaching assistant at Lincoln University before proceeding to London to complete his education. During a two-year stay in

Kwame Nkrumah (1909–72), a leading pan-African and anti-colonial leader, helped end British rule over the West African colony of the Gold Coast, declaring the new country of Ghana independent on March 6, 1957. An advocate of African socialism, he was elected president in 1960. Here Nkrumah is pictured with Britain’s Queen Elizabeth II in 1961. (Time & Life Pictures/Getty Images)

London, Nkrumah engaged in the anti-colonial struggle in West Africa through the West Africa National Secretariat (WANS) of the Pan-African movement.

Nkrumah started his political and revolutionary activities in the US while in school. The knowledge of Protestant theology and Marxism he acquired there prepared him for entry into political and revolutionary activities against colonialism and set in motion a dream of African unity. Nkrumah became the president of the African Student Organization of the US and Canada. In England, Nkrumah was a pioneer of the Pan-African Congress, established in 1945 with the aim of providing a platform for Africans to unite and present a common front against colonialism without undermining African traditionalism and egalitarian structure.

Nkrumah returned to the Gold Coast in 1947 to become general secretary of the newly established United Gold Coast Convention (UGCC), founded by and under the leadership of J. B. Danquah. As general secretary, he helped build a mass following of supporters for the new movement through large-scale campaigns, revolutionary speeches, and enlightenment campaigns throughout the Gold Coast. He left the movement in 1949 due to irreconcilable differences between middle-class leaders of the UGCC and his own radical supporters, and formed the Convention People's Party.

His campaign strategy and slogan of "positive action," which described his program of non-violent protest, strikes, non-cooperation, and civil disobedience against the British colonial government, created crises for the government. This sparked massive political unrest throughout the country in 1950. His Africanization policy also created better career opportunities for Ghanaians.

A firm believer in traditionalism and the establishment of a socialistic society (dubbed African socialism), Nkrumah was a socialist revolutionary philosopher who was very critical of capitalism, which he described as a refined form of feudalism, and thus a form of slavery. He believed that traditional African society was not capitalistic but egalitarian and communalistic. Capitalism, he argued, was irreconcilable with the egalitarianism and communalism of traditional African society.

Domestic and external difficulties and problems precipitated Nkrumah's eventual fall from power

in the mid-1960s. Shortly after proclaiming Ghana a republic, his administration became involved in magnificent but ruinous development projects. Contraction of the economy led to widespread labor unrest and a general strike in 1961. The economy of Ghana deteriorated after he borrowed a large amount of money abroad for the development projects. At the same time, he became autocratic, proclaiming himself president for life and leading Ghana to become a one-party state. His dream of African unity was also suspicious to many and was seen as an attempt to weaken fellow African states. With enemies in both Africa and the West, he survived many assassination attempts.

His eventual fall from power took place on February 24, 1966. His regime was overthrown in a military coup led by military and police officers, with the active connivance of western powers, especially the US. Nkrumah was on a trip to Russia, Burma, and the Far East during the coup and went into exile in Guinea where President Sékou Touré made him co-president. He died of cancer in 1972 in Bucharest in Romania.

Non-interventionists, 1914–1945

Stacy Warner Maddern

The non-interventionist movement in the United States serves as a foundation for dissent in America where involvement in international conflicts is concerned. In 1917, as the United States grew closer to entering the war in Europe, voices of dissent could be heard inside Washington circles.

Wisconsin Senator Robert La Follette proclaimed: "Every nation has its war party. It is not the party of democracy. It is the party of autocracy. It seeks to dominate absolutely. It is

commercial, imperialistic, ruthless. It tolerates no opposition.” The first woman in the House of Representatives, Jeannette Rankin of Montana, joined La Follette. As a committed pacifist, she cared little about the damage her beliefs may cause her political career. While some male representatives joined her in voting against the war, a majority of citizens cast her as a woman who could not handle the pressures of national leadership.

When the US Congress finally declared war, it was the Socialist Party of America that organized the largest anti-war campaign, calling an emergency convention in St. Louis. The Socialist Party held that entering the war was “a crime against the people of the United States.” The party’s most prominent voice was Eugene Debs, who gave several anti-war speeches, the most memorable of which was delivered outside a prison in Canton, Ohio, where three socialists were serving time for opposing the draft. Debs proclaimed: “The master class has always declared the wars; the subject class has always fought the battles. The master class has had all to gain and nothing to lose, while the subject class has had nothing to gain and all to lose – especially their lives.”

The government’s response to what it considered treasonous activity was to enact laws to quell such behavior. In 1917–18, the US Congress created both the Espionage Act and the Sedition Act (1918) as the remedy. The Espionage Act made it illegal to do anything that caused insubordination, disloyalty, mutiny, or refusal of duty by a member of the armed forces, and to do anything that willfully obstructed recruitment or enlistment service. The Sedition Act forbade Americans to use “disloyal, profane, scurrilous, or abusive language” about the United States government, flag, or armed forces during war time. The Espionage Act would claim Debs as its most prolific casualty, sentencing him to ten years in prison for making speeches and for counseling young workers to refuse military service. Helen Keller, a persistent voice against militarism, reacted to Debs’s sentence by stating: “I should be proud if the Supreme Court convicted me of abhorring war, and doing all in my power to oppose it.”

Regardless of the government’s repressive techniques, resistance to the war effort prevailed, resulting in nearly 900 people imprisoned for speaking against the war, while an additional

15,000 men declared themselves conscientious objectors. The Socialist Party joined forces with the International Workers of the World (IWW) to create a “Working-Class Union” of draft resisters to march on Washington. The march resulted in 450 members arrested and sentenced to prison. Not deterred, an additional 8,000 later marched in Boston against the war. After men failed to respond to the call of duty, a draft was instituted, but still an additional 330,000 would be classified as draft evaders.

By the 1930s, as the United States tried to recover from the Great Depression, Americans began to call for more isolationism and non-intervention when it came to international conflicts. Veterans who had served in World War I had become increasingly cynical about the nation’s motivations for entering the war. The Bonus Army protests of 1929 had only heightened the fervor over the government’s treatment of veterans who had fought for their country. US General Smedley Butler, after a 33-year military career and twice a recipient of the Medal of Honor, reflected on his military career as being “a high-class muscle man for Big Business, for Wall Street and the bankers. In short, I was a racketeer, a gangster for capitalism.”

As the nation pressed toward involvement in World War II, organizations like the American Peace Mobilization (APM) came out in opposition to the war. The APM would find support from veterans of the Abraham Lincoln Brigade who urged Americans to “Fight for democracy at home. Be a Volunteer for Peace. Join the APM.” In 1940, a Yale University law student, R. Stuart Douglas, Jr., coordinated the America First Committee (AFC) in an attempt to mobilize pressure on President Franklin Delano Roosevelt to honor his pledge of keeping the United States out of the war. The AFC held that the only way to preserve democracy at home was by staying out of what it considered a “European war.” The Catholic Worker movement, founded by Dorothy Day and Peter Maurin in 1933, was also instrumental in a large mobilization effort that opposed the war. One of its members was Ammon Hennacy, who during World War I had been imprisoned for two years for resisting conscription. Again, as the new war approached, he refused to sign up for the draft and pledged not to pay taxes in protest of the government’s position. Even the media seemed to be wholeheartedly supporting resistance to the

war, which seemingly gave some credence to the opposition. In 1939, the *Chicago Tribune* opined, “The frontiers of American democracy are not in Europe, Asia or Africa.” However, all of that would change on December 7, 1941, when Japan bombed Pearl Harbor. After this catastrophic event, any mention of opposing the war effort seemed un-American.

While the anti-war effort was quelled and the United States declared war on Japan, dissidents were still justified by their position. After deciding to disband on December 11, 1941, the AFC issued the following statement: “Our principles were right. Had they been followed, war could have been avoided. No good purpose can now be served by considering what might have been, had our objectives been attained.” Such words would only resonate as again America was at war. In the end, the morality of World War II was politically unable to be questioned.

Non-violent movements: foundations and early expressions

Daniel Ritter and Christopher Pieper

Contempt for abusive power is one of the most salient features of politics in world history. Examples of violent responses to such power abuses are numerous, and much of our written history revolves around the clash between rulers and ruled, challengers and insiders, indigenous and invaders. The most common result of these

clashes has been asymmetrical suffering visited upon challengers, particularly when their main tactic is violent reprisal. However, throughout the ages, individuals and groups have also resisted oppression by non-violent means, defined as “a general technique of conducting protest, resistance, and intervention without physical violence” (Sharp 2005).

To take just one sector of social life, religion, virtually all of the world’s major faith traditions offer ambivalent and polysemic messages regarding the use of violence in social affairs. In the historical record one can readily find non-violent uprisings of Jews against the Romans in the first century, alongside tales of the Zealots and their impatient desire for blood and liberation. Similarly, a long tradition of pacifism and non-cooperation runs through world religions of the premodern era, as well as the majority of secular ethic systems. For the study of protest and revolution then, it is essential to delimit the survey to only those cases that have engaged in what Tilly has called “collective action,” or “the joint pursuit of common goals” (Tilly 1978), through the deliberate use of non-violent means of struggle.

While the human use of non-violence is as ancient as our perpetration of violence (according to Gandhi, non-violence is “as old as the hills”), the strategic use of collective non-violence is a fairly recent addition to the world’s socio-political landscape. From the early experiences of Christian groups in Europe and the United

Non-violent protest has figured in social movements throughout the world, often modeled after Mohandas Karamchand Gandhi's efforts to secure Indian independence from Britain. Here United Auto Workers' Union (UAW) members employ non-violent tactics through a sit-down strike in 1937 at the General Motors Fisher Body Plant in Flint, Michigan. (Getty Images)

States, via the discoveries and challenges of Mahatma Gandhi and Ghaffar “Badshah” Khan in Southeast Asia, to the non-violent challenges to states and invaders in South America and Scandinavia, non-violence has a long history.

From Pacifism to Non-Violence: Early Developments

Most scholars in the field trace the origins of non-violence in its contemporary conception to Mohandas Gandhi and the mass, organized non-violent campaigns in South Africa in 1906. The justification for this genesis point is provided through Gandhi’s unprecedented synthesis of large-scale collective action with a set of methods and tactics which, while deceptively powerful, ruled out physical harm to an opponent’s person or property. Prior to Gandhi, mass movements directed against authorities or policies were largely spontaneous, non-strategic, fragmented, and often used or finally degenerated into violence. To the extent that “non-violent” methods were used prior to the twentieth century, they were generally employed by *individuals* who identified as pacifists, and were frequently motivated by religious or ethical values.

Among the first in the modern era to apply non-violent tactics against social ills was the Society of Friends, or Quakers. Though active throughout Anglo-American countries (including Ireland, where they refused to fight in the Protestant–Catholic Wars), the Quakers made their presence felt most directly in Colonial America and during the Revolutionary period. As tensions between England and the colonies escalated and many urged a forceful overthrow of the king’s local rule, Quakers stood virtually alone as voices for peaceful resistance. Many vocally opposed the use of violent or disruptive tactics, including the famous “Boston Tea Party,” as unChristian, and instead advocated boycotts of English products and widespread acts of non-cooperation. The choice of passive resistance and overt pacifism rather than non-violent direct action sharply distinguishes pre-Gandhian collective action repertoires from those of the twentieth century. For example, many Quakers in the Pennsylvania Assembly chose to resign rather than acquiesce to calls for armed reaction against Native American stirrings in the colony, and many more observed strict neutrality and

non-participation in the Revolutionary War of 1776. Still others urged reconciliation with the English and refused to pay taxes to finance the war. Quakers during this period faced violent reprisals for their choices, including attacks on their homes, exile, and specious arrests.

The tradition of Anglo-American pacifism continued into the nineteenth century in the struggles against slavery, as well as a more general diffusion of non-violence as a life philosophy assisted by the widely read literature of Thoreau, Emerson, and Tolstoy. In the religious sphere, Quakers, Anabaptists, and members of the so-called “peace churches” (Brethren, Mennonites, and Shakers) began in the 1830s to “reframe” slavery as a national sin, and rally toward abolitionist action, the majority of which was non-violent. The most famous of these non-violent abolitionists was William Lloyd Garrison, who, though a vocal critic of organized religion, was converted to the cause of “immediatism,” or immediate abolition, by Quaker Ben Lundy. For the rest of his life until the order of the Emancipation Proclamation in 1863, Garrison fought without violence for an end to slavery. In lieu of violence, Garrison and his many followers used “moral suasion” aimed at slaveholders, churches, and individual Christians.

Abolitionists also engaged in a variety of atomized “non-resistant” efforts, such as tax and vote refusal, open disobedience of segregation laws in public facilities, aiding those escaping via the Underground Railroad, and what contemporary sociologists would label “sit-ins.” Boycotts of segregated school and slave products such as cotton and sugar, though fragmented and largely symbolic, prefigured the emergence of these tactics as staples of twentieth-century non-violent mass action and emphasized the centrality of economic self-sufficiency, much like Gandhi would do half a century later. Abolitionists also helped what some consider the first national social movement in the US through the American Anti-Slavery Society, which boasted 250,000 members by 1838. It is necessary to stress, of course, that the abolition movement, whether through its non-violent face or its violent side epitomized by John Brown’s attack on Harper’s Ferry, did not directly end slavery in the US. Undoubtedly, though, abolitionists, particularly the huge proportion who were non-violent, created and sustained the necessary political attention and shift in public opinion

to make the issue salient on the national moral agenda. Salient enough, ironically, that many Americans felt the crisis could no longer be resolved non-violently, resulting in the deadliest war in American history.

Following in the footsteps of the abolitionists, a new and energized class of non-violent activists was challenging cultural codes and pressing state authorities for expansion of political rights, this time for women's suffrage. In fact, many of those who had fought slavery also fought well into the twentieth century for suffrage, including Garrison, Lucretia Mott, Susan B. Anthony, and Harriet Beecher Stowe. Both US and British suffragists borrowed directly from the playbook of non-violent abolitionists, regularly employing tactics such as hunger strikes, marches, demonstrations, civil disobedience, disruption, and silent vigils. As a result of their efforts, women obtained the right to vote in the US in 1920 and in the United Kingdom in 1928.

Non-Violent Protest and Social Movements in the Early Twentieth Century

Non-violent resistance was not new to the world in the early twentieth century, but the idea of sustaining a non-violent campaign in the manner of a military campaign was indeed novel. Drawing primarily on the writings of Thoreau and Tolstoy, but also finding inspiration in the sacred texts of several religious traditions, Mohandas K. Gandhi invented a method of struggle in 1906 that has since been used by protesters and revolutionaries on virtually every continent. Dissatisfied with terms such as "civil disobedience" and "passive resistance," Gandhi eventually termed his new method *satyagraha*, literally meaning "holding, or clinging, to truth." While this spiritual and religious aspect of non-violent resistance has diminished over time, the essential characteristics of the methods have only developed and matured, as Gandhi predicted they would. Nowadays, the most popular term corresponding to Gandhi's *satyagraha*, minus the spiritual, or principled, overtones, is "non-violent action." This more pragmatic term reflects recent scholarship's focus on the methods and strategies, rather than the moral and philosophical justifications, associated with contemporary non-violence. While this shift from principled to pragmatic non-violence is important,

so are the origins of non-violent protest and social movements, which began on the southern tip of Africa.

Mohandas K. Gandhi and the Birth of Non-Violent Collective Action

Unable to find employment as a lawyer in India upon the completion of his studies in London, Gandhi accepted an offer to assist with a court case in South Africa, at the time a British colony and member of the same commonwealth of British nations as India. Having experienced British culture and sophistication, Gandhi expected South Africa to be governed by the same enlightened principles he had encountered as a student. However, South Africa was at this point in time, about half a century before the official introduction of apartheid, already an incredibly racist society, something Gandhi experienced first-hand almost immediately upon arriving in South Africa in May 1893.

In a story remarkably similar to that of civil rights champion Rosa Parks, Gandhi was thrown off a train in the middle of the night for occupying a first-class seat, for which he held a valid ticket. Refusing to move to the van compartment simply because of his skin color, Gandhi was literally tossed off the train at the next station, Pietermaritzburg, his luggage following close behind. After this incident, Gandhi became increasingly aware of the racist injustice that pervaded South Africa.

Although Indians often outnumbered whites in South African towns, they rarely enjoyed the same rights as their European counterparts. Indians were allowed to enter South Africa as indentured laborers, and after several years of service they could buy themselves the right to work as free laborers or merchants. However, the cost of occupational freedom was high, and very few former indentured laborers could afford it. Furthermore, all Indians were forced to carry special passes with them at all times that had to be presented to police officials upon demand. These passes constrained Indians' ability to travel and were designed not only to control the movement of the Indian population, but also to give white merchants significant business advantages over their Indian competitors. During his more than 20 years in South Africa, Gandhi organized non-violent resistance against laws and practices such as these. He did it through marches, demonstrations, petitions, letter-writing

campaigns, burning of passes, and other tactics associated with what is now known as non-violent action. Gandhi experienced both defeats and triumphs during his time in South Africa, neither of which could compare to the ones he later experienced in India.

While South African diamonds and other minerals provided the British government in London with important revenue, India was indeed the “Crown Jewel” of the empire. The British had come to India in the sixteenth century, not as invaders but as traders and merchants. Over time, however, they had begun to exert increasing influence over the subcontinent. Following north Indian rebellions in 1857 that took the British well over a year to quell, India officially became part of the British empire.

Although the British had used similar tactics to rule India as they had employed in most colonies, India was decidedly different. No other British colony had a population of a staggering 300 million people. By comparison, controlling the native Africans and immigrant Asians in South Africa was relatively straightforward. In India, on the other hand, the British relied heavily on the cooperation of the native population. More specifically, the British practiced a strategy of recognizing and supporting local rulers, giving these leaders status and financial rewards in exchange for obedience and partial remittance of real political power.

It was this relationship between colonizers and colonized that Gandhi’s independence movement sought to exploit. During the campaign for “self-rule,” Gandhi discovered the simple truth that would become the hallmark of non-violent movements all over the world – without the cooperation of the ruled it becomes impossible for a regime to govern effectively. The key thus became to motivate Indians of all walks of life to “non-cooperate” with the British colonial government. In some cases this was naturally easy to accomplish, as when encouraging the average citizen to stop paying his or her taxes to the colonial government, but there were also many Indians who had benefited, and continued to benefit, from British governance. Through an array of tactics and strategies, including different types of labor strikes, petitions, demonstrations, marches, civil disobedience, boycotts, and the *hartaal*, or general strike, these beneficiaries were slowly but surely persuaded to give up both titles and offices. While some Indians

remained loyal to the British to the end, many became strong supporters of the movement.

Upon his return to India in 1915, Gandhi was approached by the Indian National Congress (INC, sometimes referred to as the Congress Party), whose leaders asked him to join their thus-far unproductive effort to achieve independence. Gandhi, who had lived in South Africa for over 20 years, considered himself a stranger to his native land, and set upon a nationwide tour in order to rediscover India. As a result of his journey Gandhi became aware of the oppression his fellow citizens faced.

One of the earliest struggles he engaged in was aiding the indigo farmers in Champaran. Similarly to other farmers and workers in India, the indigo growers were being exploited by British landowners who demanded that the farmers cultivate crops of British choice rather than those necessary for survival. As a consequence the farmers produced harvests that could be purchased cheaply by the British landlords, which frequently led to dire conditions for the farming community in terms of food shortages. The core of Gandhi’s effort to help the farmers was to catalogue the abuses committed by the landlords. Eventually this effort led to his arrest, which in turn triggered massive demonstrations against the British authorities. Consequently, the landlords were forced by the central British government to reduce their oppression of the farmers, and Gandhi won his first victory on Indian soil.

Perhaps the single most monumental non-violent action engaged in during the independence movement was the Salt March of 1930. Protesting the British monopoly on salt, Gandhi set out to march 241 miles from his Sabarmati ashram (an *ashram* is a type of communal farm) outside of Ahmadabad to the coastal town of Dandi, where he planned to break the law that prohibited Indians from freely making salt. While the monopoly on salt was not an essential source of income for the British, it symbolized the absolute dominance of colonizer over colonized, as salt is crucial to survival in the tropic and subtropic climate of India. By controlling salt, Gandhi reasoned, the British controlled life in India. He therefore left his camp in the morning of March 12, accompanied by 78 other volunteers on a walk that would last for 24 days. On the way to Dandi they were joined by thousands of marchers, and Gandhi took the

opportunity to deliver speeches in villages they passed along the way, thus raising awareness for his non-cooperation campaign. Once they reached their destination, Gandhi made salt by boiling seawater from the Indian Ocean. In one seemingly insignificant act, Gandhi had challenged the entire system that permitted the British to rule India. Within days thousands of Indians were making their own salt, and Gandhi soon found himself behind bars once again, but not before showing India how to resist British imperialism.

The practice of non-violent non-cooperation made it increasingly difficult for the British to rule India. As Gandhi once put it, 100,000 British simply could not control 300 million Indians once those Indians had decided to cease cooperating. Although other developments independent of the Indian context helped bring an end to British rule, the role of non-violent resistance can hardly be overstated – in the end, Indian independence was won by non-violent means. Following the Salt March, it would take an additional 17 years of continued non-violent struggle for India to gain independence. Although Gandhi felt that his movement ultimately had been a failure (he could not stop the partition of India that resulted in one Hindu and one Muslim state), the methods he developed in South Africa and India have been diffused throughout the world, resulting in the achievement of previously denied rights, and in the falls of numerous oppressive regimes.

Early Non-Violent Action Beyond Gandhi

Doubtless due to their proximity and personal networks, the first to benefit from the global diffusion of the Gandhian non-violent repertoire was the population of Pashtun Muslims in the Northwest Frontier Province of British India (today Afghanistan). Led by the revered Abdul Ghaffar “Badshah” Khan, the Pashtuns quickly coalesced into a formidable social and political force. Khan’s early work focused on social reform, such as school-building, spreading the ideas of non-violence and economic self-sufficiency, and Hindu–Muslim unity. In 1929, Khan refashioned the growing Pashtun organization into a “non-violent army,” the Khuda-i Khidmatgar (Servants of God). This military-modeled group trained all recruits in intensive camps where they participated in physically demanding work and took a ten-point vow emphasizing non-violence, purity, loyalty, poverty,

and obedience to prepare them for the imminent clash with British colonizers. The Khuda-i Khidmatgar, or “Red Shirts” as they were dubbed by the British due to their crimson uniforms, viewed themselves as part of the larger Indian independence movement led by Gandhi, and Khan himself was often referred to as the “Frontier Gandhi.” The two leaders enjoyed mutual admiration and friendship. Khan formally forged an alliance with the Indian National Congress in 1931, by which time the Red Shirts had grown to 100,000 members.

Certainly the most infamous and decisive event in the history of the Pashtun movement was the Kissa Khani Bazaar massacre on April 23, 1930, in which more than 200 Pashtuns, many of them Khuda-i Khidmatgars, were killed by British soldiers. While British authorities investigated the matter, public favor and moral credibility shifted to the Pashtuns. Khan’s followers attempted to calm outraged and often violent tribal groups. These uprisings led to a massive crackdown on all resistance, violent and non-violent, which had the very common yet paradoxical effect of revealing the dark, inhumane side of the regime and turning an increasing number of locals to the side of non-violent resistance. Though Badshah Khan spent much of this period in prison for sedition, the sacrifice and efforts of his non-violent army were instrumental in securing stability and limiting bloodshed during the transition to independence in 1947.

Halfway around the world, social change activists in Latin America were reaping benefits from the widespread use and fine-tuning of a staple of non-violent resistance: the strike. Patricia Parkman (1990) tallies no fewer than 80 separate countergovernment work stoppages, walkouts, suspensions, and strikes between 1931 and 1946 across Cuba, Nicaragua, Chile, Ecuador, El Salvador, Guatemala, Honduras, and Haiti. A wide variety of social groups participated in these strikes, including students, professionals, publishers, bus drivers, healthcare workers, and shop-owners; in many cases the linking of diverse economic groups in strikes resulted in total shutdown of the country. Five of these movements resulted in regime changes, though certainly many of the new rulers were scarcely an improvement over their predecessors.

Similarly, non-violent tactics played significant roles in US labor struggles during the 1930s as well. The Congress of Industrial Organizations

(CIO) and the United Auto Workers (UAW) organized massive sit-down strikes in key auto component plants in Ohio, Michigan, and Indiana during late 1936 and early 1937. According to estimates, approximately 400,000 workers participated in these protests; many were shot, arrested, tear-gassed, and beaten. As a specific tool of contention, the sit-down has several unique advantages, outlined by Walter Linder. First, since strikers are inside the factories, it is more difficult for owners to bring in “scabs” or engage in violent repression, which might also damage factory equipment. Second, the close-in factory environment heightens solidarity and protects workers from inclement conditions. Finally, defectors are easily noticed by their refusal to stop work. This repertoire, though perhaps not originated by American labor, was certainly perfected to stunning effect by these pioneers, and subsequently mimicked around the world.

World War II Resistance Movements and Postwar Social Reform

Though it may be difficult to imagine the 1940s as a period of non-violent social change with the dark shadow of World War II coloring every facet of life in the period, a surprising amount of peaceful protest and direct action is found in the historical record. In the early months of 1940 Germany invaded Denmark and Norway. As both nations were militarily inferior to the Nazi war machine, their surrender occurred almost immediately. This did not mean, however, that the occupied nations would not resist their invaders. Through various strategies of non-violent resistance, and with varying levels of success, the Danes and Norwegians managed to interrupt the German plans of exploiting the natural resources and the workforces of their new satellites.

Germany invaded Denmark on April 9, and resistance commenced almost immediately. After early experiments with violent resistance and sabotage, it soon became clear that these forms of action were ineffective against the Germans. In addition, resisters caught engaging in disruptive activities were often sent to concentration camps or even executed. The Germans needed weapons and other supplies essential to the war effort from the Danes. These supplies were manufactured in Danish factories by Danish

hands. It thus became clear to resistance leaders that the most effective way to counter the Germans was to slow down the speed of production. Strikes were combined with occasional work stoppages and factory slow-downs. When the Germans responded to Danish strikes with sanctions, Danes found new ways to work less. For example, when curfews forbade Danes to leave their homes between 8 p.m. and 5 a.m., workers left the factories at 1 p.m., telling their supervisors that they were not on strike, but that they had to take care of their gardens before the curfew went into effect. Through non-violent resistance, the Danes did what they could to interrupt the Nazi war effort and make the occupation as costly as possible.

In Norway, armed resistance to German occupation lasted for two months following the April 9 invasion. Vidkun Quisling, a Norwegian Nazi sympathizer, was installed as the nation’s leader and set out to create his own fascist society without delay. From the very beginning, however, it was clear that Quisling did not have the support of the Norwegian people. While many different types of protest were organized in response to Quisling’s measures, the teacher strike of 1942 was one of the most fundamental.

Protesting Quisling’s attempt to introduce fascist education, 8,000–10,000 of Norway’s 12,000 teachers went on strike. Facing threats of dismissal, teachers taught classes in private homes as the government closed all schools in response to the strike. Eventually about 1,000 teachers were arrested and about half of them were sent north to the Soviet Arctic front where they had to assist German troops. While conditions were harsh, only one teacher died and another three were injured. Meanwhile, Quisling faced enormous pressure from parents of schoolchildren, and he eventually had to capitulate and bring the teachers back to their homes. Welcomed as heroes, the teachers had shown their countrymen how to resist both the invader and the puppet regime it had installed.

Although the Danish and Norwegian cases may constitute the most successful examples of non-violent resistance to the Nazis, they were not the only ones. In the Netherlands, outraged citizens resisted the German invaders through strikes and demonstrations, but with limited success. Perhaps the most fascinating case of non-violent opposition to the Nazis occurred in

Berlin where hundreds of non-Jewish women protested the arrests and planned deportation of their Jewish husbands and children. Risking their own lives, the wives of the arrested Jews demonstrated outside police stations where their husbands were being kept. After several days of sustained protest the authorities yielded and released the Jewish husbands. In the face of open criticism, one of the most brutal governments of the twentieth century was forced to give in. The Nazi regime could not risk increased public opposition, because like any other government, it depended on its subjects for support. While some 1,700 Jewish men were saved by their wives, millions of others perished in the concentration camps. Some have argued that non-violent action could not work against the Nazis, but the experiences of occupied nations and enraged German wives suggest that such an assertion needs to be approached with significant skepticism.

Conclusion

This progression from small-scale dissent to nationwide independence movements and resistance to foreign invasions constitutes a distinctive chapter in the evolution of non-violent action. A significant part of this evolution of non-violent struggle has been the separation of non-violent action from its religious roots. Many instances of non-violent struggle were either explicitly or implicitly guided by religious and/or moral motivations in the minds of its agents, and the inclination of activists to associate non-violence with religion and moral superiority has often served proponents of non-violence well, but in an increasingly secular world scholars and activists of non-violence frequently attempt to dissociate non-violence from its religious roots. The reason is the fear that its religious undertones may dissuade certain groups from applying non-violent action in contemporary struggles. Although this might be a well-founded reservation against evoking the religious elements associated with non-violent action, there is little reason to assume that religion constitutes a hindrance to the proliferation of non-violent methods of struggle. On the contrary, religious activists have often appeared in the front lines of demonstrations and been the first to challenge oppressive opponents face to face.

Two recent examples of religion playing a crucial role in non-violent attempts to interrupt the status quo took place in Burma and Tibet in 2007 and 2008. In Burma, thousands of Buddhist monks initiated protests against the ruling Burmese military junta in the fall of 2007. Initially the motivation for the unrest was increasing food and oil prices, but as the general population joined ranks with the monks, the protests soon developed into an all-encompassing criticism of the dictatorial leadership of the nation. Because of the uncontested place of the monks in the social hierarchy of Burmese society, the state did not immediately crack down on the protesters, but as the severity of the challenge to the generals' rule increased in this "Saffron Revolution," the military eventually intervened and restored order.

In a similarly monk-led challenge in Lhasa in the spring of 2008, the populace joined the ranks of protesting monks to challenge what they perceive to be the Chinese occupation of Tibet. However, the original motivation of the monks' demonstrations was not to challenge Chinese rule, but rather to protest religious restrictions enforced by the Chinese authorities. As the protests coincided with the anniversary of the failed 1959 Tibetan uprising that resulted in the Dalai Lama fleeing into exile, the demonstrations grew as the laity joined the monks and caused the protests to take a decidedly anti-Chinese turn, which in turn triggered repression and riots. Commentators have called the 2008 demonstrations the most significant challenge to Chinese rule in Tibet since 1989. Only time will tell if the influence of religion in non-violent movements will increase or fade off in an increasingly secularized world. What is more certain, if history is any guide, is that the evolution of non-violent protest will proceed, with or without religious guidance.

Non-violent movements: struggles for rights, justice, and identities

Christopher Pieper

The overriding interest in mere survival for many countries from 1939 to 1945 cast aside concerns typically categorized as social movement aims, such as independence, redistribution of material resources, or moral reform. World War II was its own unprecedented type of mobilization, activating every mode of societal energy in dozens of nations toward the objective of military victory. As contemporary historians are increasingly observing, however, war is frequently a stimulus for a wide array of consequences touching dimensions of social life far removed from the battlefield.

World War II, as a global phenomenon, exposed millions to new social practices and identities. This cross-cultural pollination inadvertently aided in creating the conditions for a flourishing of movements in ensuing decades emphasizing the human, civil, and social rights of marginalized groups. Scholars of the American civil rights movement attribute the timing of that struggle with the shift in attitudes among former GIs returning from battle having fought alongside men of all races and backgrounds. For some soldiers, this was their first experience of extended interaction with people of another race. Upon return to the States, many found it difficult to support beliefs or social customs that discriminated against people they were prepared to die for only a few months prior.

From a military-historical perspective, too, World War II was a singular event in human history. The presence of systematic genocide in the form of the Jewish Holocaust in Europe, alongside the detonation of the world's first atomic weapons in Japan, revealed to the world community in unequivocal terms that modernity did not equate necessarily to civilization, and certainly not to peace. Such shocking acts of violence led gradually to the formation of groups, movements, and ideologies designed to prevent their occurrence again, such as the United Nations in 1945, the Universal Declaration of Human Rights in 1948, and global disarmament

and nuclear freeze activism throughout latter decades.

As the postwar period extended and a longer interlude of domestic peace settled in around the world, non-violent social movements again returned to the public sphere. This time, however, their aims were qualitatively different in the main than those of previous generations. Activism after World War II has been dubbed “post-materialist,” “identity politics,” or tagged with the label “new social movements.” Common to each of these terms is concern with human and civil rights; legal and social recognition; ethnic, racial, religious, or sexual identity; and struggles for “causes” which cannot be reduced to group or self-interest, such as anti-nuclear and anti-globalization campaigns. Strategically speaking, the vast majority of this postwar activism, which captured headlines for decades and often led to life improvements for millions, was undertaken non-violently.

The Blossoming of American Non-Violence

The foundation upon which the American civil rights movement would rise to prominence was built during the 1940s, originating from hard-fought battles against racial discrimination in Chicago. What would become the Congress of Racial Equality (CORE) in 1942 began as 12 individuals involved in a “race-relations cell” of the Fellowship of Reconciliation (FOR), a Christian pacifist organization, at the University of Chicago. Members of Chicago CORE were frustrated by the lack of direct, grassroots action by other civil rights organizations, such as the National Association for the Advancement of Colored People (NAACP) and Urban League. Chicago CORE began building a national non-violent organization using direct action to combat discrimination, using FOR cells as local bases.

CORE’s first efforts targeted Chicago businesses that practiced open or *de facto* race discrimination. Only after prolonged periods of negotiation failed would CORE turn to more confrontational action, such as sit-ins and civil disobedience. Many of CORE’s actions in the 1940s did not succeed, however, likely due to over-reliance on persuasion to the exclusion of intervention. In 1942, CORE relaunched itself as a national organization, with James Farmer as chairman. It grew in visibility and stature

throughout the 1950s, remaining committed to its principles of non-violence and interracialism. CORE’s finest hour came in 1961, when it was instrumental in organizing the Freedom Rides to Alabama and Mississippi.

Beginning in the late 1950s, the American civil rights movement matured and broadened its scope, growing from the important skeletal framework provided by CORE and building upon the momentum gained from a crucial convergence of historical events. These included the *Brown v. Board of Education* Supreme Court decision in 1954, which ended segregation in public facilities; the highly publicized bus seat defiance of Rosa Parks in 1955; and a growing sense in the American mind that the black men who died for and defended the US in World War II should be able to share equally in its freedoms. Parks’s action soon led to a hastily organized bus boycott in Montgomery, Alabama which, in addition to achieving a Supreme Court ruling deeming Montgomery’s policies illegal, cast a young Baptist minister named Rev. Dr. Martin Luther King, Jr. into the national spotlight for the first time. Inspired by the success of the Montgomery action, King and other Southern black ministers met in early 1957 to found a larger, regional organization, the Southern Christian Leadership Conference (SCLC), dedicated to ending segregation through non-violent means.

The heavy intellectual and spiritual imprint of Mohandas Gandhi on King is well documented. King himself noted as much, saying of the movement: “Christ furnished the spirit and motivation, while Gandhi furnished the method.” SCLC tactics show clear signs of this influence, with frequent use of lunch counter sit-ins, retail boycotts, jail-filling, and most famously, large-scale demonstrations and marches.

King, more than any other non-violent leader, understood and mastered the most essential facet of any aspiring modern movement: publicity. His skill at organizing and turning out massive displays of humanity, along with the unrivaled ability to hold thousands enraptured with his oratory, proved the ideal combination for social movements in the age of television. The 1963 March on Washington drew an estimated crowd of 250,000, and millions more via the media.

Such events, conducted completely non-violently, accomplished several important movement goals. First, the numbers themselves conveyed in unequivocal terms that the movement was

credible, formidable, and of a scale not likely to quickly fade. This facet had significant impacts not only on public opinion regarding segregation, but on politicians who would ultimately make policy on the issue. Second, the peaceful, law-abiding manner in which the movement conducted itself helped assure white Americans that reacting with fear, apprehension, or hatred was unnecessary and unwise. This strategy assisted in generating financial and personnel resources from the general public, as well as helping to reveal the police and the government as unfairly repressive and racist. Finally, the movement's pervasive Christian themes of liberation and justice cut through boundaries of class, race, and religion, forcing many to consider anew the moral implications of segregation, discrimination, and poverty. King also appealed to American "civil religion" in his rhetoric, noting frequently that not only was God's will being violated when civil rights were denied, but also that the other "sacred text," the US Constitution, was being disobeyed.

King and the SCLC were just one of several important non-violent groups working for civil rights in this period. Another was the Student Non-Violent Coordinating Committee (SNCC), which actually formed as a spin-off of the SCLC in 1960 to lead non-violent action in new regions. SNCC also assisted in organizing the Freedom Rides, the March on Washington, and Freedom Summer, which it spearheaded. From 1960 to 1966, SNCC was led by a series of volunteers (including future US Congressman John S. Lewis) committed to the non-violent methods of the SCLC. In later years, though, internal quarrels and external events combined to alienate many in SNCC from the non-violent path, as well as the prospect of interracialism, especially after SNCC president Stokely Carmichael shifted strategy abruptly in 1966. First he excluded whites from membership. Then he embraced violence as a self-defense and revolutionary tactic. By the mid-1970s, SNCC was no longer a viable organization.

The remainder of the decade of the 1960s saw an unprecedented flowering of social and political movements around the world, many of them non-violent. While African Americans were working to realize their constitutional rights, for example, Latinos in the US were also beginning to organize politically, primarily around issues of labor exploitation and inhumane conditions

for workers in border states such as California, Texas, Arizona, and Florida. The key figure in this effort was César Chávez, who had adopted the political organizing methods of Saul Alinsky but combined them with his own deep Roman Catholic beliefs and a commitment to non-violent tactics. Chávez ingeniously incorporated religious rituals such as fasting and pilgrimages for social movement ends. In 1968, Chávez went on a 25-day fast during which he lost 35 pounds but gained 4,000 followers. He also organized a walking pilgrimage from Delano to Sacramento, California to protest the pesticide spraying of 300 union workers and as a demonstration of non-violent action.

Chávez led a number of successful grape-picker strikes, the most public of which began in 1965 and lasted a remarkable five years. Grape boycotts organized by Latino labor groups succeeded in getting near-instant attention from both growers and the state government and capturing national headlines. In addition to concessions from growers, these actions resulted in the creation of the United Farm Workers of America (UFWA), which was an alliance of two large, already existing farm worker organizations. Over the years, UFWA secured significant improvements for Latino workers, including pensions, health care, safety protection, and collective bargaining.

The war in Vietnam initiated by Eisenhower in 1954 grew increasingly unpopular domestically and internationally throughout the 1960s. Eleven years later, opposition was at a fever pitch, leading to the largest demonstration in US history to that point, an anti-war protest in Washington that drew 25,000. The anti-war movement collected energy from the student, free speech, and counterculture movements to the extent that the boundaries between them were often difficult to discern. A loose coalition of these groups, called "Mobilization," gathered in Washington, DC in November 1969 (and simultaneously in San Francisco) for what would ultimately dwarf all previous demonstrations, with more than 500,000 in attendance. Opposition was also going global, with a number of significant protests in London, Paris, and other European capitals. The Paris demonstrations in May 1968 were particularly historic, as they combined massive crowds of students with successful general strikes by more than 9 million workers.

In fact, most social movement scholars and 1960s historians agree that the majority of anti-Vietnam War activism was non-violent. Common yet innovative peaceful tactics included draft card burnings, stuffing rifle barrels with flowers, teach-ins, mock funerals, fasting, and student walkouts, many of which have been emulated and become standard features of movements since.

The general non-violent character of Vietnam activism should not diminish the very real presence of physical harm and loss of life as well during the period, however. Activists such as the Weather Underground and factional student groups viewed violence, including terrorist-style bombings, against government facilities and symbols as necessary steps toward stopping the war. A number of Quakers and Buddhists self-immolated in protest against the war, which, although involving only self-inflicted violence, reveals that the domestic front was also increasingly becoming a battle zone in its own right, a fact underscored by the shocking shootings of four student protesters by National Guardsmen at Kent State University in 1970.

It seemed the number and diversity of social movement organization dynamics were growing daily during the 1960s. For example, a brief but representative list of key social activist groups that used primarily non-violent methods would include: Students for a Democratic Society (SDS), Free Speech Movement, Clergy and Laity Concerned About Vietnam, War Resisters' League, Vietnam Veterans Against the War, and the SNCC, along with hundreds of local and state-based organizations. War Resisters' International (WRI), founded by American and British veterans of World War I, non-violently opposed every war of the twentieth century in both individual and collective forms, and the Vietnam conflict was no exception.

Liberation Theology and Non-Violent Social Change in Latin America

In 1968, CELAM, the Episcopal Conference of Latin America, composed of the Roman Catholic bishops in Central and South America, met in Medellín, Colombia to address the conditions and futures of their dioceses. The results were historic and far-reaching. First and most significantly, the bishops agreed to endorse the writings of Gustavo Gutiérrez, Leonardo and Claudius

Boff, and Paulo Freire, among others, which had been summarily labeled "liberation theology." Liberation theology stresses as a central idea the "preferential option for the poor," which in practical terms meant the formulation of policy that first addressed the needs of those in society who suffered most. Proponents advocated a combination of biblical wisdom and sociological insight to best attack this entrenched deprivation. The bishops also approved the creation of "base ecclesiastical communities," small Christian groups often connected to parish churches but sometimes independently formed. CBEs, as they were called, focused on prayer, singing, sharing of stories, and most of all, reflection on scripture and the translation of biblical passages through the prism of their daily experience. Liberation theology provided the cultural resources and moral visions for a new radical, and overwhelmingly non-violent, wave of social change throughout Latin America. El Salvador, Brazil, Mexico, and Argentina were particularly afire with the movement, contributing not only rich new theological perspectives but also significant tactical innovations for fighting poverty and marginalization.

One of the most stirring products of this new Latin American ferment in the 1970s was the brave symbolic non-violent resistance of the Argentinian mothers of La Plaza de Mayo beginning in 1977. Since the installation of a military regime in 1976, all Argentinians lived in constant fear of "disappearance," the nighttime kidnapping and presumed murdering of civilians by soldiers. Disappearances most often were reprisals for resistance to the regime, but frequently innocents were randomly chosen to enhance the climate of terror. As a result, hundreds of Argentinian women had seen their children, grandchildren, and other family members taken from them, never to be seen or heard from again.

These mothers responded on April 13, 1977 when a group of 14 relatives of the disappeared took to the Plaza de Mayo in Buenos Aires, marching in a circle and carrying photos and personal effects of their disappeared loved ones. By the fall of that year and with the assistance of national media attention, the international community was becoming aware of the mothers, their cause, and the ongoing atrocities inside Argentina. The number marching grew to several hundred. The state responded in kind and escalated the repression throughout 1978, only amplifying world attention, but also striking

near-fatal blows into the movement. Police and soldiers beat, arrested, tear-gassed, entrapped, and murdered dozens of the women and their families. By early 1979, the Plaza marches had almost completely stopped, and it appeared the violent repression of the state had succeeded in stifling the mothers.

What seemed on the surface to be a slow and painful death was actually at deeper levels a fundamental strategic decision and reorganization effort. While the external visibility of the movement subsided, the mothers moved their planning and organization inside the safe walls of parish churches, strengthening their resolve with prayer in addition to formulating their next, and bravest step. Finally, in the summer of 1979, the mothers once again marched on La Plaza de Mayo, just as before, but this time committed to not leaving under any circumstances, be it intimidation, reprisals, or even death. The movement had also taken on a formal institutional character, with legal recognition, membership structure, newspaper, and most importantly a bank account to receive support from followers around the world. The worldwide media were once again ready to hear their stories, and with each account published, new members flocked to join. By the early 1980s, registered supporters numbered in the thousands.

Though it is difficult to make plausible direct links between the actions of the mothers of La Plaza de Mayo and the 1993 democratic regime change in Argentina, many scholars have argued that this early rousing of “people power” among the ordinary citizens (in this case, perhaps the most politically marginalized class) was crucial. The mothers proved that non-violent action can bring world attention to sites of oppression and human rights violations. Perhaps most importantly, their bravery showed other Latin Americans that silence and fear are the lifeblood that feeds repressive dictatorships, and therefore liberation can be obtained only through the raising of their own, ordinary voices. By finding the courage to stand up, speak out, and tell others, these ordinary voices can realize their own freedom.

Fighting Militarism and Apartheid Non-Violently in the 1980s

The 1980s will almost certainly be remembered as the decade when the Cold War heated to as high a level as it could reach before becoming a

full-blown “hot war.” Undoubtedly the nuclear arms race that accompanied the escalated tensions between the US and Soviet Union during this period contributed to the exhaustion of the Soviet economy, and subsequently the demise of the USSR. By the early 1980s, the Bulletin of the Atomic Scientists estimated that the US had a nuclear stockpile of 25,000 weapons, and the USSR a supply of more than 35,000. Meanwhile on the domestic front, the period witnessed an explosion in the number of electricity-producing nuclear power reactors, increasing from 42 in 1973 to 96 in 1985 in the US alone. These developments propelled a new sector of non-violent activists into the global sphere, dedicated to nuclear disarmament, non-proliferation, and stopping the spread of nuclear power. Many veterans of 1960s–1970s activism became involved in these movements, but new organizations were formed as well, and novel tactics were disseminated as a result.

Among the most visible and active in the various anti-nuclear campaigns were SANE (Committee for a Sane Nuclear Policy), the Nuclear Weapons Freeze Campaign, Women’s Pentagon Action, the Nuclear-Free Philippines Coalition, Plowshares, and the Committee on Non-Violent Action. Nearly without exception, anti-nuclear social movements were decidedly non-violent, and generally reflected the radical pacifist and anti-war philosophies that undergirded their activism. Peace camps, usually composed entirely of women, were established at various military bases, missile silos, and construction facilities around the world, most famously at Greenham Common, England, home of US cruise missiles, and at the Puget Sound. These camps employed classic civil disobedience tactics to draw public attention to the social and moral hazards of nuclear arms. However, they are also “prophetic” in the Weberian sense as they present an exemplar or model, in miniature, of what an alternative society might look like, at the very physical site of the transgressor. This is much in keeping with the tradition of intentional and utopian communities common from the 1870s to the 1930s.

Anti-nuclear activism was also one of the most significant early global non-violent movements, especially in Europe and Southeast Asia. The Filipino *welgang bayan* (people’s strike) of 1985 mobilized 22 national anti-nuclear organizations against the country’s expansionist nuclear energy policy. A diverse group of 10,000

protesters demonstrated at the main nuclear plant, while thousands of students and transit workers walked out or went on strike. This action persisted for three days and remained virtually absent of violence, despite constant harassment and hundreds of arrests by state police. During its peak, the people's strike had immobilized the functioning of nearly the entire nation.

Similar efforts occurred halfway around the world in West Germany during the 1980s, as thousands of members of the non-violent Grassroots Network blockaded military bases around the country to prevent the installation of US nuclear missiles. In democratic nations, social movement organizations also became increasingly active in pushing their anti-nuclear agendas in the public policy arena, particularly in the form of resolutions and non-proliferation treaties.

President Ronald Reagan's foreign policy served as the historical launch point for a number of non-violent social movements that one can roughly categorize under the philosophical heading of "peace" or "anti-militarism." These included the aforementioned anti-nuclear movements, but also a series of somewhat lesser-known but equally interesting movements against Reagan's military involvement in Central America. Key organizations in this largely US-based activism included the Pledge of Resistance, Witness for Peace, Sanctuary, and Nicaragua Exchange. Members of these groups participated in massive non-violent demonstrations at federal buildings in Washington, DC, as well as military bases and CIA offices throughout the early 1980s. The School of the Americas Watch still maintains a perpetual presence at Fort Benning, Georgia, which they claim is a training facility for Latin American soldiers, primarily for purposes of assassination and civilian terror. Other groups, such as Sanctuary and Nicaragua Exchange, focused more on humanitarian effects of US intervention in the region, offering safe harbor to war refugees and working to increase the bonds of solidarity between North and Central American citizens.

As hostilities between Israelis and Palestinians intensified during the late 1970s and early 1980s, non-violent campaigns and interventions likewise arose with surprising speed and commitment. A fascinating yet little-known example of one such effort was the mobilization of the ethnic Druze population in the Golan Heights against Israeli occupiers in 1981. Rather than

accept Israeli annexation and forced citizenship, the indigenous Druze peacefully fought back with multi-week strikes, large-scale demonstrations, and symbolic curfew violations. Perhaps most interesting was the calling of a "reverse strike," wherein Druze families refused to work or go to school, and instead built a sewer pipeline that the Israelis had been delaying work on. Long, sustained periods of civil disobedience, non-cooperation, and refusal to react violently to police abuse ultimately resulted in significant concessions from the occupiers.
